Contributing Factors

Through discussions with stakeholders, fair housing advocates, and this assessment of fair housing issues, the City identified factors that contribute to fair housing issues in Ontario, as shown in Table 3-4. While there are several strategies identified to address the fair housing issues, the most pressing barriers are the concentration of lower-income households in northwest Ontario, lack of affordable housing in high resource areas, and displacement risk, that may prevent lower-income households from securing safe and stable housing. The City has identified the factors that contribute to these issues as priorities in combatting fair housing issues and facilitating new housing choices in high resource areas and place-based revitalization in northwestern Ontario. Prioritized contributing factors are **bolded** in the table.

Programs to address Housing Choice and Affordability in High Resource Areas:

- Program 7 explores initiatives to promote ADU development in high resource areas, including reviewing impact fees, actively marketing ADU materials, and implementing a monitoring program.
- Program 11 (Ontario Ranch) encourages development of affordable housing in future developments in Ontario Ranch, the high resource area in the city.
- Program 23 (Public Housing) commits to expanding HCV use in high and moderate resource areas.
- Program 27 (Fair Housing) commits the City to conducting fair housing training for landlords and tenants on California's Source of Income Discrimination protections, to reduce the number of voucher holders turned away, particularly in high resource areas.

Programs to address Place-based Revitalization Strategies:

- Program 6 (Neighborhood Stabilization) implements the Neighborhood Preservation Strategy Plan, which identifies revitalization strategies in key neighborhoods in northwest Ontario.
- Program 8 (Downtown Plan), which implements the Downtown Plan
- Program 27 (Fair Housing) commits the City to coordinate with San Bernardino County to expand the CalWorks program, providing trainings, job fairs, and/or other key resources to northwest Ontario.

Programs to address Anti-Displacement Strategies.

- Program 3 (Housing Rehabilitation Loans & Grants) will continue providing rehabilitation programs, with the goal of rehabilitating at least 30 units.
- Program 31 (Family Housing) implements programs through CDBG funding to support large families, including HCV use for units appropriate for large families.
- Program 23 (Public Housing) commits to expanding HCV use.
- Program 32 (Extremely Low Income Households) commits to expanding housing opportunities for ELI households.

- Program 24 (Homeownership) will expand homeownership opportunities, including in low resources areas.
- Program 27 (Fair Housing) commits the city to partner with the local fair housing provider to improve access to fair housing resources (including legal aid) and education for tenants and landlords.

Programs to address Housing Mobility to High Resource Areas:

- Program 24 (Homeownership) and Program 27 (Fair Housing Implementation) will provide resources in multiple languages to reduce language barriers
- Program 23 (Public Housing) commits to expanding HCV use in high and moderate resource areas.
- Program 30 (Housing for People with Disabilities) commits the City to assist with the development of affordable housing for persons with disabilities.
- Program 27 (Fair Housing) commits the City to meet with transit authorities biannually to discuss unmet transit needs.

Table 3-4
Contributing Factors to Fair Housing

AFH Identified Fair Housing Issues	*Contributing Factors*	*Meaningful Actions*
Presence of R/ECAPs and Areas of High Segregation and Poverty	**Lack of meaningful language access for individuals with limited English proficiency** **Lack of affordable housing in moderate and high-resource areas of the city** **Lack of investment/community revitalization strategies in low-resource areas of the city** **Availability of rentals that accept HCV in moderate and high resource areas of the city** Displacement of residents in moderate and/or high resource areas of the city due to economic pressure	Program 24 (Homeownership) and Program 27 (Fair Housing Implementation) will provide resources in multiple languages to reduce language barriers. Program 11 (Ontario Ranch) encourages development of affordable housing in future developments in Ontario Ranch, the high resource area in the city. Program 6 (Neighborhood Stabilization) implements the Neighborhood Preservation Strategy Plan, which identifies revitalization strategies in key neighborhoods in northwest Ontario. Program 23 (Public Housing) commits to expanding HCV use, in high and moderate resource areas.
Concentration of communities of color in low-resource areas, TCAC/HCD-identified areas of high segregation and poverty, and R/ECAPs	**Lack of meaningful language access for individuals with limited English proficiency** **Lack of affordable housing in moderate and high-resource areas of the city** **Availability of rentals that accept HCV in moderate and high resource areas of the city**	Program 24 (Homeownership) and Program 27 (Fair Housing Implementation) will provide resources in multiple languages to reduce language barriers. Program 11 (Ontario Ranch) encourages development of affordable housing in future developments in Ontario Ranch, the high resource area in the city. Program 6 (Neighborhood Stabilization) implements the Neighborhood Preservation Strategy Plan, which identifies revitalization strategies in key neighborhoods in northwest Ontario. Program 23 (Public Housing) commits to expanding HCV use in high and moderate resource areas.
Concentration of single-parent households	Concentration of affordable housing in low resource areas of the city Lack of affordable housing in moderate and high-resource areas of the city Lack of access to opportunity due to high housing cost	Program 11 (Ontario Ranch) encourages development of affordable housing in future developments in Ontario Ranch, the high resource area in the city. Program 23 (Public Housing) commits to expanding HCV use, in high and moderate resource areas.
Discriminatory actions against persons with disabilities	Instances of private discrimination Lack of accessible affordable housing appropriate for persons with disabilities Cost of home repairs	Program 3 (Housing Rehabilitation Loans & Grants) will continue providing rehabilitation programs, with the goal of rehabilitating at least 30 units. Program 30 (Housing for People with Disabilities) commits the City to assist with the development of affordable housing for persons with disabilities.

Table 3-4
Contributing Factors to Fair Housing

AFH Identified Fair Housing Issues	*Contributing Factors*	*Meaningful Actions*
Displacement risk from overcrowding	**Availability of affordable housing units in a range of sizes** **Availability of affordable housing in the form of ADUs and JADUs**	Program 31 (Family Housing) implements programs through CDBG funding to support large families, including HCV use for units appropriate for large families. Program 20 (Development Code Amendments) implements code updates to comply with recent state law for ADUs, supporting the development of ADUs citywide. Program 7 (ADUs) explores initiatives to promote ADU development in high resource areas, including reviewing impact fees, actively marketing ADU materials, and implementing a monitoring program.
Displacement risk due to housing condition	**Age of housing stock in northwest area of the city** **Cost of home repairs** **Lack of meaningful language access for individuals with limited English proficiency to learn about rehabilitation options**	Program 3 (Housing Rehabilitation Loans & Grants) will continue providing rehabilitation programs, with the goal of rehabilitating at least 30 units. Program 24 (Homeownership) and Program 27 (Fair Housing Implementation) will provide resources in multiple languages to reduce language barriers.
Displacement due to overpayment	**Lack of affordable housing in moderate and high-resource areas of the city** **Displacement of residents in moderate and/or high resource areas of the city due to economic pressure** **Lack of investment/community revitalization strategies in low-resource areas of the city to improve economic outcomes for residents**	Program 11 (Ontario Ranch) encourages development of affordable housing in future developments in Ontario Ranch, the high resource area in the city. Program 23 (Public Housing) commits to expanding HCV use, in high and moderate resource areas.
Location of environmental health hazards	Lack of investment/community revitalization strategies in low-resource areas of the city that would improve health outcomes for residents	Program 6 (Neighborhood Stabilization) implements the Neighborhood Preservation Strategy Plan, which identifies revitalization strategies in key neighborhoods in northwest Ontario.
Access to proficient schools and low student performance	Lack of access to opportunity due to high housing cost Lack of investment/community revitalization strategies in low-resource areas of the city to improve economic outcomes for residents Availability of rentals that accept HCV in moderate and high resource areas of the city	Program 11 (Ontario Ranch) encourages development of affordable housing in future developments in Ontario Ranch, the high resource area in the city. Program 23 (Public Housing) commits to expanding HCV use, in high and moderate resource areas. Program 6 (Neighborhood Stabilization) implements the Neighborhood Preservation Strategy Plan, which identifies revitalization strategies in key neighborhoods in northwest Ontario.

Table 3-4
Contributing Factors to Fair Housing

AFH Identified Fair Housing Issues	*Contributing Factors*	*Meaningful Actions*
Location of employers	Lack of investment/community revitalization strategies in low-resource areas of the city that would improve health outcomes for residents Lack of affordable housing in moderate and high-resource areas of the city	Program 11 (Ontario Ranch) encourages development of affordable housing in future developments in Ontario Ranch, the high resource area in the city. Program 23 (Public Housing) commits to expanding HCV use, in high and moderate resource areas. Program 6 (Neighborhood Stabilization) implements the Neighborhood Preservation Strategy Plan, which identifies revitalization strategies in key neighborhoods in northwest Ontario.

5. Resources

5.1 Housing Resources

This section describes the land resources within Ontario that are available to address the City's existing and future housing needs, including its share of the Regional Housing Needs Assessment (RHNA).

Regional Housing Needs

The regional housing needs mandate requires every local government in California to plan for its "fair share" of the region's existing and future housing needs. The California Legislature has stated that housing availability is of vital statewide importance, as is the early attainment of decent housing and a suitable living environment for every Californian. State law, therefore, requires the California Department of Housing and Community Development (HCD) to develop housing needs projections for every region in California. As directed by state law, HCD estimates each region's existing and future needs every eight years; each eight-year period is called a housing cycle. For Ontario and the rest of the Southern California Association of Governments (SCAG) region, the upcoming housing cycle (the 6th cycle) plans for projected housing needs between 2021 and 2029.

For the 6th cycle, the SCAG region has been allocated more than 1.3 million housing units to be planned for by 2029. This estimate is 300 percent higher than the approximately 400,000 units required in the previous housing planning period (the 5th cycle, which covered 2013-2021). The large regional allocation results from underproduction of housing, rapidly increasing housing prices and rents, and increasing levels of housing overpayment among residents. As a result, local governments across the region must plan to accommodate an unprecedented increase in housing goals.

SCAG is responsible for dividing the 1.3-million-unit target between each of the 191 jurisdictions in the region. Under state law, SCAG must consider specific planning factors in allocating the required housing units between jurisdictions, but it can develop a tailored model for the region. SCAG's model for the 6th cycle considers the availability of land, adequacy of infrastructure and services, market demand for housing, fair housing, availability of employment and transit, local population growth estimates, and many other housing and planning considerations; the model, however, weights opportunities to promote fair housing, proximity to employment, and transit accessibility more heavily than other factors, so jurisdictions that were closer to jobs centers, had a lower concentration of poverty, and had more access to transit opportunities

were generally allocated more units than those with poor jobs access and no public transit.

In Ontario, the RHNA goal has nearly doubled since the last Housing Element planning period. For the 2013-2021 planning period, Ontario's RHNA was 10,861 units; the allocation increased 92 percent to 20,854 units for the 2021-2029 period. Within this goal, the City must plan for housing production at three different income levels: lower-income housing (includes extremely low, very low, and low income), moderate-income, and above moderate-income. Table 5-1 summarizes the City's 2021–2029 RHNA. Ontario is required to set aside sufficient land, adopt programs, and provide funding (to the extent feasible) to facilitate and encourage housing production commensurate with that need.

Table 5-1
Ontario Regional Housing Need Allocation, 2021–2029

	Lower Income	*Moderate Income*	*Above Moderate Income*	*Total Capacity*
RHNA Need	8,926	3,329	8,599	20,854

Source: SCAG, 2021.

California law holds local governments responsible for planning for their share of the region' housing needs and ensuring that housing is planned commensurate with the total assigned need for each affordability category. However, state law does not require a city to build housing; that is the responsibility of the building industry. Local governments can obtain credit toward meeting their RHNA target in four ways:

- **Housing Production.** Housing units built and occupied (received a certificate of occupancy) on or after June 30, 2021, when the projection period for the 6th cycle RHNA begins.
- **Planned Production**. Housing units proposed for construction that are likely to be approved and built during the planning period, from July 2021 to October 2029.
- **Available Land.** Designation of vacant and underutilized sites with zoning, development standards, services, and public facilities in place so housing can be built.
- **Alternative Credits**. Qualified projects that involve the rehabilitation, preservation, and conversion of non-affordable units to affordable units, subject to conditions.

The City's housing strategies use the first three options. The following section describes how the City will address its housing planning and production goals for the 2021-2029 RHNA.

Relationship of Zoning and Density to Housing Affordability

This section describes the suitability of residential development standards, namely allowed density and zoning districts, for facilitating housing affordable to different income levels.

Zoning and density standards are correlated to the affordability of housing. In general, higher-density housing projects, like apartment buildings, are more affordable than lower-density projects, like single-family homes. While other factors such as location, the size of the units, and quality of the finish materials also contribute to a project's ultimate affordability, the state has determined that density and zoning standards are suitable proxies for identifying the potential affordability level of a site.

The following sections describe the density thresholds identified for each income category and the current zoning districts that allow the identified densities.

Lower Income

Density

Housing element law requires jurisdictions to provide a requisite analysis showing that zones identified for lower-income households provide sufficient density to encourage such development. The law provides two options for preparing the analysis: (1) describe market demand and trends, financial feasibility, and recent development experience; (2) utilize default density standards deemed adequate to meet the appropriate zoning test. According to state law, the default density standard for Ontario is 30 dwelling units per acre. In 2019 and 2020, two 100-percent affordable housing projects were built in Ontario with densities between 25 and 30 dwelling units per acre:

- ***Vista Verde***. Completed in 2021. Consists of 101 affordable units (lower-income); built at a density of 26 dwelling units per acre.
- ***Emporia Place I***. Completed in 2020. Consists of 74 affordable units (lower-income); built at a density of 26.7 dwelling units per acre.

Therefore, for the 2021-2029 planning period, the City has determined that the default density adequately demonstrates its capacity to accommodate the lower-income RHNA.

Zoning

Under the current development standards, residential development within the following zoning districts allows for densities of 30 dwelling units per acre or more.

- ***Mixed-Use (MU-1)*** – 20–75 dwelling units per acre
- ***Mixed-Use (MU-~~2~~6)*** – 14-40 dwelling units per acre
  - The City's Development Code allows for stand-alone multifamily residential projects in mixed-use districts.
- ***Planned Unit Development (PUDs)*** – 25–75 dwelling units per acre
- ***High-Density Residential (HDR-45)*** – 25.1–45 dwelling units per acre

The City's rezoning program (Program 13) will also create an affordable housing overlay that expands the land use categories that can accommodate at least 30 dwelling units per acre, exempt projects with at least 20 percent of units affordable to lower incomes from specific plan requirements if no specific plan exists, and revises existing specific plans to allow at least 30 dwelling units per acre on identified sites. Each of these changes will play a key role in fulfilling the City's lower-income RHNA.

Moderate Income

Density

Typically, medium to medium-high multiple-family zoning districts are suitable for facilitating the construction of housing affordable to moderate-income households. To determine the densities needed to accommodate moderate-income housing, nearly 2,000 properties sold or listed on the MLS between September 2020 and September 2021 were analyzed. Of the 2,000 records analyzed, 66 were newer construction (built after 2017) townhomes or condos, most of which were built at densities between 8 and 18 dwelling units per acre. Of those, 10 properties sold for less than $410,000, the moderate-income threshold, indicating the densities were sufficient to produce moderate-income housing. These sales included four new construction homes in the New Haven master-planned community (two two-bedroom units and two three-bedroom units), where projects are typically 18 units per acre or less.

In recognition of increasing home prices, however, the City has determined that a higher density of 25 units per acre would be more conducive to creating moderate-income housing. In support of this, the Cities of Chino, Fontana, and Rancho Cucamonga indicate that master-

planned communities with densities up to 25 dwelling units per acre offer homes that are affordable to moderate-income households. Therefore, the City's land inventory will focus on sites that allow for 25 or more dwelling units per acre to fulfill its moderate-income allocation.

Zoning

The same zoning districts identified as suitable for lower-income housing are suitable for moderate-income housing, as well as the following:

- ***Medium-Density Residential (MDR-25)*** – 18.1 – 25 dwelling units per acre
- ***Specific Plan (SP)*** – Sites designated as SP, where no specific plan exists, can facilitate moderate-income housing if the corresponding Policy Plan designation allows densities up to 25 dwelling units per acre. Such Policy Plan designations include:
  - *Medium-Density Residential (MDR)* – 11 to 25 dwelling units per acre
  - *Mixed-Use (MU)* – current and proposed designations for various mixed-use areas allow a range of densities with maximums ranging from 25 to 125 dwelling units per acre.

Above Moderate Income

Density and Zoning

The planned residential development projects in the city (see Table 5-2) include a mix of housing types at various densities. Most, however, are anticipated to develop at market rates that are affordable to above-moderate-income households. Therefore, it is assumed that any density and any residentially zoned land can support the development of above-moderate housing.

Housing Production and Planned Production

This section details residential development projects that have been ~~approved~~reported on the City's Annual Progress Reports (APRs) during the 6th cycle between 2022 and 2024~~., or are very near approval by the City and will complete constructed during the 6th housing cycle.~~

~~The City of Ontario has approved or expects to approve several residential projects that will receive their certificate of occupancy or final inspection during the 6th cycle. Most of these projects are already under construction, as noted in Table 5-2. As allowed under state housing element law, these approved and pending residential projects will be eligible for credit toward the 6th cycle RHNA~~.

~~As described here~~ The reported development is ~~and listed~~ summarized in Table 5-2~~, housing pipeline projects represent~~ and includes a mix of residential types~~,~~ and price points~~, and affordability levels~~.

- **Mix of Housing Types**. A ~~broad~~ range of housing products ~~is~~ has been reported in the development pipeline, including single-family residential projects, condominiums, townhomes, clustered and motor court homes, and apartment projects. Proposed projects are located on vacant land throughout the city, within existing residential neighborhoods, in underutilized mixed-use areas, and on undeveloped land south of Riverside Drive and east of the Cucamonga Channel (the Channel), where the area is transitioning from agricultural uses to residential communities.

- **Project affordability**. A project's affordability is based on the type of residential product approved/entitled in the community and the market sales price or rent charged for recently built projects in the city.

- **Mix of Vacant and Underused Sites**. Similar to the land inventory discussed later, proposed projects are situated on a combination of vacant and underused sites. Many included the subdivision of large lots or the development of a range of products, including multifamily housing, on large lots over 10 acres in size. Further, prior projects that have been built in the city have been within underutilized lots.

- **Mix of Housing Locations**. The City ~~has approved proposals, to develop 2,111~~ reported more than 12,000 units on APRs in the 6th Cycle.~~, most of which are currently under construction and expected to receive a certificate of occupancy during the 6th cycle.~~ While the greatest volume of housing development is in the area south of Riverside Drive and east of the Channel, projects have also been approved in the downtown area, along commercial corridors like Holt Boulevard, within the mixed-use areas along the Interstate (I-) 10 corridor, ~~and~~ and scattered throughout established neighborhoods~~, in addition to~~ as well as hundreds of accessory dwelling units (ADUs) that have been permitted and built, primarily in the City's established residential neighborhoods.

A summary of development progress reported on APRs during the 6th cycle ~~Only projects that have been issued a building permit or are expected to receive a building permit in the near term are~~ is ~~included~~ in ~~the pipeline projections~~Table 5-2. ~~Several more projects have been entitled, and many additional complex projects are currently under review that would add thousands more units to the city, but these have~~

~~not been included. Table 5-2, therefore, represents a conservative estimate of the planned projects.~~

Table 5-2 6th Cycle Development Progress

	Built			Permitted			Entitled			Submitted			
Unit Type	ELI+VLI+LI[1]	MI	AMI	ELI+VLI+LI	MI[2]	AMI	ELI+VLI+LI	MI	AMI	ELI+VLI+LI	MI	AMI	Total Units
2 to 4 units together[4]	-	-	45	-	-	30	-	-	-	-	-	3	78

Single Family Attached (SFA)[2,4]	-	-	968	-	7[2]	530[2]	-	-	2,111	-	-	252	3,868
Single Family Detached (SFD)[4]	-	-	1,460	-	-	690	-	-	810	-	-	668	3,628
Total[4]	49	-	3,308	-	7	1,710	3	-	4,631	-	-	2,394	12,102

Source City of Ontario Annual Progress Reports, 2022–2024, plus projects with moderate or lower income units reported on the 2025 APR.

1. APNs 104905403, 104905404: 201 S. Fern Ave (Emporia Place II by Related CA), completed 2024. All units deed restricted; Total: 50 Units; ELI: 10 Units; VLI: 20 Units; LI: 19 Units; AMI (Caretaker unit): 1.
2. APN 100855112: 1355 5th Street, under construction 2026. Mixed income (moderate units deed restricted, privately funded w/ density bonus); Total: 70 units; MI: 7 units; AMI: 63 units (status updated on 2025 APR).
3. APN 11007102: 1389 E Holt Blvd. Approved: mixed income (very low income units deed-restricted, privately funded w/ density bonus); Total: 50 units; VLI: 3 units; AMI: 47 units (new on 2025 APR)
4. Due to the annual nature of APRs, some projects are reported in multiple years. In an effort to avoid double-counting units (such as those reported as permitted one year and built the following year), the following corrections are reflected in the table:
   - 2 to 4 units together: No adjustments
   - Multifamily (5+ units): Permitted units on parcels where built units were reported were reduced to zero. (Reduced permitted by 18 units (AMI))
   - Accessory Dwelling Unit (ADU): Permitted units on parcels where a built ADU was reported were reduced to zero. (Reduced AMI permitted by 147 units)
   - Single Family Attached (SFA): Built units have been subtracted from permitted units on parcels where built units were reported. Permitted units reported over multiple years have been consolidated. (Reduced permitted by 786 units (AMI)).
   - Single Family Detached (SFD): Built units have been subtracted from permitted units on parcels where built units were reported. Permitted and built units reported over multiple years have been consolidated. (Reduced permitted by 1,315 units (AMI); reduced built by 56 units (AMI)).
5. Submitted units that were later reported as entitled, permitted, and/or built have been removed from this table and reported in other columns as appropriate (reduced submitted by 3,622 units)

ELI = Extremely Low Income, VLI = Very Low Income, LI = Low Income, MI = Moderate Income, AMI = Above Moderate Income

Notes: The projects included in the table include permits that have been issued but not completed and certificates of occupancy issued on or after 6/30/2021. There are also several projects currently under review that are not included in this table.

* SF = Single-Family, MF = Multifamily

** UC = Under Construction, PC = Currently in Plan Check, EN = Entitlement has been approved and project is expected to submit plans in near-term

Ontario's 2021-2029 RHNA includes 8,599 units for the above-moderate-income allocation (Table 5-1). ~~As shown in Table 5-2, the majority of projects are currently under construction. The two projects that are not under construction include:~~

~~Mission & Palmetto, which is currently in plan check and expected to be issued a building permit and commence construction by 2023.~~

~~890 South Magnolia, which is fully entitled, and it expected to be issued a building permit and commence construction before 2024.~~

~~Projects that are currently under construction and those that will begin construction before 2024 are expected to complete construction and received a certificate of occupancy well before the close of 6th cycle. Therefore, these projects can address 2,111 units of the above-moderate allocation.~~

Projects reported on the APRs address all of the above-moderate RHNA and a small portion of the City's lower and moderate RHNA, as noted in the summary of sites to accommodate the RHNA (Table 5-16).

The remainder of this chapter will focus on key strategies that the City will undertake to address the remainder of the ~~above-moderate allocation as well as the~~ lower- and moderate-income RHNA~~,~~ as well as additional capacity for above-moderate units in mixed-income communities.

2021-2029 RHNA Strategies

While the prior section listed residential projects ~~approved for development in the city~~reported on APRs, this section describes additional strategies proposed to address the remaining RHNA for the 2021-2029 Housing Element~~.~~ planning period.

The City is required to identify ~~available~~ sufficient~~,~~ appropriately zoned sites to accommodate its 2021–2029 RHNA, including the portion assigned to lower- and moderate-income households. An analysis of the city's available land and existing zoning districts showed that there was not enough land zoned at ~~the correct~~appropriate densities to ~~facilitate the development of enough~~ accommodate housing affordable to lower- and moderate-income households, ~~to fulfill the RHNA~~ and a rezoning program (Program 13) was needed. The City has implemented most provisions of Program 13, as noted throughout this section.

The City evaluated all of its land resources for suitability to develop at densities suitable to lower- and moderate-income housing and developed strategies and programs to meet its obligation. A description and analysis of the sites identified, including the sites' suitability for residential development, suitability to accommodate lower-income housing, realistic capacity, and allocation of units by RHNA income category ~~is~~ are

included in this section. Applicable programs are discussed ~~as applicable~~ throughout.

Identification of Sites

The analysis identified ~~233~~ 223 parcels, divided into ~~10~~ 11 Housing Opportunity Areas in which housing growth can be accommodated ~~after the City implements its rezoning program (Program 13)~~. These Opportunity Areas are further grouped into six key strategies, and illustrated in Figure 5-1, *Housing Opportunity Areas*. Housing Opportunity Areas are grouped based on similarities in site suitability, sites ability to accommodate the lower-income RHNA, realistic capacity adjustments, and distribution of units by RHNA income category. In addition to the Opportunity Areas, the City used accessory dwelling units (ADUs) as the seventh strategy to fulfill the RHNA. The sites identified in the Opportunity Areas further the City's housing goals and align with regional transportation plans by placing higher-density housing along future transit routes. The RHNA strategies also consider fair and equitable housing goals, development feasibility, proximity to amenities such as grocery stores, open space, and jobs, environmental constraints, and infrastructure availability. To ensure that the identified sites are suitable for the development of affordable housing within the 6th Cycle, and to promote such development the City has also identified several programs, outlined in the Chapter 9. These programs are intended to work in concert with the sites inventory to facilitate housing development. Programs that specifically relate to the City's sites inventory include Programs 8, 10-11, 13, and 15. These programs will be implemented in coordination with the TOP 2050 amendment process, Housing Element updates, and zoning updates -required to support the land inventory. A detailed list of each site by Assessor's Parcel Number (APN) is included in Appendix B.

Figure 5-1 shows the identified sites categorized into 10 Housing Opportunity Areas and six strategies based on their location within the city. Figures 5-2 to 5-11 show detailed maps of sites within each Opportunity Area.

Strategies

Strategies 1-6, reflect the City's sites inventory. Discussions of each strategy comprise the City's sites analysis. The discussions analyze the suitability of sites, sites to accommodate lower-income RHNA requirements, realistic capacity, and units by RHNA income level for each strategy. Proposed programs (contained in Chapter 9) that help to demonstrate site suitability, zoning adequacy, ability to accommodate lower-income housing, or are necessary to comply with housing element law are also referenced as applicable.

Following the sites analysis (strategies 1-6), strategy 7 includes a discussion demonstrating realistic ADU development potential within the city and the determination of ADU affordability levels.

Sites Analysis

The City has divided its sites analysis including the suitability of sites, sites to accommodate lower-income RHNA, realistic capacity, and units by RHNA income category by strategy.

Analyzing Suitability of Sites

The following items will be addressed, as described and applicable, under each strategy:

- **Infrastructure Availability**. Analysis assessing infrastructure availability is included for every strategy. Strategy 6, where infrastructure is still in development, outlines planned infrastructure development, and describes the City's strategy to account for the development to necessary systems. Program 11 discusses infrastructure development in the Western Ontario Ranch, where Opportunity Areas under strategy 6 are located.

- **Consistency with Affirmatively Furthering Fair Housing**. Detailed analysis of how identified sites affirmatively further fair housing opportunities is included in Chapter 3, so this topic is not addressed in this chapter.

- **RHNA Income Category**. A description specifying which portion of the realistic capacity is suitable to accommodate lower, moderate, and above moderate households, and a discussion of why the City identified sites within each opportunity area as those best suited to accommodate the lower-income RHNA (based on HCD Best Practices).

- **Environmental Constraints**. Analysis assessing environmental constraints is included for every strategy. Additional analysis is provided for strategy 6, where mapping of potential hazards identified ~~26~~ 7 parcels where groundwater levels may be shallow enough to risk potential liquefaction. Program 11 addresses

development in the Ontario Ranch, where strategy 6 Opportunity Areas are located.

Analyzing Sites to Accommodate Lower-Income RHNA, Realistic Capacity, and RHNA Income Category

Because the City's RHNA obligation is large, its land resources are finite, its parcel sizes are defined, and vacant land is scarce, the City's inventory of suitable sites includes 223~~233~~ parcels. The existing conditions, market trends, and types of anticipated development vary dramatically between different parts of the city, but there are many similarities between sites in proximity to one another. To better describe the unique considerations for the 223~~233~~ parcels, the City has divided its sites analysis including discussions of site suitability, zoning adequacy, and capacity assessment by strategy, in the following section (*Strategies*). The following items will be addressed, as applicable, under each strategy:

- **Inclusion in Previous Housing Element**. Eighteen nonvacant parcels in the City's land inventory were included the previous housing element. To encourage redevelopment on these sites, state law requires that the City allow by-right development of housing projects with at least 20 percent of units affordable to lower-income households. To meet this requirement, these sites are subject to Program 15, as discussed under strategies 1 and 2 (recycled sites are only located in the Downtown and West Holt Housing Opportunity Areas).

- **Zoning**. Many of the identified sites ~~are~~ were not ~~currently~~ originally zoned for the correct densities to support the affordability levels by the City. These sites ~~will be~~were included in the City rezoning program (Program 13). ~~Rezoning is required for strategies 1-4, and strategy 6.as~~ The City has completed rezoning for all sites under Strategies 1–3 and Strategy 6, consistent with Program 13. These parcels now allow default densities appropriate for lower- and moderate-income housing. Strategy 5 zoning has not been completed~~,~~ because all units identified under this strategy were treated as surplus capacity, and have not been necessary to satisfy its RHNA. Since certification, any changes to the inventory that required rezoning have been processed concurrent with adjustments to the sites inventory~~;~~, reported in the City's annual progress reports (APRs)~~;~~ and, when substantial, submitted to HCD for review. This was done to ensure continued compliance during the 6th cycle. All sites that were rezoned~~,~~ were done so to accommodate ~~for~~ a shortfall of units needed to fulfill the City's lower- and moderate-income RHNA. These sites have been treated as "rezoned sites" and are documented as meeting state law requirements for sites that are rezoned in order to make up for said shortfall. A detailed

description of current and proposed zoning for specific sites in each Housing Opportunity Area is discussed under the applicable strategy. The proposed zoning changes are also tabulated by APN in Appendix B.

- **Size of Sites.** Analysis assessing the suitability of sites is included for every strategy. Strategies 1, 2, 5, and 6 (where sites less than 0.5 acres or greater than 10 acres are identified) also provide sufficient evidence demonstrating that the identified sites are suitable to accommodate housing for lower-income households. Programs to facilitate affordable development on these sites, including Programs 8, 10, 11, and 13 are discussed under each strategy.

- **Underutilized (Nonvacant) Sites.** Underutilized (nonvacant) sites are identified in strategies 1-4, and strategy 6. Analysis for each strategy includes a discussion of existing uses, availability of sites, and feasibility of development. A discussion of Citywide trends and market conditions is included in the next section, while additional information about market trends specific to the strategy has been added to the discussion under strategies 5 and 6. Examples of projects demonstrating the potential for the sites to accommodate the lower-income RHNA are included under the discussion of strategy-specific market trends (strategies 5-6), Size of Site, and Feasibility of Development for each strategy or Opportunity Area as applicable. Finally, development potential on sites were confirmed through discussions with property owners, home building groups, developers and affordable housing developers.

In addition to the items described above, the sites analysis includes description of the following topics:

- **Realistic Capacity**. A detailed analysis demonstrating the realistic capacity on each site.

- **RHNA Income Category**. A breakdown of units identified to meet RHNA obligation by income category.

Citywide Market Trends

Inflation, reductions in net foreign migrations, high construction costs, changes in the nature of retail and office work, and a host of other economic and market conditions create and exacerbate risk and uncertainty in development. ~~The COVID-19 pandemic has profoundly changed the way that people shop, work, travel, and use their homes. By forcing the closure of many businesses and forcing many businesses to allow employees to work from home, COVID-19 has created economic impacts that will live on long after the pandemic subsides. These impacts are reasonably expected to affect market demand for development~~

~~throughout the 6th Cycle.~~ This section summarizes the findings expected to impact the development feasibility during the 2021-2029 cycle.

Retail

- Retailers have focused on omni-channel retailing—provide multiple avenues to shop, purchase, and/or return goods—and have been less concerned with expanding their physical footprint except in faster growing areas.
- Retail stores have mostly recovered from the COVID-era disruptions.
- K-shaped economy means that stores focused on high-end customers can be expected to do well, and those focused on lower- and middle-income customers may be challenged.
- Faced with elevated inflation, high construction costs, and tariffs, lower-~~-~~cost building-~~-~~space options will be important for attracting and retaining retail businesses.
- ~~Increasing retail vacancies from permanent closure of retail stores, services, dining, and entertainment businesses~~
- ~~Hastened shift from in-store to online retail will lengthen the recovery period for retail~~
- ~~Long term, household growth will support faster recovery and experience-oriented retail districts may ameliorate competition from online retail~~
- ~~Weak to no demand for new retail development (3 to 5 year minimum)~~

Office

- Office vacancies remain elevated throughout Southern California.
- ~~Shift to more work-from-home will lead office-based businesses to downsize as office leases come up for renewal over the next several years~~
- Could take five to ten years for office vacancies to peak and then recover to healthy levels.
- ~~Not clear yet if medical office and commercial office space for retail services will be as hard hit as the broader office market, but may suffer from pandemic-related permanent business closures~~
- ~~Weak to no demand for new office development for five to ten years; once development demand returns, smaller office~~

~~footprints likely to result in slower growth in office development over the long term~~

- Medical office market remains the bright spot in office demand.

Lodging and Hospitality

- Leisure and business travel have recovered from the downturn during the COVID 19 pandemic.
- A market study may be warranted to identify opportunities to attract hotels.
- Given high construction costs and still elevated interest rates, TOT sharing may be necessary to entice new lodging development.
- ~~Business travel virtually ceased at height of pandemic~~
- ~~Business travel is the most profitable segment in hospitality and is key to the hospitality market in Ontario~~
- ~~Recovery in hospitality tends to lag overall economic recovery~~
- ~~Business travel may never return to pre-pandemic levels as technology for internet-based meetings improve and become more commonplace~~
- ~~Market demand would have supported new hotels prior to the pandemic but will now take several years or longer for market demand to recover~~

Residential

- Residential market has remained strong. ~~during the pandemic~~
- US and California have underbuilt housing since the 2008–09 recession, so continued market strength is expected.
- Still, ~~–~~elevated interest rates may limit the feasibility of for-rent market-rate housing.
- ~~However, rising mortgage delinquencies and potential for rental evictions after protections expire are serious complications that could disrupt the housing market in the short term, or longer, depending on the government's response~~
- ~~For now, residential market demand is strong and expected to remain strong for the foreseeable future~~

Industrial

- The industrial market has near historic-low vacancy rates, although the market may be slightly softer than in previous years.

- Container traffic at the ports remains elevated, signaling continued demand for warehousing.
- Public sentiment has turned against warehousing development in many Inland Empire communities.
- ~~The industrial market has remained strong during the pandemic with historic low vacancy rates~~
- ~~Market driven by warehousing demand, which has ripple effects on manufacturing and other industrial uses~~
- ~~There is not enough land area in Southern California planned and zoned for industrial uses to meet the long-term potential for industrial development~~
- ~~The market will continue to support additional industrial development for the foreseeable future~~

Strategy 1: Downtown Housing Opportunity Area

Opportunity Area

The City developed the Downtown District Plan, as described in Program 8, which provides opportunities for high-density, market-rate, and affordable housing in the ~~Euclid Avenue Entertainment District and~~ Holt Boulevard District.

Recently completed p~~P~~rojects ~~pending funding~~, such as the Emporia Place I & II affordable housing development projects, (completed in 2020 and 2024 with 74 and 49 units affordable to lower income households), demonstrate the feasibility of 100 percent affordable residential projects in the Holt Boulevard District (LUA-3) of the Downtown District Plan. ~~projects under review, such as the Hutton C-Block Mixed-Use development that will bring ground-floor commercial with high-density housing and ,structured parking to the heart of downtown, and recently completed projects, such as the Emporia I affordable housing project (completed 2020), embody the vision for housing in the downtown.~~

In addition to completed projects (those that were active during the 6th cycle are included in the summary of reported projects in Table 5-2), ~~T~~the City has identified ~~nine~~ seven sites in ~~addition to the pipeline projects~~this Opportunity Area for inclusion in the land inventory, as shown in Figure 5-2.

Figure 5-2 Downtown Housing Opportunity Area

Suitability of Sites

Infrastructure Availability

Downtown is well-served by infrastructure. The City is also working to build OntarioNet, a new fiber-optic internet service throughout the city. The first fiber lines serving Ontario have already been installed in the areas around downtown, providing high-speed internet to support residential and mixed-use development.

RHNA Income Category

The Downtown Opportunity Area was determined to be suitable for lower-income households based on proximity to transit, access to existing and planned jobs and amenities, access to grocery stores, proximity to available infrastructure and utilities, and because there are no known requirements for environmental mitigation:

- *Proximity to transit.* ~~All~~ The site~~s~~ in this Opportunity Area ~~are~~ is within a 1/4 mile walk of the new Bus Rapid Transit (BRT) stop that is planned by the San Bernardino County Transit Authority (SBCTA) along Holt Boulevard. ~~This~~The West Valley Connector BRT route is ~~funded~~under construction and ~~expected~~scheduled to ~~be operational in 2023.~~ begin operation by late 2026.

- *Access to existing and planned jobs and amenities.* It is estimated that Downtown Ontario is currently home to more than 6,500 jobs, and the Downtown District Plan, described under Program 11, includes incentives to increase that number through development

streamlining tools such as an expansion of the administrative use permit (AUP) program, and through economic development efforts, such as bringing structured parking to the area and focused outreach to desired employment-generating users.

- *Access to grocery stores.* All sites in this Opportunity Area are within a 1/2 mile walk of an existing grocery store (Stater Brothers at 646 W. Holt Blvd. and Cardenas Markets at 720 E. Holt Blvd.).
- *Proximity to infrastructure and utilities.* As noted under infrastructure availability, this area is well-served, and these sites will benefit from innovative technology the City is piloting in the downtown.
- *Environmental mitigation.* As noted under Environmental Constraints, and discussed under Existing Use, there are no known natural or man-made environmental development concerns that would require mitigation.

To provide conservative estimates, however, only 50 percent of the identified capacity (described under Realistic Capacity) was considered suitable to accommodate lower-income housing, while the balance was considered suitable for moderate-income housing (detailed under Units by RHNA Income Category).

Environmental Constraints
There are no environmental constraints limiting development potential.

Analysis of sites to accommodate lower-income RHNA
The ~~two~~ site~~s~~ identified in this area~~, numbered in Figure 5-2, are~~ is described below.

~~*1. SWC D Street & Palm Avenue*~~

- ~~Inclusion in Previous Housing Element~~

  ~~The two parcels associated with site were included in the City's last housing element. In compliance with Assembly Bill (AB) 1397, by-right development will be allowed for any residential project that provides for at least 20 percent of units affordable to lower-income households as described in Program 15.~~

- ~~Zoning~~

  ~~The site is currently zoned for HDR-45, which allows up to 45 dwelling units per acre, satisfying the default density requirements for lower-income housing.~~

- ~~Size of Site~~

~~This site consists of two adjoining parcels (0.5 and 0.7 acres in size), so no sites smaller than 0.5 acres are included.~~

- ~~Existing Use~~

  ~~Both parcels are currently occupied by underutilized parking lots. While the parking divisions do not follow lot lines, one lot serves the utilities building to the east, while the other functions as auxiliary parking play area for the church complex to the north. Both lots, however, are under different ownership than the uses they currently serve. These parcels were identified in the inventory because parking lots provide a unique opportunity for redevelopment; limited demolition is necessary, so developers can often afford to pay higher land costs.~~

- ~~Availability of Sites~~

  ~~The City is not aware of any parking or other leases that would preclude development of these sites for affordable housing within the 6th cycle. In addition, the City is reducing requirements for this type of single-use parking in the downtown through regulatory changes in how the City determines where parking for projects can be accommodated, which would reduce the need for these uses. Further, the City has had informal conversations with property owners. While they do not currently have plans to redevelop, redevelopment of these sites for as residential uses, including potential lower income housing during the 6th cycle is feasible.~~

- ~~Feasibility of Development.~~

  ~~The identified parcels as well as the uses they currently serve are all located within Phase I or Phase II of the Downtown District Plan (Phase I adopted in 2020, Phase II expected adoption in 2023), described under Program 8. Among other actions, the City has already developed a performance-based Downtown Parking Model that promotes a "park once" strategy and considers time-of-use of different land uses to minimize the amount of parking required to serve homes, businesses, and other uses in the area, and to create a pedestrian-oriented hub. As a result of these changes, uses in this area will require less single-use parking, such as that provided on the identified site.~~

  ~~In addition to the reduced demand for the current use, there is strong interest demand for new residential projects. There are 4 residential projects currently under consideration in the downtown area. Affordable housing has also proven viable on infill sites like the identified parcels in the downtown area. There~~

~~is one recently completed (2020) affordable housing project (Emporia I), and one proposed affordable housing project (Emporia II, applying for funding in 2022), that were developed on infill properties in the downtown core. There are no other known limitations to development of this site for residential uses or affordable housing within the 6th cycle.~~

~~2.~~ *NWC Holt Boulevard & Miramonte Avenue*

- Inclusion in Previous Housing Element.

  The site consists of three~~These~~ parcels that were not included in prior housing elements. They are newly carried forward as part of the Downtown Opportunity Area in the 6th cycle inventory under Strategy 1.

- Zoning

  The site ~~is currently zoned for Neighborhood Commercial (CN), but it will be~~was rezoned as part of the City's rezoning program (Program 13) ~~with a proposed designation of~~to MU-1, part of the Holt Boulevard District (LUA-3) under the Downtown District Plan, which allows ~~up~~ between 25 and~~to~~ 75 dwelling units per acre and is suitable for lower income housing.

- Size of Site

  This site consists of 3 parcels which combined cover 0.5 acres. To facilitate the consolidation of these lots and promote redevelopment, the City will implement a lot consolidation ordinance, as described in Program 10. Because this lot is along Holt Boulevard and within the Downtown Opportunity Area, it will benefit from the provisions of both Programs 8 and 10.

- Existing Use

  The entirety of this site is currently operating as a used car sales lot. Car lots provide a unique opportunity for redevelopment because limited demolition is necessary; as a result, developers can often afford to pay higher land costs. Furthermore, this lot is currently occupied by an independent car sales operation, so strategic decisions by major corporations would not be necessary.

- Availability of Sites

  Typical commercial properties are leased on three- to five-year terms. It is unlikely this site would have lease terms longer than industry standards. In addition, uses that occupy lower-rent properties, like small-scale independent used car sales, are historically phased out as land values rise to the point where

property owners can realize higher profits through either redevelopment or sale of the property. Given the current market conditions (described above), which show a strong demand for residential, ~~rezoning this property from commercial only (CN)~~the site is expected to ~~mixed use (MU-1)~~transition over the planning period as residential demand continues to rise. ~~and allowing for residential only development, as proposed, will increase the current value of the property and encourage owners to consider alternative uses, like residential.~~ The City contacted property owners regarding the proposed land uses changes. Several property owners reached out to discuss changes with the City and none indicated that housing development was not feasible.

- Feasibility of Development

  This property is within ~~Phase II of~~ the Downtown District Plan (MU-1), Holt Boulevard District (LUA-3)~~—~~, which promotes "park once" strategies, and it is adjacent to ~~a planned~~the bus rapid transit (BRT) line on Holt Boulevard that is ~~already funded~~under construction~~,~~ and expected to be operational ~~in~~ by late 2026~~3~~. Both of these conditions reduce the parking burden of the site, reducing the costs and design challenges associated with accommodating parking on smaller housing sites. Discussions with National CORE~~ore~~, the affordable housing developer who constructed and operates the Vista Verde affordable housing project on East Holt Boulevard (completed 2021), indicated that they have developed affordable projects on sites as small as 0.5 acre~~s~~, further demonstrating that high-density affordable housing is realistic at this scale under current market and regulatory conditions. The provisions of both Programs 8 and 10 are intended to encourage development and enable affordable housing on this site.

Realistic Capacity

To determine the realistic capacity on these sites, the City identified a realistic density below the maximum~~,~~ and applied an additional reduction factor to sites with a mixed-use designation to account for potential non-residential uses. A summary of the assumptions and realistic capacity is included in Table 5-3, and detailed descriptions of the adjustment factors applied to sites within each zoning designation is provided after the table.

Table 5-3
Strategy 1: Realistic Capacity

Zoning ~~(after rezoning)~~	Number of Parcels	Acres* (Net)	Max Density (du/ac)	Max Capacity (units*)	Adjustment Factors**	Final Realistic Capacity (units*)

Opportunity Area: Downtown						
~~HDR-45~~	~~2~~	~~1.2~~	~~45~~	~~54~~	~~53.3%~~	~~29~~
MU-1	3	0.5	75	39	28.0%	**11**
TOTAL	3 ~~5~~	0.5 ~~1.7~~		39 ~~92~~		11 ~~40~~

Source: City of Ontario, ~~2022~~2026.

*Acres and units have been rounded.
**See Adjustment Factor below for a detailed description of the adjustment factors applied to each group of sites.

Adjustment Factors

- ~~HDR-45~~

~~Description:~~

- ~~Size of site: 2 parcels (consolidated), 1.2 acres~~
- ~~Allowable density: 25-45 dwelling units per acre~~
- ~~RHNA affordability: Lower-income (50 percent), Moderate-income (50 percent)~~
- ~~Existing Use: Parking Lot (see Existing Use under "Site Specific Information" above)~~
- ~~Infrastructure availability: Yes, no constraints~~
- ~~Environmental constraints: None known~~

~~Capacity Factors:~~

- ~~*Land Use Controls and Site* Improvements. No Adjustment~~
  ~~Site size reflects net acreage.~~
- ~~*Realistic Residential Capacity*. No Adjustment~~
  ~~The HDR-45 zone is a residential district, intended for 100 percent residential projects. For this reason, 100 percent of the site area was considered viable for residential development, and no reduction factor was applied.~~
- ~~*Typical Densities*. 53.3 Percent Adjustment~~
  ~~For conservative estimates, the minimum density of the zone, 25 dwelling units per acre, was used to determine the total housing capacity. 25 dwelling units per acre is 53.3 percent of the maximum density allowed.~~
- ~~*Infrastructure Availability*. No Adjustment~~

~~Not applicable, no constraint~~

~~- *Environmental Constraints.* No Adjustment~~
~~No known site constraint~~

~~**Total Capacity Adjustments: (1)x(1)x(.533)x(1)x(1) = 53.3 percent**~~

- MU-1

  Description:

  - Size of site: 3 parcels (consolidated), 0.5 acres
  - Allowable density: 25-75 dwelling units per acre
  - RHNA affordability: Lower-income (50 percent), Moderate-income (50 percent)
  - Existing Use: Used car sales (see Existing Use under "Site Specific Information" above)
  - Infrastructure availability: Yes, no constraints
  - Environmental constraints: None known

  Capacity Factors:

  - *Land Use Controls and Site Improvements.* No Adjustment
    Site size reflects net acreage.
  - *Realistic Residential Capacity.* 60 Percent Adjustment
    This mixed-use designation allows for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses. Recent and proposed development in the district includes a mix of all three types of projects, including the following residential and mixed use projects: The Hutton C-Block development is a mixed-use project with commercial uses on the ground floor, structured parking, and multi-family housing on upper floors. The Palmer West project is 100 percent residential. Two affordable projects, Emporia I, completed in 2020, and Emporia II,~~ which is entitled and expected to start construction in 2022 if funding applications are successful~~ completed in 2024, are also examples of 100 percent residential projects in this district, and illustrated that the zoning can support affordable projects. To account for potential non-residential uses, an adjustment factor of 60 percent was applied. This estimate generally reflects the

mix of project types the City anticipates based on recent applications for development in the MU-1 zone.

- *Typical Densities.* 46.7 Percent Adjustment

  The downtown mixed-use category allows residential densities between 25 and 75 dwelling units per acre. A realistic density on the lower end of the allowed range, 35 dwelling units per acre, was used to determine the total capacity in this zoning district. Recent entitlements in excess of 40 dwelling units per acres have been issued in this district. Projects include the Hutton C-Block development (60 dwelling units per acre), and the Palmer West multi-family project (47 dwelling units per acre). Affordable projects in the City, like the Emporia I development (completed in 2020), was built at a slightly lower density (26 dwelling units per acre), but there are several examples of recent affordable projects outside the City that are built at or above 35 dwelling units per acre including, Clark Commons (36 du/ac), affordable family apartments in Buena Park, completed in 2019. Accordingly, 35 dwelling units per acre will provide realistic capacity estimates. Thirty-five dwelling units per acre is 46.7 percent of the maximum density allowed.

- *Infrastructure Availability.* No Adjustment

  Not applicable, no constraint

- *Environmental Constraints.* No Adjustment

  No known site constraint

Total Capacity Adjustments: (1)x(.600)x(.467)x(1)x(1)=28.0 percent

Units by RHNA Income Category

On both sites, only 50 percent of the final realistic capacity was estimated to have the potential to accommodate lower incomes, as shown in Table 5-4.

Table 5-4

*Acres and units have been rounded.

Strategy 2: Holt Boulevard Opportunity Areas (West and East)

Opportunity Areas

Holt Boulevard is one of the city's original thoroughfares, extending through Ontario and connecting to neighboring communities. It is also an important regional transit corridor. This strategy includes two Opportunity Areas, West Holt Boulevard and East Holt Boulevard.

Suitability of Sites

Infrastructure Availability

Like Downtown, Holt Boulevard is well served by infrastructure. Water, sewer, and other utilities are in place along the corridor, and the area will benefit from ongoing technology and infrastructure investments associated with the BRT expansion and OntarioNet.

RHNA Income Category

These sites were determined to be suitable for lower-income households based on proximity to transit, access to grocery stores, proximity to available infrastructure and utilities, and because there are no known requirements for environmental mitigation, as discussed below.

- *Proximity to transit.* Holt Boulevard has long been an important transit corridor in the city. Existing bus lines along Holt Boulevard report some of the highest ridership rates in San Bernardino County. ~~In addition, the~~The San Bernardino County Transportation Authority (SBCTA) ~~plans to provide~~is implementing new ~~bus rapid transit~~Bus Rapid Transit (BRT) service along Holt Boulevard as part of the West Valley Connector Project. ~~Those portions~~Portions of the project ~~that will serve~~serving Holt Boulevard are ~~funded~~under construction and ~~scheduled for operation in 2023. are~~ expected to be operational by the end of 2026.

  - West Holt Boulevard. Approximately 70 percent of the land area identified for lower- and moderate-income housing along West Holt Boulevard is within a 5-minute walk of a planned BRT stop; 100 percent of sites are within a 10-minute walk of a planned BRT stop.

- *Access to grocery stores.*

- West Holt Boulevard. Approximately half of the acreage identified in this Opportunity Area are within a 1/2 mile walk of an existing grocery store (Superior Grocers at 815 W. Holt Blvd.).

- East Holt Boulevard. Sites ~~1-9, as noted on Figure 5-4~~west of Grove Avenue in the~~,~~ East Holt Housing Opportunity Area~~,~~ are within a 1/2 mile walk of an existing grocery store (Cardenas Markets at 720 E. Holt Blvd.). Sites east of Grove avenue are within 1/2 mile walk of a BRT station, which provides access to a variety of grocery options, including a BRT stop in front of the Cardenas Market at 720 E. Holt Blvd.

- *Proximity to infrastructure and utilities.* As noted under infrastructure availability, this area is well-served, and these sites will benefit from innovative technology the City is piloting in the downtown.

- *Environmental mitigation.* As noted under Environmental Constraints, and discussed under Existing Use, there are no known natural or man-made environmental development concerns that would require mitigation.

To provide conservative estimates, however, only 50 percent of the identified capacity (described under Realistic Capacity) was considered suitable to accommodate lower-income housing, while the balance was considered suitable for moderate-income housing (detailed under Units by RHNA Income Category).

Environmental Constraints
The development in these areas would constitute urban infill projects on already disturbed land, so there are no environmental constraints limiting development potential.

Analysis of sites to accommodate lower-income RHNA

West Holt Boulevard
The City has identified ~~36~~27 parcels (~~18.3~~12.9 acres) along West Holt Boulevard for inclusion in the land inventory, as shown in Figure 5-3 and described below.

Figure 5-3 West Holt Housing Opportunity Area

- Inclusion in Previous Housing Element

  Several parcels were included in the City's prior housing element (see a detailed list by APN in Appendix B and Program 15). To further encourage residential development on parcels listed in the last housing element and to comply with AB 1397, by-right development will be allowed for any residential project that includes at least 20 percent of units affordable to lower-income households, as described in Program 15.

- Zoning

  - *Sites with Adequate Zoning*. There are ~~27~~25 parcels (~~12.8~~11.4 acres) within the Opportunity Area currently zoned as HDR-45, which allows residential projects at densities between 25 and 45 dwelling units per acre and satisfies the default density requirements for lower-income housing and is sufficient to support moderate-income housing as well.

  - ~~*Proposed* *Rezoning*~~. Two parcels (1.5 acres)~~, currently~~ were rezoned ~~as~~ from Community Commercial (CC) to MU-8C-AH~~, are~~ as part of the City's rezoning program (Program 13). The City ~~proposes~~ changed~~ing~~ the designation to MU-8C~~2~~ with an Affordable Housing Overlay ~~(described in Program 13)~~, which ~~will allow~~allows a density range of 20~~-~~-40 dwelling units per acre and is suitable for lower- and moderate-income housing.

~~Five parcels (4.0 acres) are currently zoned as MDR-25. These will be included in the City's rezoning program (Program 13) with a proposed designation of HDR-45, which allows up to 45 dwelling units per acre and is suitable for both lower- and moderate-income housing.~~

- Size of Sites

  While parcels smaller than 0.5 acres have been identified throughout West Holt Boulevard, such parcels were only included in the sites inventory if they maintained consistent ownership with an adjacent parcel and together the parcels were greater than 0.5 acres. Adjacent parcels with consistent ownership often function as a single site. As described in Program 10, the City plans to adopt an ordinance to encourage site consolidation.

- Existing Use

  Existing uses include parking lots (2 consolidated sites, 1.4 acres), aging commercial properties including, retail/service commercial (4 consolidated sites, ~~2.8~~3.65 acres), materials suppliers and related parking areas (2 consolidated sites, 2.1 acres), automotive uses (2 sites, ~~1.0~~ 0.62 acres), and used car sales lots (~~11 sites~~6 consolidated lots, 5.04~~10.5~~ acres). These commercial properties are underutilized and surrounded by residential uses.

  The identified parking lots are associated with an established restaurant. While the restaurant is not expected to turn over this cycle, the parking areas are large, and the restaurant would still retain a large parking area that was not included in the inventory. The consolidated sites (4 parcels total) are adjacent and could be further consolidated to enable redevelopment. The City discussed general growth opportunities with property owners, who do not currently have plans to redevelop, but development could occur during the 6th cycle. Program 10 encourages lot consolidation as described above.

  The retail/service commercial properties identified in the inventory were selected because of the age of the buildings and the current mix of uses. The 4 consolidated sites are comprised of 7 parcels with structures built between 1950 and 1960. The typical lifespan of a commercial building is 30 years. The structures on the identified sites range in age from 60 to 70 years. As structures age, systems need to be updated and hazardous materials common in construction when these buildings were constructed, like asbestos and lead paint need to be abated, increasing the cost of upkeep. As these costs increase, cost-effective revenue generation declines.

When buildings no longer produce cost-effect revenue, they have reached the end of their useful life, and properties (and property owners) are typically ready for redevelopment. Tenants in these structures include liquor stores, a party supply store, an independent furniture store, a custom glass and mirror supplier, appliance repair, and a beauty school. All are small independent businesses, so redevelopment of these properties would not require strategic decisions by major corporations.

~~Other commercial uses include a nursery, a building material supplier, tire sales and automotive services. The nursey and building materials supplier operate largely outdoors and have very few supporting structures. If these properties were to redevelopment, these uses would be easier to relocate as tenant improvements are minimum. The tire sales and automotive uses also occupy structure built in the 1970s, that are now reaching the end of their useful lives.~~

Car sales lots, currently occupy more than half of the acreage identified in the sites inventory. These uses are largely undeveloped, which means the cost and effort required to transition to residential uses are reduced as less site preparation will be necessary.

- Availability of Sites

  In general, typical commercial properties are leased on three- to five-year terms. It is unlikely that existing tenants in this area would have lease terms longer than industry standards. In addition, uses that occupy lower-rent properties, like those included in the land inventory along West Holt, are historically phased out of urban areas as land values rise to the point where property owners can realize higher profits through either redevelopment or sale of the property. Given the current market conditions (described above), which show a strong demand for residential, an increased appetite for higher-density projects. The City has reached out to property owners in this area. While none have current plans for housing development, many were interested in potential lot consolidation, indicating the redevelopment is feasible within the 6th cycle.

- Feasibility of Development

  Sites along West Holt Boulevard were identified based on proximity to transit, potential for redevelopment, and current zoning.

There is ~~a growing~~sustained interest in residential development in this area~~. The~~, as evidenced by recent and ongoing entitlement activity for multifamily projects along West Holt Boulevard and in the broader corridor. Building on earlier entitlements, such as the Roosevelt Tower Apartments~~, located~~ at 549 West Holt Boulevard~~, ;~~ ~~is currently in entitlements, but construction of the 59-unit apartment building is expected~~newer multifamily and mixed-use proposals; and continued developer inquiries~~,~~ indicate that the market remains receptive to ~~begin in 2022. While this project indicates there is an appetite for~~ higher-density housing ~~development in this part of the city, examples from the larger region illustrate how underutilized sites, similar to those identified along West Holt, are being redeveloped with affordable housing, demonstrating~~at this location during the ~~potential for affordable housing on the identified sites.~~ current planning period.

Affordable housing projects throughout the region have started to look to smaller underutilized parking lots and aging commercial sites for opportunities to develop affordable housing in areas that are well served by transit and infrastructure, like the sites identified along West Holt Boulevard. Recent examples include the Heroes Landing affordable housing project in Santa Ana, CA, which transformed an underutilized parking lot on a 1.5-acre site into 75 units for permanent supportive housing. Also in Santa Ana, the Tiny Tim Plaza affordable housing project that is currently under construction turned an aging strip commercial center into 51 units of affordable family housing and community-serving commercial uses.

East Holt Boulevard

The City has identified ~~21~~ 33 parcels (~~22.2~~41.9 acres) for inclusion in the land inventory, as shown in Figure 5-4 and described below.

Figure 5-4 East Holt Housing Opportunity Area

- Inclusion in Previous Housing Element.

  These parcels were not included in prior housing elements.

- Zoning

  - *Sites with Adequate Zoning*. ~~Five~~ Six vacant parcels (5.1 acres) and eleven underutilized parcels (~~11.2~~10 acres) are zoned MU-~~2~~6, which allows 14~~-~~–40 dwelling units per acre, a density sufficient to support the development of lower- and moderate-income housing without rezoning.

  - ~~*Proposed* Rezoned~~ *Properties~~ing~~*. ~~Four~~ Three vacant parcels ~~(5.9 acres) are currently~~ were rezoned from~~for~~ Business Park (BP) to MU-6-AH~~–~~, consistent with ~~and will be included in~~ the City's rezoning program (Program 13)~~, with a proposed designation of MU-2-AH (mixed-use with an Affordable Housing Overlay, described in Program 13)~~. These~~is~~ designations ~~will~~ allow a density range of 20~~-~~–40 dwelling units per acre for MU-6-AH. As such, they are ~~and is~~ suitable to support lower- and moderate-income housing.

  - In addition, the City identified 12 properties during the 6th cycle, totaling approximately 19.2 acres, that were rezoned to MU-6-AH with the Affordable Housing Overlay Zone during the 6th Cycle. All rezoning was processed either before or concurrent with the adoption of the revised Housing Element

(2026), so an additional implementing program is not required.

- Size of Sites

  There are no sites smaller than 0.5 acres or larger than 10 acres identified within the East Holt Opportunity Area. The City's strategy emphasizes assembling small and mid-sized parcels into development sites that are large enough to support multifamily projects while remaining consistent with the established products currently of interest in the corridor.

- Existing Use

  Nine parcels (11 acres) within the Opportunity Area are currently vacant. Vacant sites are shaded in Figure 5-4, but no numerical value is assigned to Vacant sites.

  Eleven parcels (11.2 acres) are underutilized sites. The potential for redevelopment on each non-vacant site, numbered by parcel in Figure 5-4, is described below.

  1-2. Between Campus Avenue and Allyn Avenue, two parcels (1.5 acres) are identified to have the potential for redevelopment. The first (site 1-44) is a used car sales lot, which has potential for redevelopment because of the low existing floor-area ratio (FAR) (very small building and large parking area) and the age of the building. The demolition required for redevelopment would be minimal. Adjacent to this is a parcel (site 1-45, 0.91 acres) where servicelow-intensity commercial uses, including a laundromat and automotive shop, have been identified as candidates for redevelopment due to the age of the buildings (50+ years old) nearing the end of a typical lifespan for commercial buildings. Tenants on both sites are independent operators, so redevelopment of these properties would not require strategic decisions by major corporations.

  3. Traveling east on Holt Boulevard, another parcel (0.90 acres), just east of the Allyn Avenue intersection, has also been identified to have the potential for redevelopment due to the low existing FAR (large parking area and small building), the age of the structure (48 years old), and because an independent retail use occupies the site. the City has entitled a Planned Unit Development on four vacant sites 1-39, 1-42, 1-43, 1-51. The entitlement includes a 100 percent deed-restricted affordable housing community, known as Vista Verde II, which is being built in partnership between the City and National CORE. Vista Verde II was entitled in February 2025 and will provide 144 lower

income units funded through an Affordable Housing and Sustainable Communities (AHSC) program award, City contributions, and tax credit equity. This project reinforces the City's commitment to producing affordable housing and services to support long-term housing stability for lower income households.

Site 1-50 at the northwest corner of Holt Boulevard and Allyn Avenue is not included in the entitlement, but property owners of the existing O'Reilly Auto parts have expressed interest in selling the property to the City to house affordable housing.

~~4.6~~ Continuing east on Holt Boulevard, ~~on the other side of three vacant sites included in the inventory~~immediately east of the entitled Vista Verde II project, sit three parcels (sites 1-37, 1-38, and 1-41, ~~4.5~~3.2 acres), with potential for redevelopment due to low existing FAR, the age of existing structures, and because the sites are currently used by an independent automotive parts retailer and an independent automotive repair shop, which often produce noise, odors, and other nuisances that are incompatible with residential uses. These sites, however are adjacent to several residential properties. Converting these sites to housing would improve the land use compatibility for adjacent residents.

~~7.~~ 9. Further east along Holt Boulevard, three sites (1-34, 1-35, and 1-36, 1.8 acres) are identified as candidates for redevelopment. The first two properties include an unused parking lot and a boarded-up, vacant building that once functioned as a church. These sites were identified for potential redevelopment because of the age of the structure (nearly 100 years old), the poor state of repair of the building, and because the two sites are not currently being used. An automotive repair shop occupies the third parcel; it was identified as a candidate for redevelopment because it is adjacent to residential uses, which can cause nuisance issues, and has a low existing FAR.

~~10.~~ 11. East of the Grove Avenue intersection sit~~s~~ two sites (1-32 and 1-33, 2.4 acres), each with an existing motel. These sites were identified because both are older, underperforming, budget motels that could be converted into permanent supportive housing or demolished and rebuilt with housing affordable to lower- and moderate-income households.

Sites 2-4 and 2-5 were identified as suitable for affordable housing development in conjunction with the vacant site 2-6. Site 2-4 houses a postal office while site 2-5 houses an aging office with a low existing FAR. It is anticipated that the development of the

vacant parcel at site 2-6 will spur development on these adjacent lots, to account for existing uses on these properties, however, units have only been projected on the vacant parcel.

Site 3-58 houses DG market, discount retailer. This site was identified as suitable for affordable housing development due the low existing FAR, the size of the site and the potential for the site to turn over due to reduced retail demand.

Sites 3-24 and 3-52 are more than 50 percent vacant. Site 3-37 houses a vacant building with extremely low FAR, that is prime for redevelopment.

Sites 1-31, 1-30, 2-6, 2-12, 2-13, 2-14, 3-41, 3-39, 3-38, 3-59, and 3-46 are vacant.

- Availability of Sites

  In general, typical commercial properties are leased on three- to five-year terms. It is unlikely that existing tenants in this area would have lease terms longer than industry standards. ~~In addition, uses that occupy lower-rent properties, like those included in the land inventory along East Holt, are historically phased out of urban areas as land values rise to the point where property owners can realize higher profits through either redevelopment or sale of the property.~~Many of the corridor's lower-rent, auto-oriented, and small strip commercial uses are ~~located~~ on parcels suitable for affordable housing, and as land values and interest in residential and mixed-use infill increase, these uses are expected to transition to higher-value housing or mixed-use projects as owners pursue opportunities to redevelop or sell.~~ Given t~~The current market conditions (described above)~~,~~ ~~which~~ show a strong demand for residential~~,~~ and increased appetite for higher-density projects. Existing and planned affordable housing projects in this area show the viability of such sites for lower income housing.

  The City reached out to several property owners in this area. While none have current plans for housing development, those who responded would consider introducing housing or affordable housing should the opportunity arise, the primary concern property owners indicated was smaller lot sizes, which the City is working to mitigate through the provisions of program 10, including adoption of a lot consolidation ordinance to encourage and enable development of affordable housing.

- Feasibility of Development

Like West Holt Boulevard, sites along East Holt Boulevard were identified based on proximity to transit, potential for redevelopment, and current zoning.

Approximately half of the sites identified in the East Holt Boulevard Opportunity Area are within a 5-minute walk of a planned BRT stop; 100 percent of sites are within a 10-minute walk of a planned BRT stop.

There is a growing interest in residential development in this area. This is evidenced by the Vista Verde affordable housing project, completed in 2021, which was developed in the ~~MU-2~~mixed-use district along East Holt Boulevard as a 100-percent affordable housing project, demonstrating that this zone and area can support affordable housing. In addition to this project, a new ~~market rate~~one hundred percent affordable project is ~~proposed~~ entitled at 1001 E Holt ~~Blvd~~Boulevard. ~~1001 E Holt Blvd. is currently in entitlements, but construction of the 42-unit apartment building is expected to begin in 2022 or 2023~~ which is fully funded by multiple grants including an Affordable Housing and Sustainable Communities (AHSC) grant.

Examples from the larger region further illustrate how nonvacant sites, similar to those identified along West Holt, are being redeveloped with affordable housing, demonstrating the potential for affordable housing on the nonvacant sites.

Affordable housing projects throughout the region have started to look to smaller underutilized parking lots and aging commercial sites for opportunities to develop affordable housing in areas that are well served by transit and infrastructure, like the sites identified along West Holt Boulevard. Recent examples include the Heroes Landing affordable housing project in Santa Ana, CA, which transformed an underutilized parking lot on a 1.5-acre site into 75 units for permanent supportive housing. Also in Santa Ana, the Tiny Tim Plaza affordable housing project that is currently under construction turned an aging strip commercial center into 51 units of affordable family housing and community-serving commercial uses.

Realistic Capacity

To determine the realistic capacity on these sites, the City identified a realistic density below the maximum, and applied an additional reduction factor to sites with a mixed-use designation to account for potential non-residential uses. A summary of the assumptions and realistic capacity is included in Table 5-5, and detailed descriptions of the

adjustment factors applied to sites within each zoning designation is provided after the table.

Table 5-5
Strategy 2: Realistic Capacity

Zoning (after rezoning)	Number of Parcels	Acres* (Net)	Max Density (du/ac)	Max Capacity (units*)	Adjustment Factors**	Final Realistic Capacity (units*)
Opportunity Area: West Holt

Source: City of Ontario, ~~2022~~2026.

*Acres and units have been rounded.
**See Adjustment Factor below for a detailed description of the adjustment factors applied to each group of sites.

Adjustment Factors

- HDR-45

  Description:

  - Number and size of sites: ~~21~~25 sites ~~after consolidation of 32 parcels, 16.9~~totaling approximately 11.4 net acres
  - Allowable density: 25-45 dwelling units per acre
  - RHNA affordability: Lower-income (50 percent), Moderate-income (50 percent)
  - Existing Use: Parking lots, aging retail, building materials supply, automotive services, auto sales, commercial

services (see Existing Use under "Site Specific Information" above for details)

- Infrastructure availability: Yes, no constraints
- Environmental constraints: None known

Capacity Factors:

- *Land Use Controls and Site Improvements.* No Adjustment
  Site size reflects net acreage.
- *Realistic Residential Capacity.* No Adjustment
  The HDR-45 zone is a residential district, intended for 100 percent residential projects. For this reason, 100 percent of the site area was considered viable for residential development, and no reduction factor was applied.
- *Typical Densities.* ~~53.3~~55.6 Percent Adjustment
  For conservative estimates, the minimum density of the zone, 25 dwelling units per acre, was used to determine the total housing capacity. 25 dwelling units per acre is ~~53.3~~55.6 percent of the maximum density allowed.
- *Infrastructure Availability.* No Adjustment
  Not applicable, no constraint
- *Environmental Constraints.* No Adjustment
  No known site constraint

Total Capacity Adjustments: (1)x(1)x(.556~~.533~~)x(1)x(1) = 55.6~~53.3~~ percent

- ~~MU-2 and MU-2-AH,~~ MU-6, MU-6-AH, and MU-8C-AH (not including sites 2-4, 2-5, or 2-6)

  Description:

  - Number and size of sites: ~~20~~Across West Holt and East Holt, there are 27 parcels, 15~~8~~ of which are in the Affordable Housing Overlay (14.8 acres), and 13 are not in the overlay (13.3 acres) ~~sites after consolidation of 22 parcels, 23.7 acres~~
  - Allowable density:
    - MU-6~~2~~: 14-40 dwelling units per acre
    - MU-6~~2~~-AH and MU-8C-AH: 20-40 dwelling units per acre

- RHNA affordability: Lower-income (50 percent), Moderate-income (50 percent), with the exception of sites 2-~~-~~4, 2-5, and 2-6, discussed further below.

- Existing Use: ~~Vacant (9 parcels, 6.6 acres),~~Sites include a mix of vacant parcels and underutilized urban commercial and auto-oriented uses such as older motels, auto repair and parts ~~store, automotive services~~stores, open storage, used car sales, aging ~~motels~~strip commercial, small convenience ~~store in aging building~~stores on largely ~~vacant lot, vacant~~paved lots, and a former church and parking area, ~~Used car sales (see~~ all identified as candidates for redevelopment.~~ under "Site Specific Information" above)~~

- Infrastructure availability: Yes, no constraints. The corridor is fully served by utilities and is aligned with existing and planned high-frequency transit, including the Holt Boulevard BRT.

Environmental constraints: None known

Capacity Factors:

- *Land Use Controls and Site Improvements.* No Adjustment

  Site size reflects net acreage~~.~~, with no additional reductions for site improvements beyond standard requirements.

- *Realistic Residential Capacity.* 75 Percent Adjustment

  This mixed-use designation allows for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses. Recent and proposed development in the district includes a mix of ~~all three types of~~ projects, including ~~the following residential and mixed use projects:~~ 1001 E. Holt Blvd. (Vista Verde II), which is fully entitled for 144 lower-income units and fully funded through AHSC and other grants; and 1389 E Holt Blvd, a privately funded project entitled for 50 units including 3 affordable to very low income households. ~~is a mixed-use project with commercial and residential uses~~, ~~. The Roosevelt Tower Apartments is 100 percent residential.~~ Vista Verde I Affordable Housing, completed in 2021, is also 100 percent residential. All projects~~, and it~~ illustrate~~s~~ that the MU-~~2~~ 6 and MU-1 zoning district~~s~~ can support affordable projects.

To account for potential non-residential uses, a reduction factor of 25 percent was applied. This estimate generally reflects the mix of project types the City anticipates on the identified properties based on recent applications and zoning changes. The remaining 25 percent of land on identified sites is assumed to be for non-residential uses. This estimate generally reflects the mix of project types the City anticipates based on recent applications for development in the MU-6 and MU-8C~~2~~ zones.

- *Typical Densities.* 75 Percent Adjustment

  The Holt Boulevard mixed-use categories~~y~~ (MU-~~2~~6 and MU-8C) allow~~s~~ residential densities between 14 and 40 dwelling units per acre. Mixed-use sites that are part of the rezoning program are also within the affordable housing overlay (MU-~~2~~6-AH or MU-8C-AH), which will raise the minimum density to 20 dwelling units per acre, (densities between 20 and 40 dwelling units per acre are allowed). A realistic density ~~on~~ in the middle of the allowed range, 30 dwelling units per acre, was deemed realistic to determine the total capacity in these zoning districts. Recent and proposed projects in mixed-use areas along Holt Boulevard supports this density, with most proposed residential projects falling between 25 and 35 dwelling units per acre, but proposed projects have been as high as 72 dwelling units per acre. ~~including, the Roosevelt Tower Apartments, located at 549 West Holt Boulevard (72 dwelling units per acre), and 1001 E. Holt Blvd., a mixed-use multi-family project (35 dwelling units per acre)~~. Accordingly, 30 dwelling units per acre will provide a realistic capacity estimate.

- *Infrastructure Availability.* No Adjustment

  Not applicable, no constraint

- *Environmental Constraints.* No Adjustment

  No known site constraint

Total Capacity Adjustments: (1)x(.750)x(.750)x(1)x(1)=56.3 percent

- **MU-6-AH: Sites 2-4, 2-5, and 2-6.**

  - *Land Use Controls and Site Improvements.* No Adjustment. Site size reflects net acreage, with no additional reductions for site improvements beyond standard requirements.
  - *Realistic Residential Capacity.* 34.8 Percent

Combined, the sites total 9.7 acres (4.7 acres for 2-4, 0.5 acres for 2-5, and 4.5 acres for 2-6), with a combined maximum residential capacity of 388 units. Due to existing uses on two of the sites, however, the City assumed that only the vacant property (site 2-6, 4.5 acres) would be suitable for redevelopment within the 6th Cycle, which would allow for a maximum of 135 units.

To account for potential non-residential uses, however, an additional reduction factor of 25 percent was applied. This estimate generally reflects the mix of project types the City anticipates on the identified properties based on recent applications and zoning changes. The remaining 25 percent of land on identified sites is assumed to be for non-residential uses. This estimate generally reflects the mix of project types the City anticipates based on recent applications for development in the MU-6 and MU-8C zones.

- *Typical Densities.* 75 Percent Adjustment

  All three parcels are designated for mixed-use development (MU-6-AH) with the affordable housing overlay, permitting 20–40 dwelling units per acre. The same density assumption (30 dwelling units per acre) as other properties in this opportunity area with the same zoning is used (see Typical Densities in the prior MU-6-AH section for a full discussion).
- *Infrastructure Availability.* No Adjustment

  Not applicable, no constraint
- *Environmental Constraints.* No Adjustment

  No known site constraint

Total Capacity Adjustments: (1)x(.348)x(.750)x(1)x(1)=26.1 percent

- PUD.

  The City has entitled a Planned Unit Development on these properties for a 100 percent deed-restricted affordable housing community, known as Vista Verde II, which is being built in partnership between the City and National CORE. Vista Verde II was entitled in February 2025 and will provide 144 lower income units funded through an Affordable Housing and Sustainable Communities (AHSC) program award, City contributions, and tax credit equity. This project reinforces the City's commitment to producing affordable housing and services to support long-term housing stability for lower income households.

The realistic capacity for this site is 144 units, consistent with the entitlement.

Units by RHNA Income Category

To further ensure conservative estimates, only 50 percent of the final realistic capacity, except sites 2-4, 2-5, and 2-6, in both Opportunity areas was estimated to have the potential to accommodate lower incomes, as shown in Table 5-6. Due to existing uses, only 26.7 percent of the final realistic capacity on sites 2-4, 2-5, and 2-6, grouped together under the MU-6-AH zoning category, was estimated to have potential to accommodate lower income housing.

Table 5-6
Strategy 2: Units by Income Category

*Acres and units have been rounded.

Strategy 3: Old Cardenas Market Housing Opportunity Area

Opportunity Area

The Old Cardenas Market site consists of three parcels (3.5 acres) that front Euclid Avenue, as shown in Figure 5-5 and described below.

Figure 5-5 Old Cardenas Market Housing Opportunity Area

Suitability of Sites

Infrastructure Availability

Like Downtown and Holt Boulevard, this site is well-served by infrastructure.

RHNA Income Category

The ~~Downtown~~Old Cardenas Market Opportunity Area was determined to be suitable for lower-income households based on proximity to transit, access to existing jobs, access to grocery stores, proximity to available infrastructure and utilities, and because there are no known requirements for environmental mitigation:

- *Proximity to transit.* The sites in this Opportunity Area are along an existing Omnitrans bus route (Route 83), which runs the length of Euclid Avenue. SBCTA has also planned a new BRT route along Euclid Avenue, which will serve the site once it is operational.
- *Access to existing and planned jobs.* The site is just a little over 1 mile from the established industrial employment zone, which begins east of Campus Avenue.
- *Access to grocery stores.* All sites in this Opportunity Area are within a 1/4 mile walk of an existing grocery store (Cardenas Markets at 1850 S. Euclid Ave.).
- *Proximity to infrastructure and utilities.* As noted under infrastructure availability, this area is well-served, and these sites will benefit from innovative technology the City is piloting in the downtown.

- *Environmental mitigation.* As noted under Environmental Constraints, and discussed under Existing Use, there are no known natural or man-made environmental development concerns that would require mitigation.

To provide conservative estimates, however, only 50 percent of the identified capacity (described under Realistic Capacity) was considered suitable to accommodate lower-income housing, while the balance was considered suitable for moderate-income housing (detailed under Units by RHNA Income Category).

Environmental Constraints
There are no environmental constraints limiting development potential.

Analysis of sites to accommodate lower-income RHNA
All Sites

- Inclusion in Previous Housing Element

  These parcels were not included in prior housing elements.

- Zoning

  All three parcels ~~are~~ were ~~currently~~ zoned CN but ~~will be~~were included in the City's rezoning program. The two vacant parcels ~~are proposed to change to~~were rezoned HDR-45, while the Cardenas Market was rezoned MU-8D, ~~is proposed as~~ a mixed-use designation that allows for a density range of 20-~~30+~~75 dwelling units per acre.

- Size of Sites

  There are no sites smaller than 0.5 acres or larger than 10 acres identified within the Old Cardenas Market Opportunity Area.

- Existing Use

  The site includes an unused the parking lot behind a gas station, a vacant building that previously housed Cardenas Market and its parking area that is not currently in use, and the vacant lot north of the market.

- Availability of Sites

  The nonvacant sites within this Opportunity Area are not currently used. The building is vacant and parking lots are empty. The owner of the property is interested in redevelopment, and the City has discussed introducing residential used to help facilitate development of the site with the owner. The property owner is interested in redeveloping the shuttered site and is interested in

the introduction of residential including the potential to include affordable units, but there are no plans to redevelop at this time.

- Feasibility of Development

  These sites are classic infill lots along a commercial corridor that could be built out in a similar manner to the Vista Verde affordable housing project, completed in 2021, which was located along Holt Boulevard, another busy commercial corridor in the City, and the Emporia I affordable housing project, completed in 2020, which was located in the southern portion of the downtown district.

Realistic Capacity

To determine the realistic capacity on these sites, the City identified a realistic density below the maximum and applied an additional reduction factor to sites with a mixed-use designation to account for potential non-residential uses. A summary of the assumptions and realistic capacity is included in Table 5-7, and detailed descriptions of the adjustment factors applied to sites within each zoning designation is provided after the table.

Table 5-7
Strategy 3: Realistic Capacity

Land Use (after General Plan Update)	Number of Parcels	Acres* (Net)	Max Density (du/ac)	Max Capacity (units*)	Adjustment Factors**	Final Realistic Capacity (units*)
Opportunity Area: Old Cardenas Market						
HDR-45	2	1.3	45	59	54%	32
MU-8D	1	2.2	75	167	20%	33
TOTAL	**3**	**3.5**		**224**		**65**

Source: City of Ontario, 2022.

*Acres and units have been rounded.
**See Adjustment Factor below for a detailed description of the adjustment factors applied to each group of sites

Adjustment Factors

- HDR-45

  Description:

  - Number and size of sites: 1 site after consolidation of 2 parcels, 1.3 acres

  - Allowable density: 25-45 dwelling units per acre

- RHNA affordability: Lower-income (50 percent), Moderate-income (50 percent)
- Existing Use: Vacant
- Infrastructure availability: Yes, no constraints
- Environmental constraints: None known

Capacity Factors:

- *Land Use Controls and Site Improvements.* No Adjustment
  Site size reflects net acreage.
- *Realistic Residential Capacity.* No Adjustment
  The HDR-45 zone is a residential district, intended for 100 percent residential projects. For this reason, 100 percent of the site area was considered viable for residential development, and no reduction factor was applied.
- *Typical Densities.* 53.3 Percent Adjustment
  For conservative estimates, the minimum density of the zone, 25 dwelling units per acre, was used to determine the total housing capacity. 25 dwelling units per acre is 53.3 percent of the maximum density allowed.
- *Infrastructure Availability.* No Adjustment
  Not applicable, no constraint
- Environmental *Constraints.* No Adjustment
  No known site constraint

Total Capacity Adjustments: (1)x(1)x(.533)x(1)x(1) = 53.3 percent

- MU- ~~(new)~~8D

  Description:

  - Number and size of sites: 1 parcel, 2.2 acres
  - Allowable density: 20-75 dwelling units per acre
  - RHNA affordability: Lower-income (50 percent), Moderate-income (50 percent)

- Existing Use: Vacant building, former grocery store that has already relocated and associated parking lot (see Existing Use under "Site Specific Information" above)

- Infrastructure availability: Yes, no constraints

- Environmental constraints: None known

Capacity Factors:

- *Land Use Controls and Site Improvements.* No Adjustment
  Site size reflects net acreage.

- *Realistic Residential Capacity.* 50 Percent Adjustment
  This mixed-use designation will allow for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses, consistent with the City's existing mixed-use districts. Recent and proposed development in existing mixed-use areas include a mix of ~~all three types of~~ projects, including ~~the following residential and mixed-use projects:~~ 1001 E. Holt Blvd. (Vista Verde II), which is entitled for 144 lower-income units and fully funded through AHSC and other grants; and 1389 E Holt Blvd, a privately funded project entitled for 50 units including 3 affordable to very low income households. ~~is a mixed-use project with commercial and residential uses. The Roosevelt Tower Apartments is 100 percent residential.~~ Vista Verde I Affordable Housing, completed in 2021~~,~~ and the Emporia I and II Affordable Housing projects (completed in 2020 and 2024) are also 100 percent residential, and they illustrate that the mixed-use zoning can support affordable projects. To account for potential non-residential uses, a reduction factor of 50 percent was applied. This estimate generally reflects the mix of project types the City anticipates based on discussions with the property owner. The remaining 50 percent of land on identified sites is assumed to be for non-residential uses.

- *Typical Densities.* 40 Percent Adjustment
  The new mixed-use designation that ~~will~~ was be created under Program 13, will allows residential densities between 20 and 75 dwelling units per acre. A realistic density on the lower end of the allowed range, 30 dwelling units per acre, was deemed realistic to determine the total capacity in this new zoning district. Recent and proposed projects in existing mixed-use areas downtown and along

Holt Boulevard support this density including, the Roosevelt Tower Apartments, located at 549 West Holt Boulevard (72 dwelling units per acre), and 1001 E. Holt Blvd., a mixed-use multi-family project (35 dwelling units per acre). Accordingly, the City feels 30 dwelling units per acre will provide a realistic capacity estimate. Thirty dwelling units per acre is 40 percent of the maximum density allowed.

- *Infrastructure Availability.* No Adjustment
  Not applicable, no constraint

- *Environmental Constraints.* No Adjustment
  No known site constraint

Total Capacity Adjustments: (1)x(.50)x(.40)x(1)x(1)=20 percent

Units by RHNA Income Category

To further ensure conservative estimates, only half of the final realistic capacity was estimated to have the potential to accommodate lower incomes, as shown in Table 5-8.

Table 5-8

*Acres and units have been rounded.
~~**A new mixed-use zoning district will be established per Program 13.~~

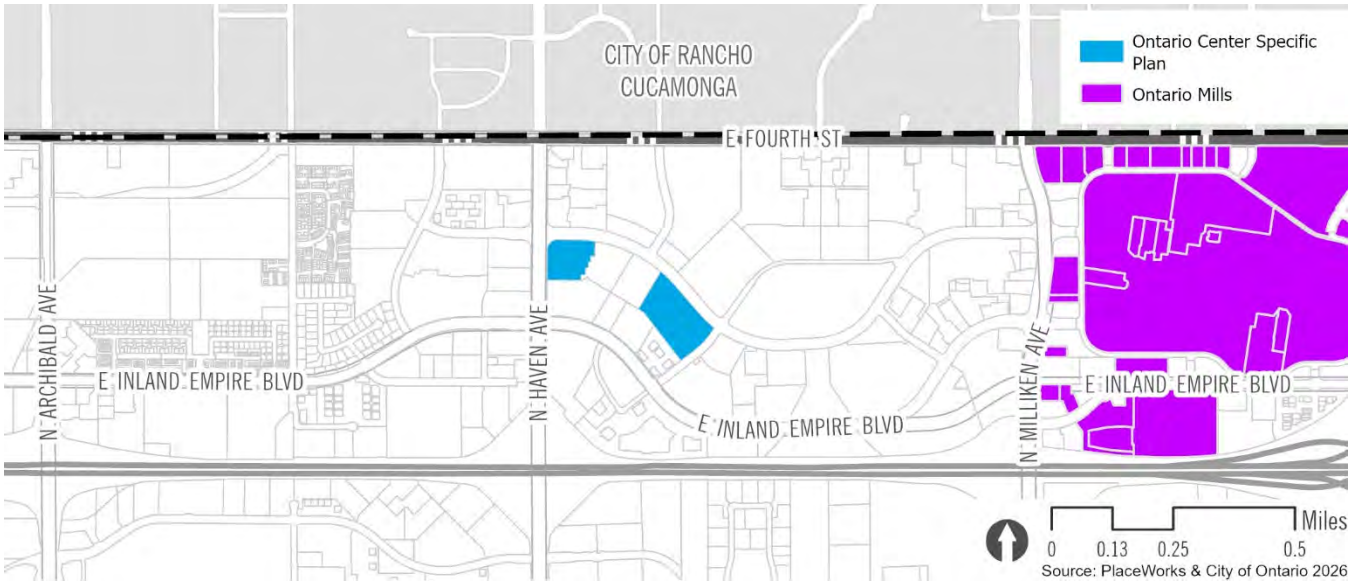
Strategy 4: Ontario Center Specific Plan Housing Opportunity Area

Opportunity Area

The Ontario Center Specific Plan offers a variety of commercial, retail, entertainment, light industrial, and office uses, as well as a mix of housing opportunities, and outlines a detailed infrastructure plan for the area. Originally adopted in 1981, the Specific Plan has been amended numerous times, including the addition of the Piemonte Overlay in 2006. The most recent amendment was adopted in 2017.

Much of the Specific Plan area has already been developed, but the remaining vacant parcels are prime candidates for development. After conversations with property owners and developers, the City identified ~~four~~ two vacant parcels (~~16.5~~ 12.9 acres), where no specific projects have been proposed, as potential sites for lower- and moderate-income housing development, as shown in Figure 5-6.

Figure 5-6 Ontario Center Specific Plan Housing Opportunity Area



Suitability of Sites

Infrastructure Availability

The backbone infrastructure to support housing development is already in place.

RHNA Income Category

The Ontario Center Specific Plan Opportunity Area was determined to be suitable for lower-income households based on proximity to transit, access to existing jobs and amenities, access to planned grocery stores, proximity to available infrastructure and utilities, and because there are no known requirements for environmental mitigation:

- *Proximity to transit.* The sites in this Opportunity Area are within a 1/4 mile walk of an existing Omnitrans bus route (Route 81), which follows Concourse Street in a loop around the Toyota Arena and fronts all sites identified in this Opportunity area.
- *Access to existing and planned jobs.* The sites in this Opportunity Area are within one of the most employment-rich areas of the City. Sites are surrounded by mid-rise office buildings and the Toyota

Arena. The Ontario Mills Mall and Ontario International Airport are both a short transit ride (on a direct line) or bike ride away.

- *Access to planned grocery store.* All sites in this Opportunity Area are within a 1/4 mile walk of a planned grocery store on the vacant lot on the southeast corner of Fourth Street and Haven Avenue.

- *Proximity to infrastructure and utilities.* As noted under infrastructure availability, this area is served by existing infrastructure and utilities.

- *Environmental mitigation.* As noted under Environmental Constraints, there are no known natural or man-made environmental development concerns that would require mitigation.

To provide conservative estimates, however, only 50 percent of the identified capacity (described under Realistic Capacity) was considered suitable to accommodate lower-income housing, while the balance was considered suitable for moderate-income housing (detailed under Units by RHNA Income Category).

Environmental Constraints

No environmental constraints limit development potential on these sites.

Analysis of sites to accommodate lower-income RHNA

All Sites

- Inclusion in Previous Housing Element

  These parcels were not included in prior housing elements.

- Zoning

  The zoning designation for all sites is Specific Plan (SP). The adopted plan is the Ontario Center Specific Plan. ~~Two of the housing sites (3.6 acres) are regulated by the Piemonte Overlay, while the remaining sites (12.9 acres) are regulated by the Ontario Center Specific Plan base document.~~ The Specific Plan does not establish density standards, so the Policy Plan densities would prevail. The Policy Plan allows for densities between 20 and 125 dwelling units per acre, which is sufficient to support lower- and moderate-income housing.

- Size of Sites

  There are no sites smaller than 0.5 acres or larger than 10 acres identified within the Opportunity Area.

- Existing Use.

  All ~~four~~ sites identified in this area are vacant.

Realistic Capacity

To determine the realistic capacity on these sites, the City identified the realistic capacity on each site based on the unbuilt entitlement and applied an additional reduction factor to sites that allow a mix of residential and non-residential to account for potential non-residential development. A summary of the realistic capacity, based on the remaining entitlement, is included in Table 5-9, and detailed descriptions of how realistic capacity and reduction factors were calculated is provided after the table.

Table 5-9
Strategy 4: Realistic Capacity

Zoning ~~(after rezoning)~~	Number of Parcels	Acres* (Net)	Max Density (du/ac)	Max Capacity (units*)	Adjustment Factors**	Final Realistic Capacity (units*)
Opportunity Area: Ontario Center Specific Plan						
~~Piemonte: Office w/ Res~~	~~2~~	~~3.6~~	~~125~~	~~454~~	~~18-19%~~	~~84~~
Urban Commercial	2	12.9	125***	1,613***	12%	193
Total	~~4~~2	~~16.5~~ 12.9	125***	1,613***~~2,067~~		193~~303~~

Source: City of Ontario, 2022.

*Acres and units have been rounded.
**See Adjustment Factor below for a detailed description of the adjustment factors applied to each group of sites
*** Density is not defined in the specific plan, so Policy Plan density would prevail. The Policy Plan allows densities between 20 and 125 dwelling units per acre.

Adjustment Factors

- ~~Piemonte: Office w/ Residential Allowed~~

  ~~Description:~~

  - ~~Number and size of sites: 2 sites, 2 parcels, 3.6 acres~~
  - ~~Allowable density: Density is not defined in the specific plan, so Policy Plan density would prevail. The Policy Plan allows densities between 20 and 125 dwelling units per acre.~~

- ~~RHNA affordability: Lower-income (50 percent), Moderate-income (50 percent)~~

- ~~Existing Use: Vacant~~

- ~~Infrastructure availability: Yes, no constraints~~

- ~~Environmental constraints: None known~~

~~Capacity Factors:~~

- ~~*Land Use Controls and Site Improvements.* No Adjustment~~
  ~~Site size reflects net acreage.~~

- ~~*Realistic Residential Capacity.* 50 Percent Adjustment~~
  ~~Because this land use category allows for non-residential development, a 50 percent adjustment factor was applied to account potential development of non-residential uses.~~

- ~~*Typical Densities.* 48.9 Percent Adjustment~~
  ~~These sites are designated as Office with Residential Development Allowed in the Piemonte Overlay area within the Ontario Center Specific Plan. While the Piemonte Overlay does not specify allowable densities, it plans for 220 new units on the two sites. If 220 units were to develop across the 3.6 acres, the resulting density would be 61 dwelling units per acre. The difference between the maximum capacity and number of units entitled under the specific plan result in a 48.9 percent adjustment factor.~~

- ~~*Infrastructure Availability.* No Adjustment~~
  ~~Not applicable, no constraint~~

- ~~*Environmental Constraints.* No Adjustment~~
  ~~No known site constraint~~

~~Total Capacity Adjustments: (1)x(1)x(.50)x(.489)x(1) = 24.5 percent~~

- Urban Commercial

  Description:

  - Number and size of sites: 2 sites, 2 parcels, 12.9 acres

  - Allowable density: Density is not defined in the specific plan, so Policy Plan density would prevail. The Policy Plan allows densities between 20 and 125 dwelling units per acre.

- RHNA affordability: Lower-income (50 percent), Moderate-income (50 percent)
- Existing Use: Vacant
- Infrastructure availability: Yes, no constraints
- Environmental constraints: None known

Capacity Factors:

- *Land Use Controls and Site Improvements.* No Adjustment
  Site size reflects net acreage.

- *Realistic Residential Capacity.* 83.2 Percent Adjustment
  Urban Commercial in the Ontario Center Specific Plan allows for a mix of tourist-related commercial uses, high- and medium-rise office buildings, entertainment/recreation clusters, and high-density residential uses above the ground floor. Discussion with developers, who have submitted plans for the development of high-density housing near the Toyota Arena (just north and east of these sites) indicate that 100 percent residential development is much more likely than any type of office development. Recent market trends due to the COVID-19 pandemic support this, as vacancies in existing office buildings will need to be filled before the market can support additional office uses. Similar sentiments hold true for tourism and entertainment uses, as much of the demand for those types of facilities is proposed in the areas around the Toyota Arena. As such, 39,000 square feet of the remaining entitled development capacity was reserved for non-residential uses on these two sites. This accounts for 16.8 percent of the remaining development potential, the inverse of the adjustment factor (83.2 percent) applied.

- *Typical Densities.* 14.4 Percent Adjustment
  While the specific plan does not specify allowable densities it does specify maximum height. The sites are included in planning area 11, where the maximum building height of 95 feet is regulated only by the height limits set by the Ontario International Airport. Housing products with densities above 60 dwelling units per acre are regularly developed under similar zoning standards, indicating the types of projects that could develop under the specific plan would meet the density thresholds necessary to facilitate the development of lower- and moderate-income housing.

In addition to height, the specific plan entitled a specific amount of development. The specific plan regulates the maximum capacity for Urban Commercial uses based on building square footage rather than dwelling units. As such, the City uses the methodology described below to translate the remaining allowable square footage permitted under the current specific plan into an approximate number of units.

Planning area 11 allows a total of 592,700 square feet; it is estimated that 360,455 square feet have already been developed, leaving 232,245 square feet of developable building area. To convert the remaining square footage into potential housing units, the City assumes the residential component would include a range of unit sizes with an average size of 1,000 square feet, inclusive of common areas, which yields a remaining development capacity of 232 units.

- *Infrastructure Availability.* No Adjustment
  Not applicable, no constraint

- *Environmental Constraints.* No Adjustment
  No known site constraint

Total Capacity Adjustments: (1)x(.832)x(.144)x(1)x(1)=12.0 percent

Units by RHNA Income Category

To further ensure conservative estimates, only half of the final realistic capacity was estimated to have the potential to accommodate lower incomes, as shown in Table 5-10.

Table 5-10

*Acres and units have been rounded.

Strategy 5: The Mills Housing Opportunity Area

Opportunity Area

The Ontario Mills Mall and surrounding areas are governed by The California Commerce Center North Specific Plan (The Mills). The specific plan was originally authored in 1992 and has not been amended since. The document envisioned a regional commercial center focused on value-oriented retail and jobs creation that would capitalize on the proximity to the freeways and serve as a local landmark. The Mills has largely achieved this vision, and it remains a high-performing retail hub today (2021), but the economic outlook for retail and office uses in 2021 is vastly different than it was in 1992.

Ontario Mills Market Trends

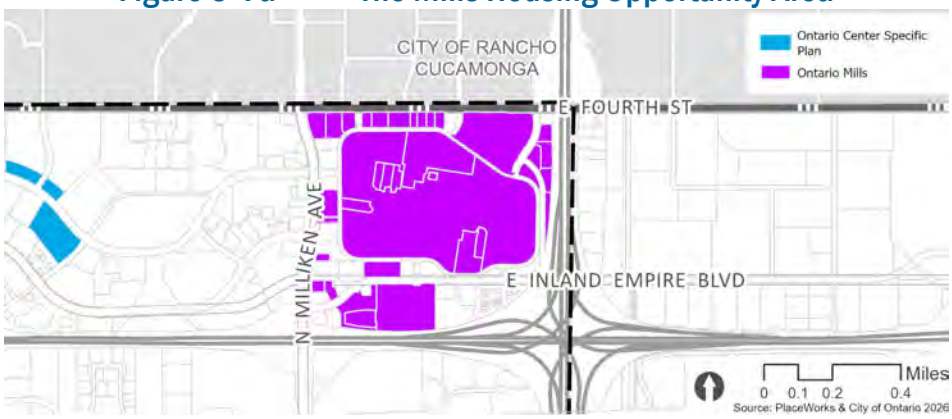
Current trends in the redevelopment of retail centers began with the introduction of online retail, which is currently capturing 20 percent of every retail dollar spent in the US economy. Recent industry reports (Barclay's Bank in October 2020 and Coresight Research in July 2020) find that the current number of retailers will likely be substantially reduced by 2030, with predictions by Coresight that online retail will account for 40 percent of retail sales by 2030. The COVID-19 pandemic has only accelerated the past trends. As retail stores opt to relocate or retail properties become due for major reinvestments/improvements, property owners find few retailers looking to replace existing tenants or find greater value in developing new residential uses. The demand for office space is likewise expected to remain stagnant through the 2021-2029 planning period as more office workers choose to work from home in the wake of the COVID-19 pandemic.

While retail uses, in general, are in decline, the Ontario Mills Mall remains a high-performing shopping center. It is anticipated that much of the existing retail square footage will remain through 2029, the physical configuration of the mall may be reshaped, consistent with current trends in mall redevelopment, leaving spaces for parking areas and outparcels to intensify with residential uses as existing restaurants, movie theaters, and retailers consolidate locations, relocate, or otherwise reconsider their physical footprint. The City's economic development department is in frequent contact with mall operators and property owners, and there are no known limitations, such as parking lease agreements that could limit redevelopment during the 6th cycle.

Successful shopping center redevelopment efforts, like the Bella Terra Mall in Huntington Beach, show high-performing malls successfully repositioning tenants in new configurations that introduce residential uses while retaining and improving their commercial cores.

Considering current market trends, the City has identified the parking areas and several out parcels around the Ontario Mills Mall as potential redevelopment sites suitable for housing, as shown in Figure 5-7a.

Figure 5-7a The Mills Housing Opportunity Area



Suitability of Sites

Infrastructure Availability

The Mills area already has the necessary infrastructure in place to support housing development.

RHNA Income Category

The Ontario Mills Opportunity Area was determined to be suitable for lower-income households based on proximity to transit, access to existing and planned jobs and amenities, access to grocery stores, proximity to available infrastructure and utilities, and because there are no known requirements for environmental mitigation:

- *Proximity to transit.* The sites in this Opportunity Area are within a 1/4 mile walk of an existing Omnitrans bus route (Route 81), which stops at the Ontario Mills Mall.
- *Access to existing and planned jobs.* The sites in this Opportunity Area are within one of the most employment-rich areas of the City. The mid-rise office buildings, the Toyota Arena, and the Ontario International Airport are all a short transit ride (on a direct line) or bike ride away.
- *Access to grocery store.* Sites in this Opportunity Area are across Milliken Avenue from Target and Sam's Club.
- *Proximity to infrastructure and utilities.* As noted under infrastructure availability, this area is served by existing infrastructure and utilities.

- *Environmental mitigation.* As noted under Environmental Constraints, there are no known natural or man-made environmental development concerns that would require mitigation.

To provide conservative estimates, however, only 50 percent of the identified capacity (described under Realistic Capacity) was considered suitable to accommodate lower-income housing, while 25 percent was considered suitable for moderate-income housing and 25 percent were considered suitable for above moderate-income (detailed under Units by RHNA Income Category).

Environmental Constraints
There are no known environmental constraints that would preclude housing production.

Analysis of sites to accommodate lower-income RHNA
All Sites

- Inclusion in Previous Housing Element

  These parcels were not included in prior housing elements.

- Zoning

  These sites are currently zoned for Specific Plan (SP) and uses are regulated by The California Commerce Center North Specific Plan, described previously in this section. The specific plan, as adopted, does not allow for residential uses, but the City's Policy Plan (which serves as the General Plan and was last updated in 2010) provides for housing in this area with a density range of 25 to 85 dwelling units per acre. This range would provide sufficient density to allow for the development of housing affordable to lower- and moderate-income households. In addition to establishing the density range, the Policy Plan sets a maximum of 437 units in its buildout table LU-03. As part of its rezoning program (Program 13), the City will amend the specific plan and update the Policy Plan. The specific plan will allow uses and densities consistent with the existing Policy Plan. The City will likewise update the Policy Plan to increase the residential development maximum in the Ontario Mills Mixed-Use area.

- Size of Sites

  Four of the parcels identified in this area (145.0 acres) are larger than 10 acres. This includes one of the parcels around the Mall itself (96.34 acres), two parcels that house movie theaters (18.6 acres and 14.6 acres), and a big-box retail center (15.4 acres). These sites were included in the inventory despite their size because of

current market trends in Malls, retail uses, and movie theaters, as discussed under Citywide Market Trends and Market Trends Specific to Strategy 5.

The mall site was not considered an impediment to redevelopment because larger sites with consistent ownership typically create fewer barriers to the introduction of housing in mall redevelopment projects than smaller sites with many competing landowner interests. Redevelopment efforts for the Westminster Mall, in Westminster, CA, for example, have involved a considerable planning effort to balance the various interests of many disparate property owners. Further, proposed redevelopment plans for malls such as Main Place Mall in Santa Ana, CA, incorporate larger parcels.

The City reached out to National Core, an affordable housing developer with experience in Ontario and the Inland subregion to discuss developing affordable housing on the mall site as well as sites such as the retail and theater outparcels that are larger than 10 acres. National Core indicated that larger parcels, such as these, allow for lower densities (avoiding higher construction costs) and can accommodate a greater number of units that can be more efficient to operate. Larger projects, if they can be done over multiple phases, can also be easier to finance and construct. In support of these points, they provided two examples of affordable housing projects they developed on larger sites:

- Crestview Terrace (formerly Waterman Gardens in San Bernardino): A 184-unit affordable project, completed in 2021 that involved a group of large parcels, including a 23-acre parcel and three other parcels, for an overall project site size of total of just over 37 acres.

- Mission Cove (in Oceanside): A multi-phase mixed-use project with 288 affordable units and 10,500 square feet of retail space on a 14.5-acre parcel. The final phase was completed in 2018.

These projects indicate that larger sites can provide efficiencies of scale for affordable housing development. The Mission Cove project occupies a similar parcel size to the theater and retail parcels, and it includes a retail component. The Mission Cove project was also developed in three phases (90 units in Phase I, 60 units in Phase II, and 138 units in Phase III), which could allow for flexibility in design and greater variety in the mix of uses if there is demand for commercial components on these sites.

- Existing Use

Existing uses include the Ontario Mills Mall and parking area (108.3 acres), 2 movie theaters (33.3 acres), 1 big box retail complex (15.4 acres), 3 parcels with automotive uses (2.7 acres), and 21 outparcels that currently house retail (18.5 acres) and dining (17.4 acres) establishments.

- Availability of Sites

  As discussed under Strategy 5 Market Trends, the demand for retail space is dwindling as people change the way they shop, dine, and spend their leisure time. As these changes continue to impact the retail landscape, the properties identified include aging centers, vacant buildings, and others that may be ready to reposition during the 6th cycle. While the owners of the properties identified do not currently have plans to reposition these sites, the City maintains on-going conversations with developers, and the City has reached out to property owners about potential land use changes. In general, owners are open to the possibility of introducing residential uses in the future. Developers also indicate interest in repositioning this area.

  There are no known parking leases or other restrictions that would limit redevelopment of the parking area and outparcels identified.

- Feasibility of Development

  As described under Strategy 5 Market Trends, mall redevelopment, retail repositioning, and theater downsizing, are national trends that are expected to impact uses in and around the Ontario Mills Mall.

  Several mall redevelopment efforts are already underway in the region. Projects like the Westminster Mall in Westminster, CA, Mainplace Mall in Santa Ana, CA, and the South Bay Galleria in Redondo Beach, CA, are all in the process of repositioning an indoor mall that was built for a different time to include a mix of commercial and residential uses. All these examples also propose affordable housing components, indicating that mall redevelopment projects offer a unique opportunity to introduce affordable housing into high-resource areas that are also highly accessible and well-served by infrastructure and transit.

  Redevelopment trends are not limited to retail uses. Movie theaters nationwide had already begun to see a cull in U.S. locations prior to the COVID-19 pandemic. The impacts of the COVID-19 closures, however, further eroded the industry, leaving opportunities for downsizing and redevelopment of existing theater sites. Because this is a trend seen nationally that is expected

to expand, recent examples from other states are relevant. In 2020, Loudon County, VA board of supervisors approved the redevelopment of an 11-acre Regal Cinema complex (built in 1996) as a 166-unit multi-family development. Additional projects like this are expected throughout the country as the long-term impacts of COVID-19 are fully appreciated.

Realistic Capacity

To determine the realistic capacity on these sites, the City identified a realistic density below the maximum, and applied an additional reduction factor to account for the ongoing operation of existing non-residential uses. A summary of the assumptions and realistic capacity is included in Table 5-11, and detailed descriptions of the adjustment factors applied to sites within each zoning designation is provided after the table.

Table 5-11
Strategy 5: Realistic Capacity

Zoning*** (after rezoning)	Number of Parcels	Acres*	Max Density (du/ac)	Max Capacity (units*)	Adjustment Factors**	Final Realistic Capacity (units*)
Opportunity Area: Ontario Mills						
Ontario Mills Mall						
SP	9	122.9	85	10,449	18.8%	**1,967**
Large Outparcels						
SP	4	41.1	85	3,494	18.8%	**657**
Small Outparcels						
SP	22	31.5	85	2,678	18.8%	**504**
Total	**35**	**195.5**		**16,620**		**3,128**

Source: City of Ontario, 2022.

*Acres and units have been rounded.
**See Adjustment Factor below for a detailed description of the adjustment factors applied to each group of sites.
***Per Program 13, the Specific Plan will be updated to allow residential uses at densities consistent with the existing Policy Plan (25-85 du/ac)

Adjustment Factors

- SP (Ontario Mills Mall)

Description:

- Size of site: 9 parcels, 122.9 acres
- Allowable density: 25-85 dwelling units per acre
- RHNA affordability: Lower-income (50 percent), Moderate-income (25 percent), Above Moderate-income (25 percent)

- Existing Use: Ontario Mills Mall and Parking Area (see Existing Use under "Site Specific Information" above)

- Infrastructure availability: Yes, no constraints

- Environmental constraints: None known

Capacity Factors:

- *Land Use Controls and Site Improvements.* 55 Percent Adjustment

  Redevelopment is only anticipated in the parking areas around the mall during the 6th Cycle. The net acreage of the parking area is approximately 73.75 acres, or 60 percent of the total area. It is anticipated that additional acreage will be necessary for drive aisles, sidewalks, and other public areas. An additional 5 percent was reserved to account for these uses. The total adjustment factor applied is 55 percent.

- *Realistic Residential Capacity.* 72.7 Percent Adjustment

  Revisions to the Specific Plan will allow for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses, consistent with the City's Policy Plan designation. While most of the commercial activity on these sites is expected to remain concentrated in the mall itself during the 6th Cycle. However, 27.3 percent of the site was reserved to account for potential non-residential uses, and portions of the parking area that may not fully develop during the 6th Cycle, the inverse of which, 72.7 percent, represents the reduction factor applied This estimate generally reflects the mix of project types, and anticipated timing of development the City anticipates based on recent applications for development of new residential units in areas around the Toyota Arena, which provides the closest comparison in terms of character of development expected.

- *Typical Densities.* 47.1 Percent Adjustment

  The existing specific plan will be amended to allow residential uses consistent with the proposed Policy Plan designation, as noted under Program 13. The proposed Policy Plan designation allows residential densities between 25 and 85 dwelling units per acre. A realistic density on in the middle of the allowed range, 40 dwelling units per acre, was deemed realistic to determine the total capacity in these areas based on proposed realistic densities in other similar development projects.

As noted under "Market Trends" above, mall redevelopment projects are an emerging trend that is expected to expand during the 6th Cycle in response to the accelerated changes in the way people shop in the wake of the COVID-19 pandemic. To determine the realistic density, the City looked to planned redevelopment projects, like Main Place Mall in Santa Ana, California, where the recently adopted specific plan includes a phased redevelopment plan in which the parking areas around the Mall would be developed first, as is expected for the Mills sites during the 6th Cycle. The Main Place Mall plan allowed densities up to 90 dwelling units per acre, similar to what will be allowed at the Ontario Mills. The plan for Main Place Mall also estimated a likely density of 39 dwelling units per acre across all sites where residential uses were anticipated. Consistent with this estimation, the City has assumed a realistic density of 40 dwelling units per acres across all sites where residential uses are anticipated. Forty dwelling units per acre is 47.1 percent of the maximum density allowed.

- *Infrastructure Availability.* No Adjustment
  Not applicable, no constraint

- *Environmental Constraints.* No Adjustment
  No known site constraint

Total Capacity Adjustments: (.55)x(.727)x(.471)x(1)x(1)=18.8 percent

- SP (Large outparcels)

Description:

- Size of site: 3 sites, 4 parcels, 41.1 acres

- Allowable density: 25-85 dwelling units per acre

- RHNA affordability: Lower-income (50 percent), Moderate-income (25 percent), Above Moderate-income (25 percent)

- Existing Use: Regal Cinema, Big Box retail and parking area (see Existing Use under "Site Specific Information" above)

- Infrastructure availability: Yes, no constraints

- Environmental constraints: None known

Capacity Factors:

- *Land Use Controls and Site Improvements.* 95 Percent Adjustment

  Upon redevelopment of the sites, it is anticipated that additional acreage will be necessary for drive aisles, sidewalks, and other public areas. Five percent of the land area was reserved to account for these uses. The total adjustment factor applied is 95 percent.

- *Realistic Residential Capacity.* 42.1 Percent Adjustment

  Revisions to the Specific Plan will allow for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses, consistent with the City's Policy Plan designation. While current trends, market demands and examples of theater redevelopment projects (see "Site Specific Information" above) generally support projects on larger sites that are 85 percent or more residential, the adjustment factor further reduces the anticipated realistic capacity by half again to account for the potential for higher non-residential footprints and phased development over the larger sites. The adjustment factor for realistic residential capacity is 42.1 Percent (.85x.495=.421). This estimate generally reflects the mix of project types, and anticipated timing of development the City anticipates based on recent applications for development of new residential units in areas around the Toyota Arena, and within the Meredith Mixed-Use area, which provide the closest comparison in terms of character of development expected.

- *Typical Densities.* 47.1 Percent Adjustment

  The existing specific plan will be amended to allow residential uses consistent with the proposed Policy Plan designation, as noted under Program 13. The proposed Policy Plan designation allows residential densities between 25 and 85 dwelling units per acre. A realistic density on in the middle of the allowed range, 40 dwelling units per acre, was deemed realistic to determine the total capacity in these areas. It is anticipated that similar densities can be supported on large outparcels as can be achieved in the Mall parking areas (see the typical densities Capacity Factor for the Ontario Mills Mall for additional information). Forty dwelling units per acre is 47.1 percent of the maximum density allowed.

- *Infrastructure Availability.* No Adjustment

  Not applicable, no constraint

- *Environmental Constraints.* No Adjustment

No known site constraint

Total Capacity Adjustments: (.95)x(.421)x(.471)x(1)x(1)=18.8 percent

- SP (Small outparcels)

Description:

- Size of site: 22 sites, 22 parcels, 31.5 acres
- Allowable density: 25-85 dwelling units per acre
- RHNA affordability: Lower-income (50 percent), Moderate-income (25 percent), Above Moderate-income (25 percent)
- Existing Use: Restaurant/dining, strip retail, standalone retail, automotive services (see Existing Use under "Site Specific Information" above)
- Infrastructure availability: Yes, no constraints
- Environmental constraints: None known

Capacity Factors:

- *Land Use Controls and Site Improvements*. 98 Percent Adjustment

  Upon redevelopment of the sites, it is anticipated that a minimal amount of additional acreage will be necessary for internal circulation and other public areas. These smaller sites are generally served by external, established roadways, so on-site improvements will be minimal. Two percent of the land area was reserved to account for these uses. The total adjustment factor applied is 98 percent.

- *Realistic Residential Capacity*. 40.8 Percent Adjustment

  Revisions to the Specific Plan will allow for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses, consistent with the City's Policy Plan designation. While current trends, market demands generally support projects on smaller lots that are either 100 percent residential or 100 percent commercial. It is not expected that all of the identified sites will transition to residential uses, only that they each have potential to transition. Accordingly, only 40.8 percent of the land area within the smaller outparcels is expected to transition to residential uses during the 6th cycle. Market conditions support the transition of retail sites to residential properties, and other plans for mall redevelopment propose residential uses on a higher portion of the outlying

land, so a 40.8 percent transition of identified properties is a conservative estimate intended to account for those likely to transition during the 6th Cycle. The adjustment factor for realistic residential capacity is 40.8 Percent. This estimate generally reflects the mix of project types, and anticipated timing of development the City anticipates based on proposed retail and mall redevelopment projects outside of the City.

- *Typical Densities.* 47.1 Percent Adjustment

  The existing specific plan will be amended to allow residential uses consistent with the proposed Policy Plan designation, as noted under Program 13. The proposed Policy Plan designation allows residential densities between 25 and 85 dwelling units per acre. A realistic density on in the middle of the allowed range, 40 dwelling units per acre, was deemed realistic to determine the total capacity in these areas. It is anticipated that similar densities can be supported on large outparcels as can be achieved in the Mall parking areas (see the typical densities Capacity Factor for the Ontario Mills Mall for additional information). Forty dwelling units per acre is 47.1 percent of the maximum density allowed.

- *Infrastructure Availability.* No Adjustment

  Not applicable, no constraint

- *Environmental Constraints.* No Adjustment

  No known site constraint

Total Capacity Adjustments: (.98)x(.408)x(.471)x(1)x(1)=18.8 percent

Large Site Development

AB 1397 requires additional justification to include parcels larger than 10 acres in the sites inventory for lower-income housing. The City has included sites larger than 10 acres in the Mills Housing Opportunity Area because of the market trends of retail center redevelopment (see discussion in Ontario Mills Market Trends). The Ontario Mills Mall portion of the California Commerce Center North Specific Plan consists of nine parcels totaling roughly 123 acres (parcels encompassed by Mills Circle roadway). The AMC theater (14.7-acre parcel) is under separate ownership including a large parking field. The other eight parcels are under single ownership (Ontario Mills Limited Partnership), including a 96-acre parcel that contains most of the Mall building and parking fields.

Based on patterns in similar commercial properties that intensified with residential such as the Irvine Spectrum, the property owners will likely first develop one of the parking areas into a medium or large parking

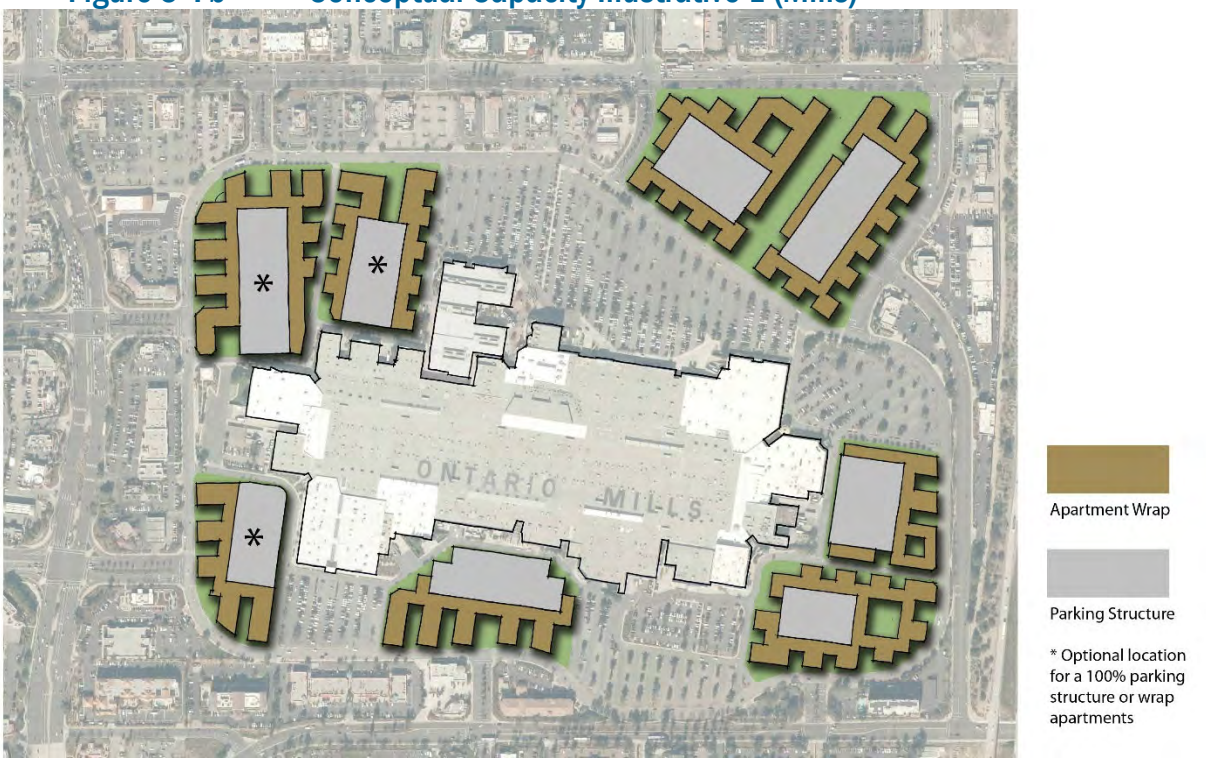
structure, which will free up other parking areas for residential development without the concern of losing parking capacity for the existing Mall. A logical option for the parking structure location is close to existing Ontario Mills Transfer Center (along Mills Circle just south of Concours Street), which will also serve future BRT service, and is just over a mile from the current Rancho Cucamonga Metrolink station. A number of other parking fields could then be developed with multistory wrap housing options that could self-park.

Additionally, the 19-acre site to the northeast that currently hosts the IMAX theatre could be intensified independent of or together with the Mall parcels. This parcel is large enough and could accommodate a small parking structure that could serve for the existing use while allowing residential to be constructed concurrently or as a second phase shortly after the parking structure is completed. With multiple points of access and enough space on any side of the existing building, the parcel could accommodate a number of different phasing and development designs. In summary, the entire realistic capacity could be accommodated on the Ontario Mills Mall property and one of the large outparcels.

While there are dozens of ways the Mills Opportunity Area could be designed for residential intensification, Figures 5-7b and 5-7c portray how the area could be intensified through two illustrative concepts of the development capacity and location of new residential (or other uses). The capacity shown in either provides more housing capacity (400-800 more) compared to the 3,128 total in Table 5-11, even without using all of the opportunity sites.

The illustratives in Figures 5-7b and 5-7c are conceptual but were generated with realistic and market-based assumptions: a maximum height of five stories, the need to self-park (at 2 spaces per unit, which is roughly in line compared to current parking standards for multiple-family development --- see Table 4-15), the need for open space, and the desire to have a mix of studio, 1-bedroom, and 2-bedroom units (unit size averages 1,000 square feet in both figures). The illustratives also took into consideration maintaining good access for existing commercial and future housing and preserving viewsheds important to existing commercial properties --- both connected to the Mall and in the surrounding parcels. It is also worth noting that the Opportunity Area contains enough capacity while maintain the existing Mall footprint exactly as is.

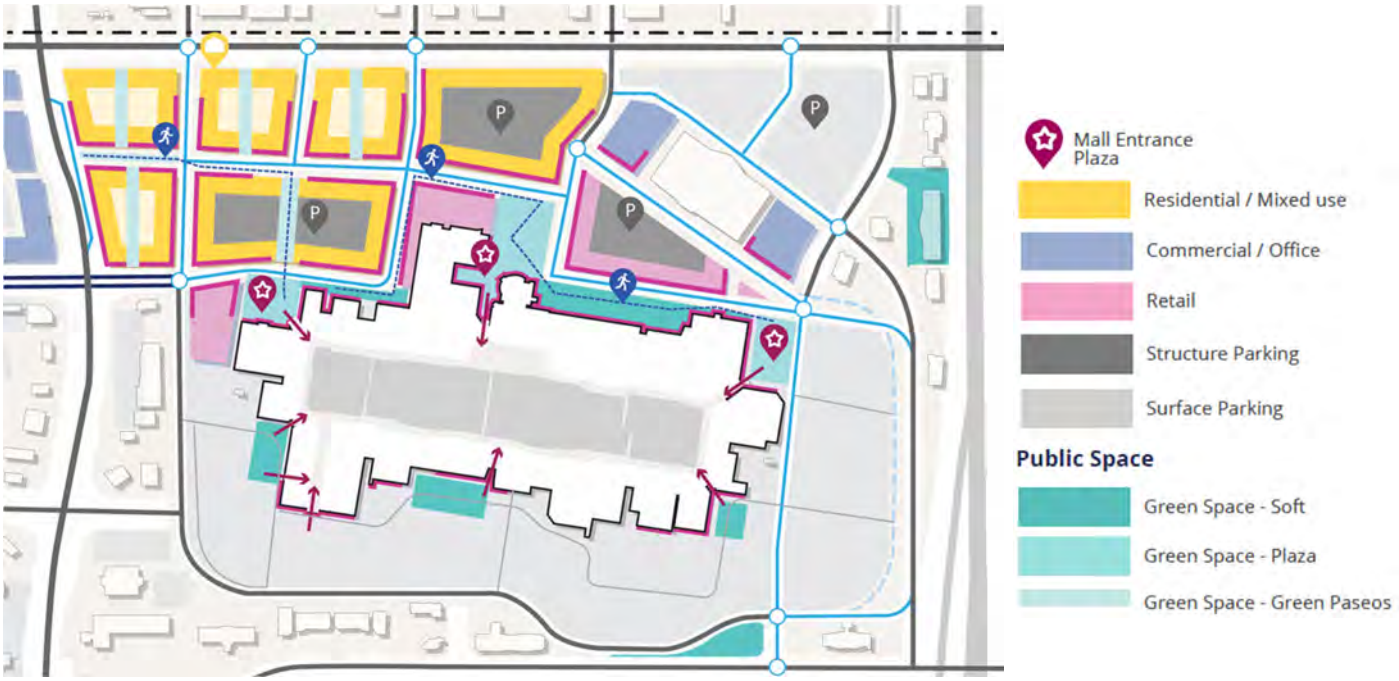
Figure 5-7b Conceptual Capacity Illustrative 1 (Mills)



In this design concept, a parking structure would likely be built as phase 1 (on one of the three sites identified with an asterisk), followed by one or more of the apartment wraps on the Ontario Mills Mall portion of the Opportunity Area as phase 2. The IMAX site could then be built as phase 3, though it also could be built independently and prior to any of the intensification on the Ontario Mills Mall site.

Note that this illustrative is solely shown for the purposes of demonstrating the capacity to intensify by 3,128 residential units and some design options that take into consideration existing and future access, commercial viewsheds, and phasing.

Figure 5-7c Conceptual Capacity Illustrative 2 (Mills)



In this design concept, a parking structure would likely be built as phase 1, shown adjacent to the IMAX property wrapped by retail space that would accommodate the retail uses (on some small outparcels) to be replaced by residential in the northwest part of the Opportunity Area. The residential would then be developed as phase 2 along with additional greenspace around the Mall. Phase 3 could include additional office space drawn by the more urbanized, mixed-use environment.

Note that this illustrative is solely shown for the purposes of demonstrating the capacity to intensify by 3,128 residential units and some design options that take into consideration existing and future access, commercial viewsheds, and phasing.

Units by RHNA Income Category

To further ensure conservative estimates, only half of the final realistic capacity was estimated to have the potential to accommodate lower incomes, as shown in Table 5-12.

Table 5-12
Strategy 5: Units by Income Category

Zoning (after rezoning)	Number of Parcels	Acres*	Units by RHNA Income Category			Final Realistic Capacity (units*)
			Lower (units*)	Moderate (units*)	Above Moderate (units*)

*Acres and units have been rounded.

Strategy 6: The Ontario Ranch Housing Opportunity Area

Opportunity Areas

The western Ontario Ranch, defined as the area south of Riverside Drive and west of the Cucamonga Channel is largely undeveloped and represents one of the few remaining greenfield opportunities in the Inland Empire. Upon annexation in 1997, the City envisioned the area as an extension of the existing urban fabric. Residential neighborhoods would be balanced by mixed-use, commercial, and public places and organized around a regional-scale park. Twenty-five years later, that vision has begun to take shape with new development east of the Channel. ~~Over the 2021-2029 planning period, development is expected to spread to the western side of the Channel as the infrastructure becomes available. The City's housing strategies for this area promote the creation of mixed-income communities in the western Ontario Ranch and address the development constraints associated with greenfield development.~~

~~Because this area is so large, but sites have many similarities, general information, relevant to all sites outlined in this strategy is provided first, following by site-specific analysis that is divided into four Opportunity Areas according to the City's vision for the future of each area.~~

Over the 2021–2029 period, development is expected to expand from the already-urbanizing areas east of the Cucamonga Channel into the western Ranch as trunk water and sewer infrastructure are extended north from Merrill Avenue and across the Grand Park Corridor, SCE Easement Area, Grove Corridor, Euclid Corridor, Vineyard Corridor/, and Sports Park Opportunity Areas. The City's housing strategy for these

areas uses Policy Plan land use designations and the Affordable Housing (AH) Overlay to set minimum densities of 20 du/ac, raise mixed-use maximums, and apply corridor-specific adjustment factors that tie realistic capacity and affordability mix to infrastructure timing. Because the western Ranch is large and sites share common characteristics, the Housing Element first presents general findings that apply citywide to all Strategy 6 sites (market trends, infrastructure phasing, suitability for lower-income housing, zoning and site size standards, and environmental conditions), then provides site-specific analysis organized into Opportunity Areas: Grand Park Corridor, SCE Easement Area, Grove Corridor, Euclid Corridor, Vineyard Corridor, and Sports Park.

Ontario Ranch Market Trends

The Ontario Ranch has been planned as a new community, providing a mix of new homes, new employment centers, and new retail opportunities linked by a large regional park and a network of smaller, local parks since the area was annexed by the City in 1997. In 2010, the City refined this vision as part of a comprehensive update to the Policy Plan, but the general intent to create a robust, complete community remained unchanged.

In the wake of the Great Recession following the 2010 update to the Policy Plan, the area saw little growth, and the existing agricultural uses continued operation under the City's Agricultural overlay zone, which was intended to allow ongoing agricultural uses until the market was able to support the conversion of properties to residential, retail, and employment uses envisioned to create a complete community. As the homebuilding market recovered, developer interest increased, and the City worked with developers to bring backbone infrastructure to the eastern portions of the Ontario Ranch (areas east of the Cucamonga Channel). The first backbone services were completed in 2014 and expanded from there. Development of residential and industrial uses grew from the available trunk lines, and has rapidly increased at pace with market demand, as discussed under Citywide Market Trends. The sites identified under strategy 6 include those that are closest to expanding infrastructure, and therefore most likely to develop during the 6th cycle, consistent with trends seen on the eastern side of the Ontario Ranch. Sites that are not expected to be served before 2028 have not been included in the sites inventory.

In 2020, it was estimated that 1,292 units were sold in the eastern Ontario Ranch, earning it the distinction of the region's top-selling master-planned community by John Burns Real Estate, and it ranked no. 5 nationally. In 2021, the eastern Ontario Ranch retained the top spot, with an estimated 1,011 units sold. Homebuilders attributed the reduction in units sales between 2020 and 2021 to delays related to the COVID-19 pandemic, and did not expect the trend to continue.

The western Ontario Ranch, is similarly situated to the eastern portions of the Ontario Ranch, but backbone infrastructure has not previously been available. As infrastructure is introduced, beginning in 2022, development in the western Ranch is expected to follow a similar trajectory to that of the eastern areas with aggressive development of residential areas to meet market demands.

Reflective of the increasing demand for new homes, developers throughout the eastern Ontario Ranch have approached the City to increase the densities allowed throughout the area. The City has not received any requests to reduce the number of units that could be built.

While the eastern Ranch does not include housing affordable to lower-income households, master-planned communities outside of the city incorporated lower-income housing, demonstrating that new communities, such as those envisioned for the Opportunity Areas grouped under Strategy 6 are able to support housing affordable to lower-income households. The ~~Great~~Grand Park Neighborhoods in Irvine, CA, for example, facilitated the development of several different affordable housing projects at a range of densities including, Montaira senior apartments, which were completed in 2020 and built at a density of 32 dwelling units per acre, and Luminaira and Espaira at Parasol Park, which were built on a 10.7 acre site that was divided to create two 5.35 acre-sites and completed in 2017.

Suitability of Sites

Infrastructure Availability

Backbone infrastructure serving the area west of the Channel is under construction and planned. ~~In~~ Since 2020 ~~and 2021~~, several large industrial projects ~~were approved, and additional projects are under review~~ along the city's southern border between Merrill and Eucalyptus Avenues have been built, ~~. These projects are~~ bringing water and sewer infrastructure to this portion of the city. The initial trunk line, ~~expected to develop in 2022, will~~ traveling along Merrill Avenue between Euclid and ~~Walker~~ Baker Avenues~~.~~, was completed in 2022. Additional mains extending from Merrill Avenue north to Eucalyptus Avenue and along Euclid Avenue, Sultana Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, and Baker Avenue have also been completed. In addition, portions of mains along Eucalyptus Ave have been installed, and additional extensions north to Edison and Schaefer are planned. Development interest remains strong, and additional facilities north of Scheafer Avenue are feasible by 2028.

New mains along Eucalyptus Avenue between Vineyard Avenue and the Cucamonga Channel have also been installed. These feed into a sewer main on Carpenter Avenue and connect to a new main along Vineyard Avenue (between Eucalyptus Avenue and Riverside Drive) that is under

construction and will be completed in 2026. It is anticipated that expansion of sewer service between the Cucamonga Creek and Walker Avenue is feasible by 2027. ~~From there, additional sewer lines are planned to extend north along Euclid, Bon View, Grove, and Walker Avenues, with the southern-most sites expected to be first served.~~

Extension of the City's backbone water infrastructure is also planned throughout the western part of the Ranch ~~in conjunction with the approved industrial projects~~. Water lines~~, with an anticipated installation date of 2022, will~~ serving~~e~~ the ~~approved~~ industrial projects have already been installed, and ~~introduce~~ additional backbone infrastructure throughout the area west of the Channel is expanding. While water lines will be installed more extensively throughout the area, service has followed and is generally anticipated to continue following the extension of the sewer lines, as the backbone sewer infrastructure is more complicated and costly to install.

Similarly, new roadways, recycled water lines, storm drains, and dry utilities have already been installed in several areas and are expected to continue to expand ~~at pace~~ with the sewer infrastructure as new development is established.

The sites selected and assumptions applied were developed after discussions with the Ontario Metropolitan Utilities Company (OMUC), taking into consideration the cost and phasing needed to ensure that housing could be developed and served by infrastructure during the 2021-2029 planning period. The following timeline for infrastructure availability was determined possible, given current plans, the rate of development on the eastern side of the Ontario Ranch, where infrastructure was introduced during the 5th housing cycle, ~~as well as~~and the rate of development and level of interest in developing the western side of Ontario Ranch. Infrastructure phasing is generally expected to expand from the Merrill Avenue and Vineyard Avenue trunk lines ~~north~~ as follows:

- **2026 AREA 1:** East of Walker (served by Vineyard Avenue sewer main)
- **2026-2027 AREA 2:** West of Walker / South of Schaefer
- **2027 AREA 3:** West of Walker / Schaefer Avenue to the northern most SCE easement.
- **2027-2028 AREA 4:** West of Walker / The northern-most SCE easement to Chino Ave
- **2028 AREA 5:** West of Walker / Chino Avenue to Riverside Drive

The City's housing strategy accounts for the need to extend infrastructure throughout the area by applying an adjustment factor based on the

~~distance of sites from the initial trunk line and~~ estimated timeline for infrastructure availability. The applicable adjustment factors for each Opportunity Area are detailed under the "Realistic Capacity" section.

RHNA Income Category
The Ontario Ranch Area was determined to be suitable for lower-income households based on proximity to transit, access to existing and planned jobs and amenities, access to grocery stores, proximity to available infrastructure and utilities, and because there are no known requirements for environmental mitigation:

- Proximity to transit.
    - ~~Great~~Grand Park Corridor and SCE Easement Area. ~~–~~The Grand Park Corridor was identified for higher-density housing development because of its proximity to planned open space, which furthers the City's fair housing goals, and because SBCTA has plans to expand a BRT route along Edison Avenue/Ontario Ranch Road. There are no existing bus stops in this area because current uses are primarily agricultural, and there are not currently enough residents, jobs, or leisure activities to entice riders to exit or alight in this area. While locations for future BRT stops will be determined according to how development transpires, with stops near centers of population, commerce, or recreation, rapid transit stops are typically one-half mile to one mile apart. The City currently envisions (subject to coordination with SBCTA) future transit stops at Euclid, Bon View, Grove, Walker, and Vineyard Avenues, each approximately half a mile apart. In that case, roughly 55 percent of the land area identified in the combined Grand Park Corridor and SCE Easement Strategy 6 Opportunity Area will be within a 5-minute walk of a BRT; nearly 100 percent of the sites will fall within a 10-minute walk of the same BRT stops. The SCE Easement Area~~,~~ ~~located~~ immediately north of Merrill Avenue and beneath the Southern California Edison transmission corridor~~,~~ is therefore planned to benefit from the same future BRT service, with adjoining parcels providing opportunities for new housing integrated with trails, open space, and supporting service uses.~~The Great Park Corridor was identified for higher-density housing development because of its proximity to planned open space, which furthers the City's fair housing goals, and because SBCTA has plans to expand a BRT route along Edison Avenue/Ontario Ranch Road. There are no existing bus stops in this area because current uses are primarily agricultural, and there are not currently enough residents, jobs, or leisure activities to entice riders to exit or~~

~~alight in this area. While locations for future BRT stops will be determined according to how development occurs, with stops near centers of population, commerce, or recreation, rapid transit stops are typically located one-half mile to one mile apart. The City currently envisions (subject to coordination with SBCTA) future transit stops placed at Euclid, Bon View, Grove, Walker, and Vineyard Avenues, each approximately half a mile apart. In that case, roughly 55 percent of the land area identified in the Great Park Corridor Opportunity Area will be within a 5-minute walk of a BRT; nearly 100 percent of the sites will fall within a 10-minute walk of the same BRT stops.~~

- Vineyard, Sports Park, and Grove Corridors~~Grove Corridor~~. The sites along the Grove Corridor, together with the Vineyard Corridor and Sports Park Opportunity Area, were identified for higher-density housing development for several reasons, including planning objectives like activating the street and enhancing transit options, development potential, and infrastructure availability. Bringing a higher concentration of mixed-income residents to these corridors will create energy on the street, distinguish Grove Avenue and Vineyard Avenue as important community connectors, and surround the planned community sports park with new neighborhoods. The influx of new residents will also make these corridors prime candidates for expanded bus and higher-frequency transit service, improving options for residents and strengthening connections between north and south Ontario. Consistent with Mobility Element Policy M-3.1 (Transit Partners), the City will maintain a proactive working partnership with transit providers to ensure that adequate public transit service is available, cost-efficient, and convenient in housing element strategy areas where sites suitable for lower-income housing development have been identified in the sites inventory.~~The sites along the Grove Corridor were identified for higher-density housing development for several reasons, including planning objectives like activating the street and enhancing transit options, development potential, and infrastructure availability. Bringing a higher concentration of mixed-income residents to the corridor will create energy on the street, distinguishing Grove Avenue as an important community connector. The influx of new residents will also make the corridor a prime candidate for expanded bus service, improving transit options for residents and strengthening the connection between north and south Ontario.~~

- ~~Euclid Corridor. SBCTA has plans to expand a BRT route along Euclid Avenue. While potential BRT stops have not yet been identified, because most of the identified sites are undeveloped, rapid transit stops are typically one-half mile to one mile apart. If future transit stops are placed at Riverside Drive, and halfway between Chino and Schaefer Avenues approximately three-quarters of a mile apart, 54 percent of the land area identified in the Euclid Corridor Opportunity Area will be within a 5-minute walk of a BRT; nearly 100 percent of the sites will fall within a 10-minute walk of the same BRT stops.~~

- *Access to planned jobs.* Between Merrill Avenue and Eucalyptus Avenue, several large industrial and logistics projects have been approved by the City. These projects will brings thousands of jobs to the western Ontario Ranch, and are within a transit or bike ride from most of the sites identified in Opportunity Areas grouped under this Strategy. In addition to these approved employment generators, the mixed-use areas within the ~~Great~~Grand Park Corridor are envisioned as employment hubs for the western Ontario Ranch. By 2050, the City projects there could be as many as 8,000 new jobs accommodated in the portions of these areas reserved for nonresidential uses, as described under the Realistic Capacity Adjustment Factors for Mixed-Use ~~Great~~Grand Park (MU-GP)~~ and Mixed-Use Eucalyptus / Chino Airport (MU-EU)~~. These new jobs would be within walking distance of many ~~of the sites identified in the Great~~Grand Park Corridor~~,~~ and SCE Easement Area sites and within ~~an easy~~a transit ride or bike ~~ride~~trip of all ~~sites~~Opportunity Areas grouped under this s~~S~~trategy, providing lower-income households with convenient access to a wide range of employment opportunities.

- *Planned ~~to~~ infrastructure and utilities.* As noted under Infrastructure Availability, infrastructure in this area is planned and expected to expand during the 6th cycle, making development feasible for the first time. The timing for the expansion of services is reflected in ~~the~~ how the realistic capacity is divided between RHNA affordability levels on each site.

  The percent of the realistic capacity estimated as suitable for lower-income units is directly related to the anticipated timing for infrastructure expansion. The percentage of capacity identified as suitable to accommodate lower-income housing decreases on sites farther away from Merrill Avenue, the southern-most street in the western Ontario Ranch~~, where the initial sewer trunk line is anticipated to complete construction in 2022 (see Infrastructure Availability for more details).~~. Sites closest to Merrill Avenue ~~are~~

reflect a mix of affordability in line with the City's policy promoting mixed-income communities, while sites farther north anticipate that an increasing amount of above-moderate housing will help to offset the costs associated with infrastructure expansion. The realistic capacity is divided by affordability level as follows:

Opportunity Area/ Subarea	Projected Infrastructure Availability	Lower *(percent of realistic capacity)*	Moderate *(percent of realistic capacity)*	Above Moderate *(percent of realistic capacity)*
Grand Park				
• **Area 2:** West of Walker / South of Schaefer Ave (All Sites)	2026-2027	50%	25%	25%
Grove Corridor				
• **Area 2**: West of Walker / South of Schaefer Ave	2026-2027	50%	25%	25%
• **Area 3**: West of Walker / Between Schaefer Ave & north SCE Easement	2027	40%	0%	60%
• **Area 4**: West of Walker / Between north SCE Easement & Chino Ave	2027-2028	35%	0%	65%
• **Area 5**: West of Walker / North of Chino Ave	2028	25%	0%	75%
Euclid Corridor				
• **Area 4:** West of Walker / Shaefer Ave to Chino Ave	2027-2028	35%	0%	65%
• **Area 5**: West of Walker / North of Chino Ave	2028	25%	0%	75%
Vineyard Corridor				
• **Area 1**: East of Walker (All Sites)	2026	50%	25%	25%
SCE Easement				
• **Area 2:** West of Walker / South of Schaefer Ave (All Sites)	2026-2027	50%	25%	25%
Sports Park				
• **Area 1**: East of Walker (All Sites)	2026	50%	25%	25%

- ~~GreatGrand Park Corridor~~
  - ~~South of SCE easement *(Infrastructure in 1-3 years)*~~
    ~~Lower income (50 percent), Moderate income (25 percent), Above moderate income (25 percent)~~
  - ~~North of SCE easement *(Infrastructure in 3-5 years)*~~
    ~~Lower income (40 percent), Above moderate income (60 percent)~~
- ~~SCE Easement Area~~
  ~~Whole area (infrastructure in 1-3 years, immediately north of Merrill Avenue)~~
- ~~Grove Corridor~~
  - ~~South of Schaefer Avenue *(Infrastructure in 3-5 years)*~~
    ~~Lower income (40 percent), Above moderate income (60 percent)~~

- ~~North of Schaefer Avenue *(Infrastructure in 4-6 years)* Lower income (25 percent), Above moderate income (75 percent)~~

- ~~Euclid Corridor~~
  - ~~South of Schaefer Avenue *(Infrastructure in 3-5 years)* Lower income (40 percent), Above moderate income (60 percent)~~
  - ~~North of Schaefer Avenue *(Infrastructure in 4-6 years)* Lower income (25 percent), Above moderate income (75 percent)~~

  - ~~Whole Area (*Infrastructure in 4-6 years*) Lower income (25 percent), Above moderate income (75 percent)~~

~~Sports Park~~

~~Whole area (infrastructure in 4-6 years, concurrent with later phases of backbone extensions serving northern western Ontario Ranch)~~

These assumptions, as well as the units associated with each income category, ~~is~~ are detailed under Units by RHNA Income Category.

- *Environmental mitigation.*

  - Grove Corridor. As noted under Environmental Constraints, there are no known natural or man-made environmental development concerns that would require mitigation.

  - SCE Easement Area. As noted under Environmental Constraints, there are no known natural or man-made environmental development concerns that would require mitigation.

  - Euclid Corridor. As noted under Environmental Constraints, there are no known natural or man-made environmental development concerns that would require mitigation.

  - Vineyard Corridor~~/ Armstrong Ranch Specific Plan~~. As noted under Environmental Constraints, there are no known natural or man-made environmental development concerns that would require mitigation.

- Sports Park Area. As noted under Environmental Constraints, there are no known natural or man-made environmental development concerns that would require mitigation.

Environmental Constraints

The sites identified in this portion of the city have no topographical, slope, flood, or fire hazards. Portions of approximately ~~26~~ 7 parcels ~~-~~in the ~~Great~~Grand Park Corridor are estimated to have ground water levels that could make the area vulnerable to liquefaction. This is determined based on the historic presence of artesian wells on these sites, and it does not indicate a known impediment to development, only a potential vulnerability that must be analyzed through geotechnical evaluation of individual sites at the time of development. The City is currently working on several infrastructure projects within area identified, including the development of Merrill and Eucalyptus Avenue as well as the establishment of the sewer trunk line along Merrill Avenue. As part of the planning process for these improvements the City conducted geotechnical analysis, and the City's Engineering department confirmed that there are no known liquefaction issues that would limit development or increase the cost of development in these areas.

All projects in the City are required to meet building code ~~the~~ standards ~~of the Uniform Building Code~~, which include~~s~~ provisions to ensure new development ~~-~~projects are built to established safety standards.

Analysis of sites to accommodate lower-income RHNA

All Sites

The following analysis of zoning and size of sites is applicable to all Opportunity Areas grouped under this strategy.

- Inclusion in Previous Housing Element

  No parcels within Opportunity Areas grouped under Strategy 6 were included in prior housing elements as suitable for lower-income units~~-~~.

- Zoning

  The Strategy 6 Opportunity Areas in western Ontario Ranch are zoned SP-AG-AH, replacing the prior SP-AG zoning and applying the Affordable Housing Overlay across all identified parcels. The Agriculture Overlay continues to allow existing agricultural uses to operate on an interim basis until development consistent with the Policy Plan and SP-AG-AH zoning is ready to proceed~~The current zoning throughout the area west of the Channel is Specific Plan with an Agriculture Overlay (SP-AG)~~.

~~The Agriculture Overlay District allows for existing agricultural uses to continue operation on an interim basis until development, consistent with the Policy Plan and zoning district, is slated to occur.~~

The SP district is intended to accommodate the adoption of specific plans that are consistent with the Policy Plan, but the zoning district does not set any density or intensity standards when no specific plan exists. With a few exceptions, most parcels in this part of the city are not yet affected by an existing specific plan. However, the Policy Plan specifies land uses and densities throughout the city, including the western Ontario Ranch. Because both the City development code and state law require consistency between the City's Policy Plan and zoning, any proposed specific plan must be consistent with the Policy Plan land uses. Therefore, the City's housing strategies use Policy Plan land use categories, including density standards, to estimate the development capacity and affordability potential for sites throughout this portion of the city.

To implement the City's policy of creating new mixed-income communities and integrating affordable housing into new development, the SP-AG-AH Affordable Housing Overlay (described in Program 13) has been applied to all parcels in the Strategy 6 Opportunity Areas as the City has completed this rezone. The overlay: ~~The City's strategy for this reflects the City's policy promoting the creation of new mixed-income communities and the integration of affordable housing with new development. To further encourage mixed-income development and affordable housing, the City will create an Affordable Housing Overlay (AH) Zone. The overlay, described in Program 13, will be applied to all parcels identified in Strategy 6 Opportunity Areas. The AH overlay zone will:~~

- Establishes a minimum density of 20 dwelling units per acre,
- Provides incentives to develop two tiers of affordable housing.
    - *Tier 1*. The first tier ~~would~~ applies~~y~~ to housing projects with at least 20% of units affordable to lower incomes. Projects in this tier are ~~would~~ no longer ~~be are~~ required to develop a new specific plan under the AH Overlay. Instead, the developer could apply the development standards for a zone that implements the current or proposed Policy Plan designation.

- *Tier 2*. The second tier ~~would~~ applies~~y~~ to projects where at least 25 percent of the proposed units are affordable to lower-income households. Tier 2 projects ~~would~~ are ~~be~~ subject to the same provisions as Tier 1, but the overlay ~~would~~ increases the maximum density for parcels with a Policy Plan designation of Medium-Density Residential (MDR) from 25 to 30 dwelling units per acre. The higher density allowed ~~would~~ effectively increases the base density of the designation and is ~~would be~~ applied prior to any state density bonus provisions.

~~With these changes, any site in the Affordable Housing Overlay District with a Policy Plan designation of MDR or Mixed-Use, the Policy Plan designations that allow at least 30 dwelling units per acre (including MDR, as revised) will satisfy the default density requirements and be considered suitable for the development of lower-income housing.~~

- Size of Sites

  - Small Sites. Parcels smaller than half an acre are excluded without adding further justification that would otherwise be required by state law enacted through AB1397. Such small sites are insignificant in terms of number (of parcels) and total acreage. All such parcels are only excluded due to size, and none of the parcels would inhibit the development of any parcels listed in the inventory (most are owned by the same owners and would be developed along with larger adjacent parcels).

  - Large Sites. AB1397 requires additional justification to include parcels larger than 10 acres in the sites inventory for lower-income housing. The City has included sites larger than 10 acres in the western Ontario Ranch because Ontario has ample recent evidence of large greenfield sites developing as housing. Areas east of the Channel had nearly identical parcel patterns to those in this area. Many properties to the east have already been subdivided and developed as housing, and the undeveloped land east of the Channel is expected to develop likewise. Other large urban greenfield projects, such as Irvine's Great Park neighborhood, reflect the same pattern of subdividing larger parcels to create mixed-income communities. Several of the communities in Irvine's Great Park neighborhood include multifamily affordable housing, indicating that this process can produce opportunities for lower-income housing. The Affordable Housing Overlay District that ~~will be~~is applied to all parcels in the Opportunity

Area (Program 13) also provides incentives to promote housing affordable to lower-income households.

The City also reached out to National Core, an affordable housing developer with experience in Ontario and the Inland subregion to discuss developing affordable housing on sites such as the retail and theater outparcels that are larger than 10 acres. National Core indicated that larger parcels, such as these, allow for lower densities (avoiding higher construction costs) and can accommodate a greater number of units that can be more efficient to operate. Larger projects, if they can be done over multiple phases, can also be easier to finance and construct. In support of these points, they provided two examples of affordable housing projects they developed on larger sites:

- Crestview Terrace (formerly Waterman Gardens in San Bernardino): A 184-unit affordable project, completed in 2021 that involved a group of large parcels, including a 23-acre parcel and three other parcels, for an overall project site size of total of just over 37 acres. Crestview Terrace developed within the Waterman + Baseline Neighborhood Specific Plan. Importantly, the developer of the Crestview Terrace development did not control the majority of property in the specific plan area.

- Mission Cove (in Oceanside): A multi-phase mixed-use project with 288 affordable units and 10,500 square feet of retail space on a 14.5-acre parcel. The final phase was completed in 2018.

These projects indicate that larger sites can provide efficiencies of scale for affordable housing development. Crestview Terrace shows that projects as large as 37 acres and parcels larger than 20 acres in size can facilitate the development of affordable housing. ~~The largest site within the 4 Opportunity Areas grouped under this strategy is 36.5 acres. The second-largest site is 26.7 acres. Because the largest sites in this area are similar in size to those that comprised the Crestview Terrace affordable housing project, the larger sites in this area are suitable for the development of affordable housing.~~

- While the above example (Crestview Terrace) illustrates how the affordable housing capacity could be realized through a specific plan, other mechanism could also lead to affordable housing. For example, consistent with the Affordable Housing Overlay District, the property owner of the large site could

choose to develop the entire site or a portion for affordable housing. Affordable housing projects tend to be larger than 50 units (enough to justify onsite property management) at densities between 20 and 30 units per acre, but projects with more units and higher densities are not uncommon. Several other affordable housing developers (e.g., Related, Meta, AMCAL, and Jamboree Housing) with experience in Ontario and/or San Bernardino County frequently produce affordable housing projects with 100 to 200 units on sites between 5 and 15 acres (e.g., Paseo Verde by Related in Fontana with 142 units on 14.8 acres). Projects like Mission Cove represent the upper end of the spectrum in Southern California as of now, although much larger projects, such as the 382-unit Weingart Center Towers in Los Angeles~~, are underway.~~ .

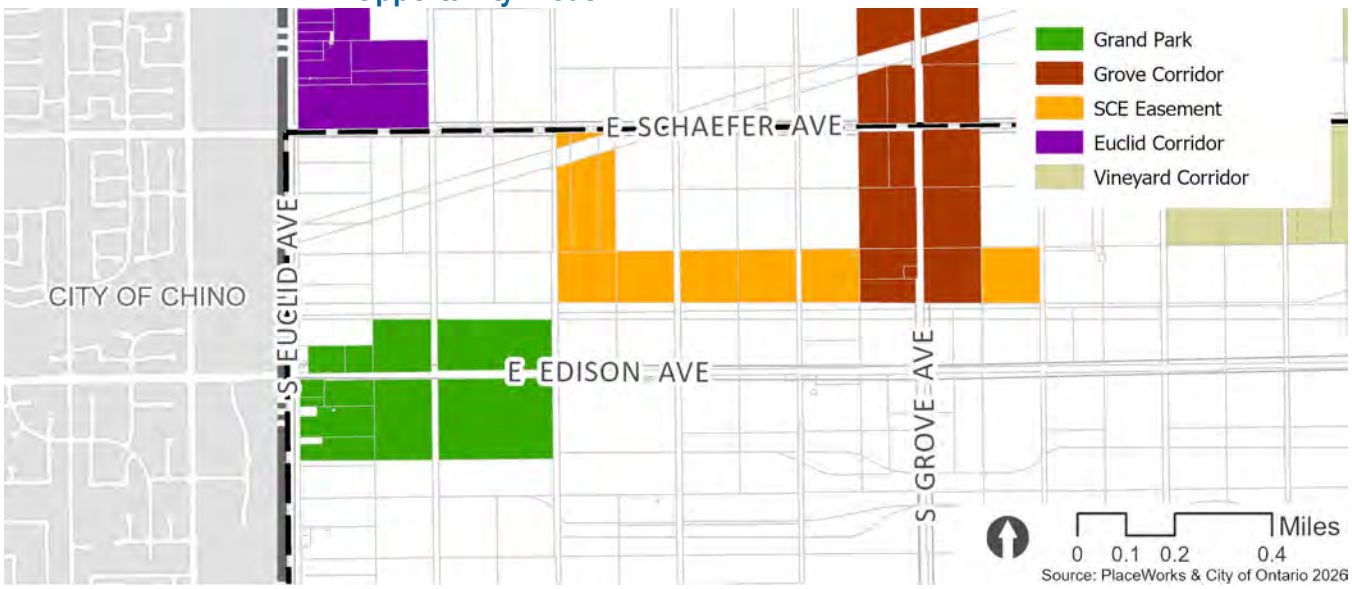
Developers of large parcels more frequently subdivide and sell off part of the property to an affordable housing developer, although they still design the overall area together as a single project to ensure continuity. ~~Of t~~The ~~seven~~three parcels larger than 10 acres in the ~~Great~~Grand Park Corridor~~, three are 16 acres and another is 18~~range from 12 to 25 acres. These parcels may not require subdivision (as they are close in size to the parcels used in larger affordable housing projects built in the area), but could easily be subdivided with a parcel between 5 and 9 acres. At 25 units per acre, such parcels could support 125 to 225 units, but higher density is allowed and is even likely given the City's flexibility in averaging the density over a larger project area. Densities above 25 units per acre would either require less land or permit larger projects. Accordingly, while the City's sites inventory assumes a 50% capacity for lower income housing on these sites, it is likely that only one-quarter of the land would be required to attain the same capacity figure. Through Program 16, the City will encourage and facilitate such subdivisions or lot line adjustments by waiving fees when a project commits to including affordable housing consistent with the Affordable Housing Overlay.

~~Great~~Grand Park Corridor

Envisioned as the organizing element for new development and imagined as a focal point for the region, the Ontario ~~Great~~Grand Park is planned to encompass approximately 340 acres between Campus and Haven Avenues, with its western leg terminating in the ~~Great~~Grand Park Corridor Housing Opportunity Area. Sites that comprise the ~~Great~~Grand Park Corridor Opportunity Area were identified based on proximity to open space and transit, potential for redevelopment, and infrastructure

availability. The sites identified in this area are shown in Figure 5-8 and described in the text that follows.

Figure 5-8 Grand Park Corridor and SCE Easement Housing Opportunity Areas



- Zoning – ~~Great~~Grand Park Corridor

  As described under zoning for all sites, properties in this area were previously zoned SP-AG with no adopted specific plan; these sites have now been rezoned to SP-AG-AH and are included in the Affordable Housing Overlay District described in Program 13.~~As described under Zoning for all sites, the sites in this area are currently zoned SP-AG, but no specific plan has been adopted, and they will be rezoned to SP-AG-AH for inclusion in the Affordable Housing Overlay District described under Program 13.~~ The Overlay ~~will~~ established a minimum density of 20 du/ac, and allow the Policy Plan designation to govern the maximum densities for each site. The Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the Policy Plan and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential.

  - Consistent with Program 13, the City ~~has~~ updated Policy Plan land uses in this area so that all Grand Park Corridor sites carry a mixed-use designation. All Grand Park Corridor parcels are designated for mixed-use development and zoned SP-AG-AH, with the Affordable Housing Overlay allowing qualifying projects to develop

without a Specific Plan and at residential densities between 20 and 65 dwelling units per acre.~~The City is also proposing to update its Policy Plan land uses as described in Program 13. Sites in this area would have Policy Plan designations of Medium Density Residential (MDR) and Mixed-Use (MU). MDR will allow a range of 20-30 du/ac for projects with at least 25 percent of units affordable to lower incomes, and a range of 20-25 du/ac for all other projects. Two different MU areas are proposed in this opportunity area, Mixed-Use Eucalyptus/Chino Airport (MU-EU) allowing 20-45 du/ac and Mixed-Use Great Park (MU-GP) 20-65 du/ac respectively. With the Policy Plan and zoning changes noted in Program 13, all sites identified support densities necessary to facilitate lower- and moderate-income housing development.~~

- Size of Sites – ~~Great~~Grand Park Corridor

  ~~Ten of the~~Three parcels identified in this corridor ~~area~~ (~~183.4~~53.4 acres) are larger than 10 acres,. As discussed ~~at~~ under Size of Sites for all sites, large sites in the Ontario Ranch provide ~~unique opportunities for~~ the scale needed to master plan mixed-use neighborhoods, phase development~~ of affordable~~, and reserve portions of each site for lower-income, ~~housing projects and are considered feasible and realistic.~~ while still achieving efficient site design.~~-~~ As discussed at Size of Sites for all sites, parcels smaller than 0.5 acres have been excluded from the land inventory, but are not expected to impede development on adjacent sites in any way.

- Existing Use~~The majority of these~~

  Most Grand Park Corridor sites continue to house the agricultural operations ~~(67~~5 parcels, ~~561.7~~67.5 acres), but many sites have already begun to transition to interim uses such as truck parking and recreational vehicle storage ~~open storage~~ (~~6~~4 parcels, ~~19.9~~10.6 acres)~~,~~ and services catering~~s~~ to the logistics industry, such as a ~~truck wash~~convenience store ~~-(2~~1 parcel~~s~~, ~~9.25~~1.2 acres). Finally, ~~2~~1 parcel~~s~~ ~~are~~ is vacant (~~9.7~~2.7acres) where prior agricultural activity has ceased and fields have been cleared in anticipation of future development.

  On the parcels currently used for agricultural operations, there are approximately ~~28~~7 existing farm homes that were built in conjunction with other agricultural structures.~~ spread across the 600 acres.~~

These aging farmhouses are largely vacant or owner-occupied. These homes do not provide established affordable housing, and they are not currently occupied by lower-income households, as shown on Figure 3-14, the median income in this area is among the highest in the City with incomes between $87,100 and $125,000 annually. Further, development of the identified sites would only occur after the land was voluntarily vacated and sold or redeveloped. As seen in areas that have recently developed to the east of the Cucamonga Channels, owners who opt to sell or redevelop their properties typically see very large profits and would be able to secure market-rate replacement housing without assistance. The ~~28~~6 existing homes are projected to be replaced by more than ~~13,000~~1,600 homes (~~more than~~approximately ~~465~~ 266 times the current stock).

Due to the extremely low density of housing and the nature of development anticipated, the existing residential uses are not expected to impede development potential. Land with very similar conditions to the sites identified in this area has recently developed on the eastern side of the Cucamonga Channel, forming new residential neighborhoods. The same trend is expected to continue westward as infrastructure expands.

No other existing uses are expected to impede development.

- Availability of Sites

The City has planned to phase out agricultural uses in this area since annexation in 1997, but insufficient infrastructure limited what could be achieved.

As ~~previously~~ described under ~~infrastructure availability,~~ ~~a~~Infrastructure Availability, the backbone sewer trunk line and associated water lines ~~are expected to be completed in 2022. All but one parcel in this opportunity area is located between~~ serving western Ontario Ranch ~~are planned for completion~~have been installed along Merrill Avenue, with extensions north to Eucalyptus Avenue. Further expansion north ~~over~~ is planned over the second half of the planning period. ~~Nearly a~~All Grand Park Corridor parcels are ~~located~~ west of Walker Avenue and south of ~~the southern most Southern California Electric~~Edison ~~(SCE) easement~~Schaefer Avenue (Area 2),~~, where infrastructure could expand in 1~~ ~~and are expected~~ where infrastructure is feasible in 2026~~-~~ or 2027. ~~to receive full sewer and water service within approximately one~~ to 3three ~~years. The parcel north of the SCE easement is expected to have access to infrastructure in 3-5 years.~~

~~after the Merrill trunk is in place.~~ As backbone infrastructure becomes available, development is likely to occur rapidly, as seen in recent years on the eastern side of the Channel. This assertion is informed by conversations with property owners, an on-going dialogue with home building advocacy groups, and regular inquiries from developers interested in this area of the City.

- Feasibility of Development

As described under Strategy 6 Market Trends, the recent development activity in the eastern Ontario Ranch reflects the pattern of development that is expected to occur in the western Ontario Ranch once the infrastructure is in place.

