REGULAR PLANNING COMMISSION MEETING AGENDA

City Hall - Council Chambers
4381 Broadway, Ste. 201, American Canyon
March 27, 2025
6:30 PM

Chair: Davet Mohammed
Vice Chair: Charles Plummer
Commissioners: Eric Altman, Marilyn Abelon, Shelby Goss,
Youth Commissioner: Ramandeep Jawanda

Tonight's meeting is a limited public forum. American Canyon promotes respectful and responsible behavior among its meeting participants, whether they are present in person or remotely. Using offensive language or remarks that promote, foster, or perpetuate discrimination based on race, creed, color, age, religion, gender marital status, status regarding public assistance, national origin, physical or mental disability or sexual orientation/gender identification, as well as any other category protected by federal, state or local laws will not be tolerated. In the case of an occurrence, the speaker will be immediately disconnected from the microphone.

Planning Commission and other public meetings will be conducted in person at City Hall, 4381 Broadway, Suite 201, American Canyon, CA 94503. This meeting is also available via Zoom Teleconferencing as a convenience for public participation. This meeting will be broadcast live to residents on Napa Valley TV, on our website here and on YouTube here. Should technical issues with Zoom occur, please select another viewing option.

PUBLIC PARTICIPATION

Oral comments, during the meeting: Oral comments can be made in person or via Zoom. To give your public comment via zoom, connect via the below Zoom link and use the "raise your hand" tool, or call into the zoom meeting at 408-638-0968 and press *9 to "raise your hand" when the item is called. To avoid confusion, all hands raised outside of Public Comment periods will be lowered.

Written comments, via eComments: Please submit written comments through the eComments link, located on the Meetings & Agendas page of our website here. Comments will be available to Planning Commissioners in real time. To allow for review of comments, eComments will close at 3:00 pm on the day of the meeting. All comments received will be posted online and become part of the meeting record.

Zoom Meeting Link: Click here.
Webinar ID: 870 8025 1647 Passcode: 123456

The above-identified measures exceed all legal requirements for participation in public comment, including those imposed by the Ralph M. Brown Act. For more information, please call the Office of the City Clerk at (707) 647-4369 or email cityclerk@americancanyon.gov.

AGENDA MATERIALS: Planning Commission agenda materials are published 72 hours prior to the meeting and are available to the public via the City's website at www.americancanyon.gov.

AMERICANS WITH DISABILITIES ACT: The Planning Commission will provide materials in appropriate alternative formats to comply with the Americans with Disabilities Act. Please send a written request to City Clerk at 4381 Broadway, Suite 201, American Canyon, CA 94503 or by email to cityclerk@americancanyon.gov. Include your name, address, phone number and brief description of the requested materials, as well as your preferred alternative format or auxiliary aid, at least three calendar days before the meeting.

PRESENTATIONS

None.

PUBLIC COMMENT

*This time is reserved for members of the public to address the Planning Commission on items of interest that are not on the Agenda and are within the subject matter jurisdiction of the Planning Commission. It is recommended that speakers limit their comments to 3 minutes each and it is requested that no comments be made during this period on items on the Agenda. Members of the public wishing to address the Planning Commission on items on the Agenda should comment via email prior to the start of the meeting, or to verbally comment on the item during the meeting, click the "raise your hand" button if joining by computer, or press *9 if joining by phone, when the item is called. The Planning Commission is prohibited by law from taking any action on matters discussed that are not on the Agenda, and no adverse conclusions should be drawn if the Planning Commission does not respond to public comment at this time. Speakers are asked to please speak clearly, and provide their name. Any handouts for distribution to the Planning Commission must be emailed by 3:00 p.m. on meeting day.*

AGENDA CHANGES

CONSENT CALENDAR

1. **Minutes of February 27, 2025**
Recommendation: Approve the minutes of February 27, 2025

PUBLIC HEARINGS

2. **Crawford Way Multifamily Project Design Permit**
Recommendation: Approve a Design Permit for development of 100 multifamily residential units on a 4.34-acre site in the Local Serving Mixed-Use (LSMU) Zoning District in the Broadway District Specific Plan (BDSP) at the Southwest corner of Crawford Way and Highway 29, APNs 058-302-001 and 058-290-012 (File No. PL23-0003)

3. **General Plan Comprehensive Update, Environmental Impact Report, and Zoning Code Amendment**

Recommendation: The Planning Commission is requested to make the following decisions:

1. A Resolution recommending the City Council of the City of American Canyon (i) Certify the Comprehensive Technical General Plan Update Final Environmental Impact Report (SCH # 2022070038), (ii) Adopt CEQA Findings of Fact and a Statement of Overriding Considerations, and (III) Adopt a Mitigation Monitoring and Reporting Program.

2. A Resolution recommending the City Council of the City of American Canyon adopt the Comprehensive 2040 Technical General Plan Update and Policies to sustain compliance with the 2024 Napa County Airport Land Use Compatibility Plan.

3. A Resolution recommending the City Council of the City of American Canyon adopt Zoning Code Amendments to ensure consistency with the General Plan and the 2024 Napa County Airport Land Use Compatibility Plan.

BUSINESS

4. **285 Napa Junction Citation Appeal**
Recommendation: Continue the 285 Napa Junction Road Citation Appeal to April 24, 2025.

MANAGEMENT AND STAFF ORAL REPORTS

5. **Active Planning Projects**
Recommendation: Review March 2025 Active Planning Projects

TITLE

Crawford Way Multifamily Project Design Permit

RECOMMENDATION

Approve a Design Permit for development of 100 multifamily residential units on a 4.34-acre site in the Local Serving Mixed-Use (LSMU) Zoning District in the Broadway District Specific Plan (BDSP) at the Southwest corner of Crawford Way and Highway 29, APNs 058-302-001 and 058-290-012 (File No. PL23-0003)

CONTACT

William He, AICP, Senior Planner

BACKGROUND & ANALYSIS

Introduction: The proposed Crawford Way Multifamily Project consists of 100 townhome dwelling units on a 4.34-acre site located in the Local Serving Mixed Use (LSMU) zoning district at the southwest corner of Crawford Way and Highway 29. A location map and site photo is included in Attachment 2.

Every zoning district includes a list of land uses that are "Permitted", "Conditionally Permitted", or "Prohibited." "Conditionally Permitted" uses require a Conditional Use Permit. The Planning Commission has discretion to approve or deny the Conditional Use Permit when there are objective reasons to support the decision.

Multifamily residential projects are designated in the LSMU zoning district as "Permitted." In contrast to a Conditional Use Permit, when a Permitted Use complies with applicable local, regional, and state development policies, and municipal code standards, the Planning Commission must generally approve the project. A list of Permitted, Conditionally-Permitted, and Prohibited uses in the LSMU zoning district is included as Attachment 3. “P” = Permitted Use; “C” = Conditional Use Permit Required; “M” = Minor Use Permit; “MU” = Permitted in a Mixed-Use building; “-“ = Prohibited.

Design Permit Process: The proposed Design Permit application demonstrates that the Crawford Way Multifamily Project complies with applicable codes and policies. The Design Permit application process is outlined in the American Canyon Municipal Code (ACMC) Chapter 19.41.

To ensure compliance with applicable codes and policies, the typical process involves the following:

- Staff reviews the project thoroughly and communicates with the applicant.
- The project is revised until staff is satisfied the project meets standards.
- Outreach in the form of an on-site sign, website posting, email distribution, newspaper notification, and hardcopy letters enables the public to review the project and ask questions.
- The Planning Commission conducts its independent review and administers a public hearing to ensure all viewpoints are heard and addressed in the context of "substantial information". Substantial information means input that is fact based and not unsubstantiated opinion.
- Following approval of a Design Permit, the applicant will satisfy conditions of approval prior to issuance of grading and building construction permits.

State of California Housing Laws: One area of codes and policies that can influence a project design are State laws that apply to housing projects. With an intent to lower the cost of housing and make approvals easier, the State of California adopts new laws every year that often supersede local (i.e.: American Canyon) regulations.

Last year was no exception. In 2024, the State adopted 33 new and amended housing-related laws. A summary of 2024 State Housing Laws prepared by the Association of Bay Area Governments is included as Attachment 4. While State Laws can be unpopular because they relax or supersede City standards, they represent a right that the property owner may invoke at their discretion. As discussed further in the staff report, this project qualifies for several exceptions (i.e.: waivers) from local zoning standards.

Recent Site History:

- On November 26, 2018, the property owner, the Yeh Area Group, LLC, submitted a Design Permit for an assisted living facility on the site. In December 2020, the project application was withdrawn.
- In July 2019, the Broadway District Specific Plan (BDSP) was approved and the project site zoning was amended from Community Commercial (CC) to Local Serving Mixed-Use (LSMU).
- Both the former zoning (i.e.: Community Commercial) and current zoning (i.e.: LSMU) allow multifamily residential development.
- On April 11, 2022, the property owner filed a preliminary application to receive answers to due diligence issues for development of 100 multifamily dwelling units.
- On January 23, 2023, the property owner submitted a Design Permit for the Crawford Way Project.
- On January 21, 2025, at the request of the applicant, the Planning Commission continued the public hearing to February 27, 2025 and again to March 27, 2025.

On March 17, 2025, the applicant requested a further continuance to April 24, 2025 (See Attachment 13). Unfortunately, a further continuance is not feasible because the Crawford Way project is subject to the Housing Crisis Act. According to the Housing Crisis Act, a housing project is

limited to 5 hearings, including continuances and appeals.

Due to this law, the project has consumed 3 of the 5 allowable hearings (i.e.: January 23, February 27, and March 27). Given the 5-hearing limit, the project cannot be further continued because:

1. One additional hearing is needed in reserve in case the Planning Commission continues the item (i.e.: hearing 4 out of 5).
2. One hearing is needed in reserve in case the Planning Commission decision is appealed to the City Council (i.e.: hearing 5 out of 5).

You can read the Housing Crisis Act from the Southern California Association of Governments in Attachment 14.

Proposed Development: The 100 Crawford Way multifamily residential units are arranged in 16 three-story residential buildings and one single-story community building. The dwelling unit mix includes 68 two-bedroom units and 32 three-bedroom units. Each dwelling unit will have a two-car garage and private balcony. At this time, the project is for rental apartments. If the applicant wishes to sell the units for individual ownership, a condominium tentative subdivision map application is needed. Listed below is a summary of the site information:

Table 1: Site Information

General Plan Designation	Local Serving Mixed-Use (LSMU)
Zoning District	Local Serving Mixed-Use (LSMU)
Site Size	4.34 Acres
Present Use	Vacant Site
Surrounding Zoning and Uses	North: Community Commercial (CC) / Canyon Plaza Shopping Center South: Neighborhood Commercial (CN) / Open Door Christian Church East: Public Right-of-Way (P) / Highway 29 West: Rural Residential (RS-10,000 and RS-20,000) /single-family homes
Access	Crawford Way

Architecture: The Broadway District Specific Plan favors “Modern Industrial" and "Modern Farmhouse” aesthetic architecture. To provide a harmonizing appearance, consistent with BDSP Design Guidelines, staff advised the applicant to develop an architectural style that reflects the Farmhouse aesthetic of the Canyon Plaza shopping center located across Crawford Way from the site.

The applicant’s architect describes the project as having Modern Industrial architecture featuring forms that also reflect Modern Farmhouse. The building corners are wrapped with upper floor balconies, wall plane articulation, and a variety of materials. The deep framed gable elements

provide a light and airy appearance to the front elevations, while the large balconies across the front facades help to break down the massing.

The material and color palettes help reinforce the architectural style. The materials include cement plaster, lap siding, panel siding, metal railings, and contemporary light fixtures, the subtle white plaster with natural colored lap siding, grey panel siding and accent-colored doors further enhance the unique aesthetic. The project description and project plans are included in the project description letter in Attachment 1, Exhibits A through F.

Parking and Vehicle Access*:* The project includes 200 garage parking spaces, 16 uncovered guest parking spaces, and 8 bicycle parking spaces. Vehicle access is provided on Crawford Way and the dwelling units facing Crawford and Highway will have pedestrian access directly to the street. Street improvements on Crawford Way and Highway 29 include new curb, gutter, sidewalks, and landscaping.

The Napa Valley Bicycle Coalition pointed out that the California Green Building Code requires more than 8 bicycle parking spaces. Staff researched this issue and notes that the California Green Building Code residential bicycle parking space requirements is voluntary, not mandatory. A new building code will be adopted state-wide in January 2026 which may increase mandatory bicycle parking requirements. Depending on how quickly the applicant can apply for building permits, the project will be subject to the current or next building code standards.

Landscaping: The project includes approximately 0.95 acres of landscaping i rrigated with recycled water. The street frontages will include shrubs, groundcover and trees. Crape Myrtle and Oklahoma Redbud trees will be planted along Highway 29. Gingko Biloba “Princeton Sentry” trees will be planted along Crawford Way. The landscaping plans are included as Attachment 1, Exhibit C.

The project includes a variety of fencing depicted on Page 4 of Attachment 1.3 - Landscape Plans.

- On Crawford Way and Highway 29, the fencing consists of a 3’-6” high metal horizontal slat fence.
- The western and southern property lines will be enclosed with a 6’ high wood horizontal slat fence.
- The north side of the Community Park Center outdoor park will be enclosed by a 6' laser-cut metal fence.
- The east and west sides the Community Park Center outdoor park will be enclosed by a 6' high wire mesh fence.

Amenities: The project includes a 2,614 square foot community building and communal open space on the south side of the site. The community areas include casual seating, shade structures, covered barbecue areas, and a children’s play structure. The community mailboxes are also located near there. Additionally, there are three paseos in the site that provide communal open space between residential buildings. Each 3-story unit will have a private balcony and ground floor porch.

Inclusionary Housing: Inclusionary housing is a State Law and Zoning Code requirement that a portion of new homes constructed remain affordable to targeted income groups for a long term. The zoning code provides different Inclusionary Housing Requirements for ***rental apartments*** than ***for sale*** residential development. (See ACMC Section 19.28). The project at this time is for rent although the applicant may apply for a tentative subdivision map to enable the units to be sold. The Inclusionary Housing Ordinance supports the General Plan Housing Element requirement to achieve the City's Regional Housing Need Allocation (RHNA) over 8 years. This includes 169 Very-Low Income homes; 109 Low-Income homes; 95 Moderate-Income homes; and 249 Above Moderate Income Homes. The Housing Element table depicting the City's 8-Year RHNA allocation is included as Attachment 5.

Rental apartments require 15 percent of the housing units to be affordable. The 15 percent affordable requirement is made up of five percent affordable to Very Low-Income residents, five percent affordable to Low-Income residents, and five percent to Moderate-income households. The income definitions are as follows:

- A Very Low-Income household is defined as one whose income is 30–50% of the Napa County area median income (AMI).
- A Low-Income household is defined as one whose income is 50–80% of the Napa County AMI.
- A Moderate-Income household is defined as one whose income is 80–120% of the Napa County AMI.

Ownership units require ten percent of the housing units to be affordable although the exact amount per income category is not specified.

Inclusionary units shall remain affordable to the targeted household(s) for a period of at least fifty-five years, or a longer period of time if required by the construction or mortgage financing assistance program, mortgage insurance program, or rental subsidy program. (ACMC 19.28.4.(B)(C)).

As a condition of approval, the applicant must prepare an affordable housing agreement prior to the issuance of construction permits. The agreement will reflect whether the homes are rented or sold.

Density Bonus: State Density Bonus Law (Government Code Section 65915) allows residential projects that include affordable housing to construct more dwelling units than the zoning code maximum (i.e.: density bonus). The Density Bonus is a State Law and included in the City's Municipal Code. A developer who meets the requirements of the State Density Bonus law is entitled to receive the density bonus and other benefits as a matter of right.

The Local Serving Mixed-Use zoning allows 20 dwelling units per acre (du/ac) which equates to 87 dwelling units on the 4.34-acre site. By providing 5 percent Very Low-Income Units, the applicant is entitled to a 20% density bonus. This equates to an allowable increase of 18 units to 105 dwelling

units. However, the applicant scaled back the density bonus by 5 units for a Project total of 100 dwelling units.

Development Standard Waivers: Projects that qualify for a Density Bonus also qualify for one or more waivers from the City's development standards. The waiver is an applicant right and cannot be denied unless the City demonstrates the waiver would harm public health or safety, or cause an environmental problem.

Listed below are waivers invoked by the applicant to ensure the site accommodates the proposed 100 dwelling units. A table that identifies the development standards is included as Attachment 1.2.4.

a. Parking Reduction: The City's parking code requires 225 parking spaces (ACMC Section 19.21.030(A)). State Density Bonus Law, section 65915 supersedes the local parking code. The Density Bonus law requires 1.5 parking spaces for every two or three-bedroom unit. All the units in this project are 2 and 3-bedroom, so, per State Law, the project is required to provide 150 parking spaces.

Fortunately, the project provides 2 parking spaces in each garage plus 16 guest spaces for a total of 216 parking spaces. The 216 parking spaces provided will exceed the State Density Bonus parking by 66 parking spaces but 9 fewer parking spaces than the City's standard. As mentioned above, the parking provided is a right granted to the applicant in accordance with State Law.

b. Building Height Increase in Setback: The maximum building height in the Local Serving Mixed Use zoning district is 42-feet. In an effort to limit building heights close to the street, the BDSP limits building heights to 24 feet when the building is setback between 15-feet to 30-feet from a public right-of-way.

According to the Applicant, the building height limit would cause the loss of at least one dwelling unit from each building on Crawford Way. For this reason, the applicant is invoking a waiver to permit a 38-foot tall building height on Crawford Way where the buildings are setback 15-feet from the right-of-way. Although the buildings adjacent to Crawford Way are 14-feet taller than the LSMU zoning code standard, they are 4-feet shorter than the maximum building height in this zoning district.

c. Garage Size Minimums: The City's zoning code requires a two-car garage dimension to be at least 20’ x 20’ with a 7’-6” ceiling height (ACMC Section 19.21.030(E)) The project narrows each two-car garage by 2-feet to 18’ x 20’. Most of the garage ceiling heights will be 9’-1” which is taller than the City's minimum standard. However, in places where there is an overhead stair encroachment, the ceiling height will be reduced to 6’-3”.

According to the applicant, reducing the garage sizes will help achieve at least one dwelling unit per

building. Per the building code, every garage will be pre-wired for Electric Vehicle charging.

d. Building to Building Setbacks: The BDSP LSMU requires 35-feet of separation between building faces (front or rear building face) and 25-feet between a building face and a building side (front or building face). The project reduces separation between building faces by 10-feet to 25-feet. According to the applicant, several buildings will not fit on the site without reducing the distance between building faces.

e. Private Open Space: According to the BDSP, private open space, such as balconies are required to be at least 50 square feet, and have a minimum depth of 6-feet. Although the proposed 84 square foot balconies exceed the BDSP size standard, the balcony depth will be reduced by 1'-6" to 4'-6". According to the applicant, a 6-foot balcony depth would require an additional 12-feet of depth across the site and would cause removal of an entire row of buildings.

BDSP SubArea Development Transfer: BDSP Table 2-4, allocates a total of 1,200 units to the Broadway District Plan. Within the plan, each subarea receives a share. The LSMU subarea was allocated 86 dwelling units. The proposed 100 dwelling unit project exceeds the LSMU unit maximum by 14 units.

The BDSP anticipated that there may be a need to shift the dwelling unit allocation among subareas. To allow flexibility and remain within the 1,200 dwelling unit limit, Section 7.4, Plan Administration, allows transfers among subareas to reflect the needs of a discretionary application.

The Medium Density Residential subarea has a 276-unit allocation. Staff will shift 14 units from the Medium Density Residential subarea to Local Serving Mixed Use. The transfer is feasible because no new residential development is proposed or constructed in the Medium Density subarea since the BDSP was adopted in 2019. Furthermore, after subtracting constructed and approved projects, the BDSP has 855 remaining dwelling units within the overall cap which gives plenty of flexibility to further shift units as needed. An accounting of the BDSP Subarea Allocations is included as Attachment 6.

Traffic Impact Fee: The city collects a Traffic Impact Fee (TIF) from new development at the time of building permit issuance. The TIF is used to help fund mobility improvements throughout the City as part of the 5-Year Capital Improvement Plan (CIP) and mobility improvements constructed off the project site by the applicant. Mobility improvements include new and expanded roadways, bicycle, pedestrian facilities, traffic calming, among others. At the recommendation of the Napa Valley Bicycle Coalition, staff proposes to require the applicant to construct a mid block pedestrian crossing on Crawford Way. This issue is discussed further in the staff report.

For residential projects, the TIF allocation is calculated by multiplying the net new daily trips generated by the project times the traffic impact fee. The current Traffic Impact fee is $735.69 Per Net New Daily Trip.

A traffic impact report was prepared by Abrams Associates. The report concludes that the proposed project will generate 674 net new daily trips. Adjusted annually for inflation, the current TIF for this project equals $495,855. The traffic impact analysis that forms the basis for the TIF is available in Attachment 7.1 and 7.2.

Vehicle Miles Travelled (VMT): In California, traffic impact as measured by driver delay caused by traffic congestion or "level of service," is no longer considered a significant environmental impact under the California Environmental Quality Act (CEQA) due to Senate Bill 743 (SB 743). A major reason the State of California abandoned traffic level of service standards is because expanding roadways to alleviate traffic congestion results in a cycle of larger roads, which encourage more automobile use, which leads to more traffic congestion, and increasing levels of greenhouse gas emissions which lead to climate change.

SB 743 requires an effort to reduce reliance on single-occupant automobiles as much as possible. In place of traffic level of service, Vehicle Miles Travelled (VMT) is a new way to measure mobility from all transportation sources. VMT is reduced by constructing homes near services and jobs with support by alternative transportation modes, such as transit, bicycle and walking. Consistent with State Law, the City adopted a VMT Policy in September 5, 2023 (Resolution 2023-14).

The project is consistent with the City's VMT policy because it is located within a short walking distance to numerous amenities. These include: the Post Office, Public Library, the Canyon Plaza Shopping Center, Canyon Corners Shopping Center, the Marketplace (Safeway Center), places of worship, Express Bus stop to Bart and the Vallejo Ferry.

To improve pedestrian connectivity, the project will construct a new sidewalk, curb, and gutter along the Crawford Way and Broadway (Highway 29) frontage. The Broadway sidewalk improvements include a landscaped 12-foot-wide multi-purpose path, across the project frontage from Crawford Way to the Open-Door Christian Church. The project also includes accessible paths of travel inside the site. The preliminary civil plans are available as Attachment 1.2.1.

In addition, the project will include a condition of approval that reimburses the applicant for the cost to construct a raised mid-block pedestrian crossing on Crawford Way. This raised pedestrian mid-block crossing will provide safe pedestrian access to the Post Office, Public Library, Canyon Plaza Shopping Center, and Express Bus stop to Bart and the Vallejo Ferry. The raised crosswalk feature will slow traffic, which has the added benefit of enhancing traffic calming on Crawford Way.

Overhead Utilities: BDSP Policy 3-4 requires the applicant to underground overhead utility poles and wires located on their site and along the property frontage. The project includes three overhead utility poles in the southeast corner of the site. The applicant has agreed to underground them as part of their site improvements. A graphic showing the three overhead utility poles is included as

Attachment 8. A preliminary joint trench plan is available as Attachment 1.2.2.

Noise and Acoustics: The project is required to comply with the Municipal Code, General Plan, and California Building Code Title 24 standards for construction noise and noise impacted interiors. A noise assessment study, developed by Edward Pack Associates, identifies recommendations to achieve the noise standards. These include sound-reducing transmission class (STC) rated windows and doors for units adjacent to Broadway.

Construction noise reduction recommendations include placing exterior stationary equipment a minimum of 100 feet from the nearest neighboring residential property line unless the equipment is acoustically shielded. Other measures include use of quiet equipment, and designating a noise complaint officer to receive and respond to complaints by phone and e-mail. As a condition of approval, the applicant is required to comply with all noise reduction standards outlined in the Noise Assessment Study. The study is available in Attachment 9.

Fire Apparatus and Trash Collection: The project includes 20-foot wide vehicle paths which are narrower than typical multifamily developments. In addition, the applicant provides six examples of multifamily projects from other jurisdictions that have a similar width for travel ways.

The Fire District reviewed and approved a firetruck turning radius plan, as well as Recology reviewed a garbage truck turning radius plan. The fire truck and garbage truck turning radius plans are available in Attachment 1.2.5, and the alley width examples from projects in other cities are available in Attachment 10.

Alquist-Priolo Earthquake Zone*:* The site is located in the Alquist-Priolo (AP) Earthquake Zone and near the West Napa fault. According to the 1972 State Law - Alquist-Priolo Earthquake Fault Zoning Act, no structure for human occupancy may be placed within 50-feet of an active fault.

The applicant conducted an earthquake fault zone study in March 2018. The fault investigation report concluded that the West Napa fault is not located within the property lines and that residential property is feasible from a geological hazard perspective. The fault study is available as Appendix D of the CEQA Addendum in Attachment 1.4.

Public Outreach: City outreach occurred between May 15, 2023, and January 22, 2025. The applicant also conducted their own public outreach in July 2023. A copy of the public notification addresses, and map is included in Attachment 11. Specific events are outlined below:

May 15, 2023 – Project Posted on website
May 15, 2023 – Project Information Announcement to GovDelivery Recipients (4,150+ people)
May 16, 2023 - Neighborhood letters sent within 300 feet
July 26, 2023 – Applicant mailed postcards regarding a public outreach meeting at the American Canyon Public Library

Aug. 3, 2023 – Public Outreach Meeting at the Public Library conducted by Applicant
Feb. 23, 2024 – Public Sign installed on site.
Jan. 10, 2025 – Public Hearing Notice mailed to property owners and residents within 500 feet

Throughout the public review period, Staff received 25 comments from the public and one comment from Caltrans. The public comments are available at Attachment 12.

COUNCIL PRIORITY PROGRAMS AND PROJECTS

Economic Development and Vitality: "Attract and expand diverse business and employment opportunities."

FISCAL IMPACT

The Crawford Way Multifamily Project Design Permit application required a developer deposit for review and processing, so there is no fiscal impact for staff time.

ENVIRONMENTAL REVIEW

The project is required to comply with the California Environmental Quality Act (CEQA). The Broadway District Specific Plan (BDSP) Final Environmental Impact Report (FEIR) evaluated the development of the 292-acre site area along the Broadway corridor. (BDSP EIR, SCH #2017042025).

An addendum to the BDSP EIR evaluated the potential impacts of the Crawford Way Project. In accordance with CEQA Guidelines Section 15162, the Addendum found that there were no substantial changes proposed by the Project. Therefore, the Project does not require preparation of a new subsequent or supplemental EIR. The Addendum identified applicable mitigation measures from the BDSP EIR, which have been included into the conditions of approval. The CEQA addendum is available as Attachment 1, Exhibit D.

PC RESOLUTION NO. 2025-XX

A RESOLUTION APPROVING A DESIGN PERMIT FOR DEVELOPMENT OF A HUNDRED MULTIFAMILY RESIDENTIAL UNITS ON A 4.34-ACRE SITE IN THE LOCAL SERVING MIXED-USE (LSMU) ZONING DISTRICT IN THE BROADWAY DISTRIST SPECIFIC PLAN (BDSP) AT THE SOUTHWEST CORNER OF CRAWFORD WAY AND HIGHWAY 29, APNS 058-302-001 AND 058-290-012 (FILE NO. PL23-0003)

WHEREAS, on January 23, 2023, the Yeh Area Group, LLC, filed a Design Permit application (File No. PL23-0003) for the Crawford Way Multifamily Project (Project), which consists of 100 dwelling units and a community building on a 4.34-acre site in the Local Serving Mixed-Use (LSMU) Zoning District, APNs 058-302-001 and 058-290-012; and

WHEREAS, the Project consists of 16 three-story residential buildings with 68 two-bedroom units and 32 three-bedroom units; and

WHEREAS, the Project includes 216 vehicle parking spaces and 8 bicycle parking spaces; and

WHEREAS, the Project includes a density bonus, which increases density from 20 dwelling units per acre to 24 dwelling units per acre, and reduces the required 225 parking spaces to 216 parking spaces; and

WHEREAS, the Project requests four waivers to development standards, which includes (1) increased building height from 24' to 38'-8" in the street side setback, (2) reduced building-to-building setback from 35' to 25', (3) reduction in garage size from 20' x 20' x 7'-6" to 18' x 20' x 6'-3", and (4) reduction of balcony depth from 6' to 4'-6"; and

WHEREAS, the project is required to submit an affordable housing agreement prior to the issuance of the first building permit; and

WHEREAS, a multifamily development is a permitted use in the LSMU zoning district; and

WHEREAS, in accordance with the General Plan Housing Element Program M, "Incentives for Affordable Housing", the City shall facilitate development of affordable housing through regulatory incentives, such as reduced parking requirements; and

WHEREAS, a duly-noticed public hearing was held by the City of American Canyon Planning Commission on January 23, 2025, February 27, 2025, and March 27, 2025 on the subject application, at which time all those in attendance were given the opportunity to speak on this proposal and to submit comments; and

WHEREAS, the Planning Commission considered all of the written and oral testimony presented at the public hearing in making its decision on March 27, 2025; and

NOW THEREFORE BE IT RESOLVED that the American Canyon Planning Commission hereby makes the following CEQA findings and Design Permit findings set out in Sections 1 and 2 to approve Design Permit PL23-0003 for the Project, subject to the conditions of approval set out in Section 3.

SECTION 1: CEQA FINDINGS

The Broadway District Specific Plan (BDSP) Final Environmental Impact Report (FEIR) evaluated the development of the 292-acre site area along the Broadway corridor. The City made findings of overriding consideration for significant and unavoidable impacts. The City Council certified the Broadway District Specific Plan Environmental Impact Report (BDSP EIR, SCH #2017042025) in July 2019 and amended the

BDSP in September 2020. The applicant provided an addendum to the BDSP EIR that evaluated the potential impacts of the Crawford Way Project. In accordance with CEQA Guidelines Section 15162, the Addendum found that there were no substantial changes proposed to by the Project and the proposed revisions do not require preparation of a new subsequent or supplemental EIR.

SECTION 2. DESIGN PERMIT FINDINGS

Approval of the Crawford Way Multifamily Project Design Permit requires all the following findings be made, pursuant to American Canyon Municipal Code Section 19.41.050:

A. The project complies with all applicable provisions of this title and any applicable approvals granted for the project by any decision-making authority.

The project includes 100 multifamily dwelling units, and multifamily residential development a permitted use in the BDSP LSMU Zone.

B. The project and its design comply with any applicable design guidelines.

The project consists of 68 two-bedroom units and 32 three-bedroom units. The design is of Modern Industrial Architecture character, and features large bay windows, decorative siding, and functional balconies. The design is aligned with the goals of the LSMU zone and the BDSP.

C. The project and its design comply with all applicable general plan policies, and applicable local, regional, and state development policies, and municipal code standards.

The project is required to meet the standards in the BDSP LSMU zone, as described in BDSP Table 2-13. The applicant had requested 6 waivers to standards which includes (1) increased density from 20 dwelling units per acre to 24 dwelling units per acre, (2) increased building height from 24' to 38'-8" in the street side setback, (3) reduced building-to-building setback from 35' to 25', (4) reduced required parking from 225 parking spaces to 216 parking spaces, (5) reduction in garage size from 400 square feet to 360 square feet, and (6) reduction of balcony depth from 6' to 4'-6". The table below shows how the project meets LSMU development standards.

	Required	*Proposed*	*Compliance*
Min. Area	*1 acre*	*4.34 acres*	*Yes*
Min. Setback from Broadway	*30'*	*32'*	*Yes*
Min. Front Yard Setback	*15'*	*15'*	*Yes*
Min. Side Yard Setbacks	*10'*	*10'*	*Yes*
Min. Rear Yard Setback	*10'*	*10'*	*Yes*
Setback between building face (front or rear building face)	*35'*	*25'*	*Waiver*
Setback between building faces and building side (front or rear building face)	*25'*	*25'*	*Yes*
Residential Density (dwelling units per acre)	*20 DU/AC*	*24 DU/AC*	*Density Bonus (see GC 65925(f)(2))*
Maximum No. of Stories	*3*	*3*	*Yes*
Max Building Height when setback 15' from Public ROW	*24'*	*38'-8"*	*Waiver*
Max Building Height when setback 30' from Public ROW	*42'*	*38'-8"*	*Yes*

Private Balcony Depth	*6'*	*4'-6"*	*Waiver*
Parking Required (per ACMC Section 19.21.030A)	*225 spaces*	*216 spaces*	*Density Bonus (see GC65915(P)(1))*
Garage Size Minimum (per ACMC Section 19.21.030E)	*20' x 20' x 7'-6"*	*18' x 20' x 6'-3"*	*Waiver*

D. The project complies with applicable policies of the Napa County Airport land use compatibility plan.

The project is outside of the Napa County Airport Land Use Compatibility Plan Zone.

E. The proposed design provides for adequate and safe on-site vehicular and pedestrian circulation.

Access to the project will be available from Crawford Way. The reduced widths of circulation paths to 20' is compatible with the Fire District and Public Works. The site includes clearly marked pedestrian paths of travel. Additionally, pedestrian access is available to the units that face Crawford Way and Highway 29.

SECTION 3: CONDITIONS OF APPROVAL

1. The Design Permit approval is granted for development of 100 townhome style dwelling units on a 4.34-acre site in the Broadway District Specific Plan Local-Serving Mixed-Use Zoning District, APNs 058-302-001 & 058-290-012 (file no. PL23-0003), which shall substantially as shown on file in the Community Development Department, except as modified by conditions contained in this approval. Exhibits A through F includes the following:
    a. Project Narrative prepared by Property Owner, dated January 23, 2023.
    b. Architectural Plans prepared by SDG Architects, consisting of 25 sheets showing the proposed site plans, building elevations, and roof plans, dated 11-15-2024.
        i. Preliminary Civil Plans prepared by Lea & Braze Engineering, consisting of 6 sheets, dated 2/2/2022.
        ii. Joint Trench Plans prepared by Tarrar Utility Consultants, consisting of 8 sheets, dated 1/23/2024.
        iii. Photometric Plans prepared by Associated Lighting Representatives, consisting of one sheet dated 1/23/2023.
        iv. Development Standards Table prepared by SDG Architects.
        v. Fire Truck Turning Plan and Garbage Truck Access Plan prepared by Lea & Braze Engineering, consisting of 2 sheets, dated 2/2/2022.
    c. Landscaping Plans prepared by vanderToolen Associates, consisting of 5 sheets showing the proposed landscaping plans, dated June 18, 2024.
    d. CEQA Addendum prepared by WRA, dated November 1, 2024.
    e. Yocha Dehe Protocols for handling human remains and cultural items affiliated with the Yocha Dehe Wintun Nation, dated August 18, 2022.
    f. Confirmation of Conditions of Approval.

2. The applicant shall defend, indemnify, and hold harmless the City of American Canyon ("City"), its elected and appointed officials, officers, employees, attorneys, representatives, boards, commissions, consultants, volunteers and agents from and against all claims, actions, including actions to arbitrate or mediate, damages, losses, judgments, liabilities, expenses and other costs, or proceedings against

the City, its elected and appointed officials, officers, employees, attorneys, representatives, boards, commissions, volunteers, or agents to attack, modify, set aside, void, or annul an approval, conditional approval, permit, entitlement, environmental document, environmental clearance, mitigation plan, or any other document or any of the proceedings, acts, or determinations taken, done, or made prior to granting of such approval, conditional approval, permit, entitlement, environmental clearance, environmental document, mitigation plan, or other documents, by the City, including, without limitation, an action against an advisory agency, appeal board, or legislative body within the applicable limitation period.

The obligation to defend, indemnify and hold the City harmless shall include the payment of all legal costs and attorney's fees (including a third party award of attorney's fees), arising out of, resulting from, or in connection with the City's act or acts leading up to and including approval of any environmental document or mitigation plan granting approvals to the applicant, incurred on behalf of, or by, the City, its elected and appointed officials, officers, employees, representatives, attorneys, boards, commissions, volunteers and agents in connection with the defense of any claim, action, or proceeding challenging the entire or a portion of an approval, conditional approval, permit, entitlement or any other document of any related claim.

The obligation to defend, indemnify, and hold the City harmless shall include, but not be limited to, the cost of preparation of any administrative record by the City, staff time, copying costs, court costs, or attorney's fees arising out of a suit or challenge contesting the adequacy of a permit, approval, conditional approval, entitlement, environmental document, mitigation plan, environmental clearance, or any other document or approval related to the applicant's project.

The City will promptly notify the applicant of any claim, action, or proceeding and will cooperate fully in the defense. If the City fails to promptly notify the applicant of any claim, action, or proceeding, or the City fails to cooperate fully in the defense, the applicant shall not be responsible to defend, indemnify, or hold harmless the City.

3. Appeal. The approval shall become effective on the expiration of the appeal period, ten calendar days following the decision, unless an appeal to the City Council is filed. An appeal may be filed with the Community Development Director by filling out an Appeal Form accompanied by a fee of $795. This approval is also subject to return of the "Applicant Confirmation of Conditions of Approval" form signed by the property owner. Should an appeal period end on a Saturday, Sunday or holiday, the final day for filing an appeal shall be the following Monday, or the next business day following a holiday. If there is no appeal, this approval will be final on April 7, 2025.

4. The applicant is responsible for paying all charges related to the processing of this discretionary case application within 30 days of the issuance of the final invoice or prior to the issuance of building permits for this project, whichever occurs first. Failure to pay all charges shall result in delays in the issuance of required permits or the revocation of the approval of this application.

5. The date upon which the approval is final shall be considered the day of the imposition of the fees, dedications, reservations and exactions required by these conditions approval for the purposes of protesting the imposition pursuant to California Government Code Section 66020.

6. Expiration of this Approval. If no construction permits have been issued and construction commenced within one year of the date upon which this approval is final, the approval shall become null and void

and of no effect. An extension of time may be granted by the Community Development Director upon the written request by a responsible party before the expiration of the one-year period, provided that the Director can make the findings that there have been no substantial changes in the approved plans, and that there has been no change in circumstances which would prevent any of the required findings of approval being made.

7. All plans submitted for review and approval and all development shall be in substantial conformance with the approved exhibits, except where modified by a condition of approval. The Community Development Director or designee may approve minor changes to the project as approved by the Planning Commission on the plans submitted for the construction permits with a determination that the changes are in substantial compliance with the representation of the project as reviewed by the Planning Commission and City Council, that the proposed change will be in compliance with the required development standards, and the change will not materially affect adjacent private or public property.

8. Prior to obtaining a building permit, all parties working on the project must obtain a business license from the City.

9. Prior to issuance of each building permit, the applicant shall submit a Certificate of Compliance from the Napa Valley Unified School District (NVUSD). For more information contact NVUSD Developer Fees - developerfees@nvusd.org .

10. The Applicant is responsible to remove any graffiti that occurs on the site within 24 hours.

Planning

11. The conditions of this Permit shall be printed on the first sheet of each plan set submitted for a building permit pursuant to this Design Permit, under the title "Design Permit Conditions". The second sheet may also be used if the first sheet is not of sufficient size to list all of the conditions. The sheet(s) containing the conditions shall be of the same size as those sheets containing the construction drawings; 8-1/2" by 11" sheets are not acceptable.

12. Prior to the issuance of the first building permit, the applicant shall prepare an affordable housing agreement in accordance with the American Canyon Municipal Code (ACMC) Section 19.28.080 that includes the following:

    a. Restricts the occupancy of 10 units of the townhome project units to tenants or owners certified by the City as low-income households as defined by the Zoning Ordinance for at least 55 years. Low-income shall be defined as 51-80% of the Napa County Area Median Income (AMI).

    b. If the project proceeds with rental units, the project will be required to provide 15% of the units as affordable housing. The 15% of dwelling units shall be 5% very-low income, 5% low income, and 5% moderate income in accordance with the Napa County AMI.

    c. The project shall provide local preference for residents and military preference for the affordable units in compliance with Resolution 2007-46 and 2007-48.

13. Prior to the sale of the first dwelling unit, the property owner is required to obtain a Condominium Subdivision Map approved by the City Council.

14. Prior to the issuance of the first Building Permit, the applicant shall record a Lot Line Adjustment to merge the two parcels on site (APN 058-302-001 and APN 058-290-012).

15. Prior to the issuance of the first Building Permit, the applicant shall submit a street name and address plan for approval by the Community Development Director and the American Canyon Fire Protection District.

16. In accordance with the Broadway District Specific Plan (BDSP) Section 2.2, all development shall exceed compliance with Title 24 Part 6 Energy Standards by 15 percent. Prior to the issuance of the first building permit, the applicant shall provide a letter from the architect or energy consultant that certifies the site complies with this standard.

17. In accordance with BDSP Policy 3-4, existing overhead utilities and utility poles on site and along the property frontage are required to be undergrounded. The site has three overhead utility poles in the southeast corner. Consult PG&E to identify the most feasible plan to underground the overhead utilities and poles. Prior to the issuance of the first building permit, complete the utility undergrounding.

18. All new rooftop equipment is required to be screened. The parapet shall be opaque and equal in height to the top of the rooftop mechanical equipment.

19. All utility meters and ground mounted AC units viewable from the public right-of-way shall be fully screened. Wooden screens are required to be stained or painted to match the townhome color and materials.

20. On sheet T2 of the Design Permit plans, the project data sheet identified 8 bicycle parking spaces for the site. Prior to the issuance of the site improvement plans, identify 8 bicycle parking spaces for the site. Prior to the first occupancy, complete the installation of the 8 bicycle parking spaces.

21. Plans submitted for building permits shall include all exterior site lighting including building mounted lighting, lighting within the parking areas and along walkways that provide a minimum of 1-foot candle illumination of these areas. Lighting shall be shielded as appropriate and avoid light spillage or glare from the project site. Exterior light fixtures on buildings shall be oriented downward and shall be shielded to return potential light and glare impacts.

22. Prior to the issuance of a final occupancy, the 6’ tall wood horizontal slat fence shall be stained or painted to match the townhome color and materials.

<u>Landscape and Irrigation Plans</u>

23. The landscape plan shall comply with the requirements of the California Government Code 65591 et. seq. known as the Water Conservation in Landscaping Act as set out in the model water efficient landscape ordinance adopted by the California Department of Water Resources and amended in 2015. All plant materials shall be served by a city-approved automatic irrigation system.

24. All trees shall be 15 gallons in size or larger.

25. Prior to the issuance of a certificate of occupancy, all landscaping shall be completed and the project’s landscape architect shall provide a written certification that all plant materials have been installed in accordance with the approved landscape plan.

26. All planting shall be maintained in good growing condition. Such maintenance shall include, where appropriate, pruning, mowing, weeding, cleaning of debris and trash, fertilizing and regular watering. Whenever necessary, planting shall be replaced with other plant materials to ensure continued compliance with applicable landscaping requirements. Required irrigation systems shall be fully

maintained in sound operating condition with heads periodically cleaned and replaced when missing to insure continued regular watering of landscape areas, and health and vitality of landscape materials.

27. All tree stakes and ties shall be removed within one year following installation or as soon as trees are able to stand erect without support.

28. Clear sight triangles shall be maintained at all driveways. Low-lying plantings and other site fixtures, including signs, shall be no taller than 30 inches within the site's vision triangles.

Signs

29. Signs for the project shall require a sign permit approval from the Community Development Department. This requirement does not apply to traffic signs, building addressing or directional signs for wayfinding.

Building and Safety

30. Prior to the final inspection, the applicant shall submit a letter of certification to the Building Official from the project architect, civil engineer, and landscape architect certifying that all improvements have been constructed in accordance with the approved building plans.

31. Construction and grading activities on the site shall be limited to between 7:00 a.m. and 6:00 p.m. Monday through Friday. Work between the hours of 6:00 pm and 7:00 am and work on weekends and holidays requires prior written approval from the Building Official. If weekends and holiday work is approved construction and grading activities on the site shall be limited to between 8:00 a.m. to 6:00 p.m. on Saturdays, and between 10:00 a.m. and 6:00 p.m. on Sundays and State and Federal holidays.

32. Prior to issuance of a building permit, the applicant shall submit a plan for the diversion of at least 70 percent of the debris from the building demolition and construction. The plan shall include the qualified recycler that will be used, the methods of managing diversion of construction materials on site, and the proposed documentation that will be submitted to confirm that the diversion goal has been met.

33. Prior to issuance of a building permit, the applicant shall submit a request to the Chief Building Official for any proposed deferred submittals on a form provided by the Building and Safety Division. The Deferred Submittal request shall include a justification for each proposed deferred submittal. The Chief Building Official shall issue a determination on each proposed deferred submittal request.

34. Prior to the final inspection, a Certified Access Specialist (CASp) shall submit a letter certifying that all improvements have been constructed in compliance with applicable state and federal accessibility standards. Determination of consistency shall be subject to the review and approval of the Building Official.

35. Construction noise shall comply with the noise reduction recommendations identified in the Noise Assessment Study for the Crawford Multi-family Development, by Edward L. Pack Associates (July 14, 2022).

36. Prior to the issuance of the first dwelling unit building permit, the applicant shall provide plans that implement the noise reduction recommendations for windows and doors identified in the Noise Assessment Study for the Crawford Multi-family Development, by Edward L. Pack Associates (July 14, 2022).

Fire District

37. New and modified buildings shall conform to requirements set forth in the currently adopted editions of the California Building Code, California Fire Code, as amended by the City of American Canyon and American Canyon Fire Protection District, and Nationally Recognized Standards.

38. There shall be no deferred submittals for fire protection equipment and related utilities. Fire protection plans shall not be attached to or bound with the building plan submittal package. This includes but is not limited to Automatic Fire Sprinkler, Fire Alarm, Fixed Fire Protection and Civil plans.

39. All Fire related underground piping and fire appurtenances shall be shown on the Civil plan submittal. In addition to the Civil plan submittal, at least (1) plan set under separate cover shall be submitted to American Canyon Building Division for routing to the American Canyon Fire Protection District detailing all underground piping and related fire appurtenances including but not limited to underground piping, underground sweep detail, underground trench details showing depth of burial, type of backfill, manufacturer's specifications of piping, valves joints, fittings and calculated size and locations of thrust blocks, hydrants locations (designate public or private), gate shut-off valves, PIV's, FDC's, fire pumps, fire pump and/or riser rooms.

40. Underground utility contractor, architect and fire sprinkler contractor shall coordinate the location of risers and control valves prior to the issuance of a building permit.

41. Fire Department plan review shall be based on the information submitted at the time of permit application. Any changes to the approved/permitted scope of work including additions, alterations, demolition, repair or a change in occupancy/use may impact the project requirements, including but not limited to the installation of additional fire protection systems or components.

42. An approved water supply capable of supplying the required fire flow for fire protection systems shall be provided to all premises upon which facilities or buildings are hereby constructed or moved into or within the City. Required fire flow and hydrant distribution shall be in accordance with Appendix B and C of the California Fire Code. Applicant shall demonstrate on plan submittal; square footage of each building on plan and provide the required fire flow information. Applicant shall demonstrate that the number and spacing of onsite fire hydrants meets the California Fire Code.

BUILDING FIRE FLOW REQUIREMENTS – CFC TABLES B105.2 & B105.1(2)
INFORMATION BELOW IS A SAMPLE AND FOR REFERENCE ONLY

Table B105.1(2) – Building size = 129, 600 square feet
Construction type = Type IIA
FF = 5,250 gpm at 20 psi
Duration = 4 hours

Table B105.2 – Fire sprinkler allowance = - 50%
5,250 – 2,625 = 2,625 gpm
FF = 2,625 gpm @ 20 psi
Duration = 2 hours

Table CC105.1 – Approximate number of hydrants = 3
Average spacing = 400 feet + 25% allowable increase = 500
Maximum distance from street or frontage = 225 feet = 50% allowable

increase = 337.5

43. Fire Protection systems shall be installed in accordance with provisions set forth in the California Fire Code as amended by the City of American Canyon and the applicable National Fire Protection Association Standard.

44. The fire protection equipment shall be located within an interior room having an approved exterior access door or in an exterior enclosure attached to the building, specifically, for the purpose of housing such equipment.

45. Fire Apparatus Access Roads shall be designed in accordance with provisions set forth in the California Fire Code Chapter 5 and Appendix D as amended by the City of American Canyon and the applicable Public Works Standard.

46. Fire apparatus access roads shall have an unobstructed minimum width of 20 feet (curb to curb) and a minimum unobstructed vertical clearance of 13' 6". They shall have an all-weather paved surface capable of supporting a GVW of 71,000 pounds. Where hydrants are provided – the width shall be a minimum of 26-feet.

47. Access roads shall be completed with all-weather surfaces prior to the stockpiling of combustible materials or beginning combustible construction. Fire apparatus access shall be provided to within 150 feet of the most remote portions of all building from an approved exterior route. If this cannot be achieved fire apparatus turnarounds will be needed.

48. Fire apparatus access roads shall not be obstructed in any manner, including the parking of vehicles. Vertical traffic calming in the form of speed pumps, humps or dips are prohibited along fire access roads without prior approval of the fire Code Official. The minimum width and clearances established in Section 503.2.1 shall be maintained at all times.

49. When required by the Fire Chief, fire apparatus access roads shall be designated as Fire Lanes and appropriate signs and/or markings installed in accordance with the California Vehicle Code and approved City standards.

50. Where applicable improvement plan submittals for permit shall include locations of fire lane red curbing and fire lane signage. Please refer to and include City Public Works Standard FP-2A & 2B with plan submittals for permitting.

51. The City of American Canyon requires that a fire hydrant be in service within 250 feet of the furthest point of construction prior to the stockpiling of combustible materials for the beginning of construction.

52. Fire Department Connections (FDC) shall be located not more than 100 ft. from the nearest fire hydrant.

Public Works

<u>Public Works General Conditions</u>

53. The Applicant shall be responsible for all City plan check, map check and inspection costs. The Applicant shall establish a Developer Deposit Account with the City upon the initiation of plan check services. The amount of the initial deposit shall be determined by the City Engineer. Additional funds may be required based upon actual costs.

54. All improvements shall be designed in accordance with the American Canyon Municipal Code (ACMC), City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

55. All existing overhead utilities and proposed utilities, both on-site and along project frontages to serve the project, shall be placed underground. Exceptions may be allowed for surface mounted transformers, pedestal mounted terminal boxes and meter cabinets.

56. Unless otherwise explicitly permitted, all existing wells, septic tanks and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Services or other designated agency. If there are none, the project engineer shall provide a letter describing the scope of the search done to make this determination.

57. A detailed Soils Investigation/Geotechnical Report shall be prepared and submitted for review. The report shall address, at a minimum, potential for liquefaction, R-values, expansive soils and seismic risk. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report.

58. A drainage report prepared by a California Registered Civil Engineer shall be submitted for review with the initial submittal of the Improvement Plans. The report shall include detailed hydrologic and hydraulic calculations to support the design and sizing of all public and private drainage facilities including storm drains and detention facilities. The report shall include an analysis of the capacity of existing downstream storm drain facilities and hydraulic conditions which may impact the design of proposed facilities and improvements.

59. A final detailed post-construction Stormwater Control Plan (SWCP) that identifies and sizes all permanent post-construction stormwater treatment BMPs shall be prepared and submitted for review and approval. The SWCP shall be prepared in accordance with the latest edition of the *Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual* and the requirements of the State Water Resources Control Board Phase II Municipal Separate Storm Water System (MS4) General Permit (Order 2022-0057- DWQ). It is the City's discretion whether to accept alternative treatment facilities other than bioretention.

60. A Post Construction Stormwater Operations and Maintenance Plan that includes a plan sheet showing all storm drain and water quality infrastructure that is to be maintained, along with detailed instructions and schedules for the ongoing maintenance and operation of all post-construction stormwater BMPs shall be submitted for review and approval by the City Engineer. Once approved, the property owner(s) shall enter into an agreement with the City that provides the terms, conditions, and security associated with the ongoing requirements of the post-construction Stormwater Best Management Practices.

61. A Final Map, as defined in the Subdivision Map Act, shall be prepared by a licensed surveyor or civil engineer. The Final Map shall show all parcels, rights-of-way, and easement(s), and shall be submitted to the City Engineer for review. The Final Map shall be in substantial conformance with the approved Tentative Map and all applicable conditions of approval. The Final Map is not valid until it has been approved by the City and recorded. Closure calculations shall be provided at the time of initial Final Map submittal. All calculated points within the map shall be based upon one common set of coordinates. All information shown on the Final Map shall be directly verifiable by information shown on the closure calculation printout. The point(s) of beginning shall be clearly defined. All lot acreages shall be shown on the Final Map and shall be verifiable from information shown on the closure

calculation printout. A current title report (within the past 180 days) shall be submitted at the time of initial Final Map submittal.

62. The Applicant shall secure all necessary rights-of-way and public and private easements for both onsite and offsite improvements. The Applicant shall prepare all necessary legal descriptions and deeds.

63. To the extent any offsite public improvements require the acquisition of property not currently owned by the Applicant or the City, the Applicant shall first make a good-faith effort to acquire the necessary property rights, however if the Applicant makes such an effort and is unable to acquire such rights, then the Applicant may request the City acquire the necessary property rights through the exercise of eminent domain provided that the Applicant enters first into an agreement with the City to pay for all costs incurred by the City to acquire such rights and if the City does not acquire the rights necessary to allow the offsite public improvements to be completed by the Applicant within statutory timeline provided by law, then the Applicant shall be relieved of the obligation to construct those off-site improvements only to the extent they require property not currently owned by the Applicant or the City. The Applicant shall make a good-faith effort to identify and acquire the necessary property rights at the earliest opportunity. A good faith offer includes identification of property rights needed (permanent and temporary), appraisal of the value of the highest and best use of the property, and a bonafide offer to pay this amount at the close of escrow.

64. The Applicant shall submit site Improvement Plans, prepared by a registered Civil Engineer, for review and approval of the City's Public Works Department. **Please be aware that this is a separate submittal from the building permit application.** The final plan set shall include all civil, landscape and joint trench drawings under a single cover sheet. No final grading or other construction shall be performed until the Improvement Plans have been approved. The Applicant shall not begin clearing, grubbing, or rough grading at the site prior to approval of the Improvement Plans, unless explicitly approved by the City of American Canyon through the standard grading and utilities only permit process. An Encroachment Permit is required for any work within City right of way. Encroachment Permits will not be issued prior to the approval of the Improvement Plans.

65. Cathodic protection shall be provided for all water valves, fittings, hydrants, meters, backflow devices, ductile iron pipe, and other metal appurtenances, regardless of the findings of any soils corrosivity analysis.

66. No grading or any construction activity shall be performed until the Improvement Plans have been approved and signed by the City Engineer. Encroachment Permits and Building Permits will not be issued prior to approval of the Improvement Plans. An Encroachment Permit is required for any work within City right of way.

67. The Applicant shall keep adjoining public and private streets free and clean of project dirt, mud, materials, and debris during the construction period in accordance with an approved SWPPP and Erosion and Sediment Control Plan using appropriate BMPs and as found necessary by the City Engineer.

68. If any hazardous material is encountered during the construction of this project, all work shall be immediately stopped and the Fire Department, Napa County Department of Environmental Services or other designated agency, and the City Inspector shall be notified immediately. Work shall not proceed until clearance has been issued by all of these agencies.

69. Prior to final preparation of the subgrade and placement of base materials, all underground utilities shall be installed and service connections stubbed out behind the sidewalk. Public utilities, Cable TV,

sanitary sewers, and water lines shall be installed in a manner that will not disturb the street pavement, curb, gutter and sidewalk, when future service connections or extensions are made.

70. Where soil or geologic conditions encountered in grading operations are different from that anticipated in the soil and/or geologic investigation report, or where such conditions warrant changes to the recommendations contained in the original soil investigation, a revised soil or geologic report shall be submitted for approval by the City Engineer. Additionally, if field conditions warrant installation of any subdrains, the location, size and construction details must be provided to the City for review and approval prior to construction.

71. All new fire hydrants shall be covered with burlap sacks until the hydrants have been tested and found to be in conformance with City flow requirements. No storage of combustible materials or construction of building shall be permitted until all hydrants meet City flow requirements.

72. Prior to placing the final lift of asphalt, all public storm drains and sanitary sewer lines shall be video inspected at the Applicant's expense. All video media (CD, DVD, or portable hard drive) shall be submitted to the City. If any inadequacies are found, they shall be repaired prior to the placement of the final lift of asphalt.

73. All streets, curbs, gutters, sidewalks or other public facilities damaged in the course of construction associated with this Project shall be the responsibility of the Applicant and shall be repaired to the satisfaction of the City at the Applicant's expense.

74. After all of the new underground utilities within existing public streets have been installed, the entire affected areas shall be milled and repaved to present a neat finished pavement area. Multiple trench patches are not acceptable.

75. All construction stormwater pollution prevention best management practices (BMP's) shall be installed as the first order of work and in accordance with the *State Water Resources Control Board's General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2022-0057-DWQ, as amended)*, the Applicant's Storm Water Pollution Prevention Plan (SWPPP), and the City's Erosion and Sediment Control Plan in accordance with the City's MS4 Permit. All stormwater BMP's shall be maintained to the satisfaction of the Qualified SWPPP Developer (QSD), Qualified SWPPP Practitioner (QSP), and the City Engineer.

76. With the exception of water used for loading and testing of potable water lines, all construction water used for the project shall be recycled water.

77. The development shall comply with the City's Zero Water Footprint policy.

78. All landscaping irrigation systems shall include an ET/SMART controller.

<u>Public Works Special Conditions of Approval</u>

79. The Applicant shall submit Improvement Plans prepared by a registered Civil Engineer (Engineer of Record) in substantial conformance with the preliminary civil plans titled "Tentative Map for Condominium Purposes Crawford Development" prepared by Lea & Braze Engineering, Inc., Preliminary Plans, dated May 11,2023, except as modified by these conditions.

80. Improvement Plans shall be tied to the State of California coordinate system.

81. The Applicant shall design and construct all the Public Improvements as generally described below.

a. Widen Crawford Way to a curb-to-curb width of 40-feet and provide a 12-foot wide travel lane and 8-foot wide on-street off-site parking lane. Install curb, gutter, curb ramp and a 10-foot-wide sidewalk (including width of the curb) along the entire Crawford Way frontage beginning from the western end of the property, APN 058-302-001 and extending to the SR 29 intersection. The frontage sidewalk shall have a minimum unobstructed width of 10 feet.

b. Install streetlights along the south side of Crawford Way frontage of the property. Streetlights shall conform to City of American Canyon Engineering Standard Plans and Specifications.

c. Install a new crosswalk at the northeast corner of the property, APN 058-302-001, to southeast corner of APN 058-301-008.

d. Widen State Route 29 to provide a 12-foot wide+/-, paved shoulder and install curb and gutter and a 12-foot-wide multi-use path along the entire State Route 29 frontage beginning from the northern end of the property, APN 058-302-001 and extending to the connect to the existing sidewalk along the northern end of the PG&E Property, APN 058-290-010. The frontage multi-use path shall have a minimum unobstructed width of 12 feet. Improvement along State Route 29 requires a separate Encroachment Permit from Caltrans. Frontage Improvements shall be coordinated with NVTA and Caltrans.

e. Install a new 24" diameter storm drain in Crawford Way from the point of connection to the intersection of Crawford Way and James Road.

f. Replace the existing 8" asbestos water main at Crawford Way between James Road and State Route 29 with a new 8" PVC C900 pipe, approximately 825 LF. The cost of this improvement will qualify for a credit towards the project's Water Capacity Fee. Prior to approval of the project improvement plans, the applicant shall execute a reimbursement agreement with the City.

g. Install a raised mid-block pedestrian crossing with bulb-outs on Crawford Way. The raised pedestrian mid-block crossing will provide safe pedestrian access to the Post Office, Public Library, Canyon Estates Plaza Shopping Center and Public Bus Stop. The cost of the mid-block crossing improvement will qualify for a credit towards the project's Traffic Impact Fee.

82. The Applicant shall construct all of the on-site private drive isles, parking spaces, sidewalks, walkways, water, sanitary sewer, storm drainage and stormwater quality and landscaping **"Private Improvements"** generally shown on the Preliminary Plans and more specifically described below. All private drive isles, parking spaces, walks, water, sewer, storm drainage and stormwater quality improvements shall be designed in accordance with the City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions. All private water main, sewer mains and storm drain shall be clearly labeled as "Private" on the Improvement Plans.

    a. Storm Drain Facilities: Construct private on-site drainage facilities, detention facilities, and other appurtenances to collect and convey all surface drainage to an approved private storm drain facility or outfall. Onsite drainage facilities shall provide for the positive drainage of all adjacent upstream or upgrade properties to prevent ponding. Existing run-on from adjacent properties shall not be obstructed and shall be conveyed onsite. Off-site peak storm water discharge shall not exceed 90% of the undeveloped peak flow from the 24-hour, 100-year event. The storm drains and detention facilities shall be substantially

consistent with the Preliminary Plans. However, the sizing of all storm drains and detention facilities shall be determined by the approved final drainage report.

b. Stormwater Quality Facilities: Permanent on-site private post-construction stormwater treatment BMPs shall be designed and constructed in accordance with the approved final SWCP. Runoff from all roof drains shall be conveyed to the onsite stormwater treatment facilities.

c. Landscape Irrigation Water: In the interim, on-site landscape irrigation water demand can be fulfilled by connecting to the city's potable water system. When the future recycled water system along SR29/Broadway Street, as noted in the 2016 City of American Canyon Recycled Water Master Plan is in place, on-site landscape irrigation water supply shall be converted at the developer's expense. Water demand allocated for irrigation in the interim shall be returned to the city. On-site landscape irrigation system shall conform to Title 22 of the California Code of Regulations.

83. Prior to SUBMITTAL OF THE IMPROVEMENT PLANS, the Applicant shall:

a. Submit the City's "Improvement Plan Checklist".

b. Pay an initial cash deposit for City plan check services in amount to be determined by the City prior to the time of submittal. The Project engineer shall contact City staff to discuss submittal details to determine initial deposit amount.

c. Provide the following:
   i. Public Street Repair Plan
   ii. Utility Plan and Joint Trench Plan
   iii. Construction Storm Water Pollution Prevention Plan (SWPPP) and a City Erosion and Sediment Control Plan (ESCP)
   iv. Drainage Report
   v. Post-Construction Stormwater Control Plan (SWCP)
   vi. Geotechnical Report
   vii. Construction Traffic Control Plan.
   viii. Application for Water Will Serve

d. Pothole and physically determine (by way of a survey performed by the Engineer of record) the actual horizontal location and vertical depth of all existing underground utilities throughout the proposed areas of work and provide the design of all new utility installations required to serve the project including a schedule for implementation of such work as to prevent disrupting of utility service to adjacent properties

84. Prior to ISSUANCE OF A GRADING PERMIT AND/OR APPROVAL OF THE IMPROVEMENT PLANS, the Applicant shall:

a. Provide written acknowledgment by the Geotechnical Engineer of Record that the Plans incorporate all design and construction criteria specified in the Geotechnical Report.

b. Furnish proof that all permits that may be required by the California Department of Fish & Game, State and Regional Water Quality Control Board, US Army Corps of Engineers and any other regulatory agencies with jurisdiction over the proposed construction have been obtained.

c. Complete and submit the City's Erosion and Sediment Control Plan (ESCP) Template. Applicant may refer to a SWPPP, as appropriate, by referencing page number within the SWPPP that addresses the requirements of the ESCP.

d. Submit a copy of the Notice of Intent and WDID# for coverage under the State Water Resources Control Board' General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2022-0057-DWQ).

e. Submit Encroachment Permit approved by Caltrans for improvements in State Route 29.

85. Prior to APPROVAL OF A BUILDING PERMIT, the Applicant shall:

a. Pay all account balances and current City, and American Canyon Fire Protection District fees (Mitigation and Capacity) based on rates in effect at the time of permit issuance. These fees include but may not be limited to the following: Traffic Mitigation, General Plan Update, Civic Facilities, Fire District, Water Capacity, Wastewater Capacity and Zero Water Footprint Mitigation.

86. Prior to COMMENCEMENT OF CONSTRUCTION ACTIVITIES, the Applicant shall:

a. Pay off all current account balances with the City of American Canyon.

b. Pay an inspection fee in amount to be determined at the time of commencement for the City's inspection of the Public Improvements.

c. Conduct a pre-construction meeting with representatives of the City whereby the Applicant, the Legally Responsible Party (LRP), Qualified SWPPP Practitioner (QSP), Qualified SWPPP Developer (QSD), and/or the Contractor provides the following:
   i. Six (6) full-size bond copies of the approved Improvement Plans for the City's use.
   ii. One (1) job-site copy of the latest edition of the City Standards for the Contractor use.
   iii. One (1) job-site copy of the SWPPP for use by the LRP, QSP, QSD, and Contractor.
   iv. Electronic copies of Improvement Plans and SWPPP

87. Prior to RECORDATION OF THE FINAL MAP, the Applicant shall:

a. Construct all of the Public and Private Improvements to the satisfaction of the City. Alternatively, the Applicant may enter into a Subdivision Improvement Agreement with the City agreeing to complete all of the Public and Private Improvements prior to Occupancy of the first unit. Such an Agreement will require the Applicant to provide bonds, proof of workers compensation insurance, and general liability insurance in the forms and amounts as deemed satisfactory to the City.

b. Establish a Homeowner's Association (HOA) in accordance with State law with recorded Codes, Covenants, & Restrictions (CC&Rs) that are satisfactory to the City Engineer and City Attorney to provide long-term and ongoing maintenance of all of the Private Improvements identified above. Specifically, the HOA will be responsible for the long-term and ongoing maintenance of the private streets, sidewalks, streetlights, domestic water, sanitary sewer, storm drain facilities and stormwater quality facilities within the limits of the subdivision. The City will have enforcement authority over the HOA's maintenance obligations and the obligation to review and approved proposed changes amendments to the CC&R's. The CC&R's shall require the HOA to create and maintain a separate maintenance reserve fund

in the amount of a percentage of the cost of constructing the HOA maintained improvements listed above. Said percentage will be determined by the City prior to recordation of the CC&Rs.

c. Generally, in substantial conformance with that which is shown on the approved Tentative Map, convey all easements and dedications, public and private, for the construction, use and/or maintenance of roads or other access, drainage facilities, utilities and post-construction storm water management facilities on the Final Map or by separate instruments. All dedications to the City shall be irrevocable offers of dedication. Specific public conveyances include:

    i. A 5-foot wide Public Access Easement (PAE) along the south side of Crawford Way across the frontage of the Property, APN 058-302-001.

88. Prior to ACCEPTANCE OF IMPROVEMENTS AND/OR OCCUPANCY, the Applicant shall:

a. Submit an inspector's punch list report indicating that all of the "Public and Private Improvements" are constructed to the satisfaction of the City Engineer.

b. Restore all adjacent off-site road surfaces to pre-project conditions.

c. Submit a certification by the Geotechnical Engineer of Record that all the work has been completed in substantial conformance with the recommendations in Soils Investigation/Geotechnical Report.

d. Provide a digital copy of the Improvement Plans that include all as-built or field changes, in digital AutoCAD (.dwg) and (.pdf) format (void of any AutoCAD block formats preventing full editing capabilities of the drawings), compatible with the City's current version, and tied to the NAD83 (California Zone 2, feet) coordinate system.

e. Provide a letter stating that all of the Developer's Conditions of Approval have been met.

f. Provide a letter from the Civil Engineer of Record certifying that all the site improvements were constructed and inspected in substantial conformance with the approved plans and City Standards.

g. Provide a letter from a Certified Access Specialist (CASp) certifying that all onsite and offsite improvements have been constructed in compliance with applicable state and federal accessibility standards.

h. Enter into and record a post-construction Stormwater Operations and Maintenance Agreement with the City.

Mitigation Measures

All applicable mitigations in the Mitigation Monitoring and Reporting Program (MMRP) for the Broadway District Specific Plan Project Environmental Impact Report (Resolution No. 2019-51, State Clearinghouse No. 2017042025) are incorporated as conditions of approval by reference as listed below. This information is in reference to the BDSP EIR Addendum prepared by WRA, Inc of November of 2024.

89. **BDSP EIR MM AIR-2:** Prior to issuance of the first construction permit for projects that occur pursuant to the Specific Plan, the applicant shall submit construction plans to the City of American Canyon with the following notes on them. The dust abatement measures described in the notes shall be

implemented during construction. During construction activities, the following air pollution control measures shall be implemented:

a. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day, or more as needed.
b. All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
c. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
d. All vehicle speeds on unpaved roads and surfaces shall be limited to 15 miles per hour.
e. All roadways, driveways, and sidewalks shall be paved as soon as possible.
f. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
g. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 2 minutes (beyond the 5-minute limit required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.
h. All construction equipment shall be maintained and properly tuned in accordance with manufacturers' specifications. All equipment shall be checked by a certified visible emissions evaluator.
i. A publicly visible sign shall be posted with the name and telephone number of the person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Bay Area Air Quality Management District's phone number shall also be visible to ensure compliance with applicable regulations.

90. **BDSP EIR MM AIR-3:** Prior to issuance of the first construction permit for development projects that occur pursuant to the Specific Plan, the applicant shall provide documentation to the City of American Canyon demonstrating that all off-road diesel equipment proposed for use are powered with Tier 3 or cleaner engines.

91. **BDSP EIR MM AIR-4a:** Prior to issuance of building permits for any sensitive receptor use (residential areas, elementary school, daycare centers, etc.) that would be developed pursuant to the Specific Plan, the applicant shall complete either of the following two options:

    a. Prepare and submit a toxic air contaminant risk screening assessment to the City of American Canyon that demonstrates the potential risk from roadways, rail, and stationary sources would not exceed BAAQMD's cumulative risk threshold for toxic air contaminant impacts.

    b. Prepare and submit a Health Risk Analysis to the City of American Canyon, consistent with BAAQMD's recommended methodology, that demonstrates the potential risk from roadways, rail, and stationary sources would not exceed the BAAQMD's cumulative risk threshold for toxic air contaminant impacts. If mitigation is required to reduce a potentially significant risk to less than the cumulative risk threshold, that mitigation shall be clearly identified, and the associated risk reduction quantified. The mitigation must be incorporated into the project and implemented.

92. **BDSP EIR MM BIO-1a:** Prior to development activities within undeveloped properties within the BDSP area, the applicant shall retain a qualified biologist to conduct a reconnaissance-level biological assessment. The assessment shall evaluate the potential presence of special-status plant and wildlife species, sensitive natural communities, jurisdictional features, and wildlife and fish movement. If the

reconnaissance-level biological assessment determines that protocol-level surveys or pre-construction surveys are warranted, these studies shall be completed prior to construction. Additionally, any required mitigation (protective buffers, passive relocation, restoration, etc.) shall be completed at the appropriate time. This mitigation measure shall not apply to sites that are entirely or mostly hardscaped or disturbed.

93. **BDSP EIR MM BIO-1b:** Prior to tree removal activities that occur during the nesting season (February 1 and August 31), the applicant shall retain a qualified biologist to conduct a pre-construction nesting bird survey no more than 14 days prior to vegetation removal. If the biologist observes nesting birds to be present, a minimum 250-foot protective buffer shall be established around the nest until the young have fledged. This mitigation measure shall not apply to tree removal activities that occur outside the nesting season (September 1 to January 31).

94. **BDSP EIR MM CUL-1:** If prehistoric or historic-period archaeological resources are encountered during ground disturbing activities associated with new development that occurs pursuant to the Specific Plan, all construction activities within 100 feet of the find shall halt and the City of American Canyon shall be notified. Prehistoric archaeological materials might include obsidian and chert flaked stone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil ("midden") containing heat affected rocks, artifacts, or shellfish remains; and stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); and battered stone tools, such as hammerstones and pitted stones. Historic-period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse. A Secretary of the Interior-qualified archaeologist shall inspect the findings within 24 hours of discovery. If it is determined that the project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines), mitigation shall be implemented in accordance with PRC Section 21083.2 and Section 15126.4 of the CEQA Guidelines, with a preference for preservation in place. Consistent with Section 15126.4(b)(3), this may be accomplished through planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement. If avoidance is not feasible, a qualified archaeologist shall prepare and implement a detailed treatment plan in consultation with the City of American Canyon. Treatment of unique archaeological resources shall follow the applicable requirements of PRC Section 21083.2. Treatment for most resources would consist of (but would not be limited to) sample excavation, artifact collection, site documentation, and historical research, with the aim to target the recovery of important scientific data contained in the portion(s) of the significant resource to be impacted by the Project. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and state repositories, libraries, and interested professionals.

95. **BDSP EIR MM CUL-3:** If potential fossils are discovered during project implementation, all earthwork or other types of ground disturbance within 100 feet of the find shall stop immediately until a qualified professional paleontologist can assess the nature and importance of the find. The paleontologist shall report his/her findings to the City of American Canyon. Based on the scientific value or uniqueness of the find, the paleontologist shall either record the find and recommend that the City of American Canyon allow work to continue or recommend salvage and recovery of the fossil. The paleontologist shall, if required, propose modifications to the stop-work radius based on the nature of the find, site geology, and the activities occurring on the site. If treatment and salvage is required, recommendations will be consistent with Society of Vertebrate Paleontology guidelines and currently accepted scientific practice. If required, treatment for fossil remains shall include preparation and recovery of fossil materials so that they can be housed in an appropriate museum or university

collection, and, if required, shall also include preparation of a report for publication describing the finds.

96. **BDSP EIR MM CUL-4:** In the event of discovery or recognition of any human remains during construction activities, such activities within 100 feet of the find shall cease until the Napa County Coroner has been contacted to determine that no investigation of the cause of death is required. The Native American Heritage Commission (NAHC) shall be contacted within 24 hours if it is determined that the remains are Native American. The NAHC will then identify the person or persons it believes to be the most likely descendant from the deceased Native American (PRC Section 5097.98), who in turn would make recommendations to the City of American Canyon for the appropriate means of treating the human remains and any associated funerary objects (CEQA Guidelines Section 15064.5(d)).

97. **BDSP EIR MM GEO-1a:** Prior to issuance of building permits for development projects that occur pursuant to the Specific Plan that are located within an Alquist-Priolo Special Study Zone, the City of American Canyon shall verify that the applicant has commissioned a fault investigation. The fault investigation shall be prepared by a licensed geologist or geotechnical engineer and determine the precise location of the West Napa Fault in relation to the proposed project. All recommended fault setbacks set forth in the fault investigation shall be shown on project plans.

98. **BDSP EIR MM GEO-1b:** Prior to issuance of building permits for development projects that occur pursuant to the Specific Plan, the City of American Canyon shall verify that the applicant has commissioned a design-level geotechnical report. The report shall be prepared by a licensed geologist or geotechnical engineer and determine whether the geologic conditions of the site in question are suitable for development. All recommendations for grading, soil engineering, and construction shall be incorporated into the project plans.

99. **BDSP EIR MM HYD-1a:** Prior to issuance of grading permits for development projects that occur pursuant to the Specific Plan, the City of American Canyon shall verify that the applicant has prepared a Stormwater Pollution Prevention Plan (SWPPP) in accordance with the requirements of the statewide Construction General Permit. The SWPPP shall be designed to address the following objectives: (1) all pollutants and their sources, including sources of sediment associated with construction, construction site erosion, and all other activities associated with construction activity are controlled; (2) where not otherwise required to be under a Regional Water Quality Control Board permit, all non-stormwater discharges are identified and either eliminated, controlled, or treated; (3) site best management practices (BMPs) are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized nonstormwater discharges from construction activity; and (4) stabilization BMPs are installed to reduce or eliminate pollutants after construction are completed. The SWPPP shall be prepared by a qualified SWPPP developer. The SWPPP shall include the minimum BMPs required for the identified Risk Level. BMP implementation shall be consistent with the BMP requirements in the most recent version of the California Stormwater Quality Association Stormwater Best Management Handbook—Construction or the Caltrans Stormwater Quality Handbook Construction Site BMPs Manual.

100. **BDSP EIR MM HYD-1b:** Prior to issuance of building permits for development projects that occur pursuant to the Specific Plan, the project applicant shall prepare a Stormwater Control Plan that includes post-construction stormwater controls in the site design to satisfy requirements of the Phase II Small MS4 Permit. This shall include a review of the final Stormwater Control Plan by the City of American Canyon to ensure that the required controls are in place. Provision E.12.h of the MS4 Permit requires that an operation and maintenance program be implemented for post-construction stormwater management features. Responsible parties and funding for long-term maintenance of all

BMPs must be specified. This plan shall specify a regular inspection schedule of stormwater treatment facilities in accordance with the requirements of the MS4 Permit. Reports documenting inspections and any remedial action conducted shall be submitted regularly to the City for review and approval.

101. **BDSP EIR MM NOI-1:** Prior to issuance of building permits of noise-sensitive land uses within the 65 dBA Ldn roadway noise contours shown in Exhibit 3.9-4 or within the 65 dBA Ldn roadway noise contours specified in Table 3.9- 15 (within 350 feet of the centerline of Broadway Street or 127 feet of the centerline of American Canyon Road), the applicant shall retain an acoustical engineer to conduct a detailed acoustical analysis. The detailed acoustical analysis shall confirm the roadway noise levels impacting the sensitive receptors, and if necessary, shall identify mitigation measures to reduce interior noise levels at the sensitive land uses to within City noise standards.

102. **BDSP EIR MM NOI-2a:** Prior to issuance of grading permits, if construction activities will (1) pile drive within 150 feet or (2) utilize mobile construction equipment within 20 feet of any existing structure with sensitive receptors, the applicant shall retain an acoustical engineer to conduct a vibration analysis for potential impacts from construction-related vibration impacts to the existing structure(s) with sensitive receptors. The vibration analysis shall determine the vibration levels created by construction activities at the existing structure(s) with sensitive receptors and, if necessary, develop mitigation to reduce the vibration levels to within the Caltrans threshold of 0.25 inch per second PPV.

PASSED, APPROVED and ADOPTED at a regularly scheduled meeting of the Planning Commission of the City of American Canyon held on the 27th day of March, 2025, by the following vote:

American Canyon, CA 94503

Mr. William He,

Project data

Address:	Crawford Way and CA 29, American Canyon, CA 94503	
County:	Napa County	
APN:	058-302-001 & 058-290-12	
General Plan:	CN Commercial Neighborhood	
Zoning:	CN Commercial Neighborhood (Residential Overlay)	
	Broadway District Specific Plan LSMU	
Gross Site Area:	188,876 SF:	(4.336 Acres)
Net Site Area:	186,276 SF:	(4.276 Acres)

Project description
This 4.276 acre proposed multifamily development site is located at the intersection of Crawford Way and Broadway and falls within the Broadway District Specific Plan (BDSP). The project proposes 100 Townhome style apartments within sixteen 3-story buildings including a mix of 68 two bedroom and 32 three bedroom units. The buildings are arranged around allies for garage parking and paseos which include both common and private open space. Front porches will be located along the paseos or facing out to street frontages. Each unit will contain an attached tuck-under private two car garage. The development embraces a Modern Industrial design aesthetic consistent with the BDSP and will provide significant amenities for residents including a large Common Open Space with Community Building. All buildings will be constructed to comply with the latest practices in resource efficient design. This project may qualify as a transit district project given its proximity to the bus stop next to the post office.

Architectural Description
This is an infill project on an empty corner lot along Broadway at the intersection of Crawford Way. We are meeting the Guiding Principles of the Specific Plan by beautifying the corridor with landscaping, trees, and architecture as well as providing a multi-purpose pathway along the project frontage that connects it to the neighboring properties. The project has a strong identity with a unique architectural style while fitting in to the context of the Specific Plan area. The site is designed so that front doors face out to the existing streets and onto paseos within the project, while garage doors face each other onto allies at the rears of the buildings. The building corners are wrapped with upper floor balconies, wall plane articulation, and a variety of materials. Within the project site are numerous gathering spaces for the community along the street frontages, interior paseos, and the Community Building and Open Space. We have favored an interpretation of a Modern Industrial concept with basic forms that also mimic a simple Farmhouse geometry. The clean lines of the deep framed gable elements provide a light and airy appearance to the front elevations, while the large balconies that expand across the front facades help to break down the massing. The material and color palettes help to reinforce the Modern Industrial style. The materials include, cement plaster, lap siding, panel siding, metal railings, and contemporary light fixtures, the subtle white plaster with natural colored lap siding, grey panel siding and accent colored doors further enhance the unique aesthetic**.**

	20% x 87 Units: 17.4 Units: 18 Units
Proposed Max Density:	105 Units / 4.336 Acres: 24 du/ac
Concessions:	5% Very Low = 1 Concession

Density Bonus Application

Pursuant to the State Density Bonus Law (Government Code Sections 65915 et seq.) and the City's Density Bonus Ordinance, the base residential density applicable to the Project is 87 dwelling units and the Project Sponsor is proposing a project of 100 dwelling units. To meet the City's Affordable Housing requirements of 15% BMR with 5% at each income level the Project Sponsor will provide (5) Very Low, (5) Low, and (5) Moderate Income BMR units for a total of (15) BMR units. The (15) BMR units represent 17.2% affordable units. The (5) Very Low Income units represent 5.7% Very Low Income affordable units which entitles the project to a 20% Density Bonus. The 20% Density Bonus equals an additional (18) units for a total of 105 units.

Density Bonus Law Explanation

The purpose of the State Density Bonus Law (DBL) is to encourage cities to offer bonuses and incentives to housing developers that will "contribute significantly to the economic feasibility of lower income housing in proposed housing developments." (Gov. Code Section 65917.) The State Density Bonus Law has four distinct primary components: (1) Density Bonuses; (2) Incentives/Concessions; (3) Development Standard Waivers; and (4) Parking Standards. Although interrelated, each component serves a different purpose and is governed by unique standards as follows:

1. Section 65915(b) (1) of the State Density Bonus Law provides that requests for a density bonus *must* be granted "when an applicant for a housing development seeks and agrees to construct a housing development" that meets one or more of the statute's thresholds. Our proposed development will provide 5% of the Specific Plan allowed density (i.e. calculated to be ten (5) units) to households that meet the "Very Low" income qualification, which would entitle it to receive a 20% density bonus over and above the maximum density allowed in the General Plan.

2. Section 65915(d)(2)(B) of the State Density Bonus Law provides that requests for Incentives or Concessions must be granted when an applicant for a housing development seeks and agrees to construct a housing development" that meets one or more of the statute's thresholds. The number of Incentives and concessions to which a project applicant is entitled depends upon the percentage of Very Low, Low-, or Moderate-income units provided. The project applicant is entitled to receive (1) one incentive for projects that include at least 5% of the base units for very low income households, as is the case here. The incentives or concessions requested are ones which are "proposed by the developer" and result "in identifiable and actual cost reductions to provide for affordable housing costs". The applicant proposes using the one incentive or concession as follows: The project sponsor has elected not to request any Concessions at this time but reserves the rights to request the Concession should necessity dictate, subject to review by the City.

3. The third component of the State Density Bonus Law, Development Standard Waivers, is separate from and in addition to requests for incentives. The law states that a density bonus applicant may request a waiver or reduction of development standards that would have the effect of physically precluding the construction of the project at the densities or with the incentives permitted under the statute. (Section 65915(e) (1).) The definition of a "development standard" includes a site or construction condition, including, without limitation, local height, setback, floor area ratio, onsite open space, and parking area ratio requirements that would otherwise apply to residential development pursuant to ordinances, general plan elements, specific plans, charters, or other local condition, law, policy, resolution, or regulation. (Section 65915(o) (1).) A request for a development standard waiver neither reduces nor increases the number of incentives to which the developer is otherwise entitled. (Section 65915(e) (2). Furthermore, there is no limit on the number of waivers that may be issued. The design team has made significant efforts to comply with the original intent of the Broadway District Specific Plan. The proposed development will specifically require the following Development Standards Waivers; Building Height at Side Street, Garage Size Minimums, Building to Building Setbacks, and ___ as outlined below in order to physically achieve the Density Bonus on the subject site, however we reserve the right to request other waivers consistent with the DBL should necessity dictate, subject to review by the City.

4. The fourth component of the State Density Bonus Law concerns the project parking ratio. In addition to the incentives allowed under Section 65915(d), an applicant may request that the city not require a vehicular parking ratio for a density bonus project that exceeds the following: 1 onsite space for 0-1 bedroom; 1.5 onsite spaces for 2-3 bedrooms; and 2 onsite spaces for four or more bedrooms. (Section 65915(p) (1).) Furthermore per 65915 as amended by AB 744 Section (p)(3)(A) If the development is located within one-half mile of a major transit stop, as defined in subdivision (b) of Section 21155 of the Public Resources Code, and there is unobstructed access to the major transit stop from the development, the ratio shall not exceed 0.5 spaces per unit. See included Parking Calculations for the proposed parking configurations.

Concession or Incentive: By meeting State Density Bonus requirement of at least 5 percent of the base units for very low-income households, the Project shall receive one (1) concessions or incentive per Government Code Section 65915(d)(2)(B). The concession requested are ones which are "proposed by the developer" and result "in identifiable and actual cost reductions to provide for affordable housing costs". Additionally, the requested concessions would not result in any "adverse impact…upon public health and safety or the physical environment or on any real property that is listed in the California Register of Historical Resources" nor would it be "contrary to state or federal law". (Government Code Section 65915(d)(1)).

Concession/Incentive 1: Not used at this time

Waiver or Reduction of Development Standards: Government Code Section 65915(e) provides that the City may waive or reduce development standards that would have the effect of physically precluding the construction of the development. The project is allowed unlimited Waivers. The Density Bonus provides for 18 additional units. The following waivers are required to provide the Density Bonus units, without these waivers the project cannot be developed at the stated density and as designed:

Waiver 1: Building Height at Side Street Setback

The Specific Plan calls for a reduced height of 24' when the building is located between 15'-30' of the

street side setback. The Project requests a Building Height waiver to accommodate the 3-story buildings that are partially located within the specified setback range. The Project requires a minimum of three stories in this area to accommodate the additional units provided by the Density Bonus otherwise we would need to remove at least one unit from each of the perpendicular buildings closest to Crawford Way. Without the waiver of the Building Height requirement, the density bonus Project could not be constructed at the stated density and as designed.

Waiver 2: Garage Size Minimums

Based on the City of American Canyons Parking Standards multi-family units require garage spaces to be 10' wide x 20' deep x 7'-6" high. The project is seeking a waiver from these requirements in order to provide 2 garage parking spaces per unit within a narrower garage space with some overhead stair encroachments. Otherwise, the extra garage width would require the removal of at least one unit per building on the site. Without the waiver of the garage size requirement, the density bonus Project could not be constructed at the stated density and as designed.

Waiver 3: Building to Building Setbacks

Based on the Broadway District Specific Plan the Setbacks between Building Face (front or rear building face) is 35'and the Setback between Building Faces and Building Side (front or rear building face) is 25'. Due to the constraints of the site, the affordable housing units, and the Density Bonus units the project requires a waiver of these setbacks in certain areas. Without the waiver of the Building to Building Setbacks requirement, the density bonus Project could not be constructed.

Waiver 4: Private Open Space

Based on the Broadway District Specific Plan Private Open Space at the upper levels is required to be 50 SF and 6' minimum in depth. We are seeking a waiver to reduce the depth of the required Private Open Space to 4'-6". This is required because the additional 1'-6" of balcony depth would require an additional 12' of depth across the site. This would require the removal of an entire row of buildings. Due to the constraints of the site, the affordable housing units, and the Density Bonus units the project requires a waiver of these depths. Without the waiver of the Private Open Space depth requirement, the density bonus Project could not be constructed.

Conclusion

The concessions and waivers requested are necessary to construct the project with the Density Bonus units as well as the additional Affordable units provided above the City requirements. In addition the requested Concessions/Incentives and waivers are proportional to the amount of the Density Bonus the applicant is entitled to. The waivers of development standards requested above will not have a specific, adverse impact upon health, safety, or the physical environment, for which there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact.

Please let us know if you require any additional information. Thank you for your consideration of this exciting new development and a great addition to the Broadway corridor.

Sincerely,

William Yeh

PROJECT DESCRIPTION

THIS 4.276 ACRE PROPOSED MULTIFAMILY DEVELOPMENT SITE IS LOCATED AT THE INTERSECTION OF CRAWFORD WAY AND BROADWAY AND FALLS WITHIN THE BROADWAY DISTRICT SPECIFIC PLAN (BDSP) . THE PROJECT PROPOSES 100 FOR SALE TOWNHOMES WITHIN SIXTEEN 3-STORY BUILDINGS INCLUDING A MIX OF 68 TWO BEDROOM AND 32 THREE BEDROOM UNITS. THE BUILDINGS ARE ARRANGED AROUND ALLIES FOR GARAGE PARKING AND PASEOS WHICH INCLUDE BOTH COMMON AND PRIVATE OPEN SPACE. FRONT PORCHES WILL BE LOCATED ALONG THE PASEOS OR FACING OUT TO STREET FRONTAGES. EACH UNIT WILL CONTAIN AN ATTACHED TUCK-UNDER PRIVATE TWO CAR GARAGE. THE DEVELOPMENT EMBRACES A MODERN INDUSTRIAL DESIGN AESTHETIC CONSISTENT WITH THE BDSP AND WILL PROVIDE SIGNIFICANT AMENITIES FOR RESIDENTS INCLUDING A LARGE COMMON OPEN SPACE WITH COMMUNITY BUILDING. ALL BUILDINGS WILL BE CONSTRUCTED TO COMPLY WITH THE LATEST PRACTICES IN RESOURCE EFFICIENT DESIGN. THIS PROJECT MAY QUALIFY AS A TRANSIT DISTRICT PROJECT GIVEN ITS PROXIMITY TO THE BUS STOP NEXT TO THE POST OFFICE.

REGISTERED PROFESSIONAL ENGINEER PHILLIAM ZACHARIA Exp. 06/30/25 CIVIL STATE OF CALIFORNIA

SHEET JT1 OF JT8 SHEETS

PROJECT NOTES:

1. FIELD ADJUST SERVICES TO MINIMIZE INTERFERENCE WITH EXISTING FACILITIES (TYPICAL).
2. CONTRACTOR SHALL PERFORM ALL TRENCHING, EXCAVATING, BACKFILLING AND OTHER WORK AS SHOWN OR NOTED ON PLANS, AND AS SPECIFIED ON UTILITY BID DOCUMENTS.
3. FIELD ADJUST SPLICE BOXES TO KEEP CLEAR OF SIDEWALK, DRIVEWAYS AND EXISTING FACILITIES (TYPICAL).
4. A 3 FOOT LEVEL WORKING AREA MUST BE MAINTAINED AROUND ALL ELECTRIC ENCLOSURES. PRIOR TO ENERGIZING THE SYSTEM, THE ELECTRIC UTILITY COMPANY INSPECTOR WILL DETERMINE IF RETAINING WALLS ARE REQUIRED TO MEET MINIMUM CLEARANCE BETWEEN ENCLOSURES AND THE TOPS OR TOES OF SLOPES. IF RETAINING WALLS ARE REQUIRED, THE DEVELOPER AND/OR CONTRACTOR SHALL OBTAIN THE NECESSARY PERMITS FROM THE CITY/COUNTY BUILDING DEPARTMENT PRIOR TO WALL CONSTRUCTION.
5. TRANSITION TO VAULTS FROM TRENCH NOT SHOWN, SEE TRANSITION DETAIL SHEET JT3 (TYPICAL).
6. CONTRACTOR SHALL PLACE ALL UTILITY SPLICE BOXES, ENCLOSURES & CONDUIT IN PROPER RELATIONSHIP TO FINAL GRADE (SHOWN SCHEMATICALLY).
7. ALL PG&E, TELEPHONE, CABLE T.V. AND FIBER OPTIC BOXES AND JOINT TRENCH FACILITIES ARE TO MAINTAIN A MINIMUM OF 3' SEPARATION FROM SEWER, WATER LATERALS AND DRIVEWAYS.
8. CONTRACTOR SHALL COORDINATE ALL CONNECTIONS BETWEEN PROPOSED AND EXISTING FACILITIES AS DIRECTED BY THE RESPECTIVE UTILITY COMPANY INSPECTOR. UTILITY COMPANY PERSONNEL SHALL MAKE ALL "HOT TIE-INS"; THE CONTRACTOR IS PROHIBITED FROM WORKING IN ANY ENERGIZED FACILITIES.
9. THE CONTRACTOR SHALL OBTAIN THE APPROPRIATE STREET EXCAVATION AND ENCROACHMENT PERMIT(S) FROM THE CITY/COUNTY PRIOR TO STARTING WORK IN THE PUBLIC STREET AREA.
10. FIELD LOCATE JOINT TRENCH FACILITIES TO KEEP CLEAR OF SERVICE LATERALS. SERVICE LATERALS TO BE ROUTED TO AVOID SPLICE BOX (ADDITIONAL P.U.E MAY BE REQUIRED).
11. RESPECTIVE UTILITY COMPANY TO OBTAIN CITY APPROVAL OF ALL ABOVE GROUND EQUIPMENT.
12. UNLESS OTHERWISE SHOWN ON THE PLANS, NATURAL BENDS SHALL BE USED FOR ALL CONDUIT EXCEPT STREET LIGHT CONDUIT.
13. INCIDENTAL TRENCHING TO SPLICE BOXES NOT SHOWN (TYPICAL). CONTRACTOR TO PROVIDE ADDITIONAL TRENCHING AS REQUIRED FOR CONDUIT ROUTING TO SPLICE BOXES AND CABINETS (TYPICAL).
14. ALL CONDUITS SHALL ENTER OR EXIT PERPENDICULAR TO BOX WALLS.
15. ALL CONDUITS MUST BE MANDREL TESTED AND APPROVED.
16. OFFSET SPLICE BOXES TO ROUTE TELEPHONE/FIBER OPTIC CONDUIT AS NEEDED (TYPICAL).
17. PULL ROPES SHALL BE PLACED IN ALL EMPTY CONDUITS AS REQUIRED BY EACH UTILITY COMPANY.
18. ALL PG&E SPLICE BOXES ADJACENT TO TRANSFORMER SHALL BE 26" IN DEPTH (TYPICAL).
19. ALL CONDUITS NOT ENTERING SPLICE BOXES OR ENCLOSURES SHALL BE CAPPED.
20. COORDINATE TIE-IN WITH UTILITY COMPANY AS REQUIRED.
21. THE STREET LIGHT SYSTEM SHALL BE INSTALLED IN ACCORDANCE WITH THE "MATERIAL AND LABOR RECAP" AND LIGHT SCHEDULE AS SHOWN ON THESE PLANS.
22. ALL EXISTING DUCTS TO BE USED IN THESE PLANS SHALL BE "VERIFIED" BY PULLING A MANDREL THROUGH THE ENTIRE EXISTING LENGTH PRIOR TO CONNECTION.
23. EDGE OF SPLICE BOXES & PEDESTALS SHALL BE 5' FROM EDGE OF FIRE HYDRANT AND 3' FROM STREET LIGHT (TYPICAL). CONTRACTOR TO AVOID DISTURBING FIRE HYDRANT THRUST BLOCK.
24. ALL UTILITY SUBSTRUCTURES SHALL BE INSTALLED IN ACCORDANCE WITH THE "MATERIAL AND LABOR RECAP" SHOWN ON THESE PLANS
25. MAINTAIN 3' CLEARANCE AND LEVEL AREA AROUND PRIMARY SPLICE BOXES & XFMRS.
26. DUE TO UNCERTAINTIES OF THE EXACT LOCATION OF EXISTING FACILITIES, FIELD LOCATION OF PROPOSED FACILITIES MAY BE REQUIRED. CONFIRM WITH VARIOUS UTILITIES FOR EXACT PLACEMENT.
27. FOR CLARITY – BOXES/PEDESTALS ARE SHOWN AT LARGER SIZE THAN ACTUAL. FIELD ADJUST TO KEEP CLEAR OF DRIVEWAYS (TYPICAL).
28. ALL SERVICE FACILITIES SHALL BE EXTENDED TO EITHER THE PROPERTY LINE OR TO POSITION SHOWN ON THE PLANS, AND THEN CAPPED, BURIED AND LOCATION STAKED.
29. THESE PLANS WERE PREPARED UTILIZING PLANS RECEIVED FROM LEA & BRAZE ENGINEERING, INC. (510) 887-4086.

GENERAL NOTES:

1. ALL JOINT TRENCH CONSTRUCTION WORK SHALL BE IN ACCORDANCE WITH PG&E UTILITY OPERATIONS UO STANDARD S5453.
2. ALL WORK SHALL BE SUBJECT TO THE INSPECTION AND SATISFACTION OF ALL PARTICIPATING UTILITIES AND CITY INSPECTORS.
3. BACKFILL SELECTION SHALL BE SUBJECT TO THE APPROVAL OF THE RESPECTIVE UTILITY COMPANIES, THE SOILS ENGINEER AND THE CITY AND/OR COUNTY WHERE THE PROJECT IS LOCATED. CONSULT PARTICIPATING UTILITIES, SOILS ENGINEER, AND THE CITY FOR APPROVED BACKFILL MATERIAL. COMPACTION TO MEET LOCAL AGENCIES REQUIREMENTS.
4. THE BOTTOM OF THE TRENCH SHALL BE CLEARED OF ROCKS AND OTHER HARD SURFACES. DISTRIBUTION TRENCHES WITHOUT TELEPHONE CONDUIT DO NOT REQUIRE BEDDING MATERIAL. SERVICE TRENCHES WITHOUT TELEPHONE CONDUIT REQUIRE 2" SAND BEDDING AS A PAD ON WHICH UTILITY FACILITIES CAN REST. SERVICE TRENCHES CONTAINING TELEPHONE CONDUIT ONLY REQUIRE A 1" SAND BEDDING. ALL OTHER TRENCHES CONTAINING TELEPHONE CONDUIT REQUIRE A 3" SAND BEDDING. REFER TO PG&E GREEN BOOK PUBLICATION S5453, EXHIBIT B AND AT&T SPEC95 "AT&T SPECIFICATIONS" TRENCHING AND CONDUIT GUIDE FOR FURTHER INFORMATION.
5. THE CONTRACTOR SHALL BE RESPONSIBLE TO REPLACE PAVEMENT AND/OR SIDEWALK WHERE REMOVED OR DAMAGED AS A RESULT OF ITS OPERATION (UNLESS OTHERWISE NOTED). REPLACEMENT OF PAVEMENT AND/OR SIDEWALK TO BE PER CITY SPECIFICATIONS.
6. THE CONTRACTOR SHALL BE RESPONSIBLE TO COORDINATE AND NOTIFY ALL PARTICIPATING UTILITY INSTALLATIONS.
7. THE CONTRACTOR SHALL BE HELD RESPONSIBLE FOR ANY FIELD CHANGES MADE WITHOUT FIRST NOTIFYING TARRAR UTILITY CONSULTANTS.
8. **IT IS THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE EXISTENCE AND/OR PRECISE LOCATION OF ALL UNDERGROUND FACILITIES PRIOR TO THE START OF CONSTRUCTION. TARRAR UTILITY CONSULTANTS MAKES NO WARRANTY WHATSOEVER THAT THE EXISTING UNDERGROUND UTILITIES AND/OR STRUCTURES DEPICTED ON THE PLANS HAVE BEEN ACCURATELY LOCATED OR THAT THERE ARE NO OTHER UNDERGROUND UTILITIES AND STRUCTURES IN ADDITION TO WHAT HAS BEEN SHOWN. CALL U.S.A. A MINIMUM OF 48 HOURS PRIOR TO STARTING CONSTRUCTION. FOR CALIFORNIA NORTH, (KERN COUNTY AND NORTHERLY, AND NEVADA) CALL (800)227-2600. FOR CALIFORNIA SOUTH, (SAN BERNARDINO COUNTY AND SOUTHERLY) CALL (800)422-4133.**
9. CONTRACTOR SHALL COMPLY WITH ALL STATE, COUNTY AND CITY LAWS AND ORDINANCES AND WITH THE REGULATIONS OF THE DEPARTMENT OF INDUSTRIAL RELATIONS, O.S.H.A. AND ANY OTHER GOVERNMENTAL AGENCY RELATING TO THE SAFETY AND CHARACTER OF WORK, EQUIPMENT AND LABOR PERSONNEL.
10. THE DRAWINGS AND SPECIFICATIONS SHALL BE CONSIDERED TO BE COMPLEMENTARY TO EACH OTHER. ANYTHING SHOWN ON THE DRAWINGS AND NOT MENTIONED IN THE SPECIFICATIONS, OR MENTIONED IN THE SPECIFICATIONS AND NOT SHOWN ON THE DRAWINGS, SHALL BE OF LIKE EFFECT AS IF SHOWN ON OR MENTIONED IN BOTH. IF DISCREPANCY IS FOUND, NOTIFY TARRAR UTILITY CONSULTANTS PRIOR TO STARTING WORK.
11. TRENCH AND CONDUIT LAYOUTS ARE SHOWN SCHEMATICALLY.
12. TRENCHING OR SUBSTRUCTURE EXCAVATION MAY NECESSITATE OPERATION OVER, UNDER, OR ADJACENT TO OTHER UNDERGROUND UTILITIES (STORM, SEWER, WATER, ETC...). THE CONTRACTOR IS RESPONSIBLE TO LOCATE, PROSPECT, EXPOSE AND PROTECT ALL ADJACENT OR CROSSING UNDERGROUND UTILITIES. THIS WORK TO PROTECT THOSE UTILITIES IS NOT CONSIDERED AS EXTRA WORK. IT IS THE CONTRACTOR'S RESPONSIBILITY TO REVIEW IMPROVEMENT PLANS, IN CONJUNCTION WITH THIS PLAN, AND BID THE WORK ACCORDINGLY.
13. THE QUANTITIES SHOWN ON THESE PLANS ARE ONLY ESTIMATES OF WHAT WILL ACTUALLY BE REQUIRED FOR THE CONSTRUCTION OF THE OVERALL PROJECT. FINAL QUANTITIES MAY VARY ACCORDING TO CHANGES, ADDITIONS, DELETIONS OR OMISSIONS ON THE ORIGINAL PLAN.
14. VERIFY ALL SUBSTRUCTURE EXCAVATION DIMENSIONS WITH SUPPLIER(S) BEFORE BIDDING.
15. TARRAR UTILITY CONSULTANTS ASSUMES NO RESPONSIBILITY FOR ANY VARIANCE BETWEEN THESE PLANS AND THE ACTUAL FIELD CONDITIONS. THE CONTRACTOR SHOULD REVIEW THE PROJECT SITE PRIOR TO SUBMITTING ITS BID.
16. THE CONTRACTOR IS REQUIRED TO EXCAVATE BELL HOLE(S) AT TIE-IN LOCATIONS AS DIRECTED BY PARTICIPATING UTILITY.
17. CONTRACTOR WILL COMPLY WITH ALL LAWS, ORDINANCES AND REGULATIONS. CONTRACTOR SHALL BE FAMILIAR WITH O.S.H.A. INDUSTRIAL ORDERS AND SHALL CONDUCT HIS WORK ACCORDINGLY. WHEN WORKING ENERGIZED EQUIPMENT, THE UTILITY OWNER SHALL BE NOTIFIED TO SUPPLY THE APPROPRIATE MAN POWER AND SAFETY PRECAUTIONS AS NEEDED. THE CONTRACTOR IS RESPONSIBLE FOR PUBLIC SAFETY AND TRAFFIC CONTROL MEASURES.
18. THE CONTRACTOR IS RESPONSIBLE TO PROVIDE AS-BUILT DRAWINGS AFTER INSTALLATION OF PG&E'S GAS AND ELECTRIC SYSTEMS (PRIOR TO "HOT TIE-INS").
19. THE CITY INSPECTOR SHALL BE NOTIFIED TWO WORKING DAYS PRIOR TO COMMENCEMENT OF WORK. COORDINATE WITH THE INSPECTOR ANY SERVICES TO BE ABANDONED.
20. THE CONTRACTOR IS TO VERIFY THE RIGHT OF WAY, PUBLIC UTILITY EASEMENT AND/OR PUBLIC SERVICE EASEMENT ACQUISITION WITH THE APPLICANT PRIOR TO CONSTRUCTION WITHIN AREAS OF QUESTION.
21. PG&E'S GENERAL TERM AND CONDITIONS FOR GAS AND ELECTRIC EXTENSION AND SERVICE CONSTRUCTION BY "APPLICANT" (EFFECTIVE 07/1/95) TO BE UTILIZED FOR ALL TRENCHING, BACKFILLING, AND INSTALLATION WORK.
22. IN THE EVENT OF DISPUTES OR DISAGREEMENT OVER ANY INSTALLATIONS, DESIGNS, PLANS OR DRAWINGS, THE SPECIFICATIONS AND REQUIREMENTS OF THE INDIVIDUAL UTILITY COMPANIES AND THEIR INSPECTORS SHALL TAKE PRECEDENCE. IN CASE OF DISCREPANCIES WITHIN THE DRAWINGS AND SPECIFICATIONS HEREIN, THE CONTRACTOR SHALL CONSULT TARRAR UTILITY CONSULTANTS FOR INTERPRETATION BEFORE WORK IS STARTED.
23. TARRAR UTILITY CONSULTANTS HEREIN, ASSUMES NO RESPONSIBILITY WHATSOEVER FOR THE QUALITY, QUANTITY OR TIMING OF WORK TO BE PERFORMED BY THE CONTRACTOR, UTILITY COMPANY CONSTRUCTION CREWS, OR OTHER SUB-CONTRACTOR OF DEVELOPER.
24. ALL TRENCHING, BACKFILLING AND INSTALLATION WORK IS TO BE IN ACCORDANCE WITH THE STANDARD PRACTICES AND SPECIFICATIONS OF EACH UTILITY COMPANY PARTICIPATING IN THE UTILITY TRENCHES WITHIN THE PROJECT.
25. THE CONTRACTOR IS RESPONSIBLE FOR MAINTAINING POINTS OF ACCESS THAT ARE AGREEABLE TO ADJACENT LAND USES AND TENANTS AT ALL TIMES.
26. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ASCERTAINING WHAT INSPECTIONS WILL BE REQUIRED FOR APPROVAL OF THE WORK AND FOR COORDINATING ALL SUCH INSPECTIONS. THE CONTRACTOR SHALL GIVE AT LEAST 48 HOURS PRIOR NOTICE TO THE CITY, SOILS ENGINEER, UTILITY COMPANIES OR ANY OTHER INDIVIDUALS OR PUBLIC AGENCIES, THAT THE WORK IS READY FOR INSPECTION.
27. THE CONTRACTOR SHALL NOTIFY DEVELOPER 48 HOURS PRIOR TO THE NEED FOR SURVEY STAKING. THE CONTRACTOR IS RESPONSIBLE FOR THE PRESERVATION OF ALL CONSTRUCTION STAKING SET BY THE DEVELOPER'S SURVEYORS AND WILL BE BACK CHARGED FOR ANY RE-STAKING THAT IS REQUIRED. ANY EXTRA CONSTRUCTION STAKING NECESSITATED SOLELY BY THE CONTRACTOR'S NEGLIGENCE WILL BE CHARGED TO AND PAID FOR BY THE CONTRACTOR.
28. ALL TRANSFORMERS AND TRANSFORMER PADS ARE TO BE INSTALLED PER PG&E SPECIFICATIONS. PROTECTIVE BOLLARDS ARE TO BE PLACED WHERE NEEDED.
29. THE CONTRACTOR SHALL MAKE HIMSELF FAMILIAR WITH THE PROJECT IMPROVEMENT PLANS AND CONDUCT HIS WORK ACCORDINGLY.
30. KEEP ALL BOXES AND PEDESTALS WITHIN PUBLIC UTILITY EASEMENTS OR RIGHT OF WAY. AS SHOWN.
31. ALL SAND BACKFILL MUST HAVE TESTING OF PH LEVEL AS WELL AS SAND EQUIVALENT. SEE **CITY OF AMERICAN CANYON** REQUIREMENTS.
32. THE PROPOSED CONSTRUCTION OPERATION MAY TAKE PLACE AT OR NEAR FENCE LINES, PROPERTY LINES AND PROPERTY IMPROVEMENTS PRIOR TO CONSTRUCTION, CONTRACTOR SHALL BE RESPONSIBLE FOR IDENTIFYING THESE AREAS AND FOR MAINTAINING THESE AREAS AND FACILITIES AT ALL TIMES DURING THE CONSTRUCTION OPERATION.
33. THE CONTRACTOR ASSUMES SOLE AND COMPLETE RESPONSIBILITY FOR THE SITE CONDITION AND SHALL DEFEND AND HOLD THE DEVELOPER AND TARRAR UTILITY CONSULTANTS HARMLESS FROM ANY ALLEGED CLAIMS OR LIABILITIES, EXCEPT THOSE ARISING FROM SOLE NEGLIGENCE OF THE DEVELOPER OR TARRAR UTILITY CONSULTANTS.
34. THE APPROXIMATE LOCATIONS OF ALL EXISTING UTILITY COMPANY UNDERGROUND LINES, POLES BOXES, ETC., WERE OBTAINED FROM A REVIEW OF AVAILABLE UTILITY COMPANY RECORDS, REPRESENTATIONS OF UTILITY COMPANY PERSONAL, OR FIELD OBSERVATIONS. NEITHER THE DEVELOPER NOR TARRAR UTILITY CONSULTANTS ASSUME ANY RESPONSIBILITY FOR VARIANCES BETWEEN THESE PLANS AND THE ACTUAL FIELD CONDITIONS. NO EXTRA PAYMENT WILL BE MADE TO THE CONTRACTOR FOR ANY ADDITIONAL TRENCHING, BOX EXCAVATIONS, MATERIALS, ETC., THAT MAY BE REQUIRED TO COMPLETE THIS PROJECT IN THE EVENT AN EXISTING TIE-IN POINT SUBSTRUCTURE IS EITHER NON-EXISTING OR IS NOT SHOWN ON THE PLANS IN ITS ACTUAL FIELD POSITION. IT IS THE CONTRACTOR'S OBLIGATION AND RESPONSIBILITY TO SAFELY LOCATE ALL EXISTING UNDERGROUND FACILITIES BY SURFACE MARKING AND/OR HAND EXCAVATION PRIOR TO STARTING CONSTRUCTION.
35. "DEVELOPER AND/OR CONTRACTOR IS RESPONSIBLE TO OBTAIN A **CITY OF AMERICAN CANYON** ENCROACHMENT PERMIT FOR ALL WORK DONE IN THE PUBLIC RIGHT OF WAY. DEVELOPER AND/OR CONTRACTOR IS ALSO RESPONSIBLE TO PROVIDE JOINT TRENCH PLANS TO THE **CITY OF AMERICAN CANYON** AT THE TIME OF APPLICATION FOR THE ENCROACHMENT PERMIT."

JOINT TRENCH NOTES:

1. TRENCH COVER & CLEARANCES SHOWN ARE MINIMUMS ONLY AND MAY REQUIRE ALTERATIONS TO SUIT FIELD CONDITIONS.
2. IT IS RECOMMENDED THAT ALL FACILITIES ARE TO BE A MINIMUM OF 12" BELOW SUB–BASE DISTURBANCE.
3. * WITH MUTUAL AGREEMENT FROM PARTICIPATING UTILITIES, WHEN 4" O.D. OR SMALLER GAS PIPE IS INSTALLED, SEPARATION MAY BE REDUCED TO NOT LESS THAN 6" BETWEEN GAS AND COMMUNICATION DUCTS (TELEPHONE, C.A.T.V. & FIBER OPTIC).
4. * WHERE 6" GAS MAIN IS LOCATED IN THE JOINT TRENCH A 18" MINIMUM SEPARATION FROM GAS MAIN TO ALL UTILITIES WILL BE REQUIRED.
5. ** WITH MUTUAL AGREEMENT FROM PARTICIPATING UTILITIES, STREET LIGHT SEPARATION MAY BE REDUCED TO 0" BETWEEN STREET LIGHT AND COMMUNICATION DUCTS (TELEPHONE, C.A.T.V. & FIBER OPTIC).
6. TRENCH CONFIGURATIONS SHOWN ARE FOR INSTALLATION WHERE EACH OCCUPANT IS UTILIZING HIS ENTIRE SPACE ALLOCATION. OTHER CONFIGURATIONS OR REDUCED DIMENSIONS MAY BE USED, PROVIDED THAT MINIMUM COVER AND CLEARANCES ARE MAINTAINED.
7. THE CONTRACTOR IS TO ADJUST TRENCH DEPTHS AT ALL JOINT TRENCH LATERAL CROSSINGS TO MAINTAIN REQUIRED CLEARANCES BETWEEN ALL PARTICIPATING UTILITIES.
8. TRENCH SECTIONS ARE SHOWN SCHEMATICALLY AND INDICATE AREAS OF OCCUPANCY ONLY; THEY DO NOT REFLECT SIZE OR QUANTITY OF FACILITIES TO BE INSTALLED.
9. TRENCH FOOTAGES PER SECTION ARE APPROXIMATE. SECTIONS ARE DESIGNED TO ACCOMMODATE ALL REQUIRED FACILITIES AS INDICATED ON EACH TRENCH PARTICIPANT'S CONSTRUCTION DRAWINGS.
10. THE CONTRACTOR SHALL VERIFY TRENCH FOOTAGES FOR ACCURACY PRIOR TO EXCAVATION AND TAKE NECESSARY PRECAUTION CROSSING WATER AND SEWER FACILITIES.
11. THE CONTRACTOR SHALL REFER TO THE COMPOSITE, CONDUIT, AND/OR EACH RESPECTIVE UTILITY INSTALLATION PLAN FOR THE NECESSARY CONDUIT CABLE AND/OR PIPE TO BE INSTALLED IN THIS PROJECT.
12. TYPE "M2" TRENCH SHALL BE INSTALLED AFTER CURB AND GUTTER INSTALLATION. CONTRACTOR SHALL COORDINATE ADDITIONAL MOVE–INS NECESSARY TO COMPLETE THE SERVICES TO THE DWELLING UNITS WITH THE DEVELOPER, ALL AGENCIES AND THE UTILITY COMPANIES. THE COST OF THESE MOVE–INS SHALL BE INCLUDED IN THE CONTRACTOR'S UNIT PRICE FOR TRENCHING.
13. THE AVERAGE TRENCH DEPTHS SHOWN ARE BASED ON THE MINIMUM UTILITY COMPANY REQUIREMENTS FOR DEPTH AND SEPARATION. CONTRACTOR SHALL ADJUST TRENCH WIDTH & DEPTH AS REQUIRED TO ADEQUATELY CLEAR EXISTING UNDERGROUND FACILITIES AND MAINTAIN MINIMUM UTILITY CLEARANCES. ALL TRENCHES OVER 60" DEEP MUST COMPLY WITH OSHA REQUIREMENTS. (SEE THE JOINT TRENCH MINIMUM COVER AND CLEARANCE TABLE)
14. CONTRACTOR SHALL USE SAND BEDDING AND SHADING AS REQUIRED BY THE UTILITY COMPANIES. THE BOTTOM OF THE TRENCH SHALL BE CLEARED OF ROCKS AND OTHER HARD SURFACES. DISTRIBUTION TRENCHES WITHOUT TELEPHONE CONDUIT DO NOT REQUIRE BEDDING MATERIAL. SERVICE TRENCHES WITHOUT TELEPHONE CONDUIT REQUIRE 2" SAND BEDDING AS A PAD ON WHICH UTILITY FACILITIES CAN REST. SERVICE TRENCHES CONTAINING TELEPHONE CONDUIT ONLY REQUIRE A 1" SAND BEDDING. ALL OTHER TRENCHES CONTAINING TELEPHONE CONDUIT REQUIRE A 3" SAND BEDDING. REFER TO PG&E GREEN BOOK PUBLICATION S5453, EXHIBIT B AND AT&T SPEC95 "AT&T SPECIFICATIONS" TRENCHING AND CONDUIT GUIDE FOR FURTHER INFORMATION.
15. ALL TRENCHING AND BACKFILLING TO BE DONE IN ACCORDANCE WITH THE **CITY OF AMERICAN CANYON** ENGINEERING STANDARDS AND SPECIFICATIONS.
16. ALL PG&E, TELEPHONE, CABLE, AND FIBER OPTIC BOXES AND JOINT TRENCH FACILITIES ARE TO MAINTAIN A MINIMUM OF 3' SEPARATION FROM SEWER AND WATER LATERALS AND DRIVEWAYS. ALL UTILITY VAULTS, BOXES, PEDESTALS, ETC. MUST MAINTAIN A 5' MINIMUM CLEARANCE FROM FIRE HYDRANTS, AND 3' MINIMUM FROM STREETLIGHTS.

Calculation Summary							
Label	CalcType	Units	Avg	Max	Min	Avg/Min	Max/Min
IN TRACK ENTRANCE	Illuminance	Fc	2.77	7.8	0.7	3.96	11.14
PEDESTRIAN PLAY AREA	Illuminance	Fc	3.99	14.9	0.2	19.95	74.50
TYPICAL COURTYARD PATHWAY	Illuminance	Fc	2.52	6.0	0.8	3.15	7.50
TYPICAL DRIVE LANE	Illuminance	Fc	2.77	7.7	0.5	5.54	15.40
TYPICAL STRAIGHT PATHWAY	Illuminance	Fc	2.13	5.1	0.5	4.26	10.20

Note: Unless otherwise specified - the lamp lumen depreciation (LLD) for legacy sources used in these calculations is based on published mean lumen ratings by major lamp manufacturers; 0.80 LLD for pulse start metal halide; 0.90 LLD for high pressure sodium; 0.95 LLD for linear T8 and T5 fluorescent; 0.86 LLD for compact fluorescent and induction; 0.88 LLD for Cosmo and Elite lamps. 0.94 LDD for all LED sources. Unless otherwise noted - 0.90 luminaire dirt depreciation (LDD) is commonly applied. In cases where appropriate - ballast factor (BF) is applied. Additional user defind factors (UDF) may be applied if necessary to represent luminaire performance to a higher degree of accruracy. Total light loss factor (LLF) is the product of all multiplied loss factors.

LIGHTING PLAN - PHOTOMETRIC ANALYSIS - LAYOUT VERIFICATION

INSTANTANEOUS DATA USED AS INPUT FOR THESE CALCULATIONS IS BASED ON ESTABLISHED IESNA TESTING PROCEDURES AND LABORATORY CONDITIONS. FIELD CONDITIONS MAY DIFFER DUE TO ACTUAL LAMP, BALLAST, ELECTRICAL, AND SITE CHARACTERISTICS.

Calculations have been performed according to IES/IDA standards and good practice. However, we cannot guarantee the accuracy of the results due to the inherent variability and tolerances in calculation methods, testing procedures, component performance, installation methods, and field conditions. Actual measurements may vary from calculations. Reflectances, landscaping, and architectural elements significantly affect the distribution of light and the resulting illuminance levels. Lamp and ballast variations may also cause differences between measured values and calculated values.

Attachment 1.3: Exhibit C - Landscaping Plans

PLANTING NOTES

1. THE PLANTING DESIGN FOR THE SITE IS DROUGHT TOLERANT AND CONSISTS OF A BALANCE OF EVERGREEN AND DECIDUOUS PLANTING AS WELL AS NATIVE AND ORNAMENTAL PLANTING.
2. PROPOSED TREE LOCATIONS ARE BASED ON STANDARD JOINT TRENCH LOCATIONS. FINAL TREE LOCATIONS TO BE DETERMINED WHEN FINAL UTILITY LOCATIONS ARE PROVIDED. TREE PLACEMENT MAY BE ADJUSTED AND FINAL TREE COUNT MAY CHANGE.
3. ALL SHRUBS AND GROUNDCOVER MATERIAL SELECTED HAVE A WUCOLS WATER USE RATING OF VERY LOW TO MODERATE.
4. PROPOSED TREE CANOPIES ARE SHOWN AT 85% MATURE GROWTH DIAMETER IN ORDER TO ENSURE THERE IS SUFFICIENT ROOM FOR TREE GROWTH AND HEALTH.

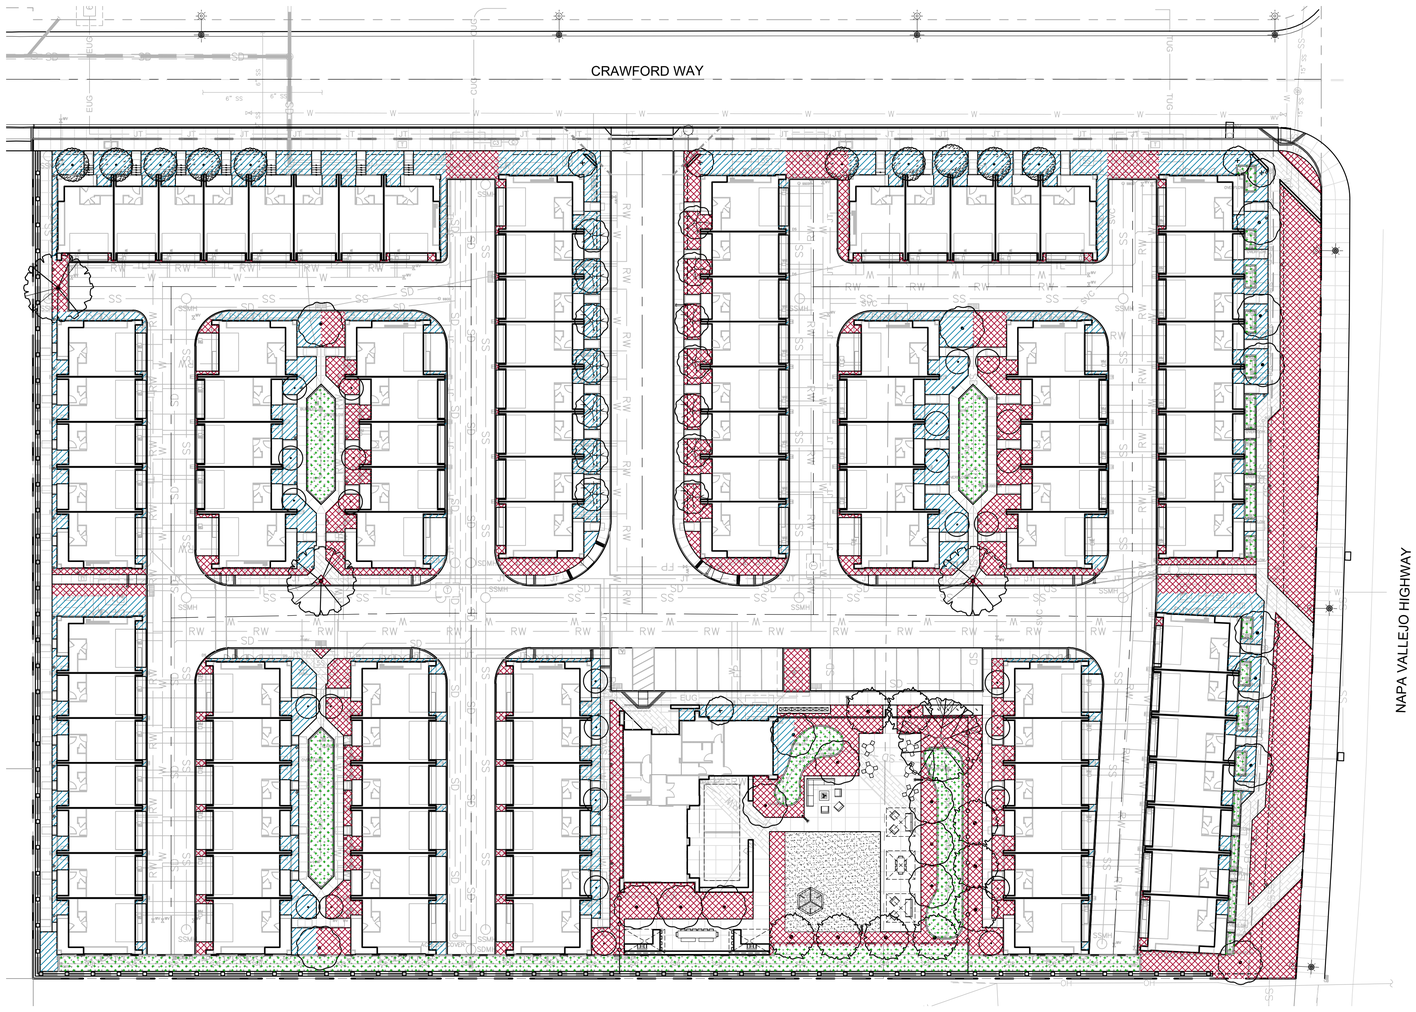
MWELO STATEMENT OF COMPLIANCE

"I HAVE COMPLIED WITH THE CRITERIA OF THE CITY OF AMERICAN CANYON WATER EFFICIENT LANDSCAPING ORDINANCE AND APPLIED THEM ACCORDINGLY FOR THE EFFICIENT USE OF WATER IN THE LANDSCAPE AND IRRIGATION DESIGN PLAN."

PHILIP A. VANDERTOOLEN, PRESIDENT
VANDERTOOLEN ASSOCIATES, INC.
CA LICENSE # 2798



IRRIGATION CONCEPT STATEMENT

THE IRRIGATION DESIGN FOR THE SITE SHALL COMPLY WITH THE STATE OF CALIFORNIA MODEL WATER EFFICIENT LANDSCAPE ORDINANCE (TITLE 23 - DIVISION 2-CHAPTER 2.7) AND THE CITY OF AMERICAN CANYON WATER EFFICIENT LANDSCAPE STANDARDS.

THE IRRIGATION SYSTEMS WILL BE AUTOMATICALLY CONTROLLED BY AN ET IRRIGATION CONTROLLER CAPABLE OF MULTIPLE PROGRAMMING AND INDEPENDENT TIMING OF INDIVIDUAL IRRIGATION SYSTEMS. THE CONTROLLER WILL HAVE A 24-HOUR CLOCK TO ALLOW MULTIPLE START TIMES AND REPEAT CYCLES TO ADJUST FOR SOIL PERCOLATION RATES.

THE IRRIGATION SYSTEMS WILL CONSIST PRIMARILY OF LOW VOLUME, LOW FLOW BUBBLERS FOR TREES, POINT SOURCE DRIP IRRIGATION FOR SHRUBS AND GROUNDCOVERS, AND LOW FLOW IRRIGATION OVERHEAD SPRAY FOR BIORETENTION AREAS.

PLANTS WILL BE GROUPED ONTO SEPARATE VALVES ACCORDING TO SUN EXPOSURE AND WATER USE TO ALLOW FOR IRRIGATION APPLICATION BY HYDROZONE. THE IRRIGATION SCHEDULING WILL REFLECT THE REGIONAL EVAPO-TRANSPIRATION RATES. THE ENTIRE SITE WILL BE DESIGNED TO RUN DURING NIGHTTIME HOURS WHEN IRRIGATION IS MOST EFFICIENT.

IRRIGATION NOTES

1. IRRIGATION ZONES: ALL LANDSCAPED AREAS HAVE AN IRRIGATION ZONE DESIGNATION OF "SHRUBS / GROUNDCOVERS/ TREES' OR 'BIORETENTION." NO IRRIGATION ZONES FOR ANNUALS AND TURFED SLOPES EXCEEDING 10% ARE PROPOSED.

2. DEPTH OF IRRIGATION LINES: ALL ON-GRADE LATERAL LINES SHALL BE BURIED TO A DEPTH OF 12" MIN. ALL ON-GRADE MAINLINES SHALL BE BURIED TO A DEPTH OF 18" MIN.

3. BACKFLOW PREVENTER: BACKFLOW PREVENTER SHALL BE A REDUCED PRESSURE PRINCIPLE BACKFLOW PREVENTER (FEBCO 825Y OR EQUAL) TYPE AS APPROVED BY WATER PURVEYOR.

4. IRRIGATION SPRINKLER TYPES: ALL SPRINKLERS SHALL UTILIZE MATCHED PRECIPITATION, PRESSURE COMPENSATING NOZZLES FOR MAXIMUM UNIFORMITY OF DISTRIBUTION. IRRIGATION SYSTEMS TO BE INSPECTED PERIODICALLY FOR BROKEN OR DEFICIENT EQUIPMENT.

5. IRRIGATION CONTROLLER: CONTROLLER SHALL BE AN AUTOMATIC ET (EVAPOTRANSPIRATION) WITH MULTIPLE PROGRAMMING CAPABILITY. CONTROLLER TO BE REPROGRAMMED SEASONALLY TO MINIMIZE RUNOFF OR OVER WATERING. WEATHER SENSING DEVICES SHALL BE UTILIZED TO CONTROL IRRIGATION CYCLES ACCORDING TO SPECIFIC IRRIGATION REQUIREMENTS.

6. CLASS OF IRRIGATION PIPE: ALL MAINLINE SHALL BE SCHEDULE 40 PVC. ALL LATERAL LINE SHALL BE CLASS 200 PVC.

7. IRRIGATION EMITTERS: ALL BIORETENTION AREAS SHALL BE IRRIGATED USING LOW FLOW OVERHEAD ROTARY SPRAY. ALL SHRUB/ GROUNDCOVER AREAS SHALL BE IRRIGATED USING DRIP IRRIGATION SYSTEM. ALL TREE AREAS SHALL BE IRRIGATED USING BUBBLER IRRIGATION SYSTEM.

Water Efficient Landscape Worksheet

Adapted from California Code of Regulations Title 23, Division 2, Chapter 2.7, Model Water Efficient Landscape Ordinance

Use drop down menus or type in values in white cells only. Results appear in Yellow or Red highlighted cells below.

Site Information

Site Name → Crawford Way Apartments
Site Type → Residential — Allowed ETAF: 0.55
Annual Eto (inches/yr) → 43.8

Hydrozone or Planting Description (a)	Plant Factor (PF)		Irrigation Method (b)	Irrigation Efficiency (IE) (c)	ETAF (PF/IE)	Landscape Area (sqft.)	ETAF x Area	*Estimated Total Water Use (gal./yr.)
Regular Landscape Areas								
TREES (LOW/MOD)	0.3	Low	RWS-bubbler	0.81	0.4	801	297	8,424
SHRUBS (LOW/MOD)	0.3	Low	Drip	0.81	0.4	33,472	12,397	352,026
BIO-INFILTRATION (MOD)	0.4	Mod./Ave.	Overhead Spray	0.75	0.5	7,372	3,932	111,645
					SUBTOTAL→	41,645	16,625	472,096
Special Landscape Areas								
1					1	0	0	0
2					1		0	0
3					1		0	0
					SUBTOTAL →	0	0	0
					Estimated Total Water Use (ETWU) →			472,096
					Maximum Allowed Water Allowance (MAWA) →			650,403

(a) Hydrozone #/Planting Description
1.) Front Lawn
2.) low water use planting
3.) medium water use

(b) Irrigation Method
Overhead Spray
Drip
Bubbler

(c) Irrigation Efficiency
0.75 for spray head
0.81 for drip

(*) ETWU (Annual Gallons Required)=
Eto x 0.62 x ETAF x Area where 0.62 is a conversion factor that converts acre-inches per acre per year to gallons per square foot per year

(**) MAWA (Annual Gallons Allowed)=
(Eto) x (0.62) x [(ETAF x LA) + ((1-ETAF) x SLA)]
where 0.62 is a conversion factor that converts acre-inches per acre per year to gallons per square foot per year, LA is the total landscape area in square feet, and ETAF is 0.55 for residential areas and 0.45 for non-residential areas.

ETAF Calculations
Regular Landscape Areas

Total ETAF x Area	16,625
Total Area	41,645
Average ETAF	0.40

All Landscape Areas

Total ETAF x Area	16,625
Total Area	41,645
Sitewide ETAF	0.40

Notes:

Average ETAF (ET adjustment Factor) for Regular Landscape Areas must be 0.55 or below for residential areas, and 0.45 or below for non-residential areas.

Calculator developed to meet code effective Dec. 1, 2015
This calculator is for estimating purposes only.

1.0 INTRODUCTION

This Environmental Impact Report (EIR) Addendum of environmental impacts is being prepared to conform to the requirements of the California Environmental Quality Act (CEQA), the CEQA Guidelines (California Code of Regulations 15000 et. seq.), and the regulations and policies of the City of American Canyon (Lead Agency [City]). This EIR Addendum evaluates the potential environmental impacts which might reasonably be anticipated to result from implementation of the Crawford Way Multifamily Project (Project). This document tiers from the City's Broadway District Specific Plan (BDSP) EIR which was certified in 2019 (SCH #2017042025).

1.1 Background and Purpose of Addendum

The Project applicant, Pensacola Residential, is proposing to develop 100 townhome style apartments on 4.336 acres (23.06 dwelling units/acre) within the Broadway District in the City of American Canyon, in Napa County, California. The property has a zoning designation of Local Serving Mixed Use. Multifamily dwellings are permitted at a density of 20 dwelling units per gross acre.

As an affordable housing project, the Project qualifies for a density bonus under the State Density Bonus Law (DBL). The State DBL encourages cities to offer bonuses and incentives to housing developers that will "contribute significantly to the economic feasibility of lower income housing in proposed housing developments." (C.G.C. § 65915) The American Canyon Municipal Code (ACMC) Section 19.27.025 allows a project applicant to submit a proposal to the City to waive or reduce development standards that the applicant believes would physically preclude housing construction that satisfies density bonus criteria (ACMC § 19.27.010). The City shall waive or reduce an applicant's development standard request, unless it finds, based on substantial evidence, that:

1. The waiver or reduction would have a specific, adverse impact upon public health and safety, or the physical environment, or on any real property listed in the California Register of Historic Resources, and there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact; or
2. The waiver or reduction would be contrary to state or federal law.

The Project would include market rate and affordable housing in the following proportions:

- Five percent very low income (five units)
- Five percent low income (five units)
- Five percent moderate income (five units)

The Project would include five percent very low-income housing units, and therefore qualifies for a 20 percent density bonus per the State DBL. The Project applicant is requesting three waivers for the Project, including the following:

WAIVER 1. BUILDING HEIGHT AT SIDE STREET SETBACK

The BDSP calls for a reduced height of 24 feet when the building is located between 15 and 30 feet of the street side setback. The applicant requests a building height waiver to accommodate the three-story buildings that are partially located within the specified setback range. The Project requires a minimum of three stories in this area to accommodate the additional units provided by the density bonus. Without the waiver of the building height requirement, the density bonus Project could not be constructed at the stated density as designed.

WAIVER 2. GARAGE SIZE MINIMUMS

The City's Parking Standards require multifamily unit garage spaces to be 10 feet wide by 20 feet deep by 7 feet-6 inches high. In order to provide two parking spaces per unit, the Project would construct two-car garages with dimensions of 17 feet-11 inches wide and 20 feet-1 inch deep for Unit 1 floor plans and dimensions of 20 feet-1 inch wide and 20 feet-1 inch deep for Unit 2 floor plans. These proposed garage parking spaces would be slightly narrower than the minimum garage space design standards required for multifamily housing, and therefore the Project applicant is requesting a waiver from these requirements. The overall width and height within these standards would preclude the Project from being built with the additional density bonus units.

WAIVER 3. BUILDING TO BUILDING SETBACKS

The BDSP calls for setbacks between the building face (front or rear) to be 35 feet and the setback between building faces and building side to be 25 feet. Without the waiver of building-to-building setbacks requirement, the Project could not be constructed due to the constraints of the site and the number of market rate housing units and density bonus units proposed.

This Addendum, checklist, and attached supporting documents have been prepared to determine whether and to what extent the BDSP EIR prepared for the City remains sufficient to address the potential impacts resulting from the three waivers requested by the Project applicant.

