Maintenance and Repair of Bridge No. 868024

**Summary:**

Requesting authorization an approval of the following:

- Authorization and approval of a competitive procurement exemption pursuant to 2-226(g)(5) of the City's Code. Utilizing the pricing structure of an active Broward County Bid Award (No. PNC2127485B1_1; Bridges, Structures and Miscellaneous Roadway Construction) set to expire July 11, 2026.

- Authorization and approval to issue a purchase order and process payment(s) to FG Construction LLC for the Maintenance and Repair of Bridge No. 868024 for a total amount of $215,000.00 (see attached quote for additional details).

**Procurement:**

City determined that there is no need for the city to seek independent competitive procurement, as the work/services mentioned herein has been successfully solicited and competitively awarded by a Florida agency.

Broward County publicly and competitively solicited for "Bridges, Structures and Miscellaneous Roadway Construction" General Roadway (No. PNC2127485B1_1). Broward County awarded this solicitation to FG Construction, LLC, the award term is set to expire July 11, 2026. This solicitation and award complies with section 2-226(g)(5) of the City's code. Procurement has confirmed/verified that the unit cost(s) provided in the submitted proposal reflects the pricing structure of Broward County's term bid award.

Utilization of the pricing structure associated with Broward County's Bid Award (No. PNC2127485B1_1; Bridges, Structures and Miscellaneous Roadway Construction) allows the City to take advantage of Broward County's competitive process and pricing, and allows the City to expediate the repair and maintenance of the mentioned bridge.

Based on the foregoing information Engineering and Procurement Departments are requesting authorization and approval of the following:

City of Plantation recently completed the Pavement Characteristic Index (PCI) report for the City to maintain its asphalted streets (approximately 214 centerline miles) and sidewalks. As part of FY24-25 budget, Council members approved $3.6 millions to continue maintaining our streets to keep them within an acceptable level of service. The scope of work for this task is to have the entire neighborhood of Plantation Park surveyed.

This item is now ready for City Council consideration.

# ENGINEERING DEPARTMENT
# INTEROFFICE MEMORANDUM NO. 2025-02

DATE: March 13, 2025
TO: Mayor and City Council
FROM: Samira Shalan, City Engineer
SUBJECT: Paving Management Program

---

**Background:**

City's Administration and Council have emphasized the need for improved asset management and infrastructure focus. Given that roadway maintenance and repaving are top priorities for the Mayor, City Council, and residents (as indicated by the citizen survey), the FY 2025 adopted budget allocated $3.6 million from General Fund ad valorem revenues for roadway and repaving.

A citywide pavement survey was conducted in 2022. The survey report concluded that our roadway network is generally in good condition with an average Pavement Condition Index (CPI) of 84. In an effort to keep the overall pavement condition in an acceptable level of service, the pavement study recommended an annual pavement management program utilizing the survey results as a tool to identify priorities.

Public Works Department identified the following roadway segments for 2025 pavement management consideration:

1. SW 125th Avenue: Roadway in poor condition with PCI of 48 and require full reconstruction.
2. NW 55th Avenue. Roadway in poor condition with PCI of 63
3. NW 10th Court. Roadway in poor condition with PCI of 51
4. Plantation Park Community Roadways: Average Roadway is in poor condition with PCI of 63

5. SW 3rd Street: Even though the roadway condition was identified in the 2022 pavement survey as in good condition with PCI of 82, however, the condition had deteriorated with time with multiple potholes and faded pavement markings. This roadway segment is located within the midtown area with high traffic volume due to events and activities within the Pine Island Park.

A map identified the above referenced locations with their current condition is shown in Exhibit "A" attached to this memorandum

The Engineering Department continues to provide the required technical support needed to implement the pavement management program. Please see below status of all identified projects:

1. SW 125th Avenue:

Status: Project design is 90% complete (Design is conducted in house by Engineering staff)

2. NW 55th Avenue.

Status: Survey request for Council Approval

3. NW 10th Court.

Status: Survey request for Council Approval

4. Plantation Park Community Roadways:

Status: Survey request for Council Approval

5. SW 3rd Street:

Status: Survey request for Council Approval

Once survey is provided, the Engineering Department will proceed with the design, permitting and construction of the paving activities.

# WORK AUTHORIZATION PURSUANT TO THE CONTINUING SERVICES AGREEMENT BETWEEN THE CITY OF PLANTATION AND KEITH AND ASSOCIATES, INC. (KEITH)

March 13, 2025

WORK AUTHORIZATION NO. #5

PURCHASE ORDER NO. (City No. TBD) PROJECT NO.12183.05 (KEITH)

PROJECT NAME: Plantation Park Community - Survey

This project specific agreement is pursuant to the Agreement for Professional Surveying and Mapping Services between the City of Plantation and Keith and Associates, Inc. (KEITH) approved by the City pursuant to RFQ #027-20, passed and adopted on April 28, 2021.

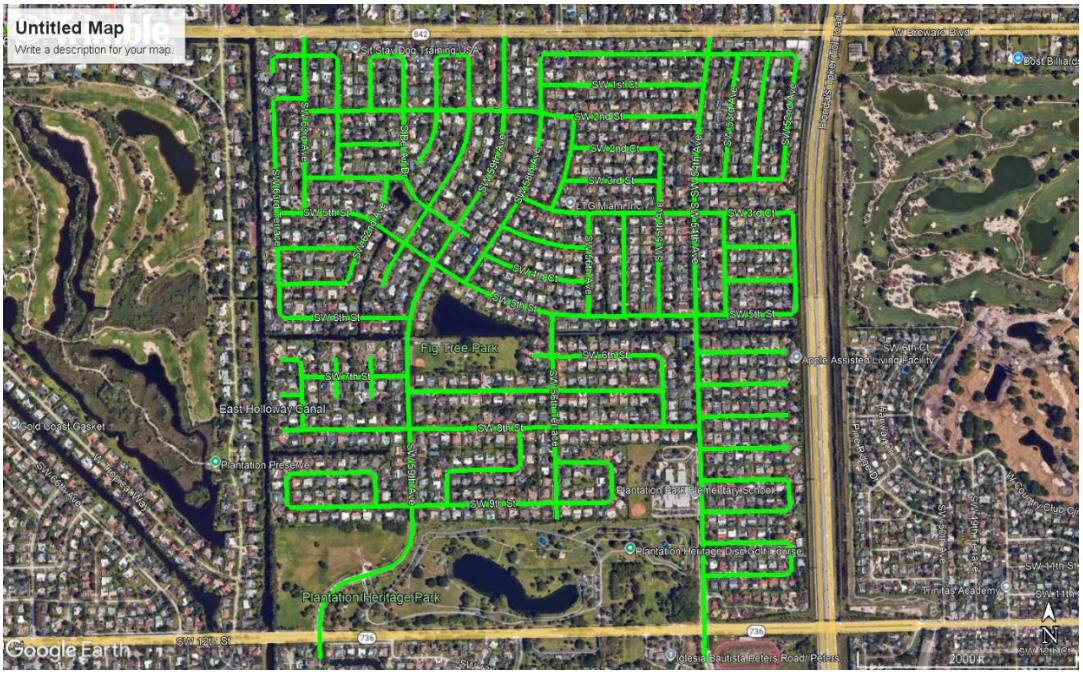
## PROJECT

The City of Plantation (OWNER) has requested that KEITH (CONSULTANT) provide the following: 3d Topographic Surveying Services. It is KEITH's understanding that this data is to be used for a neighborhood improvement project consisting of pavement resurfacing, sidewalk repairs, ADA sidewalk and ramp improvements and drainage improvements including swale re-grading. The City will provide the described STONER survey and previously produced aerial LiDAR data for reference only. The City will also provide underground utility information (drainage, water, and sewer as-builts or atlas's) for reference into the deliverables.

## PROJECT SITE

Project Limits:

- Green highlighted roadways shown below - Approximately 32.7 scan miles.
- Includes ten (10) feet past the right of way/back of sidewalk on all interior roads.



Docusign Envelope ID: 149D187E-BDC4-4E17-8A5F-9C07D6B67AB8

## SCOPE OF SERVICES

**Task 101 Topographic Survey**
KEITH will prepare a Topographic Survey of the site. Survey will show the R/W lines from BCPA together with surface improvements such as roadways, pavement, sidewalks, traffic striping, walls, fences, mailboxes, surface utilities, etc. Landscaped areas falling within the project scope will be outlined only. Survey will be referenced to the Florida State Plane Coordinate System (NAD83/11) and the North American Vertical Datum of 1988 (NAVD88). Elevations/cross sections to be provided every 25 feet and at other significant grade break points, such as along driveway aprons and swale centerlines. Quality Level D and/or City GIS provided utility information as provided by the City will be referenced as no utility designating and/or locating (test holes) are included in this task.

KEITH proposes to gather the data for the survey using mobile LiDAR technology. Each roadway lane will be driven and scanned to the outside of the scoped area. It is anticipated that there will be some obscured areas due to parked cars and other roadside obstructions. These areas, once determined, will be surveyed using conventional methods.

**Deliverables:**
- 3D survey drawing showing all features and spot elevations every 25’
- 3D Digital Terrain Model
- Files to be provided in AutoCAD Civil 3D format.
- Signed and Sealed PDF

**Task 102 Tree Survey**
Per City GIS file, 2,110 tree locations are within the project limits. The City GIS file currently shows tree locations without any additional information. This task would include a tree survey for all trees over 3 inches in diameter at breast height (dbh) within the project limits, identifying said dbh and common name. The canopy spread, scientific name, and condition assessment (appraisal value) are not included. Survey will be referenced to the Florida State Plane Coordinate System (NAD83/11) and information collected under this task will be shown within the Topographic survey completed under Task 101.

**Deliverables:**
- Tree information included in the completed survey under Task 101.

**Task 103 Drainage Survey**
Per City GIS file, 255 drainage structure locations have been provided without invert information. This task would include selective verifications of size/type of pipes and the provided “measure down” information for these structures within the project limits. Structures would be included with annotated information to include rim, invert, size/type of pipe as provided. Survey will be referenced to the Florida State Plane Coordinate System (NAD83/11) and the North American Vertical Datum of 1988 (NAVD88). Information collected under this task will be shown within the Topographic survey completed under Task 101.

**Deliverables:**
- Drainage Survey information included in the completed survey under Task 101.

Docusign Envelope ID: 149D187E-BDC4-4E17-8A5F-9C07D6B67AB8

# ENGINEERING DEPARTMENT
# INTEROFFICE MEMORANDUM NO. 2025-02

DATE: March 13, 2025
TO: Mayor and City Council
FROM: Samira Shalan, City Engineer
SUBJECT: Paving Management Program

---

**Background:**

City's Administration and Council have emphasized the need for improved asset management and infrastructure focus. Given that roadway maintenance and repaving are top priorities for the Mayor, City Council, and residents (as indicated by the citizen survey), the FY 2025 adopted budget allocated $3.6 million from General Fund ad valorem revenues for roadway and repaving.

A citywide pavement survey was conducted in 2022. The survey report concluded that our roadway network is generally in good condition with an average Pavement Condition Index (CPI) of 84. In an effort to keep the overall pavement condition in an acceptable level of service, the pavement study recommended an annual pavement management program utilizing the survey results as a tool to identify priorities.

Public Works Department identified the following roadway segments for 2025 pavement management consideration:

1. SW 125th Avenue: Roadway in poor condition with PCI of 48 and require full reconstruction.
2. NW 55th Avenue. Roadway in poor condition with PCI of 63
3. NW 10th Court. Roadway in poor condition with PCI of 51
4. Plantation Park Community Roadways: Average Roadway is in poor condition with PCI of 63

5. SW 3rd Street: Even though the roadway condition was identified in the 2022 pavement survey as in good condition with PCI of 82, however, the condition had deteriorated with time with multiple potholes and faded pavement markings. This roadway segment is located within the midtown area with high traffic volume due to events and activities within the Pine Island Park.

A map identified the above referenced locations with their current condition is shown in Exhibit "A" attached to this memorandum

The Engineering Department continues to provide the required technical support needed to implement the pavement management program. Please see below status of all identified projects:

1. SW 125th Avenue:

Status: Project design is 90% complete (Design is conducted in house by Engineering staff)

2. NW 55th Avenue.

Status: Survey request for Council Approval

3. NW 10th Court.

Status: Survey request for Council Approval

4. Plantation Park Community Roadways:

Status: Survey request for Council Approval

5. SW 3rd Street:

Status: Survey request for Council Approval

Once survey is provided, the Engineering Department will proceed with the design, permitting and construction of the paving activities.

New line 3b has been added to this form. A flow-through entity is required to complete this line to indicate that it has direct or indirect foreign partners, owners, or beneficiaries when it provides the Form W-9 to another flow-through entity in which it has an ownership interest. This change is intended to provide a flow-through entity with information regarding the status of its indirect foreign partners, owners, or beneficiaries, so that it can satisfy any applicable reporting requirements. For example, a partnership that has any indirect foreign partners may be required to complete Schedules K-2 and K-3. See the Partnership Instructions for Schedules K-2 and K-3 (Form 1065).

## What's New

Line 3a has been modified to clarify how a disregarded entity completes this line. An LLC that is a disregarded entity should check the appropriate box for the tax classification of its owner. Otherwise, it should check the "LLC" box and enter its appropriate tax classification.

New line 3b has been added to this form. A flow-through entity is required to complete this line to indicate that it has direct or indirect foreign partners, owners, or beneficiaries when it provides the Form W-9 to another flow-through entity in which it has an ownership interest. This change is intended to provide a flow-through entity with information regarding the status of its indirect foreign partners, owners, or beneficiaries, so that it can satisfy any applicable reporting requirements. For example, a partnership that has any indirect foreign partners may be required to complete Schedules K-2 and K-3. See the Partnership Instructions for Schedules K-2 and K-3 (Form 1065).

   Any action of a FIRM in violation of this may be cause for disqualification of the FIRM.

## GENERAL CONTRACT PROVISIONS

1. Generally, the CITY does have standard CONTRACT provisions concerning its FIRMs, and it is contemplated that these CONTRACT provisions will appear in the "Master" CONTRACT. As stated herein, each Task Order may contain refinements to a scope of services, deadlines, and any negotiated adjustments to compensation, etc. The following are representative terms of CITY consulting CONTRACTs, and the CITY reserves the right to add additional terms or modify the following terms as it deems appropriate during the compensation negotiation phase of the Selection Process or at the time the master CONTRACT is implemented by a Task Order.

   a. The CITY will be able to terminate the CONTRACT without cause by giving THIRTY (30) Calendar Days written notice before termination. A transition provision will be included in the event of termination.

   b. The successful FIRM(s) shall bill the CITY according to the type of compensation as may be agreed in any given Task Order.

   c. The CITY, during any fiscal year, shall not expend money, incur any liability, or enter into any CONTRACT which, by its terms, involves the expenditure of money in excess of the amounts budgeted as amended, surpluses carried over to the recent fiscal year, and reserves which are available for expenditure during such fiscal year. Any CONTRACT, verbal or written, made in violation of this subsection is at the CITY's option null and void or voidable, and in no event can money be paid on such CONTRACT in excess of what is available for expenditure in any fiscal year. Nothing herein contained shall prevent the making of CONTRACTs for periods exceeding ONE (1) year, but any CONTRACT so made shall be executory only for the value of the services to be rendered or agreed to be paid for in succeeding fiscal years.

   d. The CITY reserves the right to prepare a CONTRACT and Task Order and to refuse to enter into a CONTRACT or Task Order if the CITY's terms are not accepted.

   e. The written CONTRACT between the successful FIRM(s) and the CITY shall include language to the effect that neither the CONTRACT, nor any portion thereof, nor any other facet of the relationship between the parties will create or be deemed to create a partnership, joint venture, joint enterprise, as a Sub-FIRM, or any other agency relationship, or an employer/employee leasing relationship, and further, shall reflect the CITY's intent that the legal relationship between the parties shall be that of an independent FIRM.

f. Each Task Order may provide that the successful FIRM(s) is to achieve final completion within an agreed time period determined and agreed upon by both parties from the date appearing in the Notice to Proceed form for the specified Project. Therefore, the FIRM agrees to begin each Project in conformity with the provisions set forth in the Task Order and to prosecute it with all due diligence, so as to complete the entire work and Project by the time limits set forth in the agreed Project Schedule for the specified Project. As to such a Task Order that has deadlines, time will be of the essence unless stated otherwise.

g. FIRM(s) shall not be entitled to an increase in the CONTRACT Price or payment or compensation of any kind from CITY for direct, indirect, consequential, impact or other costs, expenses or damages including but not limited to costs of acceleration or inefficiency or extended overhead, arising because of delay, disruption, interference or hindrance from any cause whatsoever, whether such delay, disruption, interference or hindrance be reasonable or unreasonable, foreseeable or unforeseeable, or avoidable or unavoidable; provided, however, that this provision shall not preclude recovery of damages by FIRM(s) for hindrances or delays due solely to fraud, bad faith or active malicious interference on the part of CITY. Otherwise, FIRM shall be entitled only to extensions of the CONTRACT time as the sole and exclusive remedy for excusable events of delay.

h. If the FIRM submits a schedule or expresses an intention to complete the work earlier than any required milestone or completion date, the CITY shall not be liable to the FIRM for any costs incurred, lost profits, extended overhead, expenses, or other damages of any kind because of delay or hindrance, regardless of whether such delay or hindrance was caused by the CITY or by its agents, should the FIRM be unable to complete the Work before such milestone or completion date as is described within the schedule.

i. On any particular Task Order, the CITY reserves the right to include a provision for liquidated damages as a result of any project or work delay.

j. Upon THIRTY (30) Calendar Days written notice to FIRM, CITY may, without cause and without prejudice to any other right or remedy, terminate the Agreement for CITY's convenience whenever CITY determines. Where the Agreement is terminated for the convenience of CITY, the notice of termination to FIRM must state that the CONTRACT is being terminated for the convenience of CITY, the effective date of the termination and the extent of termination. Services will be paid for through date of termination, and this shall mean payment for all completed tasks and payment for uncompleted tasks based upon the percentage of completion of such uncompleted tasks. FIRM shall not be paid on account if loss of anticipated profits or revenues or other economic loss arising out of or resulting from such termination.

k. The Agreement may also be terminated by mutual agreement at any time and under any terms.

l. No remedy under the terms of this CONTRACT in CITY's favor is intended to be exclusive of any other remedy, but each and every remedy shall be cumulative and shall be in addition to any other remedies, existing now or later, at law, in equity or by statute. No delay or omission to exercise any CITY right or CITY power accruing upon any event of default shall impair any CITY right or CITY power nor shall it be construed to be a waiver of any event of default or acquiescence in it, and every CITY right and CITY power may be exercised from time to time as often as may be deemed expedient.

m. The FIRM shall comply with all existing and future applicable laws, ordinances, rules, regulations, and lawful orders of public authorities relating to the Project and shall give all applicable notices pertaining to same.

n. The laws of the State of Florida shall govern the validity, construction and effect of this CONTRACT.

o. Should any part, term or provision of this Agreement be by the courts decided to be invalid, illegal or in conflict with any law of the State, the validity of the remaining portion or provision shall not be affected thereby.

p. To any extent that the FIRM may be acting as an "agent" and/or FIRM on behalf of the CITY, the CITY expects the FIRM to fully comply with all Federal, State, and Local laws applicable to and specifically those covering Equal Opportunity Employment, American Disabilities Act (ADA), 42 U.S.C. 12101, et seq. and Florida Building Code. We reserve the right to verify your compliance with the various laws. Failure to comply with any laws will be grounds for termination of the CONTRACT.

q. The FIRM shall indemnify and hold harmless the CITY of Plantation, its officers and employees, from liabilities, damages, losses, and costs, including, but not limited to, reasonable attorneys' fees, to the extent caused by the negligence, recklessness, or intentionally wrongful conduct of the FIRM and other persons employed or utilized by the FIRM in the performance of the CONTRACT.