The anticipated timing of infrastructure expansion paired with high interest of both developers and property owners in redeveloping this area as discussed under Suitability of Sites and Availability of Sites, indicates that development is not only feasible, but very likely to occur once infrastructure is available.

Strategy 6 Market Trends illuminates the aggressive development climate that has already manifested in the eastern side of the Ontario Ranch and references other new communities that included affordable housing. The discussion of Size of Sites for all sites also provides examples of affordable housing projects that have developed on larger greenfield sites. Together, these illustrate that the sites within this opportunity are suitable for lower-income housing.

The identified sites have also been carefully reviewed to eliminate those areas where housing development is not suitable, and to reduce the number of units that were considered suitable for lower-income households in areas where costs, such as infrastructure expansion fees are anticipated.

~~*A total of 77 parcels (600.6 acres) are identified as suitable for housing development. Areas that fall within Chino Airport safety zones 1-4, where residential development is limited, have been excluded. Parcels where the property owner or developer has already approached the City with development proposals have also been excluded. Finally, parcels with multiple Policy Plan land use designations have been divided, so only acreage associated with those portions of the parcel deemed suitable for*~~

SCE Easement Area

The SCE Easement Housing Opportunity Area consists of mixed-use and residential parcels adjacent to an east-west Southern California Edison (SCE) transmission corridor in western Ontario Ranch. While the transmission easement itself will remain a utility and open-space use, adjoining parcels provide opportunities for new housing integrated with trails, open space, and supporting service uses.

- Zoning – SCE Easement Area

  Within the SCE Easement Area, 12 parcels totaling 66 acres are zoned SP-AG-AH, with a policy plan designation of MDR. These parcels allow a minimum residential density of 20 du/ac and a maximum density of 30 du/ac if benefits of the affordable housing overlay are exercised, yielding a theoretical capacity of 1,977. The adjustment factor of 0.73 results in a final realistic capacity of 1,450 units for the SCE Easement Area. Projects that include affordable housing are exempt from specific plan requirements, consistent with the provisions of the Affordable Housing overlay.

- Size of Sites – SCE Easement Area

  No sites in this opportunity area are smaller than 0.5 acres or larger than 10 acres.

- Existing Use

  There are 12 parcels covering approximately 66 acres in this area. Agricultural uses, particularly large dairy operations, cover about 46 acres (6 parcels), including a single existing dwelling unit associated with the dairy. Two parcels, covering roughly 8.5 acres, are used for truck parking, two parcels, covering about 10.3 acres, are used for water-storage, and two parcels, covering approximately 1 acre, are vacant.

  Because of the extremely low density of housing and the anticipated type of development, the existing uses are not expected to impede development potential. Land with very similar conditions to the sites identified in this area has recently developed on the eastern side of the Cucamonga Channel, forming new residential neighborhoods. The same trend is expected to continue in this area as infrastructure expands.

  No existing uses are expected to impede development of housing.

- Availability of Sites

  The City has long anticipated transitioning this area from agricultural and utility-compatible uses to urban development as backbone infrastructure extends westward, and the SCE Easement Area has been included in that phasing strategy. As described under Infrastructure Availability, new sewer and water infrastructure along Merrill Avenue and connecting north–south corridors will serve the SCE Easement Area over the first half of the planning period, opening these portions of the parcels for development. Once backbone infrastructure is available, the City

expects rapid interest in subdividing and developing these sites, consistent with the pattern already observed in nearby parts of Ontario Ranch and supported by inquiries from developers and property owners.

- Feasibility of Development – SCE Easement Area

  As described under Strategy 6 Market Trends, recent development activity in eastern Ontario Ranch demonstrates the strong market for new residential neighborhoods and mixed-income projects once infrastructure is available, even on sites with physical constraints such as flood channels or utility corridors. The SCE Easement Area shares similar market conditions and policy support, and the combination of updated zoning (SP-AG-AH), appropriate Policy Plan designations (MDR and MU), and the City's programs to facilitate affordable housing demonstrates that development here is feasible and likely to occur during the planning period.

Grove Corridor

The Grove Corridor Opportunity Area extends along Grove Avenue north from ~~the Great Park Corridor Opportunity Area~~Edison Avenue to ~~and terminating at~~ Riverside Drive. The corridor provides a vital connection between southern Ontario and the city's existing urban fabric. This area is envisioned as a mixed-income residential district with a mixed-use activity node at Chino Avenue and a new community park near Riverside Drive. The sites along the Grove Corridor were identified for higher-density housing development for several reasons, including planning objectives like activating the street and enhancing transit options, development potential, and infrastructure availability. Housing within the Opportunity Area will benefit from proximity to the ~~Great~~Grand Park ~~and the new community park~~. The extents of the Opportunity Area are shown in Figure 5-9 and described below.

Figure 5-9 Grove Corridor Housing Opportunity Area

- Zoning – Grove Corridor

  All sites in the Grove Corridor are zoned for Specific Plan and are now designated SP-AG-AH, with the Affordable Housing Overlay applied to all parcels to establish a minimum residential density of 20 dwelling units per acre while allowing the Policy Plan designation to govern maximum densities. As previously discussed, the Agriculture Overlay District will remain in place until each parcel is ready to develop consistent with the Policy Plan and Affordable Housing Overlay, and because property owners and developers have already expressed interest in transitioning this area, existing agricultural operations are not expected to constrain future housing development.

  Four Policy Plan designations govern the densities allowed in this corridor, including High Density Residential (25-45 du/ac), Medium Density Residential (20-30 du/ac with provisions of the affordable housing overlay), and Mixed-Use (Grove) (20-65 du/ac).

  ~~All sites are currently zoned for Specific Plan all sites in this area are currently zoned SP-AG, and they will be rezoned to SP-AG-AH for inclusion in the Affordable Housing Overlay District (Program 13). The AH Overlay will be applied to all sites. It will establish a minimum density of 20 du/ac and allow the Policy Plan designation to govern the maximum densities.~~

~~As previously discussed, the Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the Policy Plan and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential.~~

~~The City is also proposing to update its Policy Plan land uses as described in Program 13. Sites in this area will have Policy Plan designations of MDR and Mixed-Use. MDR will allow a range of 20-30 du/ac for projects with at least 25 percent of units affordable to lower incomes, and a range of 20-25 du/ac for all other projects. The Mixed-Use area (Mixed-Use Grove), at the intersection of Grove and Chino Avenues is envisioned as a low-rise (three to five stories) mixture of retail and residential uses that will create identity and place along the corridor and serve the surrounding residents. The Mixed-Use Area will allow 20-65 du/ac. With the changes outlined in Program 13, all sites identified support densities necessary to facilitate lower- and moderate-income housing development.~~

~~There are 21 parcels (150.8 acres) currently or proposed to be classified as MDR in the Policy Plan. Four parcels (36 acres) are proposed to be classified as Mixed-Use Grove in the Policy Plan.~~

Site Size – Grove Corridor

No sites in this opportunity area are smaller than 0.5 acres or larger than 10 acres.

- Existing Use

The Opportunity Area consists of ~~25~~31 parcels (~~186.8~~205 acres). Like the ~~Great~~Grand Park Corridor, the majority of these sites continue to house the agricultural operations (16 parcels, 130.6 acres), while 53.09 acres on 10 parcels accommodate former dairy facilities, mulch/landscaping supply, truck parking, open storage, and a trucking business.~~.~~ ~~Several sites have also already begun to transition to interim uses such as building supply sales/storage, truck parking and open storage (8 parcels, 46.7 acres). Finally, there is 1 vacant parcel (9.5 acres) that has already shuttered former agricultural operations~~.

On the agricultural parcels, there are approximately ~~six~~ eleven existing farm homes that were built to serve the agricultural operations.

These aging farmhouses are largely vacant or owner-occupied. These homes do not provide established affordable housing, and they are not currently occupied by lower-income households, as shown on Figure 3-14, the median income in this area is between $55,000 and $125,000 annually. Further, development of the identified sites would only occur after the land was voluntarily vacated and sold or redeveloped by the owner occupants of the property. As seen in areas that have recently developed to the east of the Cucamonga Channels, owners who opt to sell or redevelop their properties typically see very large profits and would be able to secure replacement housing without assistance. The ~~six~~ existing homes are projected to be replaced by more than ~~4,100~~5,800 homes (more than ~~685~~ 525 times the current stock).

Because of the extremely low density of housing and the anticipated type of development, the existing residential uses are not expected to impede development potential. Land with very similar conditions to the sites identified in this area has recently developed on the eastern side of the Cucamonga Channel, forming new residential neighborhoods. The same trend is expected to continue in this area as infrastructure expands.

No existing uses are expected to impede development of housing.

- Availability of Sites

Similar to the ~~Great~~Grand Park Corridor, the City has planned to phase out agricultural uses in this area since annexation in 1997, but insufficient infrastructure limited what could be achieved.

As described under Infrastructure Availability, sewer and water service are expected to extend north from the new trunk line on Merrill Avenue along Grove Avenue, with the southern-most sites anticipated to be served first. Based on discussion with OMUC, sites in this broader Ontario Ranch area are anticipated to receive backbone service in phases generally consistent with the City's projected infrastructure schedule, including: service to Grand Park Area 2 (west of Walker/south of Schaefer) and Grove Corridor Area 2 (west of Walker/south of Schaefer) in approximately 2026–2027; Grove Corridor Area 3 (west of Walker/between Schaefer and the north SCE easement) by about 2027; Grove Corridor Area 4 and Euclid Corridor Area 4 (west of Walker/Schaefer to Chino) in roughly 2027–2028; and Grove Corridor Area 5 and Euclid Corridor Area 5 (west of Walker/north of Chino) by about 2028.~~As described under Infrastructure Availability, sewer and water service is expected to extend north from the new trunk line on Merrill Avenue~~

~~(estimated completion in 2022) north along Grove Avenue, with the southern most sites expected to be first served. Based on discussion with OMUC, the sites in this area are expected to have service in two phases:~~

- ~~Between Southern SCE easement and Schaefer Avenue: 3 to 5 years~~
- ~~Between Schaefer Avenue and Riverside Drive: 4 to 6 years~~

As backbone infrastructure becomes available, development is likely to occur rapidly, as seen in recent years on the eastern side of the Channel. This assertion is informed by conversations with property owners eager to develop, by an on-going dialogue with home building advocacy groups, and by regular inquiries from developers interested in this area of the City.

- Feasibility of Development

As with the ~~Great~~Grand Park Corridor, the anticipated timing of infrastructure expansion paired with heightened interest of both developers and property owners, described under Availability of Sites, indicates that development is not only feasible, but very likely to occur once backbone infrastructure is in place.

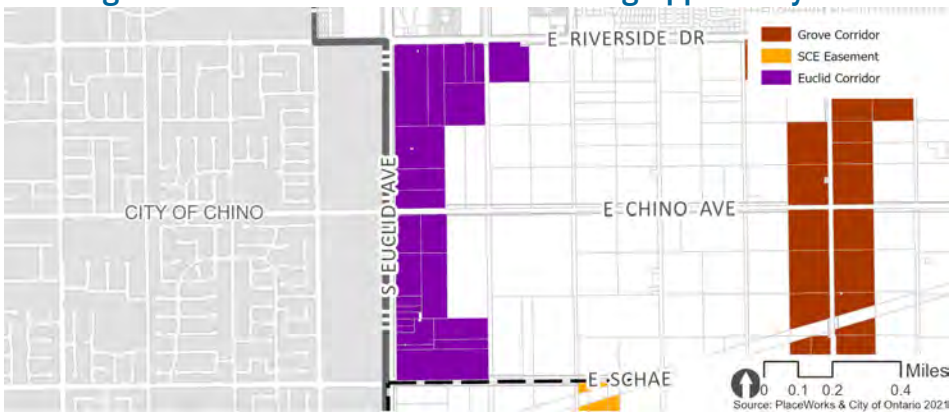
Strategy 6 Market Trends illuminates the aggressive development climate that has already manifested in the eastern side of the Ontario Ranch and references other new communities that included affordable housing. The discussion of Size of Sites for all sites also provides examples of affordable housing projects that have developed on larger greenfield sites. Together, these illustrate that the sites within this opportunity are suitable for lower-income housing.

Parcels with multiple Policy Plan land use designations have been divided, so only those portions of the parcel deemed suitable for housing development are included. As discussed later under this strategy (see "Realistic Capacity" and Units by RHNA Income Category), housing capacity assumptions have been adjusted to reflect only the portion of the parcel included in the inventory. The timing for the availability of infrastructure has been factored into the capacity estimates for all sites in this area, and the City's policy, promoting the creation of mixed-income neighborhoods is reflected in how the RHNA allocation is divided by income category for these sites.

Euclid Corridor

The Euclid Corridor Opportunity Area includes the parcels on the city's western border along Euclid Avenue between Schaefer Avenue and Riverside Drive. The sites along the Euclid Corridor were identified for higher-density housing development to complement the multifamily housing across the street in Chino, fulfill regional transit goals, and because of their development potential as well as infrastructure availability. The extents of the Opportunity Area are shown in Figure 5-10 and described in the text that follows.

Figure 5-10 Euclid Corridor Housing Opportunity Area



- Zoning – Euclid Corridor

  All properties in this area are zoned SP-AG-AH, reflecting the application of the Affordable Housing Overlay. ~~All sites are currently zoned for Specific Plan all sites in this area are currently zoned SP-AG, and they will be rezoned to SP-AG-AH for inclusion in the Affordable Housing Overlay District (Program 13).~~ The AH Overlay ~~will be applied to all sites. It will~~ establishes a minimum density of 20 du/ac and allows the Policy Plan designation to govern the maximum densities.

  As previously discussed, the Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the Policy Plan and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential.

  The City ~~is also proposing to update~~has updated its Policy Plan land uses ~~as described in~~consistent with Program 13. Sites in this area ~~would~~ have policy plan designations of MDR and Mixed-Use. MDR ~~will~~ allows a range of 20-30 du/ac for projects with at least 25 percent of units affordable to lower ~~-~~incomes, and a range of 20-25 du/ac for all other projects. One key parcel at the

intersection of Euclid Avenue and Riverside Drive carries a Mixed-Use designation that allows ~~Mixed Use is proposed on one parcel at the intersection of Euclid Avenue and Riverside Drive. The proposed Mixed Use designation would allow~~ 20-75 du/ac. ~~With the changes outlined in Program 13,~~ All sites identified support densities necessary to facilitate lower- and moderate-income housing development.

- Size of Sites – Euclid Corridor

  Five parcels identified in this area (68.3 acres) are larger than 10 acres. As discussed under Size of Sites for all sites, large sites in the Ontario Ranch provide unique opportunities for the development of affordable housing projects, and are not considered an impediment to affordable housing, but could rather been seen as an asset.

  As discussed under Size of Sites for all sites, parcels smaller than 0.5 acres have been excluded from the land inventory, but are not expected to impede development on adjacent sites in any way.

- Existing Use

  The Opportunity Area includes ~~22~~ 24 parcels (132.2 acres) that are identified as suitable for housing development. ~~Two~~ One parcel~~s~~ (~~10~~2.3 acres) ~~are~~ is vacant. ~~Eighteen~~ Nineteen parcels (~~110~~118.0~~0~~ acres) continue to house the agricultural operations. One parcel (8.8 acres) is principally occupied by the parking area that serves the nearby swap meet and livestock sales yard (neither the swap meet nor the livestock sales yard are included in the inventory). The final three parcels (3.1 acres) are underutilized commercial sites fronting Euclid Avenue. These sites were identified for redevelopment because they consist of small buildings operated by independent tenants, and they are surrounded by agricultural and vacant land. It is anticipated that these properties will redevelop concurrent with the rest of the Opportunity Area. The City has been in contact with property owners in this area, and the potential redevelopment of the identified sites with housing, including affordable options is feasible in the 6th cycle.

  On the agricultural parcels, there are approximately ~~12~~ 8 existing farm homes that were built primarily to serve agricultural operations.

  As in the ~~Great~~Grand Park and Grove Corridors, these aging farmhouses are largely vacant or owner-occupied. These homes do not provide established affordable housing, and they are not currently occupied by lower-income households, as shown on

Figure 3-14, the median income in this area is among the highest in the City with incomes between $87,100 and $125,000 annually. Further, development of the identified sites would only occur after the land was voluntarily vacated and sold or redeveloped by the owner occupants. As seen in areas that have recently developed to the east of the Cucamonga Channel, owners who opt to sell or redevelop their properties typically see very large profits and would be able to secure replacement housing without assistance. The ~~12~~ 8 existing homes are projected to be replaced by more than 2,900 homes (nearly ~~250~~ 350 times the current stock).

Because of the extremely low density of housing and the anticipated type of development, the existing residential uses are not expected to impede development potential. Land with very similar conditions to the sites identified in this area has recently developed on the eastern side of the Cucamonga Channel.

- Availability of Sites

As in the ~~Great~~Grand Park and Grove Corridors, the City has planned to phase out agricultural uses in this area since annexation in 1997, but insufficient infrastructure limited what could be achieved.

As described under Infrastructure ~~a~~Availability, sewer and water service are expected to extend north from the new trunk line on Merrill Avenue along Grove Avenue, with the southern-most sites anticipated to be served first. Based on discussion with OMUC, sites in this broader Ontario Ranch area are anticipated to receive backbone service in phases generally consistent with the City's projected infrastructure schedule, including: service to Grand Park Area 2 (west of Walker/south of Schaefer) and Grove Corridor Area 2 (west of Walker/south of Schaefer) in approximately 2026–2027; Grove Corridor Area 3 (west of Walker/between Schaefer and the north SCE easement) by about 2027; Grove Corridor Area 4 and Euclid Corridor Area 4 (west of Walker/Schaefer to Chino) in roughly 2027–2028; and Grove Corridor Area 5 and Euclid Corridor Area 5 (west of Walker/north of Chino) by about 2028.~~As previously described under infrastructure availability, sewer and water service is expected to extend north from the new trunk line on Merrill Avenue (estimated completion in 2022) north along Euclid Avenue, with the southern-most sites expected to be first served. Based on discussion with OMUC, the sites in this area are expected to have service during the two phases of expansion:~~

~~- Adjacent to Schafer Avenue: 3-5 years~~

~~- Between Schaefer Avenue and Riverside Drive: 4 to 6 years~~

~~It is estimated that the seven parcels closest to Schaefer Avenue could have access to infrastructure in 3 to 5 years, earlier than other sites in this Opportunity Area, because the City is changing the land uses immediately south of the Opportunity Area (between Schaefer Avenue and the Great Park Opportunity Area) to allow light industrial, business park, and logistics facilities. These types of operations are in extremely high demand, so it is anticipated that the development of such facilities would bring infrastructure to the southern portions of the Opportunity Area earlier in the planning period than would otherwise occur.~~

As backbone infrastructure becomes available, development is likely to occur rapidly, as seen in recent years on the eastern side of the Channel. This assertion is informed by conversations with property owners eager to develop, by an on-going dialogue with home building advocacy groups, and by regular inquiries from developers interested in this area of the City.

- Feasibility of Development

  As with the ~~Great~~Grand Park Corridor, the anticipated timing of infrastructure expansion paired with heightened interest of both developers and property owners, described under "Availability of Sites" indicates that development is not only feasible, but very likely to occur once backbone infrastructure is in place.

  Strategy 6 Market Trends illuminates the aggressive development climate that has already manifested in the eastern side of the Ontario Ranch and references other new communities that included affordable housing. The discussion of Size of Sites for all sites also provides examples of affordable housing projects that have developed on larger greenfield sites. Together, these illustrate that the sites within this opportunity are suitable for lower-income housing.

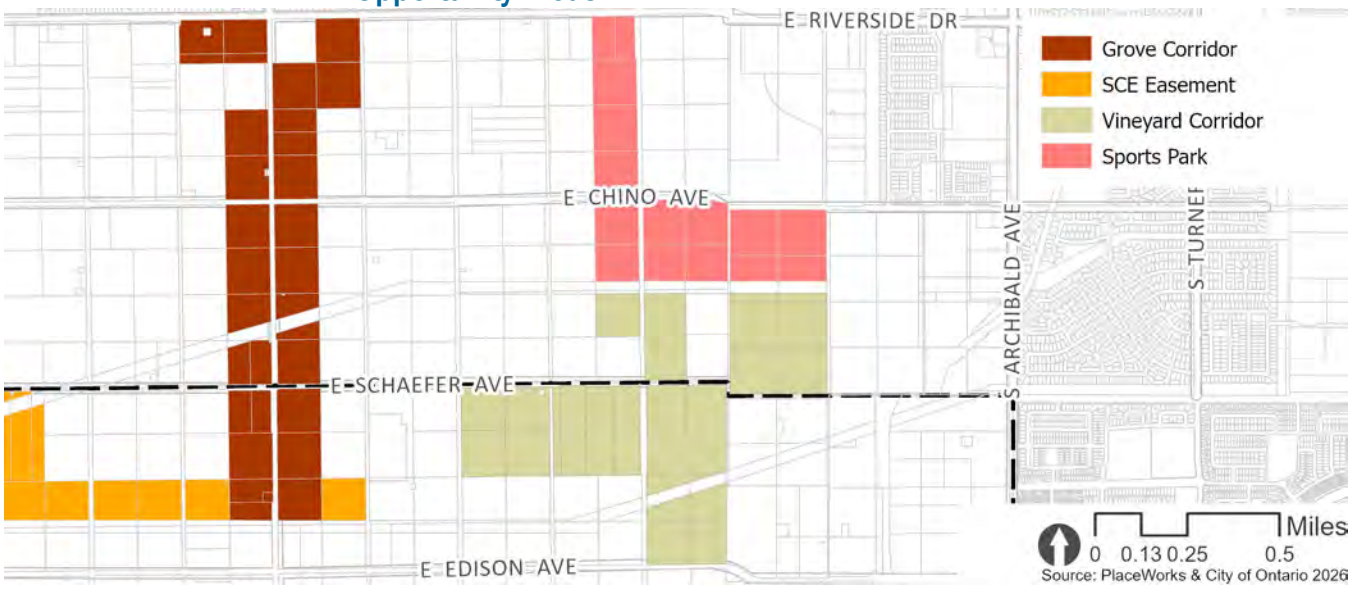
  Parcels with multiple Policy Plan land use designations have been divided, so only those portions of the parcel deemed suitable for housing development are included. As discussed later under this strategy (see "Realistic Capacity" and Units by RHNA Income Category), housing capacity assumptions have been adjusted to reflect only the portion of the parcel included in the inventory. The timing for the availability of infrastructure has been factored into the affordability estimates for all sites in this area, and the City's policy, promoting the creation of mixed-income neighborhoods is

reflected in how the RHNA allocation is divided by income category for these sites.

Vineyard Corridor

The Vineyard Corridor & Sports Park ~~/ Armstrong Ranch~~ Opportunity Areas includes the parcels on either side of Vineyard Avenue between ~~Chino~~ Edison Avenue and Riverside Drive. ~~The sites along Vineyard Avenue were identified as "overflow" sites to help the City maintain a large inventory of potential sites as development occurs throughout the planning period.~~ The extents of the Opportunity Areas are shown in Figure 5-11 and described in the text that follows.

Figure 5-11 Vineyard Corridor & Sports Park Housing Opportunity Areas



- Size of Sites – Vineyard Corridor~~/ Armstrong Ranch Specific Plan~~

- In the Vineyard Corridor, nine parcels exceed 10 acres. Seven sites (approximately 75.26 acres) are between 10 and 12 acres, while two sites are nearly 17 acres. These sites provide the scale needed to master plan mixed-use neighborhoods, phase development, and reserve portions of each site for lower income while still achieving efficient site design. As discussed at Size of Sites for all sites, parcels smaller than 0.5 acres have been excluded from the land inventory, but are not expected to impede development on adjacent sites in any way.~~No sites in this opportunity area are smaller than 0.5 acres or larger than 10 acres.~~

- Zoning – Vineyard Corridor~~/ Armstrong Ranch Specific Plan~~

The corridor's residential zoning is organized into two specific plan districts: SP-AG-AH with an HDR policy plan designation, which allows for residential development between 25 and 45 du/ac, and SP-AG-AH with an MDR policy plan designation, which together with the affordable housing overlay allows for residential development between 20 du/ac and 30 du/ac.

In the corridor, 25 parcels are zoned as follows: 12 parcels with SP-AG-AH zoning and an HDR policy plan designation covering 93.0 net acres, and 14 parcels with SP-AG-AH zoning and MDR policy plan designation covering 113.4 net acres. ~~The three parcels (28.2 acres) on the western side of Vineyard Avenue are currently zoned SP-AG. They will be rezoned to SP-AG-AH for inclusion in the Affordable Housing Overlay District (Program 13). The Agriculture Overlay District will remain in place until the parcel is ready for development consistent with the Policy Plan and Affordable Housing Overlay District. Property owners and developers alike have expressed interest in redeveloping this area, so existing agricultural operations are not expected to limit development potential.~~

~~The four parcels (36.2 acres) on the eastern side of Vineyard Avenue are governed by the Armstrong Ranch Specific Plan. The City will update the Specific Plan as part of its rezoning program (Program 13) to allow a minimum of 20 dwelling units per acre and maximum of 30 or more dwelling units per acre on the sites included in the Opportunity Area.~~

~~As backbone infrastructure becomes available, development is likely to occur rapidly, as seen in recent years on the eastern side of the Channel. This assertion is informed by conversations with property owners eager to develop, by an on-going dialogue with home building advocacy groups, and by regular inquiries from developers interested in this area of the City.~~

- Existing Use

The Opportunity Area includes ~~seven~~ 25 parcels (~~64.3~~206.4 acres), dominated by agricultural and industrial uses tied to dairy, crops, mulch production, and logistics. Agricultural uses cover 119.2 acres on 13 parcels, including extensive dairy operations, crop fields, and nurseries, while mulch/landscape supply operations 76.1 acres across 9 parcels. These parcels also have 4 existing dwelling units associated with agricultural operations, which are expected to be replaced by 5,700 units an increase of 1425 percent.

One parcel (8.8 acres) houses a recycling collection site. One parcel (0.50 acres) houses truck parking. One 1.8-acre parcel is classified

as vacant land. Although modest in size, this vacant site offers flexible infill potential along Vineyard Avenue and can be integrated into larger redevelopment efforts or future lot consolidations.

- Availability of Sites

  As in the other Opportunity Areas that comprise this strategy, the City has planned to phase out agricultural uses in this area since annexation in 1997, but insufficient infrastructure limited what could be achieved.

  As described under Infrastructure Availability, sewer and water service are expected to extend north from the new trunk line on Merrill Avenue along Grove Avenue, with the southern-most sites anticipated to be served first. Based on discussion with OMUC, sites in this broader Ontario Ranch area are anticipated to receive backbone service in phases generally consistent with the City's projected infrastructure schedule, including: service to Vineyard Corridor Area 1 (east of Walker) in 2026.

  ~~As previously described under infrastructure availability, sewer and water service is expected to extend north from the new trunk line on Merrill Avenue Between Schaefer Avenue and Riverside Drive: 4 to 6 years~~

  Discussions with the development community show that there is substantial interest in developing these sites when infrastructure is available.

- Feasibility of Development

  Discussions with the development community show that there is substantial interest in developing these sites when infrastructure is available. These sites were identified after discussions with property owners and developers interested in intensifying these area.

  The greatest deterrent to the development of these sites is the availability of infrastructure, which may be available in four to six years, depending on the rate of development. In recognition of the reduced time during the planning period when development will be feasible, only 25 percent of the realistic development capacity is estimated as affordable to lower incomes, while the remaining housing capacity is estimated to facilitate the development of above moderate-income housing. It is assumed that the above moderate-income housing will not only help to create an

integrated mixed-income community but will also help to finance the expansion of infrastructure.

Sports Park

- Zoning – Sports Park

  Within the Sports Park Opportunity Area, all sites are zoned for Specific Plan with the agriculture and affordable housing overlay (SP-AG-AH). Mixed-Use Sports Park (MU-SP), which allows 25-65 dwelling units per acre, and High Density Residential, which allows 25-45 dwelling units per acre. These zones implement Strategy 6 by reserving all identified parcels for future residential or mixed-use housing.

- Site Size – Sports Park

  Two parcels the Sports Park Opportunity Area measure 10.4 acre. includes, which round down to 10 acres, and are comparable in scale to the larger Strategy 6 sites discussed elsewhere in Ontario Ranch.

- Existing Use

  Of the 118 acres across 15 parcels in the Sports Park Opportunity Area, 96.9 acres on 12 parcels remain crops, dairies, and nursery operations, while two parcels are used for mulch/landscape supply and RV storage. There is also one 5.8-acre parcel that is currently vacant. The area as a whole is transitioning from agricultural and dairy operations to a planned regional sports complex and mixed-use district. The sports complex is planned across the street from these sites, with the first phase of development (ONT Field, a minor league baseball stadium), anticipated to open for the 2026 baseball season. As construction of the complex and supporting infrastructure proceeds, existing agricultural and dairy activities are expected to phase out in favor of housing development.

- Availability of Sites

  As in the other Opportunity Areas in the Ontario Ranch (Strategy 6), the City has planned to phase out agricultural uses in this area since annexation in 1997, but insufficient infrastructure limited what could be achieved until recently.

  As described under Infrastructure Availability, backbone sewer and water service is expected to complete installation along Vineyard Avenue in Spring 2026. This trunk line is anticipated to expedite sewer availability to the remainder of sites in Area 1,

which includes all of the sites in the Sports Park Opportunity Area.

Realistic Capacity

To determine the realistic capacity on these sites, the City identified a realistic density below the maximum, and applied an additional reduction factor to sites with a mixed-use designation to account for potential non-residential uses. A summary of the assumptions and realistic capacity is included in Table 5-5, and detailed descriptions of the adjustment factors applied to sites within each zoning designation is provided after the table.

Table 5-13
Strategy 6: Realistic Capacity

Zoning/ Policy Plan ~~(after rezoning)~~	Number of Parcels	Acres*	Max Density (du/ac)	Max Capacity (units*)	Adjustment Factor**	Final Realistic Capacity (units*)

*Acres and units have been rounded.
**See Adjustment Factor below for a detailed description of the adjustment factors applied to each group of sites.

Adjustment Factors

- SP-AG-AH / MDR (~~Great Park~~SCE Easement , Grove, and Euclid Corridors, and Vineyard Corridor~~/ Armstrong Ranch Specific Plan~~)

  Description:

- Number and size of sites: ~~94~~ 59 parcels, ~~631.8~~361.8 acres
- Allowable density: 20-30 dwelling units per acre
- RHNA affordability: varies based on location of site relative to planned infrastructure expansion.

o ~~*Great*~~ *Grand Park Corridor* ~~—~~*& SCE Easement Area* – Whole area *(infrastructure 2026-2027)*

~~Infrastructure in 1-3 years.~~ Lower-income (50 percent), Moderate-income (25 percent), Above moderate-income (25 percent)

o *Grove Corridor*

- South of Schaefer Avenue (Infrastructure- 2026-2027)

  Lower-income (50 percent), Above moderate-income (50 percent)
- Between Schaefer Avenue and Northern SCE Easement (Infrastructure- 2027)

  Lower-income (40 percent), Above moderate-income (60 percent)
- Between Northern SCE Easement and Chino Ave (Infrastructure 2027-2028)

  Lower-income (35 percent), Above moderate-income (65 percent)
- North of Chino Avenue (Infrastructure 2028)

  Lower-income (25 percent), Above moderate-income (75 percent)

- *Euclid Corridor*

- South of Chino Avenue (Infrastructure 2027-2028)

  Lower-income (35 percent), Above moderate-income (65 percent)
- North of Chino Avenue (Infrastructure 2028)

  Lower-income (25 percent), Above moderate-income (75 percent)

o *Vineyard Corridor & Sports Park Area*

- Whole Area (Infrastructure 2026)

Lower-income (50 percent), Moderate-income (25 percent), Above moderate-income (25 percent).

- ~~*1 parcel in Great Park Corridor, Southern portions of Grove Corridor & Euclid Corridors – Infrastructure in 3-5 years.* Lower-income (40 percent), Above moderate-income (60 percent)~~
- ~~*Northern portions of Grove Corridor & Euclid Corridor, all of Vineyard Corridor/ Armstrong Ranch Specific Plan – Infrastructure in 3-5 years.* Lower-income (25 percent), Above moderate-income (75 percent)~~

- Existing Use: Agriculture, ~~Open Storage~~Truck Parking, Landscape & Building Supplies, RV rentals/ ~~-~~sales/storage.
- Infrastructure availability: Planned, RHNA affordability distribution accounts for phasing of infrastructure
- Environmental constraints: Unconfirmed liquefaction potential on 7 parcels (44.8 acres), as discussed under Strategy Six "Environmental Constraints~~,~~" ." ~~recent~~ Recent projects ~~with~~in the area that has high water levels~~,~~ have not required mitigation, so no adjustment has been provided.

Capacity Factors:

- *Land Use Controls and Site Improvements*. 95 Percent Adjustment
  Portions of parcels that were not deemed appropriate for residential development (due to presence of a utility easement, designation as a future park, or other factor that would preclude residential development) are not included in the acreage estimates within the land inventory. As such, the factor applied here is intended to account for the portion of each site that will be dedicated to internal circulation, sidewalks, and other public areas. Five percent of the land area has been reserved to account for these uses. The total adjustment factor applied is 95 percent.
- *Realistic Residential Capacity*. No Adjustment
  The SP-AG-AH zone, with a Policy Plan designation of MDR is intended for 100 percent residential projects. For this reason, 100 percent of the site area was considered viable for residential development, and no reduction factor was applied.

- *Typical Densities.* 77.1 Percent Adjustment

  Project applications and requests for specific plan amendments in the eastern Ontario Ranch, have continuously requested higher and higher densities to meet current market demand. Specific plans that were originally imagined as primarily single-family homes have repositioned to include a greater variety of higher density options. Examples of recently completed homes that are similar to what would be expected in the MDR areas of western Ontario Ranch include motor court and row town products, both of which have been built at densities between 22 and 25 dwelling units per acre in the eastern Ontario Ranch. The City also looked at the densities of recent affordable projects in the northern part of the city (Vista Verde, completed in 2021, and Emporia I, completed in 2020), which were built at densities of 26 and 27 dwelling units per acre, to provide a more conservative estimate while also estimating a high enough density to realize cost savings, a realistic density of 23 dwelling units per acre was used to estimate realistic capacity. Twenty-three dwelling units per acre is 77.1 percent of the maximum density allowed.

  In addition to the adjustment factor, ~~34~~ 11 existing units (~~19 in the Great Park Corridor, 3~~ 1 in the Grove Corridor, ~~8~~12 in the Euclid Corridor, 1 in the SCE Easement Area, and 1 in the Vineyard Corridor) within the MDR designation (as previously discussed under "Site-Specific Information") have been removed from the realistic capacity to ensure estimates focus on growth rather than replacement.

- *Infrastructure* Availability. Adjustments made to affordability distribution

  As previously discussed, infrastructure availability will enable development of the western Ontario Ranch to occur in a pattern similar to that of the eastern Ranch. Infrastructure is expected to expand south to north as development occurs. Part of the funding for expansion of the infrastructure system will come from investments by market-rate developers. With the current strong demand for residential uses, it is not anticipated that the availability of infrastructure will limit the number of units that can and will be built on each site, only the timing for when those sites will be able to develop and the potential affordability levels. To account for this, and in recognition of the need to offset costs for infrastructure expansion, the percent of the realistic capacity estimated as suitable for lower-income units decreases as you move north from Merrill Avenue~~, where the initial trunk line is anticipated to complete~~

~~construction in 2022~~. ~~-~~The areas farthest from Merrill Avenue anticipate the lowest percentage of affordable units, with the balance expected to be above-moderate-income. It is expected that above-moderate housing will help to offset the costs associated with infrastructure expansion. The realistic capacity is divided by affordability level as follows:

- Grand Park Corridor & SCE Easement Area
  - Whole area (Infrastructure 2026-2027)
- Grove Corridor
  - South of Schaefer Avenue (Infrastructure 2026-~~-~~2027)
    Lower-income (50 percent), Above moderate-income (50 percent)
  - Between Schaefer Avenue and Northern SCE Easement (Infrastructure 2027)
    Lower-income (40 percent), Above moderate-income (60 percent)
  - Between Northern SCE Easement and Chino Ave (Infrastructure 2027-2028)
    Lower-income (35 percent), Above moderate-income (65 percent)
  - North of Chino Avenue (Infrastructure 2028)
    Lower-income (25 percent), Above moderate-income (75 percent)
- Euclid Corridor
  - South of Chino Avenue (Infrastructure 2027-~~-~~2028)
    Lower-income (35 percent), Above moderate-income (65 percent)
  - North of Chino Avenue (Infrastructure 2028)
    Lower-income (25 percent), Above moderate-income (75 percent)
- Vineyard Corridor & Sports Park Area
  - Whole Area (Infrastructure 2026)
    Lower-income (50 percent), Moderate-income (50 percent)

~~o Great Park Corridor *(Infrastructure in 1-3 years)*~~

~~Lower-income (50 percent), Moderate-income (25 percent), Above moderate-income (25 percent)~~

~~o 1 parcel in Great Park Corridor, Southern portions of Grove & Euclid Corridors *(Infrastructure in 3-5 years)*~~

~~Lower-income (40 percent), Above moderate-income (60 percent)~~

- ~~Northern portions of Grove Corridor & Euclid Corridor, all of Vineyard Corridor/ Armstrong Ranch Specific Plan *(Infrastructure in 3-5 years)*~~

  ~~Lower-income (25 percent), Above moderate-income (75 percent)~~

The results of this distribution are recorded in Table 5-14.

- ~~*Environmental Constraints.* No Adjustment~~

  ~~As discussed under Strategy Six "Environmental Constraints," there is unconfirmed liquefaction potential on 7 MDR parcels (44.8 acres) in the GreatGrand Park Corridor. However, geotechnical studies for recent projects within the zone have not identified any specific risks, and additional mitigation has not been required, soils and groundwater levels are assumed to be similar throughout of the zone, so adjustment was not considered necessary.~~

Total Capacity Adjustments: (.95)x(1)x(.771)x(1)x(1) = 73.3 percent

- SP-AG-AH / HDR (Grove and Vineyard Corridors, and Sports Park Area)

  Description:

  - Number and size of sites: 35 parcels, 256.0 acres
  - Allowable density: 25-45 dwelling units per acre
  - RHNA affordability: varies based on location of site relative to planned infrastructure expansion.

    - *Grove Corridor*

      - South of Schaefer Avenue (Infrastructure- 2026-2027)
      - Lower-income (50 percent), Above moderate-income (50 percent)
      - Between Schaefer Avenue and Northern SCE Easement (Infrastructure- 2027)
      - Lower-income (40 percent), Above moderate-income (60 percent)

- Between Northern SCE Easement and Chino Ave (Infrastructure 2027-2028)
  - Lower-income (35 percent), Above moderate-income (65 percent)
- North of Chino Avenue (Infrastructure 2028)
  - Lower-income (25 percent), Above moderate-income (75 percent)

- *Vineyard Corridor & Sports Park Area*
  - Whole Area (Infrastructure 2026)
    - Lower-income (50 percent), Moderate-income (25 percent), Above moderate-income (25 percent).

- Existing Use: Agriculture, Truck Parking, Landscape & Building Supplies, RV storage.

- Infrastructure availability: Planned, RHNA affordability distribution accounts for phasing of infrastructure

Capacity Factors:

- *Land Use Controls and Site Improvements.* 95 Percent Adjustment

  Portions of parcels that were not deemed appropriate for residential development (due to presence of a utility easement, designation as a future park, or other factor that would preclude residential development) are not included in the acreage estimates ~~with~~in the land inventory. As such, the factor applied here is intended to account for the portion of each site that will be dedicated to internal circulation, sidewalks, and other public areas. Five percent of the land area has been reserved to account for these uses. The total adjustment factor applied is 95 percent.

- *Realistic Residential Capacity.* No Adjustment

  The SP-AG-AH zone, with a Policy Plan designation of HDR is intended for 100 percent residential projects. For this reason, 100 percent of the site area was considered viable for residential development, and no reduction factor was applied.

- *Typical Densities.* 77.8 Percent Adjustment

  Project applications and requests for specific plan amendments in the eastern Ontario Ranch, have continuously requested higher and higher densities to meet current market demand. Specific plans that were originally imagined as

primarily single-family homes have repositioned to include a greater variety of higher density options.

In addition to this, the high density residential category sets a minimum density of 25 dwelling units per acre. It is anticipated that the higher minimum density will require products types that are closer to mid-to-high range of the density allowance, compared to MDR. As such, it was estimated that 81.8 percent of the maximum density allowed would account for realistic capacity for HDR sites.

- *Infrastructure Availability.* Adjustments made to affordability distribution

  As previously discussed, infrastructure availability will enable development of the western Ontario Ranch to occur in a pattern similar to that of the eastern Ranch. Infrastructure is expected to expand south to north as development occurs. Part of the funding for expansion of the infrastructure system will come from investments by market-rate developers. With the current strong demand for residential uses, it is not anticipated that the availability of infrastructure will limit the number of units that can and will be built on each site, only the timing for when those sites will be able to develop and the potential affordability levels. To account for this, and in recognition of the need to offset costs for infrastructure expansion, the percentage of the realistic capacity estimated as suitable for lower-income units decreases as you move north from Merrill Avenue. The areas farthest from Merrill Avenue anticipate the lowest percentage of affordable units, with the balance expected to be above-moderate-income units. It is expected that above-moderate housing will help to offset the costs associated with infrastructure expansion. The realistic capacity is divided by affordability level as follows:

  - Grove Corridor
    - South of Schaefer Avenue (Infrastructure 2026--2027)
      Lower-income (50 percent), Above moderate-income (50 percent)
    - Between Schaefer Avenue and Northern SCE Easement (Infrastructure 2027)
      Lower-income (40 percent), Above moderate-income (60 percent)
    - Between Northern SCE Easement and Chino Ave (Infrastructure 2027-2028)
      Lower-income (35 percent), Above moderate-income (65 percent)

- North of Chino Avenue (Infrastructure 2028)
  Lower-income (25 percent), Above moderate-income (75 percent)

- Vineyard Corridor & Sports Park Area
  - Whole Area (Infrastructure 2026)
    Lower-income (50 percent), Moderate-income (50 percent)

The results of this distribution are recorded in Table 5-14.

Total Capacity Adjustments: (.95)x(1)x(.818)x(1)x(1) = 77.8 percent

- ~~SP-AG-AH / MU-EU (Great Park Corridor)~~

  ~~Description:~~

  - ~~Number and size of sites: 8 parcels, 81.7 acres~~
  - ~~Allowable density: 25-45 dwelling units per acre~~
  - ~~RHNA affordability: Lower-income (50 percent), Moderate-income (25 percent), Above Moderate-income (25 percent)~~
  - ~~Existing Use: Agriculture~~
  - ~~Infrastructure availability: Planned, RHNA affordability distribution accounts for phasing of infrastructure~~
  - ~~Environmental constraints: None known~~

  ~~Capacity Factors:~~

  - ~~*Land Use Controls and Site Improvements.* 31.1 Percent Adjustment~~
    ~~Portions of parcels that were not deemed appropriate for residential development (due to presence of a utility easement, designation as a future park, or other factor that would preclude residential development) are not included in the acreage estimates within the land inventory. As such, the factor applied here represents the portion of each site that will be dedicated internal circulation, sidewalks, and other public areas. Five percent of the land area has been reserved to account for these uses. The total adjustment factor applied is 95 percent.~~
  - ~~*Realistic Residential Capacity.* 42.1 Percent Adjustment~~

This mixed-use area will allow for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses. This is a new land use in the City that will allow for some low-impact, small scale, light industrial uses as well as commercial and residential projects. Market demand for both residential and light industrial uses is high. An adjustment factor of 42.1 percent has been applied to account for potential non-residential development on these sites. This estimate generally reflects the mix of project types the City anticipates based on conversations with developers and property owners.

- *Typical Densities.* 77.8 Percent Adjustment

This mixed-use designation allows residential densities between 25 and 45 dwelling units per acre. A realistic density in the middle of the allowed range, 35 dwelling units per acre, was deemed realistic to determine the total capacity on these sites. This was based on projects developed in other areas of the city with a similar characteristic to the City's vision for affordable housing in this area, including the 1001 E. Holt Blvd., a mixed-use multi-family project (35 dwelling units per acre), and based on affordable projects outside of the City, like the Adams Avenue Affordable Housing Community in Murrieta, CA, will complete adoption hearings in 2022 and is proposed at a density of 32 dwelling units per acre over a 6.22 acre site. Accordingly, 35 dwelling units per acre will provide a realistic capacity estimate for units on these sites. Thirty-five dwelling units per acre is 77.8 percent of the maximum density allowed on the site.

In addition to the adjustment factor, 2 existing units in the Great Park Corridor with a designation of MU-EU (as previously discussed under "Site-Specific Information") have been removed from the realistic capacity to ensure estimates focus on growth rather than replacement.

- *Infrastructure Availability.* Adjustments made to affordability distribution

As previously discussed, infrastructure availability will enable development of the western Ontario Ranch to occur in a pattern similar to that of the eastern Ranch. Infrastructure is expected to expand south to north as development occurs. Part of the funding for expansion of the infrastructure system will come from investments by market-rate developers. With the current strong demand for residential uses, it is not anticipated that the availability of infrastructure will limit the number of units that can and will be built on each site, only the timing for

~~when those sites will be able to develop and the potential affordability levels. To account for this, and in recognition of the need to offset costs for infrastructure expansion, the percent of the realistic capacity estimated as suitable for lower-income units decreases as you move north from Merrill Avenue, where the initial trunk line is anticipated to complete construction in 2022. The areas farthest from Merrill Avenue anticipate the lowest percentage of affordable units, with the balance expected to be above moderate income. It is expected that above-moderate housing will help to offset the costs associated with infrastructure expansion. The realistic capacity is divided by affordability level as follows:~~

~~o *Great Park Corridor – Infrastructure in 1-3 years.* Lower-income (50 percent), Moderate-income (25 percent), Above moderate-income (25 percent)~~

~~The results of this distribution are recorded in Table 5-14.~~

~~- *Environmental Constraints.* No Adjustment~~
~~No known site constraints~~

~~**Total Capacity Adjustments: (.95)x(.421)x(.778)x(1)x(1)=31.1 percent**~~

- SP-AG-AH / MU-GP (~~Great~~Grand Park Corridor)

  Description:

  - Number and size of sites: ~~29~~ 11 parcels, ~~219.5~~81.9 acres
  - Allowable density: 20-65 dwelling units per acre
  - RHNA affordability: Lower-income (50 percent), Moderate-income (25 percent), Above-Moderate-income (25 percent)
  - Existing Use: Agriculture, ~~Open Storage, Truck Wash~~Truck Parking, Vacant Site with Concrete Pad and Fence, RV Storage
  - Infrastructure availability: Planned, RHNA affordability distribution accounts for phasing of infrastructure
  - Environmental constraints: Unconfirmed liquefaction potential on ~~19~~ 7 parcels, ~~(137.7 acres),~~ as discussed under Strategy 6, "Environmental Constraints~~,"~~ ." ~~recent~~ Recent projects within the area that potentially has high water levels~~,~~ have not required mitigation, so no adjustment has been provided.

Capacity Factors:

- *Land Use Controls and Site Improvements.* 95 Percent Adjustment

  Portions of parcels that were not deemed appropriate for residential development (due to presence of a utility easement, designation as a future park, or other factor that would preclude residential development) are not included in the acreage estimates within the land inventory. As such, the factor applied here represents the portion of each site that will be dedicated internal circulation, sidewalks, and other public areas. Five percent of the land area has been reserved to account for these uses. The total adjustment factor applied is 95 percent.

- *Realistic Residential Capacity.* 73.7 Percent Adjustment

  This mixed-use designation ~~(currently called MU-NMC West, but a name change is proposed)~~ allows for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses. This ~~is~~ land use is envisioned as the southwestern activity center for citizens of Ontario with bot vertical and horizontal mixed-use development that connects to the ~~Great~~Grand Park. To determine the amount of mixed-use land area that is expected to develop for residential uses, the City looked at trends in the eastern Ontario Ranch, where developers have consistently approached the City to reduce the commercial footprint within the adopted specific plan. The City also examined the mix of uses built or otherwise in the pipeline in the area designated as Mixed-Use NMC East in the Policy Plan, which was envisioned for a similar use as the MU-GP designation. In the Mixed-Use ~~NMC East~~ areas east of the Cucamonga Channel, the mix of uses is approximately 75 percent residential. ~~—~~Consistent with these trends, approximately 73.7 percent of the area is expected to develop for residential purposes, while the balance is reserved for non-residential uses. The total adjustment factor applied to account for the mixed use designation is 73.7 percent.

- *Typical Densities.* 53.8 Percent Adjustment

  This mixed-use designation allows residential densities between 20 and 65 dwelling units per acre. A realistic density at the lower end of the allowed range, 35 dwelling units per acre, was deemed realistic to determine the total capacity on these sites. This was based on projects developed in other areas of the city with a similar characteristic to the City's vision for affordable housing in this area, including the 1001 E. Holt Blvd., a mixed-use multi-family project (35 dwelling units per

acre), and based on affordable projects outside of the City, like the Adams Avenue Affordable Housing Community in Murrieta, CA, will complete adoption hearings in 2022 and is proposed at a density of 32 dwelling units per acre over a 6.22 acre site. Accordingly, 35 dwelling units per acre will provide a realistic capacity estimate for units on these sites. Thirty-five dwelling units per acre is 53.8 percent of the maximum density allowed on the site.

In addition to the adjustment factor, 7 existing units in the ~~Great~~Grand Park Corridor with a designation of MU-GP (as previously discussed under "Site-Specific Information") have been removed from the realistic capacity to ensure estimates focus on growth rather than replacement.

- *Infrastructure Availability.* Adjustments made to affordability level estimates rather than capacity

  As previously discussed, infrastructure availability will enable development of the western Ontario Ranch to occur in a pattern similar to that of the eastern Ranch. Infrastructure is expected to expand south to north as development occurs. Part of the funding for expansion of the infrastructure system will come from investments by market-rate developers. With the current strong demand for residential uses, it is not anticipated that the availability of infrastructure will limit the number of units that can and will be built on each site, only the timing for when those sites will be able to develop and the potential affordability levels. To account for this, and in recognition of the need to offset costs for infrastructure expansion, the percent of the realistic capacity estimated as suitable for lower-income units decreases for sites farther away from Merrill Avenue. ~~, where the initial trunk line is anticipated to complete construction in 2022.~~ The areas farthest from Merrill Avenue anticipate the lowest percentage of affordable units, with the balance expected to be above-moderate-income. It is expected that above-moderate housing will help to offset the costs associated with infrastructure expansion. The realistic capacity is therefore divided by affordability level as follows:

    - ~~*Great*~~*Grand Park Corridor* – Whole area (Infrastructure likely by 2027) Lower-income (50 percent), Moderate-income (25 percent), Above moderate-income (25 percent)

~~*Infrastructure in 1-3 years.* Lower-income (50 percent), Moderate-income (25 percent), Above moderate-income~~

~~(25 percent)~~The results of this distribution are recorded in Table 5-14.

- *Environmental Constraints.* No Adjustment

  As discussed under Strategy Six "Environmental Constraints," there is unconfirmed liquefaction potential on ~~19~~ 7 MU-GP parcels (137.7 acres) in the ~~Great~~Grand Park Corridor. However, geotechnical studies for recent projects within the zone have not identified any specific risks, and additional mitigation has not been required~~,~~. ~~soils~~ Soils and groundwater levels are assumed to be similar throughout of the zone, so adjustment was not considered necessary.

Total Capacity Adjustments: (.95)x(.737)x(.538)x(1)x(1)=37.7 percent

- SP-AG-AH / MU-GR (Grove Corridor)

  Description:

  - Number and size of sites: 4 parcels, 36 acres
  - Allowable density: 20-65 dwelling units per acre
  - RHNA affordability: Lower-income (25 percent), Above-Moderate-income (75 percent)
  - Existing Use: Agriculture
  - Infrastructure availability: Planned, RHNA affordability distribution accounts for phasing of infrastructure
  - Environmental constraints: None known

  Capacity Factors:

  - *Land Use Controls and Site Improvements.* 95 Percent Adjustment

    Portions of parcels that were not deemed appropriate for residential development (due to presence of a utility easement, designation as a future park, or other factor that would preclude residential development) are not included in the acreage estimates within the land inventory. As such, the factor applied here represents the portion of each site that will be dedicated internal circulation, sidewalks, and other public areas. Five percent of the land area has been reserved to account for these uses. The total adjustment factor applied is 95 percent.

  - *Realistic Residential Capacity.* 68.4 Percent Adjustment

This mixed-use designation (currently called MU-NMC West, but a name change is proposed) allows for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses. This ~~is~~ land use is envisioned as the southwestern activity center for citizens of Ontario with both vertical and horizontal mixed-use development that connects to the ~~Great~~Grand Park. To determine the amount of mixed-use land area that is expected to develop for residential uses, the City looked at trends in the eastern Ontario Ranch, where developers have consistently approached the City to reduce the commercial footprint within the adopted specific plan. The City also examined the mix of uses built or otherwise in the pipeline in the area designated as Mixed-Use NMC East in the Policy Plan, which was envisioned for a similar use as the MU-GP designation. In the Mixed-Use NMC East areas the mix of uses is approximately 75 percent residential. Because the City would like to encourage a greater mix of uses on these sites to serve as a neighborhood center for central Ontario Ranch, a smaller percent of the area, approximately 68.4 percent of the area is expected to develop for residential purposes, while the balance is reserved for non-residential uses. The total adjustment factor applied is 68.4 percent.

- *Typical Densities.* 53.8 Percent Adjustment

  This mixed-use designation allows residential densities between 20 and 65 dwelling units per acre. A realistic density at the lower end of the allowed range, 35 dwelling units per acre, was deemed realistic to determine the total capacity on these sites. This was based on projects developed in other areas of the city with a similar characteristic to the City's vision for affordable housing in this area, including the 1001 E. Holt Blvd., a mixed-use multi-family project (35 dwelling units per acre), and based on affordable projects outside of the City, like the Adams Avenue Affordable Housing Community in Murrieta, CA, ~~will complete adoption hearings in 2022 and is proposed~~ at a density of 32 dwelling units per acre over a 6.22 acre site.~~-~~ Accordingly, 35 dwelling units per acre will provide a realistic capacity estimate for units on these sites. Thirty-five dwelling units per acre is 53.8 percent of the maximum density allowed on the site.

  In addition to the adjustment factor, ~~3~~ 4 existing units in the Grove Corridor with a designation of MU-GR (as previously discussed under "Site-Specific Information") have been removed from the realistic capacity to ensure estimates focus on growth rather than replacement.

- *Infrastructure Availability.* Adjustments made to affordability level estimates rather than capacity

  As previously discussed, infrastructure availability will enable development of the western Ontario Ranch to occur in a pattern similar to that of the eastern Ranch. Infrastructure is expected to expand south to north as development occurs. Part of the funding for expansion of the infrastructure system will come from investments by market-rate developers. With the current strong demand for residential uses, it is not anticipated that the availability of infrastructure will limit the number of units that can and will be built on each site, only the timing for when those sites will be able to develop and the potential affordability levels. To account for this, and in recognition of the need to offset costs for infrastructure expansion, the percent of the realistic capacity estimated as suitable for lower-income units decreases as you move north from Merrill Avenue, where the initial trunk line is anticipated to complete construction in 2022. The areas farthest from Merrill Avenue anticipate the lowest percentage of affordable units, with the balance expected to be above-moderate-income. It is expected that above-moderate housing will help to offset the costs associated with infrastructure expansion. The realistic capacity is divided by affordability level as follows:

  - *Grove Corridor* ~~*(north of Schaefer Avenue) Infrastructure in 4-6 years.* Lower-income (25 percent), Above moderate-income (75 percent)~~

    - South of Schaefer Avenue (Infrastructure available by 2027)
      Lower-income (50 percent), Above moderate-income (50 percent)
    - Between Schaefer Avenue and Northern SCE Easement (Infrastructure likely by 2027)
      Lower-income (40 percent), Above moderate-income (60 percent)
    - Between Northern SCE Easement and Chino Ave (Infrastructure available by 2028)
      Lower-income (35 percent), Above moderate-income (65 percent)
    - North of Chino Avenue (Infrastructure likely by 2028)
      Lower-income (25 percent), Above moderate-income (75 percent)

The results of this distribution are recorded in Table 5-14.

- *Environmental Constraints.* No Adjustment
  No known site constraints.

Total Capacity Adjustments: (.95)x(.68.4)x(.538)x(1)x(1)=35.0 percent

- SP-AG-AH / MU-ER (Euclid Corridor)

Description:

- Number and size of sites: 1 parcel, 15.0 acres
- Allowable density: 25-75 dwelling units per acre
- RHNA affordability: Lower-income (25 percent), Above-Moderate-income (75 percent)
- Existing Use: Agriculture
- Infrastructure availability: Planned, RHNA affordability distribution accounts for phasing of infrastructure
- Environmental constraints: None known

Capacity Factors:

- *Land Use Controls and Site Improvements.* 95 Percent Adjustment
  Portions of parcels that were not deemed appropriate for residential development (due to presence of a utility easement, designation as a future park, or other factor that would preclude residential development) are not included in the acreage estimates within the land inventory. As such, the factor applied here represents the portion of each site that will be dedicated internal circulation, sidewalks, and other public areas. Five percent of the land area has been reserved to account for these uses. The total adjustment factor applied is 95 percent.

- *Realistic Residential Capacity.* 78.9 Percent Adjustment
  This mixed-use designation ~~(currently called MU-NMC West, but a name change is proposed)~~ allows for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses. This is land use is envisioned as the southwestern activity center for citizens of Ontario with bot vertical and horizontal mixed-use development that connects to the ~~Great~~Grand Park. To determine the amount of mixed-use land area that is expected to develop for residential uses,

the City looked at trends in the eastern Ontario Ranch, where developers have consistently approached the City to reduce the commercial footprint within the adopted specific plan. The City also examined the mix of uses built or otherwise in the pipeline in the area designated as Mixed-Use NMC East in the Policy Plan, which was envisioned for a similar use as the MU-GP designation. In the Mixed-Use NMC East areas the mix of uses is approximately 75 percent residential. Because the location of this site is directly across the street from a successful neighborhood shopping center, it is expected that a smaller amount of retail and other nonresidential uses will be viable, while residential uses will remain in high demand. Consistent with these trends, approximately 78.9 percent of the area is expected to develop for residential purposes, while the balance is reserved for non-residential uses. The total adjustment factor applied is 78.9 percent.

- *Typical Densities. 46.7* Percent Adjustment

  This mixed-use designation allows residential densities between 20 and 75 dwelling units per acre. A realistic density at the lower end of the allowed range, 35 dwelling units per acre, was deemed realistic to determine the total capacity on these sites. This was based on projects developed in other areas of the city with a similar characteristic to the City's vision for affordable housing in this area, including the 1001 E. Holt Blvd., a mixed-use multi-family project (35 dwelling units per acre), and based on affordable projects outside of the City, like the Adams Avenue Affordable Housing Community in Murrieta, CA, which will complete adoption hearings in 2022 and is proposed at a density of 32 dwelling units per acre over a 6.22 acre site. Accordingly, 35 dwelling units per acre will provide a realistic capacity estimate for units on these sites. Thirty-five dwelling units per acre is 53.8 percent of the maximum density allowed on the site.

- *Infrastructure Availability.* Adjustments made to affordability level estimates rather than capacity

  As previously discussed, infrastructure availability will enable development of the western Ontario Ranch to occur in a pattern similar to that of the eastern Ranch. Infrastructure is expected to expand south to north as development occurs. Part of the funding for expansion of the infrastructure system will come from investments by market-rate developers. With the current strong demand for residential uses, it is not anticipated that the availability of infrastructure will limit the number of units that can and will be built on each site, only the timing for

when those sites will be able to develop and the potential affordability levels. To account for this, and in recognition of the need to offset costs for infrastructure expansion, the percent of the realistic capacity estimated as suitable for lower-income units decreases as you move north from Merrill Avenue~~, where the initial trunk line is anticipated to complete construction in 2022~~. The areas farthest from Merrill Avenue anticipate the lowest percentage of affordable units, with the balance expected to be above-moderate-income. It is expected that above-moderate housing will help to offset the costs associated with infrastructure expansion. The realistic capacity is divided by affordability level as follows:

- *Euclid Corridor* ~~*(north of sites adjacent to Schaefer Avenue) Infrastructure in 4-6 years.* Lower-income (25 percent), Above moderate-income (75 percent)~~

  - South of Chino Avenue (Infrastructure Available by 2028)
    Lower-income (35 percent), Above moderate-income (65 percent)
  - North of Chino Avenue (Infrastructure likely by 2028)
    Lower-income (25 percent), Above moderate-income (75 percent)

The results of this distribution are recorded in Table 5-14.

- *Environmental Constraints.* No Adjustment
  No known site constraints.

Total Capacity Adjustments: (.95)x(.789)x(.467)x(1)x(1)=35.0 percent

- SP-AG-AH / MU-ER (Euclid Corridor)

Description:

- Number and size of sites: 1 parcel, 15.0 acres
- Allowable density: 25-75 dwelling units per acre
- RHNA affordability: Lower-income (25 percent), Above-Moderate-income (75 percent)
- Existing Use: Agriculture

- Infrastructure availability: Planned, RHNA affordability distribution accounts for phasing of infrastructure

- Environmental constraints: None known

Capacity Factors:

- *Land Use Controls and Site Improvements.* 95 Percent Adjustment

  Portions of parcels that were not deemed appropriate for residential development (due to presence of a utility easement, designation as a future park, or other factor that would preclude residential development) are not included in the acreage estimates in the land inventory. As such, the factor applied here represents the portion of each site that will be dedicated to internal circulation, sidewalks, and other public areas. Five percent of the land area has been reserved to account for these uses. The total adjustment factor applied is 95 percent.

- *Realistic Residential Capacity.* 78.9 Percent Adjustment

  This mixed-use designation allows for 100 percent residential uses, mixed use projects, and 100 percent non-residential uses. This ~~is~~ land use is envisioned as the southwestern activity center for citizens of Ontario with both vertical and horizontal mixed-use development that connects to the Grand Park. To determine the amount of mixed-use land area that is expected to develop for residential uses, the City looked at trends in the eastern Ontario Ranch, where developers have consistently approached the City to reduce the commercial footprint within the adopted specific plan. ~~3 All MU-ER parcels are north of sites adjacent to Schaefer Avenue.~~

Strategy 7: Accessory Dwelling Units

Accessory dwellings are a part of the strategy for meeting the City's share of its RHNA for housing affordable to low- and moderate-income households. Ontario has many single-family homes on lots that would allow space to build an ADU.

State law has been amended to facilitate and encourage the production of accessory dwellings. In 2016, AB 2299 and SB 1069 required cities to revise their zoning code to conform to the new ADU law. In 2019, SB 68, AB 881, and SB 13 further amended California Government Code Sections 65852.2 and 65852.22, and Health and Safety Code Section 17980.12 pertaining to local regulations for ADUs. In January 2020, the City Council enacted Ordinance 3175 to incorporate recent changes to state law with respect to ADUs.

Ontario has seen an influx in ADU applications, increasing from just 30 units permitted in 2019 to 69 permits issued in 2020. ~~Based on past and current trends, the City expects that 120 to 360 ADUs will be built during the Housing Element period of 2021-2029.~~ Between 2022 and 2024, the City permitted or issued certificates of occupancy for 446 ADUs, approximately 148 units per year. If this trend continues, even with a slight decrease to 100 ADUs per year, the City could anticipate approximately 475 ADUs between January 2025 and October 2029.

Since October 2021, the City has assumed that all ADUs developed are for above moderate incomes, because the City has not implemented a monitoring program to determine no-rent, low-rent, or market-rent ADUs (program 7). In reflection of this, ADUs reported in the 6th Cycle APRs have been counted towards the City's above moderate RHNA only. The City may revise APRs and assumptions after a survey is conducted that determines the actual affordability level of ADUs.

If t~~T~~he affordability for ADUs built in Ontario wa~~i~~s based on SCAG's ADU survey and affordability assumptions for San Bernardino County~~. Applying those affordability assumptions to Ontario and the range of production estimates~~, the City ~~can~~ could expect the production of ~~69~~ 530 ~~to 207~~ lower-income ADUs over the Housing Element period. Table 5-15 includes the summary of ADU projection estimates ~~by~~ based on SCAG's estimates of affordability levels. To encourage this level of production, the Housing Plan proposes ~~a~~ programs to incentivize the production of ADUs (Programs 7 and 27)~~.~~, and the City will continue to credit ADUs

towards its above moderate income RHNA until a survey is conducted to determine affordability.

Accessory Dwelling Unit Projections and SCAG's Affordability Assumptions, 2021–2029

Household Income Category	Percent of ADUs Projected[1]	Range of ADU Estimates based on SCAG Assumptions (2021-2029)[2] Conservative Trend[2]
Lower	57.5%	69530
Moderate	34.8%	42320
Above Moderate	7.7%	971
ADUS Projected (2021-2029)TOTAL	100%	120921[2]

Source: City of Ontario, 2021, SCAG, 2021.

Notes:

1. The methodology for the affordability distribution of ADUs can be accessed online at: https://scag.ca.gov/sites/main/files/file-attachments/adu_affordability_analysis_120120v2.pdf?1606868527.
2. Theis conservative trend projection assumes 446 ADUs reported on APRs Jan 2022-Dec 2024, and 15100 dwelling units will be built per year (Jan 2025-Oct 2029). This estimate for growth over the balance of the 6th cycle is based on half of the reduced number of permits issued in 2019a one-third reduction in the annual number of permits issued / units built between Jan 2022 and Dec 2024.

   The maximum trend assumes 45 dwelling units will be built per year. This estimate is based on the average of the permits issued in 2019 and 2020.

Summary of Capacity to Accommodate RHNA Allocation

Table 5-16 summarizes the City's strategy to achieve its 2021-2029 RHNA. It is recognized, however, that these strategies are deemed conservative–the City expects that additional residential and mixed-use projects will occur within specific plan areas and on underutilized sites throughout the city. The City's RHNA strategy reflects the City's policy to support the creation of mixed-income communities by assuming a mix of lower- and moderate-income housing on identified sites in established neighborhoods and a mix of lower-, moderate-, and above moderate-income housing in areas where there is no existing residential component. The following provides a high-level summary of the City's RHNA strategies.

- **Above moderate-income**. In addition to the capacity identified in pipeline projects and the analysis of strategies, the City has entitled additional capacity for several thousand homes that have not been credited toward the RHNA. Areas with development potential that are not included in the inventory include entitled specific plans, the downtown mixed-use district, and mixed-use areas along the I-10 corridor. Several specific plans were also

recently amended to allow more housing at higher densities, a trend the City expects to continue. There is sufficient capacity to accommodate the above moderate-income housing requirement of the RHNA.

- **Moderate-income**. Prior sections contained an analysis of the strategies that will be used to accommodate the moderate- and lower-income RHNA. Sites and densities were demonstrated to be sufficient to accommodate housing affordable to moderate-income households.

- **Lower-income**. Prior sections contained an analysis of the strategies that will be used to accommodate the lower-income RHNA. Sites and densities were demonstrated to be sufficient to accommodate affordable housing. In addition, specific programs were shown for each strategy that would encourage and facilitate housing production and that would also remove any potential constraints to development.

Table 5-16

Source: City of Ontario, ~~2021~~2026.

1. See Table 5-2 for details.
2. While the City has met the above moderate RHNA obligation, as reported on APRs, it must continue to maintain capacity for each income tier. Due to this, the 3,444 unit surplus reported in the "Remainder" row for above moderate housing units are counted as zero in the total column for the row.
3. The City does not and has not relied on Strategy 7 to fulfill its lower income RHNA obligation for the 6th cycle. Should the City confirm lower income affordability through subsequent surveys, ADU capacity will be revised.
4. ~~1.~~ The City does not and has not relied on Strategy 5 to fulfill its RHNA obligation for any portion of the 6th cycle. Because the zoning for Strategy 5 is not in place, it is not included in the Total Capacity or Surplus/Buffer row in Table 5-16. Should the rezoning program (program 13) be implemented on Strategy 5 sites, the City will have more capacity and a larger buffer.

5.2 Administrative and Financial Resources

Funding Sources for Affordable Housing

The City's local housing programs are supported through federal funding and state funding programs that assist first-time homebuyers, build affordable housing, and help special-needs groups, such as seniors and large households, as listed in Table 5-17. In most cases, other entities, including for-profit and nonprofit developers, apply for funds or other program benefits. For example, developers apply directly for Section 202 grants. In general, the City relies on the private sector to develop new affordable units.

Table 5-17
Federal and State Housing Funding Programs

Program Name	Description	Eligible Activities
Federal Funding Programs		
Community Development Block Grant (CDBG) Program	The Department of Housing and Urban Development (HUD) awards CDBG annually to entitlement jurisdictions and states for general activities, including housing and economic development activities. HUD also offers various other programs that can be used by the City and nonprofit and for-profit agencies for the preservation of low-income housing units, such as Section 202 and Section 108 loan guarantees. The annual appropriation for CDBG is split between states and local jurisdictions called "entitlement communities."	Acquisition Rehabilitation Homebuyer Assistance Economic Development Assistance Homeless Assistance Public Services Infrastructure Replacement
HOME Investment Partnerships Program	The Home Investment Partnerships Program (HOME) was created under the Cranston Gonzalez National Affordable Housing Act enacted in November 1990. HOME funds are awarded annually as formula grants to participating jurisdictions. HUD establishes Home Investment Trust Funds for each grantee, providing a line of credit that the jurisdiction may draw upon as needed. The program's flexibility allows states and local governments to use HOME funds for grants, direct loans, loan guarantees, or other forms of credit enhancement or rental assistance or security deposits.	Acquisition Rehabilitation Homebuyer Assistance Rental Assistance
Housing Choice Voucher (HCV) Rental Assistance (Section 8)	Provides rental assistance payments to owners of market-rate properties on behalf of very low-income tenants.	Rental Assistance
Section 811	Provides grants to nonprofit developers of supportive housing for disabled persons. The grants may be used to construct or rehabilitate group homes, independent living facilities, and intermediate care facilities. The grants may also have a rental assistance component.	Acquisition Rehabilitation New Construction Rental Assistance
Section 203(k)	Provides fixed-rate, low-interest loans to organizations wishing to acquire and rehabilitate property.	Land Acquisition Rehabilitation Refinancing of Existing Debt
Section 202	Grants to private nonprofit developers of supportive housing for very low-income seniors.	New Construction

Table 5-17
Federal and State Housing Funding Programs

Program Name	Description	Eligible Activities
Low-Income Housing Tax Credits (LIHTC)	In 1986, Congress created the federal LIHTC program to encourage private investment in the acquisition, rehabilitation, and construction of low-income rental housing. Because high housing costs in California make it difficult, even with federal credits, to produce affordable rental housing, the California legislature created a state low-income housing tax credit program to supplement the federal credit. The state credit is essentially identical to the federal credit, the Tax Credit Allocation Committee allocates both, and state credits are only available to projects receiving federal credits. Twenty percent of federal credits are reserved for rural areas and 10 percent for nonprofit sponsors. To compete for the credit, rental housing developments have to reserve units at affordable rents to households at or below 46 percent of area median income. The targeted units must be reserved for the target population for 55 years.	New Construction
Mortgage Credit Certificate Program	Offers income tax credits to first-time homebuyers. The County distributes the credits.	Homebuyer Assistance
Supportive Housing Program (SHP)	Offers grants to agencies who offer supportive housing and services to the homeless.	Transitional Housing Housing for Disabled Persons Supportive Housing Support Services
Community Reinvestment Act	The Community Reinvestment Act (CRA), enacted by Congress in 1977, is intended to encourage depository institutions to help meet the credit needs of the communities in which they operate, including low- and moderate-income neighborhoods, consistent with safe and sound banking operations. The CRA requires that each insured depository institution's record in helping meet the credit needs of its entire community be evaluated periodically. That record is taken into account in considering an institution's application for deposit facilities, including mergers and acquisitions.	New Construction Rehabilitation Acquisition Support Services Supportive Housing Homebuyer Assistance
Emergency Solutions Grant	Awards grants to nonprofits for the provision of shelter support services.	Support Services
Emergency Solutions Grant-CARES (ESG-CV)	One-time funding for programs targeted to homeless or those at-risk for housing to prepare for, respond to, or prevent impacts of the coronavirus pandemic.	Support Services (Homeless Facilities and Program)
Multifamily Housing Program (MHP)	Provides loans for new construction, rehabilitation, and preservation of affordable rental housing. Payments on the loans are deferred for a specified period of time.	New Construction Rehabilitation Preservation
CalHOME	Provides grants to local governments and nonprofit agencies for homebuyer assistance, rehabilitation, and new construction. The agency also finances acquisition, rehabilitation, and replacement of manufactured homes.	Homebuyer Assistance Rehabilitation New Construction

Table 5-17
Federal and State Housing Funding Programs

Program Name	Description	Eligible Activities
California Self-Help Housing Program	Provides grants for the administration of mutual self-help housing projects.	Homebuyer Assistance New Construction Administrative Costs
Emergency Housing and Assistance Program	Provides grants to support emergency housing.	Shelters Transitional Housing
Affordable Housing and Sustainable Communities Program	Provides funding to support infill development projects with the goal of reducing greenhouse gas emissions.	New Construction Rehabilitation
Veterans Housing and Homeless Prevention Program	Provides funding to buy, construct, rehabilitate or preserve affordable multifamily housing for veterans and their families.	Acquisition Construction Rehabilitation Preservation
Senate Bill 2 – Building Jobs and Homes Act	Provides planning grant funding to jurisdictions for plans and process improvements that will help to accelerate housing production.	Technical Assistance Planning Document Updates
Local Early Action Planning (LEAP) Grants	The (LEAP grants program provides over-the-counter grants complemented with technical assistance to local governments for the preparation and adoption of planning documents, and process improvements that: Accelerate housing production. Facilitate compliance to implement the sixth-cycle Regional Housing Needs Assessment.	Housing element updates Updates to zoning, plans or procedures to increase/accelerate housing production Pre-approved architectural and site plans Establishing State-defined Pro-housing policies *See complete list in LEAP program materials*
No Place Like Home	Through a County application process, provides loans to acquire, develop, preserve, or rehabilitate permanent supportive housing facilities.	Permanent Supportive Housing
Infrastructure Infill Grant	Provides gap financing for infrastructure improvements necessary to support the development of affordable infill housing.	Infrastructure Improvements

Table 5-17
Federal and State Housing Funding Programs

Program Name	Description	Eligible Activities
Local Housing Trust Fund Program	Provides matching grants to funds provided by Local Housing Trust Funds.	Site Acquisition Site Development Homebuyer Assistance Transitional Housing Emergency Shelter Multifamily Housing
Transit-Oriented Development Program	Supports the development of affordable multifamily rental housing near transit stations through low-interest loans.	New Construction Rehabilitation Infrastructure Improvements
State Funding Programs		
Affordable Housing Partnership Program (AHPP)	Provides lower interest rate CalHFA loans to homebuyers who receive local secondary financing.	Homebuyer Assistance
Self-Help Builder Assistance Program	Provides lower interest rate CalHFA loans to owner-builders who participate in mutual self-help housing projects. Also provides site acquisition, development financing, and construction financing for self-help projects.	Homebuyer Assistance Site Acquisition Site Development Home Construction
California Housing Assistance Program	Provides 3% silent second loans in conjunction with 97% CalHFA first loans to give eligible homebuyers 100% financing.	Homebuyer Assistance
Extra-Credit Teacher Program	Provides $7,500 silent second loan with forgivable interest in conjunction with lower-interest-rate CalHFA first loans to assist eligible teachers in buying homes.	Homebuyer Assistance
Housing Enabled by Local Partnerships	Provides 3% interest rate loans, with repayment terms up to 10 years, to local government entities for locally determined affordable housing priorities.	Wide Range of Eligible Activities
Predevelopment Loan Program	The California Department of Housing and Community Development (HCD) administers the program, which provides funds to pay the initial costs of developing affordable housing developments. Priority is given to applications with matching financing from local agencies or federal programs.	Pre-development
Multifamily Housing Program	HCD conducts the acquisition and rehabilitation component of the Multifamily Housing Program to acquire and rehabilitate existing affordable rental housing. Priority is given to projects currently subject to regulatory restrictions that may be terminated. Assistance is provided through low-interest construction and permanent loans. Eligible applicants include local government agencies, private nonprofit organizations, and for-profit organizations.	Rental Acquisition Rental Rehabilitation
Transitional Housing Program for Emancipated Foster/Probation Youth (THP-Plus)	This program provides funds for housing and services for persons who need support services for transition-age youth.	Supportive Housing Foster Care

Table 5-17
Federal and State Housing Funding Programs

Program Name	*Description*	*Eligible Activities*
Special-Needs Housing Program	Allows local governments to use Mental Health Services Act (MHSA) funds to finance the development of permanent supportive rental housing.	New Construction Supportive Housing
Home Mortgage Purchase Program	CalHFA sells bonds to raise funds for providing below-market-rate loans to qualifying first-time homebuyers.	Homebuyer Assistance

Housing Choice Vouchers

The federal government provides approximately $3 million to the Housing Authority of the County of San Bernardino to administer the Housing Choice Voucher (HCV) program. These funds are used to maintain the affordability of publicly subsidized affordable housing projects in Ontario. This allocation includes funding for approximately 501 Housing Choice Vouchers, and the Family Self-Sufficiency Program. Within Ontario, the approximate number of HCVs have been available: 496 in 2016, 422 in 2017, 527 in 2018, 676 in 2019, and 747 in 2020. As of July 2021, there are 773 vouchers in use for the City of Ontario. This includes 735 in traditional voucher programs and 38 in special voucher programs, such as the Veterans Affairs Supportive Housing. The waitlists, which are for the entire County of San Bernardino remain closed as of July 2021. In March 2021, there were 20,382 tenant-based households on the waitlist and 60,744 total households on the waitlist.

(See Programs 23, 25, 27, and 31)

Community Development Block Grants (CDBG)

The federal government provides funds for a range of housing and community development activities, including acquisition and disposition of real estate or property, public facilities and improvements, relocation, rehabilitation and construction of housing, homeownership assistance, and demolition activities. In addition, these funds can be used to acquire or subsidize at-risk units. The City of Ontario received approximately $1.8 million in funding in 2019–2020.

(See Programs 3, 4, 6, 9, 27, 31, and 33)

HOME Partnership

Ontario received approximately $666,000 in 2019–2020 in federal HOME funds. HOME funds can be used for activities that promote affordable rental housing and lower-income homeownership, including building acquisition, new construction, reconstruction, moderate or substantial rehabilitation, first-time homebuyer assistance, and tenant-based assistance, as well as the preservation of affordable housing.

(See Programs 1, 3, 4, 24, 27, 32, and 33)

Transformative Climate Communities

Ontario received funding through the Transformative Climate Communities (TCC) grant program from the State of California ($33.2 million) for a variety of project types, including housing. The TCC housing component included gap funding of approximately $14 million for the development of a 101-unit affordable housing project known as Vista Verde. The construction of the Vista Verde Apartments begun on June 17, 2019, and was completed in March 2021. Within the project area, 24 solar photovoltaic (PV) systems were installed on the single-family homes, providing approximately 31 kilowatts (kw) in renewable energy capacity. Of the 101 units, 11 will be rented to households making below 30 percent of the area median income (AMI), 37 units will be rented to households at 50 percent AMI, and 42 units will be rented out to households at 60 percent AMI. The affordable housing units will be made available through a lottery process. Applicants who already work and live in Ontario will be given preference.

(See Programs 8 and 10)

Permanent Local Housing Allocation

Ontario received funds that will be used for housing programs and homeless programs. The City is planning to use a portion of the Permanent Local Housing Allocation (PLHA) funds for first-time homebuyer programs in conjunction with reuse funds on hand from the CalHome and BEGIN programs formerly offered. Programs are currently in design development to determine income targeting and benefits.

(See Program 24)

Economic Development Activities: For the initial year of NPSP, the Housing and Economic Development Agency will implement a small commercial façade program for qualifying businesses within the 100-600 blocks of North Euclid Avenue. The commercial façade program will support four businesses.

Implementation

- ***Objectives:*** The Housing and Community Improvement Departments will collaborate with the Neighborhood Action team to attend existing events in the target neighborhoods, with an average of four per month. At least one neighborhood fair each year. Neighborhood Action Team will meet monthly. Assisting at least 20 households with first-time homebuyer loans (see also Program 25). Support four businesses with the commercial façade program. See also quantified objectives under Program 27.

- ***Responsible Agencies*:** Housing and Community Improvement Departments, Economic Development Agency

- ***Funding:*** CDBG

- ***Timing*:** Attend neighborhood meetings monthly. Distribute an initial community survey by January 2023. Develop ongoing community engagement plan by January 2024. Begin meetings of the Neighborhood Action Team by summer 2022. Develop informational materials for new homeowners and renters and business owners by summer 2024.

9.2 Housing Supply and Diversity

7. Accessory Dwelling Units (ADUs)

The City shall promote accessory dwelling units (including junior accessory dwelling units) (ADUs/JADUs) as an affordable housing option in high-resource areas and an economic mobility opportunity in Ontario through the following actions. ~~The cumulative impact of these strategies would exceed the conservative estimate of 120 units to achieve 360 ADUs in the planning period, with at least one third of the units (180) available as affordable housing to lower income households.~~

- Consider a program to waive, reduce, or defer connection or impact fees for ADUs that agree to affordability covenants for a set period of time. The City will consider options in 2026 and implement programs as necessary by 2027.

- Continue to provide information such as Frequently Asked Questions (FAQ) on the City's website. Expand information on the City's website to provide educational materials and additional

guidance, including permitting procedures and construction resources. Update the information provided on the City's website to include by December 2022, ensuring information is provided in multiple languages (including Spanish). Review and update website regarding ADU standards on a yearly basis.

- Assess the feasibility of establishing a loan program to help homeowners finance the construction of ADUs. The City shall consider incentives to encourage homeowners to deed restrict ADUs for lower-income households. The City will consider qualification requirements for income-restricted ADUs appropriately address Ontario residents' housing needs to identify barriers to qualifying (e.g., proof of residency, income levels, employment record, credit history, etc). The City will consider options in 2026 and implement programs as necessary by 2027.

- Actively market ADU guidance and materials in areas with high access to resources to encourage the development of new affordable housing in areas of opportunity as a strategy to enhance mobility and reduce displacement of low-income households seeking affordable housing options. The combination of available ADU informational material crafted to address lower-income ADU opportunity challenges and a strategic outreach approach leveraging existing established outreach networks within low-income areas, provides the greatest opportunity for residents of lower-income residents in high resource areas. During the Housing Element planning period, the ADU ordinance will be updated as appropriate in compliance with state law and adjusted as issues arise and new best practices develop. Some of the features of the program will include:

    - Receive technical assistance through SCAG to evaluate permitting practices for ADUs and JADUs and implement improvements

    - Online application process with staff intake for quality control

    - Maintain and develop materials for better applicant guidance, as needed

    - Provide consistent staff training and support

    - Look for all opportunities to provide certainty earlier in the process

    - Reduce steps and shorten timeframes, and

- Continue to watch the prefabricated housing market, including companies that produce 3D-printed homes, repurposed shipping containers, and modular construction in order to integrate new ideas into the permitting process as appropriate.

- Outreach to local homeowners that have added an ADU to involve them in supporting other homeowners who are considering adding an ADU to their property in high resource areas. Hold a community "ADU Open House" to share ideas and inspire homeowners to build ADUs. Connecting homeowners and property owners within high resource areas through existing community outreach opportunities to provide information on funding/assistance with construction costs. The City will coordinate outreach with non-profit organizations (e.g. Community Health Improvement Association, Huerta De Valle, Seeds of Joy, etc.) to compile lists of lower income households interested in renting ADUs. The City will provide these lists to homeowners and property owners within high resource areas who are building ADUs.

- Create short flyers and brochures (digital and print). Distribute through social media promotions, direct mailings to property owners, water bill inserts, and the dedicated City webpage.

- Provide information on the City's website about ADU standards and options.

- Inform people at the public counter of ADUs as an option and informing property owners with an existing unpermitted ADU of the option to bring the unit up to code as a legal ADU.

- Develop and implement a monitoring program. The program will track ADU approvals and affordability. The City will use this monitoring program to track progress in ADU development and adjust or expand the focus of its education and outreach efforts through the 2021-2029 planning period. Until ~~T~~the City ~~will~~ evaluates ADU production and affordability, all ADUs entitled, permitted, and built within the city will be reported on APRs as affordable to above moderate households. ~~two years into the planning period (2023) and~~ After the monitoring program is established, if it is determined these units ~~are not~~ meet~~ing~~ the lower- or moderate- income housing need, the City may revise APRs to reflect actual reported affordability levels. ~~will consider other housing sites that are available to accommodate the unmet portion of the lower-income RHNA.~~

See also Program 27 Fair Housing.

Implementation

- ~~***Objectives*:** Support the development of accessory dwelling units during the 2021–2029 planning period, consistent with the assumptions in the sites inventory. A cumulative impact of these strategies that exceeds the conservative estimate of 120 units to achieve 360 ADUs in the planning period, with at least one third of the units (180) available as affordable housing to lower income households.~~

- ***Responsible Agencies*:** Housing and Planning Departments and Ontario Housing Authority

- ***Funding*:** General Fund, CDBG

- ***Timing*:** Consider fee waiver and loan programs in 2026 and implement programs as necessary by 2027. Continue to provide and update program information on the City's website throughout the planning period, in English and Spanish. Actively market ADU program throughout the planning period. Outreach and ADU Open House program in high resource areas in August 2024 and implemented by August 2026. Prepare brochures May 2023 and implement in January 2024. Actively market ADU program throughout the planning period. Implement monitoring - evaluate ADU production and affordability two years into the planning period (2023).

  Between 2022 and 2024, the City permitted or issued certificates of occupancy for 446 ADUs, approximately 148 units per year. This represents an increase of more than 100% compared to the 69 permitted units in 2020, and indicates that changes in City practices have ensured that ADUs are more accessible to Ontario residents. The City will not, however, count ADUs towards its RHNA obligation for lower- or moderate-income households until such assumptions are verified by implementation of an evaluation and monitoring program.

8. Downtown Plan

Ontario's Downtown covers 12 blocks along Euclid Boulevard. The City developed a Downtown District Plan, codified as MU-1 in the development code. ~~that~~ The Downtown District Plan encompasses ~~four~~ five ~~downtown~~ districts that create sub-zones within the Mixed-Use (MU-1) zoning district: Euclid Avenue Entertainment District (LUA-1), Arts District North and South (LUA-2S and LUA-2N), Holt Boulevard District (LUA-3), and Civic Center District (LUA-4). The Downtown District Plan ~~vision~~ provides opportunities for high-density, market-rate and

affordable housing in the Euclid Avenue Entertainment District and Holt Boulevard District, offering convenient access to downtown amenities, local commercial centers, public services, open space, and public transportation. The Downtown Plan area is included in a $35 million Transformative Climate Communities (TCC) Grant awarded to the City to increase prosperity and improve transportation and housing within a disadvantaged community. The TCC program includes affordable housing, active transportation improvements, mobility hub, urban greening, carbon farm, solar photovoltaic, and transit improvements. This grant is a collaborative effort with public and community-based organizations.

Implementation

- ***Objectives*:** Implement the adopted the Downtown District Plan to facilitate new mixed-use and residential development consistent with the Downtown strategy capacity identified in Table 5-16~~(634 units in the Downtown Plan area)~~; continue to acquire property and assemble sites to facilitate new housing.
- ***Responsible Agencies***: Planning Department
- ***Funding*:** General Fund, Tax Increment, Transformative Climate Communities (TCC)
- ***Timing*:** Continue to implement the Downtown District Plan (adopted in December 2020 as part of Development Code Update).

9. Mountain and Euclid Corridors

Euclid Avenue and Mountain Avenue extend the entire length of Ontario. In recent years, developers have expressed interest in building residential and commercial projects along these corridors. Mountain Avenue has had numerous senior and affordable housing projects built adjacent to or near the corridor, and developers have begun to show interest in Euclid Avenue. Both corridors have commercial property that is proposed for redesignation as residential. To facilitate corridor development, the City previously rezoned properties along Euclid Avenue and Mountain Avenue for medium- and high-density residential development, as shown on the Official Land Use Plan (LU-01). The Old Cardenas Market strategy area is in the Euclid Corridor. ~~During the planning period, t~~The City ~~will develop~~ adopted a lot-consolidation ordinance (No. 3289) to incentivize the assemblage of parcels. Additional ~~I~~incentives may include fee modifications, flexibility in design, expedited permit processing, or others. The City will continue to monitor the ongoing status of development in the Euclid Avenue and Mountain Avenue corridors.

Implementation

- ***Objectives*:** Develop a lot consolidation ordinance to facilitate the assemblage of lots into larger parcels. ~~with up to three assemblages anticipated during the planning period in the Euclid Avenue and Mountain Avenue corridors.~~ Continue to monitor the ongoing status of development in the Euclid Avenue and Mountain Avenue corridors.

- ***Responsible Agencies*:** Planning Department

- ***Funding*:** General Fund

- ***Timing*:** The City adopted a lot consolidation ordinance on December 3, 2024 (Ordinance No. 3289)~~Within two years of Housing Element adoption, ongoing monitoring of development~~

10. Holt Boulevard

Holt Boulevard is one of the original corridors paralleling the railroad and extending through Ontario and neighboring communities. With the development and success of commercial uses fronting the freeways, the commercial viability of Holt Boulevard has gradually eroded, leaving a significant number of underutilized uses on small parcels. The Policy Plan has declared Holt Boulevard as a focus area for mixed uses, both perpendicular to Mountain Avenue, at the base of Downtown, and in the East Holt Boulevard Study Area. Sites along Holt Boulevard have been previously rezoned to accommodate higher densities. To stimulate investment in these areas, the City ~~will~~ adopted a lot consolidation ordinance (No. 3289) on December 3, 2024, and ~~incentives to~~ encourages the recycling of land to residential uses. The City will continue to monitor the ongoing status of development in the Holt Boulevard area. The Holt Boulevard area is included in a $35 million Transformative Climate Communities (TCC) grant awarded to the City to increase prosperity and improve transportation and housing within a disadvantaged community. The TCC program includes affordable housing, active transportation improvements, mobility hub, urban greening, carbon farm, solar photovoltaic, and transit improvements. This grant is a collaborative effort with public and community-based organizations and includes the development of the 101-unit Vista Verde Affordable Housing project.

Implementation

- ***Objectives*:** Develop a lot consolidation ordinance to facilitate the assemblage of lots into larger parcels, ~~with up to five assemblages~~ anticipated during the planning period in order to support achievement of the lower- and moderate-income capacities assigned to the West Holt and East Holt strategies in the sites

inventory.~~in the Holt Boulevard area~~. Continue to monitor the ongoing status of development in the Holt Boulevard area.

- ***Responsible Agencies*:** Planning Department
- ***Funding*:** General Fund
- ***Timing*:** ~~Within two years of Housing Element adoption, ongoing monitoring of development~~The City adopted a lot consolidation ordinance on December 3, 2024 (Ordinance No. 3289)

11. Ontario Ranch

Ontario Ranch covers 8,200 acres of the former San Bernardino Agricultural Preserve. This area is intended to provide a range of housing opportunities for the City's emerging regional and national employment centers. Buildout of this area is contingent on completion of infrastructure, approval of specific plans, and cancellation of Williamson Act contracts. The City has entered into an agreement with a consortium to fund $~~4~~430 million in infrastructure serving the eastern Ontario Ranch. The initial sewer trunk line~~, expected to~~ was developed in 2022, ~~will~~ traveling along Merrill Avenue between Euclid and Walker Avenues. An additional sewer line along Vineyard Avenue is expected to be completed in Spring 2026. The Vineyard Avenue sewer expansion makes development east of Walker Avenue feasible as soon as 2026. West of Walker ~~From there~~, additional sewer lines are planned to extend north along Euclid, Bon View, Grove, and Walker Avenues, with the southern-most sites expected to be first served. In this area, i~~I~~nfrastructure is expected to expand south to north as development occurs.

The City will monitor the timing of the provision of infrastructure. to ensure that infrastructure is being provided pursuant to these assumptions so that housing can be developed ~~early~~ within the planning period. The City will amend the sites inventory or rezone additional sites should infrastructure not be provided pursuant to the timeframes stated. (See also Program 14. Land Monitoring Program to Meet the RHNA.)

Many specific plans for this area have been approved. Some of the original Williamson Act contracts will also expire during the planning period. The Policy Plan has designated much of the area for medium- and high-density residential and mixed-use. Within western Ontario Ranch (largely undeveloped), the Policy Plan lays groundwork to promote a mixed-income community, with low-density, medium-density, high-density, and mixed-use well integrated with one another. Ontario Ranch offers important opportunity to integrate housing affordable to all income levels, especially lower-income households. The City will continue to process specific plan applications and work with developers to address outstanding issues, in particular the financing of infrastructure in western

Ontario Ranch. In addition, the City will meet with potential developers to explore opportunities to integrate affordable housing in new developments. The City will host annual roundtable discussions with developer(s) to proactively discuss integrating affordable units into development plans.

Additionally, the City will use the preapplication process to discuss integrating affordable units into development plans.

Implementation

- ***Objectives*:** Continue to review, approve, and implement plans to develop Ontario Ranch, and meet with potential developers to encourage the development of affordable housing.
- ***Responsible Agencies*:** Planning Department
- ***Funding***: General Fund
- ***Timing*:** Annual roundtable discussions; preapplication discussions as projects arise. Based on discussions with the Ontario Municipal Utilities Company (OMUC), with consideration of the cost, market conditions, and phasing needed to expand infrastructure, the City anticipates that infrastructure is likely to be available as follows:
  - 2026 AREA 1: East of Walker (served by Vineyard Avenue sewer main)
  - 2026-2027 AREA 2: West of Walker / South of Schaefer
  - 2027 AREA 3: West of Walker / Schaefer Avenue to the northernmost SCE easement.
  - 2027-2028 AREA 4: West of Walker / The northern-most SCE easement to Chino Ave
  - 2028 AREA 5: West of Walker / Chino Avenue to Riverside Drive
  - ~~Merrill Ave to the southern SCE (Southern California Edison) easement: 2023-2025~~
  - ~~Southern SCE easement to Schaefer Ave: 2025-2027~~
  - ~~Schaefer Ave to Riverside Drive: 2026-2028~~

12. Green Building

Green building means creating structures and using materials that are environmentally responsible and resource efficient, considering a building's entire life cycle. To reduce per-capita energy use, the City will promote conservation and renewable energy generation techniques in public facilities and private development. The City will require new construction to reduce energy demand by incorporating building and site design strategies. Conservation will be the priority strategy for renovation of existing facilities. The Policy Plan also includes land planning strategies that impact energy demand reduction, including narrowing street widths, installing broad-canopied trees for shade, and clustering compact development to reduce automobile use.

Implementation

- ***Objectives:***
  - Promote green building practices in the private sector and explore point-of-sale energy retrofits for residences.
  - Renewable energy incentive and energy-efficiency programs.
  - Develop a citywide 20-year energy plan.
  - Support pilot development project as a net-zero-energy community and formulate solar site orientation guidelines.
- ***Responsible Agencies*:** Planning Department, Building Department, Public Works
- ***Funding*:** General Fund
- ***Timing*:** Ongoing

13. 2021–2029 Regional Housing Need

To meet state law requirements (California Government Code Sections 65583(c)(1)(A) and 65583(c)(1)(B)) to address the 2021-2029 Regional Housing Needs Allocation (RHNA) and to ensure a sufficient selection of sites ~~are~~ is available for higher-density development, the City ~~shall~~ has and will continue to amend the Policy Plan and the Development Code, as needed, to provide adequate sites for- at least 8,926 lower-income units and 3,329 moderate-income units within a total RHNA of 20,854 units, as summarized in Chapter 5 and Table 5-16. The updated sites inventory identifies a realistic capacity of 9,326 lower-income units, 4,085 moderate-income units, and 8,631 above-moderate-income units (22,042 total units), which provides a buffer of 451 lower-income units, 763 moderate-income units, and 12,075 above-moderate-income units above the RHNA (including development progress reported on 6th Cycle

APRs). ~~8,333 lower-income units and 2,735 moderate-income units (11,068 total units).~~ The City will maintain zoning and overlays that allow minimum densities of at least 30 dwelling units per acre on sufficient acreage to accommodate at least 8,926 lower-income units and 3,329 moderate-income units, consistent with the strategy capacities summarized in Table 5-16. This includes implementation of the Affordable Housing (AH) Overlay on sites on East and West Holt, in Ontario Ranch south of Riverside Drive, and in other designated strategy areas to achieve the minimum 20 dwelling units per acre and higher densities assumed in the inventory. ~~The City will increase maximum density to at least 30 dwelling units per acre (du/ac) on a minimum of 270-370 acres depending on the mix of densities employed. Sites for lower-income units must allow at least 30 du/ac and are subject to the requirements of California Government Code Section 65583.2(h), including allowing owner-occupied and rental multifamily housing "by right" without discretionary review if 20 percent or more of the units in a project proposed on the site are affordable to those with lower incomes. The sites rezoned to accommodate lower-income RHNA must be able to accommodate a minimum of 16 units per site. At least half (50 percent) of the sites rezoned to accommodate lower-income RHNA shall be designated/zoned for residential uses only, except that all of the very low- and low-income housing need may be accommodated on sites designated for mixed uses if those sites allow 100 percent residential use and require that residential uses occupy 50 percent of the total floor area of a mixed-use project. The applications can be subject to design review as long as the project does not trigger the California Environmental Quality Act review process.~~

The City established ~~A~~an **Affordable Housing (AH) Overlay** zone through Ordinance No. 3204 on March 15, 2022, ~~will be created and~~ that applied to those sites proposed to change from another zone to MU-2 in the East and West Holt Corridors and to parcels identified in the sites inventory in the Ontario Ranch, south of Riverside Drive. The City updated the land use designations in its Land Use Element on August 16, 2022, consistent with the direction identified in Chapter 5. The City established the appropriate zoning (as stated in Chapter 5) for properties in the Downtown, West Holt, East Holt, and Old Cardenas Market Housing Opportunity Areas through Ordinance No. 3245 on May 2, 2023. These collective actions ensured that the City established the necessary land use designations and zoning to accommodate at least 100 percent of the City's remaining RHNA allocation.

The AH Overlay establishes a minimum density of 20 dwelling units per acre for all development regardless of affordability status and provides for special standards for affordable housing projects in the Ontario Ranch.

In the Ontario Ranch, the AH Overlay provides incentives to develop two tiers of affordable housing.

- *Tier 1*. The first tier ~~would~~ includes housing projects with at least 20% of units affordable to lower incomes. Projects in this tier ~~would~~ are no longer ~~be~~ required to develop a new specific plan under the AH Overlay.

- *Tier 2*. The second tier ~~would~~ includes projects with at least 25% of units dedicated as affordable to lower incomes via deed restriction or another long-term legal mechanism. Tier 2 projects ~~would be~~are subject to the same provisions as Tier 1, but the maximum density allowed on properties within the AH Overlay and designated as MDR on the Official Land Use Plan (Exhibit LU-01) of the Policy Plan component of The Ontario Plan ~~would~~ increases from 25 to 30 dwelling units per acre.

Projects ~~developing~~ developed without a specific plan ~~would be~~are allowed to develop according to the Policy Plan designation. Sites designated as MDR in the Policy Plan ~~would be~~are allowed to develop according to MDR-25 zoning standards~~,~~. ~~i~~If the project qualifies as Tier 2~~,~~ and ~~it~~ cannot achieve a density of 30 du/ac under MDR-25 standards, HDR-45 zoning standards may be used instead. Sites designated as MU in the Policy Plan may be developed in accordance with a comparable existing zoning implementation tool that allows for the density and/or intensity permitted by the Policy Plan.

To ensure that these incentives are primarily used as a means to promote the development of affordable housing, the AH Overlay ~~would~~ also requires projects choosing to develop without a specific plan to calculate the minimum density over the entirety of the project site (or the portion of the project site that is located within the AH Overlay, if the project area also includes properties that are not within the AH Overlay). If required to maintain adequate capacity, ~~T~~the ~~following~~ Ontario Mills Specific Plan~~specific plans~~ will be updated to require properties ~~within these Specific Plan areas~~ that are also included in the sites inventory to include a minimum density of 20 du/ac and allow at least 30 du/ac.~~:~~

- ~~The Ontario Mills Specific Plan~~
- ~~The Armstrong Ranch Specific Plan~~

The City will also **update the policy plan** designations and associated tables as necessary consistent with the proposed zoning changes, the intent of the overlay zone, and the changes to the specific plans.

Finally, the City will, consistent with direction received in HCD's review letter (May 21, 20226) evaluate and update if necessary the City's zoning

to confirm compliance with the *New Commune DTLA LLC v. City of Redondo Beach* decision related to the establishment of minimum densities and required residential development in base zones when adopting an overlay or allowing mixed uses to meet housing element rezoning requirements.

Implementation

- ***Objectives:*** Provide adequate sites to meet the City's RHNA (8,926 lower-income units, 3,329 moderate-income units, and 8,599 above-moderate-income units) by maintaining zoning, overlays, and specific plan standards that together provide realistic capacity, as shown in Table 5-16. Confirm compliance with statutory and case law on adequate zoning.~~Accommodate Ontario's share of the 2021-2029 RHNA.~~
- ***Responsible Agencies*:** Planning Department
- ***Funding*:** General Fund
- ***Timing*:** ~~Specific sites will be rezoned prior to February 12, 2025~~Update the Policy Plan and Development Code as necessary to maintain capacity to address the RHNA. Confirm compliance with case law by June 2027.

14. Land Monitoring Program to Meet the RHNA

The City is in the process of updating the Development Code for consistency with the Land Use designations of its Policy Plan. This program will implement a land monitoring program to ensure that the city has enough land to meet its RHNA throughout the planning period.

California Government Code Section 65863 stipulates that a jurisdiction must ensure that its Housing Element inventory can accommodate its share of the RHNA by income level throughout the planning period. If a jurisdiction approves a housing project at a lower density or with fewer units by income category than identified in the Housing Element, it must quantify at the time of approval the remaining unmet housing need at each income level and determine whether there is sufficient capacity to meet that need. If not, the city must "identify and make available" additional adequate sites to accommodate the jurisdiction's share of housing need by income level within 180 days of approving the reduced-density project. The City will evaluate residential development proposals for consistency with goals and policies of the Policy Plan and the 2021-2029 Housing Element sites inventory and make written findings that the density reduction is consistent with the Policy Plan and that the remaining sites identified in the Housing Element are adequate to accommodate the RHNA by income level. If a proposed reduction of residential density will result in the residential sites inventory failing to

accommodate the RHNA by income level, the City will identify and make available additional adequate sites to accommodate its share of housing need by income level within 180 days of approving the reduced-density project. (See also monitoring of infrastructure provision timing in Program 11. Ontario Ranch.)

Implementation

- ***Objectives:*** Ensure there is a sufficient supply of multifamily zoned land to meet the housing needs identified in the RHNA.
- ***Responsible Agencies:*** Planning Department
- ***Funding:*** General Fund
- ***Timing:*** Throughout the 2021-2029 planning period.

15. Residential By-Right for Developments with 20-Percent Affordable

To comply with Assembly Bill (AB) 1397, sites with Assessor's Parcel Numbers (APNs) listed in Table 9-1-in the land inventory in this 6th cycle Housing Element shall be allowed to be developed for residential use by-right, in accordance with Government Code Section 65583.2(c). This by-right (without discretionary review) requirement is only for housing developments in which at least 20 percent of the units are affordable to lower-income households. The application of the requirement should not be used to further constrain the development of housing. As such, housing developments that do not contain the requisite 20 percent would still be allowed to be developed according to the underlying (base) zoning.

Notes:
Note 1: Lot Consolidation Proposed
Note 2: This parcel has multiple land use designations. Only the portion of the parcel that is suitable for residential use was included in the acreage in this table and used to calculate capacity.
Note 3: This parcel has been split in the inventory to reflect multiple proposed land uses. Only the portions of the parcel suitable for residential use was included in the acreage in this table and used to calculate capacity.
Note 4: The sites associated with strategy 5 are included in the inventory, but the City does not count the units herein towards its RHNA because the zoning is not in place. The City cannot count the units associated with these sites towards its RHNA obligation until zoning consistent with the Housing Element is implemented.

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PZC25-002, A CITYWIDE ZONING MAP AMENDMENT TO IMPLEMENT THE ONTARIO PLAN 2050 POLICY PLAN AMENDMENT, AND MAKING FINDINGS IN SUPPORT THEREOF — APNs: 0110-072-25, 0110-081-06, 0110-081-07, 0113-282-15, 0216-174-16, 0216-174-17, 0216-214-05, 0216-214-06, 0216-214-07, 0216-311-08, 0216-311-09, 0216-312-08, 0216-312-09, 0216-312-10, 0216-313-01, 0216-313-03, 0216-313-04, 0216-313-05, 0216-313-06, 0216-313-07, 0216-313-09, 0216-314-01, 0216-314-03, 0216-314-04, 0216-314-05, 0216-314-07, 0216-314-08, 0216-314-09, 0216-321-01, 0216-321-02, 0216-321-03, 0216-321-06, 0216-321-07, 0216-322-01, 0216-322-02, 0216-322-10, 0218-102-10, 0218-102-11, 0218-111-06, 0218-111-08, 0218-111-09, 0218-111-10, 0218-111-11, 0218-111-50, 0218-111-67, 0218-111-68, 0218-111-69, 0218-121-01, 0218-121-02, 0218-121-03, 0218-121-04, 0218-121-05, 0218-121-06, 0218-122-01, 0218-122-02, 0218-122-03, 0218-122-04, 0218-122-06, 0218-122-08, 0218-122-09, 0218-122-10, 0218-181-11, 0218-181-16, 1049-101-01, 1049-101-02, 1049-101-04, 1049-101-05, 1049-101-06, 1049-101-07, 1049-101-08, 1049-101-09, 1049-101-10, 1049-101-11, 1049-101-12, 1049-101-13, 1049-101-14, 1049-101-15, 1049-101-16, 1049-101-17, 1049-101-18, 1049-101-29, 1049-101-30, 1049-101-31, 1049-101-32, 1049-101-33, 1049-101-34, 1049-101-35, 1049-101-36, 1049-101-37, 1049-101-38, 1049-101-39, 1049-101-40, 1049-131-01, 1049-131-02, 1049-131-03, 1049-131-04, 1049-131-05, 1049-131-06, 1049-131-08, 1049-131-09, 1049-131-18, 1049-131-19, 1049-131-20, 1049-131-21, 1049-131-22, 1049-161-01, 1049-161-24, 1049-161-25, 1049-171-05, 1049-171-06, 1049-171-07, 1052-151-05, 1052-151-09, 1052-151-10, 1052-151-11, 1052-161-03, 1053-111-01, 1053-111-03, 1053-111-04, 1053-171-01, 1053-171-04, 1053-171-06, 1053-171-07, 1053-181-01, 1053-181-02, 1053-191-01, 1053-191-02, 1053-201-01, 1053-281-08, 1053-301-01, 1053-301-02, 1053-311-01, 1053-311-02, 1053-321-01, 1053-321-02, 1053-321-03, 1053-331-02, 1053-331-04, 1053-341-01, 1053-341-02, 1053-351-02, 1053-361-02, 1053-371-01, 1053-391-01, 1053-411-01, 1053-421-01, 1053-421-02, 1053-511-01, 1053-511-05, 1053-511-06, 1053-511-07, 1053-511-08, 1053-521-01, 1053-521-02, 1053-531-01, 1053-531-04, 1053-541-01, 1053-551-01, 1053-571-01, 1053-571-02, 1053-581-03, 1053-581-04, 1053-591-01, 1053-591-02, 1053-601-01, 1053-601-02, 1053-601-03, 1053-601-04.

WHEREAS, the City of Ontario has initiated an application for a Zoning Map Amendment, File No. PZC25-002 (Project), to implement a citywide amendment to The Ontario Plan (TOP) 2050 Policy Plan; and

WHEREAS, the Project applies on a citywide basis to ensure consistency between zoning designations and the updated land use framework established by the Policy Plan Amendment; and

WHEREAS, the Project is not limited to a specific site, but applies to multiple properties across the City, with primary changes occurring within the Ontario Ranch area (south of Riverside Drive) and additional targeted changes in the northern portion of the City along East Holt Boulevard and South Grove Avenue; and

WHEREAS, the City is concurrently processing a General Plan Amendment (File No. PGPA25-002), and the proposed Zoning Map Amendment implements such amendment and does not result in new or more severe environmental impacts beyond those analyzed in the Supplemental Environmental Impact Report (SEIR) (State Clearinghouse No. 2025110102); and

WHEREAS, a Notice of Preparation (NOP) for the Draft SEIR was issued on November 4, 2025, and a public scoping meeting was held on November 20, 2025, to introduce the Project and solicit input from responsible agencies, stakeholders, and the public regarding the scope and content of the environmental analysis; and

WHEREAS, copies of the NOP were made available for public review at the City of Ontario Planning Department, the City's website, and were distributed through the State Clearinghouse and San Bernardino County Clerk's office in accordance with California Environmental Quality Act (CEQA) (Public Resources Code Section 21000, et seq.) requirements; and

WHEREAS, a Draft SEIR was prepared in accordance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines, incorporating input received during the NOP and scoping process; and

WHEREAS, the Draft SEIR was circulated for a 45-day public review period from March 5, 2026, through April 20, 2026; a Notice of Availability (NOA) was distributed to responsible and interested agencies, posted with the San Bernardino County Clerk's office, and published in the Inland Valley Daily Bulletin; and

WHEREAS, copies of the Draft SEIR were made available for public review at the City of Ontario Planning Department, the Ovitt Family Community Library, and on the City's website; and

WHEREAS, the Application is a project pursuant to CEQA; and

WHEREAS, the Draft SEIR was made available to the public and to all interested agencies for review and comment pursuant to CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

WHEREAS, the Final SEIR consists of the Draft SEIR, comments received during the public review period, written responses to those comments, and related appendices and supporting materials; and

WHEREAS, the City Council has certified the Final SEIR and adopted Environmental Findings, a Statement of Overriding Considerations, and a Mitigation Monitoring and Reporting Program (MMRP) for the Project pursuant to CEQA; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (ONT ALUCP), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the proposed Project is located within the Airport Influence Area of Chino Airport, within the City of Ontario boundary, and is subject to, and must be consistent with, the policies criteria set forth in Reference I, Chino Airport Land Use Compatibility Plan (CNO ALUCP), which applies only to jurisdictions within City of Ontario, and addresses the safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on April 28, 2026, the Planning Commission of the City of Ontario conducted a duly noticed public hearing to consider the Project and SEIR, at which time all persons wishing to testify were heard and the Project and SEIR, were fully studied, and concluded said hearing on that date; and

WHEREAS, as the first action on the Project, on April 28, 2026, the Planning Commission conducted a duly noticed public hearing and adopted a Resolution recommending that the City Council certify the Final SEIR, which identified significant and unavoidable impacts and included a Statement of Overriding Considerations, and concluded said hearing on that date; and

WHEREAS, the Final SEIR for the Project is on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, is available for inspection by any interested person at that location and are, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, on June 16, 2026, the City Council of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, the City Council has independently reviewed and considered the information contained in the Final SEIR, including all comments received on the Draft SEIR and Final SEIR, together with written responses thereto, and finds that the Final SEIR adequately addresses environmental issues raised during the public review process and provides decisions makers with sufficient information regarding the environmental consequences of the project, and certified the Final SEIR pursuant to CEQA; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the City Council of the City of Ontario, as follows:

SECTION 1. ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The environmental impacts of the Project were analyzed in the Ontario Policy Plan Amendment SEIR (State Clearinghouse No. 2025110102), prepared in accordance with CEQA, the State CEQA Guidelines; and

(2) The Final SEIR contains complete and accurate reporting of the environmental impacts associated with the Project; and

(3) The Final SEIR was completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(4) The Final SEIR reflects the independent judgment and analysis of the City of Ontario as the lead agency.

The City Council hereby adopts the Findings of Fact, Statement of Overriding Considerations, and Mitigation Monitoring and Reporting Program contained in Resolution No. XXXXXX certifying the Final SEIR, which findings are incorporated herein by reference.

SECTION 2. ***City Council Action.*** Based on the entire record before the City Council and all written and oral evidence presented, the City Council finds the Final SEIR complies with CEQA for the following reasons:

(1) The Final SEIR analyzes the environmental effects of the Project and finds that, with implementation of all feasible mitigation measures, the following impacts will remain significant and unavoidable: air quality (including AQMP consistency and regional construction and operational emissions), cultural resources (historic resources), greenhouse gas emissions (consistency with applicable climate plans), noise (construction, traffic, and vibration impacts), and transportation (increase in vehicle miles traveled); and

(2) The City Council further finds that the Statement of Overriding Considerations demonstrates that the Project's economic, social, housing, infrastructure, and planning benefits outweigh its significant and unavoidable environmental impacts. Such benefits include:

- Maintaining compliance with State housing law and RHNA requirements
- Facilitating employment-generating uses and economic development opportunities;
- Improving land use compatibility and implementation of The Ontario Plan;
- Supporting efficient infrastructure planning and public service delivery;
- Improving long-term jobs-housing balance through implementation of the City's comprehensive planning framework;
- Supporting coordinated truck routing and circulation planning; and
- Promoting orderly growth consistent with the City's long-range planning objectives.

(3) The City Council hereby incorporates by reference the Findings of Fact, Mitigation Monitoring and Reporting Program, and Statement of Overriding Considerations approved in connection with certification of Final SEIR (SCH No. 2025110102). The City Council finds that all feasible mitigation measures identified in the Final SEIR have been adopted and that no additional feasible mitigation measures or alternatives would substantially lessen or avoid the significant and unavoidable environmental impacts identified in the Final SEIR.

SECTION 3. **General Plan Internal Consistency**. Pursuant to Government Code section 65300.5, the City Council finds that the amendments to the Policy Plan component of TOP 2050, including revisions to the Land Use, Housing, Mobility, Community Design, Environmental Resources, Parks and Recreation, and Safety Elements, have been prepared in a coordinated manner and maintain the internal consistency of the General plan. The City Council further finds that the amendments to Exhibit LU-01 (Official Land Use Plan), Exhibit LU-03 (Future Buildout), and related Policy Plan text are mutually reinforcing and collectively support the City's long-range planning objectives while maintain consistency among all mandatory and optional elements of the General Plan.

SECTION 4. ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the decision-making body for the Project, the City Council finds that, based upon the facts and information contained in the Application and supporting documentation, the Project maintains consistency with the Housing Element of the Policy Plan (General Plan) component of TOP 2050.

The City Council further finds that the Project includes corresponding updates to the Housing Element and land use framework to ensure continued compliance with applicable State housing law, including Government Code sections 65583, 65863, and related provisions governing maintenance of adequate sites inventory and residential development capacity.

The City Council further finds that any reduction in residential capacity associated with amendments to Exhibit LU-01 is offset through corresponding modifications to the City's housing inventory and land use framework, resulting in no net loss of capacity necessary to accommodate the City's RHNA allocation. The Project maintains adequate sites to accommodate the City's remaining RHNA obligations across all income categories.

The City Council further finds that the Housing Element updates incorporated into the Project maintain consistency with the City's obligations to affirmatively further fair housing and do not reduce the City's ability to provide housing opportunities throughout the community.

Accordingly, the City Council finds that the Project is consistent with the Housing Element and applicable State housing requirements at the time of Project implementation.

SECTION 5. ***Airport Land Use Compatibility Plan Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670, et seq.) requires that an Airport Land Use Compatibility Plan (ALUCP) be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted ALUCP.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP. The City Council further finds that no amendment approved herein authorizes development that would otherwise be prohibited by the ONT ALCUP and that future discretionary proposals within the Airport Influence Area shall remain subject to project-specific consistency review.

(2) On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport (CNO) Overlay Zoning District (OZD) and Reference I, Chino Airport Land Use Compatibility Plan (CNO

ALUCP). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the City Council finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP. The City Council further finds that no amendment approved herein authorizes development that would otherwise be prohibited by the Chino ALUCP and that future discretionary development proposals within Airport Influence Areas shall remain subject to project-specific consistency review.

SECTION 6. ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in the Sections above, the City Council hereby concludes as follows:

(1) ***The proposed Zone Change is consistent The Ontario Plan 2050 when considered as an integrated and internally consistent whole.*** The Project implements the updated land use designations adopted through File No. PGPA25-002; maintains compliance with State housing law; preserves adequate housing capacity, facilitates employment-generating land uses; improves land use compatibility; supports infrastructure planning; and advances the City's long-term economic development objectives.

(2) ***The proposed Zone Change would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The proposed project aligns zoning regulations with the adopted Policy Plan, supports orderly development patterns, facilitates infrastructure planning, and has been analyzed in the SEIR, which identifies no new or separate environmental impacts associated with the Zone Change.

(3) ***The proposed Zone Change will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The proposed project ensures consistency between zoning and land-use designations, incorporates targeted refinements to improve compatibility, and supports transitions among differing land-use intensities, consistent with the overall framework of TOP 2050.

(4) ***The subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The areas subject to the Zone Change are physically suitable for the corresponding zoning designations, including considerations of parcel

configuration, access, and availability of infrastructure, as the Zone Change implements the Policy Plan Amendment. The City Council finds that the amended zoning districts are compatible with surrounding development patterns, infrastructure availability, transportation access, and long-term planning objectives identified in The Ontario Plan.

SECTION 7. ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 6, above, the CITY COUNCIL hereby APPROVES the herein described Application, as detailed in "Attachment A" attached hereto and incorporated herein by this reference.

SECTION 8. ***Custodian of Records.*** The documents and materials that constitute the record of proceedings for the Project include, but are not limited to, the Draft SEIR, Final SEIR, technical appendices, staff reports, resolutions, public hearing materials, written comments, responses to comments, transcripts, exhibits, correspondence, and all other documents relied upon by the City in making its decision. These documents are located at the City of Ontario City Hall, 303 East B Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9. ***Effective Date*****.** This Ordinance shall become effective thirty (30) days following adoption.

SECTION 10. ***Publication*****.** The City Clerk shall either: (a) have this Ordinance published in a newspaper of general circulation within 15 days after its adoption or (b) have a summary of this Ordinance published twice in a newspaper of general circulation, within 15 days after its adoption.

SECTION 11. ***Severability*****.** If any provision of this ordinance or its application to any person or circumstance is held to be invalid, such invalidity has no effect on the other provisions or applications of the Ordinance that can be given effect without the invalid provision or application, and to this extent, the provisions of this Ordinance are severable. The City Council declares that it would have adopted this Ordinance irrespective of the invalidity of any portion thereof.

SECTION 12. The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least twice, in a newspaper of general circulation in the City of Ontario, California within 15 days of the adoption. The City Clerk shall post a certified copy of this Ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this _____ day of _____ 2026.

CITY OF ONTARIO *Agenda Report* **June 16, 2026**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Luis Batres Department: Prepared By: Luis Batres Staff Member Presenting: Rudy Zeledon, Executive Director Community Development Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 21

SUBJECT: **A PUBLIC HEARING TO CONSIDER THE APPROVAL OF THE EUCALYPTUS BUSINESS PARK SPECIFIC PLAN, FILE NO. PSP24-003**

RECOMMENDATION: That the City Council introduce and waive further reading of an Ordinance approving the Eucalyptus Business Park Specific Plan (File No. PSP24-003), appended to the attached Ordinance as "Attachment A", pursuant to the facts and reasons contained in the staff report and subject to the conditions of approval appended to the attached Ordinance as "Attachment B".

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)
Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

FISCAL IMPACT: Adoption of the Eucalyptus Business Park Specific Plan (EBPSP) will result in both short-term and long-term fiscal impacts to the City. Short-term impacts primarily involve the construction of infrastructure improvements needed to support the proposed development. The developer will be responsible for installing required improvements and/or paying the applicable Development Impact Fee (DIF) associated with these improvements at the time of development.

Long-term fiscal impacts include the ongoing provision of public services and maintenance, such as police, fire, and infrastructure maintenance, required to support the future development. Although the project will generate additional property tax revenue, the projected increase will not fully offset the cost of providing these services. To address this funding gap, future development of the Specific Plan area will require the developer(s) to form and or participate in a Community Facilities District (CFD) to fund the additional public service costs associated with the development.

BACKGROUND & ANALYSIS: The Ontario Plan ("TOP") Policy Plan (General Plan) provides the basic framework for development within the 8,200-acre area commonly referred to as Ontario Ranch. The Policy Plan requires City Council approval of a Specific Plan for new developments of 10 acres or more within the Ontario Ranch area. A Specific Plan is required to ensure that sufficient land area is included to achieve cohesive, unified districts and neighborhoods. Additionally, a Specific Plan is required to incorporate a development framework for detailed land use, circulation, infrastructure improvements (such as drainage, sewer, street and water facilities), provision for public services (including parks), and urban design and landscape standards.

The Eucalyptus Business Park Specific Plan (File No. PSP24-003) project area encompasses 189 acres and is generally bounded by Walker Avenue to the east, Campus Avenue to the west, Eucalyptus Avenue to the south and Ontario Ranch Road to the north. The proposed Specific Plan would allow for the development of 2,939,000 square feet of business park development and up to 10,000 square feet of commercial development. The plan also provides for approximately 37 acres of open space-parkland, which includes a segment of the City's Grand Park. The following major components are included in the Specific Plan document to ensure proper regulation of future development.

- Land Use and Development Standards. To facilitate future development, the 189-acres Specific Plan will establish land use designations, development standards and design guidelines, circulation requirements, among others for future Business Park development. The Specific Plan is also designed to accommodate future commercial, and retail uses to support the business park development, future businesses, and their employees. The Business Park land use designation will allow a maximum Floor Area Ratio (FAR) of 0.55, which helps maintain appropriately sized buildings in the Specific Plan project area. The development standards and design guidelines are intended to ensure high-quality development throughout. The standards will promote high-quality architecture that will create a cohesive and well-designed development. The proposed business park buildings will be centered around a Contemporary architectural style, using a mix of appropriate colors and materials and various architectural elements to enhance the design.

- Circulation. Several major arterial streets in north/south and east/west directions are or will be constructed around and through the Specific Plan boundary. Primary access to the project will be provided along Eucalyptus Avenue, Campus Avenue, Bon View Avenue, Grove Avenue, and Walker Avenue. The project will also provide a new public street along the north boundary, noted as 'Public Street A'. This street will include substantial landscape improvements along the south edge to help create a buffer between the business park development to the south and the City's Grand Park to the north. This will also help improve the safety and interaction between the Grand Park and Business Park development.

- Landscape. Landscape improvements will be provided through the business park development. The Specific Plan encourages landscaping that enhances the street appeal of

the structures, creates and defines public and private spaces, and provides shade that benefits the environment. This will be achieved through comprehensive landscape and open space standards. The standards will help establish a hierarchy for landscape development along the surrounding roadways, as well as establishing a framework for consistency throughout the design. The streetscapes for the roads will include formal landscape parkway designs, neighborhood edges, and landscape medians.

- Infrastructure. The backbone infrastructure needed to serve the entire Specific Plan area will be constructed by the developers in accordance with the Ontario Ranch Streets Master Plan and the Ontario Utilities Master Plan. The timing of development phases and the required infrastructure improvements will be established and approved through future Development Agreements. Future development within the Specific Plan area will be subject to development agreements, subdivision approvals, engineering review, and infrastructure financing requirements to ensure that necessary public facilities and services are available concurrent with development.

GENERAL PLAN CONSISTENCY: The Eucalyptus Business Park Specific Plan has been evaluated for consistency with the amended Policy Plan component of The Ontario Plan. The Specific Plan implements the land use framework established through File No. PGPA25-002, supports employment-generating uses in a planned business park environment, provides integrated circulation, infrastructure, and open space improvements, and remains consistent with the City's long-term planning objectives when considered in conjunction with the Policy Plan Amendment.

AIRPORT COMPATIBILITY: The Specific Plan has been evaluated for consistency with applicable Ontario International Airport and Chino Airport compatibility requirements. Future development within the Specific Plan area will remain subject to applicable airport compatibility regulations and development standards.

HOUSING CAPACITY: The residential capacity associated with lands redesignated through the Policy Plan Amendment has been evaluated as part of File No. PGPA25-002. The City determined that the Policy Plan Amendment and associated Housing Element updates maintain sufficient residential development capacity to accommodate the City's remaining RHNA obligations and do not result in a net loss of residential development capacity necessary to comply with State housing law.

PUBLIC BENEFITS: The Specific Plan provides substantial public benefits, including development of approximately 2.9 million square feet of employment-generating business park uses, creating of approximately 1,590 jobs, construction of backbone infrastructure, implementation of circulation improvements, provision of approximately 37 acres of open space and parkland, and implementation of the City's long-term economic development objectives.

PLANNING COMMISSION REVIEW: On April 28, 2026, the Planning Commission held a public hearing on the proposed Eucalyptus Business Park Specific Plan and voted 7-0 recommending the City Council approve the Eucalyptus Business Park Specific Plan (File No. PSP24-003).

ENVIRONMENTAL REVIEW: The environmental impacts of the Specific Plan were reviewed in conjunction with The Ontario Plan (TOP) 2050 Policy Plan Amendment (File No. PGPA25-002), for which a Supplemental Environmental Impact Report (SEIR) (State Clearinghouse No. 2025110102) was prepared. The SEIR evaluated the environmental impacts associated with the implementation of the Policy Plan Amendment (PPA), which included the Eucalyptus Business Park Specific Plan (EBPSP) as part of the overall project under File No. PGPA25-002. As a result, separate/additional environmental analysis for the Specific Plan is not required. Public comments received during the SEIR raised issues relating to air quality, truck traffic, noise, greenhouse gas emissions, environmental justice, housing capacity, and warehouse development. Responses to these comments are included in the Final SEIR and demonstrate that the Final SEIR adequately addressed the significant and unavoidable impacts related to air quality, greenhouse gas emissions, noise, cultural resources, and transportation. For impacts that remain significant and unavoidable, the City Council may adopt a Statement of Overriding Considerations if it determines that the Project's economic, social, housing, infrastructure, and planning benefits outweigh those impacts. Such benefits include, but are not limited to, maintaining compliance with State housing law, preserving adequate RHNA capacity, facilitating employment-generating land uses, supporting economic development opportunities, improving land use compatibility, implementing coordinated truck routing improvements, enhancing infrastructure efficiency, and advancing the City's long-term planning objectives. The SEIR was presented to the Planning Commission on April 28, 2026, as part of File No. PGPA25-002, and was recommended 7-0 to City Council for approval. Approval of the Eucalyptus Business Park Specific Plan is subject to the adoption and approval of The Ontario Plan (TOP) 2050 Policy Plan Amendment (File No. PGPA25-002) and the associated SEIR.

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION AGENDA REPORT

April 28, 2026

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Email: PlanningDirector@OntarioCA.gov

FILE NO.: PSP24-003

SUBJECT: A public hearing to consider the Eucalyptus Business Park Specific Plan (File No. PSP24-003) to establish the land use districts, development standers, design guidelines, infrastructure improvements, etc., for the potential development of 2,939,000 square feet of business park development, 10,000 square feet of commercial development and approximately 37-acres of open space/recreation on approximately 189 acres of land for property generally located along the northeast corner of Campus Avenue and Eucalyptus Avenue, within the SP (Specific Plan) and AG (Agricultural Overlay) zoning districts (APNs:1053-531-01, 1053-531-02, 1053-531-03, 1053-531-04, 1053-541-01, 1053-541-02, 1053-551-01, 1053-371-01, 1053-371-02, 1053-581-03, 1053-581-04, 0216-321-01, 0216-321-02, 0216-321-06, 0216-321-07, 0216-322-01, 0216-322-02, 0216-322-10); **submitted by Ontario Ranch Venture II, LLC. (c/o Sares Regis Group). City Council action is required.**

PROPERTY OWNER: Ontario Ranch Venture II, LLC. (c/o Sares Regis Group)

RECOMMENDED ACTION: That the Planning Commission adopt a Resolution recommending the City Council approve the Eucalyptus Business Park Specific Plan ("EBPSP") (File No. PSP24-003), pursuant to the facts and reasons contained in the staff report and attached Resolution, and subject to the conditions of approval appended to the attached Resolution as Attachment A.

BACKGROUND: The Ontario Plan ("TOP") Policy Plan (general plan) provides the basic framework for development within the 8,200-acre area commonly referred to as Ontario Ranch. The Ontario Ranch is bound by Riverside Drive to the north, Milliken Avenue to the east, Euclid Avenue to the west and Merrill Avenue/Bellegrave to the south. The Policy Plan requires City Council approval of a Specific Plan for unregulated areas of 10 acres or more within Ontario Ranch. The Specific Plan will ensure sufficient land area is included to achieve cohesive, unified districts and neighborhoods. Additionally, the Specific Plan will provide a development framework that regulates land use, circulation, infrastructure improvements (drainage, sewer, and water facilities), provisions for public services (parks and schools), and urban design and landscape standards.

On January 27, 2010, the Ontario City Council certified The Ontario Plan Environmental Impact Report in conjunction with File No. PGPA06-001 (City Council Resolution No. 2010-006), and on August 16, 2022, the Ontario City Council certified The Ontario Plan 2050

CC	6/16/26		Final

Update Supplemental Environmental Impact Report in conjunction with File No. PGPA20-002 (City Council Resolution No. 2022-129).

On September 27, 2024, the Applicant submitted an application for a Specific Plan (File No. PSP24-003), which will establish land use designations, development standards, and design guidelines for 189 acres of land generally bounded by Walker Avenue to the east, Campus Avenue to the west, Eucalyptus Avenue to the south and Ontario Ranch Road to the north. The Specific Plan will outline the potential development of 2,939,000 square feet of business park development, 10,000 square feet of commercial development within the Business Park land use to support the Business Park operations, a potential 35,000 square foot publicly operated animal resource center and approximately 37-acres of open space. A Planning Commission recommendation of approval to the City Council is requested for the Specific Plan. Approval of the Specific Plan is subject to the approval and certification of File No. PGPA25-002, an amendment to The Ontario Policy Plan Supplemental Environmental Impact Report (SEIR) (State Clearinghouse No. 2025110102), which includes the adoption of a Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations.

PROJECT SETTING: The Project site is within the SP (Specific Plan) and AG (Agricultural Overlay) zoning districts and is currently used for farming/agriculture and dairy farm purposes. The site is made up of eighteen separate parcels comprising approximately 189-acres of land generally bounded by Walker Avenue to the east, Campus Avenue to the west, Eucalyptus Avenues to the south and Ontario Ranch Road to the north, see Exhibit A: Project Location Map, attached. The existing surrounding land uses, zoning, and Policy Plan (general plan) and specific plan land use designations are summarized in Table 1: Surrounding Zoning & Land Uses (see Technical Appendix).

PROJECT ANALYSIS:

(1) Specific Plan — The Eucalyptus Business Park Specific Plan (EBPSP) will provide regulatory requirements to ensure future development of the EBPSP implements the goals and vision of the City's Policy Plan. The EBPSP will generally include development standards and design guidelines, circulation requirements, infrastructure and phasing requirements, permitted land uses, implementation guidelines, development review and approval procedures, among others. Through these requirements and procedures, the EBPSP will ensure a well-balanced, high quality business park complex is achieved and established in a manner that will facilitate a range of uses as envisioned by The Ontario Plan. The primary components of the EBPSP are described and analyzed further below.

(a) Land Use Plan – The land use plan for the EBPSP primarily consists of a range of business park uses and open space land uses, while also accommodating commercial retail uses to support the business park development, future businesses, and their employees.

The proposed land use plan is separated into nine (9) proposed Planning Areas (PA) across the two main land use categories – Business Park (PA 1-6), and Open Space (PA 7-9) (See Exhibit B: Eucalyptus Business Park Specific Plan Land Use Map).

Business Park - The TOP identifies a maximum buildout intensity 0.60 for Business Park land uses. This intensity, also referred to as Floor Area Ratio (FAR) is intended to guide the size of business park buildings in effort to attract and/or accommodate a different spectrum of business park uses. The EBPSP is proposing a maximum intensity/FAR of 0.55, which is consistent with TOP and slightly less than the TOP maximum. The FAR for EBPSP was intentionally lowered to ensure future business park development is scaled and designed appropriately in consideration of the proximity to Grand Park.

The Specific Plan, Business Park Planning Areas are envisioned to be developed as outlined below:

- Planning Area 1, located along the upper western portion of the Specific Plan, is 7.70-acres in size and can potentially accommodate up to 162,600 square feet of business park development.

- Planning Area 2, located along the center of the Specific Plan, is 18.33-acres in size and can potentially accommodate up to 273,700 square feet of business park development.

- Planning Area 3, located along the east side of the Specific Plan, is 18.21-acres in size and can potentially accommodate up to 340,700 square feet of business park development.

- Planning Area 4, located along the southwest corner of the Specific Plan, is 18.19-acres in size and can potentially accommodate up to 423,200 square feet of business park development.

- Planning Area 5, located along the center of the Specific Plan; is 37.76-acres in size and can potentially accommodate up to 859,300 square feet of business park development.

- Planning Area 6, located along the southeast corner of the Specific Plan, is 37.71 acres in size and can potentially accommodate up to 879,500 square feet of business park development.

- Planning Area 7 through 9, located along the north boundary of the Specific Plan, is roughly 37 acres total and will remain as open space as part of the Grand Park Master Plan.

Open Space – Parkland – Grand Park extends east from Campus Avenue to Haven Avenue. This Specific Plan will be located immediately to the south of the Grand Park,

between Campus Avenue, to the west and Walker Avenue, to the east. The design, construction, and programming of Grand Park is regulated by the Grand Park Master Plan and all future improvements must be consistent with the Grand Park Master Plan. The EBPSP will provide permitted uses within the Open Space Parkland designation, which includes portions of Grand Park, however, future design and use of the park space will require separate reviews and collaboration with the City to ensure the Grand Park Master Plan vision is maintained.

Additionally, the EBPSP will also allow up to 10,000 square feet of commercial/retail uses to help support the future business park businesses and employees within those businesses. The commercial uses do not include a dedicated "commercial/retail" land use designation; these uses will instead be allowed within any of Business Park PAs. This will allow flexibility with the placement of the commercial uses either as stand-alone developments or integrated into a business park building.

(b) Development Standards and Design Guidelines — The Development Standards and Design Guidelines will provide the tools to develop a cohesive business park complex that blends form and function. Within the Business Park PAs, future development will be regulated by development standards that generally include setback and separation requirements, maximum heights, maximum sizes, parking requirements, specific landscape requirements, among others. These standards will ensure buildings are appropriately scaled within their respective PA and positioned in a manner that contributes to the overall Business Park development. Notable standards include appropriate setbacks from major and minor/private streets, appropriate landscape buffers along the perimeter of streets and buildings, proper screening of parking and truck yard where necessary, among others, all of which are intended for business park buildings.

The Design Guidelines have been established to implement the intent and vision of the Ontario Development Code and The Ontario Plan (TOP). The Design Guidelines will provide assurance that the EBPSP will produce high quality design and character in a consistent manner. The Design Guidelines will also provide appropriate direction and clarity for future developers, which helps minimize conflict and inconsistencies with the EBPSP's intent.

The EBPSP will contain a Contemporary design theme. Each building will be required to incorporate an appropriate balance of colors and materials, including the use of architectural features and elements to further enhance the design. This is generally achieved with the use of substantial glazing at the office areas or as spandrel glass throughout building elevations. Additional features such as awnings, canopies, and decorative lighting will also be required, as well as accent materials such as metal, stone, or similar. The following details help further emphasize the EBPSP design guidelines:

- Buildings are characterized by simple and distinct cubic masses with interlocking volumes of wall planes, colors, and materials to create visual appeal.

- Building massing, scale and roof forms will be the primary design components requiring articulation in their architectural expression as they relate to the public views.

- The business park, commercial land uses will maintain consideration of the pedestrian realm and will implement appropriate site planning and architectural design

- Theme walls/entry monuments may be installed at the major project entries at the discretion of the builder/project developer and subject to the approval of a master sign program by the City.

- The site design will facilitate the intended functions of common space areas and will provide for appropriate interactions between buildings and activity areas, goods movement, vehicular access/parking, and pedestrian and bicycle travel.

- The buildings will be oriented to define the street scene and provide for an aesthetically pleasing streetscape; and

(c) Circulation — The circulation plan for the Specific Plan reinforces the objective of moving vehicles, pedestrians, cyclists, and public transit safely and efficiently throughout and around the project area. The Specific Plan establishes the hierarchy and general location of roadways within the EBPSP. The Project provides efficient circulation for vehicle traffic and a safe environment for pedestrian movement. Primary access to the project will be provided along Eucalyptus and Grove Avenue as well as a new public street 'A', that will be developed along the northern portion of the Specific Plan.

The new public street will separate the Business Park land use from the Open Space land use (Grand Park). The new public street 'A' will be a 64-foot-wide (collector roadway) with two lanes in each direction. While the street serves as additional circulation, it will also include enhanced design and landscape features to help strengthen the interaction between the Business Park buildings and the Grand Park.

Additional circulation within the Specific Plan will be provided and improved as follows:

- Eucalyptus Avenue is designed to be a four 4-lane (108') collector road (truck route), with a 14-foot wide striped median, consistent with the TOP.

- Campus Avenue is designed to be a 4-lane (108') minor arterial road with a 14' striped median, consistent with the TOP.

- Bon View Avenue is designed to be 4-lane (66') collector road, consistent with the TOP.

- Grove Avenue is designed to be 4-lanes (124') principal arterial road, with a 28' wide raised landscape median, consistent with the TOP; and

- Walker Avenue is designed to be 2-lane (88') collector road (truck route), consistent with the TOP.

The Specific Plan has been designed to feature four (4) signalized intersections along Eucalyptus Avenue and four (4) along the new public street 'A'. Each street will include a parkway, sidewalk, and a landscape buffer. Right-of-way improvements along the streets will be consistent with the City's Master Plan of Streets.

(d) Landscaping Design — The landscape design theme for the EBPSP encourages landscaping and designs that enhance the street appeal of the structures, create and define public and private spaces, and provide shade that benefits the environment. A plant palette (Table 6-1) of the Specific Plan outlines the plant materials and trees to be used in parking lots, street parkways, and adjacent to buildings. The plant palette includes evergreen and deciduous trees, shrubs and ground covers, and grasses that are commonly used throughout Southern California. Many of the plants are water-efficient species native also to Southern California. The overall landscape design of the Specific Plan was organized to help define the landscape principles for the Specific Plan, with specific treatment along the streets establishing the general framework for the area.

Landscape also plays a vital role in the streetscape design. Landscape design guidelines will help establish a hierarchy for landscape development along the surrounding roadways, as well as establishing a framework for consistency throughout the design. The streetscapes for the roads include formal landscape parkway designs, neighborhood edges, and landscape medians. The EBPSP will apply the following streetscape requirements along the major roadways:

- Eucalyptus Avenue: Will be required to provide a 35-foot neighborhood edge that will include a 15-foot-wide landscape buffer, 8-foot-wide multi-purpose trail, 5-foot-wide sidewalk and a 7-foot-wide landscape parkway.

- Campus Avenue: Will be required to provide a 35-foot-wide neighborhood edge that will include a 15-foot-wide landscape setback, 8-foot-wide multi-purpose trail, 5-foot-wide sidewalk and a 7-foot-wide landscape parkway.

- Grove Avenue: Will be required to provide a 40-foot-wide landscape neighborhood edge that will include a 15-foot-wide landscape buffer, 8-foot-wide multi-purpose trail, a 5-foot-wide landscape buffer, a 5-foot-wide sidewalk and a 7-foot-wide landscape parkway.

- Walker Avenue: Will be required to provide 35-foot-wide neighborhood edge that will include a 7-foot-wide parkway, 5-foot-wide sidewalk, 8-foot-wide multi-purpose trail and 15-foot-wide landscape buffer.

- Bon View Avenue: Will be required to provide a 29-foot-wide neighborhood edge that will include a 4-foot-wide parkway, 5-foot-wide sidewalk and 20-foot-wide landscape buffer.

- New Public Street 'A': Will require a 7-foot-wide landscape parkway and a 5-foot-wide sidewalk and will provide a 20-foot landscape setback along the south side of the street, measured from the back of the sidewalk. While Public Street 'A' does not include an actual neighborhood edge, the EBPSP has incorporated the additional 20-foot landscape setback to ensure appropriate streetscape design and aesthetic landscape buffers are provided near the Grand Park.

(e) Infrastructure and Services — The backbone infrastructure to serve all areas of the Specific Plan will be installed by the developers in accordance with the Ontario Ranch Master Plan for streets, water (including recycled water), sewer, storm drain, and fiber optic facilities. Natural gas will be provided by Southern California Gas Company and electricity by Southern California Edison ("SCE"). Development of the Project requires the installation by the developer of all infrastructure necessary to serve the Project as a standalone development.

(f) Specific Plan Phasing — The phasing of development within the Specific Plan will be determined by the various developers, development agreements, and based upon the market conditions. It is anticipated that the Specific Plan will be developed in six (6) phases (see Attachment E: Proposed Phasing Plan). The proposed phases are as follows:

- Phase A: Will include Planning Area (PA) 3 and 6
- Phase B: Will include Planning Area (PA) 2 and 5
- Phase C: Will include Planning Area (PA) 1 and 4
- Phase D: Will include Planning Area (PA) 9
- Phase E: Will include Planning Area (PA) 8; and
- Phase F: Will include Planning Area (PA) 7

The developer(s) and the city will work together to ensure that the open space-parkland areas are developed concurrently with the build-out of the business park portions of the Specific Plan. The final details will be outlined in the development agreement(s) when the first subdivision map is processed and approved by the City.

(g) Signage — All future signage will be subject to review and approval of a comprehensive sign program for the Specific Plan. A sign program will facilitate the integration of the signs within the overall site and building design to create a unified visual statement and provide for flexible application of sign regulations in the design and display of multiple signs. Key provisions will include entry monument, center and tenant identification signage, traffic and wayfinding signs, building signs, secondary monumentation, and visitor and directional signage. Prior to the issuance of a Building

Permit for the installation of any new sign, the Applicant is required to submit Sign Plans for Planning Department review and approval.

PUBLIC NOTIFICATION: The subject application was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, notices were mailed to all owners of real property located within a minimum of 600 feet of the exterior boundaries of the Project site that is the subject of the hearing, as shown on the records of the County Assessor.

CORRESPONDENCE: As of the preparation of this Agenda Report, Planning Department staff have not received written or verbal communication in objection to the Project.

AGENCY/DEPARTMENT REVIEWS: Each City agency/department has been provided the opportunity to review and comment on the subject application and recommend conditions of approval to be imposed upon the application. At the time of the Resolution preparation, recommended conditions of approval were provided and are appended to the attached Resolutions as "Attachment A."

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, File No. PSP24-003, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission, therefore, finds and determines that the Project, File No. PSP24-003, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport ("CNO") Overlay Zoning District ("OZD") and Reference I, Chino Airport Land Use Compatibility Plan ("CNO ALUCP"). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development

within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The Specific Plan is located within Safety Zones 4 and 6 of the Chino ALUCP and may have additional development restrictions that include building heights, land use restrictions, Floor Area Ratio (FAR) limitations and Open Land Criteria. Refer to the Chino ALUCP for additional development regulations. Any future development in the project area shall be consistent with the policies and criteria of the ONT and Chino ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan (TOP).

California Government Code (Title 7, Division 1, Chapter 3, Article 8, Section 65450-65457) permits the adoption and administration of specific plans as an implementation tool for elements contained in the local general plan. Specific plans must demonstrate consistency in regulations, guidelines, and programs with the goals and policies set forth in the general plan. The EBPSP has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (TOP) (General Plan). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals

- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner
- Invest in the City's Infrastructure (Water, Streets, Sewers, Parks, Storm Drains and Public Facilities)
- Ensure the Development of a Well Planned, Balanced, and Self-Sustaining Community in Ontario Ranch

(2) Vision

Distinctive Development that integrates our varied and diverse focal points, districts, centers, corridors, and neighborhoods to provide a feeling of coherence without sacrificing uniqueness.

Commercial and Residential Development

- Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

- A system of vibrant retail, town, and neighborhood centers responsive to market demands and woven into the fabric of the community.

- Distinctive and well-maintained neighborhoods that offer exceptional variety in lifestyles, with convenient access to schools, recreation and cultural facilities, places of worship, places of employment and shopping.

Development Quality

- Unique and authentic districts, centers, and corridors of varied scales that establish Ontario as one of the most vital and diverse locales in Southern California.

- Superior quality and design of the built environment and open spaces through careful attention to detail at every scale, including public and private spaces and structures.

(3) Governance

Decision Making

Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

- G1-1 Consistency with Policies. We require that staff recommendations to the City Council be consistent with adopted City Council Priorities (Goals and Objectives) and The Policy Pan.

- G1-2 Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision.

(4) Policy Plan (General Plan)

Land Use Element

Goal LU-1 Balance: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

- LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

- LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and

visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

- LU-2.1 Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.

- LU-2.2 Buffers. We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.

- LU-2.5 Regulation of Uses. We regulate the location, concentration, and operation of uses that have impacts on surrounding land uses.

- LU-2.11 Context-Aware Transitions and Connections. We require new development projects and land-planning efforts to provide context-aware and appropriate transitions and connections between existing and planned neighborhoods, blocks, sites, and buildings.

Goal LU-3 Flexibility: Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.

- LU-3.1 Development Standards. We maintain clear development standards which allow flexibility to achieve our Vision and provide objective standards that ensure predictability and deliver the intended physical outcomes.

- LU-3.3 Land Use Flexibility. We consider uses not typically permitted within a land use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity.

Community Economics Element:

Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

- CE-1.1 Jobs-Housing Balance. We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.

- CE-1.5 Business Attraction. We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.

Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

- CE-2.1Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

- CE-2.2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.

- CE-2.4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

- CE-2.5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Mobility Element

Goal M-1 Roadway System: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.

- M-1.4 Complete Streets. We work to provide a complete, balanced, context-aware, multimodal transportation network that meets the needs of all users of streets, roads, and highways, including motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation. We prioritize implementation of complete streets improvements in environmental justice areas to facilitate opportunities for residents to use active transportation systems.

Goal M-2 Active Transportation: A system of trails and corridors that facilitate and encourage active modes of transportation.

- M-2.3 Pedestrian Walkways. We require streets to include sidewalks and visible crosswalks at major intersections where necessary to promote safe and comfortable mobility between residential areas, businesses, schools, parks, recreation areas, and other key destination points.

Community Design Element

Goal CD-1 Image & Identity: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

- CD-1.1 City Identity. We take actions that are consistent with the City being a leading urban center in Southern California while recognizing, enhancing, and preserving the character of our existing viable neighborhoods.

- CD-1.4 Transportation Corridors. We will enhance our major transportation corridors within the City through landscape, hardscape, signage and lighting. The extent of enhancement should be appropriate to the use, type, and context of each corridor.

Goal CD-2 Design Quality: A high level of design quality resulting in neighborhoods, public spaces, parks, and streetscapes that are attractive, safe, functional, human-scale, and distinct.

- CD-2.1 Quality Building Design and Architecture. We encourage all development projects to convey visual interest and character through:

    1. Building volume, massing, and height to provide context-appropriate scale and proportion;

    2. A true architectural style which is carried out in plan, section, and elevation through all aspects of the building and site design and appropriate for its setting; and

    3. Exterior building materials that are articulated, high quality, durable, and appropriate for the architectural style.

- CD-2.5 Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right-of-way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.

- CD-2.6 Connectivity. We promote development of local street patterns, multimodal networks, and connected public spaces that create and unify neighborhoods, rather than divide them, and create cohesive and continuous corridors, rather than independent "islands" through the following means:

1. Local street networks that provide access both between subdivisions and within neighborhoods and discourage through traffic;

2. A local street system that is logical and understandable for the user. A grid system is preferred to avoid circuitous and confusing travel paths between internal neighborhood areas and adjacent arterials and to provide adequate emergency and evacuation access; and

3. Pedestrian and bicycle networks that provide convenient access to neighborhoods and nearby destinations, such as schools, parks, other public spaces, commercial areas, and transit stops.

- CD-2.8 Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintaining visibility and accessibility, and using lighting.

- CD-2.9 Landscape Design. We encourage durable, sustainable, and drought-tolerant landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.

- CD-2.10 Parking Areas. We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include:

  1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field.

- CD-2.12 Site and Building Signage. We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures

- CD-2.13 Entitlement Process. We work collaboratively with all stakeholders to ensure a high degree of certainty in the efficient review and timely processing of all development plans and permits.

Goal CD-5 Protection of Investment: A sustained level of maintenance and improvement of properties, buildings, and infrastructure that protects property values and encourages additional public and private investments.

- CD-5.1 Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.

- CD-5.2 Maintenance of Infrastructure. We require the continual maintenance of infrastructure.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report. Approval of this Specific Plan is subject to the adoption and approval of The Ontario Plan (TOP) 2050 Policy Plan Amendment (File No. PGPA25-002) being approved by City Council.

ENVIRONMENTAL REVIEW: The environmental impacts of this Project were reviewed in conjunction with The Ontario Plan (TOP) 2050 Policy Plan Amendment (File No. PGPA25-002), for which a Supplemental Environmental Impact Report (SEIR) (State Clearinghouse No. 2025110102) was prepared. The SEIR evaluated the potential environmental impacts associated with the Policy Plan Amendment (PPA), which included the EBPSP as part of the overall project under PGPA25-002.

Through the SEIR process, potential impacts were analyzed, and revisions to the proposed project and mitigation measures were identified to reduce environmental effects. As a result, most of the impacts were reduced to a less-than-significant level. However, five impact areas remain significant and unavoidable, even with the implementation of all feasible mitigation measures. These impacts are attributable to the PPA and EBPSP.

The significant and unavoidable impacts identified in the SEIR applicable to EBPSP include:

- Air Quality — Impacts related to consistency with the Air Quality Management Plan and regional operational emissions which would contribute to regional nonattainment conditions within the South Coast Air Basin and expose sensitive receptors to elevated pollutant concentrations.

- Cultural Resources — Although protective regulations and preservation policies are included in The Ontario Plan Policy Plan Amendment (PPA), implementation of the proposed PPA may result in impacts to historic resources. Future development could involve the modification or demolition of historic resources, including Tier III resources, resulting in the destruction or material impairment of their significance. While regulatory protections and project-level review would reduce impacts, such impacts cannot be fully avoided or mitigated in all cases.

- Greenhouse Gas Emissions — Impacts associated with increased greenhouse gas emissions and potential inconsistency with the City's Community Climate Action Plan.

- Noise — Impacts related to traffic noise.

- Transportation — Impacts related to vehicle miles traveled (VMT), which would increase under buildout conditions and cannot be reduced to a less-than-significant level.

The City of Ontario circulated the Draft Supplemental Environmental Impact Report (Draft SEIR) for public review from March 5, 2026, through April 20, 2026. At the conclusion of the public review period, 17 comment letters were received. Areas of concern raised in the comments include the loss of agricultural land, environmental impacts associated with warehouse development, and requests for a warehouse moratorium. Responses to all comments received will be provided in the Final SEIR, Section 2, Response to Comments.

While 5 significant and unavoidable Project impacts have been identified, Staff finds that the Project's benefits outweigh the unavoidable adverse environmental effects. The Project provides the following benefits:

- Supports implementation of TOP 2050 by advancing a coordinated land use framework that aligns policy direction with site-specific planning; facilitates employment-generating uses through the establishment of the EBPSP and targeted reallocation of land uses within Ontario Ranch;

- Improves land use compatibility by directing business park and industrial uses to appropriate locations and incorporating updates to circulation patterns, including truck route modifications consistent with State requirements under AB 98;

- Supports the extension and coordination of infrastructure improvements necessary to accommodate planned growth, including circulation, utilities, and public services; and

- Provides economic benefits to the community through expanded employment opportunities and strengthening of the City's economic base.

Approval of this Specific Plan is subject to the adoption and approval of The Ontario Plan (TOP) 2050 Policy Plan Amendment (File No. PGPA25-002) and the associated SEIR.

TECHNICAL APPENDIX:

Table 1: Surrounding Zoning and Land Uses

	Existing Land Use	***Policy Plan Designation***	***Zoning Designation***	***Specific Plan Land Use***
Site	Farming/Agriculture Land Uses	Business Park and Open Space	EBPSP	Business Park (BP) and Open Space-Recreation (OS-R)
North	Farming/Agriculture Land Uses	Open Space-Recreation	CenterPark Specific Plan	Open Space (OS-R)
South	Industrial Development	Business Park	South Ontario Logistics Center Specific Plan, Merrill Commerce Center Specific Plan	Business Park
East	Farming/Agriculture Land Uses	Mixed-Use, Open Space-Recreation, MDR	Specific Plan (SP)	N/A
West	Vacant Land/Dairy Land Uses	Mixed-Use	Specific Plan (SP)	N/A

Resolution for File No. PSP24-003

(Document to follow this page)

RESOLUTION NO. PC26-025

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO, CALIFORNIA, RECOMMENDING THE CITY COUNCIL APPROVE THE EUCALYPTUS BUSINESS PARK SPECIFIC PLAN (FILE NO. PSP24-003), TO ESTABISH THE LAND USE DISTRICTS, DEVELOPMENT STANDARDS, DESIGN GUIDELINES, INFRACTRUCTURE IMPROVEMENTS, ETC., FOR THE POTENTIAL DEVELOPMENT OF 2,939,000 SQUARE FEET OF BUSINESS PARK DEVELOPMENT, 10,000 SQUARE FEET OF COMMERCIAL DEVELOPMENT AND APPROXIMATELY 37-ACRES OF OPEN SPACE/PARKLAND ON APPROXIMATELY 189 ACRES OF LAND FOR PROPERTY GENERALLY LOCATED ALONG THE NORTHEAST CORNER OF CAMPUS AVENUE AND EUCALYPTUS AVENUE, LOCATED WITHIN THE SP (SPECIFIC PLAN) AND AG (AGRICULTURAL OVERLAY) ZONING DISTRICTS, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 1053-531-01, 1053-531-02, 1053-531-03, 1053-531-04, 1053-541-01, 1053-541-02, 1053-551-01, 1053-371-01, 1053-371-02, 1053-581-03, 1053-581-04, 0216-321-01, 0216-321-02, 0216-321-06, 0216-321-07, 0216-322-01, 0216-322-02, 0216-322-10.

WHEREAS, ONTARIO RANCH VENTURE II, LLC. ("Applicant") has filed an Application for the approval of a Specific Plan, File No. PSP24-003 (Eucalyptus Business Park Specific Plan), as described in the title of this Resolution (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the Project site is made up of eighteen separate parcels comprising approximately 189-acres of land and is generally bounded by Walker Avenue to the east, Campus Avenue to the west, Eucalyptus Avenues to the south and Ontario Ranch Road to the north within the SP (Specific Plan) and AG (Agricultural Overlay) zoning districts; and;

WHEREAS, the property to the north of the Project site is within the CenterPark Specific Plan zoning district and is developed with farming/agriculture and dairy farm purposes, the property to the south is within the South Ontario Logistics Center Specific Plan and Merrill Commerce Center Specific Plan and is developed with business park development, the property to the east and west is within Specific Plan (SP) zoning district and is currently improved with farming/agriculture land uses; and

WHEREAS, the Eucalyptus Business Park Specific Plan, attached hereto as Attachment A, will facilitate the potential development of 2,939,000 square feet of business park development with a maximum Floor Area Ratio of 0.55 and will also allow for up to 10,000 square feet of support commercial/retail uses; and

WHEREAS, the Eucalyptus Business Park Specific Plan establishes a comprehensive set of design guidelines and development regulations to guide and regulate site planning, landscape, architectural character, circulation, permitted uses, infrastructure, among others to ensure all future development is consistent with the goals and policies of The Ontario Plan; and

WHEREAS, the Eucalyptus Business Park Specific Plan has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (TOP 2050) (General Plan); and

WHEREAS, the Application is a project pursuant to the California Environmental Quality Act — Public Resources Code Section 21000 et seq. — (hereinafter referred to as "CEQA") and an initial study has been prepared to determine possible environmental impacts; and

WHEREAS, the environmental impacts of this Project were reviewed in conjunction with File No. PGPA25-002, an amendment to The Ontario Plan (TOP) 2050 Policy Plan, for which a Supplemental Environmental Impact Report (SEIR) (State Clearinghouse No. 2025110102) was prepared, including a Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations; and

WHEREAS, the Plan Policy Amendment SEIR associated with File No. PGPA25-002 evaluated the potential environmental impacts associated with implementation of the EBPSP, including site-specific development, land use organization, circulation, and infrastructure within the Specific Plan area; and

WHEREAS, the SEIR for File No. PGPA25-002, which included a Statement of Overriding Considerations, was prepared in accordance with the California Environmental Quality Act (CEQA), the State CEQA Guidelines, and the City of Ontario Guidelines for implementation of CEQA; and

WHEREAS, the SEIR for File No. PGPA25-002 was prepared to address the environmental effects of the proposed EBPSP; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the Planning Commission the responsibility and authority to review and make recommendation to the City Council on the subject Application; and

WHEREAS, approval of this Specific Plan is contingent on the approval of File No. PGPA25-002 by City Council; and

WHEREAS, the Project has been reviewed for consistency with the Housing Element of the Policy Plan component of The Ontario Plan 2050, as State Housing Element law (as prescribed in Government Code Sections 65580 through 65589.8) requires that development projects must be consistent with the Housing Element, if upon consideration of all its aspects, it is found to further the purposes, principals, goals, and policies of the Housing Element; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (hereinafter referred to as "ALUCP"), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, the proposed Project is located within the Airport Influence Area of Chino Airport, within the City of Ontario boundary, and is subject to, and must be consistent with, the policies criteria set forth in Reference I, Chino Airport Land Use Compatibility Plan (CNO ALUCP), which applies only to jurisdictions within City of Ontario, and addresses the safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on April 28, 2026, the Planning Commission of the City of Ontario conducted a hearing to consider the Project, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending body for the Project, the Planning Commission has reviewed and considered the information contained in the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared for File No. PGPA25-002, which

evaluated the potential environmental impacts associated with implementation of the EBPSP. Based upon the facts and information contained in the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared for File No. PGPA25-002, and supporting documentation, the Planning Commission finds as follows:

(1) The environmental impacts of this Project were previously reviewed in conjunction with File No. PGPA25-002, The Ontario Plan (TOP) 2050 Policy Plan Amendment, for which a Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) was prepared, including a Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations; and

(2) The previous Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102), including the Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations contains a complete and accurate reporting of the environmental impacts associated with the Project; and

(3) The previous Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102), including the Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations was completed in compliance with CEQA and the Guidelines promulgated thereunder; and

(4) The previous Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102), including the Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations reflects the independent judgment of the Planning Commission; and

(5) The proposed Project will introduce no new significant environmental impacts beyond those previously analyzed in the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared for File No. PGPA25-002, including the Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations, and all mitigation measures adopted with the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102), are incorporated herein by this reference.

SECTION 2: ***Subsequent or Supplemental Environmental Review Not Required.*** Based on the information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial change to the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) that was prepared, that will require

major revisions to the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102), due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) that was prepared for File No. PGPA25-002, that will require major revisions to the Supplemental Environmental Impact Report due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Supplemental Environmental Impact Report that was prepared, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared for File No. PGPA25-002; or

(b) Significant effects previously examined will be substantially more severe than shown in the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102); or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared for File No. PGPA25-002, would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Housing Element Compliance.*** Pursuant to the requirements of California Government Code Chapter 3, Article 10.6, commencing with Section 65580, as the recommending body for the Project, the Planning Commission finds that based on the facts and information contained in the Application and supporting documentation, at the time of Project implementation, the Project is consistent with the Housing Element of the Policy Plan (General Plan) component of The Ontario Plan 2050, as the Project site is not one of the properties in the Housing Element Sites Inventory contained in Tables B-1 and B-2 of the Housing Element Technical Report.