1.2 Environmental Analysis and Conclusions

1.2.1 Required Findings for Use of an Addendum

Section 15164 of the State CEQA Guidelines states that an addendum to a previously certified EIR shall be prepared if some changes or additions are necessary to the previously certified document, but none of the conditions described in Section 15162 have occurred. Section 15162 of the State CEQA Guidelines identifies the conditions of a project that would require preparation of a subsequent EIR, such that an Addendum to the prior EIR would not be permitted under CEQA. A proposed change in a project will require preparation of a subsequent EIR if:

- ***A. The change in the project is substantial.*** Substantial changes in the project are those that would require major revisions of the certified 2019 BDSP EIR (SCH No. 2017042025) due to the involvement of new significant environmental effects, or if a substantial increase in the severity of previously identified significant effects has occurred.
- ***B. The circumstances under which the project is undertaken have substantially changed.*** Substantial changes in circumstances are those that would require major revisions of the certified 2019 BDSP EIR to describe and analyze new significant environmental effects, or any changes that would cause a substantial increase in the severity of the previously identified significant effects.
- ***C. New information of substantial importance, which was not known and could not have been known, with the exercise of reasonable diligence at the time the previous environmental document was approved, shows any of the following.***
    1. The project will have one or more significant effects not discussed in the previous EIR or negative declaration.
    2. Significant effects previously examined will be substantially more severe than shown in the previous EIR.

3. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative.
4. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Additionally, pursuant to Section 15163 of the State CEQA Guidelines, a lead agency may choose to prepare a supplement to an EIR rather than a subsequent EIR if:

- Any of the conditions described in Section 15162 would require the preparation of a subsequent EIR, and
- Only minor additions or changes would be necessary to make the previous EIR adequately apply to the project in the changed situation.

1.2.2 Modified Environmental Checklist Form

Pursuant to Public Resources Code (PRC) Section 21166, and CEQA Guidelines Sections 15162 and 15164, subd. (a), this EIR Addendum has been prepared to evaluate the proposed Project. The EIR Addendum uses the standard environmental checklist categories provided in Appendix G of the CEQA Guidelines, but provides answer columns for evaluation consistent with the considerations listed under CEQA Guidelines Section 15162, subd.(a).

The purpose of the checklist is to evaluate the categories in terms of any "changed condition" (e.g., changed circumstances, project changes, or new information of substantial importance) that may result in a changed environmental effect (e.g., a new significant impact or substantial increase in the severity of a previously identified significant effect) that would require further environmental review (CEQA Guidelines Section 15162).

The questions posed in the checklist come from Appendix G of the State CEQA Guidelines. The explanation of the checklist evaluation categories is provided below.

EXPLANATIONS OF CHECKLIST EVALUATION CATEGORIES

A. Conclusion in Prior Final EIR and Related Documents?

   This column summarizes the conclusion of the Prior Final EIR relative to the environmental issue listed under each topic.

B. Do the Proposed Changes Involve New Impacts?

   Pursuant to CEQA Guidelines Section 15162, subd. (a)(1), this column indicates whether the changes represented by the proposed project will result in new significant environmental impacts not previously identified or mitigated by the Final EIR or whether the changes will result in a substantial increase in the severity of a previously identified significant impact.

C. New Circumstances Involving New Impacts?

   Pursuant to CEQA Guidelines Section 15162, subd. (a)(2), this column indicates whether there have been substantial changes with respect to the circumstances under which the Project is undertaken that will require major revisions to the Final EIR due to the involvement of new significant

environmental effects or a substantial increase in the severity of previously identified significant effects.

D. New Information Requiring New Analysis or Verification?

Pursuant to CEQA Guidelines Section 15162, subd. (a)(3)(A-D), this column indicates whether new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the Final EIR was adopted, shows any of the following:

a) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
b) Significant effects previously examined will be substantially more severe than shown in the previous Final EIR;
c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous final EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

If the additional analysis completed as part of this environmental review were to find that the conclusions of the Final EIR remain the same and no new significant impacts are identified, or identified impacts are not found to be substantially more severe, or additional mitigation is not necessary, then the question would be answered "no" and no additional environmental document would be required.

E. Mitigation Measures Implemented or Addressed Impacts

Pursuant to CEQA Guidelines Section 15162, subd. (a)(3), this column indicates whether the Final EIR provides mitigation measures to address effects in the related impact category. Any previously adopted mitigation measures will be identified. The response will also address proposed revisions to previously adopted mitigation measures. These mitigation measures will be implemented with the construction of the project, as applicable. If "None" is indicated, the Final EIR has concluded that the impact either does not occur with this project or is not significant, and therefore no additional mitigation measures are needed.

1.2.3 Findings

There are no substantial changes proposed by the Project or in the circumstances in which the Project will be undertaken that require major revisions of the BDSP EIR. The proposed revisions do not require preparation of a new subsequent or supplemental EIR, due to either the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. As illustrated herein, the proposed Project is consistent with the previous EIR and requesting waivers that are allowed according to the ACMC; therefore, an Addendum is the appropriate method of documenting CEQA compliance for the Project.

1.2.4 Conclusions

The City may grant the waivers requested by the Project applicant and may also approve the proposed Project based on this Addendum. The impacts of the proposed Project remain within the impacts

previously analyzed in the BDSP EIR (CEQA Guidelines § 15164). The proposed Project does not require any major revisions to the BDSP EIR. No new significant information or changes in circumstances surrounding the proposed Project have occurred since the certification of the EIR. Therefore, the previous CEQA analyses completed for the BDSP remain adequate. The applicable mitigation measures from the EIR would be imposed on the proposed Project as described herein.

1.3 Mitigation Monitoring and Reporting Program

As required by PRC Section 21081.6, subd. (a)(1), a Mitigation Monitoring and Reporting Program (MMRP) has been prepared for the 2019 BDSP EIR in order to monitor the implementation of the mitigation measures that have been adopted. Any long-term monitoring of mitigation measures imposed on the overall development will be implemented through the MMRP.

2.0 PROJECT DESCRIPTION

2.1 Broadway District Specific Plan and Environmental Impact Report

2.1.1 Broadway District Specific Plan

The BDSP planning area is located within the City of American Canyon and encompasses 235 acres along both sides of the Broadway corridor (State Route 29 [SR-29]) from the American Canyon/Vallejo City limit (Napa/Solano County line) to the northern City limit. The plan area is bounded by a variety of residential uses (west), unincorporated Napa County (north), the Union Pacific rail line (east), and the City of Vallejo (south).

The BDSP was prepared in order to guide the development of up to 1,200 net new dwelling units and up to 840,000 square feet of net new non-residential uses within the plan area. The BDSP also includes several mobility enhancements, including reduction in SR-29 speed limits from 50 and 55 miles per hour (mph) to 35 mph, street extensions, bicycle and pedestrian facilities, and streetscape improvements.

Based on the key issues identified during the stakeholder outreach process, the BDSP's objectives are identified in Section 2.3 of the certified EIR to include:

1. Positively contribute to the local economy via new capital investment, expansion of the tax base, the development of new housing opportunities, and the creation of new employment opportunities.
2. Create a planning framework that promotes the development of highest- and-best uses on undeveloped and underutilized properties within the Broadway District.
3. Enhance safety on the SR-29 corridor by lowering the speed limit, developing bicycle and pedestrian facilities, and creating parallel routes for local trips.
4. Nurture an environment where the Broadway District can become a destination for American Canyon.
5. Leverage citywide economic benefits from the Broadway District Specific Plan.
6. Increase the number and type of housing opportunities in the Broadway District.
7. Encourage variety in the scale and design of new development.
8. Foster improved community health.
9. Provide new public spaces that include parks, plazas, private recreational facilities, and other gathering places.

There are nine subareas within the BDSP: Downtown Core, Broadway Residential, Business Park, Medium Density Residential, Home Improvement, Northern Gateway, Southern Gateway, Southeast Area Specific Plan, and Local Serving Mixed-Use. Each subarea is further divided into zoning districts to identify specific land uses that are allowed within the subareas and to establish standards that govern future development.

2.1.2 Broadway District Specific Plan Environmental Impact Report

The City Council certified the 2019 BDSP EIR (State Clearinghouse [SCH] No. 2017042025) on June 18, 2019. The BDSP EIR was prepared in accordance with CEQA to evaluate the potential environmental impacts associated with the implementation of the BDSP. The EIR evaluated the following components:

- The development of up to 1,200 new dwelling units.
- The development of up to 840,000 square feet of new non-residential uses within an approximately 300-acre area along SR-29 within the City of American Canyon.
- The development of number of mobility enhancements, including roadway extensions and improvements, and new bicycle and pedestrian facilities.

Most of the environmental impacts identified in the BDSP EIR were determined to be less than significant or were reduced to a level considered less than significant through either the adoption of mitigation measures or the incorporation of project revisions that would avoid or substantially lessen potential impacts (City of American Canyon 2019). However, even with implementation of all available mitigation, certain impacts related to Air Quality and Transportation/Traffic were identified as significant and unavoidable impacts in the BDSP EIR; for those environmental impacts, the American Canyon City Council adopted a Statement of Overriding Considerations (City of American Canyon 2019a).

The BDSP was amended with revisions in September 2020 by City Council Ordinance No. 2020-05. No subsequent environmental review documentation was prepared.

2.2 Crawford Way Multifamily Project

2.2.1 Project Location and Elements

The Crawford Way Multifamily Project (Project or proposed Project) is a market rate and affordable housing development located at the intersection of Crawford Way and Broadway. The 4.276-acre Project site is situated within the BDSP area and is currently undeveloped. Surrounding land uses include commercial and religious uses (north and south) and residential and agricultural uses (east and west).

The proposed Project would include the development of 100 townhome style apartments within 16 three-story buildings (Appendix A – Site Plan). The apartments would feature a mix of two- and three-bedroom configurations. The buildings would be arranged around alleys for garage parking and paseos which would include both common and private open space. Front porches would be located along the paseos or facing out to street frontages. Each unit would contain a traditional private two-car garage. The Project would also include amenities for residences including a large common open space and a community building.

2.2.2 General Plan and Zoning

According to the BDSP, the Project site is located within the Local Serving Commercial Mixed-Use (LSMU) sub area and is zoned for LSMU. The intent of the LSMU zoning district is to accommodate a range of commercial uses and related services that will serve the local community. This zoning district permits uses such as garden apartments, multifamily residential, semidetached single family residential, townhouses, private and public recreation facilities, indoor recreation and sports facilities, and a variety of commercial, public, and quasi-public uses.

Development in the LSMU district shall be no more than 20 dwelling units (DU) per gross acre. As such, the 4.276-acre Project site would allow a base density of 87 DU. The Project qualifies for a density bonus of 20 percent that would provide an increased allowable density of 18 DU, for a total of 105 DU. The Project proposes 100 DU, and therefore would meet the zoning classification and density requirements of the LSMU zoning district development standards. As described in Section 1.1, the Project applicant is requesting waivers for three development standards which would otherwise preclude the Project from being constructed.

2.2.3 Site Access and Parking

Access to the site would be provided off Crawford Way to the north. Pedestrian access would be provided via a sidewalk developed along the Project frontage on Crawford Way. Per the State DBL, the Project qualifies for a density bonus of 20 percent, which would allow 18 units above the allowable density to be developed on the site. The proposed Project would also include 200 covered residential parking spaces (two per DU) and 18 guest spaces, for a total of 218 spaces. As described in Section 1.1, the Project applicant is requesting a waiver for garage parking space size minimums.

2.2.4 Architectural Design

The Project would consist of townhome style, multifamily housing development with 16 residential buildings totaling 100 DU and various common interior and exterior amenity space. Each residential building would be three stories and would provide an architectural aesthetic that is cohesive with surrounding architecture.

2.2.5 Utilities

The Project would connect to the existing water and sanitary sewer lines that run along Broadway. Storm drain inlets and pipes would be installed throughout the Project boundary.

The Project site is currently served by and would connect to existing utilities from the following providers:

- Electricity–Pacific Gas & Electric Company (PG&E) and Marin Clean Energy (MCE)
- Natural Gas–PG&E
- Sewage, Potable, and Recycled Water–City of American Canyon
- Solid Waste Removal–American Canyon Recology
- Storm Drainage–City of American Canyon Public Works Department

2.2.6 Construction and Operation

For the purposes of the analysis contained in this Addendum, construction of the Project is anticipated to start in 2023.

2.3 Project-Related Approvals, Agreements, and Permits

The proposed Project requires the following discretionary approvals from the City:

- Planning Commission Adoption of this Addendum
- Planning Commission grants the design permit application.

3.0 CEQA CHECKLIST

The purpose of the checklist is to evaluate the categories in terms of any changed condition (e.g., changed circumstances, Project changes, or new information of substantial importance) that may result in a changed environmental result (e.g., a new significant impact or substantial increase in the severity of a previously identified significant effect) (CEQA Guidelines § 15162). The questions posed in the checklist come from Appendix G of the CEQA Guidelines. An unchecked answer does not necessarily mean that there are no potential impacts relative to the environmental category, but that there is no change in the condition or status of the impact since it was analyzed and addressed with mitigation measures in the Final BDSP EIR.

This Addendum addresses the conclusions of the previously certified CEQA document for the BDSP.

3.1 Explanation of Checklist Evaluation Categories

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is potentially significant unless mitigation is incorporated, as indicated by the checklist on the following pages.

1) **Conclusion in Prior Final EIR and Related Documents**

   i) This column summarizes the conclusion of the prior Final EIR relative to the environmental issue listed under each topic.

2) **Do the Proposed Changes Involve New Impacts?**

   ii) Pursuant to CEQA Guidelines Section 15162, subd. (a)(1), this column indicates whether the changes represented by the proposed Project will result in new significant environmental impacts not previously identified or mitigated by the Final EIR or whether the changes will result in a substantial increase in the severity of a previously identified significant impact.

3) **New Circumstances Involving New Impacts?**

   iii) Pursuant to CEQA Guidelines Section 15162, subd. (a)(2), this column indicates whether there have been substantial changes with respect to the circumstances under which the Project is undertaken that will require major revisions to the Final EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

4) **New Information Requiring New Analysis or Verification?**

   iv) Pursuant to CEQA Guidelines Section 15162, subd. (a)(3)(A-D), this column indicates whether new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the Final EIR was adopted, shows any of the following:

   a) The Project will have one or more significant effects not discussed in the previous EIR or negative declaration;

   b) Significant effects previously examined will be substantially more severe than shown in the previous Final EIR;

c) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the Project, but the Project proponents decline to adopt the mitigation measure or alternative; or

d) Mitigation measures or alternatives which are considerably different from those analyzed in the previous Final EIR would substantially reduce one or more significant effects on the environment, but the Project proponents decline to adopt the mitigation measure or alternative.

If the additional analysis completed as part of this environmental review were to find that the conclusions of the Final EIR remain the same and no new significant impacts are identified, or identified impacts are not found to be substantially more severe, or additional mitigation is not necessary, then the question would not be checked-off in the checklist and no additional environmental document would be required.

5) Mitigation Measures Implemented or Addressed Impacts

Pursuant to CEQA Guidelines Section 15162, subd. (a)(3), this column indicates whether the Final EIR provides mitigation measures to address effects in the related impact category. Any previously adopted mitigation measures will be identified. The response will also address proposed revisions to previously adopted mitigation measures. These mitigation measures will be implemented with the construction of the Project, as applicable. If "None" is indicated, the Final EIR has concluded that the impact either does not occur with this Project or is not significant, and therefore no additional mitigation measures are needed.

3.2 Discussion and Mitigation Sections

1) Discussion

A discussion of the elements of the checklist is provided under each environmental category in order to clarify the answers. The discussion provides information about the particular environmental issue, how the project relates to the issue, and the status of any mitigation that may be required or the has already been implemented.

2) Mitigation Measures

Applicable mitigation measures from the Final EIR that apply to the project are listed under each environmental category.

3) Conclusions

A discussion of the conclusion relating to the analysis is contained in each section.

3.3 Aesthetics

Would the project:		*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a)	Have a substantial adverse effect on a scenic vista?	Less than Significant Impact	☐	☐	☐	None
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	Less than Significant Impact	☐	☐	☐	None
c)	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the Project is in an urbanized area, would the Project conflict with applicable zoning and other regulations governing scenic quality?	Less than Significant Impact	☐	☐	☐	None
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	Less than Significant Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Have a substantial adverse effect on a scenic vista?

Summary of BDSP EIR Analysis

The BDSP EIR found that buildout of the BDSP would not have a substantial adverse effect on a scenic vista because the development would simply add to the existing development within the existing urban footprint and would not adversely affect views of any scenic vista from Oat Hill or from the former basalt plant/future Watson Ranch. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The potential impacts of the proposed Project would be consistent with the scenic vista analysis in the BDSP EIR. Construction and operation of the project in the LSMU Subarea would not alter scenic views such as Oat Hill or the basalt plant beyond what was analyzed in the BDSP EIR. The proposed Project would be three stories in height consistent with the maximum allowable building height within the LSMU zoning district. The Project would not introduce new environmental impacts related to a scenic vista or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Summary of BDSP EIR Analysis

According to the BDSP EIR, buildout of the BDSP would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic building within a state scenic highway because the Specific Plan would promote improvements in the SR-29 viewshed consistent with the roadway's status as an "Eligible" State Scenic Highway.

Crawford Way Multifamily Project Analysis

The existing visual attributes of the SR-29 viewshed within American Canyon displays a fragmented mix of commercial, industrial, and residential uses without a coherent aesthetic or sense of place visual appearance.

The proposed Project is requesting a waiver for maximum building height setback requirements. The BDSP calls for buildings to have a maximum height of 24 feet (two stories) when setback 15 feet from a public right-of-way, and a maximum height of 42 feet (three stories) when setback 30 feet from a public right-of-way. The proposed Project would include three-story buildings within 30 feet of SR-29 and Crawford Way, and is therefore requesting a waiver of this development standard.

The Project would have visually appealing architectural design and landscaping which would be consistent with other development in the area. The proposed project would lead to improvements in the SR-29 viewshed consistent with the roadway's status as an "Eligible" State Scenic Highway. The site is currently undeveloped. No scenic resources are located within the Project site. The Project would not introduce new environmental impacts related to scenic resources or a State Scenic Highway or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Summary of BDSP EIR Analysis

According to the BDSP EIR, buildout of the BDSP would not substantially degrade the existing visual character or quality of the site and its surroundings because the Specific Plan would guide the development of undeveloped properties and underutilized properties to support modern residential and non-residential uses that would be designed in accordance with the Specific Plan's development standards and design guidelines. This would improve appearance of the Broadway District by facilitating new development that provides visually appealing buildings, landscaping, underground utilities, and pedestrian/bicycle facilities.

Crawford Way Multifamily Project Analysis

The development of the proposed Project would include 16 three-story townhome style multifamily residential buildings, a community building, outdoor common areas, guest parking spaces, and associated landscaping improvements. The site is located approximately 1.2 miles southeast of Oat Hill and would not alter public views from Oat Hill or of the former basalt plant/future Watson Ranch. Therefore, the proposed project would not introduce new environmental impacts related to applicable zoning and other regulations governing scenic quality or the visual character and quality of the site or public views of the site, or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Summary of BDSP EIR Analysis

According to the BDSP EIR, buildout of the BDSP would not create a new source of substantial light or glare which would adversely affect day or nighttime views in the area because lighting would be required to employ full cut-off fixtures or be directed downward to avoid spillage onto adjoining properties or streets. This would serve to minimize the increase in light and glare that would occur from a net increase in residential and non-residential development within the Broadway District.

Crawford Way Multifamily Project Analysis

Consistent with the BDSP EIR, the development within the Project site would use lighting consistent with the BDSP development standards and design guidelines. The lighting for the Project would be required to employ full cut-off fixtures or be directed downward to avoid spillage onto adjoining properties or streets. Therefore, the proposed Project would not introduce new environmental impacts related to the visual character or quality of the site and its surroundings or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

None required.

CONCLUSION

The proposed Project would be consistent with the BDSP EIR and would not create new or more significant impacts to aesthetic resources beyond what was analyzed in the BDSP EIR. The conclusions from the BDSP EIR remain unchanged when considering the adoption of the Addendum.

3.4 Agricultural and Forestry Resources

Would the project:	*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	No Impact	☐	☐	☐	None
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	No Impact	☐	☐	☐	None
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	No Impact	☐	☐	☐	None
d) Result in the loss of forest land or conversion of forest land to non-forest use?	No Impact	☐	☐	☐	None
e) Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	No Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Summary of BDSP EIR Analysis

According to the BDSP EIR, the BDSP boundaries do not currently support agricultural land use activities and therefore, buildout of the BDSP would not convert Important Farmland to non-agricultural use. While there is "Farmland of Local Importance" in BSDP boundaries, this does not fall within the Important Farmland umbrella. It was determined that no impacts would occur.

Crawford Way Multifamily Protect Analysis

The Project site is within the BDSP boundaries, which do not support agricultural land use activities. The California Department of Conservation considers the Project site Urban and Built-Up Land with no agriculture land uses defined (California Department of Conservation 2022). The proposed Project would not introduce new environmental impacts related to the conversion of farmland uses to non-agricultural land uses or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Summary of BDSP EIR Analysis

According to the BDSP EIR, the BDSP boundaries do not currently support agricultural land use activities, and, therefore, none of the sites within the BDSP boundaries would be eligible for a Williamson contract. Therefore, no impacts would occur.

Crawford Way Multifamily Project Analysis

The Project site is located within the LSMU zoning district which does not support agricultural uses. The Project site would not be eligible for a Williamson Act contract. The Project would not introduce new environmental impacts that would conflict with existing agriculture zoning or a Williamson Act contract or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland(as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

Summary of BDSP EIR Analysis

According to the BDSP EIR, the BDSP boundaries do not contain forest land and that the American Canyon Zoning Ordinance does not have a forest zoning district. Therefore, it was determined that no impacts would occur.

Crawford Way Multifamily Project Analysis

The Project site is within the LSMU zoning district and does not include any forest or timberland use. No impact to forest or timberland would occur with development of multifamily housing units on the Project site. Therefore, the proposed Project would not introduce any new environmental impacts. No additional analysis is required.

d) Result in a loss of forest land or conversion of forest land to non-forest use?

Summary of BDSP EIR Analysis

According to the BDSP EIR, the BDSP boundaries contain no forest land. This condition precludes the possibility of the BDSP converting forest land to non-forest use. Therefore, it was determined that no impacts would occur.

Crawford Way Multifamily Project Analysis

As discussed in Impact c) above, the Project site does not contain forest land. Development of the proposed Project would not result in a loss of forest land or conversion of forest land to non-forest use. No impact would occur. The proposed Project would not introduce any new environmental impacts, and no additional analysis is required.

e) **Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?**

Summary of BDSP EIR Analysis

According to the BSDP EIR, the BDSP boundaries contain mostly organized land, with areas of undeveloped or underutilized land. Areas adjacent to the BDSP boundaries do not contain agricultural or forest land, which precludes the possibility of adverse impacts to agricultural or forest resources. Therefore, it was determined that no impacts would occur.

Crawford Way Multifamily Project Analysis

The Project site does not contain agricultural or forest uses, which precludes the possibility of loss or conversion of agricultural or forestlands to non-agricultural or non-forest uses. No impact would occur. The proposed Project would not introduce any new environmental impacts, and no additional analysis is required.

MITIGATION MEASURES

None required.

CONCLUSION

The proposed Project would be consistent with the BDSP EIR and would not create new or more significant impacts to agricultural resources beyond what was analyzed in the BDSP EIR. The conclusions from the BDSP EIR remain unchanged when considering the adoption of the Addendum.

3.5 Air Quality

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations.

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:	*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a) Conflict with or obstruct implementation of the applicable air quality plan?	Significant and Unavoidable Impact	☐	☐	☐	MM AIR-2, MM AIR-3, MM AIR-4a
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?	Significant and Unavoidable Impact	☐	☐	☐	MM AIR-2, MM AIR-3
c) Expose sensitive receptors to substantial pollutant concentrations?	Significant and Unavoidable Impact	☐	☐	☐	MM AIR-3, MM AIR-4a
d) Result in other emissions (such as those leading to odors) affecting a substantial number of people?	Significant and Unavoidable Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Conflict with or obstruct implementation of the applicable air quality plan?

Summary of BDSP EIR Analysis

According to the BDSP EIR, buildout of the BDSP would not conflict with the applicable provisions of the 2017 Clean Air Plan, and the BDSP's percent increase in residential units would be greater than the percent increase in Vehicle Miles Traveled (VMT). However, as the BDSP EIR disclosed, the BDSP would not further all of the primary goals of the 2017 Clean Air Plan as a result of significant and unavoidable impacts related to construction equipment and vehicle exhaust emissions. Because construction-generated impacts would remain significant after incorporation of mitigation, this impact would be significant and unavoidable. The City made appropriate findings and adopted a statement of overriding considerations.

Crawford Way Multifamily Project Analysis

The BDSP EIR anticipated development of the Project site. The most recent clean air plan is the Bay Area 2017 Clean Air Plan (CAP) that was analyzed in the BDSP EIR. The proposed Project would be required to implement BDSP EIR Mitigation Measures AIR-2, AIR-3, and AIR-4a to reduce impacts related to air quality pollutants emissions (as discussed in Impacts b) and c) below). However, the Project could result in a significant and unavailable impact related to construction equipment exhaust even with implementation of BDSP EIR MM AIR-3 (Impact b) below). Thus, the Project would not further all the primary goals of the 2017 CAP. The significant and unavoidable impact conclusion is consistent with the conclusion in the BDSP EIR related to conflicting with or obstructing implementation of the applicable air quality plan. Therefore, the proposed Project would not result in any new or more severe impacts beyond what was previously analyzed in the BDSP EIR. No additional analysis is required.

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Summary of BDSP EIR Analysis

Construction Fugitive Dust

It was stated in the BDSP EIR that construction activities associated with buildout of the BDSP would include demolition, site preparation, grading, building construction, paving, and architectural coating. Generally, one of the most substantial air pollutant emissions would be fugitive dust during construction activities. If uncontrolled, these emissions could lead to both health and nuisance impacts. Construction activities would also temporarily create emissions of equipment exhaust and other air contaminants. It was determined in the BDSP EIR that Mitigation Measure (MM) AIR-2 would be required to reduce impacts from fugitive dust emissions to less than significant levels.

Construction Equipment Exhaust

The timing and components of individual construction projects were not known at the time of the analysis. The BDSP EIR determined that construction facilitated by the BDSP could exceed Bay Area Air Quality Management District (BAAQMD) preliminary screening guidance. Therefore, construction-related air quality impacts were determined in the BDSP EIR to be potentially significant. Incorporation of BDSP EIR MM AIR-3, which would require the use equipment meeting Tier 3 or higher off-road engine standards, would reduce construction impacts; however, BDSP EIR MM AIR-3 would not guarantee reductions in impacts from large construction projects involving extensive equipment and/or material transport necessary to be less than significant. This impact was determined to be significant and unavoidable.

Operational Emissions

The BDSP EIR determined that the BAAQMD Clean Air Plan accounted for regional operational emissions, including those generated in the City of American Canyon, and that operational criteria pollutant emissions impacts would be less than significant.

Operational Carbon Monoxide Hotspot

Based on the Traffic Impact Study prepared for the BDSP by Fehr & Peers, the intersection of SR-29 and American Canyon Road would experience the highest cumulative peak-hour traffic volumes among the BDSP study intersections, with 6,940 vehicles per hour during the PM peak-hour. The BDSP EIR

determined that the future projects would generate peak-hour vehicle trips below the BAAQMD screening threshold for carbon monoxide hotspots and would result in a less than significant impact.

Crawford Way Multifamily Project Analysis

Construction Fugitive Dust

The Project construction activities were anticipated and analyzed in the BDSP EIR. Construction of the proposed Project within the BDSP boundaries would be required to incorporate MM AIR-2 from the BDSP EIR to ensure that impacts from fugitive dust emissions during construction activities would be less than significant.

Construction Equipment Exhaust

Construction activities and equipment usage of the Project were anticipated and analyzed in the BDSP EIR. Project construction would generate emissions of reactive organic gas; oxides of nitrogen; exhaust particulate matters, 10 micrometers or 2.5 micrometers or less in diameter; PM10; and exhaust PM2.5. The project would be required to implement BDSP EIR MM AIR-3 to reduce construction impacts. As discussed in the BDSP EIR, MM AIR-3 would not guarantee reductions in impacts from large construction projects involving extensive equipment and/or material transport necessary to be less than significant. This impact was determined to be significant and unavoidable. Construction of the Project would utilize standard construction equipment analyzed in the BDSP EIR and would not result in any new or more severe impacts related to construction emissions beyond what was previously analyzed in the BDSP EIR. No additional analysis is required.

Operational Emissions

Implementation of the proposed Project is anticipated and analyzed in the BDSP EIR. Development of the proposed Project would be consistent with all BDSP development standards and guidelines that may impact air quality. Therefore, the proposed Project would not result in any new or more severe impacts related to operational emissions beyond what was analyzed in the BDSP EIR. No additional analysis is required.

Operational Carbon Monoxide Hotspots

The BDSP EIR determined that the intersection of SR-29 and American Canyon Road would experience the highest cumulative peak-hour traffic volumes among the BDSP study intersections, with 6,940 vehicles per hour during the PM peak-hour. The BDSP buildout would have less than significant impacts to operational carbon monoxide hotspots with the anticipated vehicle volume at the highest volume intersection. Implementation of the proposed Project is anticipated and analyzed in the BDSP EIR. The proposed Project would not increase the traffic volume at the intersection of SR-29 and American Canyon Road beyond what was analyzed in the BDSP EIR. Therefore, the proposed Project would not result in any new or more severe impacts related to operational carbon monoxide emissions beyond what was analyzed in the BDSP EIR. No additional analysis is required.

c) Expose sensitive receptors to substantial pollutant concentrations?

Summary of BDSP EIR Analysis

Toxic Air Contaminant and $PM_{2.5}$ Risk

According to the BDSP EIR, future commercial or industrial projects within the BDSP planning area may locate new sources of toxic air contaminants (TAC) in proximity to existing or proposed sensitive receptors. Therefore, the level of risk associated with future projects in the BDSP planning area cannot be evaluated with certainty. The BDSP EIR determined that MMs AIR-4a and AIR-4b would reduce

potential impacts to a less than significant level.

Asbestos from Demolition

According to the BDSP EIR, there is a high potential for asbestos-containing materials (ACM) to be present within the area due to the presence of structures that predate the federal prohibition of ACMs. Any demolition of existing buildings and structures would be subject to BAAQMD Regulation 11, Rule 2 (Asbestos Demolition, Renovation, and Manufacturing), which is intended to limit asbestos emissions from demolition or renovation of structures and the associated disturbance of asbestos-containing waste material generated or handled during these activities. The rule addresses the national emissions standards for asbestos along with some additional requirements. The rule requires the Lead Agency and its contractors to notify BAAQMD of any regulated renovation or demolition activity. This notification includes a description of structures and methods utilized to determine whether ACMs are potentially present. All ACM found on the site must be removed prior to demolition or renovation activity in accordance with BAAQMD Regulation 11, Rule 2, including specific requirements for surveying, notification, removal, and disposal of ACMs. Therefore, projects that comply with BAAQMD Regulation 11, Rule 2 would ensure that ACMs would be removed and disposed of appropriately and safely. By complying with BAAQMD Regulation 11, Rule 2, thereby minimizing the release of airborne asbestos emissions, demolition activity would not result in a significant impact to air quality.

Crawford Way Multifamily Project Analysis

Toxic Air Contaminant and $PM_{2.5}$ Risk

Implementation of the proposed Project is anticipated and analyzed in the BDSP EIR. The proposed project is a residential development and would be required to implement BDSP EIR MM AIR-3 and MM AIR-4a to reduce potential impacts related to toxic air contaminant and $PM_{2.5}$ emissions to a less than significant level.

Per MM AIR-4a, the Project applicant will prepare and submit either a toxic air contaminant risk screening assessment or a Health Risk Analysis to the City prior to issuance of building permits. If mitigation is required to reduce a potentially significant risk to less than the cumulative risk threshold, the Project applicant will incorporate necessary mitigation measures as described in the approved report into Project design and implementation. With the implementation of MM AIR-4a, the Project would not result in new or more severe impacts regarding toxic air contaminants and $PM_{2.5}$ risk. No additional analysis is required.

Asbestos from Demolition

The Project site is currently undeveloped. Implementation of the Project would not require demolition of existing structures. No impact related to ACM would occur.

d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Summary of BDSP EIR Analysis

According to the BDSP EIR, buildout of the BDSP would include the development of 1,200 net new dwelling units and 840,000 square feet of net new non-residential uses (commercial and office) by 2036. Buildout of the BDSP may include restaurants and/or food vendors. Although the BAAQMD does not list restaurants as a typical source of odor in their screening guidance or in the significance determination guidance, the BAAQMD's Guidance document does discuss potential mitigation measures to reduce the potential for odor impacts from food services. Restaurants can generate odor from cooking processes

and waste disposal. The future restaurant tenants, if any, are currently unknown, as are the cooking methods, putrescible waste generation, and disposal methods.

The residential, general office, and shopping center land uses are not expected to produce any offensive odors that would result in odor complaints. During construction activities, diesel powered vehicles and equipment used on-site could create localized odors, but these would be temporary in nature and would dissipate. As such, construction-period and operation-period odor impacts were determined in the BDSP EIR to be less than significant.

Crawford Way Multifamily Project Analysis

Implementation of the proposed Project is anticipated and analyzed in the BDSP EIR. The proposed Project is a residential development that is not expected to produce any offensive odors that would result in odor complaints. During construction, diesel powered vehicles and equipment used on-site would create localized odors, but these would be temporary and would dissipate quickly. Therefore, the proposed Project would not result in any new or more severe impacts related to odors emissions beyond what was analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

BDSP EIR MM AIR-2

Prior to issuance of the first construction permit for projects that occur pursuant to the Specific Plan, the applicant shall submit construction plans to the City of American Canyon with the following notes on them. The dust abatement measures described in the notes shall be implemented during construction.

During construction activities, the following air pollution control measures shall be implemented:

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day, or more as needed.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
- All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads and surfaces shall be limited to 15 miles per hour.
- All roadways, driveways, and sidewalks shall be paved as soon as possible.
- Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 2 minutes (beyond the 5-minute limit required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturers' specifications. All equipment shall be checked by a certified visible emissions evaluator.
- A publicly visible sign shall be posted with the name and telephone number of the person to contact at the Lead Agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Bay Area Air Quality Management District's phone number shall also be visible to ensure compliance with applicable regulations.

BDSP EIR MM AIR-3

Prior to issuance of the first construction permit for development projects that occur pursuant to the Specific Plan, the applicant shall provide documentation to the City of American Canyon demonstrating

that all off-road diesel equipment proposed for use are powered with Tier 3 or cleaner engines.

BDSP EIR MM AIR-4a

Prior to issuance of building permits for any sensitive receptor use (residential areas, elementary school, daycare centers, etc.) that would be developed pursuant to the Specific Plan, the applicant shall complete either of the following two options:

1. Prepare and submit a toxic air contaminant risk screening assessment to the City of American Canyon that demonstrates the potential risk from roadways, rail, and stationary sources would not exceed BAAQMD's cumulative risk threshold for toxic air contaminant impacts.

2. Prepare and submit a Health Risk Analysis to the City of American Canyon, consistent with BAAQMD's recommended methodology, that demonstrates the potential risk from roadways, rail, and stationary sources would not exceed the BAAQMD's cumulative risk threshold for toxic air contaminant impacts. If mitigation is required to reduce a potentially significant risk to less than the cumulative risk threshold, that mitigation shall be clearly identified, and the associated risk reduction quantified. The mitigation must be incorporated into the project and implemented.

CONCLUSION

There is no new information identifying new significant effects, nor is there an increase in the severity of previously identified impacts in the BDSP EIR related to air quality. The conclusions from the BDSP EIR remain unchanged when considering the changes to the proposed Project. No additional analysis is required.

3.6 Biological Resources

Would the project:	*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*

Would the project:		Conclusion in the Final EIR	Do the Proposed Project Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures?
	protecting biological resources, such as a tree preservation policy or ordinance?					
f)	Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	No Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or United States Fish and Wildlife Service (USFWS)?

Summary of BDSP EIR Analysis

According to the BDSP EIR, several special-status plant and wildlife species occurrences have been recorded within 0.25 mile of the BDSP boundaries. BDSP EIR MM BIO-1a requires applicants proposing development activities on undeveloped properties to retain a qualified Biologist to prepare a reconnaissance-level biological assessment. BDSP EIR MM BIO-1b requires that pre-construction nesting bird surveys be conducted during the nesting season. With the implementation of BDSP EIR MM BIO-1a and MM BIO-1b, impacts to candidate, sensitive, or special status species would be less than significant.

Crawford Way Multifamily Project Analysis

As discussed in the BDSP EIR, construction within the Project site was anticipated and mitigation measures were identified to address potential impacts to biological resources. MM BIO-1a in the BDSP EIR requires all applicants proposing development activities on undeveloped properties to retain a qualified biologist to prepare a reconnaissance-level biological assessment. Per this measure, Bargas Environmental Consulting (Bargas) firm prepared a Reconnaissance-level Biological Site Assessment for the Project in October 2018 (Bargas 2018). The Project site is undeveloped and contains grasses, invasive/weedy vegetation, and one coast live oak tree located along the southern perimeter. The areas surrounding the Project site are dominated by urban development and have been heavily modified for construction of residential and commercial buildings, paved surfaces, and other urban-related infrastructure. Bargas concluded that, because of previous disturbance of the site and surrounding urban development, conditions at the Project site appear to support very little suitable habitat for most special-status species, with the exception of foraging/migratory birds and those species that might favor or be adapted to disturbed sites. During preliminary database searches, Bargas found that one special-status plant, the showy Indian clover, has a confirmed range which includes the Project site. However, this species has a low potential to occur within the Project site due to the existing level of disturbance at

the site. There is a moderate potential for Swainson's hawk, northern harrier, white-tailed kite, and savannah sparrow to utilize the Project site for foraging. However, there is low potential for these species to utilize the Project site for nesting due to the lack of suitable nesting substrate and the level of disturbance. If vegetation removal would occur during the nesting season (February 1 to August 31), the Project applicant would be required to implement MM BIO-1b in order to avoid potential impacts to nesting birds. With the implementation of BDSP EIR MM BIO-1b, impacts to special-status species during construction of the proposed Project would be less than significant.

Implementation of the Project would result in similar conclusions with the incorporation of BDSP EIR MM BIO-1a and MM BIO-1b. Therefore, the proposed Project would not result in any new or more severe impacts beyond what was analyzed in the BDSP EIR. No additional analysis is required.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or USFWS?

Summary of BDSP EIR Analysis

Development activities that occur near American Canyon Creek, North Slough, and the smaller drainage features within the BDSP boundaries have the potential to impact sensitive natural communities and riparian habitat. Such activities may involve direct impacts to these features (e.g., to install a bridge or culvert) or indirect impacts to these features (e.g., disturbance within 10 feet of these features).

Accordingly, BDSP EIR MM BIO-2 requires applicants proposing development activities within properties that contain blue line drainage or wetland features to retain a qualified Biologist to conduct a jurisdictional assessment (or other applicable evaluation). If the assessment determines that the feature falls under the jurisdiction of a federal or state resource agency, the applicant shall obtain the requisite approvals and implement the appropriate mitigation measures. With the implementation of BDSP EIR MM BIO-2, impacts would be less than significant.

Crawford Way Multifamily Project Analysis

No sensitive natural communities are located within the project site (Bargas 2018). Implementation of the Project would have no impacts to sensitive natural communities. No additional analysis is required.

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Summary of BDSP EIR Analysis

Development activities that occur near American Canyon Creek, North Slough, and the smaller drainage features within the BDSP boundaries have the potential to impact sensitive natural communities and riparian habitat. Such activities may involve direct impacts to these features (e.g., to install a bridge or culvert) or indirect impacts to these features (e.g., disturbance within 10 feet of these features).

Accordingly, BDSP EIR MM BIO-2 requires applicants proposing development activities within properties that contain blue line drainage or wetland features to retain a qualified Biologist to conduct a jurisdictional assessment (or other applicable evaluation). If the assessment determines that the feature falls under the jurisdiction of a federal or state resource agency, the applicant shall obtain the requisite approvals and implement the appropriate mitigation measures. With the implementation of BDSP EIR MM BIO-2, impacts would be less than significant.

Crawford Way Multifamily Project Analysis

No aquatic resources are located within the Project site (Bargas 2018). Implementation of the Project would have no direct and indirect impacts to aquatic resources. No additional analysis is required.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Summary of BDSP EIR Analysis

The BDSP area contains mostly urban, built-up land and is bisected by SR-29. Although there are undeveloped properties within the plan boundaries, they are disconnected and fragmented from each other and surrounded by urban development and infrastructure. Moreover, the presence of SR-29 serves as a formidable barrier to terrestrial wildlife movement within the BDSP area. To the extent that development and land use activities contemplated by the BDSP would involve disturbance to American Canyon Creek or North Slough, it would not impair localized wildlife movement by these species because of their adaptability to urban environments. Impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The Project site is bordered by SR-29, commercial and residential areas, and other urban-related infrastructure, which create a barrier for wildlife with limited crossing opportunities. While common wildlife species likely utilize the site to some degree for local movements, the Project site is surrounded by large tracts of open space to the east and west. As such, the loss of the Project site as a migration corridor would result in less than significant impacts on a regional scale. As described in Impact a), migratory birds may use the habitat within the Project site opportunistically; however, higher quality habitat exists along the Napa River corridor. Based on these factors, the construction of the Project would result in a less than significant impact to migratory corridors and habitat linkages. Therefore, the proposed Project would not result in any new or more severe impacts beyond what was analyzed in the BDSP EIR. No additional analysis is required.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Summary of BDSP EIR Analysis

American Canyon Municipal Code Chapter 19.24.040 sets forth restrictions on development and land use activities that affect riparian corridors. Generally, permitted uses must further the biological and hydrologic functions of the riparian corridor and be in the public interest (protect public health safety and welfare; provide public access, etc.). Additionally, any development activities that occur within riparian corridors must implement protective measures for fish, wildlife, vegetation, and water within the drainage feature.

The only two riparian corridors within the BDSP area that could potentially be affected by development and land use activities are American Canyon Creek and North Slough. To the extent that development and land use activities contemplated by the BDSP would involve disturbance to American Canyon Creek or North Slough, they would be subject to the requirements of Chapter 19.24.040. Impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The proposed Project would not impact watercourses, riparian habitat, vernal pools, or wetlands. The proposed Project would remain consistent with the policies (applicable to all Project components) and

would therefore have no impact with regard to local plan and policy consistency. The Project would be developed in consistent with the BDSP with three waivers for building height at side street setbacks, garage parking space size minimums, and building to building setbacks. There is one tree on the site (coast live oak) that may need to be removed during Project construction. In accordance with the City's Tree Ordinance, any tree removed would be replaced on the site, as approved by the City Council. Impacts would be less than significant. Therefore, the proposed Project would not result in any new or more severe impacts beyond what was analyzed in the BDSP EIR. No additional analysis is required.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Summary of BDSP EIR Analysis

According to the BDSP EIR, the BDSP area is not within the boundaries of an adopted habitat conservation plan or natural community conservation plan. This condition precludes the possibility of the BDSP conflicting with the provisions of such a plan. No impact would occur.

Crawford Way Multifamily Project Analysis

The proposed Project would not conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. No such plan exists applicable to the Project site. No impact will occur. Therefore, the proposed project would not result in any new or more severe impacts beyond what was analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

BDSP EIR MM BIO-1a

Prior to development activities within undeveloped properties within the BDSP area, the applicant shall retain a qualified biologist to conduct a reconnaissance-level biological assessment. The assessment shall evaluate the potential presence of special-status plant and wildlife species, sensitive natural communities, jurisdictional features, and wildlife and fish movement. If the reconnaissance-level biological assessment determines that protocol-level surveys or pre-construction surveys are warranted, these studies shall be completed prior to
construction. Additionally, any required mitigation (protective buffers, passive relocation, restoration, etc.) shall be completed at the appropriate time. This mitigation measure shall not apply to sites that are entirely or mostly hardscaped or disturbed.

BDSP EIR MM BIO-1b

Prior to tree removal activities that occur during the nesting season (February 1 and August 31), the applicant shall retain a qualified biologist to conduct a pre-construction nesting bird survey no more than 14 days prior to vegetation removal. If the biologist observes nesting birds to be present, a minimum 250-foot protective buffer shall be established around the nest until the young have fledged. This mitigation measure shall not apply to tree removal activities that occur outside the nesting season (September 1 to January 31).

CONCLUSION

There is no new information identifying new significant effects, nor is there an increase in the severity of previously identified impacts in the BDSP EIR related to biological resources. The conclusions from the

BDSP EIR remain unchanged when considering adoption of the Addendum. No additional analysis is required.

3.7 Cultural Resources

Would the project:	*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a) Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	Less than Significant Impact with Mitigation	☐	☐	☐	MM CUL-1
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	Less than Significant Impact with Mitigation	☐	☐	☐	MM CUL-1
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	Less than Significant Impact with Mitigation	☐	☐	☐	MM CUL-4

A Historical Resources Study for the Project site was prepared by Tom Origer & Associates in October 2018 (Barrow 2018). No historic properties were identified, and no archaeological site indicators were found within the Area of Potential Effects during the field survey. The Historical Resources Study provided recommendations to handle accidental discovery of buried materials, which are consistent with the BDSP EIR MM CUL-1 and MM CUL-4 discussed below.

DISCUSSION OF IMPACTS

a) Cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5?

Summary of BDSP EIR Analysis

According to the BDSP EIR, 12 historic structures (i.e., more than 45 years old) are located within the BDSP and nine historic structures are located within a 0.5-mile radius of the BDSP area. The 12 resources located within the BDSP area include three historic sites (foundations and privies), one farm/ranch, six residential homes, and two commercial buildings that were recorded between 1977 and 2015. These structures were evaluated for listing in the California Register of Historical Resources and National Register of Historic Places and were determined not to be eligible for listing. Therefore, these resources do not meet the definition of a "historical resource" for the purposes of CEQA. Although there are no listed historic resources within the BDSP area, it is possible that subsurface excavations may encounter previously undiscovered historic resources during development activities. The implementation of standard cultural resource construction mitigation (MM CUL-1) would ensure that this impact is less than significant.

Crawford Way Multifamily Project Analysis

The BDSP EIR anticipated development of the Project site. Consistent with the BDSP EIR, while there are no historical resources within the Project site, it is possible that subsurface excavations during construction would encounter previously undiscovered historic resources. The implementation of standard cultural resources construction mitigation (BDSP EIR MM CUL-1) would ensure that this impact is less than significant. The proposed Project would not result in any new or more severe impacts beyond what was analyzed in the BDSP EIR. No additional analysis is required.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5?

Summary of BDSP EIR Analysis

According to the BDSP EIR, no known prehistoric archaeological resources have been recorded within the BDSP area. However, it is possible that subsurface excavations may encounter previously undiscovered archaeological resources within the BDSP and the off-site development areas. The implementation of standard cultural resource construction mitigation (MM CUL-1) would ensure that this impact is less than significant.

Crawford Way Multifamily Project Analysis

The BDSP EIR anticipated development of the Project site. Consistent with the BDSP EIR, while there are no prehistoric archaeological resources recorded within the Project site, it is possible that subsurface excavations during construction would encounter previously undiscovered archaeological resources. The implementation of standard cultural resources construction mitigation (BDSP EIR MM CUL-1) would ensure that this impact is less than significant. The proposed project would not result in any new or more severe impacts beyond what was analyzed in the BDSP EIR. No additional analysis is required.

c) Disturb any human remains, including those interred outside of dedicated cemeteries?

Summary of BDSP EIR Analysis

The BDSP area includes areas previously inhabited by Native American tribes and, thus, there is always the possibility that subsurface construction activities associated with buildout of the BDSP, such as trenching and grading, could potentially damage or destroy previously undiscovered human remains. However, if human remains are discovered, implementation of BDSP EIR MM CUL-4 would reduce this potential impact to a less than significant level.

Crawford Way Multifamily Project Analysis

The BDSP EIR anticipated development of the Project site. Consistent with the BDSP EIR, it is possible that subsurface excavations during construction would encounter previously undiscovered human remains. The implementation of standard cultural resources construction mitigation (BDSP EIR MM CUL-4) would ensure that this impact is less than significant. The proposed Project would not result in any new or more severe impacts beyond what was analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

BDSP EIR MM CUL-1

If prehistoric or historic-period archaeological resources are encountered during ground disturbing activities associated with new development that occurs pursuant to the Specific Plan, all construction

activities within 100 feet of the find shall halt and the City of American Canyon shall be notified. Prehistoric archaeological materials might include obsidian and chert flaked stone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil ("midden") containing heat-affected rocks, artifacts, or shellfish remains; and stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); and battered stone tools, such as hammerstones and pitted stones. Historic-period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse. A Secretary of the Interior-qualified archaeologist shall inspect the findings within 24 hours of discovery. If it is determined that the project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines), mitigation shall be implemented in accordance with PRC Section 21083.2 and Section 15126.4 of the CEQA Guidelines, with a preference for preservation in place. Consistent with Section 15126.4(b)(3), this may be accomplished through planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement. If avoidance is not feasible, a qualified archaeologist shall prepare and implement a detailed treatment plan in consultation with the City of American Canyon. Treatment of unique archaeological resources shall follow the applicable requirements of PRC Section 21083.2. Treatment for most resources would consist of (but would not be limited to) sample excavation, artifact collection, site documentation, and historical research, with the aim to target the recovery of important scientific data contained in the portion(s) of the significant resource to be impacted by the Project. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and state repositories, libraries, and interested professionals.

BDSP EIR MM CUL-4

In the event of discovery or recognition of any human remains during construction activities, such activities within 100 feet of the find shall cease until the Napa County Coroner has been contacted to determine that no investigation of the cause of death is required. The Native American Heritage Commission (NAHC) shall be contacted within 24 hours if it is determined that the remains are Native American. The NAHC will then identify the person or persons it believes to be the most likely descendant from the deceased Native American (PRC Section 5097.98), who in turn would make recommendations to the City of American Canyon for the appropriate means of treating the human remains and any associated funerary objects (CEQA Guidelines Section 15064.5(d)).

CONCLUSION

There is no new information identifying new significant effects, nor is there an increase in the severity of previously identified impacts in the BDSP EIR related to cultural resources. The conclusions from the BDSP EIR remain unchanged when considering adoption of the Addendum. No additional analysis is required.

3.8 Energy

Would the project:		Conclusion in the Final EIR	Do the Proposed Project Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures?
a)	Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	None	☐	☐	☐	None
b)	Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	None	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Summary of BDSP EIR Analysis

These checklist questions were not analyzed in the BDSP EIR. The BDSP EIR did not separately analyze the energy consumption resulting from the buildout of the BDSP; however, it was addressed in several relevant topical areas of the EIR. As discussed in Section 3.2, Air Quality and Greenhouse Gases, and Section 6, Other CEQA Considerations, of the BDSP EIR, buildout of the BDSP planning area would result in the consumption of electricity, natural gas, and transportation fuels during construction and operational activities. The BDSP EIR ultimately determined that buildout of the BDSP would be consistent with the City's Sustainability Best Practice Activities, which largely encompasses energy efficiency measures through the reduction of fossil fuel consumption such as promoting infill development, alternative modes of transportation, and higher density development (City of American Canyon 2019b).

In particular, according to the energy efficiency and conservation activities goals identified within the Sustainability Best Practices Activities, the City of American Canyon joined Marin Clean Energy (MCE) in November of 2015. MCE provides renewable energy without replacing PG&E's infrastructure, maintenance, or billing systems. On September 1, 2016, the entire City of American Canyon was automatically enrolled in the light green program; at which time, users began utilizing a minimum of 52 percent renewable energy. In addition, the MCE Deep Green Program was also provided as an option to customers, allowing for 100 percent renewable energy consumption (City of American Canyon 2019b).

Crawford Way Multifamily Project Analysis

The proposed Project would be a residential project proposed on land designated and zoned for Local-Serving Mixed Use. There would be increases in both short- and long-term energy demands. Short-term

energy demand would result from construction activities, including energy needed to power worker and vendor vehicle trips as well as construction equipment. Long-term energy demand would result from operation of the Project, which would include activities such as lighting, heating, and cooling of structures. Although implementation of the proposed Project would result in an increase in energy usage compared to existing conditions, the increase in energy use would not be wasteful or inefficient because of measures incorporated into Project design, including energy-efficient building design meeting California Green Building Standards Code (CALGreen) requirements.

In addition, the Project would be required to exceed compliance with Title 24, Part 6 of the California Code of Regulations, Building Energy Efficiency Standards, by 15 percent, in accordance with BDSP Section 2.2. The proposed Project is not located in an identified area designed for renewable energy production nor would the Project interfere with the installation of any renewable energy systems. Therefore, the proposed Project would not conflict with or obstruct applicable State or local plans for promoting use of renewable energy and energy efficiency and have not significant energy impacts. The Project would not result in any new or more severe building operation energy impacts beyond what was previously analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

None required.

CONCLUSION

There is no new information identifying new significant effects, nor is there any increase in the severity of previously identified impacts in the BDSP EIR related to energy. The conclusions from the BDSP EIR remain unchanged when considering the changes to the proposed Project. No additional analysis is required.

3.9 Geology and Soils

f)	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	Less than Significant Impact with Mitigation	☐	☐	☐	MM CUL-3a

DISCUSSION OF IMPACTS

a-i) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

Summary of BDSP EIR Analysis

According to the BDSP EIR, the West Napa Fault is located within the BDSP planning area and that future development activities that occur pursuant to the BDSP within an Alquist-Priolo Special Study Zone would require the preparation of a fault investigation to determine the precise location of the West Napa Fault and establish appropriate setbacks for new structures. This requirement was reflected in MM GEO-1a. The BDSP EIR concluded that buildout of the BDSP may expose people or structures to potential substantial adverse effects associated with seismic hazards.

Crawford Way Multifamily Project Analysis

The BDSP EIR anticipated development of the Project site. The proposed Project would not result in any change to the analysis or conclusions in the BDSP EIR. Per BDSP EIR MM GEO-1a, a Fault Investigation Report was prepared for the Project site by Ryan Geological Consulting, Inc (Ryan) in March 2018 (Ryan 2018). The Project site is located within a State of California designated Earthquake Zone of Required Investigation for the active West Napa fault and is therefore considered to have a relatively high seismicity. The Fault Investigation Report concluded that the West Napa fault is not located within the Project site, and that the risk of surface fault rupture at the site is low. Therefore, residential development of the Project site is feasible from a geologic hazard perspective. Since the Project site is 250 feet from the well-defined trace of the West Napa fault at its closest location, Ryan determined that additional fault setbacks at the site are not warranted. Therefore, the proposed Project would not

introduce new impacts or create more severe impacts associated with fault rupture than those previously analyzed in the BDSP EIR. No additional analysis is required.

a-ii) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Strong seismic ground shaking?

Summary of BDSP EIR Analysis

According to the BDSP EIR, the areas within the BDSP could be subject to "strong" and "very strong" ground shaking, and that future development activities that occur pursuant to the BDSP would be required to prepare a design-level geotechnical report at the time building permits are sought. Such a report would provide recommendations on the appropriate level of soil engineering and building design necessary to minimize ground-shaking hazards. This requirement was reflected in MM GEO-1b. The BDSP EIR concluded that implementation of MM GEO-1b would ensure that development consistent with the BDSP is not exposed to strong ground shaking hazards, and that impacts would be less than significant with mitigation incorporated.

Crawford Way Multifamily Project Analysis

The BDSP EIR analyzed development on the Project site. The proposed Project would adhere to the applicable geology and soils mitigation measures identified in the BDSP EIR. Consistent with BDSP EIR MM GEO-1b, a Geotechnical Study Report was prepared for the Project site by RGH Consultants (RGH) in October 2018 (RGH Consultants 2018). In general, the surface conditions were described as soft and spongy, which is typically associated with weak, porous surface soil. Borings and laboratory tests by RGH concluded that the Project site is underlain by clay with varying amounts of sand to depths of at least 15 feet. The soil was found to be weak and porous to a depth of one foot. RGH did not observe subsurface conditions within the portion of the site that was studied that would suggest the presence of materials that may be susceptible to seismically induced densification, liquefaction, or lurching. As described in the Impact a), no active faults were identified within the site; however, the site is within an area affected by strong seismic activity and future seismic shaking should be anticipated at the site. The Project would incorporate recommendations provided in the Geotechnical Study Report into Project design to ensure that impacts related to strong seismic ground shaking would be less than significant. With the incorporation of these recommendations, the proposed Project would not introduce new impacts or create more severe impacts associated with ground shaking than those previously analyzed in the BDSP EIR. No additional analysis is required.

a-iii) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Seismic-related ground failure, including liquefaction?

Summary of BDSP EIR Analysis

The BDSP EIR determined that the BDSP area is underlain by sandstone bedrock, relatively strong and incompressible alluvial subsoils, and a topsoil layer of clayey soils. These characteristics indicate that development consistent with the BDSP would not be susceptible to ground failure, liquefaction, or liquefaction-related phenomena. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

Liquefaction occurs in soils when loosely packed, water-logged seidments at or near the ground surface lose their strength in response to strong seismic shaking. The Geotechnical Study Report concluded that the Project site is underlain by weak, porous surface soil that appears hard when dry but will lose strength rapidly and settle uner the load of fills, foundations, slabs, and pavements as its moisture content increases and approaches saturation, which may pose risk of liquefaction (RGH Consultants

2018). The Project would incorporate recommendations described in the Geotechnical Study Report in order to stabilize surface soils and reduce the risk of liquefaction due to seismic-related ground failure to a less-than significant level.

Recommendations include strengthening the soil during grading by either a) excavating the weak surface soil and replacing it as properly compacted (engineered) fill, or b) providing satisfactory foundation support below the weak surface soil (RGH Consultants 2018). With implementation of these recommendations, the proposed Project would not introduce new impacts or create more severe impacts associated with ground failure than those previously analyzed in the BDSP EIR. No additional analysis is required.

a-iv) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Landslides?

Summary of BDSP EIR Analysis

The BDSP EIR determined that the BDSP area contains mostly flat relief and that most, if not all, of the properties with the Specific Plan boundaries either support urban development or have been rough graded, which makes the likelihood of landsliding very low. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The Project site is located in a relatively flat, developed area and is not located on or near significant slopes. The Geotechnical Study Report concluded that the large-scale slope instability is not a concern at the site, and no active landslides were observed during the study (RGH 2018). The risk of landslides would be consistent with what was analyzed in the BDSP EIR. Therefore, the proposed Project would not introduce new impacts or create more severe impacts associated with landslides than those previously analyzed in the BDSP EIR. No additional analysis is required.

b) Result in substantial soil erosion or the loss of topsoil?

Summary of BDSP EIR Analysis

According to the BDSP EIR, development activities that occur pursuant to the BDSP would involve grading, building construction, paving, and utility installation activities that could result in erosion and sedimentation. Left unabated, the accumulation of sediment in downstream waterways could result in the blockage of flows, potentially causing increased localized ponding or flooding. As such, MM HYD-1a would require the implementation of stormwater quality control measures during construction activities to prevent pollutants from entering downstream waterways. The BDSP EIR concluded that implementation of MM HYD-1a would reduce impacts to less than significant.

Crawford Way Multifamily Project Analysis

As discussed in Section 3.12, Hydrology and Water Quality, the proposed Project would include implementation of stormwater quality control measures consistent with BDSP EIR MM HYD-1a and would not result in greater impacts than what was analyzed in the BDSP EIR. Therefore, the proposed Project would not introduce new environmental impacts related to soil erosion or loss of topsoil or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Summary of BDSP EIR Analysis

The BDSP EIR concluded that development within the BDSP area would not be located on a geologic unit or soil that is unstable, or that would become unstable as a result of development consistent with the BDSP, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse because the Geotechnical Investigation prepared for the BDSP EIR determined that the soils on the BDSP area are suitable to support urban development, provided that standard grading and soil engineering practices are implemented. It was concluded in the BDSP EIR that the development within the BDSP area would not be susceptible to or cause landslides, lateral spreading, subsidence, collapse, ground failure, liquefaction, or liquefaction-related phenomena, and that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

As discussed in Impact a-iii) and a-iv) above, the Project site is underlain by about one foot of highly expansive, weak, porous, compressible clayey surface soil. The Project applicant would ensure implementation of recommendations provided in the Geotechnical Study Report in order to reduce impacts related to unstable soils to a less than significant level. With implementation of these recommendations, the Project would not result in any change to the analysis or conclusions in the BDSP EIR. As such, the proposed Project would not result in any impacts beyond what was analyzed in the BDSP EIR. Therefore, the proposed Project would not introduce new environmental impacts related to on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

d) Be located on expansive soil, as defined in Table 18 1 B of the Uniform Building Code, creating substantial direct or indirect risks to life or property?

The Geotechnical Study Report concluded that the Project site is underlain by about one foot of highly expansive clayey soils. The Project would implement recommendations provided by RGH Consultants, as described in Impact a-iii) above, into Project design to reduce impacts related to expansive soils to a less than significant level. In addition, the proposed Project would be required to comply with the California Building Standards Code (CBC) to implement appropriate grading and soil engineering practices to abate the expansive soil conditions on-site. Consistent with the BDSP EIR, implementation of the recommendations in the Geotechnical Study Report and compliance with the CBC would reduce impacts associated with expansive soils. Therefore, the proposed Project would not introduce new environmental impacts related to expansive soil or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Summary of BDSP EIR Analysis

New development that occurs pursuant to the BDSP would be served by sanitary sewer service provided by the City of American Canyon. No septic systems or wastewater disposal systems would be used. No impact would occur.

Crawford Way Multifamily Project Analysis

Consistent with the BDSP EIR, the development of the proposed Project would not use septic tank systems or other alternative wastewater disposal systems. No new impacts associated with septic tank systems or alternative wastewater disposal would occur. Therefore, the proposed Project would not

introduce new environmental impacts related to septic tank or alternative wastewater disposal systems or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Summary of BDSP EIR Analysis

The paleontological records search commissioned through the University of California Berkeley Museum of Paleontology indicate that there are no vertebrate fossil localities that have been previously recorded within the BDSP boundaries. However, there has been one fossil locality that is located within a 0.5-mile radius of the BDSP area. The one fossil locality (D8020) was located east of Oat Hill and has been identified as Paleocene invertebrates from the Purisima Formation. The implementation of MM CUL-3 would reduce this potential impact to a less than significant level.

Crawford Way Multifamily Project Analysis

The BDSP EIR anticipated development of the Project site. Development of the proposed Project would not result in more intense or extensive construction activity than those analyzed in the BDSP EIR. Accordingly, the proposed Project would not result in any change to the analysis or conclusions in the BDSP EIR. The implementation of BDSP EIR MM CUL-3 would be required for the proposed Project to mitigate any potential impact to paleontological resources. Therefore, the proposed Project would not introduce new environmental impacts related to paleontological resources or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

BDSP EIR MM CUL-3

If potential fossils are discovered during project implementation, all earthwork or other types of ground disturbance within 100 feet of the find shall stop immediately until a qualified professional paleontologist can assess the nature and importance of the find. The paleontologist shall report his/her findings to the City of American Canyon. Based on the scientific value or uniqueness of the find, the paleontologist shall either record the find and recommend that the City of American Canyon allow work to continue or recommend salvage and recovery of the fossil. The paleontologist shall, if required, propose modifications to the stop-work radius based on the nature of the find, site geology, and the activities occurring on the site. If treatment and salvage is required, recommendations will be consistent with Society of Vertebrate Paleontology guidelines and currently accepted scientific practice. If required, treatment for fossil remains shall include preparation and recovery of fossil materials so that they can be housed in an appropriate museum or university collection, and, if required, shall also include preparation of a report for publication describing the finds.

BDSP EIR MM GEO-1a

Prior to issuance of building permits for development projects that occur pursuant to the Specific Plan that are located within an Alquist-Priolo Special Study Zone, the City of American Canyon shall verify that the applicant has commissioned a fault investigation. The fault investigation shall be prepared by a licensed geologist or geotechnical engineer and determine the precise location of the West Napa Fault in relation to the proposed project. All recommended fault setbacks set forth in the fault investigation shall be shown on project plans.

BDSP EIR MM GEO-1b

Prior to issuance of building permits for development projects that occur pursuant to the Specific Plan,

the City of American Canyon shall verify that the applicant has commissioned a design-level geotechnical report. The report shall be prepared by a licensed geologist or geotechnical engineer and determine whether the geologic conditions of the site in question are suitable for development. All recommendations for grading, soil engineering, and construction shall be incorporated into the project plans.

BDSP EIR MM HYD-1a

Prior to issuance of grading permits for development projects that occur pursuant to the Specific Plan, the City of American Canyon shall verify that the applicant has prepared a Stormwater Pollution Prevention Plan (SWPPP) in accordance with the requirements of the statewide Construction General Permit. The SWPPP shall be designed to address the following objectives: (1) all pollutants and their sources, including sources of sediment associated with construction, construction site erosion, and all other activities associated with construction activity are controlled; (2) where not otherwise required to be under a Regional Water Quality Control Board permit, all non-stormwater discharges are identified and either eliminated, controlled, or treated; (3) site best management practices (BMPs) are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized non-stormwater discharges from construction activity; and (4) stabilization BMPs are installed to reduce or eliminate pollutants after construction are completed. The SWPPP shall be prepared by a qualified SWPPP developer. The SWPPP shall include the minimum BMPs required for the identified Risk Level. BMP implementation shall be consistent with the BMP requirements in the most recent version of the California Stormwater Quality Association Stormwater Best Management Handbook—Construction or the Caltrans Stormwater Quality Handbook Construction Site BMPs Manual.

CONCLUSION

There is no new information identifying new significant effects, nor is there an increase in the severity of previously identified impacts related to geology and soils. The conclusions from the BDSP EIR remain unchanged when considering the adoption of the Addendum.

3.10 Greenhouse Gas Emissions

Would the project:		*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a)	Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	Less than Significant Impact	☐	☐	☐	None
b)	Conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?	Less than Significant Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Summary of BDSP EIR Analysis

The BDSP EIR based its greenhouse gas (GHG) emissions analysis on the 2017 BAAQMD CEQA Guidelines (BAAQMD 2017). It was concluded in the BDSP EIR that development and land use activities contemplated by the BDSP would generate direct and indirect GHG emissions; however, these emissions would not result in a significant impact on the environment.

Construction

The BAAQMD does not presently provide a construction-related GHG significance threshold but recommends that construction-generated GHGs be quantified and disclosed. The BAAQMD also recommends that lead agencies (in this case, the City of American Canyon) determine the level of significance of construction GHG emissions in relation to meeting AB 32 GHG reduction goals. As discussed in the BDSP EIR, buildout of the BDSP EIR would emit GHGs from upstream emission sources and direct sources. However, the BAAQMD does not have a recommended assessment methodology or threshold for plan-level, construction-generated GHGs. Upstream emissions were not estimated because they were not within the control of the project and to do so would have been speculative.

Operation

The BDSP EIR calculated operational GHG emissions with CalEEMod, Version 2016.3.2 using the trip generation estimates provided in the Traffic Impact Analysis and compared them to the BAAQMD's 4.6 metric tons (MT) of carbon dioxide equivalent (CO_2e) per service population per year for project-level GHG emissions. The full buildout of the BDSP is expected in 2036. Because 2036 is not offered as an operational year in CalEEMod Version 2016.3.2, emissions were estimated in 2035. Operation after full buildout in 2035 was estimated to generate approximately 23,153 MT CO_2e per year. The operational

emissions were less than the BAAQMD's applicable GHG emissions threshold. The BDSP's GHG impact was determined to be less than significant.

Crawford Way Multifamily Project Analysis

Development of the proposed Project would generate GHG emissions during short-term construction activities, such as site preparation, operation of construction equipment, operation of on-site heavy-duty construction vehicles, hauling of materials to and from site, and construction worker vehicle trips similar to the construction activities analyzed in the BDSP EIR. Long-term operational GHG emissions that would result from the proposed Project would include generated vehicular traffic, operation of any landscaping equipment, off-site generation of electrical power over the life of the Project, the energy required to convey water to and wastewater from site, and emissions associated with the hauling and disposal of solid waste.

The BAAQMD updated their Air Quality CEQA Guidelines in 2022 (BAAQMD 2022). The guidelines no longer contain specified thresholds of significance for project-level GHG emissions. The BAAQMD's new approach, as described in the 2022 CEQA Guidelines, is to use a "fair share" approach for determining whether an individual project's GHG emissions would be cumulatively considerable. If a project would contribute its fair share of what is needed to achieve the State's long-term GHG reduction goals, then the lead agency can find that the project's impact on GHG emissions is less than significant. The BAAQMD identified necessary design elements required of new land use projects being built in order to achieve California's long-term climate goal of carbon neutrality by 2045. If these elements are incorporated into project design and construction, then the project would not have a cumulatively considerable impact regarding GHG emissions. Alternatively, a project for which these design elements are not implemented could still be determined to have a less than significant impact on GHG emissions by demonstrating consistency with a local GHG reduction strategy that is consistent with state guidance.

The local GHG reduction strategy is the City's Energy Efficiency Climate Action Plan (EECAP). As described below in Impact b), the Project would comply with and would not obstruct implementation of this plan. Additionally, the Project would comply with the most recent CALGreen requirements and Title 24, Part 6 of the California Code of Regulations, Building Energy Efficiency Standards. Therefore, the proposed Project would not directly or indirectly generate GHG emissions that may result in a significant impact to the environment. The proposed Project would not result in any new or more severe impacts related to GHG emissions beyond what was previously analyzed in the BDSP EIR. No additional analysis is required.

b) Conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?

Summary of BDSP EIR Analysis

The BDSP EIR concluded that development and land use activities contemplated by the BDSP would not conflict with any applicable plan, policy or regulation of an agency adopted to reduce the emissions of GHGs. The BDSP EIR states that the program and policy recommendations contained in the City's EECAP were reviewed to determine if development of the project would conflict with any of the recommendations. The EECAP outlines a course of action to reduce community-wide GHG emissions generated within the City of American Canyon.

The American Canyon General Plan Circulation Element contemplates mobility improvements that would promote the development of mobility enhancements are intended to improve both motorized and non-motorized circulation within the Broadway District. Consistent with these objectives, the BDSP's design encourages development that results in reduced GHG emissions.

If a project is less than BAAQMD's threshold of significance for GHGs, it stands to reason that the project would not substantially conflict with existing California legislation adopted to reduce statewide GHG emissions. As described in Impact a), buildout of the BDSP would not exceed BAAQMD's threshold of significance for GHG emissions and would result in a less than significant impact. Therefore, the BDSP would not substantially conflict with the emission reduction requirements by AB 32.

The BDSP was found to be consistent with all applicable plans, policies, and regulations adopted for the purpose of reducing emissions of greenhouse gases, including the City's EECAP. As a result, it was determined that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The BAAQMD updated their CEQA Guidelines in 2022, which set new standards for project-level GHG impacts. As described in Impact a) above, projects must either comply with project design standards as outlined in the BAAQMD CEQA Guidelines or demonstrate consistency with a local GHG reduction strategy. The local GHG reduction strategy is the City's EECAP. The BDSP EIR anticipated development of the Project site and found that buildout of the BDSP area would be consistent with the EECAP. The proposed Project is requesting three waivers to BDSP development standards for building height at street setbacks, building to building setbacks, and garage size minimums. None of these waivers relate to GHG emissions, and the proposed Project would be consistent with all other BDSP design standards and guidelines. Therefore, the proposed Project would be consistent with all relevant plans and policies addressing GHG emissions, including the EECAP, the General Plan Circulation Element, and the BAAQMD's CEQA Air Quality Guidelines. The proposed Project would not result in any new or more severe impacts related to conflict with applicable plans, policies, or regulations adopted for the purpose of reducing GHG emissions beyond what was previously analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

None required.

CONCLUSION

There is no new information identifying new significant effects, nor is there an increase in the severity of previously identified impacts in the BDSP EIR related to GHG emissions. The conclusions from the BDSP EIR remain unchanged when considering the changes to the proposed project. No additional analysis is required.

3.11 Hazards and Hazardous Materials

Would the project:		*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a)	Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	Less than Significant Impact	☐	☐	☐	None
b)	Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	Less than Significant Impact	☐	☐	☐	None
c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	Less than Significant Impact	☐	☐	☐	None
d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	Less than Significant Impact	☐	☐	☐	None
e)	For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	Less than Significant Impact	☐	☐	☐	None

Would the project:		*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
f)	Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	Less than Significant Impact	☐	☐	☐	None
g)	Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	No Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Summary of BDSP EIR Analysis

It was determined in the BDSP EIR that buildout of the BDSP would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials. According to the BDSP EIR, hazardous materials such as gasoline, diesel, oil, grease, mechanical fluids, paints, and cleaning solvents could be present during construction activities. Additionally, cleaning solvents, diesel, gasoline, grease/degreasers, mechanical fluids and oil would be present on-site as part of daily operations.

The BDSP boundaries contain numerous structures that predate the federal prohibition of ACMs. Thus, it was determined that there is a high potential for ACMs to be present within the BDSP area.

Additionally, it was determined that the buildout of the BDSP would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment. Land uses that handle large quantities of hazardous materials are generally agricultural, industrial, or resource extraction in nature. These types of land uses were not contemplated by the BDSP. These materials would not be considered a potential risk to human health or the environment and that releases that could potentially expose substantial numbers of people or the environment to harm is not anticipated by any of the BDSP land uses. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

Consistent with the BDSP EIR, development of the proposed Project would utilize hazardous materials such as gasoline, diesel, oil, grease, mechanical fluids, paints, and cleaning solvents during construction activities. Development of the Project site would occur within the area analyzed in the BDSP EIR, would

use the same hazardous materials, and would subject to similar conditions with respect to hazards and hazardous materials as what was analyzed in the BDSP EIR. Therefore, the proposed Project would not result in new or substantially greater significant impact with regard to hazards and hazardous materials. Construction of the Project would result in similar conclusions related to hazards and hazardous materials. Therefore, the proposed Project would not introduce new environmental impacts through the routine transport, use, or disposal of hazardous materials or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Summary of BDSP EIR Analysis

It was determined in the BDSP EIR that buildout of the BDSP would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school. According to the BDSP EIR, Napa Junction Elementary School is located within the BDSP boundaries and is within the "Business Park" subarea. Additionally, Canyon Oaks Elementary School, Donaldson Way Elementary School, and American Canyon High School are within 0.35 mile, 0.40 mile, and 0.65 mile of the BDSP boundaries, respectively. During preparation of the BDSP EIR, Napa Valley Unified School District was in the process of finding a new location for Napa Junction Elementary School. The BDSP EIR determined that because land uses that emit hazardous emissions or handle hazardous materials, such as agricultural, industrial, or resource extraction are not contemplated by the BDSP, buildout of the BDSP would not emit hazardous emissions or handle hazardous materials within 0.25 mile of a school. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The Project site is located approximately 260 feet north of Napa Valley Montessori Learning Center. Consistent with the BDSP EIR, construction of the proposed Project would not create land uses that emit hazardous emissions or handle hazardous materials, such as agricultural, industrial, or resource extraction. This precludes the possibility that the proposed Project would result in the emission of hazardous emissions or handling of hazardous or acutely hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school. As discussed in Section 3.5 Air Quality, the Project would implement MM AIR-2, MM AIR-3, and MM AIR-4a to control dust emissions and emissions from diesel-fueled equipment during construction, and submit either a toxic air contaminant risk screening assessment report or Health Risk Analysis to the City for approval prior to issuance of building permits. Therefore, the proposed Project would not introduce new impacts or create more severe impacts related to hazardous emissions or materials within 0.25 mile of a school than those previously analyzed in the BDSP EIR. No additional analysis is required.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Summary of BDSP EIR Analysis

It was determined in the BDSP EIR that the BDSP would not be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would not create a significant hazard to the public or the environment. According to the BDSP EIR, there are eight recorded sites within the BDSP boundaries that are listed on hazardous materials databases compiled pursuant to Government Code Section 65962.5. All of the sites are associated with

leaking underground storage tanks. At the time of BDSP EIR preparation, seven of the sites were listed as "Closed," signifying that they have been remediated to the satisfaction of the agency with oversight. The lone site listed as "Open" was located at Caltrans Route 29 Post-Mile 1.13 (3466 Broadway Street), and is now listed as closed (SRWQCB 2023). The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

A Phase I Environmental Site Assessment (ESA) was prepared for the Project site by AEI Consultants in April 2017 (AEI Consultants 2017). The Phase I ESA indicated that the Project site consisted of undeveloped land from around 1916 until it became agricultural in 1948. The site remained agricultural until at least 1987 and has been vacant since it went fallow. The ESA did not identify evidence of the presence of or likely presence of any hazardous substances or petroleum products in, on, or at the site. No evidence of potential past releases of hazardous substances or petroleum products was indicated. The ESA indicated no other environmental concerns for the Project site and recommended no further investigation for the site. The proposed Project would not introduce new impacts or create more severe impacts related to hazardous materials sites than those previously analyzed in the BDSP EIR. No additional analysis is required.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

Summary of BDSP EIR Analysis

It was determined in the BDSP EIR that for a future development located within an airport land use plan or, where such a plan has not been adopted, within 2.0 miles of a public airport or public use airport, the future development would not result in a safety hazard for people residing or working the project area. The BDSP determined that the northern portion of the BDSP area is within 2.0 miles of Napa County Airport, but that buildout of the BDSP would not result in safety hazards for persons residing or working in the BDSP vicinity. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The Project site is approximately 3.4 miles south of Napa County Airport. According to the Airport Land Use Compatibility Plan, the Project site is not located within the boundaries of the airport influence area (Napa County 1999). Because the site is not located within 2.0 miles of a public or public use airport, and because the site is not in an airport influence area, the proposed Project would not result in safety hazards or excessive noise beyond those analyzed in the BDSP EIR. Additionally, there are no private airstrips in the vicinity of the Project site. Therefore, the proposed Project would not have any impacts related to a private airstrip and would not create any hazard for people in the area. The proposed Project would not introduce new environmental impacts related to a public or public use airport or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Summary of BDSP EIR Analysis

It was determined in the BDSP EIR that the BDSP would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. According to the BDSP EIR, the BDSP included several mobility enhancements and new connections that improve mobility

within the subareas, and by extension, emergency response and evacuation. The BDSP EIR determined that other improvements, such as trail connections, would have no impact on emergency access or evacuation. The BDSP EIR concluded that development consistent with the BDSP would not impair emergency response or evacuation in the BDSP vicinity and that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The proposed Project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. The Project would comply with the California Fire Code requirements for emergency access. The Project would not include changes that could potentially interfere with an emergency response plan or an emergency evacuation plan. Furthermore, the City traffic engineer would review and approve the site plan prior to approval. Therefore, the proposed Project would not introduce new environmental impacts related to an adopted emergency response plan or emergency evacuation plan or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Summary of BDSP EIR Analysis

According to the BDSP EIR, the BDSP boundaries are surrounded by urban uses and infrastructure on three sides and undeveloped land on the fourth. These characteristics preclude the possibility of the BDSP boundaries being exposed to wildland fires. It was determined that no impacts would occur.

Crawford Way Multifamily Project Analysis

The Project site is not in a High Fire Hazard Severity Zone or in a Very High Fire Hazard Severity Zone as mapped by California Department of Forestry and Fire Protection (CAL FIRE), and the Project site is not located in a State Responsibility Area (CAL FIRE 2023). The Project site is urbanized and is not adjacent to wildland areas. Therefore, the proposed Project would not directly or indirectly expose people or structures to a significant risk of loss, injury or death involving wildland fires. The proposed Project would not introduce new environmental impacts related to wildland fires or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

None required.

CONCLUSION

There is no new information identifying new significant effects, nor is there an increase in the severity of previously identified impacts in the BDSP EIR related to hazards and hazardous materials. The conclusions from the BDSP EIR remain unchanged when considering the changes to the proposed project. No additional analysis is required.

3.12 Hydrology and Water Quality

Would the project:	*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	Less than Significant Impact with Mitigation	☐	☐	☐	MM HYD-1a, MM HYD-1b
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	Less than Significant Impact	☐	☐	☐	None
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:					
i) result in substantial erosion or siltation on- or off-site;	Less than Significant Impact	☐	☐	☐	None
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;	Less than Significant Impact	☐	☐	☐	None
iii) create or contribute runoff water that would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff; or	Less than Significant Impact	☐	☐	☐	None
iv) impede or redirect flood flows?	Less than Significant Impact	☐	☐	☐	None
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	No Impact	☐	☐	☐	None

Would the project:	*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	None	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Summary of BDSP EIR Analysis

The BDSP EIR determined that construction and operational activities associated with the BDSP have the potential to degrade water quality in downstream water bodies. According to the BDSP EIR, buildout of the Specific Plan has the potential to degrade water quality arising from (1) short-term land disturbance from construction activities and presence of contaminants associated with construction machinery, and (2) long-term changes to land use and drainage patterns that may increase the delivery of sediments, nutrients, organic compounds, trash/debris, and other contaminants to waterways tributary to the Napa River. MM HYD-1a and MM HYD-1b were proposed, which would require implementation of a Stormwater Control Plan and an operation and maintenance program to ensure stormwater controls. The BDSP EIR concluded that impacts would be less than significant with the implementation of MM HYD-1a and MM HYD-1b.

Crawford Way Multifamily Project Analysis

The BDSP EIR anticipated development of the Project site. The proposed Project would not result in more intense or extensive construction or operational activity that has the potential to degrade water quality in downstream water bodies than the projected development analyzed in the BDSP EIR. Accordingly, the Project would not result in any change to the analysis or conclusions in the BDSP EIR. Additionally, the Project would be required to implement BDSP EIR MM HYD-1a and MM HYD-1b to address stormwater impacts. Per MM HYD-1a and HYD-1b, the Project applicant would retain a qualified professional to prepare a Stormwater Pollution Prevention Plan (SWPPP) in accordance with the requirements of the statewide Construction General Permit, as well as a Stormwater Control Plan (SCP). The SWPPP and SCP would include BMPs to reduce pollutants in stormwater discharge to a less than significant level. The Project would adhere to all design standards of the BDSP regarding wastewater discharge. Therefore, the proposed Project would not introduce new impacts or create more severe impacts associated with water quality than those previously analyzed in the BDSP EIR. No additional analysis is required.

b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Summary of BDSP EIR Analysis

According to the BDSP EIR, buildout of the BDSP would not contribute to groundwater overdraft because the BDSP area would be served by potable water service provided by the City, and no groundwater wells would be drilled on-site. Additionally, the BDSP EIR determined that buildout of the BDSP would not impair groundwater recharge because soils that underlie the BDSP area are mostly clay, which have a very low infiltration rate—particularly when thoroughly wetted—and thus offer marginal groundwater recharge qualities. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

Consistent with the discussion and analysis in the BDSP EIR, the proposed Project would be served by the existing potable water service provided by the City. Therefore, the proposed Project would not introduce new impacts or create more severe impacts associated with groundwater supplies or groundwater recharge than those previously analyzed in the BDSP EIR. No additional analysis is required.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: (i) result in substantial erosion or siltation on- or off-site; (ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site; (iii) create or contribute runoff water that would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff; or (iv) impede or redirect flood flows?

Summary of BDSP EIR Analysis

The BDSP EIR determined that the development consistent with the BDSP would not contribute runoff to downstream storm drainage facilities that would result in the potential for flooding, erosion or siltation, or create runoff water which would exceed the capacity of existing or planned stormwater drainage systems. According to the BDSP EIR, buildout of the BDSP would increase the impervious surface of the BDSP area, but compliance with the City's post-development stormwater requirements would ensure that that new development captures, detains, and regulates the release of the additional runoff generated by new impervious surfaces in a manner that avoids inundating downstream stormwater facilities such that flooding occurs.

Pursuant to the requirements of the applicable stormwater permits, the City requires new development to address post-development stormwater quality using treatment measures—Low Impact Development (LID) concepts. Common examples of LID concepts include bioretention basins, landscaping, and designing pervious areas to drain into landscaped areas. LID serves two purposes: treating runoff and reducing the release of runoff during peak events.

When applications for new development are filed with the City, City staff will review project plans for compliance with the City's post-development stormwater requirements. This would ensure that new development captures, detains, and regulates the release of the additional runoff generated by new impervious surfaces in a manner that avoids inundating downstream stormwater facilities. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

Development of the proposed Project would comply with the City's post-development stormwater requirements. The Project would also implement the Preliminary Stormwater Control Plan and an operation and maintenance program as required by BDSP EIR MM HYD-1b and discussed in Impact a)

above. With the implementation of MM HYD-1a and MM HYD-1b, the proposed Project would not introduce new impacts or create more severe impacts associated with drainage, drainage systems, runoff, erosion, siltation, or flood flows than those previously analyzed in the BDSP EIR. No additional analysis is required.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Summary of BDSP EIR Analysis

According to the BDSP EIR, there are no inland water bodies that could be potentially susceptible to a seiche in the BDSP vicinity. This precludes the possibility of a seiche inundating the BDSP area.

The Association of Bay Area Government's interactive tsunami mapping feature indicates that only the coastal portions of Sonoma, Marin, San Francisco, and San Mateo Counties are susceptible to tsunamis. Areas located near the bay are not considered susceptible to tsunami inundation. This condition precludes the possibility of a tsunami inundating the BDSP area.

There are no steep slopes that would be susceptible to a mudflow in the BDSP vicinity, nor are there any volcanically active features that could produce a mudflow in the City of American Canyon. This precludes the possibility of a mudflow inundating the BDSP area. No impact would occur.

Crawford Way Multifamily Project Analysis

The Project site is not located within the Southern Gateway Subarea where the flood hazards areas occur in the BDSP planning area. Therefore, the proposed Project would not introduce new impacts or create more severe impacts associated with flood hazard areas than those previously analyzed in the BDSP EIR.

As stated in the BDSP EIR, only the coastal portions of Sonoma, Marin, San Francisco, and San Mateo Counties are susceptible to tsunamis, and areas located near the bay are not considered susceptible to tsunami inundation. Additionally, the Project site is not near any steep slopes. Thus, the proposed Project would not be at risk of inundation by seiche, tsunami, or flooding. The proposed Project would not introduce new impacts or create more severe impacts associated with seiche, tsunami, or flooding than those previously analyzed in the BDSP EIR. No additional analysis is required.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Summary of BDSP EIR Analysis

This question was not included in the BDSP EIR. No conclusion was made regarding the significance level of impacts related to compliance with a water quality control plan or sustainable groundwater management plan.

Crawford Way Multifamily Project Analysis

Development of the proposed Project would comply with the requirements of the San Francisco Bay Regional Water Quality Control Board and would satisfy the requirements of the National Pollutant Discharge Elimination System (NPDES) Program. The Project would not conflict with the guiding and implementing policies of the General Plan related to hydrology and water quality, including Goal 10, Objective 10.1, and Policies 10.1.1 through 10.1.13. Therefore, the proposed Project would not introduce new impacts or create more severe impacts than those previously analyzed in the BDSP EIR.

No additional analysis is required.

MITIGATION MEASURES

BDSP EIR MM HYD-1a

Prior to issuance of grading permits for development projects that occur pursuant to the Specific Plan, the City of American Canyon shall verify that the applicant has prepared a Stormwater Pollution Prevention Plan (SWPPP) in accordance with the requirements of the statewide Construction General Permit. The SWPPP shall be designed to address the following objectives: (1) all pollutants and their sources, including sources of sediment associated with construction, construction site erosion, and all other activities associated with construction activity are controlled; (2) where not otherwise required to be under a Regional Water Quality Control Board permit, all non-stormwater discharges are identified and either eliminated, controlled, or treated; (3) site best management practices (BMPs) are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized non-stormwater discharges from construction activity; and (4) stabilization BMPs are installed to reduce or eliminate pollutants after construction are completed. The SWPPP shall be prepared by a qualified SWPPP developer. The SWPPP shall include the minimum BMPs required for the identified Risk Level. BMP implementation shall be consistent with the BMP requirements in the most recent version of the California Stormwater Quality Association Stormwater Best Management Handbook—Construction or the Caltrans Stormwater Quality Handbook Construction Site BMPs Manual.

BDSP EIR MM HYD-1b

Prior to issuance of building permits for development projects that occur pursuant to the Specific Plan, the project applicant shall prepare a Stormwater Control Plan that includes post-construction stormwater controls in the site design to satisfy requirements of the Phase II Small MS4 Permit. This shall include a review of the final Stormwater Control Plan by the City of American Canyon to ensure that the required controls are in place. Provision E.12.h of the MS4 Permit requires that an operation and maintenance program be implemented for post-construction stormwater management features. Responsible parties and funding for long-term maintenance of all BMPs must be specified. This plan shall specify a regular inspection schedule of stormwater treatment facilities in accordance with the requirements of the MS4 Permit. Reports documenting inspections and any remedial action conducted shall be submitted regularly to the City for review and approval.

CONCLUSION

There is no new information identifying new significant effects, nor is there an increase in the severity of previously identified impacts in the BDSP EIR related to hydrology and water quality. The conclusions from the BDSP EIR remain unchanged when considering the changes to the proposed project. No additional analysis is required.

3.13 Land Use and Planning

Would the project:		Conclusion in the Final EIR	Do the Proposed Project Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures?
a)	Physically divide an established community?	Less than Significant Impact	☐	☐	☐	None
b)	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	Less than Significant Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Physically divide an established community?

Summary of BDSP EIR Analysis

The BDSP EIR concluded that all development displaced by the BDSP building would occur on a voluntary basis and that occupants would be given advance notice of development plans. The BDSP includes mobility enhancements to improve both motorized and non-motorized circulation, which would improve Broadway District connectivity. Therefore, impacts were determined to be less than significant.

Crawford Way Multifamily Project Analysis

The Project site is zoned LSMU. Development of market rate housing on the Project site would be consistent with the zoning designation. Additionally, the proposed Project does not include the addition of new roadways which could divide an established community. The Project applicant is requesting three waivers for building height at side street setbacks, garage parking space size minimums, and building face to face setbacks. These waivers would not create a division in the community. The Project would comply with all other development standards for the LSMU district as specified in the BDSP. Therefore, the proposed Project would not introduce new impacts or create more severe impacts than those previously analyzed in the BDSP EIR. No additional analysis is required.

b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Summary of BDSP EIR Analysis

The BDSP evaluated consistency of the BDSP with applicable policies and land use designations with the General Plan. The BDSP required a General Plan Amendment to ensure consistency between the BDSP and the American Canyon General Plan. When a Specific Plan entails amendments to the General Plan designations or zoning, inconsistency with the existing designations or zoning is an element of the project itself, which then necessitates a legislative policy decision by the agency and does not signify a potential environmental effect. As such, the proposed General Plan Amendment served as a self-mitigating aspect of the BDSP that served to correct the conflict. The BDSP EIR concluded that the BDSP

was consistent with all applicable goals, objectives, and policies in the General Plan. Therefore, impacts were determined to be less than significant.

Crawford Way Multifamily Project Analysis

As described in Section 2.4 and Impact a) above, the proposed Project would request waivers for building height at side street setbacks, garage parking space size requirements, and building to building setbacks. Once the waiver requests are granted and approved by the Planning Commission or City Council, the proposed Project would not conflict with any land use plan or policy. The proposed Project would not introduce new impacts or create more severe impacts than those previously analyzed in the BDSP EIR. No Additional analysis is required.

MITIGATION MEASURES

None required.

CONCLUSION

The proposed Project would be consistent with the BDSP EIR and would not create new or more significant impacts to land use beyond what was analyzed in the BDSP EIR. The conclusions from the BDSP EIR remain unchanged when considering the adoption of the Addendum.

3.14 Mineral Resources

Would the project:	Conclusion in the Final EIR	Do the Proposed Project Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures?
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	No Impact	☐	☐	☐	None
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	No Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

Summary of BDSP EIR Analysis

The BDSP EIR concluded that the BDSP boundaries do not contain a known mineral deposit and the land does not support mineral extraction operations. This precludes the possibility of a loss of mineral resources of local, regional, or statewide importance. It was determined that no impact would occur.

Crawford Way Multifamily Project Analysis

As stated in the BDSP EIR, the BDSP boundaries do not contain a known mineral deposit and the LMSU subarea does not currently support mineral extraction operation. No site within the BDSP boundaries is designated by the State or the City of American Canyon as a location of known mineral deposit. Therefore, the proposed Project would not result in the loss of known mineral resources or deposit sites, nor is there high potential for mineral resources to be identified in the undeveloped area. The proposed Project would not introduce new impacts or create more severe impacts than those previously analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

None required.

CONCLUSION

The proposed Project would be consistent with the BDSP EIR and would not create new or more significant impacts to mineral resources beyond what was analyzed in the BDSP EIR. The conclusions from the BDSP EIR remain unchanged when considering the adoption of the Addendum.

3.15 Noise

Would the project:		*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a)	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	Less than Significant Impact with Mitigation	☐	☐	☐	MM NOI-1
b)	Generation of excessive groundborne vibration or groundborne noise levels?	Less than Significant Impact with Mitigation	☐	☐	☐	MM NOI-2a
c)	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	Less than Significant Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Summary of BDSP EIR Analysis

The noise analysis of the BDSP EIR concluded that potential exposure of persons to excessive noise could occur with buildout of the BDSP. However, MM NOI-1 would require a detailed acoustical analysis to be prepared for any noise sensitive land uses within the 65 A-weighted decibel (dBA) day/night average sound level (L_{dn}) roadway noise contours (i.e., within 350 feet of the centerline of Broadway Street). The detailed acoustical analysis would confirm the roadway noise levels impacting the sensitive receptors and identify any necessary mitigation measures to reduce interior noise levels at the sensitive land uses to within City noise standards.

The noise analysis of the BDSP EIR concluded that any temporary ambient noise increase would not expose persons to noise levels in excess of standards established in the General Plan or Noise Ordinance. The ACMC allows construction noise level impacts up to 75 dBA at residential receptors between the hours of 7:00 a.m. and 7:00 p.m. and up to 60 dBA between the hours of 7:00 p.m. and 7:00 a.m.

The noise analysis of the BDSP EIR concluded that buildout anticipated under the Specific Plan would not result in a substantial permanent increase in ambient noise levels in the BDSP vicinity.

Crawford Way Multifamily Project Analysis

Construction Impact

The BDSP EIR anticipated development of the Project site. Implementation of the Project would not result in any change to the analysis or conclusions in the BDSP EIR. The closest sensitive receptors are the Open Door Christian Church and Napa Valley Montessori Learning Center located immediately south of the Project site, and single family residences located adjacent west of the Project site and across SR-29 to the east. As discussed in the BDSP EIR, construction equipment generates high levels of intermittent noise ranging from 70 dB to 105 dB and would result in a significant impact where noise-sensitive land uses adjoin construction sites. Although construction activities would result in a substantial noise increase in such locations, this impact would be short-term and would cease upon completion of construction.

Construction activities within the City are required to adhere to the ACMC's construction noise limits provided in Section 8.12.080 of the ACMC. In addition, the Project would be required to comply with BDSP EIR MM NOI-1, which requires the Project applicant to retain an acoustical engineer to conduct a detailed acoustical analysis. The Project applicant shall ensure any necessary mitigation measures provided in the acoustical report are incorporated into Project design and implementation. Per BDSP EIR MM NOI-2a, if the Project involves pile driving, the applicant shall retain an acoustical engineer to conduct a vibration analysis for potential construction related impacts, and incorporate any necessary mitigation measures into Project design and implementation. With the implementation of these measures, construction noise impacts would be less than significant, and no additional mitigation is necessary. The proposed Project would not introduce new impacts or create more severe impacts than those previously analyzed in the BDSP EIR. No additional analysis is required.

Operational Impact

As discussed in the BDSP EIR, all analyzed roadway segments of Broadway Street and American Canyon Road would exceed the City's 65 dBA L_{dn} exterior noise standard for housing, schools, health care facilities, and other sensitive land uses, which would occur even without development of the BDSP. Per MM NOI-1 and MM NOI-2a, the Project applicant shall ensure any necessary mitigation measures provided in the required acoustical and vibration analyses would be incorporated into Project design and implementation. With implementation of these measures, the proposed Project would not introduce new impacts or create more severe impacts than those previously analyzed in the BDSP EIR. No additional analysis is required.

b) Generation of excessive groundborne vibration or groundborne noise levels?

Summary of BDSP EIR Analysis

The noise analysis of the BDSP EIR concluded that potential groundborne vibration impacts could occur with buildout of the BDSP. However, according to MM NOI-2a, any project that would utilize mobile construction equipment within 20 feet of any existing structure with sensitive receptors would have to

provide site-specific vibration analysis. However, the analysis demonstrated that construction vibration impacts would be less than significant with implementation of MM NOI-2a.

The analysis also determined that potential operations vibration impacts could occur for vibration-sensitive land use development projects located within 30 feet of a truck route or within 80 feet of a railroad line. However, the analysis demonstrated that operational vibration impacts would be less than significant with implementation of MM NOI-2b.

Crawford Way Multifamily Project Analysis

The BDSP EIR anticipated development of the Project site. Implementation of the Project would not result in any change to the analysis or conclusions in the BDSP EIR. Development projected by implementation of the BDSP may result in construction activities that occur immediately adjacent to existing homes and other vibration sensitive uses, therefore there is a possibility that vibration from construction equipment would exceed the 0.25-inch-per-second peak particle velocity (PPV) threshold defined by California Department of Transportation (Caltrans) for continuous/frequent intermittent sources of vibration. Therefore, groundborne vibration impacts from Project construction activities could potentially result in a significant impact. Per BDSP EIR MM NOI-2a, the Project applicant shall retain a qualified acoustical engineer to conduct a vibration analysis for the proposed Project. The Project applicant shall ensure that any necessary mitigation measures recommended by the analysis are included in Project design and implementation to reduce impacts from groundborne vibration to a less than significant level.

The Project would comply with street setback requirements identified in the BDSP, and would therefore not include structures located within 30 feet of any roadway or within 80 feet of any railroad. Therefore, operational vibration impacts on proposed on-site receptors would be less than significant. With the implementation of MM NOI-2a, the proposed Project would not introduce new impacts or create more severe impacts than those previously analyzed in the BDSP EIR. No additional analysis is required.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Summary of BDSP EIR Analysis

The noise analysis of the BDSP EIR concluded that development consistent with the BDSP would not expose persons to excessive noise levels from aircraft.

Crawford Way Multifamily Project Analysis

The entire BDSP area is located outside the 55 dBA Community Noise Equivalent Level (CNEL) noise contour of Napa County Airport. Therefore, aviation noise exposure within the BDSP area is less than 55 dBA CNEL. All development and land use activities are considered acceptable within areas exposed to aviation noise levels of less than 55 dBA CNEL. The proposed Project would not introduce new impacts or create more severe impacts than those previously analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

BDSP EIR MM NOI-1

Prior to issuance of building permits of noise-sensitive land uses within the 65 dBA L_{dn} roadway noise contours shown in Exhibit 3.9-4 or within the 65 dBA L_{dn} roadway noise contours specified in Table 3.9-

15 (within 350 feet of the centerline of Broadway Street or 127 feet of the centerline of American Canyon Road), the applicant shall retain an acoustical engineer to conduct a detailed acoustical analysis. The detailed acoustical analysis shall confirm the roadway noise levels impacting the sensitive receptors, and if necessary, shall identify mitigation measures to reduce interior noise levels at the sensitive land uses to within City noise standards.

BDSP EIR MM NOI-2a

Prior to issuance of grading permits, if construction activities will (1) pile drive within 150 feet or (2) utilize mobile construction equipment within 20 feet of any existing structure with sensitive receptors, the applicant shall retain an acoustical engineer to conduct a vibration analysis for potential impacts from construction-related vibration impacts to the existing structure(s) with sensitive receptors. The vibration analysis shall determine the vibration levels created by construction activities at the existing structure(s) with sensitive receptors and, if necessary, develop mitigation to reduce the vibration levels to within the Caltrans threshold of 0.25 inch per second PPV.

CONCLUSION

The proposed Project would be consistent with the BDSP EIR and would not create new or more significant noise impacts beyond what was analyzed in the BDSP EIR. The conclusions from the BDSP EIR remain unchanged when considering the adoption of the Addendum.

3.16 Population and Housing

Would the project:	*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	Less than Significant Impact	☐	☐	☐	None
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	Less than Significant Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Summary of BDSP EIR Analysis

It was concluded in the BDSP EIR that the BDSP would not include substantial direct or indirect population growth in an area. The potential population growth per year resulting from the BDSP would be within historical numeric population increase that have occurred within American Canyon and therefore, the BDSP would be planned residential growth. Therefore, the population growth was determined to be less than significant.

Crawford Way Multifamily Project Analysis

The proposed Project would include development of 100 townhome style apartments in the BDSP planning area. The BDSP EIR estimated that the BDSP buildout would involve development of 1,200 du with 3.48 persons per household. The BDSP buildout would result in a population growth of 4,176 people within the BDSP boundaries over a 20-year period, which equates to 209 new residents per year. With the average number of 3.48 persons per household, the proposed 100-unit development would result in a population growth of approximately 348 people within the BDSP boundaries. Development of the Project site was anticipated in the BDSP EIR analysis. The 100 new housing units and population growth of 348 people would be within the BDSP planned housing and population growth in the area. The proposed Project would not introduce new impacts or create more severe impacts than those previously analyzed in the BDSP EIR. No additional analysis is required.

b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Summary of BDSP EIR Analysis

The BDSP EIR concluded that the BDSP would not displace substantial numbers of existing, necessitating the construction of replacement housing elsewhere. Under the BDSP, no persons would be involuntarily displaced and new dwelling units would be built. Therefore, this impact was determined to be less than significant.

Crawford Way Multifamily Project Analysis

The Project site is currently undeveloped. The Project would not displace existing housing and people because there is no housing or people on-site. The Project would include construction of 100 new housing units to support new residential use. Therefore, the proposed Project would not introduce new impacts or create more severe impacts than those previously analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

None required.

CONCLUSION

There is no new information identifying new significant effects, nor is there an increase in the severity of previously identified impacts in the BDSP EIR related to population and housing. The conclusions from the BDSP EIR remain unchanged when considering the changes to the proposed Project. No additional analysis is required.

3.17 Public Services

Would the project:	*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:					
Fire protection?	Less than Significant Impact	☐	☐	☐	None
Police protection?	Less than Significant Impact	☐	☐	☐	None
Schools?	Less than Significant Impact	☐	☐	☐	None
Parks?	Less than Significant Impact	☐	☐	☐	None
Other public facilities?	Less than Significant Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

- **Fire Protection?**

Summary of BDSP EIR Analysis

The BDSP EIR determined that buildout of the BDSP would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection. According to the BDSP EIR, payment of the development fees to fund capital improvements, as well as the Specific Plan's proximity to the American Canyon Fire Protection District Station, and compliance with the California Fire Code requirements for emergency access, fire detection and suppression systems, and minimum fire flow would minimize the demand for fire protection. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

Development of the Project site was anticipated in the BDSP EIR analysis. The proposed Project would comply with the California Fire Code requirements for emergency access, fire detection and suppression systems, and minimum fire flow. The Project applicant would pay the applicable development impact

fees in accordance with Ordinance 2013-01 (City of American Canyon 2013). Consistent with the BDSP EIR analysis, construction of 100 new housing units on-site would result in similar conclusions related to fire protection responses. Therefore, the proposed Project would not introduce new impacts or create more severe impacts related to fire protection services than those previously analyzed in the BDSP EIR. The Project site would not require new fire department facilities to serve the project. No additional analysis is required.

- **Police Protection?**

Summary of BDSP EIR Analysis

The BDSP EIR determined that buildout of the BDSP would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection. According to the BDSP EIR, the payment of development fees to fund capital improvements, as well as the project's proximity to the police department, would ensure that the development of an additional police station would not be required. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

Development of the project site was anticipated in the BDSP EIR analysis. The Project site is located approximately 0.4 mile southwest of American Canyon Police Department at 911 Donaldson Way East and would not require new police facilities to serve the Project. The Project applicant would pay the required development fees to fund capital improvements. Consistent with the BDSP EIR analysis, implementation of the Project would result in similar conclusions related to police protection responses. The proposed Project would not result in potential impacts that would be more severe than were already analyzed in the BDSP EIR. Therefore, the proposed Project would not introduce new impacts or create more severe impacts related to police protection service than those previously analyzed in the BDSP EIR. No additional analysis is required.

- **Schools?**

Summary of BDSP EIR Analysis

The BDSP EIR determined that buildout of the BDSP would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools. According to the BDSP EIR, buildout of the BDSP was anticipated to generate 614 students. The BDSP EIR determined that impacts would be less than significant with payment of development fees at the time that building permits are sought. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

Development of the Project site was anticipated in the BDSP EIR analysis. The BDSP EIR estimated the student generate rate for multi-family housing would be approximately 0.366 students/dwelling unit with the implementation of BDSP. The proposed 100 market rate housing units would generate approximately 37 students within the BDSP boundaries. The 37 new students would be within the anticipated number of new students analyzed in the BDSP EIR. In addition, the Project applicant would pay any applicant development fees. Therefore, the proposed Project would not introduce new impacts

or create more severe impacts related to schools than those previously analyzed in the BDSP EIR. No additional analysis is required.

- **Parks?**

Summary of BDSP EIR Analysis

The BDSP EIR determined that buildout of the BDSP would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks. According to the BDSP EIR, the BDSP was anticipated to increase the population of the Broadway District by approximately 4,300 residents, but impacts would be less than significant because the BDSP would require new development that occurs within the BDSP either to provide trails, parks, and recreational facilities, or to provide fees to the City of American Canyon to develop such fees elsewhere. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

Development of the Project site was included in the BDSP EIR analysis. The proposed Project would comply with private open space design standards required by the BDSP. The Project would also include a large Common Open Space and Community Building. In addition, the Project applicant would pay any applicable development fees to the City. Therefore, the proposed Project would not introduce new impacts or create more severe impacts related to parks than those previously analyzed in the BDSP EIR. No additional analysis is required.

- **Other Public Facilities?**

Summary of BDSP EIR Analysis

The BDSP EIR determined that buildout of the BDSP would not result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities. According to the BDSP EIR, the BDSP's potential increase in population is a nominal increase compared with the existing population served by local libraries and would not be expected to require new or substantially altered library facilities or other public facilities. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

Development of the Project site was anticipated in the BDSP EIR analysis. As discussed in Section 3.16 Impact a), the potential population growth resulting from the proposed Project would be consistent with the potential population growth estimated for the buildout of the BDSP. Therefore, the Project's potential population increase would not be expected to require new or substantially altered library facilities or other public facilities. The impacts of the proposed Project to libraries would not be more severe than those analyzed in the BDSP EIR. Implementation of the proposed Project would result in similar conclusions related to library services. Therefore, the proposed Project would not introduce new impacts or create more severe impacts related to other public facilities, such as libraries, than those previously analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

None required.

CONCLUSION

The proposed Project would be consistent with the BDSP EIR and would not create new or more significant impacts to public services beyond what was analyzed in the BDSP EIR. The conclusions from the BDSP EIR remain unchanged when considering the adoption of the Addendum.

3.18 Recreation

Would the project:		Conclusion in the Final EIR	Do the Proposed Project Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures?
a)	Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	Less than Significant Impact	☐	☐	☐	None
b)	Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	Less than Significant Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Summary of BDSP EIR Analysis

The BDSP EIR concluded that the BDSP would result in a population increase. However, requirements for increased park acreage would be met by fees paid to the City and by proposed features of the BDSP, such as bike/pedestrian paths, parks, private recreational facilities. Therefore, impacts were determined to be less than significant.

Crawford Way Multifamily Project Analysis

Development of the Project site was included in the BDSP EIR analysis. As discussed in Section 3.17 Impact a), the Project would include development of private and common outdoor space. In addition, the Project applicant would pay any applicable development fees to the City to increase park acreage. Implementation of the proposed Project would not result in impacts not previously addressed in the BDSP EIR. Consistent with the BDSP EIR, implementation of the proposed Project would result in similar conclusions related to recreational facilities. Therefore, the proposed Project would not introduce new park and recreation impacts or create more severe park and recreation impacts than those previously analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

None required.

CONCLUSION

The proposed Project would be consistent with the BDSP EIR and would not create new or more significant impacts to recreation facilities beyond what was analyzed in the BDSP EIR. The conclusions from the BDSP EIR remain unchanged when considering the adoption of the Addendum.

3.19 Transportation

Would the project:		*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a)	Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	Significant and Unavoidable Impact	☐	☐	☐	None
b)	Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	None	☐	☐	☐	None
c)	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	Less than Significant Impact	☐	☐	☐	None
d)	Result in inadequate emergency access?	Less than Significant Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Summary of BDSP EIR Analysis

The BDSP EIR determined that the Existing Plus Background Plus Proposed Specific Plan Traffic condition associated with the proposed Specific Plan would not conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit. The BDSP EIR concluded that impacts related to the Existing Plus Background Plus Proposed Specific Plan Traffic condition would be less than significant.

The BDSP EIR determined that the Cumulative Traffic condition associated with the proposed BDSP would conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not

limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit. The BDSP EIR concluded that no feasible mitigation is available and that impacts related to the Cumulative Traffic condition would be significant and unavoidable.

The BDSP EIR determined that buildout of the BDSP may conflict with an applicable congestion management program. According to the BDSP EIR, buildout of the BDSP would generate new vehicle trips that would contribute to unacceptable operations on SR-29. The American Canyon Circulation Element contemplates mobility improvements that would promote the development of parallel routes and better vehicular, bicycle, and pedestrian connectivity within and adjacent to the Broadway District. However, widening SR-29 to eight lanes within American Canyon is not feasible. The BDSP EIR concluded that no feasible mitigation is available and that impacts related to an applicable congestion management program would be significant and unavoidable.

Additionally, the BDSP EIR determined that the BDSP would not conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities. The BDSP EIR concluded that impacts related to policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities would be less than significant.

Crawford Way Multifamily Project Analysis

The BDSP EIR anticipated development of the Project site. Implementation of the Project would not result in any change to the analysis or conclusions in the BDSP EIR. It is reasonably foreseeable that the proposed Project would have similar impact on traffic operations in the area as compared to the development projected in the BDSP EIR. Therefore, the proposed Project would not result in any impacts more significant than those already analyzed in the BDSP EIR, the analysis and impact conclusions in the BDSP EIR adequately address the proposed Project. The proposed Project would not introduce new impacts or create more severe impacts related to an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system than those previously analyzed in the BDSP EIR. No additional analysis is required.

b) Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Summary of BDSP EIR Analysis

This question was not included in the BDSP EIR. Thus, no VMT estimates were provided within the BDSP EIR. Additionally, the City had not yet adopted thresholds for VMT to determine impacts at the time the BDSP EIR was prepared.

Crawford Way Multifamily Project Analysis

Section 15064.3 of the CEQA Guidelines provides specific considerations for evaluating a project's transportation impacts. Per Section 15064.3, analysis of VMT attributable to a project is the most appropriate measure effects of the project on transit and non-motorized travel of transportation impacts. Other relevant considerations may include the effects of the project on transit and non-motorized travel. Except as provided in Section 15064.3(b)(2) regarding roadway capacity, a project's effect on automobile delay does not constitute a significant environmental impact under CEQA.

The City did not have adopted VMT thresholds at the time the BDSP EIR was certified, nor does it currently have adopted VMT thresholds. Under section 21166 of the PRC and Sections 15162 and 15164 of the State CEQA Guidelines, this issue is not required to be analyzed unless it constitutes new information of substantial importance that was not known and could not have been known at the time the previous EIR was certified as complete (PRC § 21166 and CEQA Guidelines §§ 15162 and 15163). Traffic impacts were analyzed using other relevant methods at the time of certification of the BDSP EIR.

Under CEQA standards, it is not considered new information that requires analysis in a supplemental EIR or negative declaration. Therefore, no additional environmental analysis is warranted under CEQA. No additional analysis is required.

c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Summary of BDSP EIR Analysis

The BDSP EIR determined that buildout of the BDSP would not create hazards associated with design features or incompatible uses. Mobility enhancements such as roadway and circulation improvements, new connections, and speed limit reductions were contemplated by the BDSP EIR in order to improve roadway conditions. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The Project applicant is requesting a waiver for minimum garage size design standards required for multifamily units within the Broadway District. The design standards require garage spaces to be 10' wide by 20' deep by 7'-6" high. In order to provide two parking spaces per unit, the Project would construct two-car garages with dimensions of 17'-11" wide and 20'-1" deep for Unit 1 floor plans and dimensions of 20'-1" wide and 20'-1" deep for Unit 2 floor plans. These proposed garage parking spaces would be slightly more narrow than the minimum garage space design standards required for multifamily housing, but would not present a hazard to residents or other guests.

The proposed Project does not include other changes that could potentially introduce new hazards associated with design features or incompatible uses. Consistent with the BDSP EIR, development on the Project site in the BDSP planning area would comply with all regulations related to site design, and the Proposed project would not alter the mobility enhancements proposed in the BDSP EIR. Furthermore, the City traffic engineer would review and approve the site plan prior to project approval. The proposed Project would not result in potential impacts that would be more severe than were already analyzed in the BDSP EIR. Therefore, the proposed Project would not introduce new impacts or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

d) Result in inadequate emergency access?

Summary of BDSP EIR Analysis

The BDSP EIR determined that buildout of the BDSP would not result in inadequate emergency access and would not impair roadway safety or emergency response or evacuation. Mobility enhancements such as roadway and circulation improvements, new connections, and speed limit reductions were contemplated by the BDSP EIR in order to improve emergency response and evacuation. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The proposed Project does not include changes that could potentially interfere with emergency response, access, or evacuation. Consistent with the BDSP EIR, any development in the BDSP planning area would comply with all fire codes and regulations related to emergency access. Furthermore, the City traffic engineer would review and approve the site plan prior to Project approval. The proposed Project would not result in potential impacts that would be more severe than were already analyzed in the BDSP EIR. Therefore, the proposed Project would not introduce new impacts or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

None required.

CONCLUSION

The proposed Project would be consistent with the BDSP EIR and would not create new or more significant impacts to transportation beyond what was analyzed in the BDSP EIR. The conclusions from the BDSP EIR remain unchanged when considering the adoption of the Addendum. Impacts that were not evaluated in the BDSP EIR would be less than significant.

3.20 Tribal Cultural Resources

Would the project:		*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
1. Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:						
i)	*Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?*	Less than Significant Impact with Mitigation	☐	☐	☐	MM CUL-1
ii)	*A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.*	Less than Significant Impact with Mitigation	☐	☐	☐	MM CUL-1

DISCUSSION OF IMPACTS

a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

v) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?

Summary of BDSP EIR Analysis

According to the BDSP EIR, the BDSP area is not listed on any national, State, or local registers of historic

places (including those for Tribal Cultural Resources [TCRs]). Additionally, no TCRs have been previously recorded within the BDSP boundaries. However, in the event of the inadvertent discovery of TCRs, MM CUL-1 would serve to reduce the impact to a level of less than significant.

Crawford Way Multifamily Project Analysis

The BDSP EIR anticipated development of the Project site. Consistent with the BDSP EIR, while there are no prehistoric archaeological resources recorded within the Project site, it is possible that subsurface excavations during construction would encounter previously undiscovered archaeological resources. The implementation of standard cultural resources construction mitigation (BDSP EIR MM CUL-1) would ensure that this impact is less than significant. The proposed Project would not result in any new or more severe impacts beyond what was analyzed in the BDSP EIR. No additional analysis is required.

vi) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resources Code section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Summary of BDSP EIR Analysis

On July 20, 2016, the Yocha Dehe Wintun Nation replied with a letter indicating that the BDSP could impact undiscovered archaeological deposits and requested a site visit. The City responded to the Tribe and scheduled a consultation meeting with Yocha Dehe representatives on August 24, 2017, at American Canyon City Hall. Yocha Dehe representatives were provided information about the BDSP and provided recommendations to City staff. This concluded the tribal consultation process.

In the event of the inadvertent discovery of TCRs, MM CUL-1 would serve to reduce the impact to a level of less than significant. Furthermore, the City has subsequently adopted a General Plan Policy to require use of the Yocha Dehe Wintun Nation Treatment Protocol. Policy H-8.12 states: “In the event any Native American human remains, grave goods, ceremonial items, and items of cultural patrimony are found in conjunction with development, including archaeological studies, excavation, geotechnical investigations, grading, and any ground disturbing activity, the “Yocha Dehe Wintun Nation Treatment Protocol for Handling Human Remains and Cultural Items Affiliated with the Yocha Dehe Wintun Nation” shall be implemented.” A condition of approval on the Project will require implementation of Policy H-8.12 in the event of undiscovered archaeological deposits.

Crawford Way Multifamily Project Analysis

Consistent with the BDSP EIR, in the event of the inadvertent discovery of TCRs, BDSP EIR MM CUL-1 would serve to reduce the impact to a level of less than significant. The proposed Project would not result in any new or more severe impacts beyond what was analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

BDSP EIR MM CUL-1

If prehistoric or historic-period archaeological resources are encountered during ground disturbing activities associated with new development that occurs pursuant to the BDSP, all construction activities within 100 feet of the find shall halt and the City shall be notified. Prehistoric archaeological materials might include obsidian and chert flakedstone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil (“midden”) containing heat-affected rocks, artifacts, or

shellfish remains; and stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); and battered stone tools, such as hammerstones and pitted stones. Historic-period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse. A Secretary of the Interior-qualified archaeologist shall inspect the findings within 24 hours of discovery. If it is determined that the project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines), mitigation shall be implemented in accordance with PRC Section 21083.2 and Section 15126.4 of the CEQA Guidelines, with a preference for preservation in place. Consistent with Section 15126.4(b)(3), this may be accomplished through planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement. If avoidance is not feasible, a qualified archaeologist shall prepare and implement a detailed treatment plan in consultation with the City of American Canyon. Treatment of unique archaeological resources shall follow the applicable requirements of PRC Section 21083.2. Treatment for most resources would consist of (but would not be limited to) sample excavation, artifact collection, site documentation, and historical research, with the aim to target the recovery of important scientific data contained in the portion(s) of the significant resource to be impacted by the project. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and state repositories, libraries, and interested professionals.

CONCLUSION

There is no new information identifying new significant effects, nor is there an increase in the severity of previously identified impacts in the BDSP EIR related to tribal cultural resources. The conclusions from the BDSP EIR remain unchanged when considering the changes to the proposed Project. No additional analysis is required.

3.21 Utilities and Service Systems

Would the project:		*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a)	Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	Less than Significant Impact	☐	☐	☐	None
b)	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	Less than Significant Impact	☐	☐	☐	None
c)	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	Less than Significant Impact	☐	☐	☐	None
d)	Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	Less than Significant Impact	☐	☐	☐	None
e)	Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	Less than Significant Impact	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Summary of BDSP EIR Analysis

Wastewater

The BDSP EIR determined that buildout of the BDSP would not require or result in the construction of new wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. According to the BDSP EIR, future development in the BDSP planning area would result in a net increase sewer flow of 66,576 gallons per day. The BDSP EIR determined that several planned capital improvement projects would address deficiencies in the sewer collection system and that new development that occurs pursuant to the BDSP would be required to either contribute fees to the City of American Canyon to fund these improvements or install them in conjunction with project implementation (subject to reimbursement for costs outside of its equitable share). This would ensure that adequate wastewater collection and treatment is provided. Impacts would be less than significant.

Water

According to the BDSP EIR, a Water Supply Assessment prepared for the BDSP EIR showed that the City's water supply is sufficient to meet projected demand, including demand within the BDSP area, in all years to 2040 and under all normal-, dry-, and multiple-dry-year scenarios. The analysis showed that demand will exceed supply during some dry years, and additional demand as a result of BDSP implementation will increase those supply deficiencies. However, the City is still anticipated to be able to meet demand through the use of carryover State Water Project (SWP) water, or through some combination of carryover SWP water, Advanced Table A Program water, demand reductions, and/or additional purchases on the open market.

In addition, the BDSP EIR determined that recycled water supply in the City is available to meet existing and projected demand and is available in sufficient volume to support non-potable uses at the project site. Use of recycled water at the site was anticipated to increase the City's utilization of this supply.

Additionally, the BDSP EIR determined that individual developments would comply with the City's Zero Water Footprint policy, which would require new accounts to offset potable water use through off-site water conservation measures, conversion of off-site potable irrigation to recycled water, on-site demand reduction (relative to existing use), or by acquiring additional supply. Impacts would be less than significant.

Stormwater Drainage

The BDSP EIR determined that buildout of the BDSP would not create a need for new or expanded downstream storm drainage facilities. According to the BDSP EIR, buildout of the BDSP would increase impervious surfaces, but new development would address post-development stormwater quality using treatment measures—LID concepts that would treat runoff and reduce the release of runoff during peak events. Additionally, City staff will review new development plans for compliance with the City's post-

development stormwater requirements, which would ensure that new development captures, detains, and regulates the release of the additional runoff generated by new impervious surfaces in a manner that avoids inundating downstream stormwater facilities such that flooding occurs. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

Wastewater

The BDSP EIR anticipated development on the Project site. The Project would comply with all applicable development standards and BDSP guidelines; thus, the Project would not result in a significant increase of wastewater demand beyond what was analyzed in the BDSP EIR and would not exceed wastewater treatment requirements of the RWQCB. The proposed Project would not significantly alter the conclusions of the BDSP EIR. No additional analysis is required.

Water

Development of the Project would implement the City's requirements pursuant to the City's Zero Water Footprint policy, which would help to ensure that there is no net increase in potable water demand within the City, as noted in the BDSP EIR. The Project would generate typical water demand associated with multifamily housing, and would not induce circumstances that generate a unique demand for potable water. As discussed in Section 3.16 Impact a) population growth facilitated by the Project would be consistent with population growth associated with buildout of the BDSP area. Therefore, water demand would be consistent with the projected water demand associated with buildout of the BDSP area, as analyzed in the BDSP EIR. The Project would comply with all applicable development standards and BDSP guidelines related to water supply. The proposed Project would not create a new significant demand for potable water beyond what was analyzed in the BDSP EIR. The Project would not require or result in the construction of new water facilities or the expansion of existing facilities. No additional analysis is required.

Stormwater Drainage

The BDSP EIR anticipated development on the Project site. Implementation of the proposed Project would increase impervious surface, but the Project would install stormwater infrastructure, such as storm drain inlets and pipes, throughout the Project site to direct runoff during rain events. In addition, the proposed Project would be required to meet the City's post-development development stormwater requirements to capture, detain, and regulate the release of additional runoff generated by new impervious surfaces. The proposed Project would not result in the construction of new stormwater drainage facilities or the expansion of existing facility beyond what was analyzed in the BDSP EIR.

Implementation of the proposed Project would result in similar conclusions related to water, wastewater, and stormwater impacts. Therefore, the proposed Project would not introduce new impacts or create more severe impacts related to water, wastewater, and stormwater drainage facilities than those previously analyzed in the BDSP EIR. No additional analysis is required.

c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Summary of BDSP EIR Analysis

According to the BDSP EIR, the Sewer Master Plan analyzed the existing sewer collection system using two flow scenarios, Peak Dry Weather Flow and Peak Wet Weather Flow. In general, in a majority of the

existing pipelines, velocities were below the recommended minimum for the Peak Dry Weather Flow scenario. Hydraulic deficiencies were identified in Broadway (Main Basin 3). In addition, based on modeling, peak flows exceeded the capacity of three of the five pump stations. However, the BDSP EIR determined that the City's planned capital improvement programs would address the deficiencies in the sewer collection system. Additionally, as previously discussed, the capital improvements would be funded by new development. Therefore, the BDSP EIR concluded that adequate wastewater collection and treatment would be provided and that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The BDSP EIR anticipated development on the Project site and determined that the City's planned capital improvement programs would address the deficiencies in the sewer collection system. The Project applicant would pay any applicable development fees for capital improvements. The proposed Project would not result in a determination by a wastewater treatment provider that there is inadequate capacity to serve the Project's projected demand in addition to existing commitments. Therefore, the proposed Project would not introduce new impacts or create more severe impacts related to wastewater capacity than those previously analyzed in the BDSP EIR. No additional analysis is required.

d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Summary of BDSP EIR Analysis

It was determined in the BDSP EIR that the BDSP area would be served by a landfill with sufficient permitted capacity to accommodate solid waste disposal needs. According to the BDSP EIR, using an average of 3.89 pounds of debris per square foot for nonresidential construction and 4.38 pounds of debris per square foot of residential construction, buildout of the BDSP EIR would generate an estimated 10,299 cubic feet of waste. The BDSP EIR determined that the construction waste generated by buildout of the BDSP (10,299 cubic yards) would represent less than 0.01 percent of the remaining capacity at the Potrero Hills Landfill, and that the operational waste generated by buildout of the BDSP (7,304 cubic yards annually) would represent less than 0.01 percent of the remaining capacity at the Potrero Hills Landfill. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The BDSP EIR anticipated development on the Project site. As discussed in Section 3.16 Impact a), the proposed Project would result in population growth that is consistent with the potential population increase of the BDSP buildout. Therefore, the construction and operational waste generated by the proposed Project are considered in the BDSP EIR analysis. Based on the waste generation rates, the proposed Project would generate a similar amount of waste as compared to the previously contemplated residential uses. The proposed Project would be served by a landfill with sufficient capacity to accommodate the proposed Project's solid waste disposal needs and would not generate solid waste in excess of State or local standards or in excess of local infrastructure, nor would the Project otherwise impair the attainment of solid waste reduction goals. Therefore, the proposed Project would not introduce new impacts or create more severe impacts related to landfill capacity than those

previously analyzed in the BDSP EIR. No additional analysis is required.

MITIGATION MEASURES

None required.

CONCLUSION

The proposed Project would be consistent with the BDSP EIR and would not create new or more significant impacts to utilities and service systems beyond what was analyzed in the BDSP EIR. The conclusions from the BDSP EIR remain unchanged when considering the adoption of the Addendum.

3.22 Wildfire

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:	*Conclusion in the Final EIR*	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	Less than Significant Impact	☐	☐	☐	None
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	None	☐	☐	☐	None
c) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	None	☐	☐	☐	None
d) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	None	☐	☐	☐	None

DISCUSSION OF IMPACTS

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

Summary of BDSP EIR Analysis

The BDSP EIR concluded that all circulation changes proposed in the BDSP would either have no impact on the emergency response and evacuation or would improve mobility for emergency response vehicles. Therefore, the BDSP EIR would not impair implementation or physically interfere with any adopted emergency response plans or emergency evacuation plans. Impacts were determined to be less

than significant.

Crawford Way Multifamily Project Analysis

The Project site is not located within a High Fire Hazard Severity Zone, or a Very High Fire Hazard Severity Zone as mapped by CAL Fire (CAL Fire 2023). The City adopted the Napa County Multi-Jurisdictional Hazard Mitigation Plan (NCMJHMP) in 2020. The plan does not identify the Project site as a wildfire zone, nor does it identify evacuation routes near or in the vicinity of the site (County of Napa 2020). The proposed Project would not obstruct implementation of the NCMJHMP. Consistent with the BDSP EIR, any development in the BDSP plan area would have to comply with all fire codes and regulations related to emergency access. Therefore, the proposed Project would not introduce new impacts or create more severe impacts than those analyzed in the BDSP EIR. No additional analysis is required.

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Summary of BDSP EIR Analysis

This checklist question did not exist at the time that the BDSP EIR was certified. Additionally, impacts associated with pollutants from wildfire were not evaluated in other sections in the BDSP EIR. No conclusion was made about the significance level of environmental impacts regarding wildfire risks or risk of exposure to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire.

Crawford Way Multifamily Project Analysis

As discussed in Impact a) above, the Project site is not located in a within a High Fire Hazard Severity Zone or a Very High Fire Hazard Severity Zone. In the City, the wind is mostly from the west from February to November and from the north from November to February (Weather Spark 2023). The windiest month of the year occurs in June with an average hourly wind speed of 8.4 miles per hour (Weather Spark 2023). The Project site is not located in a State Responsibility Area or nearby wildland areas. The Project site is located on relatively flat land. The Project site does not embody conditions that would exacerbate a wildfire. The Proposed project would not exacerbate or expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildlife due to slope, prevailing winds, or other factors. The impact would be less than significant.

c) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Summary of BDSP EIR Analysis

This checklist question did not exist at the time that the BDSP EIR was certified. Additionally, impacts associated with pollutants from wildfire were not evaluated in other sections in the BDSP EIR. No conclusion was made about the significance level of environmental impacts regarding the installation or maintenance of infrastructure such as roads, fuel breaks, emergency water sources, power lines, or other utilities that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment.

Infrastructure-related impacts were addressed in the BDSP EIR in Section 3.13, Utilities and Service Systems, which described the City's existing utility systems and assessed potential environmental effects related to utility services. Furthermore, the BDSP EIR discussed the effects the BDSP would have on the

ability of the City and other service providers to deliver services to the BDSP and vicinity. Impacts were determined to be less than significant.

Crawford Way Multifamily Project Analysis

The proposed Project would not include the installation or maintenance of associated infrastructures (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk. The impact would be less than significant.

d) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Summary of BDSP EIR Analysis

This checklist question did not exist at the time the BDSP EIR was certified. However, impacts related to landslides and flooding were discussed in Section 3.5, Geology, Soils, and Seismicity. The BDSP EIR determined that the BDSP area contains mostly flat land. Moreover, most, if not all, of the properties with the BDSP boundaries either support urban development or have been rough graded, which makes the likelihood of landslides very low. Impacts were determined to be less than significant.

The BDSP EIR determined that the Specific Plan would not place housing or structures within a 100-year flood hazard area. According to the BDSP EIR, the flood hazard areas within the Specific Plan coincide with the Southern Gateway subarea, where no new development is proposed by the BDSP. Therefore, development and land use activities contemplated by the Specific Plan would not expose persons or structures to new risks associated with 100-year or 500-year flood hazards. The BDSP EIR concluded that impacts would be less than significant.

Crawford Way Multifamily Project Analysis

The Project site is flat and is not located in a Landslide Zone as delineated by the California Geological Survey (California Geological Survey 2023). The Project would implement BDSP EIR MM HYD-1a to address impacts related to flooding. The proposed Project would not result in potential impacts that would be more severe than were already analyzed in the BDSP EIR. Therefore, the proposed Project would not expose people or structures to significant risks due to runoff, post-fire slop instability, or drainage changes. The impact would be less than significant.

MITIGATION MEASURES

None required.

CONCLUSION

The proposed Project would be consistent with the BDSP EIR and would not create new or more significant impacts to wildfire beyond what was analyzed in the BDSP EIR. The conclusions from the BDSP EIR remain unchanged when considering the adoption of the Addendum. Impacts that were not evaluated in the BDSP EIR would be less than significant.

3.23 Mandatory Findings of Significance

		Conclusion in the Final EIR	*Do the Proposed Project Changes Involve New or More Severe Impacts?*	*New Circumstances Involving New or More Severe Impacts?*	*New Information Requiring New Analysis or Verification?*	*Mitigation Measures?*
a)	Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	Less than Significant with Mitigation	☐	☐	☐	MM BIO-1b, MM CUL-1, MM CUL-4
b)	Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	Less than Significant with Mitigation	☐	☐	☐	Applicable BDSP EIR MMs as discussed throughout this Addendum
c)	Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?	Less than Significant with Mitigation	☐	☐	☐	Applicable BDSP EIR MMs as discussed throughout this Addendum

DISCUSSION OF IMPACTS

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population

to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

As discussed in Section 3.6, Biological Resources, the proposed Project would not have significant impacts beyond what was analyzed in the BDSP EIR. BDSP EIR MM BIO-1b would be applicable to the proposed Project and would be implemented prior to any tree removal activities that occur during the nesting season. The proposed Project would have no significant impacts related to the potential for the degradation of the quality of the environment, a substantial reduction in the habitat of a fish or wildlife species, the drop of a fish or wildlife population below self-sustaining levels, a substantial reduction in the number or restriction on the range of a rare or endangered plant or animal.

Furthermore, as discussed in Sections 3.7 and 3.20, Cultural Resources and Tribal Cultural Resources, the proposed Project would not have significant impacts with respect to major periods of California history or prehistory beyond what was analyzed in the BDSP EIR. BDSP EIR MM CUL-1 and MM CUL-4 would be implemented in the event prehistoric or historic-period archaeological resources are encountered or in the event of discovery or recognition of any human remains during the Project's ground disturbing activities. The proposed Project would have no significant impacts related to the potential for elimination of important examples of major periods of California history or prehistory.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

The proposed Project's impacts would be individually limited and not cumulatively considerable. Based on the analysis provided in Section 3.5, Air Quality; Section 3.15, Noise, and Section 3.19, Transportation, the proposed Project would not substantially increase cumulative impacts related to these analysis areas. Additionally, as presented throughout this Addendum, the proposed Project's cumulative impacts would be consistent with BDSP EIR.

c) Does the project have environmental effects that will cause substantial adverse effects on human beings, either directly or indirectly?

The proposed Project has not been found to generate new or substantially more severe environmental effects than those previously analyzed in the BDSP EIR; therefore, there is no likelihood of the proposed Project causing substantial adverse effects on human beings, either directly or indirectly, beyond that which was previously analyzed in the BDSP EIR. Impacts would be consistent with what was analyzed in the BDSP EIR.

MITIGATION MEASURES

Implement all BDSP mitigation measures discussed in this Addendum.

CONCLUSION

The proposed Project would be consistent with the BDSP EIR and would not create new or more significant cumulative impacts beyond what was analyzed in the BDSP EIR. The conclusions from the BDSP EIR remain unchanged when considering the adoption of the Addendum. Impacts that were not evaluated in the BDSP EIR would be less than significant.

APPENDIX B. BIOLOGICAL SITE ASSESSMENT

BARGAS
Environmental Consulting

10/24/2018

Pensicola Residential
4941 Allison Parkway
Vacaville, CA 95688

Subject: DRAFT Reconnaissance-level, Biological Site Assessment for the Proposed Gold Key Assisted Living Facility project +/- 4.32 acres, Napa County, California (APN 058-302-001 & 058-290-012)

Mr. Taylor Tanner:

This report summarizes the results of the reconnaissance-level biological site assessment survey conducted by a Bargas Environmental Consulting (Bargas) biologists for the proposed Gold Key Assisted Living Facility project. The project is located at the southwest corner of Crawford Way and Broadway Parkway in the city of American Canyon, Napa County, California (**Figures 1** and **2**).

This survey was conducted to assess the project and current site conditions for compliance with CEQA requirements as well as the in-fill development project exemption review process. The site was assessed for the presence of jurisdictional wetland resources, nesting bird habitat, and special status wildlife and plant species (SSS) habitat and presence.

Methods

Prior to conducting the survey of the study area, a thorough review of habitat, special-status species, and jurisdictional wetland databases was performed. The databases queried to obtain background information for the site included; the Natural Resources Conservation Service Web Soil Survey, California Department of Fish and Wildlife Natural Diversity Database (CNDDB), and US Fish and Wildlife Service Information for Planning and Consultation (IPaC), Online Critical Habitat Mapper, and National Wetlands Inventory (NWI). The CNDDB data was drawn from the Cuttings Wharf USGS 7.5-minute quadrangle. The IPaC compiles a list of special-status species from Napa County. Results from the database reviews can be found in **Tables 1** and **2** below.

Bargas biologists Corey Clapp and Krystal Pulsipher conducted a reconnaissance-level survey of the study area on October 3, 2018 from 1130 – 1230. Weather conditions were characterized by 72°F, partly cloudy skies, calm winds, with a 20% chance of precipitation. The pedestrian survey consisted of meandering transects throughout the site with an evaluation of; current site conditions, potential habitat for special-status species, potential nesting bird habitat, presence of wetlands and waterways, and identification of

3031 F St., Suite 203 Sacramento, CA 95816 916.993.9218 www.BargasConsulting.com

vegetation. The biologist conducted a comprehensive reconnaissance-level survey and not a determinant-level survey consistent with agency protocols for special-status species.

Photos were taken throughout the project area (**Photos 1** through **4**). Locations of site photos are labelled in **Figure 2**. All locations of proposed work activities were surveyed. The study area was evaluated for presence of habitat requirements for special-status wildlife species known to occur in the region as summarized in **Table 2**. A cumulative list of wildlife and plant species observed was then compiled for the study area as summarized in **Table 3**.

Results

Table 1: Summary of the preliminary database review for soils, wetlands, and critical habitat.