FIRM agrees to indemnify, defend, save and hold harmless the CITY, its officers, agents and employees, from all damages, liabilities, losses, claims, fines and fees, and from any and all suits and actions of every name and description that may be brought against the CITY, its officers, agents and employees, on account of any claims, fees, royalties, or costs for any invention or patent or for the infringement of any and all copyrights or patent rights claimed by any person, FIRM, or corporation which result from the work product of the FIRM.

In the event of any claims or suits which fall within either of the foregoing indemnities, payment of any amount due pursuant thereto shall, after receipt of written notice by FIRM from the CITY that such amount is due, be made by FIRM prior to the CITY being required to pay same, or in the alternative, the CITY, at CITY's option, may make payment of an amount so due and the FIRM shall promptly reimburse the CITY for same, together with interest thereon at the rate of 12% per annum simple interest from the day of CITY's payment. FIRM agrees, at the FIRM's expense, after receipt of written notice from the CITY, to defend any action against the CITY that falls within the scope of the foregoing indemnities, or the CITY, at the CITY's option, may elect not to tender such defense and may instead elect to secure its own attorney to defend any such action and the reasonable costs and expenses of such attorney incurred in defending such action shall be payable by the FIRM. Additionally, if FIRM, after receipt of written notice from the CITY fails to make any payment due hereunder to the CITY, FIRM shall pay any reasonable attorney's fees or costs incurred by the CITY in securing any such payment from FIRM.

Nothing contained herein is intended nor shall it be construed to waive the CITY's rights and immunities under the common law or Florida Statute §768.28 as amended from time to time. This obligation shall not be construed to negate, abridge, or otherwise reduce any other right or obligation of indemnity which would otherwise exist in the CITY's favor.

r. External Funding Requirements: Some of the work/tasks performed under this contract could be wholly or partially funded by grants, loans or programs administered by Federal governmental agencies, State governmental agencies, Broward County or all three. To that end, the FIRM agrees to meet all applicable conditions or requirements of such grants, loans, or programs, regardless of whether or not such conditions or requirements are specifically identified or referenced in the contract documents. These requirements may include record production, processing, and retention, cooperation in audits (both prior to and after completion), and special provisions for inspections, labor, materials, insurance, bonding, and payments or draw requests, Certified Business Enterprise Programs, or all of the foregoing.

# DRUG-FREE WORKPLACE

## STATEMENT UNDER SECTION 287.087 FLORIDA STATUES

**TO BE RETURNED WITH FIRM**

Preference must be given to FIRMS submitting certification with their bid or proposal, certifying they have a drug-free workplace in accordance with the Florida Statutes, Section 287.087. This requirement affects all public entities of the State and became effective January 1, 1991.

Preference shall be given to businesses with drug-free workplace programs. Whenever two or more bids, proposals, or replies that are equal with respect to price, quality and service are received by the State or by any political subdivision for the procurement of commodities or contractual services, a bid, proposal, or reply received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. Established procedures for processing the bids will be followed if none of the tied vendors have a drug-free workplace program. In order to have a drug-free workplace program, a business shall:

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the action that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).

4. In the statement specified in subsection (1), notify the employees that as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any convictions of, or plea of guilty or nolo contendere to, any violations of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the workplace, no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in, a drug abuse assistance or rehabilitation program if such is available in the employee's community, by an employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of the above measures.

As the person authorized to sign this statement, I certify that this company complies with the above requirements.

COOPERATION WITH THE BROWARD COUNTY
OFFICE OF INSPECTOR GENERAL

**TO BE RETURNED WITH PROPOSAL**

The Broward County Office of Inspector General ("OIG") has the authority to review and investigate how governmental contracts are performed and how FIRMS and vendors (herein, "FIRMS") are paid. To this end, FIRM agrees to cooperate with the OIG in the event the FIRM is contacted by the OIG. Such cooperation shall include, answering any questions that may be posed by the OIG, and allowing the OIG to review and copy any of FIRM's written material, contract documentation, and financial records that may relate to the formulation, execution, and performance of this Contract. The FIRM acknowledges and agrees that whatever work or effort is expended by FIRM in interfacing with the OIG is part of the administrative or overhead or base costs of the services provided by the FIRM to the CITY, and shall never be a basis for claiming extra or additional compensation under this Contract, or for requesting a change order.

The FIRM's failure to cooperate fully with the OIG as required by the preceding clause shall be a basis for the City claiming the FIRM is in default, and may, if not timely cured, allow the City to terminate this Contract for cause. Unless the FIRM is instructed otherwise in a specific written and notarized Order signed by the Broward County Inspector General, FIRM shall advise CITY, in writing and in the same manner as FIRM gives the City formal notice under this Contract, each instance, if ever, that the FIRM is contacted by the OIG, and shall supply the City with information necessary to allow the City to ensure that the FIRM is fully performing the requirements of this Paragraph.

**FLORIDA STATUES**

**TO BE RETURNED WITH BIDDER**

Preference must be given to BIDDER submitting certification with their bid or proposal, certifying they have a drug-free workplace in accordance with the Florida Statutes, Section 287.087. This requirement affects all public entities of the State and became effective January 1, 1991.

This endorsement modifies insurance provided under the following:

In consideration of the premium paid, the policy to which this Endorsement is attached is amended as follows:

**SECTION II – WHO IS AN INSURED,** Paragraph **4.e.** is deleted and replaced with the following:

**e.** Any person or organization, other than a third party carrier, you agree to include as an insured in a written contract, written agreement or permit, but only with respect to **bodily injury**, **property damage**, **environmental damage** or **personal and advertising injury** arising out of your operations, **your work**, equipment or premises leased or rented by you, or **your products** which are distributed or sold in the regular course of a vendor's business, however:

**(1)** A vendor is not an insured as respects **bodily injury**, **property damage**, **environmental damage** or **personal and advertising injury**:

**(a)** For which the vendor is obligated to pay damages by reason of the assumption of liability in a contract or agreement except that which the vendor would have in the absence of the contract or agreement;

**(b)** Arising out of any express warranty unauthorized by you;

**(c)** Arising out of any physical or chemical change in the product made intentionally by the vendor;

**(d)** Arising out of repackaging, except when unpacked solely for the purpose of inspection, demonstration, testing, or the substitution of parts under instructions from you, and then repackaged in the original container;

**(e)** Arising out of any failure to make inspections, adjustments, tests or servicing as the vendor has agreed to make or normally undertakes to make in the usual course of business, in connection with the distribution or sale of the products;

**(f)** Arising out of demonstration, installation servicing or repair operations, except such operations performed at the vendor's location in connection with the sale of the product; or

**(g)** Arising out of products which, after distribution or sale by you, have been labeled or relabeled or used as a container, part or ingredient of any other thing or substance by or for the vendor.

**(2)** A manager or lessor of premises leased or rented to you, a lessor of leased equipment, or a mortgagee, assignee, or receiver is not an insured as respects **bodily injury**, **property damage**, **environmental damage** or **personal and advertising injury**:

**(a)** Arising out of any **occurrence** that takes place after the equipment lease expires or you cease to be a tenant; or

**(b)** Arising out of structural alterations, new construction or demolition operations performed by or on behalf of the manager or lessor of premises, or mortgagee, assignee, or receiver.

**(3)** The insurance afforded to such additional insured only applies to the extent permitted by law.

**(4)** If coverage provided to the additional insured is required by a contract or agreement, the insurance afforded to such additional insured will not be broader than that which you are required by the contract or agreement to provide for such additional insured.

ALL OTHER TERMS, CONDITIONS AND EXCLUSIONS OF THIS POLICY REMAIN UNCHANGED.

**a. Primary Insurance**

This insurance is primary except when Paragraph **b.** below applies. If this insurance is primary, our obligations are not affected unless any of the other insurance is also primary. Then, we will share with all that other insurance by the method described in Paragraph **c.** below. However, regardless of whether **b.** below applies, in the event that a written contract or agreement or permit requires this insurance to be primary for any person or organization you agreed to insure and such person or organization is an insured under this policy, we will not seek contributions from any such other insurance issued to such person or organization.

**b. Excess Insurance**

**(1)** This insurance is excess over:

**(a)** Any of the other insurance, whether primary, excess, contingent or on any other basis:

**(i)** That is Fire, Extended Coverage, Builder's Risk, Installation Risk or similar coverage for **your work**;

**(ii)** That is Fire insurance for premises rented to you or temporarily occupied by you with permission of the owner;

**(iii)** That is insurance purchased by you to cover your liability as a tenant for **property damage** to premises rented to you or temporarily occupied by you with permission of the owner;

**(iv)** If the loss arises out of the maintenance or use of aircraft, **autos** or watercraft to the extent not subject to Exclusion a**.** of **COVERAGE PART I – Coverage A – General Bodily Injury And Property Damage Liability** or Exclusion a. of **COVERAGE PART IV – Professional Liability**; or

**(v)** That provides coverage for environmental or pollution liability to you or any person or organization qualifying as an insured under **SECTION II – WHO IS AN INSURED,** paragraphs **1., 4.a., or 4.g**.

**(b)** Any other primary insurance available to you covering liability for damages arising out of the premises or operations, or the products and completed operations, for which you have been added as an additional insured.

**(c)** Any project specific primary insurance available to you covering liability for damages arising out of **your work**, for which you are an insured

**(2)** When this insurance is excess, we will have no duty to defend the insured against any **suit** if any other insurer has a duty to defend the insured against that **suit**. If no other insurer defends, we will undertake to do so, but we will be entitled to the insured's rights against all those other insurers.

**(3)** When this insurance is excess over other insurance, we will pay only our share of the amount of the loss, if any, that exceeds the sum of:

**(a)** The total amount that all such other insurance would pay for the loss in the absence of this insurance;

**(b)** The total of all deductible and self-insured amounts under all that other insurance; and

**(c)** The deductible and self-insured amounts under this insurance.

**(4)** We will share the remaining loss, if any, with any other insurance that is not described in this Excess Insurance provision and was not bought specifically to apply in excess of the Limits of Insurance shown in the Declarations of this policy.

**c. Method of Sharing**

If all of the other insurance permits contribution by equal shares, we will follow this method also. Under this approach each insurer contributes equal amounts, excess of applicable deductible and self-insured amounts under all such insurance, until it has paid its applicable limit of insurance or none of the loss remains, whichever comes first.

If any of the other insurance does not permit contribution by equal shares, we will contribute by limits. Under this method, each insurer's share is based on the ratio of its applicable limit of insurance to the total applicable limits of insurance of all insurers.

**19. Premiums and Deductible**

The first Named Insured shown in the Declarations:

**a.** Is responsible for the payment of all premiums;

**b.** Will be the payee for any return premiums we pay; and

**c.** Is responsible for the payment of all deductibles.

**20. Representations**

By accepting this policy, you agree:

**a.** The statements in the Declarations are accurate and complete;

**b.** Those statements are based upon representations you made to us; and

**c.** We have issued this policy in reliance upon your representations.

**21. Separation of Insureds**

Except with respect to the Limits of Insurance, any insured versus insured exclusions, and any rights or duties specifically assigned in this policy to the first Named Insured, this insurance applies:

1. As if each Named Insured were the only Named Insured; and
2. Separately to each insured against whom **claim** is made or **suit** is brought.

**22. Transfer of Rights of Recovery Against Others To Us**

If the insured has rights to recover all or part of any payment we have made under this policy, those rights are transferred to us. At our request, the insured will bring **suit** or transfer those rights to us and help us enforce them. However, if the insured has waived rights of recovery against any person or organization prior to a loss, we waive any right of recovery we may have under this policy against such person or organization.

**23. Transfer of Your Rights and Duties Under This Policy**

Your rights and duties under this policy may not be transferred without our written consent except in the case of death of an individual named insured.

If you die, your rights and duties will be transferred to your legal representative but only while acting within the scope of duties as your legal representative. Until your legal representative is appointed, anyone having proper temporary custody of your property will have your rights and duties but only with respect to that property.

**24. When We Do Not Renew**

If we decide not to renew, we will mail or deliver to the first Named Insured shown in the Declarations written notice of the nonrenewal not less than sixty (60) days before the expiration date. If notice is mailed, proof of mailing will be sufficient proof of notice.

**SECTION V – DEFINITIONS**

Our company attentively monitors all possibilities of natural disasters, year-round throughout Florida. In the event of a possible storm or flood, our team is organized to plan for all risks and likelihoods.

## Emergency Response

Flotech's experienced management team knows what to expect and how to respond to large-scale natural disasters. Each work site is assessed for best course of action. Progress photos are cataloged, and production is recorded daily; noting location, quantity of debris removed and corresponding disposal service facility location and disposal quantity. Disposal tickets are also recorded per work site.

This level of management proficiency dates to Flotech's assignment as First Responders for Hurricane Katrina in New Orleans, Louisiana in 2005, which consisted of unblocking hundreds of thousands of linear feet of storm water drains to alleviate flooding. Because of the scale and resources of our fleet, we are able to meet rigorous demand response times performing all operations necessary to completely remove any type of blockage and restore flow to wastewater conveyance systems.

Flotech's investment in high-performance equipment and fleet management program ensures reliable and dependable service. Flotech's 20+ Combination Jet-Vac Trucks are recognized to be the best-inclass fleet, with 2,500 psi/100,000 GPM high pressure Jet Rodder pumps and powerful Positive Displacement blower producing 5000 CFM; capable of pulling material long distances into 15 CY (3,000 Gal) debris tanks. This combination of equipment is best suited to efficiently tackle the most demanding blockages and frequent sewage spills. Our vacuum trucks also provide a fast and safe way to remove material, without requiring a backhoe or other traditional digging equipment to excavate a site with utility locations for water, gas, electric, telephone and fiber optic lines. This is ideal in emergency situations where time is of the essence, such as hurricane disaster relief or fixing water main breaks.

Although our company was founded in South Florida, Flotech now has active operating offices in Orlando, Tampa and West Palm Beach. Our fleet of over 20 Vactor trucks and 50+ seasoned operators are on-call for emergency services all throughout the State. In the event of a natural disaster or emergency, Flotech management is prepared to quickly assess, plan and re-allocate resources using effective communication and advanced technology. Emergency calls can be responded to within 1-2 hour notice in most cases and maximum 3 hours should work site be located at an extended distance from any of our operations center.

**Teamwork at Work:**

During Flotech's impressive project history, we have encountered numerous on-site challenges, all of which we can proudly state have been resolved in a timely and effective manner. For instance, the resolution of schedule conflict in March 2020: Flotech's South, FL crews were assigned to multi night-work on a sectional installation project in Broward County, when we received City of Miami Beach emergency force main break call requiring 24-hour, full week Vactor services. Team communication, resource planning and GPS fleet tracking resulted in the speedy reallocation of resources from our Central, FL center to ensure both projects were serviced and all commitments were kept. Remaining in constant communication, Flotech is experienced in handling emergency calls and last-minute changes to project's schedule, due to weather, client needs or other unforeseen conditions.

## Safety

Safety is paramount to our company. The safety of Flotech's team members, client inspectors and local citizens are our first consideration when planning and completing all operations. Flotech's dedicated Safety Director oversees the health and safety of our team holding daily toolbox meetings, weekly safety topics, and enforcing our Fleet, Operations and Hurricane Preparedness safety programs. Our crews are certified in OSHA 10-hour, Advanced MOT (Traffic) and Confined Space Entry, amongst other safety certifications.

Expiration Date: April 30, 2024

Dear Jose L. Ferre,

Miami-Dade County Small Business Development (SBD), a division of the Internal Services Department (ISD), has completed the review of your application and attachments submitted for certification. Your firm is officially certified as a Miami-Dade County Small Business Enterprise. The Small Business Enterprise (SBE) programs are governed by Sections 2-8.1.1.1.1; 2-8.1.1.1.2; 2-10.4.01; 10-33.02 of Miami-Dade County's Codes. This Small Business Enterprise - Construction (SBE-Con) certification is valid for three (3) years. However, to validate continuing eligibility, SBD may conduct random audit(s) within the three (3) year certification period. **Failure to provide required documentation for a random audit will initiate the decertification process.**

At the time of expiration, your firm will submit a Re-certification Application at least one hundred and eighty (180) days, but not less than, ninety (90) days, prior to the end of the three (3) year certification term via the County's web-based system, Business Management Workforce System (BMWS). This will ensure sufficient time for process by SBD. **Failure to provide the re-certification application and required supporting documentation will initiate the decertification process.**

If at any time there is a material or business structure change in the firm including, but not limited to, ownership, officers, director, scope of work being performed, daily operations, affiliations(s) with other businesses or the physical location of the firm, you must notify this office within thirty (30) calendar days of the effective date of the change(s) via the BMWS. Notification should include supporting documentation. You will receive timely instructions from this office as to how you should proceed, if necessary. **Failure to notify SBD of any changes may result in immediate action to decertify the firm.**

This letter will be the only approval notification issued for the duration of your firm's three-year certification. If the firm attains graduation or becomes ineligible during the three-year certification period, you will be properly notified following an administrative process that your firm's certification has been removed pursuant to the code. Your firm's name and tier level will be listed in the directory for all SBE certified firms, which can be accessed through Miami-Dade County's SBD website: https://www.miamidade.gov/global/business/smallbusiness/home.page. Dear Jose L. Ferre,

Miami-Dade County Small Business Development (SBD), a division of the Internal Services Department (ISD), is pleased to notify you that your firm is certified under the Florida Unified Certification Program (UCP). Your firm meets the eligibility requirements for certification as a Disadvantaged Business Enterprise (DBE) in accordance with 49 CFR Part 26.

DBE certification is continuous with no expiration date; however, firms are required to attest that there are no changes via the No Change Declaration form on or before the firm's anniversary date to remain certified. You will be notified of your annual responsibilities in advance of the Anniversary Date listed above. You must submit the annual No Change Declaration form no later than the Anniversary Date to maintain your eligibility. Your firm will be listed in the UCP DBE Directory which can be accessed through the Florida Department of Transportation's website: http://www3b.dot.state.fl.us/EqualOpportunityOfficeBusinessDirectory/.

If at any time there is a material change in your firm, you must advise this office by sworn affidavit and supporting documentation within thirty (30) days. Changes include, but are not limited to ownership, officers, directors, management, key personnel, scope of work performed, daily operations, on-going business relationships with other firms, individuals or the physical location of your firm. After our review, you will receive instructions as to how you should proceed, if necessary. Failure to comply will result in action to remove your firm's DBE certification.

It is strongly recommended that you register your firm as a vendor with Miami-Dade County. To register, you may visit: http://www.miamidade.gov/procurement/vendor-registration.asp. Thank you for your interest in doing business with Miami-Dade County. If you have any questions or concerns, you may contact our office at 305-375-3111 or sbdcert@miamidade.gov.

Sincerely,

ALL OTHER TERMS, CONDITIONS AND EXCLUSIONS OF THIS POLICY REMAIN UNCHANGED.

**a. Primary Insurance**

This insurance is primary except when Paragraph **b.** below applies. If this insurance is primary, our obligations are not affected unless any of the other insurance is also primary. Then, we will share with all that other insurance by the method described in Paragraph **c.** below. However, regardless of whether **b.** below applies, in the event that a written contract or agreement or permit requires this insurance to be primary for any person or organization you agreed to insure and such person or organization is an insured under this policy, we will not seek contributions from any such other insurance issued to such person or organization.