SECTION 4: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

(2) On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport ("CNO") Overlay Zoning District ("OZD") and Reference I, Chino Airport Land Use Compatibility Plan ("CNO ALUCP"). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the Planning Commission finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

SECTION 5: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the Planning Commission during the above-referenced hearing, and upon the specific findings set forth in the Sections above, the Planning Commission hereby concludes as follows:

(1) ***The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050.*** The approximately 189-acre Eucalyptus Business Park Specific Plan is suitable for business park, commercial and open space-parkland development and is consistent with the goals and policies, plans and exhibits of the Vision, Policy Plan (TOP 2050) (General Plan), and City Council Priorities components of TOP 2050. In addition, the proposed land uses in the proposed Specific Plan will also be in harmony in terms of access, size, and compatibility with existing land use in the surrounding area; and

(2) ***The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.*** The proposed Eucalyptus Business Park Specific Plan is in conformance with the Land Use Policies and Goals of the Policy Plan and will provide standards and guidelines for the harmonious development within the districts, in a manner consistent with the Policy Plan. The Specific Plan proposes the potential development of 2,939,000 square feet of business park development, up to 10,000 square feet of commercial/retail development, and approximately 37-acres of open space/parkland on approximately 189 acres of land. The proposed Specific Plan land uses and intensity of development is consistent with the land use plan of the Policy Plan (TOP 2050); therefore, the proposed business park, commercial and open space land uses will not be detrimental to the public interest, health, safety, or general welfare of the City as they are consistent with the existing and future development of the surrounding area; and

(3) ***In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.*** The proposed Specific Plan will modify the land use from farming/agricultural and vacant land uses to Business Park and Open Space-Parkland, which aligns with the surrounding land uses planned in the Policy Plan (TOP) 2050; and

(4) ***In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.*** The proposed Specific Plan will allow for business park, commercial and open space/parkland uses on the subject site. When in conformance with the Specific Plan, the project site is suitable in size and shape, and the project site design allows for sufficient access and availability of utilities to accommodate the anticipated development.

SECTION 6: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in the Sections above, the Planning Commission hereby RECOMMENDS THE CITY COUNCIL APPROVES the herein described Application, subject to each and every condition set forth in the Department reports attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 7: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the Applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 8: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 9: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 28th day of April, 2026, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

Nancy Dediemar
Planning Commission Chairperson

ATTEST:

Henry K. Noh
Planning Director and
Secretary to the Planning Commission

STATE OF CALIFORNIA)
COUNTY OF SAN BERNARDINO)

EXECUTIVE SUMMARY

ES.1 Specific Plan Overview

The Eucalyptus Business Park Specific Plan area covers approximately 189.0 acres in the southern portion of the City of Ontario. The Specific Plan area is located north of Eucalyptus Avenue, south of Ontario Ranch Road, east of Campus Avenue, and west of Walker Avenue.

The location of the Eucalyptus Business Park Specific Plan area in regional and local contexts are depicted in Figure ES-1, *Regional Map*, and Figure ES-2, *Vicinity Map*, which show the locational setting of the Specific Plan area with surrounding jurisdictions.

The information in this Specific Plan will guide the development of a modern business park and the establishment of public park space and will address the interface between the two uses. The Specific Plan area is envisioned to provide business park development between Eucalyptus Avenue and a new east-west public street and a public park north of the new public street.

The public park land in the northern portion of the Specific Plan area is expected to provide passive park areas for the City of Ontario such as open space areas, benches, and trails.

The business park area is intended to contain employment-generating uses supported by roadways, utility infrastructure, parking areas for automobiles, commercial vehicles, and trucks, designed in a master-planned setting accented by attractive lighting, landscaping, signage, and other functional and decorative features. Buildings are intended to be welcoming to local, national, and international businesses that can bring job opportunities and economic growth to the City of Ontario, including but not limited to corporate offices, technology centers, light manufacturing, research and development, warehousing and distribution, and support retail. In addition, space for a potential publicly operated animal resource center is reserved within the Specific Plan area.

A summary of the proposed land uses is as follows:

Table ES-1 Land Use Summary

Land Use Designation	Acreage[1]	Maximum Building Square Footage
Business Park	137.90	2,939,000
Open Space – Parkland	35.88	--
Roadway	15.24	--
TOTAL	189.0 AC	2,939,000 SF

[1]Acreages are approximate and subject to survey verification.
[2]Total acreage of 189.0 is rounded up to the nearest one-tenth of an acre.

ES.2 Other Governing Documents

In addition to this Specific Plan, which includes a Land Use Plan, Infrastructure Plan, Development Regulations, Design Guidelines, and an Implementation Plan tailored to the Eucalyptus Business Park Specific Plan area, the following documents also contain applicable information:

- The Ontario Policy Plan (which serves as the City's State-mandated General Plan) that includes City-wide policies pertaining to land use, housing, mobility, safety, environmental resources, parks and recreation, community economics, community design, and social resources.

EXECUTIVE SUMMARY

ES.1 Specific Plan Overview

The Eucalyptus Business Park Specific Plan area covers approximately 189.0 acres in the southern portion of the City of Ontario. The Specific Plan area is located north of Eucalyptus Avenue, south of Ontario Ranch Road, east of Campus Avenue, and west of Walker Avenue.

The location of the Eucalyptus Business Park Specific Plan area in regional and local contexts are depicted in Figure ES-1, *Regional Map*, and Figure ES-2, *Vicinity Map*, which show the locational setting of the Specific Plan area with surrounding jurisdictions.

The information in this Specific Plan will guide the development of a modern business park and the establishment of public park space and will address the interface between the two uses. The Specific Plan area is envisioned to provide business park development between Eucalyptus Avenue and a new east-west public street and a public park north of the new public street.

The public park land in the northern portion of the Specific Plan area is expected to provide passive park areas for the City of Ontario such as open space areas, benches, and trails.

The business park area is intended to contain employment-generating uses supported by roadways, utility infrastructure, parking areas for automobiles, commercial vehicles, and trucks, designed in a master-planned setting accented by attractive lighting, landscaping, signage, and other functional and decorative features. Buildings are intended to be welcoming to local, national, and international businesses that can bring job opportunities and economic growth to the City of Ontario, including but not limited to corporate offices, technology centers, light manufacturing, research and development, warehousing and distribution, and support retail. In addition, space for a potential publicly operated animal resource center is reserved within the Specific Plan area.

A summary of the proposed land uses is as follows:

Table ES-1 Land Use Summary

Land Use Designation	Acreage[1]	Maximum Building Square Footage
Business Park	137.90	2,939,000
Open Space – Parkland	35.88	--
Roadway	15.24	--
TOTAL	189.0 AC	2,939,000 SF

[1]Acreages are approximate and subject to survey verification.
[2]Total acreage of 189.0 is rounded up to the nearest one-tenth of an acre.

ES.2 Other Governing Documents

In addition to this Specific Plan, which includes a Land Use Plan, Infrastructure Plan, Development Regulations, Design Guidelines, and an Implementation Plan tailored to the Eucalyptus Business Park Specific Plan area, the following documents also contain applicable information:

- The Ontario Policy Plan (which serves as the City's State-mandated General Plan) that includes City-wide policies pertaining to land use, housing, mobility, safety, environmental resources, parks and recreation, community economics, community design, and social resources.

- **The City of Ontario Development Code** applies to all topics not addressed by this Specific Plan's development regulations. However, if any requirement of this Specific Plan conflicts with the Development Code, the provisions of this Specific Plan shall take precedence.

- **The Airport Land Use Compatibility Plan for Ontario International Airport (ONT) and the California Airport Land Use Planning Handbook published by Caltrans Division of Aeronautics**, which contain criteria that apply to the development intensity of property located in the ONT's airport influence area. A portion of the Eucalyptus Business Park Specific Plan area is located in the ONT influence area.

- **CNO (Chino Airport) Overlay Zoning District,** which provides a land use compatibility analysis to minimize hazards and impacts to the operation of the Chino Airport and its surroundings. A portion of the Eucalyptus Business Park Specific Plan area is located in the Chino Airport influence area.

- **The Mitigation Monitoring and Reporting Program (MMRP)** that is part of the Eucalyptus Business Park Specific Plan's Environmental Impact Report (EIR) prepared in compliance with the California Environmental Quality Act (CEQA). The MMRP stipulates measures that are required to be implemented to mitigate the environmental effects of the Specific Plan's construction and operation.

ES.3 Specific Plan Components

This Eucalyptus Business Park Specific Plan is organized into the following chapters:

Chapter 1 – Introduction:
Describes the purpose and objectives of the Specific Plan, the related entitlement approvals for implementing development, and the relationship between the Specific Plan and the Ontario Policy Plan.

Chapter 2 – Existing Conditions:
Describes the physical setting of the Eucalyptus Business Park Specific Plan area and the physical conditions on and surrounding the property at the time the Specific Plan was prepared.

Chapter 3 – Land Use Plan:
Describes the Eucalyptus Business Park Specific Plan's development plan, which includes six Business Park planning areas and three Open Space – Parkland planning areas. Chapter 3 also specifies the acreages of each planning area and the maximum development intensities permitted in each land use category. Chapter 3 also includes a conceptual development plan showing how the area could be developed in compliance with the Specific Plan.

Chapter 4 – Infrastructure Plan:
Provides information on vehicular and non-vehicular circulation improvements; planned backbone water, sewer, recycled water, and storm drain systems; and the planned dry utility network for the development of the Eucalyptus Business Park Specific Plan area.

Chapter 5 – Development Regulations:
Establishes the list of permitted and conditionally permitted uses in the Specific Plan area and presents the development regulations that govern the uses. Chapter 5 also provides a discussion of the relationship between the Specific Plan and the City of Ontario Development Code.

Chapter 6 – Design Guidelines:
Provides site planning, landscaping, and architectural guidelines for implementing

development within the Specific Plan area. Guidelines in this chapter address design characteristics for building placement and architecture, landscaping, streetscapes, entry identification monuments, corner treatments at roadway intersections, walls and fencing, lighting, and signage.

Chapter 7 – Implementation Plan

Presents the policies and procedures for the City's review and approval of implementing development projects within the Eucalyptus Business Park Specific Plan area. Chapter 7 also describes the methods and procedures for interpreting and amending the Specific Plan as necessary. Additionally, funding and maintenance responsibilities are summarized within this Specific Plan.

CHAPTER 1

INTRODUCTION

1.1 Specific Plan Purpose

The purpose of the Eucalyptus Business Park Specific Plan is to guide the development of a 189.0-acre site into a modern business park and public parkland space. The Specific Plan area is located within the southern portion of the City of Ontario (City). The Ontario Policy Plan and the Ontario Development Code requires the Ontario City Council to approve Specific Plans as part of the entitlement process for new development projects within this area.

Development projects within the Specific Plan area are required to demonstrate substantial conformity with the information contained within this Specific Plan document.

The public parkland area in the northern portion of the Specific Plan area is intended to address passive recreational needs of City residents. The business park area in the southern portion of the Specific Plan area is poised to accommodate uses that rely on the regional transportation network and the site's proximity to the Ontario International Airport (ONT), the Chino Airport, State Route 60 (SR-60), State Route 83 (SR-83), State Route 91 (SR-91), Interstate 15 (I-15), and Interstate 10 (I-10). The Specific Plan area is approximately 2.2 miles south of SR-60, approximately 0.5 miles east of SR-83, approximately 7.5 miles north of SR-91, approximately 4.5 miles west of I-15, and approximately 5.6 miles south of I-10. Additionally, the Port of Long Beach and the Port of Los Angeles, which serve as major gateways for international trades, are located approximately 37 miles southwest of the Specific Plan area.

1.2 Specific Plan Objectives

The Eucalyptus Business Park Specific Plan achieves the following objectives:

- To provide a land use plan that implements The Ontario Plan's vision and appropriately positions business park and public parkland uses north of Eucalyptus Avenue, between Campus Avenue and Walker Avenue.
- To facilitate the development of a variety of employment-generating uses in a business park setting.
- To provide business park uses that are compatible with surrounding land uses.
- To provide opportunities for positive economic benefit to the City, including new revenues that can be used for vital City services.
- To provide opportunities for the development of passive use parks consistent with the City of Ontario's Grand Park Master Plan.
- To improve connectivity in the area by providing pedestrian paths, bicycle routes, and amenities such as bike racks that encourage circulation by means not dependent on a motorized vehicle.
- To identify improvements for water, recycled water, sewer, storm drain, and circulation facilities that serve planned land uses within and adjacent to the Specific Plan area.

- To set forth a development phasing sequence that allows for logical development and aligns with installation of on-site and off-site infrastructure.
- To define guidelines and standards that address architecture, landscaping, streetscapes, entry monuments, corner treatments, walls and fencing, lighting, and signage within the Specific Plan area.

1.3 Authority

The Eucalyptus Business Park Specific Plan is a regulatory document prepared pursuant to the provisions of California Government Code §§ 65450 through 65457, which grants local government agencies the authority to prepare Specific Plans for the systematic implementation of their General Plan for all or part of the area covered by the General Plan. While The Ontario Plan covers the entire City, the Specific Plan focuses on the development within the approximately 189-acre site.

California Government Code §§ 65450 through 65457 establish the authority to adopt a Specific Plan, identify the required contents of a Specific Plan, and mandate consistency with the General Plan. According to California Government Code § 65451:

(a) A Specific Plan shall include text and a diagram which specify all the following in detail:

1) The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan.

2) The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan.

3) Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.

4) A program of implementation measures including regulations, programs, public works projects, and financing measures, necessary to carry out items 1, 2, and 3.

(b) The Specific Plan shall include a statement of the relationship of the Specific Plan to the General Plan.

The Eucalyptus Business Park Specific Plan includes each of the required elements listed above and establishes the essential link between the policies of The Ontario Plan's Policy Plan and the Eucalyptus Business Park Specific Plan site. All future development plans and construction activities within the Specific Plan area shall be consistent with the requirements set forth in this Specific Plan and with all other applicable City regulations.

1.4 Severability

The Eucalyptus Business Park Specific Plan enables the City of Ontario to facilitate the processing and approval of development plans to build out the Specific Plan area. If any regulation, condition, program, or portion of this Specific Plan is held invalid or unenforceable, such portions shall be deemed separate, distinct, and independent provisions, and the invalidity of such portions or provisions shall not affect the validity and enforceability of the remaining provisions contained herein.

1.5 Approval Process and Companion Actions

The Eucalyptus Business Park Specific Plan and any future amendments are required to be considered by the City of Ontario Planning Commission and City Council, and adopted by ordinance or resolution of the City Council, pursuant to Ontario Development Code Section 1.01.035, *Relationship to Specific Plans*. More information on implementation procedures is contained in this Specific Plan Chapter 7, *Implementation Plan*.

A Policy Plan (General Plan) Amendment (GPA) will be processed in conjunction with the Eucalyptus Business Park Specific Plan. The GPA is a companion action to the approval of this Specific Plan that would achieve consistency between the General Plan land use designations, this Specific Plan's land use designations, and zoning.

Additionally, a tentative parcel map will be processed by the City of Ontario for the Specific Plan area indicating the approximate boundaries and dimensions of parcels and streets, and the proposed grading for the Specific Plan area. Following map recordation, the final map will become the legal document that identifies developable parcels within the Specific Plan area.

All development within the Eucalyptus Business Park Specific Plan area shall be subject to the Development Plan Review Process established in the City of Ontario Development Code. The development standards and design guidelines provided within this Specific Plan shall be the design criteria which the City of Ontario refers to during the Development Plan Review process.

In addition to this Specific Plan an Environmental Impact Report (EIR) was prepared in compliance with the California Environmental Quality Act (CEQA) to serve as the project-wide environmental assessment document. Together, this Specific Plan and the environmental mitigation measures contained in the accompanying EIR's Mitigation Monitoring and Reporting Program (MMRP) provide a path to develop the property taking into account all applicable goals, objectives, government requirements, and environmental regulations.

1.6 Relationship to The Ontario Plan General Plan

The Ontario Plan establishes the direction and vision for the City's future and provides a guidance system to shape the City's communities. The Ontario Plan consists of a six-part Component Framework: 1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback.

The Eucalyptus Business Park Specific Plan defines the methods and requirements for implementing development within the Specific Plan area to ensure that applicable policies from The Ontario Plan and its Policy Plan are implemented and ensure that development envisioned by this Specific Plan is consistent with applicable provisions of The Ontario Plan. The Ontario Plan sets forth long-term goals for the City's growth and development as mandated by State law. The Policy Plan is a long-term policy document that covers the elements of land use, housing, parks and recreation, environmental resources, community economics, safety, mobility, community design, and social resources.

As shown on Figure 1-1, *Existing General Plan Land Use Designations*, the Policy Plan component of The Ontario Plan designates the Specific Plan area as Medium Density Residential with Affordable Housing Overlay, Mixed-Use Eucalyptus/Chino Airport Overlay

with Affordable Housing Overlay, and Open Space – Parkland.

As shown on Figure 1-2, *Proposed General Plan Land Use Designations*, the General Plan Amendment being processed concurrently with this Specific Plan will modify the Ontario Plan's designations of the Specific Plan area to Business Park and Open Space – Parkland.

As shown on Figure 1-3, *Existing Zoning Designations*, the City of Ontario's Zoning Map designates the Specific Plan area's zoning as "Specific Plan with an Agricultural and an Affordable Housing Overlay".

As shown on Figure 1-4, *Proposed Zoning Designations,* the Zone Change being processed concurrently with this Specific Plan will modify the City of Ontario's Zoning Map of the site to "Eucalyptus Business Park Specific Plan" to allow for the development of Business Park and Open Space – Parkland uses.

Pursuant to the City of Ontario's adoption of the Eucalyptus Business Park Specific Plan, the Specific Plan will take precedence over the City's Development Code. In instances where the Specific Plan is silent on development standards, the City's Development Code shall prevail.

CHAPTER 2

EXISTING CONDITIONS

2.1 Existing Assessor Parcel Numbers

At the time the Eucalyptus Business Park Specific Plan was prepared, the Specific Plan area consisted of the following Assessor Parcel Numbers (APNs), as listed on Table 2-1, *Existing APN List*, and shown on Figure 2-1, *Existing APNs*.

Table 2-1 Existing APN List

1053-531-01	0216-321-01
1053-531-02	0216-321-02
1053-531-03	0216-321-06
1053-531-04	0216-321-07
1053-541-01	0216-322-01

1053-571-01	
1053-571-02	
1053-581-03	
1053-581-04	

2.2 Existing Land Use

As shown on Figure 2-2, *Aerial Photograph*, at the time this Specific Plan was prepared, the majority of the Specific Plan area was used for dairy farming. The Specific Plan area contained multiple dairy farms developed with single-family residences, milking barns, canopy/shade structures, and cattle pens. Several man-made access roads cross the site to provide access to the farms. Grass fields are present in the southern area of the Specific Plan area, which are used for grazing or growing grass for hay and may have previously been used to grow row crops. Additionally, the northwestern portion of the Specific Plan area contains light industrial uses and truck trailer storage uses.

2.3 Surrounding Land Uses

As shown on Figure 2-3, *Existing Surrounding Land Uses*, agricultural dairy farm uses and rural residential homes abut the Specific Plan area to the north, east, west, and southwest. Light industrial and warehouse distribution uses abut the Specific Plan area to the south and southeast.

2.4 Existing Circulation and Access

2.4.1 Regional Circulation

State Route 60 (SR-60) is located approximately 2.2 miles north of the Specific Plan area and is accessible via the Grove Avenue on- and off- ramp. State Route 83 (SR-83) is located approximately 0.5 miles west of the Specific Plan area and is accessible via Ontario Ranch Road and Eucalyptus Avenue. Interstate 15 (I-15) is located approximately 4.5 miles east of the Specific Plan area and is accessible via the Ontario Ranch Road on- and off- ramp or the Limonite Avenue on- and off- ramp.

2.4.2 Local Circulation

Access to the Eucalyptus Business Park Specific Plan area is provided from Eucalyptus Avenue, Ontario Ranch Road, Campus Avenue, Bon View Avenue, Grove Avenue, and Walker Avenue. The City of Ontario designates Eucalyptus Avenue as a truck route, which provides truck access to the Specific Plan area.

Eucalyptus Avenue abuts the Specific Plan area to the south and consisted of two paved travel lanes at the time this Specific Plan was prepared. The Ontario Policy Plan designates Eucalyptus Avenue as a 4-lane Collector Street.

Ontario Ranch Road is north of the Specific Plan area and consisted of two paved travel lanes at the time this Specific Plan was prepared. The Ontario Policy Plan designates Ontario Ranch Road as an 8-lane Principal Arterial.

Campus Avenue abuts the Specific Plan area to the west. At the time this Specific Plan was prepared, no segments of Campus Avenue abutting the Specific Plan had been constructed. The Ontario Policy Plan designates Campus Avenue as a 4-lane Minor Arterial.

Bon View Avenue is a north-south oriented street that traverses the western portion of the Specific Plan area. At the time this Specific Plan was prepared, Bon View Avenue consisted of two paved travel lanes. The Ontario Policy Plan designates Bon View Avenue as a 2-lane Collector Street.

Grove Avenue is a north-south oriented street that traverses the central portion of the Specific Plan area. At the time this Specific Plan was prepared, Grove Avenue consisted of two paved travel lanes. The Ontario Policy Plan designated Grove Avenue as a 4-lane Principal Arterial.

Walker Avenue abuts the Specific Plan area to the east. At the time this Specific Plan was prepared, Walker Avenue consisted of two paved travel lanes. The Ontario Policy Plan designates Walker Avenue as a 2-lane Collector Street.

2.5 Williamson Act

At the time this Specific Plan was prepared (2025), two parcels within the Specific Plan area had an active Williamson Act contract in place (APNs: 0216-231-01 and 0216-321-07). An application to cancel the contract is required to be submitted to the City. Cancellation would comply with provisions and requirements identified at Government Code §51280 et. seq. The City would be required to make the required statutory findings. The landowner would be required to pay the requisite cancellation fee.

Existing Surrounding Land Uses

2.6 Existing Physical Site Conditions

2.6.1 Topography

The Eucalyptus Business Park Specific Plan area is relatively flat and slopes slightly to the south with an approximate elevation ranging from 690 feet above mean sea level (AMSL) to 665 feet AMSL. The current conditions of the Specific Plan area is illustrated in Figure 2-2, *Aerial Photograph*, and the existing topographic conditions for the Specific Plan area are illustrated in Figure 2-4, *USGS Topographic Map*.

2.6.2 Hydrology

At the time the Specific Plan was prepared, the Specific Plan area consisted of dairy farms and undeveloped areas. The existing topography is relatively flat with a north-to-south sheet flow drainage pattern. The Specific Plan area is located within three City of Ontario Master Drainage Plan areas, including Area XII-1, Area XIII-1, Area XIV-1 and Area XIV-2. The EIR prepared in association with the Specific Plan includes a detailed hydrology analysis for the Specific Plan area.

2.6.3 Geology and Soils

Based on information provided from the Environmental Data Report (EDR) Radius Map report, the surficial geology within Eucalyptus Business Park Specific Plan area contains unconsolidated and semi-consolidated quaternary age alluvium, lake, playa, and terrace deposits. Soil within the Specific Plan area contains Tujunga loamy sand, Hilmar loamy fine sand, Grangeville fine sandy loam, and Chino silt loam.

From a seismic perspective, the Specific Plan area is not located within an Alquist-Priolo Earthquake Fault Zone. The possibility of significant fault rupture within the Specific Plan area is considered low.

2.6.4 Vegetation and Biological Resources

Due to past and existing land uses, no native plant communities or natural communities of special concern are present within or adjacent to the Eucalyptus Business Park Specific Plan area. The EIR prepared in association with the Specific Plan includes a detailed evaluation of biological resources.

2.6.5 Existing Ground Water Wells

Upon development of the well site areas, these wells, or any other wells found on the property, will be abandoned per California Department of Water Resources Health Guidelines and the City of Ontario Guidelines. In compliance with the Chino Basin Watermaster's Well Procedure for Developers, documentation that a well use/destruction plan and schedule for all existing private/ agricultural wells is required to be submitted to the City of Ontario prior to any construction activities. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's water system when available.

Wells shall be destroyed/ abandoned per the California Water Resource Guidelines and require permitting from the County Health Department. Documentation that the well abandonment process is underway shall be provided to the Engineering Department and the Ontario Municipal Utilities Company at the time of a grading permit and/or building permit being issued for the affected property. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the Developer shall make a formal request to the City of Ontario for such use prior to the issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement. Refer to Figure 2-5,

Existing Water Wells, for locations of water wells within the Specific Plan area. Existing wells may be converted to groundwater monitoring wells if feasible, at the City's discretion.

2.6.6 Existing NPDES Compliance

In the existing conditions, NPDES requirements are enforced under the Agricultural Permit issued by the State Water Resources Control Board.

CHAPTER 3

LAND USE

3.1 Vision

The Eucalyptus Business Park Specific Plan area is envisioned as a dynamic employment hub within a thoughtfully designed, master-planned environment along with a public parkland area intended to support passive recreation needs for the surrounding residents. It is situated in the southern portion of the City of Ontario, at the heart of one of Southern California's most robust logistics and business corridors. The location is ideally positioned to support a wide range of business park and employment-generating uses. With strategic proximity to major freeways, regional airports, and the Ports of Los Angeles and Long Beach, the Eucalyptus Business Park Specific Plan area offers unparalleled access to regional, national, and international markets. The Eucalyptus Business Park Specific Plan is designed to foster long-term economic growth, support business innovation, and provide high-quality jobs, contributing to the vitality of the local community and the broader Inland Empire region.

3.2 Land Use Plan

This Specific Plan establishes two land use designations: Business Park and Open Space – Parkland. For planning purposes, as shown on Figure 3-1, *Conceptual Land Use Plan*, and Table 3-1, *Land Use Plan Statistical Summary*, the Specific Plan will establish nine planning areas to provide for the development of a 189.0-acre site with up to 2,939,000 square feet (SF) of Business Park floor space on 137.90 acres at a maximum allowed floor area ratio (FAR) of 0.55 and 35.88 acres of Open Space – Parkland. The remaining 15.24 acres are designated for roadway improvements.

Table 3-1 Land Use Plan Statistical Summary

PA	Land Use	Acres	Maximum Buildout SF
Business Park			
1	Business Park	7.70	162,600
2	Business Park	18.33	273,700
3	Business Park	18.21	340,700
4	Business Park	18.19	423,200
5	Business Park	37.76	859,300
6	Business Park	37.71	879,500
Business Park Totals		**137.90 AC**	**2,939,000 SF**
Open Space – Parkland			
7	Open Space – Parkland	8.00	--
8	Open Space – Parkland	13.99	--
9	Open Space – Parkland	13.89	--
Total Open-Space Parkland Acreage		**35.88 AC**	--
--	Roadway	15.24	--
Total		**189.0 AC**	**2,939,000 SF**

Notes:

1. A maximum of 10,000 SF total of Commercial uses may be provided within the Business Park Planning Areas 1, 2, 3, 4, 5, and/or 6.

2. A publicly operated animal resource center site (35,000 SF) may be provided within the Business Park Planning Areas 1, 2, 3, 4, 5, 6, 7, 8, or 9. The final size and location of the animal resource center site is subject to the approval by the City of Ontario.

3. Total acreage of 189.0 is rounded up to the nearest one-tenth of an acre.

4. The Specific Plan allows the transfer of development square footage (15 percent or less) within the same land use designation, provided that the shift in square footage would not exceed the maximum allowable overall square footage (2,939,000) and the maximum building FAR (0.55).

3.2.1 Business Park

Encompassing 137.90 acres in the southerly portion of the Specific Plan area along its frontage with Eucalyptus Avenue, Planning Areas 1 through 6 are designated Business Park. Up to 2,939,000 SF of building space are permitted across Planning Areas 1 through 6.

The Business Park land use designation intends to provide for uses such as employee-intensive office spaces, technology centers, research and development facilities, warehouse and distribution, and light manufacturing. Primary vehicular access is planned within Eucalyptus Avenue, Public Street 'A', Campus Avenue, Bon View Avenue, Grove Avenue, and Walker Avenue. The Specific Plan also allows a maximum total of 10,000 SF of commercial uses within the Business Park planning areas to support the Business Park operations and a potential 35,000 SF publicly operated animal resource center.

The Specific Plan allows the transfer of development square footage (15 percent or less) within the same land use designation, provided that the shift in square footage would not exceed the maximum allowable overall square footage (2,939,000) and the maximum building FAR (0.55).

3.2.2 Open Space – Parkland

Encompassing 35.88 acres in the northerly portion of the Specific Plan area along its frontage with Public Street 'A', Planning Areas 7, 8, and 9 are designated Open Space – Parkland. The Open Space – Parkland planning areas intend to provide passive recreational facilities, such as open space areas, benches, and trails.

3.3 Airport Influence Compliance

The Specific Plan area is located within the Ontario International Airport (ONT) Influence Area (AIA), and it is located outside any identified safety, airspace protection, and noise impact zones. All properties located within the ONT AIA are subject to a real estate transaction disclosure notice.

The Specific Plan area is also located within the Chino Airport (CNO) AIA. The San Bernardino County Comprehensive Land Use Plan for Chino Airport was adopted in 1991 and does not reflect guidance set forth in the 2011 Caltrans Airport Land Use Planning Handbook. As such, in 2022, the City of Ontario adopted the CNO Overlay District which provides maps, criteria, and policy language to guide development within the Chino AIA consistent with the 2011 Caltrans Airport Land Use Planning Handbook.

As illustrated in Figure 3-2, *Chino Safety Zones*, the majority of the Specific Plan area is located within CNO Safety Zone 5 (low risk), with a very small portion of the southeastern corner located within Safety Zone 4 (moderate risk).

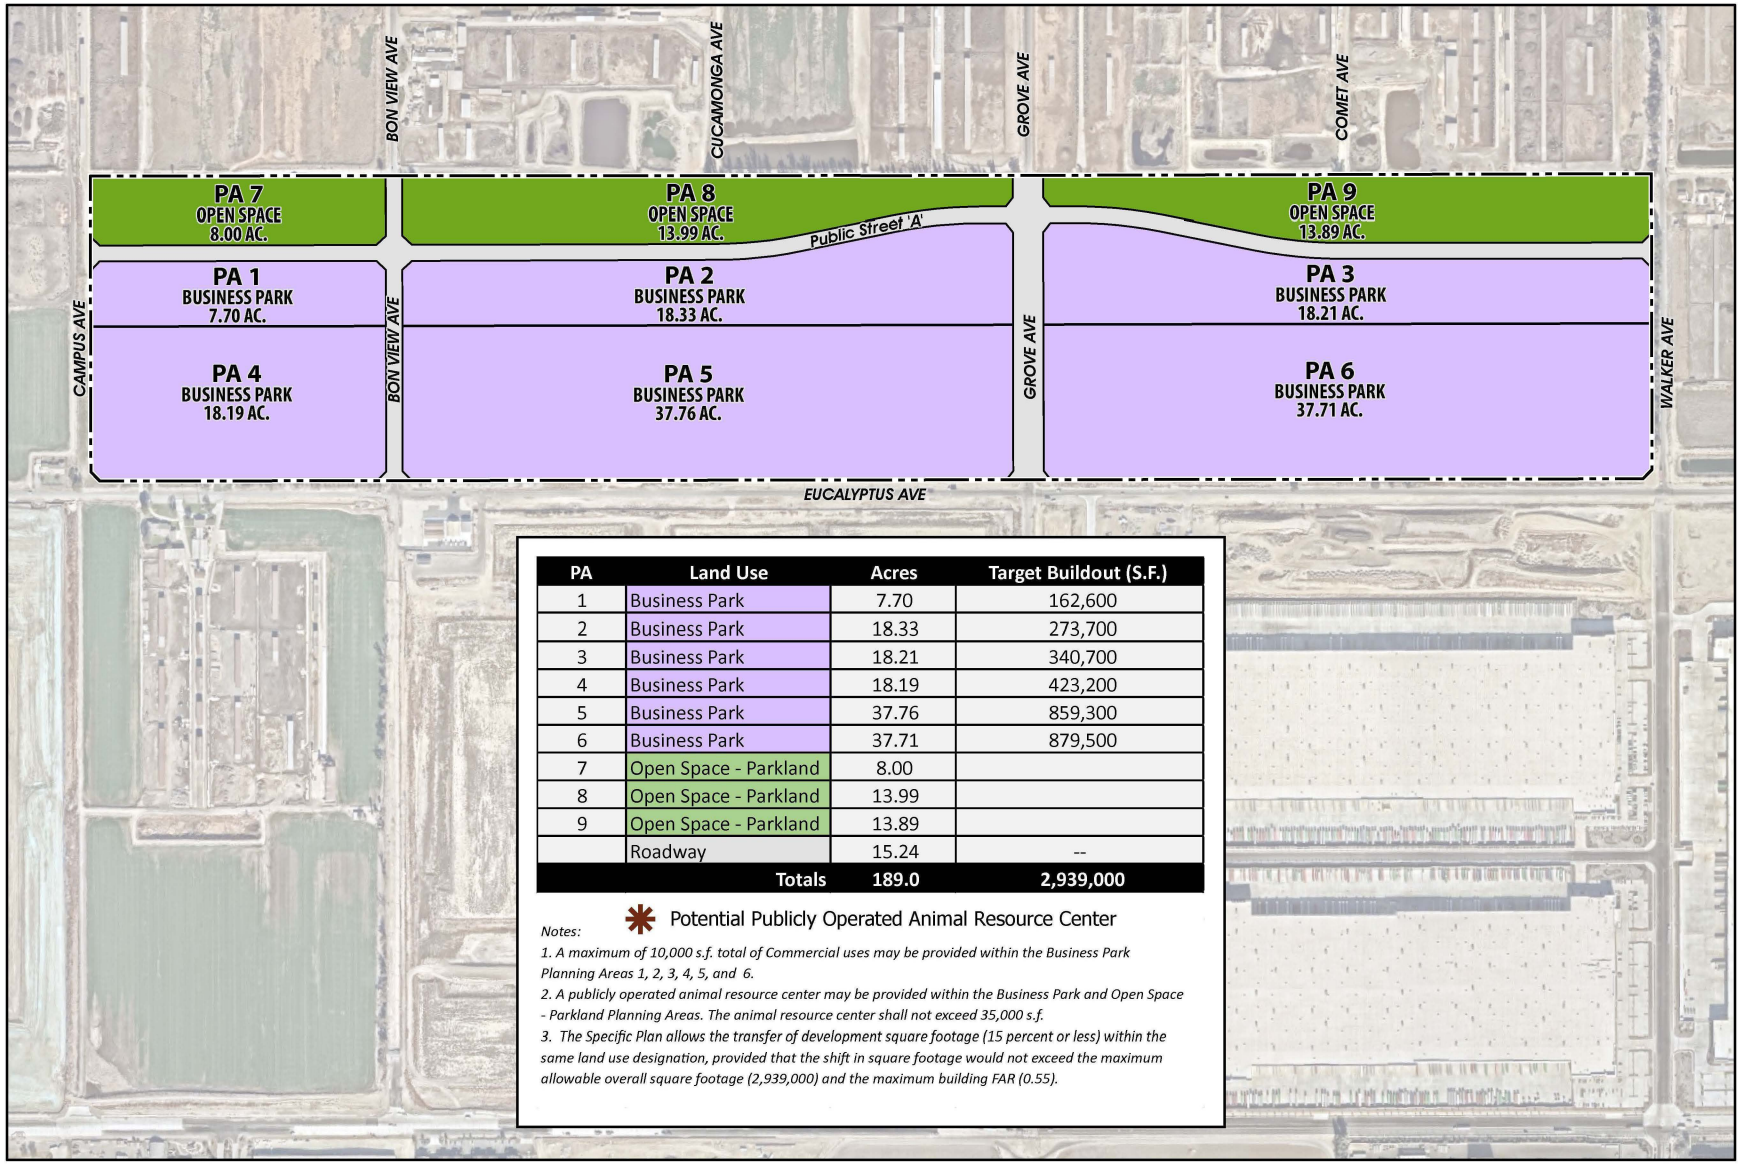
Development within the land use compatibility zones may have building height, land use, and floor area ratio (FAR) limitations and is subject to open land requirements. For further details, refer to Chapter 5, *Development Regulations*, as well as the ONT and CNO Airport Land Use Compatibility Plans.

3.4 Conceptual Site Plan

Figure 3-3, *Conceptual Site Plan*, depicts a potential layout of the Specific Plan area. The final building configurations, sizes, and orientation will be determined during the Development Plan review process.

The conceptual site plan reflects current market trends, site conditions, and planned infrastructure. The conceptual site plan may be modified provided it does not exceed the maximum square footage provided in the

Specific Plan's Conceptual Land Use Plan and complies with this Specific Plan and applicable provisions of the City of Ontario's Development Code.



PA	Land Use	Acres	Target Buildout (S.F.)
1	Business Park	7.70	162,600
2	Business Park	18.33	273,700
3	Business Park	18.21	340,700
4	Business Park	18.19	423,200
5	Business Park	37.76	859,300
6	Business Park	37.71	879,500
7	Open Space - Parkland	8.00	
8	Open Space - Parkland	13.99	
9	Open Space - Parkland	13.89	
	Roadway	15.24	--
	Totals	**189.0**	**2,939,000**

* Potential Publicly Operated Animal Resource Center

Notes:

1. A maximum of 10,000 s.f. total of Commercial uses may be provided within the Business Park Planning Areas 1, 2, 3, 4, 5, and 6.

2. A publicly operated animal resource center may be provided within the Business Park and Open Space - Parkland Planning Areas. The animal resource center shall not exceed 35,000 s.f.

3. The Specific Plan allows the transfer of development square footage (15 percent or less) within the same land use designation, provided that the shift in square footage would not exceed the maximum allowable overall square footage (2,939,000) and the maximum building FAR (0.55).

CHAPTER 4

INFRASTRUCTURE PLAN

4.1 Circulation and Access Plan

The Eucalyptus Business Park Specific Plan Circulation and Access Plan provides direct, safe, and convenient access for visitors, employees, and commercial vehicles including trucks to and from the Specific Plan area. Components of the Specific Plan's Circulation and Access Plan are discussed and illustrated below.

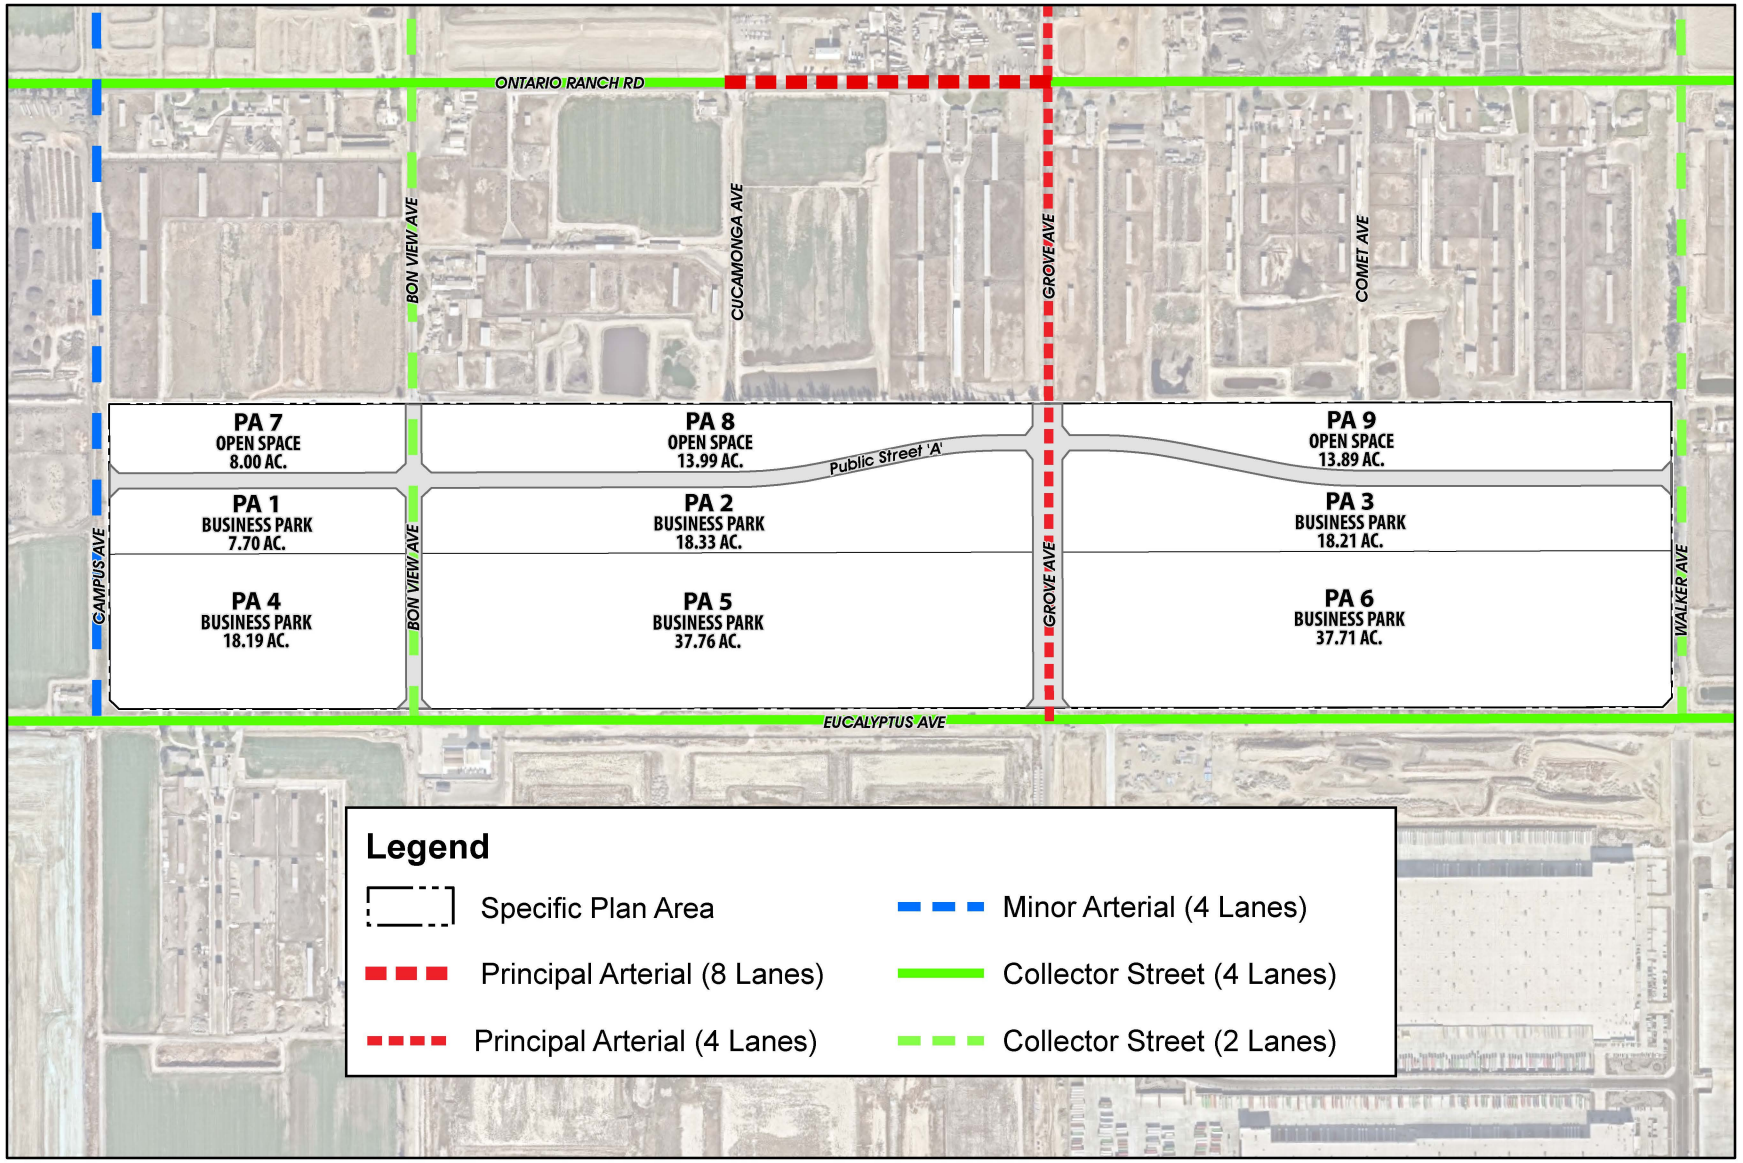
4.1.1 Vehicular Circulation

Direct access to the Eucalyptus Business Park Specific Plan area is provided by Campus Avenue from the west, Eucalyptus Avenue from the south, and Walker Avenue from the east. Additionally, Bon View Avenue and Grove Avenue provide access through the Specific Plan area in the north-south orientation. The Specific Plan proposes to provide an internal east-west oriented Public Street 'A' through the Specific Plan area to connect Campus Avenue and Walker Avenue. Public Street 'A' will provide a separation between the Business Park land uses and the Open Space – Parkland land uses.

The installation of traffic controls (traffic signals and stop signs) and the location and orientation of private driveways serving individual buildings and uses will be determined as part of implementing development plans. Additional right-of-way may be required to accommodate additional left turn lanes at intersections based on required queue lengths per the Traffic Impact Analysis/Specific Plan EIR.

Figure 4-1, *Existing Vehicular Circulation and Access Plan*, provides the City's proposed ultimate roadway buildout within the Specific Plan area, and Figure 4-2, *Conceptual Vehicular Circulation and Access Plan*, illustrates the vehicular circulation plan within the Specific Plan area. Final intersection spacing, intersection right-of-way (ROW), and traffic controls must conform to the findings of the associated traffic impact analysis and to City standards. All right-of-way/easements necessary to construct the required public improvements shall be obtained to the extent feasible.

The following pages describe and illustrate the primary components of the Eucalyptus Business Park Specific Plan's vehicular circulation network. Existing interim striping shall be removed along existing frontage streets. Refer to Chapter 7, *Implementation Plan*, for additional circulation improvement standards pertaining to phasing.



Source(s): Esri, Nearmap Imagery (January 2025), Michael Baker (11-20-2025), San Bernardino County (2025), City of Ontario (10-20-2016)

Feet

Conceptual Vehicular Circulation and Access Plan

A. Campus Avenue (108' ROW Minor Arterial)

Campus Avenue forms the western boundary of Planning Areas 1, 4, and 7. At the time this Specific Plan was prepared, no segments of the ROW abutting the Specific Plan area had been constructed. This public roadway will provide access to the Specific Plan area from off-site areas to the north and south.

As shown on Figure 4-3, *Street Sections – Campus Avenue, Bon View Avenue, and Grove Avenue*, the developer(s) of the Eucalyptus Business Park Specific Plan area will be responsible for constructing the eastern 78 feet out of the total 108-foot-wide ROW. The 78 feet of improvement includes 59 feet of paved roadway, a 12-foot-wide parkway that includes 7 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk. The remaining western portions of the Campus Avenue ROW will be constructed by others and include 18 feet of paved roadway and a 12-foot-wide parkway containing 7 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk.

Beyond the Campus Avenue ROW, a 23-foot-wide landscape buffer abuts both the eastern and western sides of the ROW. Developer(s) of the Specific Plan area will be responsible for constructing the eastern landscape buffer inclusive of an 8-foot-wide multi-purpose trail.

A traffic signal will be located at the intersection of Campus Avenue and Eucalyptus Avenue by developer(s) within the Specific Plan area and a potential traffic signal may be installed at the intersection of Campus Avenue and Public Street 'A'. Traffic signal locations are subject to change based on the results and recommendations of a traffic study. All improvements to Campus Avenue are required to comply with applicable City of Ontario requirements, including sight distance requirements.

Final driveway locations along Campus Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines.

B. Bon View Avenue (66' ROW Collector)

Bon View Avenue forms the eastern boundary of Planning Areas 1, 4, and 7 and the western boundary of Planning Areas 2, 5, and 8. This public roadway provides access to the Specific Plan area from off-site areas to the north and south.

As shown on Figure 4-3, *Street Sections – Campus Avenue, Bon View Avenue, and Grove Avenue*, the developer(s) of the Eucalyptus Business Park Specific Plan area will be responsible for constructing the entire width of the 66-foot-wide ROW. The 66 feet of improvement includes 48 feet of paved roadway and a 9-foot-wide parkway on both sides of the street that includes 4 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk.

Beyond the Bon View Avenue ROW, a 20-foot-wide storm drain easement abuts the eastern side of the ROW. Easement width requirement is subject to change based on findings of City-approved hydraulic studies, master plan updates, and project final designs.

Developers outside of the Specific Plan area are constructing a traffic signal at the intersection of Bon View Avenue and Eucalyptus Avenue and a potential traffic signal may be installed at the intersection of Bon View Avenue and Public Street 'A'. If the traffic signal improvements are not completed and accepted by the City, developer(s) of this Specific Plan area is subject to the traffic signal improvements required. All improvements to Bon View Avenue are required to comply with applicable City of Ontario requirements,

including sight distance requirements. Due to utility constraints, Bon View Avenue may need to be constructed as a tilt section.

Final driveway locations along Bon View Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

C. Grove Avenue (124' ROW Principal Arterial)

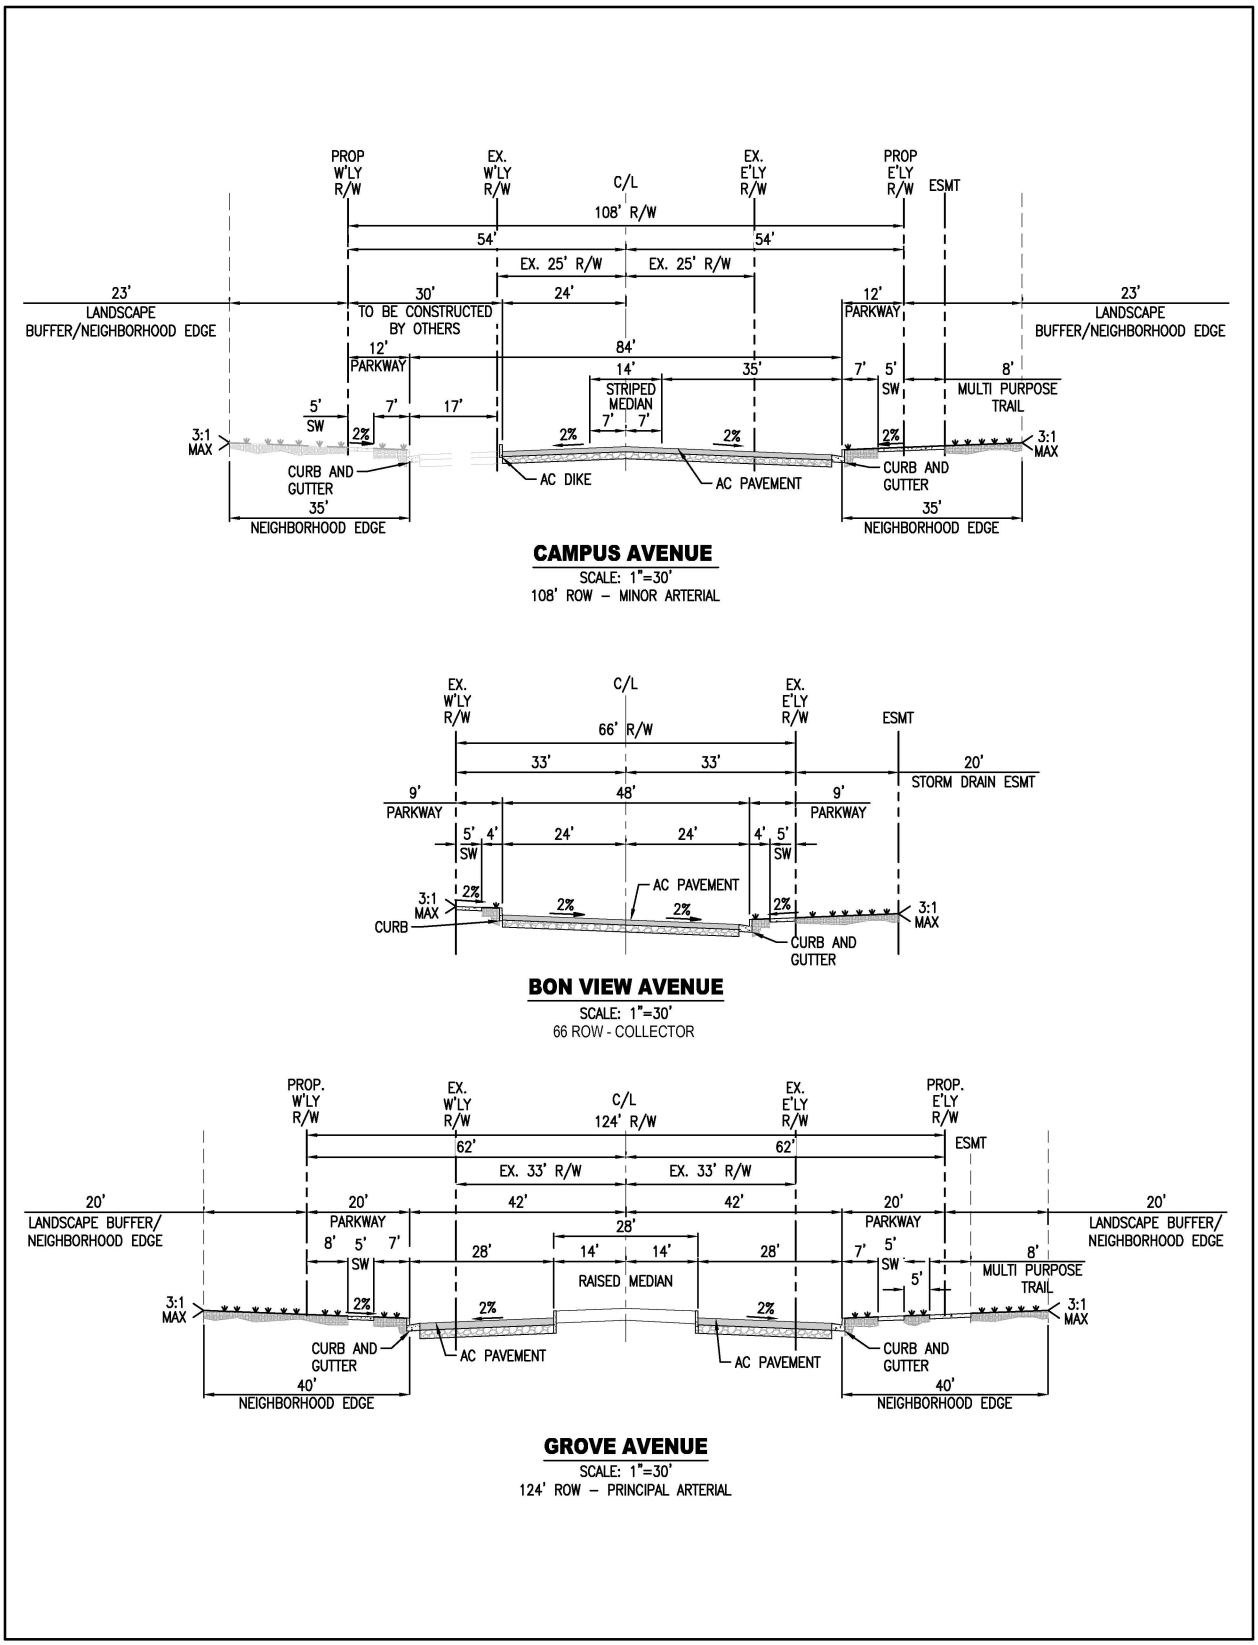
Grove Avenue forms the eastern boundary of Planning Areas 2, 5, and 8 and the western boundary of Planning Areas 3, 6, and 9. This public roadway provide access to the Specific Plan area from off-site areas to the north and south.

As shown on Figure 4-3, *Street Sections – Campus Avenue, Bon View Avenue, and Grove Avenue*, the developer(s) of the Eucalyptus Business Park Specific Plan area will be responsible for constructing the entire width of the 124-foot-wide ROW. The 124 feet of improvement includes a 28-foot-wide raised center median, and 56 feet of paved roadway and a 20-foot-wide parkway on both sides of the street. The 20-foot-wide parkway on the western side of the ROW provides 7 feet of curb-adjacent landscaping, a 5-foot-wide sidewalk and an additional 8 feet of landscaping on the west side of the sidewalk. The 20-foot-wide parkway on the eastern side of the ROW provides 7 feet of curb-adjacent landscaping, a 5-foot-wide sidewalk, 5 feet of additional landscaping, and an 8-foot-wide multi-purpose trail.

Beyond the Grove Avenue ROW, a 20-foot-wide landscape buffer abuts both the eastern and western sides of the ROW.

The traffic signal at the intersection of Grove Avenue and Eucalyptus Avenue will be constructed by others, as part of adjacent development to the south. A potential traffic signal may be installed at the intersection of Grove Avenue and Street 'A". If the traffic signal improvements are not completed and accepted by the City, developer(s) of this Specific Plan area is subject to the traffic signal improvements required. Traffic signal locations are subject to change based on the results and recommendations of a traffic study. All improvements to Grove Avenue are required to comply with applicable City of Ontario requirements, including sight distance requirements.

Final driveway locations along Grove Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.



Source(s): Michael Baker International (04-01-2026)

Figure 4-3

Street Sections - Campus Avenue, Bon View Avenue, and Grove Avenue

Not to Scale

D. Walker Avenue (88' ROW Collector)

Walker Avenue forms the eastern boundary of Plannings Areas 3, 6, and 9. This public roadway provides access to the Specific Plan area from off-site areas to the north and south.

As shown on Figure 4-4, *Street Sections – Walker Avenue, Eucalyptus Avenue*, *and Public Street 'A'*, the developer(s) of the Eucalyptus Business Park Specific Plan area will be responsible for constructing the western 69 feet out of the total 88-foot-wide ROW. The 69 feet of improvement includes 57 feet of paved roadway and a 12-foot-wide parkway that includes 7 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk. The remaining eastern portions of Walker Avenue ROW will be constructed by others and include 7 feet of paved roadway, a 12-foot-wide parkway containing 7 feet of curb-adjacent landscaping and 5-foot-wide sidewalk, and an 8-foot wide Multi Purpose Trail located outside of the right-of-way.

A 23-foot-wide landscape buffer abuts both the east and west sides of the Walker Avenue ROW. Within the eastern landscape buffer, developers outside of the Specific Plan area will be responsible for constructing an 8-foot-wide multi-purpose trail.

The traffic signal at the intersection of Walker Avenue and Eucalyptus Avenue will be constructed by others as part of adjacent development to the south. A potential traffic signal may be installed at the intersection of Walker Avenue and Public Street 'A'. If the traffic signal improvements are not completed and accepted by the City, developer(s) of this Specific Plan area is subject to the traffic signal improvements required. All improvements to Walker Avenue are required to comply with applicable City of Ontario requirements, including sight distance requirements. Developers shall design and construct concrete pavements on Walker Avenue southbound approaches at Eucalyptus Avenue in accordance with City of Ontario standard drawing #1207 as Walker Avenue will be designated as a truck route.

Final driveway locations along Walker Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

E. Eucalyptus Avenue (108' ROW Collector)

Eucalyptus Avenue forms the southern boundary of Planning Areas 4, 5, and 6. This public roadway provides access to the Specific Plan area from off-site areas to the east and west.

As shown on Figure 4-4, *Street Sections – Walker Avenue, Eucalyptus Avenue, and Public Street 'A',* Eucalyptus Avenue will provide 84 feet of paved roadway, which includes a 14-foot-wide painted median. A 12-foot-wide parkway that includes 7 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk is provided on both sides of the street. Beyond the ROW, a 23-foot-wide landscape buffer abuts both sides of Eucalyptus Avenue. Additionally, an 8-foot-wide multi-purpose trail is provided within the northern landscape buffer.

Developer(s) within the Eucalyptus Business Park Specific Plan area west of Grove Avenue will be responsible for constructing the northern 16 feet of paved roadway, the 12-foot-wide parkway, and the 8-foot-wide multi-purpose trail. Developer(s) within the Eucalyptus Business Park Specific Plan area east of Grove Avenue will be responsible for constructing the 12-foot-wide parkway and the 8-foot-wide multi-purpose trail. The remaining portions of Eucalyptus Avenue, as illustrated in Figure 4-4, will be constructed by developer(s)

outside of the Specific Plan area. Developer(s) shall design and construct concrete pavement at all intersection approaches in accordance with City of Ontario Standard Drawing No. 1207, as Eucalyptus Avenue will be designated as a truck route.

The traffic signals along Eucalyptus Avenue at its intersections with Bon View Avenue, Grove Avenue, and Walker Avenue will be constructed by others, as part of adjacent development to the south. If the traffic signal improvements are not completed and accepted by the City, developer(s) of this Specific Plan area is subject to the traffic signal improvements required. Developer(s) within the Specific Plan area will be responsible for a traffic signal at the intersection of Eucalyptus Avenue and Campus Avenue. Traffic signal locations are subject to change based on the results and recommendations of a traffic study. All improvements to Eucalyptus Avenue are required to comply with applicable City of Ontario requirements, including sight distance requirements.

Final driveway locations along Eucalyptus Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

F. Public Street 'A' (64' ROW Local Street)

Public Street 'A' forms the northern boundary of Planning Areas 1, 2, and 3 and the southern boundary of Planning Areas 7, 8, and 9. This public roadway provides access to the Specific Plan area from off-site areas to the east and west.

As shown on Figure 4-4, *Street Sections – Walker Avenue, Eucalyptus Avenue, and Public Street 'A'*, implementing projects within the Eucalyptus Business Park Specific Plan area will be responsible for constructing the entire width of the 64-foot-wide ROW. The 64 feet of improvement includes 40 feet of paved roadways and a 12-foot-wide parkway on both sides of the street that includes 7 feet of curb adjacent landscaping and a 5-foot-wide sidewalk. Notwithstanding the above, Street 'A' may require additional roadway width at intersections with north–south streets to accommodate truck turning movements associated with the Business Park uses. Accordingly, the right-of-way and paved roadway width for Street A may be increased at intersections, as determined necessary through implementing projects, subject to City review and approval.

A traffic signal may be required at the intersection of Public Street 'A' and Grove Avenue, Public Street 'A' and Campus Avenue, Public Street 'A' and Bon View Avenue, and Public Street 'A' and Walker Avenue. Traffic signal locations are subject to change based on the results and recommendations of a traffic study. All improvements to Public Street 'A' are required to comply with applicable City of Ontario requirements, including sight distance requirements.

Final driveway locations along Public Street 'A' will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

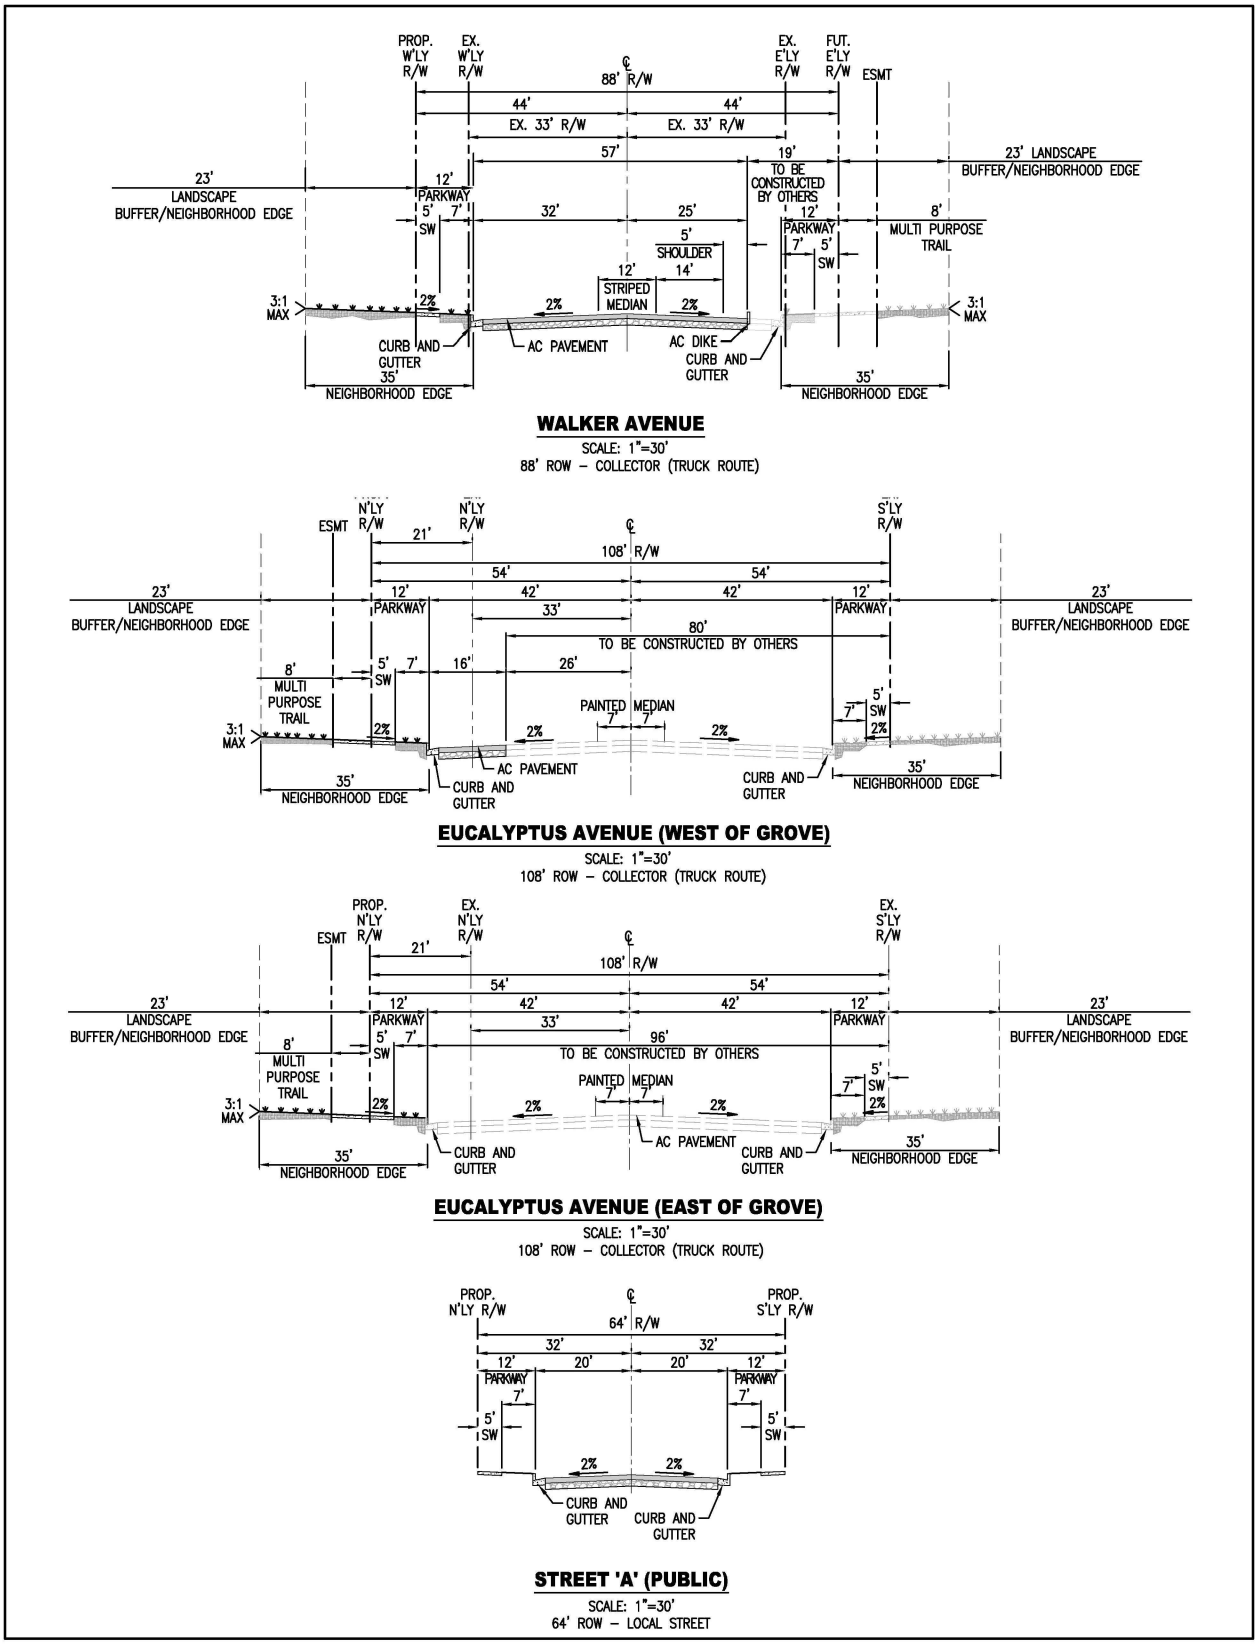
G. Private Drive Aisles

Private drive aisles connect individual planning areas to the public roadways described above. Within each planning area, private drive aisles provide vehicular access for automobiles and commercial vehicles including trucks to parking lots and loading areas and provide sidewalk opportunities for pedestrian and bicycle access to building entries and

amenities. Private drive aisles will have pavement widths that range between 24 and 50 feet. Private drive aisles are not depicted on Figure 4-2 as their locations, alignments, and widths will be determined in conjunction with the design of implementing development projects.

H. Truck Routes

Access to the Eucalyptus Business Park Specific Plan area is provided from Eucalyptus Avenue, Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, and Public Street 'A'. Project truck traffic shall use the City's truck route in Euclid Avenue, Walker Avenue, Eucalyptus Avenue, and Merrill Avenue to access the Specific Plan area.



Source(s): Michael Baker International (04-01-2026)

Figure 4-4

Street Sections - Walker Avenue, Eucalyptus Avenue, and Public Street 'A'

Not to Scale

4.1.2 Non-Vehicular Circulation

The Eucalyptus Business Park Specific Plan encourages non-motorized circulation for employees and visitors of the Specific Plan area. Pedestrian circulation is encouraged within the Specific Plan area through a network of sidewalks and multi-purpose trails, and bicycle circulation is encouraged through a network of bike lanes and multi-purpose trails. Additional pedestrian and bicycle facilities will be designed on individual business park building sites at the time buildings are designed and positioned in each planning area as part of implementing development projects. Additional pedestrian and bicycle facilities within Planning Areas 7, 8, and 9 will be designed consistent with the City of Ontario Grand Park Master Plan.

As shown on Figure 4-5, *Conceptual Non-Vehicular Circulation and Mobility Plan*, the Eucalyptus Business Park Specific Plan provides for sidewalk in the public ROW along Bon View Avenue and Public Street 'A'; sidewalk and multi-purpose trail along Grove Avenue; and sidewalk, Class II bikeway, and multi-purpose trail along Eucalyptus Avenue, Campus Avenue, and Walker Avenue (to be constructed by others). Pedestrian crosswalks are designed at street intersections to ensure pedestrian safety. Locations of pedestrian crosswalks are provided on Figure 4-5.

As illustrated on Figure 4-5, 5-foot-wide sidewalks are provided on both sides of Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, Eucalyptus Avenue, and Public Street 'A'; an 8-foot-wide multi-purpose trail is provided on Eucalyptus Avenue, Campus Avenue, Grove Avenue and Walker Avenue; and Class II bike lanes are provided along Eucalyptus Avenue, Campus Avenue, and Walker Avenue. Construction of the non-vehicular network will be provided by developers both within and outside of the Specific Plan area. Responsibility of construction is illustrated in Figures 4-3 and 4-4 of this Specific Plan.

The Eucalyptus Business Park Specific Plan anticipates a large volume of passenger vehicle and truck traffic circulating on the site; therefore, convenient and safe pedestrian and bicycle access was given careful consideration when preparing the design standards of this Specific Plan. Provisions for sidewalks, short-term and long-term bicycle storage facilities, and employee and visitor gathering areas interior to the planning areas are set forth in Chapter 6, *Design Guidelines*, of this Specific Plan.

In addition to internal non-vehicular circulation, Omnitrans provides bus services to and from the Specific Plan area. The following bus and transit facilities are located west and north of the Specific Plan area:

- Omnitrans Bus Route 83, located approximately 0.6 miles to the west along Euclid Avenue.
- Omnitrans Bus Route 87, located approximately 1.8 miles to the north along Riverside Drive.
- As part of the Specific Plan, a new bus turnout would be constructed near the intersection of Grove Avenue and Eucalyptus Avenue in anticipation of future Omnitrans service.

Figure 4-5

0 200 400 800
Feet

Conceptual Non-Vehicular Circulation and Mobility Plan

4.2 Utility Infrastructure Plan

Buildout of the Eucalyptus Business Park Specific Plan area requires the installation of water, sewer, drainage, and other utility infrastructure, as described in the subsections below. All utility infrastructure improvements shall be constructed in accordance with applicable City of Ontario design standards and specifications.

Public utility mains shall be located within publicly dedicated ROW and publicly dedicated streets. Any proposed public utilities within private streets shall be subject to City approval and contained within acceptable easements, access, and separation requirements. Minimum width for a public utility easement (PUE) shall be at least 20 feet wide and shall be centered on the public utility main. Setbacks are required when there is a public utility within a private street, drive, or alley to accommodate any utility appurtenances. Additionally, private utilities are not allowed within the PUEs.

4.2.1 Potable Water Plan

The City of Ontario provides water service to the Specific Plan area. The Specific Plan area lies within the 925 Pressure Zone (PZ). As shown on Figure 4-6, *Potable Water Infrastructure Plan*, planned potable water lines proposed by projects outside of the Specific Plan area include a 16-inch potable water line within Eucalyptus Avenue between Campus Avenue and Grove Avenue; and a 24-inch potable water line within Eucalyptus Avenue between Grove Avenue and Walker Avenue. Additionally, an existing 30-inch potable water line within Grove Avenue between Eucalyptus Avenue and Ontario Ranch Road. Any existing potable water mains not yet accepted by the City that support the development of the Specific Plan are required at the responsibility of the developer to support the development of the Specific Plan area.

Potable water system improvements within the Specific Plan area require the planning, design, and construction of the following: 12-inch potable water lines along Bon View Avenue from Eucalyptus Avenue to the northern boundary of the Specific Plan area; 16-inch potable water lines along Campus Avenue and Walker Avenue from Eucalyptus Avenue to the northern boundary of the Specific Plan area; and a 12-inch potable water line along Public Street 'A' between Campus Avenue and Walker Avenue.

The overall water infrastructure plan to serve the City of Ontario is illustrated on Figure 4-7, *City of Ontario Ultimate Water System*. Final sizing of required infrastructure shall be determined at the time of development during final design based on hydraulic calculations. The required infrastructure is subject to change based upon findings of City approved hydraulic studies, master plan updates, and project final designs. Any existing utilities, including other agencies' mains, that do not meet minimum depths, standard alignment locations, and/or minimum horizontal and vertical separation requirements shall be subject to relocation/replacement by the developer(s) of the Specific Plan.

All on-site improvements are required to have hydraulic studies to determine infrastructure improvements needed to support each area and shall be the responsibility of the developer(s). Any changes in land use not limited to units, density, or intensity, that are not previously accounted for in a City approved study following current design criteria shall trigger a revised updated hydraulic study and any new findings of infrastructure improvements needed are required at the responsibility of the developer.

The City's Potable Water Master Plan identifies new water facilities to serve the Ontario Ranch area, which will need to be constructed prior to

or concurrent with the Specific Plan area's water improvements. Construction of the Specific Plan area's water improvements and the Master Plan water improvements necessary to serve the Specific Plan area shall be the responsibility of the developer(s). The Eucalyptus Business Park Specific Plan will be required to participate in the Master Plan water improvements as detailed in this Specific Plan.

As a part of the backbone infrastructure, the master planned 925 Pressure Zone (PZ) reservoir shall be constructed on the City-owned reservoir site as directed by the City. Well supply and any drinking water treatment necessary for the 925 PZ shall be constructed to supply the 925 PZ reservoir. The 925 Pressure Zone (PZ) Phase 2 Potable Water System facilities will need to be constructed to support the Project. In the event the 925 PZ Phase 2 facilities are not completed in time to serve the Project, the developer(s) may implement an interim water supply strategy, subject to review and approval by the City. The off-site improvements include the construction of 42-inch water main on Grove Avenue, from Chino Avenue to Francis Street, proceeding west on Francis Street to Bon View Avenue, continuing north on Bon View Avenue to the City-owned Reservoir site. Additional improvements include installing a 42-inch potable water main in Grove Avenue connecting from the 30-inch to the 42-inch potable water main in Grove Avenue at Chino Ave; and extending to the Bon View Avenue Reservoir site and to the Reservoir; and, installing a 9 million gallon reservoir on the Bon View Reservoir site; and, installing two 2,500 gpm wells with any treatment necessary to meet water quality standards and the 16-inch to 42-inch well collection mains from the wells to the reservoirs. The Eucalyptus Business Park Specific Plan will be required to participate in the future Phase 2 Water System Improvements as detailed in the development agreements with the City.

City of Ontario Ultimate Water System

4.2.2 Recycled Water Plan

The City of Ontario/Ontario Municipal Utilities Company (OMUC) and the Inland Empire Utilities Agency (IEUA) supplies recycled water to the Specific Plan area. Recycled Water supplied by OMUC is produced by the IEUA from its four wastewater reclamation plants. As shown on Figure 4-8, *Recycled Water Infrastructure Plan*, existing recycled water lines include a 30-inch IEUA recycled water line within Eucalyptus Avenue between Campus Avenue and Bon View Avenue; a 12-inch City of Ontario recycled water line within Eucalyptus Avenue between Bon View Avenue and Walker Avenue; a 30-inch IEUA recycled water line within Bon View Avenue between Eucalyptus Avenue and Ontario Ranch Road; and a 30-inch IEUA recycled water line within Ontario Ranch Road between Bon View Avenue and Walker Avenue.

Recycled water infrastructure improvements for the Specific Plan area require the planning, design, and construction of the following: an 8-inch recycled water line within Grove Avenue and Walker Avenue between Eucalyptus Avenue and the northern edge of the Specific Plan area. At the discretion of the City, additional recycled water line may be needed within Campus Avenue and Public Street 'A' to support development parcels not fronting a master planned recycled water main. Improvements may include an 8-inch recycled water line within Campus Avenue between Eucalyptus Avenue and the northern edge of the Specific Plan area; and an 8-inch recycled water line along Public Street 'A' between Campus Avenue and Walker Avenue.

The Eucalyptus Business Park Specific Plan shall make use of recycled water for all approved uses including, but not limited to, the irrigation of parks, street parkway landscaping, and any other Property Owners' Association (POA) maintained common areas. The developer shall prepare and secure approval of an Engineering Report from the City of Ontario and State Department of Drinking Water Agency prior to the use of recycled water.

Final sizing of required infrastructure shall be determined at the time of development during final design based on hydraulic calculations. The required infrastructure is subject to change based upon findings of City approved hydraulic studies, master plan updates, and project final designs. Any existing utilities, including other agencies' mains, that do not meet minimum depths, standard alignment locations, and/or minimum horizontal and vertical separation requirements shall be subject to relocation/ replacement by the developer(s) of the Specific Plan. The developer of the Specific Plan area is required to obtain approvals from IEUA for regional connections outlined in the Specific Plan and additional regional connections as required to support development not fronting a City recycled water main.

All on-site improvements are required to have hydraulic studies to determine infrastructure improvements needed to support each area and shall be the responsibility of the developer. Any changes in land use not limited to units, density, or intensity, that are not previously accounted for in a City approved study following current design criteria shall trigger a revised updated hydraulic study and any new findings of infrastructure improvements needed are required at the responsibility of the developer.

Figure 4-8

0 200 400 800 Feet

Recycled Water Infrastructure Plan

4.2.3 Sanitary Sewer Plan

Sanitary sewer/wastewater collections for the Specific Plan area are served by the City of Ontario/OMUC, which conveys wastewater to the IEUA for transmission and treatment. As shown on Figure 4-9, *Sanitary Sewer Infrastructure Plan*, at the time the Specific Plan was prepared, there is no existing sanitary sewer infrastructure within the Specific Plan area.

Sanitary sewer infrastructure improvements for the Specific Plan area require the planning, design, and construction of the following: a 15-inch sanitary sewer line within Campus Avenue between Eucalyptus Avenue and the northern border of the Specific Plan area; an 18-inch sanitary sewer line within Bon View Avenue between Eucalyptus Avenue and the northern border of the Specific Plan area; and a 21-inch sanitary sewer line within Grove Avenue and Walker Avenue between Eucalyptus Avenue and the northern border of the Specific Plan area. At the discretion of the City, additional sanitary sewer lines may be needed within Eucalyptus Avenue and Public Street 'A' to support development parcels not fronting a master planned sewer main. Improvements may include an 8-inch sanitary sewer line within Eucalyptus Avenue east of Bon View Avenue to connect with the proposed sewer line east of Bon View Avenue; an 8-inch sanitary sewer line within Eucalyptus Avenue east of Grove Avenue to connect with the proposed sanitary sewer line east of Grove Avenue; an 8-inch sanitary sewer line within Public Street 'A' east of Campus Avenue to connect with the proposed sewer line within Campus Avenue; an 8-inch sanitary sewer line within Public Street 'A' east of Bon View Avenue to connect with the proposed sewer line within Bon View Avenue; and an 8-inch sanitary sewer line within Public Street 'A' west of Walker Avenue to connect with the proposed sewer line within Walker Avenue. Any existing sewer mains not yet accepted by the City that are downstream of the Specific Plan area are required at the responsibility of the developer to support the development of the Specific Plan.

In addition to proposed sewer infrastructure, tributary flows are also included in Figure 4-9. The flows arrows show which sewer lines are supporting the sewer flows from each planning area.

Required sanitary sewer infrastructure is subject to change based upon findings of City-approved hydraulic studies, master plan updates, and project final designs; and, sewer main locations are also subject to change based upon the developer-conducted and City-approved Conceptual Design Report.

Final sizing of sewer mains shall be determined during final design by hydraulic calculations through a Sewer Study or Sewer Sub-Area Master Plan (SSAMP) per the City's current Sewer Master Plan.

Any existing utilities, including other agencies' mains, that do not meet minimum depths, standard alignment locations, and/or minimum horizontal and vertical separation requirements shall be subject to relocation/ replacement by the developer(s) of the Specific Plan.

All on-site improvements are required to have hydraulic studies to determine infrastructure improvements needed to support each area and shall be the responsibility of the developer. All on-site intract public sewer mains shall be studied via a Sewer Sub-Area Master Plan (SSAMP) per the City's current Sewer Master Plan. Any changes in sewer tributary boundaries, as acceptable at the City's discretion or land use not limited to units, density, or intensity, that are not previously accounted for in a City approved study following current design criteria shall trigger a

revised updated sewer study and any new findings of infrastructure improvements needed are required at the responsibility of the developer.

The off-site public sewer shall be designed to meet all applicable City standards and requirements and designed in such a way so that the proposed on-site private sewer improvements shall be designed to meet all applicable building and plumbing codes. Eucalyptus Business Park Specific Plan's sewer tributary areas shall be determined in conformance with the latest City Sewer Master Plan while accommodating the off-site and on-site sewer standards, codes, and requirements, etc. If Eucalyptus Business Park Specific Plan's sewer tributary areas need to be revised to allow the public or private sewer to meet applicable requirements, and a revised SSAMP supports the revised sewer tributary boundaries, as approved at the City's discretion, then Figure 4-10 shall be revised to reflect Eucalyptus Business Park Specific Plan's new sewer tributary boundaries.

Sanitary Sewer Infrastructure Plan

4.2.4 Storm Water Management Plan

As shown on Figure 4-10, *Storm Drain Infrastructure Plan*, existing storm drain infrastructure includes a 24-inch storm drain line within Eucalyptus Avenue east of Campus Avenue; a 42-inch storm drain line within Eucalyptus Avenue west of Bon View Avenue; a 24-inch line within Eucalyptus Avenue east of Bon View Avenue, a 24-inch storm drain line within Eucalyptus Avenue just east and west of Grove Avenue; and a 24-inch storm drain line within Eucalyptus Avenue west of Walker Avenue.

Storm drain infrastructure improvements for the Specific Plan area require the planning, design, and construction of the following: a 60-inch storm drain line within Campus Avenue between Eucalyptus Avenue and the northern boundary of the Specific Plan area; a 96-inch storm drain line within Bon View Avenue between Eucalyptus Avenue and the northern boundary of the Specific Plan area; a 108-inch storm drain line within Grove Avenue and Walker Avenue between Eucalyptus Avenue and the northern boundary of the Specific Plan area; 24-inch storm drain lines within Public Street 'A' between Campus Avenue and Bon View Avenue; and 36-inch storm drain lines within Public Street 'A' between Bon View Avenue and Walker Avenue.

The overall storm drain infrastructure plan to serve the City of Ontario is illustrated on Figure 4-13, *City of Ontario Planned Drainage Facilities*. Required storm drain infrastructure is subject to change based upon findings of City-approved hydraulic studies, master plan updates, and project final designs. If the storm drain improvements are not completed and accepted by the City, the developer of this Specific Plan is subject to the storm drain improvements required.

If at the time of construction, Line I in Euclid Avenue in the City of Chino has not been constructed, the developments tributary to this line (see Figure 4-13) will need to detain and release their runoff at 80% of the pre-development flows.

A. National Pollutant Discharge Elimination System (NPDES) Compliance and Water Quality Management Plan (WQMP)

The grading and drainage areas design for the on-site storm drain system improvements within the Eucalyptus Business Park Specific Plan area will utilize a variety of Low Impact Development (LID) design concepts to detain, filter, and treat surface runoff in a practical manner to comply with the requirements of the San Bernardino County NPDES Storm Water Program's current WQMP and the City's NPDES program requirements for new development projects.

The objective of project-specific WQMPs is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased water pollutants and changes in hydrology. These effects shall be minimized through the implementation of on-site and off-site LID Site Design Best Management Practices (BMP's) that retain/infilter or biotreat 85th percentile storm event runoff from the Specific Plan area.

In addition, non-structural and structural Source Control BMP's will be implemented and documented in approved Water Quality Management Plan(s) associated with the design of implementing development projects to reduce pollutant generation and transport from the Specific Plan area.

All Priority Land Use (PLU) areas, defined by the State Water Resources Board (SWRCB) as high trash generating areas such as industrial uses within the Specific Plan area shall comply with the statewide Trash Provisions adopted by the SWRCB and trash requirements in the

most current San Bernardino County Area-Wide MS4 permit.

Prior to the issuance of any grading or construction permits for any parcel map or area that disturbs one (1) acre or more of land within the Eucalyptus Business Park Specific Plan area, an Erosion Control & Sedimentation Plan and Storm Water Pollution Prevention Plans (SWPPP) will be prepared to comply with California State Water Resources Control Board's (State Water Board) current "General Permit to Discharge Storm Water Associated with Construction Activity" and current "Area Wide Urban Storm Water Runoff (Regional NPDES) Permit." SWPPPs are required to identify and detail all appropriate Best Management Practices (BMPs) to be implemented or installed during construction.

B. Airport Compatibility

The Specific Plan area is located in the Airport Influence Areas (AIAs) of the Ontario International Airport and the Chino Airport. The Federal Aviation Administration (FAA) identifies stormwater management facilities as one of the greatest attractants to wildlife hazards to airport operations. For this reason, all new above ground stormwater management facilities located within the Eucalyptus Business Park Specific Plan area will be designed to avoid the creation of open water and habitat by being designed to drain completely within a maximum 48-hour period following design storm event (i.e., 24-hour storm) and remain totally dry between storm events.

Not to Scale

4.2.5 Dry Utilities Plan

Southern California Gas Company (SoCal Gas) provides gas service, Southern California Edison (SCE) provides the electric service, and OntarioNet Fiber and Frontier Communications provide telecommunication (telecom) services to the Specific Plan area. As shown on Figure 4-12, *Dry Utilities Infrastructure Plan*, and Figure 4-13, *Fiber Optics Plan*, existing dry utilities infrastructure includes a 3-inch gas line within Eucalyptus Avenue between Campus Avenue and Bon View Avenue; a 3-inch and a 12-inch gas line along Eucalyptus Avenue between Bon View Avenue and Grove Avenue; a 2-inch and a 12-inch gas line within Bon View Avenue; a 4-inch gas line within Grove Avenue; and a 2-inch gas line within Walker Avenue.

Dry utilities, including electric and telecom improvements for the Specific Plan area require the planning, design, and construction of the following: new SCE and telecom lines within Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, Eucalyptus Avenue, and Public Street 'A'; new fiber optic lines within Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, Eucalyptus Avenue, and Public Street 'A'. The Specific Plan would also install a new gas line in Campus Avenue between Eucalyptus Avenue and the northern boundary of the Specific Plan area as part of areawide infrastructure improvements; However, the Specific Plan would not utilize natural gas.

All dry utilities internal to the Eucalyptus Business Park Specific Plan area will be installed underground in conjunction with the development of the Specific Plan area in accordance with applicable public utility standards and specifications and to the satisfaction of the Ontario City Engineer. The location of other lateral connections, transformers, switches, pull boxes, and dry utility manholes will be determined at the time buildings are positioned and uses are established in each planning area in conjunction with implementing development.

4.3 Conceptual Grading Plan

As part of site grading activities, the majority of the Specific Plan area would be subject to grading and disturbance. Specifically, grading activities on-site would require approximately 1,000,000 cubic yards (CY) of cut and approximately 1,150,000 CY of fill. Net fill (import) would be 150,000 CY. Within this earthwork operation, the site needs to export approximately 51,000 CY of organic materials.

CHAPTER 5

DEVELOPMENT REGULATIONS

5.1 Purpose and Intent

This Chapter formally establishes the use permissions and development standards (zoning) for the Eucalyptus Business Park Specific Plan area. The regulations provided herein work in concert with the architectural and landscape guidelines set forth in Chapter 6, *Design Guidelines*, to achieve the vision of this Specific Plan.

5.2 Definition of Terms

The meaning of words, phrases, titles, land uses, and terms shall be the same as provided in the City of Ontario Development Code (hereafter referred as "Development Code"), unless otherwise specifically defined in this Specific Plan.

5.3 Applicability

The regulations set forth in this Chapter shall apply to all development plans or agreements, tract or parcel maps, site plans, or any other action requiring administrative or discretionary approval within the approximately 189-acre Eucalyptus Business Park Specific Plan area. If the development standards contained herein differ from those contained in the Ontario Development Code, the provisions of this Specific Plan shall take precedence. Any development standard, condition, or situation not specifically addressed herein shall be subject to the applicable requirements of the Ontario Development Code.

5.4 Permitted, Conditionally Permitted, and Administratively Permitted Uses

Land within the Eucalyptus Business Park Specific Plan area and structures/facilities thereon may be developed, divided, and/or used for those activities listed in Table 5-1, *Permitted Land Uses*. Table 5-1 lists the permitted, conditionally-permitted, and administratively permitted land uses for each land use district established by this Specific Plan (Business Park and Open Space – Parkland). A use that is not listed in Table 5-1 is a prohibited use unless otherwise allowed pursuant to the procedures described in Chapter 7, *Implementation Plan*, or through applicable interpretations and determinations established by the Development Code.

The Specific Plan area is located within the Chino Airport (CNO) AIA. The San Bernardino County Comprehensive Land Use Plan for Chino Airport was adopted in 1991 and does not reflect guidance set forth in the 2011 Caltrans Airport Land Use Planning Handbook. As such, in 2022, the City of Ontario adopted the CNO Overlay District which provides maps, criteria, and policy language to guide development within the Chino AIA consistent with the 2011 Caltrans Airport Land Use Planning Handbook. The majority of the Specific Plan area is located within CNO Safety Zone 5 (low risk), with a very small portion of the southeastern corner located within Safety Zone 4 (moderate risk).

Development within the land use overlay district may have building height, land use, and floor area ratio (FAR) limitations and is subject to open land requirements. The more stringent criteria between those indicated in the applicable provisions set forth in this overlay district and this Specific Plan shall govern.

The symbols shown in Table 5-1 have the following meanings:

"P" – the land use is permitted by right, subject to the development standards applicable to that land use district.

"C" – the land use is conditionally permitted, subject to the filing of a Conditional Permit in accordance with the requirements of the Ontario Development Code and must be approved by the City of Ontario Zoning Administrator or Planning Commission before the use can be established within a particular land use district.

"A" – the land use is administratively permitted, subject to the filing of an Administrative Use Permit in accordance with the requirements of the Ontario Development Code.

Table 5-1 Permitted Land Uses

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Agriculture, Forestry, Fishing, Hunting			
Temporary and interim agriculture uses	P	P	Restricted to existing legally established agriculture and dairy uses.
Manufacturing			
Aerospace	P	--	
Alcoholic beverage manufacturing (breweries, wineries, distilleries, and related tasting room)	C	---	
Apparel	P	---	
Automotive	P	--	
Boutique/artisan small-scale and micro manufacturing facilities	P	---	Includes all types of small-scale businesses that produce tangible goods, such as textiles, hardware and hardware prototyping, woodworking, metal working, 3D printing, consumer product design and prototyping, nonalcoholic beverage, local food production and packaging, soaps, perfumes, and lotions.
Computer and electronic products	P	---	

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Electrical equipment, appliances, and components	P	---	
Food	P	---	Including bread, tortilla, snack foods, roasted nuts, coffee and tea, spice and extract, and other miscellaneous food manufacturing)
Footwear	P	---	
Furniture and related product manufacturing	P	---	
Leather and allied product	P	---	
Miscellaneous manufacturing	P	---	Includes medical equipment and supplies; jewelry and silverware; sporting and athletic goods; dolls, toys and games; office supplies; signs; and other miscellaneous manufacturing.
Painting, Powder Coating and Polishing Metal and Metal Products for the Trade	C	--	Activities are restricted to within a fully enclosed building.
Pharmaceuticals and medicines	C	---	
Plastic product manufacturing	P	---	
Printing and related support activities	P	---	
Textile product mills	P	---	Activities are restricted to within a fully enclosed building.
Wholesale Trade			
Automotive parts and accessories (excludes automotive repair)	P	---	
Business to business electronic markets	P	---	Includes sale of goods such as household goods, computer parts, clothing,

Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
			food, office supplies, and other tangible goods.
Durable and nondurable goods agents and brokers	P	---	Agent and brokers that facilitate wholesale transactions of tangible goods for manufacturers and buyers
Furniture and home furnishings	P	---	
Group purchasing organizations	P	---	
Hardware and plumbing, and heating equipment and supplies	P	---	
Household appliances and electrical and electronic goods	P	---	
Merchant wholesalers, nondurable goods	P	---	Excludes industrial gases, petroleum bulk stations and terminals, and fireworks and explosives.
Miscellaneous durable goods	P	---	Includes musical instruments, prerecorded compact discs and digital video discs, and timber and timber products.
Motor vehicle parts and supplies	P	---	
Professional and commercial equipment and supplies	P	---	Includes wholesale distribution of durable goods designed for business, industrial, or professional use, including medical, photographic, office, and computer equipment.
Sporting and recreational goods and supplies	P	---	Sales of firearms will require an approved CUP.
Toy and hobby goods and supplies	P	---	

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Jewelry, watches, precious stones, and precious metals	P	---	
Retail Services			
Automated fueling stations ("card lock" facilities)	P	---	
Automobile, light truck and van body, paint, and interior repair and customization	C	---	
Automobile, light truck and van repair and maintenance	C	---	
Batting cages – indoor	C	---	
Cafeterias and buffets[1]	P	---	Outdoor dining areas, both temporary and permanent, which are provided in addition to seating areas approved with the development of a building, may be permitted, subject to the approval of an Administrative Use Permit.
Convenience stores[1]	P	---	Gross floor area shall not exceed 10,000 sq. ft. for a single building.
Fitness and recreational sports centers (limited to health clubs and gyms, fitness and sports training facilities, tennis club, swim clubs and other activities and facilities) • GFA less than 10,000 SF	P	---	
Fitness and recreational sports centers (limited to health clubs and gyms, fitness and sports	C	---	

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
training facilities, tennis club, swim clubs and other activities and facilities) • GFA 10,000 or more SF			
Full-service restaurants[2]	P	---	Outdoor dining areas, both temporary and permanent, which are provided in addition to seating areas approved with the development of a building, may be permitted, subject to the approval of an Administrative Use Permit.
Gasoline stations with convenience stores[1]	C	---	
Home and garden equipment and appliance repair and maintenance	P	---	
Industrial retail sales (limited to the ancillary sales of goods and/or product either manufactured, warehoused, or wholesaled on-site) • ≤ 8,000 SF	P	---	
Industrial retail sales (limited to the ancillary sales of goods and/or product either manufactured, warehoused, or wholesaled on-site) • > 8,000 SF of building GFA	C	---	
Limited-service and fast food restaurants	P	---	Outdoor dining areas, both temporary and permanent, which are provided in addition to seating areas approved with the development of a

Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
			building, may be permitted, subject to the approval of an Administrative Use Permit.
Other Personal and Household Goods Repair and Maintenance -- Without Retail Sales (limited to garment alteration and repair, jewelry repair, key duplicating, musical instrument repair and tailor shops)	P	---	
Reupholsters and furniture repair	P	---	
Self-serve and full-service gasoline stations[1]	C	---	
Automotive servicing facilities (limited to retail-oriented services, such as emissions testing, battery replacement and other similar retail activities that involves the limited use of pneumatic tools or equipment that create noise impacts)	P	---	
Simulated racing (limited to go-carts, radio-controlled vehicles, and other similar facilities)	C	---	
Snack and nonalcoholic beverage bars[1]	P	---	Outdoor dining areas, both temporary and permanent, which are provided in addition to seating areas approved with the development of a building, may be permitted, subject to the approval of an Administrative Use Permit.

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Vending machine operators (retailing of merchandise through vending machines, as an ancillary business activity, within a fully enclosed building)	P	---	
Transportation & Warehousing			
Couriers and messengers	P	---	
Data center	C	---	
General warehousing and storage within a wholly enclosed building	P	---	
Fulfilment Center	P	---	
Outdoor materials and equipment storage in conjunction with an allowed use	C	---	
Package and Parcel Sorting and Delivery	P	---	Sorting facilities that direct packages to their final destination.
Parking lots and parking garages in conjunction with allowed uses	P	---	
Physical records, digital assets, and media archives storage	C	---	
Plug-In Electric Vehicle (PEV) Charging Facilities	P	---	
Postal service	P	---	
Indoor Vehicle Storage	P	---	
Outdoor Vehicle Storage	C	---	
Professional, Scientific, Tech. Services			
Broadcasting (except internet)	P	---	
Business support services	P	---	Includes consulting, administrative tasks, IT

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
			support, and financial management.
Depository credit intermediation	P	---	Limited to commercial banking, savings institutions, and credit unions.
Financial transactions processing and clearinghouse activities	P	---	Establishments that facilitate electronic funds transfers, check clearing, credit card processing, and managing reserves, excluding central bank activities.
Management of companies and enterprises	P	---	
Motion picture and video industries	P		Includes production, distribution, and exhibition of films, television programs, and commercials.
Newspaper, periodical, book, and directory publishers	P	---	
Personal fitness trainer	P	---	
Physicians and dentists, other health practitioners, outpatient centers, laboratory testing services, home healthcare services, and community clinics	P	---	
Religious organizations	C	---	
Scientific research and development services	C	---	
Software publishers	P	---	
Sound (audio) recording facilities	P	---	
Telephone answering services and call centers	C	---	
Construction			
Contractors (limited to businesses whose	P	---	Permitted by right if completely within a building.

Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
primary activity is performing specific activities involving in construction, engineering and capital improvement projects, or preparation of sites for construction)			Conditional use permit required if outdoor storage is provided.
Prefabricated construction assembly	P	---	
Government Offices			
Executive, legislative, and other general government support	P	P	
Fire protection (stations and substations)	P	P	
Police protection (stations, substations, and storefront facilities)	P	P	
Publicly operated animal resource center	P	P	
Arts, Entertainment and Recreation			
Open space and park lands (publicly owned facilities)	---	P	
Other Uses			
Electric Power transmission, control and distribution	P	P	Restricted to only publicly owned utility stations.
Telecommunication facilities	C	---	
Temporary and interim buildings, structures, and facilities (fewer than 5 years)	A	A	
Temporary and interim buildings, structures, and facilities (5 to 10 years)	C	C	
Self-storage facilities	P	---	
Note: 1. Uses are considered as commercial uses within the Eucalyptus Business Park Specific Plan area. The total combined square footage of the commercial uses shall not exceed 10,000 SF.			

5.5 Business Park Development Standards

The following development standards establish the development criteria that shall apply within the Business Park land use district of the Eucalyptus Business Park Specific Plan. The Specific Plan area is located within the Chino Airport Safety Zones that may limit building height, land uses, and FAR based on the proposed land use, and requires open land. Refer to the Chino Airport Land Use Compatibility Plan for additional land use restrictions. For standards that are silent in this Specific Plan, the applicable standards contained within the City's Development Code shall apply.

Table 5-2 Development Standards

Site Requirements	
	BP
Minimum lot size	1.0 acre
Maximum floor area ratio *(calculated on a Planning Area by Planning Area basis)*	0.55
Minimum lot width dimensions	100 ft
Minimum lot depth dimensions	100 ft
Maximum building footprint	560,000 SF
Maximum Building Height[1]	60 ft
Maximum Building Height (lots adjoining Public Street 'A')[1]	50 ft
Overall minimum landscape coverage (landscaping shall include plantings (trees, shrubs, groundcovers, vines) and trellises.)	13%[2]
Minimum truck court depth (measured from dock door perpendicularly to property line)	120 ft

Notes:

1. Maximum building height shall also adhere to the Chino Airport height constraints.
2. The Overall Minimum Landscape Coverage shall be determined based on the net total acreage of all parcels in the same phase of development. The minimum landscape coverage requirement shall not apply on a planning area by planning area or parcel by parcel basis.

Table 5-3 Minimum Building and Parking Setback Requirements

	BP
Minimum setbacks from property line	
Eucalyptus Avenue	25 ft
Public Street 'A'	20 ft
Campus Avenue	10 ft
Bon View Avenue	10 ft
Grove Avenue	20 ft
Walker Avenue	20 ft
Minimum side yard interior property line setbacks	
Building	5 ft
Drive aisles, passenger cars and truck parking	5 ft
Screened loading and storage yards (inclusive of passenger cars and truck parking within the screened loading and storage area)	0 ft
Minimum rear yard setback	0 ft

Table 5-4 Minimum Drive Aisle and Parking Space Separation Requirements

	BP
Adjacent to building office elements	10 ft
Adjacent to building wall or screen wall/fence, and not within a screened/enclosed yard	5 ft
Adjacent to building wall or screen wall/fence, and within a screened yard	0 ft

Table 5-5 Parking Space Requirements

Use	Required Space
Wholesale Trade	2.5 spaces per 1,000 SF
Retail Services	4 spaces per 1,000 SF
Full-Service Restaurant	10 spaces per 1,000 SF
Fast Food Restaurants	13.3 spaces per 1,000 SF
Professional, Scientific, Tech. Services	4 spaces per 1,000 SF
General Business Offices	4 spaces per 1,000 SF
Manufacturing[1,2]	1.85 spaces per 1,000 SF gross floor area (GFA)
Warehousing and Distribution[1,2]	Portion of GFA ≤ 20,000 SF: 1 space per 1,000 SF Portion of GFA > 20,000 SF: 0.5 space per 1,000 SF Tractor trailer parking space: 1 space/4 dock-high doors
General Industrial[1,2]	Portion of GFA < 50,000 SF: 1.85 spaces per 1,000 SF Portion of GFA ≥ 50,000 SF and < 100,000 SF: 1 space per 1,000 SF Portion of GFA ≥ 100,000 SF: 0.5 space per 1,000 SF Tractor trailer parking space: 1 space/4 dock-high doors
Business Park[1,2]	3 spaces per 1,000 SF Tractor trailer parking space: 1 space/4 dock-high doors

Notes:

1. Parking for "general business offices" and other associated uses shall be provided when those uses exceed 10% of the building GFA.
2. The Specific Plan permits a blended parking ratio for Business Park buildings to accommodate varying proportions of business park, general industrial, warehouse, distribution, and/or support office functions. The Planning Director may approve modifications to the blended ratio during the Development Plan review process based on operational characteristics, provided parking meets or exceeds the parking requirements in Table 5-5, *Parking Space Requirements*.

5.5.1 Other Development Standards

1) Loading docks and truck parking areas shall be visually screened from Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, and Public Street 'A' by walls and landscaping features.

2) The outdoor storage of materials and equipment shall be permitted ancillary to the land uses allowed pursuant to Table 5-1. Outdoor loading and storage areas and loading doors shall be screened from view from public streets by concrete or masonry walls and landscaping. Any gates shall be lockable. Such walls and landscaping used as screening shall be a minimum eight feet (8') in height and shall be of sufficient height to screen all outdoor materials and equipment, tractors and trailers, and loading doors from view of public streets. A line of sight study shall determine the required height(s) of the screen walls. The storage of outdoor materials shall not exceed the height of the screen walls as measured from the interior side of the walls.

3) Ground- and roof-mounted exterior mechanical equipment, heating and ventilating, air conditioning, tanks, and other mechanical devices shall be of an architecturally compatible design with the primary structure and screened when visible to the public.

4) Exterior lighting fixtures shall be downward directed. Pole-mounted lights shall be shielded with the light source oriented to not directly face public streets and/or adjacent properties.

5) All manufacturing and processing activities shall be conducted within a wholly enclosed building.

6) The following open land and occupancy limit requirements shall apply within the

Chino Airport Safety Zone, as approved by the City of Ontario City Council. Qualifying open land is land free of most structures and other obstacles such as walls, large trees or poles, and overhead wires. The minimum dimensions of the open space area shall be 75 feet by 300 feet. Additional open space requirements shall adhere to the provisions provided within the Ontario Development Code.

7) The Specific Plan area is located in the Airport Influence Area (AIA) established by the Ontario International Airport Land Use Compatibility Plan (ONT ALUCP) and the Chino Airport Safety Zone established by the provisions within the Chino Airport Overlay zoning district. All development in the Eucalyptus Business Park Specific Plan area shall be subject to the mandatory requirements and standards of those applicable ALUCP and the Ontario Development Code, or in the absence of an adopted ALUCP and Development Code, the California Airport Land Use Planning Handbook. Given the close proximity of the Specific Plan area to the Chino Airport, developers within the Specific Plan area shall consult and coordinate with Chino Airport agencies and City staffs during the planning and design stage to ensure development plans accommodate applicable safety restrictions. The entire Specific Plan area is impacted by the Chino Airport; developers within the Specific Plan area shall consult and coordinate with City staff, Chino Airport, and FAA during the planning and design stage to ensure that development plans and right-of-way street improvements do not create any hazards and comply with the California Airport Land Use Planning Handbook published by the Caltrans Division of Aeronautics and the Ontario Development Code.

5.6 Open Space-Parkland Development Standards

The Eucalyptus Business Park Specific Plan is comprised of approximately 35.88 acres of Open Space – Parkland land uses, which is planned as part of for a larger public regional park. The developer and the City of Ontario will work together to ensure the regional park will be constructed concurrently with the build out of the Business Park portion of the Specific Plan. The details of the partnership will be included in the Development Agreements accompanying the approval of the Eucalyptus Business Park Specific Plan.

CHAPTER 6

DESIGN GUIDELINES

6.1 Purpose and Intent

The design guidelines presented in this chapter describe the quality and character of the built environment expected for the Eucalyptus Business Park Specific Plan area. While the design guidelines provide direction, they are meant to provide a certain level of flexibility to allow creative expression during the design of implementing development projects.

The Eucalyptus Business Park Specific Plan area's visual identity will be expressed through attractive building architecture with quality materials, landscape, hardscape, and signage elements. The design guidelines contained herein are primarily focused on the business park planning areas and are presented in a manner that ensures consistent architectural expression from building to building, while allowing flexibility in modern-day building design.

The objectives of these Design Guidelines are as follows:

- To provide the City of Ontario assurance that the Eucalyptus Business Park Specific Plan area will develop in accordance with the quality and character described within this Specific Plan.
- To provide guidance to developers, builders, engineers, architects, urban planners, landscape architects, and other professionals to achieve and maintain the desired design quality.
- To provide an aesthetic benchmark for City staff, the Planning Commission, and the City Council in their review of the design of future development projects in the Specific Plan area.
- To provide guidelines that steer the Eucalyptus Business Park to convey a contemporary aesthetic theme and character while allowing flexibility for practical application and creative expression.
- To provide guidelines for energy and water use efficiency that can be implemented in the site planning, design, and construction of implementing development projects to minimize waste deposited at landfills, decrease fossil fuel consumption, and reduce domestic water consumption.
- To ensure that the Specific Plan implements the intent of The Ontario Plan and the City's Development Code.

The Design Guidelines presented herein apply to all development within the Business Park Planning Areas within the Eucalyptus Business Park Specific Plan area.

6.2 Parkland Guidelines

The City's vision for the Grand Park has been outlined in the Ontario Grand Park Conceptual Master Plan. All future improvements within the Grand Park including monumentation, signage, trails, landscaping, etc. shall be designed to be consistent with the Ontario Grand Park Conceptual Master Plan to ensure a consistent implementation of the City's vision. Improvements within the Grand Park shall be approved as part of the development

plan for the respective planning area of the EBPSP.

6.3 Business Park Design Theme

Planning Areas 1-6 are envisioned as a contemporary business park containing buildings that are grouped and arranged in campus-like settings. The business park areas will provide businesses with easy access to regional transportation networks, proximity to workers, and proximity to major ports and airports.

The theme features a contemporary design aesthetic, drawing on the ranch heritage of the area, which provides architectural styling with attractive detailing, visually-interesting accents, and timeless features. Developments within the business park area will provide architecturally compatible sign design, directed lighting, colorful and drought-tolerant landscaping, and energy efficient design features. Functional elements like loading areas will be oriented inward with attractive building façades facing outward toward the public streets. Generous landscaped zones along these frontages will enhance both the visual appeal and functionality of the circulation system.

6.4 Business Park Architecture Guidelines

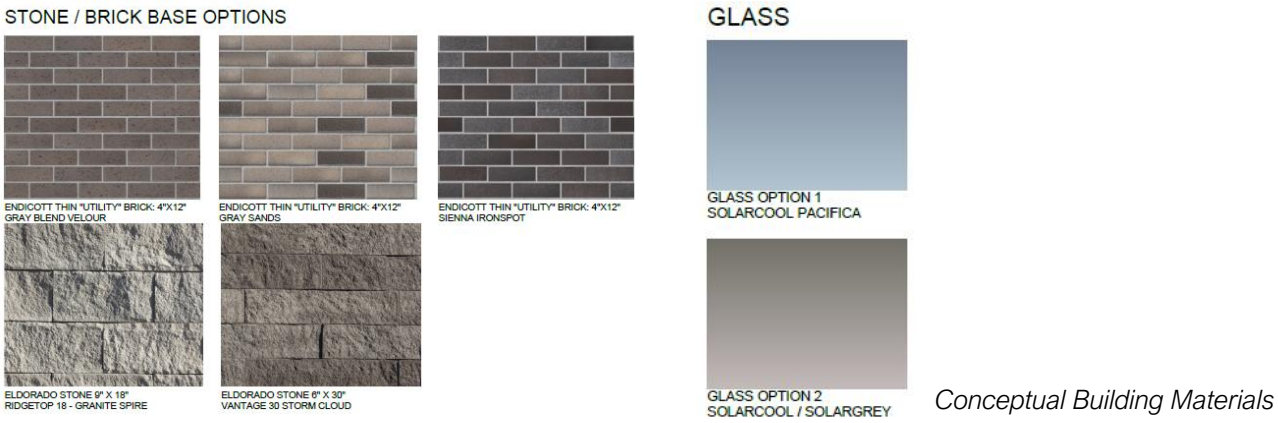
This section sets addresses the architectural design of buildings in Planning Areas 1-6.

6.4.1 Architectural Theme

The architectural style of buildings in the business park areas emphasizes building massing over structural articulation. Buildings are characterized by simple and distinct cubic masses with interlocking volumes of wall planes, colors, and materials to create visual appeal. Additionally, architectural designs may mix colors, materials, and textures to articulate façades and create visual appeal.

Design elements are selected to ensure compatibility in character, massing, detailing, and exterior materials, reinforcing the

Conceptual Building Architecture



Conceptual Building Materials

aesthetic of the intended contemporary design. While individual creativity and identity of individual buildings are encouraged, all buildings and planning areas are intended to maintain design integrity and compatibility to reinforce a cohesive image and campus-like setting throughout the Specific Plan area

6.4.2 Building Form

Building form is a fundamental aspect of architectural design, defined by elements such as shape, mass (size), scale, proportion, and articulation. Building façades visible from public roads require careful attention but even building façades not visible from public roads

or publicly accessible areas are encouraged to follow the building form guidelines listed below.

The following guidelines apply to all business park buildings to promote a visually cohesive, attractive, and welcoming environment:

1) Simple geometric shapes shall be used as the overall building form. Rectangular forms are preferred, as they provide visual balance and interest. Avoid overly complex or arbitrary building shapes.

2) Long horizontal wall surfaces facing public streets shall incorporate regular or periodic changes in exterior materials, color, decorative accents, or architectural details to add visual interest.

3) Varying the size and shape of building masses between neighboring buildings visible from public streets is encouraged.

4) Buildings abutting and facing Public Street 'A' are encouraged to have varied setback distances to provide a visually interesting and attractive street frontage.

5) Make primary pedestrian entrances to buildings (with the exception of service doors and emergency exit doors) clearly and easily identifiable through changes in massing, color, and/or building materials. Entries intended for visitors and the general public should be recessed or covered by architectural projections, roofs, or arcades to provide shade and a welcoming effect.

6) Architectural and trim detailing on building façades shall be clean, simplistic, and not overly complicated.

7) Materials applied to exterior wall elevations shall turn the corner of the building to a logical termination point in relation to architectural features or massing.

8) Provide enhanced building corner and entrance design to create visual anchors that help define the building's identity.

6.4.3 Building Materials, Colors, and Textures

Building materials and colors play a pivotal role in developing a clean, contemporary visual environment. The following guidelines apply to all business park buildings within the Eucalyptus Business Park Specific Plan area, with slight variations encouraged to provide visual interest.

1) Primary exterior building materials shall include concrete and similar materials. The primary materials should be accented by secondary materials including but not limited to natural or fabricated stone, fire resistant or synthetic wood siding (horizontal or vertical), metals, or similar materials.
2) Trim details may include metal finished in a uniform color, plaster, or concrete elements finished consistently with the building treatment. Use of overly extraneous themed detailing, like oversized or excessive foam cornice caps, foam moulding and window detailing is discouraged.
3) Material transitions should occur at intersecting planes, preferably at inside corners where wall planes change, or at points where architectural elements meet.
4) Primary exterior building colors should be light earth and gray tones. Darker and/or more vibrant accent colors may be used strategically in focal point areas, such as around building entrances and outdoor gathering spaces.
5) The use of bright primary colors, overly bold color applications, and arbitrary color patterns that clash with the established business park color palette are discouraged, except in signage and logos.
6) Colors of exposed downspouts (only permitted if not in public view), service doors, and mechanical screens shall be the same color as the adjacent building wall.
7) If downspouts are needed in areas of public view, they shall be designed as internal downspouts.
8) Provide contrasting materials at corners and vehicle entrances to visually enhance the focal points of the buildings.

6.4.4 Windows and Doors

Patterns of window and door openings shall correspond with the overall design of the building and shall be consistent in form, pattern, and color. The following windows and doors guidelines apply to business park buildings.

1) Where feasible, doors and windows on individual building façades should be arranged in a symmetrical and repetitive pattern to promote visual continuity.

Conceptual Windows and Doors

2) Window styles and trims shall be consistent in form and color within each planning area. All window trims on a given building should share a uniform finish.

3) Unfinished or untreated metal frames and gold-colored frames for windows and doors are not permitted. Clear silver anodized frames are acceptable.

4) Glass should be clear or lightly tinted with subtle reflectivity. Highly reflective or silver-tinted glass is not allowed.

5) All windows/glass and doors shall be inset to rear of wall/panel to add interest and provide shadow lines.

6.4.5 Rooftop Equipment Screening

Equipment and apparatuses placed on the roofs of business park buildings are expected to be screened from public view.

1) All rooftop mechanical, electrical, and communication equipment shall be fully screened from view from adjacent public streets. Solar photovoltaic (PV) panels and associated technologies may be visible from public review if full screening of the PV system is not feasible.

2) Screening elements shall be architecturally integrated with the building design in terms of form, materials, and color. Building parapets is the preferred method of screening but where parapets are not feasible, mechanical screens may be used

Conceptual Building Corner Elevation Rendering

but must appear as a natural extension of the building's architecture. Screening elements shall be of a uniform height, color, and texture on a building sufficient to conceal all rooftop equipment from view from adjacent public streets.

3) Rooftop equipment should be placed away from roof edges to minimize visibility and reduce the height of required screening.

4) All conduits, piping, and utility lines associated with rooftop equipment shall be concealed from public view from adjacent public streets.

5) Building roofs shall be designed to support the installation of solar photovoltaic (PV) panels and associated technologies.

6.5 Business Park Site Feature Guidelines

6.5.1 Parking and Loading Areas

Areas serving commercial vehicles such as loading dock areas and truck courts are essential for the efficient operation of business park facilities, providing access for loading, unloading, and freight movement. However, due to their scale and activity levels, these areas can present conflicts with other functions if not properly design and screened. Below are design expectations for the effective screening and use of loading docks and truck courts.

1) Business park buildings fronting Public Street 'A' shall not include loading docks on any façades facing that street.

2) Commercial vehicle loading doors, service docks, and outdoor equipment areas shall be oriented or screened to minimize visibility from public roads through the use of solid walls and dense landscaping. Screening for this purpose shall be a minimum of 8 feet. A line of sight study will determine max height required.

3) Loading and unloading activities by commercial vehicles and trucks are prohibited from occurring on or being visible from public streets.

4) Sufficient queuing space shall be provided in front of security gates to prevent commercial vehicles and trucks from stacking or idling on public streets while waiting to enter.

5) Driveway entrances for trucks and service vehicles shall be separated from passenger vehicle traffic, pedestrian pathways, and bicycle routes where possible.

6) Conduit should be installed within truck courts in logical, accessible locations to accommodate the future addition of electric truck charging stations, anticipating advances in zero-emission vehicle technology during the lifespan of the business park.

7) Passenger car parking lots within business park sites shall provide landscaping that consist of shade trees and parking finger islands.

8) Trees and parking fingers are not required in truck courts, unless required to meet the landscape coverage requirements.

6.5.2 Outdoor Employee Amenity Areas

The business park is expected to offer a wide variety of job opportunities. For the comfort of employees, outdoor employee amenities are encouraged throughout the business park area.

1) Outdoor break areas for employees may be conveniently located and accessible to each business park building and

Conceptual Employee Amenity Areas

positioned away from or screened from loading zones, trash enclosures, or other utilitarian functions. Break areas may serve one building or be shared among multiple buildings.

2) In outdoor break areas, shade structures such as canopies, trellises, or umbrellas are encouraged to be provided to shade and protect users from direct sun and light rain. Outdoor break areas are encouraged to provide weather-resistant seating and tables, including a mix of options (e.g., individual benches, larger tables, etc.) to accommodate different group sizes and preferences.

3) Use of outdoor break areas shall be encouraged by including features such as early morning and evening decorative lighting, outdoor power outlets, decorative paving, and decorative features.

4) Bicycle racks shall be provided at each building or in a common area that serves multiple buildings. Outdoor bike racks shall be secure, well-anchored, and placed in well-lit areas with passive surveillance, such as security cameras, to enhance safety.

6.5.3 Outdoor Equipment Placement

Ground-mounted and wall-mounted utilitarian equipment is expected to be needed to support business park building operations. The following guidelines are aimed at proper placement.

1) Ground-mounted equipment, including but not limited to mechanical and electrical systems, emergency generators, boilers, storage tanks, risers, and conduits should be placed out of public review or be screened from public view, particularly from adjacent public streets and other publicly accessible areas.

2) Electrical equipment rooms should be located within the building envelope. External projections, such as pop-outs or shed-like structures, are discouraged.

3) Wall-mounted equipment should not be installed in visually prominent locations on building façades that face public roads or areas with high visibility. Such equipment should either be screened from view or integrated into the building's architectural design to minimize visual impact.

6.5.4 Trash Enclosures

Thoughtfully designed trash enclosures are essential components of a well-functioning and visually cohesive business park. These facilities serve a critical operational role while also contributing to the overall aesthetic and environmental quality of the development. The following guidelines are intended to ensure that trash and recycling enclosures are secure,

functional, and architecturally integrated into the site design.

1) All outdoor refuse containers shall be screened within a permanent, lockable and durable enclosure and should be oriented so they are not visible from public roads/views. The enclosure's design shall reflect the architectural style of adjacent buildings and use similar, high-quality materials.

2) Refuse collection areas shall be located behind or to the side of buildings, away from the building's main entrance and public view.

3) Design and placement of trash enclosures shall meet Integrated Waste Department requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types.

4) Trash enclosures shall include green waste/organics and recycling collection bins.

Conceptual Trash Enclosure

6.5.5 Walls and Fences

Freestanding walls and fences play an important role in defining property boundaries, providing security, and screening service areas within a business park. To maintain a cohesive and high-quality visual environment, these elements must be thoughtfully designed to complement the architectural character of adjacent buildings and the overall site design. The following guidelines address the placement, height, materials, and appearance of freestanding walls and fences to ensure they are both functional and visually integrated.

1) Walls and fences shall be designed to complement the architectural style, colors, and materials of adjacent buildings. A consistent design theme for fencing and walls shall be maintained throughout the business park area to ensure a cohesive appearance across parcels and tenant spaces.

2) Walls and fences visible from public roads or pedestrian areas should include enhanced design treatments, such as pilasters, decorative caps, or decorative patterns, to reduce visual monotony.

3) High-quality, durable materials shall be used such as decorative block or concrete with textured or finished surfaces. Chain link fencing cannot be used where visible from the public view.

4) Walls and fences shall be designed for long-term durability and ease of maintenance. Finishes should be resistant to graffiti and weathering.

5) Where walls or fences are located at major public road intersections or project entries, special design attention should be given to include gateway features or architectural detailing.

6) Walls and fences used for security purposes should balance safety with aesthetics. Walls and fences in public view should be built with attractive, durable materials.

6.6 Energy Efficiency Guidelines

This Eucalyptus Business Park Specific Plan promotes sustainable development practices that align with California's long-term environmental goals and energy efficiency standards. These guidelines are intended to encourage the thoughtful integration of energy-efficient design, construction, and operational strategies throughout the business park. By reducing energy consumption, lowering greenhouse gas emissions, and supporting the use of renewable technologies, these standards not only minimize environmental impacts but also contribute to long-term cost savings and improved building performance for tenants and property owners. The following guidelines apply to all new construction, major renovations, and site improvements within the Specific Plan area.

1) All new construction and major renovations shall meet or exceed the requirements specified in the California Green Building Standards Code (CALGreen Code) and Title 24 energy efficiency requirements.

2) High-performance insulation, cool roofing materials, energy-efficient windows, and air-tight construction is encouraged to exceed CALGreen Code standards to minimize thermal loss and reduce HVAC demand.

3) LED lighting or equivalent shall be used for all interior and exterior applications.

4) Use of ENERGY STAR® certified appliances and daylight sensors, motion detectors, and programmable timers on lighting fixtures are encouraged to minimize unnecessary energy use.

5) Skylights are encouraged on at least 1% of building rooftops above storage spaces to reduce the need for artificial light.

6) Installation of smart thermostats and automated energy management systems are encouraged to improve heating, cooling, and ventilation efficiency.

7) Building roofs shall be designed to accommodate solar photovoltaic (PV) systems. Associated battery storage systems are encouraged as feasible to support energy resilience and reduce peak load.

8) Electric Vehicle (EV) charging stations and infrastructure for expansion is encouraged to exceed CALGreen Code standards.

9) Building tenants shall use zero-emission equipment for building operations involving goods movement, such as forklifts and yard hostlers.

10) Implementing projects shall follow the City of Ontario Climate Action Plan (CCAP) Screening Table Measures to achieve a minimum of 100 points per the Screening Table.

6.7 Lighting Guidelines

Outdoor lighting is an essential architectural component that provides aesthetic appeal, enhances safe pedestrian and vehicular circulation, and adds to security. Lighting within the public rights-of-way shall adhere to applicable City of Ontario requirements. All other lighting on private property within the Specific area shall adhere to the following guidelines.

1) Minimize glare and "spill over" light onto public streets and adjacent properties by

using downward-directed lights and/or cutoff devises on outdoor lighting fixtures, including spotlights, floodlights, electrical reflectors, and other means of illumination for signs, structures, parking, loading, unloading, and similar areas. Where desired, illuminate trees and other landscape features by concealed up light fixtures. Limit light spillover or trespass to one-quarter foot-candle or less, measured from within five feet of any adjacent property line.

2) Select all lighting fixtures from the same or complementary family of fixtures with respect to design, materials, fixture color, and light color. Use of LED lighting is encouraged.

3) Lights should be unbreakable plastic, recessed, or otherwise designed to reduce the problems associated with damage and replacement of fixtures.

4) Neon and similar types of lighting are prohibited.

5) Locate all electrical meter pedestals and light switch/control equipment in areas with minimum public visibility or screen them with appropriate plant materials.

6) Along sidewalks and walkways, the use of low mounted fixtures (ground or bollard height), which reinforce the pedestrian scaled, are encouraged.

7) Use exterior lights to accent building entrances, plazas, activity areas, and special features.

8) Provide lighting to illuminate parking lots and their pedestrian links that provide more than five parking spaces for use by the general public.

9) Provide lighting to illuminate aisles and passageways within a building complex.

10) High-Pressure Sodium (HPS) light fixtures are prohibited for site lighting.

11) Lighting is prohibited that could be mistaken for airport lighting or that would create glare in the eyes of pilots of aircraft using the nearby Chino Airport or Ontario International Airport.

6.8 Signage Guidelines

Signage will identify building occupants in the business park area and ensure the efficient circulation of vehicle traffic by identifying vehicular entry points and directing vehicles to their on-site destinations. Also, signage will enhance the pedestrian experience through wayfinding component such as directories, directional signage, and destination identifiers. A Sign Program shall be approved by the City for the Specific Plan area prior to any sign being installed within the Specific Plan area.

Clear, concise, and easy-to-understand signage that is also visually appealing is vitally important for positive worker and visitor experiences in the Specific Plan area. General design requirements for signage are as follows:

1) Freestanding signs associated with buildings should be compatible with and complementary to the building's exterior materials, colors, and finishes.

2) The dimensions and shape of free-standing signs and sign panels or elements mounted on building façades or marquees shall be scaled proportionately to the architecture.

3) All signs shall be contained within the parcel to which it is applicable and shall be so oriented as to preclude hazardous obstructions to person and/or vision of pedestrians and/or vehicle operators.

4) Building occupant identification signage shall be in keeping with the character

Conceptual Building Signages

established for the Specific Plan area with variations allowed to accommodate individual user identities/corporate branding standards.

5) All signs are expected to be of the highest quality to pass eyelevel examination and scrutiny, and shall comply with the following fabrication specifications:

    a. Signs should be constructed to eliminate burrs, dents, cutting edges and sharp corners;

    b. Surfaces which are intended to be flat should be without dents, bulges, oil canning, excessive, gaps, or other physical deformities;

    c. All fasteners shall be concealed;

    d. Access panels shall be tight-fitting, light-proof and flush with adjacent surfaces;

    e. Manufacturers' procedures that are recommended regarding expansion/contraction, fastening and restraining of acrylic plastic shall be followed; and

    f. Painted, polished and plated surfaces shall be unblemished in the finished work.

6) Prohibited sign components include the following:

    a. Letters with exposed fastening and unfinished edges (unless architecturally consistent);

    b. Paper, cardboard, Styrofoam or untreated cloth;

    c. Visible moving parts or simulated moving parts by means of fluttering, rotation, or reflecting devices; and

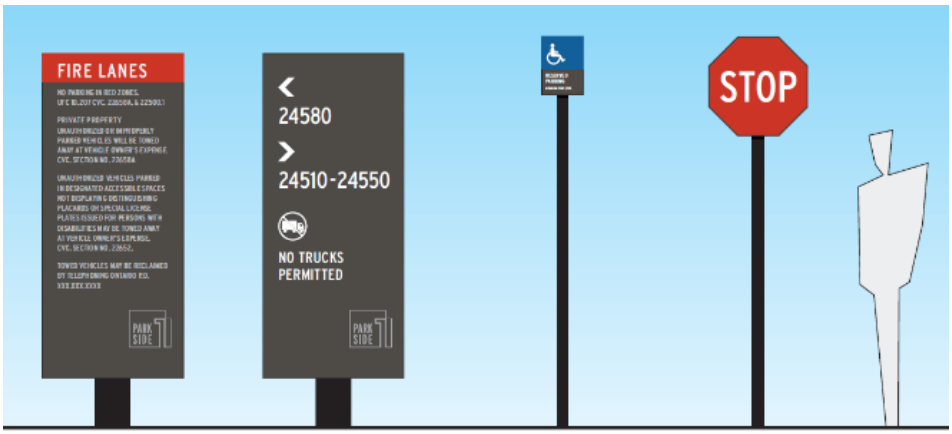
    d. Flashing and strobing.

7) All conductors, transformers, cabinets, housing, and other equipment for the illumination of signs shall be concealed and/or incorporated into the building architecture.

8) Signs shall be constructed so as to not have exposed wiring, raceways, ballasts, conduit, transformers, or the like.

9) Direction signs may be located at any vehicular or pedestrian decision point.

10) Vehicular direction signs shall clearly direct to destination anchors within the Specific Plan area, on-site parking areas, and truck routes.



Conceptual Regulatory Signage

11) Vehicular direction signs shall be consistent in size, shape, and design throughout the Specific Plan area.

12) Typography on vehicular direction signs should be legible and have enough contrast to be read from an appropriate windshield viewing distance.

13) Typography on vehicular direction signs should be legible and have enough contrast to be read from an appropriate windshield viewing distance.

14) All direction signs and general information signs (e.g., restrooms, telephones, fire extinguishers, elevators, escalators, stairs) throughout the Specific Plan area shall incorporate the appropriate identity symbol as established by the Society of Environmental Graphic Design (SEGD) and comply with all State, local and federal regulations.

15) All traffic control signs, whether on public or private property, shall conform to the California Manual on Uniform Traffic Control Devices (MUTCD).

16) All signage shall comply with the City of Ontario Development Code's Sign Regulations.

6.9 Landscape Guidelines

Landscape design guidelines provided herein establish landscape principles and standards that shall apply to all planning areas within the Eucalyptus Business Park Specific Plan area. The intent is to ensure that plant materials, entries and monuments, streetscapes, and other amenities are compatible with the overall themes of the business park area and the parkland area.

The landscape design guidelines provided herein are not intended to establish a set of rigid landscaping requirements. These landscape guidelines are intended to be flexible and are subject to modification over time. However, it is critical to the Specific Plan's long-term design integrity that any deviations from these guidelines are in keeping with the spirit of the core elements of the overall theme described herein to ensure a cohesive and unified landscape concept across the Eucalyptus Business Park Specific Plan area.

As shown on Figure 6-1, *Conceptual Landscape Plan*, landscaping will occur primarily at street corners, along roadways, and at building entrances, and in passenger car parking lots.

Primary and secondary entry treatments provide a welcoming setting for the employees and visitors to the Specific Plan area. Primary

entry treatments featuring signs and landscaping will occur at the corners of Eucalyptus Avenue and Campus Avenue and Eucalyptus Avenue and Grove Avenue. Secondary entry treatments will feature accent trees, shrubs, and groundcovers occur at the corners of entrances to the Specific Plan area.

Building corners and entrances facing public streets shall feature enhanced landscaping that complements the overall design theme of the Specific Plan area. These landscaped elements will be curated to create a visually appealing environment. Placement of trees, shrubs, and ground cover will serve to soften building facades and provide natural screening where appropriate, ensuring that structures are integrated harmoniously into their surroundings rather than dominating the streetscape.

Streetscape landscaping includes a combination of evergreen and deciduous trees, shrubs, and groundcovers to provide a visually pleasing experience for pedestrians, bicyclists, and motorists.

6.9.1 Plant Palette

The plant palette for the Eucalyptus Business Park Specific Plan area includes evergreen and deciduous trees, shrubs and ground covers, and grasses that are commonly used throughout Southern California. Many of the plant materials are water-efficient species native to Southern California or naturalized to the Southern California climate.

Table 6-1, *Plant Palette*, provides a list of plant materials approved for use in the Specific Plan area. The plants listed in Table 6-1 establish a base palette for the Specific Plan area's landscape design. Other similar plant materials may be substituted for species listed in Table 6-1, provided the alternative plants are drought resistant and complement the Specific Plan area's overall design theme.

Table 6-1 Plant Palette

Botanical Name	Common Name	Application	Water Use
Trees			
Cedrus deodara	Deodar Cedar	Evergreen Specimen	M
Cercidium x 'desert museum	Desert Museum Palo Verde	Accent Tree	L
Cercis c. 'forest pansy'	Eastern Redbud	Street Tree/Water Quality	M
Chitalpa T. 'morning cloud'	Chitalpa	Street Tree	L
Geijera parviflora	Australian Willow	Canopy Tree/Background	L
Koelreuteria bipinnata	Chinese Flame Tree	Street Tree	L
Lagerstroemia f 'natchez'	Crape Myrtle	Accent Tree/Water Quality	M
Lophostemon confertus	Brisbane Box	Background Tree	M
Olea europea 'swan hill'	Swan Hill Fruitless Olive	Accent Tree	L
Pinus eldarica	Afghan Pine	Street Tree/Background	M
Pinus halepensis	Aleppo Pine	Evergreen Screen	M
Pistachia chinensis	Chinese Pistache	Street Tree	M
Platanus a. 'bloodgood'	Lodone Plane Tree	Street Tree/Background	M
Platanus racemosa	California Sycamore	Water Quality/Canopy Tree	M
Podocarpus gracilior	Fern Pine	Street Tree/Canopy Tree	M
Quercus agrifolia	Coast Live Oak	Street Tree/Accent Tree	L
Quercus suber	Cork Oak	Street Tree	L
Quercus ilex	Holly Oak	Street Tree/Canopy Tree	L
Shrubs, Grasses, and Groundcovers			
Acacia redolens	Acacia	Groundcover	L
Agave americana	Century Plant	Accent	L
Agave attenuata 'blue glow'	Blue Glow Agave	Accent	L
Aloe arborescens	Torch Aloe	Accent/Background	L
Aloe blue elf	Blue Elf Aloe	Accent	L
Aloe petricola	Stone Aloe	Accent	L
Aloe striata	Coral Aloe	Accent	L
Arbutus unedo 'compacta'	Dwarf Strawberry Tree	Background	L
Baccharis x 'centennial'	Centennial Coyote Brush	Water Quality	L
Bouteloua g. 'blond ambition'	Blue Grama Grass	Mid-ground	L
Bulbine frutescens	Bulbine	Flowering Accent	L
Calandrinia spectabilis	Rock Purslane	Flowering Accent	L
Callistemon 'little john'	Dwarf Callistemon	Mid-ground	L
Carissa m. 'green carpet'	Dwarf Natal Plum	Groundcover	M
Carex divulsa	Berkeley Sedge	Groundcover/Foreground	L
Cotyledon orbiculata	Pig's Ear	Foreground/Accent	L
Dianella 'little rev'	Little Rev Flax Lily	Foreground	L
Dianella t. 'variegata'	Variegated Flax Lily	Foregound/Mid-ground	M
Echeveria a. 'lipstick'	Echeveria	Accent	L
Festuca mairei	Atlas Fescue	Foreground/Mid-ground	L
Hepearlor parviflora	Red Yucca	Succulent Accent	L
Hesperalie 'brakelights'	Brakelights Yucca	Mid-ground/Accent	L
Juncus patens	California Gray Rush	Water Quality	L
Lantana 'new gold'	New Gold Lantana	Groundcover/Foreground	L
Leymus c. 'canyon prince'	Canyon Prince Wild Rye	Mid-ground/Water Quality	L

Botanical Name	Common Name	Application	Water Use
Muhlenbergia c. 'regal mist'	Pink Muhly	Mid-ground/Water Quality	L
Myoporum parifolium	Ncn	Groundcover	M
Olea 'montra'	Little Ollie	Mid-ground	L
Rhaphiolepis indica 'clara'	Indian Hawthorn	Mid-ground/Background	M
Rosmarinus o. 'prostratus'	Prostrate Rosemary	Groundcover	L
Salvia greggii	Autumn Sage	Mid-ground	L
Salvia L. 'santa barbra'	Santa Barbra Mexican Sage	Mid-ground/Water Quality	L
Senecio Serpens	Blue Chalk Sticks	Succulent Groundcover	L
Turf 'marathon iie'	Sodded Turf	Groundcover	H
Westringia 'wynyabbie gem'	Coast Rosemary	Background	L

Feet

6.9.2 Irrigation

The following general irrigation concepts shall be considered in the design and installation of irrigation systems within the Eucalyptus Business Park Specific Plan area.

1) All landscaped areas should be equipped with a permanent, automatic, underground irrigation system. Drip systems are encouraged in all areas needing irrigation. Irrigation systems must conform to all City of Ontario requirements.

2) Irrigation systems should be designed to apply water slowly, allowing plants to be deep soaked and to reduce run-off.

3) Connect the irrigation system to the recycled water conveyance system.

4) "Pop-up" type sprinkler heads may be used adjacent to all walks, drives, curbs (car overhangs), parking areas and public right-of-way but must be designed to prevent all run-off and overspray.

5) The design of irrigation systems, particularly the location of controller boxes, valves, and other above-ground equipment (e.g., backflow prevention devices), shall be incorporated into the overall landscaping design. Where aboveground equipment is provided, it shall be screened or otherwise removed from public view.

6) The irrigation system shall be programmed to operate between 6:00pm and 6:00am.

6.10 Streetscape Guidelines

Streetscape landscaping is integral to creating a sense of place within the Specific Plan area. Furthermore, streetscapes serve as a way to screen undesirable views from public views. Within the Specific Plan area, streetscapes are planted with a combination of evergreen and deciduous trees, low shrubs, and groundcovers to create a pleasing experience for pedestrians, bicyclists, and motorists.

The conceptual streetscape landscape treatments within the Specific Plan area are presented in the following sections.

6.10.1 Campus Avenue

The segment of Campus Avenue abutting the Eucalyptus Business Park Specific Plan area features landscaping within parkways on both sides of the street. Parkways include a curb-adjacent park strip planted with deciduous trees, low flowering groundcovers, a 5-foot-wide sidewalk, and an 8-foot-wide multi-purpose trail. Evergreen and deciduous trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. The typical Campus Avenue Streetscape is illustrated on Figure 6-2, *Campus Avenue Streetscape*.

6.10.2 Bon View Avenue

The typical section of Bon View Avenue features landscaping within parkways on both sides of the street. Parkways include a curb-adjacent park strip planted with evergreen trees and low flowering groundcovers, as well as a 5-foot-wide sidewalk. Evergreen trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. The typical Walker Avenue Streetscape is illustrated on Figure 6-3, *Bon View Avenue Streetscape*.

6.10.3 Grove Avenue

The segment of Grove Avenue within the Eucalyptus Business Park Specific Plan area features two landscaped components: a 28-foot-wide landscaped raised median and

parkways on both sides of the street. The landscaped raised median is planted with thematic deciduous and evergreen trees at to reinforce the theme established through previous development south of the Eucalyptus Specific Plan area. Parkways include a curb-adjacent park strip planted with deciduous trees and low flowering groundcovers, with a 5-foot-wide sidewalk along the east and west side of the street and an 8-foot multi-purpose trail along the east providing passive recreational opportunities. Deciduous trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to buffer development. The typical Grove Avenue Streetscape is illustrated on Figure 6-4, Grove Avenue Streetscape.

6.10.4 Walker Avenue

The segment of Walker Avenue abutting the Eucalyptus Business Park Specific Plan area features landscaping within parkways on the west side of the street. The Parkway includes a curb-adjacent park strip planted with deciduous trees, low flowering groundcovers, and a 5-foot-wide sidewalk. Evergreen and deciduous trees are planted beyond the right-of-way to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. An 8-foot-wide multi-purpose trail is also provided along the eastern side of Walker Avenue to offer passive recreational opportunities. The typical Walker Avenue Streetscape is illustrated on Figure 6-5, *Walker Avenue Streetscape*.

6.10.5 Eucalyptus Avenue

The segment of Eucalyptus Avenue abutting the Eucalyptus Business Park Specific Plan area features landscaping within parkways along the north side of the street. Parkways include a curb-adjacent park strip planted with deciduous trees, low flowering groundcovers, and a 5-foot-wide sidewalk. Evergreen and deciduous trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. An 8-foot-wide multi-purpose trail is also provided along the northern side of Eucalyptus Avenue to offer passive recreational opportunities. The typical Eucalyptus Avenue Streetscape is illustrated on Figure 6-6, *Eucalyptus Avenue Streetscape*.

6.10.6 Public Street 'A'

The typical section of Public Street 'A' features landscaping within parkways on both sides of the street. Parkways include a curb-adjacent park strip planted with evergreen trees and low flowering groundcovers, and a 5-foot-wide sidewalk. Evergreen and deciduous trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. The typical Public Street 'A' Streetscape is illustrated on Figure 6-7, *Public Street 'A' Streetscape*.

6.11 Entries and Monuments Guidelines

Entry and corner monument treatments are designed to provide distinct visuals to emphasize the Eucalyptus Business Park Specific Plan area's aesthetic. Hardscape and landscape features at entry and corner monument locations shall provide adequate "line-of-sight" for motorists and shall comply with applicable City design standards and specifications. Monumentation shall not be located within the public street right-of-way.

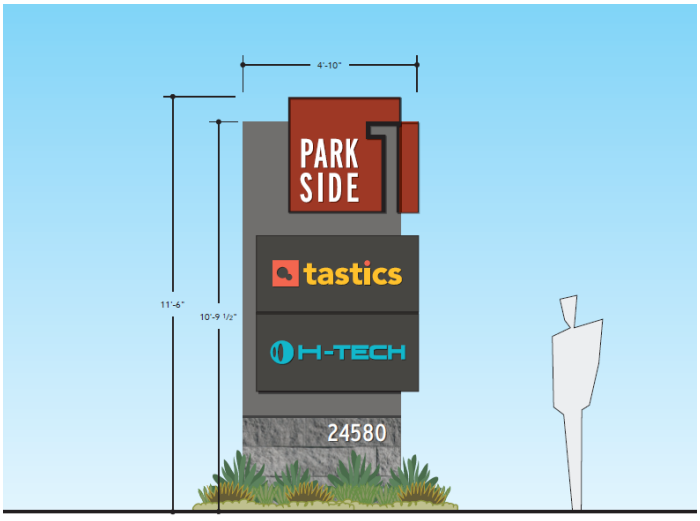
Implemented entry and corner treatments should be flexible to respond to physical contexts and the needs and desires of specific tenants and may differ slightly from the concepts presented herein; however, all entry and corner treatments within the Specific Plan area shall be consistent in theme.

6.11.1 Primary Corner Treatments

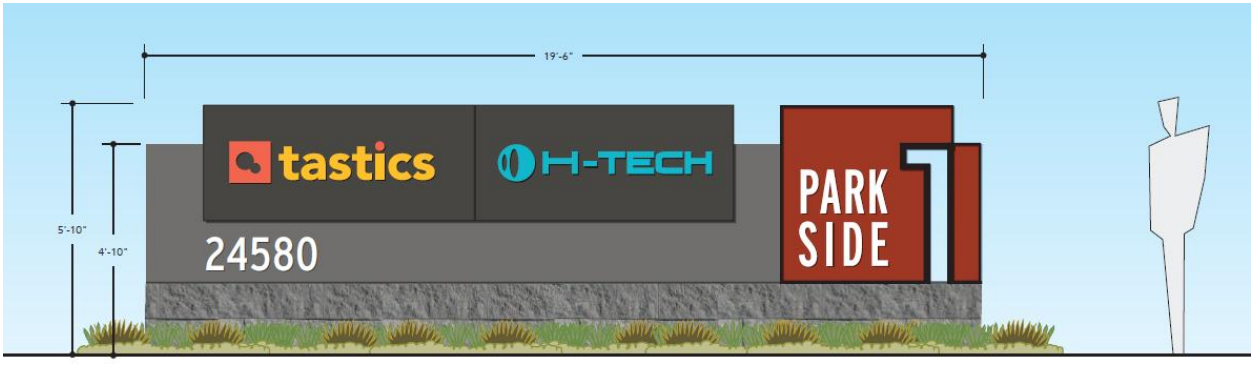
Primary corner monuments are located at the northeast corner of Eucalyptus Avenue and Campus Avenue and at the northeast and northwest corners of Eucalyptus Avenue and Grove Avenue. The primary corner treatments features orchard tree groves and the primary monument signage. Figure 6-8, *Conceptual Primary Corner Treatment*, conceptually illustrates the primary corner treatments.

6.11.2 Secondary Corner Treatments

Secondary corner monuments are located at the entrances into the Specific Plan area from the northern edge of Campus Avenue, Bon View Avenue, Grove Avenue, and Walker Avenue; from the southern edge of Bon View Avenue and Grove Avenue. The secondary corner treatments features orchard tree groves, shrubs, and groundcovers. Figure 6-9,



Conceptual Tenant Monumentation



Conceptual Secondary Corner Treatment, conceptually illustrates the secondary corner treatments.

The final locations and design details of the water quality basins will be determined when buildings are designed and oriented during the implementation of the Eucalyptus Business Park Specific Plan area.

6.12 Landscape Interface

Within the Specific Plan area, landscape treatments have been designed to address the interface between the Business Park and the Open Space – Parkland land use. The interface exhibits presented in this section are not intended to represent a literal design, but rather serve as guidelines, which may be subject to modification over time.

As shown in Figure 6-10, *Conceptual Landscape Interface – Business Park to Open Space – Parkland*, the 60-foot-wide ROW Public Street 'A' splits up the two land use districts. Within the Business Park planning areas, landscape buffers, parking, and drive-aisles can provide further separation between the Business Park buildings and the edge of the public park areas.

6.13 Water Quality Basin Guidelines

Water quality basins may be provided within the Specific Plan area to treat stormwater before the flows ultimately drain into the storm drain facilities. The water quality basins may include contoured basin edges for a natural look, and landscaping around the perimeter of the basin to screen public views of the basin. Swales may be no greater than 40% of the landscape area width to allow for ornamental landscaping, although landscaping may have limitations where necessary to deter the attraction of birds to the basins, which can be a hazard to aircraft using the nearby Chino Airport and Ontario International Airport. Other wildlife deterrents that may be considered include floating covers, bird balls, netting, and basins designed to be linear and narrow with steep sides and rip-rap lining.

6.14 Stormwater Infiltration Areas Guidelines

Stormwater infiltration areas within landscape areas shall be designed to be no greater than 40% of the landscape area width to allow for ornamental landscape. Stormwater infiltration devices located in landscape areas shall be reviewed and plans approved by the City of Ontario's Landscape Planning Division. Any stormwater devices in parkway and landscape areas shall not displace required tree locations.

CHAPTER 7

IMPLEMENTATION PLAN

7.1 Severability

This Specific Plan document enables the City of Ontario to facilitate the processing and approval of development plans and implementing permits to build out the Eucalyptus Business Park Specific Plan area. If any regulation, condition, program, or portion of this Specific Plan is held invalid or unenforceable, such portions shall be deemed separate, distinct, and independent provisions, and the invalidity of such portions or provisions shall not affect the validity and enforceability of the remaining provisions contained herein.

7.2 Applicability

Approval of the Eucalyptus Business Park Specific Plan indicates acceptance by the City of Ontario City Council of a general framework for the development of the Specific Plan area's property. Part of that framework establishes specific development standards that constitute the zoning regulations of the Specific Plan (refer to Chapter 5, *Development Regulations*). The provisions contained herein are intended to regulate development within the Specific Plan area.

Development within the Eucalyptus Business Park Specific Plan area shall be implemented through the City's approval of a tentative map, a final parcel map, and the Development Plan Review process as established in the City's Development Code. The implementation process described herein provides the mechanisms for review and approval of development projects within the Specific Plan area.

7.3 Interpretation

Unless otherwise provided, any ambiguity concerning the content or application of the Specific Plan shall be resolved by the City's Planning Director, or their designee, in a manner consistent with the goals, policies, purpose, and intent established in this Specific Plan.

7.4 Development Review Process

7.4.1 Subdivision Map

Approval of tentative maps within the Eucalyptus Business Park Specific Plan area may occur concurrently with or subsequently to the adoption of the Specific Plan. The tentative map and final subdivision maps shall be reviewed and approved pursuant to the applicable provisions of the City's Subdivision Ordinance and consistent with the applicable provisions established within the Land Use, Infrastructure, Design Guidelines, and Development Regulations chapters of this Specific Plan.

7.4.2 Development Plan Review

All development within the Eucalyptus Business Park Specific Plan area shall be subject to the Development Plan Review Process established in the City of Ontario Development Code, or as approved the by Planning Director or their designee). Adoption of this Specific Plan by the City includes the design guidelines contained in Chapter 6,

which shall be the design criteria by which development projects within the Specific Plan area shall be reviewed during Development Plan Review. Additionally, proposed uses within the Specific Plan area shall not exceed the total number of daily vehicle trips studied within the EIR prepared to address the Eucalyptus Business Park Specific Plan.

For topics on which these design guidelines are silent, the applicable design guidelines contained within the City's Development Code shall apply. The design guidelines are intended to offer flexibility while establishing fundamental evaluation criteria to guide the City's review of development projects during the design review process.

7.4.3 Development Agreements

Pursuant to California Government Code Sections 65864 et seq., City approval of individual statutory Development Agreements with each property owner may be included as part of the Specific Plan approval process and must be secured prior to approval of the first Final Map. The Development Agreement shall include, but not be limited to, methods of financing, acquisition, and construction of infrastructure. The Eucalyptus Business Park Specific Plan Development Agreement shall be fully executed prior to the issuance of the first building permits for development or first public works permit, whichever takes place first, within the Specific Plan.

7.4.4 Conditional Use Permits

Uses identified as conditionally permitted within Chapter 5, *Development Regulations*, of this Specific Plan shall be subject to review and approval by the City pursuant to the procedures set forth in Division 4.02.015, Conditional Use Permits, of the City's Development Code.

7.4.5 Variances

Variances and Administrative Exceptions to the development regulations contained in Chapter 5, *Development Regulations*, of this Specific Plan with respect to the site area, setback dimensions, building heights, distances between buildings, landscape percentage and off-street parking and loading shall be reviewed pursuant to "Variances and Administrative Exceptions" of Section 4.02.020 of the City's Development Code.

7.5 Substantial Conformance

The Substantial Conformance Determination is a mechanism that allows for the approval of ministerial minor modifications for development under the Specific Plan, which is considered and approved ministerially by the Planning Director or their designee. The City recognizes that modifications to the text and exhibits of this Specific Plan document may be needed over time. Upon direction by the City of Ontario Planning Department, certain modifications to text, exhibits, and/or development standards and design guidelines may not require a formal Specific Plan Amendment (i.e., through public hearing) and can occur ministerially. The following minor modifications to this document do not require a formal Specific Plan Amendment and are subject to ministerial review and approval by the Planning Director or their designee. The Planning Director shall have the discretion to approve or defer any request for modification to the Planning Commission or City Council, either for ministerial direction and guidance, or for a determination that the required change requires a formal amendment as discussed below in Section 7.6. Ministerial Substantial Conformance decisions are not subject to CEQA compliance because CEQA applies to discretionary actions and not to ministerial actions.

A Substantial Conformance shall constitute the following and will require approval from the Planning Director or their designee:

- Expansions or reductions of the net acreage covered by a given Planning Area.
- Transfer of development square footage of 15% or less within the same land use designation, provided that the shift in square footage does not exceed the maximum allowable square footage of 2,939,000 s.f. or exceed the maximum FAR of 0.55 provided in Chapter 5 of this Specific Plan.
- The ultimate alignment of driveways and drive aisles within any Planning Area as part of the development of implementing project(s).
- Construction of buildings, landscaping, and/or parking areas for building sites may cross over into adjacent Planning Areas within the same land use designation, Buildings constructed across Planning Area boundaries shall not, by themselves, trigger the requirement for a Substantial Conformance. Modification of design criteria such as architectural details, landscape treatments, fencing, lighting, and signage.
- Changes to the Phasing Plan, provided infrastructure is available to serve the phase as determined by the City Engineer.
- Implementation of alternative landscape materials, wall materials, entry monument design, primary/secondary corner treatments, and streetscape design that are generally consistent with the conceptual design guidelines contained within this Specific Plan.
- Modifications to the Business Park Architectural Design Guidelines, such as variation of architectural style and variations in materials and colors.
- The Conceptual Site Plan exhibit (Figure 3-3) is illustrative only; modifications to the building orientation and layout as part of the Development Plan review process where the revisions remain consistent with the intent and development standards of the Specific Plan. Final infrastructure facility sizing and precise location of dry utilities, water, sewer, and storm drainage improvements as approved by the City Engineer, OMUC, or San Bernardino Flood Control District.
- Roadway ROW design, when the changes are warranted and approved by the City Engineer.
- Revisions to exhibits that do not substantially change the intent of the Specific Plan.
- Modification, deletions, and additions to the list of permitted and conditionally permitted uses.
- Specific modifications of a similar nature to those listed above which are deemed minor by the Planning Director, which are in keeping with the intent of this Specific Plan and which are in conformance with the Policy Plan component of The Ontario Plan.

7.6 Formal Amendments to the Specific Plan

All modifications to this Specific Plan document that do not meet the criteria of a Substantial Conformance (as defined in the previous subsection) shall be deemed to require a formal Specific Plan Amendment.

Formal Specific Plan Amendments shall be subject to the review and approval of the City Council. The Planning Commission should first hear and consider all applications for formal Specific Plan Amendments and provide a recommendation to the City Council. As required by the California Government Code, all government agencies significantly affected by the proposed Amendment shall be notified

of the proposed action prior to the approval. Because a Specific Plan Amendment is a discretionary action, such amendments shall be appropriately reviewed in accordance with the CEQA Statute and Guidelines, with the City of Ontario serving as the CEQA Lead Agency.

Any formal Specific Plan Amendment initiated by an applicant requires preliminary review by the Planning Director, filing of an official application and required materials supporting the Amendment, submittal of a fee.

In considering approval or disapproval of formal Specific Plan Amendments, the Planning Commission and City Council shall find that the request is:

- Consistent with the Policy Plan component of The Ontario Plan (General Plan) in effect at the time of consideration.
- Compatible with surrounding land uses with respect to use, development standards, density, or issues of health, public safety, and general welfare.
- Consistent with the overall design character and general structure set forth in Chapter 6, *Design Guidelines*, of this Specific Plan.

7.7 Appeals

Appeals of any determination of the Planning Director, Zoning Administrator, or the Planning Commission, may be made by the applicant or any other aggrieved party by filing an application on forms provided by the City of Ontario and accompanied by the appropriate filing fee, where applicable, within ten (10) days following the final date of action for which an appeal is made.

7.8 Compliance with Mitigation Monitoring and Reporting Program

Certification of an EIR shall be required prior to the approval of the Specific Plan. Development within the Eucalyptus Business Park Specific Plan shall comply with all approved mitigation measures as described in the MMRP included as part of the EIR.

7.9 Project Financing

The financing of construction, operation, and maintenance of public improvements, facilities, and public services shall include funding through a combination of financing mechanisms. Prior to the recordation of final maps, a final determination shall be made by City staff and confirmed by the Planning Director and City Engineer regarding the responsibility for construction and maintenance of public facilities, whether publicly or privately maintained.

Implementation of the Eucalyptus Business Park Specific Plan may involve financing options including, but not limited to, the following sections:

7.9.1 Facilities and Services

Construction of public improvements and facilities and the provision of public services may be financed through private capital investment, a Community Facilities District (CFD), Development Impact Fees (DIF), or other special district, pursuant to the Mello-Roos Community District Act of 1982.

7.9.2 Operation and Maintenance

Options for operation and maintenance of public and private improvements and facilities include, but are not limited to, the following:

- City Public Works Department or other public agencies
- Individual private property owners

- Private Property Owners Association
- CFD or other special district (will be at the City's sole distraction)

7.10 Phasing Plan

As shown on Figure 7-1, *Conceptual Phasing Plan*, the development of the Eucalyptus Business Park Specific Plan area is expected to occur in six phases in response to market demands and according to a logical and orderly extension of roadways, public utilities, and infrastructure.

Phase A includes Planning Areas 3 and 6; Phase B includes Planning Areas 2 and 5; Phase C includes Planning Areas 1 and 4; Phase D includes Planning Area 9; Phase E includes Planning Area 8; and Phase F includes Planning Area 7. The developer and the City of Ontario will work together to ensure that the Open Space – Parkland Planning Areas are constructed concurrently with the build-out of the Business Park portions of the Specific Plan area in a phased manner. The details of this partnership will be included in the Development Agreement(s) accompanying the approval of the Specific Plan.

Phasing of the Specific Plan shall be permitted; however, required public improvements will be dictated by the City of Ontario's Land Development Section and the approved Development Agreement(s). The Phasing Plan is conceptual and subject to revision as the project development evolves. The Specific Plan shall allow development in any phase at any time if adequate infrastructure to support same is included. For example, construction of the publicly operated animal resource center or other building or improvement may occur prior to the completion of an earlier phase.

7.11 Maintenance Plan

The public and private improvements constructed within the Eucalyptus Business Park Specific Plan area shall be maintained through a combination of public and private entities as described in Table 7-1, *Maintenance Responsibilities*. Table 7-1 provides a list of maintenance entity options that may fund and/or maintain facilities within the Specific Plan area, however, the ultimate maintenance entity for each facility will be determined by the Eucalyptus Business Park Specific Plan's Development Agreement(s). A Property Owners Association (POA) may be established for the maintenance of common area landscape improvements and private roadways within portions of the Eucalyptus Business Park Specific Plan area. For areas in public ownership (such as public roadway ROWs and the Open Space-Parkland Planning Areas), City of Ontario Public Works, other public agencies, or municipal maintenance districts may fund the maintenance of these areas.

Table 7-1 Maintenance Responsibilities

Facility	City and/or CFD	Property Owners Association	Property Owner or Occupant	Public Utility

Figure 7-1

Phasing Plan

APPENDIX A

POLICY PLAN CONSISTENCY ANALYSIS

California Government Code (Title 7, Division 1, Chapter 3, Article 8, §§ 65450 through 65457) allows local governments to adopt and administer specific plans as tools to implement their general plan; however, specific plans must demonstrate consistency with the goals and policies set forth in the local general plan. This appendix provides a summary discussion to demonstrate that this Eucalyptus Business Park Specific Plan is consistent with, and results in the implementation of, applicable primary goals and policies of the Policy Plan (General Plan) component of The Ontario Plan.