Database	Summary of Results
NRCS Soil Survey	Clear Lake clay, poorly drained, 0 to 2 percent slopes, MLRA 14. More than 80 inches to the restrictive layer. Parent material is Basin alluvium derived from igneous, metamorphic and sedimentary rock. Non-saline to very slightly saline. Moderate availability for water storage (~9.0 inches).
USEPA NWI	There are no mapped wetlands/waterways present on site or within 250 feet.
USFWS Critical Habitat Mapper	No USFWS critical habitat is located on site.

Site Conditions

Conditions of the project site include those typically associated with urban in-fill sites; vacant lot composed of flat previously disturbed terrain surrounded by existing development. Crawford Way makes up the northern perimeter **(Photo 1),** existing residential homes are located along the western perimeter **(Photo 2)**, a local church is located along the southern perimeter **(Photo 3)** and Broadway Parkway (State Route-29) is along the eastern perimeter **(Photo 4)**. Additionally, construction activities for off-site improvements were occurring along the eastern perimeter of the site at the time of the survey.

Habitat and Wildlife Observations

The area surrounding the site is dominated by urban development and has been heavily modified for construction of residential and commercial buildings, paved surfaces, and other urban-related infrastructure. Due to previous construction/disturbance, there are no wetland features on-site and no native terrestrial habitat remains. Soils within the site appear to have been previously ripped/disked. Subterranean burrows (likely gopher sp.) as well as large cracks in the soil were observed throughout the site. There is currently one coast live oak located along the southern perimeter with four leaders with a cumulative diameter at breast height (dbh) of approximately 28 inches. No other trees or woody vegetation are present on the project site. Vegetation on-site is currently composed of predominantly invasive/weedy species such as skeleton weed, chicory, dandelion, mustard, field bind weed, etc.

Several bird species (scrub jay, northern mockingbird, falcon sp., American crow) were observed perching/foraging in off-site trees and utility poles to the south/east of the site.

Suitable Habitat for Special-Status Species

A total of 126 wildlife and plant species were identified as occurring within the general region of the study area (**Table 2**). Of these species, approximately 15 wildlife and plant species were determined to have a potential to occur within the study area. Criteria used to evaluate potential for occurrence for each SSS include the following:

- **None**: Project is outside of known species' range and no suitable habitat is present, no CNDDB occurrences within the Cuttings Wharf quadrangle;
- **Low**: Project is within the known species' range, but marginal habitat is present in the proposed project area and surrounding land, few CNDDB occurrences within the Cuttings Wharf or adjacent quadrangles;
- **Moderate**: Project is within the known species' range, at least one required habitat component is present in the proposed project area and surrounding land, multiple CNDDB occurrences in the region.

During preliminary database searches, numerous SSS noted to occur in the general region appeared to lack suitable habitat on-site. Because of previous disturbance and surrounding urban development, conditions at the project site appear to support very little suitable habitat for most SSS with the exception of foraging/migratory birds and those species that might favor or be adapted to disturbed sites (i.e. Swainson's hawk).

There is a moderate potential for Swainson's hawk, northern harrier, white-tailed kite, and savannah sparrow to utilize the project area for foraging. However, there is a low potential for these species to utilize the project area for nesting due to the lack of suitable nesting substrate and the level of disturbance. The project site provides marginal foraging habitat for Swainson's hawk. Other migratory birds, such as the various sparrow sp. and the horned lark, are also known to occur in USGS quadrangles adjacent to project area. One of the SSS plants have a confirmed range which includes the project area (showy Indian clover), with individual occurrences mapped nearby, but has a low potential to occur in the project area due to the level of disturbance present.

Table 2: Special-status wildlife and plants known to occur in the region as identified in the database review (Cornell, 2015; Stebbins, 2003; USFWS, 2018; WBWG, 2017).

Type	Scientific Name	Common Name**	Special-Status[1]	Habitat Requirements	Potential to Occur
Bird	*Buteo swainsoni*	Swainson's hawk	ST	Nests in trees, either solitary or on edge of groves, often along waterways. Forages in grasslands, sage flats and agriculture lands intermixed with native grassland.	Moderate (foraging) None (nesting)
Bird	*Circus cyaneus*	northern harrier	SSC	Breeding/foraging habitat in wide open grasslands, fields/marshes. Nests concealed on ground or wetland vegetation.	Moderate (foraging) None (nesting)
Bird	*Elanus leucurus*	white-tailed kite	FP	Commonly found in non-grazed open woodlands, grassland, partially cleared lands, cultivated fields.	Moderate (foraging) None (nesting)
Bird	*Eremophila alpestris actia*	horned lark	WL	Bare ground, in open country with very short or no vegetation, including bare agricultural fields. They breed in short grassland, short-stature sage shrub, desert, and alpine/arctic tundra.	Low
Bird	*Charadrius montanus*	mountain plover	SSC	Breeds on open plains at moderate elevations. Winters in short-grass plains and fields, plowed fields, and sandy deserts.	Low
Bird	*Melospiza melodia maxillaris* *Melospiza melodia pusillula* *Melospiza melodia samuelis*	song sparrow sp. (Suisun song sparrow, Alameda song sparrow, San Pablo song sparrow)	SSC	Variety of open habitats; tidal marshes, arctic grasslands, desert scrub, pinyon pine forest, aspen, prairie, Pacific rain forest, chaparral, agricultural fields, overgrown pastures, freshwater marsh and lake edges, forest edges, suburbs, deciduous/mixed woodlands.	Low

****Potential to occur in study area. [1]FE/FT/FC = Federally Endangered, Threatened, or Candidate; SE/ST/SCT = State Endangered or Threatened, Candidate Threatened; FP = CDFW Fully Protected; SSC = CDFW Species of Special Concern; WL = CDFW Watch List.**

Table 2: Special-status wildlife and plants known to occur in the region as identified in the database review - Continued (Cornell, 2015; Stebbins, 2003; USFWS, 2018; WBWG, 2017).

Type	Scientific Name	Common Name**	Special-Status[1]	Habitat Requirements	Potential to Occur
Bird	*Passerculus sandwichensis alaudinus* *Passerculus sandwichensis beldingi*	savannah sparrow sp. (Bryant's savannah sparrow Belding's savannah sparrow)	SSC	Summer/winter, live in grasslands with few trees, including meadows, pastures, grassy roadsides, sedge wetlands, cultivated fields planted with cover crops like alfalfa. Near oceans, inhabit tidal saltmarshes and estuaries.	Moderate (foraging) Low (nesting)
Bird	*Athene cunicularia*	burrowing owl	SSC	Live in flat, open, treeless areas with low, sparse vegetation found in grasslands, pastures, agricultural fields, road embankments; in urban vacant lots.	Low
Plant	*Centromadia parryi* ssp. *congdonii*	Congdon's tarplant	CRP 1B.1	Annual herb. Found in terraces, swales, floodplains, grassland, disturbed sites at elevations < 300 meters. Flowers: Jun-Oct	Low
Plant	*Centromadia parryi* ssp. *parryi*	pappose tarplant	CRP 1B.2	Annual herb. Found in grassland, coastal salt marshes, alkaline springs, seeps at elevations < 400 meter Flowering Time: Jun-Oct.	Low
Plant	*Trifolium amoenum*	showy Indian clover	CRP 1B.1	Annual herb. Moist, heavy soils, disturbed areas at elevations < 100 m. Flowering Time: Apr-Jun	Low

****Potential to occur in study area. [1]FE/FT/FC = Federally Endangered, Threatened, or Candidate; SE/ST/SCT = State Endangered or Threatened, Candidate Threatened; FP = CDFW Fully Protected; SSC = CDFW Species of Special Concern; WL = CDFW Watch List; CRP (California Rare Plant Rank) 1B = Extirpated in CA and Rare/Extinct Elsewhere.**

Table 3: Wildlife and plants observed in the study area during the October 3, 2018 survey.

Type	Scientific Name	Common Name	Special-Status*
Mammal	Geomyidae sp.	Gopher sp.	None
Bird	Sturnus vulgaris	European Starling	None
Bird	Falco sp.	Falcon sp.	N/A
Bird	Mimus polyglottos	Northern mocking bird	None
Bird	Corvus brachyrhynchos	American crow	None
Bird	Aphelocoma californica	California scrub-jay	None
Bird	Cathartes aura	Turkey vulture	None
Bird	Columba livia	Rock pigeon	None
Plant	Convolvulus arvensis	Field bind weed	None
Plant	Agoseris sp.	Dandilion sp.	None
Plant	Cichorium intybus	Wild Chicory	None
Plant	Chondrilla juncea	Skeleton weed	None
Plant	Helminthotheca echioides	Bristly ox tongue	None
Plant	Avena sativa	Wild oat	None
Plant	Bromus hordeaceus	Soft chess	None
Plant	Quercus agrifolia	Coastal live oak (off-site)	None
Plant	Lactuca serriola	Prickly lettuce	None
Plant	Euphorbia sp.	Spurge sp.	None
Plant	Brassica sp.	Mustard sp.	None

Conclusions

Several nesting and migratory bird species have potential to use the project site as foraging habitat as indicated in **Table 2**. However, because of the lack of suitable nesting substrate in the project area, it is not anticipated that a nesting bird survey will be needed.

Should you have any questions or comments regarding this report, please do not hesitate to contact James Stewart (jstewart@bargasconsulting.com) or myself (cclapp@bargasconsulting.com) at our listed emails, or the office at (916) 993-9218.

Sincerely,

Corey Clapp
Associate Biologist

ABSTRACT

Tom Origer & Associates conducted an historical resources survey for the Crawford Way Senior Housing Project, American Canyon, Napa County, California. The study was requested by Taylor Tanner of Gold Key Property, LLC., and authorized by Billy Yen of Pensacola Residential. This study was conducted to meet the requirements of City of American Canyon and those of the California Environmental Quality Act. The purpose of this report is to identify historical resources other than Tribal Cultural Resources (see definition of historical resources in the Regulatory Context section). Tribal Cultural Resources are defined in Public Resources Code [PRC] 21074 (a)(1)(A)-(B).

The proposed project is the development of APNs 058-290-012 and 058-302-001, totaling 4.32-acres, into a senior housing facility. The project area is located at the southwest corner of the intersection of Crawford Way and Highway 28 in the city of American Canyon.

This study included archival research at the Northwest Information Center, Sonoma State University (NWIC File No. 18-0561), examination of the library and files of Tom Origer & Associates, Native American contact, and field inspection of the study area. No historical resources were found within the study area. Documentation pertaining to this study is on file at the offices of Tom Origer & Associates (File No. 2018-087).

This report contains information about the locations of archaeological sites. For the protection of these resources, this report, and such location information, should not be publicly circulated.

Synopsis

Project:	Crawford Way Senior Housing Project
Location:	Crawford Way and Highway 29, American Canyon, Napa County
APN:	058-290-012 and 058-302-001
Quadrangles:	Cuttings Wharf 7.5’ series
Study Type:	Intensive
Scope:	4.32 acres
Finds:	None

Project Personnel

Eileen Barrow

Mrs. Barrow has been with Tom Origer & Associates since 2005. She holds a Master of Arts in cultural resources management from Sonoma State University. Mrs. Barrow's experience includes work that has been completed in compliance with local ordinances, CEQA, NEPA, and Section 106 (NHPA) requirements. Her professional affiliations include the Society for American Archaeology, the Society for California Archaeology, the California Historical Society, the Sonoma County Historical Society, and the Western Obsidian Focus Group.

INTRODUCTION

This report describes an historical resources survey for the Crawford Way Senior Housing Project, American Canyon, Napa County, California. The study was requested by Taylor Tanner of Gold Key Property, LLC., and authorized by Billy Yen of Pensacola Residential. This study was conducted to meet the requirements of City of American Canyon and those of the California Environmental Quality Act. The proposed project is the development of 4.32 acres of land into a senior housing facility. Documentation pertaining to this study is on file at Tom Origer & Associates (File No. 2018-087).

REGULATORY CONTEXT

The California Environmental Quality Act (CEQA) requires that historical resources be considered during the environmental review process. This is accomplished by an inventory of resources within a study area and by assessing the potential that historical resources could be affected by development. The term "Historical Resources' encompasses prehistoric and historical archaeological sites and built environment resources (e.g., buildings, bridges, canals). An additional category of resources is defined in CEQA under the term "Tribal Cultural Resources" (Public Resources Code Section 21074). They are not addressed in this report. Tribal cultural resources are resources that are of specific concern to California Native American tribes, and knowledge of such resources is limited to tribal people. Pursuant to revisions to CEQA enacted in July of 2015, such resources are to be identified by tribal people in direct, confidential consultation with the lead agency (PRC §21080.3.1).

This historical resources survey was designed to satisfy environmental issues specified in the CEQA and its guidelines (Title 14 CCR §15064.5) by: (1) identifying historical resources within the project area; (2) offering a preliminary significance evaluation of the identified cultural resources; (3)

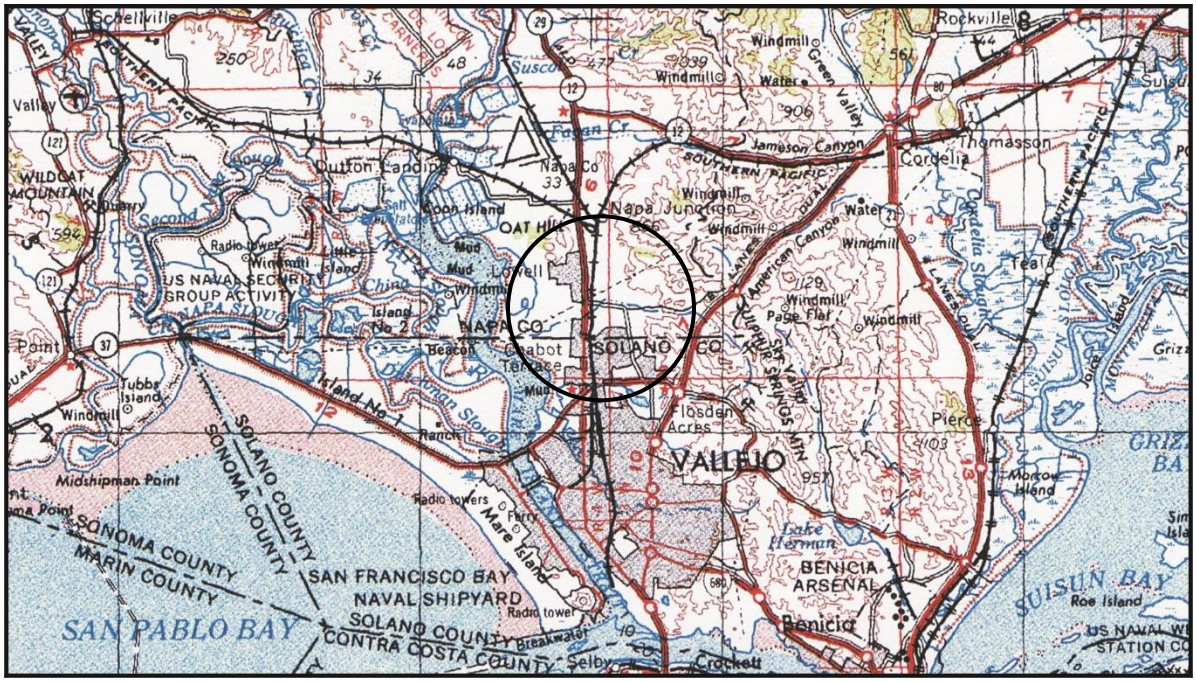

Figure 1. Project vicinity (adapted from the 1980 Santa Rosa 1:250,000-scale USGS map).

assessing resource vulnerability to effects that could arise from project activities; and (4) offering suggestions designed to protect resource integrity, as warranted.

Resource Definitions

Historical resources are classified by the State Office of Historic Preservation (OHP) as sites, buildings, structures, objects and districts, and each is described by OHP (1995) as follows.

> **Site.** A site is the location of a significant event, a prehistoric or historic occupation or activity, or a building or structure, whether standing, ruined, or vanished, where the location itself possesses historic, cultural, or archaeological value regardless of the value of any existing structure.
>
> **Building.** A building, such as a house, barn, church, hotel, or similar construction, is created principally to shelter any form of human activity. "Building" may also be used to refer to a historically and functionally related unit, such as a courthouse and jail, or a house and barn.
>
> **Structure.** The term "structure" is used to distinguish from buildings those functional constructions made usually for purposes other than creating human shelter.
>
> **Object.** The term "object" is used to distinguish from buildings and structures those constructions that are primarily artistic in nature or are relatively small in scale and simply constructed. Although it may be, by nature or design, movable, an object is associated with a specific setting or environment.
>
> **District.** A district possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development.

Significance Criteria

When a project might affect an historical resource, the project proponent is required to conduct an assessment to determine whether the effect may be one that is significant. Consequently, it is necessary to determine the importance of resources that could be affected. The importance of a resource is measured in terms of criteria for inclusion on the California Register of Historical Resources (Title 14 CCR, §4852(a)) as listed below. A resource may be important if it meets any one of the criteria below, or if it is already listed on the California Register of Historical Resources or a local register of historical resources.

An important historical resource is one which:

1. Is associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States.

2. Is associated with the lives of persons important to local, California, or national history.

3. Embodies the distinctive characteristics of a type, period, region or method of construction, or represents the work of a master or possesses high artistic values.

4. Has yielded, or may be likely to yield, information important to the pre-history or history of the local area, California, or the nation.

In addition to meeting one or more of the above criteria, eligibility for the California Register requires that a resource retains sufficient integrity to convey a sense of its significance or importance. Seven elements are considered key in considering a property's integrity: location, design, setting, materials, workmanship, feeling, and association.

The OHP advocates that all historical resources over 45 years old be recorded for inclusion in the OHP filing system (OHP 1995:2), although the use of professional judgment is urged in determining whether a resource warrants documentation.

PROJECT SETTING

Study Area Location and Description

The study area is located on the southwest corner of the intersection of Crawford Way and Highway 29 (APNs 058-290-012 and 058-302-001), American Canyon, Napa County, as shown on the Cuttings Wharf 7.5' USGS topographic map (Figure 2). It consists of 4.32 acres situated on generally level land.

The geology of the study area consists of alluvial fan deposits that date to the latest Pleistocene and Holocene (30,000 years ago to present) (Bezore *et al.* 2002).

Soils within the study area belong to the Clear Lake series (Kashawagi 1978: Sheet 47). Clear Lake soils are poorly-draining clays found on old alluvial fans and in basins. In a natural state these soils support the growth of grasses, forbs, and scattered oaks. Historically, parcels containing Clear Lake soils were used for mainly for pasture with some areas used to grow tomatoes and vineyards (Kashiwagi 1978:11).

The closest water source is American Canyon Creek located approximately 475 meters south of the southwestern corner of the study area.

Cultural Setting

Archaeological evidence indicates that human occupation of California began at least 11,000 years ago (Erlandson *et al.* 2007). Early occupants appear to have had an economy based largely on hunting, with limited exchange, and social structures based on the extended family unit. Later, milling technology and an inferred acorn economy were introduced. This diversification of economy appears to be coeval with the development of sedentism and population growth and expansion.

Sociopolitical complexity and status distinctions based on wealth are also observable in the archaeological record, as evidenced by an increased range and distribution of trade goods (e.g., shell beads, obsidian tool stone), which are possible indicators of both status and increasingly complex exchange systems.

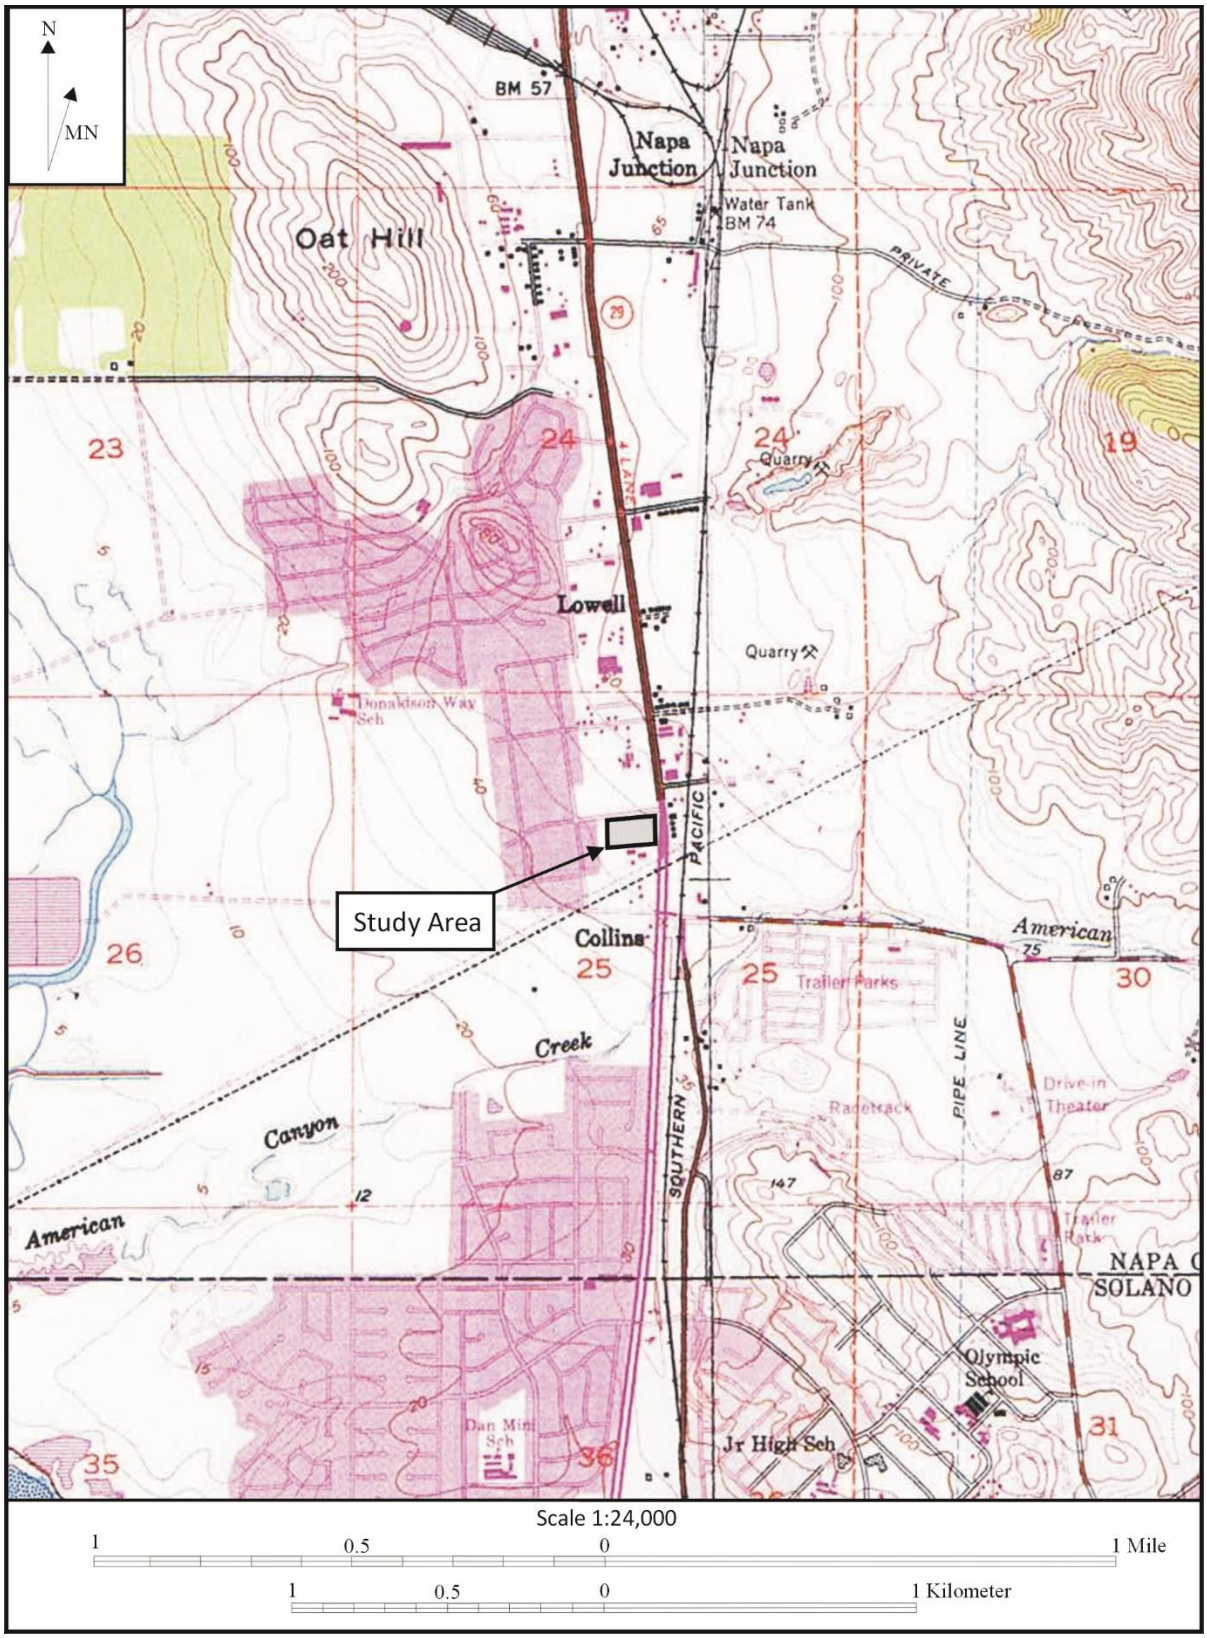

Figure 2. Study area location (adapted from the 1981 Cuttings Wharf and the 1980 Cordelia 7.5' USGS topographic map).

The study area is situated in an area controlled by the Patwin at the time of Euro-American settlement (Barrett 1908; Johnson 1978; Kroeber 1925, 1932). Linguistic evidence indicates that the Patwin were speakers of a Penutian language (Wintun). The Patwin were hunter-gatherers who lived in rich environments that allowed for dense populations with complex social structures (Barrett 1908; Kroeber 1925, 1932; Johnson 1978). They settled in large, permanent villages about which were distributed seasonal camps and task-specific sites. Primary village sites were occupied throughout the year and other sites were visited in order to procure particular resources that were especially abundant or available only during certain seasons. Sites often were situated near fresh water sources and in ecotones where plant and animal life was diverse and abundant.

The study area is located within section 25 of township 4 north, range 4 west of the Mount Diablo meridian of public lands. The land transaction history for this area is interesting in that the lands were once part of Rancho Suscol (Soscol) granted to Mariano Guadalupe Vallejo in 1843. Like much of California, when the land became a part of the United States of America, there were legal battles regarding ownership of thousands of acres of land.

Vallejo had sold Rancho Suscol to John Frisbie who in turn sold large tracts of the rancho to various buyers. In 1862, rumors swirled that Vallejo's claim to the Rancho Suscol would be rejected by the United States government, thus voiding the subsequent sales of this rancho to others. Although this rumor was denied, Frisbee and others asked Representative Timothy G. Phelps to introduce a bill that would enable those who had purchased land from discredited Mexican claimants to repurchase their land from the United States government at a price of $1.25 per acre (Gates 1970:456). This bill was countered by proposals to limit acreage to 160 acres and to purchase the land at its true value (Gates 1970:457).

Phelps' bill failed in 1862, but in 1863 the Suscol bill was approved and the Suscol Act allowed those who had purchased Rancho Suscol land to repurchase the land they were in possession of at "the time of …adjudication" of the claim (Gates 1970:461). The Suscol Act was met with mixed results. Original purchasers of portions of the Rancho Suscol were happy because lands they had purchased would either be returned to them or remain in their possession. People who had flooded to the rancho when its ownership was under question were now illegal squatters. Legal battles went on for months after the Suscol Act but many cases sided with the original purchasers from Frisbie (Gates 1970:463).

The current study area is located in a tract of land that John Frisbie retained at least partial ownership of. Edward Frisbie, C.J. Mosley, Isaac Rutan, and J.B. Thomas are also listed as owners of the large tract of land containing the study area (BLM 2018).

STUDY PROCEDURES AND FINDINGS

Native American Contact

A request was sent to the State of California's Native American Heritage Commission seeking information from the Sacred Lands File and the names of Native American individuals and groups that would be appropriate to contact regarding this project. Letters were also sent to the following groups:

Cortina Indian Rancheria of Wintun Indians
Middletown Rancheria
Mishewal-Wappo Tribe of Alexander Valley
Yocha Dehe Wintun Nation

This contact represents notification regarding the project to provide an opportunity for comment. It does not constitute consultation with tribes.

Native American Contact Results

The Native American Heritage Commission replied with a letter dated September 26, 2018, in which they indicated that the Sacred Lands File has no information about the presence of Native American cultural resources in the immediate project area.

Sally Peterson of Middletown Rancheria responded stating that the tribe has no specific comments about the project site but would like to be contacted as if evidence of human habitation is found.

No other comments have been received as of the date of this report. A log of contact efforts is appended to this report, along with copies of correspondence (see Appendix A).

Archival Study Procedures

Archival research included examination of the library and project files at Tom Origer & Associates. A review (NWIC File No. 18-0561) was completed of the archaeological site base maps and records, survey reports, and other materials on file at the Northwest Information Center (NWIC), Sonoma State University, Rohnert Park by Rachel Hennessy on September 18, 2018. Sources of information included but were not limited to the current listings of properties on the National Register of Historic Places, California Historical Landmarks, California Register of Historical Resources, and California Points of Historical Interest as listed in the Office of Historic Preservation's *Historic Property Directory* (OHP 2012).

The Office of Historic Preservation has determined that structures in excess of 45 years of age should be considered potentially important historical resources, and former building and structure locations could be potentially important historic archaeological sites. Archival research included an examination of historical maps to gain insight into the nature and extent of historical development in the general vicinity, and especially within the study area. Maps ranged from hand-drawn maps of the 1800s (e.g., GLO) to topographic maps issued by the United States Geological Survey (USGS) and the United States Army Corps of Engineers (USACE).

In addition, ethnographic literature that describes appropriate Native American groups, county histories, and other primary and secondary sources were reviewed. Sources reviewed are listed in the "Materials Consulted" section of this report.

Archival Study Findings

Archival research found that the study area had not been previously subject to a cultural resources survey. Within one-quarter mile of the study area, eight studies have been conducted (Damon 1980; Eisenman *et al.* 1979; Jablonowski *et al.* 1996; Jackson 1976, 1977a, 1977b; Patterson *et al.* 1980; Roper and Fredrickson 1983). Four of the studies were conducted for the 230 kV Transmission line just south of the study area (Damon 1980; Eisenman *et al.* 1979; Patterson *et al.* 1980; Roper and Fredrickson 1983). The remaining four studies were conducted for development projects (Jablonowski *et al.* 1996; Jackson 1976, 1977a, 1977b). These studies have resulted in the finding of one resource

within a quarter mile of the study area (Tom Origer & Associates 2003). This resource is a building complex on the east side of Highway 29 and does not extend into the study area.

There are no reported ethnographic sites within one mile of the survey area (Barrett 1908).

A review of 19th and 20th century maps shows no buildings within the study area (Buckman 1895; GLO 1863, 1923; Lyman and Throckmorton 1876; USACE 1946, 1948; USGS 1902, 1951, 1968, 1973).

Field Survey Procedures

An intensive field survey was completed by Taylor Alshuth on September 19, 2018. The study area was examined by walking in zig-zagging transects that were spaced 15 meters apart. Ground visibility ranged from excellent to poor, with vegetation being the primary hindrance. A hoe was used, as necessary to clear vegetation so that the ground surface could be inspected. At the time of the survey, a construction company doing work along the east side of the study area along Highway 29. It appeared that the east end of the study area was being used as a staging area and the vegetation in this area had been cleared allowing for excellent visibility. In addition, the construction crew had excavated a trench along Highway 29 which provided us the opportunity to examine subsurface soils. The trench measured approximately eight feet long, 30 inches wide, and four feet deep.

In addition to our surface survey and the examination of the trench excavated by a construction company, two hand-dug auger holes using a 4-inch diameter barrel auger was excavated to examine subsurface soils within the study area (see Figure 3).

Based on the results of the prefield research, it was anticipated that prehistoric and historic-period resources could be found within the study area. Prehistoric archaeological site indicators expected to be found in the region include but are not limited to: obsidian and chert flakes and chipped stone tools; grinding and mashing implements such as slabs and hand-stones, and mortars and pestles; and locally darkened midden soils containing some of the previously listed items plus fragments of bone, shellfish, and fire affected stones. Historic period site indicators generally include: fragments of glass, ceramic, and metal objects; milled and split lumber; and structure and feature remains such as building foundations and discrete trash deposits (e.g., wells, privy pits, dumps).

Field Survey Findings

Archaeology

Auger hole #1 was excavated to a depth of 100 centimeters and auger hole #2 was excavated to a depth of 150 centimeters. Soils appeared as described in the soil survey.

No archaeological site indicators or soils were observed in the backhoe trench.

No archaeological site indicators were observed during the course of our survey.

Built Environment

No buildings or structures are located within the study area.

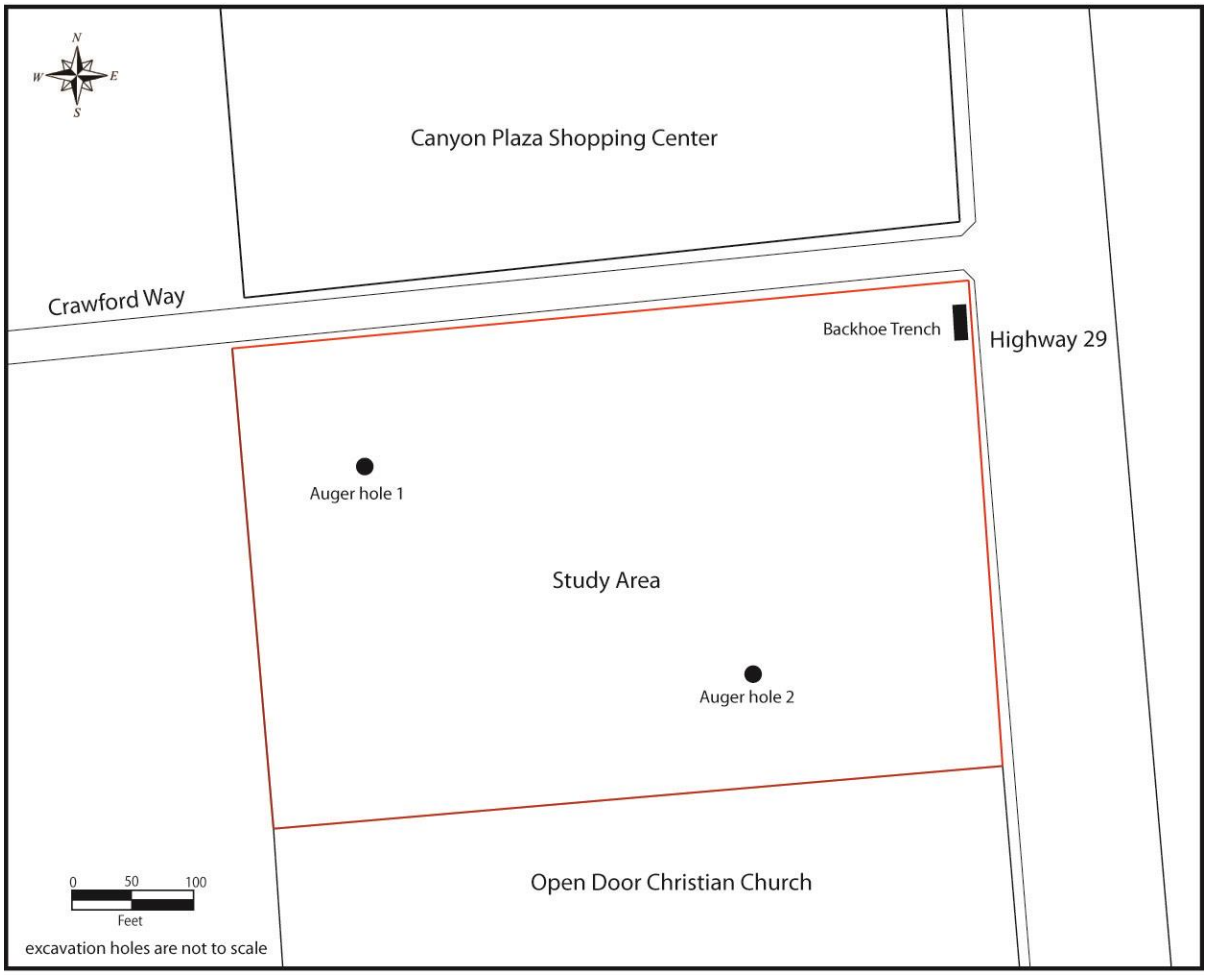

Figure 3. Location of auger holes within the study area.

RECOMMENDATIONS

Known Resources

Archaeology

No archaeological remains were observed during the course of our survey.

Built Environment

No buildings or structures are located within the study area.

No historical resources were observed; therefore, no resource specific recommendations are required.

Buried Site Potential

Determining the potential for buried deposits factors includes landform age, distance to water, slope of the study area, and archaeological data (Meyer and Kaijankoski 2017). The study area lies on geologic formations that dates from the present to 30,000 years ago, the slope of the property is 0% -5%, and the

distance to reliable water is over 150 meters. Based on age, our analysis of the environmental setting, and incorporating Meyer and Kaijankoski (2017) analysis of sensitivity for buried sites, there is a moderate potential (~4.75 on a scale of 1 – 10) for there to be buried archaeological site indicators within the study area. However, as stated previously, Auger holes #1 and #2 and the backhoe trench yielded no buried archaeological site indicators.

Accidental Discovery

In keeping with the CEQA guidelines, if archaeological remains are uncovered, work at the place of discovery should be halted immediately until a qualified archaeologist can evaluate the finds (§15064.5 [f]). Prehistoric archaeological site indicators include: obsidian and chert flakes and chipped stone tools; grinding and mashing implements (e.g., slabs and handstones, and mortars and pestles); bedrock outcrops and boulders with mortar cups; and locally darkened midden soils. Midden soils may contain a combination of any of the previously listed items with the possible addition of bone and shell remains, and fire-affected stones. Historic period site indicators generally include: fragments of glass, ceramic, and metal objects; milled and split lumber; and structure and feature remains such as building foundations and discrete trash deposits (e.g., wells, privy pits, dumps).

The following actions are promulgated in the CEQA Guidelines Section 15064.5(d) and pertain to the discovery of human remains. If human remains are encountered, excavation or disturbance of the location must be halted in the vicinity of the find, and the county coroner contacted. If the coroner determines the remains are Native American, the coroner will contact the Native American Heritage Commission. The Native American Heritage Commission will identify the person or persons believed to be most likely descended from the deceased Native American. The most likely descendent makes recommendations regarding the treatment of the remains with appropriate dignity.

SUMMARY

Tom Origer & Associates completed an historical resources survey for the Crawford Way Senior Housing Project, American Canyon, Napa County, California. The study was requested by Taylor Tanner of Gold Key Property, LLC., and authorized by Billy Yen of Pensacola Residential. This study was conducted to meet the requirements of City of American Canyon and with CEQA requirements. No historical resources were found within the study area and therefore no resource-specific recommendations are warranted. Documentation pertaining to this study is on file at the offices of Tom Origer & Associates (File No. 2018-087).

RE: Crawford Way & Highway 29 Senior Housing, Cuttings Wharf, Napa County

Dear Mr. Alshuth:

A record search of the Native American Heritage Commission (NAHC) *Sacred Lands File* was completed for the area of potential project effect (APE) referenced above with negative results. **Please note that the absence of specific site information in the *Sacred Lands File* does not indicate the absence of Native American cultural resources in any APE**.

I suggest you contact all of those listed, if they cannot supply information, they might recommend others with specific knowledge. The list should provide a starting place to locate areas of potential adverse impact within the APE. **By contacting all those on the list, your organization will be better able to respond to claims of failure to consult**. If a response has not been received within two weeks of notification, the NAHC requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact via email: Sharaya.Souza@nahc.ca.gov.

Sincerely,

Sharaya Souza

RE: Crawford Way & Highway 29 Senior Housing Project, American Canyon, Napa County, California

Dear Mr. Gabaldon:

I write to notify you of a proposed project within Napa County, for which our firm is conducting a cultural resources study. The Crawford Way & Highway 29 Senior Housing project consists of the development of a new senior housing community, in American Canyon. The City of American Canyon is reviewing the project for CEQA compliance. This notification does not constitute formal consultation.

Enclosed is a portion of the Cuttings Wharf and Cordelia, Calif. 7.5' USGS topographic quadrangles showing the project location.

Sincerely,

Taylor Alshuth

RE: Crawford Way & Highway 29 Senior Housing Project, American Canyon, Napa County, California

Dear Mr. Roberts:

I write to notify you of a proposed project within Napa County, for which our firm is conducting a cultural resources study. The Crawford Way & Highway 29 Senior Housing project consists of the development of a new senior housing community, in American Canyon. The City of American Canyon is reviewing the project for CEQA compliance. This notification does not constitute formal consultation.

Enclosed is a portion of the Cuttings Wharf and Cordelia, Calif. 7.5' USGS topographic quadrangles showing the project location.

Sincerely,

Taylor Alshuth

Subject: Fault Investigation Report
APN's 058-032-001 & 058-290-012
Highway 29 and Crawford Way
American Canyon, California

Dear Mr. Yeh:

1.0 INTRODUCTION

This report presents the results of our fault investigation for the vacant parcels APN's 058-032-001 & 058-290-012 located at the southwest intersection of Highway 29 and Crawford Way in American Canyon, California. The approximate location of the site is shown on the attached Vicinity Map, Figure 1. Based on our discussion with your representatives, we understand the site is under consideration for a multi-unit residential development.

As you are aware, the eastern half of the site is located within the State of California designated Earthquake Fault Zone for the active West Napa fault; therefore, a fault investigation is required in accordance with the Alquist-Priolo Earthquake Fault Zoning Act (AP-Act). A portion of the State of California's 2018 Earthquake Zones of Required Investigations Map (EZRIM) is provided on Figure 2 for reference. Since the new mapping stopped at the edge of the quadrangle just southwest of the site, the 1982 Special Studies Zones Map is also provided on Figure 3 for a larger viewing of the AP fault zone.

2.0 PURPOSE AND SCOPE OF SERVICES

The purpose of this investigation was to conduct a fault exploration to evaluate the potential for surface fault rupture (SRF) in the eastern portion of the site that is located within the State of California designated Earthquake Fault Zone for the West Napa fault. We performed the following scope of services for the project:

1. Conducted geologic research regarding the West Napa fault.
2. Review of previous fault investigation reports for nearby development sites.
3. Contracted with an excavation company to dig and backfill a 315-feet-long exploratory trench.
4. Cleaning and logging of the trench exposure by geologists from our office.
5. Interaction with the City's third party peer reviewer for the project.
6. Engineering geologic evaluation of our findings.
7. Consultation with your design team regarding our findings.
8. Preparation of this report.

3.0 WEST NAPA FAULT ZONE

The West Napa fault is a roughly 56 kilometer long, right-lateral strike-slip fault that extends from the Carquinez straits at the south end to the just west of the Town of St Helena to the north. The fault is part of the San Andreas fault system that forms ther boundary between the Pacific and North American tectonic plates. Displacement along the fault zone is right-lateral strike slip with a significant down to the east vertical component near the town of Napa. The surface expression of the fault includes offset drainages, east-facing scarps, linear drainages, tonal contrasts in soils and geomorphic lineaments such as saddles and linear breaks in slope. The rate of movement along the main trace of the West Napa fault is believed to be between about 1 to 4 millimeters per year. Slip appears to be distributed across a network of fault splays within the West Napa Fault Zone.

The State of California seismic hazards zonation program compiles fault information and evaluates activity for zonation in accordance with the A-P Act based on Fault Evaluation Reports. The West Napa fault was first evaluated by the State of California in 1982 and the results were published in Fault Evaluation Report 129 (FER-129). According to FER-129, the southern portion of the West Napa fault was determined active and sufficiently well-defined between the Napa Airport and the Carquinez Straits. North of the Napa Airport, the fault was not well-defined and Holocene activity had not been sufficiently demonstrated, therefore the State created the AP fault zone for the southern portion of the fault but did not zone the northern portion. The site is located in the southern portion of the fault that was zoned in accordance with AP-Act in 1982. Near the site, the fault was mapped as a single well-defined trace.

On August 24, 2014, a M6.0 earthquake occurred with the epicenter located about 6 miles southwest of the Town of Napa, California. The earthquake occurred within the West Napa fault zone with surface rupture reported on 2 main fault splays. The rupture was located in the northern portion of the fault zone, where previously not zoned in accordance with the AP-Act due to a lack of definition and demonstrated activity. The 2014 M6.0 South Napa Earthquake provided information regarding the location of the fault and as result, the Fault Evaluation Report for the West Napa Fault was updated (FER-256) and new AP fault zone maps were issued on January 11, 2018.

Fault Evaluation Report 256 focused on evaluating new information obtained from the 2014 M6.0 South Napa Earthquake. Faults were mapped based on seismicity, observations of surface fault rupture (SFR), consulting reports and UAVSAR imagery. In the southern portion of the 2014 SFR, FER-256 shows 2 fault splays. The western fault splay is located about 2 miles west of the site. The eastern fault splay is aligns with the location of the previously mapped West Napa fault shown on the 1982 Special Studies Zones map and in the U.S. Geological Survey's Quaternary Fault And Fold Database. The south end of the 2014 SFR on the eastern splay is located about 250 feet northeast of the northeastern corner of the site.

Earthquake epicenters for the main event and associated aftershocks were located on the western fault. There were no epicenters plotted on the eastern fault; however slip and surface rupture were well documented. The Quaternary Fault Map on Figure 5 shows faults from the Quaternary Fault and Fold

Database (QFFD) obtained from the kml files provided by the U.S. Geological Survey. Figure 5 also shows the 2014 SFR on both faults mapped in FER-256. Additionally, the approximate location of the epicenter from the 2014 M6.0 South Napa Earthquake is also shown.

4.0 FIELD INVESTIGATION

Exploratory trenching is considered the most conclusive of all investigative techniques used to evaluate the potential SFR. Our field investigation for this project was conducted between January 15 and February 10, 2018. The field investigation consisted the excavation and logging of 1 exploratory trench totaling about 315 lineal feet. The trench was positioned to extend from the eastern site boundary to past the western boundary of the AP fault zone. The east end of the trench was stopped 10 feet west of a marked municipal water line.

The exploratory trench was excavated up to about 9 feet deep by Precision Excavating from Pleasanton, California using a track-mounted Kobelco 115 Excavator. Trench excavations were benched for safety. The south trench wall was cleaned by our geologists using hand-picking tools to identify any potential fault-related features. The southern trench wall was graphically logged by our engineering geologist in the field at a scale of 1-inch equals 5 feet. Soil and bedrock colors noted on the logs were best fit to the Munsel Soil Color Chart and the Rock Color Chart published by the Geological Society of America (2017).

Trench Exposures were reviewed and our interpretations were discussed in the field with the City's third party peer reviewer, KC Engineering Company from Vacaville, California. The trench was loosely backfilled at the completion of logging. Some settlement and rutting should be expected. The ends of the trench were surveyed in the field by bkf Engineers from Pleasanton, California. The approximate location of the trench is shown on the Site Plan, Figure 8, Trench logs are provided on Figures 9 through 11.

5.0 FINDINGS

5.1 SITE DESCRIPTION

The site is located on the south side of Crawford Way and west of Highway 29 in American Canyon, California at the approximate location shown on Figure 1. The site consists of 2 adjacent parcels designated as APN's 058-032-001 & 058-290-012 that combine to total approximately 4.32-acres of land. The site measures approximately 520 feet along Crawford Way by about 325 feet along Highway 29. The site is relatively flat lying, ranging from about Elevation 55 Feet in the northeast corner to about Elevation 48 in the southwest corner. The site is currently undeveloped and covered with seasonal grasses.

5.2 REGIONAL GEOLOGIC CONDITIONS

5.2.1 Geology

The site is located in the Coast Ranges Geomorphic Province of California. The Coast Ranges are characterized by a series of northwest-trending, folded and faulted mountain chains and intervening valleys. Folding and faulting has deformed the area over the past few million years due to right-lateral strike slip relative motions between the Pacific and North American tectonic plates. The majority of active

deformation in the San Francisco Bay Area is believed to have occurred over the past few million years. As a result, the area is highly faulted and folded.

Regional geologic maps (listed in the references) show the site to be underlain by an alluvial fan deposits that were generated from the hills to the east. The fan deposits are considered Late Pleistocene to Early Holocene in age according to regional geologic maps (Fox, 1973, Sowers et al, 1998, and Witter et al, 2004). The farther distal ends of the fan are generally older than the near source portions. Additionally, the older Pleistocene soils are much sandier and more oxidized than the clay-rich Holocene soils. The regional geologic maps all show the West Napa Fault about 250 to 300 feet east of the eastern site boundary, east of Highway 29. The West Napa fault is shown crossing Highway 29 to the west about 900 feet north of the site. A portion of the Dibblee and Minch (2005) geologic map is provided on Figure 5 for reference.

5.2.2 Earthquake Faults and Seismicity

The site is in an area considered to have a relatively high seismicity due to the proximity of several active faults in the region. The site is located within a State of California designated Earthquake Zones Of Required Investigation for the active West Napa fault (CGS, 2018). The State of California considers a fault active if it has demonstrated movement within the Holocene Epoch of geologic time, within the past roughly 11,700 years. Only Holocene-active faults that are sufficiently active and well-defined near the ground surface are zoned in accordance with the A-P Act.

Potentially active faults are faults with Quaternary displacement (within the past 1.6 million years) but do not show evidence for Holocene activity, these faults are considered Pre-Holocene faults (Special Publication 42, 2018 update) and do not meet the criteria for zoning under the AP Act. Some faults in this category may be active with a smaller role in the tectonic setting or with a larger recurrence interval than would be detected under the AP-Act or simply have not been adequately characterized to date.

Quaternary faults in close proximity to the site include the South Hampton fault and Franklin fault located about 3½ miles to the southwest and 6 ½ miles to the southeast, respectively. While these faults are not zoned as active faults, there is some debate about their role in the tectonic setting as slip is transferred from the north end of the Calaveras fault to the northwest into the West Napa and Rodgers Creek fault systems. Additionally, Tulay fault is located about 11 miles to the west, the Bennet Valley fault is located about 12½ miles northwest, the and the Burdell Mountain fault is about 15½ miles southwest of the site.

Table 1 below lists known active faults that are believed to present the highest potential levels of ground shaking at the site, their distances from the site, estimated slip rate, and potential maximum moment-magnitude event. Faults listed below are those shown in the 2008 Fault Source Map contained in the 2014 Fault Parameters by the U.S. Geological Survey's Earthquake Hazards Program and are arranged in order of their increasing distance from the site.

TABLE 1. Potential Active Earthquake Fault Sources

FAULT SOURCE[1]	APPROXIMATE DISTANCE TO FAULT TRACE (Miles)[2]	COMPASS DIRECTION TO FAULT	SLIP RATE (Millimeters per year)[3]	MAXIMUM E.Q. MAG. (Mm)[4]
West Napa fault	250 feet	E	1 ± 1	6.5
Green Valley fault	6	NE	5 ± 3	6.2
Cordelia fault	7¼	NE		
Concord fault	11	SE	4 ± 2	6.2
Hayward fault - Northern	12	SW	9 ± 2	7.1
Greenville fault – Clayton Section	21	SE	2 ± 1	6.5
Rodgers Creek fault - Southern	10½	SW	9 ± 2	7.0
Calaveras fault - Northern	25	S	6 ± 2	6.8
San Andreas fault – 1906 Rupture	30	SW	24 ± 3	7.9

5.3 SUBSURFACE CONDITIONS

During the course of this investigation, we encountered native residual soils developing on the alluvial fans deposited at the site. For detailed descriptions of the geologic materials encountered, refer to the Trench Log on Plates 9 through 11. A general description is provided below.

The trench (T-1) exposed relatively flat stratigraphy with isolated areas of channel erosion and deposition. The upper roughly 5½ feet of the soils consist of brown to yellow brown clay-rich soils that are clearly of Holocene age. On the trench log, units A and B are dark brown organic–rich top soil layers. Units C and F are a yellow brown horizon with thin carbonate filaments that likely developed during the Holocene. Underlying these soils, at the east end of the trench, we encountered a second carbonate horizon (Unit D) with filaments and nodules up to ¾-inch diameter. Based on the size of carbonate, this unit is likely Late Pleistocene to Early Holocene in age.

Pleistocene aged soils were encountered beneath the above-mentioned soil horizons. Within the Pleistocene soils, carbonate nodules and veins ranged up to 1½-inch diameter and the soils exhibited strongly oxidized color tones; both of which are indicative of the Pleistocene climate in the region. Additionally, the Pleistocene soils were generally much sandier than the clay-rich Holocene soils.

Channel features were encountered between stations 1+05 and 1+45 and at Station 2+00 to 2+10. West of the channels, carbonate horizons with nodules and pockets up to 1½-inch diameter were observed. The size of the carbonate nodules and degree of oxidation indicates a Pre-Holocene age. Based on our

[1] 2008 Fault sources included in the 2014 Fault Parameters provided by the U.S. Geological Survey's Earthquake Hazards Program on-line web tools.
[2] Fault locations and distances to the site were determined from the KML files provided from the Quaternary Fault and fold Database and were measure from the center of the proposed Subdivision 9320 site.
[3] Slip rates obtained from Cao *et a*l. (2002).
[4] Maximum earthquake magnitude (Mm) calculated by Peterson *et al*. (1998).

observations and interpretation of pedogenic[5] features (such as carbonate development, clay skins and color) observed in the trenches, units A, B, C, D(?), F and G formed during the Holocene while units E, H, I, J, K(?), L, M and N are Pleistocene in age.

Free groundwater was encountered in Trench T-1 from about Station 1+90 to the west end of the trench at a depth of about 8½ feet below the ground surface. Due to the amount of groundwater seeping into the trench, excavation below that depth was not feasible for the purposes of this study. Groundwater levels are expected to undergo significant fluctuations in response to seasonal rainfall and local irrigation practices.

5.4 AERIAL PHOTOGRAPH INTERPRETATION

We reviewed 10 sets of stereo-paired aerial photographs covering the site vicinity between the years 1958 and 2005. Aerial photographs were obtained from the archive library at Photo Science Geospatial Solutions (formerly Pacific Aerial Surveys) in Novato, California. Aerial photographs were viewed by our engineering geologist using an Old Delft ODSII scanning stereo-scope. Since this was a study of regional-scale to evaluate the locations of active faults impacting the site, photographs were at a scale adequate to review the regional conditions. Additional images were viewed online at historicaerials.com and from the Google Earth timeline function.

Based on our review of the aerial photographs, the West Napa fault is visible about 250 feet east of the eastern site boundary. The fault can be seen as a tonal contrast between soils on either side of the fault. The earlier years viewed from 1958 through 1966 showed the clearest indications of a sharp contrast between darker soils on the east side and lighter colors of the west. The photo-lineament aligns with the faults encountered in nearby studies. The photo-lineament we interpret to represent the location of the West Napa fault is shown on a copy of the 1958 aerial photograph on Figure 6.

5.5 PREVIOUS AP STUDIES

We reviewed nearby fault investigation reports prepared for developments located in the 1982 AP fault zone. Our review was limited to about a ½ mile radius from the site. Available reports from the CGS are from the years prior to 2000; therefore some more recent reports were not available at the time of our study. The 2005 study by twinning Laboratories was provided to us by the peer reviewer.

AP 3341

Most notable to this project is the 2005 investigation by Twinning Laboratories at the site located on the northeast corner of American Canyon Road and Highway 29. The north end of the property studied by Twinning is about the same latitude as the southern boundary of the site studied herein. The Twinning

[5] Pedogenesis is the process of soil formation due to weathering of the underlying materials in any given area due to climate, precipitation and groundwater. Pedogeic features formed by the in-place weathering, water infiltration and chemistry of a soil can be used to estimate relative ages of the soils.

study included excavation and logging of 5 exploratory trenches; 4 of which encountered the West Napa fault. Setbacks were recommended for buildings intended for human occupancy.

Figure 7 shows the location of the site, Twinning's exploratory trenches and their interpretation of the fault location (purple line). The fault generally aligns as a strait projection from the southern end of the eastern fault mapped as the 2014 SFR and studies at the Eagle Drest subdivision (discussed below).

AP 2483

Kleinfelder Inc. performed several fault studies south of American Canyon Road. In 1990 they reported no fault at the Walgreens shopping center located on the south side of American Canyon Road as shown on Figure 7. Trenches were not excavated as part of the study.

AP 2950

About ½ mile south, in 1992 Kleinfelder performed a fault study at the Eagle Crest subdivision. The study encountered the West Napa fault in 3 of 4 exploratory trenches and setbacks were recommended for buildings intended for human occupancy. The Kleinfelder trenches were reviewed by the CDMG.

In 1994, Terraseach Inc. performed a supplemental fault investigation to further evaluate the fault identified by Kleinfelder. Terraseach excavated 5 additional trenches on trend with the fault interpreted by Kleinfelder. Terraseach interpreted a fault in the center of the site in 2 trenches (T-2 and T-4) similar to the Kleinfelder locations an inactive fault (T-3) that is on trend with the identified faults and no faulting at the north and south projections of the identified fault (T-1 and T-5). The peer reviewer, Darwin Meyers Associates suggested establishing setbacks as projected.

The projection of the fault interpreted during the Kleinfelder study is shown on Figure 7 (blue line). The location of the AP 2950 site is south of the map area shown on Figure 7.

AP 2798

Wallace Kuhl & Associates Inc. performed a fault investigation of the American Canyon City and Arts Center in 1994 which is located about 1/3 mile north of the project site as shown on Figure 7. The investigation included 2 exploratory trenches that were interpreted to expose no indications of active faulting. The report references the mapped trace of the West Napa fault located along the western property boundary based on the 1982 AP map. The eastern fault mapped as the 2014 SFR (brown line on Figure 7) suspiciously aligns with the east end of their Test Pit A.

Canyon Plaza – not on file

Canyon Plaza was constructed on the north side of Crawford Way between 2002 and 2004. The development is located directly north of the project site studied herein as shown on Figure 7. We could not locate reports or documents regarding faulting or geotechnical investigations at the site. However, the site is located in the AP fault zone for the West Napa fault, similar to the project site and therefore was under the same requirements to perform a fault study prior to development. Google Earth images

from 2002 suggest a linear green vegetated area trending northeast to southwest across the field. Settlement of trench backfill ponding water in this alignment would be expected from fault study at the site. Based on the age of construction, we assume a fault study was performed and the development zone cleared of active faulting, however, no record of such were available to us at the time of our study.

Smith Ranch – not on file.

Berlogar Geotechnical Consultants performed a fault exploration of the Smith Ranch property in the early 2000's as the approximate location shown on Figure 7. The investigation was located on the east side of the railroad tracks northeast of the site. The investigation included excavation of an exploratory trench extending east from the railroad tracks. No fault indications of active faulting were identified.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of this project, we conclude that the West Napa fault is not located within the subject properties. Trench T-1 penetrated into un-faulted Pleistocene soils and no indications of active or potentially active faulting were encountered in the trench. Additionally, we did not encounter any evidence of a fault crossing or trending towards the site as part of our research. The risk of surface fault rupture at the site is low. Therefore residential development of the property is feasible from a geologic hazard perspective.

Based on our review of available information regarding the location of the West Napa fault near the site, our interpretation of the fault location is shown on Figure 7 by the red dashed line. The red dashed line is intended to overlay the previously described information including the 2014 SFR, our interpretation of aerial photographs, the fault encountered in the Twinning investigation, and the projected trace from the Eagle Ridge study.

The intent of the AP-Act is to prevent residential construction from taking place across the surface trace of an active fault. Setbacks are generally established from the fault trace where well-located, or sometimes from the limits of investigation data where there is uncertainty. Several fault splays were identified based on the 2014 South Napa Earthquake, the closest of which is located about 250 feet northeast of the northeastern property corner (see Figures 4 and 7). Near the site, the West Napa fault is well-located as defined by the "*Solid Line in Red or Black*" designation on the 2018 EZRIM map (Figure 2). The previous Special Studies Zones map from 1982 also considered this fault to be well-located as shown by the "*Solid line where accurately located*" designation (Figure 3). However, the 2014 SFR is slightly east of the 1982 mapping and the State's fault mapping has shifted accordingly.

Establishing setbacks form active faults should take into account the location of the fault as well as the area of anticipated ground deformation from any given earthquake event. Establishing a setback from the active trace of the West Napa fault does not impact the site or constrain development as no fault was encountered at the site and there are no indications of any other fault splays near the site except those defined above. Since the site is 250 feet from the well-defined trace of the West Napa fault at its closest

location, additional fault setbacks at the site are not warranted. Development of the site can extend to the east end of our trench (T-1) exploration. Development east of the end of our trench could be feasible pending additional exploration that would need to dig around the municipal water line. We understand this area is not planned for development at this time.

7.0 LIMITATIONS

The results of this project are based upon the information provided to us regarding site improvements, the findings of our field investigation, geologic research, and professional judgment. This project has been conducted in accordance with currently accepted engineering geologic standards only; no other warranty is expressed or implied. Site conditions and locations of features discussed in the text of the report are those that existed during our field visit in February 2018 and are not necessarily representative of other features, locations or times. If subsurface conditions encountered during construction vary from those interpreted in this report, our firm should be contacted to review the conditions for any changes in our recommendations. The review would be acknowledged in writing.

Respectfully submitted,

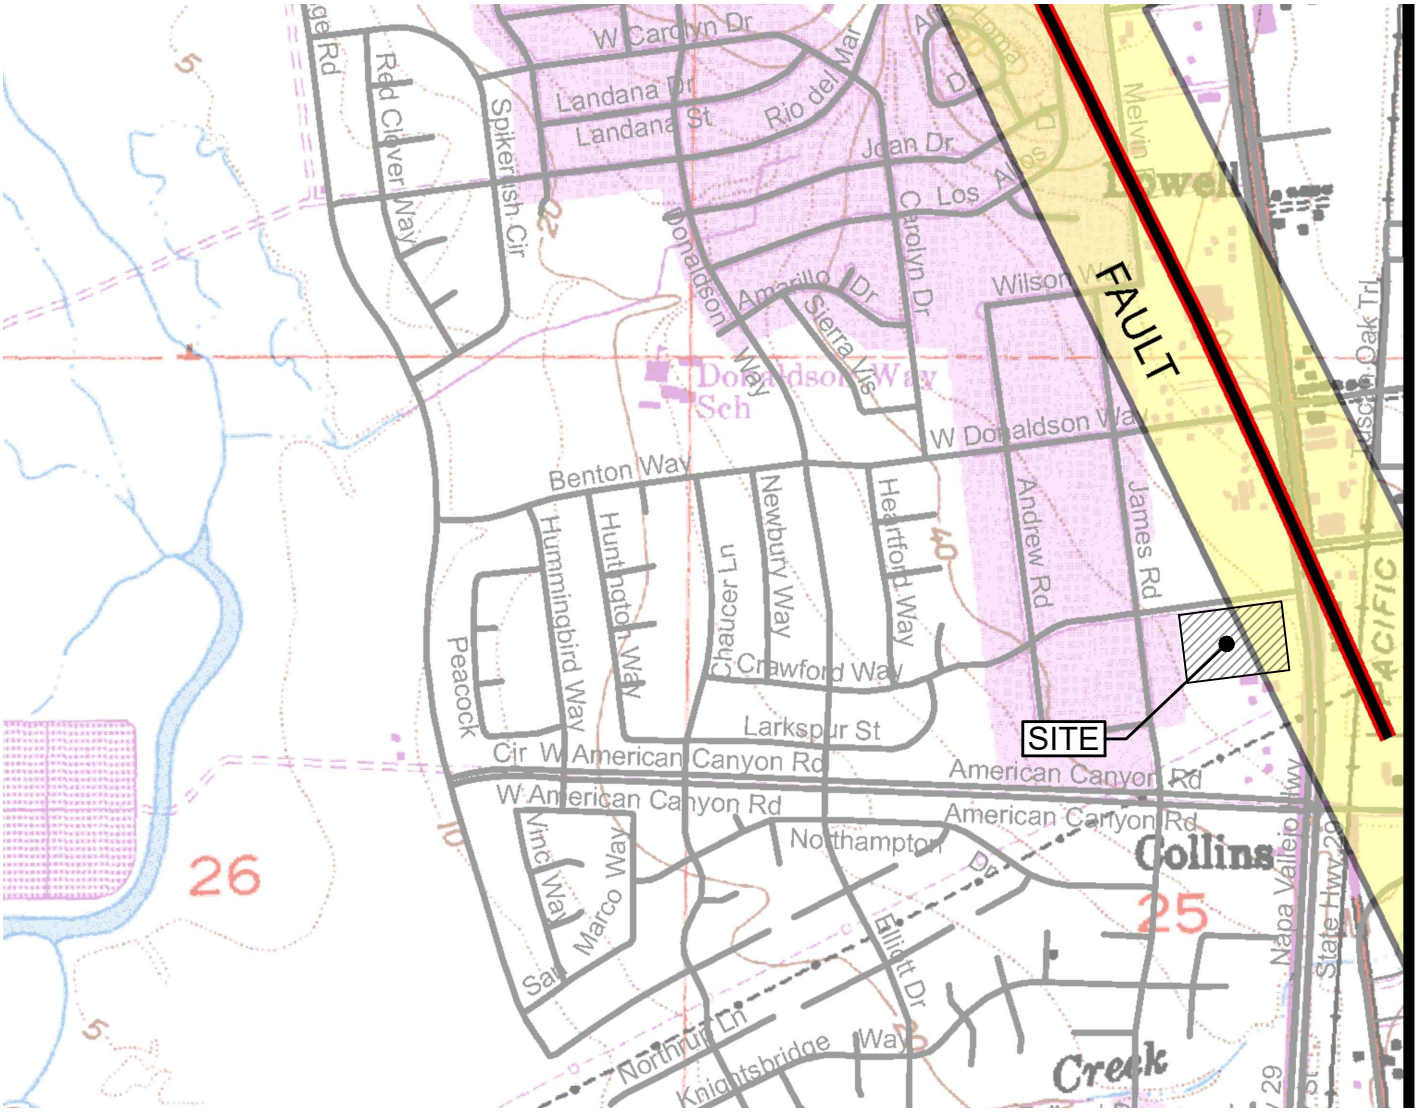

MAP EXPLANATION

Earthquake Fault Zones
Zone boundaries are delineated by straight-line segments; the boundaries define the zone encompassing active faults that constitute a potential hazard to structures from surface faulting or fault creep such that avoidance as described in Public Resources Code Section 2621.5(a) would be required.

Active Fault Traces
Faults considered to have been active during Holocene time and to have potential for surface rupture: Solid Line in Black or Red where Accurately Located; Long Dash in Black or Solid Line in Purple where Approximately Located; Short Dash in Black or Solid Line in Orange where Inferred; Dotted Line in Black or Solid Line in Rose where Concealed; Query (?) indicates additional uncertainty. Evidence of historic offset indicated by year of earthquake-associated event or C for displacement caused by fault creep.

INTRODUCTION

This report presents the results of our geotechnical study for the assisted living facility to be constructed at the southwest corner of Crawford Way and Highway 29 in American Canyon, California. The property is undeveloped and extends over relatively level terrain. The site location is shown on Plate 1, Appendix A.

We understand that Phase I of the project will comprise the construction of an approximately 64,276 square foot, 70-unit, two story senior housing community structure at the site. Phase II will consist of the construction of a 36,568 square foot, independent living structure with 42 units. Additionally, a bioretention structure is planned at the east end of the site. Auto access will be provided by a main entrance off Crawford Way and parking will be located along the perimeter of the site.

Foundation loads are expected to be typical of the moderately heavy type of construction proposed. We anticipate wall loads will range from ¾ to 1¾ kips per lineal foot. We understand site grading will be the minimum needed to construct level building pads and paved areas with positive drainage. Such grading could include cuts and fills of about 2 to 4 feet.

SCOPE

The purpose of our study, as outlined in our Professional Service Agreement dated June 25, 2018 and revised August 3, 13 and September 10, 2018, was to generate geotechnical information for the design and construction of the project. Our scope of services included reviewing selected published geologic data pertinent to the site; evaluating the subsurface conditions with borings and laboratory tests; analyzing the field and laboratory data; and presenting this report with the following geotechnical information:

1. A brief description of the soil and groundwater conditions observed during our study;

2. A discussion of seismic hazards that may affect the proposed project; and

3. Conclusions and recommendations regarding:

    a. Primary geotechnical engineering concerns and mitigating measures, as applicable;

    b. Site preparation and grading including remedial grading of weak, porous, compressible and/or expansive surface soil;

    c. Foundation type, design criteria, and estimated settlement behavior;

    d. Lateral loads for retaining wall design;

    e. Support of concrete slabs-on-grade;

    f. Preliminary pavement thickness based on our experience with similar soil and projects and the results of an R-value test on the anticipated subgrade soil;

Draft

g. Utility trench backfill;

h. Geotechnical engineering drainage improvements; and

i. Supplemental geotechnical engineering services.

STUDY

Site Exploration

We reviewed our previous geotechnical studies in the vicinity and selected geologic references pertinent to the site. The geologic literature reviewed is listed in Appendix B. On September 26, 2018, we performed a geotechnical reconnaissance of the site and explored the subsurface conditions by drilling 10 borings to depths ranging from about 3 to 15 feet. The borings were drilled with a truck-mounted drill rig equipped with 6-inch diameter, solid stem augers at the approximate locations shown on the Exploration Plan, Plate 2. The boring locations were determined approximately by pacing their distance from features shown on the Exploration Plan and should be considered accurate only to the degree implied by the method used. Our field engineer located and logged the borings and obtained samples of the materials encountered for visual examination, classification and laboratory testing.

Relatively undisturbed samples were obtained from the borings at selected intervals by driving a 2.43-inch inside diameter, split spoon sampler, containing 6-inch long brass liners, using a 140-pound hammer dropping approximately 30 inches. The sampler was driven 12 to 18 inches. The blows required to drive each 6-inch increment were recorded and the blows required to drive the last 12 inches, or portion thereof, were converted to equivalent Standard Penetration Test (SPT) blow counts using a conversion factor of 0.65 (Burmister, 1948) for correlation with empirical data. Disturbed samples were also obtained at selected depths by driving a 1.375-inch inside diameter (2-inch outside diameter) SPT sampler, without liners or rings, using a 140-pound hammer dropping approximately 30 inches. The sampler was driven 12 to 18 inches, the blows to drive each 6-inch increment were recorded, and the blows required to drive the final 12 inches, or portion thereof, are provided on the boring logs. Disturbed “bulk” samples were also obtained at selected depths from the borings and placed in buckets.

The logs of the borings showing the materials encountered, groundwater conditions, converted blow counts and sample depths are presented on Plates 3 through 12. The soil is described in accordance with the Unified Soil Classification System, outlined on Plate 13.

The boring logs show our interpretation of the subsurface soil and groundwater conditions on the date and at the locations indicated. Subsurface conditions may vary at other locations and times. Our interpretation is based on visual inspection of soil samples, laboratory test results, and interpretation of drilling and sampling resistance. The location of the soil boundaries should be considered approximate. The transition between soil types may be gradual.

DRAFT

Laboratory Testing

The samples obtained from the borings were transported to our office and re-examined to verify soil classifications, evaluate characteristics, and assign tests pertinent to our analysis. Selected samples were laboratory tested to determine their classification (Atterberg Limits, percent of silt and clay), expansion potential (Expansion Index - EI) and R-value. The test results are presented on the boring logs. Results of the classification, expansion potential and R-value tests are presented on Plates 14 and 15.

SITE CONDITIONS

General

Napa County is located within the California Coast Range geomorphic province. This province is a geologically complex and seismically active region characterized by sub-parallel northwest-trending faults, mountain ranges and valleys. The oldest bedrock units are the Jurassic-Cretaceous Franciscan Complex and Great Valley sequence sediments originally deposited in a marine environment. Subsequently, younger rocks such as the Tertiary-age Sonoma Volcanics group, the Plio-Pleistocene-age Clear Lake Volcanics and sedimentary rocks such as the Guinda, Domengine, Petaluma, Wilson Grove, Cache, Huichica and Glen Ellen formations were deposited throughout the province. Extensive folding and thrust faulting during late Cretaceous through early Tertiary geologic time created complex geologic conditions that underlie the highly varied topography of today. In valleys, the bedrock is covered by thick alluvial soil.

Geology

Published geologic maps (Bezore et al., 2002) indicate the property is underlain by late Pleistocene to Holocene fan deposits. This unit is described as gently sloping, fan-shaped, relatively undissected alluvial surfaces comprised of sand, gravel, silt and clay and are moderately to poorly sorted and moderately to poorly bedded.

Landslides

Published landslide maps (Dwyer, 1976) do not indicate large-scale slope instability at the site, and we did not observe active landslides at the site during our study.

Draft

Surface

The property extends primarily over level terrain and is covered by annual grasses. The building site for Phase I extends across the western and central portion of the site. Phase II will occupy a portion of the eastern side of the site. In general, the ground surface is soft and spongy. This is a condition generally associated with weak, porous surface soil. The surface soil is disturbed by randomly arrayed shrinkage cracks generally associated with expansive soil. Locally, expansive soil shrinks and swells with the weather cycle. The cyclic shrinking and swelling tends to disturb the upper portion of the expansive clay. This zone is defined hereinafter as the active layer.

Natural drainage consists of sheet flow over the ground surface that concentrates in man made surface drainage elements such as roadside ditches, canals and gutters, and natural drainage elements such as swales, ravines, and creeks.

Subsurface

Our borings and laboratory tests indicate that the portion of the site we studied is underlain by clay with varying amounts of sand to the maximum depth explored in our borings (15 feet). This soil is weak and porous to a depth of about 1 foot. Porous soil appears hard and strong when dry but becomes weak and compressible as its moisture content increases towards saturation. This soil exhibits high plasticity (LL = 64.3, 69.8; PI = 44.3, 49.2) and medium to high expansion potential (EI = 88, 107), and is disturbed by 1 to 2-inch-wide shrinkage cracks that extend about 1 foot below the ground surface. A detailed description of the subsurface conditions found in our borings is given on Plates 3 through 13, Appendix A. Based on Table 20.3-1 of American Society of Civil Engineers (ASCE) Standard 7-10, titled “Minimum Design Loads for Buildings and Other Structures” (2010), we have determined a Site Class of D should be used for the site.

Corrosion Potential

Results of the soil corrosivity tests that were performed for soil samples at the site are presented on Plate 16. Because we are not corrosion experts, these results should be reviewed by a corrosion expert to determine if the proposed improvements are appropriate as they relate to corrosion resistance.

Percolation Testing

As requested, we installed a slotted casing to a depth of 3 feet in boring B-9 to measure the percolation within the upper 3 feet of the site soil in that area. Our measurements indicate that the percolation rate within the upper 3 feet at boring B-9 is approximately 23 minutes/inch. The percolation test was performed following a long period without rainfall that resulted in extensive shrinkage cracking of the expansive surface soil. These shrinkage cracks tend to disappear during the winter months as the expansive soil swells, resulting in a percolation rate would likely increase significantly.

Draft

Groundwater

Free groundwater was first detected in our borings at depths ranging from 10½ to 12½ feet below the ground surface at the time of drilling. When the holes were backfilled, the water level had risen to a depth of about 9 feet. Fluctuation in the groundwater level typically occurs because of a variation in rainfall intensity, duration and other factors such as flooding and periodic irrigation. In the project area, the groundwater level can rise from a few to several feet during prolonged periods of rainfall and impact elevator pit excavations not only on a short term basis (during construction) but also during the life of the project. Elevator pit excavation dewatering is discussed in more detail in the Conclusions section of this report.

Flooding

Our review of the Federal Emergency Management Agency (FEMA) Flood Zone Map for the City of American Canyon (NO. 06055 C0617F) dated August 3, 2016, indicates that the proposed building site is located within Zone "X," an area determined to be outside the 500-year flood plain. Evaluation of flooding potential is typically the responsibility of the project civil engineer.

DISCUSSION AND CONCLUSIONS

Seismic Hazards

General

We did not observe subsurface conditions within the portion of the property we studied that would suggest the presence of materials that may be susceptible to seismically induced densification, liquefaction, or lurching. Therefore, we judge the potential for the occurrence of these phenomena at the site to be low.

Faulting and Seismicity

The site is located within a current Alquist-Priolo Earthquake Fault Zone (Bryant and Hart, 2007). Our understanding is that a fault study has been performed for the project site and no active faults were identified, indicating that the risk of fault rupture at the site is low. However, the site is within an area affected by strong seismic activity and future seismic shaking should be anticipated at the site. It will be necessary to design and construct the proposed improvements in strict adherence with current standards for earthquake-resistant construction.

Tsunamis

The tsunami inundation map for the Cuttings Wharf Quadrangle (Cal EMA, 2009) indicates that the project site is outside the predicted tsunami inundation area. Site-specific evaluation of tsunamis impact to the project is beyond the scope of this study.

Draft

Geotechnical Issues

General

Based on our study, we judge the proposed improvements can be built as planned, provided the recommendations presented in this report are incorporated into their design and construction. The primary geotechnical concerns during design and construction of the project are:

1. The presence of about 1 foot of highly expansive, weak, porous, compressible, clayey surface soil;

2. The detrimental effects of uncontrolled surface runoff and groundwater seepage on the long-term satisfactory performance of the project given the erosion potential and porous nature of the surface soil; and

3. The strong ground shaking predicted to impact the site during the life of the project.

Weak, Porous Surface Soil

Weak, porous surface soil, such as that found at the site, appears hard and strong when dry but will lose strength rapidly and settle under the load of fills, foundations, slabs, and pavements as its moisture content increases and approaches saturation. The moisture content of this soil can increase as the result of rainfall, periodic irrigation or when the natural upward migration of water vapor through the soil is impeded by, and condenses under fills, foundations, slabs, and pavements. The detrimental effects of such movements can be reduced by strengthening the soil during grading. This can be achieved by excavating the weak soil and replacing it as properly compacted (engineered) fill. Alternatively, satisfactory foundation support could be obtained below the weak surface soil.

Expansive Soil - In addition, the surface soil is expansive. Expansive surface soil shrinks and swells as they lose and gain moisture throughout the yearly weather cycle. Near the surface, the resulting movements can heave and crack lightly loaded shallow foundations (spread footings) and slabs and pavements. The zone of significant moisture variation (active layer) is dependent on the expansion potential of the soil and the extent of the dry season. In the project area, the active layer is generally considered to range in thickness from about 2 to 3 feet. The detrimental effects of the above-described movements can be reduced by pre-swelling the expansive soil and covering it with a moisture fixing and confining blanket of properly compacted select fill, as subsequently defined. In building areas, the blanket thickness required depends on the expansion potential of the soil and the anticipated performance of the foundations and slabs. In order to effectively reduce foundation and slab heave given the expansion potential of the site's soil, a blanket thickness of 30 inches will be needed. In exterior slab and paved areas, the select fill blanket need only be 12 inches thick.

Foundation and Slab Support - Provided grading is performed as discussed above, satisfactory foundation support can be obtained from spread footings that bottom on the select engineered fill.

DRAFT

Exterior Slabs and Pavements

Exterior slabs and pavements will heave and crack as the expansive soil shrinks and swells through the yearly weather cycle. Slab and pavement cracking and distress are typically concentrated along edges where moisture content variation is more prevalent within subgrade soil. Slab and pavement performance and the incidence of repair can be reduced, but not eliminated, by covering the pre-swelled expansive soil with at least 12 inches of select fill (see "On-Site Soil Quality" section) prior to constructing the slab or pavement required to carry the anticipated traffic.

On-Site Soil Quality

All fill materials used in the upper 30 inches of the building area and the upper 12 inches of exterior slab and pavement subgrade must be select, as subsequently described in "Recommendations." We anticipate that, with the exception of organic matter and of rocks or lumps larger than 6 inches in diameter, the excavated material will be suitable for re-use as general fill, but will not be suitable for use as select fill unless stabilized with lime.

Select Fill

The select fill can consist of imported that satisfies the requirements presented herein or lime stabilized on-site clayey soil. Lime stabilized soil may prevent the growth of landscape vegetation due to the inherent elevated pH level of the soil.

Settlement

Provided remedial grading is performed as recommended herein, we estimate that total settlements of heavily loaded column footings will be about 1 inch and settlement of the strip footings will be ½ inch.

Surface Drainage

Because of topography and location, the site will be impacted by surface runoff from the alluvial fan surface. Surface runoff typically sheet flows over the ground surface but can be concentrated by the planned site grading, landscaping, and drainage. The surface runoff can pond against structures and cause deeper than normal soil heave and/or seep into the slab rock. Therefore, strict control of surface runoff is necessary to provide long-term satisfactory performance of projects constructed on or near alluvial fans. It will be necessary to divert surface runoff around improvements, provide positive drainage away from structures, and install energy dissipaters at discharge points of concentrated runoff. This can be achieved by constructing the building pad several inches above the surrounding area and conveying the runoff into man made drainage elements or natural swales that lead downgradient of the site.

Elevator Pit Dewatering

As previously discussed, the groundwater level at the site can rise from a few to several feet during prolonged periods of rainfall and impact elevator pit excavations not only on a short term basis (during construction) but also during the life of the project. We did not perform a site-

Draft

specific groundwater study to quantify the inflow volume of groundwater into the excavation. Construction excavation dewatering and the sizing of the required dewatering system is typically the responsibility of the contractor. The adequacy of the construction dewatering system for use on a long-term basis should be analyzed (including the waterproofing type) and resized, as applicable. We are not experts in this field and recommend a hydrogeologist and excavation dewatering expert be consulted prior to installing such a system. As an alternative to the long-term dewatering system, the basement can be waterproofed and designed to resist full hydrostatic pressure.

RECOMMENDATIONS

Seismic Design

Seismic design parameters presented below are based on Section 1613 titled "Earthquake Loads" of the 2016 California Building Code (CBC). Based on Table 20.3-1 of American Society of Civil Engineers (ASCE) Standard 7-10, titled "Minimum Design Loads for Buildings and Other Structures" (2010), we have determined a Site Class of D should be used for the site. Using a site latitude and longitude of 38.1680°N and 122.2541°W, respectively, and the U.S. Seismic Design Maps from the United States Geological Survey (USGS) website (http://earthquake.usgs.gov/designmaps/us/application.php), we recommend that the following seismic design criteria be used for structures at the site.

2016 CBC Seismic Criteria	
Spectral Response Parameter	**Acceleration (g)**
S_S (0.2 second period)	2.047
S_1 (1 second period)	0.734
S_{MS} (0.2 second period)	2.047
S_{M1} (1 second period)	1.101
S_{DS} (0.2 second period)	1.364
S_{D1} (1 second period)	0.734

Grading

Site Preparation

Areas to be developed should be cleared of vegetation and debris. Cleared and grubbed material should be removed from the site and disposed of in accordance with County Health Department guidelines. We did not observe septic tanks, leach lines or underground fuel tanks during our study. Any such appurtenances found during grading should be capped and sealed and/or excavated and removed from the site, respectively, in accordance with established guidelines and requirements of the County Health Department. Voids created during clearing should be backfilled with engineered fill as recommended herein.

Draft

Stripping

Areas to be graded should be stripped of the upper few inches of soil containing organic matter. Soil containing more than two percent by weight of organic matter should be considered organic. Actual stripping depth should be determined by a representative of the geotechnical engineer in the field at the time of stripping. The strippings should be removed from the site, or if suitable, stockpiled for re-use as topsoil in landscaping.

Excavation Dewatering

Groundwater was encountered within the planned excavation depth for the elevator pits. Therefore, in order to accomplish the planned excavation, it may be necessary to dewater. The dewatering system can consist of a perforated plastic pipe (in a grid array) embedded in free draining rock. The system should discharge to a sump area that is pumped continuously during construction. The dewatering system can be incorporated into the permanent subdrain system for the underground structure. The general contractor is responsible for the design, operation and maintenance of the temporary dewatering system. If this system is to be incorporated into the final dewatering system of the underground structure, we should evaluate its performance during excavation. Alternatively, the underground structure should be designed to resist full hydrostatic pressure.

Excavations

Following initial site preparation, excavation should be performed as recommended herein. Excavations extending below the proposed finished grade should be backfilled with suitable materials compacted to the requirements given below.

Within fill and interior slab-on-grade areas, the weak, porous, compressible, expansive surface soil should be excavated to within 6 inches of its entire depth (about 1 foot in our borings). Additional excavation should be performed, as necessary, to allow space for the installation of a blanket of select fill, at least 30 inches thick, beneath the building pad subgrade. The excavation of weak, compressible, expansive soil should also extend at least 12 inches below exterior slab and pavement subgrade to allow space for the installation of the select fill blanket discussed in the conclusions section of this report.

The excavation of weak, porous, compressible, expansive surface materials should extend at least 5 feet beyond the outside edge of the exterior footings of the proposed buildings and 3 feet beyond the edge of exterior slabs and pavements. The excavated materials should be stockpiled for later use as compacted fill, or removed from the site, as applicable.

At all times, temporary construction excavations should conform to the regulations of the State of California, Department of Industrial Relations, Division of Industrial Safety or other stricter governing regulations. The stability of temporary cut slopes, such as those constructed during the installation of underground utilities, should be the responsibility of the contractor. Depending on the time of year when grading is performed, and the surface conditions exposed, temporary cut slopes may need to be excavated to 1½:1, or flatter. The tops of the temporary cut slopes should be rounded back to 2:1 in weak soil zones.

DRAFT

Subsurface Drainage

A subdrain should be installed where evidence of seepage is observed. The subdrain should consist of a 4-inch diameter (minimum) perforated plastic pipe with SDR 35 or better embedded in Class 2 permeable material. The permeable material should be at least 12 inches thick and extend at least 12 inches above and below the seepage zone.

In addition, subdrains should be installed at a minimum slope of 1 percent and should have cleanouts located at their ends and at turning points. “Sweep” type elbows and wyes should be used at all turning points and cleanouts, respectively. Subdrain outlets and riser cleanouts should be fabricated of the same material as the subdrain pipe as specified herein. Outlet and riser pipe fittings should not be perforated. A licensed land surveyor or civil engineer should provide “record drawings” depicting the locations of subdrains and cleanouts.

Fill Quality

All fill materials must be approved by the geotechnical engineer prior to use. The upper 30 inches of fill beneath and within 5 feet of the building area and the upper 12 inches of fill beneath and within 3 feet of exterior slabs and/or pavement edges should be select fill. We judge the on-site soil is generally suitable for use as general fill but will not be suitable for use as select fill unless they are stabilized with lime. Lime stabilized soil may prevent the growth of landscape vegetation due to the inherent elevated pH level of the soil. The suitability of the on-site soil for use as select fill should be verified during grading.

Select Fill

Select fill should be free of organic matter, have a low expansion potential, and conform in general to the following requirements:

SIEVE SIZE	PERCENT PASSING (by dry weight)
6 inch	100
4 inch	90 – 100
No. 200	10 – 60

Liquid Limit – 40 Percent Maximum
Plasticity Index – 15 Percent Maximum
R-value – 20 Minimum (pavement areas only)

Expansive on-site soil may be used as select fill if it is stabilized with lime. In general, imported fill, if needed, should be select. Material not conforming to these requirements may be suitable for use as import fill; however, it shall be the contractor’s responsibility to demonstrate that the proposed material will perform in an equivalent manner. The geotechnical engineer should approve imported materials prior to use as compacted fill. The grading contractor is responsible for submitting, at least 72 hours (3 days) in advance of its intended use, samples of the proposed import materials for laboratory testing and approval by the soils engineer.

Draft

Lime Stabilization

For preliminary planning purposes, we estimate that high calcium lime mixed at a minimum of 5½ percent (dry weight) will stabilize the expansive site soil. This percentage of lime needs to be verified prior to construction with engineering analysis and laboratory Atterberg Limits and/or pH testing using lime from the same source as that planned for use on the project and a sample of the soil to be treated. Laboratory test results and engineering analysis may indicate that a higher percentage of lime is required. The contractor should allow a minimum of 5 business days for the laboratory tests to be completed.

The lime stabilization should be performed in accordance with Section 24 of the Caltrans Standard Specifications except that a curing seal will not be required, provided the moisture content of the lime-stabilized material is maintained at or above optimum moisture content until it is permanently covered with subsequent construction. Lime stabilized materials are generally not suitable for reuse as general fill, select fill or backfill after compaction has taken place.

Fill Placement

The surface exposed by stripping and removal of weak, compressible, expansive surface soil should be scarified to a depth of at least 6 inches, uniformly moisture-conditioned to at least 4 percent above optimum and compacted to at least 90 percent of the maximum dry density of the materials as determined by ASTM Test Method D-1557. Moisture conditioning should be sufficient to completely close all shrinkage cracks for their full depth within pavement, exterior slab and building areas. If grading is performed during the dry season, the shrinkage cracks may extend to a few feet below the surface. Therefore, it may be necessary to excavate a portion of the cracked soil to obtain the proper moisture condition and degree of compaction. Approved fill material should then be spread in thin lifts, uniformly moisture-conditioned to near optimum and properly compacted. All structural fills, including those placed to establish site surface drainage, should be compacted to at least 90 percent relative compaction. Only approved select materials should be used for fill within the upper 30 inches of interior slab subgrades and within the upper 12 inches of exterior slabs and/or pavement subgrades.

DRAFT

SUMMARY OF COMPACTION RECOMMENDATIONS	
Area	Compaction Recommendation (ASTM D-1557)
Preparation for areas to receive fill	After preparation in accordance with this report, compact upper 6 inches to a minimum of 90 percent relative compaction.
General fill (native or import)	Compact to a minimum of 90 percent relative compaction.
Structural fill beneath buildings, extending outward to 5' beyond building perimeter	Compact to a minimum of 90 percent relative compaction.
Trenches	Compact to a minimum of 90 percent relative compaction. Compact the top 6 inches below vehicle pavement subgrade to a minimum of 95 percent relative compaction.
Retaining wall backfill	Compact to a minimum of 90 percent relative compaction, but not more than 95 percent.
Pavements, extending outward to 3' beyond edge of pavement	Compact upper 6 inches of subgrade to a minimum of 95 percent relative compaction.
Concrete flatwork and exterior slabs, extending outward to 3' beyond edge of slab	Compact subgrade to a minimum of 90 percent relative compaction. Where subject to vehicle traffic, compact upper 6 inches of subgrade to at least 95 percent relative compaction.
Aggregate Base	Compact aggregate base to at least 95 percent relative compaction.

Draft

Permanent Cut and Fill Slopes

In general, cut and fill slopes should be designed and constructed at slope gradients of 3:1 (horizontal to vertical) or flatter, unless otherwise approved by the geotechnical engineer in specified areas. Where steeper slopes are required, retaining walls should be used. Fill slopes should be constructed by overfilling and cutting the slope to final grade. "Track walking" of a slope to achieve slope compaction is not an acceptable procedure for slope construction. Permanent cut slopes should be observed in the field by the geotechnical engineer to verify that the exposed soil conditions are as anticipated. The geotechnical engineer is not responsible for measuring the angles of these slopes. Denuded slopes should be planted with fast-growing, deep-rooted groundcover to reduce sloughing or erosion. The cut and fill slope inclinations recommended herein address only the stability of the slopes. It should not be inferred that they address the feasibility of landscaping and weed control. Where these are concerns, the slopes should be flattened accordingly.

Wet Weather Grading

Generally, grading is performed more economically during the summer months when the on-site soil is usually dry of optimum moisture content. Delays should be anticipated in site grading performed during the rainy season or early spring due to excessive moisture in on-site soil. Special and relatively expensive construction procedures, including dewatering of excavations and importing granular soil, should be anticipated if grading must be completed during the winter and early spring or if localized areas of soft saturated soil are found during grading in the summer and fall.

Open excavations also tend to be more unstable during wet weather as groundwater seeps towards the exposed cut slope. Severe sloughing and occasional slope failures should be anticipated. The occurrence of these events will require extensive clean up and the installation of slope protection measures, thus delaying projects. The general contractor is responsible for the performance, maintenance and repair of temporary cut slopes.

Foundation Support

Provided remedial grading is performed as recommended herein, the proposed structures can be supported on continuous and isolated spread footings that bottom on select engineered fill.

Spread footings should be at least 12 inches wide and should bottom on select engineered fill at least 12 inches below pad subgrade. Additional embedment or width may be needed to satisfy code and/or structural requirements.

The bottoms of all footing excavations should be thoroughly cleaned out or wetted and compacted using hand-operated tamping equipment prior to placing steel and concrete. This will remove the soil disturbed during footing excavations, or restore their adequate bearing capacity, and reduce post-construction settlements. Footing excavations should not be allowed to dry before placing concrete. If shrinkage cracks appear in soil exposed in the footing excavations, the soil should be thoroughly moistened to close all cracks prior to concrete placement. The

Draft

moisture condition of the foundation excavations should be checked by the geotechnical engineer no more than 24 hours prior to placing concrete.

Bearing Pressures - Footings installed in accordance with these recommendations may be designed using allowable bearing pressures of 2,000, 3,000 and 4,000 pounds per square foot (psf), for dead loads, dead plus code live loads, and total loads (including wind and seismic), respectively.

Lateral Pressures - The portion of spread footing foundations extending into select engineered fill may impose a passive equivalent fluid pressure and a friction factor of 350 pcf and 0.35, respectively, to resist sliding. Passive pressure should be neglected within the upper 6 inches, unless the soil is confined by concrete slabs or pavements.

Retaining Walls

Retaining walls constructed at the site must be designed to resist lateral earth pressures plus additional lateral pressures that may be caused by surcharge loads applied at the ground surface behind the walls. Retaining walls free to rotate (yielding greater than 0.1 percent of the wall height at the top of the backfill) should be designed for active lateral earth pressures. If walls are restrained by rigid elements to prevent rotation, they should be designed for “at rest” lateral earth pressures. In the absence of backdrains, the retaining walls should be designed to resist full hydrostatic pressure.

Retaining walls should be designed to resist the following earth equivalent fluid pressures (triangular distribution):

EARTH EQUIVALENT FLUID PRESSURES		
Loading Condition	**Pressure (pcf)**	**Additional Seismic Pressure (pcf)***
Active - Level Backfill	42	16
Active - Sloping Backfill 3:1 or Flatter	53	40
At Rest - Level Backfill	63	39
Active Full Hydrostatic	83	
At Rest Full Hydrostatic	90	

* If required

These pressures do not consider additional loads resulting from adjacent foundations or other loads. If these additional surcharge loadings are anticipated, we can assist in evaluating their effects. Where retaining wall backfill is subject to vehicular traffic, the walls should be designed to resist an additional surcharge pressure equivalent to two feet of additional backfill.

Draft

Retaining walls will yield slightly during backfilling. Therefore, walls should be backfilled prior to building on, or adjacent to, the walls. Backfill against retaining walls should be compacted to at least 90 and not more than 95 percent relative compaction. Over-compaction or the use of large compaction equipment should be avoided because increased compactive effort can result in lateral pressures higher than those recommended above.

Foundation Support

Retaining walls should be supported on spread footings designed in accordance with the recommendations presented in this report. Retaining wall foundations should be designed by the project civil or structural engineer to resist the lateral forces set forth in this section.

Wall Drainage and Backfill

Retaining walls should be backdrained as shown on Plate 17, Appendix A. The backdrains should consist of 4-inch diameter, rigid perforated pipe embedded in Class 2 permeable material. The pipe should be PVC Schedule 40 or ABS with SDR 35 or better, and the pipe should be sloped to drain to outlets by gravity. The top of the pipe should be at least 8 inches below lowest adjacent grade. The Class 2 permeable material should extend to within 1½ feet of the surface. The upper 1½ feet should be backfilled with compacted soil to exclude surface water. Retaining walls designed to resist full hydrostatic pressure do not need to be backdrained. Expansive soil should not be used for wall backfill. Where expansive soil is present in the excavation made to install the retaining wall, the excavation should be sloped back 1:1 from the back of the footing or grade beam. The ground surface behind retaining walls should be sloped to drain. Where migration of moisture through retaining walls would be detrimental, retaining walls should be waterproofed.

Slab-On-Grade

Provided grading is performed in accordance with the recommendations presented herein slabs-on-grade should be underlain by select engineered fill. Slab-on-grade subgrade should be rolled to produce a dense, uniform surface. The slabs should be underlain with a capillary moisture break consisting of at least 4 inches of clean, free-draining crushed rock or gravel (excluding pea gravel) at least ¼-inch and no larger than ¾-inch in size. Interior slabs subject to vehicular traffic may be underlain by Class 2 aggregate base. The use of Class 2 aggregate base should be reviewed on a case by case basis. Class 2 aggregate base can be used for slab rock under exterior slabs. Interior area slabs should be provided with an underdrain system. The installation of this subdrain system is discussed in the “Geotechnical Drainage” section.

Slabs should be designed by the project civil or structural engineer to support the anticipated loads, reduce cracking and provide protection against the infiltration of moisture vapor. A vapor barrier should be placed under all slabs-on-grade that are likely to receive an impermeable floor finish or be used for any purpose where the passage of water vapor through the floor is undesirable. RGH does not practice in the field of moisture vapor transmission evaluation or mitigation. Therefore, we recommend that a qualified person be consulted to evaluate the general and specific moisture vapor transmission paths and any impact on the proposed

Draft

construction. This person should provide recommendations for mitigation of the potential adverse impact of moisture vapor transmission on various components of the structure as deemed appropriate.

Utility Trenches

The shoring and safety of trench excavations is solely the responsibility of the contractor. Attention is drawn to the State of California Safety Orders dealing with "Excavations and Trenches."

Unless otherwise specified by the City of American Canyon, on-site, inorganic soil may be used as utility trench backfill. Where utility trenches support pavements, slabs and foundations, trench backfill should consist of aggregate baserock. The baserock should comply with the minimum requirements in Caltrans Standard Specifications, Section 26 for Class 2 Aggregate Base. Trench backfill should be moisture-conditioned as necessary, and placed in horizontal layers not exceeding 8 inches in thickness, before compaction. Each layer should be compacted to at least 90 percent relative compaction as determined by ASTM Test Method D-1557. The top 6 inches of trench backfill below vehicle pavement subgrades should be moisture-conditioned as necessary and compacted to at least 95 percent relative compaction. Jetting or ponding of trench backfill to aid in achieving the recommended degree of compaction should not be attempted.

Pavements

Provided the site grading is performed to remediate expansive soil heave, as recommended herein, the uppermost 12-inches of pavement subgrade soil will be either imported select fill with a minimum R-value of 20 or lime stabilized site soil that generally has an R-value of at least 50. Based on those R-values we recommend the pavement sections listed in the tables below be used.

PAVEMENT SECTIONS WITH IMPORTED SELECT FILL SUBGRADE			
TI	ASPHALT CONCRETE (feet)	CLASS 2 AGGREGATE BASE (feet)	IMPORTED SELECT FILL* (feet)
7.0	0.30	1.15	1.0
6.0	0.25	1.05	1.0
5.0	0.20	0.90	1.0

* R-value ≥ 20

DRAFT

PAVEMENT SECTIONS WITH LIME STABILIZED SELECT FILL SUBGRADE			
TI	ASPHALT CONCRETE (feet)	CLASS 2 AGGREGATE BASE (feet)	LIME STABILIZED SELECT FILL* (feet)
7.0	0.35	0.50	1.0
6.0	0.30	0.50	1.0
5.0	0.20	0.50	1.0

* R-value ≥ 50

Pavement thicknesses were computed using Caltrans CalFP v1.5 design software and are based on a pavement life of 20 years. These recommendations are intended to provide support for traffic represented by the indicated Traffic Indices. They are not intended to provide pavement sections for heavy concentrated construction storage or wheel loads such as forklifts, parked truck-trailers and concrete trucks or for post-construction concentrated wheel loads such as self-loading dumpster trucks.

Because of the high expansion potential of the soil an at the site and the difficulty in controlling seasonal moisture variation beneath and adjacent to the pavement, significant cracking may develop in the pavement even if 12-inches of select fill is installed. Increasing the thickness of select fill or installing moisture cutoffs may reduce but not eliminate the potential for cracks to develop. It should be understood that pavements will likely require regular maintenance including crack sealing and the aesthetics may not be desirable.

In areas where heavy construction storage and wheel loads are anticipated, the pavements should be designed to support these loads. Support could be provided by increasing pavement sections or by providing reinforced concrete slabs. Alternatively, paving can be deferred until heavy construction storage and wheel loads are no longer present. Loading areas for self-loading dumpster trucks should be provided with reinforced concrete slabs at least 6 inches thick and reinforced with No. 4 bars at 12-inch centers each way.

Prior to placement of aggregate base, the upper 6 inches of the pavement subgrade soil (excluding lime stabilized soil) should be scarified, uniformly moisture-conditioned to near optimum, and compacted to at least 95 percent relative compaction to form a firm, non-yielding surface. Lime stabilized select fill subgrade soil should be compacted as specified in Section 24 of the Caltrans Standard Specifications.

Aggregate base materials should be spread in thin layers, uniformly moisture-conditioned, and compacted to at least 95 percent relative compaction to form a firm, non-yielding surface. The materials and methods used should conform to the requirements of the City of American Canyon and the current edition of the Caltrans Standard Specifications, except that compaction requirements should be based on ASTM Test Method D-1557. Aggregate used for the base course should comply with the minimum requirements specified in Caltrans Standard Specifications, Section 26 for Class 2 Aggregate Base.

DRAFT

Geotechnical Drainage

Surface

Surface water should be diverted away from slopes, foundations and edges of pavements. Surface drainage gradients should slope away from building foundations in accordance with the requirements of the CBC or local governing agency. Where a gradient flatter than 2 percent for paved areas and 4 percent for unpaved areas is required to satisfy design constraints, area drains should be installed with a spacing no greater than about 20 feet. Roofs should be provided with gutters and the downspouts should be connected to closed (glued Schedule 40 PVC or ABS with SDR of 35 or better) conduits discharging well away from foundations, onto paved areas or erosion resistant natural drainages or into the site's surface drainage system. Roof downspouts and surface drains must be maintained entirely separate from the slab underdrains recommended hereinafter.

Water seepage or the spread of extensive root systems into the soil subgrade of footings, slabs or pavements could cause differential movements and consequent distress in these structural elements. Landscaping should be planned with consideration for these potential problems.

Slab Underdrains

Where interior slab subgrades are less than 6 inches above adjacent exterior grade and where migration of moisture through the slab would be detrimental, slab underdrains should be installed to dispose of surface and/or groundwater that may seep and collect in the slab rock. Slab underdrains should consist of 6-inch wide trenches that extend at least 6 inches below the bottom of the slab rock and slope to drain by gravity. The slab underdrain trenches should be spaced no further than 15 feet, both ways. Additional drain trenches should be installed, as necessary, to drain all isolated under slab areas. Four-inch diameter perforated pipe (SDR 35 or better) sloped to drain to outlets by gravity should be placed in the bottom of the trenches. Slab underdrain trenches should be backfilled to subgrade level with clean, free draining slab rock. An illustration of this system is shown on Plate 18. If slab underdrains are not used, it should be anticipated that water will enter the slab rock, permeate through the concrete slab and ruin floor coverings.

Maintenance

Periodic land maintenance will be required. Surface and subsurface drainage facilities should be checked frequently, and cleaned and maintained as necessary or at least annually. A dense growth of deep-rooted ground cover must be maintained on all slopes to reduce sloughing and erosion. Sloughing and erosion that occurs must be repaired promptly before it can enlarge.

DRAFT

Supplemental Services

Pre-Bid Meeting

It has been our experience that contractors bidding on the project often contact us to discuss the geotechnical aspects. Informal contacts between RGH and an individual contractor could result in incomplete or misinterpreted information being provided to the contractor. Therefore, we recommend a pre-bid meeting be held to answer any questions about the report prior to submittal of bids. If this is not possible, questions or clarifications regarding this report should be directed to the project owner or their designated representative. After consultation with RGH, the project owner or their representative should provide clarifications or additional information to all contractors bidding the job.

Plan and Specifications Review

Coordination between the design team and the geotechnical engineer is recommended to assure that the design is compatible with the soil, geologic and groundwater conditions encountered during our study. RGH Consultants (RGH) recommends that we be retained to review the project plans and specifications to determine if they are consistent with our recommendations. In the event we are not retained to perform this recommended review, we will assume no responsibility for misinterpretation of our recommendations.

Construction Observation and Testing

Prior to construction, a meeting should be held at the site that includes, but is not limited to, the owner or owner's representative, the general contractor, the grading contractor, the foundation contractor, the underground contractor, any specialty contractors, the project civil engineer, other members of the project design team and RGH. This meeting should serve as a time to discuss and answer questions regarding the recommendations presented herein and to establish the coordination procedure between the contractors and RGH.

In addition, we should be retained to monitor all soil related work during construction, including:

- Site stripping, over-excavation, grading, and compaction of near surface soil;
- Placement of all engineered fill and trench backfill with verification field and laboratory testing;
- Observation of all foundation excavations; and
- Observation of foundation and subdrain installations.

If, during construction, we observe subsurface conditions different from those encountered during the explorations, we should be allowed to amend our recommendations accordingly. If different conditions are observed by others, or appear to be present beneath excavations, RGH should be advised at once so that these conditions may be evaluated and our recommendations reviewed and updated, if warranted. The validity of recommendations made in this report is contingent upon our being notified and retained to review the changed conditions.

DRAFT

If more than 18 months have elapsed between the submission of this report and the start of work at the site, or if conditions have changed because of natural causes or construction operations at, or adjacent to, the site, the recommendations made in this report may no longer be valid or appropriate. In such case, we recommend that we be retained to review this report and verify the applicability of the conclusions and recommendations or modify the same considering the time lapsed or changed conditions. The validity of recommendations made in this report is contingent upon such review.

These supplemental services are performed on an as-requested basis and are in addition to this geotechnical study. We cannot accept responsibility for items that we are not notified to observe or for changed conditions we are not allowed to review.

LIMITATIONS

This report has been prepared by RGH for the exclusive use of the property owner and their consultants as an aid in the design and construction of the proposed improvements described in this report.

The validity of the recommendations contained in this report depends upon an adequate testing and monitoring program during the construction phase. Unless the construction monitoring and testing program is provided by our firm, we will not be held responsible for compliance with design recommendations presented in this report and other addendum submitted as part of this report.

Our services consist of professional opinions and conclusions developed in accordance with generally accepted geotechnical engineering principles and practices. We provide no warranty, either expressed or implied. Our conclusions and recommendations are based on the information provided to us regarding the proposed construction, the results of our field exploration, laboratory testing program, and professional judgment. Verification of our conclusions and recommendations is subject to our review of the project plans and specifications, and our observation of construction.

The borings represent the subsurface conditions at the locations and on the date indicated. It is not warranted that they are representative of such conditions elsewhere or at other times. Site conditions and cultural features described in the text of this report are those existing at the time of our field exploration and may not necessarily be the same or comparable at other times.

The scope of our services did not include an environmental assessment or a study of the presence or absence of toxic mold and/or hazardous, toxic or corrosive materials in the soil, surface water, groundwater or air (on, below or around this site), nor did it include an evaluation or study for the presence or absence of wetlands. These studies should be conducted under separate cover, scope and fee and should be provided by a qualified expert in those fields.

COLUMN DESCRIPTIONS

1 Elevation (feet): Elevation (MSL, feet).
2 Depth (feet): Depth in feet below the ground surface.
3 Sample Type: Type of soil sample collected at the depth interval shown.
4 Sampling Resistance, blows/ft: Number of blows to advance driven sampler one foot (or distance shown) beyond seating interval using the hammer identified on the boring log.
5 Graphic Log: Graphic depiction of the subsurface material encountered.
6 MATERIAL DESCRIPTION: Description of material encountered. May include consistency, moisture, color, and other descriptive text.
7 Dry Density (pcf): Dry density, in pcf.
8 Water Content (%): Water content, percent.
9 % <#200 Sieve: % <#200 Sieve
10 PI, %: Plasticity Index, expressed as a water content.
11 LL, %: Liquid Limit, expressed as a water content.
12 Expansion Index (EI): Expansion Index (EI)
13 UC, ksf: Unconfined compressive strength, in kips per square foot.
14 REMARKS AND OTHER TESTS: Comments and observations regarding drilling or sampling made by driller or field personnel.

FIELD AND LABORATORY TEST ABBREVIATIONS

CHEM: Chemical tests to assess corrosivity
COMP: Compaction test
CONS: One-dimensional consolidation test
LL: Liquid Limit, percent
PI: Plasticity Index, percent
SA: Sieve analysis (percent passing No. 200 Sieve)
UC: Unconfined compressive strength test, Qu, in ksf
WA: Wash sieve (percent passing No. 200 Sieve)

MATERIAL GRAPHIC SYMBOLS

Fat CLAY, CLAY w/SAND, SANDY CLAY (CH)

TYPICAL SAMPLER GRAPHIC SYMBOLS

Bulk Sample
2.5-inch-ID Modified California w/ brass liners
2-inch-OD unlined split spoon (SPT)

OTHER GRAPHIC SYMBOLS

Water level (at time of drilling, ATD)
Water level (after waiting)
Minor change in material properties within a stratum
Inferred/gradational contact between strata
Queried contact between strata

GENERAL NOTES

1: Soil classifications are based on the Unified Soil Classification System. Descriptions and stratum lines are interpretive, and actual lithologic changes may be gradual. Field descriptions may have been modified to reflect results of lab tests.
2: Descriptions on these logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.

COMMENTS

Resistivities are only 900 to 300 ohm-cm, i.e., poor to very poor; soil reactions (i.e., pHs) are in the 6-7 range, i.e., very mildly acidic; most sulfates are elevated (@ >200 ppm), and chlorides are very midly to moderatedly elevated (@ >100 & > 500 ppm); soils are only very mildly reduced (@ 300-400 mV) [see the table below on right for assigned point values and ranges]. The Cal-Trans (CT) times to perforation of galvanized steel and full depth pitting times (following Uhlig) for unprotected steel are determined based on pertinent parameters [see table at left below]. Sulfate levels may have some adverse impact on concrete, cement, mortar or grout to varying degrees, except in ACAL3. Chlorides are calculated to have the following adverse impact on rebar failure times: ACAL1 @ <40 yrs; ACAL2 @ <45 yrs; ACAL3 @ <50 yrs; and ACAL4 @ ~48 yrs. Lime or mild cement (@ 1%-2%) treatment could be of benefit in raising soil pH to the 7.5-8.5 range would increase times to perf and 2 mm depth times [see table below on left]. While increases in some cases are significant, they are not really substantial enough, and in some cases there can be actual decreases due to very mild acidity passivation. To increase metals longevity would require steel upgrading and/or other actions. For example, cathodic protection along with coating or wrapping steel assets is one potential solution. Other options include increased and/or specialized engineering fill, use of a polymer coating, or use of plastic, fiberglass, or concrete assets. Concrete upgrading (ASTM Type II) and rebar upgrading may be prudent in some cases due to ↑SO_4 & ↑Cl.

Notes:

1. Drain rock should meet the requirements for Class 2 Permeable Material, Section 68, State of California "Caltrans" Standard Specification, latest edition. Drain rock should be placed to approximately three-quarters the height of the retaining wall.

2. Pipe should conform to the requirements of Section 68 of State of California "Caltrans" Standards, perforations placed down, sloped at 1% for gravity flow to outlet or sump with automatic pump. The pipe invert should be located at least 8 inches below the lowest adjacent finished surface.

3. During construction the contractor should use appropriate methods such as temporary bracing and/or light compaction equipment to avoid overstressing the walls. Non-expansive soils to be used as backfill.

4. Slope excavation back at a 1:1 gradient from the back of footing where expansive materials are exposed.

Not to Scale

Subject: **PHASE I ENVIRONMENTAL SITE ASSESSMENT**
Vacant Land
Highway 29 & Crawford Way, American Canyon, California 94503
AEI Project No. 370198

Dear Joseph Wang:

AEI Consultants is pleased to provide the Phase I Environmental Site Assessment (Phase I ESA) report of the above referenced address. This assessment was authorized and performed in accordance with the scope of services outlined in the Service Order, the scope and limitations of ASTM Standard Practice E1527-13, and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we may assist you in any other matter, please contact me at (925) 746-6000 or ggriffin@aeiconsultants.com.

Sincerely,

Greg Griffin
AEI Consultants

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by Gold Key Properties, LLC to conduct a Phase I ESA in conformance with the Service Order and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at Highway 29 & Crawford Way, American Canyon, Napa County, California. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

PROPERTY DESCRIPTION

PROPERTY INFORMATION	
Property Name	Vacant Land
Street Address(es)	Highway 29 & Crawford Way
City	American Canyon
State	California
Location	Southwest of the intersection of Highway 29 and Crawford Way
Vicinity Characteristics	Commercial and Residential
Approximate Site Acreage/Source	4.32/Assessor's Office
Property Type	Vacant Land
Subject Property Use(s)	Vacant Land
Assessor Parcel Number(s)	058-302-001, 058-290-012
SITE AND BUILDING INFORMATION	
Number of Buildings	None identified
Year(s) of Construction	None identified
Number of Floors/Stories	None identified

Sewage Disposal Provider or Treatment System	None identified
REGULATORY INFORMATION	
Regulatory Database Listings	None identified
Institutional Controls	None identified
Engineering Controls	None identified
Environmental Liens	None identified

Based on a review of historical sources, the subject property was identified to consist of undeveloped land from circa 1916 until it became agricultural by 1948. The subject property remained agricultural until at least 1987, and has been vacant since it went fallow.

The immediately surrounding properties consist of the following:

Direction from Site	Tenant/Use (Address)	Regulatory Database Listing(s)
Northwest	Crawford Way followed by American Canyon Library (300 Crawford Way) and US Post Office (310 Crawford Way)	None identified
North	Crawford Way followed by two multi-tenant retail buildings (3417-3419 Broadway Street)	None identified
East	Broadway Street (Highway 29) followed by residences and storage building (3302-3330 Broadway Street)	None identified
South	Open Door Christian Church (3353 Broadway Street)	None identified
West	Residences (27 James Road, 325 Crawford Way)	None identified

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

Based on topographic map interpretation and data from the *Groundwater Monitoring and Status Report - Second Quarter 2008* (3438 Broadway), the direction of groundwater flow beneath the subject property is inferred to be to the west-southwest. Based on groundwater monitoring data for a nearby site at 3438 Broadway (located approximately 0.114 mile northeast of the subject property) obtained from the GeoTracker website, groundwater is presumed to be present at an estimated depth of 4 to 12 feet bgs.

FINDINGS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

- AEI did not identify evidence of RECs during the course of this assessment.

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- AEI did not identify evidence of CRECs during the course of this assessment.

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred

in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- AEI did not identify evidence of HRECs during the course of this assessment.

Other Environmental Considerations warrant discussion, but do not qualify as RECs as defined by the ASTM Standard Practice E1527-13. These include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

- Based on a review of aerial photographs, the subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used on site, and that the subject property has been impacted by the use of such agricultural chemicals. In general, historical agricultural use is not the subject of environmental enforcement actions by regulatory agencies, and therefore, could be considered a de minimis condition. However, AEI understands that the subject property is slated for redevelopment. Consequently, it would be prudent for the owner of the subject property to determine whether sampling relating to the former agricultural use of the subject property is required by the local planning department or other applicable oversight agency prior to the commencement of redevelopment activities.

CONCLUSIONS, OPINIONS, AND RECOMMENDATIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) of Highway 29 & Crawford Way, American Canyon, Napa County, California, the *subject property*. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

AEI did not identify evidence of RECs or CRECs in connection with the subject property during the course of this assessment. AEI recommends no further investigation for the subject property at this time.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I ESA performed in conformance with the Service Order and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at Highway 29 & Crawford Way, American Canyon, Napa County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal, and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

1.2 ADDITIONAL SERVICES

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, current subject property use, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 LIMITING CONDITIONS/DEVIATIONS

The performance of this Phase I ESA was limited by the following:

- Since the subject property has never been developed, no physical address has been provided to or identified by AEI during the course of this assessment. A physical address is often utilized in the historical research process in order to identify any address-specific information, such as regulatory and enforcement actions. However, based on the reliability of other data sources, the lack of a physical address is not expected to significantly alter the findings of this assessment.
- On March 27, 2017, the American Canyon Building Department was contacted for information on the subject property in order to identify historical tenants, property use and/or hazardous materials handling. Due to the time frame of this assessment, records at the American Canyon Building Department were not available for review. However, based on the quality of information obtained from other sources, this limitation is not expected to significantly alter the Findings of this assessment.
- AEI requested an interview with the subject property owner; however, the subject property owner has not responded as of this report date. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall Findings of this assessment.
- The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

1.6 DATA GAPS AND DATA FAILURE

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 DATA FAILURE

AEI did not identify evidence of data failure during the course of this assessment.

1.6.2 DATA GAPS

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 RELIANCE

All reports, both verbal and written, are for the benefit of Gold Key Properties, LLC. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors, or assigns. Reliance is provided in accordance with AEI's Service Order and Standard Terms and Conditions executed by Gold Key Properties, LLC on March 14, 2017. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.2 SITE AND VICINITY CHARACTERISTICS

The immediately surrounding properties consist of the following:

Direction from Site	Tenant/Use (Address)	Regulatory Database Listing(s)
Northwest	Crawford Way followed by American Canyon Library (300 Crawford Way) and US Post Office (310 Crawford Way)	None identified
North	Crawford Way followed by two multi-tenant retail buildings (3417-3419 Broadway Street)	None identified
East	Broadway Street (Highway 29) followed by residences and storage building (3302-3330 Broadway Street)	None identified
South	Open Door Christian Church (3353 Broadway Street)	None identified
West	Residences (27 James Road, 325 Crawford Way)	None identified

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

2.3 PHYSICAL SETTING

Geology: According to information obtained from the USGS, the area surrounding the subject property is underlain by alluvial deposits of the Holocene era. Based on a review of the USDA Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as the Clear Lake clay series. Soils from this series are characterized as clay.

USGS Topographic Map:	Cuttings Wharf, California Quadrangle
Nearest surface water to subject property:	American Canyon Creek/0.299 mile southeast
Gradient Direction/Source:	West-southwest/*Groundwater Monitoring and Status Report - Second Quarter 2008* (3438 Broadway)
Estimated Depth to Groundwater/Source:	4 to 12 feet bgs/*Groundwater Monitoring and Status Report - Second Quarter 2008* (3438 Broadway)

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

3.1 HISTORICAL SUMMARY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, and agency records, is as follows:

Date Range	Subject Property Description/Use	Source(s)
1916	Undeveloped	Topographic map
1948-present	Agricultural or vacant fallow land	Aerial photographs, Agency records, City directories, Site observation

Based on a review of historical sources, the subject property was identified to consist of undeveloped land from circa 1916 until it became agricultural by 1948. The subject property remained agricultural until at least 1987, and has been vacant since it went fallow.

No historical addresses were identified to be associated with the subject property.

Based on a review of aerial photographs , the subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used on site, and that the subject property has been impacted by the use of such agricultural chemicals. In general, historical agricultural use is not the subject of environmental enforcement actions by regulatory agencies, and therefore, could be considered a de minimis condition. However, AEI understands that the subject property is slated for redevelopment. Consequently, it would be prudent for the owner of the subject property to determine whether sampling relating to the former agricultural use of the subject property is required by the local planning department or other applicable oversight agency prior to the commencement of redevelopment activities.

3.2 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the www.historicaerials.com collection of aerial photographs. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjacent Site Descriptions
1948	Appears to be agricultural land	NORTHWEST: Agricultural land NORTH: Agricultural land EAST: Roadway and railroad tracks followed by what appears to be a farm and/or residential buildings SOUTH: Agricultural land WEST: Agricultural land

Year(s)	Subject Property Description	Adjacent Site Descriptions
1958 1968	Agricultural land with a dirt road intersecting	NORTHWEST: Road followed by agricultural land NORTH: Road followed by agricultural EAST: No significant changes noted SOUTH: Developed with a structure with agricultural land WEST: No significant changes
1987, 1993, 2002	Agricultural or vacant land	NORTHWEST: Crawford Way followed by a commercial property NORTH: Crawford Way followed by agricultural or vacant land EAST: No significant changes SOUTH: Current commercial buildings WEST: Current residential buildings
2005, 2010, 2012	No significant changes noted	NORTHWEST: Crawford Way followed by the current commercial buildings NORTH: Crawford Way followed by the current commercial buildings EAST: No significant changes noted SOUTH: No significant changes noted WEST: No significant changes noted

**Aerials were not included in the appendices due to copyright considerations.*

Environmental concerns associated with historic agricultural use are discussed in Section 3.1.

3.3 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the Seattle Public Library collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.4 CITY DIRECTORIES

Since the subject property has never been developed, no physical address has been provided to or identified by AEI during the course of this assessment. Based on the lack of physical address, a search of city directories for the subject property was not feasible.

3.5 HISTORICAL TOPOGRAPHIC MAPS

A search of historical topographic maps was conducted for the subject property utilizing www.historicaerials.com. Topographic maps were reviewed for the following years:

Year(s)	Subject Property Description	Adjacent Site Descriptions
1916, 1927, 1942, 1947	No features depicted	NORTHWEST: No features depicted NORTH: No features depicted EAST: Railroad tracks and roadway followed by one structure SOUTH: No features depicted WEST: No features depicted
1951, 1956	No significant changes noted	NORTHWEST: No significant changes noted NORTH: No significant changes noted EAST: Roadway followed by several buildings SOUTH: No significant changes noted WEST: No significant changes noted
1969	No significant changes noted	NORTHWEST: Roadway followed by an area with no features depicted NORTH: Roadway followed by an area with no features depicted EAST: No significant changes noted SOUTH: Commercial building depicted WEST: Developed land depicted
1978	No significant changes noted	NORTHWEST: No significant changes noted NORTH: No significant changes noted EAST: Roadway followed by several structures depicted SOUTH: No significant changes noted WEST: No significant changes noted

**Historical topographic maps were not included in the appendices due to copyright considerations.*

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the historic topographic map review.

3.6 CHAIN OF TITLE

In accordance with our approved scope of services, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

On March 22, 2017, AEI accessed the Napa County Environmental Health Division's website for information on the subject property. Files at this agency may contain information regarding hazardous substance storage and use, underground storage tanks, unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area, wells and/or septic systems.

No records were file for the subject property with the Napa County Environmental Health Division.

4.2 FIRE DEPARTMENT

On March 22, 2017, AEI contacted the American Canyon Fire Prevention via telephone for information on the subject property to identify any evidence of previous or current hazardous substance usage, and/or for any historical information available for the subject property.

AEI spoke with Mr. Gregory Fortune, who indicated that there was no information indicating current or prior use or storage of hazardous substances on file for the subject property with the American Canyon Fire Prevention.

4.3 BUILDING DEPARTMENT

On March 27, 2017, the American Canyon Building Department was contacted for information on the subject property in order to identify historical tenants, property use and/or hazardous materials handling. Due to the time frame of this assessment, records at the American Canyon Building Department were not available for review. However, based on the quality of information obtained from other sources, this limitation is not expected to significantly alter the Findings of this assessment.

4.4 PLANNING DEPARTMENT

On March 22, 2017, AEI contacted the American Canyon Planning Division via telephone for information on the subject property in order to identify AULs associated with the subject property.

Evidence indicating the existence of AULs was not on file for the subject property with the American Canyon Planning Division.

4.5 COUNTY ASSESSOR OFFICE

On March 22, 2017, AEI contacted the Napa County assessor's office via telephone for information on the subject property in order to determine the earliest recorded date of development and use.

According to the Napa County assessor's office, no records of former structures exist for the subject property.

4.6 OIL AND GAS WELLS/PIPELINES

On March 22, 2017, AEI reviewed the Department of Oil, Gas, and Geothermal Resources (DOGGR) maps and the National Pipeline Mapping System (NPMS) Public Map Viewer concerning the subject property and nearby properties. The maps contain information regarding oil and gas development.

According to the Department of Oil, Gas, and Geothermal Resources map, oil or gas wells are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

According to the NPMS Public Map Viewer, pipelines are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

4.7 OTHER AGENCIES SEARCHED

On March 22, 2017, AEI accessed the **California State Water Resources Control Board (SWRCB) GeoTracker database**, a data management system for managing sites that impact groundwater, especially those requiring groundwater cleanup [USTs, Department of Defense, Site Cleanup Program] as well as permitted facilities such as operating USTs and land disposal sites.

No information indicating any release of hazardous materials from the subject property was found on the GeoTracker website.

Records reviewed for the nearby site at 3438 Highway 29 are further discussed in Section 5.1.

On March 22, 2017, AEI accessed the **California Department of Toxic Substances Control (DTSC) EnviroStor database**, which contains information of investigation, cleanup, permitting, and/or corrective actions that are planned, being conducted or have been completed under DTSC oversight.

No information indicating any release of hazardous materials from the subject property was found on the EnviroStor website.

On March 22, 2017, AEI accessed the **California Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS)** online database for information pertaining to hazardous waste disposal associated with the subject property. The HWTS generates reports on hazardous waste shipments for generators, transporters, and treatment, storage or disposal facilities (TSDFs).

No information indicating the generation of hazardous wastes was on file for the subject property with the DTSC HWTS.

4.8 State Environmental Superliens and Property Transfer Laws

In accordance with our approved scope of services, AEI did not assess whether the subject property is subject to any state environmental superliens and/or property transfer laws.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted Environmental Data Resources Inc. (EDR) to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report is included in Appendix C of this report.

The subject property was not identified in the databases reviewed.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes or No)
NPL	1	No	0	
DELISTED NPL	0.5	No	0	
SEMS (formerly CERCLIS)	0.5	No	0	
SEMS-ARCHIVE (formerly CERCLIS NFRAP)	0.5	No	0	
RCRA CORRACTS	1	No	0	
RCRA-TSDF	0.5	No	0	
RCRA LQG, SQG, CESQGs, VGN, NLR	SP/ADJ	No	0	
US ENG CONTROLS	SP	No	0	
US INST CONTROLS	SP	No	0	
ERNS	SP	No	0	
STATE/TRIBAL HWS	1	No	2	No; based on regulatory status, relative distance and/or inferred groundwater gradient
STATE/TRIBAL SWLF	0.5	No	0	

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes or No)
STATE/TRIBAL REGISTERED STORAGE TANKS	SP/ADJ	No	0	
STATE/TRIBAL LUST	0.5	No	7	No; one site is discussed below. Others are not a concern based on distance, gradient, and/or regulatory status.
STATE/TRIBAL EC and IC	SP	No	0	
STATE/TRIBAL VCP	0.5	No	0	
STATE/TRIBAL BROWNFIELD	0.5	No	0	
ORPHAN	N/A	No	3	No; none of the identified orphan sites are located in the immediate vicinity (500-feet) of the subject property, and/or based upon the distance and relative gradient, the sites are not expected to represent a significant environmental concern.
ADDITIONAL ENVIRONMENTAL RECORD SOURCES	SP/ADJ	No	0	

Facility Name: BEACON STATION #710, BEACON
Database(s): LUST, HIST CORTESE, UST, EDR Hist Auto Address: 3438 Napa Vallejo Highway (Highway 29) Distance: 0.102 mile Direction: North-northeast (hydrologically up-gradient)
Comments: According to the listings, this site was identified to have leaking underground storage tanks (USTs). The leak was discovered in May 1989 when UST were removed from the site. The lead agency involved was the Napa County Environmental Management. The site received case closure in November 1997. The site was reopened in March 2003. From 2003 to 2008, remediation activities were performed on the site. By 2008, the primary source of the gasoline-impacted soil and groundwater was removed, the site was adequately characterized, and the plume was no longer migrating. This site received case closure in April 2009. Based on the distance from the subject property and regulatory status, this site is not expected to represent a significant environmental concern at this time.

5.2 VAPOR MIGRATION

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation, to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

Based on a review of available resources as documented in this report, AEI did not identify significant on-site concerns and/or regulated listings from nearby sites which suggest that a vapor-phase migration concern currently exists at the subject property.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 INTERVIEW WITH OWNER

AEI requested an interview with the subject property owner; however, the subject property owner has not responded as of this report date. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall Findings of this assessment.

6.1.2 INTERVIEW WITH KEY SITE MANAGER

No key site manager was identified.

6.1.3 PAST OWNERS, OPERATORS, AND OCCUPANTS

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.4 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

6.2 USER PROVIDED INFORMATION

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

6.3 PREVIOUS REPORTS AND OTHER PROVIDED DOCUMENTATION

No prior reports or other relevant documentation in association with the subject property was made available to AEI during the course of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	March 24, 2017
AEI Site Assessor(s)	Jordan Vida
Property Escort(s)/Relationship(s) to Property	None identified
Units/Areas Observed	All areas of the subject property
Area(s) not accessed and reason(s)	None identified
Weather	Sunny

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
	✔	Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use
	✔	Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)
	✔	Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use
	✔	Unidentified Substance Containers
	✔	Electrical or Mechanical Equipment Likely to Contain Fluids
	✔	Interior Stains or Corrosion
	✔	Strong, Pungent, or Noxious Odors
	✔	Pools of Liquid
	✔	Drains, Sumps, and Clarifiers
	✔	Pits, Ponds, and Lagoons
	✔	Stained Soil or Pavement
	✔	Stressed Vegetation
	✔	Solid Waste Disposal or Evidence of Fill Materials
	✔	Waste Water Discharges
	✔	Wells
	✔	Septic Systems
	✔	Biomedical Wastes
	✔	Other

The subject property is currently vacant land. No on-site operations were identified.

7.2 ADJACENT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
	✔	Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use
	✔	Aboveground/Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

Yes	No	Observation
	✔	Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use
	✔	Unidentified Substance Containers
✔		Electrical or Mechanical Equipment Likely to Contain Fluids
	✔	Strong, Pungent, or Noxious Odors
	✔	Pools of Liquid
✔		Drains, Sumps, and Clarifiers
	✔	Pits, Ponds, and Lagoons
	✔	Stained Soil or Pavement
	✔	Stressed Vegetation
	✔	Solid Waste Disposal or Evidence of Fill Materials
	✔	Waste Water Discharges
	✔	Wells
	✔	Septic Systems
	✔	Other

ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing". Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Two pole-mounted and/or one subsurface transformers were observed on the adjacent sites during the site reconnaissance. No spills, staining, or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Emergency Generator

The adjacent property to the north is equipped with an emergency generator. No evidence of leaks or spills was observed at the base of the generator. Based on the good condition of the equipment, the presence of the emergency generator and associated diesel fuel is not expected to represent a significant environmental concern.

DRAINS, SUMPS, AND CLARIFIERS

One storm drain was observed in the landscaped of the adjacent property. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drain. Based on

the use of the drain solely for storm water runoff, the presence of the drain is not expected to represent a significant environmental concern.

8.0 OTHER ENVIRONMENTAL CONSIDERATIONS

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

The subject property is currently vacant land or lacks structures. Consequently, no building components containing suspect asbestos containing materials were identified during the site inspection.

8.2 LEAD-BASED PAINT

The subject property is currently vacant land or lacks structures. Consequently, AEI did not observe building components likely to contain suspect LBP during the site reconnaissance.

8.3 RADON

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/L. It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the California Department of Health Services Radon Database, 11 tests were conducted for radon levels in the subject property zip code (94503) in 2010. All of these tests indicated that radon levels were below the action level of 4.0 pCi/L set forth by the US EPA. Therefore, radon is not expected to represent a significant environmental concern.

8.4 DRINKING WATER SOURCES AND LEAD IN DRINKING WATER

The subject property is currently vacant land or lacks structures. Consequently, lead in drinking water was not addressed as part of this assessment.

8.5 MOLD/INDOOR AIR QUALITY ISSUES

The subject property is currently vacant land or lacks structures. Consequently, mold was not addressed as part of this assessment.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
WALGREENS #11365	210 AMERICAN CANYON	SE 1/8 - 1/4 (0.172 mi.)	7	16

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

SAFEWAY STORE #1883	***103 AMERICAN CANYON***	***SSW 1/8 - 1/4 (0.130 mi.)***	***B5***	***13***

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/31/2016 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 7 LUST sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
NORTHERN ABATEMENT C	***3473 BROADWAY***	***N 1/8 - 1/4 (0.200 mi.)***	***D11***	***24***

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 2 HIST CORTESE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk

Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Type: LUST Cleanup Site
Status: Open - Site Assessment
Status Date: 01/27/2016
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Case Worker: MPB
Local Agency: Not reported
RB Case Number: 28-0356
LOC Case Number: Not reported
File Location: Not reported
Potential Media Affect: Indoor Air, Other Groundwater (uses other than drinking water), Soil Vapor, Under Investigation
Potential Contaminants of Concern: Benzene, Diesel, Ethylbenzene, Gasoline, Naphthalene, Toluene, Waste Oil / Motor / Hydraulic / Lubricating, Xylene
Site History: The Site is a commercial 1.8 acre sized parcel occupied by a single-story structure operating as a casino and small office. The remainder of the property is asphalt-covered parking, landscaping, and several other small structures. To the west, Highway 29 borders the Site, with a railroad to the east, hotel on the north, and an active gas station (ARCO, in GeoTracker, closed case # 28-0281) to the south, which occupies the corner lot. During a Dec 2012 American Canyon Public Works Department repair on a sewer main, three (3) former underground storage tanks (UST) were discovered. The USTs appeared to have weathered gasoline. The tanks remain in situ, while an unauthorized release (leak) was filed in 2015. No remedial activity has been documented.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/05/2016
Date Data Arrived at EDR: 01/05/2017

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/05/2016

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Environmental Data

Alquist Priolo Faults:	Alquist Priolo faults found
Archaeology:	Potential Archaeological sites may occur in this general area, please contact the Planning, Building, & Environmental Services Dept. for details*
California Planar Coordinate:	DF269
CalVeg:	No CalVeg data found
CalWater Watershed: Hydrologic Region (HR) Hydrologic Unit (HU) Hydrologic Area (HA) Hydrologic Sub Area (HSA) Super Planning Watershed (SPW) Planning Watershed (PW)	HR: San Francisco Bay HU: San Pablo HA: Napa River HSA: Napa River SPW: Lower Napa River PW: Mouth of Napa River
Faults:	No Faults found
FEMA Flood Zone:	Parcel not in FEMA Flood Zone
Fire Hazard Severity:	No Fire Hazard Severity rating found

Parcel Report for { 058302001000 }

Developed by Napa County GIS
GISStaff@CountyOfNapa.org

GW Ordinance:	Parcel not in a designated Groundwater Deficient Area (actual groundwater conditions may vary)
Landslides:	Landslides found
Local Drainage:	Rancho del Mar Creek
Soil Type:	Clear Lake clay, drained
Special Species:	No Special Species found
Spotted Owls:	No Spotted Owls found

HazMat Releases - Local Oversight Program (LOP) (within 1500 ft):
AMERICAN CANYON VALLEJO GAS DBA
Cal Trans
MIKE'S MINI MART & GAS STATION

HazMat Releases - Non-Local Oversight Program (Non-LOP) (within 1500 ft):
Canyon Market
P.G.& E. Transformer

Agricultural Use USTs (within 1500 ft):
No Agricultureal Use USTs found

Location of archaeological sites, spotted owls, and other sensitive resources are generalized to protect their exact locations. For this reason, there is no guarantee they are located within or outside of the subject parcel. Please contact PBES to learn more.

APPENDIX F

QUALIFICATIONS

Jordan Vida – Project Manager

BS - Environmental Engineering, University of California, Merced
Engineer in Training (No. EIT 152202) ☐California
OSHA 40-hour HAZWOPER

Mr. Vida has worked in the environmental service industry since 2014 and has experience in due diligence and site mitigation. Mr. Vida provides project management to ensure ASTM compliance and satisfaction of client requirements for Environmental Due Diligence.

Project experience Due Diligence include:

- Phase I Environmental Site Assessments (PHI ESA)
- Environmental Transaction Screens (ETS)
- Regulatory Database Review
- Site Reconnaissance
- Historical Records Review
- Short-Term and Long-Term Radon Sampling

In addition, Mr. Vida provides project management for Site Mitigation.