**b. Excess Insurance**

**(1)** This insurance is excess over:

**(a)** Any of the other insurance, whether primary, excess, contingent or on any other basis:

**(i)** That is Fire, Extended Coverage, Builder's Risk, Installation Risk or similar coverage for **your work**;

**(ii)** That is Fire insurance for premises rented to you or temporarily occupied by you with permission of the owner;

**(iii)** That is insurance purchased by you to cover your liability as a tenant for **property damage** to premises rented to you or temporarily occupied by you with permission of the owner;

**(iv)** If the loss arises out of the maintenance or use of aircraft, **autos** or watercraft to the extent not subject to Exclusion a**.** of **COVERAGE PART I – Coverage A – General Bodily Injury And Property Damage Liability** or Exclusion a. of **COVERAGE PART IV – Professional Liability**; or

**(v)** That provides coverage for environmental or pollution liability to you or any person or organization qualifying as an insured under **SECTION II – WHO IS AN INSURED,** paragraphs **1., 4.a., or 4.g**.

**(b)** Any other primary insurance available to you covering liability for damages arising out of the premises or operations, or the products and completed operations, for which you have been added as an additional insured.

**(c)** Any project specific primary insurance available to you covering liability for damages arising out of **your work**, for which you are an insured

**(2)** When this insurance is excess, we will have no duty to defend the insured against any **suit** if any other insurer has a duty to defend the insured against that **suit**. If no other insurer defends, we will undertake to do so, but we will be entitled to the insured's rights against all those other insurers.

**(3)** When this insurance is excess over other insurance, we will pay only our share of the amount of the loss, if any, that exceeds the sum of:

**(a)** The total amount that all such other insurance would pay for the loss in the absence of this insurance;

**(b)** The total of all deductible and self-insured amounts under all that other insurance; and

**(c)** The deductible and self-insured amounts under this insurance.

**(4)** We will share the remaining loss, if any, with any other insurance that is not described in this Excess Insurance provision and was not bought specifically to apply in excess of the Limits of Insurance shown in the Declarations of this policy.

**c. Method of Sharing**

If all of the other insurance permits contribution by equal shares, we will follow this method also. Under this approach each insurer contributes equal amounts, excess of applicable deductible and self-insured amounts under all such insurance, until it has paid its applicable limit of insurance or none of the loss remains, whichever comes first.

If any of the other insurance does not permit contribution by equal shares, we will contribute by limits. Under this method, each insurer's share is based on the ratio of its applicable limit of insurance to the total applicable limits of insurance of all insurers.

**19. Premiums and Deductible**

The first Named Insured shown in the Declarations:

**a.** Is responsible for the payment of all premiums;

**b.** Will be the payee for any return premiums we pay; and

**c.** Is responsible for the payment of all deductibles.

**20. Representations**

By accepting this policy, you agree:

**a.** The statements in the Declarations are accurate and complete;

**b.** Those statements are based upon representations you made to us; and

**c.** We have issued this policy in reliance upon your representations.

**21. Separation of Insureds**

Except with respect to the Limits of Insurance, any insured versus insured exclusions, and any rights or duties specifically assigned in this policy to the first Named Insured, this insurance applies:

1. As if each Named Insured were the only Named Insured; and
2. Separately to each insured against whom **claim** is made or **suit** is brought.

**22. Transfer of Rights of Recovery Against Others To Us**

If the insured has rights to recover all or part of any payment we have made under this policy, those rights are transferred to us. At our request, the insured will bring **suit** or transfer those rights to us and help us enforce them. However, if the insured has waived rights of recovery against any person or organization prior to a loss, we waive any right of recovery we may have under this policy against such person or organization.

**23. Transfer of Your Rights and Duties Under This Policy**

Your rights and duties under this policy may not be transferred without our written consent except in the case of death of an individual named insured.

If you die, your rights and duties will be transferred to your legal representative but only while acting within the scope of duties as your legal representative. Until your legal representative is appointed, anyone having proper temporary custody of your property will have your rights and duties but only with respect to that property.

**24. When We Do Not Renew**

If we decide not to renew, we will mail or deliver to the first Named Insured shown in the Declarations written notice of the nonrenewal not less than sixty (60) days before the expiration date. If notice is mailed, proof of mailing will be sufficient proof of notice.

BOND AMOUNT: $ Five Percent of Amount Bid 5%

PROJECT: Stormwater Infrastructure Inspection, Cleaning and Repair Services

The CONTRACTOR and Surety are bound to the CITY in the amount set forth above, for the payment of which the CONTRACTOR and Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, as provided herein. Now, therefore, if the CITY shall accept the Bid of the CONTRACTOR and the CONTRACTOR shall enter into a Contract with the CITY in accordance with the terms of such Bid, and give such Public Construction, Performance and Payment Bond or Bonds as may be specified in the Bid or Contract Documents with good and sufficient surety acceptable to the CITY, and furnish insurance coverages to CITY as required by the Contract Documents then this obligation shall be null and void, otherwise Surety shall pay over to the CITY immediately the full penal sum of this Bid Bond upon demand. The Surety, for the value received, hereby stipulates and agrees that the obligations of said Surety shall not be impaired or affected in any way by any extensions of the time within which the CITY may accept the Bid of the CONTRACTOR and said Surety does hereby waive notice of any such extension.

Any changes in or under the contract documents, compliance or non-compliance with any formalities connected with the contract or the changes does not affect the surety's obligation under this bond. While the CONTRACTOR's allegation that its entering into the contract was prevented or frustrated by the CITY, does not affect the surety's continuing obligation to perform, a finding to such effect by a Trier of fact would affect the surety's continuing obligation.

1.10. **"System"** means a discrete group of End User's internal computer systems as designated by a unique FileNet system identification number. End User may have multiple Systems as authorized by FileNet.

1.11. **"Update"** means a subsequent release of Software (including bug fixes, patches, and maintenance releases) that FileNet makes generally available to End Users receiving Software support services. Update does not include any option, future product, or any upgrade in features, functionality or performance of the Software that FileNet separately licenses for an additional fee.

1.12. **"User"** means an individual authorized by End User to use Software regardless of whether the individual is actively using the Software at any given time. If a Client is programmed to access the Software in an automatic manner, then each discrete Client of this type is counted as an individual User.

2. **License Grant, Restrictions, and Ownership**

2.1. **FileNet ValueNet Partner.** Document Access Systems is an authorized FileNet reseller with a current FileNet Reseller Agreement in place which permits the reselling of FileNet software to its End User.

2.2. **License Grant.** Each Software product is furnished to End User under a personal, non-exclusive, nontransferable, revocable license solely for End User's internal use on End User's System and in compliance with this license and all applicable laws. End User agrees that this license does not permit End User to: (a) use the Software for a service bureau application, (b) sublicense the Software, or (c) export the Software without an adequate U.S. export license.

2.3. **Copying.** The Software may only be copied, in whole or in part (with the proper inclusion of all FileNet copyright notices and any other proprietary or trademark notice), as may be necessary and incidental for archival purposes or to replace a worn or defective copy.

2.4. **Moving.** If End User is unable to operate the Software on the System due to an equipment malfunction, then those Software Licenses for that System may be transferred temporarily to a backup computer system during the period of equipment malfunction.

2.5. **Ownership and Use.** Title to and ownership of the Software (including any portion, modification, translation, or derivative thereof, even if unauthorized) and all applicable rights in patents, copyrights and trade secrets in the Software remains exclusively with FileNet (including any of its licensors). Software is valuable, proprietary, and unique, and End User is bound by and will observe its proprietary nature. End User will take diligent action to fulfill its obligations under this license by instruction or agreement with its employees or agents that are permitted access to the Software (whose confidentiality obligations must survive termination of their employment or agency). End User may only provide access to Software on a need-to-know basis. Except as set forth in this license or as may be permitted in writing by FileNet, End User must not use, provide or otherwise make available the Software or any part thereof to any third party. End User must not reverse engineer, decompile or disassemble the Software (or any portion thereof), nor otherwise attempt to create or derive the source/human-readable code. End User acknowledges that unauthorized reproduction, use, or disclosure of the Software may cause irreparable injury to FileNet (including any of its licensors), who may therefore be entitled to injunctive relief to enforce these license restrictions, in addition to any other remedies available at law, in equity, or under this license.

2.6. **Affiliate Use of Software. Document Access Systems** agrees that End User Affiliates may use the Software if prior to any End User Affiliate's use of the Software: (a) End User accepts responsibility for the acts or omissions of End User Affiliate as if they were End User's acts or omissions; (b) End User indemnifies **Document Access Systems** against losses or damages suffered by

Deleted: 4/25/2007
Deleted: 5/18/2006

**Document Access Systems** arising from breach of this license by the End User Affiliate; and (c) use must not constitute an unauthorized exportation of the Software under U.S. Government laws and regulations.

3. **Standard Software Licenses**

3.1. **Server Software License.** Each license entitles End User to install and run Server Software on a single computer server.

3.2. **User License**

A. **Named User License** - a single designated User having the ability to access Server Software with no maximum limit on the duration of access or on the number of discrete accesses.

B. **Concurrent User License** - a designated group of Users where the maximum number of Users in the group does not exceed **10 Users** for every 1 **concurrent user license**; and the maximum number of Users within that group accessing Server Software at any one time cannot exceed **1 User** for every **1 concurrent user license.**

C. **eBusiness User License** – a designated group of Users where the maximum number of Users in the group does not exceed **100 Users** for every **1 eBusiness user license**; and the maximum number of Users in that group accessing Server Software at any one time cannot exceed the **1 User** for every **1 eBusiness user license.**

3.3. **Multiplexing.** If End User elects to use a concentrator or multiplexer, technology to provide Users with access to the Software (whether hardware or software; e.g., web/IP server, gateway, etc.), then all Users with the ability to access the Software via that technology will be counted individually for licensing purposes. FileNet's most current version of its User Guidelines will be used to determine the type of license necessary for these Users.

3.4. **Audit Rights. Document Access Systems** may audit End User's Software usage remotely, via outbound email of system metrics generated by FileNet's system monitoring utility, during on-site service calls, or upon reasonable notice to End User during standard business hours. The audit will determine usage for each Software License, including concurrent access as measured by FileNet's monitoring utility. If an audit determines that End User's usage has exceeded its Software Licenses, then End User agrees to purchase additional licenses in compliance with this license; however, this statement in no way limits **Document Access Systems** remedies.

3.5. **FileNet Confidential Information**. Certain information and materials supplied by FileNet with the Software, such as, Documentation, are FileNet confidential or proprietary trade secrets and FileNet furnishes them solely to assist End User in the installation, operation and use of the Software. FileNet marks all confidential and proprietary information and End User must abide by the terms of those markings, and not reproduce, copy or disclose the information except as is reasonable and necessary to properly use the Software.

3.6. **Term and Termination**.

A. **Termination for Material Breach. Document Access Systems** has the right to terminate End User's Software License if End User fails to pay any and all required License Fees or otherwise fails to materially comply with the Software License terms.

B. **Discontinued Use of the Software.** Each Software License will terminate if End User permanently discontinues use of the Software.

C. **Effect of Termination.** Termination of the Software License will not: (a) limit either party from pursuing any remedies available to it, including injunctive relief; (b) relieve End User of its obligation to pay all fees accrued or owed to **Document Access Systems;** or (c) affect the parties' rights and obligations under Section 2.4 (Ownership and Use), 3.5 (FileNet Confidential Information), 3.6.C (Effect of Termination), and 3.6.D (Handling of Software at Termination) that will survive termination or expiration of the Software License.

D. **Handling of Software at Termination.** Upon expiration or termination of a Software License, End User must immediately return or destroy the Software and all portions and copies of it to **Document Access Systems.** If requested by **Document Access Systems,** End User must certify in writing, within **10 days** of the request that it has fully complied with this obligation.

3.7. **Assignment.** End User may not assign, voluntarily or by operation of law, any of its rights or obligations in this Software License except with **Document Access Systems** prior written consent. This Software License will be binding on and inure to the benefit of the parties and their respective successors and permitted assigns.

3.8. **Export**. End User agrees that the Software will not be exported directly or indirectly, separately or as part of any system, without first obtaining any required permissions from the U.S. Department of Commerce or any other appropriate agency of the U.S. Government, as required.

3.9. **U.S. Government Restricted Rights.** The Software and Documentation are "Commercial Items," as that term is defined at 48 C.F.R. §2.101 (October 1995), consisting of "Commercial Computer Software" and "Commercial Computer Software Documentation," as those terms are used in 48 C.F.R. §12.212 (September 1995) or 48 C.F.R. §227.7202-1 through 7202-4 (June 1995) as applicable. Consistent with 48 C.F.R. §12.212 or 48 C.F.R. §§227.7202-1 through 7202-4, as applicable, the Commercial Computer Software and Commercial Computer Software Documentation are being licensed to U.S. Government end users (a) only as Commercial Items, and (b) with only those rights as are granted to all other end users pursuant to the terms and conditions of the applicable software license agreement. Contractor/manufacturer is: FileNet Corporation, 3565 Harbor Blvd., Costa Mesa, California 92626-1420, USA. **Unpublished rights reserved under the copyright laws of the United States.**

4. **Waiver, Amendment or Modification.** The parties' rights and remedies are separate and cumulative. The waiver, amendment, or modification of any right, power, remedy, or term of a Software License will not be effective unless in writing and signed by both parties' authorized representatives. Furthermore, the terms of a Software License may not be amended by the terms of any End User's purchase order, or **Document Access Systems** acknowledgment of same, even if the purchase order has been signed by both parties.

5. **Severability.** The invalidity of any provision of a Software License will not affect the validity and binding effect of any other provision.

Deleted: 4/25/2007
Deleted: 5/18/2006

6. **Entire Agreement.** These terms constitute the entire agreement between the parties regarding the Software License and supersede all prior or contemporaneous agreements, negotiations, representations, and proposals (whether oral or written) between **Document Access Systems** and End User.

Re: **Agreement No. 072-22 – Asphalt Rejuvenation – Renewal Period 4/17/25 – 4/16/26**

Dear Ms. Morris,

Pavement Technology, Inc. is pleased to be partnered with the City of Plantation in providing a more sustainable pavement infrastructure. As we approach the second renewal term of the referenced agreement, our firm is facing the ever-changing increase in crude oil price as well as our shipping and production costs due to this most unfortunate rise in inflation.

Enclosed are Exhibit A, Bid Addendum number two and Exhibit B, Producer Price Index (PPI) data from the contract origination date in April, 2023 to December, 2024, which indicates a 2.5 percent increase; therefore, we respectfully request a unit price increase for Reclamite® Asphalt Rejuvenation Service, from $1.21 per square yard to $1.24 per square yard and A.R.A.-1Ti Pollution-Remediating Maltene Asphalt Rejuvenator, from $2.49 per square yard to $2.55 per square yard.

Thank you for your consideration in this matter. We look forward to our continued working relationship.

Sincerely,

## PROCEDURE FOR DETERMINING PERCENT LIGHT TRANSMITTANCE ON ASPHALT REJUVENATING AGENT

### A. SCOPE

This procedure covers the determination of percent light transmittance of the asphalt-rejuvenating agent.

### B. APPARATUS

1) Container may be either glass, plastic or metal having a capacity of 6,000 ml.

2) Graduated cylinder, 1,000 ml, or greater

3) Light transmittance measuring apparatus, such as Bausch and Lomb or Lumetron spectrophotometer

4) Graduated pipette having 1 ml capacity to 0.01 ml accuracy

5) Suction bulb for use with pipette

6) Test tubes compatible with spectrophotometer, 3/4" X 6, Bausch and Lomb, Catalog No. 33-17-81, (B&L)

### C. CALIBRATION OF SPECTROPHOTOMETER

1) Calibrate spectrophotometer as follows: (a) Set wavelength at 580 mu, (b) Allow spectrophotometer to warm-up thirty minutes, (c) Zero percent light transmittance (%LT) scale, (d) Rinse test tube three times with tap water and fill to top of circle marking on B&L test tube or approximately 2/3 full, (e) Place tube in spectrophotometer and set %LT scale at 100, and (f) repeat steps (c) and (e) two times or until no further adjustments are necessary.

### D. PROCEDURE

1) Shake, stir, or otherwise thoroughly mix emulsion to be tested. Place sample of emulsion in beaker and allow to stand one minute.

2) Place 2,000 ml tap water in container.

3) Suck 1.00 ml emulsion into pipette using suction bulb. Wipe off outside of pipette.

4) Using suction bulb, blow emulsion into container.

5) Rinse pipette by sucking in diluted emulsion solution and blowing out.

6) Clean pipette with soap or solvent and water. Rinse with acetone.

7) Stir diluted emulsion thoroughly.

8) Rinse out tube to be used with the diluted emulsion three times and fill to top of circle.

9) Calibrate spectrophotometer.

10) Place diluted emulsion sample tube in spectrophotometer, cover, and read %LT to nearest tenth.
11) Repeat steps 9 and 10 until three identical consecutive readings are achieved.
12) The elapsed time between addition of emulsion to dilution of water and final %LT reading should not exceed 5 minutes.

**III. Material Performance:**

The asphalt-rejuvenating agent shall have the capability to penetrate the asphalt pavement surface and performing as follows. The asphalt-rejuvenating agent shall be absorbed and incorporated into the asphalt binder. Verification that said incorporation of the asphalt-rejuvenating agent into the asphalt binder has been affected shall be by analysis of the chemical properties of said asphalt binder i.e. viscosity shall be reduced by petroleum maltene fraction replacement method to the following extent. For pavements receiving the first or original application of rejuvenating agent, the viscosity shall be reduced by a minimum of thirty-five, (35%) percent as determined by dynamic shear rheometer (DSR) method for asphalt testing in accord with AASHTO T315-05. For retreated pavements after an initial treatment with the asphalt rejuvenator, the viscosity shall be reduced by petroleum maltene replacement method a minimum of twenty percent (20%) as determined by dynamic shear rheometer (DSR) method for testing in accord with AASHTO T315-05. In addition, the phase angle shall be increased. This analysis shall apply to extracted asphalt binder, taken from cores extracted fifteen to thirty days following application, in the upper three eights inch (3/8") of pavement. In addition, the treated areas shall be sealed in-depth to the intrusion of air and water.

The rejuvenating agent shall have a record of at least five years of satisfactory service as a petroleum maltene based emulsion asphalt-rejuvenating agent and in-depth sealer. Satisfactory service shall be based on the capability of the material to decrease the viscosity of the asphalt binder by petroleum maltene fraction replacement method, increase the phase angle, and provide an in-depth seal. Reclamite®, a Tricor Refiners, LLC product manufactured by D & D Emulsion, Inc., Mansfield, Ohio, is a product of know quality and accepted performance.

The bidder must submit with his bid the manufacturer's certification that the material proposed for use is in compliance with the specification requirements. The bidder must submit with his bid, previous use documentation and test data conclusively demonstrating the rejuvenating agent has been used successfully for a period of five years by government agencies such as Cities, Counties, etc. and that the asphalt-rejuvenating agent has been proven to perform, as heretofore required, through field testing by government agencies as to the required change in asphalt binder viscosity and phase angle. Prior testing data shall be submitted indicating such product performance on a sufficient number of projects to insure product consistency. In addition, prior testing data shall be submitted to indicate said product performance as heretofore described over a minimum testing period of three years to insure reasonable life expectancy.

RECLAMITE®, a Tricor Refiners, LLC product manufactured by D & D Emulsion Inc., Mansfield Ohio, is a product of known quality and accepted performance.

**IV. Applicator Experience:**

The asphalt-rejuvenating agent shall be applied by an experienced applicator of such material. The bidder shall have a minimum of three years' experience in applying the product proposed for use. He must submit with his bid a list of five projects on which he applied said rejuvenator. He shall indicate the project dates,

number of square yards treated in each and the name and phone number of the government official in charge of each project.

A project superintendent knowledgeable and experienced in application of the asphalt-rejuvenating agent must be in control of each day's work. The bidder shall submit a written experience outline of the project superintendent.

## V. PRODUCT STANDARDS AND ALTERNATES:

The product "Reclamite"® for the asphalt-rejuvenating agent, a Tricor Refiners, LLC product manufactured by D & D emulsions,Inc. Mansfield, Ohio is the standard for these specifications and the prices quoted on the Bid Sheet Base Bid shall be for this standard. Should a bidder wish to submit a bid for alternates to the Standard, said prices shall be entered on the BID SHEET as the "Alternate Bid" for each item. In the event that the bidder submits no bid for the Standard, only the "Alternate Bids" should be completed.