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
LU-1: A community that has jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.	
LU-1.1: Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.	**Consistent.** The Eucalyptus Business Park Specific Plan area is located in the Ontario Ranch area of the City, which is an area planned for future growth. The City's Master Plans for water, sewer, and storm drainage identify planned infrastructure facilities to support growth in this area. The developer(s) of the Eucalyptus Business Park Specific Plan area will be required to participate in the installation of the Master Plan infrastructure. Additionally, streets within the Specific Plan area are designed to be safe and accessible to accommodate different modes of non-vehicular transportation.
LU-1.2: Sustainable Community Strategy. We integrate state, regional, and local Sustainable Community /Smart Growth principles into the development and entitlement process.	**Consistent.** The Eucalyptus Specific Plan features numerous sustainable features. The Specific Plan encourages non-motorized circulation by employees and visitors via its provision of an integrated network of sidewalks, bikeways, and trails. In accordance with the Policy Plan Exhibit M-02, Multipurpose Trails & Bikeway, Class II bike lanes are provided along both sides of Campus Avenue and Walker Avenue. Additionally, the Eucalyptus Business Park Specific Plan area includes an 8-foot multi-purpose trail along Eucalyptus Avenue, Grove Avenue and Walker Avenue. All development in the Specific Plan area are required to conform to the California Green Building Standards Code (CalGreen Code) and the Specific Plan includes

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
	Energy Efficiency guidelines. In addition, the EBPSP includes a rooftop solar energy system which would generate enough electricity to meet 45% of annual electricity demand. The plant palette for the Specific Plan area consists of water-efficient species native to southern California or naturalized to the arid southern California climate, and the use of turf will be minimized. As such, the Eucalyptus Specific Plan is consistent with this policy.
LU-1.3: Adequate Capacity. We require adequate infrastructure and services for all development.	**Consistent.** The developer(s) of the Eucalyptus Business Park Specific Plan area are required to install adequate roadway and utility infrastructure improvements to meet the demands of the Specific Plan while maintaining adequate service levels for existing, surrounding development. Refer to the Environmental Impact Report (EIR) prepared for the Eucalyptus Business Park Specific Plan for a detailed analysis of the adequacy of the Specific Plan's infrastructure improvements.
LU-1.4: Multimodal Mobility. We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities	**Consistent.** The Eucalyptus Business Park Specific Plan area offers numerous opportunities for non-vehicular circulation, including multi-purpose trails, bikeways, and sidewalks. Class II bike lanes would largely be provided along both sides of Campus Avenue, between Riverside Drive and Holt Avenue, Eucalyptus Avenue, and Walker Avenue, between Euclid Avenue and Hamner Avenue. Additionally, the Eucalyptus Business Park Specific Plan area includes an 8-foot multi-purpose trail along Eucalyptus Avenue, Grove Avenue, Campus Avenue, and Walker Avenue to encourage connectivity and circulation by employees, visitors, and the passersby that is not completely dependent on a motorized vehicle. Additionally, bike storage facilities are required to be installed in each building to further promote alternative transportation.
LU-1.5: Jobs-Housing Balance. We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance.	**Consistent.** The developer(s) of the Eucalyptus Business Park will construct roadway and utility improvements in accordance with the City's infrastructure master plans. Furthermore, the Specific Plan area will generate employment opportunities for residents of the City and surrounding jurisdictions, and reduce the need for residents in the region to commute to other regions for employment opportunities. Accordingly, implementation of the Eucalyptus Business Park Specific Plan will improve

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
	the jobs-housing balance within the City and the Inland Empire region.
LU-1.6: Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.	**Consistent.** The Eucalyptus Business Park Specific Plan land use plan provides Business Park land uses that will accommodate a variety of employment uses arranged in a sensible and efficient manner that allow ease of access and complement the surrounding community. The parkland area will provide recreational amenities for residents of and visitors to the City of Ontario. The business park area of the Eucalyptus Business Park Specific Plan area is envisioned to attract local, national, and international businesses, and will assist in diversifying the mix of employment opportunities available in the City. The retail component within the business park area will serve both the businesses within the Eucalyptus Business Park Specific Plan area and the broader community.
LU-1.7: Revenues and Costs. We require future amendments to our Land Use Plan to be accompanied by analyses of fiscal impacts.	**Consistent.** A fiscal impact analysis will be prepared in support of the Specific Plan. Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of potential fiscal effects associated with the implementation of the Specific Plan.
LU-2: Compatibility between a wide range of uses and resultant urban patterns and forms.	
LU-2.1: Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.	**Consistent.** The Eucalyptus Business Park Specific Plan EIR evaluated the potential physical environmental impacts of the implementation of the Specific Plan on the surrounding community in accordance with the California Environmental Quality Act (CEQA). Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of impacts to adjacent properties associated with the implementation of the Specific Plan.
LU-2.2: Buffers. We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.	**Consistent.** The Eucalyptus Business Park Specific Plan provides conceptual streetscapes for Eucalyptus Avenue, Campus Avenue, Walker Avenue, and Public Street 'A'; primary and secondary corner treatments at Specific Plan entry points; and landscaped screening walls between truck courts and parking areas and adjacent public rights-of-way. Implementation of these features provides a visual buffer between planned on-site Business Park land uses and existing and planned off-site land uses. Additionally, the Specific Plan includes Open Space–Parkland along the northern boundary to separate the business park uses from the residential uses planned

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
	to the north. As such, the Eucalyptus Business Park is consistent with this policy.
LU-2.3: Hazardous Uses. We regulate the development of industrial and similar uses that use, store, produce, or transport toxic substances, air emissions, other pollutants, or hazardous materials.	**Consistent.** Building occupants within the Eucalyptus Business Park Specific Plan area are obligated to comply with all local and State requirements for using, storing, producing, or transporting toxic substances, air emissions, other pollutants, or hazardous materials.
LU-2.5: Regulation of Uses. We regulate the location, concentration, and operation of uses that have impacts on surrounding land uses.	**Consistent.** The Eucalyptus Business Park Specific Plan EIR evaluated the potential physical environmental impacts of the implementation of the Specific Plan on the surrounding community in accordance with CEQA. Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of impacts to adjacent properties associated with the implementation of the Specific Plan.
LU-2.6: Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.	**Consistent.** Water, sewer, storm drain, and dry utility improvements will be located underground and out of view, with the exception of storm water inlets and channels that are required to be exposed at the surface. Roadway infrastructure improvements are designed to be landscaped with a combination of evergreen and deciduous trees – including flowering varieties – shrubs and groundcovers in an aesthetically-pleasing manner to establish the Specific Plan's design theme.
LU-2.8: Transitional Areas. We require development in transitional areas to protect the quality of life of current residents.	**Consistent.** The Eucalyptus Business Park Specific Plan area is primarily surrounded by agricultural uses, dairy operations, and existing and planned industrial warehouse uses. Nonetheless, the Specific Plan stipulates landscaping and building setbacks along all of the Specific Plan's perimeter streets that separate the Specific Plan area from adjacent properties. Trucks traveling to and from the Specific Plan area are required to utilize the City's approved truck routes, thereby minimizing exposure of nearby residents to truck-related impacts. Development within the Specific Plan area must adhere to the Design Guidelines in Chapter 6 of this Specific Plan, which will provide for a high-quality, attractive, and contemporary environment.
LU-2.9: Methane Gas Sites. We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	**Consistent.** If determined to be necessary, the Eucalyptus Business Park Specific Plan area will be required to implement the mitigation measures identified in the Eucalyptus Business Park Specific Plan EIR addressing soil remediation and building

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
	venting requirements related to methane gas hazards. As such, this Specific Plan is consistent with this policy.
LU-4: Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.	
LU-4.2: Interim Development. We allow development in urban, mixed use, and transit-oriented Place Types that is not immediately reflective of our ultimate Vision for the Place Type, provided it can be modified or replaced when circumstances are right to support development aligned with the Place Type Vision. We will not allow development that impedes, precludes, or compromises our ability to achieve our Vision.	Consistent. The central theme of the Ontario Vision is "A sustained, community-wide prosperity which continuously adds value and yields benefits." The open space-parkland area will introduce and sustain recreational amenities in the long term for use by City residents and visitors. The phased development of the business park land uses in the Eucalyptus Business Park Specific Plan area will attract new businesses, provide employment opportunities for residents, contribute the City's tax base, and construct circulation and utility infrastructure improvements that are critical to allow for the growth of the region. As such, the Specific Plan area will help the City achieve its Vision by continuously adding value, yielding benefits, and contributing to the prosperity of the City and the Inland Empire region.
LU-4.3: Infrastructure Timing. We require that the necessary infrastructure and services be in place prior to or concurrently with development.	Consistent. Chapter 7, *Implementation Plan*, of the Eucalyptus Business Park Specific Plan includes a development phasing plan that requires infrastructure needed to support the buildout of the Specific Plan to be adequately phased concurrently with development.
LU-5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.	
LU-5.5: Airport Compatibility Planning for ONT. We create and maintain the Airport Land Use Compatibility Plan for ONT.	Consistent. The land uses provided by the Eucalyptus Business Park Specific Plan are consistent with the Airport Land Use Compatibility Plan (ALUCP) requirements for the Ontario International Airport. Furthermore, future development on the Specific Plan property would be required to comply with the development standards and design guidelines established in this Specific Plan, as well as the applicable requirements of the City of Ontario Development Code, which would preclude any potential inconsistencies with the Ontario International Airport ALUCP.
LU-5.7: ALUCP Consistency with Land Use Regulations. We comply with state law that requires general plans, specific plans, and all new development to be consistent with the	Consistent. The land uses provided by the Eucalyptus Business Park Specific Plan are consistent with the Airport Land Use Compatibility Plan (ALUCP) requirements for the Ontario International Airport and the provisions provided in the Chino Airport Overlay

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.	District. All proposed development will be reviewed by the City of Ontario staff in the Development Plan review process.
LU-5.8: Chino Airport. We will support the creation and implementation of the Airport Land Use Compatibility Plan for Chino Airport.	**Consistent.** The land uses provided by the Eucalyptus Business Park Specific Plan are consistent with the provisions provided in the Chino Airport Overlay District. Proposed development within the Specific Plan area will be reviewed by the City of Ontario Staff in the Site Plan review process.

Ontario Plan Policy	Specific Plan Consistency
Housing Element	
H-1: Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.	
H-1.4: Historical Preservation. We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.	**Consistent.** Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of potential impacts to historical and cultural resources that would occur as a result of the implementation of the Specific Plan. If determined to be necessary, development projects within the Specific Plan area will be required to implement mitigation measures to reduce impacts to historical and cultural resources to the maximum extent feasible.

Ontario Plan Policy	Specific Plan Consistency
Parks and Recreation Element	
PR-1: A system of safe and accessible parks that meets the needs of the community.	
PR-1.9: Phased Development. We require parks be built in new communities before a significant proportion of residents move in.	**Consistent.** The Eucalyptus Business Park Specific Plan does not include the creation of new residential units, but includes 35.88 acres of the City's Grand Park. Chapter 7, *Implementation Plan*, of the Eucalyptus Business Park Specific Plan includes a development phasing plan that discusses the buildout of the Specific Plan which includes the both the Business Park and the Open Space – Parkland land uses.
PR-1.15: Trail Connectivity. We strengthen and improve equestrian, bike, and multipurpose trail connections within the City and work to improve trail connections into adjacent jurisdictions.	**Consistent.** The Eucalyptus Business Park Specific Plan includes multi-purpose trails along Eucalyptus Avenue, Campus Avenue, Grove Avenue, and Walker Avenue to encourage connectivity and circulation by employees, visitors, and the passerby by means not completely dependent on a motorized vehicle. The multi-purpose trail system provided by the Specific Plan area implements the multipurpose trail system

Ontario Plan Policy	Specific Plan Consistency
Parks and Recreation Element	
	shown in Exhibit M-3, Multipurpose Trails & Bikeway Corridor Plan, of The Policy Plan.

Ontario Plan Policy	Specific Plan Consistency
Environmental Resources Element	
ER-1: A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.	
ER-1.3: Conservation and Sustainable Water Supply. We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability	**Consistent.** The Eucalyptus Business Park Specific Plan incorporates a drought-tolerant plant palette and water-efficient irrigation system design to minimize the water demands of planned development. In addition, implementing development projects will be required to comply with the water-efficiency mandates of the California Green Building Standards Code, including the provision of water-efficient fixtures.
ER-1.4: Supply-Demand Balance. We require that available water supply and demands be balanced.	**Consistent.** The Eucalyptus Business Park Specific Plan EIR evaluates the potential impacts of the Specific Plan's implementation related to water supply based on the results of a project-specific water supply assessment. If deemed necessary by the EIR, development within the Specific Plan is required to implement mitigation measures to reduce significant impacts to the water supply to the maximum extent feasible.
ER-1.5: Water Resource Management. Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	**Consistent.** As discussed in the Eucalyptus Business Park Specific Plan EIR, implementation of the Specific Plan will not result in new, substantial sources of urban runoff, and also will not violate applicable stormwater quality requirements. Also, the Eucalyptus Business Park Specific Plan area includes permeable surfaces (e.g., open space-parkland, landscaped areas, water quality/infiltration basins) that would allow surface water to percolate and contribute to recharge of the aquifer.
ER-1.6: Urban Run-off Quantity. We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	**Consistent.** As discussed in the Eucalyptus Business Park Specific Plan EIR, implementation of the Specific Plan will not result in new, substantial sources of urban runoff, and also will not violate applicable stormwater quality requirements. Also, the Eucalyptus Business Park Specific Plan area includes permeable surfaces (e.g., open space-parkland, landscaped areas, water quality/infiltration basins) that would allow surface water to percolate and contribute to recharge of the aquifer.

Ontario Plan Policy	Specific Plan Consistency
Environmental Resources Element	
ER-1.7: Urban Run-off Quality. We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	**Consistent.** As discussed in the Eucalyptus Business Park Specific Plan EIR, implementation of the Specific Plan will not result in new, substantial sources of urban runoff, and also will not violate applicable stormwater quality requirements. Also, the Eucalyptus Business Park Specific Plan area includes permeable surfaces (e.g., open space-parkland landscaped areas, water quality/infiltration basins) that would allow surface water to percolate and contribute to recharge of the aquifer.
ER-1.8: Wastewater Management. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	**Consistent.** All sewer conveyance infrastructure needed to serve the Eucalyptus Business Park Specific Plan area will be installed in accordance with City design standards. Accordingly, implementation of the Specific Plan will not violate any applicable waste discharge requirements as detailed in the Eucalyptus Business Park Specific Plan EIR.
ER-3: Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.	
ER-3.3: Building and Site Design. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	**Consistent.** The Eucalyptus Business Park Specific Plan's design guidelines encourage all new construction to utilize design features, fixtures, appliances, and heating and cooling controls to conserve energy and water. In addition, all development is required to comply with the California Green Building Standards Code (CalGreen Code).
ER-3.6: Generation- Renewable Sources. We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.	**Consistent.** The Eucalyptus Business Park Specific Plan proposes a rooftop solar energy system which generates enough electricity to meet 45% of annual electricity demand.
ER-4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.	
ER-4.1: Land Use. We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.	**Consistent.** The Eucalyptus Business Park Specific Plan area provides employment land uses in close proximity to major transportation corridors (Interstate 10, Interstate 15, State Route 60, State Route 83, State Route 71 and State Route 91) and near Bus Rapid Transit (BRT) Corridors along Ontario Ranch Road and Euclid Avenue. Therefore, the Specific Plan area provides local employment opportunities for residents and serves to improve the regional jobs-housing balance. Additionally, the Specific Plan area provides an integrated system of sidewalks, bikeways, and multi-purpose trails on internal and perimeter roadways to encourage non-vehicular modes of transportation. The Eucalyptus Business Park

Ontario Plan Policy	Specific Plan Consistency
Environmental Resources Element	
	Specific Plan area has the potential to reduce vehicle miles traveled, which would reduce tailpipe emissions – a major source of greenhouse gases (GHGs).
ER-4.3: Greenhouse Gases (GHG) Emissions Reductions. We will reduce GHG emissions in accordance with regional, state, and federal regulations.	**Consistent.** As described in the Eucalyptus Business Park Specific Plan EIR, the Specific Plan would be consistent with applicable regional, State, and federal regulations related to the reduction of GHG emissions and would not obstruct implementation of any GHG reduction plans/programs.
ER-4.8: Tree Planting. We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality. We expand the tree canopy in environmental justice areas to enhance air quality and reduce the "heat island" effect.	**Consistent.** The Specific Plan area is not within an environmental justice area, however, as part of the development of the Eucalyptus Business Park Specific Plan area, a substantial number of trees will be planted within the Specific Plan area, and in particular along roadway street frontages, near building entrances, and in passenger car parking lots. In addition, trees will be planted in the open space-parkland planning areas.
ER-5: Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.	
ER-5.1: Habitat Conservation Areas. We support the protection of biological resources through the establishment, restoration, and conservation of high-quality habitat areas.	**Consistent.** The Eucalyptus Business Plan Specific Plan area was historically used for agricultural uses, dairy farming, and a trucking operation. The Specific Plan EIR evaluates impacts to biological resources (including sensitive/protected habitats and species) as a result of the implementation of the Specific Plan and establishes mitigation measures required to reduce significant impacts to the maximum extent feasible.
ER-5.2: Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.	**Consistent.** The Eucalyptus Business Plan Specific Plan area was historically used for agricultural uses, dairy farming, and a trucking operation. The Specific Plan EIR evaluates impacts to biological resources (including sensitive/protected habitats and species) as a result of the implementation of the Specific Plan and establishes mitigation measures required to reduce significant impacts to the maximum extent feasible.
ER-5.3: Right to Farm. We support the right of existing farms to continue their operations within the Ontario Ranch.	**Consistent.** Implementation of the Eucalyptus Business Park Specific Plan would not preclude the continued operation of existing farms within the New Model Colony/Ontario Ranch for ten years, as shown in Table 5-1, *Permitted Uses*, of this Specific Plan. Furthermore, the Eucalyptus Business Park Specific Plan EIR evaluates impacts to surrounding land uses that could potentially occur as a result of the

Ontario Plan Policy	Specific Plan Consistency
Environmental Resources Element	
	implementation of the Eucalyptus Business Park Specific Plan and establishes mitigation measures required to reduce significant impacts to the maximum extent feasible.
ER-5.4: Transition of Farms. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	**Consistent.** Implementation of the Eucalyptus Business Park Specific Plan would not preclude the continued operation of existing farms within the New Model Colony/Ontario Ranch for ten years, as shown in Table 5-1, *Permitted Uses*, of this Specific Plan. Furthermore, the Eucalyptus Business Park Specific Plan EIR evaluates impacts to surrounding land uses that could potentially occur as a result of the implementation of the Eucalyptus Business Park Specific Plan and establishes mitigation measures required to reduce significant impacts to the maximum extent feasible.

Ontario Plan Policy	Specific Plan Consistency
Community Economics Element	
CE-1: A complete community that provides for all incomes and stages of life.	
CE-1.1: Jobs-Housing Balance. We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.	**Consistent.** The Eucalyptus Business Park Specific Plan would provide over 137.90 acres of new employment-generating land uses in close driving distance to existing and planned residential land uses. The new job opportunities provided within the Specific Plan area will assist the City's efforts to promote job growth and improve the balance between jobs and housing within the City limits.
CE-1.12: Circulation. We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles.	**Consistent.** BRT Corridors are located along Ontario Ranch Road and Euclid Avenue in close proximity to the Specific Plan. The Specific Plan would construct a bus turnout near the intersection of Grove Avenue and Eucalyptus Avenue in anticipation of future Omnitrans service. Additionally, the Specific Plan area provides Class II Bikeways along Walker Avenue and Campus Avenue. Additionally, sidewalks are provided along all streets within the Specific Plan area.
CE-2: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.	
CE-2.1: Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.	**Consistent.** The Eucalyptus Business Park Specific Plan provides for the development of the Specific Plan property as a high-quality and contemporary business park. This Specific Plan's Design Guidelines establish criteria for architecture, lighting, signage, and landscape design to promote the development of an

Ontario Plan Policy	Specific Plan Consistency
Community Economics Element	
	attractive business park with timeless design features, for as an inviting place to work and conduct business. The adjacency of the park and integral retail development further enhances the attractiveness of the Specific Plan.
CE-2.2: Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.	**Consistent.** The Eucalyptus Business Park Specific Plan requires implementing development projects within the Specific Plan area to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Planning Department which may require the development to demonstrate how each project will create appropriately unique, functional and sustainable places. Furthermore, development projects in the Specific Plan area are required to be designed in accordance with the architectural and landscape design guidelines established in Chapter 6, *Design Guidelines*, of this Specific Plan, which will result in a unique, aesthetically attractive, and contemporary business park that will be highly competitive with similar developments in the region.
CE-2.4: Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.	**Consistent.** Development projects in the Eucalyptus Business Park Specific Plan are required to be designed in accordance with the architectural and landscape design guidelines in Chapter 6, *Design Guidelines*, of this Specific Plan, which will result in a unique, aesthetically attractive, and contemporary business park that reflects high-quality architectural design.
CE-2.5: Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.	**Consistent.** This Specific Plan defines the entities responsible for the maintenance of publicly and privately-owned improvements within the Specific Plan area, including roadways and utility infrastructure. Compliance with the maintenance responsibility matrix established in Chapter 7, *Implementation Plan*, will ensure that all improvements within the Specific Plan area are properly and consistently maintained.
CE-2.6: Public Maintenance. We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.	**Consistent.** This Specific Plan defines the entities responsible for the maintenance of publicly and privately-owned improvements within the Specific Plan area, including roadways and utility infrastructure. Compliance with the maintenance responsibility matrix established in Chapter 7, *Implementation Plan*, will ensure that all improvements

Ontario Plan Policy	Specific Plan Consistency
Community Economics Element	
	within the Specific Plan area are properly and consistently maintained.
CE-3: Decision-making deliberations that incorporate the full short-term and long-term economic and fiscal implications of proposed City Council actions.	
CE-3.2: General Plan Amendments. We require those proposing General Plan amendments to disclose reasonably foreseeable impacts through a fiscal analysis.	**Consistent.** A fiscal impact analysis will be prepared in support of the Eucalyptus Business Park Specific Plan. Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of potential reasonably foreseeable fiscal effects associated with implementation of this Specific Plan.

Ontario Plan Policy	Specific Plan Consistency
Mobility Element	
M-1*: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.*	
Policy M1-1: Roadway Design and Maintenance. We require our roadways to: • Comply with federal, state, and local design and safety standards; • Meet the needs of multiple transportation modes and users; • Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways; • Be maintained in accordance with best practices; • Be compatible with the streetscape and surrounding land uses; and Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies.	**Consistent.** The Eucalyptus Business Park Specific Plan includes roadway improvements consistent with the City of Ontario Master Plan of Streets and Highways, as described in Chapter 4, *Infrastructure Plan*. Perimeter and internal streets will be constructed to City standards and are designed to accommodate vehicles, pedestrians, and bicyclists through the inclusion of sidewalks, Class II bike lanes, and multi-purpose trails. Roadway designs include parkways and landscaping to support circulation and enhance compatibility with adjacent land uses. Maintenance responsibilities are outlined in Chapter 7, *Implementation Plan*.
Policy M1-2: Mitigation of Impacts. We require development to mitigate its traffic impacts.	**Consistent.** The Eucalyptus Business Park Specific Plan is supported by a project-specific traffic impact analysis that identifies necessary mitigation measures to address traffic impacts. The implementation of these measures will be the responsibility of the developer(s) and will be carried out in accordance with City of Ontario standards and requirements.
Policy M1-4: Complete Streets.	**Consistent.** The Eucalyptus Business Park Specific Plan establishes a multimodal circulation network that

Ontario Plan Policy	Specific Plan Consistency
Mobility Element	
We work to provide a complete, balanced, context-aware, multimodal transportation network that meets the needs of all users of streets, roads, and highways, including motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation. We prioritize implementation of complete streets improvements in environmental justice areas to facilitate opportunities for residents to use active transportation systems.	includes sidewalks, Class II bike lanes, and multi-purpose trails along major roadways such as Campus Avenue, Eucalyptus Avenue, and Walker Avenue, as described in Chapter 4, *Infrastructure Plan*. The plan is designed to accommodate pedestrians, bicyclists, and vehicles through coordinated roadway and non-vehicular improvements. Design Guidelines in Chapter 6 address pedestrian connectivity and require consistent treatment of sidewalks, parkways, and landscape buffers to support safe and functional circulation throughout the Specific Plan area.
Policy M1-5: Level of Service. Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).	**Consistent.** The Eucalyptus Business Park Specific Plan is supported by a project-specific traffic impact analysis that identifies necessary mitigation measures to address traffic impacts, as referenced in Chapter 4, *Infrastructure Plan*. The Specific Plan includes planned improvements to perimeter and internal roadways in accordance with the City of Ontario Master Plan of Streets and Highways. Intersection improvements and roadway design will be subject to further analysis and review by the City to ensure compliance with applicable standards.
Policy M1-6: Reduced Vehicle Miles Traveled. We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.	**Consistent.** The Eucalyptus Business Park Specific Plan allows for business park and support commercial land uses with internal circulation systems, including sidewalks, bike lanes, and multi-purpose trails, to encourage non-vehicular travel. Also, the open space-parkland planning areas will provide recreational amenities and the retail component within the business park planning area will provide support services within walking and biking distance of the business park uses.
M-2: *A system of trails and corridors that facilitate and encourage active modes of transportation.*	
Policy M2-1: Active Transportation. We maintain our Active Transportation Master Plan to create a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe, comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.	**Consistent.** The Eucalyptus Business Park Specific Plan includes the construction of Class II bike lanes along Campus Avenue, Eucalyptus Avenue, and Walker Avenue, as well as multi-purpose trails along Campus Avenue, Eucalyptus Avenue, Grove Avenue, and Walker Avenue, as detailed in Chapter 4, *Infrastructure Plan*. These facilities are integrated with a network of sidewalks throughout the Specific Plan

Ontario Plan Policy	Specific Plan Consistency
Mobility Element	
	area to support safe and accessible travel for pedestrians and bicyclists. The circulation improvements are designed to enhance connectivity within the Business Park and to adjacent areas, consistent with the City's active transportation goals.
Policy M2-2: Bicycle System. We provide off-street multipurpose trails and Class II bikeways as our primary paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.	**Consistent.** The Eucalyptus Business Park Specific Plan includes Class II bikeways and multi-purpose trails throughout the circulation network to support bicycle travel. At final buildout, all development in the Specific Plan area will be required to comply with City of Ontario bicycle facility standards, including provisions for bike lanes, trails, and secure bicycle parking and storage.
Policy M2-3: Pedestrian Walkways. We require walkways that promote safe and convenient travel between residential areas, businesses, schools, parks, recreation areas, and other key destination points.	**Consistent.** The Eucalyptus Business Park Specific Plan includes sidewalks and multi-purpose trails along all major perimeter roadways, including Eucalyptus Avenue, Grove Avenue, Walker Avenue, and Campus Avenue, to ensure safe and convenient pedestrian access throughout the plan area. Internal private drive aisles and public streets will provide additional pedestrian connections between planned business park uses and open space areas. All pedestrian facilities will be constructed in accordance with City standards and designed to promote visibility and safety.
M-2.4 Network Opportunities. We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed- use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity. (Link to Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section)	**Consistent.** The Eucalyptus Business Park Specific Plan utilizes public rights-of-way to establish a connected bicycle and pedestrian network, including sidewalks and multi-purpose trails within the ROWs of Eucalyptus Avenue, Grove Avenue, Walker Avenue, Campus Avenue, and other major corridors. The plan incorporates parkways, landscape buffers, and trail corridors to expand the public realm and improve non-vehicular connectivity throughout the Specific Plan area in alignment with City goals.
Goal M-4: An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.	
Policy M4-1: Truck Routes.	**Consistent.** Truck access to and from the Eucalyptus Business Park Specific Plan area will utilize Grove

Ontario Plan Policy	Specific Plan Consistency
Mobility Element	
We designate and maintain a network of City truck routes that provide for the safe and efficient transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown on Exhibit M-04, Truck Routes. We will minimize conflicts on truck routes through the design and implementation of buffers between travel lanes and pedestrian and bicycle facilities on designated truck routes.	Avenue, Walker Avenue, Bon View Avenue, and Campus Avenue, with connections to designated truck routes at Eucalyptus Avenue. The circulation plan includes design elements such as landscape buffers and trail corridors along key frontages to help minimize potential conflicts between truck traffic and non-motorized users, consistent with City policies for safe and efficient goods movement.
Policy M4-4: Environmental Considerations. We support both local and regional efforts to reduce/eliminate the negative environmental impacts of goods movement through the planning and implementation of truck routing and the development of a plan to evaluate the future needs of clean fueling/recharging and electrified truck parking.	**Consistent.** The Eucalyptus Business Park Specific Plan supports regional goods movement through planned improvements to major roadway within Eucalyptus Avenue, which are identified as truck routes in Chapter 4, *Infrastructure Plan*. The Specific Plan incorporates circulation and site planning strategies that accommodate truck access and loading while minimizing conflicts with non-vehicular travel. These improvements provide a framework that can support future environmental initiatives related to sustainable goods movement.

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
CD-1: A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.	
Policy CD1-3: Existing Neighborhoods. We require the existing character of viable residential and non-residential neighborhoods be preserved, protected and enhanced.	**Consistent.** The Eucalyptus Business Park Specific Plan is designed to preserve and protect the character of surrounding neighborhoods by incorporating a thoughtful land use plan, site design, and buffer treatments. Landscape setbacks and open space parkland are located along perimeter roadways to provide a visual and physical buffer between Business Park uses and adjacent properties. Building orientation, screening walls, and enhanced landscaping will be used to minimize visual and operational impacts on neighboring land uses. Design guidelines in Chapter 6 and development standards in Chapter 5 ensure that lighting is directed away from adjacent areas and that loading and service areas are screened from public view, thereby reducing potential edge effects and maintaining compatibility with the surrounding community.

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
Policy CD1-4: Transportation Corridors. We will enhance our major transportation corridors within the City through landscape, hardscape, signage and lighting. The extent of enhancement should be appropriate to the use, type, and context of each corridor.	**Consistent.** The Eucalyptus Business Park Specific Plan enhances major transportation corridors through a cohesive streetscape design that includes landscaping, parkways, and multi-purpose trails along Eucalyptus Avenue, Grove Avenue, Walker Avenue, and Campus Avenue. These improvements include a combination of canopy trees, shrubs, and groundcover to frame the corridor edges and provide visual continuity. The plan also provides Class II bike lanes and an internal pedestrian network to promote safe, multimodal travel. Entry monuments, consistent signage, and corner treatments are integrated into the streetscape to reinforce the design character of the Business Park and create a welcoming environment for employees and visitors. Design Guidelines in Chapter 6 further establish architectural and landscape elements appropriate to the context of each corridor.
Policy CD1-5: View Corridors. We require all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees.	**Consistent.** The Eucalyptus Business Park Specific Plan does not include any design features that would obstruct views along major north-south corridors such as Campus Avenue, Grove Avenue, Bon View Avenue, and Walker Avenue. As outlined in Chapter 6, *Design Guidelines*, and Chapter 4, *Infrastructure Plan*, landscaping—including street trees and parkways—will be installed along these corridors as part of roadway improvements. These enhancements will be implemented concurrently with development to create a cohesive streetscape while maintaining an open visual character consistent with City policies.
CD-2: A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional and distinct.	
Policy CD2-1: **Quality Architecture.** We encourage all development projects to convey visual interest and character through: • Building volume, massing, and height to provide appropriate scale and proportion; • A true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and	**Consistent.** Future development within the Eucalyptus Business Park will be guided by the Specific Plan's Design Guidelines (Chapter 6), which promote high-quality architectural design through appropriate building massing, scale, and articulation. The guidelines require a unified architectural theme and consistent application of materials, colors, and detailing across all visible building elevations. While the Specific Plan does not prescribe specific materials, it emphasizes the use of durable and visually appealing finishes appropriate to a modern business park setting. These standards ensure that new development contributes positively to the City's visual character.

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
Exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.	
Policy CD2-5: Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right of way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	**Consistent.** As part of implementation of the Eucalyptus Business Park Specific Plan, improvements will be made to existing public streets including Eucalyptus Avenue, Grove Avenue, Walker Avenue, Bon View Avenue, and Campus Avenue, as outlined in Chapter 4, *Infrastructure Plan*. Planned improvements include the addition of sidewalks, Class II bike lanes, and multi-purpose trails to support safe and efficient travel for pedestrians, bicyclists, and vehicles. Landscaped parkways with trees and other plantings will be provided along all major roadways to enhance the visual character of the street network and reinforce the Specific Plan's design framework as described in Chapter 6, *Design Guidelines*. These enhancements are intended to improve connectivity and promote a cohesive streetscape identity throughout the plan area.
Policy CD2-7: Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.	**Consistent.** The Eucalyptus Business Park Specific Plan supports sustainable development principles through its location near regional transportation corridors and within close driving distance of existing residential neighborhoods. The land use plan promotes a mix of employment-generating uses intended to serve both the local and regional workforce, aligning with smart growth objectives. As described in Chapter 6, *Design Guidelines*, the landscaping strategy emphasizes the use of drought-tolerant plant species appropriate for the Inland Southern California climate, with an emphasis on low water use and long-term maintenance efficiency. These measures, combined with coordinated site planning and infrastructure improvements, contribute to reduced resource demand and enhanced environmental performance across the Specific Plan area.
Policy CD2-8: Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintenance of	**Consistent.** The Eucalyptus Business Park Specific Plan serves as the framework for implementing development projects in the Specific Plan area, and includes design specifications for sidewalks, building entrances, and lighting.

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
visibility and accessibility, and use of lighting.	
Policy CD2-9: Landscape Design. We encourage durable landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	**Consistent.** The landscape concept for the Eucalyptus Business Park incorporates the use of attractive, durable landscaping materials, and an irrigation system designed to keep plant materials in good health while conserving water. Landscaping will be provided throughout the Eucalyptus Business Park, including along roadways, within passenger car parking lots, at monuments/entries, within common open space areas, and adjacent to buildings.
Policy CD2-10: Parking Areas. We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include: 1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field. 2. Structured parking: facade articulation, screening, appropriate lighting, and landscaping. 3. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.	**Consistent.** The Eucalyptus Business Park Specific Plan does not include any residential uses. Surface parking lots, truck courts, and loading areas will be designed in accordance with the City's Development Code and the Specific Plan's Design Guidelines (Chapter 6), which require the incorporation of landscaping, screening, and clearly defined pedestrian pathways and drive aisles. Additionally, each building's surface parking area will be designed to treat urban runoff through the respective site's storm drain design.
Policy CD2-11: Entry Statements. We encourage the inclusion of amenities, signage and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	**Consistent.** The Eucalyptus Business Park includes guidelines for building entry treatments, primary and secondary corner treatments, and tenant monument treatments to identify the development and distinguish individual planning areas, in conformance with the intent of Policy CD2-11. The entry treatments, corner treatments, and tenant monuments which are illustrated in Chapter 6, *Design Guidelines*, incorporate landscaping and enhanced signage to provide attractive and distinctive visual statements.
Policy CD2-12: Site and Building Signage.	**Consistent.** The Design Guidelines for the Eucalyptus Business Park (refer to Chapter 6 of this Specific Plan)

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	include signage guidelines to ensure that future development will construct clear, concise, easy-to-read signs that reflect and complement the Specific Plan's design theme, provide for safe and efficient circulation of vehicle traffic, and facilitate pedestrian travel. Signs will be of high-quality and the use of distracting sign elements, such as flashing lights or moving parts, is prohibited. Additionally, a sign program will be provided along with the Specific Plan to further provide design standard for signs within the Specific Plan area.
Goal CD3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.	
Policy CD3.2: Comfortable, Human-Scale Public Realm. We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.	**Consistent.** The Eucalyptus Business Park Specific Plan promotes a comfortable, human-scale public realm through the coordinated design of its streetscapes, sidewalks, and multi-purpose trails, as described in Chapter 4, *Infrastructure Plan,* and Chapter 6, *Design Guidelines*. Sidewalks and trails are integrated throughout the plan area to enhance pedestrian and bicycle connectivity, while landscaped parkways and consistent setbacks create a visually appealing and walkable environment. These improvements are designed to provide safe, accessible, and aesthetically cohesive connections to the citywide transportation network. Additionally, the Open Space – Parkland planning areas will provide both passive and active open space use for visitors, employees, and surrounding residents of the Specific Plan area.
Policy CD3.3: Complete and Connected Network We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.	**Consistent.** The Eucalyptus Business Park Specific Plan provides a coordinated and interconnected circulation network for vehicles, bicycles, and pedestrians, as illustrated in Chapter 4, *Infrastructure Plan*, and Chapter 6, *Design Guidelines*. Public roadways and private drive aisles will include sidewalks, Class II bike lanes, and multi-purpose trails to ensure internal mobility and connectivity to surrounding areas. Improvements along major corridors such as Eucalyptus Avenue, Grove Avenue, Campus Avenue, and Walker Avenue support access to regional transit and commercial destinations. All future development will be required to comply with City standards for sight visibility, safety, and

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
	landscape placement to ensure a comfortable and secure travel experience for all users.
Policy CD 3.4: Context-Aware and Appropriate Design We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.	**Consistent.** The Eucalyptus Business Park Specific Plan establishes building and site design standards that ensure compatibility with surrounding development and land uses, as detailed in Chapters 5, *Development Regulations* and 6, *Design Guidelines*. The plan incorporates landscaped setbacks, internal circulation buffers, and screening treatments along perimeter roadways to create appropriate transitions between the Business Park and adjacent uses. Building height, massing, and orientation are designed to respect the scale of surrounding development and minimize potential land use conflicts, supporting a context-sensitive and visually cohesive environment.
Policy CD 3.5: Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).	**Consistent.** While the Eucalyptus Business Park Specific Plan is focused on employment, business park, and open space uses rather than retail or residential development, it incorporates design elements that support active and engaging frontages along key pedestrian corridors. As described in Chapter 6, *Design Guidelines*, primary building entrances are oriented toward public streets or internal circulation routes, with pedestrian connections provided from sidewalks and trails. Landscaping, lighting, and pathway design contribute to a safe and comfortable pedestrian experience, reinforcing the plan's intent to create a cohesive and visually appealing business park environment.
Policy CD 3.6: Managed Infrastructure. We collaborate with developers and property owners to facilitate development that realizes the envisioned character and functionality of the Place Type through the use of green and shared infrastructure within each Place Type.	**Consistent.** The Eucalyptus Business Park Specific Plan supports coordinated infrastructure planning to achieve the intended character and functionality of a modern business park. As outlined in Chapter 4, *Infrastructure Plan*, the project includes shared infrastructure improvements such as integrated roadway systems, stormwater facilities, and utility corridors designed to serve multiple parcels efficiently. The Specific Plan also promotes sustainable practices through the use of drought-tolerant landscaping and multi-purpose trails within public rights-of-way, contributing to a cohesive, functional, and environmentally responsible development pattern.
Goal CD-5: A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages additional public and private investments.	

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
Policy CD5-1: Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.	**Consistent.** The Eucalyptus Business Park Specific Plan defines the responsible parties for maintaining both public and private improvements, including roadways, utilities, landscaping, and pedestrian infrastructure, as outlined in Chapter 7, *Implementation Plan*. A maintenance responsibility matrix is included to ensure long-term upkeep of all improvements, including trails and easements, in accordance with City standards. This framework ensures that all development within the Specific Plan area will be properly and consistently maintained.
Policy CD5-2: Maintenance of Infrastructure. We require the continual maintenance of infrastructure.	**Consistent.** The Eucalyptus Business Park Specific Plan defines the responsible parties for maintaining both public and private improvements, including roadways, utilities, landscaping, and pedestrian infrastructure, as outlined in Chapter 7, *Implementation Plan*. A maintenance responsibility matrix is included to ensure long-term upkeep of all improvements, including trails and easements, in accordance with City standards. This framework ensures that all development within the Specific Plan area will be properly and consistently maintained.

LAND DEVELOPMENT DIVISION CONDITIONS OF APPROVAL

CITY OF ONTARIO PLANNING DEPARTMENT
303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

Date Prepared: 4/13/2026

File No: PSP24-003

Related Files: N/A

Project Description: A public hearing to consider the Eucalyptus Business Park Specific Plan (File No. PSP24-003) to establish the land use districts, development standards, design guidelines, infrastructure improvements, etc., for the potential development of 2,939,000 square feet of business park development, 10,000 square feet of commercial development and approximately 37-acres of open space/recreation on approximately 189 acres of land for property generally located along the northeast corner of Campus Avenue and Eucalyptus Avenue, within the SP (Specific Plan) and AG (Agricultural Overlay) zoning districts. The environmental impacts of this project were reviewed in conjunction with The Ontario Plan (TOP) 2050 Policy Plan Amendment (File No. PGPA25-002), for which a Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) was prepared. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan. The project site is also located within the Airport Influence area of Chino Airport and was evaluated and found to be consistent with the policies and criteria of the Chino Airport Land Use Compatibility Plan; (APNs:1053-531-01, 1053-531-02, 1053-531-03, 1053-531-04, 1053-541-01, 1053-541-02, 1053-551-01, 1053-371-01, 1053-371-02, 1053-581-03, 1053-581-04, 0216-321-01, 0216-321-02, 0216-321-06, 0216-321-07, 0216-322-01, 0216-322-02, 0216-322-10) **submitted by Ontario Ranch Venture II, LLC. (c/o Sares Regis Group). City Council action is required.**

Prepared By: Luis E. Batres, Senior Planner
Phone: 909.395.2431 (direct)
Email: Lbatres@ontarioca.gov

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project, are listed below. The Project shall comply with each condition of approval listed below:

1.0 Standard Conditions of Approval. The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department.

2.0 Special Conditions of Approval. In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

2.1 Specific Plan/Specific Plan Amendment. The following shall be submitted to the Planning Department within 30 days following City Council approval of the Specific Plan/Specific Plan Amendment:

(a) Two copies of the final Specific Plan document, bounded.

(b) One complete, unbound copy of the final Specific Plan document.

(c) One USB drive, or download link, containing a complete Microsoft Word, or editable, copy of the final Specific Plan document, including original figures, images and all required revisions.

2.2 Additional Fees.

(a) Within 5 days following final application approval, the Notice of Determination ("NOD") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

2.3 Mics.

(a) Approval of this Specific Plan is subject to the City Council approving File No. PGPA25-002, The Ontario Plan (TOP) 2050 Policy Plan Amendment.

- **The City of Ontario Development Code** applies to all topics not addressed by this Specific Plan's development regulations. However, if any requirement of this Specific Plan conflicts with the Development Code, the provisions of this Specific Plan shall take precedence.

- **The Airport Land Use Compatibility Plan for Ontario International Airport (ONT) and the California Airport Land Use Planning Handbook published by Caltrans Division of Aeronautics**, which contain criteria that apply to the development intensity of property located in the ONT's airport influence area. A portion of the Eucalyptus Business Park Specific Plan area is located in the ONT influence area.

- **CNO (Chino Airport) Overlay Zoning District,** which provides a land use compatibility analysis to minimize hazards and impacts to the operation of the Chino Airport and its surroundings. A portion of the Eucalyptus Business Park Specific Plan area is located in the Chino Airport influence area.

- **The Mitigation Monitoring and Reporting Program (MMRP)** that is part of the Eucalyptus Business Park Specific Plan's Environmental Impact Report (EIR) prepared in compliance with the California Environmental Quality Act (CEQA). The MMRP stipulates measures that are required to be implemented to mitigate the environmental effects of the Specific Plan's construction and operation.

ES.3 Specific Plan Components

This Eucalyptus Business Park Specific Plan is organized into the following chapters:

Chapter 1 – Introduction:
Describes the purpose and objectives of the Specific Plan, the related entitlement approvals for implementing development, and the relationship between the Specific Plan and the Ontario Policy Plan.

Chapter 2 – Existing Conditions:
Describes the physical setting of the Eucalyptus Business Park Specific Plan area and the physical conditions on and surrounding the property at the time the Specific Plan was prepared.

Chapter 3 – Land Use Plan:
Describes the Eucalyptus Business Park Specific Plan's development plan, which includes six Business Park planning areas and three Open Space – Parkland planning areas. Chapter 3 also specifies the acreages of each planning area and the maximum development intensities permitted in each land use category. Chapter 3 also includes a conceptual development plan showing how the area could be developed in compliance with the Specific Plan.

Chapter 4 – Infrastructure Plan:
Provides information on vehicular and non-vehicular circulation improvements; planned backbone water, sewer, recycled water, and storm drain systems; and the planned dry utility network for the development of the Eucalyptus Business Park Specific Plan area.

Chapter 5 – Development Regulations:
Establishes the list of permitted and conditionally permitted uses in the Specific Plan area and presents the development regulations that govern the uses. Chapter 5 also provides a discussion of the relationship between the Specific Plan and the City of Ontario Development Code.

Chapter 6 – Design Guidelines:
Provides site planning, landscaping, and architectural guidelines for implementing

development within the Specific Plan area. Guidelines in this chapter address design characteristics for building placement and architecture, landscaping, streetscapes, entry identification monuments, corner treatments at roadway intersections, walls and fencing, lighting, and signage.

Chapter 7 – Implementation Plan

Presents the policies and procedures for the City's review and approval of implementing development projects within the Eucalyptus Business Park Specific Plan area. Chapter 7 also describes the methods and procedures for interpreting and amending the Specific Plan as necessary. Additionally, funding and maintenance responsibilities are summarized within this Specific Plan.

CHAPTER 1

INTRODUCTION

1.1 Specific Plan Purpose

The purpose of the Eucalyptus Business Park Specific Plan is to guide the development of a 189.0-acre site into a modern business park and public parkland space. The Specific Plan area is located within the southern portion of the City of Ontario (City). The Ontario Policy Plan and the Ontario Development Code requires the Ontario City Council to approve Specific Plans as part of the entitlement process for new development projects within this area.

Development projects within the Specific Plan area are required to demonstrate substantial conformity with the information contained within this Specific Plan document.

The public parkland area in the northern portion of the Specific Plan area is intended to address passive recreational needs of City residents. The business park area in the southern portion of the Specific Plan area is poised to accommodate uses that rely on the regional transportation network and the site's proximity to the Ontario International Airport (ONT), the Chino Airport, State Route 60 (SR-60), State Route 83 (SR-83), State Route 91 (SR-91), Interstate 15 (I-15), and Interstate 10 (I-10). The Specific Plan area is approximately 2.2 miles south of SR-60, approximately 0.5 miles east of SR-83, approximately 7.5 miles north of SR-91, approximately 4.5 miles west of I-15, and approximately 5.6 miles south of I-10. Additionally, the Port of Long Beach and the Port of Los Angeles, which serve as major gateways for international trades, are located approximately 37 miles southwest of the Specific Plan area.

1.2 Specific Plan Objectives

The Eucalyptus Business Park Specific Plan achieves the following objectives:

- To provide a land use plan that implements The Ontario Plan's vision and appropriately positions business park and public parkland uses north of Eucalyptus Avenue, between Campus Avenue and Walker Avenue.
- To facilitate the development of a variety of employment-generating uses in a business park setting.
- To provide business park uses that are compatible with surrounding land uses.
- To provide opportunities for positive economic benefit to the City, including new revenues that can be used for vital City services.
- To provide opportunities for the development of passive use parks consistent with the City of Ontario's Grand Park Master Plan.
- To improve connectivity in the area by providing pedestrian paths, bicycle routes, and amenities such as bike racks that encourage circulation by means not dependent on a motorized vehicle.
- To identify improvements for water, recycled water, sewer, storm drain, and circulation facilities that serve planned land uses within and adjacent to the Specific Plan area.

- To set forth a development phasing sequence that allows for logical development and aligns with installation of on-site and off-site infrastructure.
- To define guidelines and standards that address architecture, landscaping, streetscapes, entry monuments, corner treatments, walls and fencing, lighting, and signage within the Specific Plan area.

1.3 Authority

The Eucalyptus Business Park Specific Plan is a regulatory document prepared pursuant to the provisions of California Government Code §§ 65450 through 65457, which grants local government agencies the authority to prepare Specific Plans for the systematic implementation of their General Plan for all or part of the area covered by the General Plan. While The Ontario Plan covers the entire City, the Specific Plan focuses on the development within the approximately 189-acre site.

California Government Code §§ 65450 through 65457 establish the authority to adopt a Specific Plan, identify the required contents of a Specific Plan, and mandate consistency with the General Plan. According to California Government Code § 65451:

(a) A Specific Plan shall include text and a diagram which specify all the following in detail:

1) The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan.

2) The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan.

3) Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.

4) A program of implementation measures including regulations, programs, public works projects, and financing measures, necessary to carry out items 1, 2, and 3.

(b) The Specific Plan shall include a statement of the relationship of the Specific Plan to the General Plan.

The Eucalyptus Business Park Specific Plan includes each of the required elements listed above and establishes the essential link between the policies of The Ontario Plan's Policy Plan and the Eucalyptus Business Park Specific Plan site. All future development plans and construction activities within the Specific Plan area shall be consistent with the requirements set forth in this Specific Plan and with all other applicable City regulations.

1.4 Severability

The Eucalyptus Business Park Specific Plan enables the City of Ontario to facilitate the processing and approval of development plans to build out the Specific Plan area. If any regulation, condition, program, or portion of this Specific Plan is held invalid or unenforceable, such portions shall be deemed separate, distinct, and independent provisions, and the invalidity of such portions or provisions shall not affect the validity and enforceability of the remaining provisions contained herein.

1.5 Approval Process and Companion Actions

The Eucalyptus Business Park Specific Plan and any future amendments are required to be considered by the City of Ontario Planning Commission and City Council, and adopted by ordinance or resolution of the City Council, pursuant to Ontario Development Code Section 1.01.035, *Relationship to Specific Plans*. More information on implementation procedures is contained in this Specific Plan Chapter 7, *Implementation Plan*.

A Policy Plan (General Plan) Amendment (GPA) will be processed in conjunction with the Eucalyptus Business Park Specific Plan. The GPA is a companion action to the approval of this Specific Plan that would achieve consistency between the General Plan land use designations, this Specific Plan's land use designations, and zoning.

Additionally, a tentative parcel map will be processed by the City of Ontario for the Specific Plan area indicating the approximate boundaries and dimensions of parcels and streets, and the proposed grading for the Specific Plan area. Following map recordation, the final map will become the legal document that identifies developable parcels within the Specific Plan area.

All development within the Eucalyptus Business Park Specific Plan area shall be subject to the Development Plan Review Process established in the City of Ontario Development Code. The development standards and design guidelines provided within this Specific Plan shall be the design criteria which the City of Ontario refers to during the Development Plan Review process.

In addition to this Specific Plan an Environmental Impact Report (EIR) was prepared in compliance with the California Environmental Quality Act (CEQA) to serve as the project-wide environmental assessment document. Together, this Specific Plan and the environmental mitigation measures contained in the accompanying EIR's Mitigation Monitoring and Reporting Program (MMRP) provide a path to develop the property taking into account all applicable goals, objectives, government requirements, and environmental regulations.

1.6 Relationship to The Ontario Plan General Plan

The Ontario Plan establishes the direction and vision for the City's future and provides a guidance system to shape the City's communities. The Ontario Plan consists of a six-part Component Framework: 1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback.

The Eucalyptus Business Park Specific Plan defines the methods and requirements for implementing development within the Specific Plan area to ensure that applicable policies from The Ontario Plan and its Policy Plan are implemented and ensure that development envisioned by this Specific Plan is consistent with applicable provisions of The Ontario Plan. The Ontario Plan sets forth long-term goals for the City's growth and development as mandated by State law. The Policy Plan is a long-term policy document that covers the elements of land use, housing, parks and recreation, environmental resources, community economics, safety, mobility, community design, and social resources.

As shown on Figure 1-1, *Existing General Plan Land Use Designations*, the Policy Plan component of The Ontario Plan designates the Specific Plan area as Medium Density Residential with Affordable Housing Overlay, Mixed-Use Eucalyptus/Chino Airport Overlay

with Affordable Housing Overlay, and Open Space – Parkland.

As shown on Figure 1-2, *Proposed General Plan Land Use Designations*, the General Plan Amendment being processed concurrently with this Specific Plan will modify the Ontario Plan's designations of the Specific Plan area to Business Park and Open Space – Parkland.

As shown on Figure 1-3, *Existing Zoning Designations*, the City of Ontario's Zoning Map designates the Specific Plan area's zoning as "Specific Plan with an Agricultural and an Affordable Housing Overlay".

As shown on Figure 1-4, *Proposed Zoning Designations,* the Zone Change being processed concurrently with this Specific Plan will modify the City of Ontario's Zoning Map of the site to "Eucalyptus Business Park Specific Plan" to allow for the development of Business Park and Open Space – Parkland uses.

Pursuant to the City of Ontario's adoption of the Eucalyptus Business Park Specific Plan, the Specific Plan will take precedence over the City's Development Code. In instances where the Specific Plan is silent on development standards, the City's Development Code shall prevail.

CHAPTER 2

EXISTING CONDITIONS

2.1 Existing Assessor Parcel Numbers

At the time the Eucalyptus Business Park Specific Plan was prepared, the Specific Plan area consisted of the following Assessor Parcel Numbers (APNs), as listed on Table 2-1, *Existing APN List*, and shown on Figure 2-1, *Existing APNs*.

Table 2-1 Existing APN List

1053-531-01	0216-321-01
1053-531-02	0216-321-02
1053-531-03	0216-321-06
1053-531-04	0216-321-07
1053-541-01	0216-322-01
1053-541-02	0216-322-02

1053-571-01	
1053-571-02	
1053-581-03	
1053-581-04	

2.2 Existing Land Use

As shown on Figure 2-2, *Aerial Photograph*, at the time this Specific Plan was prepared, the majority of the Specific Plan area was used for dairy farming. The Specific Plan area contained multiple dairy farms developed with single-family residences, milking barns, canopy/shade structures, and cattle pens. Several man-made access roads cross the site to provide access to the farms. Grass fields are present in the southern area of the Specific Plan area, which are used for grazing or growing grass for hay and may have previously been used to grow row crops. Additionally, the northwestern portion of the Specific Plan area contains light industrial uses and truck trailer storage uses.

2.3 Surrounding Land Uses

As shown on Figure 2-3, *Existing Surrounding Land Uses*, agricultural dairy farm uses and rural residential homes abut the Specific Plan area to the north, east, west, and southwest. Light industrial and warehouse distribution uses abut the Specific Plan area to the south and southeast.

2.4 Existing Circulation and Access

2.4.1 Regional Circulation

State Route 60 (SR-60) is located approximately 2.2 miles north of the Specific Plan area and is accessible via the Grove Avenue on- and off- ramp. State Route 83 (SR-83) is located approximately 0.5 miles west of the Specific Plan area and is accessible via Ontario Ranch Road and Eucalyptus Avenue. Interstate 15 (I-15) is located approximately 4.5 miles east of the Specific Plan area and is accessible via the Ontario Ranch Road on- and off- ramp or the Limonite Avenue on- and off- ramp.

2.4.2 Local Circulation

Access to the Eucalyptus Business Park Specific Plan area is provided from Eucalyptus Avenue, Ontario Ranch Road, Campus Avenue, Bon View Avenue, Grove Avenue, and Walker Avenue. The City of Ontario designates Eucalyptus Avenue as a truck route, which provides truck access to the Specific Plan area.

Eucalyptus Avenue abuts the Specific Plan area to the south and consisted of two paved travel lanes at the time this Specific Plan was prepared. The Ontario Policy Plan designates Eucalyptus Avenue as a 4-lane Collector Street.

Ontario Ranch Road is north of the Specific Plan area and consisted of two paved travel lanes at the time this Specific Plan was prepared. The Ontario Policy Plan designates Ontario Ranch Road as an 8-lane Principal Arterial.

Campus Avenue abuts the Specific Plan area to the west. At the time this Specific Plan was prepared, no segments of Campus Avenue abutting the Specific Plan had been constructed. The Ontario Policy Plan designates Campus Avenue as a 4-lane Minor Arterial.

Bon View Avenue is a north-south oriented street that traverses the western portion of the Specific Plan area. At the time this Specific Plan was prepared, Bon View Avenue consisted of two paved travel lanes. The Ontario Policy Plan designates Bon View Avenue as a 2-lane Collector Street.

Grove Avenue is a north-south oriented street that traverses the central portion of the Specific Plan area. At the time this Specific Plan was prepared, Grove Avenue consisted of two paved travel lanes. The Ontario Policy Plan designated Grove Avenue as a 4-lane Principal Arterial.

Walker Avenue abuts the Specific Plan area to the east. At the time this Specific Plan was prepared, Walker Avenue consisted of two paved travel lanes. The Ontario Policy Plan designates Walker Avenue as a 2-lane Collector Street.

2.5 Williamson Act

At the time this Specific Plan was prepared (2025), two parcels within the Specific Plan area had an active Williamson Act contract in place (APNs: 0216-231-01 and 0216-321-07). An application to cancel the contract is required to be submitted to the City. Cancellation would comply with provisions and requirements identified at Government Code §51280 et. seq. The City would be required to make the required statutory findings. The landowner would be required to pay the requisite cancellation fee.

Existing Surrounding Land Uses

2.6 Existing Physical Site Conditions

2.6.1 Topography

The Eucalyptus Business Park Specific Plan area is relatively flat and slopes slightly to the south with an approximate elevation ranging from 690 feet above mean sea level (AMSL) to 665 feet AMSL. The current conditions of the Specific Plan area is illustrated in Figure 2-2, *Aerial Photograph*, and the existing topographic conditions for the Specific Plan area are illustrated in Figure 2-4, *USGS Topographic Map*.

2.6.2 Hydrology

At the time the Specific Plan was prepared, the Specific Plan area consisted of dairy farms and undeveloped areas. The existing topography is relatively flat with a north-to-south sheet flow drainage pattern. The Specific Plan area is located within three City of Ontario Master Drainage Plan areas, including Area XII-1, Area XIII-1, Area XIV-1 and Area XIV-2. The EIR prepared in association with the Specific Plan includes a detailed hydrology analysis for the Specific Plan area.

2.6.3 Geology and Soils

Based on information provided from the Environmental Data Report (EDR) Radius Map report, the surficial geology within Eucalyptus Business Park Specific Plan area contains unconsolidated and semi-consolidated quaternary age alluvium, lake, playa, and terrace deposits. Soil within the Specific Plan area contains Tujunga loamy sand, Hilmar loamy fine sand, Grangeville fine sandy loam, and Chino silt loam.

From a seismic perspective, the Specific Plan area is not located within an Alquist-Priolo Earthquake Fault Zone. The possibility of significant fault rupture within the Specific Plan area is considered low.

2.6.4 Vegetation and Biological Resources

Due to past and existing land uses, no native plant communities or natural communities of special concern are present within or adjacent to the Eucalyptus Business Park Specific Plan area. The EIR prepared in association with the Specific Plan includes a detailed evaluation of biological resources.

2.6.5 Existing Ground Water Wells

Upon development of the well site areas, these wells, or any other wells found on the property, will be abandoned per California Department of Water Resources Health Guidelines and the City of Ontario Guidelines. In compliance with the Chino Basin Watermaster's Well Procedure for Developers, documentation that a well use/destruction plan and schedule for all existing private/ agricultural wells is required to be submitted to the City of Ontario prior to any construction activities. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's water system when available.

Wells shall be destroyed/ abandoned per the California Water Resource Guidelines and require permitting from the County Health Department. Documentation that the well abandonment process is underway shall be provided to the Engineering Department and the Ontario Municipal Utilities Company at the time of a grading permit and/or building permit being issued for the affected property. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the Developer shall make a formal request to the City of Ontario for such use prior to the issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement. Refer to Figure 2-5,

Existing Water Wells, for locations of water wells within the Specific Plan area. Existing wells may be converted to groundwater monitoring wells if feasible, at the City's discretion.

2.6.6 Existing NPDES Compliance

In the existing conditions, NPDES requirements are enforced under the Agricultural Permit issued by the State Water Resources Control Board.

CHAPTER 3

LAND USE

3.1 Vision

The Eucalyptus Business Park Specific Plan area is envisioned as a dynamic employment hub within a thoughtfully designed, master-planned environment along with a public parkland area intended to support passive recreation needs for the surrounding residents. It is situated in the southern portion of the City of Ontario, at the heart of one of Southern California's most robust logistics and business corridors. The location is ideally positioned to support a wide range of business park and employment-generating uses. With strategic proximity to major freeways, regional airports, and the Ports of Los Angeles and Long Beach, the Eucalyptus Business Park Specific Plan area offers unparalleled access to regional, national, and international markets. The Eucalyptus Business Park Specific Plan is designed to foster long-term economic growth, support business innovation, and provide high-quality jobs, contributing to the vitality of the local community and the broader Inland Empire region.

3.2 Land Use Plan

This Specific Plan establishes two land use designations: Business Park and Open Space – Parkland. For planning purposes, as shown on Figure 3-1, *Conceptual Land Use Plan*, and Table 3-1, *Land Use Plan Statistical Summary*, the Specific Plan will establish nine planning areas to provide for the development of a 189.0-acre site with up to 2,939,000 square feet (SF) of Business Park floor space on 137.90 acres at a maximum allowed floor area ratio (FAR) of 0.55 and 35.88 acres of Open Space – Parkland. The remaining 15.24 acres are designated for roadway improvements.

Table 3-1 Land Use Plan Statistical Summary

PA	Land Use	Acres	Maximum Buildout SF
Business Park			
1	Business Park	7.70	162,600
2	Business Park	18.33	273,700
3	Business Park	18.21	340,700
4	Business Park	18.19	423,200
5	Business Park	37.76	859,300
6	Business Park	37.71	879,500
Business Park Totals		**137.90 AC**	**2,939,000 SF**
Open Space – Parkland			
7	Open Space – Parkland	8.00	--
8	Open Space – Parkland	13.99	--
9	Open Space – Parkland	13.89	--
Total Open-Space Parkland Acreage		**35.88 AC**	--
--	Roadway	15.24	--
Total		**189.0 AC**	**2,939,000 SF**

Notes:

1. A maximum of 10,000 SF total of Commercial uses may be provided within the Business Park Planning Areas 1, 2, 3, 4, 5, and/or 6.

2. A publicly operated animal resource center site (35,000 SF) may be provided within the Business Park Planning Areas 1, 2, 3, 4, 5, 6, 7, 8, or 9. The final size and location of the animal resource center site is subject to the approval by the City of Ontario.

3. Total acreage of 189.0 is rounded up to the nearest one-tenth of an acre.

4. The Specific Plan allows the transfer of development square footage (15 percent or less) within the same land use designation, provided that the shift in square footage would not exceed the maximum allowable overall square footage (2,939,000) and the maximum building FAR (0.55).

3.2.1 Business Park

Encompassing 137.90 acres in the southerly portion of the Specific Plan area along its frontage with Eucalyptus Avenue, Planning Areas 1 through 6 are designated Business Park. Up to 2,939,000 SF of building space are permitted across Planning Areas 1 through 6.

The Business Park land use designation intends to provide for uses such as employee-intensive office spaces, technology centers, research and development facilities, warehouse and distribution, and light manufacturing. Primary vehicular access is planned within Eucalyptus Avenue, Public Street 'A', Campus Avenue, Bon View Avenue, Grove Avenue, and Walker Avenue. The Specific Plan also allows a maximum total of 10,000 SF of commercial uses within the Business Park planning areas to support the Business Park operations and a potential 35,000 SF publicly operated animal resource center.

The Specific Plan allows the transfer of development square footage (15 percent or less) within the same land use designation, provided that the shift in square footage would not exceed the maximum allowable overall square footage (2,939,000) and the maximum building FAR (0.55).

3.2.2 Open Space – Parkland

Encompassing 35.88 acres in the northerly portion of the Specific Plan area along its frontage with Public Street 'A', Planning Areas 7, 8, and 9 are designated Open Space – Parkland. The Open Space – Parkland planning areas intend to provide passive recreational facilities, such as open space areas, benches, and trails.

3.3 Airport Influence Compliance

The Specific Plan area is located within the Ontario International Airport (ONT) Influence Area (AIA), and it is located outside any identified safety, airspace protection, and noise impact zones. All properties located within the ONT AIA are subject to a real estate transaction disclosure notice.

The Specific Plan area is also located within the Chino Airport (CNO) AIA. The San Bernardino County Comprehensive Land Use Plan for Chino Airport was adopted in 1991 and does not reflect guidance set forth in the 2011 Caltrans Airport Land Use Planning Handbook. As such, in 2022, the City of Ontario adopted the CNO Overlay District which provides maps, criteria, and policy language to guide development within the Chino AIA consistent with the 2011 Caltrans Airport Land Use Planning Handbook.

As illustrated in Figure 3-2, *Chino Safety Zones*, the majority of the Specific Plan area is located within CNO Safety Zone 5 (low risk), with a very small portion of the southeastern corner located within Safety Zone 4 (moderate risk).

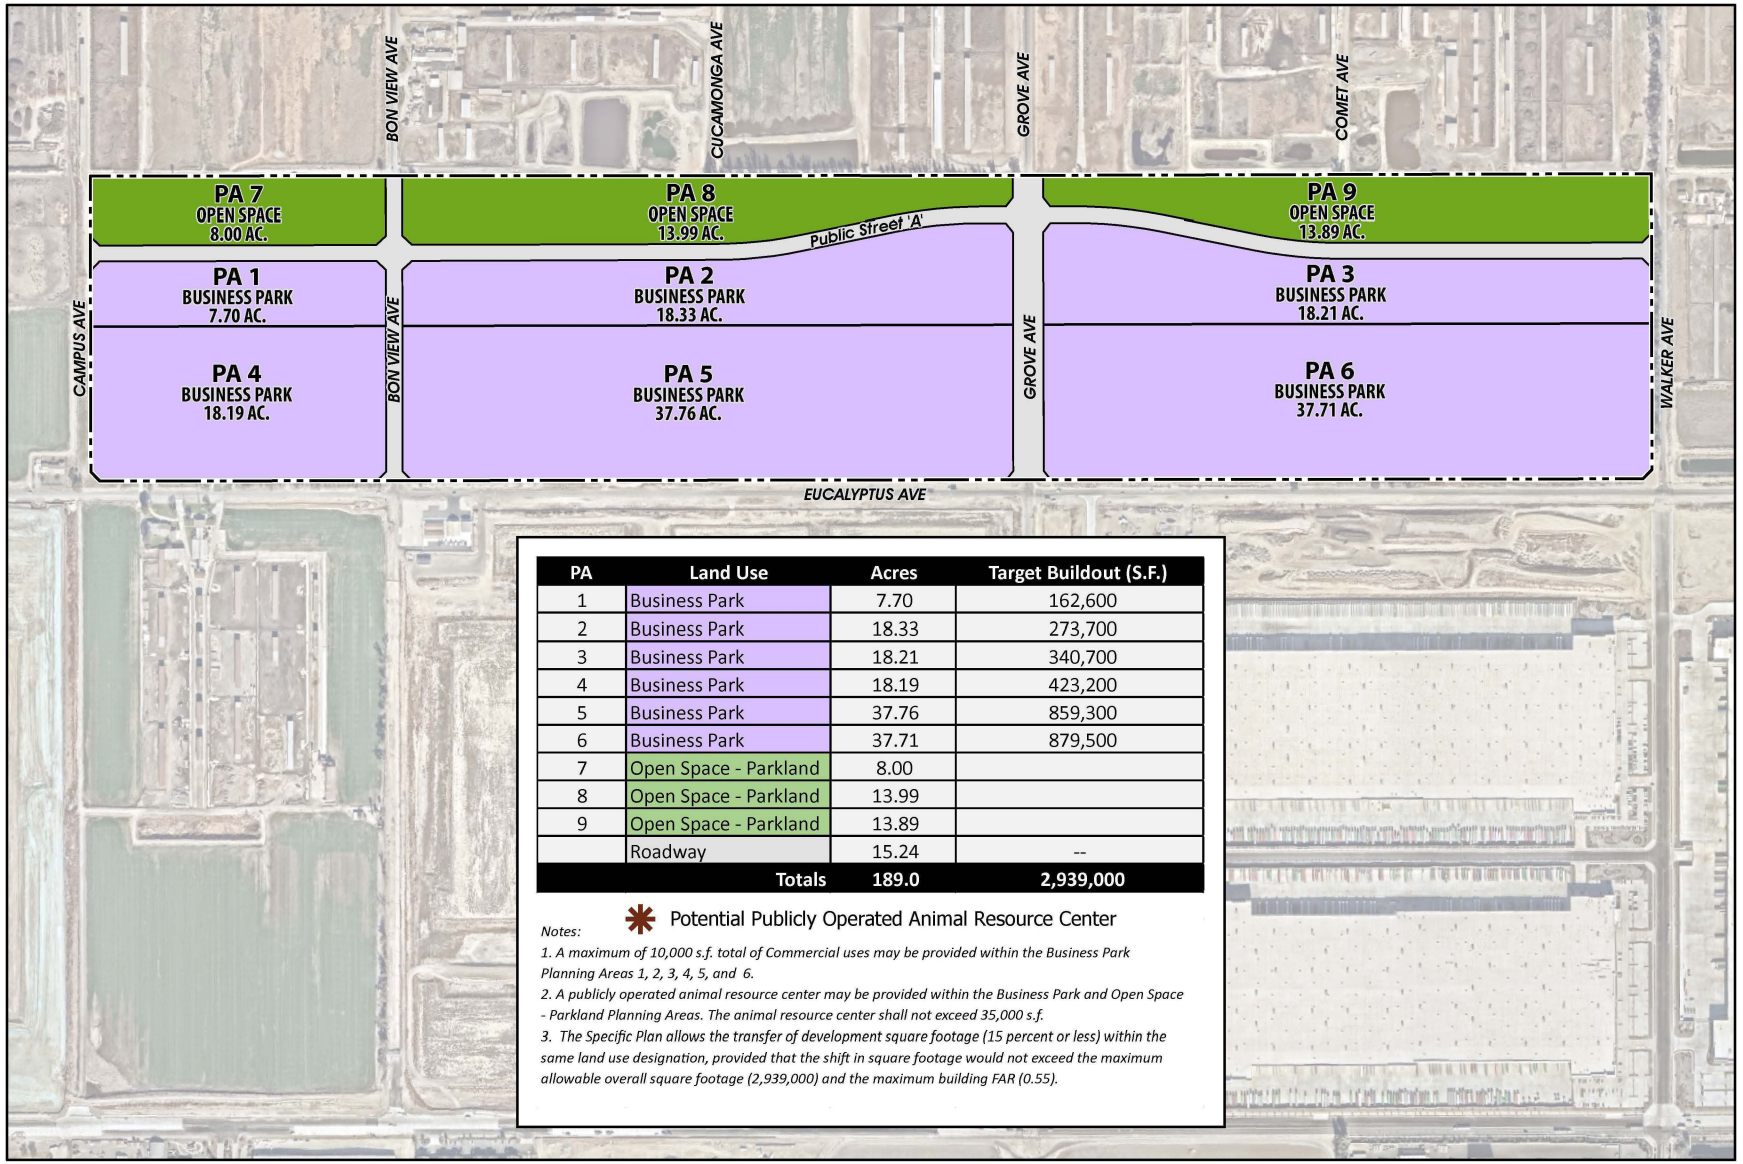
Development within the land use compatibility zones may have building height, land use, and floor area ratio (FAR) limitations and is subject to open land requirements. For further details, refer to Chapter 5, *Development Regulations*, as well as the ONT and CNO Airport Land Use Compatibility Plans.

3.4 Conceptual Site Plan

Figure 3-3, *Conceptual Site Plan*, depicts a potential layout of the Specific Plan area. The final building configurations, sizes, and orientation will be determined during the Development Plan review process.

The conceptual site plan reflects current market trends, site conditions, and planned infrastructure. The conceptual site plan may be modified provided it does not exceed the maximum square footage provided in the

Specific Plan's Conceptual Land Use Plan and complies with this Specific Plan and applicable provisions of the City of Ontario's Development Code.



PA	Land Use	Acres	Target Buildout (S.F.)
1	Business Park	7.70	162,600
2	Business Park	18.33	273,700
3	Business Park	18.21	340,700
4	Business Park	18.19	423,200
5	Business Park	37.76	859,300
6	Business Park	37.71	879,500
7	Open Space - Parkland	8.00	
8	Open Space - Parkland	13.99	
9	Open Space - Parkland	13.89	
	Roadway	15.24	--
	Totals	**189.0**	**2,939,000**

* Potential Publicly Operated Animal Resource Center

Notes:

1. A maximum of 10,000 s.f. total of Commercial uses may be provided within the Business Park Planning Areas 1, 2, 3, 4, 5, and 6.

2. A publicly operated animal resource center may be provided within the Business Park and Open Space - Parkland Planning Areas. The animal resource center shall not exceed 35,000 s.f.

3. The Specific Plan allows the transfer of development square footage (15 percent or less) within the same land use designation, provided that the shift in square footage would not exceed the maximum allowable overall square footage (2,939,000) and the maximum building FAR (0.55).

CHAPTER 4

INFRASTRUCTURE PLAN

4.1 Circulation and Access Plan

The Eucalyptus Business Park Specific Plan Circulation and Access Plan provides direct, safe, and convenient access for visitors, employees, and commercial vehicles including trucks to and from the Specific Plan area. Components of the Specific Plan's Circulation and Access Plan are discussed and illustrated below.

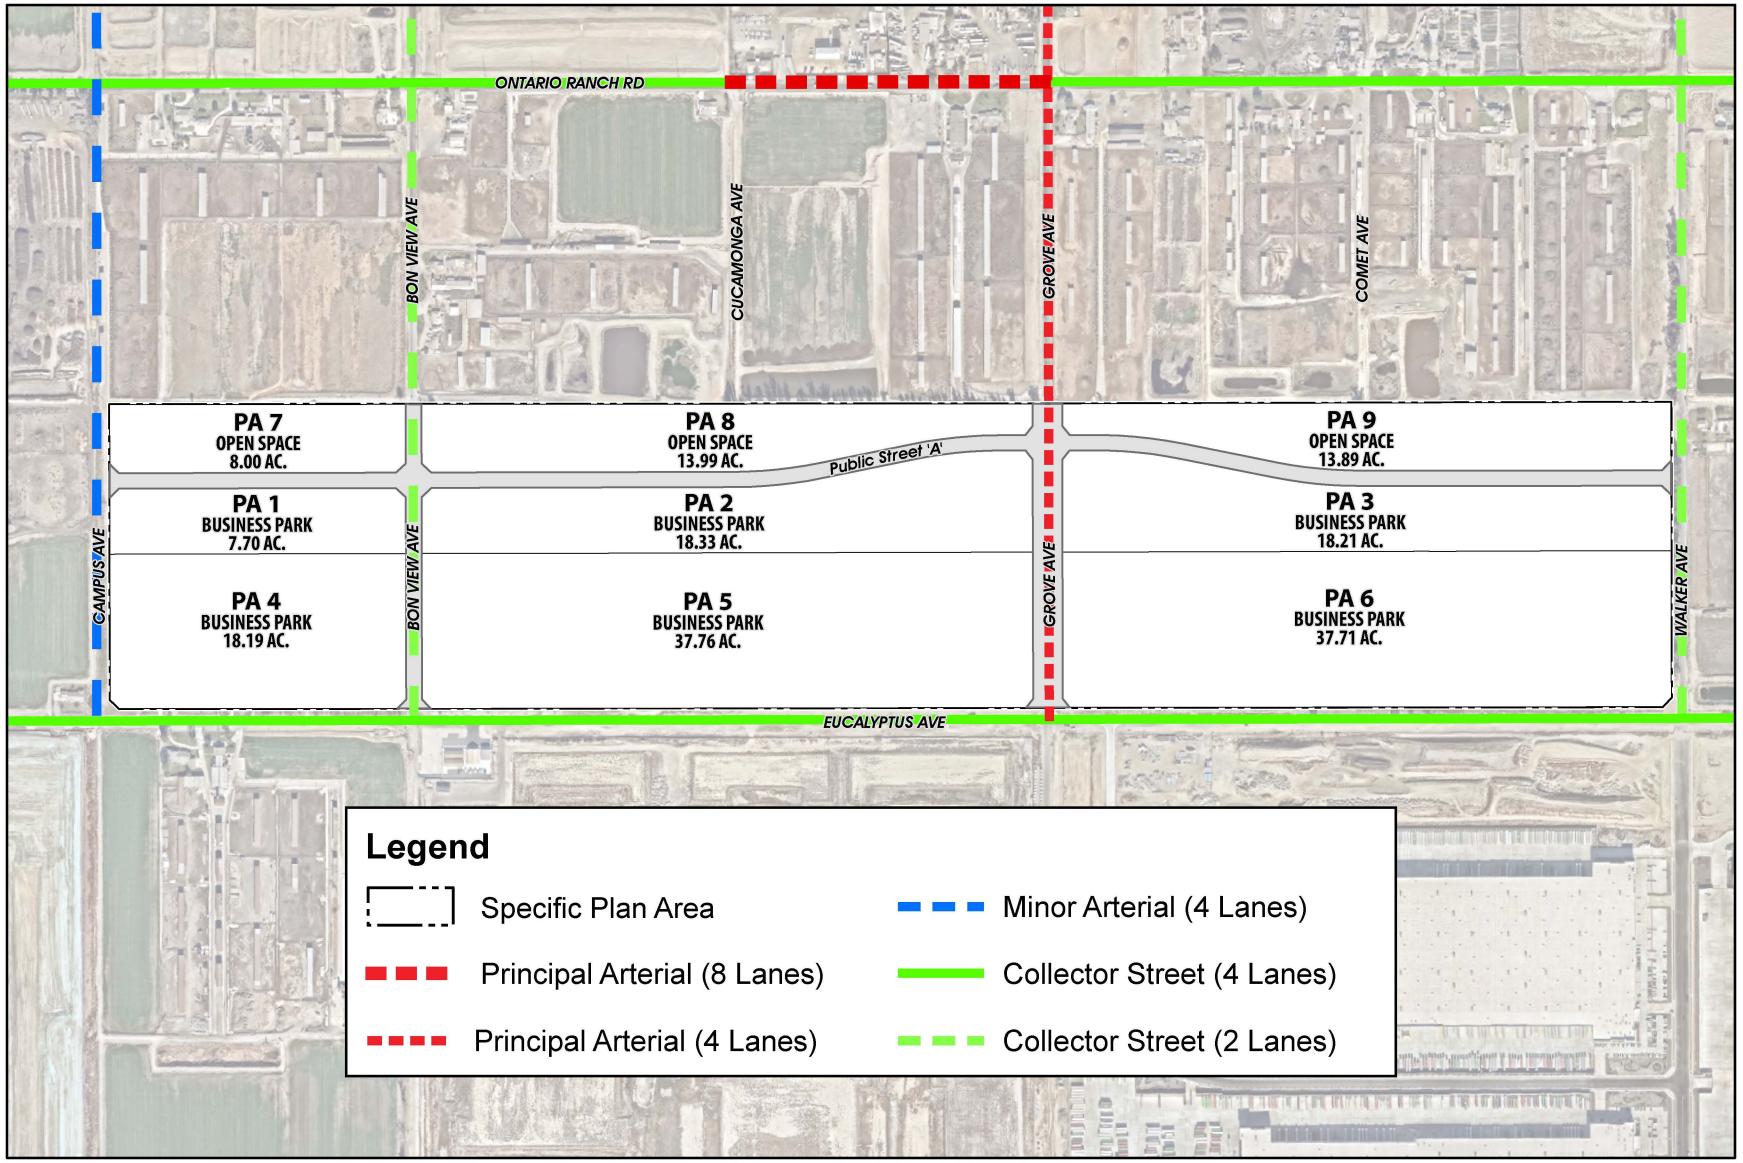
4.1.1 Vehicular Circulation

Direct access to the Eucalyptus Business Park Specific Plan area is provided by Campus Avenue from the west, Eucalyptus Avenue from the south, and Walker Avenue from the east. Additionally, Bon View Avenue and Grove Avenue provide access through the Specific Plan area in the north-south orientation. The Specific Plan proposes to provide an internal east-west oriented Public Street 'A' through the Specific Plan area to connect Campus Avenue and Walker Avenue. Public Street 'A' will provide a separation between the Business Park land uses and the Open Space – Parkland land uses.

The installation of traffic controls (traffic signals and stop signs) and the location and orientation of private driveways serving individual buildings and uses will be determined as part of implementing development plans. Additional right-of-way may be required to accommodate additional left turn lanes at intersections based on required queue lengths per the Traffic Impact Analysis/Specific Plan EIR.

Figure 4-1, *Existing Vehicular Circulation and Access Plan*, provides the City's proposed ultimate roadway buildout within the Specific Plan area, and Figure 4-2, *Conceptual Vehicular Circulation and Access Plan*, illustrates the vehicular circulation plan within the Specific Plan area. Final intersection spacing, intersection right-of-way (ROW), and traffic controls must conform to the findings of the associated traffic impact analysis and to City standards. All right-of-way/easements necessary to construct the required public improvements shall be obtained to the extent feasible.

The following pages describe and illustrate the primary components of the Eucalyptus Business Park Specific Plan's vehicular circulation network. Existing interim striping shall be removed along existing frontage streets. Refer to Chapter 7, *Implementation Plan*, for additional circulation improvement standards pertaining to phasing.



Source(s): Esri, Nearmap Imagery (January 2025), Michael Baker (11-20-2025), San Bernardino County (2025), City of Ontario (10-20-2016)

Feet

Conceptual Vehicular Circulation and Access Plan

A. Campus Avenue (108' ROW Minor Arterial)

Campus Avenue forms the western boundary of Planning Areas 1, 4, and 7. At the time this Specific Plan was prepared, no segments of the ROW abutting the Specific Plan area had been constructed. This public roadway will provide access to the Specific Plan area from off-site areas to the north and south.

As shown on Figure 4-3, *Street Sections – Campus Avenue, Bon View Avenue, and Grove Avenue*, the developer(s) of the Eucalyptus Business Park Specific Plan area will be responsible for constructing the eastern 78 feet out of the total 108-foot-wide ROW. The 78 feet of improvement includes 59 feet of paved roadway, a 12-foot-wide parkway that includes 7 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk. The remaining western portions of the Campus Avenue ROW will be constructed by others and include 18 feet of paved roadway and a 12-foot-wide parkway containing 7 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk.

Beyond the Campus Avenue ROW, a 23-foot-wide landscape buffer abuts both the eastern and western sides of the ROW. Developer(s) of the Specific Plan area will be responsible for constructing the eastern landscape buffer inclusive of an 8-foot-wide multi-purpose trail.

A traffic signal will be located at the intersection of Campus Avenue and Eucalyptus Avenue by developer(s) within the Specific Plan area and a potential traffic signal may be installed at the intersection of Campus Avenue and Public Street 'A'. Traffic signal locations are subject to change based on the results and recommendations of a traffic study. All improvements to Campus Avenue are required to comply with applicable City of Ontario requirements, including sight distance requirements.

Final driveway locations along Campus Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines.

B. Bon View Avenue (66' ROW Collector)

Bon View Avenue forms the eastern boundary of Planning Areas 1, 4, and 7 and the western boundary of Planning Areas 2, 5, and 8. This public roadway provides access to the Specific Plan area from off-site areas to the north and south.

As shown on Figure 4-3, *Street Sections – Campus Avenue, Bon View Avenue, and Grove Avenue*, the developer(s) of the Eucalyptus Business Park Specific Plan area will be responsible for constructing the entire width of the 66-foot-wide ROW. The 66 feet of improvement includes 48 feet of paved roadway and a 9-foot-wide parkway on both sides of the street that includes 4 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk.

Beyond the Bon View Avenue ROW, a 20-foot-wide storm drain easement abuts the eastern side of the ROW. Easement width requirement is subject to change based on findings of City-approved hydraulic studies, master plan updates, and project final designs.

Developers outside of the Specific Plan area are constructing a traffic signal at the intersection of Bon View Avenue and Eucalyptus Avenue and a potential traffic signal may be installed at the intersection of Bon View Avenue and Public Street 'A'. If the traffic signal improvements are not completed and accepted by the City, developer(s) of this Specific Plan area is subject to the traffic signal improvements required. All improvements to Bon View Avenue are required to comply with applicable City of Ontario requirements,

including sight distance requirements. Due to utility constraints, Bon View Avenue may need to be constructed as a tilt section.

Final driveway locations along Bon View Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

C. Grove Avenue (124' ROW Principal Arterial)

Grove Avenue forms the eastern boundary of Planning Areas 2, 5, and 8 and the western boundary of Planning Areas 3, 6, and 9. This public roadway provide access to the Specific Plan area from off-site areas to the north and south.

As shown on Figure 4-3, *Street Sections – Campus Avenue, Bon View Avenue, and Grove Avenue*, the developer(s) of the Eucalyptus Business Park Specific Plan area will be responsible for constructing the entire width of the 124-foot-wide ROW. The 124 feet of improvement includes a 28-foot-wide raised center median, and 56 feet of paved roadway and a 20-foot-wide parkway on both sides of the street. The 20-foot-wide parkway on the western side of the ROW provides 7 feet of curb-adjacent landscaping, a 5-foot-wide sidewalk and an additional 8 feet of landscaping on the west side of the sidewalk. The 20-foot-wide parkway on the eastern side of the ROW provides 7 feet of curb-adjacent landscaping, a 5-foot-wide sidewalk, 5 feet of additional landscaping, and an 8-foot-wide multi-purpose trail.

Beyond the Grove Avenue ROW, a 20-foot-wide landscape buffer abuts both the eastern and western sides of the ROW.

The traffic signal at the intersection of Grove Avenue and Eucalyptus Avenue will be constructed by others, as part of adjacent development to the south. A potential traffic signal may be installed at the intersection of Grove Avenue and Street 'A". If the traffic signal improvements are not completed and accepted by the City, developer(s) of this Specific Plan area is subject to the traffic signal improvements required. Traffic signal locations are subject to change based on the results and recommendations of a traffic study. All improvements to Grove Avenue are required to comply with applicable City of Ontario requirements, including sight distance requirements.

Final driveway locations along Grove Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

Figure 4-3

Street Sections - Campus Avenue, Bon View Avenue, and Grove Avenue

Not to Scale

D. Walker Avenue (88' ROW Collector)

Walker Avenue forms the eastern boundary of Plannings Areas 3, 6, and 9. This public roadway provides access to the Specific Plan area from off-site areas to the north and south.

As shown on Figure 4-4, *Street Sections – Walker Avenue, Eucalyptus Avenue*, *and Public Street 'A'*, the developer(s) of the Eucalyptus Business Park Specific Plan area will be responsible for constructing the western 69 feet out of the total 88-foot-wide ROW. The 69 feet of improvement includes 57 feet of paved roadway and a 12-foot-wide parkway that includes 7 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk. The remaining eastern portions of Walker Avenue ROW will be constructed by others and include 7 feet of paved roadway, a 12-foot-wide parkway containing 7 feet of curb-adjacent landscaping and 5-foot-wide sidewalk, and an 8-foot wide Multi Purpose Trail located outside of the right-of-way.

A 23-foot-wide landscape buffer abuts both the east and west sides of the Walker Avenue ROW. Within the eastern landscape buffer, developers outside of the Specific Plan area will be responsible for constructing an 8-foot-wide multi-purpose trail.

The traffic signal at the intersection of Walker Avenue and Eucalyptus Avenue will be constructed by others as part of adjacent development to the south. A potential traffic signal may be installed at the intersection of Walker Avenue and Public Street 'A'. If the traffic signal improvements are not completed and accepted by the City, developer(s) of this Specific Plan area is subject to the traffic signal improvements required. All improvements to Walker Avenue are required to comply with applicable City of Ontario requirements, including sight distance requirements. Developers shall design and construct concrete pavements on Walker Avenue southbound approaches at Eucalyptus Avenue in accordance with City of Ontario standard drawing #1207 as Walker Avenue will be designated as a truck route.

Final driveway locations along Walker Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

E. Eucalyptus Avenue (108' ROW Collector)

Eucalyptus Avenue forms the southern boundary of Planning Areas 4, 5, and 6. This public roadway provides access to the Specific Plan area from off-site areas to the east and west.

As shown on Figure 4-4, *Street Sections – Walker Avenue, Eucalyptus Avenue, and Public Street 'A',* Eucalyptus Avenue will provide 84 feet of paved roadway, which includes a 14-foot-wide painted median. A 12-foot-wide parkway that includes 7 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk is provided on both sides of the street. Beyond the ROW, a 23-foot-wide landscape buffer abuts both sides of Eucalyptus Avenue. Additionally, an 8-foot-wide multi-purpose trail is provided within the northern landscape buffer.

Developer(s) within the Eucalyptus Business Park Specific Plan area west of Grove Avenue will be responsible for constructing the northern 16 feet of paved roadway, the 12-foot-wide parkway, and the 8-foot-wide multi-purpose trail. Developer(s) within the Eucalyptus Business Park Specific Plan area east of Grove Avenue will be responsible for constructing the 12-foot-wide parkway and the 8-foot-wide multi-purpose trail. The remaining portions of Eucalyptus Avenue, as illustrated in Figure 4-4, will be constructed by developer(s)

outside of the Specific Plan area. Developer(s) shall design and construct concrete pavement at all intersection approaches in accordance with City of Ontario Standard Drawing No. 1207, as Eucalyptus Avenue will be designated as a truck route.

The traffic signals along Eucalyptus Avenue at its intersections with Bon View Avenue, Grove Avenue, and Walker Avenue will be constructed by others, as part of adjacent development to the south. If the traffic signal improvements are not completed and accepted by the City, developer(s) of this Specific Plan area is subject to the traffic signal improvements required. Developer(s) within the Specific Plan area will be responsible for a traffic signal at the intersection of Eucalyptus Avenue and Campus Avenue. Traffic signal locations are subject to change based on the results and recommendations of a traffic study. All improvements to Eucalyptus Avenue are required to comply with applicable City of Ontario requirements, including sight distance requirements.

Final driveway locations along Eucalyptus Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

F. Public Street 'A' (64' ROW Local Street)

Public Street 'A' forms the northern boundary of Planning Areas 1, 2, and 3 and the southern boundary of Planning Areas 7, 8, and 9. This public roadway provides access to the Specific Plan area from off-site areas to the east and west.

As shown on Figure 4-4, *Street Sections – Walker Avenue, Eucalyptus Avenue, and Public Street 'A'*, implementing projects within the Eucalyptus Business Park Specific Plan area will be responsible for constructing the entire width of the 64-foot-wide ROW. The 64 feet of improvement includes 40 feet of paved roadways and a 12-foot-wide parkway on both sides of the street that includes 7 feet of curb adjacent landscaping and a 5-foot-wide sidewalk. Notwithstanding the above, Street 'A' may require additional roadway width at intersections with north–south streets to accommodate truck turning movements associated with the Business Park uses. Accordingly, the right-of-way and paved roadway width for Street A may be increased at intersections, as determined necessary through implementing projects, subject to City review and approval.

A traffic signal may be required at the intersection of Public Street 'A' and Grove Avenue, Public Street 'A' and Campus Avenue, Public Street 'A' and Bon View Avenue, and Public Street 'A' and Walker Avenue. Traffic signal locations are subject to change based on the results and recommendations of a traffic study. All improvements to Public Street 'A' are required to comply with applicable City of Ontario requirements, including sight distance requirements.

Final driveway locations along Public Street 'A' will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

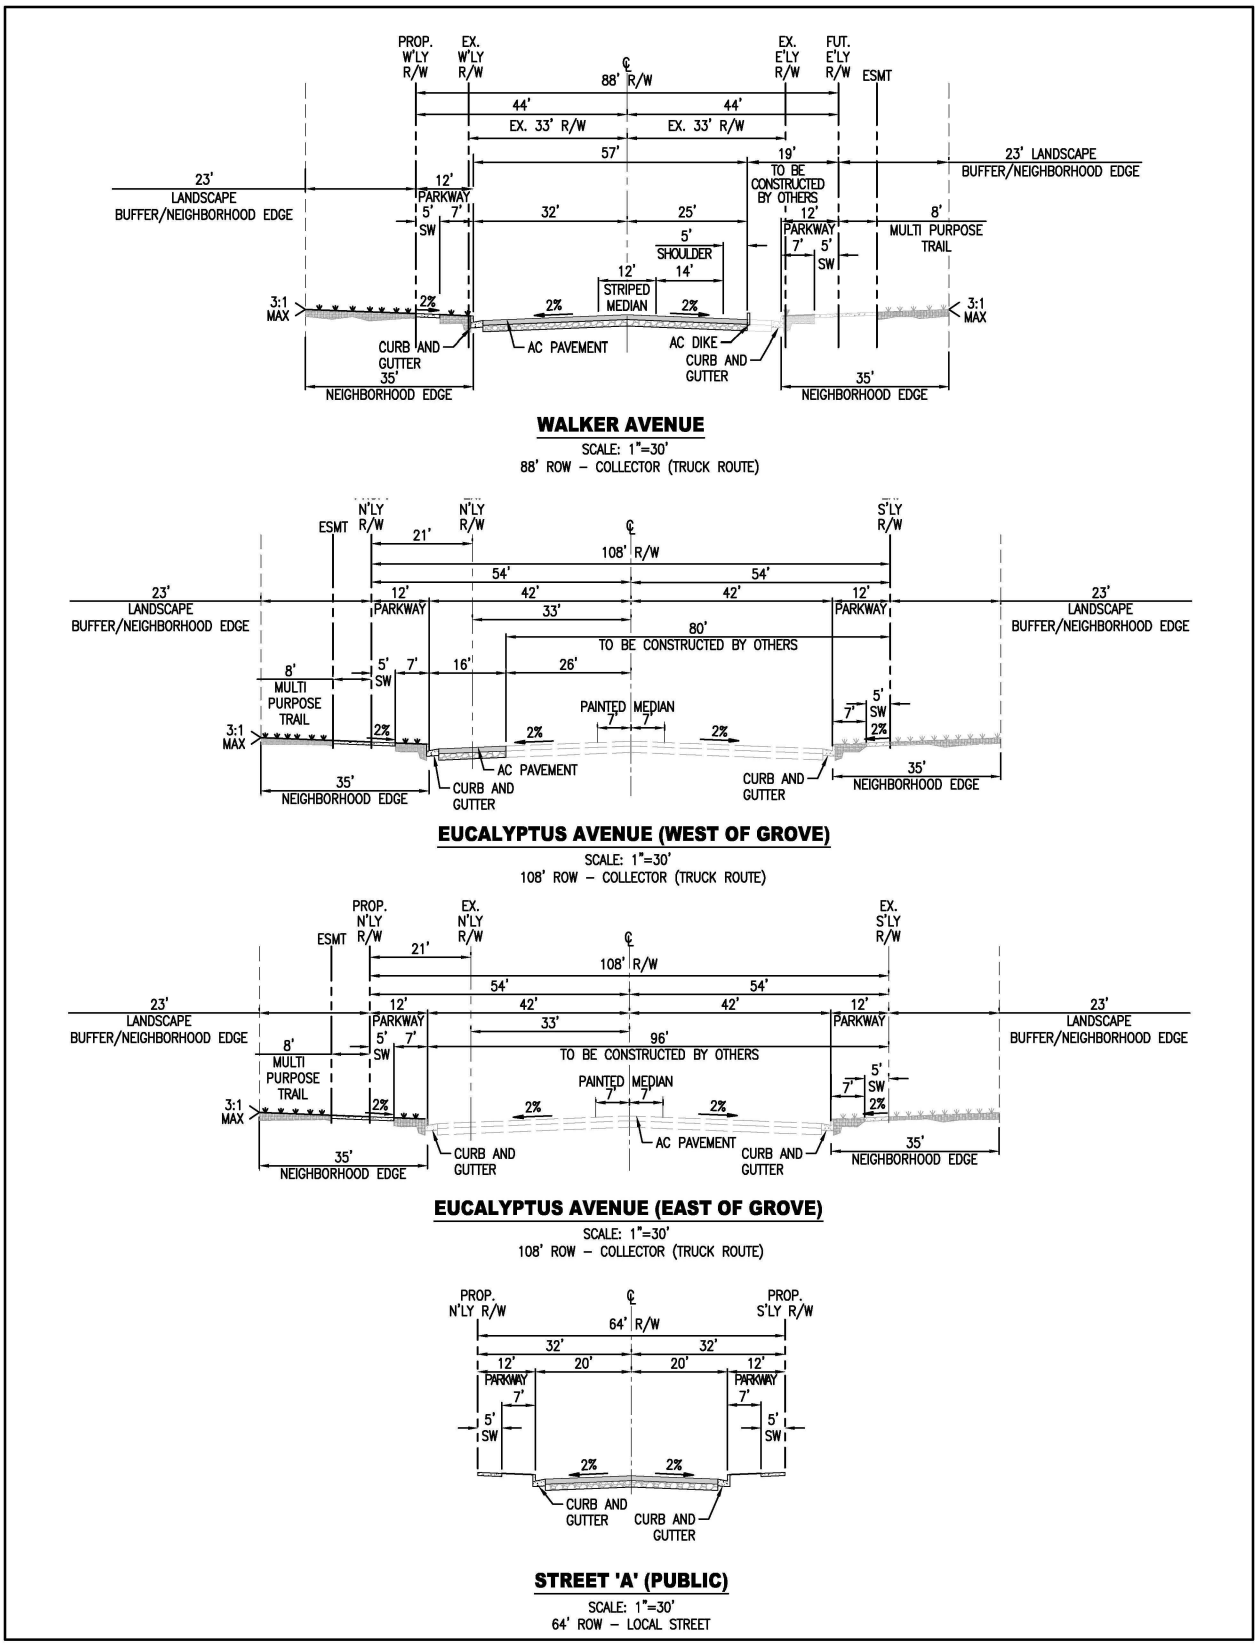
G. Private Drive Aisles

Private drive aisles connect individual planning areas to the public roadways described above. Within each planning area, private drive aisles provide vehicular access for automobiles and commercial vehicles including trucks to parking lots and loading areas and provide sidewalk opportunities for pedestrian and bicycle access to building entries and

amenities. Private drive aisles will have pavement widths that range between 24 and 50 feet. Private drive aisles are not depicted on Figure 4-2 as their locations, alignments, and widths will be determined in conjunction with the design of implementing development projects.

H. Truck Routes

Access to the Eucalyptus Business Park Specific Plan area is provided from Eucalyptus Avenue, Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, and Public Street 'A'. Project truck traffic shall use the City's truck route in Euclid Avenue, Walker Avenue, Eucalyptus Avenue, and Merrill Avenue to access the Specific Plan area.



Source(s): Michael Baker International (04-01-2026)

Figure 4-4

Street Sections - Walker Avenue, Eucalyptus Avenue, and Public Street 'A'

Not to Scale

4.1.2 Non-Vehicular Circulation

The Eucalyptus Business Park Specific Plan encourages non-motorized circulation for employees and visitors of the Specific Plan area. Pedestrian circulation is encouraged within the Specific Plan area through a network of sidewalks and multi-purpose trails, and bicycle circulation is encouraged through a network of bike lanes and multi-purpose trails. Additional pedestrian and bicycle facilities will be designed on individual business park building sites at the time buildings are designed and positioned in each planning area as part of implementing development projects. Additional pedestrian and bicycle facilities within Planning Areas 7, 8, and 9 will be designed consistent with the City of Ontario Grand Park Master Plan.

As shown on Figure 4-5, *Conceptual Non-Vehicular Circulation and Mobility Plan*, the Eucalyptus Business Park Specific Plan provides for sidewalk in the public ROW along Bon View Avenue and Public Street 'A'; sidewalk and multi-purpose trail along Grove Avenue; and sidewalk, Class II bikeway, and multi-purpose trail along Eucalyptus Avenue, Campus Avenue, and Walker Avenue (to be constructed by others). Pedestrian crosswalks are designed at street intersections to ensure pedestrian safety. Locations of pedestrian crosswalks are provided on Figure 4-5.

As illustrated on Figure 4-5, 5-foot-wide sidewalks are provided on both sides of Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, Eucalyptus Avenue, and Public Street 'A'; an 8-foot-wide multi-purpose trail is provided on Eucalyptus Avenue, Campus Avenue, Grove Avenue and Walker Avenue; and Class II bike lanes are provided along Eucalyptus Avenue, Campus Avenue, and Walker Avenue. Construction of the non-vehicular network will be provided by developers both within and outside of the Specific Plan area. Responsibility of construction is illustrated in Figures 4-3 and 4-4 of this Specific Plan.

The Eucalyptus Business Park Specific Plan anticipates a large volume of passenger vehicle and truck traffic circulating on the site; therefore, convenient and safe pedestrian and bicycle access was given careful consideration when preparing the design standards of this Specific Plan. Provisions for sidewalks, short-term and long-term bicycle storage facilities, and employee and visitor gathering areas interior to the planning areas are set forth in Chapter 6, *Design Guidelines*, of this Specific Plan.

In addition to internal non-vehicular circulation, Omnitrans provides bus services to and from the Specific Plan area. The following bus and transit facilities are located west and north of the Specific Plan area:

- Omnitrans Bus Route 83, located approximately 0.6 miles to the west along Euclid Avenue.
- Omnitrans Bus Route 87, located approximately 1.8 miles to the north along Riverside Drive.
- As part of the Specific Plan, a new bus turnout would be constructed near the intersection of Grove Avenue and Eucalyptus Avenue in anticipation of future Omnitrans service.

Figure 4-5

0 200 400 800
Feet

Conceptual Non-Vehicular Circulation and Mobility Plan

4.2 Utility Infrastructure Plan

Buildout of the Eucalyptus Business Park Specific Plan area requires the installation of water, sewer, drainage, and other utility infrastructure, as described in the subsections below. All utility infrastructure improvements shall be constructed in accordance with applicable City of Ontario design standards and specifications.

Public utility mains shall be located within publicly dedicated ROW and publicly dedicated streets. Any proposed public utilities within private streets shall be subject to City approval and contained within acceptable easements, access, and separation requirements. Minimum width for a public utility easement (PUE) shall be at least 20 feet wide and shall be centered on the public utility main. Setbacks are required when there is a public utility within a private street, drive, or alley to accommodate any utility appurtenances. Additionally, private utilities are not allowed within the PUEs.

4.2.1 Potable Water Plan

The City of Ontario provides water service to the Specific Plan area. The Specific Plan area lies within the 925 Pressure Zone (PZ). As shown on Figure 4-6, *Potable Water Infrastructure Plan*, planned potable water lines proposed by projects outside of the Specific Plan area include a 16-inch potable water line within Eucalyptus Avenue between Campus Avenue and Grove Avenue; and a 24-inch potable water line within Eucalyptus Avenue between Grove Avenue and Walker Avenue. Additionally, an existing 30-inch potable water line within Grove Avenue between Eucalyptus Avenue and Ontario Ranch Road. Any existing potable water mains not yet accepted by the City that support the development of the Specific Plan are required at the responsibility of the developer to support the development of the Specific Plan area.

Potable water system improvements within the Specific Plan area require the planning, design, and construction of the following: 12-inch potable water lines along Bon View Avenue from Eucalyptus Avenue to the northern boundary of the Specific Plan area; 16-inch potable water lines along Campus Avenue and Walker Avenue from Eucalyptus Avenue to the northern boundary of the Specific Plan area; and a 12-inch potable water line along Public Street 'A' between Campus Avenue and Walker Avenue.

The overall water infrastructure plan to serve the City of Ontario is illustrated on Figure 4-7, *City of Ontario Ultimate Water System*. Final sizing of required infrastructure shall be determined at the time of development during final design based on hydraulic calculations. The required infrastructure is subject to change based upon findings of City approved hydraulic studies, master plan updates, and project final designs. Any existing utilities, including other agencies' mains, that do not meet minimum depths, standard alignment locations, and/or minimum horizontal and vertical separation requirements shall be subject to relocation/replacement by the developer(s) of the Specific Plan.

All on-site improvements are required to have hydraulic studies to determine infrastructure improvements needed to support each area and shall be the responsibility of the developer(s). Any changes in land use not limited to units, density, or intensity, that are not previously accounted for in a City approved study following current design criteria shall trigger a revised updated hydraulic study and any new findings of infrastructure improvements needed are required at the responsibility of the developer.

The City's Potable Water Master Plan identifies new water facilities to serve the Ontario Ranch area, which will need to be constructed prior to

or concurrent with the Specific Plan area's water improvements. Construction of the Specific Plan area's water improvements and the Master Plan water improvements necessary to serve the Specific Plan area shall be the responsibility of the developer(s). The Eucalyptus Business Park Specific Plan will be required to participate in the Master Plan water improvements as detailed in this Specific Plan.

As a part of the backbone infrastructure, the master planned 925 Pressure Zone (PZ) reservoir shall be constructed on the City-owned reservoir site as directed by the City. Well supply and any drinking water treatment necessary for the 925 PZ shall be constructed to supply the 925 PZ reservoir. The 925 Pressure Zone (PZ) Phase 2 Potable Water System facilities will need to be constructed to support the Project. In the event the 925 PZ Phase 2 facilities are not completed in time to serve the Project, the developer(s) may implement an interim water supply strategy, subject to review and approval by the City. The off-site improvements include the construction of 42-inch water main on Grove Avenue, from Chino Avenue to Francis Street, proceeding west on Francis Street to Bon View Avenue, continuing north on Bon View Avenue to the City-owned Reservoir site. Additional improvements include installing a 42-inch potable water main in Grove Avenue connecting from the 30-inch to the 42-inch potable water main in Grove Avenue at Chino Ave; and extending to the Bon View Avenue Reservoir site and to the Reservoir; and, installing a 9 million gallon reservoir on the Bon View Reservoir site; and, installing two 2,500 gpm wells with any treatment necessary to meet water quality standards and the 16-inch to 42-inch well collection mains from the wells to the reservoirs. The Eucalyptus Business Park Specific Plan will be required to participate in the future Phase 2 Water System Improvements as detailed in the development agreements with the City.

City of Ontario Ultimate Water System

4.2.2 Recycled Water Plan

The City of Ontario/Ontario Municipal Utilities Company (OMUC) and the Inland Empire Utilities Agency (IEUA) supplies recycled water to the Specific Plan area. Recycled Water supplied by OMUC is produced by the IEUA from its four wastewater reclamation plants. As shown on Figure 4-8, *Recycled Water Infrastructure Plan*, existing recycled water lines include a 30-inch IEUA recycled water line within Eucalyptus Avenue between Campus Avenue and Bon View Avenue; a 12-inch City of Ontario recycled water line within Eucalyptus Avenue between Bon View Avenue and Walker Avenue; a 30-inch IEUA recycled water line within Bon View Avenue between Eucalyptus Avenue and Ontario Ranch Road; and a 30-inch IEUA recycled water line within Ontario Ranch Road between Bon View Avenue and Walker Avenue.

Recycled water infrastructure improvements for the Specific Plan area require the planning, design, and construction of the following: an 8-inch recycled water line within Grove Avenue and Walker Avenue between Eucalyptus Avenue and the northern edge of the Specific Plan area. At the discretion of the City, additional recycled water line may be needed within Campus Avenue and Public Street 'A' to support development parcels not fronting a master planned recycled water main. Improvements may include an 8-inch recycled water line within Campus Avenue between Eucalyptus Avenue and the northern edge of the Specific Plan area; and an 8-inch recycled water line along Public Street 'A' between Campus Avenue and Walker Avenue.

The Eucalyptus Business Park Specific Plan shall make use of recycled water for all approved uses including, but not limited to, the irrigation of parks, street parkway landscaping, and any other Property Owners' Association (POA) maintained common areas. The developer shall prepare and secure approval of an Engineering Report from the City of Ontario and State Department of Drinking Water Agency prior to the use of recycled water.

Final sizing of required infrastructure shall be determined at the time of development during final design based on hydraulic calculations. The required infrastructure is subject to change based upon findings of City approved hydraulic studies, master plan updates, and project final designs. Any existing utilities, including other agencies' mains, that do not meet minimum depths, standard alignment locations, and/or minimum horizontal and vertical separation requirements shall be subject to relocation/ replacement by the developer(s) of the Specific Plan. The developer of the Specific Plan area is required to obtain approvals from IEUA for regional connections outlined in the Specific Plan and additional regional connections as required to support development not fronting a City recycled water main.

All on-site improvements are required to have hydraulic studies to determine infrastructure improvements needed to support each area and shall be the responsibility of the developer. Any changes in land use not limited to units, density, or intensity, that are not previously accounted for in a City approved study following current design criteria shall trigger a revised updated hydraulic study and any new findings of infrastructure improvements needed are required at the responsibility of the developer.

Figure 4-8

0 200 400 800 Feet

Recycled Water Infrastructure Plan

4.2.3 Sanitary Sewer Plan

Sanitary sewer/wastewater collections for the Specific Plan area are served by the City of Ontario/OMUC, which conveys wastewater to the IEUA for transmission and treatment. As shown on Figure 4-9, *Sanitary Sewer Infrastructure Plan*, at the time the Specific Plan was prepared, there is no existing sanitary sewer infrastructure within the Specific Plan area.

Sanitary sewer infrastructure improvements for the Specific Plan area require the planning, design, and construction of the following: a 15-inch sanitary sewer line within Campus Avenue between Eucalyptus Avenue and the northern border of the Specific Plan area; an 18-inch sanitary sewer line within Bon View Avenue between Eucalyptus Avenue and the northern border of the Specific Plan area; and a 21-inch sanitary sewer line within Grove Avenue and Walker Avenue between Eucalyptus Avenue and the northern border of the Specific Plan area. At the discretion of the City, additional sanitary sewer lines may be needed within Eucalyptus Avenue and Public Street 'A' to support development parcels not fronting a master planned sewer main. Improvements may include an 8-inch sanitary sewer line within Eucalyptus Avenue east of Bon View Avenue to connect with the proposed sewer line east of Bon View Avenue; an 8-inch sanitary sewer line within Eucalyptus Avenue east of Grove Avenue to connect with the proposed sanitary sewer line east of Grove Avenue; an 8-inch sanitary sewer line within Public Street 'A' east of Campus Avenue to connect with the proposed sewer line within Campus Avenue; an 8-inch sanitary sewer line within Public Street 'A' east of Bon View Avenue to connect with the proposed sewer line within Bon View Avenue; and an 8-inch sanitary sewer line within Public Street 'A' west of Walker Avenue to connect with the proposed sewer line within Walker Avenue. Any existing sewer mains not yet accepted by the City that are downstream of the Specific Plan area are required at the responsibility of the developer to support the development of the Specific Plan.

In addition to proposed sewer infrastructure, tributary flows are also included in Figure 4-9. The flows arrows show which sewer lines are supporting the sewer flows from each planning area.

Required sanitary sewer infrastructure is subject to change based upon findings of City-approved hydraulic studies, master plan updates, and project final designs; and, sewer main locations are also subject to change based upon the developer-conducted and City-approved Conceptual Design Report.

Final sizing of sewer mains shall be determined during final design by hydraulic calculations through a Sewer Study or Sewer Sub-Area Master Plan (SSAMP) per the City's current Sewer Master Plan.

Any existing utilities, including other agencies' mains, that do not meet minimum depths, standard alignment locations, and/or minimum horizontal and vertical separation requirements shall be subject to relocation/ replacement by the developer(s) of the Specific Plan.

All on-site improvements are required to have hydraulic studies to determine infrastructure improvements needed to support each area and shall be the responsibility of the developer. All on-site intract public sewer mains shall be studied via a Sewer Sub-Area Master Plan (SSAMP) per the City's current Sewer Master Plan. Any changes in sewer tributary boundaries, as acceptable at the City's discretion or land use not limited to units, density, or intensity, that are not previously accounted for in a City approved study following current design criteria shall trigger a

revised updated sewer study and any new findings of infrastructure improvements needed are required at the responsibility of the developer.

The off-site public sewer shall be designed to meet all applicable City standards and requirements and designed in such a way so that the proposed on-site private sewer improvements shall be designed to meet all applicable building and plumbing codes. Eucalyptus Business Park Specific Plan's sewer tributary areas shall be determined in conformance with the latest City Sewer Master Plan while accommodating the off-site and on-site sewer standards, codes, and requirements, etc. If Eucalyptus Business Park Specific Plan's sewer tributary areas need to be revised to allow the public or private sewer to meet applicable requirements, and a revised SSAMP supports the revised sewer tributary boundaries, as approved at the City's discretion, then Figure 4-10 shall be revised to reflect Eucalyptus Business Park Specific Plan's new sewer tributary boundaries.

Figure 4-9

0 200 400 800 Feet

Sanitary Sewer Infrastructure Plan

4.2.4 Storm Water Management Plan

As shown on Figure 4-10, *Storm Drain Infrastructure Plan*, existing storm drain infrastructure includes a 24-inch storm drain line within Eucalyptus Avenue east of Campus Avenue; a 42-inch storm drain line within Eucalyptus Avenue west of Bon View Avenue; a 24-inch line within Eucalyptus Avenue east of Bon View Avenue, a 24-inch storm drain line within Eucalyptus Avenue just east and west of Grove Avenue; and a 24-inch storm drain line within Eucalyptus Avenue west of Walker Avenue.

Storm drain infrastructure improvements for the Specific Plan area require the planning, design, and construction of the following: a 60-inch storm drain line within Campus Avenue between Eucalyptus Avenue and the northern boundary of the Specific Plan area; a 96-inch storm drain line within Bon View Avenue between Eucalyptus Avenue and the northern boundary of the Specific Plan area; a 108-inch storm drain line within Grove Avenue and Walker Avenue between Eucalyptus Avenue and the northern boundary of the Specific Plan area; 24-inch storm drain lines within Public Street 'A' between Campus Avenue and Bon View Avenue; and 36-inch storm drain lines within Public Street 'A' between Bon View Avenue and Walker Avenue.

The overall storm drain infrastructure plan to serve the City of Ontario is illustrated on Figure 4-13, *City of Ontario Planned Drainage Facilities*. Required storm drain infrastructure is subject to change based upon findings of City-approved hydraulic studies, master plan updates, and project final designs. If the storm drain improvements are not completed and accepted by the City, the developer of this Specific Plan is subject to the storm drain improvements required.

If at the time of construction, Line I in Euclid Avenue in the City of Chino has not been constructed, the developments tributary to this line (see Figure 4-13) will need to detain and release their runoff at 80% of the pre-development flows.

A. National Pollutant Discharge Elimination System (NPDES) Compliance and Water Quality Management Plan (WQMP)

The grading and drainage areas design for the on-site storm drain system improvements within the Eucalyptus Business Park Specific Plan area will utilize a variety of Low Impact Development (LID) design concepts to detain, filter, and treat surface runoff in a practical manner to comply with the requirements of the San Bernardino County NPDES Storm Water Program's current WQMP and the City's NPDES program requirements for new development projects.

The objective of project-specific WQMPs is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased water pollutants and changes in hydrology. These effects shall be minimized through the implementation of on-site and off-site LID Site Design Best Management Practices (BMP's) that retain/infilter or biotreat 85th percentile storm event runoff from the Specific Plan area.

In addition, non-structural and structural Source Control BMP's will be implemented and documented in approved Water Quality Management Plan(s) associated with the design of implementing development projects to reduce pollutant generation and transport from the Specific Plan area.

All Priority Land Use (PLU) areas, defined by the State Water Resources Board (SWRCB) as high trash generating areas such as industrial uses within the Specific Plan area shall comply with the statewide Trash Provisions adopted by the SWRCB and trash requirements in the

most current San Bernardino County Area-Wide MS4 permit.

Prior to the issuance of any grading or construction permits for any parcel map or area that disturbs one (1) acre or more of land within the Eucalyptus Business Park Specific Plan area, an Erosion Control & Sedimentation Plan and Storm Water Pollution Prevention Plans (SWPPP) will be prepared to comply with California State Water Resources Control Board's (State Water Board) current "General Permit to Discharge Storm Water Associated with Construction Activity" and current "Area Wide Urban Storm Water Runoff (Regional NPDES) Permit." SWPPPs are required to identify and detail all appropriate Best Management Practices (BMPs) to be implemented or installed during construction.

B. Airport Compatibility

The Specific Plan area is located in the Airport Influence Areas (AIAs) of the Ontario International Airport and the Chino Airport. The Federal Aviation Administration (FAA) identifies stormwater management facilities as one of the greatest attractants to wildlife hazards to airport operations. For this reason, all new above ground stormwater management facilities located within the Eucalyptus Business Park Specific Plan area will be designed to avoid the creation of open water and habitat by being designed to drain completely within a maximum 48-hour period following design storm event (i.e., 24-hour storm) and remain totally dry between storm events.

Figure 4-11

City of Ontario Planned Drainage Facilities

Not to Scale

4.2.5 Dry Utilities Plan

Southern California Gas Company (SoCal Gas) provides gas service, Southern California Edison (SCE) provides the electric service, and OntarioNet Fiber and Frontier Communications provide telecommunication (telecom) services to the Specific Plan area. As shown on Figure 4-12, *Dry Utilities Infrastructure Plan*, and Figure 4-13, *Fiber Optics Plan*, existing dry utilities infrastructure includes a 3-inch gas line within Eucalyptus Avenue between Campus Avenue and Bon View Avenue; a 3-inch and a 12-inch gas line along Eucalyptus Avenue between Bon View Avenue and Grove Avenue; a 2-inch and a 12-inch gas line within Bon View Avenue; a 4-inch gas line within Grove Avenue; and a 2-inch gas line within Walker Avenue.

Dry utilities, including electric and telecom improvements for the Specific Plan area require the planning, design, and construction of the following: new SCE and telecom lines within Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, Eucalyptus Avenue, and Public Street 'A'; new fiber optic lines within Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, Eucalyptus Avenue, and Public Street 'A'. The Specific Plan would also install a new gas line in Campus Avenue between Eucalyptus Avenue and the northern boundary of the Specific Plan area as part of areawide infrastructure improvements; However, the Specific Plan would not utilize natural gas.

All dry utilities internal to the Eucalyptus Business Park Specific Plan area will be installed underground in conjunction with the development of the Specific Plan area in accordance with applicable public utility standards and specifications and to the satisfaction of the Ontario City Engineer. The location of other lateral connections, transformers, switches, pull boxes, and dry utility manholes will be determined at the time buildings are positioned and uses are established in each planning area in conjunction with implementing development.

4.3 Conceptual Grading Plan

As part of site grading activities, the majority of the Specific Plan area would be subject to grading and disturbance. Specifically, grading activities on-site would require approximately 1,000,000 cubic yards (CY) of cut and approximately 1,150,000 CY of fill. Net fill (import) would be 150,000 CY. Within this earthwork operation, the site needs to export approximately 51,000 CY of organic materials.

CHAPTER 5

DEVELOPMENT REGULATIONS

5.1 Purpose and Intent

This Chapter formally establishes the use permissions and development standards (zoning) for the Eucalyptus Business Park Specific Plan area. The regulations provided herein work in concert with the architectural and landscape guidelines set forth in Chapter 6, *Design Guidelines*, to achieve the vision of this Specific Plan.

5.2 Definition of Terms

The meaning of words, phrases, titles, land uses, and terms shall be the same as provided in the City of Ontario Development Code (hereafter referred as "Development Code"), unless otherwise specifically defined in this Specific Plan.

5.3 Applicability

The regulations set forth in this Chapter shall apply to all development plans or agreements, tract or parcel maps, site plans, or any other action requiring administrative or discretionary approval within the approximately 189-acre Eucalyptus Business Park Specific Plan area. If the development standards contained herein differ from those contained in the Ontario Development Code, the provisions of this Specific Plan shall take precedence. Any development standard, condition, or situation not specifically addressed herein shall be subject to the applicable requirements of the Ontario Development Code.

5.4 Permitted, Conditionally Permitted, and Administratively Permitted Uses

Land within the Eucalyptus Business Park Specific Plan area and structures/facilities thereon may be developed, divided, and/or used for those activities listed in Table 5-1, *Permitted Land Uses*. Table 5-1 lists the permitted, conditionally-permitted, and administratively permitted land uses for each land use district established by this Specific Plan (Business Park and Open Space – Parkland). A use that is not listed in Table 5-1 is a prohibited use unless otherwise allowed pursuant to the procedures described in Chapter 7, *Implementation Plan*, or through applicable interpretations and determinations established by the Development Code.

The Specific Plan area is located within the Chino Airport (CNO) AIA. The San Bernardino County Comprehensive Land Use Plan for Chino Airport was adopted in 1991 and does not reflect guidance set forth in the 2011 Caltrans Airport Land Use Planning Handbook. As such, in 2022, the City of Ontario adopted the CNO Overlay District which provides maps, criteria, and policy language to guide development within the Chino AIA consistent with the 2011 Caltrans Airport Land Use Planning Handbook. The majority of the Specific Plan area is located within CNO Safety Zone 5 (low risk), with a very small portion of the southeastern corner located within Safety Zone 4 (moderate risk).

Development within the land use overlay district may have building height, land use, and floor area ratio (FAR) limitations and is subject to open land requirements. The more stringent criteria between those indicated in the applicable provisions set forth in this overlay district and this Specific Plan shall govern.

The symbols shown in Table 5-1 have the following meanings:

"P" – the land use is permitted by right, subject to the development standards applicable to that land use district.

"C" – the land use is conditionally permitted, subject to the filing of a Conditional Permit in accordance with the requirements of the Ontario Development Code and must be approved by the City of Ontario Zoning Administrator or Planning Commission before the use can be established within a particular land use district.

"A" – the land use is administratively permitted, subject to the filing of an Administrative Use Permit in accordance with the requirements of the Ontario Development Code.

Table 5-1 Permitted Land Uses

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Agriculture, Forestry, Fishing, Hunting			
Temporary and interim agriculture uses	P	P	Restricted to existing legally established agriculture and dairy uses.
Manufacturing			
Aerospace	P	--	
Alcoholic beverage manufacturing (breweries, wineries, distilleries, and related tasting room)	C	---	
Apparel	P	---	
Automotive	P	--	
Boutique/artisan small-scale and micro manufacturing facilities	P	---	Includes all types of small-scale businesses that produce tangible goods, such as textiles, hardware and hardware prototyping, woodworking, metal working, 3D printing, consumer product design and prototyping, nonalcoholic beverage, local food production and packaging, soaps, perfumes, and lotions.
Computer and electronic products	P	---	

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Electrical equipment, appliances, and components	P	---	
Food	P	---	Including bread, tortilla, snack foods, roasted nuts, coffee and tea, spice and extract, and other miscellaneous food manufacturing)
Footwear	P	---	
Furniture and related product manufacturing	P	---	
Leather and allied product	P	---	
Miscellaneous manufacturing	P	---	Includes medical equipment and supplies; jewelry and silverware; sporting and athletic goods; dolls, toys and games; office supplies; signs; and other miscellaneous manufacturing.
Painting, Powder Coating and Polishing Metal and Metal Products for the Trade	C	--	Activities are restricted to within a fully enclosed building.
Pharmaceuticals and medicines	C	---	
Plastic product manufacturing	P	---	
Printing and related support activities	P	---	
Textile product mills	P	---	Activities are restricted to within a fully enclosed building.
Wholesale Trade			
Automotive parts and accessories (excludes automotive repair)	P	---	
Business to business electronic markets	P	---	Includes sale of goods such as household goods, computer parts, clothing,

Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
			food, office supplies, and other tangible goods.
Durable and nondurable goods agents and brokers	P	---	Agent and brokers that facilitate wholesale transactions of tangible goods for manufacturers and buyers
Furniture and home furnishings	P	---	
Group purchasing organizations	P	---	
Hardware and plumbing, and heating equipment and supplies	P	---	
Household appliances and electrical and electronic goods	P	---	
Merchant wholesalers, nondurable goods	P	---	Excludes industrial gases, petroleum bulk stations and terminals, and fireworks and explosives.
Miscellaneous durable goods	P	---	Includes musical instruments, prerecorded compact discs and digital video discs, and timber and timber products.
Motor vehicle parts and supplies	P	---	
Professional and commercial equipment and supplies	P	---	Includes wholesale distribution of durable goods designed for business, industrial, or professional use, including medical, photographic, office, and computer equipment.
Sporting and recreational goods and supplies	P	---	Sales of firearms will require an approved CUP.
Toy and hobby goods and supplies	P	---	

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Jewelry, watches, precious stones, and precious metals	P	---	
Retail Services			
Automated fueling stations ("card lock" facilities)	P	---	
Automobile, light truck and van body, paint, and interior repair and customization	C	---	
Automobile, light truck and van repair and maintenance	C	---	
Batting cages – indoor	C	---	
Cafeterias and buffets[1]	P	---	Outdoor dining areas, both temporary and permanent, which are provided in addition to seating areas approved with the development of a building, may be permitted, subject to the approval of an Administrative Use Permit.
Convenience stores[1]	P	---	Gross floor area shall not exceed 10,000 sq. ft. for a single building.
Fitness and recreational sports centers (limited to health clubs and gyms, fitness and sports training facilities, tennis club, swim clubs and other activities and facilities) • GFA less than 10,000 SF	P	---	
Fitness and recreational sports centers (limited to health clubs and gyms, fitness and sports	C	---	

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
training facilities, tennis club, swim clubs and other activities and facilities) • GFA 10,000 or more SF			
Full-service restaurants[2]	P	---	Outdoor dining areas, both temporary and permanent, which are provided in addition to seating areas approved with the development of a building, may be permitted, subject to the approval of an Administrative Use Permit.
Gasoline stations with convenience stores[1]	C	---	
Home and garden equipment and appliance repair and maintenance	P	---	
Industrial retail sales (limited to the ancillary sales of goods and/or product either manufactured, warehoused, or wholesaled on-site) • ≤ 8,000 SF	P	---	
Industrial retail sales (limited to the ancillary sales of goods and/or product either manufactured, warehoused, or wholesaled on-site) • > 8,000 SF of building GFA	C	---	
Limited-service and fast food restaurants	P	---	Outdoor dining areas, both temporary and permanent, which are provided in addition to seating areas approved with the development of a

Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
			building, may be permitted, subject to the approval of an Administrative Use Permit.
Other Personal and Household Goods Repair and Maintenance -- Without Retail Sales (limited to garment alteration and repair, jewelry repair, key duplicating, musical instrument repair and tailor shops)	P	---	
Reupholsters and furniture repair	P	---	
Self-serve and full-service gasoline stations[1]	C	---	
Automotive servicing facilities (limited to retail-oriented services, such as emissions testing, battery replacement and other similar retail activities that involves the limited use of pneumatic tools or equipment that create noise impacts)	P	---	
Simulated racing (limited to go-carts, radio-controlled vehicles, and other similar facilities)	C	---	
Snack and nonalcoholic beverage bars[1]	P	---	Outdoor dining areas, both temporary and permanent, which are provided in addition to seating areas approved with the development of a building, may be permitted, subject to the approval of an Administrative Use Permit.

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Vending machine operators (retailing of merchandise through vending machines, as an ancillary business activity, within a fully enclosed building)	P	---	
Transportation & Warehousing			
Couriers and messengers	P	---	
Data center	C	---	
General warehousing and storage within a wholly enclosed building	P	---	
Fulfilment Center	P	---	
Outdoor materials and equipment storage in conjunction with an allowed use	C	---	
Package and Parcel Sorting and Delivery	P	---	Sorting facilities that direct packages to their final destination.
Parking lots and parking garages in conjunction with allowed uses	P	---	
Physical records, digital assets, and media archives storage	C	---	
Plug-In Electric Vehicle (PEV) Charging Facilities	P	---	
Postal service	P	---	
Indoor Vehicle Storage	P	---	
Outdoor Vehicle Storage	C	---	
Professional, Scientific, Tech. Services			
Broadcasting (except internet)	P	---	
Business support services	P	---	Includes consulting, administrative tasks, IT

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
			support, and financial management.
Depository credit intermediation	P	---	Limited to commercial banking, savings institutions, and credit unions.
Financial transactions processing and clearinghouse activities	P	---	Establishments that facilitate electronic funds transfers, check clearing, credit card processing, and managing reserves, excluding central bank activities.
Management of companies and enterprises	P	---	
Motion picture and video industries	P		Includes production, distribution, and exhibition of films, television programs, and commercials.
Newspaper, periodical, book, and directory publishers	P	---	
Personal fitness trainer	P	---	
Physicians and dentists, other health practitioners, outpatient centers, laboratory testing services, home healthcare services, and community clinics	P	---	
Religious organizations	C	---	
Scientific research and development services	C	---	
Software publishers	P	---	
Sound (audio) recording facilities	P	---	
Telephone answering services and call centers	C	---	
Construction			
Contractors (limited to businesses whose	P	---	Permitted by right if completely within a building.

Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
primary activity is performing specific activities involving in construction, engineering and capital improvement projects, or preparation of sites for construction)			Conditional use permit required if outdoor storage is provided.
Prefabricated construction assembly	P	---	
Government Offices			
Executive, legislative, and other general government support	P	P	
Fire protection (stations and substations)	P	P	
Police protection (stations, substations, and storefront facilities)	P	P	
Publicly operated animal resource center	P	P	
Arts, Entertainment and Recreation			
Open space and park lands (publicly owned facilities)	---	P	
Other Uses			
Electric Power transmission, control and distribution	P	P	Restricted to only publicly owned utility stations.
Telecommunication facilities	C	---	
Temporary and interim buildings, structures, and facilities (fewer than 5 years)	A	A	
Temporary and interim buildings, structures, and facilities (5 to 10 years)	C	C	
Self-storage facilities	P	---	
Note: 1. Uses are considered as commercial uses within the Eucalyptus Business Park Specific Plan area. The total combined square footage of the commercial uses shall not exceed 10,000 SF.			

5.5 Business Park Development Standards

The following development standards establish the development criteria that shall apply within the Business Park land use district of the Eucalyptus Business Park Specific Plan. The Specific Plan area is located within the Chino Airport Safety Zones that may limit building height, land uses, and FAR based on the proposed land use, and requires open land. Refer to the Chino Airport Land Use Compatibility Plan for additional land use restrictions. For standards that are silent in this Specific Plan, the applicable standards contained within the City's Development Code shall apply.

Table 5-2 Development Standards

Site Requirements	
	BP
Minimum lot size	1.0 acre
Maximum floor area ratio *(calculated on a Planning Area by Planning Area basis)*	0.55
Minimum lot width dimensions	100 ft
Minimum lot depth dimensions	100 ft
Maximum building footprint	560,000 SF
Maximum Building Height[1]	60 ft
Maximum Building Height (lots adjoining Public Street 'A')[1]	50 ft
Overall minimum landscape coverage (landscaping shall include plantings (trees, shrubs, groundcovers, vines) and trellises.)	13%[2]
Minimum truck court depth (measured from dock door perpendicularly to property line)	120 ft

Notes:

1. Maximum building height shall also adhere to the Chino Airport height constraints.
2. The Overall Minimum Landscape Coverage shall be determined based on the net total acreage of all parcels in the same phase of development. The minimum landscape coverage requirement shall not apply on a planning area by planning area or parcel by parcel basis.

Table 5-3 Minimum Building and Parking Setback Requirements

	BP
Minimum setbacks from property line	
Eucalyptus Avenue	25 ft
Public Street 'A'	20 ft
Campus Avenue	10 ft
Bon View Avenue	10 ft
Grove Avenue	20 ft
Walker Avenue	20 ft
Minimum side yard interior property line setbacks	
Building	5 ft
Drive aisles, passenger cars and truck parking	5 ft
Screened loading and storage yards (inclusive of passenger cars and truck parking within the screened loading and storage area)	0 ft
Minimum rear yard setback	0 ft

Table 5-4 Minimum Drive Aisle and Parking Space Separation Requirements

	BP
Adjacent to building office elements	10 ft
Adjacent to building wall or screen wall/fence, and not within a screened/enclosed yard	5 ft
Adjacent to building wall or screen wall/fence, and within a screened yard	0 ft

Table 5-5 Parking Space Requirements

Use	Required Space
Wholesale Trade	2.5 spaces per 1,000 SF
Retail Services	4 spaces per 1,000 SF
Full-Service Restaurant	10 spaces per 1,000 SF
Fast Food Restaurants	13.3 spaces per 1,000 SF
Professional, Scientific, Tech. Services	4 spaces per 1,000 SF
General Business Offices	4 spaces per 1,000 SF
Manufacturing[1,2]	1.85 spaces per 1,000 SF gross floor area (GFA)
Warehousing and Distribution[1,2]	Portion of GFA ≤ 20,000 SF: 1 space per 1,000 SF Portion of GFA > 20,000 SF: 0.5 space per 1,000 SF Tractor trailer parking space: 1 space/4 dock-high doors
General Industrial[1,2]	Portion of GFA < 50,000 SF: 1.85 spaces per 1,000 SF Portion of GFA ≥ 50,000 SF and < 100,000 SF: 1 space per 1,000 SF Portion of GFA ≥ 100,000 SF: 0.5 space per 1,000 SF Tractor trailer parking space: 1 space/4 dock-high doors
Business Park[1,2]	3 spaces per 1,000 SF Tractor trailer parking space: 1 space/4 dock-high doors

Notes:

1. Parking for "general business offices" and other associated uses shall be provided when those uses exceed 10% of the building GFA.
2. The Specific Plan permits a blended parking ratio for Business Park buildings to accommodate varying proportions of business park, general industrial, warehouse, distribution, and/or support office functions. The Planning Director may approve modifications to the blended ratio during the Development Plan review process based on operational characteristics, provided parking meets or exceeds the parking requirements in Table 5-5, *Parking Space Requirements*.

5.5.1 Other Development Standards

1) Loading docks and truck parking areas shall be visually screened from Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, and Public Street 'A' by walls and landscaping features.

2) The outdoor storage of materials and equipment shall be permitted ancillary to the land uses allowed pursuant to Table 5-1. Outdoor loading and storage areas and loading doors shall be screened from view from public streets by concrete or masonry walls and landscaping. Any gates shall be lockable. Such walls and landscaping used as screening shall be a minimum eight feet (8') in height and shall be of sufficient height to screen all outdoor materials and equipment, tractors and trailers, and loading doors from view of public streets. A line of sight study shall determine the required height(s) of the screen walls. The storage of outdoor materials shall not exceed the height of the screen walls as measured from the interior side of the walls.

3) Ground- and roof-mounted exterior mechanical equipment, heating and ventilating, air conditioning, tanks, and other mechanical devices shall be of an architecturally compatible design with the primary structure and screened when visible to the public.

4) Exterior lighting fixtures shall be downward directed. Pole-mounted lights shall be shielded with the light source oriented to not directly face public streets and/or adjacent properties.

5) All manufacturing and processing activities shall be conducted within a wholly enclosed building.

6) The following open land and occupancy limit requirements shall apply within the

Chino Airport Safety Zone, as approved by the City of Ontario City Council. Qualifying open land is land free of most structures and other obstacles such as walls, large trees or poles, and overhead wires. The minimum dimensions of the open space area shall be 75 feet by 300 feet. Additional open space requirements shall adhere to the provisions provided within the Ontario Development Code.

7) The Specific Plan area is located in the Airport Influence Area (AIA) established by the Ontario International Airport Land Use Compatibility Plan (ONT ALUCP) and the Chino Airport Safety Zone established by the provisions within the Chino Airport Overlay zoning district. All development in the Eucalyptus Business Park Specific Plan area shall be subject to the mandatory requirements and standards of those applicable ALUCP and the Ontario Development Code, or in the absence of an adopted ALUCP and Development Code, the California Airport Land Use Planning Handbook. Given the close proximity of the Specific Plan area to the Chino Airport, developers within the Specific Plan area shall consult and coordinate with Chino Airport agencies and City staffs during the planning and design stage to ensure development plans accommodate applicable safety restrictions. The entire Specific Plan area is impacted by the Chino Airport; developers within the Specific Plan area shall consult and coordinate with City staff, Chino Airport, and FAA during the planning and design stage to ensure that development plans and right-of-way street improvements do not create any hazards and comply with the California Airport Land Use Planning Handbook published by the Caltrans Division of Aeronautics and the Ontario Development Code.

5.6 Open Space-Parkland Development Standards

The Eucalyptus Business Park Specific Plan is comprised of approximately 35.88 acres of Open Space – Parkland land uses, which is planned as part of for a larger public regional park. The developer and the City of Ontario will work together to ensure the regional park will be constructed concurrently with the build out of the Business Park portion of the Specific Plan. The details of the partnership will be included in the Development Agreements accompanying the approval of the Eucalyptus Business Park Specific Plan.

CHAPTER 6

DESIGN GUIDELINES

6.1 Purpose and Intent

The design guidelines presented in this chapter describe the quality and character of the built environment expected for the Eucalyptus Business Park Specific Plan area. While the design guidelines provide direction, they are meant to provide a certain level of flexibility to allow creative expression during the design of implementing development projects.

The Eucalyptus Business Park Specific Plan area's visual identity will be expressed through attractive building architecture with quality materials, landscape, hardscape, and signage elements. The design guidelines contained herein are primarily focused on the business park planning areas and are presented in a manner that ensures consistent architectural expression from building to building, while allowing flexibility in modern-day building design.

The objectives of these Design Guidelines are as follows:

- To provide the City of Ontario assurance that the Eucalyptus Business Park Specific Plan area will develop in accordance with the quality and character described within this Specific Plan.
- To provide guidance to developers, builders, engineers, architects, urban planners, landscape architects, and other professionals to achieve and maintain the desired design quality.
- To provide an aesthetic benchmark for City staff, the Planning Commission, and the City Council in their review of the design of future development projects in the Specific Plan area.
- To provide guidelines that steer the Eucalyptus Business Park to convey a contemporary aesthetic theme and character while allowing flexibility for practical application and creative expression.
- To provide guidelines for energy and water use efficiency that can be implemented in the site planning, design, and construction of implementing development projects to minimize waste deposited at landfills, decrease fossil fuel consumption, and reduce domestic water consumption.
- To ensure that the Specific Plan implements the intent of The Ontario Plan and the City's Development Code.

The Design Guidelines presented herein apply to all development within the Business Park Planning Areas within the Eucalyptus Business Park Specific Plan area.

6.2 Parkland Guidelines

The City's vision for the Grand Park has been outlined in the Ontario Grand Park Conceptual Master Plan. All future improvements within the Grand Park including monumentation, signage, trails, landscaping, etc. shall be designed to be consistent with the Ontario Grand Park Conceptual Master Plan to ensure a consistent implementation of the City's vision. Improvements within the Grand Park shall be approved as part of the development

plan for the respective planning area of the EBPSP.

6.3 Business Park Design Theme

Planning Areas 1-6 are envisioned as a contemporary business park containing buildings that are grouped and arranged in campus-like settings. The business park areas will provide businesses with easy access to regional transportation networks, proximity to workers, and proximity to major ports and airports.

The theme features a contemporary design aesthetic, drawing on the ranch heritage of the area, which provides architectural styling with attractive detailing, visually-interesting accents, and timeless features. Developments within the business park area will provide architecturally compatible sign design, directed lighting, colorful and drought-tolerant landscaping, and energy efficient design features. Functional elements like loading areas will be oriented inward with attractive building façades facing outward toward the public streets. Generous landscaped zones along these frontages will enhance both the visual appeal and functionality of the circulation system.

6.4 Business Park Architecture Guidelines

This section sets addresses the architectural design of buildings in Planning Areas 1-6.

6.4.1 Architectural Theme

The architectural style of buildings in the business park areas emphasizes building massing over structural articulation. Buildings are characterized by simple and distinct cubic masses with interlocking volumes of wall planes, colors, and materials to create visual appeal. Additionally, architectural designs may mix colors, materials, and textures to articulate façades and create visual appeal.

Design elements are selected to ensure compatibility in character, massing, detailing, and exterior materials, reinforcing the

Conceptual Building Architecture

Conceptual Building Materials

aesthetic of the intended contemporary design. While individual creativity and identity of individual buildings are encouraged, all buildings and planning areas are intended to maintain design integrity and compatibility to reinforce a cohesive image and campus-like setting throughout the Specific Plan area

6.4.2 Building Form

Building form is a fundamental aspect of architectural design, defined by elements such as shape, mass (size), scale, proportion, and articulation. Building façades visible from public roads require careful attention but even building façades not visible from public roads

or publicly accessible areas are encouraged to follow the building form guidelines listed below.

The following guidelines apply to all business park buildings to promote a visually cohesive, attractive, and welcoming environment:

1) Simple geometric shapes shall be used as the overall building form. Rectangular forms are preferred, as they provide visual balance and interest. Avoid overly complex or arbitrary building shapes.

2) Long horizontal wall surfaces facing public streets shall incorporate regular or periodic changes in exterior materials, color, decorative accents, or architectural details to add visual interest.

3) Varying the size and shape of building masses between neighboring buildings visible from public streets is encouraged.

4) Buildings abutting and facing Public Street 'A' are encouraged to have varied setback distances to provide a visually interesting and attractive street frontage.

5) Make primary pedestrian entrances to buildings (with the exception of service doors and emergency exit doors) clearly and easily identifiable through changes in massing, color, and/or building materials. Entries intended for visitors and the general public should be recessed or covered by architectural projections, roofs, or arcades to provide shade and a welcoming effect.

6) Architectural and trim detailing on building façades shall be clean, simplistic, and not overly complicated.

7) Materials applied to exterior wall elevations shall turn the corner of the building to a logical termination point in relation to architectural features or massing.

8) Provide enhanced building corner and entrance design to create visual anchors that help define the building's identity.

6.4.3 Building Materials, Colors, and Textures

Building materials and colors play a pivotal role in developing a clean, contemporary visual environment. The following guidelines apply to all business park buildings within the Eucalyptus Business Park Specific Plan area, with slight variations encouraged to provide visual interest.

1) Primary exterior building materials shall include concrete and similar materials. The primary materials should be accented by secondary materials including but not limited to natural or fabricated stone, fire resistant or synthetic wood siding (horizontal or vertical), metals, or similar materials.
2) Trim details may include metal finished in a uniform color, plaster, or concrete elements finished consistently with the building treatment. Use of overly extraneous themed detailing, like oversized or excessive foam cornice caps, foam moulding and window detailing is discouraged.
3) Material transitions should occur at intersecting planes, preferably at inside corners where wall planes change, or at points where architectural elements meet.
4) Primary exterior building colors should be light earth and gray tones. Darker and/or more vibrant accent colors may be used strategically in focal point areas, such as around building entrances and outdoor gathering spaces.
5) The use of bright primary colors, overly bold color applications, and arbitrary color patterns that clash with the established business park color palette are discouraged, except in signage and logos.
6) Colors of exposed downspouts (only permitted if not in public view), service doors, and mechanical screens shall be the same color as the adjacent building wall.
7) If downspouts are needed in areas of public view, they shall be designed as internal downspouts.
8) Provide contrasting materials at corners and vehicle entrances to visually enhance the focal points of the buildings.

6.4.4 Windows and Doors

Patterns of window and door openings shall correspond with the overall design of the building and shall be consistent in form, pattern, and color. The following windows and doors guidelines apply to business park buildings.

1) Where feasible, doors and windows on individual building façades should be arranged in a symmetrical and repetitive pattern to promote visual continuity.

Conceptual Windows and Doors

2) Window styles and trims shall be consistent in form and color within each planning area. All window trims on a given building should share a uniform finish.

3) Unfinished or untreated metal frames and gold-colored frames for windows and doors are not permitted. Clear silver anodized frames are acceptable.

4) Glass should be clear or lightly tinted with subtle reflectivity. Highly reflective or silver-tinted glass is not allowed.

5) All windows/glass and doors shall be inset to rear of wall/panel to add interest and provide shadow lines.

6.4.5 Rooftop Equipment Screening

Equipment and apparatuses placed on the roofs of business park buildings are expected to be screened from public view.

1) All rooftop mechanical, electrical, and communication equipment shall be fully screened from view from adjacent public streets. Solar photovoltaic (PV) panels and associated technologies may be visible from public review if full screening of the PV system is not feasible.

2) Screening elements shall be architecturally integrated with the building design in terms of form, materials, and color. Building parapets is the preferred method of screening but where parapets are not feasible, mechanical screens may be used

Conceptual Building Corner Elevation Rendering

but must appear as a natural extension of the building's architecture. Screening elements shall be of a uniform height, color, and texture on a building sufficient to conceal all rooftop equipment from view from adjacent public streets.

3) Rooftop equipment should be placed away from roof edges to minimize visibility and reduce the height of required screening.

4) All conduits, piping, and utility lines associated with rooftop equipment shall be concealed from public view from adjacent public streets.

5) Building roofs shall be designed to support the installation of solar photovoltaic (PV) panels and associated technologies.

6.5 Business Park Site Feature Guidelines

6.5.1 Parking and Loading Areas

Areas serving commercial vehicles such as loading dock areas and truck courts are essential for the efficient operation of business park facilities, providing access for loading, unloading, and freight movement. However, due to their scale and activity levels, these areas can present conflicts with other functions if not properly design and screened. Below are design expectations for the effective screening and use of loading docks and truck courts.

1) Business park buildings fronting Public Street 'A' shall not include loading docks on any façades facing that street.

2) Commercial vehicle loading doors, service docks, and outdoor equipment areas shall be oriented or screened to minimize visibility from public roads through the use of solid walls and dense landscaping. Screening for this purpose shall be a minimum of 8 feet. A line of sight study will determine max height required.

3) Loading and unloading activities by commercial vehicles and trucks are prohibited from occurring on or being visible from public streets.

4) Sufficient queuing space shall be provided in front of security gates to prevent commercial vehicles and trucks from stacking or idling on public streets while waiting to enter.

5) Driveway entrances for trucks and service vehicles shall be separated from passenger vehicle traffic, pedestrian pathways, and bicycle routes where possible.

6) Conduit should be installed within truck courts in logical, accessible locations to accommodate the future addition of electric truck charging stations, anticipating advances in zero-emission vehicle technology during the lifespan of the business park.

7) Passenger car parking lots within business park sites shall provide landscaping that consist of shade trees and parking finger islands.

8) Trees and parking fingers are not required in truck courts, unless required to meet the landscape coverage requirements.

6.5.2 Outdoor Employee Amenity Areas

The business park is expected to offer a wide variety of job opportunities. For the comfort of employees, outdoor employee amenities are encouraged throughout the business park area.

1) Outdoor break areas for employees may be conveniently located and accessible to each business park building and

Conceptual Employee Amenity Areas

positioned away from or screened from loading zones, trash enclosures, or other utilitarian functions. Break areas may serve one building or be shared among multiple buildings.

2) In outdoor break areas, shade structures such as canopies, trellises, or umbrellas are encouraged to be provided to shade and protect users from direct sun and light rain. Outdoor break areas are encouraged to provide weather-resistant seating and tables, including a mix of options (e.g., individual benches, larger tables, etc.) to accommodate different group sizes and preferences.

3) Use of outdoor break areas shall be encouraged by including features such as early morning and evening decorative lighting, outdoor power outlets, decorative paving, and decorative features.

4) Bicycle racks shall be provided at each building or in a common area that serves multiple buildings. Outdoor bike racks shall be secure, well-anchored, and placed in well-lit areas with passive surveillance, such as security cameras, to enhance safety.

6.5.3 Outdoor Equipment Placement

Ground-mounted and wall-mounted utilitarian equipment is expected to be needed to support business park building operations. The following guidelines are aimed at proper placement.

1) Ground-mounted equipment, including but not limited to mechanical and electrical systems, emergency generators, boilers, storage tanks, risers, and conduits should be placed out of public review or be screened from public view, particularly from adjacent public streets and other publicly accessible areas.

2) Electrical equipment rooms should be located within the building envelope. External projections, such as pop-outs or shed-like structures, are discouraged.

3) Wall-mounted equipment should not be installed in visually prominent locations on building façades that face public roads or areas with high visibility. Such equipment should either be screened from view or integrated into the building's architectural design to minimize visual impact.

6.5.4 Trash Enclosures

Thoughtfully designed trash enclosures are essential components of a well-functioning and visually cohesive business park. These facilities serve a critical operational role while also contributing to the overall aesthetic and environmental quality of the development. The following guidelines are intended to ensure that trash and recycling enclosures are secure,

functional, and architecturally integrated into the site design.

1) All outdoor refuse containers shall be screened within a permanent, lockable and durable enclosure and should be oriented so they are not visible from public roads/views. The enclosure's design shall reflect the architectural style of adjacent buildings and use similar, high-quality materials.

2) Refuse collection areas shall be located behind or to the side of buildings, away from the building's main entrance and public view.

3) Design and placement of trash enclosures shall meet Integrated Waste Department requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types.

4) Trash enclosures shall include green waste/organics and recycling collection bins.

Conceptual Trash Enclosure

6.5.5 Walls and Fences

Freestanding walls and fences play an important role in defining property boundaries, providing security, and screening service areas within a business park. To maintain a cohesive and high-quality visual environment, these elements must be thoughtfully designed to complement the architectural character of adjacent buildings and the overall site design. The following guidelines address the placement, height, materials, and appearance of freestanding walls and fences to ensure they are both functional and visually integrated.

1) Walls and fences shall be designed to complement the architectural style, colors, and materials of adjacent buildings. A consistent design theme for fencing and walls shall be maintained throughout the business park area to ensure a cohesive appearance across parcels and tenant spaces.

2) Walls and fences visible from public roads or pedestrian areas should include enhanced design treatments, such as pilasters, decorative caps, or decorative patterns, to reduce visual monotony.

3) High-quality, durable materials shall be used such as decorative block or concrete with textured or finished surfaces. Chain link fencing cannot be used where visible from the public view.

4) Walls and fences shall be designed for long-term durability and ease of maintenance. Finishes should be resistant to graffiti and weathering.

5) Where walls or fences are located at major public road intersections or project entries, special design attention should be given to include gateway features or architectural detailing.

6) Walls and fences used for security purposes should balance safety with aesthetics. Walls and fences in public view should be built with attractive, durable materials.

6.6 Energy Efficiency Guidelines

This Eucalyptus Business Park Specific Plan promotes sustainable development practices that align with California's long-term environmental goals and energy efficiency standards. These guidelines are intended to encourage the thoughtful integration of energy-efficient design, construction, and operational strategies throughout the business park. By reducing energy consumption, lowering greenhouse gas emissions, and supporting the use of renewable technologies, these standards not only minimize environmental impacts but also contribute to long-term cost savings and improved building performance for tenants and property owners. The following guidelines apply to all new construction, major renovations, and site improvements within the Specific Plan area.

1) All new construction and major renovations shall meet or exceed the requirements specified in the California Green Building Standards Code (CALGreen Code) and Title 24 energy efficiency requirements.

2) High-performance insulation, cool roofing materials, energy-efficient windows, and air-tight construction is encouraged to exceed CALGreen Code standards to minimize thermal loss and reduce HVAC demand.

3) LED lighting or equivalent shall be used for all interior and exterior applications.

4) Use of ENERGY STAR® certified appliances and daylight sensors, motion detectors, and programmable timers on lighting fixtures are encouraged to minimize unnecessary energy use.

5) Skylights are encouraged on at least 1% of building rooftops above storage spaces to reduce the need for artificial light.

6) Installation of smart thermostats and automated energy management systems are encouraged to improve heating, cooling, and ventilation efficiency.

7) Building roofs shall be designed to accommodate solar photovoltaic (PV) systems. Associated battery storage systems are encouraged as feasible to support energy resilience and reduce peak load.

8) Electric Vehicle (EV) charging stations and infrastructure for expansion is encouraged to exceed CALGreen Code standards.

9) Building tenants shall use zero-emission equipment for building operations involving goods movement, such as forklifts and yard hostlers.

10) Implementing projects shall follow the City of Ontario Climate Action Plan (CCAP) Screening Table Measures to achieve a minimum of 100 points per the Screening Table.

6.7 Lighting Guidelines

Outdoor lighting is an essential architectural component that provides aesthetic appeal, enhances safe pedestrian and vehicular circulation, and adds to security. Lighting within the public rights-of-way shall adhere to applicable City of Ontario requirements. All other lighting on private property within the Specific area shall adhere to the following guidelines.

1) Minimize glare and "spill over" light onto public streets and adjacent properties by

using downward-directed lights and/or cutoff devises on outdoor lighting fixtures, including spotlights, floodlights, electrical reflectors, and other means of illumination for signs, structures, parking, loading, unloading, and similar areas. Where desired, illuminate trees and other landscape features by concealed up light fixtures. Limit light spillover or trespass to one-quarter foot-candle or less, measured from within five feet of any adjacent property line.

2) Select all lighting fixtures from the same or complementary family of fixtures with respect to design, materials, fixture color, and light color. Use of LED lighting is encouraged.

3) Lights should be unbreakable plastic, recessed, or otherwise designed to reduce the problems associated with damage and replacement of fixtures.

4) Neon and similar types of lighting are prohibited.

5) Locate all electrical meter pedestals and light switch/control equipment in areas with minimum public visibility or screen them with appropriate plant materials.

6) Along sidewalks and walkways, the use of low mounted fixtures (ground or bollard height), which reinforce the pedestrian scaled, are encouraged.

7) Use exterior lights to accent building entrances, plazas, activity areas, and special features.

8) Provide lighting to illuminate parking lots and their pedestrian links that provide more than five parking spaces for use by the general public.

9) Provide lighting to illuminate aisles and passageways within a building complex.

10) High-Pressure Sodium (HPS) light fixtures are prohibited for site lighting.

11) Lighting is prohibited that could be mistaken for airport lighting or that would create glare in the eyes of pilots of aircraft using the nearby Chino Airport or Ontario International Airport.

6.8 Signage Guidelines

Signage will identify building occupants in the business park area and ensure the efficient circulation of vehicle traffic by identifying vehicular entry points and directing vehicles to their on-site destinations. Also, signage will enhance the pedestrian experience through wayfinding component such as directories, directional signage, and destination identifiers. A Sign Program shall be approved by the City for the Specific Plan area prior to any sign being installed within the Specific Plan area.

Clear, concise, and easy-to-understand signage that is also visually appealing is vitally important for positive worker and visitor experiences in the Specific Plan area. General design requirements for signage are as follows:

1) Freestanding signs associated with buildings should be compatible with and complementary to the building's exterior materials, colors, and finishes.

2) The dimensions and shape of free-standing signs and sign panels or elements mounted on building façades or marquees shall be scaled proportionately to the architecture.

3) All signs shall be contained within the parcel to which it is applicable and shall be so oriented as to preclude hazardous obstructions to person and/or vision of pedestrians and/or vehicle operators.

4) Building occupant identification signage shall be in keeping with the character

Conceptual Building Signages

established for the Specific Plan area with variations allowed to accommodate individual user identities/corporate branding standards.

5) All signs are expected to be of the highest quality to pass eyelevel examination and scrutiny, and shall comply with the following fabrication specifications:

    a. Signs should be constructed to eliminate burrs, dents, cutting edges and sharp corners;

    b. Surfaces which are intended to be flat should be without dents, bulges, oil canning, excessive, gaps, or other physical deformities;

    c. All fasteners shall be concealed;

    d. Access panels shall be tight-fitting, light-proof and flush with adjacent surfaces;

    e. Manufacturers' procedures that are recommended regarding expansion/contraction, fastening and restraining of acrylic plastic shall be followed; and

    f. Painted, polished and plated surfaces shall be unblemished in the finished work.

6) Prohibited sign components include the following:

    a. Letters with exposed fastening and unfinished edges (unless architecturally consistent);

    b. Paper, cardboard, Styrofoam or untreated cloth;

    c. Visible moving parts or simulated moving parts by means of fluttering, rotation, or reflecting devices; and

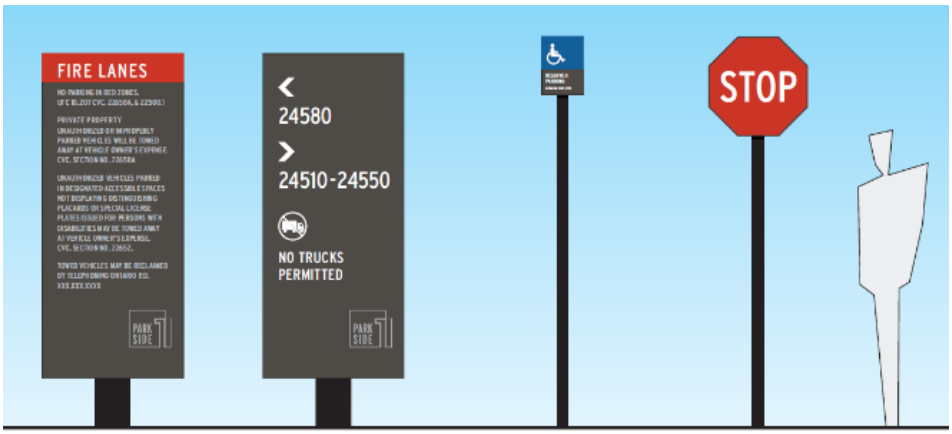
    d. Flashing and strobing.

7) All conductors, transformers, cabinets, housing, and other equipment for the illumination of signs shall be concealed and/or incorporated into the building architecture.

8) Signs shall be constructed so as to not have exposed wiring, raceways, ballasts, conduit, transformers, or the like.

9) Direction signs may be located at any vehicular or pedestrian decision point.

10) Vehicular direction signs shall clearly direct to destination anchors within the Specific Plan area, on-site parking areas, and truck routes.



Conceptual Regulatory Signage

11) Vehicular direction signs shall be consistent in size, shape, and design throughout the Specific Plan area.

12) Typography on vehicular direction signs should be legible and have enough contrast to be read from an appropriate windshield viewing distance.

13) Typography on vehicular direction signs should be legible and have enough contrast to be read from an appropriate windshield viewing distance.

14) All direction signs and general information signs (e.g., restrooms, telephones, fire extinguishers, elevators, escalators, stairs) throughout the Specific Plan area shall incorporate the appropriate identity symbol as established by the Society of Environmental Graphic Design (SEGD) and comply with all State, local and federal regulations.

15) All traffic control signs, whether on public or private property, shall conform to the California Manual on Uniform Traffic Control Devices (MUTCD).

16) All signage shall comply with the City of Ontario Development Code's Sign Regulations.

6.9 Landscape Guidelines

Landscape design guidelines provided herein establish landscape principles and standards that shall apply to all planning areas within the Eucalyptus Business Park Specific Plan area. The intent is to ensure that plant materials, entries and monuments, streetscapes, and other amenities are compatible with the overall themes of the business park area and the parkland area.

The landscape design guidelines provided herein are not intended to establish a set of rigid landscaping requirements. These landscape guidelines are intended to be flexible and are subject to modification over time. However, it is critical to the Specific Plan's long-term design integrity that any deviations from these guidelines are in keeping with the spirit of the core elements of the overall theme described herein to ensure a cohesive and unified landscape concept across the Eucalyptus Business Park Specific Plan area.

As shown on Figure 6-1, *Conceptual Landscape Plan*, landscaping will occur primarily at street corners, along roadways, and at building entrances, and in passenger car parking lots.

Primary and secondary entry treatments provide a welcoming setting for the employees and visitors to the Specific Plan area. Primary

entry treatments featuring signs and landscaping will occur at the corners of Eucalyptus Avenue and Campus Avenue and Eucalyptus Avenue and Grove Avenue. Secondary entry treatments will feature accent trees, shrubs, and groundcovers occur at the corners of entrances to the Specific Plan area.

Building corners and entrances facing public streets shall feature enhanced landscaping that complements the overall design theme of the Specific Plan area. These landscaped elements will be curated to create a visually appealing environment. Placement of trees, shrubs, and ground cover will serve to soften building facades and provide natural screening where appropriate, ensuring that structures are integrated harmoniously into their surroundings rather than dominating the streetscape.

Streetscape landscaping includes a combination of evergreen and deciduous trees, shrubs, and groundcovers to provide a visually pleasing experience for pedestrians, bicyclists, and motorists.

6.9.1 Plant Palette

The plant palette for the Eucalyptus Business Park Specific Plan area includes evergreen and deciduous trees, shrubs and ground covers, and grasses that are commonly used throughout Southern California. Many of the plant materials are water-efficient species native to Southern California or naturalized to the Southern California climate.

Table 6-1, *Plant Palette*, provides a list of plant materials approved for use in the Specific Plan area. The plants listed in Table 6-1 establish a base palette for the Specific Plan area's landscape design. Other similar plant materials may be substituted for species listed in Table 6-1, provided the alternative plants are drought resistant and complement the Specific Plan area's overall design theme.

Table 6-1 Plant Palette

Botanical Name	Common Name	Application	Water Use
Trees			
Cedrus deodara	Deodar Cedar	Evergreen Specimen	M
Cercidium x 'desert museum	Desert Museum Palo Verde	Accent Tree	L
Cercis c. 'forest pansy'	Eastern Redbud	Street Tree/Water Quality	M
Chitalpa T. 'morning cloud'	Chitalpa	Street Tree	L
Geijera parviflora	Australian Willow	Canopy Tree/Background	L
Koelreuteria bipinnata	Chinese Flame Tree	Street Tree	L
Lagerstroemia f 'natchez'	Crape Myrtle	Accent Tree/Water Quality	M
Lophostemon confertus	Brisbane Box	Background Tree	M
Olea europea 'swan hill'	Swan Hill Fruitless Olive	Accent Tree	L
Pinus eldarica	Afghan Pine	Street Tree/Background	M
Pinus halepensis	Aleppo Pine	Evergreen Screen	M
Pistachia chinensis	Chinese Pistache	Street Tree	M
Platanus a. 'bloodgood'	Lodone Plane Tree	Street Tree/Background	M
Platanus racemosa	California Sycamore	Water Quality/Canopy Tree	M
Podocarpus gracilior	Fern Pine	Street Tree/Canopy Tree	M
Quercus agrifolia	Coast Live Oak	Street Tree/Accent Tree	L
Quercus suber	Cork Oak	Street Tree	L
Quercus ilex	Holly Oak	Street Tree/Canopy Tree	L
Shrubs, Grasses, and Groundcovers			
Acacia redolens	Acacia	Groundcover	L
Agave americana	Century Plant	Accent	L
Agave attenuata 'blue glow'	Blue Glow Agave	Accent	L
Aloe arborescens	Torch Aloe	Accent/Background	L
Aloe blue elf	Blue Elf Aloe	Accent	L
Aloe petricola	Stone Aloe	Accent	L
Aloe striata	Coral Aloe	Accent	L
Arbutus unedo 'compacta'	Dwarf Strawberry Tree	Background	L
Baccharis x 'centennial'	Centennial Coyote Brush	Water Quality	L
Bouteloua g. 'blond ambition'	Blue Grama Grass	Mid-ground	L
Bulbine frutescens	Bulbine	Flowering Accent	L
Calandrinia spectabilis	Rock Purslane	Flowering Accent	L
Callistemon 'little john'	Dwarf Callistemon	Mid-ground	L
Carissa m. 'green carpet'	Dwarf Natal Plum	Groundcover	M
Carex divulsa	Berkeley Sedge	Groundcover/Foreground	L
Cotyledon orbiculata	Pig's Ear	Foreground/Accent	L
Dianella 'little rev'	Little Rev Flax Lily	Foreground	L
Dianella t. 'variegata'	Variegated Flax Lily	Foregound/Mid-ground	M
Echeveria a. 'lipstick'	Echeveria	Accent	L
Festuca mairei	Atlas Fescue	Foreground/Mid-ground	L
Hepearlor parviflora	Red Yucca	Succulent Accent	L
Hesperalie 'brakelights'	Brakelights Yucca	Mid-ground/Accent	L
Juncus patens	California Gray Rush	Water Quality	L
Lantana 'new gold'	New Gold Lantana	Groundcover/Foreground	L
Leymus c. 'canyon prince'	Canyon Prince Wild Rye	Mid-ground/Water Quality	L

Botanical Name	Common Name	Application	Water Use
Muhlenbergia c. 'regal mist'	Pink Muhly	Mid-ground/Water Quality	L
Myoporum parifolium	Ncn	Groundcover	M
Olea 'montra'	Little Ollie	Mid-ground	L
Rhaphiolepis indica 'clara'	Indian Hawthorn	Mid-ground/Background	M
Rosmarinus o. 'prostratus'	Prostrate Rosemary	Groundcover	L
Salvia greggii	Autumn Sage	Mid-ground	L
Salvia L. 'santa barbra'	Santa Barbra Mexican Sage	Mid-ground/Water Quality	L
Senecio Serpens	Blue Chalk Sticks	Succulent Groundcover	L
Turf 'marathon iie'	Sodded Turf	Groundcover	H
Westringia 'wynyabbie gem'	Coast Rosemary	Background	L

Figure 6-1

Conceptual Landscape Plan

0 200 400 800 Feet

6.9.2 Irrigation

The following general irrigation concepts shall be considered in the design and installation of irrigation systems within the Eucalyptus Business Park Specific Plan area.