Project experience in Site Mitigation include:

- Weekly and Monthly System Operation and Maintenance (O&M) of Various Remediation Sites
- Sub-Slab and Soil Vapor Installation and Sampling
- Soil Sampling
- Groundwater Sampling
- Computer Assisted Drafting (CAD)

Shannon Lefebvre – National Client Manager

BS Earth Science, Western Michigan University

Ms. Lefebvre has over 20 years of experience in the environmental services industry, primarily as a project manager and senior technical reviewer working directly with clients to fulfill their environmental needs. Ms. Lefebvre has been responsible for management of small local clients as well as large national and regional accounts.

Project experience for Ms. Lefebvre includes:

- Senior Technical Review of thousands of Phase I ESA reports on multiple property types and sizes that were done for National and regional banks, Life Insurance Companies, Equity Investors as well as Freddie Mac, Fannie Mae, SBA and USDA scopes of work.

- Phase I Environmental Site Assessments – Conducted over 1700 ESA projects including debt and equity propject. Properties range from large acreage raw land to residential, agricultural, retail, commercial and industrial properties.
- Phase II Environmental Site Assessments – Responsible for planning and coordinating all phases of subsurface soil and groundwaterinvestigation at former landfills, agricultural operations, underground storage tank (UST) sites, dry cleaners, and industrial facilities; interpretation of analytical results and technical review of peer reports.
- National Environmental Policy Act (NEPA) Compliance – Created program for private company to conduct all aspects of NEPA compliance for telecommunication towers including tribal notification, review of archaeology reports and endangered species reports, State Historic Preservation Office (SHPO) submittals, and windshield surveys), for preparation of Environmental Assessments/Finding of No Significant Impact (FONSI), and Environmental Impact Statements (EIS).
- Stormwater Pollution Prevention Plans (SWPPP)– Created and conducted oversight of construction SWPPS and preparation of SWPPPs for Arizona Department of Transportation (ADOT) statewide maintenance facilities as well as annual SWPPP inspections for City of Phoenix Aviation Department and ADOT.
- Indoor Air Quality - Responsible for the management and planning of assessment and remediation oversight regarding water intrusion and fungal growth issues, including instituting assessment criteria and remediation strategies for apartment complexes, dialysis facilities, mobile office units, retail centers, and banking workplaces throughout the U.S.
- Asbestos – Responsible for conducting surveys, and managing abatement projects throughout the U.S. including senior technical review of project reports for renovation and/or demolition of multi-family complexes, banking centers, dialysis facilities, mobile office units and retail facilities.

American Canyon, CA 94503

RE: American Canyon 6th Cycle Housing Element YD-03152022-04

Dear Ms. Hall:

Thank you for the consultation meeting on, August 08, 2022, regarding the proposed American Canyon 6th Cycle Housing Element. We appreciate you taking the time to discuss the project.

Based on the information provided during our consultation meeting, the Tribe has concerns that the project could impact known cultural resources. Therefore, we request that you incorporate Yocha Dehe Wintun Nation's Treatment Protocol into the mitigation measures for this project. Please submit the updated mitigation measures to the Cultural Resources Department once completed. We respectively decline any comment on the project at this time.

Should you have any questions, please feel free to contact:

CRD Administrative Staff
Yocha Dehe Wintun Nation
Office: (530) 796-3400
Email: THPO@yochadehe-nsn.gov

Please refer to identification number YD – 03152022-04 in any correspondence concerning this project.

Thank you for providing us with this notice and the opportunity to comment.

Sincerely,

DocuSigned by:

YOCHA DEHE
CULTURAL RESOURCES

Treatment Protocol for Handling Human Remains and Cultural Items Affiliated with the Yocha Dehe Wintun Nation

The purpose of this Protocol is to formalize procedures for the treatment of Native American human remains, grave goods, ceremonial items, and items of cultural patrimony, in the event that any are found in conjunction with development, including archaeological studies, excavation, geotechnical investigations, grading, and any ground disturbing activity. This Protocol also formalizes procedures for Tribal monitoring during archaeological studies, grading, and ground-disturbing activities.

I. Cultural Affiliation

The Yocha Dehe Wintun Nation ("Tribe") traditionally occupied lands in Yolo, Solano, Lake, Colusa and Napa Counties. The Tribe has designated its Cultural Resources Committee ("Committee") to act on the Tribe's behalf with respect to the provisions of this Protocol. Any human remains which are found in conjunction with Projects on lands culturally-affiliated with the Tribe shall be treated in accordance with Section III of this Protocol. Any other cultural resources shall be treated in accordance with Section IV of this Protocol.

II. Inadvertent Discovery of Native American Human Remains

Whenever Native American human remains are found during the course of a Project, the determination of Most Likely Descendant ("MLD") under California Public Resources Code Section 5097.98 will be made by the Native American Heritage Commission ("NAHC") upon notification to the NAHC of the discovery of said remains at a Project site. If the location of the site and the history and prehistory of the area is culturally-affiliated with the Tribe, the NAHC contacts the Tribe; a Tribal member will be designated by the Tribe to consult with the landowner and/or project proponents.

Should the NAHC determine that a member of an Indian tribe other than Yocha Dehe Wintun Nation is the MLD, and the Tribe is in agreement with this determination, the terms of this Protocol relating to the treatment of such Native American human remains shall not be applicable; however, that situation is very unlikely.

III. Treatment of Native American Remains

In the event that Native American human remains are found during development of a Project and the Tribe or a member of the Tribe is determined to be MLD pursuant to Section II of this Protocol, the following provisions shall apply. The Medical Examiner shall immediately be notified, ground disturbing activities in that location shall cease and the Tribe shall be allowed, pursuant to California Public Resources Code Section 5097.98(a), to (1) inspect the site

DocuSign Envelope ID: 0D69CDD2-A513-4BF7-A2E6-01DD9D465223

of the discovery and (2) make determinations as to how the human remains and grave goods should be treated and disposed of with appropriate dignity.

The Tribe shall complete its inspection and make its MLD recommendation within forty-eight (48) hours of getting access to the site. The Tribe shall have the final determination as to the disposition and treatment of human remains and grave goods. Said determination may include avoidance of the human remains, reburial on-site, or reburial on tribal or other lands that will not be disturbed in the future.

The Tribe may wish to rebury said human remains and grave goods or ceremonial and cultural items on or near the site of their discovery, in an area which will not be subject to future disturbances over a prolonged period of time. Reburial of human remains shall be accomplished in compliance with the California Public Resources Code Sections 5097.98(a) and (b).

The term "human remains" encompasses more than human bones because the Tribe's traditions call for the burial of associated cultural items with the deceased (funerary objects), and/or the ceremonial burning of Native American human remains, funerary objects, grave goods and animals. Ashes, soils and other remnants of these burning ceremonies, as well as associated funerary objects and unassociated funerary objects buried with or found near the Native American remains are to be treated in the same manner as bones or bone fragments that remain intact.

IV. Non-Disclosure of Location of Reburials

Unless otherwise required by law, the site of any reburial of Native American human remains shall not be disclosed and will not be governed by public disclosure requirements of the California Public Records Act, Cal. Govt. Code § 6250 et seq. The Medical Examiner shall withhold public disclosure of information related to such reburial pursuant to the specific exemption set forth in California Government Code Section 6254(r). The Tribe will require that the location for reburial is recorded with the California Historic Resources Inventory System ("CHRIS") on a form that is acceptable to the CHRIS center. The Tribe may also suggest that the landowner enter into an agreement regarding the confidentiality of site information that will run with title on the property.

V. Treatment of Cultural Resources

Treatment of all cultural items, including ceremonial items and archeological items will reflect the religious beliefs, customs, and practices of the Tribe. All cultural items, including ceremonial items and archeological items, which may be found at a Project site should be turned over to the Tribe for appropriate treatment, unless otherwise ordered by a court or agency of competent jurisdiction. The Project Proponent should waive any and all claims to ownership of

DocuSign Envelope ID: 0D69CDD2-A513-4BF7-A2E6-01DD9D465223

Tribal ceremonial and cultural items, including archeological items, which may be found on a Project site in favor of the Tribe. If any intermediary, (for example, an archaeologist retained by the Project Proponent) is necessary, said entity or individual shall not possess those items for longer than is reasonably necessary, as determined solely by the Tribe.

VI. Inadvertent Discoveries

If additional significant sites or sites not identified as significant in a Project environmental review process, but later determined to be significant, are located within a Project impact area, such sites will be subjected to further archeological and cultural significance evaluation by the Project Proponent, the Lead Agency, and the Tribe to determine if additional mitigation measures are necessary to treat sites in a culturally appropriate manner consistent with CEQA requirements for mitigation of impacts to cultural resources. If there are human remains present that have been identified as Native American, all work will cease for a period of up to 30 days in accordance with Federal Law.

VIII. Work Statement for Tribal Monitors

The description of work for Tribal monitors of the grading and ground disturbing operations at the development site is attached hereto as Addendum I and incorporated herein by reference.

DocuSign Envelope ID: 0D69CDD2-A513-4BF7-A2E6-01DD9D465223

YOCHA DEHE
CULTURAL RESOURCES

ADDENDUM I

Yocha Dehe Wintun Nation
Tribal Monitors
Description of Work and Treatment Protocol

I. Preferred Treatment

The preferred protocol upon the discovery of Native American human remains is to (1) secure the area, (2) cover any exposed human remains or other cultural items, and (3) avoid further disturbances in the area.

II. Comportment

All parties to the action are strongly advised to treat the remains with appropriate dignity, as provided in Public Resource Code Section 5097.98. We further recommend that all parties to the action treat tribal representatives and the event itself with appropriate respect. For example, jokes and antics pertaining to the remains or other inappropriate behavior are ill advised.

III. Excavation Methods

If, after the Yocha Dehe Tribal representative has been granted access to the site and it is determined that avoidance is not feasible, an examination of the human remains will be conducted to confirm they are human and to determine the position, posture, and orientation of the remains. At this point, we recommend the following procedures:

(A) Tools. All excavation in the vicinity of the human remains will be conducted using fine hand tools and fine brushes to sweep loose dirt free from the exposure.

(B) Extent of Exposure. In order to determine the nature and extent of the grave and its contents, controlled excavation should extend to a full buffer zone around the perimeter of the remains.

(C) Perimeter Balk. To initiate the exposure, a perimeter balk (especially, a shallow trench) should be excavated, representing a reasonable buffer a minimum of 10 cm around the maximum extent of the known skeletal remains, with attention to counter-intuitive discoveries or unanticipated finds relating to this or other remains. The dirt from the perimeter balk should be bucketed, distinctly labeled, and screened for cultural materials.

(D) Exposure Methods. Excavation should then proceed inward from the walls of the balk as well as downward from the surface of the exposure. Loose dirt should be scooped out and brushed off into a dustpan or other collective device. Considerable care should be given to ensure that human remains are not further impacted by the process of excavation.

DocuSign Envelope ID: 0D69CDD2-A513-4BF7-A2E6-01DD9D465223

(E) Provenience. Buckets, collection bags, notes, and tags should be fully labeled per provenience, and a distinction should be made between samples collected from: (1) **Perimeter Balk** (described above), (2) **Exposure** (dirt removed in exposing the exterior/burial plan and associations, and (3) **Matrix** (dirt from the interstices between bones or associations). Thus, each burial may have three bags, "Burial 1 Perimeter Balk," "Burial 1 Exposure Balk," "Burial 1 Matrix."

Please note the provisions below with respect to handling and conveyance of records and samples.

(F) Records. The following records should be compiled in the field: (1) a detailed scale drawing of the burial, including the provenience of and full for all human remains, associated artifacts, and the configuration of all associated phenomena such as burial pits, evidence for preinterment grave pit burning, soil variability, and intrusive disturbance, (2) complete a formal burial record using the consultants proprietary form or other standard form providing information on site #, unit or other proveniences, level depth, depth and location of the burial from a fixed datum, workers, date(s), artifact list, skeletal inventory, and other pertinent observations, (3) crew chief and worker field notes that may supplement or supercede information contained in the burial recording form, and (4) photographs, including either or standard photography or high-quality (400-500 DPI or 10 MP recommended) digital imaging.

(G) Stipulations for Acquisition and Use of Imagery. Photographs and images may be used only for showing location or configuration of questionable formation or for the position of the skeleton. They are not to be duplicated for publication unless a written release is obtained from the Tribe.

(H) Association. Association between the remains and other cultural materials should be determined in the field in consultation with an authorized Tribal representative, and may be amended per laboratory findings. Records of provenience and sample labels should be adequate to determine association or degree of likelihood of association of human remains and other cultural materials.

(I) Samples. For each burial, all **Perimeter Balk** soil is to be 1/8"-screened. All **Exposure** soil is to be 1/8"-screened, and a minimum of one 5-gallon bucket of excavated but unscreened Exposure soil is to be collected, placed in a plastic garbage bag in the bucket. All **Matrix** soil is to be carefully excavated, screened as appropriate, and then collected in plastic bags placed in 5-gallon buckets.

(J) Human remains are not to be cleaned in the field.

DocuSign Envelope ID: 0D69CDD2-A513-4BF7-A2E6-01DD9D465223

(K) Blessings. Prior to any physical action related to human remains, a designated tribal representative will conduct prayers and blessings over the remains. The archaeological consultant will be responsible for insuring that individuals and tools involved in the action are available for traditional blessings and prayers, as necessary.

IV. Lab Procedures

No laboratory studies are permitted without consultation with the tribe. Lab methods are determined on a project-specific basis in consultation with Yocha Dehe Wintun Nation representatives. The following procedures are recommended:

(A) Responsibility. The primary archaeological consultant will be responsible for insuring that all lab procedures follow stipulations made by the Tribe.

(B) Blessings. Prior to any laboratory activities related to the remains, a designated tribal representative will conduct prayers and blessings over the remains. The archaeological consultant will be responsible for insuring that individuals and tools involved in the action are available for traditional blessings and prayers, as necessary.

(C) Physical Proximity of Associations. To the extent possible, all remains, associations, samples, and original records are to be kept together throughout the laboratory process. In particular, **Matrix** dirt is to be kept in buckets and will accompany the remains to the lab. The primary archaeological consultant will be responsible for copying all field records and images, and insuring that the original notes and records accompany the remains throughout the process.

(*E) Additional Lab Finds*. Laboratory study should be done making every effort to identify unanticipated finds or materials missed in the field, such as objects encased in dirt or human remains misidentified as faunal remains in the field. In the event of discovery of additional remains, materials, and other associations the tribal representatives are to be contacted immediately.

V. Re-internment without Further Disturbance

No laboratory studies are permitted on human remains and funerary objects. The preferred treatment preference for exhumed Native American human remains is reburial in an area not subject to further disturbance. Any objects associated with remains will be reinterred with the remains.

YOCHA DEHE
CULTURAL RESOURCES

VI. Curation of Recovered Materials

Should all, or a sample, of any archaeological materials collected during the data recovery activities – with the exception of Human Remains – need to be curated, an inventory and location information of the curation facility shall be given to tribe for our records.

"P" = Permitted Use; "C" = Conditional Use Permit Required; "M" = Minor Use Permit; "MU" = Permitted in a Mixed-Use building; "-" = Prohibited

1. Permitted and conditionally permitted uses on parcels located within a designated Napa County Airport compatibility zone may be restricted or prohibited subject to the requirements of the policies related to airport compatibility in the American Canyon general plan and the Napa County Airport land use compatibility plan. Restrictions may include the requirement for recordation of overflight or avigation easements.
2. Any use that is not shown is Prohibited unless the Community Development Director finds that it is similar to a use that is listed in Table 2-3 above.

Technical Assistance
for Local Planning
HOUSING

DISCLAIMER: This document is intended solely as a technical overview of new housing-related legislation. It is not intended to serve as legal advice regarding any jurisdiction's specific policies or any proposed housing development project. Local staff should consult with their city attorney or county counsel before taking any action to implement these changes.

2024 New Housing Legislation Summary

This document was prepared for the Association of Bay Area Governments (ABAG) Regional Housing Technical Assistance (RHTA) program, to be shared with local planning staff. Below is a summary of significant housing legislation that was passed in the 2024 legislative session and subsequently signed into law by Governor Newsom. All bills become effective on January 1, 2025, unless otherwise noted.

How to use this document:
Text in green denotes an "action item," yellow denotes something that "impacts your job," and blue denotes information that is "good to know." Wherever colors are used, the text is labeled for accessibility.

APPENDIX A - SECTION 65913.4(A)(6)(B), 9/16/2021 39

HOUSING ACCOUNTABILITY ACT, THE BUILDER'S REMEDY, AND HOUSING LAW ENFORCEMENT

AB 1893: Housing Accountability Act and the Builder's Remedy

AB 1893 makes significant changes to the Housing Accountability Act (HAA) in three different areas: 1) it substantially increases liability under the Act for many local agency actions regarding review of project applications; 2) it adopts other changes applicable to all projects; and 3) it defines a "builder's remedy project" and adopts special protections for those projects.

Provisions Applicable to All Housing Development Projects:

Additional Violations of the Housing Accountability Act. AB 1893 includes a long list of additional public agency actions that are violations of the HAA, by defining all of the following agency actions as project "disapprovals" (§ 65589.5(h)(6))[1]:

- Holds more than 5 hearings on a housing development project in violation of Section 65905.5.
- Finds an application incomplete and includes in the incompleteness letter an item not on the application form.
- Requests information in a second incomplete letter that was not in the first incomplete letter and upholds this determination on appeal.
- Finds an application incomplete when a reasonable person would conclude that everything on the checklist has been submitted and upholds this determination on appeal.
- If the application is still incomplete after two resubmittals, the agency must establish that the incompleteness determination is not an effective disapproval of the application.
- Requires a builder's remedy project to apply for a legislative approval or for a permit not generally required of projects of the same type and density or treats the builder's remedy project as a nonconforming use.

[1] All references are to the Government Code unless otherwise stated. Code sections in this summary reference those **that will be in effect on January 1, 2025**, unless otherwise noted**.**

- Determines that a preliminary application has expired, or the vested rights have been lost for any reason other than expiration of the time limits under Section 65941.1(c) or changes in excess of those described in Section 65941.1(d).
- Fails to cease a course of conduct undertaken for an improper purpose, such as to cause unnecessary delay, that effectively disapproves the project, if the applicant provides written notice. The local agency must then post the notice, follow other procedures, and provide a written response between 60 and 90 days after receiving the notice. (See § 65589.5(h)(6)(D).)

AB 1893 also expands the definition of "bad faith" to include agency action or inaction that is "frivolous, pretextual, or intended to cause unnecessary delay." It also directs a court to multiply fines if the agency has violated the HAA multiple times within the planning period.

Action Items: Cities and counties should do a careful review of their application forms before January 1, 2025 to ensure that they include **all** of the information that they need to receive as part of a complete application.

Agencies also need to separate "consistency" items from "completeness" items in completeness letters. Many agencies have a practice of including in completeness letters issues of consistency with adopted standards. Completeness letters may **only** require items on the application form that were not provided. While consistency issues may be included, these should clearly be labeled as advisory only and not required for a complete application.

Finally, agencies should have provisions in their local codes allowing appeals of all staff incompleteness decisions so that any applicant must appeal before going to court.

Other Amendments Applicable to Housing Development Projects. Whether or not projects are "builder's remedy projects," the following changes apply:

1. AB 1893 expands the definition of a "housing development project" to include farmworker housing and projects where at least 50 percent of new or converted square footage is designated for residential use, the project includes at least 500 net new units, and no portion of the project is used for transient lodging. (§ 65589.5(h)(2).)
2. The Housing Accountability Act requires a separate set of findings to deny housing developments defined as "housing for very low, low- or moderate-income households." While current law requires that 20 percent of the **total** units be affordable to lower income households, or 100 percent to moderate-income households, AB 1893 lowers the affordability requirement to one of the following (§ 65589.5(h)(3)):
   - 13 percent affordable to lower income households; or
   - 10 percent affordable to very low income households; or
   - 7 percent affordable to extremely low income households; or
   - 100 percent affordable to moderate income households; or
   - 100 percent affordable to lower income households (excluding manager's units); or

- A project with 10 or fewer units base density (as defined in density bonus law), on a site smaller than one acre, with a minimum density of 10 units per acre.

These percentages apply only to a project's base density, rather than to the total units in the project, further reducing the required affordability.

Good to Know: AB 1893 creates a definition for "housing for mixed-income households" to refer to projects that meet the affordability requirement in (A), (B), (C) or (F) above.

All affordable units must have a deed restriction of at least 55 years for rentals and 45 years for ownership units. Rent and price limits are those established by the Health & Safety Code, except that 100 percent affordable projects may have rents set by the California Tax Credit Allocation Commission (CTCAC).

Impacts Your Job: To deny housing that meets the definition of "housing for very low, low-, or moderate income households," or to apply conditions that make these projects infeasible, cities and counties must make one of the findings contained in Section 65589.5(d) in addition to the findings contained in Section 65589.5(j)(1). This may expand the number of projects that must be approved because the findings contained in Section 65589.5(d) cannot be made.

3. Jurisdictions without a Housing Element in conformance with state law may now deny housing for very low, low- or moderate-income households if the project is not a builder's remedy project. (§ 65589.5(d)(6).) They still must make the findings required under Section 65589.5(j)(1) if the project conforms with all objective standards. (AB 1886, discussed below, requires that Housing Elements be approved by either HCD or a court to be considered in conformance with state law.)

4. New rules apply to a housing development that qualifies as "housing for very low, low-, or moderate income households," and is:

   - Proposed on a site designated for lower or moderate-income housing in the Housing Element, and consistent with the density in the Housing Element, and
   - Inconsistent with the general plan and zoning. A housing development may meet these qualifications if rezoning of the site has been promised in the Housing Element but has not yet been completed.

Housing developments meeting these requirements may only be required to comply with the objective standards that would have been applied on a site with zoning allowing the density, tenure (rental or ownership), and type of housing (single-family, multifamily, etc.) proposed by the applicant. If the city or county does not have any zoning or general plan classifications allowing the proposed housing, the applicant can identify objective standards within the jurisdiction that facilitate the project type and density, and those will apply. No combination of standards and conditions can be applied that make the project infeasible; or preclude the project, with density bonuses, waivers, and concessions allowed under density bonus law, from being constructed. (§ 65589.5(f)(8).)

Good to Know: This provision has been termed "builder's remedy lite." It allows development of sites designated for lower or moderate income housing in a Housing Element to be developed at that density before the site is rezoned, so long as the required amount of affordable housing is included.

Provisions Affecting Builder's Remedy Projects:

Definition of a Builder's Remedy Project. AB 1893 defines a "builder's remedy project" as a housing development project that complies with all of the following (§ 65589.5(h)(11)):

1. **The project qualifies as "housing for very low, low- or moderate-income households,"** as described above.

2. **The jurisdiction did not have a Housing Element in substantial compliance with state law on or after the date the project was "deemed complete."** This is either the date that a preliminary application containing all required information was submitted, or the date that the project application was determined to be complete, if no complete preliminary application was submitted.

   Good to Know: Under this provision, if a Housing Element was deemed out of compliance by HCD or a court after a project was deemed complete, an applicant could potentially modify the project to qualify it as a builder's remedy project. However, Section 65589.5(d)(5) allows local governments to disapprove projects that do not comply with local planning and zoning if the Housing Element was in compliance on the date that an application was "deemed complete." Local governments should consult with their counsel regarding these provisions.

3. **The density, before the addition of a density bonus, is not greater than one of the following:**

   a. 50 percent greater than the "default density" established in Section 65583.2(c)(3)(B). (In the Bay Area, communities have default densities of either 20 or 30 units per acre; this provision allows minimum densities of either 30 or 45 units per acre on all sites.); or

   b. Three times the maximum density allowed by the general plan, zoning, or state law, whichever is greater; or

   c. Density specified in the Housing Element.

   An additional 35 units per acre may be added to the above densities if any part of the site is located:

   a. Within one-half mile of a major transit stop; or

   b. In a very low vehicle travel area; or

   c. In a high or highest resource census tract, as shown on maps published by CTCAC and HCD.

   As an example, in a community with a default density of 30 units per acre, builder's remedy projects in high opportunity single-family areas are entitled to 80 units per acre base density (45 units per acre (50 percent more than the default density) plus 35 units per acre for a high resource census tract).

   Good to Know: Builder's remedy projects may utilize state density bonus law for density bonuses, incentives and concessions, and waivers and therefore may double the base densities provided by the statute. (See §§ 65589.5(f)(6)(C)(ii) and (iii).) Additional affordable housing may be required to obtain additional density if required by density bonus law.

4. **The density, on sites that have a minimum density requirement, is not less than one of the following:**

    a. If the project is located within one-half mile of a commuter rail station or heavy rail station, the project must meet the required minimum density. (Commuter rail and heavy rail are specifically defined in the statute.)

    b. On other sites with a minimum density, the project must meet at least the minimum density or half the default density, whichever is lower.

    Good to Know: If a builder's remedy project proposes fewer units than shown in the Housing Element, the city must make "no net loss" findings under state law (§ 65863) before approving the project.

5. **The project does not abut a site where more than one-third of the square footage on the site has been used, in the past three years, by a heavy or Title V industrial use, as defined in Section 65913.16.**

Protections for Builder's Remedy Projects. If a housing development project meets the new definition of a "builder's remedy project," then all of the following apply (§ 65589.5(f)(6)):

1. Only objective standards can be applied to the project. The objective standards that apply are those that would have been applied on a site with zoning allowing the density, tenure (rental or ownership), and type of housing (single-family, multifamily, etc.) proposed by the applicant. If the agency does not have any zoning or general plan classifications allowing the proposed housing, the applicant can identify objective standards within the jurisdiction that facilitate the project type and density, and those will apply.

2. No individual standard or condition or combination of standards and conditions can be applied that makes the project infeasible; or precludes the project, with waivers and concessions allowed under density bonus law, from being constructed.

3. If the project qualifies for a density bonus, the project is entitled to two additional concessions. Any extremely low income units are eligible for the same density bonus and concessions as a project with three more percentage points dedicated to very low income households. For instance, a project with 7 percent extremely low income units is entitled to the same density bonus and concessions as a project with 10 percent very low income units.

4. The project cannot be required to apply for a general or specific plan amendment, a rezoning, or any legislative approval and cannot be required to apply for any approval not generally required for a project of the same type and density. Projects complying with these provisions are deemed consistent with all standards and cannot be considered to be nonconforming uses. They are also deemed to be consistent with all standards for the purpose of SB 35 (§ 65913.4) and AB 2011 mixed-income housing projects (§ 65912.123).

5. No requirements can be applied to projects solely because they are builder's remedy projects.

6. Local affordable housing requirements cannot exceed 20 percent of the units and can only be applied if the agency can make written findings, supported by a preponderance of the evidence, that the local requirement would not make the project infeasible.

7. Affordable units must have a comparable bedroom and bathroom count as the market-rate units.

Builder's Remedy Projects Submitted Before January 1, 2025. Projects submitted before AB 1893 goes into effect, may either rely on the provisions of the HAA in effect before January 1, 2025, or, if they meet the new definition of a builder's remedy project, they may choose to be subject to "any or all" of the new provisions applicable to builder's remedy projects. (§ 65589.5(f)(7).) They may also revise their projects to meet the definition of a builder's remedy project even if the revision results in a change in the number of units or square footage of 20 percent or more. (§ 65589.5(f)(7).)

Impacts Your Job: Agencies with existing builder's remedy projects should expect at least some applicants to change their projects if allowed by state law. For instance, if a project otherwise meets the density requirements for a builder's remedy project, applicants may seek to reduce the percentage of lower income units from 20 to 13 percent or less.

AB 1413: Non-Substantive Changes to the Housing Accountability Act

AB 1413 recodifies certain provisions of the Housing Accountability Act (HAA) adopted in 2023 (as AB 1633) related to review of projects under the California Environmental Quality Act (CEQA) without making substantive changes in those provisions.

AB 1633 (2023) amended the HAA to expand the definition of disapproval of a housing development project to include certain circumstances when a public agency fails to approve a CEQA exemption or, without justification, requires additional analysis before approving environmental impact reports (EIRs) or mitigated negative declarations.

AB 1413 recodifies those provisions as Sections 65589.5.1 and 65589.5.2.

AB 1886: Housing Element Adequacy

AB 1886 states that a Housing Element is not consistent with state law until the Department of Housing and Community Development (HCD) or a court finds that it is consistent.

Significant Provisions

AB 1886 states that a Housing Element or amendment shall be considered to be in substantial compliance when the city or county adopts the element and either HCD or a court determines that the adopted Housing Element substantially complies with Housing Element Law, and the department's findings have not been superseded by contrary findings by HCD or a court or the court's decision has not been overturned by a subsequent court decision or by statute. (§ 65585.03.)

It also states that, for purposes of reviewing "housing for very low, low- or moderate-income households," a Housing Element shall be considered in compliance only if it was in compliance when the preliminary application was submitted, or when the project application was deemed complete, if no preliminary application was submitted. (§ 65589.55.) Even if a jurisdiction's Housing Element is in compliance with state law at the time a decision is made on a project, AB 1886 provides that it is not considered in compliance with state law if it was out of compliance when a preliminary application was filed.

The statute provides that it is "declaratory of existing law." Courts may or may not agree with such a legislative declaration. Agencies should consult with their local counsel regarding the applicability of the statute prior to January 1, 2025.

Good to Know: AB 1886 may expand local agency exposure to the builder's remedy by providing that Housing Elements cannot be considered in compliance with state law until HCD or a court finds an **adopted** element in compliance. It provides that local agencies do not have the authority to determine that their adopted Housing Elements are in substantial compliance with Housing Element Law.

AB 2023: Housing Element; Rebuttable Presumptions

AB 2023 amends the Government Code to add two rebuttable presumptions of *invalidity*. The first amendment is to Section 65585, which adds a rebuttable presumption of invalidity of a city or county's action or failure to act where HCD finds that act or failure to act does not substantially comply with the adopted Housing Element or obligations under Section 65583 (addressing contents of the Housing Element, rezoning, and enforcement). (§ 65585(i)(1)(B).)

Good to Know: Section 65585 already obligates HCD to review any action or failure to act by the local government that HCD determines is inconsistent with an adopted Housing Element or Section 65583. AB 2023 now adds a rebuttable presumption of invalidity to the action or failure to act where HCD finds a lack of substantial compliance. (§ 65585(i)(1)(A)-(B).)

Second, in an action to challenge the validity of a Housing Element, **AB 2023** amends Section 65589.3 to add a rebuttable presumption, of *invalidity* of that Housing Element if HCD has found that the element does *not* substantially comply with the Housing Element Law. (§ 65589.3(b).)

Good to Know: AB 2023 does not change the already existing rebuttable presumption of *validity* of an element or amendment if HCD has found that the element or amendment substantially complies with the Housing Element Law—this rebuttable presumption of validity may be found in the new subdivision (a) of Section 65589.3.

Impacts Your Job: Adopting a Housing Element despite HCD finding a lack of substantial compliance carries with it greater risk because AB 2023 has added a new rebuttable presumption of *invalidity* where HCD has found a lack of substantial compliance.

SB 1037: Housing Law Enforcement

SB 1037 creates new legal remedies for actions brought by the Attorney General (AG) or the Department of Housing and Community Development (HCD) to require adoption of Housing Element updates revisions or to enforce any state law that requires a local government to ministerially approve a planning application for a housing development project.

Significant Provisions

SB 1037 enacts Section 65009.1, which provides new penalties for actions brought by the AG or HCD to (1) enforce adoption of Housing Element updates under the schedule in Section 65588(e); or (2) enforce any state law requiring a city, county, or "local agencies" to ministerially approve any planning application for a housing development project. (§ 65009.1(a).) These remedies include: (1) a penalty for each violation of at least $10,000 but no more than $50,000 *per month* accrued from the violation date until the violation is cured; (2) all costs of investigating and prosecuting the action including expert fees, reasonable attorneys' fees, and costs whenever the AG or HCD prevails in a civil action to enforce state laws under this statute; and (3) other equitable or injunctive relief, including provisional or permanent injunctions. (§ 65009.1(a)(1)-(3).)

Good to Know: The monetary penalties in this statute only apply to a city or county's acts or omissions that are "arbitrary, capricious, entirely lacking in evidentiary support, contrary to established policy, unlawful, or procedurally unfair." (§ 65009.1(b).) Ensuring evidentiary and legal support, as well as procedural fairness, for a local agency's action may avoid these penalties, but it is not known how the courts will apply these terms in the housing context.

"Local agencies" are not defined in the statute, and it is unclear which agencies are covered in addition to cities and counties.

Any penalties imposed under this section may not be paid out of funds already dedicated to affordable housing. (§ 65009.1(c)(2).) Failure to pay penalties can result in the Controller intercepting available state and local funds. (§ 65009.1(c)(3).) Civil penalties are paid to the state's Building Homes and Jobs Trust Fund to support affordable housing in the community that paid the penalties. However, if not spent after five years, the funds may be used anywhere in the state. (§§ 65009.1(c)(1),(4)().) Additional penalties may be imposed to enforce timely adoption of Housing Element revisions if—despite a court order—cities or counties fail to meet the deadlines in Section 65754, which requires in part: (1) bringing the Housing Element into compliance within 120 days of the court's order; and (2) submitting to HCD for its review a draft of the revised Housing Element at least 45 days before adoption.

Good to Know: If subject to a court order to adopt a Housing Element, the Housing Element adoption is exempt from the California Environmental Quality Act, although an initial study must be prepared and possibly an "environmental assessment" in the form of a Draft Environmental Impact Report. (§ 65759.)

Failure to meet these deadlines requires the court to impose the following penalties and remedial provisions: (A) if not already imposed, the court must modify its prior order to impose the *maximum* penalty of $50,000 per month for each month until the "city, county, or local agency has substantially complied" with Section 65754; and (B) if not already imposed, the court must impose *all* of the remedial provisions in Section 65755(a) until substantial compliance, including:

1. Suspending authority to issue building permits and all other related permits with limited exceptions;
2. Suspending authority to grant zoning changes, variances;
3. Suspending the authority to grant subdivision map approvals;
4. Mandating approval of all applications for building permits and related construction permits for housing projects with an approved final subdivision map, parcel map, or plot plan, subject to some exceptions;
5. Mandating approval of final subdivision maps for housing projects that conform to an approved tentative map;
6. Mandating approval of any tentative subdivision map for a housing project that meets certain requirements.

(§§ 65009.1(d)(2)(B), 65755.)

However, certain housing projects must be exempted from the prohibition on further approvals. (§ 65009.1(d)(2)(C)(i)-(iv).) In other words, cities, counties, and local agencies are still required to issue certain approvals for housing development projects even if their land use approval authority has otherwise been suspended.

These new penalties and remedies apply *in addition* to any others already available. (§ 65009.1(d)(1).) These remedies apply to all cities, including charter cities, and do not limit or affect remedies available to any other party seeking to enforce dozens of other laws such as the Housing Accountability Act. (§§ 65009.1(e)(1), 65885(j)(1)-(26).) Attorneys' fees under Code of Civil Procedure section 1021.5, which a court may award to a successful party in any action resulting in enforcement of an important right affecting the public interest, remain available in addition to the remedies set forth in this new section. (§ 65009.1(e)(1).)

Impacts Your Job: The bills discussed in this section increase HCD's authority to find local actions out of compliance with many state laws and so increase the risks to cities and counties if HCD's direction is not followed, including exposure to the builder's remedy, hefty financial penalties, and the inability to approve non-residential developments.

HOUSING ELEMENTS

AB 2023, AB 2597, AB 2667, AB 3093, and SB 7: Housing Elements

These five bills collectively make significant changes to Housing Element law, primarily applicable in the **seventh** Housing Element cycle, but not applicable in the current sixth cycle.

Significant Provisions

Procedural Requirements for Adoption.

Assessment of Fair Housing. The assessment of fair housing (required by § 65583(c)(10)) must be completed before the first draft of the Housing Element is available to the public for the 30-day review period required by Section 65585(b).

HCD must develop a standardized reporting format for the programs and for reporting actions taken during the planning period to implement the jurisdiction's fair housing priorities and goals. (§ 65583(c)(10)(A).) The standardized reporting format must enable reporting of all the existing assessment components and, at a minimum, include:

- Timelines for implementation.
- Responsible party or parties.
- Resources committed from the local budget to affirmatively further fair housing.
- Action areas.
- Potential impacts of the program.

Cities and counties will be required to use the standardized report format that HCD creates for the seventh and subsequent revision of the Housing Element.

Impacts Your Job: The assessment of fair housing must be completed much earlier than was typical in the sixth cycle, but agencies will have a standardized format to use.

Housing Element Adoption and Revisions. A draft of the sites inventory must be available to HCD, posted on the agency's website, and emailed by link to anyone requesting notice at least 90 days before the initial adoption of the Housing Element and at least 7 days before any subsequent adoption if changes are made to the site inventory. (§ 65585(b).). All changes to draft elements must be posted at least 7 days before sending the revision to HCD. (§ 65585(f).).

If HCD finds a draft Housing Element does not comply with Housing Element law, the City Council or Board of Supervisors has the option of changing the element to comply with HCD's findings, or adopting the element without changes and adopting findings that explain why the city or county believes the Housing Element conforms with state law despite HCD's findings. (Section 65585(f).). If the city or county adopts these findings, it must submit the findings to HCD along with the adopted element, and HCD must review the local findings along with the adopted element. (§ 65585(g).).

Impacts Your Job: The net effect of these requirements is that Housing Elements will take longer to prepare. Cities and counties should begin the Housing Element process well in advance of the deadline.

Less Time to Complete Rezonings.

Section 65583(c)(1)(A) provides new statutory deadlines for rezonings required by Housing Element law. Beginning with the seventh cycle, where a jurisdiction's Housing Element fails to identify enough existing sites in the inventory to accommodate the housing need at all household income levels, cities and counties must commit to completing rezoning within either:

- One year of the statutory deadline for adopting the Housing Element; or
- Three years and 90 days after the statutory deadline if the local government satisfies all of the following requirements:
    - Submitting a draft element or amendment to HCD for review at least 90 days before the statutory deadline for adoption of the Housing Element;
    - Receiving from HCD findings that the draft substantially complies with the Housing Element Law on or before the deadline for adoption of the Housing Element; and
    - Adopting the draft element or amendment that HCD found to be substantially compliant no later than 120 days after the Section 65588 deadline.

"Rezoning," for the sixth cycle as well as the seventh cycle, now includes any necessary local coastal program amendments. (§ 65583(c)(10(A).) A one-year extension of the deadline may still be obtained under Section 65583(f).

Good to Know. The changes made by AB 1893 to the Housing Accountability Act allow sites designated for rezoning to be developed at the density shown in the Housing Element as soon as the Housing Element is adopted. In the seventh cycle, agencies may want to adopt the required zoning at the same time as they adopt their Housing Elements. This is particularly the case for localities within the coastal zone, where Coastal Commission review may be lengthy.

Addition of Extremely Low and Acutely Low-Income Categories and Other Changes.

Starting with the seventh cycle, regional housing needs allocations (RHNA) will include allocations for extremely low income (30 percent of median income and below) and acutely low income (15 percent of median income and below; definitions in Section 65582.). Numerous technical changes have been made in Section 65583 to require a specific analysis of the needs of households at those income levels and to develop programs to assist in providing adequate housing to meet the needs of acutely low income households.

By December 31, 2026, HCD must publish advisory guidance that includes sample analyses and programs pertaining to special housing needs for acutely low and extremely low income households. (§ 65583.05.)

The constraints analysis must include an assessment of how existing and proposed historic designations affect the community's ability to meet its RHNA. (§ 65583(a)(5).)

Amendments to Regional Housing Needs Allocation.

Limitations on Local Government Appeals. If HCD determines the RHNA (in regions without a council of governments), no objection to the RHNA may be filed by a city or county. (§ 65584.01(d).) Appeals of draft RHNA allocations must be filed within 30 days rather than 45 days (§ 65584.05(b)), and the appeal

period may be further reduced to as few as 10 days. The notice period for the hearings on any appeals is also reduced to 10 days. Other review periods – for comments on other cities' appeals, for instance – may also be reduced to 10 days to facilitate earlier adoption of the RHNA. (§ 65584.05(i).)

In general, other timelines are reduced so that the RHNA may be adopted earlier.

Changes to RHNA Determination. Data regarding the housing needs of homeless persons must be provided by the applicable council of governments – in the Bay Area, the Association of Bay Area Governments (ABAG) – to HCD when it determines the total housing needs of the region. (§ 65584.01((b)(1)(J).) A council of governments must make a diligent effort to achieve public participation of households with special housing needs. (§ 65584.04(d).)

For the seventh and subsequent cycles, the RHNA will include an allocation of units for acutely low and extremely low income households. (§ 65584.04(m)(2)(B).)

ANNUAL REPORTS

AB 2667: Reporting by Opportunity Area

AB 2667 amends Housing Element Law to require that local agencies report certain additional categories of information in their annual progress reports (APRs) related to "opportunity area."

Significant Provisions

For the 2025 APR, AB 2667 requires reporting by "opportunity area." Starting with the seventh Housing Element cycle, reporting will be required by income level within each opportunity area. (§ 65400(a)(2)(E).) The statute requires reporting of units approved and disapproved in the prior year by:

- The number of units located within each opportunity area.
- The number of units approved and disapproved within each opportunity area for each of the following income categories:
    - Very low-income households;
    - Lower-income households;
    - Moderate-income households; and
    - Above moderate-income households.

In the seventh cycle, this information will also need to be provided for acutely low-income and extremely low-income households.

Good To Know: "Opportunity area" is defined as the highest, high, moderate, or low resource area according to the most recent Opportunity Map published by the California Tax Credit Allocation Committee (CTCAC) and HCD. The 2024 opportunity maps can be viewed at: https://belonging.berkeley.edu/final-2024-ctcac-hcd-opportunity-map.

Action Item: Planning agencies will need to determine how to capture permit and project data by opportunity area to complete the APR due on April 1, 2025.

AB 2580: Reporting Historic Designations

AB 2580 requires that local agencies report new historic designations in their APRs and the status of any housing development projects proposed on those newly designated sites. (§ 65400(a)(2)(N).)

Significant Provisions

AB 2580 requires that the APR include a list of all sites or districts placed on the National Register of Historic Places, the California Register of Historic Resources, or a local register of historic places by the city or county within the past year and the status of any housing development projects proposed for the new historic designations, including:

- Whether the housing development project has been entitled.
- Whether a building permit has been issued for the project.
- The number of units in the project.

Action Item: Planning agencies will need to compile a list of historic designations created in the past year and any housing developments proposed for those sites to complete the APR due by April 1, 2025.

AB 3093: Reporting Housing Element Progress

AB 3093 requires that the APR include the city's or county's progress in meeting its RHNA for the sixth and previous versions of the Housing Element. (§ 65400(a)(2)(B)(i)(II).)

ZONING

AB 2904: Zoning Ordinance Notices

AB 2904 requires that public hearing notices be published 20 days before the hearing for a zoning ordinance amendment that affects permitted uses of real property.

Significant Provisions

Under existing law, planning commissions must hold a public hearing on a proposed zoning ordinance amendment and publish notice of this hearing 10 days before the hearing.

When a proposed zoning ordinance or amendment to a zoning ordinance "affects the permitted uses of real property," this bill requires a 20-day notice of the public hearing. Under AB 2904, notice of planning commission public hearings for zoning ordinances or amendments that affect the permitted uses of real property must be published and posted, as well as mailed, and delivered or advertised at least 20 days before the meeting. (§ 65854(b)(2).)

Ordinances or amendments that do not affect the permitted uses of real property require only 10-day notice under current law.

Good To Know: The statute does not require additional notice of City Council or Board of Supervisors hearings on zoning amendments.

Impacts Your Job: Planners will need to be mindful of the type of proposed zoning ordinance as required notice depends on whether the proposed zoning ordinance affects the permitted use of real property. A broad range of amendments may "affect the permitted uses of real property," so planners may wish to consult with legal counsel regarding the required planning commission notice.

STREAMLINED AND BY RIGHT APPROVALS

SB 450: Amendments to California HOME Act (SB 9)

SB 450 amends Senate Bill 9 (2021), which requires public agencies to ministerially approve urban lot splits and two-unit developments in single-family zones that meet certain criteria.

Significant Provisions

SB 450 makes the following changes in SB 9:

1. Agencies cannot impose objective zoning, subdivision, and design standards on two-unit developments that do not apply uniformly to development within the zone, unless the SB 9 standards are more permissive. (§ 65852.21(b)(3).)

2. As it relates to urban lot splits, a local agency may impose objective zoning standards, objective subdivision standards, and objective design review standards, but only as they relate to the design or improvements of a parcel. (§ 66411.7(c)(1).)

3. An application under SB 9 must be approved or denied within 60 days after the agency receives a completed application, or it is "deemed approved." If the application is denied, the applicant must be provided a full list of deficiencies and told how the application can be remedied. (§§ 65852.21(h) and 66411.7(b)(1).)

4. Parcels must satisfy the requirements in Sections 65913.4(a)(6)(B) – (K), **as those sections existed on September 16, 2021.** (see Appendix A)

5. A two-unit development is permitted if it demolishes more than 25 percent of existing exterior structural walls. This means that a two-unit development that otherwise complies with the eligibility criteria in SB 9 may propose demolition of an entire existing structure and still qualify for ministerial review and approval. (Existing § 65852.21(a)(5) was deleted.)

6. A finding of a "specific adverse impact" justifying project denial may only be made for public health or safety reasons, not for the project's impact on the physical environment. (§§ 65852.21(d) and 66411.7(d).)

The Legislature also adopted an expanded list of reasons for the adoption of SB 9 in response to a trial court decision finding that SB 9 did not apply to charter cities. The court found that the Legislature's purpose for adopting SB 9 – to create more affordable housing – was not related to the actual provisions, which do not require any affordable housing. The revised statement indicates that the bill's purpose is to create more housing of all types.

Impacts Your Job: Agencies will need to establish procedures to ensure that SB 9 projects are approved or denied within 60 days after being found complete.

Action Items: Cities and counties that have imposed standards on SB 9 projects that are more restrictive than standards applied to single-family homes in the same zone should modify their SB 9 ordinances as soon as possible. Any provisions applying to urban lot splits that are unrelated to the design or improvements of the lot split must also be removed Agencies must review applications consistent with SB 450 even before revising their local ordinances.

Good To Know: The standards included in Sections 65913.4(a)(6)(B - K) existing on September 16, 2021 are attached as an appendix to this summary.

SB 1123: Amendments to Small Lot Subdivisions

SB 1123 (§§ 66499.41, 65852.28, and 65913.4.5) amends provisions enacted by SB 684, effective July 1, 2024, which specified processing procedures for subdivisions of 10 units or less.

Significant Provisions

The statute expands eligible sites to vacant lots zoned for single-family residences that are no larger than 1.5 acres. On a parcel zoned for single-family residences, newly created parcels must be at least 1,200 sq. ft. in size, and the city or county may impose a height limit at least as high as that allowed by the existing zoning.

SB 1123 also establishes a minimum density for these sites if the parcel is not included in the jurisdiction's site inventory in the Housing Element. The density of the development must be the greater of 66 percent of the allowable density or 66 percent of the default density (for example, approximately 20 units/acre if the default density is 30 units/acre). The proposed subdivision cannot allow an existing home to be sold separately from other existing homes.

Good To Know: SB 1123 will become effective on July 1, 2025.

Impacts Your Job: SB 684 established a ministerial process for approval of small subdivisions with short turnaround times and contains many detailed and complex provisions. Planners receiving applications under these provisions may want to create a checklist to determine the project's compliance.

AB 2243: Amendments to Middle Class Housing Act of 2022 (AB 2011) and Affordable Housing and High Road Jobs Act of 2022 (SB 6)

AB 2243 makes numerous amendments to both AB 2011 (2022) and SB 6 (2022), which allowed for residential development in zones where parking, retail, or commercial are a principally permitted use.

Significant Provisions Amending SB 6

SB 6 now provides that a site on which a housing development is proposed cannot be larger than 20 acres. AB 2243 amends this requirement, providing that the project site shall not exceed 20 acres unless the site is a regional mall (as defined in § 65912.101(r)), in which case the site may not exceed 100 acres. (§ 65912.121(d).)

Significant Provisions Amending AB 2011

Definitions. AB 2243 (§ 65912.101) adds several definitions to AB 2011 and amends several existing definitions in AB 2011, including the following:

- Changes the definition of “commercial corridor" to mean a street (rather than a highway) that is not a freeway.
- Adds definition of “freeway," providing that freeway shall have the same meaning as defined in Vehicle Code Section 332 except it shall not include the portion of a freeway that is an onramp or offramp.
- Removes definition of "side street" and replace it with a definition of "street," providing that “street” has the same meaning as defined in Vehicle Code Section 590 and includes sidewalks as defined in Vehicle Code Section 555.
- Changes definition of “industrial use” to add uses requiring certain air district permits. Also exempts from the definition of “industrial use” a “use where the only source permitted by a district is an emergency backup generator” and “self-storage for the residents of a building.”
- Adds a definition of “regional mall.”
- **Impacts Your Job:** Changes the definition of “principally permitted use” to provide that parking uses are a considered principally permitted whether or not they require conditional use permit.

Changes to Qualifying Criteria for All AB 2011 Projects (§§ 65912.111 and 65912.121).

AB 2011 prohibits development on a site or adjoined to any site where more than one-third of the square footage on the site is "dedicated to industrial use." AB 2243 alters the meaning of "dedicated to industrial use" to mean a site where the square footage is currently being used as an industrial use, the “most recently permitted use of the square footage is an industrial use*, and the site has been occupied within the past three years*”, or “site was designated for industrial use in latest version of local government’s general plan adopted before January 1, 2022, *and residential uses are not principally permitted on the site*.” [2]Under current law AB 2011 projects are allowed anywhere within the coastal zone. AB 2243 limits sites for AB 2011 projects within the coastal zone to sites eligible for SB 35 streamlined development review, except that they may be located on sites not zoned for multifamily housing. (Italics indicate changes to the law.)

AB 2243 additionally prohibits the development of affordable AB 2011 projects on a site that would require the demolition of a historic structure that is on the national, state, or local register; mixed-income projects were already prohibited on such sites.

AB 2243 provides that for a site within a neighborhood plan area, the neighborhood plan applicable to the site must permit multifamily housing development on the site. "Neighborhood plan" is redefined to mean a specific plan, an area plan, precise plan, community plan, urban village plan, or master plan adopted by the local government before January 1, 2024, and within 25 years of the date that a development proponent applies for an AB 2011 project. A "neighborhood plan" does not include community plan(s) where the cumulative area covered by the community plan(s) in the jurisdiction is more than one-half of the area of the jurisdiction.

[2] The italicized text indicates new language added by AB 2243.

Changes to Development Standards for All AB 2011 Projects. (§§ 65912.113 and 65912.123.)

As originally enacted, AB 2011 did not allow for the development of housing located within 500 feet of a freeway. AB 2243 eliminates this complete prohibition, providing that housing may be developed within 500 feet of a freeway so long as all the following requirements are met: (a) the building shall have a centralized heating, ventilation, and air-conditioning system; (b) outdoor air intakes for the heating, ventilation, and air-conditioning system shall face away from the freeway; (c) the building shall provide an air filtration media for outside and return air that provide a MERV of 16; (d) the air filtration media shall be replaced at the manufacturer's designated interval; and (e) the building shall not have any balconies facing the freeway. As defined by the statute, "minimum efficiency reporting value" or "MERV" refers to the measurement scale developed by the American Heating, Refrigerating, and Air-Conditioning Engineers used to report the effectiveness of air filters. (§ 659112.101(m).).

In addition, AB 2243 provides that for any project that is the conversion of the use of an existing nonresidential use building to residential use, the local government shall not require the provision of common open space beyond what is already existing on the project site.

The requirements for AB 2011 projects apply only to newly created housing units.

Changes to Approval Process for All AB 2011 Projects. (§§ 65912.114 and 65912.124.)

Impacts Your Job: AB 2243 makes important changes to the ministerial process for AB 2011 projects. First, a local government is required to determine, in writing, whether a development is consistent or inconsistent with objective planning standards within 60 days (for projects containing 150 units or fewer), or 90 days (for projects with more than 150 units) with the objective development standards specified in AB 2011.

If the local government determines that the development proposal conflicts with any of the applicable development standards, it must provide the applicant with a written, exhaustive list of the standard(s) with which the project conflicts and an explanation for the reason or reasons the development conflicts with such standard(s).

Within 30 days of resubmittal of any development proposal, the local government must determine, in writing, whether the development is consistent or still inconsistent with the applicable development standards. In such subsequent review of the application, the local government shall not request the development proponent provide any new information that was not stated in the initial list of items that were determined to be in conflict.

After the local government has determined that the development is consistent with the objective standards in AB 2011, the local government must approve the development within 60 days, or 90 days, as applicable, of the date that the development is determined to be consistent. Design review may be conducted in this period, but only by the board or commission responsible for design review (usually not the City Council or Board of Supervisors).

If the project is in the coastal zone, it must also receive a coastal development permit (CDP). (§ 65912.114(e).), The CDP must be approved if it is consistent with the objective standards of the local coastal program or certified land use plan.

AB 2443 clarifies that density bonuses, concessions, waivers, and reductions of parking standards under density bonus law do not require a discretionary review process and do not constitute a basis to find the

project inconsistent with the local coastal program. (§ 65912.114(f).). Moreover, the amount of any impact fee charged to an AB 2011 project must be proportional to the increased burden on public facilities and must be offset to account for demolition or change of an existing use. (§ 65912.114(g).).

Previously, applicants were required to submit a Phase I environmental assessment and, where needed, an endangerment assessment, with the project application. AB 2243 states that these items must be required as conditions of approval. (§ 65912.114(k).).

Impacts Your Job: AB 2243 expressly provides that the Housing Accountability Act (§ 65589.5) applies to AB 2011 projects. (§ 65912.114(r).). AB 2243 also allows an applicant who submitted an AB 2011 application before December 31, 2024, to be subject to any of the provisions of the statute as revised by AB 2243 or to be subject to the provisions existing on December 31, 2024. (§ 65912.106.).

Changes to Mixed-Income Housing Qualifying Criteria (Section 65912.121).

As originally enacted, AB 2011 provided that a site on which a mixed-income housing development was proposed could not exceed 20 acres in size. AB 2243 amends this requirement, providing that the project site shall not exceed 20 acres unless the site is a regional mall, in which case the site may not exceed 100 acres. (§ 65912.121(d).). "Regional mall" refers to a site that meets all the following criteria on the date that the development proponent submits an AB 2011 application:

- The permitted uses on the site include at least 250,000 square feet of retail use.
- At least two-thirds of the permitted uses on the site are retail uses.
- At least two of the permitted retail uses on the site are at least 10,000 square feet in size. (§ 65912.101(r).).

Changes to Mixed-Income Housing Development Standards (§§ 65912.122 and 65912.123).

AB 2011 mixed-income housing development projects must provide a certain percentage of affordable housing units. AB 2243 adds a definition of "base units", which has the same meaning as in state density bonus law. (Gov. Code § 65915(o)(8)(A).). Local agencies may require that AB 2011 projects meet local inclusionary standards if they provide for a deeper level of affordability.

AB 2011 established minimum residential densities for mixed-income housing development projects in both metropolitan and non-metropolitan jurisdictions. AB 2243 provides instead that the "allowable" residential density for an AB 2011 development (to be considered the "base density" for purposes of awarding a density bonus) shall the greater of:

- The maximum allowable residential density, as defined by Section 65915(o)(6), allowed on the parcel by the local government; or
- For sites in a metropolitan jurisdiction:
    - Of less than one acre in size in a metropolitan jurisdiction, 30 du/acre;
    - Of one acre or greater on commercial corridor of less than 100 ft, 40 du/acre;
    - Of one acre or greater on commercial corridor of 100 ft or more, 60 du/acre; or
    - In a *very low vehicle travel area* or within one-half mile of major transit stop, 80 du/acre.

- For sites in a non-metropolitan jurisdiction:
  - Of less than one acre in size, 20 du/acre;
  - Of one acre or greater on commercial corridor of less than 100 ft, 30 du/acre;
  - Of one acre or greater on commercial corridor of 100 ft or more, 50 du/acre; or
  - In a *very low vehicle travel area* or within one-half mile of major transit stop, 70 du/acre.

"Very low vehicle travel area" has the same meaning as defined in Section 65589.5(h).

AB 2243 also establishes requirements for the **minimum** density at which a housing development project must be developed. These requirements are as follows:

- For a housing development application that is determined to be consistent with AB 2011 objective planning standards before January 1, 2027, the project must be developed at 50 percent or greater of the allowable residential density specified by the statute (without consideration of the density permitted by local zoning), unless the site is within one-half mile of an existing passenger rail or bus rapid transit station, in which case the project must be developed at 75 percent or greater of the allowable residential density specified by the statute.

- For a housing development project application that is deemed complete on or after January 1, 2027, the development project shall be developed at a density that is 75 percent or greater of the allowable residential density specified by the statute.

Notwithstanding these requirements, a city or county cannot subject a development project to any density limitation if the project proposes to convert existing buildings to a residential use, unless the development project includes additional new square footage that is more than 20 percent of the overall square footage of the project.

In addition to the other development standards outlined in Section 65912.123, a development project at a regional mall must comply with the following requirements: § 65912.123, a development project at a regional mall must comply with the following requirements:

- The average size of a block shall not exceed three acres. A "block" means an area fully surrounded by streets, pedestrian paths, or a combination of streets and pedestrian paths that are each at least 40 feet in width.
- At least 5 percent of the site shall be dedicated to open space.
- For the portion of the property that fronts a street that is newly created by the project and is not a commercial corridor, a building shall abut within 10 feet of the street for at least 60 percent of the frontage.

Finally, AB 2243 provides that the objective standards that a jurisdiction applies to a housing development shall not preclude the development from being built at the residential density required by AB 2011 and shall not require the development to reduce unit size to meet the objective standards.

AB 3122: Amendments to SB 35

SB 3122 makes minor amendments to the streamlined, ministerial approval process generally known as the "SB 35" process. (§ 65913.4.).

Significant Provisions

AB 3122 requires local planning departments to provide a written notice of any consistencies with objective planning standards within **30 days** after an application is resubmitted in response to a letter finding inconsistencies.

When a modification of an approved application is submitted, objective planning standards that were put in place after the initial approval can only be imposed if the square footage of the project *increases* by 15 percent or the number of units *decreases by* 15 percent; this threshold is reduced from 15 percent to 5 percent if the standards address issues of health and safety. Previously the statute allowed new standards to be applied if the project "changed" by 15 percent.

An application for a subdivision for a project that satisfies the requirements of Section 65913.4 and all local objective subdivision standards is *only* exempt from CEQA if (i) it has or will receive low-income housing tax credit financing or (ii) if the development is within (A) an incorporated city that includes some portions of an urbanized area or (B) an urbanized area or urban cluster in a county with a population greater than 250,000 people.

Finally, SB 3122 reduces the required affordability of projects submitted prior to January 1, 2019

that include at least 500 units and desire to modify a prior approval. In that case, only 20 percent of the units must be affordable, with at least 9 percent of the units affordable to very low income households and at least 11 percent affordable to households making at or below 80 percent of the area median income.

Impacts Your Job: If an application is resubmitted to address previous comments, the planning department has only 30 days after the application is resubmitted to provide written notice of any remaining conflicts with objective standards.

ACCESSORY DWELLING UNITS

SB 1211: Additional ADUs for Multifamily Properties

SB 1211 (§§ 66313, 66314, and 66323) contains various provisions allowing additional ADUs in existing multifamily properties.

Significant Provisions

SB 2011 amends Section 66323(a)(4) to allow up to eight detached accessory dwelling units on a property with an existing multifamily dwelling. However, the number of detached accessory dwelling units cannot exceed the number of existing units on the lot. For a property with a proposed multifamily dwelling, only two detached accessory dwelling units may be permitted.

SB 2011 also adds a definition of "livable space" to include only spaces intended for human habitation, including living, sleeping, eating, cooking, or sanitation. Because multifamily buildings can convert non-livable space to ADUs, this will allow spaces such as laundry rooms and community rooms to be converted to ADUs.

SB 1211 expands the type of parking that a local jurisdiction cannot require be replaced as a condition of permitting an accessory dwelling unit to include "uncovered parking spaces."

Finally, the bill clarifies that development and design standards not included in Section 66323 cannot be required for an accessory dwelling unit that meets the requirements of Section 66323(a) (“exempt” ADUs, formerly listed in § 65852.2(e)).

Action Item: Agencies should update their ordinances to address the increase in the number of detached accessory dwelling units allowed on a property with an existing multifamily dwelling and other changes required by the statute.

AB 2533: Unpermitted ADUs and Junior Accessory Dwelling Units

AB 2533 (§ 66332) limits the ability of cities and counties to enforce their codes against certain ADUs and JADUs constructed without permits.

Significant Provisions

AB 2533 specifies the process that cities and counties must follow if requested to legalize ADUs and JADUs constructed before January 1, 2020. To deny a permit for the unpermitted unit, rather than making a finding that correcting a violation is necessary to "protect the health and safety of the public or occupants of the structure," the agency must make a finding that correcting the violation is necessary to comply with Health & Safety Code Section 17920.3. The local agency also cannot penalize the applicant for having the unpermitted unit, such as by doubling permit fees, and the agency must approve necessary permits to correct noncompliance with health and safety standards. Unpermitted units cannot be required to pay impact fees or connection or capacity charges unless the utilities are needed to comply with Health & Safety Code Section 17920.3.

AB 2533 also requires agencies to inform the public about the permitting process for unpermitted accessory dwelling units and junior accessory dwelling units. After receiving a request to legalize an unpermitted unit, a city or county inspector may inspect the unit and provide recommendations to

comply with health and safety standards. Information must be available to the public and posted on the agency's website, including:

- A checklist listing the conditions in Health & Safety Code Section 17920.3 that would deem a building substandard;
- Informing potential applicants that they may obtain a confidential third-party inspection before submitting the plans.

Action Item: Agencies need to post on their websites checklists listing conditions considered substandard under Health and Safety Code section 17920.3 and informing homeowners that they can obtain a confidential third-party inspection from a licensed contractor prior to submitting an application for a permit for a JADU or ADU constructed without permits before January 1, 2020.

SB 1211: ADUs in the Coastal Zone

SB 1077 (Public Resources Code Section 30500.5) requires the California Coastal Commission and the Department of Housing and Community Development to collaborate to develop and provide guidance to local agencies to simplify the permitting process for ADUs and JADUs in the coastal zone.

Good to Know: The Coastal Commission will convene at least one public workshop to receive comments on guidance before the document is finalized.

SB 477: Recodification of the ADU and JADU Statutes

SB 477 renumbered the Government Code sections for accessory dwelling units and junior accessory dwelling units.

Government Code Sections Prior to SB 477	Current Government Code Sections
65852.150	66310-66312
65852.2	66313-66332
65852.22	66333-66339
65852.26; 65852.2(a)(10)	66340-66341; 66342

Action Item: If the local ordinance references the old Government Code provisions, agencies should update those references.

DENSITY BONUS LAW

AB 2694 & AB 3116: Density Bonus – Residential Care Facilities for the Elderly and Student Housing Developments

AB 2694 and **AB 3116** (§ 65915) are companion bills that make amendments to density bonus law related to residential care facilities for the elderly and student housing developments.

Significant Provisions

AB 2694: Residential Care Facilities: AB 2694 adds to the definition of a "senior citizen housing development," a residential care facility for the elderly, as defined in Health & Safety Code Section 1569.2. This Health & Safety Code section defines a residential care facility for the elderly as housing for persons 60 years of age or over where varying levels and intensities of care and supervision, protective supervision, personal care, or health-related services are provided.

It also defines a "shared housing unit" for purposes of a residential care facility for the elderly to include a unit without an individual kitchen that may be shared by unrelated persons, and a unit where a room that may be shared by unrelated persons meets the "minimum room area" requirements provided in density bonus definition of "shared housing unit".

Impacts Your Job: Planners now may receive requests for density bonuses for residential care facilities for the elderly (RCFEs). Note that senior housing developments are eligible for a density bonus even if no affordable housing is provided. State law provides that local agencies cannot limit rents in RCFEs.

AB 3116: Student housing developments: SB 3116 substantially modifies existing provisions applicable to student housing developments eligible for density bonuses. "Student housing developments" are defined as "a development that contains bedrooms containing two or more bedspaces that have a shared or private bathroom, access to a shared or private living room and laundry facilities, and access to a shared or private kitchen."

Additional requirements now apply to student housing. In particular:

- All units in the student housing development must be used exclusively for undergraduate, graduate, or professional students enrolled currently or in the past six months in at least six units at an institution of higher education accredited by the Western Association of Schools and Colleges or the Accrediting Commission for Community and Junior Colleges.
- As a condition of occupancy, the developer must provide evidence to the city or county that the developer has done one of the following: (i) entered into an operating agreement or master lease with one or more institutions of higher education; or (ii) established a system for confirming its renters' status as students to ensure that all units of the student housing development are occupied by students from an institution of higher education.
- The maximum density bonus is increased from 35 percent to 50 percent if more affordable housing is provided, but the student development cannot be located on a site that would require replacement housing if the project receives greater than a 35 percent density bonus.

- Any rental bed reserved for lower income students cannot be tied to a specific bedroom, and the affordability restriction provision cannot prevent a lower income student from sharing a room or unit with a student who is not lower income.
- The student housing project is now eligible for two concessions if the project includes at least 23percent of the total units for lower income students.
- No parking can be required for a bedspace in the housing development project.

Impacts Your Job: Planners need to be aware of these additional requirements if an application is made for a density bonus for a student housing development.

CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA)

SB 1395 and SB 1361: Expansion of CEQA Exemptions Relating to Shelters and Low Barrier Navigation Centers

SB 1395 expands certain exemptions from the requirements of the California Environmental Quality Act to additional public agency actions relating to homeless shelters and low barrier navigation centers.

Significant Provisions

SB 1395 and SB 1361 expand existing homeless shelter and low-barrier navigation CEQA exemptions to include:

- Actions taken to approve a contract with a homeless shelter to provide services such as case management, resource navigation, security services, residential services, and counseling services. (§ 8698.4(a)(4) and Public Resources Code § 21080.10.)
- Actions taken for a low barrier navigation center to: (1) lease land owned by the local agency for the center; (2) take other actions associated with the lease; (3) provide financial assistance; (4) construct or operate a low barrier navigation center; and (5) enter into a contract to provide services. (Public Resources Code § 21080.27.5.) “Low barrier navigation center” has the meaning provided in Section 65660.

Good to Know: The definition of “Low Barrier Navigation Center” now provides that a low barrier navigation center may be non-congregate and relocatable.

AB 2199: Extension of Infill Exemption in Unincorporated Areas

AB 2199 extends until January 1, 2032, the existing statutory CEQA exemption for multi-family residential and mixed-use housing projects on infill sites in unincorporated areas. In addition to extending the sunset date, AB 2199 provides that it cannot be used if the project may cause a substantial adverse impact to tribal cultural resources. (Public Resources Code § 21159.25.)

SB 768: HCD Study of Vehicle Miles Traveled (VMT)

SB 768 requires HCD, if it receives an appropriation for this purpose, to conduct and post on its website a study on how vehicles miles traveled (VMT) is used as a metric for measuring transportation impacts

of housing projects pursuant to CEQA. If the legislature appropriates the funds necessary for HCD's study, HCD would have until January 1, 2028 to post the completed study online. (Public Resources Code § 21099.5.)

The study must include an analysis of:

1. The Office of Planning and Research's guidelines for determining the significance of transportation impacts of project within transit priority areas;
2. How VMT impacts of various mitigation measures increase capacity and/or induce VMT;
3. The monetary and time costs of VMT mitigation measures to housing projects;
4. Exempt housing project types;
5. Differences in the availability and feasibility of mitigation measures for housing projects in rural, suburban, urban, and low VMT areas; and
6. The relationship between VMT reduction, greenhouse gas emissions, housing volume and affordability, transportation, economic development, public health, and equity.

Good to Know: SB 768 requires HCD to consult with local governments and interested parties in conducting its study.

FEES

AB 2430: Monitoring Fees for Affordable Units

AB 2430 limits the ability of cities to charge a monitoring fee to 100 percent affordable housing developments when the units are monitored by another agency. (§ 65915.3.)

Significant Provisions

AB 2430 prohibits a city or county from charging a monitoring fee to ensure continuing affordability of affordable units provided to obtain a density or required by a local inclusionary housing ordinance, if all of the following conditions are met:

1. The housing development is 100 percent affordable as defined in Section 65915(b)(1)(G).
2. The development received a density bonus under Section 65915.
3. The housing development is subject to a recorded regulatory agreement with the California Tax Credit Allocation Committee (CTCAC), the California Housing Finance Authority (FHA), or HCD that requires compliance with Section 65915.
4. Prior to receiving a building permit, the applicant provides a fully executed Tax Credit Reservation Letter indicating the applicant accepted the award.
5. The applicant provides the local government a copy of the recorded regulatory agreement with CTCAC, FHA, or HCD.

6. The applicant agreed to provide the local government the compliance monitoring document required by CTCAC, FHA, or HCD.

Starting January 1, 2025, an existing occupied housing development that is subject to a monitoring fee will no longer be subject to that fee if it meets all of the requirements listed above.

A city or county may still charge a monitoring fee on a housing development that meets the criteria of Section 65915(b)(1)(G) if any of the following conditions are met:

1. The applicant utilizes a local incentive program that results in development of units with deeper affordability or more affordable units than what is monitored by CTCAC, FHA, or HCD.
2. The applicant uses a local incentive program that results in the development of units that are affordable to moderate income households.
3. The applicant accepts a local funding source that results in development of units with different affordability than what is monitored for by CTAC, FHA, or HCD.
4. The applicant accepts funding from a regional, state, or federal agency other than CTCAC, FHA, HCD, or the California Debt Limit Allocation Committee that requires monitoring activities that would not otherwise be conducted by these entities or the public agency issuing the funding.

Lastly, a city or county that is not collecting a monitoring fee pursuant to this section has no obligation to monitor a housing development for compliance with state density bonus law.

Good to Know: A city or county may not be able to charge a monitoring fee to certain affordable projects.

Impacts Your Job: If a city or county routinely charges a monitoring fee on inclusionary or density bonus units, the city or county should revisit projects that are paying the fee to determine if they meet the above-described requirements that would prohibit charging a monitoring fee.

AB 2663: Inclusionary Housing In-Lieu Fees

Starting January 1, 2026, AB 2663 (§ 65906.6) requires agencies with an in-lieu fee alternative for inclusionary housing programs to track and annually publish on their website the amount of inclusionary in-lieu fees collected in the previous year and whether the fees are intended to be used for a project. Additionally, starting January 1, 2026 and every five years after that, the local agency must post the amount of inclusionary in-lieu fees collected in the past five years and the projects that the fees were spent on.

Action Item: The agency's first online publication of information for inclusionary in-lieu fees must satisfy both the annual and five-year reporting requirements. Cities and counties should commence to collect this information so that it can be posted as required.

AB 2553: Fees Near Major Transit Stops.

AB 2553 (§ 66005.1 and Public Resources § 21064.3) expands the definition of "major transit stop" and limits the ability of cities and counties to levy traffic impact fees for housing developments near major transit stops and in transit priority areas.

Significant Provisions

Previously a "major transit stop" included, among other locations, the intersection of two or more major bus routes with a frequency of service interval of 20 minutes or less during the morning and afternoon peak commute periods. This bill now revises the definition of "major transit stop" to increase the frequency of service interval to 20 minutes. (Public Resources Code § 21064.3.)

Section 66005.1 previously limited traffic impact fees that could be charged to housing developments located within one-half mile of a transit station. It now limits fees within any transit priority area, which includes any site within one-half mile of a "major transit stop," if the major transit stop is programmed to be completed within one year from the scheduled completion and occupancy of the housing development.

Impacts Your Job: Cities and counties may be required to set lower traffic impact mitigation fees for housing developments near major transit stops, instead of just at transit stations. The expanded definition of "major transit stop" will affect many projects' eligibility for other benefits, such as CEQA exemptions, parking reductions, and increased density under density bonus law and AB 2011.

SB 937: Impact Fees for Housing Developments Paid at Occupancy

SB 937 (§ 66007) requires that payment of impact fees for many housing development projects be delayed until issuance of a certificate of occupancy, temporary certificate of occupancy, or final inspection.

Significant Provisions

SB 937 restricts the ability of cities and counties to collect fees for the purpose of defraying the cost of public improvements until issuance of a certificate of occupancy, temporary certificate of occupancy, or final inspection. The restriction applies to "designated residential projects," which include:

- 100 percent affordable projects.
- Low barrier navigation centers.
- Projects approved under AB 2011.
- Projects meeting the requirements for approval under SB 35 (§ 65913.4(a)).
- Projects meeting the requirements for approval under SB 4 (§ 65913.16(c)).
- Projects eligible for a density bonus.
- Projects with 10 or fewer units.

The amount charged must be the same as would have been charged at building permit issuance, with no interest or other fees permitted. The agency may determine if the fees will be paid for each dwelling at occupancy, or when a certain percentage of units have been approved for occupancy, or when all the dwellings have been approved for occupancy.

However, fees may be collected earlier under the following conditions, except for projects where 49 percent of the units are reserved for lower income households:

1. Utility connection fees may be collected when the application for service is received, so long as those fees do not exceed the costs incurred. It is not clear if this provision applies to capacity fees.
2. The fees will reimburse the agency for expenditures previously made if those expenditures have not been paid by another party.
3. The agency determines that the fees will be used for water or sewer service; transportation; or public safety facilities for the residential development, and an account has been established and funds appropriated for those facilities.

For 49 percent affordable projects, the developer may either post a performance bond or letter of credit; if no letter of credit is posted, the unpaid fees may be imposed as a lien and collected with property taxes. This provision does not apply to 100 percent affordable projects.

Agencies may require applicants to execute a contract to pay the fees if they are not paid with the building permit. If required, the contract must be recorded against the property and constitutes a lien against the property and may require the property owner to notify the agency of each opening of escrow and authorize payment to the agency out of escrow. Agencies must post the model form of contract on their website. The City Council or Board of Supervisors may authorize an employee to sign the contract.

Good to Know: SB 937 provides no separate definition of "fees and charges." The definition of "fees" appears to be that in Section 66000(b), which defines "fees" as those imposed for the purpose of defraying all or a portion of the cost of public facilities related to the development project. However, park dedication fees paid under the Quimby Act (§ 66477), fees for processing applications, and fees collected under development agreements are excluded from the definition of "fees." Affordable housing fees appear to be exempt because they are not fees for "public facilities." However, agency staff should consult with their counsel regarding which fees are affected by this statute.

Action Items: Cities and counties should immediately review the fees paid at building permit issuance to determine which may be affected by this bill and to determine if the appropriate determinations can be made to continue collecting fees at building permit. If any fees cannot be collected until occupancy or final inspection and agencies desire to enter into and record contracts with developers, a model contract needs to be posted on the agency's website, and ideally a staff member should be authorized to sign the contract.

Impacts Your Job: Agencies will need to establish procedures to collect fees at occupancy or final inspection and to record releases if a contract was recorded. Because the fees must be the same as would have been charged at building permit issuance, agencies may wish to consider calculating the fees that will be due at occupancy at the time the building permit is issued.

AB 1820: Good Faith Fee Estimates

AB 1820 (§§ 65940.1, 65941.1, 65943.1) requires cities and counties to provide good faith fee estimates to developers after a project is approved and, if requested, after a preliminary application is filed.

Significant Provisions

AB 1820 requires a city, county, or city and county to provide, upon request, preliminary fee and exaction estimates within 30 business days of submission of a preliminary application. (§ 65941.1.). Within 30 business days of a housing development project receiving all necessary approvals to be eligible to apply for and obtain a building permit, cities and counties must provide the project proponent with an itemized list and good faith estimate of the fees and exactions. (§ 65943.1.). Cities and counties are only responsible to provide estimates of fees and exactions that they impose; the applicant must request fee schedules from other agencies, such as school districts, that may impose additional fees.

The statute defines "exactions" as defined in Section 65940.1 to include:

- A construction excise tax;
- A requirement to provide public art or an in-lieu payment;
- Parkland dedications or park in-lieu fees imposed under the Subdivision Map Act (Quimby Act fees);
- Special Mello-Roos tax.

It defines "fees" to include any fee or charge described in:

- The Mitigation Fee Act (primarily impact fees);
- Fees for development projects constructed after a natural disaster (§ 66010 *et seq.*);
- Fees adopted under Section 66016 *et seq.*; and
- Fees described in Section 66020 *et seq.*

However, "fees" do not include:

- Cost of providing electrical or gas service from a publicly owned utility;
- Fees to comply with CEQA.

Applicants may request fees schedules. For the fee estimate provided after project approval, if the agency calculates fees using a cost recovery method, the estimate must be based on the average fees imposed on a similar project.

These estimates are not binding.

Action Item: Cities and counties should determine which fees must be estimated and provided to developers and develop a method for estimating them. Project approvals will need to be accompanied by fee estimates. Cities may want to combine the required estimate with a notice of the right to protest the fees contained in Section 66020.

Good to Know: The fee and exaction estimates required by AB 1820 are not legally binding.

AB 3177: Restrictions on Required Dedications to Reduce Traffic Impacts.

AB 3177 (§ 66005.1(c)) limits the ability of cities and counties to require dedications of property to relieve traffic congestion.

Significant Provisions

This bill prohibits local agencies from imposing land dedication requirements on housing developments for purposes of mitigating vehicular traffic impacts, achieving an adopted level of service, or achieving a desired roadway width. A dedication requirement may be required if:

- The housing development is not in a transit priority area **and** has a street frontage of 500 feet or more; or
- The purpose is to construct public improvements, including, but not limited to, sewers and sidewalks; or
- The requirement is imposed as a condition of approval of a specific housing development for traffic safety features if the agency makes a finding supported by substantial evidence that the dedication is necessary to preserve the health, safety, or welfare of the public, including pedestrians, cyclists, and children.

For purposes of this bill, a "housing development" is a project where at least 50 percent of floorspace is for residential use.

Impacts Your Job: In most instances, cities and counties will not be able to require roadway dedications from housing developments to ease traffic congestion.

AFFORDABLE HOUSING BILLS

AB 846: Definition of Affordable Rent and Rent Caps on Tax Credit Projects (Health & Safety Code § 50053 & 50199.25)

AB 846 (Health & Safety Code §§ 50053 and 50199.25) changes the definition of "affordable rent" under the Health & Safety Code for housing developments where at least 80 percent of the units, exclusive of managers' units, are dedicated to lower income households so that it matches the affordable rent provisions of the tax-exempt bond program, the low income housing tax credit program, or other local, state, or federal program providing public financing or public financial assistance to the housing development. The legislation also requires the Tax Credit Allocation Committee ("TCAC") to adopt regulations to cap increases on annual rents for tax credit projects.

Significant Provisions

State law provides that the definitions of "affordable rent" found in Health and Safety Code Section 50053 apply in numerous circumstances. The following are some examples of the 58 provisions of state law that currently reference Health and Safety Code Section 50053:

- Density bonus law;
- Surplus land act;
- SB 35 streamlined ministerial approval for housing developments;
- Real property tax exemption laws;
- Certain exemptions from CEQA;
- Replacement housing laws; and
- Law governing the use of the low- and moderate-income housing asset funds administered by successors to the housing assets of a community's dissolved redevelopment agencies.

The definition of affordable rent under Health and Safety Code Section 50053 differs from other affordable housing programs such as the low-income housing tax program. Affordable housing operators and local agency staff charged with monitoring affordable housing development must calculate multiple "affordable rents" for a residential unit under the varying definitions that apply under each program. The lowest of all rents applies to the unit.

AB 846 will simplify the calculation of affordable rent for affordable housing developments that meet the following criteria:

- The affordable housing development is using a state program in which the law governing that program provides that the "affordable rent" definitions in Health and Safety Code Section 50053 apply.
- 80 percent of the residential units (excluding managers' units) in the development are dedicated to lower income households.
- The affordable housing development receives, on or after January 1, 2025, an award of one of the following:
    - Federal or state low-income housing tax credits;
    - Tax-exempt private activity bonds or general obligation bonds; or
    - Local, state, or federal loans or grants.

AB 846 provides that if the affordable housing developments meets these requirements, the definition of affordable rent under the other housing programs applies rather than the Health and Safety Code definition. For example, if a development is using HOME funds as well as Low and Moderate Income Housing Asset Funds, the HOME rents apply, not the Health and Safety Code Section 50053 definitions of affordable rent. Similarly, if a development is using low income housing tax credits and Low and Moderate Income Housing Asset Funds, the tax credit rents apply, not the Health and Safety Code Section 50053 definitions of affordable rent.

Good to Know: TCAC annually publishes maximum rents by income category on its website so the TCAC rents are easy to access. The TCAC rents are also based on the date the developments are placed in service, which is the date the certificate of occupancy is issued for the units, so it is helpful to have that information.

Impacts Your Job: This change should considerably ease the monitoring of eligible affordable housing developments by local jurisdictions as it will make the calculation of affordable rent consistent with other programs, thereby eliminating the need to calculate the affordable rent under varying definitions. However, staff monitoring local affordable housing developments should verify if other definitions of affordable rent may also apply given the funding sources for the housing development.

The legislation also requires TCAC to adopt regulations to cap increases on annual rents for tax credit projects by June 30, 2025, and thereafter to assess and possibly modify the rent caps annually.

AB 2926: Assisted Housing Developments; Expiration of Affordability Restrictions

AB 2926 (§§ 65863.10, 65863.11, and 65863.13) makes several changes to state law relating to the California Preservation Notice Law, which requires an owner to provide certain notices to tenants and potential buyers where the affordability restrictions applicable to an "assisted housing development" are set to expire.

Significant Provisions

Currently, state law requires an owner of an assisted housing development who is proposing termination of a subsidy contract or prepayment of governmental assistance or an owner of an assisted housing development which has expiring rental restrictions to provide a 12-month and 6-month notice of the proposed change(s) to each tenant household residing in the assisted housing development.

Good to Know: AB 2926 expands the definition "assisted housing development" to include a development that receives the following assistance from a city or county in exchange for affordability restrictions: SB 6 (2022); streamlining assistance pursuant to AB 2011 (2022); SB 35 (§ 65913.4); or the Affordable Housing on Faith and Higher Education Lands Act of 2023. However, affordable units provided only under local inclusionary programs are not considered to be "assisted housing developments," although affordable units provided in exchange for a density bonus or other provisions of density bonus law are considered to be "assisted housing developments."

AB 2926 makes several technical amendments to these noticing requirements. First, in the 12-month notice to tenants, the owner is required to state whether the owner might impose *any* rent increase during the 12 months following prepayment, termination, or the expiration of rental restrictions, as opposed to just rent increases in excess of the limits established by the Low-Income Housing Tax Credit program. Similarly, in the 6-month notice to tenants, the owner must now state that they will accept enhanced Section 8 housing choice vouchers if existing tenants receive them.

The Preservation Notice Act also requires an owner proposing prepayment or termination, or with expiring rental restrictions, to give notice of the opportunity to submit a purchase offer at full market value one year in advance to potential buyers (i.e., all "qualified entities" as certified by HCD) interested in preserving affordability.

Under the new provisions, an owner who receives a bona fide purchase offer- at a price determined by the parties or by a qualified appraiser - from a preservation buyer within 270 days (or 9 months) of the notice of the opportunity to purchase must inform HCD of all such offers within 90 days and either (1) accept the bona fide offer from a qualified entity to purchase and execute a purchase agreement or (2)

record a new regulatory agreement with a term of at least 30 years that minimally meets the criteria of Section 65863.13(a).

If the owner does not receive a bona fide offer from one or more qualified entities within 270 days of the notice of opportunity to purchase or if all bona fide offers are withdraw, the owner may either (1) sell the property to any buyer, (2) extend the affordability restrictions for any period of time, or (3) maintain ownership of the property and allow the expiration, termination or prepayment to occur at the end of applicable noticing period.

An owner seeking an exemption from the noticing and sale requirements of the Act may not terminate a tenancy due to planned renovation during escrow.

Finally, AB 2926 clarifies that all of the following may enforce both the noticing and sale provisions: an affected tenant (as defined in § 65863.10(a)(2)), a group of affected tenants that meets the requirements of a legitimate tenant organization, as defined in federal regulations, and a tenant association (as defined in § 54863.11(a)(4).).

OTHER BILLS

AB 2117: Extensions of Permit Approval for Litigation

AB 2117 (§ 65009(f)) delays the expiration of permit or project approval for the duration of an appeal period and any litigation over the project approval.

Significant Provisions

AB 2117 provides that the time before a permit or project approval issued by a city, county, or state agency expires does not include the period of time during which the approval of the permit or project is subject to a "pending" action or proceeding. "Pending" includes an appeal period and has the same meaning as in Code of Civil Procedure Section 1049. The period of delay extends from the litigation's commencement until final determination upon appeal or the time for appeal has passed.

Good to Know: AB 2117 defines "permit" as any development permit, but excludes the following types of permits: (1) building permits for the construction, demolition, or alteration of buildings, whether discretionary or ministerial; (2) minor or standard excavation and grading; (3) demolition; and (4) nondiscretionary permit or review required or issued by a local agency after the entitlement process has been completed.

Impacts Your Job: Permits do not expire while the permit or project is subject to litigation.

AB 2729: 18-Month Extension of Permit Approvals

AB 2729 (§ 65914.4) delays the expiration of certain permits issued for housing developments by 18 months.

Significant Provisions

AB 2729 extends by 18 months entitlements for housing development projects that were issued prior to, and in effect on, January 1, 2024 and will otherwise expire before December 31, 2025. The provision will not apply if the permit was previously extended for at least 18 months during 2024 under either state law or by a local agency. For purposes of this statute, a "housing development project" is a project where two-thirds of the square footage is dedicated for residential use (excluding underground space).

"Housing entitlements" include approvals and permits issued by state agencies, any permit subject to the Permit Streamlining Act, ministerial approvals such as those under SB 35 and AB 2011, tentative maps, and vested rights associated with permits. However, development agreements, preliminary applications, and tentative maps extended for 24 months under state law after January 1, 2024 are not considered to be "housing entitlements" for this purpose.

Action Item: Cities and counties will need to determine which project approvals have been extended by this legislation.

SB 1210: Electrical, Gas and Sewer Service Connections for New Housing Developments

SB 1210 (Public Utilities Code §§ 8400-8401) imposes new requirements on corporate utility providers, special districts, and municipal corporations operating public utilities to post certain information related to utility services for new housing construction.

Significant Provisions

SB 1210 requires electrical, gas, sewer, and water service utilities to post on their websites by January 1, 2026, the following information related to new housing construction: (1) the schedule of estimated fees for typical service connections for accessory dwelling units, mixed-use developments, multifamily structures, and single-family homes; and (2) estimated timeframes for completing typical connections for each housing type.

Good to Know: SB 1210 applies to municipal corporations operating a public utility but excludes agencies that are already required under § 65940.1 to post a schedule of fees and exactions online and continues to post this information.

The requirements imposed by SB 1210 do not apply to utilities with fewer than 4,000 service connections that do not maintain a website due to hardship. Such hardship must be evidenced by the utility annually adopting a resolution in a public meeting that is properly noticed and supported by detailed evidence. Examples of proper findings include, but are not limited to, inadequate access to broadband communications network facilities, significantly limited financial resources, or insufficient staff resources.

GENERAL PLANS – NON-HOUSING ELEMENTS

While the following two bills do not relate directly to housing, these general plan updates may be due along with the seventh cycle Housing Element revisions.

AB 1889: Conservation Element: Wildlife and Habitat Connectivity

AB 1889 amended Section 65302 to require that certain fish, wildlife, and habitat connectivity considerations be included in the conservation element.

Significant Provisions

The "Room to Roam" Act requires cities and counties to revise their conservation element to consider wildlife and habitat connectivity in both existing and planned land use projects upon the next update of one or more general plan elements on or after January 1, 2028. The bill's purpose is to supplement Executive Order No. N-82-20 (Public Resources Code Section 71450) in assisting with the state's efforts to conserve at least 30 percent of California's land and coastal waters by 2030 and to contribute to the preservation and restoration of biodiversity through wildlife connectivity. The conservation element must identify and analyze connectivity areas, permeability, natural landscape areas, and planned or existing wildlife passage features; must consider the impacts of development and barriers caused by it to wildlife and habitat connectivity; and must analyze and consider opportunities to remediate existing connectivity barriers and restore degraded habitat and open space.

Good to Know: "Room to Roam" Act does not require updates to the conservation element until on or after January 1, 2028, but will require an update along with the seventh cycle Housing Element in 2031 if no general plan update was completed before that date. If the jurisdiction already has policies in place that meet the requirements of the Act, it can incorporate those policies in the general plan by reference.

AB 2684: Safety Element: Extreme Heat

AB 2684 added Section 65302.011 to require an analysis of extreme heat in the safety element.

Significant Provisions

AB 2684 requires a city or county to update the safety element of its general plan to address the hazards caused by extreme heat upon the next revision of one or more elements of the general plan on or after January 1, 2028.

The definition of "Extreme Heat" has the same meaning as in Public Resources Code Section 71410, which defines it as increasing temperatures or other meteorological conditions that could result in any of the following:

> (A) Extreme heat wave.
>
> (B) Heat health event.
>
> (C) Heat watch, warning, or advisory from the National Weather Service, the Office of Emergency Services, or a county health officer.

(D) A proclamation of a state of emergency by the Governor pursuant to Section 8625 of the Government Code.

If the jurisdiction has adopted an extreme heat action plan or document that fulfills the goals of AB 2684, the jurisdiction can summarize and incorporate that plan or document in the safety element. The jurisdiction may also use or reference information in the Extreme Heat Action Plan described in Public Resources Code Section 71361 and the State Hazard Mitigation Plan required by the Federal Disaster Mitigation Act of 2000 (Public Law 106-390).

Good to Know: The safety element does not need to be updated to incorporate the requirements of AB 2684 until after January 1, 2028, but will require an update along with the seventh cycle Housing Element in 2031 if no general plan update was completed before that date.

Impacts Your Job: After the first revision to incorporate the analysis of extreme heat, the safety element shall be reviewed and, if necessary, revised upon each revision of the Housing Element or local hazard mitigation plan, but at least every eight years, to identify new information relating to extreme heat hazards that was not available during the previous revision of the safety element.

APPENDIX A - SECTION 65913.4(A)(6)(B), 9/16/2021

Related to SB 9, SB 450 adds language that the project must comply with 65913.4(A)(6)(B)-(K) as it existed on Sept 16, 2021. This language is included in the summary for easier access to this text, since this statute has and is likely to change in the future.

(6) The development is not located on a site that is any of the following:

(B) Either prime farmland or farmland of statewide importance, as defined pursuant to United States Department of Agriculture land inventory and monitoring criteria, as modified for California, and designated on the maps prepared by the Farmland Mapping and Monitoring Program of the Department of Conservation, or land zoned or designated for agricultural protection or preservation by a local ballot measure that was approved by the voters of that jurisdiction.

(C) Wetlands, as defined in the United States Fish and Wildlife Service Manual, Part 660 FW 2 (June 21, 1993).

(D) Within a very high fire hazard severity zone, as determined by the Department of Forestry and Fire Protection pursuant to Section 51178, or within a high or very high fire hazard severity zone as indicated on maps adopted by the Department of Forestry and Fire Protection pursuant to Section 4202 of the Public Resources Code. This subparagraph does not apply to sites excluded from the specified hazard zones by a local agency, pursuant to subdivision (b) of Section 51179, or sites that have adopted fire hazard mitigation measures pursuant to existing building standards or state fire mitigation measures applicable to the development.

(E) A hazardous waste site that is listed pursuant to Section 65962.5 or a hazardous waste site designated by the Department of Toxic Substances Control pursuant to Section 25356 of the Health and Safety Code, unless the State Department of Public Health, State Water Resources Control Board, or Department of Toxic Substances Control has cleared the site for residential use or residential mixed uses.

(F) Within a delineated earthquake fault zone as determined by the State Geologist in any official maps published by the State Geologist, unless the development complies with applicable seismic protection building code standards adopted by the California Building Standards Commission under the California Building Standards Law (Part 2.5 (commencing with Section 18901) of Division 13 of the Health and Safety Code), and by any local building department under Chapter 12.2 (commencing with Section 8875) of Division 1 of Title 2.

(G) Within a special flood hazard area subject to inundation by the 1 percent annual chance flood (100-year flood) as determined by the Federal Emergency Management Agency in any official maps published by the Federal Emergency Management Agency. If a development proponent is able to satisfy all applicable federal qualifying criteria in order to provide that the site satisfies this subparagraph and is otherwise eligible for streamlined approval under this section, a local government shall not deny the application on the basis that the development proponent did not comply with any additional permit requirement, standard, or action adopted by that local government that is applicable to that site. A development may be located on a site described in this subparagraph if either of the following are met:

(i) The site has been subject to a Letter of Map Revision prepared by the Federal Emergency Management Agency and issued to the local jurisdiction.

(ii) The site meets Federal Emergency Management Agency requirements necessary to meet minimum flood plain management criteria of the National Flood Insurance Program pursuant to Part 59 (commencing with Section 59.1) and Part 60 (commencing with Section 60.1) of Subchapter B of Chapter I of Title 44 of the Code of Federal Regulations.

(H) Within a regulatory floodway as determined by the Federal Emergency Management Agency in any official maps published by the Federal Emergency Management Agency, unless the development has received a no-rise certification in accordance with Section 60.3(d)(3) of Title 44 of the Code of Federal Regulations. If a development proponent is able to satisfy all applicable federal qualifying criteria in order to provide that the site satisfies this subparagraph and is otherwise eligible for streamlined approval under this section, a local government shall not deny the application on the basis that the development proponent did not comply with any additional permit requirement, standard, or action adopted by that local government that is applicable to that site.

(I) Lands identified for conservation in an adopted natural community conservation plan pursuant to the Natural Community Conservation Planning Act (Chapter 10 (commencing with Section 2800) of Division 3 of the Fish and Game Code), habitat conservation plan pursuant to the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq.), or other adopted natural resource protection plan

(J) Habitat for protected species identified as candidate, sensitive, or species of special status by state or federal agencies, fully protected species, or species protected by the federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq.), the California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code), or the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of Division 2 of the Fish and Game Code).
(K) Lands under conservation easement.

American Canyon Townhomes Project

in the

City of American Canyon

TRAFFIC IMPACT STUDY

1) INTRODUCTION

This transportation analysis describes the existing and future conditions for transportation and traffic circulation both with and without the proposed project. The study presents information on the regional and local roadway networks, pedestrian and transit conditions, and provides an analysis of the effects on transportation facilities associated with the project. This study also describes the regulatory setting; the criterion used for determining the significance of environmental impacts; and summarizes potential environmental impacts and appropriate mitigation measures when necessary. In addition, this analysis provides an assessment of the site access and internal circulation. This study has been conducted in accordance with the requirements and methodologies set forth by Napa County, Caltrans, and the applicable provisions of CEQA.

2) PROJECT DESCRIPTION

The proposed project would include construction of 100 townhomes on a parcel that is currently vacant. The project is located south of Crawford Way and west of State Route 29 (SR 29) in the City of American Canyon. All access to the site will be from a driveway onto Crawford Drive west of SR 29. **Figure 1** shows the location of the project and the surrounding roadway network. **Figure 2** shows the proposed site plan for the project.

3) ENVIRONMENTAL SETTING

This section of the report describes the roadways, traffic conditions and other existing transportation characteristics in the vicinity of the project. The primary basis of the analysis is the peak hour level of service for the key intersections. The hours identified as the “peak” hours were generally between 7:00 a.m. and 8:00 a.m. and 4:00 p.m. and 5:00 p.m. for all of the transportation facilities described. Throughout this report, these peak hours will be identified as the AM and PM peak hours, respectively.

3.1 Project Study Intersections

Based on the project's trip generation and the potential for traffic impacts a list of project study intersections was prepared based on Caltrans' guidelines. **Figure 1** shows the location of the project study intersections. As mentioned above, all access to the site will be from Crawford Drive.

There are three (3) study intersections that have been included in the analysis. These include the intersections of Crawford Drive with James Road, State Route 29, and also the project entrance. The existing intersections on Crawford Drive are controlled by stop signs with all-way stop control at James Road and side street stop control for Crawford Drive on its approach to SR 29.

3.2 Traffic Analysis Scenarios

The study intersections were evaluated for the following six scenarios:

- Scenario 1: *Existing Conditions* – Level of Service (LOS) based on existing peak hour volumes and existing intersection configurations.

- Scenario 2: *Existing Plus Project* – Existing traffic volumes plus trips from the proposed project.

- Scenario 3: *Baseline (No Project) Conditions* – The Baseline scenario is based on the existing volumes plus growth in background traffic (for two years) plus the traffic from reasonably foreseeable developments that could substantially affect the volumes at the project study intersections.

- Scenario 4: *Baseline Plus Project Conditions* – This scenario is based on the Baseline traffic volumes plus the trips from the proposed project.

- Scenario 5: *Cumulative Conditions* – This scenario includes cumulative (Year 2040) volumes based on buildout of the City's General Plan and the most recent release of the Countywide Travel Demand Model.

- Scenario 6: *Cumulative Plus Project Conditions* – This scenario includes cumulative (Year 2040) volumes based plus the trips from the proposed project.

3.3 Existing Roadway Network

The following is a detailed description of the roadways that could be affected by the project:

- **State Route 29 (SR 29) -** State Route 29 (SR-29) is a state highway that travels in a north-south direction between I-80 in Vallejo and SR-20 in Upper Lake. Within American Canyon, SR-29 bisects the City as a four-lane highway with signalized intersections at major cross streets. It serves as a primary route for commuter and industrial truck traffic traveling between Napa County and the San Francisco-Oakland Bay Area.

- **American Canyon Road –** American Canyon Road is a major east-west, four-lane arterial that traverses between Wetlands Edge Road, from within the City, to I-80, where it forms a grade separated interchange. American Canyon Road serves primarily residential and commuter traffic in the City, and acts as a rural connector east of the City limits.

- **Donaldson Way -** Donaldson Way is an east-west collector street that serves areas east and west of SR 29. Donaldson Way extends from Newell Drive to the east, through SR 29, to Benton Way. At Benton Way, Donaldson Way changes from an east-west alignment to a north-south alignment, extending to Eucalyptus Drive on the north. Donaldson Way has a signalized intersection with SR 29.

- **Crawford Way and James Road** – Crawford Way and James Road are both designated as two lane collector streets in the City's General Plan and have a 25 mph speed limit. Crawford Way extends west State Route 29 to terminate at Chaucer Lane. James Road extends north from American Canyon Road to terminate at Wilson Street.

3.4 Intersection Analysis Methodology

Existing operational conditions at the two (2) study intersections have been evaluated using the methodology set forth in the 6th Edition of the *Highway Capacity Manual* (*HCM*) Level of Service (LOS) methodology with Synchro software.[1] Level of service is an expression, in the form of a scale, of the relationship between the capacity of an intersection (or roadway segment) to accommodate the volume of traffic moving through it at any given time. The level of service scale describes traffic flow with six ratings ranging from A to F, with "A" indicating relatively free flow of traffic and "F" indicating stop-and-go traffic characterized by traffic jams.

As the amount of traffic moving through a given intersection or roadway segment increases, the traffic flow conditions that motorists experience rapidly deteriorate as the capacity of the intersection or roadway segment is reached. Under such conditions, there is general instability in the traffic flow, which means that relatively small incidents (e.g., momentary engine stall) can cause considerable fluctuations in speeds and delays that lead to traffic congestion. This near-capacity situation is labeled level of service (LOS) E. Beyond LOS E, the intersection or

[1] *Highway Capacity Manual – Sixth Edition*, Transportation Research Board, Washington D.C., 2016

roadway segment capacity has been exceeded, and arriving traffic will exceed the ability of the intersection to accommodate it.

For signalized intersections, The CCTA standards are based on LOS and the volume to capacity ratio (V/C) for the entire intersection. The *HCM* methodology determines the capacity of each lane group approaching the intersection. The LOS is then based on average control delay (in seconds per vehicle) for the various movements within the intersection. A combined weighted average control delay and LOS are presented for the intersection. A summary of the HCM results and copies of the detailed HCM LOS calculations are included in the appendix to this report. **Table 1** summarizes the relationship between LOS, average control delay, and the volume to capacity ratio at signalized intersections.

For unsignalized (all-way stop controlled and two-way stop controlled) intersections, the average control delay and LOS operating conditions are calculated by approach (e.g., northbound) and movement (e.g., northbound left-turn) for those movements that are subject to delay. In general, the operating conditions for unsignalized intersections are presented for the worst approach. **Table 2** summarizes the relationship between LOS and average control delay at unsignalized intersections.

3.5 Existing Intersection Capacity Conditions

The existing intersection geometry at each of the project study intersections can be seen in **Figure 3.** The traffic volumes at the study intersections for weekday AM and PM peak hours are presented in **Figure 4**. Existing traffic data for the study intersections was obtained from peak hour traffic, pedestrian, and bicycle counts conducted on June 14 and 15, 2023. **Table 3** summarizes the associated LOS computation results for the existing weekday AM and PM peak hour conditions. Please note that the corresponding LOS analysis calculation sheets are presented in the *Traffic Analysis Appendix*. As shown in **Table 3**, all of the study intersections currently have acceptable conditions (LOS D or better) during the weekday AM and PM peak hours.

3.6 Planned Roadway Improvements

The existing General Plan includes proposed improvement projects planned to support buildout of the existing General Plan land uses. The roadway network changes in the area are identified by the Napa County General Plan, the American Canyon General Plan Circulation Element Update, and MTC's Transportation 2035 Plan, and the State Route 29 Gateway Corridor Improvement Plan. These documents call for widening of SR-29 to three lanes in each direction from the SR-221 interchange to the southern County Line. A flyover ramp would be constructed for traffic traveling from southbound SR-221 (Napa-Vallejo Highway) to southbound SR-12/SR-29. A grade-separated diamond interchange is planned at the SR-29/SR-12/Airport Boulevard intersection. Additionally, an extension of Newell Drive to connect the existing section to SR-29

TABLE 1
SIGNALIZED INTERSECTION LEVEL OF SERVICE DEFINITIONS

Level of Service	Description of Operations	Average Delay (sec/veh)	Volume to Capacity Ratio
A	Insignificant Delays: No approach phase is fully used and no vehicle waits longer than one red indication.	≤ 10	< 0.60
B	Minimal Delays: An occasional approach phase is fully used. Drivers begin to feel restricted.	> 10 to 20	> 0.61 to 0.70
C	Acceptable Delays: Major approach phase may become fully used. Most drivers feel restricted.	> 20 to 35	> 0.71 to 0.80
D	Tolerable Delays: Drivers may wait through no more than one red indication. Queues may develop but dissipate without excessive delays.	> 35 to 55	> 0.81 to 0.90
E	Significant Delays: Volumes approaching capacity. Vehicles may wait through several signal cycles and long vehicle queues from upstream.	> 55 to 80	> 0.91 to 1.00
F	Excessive Delays: Represents conditions at capacity, with extremely long delays. Queues may block upstream intersections.	> 80	> 1.00

SOURCES: *Highway Capacity Manual – Sixth Edition*, Transportation Research Board, 2016.

TABLE 2
UNSIGNALIZED INTERSECTION LEVEL OF SERVICE DEFINITIONS

Level of Service	Description of Operations	Average Delay (seconds/vehicle)
A	No delay for stop-controlled approaches.	0 to 10
B	Operations with minor delays.	> 10 to 15
C	Operations with moderate delays.	> 15 to 25
D	Operations with some delays.	> 25 to 35
E	Operations with high delays and long queues.	> 35 to 50
F	Operation with extreme congestion, with very high delays and long queues unacceptable to most drivers.	> 50

TABLE 3
EXISTING INTERSECTION LEVEL OF SERVICE CONDITIONS

	INTERSECTION	CONTROL	PEAK HOUR	EXISTING	
				Delay	LOS
1	CRAWFORD WAY & JAMES ROAD	All Way Stop	AM	7.5	A
			PM	8.9	A
2	CRAWFORD WAY & PROJECT DRIVEWAY	Side Street Stop	AM	1.2 (9.2)	A
			PM	3.5 (9.2)	A
3	CRAWFORD WAY & BROADWAY (SR-29)	Side Street Stop	AM	0.2 (16.3)	A (C)
			PM	1.4 (41.9)	A (E)

SOURCE: Abrams Associates, 2023

NOTES: HCM LOS results are presented in terms of average intersection delay in seconds per vehicle. For stop-controlled intersections the results for the worst side street approach are presented.

and provide additional north-south vehicle capacity through the City is proposed in the Circulation Element. In addition, it should be noted that west of the study area Wetlands Edge Road is ultimately planned to be extended north to Green Island Road and south to Kimberly Drive.

3.7 Pedestrian and Bicycle Facilities

Bicycle paths, lanes and routes are typical examples of bicycle transportation facilities, which are defined by Caltrans as being in one of the following three classes:

Class I – Provides a completely separated facility designed for the exclusive use of bicyclists and pedestrians with crossing points minimized.
Class II – Provides a restricted right-of-way designated lane for the exclusive or semi-exclusive use of bicycles with through travel by motor vehicles or pedestrians prohibited, but with vehicle parking and cross-flows by pedestrians and motorists permitted.
Class III – Provides a right-of-way designated by signs or permanent markings and shared with pedestrians and motorists.

There are sidewalks along some streets in the study area, including the north side of Crawford Way adjacent to the project site. There is also an eight-foot wide sidewalk along the western side of State Route 29 to the south of the project site and it is assumed this would need to be continued along the project's eastern frontage. With the exception of American Canyon Road, most roadways in the study area do not have bicycle lanes. The City has adopted a Bicycle Plan in accordance with the California Bicycle Transportation Act and James Road is planned to be a Class II Bike Route in the City's General Plan.

3.8 Transit Service

The City of American Canyon has a number of public transportation options including fixed route systems and demand-responsive systems as well as local systems and regional systems. The following public transportation systems are available to City of American Canyon residents. American Canyon Transit (ACT) is a bus service that provides round trip route through the City on weekdays in the mornings and in the afternoon. The ACT buses will deviate from routes and provide on-demand service as time permits for disabled and senior citizens.

Napa Valley Transit (VINE) is another transit service that provides bus routes to several cities in Napa County. For American Canyon, Routes 11, 11X, and 29 offer bus stops within the City limits. Route 11 runs from Calistoga to Vallejo and stops at SR 29/Rio Del Mar and at the American Canyon Senior Center on Elliot Drive between Knightsbridge Way and Kimberly Drive. VINE 29 is a commuter express route from Calistoga to El Cerrito Del Norte BART and the Ferry Terminal in Vallejo. Vine routes 11X, and 29 stop at the American Canyon Post Office at SR 29/Crawford Way between approximately 3:45PM and 6:45PM. Both of these routes are available throughout the week. VINE Go is also an available door-to-door dedicated service for qualifying disabled and senior citizens.

4) REGULATORY CONTEXT

Existing policies, laws and regulations that apply to the proposed project are summarized below.

4.1 State

The California Department of Transportation (Caltrans) has jurisdiction over State highways. Therefore, Caltrans controls all construction, modification, and maintenance of State highways, such as SR 4. Any improvements to these roadways would require Caltrans' approval. The Guide for the Preparation of Traffic Impact Studies provides consistent guidance for Caltrans staff who review local development and land use change proposals. The Guide also informs local agencies about the information needed for Caltrans to analyze the traffic impacts to state highway facilities which include freeway segments, on- or off-ramps, and signalized intersections.

4.2 Local

City of American Canyon General Plan - The Transportation and Circulation Element included in the Napa General Plan was prepared pursuant to Section 65302(b) of the California Government Code. The Transportation and Circulation Element addresses the location and extent of existing and planned transportation routes, terminals, and other local public utilities and facilities. The General Plan identifies roadway and transit goals and policies that have been adopted to ensure that the transportation system of the City will have adequate capacity to

serve planned growth. These goals and policies are intended to provide a plan and implementation measures for an integrated, multi-modal transportation system that will safely and efficiently meet the transportation needs of all economic and social segments of the City.

4.3 Significance Criteria

The following applicable thresholds of significance were used to determine if the project transportation impacts were significant and required mitigation. These thresholds are consistent with the City's General Plan Circulation Element:

Achieve and maintain a Multimodal LOS D or better for roadways and intersections during peak hours where possible for as long as possible. However, recognizing that LOS D may not be achievable or cannot be maintained upon full buildout of the General Plan, due to traffic generated from sources beyond control of the City, the City Council shall have the discretion to only require feasible mitigation measures that may not achieve LOS D, but will reduce the impact of any development use or VMT planned for in the Land Use Element of the General Plan.

The locations that may not achieve or maintain LOS D are as follows and will be exempt from the LOS D policy:

- *State Route 29 through the City*
- *American Canyon Road from SR 29 to Flosden Road-Newell Drive*
- *Flosden Road south of American Canyon Road*

According to CEQA guidelines, a project would have a significant impact if it would:

- *Conflict with an applicable congestion management program, including, but not limited to, level-of-service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways.*
- *Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks.*
- *Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).*
- *Result in inadequate emergency vehicle access.*
- Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

The project is not located near an airport and consists of low-rise buildings. Therefore, the project is not expected to change air traffic patterns or create flight safety risks and the threshold related to air traffic patterns is not discussed in the detailed analysis below.

5) VEHICLE MILES TRAVELED ANALYSIS

One performance measure that can be used to quantify the transportation impacts of a project is vehicle miles traveled (VMT). This section presents an analysis of the extent of the VMT-related transportation impacts caused by the Project. The City of American Canyon has not yet adopted VMT guidelines so the analysis was based on guidelines from the Governor's Office of Planning and Research (OPR).[1]

In Napa County VMT is estimated using the Solano Napa Activity Based Model (SNABM). The model calculates VMT based on the number of vehicles multiplied by the typical distance traveled by each vehicle originating from or driving to a certain area. The volume of traffic and distance traveled depends on mix of land use types, density, and location as well as the existing and planned transportation system, including availability of public transportation. A travel demand model attempts to properly represent these relationships when forecasting vehicle trips and VMT. The model divides areas into transportation analysis zones, or TAZs, which are used for transportation analysis and other planning purposes. The CCTA Travel Model includes TAZs that vary in size from a few city blocks in some areas to much larger zones in lower density areas.

VMT is a particularly useful metric for evaluating the impacts of growth on greenhouse gas (GHG) emissions because it can be used to estimate fuel consumption by motor vehicles. Increases in VMT cause proportional increases in greenhouse gas emissions and air pollution. The Office of Planning and Research (OPR) released their final proposed Guidelines in a Technical Advisory on Evaluating Transportation Impacts in CEQA, dated December 2018, which went into effect on July 1, 2020.

Near-Term Plus Project VMT Analysis - Based on the SNABM Travel Model, the Countywide average daily VMT per resident is currently estimated to be 23.4 miles. The residents of the proposed project would be expected to have similar VMT to existing residents in the area. The VMT per resident estimated by the SNABM Travel Model for the project area would therefore be assumed represent the approximate VMT per resident that would be generated by the proposed project as well. The project site is located in TAZ 211 which the SNABM model indicates has an average VMT per capita (a.k.a. per resident) 16.4 miles. **Table 4** summarizes the 2023 VMT per resident for the project and provides a comparison to the VMT threshold, which is the Bay Area average VMT per resident.

[1] *Technical Advisory on Evaluating Transportation Impacts in CEQA*, Governor's Office of Planning and Research, Sacramento, CA, December, 2018.

TABLE 4
NEAR-TERM PLUS PROJECT VMT ANALYSIS RESULTS

Scenario	*Project Average VMT Per Resident*	*VMT Impact Threshold* [1]	*Impact?*
2023 Plus Project	**16.4 miles**	**23.4 miles**	**No**

NOTE: [1] *The existing plus project VMT impact threshold for residential projects is below the Bay Area average VMT per resident, which is 23.4 miles.*

As seen in **Table 1**, the proposed project is forecast to have an average VMT of 16.4 miles and the impact threshold is for the project to be below the Bay Area regional average of 23.4 miles. For comparison to other potential thresholds, the project would also be forecast to have an average VMT that is more than 15% below the Bay Area regional average. Therefore, the project would be expected to have a less than significant impact to VMT in the area under near-term conditions, subject to City approval.

Cumulative Plus Project VMT Analysis - Since the project would have a less than significant impact on near-term VMT, the project would not require a detailed evaluation of the project's cumulative VMT impacts. The cumulative analysis is for determining if the Citywide VMT increases or decreases with the proposed project, relative to the VMT generated that would otherwise be generated by full General Plan buildout. In the case of the proposed project, the cumulative impacts would be less than significant because the project would remain consistent with the VMT projections for the City's current General Plan. It is our understanding the project is also consistent with the Regional Transportation Plan (RTP) and Sustainable Communities Strategy (SCS). Therefore, the project generated VMT would be considered to be below the established VMT thresholds and therefore, subject to City approval, the project would be considered to have a less than significant impact on the VMT in the area.

6) LEVEL OF SERVICE ANALYSIS

6.1 Project Trip Generation

The proposed project would include construction of 100 townhomes on a parcel that is currently vacant. The trip generation calculations are shown in **Table 5**. The trip generation rates are based on the ITE rates for low-rise apartments in a general urban/suburban environment, not close to rail transit (Land Use 220) taken from the 11th Edition of the Institute of Transportation Engineers (ITE) Trip Generation Manual. As shown in **Table 5**, the proposed project is forecast

TABLE 5
TRIP GENERATION CALCULATIONS

Land Use	ITE Code	Size	ADT	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
ITE Apartment Rates (General Urban/Suburban, Not Close to Rail Transit) - Trips per Unit	220		6.74	0.10	0.30	0.40	0.32	0.19	0.51
Net New Trip Generation for the Proposed Project		***100 units***	**674**	**10**	**30**	**40**	**32**	**19**	**51**

to generate a net increase in traffic of approximately 40 trips during the AM peak hour and 51 trips during the PM peak hour. For purposes of determining the reasonable worst-case impacts of traffic on the surrounding street network from a proposed project, the trips generated by this proposed development are estimated for the peak commute hours which represent the peak of "*adjacent street traffic*". This is the time period when the project traffic would generally contribute to the greatest amount of congestion.

6.2 Project Trip Distribution

The trip distribution assumptions have been based on the project's proximity to freeways, the existing directional split at Crawford Drive and State Route 29, and the overall land use patterns in the area. The resulting distribution then assumed that 42 percent of the project traffic would be to and from the west on Willow Pass Road. **Figure 5** shows the project traffic that would be added at each of the study intersections.

6.3 Existing Plus Project Intersection Capacity Conditions

This scenario evaluates the existing conditions with the addition of traffic from the proposed project. The capacity calculations for the Existing Plus Project scenario were shown previously in **Table 3**. **Figure 6** shows the project traffic that would be added at each of the study

intersections. As shown in **Table 6**, all of the project study intersections would continue to have acceptable conditions during the weekday AM and PM peak hours, due to the fact that State Route 29 is exempt from the LOS D standard.

6.4 Baseline Intersection Capacity Conditions

The Baseline scenario evaluates the existing conditions with the addition of traffic from reasonably foreseeable projects in the area. For this analysis a 15% increase was applied to the existing traffic counts to account for approved projects that could be occupied before 2025. **Figure 7** presents the resulting baseline volumes at each of the project study intersections. **Table 7** summarizes the associated LOS computation results for the Baseline and Baseline Plus Project weekday AM and PM peak hour conditions. The corresponding LOS analysis calculation sheets are presented in the *Traffic Analysis Appendix*. As shown in **Table 7**, with addition of traffic from the proposed project all study intersections would continue have acceptable conditions during the weekday AM and PM peak hours, due to the fact that State Route 29 is exempt from the LOS D standard.

6.5 Baseline *Plus Project* Intersection Capacity Conditions

The Baseline plus proposed project traffic forecasts were developed by adding project-related traffic to the baseline traffic volumes. **Figure 8** presents the Baseline Plus Project traffic volumes that were used in the analysis. **Table 7** summarizes the LOS results for the Baseline Plus Project weekday AM and PM peak hour conditions. As shown in **Table 7**, all of the study intersections would continue to have acceptable conditions (LOS D or better) during the weekday AM and PM peak hours.

SOURCE: Abrams Associates, 2023

NOTES: HCM LOS results are presented in terms of average intersection delay in seconds per vehicle. For stop-controlled intersections the results for the worst side street approach are presented.

6.6 Cumulative Intersection Capacity Conditions

For the cumulative conditions, the intersection traffic volumes were based on the existing turning movements with the addition of traffic from all planned and approved projects plus the addition of growth estimated by the County's traffic model. **Figure 9** presents the cumulative build-out lane configurations assumed in the analysis. **Figure 10** presents the cumulative build-out traffic volumes without traffic from the proposed project. As shown in **Table 8**, all of the study intersections would continue to have acceptable conditions (LOS D or better) during the weekday AM and PM peak hours, due to the fact that State Route 29 is exempt from the LOS D standard.

6.7 Cumulative Plus Project Intersection Capacity Conditions

Table 7 summarizes the LOS results for the Cumulative Plus Project (Year 2040) traffic conditions at each of the project study intersections. As shown on this table, all of the study intersections would continue to have acceptable conditions (LOS D or better) during the weekday AM and PM peak hours. In addition, none of these intersections would meet Caltrans' Peak Hour Signal Warrant. It is important to note that the through movements on State Route 29 Road would not be forecast to be impacted. **Figure 11** presents the cumulative build-out traffic volumes including the traffic from the proposed project.

6.8 Internal Circulation and Access

No internal site circulation or access issues have been identified that would cause a traffic safety problem or any unusual traffic congestion or delay. The volumes on the internal roadways would be light enough so that no significant conflicts would be expected within the project. At the intersection of Crawford Drive with the project entrance there would be LOS A operations on the side street approach during the peak hours under cumulative plus project conditions. As discussed in Section 6.7, there would be no significant increase to the delay on State Route 29, only on the low-volume Crawford Drive side street movement. However, this intersection would not meet Caltrans' Peak Hour Signal Warrant and therefore the addition of project traffic not be considered a significant impact, subject to City approval.

6.9 Parking Impacts

The proposed project would provide an adequate supply of off-street parking based on the City's requirements. The project is currently proposing to meet the City's parking requirements and based on our review of the proposed plan there would be no significant impacts to the surrounding properties.

6.10 Pedestrian and Bicycle Impacts

The proposed project would generate additional pedestrian and bicycle traffic in the area, thereby potentially increasing conflicts between vehicles, bicycles, and pedestrians. In general, the proposed project would not generate a significant increase in pedestrian and bicycle traffic in the area in comparison to the existing volumes and given the size and nature of the proposed project. In addition, the proposed project would not create any new safety problems in the area. The proposed project would also not significantly impact any existing bicycle facilities, including bike lanes, routes, or paths in the area. In general, the proposed project would not generate a significant increase in bicycle traffic in the area and would not significantly impact or change the design of any existing bicycle facilities.

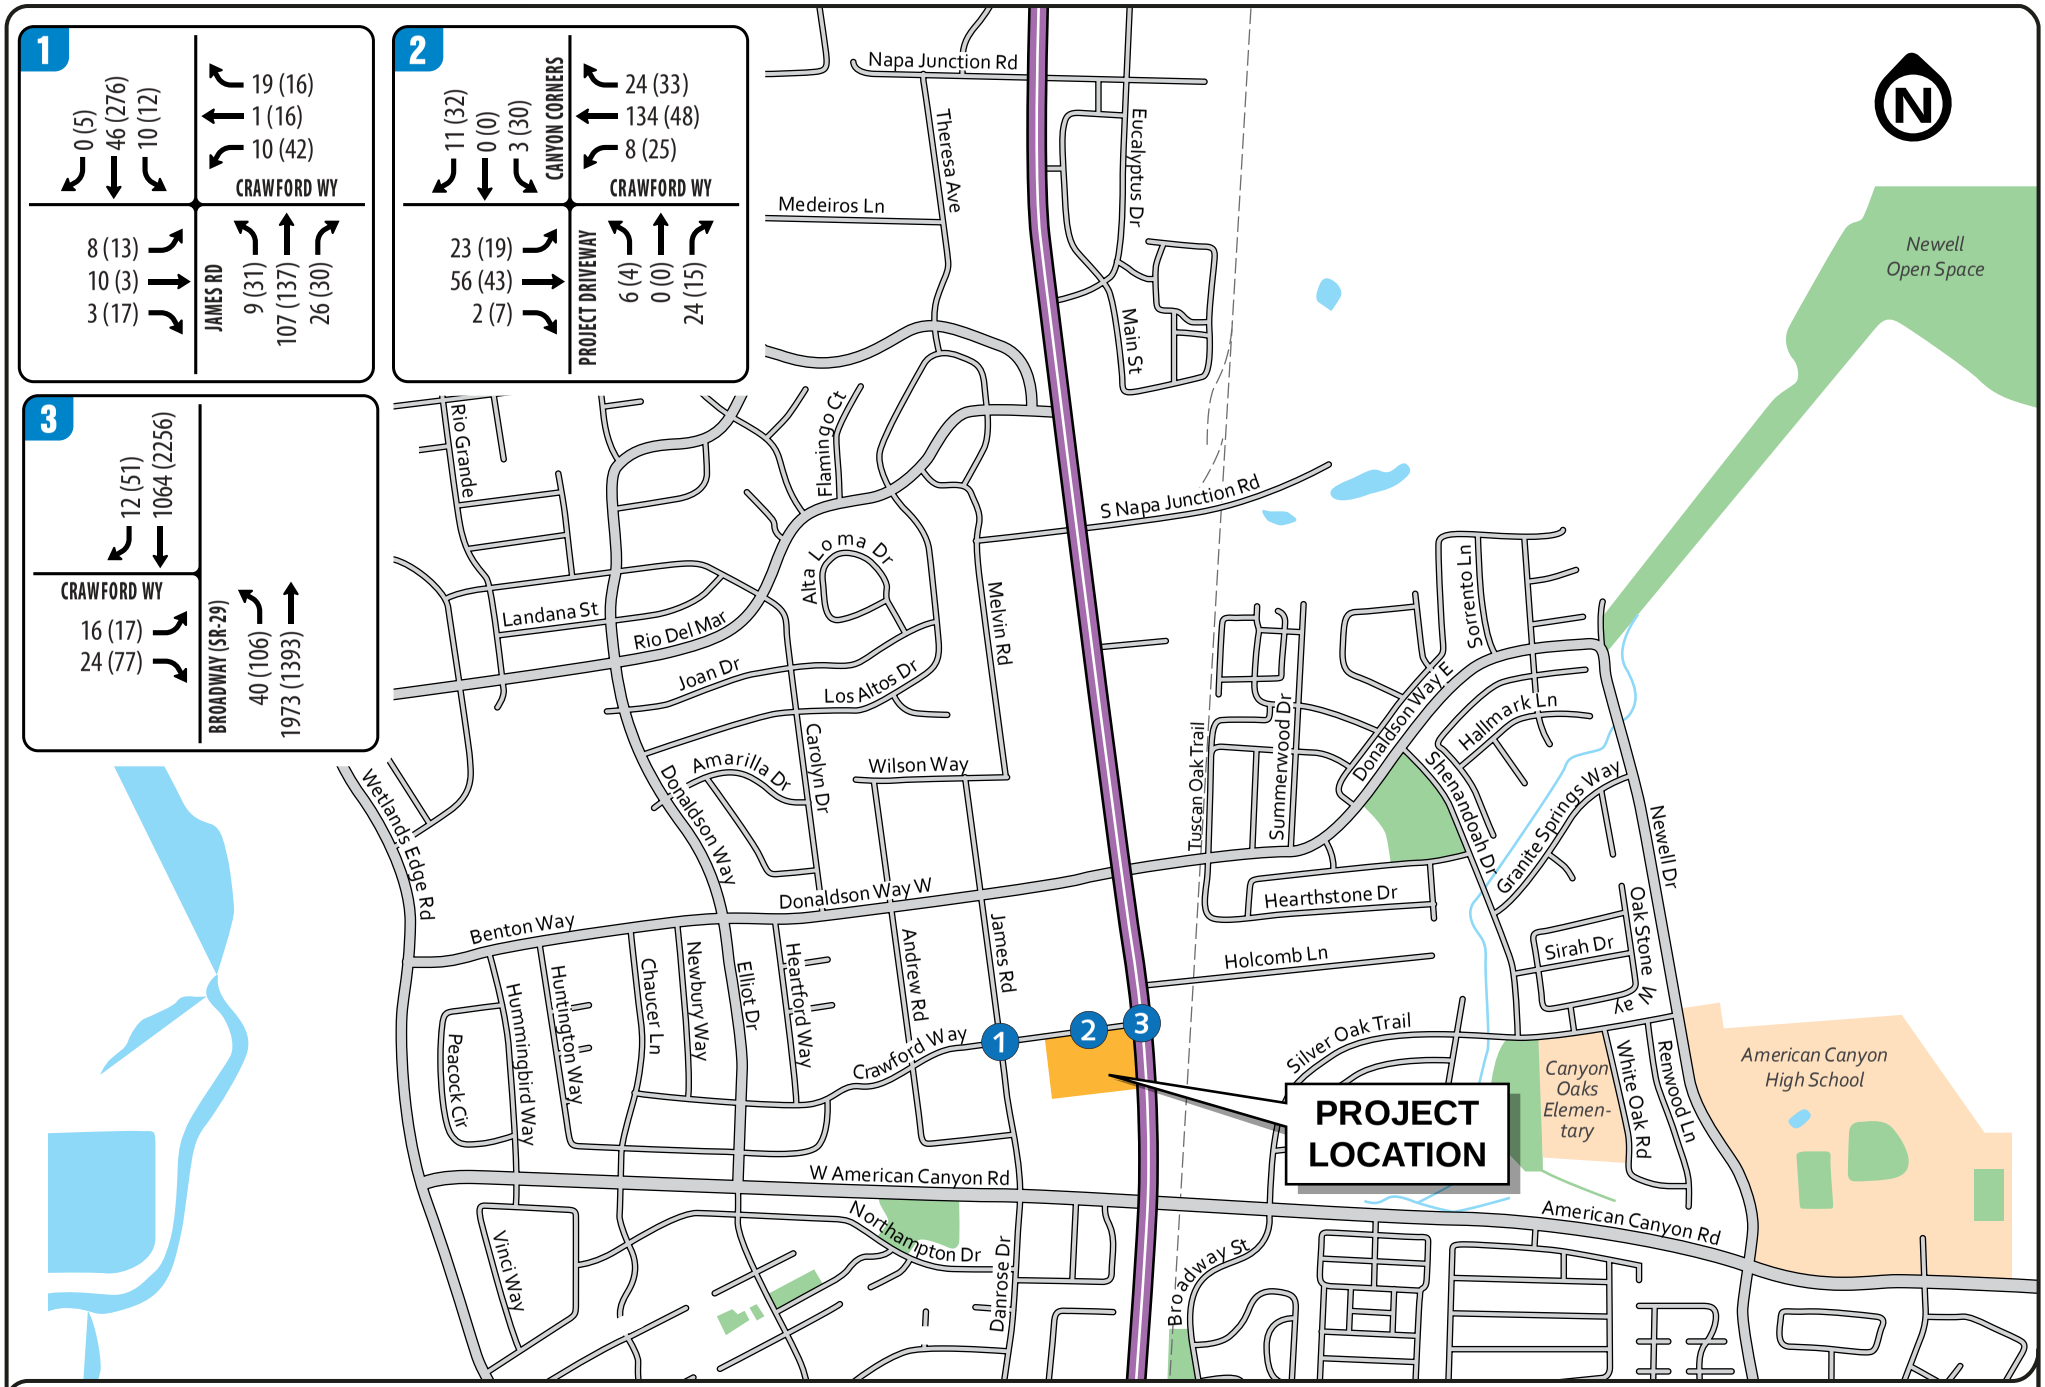

FIGURE 11 | CUMULATIVE PLUS PROJECT AM(PM) PEAK HOUR TRAFFIC VOLUMES

TRAFFIC IMPACT ANALYSIS

^merican Canyon Townhomes Project

ty of American Canyon

554

Abrams Associates
TRAFFIC ENGINEERING, INC.

6.11 Transit Impacts

The proposed project would not interfere with any existing bus routes and would not remove or relocate any existing bus stops. Some residents of the project would be expected to utilize local bus route and would provide additional ridership for bus companies. Therefore, the impact of the proposed Project on existing transit operations or adopted plans related to transit would be less than significant.

6.12 Project-Specific Impacts and Mitigation Measures

Based on the project's design and a detailed analysis conducted according to the required guidelines there would be no significant transportation impacts according to established traffic engineering standards and no off-site traffic or transportation mitigations would be required.

Impact #1 Impacts related to conflicts with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or potential decreases to the performance or safety of such facilities.

The project would not result in degradation of the level of service (or a significant increase in delay) on any roadway segments currently being utilized by bus transit in the area and would not increase ridership beyond existing capacity. As such, no significant impacts to bus transit would be expected to occur. In addition, the proposed project would not significantly impact or change the design of any existing pedestrian facilities and would not create any new safety problems for pedestrians in the area. The project will add some bicyclists in the area but the volumes added would not be expected to significantly impact any existing bicycle facilities. In relation to the existing conditions, the proposed project would not cause substantial changes to the pedestrian or bicycle traffic in the area and would not significantly impact or require changes to the design of any existing bicycle or pedestrian facilities.

Mitigation Measure(s)
None required.

Impact #2 Impacts relating to demolition and construction activities

The increase in traffic as a result of demolition and construction activities associated with the proposed project has been quantified assuming a worst-case single phase construction period of 12 months.

Heavy Equipment

Approximately three pieces of heavy equipment are estimated to be transported on and off the site each month throughout the demolition and construction of the

proposed project. Heavy equipment transport to and from the site could cause traffic impacts in the vicinity of the project site during construction. However, each load would be required to obtain all necessary permits, which would include conditions. Prior to issuance of grading and building permits, the project applicant would be required to submit a Traffic Control Plan.

The requirements within the Traffic Control Plan include, but are not limited to, the following: truck drivers would be notified of and required to use the most direct route between the site and the freeway, as determined by the CityEngineering Department; all site ingress and egress would occur only at the main driveways to the project site and construction activities may require installation of temporary traffic controls as determined by the City Engineer; specifically designated travel routes for large vehicles would be monitored and controlled by flaggers for large construction vehicle ingress and egress; any debris and mud on nearby streets caused by trucks would be monitored daily and may require instituting a street cleaning program. In addition, the transport of heavy equipment being hauled to and from the site each month would be short-term and temporary.

Employees

The weekday work is expected to begin around 7:00 AM and end around 4:00 PM. The construction worker arrival peak would occur between 6:30 AM and 7:30 AM, and the departure peak would occur between 4:00 PM and 5:00 PM. These peak hours are slightly before the countywide commute peaks. It should be noted that the number of trips generated during construction would not only be temporary, but would also be less than the proposed project at buildout. Based on past construction of similar projects, construction workers could require parking for up to 50 vehicles during the peak construction period. Additionally, deliveries, visits, and other activities may generate peak non-worker parking demand of 10 to 15 trucks and automobiles per day.

Therefore, up to 65 vehicle parking spaces may be required during the peak construction period for the construction employees. Furthermore, the City's construction traffic control guidelines require construction employee parking be provided on the project site to eliminate conflicts with nearby residential areas. Because the construction of the project can be staggered so that employee parking demand is met by using on-site parking, the impacts of construction-related employee traffic and parking are considered less-than-significant.

Construction Material Import/Export

The project would also require removal of existing debris as well as the importation of construction material, including raw materials for the building pads, the buildings, and landscaping. During the maximum peak construction period, the project could generate approximately 10 truck trips per day. Furthermore, under the provisions of the Traffic Control Plan, if importation and exportation of material becomes a traffic nuisance, then the City Engineer may limit the hours the activities can take place.

Traffic Control Plan

The Traffic Control Plan would indicate how parking for construction workers would be provided during construction and ensure a safe flow of traffic in the project area during construction. This analysis assumed construction of the entire project in one phase to identify the potential worst-case traffic effects. If the project is built in phases over time, the effects of each phase will be the same or less. Each phase will be subject to a Traffic Control Plan and oversight by the City Engineer. The last phase may require added worker parking measures, depending on the circumstances, as there will not be any remaining vacant land for parking. Therefore, the demolition and construction activities associated with the proposed project or its individual phases would not lead to noticeable congestion in the vicinity of the site or the perception of decreased traffic safety resulting in a ***less-than-significant*** impact.

Mitigation Measure(s)
None required.

Impact #3 Impacts related to site access and circulation.

The proposed project would one main driveway on Crawford Drive that would be controlled with a stop sign on the side street approach. Based on a review of the proposed site plan it was determined that the site circulation should function well and would not cause any safety or operational problems. The project site design has been required to conform to City design standards and is not expected to create any significant impacts to pedestrians, bicyclists or traffic operations. Therefore, impacts related to access and circulation to the proposed project would be ***less-than-significant*** with implementation of the following mitigation measure.

Mitigation Measure(s)
None required.

Impact #4 Impacts regarding emergency vehicle access on and surrounding the proposed project site.

Sufficient emergency access is determined by factors such as number of access points, roadway width, and proximity to fire stations. The land use plan for the proposed project would include an entrance on Crawford Drive along with a secondary access on State Route 29 for emergency vehicle access only. All lane widths within the project would meet the minimum width that can accommodate an emergency vehicle; therefore, the width of the internal roadways would be adequate. In addition, the addition of traffic from project traffic would not result in any significant changes to emergency vehicle response times in the area. Therefore, subject to approval from the City and the fire department, the development of the proposed project is expected to have ***less-than-significant*** impacts regarding emergency vehicle access.

Mitigation Measure(s)
None required.

I. Executive Summary

This report presents the results of a noise assessment study, in compliance with the California Environmental Quality Act, for a planned multi-family development at 15860 Highway 29 in American Canyon, as shown on the Site Plan, Ref. (a). This study includes an analysis of traffic noise impacts to the proposed development site, evaluations of the noise exposures against the standards of the City of American Canyon Noise Element, Ref. (b), and the State of California Code of Regulations, Title 24, Ref. (c). This study also includes analyses of the project-generated construction noise and vibration impacts the adjacent residential neighbors and the effects of project-generated traffic noise.

The following report includes background information on acoustics, noise standards applicable to the project, existing and future noise exposure impacts to the project, project construction noise impacts and mitigation measures for noise impacted receiver locations. The results of this study reveal that the noise exposures at the site from Highway 29 traffic will exceed the noise exposure trigger level of the City of American Canyon General Plan Noise Element for the dwelling unit interior noise exposure limit. The interior noise exposures in most of the dwelling units will exceed the interior noise exposure limits of the Noise Element and Title 24 standards. Noise mitigation measures for the noise impacted dwelling units will be required.

Construction of the project will generate levels of noise in excess of the City of American Canyon Municipal Code. Compliance with the Municipal Code construction noise standard cannot be achieved. However, this impact will be temporary. Vibration from construction will not affect the closest residential or church buildings and noise and vibration reduction measures to minimize these impacts are recommended.

In terms of the CEQA compliance checklist, the project results in the following:

a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	Potential Significant Impact
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	Less Than Significant With Mitigation
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	Less Than Significant
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	Less Than Significant With Mitigation
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	No impact
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	No impact

II. Background Information on Acoustics

Noise is defined as unwanted sound. Airborne sound is a rapid fluctuation of air pressure above and below atmospheric pressure. Sound levels are usually measured and expressed in decibels (dB) with 0 dB corresponding roughly to the threshold of hearing.

Most of the sounds which we hear in our normal environment do not consist of a single frequency, but rather a broad range of frequencies. As humans do not have perfect hearing, environmental sound measuring instruments have an electrical filter built in so that the instrument's detector replicates human hearing. This filter is called the "A-weighting" network and filters out low and very high frequencies. All environmental noise is reported in terms of A-weighted decibels, notated as “dBA”. All sound levels used in this report are A-weighted unless otherwise noted. Table I, below, shows the typical human response and noise sources for A-weighted noise levels.