Bidders may offer an ALTERNATE for the Standard specified in the Specifications provided the bidder adheres to the following and submits same with his bid.

(a) List the proposed alternate on the BID SHEET form giving the product name and price.

(b) Furnish complete specifications and descriptive literature for the alternate as well as a one-gallon sample of the material proposed for use. Such descriptive and detailed information shall be complete and at least equal in detail to the agency's requirements for the standard item for which the alternate is offered.

(c) Submit a current Safety Data Sheet for the alternate materials. The agency will give the alternate consideration. The Contractor may furnish only those alternate items included in his proposal and approved by the agency prior to award of a contract.

(d) Furnish all required test data and use documentation as heretofore required.

If no ALTERNATE is indicated on the BID SHEET, the Contractor shall furnish the STANDARD (brand) specified in the attached specifications.

Should the ALTERNATE offered be found unacceptable by the agency based on the data submitted with the bid and no bid is entered on the BID SHEET for the Standard, then said bid will be considered non-responsive.

## VI. APPLICATION TEMPERATURE/WEATHER LIMITATIONS:

The temperature of the asphalt rejuvenating emulsion, at the time of application shall be as recommended by the manufacturer. The asphalt-rejuvenating agent shall be applied only when the existing surface to be treated is thoroughly dry and when it is not threatening to rain. The asphalt-rejuvenating agent shall not be applied when the ambient temperature is below 40°F.

## VII. HANDLING OF ASPHALT REJUVENATING AGENT:

Contents in tank cars or storage tanks shall be circulated at least forty-five minutes before withdrawing any material for application. When loading the distributor, the asphalt-rejuvenating agent concentrate shall be

loaded first and then the required amount of water shall be added. The water shall be added into the distributor with enough force to cause agitation and thorough mixing of the two materials. To prevent foaming, the discharge end of the water hose or pipe shall be kept below the surface of the material in the distributor that shall be used as a spreader. The distributor truck will be cleaned of all of its asphalt materials, and washed out to the extent that no discoloration of the emulsion may be perceptible. Cleanliness of the spreading equipment shall be subject to the approval and satisfaction of the Engineer.

**VIII. RESIDENT NOTIFICATION:**

The contractor shall distribute by hand, a typed notice to all residences and businesses on the street to be treated. The notice will be delivered no more than 24 hours prior to the treatment of the road. The notice will have a local phone number that residents may call to ask questions. The notice shall be of the door hanger type that secures to the door handle of each dwelling. Unsecured notices will not be allowed. The contractor shall also place the notice on the windshield of any parked cars on the street. Hand distribution of this notice will be considered incidental to the contract.

**IX. APPLICATING EQUIPMENT:**

The distributor for spreading the emulsion shall be self-propelled, and shall have pneumatic tires. The distributor shall be designed and equipped to distribute the asphalt-rejuvenating agent uniformly on variable widths of surface at readily determined and controlled rates from 0.04 to 0.08 gallons per square yard of surface, and with an allowable variation from any specified rate not to exceed 5 percent of the specified rate.

Distributor equipment shall include full circulation spray bars, pump tachometer, volume-measuring device, and a hand hose attachment suitable for application of the emulsion manually to cover areas inaccessible to the distributor. The distributor shall be equipped to circulate and agitate the emulsion within the tank. The distributor shall have a computerized system, acceptable to the Engineer that controls the rate of product application.

A check of distributor equipment as well as application rate accuracy and uniformity of distribution shall be made when directed by the Engineer.

The truck used for applying rock dust, or other aggregate when required and approved by the Engineer, shall be equipped with a spreader that allows the rock dust to be uniformly distributed onto the pavement. The spreader shall be able to apply 1/2 pound to 3 pounds of rock dust or other aggregate per square yard in a single pass. The spreader shall be adjustable so as not to broadcast the rock dust or other aggregate onto driveways or tree lawns.

The rock dust or other aggregate to be used shall be free flowing, without any leaves, dirt, stones, etc. Any wet rock dust shall be rejected from the job site.

Any equipment that is not maintained in full working order, or is proven inadequate to obtain the results prescribed, shall be repaired or replaced at the direction of the Engineer.

## X. APPLICATION OF REJUVENATING AGENT:

The asphalt-rejuvenating agent shall be applied by a distributor truck at the temperature recommended by the manufacturer and at the pressure required for the proper distribution. The emulsion shall be so applied that uniform distribution is obtained at all points of the areas to be treated. Distribution shall be commenced with a running start to insure full rate of spread over the entire area to be treated. Areas inadvertently missed shall receive additional treatment as may be required by hand sprayer application.

Application of asphalt-rejuvenating agent shall be on one-half width of the pavement at a time. When the second half of the surface is treated, the distributor nozzle nearest the center of the road shall overlap the previous application by at least one-half the width of the nozzle spray. In any event, the centerline construction joint area of the pavement shall be treated in both application passes of the distributor truck.

Before spreading, the asphalt-rejuvenating agent shall be blended with water at the rate of two (2) parts rejuvenating agent to one (1) part water, by volume or as specified by the manufacturer for jobsite conditions. The combined mixture of asphalt-rejuvenating agent and water shall be spread at the rate of 0.04 to 0.08 gallons per square yard, or as approved by the Engineer following field testing.

Where more than one application is to be made, succeeding applications shall be made as soon as penetration of the preceding application has been completed and the Engineer grants approval for additional applications.

Grades or super elevations of surfaces that may cause excessive runoff, in the opinion of the Engineer, shall have the required amounts applied in two or more applications as directed.

After the rejuvenating emulsion has penetrated and when surface conditions require a light coating of dry rock dust, or other aggregate approved by the Engineer, shall be applied to the surface in sufficient amount to protect the traveling public as required by the Engineer. The rock dust or other approved aggregate shall be swept and removed from the streets and properly disposed of at the Contractor's expense within 24 hours of application.

The Contractor shall furnish a quality inspection report showing the source, manufacturer, and the date shipped, for each load of asphalt-rejuvenating agent. When directed by the Engineer, the Contractor shall take representative samples of material for testing.

## XI. STREET SWEEPING:

The Contractor shall be responsible for sweeping and cleaning of the streets prior to, and after treatment.

Prior to treatment, the street will be cleaned of all standing water, dirt, leaves, foreign materials, etc. This work shall be accomplished by hand brooming, power blowing or other approved methods. If in the opinion of the Engineer, the hand cleaning is not sufficient, than a self-propelled street sweeper shall be used.

All rock dust or other approved material used during the treatment must be removed no later than 24 hours after treatment of the street. This shall be accomplished by a combination of hand and mechanical sweeping. All turnouts, cul-de-sacs, etc. must be cleaned of any material to the satisfaction of the Engineer. Street sweeping will be included in the price bid per square yard for asphalt-rejuvenating agent.

If, in the opinion of the Engineer, additional rock dust is required, said material shall be applied by the contractor. Said rock dust shall be swept up no later than 24 hours following reapplication. No additional compensation will be allowed for reapplication and removal of rock dust.

**XII. TRAFFIC CONTROL:**

The Contractor shall schedule his operations and carry out the work in a manner to cause the least disturbance and/or interference with the normal flow of traffic over the areas to be treated. Treated portions of the pavement surfaces shall be kept closed and free from traffic until penetration, in the opinion of the Engineer, has become complete and the area is suitable for traffic.

When, in the opinion of the Engineer, traffic must be maintained at all times on a particular street, then the Contractor shall apply asphalt-rejuvenating agent to one lane at a time. Traffic shall be maintained in the untreated lane until the traffic may be switched to the completed lane.

The Contractor shall be responsible for all traffic control and signing required to permit safe travel. The contractor shall notify the police and fire departments as to the streets that are to be treated each day.

If, in the opinion of the Engineer, proper signing is not being used, the Contractor shall stop all operations until safe signing and barricading is achieved.

**XIII. METHOD OF MEASUREMENT:**

Asphalt-rejuvenating agent will be measured by the square yard as provided for in the Contract Documents.

**XIV. BASIS FOR PAYMENT:**

The accepted quantities, measured as provided for above, will be paid for at the contract unit price for asphalt-rejuvenating agent.

Asphalt-rejuvenating agent shall be paid for PER SQUARE YARD, which shall be full compensation for furnishing all materials, equipment, labor and incidentals to complete the work as specified and required.

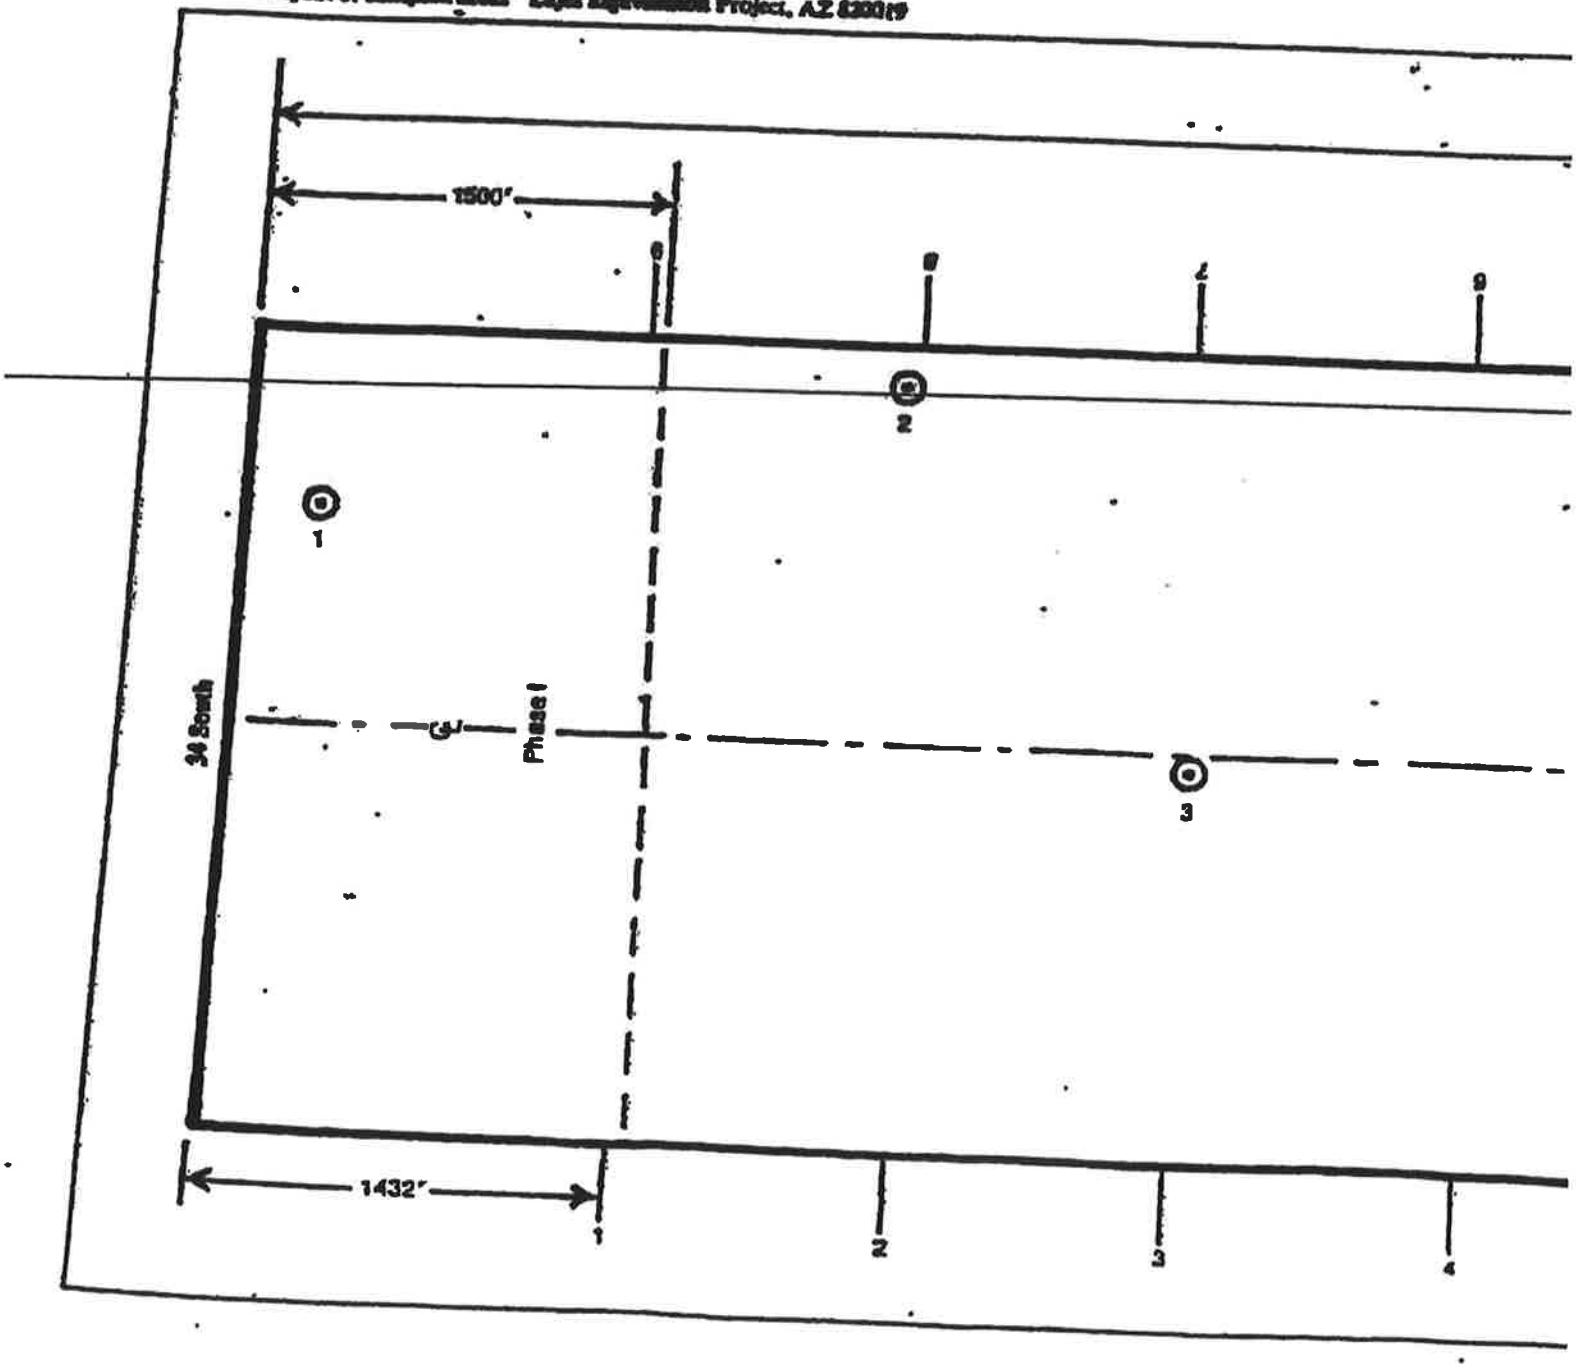
1. In February 1983, the Pavement Systems Division, Geotechnical Laboratory, U.S. Army Engineer Waterways Experiment Station (WES), Vicksburg, Mississippi, was requested by the 1605th Air Base Wing (MAC), Lajes Field, Azores, to provide technical assistance and construction inspection of the rejuvenator project on Runway 16–34, which included sampling and laboratory testing. Treatment of the runway was performed 10–15 March. An excess of Reclamit remaining from projects in 1979 and 1983 w: used to treat some parking aprons and taxiwa

2. Messrs. Jack E. Pickett and James E Schoenberger traveled to Lajes Field on 28 February 1983 to take samples before and after treatment and to observe the rejuvenato application.

3. The 10,864–ft runway was divided in: sections and treated in three phases. This was

Incl 1 Layout of sampled areas, Lajes Rejuvenation Project, AZ 8300[illegible]



done so the runway could remain open to traffic during treatment. Before treatment, one set of three 6–in. cores were taken at each of eight locations, selected at random throughout the runway, two sets from Phase I and three sets each from Phases II and III. Core locations are shown on Incl 1. After treatment, three additional cores were taken at each location within 2 to 4 ft of the original core locations and in the same construction lane.

The samples were processed by sawing 3/ of material from the upper surface. The asphalt was extracted from this 3/8–in.–t sample and recovered; untreated samples processed at the field laboratory at Lajes. recovered asphalt and treated samples wer returned to WES for processing and penet tion and viscosity testing. Results of these laboratory tests are summarized in Table I. Test results indicate the rejuvenation of

Runway 16–34 was satisfactory. The penetration test shows an increase of approximately 194 percent and the viscosity test shows a decrease of approximately 94 percent. The specification requires the average penetration to be increased by 20 percent and the average viscosity to be decreased by 40 percent.

4. The contractor for the project was Mr. Colin M. Durante, Pavement Technology, Inc., 11260 Berett Road, Cleveland, Ohio 44102. He elected to use Reclamite, a proprietary material manufactured by the Golden Bear Division of Witco Chemical Corporation, Bakersfield, California, as a rejuvenator. Reclamite is a resin-based emulsion that leaves an oily residue and is applied with a bituminous distributor. The Reclamite material was mixed at the job site in a two to one ratio with water, two parts Reclamite to one part water. The Reclamite mixture at ambient temperature (60–70°F) was sprayed onto the runway pavement by using a 1140 gal bituminous distributor equipped with a 10-ft spray bar. Application rates were varied intentionally to avoid excess rejuvenator in areas, such as recently patched areas, and areas with rubber build-up. Areas outside regular traffic were sprayed heavier, which would not bother air traffic, in case of excess rejuvenator on the surface. Dates of treatment and application rates (gal/yd²) are shown in Table II. The remainder of the material was used to spray various taxiways and parking aprons.

**January 8, 2016**

**Customer:** Pavement Technology, Inc. - Colin Durante, John Schlegel

**Project:** Charleston County, South Carolina - 2015 Reclamite Application

**Samples Submitted:** Sixteen core samples (8 untreated and 8 treated with RECLAMITE®) identified as:

Forest Trail, Hulsey Boulevard, Patterson Avenue, South Rhett Avenue, Shadowmoss Parkway, Algon Quin Road, Queen Street, Wingo Way

**Requested Testing:**

Determine the Dynamic Shear Rheological properties at 60°C of the recovered asphalt binder from the top 3/8-inch layer of each core. These properties include viscosity, phase angle, complex, elastic, and viscous moduli.

**Summary of Testing:**

The top 3/8-inch of each core was removed for testing. The asphalt was extracted and recovered as prescribed by California Test Method 365. Viscosity and phase angle, as well as, complex, elastic, and viscous moduli were determined on the recovered asphalt binder using Dynamic Shear Rheology as prescribed by AASHTO T315. Test results are reported by Table 1.

## A.R.A.-1 Ti® Pollution-Remediating Maltene Asphalt Rejuvenator

Following five years of successful laboratory and field testing, Pavement Technology, Inc. (PTI) is delighted to announce the commercialization of our suite of state-of-the-art pollution-reducing, super-hydrophilic, and UV protective photocatalytic pavement solutions. The product stock represents PTI's next evolution of premium pavement preservation materials enhanced with photo-reactive titanium dioxide ($TiO_2$). **A.R.A.-1 Ti®** is our celebrated maltene asphalt rejuvenator[1], with five decades of proven pavement preservation accomplishment, strengthened with the environmental and ecological properties of $TiO_2$.