1) All landscaped areas should be equipped with a permanent, automatic, underground irrigation system. Drip systems are encouraged in all areas needing irrigation. Irrigation systems must conform to all City of Ontario requirements.

2) Irrigation systems should be designed to apply water slowly, allowing plants to be deep soaked and to reduce run-off.

3) Connect the irrigation system to the recycled water conveyance system.

4) "Pop-up" type sprinkler heads may be used adjacent to all walks, drives, curbs (car overhangs), parking areas and public right-of-way but must be designed to prevent all run-off and overspray.

5) The design of irrigation systems, particularly the location of controller boxes, valves, and other above-ground equipment (e.g., backflow prevention devices), shall be incorporated into the overall landscaping design. Where aboveground equipment is provided, it shall be screened or otherwise removed from public view.

6) The irrigation system shall be programmed to operate between 6:00pm and 6:00am.

6.10 Streetscape Guidelines

Streetscape landscaping is integral to creating a sense of place within the Specific Plan area. Furthermore, streetscapes serve as a way to screen undesirable views from public views. Within the Specific Plan area, streetscapes are planted with a combination of evergreen and deciduous trees, low shrubs, and groundcovers to create a pleasing experience for pedestrians, bicyclists, and motorists.

The conceptual streetscape landscape treatments within the Specific Plan area are presented in the following sections.

6.10.1 Campus Avenue

The segment of Campus Avenue abutting the Eucalyptus Business Park Specific Plan area features landscaping within parkways on both sides of the street. Parkways include a curb-adjacent park strip planted with deciduous trees, low flowering groundcovers, a 5-foot-wide sidewalk, and an 8-foot-wide multi-purpose trail. Evergreen and deciduous trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. The typical Campus Avenue Streetscape is illustrated on Figure 6-2, *Campus Avenue Streetscape*.

6.10.2 Bon View Avenue

The typical section of Bon View Avenue features landscaping within parkways on both sides of the street. Parkways include a curb-adjacent park strip planted with evergreen trees and low flowering groundcovers, as well as a 5-foot-wide sidewalk. Evergreen trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. The typical Walker Avenue Streetscape is illustrated on Figure 6-3, *Bon View Avenue Streetscape*.

6.10.3 Grove Avenue

The segment of Grove Avenue within the Eucalyptus Business Park Specific Plan area features two landscaped components: a 28-foot-wide landscaped raised median and

parkways on both sides of the street. The landscaped raised median is planted with thematic deciduous and evergreen trees at to reinforce the theme established through previous development south of the Eucalyptus Specific Plan area. Parkways include a curb-adjacent park strip planted with deciduous trees and low flowering groundcovers, with a 5-foot-wide sidewalk along the east and west side of the street and an 8-foot multi-purpose trail along the east providing passive recreational opportunities. Deciduous trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to buffer development. The typical Grove Avenue Streetscape is illustrated on Figure 6-4, Grove Avenue Streetscape.

6.10.4 Walker Avenue

The segment of Walker Avenue abutting the Eucalyptus Business Park Specific Plan area features landscaping within parkways on the west side of the street. The Parkway includes a curb-adjacent park strip planted with deciduous trees, low flowering groundcovers, and a 5-foot-wide sidewalk. Evergreen and deciduous trees are planted beyond the right-of-way to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. An 8-foot-wide multi-purpose trail is also provided along the eastern side of Walker Avenue to offer passive recreational opportunities. The typical Walker Avenue Streetscape is illustrated on Figure 6-5, *Walker Avenue Streetscape*.

6.10.5 Eucalyptus Avenue

The segment of Eucalyptus Avenue abutting the Eucalyptus Business Park Specific Plan area features landscaping within parkways along the north side of the street. Parkways include a curb-adjacent park strip planted with deciduous trees, low flowering groundcovers, and a 5-foot-wide sidewalk. Evergreen and deciduous trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. An 8-foot-wide multi-purpose trail is also provided along the northern side of Eucalyptus Avenue to offer passive recreational opportunities. The typical Eucalyptus Avenue Streetscape is illustrated on Figure 6-6, *Eucalyptus Avenue Streetscape*.

6.10.6 Public Street 'A'

The typical section of Public Street 'A' features landscaping within parkways on both sides of the street. Parkways include a curb-adjacent park strip planted with evergreen trees and low flowering groundcovers, and a 5-foot-wide sidewalk. Evergreen and deciduous trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. The typical Public Street 'A' Streetscape is illustrated on Figure 6-7, *Public Street 'A' Streetscape*.

6.11 Entries and Monuments Guidelines

Entry and corner monument treatments are designed to provide distinct visuals to emphasize the Eucalyptus Business Park Specific Plan area's aesthetic. Hardscape and landscape features at entry and corner monument locations shall provide adequate "line-of-sight" for motorists and shall comply with applicable City design standards and specifications. Monumentation shall not be located within the public street right-of-way.

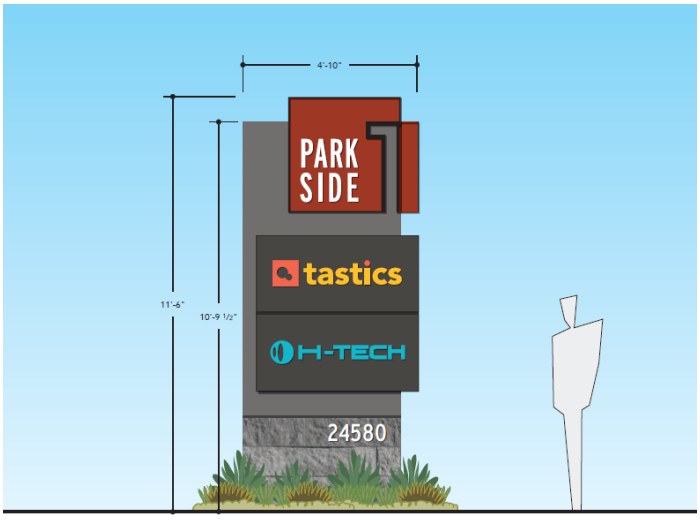
Implemented entry and corner treatments should be flexible to respond to physical contexts and the needs and desires of specific tenants and may differ slightly from the concepts presented herein; however, all entry and corner treatments within the Specific Plan area shall be consistent in theme.

6.11.1 Primary Corner Treatments

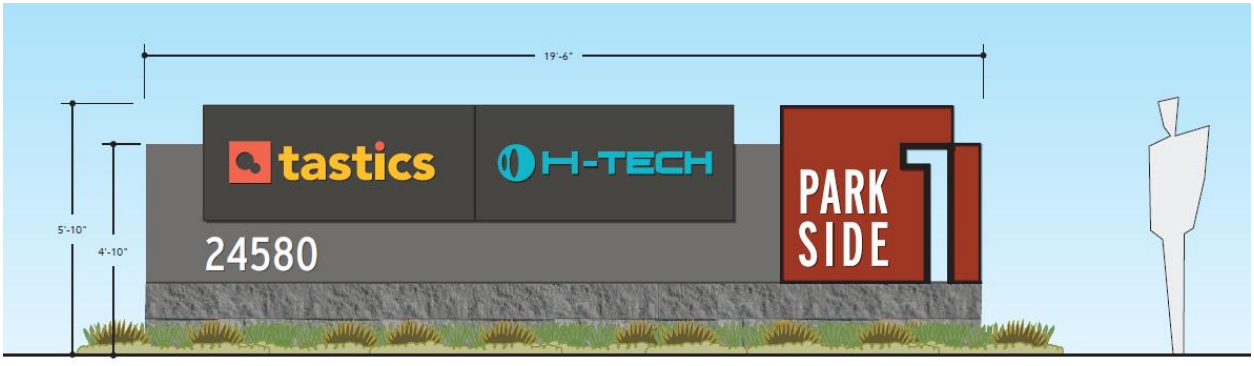
Primary corner monuments are located at the northeast corner of Eucalyptus Avenue and Campus Avenue and at the northeast and northwest corners of Eucalyptus Avenue and Grove Avenue. The primary corner treatments features orchard tree groves and the primary monument signage. Figure 6-8, *Conceptual Primary Corner Treatment*, conceptually illustrates the primary corner treatments.

6.11.2 Secondary Corner Treatments

Secondary corner monuments are located at the entrances into the Specific Plan area from the northern edge of Campus Avenue, Bon View Avenue, Grove Avenue, and Walker Avenue; from the southern edge of Bon View Avenue and Grove Avenue. The secondary corner treatments features orchard tree groves, shrubs, and groundcovers. Figure 6-9,



Conceptual Tenant Monumentation



Conceptual Secondary Corner Treatment, conceptually illustrates the secondary corner treatments.

The final locations and design details of the water quality basins will be determined when buildings are designed and oriented during the implementation of the Eucalyptus Business Park Specific Plan area.

6.12 Landscape Interface

Within the Specific Plan area, landscape treatments have been designed to address the interface between the Business Park and the Open Space – Parkland land use. The interface exhibits presented in this section are not intended to represent a literal design, but rather serve as guidelines, which may be subject to modification over time.

As shown in Figure 6-10, *Conceptual Landscape Interface – Business Park to Open Space – Parkland*, the 60-foot-wide ROW Public Street 'A' splits up the two land use districts. Within the Business Park planning areas, landscape buffers, parking, and drive-aisles can provide further separation between the Business Park buildings and the edge of the public park areas.

6.13 Water Quality Basin Guidelines

Water quality basins may be provided within the Specific Plan area to treat stormwater before the flows ultimately drain into the storm drain facilities. The water quality basins may include contoured basin edges for a natural look, and landscaping around the perimeter of the basin to screen public views of the basin. Swales may be no greater than 40% of the landscape area width to allow for ornamental landscaping, although landscaping may have limitations where necessary to deter the attraction of birds to the basins, which can be a hazard to aircraft using the nearby Chino Airport and Ontario International Airport. Other wildlife deterrents that may be considered include floating covers, bird balls, netting, and basins designed to be linear and narrow with steep sides and rip-rap lining.

6.14 Stormwater Infiltration Areas Guidelines

Stormwater infiltration areas within landscape areas shall be designed to be no greater than 40% of the landscape area width to allow for ornamental landscape. Stormwater infiltration devices located in landscape areas shall be reviewed and plans approved by the City of Ontario's Landscape Planning Division. Any stormwater devices in parkway and landscape areas shall not displace required tree locations.

CHAPTER 7

IMPLEMENTATION PLAN

7.1 Severability

This Specific Plan document enables the City of Ontario to facilitate the processing and approval of development plans and implementing permits to build out the Eucalyptus Business Park Specific Plan area. If any regulation, condition, program, or portion of this Specific Plan is held invalid or unenforceable, such portions shall be deemed separate, distinct, and independent provisions, and the invalidity of such portions or provisions shall not affect the validity and enforceability of the remaining provisions contained herein.

7.2 Applicability

Approval of the Eucalyptus Business Park Specific Plan indicates acceptance by the City of Ontario City Council of a general framework for the development of the Specific Plan area's property. Part of that framework establishes specific development standards that constitute the zoning regulations of the Specific Plan (refer to Chapter 5, *Development Regulations*). The provisions contained herein are intended to regulate development within the Specific Plan area.

Development within the Eucalyptus Business Park Specific Plan area shall be implemented through the City's approval of a tentative map, a final parcel map, and the Development Plan Review process as established in the City's Development Code. The implementation process described herein provides the mechanisms for review and approval of development projects within the Specific Plan area.

7.3 Interpretation

Unless otherwise provided, any ambiguity concerning the content or application of the Specific Plan shall be resolved by the City's Planning Director, or their designee, in a manner consistent with the goals, policies, purpose, and intent established in this Specific Plan.

7.4 Development Review Process

7.4.1 Subdivision Map

Approval of tentative maps within the Eucalyptus Business Park Specific Plan area may occur concurrently with or subsequently to the adoption of the Specific Plan. The tentative map and final subdivision maps shall be reviewed and approved pursuant to the applicable provisions of the City's Subdivision Ordinance and consistent with the applicable provisions established within the Land Use, Infrastructure, Design Guidelines, and Development Regulations chapters of this Specific Plan.

7.4.2 Development Plan Review

All development within the Eucalyptus Business Park Specific Plan area shall be subject to the Development Plan Review Process established in the City of Ontario Development Code, or as approved the by Planning Director or their designee). Adoption of this Specific Plan by the City includes the design guidelines contained in Chapter 6,

which shall be the design criteria by which development projects within the Specific Plan area shall be reviewed during Development Plan Review. Additionally, proposed uses within the Specific Plan area shall not exceed the total number of daily vehicle trips studied within the EIR prepared to address the Eucalyptus Business Park Specific Plan.

For topics on which these design guidelines are silent, the applicable design guidelines contained within the City's Development Code shall apply. The design guidelines are intended to offer flexibility while establishing fundamental evaluation criteria to guide the City's review of development projects during the design review process.

7.4.3 Development Agreements

Pursuant to California Government Code Sections 65864 et seq., City approval of individual statutory Development Agreements with each property owner may be included as part of the Specific Plan approval process and must be secured prior to approval of the first Final Map. The Development Agreement shall include, but not be limited to, methods of financing, acquisition, and construction of infrastructure. The Eucalyptus Business Park Specific Plan Development Agreement shall be fully executed prior to the issuance of the first building permits for development or first public works permit, whichever takes place first, within the Specific Plan.

7.4.4 Conditional Use Permits

Uses identified as conditionally permitted within Chapter 5, *Development Regulations*, of this Specific Plan shall be subject to review and approval by the City pursuant to the procedures set forth in Division 4.02.015, Conditional Use Permits, of the City's Development Code.

7.4.5 Variances

Variances and Administrative Exceptions to the development regulations contained in Chapter 5, *Development Regulations*, of this Specific Plan with respect to the site area, setback dimensions, building heights, distances between buildings, landscape percentage and off-street parking and loading shall be reviewed pursuant to "Variances and Administrative Exceptions" of Section 4.02.020 of the City's Development Code.

7.5 Substantial Conformance

The Substantial Conformance Determination is a mechanism that allows for the approval of ministerial minor modifications for development under the Specific Plan, which is considered and approved ministerially by the Planning Director or their designee. The City recognizes that modifications to the text and exhibits of this Specific Plan document may be needed over time. Upon direction by the City of Ontario Planning Department, certain modifications to text, exhibits, and/or development standards and design guidelines may not require a formal Specific Plan Amendment (i.e., through public hearing) and can occur ministerially. The following minor modifications to this document do not require a formal Specific Plan Amendment and are subject to ministerial review and approval by the Planning Director or their designee. The Planning Director shall have the discretion to approve or defer any request for modification to the Planning Commission or City Council, either for ministerial direction and guidance, or for a determination that the required change requires a formal amendment as discussed below in Section 7.6. Ministerial Substantial Conformance decisions are not subject to CEQA compliance because CEQA applies to discretionary actions and not to ministerial actions.

A Substantial Conformance shall constitute the following and will require approval from the Planning Director or their designee:

- Expansions or reductions of the net acreage covered by a given Planning Area.
- Transfer of development square footage of 15% or less within the same land use designation, provided that the shift in square footage does not exceed the maximum allowable square footage of 2,939,000 s.f. or exceed the maximum FAR of 0.55 provided in Chapter 5 of this Specific Plan.
- The ultimate alignment of driveways and drive aisles within any Planning Area as part of the development of implementing project(s).
- Construction of buildings, landscaping, and/or parking areas for building sites may cross over into adjacent Planning Areas within the same land use designation, Buildings constructed across Planning Area boundaries shall not, by themselves, trigger the requirement for a Substantial Conformance. Modification of design criteria such as architectural details, landscape treatments, fencing, lighting, and signage.
- Changes to the Phasing Plan, provided infrastructure is available to serve the phase as determined by the City Engineer.
- Implementation of alternative landscape materials, wall materials, entry monument design, primary/secondary corner treatments, and streetscape design that are generally consistent with the conceptual design guidelines contained within this Specific Plan.
- Modifications to the Business Park Architectural Design Guidelines, such as variation of architectural style and variations in materials and colors.
- The Conceptual Site Plan exhibit (Figure 3-3) is illustrative only; modifications to the building orientation and layout as part of the Development Plan review process where the revisions remain consistent with the intent and development standards of the Specific Plan. Final infrastructure facility sizing and precise location of dry utilities, water, sewer, and storm drainage improvements as approved by the City Engineer, OMUC, or San Bernardino Flood Control District.
- Roadway ROW design, when the changes are warranted and approved by the City Engineer.
- Revisions to exhibits that do not substantially change the intent of the Specific Plan.
- Modification, deletions, and additions to the list of permitted and conditionally permitted uses.
- Specific modifications of a similar nature to those listed above which are deemed minor by the Planning Director, which are in keeping with the intent of this Specific Plan and which are in conformance with the Policy Plan component of The Ontario Plan.

7.6 Formal Amendments to the Specific Plan

All modifications to this Specific Plan document that do not meet the criteria of a Substantial Conformance (as defined in the previous subsection) shall be deemed to require a formal Specific Plan Amendment.

Formal Specific Plan Amendments shall be subject to the review and approval of the City Council. The Planning Commission should first hear and consider all applications for formal Specific Plan Amendments and provide a recommendation to the City Council. As required by the California Government Code, all government agencies significantly affected by the proposed Amendment shall be notified

of the proposed action prior to the approval. Because a Specific Plan Amendment is a discretionary action, such amendments shall be appropriately reviewed in accordance with the CEQA Statute and Guidelines, with the City of Ontario serving as the CEQA Lead Agency.

Any formal Specific Plan Amendment initiated by an applicant requires preliminary review by the Planning Director, filing of an official application and required materials supporting the Amendment, submittal of a fee.

In considering approval or disapproval of formal Specific Plan Amendments, the Planning Commission and City Council shall find that the request is:

- Consistent with the Policy Plan component of The Ontario Plan (General Plan) in effect at the time of consideration.
- Compatible with surrounding land uses with respect to use, development standards, density, or issues of health, public safety, and general welfare.
- Consistent with the overall design character and general structure set forth in Chapter 6, *Design Guidelines*, of this Specific Plan.

7.7 Appeals

Appeals of any determination of the Planning Director, Zoning Administrator, or the Planning Commission, may be made by the applicant or any other aggrieved party by filing an application on forms provided by the City of Ontario and accompanied by the appropriate filing fee, where applicable, within ten (10) days following the final date of action for which an appeal is made.

7.8 Compliance with Mitigation Monitoring and Reporting Program

Certification of an EIR shall be required prior to the approval of the Specific Plan. Development within the Eucalyptus Business Park Specific Plan shall comply with all approved mitigation measures as described in the MMRP included as part of the EIR.

7.9 Project Financing

The financing of construction, operation, and maintenance of public improvements, facilities, and public services shall include funding through a combination of financing mechanisms. Prior to the recordation of final maps, a final determination shall be made by City staff and confirmed by the Planning Director and City Engineer regarding the responsibility for construction and maintenance of public facilities, whether publicly or privately maintained.

Implementation of the Eucalyptus Business Park Specific Plan may involve financing options including, but not limited to, the following sections:

7.9.1 Facilities and Services

Construction of public improvements and facilities and the provision of public services may be financed through private capital investment, a Community Facilities District (CFD), Development Impact Fees (DIF), or other special district, pursuant to the Mello-Roos Community District Act of 1982.

7.9.2 Operation and Maintenance

Options for operation and maintenance of public and private improvements and facilities include, but are not limited to, the following:

- City Public Works Department or other public agencies
- Individual private property owners

- Private Property Owners Association
- CFD or other special district (will be at the City's sole distraction)

7.10 Phasing Plan

As shown on Figure 7-1, *Conceptual Phasing Plan*, the development of the Eucalyptus Business Park Specific Plan area is expected to occur in six phases in response to market demands and according to a logical and orderly extension of roadways, public utilities, and infrastructure.

Phase A includes Planning Areas 3 and 6; Phase B includes Planning Areas 2 and 5; Phase C includes Planning Areas 1 and 4; Phase D includes Planning Area 9; Phase E includes Planning Area 8; and Phase F includes Planning Area 7. The developer and the City of Ontario will work together to ensure that the Open Space – Parkland Planning Areas are constructed concurrently with the build-out of the Business Park portions of the Specific Plan area in a phased manner. The details of this partnership will be included in the Development Agreement(s) accompanying the approval of the Specific Plan.

Phasing of the Specific Plan shall be permitted; however, required public improvements will be dictated by the City of Ontario's Land Development Section and the approved Development Agreement(s). The Phasing Plan is conceptual and subject to revision as the project development evolves. The Specific Plan shall allow development in any phase at any time if adequate infrastructure to support same is included. For example, construction of the publicly operated animal resource center or other building or improvement may occur prior to the completion of an earlier phase.

7.11 Maintenance Plan

The public and private improvements constructed within the Eucalyptus Business Park Specific Plan area shall be maintained through a combination of public and private entities as described in Table 7-1, *Maintenance Responsibilities*. Table 7-1 provides a list of maintenance entity options that may fund and/or maintain facilities within the Specific Plan area, however, the ultimate maintenance entity for each facility will be determined by the Eucalyptus Business Park Specific Plan's Development Agreement(s). A Property Owners Association (POA) may be established for the maintenance of common area landscape improvements and private roadways within portions of the Eucalyptus Business Park Specific Plan area. For areas in public ownership (such as public roadway ROWs and the Open Space-Parkland Planning Areas), City of Ontario Public Works, other public agencies, or municipal maintenance districts may fund the maintenance of these areas.

Table 7-1 Maintenance Responsibilities

Facility	City and/or CFD	Property Owners Association	Property Owner or Occupant	Public Utility

Figure 7-1

Phasing Plan

APPENDIX A

POLICY PLAN CONSISTENCY ANALYSIS

California Government Code (Title 7, Division 1, Chapter 3, Article 8, §§ 65450 through 65457) allows local governments to adopt and administer specific plans as tools to implement their general plan; however, specific plans must demonstrate consistency with the goals and policies set forth in the local general plan. This appendix provides a summary discussion to demonstrate that this Eucalyptus Business Park Specific Plan is consistent with, and results in the implementation of, applicable primary goals and policies of the Policy Plan (General Plan) component of The Ontario Plan.

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
LU-1: A community that has jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.	
LU-1.1: Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.	**Consistent.** The Eucalyptus Business Park Specific Plan area is located in the Ontario Ranch area of the City, which is an area planned for future growth. The City's Master Plans for water, sewer, and storm drainage identify planned infrastructure facilities to support growth in this area. The developer(s) of the Eucalyptus Business Park Specific Plan area will be required to participate in the installation of the Master Plan infrastructure. Additionally, streets within the Specific Plan area are designed to be safe and accessible to accommodate different modes of non-vehicular transportation.
LU-1.2: Sustainable Community Strategy. We integrate state, regional, and local Sustainable Community /Smart Growth principles into the development and entitlement process.	**Consistent.** The Eucalyptus Specific Plan features numerous sustainable features. The Specific Plan encourages non-motorized circulation by employees and visitors via its provision of an integrated network of sidewalks, bikeways, and trails. In accordance with the Policy Plan Exhibit M-02, Multipurpose Trails & Bikeway, Class II bike lanes are provided along both sides of Campus Avenue and Walker Avenue. Additionally, the Eucalyptus Business Park Specific Plan area includes an 8-foot multi-purpose trail along Eucalyptus Avenue, Grove Avenue and Walker Avenue. All development in the Specific Plan area are required to conform to the California Green Building Standards Code (CalGreen Code) and the Specific Plan includes

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
	Energy Efficiency guidelines. In addition, the EBPSP includes a rooftop solar energy system which would generate enough electricity to meet 45% of annual electricity demand. The plant palette for the Specific Plan area consists of water-efficient species native to southern California or naturalized to the arid southern California climate, and the use of turf will be minimized. As such, the Eucalyptus Specific Plan is consistent with this policy.
LU-1.3: Adequate Capacity. We require adequate infrastructure and services for all development.	**Consistent.** The developer(s) of the Eucalyptus Business Park Specific Plan area are required to install adequate roadway and utility infrastructure improvements to meet the demands of the Specific Plan while maintaining adequate service levels for existing, surrounding development. Refer to the Environmental Impact Report (EIR) prepared for the Eucalyptus Business Park Specific Plan for a detailed analysis of the adequacy of the Specific Plan's infrastructure improvements.
LU-1.4: Multimodal Mobility. We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities	**Consistent.** The Eucalyptus Business Park Specific Plan area offers numerous opportunities for non-vehicular circulation, including multi-purpose trails, bikeways, and sidewalks. Class II bike lanes would largely be provided along both sides of Campus Avenue, between Riverside Drive and Holt Avenue, Eucalyptus Avenue, and Walker Avenue, between Euclid Avenue and Hamner Avenue. Additionally, the Eucalyptus Business Park Specific Plan area includes an 8-foot multi-purpose trail along Eucalyptus Avenue, Grove Avenue, Campus Avenue, and Walker Avenue to encourage connectivity and circulation by employees, visitors, and the passersby that is not completely dependent on a motorized vehicle. Additionally, bike storage facilities are required to be installed in each building to further promote alternative transportation.
LU-1.5: Jobs-Housing Balance. We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance.	**Consistent.** The developer(s) of the Eucalyptus Business Park will construct roadway and utility improvements in accordance with the City's infrastructure master plans. Furthermore, the Specific Plan area will generate employment opportunities for residents of the City and surrounding jurisdictions, and reduce the need for residents in the region to commute to other regions for employment opportunities. Accordingly, implementation of the Eucalyptus Business Park Specific Plan will improve

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
	the jobs-housing balance within the City and the Inland Empire region.
LU-1.6: Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.	**Consistent.** The Eucalyptus Business Park Specific Plan land use plan provides Business Park land uses that will accommodate a variety of employment uses arranged in a sensible and efficient manner that allow ease of access and complement the surrounding community. The parkland area will provide recreational amenities for residents of and visitors to the City of Ontario. The business park area of the Eucalyptus Business Park Specific Plan area is envisioned to attract local, national, and international businesses, and will assist in diversifying the mix of employment opportunities available in the City. The retail component within the business park area will serve both the businesses within the Eucalyptus Business Park Specific Plan area and the broader community.
LU-1.7: Revenues and Costs. We require future amendments to our Land Use Plan to be accompanied by analyses of fiscal impacts.	**Consistent.** A fiscal impact analysis will be prepared in support of the Specific Plan. Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of potential fiscal effects associated with the implementation of the Specific Plan.
LU-2: Compatibility between a wide range of uses and resultant urban patterns and forms.	
LU-2.1: Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.	**Consistent.** The Eucalyptus Business Park Specific Plan EIR evaluated the potential physical environmental impacts of the implementation of the Specific Plan on the surrounding community in accordance with the California Environmental Quality Act (CEQA). Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of impacts to adjacent properties associated with the implementation of the Specific Plan.
LU-2.2: Buffers. We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.	**Consistent.** The Eucalyptus Business Park Specific Plan provides conceptual streetscapes for Eucalyptus Avenue, Campus Avenue, Walker Avenue, and Public Street 'A'; primary and secondary corner treatments at Specific Plan entry points; and landscaped screening walls between truck courts and parking areas and adjacent public rights-of-way. Implementation of these features provides a visual buffer between planned on-site Business Park land uses and existing and planned off-site land uses. Additionally, the Specific Plan includes Open Space–Parkland along the northern boundary to separate the business park uses from the residential uses planned

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
	to the north. As such, the Eucalyptus Business Park is consistent with this policy.
LU-2.3: Hazardous Uses. We regulate the development of industrial and similar uses that use, store, produce, or transport toxic substances, air emissions, other pollutants, or hazardous materials.	**Consistent.** Building occupants within the Eucalyptus Business Park Specific Plan area are obligated to comply with all local and State requirements for using, storing, producing, or transporting toxic substances, air emissions, other pollutants, or hazardous materials.
LU-2.5: Regulation of Uses. We regulate the location, concentration, and operation of uses that have impacts on surrounding land uses.	**Consistent.** The Eucalyptus Business Park Specific Plan EIR evaluated the potential physical environmental impacts of the implementation of the Specific Plan on the surrounding community in accordance with CEQA. Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of impacts to adjacent properties associated with the implementation of the Specific Plan.
LU-2.6: Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.	**Consistent.** Water, sewer, storm drain, and dry utility improvements will be located underground and out of view, with the exception of storm water inlets and channels that are required to be exposed at the surface. Roadway infrastructure improvements are designed to be landscaped with a combination of evergreen and deciduous trees – including flowering varieties – shrubs and groundcovers in an aesthetically-pleasing manner to establish the Specific Plan's design theme.
LU-2.8: Transitional Areas. We require development in transitional areas to protect the quality of life of current residents.	**Consistent.** The Eucalyptus Business Park Specific Plan area is primarily surrounded by agricultural uses, dairy operations, and existing and planned industrial warehouse uses. Nonetheless, the Specific Plan stipulates landscaping and building setbacks along all of the Specific Plan's perimeter streets that separate the Specific Plan area from adjacent properties. Trucks traveling to and from the Specific Plan area are required to utilize the City's approved truck routes, thereby minimizing exposure of nearby residents to truck-related impacts. Development within the Specific Plan area must adhere to the Design Guidelines in Chapter 6 of this Specific Plan, which will provide for a high-quality, attractive, and contemporary environment.
LU-2.9: Methane Gas Sites. We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	**Consistent.** If determined to be necessary, the Eucalyptus Business Park Specific Plan area will be required to implement the mitigation measures identified in the Eucalyptus Business Park Specific Plan EIR addressing soil remediation and building

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
	venting requirements related to methane gas hazards. As such, this Specific Plan is consistent with this policy.
LU-4: Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.	
LU-4.2: Interim Development. We allow development in urban, mixed use, and transit-oriented Place Types that is not immediately reflective of our ultimate Vision for the Place Type, provided it can be modified or replaced when circumstances are right to support development aligned with the Place Type Vision. We will not allow development that impedes, precludes, or compromises our ability to achieve our Vision.	Consistent. The central theme of the Ontario Vision is "A sustained, community-wide prosperity which continuously adds value and yields benefits." The open space-parkland area will introduce and sustain recreational amenities in the long term for use by City residents and visitors. The phased development of the business park land uses in the Eucalyptus Business Park Specific Plan area will attract new businesses, provide employment opportunities for residents, contribute the City's tax base, and construct circulation and utility infrastructure improvements that are critical to allow for the growth of the region. As such, the Specific Plan area will help the City achieve its Vision by continuously adding value, yielding benefits, and contributing to the prosperity of the City and the Inland Empire region.
LU-4.3: Infrastructure Timing. We require that the necessary infrastructure and services be in place prior to or concurrently with development.	Consistent. Chapter 7, *Implementation Plan*, of the Eucalyptus Business Park Specific Plan includes a development phasing plan that requires infrastructure needed to support the buildout of the Specific Plan to be adequately phased concurrently with development.
LU-5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.	
LU-5.5: Airport Compatibility Planning for ONT. We create and maintain the Airport Land Use Compatibility Plan for ONT.	Consistent. The land uses provided by the Eucalyptus Business Park Specific Plan are consistent with the Airport Land Use Compatibility Plan (ALUCP) requirements for the Ontario International Airport. Furthermore, future development on the Specific Plan property would be required to comply with the development standards and design guidelines established in this Specific Plan, as well as the applicable requirements of the City of Ontario Development Code, which would preclude any potential inconsistencies with the Ontario International Airport ALUCP.
LU-5.7: ALUCP Consistency with Land Use Regulations. We comply with state law that requires general plans, specific plans, and all new development to be consistent with the	Consistent. The land uses provided by the Eucalyptus Business Park Specific Plan are consistent with the Airport Land Use Compatibility Plan (ALUCP) requirements for the Ontario International Airport and the provisions provided in the Chino Airport Overlay

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.	District. All proposed development will be reviewed by the City of Ontario staff in the Development Plan review process.
LU-5.8: Chino Airport. We will support the creation and implementation of the Airport Land Use Compatibility Plan for Chino Airport.	**Consistent.** The land uses provided by the Eucalyptus Business Park Specific Plan are consistent with the provisions provided in the Chino Airport Overlay District. Proposed development within the Specific Plan area will be reviewed by the City of Ontario Staff in the Site Plan review process.

Ontario Plan Policy	Specific Plan Consistency
Housing Element	
H-1: Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.	
H-1.4: Historical Preservation. We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.	**Consistent.** Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of potential impacts to historical and cultural resources that would occur as a result of the implementation of the Specific Plan. If determined to be necessary, development projects within the Specific Plan area will be required to implement mitigation measures to reduce impacts to historical and cultural resources to the maximum extent feasible.

Ontario Plan Policy	Specific Plan Consistency
Parks and Recreation Element	
PR-1: A system of safe and accessible parks that meets the needs of the community.	
PR-1.9: Phased Development. We require parks be built in new communities before a significant proportion of residents move in.	**Consistent.** The Eucalyptus Business Park Specific Plan does not include the creation of new residential units, but includes 35.88 acres of the City's Grand Park. Chapter 7, *Implementation Plan*, of the Eucalyptus Business Park Specific Plan includes a development phasing plan that discusses the buildout of the Specific Plan which includes the both the Business Park and the Open Space – Parkland land uses.
PR-1.15: Trail Connectivity. We strengthen and improve equestrian, bike, and multipurpose trail connections within the City and work to improve trail connections into adjacent jurisdictions.	**Consistent.** The Eucalyptus Business Park Specific Plan includes multi-purpose trails along Eucalyptus Avenue, Campus Avenue, Grove Avenue, and Walker Avenue to encourage connectivity and circulation by employees, visitors, and the passerby by means not completely dependent on a motorized vehicle. The multi-purpose trail system provided by the Specific Plan area implements the multipurpose trail system

Ontario Plan Policy	Specific Plan Consistency
Environmental Resources Element	
ER-1: A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.	
ER-1.3: Conservation and Sustainable Water Supply. We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability	**Consistent.** The Eucalyptus Business Park Specific Plan incorporates a drought-tolerant plant palette and water-efficient irrigation system design to minimize the water demands of planned development. In addition, implementing development projects will be required to comply with the water-efficiency mandates of the California Green Building Standards Code, including the provision of water-efficient fixtures.
ER-1.4: Supply-Demand Balance. We require that available water supply and demands be balanced.	**Consistent.** The Eucalyptus Business Park Specific Plan EIR evaluates the potential impacts of the Specific Plan's implementation related to water supply based on the results of a project-specific water supply assessment. If deemed necessary by the EIR, development within the Specific Plan is required to implement mitigation measures to reduce significant impacts to the water supply to the maximum extent feasible.
ER-1.5: Water Resource Management. Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	**Consistent.** As discussed in the Eucalyptus Business Park Specific Plan EIR, implementation of the Specific Plan will not result in new, substantial sources of urban runoff, and also will not violate applicable stormwater quality requirements. Also, the Eucalyptus Business Park Specific Plan area includes permeable surfaces (e.g., open space-parkland, landscaped areas, water quality/infiltration basins) that would allow surface water to percolate and contribute to recharge of the aquifer.
ER-1.6: Urban Run-off Quantity. We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	**Consistent.** As discussed in the Eucalyptus Business Park Specific Plan EIR, implementation of the Specific Plan will not result in new, substantial sources of urban runoff, and also will not violate applicable stormwater quality requirements. Also, the Eucalyptus Business Park Specific Plan area includes permeable surfaces (e.g., open space-parkland, landscaped areas, water quality/infiltration basins) that would allow surface water to percolate and contribute to recharge of the aquifer.

Ontario Plan Policy	Specific Plan Consistency
Environmental Resources Element	
ER-1.7: Urban Run-off Quality. We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	**Consistent.** As discussed in the Eucalyptus Business Park Specific Plan EIR, implementation of the Specific Plan will not result in new, substantial sources of urban runoff, and also will not violate applicable stormwater quality requirements. Also, the Eucalyptus Business Park Specific Plan area includes permeable surfaces (e.g., open space-parkland landscaped areas, water quality/infiltration basins) that would allow surface water to percolate and contribute to recharge of the aquifer.
ER-1.8: Wastewater Management. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	**Consistent.** All sewer conveyance infrastructure needed to serve the Eucalyptus Business Park Specific Plan area will be installed in accordance with City design standards. Accordingly, implementation of the Specific Plan will not violate any applicable waste discharge requirements as detailed in the Eucalyptus Business Park Specific Plan EIR.
ER-3: Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.	
ER-3.3: Building and Site Design. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	**Consistent.** The Eucalyptus Business Park Specific Plan's design guidelines encourage all new construction to utilize design features, fixtures, appliances, and heating and cooling controls to conserve energy and water. In addition, all development is required to comply with the California Green Building Standards Code (CalGreen Code).
ER-3.6: Generation- Renewable Sources. We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.	**Consistent.** The Eucalyptus Business Park Specific Plan proposes a rooftop solar energy system which generates enough electricity to meet 45% of annual electricity demand.
ER-4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.	
ER-4.1: Land Use. We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.	**Consistent.** The Eucalyptus Business Park Specific Plan area provides employment land uses in close proximity to major transportation corridors (Interstate 10, Interstate 15, State Route 60, State Route 83, State Route 71 and State Route 91) and near Bus Rapid Transit (BRT) Corridors along Ontario Ranch Road and Euclid Avenue. Therefore, the Specific Plan area provides local employment opportunities for residents and serves to improve the regional jobs-housing balance. Additionally, the Specific Plan area provides an integrated system of sidewalks, bikeways, and multi-purpose trails on internal and perimeter roadways to encourage non-vehicular modes of transportation. The Eucalyptus Business Park

Ontario Plan Policy	Specific Plan Consistency
Environmental Resources Element	
	Specific Plan area has the potential to reduce vehicle miles traveled, which would reduce tailpipe emissions – a major source of greenhouse gases (GHGs).
ER-4.3: Greenhouse Gases (GHG) Emissions Reductions. We will reduce GHG emissions in accordance with regional, state, and federal regulations.	**Consistent.** As described in the Eucalyptus Business Park Specific Plan EIR, the Specific Plan would be consistent with applicable regional, State, and federal regulations related to the reduction of GHG emissions and would not obstruct implementation of any GHG reduction plans/programs.
ER-4.8: Tree Planting. We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality. We expand the tree canopy in environmental justice areas to enhance air quality and reduce the "heat island" effect.	**Consistent.** The Specific Plan area is not within an environmental justice area, however, as part of the development of the Eucalyptus Business Park Specific Plan area, a substantial number of trees will be planted within the Specific Plan area, and in particular along roadway street frontages, near building entrances, and in passenger car parking lots. In addition, trees will be planted in the open space-parkland planning areas.
ER-5: Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.	
ER-5.1: Habitat Conservation Areas. We support the protection of biological resources through the establishment, restoration, and conservation of high-quality habitat areas.	**Consistent.** The Eucalyptus Business Plan Specific Plan area was historically used for agricultural uses, dairy farming, and a trucking operation. The Specific Plan EIR evaluates impacts to biological resources (including sensitive/protected habitats and species) as a result of the implementation of the Specific Plan and establishes mitigation measures required to reduce significant impacts to the maximum extent feasible.
ER-5.2: Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.	**Consistent.** The Eucalyptus Business Plan Specific Plan area was historically used for agricultural uses, dairy farming, and a trucking operation. The Specific Plan EIR evaluates impacts to biological resources (including sensitive/protected habitats and species) as a result of the implementation of the Specific Plan and establishes mitigation measures required to reduce significant impacts to the maximum extent feasible.
ER-5.3: Right to Farm. We support the right of existing farms to continue their operations within the Ontario Ranch.	**Consistent.** Implementation of the Eucalyptus Business Park Specific Plan would not preclude the continued operation of existing farms within the New Model Colony/Ontario Ranch for ten years, as shown in Table 5-1, *Permitted Uses*, of this Specific Plan. Furthermore, the Eucalyptus Business Park Specific Plan EIR evaluates impacts to surrounding land uses that could potentially occur as a result of the

Ontario Plan Policy	Specific Plan Consistency
Environmental Resources Element	
	implementation of the Eucalyptus Business Park Specific Plan and establishes mitigation measures required to reduce significant impacts to the maximum extent feasible.
ER-5.4: Transition of Farms. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	**Consistent.** Implementation of the Eucalyptus Business Park Specific Plan would not preclude the continued operation of existing farms within the New Model Colony/Ontario Ranch for ten years, as shown in Table 5-1, *Permitted Uses*, of this Specific Plan. Furthermore, the Eucalyptus Business Park Specific Plan EIR evaluates impacts to surrounding land uses that could potentially occur as a result of the implementation of the Eucalyptus Business Park Specific Plan and establishes mitigation measures required to reduce significant impacts to the maximum extent feasible.

Ontario Plan Policy	Specific Plan Consistency
Community Economics Element	
CE-1: A complete community that provides for all incomes and stages of life.	
CE-1.1: Jobs-Housing Balance. We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.	**Consistent.** The Eucalyptus Business Park Specific Plan would provide over 137.90 acres of new employment-generating land uses in close driving distance to existing and planned residential land uses. The new job opportunities provided within the Specific Plan area will assist the City's efforts to promote job growth and improve the balance between jobs and housing within the City limits.
CE-1.12: Circulation. We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles.	**Consistent.** BRT Corridors are located along Ontario Ranch Road and Euclid Avenue in close proximity to the Specific Plan. The Specific Plan would construct a bus turnout near the intersection of Grove Avenue and Eucalyptus Avenue in anticipation of future Omnitrans service. Additionally, the Specific Plan area provides Class II Bikeways along Walker Avenue and Campus Avenue. Additionally, sidewalks are provided along all streets within the Specific Plan area.
CE-2: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.	
CE-2.1: Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.	**Consistent.** The Eucalyptus Business Park Specific Plan provides for the development of the Specific Plan property as a high-quality and contemporary business park. This Specific Plan's Design Guidelines establish criteria for architecture, lighting, signage, and landscape design to promote the development of an

Ontario Plan Policy	Specific Plan Consistency
Community Economics Element	
	attractive business park with timeless design features, for as an inviting place to work and conduct business. The adjacency of the park and integral retail development further enhances the attractiveness of the Specific Plan.
CE-2.2: Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.	**Consistent.** The Eucalyptus Business Park Specific Plan requires implementing development projects within the Specific Plan area to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Planning Department which may require the development to demonstrate how each project will create appropriately unique, functional and sustainable places. Furthermore, development projects in the Specific Plan area are required to be designed in accordance with the architectural and landscape design guidelines established in Chapter 6, *Design Guidelines*, of this Specific Plan, which will result in a unique, aesthetically attractive, and contemporary business park that will be highly competitive with similar developments in the region.
CE-2.4: Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.	**Consistent.** Development projects in the Eucalyptus Business Park Specific Plan are required to be designed in accordance with the architectural and landscape design guidelines in Chapter 6, *Design Guidelines*, of this Specific Plan, which will result in a unique, aesthetically attractive, and contemporary business park that reflects high-quality architectural design.
CE-2.5: Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.	**Consistent.** This Specific Plan defines the entities responsible for the maintenance of publicly and privately-owned improvements within the Specific Plan area, including roadways and utility infrastructure. Compliance with the maintenance responsibility matrix established in Chapter 7, *Implementation Plan*, will ensure that all improvements within the Specific Plan area are properly and consistently maintained.
CE-2.6: Public Maintenance. We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.	**Consistent.** This Specific Plan defines the entities responsible for the maintenance of publicly and privately-owned improvements within the Specific Plan area, including roadways and utility infrastructure. Compliance with the maintenance responsibility matrix established in Chapter 7, *Implementation Plan*, will ensure that all improvements

Ontario Plan Policy	Specific Plan Consistency
Community Economics Element	
	within the Specific Plan area are properly and consistently maintained.
CE-3: Decision-making deliberations that incorporate the full short-term and long-term economic and fiscal implications of proposed City Council actions.	
CE-3.2: General Plan Amendments. We require those proposing General Plan amendments to disclose reasonably foreseeable impacts through a fiscal analysis.	**Consistent.** A fiscal impact analysis will be prepared in support of the Eucalyptus Business Park Specific Plan. Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of potential reasonably foreseeable fiscal effects associated with implementation of this Specific Plan.

Ontario Plan Policy	Specific Plan Consistency
Mobility Element	
M-1*: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.*	
Policy M1-1: Roadway Design and Maintenance. We require our roadways to: • Comply with federal, state, and local design and safety standards; • Meet the needs of multiple transportation modes and users; • Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways; • Be maintained in accordance with best practices; • Be compatible with the streetscape and surrounding land uses; and Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies.	**Consistent.** The Eucalyptus Business Park Specific Plan includes roadway improvements consistent with the City of Ontario Master Plan of Streets and Highways, as described in Chapter 4, *Infrastructure Plan*. Perimeter and internal streets will be constructed to City standards and are designed to accommodate vehicles, pedestrians, and bicyclists through the inclusion of sidewalks, Class II bike lanes, and multi-purpose trails. Roadway designs include parkways and landscaping to support circulation and enhance compatibility with adjacent land uses. Maintenance responsibilities are outlined in Chapter 7, *Implementation Plan*.
Policy M1-2: Mitigation of Impacts. We require development to mitigate its traffic impacts.	**Consistent.** The Eucalyptus Business Park Specific Plan is supported by a project-specific traffic impact analysis that identifies necessary mitigation measures to address traffic impacts. The implementation of these measures will be the responsibility of the developer(s) and will be carried out in accordance with City of Ontario standards and requirements.
Policy M1-4: Complete Streets.	**Consistent.** The Eucalyptus Business Park Specific Plan establishes a multimodal circulation network that

Ontario Plan Policy	Specific Plan Consistency
Mobility Element	
We work to provide a complete, balanced, context-aware, multimodal transportation network that meets the needs of all users of streets, roads, and highways, including motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation. We prioritize implementation of complete streets improvements in environmental justice areas to facilitate opportunities for residents to use active transportation systems.	includes sidewalks, Class II bike lanes, and multi-purpose trails along major roadways such as Campus Avenue, Eucalyptus Avenue, and Walker Avenue, as described in Chapter 4, *Infrastructure Plan*. The plan is designed to accommodate pedestrians, bicyclists, and vehicles through coordinated roadway and non-vehicular improvements. Design Guidelines in Chapter 6 address pedestrian connectivity and require consistent treatment of sidewalks, parkways, and landscape buffers to support safe and functional circulation throughout the Specific Plan area.
Policy M1-5: Level of Service. Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).	**Consistent.** The Eucalyptus Business Park Specific Plan is supported by a project-specific traffic impact analysis that identifies necessary mitigation measures to address traffic impacts, as referenced in Chapter 4, *Infrastructure Plan*. The Specific Plan includes planned improvements to perimeter and internal roadways in accordance with the City of Ontario Master Plan of Streets and Highways. Intersection improvements and roadway design will be subject to further analysis and review by the City to ensure compliance with applicable standards.
Policy M1-6: Reduced Vehicle Miles Traveled. We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.	**Consistent.** The Eucalyptus Business Park Specific Plan allows for business park and support commercial land uses with internal circulation systems, including sidewalks, bike lanes, and multi-purpose trails, to encourage non-vehicular travel. Also, the open space-parkland planning areas will provide recreational amenities and the retail component within the business park planning area will provide support services within walking and biking distance of the business park uses.
M-2: *A system of trails and corridors that facilitate and encourage active modes of transportation.*	
Policy M2-1: Active Transportation. We maintain our Active Transportation Master Plan to create a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe, comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.	**Consistent.** The Eucalyptus Business Park Specific Plan includes the construction of Class II bike lanes along Campus Avenue, Eucalyptus Avenue, and Walker Avenue, as well as multi-purpose trails along Campus Avenue, Eucalyptus Avenue, Grove Avenue, and Walker Avenue, as detailed in Chapter 4, *Infrastructure Plan*. These facilities are integrated with a network of sidewalks throughout the Specific Plan

Ontario Plan Policy	Specific Plan Consistency
Mobility Element	
	area to support safe and accessible travel for pedestrians and bicyclists. The circulation improvements are designed to enhance connectivity within the Business Park and to adjacent areas, consistent with the City's active transportation goals.
Policy M2-2: Bicycle System. We provide off-street multipurpose trails and Class II bikeways as our primary paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.	**Consistent.** The Eucalyptus Business Park Specific Plan includes Class II bikeways and multi-purpose trails throughout the circulation network to support bicycle travel. At final buildout, all development in the Specific Plan area will be required to comply with City of Ontario bicycle facility standards, including provisions for bike lanes, trails, and secure bicycle parking and storage.
Policy M2-3: Pedestrian Walkways. We require walkways that promote safe and convenient travel between residential areas, businesses, schools, parks, recreation areas, and other key destination points.	**Consistent.** The Eucalyptus Business Park Specific Plan includes sidewalks and multi-purpose trails along all major perimeter roadways, including Eucalyptus Avenue, Grove Avenue, Walker Avenue, and Campus Avenue, to ensure safe and convenient pedestrian access throughout the plan area. Internal private drive aisles and public streets will provide additional pedestrian connections between planned business park uses and open space areas. All pedestrian facilities will be constructed in accordance with City standards and designed to promote visibility and safety.
M-2.4 Network Opportunities. We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed- use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity. (Link to Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section)	**Consistent.** The Eucalyptus Business Park Specific Plan utilizes public rights-of-way to establish a connected bicycle and pedestrian network, including sidewalks and multi-purpose trails within the ROWs of Eucalyptus Avenue, Grove Avenue, Walker Avenue, Campus Avenue, and other major corridors. The plan incorporates parkways, landscape buffers, and trail corridors to expand the public realm and improve non-vehicular connectivity throughout the Specific Plan area in alignment with City goals.
Goal M-4: An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.	
Policy M4-1: Truck Routes.	**Consistent.** Truck access to and from the Eucalyptus Business Park Specific Plan area will utilize Grove

Ontario Plan Policy	Specific Plan Consistency
Mobility Element	
We designate and maintain a network of City truck routes that provide for the safe and efficient transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown on Exhibit M-04, Truck Routes. We will minimize conflicts on truck routes through the design and implementation of buffers between travel lanes and pedestrian and bicycle facilities on designated truck routes.	Avenue, Walker Avenue, Bon View Avenue, and Campus Avenue, with connections to designated truck routes at Eucalyptus Avenue. The circulation plan includes design elements such as landscape buffers and trail corridors along key frontages to help minimize potential conflicts between truck traffic and non-motorized users, consistent with City policies for safe and efficient goods movement.
Policy M4-4: Environmental Considerations. We support both local and regional efforts to reduce/eliminate the negative environmental impacts of goods movement through the planning and implementation of truck routing and the development of a plan to evaluate the future needs of clean fueling/recharging and electrified truck parking.	**Consistent.** The Eucalyptus Business Park Specific Plan supports regional goods movement through planned improvements to major roadway within Eucalyptus Avenue, which are identified as truck routes in Chapter 4, *Infrastructure Plan*. The Specific Plan incorporates circulation and site planning strategies that accommodate truck access and loading while minimizing conflicts with non-vehicular travel. These improvements provide a framework that can support future environmental initiatives related to sustainable goods movement.

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
CD-1: A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.	
Policy CD1-3: Existing Neighborhoods. We require the existing character of viable residential and non-residential neighborhoods be preserved, protected and enhanced.	**Consistent.** The Eucalyptus Business Park Specific Plan is designed to preserve and protect the character of surrounding neighborhoods by incorporating a thoughtful land use plan, site design, and buffer treatments. Landscape setbacks and open space parkland are located along perimeter roadways to provide a visual and physical buffer between Business Park uses and adjacent properties. Building orientation, screening walls, and enhanced landscaping will be used to minimize visual and operational impacts on neighboring land uses. Design guidelines in Chapter 6 and development standards in Chapter 5 ensure that lighting is directed away from adjacent areas and that loading and service areas are screened from public view, thereby reducing potential edge effects and maintaining compatibility with the surrounding community.

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
Policy CD1-4: Transportation Corridors. We will enhance our major transportation corridors within the City through landscape, hardscape, signage and lighting. The extent of enhancement should be appropriate to the use, type, and context of each corridor.	**Consistent.** The Eucalyptus Business Park Specific Plan enhances major transportation corridors through a cohesive streetscape design that includes landscaping, parkways, and multi-purpose trails along Eucalyptus Avenue, Grove Avenue, Walker Avenue, and Campus Avenue. These improvements include a combination of canopy trees, shrubs, and groundcover to frame the corridor edges and provide visual continuity. The plan also provides Class II bike lanes and an internal pedestrian network to promote safe, multimodal travel. Entry monuments, consistent signage, and corner treatments are integrated into the streetscape to reinforce the design character of the Business Park and create a welcoming environment for employees and visitors. Design Guidelines in Chapter 6 further establish architectural and landscape elements appropriate to the context of each corridor.
Policy CD1-5: View Corridors. We require all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees.	**Consistent.** The Eucalyptus Business Park Specific Plan does not include any design features that would obstruct views along major north-south corridors such as Campus Avenue, Grove Avenue, Bon View Avenue, and Walker Avenue. As outlined in Chapter 6, *Design Guidelines*, and Chapter 4, *Infrastructure Plan*, landscaping—including street trees and parkways—will be installed along these corridors as part of roadway improvements. These enhancements will be implemented concurrently with development to create a cohesive streetscape while maintaining an open visual character consistent with City policies.
CD-2: A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional and distinct.	
Policy CD2-1: **Quality Architecture.** We encourage all development projects to convey visual interest and character through: • Building volume, massing, and height to provide appropriate scale and proportion; • A true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and	**Consistent.** Future development within the Eucalyptus Business Park will be guided by the Specific Plan's Design Guidelines (Chapter 6), which promote high-quality architectural design through appropriate building massing, scale, and articulation. The guidelines require a unified architectural theme and consistent application of materials, colors, and detailing across all visible building elevations. While the Specific Plan does not prescribe specific materials, it emphasizes the use of durable and visually appealing finishes appropriate to a modern business park setting. These standards ensure that new development contributes positively to the City's visual character.

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
Exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.	
Policy CD2-5: Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right of way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	**Consistent.** As part of implementation of the Eucalyptus Business Park Specific Plan, improvements will be made to existing public streets including Eucalyptus Avenue, Grove Avenue, Walker Avenue, Bon View Avenue, and Campus Avenue, as outlined in Chapter 4, *Infrastructure Plan*. Planned improvements include the addition of sidewalks, Class II bike lanes, and multi-purpose trails to support safe and efficient travel for pedestrians, bicyclists, and vehicles. Landscaped parkways with trees and other plantings will be provided along all major roadways to enhance the visual character of the street network and reinforce the Specific Plan's design framework as described in Chapter 6, *Design Guidelines*. These enhancements are intended to improve connectivity and promote a cohesive streetscape identity throughout the plan area.
Policy CD2-7: Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.	**Consistent.** The Eucalyptus Business Park Specific Plan supports sustainable development principles through its location near regional transportation corridors and within close driving distance of existing residential neighborhoods. The land use plan promotes a mix of employment-generating uses intended to serve both the local and regional workforce, aligning with smart growth objectives. As described in Chapter 6, *Design Guidelines*, the landscaping strategy emphasizes the use of drought-tolerant plant species appropriate for the Inland Southern California climate, with an emphasis on low water use and long-term maintenance efficiency. These measures, combined with coordinated site planning and infrastructure improvements, contribute to reduced resource demand and enhanced environmental performance across the Specific Plan area.
Policy CD2-8: Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintenance of	**Consistent.** The Eucalyptus Business Park Specific Plan serves as the framework for implementing development projects in the Specific Plan area, and includes design specifications for sidewalks, building entrances, and lighting.

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
visibility and accessibility, and use of lighting.	
Policy CD2-9: Landscape Design. We encourage durable landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	**Consistent.** The landscape concept for the Eucalyptus Business Park incorporates the use of attractive, durable landscaping materials, and an irrigation system designed to keep plant materials in good health while conserving water. Landscaping will be provided throughout the Eucalyptus Business Park, including along roadways, within passenger car parking lots, at monuments/entries, within common open space areas, and adjacent to buildings.
Policy CD2-10: Parking Areas. We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include: 1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field. 2. Structured parking: facade articulation, screening, appropriate lighting, and landscaping. 3. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.	**Consistent.** The Eucalyptus Business Park Specific Plan does not include any residential uses. Surface parking lots, truck courts, and loading areas will be designed in accordance with the City's Development Code and the Specific Plan's Design Guidelines (Chapter 6), which require the incorporation of landscaping, screening, and clearly defined pedestrian pathways and drive aisles. Additionally, each building's surface parking area will be designed to treat urban runoff through the respective site's storm drain design.
Policy CD2-11: Entry Statements. We encourage the inclusion of amenities, signage and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	**Consistent.** The Eucalyptus Business Park includes guidelines for building entry treatments, primary and secondary corner treatments, and tenant monument treatments to identify the development and distinguish individual planning areas, in conformance with the intent of Policy CD2-11. The entry treatments, corner treatments, and tenant monuments which are illustrated in Chapter 6, *Design Guidelines*, incorporate landscaping and enhanced signage to provide attractive and distinctive visual statements.
Policy CD2-12: Site and Building Signage.	**Consistent.** The Design Guidelines for the Eucalyptus Business Park (refer to Chapter 6 of this Specific Plan)

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	include signage guidelines to ensure that future development will construct clear, concise, easy-to-read signs that reflect and complement the Specific Plan's design theme, provide for safe and efficient circulation of vehicle traffic, and facilitate pedestrian travel. Signs will be of high-quality and the use of distracting sign elements, such as flashing lights or moving parts, is prohibited. Additionally, a sign program will be provided along with the Specific Plan to further provide design standard for signs within the Specific Plan area.
Goal CD3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.	
Policy CD3.2: Comfortable, Human-Scale Public Realm. We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.	**Consistent.** The Eucalyptus Business Park Specific Plan promotes a comfortable, human-scale public realm through the coordinated design of its streetscapes, sidewalks, and multi-purpose trails, as described in Chapter 4, *Infrastructure Plan,* and Chapter 6, *Design Guidelines*. Sidewalks and trails are integrated throughout the plan area to enhance pedestrian and bicycle connectivity, while landscaped parkways and consistent setbacks create a visually appealing and walkable environment. These improvements are designed to provide safe, accessible, and aesthetically cohesive connections to the citywide transportation network. Additionally, the Open Space – Parkland planning areas will provide both passive and active open space use for visitors, employees, and surrounding residents of the Specific Plan area.
Policy CD3.3: Complete and Connected Network We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.	**Consistent.** The Eucalyptus Business Park Specific Plan provides a coordinated and interconnected circulation network for vehicles, bicycles, and pedestrians, as illustrated in Chapter 4, *Infrastructure Plan*, and Chapter 6, *Design Guidelines*. Public roadways and private drive aisles will include sidewalks, Class II bike lanes, and multi-purpose trails to ensure internal mobility and connectivity to surrounding areas. Improvements along major corridors such as Eucalyptus Avenue, Grove Avenue, Campus Avenue, and Walker Avenue support access to regional transit and commercial destinations. All future development will be required to comply with City standards for sight visibility, safety, and

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
	landscape placement to ensure a comfortable and secure travel experience for all users.
Policy CD 3.4: Context-Aware and Appropriate Design We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.	**Consistent.** The Eucalyptus Business Park Specific Plan establishes building and site design standards that ensure compatibility with surrounding development and land uses, as detailed in Chapters 5, *Development Regulations* and 6, *Design Guidelines*. The plan incorporates landscaped setbacks, internal circulation buffers, and screening treatments along perimeter roadways to create appropriate transitions between the Business Park and adjacent uses. Building height, massing, and orientation are designed to respect the scale of surrounding development and minimize potential land use conflicts, supporting a context-sensitive and visually cohesive environment.
Policy CD 3.5: Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).	**Consistent.** While the Eucalyptus Business Park Specific Plan is focused on employment, business park, and open space uses rather than retail or residential development, it incorporates design elements that support active and engaging frontages along key pedestrian corridors. As described in Chapter 6, *Design Guidelines*, primary building entrances are oriented toward public streets or internal circulation routes, with pedestrian connections provided from sidewalks and trails. Landscaping, lighting, and pathway design contribute to a safe and comfortable pedestrian experience, reinforcing the plan's intent to create a cohesive and visually appealing business park environment.
Policy CD 3.6: Managed Infrastructure. We collaborate with developers and property owners to facilitate development that realizes the envisioned character and functionality of the Place Type through the use of green and shared infrastructure within each Place Type.	**Consistent.** The Eucalyptus Business Park Specific Plan supports coordinated infrastructure planning to achieve the intended character and functionality of a modern business park. As outlined in Chapter 4, *Infrastructure Plan*, the project includes shared infrastructure improvements such as integrated roadway systems, stormwater facilities, and utility corridors designed to serve multiple parcels efficiently. The Specific Plan also promotes sustainable practices through the use of drought-tolerant landscaping and multi-purpose trails within public rights-of-way, contributing to a cohesive, functional, and environmentally responsible development pattern.
Goal CD-5: A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages additional public and private investments.	

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
Policy CD5-1: Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.	**Consistent.** The Eucalyptus Business Park Specific Plan defines the responsible parties for maintaining both public and private improvements, including roadways, utilities, landscaping, and pedestrian infrastructure, as outlined in Chapter 7, *Implementation Plan*. A maintenance responsibility matrix is included to ensure long-term upkeep of all improvements, including trails and easements, in accordance with City standards. This framework ensures that all development within the Specific Plan area will be properly and consistently maintained.
Policy CD5-2: Maintenance of Infrastructure. We require the continual maintenance of infrastructure.	**Consistent.** The Eucalyptus Business Park Specific Plan defines the responsible parties for maintaining both public and private improvements, including roadways, utilities, landscaping, and pedestrian infrastructure, as outlined in Chapter 7, *Implementation Plan*. A maintenance responsibility matrix is included to ensure long-term upkeep of all improvements, including trails and easements, in accordance with City standards. This framework ensures that all development within the Specific Plan area will be properly and consistently maintained.

Project Description: A public hearing to consider the Eucalyptus Business Park Specific Plan (File No. PSP24-003) to establish the land use districts, development standards, design guidelines, infrastructure improvements, etc., for the potential development of 2,939,000 square feet of business park development, 10,000 square feet of commercial development and approximately 37-acres of open space/recreation on approximately 189 acres of land for property generally located along the northeast corner of Campus Avenue and Eucalyptus Avenue, within the SP (Specific Plan) and AG (Agricultural Overlay) zoning districts. The environmental impacts of this project were reviewed in conjunction with The Ontario Plan (TOP) 2050 Policy Plan Amendment (File No. PGPA25-002), for which a Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) was prepared. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan. The project site is also located within the Airport Influence area of Chino Airport and was evaluated and found to be consistent with the policies and criteria of the Chino Airport Land Use Compatibility Plan; (APNs:1053-531-01, 1053-531-02, 1053-531-03, 1053-531-04, 1053-541-01, 1053-541-02, 1053-551-01, 1053-371-01, 1053-371-02, 1053-581-03, 1053-581-04, 0216-321-01, 0216-321-02, 0216-321-06, 0216-321-07, 0216-322-01, 0216-322-02, 0216-322-10) **submitted by Ontario Ranch Venture II, LLC. (c/o Sares Regis Group). City Council action is required.**

Prepared By: Luis E. Batres, Senior Planner
Phone: 909.395.2431 (direct)
Email: Lbatres@ontarioca.gov

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project, are listed below. The Project shall comply with each condition of approval listed below:

1.0 Standard Conditions of Approval. The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department.

2.0 Special Conditions of Approval. In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

2.1 Specific Plan/Specific Plan Amendment. The following shall be submitted to the Planning Department within 30 days following City Council approval of the Specific Plan/Specific Plan Amendment:

(a) Two copies of the final Specific Plan document, bounded.

(b) One complete, unbound copy of the final Specific Plan document.

(c) One USB drive, or download link, containing a complete Microsoft Word, or editable, copy of the final Specific Plan document, including original figures, images and all required revisions.

2.2 Additional Fees.

(a) Within 5 days following final application approval, the Notice of Determination ("NOD") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

2.3 Mics.

(a) Approval of this Specific Plan is subject to the City Council approving File No. PGPA25-002, The Ontario Plan (TOP) 2050 Policy Plan Amendment.

ORDINANCE NO. _____

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ONTARIO, CALIFORNIA, APPROVING FILE NO. PSP24-003, THE EUCALYPTUS BUSINESS PARK SPECIFIC PLAN, TO ESTABLISH THE LAND USE DISTRICTS, DEVELOPMENT STANDARDS, DESIGN GUIDELINES, AND INFRASTRUCTURE IMPROVEMENTS FOR THE POTENTIAL DEVELOPMENT OF 2,939,000 SQUARE FEET OF BUSINESS PARK DEVELOPMENT, 10,000 SQUARE FEET OF COMMERCIAL DEVELOPMENT AND APPROXIMATELY 37 ACRES OF OPEN SPACE/PARKLAND ON APPROXIMATELY 189 ACRES OF LAND, AND MAKING FINDINGS IN SUPPORT THEREOF—APNS: 1053-531-01, 1053-531-02, 1053-531-03, 1053-531-04, 1053-541-01, 1053-541-02, 1053-551-01, 1053-371-01, 1053-371-02, 1053-581-03, 1053-581-04, 0216-321-01, 0216-321-02, 0216-321-06, 0216-321-07, 0216-322-01, 0216-322-02 AND 0216-322-10.

WHEREAS, ONTARIO RANCH VENTURE II, LLC. (Applicant) has filed an Application for the approval of the Eucalyptus Business Park Specific Plan (File No. PSP24-003), as described in the title of this Ordinance (hereinafter referred to as Application or Project); and

WHEREAS, the Application applies to 189 acres of land generally bounded by Walker Avenue to the east, Campus Avenue to the west, Eucalyptus Avenue to the south and Ontario Ranch Road to the north, located within the SP (Specific Plan) and AG (Agricultural Overlay) zoning districts, and is presently improved with farming/agriculture land uses; and

WHEREAS, the property to the north of the Project site is within the Center Park Specific Plan zoning district and is developed with farming/agriculture and dairy farm purposes. The properties to the east and west are located within the Specific Plan (SP) zoning district and are developed with farming/agriculture land uses. The property to the south is within the South Ontario Logistics Center Specific Plan and Merrill Commerce Center Specific Plan zoning districts, and is developed with business park development; and

WHEREAS, the Eucalyptus Business Park Specific Plan (EBPSP), will facilitate the potential development of 2,939,000 square feet of business park development with a maximum Floor Area Ratio of 0.55. The Specific Plan will also allow for up to 10,000 square feet of support commercial/retail uses and approximately 37 acres of open space-parkland; and

WHEREAS, the EBPSP establishes a comprehensive set of design guidelines and development regulations to guide and regulate site planning, landscape, architectural character, circulation, permitted uses, infrastructure, among others to ensure all future development is consistent with the goals and policies of The Ontario Plan 2050 (TOP 2050); and

WHEREAS, the EBPSP has been prepared in conformance with the goals and policies of the City of Ontario Policy Plan (TOP 2050) (General Plan); and

WHEREAS, on April 28, 2026, the Planning Commission conducted a public hearing and approved Resolution No. PC26-023 recommending the City Council approve a Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared in conjunction with The Ontario Plan (TOP) 2050 Policy Plan Amendment, File No. PGPA25-002. The Supplemental Environmental Impact Report (SEIR) finds that the proposed project introduces no new significant environmental impacts; and

WHEREAS, the Plan Policy Amendment SEIR associated with File No. PGPA25-002 evaluated the potential environmental impacts associated with implementation of the EBPSP, including site-specific development, land use organization, circulation, and infrastructure within the Specific Plan area; and

WHEREAS, the SEIR for File No. PGPA25-002, which included a Statement of Overriding Considerations, was prepared in accordance with the California Environmental Quality Act (CEQA), the State CEQA Guidelines, and the City of Ontario Guidelines for implementation of CEQA; and

WHEREAS, the SEIR for File No. PGPA25-002 was prepared to address the environmental effects of the proposed EBPSP; and

WHEREAS, the City's "Local Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed; and

WHEREAS, Ontario Development Code Table 2.02-1 (Review Matrix) grants the City Council the responsibility and authority to review and act on the subject Application; and

WHEREAS, the Project is located within the Airport Influence Area of Ontario International Airport (ONT), which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and is subject to, and must be consistent with, the policies and criteria set forth in the Ontario International Airport Land Use Compatibility Plan (ALUCP), which applies only to jurisdictions within San Bernardino County, and addresses the noise, safety, airspace protection, and overflight impacts of current and future airport activity; and

WHEREAS, City of Ontario Development Code Division 2.03 (Public Hearings) prescribes the manner in which public notification shall be provided and hearing procedures to be followed, and all such notifications and procedures have been completed; and

WHEREAS, on April 28, 2026, the Planning Commission of the City of Ontario conducted a hearing to consider the SEIR (State Clearinghouse No. 2025110102) prepared in conjunction with The Ontario Plan (TOP) 2050 Policy Plan Amendment, File No. PGPA25-002, and concluded said hearing on that date, voting to issue Resolution No. PC26-023 recommending the City Council approve the Application; and

WHEREAS, on April 28, 2026, the Planning Commission of the City of Ontario conducted a hearing to consider the EBPSP, File No. PSP24-003, and concluded said hearing on that date, voting to issue Resolution No. PC26-025 recommending the City Council approve the Application; and

WHEREAS, on June 16, 2026, the City Council of the City of Ontario conducted a hearing to consider the Eucalyptus Business Park Specific Plan, File No. PSP24-003, and concluded said hearing on that date; and

WHEREAS, all legal prerequisites to the adoption of this Ordinance have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND ORDAINED by the City Council of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the decision-making body for the Project, the City Council has reviewed and considered the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared in conjunction with The Ontario Plan (TOP) 2050 Policy Plan Amendment, File No. PGPA25-002, which evaluated the potential environmental impacts associated with implementation of the Policy Plan Amendment, the Eucalyptus Business Park Specific Plan (EBPSP), and related actions. Based upon the facts and information contained in the SEIR, the administrative record, and all supporting documentation, including all written and oral evidence presented to the City Council, the City Council finds as follows:

(1) The environmental impacts of this project were previously reviewed in conjunction with the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared in conjunction with The Ontario Plan (TOP) 2050 Policy Plan Amendment, File No. PGPA25-002, including a Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations; and

(2) The Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared in conjunction with The Ontario Plan (TOP) 2050 Policy Plan Amendment, File No. PGPA25-002, including a Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations contains complete reporting of the environmental impacts associated with the Project; and

(3) The City Council hereby incorporates by reference the Findings of Fact, MMRP, and Statement of Overriding Considerations approved in connection with certification of the Final SEIR No. 2025110102. The City Council finds that all feasible mitigation measures identified in the Final SEIR have been adopted and that no additional feasible mitigation measures or alternatives would substantially lessen or avoid the significant and unavoidable environmental impacts identified in the Final SEIR.

(4) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(5) The Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared in conjunction with The Ontario Plan (TOP) 2050 Policy Plan Amendment, File No. PGPA25-002, including a Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations, contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the City Council; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the project may result in significant environmental impacts; and

(7) The proposed Project will introduce no new significant environmental impacts beyond those previously analyzed in the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared for File No. PGPA25-002, including the Mitigation Monitoring and Reporting Program and Statement of Overriding Considerations, and all mitigation measures adopted with the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102), are incorporated herein by this reference.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Project, all related information presented to the City Council, and the specific findings set forth in Section 1, above, the City Council finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required, as the Project:

(1) Does not constitute substantial changes to the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared for File No. PGPA25-002, that will require major revisions to the Supplemental Environmental Impact Report due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) prepared for File No. PGPA25-002, that will require major revisions to the Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Supplemental Environmental Impact Report, State Clearinghouse No. 2025110102) was certified/adopted, that shows any of the following:

(a) The project will have one or more significant effects not discussed in the Supplemental Environmental Impact Report, State Clearinghouse No. 2025110102); or

(b) Significant effects previously examined will be substantially more severe than shown in the Supplemental Environmental Impact Report, State Clearinghouse No. 2025110102); or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Supplemental Environmental Impact Report, State Clearinghouse No. 2025110102) would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Airport Land Use Compatibility Plan ("ALUCP") Compliance.*** The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

(1) On April 19, 2011, the City Council of the City of Ontario approved and adopted the Ontario International Airport Land use Compatibility Plan, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future airport activity. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP; and

(2) On August 2, 2022, the City Council of the City of Ontario approved and adopted a Development Code Amendment to establish the Chino Airport ("CNO") Overlay Zoning District ("OZD") and Reference I, Chino Airport Land Use Compatibility Plan ("CNO ALUCP"). The CNO OZD and CNO ALUCP established the Airport Influence Area for Chino Airport, solely within the City of Ontario, and limits future land uses and development within the Airport Influence Area, as they relate to safety, airspace protection, and overflight impacts of current and future airport activity. The CNO ALUCP is consistent with policies and criteria set forth within the Caltrans 2011 California Airport Land Use Planning Handbook. The proposed Project is located within the Airport Influence Area of Chino Airport and was evaluated and found to be consistent with the California Airport Land Use Planning Handbook and the CNO ALUCP. As the decision-making body for the Project, the City Council has reviewed and considered the facts and information contained in the Application and supporting documentation against the CNO ALUCP compatibility factors, including Safety, Airspace Protection, Overflight. As a result, the City Council, therefore, finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the California Airport Land Use Planning Handbook and the Chino ALUCP.

SECTION 4: ***Concluding Facts and Reasons.*** Based upon the substantial evidence presented to the City Council during the above-referenced hearing, and upon the specific findings set forth in Section 1 through 3, above, the City Council hereby concludes as follows:

(1) *The proposed Specific Plan, or amendment thereto, is consistent with the goals, policies, plans and exhibits of the Vision, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan 2050.* The approximately 189-acre Eucalyptus Business Park Specific Plan (EBPSP) is suitable for business park, commercial and open space-parkland development and is consistent with the goals and policies, plans and exhibits of the Vision, Policy Plan (TOP 2050) (General Plan), and City Council Priorities components of TOP 2050. In addition, the proposed land uses in the proposed Specific Plan will also be in harmony in terms of access, size, and compatibility with existing land use in the surrounding area; and

(2) *The proposed Specific Plan, or amendment thereto, would not be detrimental to the public interest, health, safety, convenience, or general welfare of the City.* The proposed Eucalyptus Business Park Specific Plan is in conformance with the Land Use Policies and Goals of the Policy Plan and will provide standards and guidelines for the harmonious development within the districts, in a manner consistent with the Policy Plan. The Specific Plan proposes the potential development of 2,939,000 square feet of business park development, up to 10,000 square feet of commercial/retail development, and approximately 37-acres of open space-parkland on approximately 189 acres of land. The proposed Specific Plan land uses and intensity of development is consistent with the land use plan of the Policy Plan (TOP 2050); therefore, the proposed business park, commercial and open space land uses will not be detrimental to the public interest, health, safety, or general welfare of the City as they are consistent with the existing and future development of the surrounding area; and

(3) *In the case of an application affecting specific property(ies), the proposed Specific Plan, or amendment thereto, will not adversely affect the harmonious relationship with adjacent properties and land uses.* The proposed Specific Plan will modify the land use from farming/agricultural and vacant land uses to Business Park and Open Space-Parkland, which aligns with the surrounding land uses planned in the Policy Plan (TOP) 2050; and

(4) *In the case of an application affecting specific property(ies), the subject site is physically suitable, including, but not limited to, parcel size, shape, access, and availability of utilities, for the request and anticipated development.* The proposed Specific Plan will allow for business park; commercial and open space-parkland uses on the subject site. When in conformance with the Specific Plan, the project site is suitable in size and shape, and the project site design allows for sufficient access and availability of utilities to accommodate the anticipated development.

SECTION 5: ***City Council Action.*** Based upon the findings and conclusions set forth in Sections 1 through 4, above, the City Council hereby APPROVES the herein described Eucalyptus Business Park Specific Plan, File No. PSP24-003, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 6: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 7: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 8: ***Severability.*** If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The People of the City of Ontario hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

SECTION 9: ***Effective Date.*** This Ordinance shall become effective 30 days following its adoption.

SECTION 10: ***Publication and Posting.*** The Mayor shall sign this Ordinance and the City Clerk shall certify as to the adoption and shall cause a summary thereof to be published at least once, in a newspaper of general circulation in the City of Ontario, California within 15 days following the adoption. The City Clerk shall post a certified copy of this ordinance, including the vote for and against the same, in the Office of the City Clerk, in accordance with Government Code Section 36933.

PASSED, APPROVED, AND ADOPTED this ____ day of _____ 2026.

EXECUTIVE SUMMARY

ES.1 Specific Plan Overview

The Eucalyptus Business Park Specific Plan area covers approximately 189.0 acres in the southern portion of the City of Ontario. The Specific Plan area is located north of Eucalyptus Avenue, south of Ontario Ranch Road, east of Campus Avenue, and west of Walker Avenue.

The location of the Eucalyptus Business Park Specific Plan area in regional and local contexts are depicted in Figure ES-1, *Regional Map*, and Figure ES-2, *Vicinity Map*, which show the locational setting of the Specific Plan area with surrounding jurisdictions.

The information in this Specific Plan will guide the development of a modern business park and the establishment of public park space and will address the interface between the two uses. The Specific Plan area is envisioned to provide business park development between Eucalyptus Avenue and a new east-west public street and a public park north of the new public street.

The public park land in the northern portion of the Specific Plan area is expected to provide passive park areas for the City of Ontario such as open space areas, benches, and trails.

The business park area is intended to contain employment-generating uses supported by roadways, utility infrastructure, parking areas for automobiles, commercial vehicles, and trucks, designed in a master-planned setting accented by attractive lighting, landscaping, signage, and other functional and decorative features. Buildings are intended to be welcoming to local, national, and international businesses that can bring job opportunities and economic growth to the City of Ontario, including but not limited to corporate offices, technology centers, light manufacturing, research and development, warehousing and distribution, and support retail. In addition, space for a potential publicly operated animal resource center is reserved within the Specific Plan area.

A summary of the proposed land uses is as follows:

Table ES-1 Land Use Summary

Land Use Designation	Acreage[1]	Maximum Building Square Footage
Business Park	137.90	2,939,000
Open Space – Parkland	35.88	--
Roadway	15.24	--
TOTAL	189.0 AC	2,939,000 SF

[1]Acreages are approximate and subject to survey verification.
[2]Total acreage of 189.0 is rounded up to the nearest one-tenth of an acre.

ES.2 Other Governing Documents

In addition to this Specific Plan, which includes a Land Use Plan, Infrastructure Plan, Development Regulations, Design Guidelines, and an Implementation Plan tailored to the Eucalyptus Business Park Specific Plan area, the following documents also contain applicable information:

- The Ontario Policy Plan (which serves as the City's State-mandated General Plan) that includes City-wide policies pertaining to land use, housing, mobility, safety, environmental resources, parks and recreation, community economics, community design, and social resources.

- **The City of Ontario Development Code** applies to all topics not addressed by this Specific Plan's development regulations. However, if any requirement of this Specific Plan conflicts with the Development Code, the provisions of this Specific Plan shall take precedence.

- **The Airport Land Use Compatibility Plan for Ontario International Airport (ONT) and the California Airport Land Use Planning Handbook published by Caltrans Division of Aeronautics**, which contain criteria that apply to the development intensity of property located in the ONT's airport influence area. The entire Eucalyptus Business Park Specific Plan area is located in the ONT airport influence area.

- **The Chino Airport Land Us Compatibility Plan (Ontario Development Code Reference I) and the Chino Airport (CNO) Overlay Zoning District** promote compatibility between CNO and the land uses that surrounds it. All development shall be consistent with the policies and criteria of the Chino Airport Land Use Compatibility Plan (ALUCP). The entire Eucalyptus Business Park Specific Plan area is located in the Chino Airport influence area.

- **The Mitigation Monitoring and Reporting Program (MMRP)** that is part of the Eucalyptus Business Park Specific Plan's Environmental Impact Report (EIR) prepared in compliance with the California Environmental Quality Act (CEQA). The MMRP stipulates measures that are required to be implemented to mitigate the environmental effects of the Specific Plan's construction and operation.

ES.3 Specific Plan Components

This Eucalyptus Business Park Specific Plan is organized into the following chapters:

Chapter 1 – Introduction:
Describes the purpose and objectives of the Specific Plan, the related entitlement approvals for implementing development, and the relationship between the Specific Plan and the Ontario Policy Plan.

Chapter 2 – Existing Conditions:
Describes the physical setting of the Eucalyptus Business Park Specific Plan area and the physical conditions on and surrounding the property at the time the Specific Plan was prepared.

Chapter 3 – Land Use Plan:
Describes the Eucalyptus Business Park Specific Plan's development plan, which includes six Business Park planning areas and three Open Space – Parkland planning areas. Chapter 3 also specifies the acreages of each planning area and the maximum development intensities permitted in each land use category. Chapter 3 also includes a conceptual development plan showing how the area could be developed in compliance with the Specific Plan.

Chapter 4 – Infrastructure Plan:
Provides information on vehicular and non-vehicular circulation improvements; planned backbone water, sewer, recycled water, and storm drain systems; and the planned dry utility network for the development of the Eucalyptus Business Park Specific Plan area.

Chapter 5 – Development Regulations:
Establishes the list of permitted and conditionally permitted uses in the Specific Plan area and presents the development regulations that govern the uses. Chapter 5 also provides a discussion of the relationship

between the Specific Plan and the City of Ontario Development Code.

Chapter 6 – Design Guidelines:

Provides site planning, landscaping, and architectural guidelines for implementing development within the Specific Plan area. Guidelines in this chapter address design characteristics for building placement and architecture, landscaping, streetscapes, entry identification monuments, corner treatments at roadway intersections, walls and fencing, lighting, and signage.

Chapter 7 – Implementation Plan

Presents the policies and procedures for the City's review and approval of implementing development projects within the Eucalyptus Business Park Specific Plan area. Chapter 7 also describes the methods and procedures for interpreting and amending the Specific Plan as necessary. Additionally, funding and maintenance responsibilities are summarized within this Specific Plan.

CHAPTER 1

INTRODUCTION

1.1 Specific Plan Purpose

The purpose of the Eucalyptus Business Park Specific Plan is to guide the development of a 189.0-acre site into a modern business park and public parkland space. The Specific Plan area is located within the southern portion of the City of Ontario (City). The Ontario Policy Plan and the Ontario Development Code requires the Ontario City Council to approve Specific Plans as part of the entitlement process for new development projects within this area.

Development projects within the Specific Plan area are required to demonstrate substantial conformity with the information contained within this Specific Plan document.

The public parkland area in the northern portion of the Specific Plan area is intended to address passive recreational needs of City residents. The business park area in the southern portion of the Specific Plan area is poised to accommodate uses that rely on the regional transportation network and the site's proximity to the Ontario International Airport (ONT), the Chino Airport, State Route 60 (SR-60), State Route 83 (SR-83), State Route 91 (SR-91), Interstate 15 (I-15), and Interstate 10 (I-10). The Specific Plan area is approximately 2.2 miles south of SR-60, approximately 0.5 miles east of SR-83, approximately 7.5 miles north of SR-91, approximately 4.5 miles west of I-15, and approximately 5.6 miles south of I-10. Additionally, the Port of Long Beach and the Port of Los Angeles, which serve as major gateways for international trades, are located approximately 37 miles southwest of the Specific Plan area.

1.2 Specific Plan Objectives

The Eucalyptus Business Park Specific Plan achieves the following objectives:

- To provide a land use plan that implements The Ontario Plan's vision and appropriately positions business park and public parkland uses north of Eucalyptus Avenue, between Campus Avenue and Walker Avenue.
- To facilitate the development of a variety of employment-generating uses in a business park setting.
- To provide business park uses that are compatible with surrounding land uses.
- To provide opportunities for positive economic benefit to the City, including new revenues that can be used for vital City services.
- To provide opportunities for the development of passive use parks consistent with the City of Ontario's Grand Park Master Plan.
- To improve connectivity in the area by providing pedestrian paths, bicycle routes, and amenities such as bike racks that encourage circulation by means not dependent on a motorized vehicle.
- To identify improvements for water, recycled water, sewer, storm drain, and circulation facilities that serve planned land uses within and adjacent to the Specific Plan area.

- To set forth a development phasing sequence that allows for logical development and aligns with installation of on-site and off-site infrastructure.
- To define guidelines and standards that address architecture, landscaping, streetscapes, entry monuments, corner treatments, walls and fencing, lighting, and signage within the Specific Plan area.

1.3 Authority

The Eucalyptus Business Park Specific Plan is a regulatory document prepared pursuant to the provisions of California Government Code §§ 65450 through 65457, which grants local government agencies the authority to prepare Specific Plans for the systematic implementation of their General Plan for all or part of the area covered by the General Plan. While The Ontario Plan covers the entire City, the Specific Plan focuses on the development within the approximately 189-acre site.

California Government Code §§ 65450 through 65457 establish the authority to adopt a Specific Plan, identify the required contents of a Specific Plan, and mandate consistency with the General Plan. According to California Government Code § 65451:

(a) A Specific Plan shall include text and a diagram which specify all the following in detail:

1) The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan.

2) The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan.

3) Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.

4) A program of implementation measures including regulations, programs, public works projects, and financing measures, necessary to carry out items 1, 2, and 3.

(b) The Specific Plan shall include a statement of the relationship of the Specific Plan to the General Plan.

The Eucalyptus Business Park Specific Plan includes each of the required elements listed above and establishes the essential link between the policies of The Ontario Plan's Policy Plan and the Eucalyptus Business Park Specific Plan site. All future development plans and construction activities within the Specific Plan area shall be consistent with the requirements set forth in this Specific Plan and with all other applicable City regulations.

1.4 Severability

The Eucalyptus Business Park Specific Plan enables the City of Ontario to facilitate the processing and approval of development plans to build out the Specific Plan area. If any regulation, condition, program, or portion of this Specific Plan is held invalid or unenforceable, such portions shall be deemed separate, distinct, and independent provisions, and the invalidity of such portions or provisions shall not affect the validity and enforceability of the remaining provisions contained herein.

1.5 Approval Process and Companion Actions

The Eucalyptus Business Park Specific Plan and any future amendments are required to be considered by the City of Ontario Planning Commission and City Council, and adopted by ordinance or resolution of the City Council, pursuant to Ontario Development Code Section 1.01.035, *Relationship to Specific Plans*. More information on implementation procedures is contained in this Specific Plan Chapter 7, *Implementation Plan*.

A Policy Plan (General Plan) Amendment (GPA) will be processed in conjunction with the Eucalyptus Business Park Specific Plan. The GPA is a companion action to the approval of this Specific Plan that would achieve consistency between the General Plan land use designations, this Specific Plan's land use designations, and zoning.

Additionally, a tentative parcel map will be processed by the City of Ontario for the Specific Plan area indicating the approximate boundaries and dimensions of parcels and streets, and the proposed grading for the Specific Plan area. Following map recordation, the final map will become the legal document that identifies developable parcels within the Specific Plan area.

All development within the Eucalyptus Business Park Specific Plan area shall be subject to the Development Plan Review Process established in the City of Ontario Development Code. The development standards and design guidelines provided within this Specific Plan shall be the design criteria which the City of Ontario refers to during the Development Plan Review process.

In addition to this Specific Plan an Environmental Impact Report (EIR) was prepared in compliance with the California Environmental Quality Act (CEQA) to serve as the project-wide environmental assessment document. Together, this Specific Plan and the environmental mitigation measures contained in the accompanying EIR's Mitigation Monitoring and Reporting Program (MMRP) provide a path to develop the property taking into account all applicable goals, objectives, government requirements, and environmental regulations.

1.6 Relationship to The Ontario Plan General Plan

The Ontario Plan establishes the direction and vision for the City's future and provides a guidance system to shape the City's communities. The Ontario Plan consists of a six-part Component Framework: 1) Vision, 2) Governance Manual, 3) Policy Plan, 4) City Council Priorities, 5) Implementation, and 6) Tracking and Feedback.

The Eucalyptus Business Park Specific Plan defines the methods and requirements for implementing development within the Specific Plan area to ensure that applicable policies from The Ontario Plan and its Policy Plan are implemented and ensure that development envisioned by this Specific Plan is consistent with applicable provisions of The Ontario Plan. The Ontario Plan sets forth long-term goals for the City's growth and development as mandated by State law. The Policy Plan is a long-term policy document that covers the elements of land use, housing, parks and recreation, environmental resources, community economics, safety, mobility, community design, and social resources.

As shown on Figure 1-1, *Existing General Plan Land Use Designations*, the Policy Plan component of The Ontario Plan designates the Specific Plan area as Medium Density Residential with Affordable Housing Overlay, Mixed-Use Eucalyptus/Chino Airport Overlay

with Affordable Housing Overlay, and Open Space – Parkland.

As shown on Figure 1-2, *Proposed General Plan Land Use Designations*, the General Plan Amendment being processed concurrently with this Specific Plan will modify the Ontario Plan's designations of the Specific Plan area to Business Park and Open Space – Parkland.

As shown on Figure 1-3, *Existing Zoning Designations*, the City of Ontario's Zoning Map designates the Specific Plan area's zoning as "Specific Plan with an Agricultural and an Affordable Housing Overlay".

As shown on Figure 1-4, *Proposed Zoning Designations,* the Zone Change being processed concurrently with this Specific Plan will modify the City of Ontario's Zoning Map of the site to "Eucalyptus Business Park Specific Plan" to allow for the development of Business Park and Open Space – Parkland uses.

Pursuant to the City of Ontario's adoption of the Eucalyptus Business Park Specific Plan, the Specific Plan will take precedence over the City's Development Code. In instances where the Specific Plan is silent on development standards, the City's Development Code shall prevail.

CHAPTER 2

EXISTING CONDITIONS

2.1 Existing Assessor Parcel Numbers

At the time the Eucalyptus Business Park Specific Plan was prepared, the Specific Plan area consisted of the following Assessor Parcel Numbers (APNs), as listed on Table 2-1, *Existing APN List*, and shown on Figure 2-1, *Existing APNs*.

Table 2-1 Existing APN List

1053-531-01	0216-321-01
1053-531-02	0216-321-02
1053-531-03	0216-321-06
1053-531-04	0216-321-07
1053-541-01	0216-322-01

1053-571-01	
1053-571-02	
1053-581-03	
1053-581-04	

2.2 Existing Land Use

As shown on Figure 2-2, *Aerial Photograph*, at the time this Specific Plan was prepared, the majority of the Specific Plan area was used for dairy farming. The Specific Plan area contained multiple dairy farms developed with single-family residences, milking barns, canopy/shade structures, and cattle pens. Several man-made access roads cross the site to provide access to the farms. Grass fields are present in the southern area of the Specific Plan area, which are used for grazing or growing grass for hay and may have previously been used to grow row crops. Additionally, the northwestern portion of the Specific Plan area contains light industrial uses and truck trailer storage uses.

2.3 Surrounding Land Uses

As shown on Figure 2-3, *Existing Surrounding Land Uses*, agricultural dairy farm uses and rural residential homes abut the Specific Plan area to the north, east, west, and southwest. Light industrial and warehouse distribution uses abut the Specific Plan area to the south and southeast.

2.4 Existing Circulation and Access

2.4.1 Regional Circulation

State Route 60 (SR-60) is located approximately 2.2 miles north of the Specific Plan area and is accessible via the Grove Avenue on- and off- ramp. State Route 83 (SR-83) is located approximately 0.5 miles west of the Specific Plan area and is accessible via Ontario Ranch Road and Eucalyptus Avenue. Interstate 15 (I-15) is located approximately 4.5 miles east of the Specific Plan area and is accessible via the Ontario Ranch Road on- and off- ramp or the Limonite Avenue on- and off- ramp.

2.4.2 Local Circulation

Access to the Eucalyptus Business Park Specific Plan area is provided from Eucalyptus Avenue, Ontario Ranch Road, Campus Avenue, Bon View Avenue, Grove Avenue, and Walker Avenue. The City of Ontario designates Eucalyptus Avenue as a truck route, which provides truck access to the Specific Plan area.

Eucalyptus Avenue abuts the Specific Plan area to the south and consisted of two paved travel lanes at the time this Specific Plan was prepared. The Ontario Policy Plan designates Eucalyptus Avenue as a 4-lane Collector Street.

Ontario Ranch Road is north of the Specific Plan area and consisted of two paved travel lanes at the time this Specific Plan was prepared. The Ontario Policy Plan designates Ontario Ranch Road as an 8-lane Principal Arterial.

Campus Avenue abuts the Specific Plan area to the west. At the time this Specific Plan was prepared, no segments of Campus Avenue abutting the Specific Plan had been constructed. The Ontario Policy Plan designates Campus Avenue as a 4-lane Minor Arterial.

Bon View Avenue is a north-south oriented street that traverses the western portion of the Specific Plan area. At the time this Specific Plan was prepared, Bon View Avenue consisted of two paved travel lanes. The Ontario Policy Plan designates Bon View Avenue as a 2-lane Collector Street.

Grove Avenue is a north-south oriented street that traverses the central portion of the Specific Plan area. At the time this Specific Plan was prepared, Grove Avenue consisted of two paved travel lanes. The Ontario Policy Plan designated Grove Avenue as a 4-lane Principal Arterial.

Walker Avenue abuts the Specific Plan area to the east. At the time this Specific Plan was prepared, Walker Avenue consisted of two paved travel lanes. The Ontario Policy Plan designates Walker Avenue as a 2-lane Collector Street.

2.5 Williamson Act

At the time this Specific Plan was prepared (2025), two parcels within the Specific Plan area had an active Williamson Act contract in place (APNs: 0216-231-01 and 0216-321-07). An application to cancel the contract is required to be submitted to the City. Cancellation would comply with provisions and requirements identified at Government Code §51280 et. seq. The City would be required to make the required statutory findings. The landowner would be required to pay the requisite cancellation fee.

Existing Surrounding Land Uses

2.6 Existing Physical Site Conditions

2.6.1 Topography

The Eucalyptus Business Park Specific Plan area is relatively flat and slopes slightly to the south with an approximate elevation ranging from 690 feet above mean sea level (AMSL) to 665 feet AMSL. The current conditions of the Specific Plan area is illustrated in Figure 2-2, *Aerial Photograph*, and the existing topographic conditions for the Specific Plan area are illustrated in Figure 2-4, *USGS Topographic Map*.

2.6.2 Hydrology

At the time the Specific Plan was prepared, the Specific Plan area consisted of dairy farms and undeveloped areas. The existing topography is relatively flat with a north-to-south sheet flow drainage pattern. The Specific Plan area is located within three City of Ontario Master Drainage Plan areas, including Area XII-1, Area XIII-1, Area XIV-1 and Area XIV-2. The EIR prepared in association with the Specific Plan includes a detailed hydrology analysis for the Specific Plan area.

2.6.3 Geology and Soils

Based on information provided from the Environmental Data Report (EDR) Radius Map report, the surficial geology within Eucalyptus Business Park Specific Plan area contains unconsolidated and semi-consolidated quaternary age alluvium, lake, playa, and terrace deposits. Soil within the Specific Plan area contains Tujunga loamy sand, Hilmar loamy fine sand, Grangeville fine sandy loam, and Chino silt loam.

From a seismic perspective, the Specific Plan area is not located within an Alquist-Priolo Earthquake Fault Zone. The possibility of significant fault rupture within the Specific Plan area is considered low.

2.6.4 Vegetation and Biological Resources

Due to past and existing land uses, no native plant communities or natural communities of special concern are present within or adjacent to the Eucalyptus Business Park Specific Plan area. The EIR prepared in association with the Specific Plan includes a detailed evaluation of biological resources.

2.6.5 Existing Ground Water Wells

Upon development of the well site areas, these wells, or any other wells found on the property, will be abandoned per California Department of Water Resources Health Guidelines and the City of Ontario Guidelines. In compliance with the Chino Basin Watermaster's Well Procedure for Developers, documentation that a well use/destruction plan and schedule for all existing private/ agricultural wells is required to be submitted to the City of Ontario prior to any construction activities. If a private well is actively used for water supply, the Developer shall submit a plan to abandon such well and connect users to the City's water system when available.

Wells shall be destroyed/ abandoned per the California Water Resource Guidelines and require permitting from the County Health Department. Documentation that the well abandonment process is underway shall be provided to the Engineering Department and the Ontario Municipal Utilities Company at the time of a grading permit and/or building permit being issued for the affected property. If the Developer proposes temporary use of an existing agricultural well for purposes other than agriculture, such as grading, dust control, etc., the Developer shall make a formal request to the City of Ontario for such use prior to the issuance of permits for any construction activity. Upon approval, the Developer shall enter into an agreement with the City of Ontario and pay any applicable fees as set forth by the agreement. Refer to Figure 2-5,

Existing Water Wells, for locations of water wells within the Specific Plan area. Existing wells may be converted to groundwater monitoring wells if feasible, at the City's discretion.

2.6.6 Existing NPDES Compliance

In the existing conditions, NPDES requirements are enforced under the Agricultural Permit issued by the State Water Resources Control Board.

CHAPTER 3

LAND USE

3.1 Vision

The Eucalyptus Business Park Specific Plan area is envisioned as a dynamic employment hub within a thoughtfully designed, master-planned environment along with a public parkland area intended to support passive recreation needs for the surrounding residents. It is situated in the southern portion of the City of Ontario, at the heart of one of Southern California's most robust logistics and business corridors. The location is ideally positioned to support a wide range of business park and employment-generating uses. With strategic proximity to major freeways, regional airports, and the Ports of Los Angeles and Long Beach, the Eucalyptus Business Park Specific Plan area offers unparalleled access to regional, national, and international markets. The Eucalyptus Business Park Specific Plan is designed to foster long-term economic growth, support business innovation, and provide high-quality jobs, contributing to the vitality of the local community and the broader Inland Empire region.

3.2 Land Use Plan

This Specific Plan establishes two land use designations: Business Park and Open Space – Parkland. For planning purposes, as shown on Figure 3-1, *Conceptual Land Use Plan*, and Table 3-1, *Land Use Plan Statistical Summary*, the Specific Plan will establish nine planning areas to provide for the development of a 189.0-acre site with up to 2,939,000 square feet (SF) of Business Park floor space on 137.90 acres at a maximum allowed floor area ratio (FAR) of 0.55 and 35.88 acres of Open Space – Parkland. The remaining 15.24 acres are designated for roadway improvements.

Table 3-1 Land Use Plan Statistical Summary

PA	Land Use	Acres	Maximum Buildout SF
Business Park			
1	Business Park	7.70	162,600
2	Business Park	18.33	273,700
3	Business Park	18.21	340,700
4	Business Park	18.19	423,200
5	Business Park	37.76	859,300
6	Business Park	37.71	879,500
Business Park Totals		**137.90 AC**	**2,939,000 SF**
Open Space – Parkland			
7	Open Space – Parkland	8.00	--
8	Open Space – Parkland	13.99	--
9	Open Space – Parkland	13.89	--
Total Open-Space Parkland Acreage		**35.88 AC**	--
--	Roadway	15.24	--
Total		**189.0 AC**	**2,939,000 SF**

Notes:

1. A maximum of 10,000 SF total of Commercial uses may be provided within the Business Park Planning Areas 1, 2, 3, 4, 5, and/or 6.

2. A publicly operated animal resource center site (35,000 SF) may be provided within the Business Park Planning Areas 1, 2, 3, 4, 5, 6, 7, 8, or 9. The final size and location of the animal resource center site is subject to the approval by the City of Ontario.

3. Total acreage of 189.0 is rounded up to the nearest one-tenth of an acre.

4. The Specific Plan allows the transfer of development square footage (15 percent or less) within the same land use designation, provided that the shift in square footage would not exceed the maximum allowable overall square footage (2,939,000) and the maximum building FAR (0.55).

3.2.1 Business Park

Encompassing 137.90 acres in the southerly portion of the Specific Plan area along its frontage with Eucalyptus Avenue, Planning Areas 1 through 6 are designated Business Park. Up to 2,939,000 SF of building space are permitted across Planning Areas 1 through 6.

The Business Park land use designation intends to provide for uses such as employee-intensive office spaces, technology centers, research and development facilities, warehouse and distribution, and light manufacturing. Primary vehicular access is planned within Eucalyptus Avenue, Public Street 'A', Campus Avenue, Bon View Avenue, Grove Avenue, and Walker Avenue. The Specific Plan also allows a maximum total of 10,000 SF of commercial uses within the Business Park planning areas to support the Business Park operations and a potential 35,000 SF publicly operated animal resource center.

The Specific Plan allows the transfer of development square footage (15 percent or less) within the same land use designation, provided that the shift in square footage would not exceed the maximum allowable overall square footage (2,939,000) and the maximum building FAR (0.55).

3.2.2 Open Space – Parkland

Encompassing 35.88 acres in the northerly portion of the Specific Plan area along its frontage with Public Street 'A', Planning Areas 7, 8, and 9 are designated Open Space – Parkland. The Open Space – Parkland planning areas intend to provide passive recreational facilities, such as open space areas, benches, and trails.

3.3 Airport Influence Compliance

The Specific Plan area is located within the Ontario International Airport (ONT) Influence Area (AIA), and it is located outside any identified safety, airspace protection, and noise impact zones. All properties located within the ONT AIA are subject to a real estate transaction disclosure notice.

The Specific Plan area is also located within the Chino Airport (CNO) AIA. The San Bernardino County Comprehensive Land Use Plan for Chino Airport was adopted in 1991 and does not reflect guidance set forth in the 2011 Caltrans Airport Land Use Planning Handbook. As such, in 2022, the City of Ontario adopted the CNO Overlay District which provides maps, criteria, and policy language to guide development within the Chino AIA consistent with the 2011 Caltrans Airport Land Use Planning Handbook.

As illustrated in Figure 3-2, *Chino Safety Zones*, the majority of the Specific Plan area is located within CNO Safety Zone 6 (low risk), with a very small portion of the southeastern corner located within Safety Zone 4 (moderate risk).

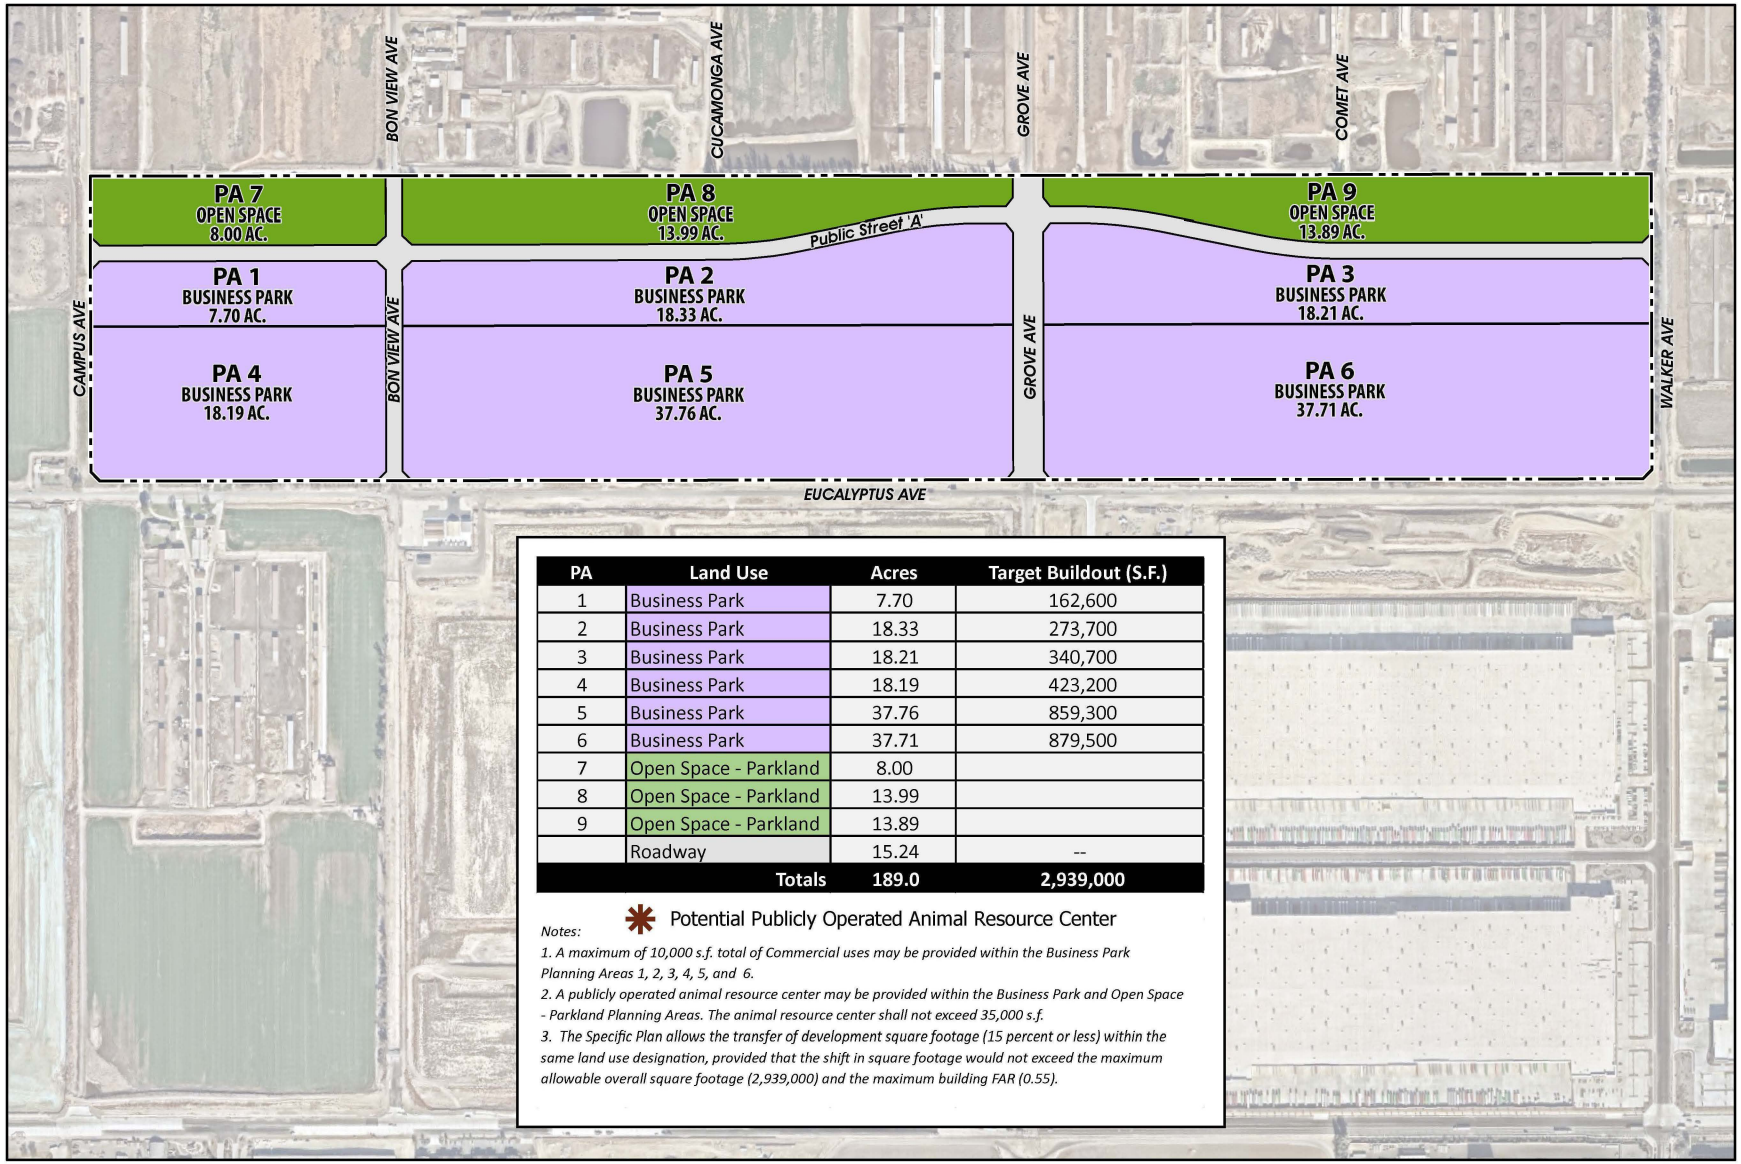
Development within the Eucalyptus Business Park Specific Plan shall be consistent with the policies and criteria of the Chino ALUCP that include building height, land use, floor area ratio (FAR) limitations and open land requirements. For further details, refer to Chapter 5, *Development Regulations*, as well as the ONT and CNO Airport Land Use Compatibility Plans.

3.4 Conceptual Site Plan

Figure 3-3, *Conceptual Site Plan*, depicts a potential layout of the Specific Plan area. The final building configurations, sizes, and orientation will be determined during the Development Plan review process.

The conceptual site plan reflects current market trends, site conditions, and planned infrastructure. The conceptual site plan may be

modified provided it does not exceed the maximum square footage provided in the Specific Plan's Conceptual Land Use Plan and complies with this Specific Plan and applicable provisions of the City of Ontario's Development Code.



PA	Land Use	Acres	Target Buildout (S.F.)
1	Business Park	7.70	162,600
2	Business Park	18.33	273,700
3	Business Park	18.21	340,700
4	Business Park	18.19	423,200
5	Business Park	37.76	859,300
6	Business Park	37.71	879,500
7	Open Space - Parkland	8.00	
8	Open Space - Parkland	13.99	
9	Open Space - Parkland	13.89	
	Roadway	15.24	--
	Totals	**189.0**	**2,939,000**

* Potential Publicly Operated Animal Resource Center

Notes:

1. A maximum of 10,000 s.f. total of Commercial uses may be provided within the Business Park Planning Areas 1, 2, 3, 4, 5, and 6.

2. A publicly operated animal resource center may be provided within the Business Park and Open Space - Parkland Planning Areas. The animal resource center shall not exceed 35,000 s.f.

3. The Specific Plan allows the transfer of development square footage (15 percent or less) within the same land use designation, provided that the shift in square footage would not exceed the maximum allowable overall square footage (2,939,000) and the maximum building FAR (0.55).

CHAPTER 4

INFRASTRUCTURE PLAN

4.1 Circulation and Access Plan

The Eucalyptus Business Park Specific Plan Circulation and Access Plan provides direct, safe, and convenient access for visitors, employees, and commercial vehicles including trucks to and from the Specific Plan area. Components of the Specific Plan's Circulation and Access Plan are discussed and illustrated below.

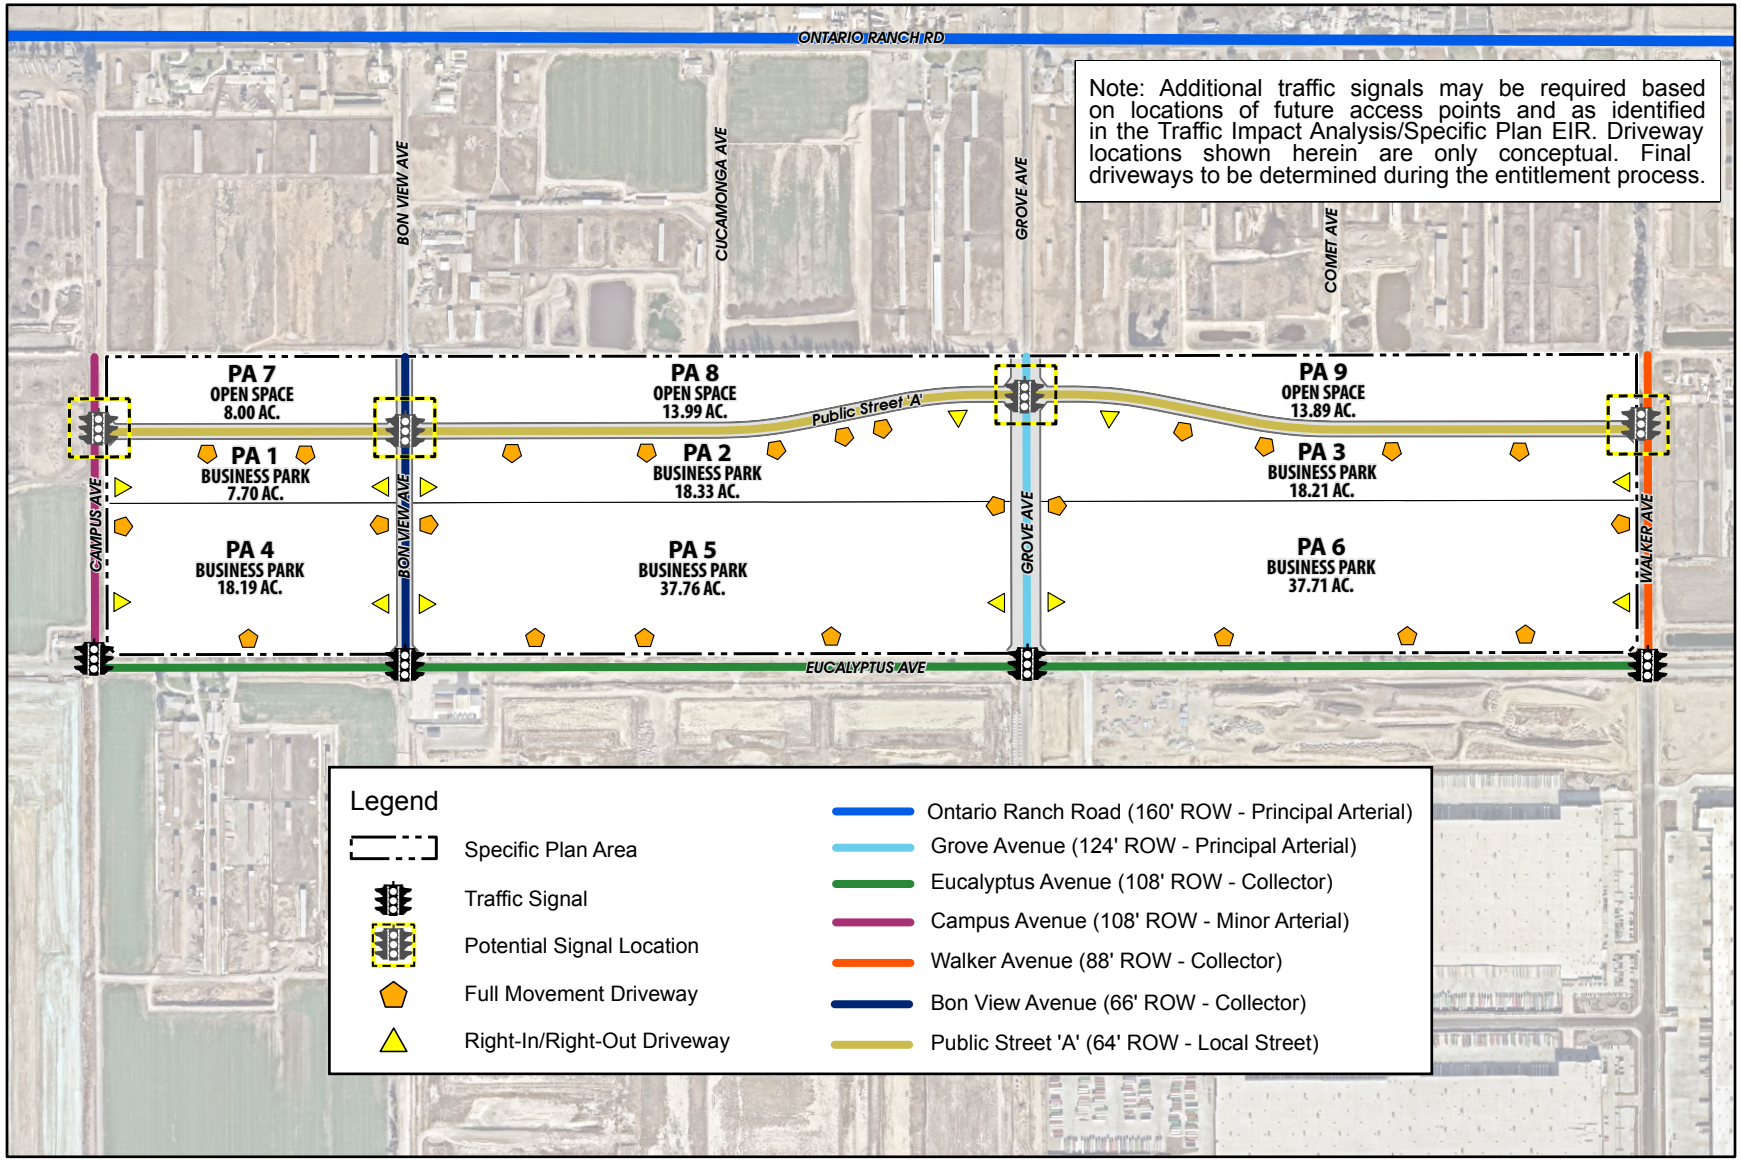
4.1.1 Vehicular Circulation

Direct access to the Eucalyptus Business Park Specific Plan area is provided by Campus Avenue from the west, Eucalyptus Avenue from the south, and Walker Avenue from the east. Additionally, Bon View Avenue and Grove Avenue provide access through the Specific Plan area in the north-south orientation. The Specific Plan proposes to provide an internal east-west oriented Public Street 'A' through the Specific Plan area to connect Campus Avenue and Walker Avenue. Public Street 'A' will provide a separation between the Business Park land uses and the Open Space – Parkland land uses.

The installation of traffic controls (traffic signals and stop signs) and the location and orientation of private driveways serving individual buildings and uses will be determined as part of implementing development plans. Additional right-of-way may be required to accommodate additional left turn lanes at intersections based on required queue lengths per the Traffic Impact Analysis/Specific Plan EIR.

Figure 4-1, *Conceptual Vehicular Circulation and Access Plan*, illustrates the vehicular circulation plan within the Specific Plan area. Final intersection spacing, intersection right-of-way (ROW), and traffic controls must conform to the findings of the associated traffic impact analysis and to City standards. All right-of-way/easements necessary to construct the required public improvements shall be obtained to the extent feasible.

The following pages describe and illustrate the primary components of the Eucalyptus Business Park Specific Plan's vehicular circulation network. Existing interim striping shall be removed along existing frontage streets. Refer to Chapter 7, *Implementation Plan*, for additional circulation improvement standards pertaining to phasing.



Source(s): Esri, Nearmap Imagery (January 2025), Michael Baker (04-01-2026), San Bernardino County (2025)

Figure 4-1

0 200 400 800
Feet

Conceptual Vehicular Circulation and Access Plan

A. Campus Avenue (108' ROW Minor Arterial)

Campus Avenue forms the western boundary of Planning Areas 1, 4, and 7. At the time this Specific Plan was prepared, no segments of the ROW abutting the Specific Plan area had been constructed. This public roadway will provide access to the Specific Plan area from off-site areas to the north and south.

As shown on Figure 4-2, *Street Sections – Campus Avenue, Bon View Avenue, and Grove Avenue*, the developer(s) of the Eucalyptus Business Park Specific Plan area will be responsible for constructing the eastern 78 feet out of the total 108-foot-wide ROW. The 78 feet of improvement includes 59 feet of paved roadway, a 12-foot-wide parkway that includes 7 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk. The remaining western portions of the Campus Avenue ROW will be constructed by others and include 18 feet of paved roadway and a 12-foot-wide parkway containing 7 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk.

Beyond the Campus Avenue ROW, a 23-foot-wide landscape buffer abuts both the eastern and western sides of the ROW. Developer(s) of the Specific Plan area will be responsible for constructing the eastern landscape buffer inclusive of an 8-foot-wide multi-purpose trail.

A traffic signal will be located at the intersection of Campus Avenue and Eucalyptus Avenue by developer(s) within the Specific Plan area and a potential traffic signal may be installed at the intersection of Campus Avenue and Public Street 'A'. Traffic signal locations are subject to change based on the results and recommendations of a traffic study. All improvements to Campus Avenue are required to comply with applicable City of Ontario requirements, including sight distance requirements.

Final driveway locations along Campus Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines.

B. Bon View Avenue (66' ROW Collector)

Bon View Avenue forms the eastern boundary of Planning Areas 1, 4, and 7 and the western boundary of Planning Areas 2, 5, and 8. This public roadway provides access to the Specific Plan area from off-site areas to the north and south.

As shown on Figure 4-2, *Street Sections – Campus Avenue, Bon View Avenue, and Grove Avenue*, the developer(s) of the Eucalyptus Business Park Specific Plan area will be responsible for constructing the entire width of the 66-foot-wide ROW. The 66 feet of improvement includes 48 feet of paved roadway and a 9-foot-wide parkway on both sides of the street that includes 4 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk.

Beyond the Bon View Avenue ROW, a 20-foot-wide storm drain easement abuts the eastern side of the ROW. Easement width requirement is subject to change based on findings of City-approved hydraulic studies, master plan updates, and project final designs.

Developers outside of the Specific Plan area are constructing a traffic signal at the intersection of Bon View Avenue and Eucalyptus Avenue and a potential traffic signal may be installed at the intersection of Bon View Avenue and Public Street 'A'. If the traffic signal improvements are not completed and accepted by the City, developer(s) of this Specific Plan area is subject to the traffic signal improvements required. All improvements to Bon View Avenue are required to comply with applicable City of Ontario requirements,

including sight distance requirements. Due to utility constraints, Bon View Avenue may need to be constructed as a tilt section.

Final driveway locations along Bon View Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

C. Grove Avenue (124' ROW Principal Arterial)

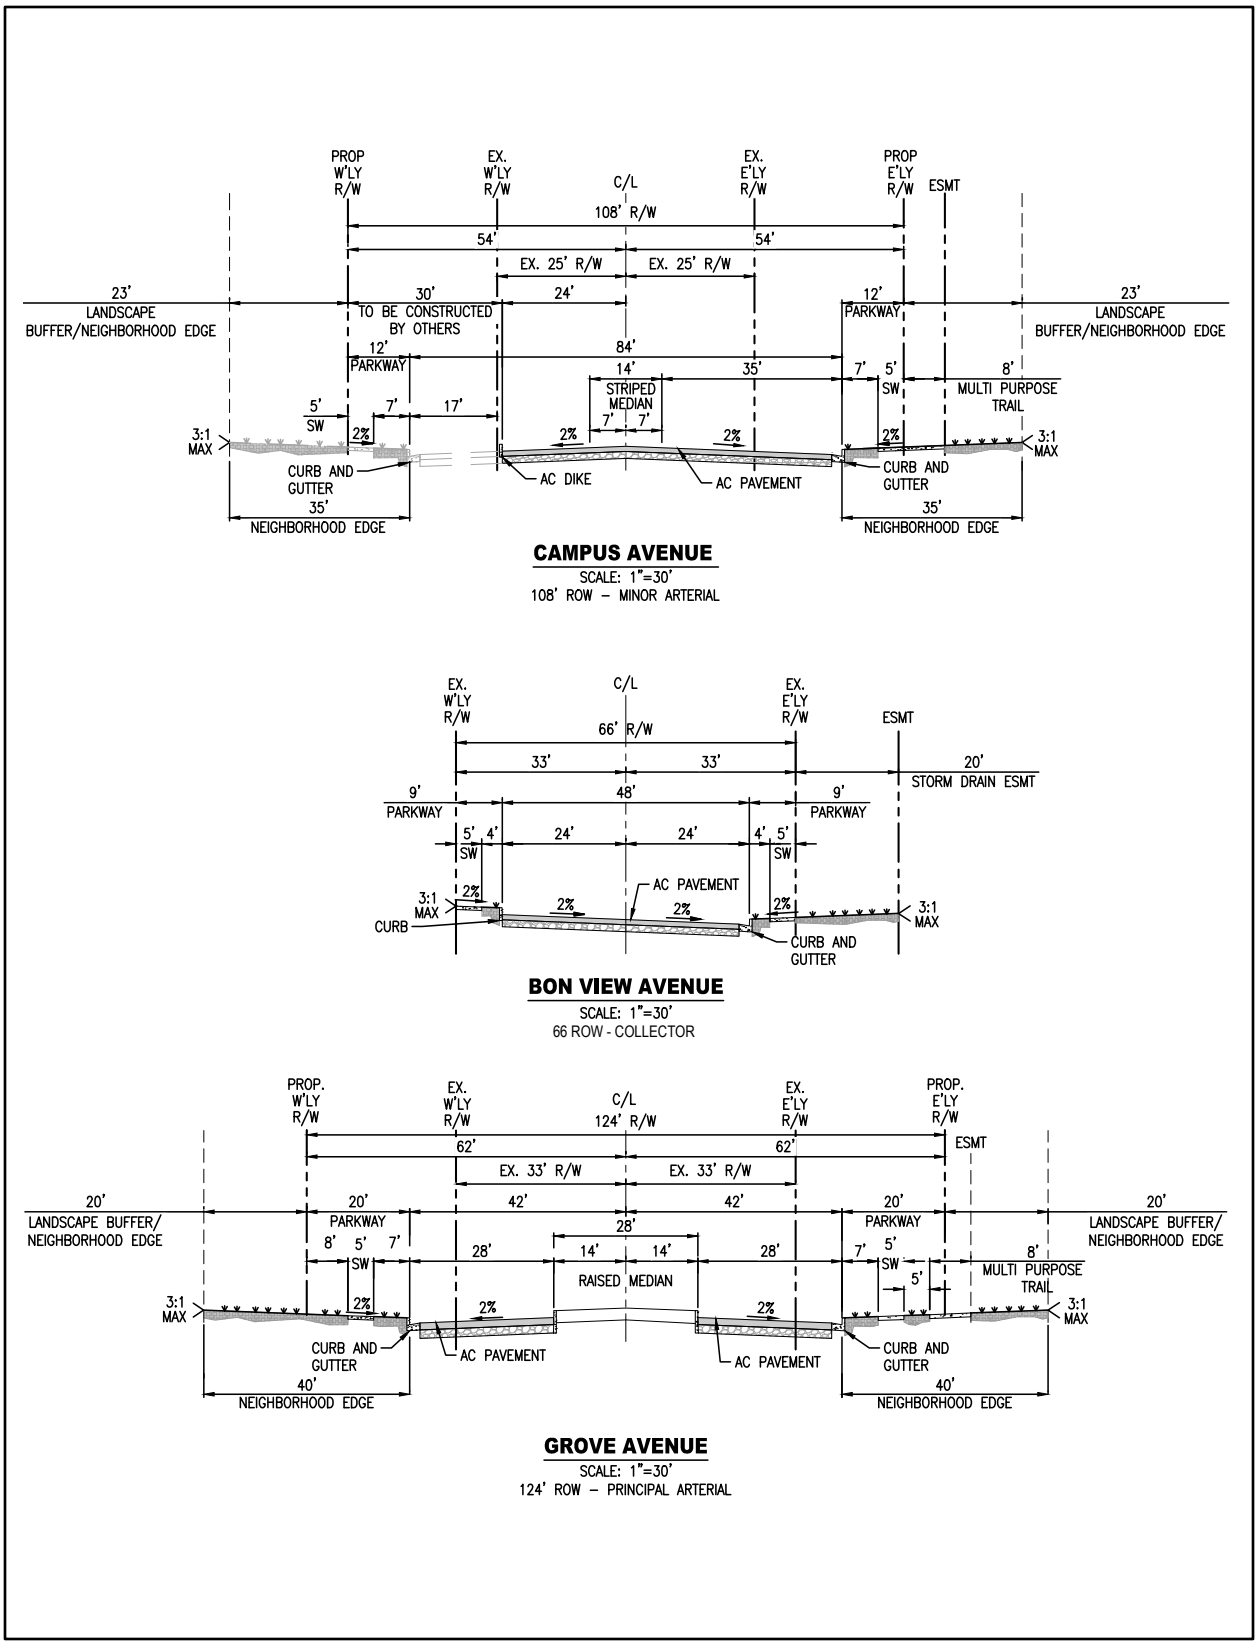
Grove Avenue forms the eastern boundary of Planning Areas 2, 5, and 8 and the western boundary of Planning Areas 3, 6, and 9. This public roadway provide access to the Specific Plan area from off-site areas to the north and south.

As shown on Figure 4-2, *Street Sections – Campus Avenue, Bon View Avenue, and Grove Avenue*, the developer(s) of the Eucalyptus Business Park Specific Plan area will be responsible for constructing the entire width of the 124-foot-wide ROW. The 124 feet of improvement includes a 28-foot-wide raised center median, and 56 feet of paved roadway and a 20-foot-wide parkway on both sides of the street. The 20-foot-wide parkway on the western side of the ROW provides 7 feet of curb-adjacent landscaping, a 5-foot-wide sidewalk and an additional 8 feet of landscaping on the west side of the sidewalk. The 20-foot-wide parkway on the eastern side of the ROW provides 7 feet of curb-adjacent landscaping, a 5-foot-wide sidewalk, 5 feet of additional landscaping, and an 8-foot-wide multi-purpose trail.

Beyond the Grove Avenue ROW, a 20-foot-wide landscape buffer abuts both the eastern and western sides of the ROW.

The traffic signal at the intersection of Grove Avenue and Eucalyptus Avenue will be constructed by others, as part of adjacent development to the south. A potential traffic signal may be installed at the intersection of Grove Avenue and Street 'A". If the traffic signal improvements are not completed and accepted by the City, developer(s) of this Specific Plan area is subject to the traffic signal improvements required. Traffic signal locations are subject to change based on the results and recommendations of a traffic study. All improvements to Grove Avenue are required to comply with applicable City of Ontario requirements, including sight distance requirements.

Final driveway locations along Grove Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.



Source(s): Michael Baker International (04-01-2026)

Figure 4-2

Street Sections - Campus Avenue, Bon View Avenue, and Grove Avenue

Not to Scale

D. Walker Avenue (88' ROW Collector)

Walker Avenue forms the eastern boundary of Plannings Areas 3, 6, and 9. This public roadway provides access to the Specific Plan area from off-site areas to the north and south.

As shown on Figure 4-3, *Street Sections – Walker Avenue, Eucalyptus Avenue*, *and Public Street 'A'*, the developer(s) of the Eucalyptus Business Park Specific Plan area will be responsible for constructing the western 69 feet out of the total 88-foot-wide ROW. The 69 feet of improvement includes 57 feet of paved roadway and a 12-foot-wide parkway that includes 7 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk. The remaining eastern portions of Walker Avenue ROW will be constructed by others and include 7 feet of paved roadway, a 12-foot-wide parkway containing 7 feet of curb-adjacent landscaping and 5-foot-wide sidewalk, and an 8-foot wide Multi Purpose Trail located outside of the right-of-way.

A 23-foot-wide landscape buffer abuts both the east and west sides of the Walker Avenue ROW. Within the eastern landscape buffer, developers outside of the Specific Plan area will be responsible for constructing an 8-foot-wide multi-purpose trail.

The traffic signal at the intersection of Walker Avenue and Eucalyptus Avenue will be constructed by others as part of adjacent development to the south. A potential traffic signal may be installed at the intersection of Walker Avenue and Public Street 'A'. If the traffic signal improvements are not completed and accepted by the City, developer(s) of this Specific Plan area is subject to the traffic signal improvements required. All improvements to Walker Avenue are required to comply with applicable City of Ontario requirements, including sight distance requirements. Developers shall design and construct asphalt and concrete pavements on Walker Avenue southbound approaches at Eucalyptus Avenue in accordance with City of Ontario standard drawing #1011 and 1207, as Walker Avenue will be designated as a truck route.

Final driveway locations along Walker Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

E. Eucalyptus Avenue (108' ROW Collector)

Eucalyptus Avenue forms the southern boundary of Planning Areas 4, 5, and 6. This public roadway provides access to the Specific Plan area from off-site areas to the east and west.

As shown on Figure 4-3, *Street Sections – Walker Avenue, Eucalyptus Avenue, and Public Street 'A',* Eucalyptus Avenue will provide 84 feet of paved roadway, which includes a 14-foot-wide painted median. A 12-foot-wide parkway that includes 7 feet of curb-adjacent landscaping and a 5-foot-wide sidewalk is provided on both sides of the street. Beyond the ROW, a 23-foot-wide landscape buffer abuts both sides of Eucalyptus Avenue. Additionally, an 8-foot-wide multi-purpose trail is provided within the northern landscape buffer.

Developer(s) within the Eucalyptus Business Park Specific Plan area west of Grove Avenue will be responsible for constructing the northern 16 feet of paved roadway, the 12-foot-wide parkway, and the 8-foot-wide multi-purpose trail. Developer(s) within the Eucalyptus Business Park Specific Plan area east of Grove Avenue will be responsible for constructing the 12-foot-wide parkway and the 8-foot-wide multi-purpose trail. The remaining portions of Eucalyptus Avenue, as illustrated in Figure 4-3, will be constructed by developer(s)

outside of the Specific Plan area. Developer(s) shall design and construct concrete pavement at all intersection approaches in accordance with City of Ontario Standard Drawing No. 1207, as Eucalyptus Avenue will be designated as a truck route.

The traffic signals along Eucalyptus Avenue at its intersections with Bon View Avenue, Grove Avenue, and Walker Avenue will be constructed by others, as part of adjacent development to the south. If the traffic signal improvements are not completed and accepted by the City, developer(s) of this Specific Plan area is subject to the traffic signal improvements required. Developer(s) within the Specific Plan area will be responsible for a traffic signal at the intersection of Eucalyptus Avenue and Campus Avenue. Traffic signal locations are subject to change based on the results and recommendations of a traffic study. All improvements to Eucalyptus Avenue are required to comply with applicable City of Ontario requirements, including sight distance requirements.

Final driveway locations along Eucalyptus Avenue will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

F. Public Street 'A' (64' ROW Local Street)

Public Street 'A' forms the northern boundary of Planning Areas 1, 2, and 3 and the southern boundary of Planning Areas 7, 8, and 9. This public roadway provides access to the Specific Plan area from off-site areas to the east and west.

As shown on Figure 4-3, *Street Sections – Walker Avenue, Eucalyptus Avenue, and Public Street 'A'*, implementing projects within the Eucalyptus Business Park Specific Plan area will be responsible for constructing the entire width of the 64-foot-wide ROW. The 64 feet of improvement includes 40 feet of paved roadways and a 12-foot-wide parkway on both sides of the street that includes 7 feet of curb adjacent landscaping and a 5-foot-wide sidewalk. Notwithstanding the above, Street 'A' may require additional roadway width at intersections with north–south streets to accommodate truck turning movements associated with the Business Park uses. Accordingly, the right-of-way and paved roadway width for Street A may be increased at intersections, as determined necessary through implementing projects, subject to City review and approval.

A traffic signal may be required at the intersection of Public Street 'A' and Grove Avenue, Public Street 'A' and Campus Avenue, Public Street 'A' and Bon View Avenue, and Public Street 'A' and Walker Avenue. Traffic signal locations are subject to change based on the results and recommendations of a traffic study. All improvements to Public Street 'A' are required to comply with applicable City of Ontario requirements, including sight distance requirements.

Final driveway locations along Public Street 'A' will be determined in conjunction with the design of implementing development projects, in accordance with Chapter 2.0 Access Guidelines of the City of Ontario's Traffic and Transportation Design Guidelines and to the satisfaction of the City Engineer.

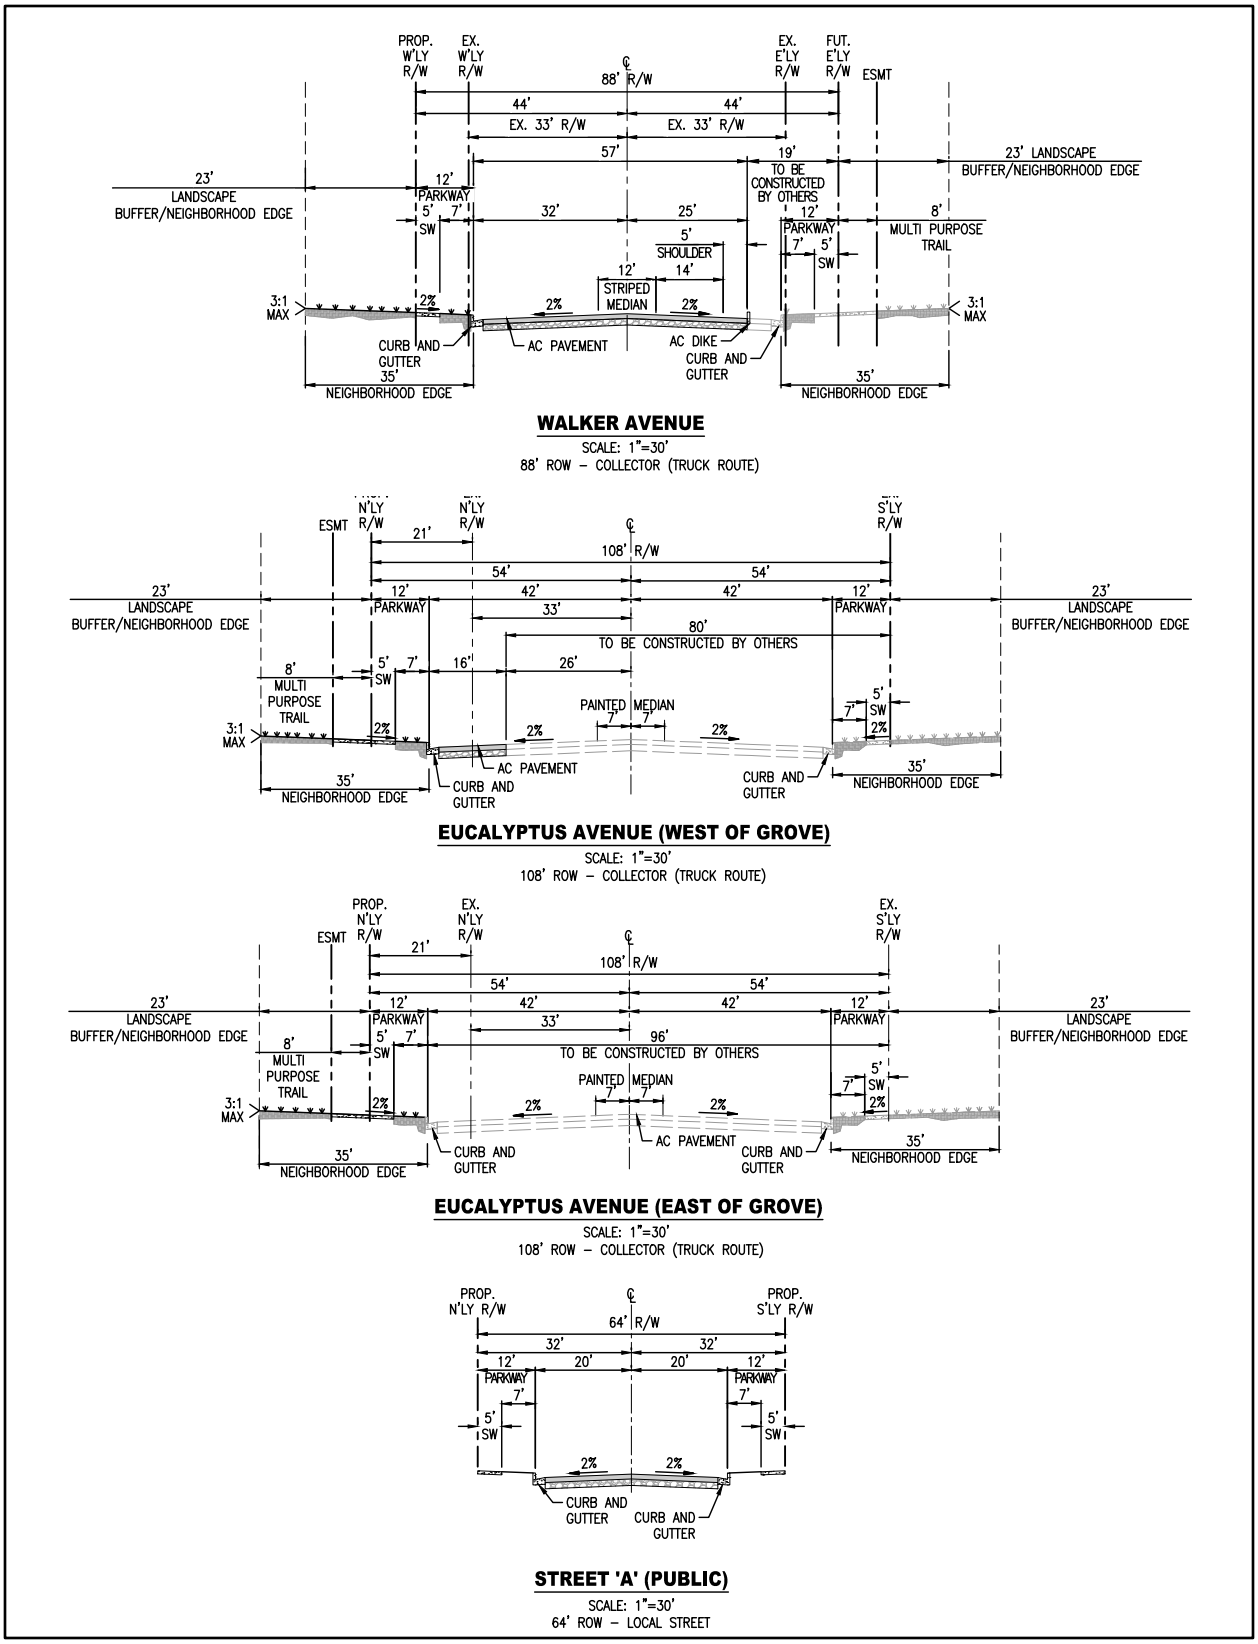
G. Private Drive Aisles

Private drive aisles connect individual planning areas to the public roadways described above. Within each planning area, private drive aisles provide vehicular access for automobiles and commercial vehicles including trucks to parking lots and loading areas and provide sidewalk opportunities for pedestrian and bicycle access to building entries and

amenities. Private drive aisles will have pavement widths that range between 24 and 50 feet. Private drive aisles are not depicted on Figure 4-1 as their locations, alignments, and widths will be determined in conjunction with the design of implementing development projects.

H. Truck Routes

Access to the Eucalyptus Business Park Specific Plan area is provided from Eucalyptus Avenue, Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, and Public Street 'A'. Project truck traffic shall use the City's truck route in Euclid Avenue, Walker Avenue, Eucalyptus Avenue, and Merrill Avenue to access the Specific Plan area.



Source(s): Michael Baker International (04-01-2026)

Figure 4-3

Street Sections - Walker Avenue, Eucalyptus Avenue, and Public Street 'A'

Not to Scale

4.1.2 Non-Vehicular Circulation

The Eucalyptus Business Park Specific Plan encourages non-motorized circulation for employees and visitors of the Specific Plan area. Pedestrian circulation is encouraged within the Specific Plan area through a network of sidewalks and multi-purpose trails, and bicycle circulation is encouraged through a network of bike lanes and multi-purpose trails. Additional pedestrian and bicycle facilities will be designed on individual business park building sites at the time buildings are designed and positioned in each planning area as part of implementing development projects. Additional pedestrian and bicycle facilities within Planning Areas 7, 8, and 9 will be designed consistent with the City of Ontario Grand Park Master Plan.

As shown on Figure 4-4, *Conceptual Non-Vehicular Circulation and Mobility Plan*, the Eucalyptus Business Park Specific Plan provides for sidewalk in the public ROW along Bon View Avenue and Public Street 'A'; sidewalk and multi-purpose trail along Grove Avenue; and sidewalk, Class II bikeway, and multi-purpose trail along Eucalyptus Avenue, Campus Avenue, and Walker Avenue (to be constructed by others). Pedestrian crosswalks are designed at street intersections to ensure pedestrian safety. Locations of pedestrian crosswalks are provided on Figure 4-4.

As illustrated on Figure 4-4, 5-foot-wide sidewalks are provided on both sides of Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, Eucalyptus Avenue, and Public Street 'A'; an 8-foot-wide multi-purpose trail is provided on Eucalyptus Avenue, Campus Avenue, Grove Avenue and Walker Avenue; and Class II bike lanes are provided along Eucalyptus Avenue, Campus Avenue, and Walker Avenue. Construction of the non-vehicular network will be provided by developers both within and outside of the Specific Plan area. Responsibility of construction is illustrated in Figures 4-2 and 4-3 of this Specific Plan.

The Eucalyptus Business Park Specific Plan anticipates a large volume of passenger vehicle and truck traffic circulating on the site; therefore, convenient and safe pedestrian and bicycle access was given careful consideration when preparing the design standards of this Specific Plan. Provisions for sidewalks, short-term and long-term bicycle storage facilities, and employee and visitor gathering areas interior to the planning areas are set forth in Chapter 6, *Design Guidelines*, of this Specific Plan.

In addition to internal non-vehicular circulation, Omnitrans provides bus services to and from the Specific Plan area. The following bus and transit facilities are located west and north of the Specific Plan area:

- Omnitrans Bus Route 83, located approximately 0.6 miles to the west along Euclid Avenue.
- Omnitrans Bus Route 87, located approximately 1.8 miles to the north along Riverside Drive.
- As part of the Specific Plan, a new bus turnout would be constructed near the intersection of Grove Avenue and Eucalyptus Avenue in anticipation of future Omnitrans service.

Figure 4-4

0 200 400 800 Feet

Conceptual Non-Vehicular Circulation and Mobility Plan

4.2 Utility Infrastructure Plan

Buildout of the Eucalyptus Business Park Specific Plan area requires the installation of water, sewer, drainage, and other utility infrastructure, as described in the subsections below. All utility infrastructure improvements shall be constructed in accordance with applicable City of Ontario design standards and specifications.

Public utility mains shall be located within publicly dedicated ROW and publicly dedicated streets. Any proposed public utilities within private streets shall be subject to City approval and contained within acceptable easements, access, and separation requirements. Minimum width for a public utility easement (PUE) shall be at least 20 feet wide and shall be centered on the public utility main. Setbacks are required when there is a public utility within a private street, drive, or alley to accommodate any utility appurtenances. Additionally, private utilities are not allowed within the PUEs.

4.2.1 Potable Water Plan

The City of Ontario provides water service to the Specific Plan area. The Specific Plan area lies within the 925 Pressure Zone (PZ). As shown on Figure 4-5, *Potable Water Infrastructure Plan*, planned potable water lines proposed by projects outside of the Specific Plan area include a 16-inch potable water line within Eucalyptus Avenue between Campus Avenue and Grove Avenue; and a 24-inch potable water line within Eucalyptus Avenue between Grove Avenue and Walker Avenue. Additionally, an existing 30-inch potable water line within Grove Avenue between Eucalyptus Avenue and Ontario Ranch Road. Any existing potable water mains not yet accepted by the City that support the development of the Specific Plan are required at the responsibility of the developer to support the development of the Specific Plan area.

Potable water system improvements within the Specific Plan area require the planning, design, and construction of the following: 12-inch potable water lines along Bon View Avenue from Eucalyptus Avenue to the northern boundary of the Specific Plan area; 16-inch potable water lines along Campus Avenue and Walker Avenue from Eucalyptus Avenue to the northern boundary of the Specific Plan area; and a 12-inch potable water line along Public Street 'A' between Campus Avenue and Walker Avenue.

The overall water infrastructure plan to serve the City of Ontario is illustrated on Figure 4-6, *City of Ontario Ultimate Water System*. Final sizing of required infrastructure shall be determined at the time of development during final design based on hydraulic calculations. The required infrastructure is subject to change based upon findings of City approved hydraulic studies, master plan updates, and project final designs. Any existing utilities, including other agencies' mains, that do not meet minimum depths, standard alignment locations, and/or minimum horizontal and vertical separation requirements shall be subject to relocation/replacement by the developer(s) of the Specific Plan.

All on-site improvements are required to have hydraulic studies to determine infrastructure improvements needed to support each area and shall be the responsibility of the developer(s). Any changes in land use not limited to units, density, or intensity, that are not previously accounted for in a City approved study following current design criteria shall trigger a revised updated hydraulic study and any new findings of infrastructure improvements needed are required at the responsibility of the developer.

The City's Potable Water Master Plan identifies new water facilities to serve the Ontario Ranch area, which will need to be constructed prior to

or concurrent with the Specific Plan area's water improvements. Construction of the Specific Plan area's water improvements and the Master Plan water improvements necessary to serve the Specific Plan area shall be the responsibility of the developer(s). The Eucalyptus Business Park Specific Plan will be required to participate in the Master Plan water improvements as detailed in this Specific Plan.

As a part of the backbone infrastructure, the master planned 925 Pressure Zone (PZ) reservoir shall be constructed on the City-owned reservoir site as directed by the City. Well supply and any drinking water treatment necessary for the 925 PZ shall be constructed to supply the 925 PZ reservoir. The 925 Pressure Zone (PZ) Phase 2 Potable Water System facilities will need to be constructed to support the Project. In the event the 925 PZ Phase 2 facilities are not completed in time to serve the Project, the developer(s) may implement an interim water supply strategy, subject to review and approval by the City. The off-site improvements include the construction of a 42-inch potable water main in Chino Avenue connecting from the existing 30-inch potable water main in Grove Avenue; extending the 42-inch potable main in Campus Avenue to Francis Street; extending the 42-inch potable water main in Francis Street to Cucamonga Avenue; and extending the 42-inch potable water main in Cucamonga Avenue; and extending to the Bon View Avenue Reservoir site and to the Reservoir; and, installing a 9 million gallon reservoir on the Bon View Reservoir site; and, installing two 2,500 gpm wells with any treatment necessary to meet water quality standards and the 16-inch to 42-inch well collection mains from the wells to the reservoirs. The Eucalyptus Business Park Specific Plan will be required to participate in the future Phase 2 Water System Improvements as detailed in the development agreements with the City.

City of Ontario Ultimate Water System

4.2.2 Recycled Water Plan

The City of Ontario/Ontario Municipal Utilities Company (OMUC) and the Inland Empire Utilities Agency (IEUA) supplies recycled water to the Specific Plan area. Recycled Water supplied by OMUC is produced by the IEUA from its four wastewater reclamation plants. As shown on Figure 4-7, *Recycled Water Infrastructure Plan*, existing recycled water lines include a 30-inch IEUA recycled water line within Eucalyptus Avenue between Campus Avenue and Bon View Avenue; a 12-inch City of Ontario recycled water line within Eucalyptus Avenue between Bon View Avenue and Walker Avenue; a 30-inch IEUA recycled water line within Bon View Avenue between Eucalyptus Avenue and Ontario Ranch Road; and a 30-inch IEUA recycled water line within Ontario Ranch Road between Bon View Avenue and Walker Avenue.

Recycled water infrastructure improvements for the Specific Plan area require the planning, design, and construction of the following: an 8-inch recycled water line within Grove Avenue and Walker Avenue between Eucalyptus Avenue and the northern edge of the Specific Plan area. At the discretion of the City, additional recycled water line may be needed within Campus Avenue and Public Street 'A' to support development parcels not fronting a master planned recycled water main. Improvements may include an 8-inch recycled water line within Campus Avenue between Eucalyptus Avenue and the northern edge of the Specific Plan area; and an 8-inch recycled water line along Public Street 'A' between Campus Avenue and Walker Avenue.

The Eucalyptus Business Park Specific Plan shall make use of recycled water for all approved uses including, but not limited to, the irrigation of parks, street parkway landscaping, and any other Property Owners' Association (POA) maintained common areas. The developer shall prepare and secure approval of an Engineering Report from the City of Ontario and State Department of Drinking Water Agency prior to the use of recycled water.

Final sizing of required infrastructure shall be determined at the time of development during final design based on hydraulic calculations. The required infrastructure is subject to change based upon findings of City approved hydraulic studies, master plan updates, and project final designs. Any existing utilities, including other agencies' mains, that do not meet minimum depths, standard alignment locations, and/or minimum horizontal and vertical separation requirements shall be subject to relocation/ replacement by the developer(s) of the Specific Plan. The developer of the Specific Plan area is required to obtain approvals from IEUA for regional connections outlined in the Specific Plan and additional regional connections as required to support development not fronting a City recycled water main.

All on-site improvements are required to have hydraulic studies to determine infrastructure improvements needed to support each area and shall be the responsibility of the developer. Any changes in land use not limited to units, density, or intensity, that are not previously accounted for in a City approved study following current design criteria shall trigger a revised updated hydraulic study and any new findings of infrastructure improvements needed are required at the responsibility of the developer.

Figure 4-7

0 200 400 800 Feet

Recycled Water Infrastructure Plan

4.2.3 Sanitary Sewer Plan

Sanitary sewer/wastewater collections for the Specific Plan area are served by the City of Ontario/OMUC, which conveys wastewater to the IEUA for transmission and treatment. As shown on Figure 4-8, *Sanitary Sewer Infrastructure Plan*, at the time the Specific Plan was prepared, there is no existing sanitary sewer infrastructure within the Specific Plan area.

Sanitary sewer infrastructure improvements for the Specific Plan area require the planning, design, and construction of the following: a 15-inch sanitary sewer line within Campus Avenue between Eucalyptus Avenue and the northern border of the Specific Plan area; an 18-inch sanitary sewer line within Bon View Avenue between Eucalyptus Avenue and the northern border of the Specific Plan area; and a 21-inch sanitary sewer line within Grove Avenue and Walker Avenue between Eucalyptus Avenue and the northern border of the Specific Plan area. At the discretion of the City, additional sanitary sewer lines may be needed within Eucalyptus Avenue and Public Street 'A' to support development parcels not fronting a master planned sewer main. Improvements may include an 8-inch sanitary sewer line within Eucalyptus Avenue east of Bon View Avenue to connect with the proposed sewer line in Bon View Avenue; an 8-inch sanitary sewer line within Eucalyptus Avenue east of Grove Avenue to connect with the proposed sanitary sewer line in Grove Avenue; an 8-inch sanitary sewer line within Public Street 'A' east of Campus Avenue to connect with the proposed sewer line within Campus Avenue; an 8-inch sanitary sewer line within Public Street 'A' east of Bon View Avenue to connect with the proposed sewer line within Bon View Avenue; and an 8-inch sanitary sewer line within Public Street 'A' west of Walker Avenue to connect with the proposed sewer line within Walker Avenue. Any existing sewer mains not yet accepted by the City that are downstream of the Specific Plan area are required at the responsibility of the developer to support the development of the Specific Plan.

In addition to proposed sewer infrastructure, tributary flows are also included in Figure 4-8. The flows arrows show which sewer lines are supporting the sewer flows from each planning area.

Required sanitary sewer infrastructure is subject to change based upon findings of City-approved hydraulic studies, master plan updates, and project final designs; and, sewer main locations are also subject to change based upon the developer-conducted and City-approved Conceptual Design Report.

Final sizing of sewer mains shall be determined during final design by hydraulic calculations through a Sewer Study or Sewer Sub-Area Master Plan (SSAMP) per the City's current Sewer Master Plan.

Any existing utilities, including other agencies' mains, that do not meet minimum depths, standard alignment locations, and/or minimum horizontal and vertical separation requirements shall be subject to relocation/ replacement by the developer(s) of the Specific Plan.

All on-site improvements are required to have hydraulic studies to determine infrastructure improvements needed to support each area and shall be the responsibility of the developer. All on-site intract public sewer mains shall be studied via a Sewer Sub-Area Master Plan (SSAMP) per the City's current Sewer Master Plan. Any changes in sewer tributary boundaries, as acceptable at the City's discretion or land use not limited to units, density, or intensity, that are not previously accounted for in a City approved study following current design criteria shall trigger a revised updated sewer study and any new

findings of infrastructure improvements needed are required at the responsibility of the developer.

The off-site public sewer shall be designed to meet all applicable City standards and requirements and designed in such a way so that the proposed on-site private sewer improvements shall be designed to meet all applicable building and plumbing codes. Eucalyptus Business Park Specific Plan's sewer tributary areas shall be determined in conformance with the latest City Sewer Master Plan while accommodating the off-site and on-site sewer standards, codes, and requirements, etc. If Eucalyptus Business Park Specific Plan's sewer tributary areas need to be revised to allow the public or private sewer to meet applicable requirements, and a revised SSAMP supports the revised sewer tributary boundaries, as approved at the City's discretion, then Figure 4-8 shall be revised to reflect Eucalyptus Business Park Specific Plan's new sewer tributary boundaries.

Sanitary Sewer Infrastructure Plan

4.2.4 Storm Water Management Plan

As shown on Figure 4-9, *Storm Drain Infrastructure Plan*, existing storm drain infrastructure includes a 24-inch storm drain line within Eucalyptus Avenue east of Campus Avenue; a 42-inch storm drain line within Eucalyptus Avenue west of Bon View Avenue; a 24-inch line within Eucalyptus Avenue east of Bon View Avenue, a 24-inch storm drain line within Eucalyptus Avenue just east and west of Grove Avenue; and a 24-inch storm drain line within Eucalyptus Avenue west of Walker Avenue.

Storm drain infrastructure improvements for the Specific Plan area require the planning, design, and construction of the following: a 60-inch storm drain line within Campus Avenue between Eucalyptus Avenue and the northern boundary of the Specific Plan area; a 96-inch storm drain line within Bon View Avenue between Eucalyptus Avenue and the northern boundary of the Specific Plan area; a 108-inch storm drain line within Grove Avenue and Walker Avenue between Eucalyptus Avenue and the northern boundary of the Specific Plan area; 24-inch storm drain lines within Public Street 'A' between Campus Avenue and Bon View Avenue; and 36-inch storm drain lines within Public Street 'A' between Bon View Avenue and Walker Avenue.

The overall storm drain infrastructure plan to serve the City of Ontario is illustrated on Figure 4-10, *City of Ontario Planned Drainage Facilities*. Required storm drain infrastructure is subject to change based upon findings of City-approved hydraulic studies, master plan updates, and project final designs. If the storm drain improvements are not completed and accepted by the City, the developer of this Specific Plan is subject to the storm drain improvements required.

If at the time of construction, Line I in Euclid Avenue in the City of Chino has not been constructed, the developments tributary to this line (see Figure 4-10) will need to detain and release their runoff at 80% of the pre-development flows.

A. National Pollutant Discharge Elimination System (NPDES) Compliance and Water Quality Management Plan (WQMP)

The grading and drainage areas design for the on-site storm drain system improvements within the Eucalyptus Business Park Specific Plan area will utilize a variety of Low Impact Development (LID) design concepts to detain, filter, and treat surface runoff in a practical manner to comply with the requirements of the San Bernardino County NPDES Storm Water Program's current WQMP and the City's NPDES program requirements for new development projects.

The objective of project-specific WQMPs is to minimize the detrimental effects of urbanization on the beneficial uses of receiving waters, including effects caused by increased water pollutants and changes in hydrology. These effects shall be minimized through the implementation of on-site and off-site LID Site Design Best Management Practices (BMP's) that retain/infilter or biotreat 85th percentile storm event runoff from the Specific Plan area.

In addition, non-structural and structural Source Control BMP's will be implemented and documented in approved Water Quality Management Plan(s) associated with the design of implementing development projects to reduce pollutant generation and transport from the Specific Plan area.

All Priority Land Use (PLU) areas, defined by the State Water Resources Board (SWRCB) as high trash generating areas such as industrial uses within the Specific Plan area shall comply with the statewide Trash Provisions adopted by the SWRCB and trash requirements in the

most current San Bernardino County Area-Wide MS4 permit.