TABLE I

The A-Weighted Decibel Scale, Human Response, and Common Noise Sources

Noise Level, dBA	Human Response	Noise Source
120-150+	Painfully Loud	Sonic Boom (140 dBA)
100-120	Physical Discomfort	Discotheque (115 dBA) Motorcycle at 20 ft. (110 dBA) Power Mower (100 dBA)
70-100	Annoying	Diesel Pump at 100 ft. (95 dBA) Freight Train at 50 ft. (90 dBA) Food Blender (90 dBA) Jet Plane at 1000 ft. (85 dBA) Freeway at 50 ft. (80 dBA) Alarm Clock (80 dBA)
50-70	Intrusive	Average Traffic at 100 ft. (70 dBA) Vacuum Cleaner (70 dBA) Typewriter (65 dBA) Loud Conversation (60 dBA)
0-50	Quiet	Normal Conversation (50 dBA) Light Traffic at 100 ft. (45 dBA) Refrigerator (45 dBA) Desktop Computer (40 dBA) Whispering (35 dBA) Leaves Rustling (10 dBA) Threshold of Hearing (0 dBA)

Although the A-weighted noise level may adequately indicate the level of noise at any instant in time, community noise levels vary continuously. Most environmental noise includes a mixture of noise from distant sources that create a relatively steady background noise from which no particular source is identifiable. To describe the time-varying character of environmental noise, the statistical noise descriptors, L_1, L_{10}, L_{50} and L_{90} are commonly used. They are the A-weighted noise levels exceeded for 1%, 10%, 50% and 90% of a stated time period. The continuous equivalent-energy level (L_{eq}) is that level of a steady state noise which has the same sound energy as a time-varying noise. It is often considered the average noise level and is used to calculate the Day-Night Levels (DNL) and the Community Noise Equivalent Level (CNEL) described below.

In determining the daily level of environmental noise, it is important to account for the difference in response of people to daytime and nighttime noises. During the nighttime, exterior background noises are generally lower than the daytime levels. However, most household noise also decreases at night and exterior noise becomes very noticeable. Further, most people sleep at night and are very sensitive to noise intrusion. To account for human sensitivity to nighttime noise levels, the Day-Night Level (DNL) noise descriptor was developed. The DNL is also called the L_{dn}. Either is acceptable, however, DNL is more popular worldwide. The DNL divides the 24-hour day into the daytime period of 7:00 a.m. to 10:00 p.m. and the nighttime period of 10:00 p.m. to 7:00 a.m. The nighttime noise levels are penalized by 10 dB to account for the greater sensitivity to noise at night. The Community Noise Equivalent Level (CNEL) is another 24-hour average which includes a 5 dB evening (7:00 p.m. - 10:00 p.m.) penalty and a 10 dB nighttime penalty. Both the DNL and the CNEL average the daytime, evening and nighttime noise levels over a 24-hour period to attain a single digit *noise exposure*. The proper notations for the Day-Night Level and the Community Noise Equivalent Level are dB DNL and dB CNEL, respectively, as they can only be calculated using A-weighted decibels. It is, therefore, considered redundant to notate dB(A) DNL or dB(A) CNEL. Noise exposures are always rounded to the nearest whole number.

The effects of noise on people can be listed in three general categories:

- subjective effects of annoyance, nuisance, dissatisfaction;
- interference with activities such as speech, sleep, learning, relaxing;
- physiological effects such as startling, hearing loss.

The levels associated with environmental noise, in almost every case, produce effects only in the first two categories. Workers in industrial plants, airports, etc., can experience noise in the last category. Unfortunately, there is, as yet, no completely satisfactory way to measure the subjective effects of noise, or of the corresponding reactions of annoyance and dissatisfaction. This is primarily due to the wide variation in individual thresholds of annoyance and differing individual past experiences with noise.

An important way to determine a person's subjective reaction to a new noise is to compare it to the existing environment to which one has adapted, i.e., the "ambient". In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will be judged by the receptors.

With regard to increases in A-weighted noise level, the Environmental Protection Agency has determined the following relationships that will be helpful in understanding this report.

- Except in carefully controlled laboratory experiments, a change of 1 dB cannot be perceived.
- Outside of the laboratory, a 3 dB change is considered a just-perceptible difference.
- A change in level of at least 5 dB is required before any noticeable change in community response would be expected.
- A 10 dB change is subjectively heard as approximately a doubling in loudness, and would almost certainly cause an adverse change in community response.

The adding or subtracting of sound levels is not simple arithmetic. The sound levels, in decibels, must be converted to Bels, the anti-log's of which are then calculated. The manipulation is then performed (arithmetic addition or subtraction), the logarithm of the sum or difference is calculated. The final number is then multiplied by 10 to convert Bels to decibels. The formula for adding decibels is as follows:

$$Sum = 10\log(10^{SL/10} + 10^{SL/10})$$ where, SL is the Sound Level in decibels.

For example, 60 dB + 60 dB = 63 dB, and 60 dB + 50 dB = 60 dB. Two sound sources of the same level are barely noisier than just one of the sources by itself. When one source is 10 dB higher than the other, the less noisy source does not add to the noisier source.

III. Noise Standards, Goals & Policies

A. City of American Canyon General Plan

The noise assessment results presented in the findings were evaluated against the standards of the City of American Canyon Noise Element, which utilizes the Day-Night Level (DNL) descriptor. The DNL is a 24-hour time weighted average noise exposure that penalizes noise created during the nighttime period, and is commonly used to describe community noise environments. Policy 11.2.2 of the Noise Element standards specify an exterior noise exposure triggering level of 60 dB DNL for multi-family housing. For dwelling units exposed to an exterior noise exposure of 60 dB DNL or greater, a noise analysis is required that will provide the noise mitigation measures necessary to limit the interior noise exposures to 45 dB DNL or lower.

The Noise Element does not contain an exterior noise exposure standard or limit for exterior living spaces, whether they are community or private.

B. City of American Canyon Municipal Code

Title 8 Health and Safety
Chapter 8.12 Community Noise

8.12.080 Specific Types of Noise Prohibited

2. Construction or Demolition.

a. Operating or causing the operation of any tools or equipment used in construction, drilling, repair, alteration or demolition work between the hours of seven p.m. and seven a.m., such that the sound therefrom creates a noise disturbance across a residential or commercial real property line, except for emergency work of public service utilities or by variance issued by the appropriate authority. This subsection shall not apply to the use of domestic power tools, as specified in subsection (B)(3) of this section.

b. Noise Restrictions at Affected Properties. Where technically and economically feasible, construction activities shall be conducted in such a manner that the maximum noise levels at affected properties will not exceed those listed in the following schedule:

Table 8.12.080

Noise Limits for Construction Activities

Timeframe	Residential	Commercial	Industrial
Daily: 7 a.m. to 7 p.m.	75 dBA	80 dBA	85 dBA
Daily: 7 p.m. to 7 a.m.	60 dBA	65 dBA	70 dBA

***** Note: 75 dBA is an extremely strict noise level limit for construction operations. Any construction project within a couple hundred feet of a residence would not be able to comply.**

C. State of California Code of Regulations, Title 24

The State of California Code of Regulations, Title 24 (CBC) standards use the DNL descriptor (to be consistent with local standards) and specify an interior noise exposure limit in living spaces of multi-family housing to 45 dB DNL from exterior noise sources. This standard is the same as the City of American Canyon Noise Element standard described above.

The Title 24 standards also specify minimum sound insulation ratings for common partitions separating different dwelling units and dwelling units from interior common spaces. The standards specify that common walls must have a design Sound Transmission Class (STC) rating of 50 or higher. Common floor/ceiling assemblies must have design STC ratings of 50 or higher and Impact Insulation Class (IIC) ratings of 50 or higher. As the design details of the common interior partitions were not available at the time of this study, an evaluation of the interior partitions has not been performed.

D. California Environmental Quality Act (CEQA)

The project-generated noise exposures were evaluated against the guidelines of the California Environmental Quality Act (CEQA). CEQA does not limit noise levels or noise exposures nor does it quantify noise exposure or noise level increases over the ambient to define noise impacts. CEQA evaluates a project as a significant noise impact if it "...caused a substantial increases in the ambient noise levels...". The quantification of the threshold of significance is left up to the local jurisdiction. The City of American Canyon, however, does not provide a threshold of significance in the General Plan. Therefore, for the purposes of this study, thresholds of significance used by many other local jurisdictions are recommended for adoption for this project. The thresholds of significance shall be applied at the existing residential area to the east and north of the site.

These thresholds are:

(a) causing the DNL in existing residential areas to increase by 5 dB or more and remain below 60 dB DNL;

(b) causing the DNL in existing residential areas to increase by 3 dB or more and, thereby, exceed 60 dB DNL;

(c) causing the DNL in existing residential areas to increase by 1 dB or more if the current noise exposure exceeds 60 dB DNL.

If the project causes any of the above three criteria to occur, the project will be considered a significant noise impact to the areas where it occurs and mitigation measures will be required.

The noise exposures shown in this study are without the application of mitigation measures and represent the noise environment for current, existing and future project site conditions.

IV. Acoustical Setting

A. Site, Traffic, Railroad and Project Descriptions

The planned development site is a vacant parcel located on the west side of Highway 29 at Crawford Way in American Canyon. The site is relatively flat and at-grade with the surrounding roadways and land uses. Surrounding land uses include single-family residential adjacent to the west, the Canyon Plaza shopping center across Crawford Way to the north, single-family residential across Highway 29 to the east and the Open Door Christian Church to the south.

The on-site noise environment is controlled primarily by traffic sources on Highway 29, which carries an existing (2019) Average Daily Traffic (ADT) volume of 36,800 vehicles, Ref. (d). Crawford Way is a minor street and traffic data are not currently available. The California Northern railroad operates two trains per day servicing commercial customers from Vallejo to Napa, as reported by the California Northern Railroad, Ref. (e).

The planned project includes the construction of 100 3-story townhouse style condominiums in sixteen buildings. A community building will also be located along the southerly side of the site. The site plan is shown on Figure 1 on page 11.

FIGURE 1 – Site Plan

V. Noise Impacts to the Project

A. Existing Noise Levels

To determine the existing noise environment at the site, continuous recordings of the sound levels were made at a location 95 ft. from centerline of Highway 29 corresponding to the planned minimum setback of the buildings from the roadway. The sound level meter was attached to a power pole at a height of 13 ft. above the ground for security of the instrument. The measurement location is shown on Figure 2, below. The sound level measurements were made on June 21-22, 2022 and were recorded and processed for a continuous 24 hour period using a Larson-Davis Model 812 Precision Integrating Sound Level Meter. The meter yields, by direct read-out, a series of descriptors of the sound levels versus time, as described in Appendix B. The measured descriptors include the L_1, L_{10}, L_{50}, and L_{90}, i.e., those levels exceeded for 1%, 10%, 50%, and 90% of the time. Also measured were the maximum and minimum levels and the continuous equivalent-energy levels (L_{eq}), which are used to calculate the DNL.

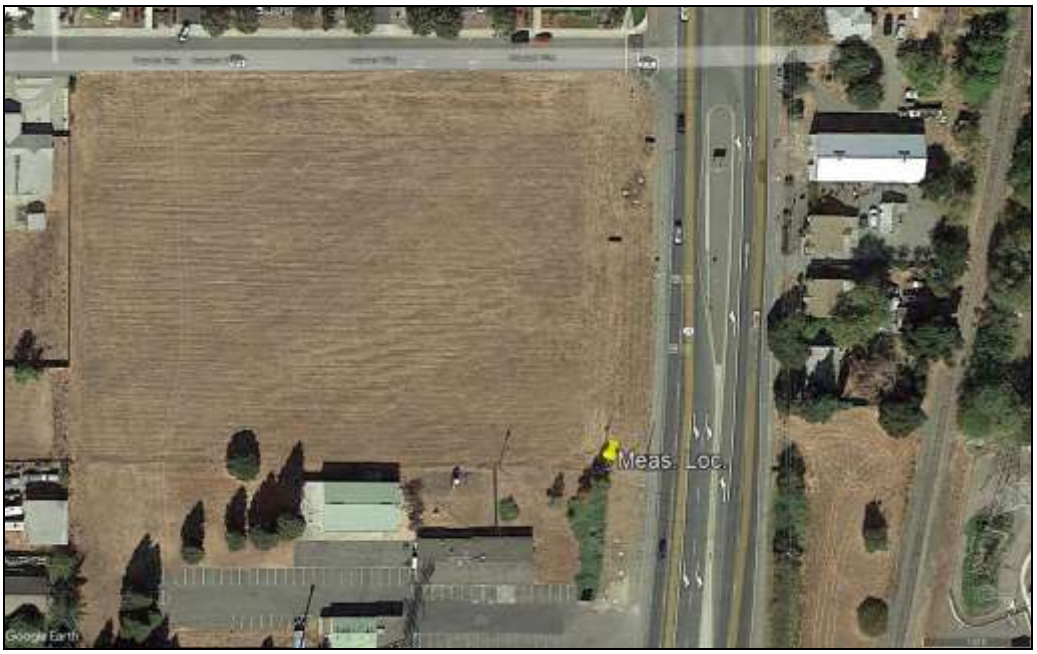

FIGURE 2 – Noise Measurement Location

The results of the measurements reveal that the L_{eq}'s at the measurement location, 95 ft. from the centerline of Highway 29, ranged from 61.9 to 66.6 dBA during the daytime and from 60.1 to 66.1 dBA at night.

Traffic noise dissipates at the rate of 3-6 dB for each doubling of distance from the source to the receiver. Other locations on the site at greater distances from Highway 29 will have lower noise levels. Additional noise reduction will be provided by interposed buildings of the project.

Vehicular traffic noise contains a wide spectrum of frequency components (from 100 to 10,000 Hz), which is associated with engine, tire, exhaust and other sources and was used to determine the noise control measures recommended for this project.

B. Future Noise Levels

Future traffic volume predictions for Highway 29 were made from future traffic volume data provided by the consultant traffic engineer, Ref. (f). The Cumulative + Project ADT was reported to be 70,540 vehicles. As the existing (2019 pre-COVID) volume is 36,800 vehicles ADT, the increase in traffic volume yields a 3 dB increase in the traffic noise levels.

$\Delta dB = 10\log_{10}(70{,}540/36{,}800) = 2.8$

There is no expected increase in rail operations, Ref. (e).

C. Exterior Noise Exposures

To evaluate the on-site noise exposures against the City of American Canyon standards, the DNL for the survey location was calculated by decibel averaging of the L_{eq}'s as they apply to the daily time periods of the DNL index. A 10 dB penalty was added to noise created at night to account for the increased human sensitivity to noise during nighttime hours. The DNL is a 24-hour noise descriptor that uses the measured L_{eq} values to calculate a 24-hour time-weighted average noise exposure. Adjustments were made to the measured traffic noise levels to account for the various setback distances from the measurement location to the receptor location using methods established by the Highway Research Board, Ref. (g). The formula used to calculate the DNL is described in Appendix B.

The results of the calculations indicate that the exterior noise exposures at the measurement location and planned minimum building setback from Highway 29 is 70 dB DNL. Under traffic conditions, the noise exposure is expected to increase to 73 dB DNL. Thus, the exterior noise exposures will exceed the 60 dB DNL triggering level for the requirement of an acoustical analysis that provides the noise mitigation measures necessary to reduce the interior noise exposures to 45 dB DNL or lower. This study is intended to satisfy that requirement.

The future bare site 70 dB DNL noise contour line will be 150 ft. from the Highway 29 centerline.

The future bare site 65 dB DNL noise contour line will be 275 ft. from the Highway 29 centerline.

The future bare site 60 dB DNL noise contour line will be 700 ft. from the Highway 29 centerline and will be off site.

Also note that bare site noise contours do not necessarily represent the actual noise exposures at certain building facades once the buildings are completed.

B. Interior Noise Exposures

To determine the interior noise exposures, a 15 dB reduction was applied to the exterior noise exposures at the building setbacks to represent the attenuation provided by a typical building shell under an *annual-average* condition. The annual-average condition assumes the installation of standard dual-pane, thermal insulating windows and glass doors that are kept open up to 50% of the time for natural ventilation.

- The interior noise exposure in the most impacted living spaces closest to Highway 29 will be up to 55 and 58 dB DNL under existing and future traffic conditions, respectively. Thus, the noise exposures will be up to 13 dB in excess of the 45 dB DNL limits of the City of American Canyon Noise Element and Title 24 standards.

Noise mitigation measures will be required. The recommended measures are provided in Section VII of this report.

VI. Project-Generated Noise Impacts

A. Project Traffic Noise

The contribution of the traffic noise due to the project in the vicinity of the site will be negligible due to the relatively low volume of the project traffic in relation to the existing and ultimately, the future traffic volumes. Table II, below, provides the analysis of the worst cast condition for the leg of Crawford Way between the project site entry/exit and James Road (West leg of Intersection 4 of the traffic study). As shown in the Table, the project will result in a 0.9 dB increase over the existing noise levels and 0.7 dB over the future noise levels. These increases are less than 1 decibel and are less than significant.

The traffic noise study was prepared for a previous residential application containing 70 dwelling units. The project traffic volume on Crawford Way was predicted at that time to be 140 vehicles ADT. However, updated traffic volume data for this project has not been provided. Thus, we are estimating that the project traffic volume from 100 dwelling units will be 400 trips per day (4 trips per dwelling).

TABLE II

Project-generated Traffic Noise Impacts

Intersection 4W	AM	PM	ADT	ΔdB
EXISTING	180	117	1800	
PROJECT	10	14	400	
EXIST. + PROJ.			2200	0.9
CUMULATIVE	218	140	2180	
CUMUL. + PROJ.	228	154	2580	0.7

B. Construction Noise and Vibration Analysis

Short-term noise impacts may be created during clearing of the site and the construction of the project. Construction equipment will consist of small bulldozers, loaders, backhoes, excavators, graders, cranes, forklifts, generators and air compressors. Construction equipment noise levels range from 76 to 101 dBA at a 50 ft. distance from the source, and has a potential to disturb residences adjacent to the west and to the church to the south if the church is active during construction hours. Very high noise level equipment, such as pile drivers and rock drills are not expected to be used on this project.

A table of construction equipment (mostly earthwork equipment, which is usually the noisiest, taken from the Federal Transit Administration Noise and Vibration Impact Assessment, Ref. (h), is provided on page 18. The noise levels for each item of equipment, not all of which will be used on this project, are reported for a standard distance of 50 ft. None of the construction equipment used for this project will generate noise levels higher than 90 dBA at 50 ft. No extreme noise generators, such as pile driving, will be used on this project. Noise from construction equipment dissipates at the rate of 6 dB per doubling of the distance from the source to the receiver.

Since construction is carried out in several reasonably discrete phases, each will have its own mix of equipment and consequently, its own noise characteristics. Generally, the site preparation requires the use of heavy equipment such as bulldozers, loaders, graders, concrete trucks and diesel trucks. Construction of the building includes haul trucks, cranes, forklifts, pumps, air compressors and powered and manual hand tools (saws, nail guns, sprayers). Once the shells of the buildings are completed with the windows installed, much of the construction noise will be contained inside the buildings.

Table III on page 19 contains the analysis of the construction noise levels at the most noise impacted residence adjacent to the west and to the Open Door Christian Church adjacent to the south. The table provides the noise levels for each type of equipment or operation at the nearest and farthest distances from the receivers. The table also provides the distance at which each item of equipment or operation produces a noise level of 75 dBA, i.e., the limit of the Municipal Code. The noise levels presented in the table are typical noise levels produced by the pieces of equipment shown. However, equipment used in the field may vary slightly, depending on the sizes of engines, the contractor and their sub-contractors, age of equipment, the way tools, devices and items of equipment are utilized and many other factors that are unknown at this time and cannot be predicted with any level of accuracy. In addition, the sound levels at the property boundaries at any given time will change dramatically such that the noise levels may occur for very short periods of time or may occur for longer periods of time.

Although the City of American Canyon has quantitative noise level limits for construction contained within the Municipal Code, noise reduction measures to reduce construction noise for compliance with the Municipal Code would not be reasonable (extraordinarily high and heavy) or the separation distance would need to be on the order of several hundred feet from the sensitive land use.

Noise reduction measures are recommended herein and should be applied to the greatest extent feasible for mobile and stationary equipment. These measures are intended to be incorporated as “best practices” methods and to minimize annoyance to neighboring land uses.

Construction activities can produce varying amounts of ground-borne vibration, which depend on the type of equipment used and various methods. Vibration is produced by the equipment operation and the vibrational waves travel through the ground/soil that diminish over distance. It is rare that construction vibration is intense enough to cause damage to existing structures. However, due to the close proximity of the masonry commercial buildings to the north and south and the masonry residential building to the east, a qualitative analysis of vibration is warranted.

Ground-borne vibration is typically reported in terms of "peak particle velocity" or PPV, and sometimes reported in terms of decibels of vibration, notated as VdB, which is a level of vibration (L_v). The use of PPV is more common for construction equipment and methods.

Table IV, below, provides building damage criteria from construction vibration established by the Federal Transit Administration.

TABLE IV

Construction Vibration Damage Criteria

Building Category	PPV (in/sec)	Approx. L_v (VdB)
I. Reinforced-concrete, steel or timber (no plaster)	0.50	102
II. Engineered concrete and masonry (no plaster)	0.30	98
III. Non-engineered timber and masonry buildings	0.20	94
IV. Buildings extremely susceptible to vibration damage	0.12	90

** RMS velocity in decibels (VdB) re: 1 micro-inch/second

The adjacent commercial buildings to the north and south are timber and stucco finished buildings with unknown foundations. In addition, the building to the north is a medical office building that may be more sensitive to vibration than a typical modern commercial structure. These structures fall into Building Category III where the vibration limit is 0.20 in/sec PPV.

The contractors used for the demolition of the site and construction of the project have not yet been selected, nor has a construction schedule and list of equipment been developed. Table V, below, provides a list of typical construction equipment, their vibration levels at 25 ft. reference distances, the vibration levels at the building setbacks of the very near commercial buildings to the north and south and the multi-family building to the east. Also shown are the distances each item of equipment must stay away from the respective adjacent structures to limit the vibration levels to no more than 0.20 in/sec PPV at the commercial and residential buildings. As shown in Table V, only the use of a compactor, vibratory rollers or a clam shovel within close proximity to the residence to the west and the church to the south could potentially be a cause for concern.

Measures to reduce ground-borne vibration to a specific level will not be required. However, as with noise, best practices methods are provided herein to minimize the effects of vibration and not to increase vibration from operations that would not normally induce vibration.

TABLE V

Construction Equipment Vibration Levels, in/sec PPV

VII. Recommendations

A. Interior Noise Control

To achieve compliance with the City of American Canyon Noise Element and Title 24 standards of 45 dB DNL in the noise impacted living spaces, window and glass door controls will be required, as described below.

- Maintain closed at all times all windows and glass doors of living spaces identified on Figure 3 by a colored band. Install windows and glass doors with the minimum Sound Transmission Class (STC) ratings shown. Provide some type of mechanical ventilation for the living spaces with the closed window condition.

Please see Figure 3 for the locations of the noise impacted building facades.

When windows and doors are maintained closed at all time for noise control, some type of mechanical ventilation must be provided. The mechanical ventilation system shall conform to the requirements of the California Mechanical Code and shall not compromise the acoustical integrity of the building shell. All other windows and glass doors of the development may be kept open as desired.

When windows are kept closed for noise control, they shall be operable as the requirement does not imply a fixed or inoperable condition.

In addition to the required STC ratings, the windows shall be installed in an acoustically-effective manner. To achieve an acoustically-effective window or door construction, the operable panels must form an air-tight seal when in the closed position and the window and door frames must be caulked to the wall opening around their entire perimeter with a non-hardening caulking compound to prevent sound infiltration. Expandable foams are not acceptable acoustical sealants.

EDWARD L. PACK ASSOCIATES INC

Please be aware that many dual-pane window assemblies have inherent noise reduction problems in the traffic noise frequency spectrum due to resonance that occurs within the air space between the glass lites, and the noise reduction capabilities vary from manufacturer to manufacturer. Therefore, the acoustical test report of all sound rated windows and glass doors should be reviewed be a qualified acoustician to ensure that the chosen windows and glass doors will adequately reduce traffic noise to acceptable levels.

The implementation of the above measures will reduce the traffic noise exposures in the living spaces to no more than 45 dB DNL under future traffic conditions for compliance with the standards of the City of American Canyon Noise Element and Title 24.

B. Construction Noise and Vibration

Reduction of the demolition/construction phase noise at the site can be accomplished by using quiet or "new technology" equipment. The greatest potential for noise abatement of current equipment should be the quieting of exhaust noises by use of improved mufflers. It is recommended that all internal combustion engines used at the project site be equipped with a type of muffler recommended by the vehicle manufacturer. In addition, all equipment should be in good mechanical condition so as to minimize noise created by faulty or poorly maintained engine, drive-train and other components. Construction noise can also be mitigated by the following:

OPERATIONAL AND SITUATIONAL CONTROLS

- All work on site should be restricted to 6:30 AM to 8:00 PM to comply with the City of American Canyon Noise Element Policy 11.7.1.
- All construction noise control measures currently imposed on the project shall be maintained unless the measures outlined herein are more restrictive.
- All exterior stationary equipment shall be kept at least 100 ft. from neighboring residential property line unless acoustically shielded.
- No material deliveries are allowed on Sundays or Federal Holidays.
- Cranes shall be located at least 100 ft. from any neighboring residential property line with the exception of cranes or lifts necessary to dismantle scaffolding.
- Minimize material movement along the south and west sides of the site.
- Locate stockpiles adjacent to residential neighbors as much as possible to help shield residences from on-site noise generation.

- Driveways and other vehicle travel paths shall be graded smooth to minimize vibration and “bangs” from vehicles traveling over rough surfaces.

- Music shall not be audible off site.

- Dirt berming and stockpiling materials whenever possible can also help reduce noise to sensitive receptor locations.

- Place long-term stationary equipment as far away from the residential areas as possible.

- Keep mobile equipment (haul trucks, concrete trucks, etc.) off of local streets near residences as much as possible.

- Keep vehicle paths graded smooth as rough roads and paths can cause significant noise and vibration from trucks (particularly empty trucks) rolling over rough surfaces. Loud bangs and ground-borne vibration can occur.

- Limit the extent of heavy diesel engine equipment work to less than 10 consecutive days when working within 40 ft. of the west or south property lines.

INTERIOR WORK

- For interior work, the windows of the interior spaces facing neighboring residences where work is being performed shall be kept closed while work is proceeding.

- Noise generating equipment indoors should be located within the building to utilize building elements as noise screens.

EQUIPMENT

- Earth Removal: Use scrapers as much as possible for earth removal, rather than the noisier loaders and hauling trucks.

- Backfilling: Use a backhoe for backfilling, as it is less costly and quieter than either dozers or loaders.

- Ground Preparation: Use a motor grader rather than a bulldozer for final grading. Wheeled heavy equipment is less noisy than track equipment. Utilize wheeled equipment rather than track equipment whenever possible.

- Building Construction: Nail guns should be used where possible as they are less noisy than manual hammering.

- Generators and Compressors: Use generators, compressors and pumps that are housed in acoustical enclosures rather than weather enclosures or none at all.

- Utilize temporary power service from the utility company in lieu of generators wherever possible.

- Circular saws, miter/chop saws and radial arm saws shall be used no closer than 50 ft. from any residential property line unless the saw is screened from view by any and all residences using an air-tight screen material of at least 2.0 lbs./sq. ft. surface weight, such as ¾" plywood.

- Use electrically powered tools rather than pneumatic tools whenever possible.

- Mitigation of the construction phase noise at the site can be accomplished by using quiet or "new technology" equipment.

- The greatest potential for noise abatement of current equipment should be the quieting of exhaust noises by use of improved mufflers.
- It is recommended that all internal combustion engines used at the project site be equipped with a type of muffler recommended by the vehicle manufacturer.
- All equipment should be in good mechanical condition so as to minimize noise created by faulty or poorly maintained engines, drive-trains and other components. Worn, loose or unbalanced parts or components shall be maintained or replaced to minimize noise and vibration.
- Utilize wheeled equipment rather than tracked equipment whenever possible.
- Vibrating compaction equipment shall not be used within 40 ft. of a residential structure.

NOISE COMPLAINT MANAGEMENT

- Designate a noise complaint officer. The officer shall be available at all times during construction hours via both telephone and email. Signs shall be posted at site entries. A sample is shown below.

NOISE COMPLAINTS

FOR CONCERNS REGARDING CONSTRUCTION NOISE PLEASE CONTACT:

"CONSTRUCTION OFFICER"
Conoff@jobsite.com
OPERATIONS MANAGEMENT ENGINEER
CALL CENTER: (111) 111-1111

- Notify, in writing, all residents within 300 ft. of the site of construction. The notification shall contain the name, phone number and email address of the noise complaint officer. A flyer may be placed at the doors of the residences.

- A log of all complaints shall be maintained. The logs shall contain the name and address of the complainant, the date and time of the complaint, the nature/description of the noise source, a description of the remediation attempt or the reason remediation could not be attempted.

In conclusion, noise impacts will occur to the interior living spaces of the project. Noise mitigation measures will be required for compliance with the City of American Canyon Noise Element and Title 24. Project-generated noise from traffic will a less than significant impact to the nearby noise sensitive neighborhood. Construction noise will exceed the limits of the City of American Canyon Municipal Code. These noise excesses cannot be resolved feasibly due to the strict nature of the noise level limit.

This report presents the results of a noise assessment study for the planned multi-family development along Highway 29 at Crawford Way in American Canyon. The study findings and recommendations for current conditions are based on field measurements and other data and are correct to the best of our knowledge. The future noise exposures are based on information provided by the traffic consultant for the previous project. However, significant changes in future traffic volumes, or changes motor vehicle technology, speed limits, noise regulations, or other future changes beyond our control may produce long-range noise results different from our estimates.

Report Prepared By:

EDWARD L. PACK ASSOC., INC.

Jeffrey K. Pack

APPENDIX B

Noise Standards, Terminology, Instrumentation and General Building Shell Controls,

1. Noise Standards

City of American Canyon General Plan Noise Element Standards

The City of American Canyon Noise Element of the General Plan, adopted 2019, contains policies and standards for various land uses throughout the City. The noise exposures values are in terms of dB Day-Night Level (DNL).

Policies

11.2.1 Require that new development for locations in which the exterior or interior noise levels indicated in **Figure 11-2** are likely to be exceeded, submit a noise attenuation study prepared by a qualified acoustical engineer in order to determine appropriate mitigation measures. (*I 11.3, I 11.14,* and *I 11.15*)

11.2.2 Enforce the California Noise Insulation Standards (Title 25, California Administrative Code) that apply to new multiple family, hotel, motel, dormitory, and long-term care developments with a Ldn of 60 dB(A) noise contour adjacent to roads, transit lines, and manufacturing areas to ensure that the units have been designed to limit interior noise levels in habitable rooms to a Ldn of 45 dB(A) with doors and windows closed. (*I 11.3, I 11.14,* and *I 11.15*)

11.2.3 Require that air conditioning units and pool equipment within residential areas be designed and sited in a manner that does not intrude upon the peace and quiet of adjacent noise-sensitive uses. (*I 11.14* and *I 11.15*)

11.2.4 Require that new industrial, commercial and related land uses, or the expansion of these existing land uses, demonstrate that they would not directly cause ambient noise levels to exceed an exterior Ldn of 65 dB(A) in areas containing housing, schools, health care facilities, or other "noise-sensitive" land uses. Additionally, require that potentially significant noise generators, including uses such as night clubs that cause sporadic noise intensities, submit noise analyses prepared by an acoustical expert that include specific recommendations for mitigation when: a) the project is located in close proximity to noise-sensitive land uses or land that is planned for noise-sensitive land uses, or b) the proposed noise source could violate the noise provisions of the General Plan or City Noise ordinance. (*I 11.3, I 11.4, I 11.14,* and *I 11.15*)

11.2.5 Require that new commercial structures located adjacent to existing residential areas shield their HVAC units so as to limit the units adverse noise impacts to the greatest extent possible. (*I 11.14* and *I 11.15*)

11.2.6 Require that parking lots associated with new commercial structures be designed so as to buffer adjacent residential uses from vehicular noise. (*I 11.14* and *I 11.15*)

11.2.7 Encourage "noise-sensitive" uses, including schools, libraries, health care facilities, and residential developments, to incorporate fences, walls, landscaping, and/or other noise buffers and barriers to mitigate noise impacts where appropriate and feasible. (*I 11.3* and *I 11.14*)

11.2.8 Consider alternate land uses or mitigation measures if large walls or other physical barriers are required to mitigate noise impacts that will affect or be caused by a proposed development project. (*I 11.4, I 11.14*, and *I 11.15*)

11.2.9

Require the utilization of site and architectural design features in conjunction with noise barriers to mitigate impacts on sensitive land uses. Design techniques capable of mitigating potential noise impacts include:

a. Site Design

12 Using building setbacks and dedicating noise easements to increase the distance between the noise source and receiver;

13 Locating uses and orienting buildings that are compatible with higher noise levels adjacent to noise generators or in clusters to shield more noise-sensitive areas and uses;

14 Placing noise tolerant land uses, such as parking areas, between noise sources and receivers;

15 Using noise tolerant structures, such as garages or carports, to shield noise-sensitive areas; and

16 Clustering office, commercial, or multiple family residential structures to reduce interior open space noise levels.

b. Architectural Design

- Using dense building materials and tight fitting doors;
- Employing double glazed and double pane windows;
- Placing unopenable windows on the side of the structure facing a major roadway and entry doors on the side of the building facing away from the major roadway; and
- Avoiding balconies and patio areas facing major transportation routes. (*I 11.1, I 11.16,* and *I 11.17*)

TRAFFIC-RELATED NOISE IMPACTS

Objective

11.3

Minimize the adverse impacts of traffic-generated noise on residential and other "noise-sensitive" uses as depicted on **Figure 11-5**.

Policies

11.3.1

Minimize motor vehicle noise impacts from streets and highways through proper route location and sensitive roadway design by employing the following strategies:

a. Consider the impacts of truck routes, the effects of a variety of truck traffic, and future motor vehicle volumes on noise levels adjacent to master planned roadways when improvements to the circulation system are planned.

b. Mitigate traffic volumes and vehicle speed through residential neighborhoods.

c. Work closely with the State of California Department of Transportation (Caltrans) in the early stages of highway improvements and design modifications to ensure that proper consideration is given to potential noise impacts on the City. (*I 11.4, I 11.15* and *I 11.16*)

1621 Require that all new nonresidential development design and configure onsite ingress and egress points to divert traffic (and its resultant noise) away from "noise-sensitive" land uses to the greatest degree practicable. (*I 11.16*)

1622 Actively enforce existing applicable sections of the California Vehicle Code related to vehicle or equipment mufflers and modified exhaust systems. (*I 11.22*)

1623 Require that any municipal vehicles or noise-generating mechanical equipment purchased or used by the City of American Canyon comply with noise performance standards consistent with the best available noise reduction technology. (*I 11.25*)

1624 Encourage local and regional public transit providers to ensure that the equipment they use and operate does not create excessive noise impacts on the community. (*I 11.19*)

1625 Encourage Caltrans to install and maintain mitigation and/or landscaping elements along highways under their jurisdiction that are adjacent to existing residential subdivisions or noise-sensitive uses in order to reduce their adverse noise impacts. (*I 11.18*)

1626 Provide for the development of alternate transportation modes, such as bicycle paths and pedestrian walkways, to minimize the number of noise generating automobile trips. (*I 11.5*)

162.7 Reduce noise impacts of vehicular travel by implementing Transportation Management Policies 4.6.1 through 4.6.5. (*I 4.8, I 4.10, I 4.11,* and *I 4.13*)

AIRCRAFT-RELATED NOISE IMPACTS

Objective

11.4 Minimize the adverse impacts of aircraft generated noise on residential . and other "noise-sensitive" uses.

Policies

162.8 Restrict the development of uses located within the 65 CNEL contour of Napa Airport to industrial, agricultural, or other open space uses (see **Figure 11-5**). (*I 11.23*)

162.9 Require that development in the vicinity of Napa Airport comply with the noise standards contained in the Airport Land Use Compatibility Plan (ALUP). (*I 11.24*)

162.10 Work closely with the Napa County Airport to ensure that the airport's operations do not generate adverse noise conditions in the City of American Canyon. (*I 11.21*)

162.11 Restrict the development of uses located within the 65 CNEL contour of Napa Airport to industrial, agricultural, or other open space uses (see **Figure 11-5**). (*I 11.23*)

162.12 Require that development in the vicinity of Napa Airport comply with the noise standards contained in the Airport Land Use Compatibility Plan (ALUP). (*I 11.24*)

162.13 Work closely with the Napa County Airport to ensure that the airport's operations do not generate adverse noise conditions in the City of American Canyon. (*I 11.21*)

NOISE IMPACTS OF COMMERCIAL AND INDUSTRIAL LAND USES

Objective

11.5 Minimize noise spillover or encroachment from commercial and industrial land uses into adjoining residential neighborhoods or "noise-sensitive" uses.

Policies

162.14 Require that automobile and truck access to commercial or industrial land uses abutting residential parcels be located at the maximum practical distance from the residential parcels. (*I 11.4*)

162.15 Prohibit the siting of loading and shipping facilities for commercial and industrial land uses adjacent to residential parcels, thereby minimizing the potential noise impacts upon those parcels to the greatest degree practicable. (*I 11.4*)

162.16 Require that parking areas for commercial and industrial land uses be set back from adjacent residential areas to the maximum extent feasible or be buffered and shielded by walls, fences, berms, and/or adequate landscaping. (*I 11.4*)

162.17 Require that parking structures serving commercial or industrial land uses be designed to minimize the potential noise impacts of vehicles using these facilities both on site and on adjacent land uses or properties. The design measures may include: (a) the use of materials that mitigate sound transmission; and (b) the configuration of interior spaces to minimize sound amplification and transmission. (*I 11.4*)

162.18 Limit the hours of operation and/or the use of leaf blowers, parking lot sweepers, or other high noise-generating commercial/industrial equipment to reduce the potentially adverse noise impacts of such equipment upon adjacent residential areas. (*I 11.6*)

162.19 Require that the hours of truck deliveries to commercial or industrial land uses abutting residential uses be limited (within a reasonable period) unless there are no feasible alternatives or there are overriding transportation benefits by scheduling deliveries at other hours. (*I 11.6*)

NOISE IMPACTS OF MIXED-USE STRUCTURES

Objective

11.6 Minimize the potentially adverse noise impacts associated with the development of mixed-use structures in which residential units are located above ground floor commercial uses.

Policies

11.6.1

Require that the commercial component of a mixed-use project not generate excessive noise. (*I*

CONSTRUCTION NOISE IMPACTS

Objective

11.7

Minimize the impacts of construction noise on adjacent uses.

Policies Limit non-emergency construction activities adjacent to existing noise-sensitive uses to daylight hours between 6:30 AM and 8:00 PM. (*I 11.7*)

16220 Require construction activities to employ practical techniques and practices that minimize the generation of adverse and/or excessive noise impacts on adjacent land uses. (*I 11.7*)

NOISE IMPACTS/ENCROACHMENT WITHIN MULTI-OCCUPANT STRUCTURES

Objective

11.8 Ensure that buildings are constructed soundly to prevent adverse noise transmission between differing uses or tenants located in the same commercial structure, and individual dwelling units in multi-family residential structures.

Policy

11.8.1 Rigorously enforce the applicable provisions of the Uniform Building Code and City of American Canyon Municipal Code, which prevent the transmission of excessive and unacceptable noise levels between individual tenants and businesses in commercial structures and between individual dwelling units in multi-family residential structures. (*I 0*)

NOISE IMPACTS OF ENTERTAINMENT AND RESTAURANT/BAR LAND USES

Objective

11.9

Minimize excessive noise generated by entertainment and restaurant/bar establishments and limit noise spillover from these uses into adjacent residential or other "noise-sensitive" land uses.

Policies

11.9.1

Require that entertainment and restaurant/bar uses take appropriate steps to control the activities of their patrons onsite, as well as within a reasonable and legally justified distance from the place of business, to minimize potential noise-related impacts on adjacent residential neighborhoods. (*I*

16221 Discourage the development of new nightclubs, discotheques, and other high noise- generating entertainment uses directly adjacent to any residential neighborhoods, residential dwelling units, schools, health care facilities, or other "noise-sensitive" land uses, unless it is demonstrated that adequate measures can be installed and employed by these establishments to adequately mitigate the potential impacts of onsite operations and/or offsite customer activities upon these areas. (*I11.8*)

16222 Prohibit the location of uses characterized by excessive noise, such as fast food restaurants with drive-through speakers, adjacent to residential neighborhoods. (*I 11.6*)

NOISE IMPACTS OF RAILROAD USES

Objective

11.10

Minimize the noise impacts created by railroad transit (freight and passenger) on residential uses and other "noise-sensitive" land uses.

Policy 11.10.1 Work with railroad operators using facilities that cross through the City of American Canyon to install noise mitigation features where operations impact existing adjacent residential or other "noise-sensitive" uses. (*I 11.20*)

ANALYSIS AND MITIGATION OF CITYWIDE STATIONARY (FIXED-SOURCE) NOISE IMPACTS

Objective

11.11 Ensure that the noise impacts of stationary sources are adequately mitigated.

Policies

11.2.1 Require the completion of detailed and independent acoustical analyses on any new or renovated land uses or structures determined by the City to be potential major stationary noise sources. Such studies will be completed and reviewed, with recommended mitigation measures successfully implemented and tested, prior to the issuance of a Certificate of Occupancy for said land use or structure. (*I 11.12*)

11.2.2 Encourage major stationary noise generating sources throughout the City of American Canyon to voluntarily install additional noise buffering or reduction mechanisms within their facilities to reduce noise generation levels to the lowest extent practicable. (*I 11.13*)

11.2.3 Require the installation of noise buffering or reduction mechanisms within major stationary noise generating sources located throughout the City prior to the renewal of Conditional Use Permits or prior to the approval and/or issuance of new Conditional Use Permits for said facilities, in order to reduce their noise generation levels to the lowest extent practicable. (*I 11.13*)

B. Title 24 Noise Standards

2019 California Building Code, Volume 1, Part 2
SECTION 1206 – SOUND TRANSMISSION

1206.1 Scope. This section shall apply to common interior walls, partitions and floor/ceiling assemblies between adjacent dwelling units and sleeping units or between dwelling units and sleeping units and adjacent public areas such as halls, corridors, stairways or service areas.

1206.2 Air-borne sound. Walls, partitions and floor/ceiling assemblies separating dwelling units and sleeping units from each other or from public or service areas shall have a sound transmission class of not less than 50, or not less than 45 if field tested, for air-borne noise when tested in accordance to ASTM E-90. Alternatively, the sound transmission class of walls, partitions and floor-ceiling assemblies shall be established by engineering analysis based on a comparison of walls, partitions and floor-ceiling assemblies having sound transmission class ratings as determined by the test procedures in ASTM E90. Penetrations or openings in construction assemblies for piping; electrical devices; recessed cabinets; bathtubs; soffits; or heating, ventilating or exhaust ducts shall be sealed lined, insulated or otherwise treated to maintain the required ratings. The requirement shall not apply to entrance doors; however, such doors shall be tight fitting to the frame and sill.

1206.3 Structure-borne sound. Floor/ceiling assemblies between dwelling units and sleeping units or between a dwelling unit or sleeping unit and a public or service area with the structure shall have an impact insulation class rating of not less than 50, or not less than 45 if field tested, when tested in accordance with ASTM E-492. Alternatively, the impact insulation class of floor-ceiling assemblies shall be established by engineering analysis based on a comparison of floor-ceiling assemblies having impact insulation class ratings as determined by the test procedures in ASTM E492.

Exception: *Impact sound insulation is not required for floor/ceiling assemblies over non-habitable rooms or spaces not designed to be occupied, such as garages, mechanical rooms or storage areas.*

1206.4 Allowable interior noise levels. *Interior noise levels attributable to exterior sources shall not exceed 45 dB in any habitable room. The noise metric shall be either the day-night average sound level (Ldn) or the community noise equivalent level (CNEL), consistent with the noise element of the local general plan.*

1206.5 Acoustical control. [BSC-CG] *See California Green Building Standards code, Chapter 5, Division 5.5 for additional sound transmission requirements.*

2. Terminology

A. Statistical Noise Levels

Due to the fluctuating character of urban traffic noise, statistical procedures are needed to provide an adequate description of the environment. A series of statistical descriptors have been developed which represent the noise levels exceeded a given percentage of the time. These descriptors are obtained by direct readout of the sound measuring instruments. Some of the statistical levels used to describe community noise are defined as follows:

L_1 - A noise level exceeded for 1% of the time.

L_{10} - A noise level exceeded for 10% of the time, considered to be an "intrusive" level.

L_{50} - The noise level exceeded 50% of the time representing an "average" sound level.

L_{90} - The noise level exceeded 90 % of the time, designated as a "background" noise level.

L_{eq} - The continuous equivalent-energy level is that level of a steady noise having the same sound energy as a given time-varying noise. The L_{eq} represents the decibel level of the time-averaged value of sound energy or sound pressure squared and is the descriptor used to calculate the DNL and CNEL.

B. Day-Night Level (DNL)

Noise levels utilized in the standards are described in terms of the Day-Night Level (DNL). The DNL rating is determined by the cumulative noise exposures occurring over a 24-hour day in terms of A-Weighted sound energy. The 24-hour day is divided into two subperiods for the DNL index, i.e., the daytime period from 7:00 a.m. to 10:00 p.m., and the nighttime period from 10:00 p.m. to 7:00 a.m. A 10 dB weighting factor is applied (added) to the noise levels occurring during the nighttime period to account for the greater sensitivity of people to noise during these hours. The DNL is calculated from the measured L_{eq} in accordance with the following mathematical formula:

$$DNL = \left[[(10\log_{10}(10^{\Sigma Leq(7\text{-}10)})) \times 15] + [((10\log_{10}(10^{\Sigma Leq(10\text{-}7))})+10) \times 9]\right]/24$$

C. A-Weighted Sound Level

The decibel measure of the sound level utilizing the "A" weighted network of a sound level meter is referred to as "dBA". The "A" weighting is the accepted standard weighting system used when noise is measured and recorded for the purpose of determining total noise levels and conducting statistical analyses of the environment so that the output correlates well with the response of the human ear.

3. Instrumentation

The on-site field measurement data were acquired by the use of one or more of the precision acoustical instruments shown below. The acoustical instrumentation provides a direct readout of the L exceedance statistical levels including the equivalent-energy level (L_{eq}). Input to the meters was provided by a microphone extended to a height of 5 ft. above the ground. The meter conforms to ANSI S1.4 for Type 1 instruments. The "A" weighting network and the "Fast" response setting of the meter were used in conformance with the applicable ISO and IEC standards. All instrumentation was acoustically calibrated before and after field tests to assure accuracy.

Larson Davis LDL 812 Precision Integrating Sound Level Meter
Larson Davis 831C Precision Integrating Sound Level Meter
Larson Davis LxT Precision Integrating Sound Level Meter

4. Mechanical Ventilation Requirements

California Mechanical Code Chapter 4- Ventilation Air

402.3 Mechanical Ventilation

Where natural ventilation is not permitted by this section or the building code, mechanical ventilation systems shall be designed, constructed, and installed to provide a method of supply air and exhaust air. Mechanical ventilation systems shall include controls, manual or automatic, that enable the fan system to operate wherever the spaces served are occupied. The system shall be designed to maintain minimum outdoor airflow as required by Section 403.0 under any load conditions.

5. Building Shell Controls

The following additional precautionary measures are required to assure the greatest potential for exterior-to-interior noise attenuation by the recommended mitigation measures. These measures apply at those units where closed windows are required:

- Unshielded entry doors having a direct or side orientation toward the primary noise source must be 1-5/8" or 1-3/4" thick, insulated metal or solid-core wood construction with effective weather seals around the full perimeter.

- If any penetrations in the building shell are required for vents, piping, conduit, etc., sound leakage around these penetrations can be controlled by sealing all cracks and clearance spaces with a non-hardening caulking compound.

- Ventilation openings shall not compromise the acoustical integrity of the building shell.

- Spray-in or expandable foams are not acceptable for use as an acoustical sealant or as an insulation material for sound absorption within a wall or floor/ceiling cavity.

CITY OF AMERICAN CANYON PLANNING COMMISSION

NOTICE OF PUBLIC HEARING (2025-03)

On **Thursday, January 23, 2025,** at the hour of **6:30 p.m.,** at **4381 Broadway, Suite 201** (in the Council Chambers of the American Canyon City Hall), a public hearing will be held by the Planning Commission of the City of American Canyon to consider the following:

APPLICATION:	Consider a Resolution to approve a Design Permit for development of 100 multifamily residential units on a 4.34-acre site in the Local Serving Mixed-Use (LSMU) zoning district in the Broadway District Specific Plan (BDSP) at the southwest corner of Crawford Way and Highway 29, APNs 058-302-001 and 058-290-012 (File No. PL23-0003).
PROJECT DESCRIPTION:	The Crawford Way Multifamily project consists of 100 dwelling units on 16 3-story buildings. The project includes 68 two-bedroom units and 32 three-bedroom units, and the units range from 1,212 to 1,632 square feet. The units are developed with a farmhouse aesthetic and include a two-car garage and private open space. The site includes a community building and a large common open space. The project will have vehicular access on Crawford Way and pedestrian access along Highway 29.
ENVIRONMENTAL REVIEW:	The City Council certified the Broadway District Specific Plan Environmental Impact Report (BDSP EIR, SCH #2017042025) in July 2019 and amended the BDSP in September 2020. The applicant provided an addendum to the BDSP EIR that evaluated the potential impacts of the Crawford Way Project. In accordance with CEQA Guidelines Section 15162, the Addendum found that there were no substantial changes proposed to by the Project and the proposed revisions do not require preparation of a new subsequent or supplemental EIR.
PROJECT LOCATION:	Vacant lot at the southwest corner of Crawford Way and Highway 29, APNs 058-302-001 and 058-290-012
APPLICANT:	Yeh Area Group, c/o William Yeh

All interested persons are invited to attend the meeting and be heard on this matter. Copies of all documents that relate to the above-described project may be examined at the Community Development Department office prior to the hearing. The meeting will be conducted in person and by teleconference via a Zoom connection where the Planning Commission and staff will participate with both audio and video presence. The meeting will be accessible for all members of the public to attend via the City's website, YouTube, and Cable TV Channel 28 and public comments enabled via email and phone.

Written comments may be submitted to the Community Development Department at www.americancanyon.gov/ProjectReview or by mail at 4381 Broadway St, Suite 201, American Canyon, CA 94503, prior to the public hearing.

If you challenge the particular proceedings in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the City prior to the public hearing.

Public meetings/events sponsored or conducted by the City of American Canyon are held in accessible sites. Requests for accommodations may be made by calling (707) 647-4577 (voice) or 711 for the California Relay Service or by e-mailing cityclerk@americancanyon.gov at least 72 hours in advance of the event. Copies of documents distributed at the meeting are available in alternative formats upon request.

Is there a plan for affordable "home ownership?" We are building more and more apartments in American Canyon. Is there a plan in place to develop condos, or townhomes for purchase? These would be a great starter home for many families wanting to move to American Canyon.

Hello Marilyn,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, you asked if this project would be for sale or for rent. Here are some answers to your question.

The Crawford Way Project is proposed as 100 units of apartment units. The City regulates zoning for parcels, but does not get into the specificity of apartments versus condos. They are treated as multifamily dwelling units and developers choose between building for rent or for sale. In 2023, the Planning Commission approved 30 condo units to be developed in the Watson Ranch Napa Valley Ruins and Garden area. The residential dwelling units range from 2,065 to 2,695 SF each.

Kind regards,

William He, AICP

Hello Debra,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, you asked about who the management company would be and how the project would be marketed.

Unfortunately, the applicant has not identified a management company at this time. Typically, developers will inform the City about the management company after the entitlement phase and close towards the end of construction. For more information on this project, please keep in touch with us by signing up to our newsletter, link here.

I lived in AC from 2001 until last summer. I want to move back and still have family there. My concern is AC is becoming more and more like Napa. Many of us moved there to get away from what Napa was quickly becoming. Not carrying about the average citizen and commuted to tourists. These apartments give themselves away stating 15 affordable units. The size is larger than necessary and two car garages are unusual. Like many apartments and homes in AC now, they will not be affordable for the backbone of the city…it's middle class, longtime citizens. Children must move away to afford a place and seniors are losing ground. Instead of all the over-the-top things, get truly affordable apartments and family oriented restaurants and places to go. Movies, bowling, skating, miniature golf etc. Teens leave town just to go to a show or bowl. I know many feel as I do, so please start listening to your supposedly bosses and think of them. Thank you.

Hi Dara,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, you expressed concern that the project lacks affordability and that it would price out middle class residents. Additionally, you expressed support for the development of more family-oriented business instead. Here are some answers to your questions.

The developer is required to provide 10 percent of their dwelling units for affordable housing if the project is to proceed as townhomes for sale, where the 10 percent of the units will be available at low-income affordability. If the project is to proceed as apartments for rent, the applicant is required to provide 15 percent of the dwelling units for affordable housing, where 5 percent of the units will be available at the very-low income, 5 percent of the units will be at low-income, and 5 percent will be at moderate-income level. Affordability will be measured with Napa County Area Median Income (AMI), which is updated annually.

The City is working on bringing more businesses to the business districts. In 2019, the City approved the Broadway District Specific Plan (BDSP), which streamlines environmental review. In 2022, Bel King and Pasta D'Oro restaurants opened their doors. In May of 2024, the Planning Commission approved the Chicken Guy restaurant. The City has a variety of parcels, mostly along Highway 29 where new stores and restaurants are permitted.

I am looking for a 2 bedroom apartment that has a wheelchair accessible bathroom and a large wheel-in shower. Also, low-income. Will there be any available?

Hi Janis,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, you asked if the units will be affordable to low-income families and if there are units with accessible bathrooms and showers. Here are some answers to your questions.

The developer is required to provide 10 percent of their dwelling units for affordable housing if the project is to proceed as townhomes for sale, where the 10 percent of the units will be available at low-income affordability. If the project is to proceed as apartments for rent, the applicant is required to provide 15 percent of the dwelling units for affordable housing, where 5 percent of the units will be available at the very-low income, 5 percent of the units will be at low-income, and 5 percent will be at moderate-income level. Affordability will be measured with Napa County Area Median Income (AMI), which is updated annually. The applicant has not identified how many ADA units are available, but the project will comply with the California Building Code.

Unfortunately, this project is in the Planning Entitlement process and have not started construction. Typically, developers will inform the City about their completion towards the end of construction. For more information on this project, please keep in touch with us by signing up to our newsletter, link here.

Is this a rental project? We have enough apartment projects. I am opposing to this new project. Let me know where I need to sign to stop this project. Thank You

Hi Roxana,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, you asked if this project would be a rental project and expressed opposition to it because you believe the City has enough apartment projects.

The Crawford Way Project is proposed as 100 units of apartment units. The City regulates zoning for parcels, but does not get into the specificity of apartments versus condos. They are treated as multifamily dwelling units and developers choose between building for rent or for sale. In 2023, the Planning Commission approved 30 condo units to be developed in the Watson Ranch Napa Valley Ruins and Garden area. The residential dwelling units range from 2,065 to 2,695 SF each.

Kind regards,

Haven't we added enough apartments at once Kansas City stop and take a breath and see the impact of the huge housing and apartments that are being built currently before we add more people and cars and congestion to our town?

Hi Tina,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, expressed concern over the impact of new apartments, which will bring more people and cars into the City. Here are a few points you might consider in light of the Crawford Way Project.

Since 1969, California has required all city and county governments to adopt policies to accommodate each community's "fair share" of housing for all income groups. Known as the Regional Housing Needs Allocation (RHNA), jurisdictions like American Canyon must demonstrate they have sufficient land at appropriate densities and streamline development approvals to accommodate their fair share of new housing need in the San Francisco Bay Area region.

As we have all heard in the news, the Bay Area housing shortage grows more acute. In 2017 alone, the Governor signed 15 housing bills intended to require cities, like American Canyon to increase housing supply. Like all cities in California, American Canyon must comply with these laws in order to qualify for a growing list of grant programs that are used to pay for roadway infrastructure and other programs.

In addition, if the City does not streamline housing approvals and accommodate housing for lower income residents, the State may take away the City's authority to regulate housing entirely. You can learn more about reasons for housing approvals in a short video on the Housing Element HERE.

Very seriously wonder why yet another apartment complex is being proposed for our city. Not one of the existing complexes are at capacity. It seems we are encouraging a transient population more than permanent residents. I am extremely concerned about the many apartment and hotel complexes. Hotels are being allowed to build right next to each other?!? Doesn't seem fair to the hotels who have been here and committed to and supported our city for many years. The wisdom of the city officials is a mystery to me.

Hello Gail,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, expressed concern over the increase of apartments and hotels in the City. Here are a some answers to your questions:

1. *Why does the City keep building housing?*

Since 1969, California has required all city and county governments to adopt policies to accommodate each community's "fair share" of housing for all income groups. Known as the Regional Housing Needs Allocation (RHNA), jurisdictions like American Canyon must demonstrate they have sufficient land at appropriate densities and streamline development approvals to accommodate their fair share of new housing need in the San Francisco Bay Area region.

As we have all heard in the news, the Bay Area housing shortage grows more acute. In 2017 alone, the Governor signed 15 housing bills intended to require cities, like American Canyon to increase housing supply. Like all cities in California, American Canyon must comply with these laws in order to qualify for a growing list of grant programs that are used to pay for roadway infrastructure and other programs.

In addition, if the City does not streamline housing approvals and accommodate housing for lower income residents, the State may take away the City's authority to regulate housing entirely. You can learn more about reasons for housing approvals in a short video on the Housing Element HERE.

2. *Why is the City building so many hotels and why are they being built next to each other?*

Hotels are permitted uses in parcels along Highway 29. There is no proximity restriction to their development. It is coincidental that two new hotels, the Home2 Suites Hotel and the Hampton Inn, are approved in recent years. During their entitlement review, the applicant provided economic feasibility studies that showed hotel rooms are high in demand in American Canyon and South Napa County.

I hope these responses provides you with some more information and thank you for being an active participant in your community. By expressing your concerns and offering constructive suggestions, you contribute to a more informed decision-making process.

This is too much. We are adding WAY too many residences, especially multi-family residences to our town without having implemented a realistic plan for 1. traffic 2. water. Relying on water sources that are not even built yet and are still in planning stages is not a relief to the water problems we've had in drought years. Let's not even mention traffic. Seriously, there is NO real solution to the traffic that happens to be the worst in Am Can specifically! This nonsense has got to stop. I can't even believe our council and planning commission are even considering this. I have been a resident for the better part of the last 30 years. I am all about progress, but enough is enough. Please feel free to contact me to discuss. I would love to hear your reasoning.

Hi Kami,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, expressed concern over the increase of apartments due to the impacts on traffic and water supply. Here are some answers to your questions:

1. *Why does the City keep building housing?*

Since 1969, California has required all city and county governments to adopt policies to accommodate each community's "fair share" of housing for all income groups. Known as the Regional Housing Needs Allocation (RHNA), jurisdictions like American Canyon must demonstrate they have sufficient land at appropriate densities and streamline development approvals to accommodate their fair share of new housing need in the San Francisco Bay Area region.

As we have all heard in the news, the Bay Area housing shortage grows more acute. In 2017 alone, the Governor signed 15 housing bills intended to require cities, like American Canyon to increase housing supply. Like all cities in California, American Canyon must comply with these laws in order to qualify for a growing list of grant programs that are used to pay for roadway infrastructure and other programs.

In addition, if the City does not streamline housing approvals and accommodate housing for lower income residents, the State may take away the City's authority to regulate housing entirely. You can learn more about reasons for housing approvals in a short video on the Housing Element HERE.

2. *Why does the City not fix the traffic problem before building more new development?*

The city is working hard to address traffic issues in American Canyon. The Crawford Way Multifamily project will be required to pay a traffic impact fee, which all new development is required to pay prior to construction permits. The fee required pays for expanding the roadway system, including a portion of funds to improve Highway 29. In addition, the Sun Square project will improve the roadway in front of their project with a curb, gutter, and new sidewalk.

Every year, the City Council adopts a 5-Year Capital Improvement Program (CIP). The CIP includes numerous physical improvements to city facilities in many categories, including roadways. The Planning Commission will reviewed this list at their May 23, 2024 meeting, link here. Roadway improvements in the 5-Year CIP include the following:

- Green Island Road reconstruction and widening
- Wetlands Edge Court extension
- South Kelly Road/Highway 29 intersection widening

Melvin Road traffic calming, sidewalk and storm drainage improvements
- Rancho Del Mar paving and utility improvements.

In 2022, the City made the following road improvements:
- Completed the missing Devlin Road link from the railroad bridge at Middletown Way to Green Island Road
- Crosswalk ramp improvements on Folland Drive, Corsicana Drive, Brophy Street, Kemp Lane, Kemp Way, Sheffield Way, and Folland Drive, Gold Valley Way at Tapestry Lane
- Enhanced pedestrian intersection on Donaldson Way at Shenandoah Drive and on Silver Oak Trail at White Oak Drive
- 8,600 feet of new Class II Bike Lanes on Donaldson Way, Shenandoah Drive, and Silver Oak Trail
- Enhanced crosswalk improvements on Elliott Drive and on Daniel Drive
- Installed 410 feet of sidewalk on Eucalyptus Drive
- Installed permanent traffic calming measures on Wetlands Edge, including speed cushions and curb bulb-outs

In 2022, the City completed the annual pavement resurfacing project that included paving, ADA upgrades, bike lane, and/or crosswalk improvements at the following streets:
- American Canyon Road East (between Flosden Road & City Limits),
- Blanco Street,
- Brophy Street,
- Corsicana Drive,
- Commerce Boulevard,
- Donaldson Way East,
- Flosden Road at Daniel Drive,
- Folland Drive,
- Gold Valley Way & Tapestry Lane,
- Kemp Lane,
- Kemp Way,
- Sheffield Way,
- Shenandoah Drive, and
- Silver Oak Trail.

The annual pavement resurfacing project was funded by SB1/Gas Tax, Measure T, and ARPA Funding.

In 2023, six streets are planned for 1.5 miles of grind and overlay through Measure T Funding. Streets that will be rehabilitated are selected based on the Pavement Management Program, which considers public safety, underground utility needs, and available funding. To learn more about how these decisions are made or see the specific areas on the project list, visit CityofAmericanCanyon.org/Streets.

In 2022, the City adopted a Local Streets and Roads Safety Plan. You can view this plan on our website HERE.

Safe roadways begin with safe drivers, and that includes ourselves. Take the *We Love Safe Streets* traffic calming program resident pledge and safety program HERE.

Highway 29 is a chronically congested highway through American Canyon. Owned and operated by the State of California through Caltrans, the Napa Valley Transportation Agency (NVTA) is the authorized Napa County liaison with Caltrans. The NVTA, with funding support from the City of American Canyon, recently completed a Project Initiation Document (PID) to improve Highway 29 through American Canyon. This plan requires environmental review to evaluate two alternatives. Completion of this study is anticipated to provide access to federal funds for Highway 29 transit, operations, beautification, and pedestrian improvements. You can view the PID study documents at the NVTA website HERE.

3. *Where will the City find water for these new developments?*

As a part of ongoing water conservation efforts in the commercial sector, the City of American Canyon adopted a Zero Water Footprint policy. Also known as ZWF, the primary goal of this policy is that there is no loss in reliability or increase in water rates for existing water service customers due to new demand for water within the City's water service area.

In order to meet our ZWF standards, Developers must ensure that all new developments offset the amount of increased potable water that will be consumed by their project on a one-to-one basis. As part of the process, Developers are first required to minimize their demand for new potable water by using water efficient fixtures, consuming recycled water for non-potable uses when available, dual plumbing buildings, installing water wise landscaping and irrigation, and other appropriate measures. Once the Developer, working with the City, has refined their plan to minimize potable water needs, the City works with them to evaluate the water footprint of the project and the proposed offset to determine if the project has achieved a ZWF. For more information on the ZWF, see this link.

I hope these responses provides you with some more information and thank you for being an active participant in your community. By expressing your concerns and offering constructive suggestions, you contribute to a more informed decision-making process.

I completely oppose this new building plan for yet another building for apartments! The city is building too fast without knowing the consequences. This needs to stop immediately.
Why can't the city listen to its citizens instead of developers with deep pockets. Enough is enough!

Hi Cindy,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, expressed concern over the increase of apartments, gas stations, and hotels in the City. Here are some answers to your questions:

1. *Why does the City keep building housing?*

Since 1969, California has required all city and county governments to adopt policies to accommodate each community's "fair share" of housing for all income groups. Known as the Regional Housing Needs Allocation (RHNA), jurisdictions like American Canyon must demonstrate they have sufficient land at appropriate densities and streamline development approvals to accommodate their fair share of new housing need in the San Francisco Bay Area region.

As we have all heard in the news, the Bay Area housing shortage grows more acute. In 2017 alone, the Governor signed 15 housing bills intended to require cities, like American Canyon to increase housing supply. Like all cities in California, American Canyon must comply with these laws in order to qualify for a growing list of grant programs that are used to pay for roadway infrastructure and other programs.

In addition, if the City does not streamline housing approvals and accommodate housing for lower income residents, the State may take away the City's authority to regulate housing entirely. You can learn more about reasons for housing approvals in a short video on the Housing Element HERE.

2. *Why does the City keep building Gas Stations?*

The City has four gas stations, with the Circle K as the newest addition. Since March of 2022, the City Council approved an ordinance to prohibit fossil fuel service stations to reduce impacts to the environment. Therefore, Circle K will be the last gas station to be developed in the City. For more information on the gas station prohibition, see the American Canyon Municipal Code (ACMC) Section 19.49.090, link here.

3. *Why is the City building so many hotels and why are they being built next to each other?*

Hotels are permitted uses in parcels along Highway 29. There is no proximity restriction to their development. It is coincidental that two new hotels, the Home2 Suites Hotel and the Hampton Inn, are approved in recent years. During their entitlement review, the applicant provided economic feasibility studies that showed hotel rooms are high in demand in American Canyon and South Napa County.

I hope these responses provides you with some more information and thank you for being an active participant in your community. By expressing your concerns and offering constructive suggestions, you contribute to a more informed decision-making process.

JUST NO!!!! We have plenty of housing. Until Hwy 29 is figured WE do not need more housing. This HUGE Watson project a Hotel 2 new Apartment Buildings and now another Housing unit, you people are losing your minds just like the gas stations you people were running amok attempting to put one on every corner. I do understand the need, however there HAS to be a limit. You want to build warehouses and now it's Green Island, the gateway to wine country, what Napa doesn't want it you people accept the rejects car and point THAT CHICKEN DIVE. Why does AC need another drive thru junk food place? More FAMILY style restaurants? A place for older teens to go? More family oriented venues, I have an amazing idea another Grocery Store.

Subject: Crawford Way Multifamily Project - Public Comment
Date: Thursday, January 16, 2025 4:07:00 PM

Hi Shana,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, expressed concern over the increase of apartments and fast-food restaurants. You also mentioned that you would like to see another grocery store in the City. Here are some answers to your questions:

1. *Why does the City keep building housing?*

Since 1969, California has required all city and county governments to adopt policies to accommodate each community's "fair share" of housing for all income groups. Known as the Regional Housing Needs Allocation (RHNA), jurisdictions like American Canyon must demonstrate they have sufficient land at appropriate densities and streamline development approvals to accommodate their fair share of new housing need in the San Francisco Bay Area region.

As we have all heard in the news, the Bay Area housing shortage grows more acute. In 2017 alone, the Governor signed 15 housing bills intended to require cities, like American Canyon to increase housing supply. Like all cities in California, American Canyon must comply with these laws in order to qualify for a growing list of grant programs that are used to pay for roadway infrastructure and other programs.

In addition, if the City does not streamline housing approvals and accommodate housing for lower income residents, the State may take away the City's authority to regulate housing entirely. You can learn more about reasons for housing approvals in a short video on the Housing Element HERE.

2. *Why doesn't the City build more family-friendly restaurants instead of fast-food restaurants?*

In 2019, Laso Restaurant opened on Antonina Ave. In 2022, Bel King and Pasta D'Oro restaurants opened their doors. The City has a variety of parcels, mostly along Highway 29 where new stores and restaurants are permitted.
There is a very strong link between new housing and more stores and restaurants because all restaurants need hungry customers. New housing brings more residents to American Canyon who become customers. According to Business.com, a new restaurant owner must consider 13 factors before deciding to open a restaurant. These include: understanding potential competitors, good location, a great menu, hours of operation, marketing, staffing, financial resources, health agency permitting, and target customers. Business.com is a website for business news and resource content focused on helping business owners launch, build, and expand their businesses. You can read their article on restaurant location criteria https://www.business.com/articles/7-things-to-consider-restaurant/

3. *Why can't the City get another Grocery Store?*

The City cannot develop grocery stores on its own. While the City establishes zones and permitted uses for development, it is ultimately up to the property owner to decide what goes on their site. The property owner would have to be interested in developing a space that meets all of the prospective grocery store's specifications (such as Trader Joe's, Safeway, Whole Foods, etc). The grocery store company would do their research, which involves factors like population density, demographics, spending power, presence of competitors, and more. If there's an agreement between the property owner and grocery store, then they pursue City entitlements and permits.

I hope these responses provides you with some more information and thank you for being an active participant in your community. By expressing your concerns and offering constructive suggestions, you contribute to a more informed decision-making process.

Hello Kathleen,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, you asked if this project would be for sale or for rent. Here are some answers to your question.

The Crawford Way Project is proposed as 100 units of apartment units. The City regulates zoning for parcels, but does not get into the specificity of apartments versus condos. They are treated as multifamily dwelling units and developers choose between building for rent or for sale. In 2023, the Planning Commission approved 30 condo units to be developed in the Watson Ranch Napa Valley Ruins and Garden area. The residential dwelling units range from 2,065 to 2,695 SF each.

Kind regards,

William He, AICP

Hi Issac,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, expressed opposition to the proposed project. Here are a few points you might consider in light of the Crawford Way Project.

Since 1969, California has required all city and county governments to adopt policies to accommodate each community's "fair share" of housing for all income groups. Known as the Regional Housing Needs Allocation (RHNA), jurisdictions like American Canyon must demonstrate they have sufficient land at appropriate densities and streamline development approvals to accommodate their fair share of new housing need in the San Francisco Bay Area region.

As we have all heard in the news, the Bay Area housing shortage grows more acute. In 2017 alone, the Governor signed 15 housing bills intended to require cities, like American Canyon to increase housing supply. Like all cities in California, American Canyon must comply with these laws in order to qualify for a growing list of grant programs that are used to pay for roadway infrastructure and other programs.

In addition, if the City does not streamline housing approvals and accommodate housing for lower income residents, the State may take away the City's authority to regulate housing entirely. You can learn more about reasons for housing approvals in a short video on the Housing Element HERE.

I'm concerned with the addition of 200 more cars driving around our, already over crowded and crumbling roadways. Who will pay to restore our roads.

Hi Timothy,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, you expressed concern over the addition of 200 more cars to the community and wanted to know who will pay to restore our roads. Here are some answers to your question:

The city is working hard to address traffic issues in American Canyon. The Crawford Way Multifamily project will be required to pay a traffic impact fee, which all new development is required to pay prior to construction permits. The fee required pays for expanding the roadway system, including a portion of funds to improve Highway 29. In addition, the Sun Square project will improve the roadway in front of their project with a curb, gutter, and new sidewalk.

Every year, the City Council adopts a 5-Year Capital Improvement Program (CIP). The CIP includes numerous physical improvements to city facilities in many categories, including roadways. The Planning Commission will reviewed this list at their May 23, 2024 meeting, link here. Roadway improvements in the 5-Year CIP include the following:

- Green Island Road reconstruction and widening
- Wetlands Edge Court extension
- South Kelly Road/Highway 29 intersection widening
- Melvin Road traffic calming, sidewalk and storm drainage improvements
- Rancho Del Mar paving and utility improvements.

In 2022, the City made the following road improvements:

- Completed the missing Devlin Road link from the railroad bridge at Middletown Way to Green Island Road
- Crosswalk ramp improvements on Folland Drive, Corsicana Drive, Brophy Street, Kemp Lane, Kemp Way, Sheffield Way, and Folland Drive, Gold Valley Way at Tapestry Lane
- Enhanced pedestrian intersection on Donaldson Way at Shenandoah Drive and on Silver Oak Trail at White Oak Drive
- 8,600 feet of new Class II Bike Lanes on Donaldson Way, Shenandoah Drive, and Silver Oak Trail
- Enhanced crosswalk improvements on Elliott Drive and on Daniel Drive
- Installed 410 feet of sidewalk on Eucalyptus Drive
- Installed permanent traffic calming measures on Wetlands Edge, including speed cushions and curb bulb-outs

In 2022, the City completed the annual pavement resurfacing project that included paving, ADA upgrades, bike lane, and/or crosswalk improvements at the following streets:

- American Canyon Road East (between Flosden Road & City Limits),
- Blanco Street,
- Brophy Street,
- Corsicana Drive,
- Commerce Boulevard,
- Donaldson Way East,
- Flosden Road at Daniel Drive,
- Folland Drive,
- Gold Valley Way & Tapestry Lane,
- Kemp Lane,
- Kemp Way,
- Sheffield Way,
- Shenandoah Drive, and
- Silver Oak Trail.

The annual pavement resurfacing project was funded by SB1/Gas Tax, Measure T, and ARPA Funding.

In 2023, six streets are planned for 1.5 miles of grind and overlay through Measure T Funding. Streets that will be rehabilitated are selected based on the Pavement Management Program, which considers public safety, underground utility needs, and available funding. To learn more about how these decisions are made or see the specific areas on the project list, visit CityofAmericanCanyon.org/Streets.

In 2022, the City adopted a Local Streets and Roads Safety Plan. You can view this plan on our website HERE.

Safe roadways begin with safe drivers, and that includes ourselves. Take the *We Love Safe Streets* traffic calming program resident pledge and safety program HERE.

Highway 29 is a chronically congested highway through American Canyon. Owned and operated by the State of California through Caltrans, the Napa Valley Transportation Agency (NVTA) is the authorized Napa County liaison with Caltrans. The NVTA, with funding support from the City of American Canyon, recently completed a Project Initiation Document (PID) to improve Highway 29 through American Canyon. This plan requires environmental review to evaluate two alternatives. Completion of this study is anticipated to provide access to federal funds for Highway 29 transit, operations, beautification, and pedestrian improvements. You can view the PID study documents at the NVTA website HERE.

I hope these responses provides you with some more information and thank you for being an active participant in your community. By expressing your concerns and offering constructive suggestions, you contribute to a more informed decision-making process.

I'd like to know when the meeting is to discuss this, as well as what the city plans to do for the homes on James Rd, who've already had 10' of our property taken with the sidewalks, now we're losing our view as well. Also, I have a small child and I'd like to know what the city plans to do to keep the neighbors in the apartments from being able to view what's happening on my property, with my family. It's invasive and completely lowers the value of my home and my neighborhood.

Hi Kelly,

Thank you for reaching out to the City regarding the Crawford Way Multifamily Project. In your comment, you expressed concern over the project because the new building will overlook your property and impact your privacy.

The project is in the Local-Serving Mixed Use (LSMU) zone, which permits a maximum height of 42 feet. According to the project plans, the height of the building will be approximately 39'. The building will be set back 10 feet from the western property line, and a 6-foot-tall wooden fence will be installed along the property line.

I recognize that this represents a significant change to the site and the surrounding neighborhood. Balancing growth with maintaining the quality of life in our community is crucial. I appreciate you taking the time to share your concerns. Your input is invaluable in shaping development projects, and by voicing your concerns and offering constructive suggestions, you help ensure a more informed decision-making process.

Hi Chary,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, you expressed interest in applying to the residential project.

Unfortunately, this project is in the Planning Entitlement process and have not started construction. Typically, developers will inform the City about their completion towards the end of construction. For more information on this project, please keep in touch with us by signing up to our newsletter, link here.

Hello my name is Barbara Garcia and we are home owners in American Canyon. You are asking our opinions on this housing project on Crawford & 29, I sure hope you listen to us
Please NO MORE HOUSING especially on the freeway. There is already a project on NEWELL to ease the traffic. Housing would cause EVEN MORE traffic!
My request is for maybe a grocery outlet, dog park, some kind of park, or a small restaurant besides Mexican food. You could have put that Chicken place there. Even the 99 cent store could have gone there. Move the Post Office over there. Give them & the library more room.
PLENTY of other options
PLEASE PLEASE NO MORE HOUSING, GAS STATIONS OR FAST FOOD!! PLEASE
Thank you! I know plenty of residents feel the same PLEASE I hope you listen.
Thank you Barbara Garcia

Hi Barbara,

Thank you for sharing your thoughts about the housing project on Crawford & 29. As a homeowner in American Canyon, your perspective is valuable, and I appreciate your engagement in the community.

It's clear that you have concerns about the impact of additional housing in the area, particularly in terms of traffic. I understand that traffic congestion can be frustrating, and it's essential to consider the overall effects of any development project. Here are a few points you might consider in light of the Crawford Way Apartments:

Additional Housing in our Community
Housing is a building block for any community. It fosters a sense of belonging, social cohesion, and community engagement. New residents attend our churches and contribute to community events and other aspects of civic life.

Housing Choice For Residents
The Bay Area has a critical shortage of housing, and American Canyon is no exception. New housing helps offset the housing shortage which gives all residents more choice in their living situation. Increasing the housing supply may help slow rent increases, which would leave residents with potentially more disposable income to spend in the community.

Contribution to the School District
Our local school district, Napa Valley Unified School District (NVUSD) has been experiencing declining enrollment for many years. New housing brings new families to American Canyon, which helps reduce declines in our school district enrollment.

Traffic Management
While housing projects can indeed contribute to increased traffic, even retail or restaurant development on the property will result in an increase in traffic. However, it's essential to evaluate the proposed development's traffic management plan:

- Residents living in this apartment project would have excellent access to bus transit to their jobs because the location is across the street from the Rapid Bus to Bart. Residents will have convenient access to Highway 29 to conduct shopping and reach points outside the City.

- The Crawford Apartments project will construct a pedestrian/bike trail along its Highway 29 frontage and improve Crawford Way with a curb, gutter and sidewalk.

Every new development is assessed a traffic impact fee. The Crawford Way Apartments will be assessed approximately $490,000 that will be added to a traffic improvement fund to construct circulation improvements throughout the City.

Retail Stores and Restaurants

You mentioned that the site could be developed with a grocery outlet, a small restaurant besides Mexican food, the Chicken Guy Restaurant, or a 99-Cent store. Unfortunately, the City does not have the authority to require property owners to sell their property to specific businesses. Generally, the property owner reviews allowable uses on their property and constructs the type of development they are most familiar with or brings the greatest return on investment.

Even so, housing brings more residents to American Canyon who become customers which can help attract new retail businesses and restaurants to American Canyon. According to Business.com, a new restaurant owner must consider 7 factors before deciding to open a restaurant. These include: the number of target customers nearby, potential competitors, good location, a great menu, hours of operation, marketing, staffing, financial resources, and health agency permitting. You can read their article on restaurant location criteria at this link, https://www.business.com/articles/7-things-to-consider-restaurant/ .

Economic Boost

Housing construction stimulates the local economy. During construction, it generates construction jobs and construction material purchases. After construction, new residents generate on-going consumer-driven jobs in the local economy for services and purchases. This economic boost contributes to the overall well-being of the community.

Local Employment

We have all heard about the shortage of labor and the harm it creates to businesses, including restaurants who cannot find enough employees to remain open. New housing enables our local businesses to attract and retain employees who live nearby. When housing is affordable, workers are more likely to live near their workplace, reducing commute times, improve work-life balance, and have more disposable income left over to patronize our stores, services, and restaurants. This, in turn, benefits local businesses and the community as a whole.

State Housing Laws

There are many State laws that require every jurisdiction in California to accommodate their fair share of regional housing demand for every income resident. This law requires American Canyon to permit additional housing in our community. One such law is the Housing Accountability Act in 2023 (Government Code Section 65589.5). The Housing Accountability Act suggests that California housing has become the most expensive in the nation, in part, discrimination toward low-income and minority households. (Gov. Code Section 65589.5(1)(C).

As a result of this law, when housing is permitted in a location, the City may not use subjective criteria to deny the application, reduce the housing density, or add new requirements that are not part of the City's development standards.

Community Spaces

Your idea of moving the Post Office and providing more room for the library is thoughtful. Community spaces are essential for residents' well-being. You may wish to consider attending a Council meeting to share your ideas further.

Finding a balance between growth and maintaining the quality of life of the City is crucial, and I appreciate you for taking the time to share your concerns. Community input plays a significant role in shaping development projects. By expressing your concerns and offering constructive suggestions, you contribute to a more informed decision-making process.

Thank you for being an active participant in your community. Together, we can work towards a vibrant and sustainable American Canyon.

Kind regards,

Hi Sharon.

Thank you for contacting the City of American Canyon.

Attached is a letter sent to neighbors of the Crawford Way Multi-Family Project. Please use this link to find latest information on the Crawford Way Multi-Family Project and submit questions or comments.

Although we wish could, the City does not decide whether stores like Whole Foods or Traders Joes locate in American Canyon. (The businesses themselves decide that). Those retailers are nice, and while we would welcome their presence, we know they won't locate in areas without sufficient patronage.

As Council Member Joseph alluded, a generation ago, neither Walmart nor Safeway existed in American Canyon. Those retailers responded once the community grew to a certain size. We are employing this strategy again in the hopes additional retailers (and more restaurants) will want to locate in American Canyon. Moreover, the City is now mandated to provide for housing in a way that didn't exist previously. And we hope to welcome in these new residents in the same way most current residents were welcomed over the past 30 years.

Please feel free to give me a call with questions

Thank you and take care.

Jason B. Holley, City Manager

Subject: Re: [External] More Housing

Sharon, I am adding our City Manager to this email, so he's in the loop, and may want to offer his comments as well.

There is a proposal to build an apartment complex on the lot on the corner of Crawford and Hwy 29. I believe the public notice was just sent out and I encourage you to submit your comments (as well as attend the public hearing which will follow--I don't believe a date has been selected). You can go online and comment here.

In general, there are two main reasons to build homes. The first is that more homes/residents leads to more retail. Some 20 years ago, we added a large number of homes, which led to the Safeway Shopping Center, Canyon Plaza, Walmart and more. The only way to generate retail without homes would be to become more tourist-friendly, which can be lucrative for a city but tends to price out the locals.

The second reason is the State is mandating cities and counties to build more housing, and they have adopted laws that actually allow for higher densities and reduced parking, both of which are impractical in American Canyon.

I know it's frustrating to you as a resident here, but it is also frustrating as an elected official, since we have done more than our fair share of housing. Despite this, the State treats us as if we were just as bad as communities that avoided adding any housing at all.

Going forward, I believe we need to move forward on building out the parallel road system that has been part of our General Plan. That is, improving the safety and traffic flow on Highway 29 and also working with the property owners (and the County) to extend Newell Road all the way to South Kelley Road.

We are on our way to transforming Highway 29--our County wide transportation agency is working with Caltrans to add bike paths, sidewalks and landscaping along both sides of 29--and exploring the use of Roundabouts to eliminate most of the traffic signals. We just finished securing the funds for the environmental review. Of course, it will still take a number of years before the construction is complete, but we are no longer just talking about it!

On Newell, we are moving forward with annexing land needed to secure the property we need to

build the the road to Green Island Road (the first phase), and hope to work with the County on securing the land for the second phase (to South Kelley). We will also need to find a lot of money to actually build the road, which will include crossing a railroad and a creek--both of which make the project both expensive and more complicated.

Again, we are at least moving forward with a strategy to get the road built.

I hope this explains why we're doing what we're doing, and why it seems to take so long to see actual changes.

Mark Joseph
Councilmember
[redacted]

On May 17, 2023, 3:05 PM -0700, Sharon Redman-Patchin [redacted]>, wrote:

> Hello Council members,
>
> I heard there may be more housing built on Highway 29, which is in the lot behind our house. I am unsure why we continue to build housing when we do not have the infrastructure to support it. We have no restaurants, no places to shop other than Walmart (which leaves much to be desired) and Safeway and our roads are already overloaded. Why are we not putting in stores such as Whole Foods and Trader Joe's and restaurants where we can actually sit and enjoy one another's company. Instead, we have to drive into Napa, Sonoma or Vallejo. Why are we not keeping this money in our own city?
>
> Additionally, I sent an email last week, and you graciously responded--thank you, regarding the traffic we deal with on James Road. Adding more housing, which you are doing already in two other areas, increases the traffic we deal with every single day. Do we really need more housing? I appreciate you hearing our concerns. Thank you.

I am objecting to this project, Crawford Way could not cope with the additional traffic from the proposed 100-unit project, the extra traffic coming off Crawford Way onto HW29 would be extremely dangerous, and the other side streets of James Road, Donaldson Way & W. American Canyon Road, would most definitely cause great traffic congestion on what is on a school route to Donaldson Way. It most definitely would put school children at great risk coming & going to school.

Date: Thursday, January 16, 2025 4:39:00 PM

Hi Donna,

Thank you for contacting the City regarding the Crawford Way Multifamily Project. In your comment, you expressed concern over the project and its traffic impact to Crawford Way and nearby roads. Here are some answers to your question:

The city is working hard to address traffic issues in American Canyon. The Crawford Way Multifamily project will be required to pay a traffic impact fee, which all new development is required to pay prior to construction permits. The fee required pays for expanding the roadway system, including a portion of funds to improve Highway 29. In addition, the Sun Square project will improve the roadway in front of their project with a curb, gutter, and new sidewalk.

Every year, the City Council adopts a 5-Year Capital Improvement Program (CIP). The CIP includes numerous physical improvements to city facilities in many categories, including roadways. The Planning Commission will reviewed this list at their May 23, 2024 meeting, link here. Roadway improvements in the 5-Year CIP include the following:

- Green Island Road reconstruction and widening
- Wetlands Edge Court extension
- South Kelly Road/Highway 29 intersection widening
- Melvin Road traffic calming, sidewalk and storm drainage improvements
- Rancho Del Mar paving and utility improvements.

In 2022, the City made the following road improvements:

- Completed the missing Devlin Road link from the railroad bridge at Middletown Way to Green Island Road
- Crosswalk ramp improvements on Folland Drive, Corsicana Drive, Brophy Street, Kemp Lane, Kemp Way, Sheffield Way, and Folland Drive, Gold Valley Way at Tapestry Lane
- Enhanced pedestrian intersection on Donaldson Way at Shenandoah Drive and on Silver Oak Trail at White Oak Drive
- 8,600 feet of new Class II Bike Lanes on Donaldson Way, Shenandoah Drive, and Silver Oak Trail
- Enhanced crosswalk improvements on Elliott Drive and on Daniel Drive
- Installed 410 feet of sidewalk on Eucalyptus Drive
- Installed permanent traffic calming measures on Wetlands Edge, including speed cushions and curb bulb-outs

In 2022, the City completed the annual pavement resurfacing project that included paving, ADA upgrades, bike lane, and/or crosswalk improvements at the following streets:

- American Canyon Road East (between Flosden Road & City Limits),
- Blanco Street,
- Brophy Street,
- Corsicana Drive,
- Commerce Boulevard,
- Donaldson Way East,
- Flosden Road at Daniel Drive,
- Folland Drive,
- Gold Valley Way & Tapestry Lane,
- Kemp Lane,
- Kemp Way,
- Sheffield Way,
- Shenandoah Drive, and
- Silver Oak Trail.

The annual pavement resurfacing project was funded by SB1/Gas Tax, Measure T, and ARPA Funding.

In 2023, six streets are planned for 1.5 miles of grind and overlay through Measure T Funding. Streets that will be rehabilitated are selected based on the Pavement Management Program, which considers public safety, underground utility needs, and available funding. To learn more about how these decisions are made or see the specific areas on the project list, visit CityofAmericanCanyon.org/Streets.

In 2022, the City adopted a Local Streets and Roads Safety Plan. You can view this plan on our website HERE.

Safe roadways begin with safe drivers, and that includes ourselves. Take the *We Love Safe Streets* traffic calming program resident pledge and safety program HERE.

Highway 29 is a chronically congested highway through American Canyon. Owned and operated by the State of California through Caltrans, the Napa Valley Transportation Agency (NVTA) is the authorized Napa County liaison with Caltrans. The NVTA, with funding support from the City of American Canyon, recently completed a Project Initiation Document (PID) to improve Highway 29 through American Canyon. This plan requires environmental review to evaluate two alternatives. Completion of this study is anticipated to provide access to federal funds for Highway 29 transit, operations, beautification, and pedestrian improvements. You can view the PID study documents at the NVTA website HERE.

I hope these responses provides you with some more information and thank you for being an active participant in your community. By expressing your concerns and offering constructive suggestions, you contribute to a more informed decision-making process.

Kind regards,

William He, AICP

City of American Canyon

New eComment for Planning Commission

Carlotta Sainato submitted a new eComment.

Meeting: Planning Commission

Item: 3.) Crawford Way Multifamily Project Design Permit

eComment: The Napa County Bicycle Coalition (NCBC) requests changes to the Crawford Way Multifamily Project (Project) to better align the Project with City goals and commitments on sustainability, transportation and public safety. As a high-density, centrally located development, the Project has great potential to offset its traffic impacts and improve its value by facilitating multimodal transportation. The Project is in walking/biking distance of public schools, the City's recreation & aquatic center, parks & trails, the public library, the post office, churches, the community garden, and multiple commercial centers, offering many opportunities for residents to shift to walking/biking. However, current project plans fall short of providing safe and comfortable walking/biking facilities, which will encourage residents to drive and contribute to existing traffic and emissions issues. To improve bicyclist/pedestrian safety and comfort, NCBC asks that the Planning Commission require the applicant to: 1) Add more bicycle parking. The proposed 8 bike parking spaces for a 100-unit development is inadequate and discourages biking, especially given the 216 vehicle parking spaces provided. The Spring Grove multifamily project proposed in St. Helena provides 1 secure long-term bike parking space for each unit connected to its garage – we recommend this strategy. 2) Improve pedestrian crossings and calm traffic on Crawford. Bulb-outs, high-visibility crosswalks, and/or other traffic-calming should be applied to the Crawford/SR 29 intersection to slow exiting SR29 traffic and prioritize resident safety. Continue calming traffic to speeds appropriate for a residential area by adding a midblock crosswalk across Crawford with bulb-outs, a high-visibility crosswalk, and Rectangular Rapid Flashing Beacons. Aligning this crosswalk with Canyon Plaza's west sidewalk entrance will offer an alternative to the SR29 crosswalk and encourage walking to destinations on the north side of Crawford. 3) Improve bicycle facilities on Crawford. This Project changes the need for bicycle facilities from what is proposed in the Bike Plan. As a route to schools and parks, Crawford can act as a low-stress alternative to W. Donaldson Way, which experiences high vehicle volumes from SR29, especially during school times. We request Class II bike lanes or Class III bicycle boulevards with traffic-calming from SR29 to James Dr. We recommend extending this to Elliott Dr for maximum connectivity benefits.

Kara Vernor
Executive Director
Napa County Bike Coalition
PO Box 5157
Napa, CA, 94581

Dear Ms. Vernor,

We appreciate the Napa County Bicycle Coalition's commitment to enhancing active transportation and sustainability in Napa County and welcome your engagement in the public review process for the Crawford Way Multifamily Project.

In your comments, the Spring Grove development in St. Helena was referenced as a model for bike parking and you had commented that it delivers a higher standard than our project at one secure long-term bike parking space per unit. The Crawford Way Multifamily Project includes the same bicycle storage as Spring Grove as each unit has additional garage storage space above and beyond the space allotted for two car parking. This additional space provides for secure long-term bicycle storage. As such, our plans already meet with your recommended strategy and exceed the City's requirements for bicycle storage.

With regard to your other comments, we recognize and support the City's broader goals for improving multimodal infrastructure and will comply with all local and state building codes and requirements. Should you have any additional questions related to the specifics of our development, we would be happy to clarify further.

Sincerely,

William Yeh
Crawford Way Multifamily Project

---

Hi Carlotta,

Thank you for your thoughtful comments on the Crawford Way Multifamily Project Design Permit.

The proposed Crawford Way Multifamily Project consists of 100 townhome dwelling units on a 4.34-acre site located in the Local Serving Mixed Use (LSMU) zoning district at the southwest corner of Crawford Way and Highway 29.

You requested three amendments to the project:

1. Additional bicycle parking
2. A mid-block pedestrian crossing on Crawford Way
3. Class II bike lanes or Class III bicycle boulevards with traffic-calming from SR29 to James Dr.

Multifamily residential projects are designated as "Permitted." in the LSMU zoning district. When a Permitted use complies with applicable local, regional, and state development policies, and municipal code standards, the Planning Commission must generally approve the project. Since the project complies with these policies, our ability as a City to require modifications is limited. Listed below are responses to each of your requests:

1. **Additional Bicycle Parking:** According to Municipal Code Section 19.21.050, a project with 200-299 automobile parking stalls requires 8 bicycle parking spaces. A new California building code effective January 2026 may require more bicycle parking. If the project is approved and the building permit applications are submitted after January 1, 2026, the project may be subject to the new standards. Currently, we cannot require additional bicycle parking spaces.
2. **Mid-Block Pedestrian Crossing:** We agree that a mid-block pedestrian crossing on Crawford Way would enhance safety and provide traffic calming. The project is subject to Traffic Impact fees which fund roadway, transit, and active transportation improvements. We will add a condition of approval requiring the applicant to construct a raised mid-block crosswalk when they construct their mandatory roadway frontage improvements (i.e.: curb, gutter, sidewalk improvements on Crawford Way and SR-29). The cost will be reimbursed from their traffic impact fees.
3. **Class II bike lanes or Class III bicycle boulevard**: Designating Crawford Way as a Class II bike lanes or Class III bicycle boulevard is a worthy idea. Bicycle trails are part of the General Plan Circulation (Mobility) Element. The Napa Valley Transportation Authority (NVTA) is developing a Countywide Active Transportation Plan and seeking public input. If the plan is adopted, the City would incorporate this plan into our General Plan Mobility Element.

Implementing Class II bike lanes or Class III bicycle boulevard involves street striping, which is a low-cost improvement. You can learn more about the NVTA Active Transportation Plan and how to stay involved by HERE.

We appreciate your ideas to improve American Canyon. If you have any further questions about the Crawford Way project or any other planning issue, feel free to contact me at Whe@americancanyon.gov or Brent Cooper at bcooper@americancanyon.gov.

New eComment for Planning Commission

T L Wong submitted a new eComment.

Meeting: Planning Commission

Item: 3.) Crawford Way Multifamily Project Design Permit

eComment: Hello Planning Commissioners! Welcome to our new Commissioners, and happy new year to all As a city resident who has run and biked over 700 miles on our city's beautiful open space and our roadways, I urge you to keep active transportation in mind for all projects. For this project, I urge you to add these changes before approving it 1) Landscaping -- plants that are native to our area are even more important during this time of climate crisis. Local plants support local bugs which support local wildlife. Native oak trees are a keystone plant and one of the most powerful ways we can support local wildlife. Native plants are also drought-resistant. 2) Bicycle support -- the proposed 8 bike parking spaces for a 100-unit development is inadequate and discourages biking, especially given the 216 vehicle parking spaces provided. Please follow the Spring Grove multifamily project proposed in St. Helena, which provides 1 secure long-term bike parking space for each unit connected to its garage. 2) Improve pedestrian crossings and calm traffic on Crawford. Bulb-outs, high-visibility crosswalks, and/or other traffic-calming should be applied to the Crawford/SR 29 intersection to slow exiting SR29 traffic and prioritize resident safety. Continue calming traffic to speeds appropriate for a residential area by adding a midblock crosswalk across Crawford with bulb-outs, a high-visibility crosswalk, and Rectangular Rapid Flashing Beacons. Aligning this crosswalk with Canyon Plaza’s west sidewalk entrance will offer an alternative to the SR29 crosswalk and encourage walking to destinations on the north side of Crawford. 3) Improve bicycle facilities on Crawford. This Project changes the need for bicycle facilities from what is proposed in the Bike Plan. As a route to schools and parks, Crawford can act as a low-stress alternative to W. Donaldson Way, which experiences high vehicle volumes from SR29, especially during school times. Please use Class II bike lanes or Class III bicycle boulevards with traffic-calming from SR29 to James Dr., and extend this to Elliott Dr for maximum connectivity benefits. Thank you Tammy Wong

Hi Tammy,

Thank you for your thoughtful comments on the Crawford Way Multifamily Project Design Permit.

The proposed Crawford Way Multifamily Project consists of 100 townhome dwelling units on a 4.34-acre site located in the Local Serving Mixed Use (LSMU) zoning district at the southwest corner of Crawford Way and Highway 29.

You requested four amendments to the project:

1. Native landscaping
2. Additional bicycle parking
3. A mid-block pedestrian crossing on Crawford Way
4. Class II bike lanes or Class III bicycle boulevards with traffic-calming from SR29 to James Dr.

Multifamily residential projects are designated as "Permitted." in the LSMU zoning district. When a Permitted use complies with applicable local, regional, and state development policies, and municipal code standards, the Planning Commission must generally approve the project. Since the project complies with these policies, our ability as a City to require modifications is limited. Listed below are responses to each of your requests:

1. **Native Landscaping:** The landscape ordinance emphasizes drought tolerant landscaping, but does not mandate native landscaping. The City Council requested staff to evaluate amendments to require more native vegetation, but these requirements are not yet in place. Therefore, we cannot require a greater percentage of native vegetation for this project. Future projects will be subject to new regulations once adopted.
2. **Additional Bicycle Parking:** According to Municipal Code Section 19.21.050, a project with 200-299 automobile parking stalls requires 8 bicycle parking spaces. A new California building code effective January 2026 may require more bicycle parking. If the project is approved and the building permit applications are submitted after January 1, 2026, the project may be subject to the new standards. Currently, we cannot require additional bicycle parking spaces.
3. **Mid-Block Pedestrian Crossing:** We agree that a mid-block pedestrian crossing on Crawford Way would enhance safety and provide traffic calming. The project is subject to Traffic Impact fees which fund roadway, transit, and active transportation improvements. We will add a condition of approval requiring the applicant to construct a raised mid-block crosswalk when they construct their mandatory roadway frontage improvements (i.e.: curb, gutter, sidewalk improvements on Crawford Way and SR-29). The cost will be reimbursed from their traffic

impact fees.

4. **Class II bike lanes or Class III bicycle boulevard**: Designating Crawford Way as a Class II bike lanes or Class III bicycle boulevard is a worthy idea. Bicycle trails are part of the General Plan Circulation (Mobility) Element. The Napa Valley Transportation Authority (NVTA) is developing a Countywide Active Transportation Plan and seeking public input. If the plan is adopted, the City would incorporate this plan into our General Plan Mobility Element. Implementing Class II bike lanes or Class III bicycle boulevard involves street striping, which is a low-cost improvement. You can learn more about the NVTA Active Transportation Plan and how to stay involved by HERE:

We appreciate your ideas to improve American Canyon. If you have any further questions about the Crawford Way project or any other planning issue, feel free to contact me at Whe@americancanyon.gov or Brent Cooper at bcooper@americancanyon.gov.

New eComment for Planning Commission

Teresa Abeyta submitted a new eComment.

Meeting: Planning Commission

Item: PUBLIC COMMENT

eComment: Planning Commission I am writing to let you know that I am totally opposed to the Crawford Way Multifamily Project Design Permit and the project itself, number 3, on the agenda for the February 27, 2025, meeting. First, I would like to point out that this agenda item was continued at the January 23, 2025, meeting and now it is postponed again for the February meeting by the developer. If the developer was coming in for a job interview and cancelled the appointment two consecutive times, I doubt a 3rd interview would be scheduled. This does not bode well for the future of this project. Please keep in mind the fiasco of the Supportive housing project on Broadway St. near the border of Vallejo and American Canyon, much of which had to do with project management problems from the beginning. My reasons for opposition to this Multifamily Complex • This is a high-density project,100 - 2- and 3-bedroom units on a 4.34 acre parcel is just too many units on this small parcel of land. • Only one entrance/ exit into the complex. If several hundred people must leave quickly, and emergency vehicles are trying to get in, it could be a disaster. • Traffic on Crawford Way will increase tremendously and merge on to James Rd. or HW 29, adding to more congestion through our town and increasing accidents as stopped cars pull out onto the highway. • Even though each unit has a garage on the first level, 16 additional guest parking spaces are just not enough. Crawford Way and Canyon Plaza parking spaces will be full of the overflow of cars. • Those of us on the West side of this project will be losing our privacy, as the second-floor balconies will face directly into our yards. I have been told that this project will be approved once the developer meets all the building codes and requirements. This is so unfortunate for our neighborhood. The developer wants to put a high-density complex on a low-density property. I am adamantly opposed to this project. Thank you for your time

---

Hi Teresa,

Thank you for participating in the public comments for the Crawford Way Multifamily Project. We appreciate your interest and thoughtful concern for the future of our City. We considered your input and have answers to your concerns.

1. Postponements. While delays and postponements are rare for the Planning Commission, an applicant does have the right to request a continuance to review and revise their project.
2. Density. The site is in the Local-Serving Mixed-Use zoning district, and multifamily developments are a permitted use. The project density was increased in compliance with the State Density Bonus Law (SDBL), which allows an increased density for projects that provide affordable housing, LINK HERE.
3. Access. The single entrance/ exit on Crawford Way has been thoroughly reviewed by the Fire District, which found that the 100 units complied with fire safety standards. The project also includes an emergency vehicle access (EVA) on Highway 29 that is limited to emergency vehicles.
4. Traffic. The project includes a traffic impact report that explained the project is consistent with the City Vehicle Miles Traveled (VMT) policy. While the project will generate new traffic, it will also provide approximately $495,000 in traffic impact fees that help fund mobility improvements throughout the city as part of the 5-Year Capital Improvement Program (CIP), LINK HERE. Additionally, the project will provide a new mid-block crosswalk to Canyon Plaza through their traffic impact fees.
5. Parking. The project provides 200 garage parking spaces and 16 uncovered guest spaces while the City Municipal Code requires 225 parking spaces. The State Density Bonus Law allows developers to provide a reduced number of required parking spaces for affordable housing projects. According to the SDBL, a project with 100 two-to-three-bedroom units would require a one-and one-half bedroom to one parking space ratio, or 150 parking spaces. The applicant providing 216 parking spaces exceeds the State minimum.
6. Privacy. The applicant is providing a 6’ tall wooden fence along their western property line and the buildings are set back 10’ in accordance with LSMU development standards. Please note that prior to the Broadway District, the site was in the Community Commercial (CC) zone, which also allowed 3-story multifamily development.

Hi Gary,

Thank you for participating in the public comments for the Crawford Way Multifamily Project. Here is some information on your question regarding the American Canyon school system.

The American Canyon school system is part of the Napa Valley Unified School District (NVUSD), LINK HERE. According Ed Data, a partner with the California Department of Education, enrollment rates in the NVUSD system has been on decline since 2020, see LINK HERE. In fiscal year 2019-20, the cumulative enrollment was 18,163 students, whereas in fiscal year 2023-24, the cumulative enrollment was 16,885.

Declining student enrollment can be a serious issue because California's school funding is tied to Average Daily Attendance (ADA). When student enrollment declines, fewer students result in less school funding. When student enrollment declines for a long time, it places financial pressure on districts. Approval of the Crawford Way apartments will help provide additional students.

In addition to adding students to the school district, state law provides NVUSD with a developer fee on new housing and commercial development. The fee is used to "address the impact of a growing student population". Currently, the fee for residential development is $5.17 per square foot. You can find out more about the fee at THIS LINK. According to the project applicant, the Crawford Project will include 133,562 square feet of living space, which equates to approximately $690,000 in fees due to NVUSD.

We copied Rob Mangewala, NVUSD Assistant Superintendent Business and Operational Services who would have more information on the status of student enrollment in American Canyon.

Subject: [External] Crawford Way Multifamily Design Permit Application (PL23-0003) Review

Hello William,

Thank you for the opportunity to review the Crawford Way Multifamily Design Permit Application- (PL23-0003) Project.

Attached are a few comments regarding the project, please let me know if you have any questions.

Encroachment Permit
Please be advised that any permanent work or temporary traffic control that encroaches onto Caltrans' ROW requires a Caltrans-issued encroachment permit. As part of the encroachment permit submittal process, you may be asked by the Office of Encroachment Permits to submit a completed encroachment permit application package, digital set of plans clearly delineating Caltrans' ROW, digital copy of signed, dated and stamped (include stamp expiration date) traffic control plans, this comment letter, your response to the comment letter, and where applicable, the following items: new or amended Maintenance Agreement (MA), approved Design Standard Decision Document (DSDD), approved encroachment exception request, and/or airspace lease agreement. Your application package may be emailed to D4Permits@dot.ca.gov.

To obtain information about the most current encroachment permit process

and to download the permit application, please visit Caltrans Encroachment Permits.

Travel Demand Analysis
With the enactment of Senate Bill (SB) 743, Caltrans is focused on maximizing efficient development patterns, innovative travel demand reduction strategies, and multimodal improvements. For more information on how Caltrans assesses Transportation Impact Studies, please review Caltrans' Transportation Impact Study Guide.

If the project meets the screening criteria established in the City's adopted Vehicle Miles Traveled (VMT) policy to be presumed to have a less-than-significant VMT impact and exempt from detailed VMT analysis, please provide justification to support the exempt status in alignment with the City's VMT policy.

- VMT analysis pursuant to the City's guidelines. Projects that result in automobile VMT per capita above the threshold of significance for existing (i.e. baseline) city-wide or regional values for similar land use types may indicate a significant impact. If necessary, mitigation for increasing VMT should be identified. Mitigation should support the use of transit and active transportation modes. Potential mitigation measures that include the requirements of other agencies such as Caltrans are fully enforceable through permit conditions, agreements, or other legally-binding instruments under the control of the City.

- A schematic illustration of walking, biking and auto conditions at the project site and study area roadways. Potential traffic safety issues to the State Transportation Network (STN) may be assessed by Caltrans via the Interim Safety Guidance (*link*).

- The project's primary and secondary effects on pedestrians, bicycles, travelers with disabilities and transit performance should be evaluated, including countermeasures and trade-offs resulting from mitigating VMT increases. Access to pedestrians, bicycle, and transit facilities must be maintained.

- Clarification of the intensity of events/receptions to be held at the location and how the associated travel demand and VMT will be mitigated.

    - **Multimodal Transportation Planning**
    - Please review and include the reference of the *Caltrans District 4 Pedestrian Plan* (2021) and the *Caltrans District 4 Bike Plan* (2018) in the DEIR regulatory framework. These two plans studied existing conditions for walking and biking along and across the State Transportation Network (STN) in the nine-county Bay Area and developed a list of location-based

and prioritized needs.

- Please note that any Complete Streets reference should be updated to reflect Caltrans Director's Policy 37 (DP-37), which supersedes Deputy Directive 64-R1, and further builds upon its goals. More information on DP-37 can be viewed here: https://dot.ca.gov/-/media/dot-media/programs/sustainability/documents/dp-37-complete-streets-a11y.pdf

Subject: Crawford Multi-family Project - PC Meeting of 3/27

Hi Billy,

I wanted to check in with you on the March 27 Planning Commission date for the Crawford Project. Please confirm if you and your team will be attending that day. If you need more time, please let me know as soon as possible.

Kind regards,

William He, AICP

Senior Planner

Senate Bill No. 330
CHAPTER 654

An act to amend Section 65589.5 of, to amend, repeal, and add Sections 65940, 65943, and 65950 of, to add and repeal Sections 65905.5, 65913.10, and 65941.1 of, and to add and repeal Chapter 12 (commencing with Section 66300) of Division 1 of Title 7 of, the Government Code, relating to housing.

[Approved by Governor October 09, 2019. Filed with Secretary of State October 09, 2019.]

LEGISLATIVE COUNSEL'S DIGEST

SB 330, Skinner. Housing Crisis Act of 2019.

(1) The Housing Accountability Act, which is part of the Planning and Zoning Law, prohibits a local agency from disapproving, or conditioning approval in a manner that renders infeasible, a housing development project for very low, low-, or moderate-income households or an emergency shelter unless the local agency makes specified written findings based on a preponderance of the evidence in the record. The act specifies that one way to satisfy that requirement is to make findings that the housing development project or emergency shelter is inconsistent with both the jurisdiction's zoning ordinance and general plan land use designation as specified in any element of the general plan as it existed on the date the application was deemed complete. The act requires a local agency that proposes to disapprove a housing development project that complies with applicable, objective general plan and zoning standards and criteria that were in effect at the time the application was deemed to be complete, or to approve it on the condition that it be developed at a lower density, to base its decision upon written findings supported by substantial evidence on the record that specified conditions exist, and places the burden of proof on the local agency to that effect. The act requires a court to impose a fine on a local agency under certain circumstances and requires that the fine be at least $10,000 per housing unit in the housing development project on the date the application was deemed complete.

This bill, until January 1, 2025, would specify that an application is deemed complete for these purposes if a preliminary application was submitted, as described below.

Existing law authorizes the applicant, a person who would be eligible to apply for residency in the development or emergency shelter, or a housing organization to bring an action to enforce the Housing Accountability Act. If, in that action, a court finds that a local agency failed to satisfy the requirement to make the specified findings described above, existing law requires the court to issue an order or judgment compelling compliance with the act within 60 days, as specified.

This bill, until January 1, 2025, would additionally require a court to issue the order or judgment previously described if the local agency required or attempted to require certain housing development projects to comply with an ordinance, policy, or standard not adopted and in effect when a preliminary application was submitted.

Existing law authorizes a local agency to require a housing development project to comply with objective, quantifiable, written development standards, conditions, and policies appropriate to, and consistent with, meeting the jurisdiction's share of the regional housing need, as specified.

This bill, until January 1, 2025, would, notwithstanding those provisions or any other law and with certain exceptions, require that a housing development project only be subject to the ordinances, policies, and standards adopted and in effect when a preliminary application is submitted, except as specified.

(2) The Planning and Zoning Law, except as provided, requires that a public hearing be held on an application for a variance from the requirements of a zoning ordinance, an application for a conditional use permit or equivalent development permit, a proposed revocation or modification of a variance or use permit or equivalent development permit, or an appeal from the action taken on any of those applications. That law requires that notice of a public hearing be provided in accordance with specified procedures.

This bill, until January 1, 2025, would prohibit a city or county from conducting more than 5 hearings, as defined, held pursuant to these provisions, or any other law, ordinance, or regulation requiring a public hearing, if a proposed housing development project complies with the applicable, objective general plan and zoning standards in effect at the time an application is deemed complete, as defined. The bill would require the city or county to consider and either approve or disapprove the housing development project at any of the 5 hearings consistent with the applicable timelines under the Permit Streamlining Act.

(3) The Permit Streamlining Act, which is part of the Planning and Zoning Law, requires each state agency and each local agency to compile one or more lists that specify in detail the information that will be required from any applicant for a development project. That law requires the state or local agency to make copies of this information available to all applicants for development projects and to any persons who request the information.

The bill, until January 1, 2025, for purposes of any state or local law, ordinance, or regulation that requires a city or county to determine whether the site of a proposed housing development project is a historic site, would require the city or county to make that determination, which would remain valid for the pendency of the housing development, at the time the application is deemed complete, except as provided. The bill, until January 1, 2025, would also require that each local agency make copies of any above-described list with respect to information required from an applicant for a housing development project available both (A) in writing to those persons to whom the agency is required to make information available and (B) publicly available on the internet website of the local agency.

The Permit Streamlining Act requires public agencies to approve or disapprove of a development project within certain timeframes, as specified. The act requires a public agency, upon its determination that an application for a development project is incomplete, to include a list and a thorough description of the specific information needed to complete the application. Existing law authorizes the applicant to submit the additional material to the public agency, requires the public agency to determine whether the submission of the application together with the submitted materials is complete within 30 days of receipt, and provides for an appeal process from the public agency's determination. Existing law requires a final written determination by the agency on the appeal no later than 60 days after receipt of the applicant's written appeal.

This bill, until January 1, 2025, would provide that a housing development project, as defined, shall be deemed to have submitted a preliminary application upon providing specified information about the proposed project to the city or county from which approval for the project is being sought. The bill would require each local agency to compile a checklist and application form that applicants for housing development projects may use for that purpose and would require the Department of Housing and Community Development to adopt a standardized form for applicants seeking approval from a local agency that has not developed its own application form. After the submittal of a preliminary application,

the bill would provide that a housing development project would not be deemed to have submitted a preliminary application under these provisions if the development proponent revises the project such that the number of residential units or square footage of construction changes by 20% or more until the development proponent resubmits the information required by the bill so that it reflects the revisions. The bill would require a development proponent to submit an application for a development project that includes all information necessary for the agency to review the application under the Permit Streamlining Act within 180 days of submitting the preliminary application.

The bill, until January 1, 2025, would require the lead agency, as defined, if the application is determined to be incomplete, to provide the applicant with an exhaustive list of items that were not complete, as specified.

The Permit Streamlining Act generally requires that a public agency that is the lead agency for a development project approve or disapprove a project within 120 days from the date of certification by the lead agency of an environmental impact report prepared for certain development projects, but reduces this time period to 90 days from the certification of an environmental impact report for development projects meeting certain additional conditions relating to affordability. Existing law defines "development project" for these purposes to mean a use consisting of either residential units only or mixed-use developments consisting of residential and nonresidential uses that satisfy certain other requirements.

This bill, until January 1, 2025, would reduce the time period in which a lead agency under these provisions is required to approve or disapprove a project from 120 days to 90 days, for a development project generally described above, and from 90 days to 60 days, for a development project that meets the above-described affordability conditions. The bill would recast the definition of "development project" for these purposes to mean a housing development project, as defined in the Housing Accountability Act.

(4) The Planning and Zoning Law, among other things, requires the legislative body of each county and city to adopt a comprehensive, long-term general plan for the physical development of the county or city and of any land outside its boundaries that relates to its planning. That law authorizes the legislative body, if it deems it to be in the public interest, to amend all or part of an adopted general plan, as provided. That law also authorizes the legislative body of any county or city, pursuant to specified procedures, to adopt ordinances that, among other things, regulate the use of buildings, structures, and land as between industry, business, residences, open space, and other purposes.

This bill, until January 1, 2025, with respect to land where housing is an allowable use, except as specified, would prohibit a county or city, including the electorate exercising its local initiative or referendum power, in which specified conditions exist, determined by the Department of Housing and Community Development as provided, from enacting a development policy, standard, or condition, as defined, that would have the effect of (A) changing the land use designation or zoning of a parcel or parcels of property to a less intensive use or reducing the intensity of land use within an existing zoning district below what was allowed under the general plan or specific plan land use designation and zoning ordinances of the county or city as in effect on January 1, 2018; (B) imposing or enforcing a moratorium on housing development within all or a portion of the jurisdiction of the county or city, except as provided; (C) imposing or enforcing new design standards established on or after January 1, 2020, that are not objective design standards, as defined; or (D) establishing or implementing certain limits on the number of permits issued by, or the population of, the county or city, unless the limit was approved prior to January 1, 2005, in a predominantly agricultural county, as defined. The bill would, notwithstanding these prohibitions, allow a city or county to prohibit the commercial use of land zoned for residential use consistent with the authority of the city or county conferred by other law. The bill would state that these prohibitions would

apply to any zoning ordinance adopted or amended on or after the effective date of these provisions, and that any development policy, standard, or condition on or after that date that does not comply would be deemed void.

This bill would also require a project that requires the demolition of housing to comply with specified requirements, including the provision of relocation assistance and a right of first refusal in the new housing to displaced occupants, as provided. The bill would provide that these provisions do not supersede any provision of a locally adopted ordinance that places greater restrictions on the demolition of residential dwelling units or that requires greater relocation assistance to displaced households. The bill would require a county or city subject to these provisions to include information necessary to determine compliance with these provisions in the list or lists that specify the information that will be required from any applicant for a development project under the Permit Streamlining Act.

The bill would state that these prohibitions would prevail over any conflicting provision of the Planning and Zoning Law or other law regulating housing development in this state, except as specifically provided. The bill would also require that any exception to these provisions, including an exception for the health and safety of occupants of a housing development project, be construed narrowly.

(5) This bill would include findings that the changes proposed by this bill address a matter of statewide concern rather than a municipal affair and, therefore, apply to all cities, including charter cities.

(6) By imposing various new requirements and duties on local planning officials with respect to housing development, and by changing the scope of a crime under the State Housing Law, this bill would impose a state-mandated local program.

The California Constitution requires the state to reimburse local agencies and school districts for certain costs mandated by the state. Statutory provisions establish procedures for making that reimbursement.

This bill would provide that with regard to certain mandates no reimbursement is required by this act for a specified reason.

With regard to any other mandates, this bill would provide that, if the Commission on State Mandates determines that the bill contains costs so mandated by the state, reimbursement for those costs shall be made pursuant to the statutory provisions noted above.

(7) This bill would provide that its provisions are severable.

Bill Text

THE PEOPLE OF THE STATE OF CALIFORNIA DO ENACT AS FOLLOWS:

SECTION 1.

This act shall be known, and may be cited, as the Housing Crisis Act of 2019.

SEC. 2.

(a) The Legislature finds and declares the following:

(1) California is experiencing a housing supply crisis, with housing demand far outstripping supply. In 2018, California ranked 49th out of the 50 states in housing units per capita.

(2) Consequently, existing housing in this state, especially in its largest cities, has become very expensive. Seven of the 10 most expensive real estate markets in the United States are in California. In San Francisco, the median home price is $1.6 million.

(3) California is also experiencing rapid year-over-year rent growth with three cities in the state having had overall rent growth of 10 percent or more year-over-year, and of the 50 United States cities with the highest United States rents, 33 are cities in California.

(4) California needs an estimated 180,000 additional homes annually to keep up with population growth, and the Governor has called for 3.5 million new homes to be built over the next 7 years.

(5) The housing crisis has particularly exacerbated the need for affordable homes at prices below market rates.

(6) The housing crisis harms families across California and has resulted in all of the following:

(A) Increased poverty and homelessness, especially first-time homelessness.

(B) Forced lower income residents into crowded and unsafe housing in urban areas.

(C) Forced families into lower cost new housing in greenfields at the urban-rural interface with longer commute times and a higher exposure to fire hazard.

(D) Forced public employees, health care providers, teachers, and others, including critical safety personnel, into more affordable housing farther from the communities they serve, which will exacerbate future disaster response challenges in high-cost, high-congestion areas and increase risk to life.

(E) Driven families out of the state or into communities away from good schools and services, making the ZIP Code where one grew up the largest determinate of later access to opportunities and social mobility, disrupting family life, and increasing health problems due to long commutes that may exceed three hours per day.

(7) The housing crisis has been exacerbated by the additional loss of units due to wildfires in 2017 and 2018, which impacts all regions of the state. The Carr Fire in 2017 alone burned over 1,000 homes, and over 50,000 people have been displaced by the Camp Fire and the Woolsey Fire in 2018. This temporary and permanent displacement has placed additional demand on the housing market and has resulted in fewer housing units available for rent by low-income individuals.

(8) Individuals who lose their housing due to fire or the sale of the property cannot find affordable homes or rental units and are pushed into cars and tents.

(9) Costs for construction of new housing continue to increase. According to the Terner Center for Housing Innovation at the University of California, Berkeley, the cost of building a 100-unit affordable housing project in the state was almost $425,000 per unit in 2016, up from $265,000 per unit in 2000.

(10) Lengthy permitting processes and approval times, fees and costs for parking, and other requirements further exacerbate cost of residential construction.

(11) The housing crisis is severely impacting the state’s economy as follows:

(A) Employers face increasing difficulty in securing and retaining a workforce.

(B) Schools, universities, nonprofits, and governments have difficulty attracting and retaining teachers, students, and employees, and our schools and critical services are suffering.

(C) According to analysts at McKinsey and Company, the housing crisis is costing California $140 billion a year in lost economic output.

(12) The housing crisis also harms the environment by doing both of the following:

(A) Increasing pressure to develop the state's farmlands, open space, and rural interface areas to build affordable housing, and increasing fire hazards that generate massive greenhouse gas emissions.

(B) Increasing greenhouse gas emissions from longer commutes to affordable homes far from growing job centers.

(13) Homes, lots, and structures near good jobs, schools, and transportation remain underutilized throughout the state and could be rapidly remodeled or developed to add affordable homes without subsidy where they are needed with state assistance.

(14) Reusing existing infrastructure and developed properties, and building more smaller homes with good access to schools, parks, and services, will provide the most immediate help with the lowest greenhouse gas footprint to state residents.

(b) In light of the foregoing, the Legislature hereby declares a statewide housing emergency, to be in effect until January 1, 2025.

(c) It is the intent of the Legislature, in enacting the Housing Crisis Act of 2019, to do both of the following:

(1) Suspend certain restrictions on the development of new housing during the period of the statewide emergency described in subdivisions (a) and (b).

(2) Work with local governments to expedite the permitting of housing in regions suffering the worst housing shortages and highest rates of displacement.

SEC. 3.

Section 65589.5 of the Government Code is amended to read:

65589.5.

(a) (1) The Legislature finds and declares all of the following:

(A) The lack of housing, including emergency shelters, is a critical problem that threatens the economic, environmental, and social quality of life in California.

(B) California housing has become the most expensive in the nation. The excessive cost of the state's housing supply is partially caused by activities and policies of many local governments that limit the approval of housing, increase the cost of land for housing, and require that high fees and exactions be paid by producers of housing.

(C) Among the consequences of those actions are discrimination against low-income and minority households, lack of housing to support employment growth, imbalance in jobs and housing, reduced mobility, urban sprawl, excessive commuting, and air quality deterioration.

(D) Many local governments do not give adequate attention to the economic, environmental, and social costs of decisions that result in disapproval of housing development projects, reduction in density of housing projects, and excessive standards for housing development projects.

(2) In enacting the amendments made to this section by the act adding this paragraph, the Legislature further finds and declares the following:

(A) California has a housing supply and affordability crisis of historic proportions. The consequences of failing to effectively and aggressively confront this crisis are hurting millions of Californians, robbing future generations of the chance to call California home, stifling economic opportunities for workers and businesses, worsening poverty and homelessness, and undermining the state's environmental and climate objectives.

(B) While the causes of this crisis are multiple and complex, the absence of meaningful and effective policy reforms to significantly enhance the approval and supply of housing affordable to Californians of all income levels is a key factor.

(C) The crisis has grown so acute in California that supply, demand, and affordability fundamentals are characterized in the negative: underserved demands, constrained supply, and protracted unaffordability.

(D) According to reports and data, California has accumulated an unmet housing backlog of nearly 2,000,000 units and must provide for at least 180,000 new units annually to keep pace with growth through 2025.

(E) California's overall homeownership rate is at its lowest level since the 1940s. The state ranks 49th out of the 50 states in homeownership rates as well as in the supply of housing per capita. Only one-half of California's households are able to afford the cost of housing in their local regions.

(F) Lack of supply and rising costs are compounding inequality and limiting advancement opportunities for many Californians.

(G) The majority of California renters, more than 3,000,000 households, pay more than 30 percent of their income toward rent and nearly one-third, more than 1,500,000 households, pay more than 50 percent of their income toward rent.

(H) When Californians have access to safe and affordable housing, they have more money for food and health care; they are less likely to become homeless and in need of government-subsidized services; their children do better in school; and businesses have an easier time recruiting and retaining employees.

(I) An additional consequence of the state's cumulative housing shortage is a significant increase in greenhouse gas emissions caused by the displacement and redirection of populations to states with greater housing opportunities, particularly working- and middle-class households. California's cumulative housing shortfall therefore has not only national but international environmental consequences.

(J) California's housing picture has reached a crisis of historic proportions despite the fact that, for decades, the Legislature has enacted numerous statutes intended to significantly increase the approval, development, and affordability of housing for all income levels, including this section.

(K) The Legislature's intent in enacting this section in 1982 and in expanding its provisions since then was to significantly increase the approval and construction of new housing for all economic segments of California's communities by meaningfully and effectively curbing the capability of local governments to deny, reduce the density for, or render infeasible housing development projects and emergency shelters. That intent has not been fulfilled.

(L) It is the policy of the state that this section be interpreted and implemented in a manner to afford the fullest possible weight to the interest of, and the approval and provision of, housing.

(3) It is the intent of the Legislature that the conditions that would have a specific, adverse impact upon the public health and safety, as described in paragraph (2) of subdivision (d) and paragraph (1) of subdivision (j), arise infrequently.

(b) It is the policy of the state that a local government not reject or make infeasible housing development projects, including emergency shelters, that contribute to meeting the need determined pursuant to this article without a thorough analysis of the economic, social, and environmental effects of the action and without complying with subdivision (d).

(c) The Legislature also recognizes that premature and unnecessary development of agricultural lands for urban uses continues to have adverse effects on the availability of those lands for food and fiber production and on the economy of the state. Furthermore, it is the policy of the state that development should be guided away from prime agricultural lands; therefore, in implementing this section, local jurisdictions should encourage, to the maximum extent practicable, in filling existing urban areas.

(d) A local agency shall not disapprove a housing development project, including farmworker housing as defined in subdivision (h) of Section 50199.7 of the Health and Safety Code, for very low, low-, or moderate-income households, or an emergency shelter, or condition approval in a manner that renders the housing development project infeasible for development for the use of very low, low-, or moderate-income households, or an emergency shelter, including through the use of design review standards, unless it makes written findings, based upon a preponderance of the evidence in the record, as to one of the following:

(1) The jurisdiction has adopted a housing element pursuant to this article that has been revised in accordance with Section 65588, is in substantial compliance with this article, and the jurisdiction has met or exceeded its share of the regional housing need allocation pursuant to Section 65584 for the planning period for the income category proposed for the housing development project, provided that any disapproval or conditional approval shall not be based on any of the reasons prohibited by Section 65008. If the housing development project includes a mix of income categories, and the jurisdiction has not met or exceeded its share of the regional housing need for one or more of those categories, then this paragraph shall not be used to disapprove or conditionally approve the housing development project. The share of the regional housing need met by the jurisdiction shall be calculated consistently with the forms and definitions that may be adopted by the Department of Housing and Community Development pursuant to Section 65400. In the case of an emergency shelter, the jurisdiction shall have met or exceeded the need for emergency shelter, as identified pursuant to paragraph (7) of subdivision (a) of Section 65583. Any disapproval or conditional approval pursuant to this paragraph shall be in accordance with applicable law, rule, or standards.

(2) The housing development project or emergency shelter as proposed would have a specific, adverse impact upon the public health or safety, and there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact without rendering the development unaffordable to low- and moderate-income households or rendering the development of the emergency shelter financially infeasible. As used

in this paragraph, a "specific, adverse impact" means a significant, quantifiable, direct, and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete. Inconsistency with the zoning ordinance or general plan land use designation shall not constitute a specific, adverse impact upon the public health or safety.

(3) The denial of the housing development project or imposition of conditions is required in order to comply with specific state or federal law, and there is no feasible method to comply without rendering the development unaffordable to low- and moderate-income households or rendering the development of the emergency shelter financially infeasible.

(4) The housing development project or emergency shelter is proposed on land zoned for agriculture or resource preservation that is surrounded on at least two sides by land being used for agricultural or resource preservation purposes, or which does not have adequate water or wastewater facilities to serve the project.

(5) The housing development project or emergency shelter is inconsistent with both the jurisdiction's zoning ordinance and general plan land use designation as specified in any element of the general plan as it existed on the date the application was deemed complete, and the jurisdiction has adopted a revised housing element in accordance with Section 65588 that is in substantial compliance with this article. For purposes of this section, a change to the zoning ordinance or general plan land use designation subsequent to the date the application was deemed complete shall not constitute a valid basis to disapprove or condition approval of the housing development project or emergency shelter.

(A) This paragraph cannot be utilized to disapprove or conditionally approve a housing development project if the housing development project is proposed on a site that is identified as suitable or available for very low, low-, or moderate-income households in the jurisdiction's housing element, and consistent with the density specified in the housing element, even though it is inconsistent with both the jurisdiction's zoning ordinance and general plan land use designation.

(B) If the local agency has failed to identify in the inventory of land in its housing element sites that can be developed for housing within the planning period and are sufficient to provide for the jurisdiction's share of the regional housing need for all income levels pursuant to Section 65584, then this paragraph shall not be utilized to disapprove or conditionally approve a housing development project proposed for a site designated in any element of the general plan for residential uses or designated in any element of the general plan for commercial uses if residential uses are permitted or conditionally permitted within commercial designations. In any action in court, the burden of proof shall be on the local agency to show that its housing element does identify adequate sites with appropriate zoning and development standards and with services and facilities to accommodate the local agency's share of the regional housing need for the very low, low-, and moderate-income categories.

(C) If the local agency has failed to identify a zone or zones where emergency shelters are allowed as a permitted use without a conditional use or other discretionary permit, has failed to demonstrate that the identified zone or zones include sufficient capacity to accommodate the need for emergency shelter identified in paragraph (7) of subdivision (a) of Section 65583, or has failed to demonstrate that the identified zone or zones can accommodate at least one emergency shelter, as required by paragraph (4) of subdivision (a) of Section 65583, then this paragraph shall not be utilized to disapprove or conditionally approve an emergency shelter proposed for a site designated in any element of the general plan for industrial, commercial, or multifamily residential uses. In any action in court, the burden of proof shall be

on the local agency to show that its housing element does satisfy the requirements of paragraph (4) of subdivision (a) of Section 65583.

(e) Nothing in this section shall be construed to relieve the local agency from complying with the congestion management program required by Chapter 2.6 (commencing with Section 65088) of Division 1 of Title 7 or the California Coastal Act of 1976 (Division 20 (commencing with Section 30000) of the Public Resources Code). Neither shall anything in this section be construed to relieve the local agency from making one or more of the findings required pursuant to Section 21081 of the Public Resources Code or otherwise complying with the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code).

(f) (1) Except as provided in subdivision (o), nothing in this section shall be construed to prohibit a local agency from requiring the housing development project to comply with objective, quantifiable, written development standards, conditions, and policies appropriate to, and consistent with, meeting the jurisdiction's share of the regional housing need pursuant to Section 65584. However, the development standards, conditions, and policies shall be applied to facilitate and accommodate development at the density permitted on the site and proposed by the development.

(2) Except as provided in subdivision (o), nothing in this section shall be construed to prohibit a local agency from requiring an emergency shelter project to comply with objective, quantifiable, written development standards, conditions, and policies that are consistent with paragraph (4) of subdivision (a) of Section 65583 and appropriate to, and consistent with, meeting the jurisdiction's need for emergency shelter, as identified pursuant to paragraph (7) of subdivision (a) of Section 65583. However, the development standards, conditions, and policies shall be applied by the local agency to facilitate and accommodate the development of the emergency shelter project.

(3) Except as provided in subdivision (o), nothing in this section shall be construed to prohibit a local agency from imposing fees and other exactions otherwise authorized by law that are essential to provide necessary public services and facilities to the housing development project or emergency shelter.

(4) For purposes of this section, a housing development project or emergency shelter shall be deemed consistent, compliant, and in conformity with an applicable plan, program, policy, ordinance, standard, requirement, or other similar provision if there is substantial evidence that would allow a reasonable person to conclude that the housing development project or emergency shelter is consistent, compliant, or in conformity.

(g) This section shall be applicable to charter cities because the Legislature finds that the lack of housing, including emergency shelter, is a critical statewide problem.

(h) The following definitions apply for the purposes of this section:

(1) "Feasible" means capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors.

(2) "Housing development project" means a use consisting of any of the following:

(A) Residential units only.

(B) Mixed-use developments consisting of residential and nonresidential uses with at least two-thirds of the square footage designated for residential use.

(C) Transitional housing or supportive housing.

(3) “Housing for very low, low-, or moderate-income households” means that either (A) at least 20 percent of the total units shall be sold or rented to lower income households, as defined in Section 50079.5 of the Health and Safety Code, or (B) 100 percent of the units shall be sold or rented to persons and families of moderate income as defined in Section 50093 of the Health and Safety Code, or persons and families of middle income, as defined in Section 65008 of this code. Housing units targeted for lower income households shall be made available at a monthly housing cost that does not exceed 30 percent of 60 percent of area median income with adjustments for household size made in accordance with the adjustment factors on which the lower income eligibility limits are based. Housing units targeted for persons and families of moderate income shall be made available at a monthly housing cost that does not exceed 30 percent of 100 percent of area median income with adjustments for household size made in accordance with the adjustment factors on which the moderate-income eligibility limits are based.

(4) “Area median income” means area median income as periodically established by the Department of Housing and Community Development pursuant to Section 50093 of the Health and Safety Code. The developer shall provide sufficient legal commitments to ensure continued availability of units for very low or low-income households in accordance with the provisions of this subdivision for 30 years.

(5) Notwithstanding any other law, until January 1, 2025, “deemed complete” means that the applicant has submitted a preliminary application pursuant to Section 65941.1.

(6) “Disapprove the housing development project” includes any instance in which a local agency does either of the following:

(A) Votes on a proposed housing development project application and the application is disapproved, including any required land use approvals or entitlements necessary for the issuance of a building permit.

(B) Fails to comply with the time periods specified in subdivision (a) of Section 65950. An extension of time pursuant to Article 5 (commencing with Section 65950) shall be deemed to be an extension of time pursuant to this paragraph.

(7) “Lower density” includes any conditions that have the same effect or impact on the ability of the project to provide housing.

(8) Until January 1, 2025, “objective” means involving no personal or subjective judgment by a public official and being uniformly verifiable by reference to an external and uniform benchmark or criterion available and knowable by both the development applicant or proponent and the public official.

(9) Notwithstanding any other law, until January 1, 2025, “determined to be complete” means that the applicant has submitted a complete application pursuant to Section 65943.

(i) If any city, county, or city and county denies approval or imposes conditions, including design changes, lower density, or a reduction of the percentage of a lot that may be occupied by a building or structure under the applicable planning and zoning in force at the time the housing development project’s application is deemed complete, that have a substantial adverse effect on the viability or affordability of a housing development for very low, low-, or moderate-income households, and the denial of the development or the imposition of conditions on the development is the subject of a court action which challenges the denial or the imposition of conditions, then the burden of proof shall be on the local legislative body to show that its decision is consistent with the findings as described in subdivision (d), and that the findings are supported by a preponderance of the evidence in the record, and with the requirements of subdivision (o).

(j) (1) When a proposed housing development project complies with applicable, objective general plan, zoning, and subdivision standards and criteria, including design review standards, in effect at the time that the application was deemed complete, but the local agency proposes to disapprove the project or to impose a condition that the project be developed at a lower density, the local agency shall base its decision regarding the proposed housing development project upon written findings supported by a preponderance of the evidence on the record that both of the following conditions exist:

(A) The housing development project would have a specific, adverse impact upon the public health or safety unless the project is disapproved or approved upon the condition that the project be developed at a lower density. As used in this paragraph, a "specific, adverse impact" means a significant, quantifiable, direct, and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete.

(B) There is no feasible method to satisfactorily mitigate or avoid the adverse impact identified pursuant to paragraph (1), other than the disapproval of the housing development project or the approval of the project upon the condition that it be developed at a lower density.

(2) (A) If the local agency considers a proposed housing development project to be inconsistent, not in compliance, or not in conformity with an applicable plan, program, policy, ordinance, standard, requirement, or other similar provision as specified in this subdivision, it shall provide the applicant with written documentation identifying the provision or provisions, and an explanation of the reason or reasons it considers the housing development to be inconsistent, not in compliance, or not in conformity as follows:

(i) Within 30 days of the date that the application for the housing development project is determined to be complete, if the housing development project contains 150 or fewer housing units.

(ii) Within 60 days of the date that the application for the housing development project is determined to be complete, if the housing development project contains more than 150 units.