As a natural decomposition accelerant, $TiO_2$ is a multifaceted photo-responsive material[2] rapidly gaining increased scientific and commercial interest for near-roadway microenvironments (MEs) as it advances a host of positive environmental benefits, including:

- **Depolluting** near-pavement air (or water) cleaning applications, where $TiO_2$ reacted surfaces oxidize a variety of pollutants and contaminants such as those emitted by vehicles, especially $NO_x$ and VOCs, reducing ozone pollution and mitigating acid rain formation
- **"Cool Pavements"** where $TiO_2$ treated surfaces provide a solar-reflective top boundary, which lessens pavement heat absorption and related radiative forcing (RF) by materially reducing the convective re-release of UV radiation that leads to the undesired heat island effects in our cities while extending the life-cycle assessment of pavements by slowing-down pavement oxidation[3]
- **Super-Hydrophilic** surfaces, which provide a rapid water-desorbing pavement to reduce saturation and prevent water intrusion damage. Super-hydrophilic pavements are also self-cleaning to remove

contaminants (e.g., mold) and staining and are indicated for inclement weather-related safety (rain displacing; ice inhibiting) improvements for roads[4]

Lead by **A.R.A.-1 Ti®**, our suite of pollution-remediating solutions creates a perpetual air-purifying roadway microenvironment (ME) that can mitigate the effects of Urban Heat islands and contribute to an agency's compliance with the Clean Air Act (CAA) and the U.S. EPA's stringent National Ambient Air Quality Standard (NAAQS).

The Texas A&M Transportation Institute (TTI) is PTI's research partner for our $TiO_2$ enhanced products and all applications include standard verification testing perfected by TTI for pollution-reduction efficiency, Urban Heat Island (UHI) mitigation and water displacement effectiveness.

TTI standard photocatalytic property testing includes:

- **Titanium Dioxide Penetration and Load:** XRF (fluorescent X-ray) analysis
- **Nitrogen Oxide Removal:** Japanese Industrial Standard (JIS) TR Z 0018 *Photocatalytic Materials – Air Purification Test Procedure* (as adapted to ASTM)
- **UHI Mitigation:** U.S. Green Building Council USGBC), LEED V4 Heat Island Reduction (HIR) via Solar Reflectance Index (SRI) - ASTM E1980 - 11 *Standard Practice for Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces*
- **Hydrophilic Properties:** ASTM D7334 - 08(2013) *Standard Practice for Surface Wettability of Coatings, Substrates and Pigments by Advancing Contact Angle Measurement*

The verification testing results can be used for preparation for environmental grants and programs, including the Federal Highway Administration's Congestion Mitigation and Air Quality Improvement Program (CMAQ) as provided under the CAA and administered by the Federal Highway Administration (FHWA) with matching funds of 80% to 100%; [5] and the Federal Transit Administration's Urbanized Area Formula Program Grants (UAFPG), which match fund up to 80% for "technical transportation-related studies" and up to 90% for capital investment in "associated transit improvements" attributable to compliance with the CAA.[6] Other eligible sources include the Voluntary Airport Low Emissions Program (VALE) through the Federal Aviation Administration (FAA) and the FAA's Aviation Research Grants Program (FAA-12-01).

## 1 SUMMARY AND TESTING

The background, methods, application and testing for PTI's photocatalytic pavement solutions for pollution removal, pavement lifecycle extension and urban heat management are described herein.

PTI is into its fifth decade serving government agencies and was an early advocate for asphalt rejuvenation nanoscience using Maltene Replacement Technology (MRT) [7] to extend the life cycle assessment (LCA) of asphalt pavements. Thousands of agencies (SCMs) have employed MRT for many decades as part of their roadway planning and maintenance protocols to reduce costs and lower their community's carbon footprint. Pavement preservation solutions enhanced with the trifecta of photocatalytic properties, from depollution to heat-reducing and life cycle extending, are a natural advancement in environmental and sustainability solutions from PTI.

These next generation products are proving valuable to SCMs and other transportation infrastructure authorities, such as airports, seeking to manage compliance with the Clean Air Act (CAA), the National Ambient Air Quality Standards (NAAQS) for airborne pollution inventory minimums, and Urban Heat Island effect (UHI).

The near-road microenvironment (ME) is a significant area of policy and practice concern for modern urban planners, regulators, and sustainability managers. Emissions from cars and trucks are a major source of greenhouse gases (GHGs) and the primary source for anthropogenic airborne toxins, such as nitrogen oxides ($NO_x$) and volatile organic compounds (VOCs), that form the nucleus of unhealthy photochemical smog.

The combined action of urbanization (change in land use) and sharp increase in vehicular emissions intensifies both the build-up of GHGs in the air we breathe and the impact of heat sinks. The circular impacts from air pollution and UHI amplify related economic stresses on communities. In turn, GHG inventories accumulate, exaggerating linked atopic and other human disease.[8]

National Emissions Inventory (NEI) Data [9] indicate motor vehicles operating on roadways emit on average 60% of ozone pollution ($O_3$), principally $NO_x$ in the United States. In more densely populated areas, vehicle-based emissions inventory trend closer to 75%, while total vehicle emissions in rapidly growing metropolitan areas have skyrocketed over 80% since 1990.[10]

In addition to poorer air quality and the escalating health burden, mobile-sourced pollution is contributing to the "western impacts", including rising sea levels and warmer climates. For example, intensified El Niño effects are resulting in exaggerated precipitation and incidence of flooding in the Southeastern United States and droughts in the West.

$NO_x$ is the primary component of $O_3$ or "urban smog". It is a class of gaseous pollutants generated during high temperature processes of internal combustion engines and consists of nitric oxide (NO) and nitrogen dioxide ($NO_2$). $NO_2$ is considered among the most dangerous air pollutants impacting human health and the environment and is one of six Criteria Air Pollutants (CAPs) as defined under the NAAQS.

Photocatalytic oxidation (PCO) of $NO_x$ using topical spray materials containing **titanium dioxide ($TiO_2$)** for roadway applications is a novel, yet proven technology for mitigating urban smog. It has been researched and tested broadly,

especially in Europe. While the success rate for PCO efficiency of $TiO_2$ solutions has been consistently encouraging,[11] [12] prevailing techniques for both the development and application of $TiO_2$ compounds have proven not durable or economical.

**That now has changed.**

In 2017 (and 2018), PTI applied the first field tests for *durable* $TiO_2$ solutions in Greenville (SC) and Orlando (FL). The technological breakthrough combined proven surface penetrating pavement preservation compounds, long utilized by conservation minded SCMs, fortified with photocatalyst grade $TiO_2$, to impregnate pavements with the natural pollution-reducing and heat reflecting material. The PTI technique provides both a method for sustainable $TiO_2$ delivery into pavement wearing-course depth and at cost-effective "retrofit" economics. The practice promotes an efficient and scalable application for solar-based, direct capture technology for $O_3$ precursors in the near-road environment.

Titanium is an amazing material. It is as strong as steel, yet a fraction of its weight and much more durable. $TiO_2$ is a natural mineral whose atypical chemical properties have led to a diverse range of commercial and industrial uses from whitening additives in paints to food coloring, candy coatings, toothpaste, and reflective sunscreens, etc.

Or as surface 'wetting' (i.e., hydrophilic) and anti-fogging agents and as photo-reactive chemical catalysts.[13]

With a half century of experience introducing nanotechnologies to pavements, PTI's photocatalytic solutions are designed to deeply penetrate pavement surfaces to deliver nanoparticle, photocatalyst $TiO_2$ into depth at optimal load for sustained PCO and UHI mitigation. The product stock can be applied to almost any asphalt or concrete substrate using PTI's advanced application apparatus and at a fraction of the costs to more archival means to clean air, reduce heat build and extend infrastructure life cycle.

Based on the Greenville and Orlando successes **(Table 1.1)**, [14] more refined applications of these new solutions have been deployed in the field as pilot projects in Austin (TX), Charlotte County (FL), Greater (Cary) Raleigh (NC), Bartow (FL) [FDOT test], Akron (Summit County) (OH) and at Orlando International Airport (MCO).

Recently, Cincinnati (OH) and Raleigh (NC) placed the first ever public bid and RFP for these materials. They will be used on the first photocatalytic pavement related project to receive LEED in St. Petersburgh (FL) and piloted at the Kennedy Space Center by NASA later in summer 2020.

## 1.2 Field Testing – Vehicular Pollution Removal

The Texas A&M Transportation Institute (TTI) has tested field cores from the pilot sites using standardized photocatalytic materials testing protocols for PCO. [15] TTI testing indicates consistently strong $NO_x$ reduction at all sites tested and over multiple years on the oldest sites **(Tables 1.1-1.4)**.

Texas A&M also has tested the pilot sites for $TiO_2$ penetration (durability) and load optimization (PCO efficiency) through 'wearing-course' depth (0 to 6 mm) [16] using x-ray fluorescence analysis **(Figure 1.1)**.[17] [18]

Due, in large part, to previously proven penetrant technology, PTI test sites consistently indicate deep penetration of the photocatalyst material at efficient PCO concentrations (> 2000 ppm) as deep as 50 mm (2 inches) or 8x AASHTO wearing-course depth.

The high $TiO_2$ presence at wearing-course depth is why the $NO_x$ reduction figures are consistently strong. Penetration and reliable load optimization of the $TiO_2$ is the key to the significant technological advancement with Pavement Technology's photocatalytic pavement solutions. This was achieved by combining two proven nanotechnologies – known pavement preservation penetrating agents (e.g., MRT) and photocatalysis using photoreactive grade nanoparticle titanium dioxide.

Road-level $NO_x$ capture and sequestration or "$NO_x$ Capture" has been the principal advantage of PTI's photocatalytic pavement solutions, with a product stock including **A.R.A.-1 Ti®** for asphalt surface courses, **Litho1000$^{Ti®}$** for concrete surface courses, **JOINTBOND$^{Ti®}$** (longitudinal joints) and **Ti-introCME®** (all substrates), which cover most or all transportation infrastructures and needs.

## 1.3 Acid Rain Mitigation with $TiO_2$ Treated Roads

Atmospheric deposition of nitrogen is a major source of nitrate found in watersheds and is addressed by various water-quality legislation. Specifically, because almost all of the sources of nitrogen contaminations are point sources, this form of pollution is best controlled by directly reducing nitrogen oxide emissions.

Commonly, these point sources are located outside of the political boundaries of watersheds that inherit this atmospheric deposited nitrogen and, therefore, may not be controlled through SCM regulations nor governance. Recent amendments to the CAA have mandated reductions to $NO_x$, including from mobile sources, as they are a critical factor in managing nitrogen levels impacting lakes, reservoirs, rivers, and other estuarial expanses.

Vehicular emissions are the second largest source of nitrogen builds in watersheds, after agricultural sources, and can contribute as much as 40% [19] of nitrate levels in dense urban settings.

The U.S. Geological Survey (USGS) recommends direct reduction strategies for mobile-sourced $NO_x$ be employed to reduce such water contaminations. So, photocatalytic pavements provide a preferred strategy for acid rain mitigation and direct reduction of watershed nitrogen builds.

### 1.4 Field Testing - Cool Pavements with $TiO_2$

In 2019, TTI added testing for solar reflectance (UHI mitigation effectiveness), showing PTI test sites consistently exceed the threshold for

**U.S. Green Building Council LEED** for heat island reduction **(Table 1.5)**.[20] [21]

At Orlando International Airport, PTI solutions turned an almost perfectly absorptive asphalt parking ramp (FedEx terminal) with a **Solar Reflectance Index (SRI)** of 9 (out of 100) into a 39-40 or 40% more reflective than LEED requirements and **> 4x as heat energy displacing** as original, untreated asphalt.

As a heat mitigator, photocatalytic grade $TiO_2$ simultaneously absorbs solar radiation away from the pavement substrate and efficiently redirects the energy back into the atmosphere, thereby protecting the pavement from oxidative deterioration (LCA extension) and eliminating excess pavement emissivity (especially in asphalts), creating a so-called – **"cool pavement"** which greatly helps reduce UHI.[22]

### 1.5 Field Testing – Super-Hydrophilic Pavements

$TiO_2$-bearing pavements exhibit a **Photoinduced Superhydrophilicity State** (PSH) when exposed to UV radiation, which enables water to disperse and desorb across a TiO2-treated surface much more efficiently. [23] [24] This **greatly reduces water intrusion risk** to pavements and critical for longitudinal joints.

PSH pavements also promote significant **highway safety** improvement implications including reduced hydroplaning, less windshield visibility impairment, and possibly ice formation mitigation. It also is why $TiO_2$ treated surfaces are mechanically "self-cleaning" and both anti-mold and antimicrobial. [25]

For example, the PTI test site at Orlando International exhibited significant mold removal within the first few months on the previously mentioned FedEx ramp treated with **A.R.A.-1 Ti®**.

Light energized $TiO_2$ strongly attracts water, which is naturally polarized, where the water molecules are split by the activated surface, resulting in vastly improved disposal of $H_2O$ as it is transformed into thin films across the surface, not allowing droplets (and ponding) to form **(Drawing 1.2)**.

### Drawing 1.2 Super-Hydrophilic Surfaces Can Rapidly Displace Water

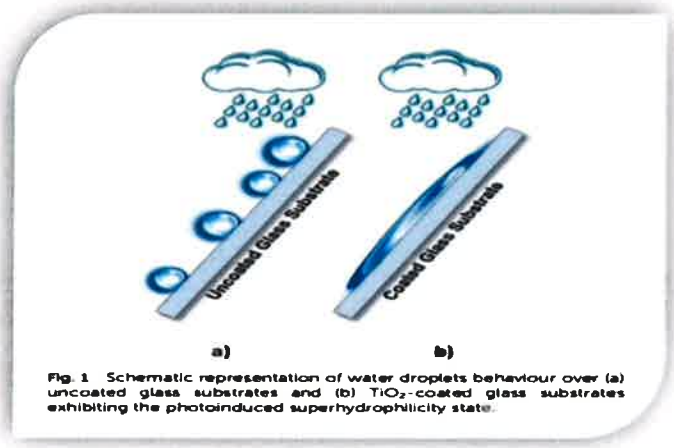

Fig. 1 Schematic representation of water droplets behaviour over (a) uncoated glass substrates and (b) $TiO_2$-coated glass substrates exhibiting the photoinduced superhydrophilicity state.

Source: Universidade do Porto (Portugal)

This PSH or **"quick drying"** transition of a photocatalytic pavement surface can be observed by measuring water contact angle (WCA) before and after UV illumination,[26] where a $TiO_2$-bearing surface presents a **contact angle** considerably **lower** when irradiated. This **accelerates the dispersion** of water across the surface by as much as **5x** a non $TiO_2$-bearing or "inactive" surface.[27] [28]

As with $NO_x$ reduction, the "fully hydroxylated" $TiO_2$-bearing pavement [29] during photocatalysis causes powerful oxidants to combine with the adsorbed water molecules (e.g., rain) to form new hydrogen bonding with the $H_2O$ clusters. This forces the distribution of these bonds within the water droplets to decrease, resulting in a **reduction** of **surface tension** between the water and the photoreactive $TiO_2$ surface.[30] [31]

A WCA of less than 90 degrees is considered "hydrophilic" and will increasingly (with lower contact angle) speed-up the displacement of water **(Drawing 1.3)**.

### Drawing 1.3 Hydrophilic vs Hydrophobic Contact Angles

For example, in highway design, an open graded friction course (OGFC) is designed specifically to **physically reduce** water contact angle as **surface roughness** has a strong effect on wettability.

A photocatalytic pavement will be even more efficient at producing a hydrophilic outcome through its high electro-chemical energy transformation of water molecules as described, providing a measurable upgrade to the water desorbing efficiency of any pavement substrate.

PTI tested **A.R.A.-1 Ti®** on an OGFC in Bartow (FL) for the Florida Department of Transportation (FDOT) in 2019. As indicated in **(Table 1.6)**, the $TiO_2$ enhanced test section observed a material decline in WCA from 81-82 degrees to 50-51 degrees for a nearly 40% improvement in water displacement capability.

In the Charlotte County (FL) trials, PTI tested both **Litho1000$^{Ti®}$** and **Ti-introCME®** across test sections for skid resistance (friction) under the standard testing protocol [32] which was executed by International Cybernetics **(Table 1.7)**. The primary purpose for which was to determine skid resistance safety when applying $TiO_2$ enhanced products to high speed thoroughfares. But what also was observed was clear indications of the instantaneous hydrophilic *effect* the $TiO_2$ imparted to the surface of the pavement.

As exhibited, the surfaces treated with both **Litho1000$^{Ti®}$** and **Ti-introCME®** showed that friction was not adversely impacted in any of the tests and that in all six tests, skid resistance improved meaningfully. That friction results improved immediately (tested after just 20 minutes following application) and continued was insightful as it indicates the clear presence of the $TiO_2$ and a PSH.

To some, this may appear to be a startling outcome, especially considering the rather small amount of water used in the standardized friction test. But it is direct evidence of improved hydrophilic tendency of a road impregnated with photocatalyst grade $TiO_2$. While more expanded research is concurrent, under actual inclement weather conditions, one should expect the improved (relative) skid resistance for a $TiO_2$-bearing pavement to be even greater, hence the safety improvements realizable.

PTI's photocatalytic pavement solutions provide the Public Works profession the first method for sustainable $TiO_2$ delivery into pavement wearing-course depth and at cost-effective "retrofit" economics. The technique promotes an efficient, durable, and scalable application for solar-based, **"$NO_x$ Capture"** technology for the systematic removal of $O_3$ precursors, UHI mitigation, pavement infrastructure LCA extension, and improved roadway safety in the critical near-road environment.

SRI is a measure of the constructed surface's ability to reflect solar heat, as shown by a small temperature rise. It is defined so that a standard black surface (reflectance 0.05, emittance 0.90) is 0 and a standard white surface (reflectance 0.80, emittance 0.90) is 100. The relevant standards for measuring solar reflectance are:

**Table 2.2 Test of Solar Reflectance**

| Value | Test Method |
|---|---|
| **Solar Reflectance** | **ASTM C1549 – Standard Test Method for Determination of Solar Reflectance** |
| **Solar Reflectance Index** | **ASTM E 1980 – Standard Practice for Calculating Solar Reflectance Index of Horizontal and Low-Sloped Opaque Surfaces** |

Based on these standards, the SRI is a measure of the relative steady-state temperature of a surface with respect to a standard white surface (SRI=100) and a standard black surface (SRI=0) under standard solar and ambient conditions.

Under normal ambient conditions, the steady-state temperature for the black and white reference surfaces is 355.61 kelvin (K) or 180°F and 317.76 K (110°F), respectively.
A Solar Reflectance Index (SRI) can be defined as:

$$SRI = \frac{T_b - T_s}{T_b - T_w}$$

Where:

- Steady-state Surface Temperature (Ts)—the temperature of the surface, in K, under the standard solar conditions. The surface temperature Ts (°C)=Ts (K)-273
- Reference Black Surface Temperature (Tb)—the steady-state temperature of a black surface with a solar reflectance of 0.05 and infrared emittance of 0.9, under the standard solar and ambient conditions
- Reference White Surface Temperature (Tw)—the steady-state temperature of a white surface with a solar reflectance of 0.80 and infrared emittance of 0.9, under the standard solar and ambient conditions
- Sky Temperature (Tsky)—the temperature of a black body that would radiate the same power in the thermal infrared spectrum (5 to 40 nm) toward the earth as does the sky

The minimum SRI value following the heretofore outlined test procedure(s) evaluating field core samples shall average 29 (or 0.29) for all cores tested, which meet the minimum standard (≥50% 29 SRI) for the U.S. Green Building Council (USGBC) hardscape threshold for Leadership in Energy and Environmental Design (LEED) credit or the minimum standard for the American Public Works Association (APWA) / Institute for Sustainable Infrastructure (ISI) Envision Superior (≥60% 29 SRI) level of achievement credit.