Prior to the issuance of any grading or construction permits for any parcel map or area that disturbs one (1) acre or more of land within the Eucalyptus Business Park Specific Plan area, an Erosion Control & Sedimentation Plan and Storm Water Pollution Prevention Plans (SWPPP) will be prepared to comply with California State Water Resources Control Board's (State Water Board) current "General Permit to Discharge Storm Water Associated with Construction Activity" and current "Area Wide Urban Storm Water Runoff (Regional NPDES) Permit." SWPPPs are required to identify and detail all appropriate Best Management Practices (BMPs) to be implemented or installed during construction.

B. Airport Compatibility

The Specific Plan area is located in the Airport Influence Areas (AIAs) of the Ontario International Airport and the Chino Airport. The Federal Aviation Administration (FAA) identifies stormwater management facilities as one of the greatest attractants to wildlife hazards to airport operations. For this reason, all new above ground stormwater management facilities located within the Eucalyptus Business Park Specific Plan area will be designed to avoid the creation of open water and habitat by being designed to drain completely within a maximum 48-hour period following design storm event (i.e., 24-hour storm) and remain totally dry between storm events.

Figure 4-10

City of Ontario Planned Drainage Facilities

Not to Scale

4.2.5 Dry Utilities Plan

Southern California Gas Company (SoCal Gas) provides gas service, Southern California Edison (SCE) provides the electric service, and OntarioNet Fiber and Frontier Communications provide telecommunication (telecom) services to the Specific Plan area. As shown on Figure 4-11, *Dry Utilities Infrastructure Plan*, and Figure 4-12, *Fiber Optics Plan*, existing dry utilities infrastructure includes a 3-inch gas line within Eucalyptus Avenue between Campus Avenue and Bon View Avenue; a 3-inch and a 12-inch gas line along Eucalyptus Avenue between Bon View Avenue and Grove Avenue; a 2-inch and a 12-inch gas line within Bon View Avenue; a 4-inch gas line within Grove Avenue; and a 2-inch gas line within Walker Avenue.

Dry utilities, including electric and telecom improvements for the Specific Plan area require the planning, design, and construction of the following: new SCE and telecom lines within Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, Eucalyptus Avenue, and Public Street 'A'; new fiber optic lines within Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, Eucalyptus Avenue, and Public Street 'A'. The Specific Plan would also install a new gas line in Campus Avenue between Eucalyptus Avenue and the northern boundary of the Specific Plan area as part of areawide infrastructure improvements; However, the Specific Plan would not utilize natural gas.

All dry utilities internal to the Eucalyptus Business Park Specific Plan area will be installed underground in conjunction with the development of the Specific Plan area in accordance with applicable public utility standards and specifications and to the satisfaction of the Ontario City Engineer. The location of other lateral connections, transformers, switches, pull boxes, and dry utility manholes will be determined at the time buildings are positioned and uses are established in each planning area in conjunction with implementing development.

4.3 Conceptual Grading Plan

As part of site grading activities, the majority of the Specific Plan area would be subject to grading and disturbance. Specifically, grading activities on-site would require approximately 1,000,000 cubic yards (CY) of cut and approximately 1,150,000 CY of fill. Net fill (import) would be 150,000 CY. Within this earthwork operation, the site needs to export approximately 51,000 CY of organic materials.

CHAPTER 5

DEVELOPMENT REGULATIONS

5.1 Purpose and Intent

This Chapter formally establishes the use permissions and development standards (zoning) for the Eucalyptus Business Park Specific Plan area. The regulations provided herein work in concert with the architectural and landscape guidelines set forth in Chapter 6, *Design Guidelines*, to achieve the vision of this Specific Plan.

5.2 Definition of Terms

The meaning of words, phrases, titles, land uses, and terms shall be the same as provided in the City of Ontario Development Code (hereafter referred as "Development Code"), unless otherwise specifically defined in this Specific Plan.

5.3 Applicability

The regulations set forth in this Chapter shall apply to all development plans or agreements, tract or parcel maps, site plans, or any other action requiring administrative or discretionary approval within the approximately 189-acre Eucalyptus Business Park Specific Plan area. If the development standards contained herein differ from those contained in the Ontario Development Code, the provisions of this Specific Plan shall take precedence. Any development standard, condition, or situation not specifically addressed herein shall be subject to the applicable requirements of the Ontario Development Code.

5.4 Permitted, Conditionally Permitted, and Administratively Permitted Uses

Land within the Eucalyptus Business Park Specific Plan area and structures/facilities thereon may be developed, divided, and/or used for those activities listed in Table 5-1, *Permitted Land Uses*. Table 5-1 lists the permitted, conditionally-permitted, and administratively permitted land uses for each land use district established by this Specific Plan (Business Park and Open Space – Parkland). A use that is not listed in Table 5-1 is a prohibited use unless otherwise allowed pursuant to the procedures described in Chapter 7, *Implementation Plan*, or through applicable interpretations and determinations established by the Development Code.

The Specific Plan area is located within the Chino Airport (CNO) AIA. The San Bernardino County Comprehensive Land Use Plan for Chino Airport was adopted in 1991 and does not reflect guidance set forth in the 2011 Caltrans Airport Land Use Planning Handbook. As such, in 2022, the City of Ontario adopted the CNO Overlay District which provides maps, criteria, and policy language to guide development within the Chino AIA consistent with the 2011 Caltrans Airport Land Use Planning Handbook. The majority of the Specific Plan area is located within CNO Safety Zone 6 (low risk), with a very small portion of the southeastern corner located within Safety Zone 4 (moderate risk).

Development shall be consistent with the policies and criteria of the CNO ALUCP and may have additional development restrictions that include building heights, land use restrictions, Floor Area Ratio (FAR) limitations and Open Land Criteria. Refer to the Chino ALUCP for additional development regulations.

The symbols shown in Table 5-1 have the following meanings:

"P" – the land use is permitted by right, subject to the development standards applicable to that land use district.

"C" – the land use is conditionally permitted, subject to the filing of a Conditional Permit in accordance with the requirements of the Ontario Development Code and must be approved by the City of Ontario Zoning Administrator or Planning Commission before the use can be established within a particular land use district.

"A" – the land use is administratively permitted, subject to the filing of an Administrative Use Permit in accordance with the requirements of the Ontario Development Code.

Table 5-1 Permitted Land Uses

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Agriculture, Forestry, Fishing, Hunting			
Temporary and interim agriculture uses	P	P	Restricted to existing legally established agriculture and dairy uses.
Manufacturing			
Aerospace	P	--	
Alcoholic beverage manufacturing (breweries, wineries, distilleries, and related tasting room)	C	---	
Apparel	P	---	
Automotive	P	--	
Boutique/artisan small-scale and micro manufacturing facilities	P	---	Includes all types of small-scale businesses that produce tangible goods, such as textiles, hardware and hardware prototyping, woodworking, metal working, 3D printing, consumer product design and prototyping, nonalcoholic beverage, local food production and packaging, soaps, perfumes, and lotions.
Computer and electronic products	P	---	

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Electrical equipment, appliances, and components	P	---	
Food	P	---	Including bread, tortilla, snack foods, roasted nuts, coffee and tea, spice and extract, and other miscellaneous food manufacturing)
Footwear	P	---	
Furniture and related product manufacturing	P	---	
Leather and allied product	P	---	
Miscellaneous manufacturing	P	---	Includes medical equipment and supplies; jewelry and silverware; sporting and athletic goods; dolls, toys and games; office supplies; signs; and other miscellaneous manufacturing.
Painting, Powder Coating and Polishing Metal and Metal Products for the Trade	C	--	Activities are restricted to within a fully enclosed building.
Pharmaceuticals and medicines	C	---	
Plastic product manufacturing	P	---	
Printing and related support activities	P	---	
Textile product mills	P	---	Activities are restricted to within a fully enclosed building.
Wholesale Trade			
Automotive parts and accessories (excludes automotive repair)	P	---	
Business to business electronic markets	P	---	Includes sale of goods such as household goods, computer parts, clothing,

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
			food, office supplies, and other tangible goods.
Durable and nondurable goods agents and brokers	P	---	Agent and brokers that facilitate wholesale transactions of tangible goods for manufacturers and buyers
Furniture and home furnishings	P	---	
Group purchasing organizations	P	---	Entities that aggregate purchasing volume for businesses to negotiate discounts, rebates, and better contract terms with suppliers.
Hardware and plumbing, and heating equipment and supplies	P	---	
Household appliances and electrical and electronic goods	P	---	
Merchant wholesalers, nondurable goods	P	---	Excludes industrial gases, petroleum bulk stations and terminals, and fireworks and explosives.
Miscellaneous durable goods	P	---	Includes musical instruments, prerecorded compact discs and digital video discs, and timber and timber products.
Motor vehicle parts and supplies	P	---	
Professional and commercial equipment and supplies	P	---	Includes wholesale distribution of durable goods designed for business, industrial, or professional use, including medical, photographic, office, and computer equipment.
Sporting and recreational goods and supplies	P	---	Sales of firearms will require an approved CUP.

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Toy and hobby goods and supplies	P	---	
Jewelry, watches, precious stones, and precious metals	P	---	
Retail Services			
Automated fueling stations ("card lock" facilities)	P	---	
Automobile, light truck and van body, paint, and interior repair and customization	C	---	
Automobile, light truck and van repair and maintenance	C	---	
Batting cages – indoor	C	---	
Cafeterias and buffets[1]	P	---	Outdoor dining areas, both temporary and permanent, which are provided in addition to seating areas approved with the development of a building, may be permitted, subject to the approval of an Administrative Use Permit.
Convenience stores[1]	P	---	Gross floor area shall not exceed 10,000 sq. ft. for a single building.
Fitness and recreational sports centers (limited to health clubs and gyms, fitness and sports training facilities, tennis club, swim clubs and other activities and facilities) • GFA less than 10,000 SF	P	---	
Fitness and recreational sports centers (limited to	C	---	

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"

health clubs and gyms, fitness and sports training facilities, tennis club, swim clubs and other activities and facilities) • GFA 10,000 or more SF			
Full-service restaurants[2]	P	---	Outdoor dining areas, both temporary and permanent, which are provided in addition to seating areas approved with the development of a building, may be permitted, subject to the approval of an Administrative Use Permit.
Gasoline stations with convenience stores[1]	C	---	
Home and garden equipment and appliance repair and maintenance	P	---	
Industrial retail sales (limited to the ancillary sales of goods and/or product either manufactured, warehoused, or wholesaled on-site) • ≤ 8,000 SF	P	---	
Industrial retail sales (limited to the ancillary sales of goods and/or product either manufactured, warehoused, or wholesaled on-site) • > 8,000 SF of building GFA	C	---	
Limited-service and fast food restaurants	P	---	Outdoor dining areas, both temporary and permanent, which are provided in addition

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
			to seating areas approved with the development of a building, may be permitted, subject to the approval of an Administrative Use Permit. Restaurants that includes a drive-through shall require a CUP.
Other Personal and Household Goods Repair and Maintenance -- Without Retail Sales (limited to garment alteration and repair, jewelry repair, key duplicating, musical instrument repair and tailor shops)	P	---	
Reupholsters and furniture repair	P	---	
Self-serve and full-service gasoline stations[1]	C	---	
Automotive servicing facilities (limited to retail-oriented services, such as emissions testing, battery replacement and other similar retail activities that involves the limited use of pneumatic tools or equipment that create noise impacts)	P	---	
Simulated racing (limited to go-carts, radio-controlled vehicles, and other similar facilities)	C	---	

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Snack and nonalcoholic beverage bars[1]	P	---	Outdoor dining areas, both temporary and permanent, which are provided in addition to seating areas approved with the development of a building, may be permitted, subject to the approval of an Administrative Use Permit.
Vending machine operators (retailing of merchandise through vending machines, as an ancillary business activity, within a fully enclosed building)	P	---	
Transportation & Warehousing			
Couriers and messengers	P	---	
Data center	C	---	
General warehousing and storage within a wholly enclosed building	P	---	
Fulfilment Center	P	---	
Outdoor materials and equipment storage in conjunction with an allowed use	C	---	
Package and Parcel Sorting and Delivery	P	---	Sorting facilities that direct packages to their final destination.
Parking lots and parking garages in conjunction with allowed uses	P	---	
Physical records, digital assets, and media archives storage	C	---	
Plug-In Electric Vehicle (PEV) Charging Facilities	P	---	
Postal service	P	---	

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Indoor Vehicle Storage	P	---	
Outdoor Vehicle Storage	C	---	
Professional, Scientific, Tech. Services			
Broadcasting (except internet)	P	---	
Business support services	P	---	Includes consulting, administrative tasks, IT support, and financial management.
Depository credit intermediation	P	---	Limited to commercial banking, savings institutions, and credit unions.
Financial transactions processing and clearinghouse activities	P	---	Establishments that facilitate electronic funds transfers, check clearing, credit card processing, and managing reserves, excluding central bank activities.
Management of companies and enterprises	P	---	
Motion picture and video industries	P		Includes production, distribution, and exhibition of films, television programs, and commercials.
Newspaper, periodical, book, and directory publishers	P	---	
Personal fitness trainer	P	---	
Physicians and dentists, other health practitioners, outpatient centers, laboratory testing services, home healthcare services, and community clinics	P	---	
Religious organizations	C	---	
Scientific research and development services	C	---	
Software publishers	P	---	

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
Sound (audio) recording facilities	P	---	
Telephone answering services and call centers	C	---	
Construction			
Contractors (limited to businesses whose primary activity is performing specific activities involving in construction, engineering and capital improvement projects, or preparation of sites for construction)	P	---	Permitted by right if completely within a building. Conditional use permit required if outdoor storage is provided.
Prefabricated construction assembly	P	---	
Government Offices			
Executive, legislative, and other general government support	P	P	
Fire protection (stations and substations)	P	P	
Police protection (stations, substations, and storefront facilities)	P	P	
Publicly operated animal resource center	P	P	
Arts, Entertainment and Recreation			
Open space and park lands (publicly owned facilities)	---	P	
Other Uses			
Electric Power transmission, control and distribution	P	P	Restricted to only publicly owned utility stations.
Telecommunication facilities	C	---	
Temporary and interim buildings, structures,	A	A	

Use Legend: Permitted Use = "P" Conditional Use = "C" Administrative Use = "A" Prohibited Use = "---"			
Use	Business Park (PAs 1-6)	Open Space – Parkland (PAs 7-9)	Notes
and facilities (fewer than 5 years)			
Temporary and interim buildings, structures, and facilities (5 to 10 years)	C	C	
Self-storage facilities	P	---	
Note: 1. Uses are considered as commercial uses within the Eucalyptus Business Park Specific Plan area. The total combined square footage of the commercial uses shall not exceed 10,000 SF.			

5.5 Business Park Development Standards

The following development standards establish the development criteria that shall apply within the Business Park land use district of the Eucalyptus Business Park Specific Plan. The Specific Plan area is located within the Chino Airport Safety Zones that may limit building height, land uses, and FAR based on the proposed land use, and requires open land. Refer to the Chino Airport Land Use Compatibility Plan for additional land use restrictions. For standards that are silent in this Specific Plan, the applicable standards contained within the City's Development Code shall apply.

Table 5-2 Development Standards

Site Requirements	
	BP
Minimum lot size	1.0 acre
Maximum floor area ratio *(calculated on a Planning Area by Planning Area basis)*	0.55
Minimum lot width dimensions	100 ft
Minimum lot depth dimensions	100 ft
Maximum building footprint	560,000 SF
Maximum Building Height[1]	60 ft
Maximum Building Height (lots adjoining Public Street 'A')[1]	50 ft
Overall minimum landscape coverage (landscaping shall include plantings (trees, shrubs, groundcovers, vines) and trellises.)	13%[2,3]
Minimum truck court depth (measured from dock door perpendicularly to property line)	120 ft

Notes:

1. Maximum building height shall also adhere to the Chino Airport height constraints.
2. The Overall Minimum Landscape Coverage shall be determined based on the net total acreage of all parcels in the same phase of development. The minimum landscape coverage requirement shall not apply on a planning area by planning area or parcel by parcel basis.
3. The architecture of buildings shall be thoughtfully designed and create a cohesive project with the landscape design of the project.
4. Up to 15% of a parcel's square footage is permitted to encroach into an adjacent planning area, as long as both areas share the same land use designation

Table 5-3 Minimum Building and Parking Setback Requirements

	BP
Minimum setbacks from property line[1]	
Eucalyptus Avenue	25 ft
Public Street 'A'	20 ft
Campus Avenue	10 ft
Bon View Avenue	10 ft
Grove Avenue	20 ft
Walker Avenue	20 ft
Minimum side yard interior property line setbacks	
Building	5 ft
Drive aisles, passenger cars and truck parking	5 ft
Screened loading and storage yards (inclusive of passenger cars and truck parking within the screened loading and storage area)	0 ft
Minimum rear yard setback	0 ft

Notes:

1. ADA accessible pathways are permitted to encroach into setback areas to provide a path of travel.

Table 5-4 Minimum Drive Aisle and Parking Space Separation Requirements

	BP
Adjacent to building office elements	10 ft
Adjacent to building wall or screen wall/fence, and not within a screened/enclosed yard	5 ft

Adjacent to building wall or screen wall/fence, and within a screened yard	0 ft

Table 5-5 Parking Space Requirements

Use	Required Space
Wholesale Trade	2.5 spaces per 1,000 SF
Retail Services	4 spaces per 1,000 SF
Full-Service Restaurant	10 spaces per 1,000 SF
Fast Food Restaurants	13.3 spaces per 1,000 SF
Professional, Scientific, Tech. Services	4 spaces per 1,000 SF
General Business Offices	4 spaces per 1,000 SF
Manufacturing[1,2]	1.85 spaces per 1,000 SF gross floor area (GFA)
Warehousing and Distribution[1,2]	Portion of GFA ≤ 20,000 SF: 1 space per 1,000 SF Portion of GFA > 20,000 SF: 0.5 space per 1,000 SF Tractor trailer parking space: 1 space/4 dock-high doors
General Industrial[1,2]	Portion of GFA < 50,000 SF: 1.85 spaces per 1,000 SF Portion of GFA ≥ 50,000 SF and < 100,000 SF: 1 space per 1,000 SF Portion of GFA ≥ 100,000 SF: 0.5 space per 1,000 SF Tractor trailer parking space: 1 space/4 dock-high doors
Business Park[1,2]	3 spaces per 1,000 SF Tractor trailer parking space: 1 space/4 dock-high doors

Notes:

1. Parking for "general business offices" and other associated uses shall be provided when those uses exceed 10% of the building GFA.
2. The Specific Plan permits a blended parking ratio for Business Park buildings to accommodate varying proportions of business park, general industrial, warehouse, distribution, and/or support office functions. The Planning Director may approve modifications to the blended ratio during the Development Plan review process based on operational characteristics, provided parking meets or exceeds the parking requirements in Table 5-5, *Parking Space Requirements*.
3. Parking stalls along the landscape edge are required to provide a landscape finger every 15 stalls.

5.5.1 Other Development Standards

1) Loading docks and truck parking areas shall be visually screened from Campus Avenue, Bon View Avenue, Grove Avenue, Walker Avenue, and Public Street 'A' by walls and landscaping features.

2) The outdoor storage of materials and equipment shall be permitted ancillary to the land uses allowed pursuant to Table 5-1. Outdoor loading and storage areas and loading doors shall be screened from view from public streets by concrete or masonry walls and landscaping. Any gates shall be lockable. Such walls and landscaping used as screening shall be a minimum eight feet (8') in height and shall be of sufficient height to screen all outdoor materials and equipment, tractors and trailers, and loading doors from view of public streets. A line of sight study shall determine the required height(s) of the screen walls. The storage of outdoor materials shall not exceed the height of the screen walls as measured from the interior side of the walls.

3) Ground- and roof-mounted exterior mechanical equipment, heating and ventilating, air conditioning, tanks, and other mechanical devices shall be of an architecturally compatible design with the primary structure and screened when visible to the public.

4) Exterior lighting fixtures shall be downward directed. Pole-mounted lights shall be shielded with the light source oriented to not directly face public streets and/or adjacent properties.

5) All manufacturing and processing activities shall be conducted within a wholly enclosed building.

6) The following open land and occupancy limit requirements shall apply within the Chino Airport Safety Zone, as approved by the City of Ontario City Council. Qualifying open land is land free of most structures and other obstacles such as walls, large trees or poles, and overhead wires. The minimum dimensions of the open space area shall be 75 feet by 300 feet. Additional open space requirements shall adhere to the provisions provided within the Ontario Development Code.

7) The Specific Plan area is located in the Airport Influence Area (AIA) established by the Ontario International Airport Land Use Compatibility Plan (ONT ALUCP) and the Chino Airport Safety Zone established by the provisions within the Chino Airport Overlay zoning district. All development in the Eucalyptus Business Park Specific Plan area shall be subject to the mandatory requirements and standards of those applicable ALUCP and the Ontario Development Code, or in the absence of an adopted ALUCP and Development Code, the California Airport Land Use Planning Handbook. Given the close proximity of the Specific Plan area to the Chino Airport, developers within the Specific Plan area shall consult and coordinate with Chino Airport agencies and City staffs during the planning and design stage to ensure development plans accommodate applicable safety restrictions. The entire Specific Plan area is impacted by the Chino Airport; developers within the Specific Plan area shall consult and coordinate with City staff, Chino Airport, and FAA during the planning and design stage to ensure that development plans and right-of-way street improvements do not create any hazards and comply with the California Airport Land Use Planning Handbook published by the Caltrans Division of Aeronautics and the Chino ALUCP, Reference I of the Ontario Development Code.

5.6 Open Space-Parkland Development Standards

The Eucalyptus Business Park Specific Plan is comprised of approximately 35.88 acres of Open Space – Parkland land uses, which is planned as part of for a larger public regional park. The developer and the City of Ontario will work together to ensure the regional park will be constructed concurrently with the build out of the Business Park portion of the Specific Plan. The details of the partnership will be included in the Development Agreements accompanying the approval of the Eucalyptus Business Park Specific Plan.

CHAPTER 6

DESIGN GUIDELINES

6.1 Purpose and Intent

The design guidelines presented in this chapter describe the quality and character of the built environment expected for the Eucalyptus Business Park Specific Plan area. While the design guidelines provide direction, they are meant to provide a certain level of flexibility to allow creative expression during the design of implementing development projects.

The Eucalyptus Business Park Specific Plan area's visual identity will be expressed through attractive building architecture with quality materials, landscape, hardscape, and signage elements. The design guidelines contained herein are primarily focused on the business park planning areas and are presented in a manner that ensures consistent architectural expression from building to building, while allowing flexibility in modern-day building design.

The objectives of these Design Guidelines are as follows:

- To provide the City of Ontario assurance that the Eucalyptus Business Park Specific Plan area will develop in accordance with the quality and character described within this Specific Plan.
- To provide guidance to developers, builders, engineers, architects, urban planners, landscape architects, and other professionals to achieve and maintain the desired design quality.
- To provide an aesthetic benchmark for City staff, the Planning Commission, and the City Council in their review of the design of future development projects in the Specific Plan area.
- To provide guidelines that steer the Eucalyptus Business Park to convey a contemporary aesthetic theme and character while allowing flexibility for practical application and creative expression.
- To provide guidelines for energy and water use efficiency that can be implemented in the site planning, design, and construction of implementing development projects to minimize waste deposited at landfills, decrease fossil fuel consumption, and reduce domestic water consumption.
- To ensure that the Specific Plan implements the intent of The Ontario Plan and the City's Development Code.

The Design Guidelines presented herein apply to all development within the Business Park Planning Areas within the Eucalyptus Business Park Specific Plan area.

6.2 Parkland Guidelines

The City's vision for the Grand Park has been outlined in the Ontario Grand Park Conceptual Master Plan. All future improvements within the Grand Park including monumentation, signage, trails, landscaping, etc. shall be designed to be consistent with the Ontario Grand Park Conceptual Master Plan to ensure a consistent implementation of the City's vision. Improvements within the Grand Park shall be approved as part of the development

plan for the respective planning area of the EBPSP.

6.3 Business Park Design Theme

Planning Areas 1-6 are envisioned as a contemporary business park containing buildings that are grouped and arranged in campus-like settings. The business park areas will provide businesses with easy access to regional transportation networks, proximity to workers, and proximity to major ports and airports.

The theme features a contemporary design aesthetic, drawing on the ranch heritage of the area, which provides architectural styling with attractive detailing, visually-interesting accents, and timeless features. Developments within the business park area will provide architecturally compatible sign design, directed lighting, colorful and drought-tolerant landscaping, and energy efficient design features. Functional elements like loading areas will be oriented inward with attractive building façades facing outward toward the public streets. Generous landscaped zones along these frontages will enhance both the visual appeal and functionality of the circulation system.

6.4 Business Park Architecture Guidelines

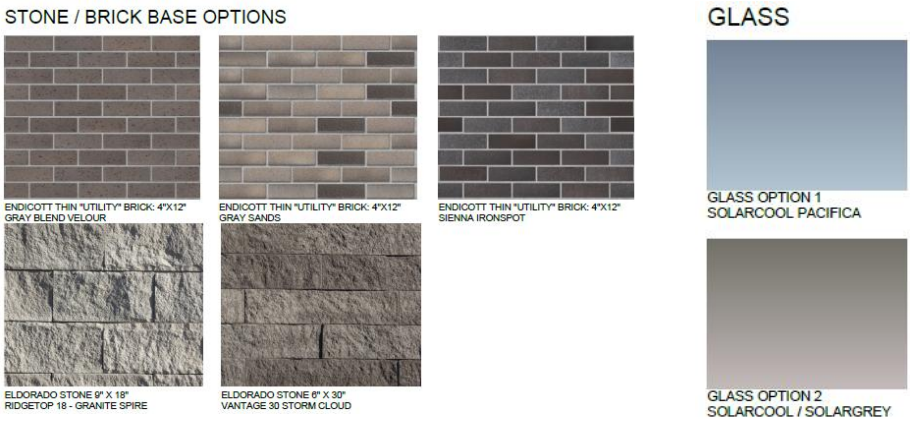
This section sets addresses the architectural design of buildings in Planning Areas 1-6.

6.4.1 Architectural Theme

The architectural style of buildings in the business park areas emphasizes building massing over structural articulation. Buildings are characterized by simple and distinct cubic masses with interlocking volumes of wall planes, colors, and materials to create visual appeal. Additionally, architectural designs may mix colors, materials, and textures to articulate façades and create visual appeal.

Design elements are selected to ensure compatibility in character, massing, detailing, and exterior materials, reinforcing the aesthetic of the intended contemporary

Conceptual Building Architecture



Conceptual Building Materials

design. While individual creativity and identity of individual buildings are encouraged, all buildings and planning areas are intended to maintain design integrity and compatibility to reinforce a cohesive image and campus-like setting throughout the Specific Plan area

6.4.2 Building Form

Building form is a fundamental aspect of architectural design, defined by elements such as shape, mass (size), scale, proportion, and articulation. Building façades visible from public roads require careful attention but even building façades not visible from public roads

or publicly accessible areas are encouraged to follow the building form guidelines listed below.

The following guidelines apply to all business park buildings to promote a visually cohesive, attractive, and welcoming environment:

1) Simple geometric shapes shall be used as the overall building form. Rectangular forms are preferred, as they provide visual balance and interest. Avoid overly complex or arbitrary building shapes.

2) Long horizontal wall surfaces facing public streets shall incorporate regular or periodic changes in exterior materials, color, decorative accents, or architectural details to add visual interest.

3) Varying the size and shape of building masses between neighboring buildings visible from public streets is encouraged.

4) Buildings abutting and facing Public Street 'A' are encouraged to have varied setback distances to provide a visually interesting and attractive street frontage.

5) Make primary pedestrian entrances to buildings (with the exception of service doors and emergency exit doors) clearly and easily identifiable through changes in massing, color, and/or building materials. Entries intended for visitors and the general public should be recessed or covered by architectural projections, roofs, or arcades to provide shade and a welcoming effect.

6) Architectural and trim detailing on building façades shall be clean, simplistic, and not overly complicated.

7) Materials applied to exterior wall elevations shall turn the corner of the building to a logical termination point in relation to architectural features or massing.

8) Provide enhanced building corner and entrance design to create visual anchors that help define the building's identity.

6.4.3 Building Materials, Colors, and Textures

Building materials and colors play a pivotal role in developing a clean, contemporary visual environment. The following guidelines apply to all business park buildings within the Eucalyptus Business Park Specific Plan area, with slight variations encouraged to provide visual interest.

1) Primary exterior building materials shall include concrete and similar materials. The primary materials should be accented by secondary materials including but not limited to natural or fabricated stone, fire resistant or synthetic wood siding (horizontal or vertical), metals, or similar materials.

2) Trim details may include metal finished in a uniform color, plaster, or concrete elements finished consistently with the building treatment. Use of overly extraneous themed detailing, like oversized or excessive foam cornice caps, foam moulding and window detailing is discouraged.

3) Material transitions should occur at intersecting planes, preferably at inside corners where wall planes change, or at points where architectural elements meet.

4) Primary exterior building colors should be light earth and gray tones. Darker and/or more vibrant accent colors may be used strategically in focal point areas, such as around building entrances and outdoor gathering spaces.

5) The use of bright primary colors, overly bold color applications, and arbitrary color patterns that clash with the established business park color palette are discouraged, except in signage and logos.

6) Colors of exposed downspouts (only permitted if not in public view), service doors, and mechanical screens shall be the same color as the adjacent building wall.

7) If downspouts are needed in areas of public view, they shall be designed as internal downspouts.

8) Provide contrasting materials at corners and vehicle entrances to visually enhance the focal points of the buildings.

6.4.4 Windows and Doors

Patterns of window and door openings shall correspond with the overall design of the building and shall be consistent in form, pattern, and color. The following windows and doors guidelines apply to business park buildings.

1) Where feasible, doors and windows on individual building façades should be arranged in a symmetrical and repetitive pattern to promote visual continuity.

Conceptual Windows and Doors

2) Window styles and trims shall be consistent in form and color within each planning area. All window trims on a given building should share a uniform finish.

3) Unfinished or untreated metal frames and gold-colored frames for windows and doors are not permitted. Clear silver anodized frames are acceptable.

4) Glass should be clear or lightly tinted with subtle reflectivity. Highly reflective or silver-tinted glass is not allowed.

5) All windows/glass and doors shall be inset to rear of wall/panel to add interest and provide shadow lines.

6.4.5 Rooftop Equipment Screening

Equipment and apparatuses placed on the roofs of business park buildings are expected to be screened from public view.

1) All rooftop mechanical, electrical, and communication equipment shall be fully screened from view from adjacent public streets. Solar photovoltaic (PV) panels and associated technologies may be visible from public review if full screening of the PV system is not feasible.

2) Screening elements shall be architecturally integrated with the building design in terms of form, materials, and color. Building parapets is the preferred method of screening but where parapets are not feasible, mechanical screens may be used

Conceptual Building Corner Elevation Rendering

but must appear as a natural extension of the building's architecture. Screening elements shall be of a uniform height, color, and texture on a building sufficient to conceal all rooftop equipment from view from adjacent public streets.

3) Rooftop equipment should be placed away from roof edges to minimize visibility and reduce the height of required screening.

4) All conduits, piping, and utility lines associated with rooftop equipment shall be concealed from public view from adjacent public streets.

5) Building roofs shall be designed to support the installation of solar photovoltaic (PV) panels and associated technologies.

6.5 Business Park Site Feature Guidelines

6.5.1 Parking and Loading Areas

Areas serving commercial vehicles such as loading dock areas and truck courts are essential for the efficient operation of business park facilities, providing access for loading, unloading, and freight movement. However, due to their scale and activity levels, these areas can present conflicts with other functions if not properly design and screened. Below are design expectations for the effective screening and use of loading docks and truck courts.

1) Business park buildings fronting Public Street 'A' shall not include loading docks on any façades facing that street.

2) Commercial vehicle loading doors, service docks, and outdoor equipment areas shall be oriented or screened to minimize visibility from public roads through the use of solid walls and dense landscaping. Screening for this purpose shall be a minimum of 8 feet. A line of sight study will determine max height required.

3) Loading and unloading activities by commercial vehicles and trucks are prohibited from occurring on or being visible from public streets.

4) Sufficient queuing space shall be provided in front of security gates to prevent commercial vehicles and trucks from stacking or idling on public streets while waiting to enter.

5) Driveway entrances for trucks and service vehicles shall be separated from passenger vehicle traffic, pedestrian pathways, and bicycle routes where possible.

6) Conduit should be installed within truck courts in logical, accessible locations to accommodate the future addition of electric truck charging stations, anticipating advances in zero-emission vehicle technology during the lifespan of the business park.

7) Passenger car parking lots within business park sites shall provide landscaping that consist of shade trees and parking finger islands.

8) Trees and parking fingers are not required in truck courts, unless required to meet the landscape coverage requirements.

6.5.2 Outdoor Employee Amenity Areas

The business park is expected to offer a wide variety of job opportunities. For the comfort of employees, outdoor employee amenities are encouraged throughout the business park area.

1) Outdoor break areas for employees may be conveniently located and accessible to each business park building and

Conceptual Employee Amenity Areas

positioned away from or screened from loading zones, trash enclosures, or other utilitarian functions. Break areas may serve one building or be shared among multiple buildings.

2) In outdoor break areas, shade structures such as canopies, trellises, or umbrellas are encouraged to be provided to shade and protect users from direct sun and light rain. Outdoor break areas are encouraged to provide weather-resistant seating and tables, including a mix of options (e.g., individual benches, larger tables, etc.) to accommodate different group sizes and preferences.

3) Use of outdoor break areas shall be encouraged by including features such as early morning and evening decorative lighting, outdoor power outlets, decorative paving, and decorative features.

4) Bicycle racks shall be provided at each building or in a common area that serves multiple buildings. Outdoor bike racks shall be secure, well-anchored, and placed in well-lit areas with passive surveillance, such as security cameras, to enhance safety.

6.5.3 Outdoor Equipment Placement

Ground-mounted and wall-mounted utilitarian equipment is expected to be needed to support business park building operations. The following guidelines are aimed at proper placement.

1) Ground-mounted equipment, including but not limited to mechanical and electrical systems, emergency generators, boilers, storage tanks, risers, and conduits should be placed out of public review or be screened from public view, particularly from adjacent public streets and other publicly accessible areas.

2) Electrical equipment rooms should be located within the building envelope. External projections, such as pop-outs or shed-like structures, are discouraged.

3) Wall-mounted equipment should not be installed in visually prominent locations on building façades that face public roads or areas with high visibility. Such equipment should either be screened from view or integrated into the building's architectural design to minimize visual impact.

6.5.4 Trash Enclosures

Thoughtfully designed trash enclosures are essential components of a well-functioning and visually cohesive business park. These facilities serve a critical operational role while also contributing to the overall aesthetic and environmental quality of the development. The following guidelines are intended to ensure that trash and recycling enclosures are secure,

functional, and architecturally integrated into the site design.

1) All outdoor refuse containers shall be screened within a permanent, lockable and durable enclosure and should be oriented so they are not visible from public roads/views. The enclosure's design shall reflect the architectural style of adjacent buildings and use similar, high-quality materials.

2) Refuse collection areas shall be located behind or to the side of buildings, away from the building's main entrance and public view.

3) Design and placement of trash enclosures shall meet Integrated Waste Department requirements, including the requirements for Sizing of Storage, Location of Collection Area, Accessibility for Collection Vehicles, and Collection of Sorted/Diverted Waste Types.

4) Trash enclosures shall include green waste/organics and recycling collection bins.

Conceptual Trash Enclosure

6.5.5 Walls and Fences

Freestanding walls and fences play an important role in defining property boundaries, providing security, and screening service areas within a business park. To maintain a cohesive and high-quality visual environment, these elements must be thoughtfully designed to complement the architectural character of adjacent buildings and the overall site design. The following guidelines address the placement, height, materials, and appearance of freestanding walls and fences to ensure they are both functional and visually integrated.

1) Walls and fences shall be designed to complement the architectural style, colors, and materials of adjacent buildings. A consistent design theme for fencing and walls shall be maintained throughout the business park area to ensure a cohesive appearance across parcels and tenant spaces.

2) Walls and fences visible from public roads or pedestrian areas should include enhanced design treatments, such as pilasters, decorative caps, or decorative patterns, to reduce visual monotony.

3) High-quality, durable materials shall be used such as decorative block or concrete with textured or finished surfaces. Chain link fencing cannot be used where visible from the public view.

4) Walls and fences shall be designed for long-term durability and ease of maintenance. Finishes should be resistant to graffiti and weathering.

5) Where walls or fences are located at major public road intersections or project entries, special design attention should be given to include gateway features or architectural detailing.

6) Walls and fences used for security purposes should balance safety with aesthetics. Walls and fences in public view should be built with attractive, durable materials.

6.6 Energy Efficiency Guidelines

This Eucalyptus Business Park Specific Plan promotes sustainable development practices that align with California's long-term environmental goals and energy efficiency standards. These guidelines are intended to encourage the thoughtful integration of energy-efficient design, construction, and operational strategies throughout the business park. By reducing energy consumption, lowering greenhouse gas emissions, and supporting the use of renewable technologies, these standards not only minimize environmental impacts but also contribute to long-term cost savings and improved building performance for tenants and property owners. The following guidelines apply to all new construction, major renovations, and site improvements within the Specific Plan area.

1) All new construction and major renovations shall meet or exceed the requirements specified in the California Green Building Standards Code (CALGreen Code) and Title 24 energy efficiency requirements.

2) High-performance insulation, cool roofing materials, energy-efficient windows, and air-tight construction is encouraged to exceed CALGreen Code standards to minimize thermal loss and reduce HVAC demand.

3) LED lighting or equivalent shall be used for all interior and exterior applications.

4) Use of ENERGY STAR® certified appliances and daylight sensors, motion detectors, and programmable timers on lighting fixtures are encouraged to minimize unnecessary energy use.

5) Skylights are encouraged on at least 1% of building rooftops above storage spaces to reduce the need for artificial light.

6) Installation of smart thermostats and automated energy management systems are encouraged to improve heating, cooling, and ventilation efficiency.

7) Building roofs shall be designed to accommodate solar photovoltaic (PV) systems. Associated battery storage systems are encouraged as feasible to support energy resilience and reduce peak load.

8) Electric Vehicle (EV) charging stations and infrastructure for expansion is encouraged to exceed CALGreen Code standards.

9) Building tenants shall use zero-emission equipment for building operations involving goods movement, such as forklifts and yard hostlers.

10) Implementing projects shall follow the City of Ontario Climate Action Plan (CCAP) Screening Table Measures to achieve a minimum of 100 points per the Screening Table.

6.7 Lighting Guidelines

Outdoor lighting is an essential architectural component that provides aesthetic appeal, enhances safe pedestrian and vehicular circulation, and adds to security. Lighting within the public rights-of-way shall adhere to applicable City of Ontario requirements. All other lighting on private property within the Specific area shall adhere to the following guidelines.

1) Minimize glare and "spill over" light onto public streets and adjacent properties by

using downward-directed lights and/or cutoff devises on outdoor lighting fixtures, including spotlights, floodlights, electrical reflectors, and other means of illumination for signs, structures, parking, loading, unloading, and similar areas. Where desired, illuminate trees and other landscape features by concealed up light fixtures. Limit light spillover or trespass to one-quarter foot-candle or less, measured from within five feet of any adjacent property line.

2) Select all lighting fixtures from the same or complementary family of fixtures with respect to design, materials, fixture color, and light color. Use of LED lighting is encouraged.

3) Lights should be unbreakable plastic, recessed, or otherwise designed to reduce the problems associated with damage and replacement of fixtures.

4) Neon and similar types of lighting are prohibited.

5) Locate all electrical meter pedestals and light switch/control equipment in areas with minimum public visibility or screen them with appropriate plant materials.

6) Along sidewalks and walkways, the use of low mounted fixtures (ground or bollard height), which reinforce the pedestrian scaled, are encouraged.

7) Use exterior lights to accent building entrances, plazas, activity areas, and special features.

8) Provide lighting to illuminate parking lots and their pedestrian links that provide more than five parking spaces for use by the general public.

9) Provide lighting to illuminate aisles and passageways within a building complex.

10) High-Pressure Sodium (HPS) light fixtures are prohibited for site lighting.

11) Lighting is prohibited that could be mistaken for airport lighting or that would create glare in the eyes of pilots of aircraft using the nearby Chino Airport or Ontario International Airport.

6.8 Signage Guidelines

Signage will identify building occupants in the business park area and ensure the efficient circulation of vehicle traffic by identifying vehicular entry points and directing vehicles to their on-site destinations. Also, signage will enhance the pedestrian experience through wayfinding component such as directories, directional signage, and destination identifiers. A Sign Program shall be approved by the City for the Specific Plan area prior to any sign being installed within the Specific Plan area.

Clear, concise, and easy-to-understand signage that is also visually appealing is vitally important for positive worker and visitor experiences in the Specific Plan area. General design requirements for signage are as follows:

1) Freestanding signs associated with buildings should be compatible with and complementary to the building's exterior materials, colors, and finishes.

2) The dimensions and shape of free-standing signs and sign panels or elements mounted on building façades or marquees shall be scaled proportionately to the architecture.

3) All signs shall be contained within the parcel to which it is applicable and shall be so oriented as to preclude hazardous obstructions to person and/or vision of pedestrians and/or vehicle operators.

4) Building occupant identification signage shall be in keeping with the character

established for the Specific Plan area with variations allowed to accommodate individual user identities/corporate branding standards.

5) All signs are expected to be of the highest quality to pass eyelevel examination and scrutiny, and shall comply with the following fabrication specifications:

    a. Signs should be constructed to eliminate burrs, dents, cutting edges and sharp corners;

    b. Surfaces which are intended to be flat should be without dents, bulges, oil canning, excessive, gaps, or other physical deformities;

    c. All fasteners shall be concealed;

    d. Access panels shall be tight-fitting, light-proof and flush with adjacent surfaces;

    e. Manufacturers' procedures that are recommended regarding expansion/contraction, fastening and restraining of acrylic plastic shall be followed; and

    f. Painted, polished and plated surfaces shall be unblemished in the finished work.

6) Prohibited sign components include the following:

    a. Letters with exposed fastening and unfinished edges (unless architecturally consistent);

    b. Paper, cardboard, Styrofoam or untreated cloth;

    c. Visible moving parts or simulated moving parts by means of fluttering, rotation, or reflecting devices; and

    d. Flashing and strobing.

7) All conductors, transformers, cabinets, housing, and other equipment for the illumination of signs shall be concealed and/or incorporated into the building architecture.

8) Signs shall be constructed so as to not have exposed wiring, raceways, ballasts, conduit, transformers, or the like.

9) Direction signs may be located at any vehicular or pedestrian decision point.

10) Vehicular direction signs shall clearly direct to destination anchors within the Specific Plan area, on-site parking areas, and truck routes.

Conceptual Building Signage

Conceptual Signage Renderings

11) Vehicular direction signs shall be consistent in size, shape, and design throughout the Specific Plan area.

12) Typography on vehicular direction signs should be legible and have enough contrast to be read from an appropriate windshield viewing distance.

13) Typography on vehicular direction signs should be legible and have enough contrast to be read from an appropriate windshield viewing distance.

14) All direction signs and general information signs (e.g., restrooms, telephones, fire extinguishers, elevators, escalators, stairs) throughout the Specific Plan area shall incorporate the appropriate identity symbol as established by the Society of Environmental Graphic Design (SEGD) and comply with all State, local and federal regulations.

15) All traffic control signs, whether on public or private property, shall conform to the California Manual on Uniform Traffic Control Devices (MUTCD).

16) All signage shall comply with the City of Ontario Development Code's Sign Regulations.

6.9 Landscape Guidelines

Landscape design guidelines provided herein establish landscape principles and standards that shall apply to all planning areas within the Eucalyptus Business Park Specific Plan area. The intent is to ensure that plant materials, entries and monuments, streetscapes, and other amenities are compatible with the overall

themes of the business park area and the parkland area.

The landscape design guidelines provided herein are not intended to establish a set of rigid landscaping requirements. These landscape guidelines are intended to be flexible and are subject to modification over time. However, it is critical to the Specific Plan's long-term design integrity that any deviations from these guidelines are in keeping with the spirit of the core elements of the overall theme described herein to ensure a cohesive and unified landscape concept across the Eucalyptus Business Park Specific Plan area.

As shown on Figure 6-1, *Conceptual Landscape Plan*, landscaping will occur primarily at street corners, along roadways, and at building entrances, and in passenger car parking lots.

Primary and secondary entry treatments provide a welcoming setting for the employees and visitors to the Specific Plan area. Primary entry treatments featuring signs and landscaping will occur at the corners of Eucalyptus Avenue and Campus Avenue and Eucalyptus Avenue and Grove Avenue. Secondary entry treatments will feature accent trees, shrubs, and groundcovers occur at the corners of entrances to the Specific Plan area.

Building corners and entrances facing public streets shall feature enhanced landscaping that complements the overall design theme of the Specific Plan area. These landscaped elements will be curated to create a visually appealing environment. Placement of trees, shrubs, and ground cover will serve to soften building facades and provide natural screening where appropriate, ensuring that structures are integrated harmoniously into their surroundings rather than dominating the streetscape.

Streetscape landscaping includes a combination of evergreen and deciduous trees, shrubs, and groundcovers to provide a visually pleasing experience for pedestrians, bicyclists, and motorists.

6.9.1 Plant Palette

The plant palette for the Eucalyptus Business Park Specific Plan area includes evergreen and deciduous trees, shrubs and ground covers, and grasses that are commonly used throughout Southern California. Many of the plant materials are water-efficient species native to Southern California or naturalized to the Southern California climate.

Table 6-1, *Plant Palette*, provides a list of plant materials approved for use in the Specific Plan area. The plants listed in Table 6-1 establish a base palette for the Specific Plan area's landscape design. Other similar plant materials may be substituted for species listed in Table 6-1, provided the alternative plants are drought resistant and complement the Specific Plan area's overall design theme.

Table 6-1 Plant Palette

Botanical Name	Common Name	Application	Water Use
Trees			
Cedrus deodara	Deodar Cedar	Evergreen Specimen	M
Cercidium x 'desert museum	Desert Museum Palo Verde	Accent Tree	L
Cercis c. 'forest pansy'	Eastern Redbud	Street Tree/Water Quality	M
Chitalpa T. 'morning cloud'	Chitalpa	Street Tree	L
Geijera parviflora	Australian Willow	Canopy Tree/Background	L
Koelreuteria bipinnata	Chinese Flame Tree	Street Tree	L
Lagerstroemia f 'natchez'	Crape Myrtle	Accent Tree/Water Quality	M
Lophostemon confertus	Brisbane Box	Background Tree	M
Olea europea 'swan hill'	Swan Hill Fruitless Olive	Accent Tree	L
Pinus eldarica	Afghan Pine	Street Tree/Background	M
Pinus halepensis	Aleppo Pine	Evergreen Screen	M
Pistachia chinensis	Chinese Pistache	Street Tree	M
Platanus a. 'bloodgood'	Lodone Plane Tree	Street Tree/Background	M
Platanus racemosa	California Sycamore	Water Quality/Canopy Tree	M
Podocarpus gracilior	Fern Pine	Street Tree/Canopy Tree	M
Quercus agrifolia	Coast Live Oak	Street Tree/Accent Tree	L
Quercus suber	Cork Oak	Street Tree	L
Quercus ilex	Holly Oak	Street Tree/Canopy Tree	L
Shrubs, Grasses, and Groundcovers			
Acacia redolens	Acacia	Groundcover	L
Agave americana	Century Plant	Accent	L
Agave attenuata 'blue glow'	Blue Glow Agave	Accent	L
Aloe arborescens	Torch Aloe	Accent/Background	L
Aloe blue elf	Blue Elf Aloe	Accent	L
Aloe petricola	Stone Aloe	Accent	L
Aloe striata	Coral Aloe	Accent	L
Arbutus unedo 'compacta'	Dwarf Strawberry Tree	Background	L
Baccharis x 'centennial'	Centennial Coyote Brush	Water Quality	L
Bouteloua g. 'blond ambition'	Blue Grama Grass	Mid-ground	L
Bulbine frutescens	Bulbine	Flowering Accent	L
Calandrinia spectabilis	Rock Purslane	Flowering Accent	L
Callistemon 'little john'	Dwarf Callistemon	Mid-ground	L
Carissa m. 'green carpet'	Dwarf Natal Plum	Groundcover	M
Carex divulsa	Berkeley Sedge	Groundcover/Foreground	L
Cotyledon orbiculata	Pig's Ear	Foreground/Accent	L
Dianella 'little rev'	Little Rev Flax Lily	Foreground	L
Dianella t. 'variegata'	Variegated Flax Lily	Foregound/Mid-ground	M
Echeveria a. 'lipstick'	Echeveria	Accent	L
Festuca mairei	Atlas Fescue	Foreground/Mid-ground	L
Hepearlor parviflora	Red Yucca	Succulent Accent	L
Hesperalie 'brakelights'	Brakelights Yucca	Mid-ground/Accent	L
Juncus patens	California Gray Rush	Water Quality	L
Lantana 'new gold'	New Gold Lantana	Groundcover/Foreground	L
Leymus c. 'canyon prince'	Canyon Prince Wild Rye	Mid-ground/Water Quality	L

Botanical Name	Common Name	Application	Water Use
Muhlenbergia c. 'regal mist'	Pink Muhly	Mid-ground/Water Quality	L
Myoporum parifolium	Ncn	Groundcover	M
Olea 'montra'	Little Ollie	Mid-ground	L
Rhaphiolepis indica 'clara'	Indian Hawthorn	Mid-ground/Background	M
Rosmarinus o. 'prostratus'	Prostrate Rosemary	Groundcover	L
Salvia greggii	Autumn Sage	Mid-ground	L
Salvia L. 'santa barbra'	Santa Barbra Mexican Sage	Mid-ground/Water Quality	L
Senecio Serpens	Blue Chalk Sticks	Succulent Groundcover	L
Turf 'marathon iie'	Sodded Turf	Groundcover	H
Westringia 'wynyabbie gem'	Coast Rosemary	Background	L

Conceptual Landscape Plan

0 200 400 800 Feet

6.9.2 Irrigation

The following general irrigation concepts shall be considered in the design and installation of irrigation systems within the Eucalyptus Business Park Specific Plan area.

1) All landscaped areas should be equipped with a permanent, automatic, underground irrigation system. Drip systems are encouraged in all areas needing irrigation. Irrigation systems must conform to all City of Ontario requirements.

2) Irrigation systems should be designed to apply water slowly, allowing plants to be deep soaked and to reduce run-off.

3) Connect the irrigation system to the recycled water conveyance system.

4) "Pop-up" type sprinkler heads may be used adjacent to all walks, drives, curbs (car overhangs), parking areas and public right-of-way but must be designed to prevent all run-off and overspray.

5) The design of irrigation systems, particularly the location of controller boxes, valves, and other above-ground equipment (e.g., backflow prevention devices), shall be incorporated into the overall landscaping design. Where aboveground equipment is provided, it shall be screened or otherwise removed from public view.

6) The irrigation system shall be programmed to operate between 6:00pm and 6:00am.

6.10 Streetscape Guidelines

Streetscape landscaping is integral to creating a sense of place within the Specific Plan area. Furthermore, streetscapes serve as a way to screen undesirable views from public views. Within the Specific Plan area, streetscapes are planted with a combination of evergreen and deciduous trees, low shrubs, and groundcovers to create a pleasing experience for pedestrians, bicyclists, and motorists.

The conceptual streetscape landscape treatments within the Specific Plan area are presented in the following sections.

6.10.1 Campus Avenue

The segment of Campus Avenue abutting the Eucalyptus Business Park Specific Plan area features landscaping within parkways on both sides of the street. Parkways include a curb-adjacent park strip planted with deciduous trees, low flowering groundcovers, a 5-foot-wide sidewalk, and an 8-foot-wide multi-purpose trail. Evergreen and deciduous trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. The typical Campus Avenue Streetscape is illustrated on Figure 6-2, *Campus Avenue Streetscape*.

6.10.2 Bon View Avenue

The typical section of Bon View Avenue features landscaping within parkways on both sides of the street. Parkways include a curb-adjacent park strip planted with evergreen trees and low flowering groundcovers, as well as a 5-foot-wide sidewalk. Evergreen trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. The typical Walker Avenue Streetscape is illustrated on Figure 6-3, *Bon View Avenue Streetscape*.

6.10.3 Grove Avenue

The segment of Grove Avenue within the Eucalyptus Business Park Specific Plan area features two landscaped components: a 28-foot-wide landscaped raised median and

parkways on both sides of the street. The landscaped raised median is planted with thematic deciduous and evergreen trees at to reinforce the theme established through previous development south of the Eucalyptus Specific Plan area. Parkways include a curb-adjacent park strip planted with deciduous trees and low flowering groundcovers, with a 5-foot-wide sidewalk along the east and west side of the street and an 8-foot multi-purpose trail along the east providing passive recreational opportunities. Deciduous trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to buffer development. The typical Grove Avenue Streetscape is illustrated on Figure 6-4, Grove Avenue Streetscape.

6.10.4 Walker Avenue

The segment of Walker Avenue abutting the Eucalyptus Business Park Specific Plan area features landscaping within parkways on the west side of the street. The Parkway includes a curb-adjacent park strip planted with deciduous trees, low flowering groundcovers, and a 5-foot-wide sidewalk. Evergreen and deciduous trees are planted beyond the right-of-way to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. An 8-foot-wide multi-purpose trail is also provided along the eastern side of Walker Avenue to offer passive recreational opportunities. The typical Walker Avenue Streetscape is illustrated on Figure 6-5, *Walker Avenue Streetscape*.

6.10.5 Eucalyptus Avenue

The segment of Eucalyptus Avenue abutting the Eucalyptus Business Park Specific Plan area features landscaping within parkways along the north side of the street. Parkways include a curb-adjacent park strip planted with deciduous trees, low flowering groundcovers, and a 5-foot-wide sidewalk. Evergreen and deciduous trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. An 8-foot-wide multi-purpose trail is also provided along the northern side of Eucalyptus Avenue to offer passive recreational opportunities. The typical Eucalyptus Avenue Streetscape is illustrated on Figure 6-6, *Eucalyptus Avenue Streetscape*.

6.10.6 Public Street 'A'

The typical section of Public Street 'A' features landscaping within parkways on both sides of the street. Parkways include a curb-adjacent park strip planted with evergreen trees and low flowering groundcovers, and a 5-foot-wide sidewalk. Evergreen and deciduous trees are planted beyond the right-of-way on both sides of the street to provide pedestrians using the sidewalk with additional opportunities for shade and to screen undesirable views. The typical Public Street 'A' Streetscape is illustrated on Figure 6-7, *Public Street 'A' Streetscape*.

6.11 Entries and Monuments Guidelines

Entry and corner monument treatments are designed to provide distinct visuals to emphasize the Eucalyptus Business Park Specific Plan area's aesthetic. Hardscape and landscape features at entry and corner monument locations shall provide adequate "line-of-sight" for motorists and shall comply with applicable City design standards and specifications. Monumentation shall not be located within the public street right-of-way.

Implemented entry and corner treatments should be flexible to respond to physical contexts and the needs and desires of specific tenants and may differ slightly from the concepts presented herein; however, all entry and corner treatments within the Specific Plan area shall be consistent in theme.

6.11.1 Primary Corner Treatments

Primary corner monuments are located at the northeast corner of Eucalyptus Avenue and Campus Avenue and at the northeast and northwest corners of Eucalyptus Avenue and Grove Avenue. The primary corner treatments features orchard tree groves and the primary monument signage. Figure 6-8, *Conceptual Primary Corner Treatment*, conceptually illustrates the primary corner treatments.

6.11.2 Secondary Corner Treatments

Secondary corner monuments are located at the entrances into the Specific Plan area from the northern edge of Campus Avenue, Bon View Avenue, Grove Avenue, and Walker Avenue; from the southern edge of Bon View Avenue and Grove Avenue. The secondary corner treatments features orchard tree groves, shrubs, and groundcovers. Figure 6-9, *Conceptual Secondary Corner Treatment*, conceptually illustrates the secondary corner treatments.

The final locations and design details of the water quality basins will be determined when buildings are designed and oriented during the implementation of the Eucalyptus Business Park Specific Plan area.

6.12 Landscape Interface

Within the Specific Plan area, landscape treatments have been designed to address the interface between the Business Park and the Open Space – Parkland land use. The interface exhibits presented in this section are not intended to represent a literal design, but rather serve as guidelines, which may be subject to modification over time.

As shown in Figure 6-10, *Conceptual Landscape Interface – Business Park to Open Space – Parkland*, the 60-foot-wide ROW Public Street 'A' splits up the two land use districts. Within the Business Park planning areas, landscape buffers, parking, and drive-aisles can provide further separation between the Business Park buildings and the edge of the public park areas.

6.13 Water Quality Basin Guidelines

Water quality basins may be provided within the Specific Plan area to treat stormwater before the flows ultimately drain into the storm drain facilities. The water quality basins may include contoured basin edges for a natural look, and landscaping around the perimeter of the basin to screen public views of the basin. Swales may be no greater than 40% of the landscape area width to allow for ornamental landscaping, although landscaping may have limitations where necessary to deter the attraction of birds to the basins, which can be a hazard to aircraft using the nearby Chino Airport and Ontario International Airport. Other wildlife deterrents that may be considered include floating covers, bird balls, netting, and basins designed to be linear and narrow with steep sides and rip-rap lining.

6.14 Stormwater Infiltration Areas Guidelines

Stormwater infiltration areas within landscape areas shall be designed to be no greater than 40% of the landscape area width to allow for ornamental landscape. Stormwater infiltration devices located in landscape areas shall be reviewed and plans approved by the City of Ontario's Landscape Planning Division. Any stormwater devices in parkway and landscape areas shall not displace required tree locations.

CHAPTER 7

IMPLEMENTATION PLAN

7.1 Severability

This Specific Plan document enables the City of Ontario to facilitate the processing and approval of development plans and implementing permits to build out the Eucalyptus Business Park Specific Plan area. If any regulation, condition, program, or portion of this Specific Plan is held invalid or unenforceable, such portions shall be deemed separate, distinct, and independent provisions, and the invalidity of such portions or provisions shall not affect the validity and enforceability of the remaining provisions contained herein.

7.2 Applicability

Approval of the Eucalyptus Business Park Specific Plan indicates acceptance by the City of Ontario City Council of a general framework for the development of the Specific Plan area's property. Part of that framework establishes specific development standards that constitute the zoning regulations of the Specific Plan (refer to Chapter 5, *Development Regulations*). The provisions contained herein are intended to regulate development within the Specific Plan area.

Development within the Eucalyptus Business Park Specific Plan area shall be implemented through the City's approval of a tentative map, a final parcel map, and the Development Plan Review process as established in the City's Development Code. The implementation process described herein provides the mechanisms for review and approval of development projects within the Specific Plan area.

7.3 Interpretation

Unless otherwise provided, any ambiguity concerning the content or application of the Specific Plan shall be resolved by the City's Planning Director, or their designee, in a manner consistent with the goals, policies, purpose, and intent established in this Specific Plan.

7.4 Development Review Process

7.4.1 Subdivision Map

Approval of tentative maps within the Eucalyptus Business Park Specific Plan area may occur concurrently with or subsequently to the adoption of the Specific Plan. The tentative map and final subdivision maps shall be reviewed and approved pursuant to the applicable provisions of the City's Subdivision Ordinance and consistent with the applicable provisions established within the Land Use, Infrastructure, Design Guidelines, and Development Regulations chapters of this Specific Plan.

7.4.2 Development Plan Review

All development within the Eucalyptus Business Park Specific Plan area shall be subject to the Development Plan Review Process established in the City of Ontario Development Code, or as approved the by Planning Director or their designee). Adoption of this Specific Plan by the City includes the design guidelines contained in Chapter 6,

which shall be the design criteria by which development projects within the Specific Plan area shall be reviewed during Development Plan Review. Additionally, proposed uses within the Specific Plan area shall not exceed the total number of daily vehicle trips studied within the EIR prepared to address the Eucalyptus Business Park Specific Plan.

For topics on which these design guidelines are silent, the applicable design guidelines contained within the City's Development Code shall apply. The design guidelines are intended to offer flexibility while establishing fundamental evaluation criteria to guide the City's review of development projects during the design review process.

7.4.3 Development Agreements

Pursuant to California Government Code Sections 65864 et seq., City approval of individual statutory Development Agreements with each property owner may be included as part of the Specific Plan approval process and must be secured prior to approval of the first Final Map. The Development Agreement shall include, but not be limited to, methods of financing, acquisition, and construction of infrastructure. The Eucalyptus Business Park Specific Plan Development Agreement shall be fully executed prior to the issuance of the first building permits for development or first public works permit, whichever takes place first, within the Specific Plan.

7.4.4 Conditional Use Permits

Uses identified as conditionally permitted within Chapter 5, *Development Regulations*, of this Specific Plan shall be subject to review and approval by the City pursuant to the procedures set forth in Division 4.02.015, Conditional Use Permits, of the City's Development Code.

7.4.5 Variances

Variances and Administrative Exceptions to the development regulations contained in Chapter 5, *Development Regulations*, of this Specific Plan with respect to the site area, setback dimensions, building heights, distances between buildings, landscape percentage and off-street parking and loading shall be reviewed pursuant to "Variances and Administrative Exceptions" of Section 4.02.020 of the City's Development Code.

7.5 Substantial Conformance

The Substantial Conformance Determination is a mechanism that allows for the approval of ministerial minor modifications for development under the Specific Plan, which is considered and approved ministerially by the Planning Director or their designee. The City recognizes that modifications to the text and exhibits of this Specific Plan document may be needed over time. Upon direction by the City of Ontario Planning Department, certain modifications to text, exhibits, and/or development standards and design guidelines may not require a formal Specific Plan Amendment (i.e., through public hearing) and can occur ministerially. The following minor modifications to this document do not require a formal Specific Plan Amendment and are subject to ministerial review and approval by the Planning Director or their designee. The Planning Director shall have the discretion to approve or defer any request for modification to the Planning Commission or City Council, either for ministerial direction and guidance, or for a determination that the required change requires a formal amendment as discussed below in Section 7.6. Ministerial Substantial Conformance decisions are not subject to CEQA compliance because CEQA applies to discretionary actions and not to ministerial actions.

A Substantial Conformance shall constitute the following and will require approval from the Planning Director or their designee:

- Expansions or reductions of the net acreage covered by a given Planning Area.
- Transfer of development square footage of 15% or less within the same land use designation, provided that the shift in square footage does not exceed the maximum allowable square footage of 2,939,000 s.f. or exceed the maximum FAR of 0.55 provided in Chapter 5 of this Specific Plan.
- The ultimate alignment of driveways and drive aisles within any Planning Area as part of the development of implementing project(s).
- Construction of buildings, landscaping, and/or parking areas for building sites may cross over into adjacent Planning Areas within the same land use designation, Buildings constructed across Planning Area boundaries shall not, by themselves, trigger the requirement for a Substantial Conformance. Modification of design criteria such as architectural details, landscape treatments, fencing, lighting, and signage.
- Changes to the Phasing Plan, provided infrastructure is available to serve the phase as determined by the City Engineer.
- Implementation of alternative landscape materials, wall materials, entry monument design, primary/secondary corner treatments, and streetscape design that are generally consistent with the conceptual design guidelines contained within this Specific Plan.
- Modifications to the Business Park Architectural Design Guidelines, such as variation of architectural style and variations in materials and colors.
- The Conceptual Site Plan exhibit (Figure 3-3) is illustrative only; modifications to the building orientation and layout as part of the Development Plan review process where the revisions remain consistent with the intent and development standards of the Specific Plan. Final infrastructure facility sizing and precise location of dry utilities, water, sewer, and storm drainage improvements as approved by the City Engineer, OMUC, or San Bernardino Flood Control District.
- Roadway ROW design, when the changes are warranted and approved by the City Engineer.
- Revisions to exhibits that do not substantially change the intent of the Specific Plan.
- Modification, deletions, and additions to the list of permitted and conditionally permitted uses.
- Specific modifications of a similar nature to those listed above which are deemed minor by the Planning Director, which are in keeping with the intent of this Specific Plan and which are in conformance with the Policy Plan component of The Ontario Plan.

7.6 Formal Amendments to the Specific Plan

All modifications to this Specific Plan document that do not meet the criteria of a Substantial Conformance (as defined in the previous subsection) shall be deemed to require a formal Specific Plan Amendment.

Formal Specific Plan Amendments shall be subject to the review and approval of the City Council. The Planning Commission should first hear and consider all applications for formal Specific Plan Amendments and provide a recommendation to the City Council. As required by the California Government Code, all government agencies significantly affected by the proposed Amendment shall be notified

of the proposed action prior to the approval. Because a Specific Plan Amendment is a discretionary action, such amendments shall be appropriately reviewed in accordance with the CEQA Statute and Guidelines, with the City of Ontario serving as the CEQA Lead Agency.

Any formal Specific Plan Amendment initiated by an applicant requires preliminary review by the Planning Director, filing of an official application and required materials supporting the Amendment, submittal of a fee.

In considering approval or disapproval of formal Specific Plan Amendments, the Planning Commission and City Council shall find that the request is:

- Consistent with the Policy Plan component of The Ontario Plan (General Plan) in effect at the time of consideration.
- Compatible with surrounding land uses with respect to use, development standards, density, or issues of health, public safety, and general welfare.
- Consistent with the overall design character and general structure set forth in Chapter 6, *Design Guidelines*, of this Specific Plan.

7.7 Appeals

Appeals of any determination of the Planning Director, Zoning Administrator, or the Planning Commission, may be made by the applicant or any other aggrieved party by filing an application on forms provided by the City of Ontario and accompanied by the appropriate filing fee, where applicable, within ten (10) days following the final date of action for which an appeal is made.

7.8 Compliance with Mitigation Monitoring and Reporting Program

Certification of an EIR shall be required prior to the approval of the Specific Plan. Development within the Eucalyptus Business Park Specific Plan shall comply with all approved mitigation measures as described in the MMRP included as part of the EIR.

7.9 Project Financing

The financing of construction, operation, and maintenance of public improvements, facilities, and public services shall include funding through a combination of financing mechanisms. Prior to the recordation of final maps, a final determination shall be made by City staff and confirmed by the Planning Director and City Engineer regarding the responsibility for construction and maintenance of public facilities, whether publicly or privately maintained.

Implementation of the Eucalyptus Business Park Specific Plan may involve financing options including, but not limited to, the following sections:

7.9.1 Facilities and Services

Construction of public improvements and facilities and the provision of public services may be financed through private capital investment, a Community Facilities District (CFD), Development Impact Fees (DIF), or other special district, pursuant to the Mello-Roos Community District Act of 1982.

7.9.2 Operation and Maintenance

Options for operation and maintenance of public and private improvements and facilities include, but are not limited to, the following:

- City Public Works Department or other public agencies
- Individual private property owners

- Private Property Owners Association
- CFD or other special district (will be at the City's sole distraction)

7.10 Phasing Plan

As shown on Figure 7-1, *Conceptual Phasing Plan*, the development of the Eucalyptus Business Park Specific Plan area is expected to occur in six phases in response to market demands and according to a logical and orderly extension of roadways, public utilities, and infrastructure.

Phase A includes Planning Areas 3 and 6; Phase B includes Planning Areas 2 and 5; Phase C includes Planning Areas 1 and 4; Phase D includes Planning Area 9; Phase E includes Planning Area 8; and Phase F includes Planning Area 7. The developer and the City of Ontario will work together to ensure that the Open Space – Parkland Planning Areas are constructed concurrently with the build-out of the Business Park portions of the Specific Plan area in a phased manner. The details of this partnership will be included in the Development Agreement(s) accompanying the approval of the Specific Plan.

Phasing of the Specific Plan shall be permitted; however, required public improvements will be dictated by the City of Ontario's Land Development Section and the approved Development Agreement(s). The Phasing Plan is conceptual and subject to revision as the project development evolves. The Specific Plan shall allow development in any phase at any time if adequate infrastructure to support same is included. For example, construction of the publicly operated animal resource center or other building or improvement may occur prior to the completion of an earlier phase.

7.11 Maintenance Plan

The public and private improvements constructed within the Eucalyptus Business Park Specific Plan area shall be maintained through a combination of public and private entities as described in Table 7-1, *Maintenance Responsibilities*. Table 7-1 provides a list of maintenance entity options that may fund and/or maintain facilities within the Specific Plan area, however, the ultimate maintenance entity for each facility will be determined by the Eucalyptus Business Park Specific Plan's Development Agreement(s). A Property Owners Association (POA) may be established for the maintenance of common area landscape improvements and private roadways within portions of the Eucalyptus Business Park Specific Plan area. For areas in public ownership (such as public roadway ROWs and the Open Space-Parkland Planning Areas), City of Ontario Public Works, other public agencies, or municipal maintenance districts may fund the maintenance of these areas.

Table 7-1 Maintenance Responsibilities

Facility	City and/or CFD	Property Owners Association	Property Owner or Occupant	Public Utility

Figure 7-1

Phasing Plan

APPENDIX A

POLICY PLAN CONSISTENCY ANALYSIS

California Government Code (Title 7, Division 1, Chapter 3, Article 8, §§ 65450 through 65457) allows local governments to adopt and administer specific plans as tools to implement their general plan; however, specific plans must demonstrate consistency with the goals and policies set forth in the local general plan. This appendix provides a summary discussion to demonstrate that this Eucalyptus Business Park Specific Plan is consistent with, and results in the implementation of, applicable primary goals and policies of the Policy Plan (General Plan) component of The Ontario Plan.

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
LU-1: A community that has jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.	
LU-1.1: Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.	**Consistent.** The Eucalyptus Business Park Specific Plan area is located in the Ontario Ranch area of the City, which is an area planned for future growth. The City's Master Plans for water, sewer, and storm drainage identify planned infrastructure facilities to support growth in this area. The developer(s) of the Eucalyptus Business Park Specific Plan area will be required to participate in the installation of the Master Plan infrastructure. Additionally, streets within the Specific Plan area are designed to be safe and accessible to accommodate different modes of non-vehicular transportation.
LU-1.2: Sustainable Community Strategy. We integrate state, regional, and local Sustainable Community /Smart Growth principles into the development and entitlement process.	**Consistent.** The Eucalyptus Specific Plan features numerous sustainable features. The Specific Plan encourages non-motorized circulation by employees and visitors via its provision of an integrated network of sidewalks, bikeways, and trails. In accordance with the Policy Plan Exhibit M-02, Multipurpose Trails & Bikeway, Class II bike lanes are provided along both sides of Campus Avenue and Walker Avenue. Additionally, the Eucalyptus Business Park Specific Plan area includes an 8-foot multi-purpose trail along Eucalyptus Avenue, Grove Avenue and Walker Avenue. All development in the Specific Plan area are required to conform to the California Green Building Standards Code (CalGreen Code) and the Specific Plan includes

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
	Energy Efficiency guidelines. In addition, the EBPSP includes a rooftop solar energy system which would generate enough electricity to meet 45% of annual electricity demand. The plant palette for the Specific Plan area consists of water-efficient species native to southern California or naturalized to the arid southern California climate, and the use of turf will be minimized. As such, the Eucalyptus Specific Plan is consistent with this policy.
LU-1.3: Adequate Capacity. We require adequate infrastructure and services for all development.	**Consistent.** The developer(s) of the Eucalyptus Business Park Specific Plan area are required to install adequate roadway and utility infrastructure improvements to meet the demands of the Specific Plan while maintaining adequate service levels for existing, surrounding development. Refer to the Environmental Impact Report (EIR) prepared for the Eucalyptus Business Park Specific Plan for a detailed analysis of the adequacy of the Specific Plan's infrastructure improvements.
LU-1.4: Multimodal Mobility. We require development and urban design, where appropriate, that reduces reliance on the automobile and capitalizes on active transportation, transit, electric vehicles, and multimodal transportation opportunities	**Consistent.** The Eucalyptus Business Park Specific Plan area offers numerous opportunities for non-vehicular circulation, including multi-purpose trails, bikeways, and sidewalks. Class II bike lanes would largely be provided along both sides of Campus Avenue, between Riverside Drive and Holt Avenue, Eucalyptus Avenue, and Walker Avenue, between Euclid Avenue and Hamner Avenue. Additionally, the Eucalyptus Business Park Specific Plan area includes an 8-foot multi-purpose trail along Eucalyptus Avenue, Grove Avenue, Campus Avenue, and Walker Avenue to encourage connectivity and circulation by employees, visitors, and the passersby that is not completely dependent on a motorized vehicle. Additionally, bike storage facilities are required to be installed in each building to further promote alternative transportation.
LU-1.5: Jobs-Housing Balance. We coordinate land use, infrastructure, and transportation planning and analysis with regional, county, and other local agencies to further regional and subregional goals for jobs-housing balance.	**Consistent.** The developer(s) of the Eucalyptus Business Park will construct roadway and utility improvements in accordance with the City's infrastructure master plans. Furthermore, the Specific Plan area will generate employment opportunities for residents of the City and surrounding jurisdictions, and reduce the need for residents in the region to commute to other regions for employment opportunities. Accordingly, implementation of the Eucalyptus Business Park Specific Plan will improve

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
	the jobs-housing balance within the City and the Inland Empire region.
LU-1.6: Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.	**Consistent.** The Eucalyptus Business Park Specific Plan land use plan provides Business Park land uses that will accommodate a variety of employment uses arranged in a sensible and efficient manner that allow ease of access and complement the surrounding community. The parkland area will provide recreational amenities for residents of and visitors to the City of Ontario. The business park area of the Eucalyptus Business Park Specific Plan area is envisioned to attract local, national, and international businesses, and will assist in diversifying the mix of employment opportunities available in the City. The retail component within the business park area will serve both the businesses within the Eucalyptus Business Park Specific Plan area and the broader community.
LU-1.7: Revenues and Costs. We require future amendments to our Land Use Plan to be accompanied by analyses of fiscal impacts.	**Consistent.** A fiscal impact analysis will be prepared in support of the Specific Plan. Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of potential fiscal effects associated with the implementation of the Specific Plan.
LU-2: Compatibility between a wide range of uses and resultant urban patterns and forms.	
LU-2.1: Land Use Decisions. We minimize adverse impacts on adjacent properties when considering land use and zoning requests.	**Consistent.** The Eucalyptus Business Park Specific Plan EIR evaluated the potential physical environmental impacts of the implementation of the Specific Plan on the surrounding community in accordance with the California Environmental Quality Act (CEQA). Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of impacts to adjacent properties associated with the implementation of the Specific Plan.
LU-2.2: Buffers. We require new uses to provide mitigation or buffers between existing uses where potential adverse impacts could occur. Additional mitigation is required when new uses could negatively impact environmental justice areas.	**Consistent.** The Eucalyptus Business Park Specific Plan provides conceptual streetscapes for Eucalyptus Avenue, Campus Avenue, Walker Avenue, and Public Street 'A'; primary and secondary corner treatments at Specific Plan entry points; and landscaped screening walls between truck courts and parking areas and adjacent public rights-of-way. Implementation of these features provides a visual buffer between planned on-site Business Park land uses and existing and planned off-site land uses. Additionally, the Specific Plan includes Open Space–Parkland along the northern boundary to separate the business park uses from the residential uses planned

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
	to the north. As such, the Eucalyptus Business Park is consistent with this policy.
LU-2.3: Hazardous Uses. We regulate the development of industrial and similar uses that use, store, produce, or transport toxic substances, air emissions, other pollutants, or hazardous materials.	**Consistent.** Building occupants within the Eucalyptus Business Park Specific Plan area are obligated to comply with all local and State requirements for using, storing, producing, or transporting toxic substances, air emissions, other pollutants, or hazardous materials.
LU-2.5: Regulation of Uses. We regulate the location, concentration, and operation of uses that have impacts on surrounding land uses.	**Consistent.** The Eucalyptus Business Park Specific Plan EIR evaluated the potential physical environmental impacts of the implementation of the Specific Plan on the surrounding community in accordance with CEQA. Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of impacts to adjacent properties associated with the implementation of the Specific Plan.
LU-2.6: Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.	**Consistent.** Water, sewer, storm drain, and dry utility improvements will be located underground and out of view, with the exception of storm water inlets and channels that are required to be exposed at the surface. Roadway infrastructure improvements are designed to be landscaped with a combination of evergreen and deciduous trees – including flowering varieties – shrubs and groundcovers in an aesthetically-pleasing manner to establish the Specific Plan's design theme.
LU-2.8: Transitional Areas. We require development in transitional areas to protect the quality of life of current residents.	**Consistent.** The Eucalyptus Business Park Specific Plan area is primarily surrounded by agricultural uses, dairy operations, and existing and planned industrial warehouse uses. Nonetheless, the Specific Plan stipulates landscaping and building setbacks along all of the Specific Plan's perimeter streets that separate the Specific Plan area from adjacent properties. Trucks traveling to and from the Specific Plan area are required to utilize the City's approved truck routes, thereby minimizing exposure of nearby residents to truck-related impacts. Development within the Specific Plan area must adhere to the Design Guidelines in Chapter 6 of this Specific Plan, which will provide for a high-quality, attractive, and contemporary environment.
LU-2.9: Methane Gas Sites. We require sensitive land uses and new uses on former dairy farms or other methane-producing sites be designed to minimize health risks.	**Consistent.** If determined to be necessary, the Eucalyptus Business Park Specific Plan area will be required to implement the mitigation measures identified in the Eucalyptus Business Park Specific Plan EIR addressing soil remediation and building

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
	venting requirements related to methane gas hazards. As such, this Specific Plan is consistent with this policy.
LU-4: Development that provides short-term value only when the opportunity to achieve our Vision can be preserved.	
LU-4.2: Interim Development. We allow development in urban, mixed use, and transit-oriented Place Types that is not immediately reflective of our ultimate Vision for the Place Type, provided it can be modified or replaced when circumstances are right to support development aligned with the Place Type Vision. We will not allow development that impedes, precludes, or compromises our ability to achieve our Vision.	Consistent. The central theme of the Ontario Vision is "A sustained, community-wide prosperity which continuously adds value and yields benefits." The open space-parkland area will introduce and sustain recreational amenities in the long term for use by City residents and visitors. The phased development of the business park land uses in the Eucalyptus Business Park Specific Plan area will attract new businesses, provide employment opportunities for residents, contribute the City's tax base, and construct circulation and utility infrastructure improvements that are critical to allow for the growth of the region. As such, the Specific Plan area will help the City achieve its Vision by continuously adding value, yielding benefits, and contributing to the prosperity of the City and the Inland Empire region.
LU-4.3: Infrastructure Timing. We require that the necessary infrastructure and services be in place prior to or concurrently with development.	Consistent. Chapter 7, *Implementation Plan*, of the Eucalyptus Business Park Specific Plan includes a development phasing plan that requires infrastructure needed to support the buildout of the Specific Plan to be adequately phased concurrently with development.
LU-5: Integrated airport systems and facilities that minimize negative impacts to the community and maximize economic benefits.	
LU-5.5: Airport Compatibility Planning for ONT. We create and maintain the Airport Land Use Compatibility Plan for ONT.	Consistent. The land uses provided by the Eucalyptus Business Park Specific Plan are consistent with the Airport Land Use Compatibility Plan (ALUCP) requirements for the Ontario International Airport. Furthermore, future development on the Specific Plan property would be required to comply with the development standards and design guidelines established in this Specific Plan, as well as the applicable requirements of the City of Ontario Development Code, which would preclude any potential inconsistencies with the Ontario International Airport ALUCP.
LU-5.7: ALUCP Consistency with Land Use Regulations. We comply with state law that requires general plans, specific plans, and all new development to be consistent with the	Consistent. The land uses provided by the Eucalyptus Business Park Specific Plan are consistent with the Airport Land Use Compatibility Plan (ALUCP) requirements for the Ontario International Airport and the provisions provided in the Chino Airport Overlay

The Ontario Plan Policy	Specific Plan Consistency
Land Use Element	
policies and criteria set forth within an Airport Land Use Compatibility Plan for any public-use airport.	District and Chino ALUCP. All proposed development will be reviewed by the City of Ontario staff in the Development Plan review process.
LU-5.8: Chino Airport. We will support the creation and implementation of the Airport Land Use Compatibility Plan for Chino Airport.	**Consistent.** The land uses provided by the Eucalyptus Business Park Specific Plan are consistent with the provisions provided in the Chino Airport Overlay District. Proposed development within the Specific Plan area will be reviewed by the City of Ontario Staff in the Site Plan review process.

Ontario Plan Policy	Specific Plan Consistency
Housing Element	
H-1: Stable neighborhoods of quality housing, ample community services and public facilities, well-maintained infrastructure, and public safety that foster a positive sense of identity.	
H-1.4: Historical Preservation. We support the preservation and enhancement of residential structures, properties, street designs, lot configurations, and other reminders of Ontario's past that are considered to be local historical or cultural resources.	**Consistent.** Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of potential impacts to historical and cultural resources that would occur as a result of the implementation of the Specific Plan. If determined to be necessary, development projects within the Specific Plan area will be required to implement mitigation measures to reduce impacts to historical and cultural resources to the maximum extent feasible.

Ontario Plan Policy	Specific Plan Consistency
Parks and Recreation Element	
PR-1: A system of safe and accessible parks that meets the needs of the community.	
PR-1.9: Phased Development. We require parks be built in new communities before a significant proportion of residents move in.	**Consistent.** The Eucalyptus Business Park Specific Plan does not include the creation of new residential units, but includes 35.88 acres of the City's Grand Park. Chapter 7, *Implementation Plan*, of the Eucalyptus Business Park Specific Plan includes a development phasing plan that discusses the buildout of the Specific Plan which includes the both the Business Park and the Open Space – Parkland land uses.
PR-1.15: Trail Connectivity. We strengthen and improve equestrian, bike, and multipurpose trail connections within the City and work to improve trail connections into adjacent jurisdictions.	**Consistent.** The Eucalyptus Business Park Specific Plan includes multi-purpose trails along Eucalyptus Avenue, Campus Avenue, Grove Avenue, and Walker Avenue to encourage connectivity and circulation by employees, visitors, and the passerby by means not completely dependent on a motorized vehicle. The multi-purpose trail system provided by the Specific Plan area implements the multipurpose trail system

Ontario Plan Policy	Specific Plan Consistency
Parks and Recreation Element	
	shown in Exhibit M-3, Multipurpose Trails & Bikeway Corridor Plan, of The Policy Plan.

Ontario Plan Policy	Specific Plan Consistency
Environmental Resources Element	
ER-1: A reliable and cost-effective system that permits the City to manage its diverse water resources and needs.	
ER-1.3: Conservation and Sustainable Water Supply. We work with regional water providers and users to conserve water and ensure sustainable local water supplies as more frequent droughts reduce long term local and regional water availability	Consistent. The Eucalyptus Business Park Specific Plan incorporates a drought-tolerant plant palette and water-efficient irrigation system design to minimize the water demands of planned development. In addition, implementing development projects will be required to comply with the water-efficiency mandates of the California Green Building Standards Code, including the provision of water-efficient fixtures.
ER-1.4: Supply-Demand Balance. We require that available water supply and demands be balanced.	Consistent. The Eucalyptus Business Park Specific Plan EIR evaluates the potential impacts of the Specific Plan's implementation related to water supply based on the results of a project-specific water supply assessment. If deemed necessary by the EIR, development within the Specific Plan is required to implement mitigation measures to reduce significant impacts to the water supply to the maximum extent feasible.
ER-1.5: Water Resource Management. Environmental justice areas are prioritized as we coordinate with local agencies to protect water quality, prevent pollution, address existing contamination, and remediate contaminated surface water and groundwater.	Consistent. As discussed in the Eucalyptus Business Park Specific Plan EIR, implementation of the Specific Plan will not result in new, substantial sources of urban runoff, and also will not violate applicable stormwater quality requirements. Also, the Eucalyptus Business Park Specific Plan area includes permeable surfaces (e.g., open space-parkland, landscaped areas, water quality/infiltration basins) that would allow surface water to percolate and contribute to recharge of the aquifer.
ER-1.6: Urban Run-off Quantity. We encourage the use of low impact development strategies, including green infrastructure, to intercept run-off, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.	Consistent. As discussed in the Eucalyptus Business Park Specific Plan EIR, implementation of the Specific Plan will not result in new, substantial sources of urban runoff, and also will not violate applicable stormwater quality requirements. Also, the Eucalyptus Business Park Specific Plan area includes permeable surfaces (e.g., open space-parkland, landscaped areas, water quality/infiltration basins) that would allow surface water to percolate and contribute to recharge of the aquifer.

Ontario Plan Policy	Specific Plan Consistency
Environmental Resources Element	
ER-1.7: Urban Run-off Quality. We require the control and management of urban run-off, consistent with Regional Water Quality Control Board regulations.	**Consistent.** As discussed in the Eucalyptus Business Park Specific Plan EIR, implementation of the Specific Plan will not result in new, substantial sources of urban runoff, and also will not violate applicable stormwater quality requirements. Also, the Eucalyptus Business Park Specific Plan area includes permeable surfaces (e.g., open space-parkland landscaped areas, water quality/infiltration basins) that would allow surface water to percolate and contribute to recharge of the aquifer.
ER-1.8: Wastewater Management. We require the management of wastewater discharge and collection consistent with waste discharge requirements adopted by the Regional Water Quality Control Board.	**Consistent.** All sewer conveyance infrastructure needed to serve the Eucalyptus Business Park Specific Plan area will be installed in accordance with City design standards. Accordingly, implementation of the Specific Plan will not violate any applicable waste discharge requirements as detailed in the Eucalyptus Business Park Specific Plan EIR.
ER-3: Cost-effective and reliable energy system sustained through a combination of low impact buildings, site and neighborhood energy conservation, and diverse sources of energy generation that collectively helps to minimize the region's carbon footprint.	
ER-3.3: Building and Site Design. We require new construction to incorporate energy efficient building and site design strategies, which could include appropriate solar orientation, maximum use of natural daylight, passive solar, and natural ventilation.	**Consistent.** The Eucalyptus Business Park Specific Plan's design guidelines encourage all new construction to utilize design features, fixtures, appliances, and heating and cooling controls to conserve energy and water. In addition, all development is required to comply with the California Green Building Standards Code (CalGreen Code).
ER-3.6: Generation- Renewable Sources. We promote the use of renewable energy sources (e.g., solar, wind, biomass) in public and private sector development.	**Consistent.** The Eucalyptus Business Park Specific Plan proposes a rooftop solar energy system which generates enough electricity to meet 45% of annual electricity demand.
ER-4: Improved indoor and outdoor air quality and reduced locally generated pollutant emissions.	
ER-4.1: Land Use. We reduce GHG and other local pollutant emissions through compact, mixed use, and transit-oriented development and development that improves the regional jobs-housing balance.	**Consistent.** The Eucalyptus Business Park Specific Plan area provides employment land uses in close proximity to major transportation corridors (Interstate 10, Interstate 15, State Route 60, State Route 83, State Route 71 and State Route 91) and near Bus Rapid Transit (BRT) Corridors along Ontario Ranch Road and Euclid Avenue. Therefore, the Specific Plan area provides local employment opportunities for residents and serves to improve the regional jobs-housing balance. Additionally, the Specific Plan area provides an integrated system of sidewalks, bikeways, and multi-purpose trails on internal and perimeter roadways to encourage non-vehicular modes of transportation. The Eucalyptus Business Park

Ontario Plan Policy	Specific Plan Consistency
Environmental Resources Element	
	Specific Plan area has the potential to reduce vehicle miles traveled, which would reduce tailpipe emissions – a major source of greenhouse gases (GHGs).
ER-4.3: Greenhouse Gases (GHG) Emissions Reductions. We will reduce GHG emissions in accordance with regional, state, and federal regulations.	**Consistent.** As described in the Eucalyptus Business Park Specific Plan EIR, the Specific Plan would be consistent with applicable regional, State, and federal regulations related to the reduction of GHG emissions and would not obstruct implementation of any GHG reduction plans/programs.
ER-4.8: Tree Planting. We protect healthy trees within the City and plant new trees to increase carbon sequestration and help the regional/local air quality. We expand the tree canopy in environmental justice areas to enhance air quality and reduce the "heat island" effect.	**Consistent.** The Specific Plan area is not within an environmental justice area, however, as part of the development of the Eucalyptus Business Park Specific Plan area, a substantial number of trees will be planted within the Specific Plan area, and in particular along roadway street frontages, near building entrances, and in passenger car parking lots. In addition, trees will be planted in the open space-parkland planning areas.
ER-5: Protected high value habitat and farming and mineral resource extraction activities that are compatible with adjacent development.	
ER-5.1: Habitat Conservation Areas. We support the protection of biological resources through the establishment, restoration, and conservation of high-quality habitat areas.	**Consistent.** The Eucalyptus Business Plan Specific Plan area was historically used for agricultural uses, dairy farming, and a trucking operation. The Specific Plan EIR evaluates impacts to biological resources (including sensitive/protected habitats and species) as a result of the implementation of the Specific Plan and establishes mitigation measures required to reduce significant impacts to the maximum extent feasible.
ER-5.2: Entitlement and Permitting Process. We comply with state and federal regulations regarding protected species.	**Consistent.** The Eucalyptus Business Plan Specific Plan area was historically used for agricultural uses, dairy farming, and a trucking operation. The Specific Plan EIR evaluates impacts to biological resources (including sensitive/protected habitats and species) as a result of the implementation of the Specific Plan and establishes mitigation measures required to reduce significant impacts to the maximum extent feasible.
ER-5.3: Right to Farm. We support the right of existing farms to continue their operations within the Ontario Ranch.	**Consistent.** Implementation of the Eucalyptus Business Park Specific Plan would not preclude the continued operation of existing farms within the New Model Colony/Ontario Ranch for ten years, as shown in Table 5-1, *Permitted Uses*, of this Specific Plan. Furthermore, the Eucalyptus Business Park Specific Plan EIR evaluates impacts to surrounding land uses that could potentially occur as a result of the

Ontario Plan Policy	Specific Plan Consistency
Environmental Resources Element	
	implementation of the Eucalyptus Business Park Specific Plan and establishes mitigation measures required to reduce significant impacts to the maximum extent feasible.
ER-5.4: Transition of Farms. We protect both existing farms and sensitive uses around them as agricultural areas transition to urban uses.	**Consistent.** Implementation of the Eucalyptus Business Park Specific Plan would not preclude the continued operation of existing farms within the New Model Colony/Ontario Ranch for ten years, as shown in Table 5-1, *Permitted Uses*, of this Specific Plan. Furthermore, the Eucalyptus Business Park Specific Plan EIR evaluates impacts to surrounding land uses that could potentially occur as a result of the implementation of the Eucalyptus Business Park Specific Plan and establishes mitigation measures required to reduce significant impacts to the maximum extent feasible.

Ontario Plan Policy	Specific Plan Consistency
Community Economics Element	
CE-1: A complete community that provides for all incomes and stages of life.	
CE-1.1: Jobs-Housing Balance. We pursue improvement to the Inland Empire's balance between jobs and housing by promoting job growth that reduces the regional economy's reliance on out-commuting.	**Consistent.** The Eucalyptus Business Park Specific Plan would provide over 137.90 acres of new employment-generating land uses in close driving distance to existing and planned residential land uses. The new job opportunities provided within the Specific Plan area will assist the City's efforts to promote job growth and improve the balance between jobs and housing within the City limits.
CE-1.12: Circulation. We continuously plan and improve public transit and non-vehicular circulation for the mobility of all, including those with limited or no access to private automobiles.	**Consistent.** BRT Corridors are located along Ontario Ranch Road and Euclid Avenue in close proximity to the Specific Plan. The Specific Plan would construct a bus turnout near the intersection of Grove Avenue and Eucalyptus Avenue in anticipation of future Omnitrans service. Additionally, the Specific Plan area provides Class II Bikeways along Walker Avenue and Campus Avenue. Additionally, sidewalks are provided along all streets within the Specific Plan area.
CE-2: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.	
CE-2.1: Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.	**Consistent.** The Eucalyptus Business Park Specific Plan provides for the development of the Specific Plan property as a high-quality and contemporary business park. This Specific Plan's Design Guidelines establish criteria for architecture, lighting, signage, and landscape design to promote the development of an

Ontario Plan Policy	Specific Plan Consistency
Community Economics Element	
	attractive business park with timeless design features, for as an inviting place to work and conduct business. The adjacency of the park and integral retail development further enhances the attractiveness of the Specific Plan.
CE-2.2: Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.	**Consistent.** The Eucalyptus Business Park Specific Plan requires implementing development projects within the Specific Plan area to be reviewed and approved pursuant to the provisions of the City's Subdivision Ordinance and Development Plan Review process which provides for review by the City's Planning Department which may require the development to demonstrate how each project will create appropriately unique, functional and sustainable places. Furthermore, development projects in the Specific Plan area are required to be designed in accordance with the architectural and landscape design guidelines established in Chapter 6, *Design Guidelines*, of this Specific Plan, which will result in a unique, aesthetically attractive, and contemporary business park that will be highly competitive with similar developments in the region.
CE-2.4: Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.	**Consistent.** Development projects in the Eucalyptus Business Park Specific Plan are required to be designed in accordance with the architectural and landscape design guidelines in Chapter 6, *Design Guidelines*, of this Specific Plan, which will result in a unique, aesthetically attractive, and contemporary business park that reflects high-quality architectural design.
CE-2.5: Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.	**Consistent.** This Specific Plan defines the entities responsible for the maintenance of publicly and privately-owned improvements within the Specific Plan area, including roadways and utility infrastructure. Compliance with the maintenance responsibility matrix established in Chapter 7, *Implementation Plan*, will ensure that all improvements within the Specific Plan area are properly and consistently maintained.
CE-2.6: Public Maintenance. We require the establishment and operation of maintenance districts or other vehicles to fund the long-term operation and maintenance of the public realm whether on private land, in rights-of-way, or on publicly-owned property.	**Consistent.** This Specific Plan defines the entities responsible for the maintenance of publicly and privately-owned improvements within the Specific Plan area, including roadways and utility infrastructure. Compliance with the maintenance responsibility matrix established in Chapter 7, *Implementation Plan*, will ensure that all improvements

Ontario Plan Policy	Specific Plan Consistency
Community Economics Element	
	within the Specific Plan area are properly and consistently maintained.
CE-3: Decision-making deliberations that incorporate the full short-term and long-term economic and fiscal implications of proposed City Council actions.	
CE-3.2: General Plan Amendments. We require those proposing General Plan amendments to disclose reasonably foreseeable impacts through a fiscal analysis.	**Consistent.** A fiscal impact analysis will be prepared in support of the Eucalyptus Business Park Specific Plan. Refer to the Eucalyptus Business Park Specific Plan EIR for a detailed analysis of potential reasonably foreseeable fiscal effects associated with implementation of this Specific Plan.

Ontario Plan Policy	Specific Plan Consistency
Mobility Element	
M-1*: A system of roadways that meets the mobility needs of a dynamic and prosperous Ontario.*	
Policy M1-1: Roadway Design and Maintenance. We require our roadways to: • Comply with federal, state, and local design and safety standards; • Meet the needs of multiple transportation modes and users; • Handle the capacity envisioned in the City of Ontario Master Plan of Streets and Highways; • Be maintained in accordance with best practices; • Be compatible with the streetscape and surrounding land uses; and Promote the efficient flow of all modes of traffic through the implementation of intelligent transportation systems and travel demand management strategies.	**Consistent.** The Eucalyptus Business Park Specific Plan includes roadway improvements consistent with the City of Ontario Master Plan of Streets and Highways, as described in Chapter 4, *Infrastructure Plan*. Perimeter and internal streets will be constructed to City standards and are designed to accommodate vehicles, pedestrians, and bicyclists through the inclusion of sidewalks, Class II bike lanes, and multi-purpose trails. Roadway designs include parkways and landscaping to support circulation and enhance compatibility with adjacent land uses. Maintenance responsibilities are outlined in Chapter 7, *Implementation Plan*.
Policy M1-2: Mitigation of Impacts. We require development to mitigate its traffic impacts.	**Consistent.** The Eucalyptus Business Park Specific Plan is supported by a project-specific traffic impact analysis that identifies necessary mitigation measures to address traffic impacts. The implementation of these measures will be the responsibility of the developer(s) and will be carried out in accordance with City of Ontario standards and requirements.
Policy M1-4: Complete Streets.	**Consistent.** The Eucalyptus Business Park Specific Plan establishes a multimodal circulation network that

Ontario Plan Policy	Specific Plan Consistency
Mobility Element	
We work to provide a complete, balanced, context-aware, multimodal transportation network that meets the needs of all users of streets, roads, and highways, including motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation. We prioritize implementation of complete streets improvements in environmental justice areas to facilitate opportunities for residents to use active transportation systems.	includes sidewalks, Class II bike lanes, and multi-purpose trails along major roadways such as Campus Avenue, Eucalyptus Avenue, and Walker Avenue, as described in Chapter 4, *Infrastructure Plan*. The plan is designed to accommodate pedestrians, bicyclists, and vehicles through coordinated roadway and non-vehicular improvements. Design Guidelines in Chapter 6 address pedestrian connectivity and require consistent treatment of sidewalks, parkways, and landscape buffers to support safe and functional circulation throughout the Specific Plan area.
Policy M1-5: Level of Service. Maintain a peak hour Level of Service (LOS) E or better at all intersections. Maintain Level of Service D or better on arterial streets in the City. Develop and maintain a list of locations where LOS E or LOS F are considered acceptable and would be exempt from this level of service policy. Considerations for LOS exemption include being restricted by environmental constraints, lacking available right-of-way, deterring an increase in VMT, or degrading other modes of travel (such as bicycle or pedestrian infrastructure).	**Consistent.** The Eucalyptus Business Park Specific Plan is supported by a project-specific traffic impact analysis that identifies necessary mitigation measures to address traffic impacts, as referenced in Chapter 4, *Infrastructure Plan*. The Specific Plan includes planned improvements to perimeter and internal roadways in accordance with the City of Ontario Master Plan of Streets and Highways. Intersection improvements and roadway design will be subject to further analysis and review by the City to ensure compliance with applicable standards.
Policy M1-6: Reduced Vehicle Miles Traveled. We will strive to reduce VMT through a combination of land use, transportation projects, travel demand management strategies, and other trip reduction measures in coordination with development projects and public capital improvement projects.	**Consistent.** The Eucalyptus Business Park Specific Plan allows for business park and support commercial land uses with internal circulation systems, including sidewalks, bike lanes, and multi-purpose trails, to encourage non-vehicular travel. Also, the open space-parkland planning areas will provide recreational amenities and the retail component within the business park planning area will provide support services within walking and biking distance of the business park uses.
M-2: *A system of trails and corridors that facilitate and encourage active modes of transportation.*	
Policy M2-1: Active Transportation. We maintain our Active Transportation Master Plan to create a comprehensive system of on- and off-street bikeways and pedestrian facilities that are safe, comfortable, and accessible and connect residential areas, businesses, schools, parks, and other key destination points.	**Consistent.** The Eucalyptus Business Park Specific Plan includes the construction of Class II bike lanes along Campus Avenue, Eucalyptus Avenue, and Walker Avenue, as well as multi-purpose trails along Campus Avenue, Eucalyptus Avenue, Grove Avenue, and Walker Avenue, as detailed in Chapter 4, *Infrastructure Plan*. These facilities are integrated with a network of sidewalks throughout the Specific Plan

Ontario Plan Policy	Specific Plan Consistency
Mobility Element	
	area to support safe and accessible travel for pedestrians and bicyclists. The circulation improvements are designed to enhance connectivity within the Business Park and to adjacent areas, consistent with the City's active transportation goals.
Policy M2-2: Bicycle System. We provide off-street multipurpose trails and Class II bikeways as our primary paths of travel and use the Class III for connectivity in constrained circumstances. When truck routes and bicycle facilities share a right-of-way, we prefer Class I or Class IV bicycle facilities. We require new development to include bicycle facilities, such as bicycle parking and secure storage areas.	**Consistent.** The Eucalyptus Business Park Specific Plan includes Class II bikeways and multi-purpose trails throughout the circulation network to support bicycle travel. At final buildout, all development in the Specific Plan area will be required to comply with City of Ontario bicycle facility standards, including provisions for bike lanes, trails, and secure bicycle parking and storage.
Policy M2-3: Pedestrian Walkways. We require walkways that promote safe and convenient travel between residential areas, businesses, schools, parks, recreation areas, and other key destination points.	**Consistent.** The Eucalyptus Business Park Specific Plan includes sidewalks and multi-purpose trails along all major perimeter roadways, including Eucalyptus Avenue, Grove Avenue, Walker Avenue, and Campus Avenue, to ensure safe and convenient pedestrian access throughout the plan area. Internal private drive aisles and public streets will provide additional pedestrian connections between planned business park uses and open space areas. All pedestrian facilities will be constructed in accordance with City standards and designed to promote visibility and safety.
M-2.4 Network Opportunities. We use public rights-of-way and easements such as, utility easements, levees, drainage corridors, road rights-of-way, medians, and other potential options to maintain and expand our bicycle and pedestrian network. In urban, mixed- use, and transit-oriented Place Types, we encourage the use of underutilized public and private spaces to expand our public realm and improve pedestrian and bicycle connectivity. (Link to Community Design Element Urban, Mixed Use, and Transit-oriented Place Types Section)	**Consistent.** The Eucalyptus Business Park Specific Plan utilizes public rights-of-way to establish a connected bicycle and pedestrian network, including sidewalks and multi-purpose trails within the ROWs of Eucalyptus Avenue, Grove Avenue, Walker Avenue, Campus Avenue, and other major corridors. The plan incorporates parkways, landscape buffers, and trail corridors to expand the public realm and improve non-vehicular connectivity throughout the Specific Plan area in alignment with City goals.
Goal M-4: An efficient flow of goods through the City that maximizes economic benefits and minimizes negative impacts.	
Policy M4-1: Truck Routes.	**Consistent.** Truck access to and from the Eucalyptus Business Park Specific Plan area will utilize Grove

Ontario Plan Policy	Specific Plan Consistency
Mobility Element	
We designate and maintain a network of City truck routes that provide for the safe and efficient transport of goods while minimizing negative impacts on local circulation and noise-sensitive land uses, as shown on Exhibit M-04, Truck Routes. We will minimize conflicts on truck routes through the design and implementation of buffers between travel lanes and pedestrian and bicycle facilities on designated truck routes.	Avenue, Walker Avenue, Bon View Avenue, and Campus Avenue, with connections to designated truck routes at Eucalyptus Avenue. The circulation plan includes design elements such as landscape buffers and trail corridors along key frontages to help minimize potential conflicts between truck traffic and non-motorized users, consistent with City policies for safe and efficient goods movement.
Policy M4-4: Environmental Considerations. We support both local and regional efforts to reduce/eliminate the negative environmental impacts of goods movement through the planning and implementation of truck routing and the development of a plan to evaluate the future needs of clean fueling/recharging and electrified truck parking.	**Consistent.** The Eucalyptus Business Park Specific Plan supports regional goods movement through planned improvements to major roadway within Eucalyptus Avenue, which are identified as truck routes in Chapter 4, *Infrastructure Plan*. The Specific Plan incorporates circulation and site planning strategies that accommodate truck access and loading while minimizing conflicts with non-vehicular travel. These improvements provide a framework that can support future environmental initiatives related to sustainable goods movement.

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
CD-1: A dynamic, progressive city containing distinct neighborhoods and commercial districts that foster a positive sense of identity and belonging among residents, visitors, and businesses.	
Policy CD1-3: Existing Neighborhoods. We require the existing character of viable residential and non-residential neighborhoods be preserved, protected and enhanced.	**Consistent.** The Eucalyptus Business Park Specific Plan is designed to preserve and protect the character of surrounding neighborhoods by incorporating a thoughtful land use plan, site design, and buffer treatments. Landscape setbacks and open space parkland are located along perimeter roadways to provide a visual and physical buffer between Business Park uses and adjacent properties. Building orientation, screening walls, and enhanced landscaping will be used to minimize visual and operational impacts on neighboring land uses. Design guidelines in Chapter 6 and development standards in Chapter 5 ensure that lighting is directed away from adjacent areas and that loading and service areas are screened from public view, thereby reducing potential edge effects and maintaining compatibility with the surrounding community.

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
Policy CD1-4: Transportation Corridors. We will enhance our major transportation corridors within the City through landscape, hardscape, signage and lighting. The extent of enhancement should be appropriate to the use, type, and context of each corridor.	**Consistent.** The Eucalyptus Business Park Specific Plan enhances major transportation corridors through a cohesive streetscape design that includes landscaping, parkways, and multi-purpose trails along Eucalyptus Avenue, Grove Avenue, Walker Avenue, and Campus Avenue. These improvements include a combination of canopy trees, shrubs, and groundcover to frame the corridor edges and provide visual continuity. The plan also provides Class II bike lanes and an internal pedestrian network to promote safe, multimodal travel. Entry monuments, consistent signage, and corner treatments are integrated into the streetscape to reinforce the design character of the Business Park and create a welcoming environment for employees and visitors. Design Guidelines in Chapter 6 further establish architectural and landscape elements appropriate to the context of each corridor.
Policy CD1-5: View Corridors. We require all major north-south streets be designed and redeveloped to feature views of the San Gabriel Mountains, which are part of the City's visual identity and a key to geographic orientation. Such views should be free of visual clutter, including billboards and may be enhanced by framing with trees.	**Consistent.** The Eucalyptus Business Park Specific Plan does not include any design features that would obstruct views along major north-south corridors such as Campus Avenue, Grove Avenue, Bon View Avenue, and Walker Avenue. As outlined in Chapter 6, *Design Guidelines*, and Chapter 4, *Infrastructure Plan*, landscaping—including street trees and parkways—will be installed along these corridors as part of roadway improvements. These enhancements will be implemented concurrently with development to create a cohesive streetscape while maintaining an open visual character consistent with City policies.
CD-2: A high level of design quality resulting in public spaces, streetscapes, and developments that are attractive, safe, functional and distinct.	
Policy CD2-1: **Quality Architecture.** We encourage all development projects to convey visual interest and character through: • Building volume, massing, and height to provide appropriate scale and proportion; • A true architectural style which is carried out in plan, section and elevation through all aspects of the building and site design and appropriate for its setting; and	**Consistent.** Future development within the Eucalyptus Business Park will be guided by the Specific Plan's Design Guidelines (Chapter 6), which promote high-quality architectural design through appropriate building massing, scale, and articulation. The guidelines require a unified architectural theme and consistent application of materials, colors, and detailing across all visible building elevations. While the Specific Plan does not prescribe specific materials, it emphasizes the use of durable and visually appealing finishes appropriate to a modern business park setting. These standards ensure that new development contributes positively to the City's visual character.

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
Exterior building materials that are visually interesting, high quality, durable, and appropriate for the architectural style.	
Policy CD2-5: Streetscapes. We design new and, when necessary, retrofit existing streets to improve walkability, bicycling and transit integration, strengthen connectivity, and enhance community identity through improvements to the public right of way such as sidewalks, street trees, parkways, curbs, street lighting and street furniture.	**Consistent.** As part of implementation of the Eucalyptus Business Park Specific Plan, improvements will be made to existing public streets including Eucalyptus Avenue, Grove Avenue, Walker Avenue, Bon View Avenue, and Campus Avenue, as outlined in Chapter 4, *Infrastructure Plan*. Planned improvements include the addition of sidewalks, Class II bike lanes, and multi-purpose trails to support safe and efficient travel for pedestrians, bicyclists, and vehicles. Landscaped parkways with trees and other plantings will be provided along all major roadways to enhance the visual character of the street network and reinforce the Specific Plan's design framework as described in Chapter 6, *Design Guidelines*. These enhancements are intended to improve connectivity and promote a cohesive streetscape identity throughout the plan area.
Policy CD2-7: Sustainability. We collaborate with the development community to design and build neighborhoods, streetscapes, sites, outdoor spaces, landscaping and buildings to reduce energy demand through solar orientation, maximum use of natural daylight, passive solar and natural ventilation, building form, mechanical and structural systems, building materials and construction techniques.	**Consistent.** The Eucalyptus Business Park Specific Plan supports sustainable development principles through its location near regional transportation corridors and within close driving distance of existing residential neighborhoods. The land use plan promotes a mix of employment-generating uses intended to serve both the local and regional workforce, aligning with smart growth objectives. As described in Chapter 6, *Design Guidelines*, the landscaping strategy emphasizes the use of drought-tolerant plant species appropriate for the Inland Southern California climate, with an emphasis on low water use and long-term maintenance efficiency. These measures, combined with coordinated site planning and infrastructure improvements, contribute to reduced resource demand and enhanced environmental performance across the Specific Plan area.
Policy CD2-8: Safe Design. We incorporate defensible space design into new and existing developments to ensure the maximum safe travel and visibility on pathways, corridors, and open space and at building entrances and parking areas by avoiding physically and visually isolated spaces, maintenance of	**Consistent.** The Eucalyptus Business Park Specific Plan serves as the framework for implementing development projects in the Specific Plan area, and includes design specifications for sidewalks, building entrances, and lighting.

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
visibility and accessibility, and use of lighting.	
Policy CD2-9: Landscape Design. We encourage durable landscaping materials and designs that enhance the aesthetics of structures, create and define public and private spaces, and provide shade and environmental benefits.	**Consistent.** The landscape concept for the Eucalyptus Business Park incorporates the use of attractive, durable landscaping materials, and an irrigation system designed to keep plant materials in good health while conserving water. Landscaping will be provided throughout the Eucalyptus Business Park, including along roadways, within passenger car parking lots, at monuments/entries, within common open space areas, and adjacent to buildings.
Policy CD2-10: Parking Areas. We require all development, including single-family residential, to minimize the visual impact of surface, structured, and garage parking areas visible from the public realm in an aesthetically pleasing, safe and environmentally sensitive manner. Examples include: 1. Surface parking: Shade trees, pervious surfaces, urban run-off capture and infiltration, and pedestrian paths to guide users through the parking field. 2. Structured parking: facade articulation, screening, appropriate lighting, and landscaping. 3. Garage parking: providing access to single-family residential garages through alley access, recessing garages from the frontage to emphasize front doors or active living spaces.	**Consistent.** The Eucalyptus Business Park Specific Plan does not include any residential uses. Surface parking lots, truck courts, and loading areas will be designed in accordance with the City's Development Code and the Specific Plan's Design Guidelines (Chapter 6), which require the incorporation of landscaping, screening, and clearly defined pedestrian pathways and drive aisles. Additionally, each building's surface parking area will be designed to treat urban runoff through the respective site's storm drain design.
Policy CD2-11: Entry Statements. We encourage the inclusion of amenities, signage and landscaping at the entry to neighborhoods, commercial centers, mixed use areas, industrial developments, and public places that reinforce them as uniquely identifiable places.	**Consistent.** The Eucalyptus Business Park includes guidelines for building entry treatments, primary and secondary corner treatments, and tenant monument treatments to identify the development and distinguish individual planning areas, in conformance with the intent of Policy CD2-11. The entry treatments, corner treatments, and tenant monuments which are illustrated in Chapter 6, *Design Guidelines*, incorporate landscaping and enhanced signage to provide attractive and distinctive visual statements.
Policy CD2-12: Site and Building Signage.	**Consistent.** The Design Guidelines for the Eucalyptus Business Park (refer to Chapter 6 of this Specific Plan)

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
We encourage the use of sign programs that utilize complementary materials, colors, and themes. Project signage should be designed to effectively communicate and direct users to various aspects of the development and complement the character of the structures.	include signage guidelines to ensure that future development will construct clear, concise, easy-to-read signs that reflect and complement the Specific Plan's design theme, provide for safe and efficient circulation of vehicle traffic, and facilitate pedestrian travel. Signs will be of high-quality and the use of distracting sign elements, such as flashing lights or moving parts, is prohibited. Additionally, a sign program will be provided along with the Specific Plan to further provide design standard for signs within the Specific Plan area.
Goal CD3: Vibrant urban environments that are organized around intense buildings, pedestrian and transit areas, public plazas, and linkages between and within developments that are conveniently located, visually appealing and safe during all hours.	
Policy CD3.2: Comfortable, Human-Scale Public Realm. We require that public spaces, including streets, parks, and plazas on both public and private property be designed to maximize safety, comfort and aesthetics and connect to the citywide pedestrian, vehicular, and bicycle networks.	**Consistent.** The Eucalyptus Business Park Specific Plan promotes a comfortable, human-scale public realm through the coordinated design of its streetscapes, sidewalks, and multi-purpose trails, as described in Chapter 4, *Infrastructure Plan,* and Chapter 6, *Design Guidelines*. Sidewalks and trails are integrated throughout the plan area to enhance pedestrian and bicycle connectivity, while landscaped parkways and consistent setbacks create a visually appealing and walkable environment. These improvements are designed to provide safe, accessible, and aesthetically cohesive connections to the citywide transportation network. Additionally, the Open Space – Parkland planning areas will provide both passive and active open space use for visitors, employees, and surrounding residents of the Specific Plan area.
Policy CD3.3: Complete and Connected Network We require that pedestrian, vehicular, and bicycle circulation on both public and private property be coordinated to provide connections internally and externally to adjacent neighborhoods and properties (existing and planned) through a system of local roads and trails that promote walking and biking to nearby destinations (including existing and planned parks, commercial areas, and transit stops) and are designed to maximize safety, comfort, and aesthetics.	**Consistent.** The Eucalyptus Business Park Specific Plan provides a coordinated and interconnected circulation network for vehicles, bicycles, and pedestrians, as illustrated in Chapter 4, *Infrastructure Plan*, and Chapter 6, *Design Guidelines*. Public roadways and private drive aisles will include sidewalks, Class II bike lanes, and multi-purpose trails to ensure internal mobility and connectivity to surrounding areas. Improvements along major corridors such as Eucalyptus Avenue, Grove Avenue, Campus Avenue, and Walker Avenue support access to regional transit and commercial destinations. All future development will be required to comply with City standards for sight visibility, safety, and

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
	landscape placement to ensure a comfortable and secure travel experience for all users.
Policy CD 3.4: Context-Aware and Appropriate Design We require appropriate building and site design that complements existing development, respects the intent and identity of the Place Type, and provides appropriate transitions and connections between adjacent uses to ensure compatibility of scale, maintain an appropriate level of privacy for each use, and minimize potential conflicts.	**Consistent.** The Eucalyptus Business Park Specific Plan establishes building and site design standards that ensure compatibility with surrounding development and land uses, as detailed in Chapters 5, *Development Regulations* and 6, *Design Guidelines*. The plan incorporates landscaped setbacks, internal circulation buffers, and screening treatments along perimeter roadways to create appropriate transitions between the Business Park and adjacent uses. Building height, massing, and orientation are designed to respect the scale of surrounding development and minimize potential land use conflicts, supporting a context-sensitive and visually cohesive environment.
Policy CD 3.5: Active Frontages. We create lively pedestrian streetscapes by requiring primary building, business, and residential entrances, outdoor dining, and storefronts be located on ground floors adjacent to sidewalks or public spaces and designed to maximize safety, comfort, aesthetics, and the intended functionality (as defined by the Place Type).	**Consistent.** While the Eucalyptus Business Park Specific Plan is focused on employment, business park, and open space uses rather than retail or residential development, it incorporates design elements that support active and engaging frontages along key pedestrian corridors. As described in Chapter 6, *Design Guidelines*, primary building entrances are oriented toward public streets or internal circulation routes, with pedestrian connections provided from sidewalks and trails. Landscaping, lighting, and pathway design contribute to a safe and comfortable pedestrian experience, reinforcing the plan's intent to create a cohesive and visually appealing business park environment.
Policy CD 3.6: Managed Infrastructure. We collaborate with developers and property owners to facilitate development that realizes the envisioned character and functionality of the Place Type through the use of green and shared infrastructure within each Place Type.	**Consistent.** The Eucalyptus Business Park Specific Plan supports coordinated infrastructure planning to achieve the intended character and functionality of a modern business park. As outlined in Chapter 4, *Infrastructure Plan*, the project includes shared infrastructure improvements such as integrated roadway systems, stormwater facilities, and utility corridors designed to serve multiple parcels efficiently. The Specific Plan also promotes sustainable practices through the use of drought-tolerant landscaping and multi-purpose trails within public rights-of-way, contributing to a cohesive, functional, and environmentally responsible development pattern.
Goal CD-5: A sustained level of maintenance and improvement of properties, buildings and infrastructure that protects the property values and encourages additional public and private investments.	

Ontario Plan Policy	Specific Plan Consistency
Community Design Benefit	
Policy CD5-1: Maintenance of Buildings and Property. We require all public and privately-owned buildings and property (including trails and easements) to be properly and consistently maintained.	**Consistent.** The Eucalyptus Business Park Specific Plan defines the responsible parties for maintaining both public and private improvements, including roadways, utilities, landscaping, and pedestrian infrastructure, as outlined in Chapter 7, *Implementation Plan*. A maintenance responsibility matrix is included to ensure long-term upkeep of all improvements, including trails and easements, in accordance with City standards. This framework ensures that all development within the Specific Plan area will be properly and consistently maintained.
Policy CD5-2: Maintenance of Infrastructure. We require the continual maintenance of infrastructure.	**Consistent.** The Eucalyptus Business Park Specific Plan defines the responsible parties for maintaining both public and private improvements, including roadways, utilities, landscaping, and pedestrian infrastructure, as outlined in Chapter 7, *Implementation Plan*. A maintenance responsibility matrix is included to ensure long-term upkeep of all improvements, including trails and easements, in accordance with City standards. This framework ensures that all development within the Specific Plan area will be properly and consistently maintained.

LAND DEVELOPMENT DIVISION CONDITIONS OF APPROVAL

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Fax: 909.395.2420

Date Prepared: 5/15/2026

File No: PSP24-003

Related Files: N/A

Project Description: A public hearing to consider the Eucalyptus Business Park Specific Plan (File No. PSP24-003) to establish the land use districts, development standards, design guidelines, infrastructure improvements, etc., for the potential development of 2,939,000 square feet of business park development, 10,000 square feet of commercial development and approximately 37-acres of open space/recreation on approximately 189 acres of land for property generally located along the northeast corner of Campus Avenue and Eucalyptus Avenue, within the SP (Specific Plan) and AG (Agricultural Overlay) zoning districts. The environmental impacts of this project were reviewed in conjunction with The Ontario Plan (TOP) 2050 Policy Plan Amendment (File No. PGPA25-002), for which a Supplemental Environmental Impact Report (State Clearinghouse No. 2025110102) was prepared. This application introduces no new significant environmental impacts. The proposed project is located within the Airport Influence Area of Ontario International Airport and was evaluated and found to be consistent with the policies and criteria of the Ontario International Airport Land Use Compatibility Plan. The project site is also located within the Airport Influence area of Chino Airport and was evaluated and found to be consistent with the policies and criteria of the Chino Airport Land Use Compatibility Plan; (APNs:1053-531-01, 1053-531-02, 1053-531-03, 1053-531-04, 1053-541-01, 1053-541-02, 1053-551-01, 1053-371-01, 1053-371-02, 1053-581-03, 1053-581-04, 0216-321-01, 0216-321-02, 0216-321-06, 0216-321-07, 0216-322-01, 0216-322-02, 0216-322-10) **submitted by Ontario Ranch Venture II, LLC. (c/o Sares Regis Group).**

Prepared By: Luis E. Batres, Senior Planner

Email: Lbatres@ontarioca.gov

The Planning Department, Land Development Section, conditions of approval applicable to the above-described Project, are listed below. The Project shall comply with each condition of approval listed below:

1.0 Standard Conditions of Approval. The project shall comply with the *Standard Conditions for New Development*, adopted by City Council Resolution No. 2017-027 on April 18, 2017. A copy of the *Standard Conditions for New Development* may be obtained from the Planning Department or City Clerk/Records Management Department.

2.0 Special Conditions of Approval. In addition to the *Standard Conditions for New Development* identified in condition no. 1.0, above, the project shall comply with the following special conditions of approval:

2.1 Specific Plan/Specific Plan Amendment. The following shall be submitted to the Planning Department within 45 days following City Council approval of the Specific Plan/Specific Plan Amendment:

(a) Two copies of the final approved Specific Plan document, bounded.

(b) One complete, unbound copy of the final approved Specific Plan document.

(c) One USB drive, or download link, containing a complete Microsoft Word, or editable, copy of the final approved Specific Plan document, including original figures, images and all required revisions.

2.2 Additional Fees.

(a) Within 5 days following final application approval, the Notice of Determination ("NOD") filing fee shall be provided to the Planning Department. The fee shall be paid by check, made payable to the "Clerk of the Board of Supervisors", which shall be forwarded to the San Bernardino County Clerk of the Board of Supervisors, along with all applicable environmental forms/notices, pursuant to the requirements of the California Environmental Quality Act ("CEQA"). Failure to provide said fee within the time specified will result in the extension of the statute of limitations for the filing of a CEQA lawsuit from 30 days to 180 days.

2.3 Mics.

(a) Approval of this Specific Plan is subject to the City Council approving File No. PGPA25-002, The Ontario Plan (TOP) 2050 Policy Plan Amendment.

CITY OF ONTARIO *Agenda Report* **June 16, 2026**	**SECTION:** **PUBLIC HEARINGS**
Department: Planning Prepared By: Jeanie Irene T Aguilo Department: Prepared By: Jeanie Irene T Aguilo Staff Member Presenting: Rudy Zeledon, Executive Director Community Development Approved By:	Submitted To: Council/OHA Approved: _____ Continued To: _____ Denied: _____ Item No: 22

SUBJECT: **A PUBLIC HEARING TO CONSIDER AN AMENDMENT TO THE MEREDITH INTERNATIONAL CENTRE SPECIFIC PLAN (FILE NO. PSPA25-005) TO ESTABLISH A MIXED-USE OVERLAY DISTRICT (PLANNING AREA 3A) ON 25.38 ACRES OF LAND**

RECOMMENDATION: That the City Council consider and adopt:

A. A Resolution approving an Addendum to the Meredith International Centre Specific Plan Environmental Impact Report (State Clearinghouse No. 2014051020).
B. A Resolution approving a Specific Plan Amendment (File No. PSPA25-005) for the Meredith International Centre Specific Plan, appended to the attached Resolution as "Attachment A", pursuant to the facts and reasons contained in the staff report and subject to the conditions of approval appended to the attached Resolution as "Attachment B".

THE FOLLOWING COUNCIL GOALS ARE BEING ACHIEVED:
Invest in the Growth and Evolution of the City's Economy
Operate in a Businesslike Manner
Focus Resources in Ontario's Commercial and Residential Neighborhoods

FISCAL IMPACT: There is not a direct fiscal impact associated with this action. There is no development proposed at this time and all future development and public infrastructure improvements will be constructed by a developer at its sole cost.

BACKGROUND & ANALYSIS: In April 2015, the City Council approved a General Plan Amendment (File No. PGPA13-005) and a Specific Plan Amendment (File No. PSPA14-003) to the Meredith International Centre Specific Plan (Specific Plan). The Specific Plan, originally adopted in 1981, was amended to facilitate the development of approximately 3 million square feet of industrial land uses, up to 600 hotel rooms, 1.1 million square feet of commercial land uses, and up to 800 residential units on roughly 257.7 acres of land. The Specific Plan generally covers several properties located north of the Interstate 10 Freeway, south of 4th Street, between Vineyard Avenue and Archibald Avenue.

Following the 2015 Specific Plan Amendment, the City Council approved a subsequent Amendment (File No. PSPA19-002) in November 2019 to establish a new mixed-use overlay within Planning Area 2. The overlay, identified as Planning Area 2A, was intended to facilitate a mixed-use development consisting of up to 925 luxury multi-family dwelling units and 5,000 square feet of retail space. The development project, known as The Vineyards, completed construction in January of 2025.

The proposed Specific Plan Amendment was initiated by the City in July 2025. Similar to the 2019 Amendment, the proposed Amendment will establish a new Mixed-Use Overlay district in Planning Area 3 (identified as Planning Area 3A), on 25.38 acres of land. The new overlay will facilitate a mixed-use development that can include up to 1,400 multi-family dwelling units and up to 50,000 square feet of commercial/retail uses. The Specific Plan will be updated to include the following:

- New development standards for Planning Area 3A to facilitate future development.
- An updated land use map to reflect the overlay boundary for Planning Area 3A.
- An updated land use matrix to reflect the allowed uses within Planning Area 3A.
- Various text and exhibit updates to reflect the proposed changes for Planning Area 3A.

The proposed Amendment is in keeping with the Specific Plan's objectives to create an urban environment where businesses can locate and thrive, where multi-family housing opportunities are within walking distance of restaurants, goods and services, and to become a regional draw that takes advantage of nearby transportation corridors. Additionally, the proposed amendment will ensure greater consistency between the Specific Plan and The Ontario Plan (TOP) Policy Plan in that TOP envisions this area with regional-serving retail and/or office, and stand-alone residential projects that can create a mixed-use environment in both horizontal and vertical form.

There is no development plan associated with the proposed Specific Plan Amendment. All future development within Planning Area 3/3A will require a separate review process in compliance with the Ontario Development Code and the Meredith International Centre Specific Plan.

PLANNING COMMISSION REVIEW: On November 25, 2025, the Planning Commission held a public hearing on the proposed Specific Plan Amendment. During the public comment period, concerns were expressed about potential traffic and the number of new residential units that could result from the proposed amendment. Staff responded that the potential traffic impacts and proposed residential buildout were analyzed as part of the Addendum for the proposed Specific Plan Amendment. The analysis considered street and intersection operations, as well as the offset in the amount of the current commercial buildout in comparison to the proposed residential buildout. The analysis concluded that the proposed amendment will not result in any new significant impacts beyond the Specific Plan's EIR findings, and all necessary mitigations will remain applicable to future development proposals within the Specific Plan. After considering the public comments and Staff response, the Planning Commission voted 4-0, recommending City Council approval.

ENVIRONMENTAL REVIEW: The environmental impacts of this project were reviewed in conjunction with an Addendum to the Meredith International Centre Specific Plan Environmental Impact Report (State Clearinghouse No. 2014051020) adopted by City Council on April 7, 2015. The Addendum analyzed the proposed amendments and potential build out within Planning Area 3A and concluded that the Specific Plan Amendment introduces no new significant environmental

impacts. All previously adopted mitigation measures are a condition of project approval and are incorporated herein by this reference.

CITY OF ONTARIO PLANNING DEPARTMENT

PLANNING COMMISSION AGENDA REPORT

November 25, 2025

303 East B Street, Ontario, California 91764 Phone: 909.395.2036 / Email: PlanningDirector@OntarioCA.gov

FILE NO: PSPA25-005

SUBJECT: A public hearing to consider an Amendment to the Meredith International Centre Specific Plan to establish a Mixed-Use Overlay district (Planning Area 3A) on 25.38 acres of land within the Planning Area 3 (Urban Commercial) land use district, located at the southwest corner of Archibald Avenue and Inland Empire Boulevard. (APNs: 0110-321-74, 0110-321-75, 0110-321-76, 0110-321-29, and 0110-321-77) **City Initiated. City Council action is required.**

PROPERTY OWNER: Ikea Property Inc.

RECOMMENDED ACTION: That the Planning Commission consider and adopt a Resolution recommending approval of the use of an Addendum to the Meredith International Centre Specific Plan Environmental Impact Report (State Clearinghouse No. 2014051020) and adopt a Resolution recommending approval of a Specific Plan Amendment (File No. PSPA25-005), for the Meredith International Centre Specific Plan, appended to the attached Resolutions as Attachment A, pursuant to the facts and reasons contained in the staff report and subject to the conditions of approval appended to the attached Resolutions as Attachment B.

BACKGROUND: In April 2015, the City Council approved a General Plan Amendment (File No. PGPA13-005) and Specific Plan Amendment (File No. PSPA14-003). These applications modified the Meredith International Centre Specific Plan, originally adopted in 1981, to facilitate the development of approximately 3 million square feet of industrial land uses, up to 600 hotel rooms, 1.1 million square feet of commercial land uses, and up to 800 residential units on approximately 257.7 acres of land located on the north side of the Interstate 10 Freeway between Vineyard and Archibald Avenues.

CC	12/16/2025		Final

The Specific Plan is intended to accommodate industrial uses and horizontal and vertical mixture of commercial, office, and residential uses. Existing developments within the Specific Plan area include national retail distribution centers, luxury vehicle dealerships, and luxury apartments.

In November 2019, the City Council approved a subsequent Specific Plan Amendment (File No. PSPA19-002) to establish a new Mixed-Use Overlay district (Planning Area 2A). The 2019 Amendment facilitated a Development Plan allowing up to 925 multi-family dwelling units and 5,000 square feet of retail space (File No. PDEV19-025) within Planning Area 2A. The project was designed and constructed with a mixture of luxurious mid-rise buildings along with commercial spaces integrated within the ground floor.

On July 9, 2025, the City of Ontario initiated a new amendment to the Meredith International Centre Specific Plan to establish a new Mixed-Use Overlay district within Planning Area 3 (proposed project). The new overlay will establish Planning Area 3A on 25.38 acres of land and will include associated development standards, modifications to the land use map and land use table, updated exhibits, and text changes to reflect the proposed Overlay.

PROJECT SETTING: The Project site is comprised of 25.38 acres of land within Planning Area 3 located at the southwest corner of Archibald Avenue and Inland Empire Boulevard, within the Urban Commercial land use district of the Meredith International Centre Specific Plan (see Figure 1: Project Location). The Project site consists of five lots that are relatively flat, with a gentle slope to the southwest. The properties to the north of the Project site are within Planning Area 4 (Urban Residential) of the Meredith International Centre Specific Plan and are improved with residential developments. The properties to the east are within the High Intensity Office (OH) zoning district and are developed with a gasoline station and a hotel that is currently under construction. Additionally, the Project site is bounded by Interstate 10 to the south, and a flood control channel and Planning Area 2 (Urban Commercial) of the Specific Plan to the west. The existing surrounding land uses, zoning, and Policy Plan (general plan) and specific plan land use designations are summarized in Table 1: Surrounding Zoning & Land Uses.

PROJECT ANALYSIS: The Specific Plan Amendment will establish a Mixed-Use Overlay district (Planning Area 3A) within the Planning Area 3 (Urban Commercial) land use district. The proposed overlay will allow a mixed-use development that could include up to 1,400 residential units and up to 50,000 square feet of commercial/retail uses. The intent of the Specific Plan Amendment is to establish criteria and parameters for future development projects that are distinguished, high quality, and provide opportunities for high-end dining, retail, and resort-style residential living. The proposed amendment will also support the Specific Plan's objective to create an urban environment where businesses can locate and thrive, where multi-family housing opportunities are within walking distance to restaurants, goods and services, and to become a regional draw that takes advantage of nearby transportation corridors.

Additionally, the proposed amendment will also ensure greater consistency between the Specific Plan and The Ontario Plan (TOP) Policy Plan. The TOP currently has a land use designation of mixed use (MU-Meredith), allowing up to 125 dwelling units per acre with intense office and retail uses to support. Furthermore, the TOP envisions this area with regional-serving retail and/or office, and stand-alone residential projects that can create a mixed-use environment in both horizontal and vertical form.

The proposed amendment will revise several sections of the Meredith International Centre Specific Plan including Section 2 – Development Plan and Section 5 – Development Standards. A copy of the changes is reflected in Attachment A – Meredith International Centre Specific Plan Amendment Redlines, attached.

There is no development plan associated with the proposed Specific Plan Amendment. All future development within Planning Area 3/3A will require a separate review process in compliance with the Ontario Development Code and the Meredith International Centre Specific Plan.

PUBLIC NOTIFICATION: The subject application was advertised as a public hearing in at least one newspaper of general circulation in the City of Ontario (the Inland Valley Daily Bulletin newspaper). In addition, notices were mailed to all owners of real property located within a minimum of 600 feet of the exterior boundaries of the property that is the subject of the hearing, as shown on the records of the County Assessor.

CORRESPONDENCE: As of the preparation of this Agenda Report, Planning Department staff has not received any written or verbal communications from the owners or occupants of properties surrounding the Project site or from the public in general, regarding the subject application.

AGENCY/DEPARTMENT REVIEWS: Each City agency/department has been provided the opportunity to review and comment on the subject application and recommend conditions of approval to be imposed upon the application. At the time of the Resolution preparation, recommended conditions of approval were provided and are appended to the attached Resolutions.

AIRPORT LAND USE COMPATIBILITY PLAN (ALUCP) COMPLIANCE: The California State Aeronautics Act (Public Utilities Code Section 21670 et seq.) requires that an Airport Land Use Compatibility Plan be prepared for all public use airports in the State; and requires that local land use plans and individual development proposals must be consistent with the policies set forth in the adopted Airport Land Use Compatibility Plan.

On April 19, 2011, the City Council of the City of Ontario approved and adopted the ONT ALUCP, establishing the Airport Influence Area for Ontario International Airport, which encompasses lands within parts of San Bernardino, Riverside, and Los Angeles Counties, and limits future land uses and development within the Airport Influence Area, as they relate to noise, safety, airspace protection, and overflight impacts of current and future

airport activity. As the recommending body for the Project, the Planning Commission has reviewed and considered the facts and information contained in the Application and supporting documentation against the ONT ALUCP compatibility factors, including [1] Safety Criteria (ONT ALUCP Table 2-2) and Safety Zones (ONT ALUCP Map 2-2), [2] Noise Criteria (ONT ALUCP Table 2-3) and Noise Impact Zones (ONT ALUCP Map 2-3), [3] Airspace protection Zones (ONT ALUCP Map 2-4), and [4] Overflight Notification Zones (ONT ALUCP Map 2-5). As a result, the Planning Commission finds and determines that the Project, when implemented in conjunction with the conditions of approval, will be consistent with the policies and criteria set forth within the ONT ALUCP.

COMPLIANCE WITH THE ONTARIO PLAN: The proposed Project is consistent with the principles, goals and policies contained within the Vision, Governance, Policy Plan (General Plan), and City Council Priorities components of The Ontario Plan (TOP). More specifically, the goals and policies of TOP that are furthered by the proposed Project are as follows:

(1) City Council Goals

- Invest in the Growth and Evolution of the City's Economy
- Operate in a Businesslike Manner
- Focus Resources in Ontario's Commercial and Residential Neighborhoods

(2) Vision

Distinctive Development that integrates our varied and diverse focal points, districts, centers, corridors, and neighborhoods to provide a feeling of coherence without sacrificing uniqueness.

Commercial and Residential Development

- Development quality that is broadly recognized as distinctive and not exclusively tied to the general suburban character typical of much of Southern California.

(3) Governance

Decision Making

Goal G1: Sustained decision-making that consistently moves Ontario towards its Vision by using The Ontario Plan as a framework for assessing choices.

- G1-1 Consistency with Policies. We require that staff recommendations to the City Council be consistent with adopted City Council Priorities (Goals and Objectives) and The Policy Pan.

- G1-2 Long-term Benefit. We require decisions to demonstrate and document how they add value to the community and support the Ontario Vision.

(4) Policy Plan (General Plan)

Land Use Element

Goal LU-1 Balance: A community that has a spectrum of housing types and price ranges that match the jobs in the City and that make it possible for people to live and work in Ontario and maintain a quality of life.

- LU-1.1 Strategic Growth. We concentrate growth in strategic locations that help create place and identity, maximize available and planned infrastructure, foster the development of transit, and support the expansion of the active and multimodal transportation networks throughout the City.

- LU-1.6 Complete Community. We incorporate a variety of land uses and building types in our land use planning efforts that result in a complete community where residents at all stages of life, employers, workers, and visitors have a wide spectrum of choices of where they can live, work, shop and recreate within Ontario.

Goal LU-2 Compatibility: Compatibility between a wide range of uses and a resultant urban patterns and forms.

- LU-2.6: Infrastructure Compatibility. We require infrastructure to be aesthetically pleasing and in context with the community character.

Goal LU-3 Flexibility: Staff, regulations and processes that support and allow flexible response to conditions and circumstances in order to achieve the Vision.

- LU-3.1 Development Standards. We maintain clear development standards which allow flexibility to achieve our Vision and provide objective standards that ensure predictability and deliver the intended physical outcomes.

- LU-3.3 Land Use Flexibility. We consider uses not typically permitted within a land use category if doing so improves livability, reduces vehicular trips, creates community gathering places and activity nodes, and helps create identity.

Housing Element

Goal H-2 Housing Supply & Diversity: Diversity of types of quality housing that are affordable to a range of household income levels, accommodate changing demographics, and support and reinforce the economic sustainability of Ontario.

- H-2.1 Corridor Housing. We revitalize transportation corridors by encouraging the production of higher density residential and mixed-uses that are architecturally, functionally, and aesthetically suited to corridors.

- H-2.5 Housing Design. We require architectural excellence through adherence to City design guidelines, thoughtful site planning, environmentally sustainable practices, and other best practices.

Community Economics Element:

Goal CE-1 Complete Community: A complete community that provides for all incomes and stages of life.

- CE-1.5 Business Attraction. We proactively attract new and expanding businesses to Ontario in order to increase the City's share of growing sectors of the regional and global economy.

- CE-1.6 Diversity of Housing. We collaborate with residents, housing providers, and the development community to provide housing opportunities for every stage of life; we plan for a variety of housing types and price points to encourage the development of housing supportive of our efforts to attract business in growing sectors of the community while being respectful of existing viable uses.

Goal CE-2 Placemaking: A City of distinctive neighborhoods, districts, corridors, and centers where people choose to be.

- CE-2.1 Development Projects. We require new development and redevelopment to create unique, high-quality places that add value to the community.

- CE-2.2 Development Review. We require those proposing new development and redevelopment to demonstrate how their projects will create appropriately unique, functional, and sustainable places that will compete well with their competition within the region.

- CE-2.4 Protection of Investment. We require that new development and redevelopment protect existing investment by providing architecture and urban design of equal or greater quality.

- CE-2.5 Private Maintenance. We require adequate maintenance, upkeep, and investment in private property because proper maintenance on private property protects property values.

Community Design Element

Goal CD-1 Image & Identity: A dynamic, progressive city containing distinct and complete places that foster a positive sense of identity and belonging among residents, visitors, and businesses.

- CD-1.2 Place Types. We establish Place Types in urban, mixed use, and transit-oriented areas to foster the City's identity as a premier community and require new development within each Place Type to incorporate prescribed urban patterns, forms, and placemaking priorities.

HOUSING ELEMENT COMPLIANCE: The Project is consistent with the Housing Element of the Policy Plan (general plan) component of The Ontario Plan, as the Project site is not one of the properties in the Housing Element Sites contained in Tables B-1 and B-2 (Housing Element Sites Inventory) of the Housing Element Technical Report.

ENVIRONMENTAL REVIEW: The environmental impacts of this project were reviewed in conjunction with an Addendum to the Meredith International Centre Specific Plan Environmental Impact Report (State Clearinghouse No. 2014051020) adopted by City Council on April 7, 2015. The Addendum concluded that the Specific Plan Amendment introduces no new significant environmental impacts. All previously adopted mitigation measures are a condition of project approval and are incorporated herein by this reference.

to the Meredith International Center Specific Plan
Environmental Impact Report
(State Clearing House No. 2014051020)

(Document to follow this page)

Resolution for File No. PSPA25-005

(Document to follow this page)

RESOLUTION NO. PC25-056

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF ONTARIO RECOMMENDING THAT THE CITY COUNCIL APPROVE AN ADDENDUM TO THE MEREDITH INTERNATIONAL CENTRE SPECIFIC PLAN AMENDMENT ENVIRONMENTAL IMPACT REPORT (SCH # 2014051020), FOR WHICH AN INITIAL STUDY WAS PREPARED, PURSUANT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT, AS AMENDED, FOR FILE NO. PSPA25-005—APNS: 0110-321-74, 0110-321-75, 0110-321-76, 0110-321-29, AND 0110-321-77

WHEREAS, CITY OF ONTARIO (hereinafter referred to as "Applicant") has filed an Application for the approval of a Specific Plan Amendment, File No. PSPA25-005, to establish a Mixed-Use Overlay district (Planning Area 3A) on 25.38 acres of land within the Planning Area 3 (Urban Commercial) land use district, located at the southwest corner of Archibald Avenue and Inland Empire Boulevard, in the City of Ontario, California (hereinafter referred to as "Application" or "Project"); and

WHEREAS, the City of Ontario certified the Environmental Impact Report prepared for The Ontario Plan and associated Statement of Overriding Considerations, and issued Resolution No. 2010-003; and

WHEREAS, the City of Ontario adopted the Policy Plan (General Plan) as part of the component framework for The Ontario Plan on January 27, 2010, and issued Resolution No. 2010-004; and

WHEREAS, the City of Ontario certified the Supplemental Environmental Impact Report (SEIR), for the General Plan Amendment for The Ontario Plan 2050 Technical Update on August 16, 2022; and

WHEREAS, environmental impacts of the proposed project were reviewed in conjunction with an Addendum to the Meredith International Centre Specific Plan Amendment Environmental Impact Report (SCH# 2014051020), certified by City Council on April 7, 2015, in conjunction with File Nos. PGPA13-005 and PSPA14-003. This Application introduces no new significant environmental impacts; and

WHEREAS, the Planning Director of the City of Ontario has prepared and approved for attachment to the certified Environmental Impact Report, an Addendum to the Certified EIR (hereinafter referred to as "EIR Addendum") in accordance with the requirements of the California Environmental Quality Act of 1970, together with State and local guidelines implementing said Act, all as amended to date (collectively referred to as "CEQA"); and

WHEREAS, the EIR Addendum concluded that implementation of the Project could result in a number of significant effects on the environment that were previously analyzed in the Certified EIR, and that the Certified EIR identified mitigation measures that would reduce each of those significant effects to a less-than-significant level; and

WHEREAS, pursuant to State CEQA Guidelines Section 15164(a), a lead agency shall prepare an addendum to a previously certified EIR if some changes or additions are necessary to a project, but the preparation of a subsequent or supplemental EIR is not required; and

WHEREAS, the City determined that none of the conditions requiring preparation of a subsequent or supplemental EIR would occur from the Project, and that preparation of an Addendum to the Certified EIR was appropriate; and

WHEREAS, the City of Ontario is the lead agency on the Project, and the Planning Commission is the recommending authority for the requested approval to construct and otherwise undertake the Project; and

WHEREAS, the Planning Commission has reviewed and considered the EIR Addendum for the Project, has concluded that none of the conditions requiring preparation of a subsequent of supplemental EIR have occurred, and intends to take actions on the Project in compliance with CEQA and state and local guidelines implementing CEQA; and

WHEREAS, the EIR Addendum for the Project is on file in the Planning Department, located at 303 East B Street, Ontario, CA 91764, is available for inspection by any interested person at that location and is, by this reference, incorporated into this Resolution as if fully set forth herein; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, IT IS HEREBY FOUND, DETERMINED, AND RESOLVED by the Planning Commission of the City of Ontario, as follows:

SECTION 1: ***Environmental Determination and Findings.*** As the recommending authority for the Project, the Planning Commission has reviewed and considered the information contained in the administrative record for the Project. Based upon the facts and information contained in the administrative record, including all written and oral evidence presented to the Planning Commission, the Planning Commission finds as follows:

(1) The environmental impacts of this project were reviewed in conjunction with an Addendum to the Meredith International Centre Specific Plan Amendment Environmental Impact Report (SCH# 2014051020), certified by City Council on April 7, 2015, in conjunction with File Nos. PGPA13-005 and PSPA14-003. This Application introduces no new significant environmental impacts; and

(2) The EIR Addendum and administrative record have been completed in compliance with CEQA, the State CEQA Guidelines, and the City of Ontario Local CEQA Guidelines; and

(3) The City's "Guidelines for the Implementation of the California Environmental Quality Act (CEQA)" provide for the use of a single environmental assessment in situations where the impacts of subsequent projects are adequately analyzed. This Application introduces no new significant environmental impacts; and

(4) All previously adopted mitigation measures shall be a condition of project approval, as they are applicable to the Project, and are incorporated herein by this reference; and

(5) The EIR Addendum contains a complete and accurate reporting of the environmental impacts associated with the Project, and reflects the independent judgment of the Planning Commission; and

(6) There is no substantial evidence in the administrative record supporting a fair argument that the Project may result in significant environmental impacts.

SECTION 2: ***Additional Environmental Review Not Required.*** Based on the Addendum, all related information presented to the Planning Commission, and the specific findings set forth in Section 1, above, the Planning Commission finds that the preparation of a subsequent or supplemental Environmental Impact Report is not required for the Project, as the Project:

(1) Does not constitute substantial changes to the Certified EIR that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; and

(2) Does not constitute substantial changes with respect to the circumstances under which the Certified EIR was prepared, that will require major revisions to the Certified EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of the previously identified significant effects; and

(3) Does not contain new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the Certified EIR was certified/adopted, that shows any of the following:

(a) The Project will have one or more significant effects not discussed in the Certified EIR; or

(b) Significant effects previously examined will be substantially more severe than shown in the Certified EIR; or

(c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the Project, but the City declined to adopt such measures; or

(d) Mitigation measures or alternatives considerably different from those analyzed in the Certified EIR would substantially reduce one or more significant effects on the environment, but which the City declined to adopt.

SECTION 3: ***Planning Commission Action.*** Based upon the findings and conclusions set forth in Sections 1 and 2, above, the Planning Commission hereby recommends the City Council finds that based upon the entire record of proceedings before it, and all information received, that there is no substantial evidence that the Project will constitute substantial changes to the Certified EIR, and does hereby approve the EIR Addendum, attached hereto as "Attachment A," and incorporated herein by this reference.

SECTION 4: ***Indemnification.*** The Applicant shall agree to defend, indemnify and hold harmless, the City of Ontario or its agents, officers, and employees from any claim, action or proceeding against the City of Ontario or its agents, officers or employees to attack, set aside, void, or annul this approval. The City of Ontario shall promptly notify the Applicant of any such claim, action, or proceeding, and the City of Ontario shall cooperate fully in the defense.

SECTION 5: ***Custodian of Records.*** The documents and materials that constitute the record of proceedings on which these findings have been based are located at the City of Ontario City Hall, 303 East "B" Street, Ontario, California 91764. The custodian for these records is the City Clerk of the City of Ontario.

SECTION 6: ***Certification to Adoption.*** The Secretary shall certify to the adoption of the Resolution.

- - - - - - - - - - - - - -

The Secretary Pro Tempore for the Planning Commission of the City of Ontario shall certify as to the adoption of this Resolution.

I hereby certify that the foregoing Resolution was duly and regularly introduced, passed and adopted by the Planning Commission of the City of Ontario at a regular meeting thereof held on the 25th day of November 2025, and the foregoing is a full, true and correct copy of said Resolution, and has not been amended or repealed.

1.0 INTRODUCTION

In 2015, the City of Ontario (City), as Lead Agency under the California Environmental Quality Act (CEQA), prepared a Draft Environmental Impact Report (EIR) and a Final EIR (State Clearinghouse No. 2014051020) for the *Meredith International Centre Specific Plan Amendment* (Specific Plan). These documents are collectively referred to in this document as the Specific Plan EIR. The Specific Plan outlines a development plan, circulation plan, utility infrastructure plan, development standards, design guidelines, and an implementation plan to guide development within the area for a five to ten year planning period.

The Meredith International Centre Specific Plan Amendment – Planning Area 3 Project (project) proposes to modify the Specific Plan to include a Mixed-Use Overlay across Planning Area 3 of the Specific Plan area, allowing the development of up to 1,400 residential units and up to 50,000 square feet of commercial/retail uses in addition to the uses permitted under the site's Urban Commercial designation. This Addendum has been prepared to determine whether the proposed project would result in new or substantially more severe significant environmental impacts compared to the impacts of the Specific Plan as disclosed in the Specific Plan EIR.

1.1 PROJECT LOCATION

The City of Ontario is in the southwestern portion of San Bernardino County and is surrounded by the cities of Upland and Rancho Cucamonga to the north; the City of Fontana and unincorporated San Bernardino County to the east; the cities of Eastvale and Jurupa Valley to the south; and the cities of Chino and Montclair and unincorporated San Bernardino County to the west; refer to Exhibit 1, *Regional Vicinity*.

As shown on Exhibit 2, *Site Vicinity*, the approximately 25.3-acre project site is located in the northern portion of the City. The site is bounded by Inland Empire Boulevard to the north, Archibald Avenue to the east, Interstate 10 (I-10) to the south, and Deer Creek Channel, a concrete-lined flood control channel, to the west. The Ontario International Airport (ONT) is located approximately 0.4-mile to the south.

1.2 PREVIOUS ENVIRONMENTAL DOCUMENT

Meredith International Centre Specific Plan Amendment Final Environmental Impact Report

As discussed above, in 2015, the City prepared the programmatic Specific Plan EIR as a major update to the original *Meredith International Centre Specific Plan*, which was approved in 1981. The Meredith SPA includes a mix of industrial, commercial, and residential land uses within five planning areas across 257.7 acres; refer to Exhibit 3, *Current Land Use Plan*. Table 1, *Current Specific Plan Buildout Potential*, illustrates the approved land uses and buildout potential of the Specific Plan as analyzed in the Specific Plan EIR.

Planning Area 3 is the proposed project site and is designated Urban Commercial. The Specific Plan EIR assumed buildout of Planning Area 3 would allow up to 400 hotel rooms and 250,000 square feet of commercial uses (for a total buildout of 480,000 square feet).

Table 1
Current Specific Plan Buildout Potential

Planning Area	Land Use	Acreage	Square Footage	Residential Units	Hotel Rooms
1	Industrial	146.6	3,007,000	--	--
1A	Industrial	2.0		--	--
2	Urban Commercial	43.7	650,000	--	200[1]
	Mixed Use Overlay[2]		5,000	925	
3[3]	Urban Commercial	25.3	480,000	--	400[1]
4	Urban Residential	21.4	--	800	--
5	Urban Commercial	2.7	13,000	--	--
Roadway Modifications		16.0	--	--	--
Total		**257.7**	**4,155,000**	**1,725**	**600**

Note:
1. The number of hotel rooms is included in the square footage totals of Planning Areas 2 and 3.
2. The Mixed Use Overlay in Planning Area 2 was established in 2019 and analyzed in the *Meredith International Centre Specific Plan Amendment Environmental Impact Report Addendum*, prepared by the City of Ontario and dated November 15, 2019.
3. Planning Area 3 is the proposed project site.

MEREDITH INTERNATIONAL CENTRE SPECIFIC PLAN AMENDMENT – PLANNING AREA 3 PROJECT
ADDENDUM TO THE ENVIRONMENTAL IMPACT REPORT

Current Land Use Plan

Exhibit 5423

The Specific Plan EIR analyzed project impacts for the following environmental topics:

- Land Use and Planning;
- Traffic and Circulation;
- Air Quality;
- Global Climate Change and Greenhouse Gas Emissions;
- Noise;
- Hazards and Hazardous Materials;
- Public Services and Utilities;
- Hydrology and Water Quality;
- Biological Resources;
- Geology and Soils;
- Cultural Resources;
- Aesthetics; and
- Population and Housing.

Overall, the Specific Plan EIR identified the following three environmental resource areas with significant and unavoidable impacts:

- Air Quality (project-level and cumulative construction and operational emissions);
- Noise (construction and operational noise); and
- Transportation and Circulation (cumulative intersection/freeway traffic impacts).

Meredith International Centre Specific Plan Amendment Environmental Impact Report Addendum

In 2019, the City prepared the *Meredith International Centre Specific Plan Amendment Environmental Impact Report Addendum* (2019 Addendum), which proposed changes to Planning Area 2 of the Specific Plan area. Specifically, the 2019 Addendum analyzed impacts of a Specific Plan Amendment and Development Plan establishing a Mixed-Use Overlay for Planning Area 2 to accommodate development of up to 925 multi-family residential units and 5,000 square feet of retail space in addition to the uses permitted under the site's Urban Commercial designation (i.e., 200-room hotel encompassing 650,000 square feet); refer to Table 1.

The 2019 Addendum concluded that the project would not result in a substantial increase in the severity of any of the impacts identified in the Specific Plan EIR nor would it require implementation of any new or modified mitigation measures. Specifically, the 2019 Addendum found that the proposed modifications to Planning Area 2 would result in the same significant and unavoidable impacts identified in the Specific Plan EIR. Consistent with CEQA Guidelines Section 15162(a), the significant and unavoidable impacts identified in the 2019 Addendum are not new or more severe than those identified in the Specific Plan EIR.

As stated, the 2019 Addendum analyzed impacts associated only with modifications to Planning Area 2. Given that the proposed project analyzed under this Addendum is related to modifications to Planning Area 3, the analyses herein only references 2019 Addendum findings where applicable (e.g., Population and Housing).

2.0 DESCRIPTION OF PROJECT MODIFICATIONS

2.1 ADDENDUM'S PURPOSE AND NEED

When an EIR has been certified or a negative declaration adopted for a project, no subsequent or supplemental environmental review documentation shall be required unless one or more of the following events occurs:

1) Substantial changes are proposed in the project, which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

2) Substantial changes occur with respect to the circumstances under which the project is undertaken, which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:

    A. The project will have one or more significant effects not discussed in the previous EIR or negative declaration;

    B. Significant effects previously examined will be substantially more severe than shown in the previous EIR;

    C. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

    D. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

When none of the above events has occurred, yet minor technical changes or additions to the previously adopted negative declaration are necessary, an addendum may be prepared (CEQA Guidelines Section 15164[b]).

As discussed below, none of the conditions described in CEQA Guidelines Section 15162 calling for preparation of subsequent environmental review have occurred. This Addendum supports the conclusion that the proposed project modifications are minor or technical changes that do not result in any new significant environmental effects or a substantial increase in the severity of previously identified significant effects. In addition, as discussed below, the proposed project modifications would not result in any new or substantially increased significant environmental impacts, no new mitigation measures, or no new alternatives that would substantially reduce significant impacts. As a result, an addendum is an appropriate CEQA document for analysis and consideration of the proposed project modifications.

Circulation of an addendum for public review is not necessary (CEQA Guidelines Section 15164, subdivision (c)); however, the addendum must be considered in conjunction with the adopted Final EIR by the decision-making body (CEQA Guidelines Section 15164, subdivision (d)). The proposed project is an Addendum to the Specific Plan EIR (i.e., the certified Final EIR).

CEQA requires a comparative evaluation of a proposed project and alternatives to the project, including the "No Project" alternative. The Specific Plan EIR addressed a reasonable range of alternatives for the Specific Plan. There is no new information indicating that an alternative that was previously rejected as infeasible is in fact feasible, or that a considerably different alternative than those previously studied would substantially reduce one or more significant effects on the environment.

2.2 ENVIRONMENTAL SETTING

Located in a highly developed and urbanized environment, the proposed project site is a vacant, disturbed site. Sparse ruderal vegetation and ornamental landscaping are present on-site. Ornamental trees line the eastern and southern perimeters adjacent to the I-10 westbound on-ramp. There are no internal roadways within the project site, however Inland Empire Boulevard and Archibald Avenue adjacent to the project site are improved with sidewalk, curb, and gutter, as well as crosswalks, streetlights, and signalized intersections. There is a dirt path that runs along the eastern, southern, and western borders of the project site, and a north-south drainage channel that traverses the eastern portion of the site. The project site is surrounded by development on all four sides, including I-10 to the south and Deer Creek Channel to the west.

GENERAL PLAN DESIGNATION

According to Exhibit LU-01, *Land Use Plan*, of *The Ontario Plan 2050* (TOP 2050), the project site has a Mixed Use - Meredith land use designation, and Inland Empire Boulevard adjacent to the site is designated as a Corridor.[1] TOP 2050 defines Mixed Use - Meredith as a mixture of mid-rise buildings, regional-serving retail and office centers, and standalone high density residential projects, with a density of 14 to 125 dwelling units per acre (du/ac) and a floor area ratio (FAR) of 3.0 for office and retail uses.

[1] City of Ontario, *The Ontario Plan 2050, Exhibit LU-01: Land Use Plan*, January 27, 2010.

ZONING DESIGNATION

According to the City's *Official Zoning Map*, the project site is zoned Meredith International Centre Specific Plan (2265-SP).[2]

As shown on Exhibit 3, the project site is designated Urban Commercial and encompasses Planning Area 3 of the Specific Plan area. According to the Specific Plan, the Urban Commercial designation of Planning Area 3 allows for a range of commercial uses that benefit from proximity to transportation corridors. Located adjacent to the Specific Plan's Urban Residential area (within Planning Area 4), and proximate to the planned alignment of the Gold Line light rail transit (LRT) corridor, Planning Area 3 is envisioned to offer smaller, pedestrian-oriented retail establishments. The maximum buildout for Planning Area 3 under the Specific Plan is approximately 250,000 square feet of commercial uses and up to 400 overnight lodging (hotel) rooms for a total buildout of approximately 480,000 square feet; the Urban Commercial designation permits or conditionally permits office and shopping center uses but does not permit residential uses.

SURROUNDING LAND USES

Surrounding land uses include mixed-use, industrial, commercial, and residential uses:

- *North*: Inland Empire Boulevard is immediately north of the project site. Planning Areas 4 and 5 of the Specific Plan are located further north. Planning Area 4 is developed with multi-family residences, and Planning Area 5 is developed with commercial/retail uses, including fast food restaurants and a gas station/convenience store. Planning Area 4 is designated Urban Residential and Planning Area 5 is designated Urban Commercial.

- *East*: Immediately east of the project site is Archibald Avenue. Further east is a gas station, hotel (currently under construction), and vacant land; these properties are not within the Specific Plan area and are designated Office Commercial and zoned High Intensity Office (OH).

- *South*: Immediately south of the project site is I-10. Further south are warehouses and distribution centers; these properties are not within the Specific Plan area and are designated Mixed-Use and zoned Specific Plan (SP) with a Multimodal Transit Center (MTC) Overlay.

- *West*: Deer Creek Channel is immediately west of the project site. Car dealerships and associated service centers are located further west. This area is within Planning Area 2 of the Specific Plan and is designated Urban Commercial.

[2] City of Ontario, *Official Zoning Map*, January 1, 2016.

2.3 PROJECT DESCRIPTION

The project proposes to modify the existing Specific Plan to include a Mixed-Use Overlay across Planning Area 3 to allow for up to 50,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units in place of the uses and buildout currently permitted under the site's Urban Commercial designation. Table 2, *Proposed Planning Area 3 Buildout Potential*, details the proposed buildout potential and Exhibit 4, *Proposed Land Use Plan*, illustrates the proposed land use plan for Planning Area 3.

Table 2
Proposed Planning Area 3 Buildout Potential

Planning Area	Current Specific Plan			Proposed Project		
	Acreage	Land Use	Buildout	Acreage	Land Use	Buildout
3	25.3	Urban Commercial	480,000 SF (including up to 400 hotel rooms)	25.3	Mixed Use Overlay	1,400 units; 50,000 SF commercial/ retail uses
Notes: SF = square feet						

In accordance with Section 15162 of the CEQA Guidelines this Addendum evaluates the proposed changes to Planning Area 3 to determine if:

1) Substantial changes are proposed which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
2) Substantial changes occur with respect to the circumstances under which the project is undertaken, which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified.

The project qualifies for an EIR Addendum under CEQA if it does not result in any of the conditions described in Section 15162 of the CEQA Guidelines requiring the preparation of a subsequent or supplemental environmental impact report.

09/2025 • JN 205836

Exhibi 5429

Additionally, as part of the project, the City entered into a Purchase and Sale Agreement (Agreement) with Ikea Property Inc. to purchase the project site – 2350-2630 East Inland Empire Boulevard, Ontario, CA 91764 (Assessor Parcel Numbers 0110-321-29, 0110-321-74, 0110-321-75, 0110-321-76 and 0110-321-77). The Agreement provides that the City may, during a specified due diligence period, choose, pursuant to compliance with CEQA, to assign its right, title, and interest in the Agreement to an entity that is an affiliate of Brickstone Development and controlled by John Kusmiersky (Buyer Assignee). The Buyer Assignee is expected to develop the project site with up to 50,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units. As such, the proposed project under review in this Addendum includes both the proposed Specific Plan Amendment and the proposed approval of the City's assignment of the Agreement to the Buyer Assignee.

DISCRETIONARY ACTIONS

The project is anticipated to require the following City discretionary permits and approvals:

- CEQA Clearance; and
- Specific Plan Amendment.

2.4 ADDENDUM SCOPE OF ENVIRONMENTAL REVIEW

As discussed in the Specific Plan EIR, buildout of the Specific Plan was determined to have less than significant impacts or no impact with regard to the following environmental issue areas:

- Agriculture and Forestry Resources;
- Mineral Resources;
- Recreation;
- Land Use and Planning;
- Global Climate Change and Greenhouse Gas Emissions;
- Public Services and Utilities;
- Hydrology and Water Quality;
- Aesthetics; and
- Population and Housing.

The Specific Plan EIR established that, with mitigation, buildout of the Specific Plan would result in less than significant impacts related to the following environmental issue areas:

- Hazards/Hazardous Materials;
- Biological Resources;
- Geology and Soils; and
- Cultural Resources.