(B) If the local agency fails to provide the required documentation pursuant to subparagraph (A), the housing development project shall be deemed consistent, compliant, and in conformity with the applicable plan, program, policy, ordinance, standard, requirement, or other similar provision.

(3) For purposes of this section, the receipt of a density bonus pursuant to Section 65915 shall not constitute a valid basis on which to find a proposed housing development project is inconsistent, not in compliance, or not in conformity, with an applicable plan, program, policy, ordinance, standard, requirement, or other similar provision specified in this subdivision.

(4) For purposes of this section, a proposed housing development project is not inconsistent with the applicable zoning standards and criteria, and shall not require a rezoning, if the housing development project is consistent with the objective general plan standards and criteria but the zoning for the project site is inconsistent with the general plan. If the local agency has complied with paragraph (2), the local agency may require the proposed housing development project to comply with the objective standards and criteria of the zoning which is consistent with the general plan, however, the standards and criteria shall be applied to facilitate and accommodate development at the density allowed on the site by the general plan and proposed by the proposed housing development project.

(k) (1) (A) (i) The applicant, a person who would be eligible to apply for residency in the development or emergency shelter, or a housing organization may bring an action to enforce this section. If, in any action

brought to enforce this section, a court finds that any of the following are met, the court shall issue an order pursuant to clause (ii):

(I) The local agency, in violation of subdivision (d), disapproved a housing development project or conditioned its approval in a manner rendering it infeasible for the development of an emergency shelter, or housing for very low, low-, or moderate-income households, including farmworker housing, without making the findings required by this section or without making findings supported by a preponderance of the evidence.

(II) The local agency, in violation of subdivision (j), disapproved a housing development project complying with applicable, objective general plan and zoning standards and criteria, or imposed a condition that the project be developed at a lower density, without making the findings required by this section or without making findings supported by a preponderance of the evidence.

(III) (ia) Subject to sub-subclause (ib), the local agency, in violation of subdivision (o), required or attempted to require a housing development project to comply with an ordinance, policy, or standard not adopted and in effect when a preliminary application was submitted.

(ib) This subclause shall become inoperative on January 1, 2025.

(ii) If the court finds that one of the conditions in clause (i) is met, the court shall issue an order or judgment compelling compliance with this section within 60 days, including, but not limited to, an order that the local agency take action on the housing development project or emergency shelter. The court may issue an order or judgment directing the local agency to approve the housing development project or emergency shelter if the court finds that the local agency acted in bad faith when it disapproved or conditionally approved the housing development or emergency shelter in violation of this section. The court shall retain jurisdiction to ensure that its order or judgment is carried out and shall award reasonable attorney's fees and costs of suit to the plaintiff or petitioner, except under extraordinary circumstances in which the court finds that awarding fees would not further the purposes of this section.

(B) (i) Upon a determination that the local agency has failed to comply with the order or judgment compelling compliance with this section within 60 days issued pursuant to subparagraph (A), the court shall impose fines on a local agency that has violated this section and require the local agency to deposit any fine levied pursuant to this subdivision into a local housing trust fund. The local agency may elect to instead deposit the fine into the Building Homes and Jobs Fund, if Senate Bill 2 of the 2017–18 Regular Session is enacted, or otherwise in the Housing Rehabilitation Loan Fund. The fine shall be in a minimum amount of ten thousand dollars ($10,000) per housing unit in the housing development project on the date the application was deemed complete pursuant to Section 65943. In determining the amount of fine to impose, the court shall consider the local agency's progress in attaining its target allocation of the regional housing need pursuant to Section 65584 and any prior violations of this section. Fines shall not be paid out of funds already dedicated to affordable housing, including, but not limited to, Low and Moderate Income Housing Asset Funds, funds dedicated to housing for very low, low-, and moderate-income households, and federal HOME Investment Partnerships Program and Community Development Block Grant Program funds. The local agency shall commit and expend the money in the local housing trust fund within five years for the sole purpose of financing newly constructed housing units affordable to extremely low, very low, or low-income households. After five years, if the funds have not been expended, the money shall revert to the state and be deposited in the Building Homes and Jobs Fund, if Senate Bill 2 of the 2017–18 Regular Session is enacted, or otherwise in the Housing Rehabilitation Loan Fund, for the sole purpose of financing newly constructed housing units affordable to extremely low, very low, or low-income households.

(ii) If any money derived from a fine imposed pursuant to this subparagraph is deposited in the Housing Rehabilitation Loan Fund, then, notwithstanding Section 50661 of the Health and Safety Code, that money shall be available only upon appropriation by the Legislature.

(C) If the court determines that its order or judgment has not been carried out within 60 days, the court may issue further orders as provided by law to ensure that the purposes and policies of this section are fulfilled, including, but not limited to, an order to vacate the decision of the local agency and to approve the housing development project, in which case the application for the housing development project, as proposed by the applicant at the time the local agency took the initial action determined to be in violation of this section, along with any standard conditions determined by the court to be generally imposed by the local agency on similar projects, shall be deemed to be approved unless the applicant consents to a different decision or action by the local agency.

(2) For purposes of this subdivision, "housing organization" means a trade or industry group whose local members are primarily engaged in the construction or management of housing units or a nonprofit organization whose mission includes providing or advocating for increased access to housing for low-income households and have filed written or oral comments with the local agency prior to action on the housing development project. A housing organization may only file an action pursuant to this section to challenge the disapproval of a housing development by a local agency. A housing organization shall be entitled to reasonable attorney's fees and costs if it is the prevailing party in an action to enforce this section.

(l) If the court finds that the local agency (1) acted in bad faith when it disapproved or conditionally approved the housing development or emergency shelter in violation of this section and (2) failed to carry out the court's order or judgment within 60 days as described in subdivision (k), the court, in addition to any other remedies provided by this section, shall multiply the fine determined pursuant to subparagraph (B) of paragraph (1) of subdivision (k) by a factor of five. For purposes of this section, "bad faith" includes, but is not limited to, an action that is frivolous or otherwise entirely without merit.

(m) Any action brought to enforce the provisions of this section shall be brought pursuant to Section 1094.5 of the Code of Civil Procedure, and the local agency shall prepare and certify the record of proceedings in accordance with subdivision (c) of Section 1094.6 of the Code of Civil Procedure no later than 30 days after the petition is served, provided that the cost of preparation of the record shall be borne by the local agency, unless the petitioner elects to prepare the record as provided in subdivision (n) of this section. A petition to enforce the provisions of this section shall be filed and served no later than 90 days from the later of (1) the effective date of a decision of the local agency imposing conditions on, disapproving, or any other final action on a housing development project or (2) the expiration of the time periods specified in subparagraph (B) of paragraph (5) of subdivision (h). Upon entry of the trial court's order, a party may, in order to obtain appellate review of the order, file a petition within 20 days after service upon it of a written notice of the entry of the order, or within such further time not exceeding an additional 20 days as the trial court may for good cause allow, or may appeal the judgment or order of the trial court under Section 904.1 of the Code of Civil Procedure. If the local agency appeals the judgment of the trial court, the local agency shall post a bond, in an amount to be determined by the court, to the benefit of the plaintiff if the plaintiff is the project applicant.

(n) In any action, the record of the proceedings before the local agency shall be filed as expeditiously as possible and, notwithstanding Section 1094.6 of the Code of Civil Procedure or subdivision (m) of this section, all or part of the record may be prepared (1) by the petitioner with the petition or petitioner's points and authorities, (2) by the respondent with respondent's points and authorities, (3) after payment of costs by the petitioner, or (4) as otherwise directed by the court. If the expense of preparing the record

has been borne by the petitioner and the petitioner is the prevailing party, the expense shall be taxable as costs.

(o) (1) Subject to paragraphs (2), (6), and (7), and subdivision (d) of Section 65941.1, a housing development project shall be subject only to the ordinances, policies, and standards adopted and in effect when a preliminary application including all of the information required by subdivision (a) of Section 65941.1 was submitted.

(2) Paragraph (1) shall not prohibit a housing development project from being subject to ordinances, policies, and standards adopted after the preliminary application was submitted pursuant to Section 65941.1 in the following circumstances:

(A) In the case of a fee, charge, or other monetary exaction, to an increase resulting from an automatic annual adjustment based on an independently published cost index that is referenced in the ordinance or resolution establishing the fee or other monetary exaction.

(B) A preponderance of the evidence in the record establishes that subjecting the housing development project to an ordinance, policy, or standard beyond those in effect when a preliminary application was submitted is necessary to mitigate or avoid a specific, adverse impact upon the public health or safety, as defined in subparagraph (A) of paragraph (1) of subdivision (j), and there is no feasible alternative method to satisfactorily mitigate or avoid the adverse impact.

(C) Subjecting the housing development project to an ordinance, policy, standard, or any other measure, beyond those in effect when a preliminary application was submitted is necessary to avoid or substantially lessen an impact of the project under the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code).

(D) The housing development project has not commenced construction within two and one-half years following the date that the project received final approval. For purposes of this subparagraph, "final approval" means that the housing development project has received all necessary approvals to be eligible to apply for, and obtain, a building permit or permits and either of the following is met:

(i) The expiration of all applicable appeal periods, petition periods, reconsideration periods, or statute of limitations for challenging that final approval without an appeal, petition, request for reconsideration, or legal challenge having been filed.

(ii) If a challenge is filed, that challenge is fully resolved or settled in favor of the housing development project.

(E) The housing development project is revised following submittal of a preliminary application pursuant to Section 65941.1 such that the number of residential units or square footage of construction changes by 20 percent or more, exclusive of any increase resulting from the receipt of a density bonus, incentive, concession, waiver, or similar provision. For purposes of this subdivision, "square footage of construction" means the building area, as defined by the California Building Standards Code (Title 24 of the California Code of Regulations).

(3) This subdivision does not prevent a local agency from subjecting the additional units or square footage of construction that result from project revisions occurring after a preliminary application is submitted pursuant to Section 65941.1 to the ordinances, policies, and standards adopted and in effect when the preliminary application was submitted.

(4) For purposes of this subdivision, "ordinances, policies, and standards" includes general plan, community plan, specific plan, zoning, design review standards and criteria, subdivision standards and criteria, and any other rules, regulations, requirements, and policies of a local agency, as defined in Section 66000, including those relating to development impact fees, capacity or connection fees or charges, permit or processing fees, and other exactions.

(5) This subdivision shall not be construed in a manner that would lessen the restrictions imposed on a local agency, or lessen the protections afforded to a housing development project, that are established by any other law, including any other part of this section.

(6) This subdivision shall not restrict the authority of a public agency or local agency to require mitigation measures to lessen the impacts of a housing development project under the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code).

(7) With respect to completed residential units for which the project approval process is complete and a certificate of occupancy has been issued, nothing in this subdivision shall limit the application of later enacted ordinances, policies, and standards that regulate the use and occupancy of those residential units, such as ordinances relating to rental housing inspection, rent stabilization, restrictions on short-term renting, and business licensing requirements for owners of rental housing.

(8) This subdivision shall become inoperative on January 1, 2025.

(p) This section shall be known, and may be cited, as the Housing Accountability Act.

SEC. 4.

Section 65905.5 is added to the Government Code, to read:

65905.5.

(a) Notwithstanding any other law, if a proposed housing development project complies with the applicable, objective general plan and zoning standards in effect at the time an application is deemed complete, after the application is deemed complete, a city, county, or city and county shall not conduct more than five hearings pursuant to Section 65905, or any other law, ordinance, or regulation requiring a public hearing in connection with the approval of that housing development project. If the city, county, or city and county continues a hearing subject to this section to another date, the continued hearing shall count as one of the five hearings allowed under this section. The city, county, or city and county shall consider and either approve or disapprove the application at any of the five hearings allowed under this section consistent with the applicable timelines under the Permit Streamlining Act (Chapter 4.5 (commencing with Section 65920)).

(b) For purposes of this section:

(1) "Deemed complete" means that the application has met all of the requirements specified in the relevant list compiled pursuant to Section 65940 that was available at the time when the application was submitted.

(2) "Hearing" includes any public hearing, workshop, or similar meeting conducted by the city or county with respect to the housing development project, whether by the legislative body of the city or county, the planning agency established pursuant to Section 65100, or any other agency, department, board, commission, or any other designated hearing officer or body of the city or county, or any committee or

subcommittee thereof. “Hearing” does not include a hearing to review a legislative approval required for a proposed housing development project, including, but not limited to, a general plan amendment, a specific plan adoption or amendment, or a zoning amendment, or any hearing arising from a timely appeal of the approval or disapproval of a legislative approval.

(3) “Housing development project” has the same meaning as defined in paragraph (2) of subdivision (h) of Section 65589.5.

(c) (1) For purposes of this section, a housing development project shall be deemed consistent, compliant, and in conformity with an applicable plan, program, policy, ordinance, standard, requirement, or other similar provision if there is substantial evidence that would allow a reasonable person to conclude that the housing development project is consistent, compliant, or in conformity.

(2) A proposed housing development project is not inconsistent with the applicable zoning standards and criteria, and shall not require a rezoning, if the housing development project is consistent with the objective general plan standards and criteria, but the zoning for the project site is inconsistent with the general plan. If the local agency complies with the written documentation requirements of paragraph (2) of subdivision (j) of Section 65589.5, the local agency may require the proposed housing development project to comply with the objective standards and criteria of the zoning that is consistent with the general plan; however, the standards and criteria shall be applied to facilitate and accommodate development at the density allowed on the site by the general plan and proposed by the proposed housing development project.

(d) Nothing in this section supersedes, limits, or otherwise modifies the requirements of, or the standards of review pursuant to, Division 13 (commencing with Section 21000) of the Public Resources Code.

(e) This section shall remain in effect only until January 1, 2025, and as of that date is repealed.

SEC. 5.

Section 65913.10 is added to the Government Code, to read:

65913.10.

(a) For purposes of any state or local law, ordinance, or regulation that requires the city or county to determine whether the site of a proposed housing development project is a historic site, the city or county shall make that determination at the time the application for the housing development project is deemed complete. A determination as to whether a parcel of property is a historic site shall remain valid during the pendency of the housing development project for which the application was made unless any archaeological, paleontological, or tribal cultural resources are encountered during any grading, site disturbance, or building alteration activities.

(b) For purposes of this section:

(1) “Deemed complete” means that the application has met all of the requirements specified in the relevant list compiled pursuant to Section 65940 that was available at the time when the application was submitted.

(2) “Housing development project” has the same meaning as defined in paragraph (2) of subdivision (h) of Section 65589.5.

(c) (1) Nothing in this section supersedes, limits, or otherwise modifies the requirements of, or the standards of review pursuant to, Division 13 (commencing with Section 21000) of the Public Resources Code.

(2) Nothing in this section supersedes, limits, or otherwise modifies the requirements of the California Coastal Act of 1976 (Division 20 (commencing with Section 30000) of the Public Resources Code).

(d) This section shall remain in effect only until January 1, 2025, and as of that date is repealed.

SEC. 6.

Section 65940 of the Government Code is amended to read:

65940.

(a) (1) Each public agency shall compile one or more lists that shall specify in detail the information that will be required from any applicant for a development project. Each public agency shall revise the list of information required from an applicant to include a certification of compliance with Section 65962.5, and the statement of application required by Section 65943. Copies of the information, including the statement of application required by Section 65943, shall be made available to all applicants for development projects and to any person who requests the information.

(2) An affected city or affected county, as defined in Section 66300, shall include the information necessary to determine compliance with the requirements of subdivision (d) of Section 66300 in the list compiled pursuant to paragraph (1).

(b) The list of information required from any applicant shall include, where applicable, identification of whether the proposed project is located within 1,000 feet of a military installation, beneath a low-level flight path or within special use airspace as defined in Section 21098 of the Public Resources Code, and within an urbanized area as defined in Section 65944.

(c) (1) A public agency that is not beneath a low-level flight path or not within special use airspace and does not contain a military installation is not required to change its list of information required from applicants to comply with subdivision (b).

(2) A public agency that is entirely urbanized, as defined in subdivision (e) of Section 65944, with the exception of a jurisdiction that contains a military installation, is not required to change its list of information required from applicants to comply with subdivision (b).

(d) This section shall remain in effect only until January 1, 2025, and as of that date is repealed.

SEC. 7.

Section 65940 is added to the Government Code, to read:

65940.

(a) Each public agency shall compile one or more lists that shall specify in detail the information that will be required from any applicant for a development project. Each public agency shall revise the list of information required from an applicant to include a certification of compliance with Section 65962.5, and

the statement of application required by Section 65943. Copies of the information, including the statement of application required by Section 65943, shall be made available to all applicants for development projects and to any person who requests the information.

(b) The list of information required from any applicant shall include, where applicable, identification of whether the proposed project is located within 1,000 feet of a military installation, beneath a low-level flight path or within special use airspace as defined in Section 21098 of the Public Resources Code, and within an urbanized area as defined in Section 65944.

(c) (1) A public agency that is not beneath a low-level flight path or not within special use airspace and does not contain a military installation is not required to change its list of information required from applicants to comply with subdivision (b).

(2) A public agency that is entirely urbanized, as defined in subdivision (e) of Section 65944, with the exception of a jurisdiction that contains a military installation, is not required to change its list of information required from applicants to comply with subdivision (b).

(d) This section shall become operative on January 1, 2025.

SEC. 8.

Section 65941.1 is added to the Government Code, to read:

65941.1.

(a) An applicant for a housing development project, as defined in paragraph (2) of subdivision (h) of Section 65589.5, shall be deemed to have submitted a preliminary application upon providing all of the following information about the proposed project to the city, county, or city and county from which approval for the project is being sought and upon payment of the permit processing fee:

(1) The specific location, including parcel numbers, a legal description, and site address, if applicable.

(2) The existing uses on the project site and identification of major physical alterations to the property on which the project is to be located.

(3) A site plan showing the location on the property, elevations showing design, color, and material, and the massing, height, and approximate square footage, of each building that is to be occupied.

(4) The proposed land uses by number of units and square feet of residential and nonresidential development using the categories in the applicable zoning ordinance.

(5) The proposed number of parking spaces.

(6) Any proposed point sources of air or water pollutants.

(7) Any species of special concern known to occur on the property.

(8) Whether a portion of the property is located within any of the following:

(A) A very high fire hazard severity zone, as determined by the Department of Forestry and Fire Protection pursuant to Section 51178.

(B) Wetlands, as defined in the United States Fish and Wildlife Service Manual, Part 660 FW 2 (June 21, 1993).

(C) A hazardous waste site that is listed pursuant to Section 65962.5 or a hazardous waste site designated by the Department of Toxic Substances Control pursuant to Section 25356 of the Health and Safety Code.

(D) A special flood hazard area subject to inundation by the 1 percent annual chance flood (100-year flood) as determined by the Federal Emergency Management Agency in any official maps published by the Federal Emergency Management Agency.

(E) A delineated earthquake fault zone as determined by the State Geologist in any official maps published by the State Geologist, unless the development complies with applicable seismic protection building code standards adopted by the California Building Standards Commission under the California Building Standards Law (Part 2.5 (commencing with Section 18901) of Division 13 of the Health and Safety Code), and by any local building department under Chapter 12.2 (commencing with Section 8875) of Division 1 of Title 2.

(F) A stream or other resource that may be subject to a streambed alteration agreement pursuant to Chapter 6 (commencing with Section 1600) of Division 2 of the Fish and Game Code.

(9) Any historic or cultural resources known to exist on the property.

(10) The number of proposed below market rate units and their affordability levels.

(11) The number of bonus units and any incentives, concessions, waivers, or parking reductions requested pursuant to Section 65915.

(12) Whether any approvals under the Subdivision Map Act, including, but not limited to, a parcel map, a tentative map, or a condominium map, are being requested.

(13) The applicant's contact information and, if the applicant does not own the property, consent from the property owner to submit the application.

(14) For a housing development project proposed to be located within the coastal zone, whether any portion of the property contains any of the following:

(A) Wetlands, as defined in subdivision (b) of Section 13577 of Title 14 of the California Code of Regulations.

(B) Environmentally sensitive habitat areas, as defined in Section 30240 of the Public Resources Code.

(C) A tsunami run-up zone.

(D) Use of the site for public access to or along the coast.

(15) The number of existing residential units on the project site that will be demolished and whether each existing unit is occupied or unoccupied.

(16) A site map showing a stream or other resource that may be subject to a streambed alteration agreement pursuant to Chapter 6 (commencing with Section 1600) of Division 2 of the Fish and Game Code and an aerial site photograph showing existing site conditions of environmental site features that would be subject to regulations by a public agency, including creeks and wetlands.

(17) The location of any recorded public easement, such as easements for storm drains, water lines, and other public rights of way.

(b) (1) Each local agency shall compile a checklist and application form that applicants for housing development projects may use for the purpose of satisfying the requirements for submittal of a preliminary application.

(2) The Department of Housing and Community Development shall adopt a standardized form that applicants for housing development projects may use for the purpose of satisfying the requirements for submittal of a preliminary application if a local agency has not developed its own application form pursuant to paragraph (1). Adoption of the standardized form shall not be subject to Chapter 3.5 (commencing with Section 11340) of Part 1 of Division 3 of Title 2 of the Government Code.

(3) A checklist or form shall not require or request any information beyond that expressly identified in subdivision (a).

(c) After submittal of all of the information required by subdivision (a), if the development proponent revises the project such that the number of residential units or square footage of construction changes by 20 percent or more, exclusive of any increase resulting from the receipt of a density bonus, incentive, concession, waiver, or similar provision, the housing development project shall not be deemed to have submitted a preliminary application that satisfies this section until the development proponent resubmits the information required by subdivision (a) so that it reflects the revisions. For purposes of this subdivision, "square footage of construction" means the building area, as defined by the California Building Standards Code (Title 24 of the California Code of Regulations).

(d) (1) Within 180 calendar days after submitting a preliminary application with all of the information required by subdivision (a) to a city, county, or city and county, the development proponent shall submit an application for a development project that includes all of the information required to process the development application consistent with Sections 65940, 65941, and 65941.5.

(2) If the public agency determines that the application for the development project is not complete pursuant to Section 65943, the development proponent shall submit the specific information needed to complete the application within 90 days of receiving the agency's written identification of the necessary information. If the development proponent does not submit this information within the 90-day period, then the preliminary application shall expire and have no further force or effect.

(3) This section shall not require an affirmative determination by a city, county, or city and county regarding the completeness of a preliminary application or a development application for purposes of compliance with this section.

(e) This section shall remain in effect only until January 1, 2025, and as of that date is repealed.

SEC. 9.

Section 65943 of the Government Code is amended to read:

65943.

(a) Not later than 30 calendar days after any public agency has received an application for a development project, the agency shall determine in writing whether the application is complete and shall immediately transmit the determination to the applicant for the development project. If the application is determined to be incomplete, the lead agency shall provide the applicant with an exhaustive list of items that were not complete. That list shall be limited to those items actually required on the lead agency's submittal

requirement checklist. In any subsequent review of the application determined to be incomplete, the local agency shall not request the applicant to provide any new information that was not stated in the initial list of items that were not complete. If the written determination is not made within 30 days after receipt of the application, and the application includes a statement that it is an application for a development permit, the application shall be deemed complete for purposes of this chapter. Upon receipt of any resubmittal of the application, a new 30-day period shall begin, during which the public agency shall determine the completeness of the application. If the application is determined not to be complete, the agency's determination shall specify those parts of the application which are incomplete and shall indicate the manner in which they can be made complete, including a list and thorough description of the specific information needed to complete the application. The applicant shall submit materials to the public agency in response to the list and description.

(b) Not later than 30 calendar days after receipt of the submitted materials described in subdivision (a), the public agency shall determine in writing whether the application as supplemented or amended by the submitted materials is complete and shall immediately transmit that determination to the applicant. In making this determination, the public agency is limited to determining whether the application as supplemented or amended includes the information required by the list and a thorough description of the specific information needed to complete the application required by subdivision (a). If the written determination is not made within that 30-day period, the application together with the submitted materials shall be deemed complete for purposes of this chapter.

(c) If the application together with the submitted materials are determined not to be complete pursuant to subdivision (b), the public agency shall provide a process for the applicant to appeal that decision in writing to the governing body of the agency or, if there is no governing body, to the director of the agency, as provided by that agency. A city or county shall provide that the right of appeal is to the governing body or, at their option, the planning commission, or both.

There shall be a final written determination by the agency on the appeal not later than 60 calendar days after receipt of the applicant's written appeal. The fact that an appeal is permitted to both the planning commission and to the governing body does not extend the 60-day period. Notwithstanding a decision pursuant to subdivision (b) that the application and submitted materials are not complete, if the final written determination on the appeal is not made within that 60-day period, the application with the submitted materials shall be deemed complete for the purposes of this chapter.

(d) Nothing in this section precludes an applicant and a public agency from mutually agreeing to an extension of any time limit provided by this section.

(e) A public agency may charge applicants a fee not to exceed the amount reasonably necessary to provide the service required by this section. If a fee is charged pursuant to this section, the fee shall be collected as part of the application fee charged for the development permit.

(f) Each city and each county shall make copies of any list compiled pursuant to Section 65940 with respect to information required from an applicant for a housing development project, as that term is defined in paragraph (2) of subdivision (h) of Section 65589.5, available both (1) in writing to those persons to whom the agency is required to make information available under subdivision (a) of that section, and (2) publicly available on the internet website of the city or county.

(g) This section shall remain in effect only until January 1, 2025, and as of that date is repealed.

SEC. 10.

Section 65943 is added to the Government Code, to read:

65943.

(a) Not later than 30 calendar days after any public agency has received an application for a development project, the agency shall determine in writing whether the application is complete and shall immediately transmit the determination to the applicant for the development project. If the written determination is not made within 30 days after receipt of the application, and the application includes a statement that it is an application for a development permit, the application shall be deemed complete for purposes of this chapter. Upon receipt of any resubmittal of the application, a new 30-day period shall begin, during which the public agency shall determine the completeness of the application. If the application is determined not to be complete, the agency's determination shall specify those parts of the application which are incomplete and shall indicate the manner in which they can be made complete, including a list and thorough description of the specific information needed to complete the application. The applicant shall submit materials to the public agency in response to the list and description.

(b) Not later than 30 calendar days after receipt of the submitted materials, the public agency shall determine in writing whether they are complete and shall immediately transmit that determination to the applicant. If the written determination is not made within that 30-day period, the application together with the submitted materials shall be deemed complete for purposes of this chapter.

(c) If the application together with the submitted materials are determined not to be complete pursuant to subdivision (b), the public agency shall provide a process for the applicant to appeal that decision in writing to the governing body of the agency or, if there is no governing body, to the director of the agency, as provided by that agency. A city or county shall provide that the right of appeal is to the governing body or, at their option, the planning commission, or both.

There shall be a final written determination by the agency on the appeal not later than 60 calendar days after receipt of the applicant's written appeal. The fact that an appeal is permitted to both the planning commission and to the governing body does not extend the 60-day period. Notwithstanding a decision pursuant to subdivision (b) that the application and submitted materials are not complete, if the final written determination on the appeal is not made within that 60-day period, the application with the submitted materials shall be deemed complete for the purposes of this chapter.

(d) Nothing in this section precludes an applicant and a public agency from mutually agreeing to an extension of any time limit provided by this section.

(e) A public agency may charge applicants a fee not to exceed the amount reasonably necessary to provide the service required by this section. If a fee is charged pursuant to this section, the fee shall be collected as part of the application fee charged for the development permit.

(f) This section shall become operative on January 1, 2025.

SEC. 11.

Section 65950 of the Government Code is amended to read:

65950.

(a) A public agency that is the lead agency for a development project shall approve or disapprove the project within whichever of the following periods is applicable:

(1) One hundred eighty days from the date of certification by the lead agency of the environmental impact report, if an environmental impact report is prepared pursuant to Section 21100 or 21151 of the Public Resources Code for the development project.

(2) Ninety days from the date of certification by the lead agency of the environmental impact report, if an environmental impact report is prepared pursuant to Section 21100 or 21151 of the Public Resources Code for a development project defined in subdivision (c).

(3) Sixty days from the date of certification by the lead agency of the environmental impact report, if an environmental impact report is prepared pursuant to Section 21100 or 21151 of the Public Resources Code for a development project defined in subdivision (c) and all of the following conditions are met:

(A) At least 49 percent of the units in the development project are affordable to very low or low-income households, as defined by Sections 50105 and 50079.5 of the Health and Safety Code, respectively. Rents for the lower income units shall be set at an affordable rent, as that term is defined in Section 50053 of the Health and Safety Code, for at least 30 years. Owner-occupied units shall be available at an affordable housing cost, as that term is defined in Section 50052.5 of the Health and Safety Code.

(B) Prior to the application being deemed complete for the development project pursuant to Article 3 (commencing with Section 65940), the lead agency received written notice from the project applicant that an application has been made or will be made for an allocation or commitment of financing, tax credits, bond authority, or other financial assistance from a public agency or federal agency, and the notice specifies the financial assistance that has been applied for or will be applied for and the deadline for application for that assistance, the requirement that one of the approvals of the development project by the lead agency is a prerequisite to the application for or approval of the application for financial assistance, and that the financial assistance is necessary for the project to be affordable as required pursuant to subparagraph (A).

(C) There is confirmation that the application has been made to the public agency or federal agency prior to certification of the environmental impact report.

(4) Sixty days from the date of adoption by the lead agency of the negative declaration, if a negative declaration is completed and adopted for the development project.

(5) Sixty days from the determination by the lead agency that the project is exempt from the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code), if the project is exempt from that act.

(b) This section does not preclude a project applicant and a public agency from mutually agreeing in writing to an extension of any time limit provided by this section pursuant to Section 65957.

(c) For purposes of paragraphs (2) and (3) of subdivision (a) and Section 65952, “development project” means a housing development project, as that term is defined in paragraph (2) of subdivision (h) of Section 65589.5.

(d) For purposes of this section, “lead agency” and “negative declaration” have the same meaning as defined in Sections 21067 and 21064 of the Public Resources Code, respectively.

(e) This section shall remain in effect only until January 1, 2025, and as of that date is repealed.

SEC. 12.

Section 65950 is added to the Government Code, to read:

65950.

(a) A public agency that is the lead agency for a development project shall approve or disapprove the project within whichever of the following periods is applicable:

(1) One hundred eighty days from the date of certification by the lead agency of the environmental impact report, if an environmental impact report is prepared pursuant to Section 21100 or 21151 of the Public Resources Code for the development project.

(2) One hundred twenty days from the date of certification by the lead agency of the environmental impact report, if an environmental impact report is prepared pursuant to Section 21100 or 21151 of the Public Resources Code for a development project defined in subdivision (c).

(3) Ninety days from the date of certification by the lead agency of the environmental impact report, if an environmental impact report is prepared pursuant to Section 21100 or 21151 of the Public Resources Code for a development project defined in subdivision (c) and all of the following conditions are met:

(A) At least 49 percent of the units in the development project are affordable to very low or low-income households, as defined by Sections 50105 and 50079.5 of the Health and Safety Code, respectively. Rents for the lower income units shall be set at an affordable rent, as that term is defined in Section 50053 of the Health and Safety Code, for at least 30 years. Owner-occupied units shall be available at an affordable housing cost, as that term is defined in Section 50052.5 of the Health and Safety Code.

(B) Prior to the application being deemed complete for the development project pursuant to Article 3 (commencing with Section 65940), the lead agency received written notice from the project applicant that an application has been made or will be made for an allocation or commitment of financing, tax credits, bond authority, or other financial assistance from a public agency or federal agency, and the notice specifies the financial assistance that has been applied for or will be applied for and the deadline for application for that assistance, the requirement that one of the approvals of the development project by the lead agency is a prerequisite to the application for or approval of the application for financial assistance, and that the financial assistance is necessary for the project to be affordable as required pursuant to subparagraph (A).

(C) There is confirmation that the application has been made to the public agency or federal agency prior to certification of the environmental impact report.

(4) Sixty days from the date of adoption by the lead agency of the negative declaration, if a negative declaration is completed and adopted for the development project.

(5) Sixty days from the determination by the lead agency that the project is exempt from the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code), if the project is exempt from that act.

(b) This section does not preclude a project applicant and a public agency from mutually agreeing in writing to an extension of any time limit provided by this section pursuant to Section 65957.

(c) For purposes of paragraphs (2) and (3) of subdivision (a) and Section 65952, “development project” means a use consisting of either of the following:

(1) Residential units only.

(2) Mixed-use developments consisting of residential and nonresidential uses in which the nonresidential uses are less than 50 percent of the total square footage of the development and are limited to neighborhood commercial uses and to the first floor of buildings that are two or more stories. As used in this paragraph, "neighborhood commercial" means small-scale general or specialty stores that furnish goods and services primarily to residents of the neighborhood.

(d) For purposes of this section, "lead agency" and "negative declaration" have the same meaning as defined in Sections 21067 and 21064 of the Public Resources Code, respectively.

(e) This section shall become operative on January 1, 2025.

SEC. 13.

Chapter 12 (commencing with Section 66300) is added to Division 1 of Title 7 of the Government Code, to read:

CHAPTER 12. Housing Crisis Act of 2019

66300.

(a) As used in this section:

(1) (A) Except as otherwise provided in subparagraph (B), "affected city" means a city, including a charter city, that the Department of Housing and Community Development determines, pursuant to subdivision (e), is in an urbanized area or urban cluster, as designated by the United States Census Bureau.

(B) Notwithstanding subparagraph (A), "affected city" does not include any city that has a population of 5,000 or less and is not located within an urbanized area, as designated by the United States Census Bureau.

(2) "Affected county" means a census designated place, based on the 2013-2017 American Community Survey 5-year Estimates, that is wholly located within the boundaries of an urbanized area, as designated by the United States Census Bureau.

(3) Notwithstanding any other law, "affected county" and "affected city" includes the electorate of an affected county or city exercising its local initiative or referendum power, whether that power is derived from the California Constitution, statute, or the charter or ordinances of the affected county or city.

(4) "Department" means the Department of Housing and Community Development.

(5) "Development policy, standard, or condition" means any of the following:

(A) A provision of, or amendment to, a general plan.

(B) A provision of, or amendment to, a specific plan.

(C) A provision of, or amendment to, a zoning ordinance.

(D) A subdivision standard or criterion.

(6) “Housing development project” has the same meaning as defined in paragraph (2) of subdivision (h) of Section 65589.5.

(7) “Objective design standard” means a design standard that involve no personal or subjective judgment by a public official and is uniformly verifiable by reference to an external and uniform benchmark or criterion available and knowable by both the development applicant or proponent and the public official before submittal of an application.

(b) (1) Notwithstanding any other law except as provided in subdivision (i), with respect to land where housing is an allowable use, an affected county or an affected city shall not enact a development policy, standard, or condition that would have any of the following effects:

(A) Changing the general plan land use designation, specific plan land use designation, or zoning of a parcel or parcels of property to a less intensive use or reducing the intensity of land use within an existing general plan land use designation, specific plan land use designation, or zoning district below what was allowed under the land use designation and zoning ordinances of the affected county or affected city, as applicable, as in effect on January 1, 2018, except as otherwise provided in clause (ii) of subparagraph (B). For purposes of this subparagraph, “less intensive use” includes, but is not limited to, reductions to height, density, or floor area ratio, new or increased open space or lot size requirements, or new or increased setback requirements, minimum frontage requirements, or maximum lot coverage limitations, or anything that would lessen the intensity of housing.

(B) (i) Imposing a moratorium or similar restriction or limitation on housing development, including mixed-use development, within all or a portion of the jurisdiction of the affected county or city, other than to specifically protect against an imminent threat to the health and safety of persons residing in, or within the immediate vicinity of, the area subject to the moratorium or for projects specifically identified as existing restricted affordable housing.

(ii) The affected county or affected city, as applicable, shall not enforce a zoning ordinance imposing a moratorium or other similar restriction on or limitation of housing development until it has submitted the ordinance to, and received approval from, the department. The department shall approve a zoning ordinance submitted to it pursuant to this subparagraph only if it determines that the zoning ordinance satisfies the requirements of this subparagraph. If the department denies approval of a zoning ordinance imposing a moratorium or similar restriction or limitation on housing development as inconsistent with this subparagraph, that ordinance shall be deemed void.

(C) Imposing or enforcing design standards established on or after January 1, 2020, that are not objective design standards.

(D) Except as provided in subparagraph (E), establishing or implementing any provision that:

(i) Limits the number of land use approvals or permits necessary for the approval and construction of housing that will be issued or allocated within all or a portion of the affected county or affected city, as applicable.

(ii) Acts as a cap on the number of housing units that can be approved or constructed either annually or for some other time period.

(iii) Limits the population of the affected county or affected city, as applicable.

(E) Notwithstanding subparagraph (D), an affected county or affected city may enforce a limit on the number of approvals or permits or a cap on the number of housing units that can be approved or

constructed if the provision of law imposing the limit was approved by voters prior to January 1, 2005, and the affected county or affected city is located in a predominantly agricultural county. For the purposes of this subparagraph, "predominantly agricultural county" means a county that meets both of the following, as determined by the most recent California Farmland Conversion Report produced by the Department of Conservation:

(i) Has more than 550,000 acres of agricultural land.

(ii) At least one-half of the county area is agricultural land.

(2) Any development policy, standard, or condition enacted on or after the effective date of this section that does not comply with this section shall be deemed void.

(c) Notwithstanding subdivisions (b) and (f), an affected county or affected city may enact a development policy, standard, or condition to prohibit the commercial use of land that is designated for residential use, including, but not limited to, short-term occupancy of a residence, consistent with the authority conferred on the county or city by other law.

(d) Notwithstanding any other provision of this section, both of the following shall apply:

(1) An affected city or an affected county shall not approve a housing development project that will require the demolition of residential dwelling units unless the project will create at least as many residential dwelling units as will be demolished.

(2) An affected city or an affected county shall not approve a housing development project that will require the demolition of occupied or vacant protected units, unless all of the following apply:

(A) (i) The project will replace all existing or demolished protected units.

(ii) Any protected units replaced pursuant to this subparagraph shall be considered in determining whether the housing development project satisfies the requirements of Section 65915 or a locally adopted requirement that requires, as a condition of the development of residential rental units, that the project provide a certain percentage of residential rental units affordable to, and occupied by, households with incomes that do not exceed the limits for moderate-income, lower income, very low income, or extremely low income households, as specified in Sections 50079.5, 50093, 50105, and 50106 of the Health and Safety Code.

(iii) Notwithstanding clause (i), in the case of a protected unit that is or was, within the five-year period preceding the application, subject to a form of rent or price control through a local government's valid exercise of its police power, and that is or was occupied by persons or families above lower income, the affected city or affected county may do either of the following:

(I) Require that the replacement units be made available at affordable rent or affordable housing cost to, and occupied by, low-income persons or families. If the replacement units will be rental dwelling units, these units shall be subject to a recorded affordability restriction for at least 55 years.

(II) Require that the units be replaced in compliance with the jurisdiction's rent or price control ordinance, provided that each unit is replaced. Unless otherwise required by the affected city or affected county's rent or price control ordinance, these units shall not be subject to a recorded affordability restriction.

(B) The housing development project will include at least as many residential dwelling units as the greatest number of residential dwelling units that existed on the project site within the last five years.

(C) Any existing residents will be allowed to occupy their units until six months before the start of construction activities with proper notice, subject to Chapter 16 (commencing with Section 7260) of Division 7 of Title 1.

(D) The developer agrees to provide both of the following to the occupants of any protected units:

(i) Relocation benefits to the occupants of those affordable residential rental units, subject to Chapter 16 (commencing with Section 7260) of Division 7 of Title 1.

(ii) A right of first refusal for a comparable unit available in the new housing development affordable to the household at an affordable rent, as defined in Section 50053 of the Health and Safety Code, or an affordable housing cost, as defined in 50052.5.

(E) For purposes of this paragraph:

(i) "Equivalent size" means that the replacement units contain at least the same total number of bedrooms as the units being replaced.

(ii) "Protected units" means any of the following:

(I) Residential dwelling units that are or were subject to a recorded covenant, ordinance, or law that restricts rents to levels affordable to persons and families of lower or very low income within the past five years.

(II) Residential dwelling units that are or were subject to any form of rent or price control through a public entity's valid exercise of its police power within the past five years.

(III) Residential dwelling units that are or were occupied by lower or very low income households within the past five years.

(IV) Residential dwelling units that were withdrawn from rent or lease in accordance with Chapter 12.75 (commencing with Section 7060) of Division 7 of Title 1 within the past 10 years.

(iii) "Replace" shall have the same meaning as provided in subparagraph (B) of paragraph (3) of subdivision (c) of Section 65915.

(3) This subdivision shall not supersede any objective provision of a locally adopted ordinance that places restrictions on the demolition of residential dwelling units or the subdivision of residential rental units that are more protective of lower income households, requires the provision of a greater number of units affordable to lower income households, or that requires greater relocation assistance to displaced households.

(4) This subdivision shall only apply to a housing development project that submits a complete application pursuant to Section 65943 on or after January 1, 2020.

(e) The Department of Housing and Community Development shall determine those cities and counties in this state that are affected cities and affected counties, in accordance with subdivision (a) by June 30, 2020. The department may update the list of affected cities and affected counties once on or after January 1, 2021, to account for changes in urbanized areas or urban clusters due to new data obtained from the 2020 census. The department's determination shall remain valid until January 1, 2025.

(f) (1) Except as provided in paragraphs (3) and (4) and subdivisions (h) and (i), this section shall prevail over any conflicting provision of this title or other law regulating housing development in this state to the extent that this section more fully advances the intent specified in paragraph (2).

(2) It is the intent of the Legislature that this section be broadly construed so as to maximize the development of housing within this state. Any exception to the requirements of this section, including an exception for the health and safety of occupants of a housing development project, shall be construed narrowly.

(3) This section shall not be construed as prohibiting the adoption or amendment of a development policy, standard, or condition in a manner that:

(A) Allows greater density.

(B) Facilitates the development of housing.

(C) Reduces the costs to a housing development project.

(D) Imposes or implements mitigation measures as necessary to comply with the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code).

(4) This section shall not apply to a housing development project located within a very high fire hazard severity zone. For purposes of this paragraph, "very high fire hazard severity zone" has the same meaning as provided in Section 51177.

(g) This section shall not be construed to void a height limit, urban growth boundary, or urban limit established by the electorate of an affected county or an affected city, provided that the height limit, urban growth boundary, or urban limit complies with subparagraph (A) of paragraph (1) of subdivision (b).

(h) (1) Nothing in this section supersedes, limits, or otherwise modifies the requirements of, or the standards of review pursuant to, Division 13 (commencing with Section 21000) of the Public Resources Code.

(2) Nothing in this section supersedes, limits, or otherwise modifies the requirements of the California Coastal Act of 1976 (Division 20 (commencing with Section 30000) of the Public Resources Code). For a housing development project proposed within the coastal zone, nothing in this section shall be construed to prohibit an affected county or an affected city from enacting a development policy, standard, or condition necessary to implement or amend a certified local coastal program consistent with the California Coastal Act of 1976 (Division 20 (commencing with Section 30000) of the Public Resources Code).

(i) (1) This section does not prohibit an affected county or an affected city from changing a land use designation or zoning ordinance to a less intensive use if the city or county concurrently changes the development standards, policies, and conditions applicable to other parcels within the jurisdiction to ensure that there is no net loss in residential capacity.

(2) This section does not prohibit an affected county or an affected city from changing a land use designation or zoning ordinance to a less intensive use on a site that is a mobilehome park, as defined in Section 18214 of the Health and Safety Code, as of the effective date of this section, and the no net loss requirement in paragraph (1) shall not apply.

(j) Notwithstanding subdivisions (b) and (f), this section does not prohibit an affected city or an affected county from enacting a development policy, standard, or condition that is intended to preserve or facilitate the production of housing for lower income households, as defined in Section 50079.5 of the Health and Safety Code, or housing types that traditionally serve lower income households, including mobilehome parks, single-room occupancy units, or units subject to any form of rent or price control through a public entity's valid exercise of its police power.

66301.

This chapter shall remain in effect only until January 1, 2025, and as of that date is repealed.

SEC. 14.

The Legislature finds and declares that the provision of adequate housing, in light of the severe shortage of housing at all income levels in this state, is a matter of statewide concern and is not a municipal affair as that term is used in Section 5 of Article XI of the California Constitution. Therefore, the provisions of this act apply to all cities, including charter cities.

SEC. 15.

No reimbursement is required by this act pursuant to Section 6 of Article XIII B of the California Constitution for certain costs that may be incurred by a local agency or school district because, in that regard, this act creates a new crime or infraction, eliminates a crime or infraction, or changes the penalty for a crime or infraction, within the meaning of Section 17556 of the Government Code, or changes the definition of a crime within the meaning of Section 6 of Article XIII B of the California Constitution.

However, if the Commission on State Mandates determines that this act contains other costs mandated by the state, reimbursement to local agencies and school districts for those costs shall be made pursuant to Part 7 (commencing with Section 17500) of Division 4 of Title 2 of the Government Code.

SEC. 16.

The provisions of this act are severable. If any provision of this act or its application is held invalid, that invalidity shall not affect other provisions or applications that can be given effect without the invalid provision or application.

TITLE

General Plan Comprehensive Update, Environmental Impact Report, and Zoning Code Amendment

RECOMMENDATION

The Planning Commission is requested to make the following decisions:

1. A Resolution recommending the City Council of the City of American Canyon (i) Certify the Comprehensive Technical General Plan Update Final Environmental Impact Report (SCH # 2022070038), (ii) Adopt CEQA Findings of Fact and a Statement of Overriding Considerations, and (III) Adopt a Mitigation Monitoring and Reporting Program.

2. A Resolution recommending the City Council of the City of American Canyon adopt the Comprehensive 2040 Technical General Plan Update and Policies to sustain compliance with the 2024 Napa County Airport Land Use Compatibility Plan.

3. A Resolution recommending the City Council of the City of American Canyon adopt Zoning Code Amendments to ensure consistency with the General Plan and the 2024 Napa County Airport Land Use Compatibility Plan.

CONTACT

Brent Cooper, AICP, Community Development Director

BACKGROUND & ANALYSIS

What is a General Plan:

The General Plan guides the City toward a shared community vision of a Healthy, Equitable, Resilient, and Economically Vibrant community through the Year 2040 and beyond. Since 1990, the California Supreme Court firmly established that the General Plan is the pre-eminent statement of local planning that governs future growth and development. Referring to it as "the constitution for all future development," the General Plan is inherently broad-based because it lays out overarching goals, policies, and actions that guide all government actions.

Our current General Plan was adopted soon after incorporation on November 3, 1994. Over the years, the General Plan has been amended many times - as recently as November 2023. However,

inconsistencies among the elements emerge, and some policies have become outdated. The proposed Comprehensive General Plan Update addresses current local and regional conditions, as well as changes in State law that may not have been in effect when the General Plan was originally adopted.

With a legally adequate General Plan in place, the City can systematically implement its vision through regulatory tools such as Specific Plans, Zoning Ordinances, and Design Guidelines, as well as immediate-term projects like Land Subdivisions, Design Permits, Conditional Use Permits, and Public Works Capital Improvement Programs.

The proposed 2040 Technical General Plan Update is organized into the following elements: Land Use; Housing; Mobility; Utilities; Public Services and Facilities; Environment, Parks, and Recreation; Safety; and Environmental Justice. Together, these elements cover all topics required to be included in a General Plan under State law. Additional elements may be added in the future as resources and priorities arise. A copy of the General Plan is included as Attachment 2, Exhibit A. A graphic prepared by the League of California Cities illustrates the General Plan and its relationship to mid- and short-range policy actions. See Attachment 4. You can read more about the Purpose and Use of a General Plan in the Introduction Chapter of the General Plan. The General Plan is available in Attachment 2, Exhibit A.

General Plan Study Areas:
California state law requires the study area to include the City limits plus any land outside its boundaries, in the planning agency's judgment, that bears relation to its planning " (Gov. Code § 65300). Consistent with State Law, there are several geographical areas that influence long-term planning. These include the following:

- **City Limits**. This is the boundary within the incorporated city limits. Land Use policies in American Canyon are adopted by the City Council. Except for property owned and operated by the Federal Government or State of California and their agencies (i.e.: Caltrans, Napa Valley Unified School District), American Canyon has land use authority over all land within its city limits.

- **Sphere of Influence**. The Napa Local Agency Formation Commission (LAFCO) establishes the Sphere of Influence (SOI), which defines the probable physical boundary and service area of a local agency. The SOI includes incorporated and unincorporated areas where the City has or plans to have responsibility to provide public facilities and services. In most situations, property must be located in the SOI before it can be annexed into the City limits. The City's SOI was approved by LAFCO at the time of incorporation in 1992 and updated periodically since then. The most recent update was in 2015 in association with the Canyon Estates annexation.

- **Urban Limit Line**. The City Council adopted a voter-initiated Urban Limit Line (ULL) around the

city in 2008. Negotiated with Napa County in 2008, the ULL extends beyond the City's SOI. The ULL boundary represents an agreement between the City and County over the City limits to the Year 2030, after which the ULL expires. The General Plan contemplates extending the existing ULL indefinitely and designates the Hess/Laird Property northeast of the City's current ULL as a ULL Study Area.

- **General Plan Planning Area**. The General Plan Planning Area encompasses the City of American Canyon Water and Sewer Service areas. Napa County has land use authority outside the City Limits, however, as the Water and Sewer Service provider, the City has authority over these services. For this reason, the Water and Sewer Service areas bear relation to the City's planning consistent with Government Code Section 65300.

A map published by LAFCO depicts the City in grey, the SOI with a solid black line, and the ULL with a dashed red line. See Attachment 5. A map depicting the City's General Plan Planning Area is included as Attachment 6.

General Plan Update Scope:

The General Plan update effort began in December 2019 with Mintier Harnish as the project manager. Later on, Rincon Associates joined the team. Over these years, numerous significant activities influenced the proposed General Plan. A summary of important milestones are listed below:

- January 2020 - The City Council established an advisory committee for Lifelong Learning and the West Side Roadway Connector. Numerous meetings helped shape policies in the 2040 General Plan.

- January 2020 - The City Council amended the General Plan to update the Citywide Bicycle Master Plan. This plan remains in the 2040 General Plan along with the Pedestrian Master Plan, adopted in 2017.

- September 2020 - Significant budget reductions caused by diminished economic activity from the Covid Pandemic necessitated a lower General Plan budget and reduced scope.

- June 2021 - The City Council accepted the West Side Committee's roadway alignment recommendation. See Attachment 7.

- September 2021 - The City Council amended the General Plan to incorporate greenhouse gas and climate change policies into the Land Use Element. This General Plan Amendment enabled an ordinance to prohibit any new gas stations in American Canyon.

- September 2021 - The City Council amended the General Plan to allow multifamily residential development on the east side of Oat Hill. A series of entitlements were approved at that time, and today, apartment construction is well under way.

- January 2022 - City Council modified the scope to address a more technical approach, intended to expedite completion of the General Plan schedule.

- April 2022 - The City Council directed staff to add the Hess/Laird property to the General Plan scope as a Special Study area for potential inclusion in the City's Urban Limit Line.

- June 2022 - The City issued a Notice of Preparation (NOP) to begin the environmental review process for the General Plan. The NOP provides a detailed description of the General Plan Update. A copy of the NOP is included in Attachment 8.

- January 2023 - In a joint meeting with the Planning Commission, the City Council approved an update to the Housing Element. In June 2023, the State of California Department of Housing and Community Development (HCD) certified the Housing Element.

- April 2023 - The City Council amended the General Plan to delete growth control policies that conflicted with State Housing laws.

- August 2023 - The City Council amended the General Plan to accommodate changes to the Watson Ranch Specific Plan.

- September 2023 - The City Council adopted for "Vehicle Miles Traveled" (VMT) standards for new development. Adopting VMT standards is a goal in the NOP scope of work.

- September 2023 - The City Council decided to not amend the NVUSD surplus school sites to a residential zoning district through the General Plan update process.

- November 2023 - The City Council amended the General Plan to accommodate pre-zoning for the Paoli/Watson Lane annexation.

- February 2024 - The City Council certified the Measure K Initiative, establishing ministerial permitting for certain warehouse facilities in American Canyon.

- February 2024 - The City Council approved first-of-its-kind industrial greenhouse gas and commerce center sustainability standard ordinances in the Bay Area.

- September 2024 - The General Plan Draft Environmental Impact Report (EIR) was released for public review.

- October 2024 - The Planning Commission conducted a workshop on the Draft EIR conclusions.

- December 2024 - Napa County Airport Land Use Commission (ALUC) adopted an updated

Airport Land Use Compatibility Plan (ALUCP) for the County's two airports - Angwin and Napa. This issue is discussed further in the staff report.

- December 2024 - The extended General Plan EIR public review period ends.

- March 2024 - Responses were sent to address comments on the Draft EIR.

General Plan Map and Zoning Map Changes:
The proposed General Plan Land Use map is included as Attachment 9. This map designates a General Plan land use category to all property within the city limits, sphere of influence, and urban limit line.

Normally, a Comprehensive General Plan Update brings many land use changes. Fortunately, because many significant land use amendments were completed during the General Plan update timeframe, there are few remaining land use changes needed at this time. What is left include General Plan land uses that do not match the existing uses. For example, various creeks are redesignated from Residential to Open Space. Napa Junction Elementary School, Donaldson Way Elementary School, and various parks are redesignated from Residential to Public. Proposed land use changes are shown in Attachment 10.

The General Plan land use changes are paired with zoning map changes. Amending the zoning at the same time as the General Plan maintains consistency between these two documents. A table identifying each parcel earmarked for a zoning map amendment can be found within the Zoning Amendment Resolution included as Attachment 3.

Public Review Draft General Plan Revisions:
The General Plan was made available for public review in September 2024. During this time, the City received a letter from the Napa County Bicycle Coalition. In addition,City staff conducted its own review. The Napa County Bicycle Coalition comments improved the General Plan.

Nearly all the Napa County Bicycle Coalition recommendations were included in the revised General Plan. One area that staff is unable to accommodate involves the Bike Coalition's recommendations for service standards. Examples include committing to a specific percentage VMT reduction by 2045, completing 50% of our active transportation network by 2040, street sweeping schedules, and similar suggestions.

While staff does not necessarily disagree with the intent and benefits of these standards, they require City Council policy direction related to general plan implementation. We appreciate the time spent by the Napa County Bicycle Coalition to improve the General Plan. A copy of their letter and staff response is included as Attachment 11.

The draft General Plan has been renamed "Public Review Draft March 2025." The current draft identifies changes to the September Public Review Draft. Deleted text is noted with strikethrough. Added text is noted with a double underline. Each change is explained with a Justification note.

General Plan Graphic Images:
Apart from the content itself, there are a number of placeholder graphics throughout the General Plan. Over the past year, the City Communications team has acquired an extensive library of local photos. Prior to the General Plan adoption, staff will review the General Plan graphics and replace "non-local" images with illustrations more representative of life in American Canyon.

Napa Airport Land Use Compatibility Plan Update:
On December 4, 2024, the Napa County Airport Commission (ALUC) adopted a new Airport Land Use Compatibility Plan (ALUCP) for the County's two airports - Angwin and Napa. The 2024 Airport Land Use Compatibility Plan (ALUCP) updates and entirely replaces the 1991 ALUCP amended in December 1999 (1999 ALUCP). Much like our General Plan, the need for the comprehensive update arose primarily because of a ALUC desire to bring the plan up to current standards, reflect current airport layout plans (ALPs), and address stakeholder needs.

The primary function of the Airport Land Use Compatibility Plan (ALUCP) is to ensure compatibility between Napa and Angwin Airports and future land use development in their surrounding areas. The plan achieves this by establishing a set of compatibility criteria for new development around each airport.

The ALUCP is a complex regulatory document because it considers many different land use scenarios in the vicinity of each airport. A land use compatibility zone map that corresponds to safety generally associated with aircraft patterns around the airport is a primary tool to regulate building occupancy and land uses within the airport influence area. The Napa Airport land use compatibility zone map is an exhibit in the new Zoning Code Chapter 19.55 Airport Land Use Compatibility (Attachment 3, Exhibit B).

The Land Use Compatibility Zone map divides the airport influence area into Zones A through E. Zone A is the most restrictive, and Zone E is the last restrictive. In American Canyon, most areas of the City are located well outside the most restrictive areas close to the airport. In our industrial districts located south of Napa Airport, the warehouse, logistics and office uses meet the building occupancy standards. Under the new plan there is no significant change anticipated to occupancy limitations on new development.

The areas of American Canyon, generally south of the warehouses off Green Island Road, and north and east of Oat Hill were located in Zone D of the former Airport Compatibility Plan. Under the former plan, Zone D was considered an aircraft noise impact area and housing was considered incompatible.

The new plan updated aircraft noise contours and concluded that very low density and higher density housing is compatible in the southern areas of the former Zone D. Today, the new ALUCP designates this area as Zone D2. Zone D2 covers the vacant properties between Eucalyptus Drive and Green Island Road, the Paoli/Watson Annexation area, and the Hess/Laird properties, among others. Allowance of residential uses in the former Zone D opens up new opportunities for vacant properties within the General Plan study area. Amendments to the General Plan, should it be considered, would occur *after* this current General Plan update is complete.

For now, because the Napa Airport Land Use Compatibility Plan extends into American Canyon, State Law requires our General Plan to be revised within 180 days of the ALUCP adoption. The 180-day deadline will occur on June 2, 2025. To meet this deadline, the General Plan update adopts the ALUCP as a standalone document into the General Plan and adds policy amendments. The ALUCP may be viewed in Attachment 1, Exhibit B. The ALUCP policy amendments may be viewed in the Land Use Element, Goal LU-9 and the Safety Element, Goal S-6.

State Law also requires the Zoning Ordinance be consistent with the ALUCP. To provide this consistency, the Zoning Code Amendment includes a new Municipal Code Chapter 19.55 - Airport Land Use Compatibility. This new zoning chapter provides further consistency with the ALUCP. The new Chapter 19.55 can be viewed in Attachment 3, Exhibit B.

Amendment of the General Plan, including policies to bring the General Plan and Zoning into conformance with the ALUCP requires a conformance review by the ALUC. Administered by Napa County staff, we will submit the General Plan and Zoning Code update to ALUC shortly after the Planning Commission hearing. The project schedule contemplates a conformance determination by the ALUC prior to City Council action on the EIR, General Plan and Zoning Code Amendments.

California Environmental Quality Act:
The General Plan Update is subject to the California Environmental Quality Act (CEQA), a state law enacted in 1970. CEQA requires all public agencies to identify and disclose potentially significant environmental effects of land use projects and to avoid or mitigate those effects if feasible.

The 2040 Technical General Plan Update Environmental Impact Report (EIR) examines the potential environmental effects of the proposed General Plan and subsequent activities, such as zoning code amendments and approval of development proposals throughout the City.

The EIR evaluates numerous environmental issues and categorizes each potential impact under one of four levels of environmental significance:

1. **No Impact**: The proposed plan would have no effect on environmental conditions or would reduce existing environmental problems or hazards.
2. **Less than Significant**. An impact that may be adverse but does not exceed the threshold levels

and does not require mitigation measures. However, mitigation measures that could further lessen the environmental effect may be suggested if readily available and easily achievable.

3. **Less than Significant with Mitigation Incorporated**. An impact that can be reduced to below the threshold level with reasonably available and feasible mitigation measures. Such an impact requires findings under Section 15091 of the CEQA Guidelines.
4. S**ignificant and Unavoidable**. An impact that cannot be reduced to below the threshold level with reasonably available and feasible mitigation measures. Such an impact requires a Statement of Overriding Considerations to be issued if the proposed plan is approved pursuant to Section15093 of the CEQA Guidelines.

Fortunately, the General Plan is anticipated to cause only two significant and unavoidable environmental impacts:

1. Construction Noise. Construction noise will temporarily exceed limits in the Noise Ordinance. Although noise may exceed standards, many measures can be taken to reduce noise to the greatest extent possible, including measures that will reduce noise from non-construction activities. Table ES-1 in the Draft EIR identifies these measures. See Attachment 1, Exhibit A.

2. Vehicle Miles Traveled. Vehicle Miles Traveled (VMT) measures the distance people travel. Typically, automobile travel is inefficient because many of us travel alone in cars. As a result, transportation is a major source of greenhouse gases that contribute to climate change. Smart growth policies, such as improving transit, creating safer ways to walk and bike to frequent destinations, and reducing the distance between homes and shopping or employment can reduce VMT.

American Canyon adopted a Vehicle Miles Travlled (VMT) Policy in 2023, aiming to reduce per capita vehicle transportation use by 19 percent. The good news is that smart growth policies in the updated General Plan reduce non-residential (employee) VMT by nearly 33%, exceeding the 19% reduction goal. However, citywide residential VMT is forecasted to be reduced by only 4.4%, falling short of the 19% reduction goal. Continued efforts to provide services near residents and economic development efforts to bring more jobs closer to American Canyon residents will help reduce VMT in the long term.

Because the General Plan Update creates two significant and unavoidable impacts, the Planning Commission will be requested to recommend the City Council adopt a Statement of Overriding Considerations which is contained in Attachment 1, Exhibit E.

Economic Development:

A General Plan promotes economic development by providing a framework for future growth, including land use, infrastructure, and housing. This framework attracts businesses and creates a stable environment for economic activity.

The original General Plan included an Economic Development Element, but its policies are now outdated. Due to Covid-era budget limitations, a new Economic Development Element was removed from the General Plan scope. While an Economic Development Element can be useful, an updated General Plan that complies with State Law is itself a powerful tool for spurring economic development. For example, a General Plan that highlights American Canyon's intrinsic appeal can attract economic activity.

What makes American Canyon an attractive location for economic activity? The City's contribution to economic activity is good governance. Good governance means implementing the General Plan through the following public services:

- Specific Plans (such as Watson Ranch and Broadway District),
- CEQA Streamlining with Program EIRs (such as the General Plan EIR),
- Online permitting,
- Responsive development application review times,
- Cost-effective infrastructure implementation (including parks, trails, roadways, and utilities),
- Strong public safety,
- Robust recreation and active transportation measures,
- Environmental stewardship and climate adaptation,
- Support for public schools and lifelong learning,
- Inclusive community outreach and participation,
- Extensive community partnership,
- A balanced municipal budget, and much more.

Policies addressing these and other issues, when implemented earnestly, will enhance American Canyon as an attractive place to do business, thereby furthering economic development in our City.

General Plan Review Schedule:
The General Plan Update schedule would complete the update and associated zoning code amendments before the the City's next Fiscal Year, which begins July 1. Listed below is the schedule:

Date	Hearing Body	Hearing Type
03.27.25	Planning Commission	EIR, General Plan & Zoning Public Hearing
04.02.25	OSATS Commission	General Plan & Zoning Recommendation
04.10.25	Parks & Community Services Commission	General Plan & Zoning Recommendation
04.15.25	City Council	EIR, General Plan & Zoning Workshop
05.07.25	Napa County ALUC	General Plan & Zoning Conformance
05.20.25	City Council	EIR, General Plan & Zoning Public Hearing
06.03.25	City Council	Zoning Final Reading Consent

COUNCIL PRIORITY PROGRAMS AND PROJECTS

Organizational Effectiveness: "Deliver exemplary government services."

FISCAL IMPACT

The cost to prepare the General Plan Update project is included in the current and proposed Citywide budget.

ENVIRONMENTAL REVIEW

The City of American Canyon prepared an Environmental Impact Report (EIR – State Clearinghouse No. 2022070038) for the General Plan Update Project in accordance with the California Environmental Quality Act.

RESOLUTION NO. 2025-XX

A RESOLUTION RECOMMENDING THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON (i) CERTIFY THE COMPREHENSIVE TECHNICAL GENERAL PLAN UPDATE FINAL ENVIRONMENTAL IMPACT REPORT (SCH # 2022070038), (ii) ADOPT CEQA FINDINGS OF FACT AND A STATEMENT OF OVERRIDING CONSIDERATIONS, AND (III) ADOPT A MITIGATION MONITORING AND REPORTING PROGRAM

WHEREAS, in 2019, the City of American Canyon ("City") began the process of comprehensively updating the General Plan, and since this time City officials, employees, and community members have been actively involved in the preparation of the 2040 General Plan Update ("2040 General Plan"); and

WHEREAS, the 2040 General Plan applies to lands within City limits and also certain lands outside City limits, which collectively comprise the City's Planning Area. The City's Planning Area covers includes the City of American Canyon Water and Sewer Service area, the City limits, the City's Sphere of Influence (SOI), and urban limit line; and

WHEREAS, the 2040 General Plan is a comprehensive, long-term plan for the City's future growth and development, represents the community's view of its future, and contains the goals and policies upon with the City Council, Planning Commission, and the entire community will base land use and resource decisions; and

WHEREAS, the City is the lead agency for the 2040 General Plan project pursuant to the California Environmental Quality Act ("CEQA"); and

WHEREAS, the City has completed the 2040 General Plan and analyzed potential environmental impacts in compliance with CEQA. The 2040 General Plan and corresponding environmental review documents are now before the City's decision- making bodies for consideration, certification, and adoption; and

WHEREAS, on July 5, 2022, the City filed a Notice of Preparation ("NOP") with the State Office of Planning and Research (OPR") to determine the scope of environmental review for the 2040 General Plan. The NOP was circulated to the relevant state and local public agencies, as well as to interested organizations and members of the public between July 5, 2022 to August 4, 2022; and

WHEREAS, the City prepared a Draft Environmental Impact Report (Draft EIR) (SCH No. 2022070038) for the 2040 General Plan; and

WHEREAS, on September 28, 2024, the City issued a Notice of Completion (NOC) and a Notice of Availability (NOA) which started a 45-day review period that extended to November 12, 2024; and

WHEREAS, the City notified the public about the availability of the Draft EIR through the publication of an advertisement in a newspaper (Vallejo Times Herald) and via email; and

WHEREAS, on October 24, 2024, the Planning Commission conducted a workshop to receive public comments on the scope and content of the environmental impact report; and

WHEREAS, on November 12, 2024, the City extended the public review period to December 27, 2024; and

WHEREAS, the City received a total of nine (9) comment letters relating to the 2040 General Plan Draft EIR during the public review period; and

WHEREAS, on or before March 14, 2025, the City delivered responses to each of the nine (9) written comment letters received on the content of the Draft EIR in the form of the Final EIR; and

WHEREAS, the City prepared the Final Environmental Impact Report ("Final EIR") for the 2040 General Plan, which incorporates the Draft EIR, contains the City's responses to written comments received on the Draft EIR, and identifies revisions to the Draft EIR; and

WHEREAS, pursuant to California Code of Regulations, Title 14 ("CEQA Guidelines"), Section 15090, the lead agency's decision-making bodies shall review the Final EIR and certify that the Final EIR was prepared in compliance with CEQA; and

WHEREAS, pursuant to CEQA Guidelines Section 15091, the City prepared findings regarding the significant adverse environmental impacts that may result from approval and implementation of the 2040 General Plan ("CEQA Findings"); and

WHEREAS, pursuant to CEQA Guidelines Sections 15091 and 15093, the City prepared a Statement of Overriding Considerations for environmental impacts that are expected to remain significant and unavoidable; and

WHEREAS, pursuant to CEQA Guidelines Section 15091 and 15097, the City prepared a Mitigation Monitoring and Reporting Program ("MMRP") for mitigation measures imposed to avoid or mitigate significant environmental impacts; and

WHEREAS, the Planning Commission has reviewed the Final EIR (incorporated hereto as Exhibit A), the CEQA Findings and the Statement of Overriding Considerations (attached hereto as Exhibit B), and the MMRP (attached hereto as Exhibit C); and

WHEREAS, CEQA Guidelines Section 15090 requires that, prior to approving a proposed project for which a Final EIR has been prepared, a lead agency's decision making body must certify that: (1) the Final EIR has been completed in compliance with CEQA; (2) the Final EIR was presented to the decision-making body of the lead agency, and the decision-making body reviewed and considered the information contained in the final EIR prior to approving the project; and (3) the Final EIR reflects the lead agency's independent judgment and analysis; and

WHEREAS, prior to approving a proposed project for which a Final EIR has identified significant environmental effects, a lead agency's decision making body is required, pursuant to Public Resources Code Section 21081, subdivision (a), and CEQA Guidelines Section 15091, to adopt findings demonstrating that the decision making body has considered and adopted all feasible mitigation measures or feasible project alternatives that can substantially lessen or avoid any significant project-related environmental effects ("CEQA Findings of Fact"); and

WHEREAS, prior to approving a project that requires the adoption of feasible mitigation measures to substantially lessen or avoid significant environmental effects, a lead agency's decision-making body is

required by Public Resources Code Section 21081.6, subdivision (a), to adopt a mitigation monitoring and reporting program to ensure that the mitigation measures adopted by the lead agency are carried out; and

WHEREAS, on March 27, 2025, the Planning Commission conducted a duly-noticed public hearing to evaluate the Comprehensive Technical General Plan Update and Final EIR and determined that based on all the evidence presented, including, but not limited to, written and oral testimony given at meetings, it is appropriate to recommend that the City Council certify the Final EIR as adequate to address environmental impacts associated with the Comprehensive Technical General Plan Update, and adopt the Mitigation Monitoring and Reporting Program.

NOW, THEREFORE, BE IT RESOLVED that the foregoing recitals are true and correct and are included herein by reference as findings.

NOW, THEREFORE, BE IT FURTHER RESOLVED that the Planning Commission recommends that the City Council makes the three findings necessary to certify that the Final EIR reflects the independent judgement and analysis of the City and thoroughly as adequate to addresses the potentially significant environmental impacts associated with implementation of the Comprehensive Technical General Plan Update. The Final EIR consists of the Draft EIR (Exhibit A to this Resolution) and Appendices (Exhibit B to this Resolution), and the Final EIR, which includes a list of persons, organizations, and agencies that provided comments on the Draft EIR, responses to the comments received regarding the Draft EIR, and errata or revisions to the Draft EIR (Exhibit C to this Resolution).

NOW, THEREFORE, BE IT FURTHER RESOLVED that the Planning Commission recommends that City Council adopt the Mitigation Monitoring and Reporting Plan for the Comprehensive Technical General Plan Update Exhibit D to this Resolution).

NOW, THEREFORE, BE IT FURTHER RESOLVED that the Planning Commission recommends that City Council adopt Findings of Fact for the Comprehensive Technical General Plan Update (Exhibit E to this Resolution).

PASSED, APPROVED and **ADOPTED** at a specially scheduled meeting of Planning Commission of the City of American Canyon held on the March 27, 2025 by the following vote:

Executive Summary

This document is an Environmental Impact Report (EIR) analyzing the environmental effects of the proposed City of American Canyon 2040 Technical General Plan Update ("project"). This executive summary summarizes the characteristics of the proposed project, EIR alternatives, and the environmental impacts and mitigation measures associated with implementation of the proposed project.

Project Synopsis

Lead Agency Contact Person

Brent Cooper, AICP, Community Development Director
City of America Canyon Planning Department
4381 Broadway Street Suite 201, American Canyon, CA 94503
bcooper@cityofamericancanyon.org

Project Description

This EIR has been prepared to examine the potential environmental effects of the proposed project. The following is a summary of the full project description, which can be found in Chapter 2, *Project Description*.

The project is an update to the City's current General Plan, which includes the following chapters: Introduction, Land Use Element, Housing Element, Economic Development Element, Circulation Element, Utilities Element, Public Services and Facilities Element, Parks and Recreation Element, Natural and Historic & Cultural Resources Element, Geology Element, Flood Hazards Element, and Noise Element. The project establishes the City's vision for future development through the horizon year of 2040. The project will serve as the City's primary guide for future land use and development decisions in a way that meets the community needs and priorities while serving as a key tool for influencing and improving the quality of life for residents and businesses. As such, it serves as the "blueprint" for future development and conservation of a community. The 2040 General Plan Update will help the City plan for important community issues, such as community growth; health, housing, mobility, and infrastructure needs; climate change; and environmental protection. It will also set the stage for future social, physical, and economic development of the city.

Project Objectives

The Technical 2040 General Plan will serve as a long-term framework for future growth and development, represents the community's view of its future, and contains the goals and policies upon with the City Council, Planning Commission, and the entire community will base land use and resource decisions. The Technical 2040 General Plan will provide a contemporary plan that will guide American Canyon though the next 20 years. The primary objective of this project is to update the existing American Canyon General Plan in order for it to be compliant with State law.

The Technical 2040 General Plan would implement the vision of the existing General Plan. The City identifies the following three fundamental roles of the City:

1. The City should be home for a residential population, internally accommodating a sufficient range of uses to support the needs of residents (including a mix of housing types, commercial services, entertainment, employment, recreation, education, health, religious, cultural facilities, transportation services, and open space). At the present time, many of these uses are located outside the City, which necessitates extensive travel by residents to access these services.
2. The City should be a center of employment and commerce for regional, as well as local residents. This will provide an opportunity to capitalize upon (1) the cluster of uses which have developed in the Green Island Industrial Park; (2) the proximity of the City to the Napa County Airport and Southern Pacific railroad, and (3) the relationship of the City to the agricultural and vineyard industries of Napa County.
3. The City can capture visitors to the Napa Valley by providing uses which capitalize on the unique environmental setting of the foothills, river valleys, and agriculture. Environmental educational facilities, such as wetlands interpretative centers, overnight camping and recreational vehicle facilities, river recreational facilities such as boating, golf courses, and hotel/motels and restaurants are representative of the range of uses which may be considered.

Alternatives

As required by the California Environmental Quality Act (CEQA), this EIR examines alternatives to the proposed plan. Studied alternatives include the following three alternatives. Based on the alternatives analysis, Alternative 3 was determined to be the environmentally superior alternative.

- Alternative 1: No Project Alternative
- Alternative 2: Watson Ranch Natural Alternative
- Alternative 3: Limited Growth

Refer to Chapter 6, *Alternatives*, for the complete EIR alternatives analysis.

Areas of Known Controversy

The EIR scoping process did not identify areas of known controversy for the proposed plan. Public responses to the Notice of Preparation of a Draft EIR as well as public input received at the EIR scoping meeting held by the City are summarized in Chapter 1.0, *Introduction*.

Issues to be Resolved

There are no CEQA-related issues to be resolved at this time.

Issues Not Studied in Detail in the EIR

Impacts related to Agriculture and Forestry Resources, Energy, Geology and Soils, Hazards and Hazardous Materials, Hydrology and Water Quality, and Mineral Resources were found to be less than significant. Discussion of these impacts is included in Chapter 4.15, *Effects Found Not to be Significant,* of the EIR.

Summary of Impacts and Mitigation Measures

Table ES-1 summarizes the environmental impacts, mitigation measures, and residual impacts (the impact after application of mitigation, if required) associated with implementation of the proposed project. Impacts are categorized as follows:

- **Significant and Unavoidable.** An impact that cannot be reduced to below the threshold level given reasonably available and feasible mitigation measures. Such an impact requires a Statement of Overriding Considerations to be issued if the proposed plan is approved pursuant to Section15093 of the CEQA Guidelines.
- **Less than Significant with Mitigation Incorporated.** An impact that can be reduced to below the threshold level given reasonably available and feasible mitigation measures. Such an impact requires findings under Section 15091 of the CEQA Guidelines.
- **Less than Significant.** An impact that may be adverse but does not exceed the threshold levels and does not require mitigation measures. However, mitigation measures that could further lessen the environmental effect may be suggested if readily available and easily achievable.
- **No Impact:** The proposed plan would have no effect on environmental conditions or would reduce existing environmental problems or hazards.

Table ES-1 Summary of Environmental Impacts, Mitigation Measures, and Residual Impacts

Impact Statement	Mitigation Measure(s)	Residual Impact
Aesthetics		
Impact AES-1. The project would not have a substantial adverse effect on a scenic vista, including views of hills, and impacts would be less than significant**.**	No mitigation is required	Less than Significant
Impact AES-2. The city of American Canyon does not have a designated state scenic highway and the project would not damage scenic resources within a state scenic highway. No impact would occur.	No mitigation is required	No Impact
Impact AES-3. The project would implement policies that would require development of objective design standards for future development. The project would not conflict with applicable zoning and other regulations governing scenic quality and this impact would be less than significant.	No mitigation is required	Less than Significant
Impact AES-4. Construction and operation of future development facilitated by the project could create new sources of light or glare that could adversely affect the visual environment. Impacts would be less than significant with mitigation.	**AES-1 Construction Lighting Plan.** Prior to nighttime construction, if needed for a particular project, project applicants shall submit a construction lighting plan to the City for review and approval. The construction lighting plan shall ensure that the minimum amount of lighting is used to meet safety requirements and ensure no spillover occurs to nearby sensitive uses. All lighting shall be directed downward and away from surrounding land uses**.** **AES-2 Operational Lighting Plan.** Prior to discretionary project approval, the project applicant shall prepare and submit a photometric plan to the City for review and approval which demonstrates that all exterior light fixtures will be directed downward or employ full cut-off fixtures to prevent light spillage. The approved plan shall be incorporated into project design plans.	Less than Significant with Mitigation
Air Quality		
Impact AQ-1. The project would be consistent with the BAAQMD's 2017 Clean Air Plan. Impacts would be less than significant.	No mitigation is required	Less than Significant
Impact AQ-2. The project would not result in a cumulatively considerable net increase of criteria pollutants during construction or operations. Impacts would be less than significant.	No mitigation is required	Less than Significant

Impact Statement	Mitigation Measure(s)	Residual Impact
Impact AQ-3. Construction activities for projects lasting longer than two months or located within 1,000 feet of sensitive receptors could expose sensitive receptors to substantial pollutant concentrations. Implementation of the project may also expose sensitive receptors to operational sources of toxic air contaminants. Impacts would be less than significant with mitigation.	**AQ-1 Conduct Construction Health Risk Assessment.** Prior to issuance of a grading or building permit, whichever occurs first, the applicant shall submit to the City a construction health risk assessment (HRA) in accordance with BAAQMD recommendations for any development project that has at least one the following characteristics: ▪ The project is located within 1,000 feet of sensitive receptors. ▪ Project construction would last longer than two months. ▪ Project construction would not utilize equipment rated USEPA Tier 4 (for equipment of 50 horsepower or more); construction equipment fitted with Level 3 Diesel Particulate Filters (for all equipment of 50 horsepower or more); or alternative fuel construction equipment. If the HRA determines that construction will exceed BAAQMD significance thresholds, the HRA shall provide mitigation measures to reduce the impact to less than significant, including but not limited to requiring the use of Tier 4 engines, Level 3 Diesel Particulate Filters, and/or alternative fuel construction equipment. **AQ-2 Reduce Operational Toxic Air Contaminants Near Sensitive Receptors.** For new sensitive receptors proposed within 500 feet of a major sources of TAC (high-volume roadways with 10,000 vehicles or more per day), the project applicant shall prepare an operational health risk assessment for the City's review and approval. If TAC exposure at new sensitive receptor sites would exceed BAAQMD health risk thresholds, require the project applicant include mechanical air filtration or other measures to reduce health risk exposure to acceptable levels. **AQ-3 Conduct Operational Health Risk Assessment.** Prior to permit approval for industrial, warehousing, or commercial land uses that would generate at least 100 diesel trucks per day or 40 or more trucks with diesel-powered transport refrigeration units per day, the applicant shall submit an operational health risk assessment (HRA) or submit proof that an HRA is not required in accordance with BAAQMD thresholds to the City for review and approval. If required by the City, the operational HRA shall be prepared in accordance with the Office of Environmental Health Hazard Assessment and BAAQMD requirements, and mitigated to an acceptable level. Typical measures to reduce risk impacts may include, but are not limited to: ▪ Restricting idling on-site beyond Air Toxic Control Measures idling restrictions, as feasible. ▪ Electrifying warehousing docks. ▪ Truck Electric Vehicle (EV) Capable trailer spaces. ▪ Requiring use of newer equipment and/or vehicles. ▪ Restricting off-site truck travel through the creation of truck routes.	Less than Significant with Mitigation

Impact Statement	Mitigation Measure(s)	Residual Impact
	The operational HRA shall be provided to the City for review and concurrence prior to project approval.	
Impact AQ-4. The project would not create objectionable odors that could adversely affect a substantial number of people. Impacts related to odors would be less than significant with mitigation**.**	**AQ-4 Reduce Operational Odor Impacts.** Prior to discretionary approval by the City, if it is determined by the City that a development project has the potential to emit nuisance odors beyond the property line, the project applicant shall prepare an odor management plan and submit it to the City for review and approval. Facilities that have the potential to generate nuisance odors include, but are not limited to: ▪ Wastewater treatment plants ▪ Composting, green waste, or recycling facilities ▪ Fiberglass manufacturing facilities ▪ Painting/coating operations ▪ Large-capacity coffee roasters ▪ Food-processing facilities The odor management plan shall demonstrate compliance with the latest BAAQMD screening distances and guidelines. The odor management plan shall identify the best available control technologies for toxics (T-BACTs) that will be utilized to reduce potential odors to acceptable levels, including appropriate enforcement mechanisms. T-BACTs may include but are not limited to scrubbers (i.e., air pollution control devices) at the industrial facility. T-BACTs identified in the odor management plan shall be identified as mitigation measures in the documents prepared for the development project and/or incorporated into the project's site plan.	Less than Significant with Mitigation
Biological Resources		
Impact BIO-1. The project could have the potential to have an adverse impact on special status species. Implementation of federal, state, and local regulations and policies, as well as mitigation measures bio-1 and bio-2, would ensure development facilitated by the project would not have a substantial adverse effect on candidate, sensitive, or special status species. This impact would be less than significant with mitigation.	**BIO-1 Biological Resources Screening and Assessment. F**or projects proposed within undeveloped parcels, the City shall require project applicants to engage a qualified biologist (having the appropriate education and experience level) to perform a baseline Biological Resources Screening and Assessment to determine whether projects proposed within undeveloped parcels have any potential to impact special-status biological resources, inclusive of special-status plants and animals, sensitive vegetation communities (including vernal pools and other wetlands), and critical habitat. If it is determined that the project has no potential to impact biological resources, no further action is required. If the project would have the potential to impact biological resources, prior to construction, a qualified biologist shall conduct a project-specific biological analysis to document the existing biological resources within a project footprint plus a minimum buffer of 500 feet around the project footprint, as is feasible, and to determine the potential impacts to those resources. The project-specific biological analysis shall evaluate the potential for impacts to all biological resources including, but not limited to special-status species, nesting birds,	Less than Significant with Mitigation

Impact Statement	Mitigation Measure(s)	Residual Impact
	wildlife movement, sensitive plant communities, critical habitats, and other resources judged to be sensitive by local, state, and/or federal agencies. If the project would have the potential to impact these resources, the following mitigation measures (mitigation measures BIO-2 through BIO-8) shall be incorporated, as applicable, to reduce impacts to a less than significant level. Pending the results of the project-specific biological analysis, design alterations, further technical studies (e.g., protocol surveys) and consultations with the USFWS, CDFW, and/or other local, state, and federal agencies may be required. Note that specific surveys described in the mitigation measures below may be completed as part of the project-specific biological analysis where suitable habitat is present. **BIO-2 Special-status Plant Species Surveys.** If the project-specific Biological Resources Screening and Assessment (Mitigation Measure BIO-1) determines that there is potential for significant impacts to federally or state-listed plants or regional population level impacts to species with a CRPR of 1B or 2B from project development, a qualified biologist shall complete surveys for special-status plants prior to any vegetation removal, grubbing, or other construction activity (including staging and mobilization). The surveys shall be floristic in nature and shall be seasonally timed to coincide with the target species. All plant surveys shall be conducted by a qualified biologist during the blooming season prior to development permit approval. All special-status plant species identified on site shall be mapped onto a site-specific aerial photograph or topographic map with the use of Global Positioning System unit. Surveys shall be conducted in accordance with the most current protocols established by the CDFW, USFWS, and the local jurisdictions if said protocols exist. A report of the survey results shall be submitted to the City, and the CDFW and/or USFWS, as appropriate, for review and/or approval. **BIO-3 Special-status Plant Species Avoidance, Minimization, and Mitigation.** If federally and/or state-listed or CRPR 1B or 2 species are found during special-status plant surveys (pursuant to Mitigation Measure BIO-2), and would be directly impacted, or there would be a population-level impact to non-listed sensitive species, then the project shall be re-designed to avoid impacting those plant species, where feasible. Rare and listed plant occurrences that are not within the immediate disturbance footprint but are located within 50 feet of disturbance limits shall have bright orange protective fencing installed at least 30 feet beyond their extent, or other distance as approved by a qualified biologist, to protect them from harm. **BIO-4 Habitat Restoration Plan.** If federally or state-listed plants or non-listed special-status CRPR 1B and 2 plant populations identified during special status plant surveys (pursuant to Mitigation Measure BIO-2), cannot be avoided, and will be impacted by development, all impacts shall be mitigated by the applicant at a ratio not lower than 1:1 per acre of impact (and 1:1 per tree), and to be determined by the City (in coordination with CDFW and USFWS as and if applicable) for each species as a component of habitat	

Impact Statement	Mitigation Measure(s)	Residual Impact
	restoration. A qualified biologist shall prepare and submit a restoration plan to the City for review and approval prior to City approval of project plans. (Note: if a federally and/or state-listed plant species will be impacted, the restoration plan shall be submitted to the USFWS and/or CDFW for review, and federal and/or state take authorization may be required by these agencies.) The restoration plan shall include, at a minimum, the following components: 1. Description of the project/impact site (i.e., location, responsible parties, areas to be impacted by habitat type). 2. Goal(s) of the compensatory mitigation project (type[s] and area[s]) of habitat to be established, restored, enhanced, and/or preserved; specific functions and values of habitat type[s] to be established, restored, enhanced, and/or preserved). 3. Description of the proposed compensatory mitigation site (location and size, ownership status, existing functions, and values). 4. Implementation plan for the compensatory mitigation site (rationale for expecting implementation success, responsible parties, schedule, site preparation, planting plan). 5. Maintenance activities during the monitoring period, including weed removal as appropriate (activities, responsible parties, schedule). 6. Monitoring plan for the compensatory mitigation site, including no less than quarterly monitoring for the first year (performance standards, target functions and values, target acreages to be established, restored, enhanced, and/or preserved, annual monitoring reports). 7. Success criteria based on the goals and measurable objectives; said criteria to be, at a minimum, at least 80 percent survival of container plants and 30 percent relative cover by vegetation type or other industry standards as determined by a qualified restoration specialist. 8. An adaptive management program and remedial measures to address any shortcomings in meeting success criteria. 9. Notification of completion of compensatory mitigation and agency confirmation. 10. Contingency measures (initiating procedures, alternative locations for contingency compensatory mitigation, funding mechanism). 11. All nursery plants used in restoration shall be inspected for sudden oak death. **BIO-5 Endangered/Threatened Special-status Species Habitat Assessments and Protocol Surveys.** If the results of the project-specific biological analysis (Mitigation Measure BIO-1) determine that suitable habitat may be present for federal or state listed, candidate, or proposed species, protocol habitat assessments/surveys shall be completed in accordance with current CDFW and/or USFWS protocols prior to issuance of any construction permits.	

Impact Statement	Mitigation Measure(s)	Residual Impact
	If, through consultation with the CDFW and/or USFWS, it is determined that protocol habitat assessments/surveys are not required, the applicant shall complete and document this consultation and submit it to the City prior to issuance of any construction permits. Each protocol has different survey and timing requirements. The applicant shall be responsible for ensuring they understand the protocol requirements and shall hire a qualified biologist to conduct protocol surveys. (Note: if a federally and/or state-listed wildlife species will be impacted, federal and/or state take authorization may be required by USFWS and CDFW.) **BIO-6 Endangered/Threatened Animal Species Avoidance and Minimization.** The following measures shall be applied to impacted aquatic and/or terrestrial animal species identified by the project-specific Biological Resources Screening and Assessment required under Mitigation Measure BIO-1. 1. Ground disturbance shall be limited to the minimum necessary to complete the project. A qualified biologist shall flag the project limits of disturbance. Areas of special biological concern within or adjacent to the limits of disturbance shall have highly visible orange construction fencing installed between said area and the limits of disturbance. 2. All projects occurring within/adjacent to aquatic habitats (including riparian habitats and wetlands) shall be completed between April 1 and October 31, if feasible, to avoid impacts to sensitive aquatic species. Any work outside these dates would require project-specific approval from the City and may be subject to regulatory agency approval. 3. All projects occurring within or adjacent to sensitive habitats that may support federally and/or state-listed endangered/threatened species shall have a CDFW- and/or USFWS-approved biologist present during all initial ground disturbing/vegetation clearing activities. Once initial ground disturbing/vegetation clearing activities have been completed, said biologist shall conduct daily pre-activity clearance surveys for endangered/threatened species. Alternatively, and upon approval of the CDFW and/or USFWS, said biologist may conduct site inspections at a minimum of once per week to ensure all prescribed avoidance and minimization measures are fully implemented. 4. No endangered/threatened species shall be captured and relocated without express permission from the CDFW and/or USFWS. 5. If at any time during project construction an endangered/threatened species enters the construction site or otherwise may be impacted by the project, all project activities shall cease. A CDFW/USFWS-approved biologist shall document the occurrence and consult with the CDFW and USFWS, as appropriate, to determine whether it was safe for project activities to resume.	

Impact Statement	Mitigation Measure(s)	Residual Impact
	6. For all work occurring in areas where endangered/threatened species may be present and are at risk of entering the project site during construction, the applicant shall install exclusion fencing along the project boundaries prior to start of construction (including staging and mobilization). The placement of the fence shall be at the discretion of the CDFW/USFWS-approved biologist. This fence shall consist of solid silt fencing placed at a minimum of three feet above grade and two feet below grade and shall be attached to wooden stakes placed at intervals of not more than five feet. The applicant shall inspect the fence weekly and following rain events and high wind events and shall be maintained in good working condition until all construction activities are complete. 7. All vehicle maintenance/fueling/staging shall occur not less than 100 feet from any riparian habitat or water body, including seasonal wetland features. Suitable containment procedures shall be implemented to prevent spills. A minimum of one spill kit shall be available at each work location near riparian habitat or water bodies. 8. No equipment shall be permitted to enter wetted portions of any affected drainage channel or wetland. 9. At the end of each workday, excavations shall be secured with a cover or a ramp provided to prevent wildlife entrapment. 10. All trenches, pipes, culverts, or similar structures shall be inspected for animals prior to burying, capping, moving, or filling. 11. Considering the potential for the project to impact federally and state-listed species and their habitat, the City shall contact CDFW and USFWS to identify mitigation banks within Napa County during project development. If the results of the project-specific biological analysis (Mitigation Measure BIO-1) determine that impacts to federally and state threatened or endangered species habitat are expected, City and/or applicant shall explore species-appropriate mitigation bank(s) servicing the region for purchase of mitigation credits. 12. Prior to grading and construction in natural areas of containing suitable upland habitat, a qualified biologist shall conduct a preconstruction survey as determined necessary during the biological analysis (Mitigation Measure BIO-1) . The survey should include a transect survey over the entire project disturbance footprint (including access and staging areas), and mapping of suitable habitat features, such as burrows, that are potentially suitable for listed species. If any listed species are detected, no work shall be conducted until the individual(s) leaves the site of their own accord, unless federal and/or state “take” authorization has been issued for relocation. Typical preconstruction survey procedures, such as burrow scoping and burrow collapse, cannot be conducted without federal and state permits. If any life stage of listed species are found within the survey area, the City and/or applicant shall consult with the	

Impact Statement	Mitigation Measure(s)	Residual Impact
	USFWS and CDFW to determine the appropriate course of action to comply with the FESA and CESA, if permits are not already in place at the time of construction. **BIO-7: Pre-Construction Bird Surveys, Avoidance, and Notification.** For all future development under the 2040 General Plan, construction activities initiated during the bird nesting season (February 1 – September 15), involving removal of vegetation (e.g. trees and shrubs), abandoned structures, or other nesting bird habitat, a pre-construction nesting bird survey shall be conducted no more than 5 days prior to initiation of ground disturbance and vegetation removal. The nesting bird pre-construction survey shall be conducted on foot and shall include a buffer around the construction site at a distance determined by a qualified biologist, including staging and storage areas. The minimum survey radii surrounding the work area shall be the following: 250 feet for non-raptors and 1,000 feet for raptors. The survey shall be conducted by a qualified biologist familiar with the identification of avian species known to occur in the American Canyon region. If construction lapses for seven days or longer, the qualified biologist shall conduct another focused survey before project activities are reinitiated. If nests are found, an avoidance buffer shall be determined by the biologist dependent upon the species, the proposed work activity, and existing disturbances associated with land uses outside of the site. The qualified biologist shall observe the active nest to establish a behavioral baseline of the adults and nestlings, if present. The qualified biologist shall continuously monitor the active nests to detect signs of disturbance and behavioral change as a result of construction impacts, such as noise, vibration, odors, or worker/equipment motion. If signs of disturbance and behavioral changes are observed, the qualified biologist shall cease work causing those changes and may contact CDFW or USFWS for guidance. The buffer shall be demarcated by the biologist with bright orange construction fencing, flagging, construction lathe, or other means to demarcate the boundary. All construction personnel shall be notified of the buffer zone as an “Ecologically Sensitive Area” and to avoid entering the buffer zone during the nesting season. No ground disturbing activities shall occur within the buffer until the biologist has confirmed that breeding/nesting is completed and the young have fledged the nest. Encroachment into the buffer shall occur only at the discretion of the qualified biologist on the basis that the encroachment will not be detrimental to an active nest. A report summarizing the pre-construction survey(s) shall be prepared by a qualified biologist and shall be submitted to the City prior to the commencement of construction activities. Project site plans shall include a statement acknowledging compliance with the federal MBTA and California Fish and Game Code that includes avoidance of active bird nests and identification of Best Management Practices to avoid impacts to active nests, including checking for nests prior to construction activities during February 1 to September 15, and	

Impact Statement	Mitigation Measure(s)	Residual Impact
	what to do if an active nest is found so that the nest is not inadvertently impacted during grading or construction activities. **BIO-8 Roosting Bat Surveys and Avoidance Prior to Removal.** For all future development under the 2040 General Plan that will require the removal of large trees (greater than 20 inches in diameter at five feet from the ground), abandoned buildings, bridges, or other suitable roosting structure identified during the Biological Resources Screening and Assessment (Mitigation Measure BIO-1), prior to tree and/or structure removal, a qualified biologist shall conduct a focused survey of all trees and structures to be removed or impacted by construction activities to determine whether active roosts of special-status bats are present on site. Tree or structure removal shall be planned for either the spring or the fall, and timed to ensure both suitable conditions for the detection of bats and adequate time for tree and/or structure removal to occur during seasonal periods of bat activity exclusive of the breeding season, as described below. Trees and/or structures containing suitable potential bat roost habitat features shall be clearly marked or identified. If no bat roosts are found, the results of the survey will be documented and submitted to the City within 30 days of the survey, after which no further action will be required. If roosts are present, the biologist shall prepare a site-specific roosting bat protection plan to be implemented by the contractor following the City's approval. Additionally, the qualified biologist shall determine compensatory mitigation for temporary or permanent habitat loss due to tree removal, in conjunction with CDFW. The plan shall incorporate the following guidance as appropriate: ▪ When possible, removal of trees/structures identified as suitable roosting habitat shall be conducted during seasonal periods of bat activity, including the following: Between September 1 and about October 15, or before evening temperatures fall below 45 degrees Fahrenheit and/or more than 0.5 inch of rainfall within 24 hours occurs. Between March 1 and April 15, or after evening temperatures rise above 45 degrees Fahrenheit and/or no more than 0.5 inch of rainfall within 24 hours occurs. ▪ If a tree/structure must be removed during the breeding season and is identified as potentially containing a colonial maternity roost, then a qualified biologist shall conduct acoustic emergence surveys or implement other appropriate methods to further evaluate if the roost is an active maternity roost. Under the biologist's guidance, the contractor shall implement measures similar to or exceeding the following: If it is determined that the roost is not an active maternity roost, then the roost may be removed in accordance with the other requirements of this measure.	

Impact Statement	Mitigation Measure(s)	Residual Impact
	If it is found that an active maternity roost of a colonial roosting species is present, the roost shall not be disturbed during the breeding season (April 15 to August 31). ▪ Tree removal procedures shall be implemented using a two-step tree removal process. This method is conducted over two consecutive days and works by creating noise and vibration by cutting non-habitat branches and limbs from habitat trees using chainsaws only (no excavators or other heavy machinery) on day one. The noise and vibration disturbance, together with the visible alteration of the tree, is very effective in causing bats that emerge nightly to feed to not return to the roost that night. The remainder of the tree is removed on day two. ▪ Prior to the demolition of vacant structures within the project site, a qualified biologist shall conduct a focused habitat assessment of all structures to be demolished. The habitat assessment shall be conducted enough in advance to ensure the commencement of building demolition can be scheduled during seasonal periods of bat activity (see above), if required. If no signs of day roosting activity are observed, no further actions will be required. If bats or signs of day roosting by bats are observed, a qualified biologist will prepare specific recommendations such as partial dismantling to cause bats to abandon the roost, or humane eviction, both to be conducted during seasonal periods of bat activity, if required. ▪ If the qualified biologist determines a roost is used by a large number of bats (large hibernaculum), bat boxes shall be installed near the project site. The number of bat boxes installed will depend on the size of the hibernaculum and shall be determined through consultation with CDFW. If a maternity colony has become established, all construction activities shall be postponed within a 500-foot buffer around the maternity colony until it is determined by a qualified biologist that the young have dispersed. Once it has been determined that the roost is clear of bats, the roost shall be removed immediately. **BIO-9 Conduct Pre-construction Crotch's Bumblebee surveys and Implement Avoidance Measures.** If the results of the project-specific biological analysis (Mitigation Measure BIO-1) determine that suitable habitat may be present for Crotch's bumble bee, a habitat assessment shall be performed by a qualified biologist knowledgeable and experienced with Crotch's bumblebee and the habitat in which they occur. If the biologist determines that suitable habitat for Crotch's bumblebee is present, a focused survey shall be performed during the species' active flight period for Crotch's bumblebee and peak blooming period of nectar and pollen sources (May 1 through July 31). The Crotch's bumblebee survey shall be conducted on foot and shall encompass the entirety of a project site and focus on areas that allow for the highest probability of detection, such as high abundance nectar or pollen sources and rodent burrows that may be used for breeding and nesting. If Crotch's bumblebee is determined to be present, the project proponent shall	

Impact Statement	Mitigation Measure(s)	Residual Impact
	map the locations of the observed bumblebee, areas of abundant nectar or pollen sources, and any active nesting sites. A report summarizing the results of the habitat assessment and focused survey (if required) shall be prepared by the qualified biologist and shall be submitted to the City prior to the commencement of construction activities. Further, consultation with the CDFW will be necessary in the event Crotch's bumblebee was observed within a project site and an Incidental Take Permit, in accordance with the California Endangered Species Act, may be required prior to initiating any ground disturbance on the site. If Crotch's bumble are not listed and no longer candidates for listing at the time of project implementation, this mitigation measure would not be required.	
Impact BIO-2. Development and mobility improvements facilitated by the project would be subject to adopted city regulations to minimize impacts to riparian habitat, sensitive natural communities, and wetlands. Compliance with the NPDES construction general permit, ms4 storm water permit, American Canyon municipal code, and proposed policies in the 2040 general plan would ensure potential impacts to riparian habitat, sensitive natural communities, and wetlands would be less than significant.	No mitigation is required.	Less than Significant
Impact BIO-3. Implementation of the project would not substantially impede the movement of native resident or migratory fish or wildlife species, or with established native resident or migratory wildlife corridors after implementation of proposed policies in the 2040 general plan and compliance with the American Canyon municipal code.	No mitigation is required.	Less than Significant
Impact BIO-4. The project would implement proposed policies designed to protect biological resources. Development and mobility improvements facilitated by the project would be required to adhere to these policies, as well as American Canyon municipal code requirements to protect biological resources. Therefore, this impact would be less than significant.	No mitigation is required.	Less than Significant

Impact Statement	Mitigation Measure(s)	Residual Impact
Impact BIO-5. Implementation of the project would not conflict with the provision of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan. No impact would occur.	No mitigation is required.	No Impact
Cultural Resources		
Impact CUL-1. Development facilitated by the project could adversely affect previously unidentified historic-period resources. Impacts to historic-period resources would be less than significant with mitigation.	**CUL-1 Historical Built Environment.** Prior to project approval, the applicant shall submit a report to the City that identifies any historic-age features (i.e., structures over 45 years of age) proposed to be altered or demolished. If historical-age features are present, the applicant shall submit a historical resources evaluation to the City prepared in areas that contains buildings, structures, objects, sites, landscape/site plans, or other features that are 45 years of age or older, by a qualified architectural historian or historian who meets the Secretary of the Interior's Professional Qualifications Standards (PQS) in architectural history or history (36 CFR Part 61). The evaluation shall include an intensive-level evaluation, in accordance with the guidelines and best practices meeting the State Office of Historic Preservation guidelines. All evaluated properties shall be documented on Department of Parks and Recreation Series 523 Forms. The report shall be submitted to the City for review and approval. If historical resources are identified through the survey and evaluation, efforts shall be made by the applicant to ensure that the relocation, rehabilitation, or alteration of the resource is consistent with the Secretary of the Interior's Standards for the Treatments of Historic Properties (Standards). The applicant shall submit a report to the City that identifies and specifies the treatment of character-defining features and construction activities, and demonstrates how the project complies with the Standards and avoids the substantial adverse change in the significance of the historical resource as defined by CEQA Guidelines Section 15064.5(b). The report shall be prepared by an architectural historian or historical architect meeting the PQS as defined by 36 CFR Part 61 and provided to the City for review and concurrence prior to project approval.	Less than Significant with Mitigation
Impact CUL-2. Development facilitated by the project could adversely affect previously unidentified archaeological resources. Impacts would be less than significant with mitigation**.**	**CUL-2 Archaeological Resources Assessment.** Prior to project approval of a project that involves ground disturbance activities (that may include but are not limited to, pavement removal, potholing, grubbing, tree removal, and grading), the applicant shall submit to the City an archaeological resources assessment prepared by a qualified archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in either prehistoric or historic archaeology. Assessments shall include a CHRIS records search at the NWIC and a SLF Search from the NAHC. The records searches shall characterize the results of previous cultural resource surveys and disclose any cultural resources that have been recorded and/or evaluated in and around the development site. A qualified professional	Less than Significant with Mitigation

Impact Statement	Mitigation Measure(s)	Residual Impact
	shall conduct a Phase I pedestrian survey for those projects that include undeveloped areas to locate any surface cultural materials. If the Phase I archaeological survey identifies resources that may be affected, the applicant shall also conduct Phase II testing and evaluation. If resources are determined significant or unique through Phase II testing and site avoidance is not possible, the qualified professional shall identify appropriate site-specific mitigation measures in the Phase II evaluation. These measures may include, but would not be limited to, a Phase III data recovery program, avoidance, or other appropriate actions to be determined by a qualified archaeologist. If significant archaeological resources cannot be avoided, impacts may be reduced to less than significant level by filling on top of the sites rather than cutting into the cultural deposits. Alternatively, and/or in addition, a data collection program may be warranted, including mapping the location of artifacts, surface collection of artifacts, or excavation of the cultural deposit, to characterize the nature of the buried portions of sites. Curation of the excavated artifacts or samples would occur as specified by the archaeologist. The City shall review and approve the archaeological resources assessment prior to project approval. **CUL-3 Unanticipated Discoveries.** For projects whose Phase I archaeological survey identifies archaeological resources that may be affected, the applicant shall retain a qualified cultural resource specialist to monitor construction activities that involve ground-disturbing activities greater than 12 inches in depth and occur within 60 feet of a potentially significant cultural resource. If archaeological resources are encountered during ground-disturbing activities, work in the immediate area must halt and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology should be contacted immediately to evaluate the find. If necessary, the evaluation may require preparation of a treatment plan and archaeological testing for CRHR eligibility. If the discovery proves to be significant under CEQA and cannot be avoided by the project, additional work, such as excavating the cultural deposit to fully characterize its extent and collecting and curating artifacts may be warranted to mitigate any significant impacts to cultural resources. If archaeological resources of Native American origin are identified during construction, a qualified archaeologist will consult with the City to begin Native American consultation procedures. Periodic reports of the find and subsequent evaluations shall be submitted to the City during construction.	
Impact CUL-3. Development facilitated by the project could result in damage to or destruction of human burials. Impacts would be less than significant through adherence to existing regulations and with mitigation.	**CUL-4 Human Remains.** In the event of an accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken:	Less than Significant with Mitigation

Impact Statement	Mitigation Measure(s)	Residual Impact
	1. There shall be no further excavation or disturbance within 100 feet of the remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98. 2. Where the following conditions occur, the landowner or authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance: ▪ The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission. ▪ The descendant identified fails to make a recommendation. ▪ The landowner or authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner. Additionally, California Public Resources Code Section 15064.5 requires the following relative to Native American Remains: ▪ When an initial study identifies the existence of, or the probable likelihood of, Native American Remains within a project, a lead agency shall work with the appropriate Native Americans as identified by the NAHC as provided in Public Resources Code Section 5097.98. The applicant may each develop a plan with respect to their respective individual development proposals for treating or disposing of, with appropriate dignity, the human remains, and any items associated with Native American Burials with the appropriate Native Americans as identified by the NAHC.	
Greenhouse Gas Emissions		
Impact GHG-1. Development facilitated by the project would make progress towards achieving state goals but would not necessarily meet state 2030 or 2045 goals. Mitigation measures ghg-2 and ghg-3 would require implementation of CEQA GHG thresholds and a climate	**GHG-1 Construction GHG BMPs.** Prior to the issuance of any grading permits, the project applicant shall provide the City of American Canyon with documentation (e.g., site plans) demonstrating implementation of construction Best Management Practices (BMPs). Measures may include but are not limited to:	Significant and Unavoidable

Impact Statement	Mitigation Measure(s)	Residual Impact
action plan (cap); however, development facilitated by the project would not meet the 2030 or 2045 goals until the cap is updated and adopted. This impact would be significant and unavoidable**.**	▪ At least 15 percent of the construction fleet for each project phase shall be alternatively fueled or electric. ▪ At least 10 percent of building materials used for project construction shall be sourced from local suppliers. ▪ At least 65 percent of construction and demolition waste materials shall be recycled or reused. ▪ At least one contractor that has a business location in American Canyon shall be contracted for project construction. ▪ All construction contracts shall include language that requires all off-road equipment with a power rating below 19 kilowatts (e.g., plate compactors, pressure washers) using during construction be electrically powered. ▪ Architectural coatings used for project construction shall be "Low-VOC," containing no greater than 50 grams of volatile organic compounds (VOC) per liter of product. ▪ Project construction shall prohibit the use of generators and shall establish grid power connection to electrical equipment needs. ▪ Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California Airborne Toxics Control Measure [ATCM] Title 13, Section 2485 of California Code of Regulations). Clear signage regarding idling restrictions shall be provided for construction workers at all access points. ▪ All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation. ▪ The prime construction contractor shall post a publicly visible sign with their telephone number and contractor to contact. The construction contractor shall take corrective action within 48 hours. The BAAQMD's phone number shall also be identified and visible to ensure compliance with applicable regulations. **GHG-2 Adopt and Implement a CEQA GHG Emissions Threshold.** The City shall include and implement a new 2040 General Plan policy under the Environment Element to prepare, adopt, and implement a CEQA GHG Emissions threshold of significance. The City shall adopt the CEQA GHG Emissions threshold of significance by the end of 2025 for use in future CEQA GHG emissions analyses through 2030. In addition, upon completion of future CAP updates and as necessary, the City shall update the CEQA GHG Emissions threshold of significance and American Canyon CEQA GHG Checklist to be consistent with each CAP update. **GHG-3 Adopt American Canyon CAP to Meet the State's 2030 and 2045 GHG Emissions Goals.** The City shall draft and adopt the American Canyon qualified CAP by the end of 2025	

Impact Statement	Mitigation Measure(s)	Residual Impact
	to outline how American Canyon will meet the State's 2030 goal of 40 percent below 1990 emissions levels and 2045 goal of carbon neutrality. Implementation measures in the updated qualified CAP to achieve the 2030 and 2045 goals may include, but are not limited to, the following: Develop and adopt Zero Net Energy requirements for new and remodeled residential and non-residential development; ▪ Develop and adopt a building electrification ordinance for existing and proposed structures; ▪ Expand charging infrastructure and parking for electric vehicles; ▪ Implement carbon sequestration by expanding the urban forest, participating in soil-based or compost application sequestration initiatives, supporting regional open space protection, and/or incentivizing rooftop gardens; and ▪ Implement policies and measures included in the California 2022 Climate Change Scoping Plan, such as mobile source strategies for increasing clean transit options and zero emissions vehicles by providing electric vehicle charging stations.	
Land Use and Planning		
Impact LU-1. The project would not physically divide an established community and there would be no impact**.**	No mitigation is required.	No Impact
Impact LU-2. The project would not result in a significant environmental impact due to a conflict with a plan adopted for the purpose of avoiding or mitigating an environmental effect. Impacts would be less than significant**.**	Mitigation measures AES-1, AES-2, AQ-1 through AQ-4, BIO-1, BIO-2, CUL-1 through CUL-3, GHG-1 through GHG-3, NOI-1 through NOI-3, PAL-1, WF-1, and WF-2.	Less than Significant

Impact Statement	Mitigation Measure(s)	Residual Impact
Noise		
Impact NOI-1. Construction of development facilitated by the project would temporarily increase noise levels, potentially affecting nearby noise-sensitive land uses. Development facilitated by the project would also introduce new noise sources and contribute to increases in operational noise. The continued regulation of noise, consistent with the city municipal code and implementation of proposed policies in the 2040 general plan would minimize impacts to adjacent land uses. However, construction and operational traffic noise could exceed standards even after implementation of mitigation. This impact would be significant and unavoidable.	**NOI-1 Conduct Construction Noise Analysis.** The City shall review future developments within 1,000 feet of a sensitive receiver, and where applicable, require the following feasible measures as standard conditions of approval to reduce construction noise levels below a level of significance: ▪ **Mufflers.** During excavation and grading construction phases, all construction equipment, fixed or mobile, shall be operated with closed engine doors and shall be equipped with properly operating and maintained mufflers consistent with manufacturers' standards. ▪ **Stationary Equipment.** All stationary construction equipment shall be placed so that emitted noise is directed away from the nearest sensitive receivers. ▪ **Equipment Staging Areas.** Equipment staging shall be located in areas that will create the greatest distance feasible between construction-related noise sources and noise-sensitive receivers. ▪ **Smart Back-up Alarms.** Mobile construction equipment shall have smart back-up alarms that automatically adjust the sound level of the alarm in response to ambient noise levels. Alternatively, back-up alarms shall be disabled and replaced with human spotters to ensure safety when mobile construction equipment is moving in the reverse direction in compliance with applicable safety laws and regulations. ▪ **Electrically-Powered Tools and Facilities.** Electrical power shall be used to run air compressors and similar power tools and to power any temporary structures, such as construction trailers or caretaker facilities, where feasible. ▪ **Noise Disturbance Coordinator.** The project applicant shall designate a "noise disturbance coordinator" responsible for responding to any local complaints about construction noise. The disturbance coordinator shall determine the cause of any noise complaint and shall require that reasonable measures be implemented to correct the problem. A telephone number for the disturbance coordinator and the City shall be posted at the construction site. ▪ **Temporary Noise Barriers.** Erect temporary noise barriers, where feasible, when construction noise is predicted to exceed the City's construction standards and when the anticipated construction duration is greater than is typical (e.g., two years or greater). Temporary noise barriers shall be constructed with solid materials (e.g., wood) with a density of at least 1.5 pounds per square foot with no gaps from the ground to the top of the barrier. If a sound blanket is used, barriers shall be constructed with solid material with a density of at least 1 pound per square foot with no gaps from the ground to the top of the barrier and be lined on the construction side with acoustical	Significant and Unavoidable.

Impact Statement	Mitigation Measure(s)	Residual Impact
	blanket, curtain or equivalent absorptive material rated sound transmission class (STC) 32 or higher. **NOI-2 Implement Roadway Vehicle Noise Reduction Measures.** The City shall install "quiet pavement" roadway improvements, such as rubberized asphalt or open-grade asphalt concrete overlays along impacted roadway segments (American Canyon Road west of I-80 and Newell Drive north of American Canyon Road). The program may be funded by "fair share" developer contributions for proposed projects along impacted roadways to pay for the "quiet pavement" roadway improvements.	
Impact NOI-2. Construction of development facilitated by the project would temporarily generate groundborne vibration and noise, potentially affecting nearby land uses. This impact would be less than significant with mitigation. Operation of development facilitated by the project would not result in substantial groundborne vibration and noise and this impact would be less than significant.	**NOI-3 Construction Vibration Control Plan.** Prior to issuance of a building permit for a project that includes the following, the project applicant shall prepare a groundborne noise and vibration analysis to assess and mitigate potential noise and vibration impacts related to these construction activities: ▪ Pile driving within: ▫ 135 feet of fragile structures such as historical resources; ▫ 100 feet of non-engineered timber and masonry buildings (e.g., most residential buildings); or ▫ 75 feet of engineered concrete and masonry (no plaster); ▪ A vibratory roller within: ▫ 40 feet of fragile historical resources; or ▫ 25 feet of any other structure ▪ A dozer or other large earthmoving equipment within: ▫ 20 feet for a fragile historical structure; or ▫ 15 feet of any other structure The noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed FTA architectural damage thresholds (e.g., 0.12 in/sec PPV for fragile or historical resources, 0.2 in/sec PPV for non-engineered timber and masonry buildings, and 0.3 in/sec PPV for engineered concrete and masonry). If vibration levels would exceed this threshold, alternative uses such as drilling piles as opposed to pile driving, static rollers as opposed to vibratory rollers, and lower horsepower earthmoving equipment shall be used. If necessary, construction vibration monitoring shall be conducted to ensure FTA vibration thresholds are not exceeded.	Less than Significant with Mitigation

Impact Statement	Mitigation Measure(s)	Residual Impact
Impact NOI-3. Development facilitated by the project would not result in a significant increase in airport or airstrip activity. The continued regulation of airport noise consistent with state and federal regulations, the implementation of proposed policies in the 2040 general plan, and compliance with napa county airport land use compatibility plan would minimize disturbance to people residing or working within proximity of the napa county airport. Impacts would be less than significant.	No mitigation is required.	Less than Significant
Paleontological Resources		
Impact PAL-1.the project has the potential to result in impacts to paleontological resources. Impacts would be less than significant with mitigation incorporated**.**	**PAL-1 Retention of a Qualified Professional Paleontologist.** Prior to submittal of a discretionary development application in areas underlain by high or undetermined sensitivity geologic units (i.e., Pleistocene alluvial fan deposits; Markley Sandstone; Jameson Shale Member of Markley Sandstone; Domengine Sandstone; and sandstone and shale of the Great Valley Complex), the City shall require a Qualified Professional Paleontologist [as defined by the Society of Vertebrate Paleontology (SVP) (2010)] be retained to determine the project's potential to significantly impact paleontological resources according to SVP (2010) standards. If necessary, the Qualified Professional Paleontologist shall recommend mitigation measures to reduce potential impacts to paleontological resources to a less than significant level. The City shall review and approve the Qualified Professional Paleontologist's findings and recommendation. All recommendations shall be incorporated into the project plans prior to issuance of a grading permit**.**	Less than Significant with Mitigation
Population and Housing		
Impact POP-1. Implementation of the project would facilitate the construction of new housing in American Canyon and would increase population. The 2040 general plan would accommodate and plan for population growth and includes policies to manage growth and development. Impacts would be less than significant.	No mitigation is required.	Less than Significant

Impact Statement	Mitigation Measure(s)	Residual Impact
Impact POP-2. Implementation of the project would not result in the displacement of substantial numbers of housing or people. The project would facilitate the development of new housing in accordance with state and local housing requirements, while preserving existing residential neighborhoods. Impacts would be less than significant**.**	No mitigation is required.	Less than Significant
Public Services and Recreation		
Impact PS-1. Development facilitated by the project would increase the population in the planning area, which would result in an increase in demand for fire, police, and libraries. Compliance with proposed policies in the 2040 general plan and continued environmental review would minimize adverse environmental effects associated with the provision of new or physically altered fire, police, or library facilities. These impacts would be less than significant.	No mitigation is required.	Less than Significant
Impact PS-2. Future development facilitated by the project would be required to pay impact fees that would provide funding for the provision or expansion of new school facilities, pursuant to government code section 65995(b). Impacts from the project would be offset by the payment of impact fees and impacts would be less than significant.	No mitigation is required.	Less than Significant
Impact PS-3. Development facilitated by the project would increase the population in the planning area, which would increase the use of parks and recreational facilities. Adherence to American Canyon municipal code regulations and proposed 2040 general plan policies would ensure impacts related to parks and recreational facilities would be less than significant.	No mitigation is required	Less than Significant
Transportation		
Impact TRA-1. The project would not conflict with a program, plan, ordinance or policy addressing the circulation system and impacts would be less than significant.	No mitigation is required.	Less than Significant

Impact Statement	Mitigation Measure(s)	Residual Impact
Impact TRA-2. The future (2040) citywide rate of Residential VMT per Capita with the proposed 2040 General Plan would be higher than the significance threshold. The project would therefore conflict with or be inconsistent with CEQA Guidelines 15064.3(b) and impacts would be significant.	No feasible mitigation measures beyond policies included in the Mobility Element of the General Plan.	Significant and Unavoidable
Impact TRA-3. The project would not substantially increase hazards due to a geometric design feature and impacts would be less than significant.	No mitigation is required.	Less than Significant
Impact TRA-4. The project would not result in inadequate emergency access and impacts would be less than significant**.**	No mitigation is required.	Less than Significant
Tribal Cultural Resources		
Impact TCR-1. The project could adversely impact tribal cultural resources. Impacts would be less than significant through consultation conducted pursuant to AB 52.	No mitigation is required.	Less than Significant
Utilities and Service Systems		
Impact UTL-1. Development facilitated by the project would increase demand for water, wastewater, electric power, telecommunications, and stormwater drainage; however, no additional relocation or construction of utility services would be required to service the project beyond connections to existing utilities. The project would result in a minimal increase in natural gas demand. Impacts would be less than significant**.**	No mitigation is required.	Less than Significant
Impact UTL-2. The project would increase demand for water. Water supply for the project would be provided by the City of American Canyon from existing and planned supply sources including imported water and supplemental water purchased from the City of Vallejo as well as locally developed recycled water. Potential impacts would be less than significant.	No mitigation is required.	Less than Significant

Impact Statement	Mitigation Measure(s)	Residual Impact
Impact UTL-3. Development facilitated by the project would increase demand for wastewater treatment. The timing, intensity, and location of an expansion of wastewater treatment facilities is unknown at this time, but an expansion would require additional ceqa review and compliance with existing building and zoning codes. As such, impacts related to expansion of wastewater treatment facilities as a result of the 2040 general plan would be less than significant.	No mitigation is required.	Less than Significant
Impact UTL-4. The project would not generate solid waste in excess of state or local standards, would not exceed the capacity of local infrastructure, and would not impair the attainment of solid waste reduction goals. Impacts would be less than significant.	No mitigation is required.	Less than Significant
Wildfire		
Impact W-1. The 2040 general plan proposed policies address emergency access, response, and preparedness. Therefore, the project would not impair an emergency response plan or emergency evacuation plan. Impacts would be less than significant.	No mitigation is required.	Less than Significant
Impact W-2. The project could expose people and structures to wildfire risk; however, wildfire risks would be reduced with mitigation and impacts would be less than significant.	**WF-1 Wildfire Risk Reduction During Construction.** For projects located in proximity to agricultural or undeveloped areas (including hillside areas) with flammable vegetation, prior to issuance of a grading or building permit, whichever occurs first, the applicant shall submit documentation that they will implement the following measures to reduce risk of loss, injury, or death from wildfire during construction: 1. Construction equipment powered by internal combustion engines shall be equipped with spark arresters. The spark arresters shall be maintained pursuant to manufacturer recommendations to ensure adequate performance. 2. Certain project construction activities with potential to ignite wildfires during red-flag warnings issued by the National Weather Service for the project site location shall be prohibited. Example activities that shall be prohibited during red-flag warnings include welding and grinding outside of enclosed buildings, mowing, chain sawing, chipping, the use of any equipment with the potential to introduce sparks. 3. Fire extinguishers shall be required to be onsite during construction. Construction vehicles shall be equipped with at least one (1) functioning fire extinguisher and one (1) shovel or McLeod firefighting tool. Heavy machinery or equipment (e.g., tractors,	Less than Significant with Mitigation

Impact Statement	Mitigation Measure(s)	Residual Impact
	grinders, tree chippers, excavators, bulldozers) shall be equipped with one (1) shovel, McLeod firefighting tool, or Pulaski; one (1) functioning fire extinguisher; and at least one 5-gallon backpack pump or larger capacity water (or CAFS) pump/delivery system.. Fire extinguishers shall be maintained to function according to manufacturer specifications. Construction personnel shall receive training on the proper methods of using a fire extinguisher. **WF-2 Fire Resistant Vegetation and Landscaping.** For projects located in proximity to agricultural or undeveloped areas (including hillside areas) with flammable vegetation, prior to issuance of a building permit for development located within or adjacent to a VHFHSZ, the applicant shall submit landscape plans prepared by a registered Landscape Architect that are consistent with applicable Building and Fire Codes.	
Impact W-3. The project would include the installation of utilities and future mobility improvements; however, compliance with the HMP and proposed policies in the 2040 general plan would reduce impacts to less than significant.	No mitigation is required.	Less than Significant
Impact W-4. The planning area is relatively flat and compliance with proposed policies in the 2040 general plan and the American Canyon municipal code would ensure that risks from flooding or landslides due to a wildfire would be less than significant.	No mitigation is required	Less than Significant

1 Introduction

This Environmental Impact Report (EIR) examines the potential environmental effects of the proposed City of American Canyon (City) 2040 Technical General Plan Update ("project"). The environmental review process for the project, and legal basis for preparing an EIR, are described below.

1.1 Environmental Impact Report Background

This document is an EIR that evaluates the potential environmental impacts associated with implementation of the project. This section of the EIR:

1. Provides an overview of project's background.
2. Summarizes the process involved in developing the project.
3. Describes the purpose of and legal authority of the EIR.
4. Summarizes the scope and content of the EIR.
5. Lists lead, responsible, and trustee agencies for the EIR.
6. Describes the intended uses of the EIR.
7. Provides a synopsis of the environmental review process required under the California Environmental Quality Act (CEQA).

The contents of other EIR sections are as follows:

- Section 2, *Project Description*, provides a detailed discussion of the project.
- Section 3, *Environmental Setting*, describes the general environmental setting for the City of American Canyon.
- Section 4*, Environmental Impact Analysis*, describes the potential environmental effects associated with development facilitated by the project.
- Section 5*, Other CEQA Required Sections*, discusses issues such as growth inducement and significant irreversible environmental effects.
- Section 6, *Alternatives*, discusses alternatives to the project, including the CEQA-required "no project" alternative.
- Section 7, *References and Report Preparers*, lists informational sources for the EIR and persons involved in the preparation of the document.

In addition, this EIR also includes the following Appendices:

- Appendix A. Notice of Preparation and Scoping Comments Received
- Appendix B. Supporting Biological Resources Information
- Appendix C. Supporting Noise Information

1.2 Overview of the Project

State law (Government Code Section 65300) requires each city and county adopt a comprehensive general plan. The City's existing General Plan was adopted by the City Council on November 3, 1994. The project is a comprehensive effort to update the existing General Plan to respond to current local and regional conditions, and changes in State law that may not have been in effect when the General Plan was originally adopted. The proposed 2040 Technical General Plan Update has been organized into the following elements: Land Use; Housing; Economic Development; Mobility; Utilities; Public Services and Facilities; Environment, Parks, and Recreation; Safety; and Environmental Justice. Together, these elements cover all topics required to include in a General Plan under State law.

The General Plan defines the policy framework by which the City's physical and economic resources are to be managed and used over the next 18 years. City decision-makers will use the General Plan as a blueprint for:

- Choices about the use of land;
- Protection of environmental resources;
- Conservation and development of housing;
- Provision of supporting infrastructure and public and human services; and
- Protection of people and property from natural and constructed hazards.

The General Plan serves as a constitution for future development in American Canyon. Therefore, any City decision affecting land use and development must be consistent with the General Plan. This includes development projects that may be proposed in the future. An action, program, or project would be considered consistent with the General Plan if, considering all of its aspects, it will further the objectives and policies of the General Plan or not obstruct their attainment.

The project contains goals, policies, and implementation programs to implement the City's overarching objectives.

- **Goals** are statements that provide direction and state the desired end condition.
- **Policies** establish basic courses of action to achieve these goals, and directly guide the response of elected and appointed officials to development proposals and related community actions.
- **Implementation Programs** are specific actions, procedures, standards or techniques that the City must take to help achieve a specified goal or implement an adopted policy.

1.3 Purpose and Legal Authority

This EIR has been prepared in accordance with the CEQA Guidelines. In accordance with CEQA Guidelines Section 15121(a) (California Code of Regulations, Title 14, Division 6, Chapter 3), the purpose of an EIR is to:

> Inform public agency decision-makers and the public generally of the significant environmental effects of a project, identify possible ways to minimize the significant effects, and describe reasonable alternatives to the project.

This EIR fulfills the requirements for a Program EIR. Although the legally required contents of a Program EIR are the same as a Project EIR, Program EIRs are by necessity more conceptual and may

contain more general discussion of impacts, alternatives, and mitigation measures than a Project EIR. As provided in CEQA Guidelines Section 15168, a Program EIR may be prepared on a series of actions characterized as one large project. Use of a Program EIR enables the City (as Lead Agency) to consider broad policy alternatives and program-wide mitigation measures and greater flexibility to address environmental issues and/or cumulative impacts on a comprehensive basis. While the Program level EIR uses expansive program-level thresholds, it should not be assumed that impacts determined to be less than significant at a program level would be less than significant for an individual project implemented under the 2040 General Plan, even if the individual project is consistent with the 2040 General Plan.

Once a Program EIR has been prepared, subsequent activities within the Project must be evaluated to determine what, if any, additional CEQA documentation needs to be prepared. If the Program EIR addresses the Project's effects as specifically and comprehensively as possible, many subsequent activities could be found to be within the Program EIR scope and additional environmental documentation may not be required (CEQA Guidelines Section 15168(c)). When a Lead agency relies on a Program EIR for a subsequent activity, it must incorporate applicable mitigation measures and alternatives developed in the Program EIR into the subsequent activities (CEQA Guidelines Section 15168(c)(3)). If a subsequent activity would have effects not contemplated or not within the scope of the Program EIR, the Lead Agency must prepare a new Initial Study leading to a Negative Declaration, Mitigated Negative Declaration, or a project level EIR. In this case, the Program EIR still serves a valuable purpose as the first-tier environmental analysis. CEQA Guidelines Section 15168(b) encourage the use of Program EIRs, citing five advantages:

- Provision of a more exhaustive consideration of impacts and alternatives than would be practical in an individual EIR.
- Focus on cumulative impacts that might be slighted in a case-by-case analysis.
- Avoidance of continual reconsideration of recurring policy issues.
- Consideration of broad policy alternatives and programmatic mitigation measures at an early stage when the agency has greater flexibility to deal with them.
- Reduction of paperwork by encouraging the reuse of data (through tiering).

This EIR has been prepared to analyze potentially significant environmental impacts resulting from implementation of the project and provides feasible mitigation measures or project alternatives that would minimize or eliminate these impacts.

1.4 Scope and Content

In accordance with the CEQA Guidelines, a Notice of Preparation (NOP) of a Draft EIR was circulated to potentially interested parties on July 5, 2022. The NOP, included in Appendix A, indicates that all issues on the City's environmental checklist would be discussed in the EIR. These include:

- Aesthetics
- Agricultural and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Noise
- Population and Housing
- Public Services and Recreation
- Transportation
- Tribal Cultural Resources

- Greenhouse Gas Emissions
- Land Use and Planning
- Utilities and Service Systems
- Wildfire

This EIR evaluates potential impacts in each of these areas. Impacts regarding the CEQA topics of Agriculture and Forestry Resources, Energy, Geology and Soils, Hazards and Hazardous Materials, Hydrology and Water Quality, and Mineral Resources were determined to not be significant and are analyzed in section 4.15 of this EIR. The focus of this EIR is to:

- Provide information about the project for consideration by the City Council in its selection of the project, an alternative to the project, or a combination of various elements from the project and its alternatives, for approval;
- Review and evaluate the potentially significant environmental impacts that could occur as a result of the growth and development envisioned in the project;
- Identify feasible mitigation measures that may be incorporated into the project to reduce or eliminate potentially significant effects;
- Disclose any potential growth-inducing and/or cumulative impacts associated with the project; and
- Examine a reasonable range of alternative growth scenarios (including growth according to the existing General Plan, reduced growth, and alternative locations within the City for growth) that could feasibly attain the basic objectives of the project, while eliminating and/or reducing some or all of its potentially significant adverse environmental effects.

The NOP of this EIR received three written responses. The responses, included in Appendix A, are addressed, as appropriate, in the analysis contained in the various subsections of Section 4, *Environmental Impact Analysis*. The City staff also conducted a virtual scoping meeting on July 28, 2022. Two Planning Commissioners and one member of the public made comments at the Scoping Meeting. Table 1-1 shows a summary of the written comments and Scoping Meeting comments. The NOP and written comments are included in Appendix A.

Table 1-1 NOP Comments and EIR Response

Commenter	Issue Area/Issues Raised	How and Where Addressed in the EIR
Agency Comments		
California Department of Fish and Wildlife (CDFW)	Requested that the EIR include the following information: land use changes; project footprints; temporarily impacted areas; plans for proposed structures, ground disturbing activities, landscaping, stormwater improvements, fencing, paving, stationary machinery; operational features; and construction activities.	Chapter 2, *Project Description* includes the complete project description. Some of the information requested by CDFW is currently not available, including footprints, plans for buildings, operational features, and construction information. This EIR is a programmatic EIR and the information requested by CDFW will be available when future plans and projects are proposed and reviewed by the City.
	Requested creation of procedure or checklist for evaluating subsequent project impacts on biological resources to determine if individual projects are within the scope of the Program EIR.	Section 1.3, *Purpose and Legal Authority* identifies how this Programmatic EIR would be used in the future.
	Noted regulatory authority under the California Endangered Species Act, Native	These regulations are incorporated into Section 4.3, *Biological Resources.*

Commenter	Issue Area/Issues Raised	How and Where Addressed in the EIR
	Plant Protection Act, Fish and Game Code, and Migratory Bird Treaty Act.	
	Recommended EIR provide baseline data for species and habitat from multiple sources.	The baseline data used for this EIR is included in Section 4.3, *Biological Resources.*
	Recommended surveys be conducted for special-status species.	A requirement for biological resource surveys for future projects is included in Section 4.3, *Biological Resources.*
	Requested discussion of all direct and indirect impacts associated with the project, feasible mitigation, and cumulative impacts	Impacts and mitigation are identified in Section 4.3, *Biological Resources.*
California Department of Transportation (Caltrans)	Identified that VMT analysis should include discussion of multimodal transportation and traffic safety issues; the project's effects on pedestrians, bicycles, travelers with disabilities, and transit performance; and, if necessary, mitigation for an increase in VMT.	Comment is addressed in Section 4.11, *Transportation*
Native American Heritage Commission (NAHC)	Noted tribal consultation is required under Assembly Bill 52 and Senate Bill 18.	The notification process, pursuant to Assembly Bill 52 and Senate Bill 18, is summarized in Section 4.12, *Tribal Cultural Resources.*
	Identified procedures to follow and requested feasible mitigation be considered, including provisions for the inadvertent discovery of tribal cultural resources.	Comment is addressed in Section 4.4, *Cultural Resources* and Section 4.12, *Tribal Cultural Resources.*
Planning Commission Comments		
Vice Chair Wong	Requested information on Measure J consistency with the American Canyon General Plan and Napa County General Plan	This comment concerns the General Plan Update and is not relevant to the EIR.
	Requested information on EIR and General Plan noticing process to public and Planning Commission.	Summary of noticing is provided in Section 1.7*, Environmental Review Process.*
	Asked how the draft resolutions regarding climate change would be incorporated into the General Plan Update.	This comment concerns the General Plan Update and is not relevant to the EIR. A discussion of greenhouse gas emissions is provided in Section 4.7, *Greenhouse Gas Emissions.*
Commissioner Navarro	Asked if General Plan Update and EIR would address climate change and prohibiting new gas stations in the City.	Comment is addressed in Section 4.5, *Energy*, and Section 4.7, *Greenhouse Gas Emissions.*
	Noted highlighting greenhouse gas reduction measures may result in extra community engagement.	A discussion of greenhouse gas emissions is provided in Section 4.7, *Greenhouse Gas Emissions.*
Public Comments		
Chris James	Requested clarification on Measure J, Green Island Vineyards project, and LAFCO's effect on the General Plan Update.	This comment concerns the General Plan Update and is not relevant to the EIR.
	Requested information on the Urban Limit Line and introduction of the Hess Laird property.	A discussion of the Urban Limit Line and Hess Laird property is included in Chapter 2, *Project Description.*

1.5 Lead, Responsible, and Trustee Agencies

The City of American Canyon is the lead agency under CEQA for this EIR because it has primary discretionary authority to determine whether or how to approve the project. CEQA Guidelines Section 15381 defines responsible agencies as other public agencies that are responsible for carrying out/implementing a specific component of a project or for approving a project that implements the goals and policies of a General Plan. There are no responsible agencies for the project. Although not responsible agencies under CEQA, several other agencies have review authority over aspects of the project or approval authority over projects that could potentially be implemented in accordance with various objectives and policies included in the project. These agencies and their roles are listed below.

- The State Geologist is responsible for the review of the City's program for minimizing exposure to geologic hazards and for regulating surface mining activities.
- The Napa Local Agency Formation Commission (LAFCO) has responsibility for approving any annexations to the City that might occur over the life of the project.
- The California Department of Transportation (Caltrans) has responsibility for approving future improvements to the state highway system, including State Route 29.
- The California Department of Fish and Wildlife (CDFW) has responsibility for issuing take permits and streambed alteration agreements for any projects with the potential to affect plant or animal species listed by the State of California as rare, threatened, or endangered or that would disturb waters of the State.
- The Napa County Airport Land Use Commission (ALUC) has the responsibility of reviewing the project and future individual projects, as applicable, for consistency with the ALUC's Airport Land Use Compatibility Plan (ALUCP).
- Any other public agencies which may own land within City boundaries.

Trustee agencies have jurisdiction over certain resources held in trust for the people of California but do not have a legal authority over approving or carrying out the project. CEQA Guidelines Section 15386 designates four agencies as trustee agencies: CDFW with regards to fish and wildlife, native plants designated as rare or endangered, game refuges, and ecological reserves; the State Lands Commission, with regard to state-owned "sovereign" lands, such as the beds of navigable waters and State school lands; the California Department of Parks and Recreation, with regard to units of the State park system; and the University of California, with regard to sites within the Natural Land and Water Reserves System. The CDFW, due to the potential for rare or endangered species, is the only trustee agencies for the project.

1.6 Intended Uses of the EIR

This EIR is as an informational document for use in the City's review and consideration of the project. This document is a Program EIR. CEQA Guidelines Section 15168(a) states that:

> A Program EIR is an EIR which may be prepared on a series of actions that can be characterized as one large project and are related either: (1) geographically; (2) as logical parts in a chain of contemplated actions; (3) in connection with issuance of rules, regulations, plans, or other general criteria, to govern the conduct of a continuing program; or (4) as individual activities

carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways.

As a programmatic document, this EIR presents and discloses a region-wide assessment of the environmental impacts of the project. The information and analysis in this EIR will be used by the City of American Canyon Planning Commission and City Council, trustee agencies, and the general public to evaluate the project's potential effects on the environment.