**2.4.6 Hydrophilic Improvement:** Verification of the improvement in hydrophilic property of the Titanium Dioxide nano-particle portion of the $TiO_2$ Enhanced Asphalt Rejuvenating Agent shall be by laboratory analysis of core samples extracted from the treated pavement as directed and required by the Engineer. The cores shall be a minimum of four inches (4") in diameter and in pairs at each location directed by the Engineer. The cores shall be tested by an accredited laboratory or university with the equipment and capability to perform the following test procedures.

**2.4.7 Wettability Test:** Hydrophilic improvement shall be determined by measuring the treated core samples for Water Contact Angle (WCA). WCA is a common measurement of a constructed surface's ability to improve wettability or the ability of water to develop a stronger boundary (less resistance) with the surface as shown by a decline in water contact angle. A WCA of $> 90^0$ is considered hydrophobic or high resistance while a WCA $<90^0$ is considered hydrophilic or low resistance. The relevant standard for measuring WCA is:

**Table 2.3 Test of Water Contact Angle**

| Value | Test Method |
|---|---|
| **Water Contact Angle** | **ASTM D7334 - 08(2013) Standard Practice for Surface Wettability of Coatings, Substrates and Pigments by Advancing Contact Angle Measurement** |
| | |

The minimum WCA reduction following the heretofore outlined test procedure evaluating field core samples shall average 20% for all cores tested.

## 2.5 Equipment

**2.5.1 Distributor:** The distributor for spreading the emulsion shall be self-propelled and shall have pneumatic tires. The distributor shall be designed and equipped to distribute the asphalt rejuvenating agent uniformly on variable widths of surface at readily determined and controlled rates from 0.04 to 0.10 gallons per square yard of surface, and with an allowable variation from any specified rate not to exceed 5% of the specified rate.

Distributor equipment shall include full circulation spray bars, pump tachometer, volume measuring device and a hand hose attachment suitable for application of the emulsion manually to cover areas inaccessible to the distributor. The distributor shall be equipped to circulate and agitate the emulsion within the tank.

The rate of application shall be controlled by an onboard computer control system designed to control the selected application rate uniformly and consistently in gallons per square yard regardless of the forward speed of the distributor truck.

A check of distributor equipment as well as application rate accuracy and uniformity of distribution shall be made when directed by the Engineer.

**2.5.2 Aggregate Cover Truck:** The truck used for cover aggregate application shall be equipped with a spreader that allows the aggregate to be uniformly distributed onto the pavement. The spreader shall be able to apply 1/2 pound to 3 pounds of cover aggregate per square yard in a single pass. The spreader shall be adjustable so as not to broadcast cover aggregate onto driveways or to lawns.

The cover aggregate to be used shall be free flowing, without any leaves, dirt, stones, etc. Any wet aggregate shall be rejected from the job site.

Any equipment that is not maintained in full working order, or is proven inadequate to obtain the results prescribed, shall be repaired, or replaced at the direction of the Engineer.

**2.5.3 Calibration:** Distributor- prior to construction, calibrate the distributor in accordance with ASTM D2995-99 in the presence of the Engineer. The distributor shall be moving forward at the proper application speed at the time the spray bar is opened. If at any time a nozzle becomes clogged or not spraying a proper pattern, the operation shall be immediately halted until repairs are made.

## 2.6 Construction

**2.6.1 Layout:** The Contractor will be responsible for the lay out of the roadway and project planning and sequencing to meet traffic control requirements prior to paving.

**2.6.2 Weather and Seasonal Limitations:** The $TiO_2$ Enhanced Asphalt Rejuvenating Agent shall not be applied to a wet surface or when rain is occurring, or the threat of rain is present immediately before placement. The surface treatment shall not be applied when the temperature is less than 40° in the shade. When applying emulsions, the temperature of the surface shall be a minimum of 45°F, and no more than 150°F.

If unexpected rain occurs prior to material penetration and cover aggregate application, the agent shall be reapplied at no cost to the agency. Further, the contractor's traffic control and project monitoring shall continue until the application has penetrated, area has been sanded and the resultant surface is acceptable to the Engineer for vehicular travel.

**2.6.3 Preparation of Surface:** The contractor will be responsible for blowing or sweeping the road immediately ahead of the application operation to make sure the road is free of standing water, dirt, loose aggregate, and other debris. The surface shall be clean and dry prior to the application.

**2.6.4 Application of $TiO_2$ Enhanced Asphalt Rejuvenating Agent:** The $TiO_2$ Enhanced Asphalt Rejuvenating Agent shall be applied by a distributor truck at the temperature recommended by the manufacturer and at the pressure required for the proper distribution. The emulsion shall be so applied that uniform distribution is obtained at all points of the areas to be treated. Distribution shall be commenced with a running start to ensure full rate of spread over the entire area to be treated. Areas inadvertently missed shall receive additional treatment as may be required by hand sprayer application.

**2.6.5 Material Placement of $TiO_2$ Enhanced Asphalt Rejuvenating Agent:** Application of $TiO_2$ Enhanced Asphalt Rejuvenating Agent shall be on one-half width of the pavement at a time. When the second half of the surface is treated, the distributor nozzle nearest the center of the road shall overlap the previous application by at least one-half the width of the nozzle spray. In any event the centerline construction joint of the pavement shall be treated in both application passes of the distributor truck.

Before spreading, the $TiO_2$ Enhanced Asphalt Rejuvenating Agent shall be blended with water at the rate of two parts rejuvenating agent to one-part water, by volume or as specified by the manufacturer. The combined mixture of asphalt rejuvenating agent and water shall be spread at the rate of 0.04 to 0.10 gallons per square yard, or as approved by the Engineer following field testing.

Where more than one application is to be made, succeeding applications shall be made as soon as penetration of the preceding application has been completed and the Engineer grants approval for additional applications. Grades or super elevations of surfaces that may cause excessive runoff, in the opinion of the Engineer, shall have the required amounts applied in two or more applications as directed.

The Contractor shall furnish a quality inspection report showing the source, manufacturer, and the date shipped, for each load of $TiO_2$ Enhanced Asphalt Rejuvenating Agent. When directed by the Engineer, the Contractor shall take representative samples of material for testing.

**2.6.6 Test Strip for Application Rate:** Prior to start of the project, the contractor shall perform test strip applications as directed by the engineer. Test strips shall be performed for each pavement group of similar age and type within the project area.

The test strips shall be applied at a minimum width of 6 feet and for a length of 50 feet. A total of three test strips shall be applied at application rates of 0.04, 0.08 and 0.10 gallons per square yard, respectively. The time, in minutes, for essentially complete absorption of the asphalt rejuvenating emulsion shall be recorded for each test strip. The optimal rate to be used in a given area shall be that rate essentially absorbed within 20 minutes.

In the event that all three of the standard test rates are absorbed completely within the 20-minute timeframe, then the Contractor and the Engineer shall agree on a fourth test strip application rate.

Upon completion of the test strips for each pavement group, the Engineer will determine the final application rate to be applied to each pavement group.

**2.6.7 Cover Aggregate Application:** After the $TiO_2$ Enhanced Asphalt Rejuvenating Agent emulsion has penetrated, and when recommended by the Contractor and approved by the Engineer, a coating of dry cover aggregate shall be applied to the surface in sufficient amount to protect the traveling public as required.

All cover aggregate used during the treatment must be removed no later than 24 hours after treatment of a roadway. This shall be accomplished by a combination of hand and mechanical sweeping. All turnouts, cul-de-sacs, etc. must be cleaned of any material to the satisfaction of the Engineer. Street sweeping will be included in the price bid per square yard for asphalt rejuvenating emulsion.

If, after the cover aggregate is swept and in the opinion of the Engineer a hazardous condition exists on the roadway, the contractor must apply additional cover aggregate and sweep same no later than 24 hours following reapplication. No additional compensation will be allowed for reapplication and removal of materials.

**2.6.8 Handling of $TiO_2$ Enhanced Asphalt Rejuvenating Agent:** Contents in tank cars or storage tanks shall be circulated at least 45 minutes before withdrawing any material for application. The distributor truck will be cleaned of all of its asphalt materials and washed out to the extent that no discoloration of the emulsion may be perceptible. Cleanliness of the spreading equipment shall be subject to the approval of the Engineer.

**2.6.9 Street Sweeping:** The Contractor shall be responsible for sweeping and cleaning the streets after treatment. All cover aggregate used during the treatment must be removed no later than 24 hours after treatment of the street. This shall be accomplished by a combination of hand and mechanical sweeping. All turnouts, cul-de-sacs, etc. must be cleaned of any material to the satisfaction of the Engineer.

If, after cover aggregate is swept and in the opinion of the Engineer a hazardous condition exists on the roadway, the contractor must apply additional cover aggregate and sweep same no later than 24 hours following reapplication. No additional compensation will be allowed for reapplication and removal of cover aggregate.

**2.6.10 Resident Notification:** The contractor shall distribute by hand, a typed notice to all residences and businesses on the street to be treated. The notice will be delivered no more than 24 hours prior to the treatment of the road. The notice will have a local phone number that residents may call to ask questions. The notice shall be of the door hanger type, which secures to the door handle of each dwelling. Unsecured notices will not be allowed. The contractor shall also place the notice on the windshield of any parked cars on the street. Hand distribution of this notice will be considered incidental to the contract.

**2.6.11 Traffic Control:** The Contractor shall furnish all necessary traffic control, barricades, signs, and flagmen, to ensure the safety of the traveling public and to all working personnel. Traffic shall not travel on fresh $TiO_2$ Enhanced Asphalt Rejuvenating Agent until penetration, in the opinion of the Engineer, has become complete and the area is suitable for traffic. The Contractor shall submit an M.O.T plan indicating all facets of traffic control for the project area. The M.O.T. plan must be approved in writing by the Engineer prior to commencing any work. All traffic control shall be in accordance with the DOT Roadway Design Standards (most current edition). Traffic control devices shall be checked daily and periodically throughout the project for compliance; and where adjustments or corrections are needed, prompt revisions shall be made.

**2.6.12 Method of Measurement:** The $TiO_2$ Enhanced Asphalt Rejuvenating Agent emulsion shall be paid at the Contract bid unit prices for the actual square yards of pavement treated as field measured. Said payment is compensation in full for all costs of furnishing and applying the material as specified, including cleaning the existing pavement, purchase of cover aggregate, delivery of cover aggregate, all labor, equipment, and materials necessary for the placement of the $TiO_2$ Enhanced Asphalt Rejuvenating Agent emulsion, sweeping of any loose material after construction and other requirements as specified. Traffic control for maintaining traffic for constructing $TiO_2$ Enhanced Asphalt Rejuvenating Agent emulsion shall be considered incidental.

Payment for removal of untreated and treated cores shall be paid for as each at the unit price bid for Test Core Removal.

## 3 BACKGROUND

### 3.1 Mobile Source Pollution and Tropospheric Ozone

Ozone, sometimes referred to as **"smog"**, is a toxic gas that is formed in the atmosphere when three atoms of oxygen combine (i.e., $O_3$). The chemical structure of ozone is the same wherever it is found; however, as shown **(Figure 3.1)** there are two categories of ozone.

**Stratospheric Ozone** is found naturally in the Earth's upper atmosphere - 6 to 30 miles above the Earth's surface - where it forms a protective layer that shields us from the sun's harmful ultraviolet rays.[33] This sometimes is referred to as "good ozone".

**Ground-Level Ozone** is found near ground level, naturally (sometimes called "tropospheric ozone"). It is created by chemical reactions between nitrous oxides ($NO_x$) and volatile organic compounds (VOCs) in the presence of sunlight. Emissions from industrial facilities can contribute as much 15% of tropospheric ozone, electric utilities 20% and motor vehicle exhaust contributes 60% or more **(Figure 3.2)**.[34] They are the major sources of noxious gas formations in the air humans breathe ("bad ozone").

Climate scientists and healthcare experts have concluded that ground-level pollution or photochemical smog in densely populated, urban environments has developed into a human health crisis.

The World Health Organization's (WHO) most recent survey of 4300+ cities worldwide indicate only 20% of urban populations live in cities that comply with WHO air quality guideline levels for fine particulate matter ($PM_{2.5}$), which includes $NO_x$ as the major contributor.[35] [36]

The poor showing includes American cities, where all of our major urban hubs are near, already at or above WHO limits.[37]

Further, WHO scientists believe the impact of inner-city air pollution on the development of respiratory and atopic disease in childhood, in particular, has reached epidemic proportion.[38] Air pollution may contribute to as many as 9 million premature deaths annually,[39] including 43% of lung diseases and cancer, 25% of heart disease and 24% of strokes.[40]

The American Lung Association has concluded:

*"The burden of air pollution is not evenly shared. Poorer people and some racial and ethnic groups are among those who often face higher exposure to pollutants..."* [41] owing, in no small part, to their sheer proximity to major point-sources (industry and traffic) for anthropogenic pollution.

### 3.2 Air Quality and Resident Health

**Creation of Hazardous Photochemical Smog Caused by Vehicle Emissions:** Detrimental gas emissions, such as $NO_x$ and sulfur oxides ($SO_x$), are formed during the combustion process from burning fossil fuels. Vehicle emissions introduce one of those oxides – nitrogen dioxide, into the environment, increasing $O_3$ concentrations. As the ozone concentrates, the percentage of nitrogen undergoing oxidization also increases, resulting in an increasingly higher percentage of $NO_2$ in the atmosphere, especially in the troposphere to create ground-level pollution harmful to humans and damaging to ecological systems.

Researchers have identified a clear association between these serious environmental, ecological and health dangers with the presence of photochemical smog, acid rain, and rising $NO_2$ concentrations. The EPA classifies $NO_2$ as an "extremely hazardous" criteria toxin [42] and has set stringent limits on its ozone inventory under the NAAQS. [43] The ratio of $NO_2$ to total gas emissions has been rising over the years due to increasing urbanization and associated traffic and

has resulted in a corresponding increase in $O_3$ ``build-up.[44]

EPA technical data shows that as much as two-thirds of atmospheric $NO_2$ is emitted from mobile sources.[45] And nearly half of all Americans live within 'maximum exposure' to near-roadway pollution or within 500 meters of high AADT volume roads, according to the most recent U.S. Census.[46]

Airborne nitrous oxides (nitrites) have a half-life ranging 100 to 150 years.[47] The EPA also believes $NO_2$ concentrations from vehicles and near roadways are appreciably higher than those measured at monitors in the current EPA network. In fact, **near-road concentrations can be 2–3 times higher than measured at nearby area-wide monitors**,[48] making road-level **"breathing zones"** uniquely attractive targets for managing $NO_2$ contaminations.

EPA estimates [49] **(Figure 3.3)** indicate all major U.S. cities and much of the country's populated areas in general would breach $O_3$ concentrations at a 60ppb (parts per billion) threshold. The current limit is just 65ppb [50] and most health and environmental experts expect the "nonattainment" limit to be lowered in the near future.

So, agencies need to be both preemptive and proactive. Most do not have adequate strategies in-place, however. [51]

### 3.3 On-Road Vehicular Emissions

**The Good News** is that vehicles are getting more efficient. Average new vehicle fuel economy for internal combustion engine (ICV) passenger cars has increased from 13 mpg in 1975 to 25 mpg today,[52] and it's expected to steadily rise to 40 mpg in the coming decade.[53] Many ICV models already exceed 35 mpg. [54]

EPA scientists and engineers at the National Vehicle and Fuel Emissions Laboratory (NVFEL) at the University of Michigan (Ann Arbor) are working closely with our automotive industry ("Detroit") to continue to improve current vehicular technology *in-use* to meet higher MPGs.

**The Bad News** is that our urban centers and accompanying vehicle ownership are growing far faster than emissions technology can pace.

America alone has seen annual new vehicle registrations nearly triple since 1975,[55] far outpacing gains in fuel efficiency. And while new energy vehicle (NEV) growth has been steady, wide adoption has been greatly limited by steep cost prohibitions, lackluster consumer enthusiasm and other constraints.[56] [57] [58] The electric vehicle (EV) market e.g., appears to be centered exclusively on the super-luxury market, with average MSRPs exceeding 67,000 USD.[59]

The National Renewable Energy Laboratory (NREL) predicts that energy demand would skyrocket by over 60% [60] from current capacity limits if EVs were widely adopted. But where would we get more electricity today, tomorrow, or even fifty years from now to meet such an enormous increase in electricity demand?

By most estimates, we'd need as many as 10 billion solar panels in the United States alone just to handle electric cars, creating substantial financial, logistic and land use issues.[61] And that, of course, assumes the panels will be able to constantly (steadily) produce the electricity we will need, while future technology actually will develop to store it. These are big "ifs".

Reasoned analysis suggests that even if such limitations for renewable energy sources are solved, in part or in whole, estimates for overhauling the country's electric grid and energy infrastructure for ***new energies*** are rounded in the ***tens*** **of trillions** USD.[62] [63] [64] So, alternative energy

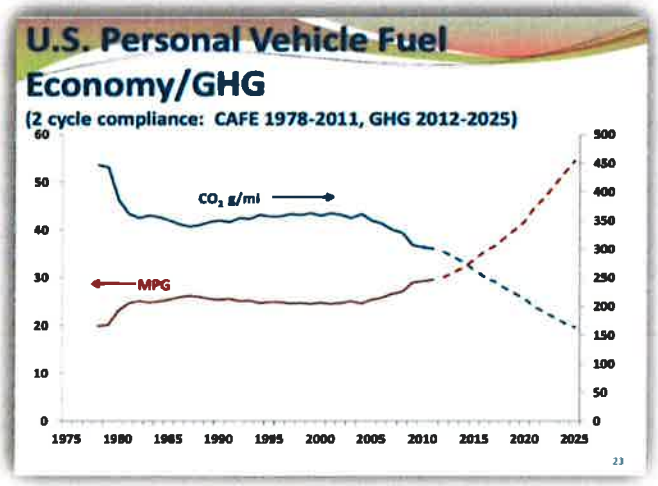
sources are proving more difficult to scale, store or even afford than expected. [65] [66]

For now, GHG emissions from an EV are 50% higher than the improving fuel economy ICVs.[67] So, the need for more commercially practicable solutions today, tomorrow, and perhaps for a lot longer for vehicular emissions management are presenting themselves.

In PTI's on-gong discussions with the Federal Highway Administration's (FHWA) Environment, Air Quality, and Realty Team (which oversees CMAQ), improvements in existing transportation systems remain the highest priority and are consistent with the EPA's NVFEL view.

Any technology which promotes reduced $CO_2e$ from vehicles, including photocatalytic roads, is viewed as a *de facto* improvement or acceleration in vehicular MPG efficiency towards meeting Corporate Average Fuel Economy (CAFE) standards **(Figure 3.4)**.

**Figure 3.4 Vehicle MPG vs $CO_2e$**



Source: EPA: National Vehicle and Fuel Emission Laboratory

The global trend to reduce pollution and energy consumption is a most critical cause, but poses unquestionable challenges (as highlighted), as numerous as they are complex for governments and industry. How we adapt products, services, and governance to play a scalable role in reducing pollution and energy consumption and our associated carbon footprint is key. These questions are becoming more urgent as legislative and environmental guidelines drive us towards more efficient energy usage, including and especially for on-road concentrations.[68]

In considering the response and beyond the immense economic costs, one must also consider consumer expectations. While most consumers are aware of the balance between the cost and environmental benefits of reduced energy consumption, many may be reluctant to accept energy-reducing products that compromise other criteria e.g., product or behavior choice or even aesthetics.

## 3.4 Surface Chemistries & Catalytic Pollution Removal Systems

The photocatalytic effect of $TiO_2$ applied to pavements and other structures can remove pollutants from the air, so that so-called **"photocatalytic pavements"** can be installed for two primary applications - air pollutant removal and heat management. And critically - without significant cost nor change to transportation infrastructure or effect on consumer choice or behavior.

Several approaches utilizing photocatalysis have been studied as methods for successfully counteracting noxious emissions.