The Specific Plan EIR determined that buildout of the Specific Plan would result in the following significant and unavoidable impacts:

- Air Quality;
- Noise; and
- Traffic and Circulation.

This Addendum addresses changes resulting from implementation of the proposed project to each of the environmental resource areas noted above.

This page intentionally left blank.

3.0 ENVIRONMENTAL ASSESSMENT

This comparative analysis has been undertaken to analyze whether the proposed project would result in any new or substantially more severe significant environmental impacts as compared to the Specific Plan that has been subject to the Specific Plan EIR. The comparative analysis discusses whether impacts are greater than, less than, or similar to the conclusions discussed in the Specific Plan EIR.

3.1 IMPACTS HAVING NO POTENTIAL TO RESULT IN NEW OR SUBSTANTIALLY MORE SEVERE SIGNIFICANT IMPACTS

3.1.1 Aesthetics

Specific Plan EIR Findings

According to the Specific Plan EIR, buildout of the Specific Plan would not adversely affect scenic vistas or other scenic resources in the City, degrade existing visual character or quality of the Specific Plan area, or create a new source of substantial light or glare. Development in accordance with the Specific Plan would be required to comply with existing regulations, including the Specific Plan design guidelines, all applicable provisions and restrictions of the Ontario International Airport Land Use Compatibility Plan (ALUCP), and all applicable requirements of the City's Development Code (*Ontario Municipal Code* [Municipal Code] Title 9). As such, the Specific Plan EIR determined that aesthetic impacts associated with buildout of the Specific Plan would be less than significant. Further, as detailed in the Initial Study prepared for the Specific Plan EIR, the Specific Plan would result in no impacts to scenic resources within a State scenic highway as the portion of I-10 that forms the southern boundary of the Specific Plan site is not designated as a scenic highway by the California Department of Transportation.

Proposed Project Findings

Scenic Vistas

There are no designated scenic vistas within the City. Notwithstanding, notable visual resources in the City include, but are not limited to, views of the San Bernardino and San Gabriel Mountains located generally to the east and north of the City, respectively; and open space/rural expanses located southerly of Riverside Drive. Additionally, Euclid Avenue Corridor and Mission Boulevard Corridor are noted as an important visual corridor within Ontario. The project site is relatively flat. The San Gabriel Mountain range is visible to the north, but partially obstructed due to the distance and existing development to the north. The project site is approximately 2.8 miles east of the Euclid Avenue Corridor and 1.5 miles northeast of the Mission Boulevard Corridor. The project would not interfere with General Plan Policy CD1-5 that protects public views of the San Gabriel Mountains. Similar to buildout of the Specific Plan, future development in accordance with the

proposed Mixed-Use Overlay would be required to comply with Municipal Code regulations (e.g., City's Development Code Chapter 1, *Zoning and Land Use Requirements*, that requires retention of significant natural features and open space preservation of views, contour grading, natural landscaping, and architectural design that blends with the natural terrain of the City). Additionally, due to the distance and intervening topography, future development on the project site would not have a substantial adverse effect on local and regional scenic vistas or corridors in the Specific Plan area. No impact would occur.

Scenic Resources within State Scenic Highways

No eligible or official State scenic highways exist within or adjacent to the Specific Plan area, including the project site.[3] Thus, similar to the Specific Plan, development in accordance with the project would not substantially damage scenic resources within a State scenic highway. No impact would occur.

Consistency with Zoning Regulations Governing Scenic Quality

Ontario is in a highly developed, urban/suburban area. Thus, this discussion analyzes whether the project would conflict with applicable zoning regulations governing scenic quality. The Specific Plan includes Development Standards (Section 5) and Design Guidelines (Section 6) that ensure all future projects within the Specific Plan area are developed in an organized manner in compliance with existing regulations. Specifically, Mixed-Use Overlay development standards in Section 5 of the Specific Plan provide specific requirements related to maximum density and FAR, setbacks, minimum building separation, maximum building heights, and minimum open space and landscaping requirements that standardize the visual character and scenic quality of the Specific Plan area. Future development within Planning Area 3 would also conform to City and ALUCP height limitations. Furthermore, prior to the issuance of development permits, future commercial/retail and/or residential development within Planning Area 3 would be reviewed by the City to ensure conformance with the provisions of the Specific Plan, Municipal Code, and General Plan policies and ensure that anticipated development does not conflict with zoning regulations governing scenic quality. Impacts would be less than significant.

Light and Glare

Existing light and glare sources associated with residential, industrial, and commercial uses are present in the project area. The nearest sensitive light and glare receptors are existing multi-family residences to the north. Future lighting and glare sources associated with the proposed residential and commercial/retail uses would be similar to existing sources in the project area as well as to sources associated with already permitted uses within Planning Area 3 (i.e., hotel and urban commercial uses). Similar to buildout of the

[3] California Department of Transportation, *California State Scenic Highway System Map*, https://www.arcgis.com/apps/webappviewer/index.html?id=465dfd3d807c46cc8e8057116f1aacaa, accessed March 5, 2025.

Specific Plan, future commercial/retail and residential development within Planning Area 3 would be guided by the zoning and development standards within the Specific Plan, as well as within Section D.01.005(E), *Site Lighting*, and Section E.01.004(K), *Site Design*, of the Municipal Code. Upon adherence to these standards, the project would not result in substantial light and glare impacts to the residential uses to the north. Overall, the project would not create a new source of substantial light or glare which would adversely affect day or nighttime views in the area. Impacts would be less than significant.

As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

3.1.2 Agriculture and Forestry Resources

Specific Plan EIR Findings

The Initial Study prepared for the Specific Plan EIR determined that Specific Plan buildout would result in no impact related to agriculture and forestry resources.

Proposed Project Findings

According to the California Department of Conservation, the project site is designated as Other Land, which may include low density rural developments; brush, timber, wetland, and riparian areas not suitable for livestock grazing; confined livestock, poultry or aquaculture facilities; strip mines, borrow pits; and water bodies smaller than forty acres.[4] Vacant and nonagricultural land surrounded on all sides by urban development and greater than 40 acres is mapped as Other Land. [5] As such, no agriculture or forestry resources occur on-site. The project site is designated Urban Commercial and zoned Meredith International Centre Specific Plan (2265-SP) and does not include any land mapped or zoned as farmland, forest land, or timberland. There are no existing agriculture or timber operations on the project site, and the site is not subject to a Williamson Act contract. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

3.1.3 Geology and Soils

Specific Plan EIR Findings

As detailed in the Initial Study and the Specific Plan EIR, the Specific Plan area (which includes the project site) is not subject to significant ground rupture of a known earthquake fault, soil erosion or the loss of topsoil, liquefaction, lateral spreading, or landslide hazards, nor does the Specific Plan site feature soils incapable of adequately supporting

[4] California Department of Conservation, *California Important Farmland Finder*, https://maps.conservation.ca.gov/DLRP/CIFF/, accessed March 5, 2025.
[5] Ibid.

the use of septic tanks or alternative waste water disposal systems where sewers are not available. However, the near-surface native soils across the entire Specific Plan area vary in density and composition, and some of these soils may be collapsible and subject to excessive post-construction settlement. As detailed in the Specific Plan EIR, impacts in this regard would be less than significant with mitigation incorporated. Future development within the Specific Plan area would be required to implement Specific Plan EIR Mitigation Measure 4.10.1 and comply with recommendations and performance standards identified in the Geotechnical Study prepared for the Specific Plan. The Geotechnical Study recommends remedial grading to remove the upper portion of alluvial soils; following excavation, the subgrade soils should be evaluated by a geotechnical engineer to verify their suitability for development. Additionally, the on-site conditions and recommendations of each future development would be verified with a site- and design-specific Final Geotechnical Study prepared for future project-specific developments. As such, the Specific Plan EIR concluded that the anticipated design of structures in accordance with a project-specific Geotechnical Study and compliance with the California Building Code (Title 24, Part 2 of the California Code of Regulations) and current seismic engineering practices is sufficient to reduce geological hazards to less than significant levels. Field investigations conducted in preparation for the Specific Plan EIR did not identify any evidence of paleontological resources in the Specific Plan area. However, it was concluded that there is potential for fossil-bearing soils to be present, depending on future excavation depths and site preparation activities. Specific Plan EIR Mitigation Measure 4.11.8 was included to require monitoring of grading and excavation activities in older alluvial deposits, including any excavation that exceeds eight feet in depth.

Proposed Project Findings

Seismic Ground Shaking, Seismic-Related Ground Failure, and Unstable Soils

As the proposed project site is located within the Specific Plan area, future development within Planning Area 3 under the proposed project similarly would not be subject to significant ground rupture of a known earthquake fault, soil erosion or the loss of topsoil, liquefaction, lateral spreading, or landslide hazards. Specifically, according to the California Geologic Survey, the closest fault line is the Red Hill-Etiwanda Avenue fault, located approximately 2.8 miles north and northwest of the project site.[6] Nonetheless, Southern California has numerous active seismic faults subjecting residents to potential earthquake and seismic-related hazards. Therefore, the project site is anticipated to experience moderate to occasionally high levels of ground motion from nearby faults as well as ground motions from other active seismic areas of the Southern California region. Furthermore, future development in accordance with the proposed Mixed-Use Overlay would also be subject to the same risks as detailed in the Specific Plan EIR associated with excessive post-construction settlement. However, upon implementation of Specific Plan EIR Mitigation Measure 4.10.1, these risks would be reduced to less than significant levels. Specifically, a project-specific geotechnical study would be required for future development on-site to evaluate site-specific geotechnical hazards and recommend

[6] California Department of Conservation, *Fault Activity Map of California*, https://maps.conservation.ca.gov/cgs/fam/, accessed March 5, 2025.

design and construction measures to implement to reduce potential impacts associated with seismic hazards and unstable soils. Further, similar to development under the Specific Plan, design of future commercial/retail and/or residential development within Planning Area 3 would also be required to comply with the California Building Code and current seismic engineering practices. Thus, impacts would be reduced to less than significant levels upon implementation of Specific Plan EIR Mitigation Measure 4.10.1.

Septic Tanks/Alternative Wastewater Disposal Systems

Similar to the Specific Plan, future development within Planning Area 3 would be required to connect to the City's existing wastewater network and thus, would not utilize any septic tanks or other alternative wastewater disposal systems. No impact would occur in this regard.

Paleontological Resources

Similar to buildout of the Specific Plan, if future grading and excavation activities within Planning Area 3 are to exceed eight feet in depth, Specific Plan EIR Mitigation Measure 4.11.8 (paleontological monitoring of grading and excavation activities in older alluvial deposits, including excavations that exceed eight feet in depth) would reduce impacts to less than significant levels.

As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

3.1.4 Hazards and Hazardous Materials

Specific Plan EIR Findings

As detailed in the Specific Plan EIR, the Specific Plan would not create a significant hazard through the routine transport, use, or disposal of hazardous materials or foreseeable upset and accident conditions; be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5; be located within the vicinity of a private airstrip; impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; or expose people or structures to a significant risk of loss, injury or death involving wildland fires. The Specific Plan EIR notes that buildout of the Specific Plan may result in potentially significant impacts in regard to emitting or handling hazardous materials within one-quarter of a mile of an existing or proposed school (Italo M. Bernt School, located along the south side of 4th Street and within the Specific Plan area). However, the Specific Plan EIR determined that with implementation of Specific Plan EIR Mitigation Measures 4.6.1 and 4.6.2, impacts in this regard would be reduced to less than significant levels.

Proposed Project Findings

Routine Use or Accidental Release of Hazardous Materials

Construction of future commercial/retail and/or residential development within Planning Area 3 could involve the use of limited amounts of hazardous materials, such as paints and solvents, gasoline, diesel fuels, and other hazardous materials routinely utilized with construction equipment. However, activities would be short-term, and the materials used would not be in such quantities, or stored in such a manner, as to pose a significant safety hazard. All construction activities would be subject to applicable laws and regulations governing the use, storage, and transportation of hazardous materials, specifically those established by the U.S. Department of Transportation, California Department of Transportation (Caltrans), and California Highway Patrol, as well as the Hazardous Materials Transportation Uniform Safety Act.

Similar to the Specific Plan, operation of future commercial/retail and/or residential uses in Planning Area 3 that could involve the use of hazardous materials would be regulated by the California Fire Code, as well as other federal, State, and local regulations related to the protection of the public's health and safety. Thus, impacts would be less than significant.

Emission or Handling of Hazardous Materials Near Schools

The nearest school to the project site previously identified in the Specific Plan EIR (Italo M. Bernt School) has since been demolished. Currently, there are no schools within one-quarter mile of the project site. Thus, no impact would occur in this regard.

Hazardous Materials Sites Listing

As the project site is located within the Specific Plan area, the proposed project would similarly not be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. No impact would occur.

Airport Safety Hazards or Excessive Noise Impacts

As discussed in the Specific Plan EIR, the Specific Plan area is approximately 0.5-mile north of ONT and is located within the identified Airport Influence Area. As such, the project is subject to the ONT ALUCP, which sets limits on future land uses and development near the airport in response to noise, safety, airspace protection, and overflight impacts of current and future airport activity.

As shown in Specific Plan EIR Figure 4.6-2, *ONT Airport Safety Zones*, the project is located outside of all identified safety zones for ONT, as designated within the ONT ALUCP. As such, future development within Planning Area 3 would not result in airport-related safety hazards for future occupants and impacts would be less than significant.

Impair or Interfere with Emergency Response or Evacuation Plan

Similar to the Specific Plan, future development in accordance with the proposed Mixed-Use Overlay on Planning Area 3 would not alter vehicle circulation routes in the project area in a manner that would interfere with adopted emergency response or emergency evacuation plans. In accordance with City policies, coordination with the Ontario Fire Department and Ontario Police Department during site plan review of future development plans for Planning Area 3 would ensure that potential interference with emergency response and evacuation efforts are avoided. Impacts would be less than significant.

Wildland Fire Hazards

According to the California Department of Forestry and Fire, the project site is not located in or near a State or Local Responsibility Area Fire Hazard Severity Zone.[7] As such, future development within Planning Area 3 would not expose people or structures to wildland fire hazards. No impact would occur.

As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

3.1.5 Hydrology and Water Quality

Specific Plan EIR Findings

As detailed in the Initial Study and the Specific Plan EIR, the Specific Plan would result in less than significant impacts pertaining to groundwater supplies and recharge; flood hazard and flood flows; inundation by seiche, tsunami, or mudflow; water quality; drainage pattern alteration and/or increased runoff resulting in flooding, erosion or siltation; runoff exceeding the capacity of existing or planned storm water drainage systems; and increased polluted runoff sources.

Proposed Project Findings

Violate or Substantially Degrade Water Quality Standards and/or Waste Discharge Requirements

Similar to buildout of the Specific Plan, future development within Planning Area 3 would be required to comply with the Santa Ana Regional Water Quality Control Board (RWQCB) multiple separate storm sewer system (MS4) permit and the San Bernardino County Stormwater Program. Compliance with these existing regulatory requirements, including implementation of low impact design (LID) strategies and construction and post-

[7] California Department of Forestry and Fire, *Fire Hazard Severity Zones in State Responsibility Area*, https://calfire-forestry.maps.arcgis.com/apps/webappviewer/index.html?id=988d431a42b242b29d89597ab693d008, accessed March 26, 2025.

construction BMPs, the project would not violate or substantially degrade water quality standards or waste discharge requirements. Impacts would be less than significant.

Groundwater Supplies and Recharge

Similar to the Specific Plan, buildout of the proposed project would not contribute to groundwater depletion or groundwater recharge. Water would be supplied by the Ontario Municipal Utilities Company (OMUC). As discussed below in Section 3.2.10, *Utilities and Service Systems*, a Water Supply Assessment (WSA) was prepared for the proposed project; refer to Appendix E, *Water Supply Assessment*. Based on the WSA, the project is projected to result in a water demand of approximately 260 acre-feet per year (AFY); refer to WSA Table 2-5, *Proposed Project Water Demand*. In comparison, the estimated total water demand of Planning Area 3 as presented in the *City of Ontario Final 2020 Urban Water Management Plan* (2020 UWMP), dated June 2021, is approximately 143 AFY. Thus, the project would result in an increase of approximately 117 AFY compared to what was assumed for Planning Area 3 in the 2020 UWMP. Nevertheless, the WSA concluded that current OMUC water production capacities are greater than needed to meet the average day demands under Citywide buildout conditions, including groundwater supplies. OMUC also has forecasted that excess water supplies will be available to meet Citywide demand during normal, single-dry, and multiple dry water years over the next 20 years. Thus, the project would not substantially decrease groundwater supplies or interfere with OMUC's groundwater recharge areas. Impacts would be less than significant.

Alteration of Existing Drainage Patterns

Similar to buildout under the Specific Plan, future commercial/retail and residential development within Planning Area 3 would increase impervious areas compared to the existing vacant land and thus increase runoff and flows into the City's storm drainage system. However, similar to development elsewhere in the Specific Plan area, in accordance with the *Riverside County Flood Control and Water Conservation District Hydrology Manual*, future commercial/retail and residential development within Planning Area 3 would be required to prepare project-specific hydrology and hydraulic studies to evaluate pre- and post-development stormwater flows to ensure that the capacities of existing and planned storm drain systems are not exceeded. The project-specific hydrology studies would be reviewed and approved by the City as part of the development plan review process at a later date. Thus, impacts would be less than significant.

Flood Hazard, Tsunami, or Seiche Zones

As detailed in Section 1.1, *Project Location*, Deer Creek Channel, a concrete-lined flood control channel, bounds the project site to the west. According to Specific Plan EIR Figure 4.8-1, *Flood Hazard Areas*, the project site is located within a 500-year floodplain and lies within the dam inundation area for the San Antonio Dam. Nonetheless, the TOP 2050

SEIR concluded that the probability of catastrophic failure is very low.[8] Furthermore, the City of Ontario Fire Department maintains a list of emergency procedures to be followed in the event of a dam failure. Because the likelihood of catastrophic failure of the San Antonio Dam is very low and the City is prepared in the event of such failure, impacts are considered less than significant in this regard.

Additionally, given that the site is located over 35 miles inland of coastal waters, no impacts would occur related to tsunami hazards.

Conflict with Water Quality Control Plan or Groundwater Management Plan

The City's groundwater supplies are obtained from the Chino Groundwater Basin, which is adjudicated and managed by the Chino Basin Watermaster. The Chino Basin is exempt from legislative requirements under the Sustainable Groundwater Management Act (SGMA) because it is an adjudicated basin and is not required to prepare a groundwater sustainability plan. Adjudicated basins have determined the safe yield for the basin and have assigned individual pumping allocations to limit groundwater production to the safe yield.

As such, future development in accordance with the proposed project and adherence to existing local and State water quality regulations would ensure that surface and groundwater quality are not adversely impacted. As stated, future development within Planning Area 3 would be required to comply with the RWQCB MS4 permit and the San Bernardino County Stormwater Program. Therefore, the project would not obstruct or conflict with the RWQCB's Basin Plan or any groundwater management plan, and impacts would be less than significant.

As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

3.1.6 Mineral Resources

Specific Plan EIR Findings

The Initial Study prepared for the Specific Plan EIR concluded that buildout of the Specific Plan would result in no impact related to mineral resources.

Proposed Project Findings

According to the Department of Conservation, the project site is designated as Mineral Resource Zone 2 (MRZ-2), which is an area where geologic data indicates that significant

[8] City of Ontario, *Final Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), The Ontario Plan 2050*, August 2022.

portland cement concrete-grade (PCC-Grade) aggregate resources are present.[9,10] However, it is recognized that some areas within the MRZ-2 have already been urbanized, and therefore the mineral resources within them have a limited opportunity for conservation, development, or utilization.[11] According to TOP 2050, significant mineral resources within the City are limited to construction aggregate; those areas with potential mineral resources have been developed with urban uses and are not suitable for mineral resource extraction. Further, the site is not being utilized for mineral extraction. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

3.1.7 Population and Housing

Specific Plan EIR Findings

The project site was vacant and undeveloped at the time the Specific Plan EIR was prepared; no existing residences would be displaced by the proposed project.

The 2019 Addendum, prepared to analyze impacts associated with modifications to Planning Area 2, concluded that the proposed change to Planning Area 2 would reduce the estimated buildout of Planning Area 2 from 650,000 square feet to 322,200 square feet of non-residential floor area and would add 925 multi-family residential units. In total, buildout of the Specific Plan would accommodate 1,725 residential units (including 800 units approved for Planning Area 4 and 925 units for Planning Area 2). Although the proposed change would increase residential units and associated population, according to the Specific Plan EIR, the total 1,725 residential units would be well below the 2,958 residential units assumed in the General Plan buildout for the full Specific Plan area. Therefore, the increase in residential units would be consistent with Citywide policy and growth projections and potential impacts from modifications to Planning Area 2 analyzed in the 2019 Addendum would be less than significant. Overall, the 2019 Addendum concluded the Planning Area 2 modifications would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR.

Proposed Project Findings

Together, the Specific Plan EIR and 2019 Addendum anticipated a buildout of 1,725 dwelling units in the Specific Plan area, with 800 units specifically planned for Planning Area 4 and 925 units for Planning Area 2; refer to Table 1. The proposed project would

---

10 Department of Conservation, *Update of Mineral Land Classification Map for Portland Cement Concrete-Grade Aggregate in the Claremont-Upland Production-Consumption Region, Los Angeles and San Bernardino Counties*, *California*, 2007.

11 Department of Conservation, *Special Report 202: Update of Mineral Land Classification for Portland Cement Concrete-Grade Aggregate in the Claremont-Upland Production-Consumption Region, Los Angeles and San Bernardino Counties*, *California*, 2007.

accommodate up to 1,400 dwelling units, which would increase the Specific Plan residential buildout projection. Based on the City's current average household size of 3.29[12], the additional 1,400 dwelling units brought on by the project could generate approximately 4,606 additional residents. However, the City has a current population of 181,224 residents and housing stock of 56,836 units, and is projected to grow by 224,662 people and 71,326 units by 2050.[13,14] The project's anticipated population would represent approximately 10.6 percent of the City's anticipated growth under TOP 2050. As such, the project would not result in substantial unplanned growth. Additionally, the proposed 1,400 dwelling units would contribute to the City's Regional Housing Needs Assessment (RHNA) allocation of 20,854 units for the 2021-2029 planning period, which would be considered a project benefit.

Further, the project site is currently vacant. Thus, similar to buildout of the Specific Plan, the project would not displace any existing people or housing. No impact would occur.

As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

3.1.8 Public Services

Specific Plan EIR Findings

As discussed above, the project could increase the total housing projected for Specific Plan buildout by approximately 1,400 dwelling units, which could generate up to 4,606 additional residents. However, the growth induced by buildout of the proposed project would be within TOP 2050 Citywide forecasts and would not represent unplanned growth.[15]

Proposed Project Findings

Future commercial/retail and residential uses may increase demand for public services, including police protection, fire protection, school, and library services, compared to what was previously analyzed for Planning Area 3 in the Specific Plan EIR. However, buildout of Planning Area 3 under the proposed project, similar to buildout of the Specific Plan, would create a gradual increase in demand for these services and existing regulations, site plan review by Ontario Fire and Police Departments, and development impact fees would reduce impacts to less than significant levels.

15 City of Ontario, *Final Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), The Ontario Plan 2050*, August 2022.

Fire Protection Services

Fire protection services would be provided by the Ontario Fire Department. As discussed in the Specific Plan EIR, prior to issuance of building permits, all development plans for individual projects within the Specific Plan area, including Planning Area 3 for the proposed project, would be reviewed by the City and the Ontario Fire Department to ensure compliance with Ontario Fire Department conditions of approval related to emergency access and fire flow requirements, along with any fire prevention, protection, and/or suppression requirements as specified under existing City ordinances and applicable California Building Code and California Fire Code provisions. Compliance with the Ontario Fire Department conditions of approval and State and local fire standards would reduce potential demands for, and impacts upon, Ontario Fire Department services and emergency medical services. Development impact fees required for future development, as well as tax revenues generated by future development, would provide supplemental funding available to expand or enhance current Ontario Fire Department services available to the project and vicinity. Thus, impacts would be less than significant.

Police Protection Services

Police protection services would be provided by the Ontario Police Department. Similar to Specific Plan buildout, future development in accordance with the project in Planning Area 3 would be reviewed by the City, including the Ontario Police Department to ensure the incorporation of appropriate safety and security elements throughout the site (e.g., appropriate building and parking lot security and alarm systems, adequate outdoor lighting, and provision of defensible spaces). Additionally, development impact fees and sales tax revenues generated by future development would provide supplemental funding to expand or enhance current Ontario Police Department police protection services available to the project and vicinity. Thus, impacts would be less than significant.

Schools

Public school services would be provided by Cucamonga School District (CSD) for grades K-8 and Chaffey Joint Union High Schools (CJUHS) for grades 9-12. Although the project could result in an increased demand for CSD and CJUHS school services, prior to issuance of building permits, future developments would be required to pay requisite fees to CSD and CJUHS, similar to development associated with buildout of the Specific Plan. According to Section 65996 of the California Government Code, payment of statutory fees is considered full mitigation for new development projects. Thus, a less than significant impact would occur in this regard.

Parks

Refer to Section 3.1.9, *Recreation*, below.

Other Public Facilities

Other public facilities, such as libraries, may be impacted by buildout of the project. The City has two library facilities within its library system: the Ovitt Family Community Library at 215 East C Street, and the Lewis Family Branch at 3850 East Riverside Drive. While future residents may increase demand for library services beyond what was analyzed in the Specific Plan EIR, the Ontario library system is a member of the Inland Library System, which includes 19 independent libraries and other resources in San Bernardino, Riverside, and Inyo Counties. The Inland Library system allows library members to utilize interlibrary loans for hardcopy and online resources. Thus, City's library resources are not limited to those within the two City libraries. Further, future development in accordance with the project would be required to pay development impact fees that provide additional funding for future library services and space, as needed. Impacts would be less than significant.

As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

3.1.9 Recreation

Specific Plan EIR Findings

The Initial Study prepared for the Specific Plan EIR concluded that the Specific Plan would result in no impact related to recreation.

Proposed Project Findings

Buildout of an additional 1,400 residential units under the proposed project may increase demand for new recreational facilities, and/or deteriorate existing recreational facilities, beyond what was anticipated for the project site under the Specific Plan. However, as with all new residential development within the City, future residential development on-site would be required to participate in the City's established Park Development Impact Fee Program, which was established pursuant to the Quimby Act (Government Code Section 66477). According to TOP 2050 EIR, the City currently requires three acres of developed parkland per 1,000 residents. As part of the City's standard development review process, the total area of the project's parkland dedication would be determined upon submittal of development plans and an in-lieu fee would be assessed and paid by future project applicant(s), as needed, prior to issuance of occupancy permits. Additionally, common and private open space/recreational amenities are required as part of multi-family development proposals. As such, recreational demands associated with project buildout would be met through parkland dedication, in-lieu fees, or a combination of the two. Impacts would be less than significant in this regard. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

3.1.10 Wildfire

Specific Plan EIR Findings

The Specific Plan EIR did not evaluate Wildfire as it was not included in Appendix G of the CEQA Guidelines at the time the Specific Plan EIR was certified. However, as discussed in the 'Hazards and Hazardous Materials' section of the Specific Plan EIR, buildout of the Specific Plan would not expose people or structures to a significant risk of loss, injury or death involving wildland fires.

Proposed Project Findings

According to the California Department of Forestry and Fire, the project site is not located in or near a State or Local Responsibility Area Fire Hazard Severity Zone.[16] As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Certified Specific Plan EIR Mitigation Measures:

4.10.1 Design and development of the project shall comply with recommendations and performance standards identified within the Final Geotechnical Study. Where the Project Geotechnical Study is silent, requirements of the California Building Code as adopted and implemented by the City shall prevail.

4.11.8 Any excavation exceeding eight feet below the current grade shall be monitored by a qualified paleontologist. If older alluvial deposits are encountered at shallower depths, monitoring shall be initialed once these deposits are encountered. A qualified paleontologist is defined as an individual with an M.S. or a Ph.D. in paleontology or geology who is familiar with paleontological procedures and techniques. A paleontological monitor may be retained to perform the on-site monitoring in place of the qualified paleontologist. The paleontological monitoring program should follow the local protocols of the Western Center (Hemet) and/or the San Bernardino County Museum and a paleontological monitoring plan should be developed prior to the ground altering activities. The extent and duration of the monitoring can be determined once the grading plan is understood and approved. The paleontological monitor shall have the authority to halt any Project-related activities that may be adversely impacting potentially significant resources. If paleontological resources are uncovered or otherwise identified, they shall be recovered, analyzed in accordance with

[16] California Department of Forestry and Fire, *Fire Hazard Severity Zones in State Responsibility Area*, https://calfire-forestry.maps.arcgis.com/apps/webappviewer/index.html?id=988d431a42b242b29d89597ab693d008, accessed March 26, 2025.

standard guidelines, and curated with the appropriate facility (e.g., the Western Center at the Diamond Valley Reservoir, Hemet).

Addendum Project Conditions: None.

3.2 IMPACTS POTENTIALLY RESULTING IN NEW OR SUBSTANTIALLY MORE SEVERE SIGNIFICANT IMPACTS

3.2.1 Air Quality

Specific Plan EIR Findings

The Specific Plan area is located in South Coast Air Basin (Basin) within the South Coast Air Quality Management District's (SCAQMD) jurisdiction. According to the Specific Plan EIR, the Specific Plan would not result in or cause National Ambient Air Quality Standards (NAAQS) or California Ambient Air Quality Standards (CAAQS) violations. It was determined that the Specific Plan's proposed land use designation did not materially affect potential development intensities when compared to those assumed in TOP 2050 EIR, and the SCAQMD's *2012 Air Quality Management Plan* (applicable AQMP at the time). Further, it was determined that the Specific Plan's proposed change in land use designations for the subject site would not generate operational source criteria pollutant emissions not already reflected in the applicable AQMP's regional emissions inventory. Based on this, the Specific Plan was considered to be consistent with the AQMP and impacts were determined to be less than significant.

However, as discussed in the Specific Plan EIR, construction and operational emissions would be significant and unavoidable after implementation of mitigation measures (Specific Plan EIR Mitigation Measures 4.3.1 through 4.3.5). As shown in the Specific Plan EIR, maximum daily construction source emissions of volatile organic compounds (VOC), nitrogen oxides (NO_X), and carbon monoxide (CO) exceed applicable SCAQMD regional thresholds. It was also determined that under 2017 conditions, maximum daily operational-source emissions of VOC, NO_x, CO, fine particulate matter ($PM_{2.5}$), and coarse particulate matter (PM_{10}) would exceed applicable SCAQMD regional thresholds. Further, the Specific Plan EIR determined that under buildout conditions originally envisioned for year 2020, maximum daily operational source emission of VOC, NO_X, CO, PM_{10}, and $PM_{2.5}$ would exceed applicable SCAQMD regional thresholds. Each of these impacts was determined to be significant and unavoidable despite implementation of mitigation.

Moreover, the Basin is designated as a non-attainment area for ozone, PM_{10}, and $PM_{2.5}$. Therefore, it was determined that construction VOC and NO_X emissions regional threshold exceedances would result in a cumulatively considerable net increase in criteria pollutants (ozone and PM_{10}/$PM_{2.5}$) for which the project region is non-attainment. Additionally, it was determined that operational source VOC, NO_X, PM_{10}, and $PM_{2.5}$ emissions' regional threshold exceedances would result in a cumulatively considerable net increase in criteria pollutants (ozone and PM_{10}/$PM_{2.5}$) for which the project region is

non-attainment. These were considered cumulatively significant air quality impacts as detailed in the Specific Plan EIR.

Finally, the Specific Plan EIR determined that maximum daily construction source emissions would not exceed applicable Localized Significance Thresholds (LSTs) for PM_{10} with application of mitigation, which would reduce these impacts to levels that would not exceed applicable SCAQMD LSTs (i.e., Specific Plan EIR Mitigation Measures 4.3.1 through 4.3.4 would reduce maximum-daily construction-source emissions at the nearest sensitive receptor [the Bernt School site]). Regarding operational source LSTs, the Specific Plan EIR determined that maximum daily operational source emissions concentrations would not exceed applicable LSTs and would not require mitigation. Overall LST impacts were determined to be less than significant with incorporation of mitigation. Additionally, the Specific Plan EIR determined that the Specific Plan would result in less than significant project source and freeway source impacts with incorporation of Specific Plan EIR Mitigation Measure 4.3.6, which reduces freeway source carcinogenic health risks at the Specific Plan area to below the SCAQMD cancer risk threshold of 10 in one million.

According to the Specific Plan EIR, buildout of the Specific Plan would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people, and impacts were determined to be less than significant in this regard.

Proposed Project Analysis

Project Consistency with AQMP

In December 2022, SCAQMD released the *Final 2022 AQMP* (2022 AQMP). The 2022 AQMP continues to evaluate current integrated strategies and control measures to meet the CAAQS, as well as explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, State, and local levels. Similar to the 2016 AQMP, the 2022 AQMP incorporates scientific and technological information and planning assumptions, including the Southern California Association of Governments (SCAG) *2020-2045 Regional Transportation Plan/Sustainable Communities Strategy* (2020-2045 RTP/SCS), a planning document that supports the integration of land use and transportation to help the region meet the Federal Clean Air Act requirements.

- *Consistency Criterion No. 1*: The proposed project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

- *Consistency Criterion No. 2*: The project will not exceed the assumptions in the AQMP based on the years of project buildout phase.

The violations that Criterion No. 1 refers to are the CAAQS and NAAQS. The CAAQS and NAAQS comprise, and are reflected in the SCAQMD LSTs. It is noted here that the CAAQS and NAAQS are not equivalent to SCAQMD regional emissions thresholds.

As detailed above, the Specific Plan EIR concluded that the Specific Plan was determined to be consistent with the applicable AQMP (i.e., the 2012 AQMP) at the time. As demonstrated below, the proposed project would not result in or cause NAAQS or CAAQS violations as the proposed project would not exceed applicable LST thresholds. Further, the proposed modifications to Planning Area 3 do not include a change in land use designation for the Specific Plan area that may generate substantial operational source criteria pollutant emissions not already reflected in the 2012 AQMP regional emissions inventory. Further, the proposed mixed-use overlay would allow for up to 50,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units; when compared to development analyzed in the adopted Specific Plan (a mix of industrial, commercial, and residential land uses totaling 4,155,000 square feet, 1,725 dwelling units, and 600 hotel rooms within five planning areas across 257.7 acres), the associated Specific Plan EIR, and the 2012 AQMP that included the Specific Plan buildout, the proposed project (50,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units) would result in minor changes to the scale and intensity of the Specific Plan. The current AQMP (2022 AQMP) has been developed after adoption of the Specific Plan, and the associated development density of the Specific Plan should have been incorporated. As the proposed project does not significantly alter land uses, increase scale, or significantly increase development intensities of the Specific Plan, impacts resulting from the proposed project are anticipated to be similar to what was originally envisioned in the Specific Plan.

Peak day emissions generated by construction activities are largely independent on land use assignments but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities. As discussed above, the 2022 AQMP was developed after adoption of the Specific Plan, and the associated development densities of the Specific Plan should have been incorporated. Further, the Specific Plan designates the proposed project site as Mixed Use – Meredith. The Mixed Use – Meredith designation is described as a mixture of mid-rise buildings, regional-serving retail and office centers, and standalone high density residential projects, with a density of 14 to 125 du/ac and a FAR of 3.0 for office and retail uses. The Specific Plan designates the site (Planning Area 3) as Urban Commercial and forecasts a maximum buildout of 480,000 square feet, including 400 hotel rooms; uses conditionally permitted also include office and shopping centers. The project proposes a Mixed-Use Overlay across Planning Area 3 within the Specific Plan area that would allow for up to 50,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units. By accommodating residential and commercial/retail uses in Planning Area 3, the project would be consistent with TOP 2050 Land Use Element goals and policies to provide a variety of housing and job options in proximity to one another and in proximity to transit. These goals and policies coincide with the vision of SCAG's current RTP/SCS (i.e., Connect SoCal), which focuses on

transportation alternatives that meet air quality standards and GHG emission reduction targets. While the proposed project would modify the Specific Plan's buildout vision for Planning Area 3, the housing, jobs, and population generated by the project would be within TOP 2050 growth forecasts for the City. Additionally, the proposed dwelling units would contribute to the City's RHNA allocation, which would be considered a project benefit and would be consistent with TOP 2050 Housing Element.

In conclusion, the project's proposed uses are consistent with the site's land use designation and development density and intensity as originally envisioned for the Specific Plan, which has been incorporated in the 2022 AQMP. As such, the proposed project is considered to be consistent with the 2022 AQMP and impacts in this regard would be less than significant. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Emissions and Regional Thresholds

Proposed project-related air quality emissions from criteria pollutants (VOCs, NO_X, sulfur oxides [SO_x], CO, PM_{10}, and $PM_{2.5}$) were calculated using the California Emissions Estimator Model (CalEEMod) version 2022.1.1.30. Outputs from the model run are provided in Appendix A, *Air Quality/GHG Emissions/Energy Data*.

Typical construction activities associated with a land use development project emissions are expected from various construction phrases including, and not limited to, demolition, site preparation, grading, building construction, paving, and architectural coating. Due to the programmatic nature of the proposed project, no construction is currently planned, thus no project-specific construction details are currently available for CalEEMod modeling, and exact construction emissions generated by future development are unknown. Construction emissions depend on multiple factors, including, but not limited to, the start and duration of construction phases, types and quantity of construction equipment to be used, soil import and export volumes, hauling trips distance, etc., all of which cannot be determined at this stage of the planning process. As such, because implementation of the project does not propose any specific development and construction details are unknown, construction-related emissions that may occur at any one time in any scale are speculative and cannot be accurately determined at this stage of the planning process. As such, construction emissions are not quantified. Nevertheless, all future development within the project site (Planning Area 3) capable of generating substantial construction-related emissions would be required to undergo separate environmental review under CEQA to evaluate project-specific impacts on a project-by-project basis, as the extent of impacts become known through the design process. Further, future development on-site would be required to implement any required mitigation measures from the TOP 2050 EIR and the Specific Plan EIR on a project-by-project basis, as applicable, pursuant to CEQA provisions. Specifically, future projects within the Specific Plan, if applicable, would be required to incorporate Specific Plan EIR Mitigation Measures 4.3.1 through 4.3.3 to reduce maximum daily project construction-

source emissions to the extent possible.

Operational activities associated with the proposed project would result in emissions of VOCs, NO_X, SO_X, CO, PM_{10}, and $PM_{2.5}$. Operational emissions are expected from the following primary sources:

- *Area Source Emissions*: Area sources include architectural coatings, consumer products, and landscape maintenance equipment.

- *Energy Source Emissions*: Energy source emissions include combustion emissions associated with generation of natural gas and electricity. However, because electrical generating facilities for the proposed project area are located either outside the region (State) or offset through the use of pollution credits (RECLAIM) for generation within the Basin, criteria pollutant emissions from off-site generation of electricity are excluded from the evaluation of significance.

- *Mobile Source Emissions*: Proposed project-related air quality emissions derive primarily from vehicle trips associated with the proposed project, including residential, commercial, and employee trips to and from the site associated with the proposed uses. Moreover, vehicles traveling on paved roads would be a source of fugitive emissions due to the generation of road dust inclusive of brake and tire wear particulates. Trip characteristics available from the project-specific transportation impact analysis; refer to Appendix D, *Focused Traffic Study*. It should be noted that trips originally envisioned for Planning Area 3 were not deducted from the project-generated trips to provide a conservative analysis.

The Specific Plan EIR assumed buildout of Planning Area 3 would allow for 480,000 square feet of commercial use (including 400 hotel rooms) under the Urban Commercial land use designation. The project proposes to modify the existing Specific Plan to include a Mixed-Use Overlay across Planning Area 3 to allow for up to 50,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units in place of the uses and buildout currently permitted under the site's Urban Commercial designation. Estimated operational emissions are summarized in Table 3, *Summary of Peak Daily Operational Emissions*. Project-related operational emissions from the CalEEMod modeling run have been added to the Specific Plan operational emissions. It should be noted that this is a conservative analysis as the proposed project modifications would replace the originally approved development permitted for Planning Area 3. In addition, the proposed project would continue to incorporate mitigation measures in accordance with the Specific Plan EIR, which include Specific Plan EIR Mitigation Measures 4.3.4 and 4.3.5 that would reduce maximum daily project operational emissions to the extent possible.

As shown in Table 3, with the proposed project modifications to Planning Area 3, the Specific Plan would continue to exceed the numerical thresholds of significance established by the SCAQMD for emissions of various criteria pollutants (VOCs, NO_X, CO, PM_{10}, and $PM_{2.5}$), similar to impacts analyzed in the Specific Plan EIR. As such, operational impacts would continue to be considered significant and unavoidable.

As such, the project would not result in a new significant environmental effect or substantial increase in the severity of a previously identified significant environmental effect as compared to the conclusions of Specific Plan EIR and 2019 Addendum.

Table 3
Summary of Peak Daily Operational Emissions

Emissions Source	Pollutant (pounds/day)[1]					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Summer Operational Emissions						
Mobile	39.00	36.00	349.00	0.89	80.00	21.00
Area	82.00	26.00	433.00	1.20	51.00	49.00
Energy	0.35	6.00	2.60	0.04	0.48	0.48
Project Summer Total (Year 2026)	**121.00**	**68.00**	**784.00**	**2.20**	**131.00**	**70.00**
Specific Plan (Planning Areas 1,2,3, & 4) Total (Year 2020)[2]	*299.76*	*706.11*	*1,481.11*	*4.98*	*286.11*	*87.49*
Overall Total	***420.76***	***774.11***	***2265.11***	***7.18***	***417.11***	***157.49***
SCAQMD Thresholds	*55*	*55*	*550*	*150*	*150*	*55*
Is Threshold Exceeded?	Yes	Yes	Yes	No	Yes	Yes
Winter Operational Emissions						
Mobile	37.00	39.00	292.00	0.83	80.00	21.00
Area	74.00	25.00	352.00	1.20	51.00	49.00
Energy	0.35	6.00	2.60	0.04	0.48	0.48
Project Winter Total (Year 2026)	**111.00**	**70.00**	**646.00**	**2.10**	**131.00**	**70.00**
Specific Plan (Planning Areas 1,2,3, & 4) Total (Year 2020)[2]	*296.42*	*733.89*	*1,462.01*	*4.76*	*286.15*	*87.51*
Overall Total	***407.42***	***803.89***	***2108.01***	***6.86***	***417.15***	***157.51***
SCAQMD Thresholds	*55*	*55*	*550*	*150*	*150*	*55*
Is Threshold Exceeded?	Yes	Yes	Yes	No	Yes	Yes

Notes: VOC = volatile organic chemical; NO_x = nitrous oxide; CO = carbon monoxide; SO_X = sulfur oxide; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter

1. Totals might be slightly off due to rounding.
2. Daily peak operation emissions as shown in the Specific Plan EIR *Appendix D: Air Quality Impact Analyses, Table 3-13: Summary of Year 2020 Peak Operational Emissions (With Mitigation)*.

Source: Appendix A, *Air Quality/GHG Emissions/Energy Data*.

Localized Significance to Sensitive Receptors

Project-Source Pollutants

This analysis makes use of methodologies included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or State ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as LSTs.

The SCAQMD recommends that the nearest sensitive receptor be considered when determining a project's localized air quality impacts. Sensitive receptors are defined as populations that are more susceptible to the effects of pollution than the population at large. The SCAQMD identifies the following as sensitive receptors: long-term health care facilities, rehabilitation centers, convalescent centers, retirement homes, residences, schools, playgrounds, childcare centers, and athletic facilities. According to the SCAQMD, projects have the potential to create significant impacts if they are located within one-quarter mile of sensitive receptors and would emit toxic air contaminants (TAC) identified in SCAQMD Rule 1401.

The nearest land use where an individual could remain for 24 hours to the project site has been used to determine localized operational air quality impacts for emissions of PM_{10} and $PM_{2.5}$ (since PM_{10} and $PM_{2.5}$ thresholds are based on a 24-hour averaging time); the nearest sensitive receptors are existing multi-family residences in Planning Area 4, approximately 95 feet north of Planning Area 3.

As detailed above, due to the programmatic nature of the proposed project, no construction is currently planned, thus no project-specific construction details are currently available for CalEEMod modeling, and exact construction emissions generated by future development are unknown. All future development within the project site (Planning Area 3) capable of generating substantial construction-related emissions would be required to undergo separate environmental review under CEQA to evaluate project-specific impacts on a project-by-project basis, as the extent of impacts become known through the design process. Further, these future new development projects would be required to implement any required mitigation measures from the TOP EIR and the Specific Plan EIR on a project-by-project basis, as applicable, pursuant to CEQA provisions. Specifically, future projects within the Specific Plan, if applicable, would be required to incorporate Specific Plan EIR Mitigation Measures 4.3.1 through 4.3.3 to reduce maximum daily project construction emissions to the extent possible.

The proposed mixed-use overlay would allow commercial and residential development and would not be a source of on-site/localized emissions or have the potential to emit TACs identified in SCAQMD Rule 1401; TAC emissions primarily come from mobile source. As detailed in the project-specific transportation impact analysis (Appendix D), the net trip generation potential would be approximately 10,670 trips, 1,042 more trips than what was originally envisioned and analyzed for Planning Area 3 in the Specific Plan

EIR (9,628 trips). The net trips are not anticipated to exacerbate pre-existing hazards and increase the localized emissions over the thresholds (emissions associated with the originally proposed Planning Area 3 already exceeded thresholds). Operational LST impacts would be less than significant. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Off-Site Freeway Source Pollutants

In 2005, the California Air Resources Board (CARB) promulgated an advisory recommendation to avoid setting sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles per day, or rural roads with 50,000 vehicles per day. CARB indicates that due to traffic-generated pollutants, there is an estimated increased cancer risk incidence of 300 to 1,700 per million within this domain. At some point however, the increased cancer risk incidence due to the effects of freeway/roadway corridor pollutants become indistinguishable from the ambient air quality condition. In this regard, the effects of freeway/roadway-source pollutants that may impact the proposed project site are already acknowledged and accounted for within the ambient air quality discussions presented within the Specific Plan EIR. More specifically, the MATES-III Study data for the Specific Plan comprehensively reflects increased TAC-source cancer risks affecting the City and project site, inclusive of increased cancer risks due to freeway/roadway pollutant sources. It is, however, recognized that the effects of freeway traffic pollutants on the project site would likely be more acute and discernible in those areas nearer freeway/roadway corridors, including the proposed project site (Planning Area 3) which is immediately adjacent to I-10 and would include residential land uses.

It was determined that with incorporation of Specific Plan EIR Mitigation Measure 4.3.6, freeway source carcinogenic health risks at the Specific Plan Area would total 7.14 in one million and would not exceed the SCAQMD cancer risk threshold of 10 in one million. Specific Plan EIR Mitigation Measure 4.3.6 was established to reduce cancer risks to future residence of the Specific Plan. However, in the *California Building Industry Association v. Bay Area Air Quality Management District* (2015), 62 Cal. 4th 369 (CBIA) case, the California Supreme Court determined that CEQA does not generally require an impacts analysis of the existing environmental conditions on future residents of a proposed project and generally only requires an analysis of the proposed project's impact on the environment. However, the CBIA case also stated that when a proposed project brings development and people into an area already subject to specific hazards and the new development/people exacerbate the existing hazards, then CEQA requires an analysis of the hazards and the proposed project's effect in terms of increasing the risks related to those hazards. In regard to air quality hazards, toxic air contaminants (TACs) are defined as substances that may cause or contribute to an increase in deaths or in serious illness, or that may pose a present or potential hazard to human health. As such, if a project would not exacerbate pre-existing hazards (e.g., TAC health risks), then an analysis of those hazards and the project's effect on increasing those hazards is not required.

The proposed mixed-use overlay would allow commercial and residential development and would not be a source of TACs. Existing uses on-site only include vacant land and does not contain any operational land uses that emit toxic air contaminants. Therefore, the proposed project does not exacerbate pre-existing hazards and impact would be less than significant in this regard.

It should be noted that the proposed project would continue to incorporate mitigation measures in accordance with the Specific Plan EIR. Specifically, Specific Plan EIR Mitigation Measure 4.3.6 requires residential units within the Specific Plan area (including Planning Area 3) to include installation and maintenance of air filtration systems.

Further, proposed project-related traffic would not create or result in a CO "hotspot." As the proposed project's emissions would comply with federal, State, and local air quality standards, they are not sufficiently high enough to use a regional modeling program to correlate health effects on a Basin-wide level and would not provide a reliable indicator of health effects if modeled. Therefore, sensitive receptors would not be exposed to substantial pollutant concentrations as the result of proposed project and localized impacts would be less than significant. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Odors

The proposed project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed project may result from the temporary storage of typical solid waste (refuse) associated with the proposed project's long-term operational uses (residential and commercial/retail uses). Standard construction requirements would minimize odor impacts from construction. Construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with current solid waste regulations. The proposed project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors and other emissions (such as those leading to odors) associated with the proposed project would be less than significant. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Certified Specific Plan EIR Mitigation Measures:

4.3.1 The following requirements shall be incorporated into Project plans and specifications in order to ensure implementation of SCAQMD Rule 403 and limit fugitive dust emissions:

- All clearing, grading, earth-moving, or excavation activities shall cease when winds exceed 25 miles per hour;

- The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the Project site are watered at least three (3) times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day;

- The contractor shall ensure that traffic speeds on unpaved roads and Project site areas are reduced to 15 miles per hour or less; and

- Only "Zero-Volatile Organic Compounds" paints (no more than 150 gram/liter of VOC) and/or High Pressure Low Volume (HPLV) applications consistent with South Coast Air Quality Management District Rule 1113 shall be used.

4.3.2 Grading plans shall reference the requirement that a sign shall be posted on-site stating that construction workers need to shut off engines at or before five minutes of idling.

4.3.3 During grading activity, all rubber tired dozers and scrapers (≥ 150 horsepower) shall be CARB Tier 3 Certified or better. Additionally, during grading activity, total horsepower hours per day for all equipment shall not exceed 149,840; and the maximum (actively graded) disturbance area shall not exceed 26 acres per day.

4.3.4 Prior to the issuance of building permits, the Project Applicant shall submit energy demand calculations to the City (Planning and Building Departments) demonstrating that the increment of the Project for which building permits are being requested would achieve a minimum 5% increase in energy efficiencies beyond incumbent California Building Code Title 24 performance standards. Representative energy efficiency/energy conservation measures to be incorporated in the Project would include, but would not be limited to, those listed below (it being understood that the items listed below are not all required and merely present examples; the list is not all-inclusive and other features that would comparably reduce energy consumption and promote energy conservation would also be acceptable):

- Increase in insulation such that heat transfer and thermal bridging is minimized;

- Limit air leakage through the structure and/or within the heating and cooling distribution system;

- Use of energy-efficient space heating and cooling equipment; Installation of electrical hook-ups at loading dock areas;
- Installation of dual-paned or other energy efficient windows;
- Use of interior and exterior energy efficient lighting that exceeds then incumbent California Title 24 Energy Efficiency performance standards;
- Installation of automatic devices to turn off lights where they are not needed;
- Application of a paint and surface color palette that emphasizes light and off-white colors that reflect heat away from buildings;
- Design of buildings with “cool roofs” using products certified by the Cool Roof Rating Council, and/or exposed roof surfaces using light and off-white colors;
- Design of buildings to accommodate photo-voltaic solar electricity systems or the installation of photo-voltaic solar electricity systems; and
- Installation of ENERGY STAR-qualified energy-efficient appliances, heating and cooling systems, office equipment, and/or lighting products.

4.3.5 The developer of the industrial phase of the Project (Planning Area 1) will install on the roofs of the warehouse buildings a photo-voltaic electrical generation system (PV system) capable of generating 1,600,000 kilowatt hours per year. The developer may install the required PV system in phases on a pro rata square foot basis as each building is completed; or if the PV system is to be installed on a single building, all of the PV system necessary to supply the PV estimated electrical generation shall be installed within two years (24 months) of the first building that does not include a PV system receives a certificate of occupancy.

4.3.6 Residential units within the Project site shall include the installation and maintenance of air filtration systems with efficiencies equal to or exceeding a Minimum Efficiency Reporting Value (MERV) 16 as defined by the American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE) Standard 52.2.

Addendum Project Conditions: None.

3.2.2 Biological Resources

Specific Plan EIR Findings

The Initial Study prepared for the Specific Plan EIR determined that buildout of the Specific Plan would not result in adverse effects on riparian habitats, sensitive natural communities, or federally protected wetlands, or conflict with local policies or ordinances protecting biological resources, or adopted habitat or natural community conservations plans. Additionally, the Initial Study determined that impacts related to an interference with a migratory corridor or nursery site would be less than significant given that the Specific Plan area was disturbed and improved with development and roadways.

The Specific Plan EIR determined that no special-status plant species were anticipated to occur within the Specific Plan area. However, the California horned lark was observed during the Specific Plan EIR biological site survey, and the Specific Plan area was determined to contain suitable habitat for burrowing owl. Both the California horned lark and burrowing owl are special-status wildlife species, and as such the Specific Plan EIR included mitigation measures to reduce impacts related to these species. Specifically, Mitigation Measure 4.9.1 requires that vegetation removal occur outside of the nesting bird season (August 1 to February 1) in order to ensure that active nests of migratory birds are avoided. Mitigation Measure 4.9.2 requires pre-construction burrowing owl surveys in order to avoid active burrows during the breeding season, with additional measures to follow, such as the use of buffers, if active burrows are present. Mitigation Measure 4.9.3 includes closure of inactive burrowing owl burrows outside of the breeding season (September 1 through January 31), and Mitigation Measure 4.9.4 requires implementation of a mitigation plan for any burrowing owl displaced due to project construction, which could include habitat replacement conservation or purchase of conservation bank credits. With implementation of Mitigation Measures 4.9.1 through 4.9.4, the Specific Plan EIR determined that buildout of the Specific Plan would result in less than significant impacts on special-status wildlife species.

The Specific Plan EIR further concluded that a drainage channel on the eastern portion of the Specific Plan area could be subject to the jurisdiction of the U.S. Army Corps of Engineers (USACE), California Department of Fish and Wildlife (CDFW), and/or Regional Water Quality Control Board (RWQCB). As such, Mitigation Measures 4.9.5 through 4.9.7 were included to ensure that jurisdictional delineation of drainage features on-site are conducted prior to issuance of grading permits, followed by applicable agency consultation and acquisition of applicable permits with the USACE, CDFW, and/or RWQCB. Following implementation of required mitigation, it was determined that impacts to potential jurisdictional resources within the Specific Plan area would be less than significant.

Proposed Project Analysis

The following analysis is based primarily on the following technical studies (refer to Appendix B, *Biological Reports*):

- *Biological Resources Assessment for Meredith International Centre Specific Plan Amendment – Planning Area 3 Project, City of Ontario, San Bernardino County, California* (Biological Resources Assessment), prepared by Michael Baker International, dated September 15, 2025; and

- *Aquatic Resources Delineation Report Meredith International Centre Specific Plan Amendment Project City of Ontario, San Bernardino County, California* (ARDR), prepared by Michael Baker International, dated September 2025.

The Biological Resources Assessment included a literature review of the CDFW's California Natural Diversity Database (CNDDB), California Native Plant Society's (CNPS) Online Inventory of Rare and Endangered Plants of California, Natural Resources Conservation Service (NRCS) Web Soil Survey, U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory, USFWS IPaC database, Calflora database, and corresponding U.S. Geological Survey (USGS) topographic maps. Additionally, a general biological resources survey and habitat assessment of the project site was conducted on August 5, 2025.

The ARDR included a literature review of USGS topographic maps, USGS hydrography data, aerial photography, U.S. Department of Agriculture (USDA) soil survey, USDA Hydric Soils List of California, USFWS National Wetlands Inventory Map, and Federal Emergency Management Agency's (FEMA) National Flood Insurance Program. A jurisdictional delineation was conducted on August 5, 2025 per methods outlined in the USACE's *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region, Version 2.0* (2008).

Special-Status Species

Based on the results of the Biological Resources Assessment, two special-status wildlife species have a moderate potential to occur within the project site: monarch (*Danaus plexippus plexippus*, federal proposed threatened) and burrowing owl (*Athene cunicularia*, State candidate endangered [SCE] and species of special concern [SSC]). Monarch has the potential to fly through the project site; however, the site provides limited nectar resources for foraging due to the dominance of weedy, non-native species. Additionally, no milkweed (*Asclepias*) species were observed and no suitable overwintering habitat was present on-site during the field visit. Therefore, monarch is not expected to breed on-site. The nearest known monarch record was from 2023 within the Cucamonga-Guasti Regional Park, approximately 0.3-mile to the northeast of the project site. Overall, if monarch fly through the site, they would be expected in very low numbers due to the disturbed nature of the site and dominance by non-native weedy vegetation. Development of the site in accordance with the Specific Plan and the proposed project

would similarly not remove habitat that would affect the long-term status of monarch populations; therefore, potential impacts associated with buildout of the proposed Mixed-Use Overlay are considered less than significant, similar to Specific Plan buildout impacts.

Similarly, no burrowing owls or suitable burrowing owl burrows were detected on-site during the field survey. However, burrowing owl are known to occur in the area; the nearest known records north of I-10 are from 2016, approximately 1.25 miles east of the project site, and the nearest known records south of I-10 are from 2017, approximately 0.3-mile south of the project site. The most recent records are from 2023, south and east of ONT. Therefore, there is potential for burrowing owl to colonize the site. As such, similar to buildout of the Specific Plan, implementation of Specific Plan EIR Mitigation Measures 4.9.2 and 4.9.3, which would require pre-constriction burrowing owl surveys, and, if necessary, burrowing owl exclusion and mitigation plan preparation, would be required to reduce impacts to less than significant levels. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Riparian Habitat and Sensitive Natural Communities

The project site supports ornamental landscaping and disturbed, weedy vegetation. There are no riparian habitats or other sensitive natural communities present within the project site boundaries. Therefore, similar to buildout of the Specific Plan, future development within Planning Area 3 in accordance with the project would have no impact on riparian habitats or other sensitive natural communities. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Wildlife Corridors and Habitat Linkages

The project site is within a highly urbanized area surrounded by residential and commercial development in all directions; it is not within or adjacent to any natural open space areas or other natural features that would be used by wildlife as a corridor or habitat linkage. The project site is adjacent to and east of the confluence of Cucamonga Creek and Deer Creek, two concrete channelized waterways with vertical concrete walls, concrete bottoms, and no vegetation. According to the Biological Resources Assessment, due to the developed nature of the concrete channels and lack of vegetation, these channels provide low value wildlife movement habitat.

Nevertheless, similar to conditions described in the Specific Plan EIR, the vegetation within and adjacent to the project site provides suitable nesting opportunities for a variety of bird species that are adapted to urban areas. Impacts to nesting birds are considered potentially significant. As such, similar to buildout of the Specific Plan and in order to maintain compliance with the California Fish and Game Code (CFGC) and federal Migratory Bird Treaty Act (MBTA), project implementation of Specific Plan EIR Mitigation

Measure 4.9.1 (pre-construction nesting bird surveys or avoidance of vegetation removal during breeding season) would be required to reduce impacts to less than significant levels. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

State and Federal Jurisdictional Aquatic Features

The ARDR included a jurisdictional delineation of the drainage channel in the eastern portion of the project site (Aquatic Feature 1; AF-1). During the site reconnaissance, some surface water was present within the northern portion of AF-1. Evidence of an ordinary high-water mark (OHWM) and surface hydrology was observed. Vegetation coverage was consistent throughout the channel, with flax-leaved horseweed (*Erigeron bonariensis*), short-podded mustard (*Hirschfeldia incana*), and telegraph weed (*Heterotheca grandiflora*) dominant throughout the channel. A few individuals of tall cyperus (*Cyperus eragrostis*) and spiny rush (*Juncus acutus*) were present at the northern end of AF-1. Due to the presence of hydrophytic vegetation and wetland hydrology, one soil pit was investigated within the vicinity of AF-1 to document the presence or absence of wetland conditions. Based on the results, the ARDR concluded that no wetlands were present within AF-1.

Although evidence of an OHWM was noted within the boundaries of the project site, AF-1 is an ephemeral drainage feature, does not exhibit relatively permanent flow, and does not have a surface hydrological connection to a traditional navigable waterway. Therefore, AF-1 is not considered waters of the U.S. However, this feature would fall under the jurisdiction of the RWQCB under the Porter-Cologne Act and is considered waters of the State. Further, the mapped feature exhibits a clear bed and bank and is considered CDFW jurisdictional streambed.

Buildout of the proposed project would impact 0.03-acre of non-wetland RWQCB waters of the State and 0.15-acre of CDFW jurisdictional streambed, which would require permits from these regulatory agencies. These findings are consistent with the Specific Plan EIR analysis, which identified that this drainage feature (AF-1) could be subject to regulatory jurisdiction. Therefore, implementation of Specific Plan EIR Mitigation Measures 4.9.5 through 4.9.7 would reduce impacts in this regard. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Conflict with Local Policies Protecting Biological Resources

The proposed project would not conflict with any local policies or ordinances protecting biological resources. The City has adopted tree preservation and protection measures, including requirements for protected root zones, fencing, and arborist oversight during construction. However, the project site does not support any trees; therefore, future development on-site would not impact trees subject to this ordinance. No impact would

occur. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Conflict with Applicable Habitat Conservation Plans

The Specific Plan area, including the project site, is not covered by an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. No impact would occur. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Certified Specific Plan EIR Mitigation Measures:

4.9.1 Avoidance of Nesting Migratory Birds: If possible, all vegetation removal activities shall be scheduled from August 1 to February 1, which is outside the general avian nesting season. This would ensure that no active nests would be disturbed and that removal could proceed rapidly. If vegetation is to be cleared during the nesting season, all suitable habitat will be thoroughly surveyed within 72 hours prior to clearing for the presence of nesting birds by a qualified biologist (Project Biologist). The Project Biologist shall be approved by the City and retained by the Applicant. The survey results shall be submitted by the Project Applicant to the City Planning Department. If any active nests are detected, the area shall be flagged and mapped on the construction plans along with a minimum 300-foot buffer, with the final buffer distance to be determined by the Project Biologist. The buffer area shall be avoided until, as determined by the Project Biologist, the nesting cycle is complete or it is concluded that the nest has failed. In addition, the Project Biologist shall be present on the site to monitor the vegetation removal to ensure that any nests, which were not detected during the initial survey, are not disturbed.

4.9.2 Burrowing Owl Avoidance: Breeding season avoidance measures for the burrowing owl including, but not limited to, those that follow shall be implemented. A pre-construction survey for resident burrowing owls shall be conducted by a qualified Project Biologist within 30 days prior to construction activities. If ground-disturbing activities are delayed or suspended for more than 30 days after the pre-construction survey, the site will be resurveyed for owls. Pre-construction survey methodology shall be based on Appendix D (Breeding and Non-breeding Season Surveys and Reports) of the CDFW Staff Report on Burrowing Owl Mitigation (CDFW) March 7, 2012 (CDFW Burrowing Owl Mitigation Staff Report). Results of the pre-construction survey shall be provided to CDFW and the City. If the pre-construction survey does not identify burrowing owls on the Project site, then no further mitigation shall be required. If burrowing owls are found to

be utilizing the Project site during the pre-construction survey, measures shall be developed by the Project Biologist in coordination with CDFW to avoid impacting occupied burrows during the nesting period. These measures shall be based on the most current CDFW protocols and would minimally include establishment of buffer setbacks from occupied burrows and owl monitoring during Project construction activities.

4.9.3 Burrowing Owl Passive Exclusion: During the non-breeding season (September 1 through January 31), if burrows occupied by migratory or non-migratory resident burrowing owls are detected during a pre-construction survey, then burrow exclusion and/or closure may be used to passively exclude owls from those burrows. Burrow exclusion and/or closure shall only be conducted by the Project Biologist in consultation and coordination with CDFW employing incumbent CDFW guidelines.

4.9.5 Prior to the issuance of any grading permits and prior to any physical disturbance of any possible jurisdictional areas, the Applicant shall obtain a Regional Board 401 Certification, or a written waiver of the requirement for such an agreement or permit, from the California Regional Water Quality Control Board. Written verification of such a permit or waiver shall be provided to the City of Ontario Planning Department.

4.9.6 Prior to the issuance of any grading permits and prior to any physical disturbance of any possible jurisdictional areas, the Applicant shall obtain a stream bed alteration agreement or permit, or a written waiver of the requirement for such an agreement or permit, from the California Department of Fish and Wildlife. Information to be provided as part of the Streambed Alteration Agreement (if required) shall include but not be limited to the following:

- Delineation of lakes, streams, and associated habitat that will be temporarily and/or permanently impacted by the proposed project (include an estimate of impact to each habitat type);
- Discussion of avoidance measures to reduce project impacts; and
- Discussion of potential mitigation measures required to reduce the project impacts to a level of insignificance.

Written verification of such a streambed alteration agreement/permit, or waiver, shall be provided to the City of Ontario Planning Department.

4.9.7 Prior to the issuance of any grading permits and prior to any physical disturbance of any possible jurisdictional areas, the Applicant shall obtain a 404 permit, or a written waiver of the requirement for such an agreement or permit, from the U.S. Army Corps of Engineers. Written verification of such a permit or waiver shall be provided to the City of Ontario Planning Department.

Addendum Project Conditions: None.

3.2.3 Cultural Resources

Specific Plan EIR Findings

The Initial Study prepared for the Specific Plan EIR determined that implementation of the Specific Plan would result in less than significant impacts regarding disturbances to human remains, including those interred outside of formal cemeteries.

According to the Specific Plan EIR, the Specific Plan area is historically associated with the Italian Vineyard Company holdings and the activities associated with the community of Guasti. Field investigations conducted in preparation of the Specific Plan EIR identified a single irrigation valve on the south side of Inland Empire Boulevard, west of the Cucamonga Creek Channel (Planning Area 2), and a fragment of rock and concrete along Fourth Street, east of Vineyard Avenue (Planning Area 3); both are considered scant evidence of early vineyard activities. The Specific Plan EIR determined that the Specific Plan area does not contain any significant historical or archaeological resources, and that the potential for identifying prehistoric or historic archaeological resources is low. Nonetheless, the Specific Plan EIR included Mitigation Measures 4.11.1 through 4.11.7 in the event that previously undiscovered resources are identified during project implementation. Mitigation Measure 4.11.1 would require construction signage to be posted that provides instructions for the discovery of a previously unanticipated cultural resource. Mitigation Measure 4.11.2 would require project applicants to consult with potentially affected Native American tribes 30 days prior to grading activities and to enter a Cultural Resources Treatment and Monitoring Agreement with applicable tribes. Mitigation Measure 4.11.3 would require construction signage to be posted that provides instructions if human remains are encountered during ground-disturbing activities. Mitigation Measure 4.11.4 outlines procedures for the curation and recordation of any cultural resources discovered during grading activities and which are not addressed by the Cultural Resources Treatment and Monitoring Agreement. Mitigation Measure 4.11.5 would require the avoidance and preservation of sacred sites. Mitigation Measure 4.11.6 states that in the event that a developer and tribe cannot agree on the significance of or mitigation for a resource discovered during grading, the City of Ontario Planning Director shall make this determination, appealable to the City of Ontario. Last, Mitigation Measure 4.11.7 would require site monitoring by a qualified archeologist during construction activities.

Proposed Project Analysis

Historical Resources

The proposed project site is located entirely within the Specific Plan area, and as such the site is similarly historically associated with the Italian Vineyard Company holdings and the activities associated with the community of Guasti. However, there are no existing structures on-site that could qualify as a historic resource under CEQA, and no impact

would occur to historic resources. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Archaeological Resources

As analyzed in the Specific Plan EIR, while the project site has low potential for containing any significant prehistoric or historic archaeological resources, buildout of the project site would require some level of ground-disturbing activities that could uncover previously undiscovered archaeological resources. In the event of inadvertent discovery, Specific Plan EIR Mitigation Measures 4.11.1 through 4.11.7 would reduce potential impacts to less than significant levels. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Human Remains

Similar to buildout under the Specific Plan and as required by California Health and Safety Code Section 7050.5, should human remains be found during future development of Planning Area 3 in accordance with the project, no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains were found to be prehistoric, the coroner would coordinate with the California Native American Heritage Commission as required by State law. Based on compliance with these existing regulations, future development in accordance with the project's potential to disturb human remains would be less than significant. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Certified Specific Plan EIR Mitigation Measures:

4.11.1 Prior to development approval on the Project site and issuance of any grading, building, or other permit authorizing ground-disturbing activity, the Project Applicant(s) shall include the following wording on all construction contract documentation:

"If during grading or construction activities, cultural resources are discovered on the Project site, work shall be halted immediately within 50 feet of the discovery and the resources shall be evaluated by a qualified archeologist and any affected Tribes (Tribes). Any unanticipated cultural resources that are discovered shall be evaluated and a final report prepared by the qualified archeologist. The report shall include a list of the resources discovered, documentation of each site/locality, and interpretation of the

resources identified, and the method of preservation and/or recovery for identified resources. In the event the significant resources are recovered and if the qualified archaeologist and the Tribe determines the resources to be historic or unique, avoidance and/or mitigation would be required pursuant to and consistent with CEQA Guidelines Sections 15064.5 and 15126.4 and Public Resources Code Section 21083.2 and the Cultural Resources Treatment and Monitoring Agreement required under Mitigation Measure 4.9.2."

4.11.2 At least 30 days prior to seeking a grading permit, the Project Applicant(s) shall contact potentially affected Tribes to notify the Tribes of grading, excavation, and the monitoring program and to coordinate with the City of Ontario and the Tribes to develop a Cultural Resources Treatment and Monitoring Agreement. The agreement shall include, but not be limited to, outlining provisions and requirements for addressing the treatment of cultural resources; Project grading and development scheduling; terms of compensation for the monitors; and treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site; and establishing on-site monitoring provisions and/or requirements for professional Tribal monitors during all ground-disturbing activities. A copy of this signed agreement shall be provided to the Planning Director and Building Official prior to the issuance of the first grading permit.

4.11.3 Prior to development approval on the Project site and issuance of any grading, building, or other permit authorizing ground-disturbing activity, the Project Applicant(s) shall include the following wording on all construction contract documentation:

"If human remains are encountered, California Health and Safety Code Section 7050.5 requires that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the San Bernardino County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within a reasonable time frame. Subsequently, the Native American Heritage Commission shall identify the "most likely descendant" within 24 hours of receiving notification from the coroner. The most likely descendant shall then have 48 hours to make recommendations and engage in consultations concerning the treatment of the remains as provided in Public Resources Code Section 5097.98."

4.11.4 All cultural materials, with the exception of sacred items, burial goods, and human remains, which will be addressed in the Cultural Resources Treatment and Monitoring Agreement required by Mitigation Measure 4.9.2,

that are collected during the grading monitoring program and from any previous archeological studies or excavations on the Project site shall be curated according to the current professional repository standards. The collections and associated records shall be transferred, including title, to the affected Tribe's/Tribes' curation facility(ies), which meets the standards set forth in 36 CRF Part 79 for federal repositories.

4.11.5 All sacred sites, should they be encountered within the Project site, shall be avoided and preserved as the preferred mitigation, if feasible as determined by a qualified professional in consultation with the affected Tribe(s). To the extent that a sacred site cannot be feasibly preserved in place or left in an undisturbed state, mitigation measures shall be required pursuant to and consistent with Public Resources Code Section 21083.2 and CEQA Guidelines Sections 15064.5 and 15126.4.

4.11.6 Prior to development approval on the Project site and issuance of any grading, building, or other permit authorizing ground-disturbing activity, the Project Applicant(s) shall include the following wording on all construction contract documentation:

"If inadvertent discoveries of subsurface archaeological resources are discovered during grading, work shall be halted immediately within 50 feet of the discovery. The developer, the Project archeologist, and the Tribe(s) shall assess the significance of such resources and shall meet and confer regarding the mitigation for such resources. If the developer and the Tribe cannot agree on the significance of or the mitigation for such resources, these issues will be presented to the City of Ontario Planning Director. The Planning Director shall make the determination based on the provisions of CEQA with respect to archaeological resources and shall take into account the religious beliefs, customs, and practices of the Tribe(s). Notwithstanding any other rights available under the law, the decision of the Planning Director shall be appealable to the City of Ontario. In the event the significant resources are recovered and if the qualified archaeologist determines the resources to be historic or unique as defined by relevant state and local law, avoidance and mitigation would be required pursuant to and consistent with Public Resources Code Section 21083.2 and CEQA Guidelines Sections 15064.5 and 15126.4."

4.11.7 To address the possibility that cultural resources may be encountered during grading or construction, a qualified professional archeologist shall monitor all construction activities that could potentially impact archaeological deposits (e.g., grading, excavation, and/or trenching). However, monitoring may be discontinued as soon the qualified professional is satisfied that construction will not disturb cultural and/or paleontological resources.

Addendum Project Conditions: None.

3.2.4 Energy

Specific Plan EIR Findings

Although Energy was not one of the topical areas in CEQA Guidelines Appendix G when the Specific Plan EIR was certified in 2015, energy use was evaluated extensively in the Specific Plan EIR Section 5.6, *Energy Conservation*. The Specific Plan EIR determined that regulatory compliance (e.g., Building Energy Efficiency Standards [commonly known as Title 24], *City of Ontario Community Climate Action Plan* [CCAP]) and implementation of all feasible Specific Plan EIR mitigation measures (Specific Plan EIR Mitigation Measure 4.3.3 requiring dozers and scrapers [≥ 50 horsepower] used during grading activities to be CARB Tier 3 Certified or better which improves fuel efficiency and reduce energy waste, and Specific Plan EIR Mitigation Measure 4.3.4 requiring a five percent increase in energy efficiencies beyond incumbent Title 24 performance standards) would ensure that construction and operations for future development in accordance with the Specific Plan EIR would not result in the inefficient, wasteful or unnecessary consumption of energy, and potential project impacts in these regards would be less than significant. Further, the energy demands of buildout of the Specific Plan can be accommodated within the context of available resources and energy delivery systems. The Specific Plan would, therefore, not cause or result in the need for additional energy production or transmission facilities and would not create or result in a potentially significant impact affecting energy resources or energy delivery systems.

Proposed Project Analysis

Wasteful, Inefficient, or Unnecessary Energy Consumption

Construction

The analysis of impacts related to energy use considers construction and operations of a project. Fossil fuels would be used for construction vehicles and other energy-consuming equipment during construction of the project. Construction of future commercial/retail and/or residential development in accordance with the proposed mixed-use overlay would result in on-road (automotive) fuel consumption associated with construction vehicle trips and off-road fuel consumption associated with construction equipment usage.

Construction fuel consumption depends on multiple factors, including, but not limited to, start and duration of construction phases, types and numbers of construction equipment to be used, soil import and export volumes, hauling trips distance, etc., all of which cannot be determined at this stage of the planning process. Because implementation of the project does not propose any specific development and no project-level construction details can be provided, construction-related fuel consumption that may occur at any time in any scale are speculative and cannot be accurately determined at this stage of the planning process. As such, construction-related fuel consumption was not quantified.

However, this project proposes similar land use types (i.e., commercial/retail and residential) as the already permitted urban commercial uses in Planning Area 3 as analyzed in the Specific Plan EIR and within the same project site (i.e., no increase in site acreage), and therefore similar construction techniques, equipment, and anticipated construction fuel consumption would be expected. Further, all future commercial/retail and/or residential development in accordance with the proposed mixed-use overlay would be subject to project-specific and site-specific discretionary approvals (including separate CEQA review) on a case-by-case basis to ensure that development occurs in a logical manner consistent with the Specific Plan and any energy impacts during construction would be analyzed and mitigated, if applicable. Typically, fuel consumed during construction would be temporary and would not represent a significant demand for energy resources. In addition, some incidental energy conservation would occur during construction through compliance with State requirements. Construction equipment would also be required to comply with the latest U.S. Environmental Protection Agency (EPA) and CARB engine emissions standards. These emissions standards require highly efficient combustion systems that maximize fuel efficiency and reduce unnecessary fuel consumption. Due to increasing transportation costs and fuel prices, contractors and owners have a strong financial incentive to avoid wasteful, inefficient, and unnecessary consumption of energy during construction. There is growing recognition among developers and retailers that sustainable construction is not prohibitively expensive, and that there is a significant cost-savings potential in green building practices and materials. Further, project-related incremental increase in the use of energy bound in construction materials, such as asphalt, steel, concrete, pipes and manufactured or processed materials (e.g., lumber and gas), would not substantially increase demand for energy compared to overall local and regional demand for construction materials.

Construction fuel use is temporary and would cease upon completion of construction activities. There are no unusual project characteristics that would necessitate the use of construction equipment that would be less energy-efficient than at comparable construction sites in the region or State. Additionally, construction contractors would be required to comply with the provisions of California Code of Regulations Title 13, Sections 2449 and 2485, which prohibit diesel-fueled commercial motor vehicles and off-road diesel vehicles from idling for more than five minutes and would minimize unnecessary fuel consumption. Construction equipment would be subject to the EPA Construction Equipment Fuel Efficiency Standard, which would also minimize inefficient, wasteful, or unnecessary fuel consumption. Furthermore, per applicable regulatory requirements, such as the current CALGreen, future commercial/retail and/or residential development in accordance with the project would comply with construction waste management practices to divert a minimum of 65 percent of construction debris.

As detailed above, the Specific Plan EIR determined that energy-related impacts of Specific Plan buildout would be less than significant. Similarly, for the project, construction fuel consumption would not be any more inefficient, wasteful, or unnecessary than other similar development projects. As such, a less than significant impact would occur in this regard. As such, the project would not result in a new significant environmental effect or

substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Operations

This analysis focuses on three sources of energy that are relevant to the project: electricity, natural gas, and transportation fuel for vehicle trips associated with project operations. The analysis of operational energy usage is based on the California Emissions Estimator Model (CalEEMod) version 2022.1.1.30. modeling results for the project; refer to Appendix A. The project's estimated electricity and natural gas consumption is based primarily on CalEEMod's default settings for San Bernardino County and consumption factors provided by Southern California Edison (SCE) and Southern California Gas Company (SoCalGas), the electricity and natural gas providers for the City and the project site, respectively. The amount of operational fuel consumption was estimated using the project's annual vehicle miles traveled (VMT) as modeled in CalEEMod, and CARB Emissions Factor 2021 (EMFAC2021) website platform, which provides typical fuel efficiency for the County. The year of 2027 was used as the buildout (operational) year of the project assuming development on Planning Area 3 could initiate as early as the next year from when this Addendum was prepared and conservatively accounting for a construction duration of approximately one year. The project's estimated operational energy consumption is summarized in Table 4, *Energy Consumption*.

As shown in Table 4, the project's annual electricity and natural gas usage would result in approximately 0.0435 percent over the County's typical annual electricity usage and approximately 0.0432 percent over the County's typical annual natural usage, respectively. Furthermore, the project's increase in operational vehicle fuel consumption would increase the County's consumption by approximately 0.2076 percent. Overall, the project would result in a nominal energy consumption increase over the County's current energy consumption.

Table 4
Energy Consumption

Energy Type	Project Annual Energy Consumption[1]	San Bernadino County Annual Energy Consumption[2]	Percentage Increase Countywide
Electricity Consumption[3] (MWh)	7,046 MWh	16,206,401 MWh	0.0435%
Natural Gas Consumption[4] (therms)	236,140 therms	547,159,228 therms	0.0432%
Operational Automotive (on-road) Fuel Consumption[5]	2,283,080 gallons	1,099,671,804 gallons	0.2076%

Energy Type	Project Annual Energy Consumption[1]	San Bernadino County Annual Energy Consumption[2]	Percentage Increase Countywide

Notes:
1. Project electricity and natural gas consumptions as modeled in California Emissions Estimator Model (CalEEMod) computer model provided in Appendix A. Fuel consumption calculated based on CalEEMod results.
2. The project's increase in electricity and natural gas consumptions are compared to the total consumption in San Bernardino County in 2024 (the latest year where data is available). The project's increase in operational automotive fuel consumption is compared with the projected Countywide on-road fuel consumption in 2027 (project estimated operation year).
3. Electricity consumption data source: California Energy Commission, *Electricity Consumption*, https://www.energy.ca.gov/data-reports/energy-almanac/california-electricity-data/california-energy-consumption-dashboards-0, accessed September 22, 2025.
4. Natural gas consumption data source: California Energy Commission, *Natural Gas Consumption*, https://www.energy.ca.gov/data-reports/energy-almanac/california-electricity-data/california-energy-consumption-dashboards-1, accessed September 22, 2025.
5. Countywide on-road fuel consumption is derived from CARB EMFAC2021.

Source: Refer to Appendix A.

Transportation Energy Demands

Pursuant to the Federal Energy Policy and Conservation Act of 1975, the National Highway Traffic and Safety Administration is responsible for establishing additional vehicle standards and for revising existing standards. Compliance with federal fuel economy standards is not determined for each individual vehicle model. Rather, compliance is determined based on each manufacturer's average fuel economy for the portion of their vehicles produced for sale in the United States. The key drivers of transportation-related fuel consumption are job locations/commuting distance and many personal choices on when and where to drive for various purposes. Those factors are outside of the scope of the design of the proposed project.

However, the project would include various design features that would promote the reduction of overall VMT generated from the proposed development, which reduces petroleum fuel consumption. In compliance with CALGreen, future residential and non-residential development would be required to install bike parking spaces and electric vehicle (EV) charging stations, as applicable. According to the project-specific transportation impact analysis, operation of the project would result in approximately 10,670 average daily trip and 40,722,805 annual VMT; refer to Appendix D. As indicated in Table 4, the project's operational automotive transportation is estimated to consume approximately 2,283,080 gallons of fuel per year. This increase would account for 0.2076 percent of the County's forecast annual consumption of fuel for the buildout year of 2027. As such, the project would account for a nominal percentage of the forecasted annual operational automotive fuel consumption for the County and, thus, would have a nominal effect on the local and regional energy supplies.

The project is also located within close proximity to existing destinations in surrounding areas that residents and guests may potentially visit, such as restaurants and commercial retail uses north of the site The nearest bus stop (Inland Empire Boulevard and Archibald Avenue intersection) is approximately 350 feet east of the project site. As such, the

project's proximity to existing public transit and destinations would reduce overall VMT and would reduce petroleum fuel consumption.

Overall, the project does not propose any unusual features that would result in excessive long-term operational fuel consumption. Therefore, fuel consumption associated with vehicle trips generated by the proposed project would not be considered inefficient, wasteful, or unnecessary compared to other similar developments in the region.

Building Energy Demand

The California Energy Commission (CEC) developed 2024 to 2040 forecasts for energy consumption and peak demand in support of the *2023 Integrated Energy Policy Report* (2023 IEPR) for each of the major electricity and natural gas planning areas and the State based on economic and demographic growth projections. CEC forecasted baseline electricity consumption grows at a rate of about 1.7 percent annually through 2040.[17] The natural gas consumption grows at a rate of about 0.2 percent annually through 2035.[18]

As shown in Table 4, the project's operational energy consumption at full buildout would result in an annual electricity and natural gas consumption of 7,046 MWh and 236,140 therms, respectively. Table 4 also shows the increase of operational energy consumption would result in an approximately 0.0435 percent increase in electricity consumption and approximately 0.0432 percent increase in natural gas consumption over the current Countywide usage. As such, energy consumption would be significantly below the CEC's forecasts and the current Countywide usage. Overall, the project would be consistent with the CEC's energy consumption forecasts and would not require additional energy capacity or supplies. The project would also consume energy during the same time periods as other surrounding commercial/retail and/or residential developments. As a result, the project would not result in unique or more intensive peak or base period energy demand.

Future development within the Specific Plan area would be required to comply with the latest version of the Title 24 Building Energy Efficiency Standards, which provide minimum efficiency standards related to various building features, including appliances, water and space heating and cooling equipment, building insulation and roofing, and lighting. Implementation of Title 24 standards significantly reduces energy usage. Title 24 standards are updated every three years and become more stringent between each update; therefore, complying with the latest Title 24 standards would make the project more energy efficient than existing buildings built under the earlier versions of the Title 24 standards. It should also be acknowledged that any building permit applications applied on or after January 1, 2026, would be required to comply with the upcoming 2025 California Building Energy Efficiency Standards. The 2025 California Building Energy Efficiency Standards expands on the existing 2022 Title 24 standards (i.e., promote the

[17] California Energy Commission, *2023 Integrated Energy Policy Report, page 130*, July 14, 2024.

[18] Based on the *2023 Integrated Energy Policy Report*, the gas forecast is updated every two years, in odd years. As such, the natural gas consumption shown here is based on the California Energy Commission, *Final 2022 Integrated Energy Policy Report Update, page 140*, May 10, 2023.

use of heat pumps in new residential development, electrical readiness, updated ventilation standards, etc.). Additionally, future projects within Planning Area 3 would be required to install high efficiency lighting and energy-efficient appliances and provide on-site renewable energy generation through installation of solar solar-ready roof(s). Future development would also be required to utilize all electric landscape equipment and incorporate water conservation measures such as installing low-flow fixtures, water-efficiency irrigation, and drought tolerant landscape that would reduce energy consumption associated with transporting water. Further, future development would be required to be consistent with the goals and policies as outlined in TOP 2050 in regard to energy in an effort to reduce the energy-related impacts of building construction and occupation on the current and future environment during project implementation. Furthermore, SCE is subject to California's Renewable Portfolio Standard (RPS) which requires investor-owned utilities, electric service providers, and community choice aggregators to increase procurement from eligible renewable energy resources to 60 percent of total procurement by 2030 and 100 percent of total procurement by 2045. Renewable energy is generally defined as energy that comes from resources which are naturally replenished within a human timescale such as sunlight, wind, tides, waves, and geothermal heat. The increase in reliance of such energy resources further ensures that new development projects will not result in the waste of the finite energy resources. Overall, the project would ensure energy consumption to be kept to a minimum through these components.

Based on the analysis above, the project would not cause wasteful, inefficient, and unnecessary consumption of building energy during project operation or preempt future energy development or future energy conservation. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Consistency with State or Local Energy Plan

As discussed above, the State's electricity grid is transitioning to renewable energy under California's RPS Program. Renewable sources of electricity include wind, small hydropower, solar, geothermal, biomass, and biogas. In general, California has RPS requirements of 33 percent renewable energy by 2020 (SB X1-2), 40 percent by 2024 (SB 350), 50 percent by 2026 (SB 100), 60 percent by 2030 (SB 100), and 100 percent by 2045 (SB 100). SB 100 also establishes RPS requirements for publicly owned utilities that consist of 44 percent renewable energy by 2024, 52 percent by 2027, and 60 percent by 2030. The Statewide RPS requirements do not directly apply to individual development projects, but to utilities and energy providers such as SCE, whose compliance with RPS requirements would contribute to the State of California objective of transitioning to renewable energy.

The commercial/retail and residential land uses proposed under the project would comply with current and future iterations of CALGreen standards. Furthermore, future projects within Planning Area 3 would be subject to Specific Plan EIR Mitigation Measure 4.3.3

(requiring dozers and scrapers with more than 50 horsepower used during grading activities to be CARB Tier 3 Certified or better), and Specific Plan EIR Mitigation Measure 4.3.4 (requiring a five percent increase in energy efficiencies beyond incumbent Title 24 performance standards), which would support the Statewide goal of transitioning the electricity grid to renewable sources and employ best practices regarding energy-saving standards. Future projects would also comply with the requirements of the City's CCAP and implement an array of project design features that will conserve or reduce energy use, (i.e. improved insulation, water use reduction, use of recycled water, solar energy, etc.). Additionally, as detailed above, the project would be consistent with the CEC's 2023 IEPR energy consumption forecasts and would not require additional energy capacity or supplies.

Therefore, implementation of project would not conflict with or obstruct implementation of California's RPS program, or any other State or local energy plans. Impacts would be less than significant in this regard. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Certified Specific Plan EIR Mitigation Measures:

4.3.3 During grading activity, all rubber tired dozers and scrapers (≥ 150 horsepower) shall be CARB Tier 3 Certified or better. Additionally, during grading activity, total horsepower hours per day for all equipment shall not exceed 149,840; and the maximum (actively graded) disturbance area shall not exceed 26 acres per day.

4.3.4 Prior to the issuance of building permits, the Project Applicant shall submit energy demand calculations to the City (Planning and Building Departments) demonstrating that the increment of the Project for which building permits are being requested would achieve a minimum 5% increase in energy efficiencies beyond incumbent California Building Code Title 24 performance standards. Representative energy efficiency/energy conservation measures to be incorporated in the Project would include, but would not be limited to, those listed below (it being understood that the items listed below are not all required and merely present examples; the list is not all-inclusive and other features that would comparably reduce energy consumption and promote energy conservation would also be acceptable):

- Increase in insulation such that heat transfer and thermal bridging is minimized;

- Limit air leakage through the structure and/or within the heating and cooling distribution system;

- Use of energy-efficient space heating and cooling equipment; Installation of electrical hook-ups at loading dock areas;
- Installation of dual-paned or other energy efficient windows;
- Use of interior and exterior energy efficient lighting that exceeds then incumbent California Title 24 Energy Efficiency performance standards;
- Installation of automatic devices to turn off lights where they are not needed;
- Application of a paint and surface color palette that emphasizes light and off-white colors that reflect heat away from buildings;
- Design of buildings with “cool roofs” using products certified by the Cool Roof Rating Council, and/or exposed roof surfaces using light and off-white colors;
- Design of buildings to accommodate photo-voltaic solar electricity systems or the installation of photo-voltaic solar electricity systems; and
- Installation of ENERGY STAR-qualified energy-efficient appliances, heating and cooling systems, office equipment, and/or lighting products.

Addendum Project Conditions: None.

3.2.5 Greenhouse Gas Emissions

Specific Plan EIR Findings

The Specific Plan EIR determined that GHG impacts would be less than significant upon compliance with State policies and requirements and application of Specific Plan EIR Mitigation Measure 4.3.4. Therefore, the Specific Plan was consistent with, or otherwise not in conflict with, recommended measures and actions in the CARB *2014 Scoping Plan*. The 2014 Scoping Plan established strategies and measures that would achieve GHG reductions goals set forth in the Global Warming Solutions Act of 2006 (AB 32). More specifically, the 2014 Scoping Plan called for an approximately 28.5 percent reduction in GHG emissions when compared to Business-as-Usual (BAU) conditions. Similarly, TOP 2050 EIR indicates that AB 32 compliance would be achieved through an approximately 30.0 percent reduction in GHG emission when compared to a BAU Scenario. It was also determined that the Specific Plan was consistent with applicable TOP 2050 goals and policies and would comply with and implement applicable TOP 2050 EIR mitigation measures. The Specific Plan EIR analysis showed that GHG emissions would be reduced

by approximately 32.81 percent when compared to a 2020 BAU Scenario. It was also shown that the Specific Plan would generate an estimated 73,645.72 metric tons of carbon dioxide equivalent ($MTCO_2e$) emissions when compared to existing conditions. In context, the City of Ontario 2008 GHG emissions as estimated under the *City of Ontario Community Climate Action Plan* (CCAP) totaled 2.5 million $MTCO_2e$. Project GHG emissions would represent approximately three percent of the City's estimated 2008 GHG emissions total. As discussed in the CCAP, an individual project cannot generate enough GHG emissions to influence global climate change. The project participates in this potential impact by its incremental contribution combined with the cumulative increase of all other sources of GHGs, which when taken together may have a significant impact on global climate change . . . Because the CCAP addresses GHG emissions reduction, is in concert with AB 32 and international efforts to address global climate change and includes specific local requirements that will substantially lessen the cumulative problem, compliance with the CCAP fulfills the description of mitigation found in CEQA Guidelines §15130(a)(3) and §15183.5. (CCAP, pages 2-5). As such, it was determined that the Specific Plan would be consistent with the CCAP, would be in concert with AB 32 and international efforts to address global climate change, and would reflect specific local requirements that would substantially lessen cumulative GHG emissions impacts. The Specific Plan would therefore also fulfill the description of mitigation found in CEQA Guidelines §15130(a)(3) and §15183.5. It was determined the Specific Plan's incremental contribution to GHG emissions impacts would therefore not be cumulatively considerable.

Proposed Project Analysis

GHG Emissions

Future construction-related activities associated with development within the project could result in emissions of GHGs. The Specific Plan EIR assumed buildout of Planning Area 3 would allow for 480,000 square feet of commercial use (including 400 hotel rooms) under the Urban Commercial land use designation. The project proposes to modify the existing Specific Plan to include a Mixed-Use Overlay over Planning Area 3 to allow for up to 50,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units in place of the uses and buildout currently permitted under the site's Urban Commercial designation. Construction GHG emissions depend on multiple factors, including, but not limited to, start and duration of construction phases, types and quantity of construction equipment to be used, soil import and export volumes, hauling trips distance, etc., all of which cannot be determined at this stage of the planning process. As such, because implementation of the project does not propose any specific development and construction details are unknown, construction-related GHG emissions that may occur at any one time in any scale are speculative and cannot be accurately determined at this stage of the planning process. It should be noted that construction GHG emissions are typically nominal as they are attenuated based on development lifetime (typically assumed to be 30 years). Additionally, this project proposes similar land use types (i.e., commercial/retail and residential) as the already permitted urban commercial uses in Planning Area 3 as analyzed in the Specific Plan EIR and within the same project site (i.e., no increase in site acreage), and therefore similar construction techniques,

equipment, and anticipated construction GHG emissions would be expected. As such, construction of future developments within the project site would be subject to project-specific and site-specific discretionary approvals (including separate CEQA review) on a case-by-case basis, as the extent of impacts become known through the design process to ensure that development occurs in a logical manner consistent with Specific Plan.

Operation of future commercial/retail and/or residential development on-site could result in direct and indirect GHG emissions. Direct GHG emissions would include emissions from area sources, mobile sources, and refrigerants, while indirect emissions would include emissions from energy consumption, water demand, and solid waste generation. The most recent version of the California Emissions Estimator Model (CalEEMod), version 2022.1 was used to calculate project related GHG emissions. CalEEMod outputs are contained within Appendix A. Table 5, *Estimated Greenhouse Gas Emissions*, presents the estimated GHG emissions of the project.

It should be noted that the proposed project would continue to incorporate mitigation measures in accordance to the Specific Plan EIR, including Specific Plan EIR Mitigation Measures 4.3.4 that would reduce operational source GHG emissions to the extent possible by requiring a five percent increase in energy efficiencies beyond incumbent Title 24 performance standards, thereby reducing GHG emissions associated with building energy consumption; this measure has not been incorporated into the CalEEMod modeling as a conservative measure.

Table 5
Estimated Greenhouse Gas Emissions

Emission Source	CO_2	CH_4	N_2O	Refrigerants	CO_2e
	Metric Tons/year				
Direct Emissions					
Mobile Source	14,338.00	0.69	0.71	20.00	14,586.00
Area Source	403.00	0.44	<0.01	0.00	414.00
Refrigerants	0.00	0.00	0.00	1.80	1.80
Total Direct Emissions[1]	*14,741.00*	*1.13*	*0.71*	*21.80*	*15,001.80*
Indirect Emissions					
Energy	2,953.00	0.22	0.02	0.00	2,963.00
Water	125.00	2.00	0.05	0.00	191.00
Waste	63.00	6.30	0.00	0.00	221.00
Total Indirect Emissions[1]	*3,141.00*	*8.52*	*0.07*	*0.00*	*3,375.00*
Project Total Emissions (All Sources)	***18,376.80 $MTCO_2e$ per year***				

Notes: CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; CO_2e = carbon dioxide equivalent
1. Totals may be slightly off due to rounding.

Source: Refer to Appendix A for assumptions used in this analysis.

Direct Project-Related Source of Greenhouse Gases

Mobile Source. As detailed in the project-specific transportation impact analysis (Appendix D), the project's trip generation potential would be approximately 10,670 daily

trips, which equates to approximately 14,586.00 $MTCO_2e$ per year of mobile source GHG emissions; refer to Table 5.

Area Source. Area source emissions were calculated using CalEEMod and project-specific land use data. Project-related area sources may include exhaust emissions from typical landscape maintenance equipment such as lawnmowers, shredders/grinders, blowers, trimmers, chain saws, and hedge trimmers. Future development within Planning Area 3 would also use all electric landscape equipment; as a conservative analysis, these features were not quantified in the modeling. As noted in Table 5, the project would result in 414.00 $MTCO_2e$ per year of area source GHG emissions.

Refrigerants. Refrigerants are substances used in equipment for air conditioning and refrigeration. Most of the refrigerants used today are hydrofluorocarbons or blends thereof, which can have high global warming potential (GWP) values. All equipment that uses refrigerants has a charge size (i.e., quantity of refrigerant the equipment contains), and an operational refrigerant leak rate, and each refrigerant has a GWP that is specific to that refrigerant. CalEEMod quantifies refrigerant emissions from leaks during regular operation and routine servicing over the equipment lifetime and then derives average annual emissions from the lifetime estimate. As the project would allow for commercial/retail and residential uses, the project would only directly result in approximately 1.80 $MTCO_2e$ per year from refrigerants; refer to Table 5.

Indirect Project-Related Source of Greenhouse Gases

Energy. Energy consumption emissions were calculated using the CalEEMod model and project-specific land use data. Electricity and natural gas would be provided to the project site via Southern California Edison (SCE) and Southern California Gas Company (SoCal Gas). Future development within Planning Area 3 would be required to comply with the latest version of the Title 24 Building Energy Efficiency Standards, which provide minimum efficiency standards related to various building features, including appliances, water and space heating and cooling equipment, building insulation and roofing, and lighting. Implementation of Title 24 standards significantly reduces energy usage. Title 24 standards are updated every three years and become more stringent between each update; therefore, complying with the latest Title 24 standards would make the project more energy efficient than existing buildings built under the earlier versions of the Title 24 standards. However, it should be acknowledged that any building permit applications applied on or after January 1, 2026, would be required to comply with the upcoming 2025 California Building Energy Efficiency Standards. The 2025 California Building Energy Efficiency Standards expands on the existing 2022 Title 24 standards (i.e., promote the use of heat pumps in new residential development, electrical readiness, updated ventilation standards, etc.). Additionally, future projects within Planning Area 3 would be required to install high efficiency lighting and energy-efficient appliances, and provide on-site renewable energy generation through installation of solar solar-ready roof(s). As a conservative analysis, these features were not quantified in the modeling. The project would indirectly result in 2,963.00 $MTCO_2e$ per year of GHG emissions due to energy consumption; refer to Table 5.

Water. The project's operations would result in a demand of approximately 442 million gallons of water per year, refer to Appendix A. Future development within the Specific Plan area would incorporate water conservation measures such as installing low-flow fixtures, water-efficiency irrigation, and drought tolerant landscape that would effectively reduce GHG emissions associated with water usage. As a conservative analysis, these features were not quantified in the modeling. Emissions from indirect GHG emissions due to water supply would result in 191.00 $MTCO_2e$ per year; refer to Table 5.

Waste. Solid waste associated with operations of the project would result in 221.00 $MTCO_2e$ per year; refer to Table 5.

Conclusion

As shown in Table 5, project implementation would generate approximately 18,376.80 $MTCO_2e$ of GHG emissions annually. It should be noted that there are currently no published Statewide thresholds of significance for measuring the impact of GHG emissions generated by a proposed project. CEQA Guidelines § 15064.7(b) indicates "each public agency is encouraged to develop and publish thresholds of significance that the agency uses in the determination of the significance of environmental effects." Jurisdictions within the South Coast Air Quality Management District (SCAQMD) boundary can refer to the SCAQMD's air quality thresholds in the absence of locally adopted thresholds and GHG mitigation plans. The City's CCAP addresses cumulative GHG emissions by establishing Citywide emission reduction targets that reduce the cumulative GHG impacts to less than significant, provides a set of recommended GHG reduction measures that collectively achieve the emission targets, and provides an implementation plan to implement the reduction measures. As such, significance of a project's GHG emissions is determined based on its consistency with the applicable GHG plans, policies, or regulations, and quantification of project-related GHG emissions is for informational purposes only.

Consistency with Applicable GHG Plans, Policies, or Regulations

The project's GHG plan consistency analysis is based on its alignment with the 2022 Scoping Plan, Southern California Association of Governments (SCAG) *2020-2045 Regional Transportation Plan/Sustainable Communities Strategy* (2020-2045 RTP/SCS), and the City's CCAP. Statewide, the 2022 Scoping Plan provides measures to achieve Senate Bill 32 (SB 32) targets. Regionally, the SCAG 2020-2045 RTP/SCS includes measures to achieve VMT reductions required under SB 375. Locally, the CCAP contains measures to enhance the City's ability to further reduce GHG emissions.

Consistency with the 2022 Scoping Plan

The 2022 Scoping Plan identifies reduction measures necessary to achieve the goal of carbon neutrality by 2045 or earlier. Actions that reduce GHG emissions are identified for each AB 32 inventory sector. Provided in Table 6, *Consistency with the 2022 Scoping Plan: AB 32 GHG Inventory Sectors*, is an evaluation of applicable reduction

actions/strategies by emissions source category to determine how the project would be consistent with or exceed reduction actions/strategies outlined in the 2022 Scoping Plan.

Table 6
Consistency with the 2022 Scoping Plan: AB 32 Inventory Sectors

Actions and Strategies	Project Consistency Analysis
Smart Growth / Vehicles Miles Traveled (VMT)	
Reduce VMT per capita to 25% below 2019 levels by 2030, and 30% below 2019 levels by 2045	**Consistent**. Future development within the project site would include various design features that would promote the reduction of overall VMT. In compliance with CALGreen, future residential and non-residential development would be required to install bike parking spaces and electric vehicle (EV) charging stations, as applicable. The project is also located within close proximity to existing destinations in surrounding areas that residents and guests may potentially visit, such as restaurants and commercial retail uses north of the site. The nearest bus stop (Inland Empire Boulevard and Archibald Avenue intersection) is approximately 350 feet east of the project site. As such, the project's proximity to existing public transit and destinations would reduce overall VMT.
Construction Equipment	
Achieve 25% of energy demand electrified by 2030 and 75% electrified by 2045.	**Consistent**. The City of Ontario has not adopted an ordinance or program requiring the use of electrified construction equipment. However, if adopted in the future, developments within the project would be required to comply with the applicable policies requiring the use of electrified construction equipment.
New Residential and Commercial Buildings	
All electric appliances beginning 2026 (residential) and 2029 (commercial), contributing to 6 million heat pumps installed statewide by 2030	**Consistent**. The City of Ontario has not adopted an ordinance or program requiring all electric appliances. However, if adopted in the future, developments within the project would be required to comply with the applicable policies requiring the use of electrified construction equipment.
Non-combustion Methane Emissions	
Divert 75% of organic waste from landfills by 2025	**Consistent**. SB 1383 establishes targets to achieve a 50 percent reduction in the level of Statewide disposal of organic waste from 2014 level by 2020 and a 75 percent reduction by 2025. The law establishes an additional target that not less than 20 percent of currently disposed edible food is recovered for human consumption by 2025. The project would comply with local and regional regulations and recycle or compost 75 percent of waste by 2025 pursuant to SB 1383.
Source: California Air Resources Board, *2022 Scoping Plan*, November 16, 2022.	

Consistency with the 2020-2045 RTP/SCS

The *2024-2050 Regional Transportation Plan/Sustainable Communities Strategy* (2024-2050 RTP/SCS; Connect SoCal 2024) was adopted by SCAG on April 4, 2024. However, CARB concluded that the technical methodology SCAG used to quantify the GHG

emission reductions for the Connect SoCal 2024 does not operate accurately.[19] SCAG resubmitted the Sustainable Communities Strategy (SCS) Submittal Package for CARB's review in June 2024. At the time of preparation of this memorandum, CARB has not made its determination on the validity of Connect SoCal 2024. Review by CARB is limited to acceptance or rejection of SCAG's determination that its SCS would, if implemented, achieve the region's GHG emissions reduction target. If CARB rejects SCAG's determination of meeting the GHG emission target, SCAG would need to revise the SCS or adopt an alternative planning strategy demonstrating the ability to achieve the target. As such, until CARB makes the decision, Connect SoCal 2024 is not a fully adopted document and is potentially subject to further updates, especially from the GHG reduction perspective of the methods and assumptions of the calculation of Auto Operating Costs (AOC)[20], induced travel, electric vehicle incentives, job center parking and parking deregulation, off-model strategy assumptions, and emissions factors.

As CARB has not made the decision at the time of preparation of this document, the following consistency analysis only relies upon the 2020-2045 RTP/SCS, refer to Table 7, *Consistency with 2020-2045 RTP/SCS*. The 2020-2045 RTP/SCS includes performance goals that were adopted to help focus future investments on the best-performing projects and different strategies to preserve, maintain, and optimize the performance of the existing transportation system. The 2020-2045 RTP/SCS is forecasted to help California reach its GHG reduction goals by reducing GHG emissions from passenger cars by 8 percent below 2005 levels by 2020, and by 19 percent by 2035 in accordance with the most recent CARB targets adopted in March 2018. Five key SCS strategies are included in the 2020-2045 RTP/SCS to help the region meet its regional VMT and GHG reduction goals. Table 7 evaluates the project's consistency with the 2020-2045 RTP/SCS strategies. As detailed, the project would be consistent with the GHG emission reduction strategies contained in the 2020-2045 RTP/SCS.

Table 7
Consistency with the 2020-2045 RTP/SCS

Reduction Strategy	Applicable Land Use Tools	Project Consistency Analysis
Focus Growth Near Destinations and Mobility Options		
• Emphasize land use patterns that facilitate multimodal access to work, educational and other destinations.	**Center Focused Placemaking, Priority Growth Areas**	**Consistent.** The project site is in a highly developed and urbanized environment, bounded by Inland Empire Boulevard to the north, Archibald Avenue to the east, and I-10 to the south. The project is not located within a TPA or HQTA; however, the project

[19] California Air Resources Board, *RE: CARB Review of Southern California Association of Governments' 2024 SCS Senate Bill 375 Greenhouse Gas Emissions Draft Technical Methodology*, March 29, 2024. https://ww2.arb.ca.gov/sites/default/files/2024-04/SCAG%20memo%20final.pdf, accessed February 13, 2025.

[20] AOC is used as key variable across several major model components of the travel demand model, such as vehicle ownership, destination choice, and mode choice. This parameter represents the expenses associated with the usage of vehicles, expressed in cents per mile or dollar per mile. AOC plays a pivotal role as a fundamental parameter within the travel demand model.

Reduction Strategy	Applicable Land Use Tools	Project Consistency Analysis
	(PGA), Job Centers, High Quality Transit Areas (HQTAs), Transit Priority Areas (TPA), Neighborhood Mobility Areas (NMAs), Livable Corridors, Spheres of Influence (SOIs), Green Region, Urban Greening.	is located approximately 2.2 miles from the nearest transit center (East Ontario Metrolink Station). ONT is located approximately 0.4-mile to the south. The nearest bus stop (Inland Empire Boulevard and Archibald Avenue intersection) is approximately 350 feet east of the project site. As such, users of future commercial/retail and residential uses associated with the project would be offered a variety of multimodal access.
• Focus on a regional jobs/housing balance to reduce commute times and distances and expand job opportunities near transit and along center-focused main streets.		**Consistent.** The project proposes an overlay to allow for commercial/retail uses and residential development, resulting in a mixed-use environment. This configuration would enable future employees to live within the project area, thereby enhancing the regional jobs-housing balance, shortening commute times and distances, and increasing access to employment opportunities near transit corridors and central main streets.
• Plan for growth near transit investments and support implementation of first/last mile strategies.		**Consistent**. As noted above, the project site is in a highly developed and urbanized environment. As such, the proposed development would allow for growth near transit investments and support implementation of first/last mile strategies.
• Promote the redevelopment of underperforming retail developments and other outmoded nonresidential uses.		**Not Applicable**. The project site is currently vacant and no underperforming retail or outmoded nonresidential uses are located on-site. Nonetheless, the project would promote housing and commercial development on the currently vacant (underutilized) site to accommodate new growth, increase amenities, and connectivity in existing neighborhoods.
• Prioritize infill and redevelopment of underutilized land to accommodate new growth, increase amenities and connectivity in existing neighborhoods.		
• Encourage design and transportation options that reduce the reliance on and number of solo car trips (this could include mixed uses or locating and orienting close to existing destinations).		**Consistent**. The project site is in a highly developed and urbanized environment with multimodal transportation access options. As the proposed overlay would accommodate a mixed-use development, the proposed project would reduce the reliance on and number of solo car trips.
• Identify ways to “right size” parking requirements and promote alternative parking strategies (e.g. shared parking or smart parking).		**Consistent**. As no specific development is proposed at this time, it would be too speculative to determine ways to “right size” parking requirements or promote specific alternative parking strategies. Nonetheless, future developments within the project site would be

Reduction Strategy	Applicable Land Use Tools	Project Consistency Analysis
		subject to project-specific and site-specific discretionary approvals (including separate CEQA review) on a case-by-case basis to ensure that development occurs in a logical manner consistent with the Specific Plan.
Promote Diverse Housing Choices		
• Preserve and rehabilitate affordable housing and prevent displacement.	**PGA, Job Centers, HQTAs, NMA, TPAs, Livable Corridors, Green Region, Urban Greening.**	**Not Applicable**. The project is currently vacant. As such, no rehabilitation or displacement of affordable housing would occur.
• Identify funding opportunities for new workforce and affordable housing development.		**Not Applicable**. This strategy only pertains to governmental agencies and would not be applicable to development projects.
• Create incentives and reduce regulatory barriers for building context sensitive accessory dwelling units to increase housing supply.		**Not Applicable**. This strategy only pertains to governmental agencies and would not be applicable to development projects.
• Provide support to local jurisdictions to streamline and lessen barriers to housing development that supports reduction of greenhouse gas emissions		**Not Applicable**. This strategy only pertains to governmental agencies and would not be applicable to development projects. Nonetheless, the project would allow for commercial/retail and residential development to occur, thereby reducing commute times and distances and expanding job opportunities near transit and along center-focused main streets that would supports reduction of GHG emissions.
Leverage Technology Innovations		
• Promote low emission technologies such as neighborhood electric vehicles, shared rides hailing, car sharing, bike sharing and scooters by providing supportive and safe infrastructure such as dedicated lanes, charging and parking/drop-off space.	**HQTA, TPAs, NMA, Livable Corridors.**	**Consistent**. Future development within the project would comply with sustainable practices included in the latest Title 24 Standards and CALGreen Code, which would require developments to provide bicycle parking and electric vehicle parking to promote low emissions technologies.
• Improve access to services through technology—such as telework and telemedicine as well as other incentives such as a “mobility wallet,” an app-based system for storing transit and other multi-modal payments.		**Not Applicable**. This strategy focuses on SCAG’s support on technology which may reduce VMT or allow for easier access to transportation options. This reduction strategy does not apply to development project.
• Identify ways to incorporate “micro-power grids” in		**Not Applicable**. This strategy focuses on SCAG’s support on promoting “micro-power grids”.

Reduction Strategy	Applicable Land Use Tools	Project Consistency Analysis
communities, for example solar energy, hydrogen fuel cell power storage and power generation		Nonetheless, future projects within Planning Area 3 would be required to install high efficiency lighting and energy-efficient appliances, and provide on-site renewable energy generation through installation of solar solar-ready roof(s).
Support Implementation of Sustainability Policies		
• Pursue funding opportunities to support local sustainable development implementation projects that reduce greenhouse gas emissions	**Center Focused Placemaking, PGA, Job Centers, HQTAs, TPA, NMAs, Livable Corridors, SOIs, Green Region, Urban Greening.**	**Consistent**. While this strategy is focused on local governments, agencies, and organizations' actions to support the implementation of sustainability policies, the project would participate in opportunities provided by these agencies that would support sustainability. For example, the proposed project would have the option to participate in programs and rebates provided by SCE that promote sustainability.
• Support statewide legislation that reduces barriers to new construction and that incentivizes development near transit corridors and stations		**Not Applicable**. This strategy focuses on SCAG's support of Statewide legislation.
• Support local jurisdictions in the establishment of Enhanced Infrastructure Financing Districts (EIFDs), Community Revitalization and Investment Authorities (CRIAs), or other tax increment or value capture tools to finance sustainable infrastructure and development projects, including parks and open space		**Not Applicable**. This strategy focuses on SCAG's support of Statewide legislation.
• Work with local jurisdictions/ communities to identify opportunities and assess barriers to implement sustainability strategies		**Consistent**. Future development projects within Planning Area 3 would work alongside the City of Ontario and SCE in implementing required sustainability programs and/or optional rebate programs.
• Enhance partnerships with other planning organizations to promote resources and best practices in the SCAG region		**Not Applicable**. This strategy focuses on SCAG's support of local planning organizations.
• Continue to support long range planning efforts by local jurisdictions		**Not Applicable**. This strategy focuses on SCAG's support of local planning organizations.

Reduction Strategy	Applicable Land Use Tools	Project Consistency Analysis
Promote a Green Region		
• Support development of local climate adaptation and hazard mitigation plans, as well as project implementation that improves community resiliency to climate change and natural hazards	**Green Region, Urban Greening, Greenbelts and Community Separators.**	**Not Applicable**. This strategy focuses on SCAG's support of local planning organizations.
• Support local policies for renewable energy production, reduction of urban heat islands and carbon sequestration		**Consistent**. Future developments within Planning Area 3 would be required to provide on-site renewable energy generation through installation of solar solar-ready roof(s), comply with the CALGreen Code and Title 24 standards, and implement design features that support renewable energy production and reduction of urban heat islands.
• Integrate local food production into the regional landscape		**Not Applicable**. This strategy focuses on the incorporation of food production (community gardens).
• Promote more resource efficient development focused on conservation, recycling and reclamation		**Consistent**. Future development in accordance with the mixed-use overlay would be required to incorporate a variety of project design features focused on sustainability and conservation such as low flow water fixtures, water-efficiency irrigation, install drought tolerant landscape, and high efficiency lighting. Future development would also comply with local and regional regulations for recycling and composting such as SB 1383.
• Preserve, enhance and restore regional wildlife connectivity		**Consistent.** Refer to Section 3.2.2, *Biological Resources*.
• Reduce consumption of resource areas, including agricultural land		**Not Applicable**. The project is located within an urbanized and built environment. Project development would not remove any agricultural land.
• Identify ways to improve access to public park space		**Not Applicable**. This strategy focuses on SCAG's cooperation with local agencies in supporting accessibility to public parks. Nonetheless, it should be noted that future development within Planning Area 3 would be required to develop common and private open space in accordance with City's standards.

Source: Southern California Association of Governments, *2020-2040 Regional Transportation Plan/Sustainable Communities Strategy – Connect SoCal*, September 3, 2020.

Consistency with the City of Ontario 2022 Community Climate Action Plan

The purpose of the CCAP is to provide guidance on how to analyze GHG emissions and determine significance during the CEQA review of development projects within the City. Because the CCAP addresses GHG emissions reductions and is consistent with the requirements of AB 32, SB 32, and international efforts to reduce GHG emissions, compliance with the CCAP fulfills the description of mitigation found in the State CEQA Guidelines. The CCAP includes performance standards that will reduce GHG emissions from new development by 54,069 $MTCO_2e$ per year in 2030 and 302,803 $MTCO_2e$ in 2050 as compared to emissions levels in 2019, prior to the adoption of the CCAP. CEQA requires the assessment of environmental impacts for proposed projects, including the impacts of GHG emissions. The development review procedures for evaluating GHG impacts and determining significance under CEQA are streamlined by utilizing the CCAP performance standard review checklist (*Ontario Community Climate Action Plan Greenhouse Gas Emissions Screening Tables*, dated March 2023) to mitigate project GHG emissions and by demonstrating compliance with the CCAP. The levels of GHG emissions reductions in the Screening Tables are consistent with the City's adopted targets in the CCAP.

The project proposes to modify the existing Specific Plan to include a Mixed-Use Overlay across Planning Area 3 to allow for up to 50,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units in place of the uses and buildout currently permitted under the site's Urban Commercial designation. Because implementation of the project does not propose any specific development, whether the project design-level strategies (specific to development land uses) as listed on the CCAP that could be achieved is too speculative and cannot be accurately determined at this stage of the planning process. As discussed above, the project would be consistent with the 2022 Scoping Plan and the 2020-2045 RTP/SCS. Future development within the Specific Plan would be required to analyze GHG emissions and determine significance on a case-by-case basis in accordance with CEQA to ensure that development is consistent with applicable GHG reduction plans, including the CCAP. As such, the project would be consistent with CCAP.

Conclusion

In summary, the plan consistency analysis provided above demonstrates that the project complies with or exceeds the plans, policies, regulations and GHG reduction actions/strategies outlined in the 2022 Scoping Plan, the 2020-2045 RTP/SCS, and the City's CCAP. Impacts would be less than significant in this regard. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Certified Specific Plan EIR Mitigation Measures:

4.3.4 Prior to the issuance of building permits, the Project Applicant shall submit energy demand calculations to the City (Planning and Building

Departments) demonstrating that the increment of the Project for which building permits are being requested would achieve a minimum 5% increase in energy efficiencies beyond incumbent California Building Code Title 24 performance standards. Representative energy efficiency/energy conservation measures to be incorporated in the Project would include, but would not be limited to, those listed below (it being understood that the items listed below are not all required and merely present examples; the list is not all-inclusive and other features that would comparably reduce energy consumption and promote energy conservation would also be acceptable):

- Increase in insulation such that heat transfer and thermal bridging is minimized;
- Limit air leakage through the structure and/or within the heating and cooling distribution system;
- Use of energy-efficient space heating and cooling equipment; Installation of electrical hook-ups at loading dock areas;
- Installation of dual-paned or other energy efficient windows;
- Use of interior and exterior energy efficient lighting that exceeds then incumbent California Title 24 Energy Efficiency performance standards;
- Installation of automatic devices to turn off lights where they are not needed;
- Application of a paint and surface color palette that emphasizes light and off-white colors that reflect heat away from buildings;
- Design of buildings with “cool roofs” using products certified by the Cool Roof Rating Council, and/or exposed roof surfaces using light and off-white colors;
- Design of buildings to accommodate photo-voltaic solar electricity systems or the installation of photo-voltaic solar electricity systems; and
- Installation of ENERGY STAR-qualified energy-efficient appliances, heating and cooling systems, office equipment, and/or lighting products.

Addendum Project Conditions: None.

3.2.6 Land Use and Planning

Specific Plan EIR Findings

The Specific Plan EIR concluded that the land use pattern under the Specific Plan buildout, combined with the development standards and design guidelines of the Specific Plan, would preclude division or disruption of land uses, both within and outside of the Specific Plan area. Impacts were determined to be less than significant in this regard. Following approval of requested amendments to the Land Use Element of TOP 2050, the Specific Plan EIR concluded that the Specific Plan would be consistent with TOP 2050. The Specific Plan EIR also determined that the Specific Plan would be consistent with the goals and policies within the Southern California Association of Governments (SCAG) *2012-2035 Regional Transportation Plan/Sustainable Communities Strategy* (RTP/SCS). Overall, implementation of the Specific Plan would result in less than significant impacts related to land use and planning.

Proposed Project Analysis

Physically Divide an Established Community

Located in a highly developed and urbanized environment, the project site is vacant and disturbed with no internal roadways. It is bound by Inland Empire Boulevard to the north, Archibald Avenue to the east, I-10 to the south, and Deer Creek Channel to the west. The project proposes a Mixed-Use Overlay across Planning Area 3 within the Specific Plan area that would allow for up to 50,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units. Given that Planning Area 3 is bounded by roadways and a concrete channel on all sides, project implementation would not physically divide an established community. Instead, it would contribute towards the existing urban fabric of the project area by accommodating development of residential and commercial uses near other existing similar uses compared to existing site conditions (i.e., vacant and undeveloped). Impacts would be less than significant. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Consistency with Adopted Land Use Plans

Currently, the project site has a TOP 2050 land use designation of Mixed Use – Meredith, which permits a density range of 14 to 125 du/ac and a maximum FAR of 3.0 for office and retail uses. The Specific Plan designates the site (Planning Area 3) as Urban Commercial and forecasts a maximum buildout of 480,000 square feet, including 400 hotel rooms; uses conditionally permitted also include office and shopping centers.

By accommodating residential and commercial/retail uses in Planning Area 3, the project would be consistent with TOP 2050 Land Use Element goals and policies to provide a variety of housing and job options in proximity to one another and in proximity to transit.

These goals and policies coincide with the vision of SCAG's current RTP/SCS (i.e., Connect SoCal), which focuses on transportation alternatives that meet air quality standards and GHG emission reduction targets. While the proposed project would modify the Specific Plan's buildout vision for Planning Area 3, the housing, jobs, and population generated by the project would be within TOP 2050 growth forecasts for the City, and as such would result in a less than significant impact. Additionally, the proposed dwelling units would contribute to the City's RHNA allocation, which would be considered a project benefit and would be consistent with TOP 2050 Housing Element. Further, the potential physical impacts resulting from implementing the proposed land uses have been addressed through the analyses presented throughout this document.

The proposed Mixed-Use Overlay would be consistent with surrounding development, particularly adjacent uses in Planning Area 4 to the north and Planning Area 2 to the west. Similar to other development projects within the Specific Plan area, future development within the project site would be required to adhere to the development standards and design guidelines established by TOP 2050, the Specific Plan, and the City's Municipal Code, and all development projects would be reviewed by the City prior to issuance of any building permits. Impacts in this regard would be less than significant. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Certified Specific Plan EIR Mitigation Measures: None.

Addendum Project Conditions: None.

3.2.7 Noise

Specific Plan EIR Findings

According to the Specific Plan EIR, construction activities associated with the various phases of Specific Plan construction are expected to generate hourly noise levels exceeding the acceptable construction noise level threshold of 65 dBA L_{eq} at nearby sensitive receptor locations during peak activity near the property line. Therefore, a potentially significant impact would occur and Specific Plan EIR Mitigation Measures 4.5.1 through 4.5.5 would be required. Specific Plan EIR Mitigation Measure 4.5.1 requires construction activities to occur during the City's permitted hours. Specific Plan EIR Mitigation Measure 4.5.2 requires temporary noise barriers that provide a minimum noise level attenuation of 10.0 dBA when construction occurs near existing noise-sensitive structures. Specific Plan EIR Mitigation Measure 4.5.3 requires construction equipment equipped with mufflers and directed away from the noise sensitive receptors. Specific Plan EIR Mitigation Measure 4.5.4 requires equipment staging areas to be located at the greatest distance to noise sensitive receptors to the south of the Specific Plan site. Last, Specific Plan EIR Mitigation Measure 4.5.5 requires haul truck deliveries to occur during the City's permitted construction hours and haul routes to minimize exposure of sensitive receptors to delivery truck-related noise. With the implementation of Specific Plan EIR

Mitigation Measures 4.5.1 through 4.5.5, construction noise levels would be reduced but still exceed the 65 dBA L_{eq} construction noise level threshold due to the close proximity to noise-sensitive receptors. Therefore, the Specific Plan EIR concluded that construction noise impacts would remain significant and unavoidable.

Operations of the Specific Plan would create a substantial permanent increase in traffic-related noise levels and expose people to noise levels in excess of the exterior noise level standards at the adjacent land uses along nearby roadways. Therefore, a potentially significant impact would occur. In addition, because the Specific Plan vehicular-source noise would be additive to already unacceptable and cumulatively significant ambient noise conditions, vehicular-source noise impacts would also be cumulatively considerable. There is no feasible mitigation measure to reduce the Specific Plan's cumulative traffic noise impact on off-site adjacent land uses, and impacts were determined to be significant and unavoidable. The Specific Plan EIR also analyzed exterior and interior traffic noise impact on future on-site residential uses and concluded that impacts would be less than significant with implementation of Specific Plan EIR Mitigation Measures 4.5.6 through 4.5.8, which require noise barriers for first floor residential patio areas adjacent to Inland Empire Boulevard, mechanical ventilation for all residential uses, and upgraded windows for second floor residential facades facing Inland Empire Boulevard.

Buildout associated with Specific Plan would result in new types of stationary noise sources, including drive-through speakerphones, parking lot activities, and distribution warehouse facilities. According to the Specific Plan EIR, the Specific Plan operation would not cause or result in an exceedance of the maximum acceptable ambient noise levels of 65 dBA during daytime and 45 dBA during nighttime. Operations associated with buildout of the Specific Plan would also not result in an increase of 1.5 dBA or greater in instances where noise levels without the Specific Plan already exceed the maximum acceptable ambient condition. As such, a less than significant impact would occur. However, to further reduce potential operational noise levels, Specific Plan EIR Mitigation Measures 4.5.9 through 4.5.13 are proposed, which require construction of noise barriers, installation of mufflers on trucks, tractors, and forklifts, and best practices for on-site trucks movement.

According to the Specific Plan EIR, buildout of the Specific Plan would not cause structural damage or human annoyance due to vibration, except for one sensitive receptor location during construction of Planning Area 1. As such, impacts would be potentially significant and Mitigation Measure 4.5.14 is required, which requires the operation of heavy equipment to occur during permitted construction hours and avoid the nearest sensitive receptor location whenever feasible. However, despite implementation of Mitigation Measure 4.5.14, construction vibration impacts would remain significant and unavoidable. Regarding operational vibration impacts, the Specific Plan EIR concluded that operational activities would not generate excessive vibration levels and impacts would be less than significant.

According to the Specific Plan EIR, impacts associated with the Specific Plan's potential to expose people residing or working in the Specific Plan area to excessive airport noise levels is considered less than significant.

Proposed Project Analysis

Existing Conditions

Sensitive Receptors

Human response to noise varies widely depending on the type of noise, time of day, and sensitivity of the receptor. Sensitive populations are more susceptible to the effects of noise than the general population. Land uses considered sensitive by the State of California include schools, playgrounds, athletic facilities, hospitals, rest homes, rehabilitation centers, long-term care and mental care facilities. Generally, a sensitive receptor is identified as a location where human populations (especially children, senior citizens, and sick people) are present. Land uses less sensitive to noise are business, commercial, and professional developments. Noise receptors categorized as being least sensitive to noise include industrial, manufacturing, utilities, agriculture, natural open space, undeveloped land, parking lots, warehousing, and transit terminals. These types of land uses often generate high noise levels. Moderately sensitive land uses typically include multi-family dwellings, hotels, motels, dormitories, and outpatient clinics.

The nearest sensitive receptors to the project site are the existing multi-family residential uses located approximately 95 feet to the north of Planning Area 3.

Stationary Sources

The project site is surrounded by residential, commercial, and warehousing uses. Stationary noise sources in the project vicinity include mechanical equipment and stationary noise sources from the industrial uses within the project vicinity. The noise associated with these stationary sources may represent a single-event noise occurrence, short-term, or long-term/continuous noise.

Mobile Sources

Most of the existing noise in the project area is generated from vehicular sources along I-10, Inland Empire Boulevard, and Archibald Avenue.

Existing Ambient Noise Levels

To quantify existing ambient noise levels in the project area, Michael Baker International conducted four short-term noise measurements in the project vicinity on April 2, 2025. The 10-minute measurements were taken between 11:30 a.m. and 1:00 p.m. Refer to Appendix C, *Noise Data*, for measurement locations. Short-term (L_{eq}) measurements at these locations are considered representative of the noise levels in the project area

throughout the day. The noise measurements were taken during "off-peak" (9:00 a.m. through 3:00 p.m.) traffic noise hours as this provides a more conservative baseline. During rush hour traffic, vehicle speeds and heavy truck volumes are often low; as such, free-flowing traffic conditions before or after rush hour often yield higher noise levels due to higher vehicle speeds.[21] The most recent ambient noise levels measured are identified in Table 8, *Noise Measurements*. Furthermore, relevant hourly daytime (7:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) ambient noise levels collected on March 17, 2014 in areas adjacent to Planning Area 3 as presented in the Specific Plan EIR are also listed in Table 8 for informational purposes. However, as the 2025 measurements would more accurately represent existing conditions, 2025 ambient noise data are used throughout this analysis.

Table 8
Noise Measurements

Site No.	Location	L_{eq} (dBA)	L_{min} (dBA)	L_{max} (dBA)	Start Time
Noise Measurements Collected on April 2, 2025[1]					
NM-1	West of the multi-family residential building at 2505 East Date Palm Paseo	67.8	57.4	84.6	11:59 a.m.
NM-2	Near the multi-family residential building approximately 100 feet east of the East Date Palm Paseo and Inland Empire Boulevard intersection	66.8	59.7	79.5	12:17 p.m.
NM-3	In front of the multi-family residential building at 701 Via Dolcetto	69.0	52.7	87.4	12:42 p.m.
Site No.	**Location**	**Hourly Noise Level Daytime (L_{eq} dBA)**		**Hourly Noise Level Nighttime (L_{eq} dBA)**	
Noise Measurements Collected on March 17, 2014[2]					
L-7	Located on the south side of Inland Empire Boulevard across from the proposed Urban Residential land use of the project site. (Across the street from NM-2)	65.2		64.5	
L-9	Located just north of the I-10 freeway westbound on-ramp at Vineyard Avenue. (Same location as NM-1)	64.8		62.2	

Notes:
1. Refer to Appendix C, *Noise Data*, for the results of the field measurements and measurement locations.
2. Data from Urban Crossroads, Inc., *Meredith International Centre Noise Impact Analysis*, October 17, 2014; refer to Table 5-1, *Long-Term Ambient Noise Level Measurements*, and Exhibit 5-A, *Noise Measurement Locations*, for field measurements and a map of noise measurement locations.

Meteorological conditions were sunny, cool temperatures (61 degrees Fahrenheit [°F]), and wind speeds of approximately 6 miles per hour. Measured noise levels during the daytime measurements ranged from 66.8 to 69.0 dBA L_{eq}. The sources of peak noise include traffic along the roadways. Noise monitoring equipment used for the ambient

[21] California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Analysis Protocol*, September 2013.

noise survey consisted of a Brüel & Kjær Hand-held Analyzer Type 2250 equipped with a Type 4189 pre-polarized microphone. The monitoring equipment complies with applicable requirements of the American National Standards Institute (ANSI) for Type I (precision) sound level meters. Refer to Appendix C for the results of the field measurement.

Construction Noise

The project proposes a mixed-use overlay across Planning Area 3 of the Specific Plan, allowing development of up to 1,400 residential units and up to 50,000 square feet of commercial/retail uses. There is no construction or development proposed as part of this project. Construction noise depends on multiple factors, including, but not limited to, limits of the proposed buildings and hardscapes, building heights, start and duration of construction phases, types and quantity of construction equipment to be used, trucks volume that depends on soil import and export volumes, hauling trips distance, etc., all of which cannot be determined at this stage of the planning process. As such, because implementation of the project does not propose any specific development and construction details are unknown, construction-related noise levels that may occur at any one time in any scale are speculative and cannot be accurately determined at this stage of the planning process. Therefore, construction noise is not quantified. Nonetheless, the proposed project would be subject to Specific Plan EIR Mitigation Measures 4.5.1 through 4.5.5, which would help minimize the construction noise impacts through enforcement of the City's Noise Ordinance and best management practices, which would be incorporated into construction plans and implemented during construction associated with new development near sensitive receptors. Furthermore, future developments within the project site would be subject to project-specific and site-specific discretionary approvals (including separate CEQA review) on a case-by-case basis to evaluate and mitigate, as needed, any project-specific environmental impacts.

Due to the proximity of construction activities to sensitive uses, the number of construction projects that may occur simultaneously, and the potential duration of construction activities, construction noise impacts could still result in a temporary substantial increase in noise levels above ambient conditions and exceedance of the 65 dBA L_{eq} threshold used in Specific Plan EIR. Although the proposed project allows additional commercial and residential areas on the project site compared to the Specific Plan, construction activities would not be located any closer to the nearest sensitive receptors as the proposed project does not change the project site boundary. This project proposes similar land use types as the already permitted urban commercial uses in Planning Area 3 as analyzed in the Specific Plan EIR, and therefore similar construction techniques, equipment, and anticipated levels of construction noise would be expected. Construction activities associated with the additional commercial and residential uses would also be spread across the project site and would not be concentrated near any sensitive receptors for an extended period of time. As such, future development associated with the proposed project would not generate noise levels beyond what was analyzed in Specific Plan EIR. Therefore, similar to the Specific Plan, short-term construction noise impacts from the proposed project would remain significant and unavoidable. As such, the project would

not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Construction Vibration

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods used, distance to the affected structures and soil type. Operation of some heavy-duty construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. Ground-borne vibration levels resulting from typical construction activities (i.e., grading, which typically generates the most vibration impacts) are typically estimated using reference vibration levels of construction equipment at 25 feet as established in the Federal Transit Administration's (FTA's) *Transit Noise and Vibration Impact Assessment Manual* and evaluated against Caltrans' *Transportation and Construction Vibration Guidance Manual*.
Construction vibration depends on multiple factors, including, but not limited to, limits of the proposed buildings and hardscapes, building heights, start and duration of construction phases, types and numbers of construction equipment to be used, etc., all of which cannot be determined at this stage of the planning process. As such, because there is no specific construction or development proposed within the proposed project site at this time, construction-related vibration impacts that may occur at any one time in any scale are speculative and cannot be accurately determined at this stage of the planning process. Nonetheless, it is expected that ground-borne vibration from proposed project construction activities would cause only intermittent, localized intrusion. Further, the proposed project would be subject to Specific Plan EIR Mitigation Measure 4.5.14, which would help minimize the construction vibration impacts through enforcement of the City's Noise Ordinance. Further, the proposed project proposes changes to Planning Area 3, while the Specific Plan EIR only found significant and unavoidable construction vibration impact during construction of Planning Area 1. As the proposed project does not change the boundary of Planning Area 3, future development would not generate vibration levels beyond what was analyzed in the Specific Plan EIR. Consistent with the Specific Plan EIR, the proposed project would result in less than significant construction vibration impacts during construction within Planning Area 3. Furthermore, future developments within the project site would be subject to project-specific and site-specific discretionary approvals (including separate CEQA review) on a case-by-case basis to evaluate and mitigate, as needed, any project-specific environmental impacts. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Operational Noise

Off-Site Mobile Noise

Future development within the proposed project area would result in additional traffic on adjacent roadways, thereby potentially increasing vehicular noise in the vicinity of existing

and proposed land uses. The most prominent source of mobile traffic noise in the project vicinity is along I-10, Inland Empire Boulevard, and Archibald Avenue. The nearest sensitive receptors are the existing multi-family residences located across Inland Empire Boulevard.

To assess the off-site traffic CNEL noise level impacts associated with development of the proposed project, noise level contours were developed based on proposed project-specific traffic impact analysis. Noise level contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway. Noise contours were used to assess the proposed project's incremental 24-hour dBA CNEL traffic-related noise impacts at land uses adjacent to roadways conveying proposed project-related traffic. The noise contours represent the distance to noise levels of constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA CNEL noise levels. The noise contours do not consider the effect of any existing noise barriers or topography that may attenuate ambient noise levels. In addition, because the noise contours reflect modeling of vehicular noise on area roadways, they appropriately do not reflect noise contributions from the surrounding stationary noise sources within the study area.

Table 9, *Traffic Noise Levels With and Without Project*, compares conditions with and without the project for year 2017, which was a scenario presented in the Specific Plan EIR) and year 2035 future scenarios. It should be acknowledged that the Specific Plan EIR used traffic data for 2014 (the year the Specific Plan EIR was prepared) as the existing condition. However, as detailed in the Specific Plan EIR Section 4.2, *Traffic and Circulation*, Year 2017 Conditions reflects an interim development condition with the completion and occupancy of the Specific Plan's Planning Area 1 (industrial land uses) together with approximately 86,000 square feet of commercial/retail space in Planning Area 2. As such, Year 2017 Conditions would be most consistent with existing condition and traffic data from year 2017 were used to represent the "existing condition" for this project. Consistent with the Specific Plan EIR, for existing conditions, this analysis utilizes the following significance criteria: when the "without project" noise levels already exceed the acceptable ambient noise level of 65 dBA CNEL, a project noise level increase of 1.5 dBA CNEL or greater is considered a significant impact if nearby noise-sensitive receivers are affected.

As shown in Table 9, under existing conditions, no roadway segments would experience a project noise level increase of 1.5 dBA CNEL or greater. However, under the cumulative condition, several roadway segments would experience a project noise level increase of 1.5 dBA CNEL or greater. Therefore, project vehicular-source noise impacts would also be cumulatively considerable. Similar to the Specific Plan, no feasible mitigation measures exist that would reduce off-site vehicular-source noise impacts to less than significant levels and thus, the mobile noise impacts associated with the proposed project would remain significant and unavoidable. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Table 9
Traffic Noise Levels With and Without Project

Roadway Segment	Existing[1]	Existing + Project[1]	Existing + Project - Existing[1]	Cumulative (Future with Project) [1]	Cumulative - Existing[1,2]
	dBA CNEL @ 100 Feet from Roadway Centerline	dBA CNEL @ 100 Feet from Roadway Centerline	Difference In dBA Between Existing and Existing + Project	dBA CNEL @ 100 Feet from Roadway Centerline	Difference In dBA CNEL Between Cumulative and Existing
4th Street, West of Archibald Avenue, East of Hellman Avenue	65.2	65.8	0.5	67.4	**2.1**
4th Street, East of Archibald Avenue	66.2	66.2	0.0	67.5	1.3
Inland Empire Boulevard, East of Archibald Avenue	63.0	63.5	0.5	65.1	**2.1**
Inland Empire Boulevard, West of Haven Avenue	63.7	64.0	0.2	65.1	1.3
Inland Empire Boulevard, East of Haven Avenue	63.6	63.9	0.2	64.8	1.1
Archibald Avenue, North of 4th Street	65.2	66.2	1.0	67.3	**2.1**
Archibald Avenue, North of Inland Empire Boulevard	67.1	68.3	1.2	69.4	**2.3**
Archibald Avenue, South of Inland Empire Boulevard	68.3	69.3	1.0	70.6	**2.3**

Notes:
1. Modeling was prepared with Federal Highway Administration, *Highway Noise Prediction Model (FHWA-RD-77-108) with California Vehicle Noise (CALVNO) Emissions Levels*; refer to Appendix C. Existing (Year 2017 Conditions as it most accurately represent existing conditions) ADTs are based on the Specific Plan EIR Appendix F, *Noise Impact Analysis*. With-project ADTs are based on traffic data prepared for the project.
2. **Bolded** values indicate the identified significance threshold has been exceeded.

Refer to Appendix C.

Stationary Operational Noise

The proposed project would allow for up to up to 50,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units in addition to the uses permitted under the site's Urban Commercial designation. The main stationary noise source typical for commercial and residential uses would be mechanical equipment.

Heating, ventilation, and air conditioning (HVAC) units would be installed on the roof of future commercial and multi-family residential buildings. Typically, mechanical

equipment, such as HVAC units, generates noise levels of 66 dBA at 3 feet from the source.[22] Noise generated by stationary sources typically attenuates at a rate of 6 dBA per doubling distance from the source. The nearest sensitive receptors to the proposed project site are the existing multi-family residential uses to the north, located approximately 95 feet measured from the proposed project site boundary. As a conservative analysis, it is assumed that the HVAC units would be located at the project boundary. At 95 feet, noise levels from HVAC units would be approximately 36 dBA, which would not exceed the City's exterior (65 dBA during daytime and 45 dBA during nighttime; refer to Municipal Code Section 5-29.04, *Exterior Noise Standard*) noise standards at the nearest sensitive receptors. Furthermore, the noise level would not exceed the ambient noise level (65.7 dBA; refer to Table 8) at the nearest sensitive receptors. As such, impacts would be less than significant in this regard.

Conclusion

It should be noted that as the proposed project is not located in Planning Area 4 and does not propose industrial uses, Specific Plan EIR Mitigation Measures 4.5.9 through 4.5.13 do not apply. Therefore, long-term operational stationary noise impacts related to implementation of the proposed project would result in less than significant impacts. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Operational Vibration

Long-term operation of the commercial and residential uses of the proposed project would not include or require equipment, facilities, or activities that would result in perceptible groundborne vibration. As such, it can be reasonably inferred that operations associated with the proposed project would not create perceptible vibration impacts to the nearest sensitive receptors. Impacts would be less than significant, consistent with Specific Plan EIR. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Airport Noise

The project site is located within the ONT Airport Influence Area according to Policy Map 2-1 of the ONT ALUCP.[23] Since the project site is located within the ONT Airport Influence Area, the proposed project is subject to the Noise Criteria established in the ONT ALUCP. As shown in ONT ALUCP Exhibit 1-9, *Compatibility Factors: Noise*, the southern portion

[22] Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, June 26, 2015.

[23] Ontario Airport Planning, *Ontario International Airport Land Use Compatibility Plan, July 2018 Amendment, Map 2-1, Compatibility Policy Map: Airport Influence Area*, https://www.ont-iac.com/wp-content/uploads/2019/02/ONT-AIA-policy-map-2-1.pdf, accessed March 21, 2025.

of the project site is located within the 60 to 65 dBA CNEL airport noise level contours.[24] According to the ONT ALUCP Table 2-3*, Noise Criteria*, commercial uses within the 60 to 65 dBA CNEL is considered a normally compatible land use and residential uses are conditionally compatible uses so long as the residential building structures meet an interior noise standard of 45 dBA CNEL.[25] Future development plan(s) for the site would be referred to the Airport Land Use Commission for a consistency determination to ensure anticipated uses are consistent with the ONT ALUCP. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Certified Specific Plan EIR Mitigation Measures:

4.5.1 Prior to approval of grading plans and/or issuance of building permits, plans shall include a note indicating that noise-generating Project construction activities shall occur between the permitted hours of 7:00 a.m. and 6:00 p.m. on weekdays, or Saturdays, and between 9:00 a.m. and 6:00 p.m. on Sundays. The Project construction supervisor shall ensure compliance with the note and the City shall conduct periodic inspection at its discretion.

4.5.2 Install temporary noise control barriers that provide a minimum noise level attenuation of 10.0 dBA when Project construction occurs near existing noise-sensitive structures. The noise control barrier must present a solid face from top to bottom. The noise control barrier must be high enough and long enough to block the view of the noise source. Unnecessary openings shall not be made.

- The noise barriers must be maintained and any damage promptly repaired. Gaps, holes, or weaknesses in the barrier or openings between the barrier and the ground shall be promptly repaired.
- The noise control barriers and associated elements shall be completely removed and the site appropriately restored upon the conclusion of the construction activity.

4.5.3 During all Project site construction, the construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturers' standards. The construction contractor shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receivers nearest the Project site.

[24] Ontario Airport Planning, *Ontario International Airport Land Use Compatibility Plan, July 2018 Amendment, Exhibit 1-9, Compatibility Factors: Noise*, https://www.ont-iac.com/wp-content/uploads/2019/02/ONT-compatibility-Exhibit-1-9-July-2018-Amendment.pdf, accessed January 7, 2025.

[25] Ontario Airport Planning, *Ontario International Airport Land Use Compatibility Plan, July 2018 Amendment, Table 2-3, Noise Criteria*, https://www.ont-iac.com/wp-content/uploads/2019/02/ALUCP-Chap-2-Table-2-3-Noise-Criteria-Amendment-July-2018-Final-Doc.pdf, accessed January 7, 2025.

4.5.4 The construction contractor shall locate equipment staging in areas that will create the greatest distance between construction-related noise sources and noise sensitive receivers nearest the Project site (i.e., to the south) during all Project construction.

4.5.5 The construction contractor shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 7:00 a.m. and 6:00 p.m. on weekdays, or Saturdays, and between 9:00 a.m. and 6:00 p.m. on Sundays). The Project Applicant shall prepare a haul route exhibit for review and approval by the City of Ontario Planning Division prior to commencement of construction activities. The haul route exhibit shall design delivery routes to minimize the exposure of sensitive land uses or residential dwellings to delivery truck-related noise.

4.5.6 First floor residential patio areas adjacent to Inland Empire Boulevard shall include the construction of 6-foot high noise barriers.

4.5.7 All residential uses proposed within the Specific Plan shall be equipped with a means of mechanical ventilation (e.g., air conditioning).

4.5.8 All second floor residential façades facing Inland Empire Boulevard shall require upgraded windows with a minimum STC rating of 29.

4.5.14 The operation of heavy equipment shall only occur between the hours of 7:00 a.m. and 6:00 p.m. on weekdays, or Saturdays, and between 9:00 a.m. and 6:00 p.m. on Sundays, and avoided at the Project site boundary nearest receiver location R4 whenever feasible.

Addendum Project Conditions: None.

3.2.8 Transportation

Specific Plan EIR Findings

As detailed in the Initial Study prepared for the Specific Plan EIR, the Specific Plan does not present elements or aspects that would conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities. Although the Specific Plan may result in increased demand for public transportation due to increases in population and employment, transit agencies routinely review and adjust their ridership schedules to accommodate public demand, and the need for transit-related facilities would be coordinated between the City and future development applicants as part of the City's development review process. As such, impacts were determined to be less than significant in this regard.

The Specific Plan EIR determined that compliance with the City's Development Impact Fees (DIF) Program and payment of Fair Share Fees (Specific Plan EIR Mitigation Measures 4.2.5 through 4.2.9) would fulfill mitigation requirements for Specific Plan's contributions to potentially significant traffic/transportation impacts at facilities under the sole jurisdiction of the City of Ontario. However, at extra-jurisdictional or shared jurisdictional locations, the Specific Plan EIR determined that future projects in these locations would be subject to potentially significant traffic/transportation impacts, and project compliance with the City's DIF Program and payment of Fair Share Fees would not ensure timely completion of required improvements. Further, at certain study area locations, implementation of required improvements would require additional right-of-way, acquisition of which may not feasible. Potentially significant Specific Plan-related traffic/transportation (intersection level-of-service [LOS]) impacts at extra-jurisdictional or shared jurisdictional locations, or at locations where additional right-of-way be required, were determined to be significant and unavoidable. Further, the Specific Plan EIR concluded that traffic-related impacts at several study intersections associated with the development of the Specific Plan were also considered cumulatively significant and unavoidable. Traffic impacts at the following study area intersections were determined to be cumulatively significant and unavoidable under at least one of the analysis scenarios (i.e., Existing Conditions, Year 2017 Conditions, Year 2020 Conditions, and/or Year 2035 Conditions):

- Archibald Avenue at Arrow Route (Intersection #2)
- Baker Avenue at 8th Street (Intersection #3)
- Hellman Avenue at 6th Street (Intersection #9)
- Haven Avenue at 6th Street (Intersection # 12)
- I-10 EB Ramp at 4th Street (Intersection #14)
- Vineyard Avenue at 4th Street (Intersection #20)
- Archibald Avenue at 4th Street (Intersection #23)
- Haven Avenue at 4th Street (Intersection #25)
- Archibald Avenue at Inland Empire Boulevard (Intersection #28)
- Vineyard Avenue at I-10 EB Ramps (Intersection #32)

It was also determined that Specific Plan-generated traffic would contribute to cumulatively significant impacts affecting freeway facilities within the study area. As discussed in the Specific Plan EIR, there are no feasible means for project applicants or the City to mitigate cumulatively significant freeway facilities impacts, and these impacts are accordingly recognized as cumulatively significant and unavoidable.

With regard to hazards from design features or incompatible uses, and emergency access, the Specific Plan EIR noted that the final design of future site plans would be reviewed and approved by the City Traffic Engineer in order to ensure appropriate design and implementation of all circulation improvements within the Specific Plan. In addition, it was noted that the City of Ontario Police and Fire Departments would review the future site plans in regard to emergency access. The Specific Plan EIR further noted that efficient and safe operations would be provided by on-site and localized circulation and

intersection improvements included as components of the Specific Plan. Overall, impacts would be less than significant.

The Specific Plan EIR also determined that the Specific Plan's impact to change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks would be less than significant.

Proposed Project Analysis

Plans for Transit, Roadway, Bicycle, and Pedestrian Facilities

The proposed Mixed-Use Overlay would accommodate residential and commercial/retail uses within Planning Area 3, including up to 1,400 residential units and 50,000 square feet of commercial/retail use. Similar to buildout of the Specific Plan, all future proposed circulation improvements within Planning Area 3, including those related to transit, vehicular, bicycle, and pedestrian facilities, would be designed in accordance with local established standards to ensure existing and planned circulation facilities in the project area are not adversely impacted by future development on-site. Future development plan and site plan(s) would be reviewed by various City departments to ensure vehicular and alternative transportation facilities can maintain existing and planned services. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Intersection Operations Analysis

The Specific Plan EIR did not evaluate VMT impacts as it was not required in the CEQA Guidelines at the time the Specific Plan EIR was prepared in 2015. Instead, the Specific Plan EIR evaluated transportation/traffic impacts utilizing the LOS methodology and LOS-based analysis is therefore provided in this Addendum. As such, intersection operations analysis was conducted to determine potential LOS changes upon implementation of the proposed project. Michael Baker International prepared the *Meredith International Centre Specific Plan Amendment Planning Area 3 – Focused Traffic Study* (Focused Traffic Study), dated November 20, 2025, to evaluate the project's transportation impacts; refer to Appendix D, *Focused Traffic Study*.

The proposed project is anticipated to generate 10,670 net new trips, including 719 a.m. peak hour trips and 941 p.m. peak hour trips. An intersection operational analysis was conducted at eight intersections in the project area to determine if project-generated traffic would negatively affect intersection operations. The eight intersections evaluated in the Focused Traffic Study include:

- #10 Archibald Avenue and 6th Street;
- #20 Vineyard Avenue and 4th Street;
- #23 Archibald Avenue and 4th Street;
- #27 Vineyard Avenue and Inland Empire Boulevard;

- #28 Archibald Avenue and Inland Empire Boulevard;
- #33 Archibald Avenue and I-10 Ramp Single-Point Interchange (SPI);
- #40 Project Driveway "C" and Inland Empire Boulevard; and
- #41 Project Driveway "D" and Inland Empire Boulevard.

To remain consistent with the previous Specific Plan EIR analysis, the trip distribution for the proposed project was intentionally made to match the trip distribution from the Specific Plan EIR analysis. Appendix A of the Focused Traffic Study contains the original trip distribution for Planning Area 3 used in the original Transportation Impact Assessment conducted in 2015 and included as Appendix C, *Traffic Impact Analysis*, of the Specific Plan EIR (*Traffic Impact Analysis, Meredith International Centre Specific Plan Amendment, Ontario, California*, prepared by Linscott, Law & Greenspan, Engineers, dated January 22, 2015 [2015 TIA]). Further, the Focused Traffic Study utilized Highway Capacity Manual 2000, using Synchro Software (Version 12) to remain consistent with the 2015 TIA analysis. The analysis utilized the same baseline "without project" volumes documented in the 2015 TIA. The "plus project" conditions reflect identical trips for Planning Areas 1, 2, and 4; only the estimated trips for Planning Area 3 were updated for this analysis. The intent of the Focused Traffic Study analysis is to determine if new traffic impacts are identified at these study intersections and if the proposed improvements documented in the 2015 TIA are sufficient to mitigate any new potential impacts. Additionally, intersection operational thresholds remain consistent with those used in the 2015 TIA.

The following study scenarios were evaluated:

- Existing Plus Project (Planning Area 1-4);
- Year 2020 Cumulative Traffic Conditions Plus Project (Planning Areas 1-4); and
- Year 2035 General Plan Buildout Plus Project (Planning Areas 1-4).

Existing Plus Project Scenario

2015 TIA Findings

Focused Traffic Study Table 4-1, *2015 TIA Existing Plus Project Intersection Analysis Results*, summarizes the analysis results for the Existing Plus Project condition documented in the 2015 TIA. As shown, the Specific Plan EIR determined that none of the study intersections would operate at unacceptable LOS. As such, no significant impacts were identified at these intersections.

Proposed Project Findings

Focused Traffic Study Table 4-2, *Proposed Project Existing Plus Project Intersection Analysis Results*, summarizes the analysis results for the Existing Plus Project condition under the proposed project. As shown, under the existing plus project condition, all intersections would still operate at an acceptable LOS based on individual intersection thresholds.

Thus, the analysis indicates that, with the inclusion of the proposed project, the intersections' operations under the Existing Plus Project Scenario do not degrade to unacceptable LOS compared to buildout of the Specific Plan and therefore, no new transportation impacts would occur in this regard.

Year 2020 Cumulative Traffic Conditions Plus Project Scenario

2015 TIA Findings

Focused Traffic Study Table 4-3, *2015 TIA Year 2020 Cumulative Plus Project Intersection Analysis Results*, summarizes the analysis results for the Year 2020 Cumulative Plus Project condition documented in the 2015 TIA and included in the Specific Plan EIR. As shown, most intersections operate at acceptable LOS for both peak hours with the exception of:

- #23 Archibald Avenue and 4th Street – operates at LOS F during the PM Peak Hour; and
- #28 Archibald Avenue and Inland Empire Boulevard – operates at LOS F during the PM Peak Hour.

As such, a significant impact was identified for these locations. Mitigation improvements were included in the 2015 TIA and Specific Plan EIR to improve the LOS of these intersections. The following improvements were proposed for the intersections and are required pursuant to Specific Plan EIR Mitigation Measure 4.2.3:

- #23 Archibald Avenue and 4th Street
    - Construct 2nd northbound left turn lane
    - Additional northbound through lane
    - Modify traffic signal
- #28 Archibald Avenue and Inland Empire Boulevard
    - Construct 3rd northbound left turn lane
    - Additional southbound through lane
    - Modify traffic signal

The 2015 TIA and Specific Plan EIR concluded that with the implementation of these improvements per Specific Plan EIR Mitigation Measure 4.2.3 the potentially significant impacts at the two identified intersections would be mitigated to less than significant levels.

Proposed Project Findings

Focused Traffic Study Table 4-4, *Proposed Project Year 2020 Cumulative Plus Project Intersection Analysis Results*, summarizes the analysis results for the Year 2020 Cumulative Plus Project condition under the proposed project. Similar to the 2015 TIA and Specific Plan EIR findings, most intersections operate at acceptable LOS for both peak hours with the exception of:

- #23 Archibald Avenue and 4th Street – operates at LOS F during the PM Peak Hour; and
- #28 Archibald Avenue and Inland Empire Boulevard – operates at LOS F during the PM Peak Hour.

With the implementation of identical mitigation improvements developed in the 2015 TIA and included in Specific Plan EIR Mitigation Measures 4.2.3, all intersections under the Year 2020 Cumulative Traffic Conditions Plus Project would operate at acceptable LOS based on individual intersection thresholds. Thus, the analysis indicates that, with the inclusion of the proposed project, the intersections' operations do not degrade to unacceptable LOS compared to buildout of the Specific Plan and therefore, no new transportation impacts would occur in this regard.

Year 2035 General Plan Buildout Plus Project Scenario

2015 TIA Findings

Focused Traffic Study Table 4-5, *2015 TIA Year 2035 General Plan Buildout Plus Project Intersection Analysis Results*, summarizes the analysis results for the Year 2035 General Plan Buildout Plus Project condition documented in the 2015 TIA and Specific Plan EIR. As shown, most intersections operate at acceptable LOS for both peak hours with the exception of:

- #20 Vineyard Avenue and 4th Street – operates at LOS F during the PM Peak Hour;
- #23 Archibald Avenue and 4th Street – operates at LOS F during the PM Peak Hour; and
- #28 Archibald Avenue and Inland Empire Boulevard – operates at LOS F during the PM Peak Hour.

As such, a potentially significant impact was identified for these locations. Mitigation improvements were developed to improve the LOS of these intersections. The following improvements were proposed for the intersections and are required pursuant to Specific Plan EIR Mitigation Measures 4.2.3 and 4.2.4:

- #20 Vineyard Avenue and 4th Street
    - Construct additional southbound through lane
    - Modify traffic signal
- #23 Archibald Avenue and 4th Street
    - Construct 2nd northbound left turn lane
    - Additional northbound through lane
    - Modify traffic signal
- #28 Archibald Avenue and Inland Empire Boulevard
    - Construct 3rd northbound left turn lane
    - Additional southbound through lane
    - Modify traffic signal

As shown, with the implementation of these improvements per Specific Plan EIR Mitigation Measures 4.2.3 and 4.2.4, the Specific Plan EIR determined that the potentially significant impacts at the identified intersections would be mitigated to less than significant levels.

Proposed Project Findings

Focused Traffic Study Table 4-6, *Proposed Project Year 2035 General Plan Buildout Plus Project Intersection Analysis Results*, summarizes the analysis results for the Year 2035 General Plan Buildout Plus Project condition under the proposed project. Similar to the 2015 TIA and Specific Plan EIR findings, most intersections operate at acceptable LOS for both peak hours with the exception of:

- #20 Vineyard Avenue and 4th Street – operates at LOS F during the PM Peak Hour;
- #23 Archibald Ave and 4th St – operates at LOS F during the PM Peak Hour; and
- #28 Archibald Ave and Inland Empire Blvd – operates at LOS F during the PM Peak Hour.

With the implementation of identical mitigation improvements developed in the 2015 TIA and included in Specific Plan EIR Mitigation Measures 4.2.3 and 4.2.4, all intersections under the Year 2035 General Plan Buildout Plus Project Scenario would operate at acceptable LOS based on individual intersection thresholds. Thus, the analysis indicates that, with the inclusion of the mitigation improvements developed in the 2015 TIA and included in the Specific Plan EIR, the intersections' operations do not degrade to unacceptable LOS compared to buildout of the Specific Plan and therefore, no new transportation impacts would occur in this regard.

Conclusion

Overall, the analysis for all three scenarios indicates that, with the implementation of identical mitigation improvements developed in the 2015 TIA and included in Specific Plan EIR Mitigation Measures 4.2.3 and 4.2.4, the intersections' operations do not degrade to unacceptable LOS. Therefore, outside of the impacts identified in the 2015 TIA, no new transportation impacts would occur due to the proposed project. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Hazardous Design Feature or Incompatible Use

Similar to development elsewhere within the Specific Plan area, all future roadway improvements within Planning Area 3 in accordance with the project must be designed in accordance with Caltrans and City established standards for roadway design, signing, striping, sight distance and be subject to review by the City. Compliance with existing Caltrans and City standards would be verified as part of the site plan review process for

future development plans within Planning Area 3. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Inadequate Emergency Access

Temporary and short-term traffic detours and traffic disruption could result from construction activities related to future development within Planning Area 3. Management and control of construction traffic would be addressed through the preparation and submittal of a Construction Area Traffic Management Plan that would be reviewed and approved by the City prior to or concurrent with future building plan review(s). A Construction Area Traffic Management Plan would identify traffic controls for any street closures and detours, construction vehicle access routes, hours of construction traffic, or other potential disruptions to traffic circulation during construction.

Further, all future roadway improvements within Planning Area 3 would be designed in accordance with Caltrans and City established standards for roadway design, signing, striping, sight distance and be subject to review by the City. In accordance with City policies, coordination with the Ontario Fire Department and Ontario Police Department during site plan review of future development plans for Planning Area 3 would ensure that adequate emergency access is provided. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Certified Specific Plan EIR Mitigation Measures:

4.2.3 Prior to the issuance of building permits, the Project Applicant shall pay requisite fees toward the construction of Year required 2020 improvements as summarized at Table 4.2-21 at the intersections of:

- Archibald Avenue at Arrow Route (Study Area Intersection 2);
- I-10 EB Ramp at 4th Street (Study Area Intersection 14);
- Archibald Avenue at 4th Street (Study Area Intersection 23);
- Haven Avenue at 4th Street (Study Area Intersection 25);
- Archibald Avenue at Inland Empire Boulevard (Study Area Intersection 28); and
- Vineyard Avenue at I-10 EB Ramps (Study Area Intersection 32).

4.2.4 Prior to the issuance of building permits, the Project Applicant shall pay requisite fees toward the construction of Year 2035 improvements as summarized at Table 4.2-24 at the intersections of:

- Archibald Avenue at Arrow Route (Study Area Intersection 2);
- Baker Avenue at 8th Street (Study Area Intersection 3);

- Hellman Avenue at 6th Street (Study Area Intersection 9);
- Haven Avenue at 6th Street (Study Area Intersection 12);
- Vineyard Avenue at 4th Street (Study Area Intersection 20);
- Archibald Avenue at 4th Street (Study Area Intersection 23);
- Haven Avenue at 4th Street (Study Area Intersection 25); and
- Archibald Avenue at Inland Empire Boulevard (Study Area Intersection 28).

Addendum Project Conditions: None.

3.2.9 Tribal Cultural Resources

Specific Plan EIR Findings

California Assembly Bill 52 (AB 52) was enacted in July 1, 2015 and expanded CEQA by establishing a formal consultation process for California tribes within the CEQA process. Section 21074 of AB 52 also defines a new category of resources under CEQA called tribal cultural resources. Tribal cultural resources are defined as "sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe" and is either listed on or eligible for the California Register of Historical Resources or include in a local historic register, or if the lead agency chooses to treat the resource as a tribal cultural resource. AB 52 was not in effect at the time the Specific Plan EIR was certified.