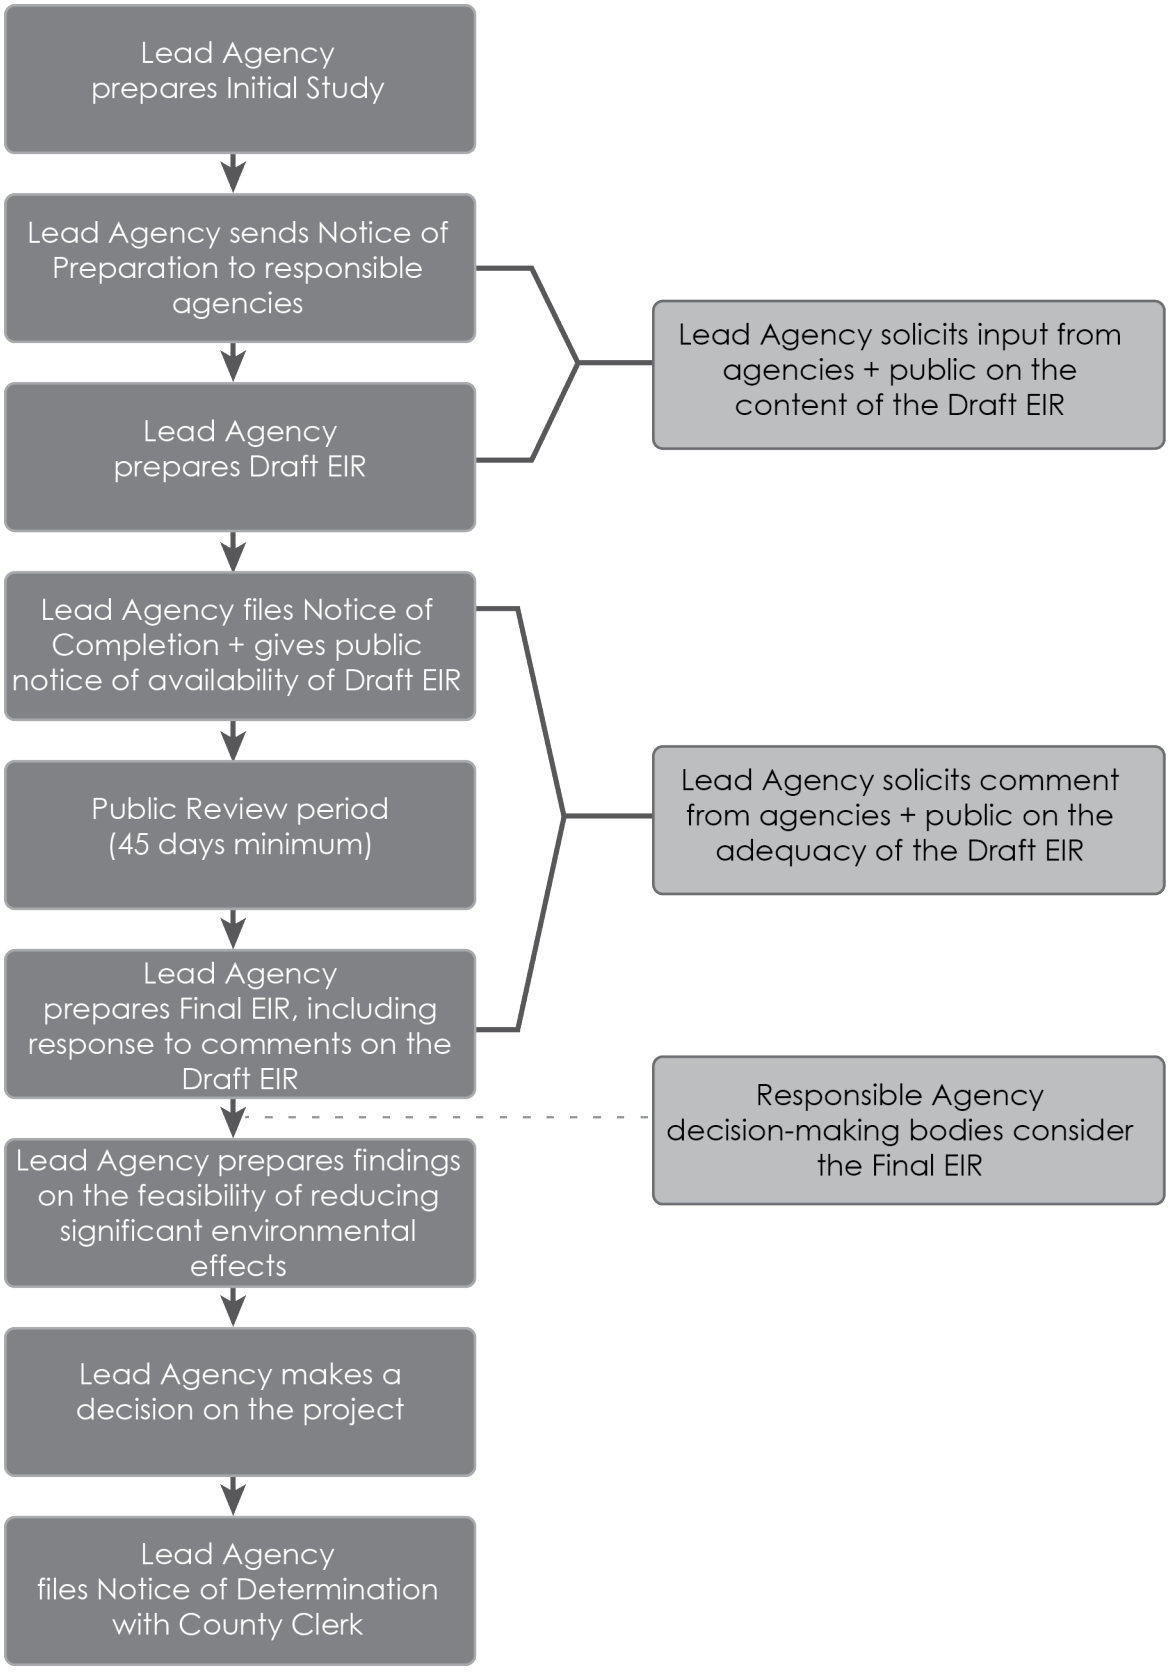
1.7 Environmental Review Process

The environmental impact review process required under CEQA is summarized below and illustrated in Figure 1-1. The steps appear in sequential order.

1. **Notice of Preparation (NOP) Distributed.** Immediately after deciding that an EIR is required, the lead agency must file a NOP soliciting input on the EIR scope to "responsible," "trustee," and involved federal agencies; to the State Clearinghouse, if one or more state agencies is a responsible or trustee agency; and to parties previously requesting notice in writing. The NOP must be posted in the County Clerk's office for 30 days. A scoping meeting to solicit public input on the issues to be assessed in the EIR is not required but may be conducted by the lead agency. The NOP public comment period for the project was from July 5, 2022 to August 4, 2022 and a scoping meeting was held on July 28, 2022. Public comments were received in response to the NOP and scoping process.
2. **Draft EIR Prepared.** The Draft EIR must contain: a) table of contents or index; b) summary; c) project description; d) environmental setting; e) significant impacts (direct, indirect, cumulative, growth-inducing and unavoidable impacts); f) alternatives; g) mitigation measures; and h) irreversible changes.
3. **Public Notice and Review.** A lead agency must prepare a Public Notice of Availability of an EIR. The Notice must be placed in the County Clerk's office for 30 days (Public Resources Code Section 21092) and sent to anyone requesting it. Additionally, public notice of Draft EIR availability must be given through at least one of the following procedures: a) publication in a newspaper of general circulation; b) posting on and off the project site; and c) direct mailing to owners and occupants of contiguous properties. The lead agency must consult with and request comments on the Draft EIR from responsible and trustee agencies, and adjacent cities and counties. When a Draft EIR is sent to the State Clearinghouse for review, the public review period must be 45 days, unless a shorter period is approved by the Clearinghouse (Public Resources Code 21091). Distribution of the Draft EIR may be required through the State Clearinghouse. This EIR will be circulated for a 45-day public review and will be sent to the State Clearinghouse.
4. **Notice of Completion.** A lead agency must file a Notice of Completion with the State Clearinghouse as soon as it completes a Draft EIR.
5. **Final EIR.** A Final EIR must include: a) any revisions to the Draft EIR; b) copies of comments received during public review; c) list of persons and entities commenting; and d) responses to comments.
6. **Certification of Final EIR.** The lead agency shall certify that: a) the Final EIR has been completed in compliance with CEQA; b) the Final EIR was presented to the decision-making body of the lead agency; and c) the decision-making body reviewed and considered the information in the Final EIR prior to approving a project.

7. **Lead Agency Project Decision.** A lead agency may: a) disapprove a project because of its significant environmental effects; b) require changes to a project to reduce or avoid significant environmental effects; or c) approve a project despite its significant environmental effects, if the proper findings and statement of overriding considerations are adopted.
8. **Findings/Statement of Overriding Considerations.** For each significant impact of the project identified in the EIR, the lead or responsible agency must find, based on substantial evidence, that: a) the project has been changed to avoid or substantially reduce the magnitude of the impact; b) changes to the project are within another agency's jurisdiction and such changes have or should be adopted; or c) specific economic, social, or other considerations make the mitigation measures or project alternatives infeasible. If an agency approves a project with unavoidable significant environmental effects, it must prepare a written Statement of Overriding Considerations that set forth the specific social, economic, or other reasons supporting the agency's decision.
9. **Mitigation Monitoring/Reporting Program.** When an agency makes findings on significant effects identified in the EIR, it must adopt a reporting or monitoring program for mitigation measures that were adopted or made conditions of project approval to mitigate significant effects.
10. **Notice of Determination.** An agency must file a Notice of Determination after deciding to approve a project for which an EIR is prepared. A local agency must file the Notice with the County Clerk. The Notice must be posted for 30 days and sent to anyone previously requesting notice. Posting of the Notice starts a 30-day statute of limitations on CEQA challenges.

Figure 1-1 Environmental Review Process



This page intentionally left blank.

2 Project Description

The project analyzed in this Environmental Impact Report (EIR) is the City of American Canyon (City) Technical 2040 General Plan Update, hereafter referred to as the "project." This section of the EIR describes the key characteristics of the project, including the project proponent/lead agency, the geographic extent of the plan, project objectives, required approvals, and the development forecasted by the project.

2.1 Project Purpose

The project is an update to the City's current General Plan, which includes the following chapters: Introduction, Land Use Element, Housing Element, Economic Development Element, Circulation Element, Utilities Element, Public Services and Facilities Element, Parks and Recreation Element, Natural and Historic & Cultural Resources Element, Geology Element, Flood Hazards Element, and Noise Element. The project establishes the City's vision for future development through the horizon year of 2040. The project will serve as the City's primary guide for future land use and development decisions in a way that meets the community needs and priorities while serving as a key tool for influencing and improving the quality of life for residents and businesses. As such, it serves as the "blueprint" for future development and conservation of a community. The 2040 General Plan Update will help the City plan for important community issues, such as community growth; health, housing, mobility, and infrastructure needs; climate change; and environmental protection. It will also set the stage for future social, physical, and economic development of the City.

2.2 Project Proponent/Lead Agency

The City of American Canyon is both the project proponent and the lead agency for the project. The City's Community Development Department (located at 4381 Broadway Street, Suite 201, American Canyon, California 94503) prepared this EIR with the assistance of Rincon Consultants, Inc. and Mintier-Harnish.

2.3 Project Location

The City of American Canyonis located in southern Napa County, as shown in Figure 2-1. The City is bordered by Napa County Airport to the north, Sulphur Spring Mountains to the east, Solano County and the City of Vallejo to the south, and the Napa River to the west.

Pursuant to State law, a General Plan must address all areas that bear a physical relationship to the long-term planning of the city. Consistent with this principle, the General Plan Area includes the City of American Canyon Water and Sewer Service area, the City limits, the City's Sphere of Influence (SOI), and urban limit line. Figure 2-1 depicts the limits of the General Plan Area.

Figure 2-1 Regional Location

City of American Canyon Boundary
Sphere of Influence
General Plan Area
2030 Urban Limit
Project Location

N

American Canyon GPU and EIR

Any future development associated with the 2040 General Plan would be limited to the City limits, the SOI, and the urban limit line. As such, this EIR focuses on these three areas, which altogether are referred to as the "Planning Area." Figure 2-2 depicts the City limits, the SOI, and the urban limit line. The American Canyon city limits defines land that has been incorporated and for which the City has authority. The Napa County Local Agency Formation Commission (LAFCo) established the SOI, which defines the probable physical boundary and service area of a local agency. The SOI includes areas the City will have primary responsibility to provide public facilities and services. The City Council adopted an initiative in 2008 to adopt an urban limit line around the city. This urban limit line was negotiated with Napa County to be consistent with the County's general plan and agricultural protection ordinances. The boundary helps preserve agriculture and open spaces, prevent urban sprawl, implement the planned development of the city, foster sustainable growth, and maintain a balance between housing and jobs. Primary regional access to the City is provided by Interstate 80 (I-80), approximately five miles to the east of the City limits. State Route 29 (SR 29) provides north-south access while State Route 12 (SR 12) provides east-west access to the City. The City is served by a surface street system ranging from multi-lane arterial roadways to narrow two-lane streets.

2.4 Regulatory Setting

State law (Government Code Sections 65300 through 65303.4) sets forth the requirement for each municipality to adopt and periodically update its General Plan, and sets the requirement that a General Plan include the following mandatory subject areas, or "elements": Land Use, Circulation, Housing, Open Space, Conservation, Noise, Safety, and Environmental Justice. State law also allows for optional elements that can be organized or combined at the City's discretion. The 2040 General Plan has been organized into the following elements: Land Use; Housing; Economic Development; Mobility; Utilities; Public Services and Facilities; Environment, Parks, and Recreation; Safety; and Environmental Justice. Together, these elements cover all topics required to be included in a General Plan under State law. The Housing Element was certified by the State Department of Housing and Community Development (HCD) on June 30, 2023.

Under State law, a property's zoning is required to be consistent with its General Plan land use designation (Government Code Section 65860). Section 65860(c) of the Government Code requires that when a General Plan is amended or updated in a way that makes the Zoning Ordinance inconsistent with the General Plan, "the zoning ordinance shall be amended within a reasonable time so that it is consistent with the general plan as amended."

Figure 2-2 Project Location

Additional data provided by the City of American Canyon, 2022.

2.5 Project Objectives

The Technical 2040 General Plan will serve as a long-term framework for future growth and development, represents the community's view of its future, and contains the goals and policies upon with the City Council, Planning Commission, and the entire community will base land use and resource decisions. The Technical 2040 General Plan will provide a contemporary plan that will guide American Canyon though the next 20 years. The primary objective of this project is to update the existing American Canyon General Plan in order for it to be compliant with State law.

The Technical 2040 General Plan would implement the vision of the existing General Plan. The City identifies the following three fundamental roles of the City:

1. The City should be home for a residential population, internally accommodating a sufficient range of uses to support the needs of residents (including a mix of housing types, commercial services, entertainment, employment, recreation, education, health, religious, cultural facilities, transportation services, and open space). At the present time, many of these uses are located outside the City, which necessitates extensive travel by residents to access these services.
2. The City should be a center of employment and commerce for regional, as well as local residents. This will provide an opportunity to capitalize upon (1) the cluster of uses which have developed in the Green Island Industrial Park; (2) the proximity of the City to the Napa County Airport and Southern Pacific railroad, and (3) the relationship of the City to the agricultural and vineyard industries of Napa County.
3. The City can capture visitors to the Napa Valley by providing uses which capitalize on the unique environmental setting of the foothills, river valleys, and agriculture. Environmental educational facilities, such as wetlands interpretative centers, overnight camping and recreational vehicle facilities, river recreational facilities such as boating, golf courses, and hotel/motels and restaurants are representative of the range of uses which may be considered.

2.6 Project Characteristics

2.6.1 2040 General Plan Update Organization

The elements included in the 2040 General Plan are further described below.

- **Land Use Element.** This element contains the development policies and standards that directly shape land use decisions and the resulting physical form of the City of American Canyon. These include density, lot coverage, and height policies. The Land Use Element serves as the primary means for ensuring that new land uses are logically organized and developed sustainably.
- **Mobility Element.** This element provides a framework for decisions concerning the City's multimodal transportation network. This element also incorporates Vehicle Miles Travelled policies consistent with Senate Bill 743 (SB 743) and updates street standards for all modes of transportation including transit, bicycles, and pedestrian.
- **Utilities.** This element focuses on the variety of public facilities, utilities, and infrastructure that are necessary to sustain existing households and businesses and to accommodate future population and employment growth.
- **Environment, Parks, and Recreation.** This element considers the effects of existing and planned development on natural resources, including biological resources, water resources, soil

resources, cultural and historic resources, and air quality and climate change. This element also guides the long-range preservation and conservation of open space, as well as the park and recreational facilities.

- **Safety Element**. This element addresses natural and urban safety hazards in American Canyon, including existing and potential hazards. This Element establishes policies and actions to mitigate identified hazards to protect City residents and visitors. This element also focuses on noise element requirements, consistent with Government Code Section 65302(f), including new existing noise contours as well as projected noise contours based on future traffic volumes projected to arise from improvements planned for in the Mobility Element.
- **Environmental Justice.** This element establishes goals, policies, and implementation programs related to environmental justice to ensure all the members of the American Canyon community (i.e., residents, workers, business owners, local organizations, and visitors) regardless of race, ethnicity, age, gender, religion, sexual orientation, disability, and socio-economic status feel valued, safe, respected, included, and secure.

The City has also prepared an updated Housing Element, which was made available for public review on September 27, 2022. The Housing Element identifies the City's Regional Housing Needs Allocation (RHNA) goal of 622 dwelling units and provides the City's action plan for the 6th Cycle Housing Element (2023 to 2031). The Housing Element was certified by the State Department of Housing and Community Development (HCD) on June 30, 2023. The Housing Element has undergone separate CEQA review and for that reason is not analyzed in this EIR.

In addition, the 2040 General Plan would include an Economic Development and Public Services and Facilities Element. However, these elements have not been updated and the current Economic Development and Public Services and Facilities Element in the current General Plan would still apply to the project. Pertinent policies that would reduce environmental impacts are identified in this EIR.

2.6.2 Land Use Designations

The land use map for the General Plan Update is provided in Figure 2-3. These land use designations define the basic categories of land uses allowed in the city but are implemented through the City's Zoning Ordinance and Zoning Map, which are part of the City's Municipal Code and contain more specific regulations and standards governing development on individual properties. The project would change some of the land use designations; however, these changes primarily resolve inconsistences between existing uses and the General Plan land use designations. Figure 2-4 shows the changes in land use designations compared to the current General Plan.

2.6.3 Urban Limit Line Expansion

As a part of the project, the City would update the Urban Limit Line to include the Hess/Laird Property, as shown in Figure 2-5. The lands that would be added to the Urban Limit Line are within Napa County's jurisdiction and would need to be incorporated into the City with an annexation before any future development could occur in that area. Because these lands are not within the City's jurisdiction, the potential environmental impacts from future development in the Hess Laird Property will be addressed when the City pursues annexation of that area. The expansion of the Urban Limit Line is an administrative process that would not result in an environmental impacts and is not discussed further in this EIR.

Additional data provided by the City of American Canyon, 2021; Hess/Laird Property digitized from the Proposed Urban Limit Line Addition, 2022.

American Canyon GPU and EIR
Fig 4 Proposed Urban Limit Line

2.6.4 Project Buildout

Compared to existing conditions, there could be additional buildout from implementation of the 2040 General Plan. The potential buildout associated with the project was estimated based on the City's Traffic Impact Fee (TIF) Nexus Study, as well as the known buildout of specific plans and already approved General Plan Amendments. Table 2-1 and Table 2-2 identifies the additional residential and non-residential buildout that could occur relative to existing conditions, respectively.

Overall, compared to existing conditions, the project could add a total of 3,379 additional residential units and approximately 5,704,000 square feet of commercial, retail, hotel, industrial, warehouse, and research and development (R&D) uses.

2.6.5 Mobility Updates

The 2040 General Plan includes a Mobility Element, which provides a vision and guiding principles for the transportation system. The Mobility Element identifies the following proposed major circulation improvements in American Canyon:

- The City is in partnership with the Napa Valley Transportation Authority to identify improvements to SR 29, including landscaping improvements, pedestrian improvements, and multimodal features.
- Newell Drive extension from Watson Ranch to Highway 29 at Green Island Road (2-Lane Major Collector Road and 4-Lane Arterial)
- Green Island Road reconstruction from a 2-lane Arterial to a 3-Lane Arterial
- West Side Connector (2-Lane Major Collector)
- Eucalyptus Drive extension from Theresa Avenue to Broadway (2-Lane Major Collector)
- Rio Del Mar or South Napa Junction Road, including new at-grade crossing from Broadway to Newell Drive (2-Lane Major Collector)
- Napa Junction Road from Theresa Avenue to Hess Road (2-Lane Minor Collector)
- Newell Drive Railroad Overcrossing
- American Canyon Road Pedestrian Crossing
- Donaldson Way Pedestrian Crossing
- Napa Junction Road Pedestrian Crossing

The new proposed roadways are shown in Figure 2-6.

Table 2-1 Residential Buildout Compared to Existing Conditions

Residential Type	Number of Dwelling Units					
	Pipeline Projects [a]	Remaining TIF Projects [b]	Broadway District Specific Plan [c]	Watson Ranch Specific Plan [d]	Oat Hill Residential General Plan Amendment [e]	Total
Single Family	41	197	0	1,061	0	1,299
Multi-family	186	36	1,200	192	291	1,905
Total	**227**	**233**	**1,200**	**1,253**	**291**	**3,204**

Notes:

a. The City has identified the following pipeline projects that would be constructed in the future: Lemos Pointe, Canton Estates, West Carolyn Subdivision, and Rio Del Mat West Subdivisions (City of American Canyon 2022).

b. The Remaining TIF Projects were calculated by subtracting the estimated buildout in the 2015 TIF with both the pipeline projects and the projects that were constructed between 2014 and 2021 (City of American Canyon 2015 and 2022a).

c. The Broadway District Specific Plan was adopted in July 2019 and has undergone CEQA review (City of American Canyon 2020).

d. The Watson Ranch Specific Plan was adopted in 2018 and has undergone CEQA review (City of American Canyon 2018).

e. In September 2021, the Oat Hill Multi-Family Residential Project, which included a General Plan Amendment was approved. An Initial Study/Mitigated Negative Declaration was prepared for this Project (City of American Canyon 2021).

Table 2-2 Non-Residential Buildout Compared to Existing Conditions

Non-Residential Type	Area (in Million Square Feet)					
	Pipeline Projects [a]	Remaining TIF Projects [b]	Broadway District Specific Plan [c]	Watson Ranch Specific Plan [d]	Watson Lane Annexation [e]	Total
Office	0	65	100	25	0	190
Commercial/Retail/Hotel	0	0	840	175	189	1,204
Industrial/Warehouse/R&D	3,118	0	0	0	1,192	4,310
Total	**3,118**	**65**	**940**	**200**	**1,381**	**5,704**

Notes:

a. The City has identified the following pipeline projects that would be constructed in the future: Future Warehouse at 1055 Commerce Court, Napa Airport Commerce Center, Giovanni Logistics Center, SDG 217 Warehouse, and PGE Regional Center (City of American Canyon 2022).

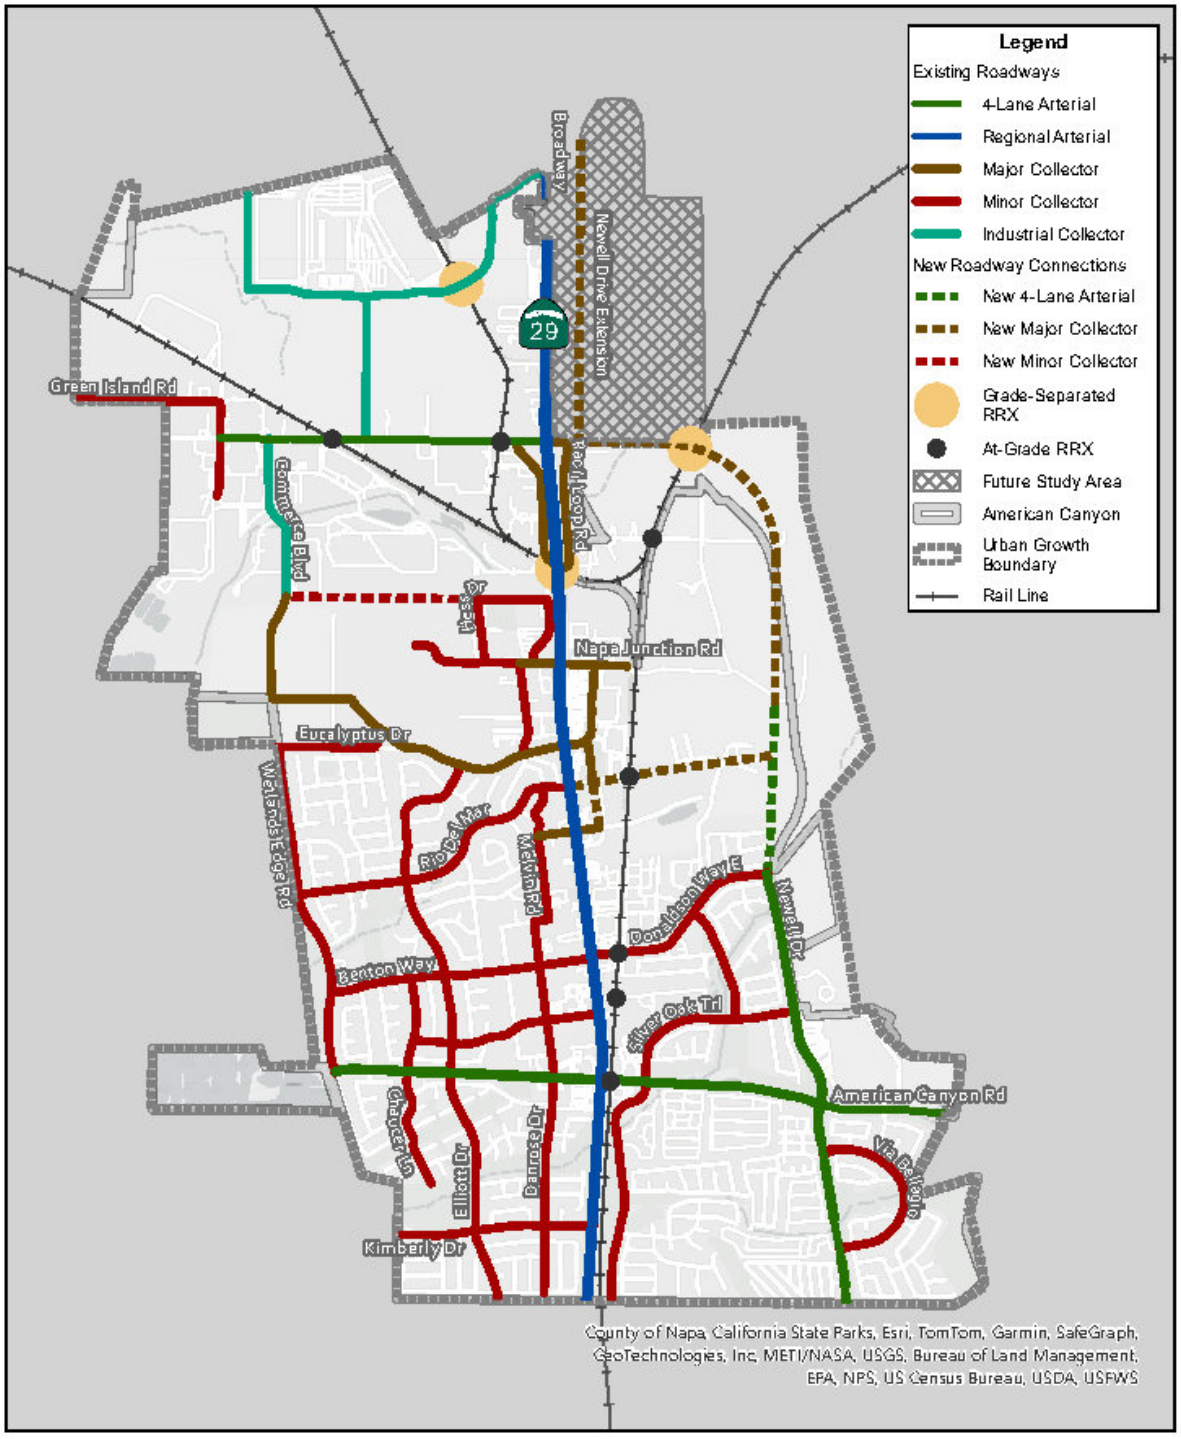
b. The Remaining TIF Projects were calculated by subtracting the estimated buildout in the 2015 TIF with both the pipeline projects and the projects that were constructed between 2014 and 2021 (City of American Canyon 2015 and 2022a).

c. The Broadway District Specific Plan was adopted in July 2019 and has undergone CEQA review (City of American Canyon 2020).

d. The Watson Ranch Specific Plan was adopted in 2018 and has undergone CEQA review (City of American Canyon 2018).

e. The Watson Lane Annexation Project would annex an area within the City's SOI and allow for industrial and commercial development. The project is currently undergoing CEQA (City of American Canyon 2022b).

Figure 2-6 Proposed Roadway Connections



2.7 Intended Use of this EIR

This EIR provides a programmatic environmental review of implementing the City's 2040 General Plan Update. Subsequent activities falling under the City's 2040 General Plan Update will utilize this EIR to focus the environmental review of these consequent activities and to determine their effects. If a new project is proposed that is not anticipated by the 2040 General Plan Update, or may result in project-level environmental effects not addressed in this program-level EIR, the future project would be evaluated as required under CEQA. This EIR is not intended to prohibit consideration of future projects or CEQA analysis of future projects.

2.8 Project Implementation

Following adoption of project by the City Council, all subsequent activities and development within the City will be guided by the goals and policies in the Technical 2040 General Plan Update. It therefore provides specific policy guidance for implementation of plan concepts. The City will also need to work with Napa County and other public agencies to implement policies that affect their respective jurisdictions or would affect the region. Implementing these policies in accordance with new development (residential, commercial, or industrial) will be subject to the City's established review and approval processes, with final review and approval by the appropriate departmental staff, as well as the appointed and elected officials. The principal responsibilities that city officials and staff have for project implementation are briefly summarized below:

- Update the City of American Canyon Zoning Ordinance to achieve consistency with the adopted General Plan Update.
- Rezone properties, as dictated by future development proposals.
- Approve tentative maps, variances, conditional use permits, and other land use permits and entitlements.
- Approve development agreements and issuance of related permits and approvals consistent with the 2040 General Plan Update.
- Analyze and plan public infrastructure such as roadway improvements, other capital improvements, and natural/capital resource preservation and/or restoration.
- Conduct or consider further focused planning studies, as appropriate to future development in the city.

2.9 Required Approvals

With recommendations from the City's Planning Commission, the American Canyon City Council will need to take the following discretionary actions in conjunction with the project:

- Certify the Final EIR and adopt required findings, including required findings under CEQA Guidelines Sections 15090, 15091, and 15093.
- Approve and adopt the Technical 2040 General Plan Update.

This page intentionally left blank.

3 Environmental Setting

This section provides a general overview of the environmental setting for the project. More detailed descriptions of the environmental setting for each environmental issue area can be found in Section 4, *Environmental Impact Analysis*.

3.1 Setting

The City of American Canyon is located in southern Napa County, approximately 5 miles south of the City of Napa, 25 miles northeast of the city of San Francisco, and approximately 20 miles north of the City of Oakland. The city is located north of the San Francisco Bay and San Pablo Bay, east of Napa River and west of the Newell Open Space Preserve and Lynch Canyon Open Space Park. Broadly, the City of American Canyon is bordered by unincorporated Napa County and the Napa County Airport to the north, Sulphur Spring Mountains to the east, Solano County and the City of Vallejo to the south, and a salt marsh and wetland area including the Napa River to the west.

The City encompasses an area of approximately 6.1 square miles. In addition, the City has a sphere of influence (SOI), which represents those areas that may already receive City services and are a visual and logical expansion of the city boundaries. There is currently one area in the SOI that is not within City limits. The City is currently in the process of annexing that area as part of the Paoli/Watson Lane Annexation Project and is currently preparing an Environmental Impact Report (EIR) consistent with the California Environmental Quality Act (CEQA) (City of American Canyon 2022). Primary regional access to the city is provided by Interstate 80 (I-80), approximately 5 miles to the east of the city limits. State Route (SR) 29 provides north-south access while SR 12 and SR 37 provide east-west access to the city. The city is served by a surface street system ranging from multi-lane arterial roadways to narrow two-lane streets. Primary access to the project site is provided by SR 29, known locally as “Broadway.”

Land uses in the City include single and multi-family residential, commercial, industrial, and open space. The City plays an important role in the Napa Valley wine industry with continuous growth in wine logistics, wine making, storage and distribution. The City is also home to growing major food production industries and logistics distribution, such as Coca Cola, Barry Callebaut Chocolate, Mezzetta, Amazon, and the nation’s first IKEA E-Commerce Distribution Center.

The climate of the City of American Canyon is a warm-summer Mediterranean climate, characterized by dry, hot summers and moderately moist, cool winters. The average temperature for the year in the City is 56.4°F (13.6°C). The warmest month, on average, is August with an average temperature of 65.1°F (18.4°C). The coolest month on average is December, with an average temperature of 45.4°F (7.4°C) (Weatherbase 2022). Average annual precipitation in American Canyon is 17.4 inches. Generally, in an average or typical year, most precipitation is received from October through April (Weatherbase 2022).

3.2 EIR Baseline

Section 15125 of the California Environmental Quality Act (CEQA) Guidelines states that an Environmental Impact Report (EIR) “should include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation is

published." Section 15125 states that this approach "normally constitute[s] the baseline physical conditions by which a lead agency determines whether an impact is significant." This EIR evaluates impacts against existing conditions, at the time the notice of preparation (NOP) was published, which was July 5, 2022. This EIR considers the potential impacts from buildout of the General Plan in 2040, compared to exiting conditions.

3.3 Cumulative Development

CEQA defines cumulative impacts as two or more individual actions that, when considered together, are considerable or will compound other environmental impacts. Cumulative impacts are the changes in the environment that result from the incremental impact of development of the proposed project and other nearby projects. For example, traffic impacts of two nearby projects may be insignificant when analyzed separately but could have a significant impact when analyzed together. Cumulative impact analysis allows an EIR to provide a reasonable forecast of future environmental conditions and can more accurately gauge the effects of a series of projects.

Because the project is a general plan update, cumulative impacts are treated somewhat differently than would be the case for a project-specific development. CEQA Guidelines Section 15130 provides the following direction relative to cumulative impact analysis and states that the following elements are necessary for an adequate discussion of environmental impacts:

> A summary of projections contained in an adopted local, regional or statewide plan, or related planning document, that describes or evaluates conditions contributing to the cumulative effect. Such plans may include: a general plan, regional transportation plan, or plans for the reduction of greenhouse gas emissions. A summary of projections may also be contained in an adopted or certified prior environmental document for such a plan. Such projections may be supplemented with additional information such as a regional modeling program. Any such document shall be referenced and made available to the public at a location specified by the lead agency.

By its nature, a general plan considers cumulative impacts insofar as it considers cumulative development that could occur within the Planning Area. For example, the transportation analysis considers the overall change in vehicle miles travelled (VMT) due to implementing several development projects that would add to the buildout associated with implementing the project. These cumulative VMT calculations are accounted for in the air quality, energy, greenhouse gas emissions, and noise analyses; therefore, these analyses would also be considered cumulative. Other impacts, such as geology and soils and cultural resources, are site specific and would not result in an overall cumulative impact from growth outside of the city. Therefore, the analysis of project impacts in this EIR also constitutes the cumulative analysis.

4 Environmental Impact Analysis

This section discusses the possible environmental effects of the project for the specific issue areas identified through the scoping process with potential to experience significant effects. A "significant effect" as defined by the California Environmental Quality Act (CEQA) Guidelines Section 15382:

> means a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant.

The assessment of each issue area begins with a discussion of the environmental setting related to the issue, followed by the impact analysis. In the impact analysis, the first subsection identifies the methodologies used and the "significance thresholds," which are those criteria adopted by the City and other agencies, universally recognized, or developed specifically for this analysis to determine whether potential effects are significant. The next subsection describes each impact of the project, mitigation measures for significant impacts, and the level of significance after mitigation. Each effect under consideration for an issue area is separately listed in bold text with the discussion of the effect and its significance. Each bolded impact statement also contains a statement of the significance determination for the environmental impact as follows:

- **Significant and Unavoidable**. An impact that cannot be reduced to below the threshold level given reasonably available and feasible mitigation measures. Such an impact requires a Statement of Overriding Considerations to be issued if the project is approved pursuant to CEQA Guidelines Section 15093.
- **Less than Significant with Mitigation Incorporated**. An impact that can be reduced to below the threshold level given reasonably available and feasible mitigation measures. Such an impact requires findings under CEQA Guidelines Section 15091.
- **Less than Significant**. An impact that may be adverse but does not exceed the threshold levels and does not require mitigation measures. However, mitigation measures that could further lessen the environmental effect may be suggested if readily available and easily achievable.
- **No Impact.** The project would have no effect on environmental conditions or would reduce existing environmental problems or hazards.

Following each environmental impact discussion is a list of mitigation measures (if required) and the residual effects or level of significance remaining after implementation of the measure(s). The Executive Summary of this EIR summarizes all impacts and mitigation measures that apply to the project.

This page intentionally left blank.

4.1 Aesthetics

This section summarizes the aesthetic resources in the Planning Area and analyzes the impacts on aesthetics, including impacts to scenic vistas, scenic resources, visual character, visual quality, and light and glare due to the project.

4.1.1 Setting

The Planning Area is situated in the central portion of the Coast Mountain Ranges in the southeastern portion of Napa County, between the east bank of the Napa River and the Sulfur Springs Mountains foothills. The primary arterial roadway in the City is State Route (SR) 29, which bisects the City from north to south and serves as the primary commercial corridor. Residential uses are generally located in the southern portion of the City, with commercial and industrial uses located in the northern portion near the Napa County Airport. American Canyon is characterized by its low-rise, rural suburban appearance, with most development having occurred within the last 40 years. The City is characterized by a variety of visual resources, both natural and constructed, including the rolling foothills to the east, riparian corridors, Oat Hill, Napa River, and the Basalt Plant. Visual resources in American Canyon are shown in Figure 4.1-1 through Figure 4.1-6. These figures show views of American Canyon Creek (Figure 4.1-1), the Basalt Plant site (Figure 4.1-2), the foothills to the east of American Canyon (Figure 4.1-3), an overview of American Canyon (Figure 4.1-4), a view of Oat Hill (Figure 4.1-5), and a view of the Napa River and wetlands to the west of American Canyon (Figure 4.1-6).

a. Scenic Resources

Most communities identify scenic resources that contribute to community identity. Scenic resources can be natural or constructed features such as trees, rock formations, historic buildings, and public art. The eastern foothills contribute to the City's visual image as they provide a transition between the higher mountain ranges to the east and the low land or floodplains to the west. The foothills also contribute to the rural quality of the community and serve as a backdrop to the City's existing development, which is viewed by its residents and vehicles traveling on State Route (SR) 29. Active vineyards located on portions of the foothills provide a linkage with the Napa Valley (City of American Canyon 1994a).

Oat Hill is located in the western portion of the City between developed land and the Napa River. The hill is a visual landmark that provides direction and orientation to many residents in the community, particularly those living in residential neighborhoods within proximity to the hill (City of American Canyon 1994a).

Although most of the city's visual resources are natural, the Napa Valley Ruins & Gardens is an exception. The Basalt Rock Company started a rock quarrying facility and operations near the Napa River in 1941. Following World War II, the plant built almost 30 miles of pipeline in Napa County. This facility is now the focus of the Watson Ranch Specific Plan neighborhood. Architectural features of the Napa Valley Ruins & Gardens are planned to be incorporated into the design of the Watson Ranch Specific Plan neighborhood.

Figure 4.1-4 View of American Canyon from Napa Junction Road, Facing Southeast

Figure 4.1-5 View of Oat Hill from Napa Junction Road, Facing South

Figure 4.1-6 View of the Napa River and Wetlands from Wetlands Edge Road, Facing Northwest

Scenic Vistas and Views

A scenic vista provides views of an aesthetically valued landscape that benefits the public. The term "vista" generally implies an expansive view, usually from an elevated point or open area. This designation may be officially designated or unofficially defined by a set of criteria. American Canyon contains a number of streams and creeks, including American Canyon Creek, that provide the area with riparian habitats and vegetation and are considered scenic views. American Canyon Creek runs through the central portion of the City from the higher elevations of the Sulphur Spring Mountains to the Napa River. Development has altered the creek's natural stream course and ability to be viewed in some locations in American Canyon (City of American Canyon 1994a).

Although the Napa River flows outside City limits, the river serves as the primary western edge for American Canyon. In addition to the river's role as a key boundary, the river itself is another visual resource that enhances the overall beauty of the area. Napa River is clearly visible from the City's higher elevations, including atop Oat Hill, the eastern foothills, and neighborhoods immediately east of the Napa River (City of American Canyon 1994a).

Scenic Roadways

California's Scenic Highway Program designates scenic highways with the intention of protecting these corridors from change that would diminish the aesthetic value of adjacent lands. A highway is designated as an eligible scenic highway when the California Department of Transportation (Caltrans) determines that the roadway corridor qualifies for official status. The status of an officially designated scenic highway changes when the local governing body applies to Caltrans for scenic highway approval, adopts a Corridor Protection Program, and receives notification that the highway has been officially designated (Caltrans 2022). Scenic highways must have an approved Corridor Protection Program and remain in compliance to maintain scenic highway status. According to the Caltrans State Scenic Highway Map and list of eligible and officially designated State Scenic Highways, SR 29 is eligible for designation as a State Scenic Highway but is not officially designated as such (Caltrans 2018).

b. Visual Character

The City is in a transitional area between the Sulphur Springs Mountains and the Napa River. A high-quality visual image and environmental character distinguish the area from other cities in the northern San Francisco Bay region. These visual and physical qualities provide a contrast from the urbanized areas to the south (City of American Canyon 1994b). Residential uses are generally located in the southern portion of American Canyon, with commercial and industrial uses located in the northern portion near the Napa County Airport.

c. Light and Glare Conditions

Light and glare from indoor or outdoor uses can reduce visibility of the night sky, create potential hazards to drivers, and be a nuisance to residential areas. The City has typical light conditions found in suburban areas (e.g., roadway lighting, commercial parking lot and building lighting, residential buildings, headlights from motor vehicles). Sources of daytime glare include direct beam sunlight and reflections from windows, architectural coatings, glass, and other shiny reflective surfaces. Nighttime lighting and glare are produced by both stationary and mobile sources. Stationary sources of nighttime light include structure illumination, decorative landscape lighting, lighted signs, and streetlights. The primary source of mobile nighttime light is motor vehicle headlights. Sources of

light and glare in the residential areas include street lighting along roadways, lit building exteriors and signage, and parking lot lighting.

4.1.2 Regulatory Setting

a. Federal Regulations

No existing federal regulations pertain to the aesthetic resources in the City.

b. State Regulations

California Scenic Highways Program

The California Scenic Highway Program, established in 1963, identifies and designates certain highways throughout the State which require special conservation treatment in relation to surrounding land use development. Caltrans manages the State Scenic Highway Program and defines a scenic highway as any freeway, highway, road, or other public right-of-way, that traverses an area of exceptional scenic quality. Suitability for designations as a State scenic highway is based on the vividness, intactness, and unity of their view corridors, as described in Caltrans' Scenic Highway Guidelines (Caltrans 2008):

- *Vividness* is the extent to which the landscape is memorable. This is associated with the distinctiveness, diversity, and contrast of visual elements. A vivid landscape makes an immediate and lasting impression on the viewer.
- *Intactness* is the integrity of visual order in the landscape and the extent to which the natural landscape is free from visual intrusions (e.g., buildings, structures, equipment, grading).
- *Unity* is the extent to which development is sensitive to and visually harmonious with the natural landscape.

California Code of Regulations, Title 24

Title 24 of the California Code of Regulations (CCR), also known as the California Building Standards Code, consists of regulations to control building standards throughout the State. The California Electrical Code (Title 24, Part 3) and Green Building Standards Code (also referred to as the CALGreen Code; Title 24, Part 11) stipulate minimum light intensities for safety and security at pedestrian pathways, circulation ways, and paths of egress.

- The CALGreen Code (24 CCR, Part 11, Paragraph 5.106.8, *Light Pollution Reduction*) provides that all nonresidential outdoor lighting must comply with the following:
  - The minimum requirements in the California Energy Code (CEC) for Lighting Zones 0 to 4 as defined in Chapter 10 of the California Administrative Code;
  - Backlight ratings as defined in the Illuminating Engineering Society's Technical Memorandum on Luminaire Classification Systems for Outdoor Luminaires (IES TM-15-11);
  - Uplight and Glare ratings as defined in the CEC; and
  - Allowable backlight, uplight, and glare ratings not exceeding those shown in Table 5.106.8 in Section 5.106.8 of the CALGreen Code, or a local ordinance lawfully enacted pursuant to Section 101.7 of the CALGreen Code, whichever is more stringent.

The 2022 updates to the CALGreen Code went into effect on January 1, 2023. They require nonresidential buildings to maximize light emitting diode (LED) technology in indoor and outdoor lighting plans.

c. Local Regulations

American Canyon Municipal Code – Title 19 (Zoning)

The Zoning Code (Title 19) of the American Canyon Municipal Code implements the General Plan, particularly the Land Use Element. While General Plan designations are more generalized in nature, the Zoning Code and zoning districts provide specific controls on land use, density or intensity of development, and development standards to implement the City's General Plan goals and policies. The Zoning Code provides standards for protection of visual resources, compatible design, and illumination for new development in the City that is associated with zoning. Zoning Code Title 19 establishes standards for development within the City. Zoning Code Chapter 19.23 provides a list of prohibited signage in the City. The California Building Code, which includes lighting requirements, has been adopted in Chapter 16.02 of the Municipal Code (City of American Canyon 2022).

4.1.3 Impact Analysis

a. Significance Thresholds and Methodology

CEQA Significance Criteria

Based on Appendix G of the CEQA Guidelines a project may be deemed to have a significant impact on aesthetics if it would:

1. Have a substantial adverse effect on a scenic vista;
2. Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway;
3. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality; or
4. Create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area.

Methodology

Aesthetics impact assessments involve qualitative analysis that is subjective but informed by the City policies detailed above. Reactions to the same aesthetic conditions vary according to viewer taste and interests but are basically governed by the visual compatibility with the surroundings and existing development, coherence with design guidelines established by the jurisdiction, and use of high-quality materials that blend into the landscape. Ultimately, development decisions that prescribe aesthetic or design treatments for specific projects fall under the purview of the American Canyon Planning Commission and appointed or elected bodies charged with overseeing development permits. As a programmatic document, this EIR presents a City-wide assessment of the project. Because the EIR is a long-term document intended to guide actions for many years into the future, this analysis relies on program-level and qualitative evaluation.

Threshold 1: Would the project have a substantial adverse effect on a scenic vista?

Impact AES-1 THE PROJECT WOULD NOT HAVE A SUBSTANTIAL ADVERSE EFFECT ON A SCENIC VISTA, INCLUDING VIEWS OF HILLS, AND IMPACTS WOULD BE LESS THAN SIGNIFICANT.

The City has no designated scenic vistas or scenic viewpoints; however, views of the hills and ridgelines surrounding the City, including the Sulphur Springs foothills to the east and Oat Hill to the west, are generally considered important visual resources. Views from SR 29 provide motorists with expansive, although fleeting, views of these hills. In addition, expansive scenic views of the City and surrounding natural areas are provided from the Newell Open Space Preserve. Views from the Newell Open Space Preserve include the City, the Napa Wetlands, the Napa River, and Oat Hill. Wetlands Edge Road provides unobstructed views of the wetlands and Napa River to the west.

Future mobility improvements facilitated by the project, including improvements to roadways, and bicycle and pedestrian facilities, would not substantially obstruct views of a scenic vista. Mobility improvements such as installation of a roundabout, repaving of roads, or other improvements to bicycle lanes or pedestrian intersections are not large-scale developments which have the potential to substantially obstruct views of important visual resources in the City. In addition, mobility improvements could offer new opportunities for the public to view scenic areas. Accordingly, mobility improvements facilitated by the project would not have a substantial adverse effect on a scenic vista.

In addition, the 2040 General Plan Update would implement the following proposed policies to minimize impacts to scenic vistas:

- **Policy ENV-9.3: Identify Scenic Vistas.** Identify notable viewsheds and public views from which scenic vistas can be observed.
- **Policy ENV-9.4: Visual Design**. Require massing, height, and orientation of new development where allowable by the zoning standards adjacent to viewsheds and public views be evaluated and be sited and designed to minimize additional obstructions of public views to and along scenic areas.

Implementation of the proposed policies ENV-9.3 and ENV-9.4 would require the City's Community Development Department to create and periodically update an inventory of scenic resources important to the City; identify and map valuable scenic views; and update the City's development and design standards to protect scenic resources and viewsheds by requiring massing, height, and orientation of new development adjacent to viewsheds and public views be designed to minimize additional obstructions of public views and along scenic areas. Future development would be required to comply with the City's updated development and design standards created in accordance with proposed policies ENV-9.3 and ENV-9.4. As a result, project-specific development would be designed to minimize obstruction to scenic vistas. Therefore, the project would not have a substantial adverse effect on a scenic vista. This impact would be less than significant.

Mitigation Measures

No mitigation measures would be required.

Significance After Mitigation

Impacts would be less than significant without mitigation.

Threshold 2:	Would the project substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Impact AES-2 THE CITY OF AMERICAN CANYON DOES NOT HAVE A DESIGNATED STATE SCENIC HIGHWAY AND THE PROJECT WOULD NOT DAMAGE SCENIC RESOURCES WITHIN A STATE SCENIC HIGHWAY. NO IMPACT WOULD OCCUR.

There are no designated state scenic highways within or directly adjacent to the Planning Area (Caltrans 2018). Because there are no state scenic highways in the Planning Area, there would be no impacts related to scenic resources within a state scenic highway.

Mitigation Measures

No mitigation measures would be required.

Significance After Mitigation

There would be no impact.

Threshold 3:	Would the project, in non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Impact AES-3 THE PROJECT WOULD IMPLEMENT POLICIES THAT WOULD REQUIRE DEVELOPMENT OF OBJECTIVE DESIGN STANDARDS FOR FUTURE DEVELOPMENT. THE PROJECT WOULD NOT CONFLICT WITH APPLICABLE ZONING AND OTHER REGULATIONS GOVERNING SCENIC QUALITY AND THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.

CEQA Guidelines Section 21071 defines an urbanized area as an incorporated city that meets either of the following criteria:

- Has a population of at least 100,000 persons; or
- Has a population of less than 100,000 persons if the population of that city and not more than two contiguous incorporated cities combined equals at least 100,000 persons.

The City does not meet the first criteria but does meet the second criteria (California Department of Finance 2022)[1]. Therefore, this analysis considers whether the project conflicts with applicable zoning and other regulations governing scenic quality. The 2040 General Plan Update would implement the following proposed policies, which would minimize impacts on scenic quality from future development:

- **Policy LU-2.3: Objective Design Standards.** Establish objective design standards that convey a high level of quality and character in new residential development.

[1] The City of American Canyon has a population of approximately 21,758 persons. The City of Vallejo is an incorporated city which is contiguous to the City of American Canyon and has a population of approximately 121,558 persons. The combined population of both cities exceeds 100,000 persons.

- **Policy LU-2.4: Nonresidential Structures in Residential Neighborhoods**. Require nonresidential structures in new development (e.g., recreation facilities, community meeting rooms and auditoriums, neighborhood commercial, services, and religious facilities) be designed to be compatible with and convey the visual and physical scale and character of residential structures.
- **Policy LU-3.2: Unique Viewsheds.** Accommodate commercial uses on Oat Hill that capitalize on the unique views of the Napa River, San Francisco Bay, and Napa Valley, site topography, and other natural characteristics.
- **Policy LU-5.2: Industrial Development Unified Character.** Require new industrial development be designed to convey a unified character by inclusion of pedestrian walkways, arcades, an/or other visual elements to interconnect individual buildings; differentiation of building facades by materials, color, architectural details, and modulation of building volumes; use of consistent and well-designed public and informational signage; and installation of elements that define the key entries to the industrial district.
- **Policy LU-8.2: Objective Design and Development Standards.** Require new development to comply with the City's objective design and development standards to maintain long- term, high-quality development.
- **Policy ENV-9.4: Visual Design**. Require massing, height, and orientation of new development where allowable by the zoning standards adjacent to viewsheds and public views be evaluated and be sited and designed to minimize additional obstructions of public views to and along scenic areas.

Proposed policy LU-2.3 and policy LU-8.2 would require all new development to comply with objective design standards prepared by the City's Community Development Department. Proposed policy LU-2.4 would require nonresidential structures be designed to be visually compatible with the surrounding character of residential structures. Proposed policy LU-3.2 would require commercial development to be sited and designed to emphasize the visual characteristics of its setting. Proposed policy LU-5.2 would require industrial development to be designed to convey a unified character with surrounding development through implementation of visual elements to interconnect individual buildings. Furthermore, proposed policy ENV-9.4 would require massing, height, and orientation of new development adjacent to viewsheds and public views be evaluated and be sited and designed to minimize additional obstructions of public views to and along scenic areas.

All future development facilitated by the project would be required to adhere to the proposed policies within the 2040 General Plan Update and the City's objective design standards, which would be developed as required by the 2040 General Plan Update. As such, future development facilitated by the project would not conflict with applicable zoning or other regulations governing scenic quality. Therefore, this impact would be less than significant.

Mitigation Measures

No mitigation measures would be required.

Significance After Mitigation

Impacts would be less than significant without mitigation.

Threshold 4:	Would the project create a new source of substantial light or glare that would adversely affect daytime or nighttime views in the area?

Impact AES-4 CONSTRUCTION AND OPERATION OF FUTURE DEVELOPMENT FACILITATED BY THE PROJECT COULD CREATE NEW SOURCES OF LIGHT OR GLARE THAT COULD ADVERSELY AFFECT THE VISUAL ENVIRONMENT. IMPACTS WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION.

The City of American Canyon is a built out city with existing sources of light and glare. Future development facilitated by the project would introduce new sources of light or glare to American Canyon. New sources of light (security lighting, parking lot lighting, ornamental lighting, pedestrian scale lights, lighting from ground floor storefronts, and signs) would increase overall lighting levels in areas where increased development would occur.

Construction of future development would largely be limited to between 7:00a.m. and 7:00p.m., consistent with the City's Noise Ordinance, codified as Chapter 8.12 in the American Canyon Municipal Code. However, temporary construction lighting may be necessary for specific developments during the early morning or evening hours for safety and security reasons, and could be approved by the City upon applicant request. The introduction of temporary construction lighting could potentially result in new sources of substantial light or glare that could adversely affect nighttime views. This lighting could be bright, which would be a potentially significant impact. Implementation of Mitigation Measure AES-1 would require construction lighting to be minimized and downward-facing.

The City is characterized by existing residential, commercial, and other land uses that already generate high ambient levels of lighting. Nonetheless, a potentially significant lighting impact could occur if lighting on future development is not properly installed to minimize light spillage. Future development facilitated by the project would adhere to the CALGreen Code Section 5.106.8 which stipulates new lighting must conform to standards that keep light generated on-site from leaving the site through the use of reflectors, shields, screen walls, and any other method which complies with the CALGreen Code's intent to limit light pollution. Furthermore, future development facilitated by the project would adhere to existing American Canyon Municipal Code standards. Section 19.14.040 prohibits bright or flashing lights to be visible off-site in industrial zones. Section 19.11.060 requires parking illumination in commercial districts, including security lighting, to be arranged to reflect from adjoining properties and rights-of-way. Furthermore, the 2040 General Plan includes the following policies that would minimize lighting impacts:

- **Policy LU-3.3: Unwanted Glare.** Prevent glare with commercial lighting designed to illuminate within the property line in accordance with safety standards.
- **Policy LU-5.4: Industrial Operations.** Require, where industrial uses are located adjacent to residential neighborhoods, that their operations be controlled to prevent adverse impacts on adjacent property (e.g., noise, light and glare, and odors) and appropriate measures implemented to buffer these uses (e.g., setbacks, landscaping, and earthen berms).

Furthermore, implementation of Mitigation Measure AES-2 would require the submittal of a photometric plan for future development to ensure that all exterior light fixtures are directed downward or employ full cut-off fixtures to minimize light spillage. Implementation of this mitigation, as well as the requirements in the Municipal Code and policies in the 2040 General Plan would minimize potentially significant light and glare impacts.

Mitigation Measures

AES-1 Construction Lighting Plan

Prior to nighttime construction, if needed for a particular project, project applicants shall submit a construction lighting plan to the City for review and approval. The construction lighting plan shall ensure that the minimum amount of lighting is used to meet safety requirements and ensure no spillover occurs to nearby sensitive uses. All lighting shall be directed downward and away from surrounding land uses.

AES-2 Operational Lighting Plan

Prior to discretionary project approval, the project applicant shall prepare and submit a photometric plan to the City for review and approval which demonstrates that all exterior light fixtures will be directed downward or employ full cut-off fixtures to prevent light spillage. The approved plan shall be incorporated into project design plans.

Significance After Mitigation

Implementation of Mitigation Measure AES-1 would require a construction lighting plan for projects that would require nighttime construction and Mitigation Measure AES-2 would require the preparation of a photometric plan. Implementation of Mitigation Measures AES-1 and AES-2 would ensure that lighting and glare is minimized during construction and operation of future development. With implementation of Mitigation Measures AES-1 and AES-2, impacts would be less than significant.

4.2 Air Quality

This section analyzes the potential effects on air quality related to implementation of the project, including impacts due to construction, operations, and impacts to nearby sensitive receptors.

4.2.1 Setting

a. Climate and Topography

Air quality is affected by the rate and location of pollutant emissions and by climatic conditions that influence the movement and dispersion of pollutants. Atmospheric conditions, such as wind speed, wind direction, and air temperature gradients, along with local and regional topography, influence the relationship between air pollutant emissions and air quality.

The Planning Area is in the San Francisco Bay Area Air Basin (SFBAAB), which is comprised of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, southwestern Solano, and southern Sonoma Counties. SFBAAB covers approximately 5,540 square miles of complex terrain, consisting of coastal mountain ranges, inland valleys, and the San Francisco Bay. The SFBAAB is generally bounded on the west by the Pacific Ocean, on the north by the Coast Ranges, and on the east and south by the Diablo Range.

The climate within the SFBAAB is dominated by a strong, semi-permanent, subtropical high-pressure cell over the northeastern Pacific Ocean. Climate is also affected by the adjacent oceanic heat reservoir's moderating effects. Mild summers and winters, moderate rainfall and humidity, and daytime onshore breezes characterize regional climatic conditions in the San Francisco Bay Area (Bay Area). In summer, when the high-pressure cell is strongest and farthest north, fog forms in the morning and temperatures are mild. In winter, when the high-pressure cell is weakest and farthest south, occasional rainstorms occur.

Winter daytime temperatures in the SFBAAB typically average in the mid-50s, with nighttime temperatures averaging in the low 40s. Summer daytime temperatures typically average in the 70s, with nighttime temperatures averaging in the 50s. Precipitation varies in the region, but in general, annual rainfall is lowest in the coastal plain and inland valley, higher in the foothills, and highest in the mountains.

b. Air Pollutants of Primary Concern

Criteria air pollutants are defined as those pollutants for which the federal and state governments have established air quality standards for outdoor or ambient concentrations to protect public health with a determined margin of safety. Ozone (O_3) is generally considered to be regional pollutants because they or their precursors affect air quality on a regional scale. Pollutants such as carbon monoxide (CO), nitrogen dioxide (NO_2), and sulfur dioxide (SO_2) are considered local pollutants because they tend to accumulate in the air locally. Coarse particulate matter (PM_{10}) and fine particulate matter ($PM_{2.5}$) are considered both regional and local pollutants.

Ozone

O_3 is a highly oxidative unstable gas, produced by a photochemical reaction (triggered by sunlight) between NO_X and reactive organic gas (ROG)/volatile organic compounds (VOC).[1] ROG are composed of non-methane hydrocarbons (with some specific exclusions), and NO_X is composed of different chemical combinations of nitrogen and oxygen, mainly nitric oxide and NO_2. NO_X is formed during the combustion of fuels, while ROG are formed during combustion and evaporation of organic solvents. As a highly reactive molecule, O_3 readily combines with many different components of the atmosphere. Consequently, high levels of O_3 tend to exist only while high ROG and NO_X levels are present to sustain the O_3 formation process. Once the precursors have been depleted, O_3 levels rapidly decline. Because these reactions occur on a regional rather than local scale, O_3 is considered a regional pollutant. Groups most sensitive to O_3 include children, the elderly, people with respiratory disorders, and people who exercise strenuously outdoors (United States Environmental Protection Agency [USEPA] 2022a). Depending on the level of exposure, O_3 can result in the following:

- Cause coughing and sore or scratchy throat;
- Make it more difficult to breathe deeply and vigorously and cause pain when taking a deep breath;
- Inflame and damage the airways;
- Make the lungs more susceptible to infection;
- Aggravate lung diseases such as asthma, emphysema, and chronic bronchitis; and/or
- Increase the frequency of asthma attacks.

Carbon Monoxide

CO is a localized pollutant that is found in high concentrations only near its source. The major source of CO, a colorless, odorless, poisonous gas, is the incomplete combustion of petroleum fuels by automobile traffic. Therefore, elevated concentrations are usually only found near areas of high traffic volumes. Other sources of CO include the incomplete combustion of petroleum fuels at power plants and fuel combustion from wood stoves and fireplaces during the winter. When CO levels are elevated outdoors, they can be of particular concern for people with some types of heart disease. People with heart disease have restricted blood flow which results in a lack of oxygen to the heart muscle. These people are especially vulnerable to the effects of CO when exercising or under increased stress, when the heart needs more oxygen than usual. In these situations, short-term exposure to elevated CO may result in reduced oxygen to the heart accompanied by chest pain also known as angina (USEPA 2022b).

Nitrogen Dioxide

NO_2 is a by-product of fuel combustion; the primary sources are motor vehicles and industrial boilers and furnaces. The principal form of NO_x produced by combustion is nitric oxide, but nitric oxide reacts rapidly to form NO_2, creating the mixture of nitric oxide and NO_2, commonly called NO_x. NO_2 is a reactive, oxidizing gas and an acute irritant capable of damaging cell linings in the respiratory tract. Such exposures over short periods can aggravate respiratory diseases, particularly

[1] The California Air Resources Board defines VOC and ROG similarly as, "any compound of carbon excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate," with the exception that VOC are compounds that participate in atmospheric photochemical reactions. For the purposes of this analysis, ROG and VOC are considered comparable in terms of mass emissions, and the term ROG is used in this environmental impact report.

asthma, leading to respiratory symptoms (such as coughing, wheezing, or difficulty breathing), and increase hospital admissions and visits to emergency rooms. Longer exposures to elevated concentrations of NO_2 may contribute to the development of asthma and potentially increase susceptibility to respiratory infections. People with asthma, as well as children and the elderly are generally at greater risk for the health effects of NO_2 (USEPA 2022c). NO_2 absorbs blue light and causes a reddish-brown cast to the atmosphere and reduced visibility. It can also contribute to the formation of O_3/smog and acid rain.

Sulfur Dioxide

SO_2 is included in a group of highly reactive gases known as "oxides of sulfur." The largest sources of SO_2 emissions are from fossil fuel combustion at power plants (73 percent) and other industrial facilities (20 percent). Smaller sources of SO_2 emissions include industrial processes such as extracting metal from ore and burning fuels with a high sulfur content by locomotives, large ships, and off-road equipment. Short-term exposures to SO_2 can harm the human respiratory system and make breathing difficult. People with asthma, particularly children, are sensitive to these effects of SO_2 (USEPA 2022d).

Particulate Matter

Suspended atmospheric PM_{10} and $PM_{2.5}$ is comprised of finely divided solids and liquids such as dust, soot, aerosols, fumes, and mists. Both PM_{10} and $PM_{2.5}$ are directly emitted into the atmosphere as by-products of fuel combustion and wind erosion of soil and unpaved roads. Particulate matter is also created in the atmosphere through chemical reactions. The characteristics, sources, and potential health effects associated with PM_{10} and $PM_{2.5}$ can be very different. PM_{10} is generally associated with dust mobilized by wind and vehicles while $PM_{2.5}$ is generally associated with combustion processes as well as formation in the atmosphere as a secondary pollutant through chemical reactions. PM_{10} can cause increased respiratory disease, lung damage, cancer, premature death, reduced visibility, surface soiling. For $PM_{2.5}$, short-term exposures (up to 24-hours duration) have been associated with respiratory issues such as acute bronchitis and asthma attacks. In addition, $PM_{2.5}$ can cause premature mortality, increased hospital admissions for heart or lung issues, and restricted activity days. These adverse health effects have been reported primarily in infants, children, and older adults with preexisting heart or lung diseases (California Air Resources Board [CARB] 2022a).

Toxic Air Contaminants

Toxic air contaminants (TACs) are a diverse group of air pollutants that may cause or contribute to an increase in deaths or serious illness, or that may pose a present or potential hazard to human health. TACs include both organic and inorganic chemical substances that may be emitted from a variety of common sources, including gasoline stations, motor vehicles, dry cleaners, industrial operations, painting operations, and research and teaching facilities. One of the main sources of TACs in California is diesel engine exhaust that contains solid material known as diesel particulate matter (DPM). More than 90 percent of DPM is less than one micron in diameter (about $1/70^{th}$ the diameter of a human hair) and thus is a subset of $PM_{2.5}$. Because of their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lungs (CARB 2022b).

TACs are different than criteria pollutants because ambient air quality standards have not been established for TACs. TACs occurring at extremely low levels may still cause health effects and it is

typically difficult to identify levels of exposure that do not produce adverse health effects. TAC impacts are described by carcinogenic risk and by chronic (i.e., long duration) and acute (i.e., severe but of short duration) adverse effects on human health.

TACs include both organic and inorganic chemical substances. While DPM is a main source, TACs may be emitted from a variety of common sources, including gasoline stations, motor vehicles, dry cleaners, industrial operations, painting operations, and research and teaching facilities. People exposed to toxic air pollutants at sufficient concentrations and durations may have an increased chance of developing cancer or experiencing other serious health effects. These health effects can include damage to the immune system, as well as neurological, reproductive (e.g., reduced fertility), developmental, respiratory, and other health problems (USEPA 2020).

c. Air Quality Standards and Attainment

The federal and state governments have authority under the federal and state Clean Air Acts (CAA) to regulate emissions of airborne pollutants and have established ambient air quality standards (AAQS) for the protection of public health. An air quality standard is defined as "the maximum amount of a pollutant averaged over a specified period of time that can be present in outdoor air without harming public health" (CARB 2019a). The USEPA is the federal agency designated to administer air quality regulation, while CARB is the state equivalent in California. Federal and state AAQS have been established for six criteria pollutants: O_3, CO, NO_2, SO_2, $PM_{10,}$ $PM_{2.5}$, and lead. AAQS are designed to protect those segments of the public most susceptible to respiratory distress, such as children under the age of 14, the elderly (over the age of 65), persons engaged in strenuous work or exercise, and people with cardiovascular and chronic respiratory diseases (USEPA 2016). In addition to the federal criteria pollutants, the California Ambient Air Quality Standards (CAAQS) also specify standards for visibility-reducing particles, sulfates, hydrogen sulfide, and vinyl chloride (CARB 2019b). Table 4.2-1 lists the current National Ambient Air Quality Standards (NAAQS) as well as the CAAQS for regulated pollutants.

USEPA and CARB designate air basins or portions of air basins and counties as being in "attainment" or "nonattainment" for each of the criteria pollutants. Areas that do not meet the AAQS standards are classified as nonattainment areas. The NAAQS (other than O_3, PM_{10}, $PM_{2.5}$, and those based on annual averages or arithmetic mean) are not to be exceeded more than once per year. The NAAQS for O_3, PM_{10}, and $PM_{2.5}$ are based on statistical calculations over one- to three-year periods, depending on the pollutant. The CAAQS are not to be exceeded during a three-year period. The attainment status for Napa County is included in Table 4.2-2.

Pursuant to the CAA, USEPA designates areas as attainment, nonattainment, or maintenance for each criteria pollutant based on whether the NAAQS have been achieved. Whether an area meets the state and federal standards is based on air quality monitoring data. Areas that are unclassified have insufficient monitoring data for a specific pollutant to determine attainment or nonattainment status, although unclassified areas are typically treated as attainment for a specific pollutant. Since attainment and nonattainment designation is pollutant-specific, an area may be classified as nonattainment for one pollutant and attainment for another. Similarly, because the state and federal standards differ, an area could be classified as attainment for the federal standards of a pollutant and as nonattainment for the state standards of the same pollutant. The region is designated as a nonattainment area for the federal and state Ozone standards and the State PM_{10} and $PM_{2.5}$ standards. The region is designated unclassified or attainment for all other ambient air quality standards (BAAQMD 2017a).

Table 4.2-1 Federal and State Ambient Air Quality Standards

Pollutant	Averaging Time	NAAQS	CAAQS
Ozone	1-Hour	–	0.09 ppm
	8-Hour	0.070 ppm	0.070 ppm
Carbon Monoxide	8-Hour	9.0 ppm	9.0 ppm
	1-Hour	35.0 ppm	20.0 ppm
Nitrogen Dioxide	Annual	0.053 ppm	0.030 ppm
	1-Hour	0.100 ppm	0.18 ppm
Sulfur Dioxide	Annual	–	–
	24-Hour	–	0.04 ppm
	1-Hour	0.075 ppm	0.25 ppm
PM_{10}	Annual	–	20 µg/m^3
	24-Hour	150 µg/m^3	50 µg/m^3
PM_{25}	Annual	12 µg/m^3	12 µg/m^3
	24-Hour	35 µg/m^3	–
Lead	30-Day Average	–	1.5 µg/m^3
	3-Month Average	0.15 µg/m^3	–

NAAQS = National Ambient Air Quality Standards; CAAQS = California Ambient Air Quality Standards; ppm = parts per million; µg/m^3 = micrograms per cubic meter

d. Current Ambient Air Quality

The Planning Area is located in Napa County, which is under the jurisdiction of the Bay Area Air Quality Management District (BAAQMD). BAAQMD is responsible for achieving and maintaining the state and federal AAQS within its jurisdiction. BAAQMD operates a network of air quality monitoring stations throughout the SFBAAB. The monitoring stations aim to measure ambient concentrations of pollutants and determine whether ambient air quality meets the state and federal standards. The monitoring station closest to the Planning Area is the Vallejo – 304 Tuolomne Street Station, approximately 4 miles south of the Planning Area. This station measures 8-hour O_3, hourly O_3, $PM_{2.5}$, and NO_X. The Napa – Valley College air monitoring station (located at Magnolia Drive and Route 221) in Napa is the closest air monitoring station to the Planning Area that measures PM_{10}. This station is approximately 6.5 miles north of the Planning Area. Table 4.2-3 indicates the number of

days each federal and state standard was exceeded at the Vallejo – 304 Tuolomne Street and Napa – Valley College air monitoring stations. As shown in Table 4.2-3, O_3 measurements exceeded federal or state O_3 standards in all three observation years. PM_{10} measurements exceeded the State standard in 2020. $PM_{2.5}$ measurements exceeded federal $PM_{2.5}$ standards in 2020. No other state or federal standards were exceeded at these air monitoring stations.

Table 4.2-3 Ambient Air Quality Data

Pollutant	2019	2020	2021
8 Hour Ozone (ppm), 8-Hour Average[1]	**0.076**	**0.077**	**0.072**
Number of Days of state exceedances (>0.070 ppm)	1	1	1
Number of days of federal exceedances (>0.070 ppm)	1	1	1
Ozone (ppm), Worst Hour[1]	0.092	**0.096**	**0.099**
Number of days of state exceedances (>0.09 ppm)	0	1	1
Carbon Monoxide (ppm), Worst-Hour	*	*	*
Number of days of state exceedances (>20.0 ppm)	*	*	*
Nitrogen Dioxide (ppm) - Worst Hour[1]	0.053	0.048	0.041
Number of days of state exceedances (>0.18 ppm)	0	0	0
Number of days of federal exceedances (>0.10 ppm)	0	0	0
Particulate Matter 10 microns, μg/m^3, Worst 24 Hours[2]	37.5	**122.9**	22.9
Number of days of state exceedances (>50 μg/m^3)	0	12	0
Number of days above federal standard (>150 μg/m^3)	0	0	0
Particulate Matter <2.5 microns, μg/m^3, Worst 24 Hours[1]	30.5	**152.7**	32.0
Number of days above federal standard (>35 μg/m^3)	0	12	0

[1] Measurements were taken from the Vallejo – 304 Tuolomne Street Station

[2] Measurements taken from the Napa – Valley College Station.

*Insufficient data available to determine the value.

Bold lettering indicates an exceedance of applicable AAQS.

e. Sensitive Receptors

Sensitive receptors are facilities or land uses that include members of the population who are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. According to BAAQMD, sensitive receptors are defined as facilities or land uses that include members of the population that are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples include schools, hospitals and residential areas (BAAQMD 2017b). The Planning Area contains residential sensitive receptors throughout the Planning Area. Schools within the city include American Canyon High School, Canyon Oaks Elementary School, Donaldson Way Elementary School, and American Canyon Middle School.

4.2.2 Regulatory Setting

a. Federal

Federal Clean Air Act

The Federal Clean Air Act (CAA) governs air quality in the United States. The CAA is administered by United States Environmental Protection Agency (USEPA) at the federal level, California Air Resources Board (CARB) at the State level, and by the Air Quality Management Districts at the regional and local levels. The CAA of 1970 and the CAA Amendments of 1971 required the USEPA to establish the National Ambient Air Quality Standards (NAAQS), with states retaining the option to adopt more stringent standards or to include other specific pollutants. On April 2, 2007, the Supreme Court found that CO_2 is an air pollutant covered by the CAA; however, no NAAQS have been established for CO_2.

The USEPA is responsible for enforcing the federal CAA. The USEPA is also responsible for establishing NAAQS. NAAQS are required under the 1977 CAA and subsequent amendments. The USEPA regulates emission sources that are under the exclusive authority of the federal government, such as aircraft, ships, and certain types of locomotives. The agency has jurisdiction over emission sources outside State waters (e.g., beyond the outer continental shelf) and establishes various emission standards, including those for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission standards established by CARB.

USEPA Emission Standards for New Off-road Equipment

Before 1994, there were no standards to limit the amount of emissions from off-road equipment. In 1994, USEPA established emission standards for hydrocarbons, NOx, CO, and PM to regulate new pieces of off-road equipment. These emission standards came to be known as Tier 1. Since that time, increasingly more stringent Tier 2, Tier 3, and Tier 4 (interim and final) standards were adopted by USEPA, as well as by CARB. Each adopted emission standard was phased in over time. New engines built in and after 2015 across all horsepower sizes must meet Tier 4 final emission standards. In other words, new manufactured engines cannot exceed the emissions established for Tier 4 final emissions standards.

b. State

California Clean Air Act

The California CAA allows the state to adopt ambient air quality standards and other regulations provided that they are at least as stringent as federal standards. CARB, a part of the California Environmental Protection Agency (CalEPA), is responsible for the coordination and administration of both federal and state air pollution control programs within California, including setting the CAAQS. CARB also conducts research, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. CARB also has primary responsibility for the development of California's State Implementation Plan (SIP), for which it works closely with the federal government and the local air districts.

California State Implementation Plan

The SIP is a living document that is periodically modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins, as reported by the agencies with jurisdiction over them. The CAA Amendments dictate that states containing areas violating the NAAQS revise their SIPs to include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS. The USEPA has the responsibility to review all SIPs to determine if they conform to the requirements of the CAA.

State law makes CARB the lead agency for all purposes related to the SIP. Local air districts and other agencies prepare SIP elements and submit them to CARB for review and approval. CARB then forwards SIP revisions to the USEPA for approval and publication in the Federal Register. The BAAQMD 2017 Clean Air Plan is the SIP for the SFBAAB. The 2017 Clean Air Plan accommodates growth by projecting the growth in emissions based on different indicators. For example, population forecasts adopted by the Association of Bay Area Governments (ABAG) are used to forecast population-related emissions. Through the planning process, emissions growth is offset by basin-wide controls on stationary, area, and transportation sources of air pollution.

California Low-Emission Vehicle Program

CARB first adopted Low-Emission Vehicle (LEV) program standards in 1990. These first LEV standards ran from 1994 through 2003. LEV II regulations, running from 2004 through 2010, represent continuing progress in emission reductions. As the State's passenger vehicle fleet continues to grow and more sport utility vehicles and pickup trucks are used as passenger cars rather than work vehicles, the more stringent LEV II standards were adopted to provide reductions necessary for California to meet federally mandated clean air goals outlined in the 1994 SIP. In 2012, CARB adopted the LEV III amendments to California's LEV regulations. These amendments, also known as the Advanced Clean Car Program, include more stringent emission standards for model years 2017 through 2025 for both criteria pollutants and greenhouse gas (GHG) emissions for new passenger vehicles.

California On-Road Heavy-Duty Vehicle Program

CARB has adopted standards for emissions from various types of new on-road heavy-duty vehicles. Section 1956.8, Title 13, California Code of Regulations contains California's emission standards for on-road heavy-duty engines and vehicles, and test procedures. CARB has also adopted programs to reduce emissions from in-use heavy-duty vehicles including the Heavy-Duty Diesel Vehicle Idling Reduction Program, the Heavy-Duty Diesel In-Use Compliance Program, the Public Bus Fleet Rule and Engine Standards, and the School Bus Program and others.

California Airborne Toxics Control Measure for Asbestos

CARB has adopted Airborne Toxics Control Measures for sources that emit a particular TAC. If there is a safe threshold for a substance at which there is no toxic effect, the control measure must reduce exposure below that threshold. If there is no safe threshold, the measure must incorporate Best Available Control Technology to minimize emissions. In July 2001, CARB approved an Air Toxic Control Measure for construction, grading, quarrying and surface mining operations to minimize emissions of naturally occurring asbestos. The regulation requires application of best management practices (BMPs) to control fugitive dust in areas known to have naturally occurring asbestos and requires notification to the local air district prior to commencement of ground-disturbing activities.

The measure establishes specific testing, notification and engineering controls prior to grading, quarrying, or surface mining in construction zones where naturally occurring asbestos is located on projects of any size. There are additional notification and engineering controls at work sites larger than one acre in size. These projects require the submittal of a "Dust Mitigation Plan" and approval by the air district prior to the start of a project.

Construction sometimes requires the demolition of existing buildings where construction occurs. Buildings often include materials containing asbestos. Asbestos is also found in a natural state, known as naturally occurring asbestos. Exposure and disturbance of rock and soil that naturally contain asbestos can result in the release of fibers into the air and consequent exposure to the public. Asbestos most commonly occurs in ultramafic rock that has undergone partial or complete alteration to serpentine rock (serpentinite) and often contains chrysotile asbestos. In addition, another form of asbestos, tremolite, can be found associated with ultramafic rock, particularly near faults. Sources of asbestos emissions include unpaved roads or driveways surfaced with ultramafic rock, construction activities in ultramafic rock deposits, or rock quarrying activities where ultramafic rock is present. The Planning Area is not located in an area likely to contain naturally occurring asbestos (California Department of Conservation 2000).

Verified Diesel Emission Control Strategies

USEPA and CARB tiered off-road emission standards only apply to new engines and off-road equipment can last several years. CARB has developed Verified Diesel Emission Control Strategies (VDECS), which are devices, systems, or strategies used to achieve the highest level of pollution control from existing off-road vehicles, to help reduce emissions from existing engines. VDECS are designed primarily for the reduction of diesel PM emissions and have been verified by CARB. There are three levels of VDECS, the most effective of which is the Level 3 VDECS. Tier 4 engines are not required to install VDECS because they already meet the emissions standards for lower tiered equipment with installed controls.

California Diesel Risk Reduction Plan

CARB Diesel Risk Reduction Plan has led to the adoption of new state regulatory standards for all new on-road, off-road, and stationary diesel-fueled engines and vehicles to reduce DPM emissions by about 90 percent overall from year 2000 levels. The projected emission benefits associated with the full implementation of this plan, including federal measures, are reductions in DPM emissions and associated cancer risks of 75 percent by 2010, and 85 percent by 2020.

Tanner Air Toxics Act and Air Toxics Hot Spots Information and Assessment Act

TACs in California are primarily regulated through the Tanner Air Toxics Act (AB 1807) and the Air Toxics Hot Spots Information and Assessment Act of 1987 (AB 2588), also known as the Hot Spots Act. To date, CARB has identified more than 21 TACs and has adopted the USEPA list of Hazardous Air Pollutants (HAPs) as TACs.

Carl Moyer Memorial Air Quality Standards Attainment Program

The Carl Moyer Memorial Air Quality Standards Attainment Program (Carl Moyer Program), a partnership between CARB and local air districts, issues grants to replace or retrofit older engines and equipment with engines and equipment that exceed current regulatory requirements to reduce

air pollution. Money collected through the Carl Moyer Program complements California's regulatory program by providing incentives to effect early or extra emission reductions, especially from emission sources in environmental justice communities and areas disproportionately affected by air pollution.

The program has established guidelines and criteria for the funding of emissions reduction projects. Within the SFBAAB, the BAAQMD administers the Carl Moyer Program. The program has established guidelines and criteria for the funding of emissions reduction projects. Within SFBAAB, the BAAQMD administers the Carl Moyer Program. The program establishes cost-effectiveness criteria for funding emission reductions projects, which under the final 2017 Carl Moyer Program Guidelines are $30,000 per weighted ton of NOX, ROG, and PM.

c. Regional and Local Regulations

Bay Area Clean Air Plan

The BAAQMD is responsible for assuring that the federal and state ambient air quality standards are attained and maintained in the Bay Area. BAAQMD is also responsible for adopting and enforcing rules and regulations concerning air pollutant sources, issuing permits for stationary sources of air pollutants, inspecting stationary sources of air pollutants, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, awarding grants to reduce motor vehicle emissions, conducting public education campaigns, as well as many other activities.

BAAQMD adopted the *Bay Area Clean Air Plan: Spare the Air, Cool the Climate (Bay Area Clean Air Plan)* on April 19, 2017 as an update to the 2010 Clean Air Plan. The BAAQMD prepared the 2017 Clean Air Plan in cooperation with the Metropolitan Transportation Commission (MTC) and the ABAG. The goals of the 2017 Clean Air Plan are to reduce regional air pollutants and climate pollutants to improve the health of Bay Area residents for the next decades. The 2017 Clean Air Plan aims to lead the region into a post-carbon economy, continue progress toward attaining all State and federal air quality standards, and eliminate health risk disparities from air pollution exposure in Bay Area communities. The 2017 Clean Air Plan defines an integrated, multi-pollutant control strategy that includes 85 distinct feasible control measures to reduce emissions for four categories: ground-level ozone and its precursors, ROG and NO_X; PM (primarily $PM_{2.5}$, and precursors to secondary $PM_{2.5}$); TACs, and greenhouse gas emissions. The control measures are categorized based on the economic sector framework and include stationary sources, transportation, energy, buildings, agriculture, natural and working lands, waste management, and water. To protect public health, the control strategy will decrease population exposure to PM and TACs in communities that are most impacted by air pollution with the goal of eliminating disparities in exposure to air pollution between communities. The control strategy will also protect the climate by reducing greenhouse gas emissions and developing a long-range vision of how the Bay Area could look and function in a year 2050 post-carbon economy.

The focus of control measures includes aggressively targeting the largest source of GHG, ozone pollutants, and PM emissions: transportation. This includes more incentives for electric vehicle infrastructure, off-road electrification projects such as Caltrain and shore power at ports, and reducing emissions from trucks, school buses, marine vessels, locomotives, and off-road equipment. Additionally, the BAAQMD will continue to work with regional and local governments to reduce Vehicle Miles Traveled (VMT) through the further funding of rideshare, bike and shuttle programs.

BAAQMD Particulate Matter Plan

To fulfill federal air quality planning requirements, BAAQMD adopted a 2010 $PM_{2.5}$ emissions inventory in 2012. The Bay Area Clean Air Plan also included several measures for reducing PM emissions from stationary sources and wood burning. In 2013, USEPA issued a final rule determining that the Bay Area has attained the 24-hour $PM_{2.5}$ NAAQS, suspending federal SIP planning requirements for the SFBAAB. Despite this USEPA action, the SFBAAB will continue to be designated as nonattainment for the national 24-hour $PM_{2.5}$ standard until BAAQMD submits a redesignation request and a maintenance plan to USEPA, and USEPA approves the proposed redesignation.

The SFBAAB is in nonattainment for the federal PM_{10} and federal $PM_{2.5}$ standards. USEPA lowered the 24-hour $PM_{2.5}$ standard from 65 micrograms per cubic meter ($\mu g/m^3$) to 35 $\mu g/m^3$ in 2006, and designated the Air Basin as nonattainment for the new $PM_{2.5}$ standard effective December 14, 2009.

BAAQMD believes that it would be premature to submit a redesignation request and $PM_{2.5}$ maintenance plan at this time. Therefore, BAAQMD will prepare a "clean data" SIP to address the required elements, including:

- An emission inventory for primary $PM_{2.5}$, as well as precursors to secondary PM formation; and
- Amendments to the BAAQMD's New Source Review regulation to address $PM_{2.5}$.

The SFBAAB will continue to be designated as nonattainment for the 24-hour $PM_{2.5}$ NAAQS until the Air District elects to submit, and the EPA approves, a redesignation request and maintenance plan. At this time, BAAQMD does not have an applicable SIP with which the project would be required to comply. However, development facilitated by the project would be subject to the Bay Area Clean Air Plan, in addition to regulations set forth by BAAQMD as discussed in the following section.

BAAQMD Regulations

Regulation 2, Rule 1 (Permits–General Requirements)

The BAAQMD regulates new sources of air pollution and the modification and operation of existing sources through the issuances of authorities to construct and permits to operate. Regulation 2, Rule 1 provides an orderly procedure which the project would be required to comply with to receive authorities to construct or permits to operate from the BAAQMD for new sources of air pollutants, as applicable.

Regulation 2, Rule 5 (New Source Review Permitting)

The BAAQMD regulates backup emergency generators, fire pumps, and other sources of TACs through its New Source Review (Regulation 2, Rule 5) permitting process. Although emergency generators are intended to be used only during periods of power outages, monthly testing of each generator is required. BAAQMD limits testing to no more than 50 hours per year. Each emergency generator installed is assumed to meet a minimum of Tier 2 emission standards (before control measures). As part of the permitting process, the BAAQMD limits the excess cancer risk from any facility to no more than 10 per 1-million-population for any permits that are applied for within a 2-year period, and would require any source that would result in an excess cancer risk greater than 1 per 1 million to install Best Available Control Technology for Toxics.

Regulation 6, Rule 1 (Particulate Matter–General Requirements)

The BAAQMD regulates PM emissions through Regulation 6 by means of establishing limitations on emission rates, emissions concentrations, and emission visibility and opacity. Regulation 6, Rule 1 provides existing standards for PM emissions that could result during project construction or operation that the project would be required to comply with, as applicable, such as the prohibition of emissions from any source for a period or aggregate periods of more than 3 minutes in any hour which are equal to or greater than 20 percent opacity.

Regulation 6, Rule 6, (Particulate Matter–Prohibition of Trackout)

One rule by which the BAAQMD regulates PM includes Regulation 6, Rule 6, which prohibits PM trackout during project construction and operation. Regulation 6, Rule 6 requires the prevention or timely cleanup of trackout of solid materials onto paved public roads outside the boundaries of large bulk material sites, large construction sites, and large disturbed surface sides such as landfills.

Regulation 8, Rule 3 (Architectural Coatings)

This rule governs the manufacture, distribution, and sale of architectural coatings and limits the reactive organic gases content in paints and paint solvents. Although this rule does not directly apply to the project, it does dictate the ROG content of paint available for use during the construction.

Regulation 8, Rule 15 (Emulsified and Liquid Asphalts)

Although this rule does not directly apply to the project, it does dictate the reactive organic gases content of asphalt available for use during construction by regulating the sale and use of asphalt and limiting the ROG content in asphalt.

Regulation 1, Rule 301 (Odorous Emissions)

BAAQMD enforces odor control by helping the public to document a public nuisance. Upon receipt of a complaint, BAAQMD sends an investigator to interview the complainant and to locate the odor source if possible. BAAQMD typically brings a public nuisance court action when there are a substantial number of confirmed odor events within a 24-hour period. An odor source with five or more confirmed complaints per year averaged over 3 years is considered to have a substantial effect on receptors. Several BAAQMD regulations and rules apply to odorous emissions. Regulation 1, Rule 301 is the nuisance provision that states that sources cannot emit air contaminants that cause nuisance to a number of persons. Regulation 7 specifies limits for the discharge of odorous substances where BAAQMD receives complaints from 10 or more complainants within a 90-day period. Regulation 7 also precludes discharge of an odorous substance that causes the ambient air at or beyond the property line to be odorous after dilution with 4 parts of odor-free air, and specifies maximum limits on the emission of certain odorous compounds.

Regulation 9, Rule 8 (Inorganic Gaseous Pollutants–Nitrogen Oxides and Carbon Monoxide from Stationary Internal Combustion Engines)

Under Regulation 9, Rule 8, the BAAQMD regulates the emissions of nitrogen oxides and carbon monoxide from stationary internal combustion engines with an output rated by the manufacturer at more than 50 brake horsepower. As such, any proposed stationary source equipment (e.g., backup generators, fire pumps) which would be greater than 50 horsepower would require a BAAQMD permit under Regulation 9, Rule 8 to operate.

Regulation 11, Rule 2 (Hazardous Pollutants–Asbestos Demolition, Renovation, and Manufacturing)

Under Regulation 11, Rule 2, the BAAQMD regulates emissions of asbestos to the atmosphere during demolition, renovation, milling, and manufacturing and establishes appropriate waste disposal procedures. Any of these activities which pose the potential to generate emissions of airborne asbestos are required to comply with the appropriate provisions of this regulation.

Plan Bay Area

On October 2021, the Metropolitan Transportation Commission (MTC) approved Plan Bay Area 2050. Plan Bay Area includes integrated land use and transportation strategies for the region and was developed through OneBayArea, a joint initiative between ABAG, BAAQMD, MTC, and the San Francisco Bay Conservation and Development Commission. Plan Bay Area is also considered the ABAG/MTC Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). In accordance with SB 743, Plan Bay Area included elements designed to encourage the type of land-use development to meet three primary objectives. First, Roadway Level of Service (LOS) could not be considered an environmental impact under the California Environmental Quality Act (CEQA). Second, it introduced changes to VMT per capita as a determinant of environmental impact. Third, the use of VMT as an environmental impact in CEQA is considered a mechanism for achieving State and regional GHG reduction goals. As a regional land use plan, Plan Bay Area aims to reduce per-capita GHG emissions through the promotion of more compact, mixed-use residential and commercial neighborhoods located near transit (ABAG; MTC 2021).

Industrial Commerce Centers Sustainability Standards Ordinance 2024-03

The American Canyon Industrial Greenhouse Gas (GHG) Standards Ordinance applies to warehousing, logistics and distribution facilities in the City for which a Notice of Preparation is issued after March 1, 2024 under CEQA. The Ordinance requires zero or low emissions standards to various aspects of industrial commerce center(s), including zero-emission equipment, rooftop solar panels, and environmental compliance measures aimed at mitigating air quality degradation.

The Ordinance establishes the following standards to all warehousing, logistics, and distribution facilities in the City where a Notice of Preparation is issued after March 1, 2024, under the California Environmental Quality Act (CEQA). It defines such facilities as those used for storing and consolidating manufactured goods, typically larger than 200,000 square feet with specific characteristics such as dock high loading doors and truck activities.

The following standards are applicable under the proposed Ordinance:

1. Zero Emission Operational Equipment: All on-site motorized operational equipment (forklifts, yard trucks, pallet jacks, etc.) must be zero-emission. This includes using electrical hookups instead of diesel-fueled generators for construction tools.
2. Zero Emission Cargo Handling Equipment: All outdoor cargo handling equipment must be zero-emission vehicles. Necessary charging stations or infrastructure for these vehicles must be included in each building.
3. Rooftop Solar Panels: Before issuing a business license, the City will ensure that rooftop solar panels are installed to supply 100% of the power needed for non-refrigerated parts of the facility, including parking areas.

4. Refrigerated Space Requirements: Facilities not committing to non-refrigerated use must install conduits during construction for potential refrigerated spaces. Electric plug-in units for refrigeration units must be installed at relevant dock doors.
5. Zero Emission Construction Equipment: All generators and diesel-fueled off-road construction equipment over 75 horsepower must be zero-emissions or have CARB Tier IV-compliant engines. Exemptions are possible if such equipment is not reasonably available.
6. Electric Vehicle Charging Stations: Install infrastructure for Level 2 (or faster) EV charging stations for a percentage of employee parking spaces, increasing to 25% by 2030.
7. Air Filtration Systems: Install HVAC and/or HEPA air filtration systems in all warehouse facilities.

4.2.3 Impact Analysis

a. Significance Thresholds and Methodology

Significance Thresholds

Based on Appendix G of the CEQA Guidelines a project may be deemed to have a significant impact on air quality if it would:

1. Conflict with or obstruct implementation of the applicable air quality plan;
2. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard;
3. Expose sensitive receptors to substantial pollutant concentrations; or
4. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

This analysis uses the BAAQMD 2017 CEQA Air Quality Guidelines to evaluate air quality.

Construction Criteria Pollutant and TAC Emissions

Construction-related emissions are limited in duration but may still cause adverse air quality impacts. Construction would generate emissions from three primary sources: the operation of construction vehicles (e.g., scrapers, loaders, dump trucks, etc.); ground disturbance during site preparation and grading, which creates fugitive dust; and the application of asphalt, paint, or other oil-based substances.

At this time, the pace, location, and duration associated with construction are not sufficiently detailed to quantify a specific emission impact, and thus it would be speculative to do so. Rather, construction criteria pollutant and TAC emissions impacts for the project are discussed qualitatively, pursuant to the BAAQMD 2017 CEQA Air Quality Guidelines.

Operation Criteria Pollutant and TAC Emissions

Based on plan-level guidance from the BAAQMD 2017 CEQA Air Quality Guidelines, long-term operational criteria pollutant and TAC emissions associated with implementation of the project are discussed qualitatively by comparing the project to the 2017 Clean Air Plan goals, policies, and control measures. In addition, comparing the rate of increase of plan VMT and population is recommended by BAAQMD for determining significance of criteria pollutants. If the project does not meet either criterion, then impacts would be potentially significant.

Odors

The impact analysis qualitatively evaluates the types of land uses facilitated by the project to evaluate whether major sources of anticipated odors would be present and, if so, whether those sources would likely generate objectionable odors. According to the BAAQMD 2017 CEQA Air Quality Guidelines, the project-level threshold for odor sources is if they result in five confirmed complaints per year averaged over three years within the screening distance for land uses shown in Table 3-3 of the guidelines (BAAQMD 2017b). The plan-level threshold states to identify the location and include policies to reduce the impacts of existing or planned sources of odors. None of the land uses identified as odor sources in the 2017 guidelines are planned as part of the project. The significance thresholds for odor impacts are qualitative in nature. Specifically, an odor-generating source with five or more confirmed complaints in the new source area per year averaged over three years is considered to have a significant impact on receptors within the screening distances provided in the guidelines.

Methodology

Consistency with Air Quality Plan

The applicable air quality plan is the BAAQMD 2017 Bay Area Clean Air Plan, which identifies measures to:

- Reduce emissions and reduce ambient concentrations of air pollutants; and
- Safeguard public health by reducing exposure to the air pollutants that pose the greatest health risk, with an emphasis on protecting the communities most heavily affected by air pollution.

The project would be consistent with the Bay Area Clean Air Plan if it would support the Clean Air Plan goals, include applicable control measures, and not disrupt or hinder implementation of Clean Air Plan. Consistency with the Clean Air Plan is the basis for determining whether the project would conflict with or obstruct implementation of an applicable air quality plan.

Construction Criteria Pollutant and TAC Emissions Thresholds

BAAQMD's 2017 CEQA Air Quality Guidelines have no plan-level significance thresholds for construction air pollutants emissions. However, they do include the individual project-level thresholds for construction-related and long-term operational emissions of air pollutants. These thresholds represent the levels at which a project's individual emissions of criteria air pollutants or precursors would result in a cumulatively considerable contribution to the SFBAAB's existing air quality conditions. Construction emissions associated with implementation of the project are discussed qualitatively to evaluate potential air quality impacts.

For health risks associated with TAC and $PM_{2.5}$ emissions, the BAAQMD 2017 CEQA Air Quality Guidelines state a project would result in a significant impact if the any of the following thresholds are exceeded:

- Non-compliance with Qualified Community Risk Reduction Plan;
- Increased cancer risk of > 10.0 in a million;
- Increased non-cancer risk of > 1.0 Hazard Index (Chronic or Acute); or
- Ambient $PM_{2.5}$ increase of > 0.3 $\mu g/m^3$ annual average

In addition, a project would have a cumulatively considerably impact associated with health risks from TAC and $PM_{2.5}$ emissions if the aggregate total emissions of all past, present, and foreseeable future sources within a 1,000-foot radius of the fenceline of the source plus the project's contribution exceed any of the following thresholds:

- Non-compliance with Qualified Community Risk Reduction Plan;
- Increased cancer risk of > 100.0 in a million;
- Increased non-cancer risk of > 10.0 Hazard Index (Chronic or Acute); or
- Ambient $PM_{2.5}$ increase of > 0.8 $\mu g/m^3$ annual average

Operational Criteria Pollutant and TAC Emissions Thresholds

BAAQMD's *2017 CEQA Air Quality Guidelines* contain specific operational plan-level significance thresholds for criteria air pollutants. Plans must show the following over the planning period:

- Consistency with current air quality plan control measures
- VMT or vehicle trips increase is less than or equal to the plan's projected population increase

If a plan can demonstrate consistency with both of these criteria, then impacts are considered less than significant. The same thresholds listed above for construction health risks from TAC and $PM_{2.5}$ would apply to operation.

b. Project Impacts and Mitigation Measures

Threshold 1:	Would the project conflict with or obstruct implementation of the applicable air quality plan?

Impact AQ-1 THE PROJECT WOULD BE CONSISTENT WITH THE BAAQMD'S 2017 CLEAN AIR PLAN. IMPACTS WOULD BE LESS THAN SIGNIFICANT.

Under BAAQMD's methodology, a determination of consistency with CEQA Guidelines thresholds should demonstrate that a project:

- Supports the primary goals of the 2017 Clean Air Plan;
- Includes applicable control measures from the 2017 Clean Air Plan; and
- Does not disrupt or hinder implementation of any 2017 Clean Air Plan control measures.

The following includes a discussion of consistency with these criteria for the project. The 2017 Clean Air Plan contains 85 control measures aimed at reducing air pollution and protecting the climate in the Bay Area. For consistency with climate planning efforts at the State level, the control strategies in the 2017 Clean Air Plan are based on the same economic sector framework used by CARB, which encompass stationary sources, transportation, energy, buildings, agriculture, natural and working lands, waste management, water, and super-GHG pollutants (such as methane and hydrofluorocarbons). Table 4.2-4 identifies applicable control measures and discusses project consistency with the 2017 Clean Air Plan.

Table 4.2-4 Clean Air Plan Control Measures Consistency Analysis

Control Measures	Consistency
Stationary Sources	
SS18: Basin-Wide Combustion Strategy. Stabilize and then reduce emissions of GHGs, criteria air pollutant and toxic emissions from stationary combustion sources throughout the Air District by first establishing carbon intensity caps on major GHG sources, and then adopting new rules to (1) reduce fuel use on a source-type by source-type basis, and (2) evaluate alternatives to decarbonize abatement devices. **SS21: New Source Review for Air Toxics.** Propose revisions to Air District Rule 2-5, New Source Review of Toxic Air Contaminants, based on OEHHA's 2015 Health Risk Assessment Guidelines and CARB/ CAPCOA's 2015 Risk Management Guidance. Revise the Air District's health risk assessment trigger levels for each toxic air contaminant using the 2015 Guidelines and most recent health effects values.	**Consistent.** Stationary sources are regulated directly by BAAQMD, which routinely adopts/revises rules or regulations to implement the Stationary Source control measures to reduce stationary source emissions. Therefore, any new stationary sources associated with development facilitated by the project would be required to comply with BAAQMD's regulations.
Transportation	
TR2: Trip Reduction Programs. Implement the regional Commuter Benefits Program (Rule 14-1) that requires employers with 50 or more Bay Area employees to provide commuter benefits. Encourage trip reduction policies and programs in local plans, e.g., general and specific plans, while providing grants to support trip reduction efforts. Encourage local governments to require mitigation of vehicle travel as part of new development approval, to adopt transit benefits ordinances in order to reduce transit costs to employees, and to develop innovative ways to encourage rideshare, transit, cycling, and walking for work trips. Fund various employer-based trip reduction programs.	**Consistent**: The Mobility Element includes proposed policies that encourage trip reduction programs. The following proposed goals and policies aim to reduce VMT through implementation of policies such as: ▪ **Policy MOB-1.5: Sidewalks.** Require sidewalks on all arterial and collector streets. Where feasible, separate sidewalks from streets on arterials and collectors with landscaping including a tree canopy to create shade. ▪ **Policy MOB-1.7: Promote Walking and Bicycling.** Promote walking and bicycling for transportation, recreation, and improvement of public health. ▪ **Policy MOB-1.11: Reduce the Need to Drive.** Implement land use policies designed to create a pattern of activity that makes it easy to shop, play, visit friends, and conduct personal business without driving. ▪ **Policy MOB-1.17: Reduce Vehicle Miles Traveled.** Through layout of land uses, improved alternate travel modes, and provision of more direct routes, strive to reduce the total vehicle miles traveled by city and non-residents traveling to American Canyon to work or shop. ▪ **Policy MOB-1.22: Non-motorized Circulation System.** Provide safe and direct pedestrian routes and bikeways between places. ▪ **Policy MOB-6.1: VMT Thresholds.** Maintain and periodically reevaluate established vehicle miles traveled (VMT) thresholds and Transportation Demand Management (TDM) mitigation requirements for the purposes of environmental review under the California Environmental Quality Act (CEQA). Continue to maintain LOS standards for the purposes of planning and designing street

Control Measures	Consistency
	improvements on Green Island Road, Devlin Road, and American Canyon Road. ▪ **Policy MOB 5.10 : Transit Supportive Development.** Ensure that new development is designed to make transit a viable transportation choice for residents, including neighborhood centers or focal points with sheltered bus stops; locating medium and high-density development on or near streets served by transit wherever feasible; and link neighborhoods to bus stops by continuous sidewalks or pedestrian paths. *(Source: Existing Policy 3.11)* ▪ **Policy MOB 5.12 : SB 375 Implementation.** Coordinate with other agencies to implement regional transit solutions as part of the SB 375 Sustainable Communities Strategy. *Source: Existing Policy 3.12)*
TR13: Parking Policies. Encourage parking policies and programs in local plans, e.g., reduce minimum parking requirements; limit the supply of off-street parking in transit-oriented areas; unbundle the price of parking spaces; support implementation of demand-based pricing (such as "SF Park") in high-traffic areas.	**Consistent**: Development facilitated by the project would be required to comply with existing City parking standards and standards regarding EV parking in compliance with the latest CALGreen standards.
Energy	
EN1: Decarbonize Electricity Production. Engage with PG&E, municipal electric utilities and CCEs to maximize the amount of renewable energy contributing to the production of electricity within the Bay Area as well as electricity imported into the region. Work with local governments to implement local renewable energy programs. Engage with stakeholders including dairy farms, forest managers, water treatment facilities, food processors, public works agencies and waste management to increase use of biomass in electricity production. **EN2: Decrease Electricity Demand**. Work with local governments to adopt additional energy-efficiency policies and programs. Support local government energy efficiency program via best practices, model ordinances, and technical support. Work with partners to develop messaging to decrease electricity demand during peak times.	**Consistent.** Measures EN1 and EN2 are intended to decrease energy use as a means of reducing adverse air quality emissions. Development facilitated by the project would comply with 2022 Building Energy Efficiency Standards (or most recent version of the California Building Code) requirements that commercial buildings be electric-ready and standards for expanded solar and battery storage and residential development under three stories include rooftop photovoltaic panels. The Building Energy Efficiency Standards are updated every three years and the project would be subject to the 2022 California Building Standards when they go into effect on January 1, 2023. In addition, 2040 General Plan proposed policies listed in Section 4.15, *Effects Found to be Less than Significant*, under Section 4.15.2, *Energy,* would encourage energy efficiency and reduction.
Buildings	
BL1: Green Buildings. Collaborate with partners such as KyotoUSA to identify energy-related improvements and opportunities for on-site renewable energy systems in school districts; investigate funding strategies to implement upgrades. Identify barriers to effective local implementation of the CALGreen (Title 24) statewide building energy code; develop solutions to improve implementation/enforcement. Work with ABAG's BayREN program to make additional funding available for energy-related projects in the buildings sector. Engage with additional partners to target reducing emissions from specific types of buildings.	**Consistent**: Measures BL1 and BL2 focus on working with local governments to adopt the best GHG emissions control practices and policies. As discussed above for the Energy and Climate control measures, development facilitated by the project would comply with 2022 Building Energy Efficiency Standards' (or most recent version of the California Building Code) requirements that commercial buildings be electric-ready and standards for expanded solar and battery storage and residential development under three stories include rooftop photovoltaic panels. The Building Energy Efficiency Standards are updated every three years and the project would be subject to the 2022 California Building Standards when they go into

Control Measures	Consistency
BL2: Decarbonize Buildings. Explore potential Air District rulemaking options regarding the sale of fossil fuel-based space and water heating systems for both residential and commercial use. Explore incentives for property owners to replace their furnace, water heater or natural-gas powered appliances with zero-carbon alternatives. Update Air District guidance documents to recommend that commercial and multi-family developments install ground source heat pumps and solar hot water heaters.	effect on January 1, 2023. In addition, 2040 General Plan proposed policies listed in Section 4.15, *Effects Found to be Less than Significant*, under Section 4.15.2, *Energy,* would encourage energy efficiency and reduction.
Waste Management Control Measures	
WA4: Recycling and Waste Reduction. Develop or identify and promote model ordinances on community-wide zero waste goals and recycling of construction and demolition materials in commercial and public construction projects	**Consistent.** Measure WA4 include strategies to increase waste diversion rates through efforts to reduce, reuse, and recycle. Development facilitated by the project would comply with Assembly Bill (AB) 341, which requires mandatory commercial recycling for businesses that generate four cubic yards or more of commercial solid waste per week. For further discussion of waste diversion, please refer to Section 4.13, *Utilities and Service Systems.*

BAAQMD has identified examples of how a project or plan may disrupt or delay local government implementation of these control measures, such as a project that may preclude an extension of a transit line or bike path, or that propose excessive parking beyond parking requirements. Development within the project area would not disrupt or delay local government implementation of control measures. Overall, the project would be consistent with the three criteria for evaluating consistency with the 2017 Clean Air Plan. As such, the project would not conflict with or obstruct implementation of the applicable air quality plan, and this impact would be less than significant.

Mitigation Measures

No mitigation measures would be required.

Significance After Mitigation

Impacts would be less than significant without mitigation.

Threshold 2:	Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

Impact AQ-2 THE PROJECT WOULD NOT RESULT IN A CUMULATIVELY CONSIDERABLE NET INCREASE OF CRITERIA POLLUTANTS DURING CONSTRUCTION OR OPERATIONS. IMPACTS WOULD BE LESS THAN SIGNIFICANT.

Construction

Future development and mobility improvements associated with the project would involve constructions activities that result in air pollutant emissions. Specifically, construction activities such as demolition, grading, construction worker travel, delivery and hauling of construction supplies and debris, and fuel combustion by on-site construction equipment would generate pollutant emissions. These construction activities would create emissions of dust, fumes, equipment exhaust, and other air contaminants, particularly during site preparation and grading. The extent of daily emissions, particularly ROGs and NO_X emissions, generated by construction equipment, would depend on the

quantity of equipment used and the hours of operation for each project. The extent of $PM_{2.5}$ and PM_{10} emissions would depend upon the following factors: 1) the amount of disturbed soils; 2) the length of disturbance time; 3) whether existing structures are demolished; 4) whether excavation is involved; and 5) whether transporting excavated materials offsite is necessary. Dust emissions can lead to both nuisance and health impacts. According to the 2017 BAAQMD *CEQA Air Quality Guidelines,* $PM_{2.5}$ is the greatest pollutant of concern during construction.

The BAAQMD 2017 CEQA Air Quality Guidelines have no plan-level significance thresholds for construction air pollutant emissions that would apply to the project. However, the guidelines include project-level thresholds for construction emissions. If an individual project's construction emissions fall below the project-level thresholds, the project's impacts on regional air quality would be individually and cumulatively less than significant. The BAAQMD has also identified feasible fugitive dust control measures for construction activities. These Basic Construction Mitigation Measures are recommended for all projects. In addition, the BAAQMD and CARB have regulations that address the handling of hazardous air pollutants such as lead and asbestos, which could be aerially disbursed during demolition activities. BAAQMD rules and regulations address both the handling and transport of these contaminants. Construction of development facilitated by the project would temporarily increase air pollutant emissions, possibly creating localized areas of unhealthy air pollution concentrations or air quality nuisances, resulting in a potentially significant impact.

However, the following 2040 General Plan proposed policy would reduce fugitive dust emissions from construction activities by requiring future development to implement construction management plans in accordance with BAAQMD standards:

- **Policy ENV-11.2: Construction Management Plans.** Require new development and redevelopment projects to prepare and implement a construction management plan that incorporates Best Available Control Measures and all best management practices in accordance with the Air District standards to reduce criteria pollutants.

Best available control measures and best management practices in accordance with BAAQMD would include the following:

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times a day.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
- All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 miles per hour.
- All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California Airborne Toxics Control Measure Title 13, Section 2485 of California Code of Regulations). Clear signage shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacture's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper conditions prior to operation.

- Post a publicly visible sign with the applicant's site superintendent telephone number and person to contact regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's number shall also be visible to ensure compliance with applicable regulations.

With adherence to 2040 General Plan proposed Policy ENV-11.2, cumulative construction impacts associated with violating an air quality standard or contributing substantially to an existing or projected air quality violation in terms of criteria air pollutant emissions would be less than significant.

Operation

The greatest source of criteria pollutants in American Canyon is and would continue to be from transportation sources, specifically mobile emissions from roadway traffic. The project emphasizes reducing VMT on area roadways through emphasizing greater mixed use in the area and proximity of residents to jobs. The following 2040 General Plan proposed goals and policies would encourage active transportation modes, such as walking and bicycling, as well as the use of public transit, thereby reducing vehicle trips and associated criteria air pollutants in the Planning Area:

Goal LU-1: Establish American Canyon as a "complete city" with a diversity of distinct land uses that serve the needs of residents, businesses, and visitors.

- **Policy LU-1.4: Compact Development Pattern**. Maintain a compact development pattern that fosters a walkable and bikeable urban form.

Goal MOB-1: Provide safe and convenient access throughout the community with a citywide network of complete streets that meet the needs of all users and reduce vehicle miles traveled (VMT).

- **Policy MOB-1.7: Promote Walking and Bicycling.** Promote walking and bicycling for transportation, recreation, and improvement of public health.
- **Policy MOB-1.11: Reduce the Need to Drive.** Implement land use policies designed to create a pattern of activity that makes it easy to shop, play, visit friends, and conduct personal business without driving.
- **Policy MOB-1.12: Neighborhood Context.** Support safe, complete, and well-connected neighborhood street, bicycle, and pedestrian access and connections that balance circulation needs with the neighborhood context.
- **Policy MOB-1.17: Reduce Vehicle Miles Traveled.** Through layout of land uses, improved alternate travel modes, and provision of more direct routes, strive to reduce the total vehicle miles traveled by city and non-residents traveling to American Canyon to work or shop.
- **Policy MOB-1.20: Bicycle Plan Funding.** Include funding for the City's Bicycle Plan updates and bikeway improvements consistent with the Bicycle Plan in the City's transportation financing program and TIF, recognizing the multi-modal travel needs of the City.
- **Policy MOB-1.22: Non-motorized Circulation System.** Provide safe and direct pedestrian routes and bikeways between places.
- **Policy MOB-1.23: Pedestrian Connections to Employment Destinations**. Encourage the development of a network of continuous walkways within new commercial, town center, public, and industrial uses to improve workers' ability to walk safely around, to, and from their

workplaces. Where possible, route pedestrians to grade separated crossings over State Route 29.

- **Policy MOB-1.24: Bicycle Facilities.** Bicycle facilities shall be provided to complete a continuous bikeway system, consistent with state standards, as shown on the Bikeway Plan Map. In cases where existing right of way constraints limit development of Class II or Class IV facilities, Class Ill signage and demarcation may be permitted at the discretion of the City Engineer. Deviations from these standards and from the routing shown on the diagram shall be permitted with the approval of the City Engineer.
- **Policy MOB-1.27: Sustainable Roadway Expansion.** Monitor the effects of roadway expansion on air, noise, seismic and archeological resources, and nesting habitat.

Goal MOB-5: Support increased public transit to improve mobility, improve air quality, and support efforts to reduce vehicle miles traveled (VMT).

- **Policy MOB-6.1: VMT Thresholds**. Maintain and periodically reevaluate established vehicle miles traveled (VMT) thresholds and Transportation Demand Management (TDM) mitigation requirements for the purposes of environmental review under the California Environmental Quality Act (CEQA). Continue to maintain LOS standards for the purposes of planning and designing street improvements on Green Island Road, Devlin Road, and American Canyon Road.
- **Policy MOB-5.2: Existing Transportation Demand Management Efforts**. Continue to support the implementation of existing local and regional efforts to manage traffic demand, such as the Napa Logistics Park trip monitoring program, and employer TDM provisions of the Bay Area Air Quality Management District (BAAAQMD).
- **Policy MOB-5.3: Support Transit Operation Improvements.** Work with NVTA to expand both ACT and VINE fixed route services, improve operations, and support dedicated bus lanes and/or queue-jump lanes on SR 29 to enhance bus operations by reducing travel time for transit vehicles.
- **Policy MOB-5.7: Future Transit Links.** Consider orienting transit system expansion to link with other potential future commuter bus and/or rail services.

According to the BAAQMD 2017 CEQA Air Quality Guidelines, the threshold for criteria air pollutants and precursors requires a comparison of the percent increase in VMT and population. Table 4.2-5 summarizes the net increase in population versus VMT for cumulative plus project buildout conditions based on data provided by GHD (2022).

Table 4.2-5 Comparison of VMT and Population Increase due to the Project

Scenario	Existing (2024)	Cumulative Plus Project Buildout [a]	Net Increase
Population (number of residents)	21,758	33,248	11,490
Percentage change			53%
Total Citywide VMT	562,492	568,813	6,321
Percentage change			1%

Note:

[a.] Cumulative conditions with the project is based on Year 2040 citywide residential and commercial growth, as well as projected regional land use growth

Source: GHD 2022

The project emphasizes changing land uses to concentrate growth and jobs and services near residences to reduce singular vehicle trips. As shown in Table 4.2-5, the City's population increase would be proportionately greater than the VMT increase. If a plan's VMT increase, under the cumulative condition, is less than or equal to the plan's projected population increase, impacts to operational criteria pollutant emissions would be less than significant. As such, impacts from project operation would be less than significant.

Mitigation Measures

No mitigation measures would be required.

Significance After Mitigation

Impacts would be less than significant without mitigation.

Threshold 3:	Would the project expose sensitive receptors to substantial pollutant concentrations?

Impact AQ-3 CONSTRUCTION ACTIVITIES FOR PROJECTS LASTING LONGER THAN TWO MONTHS OR LOCATED WITHIN 1,000 FEET OF SENSITIVE RECEPTORS COULD EXPOSE SENSITIVE RECEPTORS TO SUBSTANTIAL POLLUTANT CONCENTRATIONS. IMPLEMENTATION OF THE PROJECT MAY ALSO EXPOSE SENSITIVE RECEPTORS TO OPERATIONAL SOURCES OF TOXIC AIR CONTAMINANTS. IMPACTS WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION.

Construction

The project would result in Diesel particulate matter (DPM) exhaust emissions from off-road, heavy-duty diesel equipment associated with site preparation (e.g., excavation, grading, clearing), building construction, and other construction activities. The potential cancer risk from inhaling DPM, as discussed below, outweighs the potential non-cancer[2] health impacts (CARB 2022b).

Generation of DPM from construction typically occurs in a single area for a short period. Future construction would occur over approximately seventeen years (assuming a buildout year of 2040), but use of diesel-powered construction equipment in any one area would likely occur for no more than a few years for an individual project and would cease when construction is completed in that area. It is impossible to quantify risk without identified specific project details and locations.

The dose to which the receptors are exposed is the primary factor used to determine health risk. Dose is a function of the concentration of a substance or substances in the environment and the extent of exposure that person has with the substance. Dose is positively correlated with time, meaning that a longer exposure period would result in a higher exposure level for the Maximally Exposed Individual. The risks estimated for a Maximally Exposed Individual are higher if a fixed exposure occurs over a longer period. According to the California Office of Environmental Health Hazard Assessment (OEHHA), health risk assessments, which determine the exposure of sensitive receptors to toxic emissions, should be based on a 70-year exposure period; however, such assessments should be limited to the period/duration of activities associated with the development (OEHHA 2015). BAAQMD uses an exposure period of 30 years (BAAQMD 2016).

[2] Non-cancer risks include premature death, hospitalizations and emergency department visits for exacerbated chronic heart and lung disease, including asthma, increased respiratory symptoms, and decreased lung function (CARB 2021a).

The maximum PM_{10} and $PM_{2.5}$ emissions would occur during demolition, site preparation and grading activities, which would only occur for a portion of the overall estimated timeframe of seventeen years for individual project construction. These activities would typically last for approximately two weeks to two years, depending on the extent of grading and excavation required (e.g., projects with subterranean parking structures or geological constraints require additional grading as compared to those without). PM_{10} and $PM_{2.5}$ emissions would decrease for the remaining construction period because construction activities such as building construction and architectural coating would require less intensive construction equipment. While the maximum DPM emissions associated with demolition, site preparation, and grading activities would only occur for a portion of the overall construction period, these activities represent the worst-case condition for the total construction period. This would represent between 0.1 to 7 percent of the total 30-year exposure period for health risk calculation.

Development facilitated by the project would also be required to be consistent with the applicable 2017 Clean Air Plan, BAAQMD regulatory requirements and control strategies, and the CARB In-Use Off-Road Diesel Vehicle Regulation, which are intended to reduce emissions from construction equipment and activities. Additionally, development facilitated by the project would be required to adhere to General Plan proposed Policy ENV-11.2, which requires implementation of BAAQMD best available control measures and best management practices that would reduce construction-related TACs. According to the OEHHA, construction of individual projects lasting longer than two months or placed within 1,000 feet of sensitive receptors could potentially expose nearby sensitive receptors to substantial pollutant concentrations, which could result in potentially significant risk impacts. There is the potential that development associated with the project could last more than two months or be within 1,000 feet of sensitive receptors. As such, these projects could exceed BAAQMD's thresholds of an increased cancer risk of greater than 10.0 in a million and an increased non-cancer risk of greater than 1.0 Hazard Index (Chronic or Acute). Therefore, construction impacts from TAC emissions would be potentially significant. However, implementation of Mitigation Measure AQ-1 would require the preparation of a Construction Health Risk Assessment for future projects and would mitigate potential construction-related TACs exposure impacts to a less than significant level.

Operation

The BAAQMD CEQA Guidelines include methodology for jurisdictions to evaluate the potential impacts from placing sensitive receptors in proximity to major air pollutant sources. For assessing community risk and hazards for siting a new receptor, sources within a 1,000-foot radius of a project site are typically considered. Sources are defined as freeways or high-volume roadways with 10,000 vehicles or more per day and permitted sources (BAAQMD 2017b).

Development facilitated by the project could accommodate a net increase of approximately 3,379 additional residential units and approximately 5.7 million square feet of commercial, retail, hotel, industrial, warehouse, and research and development uses. Development facilitated by the 2040 General Plan in accordance with land use and zoning regulations would not site land uses that typically generate TAC, such as industrial land uses near residential land uses. Additionally, if the proposed commercial, retail, warehouse, research and development, and industrial uses site a new stationary TAC source, like an emergency generator, then said stationary source would be required to receive a permit from BAAQMD. The permitting process would ensure that the stationary source does not present a health risk to existing nearby sensitive receptors.

Furthermore, there are several high-volume roadways in American Canyon, including SR 29, American Canyon Road, Flosden Road, and Newell Drive. The 2040 General Plan may facilitate locating sensitive receptors in proximity to high-volume roadways and freeways. To minimize health risks to sensitive receptors located near stationary sources and/or high-volume roadways, the 2040 General Plan includes the following proposed goal and policies that aim to improve air quality and minimize exposure to TAC:

Goal ENV-11: Improve air quality and minimize human exposure to toxic air pollutants.

- **Policy ENV-11.1: Regional Air Quality Efforts.** Support and coordinate with BAAQMD and State and Federal planning efforts aimed at reducing air pollution and management of major pollutants affecting American Canyon and the region, including the Clean Air Plan.
- **Policy ENV-11.3: Separate Sensitive Land Uses.** Separate sources of air pollution from sensitive land uses, such as residences, schools, day care centers, hospitals, and nursing homes.

In addition, the following proposed policy would ensure that industrial uses would not generate unacceptable levels of air emissions, including TAC.

- **Policy LU-5.5: Prevent Adverse Impacts.** Control, through the permit process, the development of industrial uses that use, store, produce, or transport hazardous materials in threshold planning quantities, generate unacceptable levels of noise or air emissions, or result in other impacts that adversely impact American Canyon.

The primary mobile source of TACs within the plan area is truck idling and use of off-road equipment. New warehousing operations could generate substantial DPM emissions from off-road equipment use and truck idling. In addition, some warehousing and industrial facilities may include use of transport refrigeration units for cold storage. Such potential future uses could generate an increase in DPM that would contribute to cancer and noncancer health risk at nearby sensitive receptors. Without project-specific analysis, health risk impacts from nonpermitted sources associated with development of industrial and commercial land uses under the proposed plan would be potentially significant. Mitigation Measure AQ-2 would require project applicants to prepare an operational health risk assessment for the siting of new sensitive receptors within 500 feet of major sources of TAC (high-volume roadways with 10,000 vehicles or more per day). Mitigation Measure AQ-3 would require applicants for land uses that would generate substantial diesel truck travel to determine the appropriate level of operational health risk assessment require. With the implementation of Mitigation Measures AQ-2 and AQ-3, the project's impacts related to TAC emissions would be less than significant.

Mitigation Measures

AQ-1 Conduct Construction Health Risk Assessment

Prior to issuance of a grading or building permit, whichever occurs first, the applicant shall submit to the City a construction health risk assessment (HRA) in accordance with BAAQMD recommendations for any development project that has at least one the following characteristics:

- The project is located within 1,000 feet of sensitive receptors.
- Project construction would last longer than two months.

- Project construction would not utilize equipment rated USEPA Tier 4 (for equipment of 50 horsepower or more); construction equipment fitted with Level 3 Diesel Particulate Filters (for all equipment of 50 horsepower or more); or alternative fuel construction equipment.

If the HRA determines that construction will exceed BAAQMD significance thresholds, the HRA shall provide mitigation measures to reduce the impact to less than significant, including but not limited to requiring the use of Tier 4 engines, Level 3 Diesel Particulate Filters, and/or alternative fuel construction equipment.

AQ-2 Reduce Operational Toxic Air Contaminants Near Sensitive Receptors

For new sensitive receptors proposed within 500 feet of a major sources of TAC (high-volume roadways with 10,000 vehicles or more per day), the project applicant shall prepare an operational health risk assessment for the City's review and approval. If TAC exposure at new sensitive receptor sites would exceed BAAQMD health risk thresholds, require the project applicant include mechanical air filtration or other measures to reduce health risk exposure to acceptable levels.

AQ-3 Conduct Operational Health Risk Assessment

Prior to permit approval for industrial, warehousing, or commercial land uses that would generate at least 100 diesel trucks per day or 40 or more trucks with diesel-powered transport refrigeration units per day, the applicant shall submit an operational health risk assessment (HRA) or submit proof that an HRA is not required in accordance with BAAQMD thresholds to the City for review and approval. If required by the City, the operational HRA shall be prepared in accordance with the Office of Environmental Health Hazard Assessment and BAAQMD requirements, and mitigated to an acceptable level. Typical measures to reduce risk impacts may include, but are not limited to:

- Restricting idling on-site beyond Air Toxic Control Measures idling restrictions, as feasible.
- Electrifying warehousing docks.
- Truck Electric Vehicle (EV) Capable trailer spaces.
- Requiring use of newer equipment and/or vehicles.
- Restricting off-site truck travel through the creation of truck routes.

The operational HRA shall be provided to the City for review and concurrence prior to project approval.

Significance After Mitigation

Construction and operational related TACs exposure impacts would be less than significant with implementation of Mitigation Measures AQ-1 through AQ-3.

Threshold 4:	Would the project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Impact AQ-4 THE PROJECT WOULD NOT CREATE OBJECTIONABLE ODORS THAT COULD ADVERSELY AFFECT A SUBSTANTIAL NUMBER OF PEOPLE. IMPACTS RELATED TO ODORS WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION.

Construction of development and mobility improvements would require the operation of construction equipment and asphalt paving, which could generate oil, diesel fuel, and asphalt odors.

The odors would be limited to the construction period and would be temporary. Therefore, odors emitted from the construction of individual future projects under the project would be less than significant.

As stated in the BAAQMD CEQA Guidelines, land uses typically producing objectionable odors include agricultural uses, wastewater treatment plants, food manufacturing plants, chemical plants, composting, refineries, landfills, and confined animal facilities. Development facilitated by the 2040 General Plan would include commercial, retail, hotel, industrial, warehouse, and research and development uses. Most of these land uses typically do not produce objectionable odors; however, certain commercial and industrial uses would have the potential to generate nuisance odors. Therefore, individual projects under the 2040 General Plan could generate potentially significant objectionable odors unless analyzed and mitigated. Mitigation Measure AQ-4 would require project applicants to evaluate potential odor impacts and implement odor control measures to the extent feasible. Therefore, 2040 General Plan impacts related to operational odor impacts would be less than significant with mitigation. In addition, other odors from development of the 2040 General Plan include odors associated with vehicle and engine exhaust and idling; however, odors from vehicles are not stationary and are dispersed throughout the roadway network and would result in less than significant impacts.

Mitigation Measures

AQ-4 Reduce Operational Odor Impacts

Prior to discretionary approval by the City, if it is determined by the City that a development project has the potential to emit nuisance odors beyond the property line, the project applicant shall prepare an odor management plan and submit it to the City for review and approval. Facilities that have the potential to generate nuisance odors include, but are not limited to:

- Wastewater treatment plants
- Composting, green waste, or recycling facilities
- Fiberglass manufacturing facilities
- Painting/coating operations
- Large-capacity coffee roasters
- Food-processing facilities

The odor management plan shall demonstrate compliance with the latest BAAQMD screening distances and guidelines. The odor management plan shall identify the best available control technologies for toxics (T-BACTs) that will be utilized to reduce potential odors to acceptable levels, including appropriate enforcement mechanisms. T-BACTs may include but are not limited to scrubbers (i.e., air pollution control devices) at the industrial facility. T-BACTs identified in the odor management plan shall be identified as mitigation measures in the documents prepared for the development project and/or incorporated into the project's site plan.

Significance After Mitigation

Odor impacts would be less than significant with implementation of Mitigation Measure AQ-4 to reduce operational odor impacts.

This page intentionally left blank.

4.3 Biological Resources

This section summarizes the biological resources in the Planning Area and analyzes the potential effects on biological resources related to implementation of the project.

4.3.1 Setting

This following information was obtained through a desktop literature review of the United States Fish and Wildlife Service's (USFWS) National Wetlands Inventory (NWI) and Information for Planning and Consultation (IPaC); the California Department of Fish and Wildlife's (CDFW) California Natural Diversity Database (CNDDB); the National Oceanic and Atmospheric Administration's (NOAA) Protected Resources Application; the Napa County General Plan Environmental Impact Report; and Napa County vegetation mapping.

a. Land Cover

The Planning Area contains substantial urban development. There are, however, areas of relatively undisturbed natural habitats in the Planning Area. Descriptions of the vegetation communities in the Planning Area are listed below, based on vegetation mapping in Napa County (Napa County 2019). Figure 4.3-1 shows the vegetation communities and land covers within the Planning Area.

Grassland

Grassland is a relatively common biotic community within the Planning Area. Three common grassland assemblages exist within Napa County: annual grassland, native grassland, and serpentine (bunchgrass) grassland. Of these assemblages, annual grassland is found within the Planning Area. Vernal pools are found in some grassland areas (County of Napa 2007).

Oak Woodland

Oak woodland occurs across a broad range of elevations, on gentle and steep slopes. There are 13 vegetation types (alliances or associations) within the oak woodland group. Six of these are dominated by evergreen oak species, six are dominated by deciduous oak species, and one is a mixture of deciduous and evergreen oaks (County of Napa 2007). Within the Planning Area, oak savannahs are protected via the American Canyon Municipal Code, Chapter 19.24.

Riparian Woodland

Within the Planning Area, riparian areas are associated with the American Canyon Creek, Rio Del Mar Creek, North Slough, and No Name Creek. Riparian woodland habitat can provide shade, habitat, and nesting sites for resident birds, migratory birds, and other wildlife such as reptiles. In addition, riparian habitat can serve as rearing habitat for anadromous fish.

Additional data provided by Napa County, 2019.

American Canyon GPU and EIR
Fig X Vegetation Communities in American Canyon

Wetlands, Streams, and Reservoirs

Wetlands are highly productive habitats for plants and wildlife. Coastal wetlands and riparian wetlands (linear areas adjacent to streams, creeks and drainages) are especially productive for plants, because recurrent flooding in these areas delivers influxes of soil and nutrients. This highly productive biotic community provides shelter and food sources for resident and migratory wildlife. The structural complexity and existence of native vegetation in these areas enhance the productivity of wetlands for wildlife species, by providing diverse sites for foraging and breeding (Napa County 2007). According to the USFWS NWI, wetlands in and surrounding the Planning Area consist of estuarine and marine habitats, freshwater ponds, freshwater emergent wetlands, and riverine habitats (USFWS 2022a).

Open water habitats, such as streams and reservoirs, are highly diverse in size, type, water chemistry, and hydrologic functions. The Napa River is a prominent aquatic feature in the Planning Area (County of Napa 2007).

Eucalyptus

American Canyon contains eucalyptus groves near the northwestern border of its city limits. The eucalyptus groves are surrounded by industrial development, a school, and public facilities. Eucalyptus are non-native and invasive in California.

b. Special Status Species

For the purposes of this analysis, special-status species include the following:

- Species listed as threatened or endangered under the Federal Endangered Species Act (FESA), including proposed and candidate species.
- Species listed as candidate, threatened, or endangered under the California Endangered Species Act (CESA).
- Species designated as Fully Protected by the California Fish and Game Code (CFGC), and Species of Special Concern or Watch List by CDFW.
- Plant species protected by the Native Plant Protection Act (NPPA) (State Rare).
- Plant species with California Native Plant Society (CNPS) California Rare Plant Ranks (CRPR) 1A, 1B, 2A and 2B.
- Species designated as locally important by the Local Agency and/or otherwise protected through ordinance, local policy, or HCPs/NCCPs.

Queries of the USFWS's IPaC, CNDDB, and CNPS's online Inventory of Rare and Endangered Plants of California were conducted to obtain comprehensive information regarding special-status species and sensitive vegetation communities known or with potential to occur in the Planning Area. Queries of the CNPS inventory and CNDDB database included the Cuttings Wharf U. S. Geological Service (USGS) 7.5-minute topographic quadrangle and surrounding 11 quadrangles (Cordelia, Sonoma, Napa, Mt. George, Fairfield North, Fairfield South, Vine Hill, Benicia, Mare Island, Petaluma Point, and Sears Point). The results of these scientific database queries are provided as Appendix B of this EIR. There are 51 plant species and 44 animal species with potential to occur within the Planning Area which meet at least one of the criteria for a special status species, described above (Appendix B). These include the federally endangered Suisun thistle (*Cicuta maculate* var. *bolanderi*), the federally threatened and State species of special concern California red-legged frog

(*rana draytonii*), the federally threatened green sturgeon – southern DPS (*Acipenser medirostris pop. 1*), and the federally threatened vernal pool fairy shrimp (*Branchinecta lynchi*) (Appendix B).

c. Nesting Birds

Suitable nesting sites for avian species protected by the federal Migratory Bird Treaty Act (MBTA) and California Fish and Game Code (CFGC), including shrubs, trees, man-made structures, and the ground surface occur throughout the Planning Area. Some species prefer vegetation for nesting, including ornamental vegetation and some species can be found nesting in man-made structures, such as power poles or the eaves of buildings. Nesting birds may occur during the breeding season (generally February 1 through August 31 but beginning January 1 for some raptor species).

d. Sensitive Vegetation Communities and Critical Habitat

Various habitats support special status species. The City identifies the following habitats as sensitive, and the American Canyon Municipal Code provides enhanced protection for these habitats and subsequently, species within these habitats:

- Riparian corridors
- Coastal saltmarsh
- Mixed hardwood forest
- Oak savannah
- Vernal pool
- Wetland habitats

The following five sensitive natural communities occur within the 12 quadrangles search range (Appendix B):

- Coastal Brackish Marsh
- Northern Claypan Vernal Pool
- Northern Coastal Salt Marsh
- Northern Vernal Pool
- Serpentine Bunchgrass

In addition, NOAA identifies critical habitat for green sturgeon – southern DPS (*Acipenser medirostris pop. 1*) in the waters adjacent to the western border of the Planning Area (NOAA 2022). UWFWS identifies critical habitat for the California red-legged frog (*rana draytonii*) and the vernal pool fairy shrimp within the City limits (*Branchinecta lynchi*) (USFWS 2022a).

e. Wildlife Movement Corridors

Wildlife movement corridors, or habitat linkages, are generally defined as connections between habitat patches that allow for physical and genetic exchange between otherwise isolated animal populations. Such linkages may serve a local purpose, such as providing a linkage between foraging and denning areas, or they may be regional in nature. Some habitat linkages may serve as migration corridors, wherein animals periodically move away from an area and then subsequently return. Others may be important as dispersal corridors for young animals. A group of habitat linkages in an area can form a wildlife corridor network.

The habitats within the linkages do not necessarily need to be the same or of the same quality as the habitats that are being linked. Rather, the linkage merely needs to contain sufficient cover and forage to allow temporary inhabitation by ground-dwelling species. Typically, habitat linkages are contiguous strips of natural areas, though dense plantings of landscape vegetation can be used by certain disturbance-tolerant species. Depending upon the species using a corridor, specific physical resources (such as rock outcroppings, vernal pools, or oak trees) may need to be located within the habitat link at certain intervals to allow slower-moving species to traverse the link. For highly mobile or aerial species, habitat linkages may be discontinuous patches of suitable resources spaced sufficiently close together to permit travel along a route in a short period of time.

Migration corridors can be bordered on either site by urban land uses, and within the City limits these corridors often include barriers to movement such as developed areas and roads. Substantial habitat connectivity occurs generally to the east and north of the City's sphere-of-influence (SOI), as well as within the City's riparian corridors. As defined by CDFW, the eastern portion of American Canyon, including the City's SOI and urban limit line are within essential habitat connectivity areas. However, due to the existing level of development, the area is considered less permeable, meaning it is more difficult for animals to migrate in these areas (CDFW 2022).