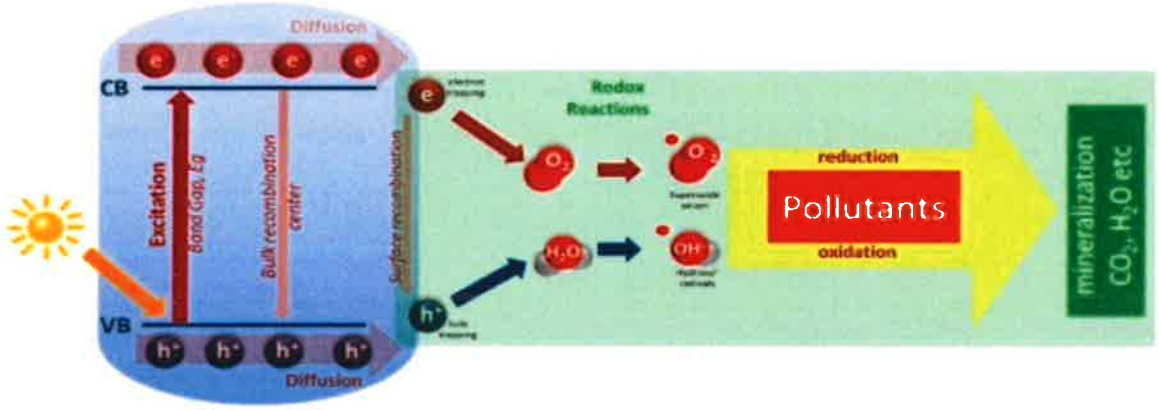
Photocatalysis or PCO is the acceleration of a photoreaction in the presence of a semiconductor. When the catalyst is activated by ultraviolet (UV) light with wavelengths less than 380nm, hydroxyl radicals and superoxide are created via band gap excitation,[69] [70] forming an electrochemical energy field (ECF) **(Drawing 3.5)**.

**Drawing 3.5 $TiO_2$ Based Photocatalysis – Band Gap Excitation**



Source: Journal of Materiomics

The ECF naturally and efficiently decomposes transient molecules traveling near or through the field, including primary $O_3$ precursors such as $NO_x$ and VOCs as discussed. So, commercial photocatalyst grade $TiO_2$ <1μm (micron) is widely used as a photocatalyst material for several reasons, including as an effective pollution remediate:

- $TiO_2$ fulfills the requirements for **effective photo-activity** under the solar irradiance levels experienced on Earth
- Photoreactive $TiO_2$ is chemically **inert**; physically **stable**; **non-toxic**; **non-exhaustive**; **economical**; and widely (commercially) **available**
- $TiO_2$ has **strong oxidizing strength**, in particular at the ambient conditions near the Earth surface given that $TiO_2$'s wide band gap (minimum energy required to excite and mobilize electrons) [71] in the solid state enables it to be very efficient in the UV range of the light spectrum
- $TiO_2$ also promotes **super-hydrophilic** (i.e., water-desorbing) as well as **solar-reflectivity** (SR) advantages to building materials

$TiO_2$ hence promotes numerous advantages useful to science and engineering including de-polluting; self-cleaning; light-remitting; and heat reducing properties.

## 3.5 Solar Reflective Properties of $TiO_2$

The growth in urbanization and changing land use coupled with ever rising vehicular emissions intensifies the UHI effects in cities.

The heat-build exaggerates heat-related stresses such as $O_3$ levels and accompanying disease in humans. And though UHI intensity depends on many factors including wind speed, direction, and solar flux, the thermodynamic properties of surface materials can greatly exaggerate the temperature profiles at the local scale.

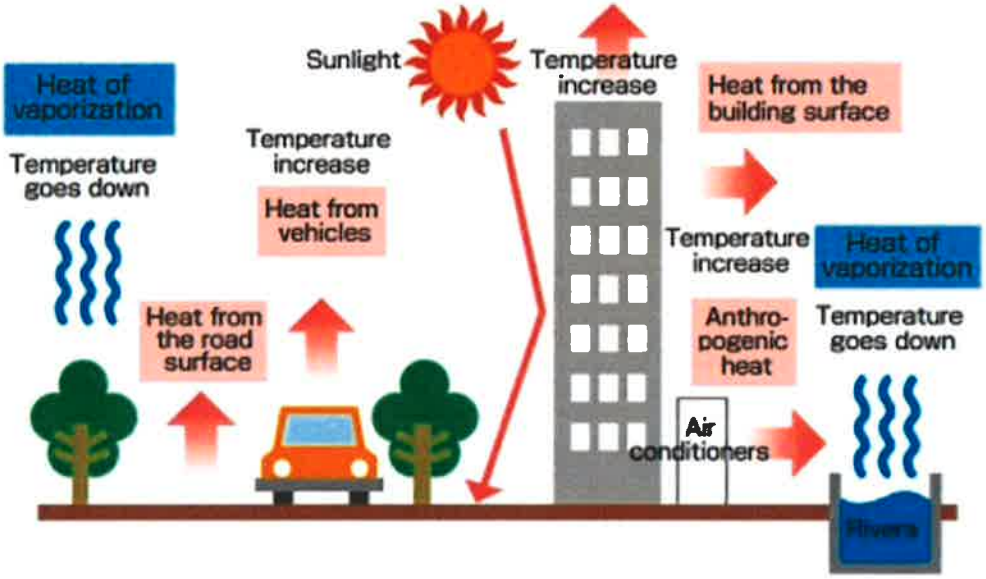
[70] Binas V, et al., Modified $TiO_2$ Based Photocatalysts for Improved Air and Health Quality, *Journal of Materiomics*, November 2016.

[71] The electronic band structure of solids refers to the energy difference (in electron volts) between the top of the valence band and the bottom of the conduction band in insulators and semiconductors.

In the southeastern U.S. alone, data indicates the "hot season" now lasts one to three weeks longer than 30 years ago, exaggerating UHI. [72] Heat-builds modify the atmospheric boundary layer (ABL), impacting air flow and mixing height (creates stagnant air) in urban environments, further deteriorating local air quality. So, UHI intensity itself, is highly correlated to air pollution levels.[73]

**Drawing 3.6 How the Heat Island Effect Occurs**



Source: Green Ribbon Toronto

Pollution-induced climate change is a circular problem and comes with other direct and indirect environmental, ecological and health impacts included in the growing phenomena now just universally described as the **Urban Heat Island** effect **(Drawing 3.6)**.

When humans are exposed to extreme or prolonged heat, many of the crippling and even deadly diseases aforementioned are exacerbated. Low-income populations and the elderly are particularly vulnerable. The EPA has estimated that for every 1.5°F rise in temperatures, net demand for electricity used for cooling/heating would increase by as much 5% or more, impacting consumer behavior and even severely limiting their choices between other essentials for living.[74]

Reduced water quality also is a factor from UHI. The extremely high temperatures of pavement structures, especially asphalt, can measurably increase the temperature of stormwater runoff, escalating additional ecological and health concerns as these warmer waters drain into sewers and eventually into lakes, rivers, ponds, and streams etc.

UHI and climate change interact in many critical and circulative ways:

- **Increased Energy Demand**
- **Increased Air Pollution and Gas Emissions**
- **Reduced Human Health and Comfort**
- **Poor Water Quality and Ecology**

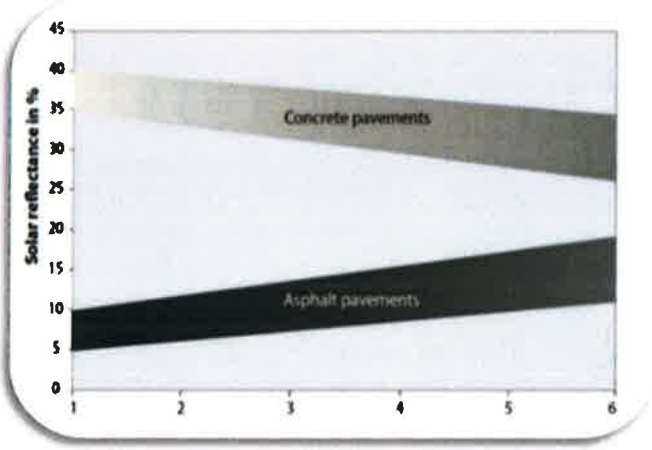
In general, white surfaces will **reflect** as much as 75% of solar energy (strong hiding power) [75] and stay relatively ***cool***, while black surfaces will **absorb** as much as 90% and will get extremely hot, of course.[76]

Research has shown that the impact from improving the solar reflectance of urban infrastructure on UHI can range as high 100 tons $CO_2e$ per lane mile per year of pavement and a global adoption of both cool roofs and pavements could lead to a potential offset of over 40 gigatons $CO_2e$ annually.[77] [78] [79]

### Drawing 3.7 Pavement Reflectivity and Time



Source: EPA: Heat Island Reduction Program (HIRP)

Asphalt is a particularly good target. New asphalt, according to the EPA Heat Island Reduction Program (HIRP), has an SRI of 5 which slowly rises with age, but remains very heat-absorbing throughout its life cycle **(Drawing 3.7)**.

An SRI of 5 at 72°F would register a surface temperature of the asphalt at 140°F over 8 hours of solar irradiation, according to HIRP testing. And each 10 SRI would reduce the pavement's temperature by 7°F to 10°F.[80]
Conventional paving materials can reach peak summertime temperatures of 150°F [81] or more, transferring excess heat to the air above them and heating stormwater as it runs off the pavement into waterways, effecting watershed ecology.

Pavements in urban centers can be as much as 50% of land cover in major cities.[82] As such, pavements are a critical element in environmental planning and UHI mitigation consideration.

Further, asphalt binder begins to photodegrade at 120°F,[83] with exponential damage as the temperature rises. Studies have shown that even modest improvement in asphalt temeperature can

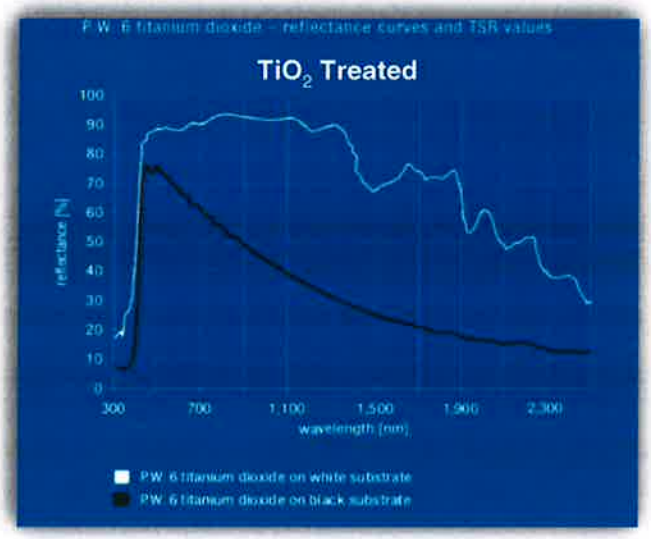
materially extend the service life of the asset **(Figure 3.8)**.[84]

*Cooler* pavements can be created with existing paving technologies including newer approaches such as the use of coatings or spray applied penetrants with SRI reducing materials to create pavements with strong light scattering efficiency.

For example, chemical giant BASF extensively has tested paint pigments for their solar reflectance properties, in large part, to improve weatherability (UV protection). As a result, BASF has developed paint additives, utilizing photocatalyst $TiO_2$, it markets as **"paint it cool!"** pigments for solar heat management in paints; DuPont similarly.

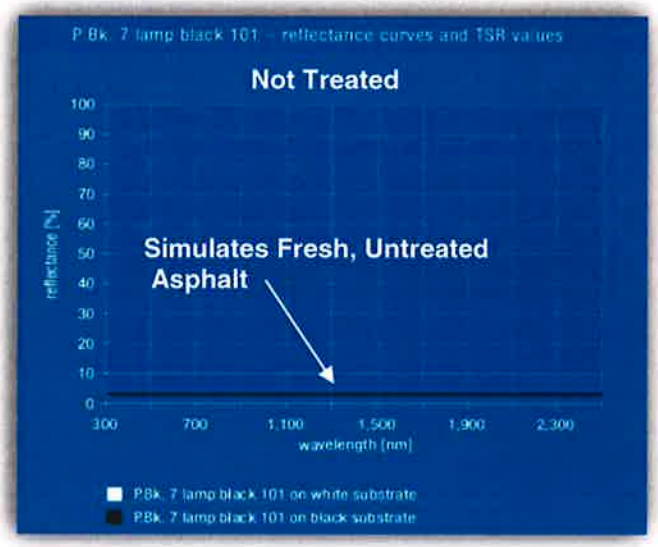
**Figure 3.9 Solar Reflectance (%) - Treated**



Source: BASF SE

BASF researchers tested $TiO_2$ presented in both white and black substrates **(Figure 3.9)**. When $TIO_2$ was added to a white substrate, the surface indicated roughly 90% reflectance from the UVA spectrum (315 to 400 nm in wavelength) all the way past visible light (400 to 700 nm) and even into infrared.

**Figure 3.10 Reflectance (%) - Untreated**



**Source: BASF SE**

For the control **(Figure 3.10)**, BASF tested black pigment against both color surfaces, which indicated only 5% reflectance, consistent with EPA HIRP testing.

But, the $TiO_2$ added to the black substrate **(back to Figure 3.9)** showed remarkable results with roughly 75% reflectance in the UVA spectrum or much higher (14x) than the control all the way through the visible spectrum (ranging 60% to 70% reflectance).[85]

**Figure 3.11 Heat-Build vs Pigment Color**

[84] EPA HIRP: Using Cool Pavements.

[85] BASF SE.

BASF scientists also tested UHI *style* heat build-up against multiple pigments and $TiO_2$. As indicated **(Figure 3.11)**, the heat-build in black pigment was materially more than the highly reflective $TiO_2$. The black pigment, with just 5% reflectivity, accumulated more than twice the heat-build of the $TiO_2$ enhanced pigment.

Over half of the solar energy experienced at the Earth's surface falls within the UV and visible light spectrum.[86] So, these results give one a clear idea of how a $TiO_2$-bearing pavement would perform to reduce radiative forcing (RF) [87] in the ambient environment.

What can be learned from BASF's testing can be applied to $TiO_2$-bearing pavements:

Nanoparticle $TiO_2$ has high light refraction properties,[88] improving a pavement's ability to diffuse thermal loading and to lower emissivity.

Understanding heat management can play a significant role in both ecology and pavement life-cycle assessment, which impacts the evaluation and appraisal for pavements on the environment through materials, construction, use, maintenance, and end-of-life phases.

UHI specifically can play a crucial role in the **use-phase** of pavement LCAs and hence can become a major tool in a community's ability to reduce its carbon footprint without disrupting infrastructure and resident utility.[89]

Yet, cool pavement technologies are not as required (adopted) by agencies as other heat island mitigation strategies (e.g., roofs) and there is no official standard or labeling program to designate cool paving materials in highway construction practices per se. But one can project as much is coming.

Our interviews with the EPA's HIRP staff indicate strong interest in and base knowledge of photocatalytic pavement solutions.

HIRP is especially interested in solutions for asphalts that do not impugn asphalt recyclability (sustainability) as most prevailing UHI mitigation strategies (e.g., "white pavements") and common pavement preservation materials alike risk because they are **adsorbed** and themselves unsustainable.

Photocatalytic pavement solutions for asphalt such as PTI's **A.R.A.-1 Ti®** offer great promise in this regard because the penetrant replaces exact chemicals (true conservation) lost to UHI and the solution is translucent and fully **absorbed** into the substrate. This preserves *full* recyclability of the asphalt while delivering the advantaged solar reflectance properties from the photocatalyst material imbedded.

The American Society for Testing Materials (ASTM) has formed a **'cool construction materials'** subcommittee in recent years to develop standard practices for measuring, rating, and labeling cool construction materials.

The subcommittee also undertook the development of a standard practice for calculating an SRI for horizontal and low-sloped surfaces (like a road), [90] which now can and should be applied to road construction **'best practices'**.

## 3.6 Pavement Preservation and GHG Mitigation

Asphalt remains the most durable and efficient material for roadway construction, dating back to the Romans and earlier. More than 90% of our roadways are built with asphalt.[91] The manufacturing of asphalts and construction of asphalt roads, however, have a meaningful impact

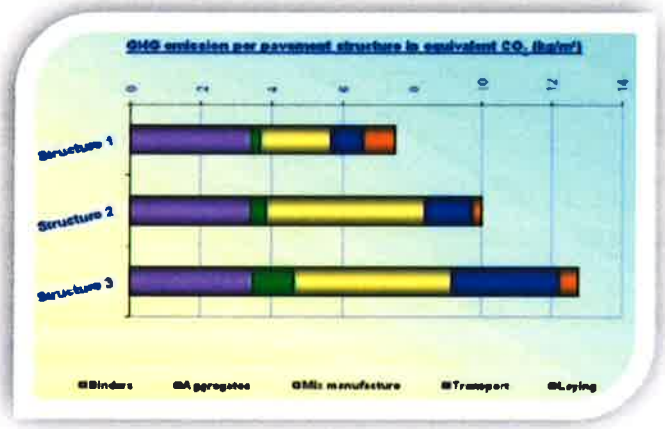
on the environment, energy use and GHG emissions.

Pavement reconstruction and most forms of rehabilitation consume significant amounts of energy. From the negative RF in obtaining and processing raw materials, to mixing, transporting, and finally paving (applying), the global warming potential (GWP) of building and maintaining roads is of considerable importance to sustainable urban planning and maintenance **(Figure 3.12)**.

Employing pavement preservation requires significantly less energy than in part or whole rebuild, of course. Fog sealing, which includes molecular replacement strategies such as MRT, uses the least amount of energy per year of extended pavement life at as little as 250 BTU/yd$^2$-yr (0.4 MJ/m$^2$-yr).[92]

### Figure 3.12 $CO_2e$ Emission by Asphalt Pavement Input



Source: Colas Group SA

Compare that to the energy consumption of a pavement **rebuild** consuming as much as 1.5 million BTUs or 200 MJ/m$^2$-yr [93] or roughly **500x the $CO_2e$** of pavement preservation strategies.

Beyond the enormous carbon footprint savings, the significant cost differential for preservation techniques over rebuilds provides returns on investment (ROI) typically exceeding 250%.[94]

One study conducted by Rutgers University [95] compared initial International Roughness Index (IRI), fuel consumption [96] and application year for pavement preservation implementation **(Figure 3.13)**. The results indicated that early pavement preservation can have a materially positive impact on $CO_2e$ reductions.[97]

### Figure 3.13 Pavement Preservation Impact on $CO_2e$ Reduction

The implication for proactive early and recurring pavement preservation strategies clearly support significant GHG mitigation against multiple points of fossil fuel consumption causally related to our critical city infrastructure, including roadways.

## 3.7 Deterioration of Asphalt Pavements Due to Manufacturing and Environmental Factors

Asphalt pavements are vulnerable to many factors, thermal loading (excess heat) being the

most damaging.[98] As noted, conventional paving materials can reach peak summertime temperatures exceeding 150°F.[99] And asphalt binder begins to photodegrade (oxidizes) at 120°F,[100] with exponential damage as the temperature rises.

Excessive heat required during manufacturing, typically 300°F to 350°F[101] or higher, is especially destructive, which leads to the volatilization or rapid loss of critical molecular components of asphalt binder that are responsible for durability and ductility (plasticity). These are commonly and scientifically referred to as **"maltene fractions"**.

As much as a third of maltene molecular content may be lost during asphalt production,[102] leaving asphalts prematurely aged by the impaired binder. Maltenes are the "media" that enable asphalt binder to impart flexibility, fluidity, and adhesion properties to paved roads. They are largely responsible for the resilience of asphalts to withstand considerable environmental and traffic stresses.

Asphalts with depleted binder chemistry become embrittled, leading to cracking and raveling stress and accelerated repair and rebuild demands.