The analysis provided in the Cultural Resources section of the Specific Plan EIR did not identify any historical or archaeological resources, including Native American resources. In addition, no comments were received from Native American tribes on the Specific Plan EIR when it was circulated for public review. However, the Specific Plan EIR included Mitigation Measures 4.11.1 through 4.11.7 to address impacts to tribal cultural resources. These measures include requirements for Native American monitors during excavation/grading, procedures for halting work if artifacts are found during ground-disturbing activities, and provisions for notification/consultation with affected tribes regarding the recovery, treatment, and disposition of artifacts.

Proposed Project Analysis

AB 52 states that prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report for a project, a lead agency shall begin consultation with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project, if the tribe requested to the lead agency, in writing, to be informed by the lead agency of proposed projects in that geographic area and the tribe requests consultation. As this environmental document (i.e., an Addendum) is not a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report, AB 52 consultation would not apply to the proposed project.

The analysis provided in the Cultural Resources section of the Specific Plan EIR did not identify any historical or archaeological resources, including Native American resources. Thus, upon review, there is no further information regarding the potential presence of tribal cultural resources on the project site. Further, the Specific Plan EIR included Mitigation Measures 4.11.1 through 4.11.7 to address impacts to tribal cultural resources. These measures include requirements for Native American monitors during excavation/grading, procedures for halting work if artifacts are found during ground-disturbing activities, and provisions for notification/consultation with affected tribes regarding the recovery, treatment, and disposition of artifacts. Future development in accordance with the proposed project would be required to implement Specific Plan EIR Mitigation Measures 4.11 through 4.17. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Certified Specific Plan EIR Mitigation Measures:

4.11.1 Prior to development approval on the Project site and issuance of any grading, building, or other permit authorizing ground-disturbing activity, the Project Applicant(s) shall include the following wording on all construction contract documentation:

"If during grading or construction activities, cultural resources are discovered on the Project site, work shall be halted immediately within 50 feet of the discovery and the resources shall be evaluated by a qualified archeologist and any affected Tribes (Tribes). Any unanticipated cultural resources that are discovered shall be evaluated and a final report prepared by the qualified archeologist. The report shall include a list of the resources discovered, documentation of each site/locality, and interpretation of the resources identified, and the method of preservation and/or recovery for identified resources. In the event the significant resources are recovered and if the qualified archaeologist and the Tribe determines the resources to be historic or unique, avoidance and/or mitigation would be required pursuant to and consistent with CEQA Guidelines Sections 15064.5 and 15126.4 and Public Resources Code Section 21083.2 and the Cultural Resources Treatment and Monitoring Agreement required under Mitigation Measure 4.9.2."

4.11.2 At least 30 days prior to seeking a grading permit, the Project Applicant(s) shall contact potentially affected Tribes to notify the Tribes of grading, excavation, and the monitoring program and to coordinate with the City of Ontario and the Tribes to develop a Cultural Resources Treatment and Monitoring Agreement. The agreement shall include, but not be limited to, outlining provisions and requirements for addressing the treatment of cultural resources; Project grading and development scheduling; terms of compensation for the monitors; and treatment and final disposition of any

cultural resources, sacred sites, and human remains discovered on the site; and establishing on-site monitoring provisions and/or requirements for professional Tribal monitors during all ground-disturbing activities. A copy of this signed agreement shall be provided to the Planning Director and Building Official prior to the issuance of the first grading permit.

4.11.3 Prior to development approval on the Project site and issuance of any grading, building, or other permit authorizing ground-disturbing activity, the Project Applicant(s) shall include the following wording on all construction contract documentation:

"If human remains are encountered, California Health and Safety Code Section 7050.5 requires that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made. If the San Bernardino County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted within a reasonable time frame. Subsequently, the Native American Heritage Commission shall identify the "most likely descendant" within 24 hours of receiving notification from the coroner. The most likely descendant shall then have 48 hours to make recommendations and engage in consultations concerning the treatment of the remains as provided in Public Resources Code Section 5097.98."

4.11.4 All cultural materials, with the exception of sacred items, burial goods, and human remains, which will be addressed in the Cultural Resources Treatment and Monitoring Agreement required by Mitigation Measure 4.9.2, that are collected during the grading monitoring program and from any previous archeological studies or excavations on the Project site shall be curated according to the current professional repository standards. The collections and associated records shall be transferred, including title, to the affected Tribe's/Tribes' curation facility(ies), which meets the standards set forth in 36 CRF Part 79 for federal repositories.

4.11.5 All sacred sites, should they be encountered within the Project site, shall be avoided and preserved as the preferred mitigation, if feasible as determined by a qualified professional in consultation with the affected Tribe(s). To the extent that a sacred site cannot be feasibly preserved in place or left in an undisturbed state, mitigation measures shall be required pursuant to and consistent with Public Resources Code Section 21083.2 and CEQA Guidelines Sections 15064.5 and 15126.4.

4.11.6 Prior to development approval on the Project site and issuance of any grading, building, or other permit authorizing ground-disturbing activity, the

Project Applicant(s) shall include the following wording on all construction contract documentation:

"If inadvertent discoveries of subsurface archaeological resources are discovered during grading, work shall be halted immediately within 50 feet of the discovery. The developer, the Project archeologist, and the Tribe(s) shall assess the significance of such resources and shall meet and confer regarding the mitigation for such resources. If the developer and the Tribe cannot agree on the significance of or the mitigation for such resources, these issues will be presented to the City of Ontario Planning Director. The Planning Director shall make the determination based on the provisions of CEQA with respect to archaeological resources and shall take into account the religious beliefs, customs, and practices of the Tribe(s). Notwithstanding any other rights available under the law, the decision of the Planning Director shall be appealable to the City of Ontario. In the event the significant resources are recovered and if the qualified archaeologist determines the resources to be historic or unique as defined by relevant state and local law, avoidance and mitigation would be required pursuant to and consistent with Public Resources Code Section 21083.2 and CEQA Guidelines Sections 15064.5 and 15126.4."

4.11.7 To address the possibility that cultural resources may be encountered during grading or construction, a qualified professional archeologist shall monitor all construction activities that could potentially impact archaeological deposits (e.g., grading, excavation, and/or trenching). However, monitoring may be discontinued as soon the qualified professional is satisfied that construction will not disturb cultural and/or paleontological resources.

Addendum Project Conditions: None.

3.2.10 Utilities and Service Systems

Specific Plan EIR Findings

The Initial Study prepared for the Specific Plan EIR concluded that impacts related to water quality would be less than significant. Regarding water supply demand and wastewater treatment capacities, the Specific Plan EIR determined that Specific Plan buildout would result in an incremental increase in an area-wide need for these services, but that this would be accommodated by available water sources and treatment capacities. As such, impacts were determined to be less than significant. Regarding stormwater drainage, the Specific Plan EIR determined that adherence to existing regulations would result in less than significant impacts. Regarding solid waste disposal, the Specific Plan EIR determined that current and future landfill capacities would be available to accommodate buildout of the Specific Plan, and impacts would be less than significant.

Proposed Project Analysis

Water Service and Supply

The project proposes to modify the Specific Plan to include a Mixed-Use Overlay across Planning Area 3 of the Specific Plan area, allowing the development of up to 1,400 residential units and up to 50,000 square feet of commercial/retail uses. OMUC provides water services to the City of Ontario, including the project site. The *City of Ontario Planning Area 3 of the Meredith International Centre Specific Plan Water Supply Assessment and Written Verification of Sufficient Water Supply* (WSA), prepared by Albert A. Webb Associates, and dated November 4, 2025, evaluated water demands associated with the proposed project; refer to Appendix E.

Based on the WSA, the project is projected to result in a water demand of approximately 260 AFY; refer to WSA Table 2-5, *Proposed Project Water Demand*. In comparison, the estimated total water demand of Planning Area 3 as presented in the 2020 UWMP, dated June 2021, is approximately 143 AFY. Thus, the project would result in an increase of approximately 117 AFY compared to what was assumed for the project site in the 2020 UWMP. However, the WSA notes that the unit water demand factor for the proposed high density residential component of the project (i.e., 1,400 units) is a highly conservative value for the project and potable water demand for this use is likely overestimated. Additionally, the WSA notes that the City's forthcoming water master plan update and 2025 UWMP will assume a conservative total water demand for Planning Area 3 to be 274 AFY (i.e., greater than the 143 AFY assumed in the 2020 UWMP and greater than the project's estimated water demand of 260 AFY).

The WSA concluded that current OMUC water production capacities are greater than needed to meet the average day demands under Citywide buildout conditions. OMUC also has forecasted that excess water supplies will be available to meet Citywide demand during normal, single-dry, and multiple dry water years over the next 20 years; refer to WSA Table 3-8, *OMUC Projected Normal Year Supply and Demand (AFY)*, Table 3-9, *OMUC Projected Single Dry Year Supply and Demand (AFY)*, and Table 3-10, *OMUC Projected Multiple Dry Year Supply and Demand (AFY)*. Therefore, the WSA concluded that OMUC's total projected potable and recycled water supplies during normal, single-dry, and multiple dry water years over a 20-year projection would be sufficient to meet the projected water demand associated with the proposed project in addition to OMUC's existing and planned future uses; project impacts would be less than significant. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Wastewater Treatment

Similar to Specific Plan buildout, buildout of the project would generate additional wastewater compared to existing conditions, which could increase sewer flows and increase demand on the wastewater treatment provider. However, the Specific Plan EIR determined that the Inland Empire Utilities Agency (IEUA) currently has surplus collection

and treatment capacity in its wastewater systems. Additionally, the increase in population and employment growth induced by the proposed project would be within Citywide forecasts.[26] Further, according to TOP 2050 SEIR, IEUA has experienced a decrease in the volume of sewage flow of approximately 10 percent over the last 20 years, due to a decrease in indoor water consumption with new development compliance with California Green Building Standards Code and mandated water conservation efforts. The IEUA anticipates a significant increase in the growth of its service area in the next 10 years, with 40 percent growth resulting from new development in the City. The IEUA develops 10-year forecasts and specifies capital improvements that will be implemented to meet the increase in demand; further, future projects have been assumed in the IEUA's Sewer System Management Plans. Future development projects would be required to pay sewer connection fees established by the City to pay for any future required improvements. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Stormwater Drainage

The proposed Mixed-Use Overlay would result in a similar amount of impervious surfaces on-site after buildout compared to the analysis in the Specific Plan EIR. All future development would be required to adhere to applicable State and local stormwater regulations, including the Santa Ana RWQCB's MS4 permit, San Bernardino County Stormwater Program, and low impact development (LID) criteria, that require post-development stormwater discharge to be equal to or less than pre-development discharge. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

Solid Waste

Buildout of the project could increase solid waste generation and increase demand for solid waste services beyond the already permitted Urban Commercial uses in Planning Area 3. However, the Specific Plan EIR determined that adequate capacity was available at regional landfills, including the El Sobrante Landfill in the City of Corona. Additionally, the increased population and employment growth induced by the proposed project compared to Specific Plan buildout would be within Citywide forecasts.[27] Further, future developments within Planning Area 3 would be required to comply with the California Green Building Standards Code (CALGreen), Assembly Bill (AB) 341, AB 1826, and applicable City policies regarding waste diversion and recycling. As such, the project would not result in a new significant environmental effect or substantially increase the severity of a previously identified significant environmental effect as compared to the conclusions of the Specific Plan EIR and 2019 Addendum.

[27] City of Ontario, *Final Supplemental Environmental Impact Report (State Clearinghouse No. 2021070364), The Ontario Plan 2050*, August 2022.

Certified Specific Plan EIR Mitigation Measures: None.

Addendum Project Conditions: None.

This page intentionally left blank.

4.0 DETERMINATION/ADDENDUM CONCLUSION

As detailed in the analysis presented above, this Addendum supports the conclusion that the proposed project constitutes minor or technical changes and do not result in any new significant environmental effects or a substantial increase in the severity of previously identified significant effects as compared to the conclusions of the Specific Plan EIR. No new information has become available and no substantial changes to the circumstances under which the Specific Plan was being undertaken since the certification of the Specific Plan EIR have occurred. As identified in the Specific Plan EIR, buildout of the Specific Plan would result in significant environmental impacts with regard to air quality, noise, and transportation. However, the proposed project would not substantially increase the severity of these effects. In addition, there are no new or different mitigation measures or alternatives that would substantially reduce these significant impacts.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	20	annual days of extreme heat
Extreme Precipitation	5.1	annual days with precipitation above 20 mm

Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	2	1	1	3

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	91
AQ-PM	98
AQ-DPM	68
Drinking Water	99
Lead Risk Housing	21
Pesticides	0.00
Toxic Releases	70

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	76
Healthy Places Index Score for Project Location (b)	43
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Land Use	Per PD and assume 10 percent for the landscape area. Total acreage adjusted to match PD.
Operations: Vehicle Data	Per project trip generation analysis by MBI (Total PA-3 Net Trip Gen Potential)
Operations: Hearths	Wood fire places removed as SCAQMD Rule 445 prohibits the installation of any open or enclosed permanently installed wood burning device.
Operations: Architectural Coatings	Per SCAQMD Rule 1113

APPENDIX B
BIOLOGICAL REPORTS

September 15, 2025 JN 205836

CITY OF ONTARIO
David F. Eoff IV, Principal Planner
303 E. B Street
Ontario, CA 91764

SUBJECT: Biological Resources Assessment for Meredith International Centre Specific Plan Amendment – Planning Area 3 Project, City of Ontario, San Bernardino County, California

Dear David Eoff,

Michael Baker International, Inc. is pleased to submit this technical report documenting the results of a biological resources assessment for the proposed Meredith International Centre Specific Plan Amendment – Planning Area 3 Project (project) located in the City of Ontario, San Bernardino County, California. The biological study area (BSA) included in this assessment incorporates the project's limits of disturbance within Assessor's Parcel Numbers 011-032-129 and 011-032-174 through -177, totaling 25.8 acres, plus a 500-foot buffer (77.0 acres) for a total BSA of 102.8 acres. This report is intended to support the California Environmental Quality Act (CEQA) process for the proposed Specific Plan Amendment.

1.0 PROJECT LOCATION

The 25.8-acre project site is currently a vacant lot located within the City of Ontario, San Bernardino County, California (Attachment A, Figure 1, *Regional Vicinity*). The project site is generally bound by Inland Empire Boulevard to the north, Archibald Avenue to the east, Interstate 10 (I-10) to the south, and a concrete wash to the west (Deer Creek and Cucamonga Creek), and is within Section 22 of Township 01 South, Range 07 West, of the *Guasti, California* 7.5-minute United States Geological Survey (USGS) topographic quadrangle map (Attachment A, Figure 2, *Project Vicinity*). Beyond the identified roadways, the project site is surrounded by residential development to the north, commercial development to the east, I-10 to the south, and commercial development beyond the channelized creeks to the west. The project site does not fall within any Natural Communities Conservation Plan or Habitat Conservation Plan.

2.0 PROJECT DESCRIPTION

The project proposes a Mixed-Use Overlay across Planning Area 3 to allow for up to 40,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units in addition to the uses permitted under the site's Urban Commercial designation (i.e., up to 400 hotel rooms and 250,000 square feet of commercial uses; a total buildout of 480,000 square feet) (Attachment A, Figure 3, *Project Site*).

3.0 EXISTING SITE CONDITIONS

The project site is located within a primarily commercial and high-density residential area within the City of Ontario. The project site is mostly flat with elevations ranging from approximately 970 to 980 feet above mean sea level, and has areas of bare ground and vegetation consistent with historic disturbance. One soil type was identified on-site utilizing the Web Soil Survey: Tujunga loamy sand, 0 to 5 percent slopes. This soil type is a very deep, well-drained soil that is formed from granitic sources and occurs in alluvial fans and floodplains, including urban areas.

4.0 METHODS

4.1 Literature Review

Prior to conducting the field survey, Michael Baker conducted a thorough literature review and records search to characterize existing site conditions and assess the potential for special-status[1] biological resources to occur that might pose a constraint to project implementation. A query of the California Natural Diversity Database (CNDDB 2025a) and California Native Plant Society (CNPS) Online Inventory of Rare and Endangered Plants of California (CNPS 2025) was conducted to obtain a list of special-status plant and wildlife species occurrence records within the USGS *Prado Dam, Guasti, Ontario, Mt. Baldy, Cucamonga Peak, Corona North, Devore, Fontana, and Riverside West* 7.5-minute quadrangle maps. The US Fish and Wildlife Service (USFWS) IPaC online database was also reviewed to identify special-status species and other resources, such as critical habitat, known or expected to occur on the project site or within the immediate vicinity (USFWS 2025a). Other sources of information about the Project site and surrounding area include the USDA NRCS Web Soil Survey (USDA NRCS 2025), the USFWS National Wetlands Inventory (USFWS 2025b), Google Earth (2025), HistoricAerials.com (2025), and Calflora database (Calflora 2025). All the information obtained informed Michael Baker's understanding of the BSA and assisted with the field survey and subsequent analysis. The results presented in this report provide a detailed assessment of the suitability of the habitat on-site to support special-status plant and wildlife species and other sensitive natural resources.

4.2 Habitat Assessment/Field Survey

Michael Baker biologist Stephen Anderson conducted a general biological resources survey and habitat assessment on August 5, 2025, between 0750 and 0945 to document existing conditions and conduct a habitat assessment for special-status plant and wildlife species, sensitive natural communities, and aquatic resources. Weather conditions were hazy and slightly cloudy with temperatures ranging from 74 to 81 degrees Fahrenheit and wind speeds of 1 to 5 miles per hour.

1 Special-status refers to plant and wildlife species that are federal or state-listed, proposed, or candidates; plant species that have been designated a California Rare Plant Rank of 1, 2, or 4 by the California Native Plant Society; wildlife species that are designated by the California Department of Fish and Wildlife as Fully Protected, or Species of Special Concern; and other state or locally rare vegetation communities.

Classification of the on-site vegetation communities and other land uses is based on the descriptions of terrestrial vegetation classification systems described in *A Manual of California Vegetation* (Sawyer et al. 2009). In addition, site characteristics such as soil condition, topography, hydrology, anthropogenic disturbances, indicator species, condition of on-site vegetation communities, and the presence of potentially regulated jurisdictional features were noted. Michael Baker used geographic information systems (GIS) software to digitize the mapped vegetation communities and overlayed the data onto an aerial photograph to further analyze existing conditions and quantify the acreages of each vegetation community on-site.

All plant and wildlife species observed during the field survey were recorded. Plant species observed were identified by visual characteristics and morphology in the field while unusual and less familiar plant species were photographed and later identified using taxonomic guides. Plant species nomenclature and taxonomy follows *The Jepson Manual: Vascular Plants of California*, second edition (Baldwin et al. 2012), and scientific names are provided immediately following common names of plant species (first reference only). Wildlife detections were made through aural and visual detection, as well as observation of sign including scat, trails, tracks, burrows, and nests. Field guides used to assist with identification of species during the field survey included *The Sibley Guide to Birds* (Sibley 2014) for birds, *A Field Guide to Western Reptiles and Amphibians* (Stebbins 2003) for herpetofauna, and *A Field Guide to Mammals of North America* (Reid 2006) for mammals. Wildlife species taxonomy follows the North American Butterfly Association (NABA 2025) for butterflies, the Society for the Study of Amphibians and Reptiles (Crother et al. 2017) for herpetofauna, the American Ornithological Society for birds (Chesser et al. 2024), and Wilson and Reeder (2005) for mammals. Scientific names are provided immediately following common names of wildlife species (first reference only).

4.3 Special-Status Species Potential to Occur Assessment

The potential for special-status species to occur in the BSA was evaluated based on:

- each species' known geographic distribution and elevation range;
- species-specific habitat requirements (e.g., vegetation communities/land covers, soils, hydrology, slope/aspect, and other requirements);
- life history traits (e.g., disturbance tolerance); and
- Michael Baker biologists' expertise, knowledge, and best professional judgement.

Current and historic records of species identified during the literature review were also considered during the analysis; however, determination of a species' potential to occur was not solely based on the age or location of these previously documented records. The current regulatory/conservation status of special-status plant and wildlife species was verified through lists and resources provided by the California Department of Fish and Wildlife (CDFW), specifically the Special Animals List (CNDDB 2025b) and Special

Vascular Plants, Bryophytes, and Lichens List (CNDDB 2025c). The potential to occur categories used in this analysis are defined as follows:

- Present: The species was observed or detected within the study area.
- Expected: The study area is within the known geographic distribution and elevation range of the species, high quality suitable habitat (considering vegetation, soils, and other factors) is present, and viable landscape connectivity to a local, known extant population(s) or sighting(s) is within the study area.
- Moderate: The study area is within the known geographic distribution and elevation range of the species, there is moderate to low quality suitable habitat (considering vegetation, soils, and other factors), and there is limited or no landscape connectivity to a local, known, extant population.
- Not Expected: The study area is outside the known geographic distribution and elevation range of the species, there is marginal to no suitable habitat, and there is no connectivity to known, extant populations.
- Absent: The species was not detected during focused or agency-approved protocol surveys.

4.4 Aquatic Resources Delineation

An aquatic resources delineation was conducted within the boundaries of the project site by Michael Baker on August 5, 2025, to verify the jurisdictional limits of waters of the U.S. regulated by the US Army Corps of Engineers (USACE), waters of the State regulated by the Regional Water Quality Control Board (RWQCB), wetlands regulated by USACE and RWQCB, and jurisdictional streambed and associated riparian habitat regulated by the CDFW. In addition, the Streamflow Duration Assessment Method (SDAM) was applied to determine the flow duration (i.e., perennial, intermittent, ephemeral) of the aquatic feature within the project site. Detailed methods for these efforts are included under separate cover in the Aquatic Resources Delineation Report (Michael Baker International 2025).

5.0 RESULTS

5.1 Vegetation Communities and Land Covers

The project site supports disturbed California buckwheat scrub and disturbed areas. The extent of each vegetation community and land cover type is listed in Table 1 and shown in Attachment A, Figure 4, *Vegetation Communities and Land Cover Types*. A total of 26 plant species, 16 native (62 percent) and 10 non-native (38 percent), were recorded during the site visit. Site photographs are included in Attachment B, and a list of all plant species observed is included in Attachment C. Surrounding land use consists of roadways, residential development, and commercial development.

TABLE 1. VEGETATION COMMUNITIES AND LAND COVER TYPES

Vegetation Community/Land Cover Type	Project Site (acres)	500-foot buffer (acres)	Total (acres)
California Buckwheat Scrub	0.0	0.7	0.7
Disturbed California Buckwheat Scrub	0.3	0.0	0.3
Concrete-lined Channel	0.0	7.3	7.3
Developed	0.0	60.5	60.5
Disturbed	25.5	8.5	34.0
TOTAL	**25.8**	**77.0**	**102.8**

California Buckwheat Scrub

California buckwheat scrub (*Eriogonum fasciculatum* Shrubland Alliance) consists of a monotypic stand of California buckwheat (*Eriogonum fasciculatum*) shrubs within Deer Creek northwest of the project site within the 500-foot buffer.

Disturbed California Buckwheat Scrub

Disturbed California buckwheat scrub consists of a monotypic stand of California buckwheat shrubs in the western portion of the project site interspersed with non-native, weedy vegetation. The California buckwheat shrubs are short (i.e., less than one foot tall), indicating previous disturbance in this area (i.e., mowing).

Concrete-lined Channel

The confluence of Deer Creek and Cucamonga Creek, both concrete-lined channels, occurs just off-site to the west of the project site.

Developed

Developed areas surround the project site and include commercial and residential developments and roadways.

Disturbed

Disturbed land cover occurs throughout the remainder of the project site. This land cover type is dominated by non-native species including Russian thistle (*Salsola tragus*), common Mediterranean grass (*Schismus barbatus*), and short podded mustard (*Hirschfeldia incana*).

5.2 General Wildlife Inventory

A total of 9 wildlife species were observed during the field survey: 1 reptile, western fence lizard (*Sceloporus occidentalis*); 5 birds, red-tailed hawk (*Buteo jamaicensis*), American crow (*Corvus brachyrhynchos*), house finch (*Haemorhous mexicanus*), mourning dove (*Zenaida macroura*), and Say's

phoebe (*Sayornis saya*); and 3 mammals, California ground squirrel (*Otospermophilus beecheyi*), coyote (*Canis latrans*), and desert cottontail (*Sylvilagus audubonii*), all of which are native species adapted to life in urban areas. These species are also listed in Attachment C.

5.3 Special-Status Biological Resources

Sensitive Natural Communities

The following ten natural communities considered sensitive by CDFW were identified during the query of the CNDDB:

- California Walnut Woodland
- Canyon Live Oak Ravine Forest
- Coastal and Valley Freshwater Marsh
- Riversidian Alluvial Fan Sage Scrub
- Southern California Arroyo Chub/Santa Ana Sucker Stream
- Southern Coast Live Oak Riparian Forest
- Southern Cottonwood Willow Riparian Forest
- Southern Riparian Forest
- Southern Sycamore Alder Riparian Woodland
- Southern Willow Scrub

The project site consists of disturbed California buckwheat scrub and disturbed and developed land cover types and does not support any sensitive natural communities.

Special-Status Plant Species

Based on the results of the literature review and records search, 78 special-status plant species were analyzed for their potential to occur on the project site (Attachment D). After a review of specific habitat preferences, known distributions, and elevation ranges, and considering the disturbed condition of the project site, no special-status plant species have the potential to occur.

The project site is not within or adjacent to designated critical habitat for any listed plant species (USFWS 2025a).

Special-Status Wildlife Species

Based on the results of the literature review and records search, a total of 54 special-status wildlife species were analyzed for their potential to occur within the BSA (Attachment D). After a review of specific habitat

preferences, known distributions, and elevation ranges, and considering the existing disturbed condition of the project site, two special-status wildlife species have a moderate potential to occur: monarch (*Danaus plexippus plexippus*, federal proposed threatened) and burrowing owl (*Athene cunicularia*, state candidate endangered [SCE] and species of special concern [SSC]).

Monarch has the potential to fly through the project site. The project site provides limited nectar resources for foraging due to the dominance of weedy, non-native species. No milkweed (*Asclepias*) species were observed during the field visit; therefore, monarch is not expected to breed on-site. Similarly, no suitable overwintering habitat is present on-site. The nearest known monarch record is from 2023 within Cucamonga-Guasti Regional Park approximately 0.3 miles to the northeast (iNaturalist n.d.).

No burrowing owls or suitable burrowing owl burrows were detected on-site during the field survey. However, burrowing owls are known from the area. The nearest known records north of I-10 are from 2016 approximately 1.25 miles east of the project site, and the nearest known records south of I-10 are from 2017 approximately 0.3 miles southeast and south southwest (CNDDB 2025a). The most recent records are from 2023 south and east of Ontario International Airport (CDFW 2025).

The project site is not within or adjacent to critical habitat for any listed wildlife species (USFWS 2025a).

State and Federal Jurisdictional Aquatic Features

Three key agencies regulate activities within inland lakes, streams, wetlands, and riparian areas in California. The USACE Regulatory Branch regulates activities that result in the discharge of dredged or fill material into waters of the U.S., including wetlands, pursuant to Section 404 of the Clean Water Act (CWA) and Section 10 of the Rivers and Harbors Act. Of the state agencies, the RWQCB regulates discharges to waters of the State, including wetlands, pursuant to Section 401 of the CWA, Section 13263 of the California Porter-Cologne Water Quality Control Act, State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State; and the CDFW regulates alterations to lakes, streambeds, and associated riparian habitat pursuant to Section 1600 et seq. of the California Fish and Game Code (CFGC).

As mentioned previously, the project site is overlain by one soil type: Tujunga loamy sand, 0 to 5 percent slopes. This soil type is a very deep, well-drained soil that is formed from granitic sources, and it occurs in alluvial fans and floodplains, including urban areas.

There are no wetland features mapped onsite by the National Wetlands Inventory; however, two riverine features are mapped just off-site to the west: Deer Creek and Cucamonga Creek. Both riverine features are human-made, concrete channels following the former path of the native streams. The channels support vertical concrete walls, concrete bottom, and no vegetation.

One jurisdictional aquatic feature was mapped within the eastern portion of the project site (Attachment A, Figure 5, *Aquatic Resources Delineation*). The riverine feature is depicted as a USGS blueline stream.

The feature originates on-site at the northern project site boundary through a 3-foot culvert under Inland Empire Boulevard and travels south for approximately 532 feet until it exits the southern project site boundary and flows into a 3-foot underground culvert. The channel has a consistent width throughout the project site with an ordinary high water mark of 3 feet and top of bank width of 12 feet. Vegetation within the channel is dominated by Canadian horseweed (*Erigeron canadensis*), short podded mustard, and telegraphweed (*Heterotheca grandiflora*). The feature supports 0.03 acres of jurisdictional non-wetland waters of the state regulated by the RWQCB and 0.15 acres of streambed regulated by CDFW. Due to the lack of a hydrological surface connection to a traditional navigable waterway and due to the ephemeral flow regime, the riverine feature onsite is not considered waters of the U.S. and would not be regulated by USACE. In addition, the feature did not support hydric soils; therefore, it is not considered a wetland. Additional details of the aquatic resources delineation can be found in the Aquatic Resources Delineation Report (Michael Baker International 2025).

5.4 Wildlife Corridors and Habitat Linkages

Wildlife corridors link areas of suitable habitat that are otherwise separated by areas of non-suitable habitat such as rugged terrain, changes in vegetation, or human disturbance. Wildlife corridors are essential to the regional ecology of a species because they provide avenues of genetic exchange and allow animals to access alternative territories as dictated by fluctuating population densities. Fragmentation of open space areas by urbanization creates “islands” of wildlife habitat that are more or less isolated from each other. Corridors mitigate the effects of this fragmentation by (1) allowing animals to move between remaining habitats, thereby permitting depleted populations to be replenished and promoting genetic exchange; (2) providing escape routes from fire, predators, and human disturbances, thus reducing the risk of catastrophic events (such as fire or disease) that could lead to local extinction; and (3) serving as travel routes for individual animals as they move within their home ranges in search of food, water, mates, and shelter. Wildlife corridors are usually bounded by urban land areas or other areas unsuitable for wildlife. The corridor generally contains suitable cover, food, and/or water to support species and facilitate movement while in the corridor. Larger, landscape-level corridors (often referred to as “habitat or landscape linkages”) can provide both transitory and resident habitat for a variety of species. Although it is commonly used as a synonym for wildlife corridor, a habitat linkage refers to a more substantial, or wider, land connection between two habitat areas. Habitat linkages allow for the periodic exchange of animals between habitat areas, which is essential to maintain adequate gene pools.

The project site is within a highly urbanized area within the City of Ontario. The project site is surrounded by residential and commercial development in all directions; it is not within or adjacent to any natural open space areas or other natural features that would be used by wildlife as a corridor or habitat linkage. The project site is adjacent to and east of the confluence of Cucamonga Creek and Deer Creek, two concrete channelized waterways with vertical concrete walls, concrete bottoms, and no vegetation. Cucamonga Creek originates in the San Gabriel Mountains and is channelized for more than 7 miles north of the project site. Similarly, Deer Creek originates in the San Gabriel Mountains east of Cucamonga Creek and is channelized for more than 8 miles before its confluence with Cucamonga Creek. South of the

confluence of these creeks, Cucamonga Creek continues south as a channelized waterway for less than one mile where it flows underground for approximately 0.3 miles under the Ontario International Airport runway system. Due to the developed nature of the concrete channels and lack of vegetation, these channels provide low value wildlife movement habitat. They may be used by more ubiquitous species adapted to urban environments such as coyote or raccoon but are less likely to be used by more secretive species that require vegetative cover such as mountain lion or bobcat.

6.0 IMPACT ANALYSIS

The following discussion examines the impacts to biological resources that may occur as a result of the project. The determination of impacts is based on both the features of the project and the biological values of the habitat and sensitivity of plant and wildlife species potentially affected. Impacts to biological resources are assessed using impact significance threshold criteria, which mirror the policy statement contained in CEQA, Section 21001(c) of the California Public Resources Code. The questions below model those included in the checklist of questions listed in Appendix G of the *CEQA Guidelines* and that are considered to determine if the project would have significant impacts to biological resources. For the purposes of this analysis, it is assumed that the entire 25.8-acre project site will be impacted.

6.1 Impacts to Special-Status Species

a) *Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?*

Less than significant with mitigation incorporated. As discussed in Section 5.3, two special-status wildlife species, monarch and burrowing owl, have a moderate potential to occur within the project site.

Monarch may fly through the project site; however, they are not expected to breed or overwinter on-site due to the lack of suitable habitat. Additionally, if they occurred, they would be expected in very low numbers due to the disturbed nature of the site and dominance by non-native weedy vegetation. Impacts would not remove habitat that would affect the long-term status of monarch populations; therefore, potential impacts are considered less than significant.

Although burrowing owl or burrowing owl burrows were not detected on-site, there are known burrowing owl locations nearby the project site. Site conditions could change between the processing of environmental documentation and project implementation. Therefore, there is potential for burrowing owl to colonize the site prior to project implementation. Impacts to burrowing owl are considered potentially significant. Compliance with **Mitigation Measure (MM) BIO-1, *Burrowing Owl Pre-construction Survey***, provided below in Section 7.0, would reduce potential impacts to less than significant.

6.2 Impacts to Sensitive Natural Communities

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

No impact. The project site is completely developed and supports ornamental landscaping and disturbed, weedy vegetation. There are no riparian habitats or other sensitive natural communities present within the project site boundaries. Therefore, the project would have no impact on riparian habitats or other sensitive natural communities.

6.3 Impacts to State or Federal Wetlands

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Less than significant with mitigation. The project site is entirely developed and does not contain any state or federally protected wetlands. Therefore, there would be no impact to state or federally protected wetlands.

Although the project site does not support state or federally protected wetlands, it does support one aquatic feature that would be regulated by the RWQCB and CDFW. Impacts to this feature, which supports 0.03 acres of RWQCB waters of the state and 0.15 acres of CDFW jurisdictional streambed, would require permits from these regulatory agencies. Therefore, impacts to the aquatic feature on-site are considered potentially significant. Compliance with **MM BIO-2, *Regulatory Approvals***, provided below in Section 7.0, would reduce impacts to this aquatic feature to less than significant.

6.4 Impacts to Wildlife Movement or Wildlife Corridors

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less than significant with mitigation. The project site is within a developed, urban area and is surrounded on all sides by existing development. The project site has no connectivity to any natural habitats that would serve as migration corridors. Therefore, there would be no impact to native wildlife movement or wildlife corridors.

Nesting birds are protected pursuant to the federal Migratory Bird Treaty Act (MBTA) and the California Fish and Game Code[2] (CFGC). To maintain compliance with the MBTA and CFGC, clearance surveys are typically required during the breeding season (generally February 15 to August 31) prior to any ground disturbance or vegetation removal activities to avoid direct and indirect impacts to active bird nests and/or nesting birds. Consequently, if an active bird nest is destroyed or if project activities result in indirect impacts to nesting birds (e.g., nest abandonment, loss of reproductive effort), it is considered "take" and is potentially punishable by fines and/or imprisonment. Although no bird nests were observed during the field survey, the vegetation within and adjacent to the project site provides suitable nesting opportunities for a variety of bird species that are adapted to developed areas. Impacts to nesting birds are considered potentially significant. Compliance with **MM BIO-3, *Nesting Birds***, provided below in Section 7.0, would reduce this impact to less than significant.

6.5 Conflicts with Local Policies or Ordinances

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No Impact. The proposed project would not conflict with any local policies or ordinances protecting biological resources. The City of Ontario has adopted tree preservation and protection measures, including requirements for Protected Root Zones, fencing, and arborist oversight during construction. However, the project site does not support any trees; therefore, the proposed project would not impact trees subject to this ordinance.

6.6 Conflicts with Adopted Habitat Conservation Plan

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No impact. The project site is not covered by an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. Therefore, there will be no conflict.

7.0 MITIGATION MEASURES

BIO-1: Burrowing Owl Pre-construction Survey

A pre-construction burrowing owl clearance survey shall be conducted no more than 30 days prior to any vegetation removal or ground-disturbing activities to avoid impacts to burrowing owls and/or occupied

[2] Section 3503 makes it unlawful to take, possess, or needlessly destroy the nest or eggs of any bird, except as otherwise provided by CFGC or any regulation made pursuant thereto; Section 3503.5 makes it unlawful to take, possess, or destroy any birds in the orders Falconiformes or Strigiformes (birds-of-prey); and Section 3513 makes it unlawful to take or possess any migratory non-game bird except as provided by the rules and regulations adopted by the Secretary of the Interior under provisions of the MBTA, as amended (16 U.S.C. § 703 *et. sq.*).

burrows. The pre-construction clearance survey shall be conducted by a qualified biologist and in accordance with the methods outlined in the *Staff Report on Burrowing Owl Mitigation* (CDFG 2012). Documentation of surveys and findings shall be submitted to the City of Ontario for review and filing. If no burrowing owls or occupied burrows are detected, project activities may begin, and no additional avoidance and minimization measures shall be required.

If an occupied burrow is found outside, but within 500 feet, of the development footprint, the qualified biologist shall establish a "no-disturbance" buffer around the burrow location(s). The size of the "no-disturbance" buffer shall be determined in consultation with CDFW and be based on the species status (i.e., breeding, non-breeding) and proposed level of disturbance. If an occupied burrow is found within the development footprint and cannot be avoided, a burrowing owl exclusion and mitigation plan shall be prepared and submitted to CDFW for approval prior to initiating project activities.

BIO-2: Regulatory Compliance

Prior to the commencement of any ground-disturbing activities, the project applicant shall obtain all necessary regulatory authorizations for work within jurisdictional waters and streambeds. Although a Section 404 permit from the USACE is not required for the project, the applicant shall obtain an Approved Jurisdictional Determination from the USACE to confirm the absence of jurisdictional waters. Additionally, the applicant shall secure a Section 401 Water Quality Certification and Waste Discharge Requirements permit from the RWQCB pursuant to the Clean Water Act and Porter-Cologne Water Quality Control Act. The applicant shall also submit formal notification to the CDFW and obtain a Lake or Streambed Alteration Agreement under Section 1602 of the California Fish and Game Code for any activities within CDFW jurisdiction.

All permit applications shall demonstrate compliance with CEQA, and applicable fees shall be paid based on the extent of jurisdictional impacts and project costs. Copies of final permits and approvals shall be provided to the lead agency prior to initiation of construction activities. Compensatory mitigation for impacts would be determined during the formal notification process and shall be approved by the RWQCB and CDFW prior to work occurring. Mitigation is anticipated to include one or more of the following: restoration of the impacted feature on-site, payment of an in-lieu fee to an agency-approved mitigation bank, or acquisition of off-site lands that contain similar jurisdictional features that would be held in a restrictive deed in perpetuity.

BIO-3: Nesting Birds

If construction commences during the bird breeding season (February 1 through August 31), a pre-construction survey for nesting birds will be conducted by a qualified biologist within three days prior to construction activities. The survey will occur within all suitable nesting habitat within the project impact area and a 100-foot buffer where access is permitted. If nesting birds are found, an avoidance area will be established around the nest by the qualified biologist until it has been determined that the young have

fledged or nesting activities have ceased. The size of the avoidance buffer shall be determined by the qualified biologist based on the location of the nest and disturbance tolerance of the bird species. The project site shall be re-surveyed if there is a lapse in construction activities for more than seven days during the nesting season.

The proposed project, inclusive of mitigation measures outlined above, will mitigate potentially significant adverse impacts to biological resources. Please contact me at 949-330-4147 or Stephen.Anderson@mbakerintl.com with any questions you may have regarding the results and/or conclusions of this report.

Sincerely,

Stephen Anderson
Senior Biologist

Plant and Wildlife Species Compendiums

Wildlife
Birds
ACCIPITRIDAE—HAWKS, KITES, EAGLES, & ALLIES
Buteo jamaicensis—red-tailed hawk
CORVIDAE—CROWS & JAYS
Corvus brachyrhynchos—American crow
FRINGILLIDAE—FRINGILLINE & CARDUELINE FINCHES & ALLIES
Haemorhous mexicanus—house finch
COLUMBIDAE—PIGEONS & DOVES
Zenaida macroura—mourning dove
TYRANNIDAE—TYRANT FLYCATCHERS
Sayornis saya—Say's phoebe
Mammals
SCIURIDAE—SQUIRRELS
Otospermophilus beecheyi—California ground squirrel
CANIDAE—WOLVES & FOXES
Canis latrans—coyote
LEPORIDAE—HARES & RABBITS
Sylvilagus audubonii—desert cottontail
Reptiles
PHRYNOSOMATIDAE—IGUANID LIZARDS
Sceloporus occidentalis—western fence lizard

Plants – Vascular Species
EUDICOTS
ASTERACEAE—Sunflower Family
Ambrosia psilostachya—western ragweed
Encelia californica—California brittle bush
Erigeron canadensis—Canadian horseweed
Heterotheca grandiflora—telegraphweed
Lactuca serriola—prickly lettuce*
BRASSICACEAE—Mustard Family
Hirschfeldia incana—short podded mustard*
CACTACEAE—Cactus Family
Opuntia sp.—pricklypear
CHENOPODIACEAE—Goosefoot Family
Koelreuteria elegans—flamegold*
Salsola tragus—prickly Russian thistle*
CUCURBITACEAE—Gourd Family
Cucurbita palmata—coyote gourd
EUPHORBIACEAE—Spurge Family
Croton californicus—California croton

FABACEAE—Legume Family
Acmispon americanus—Spanish clover
GERANIACEAE—Geranium Family
Erodium cicutarium—redstem stork's bill*
MYRTACEAE—Myrtle Family
Eucalyptus sp.—eucalyptus
Melaleuca sp.—bottlebrush
NYCTAGINACEAE—Four O'clock Family
Mirabilis jalapa—marvel of Peru*
OLEACEAE—Olive Family
Fraxinus sp.—ash
POLYGONACEAE—Buckwheat Family
Eriogonum fasciculatum—California buckwheat
Eriogonum gracile—slender woolly buckwheat
SOLANACEAE—Nightshade Family
Datura wrightii—sacred thorn-apple
TAMARICACEAE—Tamarisk Family
Tamarix ramosissima—tamarisk*
VITACEAE—Grape Family
Vitis vinifera—wine grape*
MONOCOTS
CYPERACEAE—Sedge Family
Cyperus sp.—sedge
JUNCACEAE—Rush Family
Juncus acutus—spiny rush
POACEAE—Grass Family
Bromus diandrus—ripgut brome*

Special-Status Species Potential to Occur Tables

SPECIAL-STATUS PLANT SPECIES WITH POTENTIAL TO OCCUR IN STUDY AREA

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur in BSA
Abronia villosa var. *aurita*	chaparral sand-verbena	None/None/1B.1/BLM-S, USFS-S	Chaparral, Coastal scrub, Desert dunes; Sandy/annual herb/(Jan)Mar–Sep/245–5250	Not expected to occur. No suitable habitat is present.
Acanthoscyphus parishii var. *parishii*	Parish's oxytheca	None/None/4.2/None	Chaparral, Lower montane coniferous forest; Gravelly (sometimes), Sandy (sometimes)/annual herb/June–Sep/4005–8530	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Amaranthus watsonii	Watson's amaranth	None/None/4.3/None	Mojavean desert scrub, Sonoran desert scrub/annual herb/Apr–Sep/65–5580	Not expected to occur. No suitable habitat is present.
Ambrosia monogyra	singlewhorl burrobrush	None/None/2B.2/None	Chaparral, Sonoran desert scrub; Sandy/perennial shrub/Aug–Nov/35–1640	Not expected to occur. No suitable habitat is present.
Ambrosia pumila	San Diego ambrosia	FE/None/1B.1/None	Chaparral, Coastal scrub, Valley and foothill grassland, Vernal pools; Alkaline (sometimes), Clay (sometimes), Disturbed areas (often), Loam (sometimes), Sandy (sometimes)/perennial rhizomatous herb/Apr–Oct/65–1360	Not expected to occur. No suitable habitat is present.
Aphyllon validum var. *validum*	Rock Creek broomrape	None/None/1B.2/USFS-S	Chaparral, Pinyon and juniper woodland; Granitic/perennial herb (parasitic)/May–Sep/3380–6560	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Arctostaphylos glandulosa var. *gabrielensis*	San Gabriel manzanita	None/None/1B.2/USFS-S	Chaparral (rocky)/perennial evergreen shrub/Mar/1950–4920	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Arenaria paludicola	marsh sandwort	FE/SE/1B.1/None	Marshes and swamps (brackish, freshwater); Openings, Sandy/perennial stoloniferous herb/May–Aug/10–560	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Asplenium vespertinum	western spleenwort	None/None/4.2/None	Chaparral, Cismontane woodland, Coastal scrub; Rocky/perennial rhizomatous herb/Feb–June/590–3280	Not expected to occur. No suitable habitat is present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur in BSA
Astragalus bicristatus	crested milk-vetch	None/None/4.3/USFS-S	Lower montane coniferous forest, Upper montane coniferous forest; Carbonate (usually), Rocky (sometimes), Sandy (sometimes)/perennial herb/May–Aug/5580–9005	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Astragalus brauntonii	Braunton's milk-vetch	FE/None/1B.1/None	Chaparral, Coastal scrub, Valley and foothill grassland; Burned areas (sometimes), Carbonate, Disturbed areas (sometimes), Sandstone (usually)/perennial herb/Jan–Aug/15–2100	Not expected to occur. No suitable habitat is present.
Atriplex coulteri	Coulter's saltbush	None/None/1B.2/None	Coastal bluff scrub, Coastal dunes, Coastal scrub, Valley and foothill grassland; Alkaline (sometimes), Clay (sometimes)/perennial herb/Mar–Oct/10–1510	Not expected to occur. No suitable habitat is present.
Berberis nevinii	Nevin's barberry	FE/SE/1B.1/None	Chaparral, Cismontane woodland, Coastal scrub, Riparian scrub; Gravelly (sometimes), Sandy (sometimes)/perennial evergreen shrub/(Feb)Mar–June/230–2705	Not expected to occur. No suitable habitat is present.
Calochortus clavatus var. *gracilis*	slender mariposa-lily	None/None/1B.2/USFS-S	Chaparral, Coastal scrub, Valley and foothill grassland/perennial bulbiferous herb/Mar–June(Nov)/1050–3280	Not expected to occur. No suitable habitat is present.
Calochortus plummerae	Plummer's mariposa-lily	None/None/4.2/None	Chaparral, Cismontane woodland, Coastal scrub, Lower montane coniferous forest, Valley and foothill grassland; Granitic, Rocky/perennial bulbiferous herb/May–July/330–5580	Not expected to occur. No suitable habitat is present.
Calochortus weedii var. *intermedius*	intermediate mariposa-lily	None/None/1B.2/USFS-S	Chaparral, Coastal scrub, Valley and foothill grassland; Rocky/perennial bulbiferous herb/May–July/345–2805	Not expected to occur. No suitable habitat is present.
Calystegia felix	lucky morning-glory	None/None/1B.1/None	Meadows and seeps (sometimes alkaline), Riparian scrub (alluvial); Alkaline (sometimes), Loam (sometimes)/annual rhizomatous herb/Mar–Sep/100–705	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur in BSA
Camissoniopsis lewisii	Lewis' evening-primrose	None/None/3/None	Cismontane woodland, Coastal bluff scrub, Coastal dunes, Coastal scrub, Valley and foothill grassland; Clay (sometimes), Sandy (sometimes)/annual herb/Mar–May(June)/0–985	Not expected to occur. The study area is outside of the species' known elevation range.
Centromadia pungens var. *laevis*	smooth tarplant	None/None/1B.1/None	Chenopod scrub, Meadows and seeps, Playas, Riparian woodland, Valley and foothill grassland; Alkaline/annual herb/Apr–Sep/0–2100	Not expected to occur. No suitable habitat is present.
Chloropyron maritimum var. *maritimum*	salt marsh bird's-beak	FE/SE/1B.2/BLM-S	Coastal dunes, Marshes and swamps (coastal salt)/annual herb (hemiparasitic)/May–Oct(Nov)/0–100	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Chorizanthe leptotheca	Peninsular spineflower	None/None/4.2/None	Chaparral, Coastal scrub, Lower montane coniferous forest; Granitic/annual herb/May–Aug/985–6235	Not expected to occur. No suitable habitat is present.
Chorizanthe parryi var. *parryi*	Parry's spineflower	None/None/1B.1/BLM-S, USFS-S	Chaparral, Cismontane woodland, Coastal scrub, Valley and foothill grassland; Openings, Rocky (sometimes), Sandy (sometimes)/annual herb/Apr–June/900–4005	Not expected to occur. No suitable habitat is present.
Chorizanthe xanti var. *leucotheca*	white-bracted spineflower	None/None/1B.2/BLM-S, USFS-S	Coastal scrub (alluvial fans), Mojavean desert scrub, Pinyon and juniper woodland; Gravelly (sometimes), Sandy (sometimes)/annual herb/Apr–June/985–3935	Not expected to occur. No suitable habitat is present.
Cladium californicum	California saw-grass	None/None/2B.2/USFS-S	Marshes and swamps (alkaline, freshwater), Meadows and seeps/perennial rhizomatous herb/June–Sep/195–5250	Not expected to occur. No suitable habitat is present.
Claytonia peirsonii var. *peirsonii*	Peirson's spring beauty	None/None/1B.2/USFS-S	Subalpine coniferous forest, Upper montane coniferous forest; Granitic, Metamorphic, Scree, Talus/perennial herb/(Mar)May–June/4955–9005	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur in BSA
Convolvulus simulans	small-flowered morning-glory	None/None/4.2/None	Chaparral (openings), Coastal scrub, Valley and foothill grassland; Clay, Seeps, Serpentine/annual herb/Mar–July/100–2430	Not expected to occur. No suitable habitat is present.
Deinandra paniculata	paniculate tarplant	None/None/4.2/None	Coastal scrub, Valley and foothill grassland, Vernal pools; Sandy (sometimes), Vernally Mesic (usually)/annual herb/(Mar)Apr–Nov/80–3085	Not expected to occur. No suitable habitat is present.
Diplacus johnstonii	Johnston's monkeyflower	None/None/4.3/None	Lower montane coniferous forest (disturbed areas, gravelly, roadsides, rocky, scree)/annual herb/May–Aug/3200–9580	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Dodecahema leptoceras	slender-horned spineflower	FE/SE/1B.1/None	Chaparral, Cismontane woodland, Coastal scrub (alluvial fans); Sandy/annual herb/Apr–June/655–2495	Not expected to occur. No suitable habitat is present.
Dudleya multicaulis	many-stemmed dudleya	None/None/1B.2/USFS-S	Chaparral, Coastal scrub, Valley and foothill grassland; Clay (often)/perennial herb/Apr–July/50–2590	Not expected to occur. No suitable habitat is present.
Eriastrum densifolium var. *sanctorum*	Santa Ana River woollystar	FE/SE/1B.1/None	Chaparral, Coastal scrub (alluvial fans); Gravelly (sometimes), Sandy (sometimes)/perennial herb/Apr–Sep/300–2000	Not expected to occur. No suitable habitat is present.
Eriogonum microtheca var. *johnstonii*	Johnston's buckwheat	None/None/1B.3/USFS-S	Subalpine coniferous forest, Upper montane coniferous forest; Rocky/perennial deciduous shrub/July–Sep/6000–9600	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Eriogonum umbellatum var. *minus*	alpine sulfur-flowered buckwheat	None/None/4.3/None	Subalpine coniferous forest, Upper montane coniferous forest; Gravelly/perennial herb/June–Sep/5905–10065	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Eriophyllum lanatum var. *obovatum*	southern Sierra woolly sunflower	None/None/4.3/None	Lower montane coniferous forest, Upper montane coniferous forest; Loam, Sandy/perennial herb/June–July/3655–8205	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur in BSA
Fritillaria pinetorum	pine fritillary	None/None/4.3/None	Chaparral, Lower montane coniferous forest, Pinyon and juniper woodland, Subalpine coniferous forest, Upper montane coniferous forest; Granitic (sometimes), Metamorphic (sometimes)/perennial bulbiferous herb/May–July(Sep)/5695–10825	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Galium angustifolium var. *gabrielense*	San Antonio Canyon bedstraw	None/None/4.3/None	Chaparral, Lower montane coniferous forest; Granitic, Rocky (sometimes), Sandy (sometimes)/perennial herb/Apr–Aug/3935–8695	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Galium jepsonii	Jepson's bedstraw	None/None/4.3/None	Lower montane coniferous forest, Upper montane coniferous forest; Granitic, Gravelly (sometimes), Rocky (sometimes)/perennial rhizomatous herb/July–Aug/5055–8205	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Galium johnstonii	Johnston's bedstraw	None/None/4.3/None	Chaparral, Lower montane coniferous forest, Pinyon and juniper woodland, Riparian woodland/perennial herb/June–July/4005–7545	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Heuchera caespitosa	urn-flowered alumroot	None/None/4.3/USFS-S	Cismontane woodland, Lower montane coniferous forest, Riparian forest (montane), Upper montane coniferous forest; Rocky/perennial rhizomatous herb/May–Aug/3790–8695	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Hordeum intercedens	vernal barley	None/None/3.2/None	Coastal dunes, Coastal scrub, Valley and foothill grassland (depressions, saline flats), Vernal pools/annual herb/Mar–June/15–3280	Not expected to occur. No suitable habitat is present.
Horkelia cuneata var. *puberula*	mesa horkelia	None/None/1B.1/USFS-S	Chaparral (maritime), Cismontane woodland, Coastal scrub; Gravelly (sometimes), Sandy (sometimes)/perennial herb/Feb–July(Sep)/230–2660	Not expected to occur. No suitable habitat is present.
Juglans californica	Southern California black walnut	None/None/4.2/None	Chaparral, Cismontane woodland, Coastal scrub, Riparian woodland/perennial deciduous tree/Mar–Aug/165–2955	Not expected to occur. No suitable habitat is present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur in BSA
Juncus acutus var. *leopoldii*	southwestern spiny rush	None/None/4.2/None	Coastal dunes (mesic), Coastal scrub, Marshes and swamps (coastal salt), Meadows and seeps (alkaline seeps)/perennial rhizomatous herb/(Mar)May–June/10–2955	Not expected to occur. No suitable habitat is present.
Juncus duranii	Duran's rush	None/None/4.3/None	Lower montane coniferous forest, Meadows and seeps, Upper montane coniferous forest; Mesic/perennial rhizomatous herb/July–Aug/5800–9200	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Lasthenia glabrata var. *coulteri*	Coulter's goldfields	None/None/1B.1/BLM-S	Marshes and swamps (coastal salt), Playas, Vernal pools/annual herb/Feb–June/5–4005	Not expected to occur. No suitable habitat is present.
Lepechinia fragrans	fragrant pitcher sage	None/None/4.2/USFS-S	Chaparral/perennial shrub/Mar–Oct/65–4300	Not expected to occur. No suitable habitat is present.
Lepidium virginicum var. *robinsonii*	Robinson's pepper-grass	None/None/4.3/None	Chaparral, Coastal scrub/annual herb/Jan–July/5–2905	Not expected to occur. No suitable habitat is present.
Lilium humboldtii var. *ocellatum*	ocellated Humboldt lily	None/None/4.2/None	Chaparral, Cismontane woodland, Coastal scrub, Lower montane coniferous forest, Riparian woodland; Openings/perennial bulbiferous herb/Mar–July(Aug)/100–5905	Not expected to occur. No suitable habitat is present.
Lilium parryi	lemon lily	None/None/1B.2/USFS-S	Lower montane coniferous forest, Meadows and seeps, Riparian forest, Upper montane coniferous forest; Mesic/perennial bulbiferous herb/July–Aug/4005–9005	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Linanthus concinnus	San Gabriel linanthus	None/None/1B.2/USFS-S	Chaparral, Lower montane coniferous forest, Upper montane coniferous forest; Openings, Rocky/annual herb/Apr–July/4985–9185	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Lycium parishii	Parish's desert-thorn	None/None/2B.3/None	Coastal scrub, Sonoran desert scrub/perennial shrub/Mar–Apr/445–3280	Not expected to occur. No suitable habitat is present.
Malacothamnus parishii	Parish's bushmallow	None/None/1A/None	Chaparral, Coastal scrub/perennial deciduous shrub/June–July/1000–1495	Not expected to occur. No suitable habitat is present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur in BSA
Microseris douglasii var. *platycarpha*	small-flowered microseris	None/None/4.2/None	Cismontane woodland, Coastal scrub, Valley and foothill grassland, Vernal pools; Clay/annual herb/Mar–May/50–3510	Not expected to occur. No suitable habitat is present.
Monardella australis var. *jokerstii*	Jokerst's monardella	None/None/1B.1/USFS-S	Chaparral, Lower montane coniferous forest; Alluvial Terraces, Scree, Slopes, Talus, Washes/perennial rhizomatous herb/July–Sep/4430–5740	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Monardella breweri var. *glandulifera*	Brown's Flat monardella	None/None/1B.2/None	Chaparral, Lower montane coniferous forest; Dry, Openings/annual herb/May–Aug/4265–4920	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Monardella macrantha var. *hallii*	Hall's monardella	None/None/1B.3/USFS-S	Broadleafed upland forest, Chaparral, Cismontane woodland, Lower montane coniferous forest, Valley and foothill grassland/perennial rhizomatous herb/June–Oct/2395–7200	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Monardella pringlei	Pringle's monardella	None/None/1A/None	Coastal scrub (sandy)/annual herb/May–June/985–1310	Not expected to occur. No suitable habitat is present.
Monardella saxicola	rock monardella	None/None/4.2/USFS-S	Chaparral, Closed-cone coniferous forest, Lower montane coniferous forest; Rocky, Serpentine (usually)/perennial rhizomatous herb/June–Sep/1640–5905	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Monardella viridis	green monardella	None/None/4.3/None	Broadleafed upland forest, Chaparral, Cismontane woodland/perennial rhizomatous herb/June–Sep/330–3315	Not expected to occur. No suitable habitat is present.
Muhlenbergia californica	California muhly	None/None/4.3/None	Chaparral, Coastal scrub, Lower montane coniferous forest, Meadows and seeps; Mesic, Seeps, Streambanks/perennial rhizomatous herb/June–Sep/330–6560	Not expected to occur. No suitable habitat is present.
Muhlenbergia utilis	aparejo grass	None/None/2B.2/None	Chaparral, Cismontane woodland, Coastal scrub, Marshes and swamps, Meadows and seeps; Alkaline (sometimes), Serpentine (sometimes)/perennial rhizomatous herb/Mar–Oct/80–7630	Not expected to occur. No suitable habitat is present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur in BSA
Navarretia prostrata	prostrate vernal pool navarretia	None/None/1B.2/None	Coastal scrub, Meadows and seeps, Valley and foothill grassland (alkaline), Vernal pools; Mesic/annual herb/Apr–July/10–3970	Not expected to occur. No suitable habitat is present.
Opuntia basilaris var. *brachyclada*	short-joint beavertail	None/None/1B.2/BLM-S, USFS-S	Chaparral, Joshua tree "woodland", Mojavean desert scrub, Pinyon and juniper woodland/perennial stem/Apr–June(Aug)/1395–5905	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Oreonana vestita	woolly mountain-parsley	None/None/1B.3/BLM-S, USFS-S	Lower montane coniferous forest, Subalpine coniferous forest, Upper montane coniferous forest; Gravelly (sometimes), Talus (sometimes)/perennial herb/Mar–Sep/5300–11485	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Phacelia mohavensis	Mojave phacelia	None/None/4.3/None	Cismontane woodland, Lower montane coniferous forest, Meadows and seeps, Pinyon and juniper woodland; Gravelly (sometimes), Sandy (sometimes)/annual herb/Apr–Aug/4595–8205	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Phacelia stellaris	Brand's star phacelia	None/None/1B.1/None	Coastal dunes, Coastal scrub/annual herb/Mar–June/5–1310	Not expected to occur. No suitable habitat is present.
Pseudognaphalium leucocephalum	white rabbit-tobacco	None/None/2B.2/None	Chaparral, Cismontane woodland, Coastal scrub, Riparian woodland; Gravelly, Sandy/perennial herb/(July)Aug–Nov(Dec)/0–6890	Not expected to occur. No suitable habitat is present.
Quercus durata var. *gabrielensis*	San Gabriel oak	None/None/4.2/None	Chaparral, Cismontane woodland/perennial evergreen shrub/Apr–May/1475–3280	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Romneya coulteri	Coulter's matilija poppy	None/None/4.2/None	Chaparral, Coastal scrub; Burned areas (often)/perennial rhizomatous herb/Mar–July(Aug)/65–3935	Not expected to occur. No suitable habitat is present.
Sagittaria sanfordii	Sanford's arrowhead	None/None/1B.2/BLM-S	Marshes and swamps (shallow freshwater)/perennial rhizomatous herb (emergent)/May–Oct(Nov)/0–2135	Not expected to occur. No suitable habitat is present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur in BSA
Senecio aphanactis	chaparral ragwort	None/None/2B.2/None	Chaparral, Cismontane woodland, Coastal scrub; Alkaline (sometimes)/annual herb/Jan–Apr(May)/50–2625	Not expected to occur. No suitable habitat is present.
Senecio astephanus	San Gabriel ragwort	None/None/4.3/None	Chaparral, Coastal scrub; Rocky, Slopes/perennial herb/May–July/1310–4920	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Sidalcea neomexicana	salt spring checkerbloom	None/None/2B.2/USFS-S	Chaparral, Coastal scrub, Lower montane coniferous forest, Mojavean desert scrub, Playas; Alkaline, Mesic/perennial herb/Mar–June/50–5020	Not expected to occur. No suitable habitat is present.
Sidotheca caryophylloides	chickweed oxytheca	None/None/4.3/USFS-S	Lower montane coniferous forest (sandy)/annual herb/July–Sep(Oct)/3655–8530	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Sphenopholis obtusata	prairie wedge grass	None/None/2B.2/None	Cismontane woodland, Meadows and seeps; Mesic/perennial herb/Apr–July/985–6560	Not expected to occur. No suitable habitat is present.
Streptanthus bernardinus	Laguna Mountains jewelflower	None/None/4.3/None	Chaparral, Lower montane coniferous forest/perennial herb/May–Aug/2200–8205	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Symphyotrichum defoliatum	San Bernardino aster	None/None/1B.2/USFS-S	Cismontane woodland, Coastal scrub, Lower montane coniferous forest, Marshes and swamps, Meadows and seeps, Valley and foothill grassland (vernally mesic); Streambanks/perennial rhizomatous herb/July–Nov/5–6695	Not expected to occur. No suitable habitat is present.
Symphyotrichum greatae	Greata's aster	None/None/1B.3/None	Broadleafed upland forest, Chaparral, Cismontane woodland, Lower montane coniferous forest, Riparian woodland; Mesic/perennial rhizomatous herb/June–Oct/985–6595	Not expected to occur. No suitable habitat is present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats/ Life Form/ Blooming Period/ Elevation Range (feet)	Potential to Occur in BSA
Thysanocarpus rigidus	rigid fringepod	None/None/1B.2/USFS-S	Pinyon and juniper woodland; Dry, Rocky, Slopes/annual herb/Feb–May/1970–7220	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.
Viola pinetorum var. *grisea*	grey-leaved violet	None/None/1B.2/BLM-S	Meadows and seeps, Subalpine coniferous forest, Upper montane coniferous forest/perennial herb/Apr–July/4920–11155	Not expected to occur. The study area is outside of the species' known elevation range, and there is no suitable habitat present.

Status Legend:

Federal
FE: Federally listed as endangered
FT: Federally listed as threatened
FPE: Federally proposed for listing as endangered
FPT: Federally proposed for listing as threatened
FC: Federal candidate species (former Category 1 candidates)
None: No federal listing
FDL: Delisted

State
SE: State listed as endangered
ST: State listed as threatened
SR: State rare
SCE: State candidate for listing as endangered
SCT: State candidate for listing as threatened
None: No state listing
SDL: State delisting

California Rare Plant Rank (CRPR)
CRPR 1A: Plants presumed extirpated in California and either rare or extinct elsewhere
CRPR 1B: Plants rare, threatened, or endangered in California and elsewhere
CRPR 2A: Plants presumed extirpated in California but common elsewhere
CRPR 2B: Plants rare, threatened, or endangered in California but more common elsewhere
CRPR 3: Review List: Plants about which more information is needed
CRPR 4: Watch List: Plants of limited distribution
.1 Seriously threatened in California (over 80% of occurrences threatened / high degree and immediacy of threat)
.2 Moderately threatened in California (20–80% occurrences threatened / moderate degree and immediacy of threat)
.3 Not very threatened in California (<20% of occurrences threatened / low degree and immediacy of threat or no current threats known)

SPECIAL-STATUS ANIMAL SPECIES WITH POTENTIAL TO OCCUR IN STUDY AREA

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats	Potential to Occur in BSA
Amphibians				
Anaxyrus californicus	arroyo toad	FE / None / CDFW-SSC	Desert wash | Riparian scrub | Riparian woodland | South coast flowing waters | South coast standing waters; Semi-arid regions near washes or intermittent streams, including valley-foothill and desert riparian, desert wash, etc.	Not expected to occur. No suitable habitat is present.
Batrachoseps gabrieli	San Gabriel slender salamander	None / None / USFS-S	Talus slope; Known only from the San Gabriel Mtns. Found under rocks, wood, and fern fronds, and on soil at the base of talus slopes.	Not expected to occur. No suitable habitat is present.
Rana boylii pop. 6	foothill yellow-legged frog - south coast DPS	FE / SE / BLM-S, USFS-S	Aquatic | Riparian forest | Riparian scrub | Riparian woodland | South coast flowing waters; Southern Coast Ranges from Monterey Bay south through San Gabriel Mountains; west of the Salinas River in Monterey Co, south through Transverse Ranges, and east through San Gabriel Mountains. Historically may have ranged to Baja California.	Not expected to occur. No suitable habitat is present.
Rana muscosa	southern mountain yellow-legged frog	FE / SE / USFS-S	Aquatic; Disjunct populations known from southern Sierras (northern DPS) and San Gabriel, San Bernardino, and San Jacinto Mtns (southern DPS). Found at 1,000 to 12,000 ft in lakes and creeks that stem from springs and snowmelt. May overwinter under frozen lakes.	Not expected to occur. No suitable habitat is present.
Spea hammondii	western spadefoot	FPT / None / BLM-S, CDFW-SSC	Cismontane woodland | Coastal scrub | Valley & foothill grassland | Vernal pool | Wetland; Occurs primarily in grassland habitats, but can be found in valley-foothill hardwood woodlands.	Not expected to occur. No suitable habitat is present.
Taricha torosa	Coast Range newt	None / None / CDFW-SSC	Wet forests, oak forests, chaparral, and rolling grassland; Coastal drainages from Mendocino County to San Diego County.	Not expected to occur. No suitable habitat is present.
Birds				
Agelaius tricolor	tricolored blackbird	None / ST / BLM-S, CDFW-SSC	Freshwater marsh | Marsh & swamp | Swamp | Wetland; Highly colonial species, most numerous in Central Valley and vicinity. Largely endemic to California.	Not expected to occur. No suitable habitat is present.
Ammodramus savannarum	grasshopper sparrow	None / None / CDFW-SSC	Valley & foothill grassland; Dense grasslands on rolling hills, lowland plains, in valleys and on hillsides on lower mountain slopes.	Not expected to occur. No suitable habitat is present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats	Potential to Occur in BSA
Aquila chrysaetos	golden eagle	None / None / BLM-S, CDFW-FP	Broadleaved upland forest | Cismontane woodland | Coastal prairie | Great Basin grassland | Great Basin scrub | Lower montane coniferous forest | Pinon & juniper woodlands | Upper montane coniferous forest | Valley & foothill grassland; Rolling foothills, mountain areas, sage-juniper flats, and desert.	Golden eagle may be observed flying over the project site; however, is not expected to forage or nest onsite due to the lack of suitable habitat.
Asio otus	long-eared owl	None / None / CDFW-SSC	Cismontane woodland | Great Basin scrub | Riparian forest | Riparian woodland | Upper montane coniferous forest; Riparian bottomlands grown to tall willows and cottonwoods; also, belts of live oak paralleling stream courses.	Not expected to occur. No suitable habitat is present.
Athene cunicularia	burrowing owl	None / SCE / BLM-S, CDFW-SSC	Coastal prairie | Coastal scrub | Great Basin grassland | Great Basin scrub | Mojavean desert scrub | Sonoran desert scrub | Valley & foothill grassland; Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation.	Moderate potential to occur. Burrowing owls are known to occur in the area. Although no suitable burrows were observed onsite, burrowing owls may use the project site for foraging.
Buteo swainsoni	Swainson's hawk	None / ST / BLM-S	Great Basin grassland | Riparian forest | Riparian woodland | Valley & foothill grassland; Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranch lands with groves or lines of trees.	Swainson's hawk may be observed flying over the project site; however, they are not expected to forage or nest onsite due to the lack of suitable habitat.
Campylorhynchus brunneicapillus sandiegensis	coastal cactus wren	None / None / CDFW-SSC, USFS-S	Coastal scrub; Southern California coastal sage scrub.	Not expected to occur. No suitable habitat is present.
Coccyzus americanus occidentalis	western yellow-billed cuckoo	FT / SE / BLM-S, USFS-S	Riparian forest; Riparian forest nester, along the broad, lower flood-bottoms of larger river systems.	Not expected to occur. No suitable habitat is present.
Coturnicops noveboracensis	yellow rail	None / None / CDFW-SSC, USFS-S	Freshwater marsh | Meadow & seep; Summer resident in eastern Sierra Nevada in Mono County.	Not expected to occur. No suitable habitat is present.
Cypseloides niger	black swift	None / None / CDFW-SSC	Nests in moist crevices, caves, and cliffs behind or adjacent to waterfalls in deep canyons; forages over a wide range of habitats; Coastal belt of Santa Cruz and Monterey counties; central and southern Sierra Nevada; San Bernardino and San Jacinto mountains.	Not expected to occur. No suitable habitat is present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats	Potential to Occur in BSA
Elanus leucurus	white-tailed kite	None / None / BLM-S, CDFW-FP	Cismontane woodland | Marsh & swamp | Riparian woodland | Valley & foothill grassland | Wetland; Rolling foothills and valley margins with scattered oaks and river bottomlands or marshes next to deciduous woodland.	White-tailed kite may be observed flying over the project site; however, they are not expected to forage or nest onsite due to the lack of suitable habitat.
Empidonax traillii extimus	southwestern willow flycatcher	FE / SE / None	Riparian woodland; Riparian woodlands in Southern California.	Not expected to occur. No suitable habitat is present.
Icteria virens	yellow-breasted chat	None / None / CDFW-SSC	Riparian forest | Riparian scrub | Riparian woodland; Summer resident; inhabits riparian thickets of willow and other brushy tangles near watercourses.	Not expected to occur. No suitable habitat is present.
Laterallus jamaicensis coturniculus	California black rail	None / ST / BLM-S, CDFW-FP	Brackish marsh | Freshwater marsh | Marsh & swamp | Salt marsh | Wetland; Inhabits freshwater marshes, wet meadows and shallow margins of saltwater marshes bordering larger bays.	Not expected to occur. No suitable habitat is present.
Polioptila californica californica	coastal California gnatcatcher	FT / None / CDFW-SSC	Coastal bluff scrub | Coastal scrub; Obligate, permanent resident of coastal sage scrub below 2500 ft in Southern California.	Not expected to occur. No suitable habitat is present. The California buckwheat scrub onsite is disturbed; the shrubs are very low-growing and appear to have been mowed in the past. The shrubs are not tall enough to be suitable habitat for coastal California gnatcatcher.
Setophaga petechia	yellow warbler	None / None / CDFW-SSC	Riparian forest | Riparian scrub | Riparian woodland; Riparian plant associations in close proximity to water. Also nests in montane shrubbery in open conifer forests in Cascades and Sierra Nevada.	Not expected to occur. No suitable habitat is present.
Vireo bellii pusillus	least Bell's vireo	FE / SE / None	Riparian forest | Riparian scrub | Riparian woodland; Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 2000 ft.	Not expected to occur. No suitable habitat is present.
Fishes				
Catostomus santaanae	Santa Ana sucker	FT / None / CDFW-SSC	Aquatic | South coast flowing waters; Endemic to Los Angeles Basin south coastal streams.	Not expected to occur. No suitable habitat is present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats	Potential to Occur in BSA
Gila orcuttii	arroyo chub	None / None / CDFW-SSC, USFS-S	Aquatic | South coast flowing waters; Native to streams from Malibu Creek to San Luis Rey River basin. Introduced into streams in Santa Clara, Ventura, Santa Ynez, Mojave and San Diego river basins.	Not expected to occur. No suitable habitat is present.
Oncorhynchus mykiss irideus pop. 10	steelhead - southern California DPS	FE / SCE / None	Aquatic | South coast flowing waters; Federal listing refers to populations from Santa Maria River south to southern extent of range (San Mateo Creek in San Diego County).	Not expected to occur. No suitable habitat is present.
Rhinichthys gabrielino	Santa Ana speckled dace	FPT / None / CDFW-SSC, USFS-S	Aquatic | South coast flowing waters; Headwaters of the Santa Ana and San Gabriel rivers. May be extirpated from the Los Angeles River system.	Not expected to occur. No suitable habitat is present.
Invertebrates				
Bombus crotchii	Crotch's bumble bee	None / SCE / None	Open grassland and scrub communities supporting suitable floral resources. Coastal California east to the Sierra-Cascade crest and south into Mexico.	Not expected to occur due to the disturbed nature of the site and dominance of weedy species such as Russian thistle (*Salsola tragus*), common Mediterranean grass (*Schismus barbatus*), and short podded mustard (*Hirschfeldia incana*).
Callophrys mossii hidakupa	San Gabriel Mountains elfin butterfly	None / None / USFS-S	Lower montane coniferous forest; San Gabriel and San Bernardino mountains at elevations of 3,000 to approximately 5,500 ft.	Not expected to occur. No suitable habitat is present, and the project site is outside of the known elevation range of this species.
Danaus plexippus plexippus	monarch - California overwintering population	FPT / None / USFS-S	Closed-cone coniferous forest; Winter roost sites extend along the coast from northern Mendocino to Baja California, Mexico.	Monarchs may fly through the project site; however, they are not expected to breed or overwinter due to the lack of suitable habitat. No milkweed species were detected onsite to support breeding monarchs and the project site. Foraging habitat is limited since the project site is dominated by weedy species such as Russian thistle, common Mediterranean grass, and short podded mustard.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats	Potential to Occur in BSA
Euphydryas editha quino	quino checkerspot butterfly	FE / None / None	Chaparral | Coastal scrub; Sunny openings within chaparral and coastal sage shrublands in parts of Riverside and San Diego counties.	Not expected to occur. No suitable habitat is present and the project site is outside of the known geographic range of this species.
Rhaphiomidas terminatus abdominalis	Delhi Sands flower-loving fly	FE / None / None	Interior dunes; Found only in areas of the Delhi Sands formation in southwestern San Bernardino and northwestern Riverside counties.	Not expected to occur. No suitable habitat is present. The project site supports one soil type, Tujunga loamy sand. No Delhi sands occur onsite.
Mammals				
Antrozous pallidus	pallid bat	None / None / BLM-S, CDFW-SSC, USFS-S	Chaparral | Coastal scrub | Desert wash | Great Basin grassland | Great Basin scrub | Mojavean desert scrub | Riparian woodland | Sonoran desert scrub | Upper montane coniferous forest | Valley & foothill grassland; Deserts, grasslands, shrublands, woodlands and forests. Most common in open, dry habitats with rocky areas for roosting.	Not expected to occur. No suitable habitat is present.
Chaetodipus fallax fallax	northwestern San Diego pocket mouse	None / None / CDFW-SSC	Chaparral | Coastal scrub; Coastal scrub, chaparral, grasslands, sagebrush, etc. in western San Diego, Riverside, San Bernardino, and Los Angeles Counties, inclusive of Orange County.	Not expected to occur. No suitable habitat is present.
Chaetodipus fallax pallidus	pallid San Diego pocket mouse	None / None / CDFW-SSC	Desert wash | Pinon & juniper woodlands | Sonoran desert scrub; Desert border areas of San Diego, Riverside, San Bernardino, and Los Angeles counties in desert wash, desert scrub, desert succulent scrub, pinyon-juniper, etc.	Not expected to occur. No suitable habitat is present.
Dipodomys merriami parvus	San Bernardino kangaroo rat	FE / SE / CDFW-SSC	Coastal scrub; Alluvial scrub vegetation on sandy loam substrates characteristic of alluvial fans and flood plains.	Not expected to occur. No suitable habitat is present.
Dipodomys stephensi	Stephens' kangaroo rat	FT / ST / None	Coastal scrub | Valley & foothill grassland; Primarily annual and perennial grasslands, but also occurs in coastal scrub and sagebrush with sparse canopy cover.	Not expected to occur. No suitable habitat is present.
Eumops perotis californicus	western mastiff bat	None / None / BLM-S, CDFW-SSC	Chaparral | Cismontane woodland | Coastal scrub | Valley & foothill grassland; Many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, chaparral, etc.	Not expected to occur. No suitable habitat is present.
Lasiurus xanthinus	western yellow bat	None / None / CDFW-SSC	Desert wash; Found in valley foothill riparian, desert riparian, desert wash, and palm oasis habitats.	Not expected to occur. No suitable habitat is present.
Neotoma lepida intermedia	San Diego desert woodrat	None / None / CDFW-SSC	Coastal scrub; Coastal scrub of Southern California from San Diego County to San Luis Obispo County.	Not expected to occur. No suitable habitat is present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats	Potential to Occur in BSA
Nyctinomops femorosaccus	pocketed free-tailed bat	None / None / CDFW-SSC	Joshua tree woodland | Pinon & juniper woodlands | Riparian scrub | Sonoran desert scrub; Variety of arid areas in Southern California; pine-juniper woodlands, desert scrub, palm oasis, desert wash, desert riparian, etc.	Not expected to occur. No suitable habitat is present.
Nyctinomops macrotis	big free-tailed bat	None / None / CDFW-SSC	Rocky areas; roosts in caves, holes in trees, buildings, and crevices on cliffs and rocky outcrops; forages over water ; Low-lying arid areas in Southern California.	Not expected to occur. No suitable habitat is present.
Ovis canadensis nelsoni	desert bighorn sheep	None / None / BLM-S, CDFW-FP, USFS-S	Alpine | Alpine dwarf scrub | Chaparral | Chenopod scrub | Great Basin scrub | Mojavean desert scrub | Montane dwarf scrub | Pinon & juniper woodlands | Riparian woodland | Sonoran desert scrub; Widely distributed from the White Mtns in Mono Co. to the Chocolate Mts in Imperial Co.	Not expected to occur. No suitable habitat is present.
Perognathus longimembris brevinasus	Los Angeles pocket mouse	None / None / CDFW-SSC	Coastal scrub; Lower elevation grasslands and coastal sage communities in and around the Los Angeles Basin.	Not expected to occur. No suitable habitat is present.
Reptiles				
Actinemys pallida	southwestern pond turtle	FPT / None / BLM-S, CDFW-SSC, USFS-S	Freshwater environments such as ponds, lakes, reservoirs, and slow-moving streams with abundant aquatic vegetation, typically in low to mid-elevation areas.	Not expected to occur. No suitable habitat is present.
Anniella stebbinsi	Southern California legless lizard	None / None / CDFW-SSC, USFS-S	Broadleaved upland forest | Chaparral | Coastal dunes | Coastal scrub; Generally south of the Transverse Range, extending to northwestern Baja California. Occurs in sandy or loose loamy soils under sparse vegetation. Disjunct populations in the Tehachapi and Piute Mountains in Kern County.	Not expected to occur. No suitable habitat is present.
Arizona elegans occidentalis	California glossy snake	None / None / CDFW-SSC	Arid scrub, rocky washes, grasslands, chaparral, open areas with loose soil; Patchily distributed from the eastern portion of San Francisco Bay, southern San Joaquin Valley, and the Coast, Transverse, and Peninsular ranges, south to Baja California.	Not expected to occur. No suitable habitat is present.
Aspidoscelis hyperythra	orange-throated whiptail	None / None / USFS-S	Chaparral | Cismontane woodland | Coastal scrub; Inhabits low-elevation coastal scrub, chaparral, and valley-foothill hardwood habitats.	Not expected to occur. No suitable habitat is present, and the project site is outside of the known geographic range of this species.
Aspidoscelis tigris stejnegeri	coastal whiptail	None / None / CDFW-SSC	Hot and dry areas with sparse foliage, including chaparral, woodland, and riparian areas.; Found in deserts and semi-arid areas with sparse vegetation and open areas. Also found in woodland and riparian areas.	Not expected to occur. No suitable habitat is present.

Scientific Name	Common Name	Status (Federal/State/Other)	Habitats	Potential to Occur in BSA
Coleonyx variegatus abbotti	San Diego banded gecko	None / None / CDFW-SSC	Chaparral | Coastal scrub; Coastal and cismontane Southern California.	Not expected to occur. No suitable habitat is present, and the project site is outside of the known geographic range of this species.
Crotalus ruber	red-diamond rattlesnake	None / None / CDFW-SSC, USFS-S	Chaparral | Mojavean desert scrub | Sonoran desert scrub; Chaparral, woodland, grassland, and desert areas from coastal San Diego County to the eastern slopes of the mountains.	Not expected to occur. No suitable habitat is present, and the project site is north of the northern edge of this species' range.
Phrynosoma blainvillii	coast horned lizard	None / None / BLM-S, CDFW-SSC	Chaparral | Cismontane woodland | Coastal bluff scrub | Coastal scrub | Desert wash | Pinon & juniper woodlands | Riparian scrub | Riparian woodland | Valley & foothill grassland; Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes.	Not expected to occur. No suitable habitat is present.
Thamnophis hammondii	two-striped gartersnake	None / None / BLM-S, CDFW-SSC, USFS-S	Marsh & swamp | Riparian scrub | Riparian woodland | Wetland; Coastal California from vicinity of Salinas to northwest Baja California. From sea to about 7,000 ft elevation.	Not expected to occur. No suitable habitat is present.
Thamnophis sirtalis pop. 1	south coast gartersnake	None / None / CDFW-SSC	Artificial standing waters | Marsh & swamp | Riparian scrub | Riparian woodland | South coast flowing waters | South coast standing waters | Wetland; Southern California coastal plain from Ventura County to San Diego County, and from sea level to about 850 m.	Not expected to occur. No suitable habitat is present.

Executive Summary

Michael Baker International (Michael Baker) prepared the Aquatic Resources Delineation Report for the proposed Meredith International Centre Specific Plan Amendment Project (project or project site), located in the City of Ontario, San Bernardino County, California.

This report documents all aquatic features identified by Michael Baker within the project site that are potentially subject to the following jurisdictions:

- U.S. Army Corps of Engineers (USACE) pursuant to Section 404 of the Federal Clean Water Act (CWA) and Section 10 of the Rivers and Harbors Act,
- Regional Water Quality Control Board (RWQCB) pursuant to Section 401 of the CWA and/or Section 13263 of the California Porter-Cologne Water Quality Control Act (Porter-Cologne Act), and
- California Department of Fish and Wildlife (CDFW) pursuant to Sections 1600 et seq. of the California Fish and Game Code (CFGC).

Michael Baker identified state and federal jurisdictional areas within the project site, following the most recent, acceptable guidelines for conducting a jurisdictional delineation in this region. Table ES-1 summarizes the total jurisdiction for each regulatory agency; however, only the regulatory agencies can make a final determination of jurisdictional limits.

TABLE ES-1. JURISDICTIONAL LIMITS WITHIN THE PROJECT SITE

Aquatic Feature	Latitude/Longitude	Jurisdictional Limits							
		USACE		RWQCB		CDFW			Linear Feet
		Wetland	Non-wetland	Wetland	Non-wetland	Unvegetated Streambed	Vegetated Streambed	Associated Riparian	
AF-1	34.069418°/-117.594853°	--	--	--	0.03	--	0.15	--	532
Total		**--**	**--**	**--**	**0.03**	**--**	**0.15**	**--**	**532**

The lone aquatic feature onsite (AF-1) is non-wetland and ephemeral, meaning that it would fall outside of the jurisdictional authority of the USACE, however it would be subject to the jurisdictional authority of the RWQCB and CDFW. Under this scenario, AF-1 would require applicable permits/authorizations be in place prior to the commencement of project construction. Based on a detailed review of current site conditions and project design plans, the following regulatory permits/authorizations would be required:

1. Approved Jurisdictional Determination or similar approval from the USACE to formally receive concurrence that the ephemeral aquatic feature within the project site meet the current definition of waters of the U.S. (*Revised Definition of "Waters of the United States"; Conforming*, September 8, 2023) and, therefore, is not subject to regulation under Section 404 of the CWA;

2. RWQCB Waste Discharge Requirements (Porter-Cologne Act) for impacts associated with the placement of dredge and/or fill material into Waters of the State; and,

3. CFGC Section 1602 Lake or Streambed Alteration Agreement for impacts occurring to waters of the State comprised of CDFW jurisdictional streambed and associated riparian areas.

WQC..... Water Quality Certification

Michael Baker
INTERNATIONAL

Section 1. Introduction

On behalf of the City of Ontario, Michael Baker International (Michael Baker) prepared this Aquatic Resources Delineation Report to describe, map, and quantify aquatic and other aquatic features located within the proposed project site.

This report describes the regulatory setting, methodologies, and results of the jurisdictional delineation. This report presents Michael Baker's best professional determination of the jurisdictional boundaries using the most up-to-date regulations, written policy, and guidance from the regulatory agencies; however, only the regulatory agencies can make a final determination of jurisdictional limits.

1.1 Project Location

The 25.8-acre project site is currently a vacant lot located within the City of Ontario, San Bernardino County, California (Attachment A, Figure 1, Regional Vicinity). The project site is generally bound by Inland Empire Boulevard to the north, N Archibald Avenue to the east, Interstate 10 (I-10) to the south, and a concrete-lined channel to the west (Deer Creek and Cucamonga Creek), and is within Section 22 of Township 01 South, Range 7 West, of the *Guasti, California* 7.5-minute United States Geological Survey (USGS) topographic quadrangle map (Attachment A, Figure 2, Site Vicinity). Beyond the identified roadways, the project site is surrounded by residential development to the north, commercial development to the east and south, and commercial development to the west.

1.2 Project Description

The project proposes a Mixed-Use Overlay across Planning Area 3 to allow for up to 40,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units in addition to the uses permitted under the site's Urban Commercial designation (i.e., up to 400 hotel rooms and 250,000 square feet of commercial uses; a total buildout of 480,000 square feet) (Attachment A, Figure 3, *Project Site*).

Section 2. Regulations

Three agencies regulate activities within inland streams, wetlands, and riparian areas in California. The U.S. Army Corps of Engineers (USACE) Regulatory Division regulates activities pursuant to Section 404 of the Federal Clean Water Act (CWA). The California Department of Fish and Wildlife (CDFW) regulates activities under Sections 1600 *et seq.* of the California Fish and Game Code (CFGC), and the Regional Water Quality Control Board (RWQCB) regulates activities pursuant to Section 401 of the CWA and/or Section 13263 of the California Porter-Cologne Water Quality Control Act (Porter-Cologne Act).

2.1 U.S. Army Corps of Engineers

Since 1972, the USACE and U.S. Environmental Protection Agency (EPA) jointly regulate discharges of dredged or fill material into "waters of the U.S.", including wetland and non-wetland aquatic features, pursuant to Section 404 of the CWA. Section 404 is founded on the findings of a direct connection between the aquatic feature in question and interstate commerce via Relatively Permanent Waters (RPW), and ultimately Traditional Navigable Waters (TNW), through direct or indirect connection as defined by USACE regulations. On September 8, 2023, the EPA and the USACE published the *Revised Definition of "Waters of the United States"; Conforming* (Revised Definition) in the Federal Register to define waters of the U.S., at which point the final rule became effective across the nation including the state of California. Under the revised definition, waters of the U.S. are defined as:[1]

(1) Waters which are:

(i) Currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;

(ii) The territorial seas; or

(iii) Interstate waters;

(2) Impoundments of waters otherwise defined as waters of the United States under this definition, other than impoundments of waters identified under paragraph (a)(5) of this section;

(3) Tributaries of waters identified in paragraph (a)(1) or (2) of this section that are relatively permanent, standing or continuously flowing bodies of water;

(4) Wetlands adjacent to the following waters:

(i) Waters identified in paragraph (a)(1) of this section; or

[1] 40 CFR 120.2(a)

(ii) Relatively permanent, standing or continuously flowing bodies of water identified in paragraph (a)(2) or (a)(3) of this section and with a continuous surface connection to those waters;

(5) Intrastate lakes and ponds, streams, or wetlands not identified in paragraphs (a)(1) through (4) of this section that are relatively permanent, standing or continuously flowing bodies of water with a continuous surface connection to the waters identified in paragraph (a)(1) or (a)(3) of this section.

2.2 Regional Water Quality Control Board

Applicants for a federal license or permit for activities that may discharge to waters of the U.S. must seek a Water Quality Certification (WQC) from the State or Indian tribe with jurisdiction.[2] In California, there are nine (9) Regional Boards that issue or deny WQCs for discharges within their geographical jurisdiction. The WQC is based on a finding that the discharge will meet water quality standards, which are defined as numeric and narrative objectives in each Regional Board's Basin Plan, and other applicable requirements. The State Water Resources Control Board has this responsibility for projects affecting waters within multiple RWQCBs. The RWQCB's jurisdiction extends to all waters of the U.S., including wetlands, and to non-federal waters of the State (described below).

The Porter-Cologne Act gives the State broad authority to regulate waters of the State, which are defined as any surface water or groundwater, including saline waters. The Porter-Cologne Act has become an important regulatory tool following the recent redefinition of waters of the U.S. with respect to the State's authority over isolated non-federal waters. Generally, any entity proposing to discharge waste into waters of the State must file a Report of Waste Discharge. Although "waste" is partially defined as any waste substance associated with human habitation, the RWQCB also interprets waste to include the discharge of fill material into water bodies.

On April 2, 2019, the State Water Resources Control Board adopted a *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (Procedures), for inclusion in the forthcoming *Water Quality Control Plan for Inland Surface Waters and Enclosed Bays and Estuaries and Ocean Waters of California*. The Procedures consist of four major elements:

1. A wetland definition;

2. A framework for determining if a feature that meets the wetland definition is a water of the State;

3. Wetland delineation procedures; and

4. Procedures for the submittal, review, and approval of applications for WQCs and Waste Discharge Requirements for dredge or fill activities.

[2] Title 33, United States Code, Section 1341; Clean Water Act Section.

The Procedures became effective May 28, 2020.

2.3 California Department of Fish and Wildlife

Sections 1600 *et seq.* of the CFGC establish a fee-based process to ensure that projects conducted in and around lakes, rivers, or streams do not adversely affect fish and wildlife resources, or when adverse impacts cannot be avoided, to ensure that adequate mitigation and/or compensation is provided.

Section 1602 of the CFGC requires any person, State, or local governmental agency or public utility to notify CDFW before beginning any activity that will do one or more of the following:

(1) substantially obstruct or divert the natural flow of a river, stream, or lake;

(2) substantially change or use any material from the bed, channel, or bank of a river, stream, or lake; or

(3) deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it can pass into a river, stream, or lake.

This applies to all perennial, intermittent, and ephemeral rivers, streams, and lakes in the State, including the maintenance of existing drain culverts, outfalls, and other structures. Notification to CDFW under the Lake or Streambed Alteration Program is generally required when an activity occurs within the top of active banks or outer extent of the canopy/dripline of any associated riparian vegetation, if present.

Section 3. Methods

The analysis in this report is supported by site reconnaissance conducted by Michael Baker on August 5, 2025. The field delineation aimed to verify the jurisdictional limits of waters of the U.S. and waters of the State (including potential wetlands) located within the boundaries of the project site. While in the field, Michael Baker recorded jurisdictional features on an aerial base map at a scale of 1" = 100' using topographic contours and visible landmarks as guidelines. Data points were obtained with a Garmin Map62 Global Positioning System to record and identify specific widths for ordinary high-water mark (OHWM) indicators and the locations of photographs, soil points, and other pertinent jurisdictional features, if present. These data were then transferred as a .shp file and added to the report's jurisdictional exhibits. The jurisdictional exhibits were prepared using ESRI ArcMap Version 10 software and comply with the *USACE Minimum Standards for Acceptance of Aquatic Resource Delineations*, dated January 2016.

3.1 U.S. Army Corps of Engineers

3.1.1 Non-wetland Water of the U.S.

The limits of USACE jurisdiction in non-tidal waters extend to the OHWM, which is defined as *"...that line on the shore established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas."* An OHWM can be determined by the observation of a natural line impressed on the bank; shelving; changes in the character of the soil; destruction of terrestrial vegetation; presence of litter and debris; wracking; vegetation matted down, bent, or absent; sediment sorting; leaf litter disturbed or washed away; scour; deposition; multiple observed flow events; bed and banks; water staining; and/or change in plant community.[3]

3.1.2 Wetland Waters of the U.S.

Michael Baker used the methods outlined in the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region, Version 2.0* (Regional Supplement; USACE, 2008) to delineate the limits of USACE jurisdictional wetlands. The Regional Supplement is part of a series of regional supplements to the *1987 Corps Wetland Delineation Manual* (USACE Manual). According to the USACE Manual, identification of wetlands is based on a three-parameter approach involving indicators of hydrophytic vegetation, hydric soil, and wetland hydrology. To be considered a wetland, an area must exhibit at least minimal characteristics within these three parameters. The Regional Supplement presents wetland indicators, delineation guidance, and other information that is specific to the Arid West Region. In the field, Michael Baker used the methodology listed below to examine the vegetation, soils, and evidence of hydrology and documented findings on USACE wetland determination data forms, when applicable.

[3] CWA regulations 33 CFR §328.3(e).

3.1.2.1 Vegetation

Nearly 5,000 plant species in the United States may occur in wetlands. These plants, typically referred to as hydrophytic vegetation, are listed in regional publications by the U.S. Fish and Wildlife Service (USFWS). In general, hydrophytic vegetation is present when the plant community is dominated by species that can tolerate prolonged inundation or soil saturation during growing season. Hydrophytic vegetation decisions are based on the assemblage of plant species growing on a site, rather than the presence or absence of indicator species. Plant indicator status categories are described below:

- **Obligate Wetland (OBL)**: Plants that occur almost always in wetlands under natural conditions, but which may also occur rarely in non-wetlands;
- **Facultative Wetland (FACW)**: Plants that occur usually in wetlands, but also occur in non-wetlands;
- **Facultative (FAC)**: Plants with similar likelihood of occurring in both wetlands and non-wetlands;
- **Facultative Upland (FACU)**: Plants that occur sometimes in wetlands, but occur more often in non-wetlands; and
- **Obligate Upland (UPL)**: Plants that occur rarely in wetlands but occur almost always in non-wetlands under natural conditions.

Vegetation strata are sampled separately when evaluating indicators of hydrophytic vegetation. A stratum for sampling purposes is defined as having 5 percent or more total plant cover.

Cover of vegetation is estimated and is ranked according to their dominance. Species that contribute to a cumulative total of 50 percent of the total dominant coverage, plus any species that comprise at least 20 percent (also known as the “50/20 rule”) of the total dominant coverage, are recorded on a wetland determination data form. Wetland indicator status is assigned to each species using *The National Wetland Plant List, version 3.5* (USACE, 2020). If greater than 50 percent of the dominant species from all strata were Obligate Wetland, Facultative Wetland, or Facultative species, the criteria for wetland vegetation is met.

3.1.2.2 Hydrology

Wetland hydrology indicators are presented in four groups, which are:

- **Group A – Observation of Surface Water or Saturated Soils**: Based on the direct observation of surface water or groundwater during the site visit.
- **Group B – Evidence of Recent Inundation**: Consists of evidence that the site is subject to flooding or ponding, although it may not be inundated currently. These indicators include water marks, drift deposits, sediment deposits, and similar features.
- **Group C – Evidence of Recent Soil Saturation**: Consists of indirect evidence that the soil was saturated recently. Some of these indicators, such as oxidized rhizospheres

surrounding living roots and the presence of reduced iron or sulfur in the soil profile, indicate that the soil has been saturated for an extended period.

- **Group D – Evidence from Other Site Conditions or Data**: Consists of vegetation and soil features that indicate contemporary rather than historical wet conditions and include shallow aquitard and the FAC-neutral test.

If wetland vegetation criteria are met, the presence of wetland hydrology is evaluated at each transect by recording the extent of observed surface flows, depth of inundation, depth to saturated soils, and depth to free water in the soil test pits. The lateral extent of the hydrology indicators is used as a guide for locating soil pits for evaluation of hydric soils and jurisdictional areas. In portions of the stream where the flow is divided by multiple channels with intermediate sand bars, the entire area between the channels is considered within the OHWM and the wetland hydrology indicator is considered met for the entire area.

3.1.2.3 Soils

A hydric soil is a soil that formed under conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper 16-20 inches.[4] The concept of hydric soils includes soils developed under sufficiently wet conditions to support the growth and regeneration of hydrophytic vegetation. Soils that are sufficiently wet because of artificial measures are included in the concept of hydric soils. The limits of wetland hydrology indicators are also used as a guide for locating soil pits. If any hydric soil features are located, progressive pits are dug moving laterally away from the active channel until hydric features are no longer present within the top 20 inches of the soil profile.

Once in the field, soil characteristics are verified by digging soil pits along each transect to an excavation depth of 20 inches; in areas of high sediment deposition, soil pit depth may be increased. Soil pit locations are usually placed within the drainage invert or within adjoining vegetation. At each soil pit, the soil texture and color are recorded by comparison with standard plates within a *Munsell Soil Chart* (2012). Munsell Soil Charts aid in designating color labels to soils, based by degrees of three simple variables – hue, value, and chroma. Any indicators of hydric soils, such as organic accumulation, iron reduction, translocation, and accumulation, and sulfate reduction, are also recorded. Hydric soil indicators are in the following three groups:

- **All Soils**: Refers to soils with any U.S. Department of Agriculture, Natural Resources Conservation Service (USDA) soil texture. Hydric soil indicators within this group include histosol, histic epipedon, black histic, hydrogen sulfide, stratified layers, 1-centimeter muck, depleted below dark surface, and thick dark surface.
- **Sandy Soils**: Refers to soil materials with a USDA soil texture of loamy fine sand and coarser. Hydric soil indicators within this group include sandy mucky mineral, sandy gleyed matrix, sandy redox, and stripped matrix.

[4] According to the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region, Version 2.0* (USACE 2008), growing season dates are determined through on-site observations of the following indicators of biological activity in a given year: (1) above-ground growth and development of vascular plants, and/or (2) soil temperature.

- **Loamy and Clayey Soils**: Refers to soil materials with a USDA soil texture of loamy very fine sand and finer. Hydric soil indicators within this group include loamy mucky mineral, loamy gleyed matrix, depleted matrix, redox dark surface, depleted dark surface, redox depressions, and vernal pools.

3.1.3 Streamflow Duration Assessment Method

Michael Baker determined stream duration using the methods outlined in the *Streamflow Duration Assessment Methods for the Arid West and Western Mountains of the United States of America* (SDAM; USACE, 2024). This manual is intended to offer a rapid and repeatable method to distinguish between ephemeral, intermittent, and perennial streamflow regimes. The SDAM considers several variables in determining the stream duration of a given reach, including presence and abundance of hydrophytic plant species, aquatic invertebrates, EPT taxa (comprised of Ephemeroptera, Plecoptera, and Trichoptera), algae, and other single indicators (fish and/or algae cover ≥10%).

3.2 Regional Water Quality Control Board

3.2.1 Non-wetland Waters of the State

The RWQCB generally shares the USACE jurisdictional methodology for identifying non-wetland waters unless the waterbody is not jurisdictional to the USACE under the Revised Definition. Non-wetland waters of the State do not require connectivity to downstream TNWs and can include isolated and/or ephemeral aquatic features not subject to federal jurisdiction. In the case where the waterbody is not a water of the U.S., the RWQCB considers such waterbodies to be jurisdictional waters of the State.

3.2.2 Wetland Waters of the State

The Procedures adopted by the State Water Resources Control Board on April 2, 2019, contain a wetland definition and wetland delineation procedures. The State wetland definition and delineation procedures are largely consistent with the three-parameter approach involving indicators of hydrophytic vegetation, hydric soil, and wetland hydrology implemented by the USACE and outlined in the Regional Supplement to the USACE Manual. However, one exception is that an area can naturally lack vegetation and still qualify as a wetland water of the State if it satisfies both the hydric soil and wetland hydrology parameters.

3.3 California Department of Fish and Wildlife

The scope of CDFW jurisdictional authority includes the bed and bank of streambeds and extends to the dripline of any associated riparian vegetation, whichever is greater.

Section 4. Literature Review

Michael Baker conducted a thorough review of relevant literature and materials to preliminarily identify areas that may be under the jurisdiction of the regulatory agencies. The materials used during the literature review are summarized below and in *Appendix A, Documentation*. In addition, Section 8 has the complete list of references used throughout the course of this delineation.

4.1 Watershed Review

The Cucamonga Creek sub-watershed is within the larger Santa Ana River Watershed, which drains a 2,650 square-mile area and includes parts of Orange, Riverside, and San Bernardino counties in California. The Santa Ana River drains the largest coastal stream system of Southern California, is roughly 700 miles in length, and releases into the Pacific Ocean in Huntington Beach. The Cucamonga Creek sub-watershed includes two portions of Cucamonga Creek: Reach 1 (Valley Reach) (State Waterbody ID CAR8012100019990211101136) and Reach 2 (Mountain Reach) (CAR8012402019991013163906). Cucamonga Creek generally flows north to south and ultimately drains into the Santa Ana River at the Prado Basin.

4.2 Local Climate

The Santa Ana River Watershed, similar to the region, is characterized by a year-round Mediterranean climate, or semi-arid climate, with warm, sunny, dry summers and cool, rainy, mild winters. Climatological data indicates the annual precipitation averages 20.61 inches per year. Almost all precipitation occurs in the months between November and April, with little occurring between the months of May and October. The wettest months are February and March, with a monthly average total precipitation of 9.23 inches. The average minimum temperature for Silverado is 54 degrees Fahrenheit (°F), and the average maximum temperature is 75°F, with February being the coldest month and August and September being the hottest months (monthly average 88°F).

4.3 USGS 7.5-minute Topographic Quadrangle

The project site is within Section 22 of Township 01 South, Range 7 West, of the *Guasti, California* 7.5-minute USGS topographic quadrangle map. Site topography slopes north to south, and onsite elevations range from 973 feet in the southeast portion of the project site to 985 feet along the northwest corner of the project site. Review of the topographic map indicates one potential linear aquatic resource. The topographic map shows the project site as undeveloped open space, with surrounding land use consisting of commercial development, transportation corridors, and a regional park.

4.4 Aerial Photograph

Prior to the field visits, Michael Baker reviewed multiple aerial photographs for the project site from Google Earth, including images dated 1994 through 2023. Aerial photographs can be useful

during the delineation process, as the photographs often indicate the presence of drainages and riparian vegetation (if any). Review of the aerial photographs indicated the site has remained unchanged from development. The one drainage evident in the topographic map is visible on the aerial photographs. No additional potentially jurisdictional features are apparent from the aerial photographs

4.5 Soil Survey

Prior to the field delineation, Michael Baker researched soils within the project site using the *Custom Soil Resource Report for San Bernardino County Southwestern Part, California* (USDA, 2025). Soil surveys furnish soil maps and interpretations originally needed in providing technical assistance to farmers and ranchers; in guiding other decisions about soil selection, use, and management; and in planning, research, and disseminating the results of the research. In addition, soil surveys are now heavily utilized to obtain soil information with respect to potential wetland environments and jurisdictional areas (i.e., soil characteristics, drainage, and color). The presence of hydric soils is initially investigated by comparing the mapped soil series for the site to the County list of hydric soils. The following soil series has been reported onsite:

- **Tujunga loamy sand, 0 to 5 percent slopes**

  Soils in the Tujunga series are typically comprised of somewhat excessively drained soils. This soil type occurs on alluvial fans with slopes ranging from 0 to 5 percent and elevations ranging from 650 to 3,110 feet above mean sea level (amsl). Tujunga soils experience high to very high capacity to transmit water. Tujunga loamy sand is not a hydric soil.

4.6 Hydric Soils List of California

Michael Baker reviewed the Hydric Soils List of California (USDA, 2023) to verify whether the on-site soils mapped by USDA are considered to be hydric.[5] Lists of hydric soils, along with soil survey maps, provide off-site ancillary tools to assist in wetland determinations. Lists and maps are not a substitute for field investigations. According to the soils list, none of the soils within the project site are listed as hydric.

4.7 National Wetlands Inventory

Michael Baker reviewed the USFWS National Wetlands Inventory Map to gain an understanding of potential aquatic resource areas to investigate during the field survey. According to the National Wetlands Inventory, the project site does not contain any mapped aquatic features. The National Wetlands Inventory Maps are in *Appendix A, Documentation*.

4.8 Flood Zone

The Federal Emergency Management Agency's (FEMA) National Flood Insurance Program was reviewed for available flood data within the project site. According to *Flood Insurance Rate Map*

[5] A hydric soil is a soil that formed under conditions of saturation, flooding or ponding long enough during the growing season to develop anaerobic conditions.

(FIRM) No. 06071C8628J, the project site is within Zone X (0.2% annual chance flood hazard). FEMA map panels are in *Appendix A, Documentation*.

4.9 National Hydrography Dataset

Michael Baker reviewed the National Hydrography Dataset (NHD) for available hydrography data within the project site using The National Map Advanced Viewer from the USGS. According to the NHD, one potential ephemeral stream is noted within the project site generally flowing north to south. This potential ephemeral stream flows south through a culvert out of the project site and eventually dissipates roughly 0.4 miles south of the project site. The NHD map is in *Appendix A, Documentation*.

Section 5. Site Conditions

Michael Baker regulatory specialists conducted a jurisdictional delineation on August 5, 2025. Field staff did not encounter any access limitations during the site visit. Refer to *Appendix B* for site photographs taken throughout the project site.

5.1 Aquatic Resources

5.1.1 Aquatic Feature 1 (AF-1)

AF-1 is a natural, earthen drainage feature that flows through the project site from north to south and ultimately dissipates roughly 0.4 miles south of the project site. AF-1 enters the project site via a 3-foot culvert along the northern end of the site. The first 25 feet of AF-1 consists of grouted riprap along the banks but then transitions to an earthen channel through the rest of the project site. AF-1 is comprised of loose, sandy soils and is mostly vegetated along the banks with upland plants similar in composition to the surrounding upland area. Some surface water was present within the northern portion of AF-1. Evidence of an OHWM and surface hydrology was observed via the following indicators:

- a natural line impressed on the bank,
- sediment deposition, and
- bed and banks.

The OHWM is approximately 3 feet in width along this feature, while the top of bank is roughly 12 feet in width.

Vegetation coverage was consistent throughout the channel, with flax-leaved horseweed (*Erigeron bonariensis*; FACU), short-podded mustard (*Hirschfeldia incana*; UPL), and telegraph weed (*Heterotheca grandiflora*; UPL) dominant throughout the channel. A few individuals of tall cyperus (*Cyperus eragrostis*; FACW) and spiny rush (*Juncus acutus*; FACW) were present at the northern end of AF-1.

Michael Baker conducted a stream duration assessment using the SDAM to determine the flow regime of this feature. AF-1 Reach 1 (downstream end latitude 34.068662°, longitude -117.595148°) had a mean channel width of 1 meter and a reach length of 160 meters. AF-1 Reach 1 did not exhibit indicators of flow more than in direct response to precipitation and was accordingly classified as an aquatic feature with an ephemeral flow regime. *Appendix D, SDAM Form*, has a copy of the Arid West Streamflow Duration Assessment Method form.

Due to the presence of hydrophytic vegetation and wetland hydrology, Michael Baker investigated one soil pit (SP-1) within the vicinity of AF-1 to document the presence or absence of wetland conditions.

- SP-1 was taken within a ponded area that contained the most abundant presence of hydrophytic vegetation, including tall cyperus and spiny rush. SP-1 was dug to a depth of

6 inches before hitting a restrictive layer of riprap. Although wetland hydrology was present within SP-1, hydric soil and hydrophytic-dominant vegetation were not. Therefore, it was determined that no wetlands are present within AF-1.

Appendix C, Wetland Data Forms, has a copy of the wetland determination data form.

Section 6. Findings

Michael Baker prepared this delineation to document the jurisdictional authority of the USACE, RWQCB, and CDFW within the project site. This report presents the best professional judgement in determining the extent of jurisdictional features using the most up-to-date regulations, written policy, and guidance from the regulatory agencies. However, as with any jurisdictional delineation, only the regulatory agencies can make a final determination of jurisdictional boundaries.

6.1 U.S. Army Corps of Engineers

6.1.1 Non-Wetland Waters of The U.S. Determination

Although evidence of an OHWM was noted within the boundaries of the project site, the aquatic feature on site is an ephemeral drainage feature, does not exhibit relatively permanent flow, and does not have a surface hydrological connection to a traditional navigable waterway. Therefore, AF-1 is not considered waters of the U.S.

6.1.2 Wetland Determination

As previously noted in Section 3.1.2, an area must exhibit all three wetland parameters described in the USACE Regional Supplement to be considered a jurisdictional wetland. Based on the results of the site visit, Michael Baker determined that no wetland waters are present within the project site (Section 5.1.1).

6.2 Regional Water Quality Control Board

6.2.1 Non-Wetland Waters of the State Determination

As described in Section 6.1.1, the aquatic feature mapped onsite exhibits evidence of an OHWM, but is not considered waters of the U.S. However, this feature would fall under the jurisdiction of the RWQCB under the Porter-Cologne Act and is considered waters of the State. Table 1, below, presents the total acreage of non-wetland waters of the State within the project site, as also shown in *Figure 4, RWQCB Jurisdictional Map*.

6.2.2 Wetland Determination

As described in Section 6.1.2, an area must exhibit all three wetland parameters described in the Regional Supplement to the USACE Manual to be considered a USACE jurisdictional wetland. The State wetland definition and delineation procedures are largely consistent with the USACE three-parameter approach involving indicators of hydrophytic vegetation, hydric soil, and wetland hydrology. However, one exception is that an area can lack vegetation and still satisfy the parameter for hydrophytic vegetation, thus qualifying the area as a wetland water of the State if the hydric soil and wetland hydrology parameters are also fulfilled. Based on the results of the field delineation, Michael Baker determined that the aquatic feature on site does not contain wetland waters of the State.

6.3 California Department of Fish and Wildlife

The mapped feature exhibits a clear bed and bank and is considered CDFW jurisdictional streambed. Table 1, below, presents the total acreage of CDFW streambed resources within the project site, as also shown in *Figure 5, CDFW Jurisdictional Map*.

TABLE 1. JURISDICTIONAL LIMITS WITHIN THE PROJECT SITE

Aquatic Feature	Latitude/Longitude	Cowardin Code	Jurisdictional Limits

Section 7. Regulatory Approval Process

Michael Baker prepared this report to delineate the USACE, RWQCB, and CDFW jurisdictional authority within the project site. Below is a summary of the various permits/authorizations that would be required prior to temporarily or permanently impacting on-site jurisdictional features.

7.1 U.S. Army Corps of Engineers

The USACE regulates discharges of dredged or fill materials into waters of the U.S. and wetlands pursuant to Section 404 of the CWA. Based on a review of the proposed project, obtaining a Section 404 permit from the USACE for impacts occurring within USACE jurisdictional areas is not required. However, the applicant may be required to obtain an Approved Jurisdictional Determination from the USACE to confirm the findings of this report.

7.2 Regional Water Quality Control Board

The RWQCB regulates discharges to surface waters under Section 401 of the CWA and Section 13263 of the Porter-Cologne Act. Therefore, a CWA Section 401 Water Quality Certification and Porter-Cologne Waste Discharge Requirements issued from the RWQCB would be required prior to commencement of any construction activities within RWQCB jurisdictional areas. The RWQCB also requires that applicants demonstrate California Environmental Quality Act (CEQA) compliance prior to issuance of the final permits. An application fee is required, which is calculated based on the combined total temporary and permanent impact acreages of jurisdictional impacts.

7.3 California Department of Fish and Wildlife

The CDFW regulates substantial alterations to streambed resources under Section 1602 of the CFGC. Therefore, formal notification to, and subsequent authorization from CDFW would be required prior to commencement of any construction activities within the CDFW jurisdictional areas. The CDFW also requires that CEQA compliance be obtained prior to issuing the final Lake or Streambed Alternation Agreement. A notification fee is required, which is calculated based on estimated project construction costs within any CDFW jurisdictional areas.

7.4 Recommendations

As part of the regulatory permitting process, this delineation will be forwarded to each of the regulatory agencies for their concurrence. The concurrence would be valid up to five years and would solidify findings noted within this report.

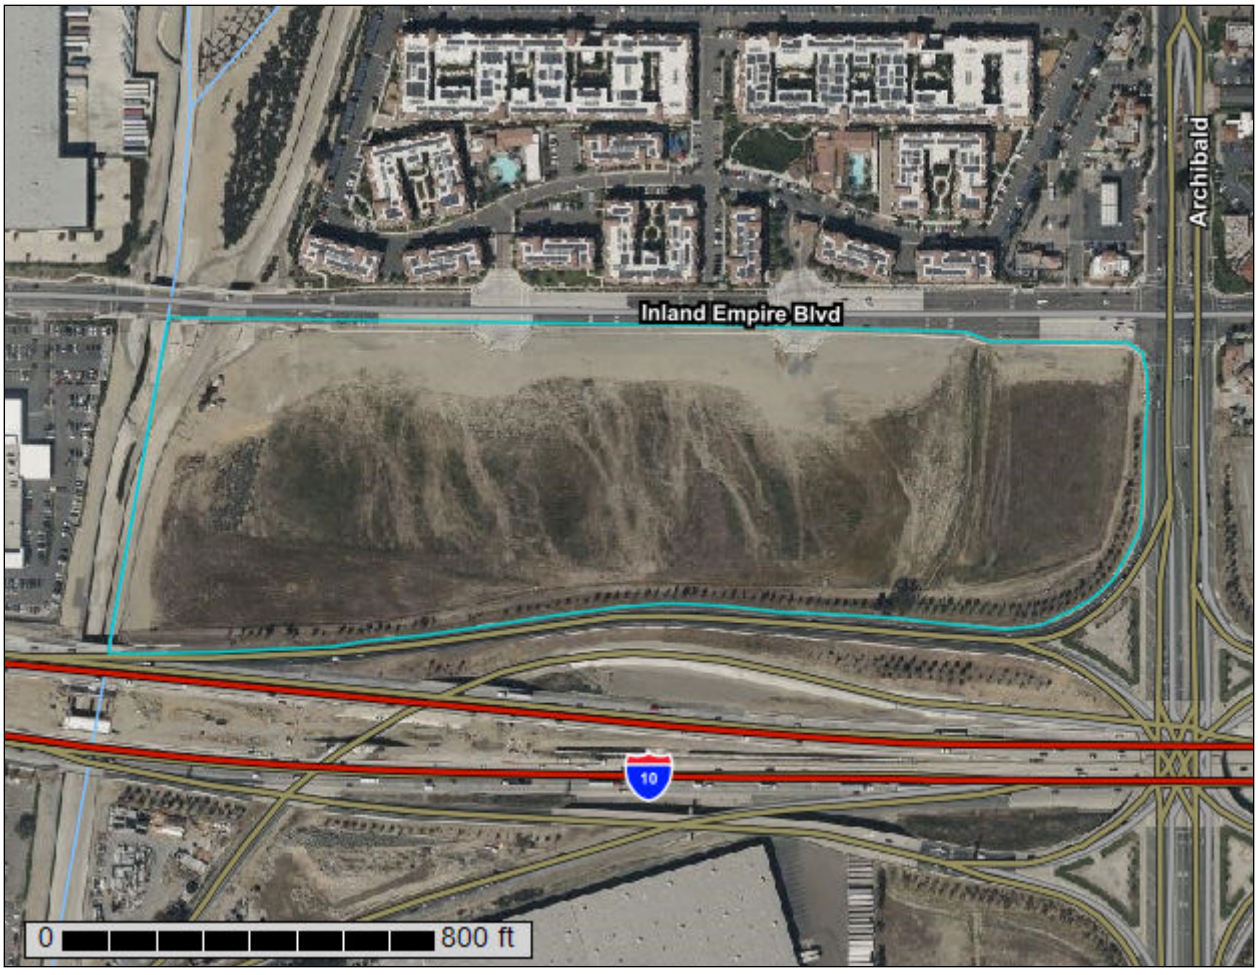
Custom Soil Resource Report for San Bernardino County Southwestern Part, California



February 18, 20

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

Map Scale: 1:3,730 if printed on A landscape (11" x 8.5") sheet.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

San Bernardino County Southwestern Part, California

TuB—Tujunga loamy sand, 0 to 5 percent slopes

Map Unit Setting

National map unit symbol: 2sx6y
Elevation: 650 to 3,110 feet
Mean annual precipitation: 10 to 25 inches
Mean annual air temperature: 62 to 65 degrees F
Frost-free period: 325 to 365 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Tujunga, loamy sand, and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Tujunga, Loamy Sand

Setting

Landform: Alluvial fans
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium derived from granite

Typical profile

A - 0 to 6 inches: loamy sand
C1 - 6 to 18 inches: loamy sand
C2 - 18 to 60 inches: loamy sand

Properties and qualities

Slope: 0 to 5 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat excessively drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): High to very high (5.95 to 19.98 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: Rare
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 4.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: A
Ecological site: R019XG912CA - Sandy Fan
Hydric soil rating: No

Minor Components

Tujunga, gravelly loamy sand

Percent of map unit: 10 percent
Landform: Alluvial fans
Landform position (three-dimensional): Tread

Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Hanford, sandy loam

Percent of map unit: 5 percent
Landform: Alluvial fans
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

APPENDIX C
WETLAND DATA FORM

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Meredith SPA City/County: Ontario, San Bernardino Cou Sampling Date: 8/5/2025

Applicant/Owner: City of Ontario State: CA Sampling Point: SP1

Investigator(s): Stephen Anderson, Audrey Tamayo Section, Township, Range: Section 22, Township 01 South, Range 7 West

Landform (hillslope, terrace, etc.): Terrace Local relief (concave, convex, none): None Slope (%): 1

Subregion (LRR): LRR K Lat: 34.069986° Long: -117.594853° Datum: WGS84

Soil Map Unit Name: TuB—Tujunga loamy sand, 0 to 5 percent slopes NWI classification: None

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ✓ No _____ (If no, explain in Remarks.)

Are Vegetation _____, Soil _____, or Hydrology _____ significantly disturbed? Are "Normal Circumstances" present? Yes ✓ No _____

Are Vegetation _____, Soil _____, or Hydrology _____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No ✓	**Is the Sampled Area within a Wetland?** Yes _____ No ✓
Hydric Soil Present?	Yes _____	No _____	
Wetland Hydrology Present?	Yes ✓	No _____	

Remarks:

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: _____)	Absolute % Cover	Dominant Species?	Indicator Status

Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: _____ (A)

Total Number of Dominant Species Across All Strata: _____ (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: _____ (A/B)

Prevalence Index worksheet:

Total % Cover of:	Multiply by:	
OBL species	x 1 =	
FACW species 10	x 2 =	20
FAC species	x 3 =	
FACU species 25	x 4 =	100
UPL species 20	x 5 =	100
Column Totals: 55 (A)		220 (B)

Prevalence Index = B/A = 4

Hydrophytic Vegetation Indicators:

___ Dominance Test is >50%

___ Prevalence Index is ≤3.0[1]

___ Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Hydrophytic Vegetation Present? Yes _____ No ✓

Remarks:

SOIL

Sampling Point: SP1

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	%	Redox Features Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-3	7.5YR 2.5/1	100					Silt loam	
3-6	7.5YR 3/2	100					Silt loam	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- ___ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5) (**LRR C**)
- ___ 1 cm Muck (A9) (**LRR D**)
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ Sandy Gleyed Matrix (S4)
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)
- ___ Loamy Mucky Mineral (F1)
- ___ Loamy Gleyed Matrix (F2)
- ___ Depleted Matrix (F3)
- ___ Redox Dark Surface (F6)
- ___ Depleted Dark Surface (F7)
- ___ Redox Depressions (F8)
- ___ Vernal Pools (F9)

Indicators for Problematic Hydric Soils[3]:

- ___ 1 cm Muck (A9) (**LRR C**)
- ___ 2 cm Muck (A10) (**LRR B**)
- ___ Reduced Vertic (F18)
- ___ Red Parent Material (TF2)
- ___ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: grouted riprap

Depth (inches): 6

Hydric Soil Present? Yes _____ No ✓

Remarks:

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ✓ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1) (**Nonriverine**)
- ___ Sediment Deposits (B2) (**Nonriverine**)
- ___ Drift Deposits (B3) (**Nonriverine**)
- ___ Surface Soil Cracks (B6)
- ___ Inundation Visible on Aerial Imagery (B7)
- ✓ Water-Stained Leaves (B9)
- ___ Salt Crust (B11)
- ___ Biotic Crust (B12)
- ___ Aquatic Invertebrates (B13)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres along Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ___ Water Marks (B1) (**Riverine**)
- ___ Sediment Deposits (B2) (**Riverine**)
- ✓ Drift Deposits (B3) (**Riverine**)
- ✓ Drainage Patterns (B10)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Shallow Aquitard (D3)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes _____ No ✓ Depth (inches): _____

Water Table Present? Yes _____ No ✓ Depth (inches): _____

Saturation Present? (includes capillary fringe) Yes _____ No ✓ Depth (inches): _____

Wetland Hydrology Present? Yes ✓ No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

APPENDIX D
ARID WEST STREAMFLOW DURATION ASSESSMENT METHOD DATA FORM

Streamflow Duration Assessment Methods

SDAM Version 3.0.0 Release Date: June 2025

https://www.epa.gov/streamflow-duration-assessment

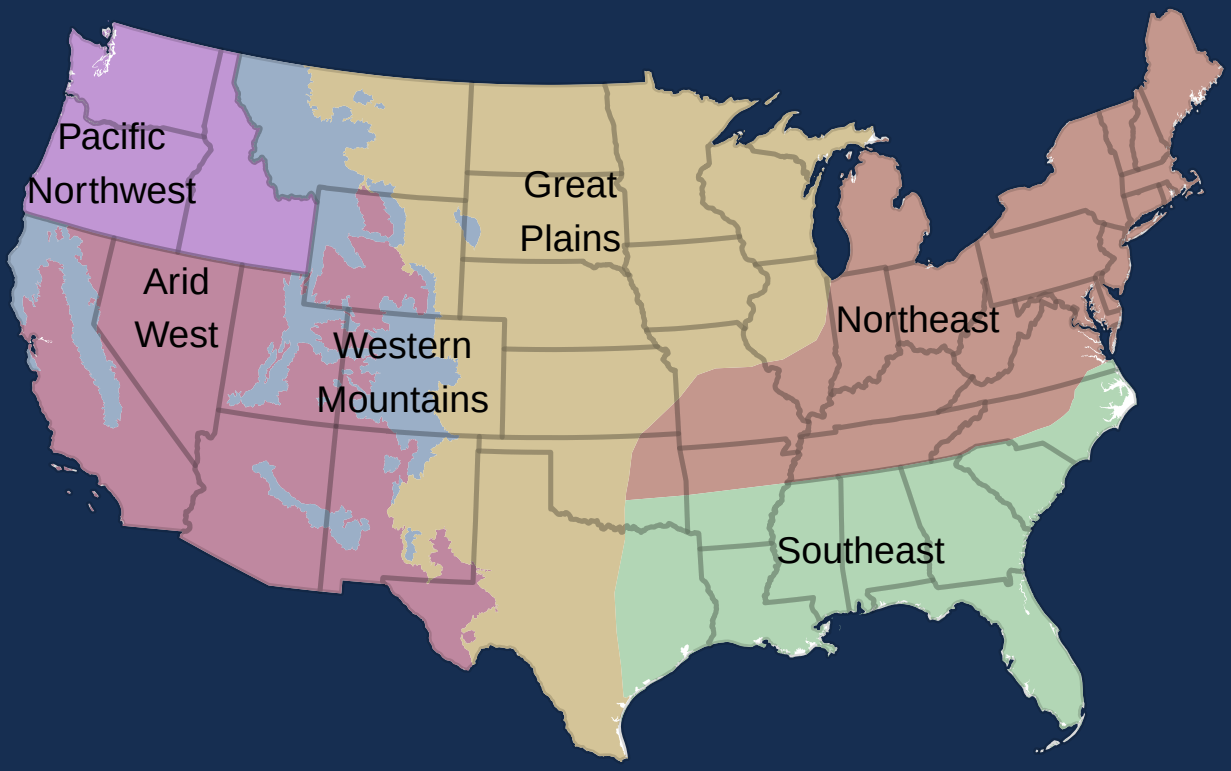
Visit date: 2025-08-05

Report generated date: 2025-08-05

Project name: Meredith SPA

Site code: N/A

Regional SDAM classification: EPHEMERAL



General site information

Project name or number: Meredith SPA

Site code or identifier: N/A

SDAM Region: Arid West

Adjacent SDAM Regions within 10 miles: Unknown

Assessor(s): Stephen Anderson, Audrey Tamayo

Waterway name: Unnamed Drainage

Visit date: 2025-08-05

Current weather conditions: Clear/Sunny

Notes on current or recent weather conditions: No recent rain events

Location: Not provided

Surrounding land use within 100 m: Urban, industrial, or residential

Notes on land use: Undeveloped land subject to regular mowing

Description of reach boundaries: Culvert at north end, culvert at south end

Assessment reach length (m): 150

Disturbed or difficult conditions: Stream modifications (e.g., channelization)

Notes on disturbances or difficult site conditions: Regularly mowed outside of channel

Observed hydrology

Percent of reach with surface flow: 0

Percent of reach with surface and sub-surface flows: 0

Number of isolated pools: 1

Notes on observed hydrology: Surface water present at north end of reach

Site photos

Top of reach looking downstream:

Middle of reach looking upstream:

Middle of reach looking downstream:

Bottom of reach looking upstream:

Site sketch

Indicators

Mean bankfull channel width (m): 1

Notes on mean bankfull channel width: Bankfull consistent throughout channel.

Mean bankfull channel width photos and descriptions:

Description: Upstream end

Description: middle

Description: downstream end

Perennial indicator taxa: No perennial indicator taxa detected

Aquatic macroinvertebrates in assessment area: Aquatic macroinvertebrates absent

Notes on aquatic macroinvertebrates:

Macroinvertebrate photos and photo descriptions:

Slope (to the nearest half-percent): 0.99

Notes about slope:

Slope is minor and consistent

Slope photos and descriptions:

Description:

Number of hydrophytic plant species: 2

Vegetation in assessment area: vegetation present

Notes on hydrophytic plants:

Hydrophytic vegetation presence is very minor

Hydrophyte photos and photo descriptions:

Description: Hydrophytes at north end of drainage

Prevalence of upland rooted plants in streambed: 0 (Poor) Rooted upland plants are prevalent within the streambed/thalweg.

Notes about upland rooted plants:

Upland rooted plants present throughout drainage

Upland rooted plants photos and descriptions:

Description: Upland plants along banks and within thalweg

Algal cover: Not Detected

Check here if algae exclusively appears to have been deposited from an upstream source, and no local growth is evident: Not checked

Notes about algal cover:

None

Algal cover photos and descriptions:

Differences in vegetation: 0 (Poor) No compositional or density differences in vegetation are present between the banks and the adjacent uplands.

Notes about differences in vegetation:

None

Vegetation differences photos and descriptions:

Riffle-pool sequence: 0 (Poor) No riffle-pool sequences observed.

Notes about riffle-pool sequence:

None

Riffle-pool photos and descriptions:

Supplemental information

Additional notes about the assessment:

None

Supplemental information photos and descriptions:

1 INTRODUCTION

In 2015, the City of Ontario (City), as Lead Agency under the California Environmental Quality Act (CEQA), prepared a Draft Environmental Impact Report (EIR) and a Final EIR (State Clearinghouse No. 2014051020) for the Meredith International Centre Specific Plan Amendment (Specific Plan). These documents are collectively referred to in this document as the Specific Plan EIR. The Specific Plan outlines a development plan, circulation plan, utility infrastructure plan, development standards, design guidelines, and an implementation plan to guide development within the area for a five to ten year planning period. As part of the Specific Plan EIR, the traffic operation impacts were assed in the *Meredith International Centre Specific Plan Amendment Traffic Impact Analysis (LLG, 2015)* [2015 TIA].

The Meredith International Centre Specific Plan Amendment – Planning Area 3 Project (proposed project) proposes to modify the Specific Plan to include a Mixed-Use Overlay across Planning Area 3 (PA-3) of the Specific Plan area, allowing the development of up to 1,400 residential units and up to 40,000 square feet of commercial/retail uses in addition to the uses permitted under the site's Urban Commercial designation. This Addendum has been prepared to determine whether the proposed project would result in new or substantially more severe significant environmental impacts compared to the impacts of the Specific Plan as disclosed in the Specific Plan EIR.

The purpose of this Focused Traffic Study (study) is to compare the traffic analysis findings associated with the proposed modifications to PA-3 to the original findings outlined in the 2015 TIA. The original 2015 TIA identified potential traffic related impacts at several study intersections associated with the development of the specific plan area that were considered cumulatively significant and unavoidable. This study assesses the change in land use assumptions associated with the proposed project, specifically with PA-3, to determine consistency with the findings of the 2015 TIA, including trip generation assumptions and level-of-service operations at select intersections.

In order to provide a direct comparison to the original 2015 TIA, this analysis utilizes the same baseline "without project" conditions as well as the same "with project" conditions associated with Planning Areas 1, 2, and 4. Therefore this analysis only considers the changes to the trip generation associated with the land use modifications in PA-3 only.

1.1 PROJECT DESCRIPTION

The current amendment to the specific plan proposes to modify the land use assumptions of PA-3 to include a Mixed-Use Overlay which would allow for up to 50,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units in place of the uses and buildout currently permitted under the site's Urban Commercial designation. **Table 1-1** lists the difference in land use assumptions between the 2014 TIA and the proposed project.

TABLE 1-1: LAND USE COMPARISON

Planning Area	2015 TIA Assumptions			Proposed Project		
	Acreage	Land Use	Buildout	Acreage	Land Use	Buildout
3	25.3	Urban Commercial	480,000 SF (including up to 400 hotel rooms)	25.3	Mixed Use Overlay	1,400 units; 50,000 SF commercial/ retail uses

Notes: SF = square feet

Regionally, the proposed project site is located within the City of Ontario (City), within the County of San Bernardino (County) as shown in **Exhibit 1-1**. Locally, the Project site is located on the northeast corner of E. Palm Canyon Drive and Monty Hall Drive as shown in **Exhibit 1-2**.

1.2 STUDY LOCATIONS

Table 1-2 lists the study intersections that were examined as part of this analysis. These intersections were selected, in coordination with City staff, due to their proximity to PA-3 to assess the potential impacts of the proposed project. The intersection numbering maintains the intersection identification numbers from the original 2015 TIA. **Exhibit 1-3** shows the study intersections within the study area.

TABLE 1-2: STUDY INTERSECTIONS

1.3 ANALYSIS SCENARIOS

In order to provide a direct comparison, this analysis utilizes the same baseline "without project" conditions which remain unchanged from the original 2015 TIA.

Therefore this study only analyzes the following "Plus Project" scenarios as defined in the 2015 TIA, have been evaluated:

- Existing Plus Project (Planning Area 1-4)
- Year 2020 Cumulative Plus Project (Planning Area 1-4)
- Year 2035 General Plan Buildout Plus Project (Planning Area 1-4)

2 ANALYSIS METHODOLOGY

2.1 LEVEL OF SERVICE ANALYSIS METHODOLOGIES

This Study has been prepared in to conform to the methodology used in the 2015 TIA. The scope of this traffic study has been coordinated with the City of Ontario and the approved scoping memo is included as **Appendix A**.

Level of service (LOS) is commonly used as a qualitative description of intersection operation and is based on the type of traffic control and experienced delay at the intersection. Identical to the 2015 TIA methodology, the Highway Capacity Manual 2000 (HCM 2000) was utilized in this analysis to determine the operating LOS at each of the study intersections. LOS can range from LOS A (free-flow conditions) to LOS F (severely congested conditions). Delay in seconds per vehicle (sec/veh) passing through the intersection, is the primary measure of effectiveness for signalized, stop-controlled, and roundabout intersections. The corresponding average stopped delay range experienced per vehicle per LOS is shown in **Table 2-1**.

TABLE 2-1: HCM INTERSECTION LEVEL OF SERVICE THRESHOLDS

Level of Service	Signalized Intersection Average Delay (seconds/vehicle)
LOS A	$x \leq 10$
LOS B	$10 < x \leq 20$
LOS C	$20 < x \leq 35$
LOS D	$35 < x \leq 55$
LOS E	$55 < x \leq 80$
LOS F	$80 < x$

Source: *Highway Capacity Manual 2000*
Note: If the volume-to-capacity ratio (v/c) > 1.0, LOS = F.

LOS is reported for the average stopped delay per vehicle for the overall intersection (all movements) for signalized intersections. LOS and delay for the intersection analysis was conducted with Synchro (version 12) software.

2.2 PERFORMANCE CRITERIA

Based on the 2015 TIA, different LOS thresholds applied to different intersections depending on location and jurisdiction. **Table 2-2** shows the impact criteria used in this analysis. Based on the 2015 TIA, mitigation improvements are expected to "Improve Levels of Service to an acceptable range and/or to pre-project conditions."

TABLE 2-2: SERVICE THRESHOLDS CRITERIA

Intersection		Jurisdiction	Minimum Acceptable LOS
10	Archibald Ave and 6th Street	Rancho Cucamonga	D
20	Vineyard Ave and 4th St	Ontario	E
23	Archibald Ave and 4th St	Ontario	E
27	Vineyard Ave and Inland Empire Blvd	Ontario	E

3 FORECAST PROJECT TRIP GENERATION

3.1 ORIGINAL 2015 TIA TRIP GENERATION

The *Meredith International Centre Specific Plan Amendment Traffic Impact Analysis (LLG, 2015)* [2015 TIA], incorporated into the original 2015 EIR, analyzed the estimated project trips for each planning area based on the land use assumptions that were available at that time including a 400-room hotel, 100,000 square feet of office space, and 150,000 square feet of retail space. The forecast trip generation calculations were based on the available rates outlined in the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9th Edition.

Table 3-1 provides the previously documented trip generation calculations for Planning Area 3. As shown, within Planning Area 3, a total of 9,628 daily trips, 473 AM Peak Hour trips, and 719 PM Peak Hour trips were anticipated during an average weekday.

TABLE 3-1: ORIGINAL 2015 TIA PLANNING AREA 3 TRIP GENERATION

Project Description	Daily	AM Peak Hour			PM Peak Hour		
		Enter	Exit	Total	Enter	Exit	Total
Trip Generation Forecast:							
Planning Area (PA) 3							
▪ 310: Hotel (400 Rooms)	3,268	124	88	212	124	116	240
▪ 710: General Office (100,000 SF)	1,103	137	19	156	25	124	149
▪ 820: Shopping Center (150,000 SF)	6,405	90	54	144	267	290	557
Less Pass-by Trips (10% Daily, 10% AM, 34% PM) [20]	-641	-9	-5	-14	-91	-98	-189
Total PA 3 Trip Generation Potential	**10,135**	**342**	**156**	**498**	**325**	**432**	**757**
Less Internal Capture (5%)	**-507**	**-17**	**-8**	**-25**	**-16**	**-22**	**-38**
Total PA 3 Net Trip Generation Potential	**9,628**	**325**	**148**	**473**	**309**	**410**	**719**

Source: *Meredith International Centre Specific Plan Amendment Traffic Impact Analysis* (LLG, Jan 2015)
Trip Rate Source: Institute of Transportation Engineer's (ITE) Trip Generation Manual, 9th Edition.

3.2 PROPOSED PROJECT

To remain consistent with the original analysis documented in the 2015 TIA, the proposed project site trips were also estimated using trip generation rates obtained from the ITE *Trip Generation Manual*, 9th Edition. **Table 3-2** shows the trip generation rates used for the proposed project. ITE Land Use codes 220 (Apartments) and 820 (Shopping Center) were assumed for the entire proposed project site.

TABLE 3-2: PROPOSED PLANNING AREA 3 TRIP GENERATION RATES

Land Use	ITE Code	Daily Trips Rate	AM Peak Hour			PM Peak Hour		
			Enter	Exit	Total	Enter	Exit	Total
Apartments	220	6.66 / DU	0.10	0.41	0.51	0.40	0.22	0.62
Shopping Center	820	42.70 / TSF	0.60	0.36	0.96	1.78	1.93	3.71

Notes: 1) Trip Rates – Institute of Transportation Engineer's (ITE) Trip Generation Manual, 9th Edition
2) DU = Dwelling Unit; TSF = Thousand Square Feet.

Table 3-3 summarizes the trip generation for the proposed project. The proposed project includes a Pass-By Trip reduction and internal capture reduction consistent with analysis documented in the 2015 TIA. The total estimated net Project trips include 10,670 daily trips, 719 AM Peak Hour trips, and 941 PM Peak Hour trips.

TABLE 3-3: PROPOSED PLANNING AREA 3 TRIP GENERATION

Project Description	Intensity	Daily[1]	AM Peak Hour			PM Peak Hour		
			Enter	Exit	Total	Enter	Exit	Total
220: Apartments	1,400 DU	9,310	140	574	714	560	308	868
820: Shopping Center	50 TSF	2,135	30	18	48	89	97	186
Less Pass-by Trips[2] (10% Daily, 10% AM, 34% PM)[3]		-214	-3	-2	-5	-30	-33	-63
Total PA-3 Trip Generation Potential		11,232	167	590	757	619	372	991
Less Internal Capture (5%)[3]		-562	-8	-30	-38	-31	-19	-50
Total PA-3 Net Trip Generation Potential		**10,670**	**159**	**560**	**719**	**588**	**353**	**941**

Notes: 1) Source: ITE Trip Generation Manual, 9th Edition.
2) Applies only to Shopping Center land use.
3) Consistent with analysis documented in *Meredith International Centre Specific Plan Amendment Traffic Impact Analysis* (LLG, Jan 2015)

The 2015 TIA originally assumed Planning Area 3's land uses would consist of a 400-room hotel, 100,000 square feet of office space, and 150,000 square feet of retail space. With the Specific Plan Amendment, the project's proposed land uses for Planning Area 3 would include up to 1,400 multi-family residential units and up to 50,000 square feet of commercial/retail uses. Because of these modifications to the land uses, the trip characteristics have also changed – particularly highlighted by the change from a hotel use to multi-family residential uses. The 2015 TIA showed higher entering trips in the AM Peak Hour and higher exiting trips in the PM Peak Hour. The proposed project's land uses show the opposite trend, with higher exiting trips in the AM Peak Hour and high entering trips in the PM Peak Hour.

Table 3-4 compares the Planning Area 3 approved 2015 TIA project trips to the proposed project trips. As shown, within PA-3, the proposed project is expected to generate more daily and peak hour trips compared to the approved 2015 TIA. Since the trip generation of the proposed project is higher than the 2015 TIA trips, an operational analysis is needed to determine if new transportation impacts are identified.

TABLE 3-4: PROJECT TRIP COMPARISON

Project Description	Daily	AM Peak Hour			PM Peak Hour		
		Enter	Exit	Total	Enter	Exit	Total
2015 TIA: PA-3	9,628	325	148	473	309	410	719
Proposed Project: PA-3	10,670	159	560	719	588	353	941
Difference	**+1,042**	**-166**	**+412**	**+246**	**+279**	**-57**	**+222**

3.3 TRIP DISTRIBUTION

The trip distribution for PA-3 documented in the 2015 TIA was utilized to determine the trip assignment for the proposed project. **Exhibits 3-1** shows the PA-3 trip distribution, as documented in the 2015 TIA. **Exhibit 3-2** shows the trip assignment for the proposed project.

3.4 TRAFFIC VOLUMES

In order to provide a direct comparison, this analysis utilizes the same baseline "without project" conditions which remain unchanged from the original 2015 TIA. For the "plus project" condition, the 2015 TIA volumes were revised to extract and replace the original PA-3 trips with the proposed project trips for PA-3.

The Existing Plus Project PA-1, PA-2, PA-3 and PA-4 traffic volumes, with the proposed project, is shown in **Exhibit 3-3**.

The Year 2020 Cumulative Plus Project PA-1, PA-2, PA-3 and PA-4 traffic volumes, with the proposed project, is shown in **Exhibit 3-4.**

The Year 2035 General Plan Buildout Plus Project PA-1, PA-2, PA-3 and PA-4 traffic volumes, with the proposed project, is shown in **Exhibit 3-5.**

Detailed volume development worksheets are contained in **Appendix B.**

4 LEVEL OF SERVICE OPERATIONS ANALYSIS

4.1 EXISTING PLUS PROJECT

4.1.1 2015 TIA Findings

Table 4-1 summarizes the analysis results for the Existing Plus Project condition documented in the 2015 TIA. As shown, none of the study intersections operate at unacceptable LOS. As such, no significant impacts were identified at these intersections.

4.1.2 Proposed Project Findings

Table 4-2 summarizes the analysis results for the Existing Plus Project condition under the proposed project. As shown, under the proposed project condition, all intersections are still operating at acceptable LOS based on individual intersection thresholds.

The analysis indicates that, with the inclusion of the proposed project, the intersections' operations do not degrade to unacceptable LOS, therefore, no new transportation impacts are identified. The Existing Plus Project analysis worksheets are contained in **Appendix C.**

TABLE 4-1: 2015 TIA EXISTING PLUS PROJECT INTERSECTION ANALYSIS RESULTS

ID	Intersection	Minimum Acceptable LOS	2015 TIA

Notes: 1) LOS = Level of Service.
2) Delay shown in seconds per vehicle.

4.2 YEAR 2020 CUMULATIVE PLUS PROJECT

4.2.1 2015 TIA Findings

Table 4-3 summarizes the analysis results for the Year 2020 Cumulative Plus Project condition documented in the 2015 TIA. As shown, most intersections operate at acceptable LOS for both peak hours with the exception of:

- (#23) Archibald Ave and 4th St – operates at LOS F during the PM Peak Hour
- (#28) Archibald Ave and Inland Empire Blvd – operates at LOS F during the PM Peak Hour

As such, a significant impact was identified for these locations. Potential mitigation improvements were developed to improve the LOS of these intersections. The following potential improvements were proposed for the intersections:

- (#23) Archibald Ave and 4th St
  - Construct 2nd NB Left-turn lane
  - Additional NB through-lane
  - Modify traffic signal
- (#28) Archibald Ave and Inland Empire Blvd
  - Construct 3rd NB Left-turn lane
  - Additional SB through-lane
  - Modify traffic signal

As shown, with the implementation of these potential improvements the significant impact was mitigated.

4.2.2 Proposed Project Findings

Table 4-4 summarizes the analysis results for the Year 2020 Cumulative Plus Project condition under the proposed project. Similar to the 2015 TIA findings, most intersections operate at acceptable LOS for both peak hours with the exception of:

- (#23) Archibald Ave and 4th St – operates at LOS F during the PM Peak Hour
- (#28) Archibald Ave and Inland Empire Blvd – operates at LOS F during the PM Peak Hour

With the implementation of the identical potential mitigation improvements developed for the 2015 TIA, all intersections are operating at acceptable LOS based on individual intersection thresholds.

The analysis indicates that, with the inclusion of the potential mitigation improvements developed for the 2015 TIA, the intersections' operations do not degrade to unacceptable LOS, therefore, no new transportation impacts are identified. The Year 2020 Cumulative Plus Project analysis worksheets are contained in **Appendix D.**

In the 2015 EIR, under the Year 2020 Cumulative Plus Project scenario, the project-related impacts at the intersections of Archibald Ave and 4th St (#23) and Archibald Ave and Inland Empire Blvd (#28) are addressed through fee payments to complete required improvements. However, these locations were still identified as cumulatively significant and unavoidable even with the payment of fees, due to right-of-way constraints. Since the findings of the proposed project rely on identical potential mitigation improvements developed for the 2015 TIA, these locations remain as cumulatively significant and unavoidable, consistent with the previous findings in the Specific Plan EIR.

TABLE 4-3: 2015 TIA YEAR 2020 CUMULATIVE PLUS PROJECT INTERSECTION ANALYSIS RESULTS

4.3 YEAR 2035 GENERAL PLAN BUILDOUT PLUS PROJECT

4.3.1 2015 TIA Findings

Table 4-5 summarizes the analysis results for the Year 2035 General Plan Buildout Plus Project condition documented in the 2015 TIA. As shown, most intersections operate at acceptable LOS for both peak hours with the exception of:

- (#20) Vineyard Ave and 4th St – operates at LOS F during the PM Peak Hour
- (#23) Archibald Ave and 4th St – operates at LOS F during the PM Peak Hour
- (#28) Archibald Ave and Inland Empire Blvd – operates at LOS F during the PM Peak Hour

As such, a significant impact was identified for these locations. Potential mitigation improvements were developed to improve the LOS of these intersections. The following improvements were proposed for the intersections:

- (#20) Vineyard Ave and 4th St
    - Construct additional SB through-lane
    - Modify traffic signal
- (#23) Archibald Ave and 4th St
    - Construct 2nd NB Left-turn lane
    - Additional NB through-lane
    - Modify traffic signal
- (#28) Archibald Ave and Inland Empire Blvd
    - Construct 3rd NB Left-turn lane
    - Additional SB through-lane
    - Modify traffic signal

As shown, with the implementation of these potential improvements the significant impact was mitigated.

4.3.2 Proposed Project Findings

Table 4-6 summarizes the analysis results for the Year 2035 General Plan Buildout Plus Project condition under the proposed project. Similar to the 2015 TIA findings, most intersections operate at acceptable LOS for both peak hours with the exception of:

- (#20) Vineyard Ave and 4th St – operates at LOS F during the PM Peak Hour
- (#23) Archibald Ave and 4th St – operates at LOS F during the PM Peak Hour
- (#28) Archibald Ave and Inland Empire Blvd – operates at LOS F during the PM Peak Hour

With the implementation of the identical potential mitigation improvements developed for the 2015 TIA, all intersections are operating at acceptable LOS based on individual intersection thresholds.

The analysis indicates that, with the inclusion of the potential mitigation improvements developed for the 2015 TIA, the intersections' operations do not degrade to unacceptable LOS, therefore, no new transportation impacts are identified. The Year 2035 General Plan Buildout Plus Project analysis worksheets are contained in **Appendix E.**

In the 2015 EIR, under the Year 2020 Cumulative Plus Project scenario, the project-related impacts at the intersections of, Vineyard Ave and 4th St (#20), Archibald Ave and 4th St (#23), and Archibald Ave and Inland Empire Blvd (#28) are addressed through fee payments to complete required improvements. However, these locations were still identified as cumulatively significant and unavoidable even with the payment of fees, due to right-of-way constraints. Since the findings of the proposed project rely on identical potential mitigation improvements developed for the 2015 TIA, these locations remain as cumulatively significant and unavoidable, consistent with the previous findings in the Specific Plan EIR.

TABLE 4-5: 2015 TIA YEAR 2035 GENERAL PLAN BUILDOUT PLUS PROJECT INTERSECTION ANALYSIS RESULTS

ID	Intersection	Minimum Acceptable LOS	2015 TIA

5 FINDINGS

The purpose of this study is to document the traffic analysis findings associated with the with the proposed changes to the Meredith International Centre Specific Plan Amendment Planning Area 3 (proposed project). A Level of Service (LOS) analysis was conducted to determine the consistency with the findings documented in the *Meredith International Centre Specific Plan Amendment Traffic Impact Analysis (LLG, 2015)* [2015 TIA], which was incorporated into the Specific Plan EIR.

The proposed project proposes to modify the existing Specific Plan to include a Mixed-Use Overlay across Planning Area 3 to allow for up to 50,000 square feet of commercial/retail uses and up to 1,400 multi-family dwelling units in place of the uses and buildout currently permitted under the site's Urban Commercial designation. A revised trip generation for the proposed project was developed to estimate the project trips. The new trip estimates were used to update the Existing With Project, Year 2020 Cumulative Plus Project, and Year 2035 General Plan Buildout Plus Project traffic volumes documented in the 2015 TIA. The revised traffic volumes were used in the LOS analysis of the proposed project. The analysis was conducted consistent with the process and methodology used in the 2015 TIA. The findings are summarized below:

Existing Plus Project
With the implementation of identical the potential mitigation improvements developed for the 2015 TIA, all intersections are anticipated to operate at acceptable LOS based on individual intersection thresholds.

Year 2020 Cumulative Plus Project
With the implementation of identical the potential mitigation improvements developed for the 2015 TIA, all intersections are anticipated to operate at acceptable LOS based on individual intersection thresholds.

Year 2035 General Plan Buildout Plus Project
With the implementation of identical the potential mitigation improvements developed for the 2015 TIA, all intersections are anticipated to operate at acceptable LOS based on individual intersection thresholds.

The analysis for all three scenarios indicates that, with the implementation of the identical potential mitigation improvements developed for the 2015 TIA, the intersections' operations do not degrade to unacceptable LOS. **Therefore, outside of the impacts identified in the 2015 TIA, no new transportation impacts are identified due to the proposed project.**

In the 2015 EIR, the project-related impacts at the intersections of Vineyard Ave and 4th St (#20), Archibald Ave and 4th St (#23), and Archibald Ave and Inland Empire Blvd (#28) are addressed through fee payments to complete required improvements. However, these locations were still identified as cumulatively significant and unavoidable even with the payment of fees, due to right-of-way acquisition requirements. Since the findings of the proposed project rely on identical potential mitigation improvements developed for the 2015 TIA, **these locations remain as cumulatively significant and unavoidable, consistent with the previous findings in the Specific Plan EIR.**

Traffic Scoping Agreement

Michael Baker
INTERNATIONAL

TECHNICAL MEMORANDUM

To: City of Ontario

From: Jordan Gray PE TE, Michael Baker International
Alejandro Tapia PE, Michael Baker International

CC: Frances Yau, Michael Baker International

Date: October 24, 2025

Subject: Meredith International Centre Specific Plan Amendment Planning Area 3 – Focused Traffic Study Scoping Memorandum

1. Introduction

Michael Baker will be preparing a Focused Traffic Study for the proposed Meredith International Centre Specific Plan Amendment Planning Area 3 Project (modified project) within the City of Ontario, California. The original Environmental Impact Report for the specific plan was documented in the *Meredith International Centre Specific Plan Amendment Final Environmental Impact Report*, dated March 2015 (2015 EIR). The 2015 EIR identified potential traffic related impacts at several study intersections associated with the development of the specific plan area that were considered cumulatively significant and unavoidable. This memorandum will assess the change in land use assumptions associated with modified project specifically with PA-3 to determine consistency with the findings of the original EIR, including trip generation assumptions and level-of-service operations at select intersections.

The modified project proposes to modify the Specific Plan to include a Mixed-use Overlay across Planning Area 3, allowing for the development of up to 1,400 residential units and up to 50,000 square feet of commercial/retail uses in addition to the uses permitted under the site's Urban Commercial designation.

Exhibit 1 shows the Project location and **Table 1** summarizes key development characteristics.

The following scoping memorandum outlines Michael Baker's approach to updating the traffic analysis associated with the modified project. As described in subsequent sections, as part of this analysis the updated baseline "Without Project" scenarios remain unchanged from the original *Meredith International Centre Specific Plan Amendment Traffic Impact Analysis (LLG, 2015)* [2015 TIA], documented in the original 2015 Specific Plan EIR. The analysis will follow be consistent with SBCTA's *Recommended Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment (SBCTA Guidelines),* dated February 2020.

Table 1: Information Summary

Item	Description
Project Location	The site is bounded by Inland Empire Boulevard to the north, Archibald Avenue to the east, Interstate 10 to the south, and Deer Creek Channel to the west.
Existing Land Uses	The project site has a Mixed Use - Meredith land use designation. Sparse ruderal vegetation and ornamental landscaping are present on-site.
Acreage	23.3 acres
Existing Zoning	Meredith Internation Centre SP (2265-SP) – Urban Commercial
Proposed Zoning	Meredith Internation Centre SP (2265-SP) – Urban Commercial + Mixed Use Overlay
Nearby Land Uses	Developed land uses exist on the North, East, South, and West sides of the Project site. *North*: Inland Empire Boulevard is immediately north of the project site. Planning Areas 4 and 5 of the Specific Plan are located further north. Planning Area 4 is developed with multi-family residences, and Planning Area 5 is developed with commercial/retail uses, including fast food restaurants and a gas station/convenience store. Planning Area 4 is designated Urban Residential and Planning Area 5 is designated Urban Commercial. *South*: Immediately south of the project site is I-10. Further south are warehouses and distribution centers; these properties are not within the Specific Plan area and are designated Mixed-Use and zoned Specific Plan (SP) with a Multimodal Transit Center (MTC) Overlay. *East*: Immediately east of the project site is Archibald Avenue. Further east is a gas station, hotel (currently under construction), and vacant land; these properties are not within the Specific Plan area and are designated Office Commercial and zoned High Intensity Office (OH). *West*: Deer Creek Channel is immediately west of the project site. Car dealerships and associated service centers are located further west. This area is within Planning Area 2 of the Specific Plan and is designated Urban Commercial.

2. Trip Generation

2015 EIR

The *Meredith International Centre Specific Plan Amendment Traffic Impact Analysis (LLG, 2015)* [2015 TIA], documented in the original 2015 Specific Plan EIR, analyzed the estimated project trips for each planning area based on the land use assumptions that were available at that time.

Table 2 provides the previously documented trip generation calculations for Planning Area 3. As shown, within Planning Area 3, a total of 9,628 daily trips, 473 AM Peak Hour trips, and 719 PM Peak Hour trips were anticipated during an average weekday.

Table 2: Approved 2015 EIR Planning Area 3 Trip Generation

Project Description	Daily	AM Peak Hour			PM Peak Hour		
		Enter	Exit	Total	Enter	Exit	Total
Trip Generation Forecast:							
Planning Area (PA) 3							
▪ 310: Hotel (400 Rooms)	3,268	124	88	212	124	116	240
▪ 710: General Office (100,000 SF)	1,103	137	19	156	25	124	149
▪ 820: Shopping Center (150,000 SF)	6,405	90	54	144	267	290	557
Less Pass-by Trips (10% Daily, 10% AM, 34% PM) [20]	-641	-9	-5	-14	-91	-98	-189
Total PA 3 Trip Generation Potential	**10,135**	**342**	**156**	**498**	**325**	**432**	**757**
Less Internal Capture (5%)	**-507**	**-17**	**-8**	**-25**	**-16**	**-22**	**-38**
Total PA 3 Net Trip Generation Potential	**9,628**	**325**	**148**	**473**	**309**	**410**	**719**

Source: *Meredith International Centre Specific Plan Amendment Traffic Impact Analysis* (LLG, January 2015)
Trip Rate Source: Institute of Transportation Engineer's (ITE) Trip Generation Manual, 9th Edition.

Modified Project

To remain consistent with the original analysis documented in the 2015 TIA, the modified project site trips were estimated using trip generation rates obtained from the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9th Edition. **Table 3** shows the trip generation rates used for the modified project. ITE Land Use codes 220 (Apartments) and 820 (Shopping Center) were assumed for the entire modified project site.

Table 3: Modified Planning Area 3 Trip Generation Rates

Land Use	ITE Code	Daily Trips Rate	AM Peak Hour			PM Peak Hour		
			Enter	Exit	Total	Enter	Exit	Total
Apartments	220	6.66 / DU	0.10	0.41	0.51	0.40	0.22	0.62
Shopping Center	820	42.70 / TSF	0.60	0.36	0.96	1.78	1.93	3.71

Notes: 1) Trip Rates – Institute of Transportation Engineer's (ITE) Trip Generation Manual, 9th Edition
2) DU = Dwelling Unit; TSF = Thousand Square Feet.

Table 3 summarizes the trip generation for the modified project. The modified project includes a Pass-By Trip reduction and internal capture reduction consistent with analysis documented in the 2015 TIA. The total estimated net Project trips include 10,670 daily trips, 719 AM Peak Hour trips, and 941 PM Peak Hour trips.

Table 3: Modified Planning Area 3 Trip Generation

Project Description	Intensity	Daily[1]	AM Peak Hour			PM Peak Hour		
			Enter	Exit	Total	Enter	Exit	Total
220: Apartments	1,400 DU	9,310	140	574	714	560	308	868
820: Shopping Center	50 TSF	2,135	30	18	48	89	97	186
Less Pass-by Trips[2] (10% Daily, 10% AM, 34% PM)[3]		-214	-3	-2	-5	-30	-33	-63
Total PA-3 Trip Generation Potential		11,232	167	590	757	619	372	991
Less Internal Capture (5%)[3]		-562	-8	-30	-38	-31	-19	-50
Total PA-3 Net Trip Generation Potential		**10,670**	**159**	**560**	**719**	**588**	**353**	**941**

Notes: 1) Source: ITE Trip Generation Manual, 9th Edition.
2) Applies only to Shopping Center land use.
3) Consistent with analysis documented in *Meredith International Centre Specific Plan Amendment Traffic Impact Analysis* (LLG, January 2015)

The 2015 TIA originally assumed Planning Area 3's land use would consist of a 400-room hotel, 100,000 square feet of office space, and 150,000 square feet of retail space. The modified project's proposed land use for Planning Area 3 consists of up to 1,400 residential units and up to 50,000 square feet of commercial/retail uses. Because of the land use changes, the trip characteristics have changed. The 2015 TIA showed higher entering trips in the AM Peak Hour and higher exiting trips in the PM Peak Hour. The modified project's land use show the opposite trend, with high exiting trips in the AM Peak Hour and high entering trips in the PM Peak Hour.

Table 4 compares the Planning Area 3 approved 2015 TIA project trips to the modified project trips. As shown, within the comparison boundary, the modified project is expected to generate more daily and peak hour trips compared to the approved 2015 TIA within Project Area 3. Since the trip generation of the modified is higher than the 2015 TIA trips, an operational analysis will be required to determine if new transportation impacts are identified.

Table 4: Project Trip Comparison

Project Description	Daily	AM Peak Hour			PM Peak Hour		
		Enter	Exit	Total	Enter	Exit	Total
2015 EIR: PA-3	9,628	325	148	473	309	410	719
Modified Project: PA-3	10,670	159	560	719	588	353	941
Difference	**1,042**	**-166**	**412**	**246**	**279**	**-57**	**222**

3. Study Area & Trip Distribution

The eight intersections listed below were selected to assess the potential impacts of the modified project. Note that the list below maintains the intersection identification numbers from the original 2015 TIA for consistency. Refer to **Exhibit 2** for the proposed study area.

- **#10** Archibald Ave and 6th Street
- **#20** Vineyard Ave and 4th St
- **#23** Archibald Ave and 4th St
- **#27** Vineyard Ave and Inland Empire Blvd
- **#28** Archibald Ave and Inland Empire Blvd
- **#33** Archibald Ave and I-10 Ramp SPI
- **#40** Project Dwy "C" and Inland Empire Blvd
- **#41** Project Dwy "D" and Inland Empire Blvd

To remain consistent with the previous analysis, the trip distribution for the modified project will be identical to that used in the 2015 EIR analysis. **Attachment A** contains the original trip distribution for Planning Area 3 used in the *original 2015 TIA.*

4. Study Methodology & Scenarios

To remain consistent with the previous analysis, following methodology will be utilized:

- Highway Capacity Manual 2000, using Synchro Software (Version 12).

The analysis will utilize the same baseline "without project" volumes documented in the 2015 TIA. The "plus project" conditions will reflect identical trips for Planning Areas 1, 2, and 4. Only the estimated trips for Planning Area 3 will be updated for this analysis. The analysis will determine if new traffic impacts are identified at these study intersections and if the proposed improvements documented in the 2015 TIA are sufficient to mitigate any new potential impacts. **Table 5** summarizes the impact criteria that will be used in this analysis. The thresholds in this table remain consistent with those used in the 2015 TIA.

The following study scenarios, as defined in the 2015 TIA, will be evaluated:

- Existing Plus Project (Planning Area 1-4)
- Year 2020 Cumulative Traffic Conditions Plus Project (Planning Areas 1-4)
- Year 2035 General Plan Buildout Plus Project (Planning Areas 1-4)

Table 5: LOS Threshold Criteria