In-service, heat continues its extortionate role in depleting maltene content in asphalt binder due to the oxidative effect of irradiation (UHI), as asphalts are highly solar energy absorptive.[103] In combination, volatilization and UHI stress are the primary factors responsible for binder-centric failure of asphalt pavements and premature rebuild needs.[104]

A proven remedy for restoring damaged or aged asphalt binder to proper performance properties is to **chemically replace** the maltenes lost during manufacturing and in-service weathering through maltene replacement therapy. MRT, effectively, establishes a molecular **"second curve"** to the LCAs of asphalt pavements.

[106] The poise (symbol P) is the unit of dynamic viscosity (absolute viscosity) in the centimeter-gram-second system of units.

The maltene rejuvenator not only was able to reduce the initial viscosity (improve resilience) of the pavement (by over 50%), it effectively **reset the oxidation curve** for the pavement over the following seven years, dramatically extending the LCA of the pavement.

MRT has been widely tested over the past half century with consistent excellent results. The method employs delivering an emulsified penetrating compound consisting of a near-pure maltene rich petroleum resin, a compatible surfactant, and water directly into the roadway surface.

The surfactant and water help deliver the fresh maltene fractions ratably and deeply into wearing-course depth. The result is a revitalized or "rejuvenated" asphalt binder which can be tested for measurably and sustainably improved rheology, as the Charleston data proves.

MRT has shown, with repeat treatments every three to five years, to extend the life cycle of asphalt pavements by two-fold and at a fraction of the cumulative cost of repaving, reducing reliance on petroleum feedstocks and cutting energy, maintenance and replacement costs.

MRT is the asphalt pavement preservation base found in PTI's **A.R.A.-1 Ti®**.

Combining a proven pavement LCA extending technology with a photocatalytic enhancement has shown great results and synergies beneficial to multiple level $CO_2e$ reductions for pavement infrastructures.

### 3.8 Road-Level Air Quality Reference Testing

There are key unknown relationships between $NO_x$, the soluble nitrates ($HNO_3$) that result from PCO and variant atmospheric conditions.

Capturing and measuring ambient air quality in real-time is very difficult owing to the multitude of meteorological variables, including but not limited to—temperature; air speed; humidity; atmospheric pressure; precipitation; and air composition contamination related to testing area configuration and scale limitations. Roadway "breathing zone" analysis also includes traffic variables, of course.

The EPA sets strict standards for such measurement and guides industry on accepted methods and procedures, including equipment under the **Federal Reference Method (FRM)** and administered by the EPA's **Ambient Monitoring Technology Information Center (AMTIC)**.[107]

Equipment that are "designated" or meet the requirements are prohibitively expensive, with set-ups ranging in the hundreds of thousands USD. And the EPA stated protocol calls for multiple FRM level equipment used in any testing for redundancy and consistency.

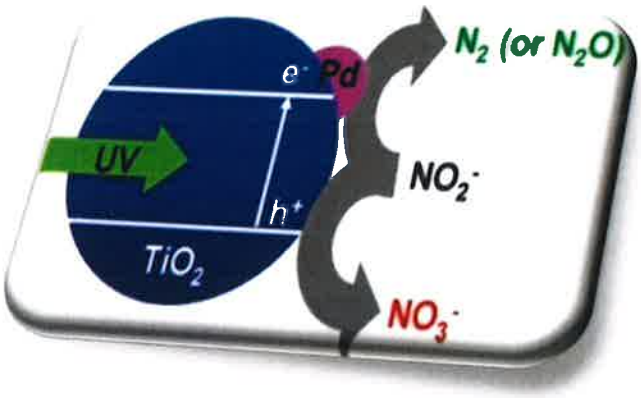
The EPA "reference" requirements are supported by the Agency's computerized simulation (regression) modeling, referred to as the **Air Pollutants Exposure Model (APEX)**.[108] So, the EPA combines advanced field monitoring with very sophisticated data-driven simulation software to predict human exposure risks to anthropogenic pollution.

Additionally, the EPA believes near-road concentrations of pollutants can be 2–3 times higher than measured at nearby area-wide monitors,[109] as previously noted, making "breathing zone" identification critical in estimating human exposure to mobile-sourced criteria toxins such as $NO_x$.
Conforming to air quality monitoring and human hazard measurement under FRM is logistically difficult and economically infeasible in most circumstances, while non-conforming testing creates an unavoidable data "reference gap".

[107] EPA: Air Quality Methods – Criteria Pollutants, www.epa.gov.
[108] EPA: Human Exposure Modeling – Air Pollutants Exposure Model, www.epa.gov.
[109] EPA: Near Roadway Air Pollution and Health, Frequently Asked Questions, www.epa.gov.

The gap potentially could be mitigated through additional near-field PCO testing to promote correlative significance to non-reference air quality data collected. And this is among the on-going research initiatives with TTI, including potentially advancing future performance specifications for photocatalyst pavements.

**Drawing 3.15 Photocatalytic Disproportionation of Nitrite Gas ($NO_2$) into Nitrate ($NO_3$)**



Source: Royal Society of Chemistry

One approach to promote better field data efficacy is to establish a verifiable $NO_x$ – nitrate exchange rate **("nitrite-nitrate exchange indexing")** in order to ensure more dependable field monitoring of pollution reduction sites using non-conforming sources **(Drawing 3.15)**. [110] [111]

The relationships primarily relate to the efficiency of the $NO_x$ - nitrate exchange rates under varying pollution exposure levels and air masses and movement. The objective of establishing such relationships would be to ascertain how field instrumentation would need to be properly configured in order effectively monitor and characterize the effect of the $NO_x$ - nitrate exchange process under PCO.

The **priori** under such a protocol would be:

- **Step 1: Establish the $NO_x$ - Nitrate Exchange Rates for Fixed $NO_x$ Levels**
- **Step 2: Establish the $NO_x$ - Nitrate Exchange Rates for Variable $NO_x$ Levels**
- **Step 3: Large-Scale Sample Testing to Validate Findings from 1 and 2**

The effectiveness of photocatalytic conversion on treated asphalt and concrete specimens can be tested with respect to a variation of $NO_x$ gas concentration by varying the air flow stream the gas is moving in. And against variant atmospheric conditions.

In the field, $NO_x$ reductions can be measured indirectly based on either quantifying nitrate levels observed directly throughout the testing area or by comparing the **dielectric constant** across the treated surfaces to nitrate levels observed in the laboratory on extracted cores, to determine nitrate evaporation rate and nitrate concentrations in the field.

These testing procedures could provide rapid methods for determining $NO_x$ reduction efficiency against the established NNE, which then could be compared to experimental (non FRM) air quality monitoring for correlations.

Both then would be compared against the established baseline verification [112] to draw an empirical relationship between PCO testing with a high degree of accuracy with those increasingly more developmental at scale. This would be the base pollution capture relationship used to develop a **full-scale econometric model**, to include other traffic and weather variables, for exceptionally reliable ME pollution removal efficiency predictability.

### 3.9 The Road of the Future is Ready

In short, human achievement, for all it is great benefits, is overwhelming *Mother Nature's* ability to self-clean our planet. This is not debatable.

Photocatalysis is a natural solution, using the immense energy of the Sun, which helps accelerate inherent, organic mechanisms for managing rising GHG inventories effecting ground-level pollution and exaggerating the impacts of heat islands and climate change.

The technology is available today and it is both scalable and economical.

1.2 CITY REP: City of Plantation, Procurement Agent

1.3 CITY: The City of Plantation, a Florida municipal corporation

1.4 CONTRACTOR: The BIDDER with whom CITY enters into a Contract for the Work.

1.5 The words 'proposal" and "bid" for this proposal are considered interchangeable.

2. Copies of Bidding Documents:

2.1 Complete sets of the Solicitation Documents shall be obtained electronically from the Demand Star website https://www.demandstar.com/app/agencies/florida/city-of-plantation-procurement-division/procurement-opportunities/9b6d13fb-3874-4291-9605-81cf63387a40/

2.2 Complete sets of Bid Documents shall be used in preparing Bids, neither CITY nor the CITY REP that prepared or assisted in the preparation of the Bid Documents assume any responsibility for errors or misinterpretations resulting from the use of incomplete sets of Bid Documents.

3. Qualifications of Bidders:

No bid will be accepted from, nor will any Contract be awarded to, any person or firm who is in arrears to CITY, upon any debt or contract, or who is a defaulter, as surety or otherwise, upon any obligation to said CITY, or who is deemed irresponsible or unreliable by CITY. The CITY shall have no liability to any Successful BIDDER unless and until the CITY executes a contract with such Successful BIDDER.

CITY shall also have the right, unless prohibited by law, to meet with one or more BIDDER after bids are opened to ensure that all CITY's expectations with respect to performance can be met and that the requirements and scope of the Contract Work are clearly understood.

4. Examination of Bid Documents and Site:

4.1 Before submitting a Bid, each BIDDER(s) must (a) examine the Bid Documents thoroughly; (b) visit the site to familiarize themselves with local conditions that may in any manner affect performance, cost, progress or furnishing of the Work as required by the solicitation; (c) familiarize themselves with Federal, State, and local laws, ordinances, Florida Building Code or other applicable construction codes, rules and regulations affecting the performance, cost, progress, or furnishing of the Work; (d) study and carefully correlate their observations with the requirements of Contract Documents, and (e) notify CITY REP of all conflicts, errors or discrepancies in the Contract Documents.

4.2 BIDDERS should also note any references made to the Specifications for identification of those surveys and investigation reports of subsurface and latent physical conditions at the site or otherwise affecting performance, cost, progress or furnishing of the Work which have been relied upon by CITY REP in preparing the Drawings and Specifications, if any. CITY will make copies of such surveys and reports, which are not bound into these documents, available to any BIDDER requesting them. These reports are not guaranteed as to accuracy or completeness, nor are they part of the Bid Documents.

4.3 The submission of a Bid will constitute an incontrovertible representation by the BIDDER that they have complied with every requirement of this Article 4 and that the Bid Documents are sufficient in scope and detail to indicate and convey understanding of all terms and conditions for performance of the Work.

4.4 Any information and data reflected in the Contract Documents with respect to Underground Facilities at or contiguous to the site is based upon information and data furnished to CITY and CITY REP by owners of such Underground Facilities or others, and neither CITY nor CITY REP assumes responsibility for the accuracy or completeness thereof unless it is expressly provided otherwise in SUPPLEMENTARY CONDITIONS.

4.5 SUPPLEMENTARY CONDITIONS, if any, may identify for limited reliance by the CONTRACTOR certain specified technical data. These (as well as other documents) should be reviewed.

4.6 Before submitting a Bid, each BIDDER will, at its own expense, make or obtain any additional examinations, investigations, explorations, surveys, tests and studies and obtain any additional information or data which pertains to the physical conditions (surface, subsurface and Underground Facilities) at or contiguous to the site or otherwise which may affect cost, progress, performance or furnishing of the Work and which BIDDER deems necessary to determine their Bid price for performance and furnishing of the Work in accordance with the time, price and other terms and conditions of the Bid Documents.

4.7 On request in advance, CITY will provide each BIDDER access to the site to conduct explorations and tests as each BIDDER deems necessary for submission of a Bid. Bidder shall fill all holes, clean up and restore the site to its former condition upon completion of such explorations.

4.8 The lands upon which the Work is to be performed, and the right-of-ways and easements for access thereto and other lands designated for use in performing the Work are identified in the Bid Documents. All additional lands and access thereto required for temporary construction facilities or storage of materials and equipment or construction operations are to be provided by the CONTRACTOR.

5. Interpretations and Addenda:

All questions about the meaning or intent of the Bid Documents shall be submitted to CITY REP in writing. Interpretations or clarifications considered necessary by CITY REP in response to such questions will be issued by Addenda and posted to the Demand Star website by CITY'S Procurement Department. Questions received less than ten (10) days prior to the date for opening of Bids will be answered at the option of the CITY. Only questions answered by formal written addenda will be binding. Oral and other interpretations or clarifications will be without legal effect.

In the event of conflict between the Notice to Bidders and the terms written within the Scope of Services and/or Specifications contained within Bid documents, the terms within the Scope of Services and/or Specifications shall control.

6. Subcontractors, Suppliers and Others:

6.1 CITY requires the identity of major Subcontractors working on the project and Suppliers of unique material or products to be submitted to CITY in advance of the Notice of Award the apparent Successful BIDDER. Any other BIDDER requested by City in writing will, within seven (7) calendar days, submit to CITY a list of all Subcontractors, Suppliers and other persons and organizations (including those who are to furnish the principal items of material and equipment) proposed for portions of this Project. An experience statement shall accompany such list with pertinent information as to similar projects and other evidence of qualifications for each identified Subcontractor, Supplier, person and organization.

6.2 If CITY or CITY REP after due investigation has reasonable objection any proposed Subcontractor, Supplier or other person or organization, may before giving the Notice of Award request the apparent Successful BIDDER to submit an acceptable substitute without an increase in Bid price. If the apparent Successful BIDDER declines to make any such substitution, CITY may award the contract to the next lowest BIDDER whose bid is determined to be the most advantageous to the CITY taking into consideration the evaluation factors and criteria set forth in the INVITATION TO BID or the code if none are provided in the INVITATION

TO BID that proposes to use acceptable Subcontractors, Suppliers and other persons and organizations. The BIDDER declining to make requested substitutions would not constitute grounds for sacrificing the Bid Security of any BIDDER.

6.3 No BIDDER shall be required to employ any Subcontractor, other person or organization against whom BIDDER has reasonable objection.

7. Bid Form:

7.1 The Bid Form is included with the Solicitation Documents.

7.2 All blanks on the Bid Forms must be completed in ink or be typed. The bid price of each item on the form must be stated in words and numerals: in case of conflict, words will take precedence. Whiteout of prices or words and numerals on Bid Form is not permitted.

7.3 Bids by corporations must be executed in the corporate name by the president or a vice-president (or other corporate office accompanied by evidence of authority to sign). The corporate seal must be affixed and attested by the secretary or an assistant secretary or notarized by a licensed Notary together with a corporate Resolution authorizing the submittal of the bid. https://www.demandstar.com/app/agencies/florida/city-of-plantation-procurement-division/procurement-opportunities/9b6d13fb-3874-4291-9605-81cf63387a40/.

Bids will not be considered and cannot be entered online after the above referenced date.

8.3 More than one Bid received for the same work from an individual, firm or partnership, a Corporation or Association under the same or different names will not be considered. Reasonable grounds for believing that any BIDDERS is interested in more than one Bid for the same work will cause the rejection of all such Bids in which the Bidders is interested. If there are reasonable grounds for believing that collusion exists among the BIDDER, the Bids of participants in such collusion will not be considered.

9. Modification and Withdrawal of Bids:

9.1 Bids may be modified or withdrawn by an appropriate document duly executed (in the manner that a Bid must be executed) and delivered to the place where Bids are to be submitted at any time prior to the opening of Bids.

9.2 If within twenty-four (24) hours after Bids are opened, any BIDDER files a duly signed, written notice with CITY and promptly thereafter demonstrates to the reasonable satisfaction of CITY that there was a material and substantial mistake in the preparation of its Bid, that BIDDER may withdraw its Bid and the Bid security will be returned. Thereafter, that BIDDER will be disqualified from further bidding on the Work to be provided under the Bid Documents.

10. Opening of Bids:

Bids will be opened, read and recorded pursuant to State of Florida Law and City of Plantation code.

12. Award of Contract:

12.1 CITY reserves the right to reject any and all Bids, to waive any and all informalities, incompleteness, or irregularities not involving price, time or material changes in the Work, and to negotiate contract terms with the Successful BIDDER, and the right to disregard all nonconforming, nonresponsive, unbalanced, incomplete, irregular, or conditional Bids. Also, CITY reserves the right to reject the Bid of any BIDDER if CITY believes that it would not be in the best interest of the Project to make an award to that BIDDER, whether because the Bid is not responsible or the Bidder is unqualified or of doubtful financial ability or fails to meet any other pertinent standard or criteria established by CITY. Discrepancies in the multiplication of units of Work and unit prices will be resolved in favor of the unit prices. Discrepancies between the indicated sum of any column of figures and the correct sum thereof will be resolved in favor of the correct sum.

12.2 CITY may conduct such investigations as CITY deems necessary to assist in the evaluation of any BIDDER and to establish the responsibility, reputation, work load, qualifications and financial ability of BIDDER, proposed Subcontractors, Suppliers and other persons and organizations to perform and furnish the Work in accordance with the Contract Documents to CITY's satisfaction within the prescribed time.

12.3 The CITY shall not be obligated to any BIDDER to enter into a contract with the BIDDER despite the CITY governing body prospectively awarding the contract to a successful BIDDER. The CITY shall be obligated to any Bidder for the project if and only if the CITY enters into a contract for the project with the Bidder, and further, no action will lie against the CITY to compel CITY to execute any such contract, or to recover from the CITY any damages, costs, lost profits, expenses, etc., that BIDDER may incur if the CITY chooses not to sign such contract. By bidding on this project, all BIDDERS acknowledge and agree that no enforceable contractual relationship arises until the CITY signs the contract, and that no action shall lie to require CITY to sign such contract at any time, and that Bidder waives all claims to damages, lost profits, costs, expenses, etc., as a result of the CITY not signing such contract.

12.4 If the contract is to be awarded, CITY will give the Successful BIDDER a Notice of Award.

12.5 Bid prices will be compared after adjusting for differences in the time designated in the Bid for Substantial Completion. The adjusting amount will be determined at the rate set forth in the Contract Documents for liquidated damages indicated for Substantial Completion for each day after the desired date appearing in Article 19 of this Document.

13. Taxes:

The CONTRACTOR shall pay all applicable sales, consumer, use and other similar taxes required by law. The CONTRACTOR is responsible for reviewing the pertinent state statutes involving the sales tax and complying with all requirements.

The Work in the affected area shall not thereafter be resumed except by written agreement of the City and Contractor if in fact the material is asbestos or polychlorinated biphenyl (PCB) and has not been rendered harmless. The Work in the affected area shall be resumed in the absence of asbestos or polychlorinated biphenyl (PCB), or when it has been rendered harmless, by written agreement of the City and Contractor.

3. The Contractor shall not be required to work in an area on the Project site that contains asbestos or polychlorinated biphenyl (PCB).

## C. Safety of Persons and Property

3. The Contractor shall erect and maintain, as required by existing conditions and performance of the Contract, reasonable safeguards for safety and protection, including posting danger signs and other warnings against hazards, promulgating safety regulations and notifying owners and users of adjacent sites and utilities.

4. When use or storage of explosives or other hazardous materials or equipment or unusual methods are necessary for execution of the Work, the Contractor shall exercise utmost care and carry on such activities under supervision of properly qualified personnel.

5. The Contractor shall promptly remedy damage and loss (other than damage or loss insured under property insurance required by the Contract Documents) to property referred to in this Section caused in whole or in part by the Contractor, a Subcontractor, a Sub-subcontractor, or anyone directly or indirectly employed by any of them, or by anyone for whose acts they may be liable and for which the Contractor is responsible except damage or loss attributable to acts or omissions of the City or Consultant or anyone directly or indirectly employed by either of them, or by anyone for whose acts either of them may be liable, and not attributable to the fault or negligence of the Contractor.

**Questions and Answers**

**Question No. 1** - The previous contract used by the City was on the South Florida Purchasing Cooperative, will this contract similarly allow for other agencies to piggyback by adding language to that end?

**Response No. 1** – The City will allow for other agencies to piggyback by excluding language in the contract that may prohibit it.

**Question No. 2** - With the extreme volatility of petroleum-based materials, longer term contracts around the state have added escalation clauses (such as the Producer Price Index or the FDOT Fuel and Bituminous Average Price Index). 3. Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).

4. In the statement specified in subsection (1), notify the employees that as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any convictions of, or plea of guilty or nolo contendere to, any violations of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the workplace, no later than five (5) days after such conviction.