4.3.2 Regulatory Setting

a. Federal Regulations

Federal Endangered Species Act

The Federal Endangered Species Act of 1973 and subsequent amendments provide for the conservation of endangered and threatened species, and the ecosystems upon which they depend. FESA is intended to prevent the unlawful "take" of listed fish, wildlife, and plant species. Section 9(a)(1)(B) specifically states take of species listed as threatened or endangered is unlawful. Take is defined as any action that would harass, harm, pursue, hunt, wound, shoot, kill, trap, capture, or collect any threatened or endangered species. Section 10 of the FESA allows the USFWS to issue incidental take permits if take of a listed species may occur during otherwise lawful activities. Section 10(a)(1)(B) requires a Habitat Conservation Plan for an incidental take permit on non-federal lands. Section 7 of the FESA requires federal agencies to aid in the conservation of listed species, and to ensure that the activities of federal agencies will not jeopardize the continued existence of listed species or adversely modify designated critical habitat. The USFWS and NOAA are responsible for administration of the FESA and have regulatory authority over federally listed species.

Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) makes it unlawful at any time, by any means or in any manner, to pursue, hunt, take, capture, or kill migratory birds, and prohibits the removal of nests occupied by migratory birds. The USFWS has regulatory authority for the MBTA.

Clean Water Act

The United States Army Corps of Engineers (USACE), under provisions of Section 404 of the Clean Water Act (CWA) and USACE implementing regulations, has jurisdiction over the placement of dredged or fill material into "waters of the United States." Congress enacted the CWA "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." In practice, the boundaries of certain waters subject to USACE jurisdiction under Section 404 have not been fully

defined. Previous regulations codified in 1986 defined "waters of the United States" as traditional navigable waters, interstate waters, all other waters that could affect interstate or foreign commerce, impoundments of waters of the United States, tributaries, the territorial seas, and adjacent wetlands.

USACE jurisdictional limits are typically identified by the Ordinary High Water Mark (OHWM) or the landward edge of adjacent wetlands, where present. The OHWM is the "line on the shore established by the fluctuations of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding area" (33 Code of Federal Regulations 328.3).

The USACE defines wetlands as "those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (33 CFR 328.3). The USACE's delineation procedures identify wetlands in the field based on indicators of three wetland parameters: hydrophytic vegetation, hydric soils, and wetland hydrology.

Fish and Wildlife Coordination Act

The USFWS also has responsibility for project review under the Fish and Wildlife Coordination Act. This statute requires that all federal agencies consult with USFWS, NOAA Fisheries, and the State's wildlife agency (CDFW) for activities that affect, control, or modify streams and other water bodies. Under the authority of the Fish and Wildlife Coordination Act, USFWS, NOAA Fisheries, and the CDFW review applications for permits issued under Section 404 and provide comments to the SACE about potential environmental impacts.

b. State Regulations

California Endangered Species Act

The CDFW is responsible for administration of the California Endangered Species Act. For projects that may affect both a State and federal listed species, compliance with the FESA will satisfy the CESA, provided the CDFW determines that the federal incidental take authorization is consistent with the CESA.

Take is defined in the California Fish and Game Code (CFGC) Section 86 as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." The CESA allows for take incidental to otherwise lawful activities under CFGC Section 2081. Project proponents wishing to obtain incidental take permits can do so through a permitting process outlined in California Code of Regulations (CCR) Section 783. Additionally, some sensitive mammals and birds are protected by the state as Fully Protected Mammals or Fully Protected Birds, as described in the CFGC, Sections 4700 and 3511, respectively.

Projects that may result in a take of a California listed species require a take permit under the CESA. The federal and State acts lend protection to species considered rare enough by the scientific community and trustee agencies to warrant special consideration, particularly with regard to protection of isolated populations, nesting or den locations, communal roosts, and other essential habitat. Unlike the FESA, the CESA prohibits the take of not just listed endangered or threatened species, but also candidate species (species petitioned for listing).

The CESA defines an endangered species as:

> …a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, or disease.

A threatened species is defined as:

> …a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that, although not presently threatened with extinction, is likely to become an endangered species in the foreseeable future in the absence of the special protection and management efforts required by this chapter. Any animal determined by the commission as rare on or before January 1, 1985 is a threatened species.

Candidate species are defined as:

> …a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the commission has formally noticed as being under review by the department for addition to either the list of endangered species or the list of threatened species, or a species for which the commission has published a notice of proposed regulation to add the species to either list.

Candidate species may be afforded temporary protection as though they were already listed as threatened or endangered at the discretion of the Fish and Game Commission. Unlike the FESA, CESA does not include listing provisions for invertebrate species. Article 3, Sections 2080 through 2085, of the CESA addresses the taking of threatened or endangered species by stating:

> …no person shall import into this State, export out of this State, or take, possess, purchase, or sell within this State, any species, or any part or product thereof, that the commission determines to be an endangered species or a threatened species, or attempt any of those acts, except as otherwise provided.

California Fish and Game Code - Nesting Bird Protection

According to CFGC Section 3503, it is unlawful to take, possess, or needlessly destroy the nest or eggs of any bird [except English sparrows (*Passer domesticus*) and European starlings (*Sturnus vulgaris*)]. Sections 3503 and 3513 prohibit the taking of specific birds, their nests, eggs, or any portion thereof during the nesting season. Section 3503.5 specifically protects birds in the orders Falconiformes and Strigiformes (birds-of-prey). Section 3513 overlaps with the federal MBTA, prohibiting the take or possession of any migratory nongame bird.

California Native Plant Protection Act

The California Native Plant Protection Act (NPPA) was enacted in 1977 and allows the California Fish and Wildlife Commission to designate plants as rare or endangered. Currently, 64 species, subspecies, and varieties of plants are protected as rare under the NPPA. The NPPA prohibits take of endangered or rare native plants but includes some exceptions for agricultural and nursery operations; emergencies; and after properly notifying CDFW for vegetation removal from canals, roads, and other sites; changes in land use; and in certain other situations. Effective in 2015, CDFW promulgated regulations (14 CCR 786.9) under the authority of the NPPA, establishing that the CESA permitting procedures (CFG Code Section 2081) would be applied to plants listed under the NPPA as

"Rare." With this change, there is little practical difference between regulations and protocols for plants listed under CESA and those listed under the NPPA.

Clean Water Act Section 401, Porter-Cologne Water Quality Control Act

The State Water Resources Control Board (SWRCB) and nine Regional Water Quality Control Boards (RWQCBs) have jurisdiction over "waters of the State," which are defined as any surface water or groundwater, including saline waters, within the boundaries of the state (California Water Code sec. 13050(e)). These agencies also have responsibilities for administering Section 401 of the CWA. In addition, where Federal jurisdiction is not asserted (for example, due to a lack of connectivity to a Relatively Permanent Waters [RPW] and Traditional Navigable Waters [TNW]), RWQCB assert jurisdiction over "waters of the State" pursuant to Section 13263 of the Porter-Cologne Water Quality Control Act, which are defined as any surface water or groundwater, including saline waters, within the boundaries of the State. In this event, the SWRCB may issue general Waste Discharge Requirements (WDRs) regarding discharges to "isolated" waters of the State if limiting criteria are not exceeded (Water Quality Order No. 2004-0004-DWQ, Statewide General Waste Discharge Requirements for Dredged or Fill Discharges to Waters Deemed by the USACE to be Outside of Federal Jurisdiction) or project-specific WDRs.

The SWRCB and RWQCBs have not established regulations for field determinations of waters of the state except for wetlands. In many cases the RWQCBs interpret the limits of waters of the State to be bounded by the OHWM unless isolated conditions or ephemeral waters are present. However, in the absence of statewide guidance, each RWQCB may interpret jurisdictional boundaries within their region and the SWRCB has encouraged applicants to confirm jurisdictional limits with their RWQCB before submitting applications. As determined by the RWQCB, waters of the State may include riparian areas or other locations outside the OHWM, leading to a larger jurisdictional area over a given water body compared to the USACE.

Procedures for defining wetland waters of the State pursuant to the SWRCB's State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State went into effect May 28, 2020. The SWRCB defines an area as wetland if, under normal circumstances:

> the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and the area's vegetation is dominated by hydrophytes or the area lacks vegetation.

The SWRCB's Implementation Guidance for the Wetland Definition and Procedures for Discharges of Dredge and Fill Material to Waters of the State (2020), states that waters of the U.S. and waters of the State should be delineated using the standard USACE delineation procedures, taking into consideration that the methods shall be modified only to allow for the fact that a lack of vegetation does not preclude an area from meeting the definition of a wetland.

California Fish and Game Code Section 1600 et seq.

Pursuant to CFGC Section 1600, CDFW has authority over all perennial, intermittent, and ephemeral rivers, streams, and lakes in the state, and requires any person, state or local governmental agency, or public utility to notify the CDFW before beginning any activity that would "substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material

containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake" that supports fish or wildlife resources.

A stream is defined as a "body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having a surface or subsurface flow that supports or has supported riparian vegetation" (CCR, Title 14 Section 1.72). A Lake or Streambed Alteration Agreement may be required for any project that would result in an adverse impact to a river, stream, or lake. CDFW jurisdiction typically extends to the top of the bank and out to the outer edge of adjacent riparian vegetation if present. However, CDFW can take jurisdiction over a body of flowing water and the landform that conveys it, including water sources and adjoining landscape elements that are byproducts of and affected by interactions with flowing water without regard to size, duration, or the timing of flow.

CDFW Special Animals List

Special-status wildlife species are those species included on the CDFW "Special Animals" list (CDFW 2020). "Special Animal" is a general term that refers to all the taxa the CNDDB is interested in tracking, regardless of their legal or protection status. The CDFW considers the taxa on this list to be those of greatest conservation need. The species on this list generally fall into one or more of the following categories:

- Officially listed or proposed for listing under the CESA and/or FESA
- State or Federal candidate for possible listing
- Taxa that meet the criteria for listing, even if not currently included on any list, as described in CEQA Guidelines Section 15380
- Taxa considered by the Department to be a Species of Special Concern
- Taxa that are biologically rare, very restricted in distribution, declining throughout their range, or have a critical vulnerable stage in their life cycle that warrants monitoring
- Populations in California that may be on the periphery of a taxon's range but are threatened with extirpation in California

c. Local Regulations

American Canyon Municipal Code

The American Canyon Municipal Code Title 14, Title 18, and Title 19 implement measures designed to protect biological resources. Chapter 14.28 implements requirements designed to reduce substantial adverse effects to water quality in the City. These include the following:

- Implementation of erosion control measures.
- Implementation construction and operational Best Management Practices (BMPs) to reduce protect water quality.
- Prohibition of discharge, modification, deposition, construction, or placement of material into a water course.

Chapter 18.40 sets design standards for development. Specifically, Section 18.40.110 sets the following requirements to protect trees:

- Requires existing trees to be preserved unless otherwise approved by City Council as part of site development plans.

- Mandates removed trees shall be replaced on-site unless an exception is approved by City Council.

Chapter 19.24 requires protection, preservation, and enhancement of biological habitats, plants, and wildlife within the City. Specifically, Chapter 19.24 requires the following:

- Requires the preparation of a biological assessment report for developments which have the potential to substantially adversely affect biological resources.
- Limits permitted uses in riparian corridors to development including underground utilities, flood control, fish and wildlife management, water supply projects, education and research, nonmotorized recreation, trails, bridges, and resource consumptive uses as provided in the California Fish and Game Code and Title 14 of the California Administrative Code.
- Prohibits development and grading that alters the biological integrity of a riparian corridor unless no feasible alternative exists, and damaged habitat is replaced with habitat of equal value.
- Requires development permitted in riparian corridors to minimize the removal of vegetation, erosion, sedimentation, and runoff; provide for sufficient passage of native and anadromous fish; minimize wastewater discharges and entrapment; prevent groundwater depletion or substantial interference with surface and subsurface flows; minimize the channelization of streams or other water courses, provide wildlife corridors to adjacent open space; buffer habitat areas, and use open space or conservation easements to protect sensitive species and their habitats.
- Requires development in wetlands areas and areas of existing or potential vernal pools be designed and sited to preserve these areas in their natural conditions. Requires habitat replacement for any wetland or vernal pool habitat removed.
- Requires development of areas designated as oak savannah, mixed hardwood forest, and coastal saltmarsh maintain a buffer from the edge of the designated habitat, maintain connectivity to surrounding habitats, and limit public access in areas where damage to habitats may occur.

4.3.3 Impact Analysis

a. Significance Thresholds and Methodology

Significance Thresholds

Based on Appendix G of the CEQA Guidelines a project may be deemed to have a significant impact on biological resources if it would:

1. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service;
2. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service;

3. Have a substantial adverse effect on state or federally protected wetlands (including but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means;
4. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites;
5. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or
6. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan

Methodology

The assessment of potential impacts to biological resources were informed based on a review of readily available information from the USFWS, CDFW, and the NOAA. As a programmatic document, this EIR presents an assessment of the potential for adoption of the 2040 General Plan to result in significant impacts to biological resources. Because the EIR is a long-term document intended to guide actions for many years into the future, this analysis relies on program-level and quantitative evaluation.

Threshold 1:	Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Impact BIO-1 THE PROJECT COULD HAVE THE POTENTIAL TO HAVE AN ADVERSE IMPACT ON SPECIAL STATUS SPECIES. IMPLEMENTATION OF FEDERAL, STATE, AND LOCAL REGULATIONS AND POLICIES, AS WELL AS MITIGATION MEASURES BIO-1 AND BIO-2, WOULD ENSURE DEVELOPMENT FACILITATED BY THE PROJECT WOULD NOT HAVE A SUBSTANTIAL ADVERSE EFFECT ON CANDIDATE, SENSITIVE, OR SPECIAL STATUS SPECIES. THIS IMPACT WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION.

As discussed in Section 4.3.1, *Setting*, there are 51 plant species and 44 animal species with potential to occur within the Planning Area. In addition, the Planning Area contains riparian corridors, coastal saltmarsh, mixed hardwood forest, and oak savannah which could serve as habitat for special status species. Critical habitat is also present within the Planning Area. Potentially significant effects on candidate, sensitive, or special status species would occur if temporary disturbance during construction or permanent development facilitated by the project would result in incremental direct loss of habitat, fragmentation of larger open areas and wildlife corridors, or disturbance of special status wildlife or vegetation species.

As shown in Figure 4.3-1, the City is primarily developed and vegetation communities primarily exist outside of the City's SOI. The American Canyon Municipal Code requires project-specific development to minimize the potential for impacts to biological resources. Section 19.24.030 of the American Canyon Municipal Code requires a biological assessment report to be prepared by a qualified professional chosen by the City for project-specific development which has the potential to adversely affect biological resources. Section 19.24.040 of the American Canyon Municipal Code prohibits residential, commercial, and industrial use in riparian corridors. Section 19.24.060 of the American Canyon Municipal Code requires development in areas that encompass oak savannah, mixed hardwood forest, and coastal saltmarsh to maintain buffers from these habitats as

recommended by the biological assessment report, maintain connectivity to surrounding habitats, and limit public access in areas where habitat damage may occur. In addition, the 2040 General Plan would include the following proposed policies that would help protect habitats:

- **Policy ENV-1.2: Sensitive Habitat Assessment and Impact Mitigation.** Require new development and redevelopment located within sensitive habitats, including coastal saltmarsh, mixed hardwood forest, oak savannah, vernal pools, and riparian habitats to provide a detailed assessment of the potential for impacts on these resources, and include measures to reduce any identifiable impacts.
- **Policy ENV-1.3: Habitat Conservation.** Support habitat conservation efforts to set aside and preserve suitable habitats, with priority given to habitats for rare and endangered species in American Canyon in accordance with state and federal resource agency requirements.

Compliance with the American Canyon Municipal Code and implementation of proposed policies in the 2040 General Plan would help ensure habitats are identified prior to project-specific siting and habitat areas are protected where applicable. However, the Municipal Code is only applicable to "significant biological habitats" defined as riparian corridors, coastal saltmarsh, mixed hardwood forest, oak savannah, vernal pools and wetlands (as defined by USFWS), and special-status species may occur in other habitats such as grasslands and eucalyptus stands, or less suitable habitats within the planning area. The Municipal Code also does not specify what level of mitigation would be required if impacts are unavoidable within significant biological habitats. Regionally occurring special-status species such as Crotch's bumblebee (*Bombus crotchii*, state candidate endangered), monarch butterfly (*Danaus Plexippus*, federal candidate), burrowing owl (*Athene cunicularia*, California species of special concern), and western pond turtle (*Actinemys marmorata*, federally proposed threatened) may occur outside these significant biological habitats and development facilitated by the project could result in indirect impacts. Given the City does not have substantial contiguous, high-quality habitat to support special status species in previously developed and disturbed areas of the City and existing American Canyon Municipal Code requirements designed to limit the disturbance of habitat, including critical habitat, development facilitated by the project would not result in significant direct impacts to special status species due to habitat loss, but may impact special status-species if individuals are present during vegetation removal or construction. Therefore, impacts to special-status species would be potentially significant.

Construction activities associated with development and mobility improvements facilitated by the project could potentially result in impacts to birds and raptors. Nesting birds and raptors have the potential to nest on buildings, in shrubs and trees, in rocky outcrops, and on bare ground throughout the City. Vegetation, including street trees, in the City can provide refuge cover from predators, perching sites, and favorable nesting habitat. Future development and mobility improvements facilitated by the project must comply with the requirements of the MBTA and Sections 3503, 3503.5, and 3513 of the California Fish and Game Code, which include obtaining prior authorization by the USFWS before the take of a protected migratory bird species occurs, subject to USFWS requirements, and prohibiting the take, possession, or destruction of nests or eggs. However, existing City regulations do not mandate procedures to ensure compliance with the requirements of the MBTA and Sections 3503, 3503.5, and 3513 of the California Fish and Game Code. Therefore, it is possible development facilitated by the project could result in disturbance to birds or raptors and potentially violate the MBTA and Sections 3503, 3503.5, and/or 3513 of the California Fish and Game Code. Impacts to nesting birds would be potentially significant.

In addition, construction activities associated with development facilitated by the project could result in indirect impacts to bats, such as the pallid bat (*Antrozous pallidus*), Townsend's big-eared bat (*Corynorhinus townsendii*), and big free-tailed bat (*Nyctinomops macrotis*). Bats have the potential to roost in buildings and trees, including street trees. If construction or demolition activities associated with development facilitated by the project would alter, demolish, or remove buildings or trees it could result in the disturbance of bat roosts. Therefore, impacts to special-status bats would be potentially significant.

Indirect impacts to special status species which utilize riparian corridors and other aquatic habitat could occur because of future development and mobility improvements facilitated by the project. The federal Clean Water Act requires compliance with the requirements of the National Pollutant Discharge Elimination System (NPDES) Construction General Permit for projects disturbing more than one acre during construction. Compliance with the Construction General Permit requires the development of a Stormwater Pollution Prevention Plan (SWPPP) developed by a certified Qualified SWPPP Developer. The SWPPP includes project-specific BMPs to control erosion, sediment release, and otherwise reduce the potential for discharge of pollutants from construction into stormwater. Typical BMPs include, but are not limited to, installation of silt fences, erosion control blankets, and anti-tracking pads at site exits to prevent off-site transport of soil materials. Chapter 14.28 of the American Canyon Municipal Code requires any construction activities to implement appropriate BMPs to prevent the discharge of sediment. If a project would not be required to submit a SWPPP pursuant to the NPDES Construction General Permit, the City requires implementation of an Erosion and Sediment Control Plan for any project subject to a grading permit. In addition, American Canyon Municipal Code Section 14.28.082 requires implementation of a Stormwater Control Plan (SCP) for all new development and redevelopment projects subject to post-construction stormwater control measure requirements. In addition, the 2040 General Plan would include the following proposed policies that would minimize water quality impacts:

- **Policy U-4.1: Storm Drainage Maintenance.** Maintain existing public storm drains and flood control facilities and construct upgraded and expanded storm drain and flood control facilities, where necessary, to protect existing and accommodate new permitted development.
- **Policy U-4.8: Low Impact Development.** Require new developments to install green infrastructure consistent with the best management practices of the State and the San Francisco Bay Regional Water Quality Control Board, including but not limited to pervious pavement, infiltration basins, raingardens, green roofs, rainwater harvesting systems, and other types of low impact development (LID).

Compliance with these regulatory requirements would minimize indirect impacts to special status species that utilize aquatic and riparian habitat. Therefore, the project would result in less than significant indirect impacts to special status species within aquatic or riparian habitat.

Mitigation Measures

BIO-1 Biological Resources Screening and Assessment

For projects proposed within undeveloped parcels, the City shall require project applicants to engage a qualified biologist (having the appropriate education and experience level) to perform a baseline Biological Resources Screening and Assessment to determine whether projects proposed within undeveloped parcels have any potential to impact special-status biological resources, inclusive of special-status plants and animals, sensitive vegetation communities (including vernal

pools and other wetlands), and critical habitat. If it is determined that the project has no potential to impact biological resources, no further action is required. If the project would have the potential to impact biological resources, prior to construction, a qualified biologist shall conduct a project-specific biological analysis to document the existing biological resources within a project footprint plus a minimum buffer of 500 feet around the project footprint, as is feasible, and to determine the potential impacts to those resources. The project-specific biological analysis shall evaluate the potential for impacts to all biological resources including, but not limited to special-status species, nesting birds, wildlife movement, sensitive plant communities, critical habitats, and other resources judged to be sensitive by local, state, and/or federal agencies. If the project would have the potential to impact these resources, the following mitigation measures (mitigation measures BIO-2 through BIO-8) shall be incorporated, as applicable, to reduce impacts to a less than significant level. Pending the results of the project-specific biological analysis, design alterations, further technical studies (e.g., protocol surveys) and consultations with the USFWS, CDFW, and/or other local, state, and federal agencies may be required. Note that specific surveys described in the mitigation measures below may be completed as part of the project-specific biological analysis where suitable habitat is present.

BIO-2 Special-status Plant Species Surveys

If the project-specific Biological Resources Screening and Assessment (Mitigation Measure BIO-1) determines that there is potential for significant impacts to federally or state-listed plants or regional population level impacts to species with a CRPR of 1B or 2B from project development, a qualified biologist shall complete surveys for special-status plants prior to any vegetation removal, grubbing, or other construction activity (including staging and mobilization). The surveys shall be floristic in nature and shall be seasonally timed to coincide with the target species. All plant surveys shall be conducted by a qualified biologist during the blooming season prior to development permit approval. All special-status plant species identified on site shall be mapped onto a site-specific aerial photograph or topographic map with the use of Global Positioning System unit. Surveys shall be conducted in accordance with the most current protocols established by the CDFW, USFWS, and the local jurisdictions if said protocols exist. A report of the survey results shall be submitted to the City, and the CDFW and/or USFWS, as appropriate, for review and/or approval.

BIO-3 Special-status Plant Species Avoidance, Minimization, and Mitigation

If federally and/or state-listed or CRPR 1B or 2 species are found during special-status plant surveys (pursuant to Mitigation Measure BIO-2), and would be directly impacted, or there would be a population-level impact to non-listed sensitive species, then the project shall be re-designed to avoid impacting those plant species, where feasible. Rare and listed plant occurrences that are not within the immediate disturbance footprint but are located within 50 feet of disturbance limits shall have bright orange protective fencing installed at least 30 feet beyond their extent, or other distance as approved by a qualified biologist, to protect them from harm.

BIO-4 Habitat Restoration Plan

If federally or state-listed plants or non-listed special-status CRPR 1B and 2 plant populations identified during special status plant surveys (pursuant to Mitigation Measure BIO-2), cannot be avoided, and will be impacted by development, all impacts shall be mitigated by the applicant at a ratio not lower than 1:1 per acre of impact (and 1:1 per tree), and to be determined by the City (in coordination with CDFW and USFWS as and if applicable) for each species as a component of habitat restoration. A qualified biologist shall prepare and submit a restoration plan to the City for review

and approval prior to City approval of project plans. (Note: if a federally and/or state-listed plant species will be impacted, the restoration plan shall be submitted to the USFWS and/or CDFW for review, and federal and/or state take authorization may be required by these agencies.) The restoration plan shall include, at a minimum, the following components:

1. Description of the project/impact site (i.e., location, responsible parties, areas to be impacted by habitat type).
2. Goal(s) of the compensatory mitigation project (type[s] and area[s]) of habitat to be established, restored, enhanced, and/or preserved; specific functions and values of habitat type[s] to be established, restored, enhanced, and/or preserved).
3. Description of the proposed compensatory mitigation site (location and size, ownership status, existing functions, and values).
4. Implementation plan for the compensatory mitigation site (rationale for expecting implementation success, responsible parties, schedule, site preparation, planting plan).
5. Maintenance activities during the monitoring period, including weed removal as appropriate (activities, responsible parties, schedule).
6. Monitoring plan for the compensatory mitigation site, including no less than quarterly monitoring for the first year (performance standards, target functions and values, target acreages to be established, restored, enhanced, and/or preserved, annual monitoring reports).
7. Success criteria based on the goals and measurable objectives; said criteria to be, at a minimum, at least 80 percent survival of container plants and 30 percent relative cover by vegetation type or other industry standards as determined by a qualified restoration specialist.
8. An adaptive management program and remedial measures to address any shortcomings in meeting success criteria.
9. Notification of completion of compensatory mitigation and agency confirmation.
10. Contingency measures (initiating procedures, alternative locations for contingency compensatory mitigation, funding mechanism).
11. All nursery plants used in restoration shall be inspected for sudden oak death.

BIO-5 Endangered/Threatened Special-status Species Habitat Assessments and Protocol Surveys

If the results of the project-specific biological analysis (Mitigation Measure BIO-1) determine that suitable habitat may be present for federal or state listed, candidate, or proposed species, protocol habitat assessments/surveys shall be completed in accordance with current CDFW and/or USFWS protocols prior to issuance of any construction permits. If, through consultation with the CDFW and/or USFWS, it is determined that protocol habitat assessments/surveys are not required, the applicant shall complete and document this consultation and submit it to the City prior to issuance of any construction permits. Each protocol has different survey and timing requirements. The applicant shall be responsible for ensuring they understand the protocol requirements and shall hire a qualified biologist to conduct protocol surveys. (Note: if a federally and/or state-listed wildlife species will be impacted, federal and/or state take authorization may be required by USFWS and CDFW.)

BIO-6 Endangered/Threatened Animal Species Avoidance and Minimization

The following measures shall be applied to impacted aquatic and/or terrestrial animal species identified by the project-specific Biological Resources Screening and Assessment required under Mitigation Measure BIO-1.

1. Ground disturbance shall be limited to the minimum necessary to complete the project. A qualified biologist shall flag the project limits of disturbance. Areas of special biological concern within or adjacent to the limits of disturbance shall have highly visible orange construction fencing installed between said area and the limits of disturbance.
2. All projects occurring within/adjacent to aquatic habitats (including riparian habitats and wetlands) shall be completed between April 1 and October 31, if feasible, to avoid impacts to sensitive aquatic species. Any work outside these dates would require project-specific approval from the City and may be subject to regulatory agency approval.
3. All projects occurring within or adjacent to sensitive habitats that may support federally and/or state-listed endangered/threatened species shall have a CDFW- and/or USFWS-approved biologist present during all initial ground disturbing/vegetation clearing activities. Once initial ground disturbing/vegetation clearing activities have been completed, said biologist shall conduct daily pre-activity clearance surveys for endangered/threatened species. Alternatively, and upon approval of the CDFW and/or USFWS, said biologist may conduct site inspections at a minimum of once per week to ensure all prescribed avoidance and minimization measures are fully implemented.
4. No endangered/threatened species shall be captured and relocated without express permission from the CDFW and/or USFWS.
5. If at any time during project construction an endangered/threatened species enters the construction site or otherwise may be impacted by the project, all project activities shall cease. A CDFW/USFWS-approved biologist shall document the occurrence and consult with the CDFW and USFWS, as appropriate, to determine whether it was safe for project activities to resume.
6. For all work occurring in areas where endangered/threatened species may be present and are at risk of entering the project site during construction, the applicant shall install exclusion fencing along the project boundaries prior to start of construction (including staging and mobilization). The placement of the fence shall be at the discretion of the CDFW/USFWS-approved biologist. This fence shall consist of solid silt fencing placed at a minimum of three feet above grade and two feet below grade and shall be attached to wooden stakes placed at intervals of not more than five feet. The applicant shall inspect the fence weekly and following rain events and high wind events and shall be maintained in good working condition until all construction activities are complete.
7. All vehicle maintenance/fueling/staging shall occur not less than 100 feet from any riparian habitat or water body, including seasonal wetland features. Suitable containment procedures shall be implemented to prevent spills. A minimum of one spill kit shall be available at each work location near riparian habitat or water bodies.
8. No equipment shall be permitted to enter wetted portions of any affected drainage channel or wetland.
9. At the end of each workday, excavations shall be secured with a cover or a ramp provided to prevent wildlife entrapment.

10. All trenches, pipes, culverts, or similar structures shall be inspected for animals prior to burying, capping, moving, or filling.
11. Considering the potential for the project to impact federally and state-listed species and their habitat, the City shall contact CDFW and USFWS to identify mitigation banks within Napa County during project development. If the results of the project-specific biological analysis (Mitigation Measure BIO-1) determine that impacts to federally and state threatened or endangered species habitat are expected, City and/or applicant shall explore species-appropriate mitigation bank(s) servicing the region for purchase of mitigation credits.
12. Prior to grading and construction in natural areas of containing suitable upland habitat, a qualified biologist shall conduct a preconstruction survey as determined necessary during the biological analysis (Mitigation Measure BIO-1) . The survey should include a transect survey over the entire project disturbance footprint (including access and staging areas), and mapping of suitable habitat features, such as burrows, that are potentially suitable for listed species. If any listed species are detected, no work shall be conducted until the individual(s) leaves the site of their own accord, unless federal and/or state "take" authorization has been issued for relocation. Typical preconstruction survey procedures, such as burrow scoping and burrow collapse, cannot be conducted without federal and state permits. If any life stage of listed species are found within the survey area, the City and/or applicant shall consult with the USFWS and CDFW to determine the appropriate course of action to comply with the FESA and CESA, if permits are not already in place at the time of construction.

BIO-7 Pre-Construction Bird Surveys, Avoidance, and Notification

For all future development under the 2040 General Plan, construction activities initiated during the bird nesting season (February 1 – September 15), involving removal of vegetation (e.g. trees and shrubs), abandoned structures, or other nesting bird habitat, a pre-construction nesting bird survey shall be conducted no more than 5 days prior to initiation of ground disturbance and vegetation removal. The nesting bird pre-construction survey shall be conducted on foot and shall include a buffer around the construction site at a distance determined by a qualified biologist, including staging and storage areas. The minimum survey radii surrounding the work area shall be the following: 250 feet for non-raptors and 1,000 feet for raptors. The survey shall be conducted by a qualified biologist familiar with the identification of avian species known to occur in the American Canyon region. If construction lapses for seven days or longer, the qualified biologist shall conduct another focused survey before project activities are reinitiated. If nests are found, an avoidance buffer shall be determined by the biologist dependent upon the species, the proposed work activity, and existing disturbances associated with land uses outside of the site. The qualified biologist shall observe the active nest to establish a behavioral baseline of the adults and nestlings, if present. The qualified biologist shall continuously monitor the active nests to detect signs of disturbance and behavioral change as a result of construction impacts, such as noise, vibration, odors, or worker/equipment motion. If signs of disturbance and behavioral changes are observed, the qualified biologist shall cease work causing those changes and may contact CDFW or USFWS for guidance. The buffer shall be demarcated by the biologist with bright orange construction fencing, flagging, construction lathe, or other means to demarcate the boundary. All construction personnel shall be notified of the buffer zone as an "Ecologically Sensitive Area" and to avoid entering the buffer zone during the nesting season. No ground disturbing activities shall occur within the buffer until the biologist has confirmed that breeding/nesting is completed and the young have fledged the nest. Encroachment into the buffer shall occur only at the discretion of the qualified biologist on the basis that the encroachment will not be detrimental to an active nest. A report summarizing the

pre-construction survey(s) shall be prepared by a qualified biologist and shall be submitted to the City prior to the commencement of construction activities.

Project site plans shall include a statement acknowledging compliance with the federal MBTA and California Fish and Game Code that includes avoidance of active bird nests and identification of Best Management Practices to avoid impacts to active nests, including checking for nests prior to construction activities during February 1 to September 15, and what to do if an active nest is found so that the nest is not inadvertently impacted during grading or construction activities.

BIO-8 Roosting Bat Surveys and Avoidance Prior to Removal

For all future development under the 2040 General Plan that will require the removal of large trees (greater than 20 inches in diameter at five feet from the ground), abandoned buildings, bridges, or other suitable roosting structure identified during the Biological Resources Screening and Assessment (Mitigation Measure BIO-1), prior to tree and/or structure removal, a qualified biologist shall conduct a focused survey of all trees and structures to be removed or impacted by construction activities to determine whether active roosts of special-status bats are present on site. Tree or structure removal shall be planned for either the spring or the fall, and timed to ensure both suitable conditions for the detection of bats and adequate time for tree and/or structure removal to occur during seasonal periods of bat activity exclusive of the breeding season, as described below. Trees and/or structures containing suitable potential bat roost habitat features shall be clearly marked or identified. If no bat roosts are found, the results of the survey will be documented and submitted to the City within 30 days of the survey, after which no further action will be required.

If roosts are present, the biologist shall prepare a site-specific roosting bat protection plan to be implemented by the contractor following the City's approval. Additionally, the qualified biologist shall determine compensatory mitigation for temporary or permanent habitat loss due to tree removal, in conjunction with CDFW. The plan shall incorporate the following guidance as appropriate:

- When possible, removal of trees/structures identified as suitable roosting habitat shall be conducted during seasonal periods of bat activity, including the following:
  - Between September 1 and about October 15, or before evening temperatures fall below 45 degrees Fahrenheit and/or more than 0.5 inch of rainfall within 24 hours occurs.
  - Between March 1 and April 15, or after evening temperatures rise above 45 degrees Fahrenheit and/or no more than 0.5 inch of rainfall within 24 hours occurs.
- If a tree/structure must be removed during the breeding season and is identified as potentially containing a colonial maternity roost, then a qualified biologist shall conduct acoustic emergence surveys or implement other appropriate methods to further evaluate if the roost is an active maternity roost. Under the biologist's guidance, the contractor shall implement measures similar to or exceeding the following:
  - If it is determined that the roost is not an active maternity roost, then the roost may be removed in accordance with the other requirements of this measure.
  - If it is found that an active maternity roost of a colonial roosting species is present, the roost shall not be disturbed during the breeding season (April 15 to August 31).
- Tree removal procedures shall be implemented using a two-step tree removal process. This method is conducted over two consecutive days and works by creating noise and vibration by cutting non-habitat branches and limbs from habitat trees using chainsaws only (no excavators

or other heavy machinery) on day one. The noise and vibration disturbance, together with the visible alteration of the tree, is very effective in causing bats that emerge nightly to feed to not return to the roost that night. The remainder of the tree is removed on day two.

- Prior to the demolition of vacant structures within the project site, a qualified biologist shall conduct a focused habitat assessment of all structures to be demolished. The habitat assessment shall be conducted enough in advance to ensure the commencement of building demolition can be scheduled during seasonal periods of bat activity (see above), if required. If no signs of day roosting activity are observed, no further actions will be required. If bats or signs of day roosting by bats are observed, a qualified biologist will prepare specific recommendations such as partial dismantling to cause bats to abandon the roost, or humane eviction, both to be conducted during seasonal periods of bat activity, if required.
- If the qualified biologist determines a roost is used by a large number of bats (large hibernaculum), bat boxes shall be installed near the project site. The number of bat boxes installed will depend on the size of the hibernaculum and shall be determined through consultation with CDFW. If a maternity colony has become established, all construction activities shall be postponed within a 500-foot buffer around the maternity colony until it is determined by a qualified biologist that the young have dispersed. Once it has been determined that the roost is clear of bats, the roost shall be removed immediately.

BIO-9 Conduct Pre-construction Crotch's Bumblebee Surveys and Implement Avoidance Measures

If the results of the project-specific biological analysis (Mitigation Measure BIO-1) determine that suitable habitat may be present for Crotch's bumble bee, a habitat assessment shall be performed by a qualified biologist knowledgeable and experienced with Crotch's bumblebee and the habitat in which they occur. If the biologist determines that suitable habitat for Crotch's bumblebee is present, a focused survey shall be performed during the species' active flight period for Crotch's bumblebee and peak blooming period of nectar and pollen sources (May 1 through July 31). The Crotch's bumblebee survey shall be conducted on foot and shall encompass the entirety of a project site and focus on areas that allow for the highest probability of detection, such as high abundance nectar or pollen sources and rodent burrows that may be used for breeding and nesting. If Crotch's bumblebee is determined to be present, the project proponent shall map the locations of the observed bumblebee, areas of abundant nectar or pollen sources, and any active nesting sites. A report summarizing the results of the habitat assessment and focused survey (if required) shall be prepared by the qualified biologist and shall be submitted to the City prior to the commencement of construction activities. Further, consultation with the CDFW will be necessary in the event Crotch's bumblebee was observed within a project site and an Incidental Take Permit, in accordance with the California Endangered Species Act, may be required prior to initiating any ground disturbance on the site. If Crotch's bumble are not listed and no longer candidates for listing at the time of project implementation, this mitigation measure would not be required.

Significance After Mitigation

Implementation of Mitigation Measure BIO-1 through BIO-9 would reduce potential impacts to special-status species, nesting birds, and roosting bats to a less than significant level by requiring Biological Resources Screening and Assessments, avoidance and minimization, habitat restoration, and preconstruction surveys.

Threshold 2:	Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?
Threshold 3:	Would the project have a substantial adverse effect on state or federally protected wetlands (including but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Impact BIO-2 DEVELOPMENT AND MOBILITY IMPROVEMENTS FACILITATED BY THE PROJECT WOULD BE SUBJECT TO ADOPTED CITY REGULATIONS TO MINIMIZE IMPACTS TO RIPARIAN HABITAT, SENSITIVE NATURAL COMMUNITIES, AND WETLANDS. COMPLIANCE WITH THE NPDES CONSTRUCTION GENERAL PERMIT, MS4 STORM WATER PERMIT, AMERICAN CANYON MUNICIPAL CODE, AND PROPOSED POLICIES IN THE 2040 GENERAL PLAN WOULD ENSURE POTENTIAL IMPACTS TO RIPARIAN HABITAT, SENSITIVE NATURAL COMMUNITIES, AND WETLANDS WOULD BE LESS THAN SIGNIFICANT.

The City identifies riparian corridors, coastal saltmarsh, mixed hardwood forest, and oak savannah as sensitive areas. These areas support a range of wildlife species. Riparian areas in particular shade aquatic habitats and maintain cooler water temperatures for wildlife within riparian areas. In addition, the CNDDB identifies coastal brackish marsh, northern claypan vernal pools, northern costal salt marsh, northern vernal pool, and serpentine bunchgrass as sensitive natural communities, which could occur in the Planning Area (Appendix B). According to the USFWS NWI, wetlands in and surrounding the City consist of estuarine and marine habitats, freshwater ponds, freshwater emergent wetlands, and riverine habitats (USFWS 2022a). Potentially significant effects on riparian or other sensitive natural communities would occur if future development or mobility improvements facilitated by the project result in the loss of habitat or degradation of habitat, such as impacts to water quality. Potentially significant impacts to state or federally protected wetlands could occur if development or mobility improvements facilitated by the project would result in the loss or degradation of existing wetlands.

Mobility improvements facilitated by the project, including improvements to roadways, and bicycle and pedestrian facilities, are not likely to result in the removal of riparian or other sensitive natural community habitat, as they would occur in areas of the City that are developed and surrounded by existing development. Development facilitated by the project would be subject to American Canyon Municipal Code requirements to protect riparian habitat and sensitive natural communities.

Section 19.24.040 of the American Canyon Municipal Code restricts residential, commercial, and industrial uses in riparian corridors and limits the potential for new development to substantially affect riparian areas. In addition, Section 19.24.040 requires development permitted in a riparian corridor to minimize the removal of vegetation, erosion, sedimentation, and runoff; minimize wastewater discharges and entrapment; buffer habitat from the built environment; and locate and design roads and utilities to avoid conflicts with biological resources, habitat areas, and wildlife corridors. Section 19.24.030 of the American Canyon Municipal Code requires a biological assessment report to be prepared for project-specific development that could result in potentially significant impacts to riparian habitat, wetlands, or vernal pools. This biological assessment would identify and provide mitigation for potentially significant impacts, in accordance with City review processes.

Section 19.24.050 of the American Canyon Municipal Code requires new development to be sited to preserve wetlands, including the retention of sufficient natural space. If preservation of wetlands for project-specific development is infeasible, the project applicant would be required to replace the

habitat consistent with the provisions of Section 19.24.050. Future development would not result in substantial adverse effects due to the direct removal of wetlands, as development facilitated by the project would primarily occur outside of substantial wetland habitat, and any wetland habitat that would be removed would be replaced in accordance with City requirements.

Section 19.24.060 of the American Canyon Municipal Code requires development of areas that encompass oak savannah, mixed hardwood forest, and coastal saltmarsh to maintain a buffer from the edge of the designated habitat zone as recommended by a biological assessment report, maintain connectivity to surrounding habitats, and limit public access in areas where damage to habitat may occur.

In addition, Section 14.28.110 of the American Canyon Municipal Code prohibits discharge into a watercourse; modification of the natural flow of water; deposition or removal of material from a watercourse; alteration of watercourse; or the placement of loose or unconsolidated material in or adjacent to a watercourse. Implementation of Section 14.28.110 would minimize the potential for development facilitated by the project to fill or hydrologically interrupt a wetland or damage water quality in riparian habitat. Development in state and/or federally protected wetlands would potentially be subject to United States Army Corps of Engineers, CDFW, and RWQCB permitting requirements.

In addition, the 2040 General Plan would include the following proposed policies that would protect riparian, creek, and wetland habitats:

- **Policy ENV-1.2: Sensitive Habitat Assessment and Impact Mitigation.** Require new development and redevelopment located within sensitive habitats, including coastal saltmarsh, mixed hardwood forest, oak savannah, vernal pools, and riparian habitats to provide a detailed assessment of the potential for impacts on these resources, and include measures to reduce any identifiable impacts.
- **Policy ENV-1.3: Habitat Conservation.** Support habitat conservation efforts to set aside and preserve suitable habitats, with priority given to habitats for rare and endangered species in American Canyon in accordance with state and federal resource agency requirements.
- **Policy: ENV-2.1: Creek Preservation.** Maintain American Canyon Creek within its natural waterway.
- **Policy ENV-2.2: Existing Streams and Creeks.** As required by wetland resource permitting agencies, require new development to incorporate existing streams and creeks into proposed development plans in their natural state to prevent degradation, erosion, or sedimentation and help impart a unique character to the city.

Development and mobility improvements facilitated by the project would be subject to applicable federal, State, and City requirements, which would minimize potential impacts to riparian habitat, sensitive natural communities, and wetlands. Through compliance with these regulations, the project would not have a substantial adverse impact on riparian habitat, sensitive natural communities, or wetlands. These impacts would be less than significant.

In addition, as discussed in Impact BIO-1, development and mobility improvements facilitated by the project would be required to comply with the provisions of the NPDES Construction General Permit, MS4 Storm Water Permit, American Canyon Municipal Code, and proposed policies in the 2040 General Plan. Compliance with these regulations would ensure future development facilitated by the project would not substantially degrade water quality in wetlands riparian habitats. These indirect impacts would be less than significant.

Mitigation Measure

No mitigation measures would be required.

Significance After Mitigation

Impacts would be less than significant without mitigation.

Threshold 4:	Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Impact BIO-3 IMPLEMENTATION OF THE PROJECT WOULD NOT SUBSTANTIALLY IMPEDE THE MOVEMENT OF NATIVE RESIDENT OR MIGRATORY FISH OR WILDLIFE SPECIES, OR WITH ESTABLISHED NATIVE RESIDENT OR MIGRATORY WILDLIFE CORRIDORS AFTER IMPLEMENTATION OF PROPOSED POLICIES IN THE 2040 GENERAL PLAN AND COMPLIANCE WITH THE AMERICAN CANYON MUNICIPAL CODE.

Habitat connectivity is generally located to the east and north of the Planning Area, as well as within the riparian corridors in the Planning Area. Potentially significant effects on wildlife movement would occur if temporary disturbance during construction or permanent new development facilitated by the project would result in the fragmentation or degradation of wildlife corridors or nursery sites. Mobility improvements facilitated by the project, including improvements to roadways, and bicycle and pedestrian facilities, would occur in areas of the City that are developed and generally are surrounded by existing development and urban disturbance. As a result, mobility improvements facilitated by the project would not result in potentially significant impacts to wildlife movement because they would not obstruct wildlife corridors or fragment habitat such that wildlife movement is restricted.

Due to the existing level of development, the Planning Area is not within an essential connectivity area as defined by CDFW (CDFW 2022). Development facilitated by the project would generally occur in areas of the City that are developed or surrounded by existing development and urban disturbance. The 2040 General Plan includes the following proposed policy to establish a network of open spaces along the City's natural drainages and riparian corridors:

- **ENV-1.5: Open Space Network.** Establish a network of open spaces along the city's natural drainages and riparian corridors and link significant biological habitats by restricting alteration to these resources and limiting land uses. Any recreational use of these areas shall be designed to avoid damaging sensitive habitat areas.

In addition, Section 19.24.040 of the American Canyon Municipal Code restricts uses in riparian corridors, which would minimize the potential impacts on riparian habitat. Furthermore, Section 19.24.040 requires project-specific development permitted within riparian corridors provide for sufficient passage of native and anadromous fish and provide wildlife corridors to adjacent open spaces.

The 2040 General Plan also includes the following proposed policy, which would minimize impacts from any future development or mobility improvements on sensitive habitat that could provide opportunities for wildlife movement:

- **ENV-1.2: Sensitive Habitat Assessment and Impact Mitigation.** Require new development and redevelopment located within sensitive habitats, including coastal saltmarsh, mixed hardwood forest, oak savannah, vernal pools, and riparian habitats to provide a detailed assessment of the

potential for impacts on these resources, and include measures to reduce any identifiable impacts.

With implementation of the proposed policies in the 2040 General Plan, as well as compliance with the American Canyon Municipal Code, development facilitated by the project would not substantially interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites. This impact would be less than significant.

Mitigation Measure

No mitigation measures would be required.

Significance After Mitigation

Impacts would be less than significant without mitigation.

Threshold 5:	Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Impact BIO-4 **THE PROJECT WOULD IMPLEMENT PROPOSED POLICIES DESIGNED TO PROTECT BIOLOGICAL RESOURCES. DEVELOPMENT AND MOBILITY IMPROVEMENTS FACILITATED BY THE PROJECT WOULD BE REQUIRED TO ADHERE TO THESE POLICIES, AS WELL AS AMERICAN CANYON MUNICIPAL CODE REQUIREMENTS TO PROTECT BIOLOGICAL RESOURCES. THEREFORE, THIS IMPACT WOULD BE LESS THAN SIGNIFICANT.**

The Planning Area has trees within its developed and disturbed areas, as well as its surrounding parks and open space. Section 18.40.110 of the American Canyon Municipal Code provides regulations governing trees in the City. Pursuant to Section 18.40.110, existing trees are required to be preserved unless otherwise approved by City Council as part of a development plan. Any tree removed as part of project-specific development is required to be replaced on-site at a minimum size of a 24-inch box of the same species, unless specifically approved by the City Council. In addition, the 2040 General Plan would implement the following proposed policies related to trees:

- **Policy ENV-1.4: Native Species.** Encourage the use of native vegetation where possible.
- **Policy ENV-1.6: Urban Forest.** Build upon existing streetscapes and develop an urban forest within the City's streets, parks, and open space to provide avian habitat, sequester carbon monoxide emissions, foster pedestrian activity, and provide shade.
- **Policy ENV-1.7: Trees for Pollinators.** Support sustainable pollinator species (i.e.: bees, birds, butterflies) in American Canyon by planting low-water use pollinator-supportive trees in streets, parks, open spaces, and private development.
- **Policy ENV-6.12: Climate Adaptation.** Mitigate the effects of heat reflecting from paved trail surfaces by incorporating shade trees along the south and west sides of trails wherever possible.

In addition, the Environment, Parks, and Recreation Element in the 2040 General Plan has additional policies that would protect biological resources in the Planning Area. Development and mobility improvements facilitated by the project would adhere to the requirements of the American Canyon Municipal Code and the proposed polices in the 2040 General Plan. Therefore, the project would not conflict with local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. This impact would be less than significant.

Mitigation Measure

No mitigation measures would be required.

Significance After Mitigation

Impacts would be less than significant without mitigation.

Threshold 6:	Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Impact BIO-5 IMPLEMENTATION OF THE PROJECT WOULD NOT CONFLICT WITH THE PROVISION OF AN ADOPTED HABITAT CONSERVATION PLAN, NATURAL COMMUNITY CONSERVATION PLAN, OR OTHER APPROVED LOCAL, REGIONAL, OR STATE HABITAT CONSERVATION PLAN. NO IMPACT WOULD OCCUR.

There are no habitat conservation plans, natural community conservation plans, or other approved local regional or state habitat conservation plans in the Planning Area. Therefore, development and improvements in the Planning Area would not conflict with such plans. No impact would occur.

Mitigation Measures

No mitigation measures would be required.

Significance After Mitigation

There would be no impact and no mitigation would be required.

4.4 Cultural Resources

This section summarizes the potential cultural resources in the Planning Area and analyzes the impacts on cultural resources due to the project.

4.4.1 Setting

a. Cultural Setting

The cultural setting for the Planning Area is presented broadly in three overviews: Prehistoric, Ethnographic, and Historic. The prehistoric and historic overviews describe human occupation before and after European contact. The ethnographic overview in the Section 4.12, *Tribal Cultural Resources* provides a synchronic "snapshot" of traditional Native American culture.

Prehistory

The Planning Area lies in the San Francisco Bay Area archaeological region (Milliken et al. 2007, Moratto 1984). Milliken et al. (2007) generally divided the prehistoric chronology of the Bay Area into five periods: The Early Holocene (8,000-3,500 before common era [BCE]), Early Period (3,500-500 BCE), Lower Middle Period (500 BCE to CE 430 common era [CE]), the Upper Middle Period (430-1050 CE), and the Late Period (1050 CE-contact).

It is presumed that early Paleoindian groups lived in the area prior to 8,000 BCE; however, no evidence for this period has been discovered in the San Francisco Bay Area (Milliken et al. 2007). Sites dating to this period may be submerged or deeply buried as a result of rising sea levels and widespread sediment deposition that has occurred since the Terminal Pleistocene (Byrd et al. 2017). For this reason, the Terminal Pleistocene Period (ca. 11,700-8,000 BCE) is not discussed here.

The earliest intensive study of the archaeology of the San Francisco Bay Area began with N.C. Nelson of the University of California, Berkeley, between 1906 and 1908. He documented over 400 shell mounds throughout the area. Nelson was the first to identify the Bay Area as a discrete archaeological region (Moratto 1984).

Early Holocene (8,000-3,500 BCE)

Archaeological evidence from the early Holocene is limited as sites dating to this period are likely buried under Holocene alluvial deposits (Moratto 1984; Ragir 1972). The available data suggests that the Early Holocene in the San Francisco Bay Area is characterized by a mobile forager pattern and the presence of millingslabs, handstones, and a variety of leaf-shaped projectile points. Two archaeological sites (CA-CCO-696 and CA-CCO-637) dating to this period have been identified in Contra Costa County at the Los Vaqueros Reservoir. The earliest date for the Early Holocene comes from the CA-CCO-696, dating to approximately 7000 BCE (Milliken et al. 2007).

Early Period (3,500-600 BCE)

The Early Period saw increased sedentism with the introduction of new ground stone technologies (i.e., mortar and pestle), an increase in regional trade, and the first cut shell beads. The earliest evidence for the use of the mortar and pestle in the San Francisco Bay Area dates to 3800 BCE and comes from archaeological site CA-CCO-637. By 1500 BCE, mortars and pestles had almost completely replaced millingslabs and handstones, indicating a greater reliance on processing nuts,

especially acorns. Faunal evidence from various sites during this person indicate a diverse faunal exploitation pattern based on the presence mussel and other shellfish, marine mammals, terrestrial mammals, and birds within sites dating to this period (D'Oro 2009).

The earliest cut bead horizon is also associated with this period. Rectangular Haliotis spp. (abalone) and Callianax biplicate (formerly *Olivella biplicata*) (Vellanoweth et al. 2014) (snail) beads have been identified at several Early Period sites, including CA-CCO-637, CA-SCL-832 in Sunnyvale, and CA-ALA-307 in Berkeley (Milliken et al. 2007). These early examples of cut beads were recovered from mortuary contexts.

Lower Middle Period (500 BCE-CE 430)

The Lower Middle Period saw numerous changes from the previous period. The presence of chipped stone points and bone tools became typical. Rectangular shell beads (common during the Early Period) disappear completely and are replaced by split-beveled and saucer Olivella beads. Haliotis spp. ornaments, bone tools and ornaments, and basketry awls also became typical, indicating the development of coiled basketry technology. Mortars and pestles continued to be the dominant grinding tool (Luby and Gruber 1999; Milliken et al. 2007).

Evidence for the Lower Middle Period in the Bay Area comes from sites such as the Emeryville shell mound (CA-ALA-309) and Ellis Landing (CA-CCO-295). The Emeryville shell mound (CA-ALA-309) is one of the largest shell mounds in the San Francisco Bay Area and contains multiple cultural sequences. The lower levels of the site, which date to the Middle Period, contain flexed burials with bone implements, chert bifaces, charmstones, and oyster shells (Moratto 1984).

Upper Middle Period (CE 430-1050)

Around CE 430, Olivella saucer bead trade networks that had been established during earlier periods collapsed and over half of known sites occupied during the Lower Middle Period were abandoned. Olivella saucer beads were replaced with Olivella saddle beads. New types of material culture appear within these sites, including elaborate, decorative blades, fishtail charmstones, new Haliotis spp. ornament forms, and mica ornaments. Sea otter bones became more abundant, while salmon and other fish became less so, suggesting changes in faunal exploitation patterns from earlier periods (Milliken et al. 2007; Simons and Carpenter 2009). Excavations at archaeological site CA-ALA-309 indicate that a shift from mussels to oysters, and oysters to clams may have occurred (Gifford 1916). Isotopic analysis confirms that San Francisco Bay Area individuals shifted from hunting higher-trophic-level foods in the Early Period to gathering foods like plants and shellfish in the Middle and Upper Periods (Burns et. al 2012). Subsistence analyses at various sites dating to this period indicate a diverse diet that included numerous species of fish, mammals, birds, shellfish, and plant resources that varied by location in the San Francisco Bay Area (Hylkema 2002).

Late Period (CE 1050-contact)

The Late Period saw an increase in social complexity, indicated by differences in burials and an increased level of sedentism relative to preceding periods, evidenced by mortars weighing up to 90.7 kilograms (Lentz 2012). An increase in imported Napa Valley obsidian occurred during this time for the production of smaller points, preforms and simple flake tools. Small, finely worked projectile points of the Stockton Serrated series associated with bow and arrow technology appear around CE 1250. Olivella shell beads disappeared and were replaced with Olivella lipped and spire -lopped beads in the South Bay and clamshell disk beads in the North Bay. Thicker and larger beads indicated higher affluence. The toggle harpoon, hopper mortar, and magnesite tube beads also

appeared during this period (Milliken et al. 2007; Lentz 2012; Von Der Porten et al. 2014), as did an increase in the intensity of resource exploitation that correlates with an increase in population (Moratto 1984). Many of the well-known sites of earlier periods, such as the Emeryville shell mound (CA-ALA-309) and the West Berkeley site (CA-ALA-307) were abandoned, as indicated by the lack of Late Period elements. Researchers have suggested that the abandonment of these sites may have resulted from fluctuating climates and drought that occurred throughout the Late Period (Lightfoot and Luby 2002).

b. Historic Context

The Post-European contact history of California is generally divided into three periods: the Spanish Period (1769–1822), the Mexican Period (1822–1848), and the American Period (1848–present). Each of these periods is briefly described below.

Spanish Period (1769 – 1822)

For more than 200 years, Cabrillo and other Spanish, Portuguese, British, and Russian explorers sailed the Alta (upper) California coast and made limited inland expeditions, but they did not establish permanent settlements (Bean 1968; Rolle 2003). Explorers such as Francis Drake and Sebastian Cermeno explored the San Francisco Bay area in the late 1500s (Bean 1968). Gaspar de Portolá and the Franciscan Father Junípero Serra established the first Spanish settlement in Alta California at Mission San Diego de Alcalá in 1769, the first of 21 missions erected by the Spanish. Portolá continued north, reaching the San Francisco Bay later that year. Pedro Fages' expedition also explored the region in 1772 (Cook 1957). Mission San Francisco de Asis and the San Francisco presidio (military fort) were founded in 1776, and Mission San Rafael Arcangel was built in 1817, all within about 30 miles of the Planning Area (Presidio Trust 2020; California Missions Foundation, N.D.).

Mexican Period (1822 – 1848)

The Mexican Period commenced when news of the success of the Mexican Revolution (1810-1821) against the Spanish crown reached California in 1822. This period saw the federalization of mission lands in California with the passage of the Secularization Act of 1833. This Act enabled Mexican governors in California to distribute former mission lands to individuals in the form of land grants. Successive Mexican governors made more than 700 land grants between 1822 and 1846, putting most of the state's lands into private ownership for the first time (Shumway 2007). The approximately 80,000-acre Rancho Suscol or Soscol was acquired by General Vallejo in 1843; which encompasses the Planning Area (City of Sonoma, N.D.).

The Mexican period saw an increased importance of sea trade and an influx of American settlers, which motivated the United States to expand their territory into California. The United States supported a small group of insurgents from Sonoma during the Bear Flag Revolt. The Bear Flaggers captured Sonoma in June of 1846. The next month, Commodore John Drake Sloat landed in Monterey and proceeded to take Yerba Buena, Sutter's Fort, Bodega Bay, and Sonoma. Fighting between American and Mexican forces continued until Mexico surrendered in 1847 (Rolle 2003).

American Period (1848 – Present)

The American Period began with the signing of the Treaty of Guadalupe Hidalgo in 1848, in which the United States agreed to pay Mexico $15 million for the conquered territory, including California, Nevada, Utah, and parts of Colorado, Arizona, New Mexico, and Wyoming. Settlement of California

continued to increase during the early American Period. Many ranchos were sold or otherwise acquired by Americans, and most were subdivided into agricultural parcels or towns. California's population grew exponentially with the discovery of gold in 1848. San Francisco grew from a population of 812 to 25,000 in only a few years and became California's first city (Rolle 2003).

The City of Vallejo, located directly south of the Planning Area, was founded on what was once General Vallejo's rancho land, and thus was named after him. After the state of California was admitted to the Union, he donated 156 acres of land and offered funding to establish a new state capital. The town of Vallejo briefly became the site of the state capitol in 1852, and it served as the capital again in 1853 for approximately one month. Vallejo's son-in-law, John B. Frisbie, is generally credited with the founding of the city and helping to establish its government (Vallejo Convention and Visitors Bureau 2019; Vallejo Chamber of Commerce 2020).

Although the town lost the government center, a naval shipyard was established there in 1854 which furthered development of the town. Mare Island Naval Shipyard, also located approximately 5-miles south of the Planning Area, became the first United States Navy installation on the Pacific Coast, and Vallejo developed into an important shipping center with ferry transportation serving passengers, railroads, and the Pony Express (Vallejo Convention and Visitors Bureau 2019). The Mare Island Naval Shipyard had an immense impact on the population of Vallejo and surrounding areas. It was known in the 1920s for the development of submarines, and its peak production period for shipbuilding, repair, and maintenance occurred during World War II. Correspondingly, the population in the areas greatly expanded during the war years. Mare Island continued to be a primary station for the construction and development of the Navy's pacific fleet of submarines in the years that followed. At the time, the base encompassed 5,200 acres (Vallejo Chamber of Commerce 2020). The area flourished as well, in part due to the Navy's presence which attracted countless military and civilian personnel from various parts. In the 1920s many Filipinos settled in the area following the Spanish-American War and the Filipino Insurrection, making the area one of the most diverse areas in northern California.

With the end of the Cold War, Mare Island Naval Shipyard's budget was reduced and the shipyard was closed in 1996, dramatically affecting the surrounding areas. The municipality underwent a bankruptcy in 2008, and efforts afterwards focused on drawing new investment to the area (Felix 2013). Various industrial, educational, recreational and historical areas have been developed as part of evolving the property for new uses (Gase 2019). Today, the waterfront area has become a focus for redevelopment to generate economic growth (City of Vallejo 2018).

City of American Canyon

The area now comprising Napa County was subject to European exploration as early as 1823, when Francisco Castro, Father Jose Altamira, and Jose Sanchez led an expedition though the area to find a site for a new mission. However, despite this incursion, European-American settlement of what is now American Canyon did not begin until two years after California was admitted to the United States (FirstCarbon Solutions 2016). In 1852, American Simpson Thompson purchased lands from General Mariano Guadalupe Vallejo and General J.B. Frisbie to establish a ranch. Thompson earned fame as one of the area's earliest fruit growers, but also grew grains on his land. In 1869, a railroad servicing the Napa Valley was developed, with a stop at Napa Junction (the original name for American Canyon), from which another line went east into the interior of California (ACHC n.d.). The area maintained a predominantly agricultural character until around 1900, when Augustus Watson established a limestone quarry. By 1902, Watson sold the quarry to the Standard Portland Cement Company, which supplemented the quarry with a new cement plant. Central to the local economy,

the plant employed 200 and produced more than 2,000 barrels of cement a day, on average. The plant continued producing cement until the 1920s or 1930s, when the local supply of limestone was exhausted. By 1946, the Basalt Rock Company repurposed the facility for the production of aggregate (FirstCarbon Solutions 2016).

Residential development of the area began after World War II. American Canyon's first subdivision, McKnight Acres was completed in 1948 and the Rancho Del Mar subdivision was built in 1952. Throughout the 1950s and 1960s, the community established new institutions and municipal services, such as the American Canyon Fire Protection District and the American Canyon Water District, in addition to expansions of the sewer and parks systems. A multi-decade campaign resulted in the incorporation of American Canyon in 1992, confirming the community's separate identity from neighboring Vallejo and Napa (ACHC n.d.). The city has grown steadily since its incorporation, expanding from about 7,000 in 1990 to approximately 21,758 residents in 2024 (see Section 4.13, *Population and Housing*).

c. Historical and Archaeological Resources in the Planning Area

There are seven important historic resources in or next to American Canyon city limits: the four properties described below and three residential properties on Jameson Canyon Road. These properties are not listed on the National Register of Historic Places or the California Register of Historical Resources but with further research and evaluation they, along with other historic-age properties within the city boundaries, may have potential to be listed historical resources.

Watson Ranch

Watson Ranch gained its name from the Watson family, who homesteaded the land in the 1850's and started the Napa Junction Company in 1900. This property consists of a main house and six outbuildings, including a secondary residence, three barns, a shop, and a garage. The Napa Junction Company mined and manufactured aggregate rock for cement, and Watson sold the company to the Standard Portland Cement Company in 1902.

Standard Portland Cement Company

The Standard Portland Cement Company mined limestone and clay from quarries located where the Watson Ranch development is now proposed. The concrete made from materials mined onsite went into countless projects in the Bay Area, including rebuilding San Francisco after the 1906 earthquake. Since the plant's closure in 1970, the structures have deteriorated and were further damaged in the 2014 Napa earthquake. The remaining walls of the structures have become an attraction for local urban graffiti artists as well. The Watson Ranch development will possibly preserve parts of the historic structures and include housing, retail, and other community services.

Lee Ranch

Lee Ranch is located at the north end of American Canyon between Green Island Road and the railroad tracks in what is now an industrial area. The home was built in 1929 and is a privately-owned home.

Newell Ranch

Newell Ranch was the home of Jack and Bernice Newell, beloved residents and benefactors of Vallejo and American Canyon for several decades until their passing. Historic Newell Ranch consists

of a barn and the ruins of two sheds, with a modern house constructed on the property in 1991. The ranch is a cultural icon for the community. The Newell Ranch Open Space was donated to the City of American Canyon by the Newell family in 1999, allowing residents to enjoy the 640 acres of trails, open hills, and scenic overlooks it provides, as well as preserving habitat for critical and endangered species and on-site cultural resources.

d. Native American Outreach

On August 16, 2022, City mailed and emailed out letters to the Cortina Band of Indians, Federated Indians of Graton Rancheria, and Yocha Dehe Wintun Nation to inform them of the proposed General Plan Update. To date, one response dated September 14, 2022 was received on from the Yocha Dehe Wintun Nation which stated that the project is within the aboriginal territories of the Yocha Dehe Wintun Nation. The Tribe requested formal consultation with the lead agency, a project timeline, detailed project information, and the latest cultural study conducted for the project. On November 16, 2022; December 9, 2022; and December 12, 2022, the City communicated with the Tribe to coordinate a date and time to meet regarding the General Plan Update. A consultation meeting was held on January 12, 2023. For a summary of the consultation meeting, refer to the discussion in Impact TCR-1 in Section 4.12, *Tribal Cultural Resources*.

4.4.2 Regulatory Setting

a. Federal Regulations

National Register of Historic Places

Although the project does not have a federal nexus, properties which are listed in or have been formally determined eligible for listing in the National Register of Historic Places (NRHP) are automatically listed in the California Register of Historical Resources (CRHR). The following is therefore presented to provide applicable regulatory context. The NRHP was authorized by Section 101 of the National Historic Preservation Act and is the nation's official list of cultural resources worthy of preservation. The NRHP recognizes the quality of significance in American, state, and local history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects. Pursuant to 36 Code of Federal Regulations (CFR) Part 60.4, a property is eligible for listing in the NRHP if it meets one or more of the following criteria:

Criterion A: Are associated with events that have made a significant contribution to the broad patterns of our history.

Criterion B: Are associated with the lives of persons significant in our past.

Criterion C: Embody the distinctive characteristics of a type, period, or method of installation, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Criterion D: Have yielded, or may be likely to yield, information important in prehistory or history.

In addition to meeting at least one of the above designation criteria, resources must also retain integrity. The National Park Service recognizes seven aspects or qualities that, considered together, define historic integrity. To retain integrity, a property must possess several, if not all, of these seven qualities, defined as follows:

Location: The place where the historic property was constructed or the place where the historic event occurred.

Design: The combination of elements that create the form, plan, space, structure, and style of a property.

Setting: The physical environment of a historic property.

Materials: Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.

Workmanship: The physical evidence of the crafts of a particular culture or people during any given period in history or prehistory.

Feeling: A property's expression of the aesthetic or historic sense of a particular period of time.

Association: The direct link between an important historic event or person and a historic property.

Certain properties are generally considered ineligible for listing in the NRHP, including cemeteries, birthplaces, graves of historical figures, properties owned by religious institutions, relocated structures, or commemorative properties. Additionally, a property must be at least 50 years of age to be eligible for listing in the NRHP. The National Park Service states that 50 years is the general estimate of the time needed to develop the necessary historical perspective to evaluated significance (National Park Service 1997:41). Properties which are less than 50 years must be determined to have "exceptional importance" to be considered eligible for NRHP listing.

b. State Regulations

California Environmental Quality Act

California Public Resources Code (PRC) Section 21804.1 requires lead agencies determine if a project could have a significant impact on historical or unique archaeological resources. As defined in PRC Section 21084.1, a historical resource is a resource listed in, or determined eligible for listing in, the CRHR; a resource included in a local register of historical resources or identified in a historical resources survey pursuant to PRC Section 5024.1(g); or any object, building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant. PRC Section 21084.1 also states resources meeting the above criteria are presumed to be historically or cultural significant unless the preponderance of evidence demonstrates otherwise. Resources listed in the NRHP are automatically listed in the CRHR and are, therefore, historical resources under CEQA. Historical resources may include eligible built environment resources and archaeological resources of the precontact or historic periods.

CEQA Guidelines Section 15064.5(c) provides further guidance on the consideration of archaeological resources. If an archaeological resource does not qualify as a historical resource, it may meet the definition of a "unique archaeological resource" as identified in PRC Section 21083.2. PRC Section 21083.2(g) defines a unique archaeological resource as an artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. It contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information;
2. Has a special and particular quality such as being the oldest of its type or the best available example of its type; or
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

If an archaeological resource does not qualify as a historical or unique archaeological resource, the impacts of a project on those resources will be less than significant and need not be considered further (CEQA Guidelines Section 15064.5[c][4]). CEQA Guidelines Section 15064.5 also provides guidance for addressing the potential presence of human remains, including those discovered during the implementation of a project.

According to CEQA, an impact that results in a substantial adverse change in the significance of a historical resource is considered a significant impact on the environment. A substantial adverse change could result from physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of the historical resource would be materially impaired (CEQA Guidelines Section 15064.5 [b][1]). Material impairment is defined as demolition or alteration in an adverse manner [of] those characteristics of a historical resource that convey its historical significance and that justify its inclusion in, or eligibility for inclusion in, the CRHR or a local register (CEQA Guidelines Section 15064.5[b][2][A]).

If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all these resources to be preserved in place or left in an undisturbed state. To the extent that resources cannot be left undisturbed, mitigation measures are required (PRC Section 21083.2[a], [b]).

CEQA Guidelines Section 15126.4 stipulates an EIR shall describe feasible measures to minimize significant adverse impacts. In addition to being fully enforceable, mitigation measures must be completed within a defined time period and be roughly proportional to the impacts of the project. Generally, a project which is found to comply with the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings* (the Standards) is considered to be mitigated below a level of significance (CEQA Guidelines Section 15126.4 [b][1]). For historical resources of an archaeological nature, lead agencies should also seek to avoid damaging effects where feasible. Preservation in place is the preferred manner to mitigate impacts to archaeological sites; however, data recovery through excavation may be the only option in certain instances (CEQA Guidelines Section 15126.4[b][3]).

California Register of Historical Resources

The CRHR was established in 1992 and codified by PRC Sections 5024.1 and 4852. The CRHR is an authoritative listing and guide to be used by State and local agencies, private groups, and citizens in identifying the existing historical resources of the State and to indicate which resources deserve to be protected from substantial adverse change to the extent prudent and feasible (Public Resources Code, 5024.1(a)). The criteria for eligibility for the CRHR are consistent with the NRHP criteria but have been modified for state use to include a range of historical resources that better reflect the history of California (Public Resources Code, 5024.1(b)). Unlike the NRHP, the CRHR does not have a defined age threshold for eligibility; rather, a resource may be eligible for the CRHR if it can be demonstrated sufficient time has passed to understand its historical or architectural significance

(California Office of Historic Preservation 2006). Further, resources may still be eligible for listing in the CRHR even if they do not retain sufficient integrity for NRHP eligibility (California Office of Historic Preservation 2006). Generally, the California Office of Historic Preservation recommends resources over 45 years of age be recorded and evaluated for historical resources eligibility (California Office of Historic Preservation 1995:2).

Properties are eligible for listing in the CRHR if they meet one of more of the following criteria:

Criterion 1: Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.

Criterion 2: Is associated with the lives of persons important to our past.

Criterion 3: Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.

Criterion 4: Has yielded, or may be likely to yield, information important in prehistory or history.

California Health and Safety Code Section 7050.5

California Health and Safety Code Section 7050.5 states that in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site, or any nearby area reasonably suspected to overlie adjacent remains, until the coroner of the county in which the remains are discovered has determined if the remains are subject to the coroner's authority. If the human remains are of Native American origin, the coroner must notify the NAHC within 24 hours of this identification.

California Public Resources Code Section 5097.98

California Public Resources Code Section 5097.98 states that the NAHC, upon notification of the discovery of Native American human remains pursuant to Health and Safety Code Section 7050.5, shall immediately notify those persons it believes to be descended from the deceased (i.e., the Most Likely Descendant or "MLD"). With permission of the landowner or a designated representative, the MLD may inspect the remains and any associated cultural materials and make recommendations for treatment or disposition of the remains and associated grave goods. The MLD shall provide recommendations or preferences for treatment of the remains and associated cultural materials within 48 hours of being granted access to the site.

c. Local Regulations

City of American Canyon General Plan

The current City of American Canyon General Plan contains goals and policies to avoid potential impacts to cultural resources.

4.4.3 Impact Analysis

a. Significance Thresholds and Methodology

Significance Thresholds

Based on Appendix G of the CEQA Guidelines a project may be deemed to have a significant impact on cultural resources if it would:

1. Cause a substantial adverse change in the significance of a historic resource pursuant to Section 15064.5
2. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5
3. Disturb any human remains, including those interred outside of formal cemeteries

Methodology

If a project may cause a substantial adverse change in the characteristics of a resource that convey its significance or justify its eligibility for inclusion in the CRHR, either through demolition, destruction, relocation, alteration, or other means, then the project would have a significant effect on the environment (CEQA Guidelines Section 15064.5[b]).

Direct impacts can be assessed by identifying the types and locations of proposed development, determining the exact locations of cultural resources within the Planning Area, assessing the significance of the resources that may be affected, and determining the appropriate mitigation. Removal, demolition, or alteration of historical resources can permanently impact the historic fabric of an archaeological site, building or structure, or historic district.

The State Legislature, in enacting the CRHR, amended CEQA to clarify which properties are significant, as well as which project impacts are considered significantly adverse. A project with an effect that may cause a substantial adverse change in the significance of a historical resource is a project that may have significant effect on the environment (CEQA Guidelines Section 150645[b]). A substantial adverse change in the significance of a historical resource means demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired (CEQA Guidelines Section 150645[b][1]).

The CEQA Guidelines further state that "[t]he significance of an historical resource is materially impaired when a project… [d]emolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in the California Register … local register of historic resources… or its identification in an historic resources survey." As such, the consideration for determining whether the project will have a significant impact on identified historic resources is whether it will materially impair the physical integrity of the historic resource, such that it could no longer be listed in the CRHR or a local landmark program.

b. Project Impacts and Mitigation Measures

Threshold 1:	Would the project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?

Impact CUL-1 DEVELOPMENT FACILITATED BY THE PROJECT COULD ADVERSELY AFFECT PREVIOUSLY UNIDENTIFIED HISTORIC-PERIOD RESOURCES. IMPACTS TO HISTORIC-PERIOD RESOURCES WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION.

As discussed above in Section 4.4.1, *Setting*, review of historical maps and aerial photographs indicate that there are several historic-aged buildings or structures located within the Planning Area. Currently there are no specific development plans; however, the 2040 General Plan could result in development on parcels containing buildings that meet the age threshold for potential historical resources, pursuant to CEQA.

Development facilitated by the project could result in material impairment of historical resources, which CEQA Guidelines Section 15064.5[b][2][A] defines as the demolition or alteration in an adverse manner [of] those characteristics of a historical resource that convey its historical significance and that justify its inclusion in, or eligibility for inclusion in, the CRHR or a local register. The Environment Element of the 2040 General Plan Update contains the following proposed goals and policies, which would minimize impacts to historical resources within the City of American Canyon:

Goal ENV-4: Preserve and restore sites, and structures that have architectural, historical, archaeological and/or cultural significance to the City of American Canyon.

- **Policy ENV-4.1: Resource Protection.** Ensure the City's culturally, historically, and archaeologically significant resources are protected in a manner that preserves and/or enhances the inherent resource value.
- **Policy ENV-4.2: Historic Structure Compatibility.** Encourage compatibility between new development and existing adjacent historic structures in terms of scale, massing, building materials and general architectural treatment.
- **Policy ENV-4.3: Historic Resource Reuse.** Encourage appropriate adaptive reuse of historic resources where possible to prevent misuse, disrepair, and demolition.
- **Policy ENV-4.4: Historical Building Code.** When historical structures are rehabilitated in accordance with established historic preservation guidelines, consider implementing the State Historical Building Code Part 8, Title 24.
- **Policy ENV-4.5: Historic Resource Preservation.** Prohibit demolition of an historic resource as a first-choice alternative for resources that qualify for Federal, State Historic Registration, or Locally Significant Resources.
- **Policy ENV-4.6: Flexible Development Standards** Consider flexibility in development standards, such as a Variance of setbacks, heights and parking requirements to help feasibility of new development that contains preserved historic resources.

These policies would help reduce impacts; however, they do not require formal historical resource evaluations or the consideration of measures to mitigate potential impacts. As such, additional measures would be required to identify and mitigate impacts to historical resources to a less than significant level. The implementation of Mitigation Measure CUL-1 would reduce impacts on historical resources by requiring evaluations for age-eligible buildings within the Planning Area and

avoiding impacts on any identified potential historical resources. This impact would be less than significant with implementation of this mitigation measure.

Mitigation Measure

CUL-1 Historical Built Environment

Prior to project approval, the applicant shall submit a report to the City that identifies any historic-age features (i.e., structures over 45 years of age) proposed to be altered or demolished. If historical-age features are present, the applicant shall submit a historical resources evaluation to the City prepared in areas that contains buildings, structures, objects, sites, landscape/site plans, or other features that are 45 years of age or older, by a qualified architectural historian or historian who meets the Secretary of the Interior's Professional Qualifications Standards (PQS) in architectural history or history (36 CFR Part 61). The evaluation shall include an intensive-level evaluation, in accordance with the guidelines and best practices meeting the State Office of Historic Preservation guidelines. All evaluated properties shall be documented on Department of Parks and Recreation Series 523 Forms. The report shall be submitted to the City for review and approval.

If historical resources are identified through the survey and evaluation, efforts shall be made by the applicant to ensure that the relocation, rehabilitation, or alteration of the resource is consistent with the Secretary of the Interior's Standards for the Treatments of Historic Properties (Standards). The applicant shall submit a report to the City that identifies and specifies the treatment of character-defining features and construction activities, and demonstrates how the project complies with the Standards and avoids the substantial adverse change in the significance of the historical resource as defined by CEQA Guidelines Section 15064.5(b). The report shall be prepared by an architectural historian or historical architect meeting the PQS as defined by 36 CFR Part 61 and provided to the City for review and concurrence prior to project approval.

Significance After Mitigation

Mitigation Measure CUL-1 would ensure a historical resource evaluation is conducted for sites with age-eligible resources within the Planning Area and require measures to reduce impacts to historical resources to less than significant.

Threshold 2:	Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Impact CUL-2 DEVELOPMENT FACILITATED BY THE PROJECT COULD ADVERSELY AFFECT PREVIOUSLY UNIDENTIFIED ARCHAEOLOGICAL RESOURCES. IMPACTS WOULD BE LESS THAN SIGNIFICANT WITH MITIGATION.

The City has known archaeological sensitivity and, as a result, the potential to encounter unidentified archaeological resources is moderate to high. Overall, ground disturbance into native soils in any areas within the Planning Area could contain previously unknown prehistoric or historic-period resources. Undeveloped areas have a higher probability of containing previously unidentified archaeological resources, given the City's known sensitivity and the probable lack of previous ground-disturbing activities in those areas. The Environment Element of the 2040 General Plan contains the following proposed goals and policies, which would minimize impacts to archaeological resources within the City of American Canyon:

Goal ENV-4: Preserve and restore sites, and structures that have architectural, historical, archaeological and/or cultural significance to the City of American Canyon.

- **Policy ENV-4.1: Resource Protection.** Ensure the City's culturally, historically, and archaeologically significant resources are protected in a manner that preserves and/or enhances the inherent resource value.

Goal ENV-5: Protect cultural and tribal resources.

- **Policy ENV-5.1: Preservation.** Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.

Many portions of the Planning Area have been previously developed for various purposes and uses. Nonetheless, there is the potential for both historic and prehistoric archaeological resources to exist surficially and below the ground surface throughout the Planning Area, which could be disturbed by grading and excavation activities for future projects. Therefore, development projects within the Planning Area that involve ground disturbance activities would have the potential to damage or destroy archaeological resources, especially if they occur in less disturbed sediments. Consequently, impacts would be potentially significant, and mitigation would be required for projects involving ground disturbance activities.

Mitigation Measures

CUL-2 Archaeological Resources Assessment

Prior to project approval of a project that involves ground disturbance activities (that may include but are not limited to, pavement removal, potholing, grubbing, tree removal, and grading), the applicant shall submit to the City an archaeological resources assessment prepared by a qualified archaeologist who meets the Secretary of the Interior's Professional Qualifications Standards in either prehistoric or historic archaeology. Assessments shall include a CHRIS records search at the NWIC and a SLF Search from the NAHC. The records searches shall characterize the results of previous cultural resource surveys and disclose any cultural resources that have been recorded and/or evaluated in and around the development site. A qualified professional shall conduct a Phase I pedestrian survey for those projects that include undeveloped areas to locate any surface cultural materials.

If the Phase I archaeological survey identifies resources that may be affected, the applicant shall also conduct Phase II testing and evaluation. If resources are determined significant or unique through Phase II testing and site avoidance is not possible, the qualified professional shall identify appropriate site-specific mitigation measures in the Phase II evaluation. These measures may include, but would not be limited to, a Phase III data recovery program, avoidance, or other appropriate actions to be determined by a qualified archaeologist. If significant archaeological resources cannot be avoided, impacts may be reduced to less than significant level by filling on top of the sites rather than cutting into the cultural deposits. Alternatively, and/or in addition, a data collection program may be warranted, including mapping the location of artifacts, surface collection of artifacts, or excavation of the cultural deposit, to characterize the nature of the buried portions of sites. Curation of the excavated artifacts or samples would occur as specified by the archaeologist. The City shall review and approve the archaeological resources assessment prior to project approval.

CUL-3 Unanticipated Discoveries

For projects whose Phase I archaeological survey identifies archaeological resources that may be affected, the applicant shall retain a qualified cultural resource specialist to monitor construction activities that involve ground-disturbing activities greater than 12 inches in depth and occur within 60 feet of a potentially significant cultural resource. If archaeological resources are encountered during ground-disturbing activities, work in the immediate area must halt and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for Archaeology should be contacted immediately to evaluate the find. If necessary, the evaluation may require preparation of a treatment plan and archaeological testing for CRHR eligibility. If the discovery proves to be significant under CEQA and cannot be avoided by the project, additional work, such as excavating the cultural deposit to fully characterize its extent and collecting and curating artifacts may be warranted to mitigate any significant impacts to cultural resources. If archaeological resources of Native American origin are identified during construction, a qualified archaeologist will consult with the City to begin Native American consultation procedures. Periodic reports of the find and subsequent evaluations shall be submitted to the City during construction.

Significance After Mitigation

Mitigation Measures CUL-2 and CUL-3 would reduce potential impacts to a less than significant level by requiring the identification and evaluation of any archaeological resources that may be present prior to construction and by providing steps for the evaluation and protection of unanticipated finds encountered during construction.

Threshold 3:	Would the project disturb any human remains, including those interred outside of formal cemeteries?

Impact CUL-3 DEVELOPMENT FACILITATED BY THE PROJECT COULD RESULT IN DAMAGE TO OR DESTRUCTION OF HUMAN BURIALS. IMPACTS WOULD BE LESS THAN SIGNIFICANT THROUGH ADHERENCE TO EXISTING REGULATIONS AND WITH MITIGATION.

Human burials outside of formal cemeteries can occur in prehistoric archaeological contexts. While no known burial sites have been identified within the Planning Area, excavations during construction activities could have the potential to disturb these resources, which could include Native American burial sites. Although it is unlikely that human remains are present, the Planning Area has the possibility of containing previously unidentified human remains.

Human burials, in addition to being potential archaeological resources, have specific provisions for treatment in PRC Section 5097. The California Health and Safety Code (Section 7050.5, 7051, and 7054) has specific provisions for the protection of human burial remains. Existing regulations address the illegality of interfering with human burial remains, and protect them from disturbance, vandalism, or destruction. They also include established procedures to be implemented if Native American skeletal remains are discovered. PRC Section 5097.98 also addresses the disposition of Native American burials, protects such remains, and establishes the NAHC to resolve any related disputes.

The Environment Element of the 2040 General Plan Update contains the following proposed goals and policies, which would minimize impacts to human burials within the City of American Canyon:

Goal ENV-4: Protect cultural and tribal resources.

- **Policy ENV-4.1: Preservation.** Protect areas containing significant historic, archaeological, and paleontological resources, as defined by the California Public Resources Code.
- **Policy ENV-4.2: Development.** Ensure that human remains are treated with sensitivity and dignity and ensure compliance with the provisions of California Health and Safety Code Section 7050.5 and California Public Resources Code Section 5097.98.
- **Policy ENV-4.3: Yocha Dehe Wintun Nation Treatment Protocol**. In the event any Native American human remains, grave goods, ceremonial items, and items of cultural patrimony are found in conjunction with development, including archaeological studies, excavation, geotechnical investigations, grading, and any ground disturbing activity, the "Yocha Dehe Wintun Nation Treatment Protocol for Handling Human Remains and Cultural Items Affiliated with the Yocha Dehe Wintun Nation" shall be implemented as included as Appendix A to the Housing Element.

Construction of future development and mobility improvements facilitated by the project, such as improvements to roadways, and bicycle and pedestrian facilities would be subject to State of California Health and Safety Code Section 7050.5, which states that if human remains are unearthed, no further disturbance can occur until the county coroner has made the necessary findings as to the origin and disposition of the remains, pursuant to PRC Section 5097.98. If the remains are determined to be of Native American descent, the coroner has 24 hours to notify the NAHC, which will determine and notify an MLD. The MLD shall complete the inspection of the site and make recommendations to the landowner within 48 hours of being granted access. Implementation of Mitigation Measure CUL-4 would ensure that the appropriate protocols are followed if human remains are encountered and would reduce potentially significant impacts to a less than significant level.

Mitigation Measures

CUL-4 Human Remains

In the event of an accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken:

1. There shall be no further excavation or disturbance within 100 feet of the remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98.

2. Where the following conditions occur, the landowner or authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance:
   - The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission.
   - The descendant identified fails to make a recommendation.
   - The landowner or authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.

   Additionally, California Public Resources Code Section 15064.5 requires the following relative to Native American Remains:

   - When an initial study identifies the existence of, or the probable likelihood of, Native American Remains within a project, a lead agency shall work with the appropriate Native Americans as identified by the NAHC as provided in Public Resources Code Section 5097.98. The applicant may each develop a plan with respect to their respective individual development proposals for treating or disposing of, with appropriate dignity, the human remains, and any items associated with Native American Burials with the appropriate Native Americans as identified by the NAHC.

Significance After Mitigation

Mitigation Measure CUL-4 would reduce potential impacts on human remains to a less than significant level by requiring the implementation of the appropriate protocols.

4.5 Greenhouse Gas Emissions

This section summarizes the setting for greenhouse gas (GHG) emissions and climate change and analyzes the impacts related to GHG emissions and climate change due to the project.

4.5.1 Setting

Gases that absorb and re-emit infrared radiation in the atmosphere are called GHGs. The gases that are widely seen as the principal contributors to human-induced climate change include carbon dioxide (CO_2); methane (CH_4); nitrous oxides (N_2O); fluorinated gases such as hydrofluorocarbons (HFCs) and perfluorocarbons (PFCs); and sulfur hexafluoride (SF_6). Water vapor is excluded from the list of GHGs because it is short-lived in the atmosphere and its atmospheric concentrations are largely determined by natural processes, such as oceanic evaporation.

Different types of GHGs have varying global warming potentials (GWP). The GWP of a GHG is the potential of a gas or aerosol to trap heat in the atmosphere over a specified timescale (generally, 100 years). Because GHGs absorb different amounts of heat, a common reference gas (CO_2) is used to relate the amount of heat absorbed to the amount of the gas emitted, referred to as "carbon dioxide equivalent" (CO_2e), which is the amount of GHG emitted multiplied by its GWP. Carbon dioxide has a 100-year GWP of one. By contrast, methane has a 100-year GWP of 30, meaning its global warming effect is 30 times greater than CO_2 on a molecule per molecule basis (United Nations Intergovernmental Panel on Climate Change [IPCC] 2021).[1]

GHGs are emitted by natural processes and human activities. Of these gases, CO_2 and CH_4 are emitted in the greatest quantities from human activities. Emissions of CO_2 are usually by-products of fossil fuel combustion, and CH_4 results from off-gassing associated with agricultural practices and landfills. Human-made GHGs, many of which have greater heat-absorption potential than CO_2, include fluorinated gases and SF_6 (United States Environmental Protection Agency [USEPA] 2022a).

Climate change is the observed increase in the average temperature of the Earth's atmosphere and oceans along with other substantial changes in climate (such as wind patterns, precipitation, and storms) over an extended period. The term "climate change" is often used interchangeably with the term "global warming," but climate change is preferred because it conveys that other changes are happening in addition to rising temperatures. The baseline against which these changes are measured originates in historical records that identify temperature changes that occurred in the past, such as during previous ice ages. The global climate is changing continuously, as evidenced in the geologic record, which indicates repeated episodes of substantial warming and cooling. The rate of change has typically been incremental, with warming or cooling trends occurring over the course of thousands of years. The past 10,000 years have been marked by a period of incremental warming, as glaciers have steadily retreated across the globe. However, scientists have observed acceleration in the rate of warming over the past 150 years. The IPCC expressed in their Sixth Assessment Report that the rise and continued growth of atmospheric CO_2 concentrations is unequivocally due to human activities (IPCC 2021). Human influence has warmed the atmosphere, ocean, and land, which has led the climate to warm at an unprecedented rate in the last 2,000 years. It is estimated that between the period of 1850 through 2019, a total of 2,390 gigatons of anthropogenic CO_2 was emitted. It is likely that anthropogenic activities have increased the global

[1] The Intergovernmental Panel on Climate Change's (2021) *Sixth Assessment Report* determined that methane has a GWP of 30. However, the 2017 Climate Change Scoping Plan published by the California Air Resources Board uses a GWP of 25 for methane, consistent with the Intergovernmental Panel on Climate Change's (2007) *Fourth Assessment Report*. Therefore, this analysis utilizes a GWP of 25.

surface temperature by approximately 1.07 degrees Celsius between the years 2010 through 2019 (IPCC 2021).

The accumulation of GHGs in the atmosphere regulates the earth's temperature. Without the natural heat-trapping effect of GHGs, the earth's surface would be about 33 degrees Celsius (°C) cooler (World Meteorological Organization 2013). However, since 1750, estimated concentrations of CO_2, CH_4, and N_2O in the atmosphere have increased by 47 percent, 156 percent, and 23 percent, respectively, primarily due to human activity (IPCC 2021). GHG emissions from human activities, particularly the consumption of fossil fuels for electricity production and transportation, are believed to have elevated the concentration of these gases in the atmosphere beyond the level of concentrations that occur naturally.

a. Greenhouse Gas Emissions Inventory

Global Emissions Inventory

Worldwide anthropogenic GHG emissions totaled 47,000 million metric tons (MT) of CO_2e in 2015, which is a 43 percent increase from 1990 GHG levels (USEPA 2022b). Specifically, 34,522 million metric tons (MMT) of CO_2e of CO_2, 8,241 MMT of CO_2e of CH_4, 2,997 MMT of CO_2e of N_2O, and 1,001 MMT of CO_2e of fluorinated gases were emitted in 2015. The largest source of GHG emissions were energy production and fuel use from vehicles and buildings, which accounted for 75 percent of the global GHG emissions. Agriculture uses and industrial processes contributed 12 percent and six percent, respectively. Waste sources contributed three percent and international transportation sources contributed two percent. These sources account for approximately 98 percent because there was a net sink of two percent from land-use change (including afforestation/reforestation and emissions removals by other land use activities) (USEPA 2022b).

United States Emissions Inventory

Total United States (U.S.) GHG emissions were 6,558 MMT of CO_2e in 2019. Emissions decreased by 1.7 percent from 2018 to 2019. Since 1990, total U.S. emissions have increased by an average annual rate of 0.06 percent for a total increase of 1.8 percent between 1990 and 2019. The decrease from 2018 to 2019 reflects the combined influences of several long-term trends, including population changes, economic growth, energy market shifts, technological changes such as improvements in energy efficiency, and decrease carbon intensity of energy fuel choices. In 2019, the industrial and transportation end-use sectors accounted for 30 percent and 29 percent, respectively, of nationwide GHG emissions; while the commercial and residential end-use sectors accounted for 16 percent and 15 percent of nationwide GHG emissions, respectively, with electricity emissions distributed among the various sectors (USEPA 2022c).

California Emissions Inventory

Based on the California Air Resources Board (CARB) California Greenhouse Gas Inventory for 2000-2019, California produced 418.2 MMT of CO_2e in 2019, which is 7.2 MMT of CO_2e lower than 2018 levels. The major source of GHG emissions in California is the transportation sector, which comprises 40 percent of the state's total GHG emissions. The industrial sector is the second largest source, comprising 21 percent of the state's GHG emissions, while electric power accounts for approximately 14 percent (CARB 2021a). The magnitude of California's total GHG emissions is due in part to its large size and large population compared to other states. However, its relatively mild climate is a factor that reduces California's per capita fuel use and GHG emissions as compared to

other states. In 2016, the State of California achieved its 2020 GHG emission reduction target of reducing emissions to 1990 levels, as emissions fell below 431 MMT of CO_2e (CARB 2021).

Local Emissions Inventory

Based on the City of American Canyon's 2012 Energy Efficiency Climate Action Plan (EECAP), the City generated approximately 120,201 MT of CO_2e in 2010 (City of American Canyon 2012). On-road transportation was the major source accounting for 39.9 percent of the total, largely due to passenger vehicles, but also commercial trips and buses. Commercial/industrial energy was the second largest source of emissions at 27 percent. Residential energy usage represented 18 percent, and solid waste and wastewater represented 7 percent each. Off-road transportation accounted for 2 percent. Agriculture accounted for less than 1 percent of emissions (City of American Canyon 2012).

b. Potential Effects of Climate Change

Globally, climate change has the potential to affect numerous environmental resources through potential impacts related to future air temperatures and precipitation patterns. Scientific modeling predicts that continued GHG emissions at or above current rates would induce more extreme climate changes during the 21st century than were observed during the 20th century. Each of the past three decades has been warmer than all the previous decades on record, and the decade from 2000 through 2010 has been the warmest. The observed global mean surface temperature from 2015 to 2017 was approximately 1.0°C higher than the average global mean surface temperature over the period from 1880 to 1900 (National Oceanic and Atmospheric Administration 2020). Furthermore, several independently analyzed data records of global and regional Land-Surface Air Temperature obtained from station observations jointly indicate that Land-Surface Air Temperature and sea surface temperatures have increased.

According to *California's Fourth Climate Change Assessment*, statewide temperatures from 1986 to 2016 were approximately 0.6 to 1.1°C higher than those recorded from 1901 to 1960. Potential impacts of climate change in California may include reduced water supply from snowpack, sea level rise, more extreme heat days per year, larger forest fires, and more drought years (State of California 2018). In addition to statewide projections, *California's Fourth Climate Change Assessment* includes regional reports that summarize climate impacts and adaptation solutions for nine regions of the state and regionally specific climate change case studies (State of California 2018). However, while there is growing scientific consensus about the possible effects of climate change at a global and statewide level, current scientific modeling tools are unable to predict what local impacts may occur with a similar degree of accuracy. A summary follows of some of the potential effects that could be experienced in California because of climate change.

Air Quality

Scientists project that the annual average maximum daily temperatures in California could rise by 2.4 to 3.2°C in the next 50 years and by 3.1 to 4.9°C in the next century (State of California 2018). Higher temperatures are conducive to air pollution formation, and rising temperatures could therefore result in worsened air quality in California. As a result, climate change may increase the concentration of ground-level ozone. The magnitude of the effect of the increased concentration of ground-level ozone, and therefore its indirect effects, are uncertain. In addition, as temperatures have increased in recent years, the area burned by wildfires throughout the state has increased, and wildfires have occurred at higher elevations in the Sierra Nevada Mountains (State of California

2018). If higher temperatures continue to be accompanied by an increase in the incidence and extent of large wildfires, air quality could worsen. Severe heat accompanied by drier conditions and poor air quality could increase the number of heat-related deaths, illnesses, and asthma attacks throughout the state. However, if higher temperatures are accompanied by wetter, rather than drier conditions, the rains could tend to temporarily clear the air of particulate pollution, which would effectively reduce the number of large wildfires and thereby ameliorate the pollution associated with them (California Natural Resources Agency 2009).

Water Supply

Analysis of paleoclimatic data (such as tree-ring reconstructions of stream flow and precipitation) indicates a history of naturally and widely varying hydrologic conditions in California and the west, including a pattern of recurring and extended droughts. Uncertainty remains with respect to the overall impact of climate change on future precipitation trends and water supplies in California. Year-to-year variability in statewide precipitation levels has increased since 1980, meaning that wet and dry precipitation extremes have become more common (California Department of Water Resources 2018). This uncertainty regarding future precipitation trends complicates the analysis of future water demand, especially where the relationship between climate change and its potential effect on water demand is not well understood. The average early spring snowpack in the western U.S., including the Sierra Nevada Mountains, decreased by about 10 percent during the last century. During the same period, sea level rose over 0.15 meter along the central and southern California coasts (State of California 2018). The Sierra snowpack provides most of California's water supply as snow that accumulates during wet winters is released slowly during the dry months of spring and summer. A warmer climate is predicted to reduce the fraction of precipitation that falls as snow and the amount of snowfall at lower elevations, thereby reducing the total snowpack (State of California 2018). Projections indicate that average spring snowpack in the Sierra Nevada and other mountain catchments in central and northern California will decline by approximately 66 percent from its historical average by 2050 (State of California 2018).

Hydrology and Sea Level Rise

Climate change could affect the intensity and frequency of storms and flooding (State of California 2018). Furthermore, climate change could induce substantial sea level rise in the coming century. Rising sea level increases the likelihood of and risk from flooding. The rate of increase of global mean sea levels between 1993 to 2022, observed by satellites, is approximately 3.5 millimeters per year, double the twentieth century trend of 1.6 millimeters per year (World Meteorological Organization 2013; National Aeronautics and Space Administration 2022). Sea levels are rising faster now than in the previous two millennia, and the rise will probably accelerate, even with robust GHG emission control measures. While the City is no close to the Pacific coast, sea level rise may jeopardize California’s water supply due to saltwater intrusion and induce groundwater flooding and/or exposure of buried infrastructure (State of California 2018).

Agriculture

California has an over $50 billion annual agricultural industry that produces over a third of the country’s vegetables and two-thirds of the country’s fruits and nuts (California Department of Food and Agriculture 2020). Higher CO_2 levels can stimulate plant production and increase plant water-use efficiency. However, if temperatures rise and drier conditions prevail, certain regions of agricultural production could experience water shortages of up to 16 percent, which would increase

water demand as hotter conditions lead to the loss of soil moisture. In addition, crop yield could be threatened by water-induced stress and extreme heat waves, and plants may be susceptible to new and changing pest and disease outbreaks (State of California 2018). Temperature increases could also change the time of year certain crops, such as wine grapes, bloom or ripen, and thereby affect their quality (California Climate Change Center 2006).

Ecosystems

Climate change and the potential resultant changes in weather patterns could have ecological effects on the global and local scales. Soil moisture is likely to decline in many regions because of higher temperatures, and intense rainstorms are likely to become more frequent. Rising temperatures could have four major impacts on plants and animals: timing of ecological events; geographic distribution and range of species; species composition and the incidence of nonnative species within communities; and ecosystem processes, such as carbon cycling and storage (Parmesan 2006; State of California 2018).

4.5.2 Regulatory Setting

a. International

United Nations Climate Change Framework Convention

On March 21, 1994, the United States joined a number of countries around the world in signing the United Nations Climate Change Framework Convention. Under the Convention, governments agreed to gather and share information on GHG emissions, national policies, and best practices; launch national strategies for addressing GHG emissions and adapting to expected impacts, including the provision of financial and technological support to developing countries; and cooperate in preparing for adaptation to the impacts of climate change.

b. Federal Regulations

Federal Clean Air Act

The U.S. Supreme Court determined in *Massachusetts et al. v. Environmental Protection Agency et al.* ([2007] 549 U.S. 05-1120) that the USEPA has the authority to regulate motor vehicle GHG emissions under the federal Clean Air Act. The USEPA issued a Final Rule for mandatory reporting of GHG emissions in October 2009. This Final Rule applies to fossil fuel suppliers, industrial gas suppliers, direct GHG emitters, and manufacturers of heavy-duty and off-road vehicles and vehicle engines and requires annual reporting of emissions. In 2012, the USEPA issued a Final Rule that established the GHG permitting thresholds that determine when Clean Air Act permits under the New Source Review Prevention of Significant Deterioration and Title V Operating Permit programs are required for new and existing industrial facilities.

In *Utility Air Regulatory Group v. Environmental Protection Agency* (134 Supreme Court 2427 [2014]), the U.S. Supreme Court held the USEPA may not treat GHGs as an air pollutant for purposes of determining whether a source can be considered a major source required to obtain a Prevention of Significant Deterioration or Title V permit. The Court also held that Prevention of Significant Deterioration permits otherwise required based on emissions of other pollutants may continue to require limitations on GHG emissions based on the application of Best Available Control Technology.

Safer Affordable Fuel-Efficient Vehicles Rule

On September 27, 2019, the USEPA and the National Highway Traffic Safety Administration published the Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule Part One: One National Program. The SAFE Rule Part One revokes California's authority to set its own GHG emissions standards and to adopt its own zero-emission vehicle mandates. On April 30, 2020, the USEPA and the National Highway Traffic Safety Administration published Part Two of the SAFE Vehicles Rule, which revised corporate average fuel economy and CO_2 emissions standards for passenger cars and trucks of model years 2021-2026, such that the standards increase by approximately 1.5 percent each year through model year 2026, as compared to the approximately 5 percent annual increase required under the 2012 standards (National Highway Traffic Safety Administration 2022).

Construction Equipment Fuel-Efficiency Standard

USEPA sets emission standards for construction equipment. The first federal standards (Tier 1) were adopted in 1994 for all off-road engines over 50 horsepower (hp) and were phased in by 2000. A new standard was adopted in 1998 that introduced Tier 1 for all equipment below 50 hp and established the Tier 2 and Tier 3 standards. The Tier 2 and Tier 3 standards were phased in by 2008 for all equipment. The current iteration of emissions standards for construction equipment are the Tier 4 efficiency requirements, which are contained in 40 Code of Federal Regulations Parts 1039, 1065, and 1068 (originally adopted in 69 Federal Register 38958 [June 29, 2004] and most recently updated in 2014 [79 Federal Register 46356]). Emissions requirements for new off-road Tier 4 vehicles were completely phased in by the end of 2015.

c. State Regulations

CARB is responsible for the coordination and oversight of State and local air pollution control programs in California. There are numerous regulations aimed at reducing the state's GHG emissions. These initiatives are summarized below.

California Advanced Clean Cars Program

Assembly Bill (AB) 1493 (2002), California's Advanced Clean Cars program (referred to as "Pavley"), requires CARB to develop and adopt regulations to achieve "the maximum feasible and cost-effective reduction of GHG emissions from motor vehicles." On June 30, 2009, the USEPA granted the waiver of Clean Air Act preemption to California for its GHG emission standards for motor vehicles, beginning with the 2009 model year, which allows California to implement more stringent vehicle emission standards than those promulgated by the USEPA. Pavley I regulates model years from 2009 to 2016 and Pavley II, now referred to as "LEV (Low Emission Vehicle) III GHG," regulates model years from 2017 to 2025. The Advanced Clean Cars program coordinates the goals of the LEV, Zero Emissions Vehicles (ZEV), and Clean Fuels Outlet programs and would provide major reductions in GHG emissions. By 2025, the rules will be fully implemented, and new automobiles will emit 34 percent fewer GHGs and 75 percent fewer smog-forming emissions from their model year 2016 levels (CARB 2011).

California Advanced Clean Trucks Program

In June 2020, CARB approved the Advanced Clean Trucks regulation, which requires manufacturers who certify Class 2b-8 chassis or complete vehicles with combustion engines to sell zero-emission trucks as an increasing percentage of their annual California sales from 2024 to 2035. In addition,

the regulation requires company and fleet reporting for large employers and fleet owners with 50 or more trucks. By 2045, all new trucks sold in California must be zero-emission. Implementation of this regulation would reduce consumption of nonrenewable transportation fuels as trucks transition to alternative fuel sources.

Executive Order B-48-18: Zero-Emission Vehicles

On January 26, 2018, Governor Brown signed Executive Order B-48-18 requiring all State entities to work with the private sector to have at least 5 million ZEVs on the road by 2030, as well as install 200 hydrogen fueling stations and 250,000 electric vehicle (EV) charging stations by 2025. It specifies that 10,000 of the EV charging stations should be direct current fast chargers. This order also requires all State entities to continue to partner with local and regional governments to streamline the installation of ZEV infrastructure. The Governor's Office of Business and Economic Development is required to publish a Plug-in Charging Station Design Guidebook and update the 2015 Hydrogen Station Permitting Guidebook to aid in these efforts. All State entities are required to participate in updating the 2016 ZEV Action Plan, along with the 2018 ZEV Action Plan Priorities Update, which includes and extends the 2016 ZEV Action Plan (Governor's Interagency Working Group on Zero-Emission Vehicles 2016, 2018) to help expand private investment in ZEV infrastructure with a focus on serving low-income and disadvantaged communities.

Executive Order N-79-20

Governor Gavin Newsom signed Executive Order N-79-20 in September 2020, which sets a Statewide goal that 100 percent of all new passenger car and truck sales in the State will be zero-emissions by 2035. It also sets a goal that 100 percent of statewide new sales of medium- and heavy-duty vehicles will be zero emissions by 2045, where feasible, and for all new sales of drayage trucks to be zero emissions by 2035. Additionally, the Executive Order targets 100 percent of new off-road vehicle sales in the State to be zero emission by 2035. CARB is responsible for implementing the new vehicle sales regulation.

California Global Warming Solutions Act of 2006 (Assembly Bill 32, Senate Bill 32, and Assembly Bill 1279)

The "California Global Warming Solutions Act of 2006," (AB 32), outlines California's major legislative initiative for reducing GHG emissions. AB 32 codifies the statewide goal of reducing GHG emissions to 1990 levels by 2020 and requires CARB to prepare a Scoping Plan that outlines the main state strategies for reducing GHG emissions to meet the 2020 deadline. In addition, AB 32 requires CARB to adopt regulations to require reporting and verification of statewide GHG emissions. Based on this guidance, CARB approved a 1990 statewide GHG level and 2020 target of 431 MMT of CO_2e, which was achieved in 2016. CARB approved the Scoping Plan on December 11, 2008, which included GHG emission reduction strategies related to energy efficiency, water use, and recycling and solid waste, among others (CARB 2008).

The CARB approved the 2013 Scoping Plan update in May 2014. The update defined the CARB's climate change priorities for the next five years, set the groundwork to reach post-2020 statewide goals, and highlighted California's progress toward meeting the "near-term" 2020 GHG emission reduction goals defined in the original Scoping Plan.

On September 8, 2016, the governor signed Senate Bill (SB) 32 into law, extending the California Global Warming Solutions Act of 2006 by requiring the state to further reduce GHG emissions to 40

percent below 1990 levels by 2030 (the other provisions of AB 32 remain unchanged). On December 14, 2017, the CARB adopted the 2017 Scoping Plan, which provides a framework for achieving the 2030 target. The 2017 Scoping Plan relies on the continuation and expansion of existing policies and regulations, such as the Cap-and-Trade Program, and implementation of recently adopted policies and legislation, such as SB 1383 and SB 100 (discussed below). The 2017 Scoping Plan also puts an increased emphasis on innovation, adoption of existing technology, and strategic investment to support its strategies.

AB 1279, "The California Climate Crisis Act," was passed on September 16, 2022 and declares the State would achieve net zero greenhouse gas emissions as soon as possible, but no later than 2045, and to achieve and maintain net negative greenhouse gas emissions thereafter. In addition, the bill states that the State would reduce GHG emissions by 85 percent below 1990 levels no later than 2045. The 2022 Scoping Plan lays out a path to achieve AB 1279 targets (CARB 2022). The actions and outcomes in the 2022 Scoping Plan would achieve significant reductions in fossil fuel combustion by deploying clean technologies and fuels, further reductions in short-lived climate pollutants, support for sustainable development, increased action on natural and working lands to reduce emissions and sequester carbon, and the capture and storage of carbon.

Senate Bill 375

The Sustainable Communities and Climate Protection Act of 2008 (SB 375), signed in August 2008, enhances the state's ability to reach AB 32 goals by directing the CARB to develop regional GHG emission reduction targets to be achieved from passenger vehicles by 2020 and 2035. SB 375 aligns regional transportation planning efforts, regional GHG reduction targets, and affordable housing allocations. Metropolitan Planning Organizations (MPOs) are required to adopt a Sustainable Communities Strategy (SCS), which allocates land uses in the MPO's Regional Transportation Plan (RTP). Qualified projects consistent with an approved SCS or Alternative Planning Strategy (categorized as "transit priority projects") can receive incentives to streamline CEQA processing.

The City of American Canyon is within the planning area of the Association of Bay Area Governments (ABAG). ABAG was assigned targets of a 10 percent reduction in GHGs from transportation sources by 2020 and a 19 percent reduction in GHGs from transportation sources by 2035 (CARB 2022b).

Assembly Bill 1493 (Reduce GHG Emissions from Vehicle Use)

AB 1493 (Chapter 200, Statutes of 2002), known as the Pavley Bill, amended Health and Safety Code Sections 42823, and added Section 43018.5 requiring CARB to develop and adopt regulations that achieve maximum feasible and cost-effective reduction of GHG emissions from passenger vehicles, light-duty trucks, and other vehicles used for noncommercial personal transportation in California.

Assembly Bill 1007 (State Alternative Fuels Plan)

AB 1007 (Chapter 371, Statutes of 2005) required the California Energy Commission (CEC) to prepare a State plan to increase the use of alternative fuels in California. The CEC prepared the State Alternative Fuels Plan (SAF Plan) in partnership with CARB and in consultation with other federal, State, and local agencies. The SAF Plan presents strategies and actions California must take to increase the use of alternative non-petroleum fuels in a manner that minimizes costs to California and maximizes the economic benefits of in-state production. The SAF Plan assessed various alternative fuels and developed fuel portfolios to meet California's goals to reduce petroleum consumption, increase alternative fuels use, reduce GHG emissions, and increase in-State

production of biofuels without causing a significant degradation of public health and environmental quality.

CARB In-Use On-Road and Off-Road Diesel Rules

The CARB rule imposes limits on idling, restricts the addition of older vehicles, and requires the retirement or replacement of older engines depending on their fleet size category. This policy indirectly impacts energy consumption.

More specifically, CARB is also charged with developing air pollution control regulations based upon the best available control measures and implementing feasible control measures under the State and Federal Clean Air Act. (Health & Safety Code, Sections 39602.5, 39667, 43013, subds. (a) and (h), 43018, 40600, 40601, 40612(a)(2) and (c)(1)(A).) Pursuant to these statutory authorities, more stringent emission standards were adopted in 2004 for off-road construction equipment (i.e. "Tier 4" standards) (40 Code of Federal Regulations Parts 1039, 1065, and 1068; Cal. Code Regs., tit. 13, Section 2025; AR 2854). CARB also adopted emission standards for on-road heavy duty diesel vehicles (i.e., haul trucks). (Cal. Code Regs., title 13, Section 1956.8.) These haul truck regulations mandate fleet turn-over to ensure that by January 1, 2023, nearly all on-road diesel trucks will have 2010 model year engines or equivalent [i.e., Tier 4]. In addition, interim steps are incorporated into the regulations (e.g., vehicles older than 1999 will be replaced with newer engines by 2020).

California Integrated Waste Management Act (Assembly Bill 341)/Assembly Bill 1826 (Mandatory Recycling/Composting)

The California Integrated Waste Management Act of 1989, as modified by AB 341, requires each jurisdiction's source reduction and recycling element to include an implementation schedule that shows diversion away from landfills of 75 percent of all solid waste by 2020 and annually thereafter. AB 1826 requires recycling of organic waste (i.e., composting). All businesses and public entities that generate four or more cubic yards of solid waste per week and multi-family residential dwellings that have five or more units are required to recycle and compost.

Senate Bill 1383

Adopted in September 2016, SB 1383 requires CARB to approve and begin implementing a comprehensive strategy to reduce emissions of short-lived climate pollutants. SB 1383 requires the strategy to achieve the following reduction targets by 2030:

- Methane – 40 percent below 2013 levels
- Hydrofluorocarbons – 40 percent below 2013 levels
- Anthropogenic black carbon – 50 percent below 2013 levels

SB 1383 also requires the California Department of Resources Recycling and Recovery (CalRecycle), in consultation with the CARB, to adopt regulations that achieve specified targets for reducing organic waste in landfills.

Senate Bill 100

Adopted on September 10, 2018, SB 100 supports the reduction of GHG emissions from the electricity sector by accelerating the state's Renewables Portfolio Standard (RPS) Program, which was last updated by SB 350 in 2015. SB 100 requires electricity providers to increase procurement from eligible renewable energy resources to 33 percent of total retail sales by 2020, 60 percent by

2030, and 100 percent by 2045. The 2020 goal was met, with approximately 36 percent of electricity coming from renewable sources in March 2021 (CARB 2021b).

Executive Order B-55-18

On September 10, 2018, the former Governor Brown issued Executive Order B-55-18, which established a new statewide goal of achieving carbon neutrality by 2045 and maintaining net negative emissions thereafter. This goal is in addition to the existing statewide GHG reduction targets established by SB 375, SB 32, SB 1383, and SB 100.

California Refrigerant Management Program

California's Refrigerant Management Program (RMP) regulates refrigerants used in larger facilities, primarily industrial and supermarket land uses. Refrigerants regulated under the RMP include any refrigerant that is an ozone depleting substance as defined in Title 40 of the Code of Federal Regulation, Part 82, and any compound with a GWP value equal to or greater than 150 according to the GWPs specified in the IPCC Fourth Assessment Report of 2007. According to the RMP, all supermarket and industrial refrigeration systems with a full recharge capacity of 50 pounds (22.7 kilograms) or greater will be required to limit the refrigerants used to no greater than 150 GWP beginning in 2022. Similarly, according to the RMP, all room air conditioning unit systems with a full recharge capacity of 50 pounds or greater will be required to limit the refrigerants used to no greater than 750 GWP beginning in 2023.

Senate Bill 1020

Senate Bill 1020 (SB 1020), signed into law on September 16, 2022, requires renewable energy and zero-carbon resources to supply 90 percent of all retail electricity sales by 2035, 95 percent by 2040, and 100 percent by 2045. All State agencies facilities must be served by 100 percent renewable and zero-carbon resources by 2030. SB 1020 also requires the Public Utilities Commission, Energy Commission, and CARB to issue a joint progress report outlining the reliability of the electrical grid with a focus on summer reliability and challenges and gaps. Additionally, SB 1020 requires the Public Utilities Commission to define energy affordability and use energy affordability metrics to develop protections, incentives, discounts, or new programs for residential customers facing hardships due to energy or gas bills.

CARB Gas Appliances Sales Ban

As part of the 2022 State Implementation Plan, CARB adopted a ban on new sales of natural gas heaters, water heaters, and furnaces by 2030 in September of 2022. This new measure is intended to reduce emissions from new residential and commercial space and water heaters sold in the State. An emission standard for space and water heaters will go into effect in 2030. Beginning in 2030, 100 percent of the sales of new natural gas-powered heaters and water heaters would need to comply with the emission standard, such as putting in electric heaters or other zero-emission options.

California Building Standards Code

The California Code of Regulations (CCR) Title 24 is referred to as the California Building Standards Code. It consists of a compilation of several distinct standards and codes related to building construction, including plumbing, electrical, interior acoustics, energy efficiency, and accessibility for persons with physical and sensory disabilities. The California Building Standards Code's energy-efficiency and green building standards are outlined below. These standards are updated every

three years and future projects would be subject to the 2022 California Building Standards when they go into effect on January 1, 2023.

Part 6 – Building Energy Efficiency Standards/Energy Code

CCR Title 24, Part 6 is the Building Energy Efficiency Standards or California Energy Code. This code, originally enacted in 1978, establishes energy-efficiency standards for residential and non-residential buildings to reduce California's energy demand. New construction and major renovations must demonstrate their compliance with the current Energy Code through submittal and approval of a Title 24 Compliance Report to the local building permit review authority and the CEC. The current iteration is the 2019 Title 24 standards. The California Building Standards Code's energy-efficiency and green building standards are outlined below. The 2022 Standards have been adopted and will come into effect January 1, 2023.

Part 11 – California Green Building Standards

The California Green Building Standards Code, referred to as CALGreen, was added to Title 24 as Part 11, first in 2009 as a voluntary code, which then became mandatory effective on January 1, 2011 (as part of the 2010 California Building Standards Code). The 2022 CALGreen includes mandatory minimum environmental performance standards for all ground-up new construction of residential and non-residential structures. It also includes voluntary tiers with stricter environmental performance standards for these same categories of residential and non-residential buildings. Local jurisdictions must enforce the minimum mandatory CALGreen standards and may adopt additional amendments for stricter requirements.

The mandatory standards require:

- Minimum 20 percent reduction in indoor water use relative to specified baseline levels[2]
- Waste Reduction
  - Minimum 65 percent non-hazardous construction/demolition waste diverted from landfills;
  - Non-residential and Multifamily dwellings with 5 or more units shall provide readily accessible areas identified for the depositing, storage and collection of nonhazardous materials for recycling including (at a minimum) paper, corrugated cardboard, glass, plastic, organic waste, and metals;
  - Nonresidential: 100 percent of trees, stumps, rocks and associated vegetation soils resulting from primary land clearing shall be reused or recycled.
- Inspections of energy systems to ensure optimal working efficiency
- Electric Vehicle (EV) Charging for New Construction[3]
  - Multifamily dwellings, hotels/motels with less than 20 units/rooms: Designation of at least 10 percent of the total number of parking spaces shall be EV capable and at least 25 percent of the total number of parking spaces shall be EV Ready.

[2] Similar to the compliance reporting procedure for demonstrating Energy Code compliance in new buildings and major renovations, compliance with the CALGreen water reduction requirements must be demonstrated through completion of water use reporting forms. Buildings must demonstrate a 20 percent reduction in indoor water use by either showing a 20 percent reduction in the overall baseline water use as identified in CALGreen or a reduced per-plumbing-fixture water use rate.

[3] EV Capable = a vehicle space with electrical panel space and load capacity to support a branch circuit and necessary raceways to support EV charging. EV Ready = a vehicle space which is provided with a branch circuit and any necessary raceways to accommodate EV charging stations including a receptacle for future installation of a charger. See 2022 California Green Building Standard Code, Title 24 Part 11 for full explanation of mandatory measures including exceptions.

- Multifamily dwellings, hotels/motels with greater than 20 units/rooms: Designation of at least 10 percent of the total number of parking spaces shall be EV capable, at least 25 percent of the total number of parking spaces shall be EV Ready, and at least 5 percent of the total number of parking spaces shall be equipped with a Level 2 Charging Station.
- Non-residential land uses shall comply with the following EV charging requirements based on the number of passenger vehicle parking spaces
  - 0-9: no EV capable spaces or charging stations required;
  - 10 – 25: 4 EV capable spaces but no charging stations required;
  - 26 – 50: 8 EV capable spaces of which 2 must be equipped with charging stations;
  - 51 – 75: 13 EV capable spaces of which 3 must be equipped with charging stations;
  - 76 – 100: 17 EV capable spaces of which 4 must be equipped with charging stations;
  - 101 – 150: 25 EV capable spaces of which 6 must be equipped with charging stations;
  - 151 – 200: 35 EV capable spaces of which 9 must be equipped with charging stations;
  - >200: 20 percent of the total available parking spaces of which 25 percent must be equipped with charging stations;
- Non-residential land uses shall comply with the following EV charging requirements for medium-duty and heavy-duty vehicles: Warehouses, grocery stores, and retail stores with planned off-street loading spaces shall install EV supply and distribution equipment, spare raceway(s) or busway(s) and adequate capacity for transformer(s), service panel(s), or subpanel(s) at the time of construction based on the number of off-street loading spaces as indicated in Table 5.106.5.4.1 of the California Green Building Standards.

- Bicycle Parking
  - Non-residential short term bicycle parking for projects anticipated to generate visitor traffic: permanently anchored bicycle racks within 200 feet of visitor entrance for 5 percent of new visitor motorized vehicle parking spaces with a minimum of one two-bike capacity rack.
  - Non-residential buildings with tenant spaces of 10 or more employees/tenant-occupants: Secure bicycle parking for 5 percent of the employee/tenant-occupant vehicle parking spaces with a minimum of one bicycle parking facility.

- Shade Trees (Non-Residential)
  - Surface parking: Minimum No. 10 container size or equal shall be installed to provide shade over 50 percent of the parking within 15 years (unless parking area covered by appropriate shade structures and/or solar);
  - Landscape areas: Minimum No. 10 container size or equal shall be installed to provide shade of 20 percent of the landscape area within 15 years;
  - Hardscape areas: Minimum No. 10 container size or equal shall be installed to provide shade of 20 percent of the landscape area within 15 years (unless covered by applicable shade structures and/or solar or the marked area is for organized sports activities).

The CALGreen voluntary standards are only mandatory if a local ordinance requires them. Since the City has not made any of the voluntary measures mandatory, the following voluntary standards would not be applicable to the project:

- Deconstruct existing buildings and reuse applicable salvaged materials;

- Residential Bicycle Parking:
  - Multifamily/hotel/motel short-term parking: Provide permanently anchored bicycle racks within 100 feet of visitor's entrance for 5 percent of visitor motorized vehicle parking capacity (minimum 1 two-bile capacity rack);
  - Hotel/Motel long-term parking: Provide one acceptable on-site bicycle parking space for every 25,000 square feet but not less than two spaces;

The CALGreen voluntary standards are divided into two tiers. Tier 1 adds additional requirements beyond the mandatory measures, whereas Tier 2 further increases the requirements.

- **Tier I**
  - Stricter energy efficiency requirements;
  - Stricter water conservation requirements for specific fixtures;
  - Minimum 65 percent reduction in construction waste with third-party verification, Minimum 10 percent recycled content for building materials;
  - Minimum 20 percent permeable paving;
  - Minimum 20 percent cement reduction;
  - Multifamily developments/hotels/motels: Minimum 35 percent of total parking spaces shall be EV ready and for projects with 20 or more dwelling units/rooms a minimum of 10 percent of the total number of parking spaces shall be equipped with EV charging stations;
- **Tier II**
  - Stricter energy efficiency requirements,
  - Stricter water conservation requirements for specific fixtures;
  - Minimum 75 percent reduction in construction waste with third-party verification,
  - Minimum 15 percent recycled content for building materials;
  - Minimum 30 percent permeable paving;
  - Minimum 25 percent cement reduction;
  - Multifamily developments/hotels/motels: Minimum 40 percent of total parking spaces shall be EV ready and for projects with 20 or more dwelling units/rooms a minimum of 15 percent of the total number of parking spaces shall be equipped with EV charging stations

Plan Bay Area 2050

Plan Bay Area 2050 is a State-mandated, integrated long-range transportation, land-use, and housing plan, known as an RTP/SCS, that would support a growing economy, provide more housing and transportation choices and reduce transportation-related pollution in the nine-county San Francisco Bay Area. Plan Bay Area 2050 builds on earlier efforts to develop an efficient transportation network and grow in a financially and environmentally responsible way. Plan Bay Area 2050 focuses on advancing equity and improving resiliency in the Bay Area by creating strategies in the following four elements: Housing, Economy, Transportation, and Environment. The Plan discusses how the future is uncertain due to anticipated employment growth, lack of housing options, and outside forces, such as climate change and economic turbulence. These uncertainties will impact growth in the Bay Area and exacerbate issues for those who are historically and systemically marginalized and underserved and excluded. Thus, Plan Bay Area 2050 has created strategies and considered investments that will serve those systemically underserved communities

and provide equitable opportunities. The Plan presents a total of 35 strategies to outline how the $1.4 trillion dollar investment would be utilized. The strategies include, but are not limited to, the following: providing affordable housing, allowing higher-density in proximity to transit-corridors, optimizing the existing roadway network, creating complete streets, providing subsides for public transit, reducing climate emissions, and expanding open space area. To bring these strategies to fruition, it will require participation by agencies, policymakers, and the public. An implementation plan is also included as part of the Plan to assess the requirements needed to carry out the strategies, identify the roles of pertinent entities, create an appropriate method to implement the strategies, and create a timeline for implementation.

Napa Valley Transportation Authority

The Napa Valley Transportation Authority (NVTA) is a Congestion Management Agency (CMA) formed in 1998 as a joint power authority between the cities of American Canyon, Calistoga, Napa, St. Helena, the town of Yountville, and the County of Napa. NVTA serves as the countywide transportation planning agency. NVTA also develops the long-range county transportation plan, which (along with similar plans from the other eight Bay Area counties) forms the "primary basis" for the RTP/SCS adopted by the Metropolitan Transportation Commission. In turn, the county transportation plan must consider the most recently adopted RTP/SCS to assure that both plans employ a common planning framework.

City of American Canyon Energy Efficiency Climate Action Plan

The City of American Canyon Energy Efficiency Climate Action Plan (EECAP) was adopted in December 2012 to develop a coordinated approach to energy efficiency and GHG reductions within the community and local government. The EECAP provides feasible strategies and measures that cost-effectively reduce energy-related and GHG emissions. Additionally, the EECAP includes an inventory of GHG emissions from all sectors in the community for years 2005 and 2010, as well as forecasts of anticipated GHG emissions for years 2020 and 2035 under a business-as-usual scenario that takes into consideration current consumption patterns, as well as population and job projections.

American Canyon Industrial GHG Standards Ordinance 2024-02

CEQA requires lead agencies to choose a threshold of significance to evaluate greenhouse gas emissions that is supported by substantial evidence and captures all significant impacts which may be one developed by an expert agency. The City falls within the Bay Area Air Quality Management District (BAAQMD), which in 2022 issued GHG significance thresholds recommendations for residential and commercial projects but did not recommend a threshold for industrial land uses. The South Coast Air Quality Management District (SCAQMD), which includes Los Angeles County, has developed a threshold of significance under CEQA for industrial land uses that is supported by substantial evidence and serves as a basis for mitigation of significant sources of GHG impacts.

The City's threshold of significance that combines BAAQMD's baseline threshold with the SCAQMD's threshold will capture the main sources of GHG emissions from industrial land uses.

The threshold standards are applied in a tiered evaluation system:

Tier 1: CEQA Categorical Exemptions

- Initially, determine if the project qualifies for any CEQA categorical exemptions. If it does not, proceed to Tier 2.

Tier 2: Consistency with Local GHG Reduction Plans

- Assess if the project aligns with a locally adopted GHG reduction plan. This plan must have undergone public hearing and CEQA review, have an approved inventory, and include monitoring. If the project is not consistent with such a plan, move to Tier 3.

Tier 3: Project Design Elements

- Evaluate the project against specific design elements
    1. **Buildings**
        a. The project should not include natural gas appliances or plumbing.
        b. The project should avoid wasteful or unnecessary energy use, as per CEQA guidelines.
    2. **Transportation**
        a. The project must achieve a reduction in vehicle miles traveled (VMT) below the regional average, currently at least 15% as per the California Climate Change Scoping Plan.
        b. The project must comply with the latest CALGreen Tier 2 electric vehicle requirements.
- If the project does not incorporate these design elements, it is considered to have a significant GHG impact. If it does, move to Tier 4.

Tier 4: GHG Emissions Screening Threshold

- Determine if the project's GHG emissions exceed the South Coast Air Quality Management District's threshold of 10,000 metric tons of CO2 equivalent (MT CO2e) per year for industrial uses and stationary projects. Projects exceeding this threshold are deemed to have a significant GHG impact.

Industrial Commerce Centers Sustainability Standards Ordinance 2024-03

The American Canyon Industrial Greenhouse Gas Standards Ordinance establishes the following standards to all warehousing, logistics, and distribution facilities in the City where a Notice of Preparation is issued after March 1, 2024, under CEQA. It defines such facilities as those used for storing and consolidating manufactured goods, typically larger than 200,000 square feet with specific characteristics such as dock high loading doors and truck activities.

The following standards are applicable under the proposed Ordinance:

1. **Zero Emission Operational Equipment.** All on-site motorized operational equipment (forklifts, yard trucks, pallet jacks, etc.) must be zero-emission. This includes using electrical hookups instead of diesel-fueled generators for construction tools.
2. **Zero Emission Cargo Handling Equipment.** All outdoor cargo handling equipment must be zero-emission vehicles. Necessary charging stations or infrastructure for these vehicles must be included in each building.

3. **Rooftop Solar Panels.** Before issuing a business license, the City will ensure that rooftop solar panels are installed to supply 100% of the power needed for non-refrigerated parts of the facility, including parking areas.
4. **Refrigerated Space Requirements.** Facilities not committing to non-refrigerated use must install conduits during construction for potential refrigerated spaces. Electric plug-in units for refrigeration units must be installed at relevant dock doors.
5. **Zero Emission Construction Equipment.** All generators and diesel-fueled off-road construction equipment over 75 horsepower must be zero-emissions or have CARB Tier IV-compliant engines. Exemptions are possible if such equipment is not reasonably available.
6. **Electric Vehicle Charging Stations.** Install infrastructure for Level 2 (or faster) EV charging stations for a percentage of employee parking spaces, increasing to 25% by 2030.
7. **Air Filtration Systems.** Install HVAC and/or HEPA air filtration systems in all warehouse facilities.

4.5.3 Impact Analysis

a. Significance Thresholds and Methodology

Significance Thresholds

Based on Appendix G of the CEQA Guidelines a project may be deemed to have a significant impact on GHG emissions if it would:

1. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or
2. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases.

Most individual projects do not generate sufficient GHG emissions to create a project-specific impact through a direct influence on climate change. However, physical changes caused by a project can contribute incrementally to cumulative effects that are significant, even if individual changes resulting from a project are limited. The issue of climate change typically involves an analysis of whether a project's contribution towards an impact is cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, other current projects, and probable future projects (CEQA Guidelines, Section 15064[h][1]). The 2022 BAAQMD *CEQA Thresholds for Evaluating the Significance of Climate Impacts From Land Use Projects and Plans* provides two plan level thresholds for determining the significance of GHGs. The two approaches are as follows:

1. Consistency with a qualified GHG reduction plan
2. Meets the State's goals to reduce emissions to 40 percent below 1990 levels by 2030 and carbon neutrality by 2045

The City of American Canyon's EECAP is not a qualified GHG reduction plan, since it contains targets only for 2020 and was adopted prior to the adoption of new targets contained in the 2022 Scoping Plan; therefore, the first approach is not feasible. As such, the City uses the second approach to determine the significance of GHGs for development facilitated by the project.

Methodology

Based on plan-level guidance from the 2022 BAAQMD *CEQA Thresholds for Evaluating the Significance of Climate Impacts From Land Use Projects and Plans,* GHG emissions associated with project implementation is discussed qualitatively by comparing the project to the 2022 BAAQMD GHG thresholds, namely whether policies work towards achieving carbon neutrality by 2045. In addition, the project is qualitatively compared to other applicable plans, policies, and regulations adopted for the purpose of reducing the emissions of GHGs.

In developing its 2022 GHG significance thresholds, BAAQMD analyzed what new land use development projects will require to achieve California's long-term climate goal of carbon neutrality by 2045, thereby better representing what design elements new land use development projects need to incorporate to sufficiently contribute to achieving the State's goal. As GHG emissions from the land use sector come primarily from building energy use and from transportation, these are the areas that need to be evaluated to determine whether the project can or will be carbon neutral. With respect to building energy use, this can be achieved by replacing natural gas with electric power and by eliminating inefficient or wasteful electricity usage. These strategies will support California's transition away from fossil fuel-based energy sources and will bring the project's GHG emissions associated with building energy use down to zero because SB 100 incrementally requires greater proportions of in-state sales of electricity to be generated from renewable and carbon-free sources, ultimately requiring 100 percent of in-state electricity sales to be generated from carbon-free sources by 2045. With respect to transportation, projects need to be designed to reduce project-generated VMT and to provide sufficient EV charging infrastructure to support the adoption of EVs. BAAQMD's 2022 significance thresholds for project design elements are listed below. If a land use development project cannot demonstrate consistency, then that project would result in a potentially significant impact related to GHG emissions.

1. **Buildings**
    i. The project will not include natural gas appliances or natural gas plumbing (in both residential and nonresidential development).
    ii. The project will not result in any wasteful, inefficient, or unnecessary electrical usage as determined by the analysis required under CEQA Section 21100(b)(3) and Section 15126.2(b) of the CEQA Guidelines.

2. **Transportation**
    i. Achieve compliance with off-street EV requirements in the most recently adopted version of CALGreen Tier 2.
    ii. Achieve a 15 percent reduction in project-generated residential VMT per capita and VMT per employee rate below the existing American Canyon rate.

As discussed in Chapter 4.11, *Transportation*, project-generated traffic is evaluated for whether it would conflict or be inconsistent with CEQA Guidelines Section 15064.3(b), which describes specific considerations for analyzing transportation impacts as amended on July 1, 2020, pursuant to SB 375. SB 375 aims to better promote statewide policies that (a) combat climate change by reducing greenhouse gas emissions and particulates; (b) encourage infill development and a diversity of uses instead of sprawl; and (c) promote multi-modal transportation networks, providing clean, efficient access to destinations and improving public health through active transportation. Section 15064.3(b) states that VMT is "generally" the most appropriate measure of transportation impacts. No particular methodology or metric is mandated by section 15064.3(b) and the methodology or

metric is left to the lead agency, bearing in mind the criteria the legislature had in mind for determining the significance of transportation impacts in SB 743. These were expressed in Public Resource Code section 21099(b)(1), which states: "[t]hose criteria shall promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." The American Canyon travel demand model is a trip-based model and estimates the following:

- Residential VMT per capita was estimated based on the VMT attributable to home-based trip productions, to and from residences in American Canyon.
- VMT per employee was estimated based on the VMT associated with home-based work (HBW) trips, to and from places of employment in American Canyon.

VMT impacts would be considered potentially significant if the forecasted rate of residential VMT per capita or VMT per employee for the project were to exceed 85 percent of the existing rate of VMT in each category for American Canyon, based on the American Canyon travel demand model.

In terms of the potential for wasteful, inefficient, or unnecessary electrical usage as determined by the analysis required under CEQA Section 21100(b)(3) and CEQA Guidelines Section 15126.2(b), project energy impacts are addressed under *Energy* in Chapter 4.15, *Effects Found to be Less than Significant*.

b. Project Impacts and Mitigation Measures

Threshold 1:	Would the project generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment?
Threshold 2:	Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Impact GHG-1 DEVELOPMENT FACILITATED BY THE PROJECT WOULD MAKE PROGRESS TOWARDS ACHIEVING STATE GOALS BUT WOULD NOT NECESSARILY MEET STATE 2030 OR 2045 GOALS. MITIGATION MEASURES GHG-2 AND GHG-3 WOULD REQUIRE IMPLEMENTATION OF CEQA GHG THRESHOLDS AND A CLIMATE ACTION PLAN (CAP); HOWEVER, DEVELOPMENT FACILITATED BY THE PROJECT WOULD NOT MEET THE 2030 OR 2045 GOALS UNTIL THE CAP IS UPDATED AND ADOPTED. THIS IMPACT WOULD BE SIGNIFICANT AND UNAVOIDABLE.

Construction

Construction of future development and mobility improvements associated with the 2040 General Plan would result in GHG emissions during construction, primarily from fuel consumption associated with heavy equipment, light-duty vehicles, machinery, and generators for lighting. Temporary grid power may also be provided to construction trailers or electric construction equipment that may result in indirect GHG emissions from energy generation. The project would utilize construction contractors that would be required to comply with applicable CARB regulations, such as accelerated retrofitting, repowering, or replacement of heavy-duty diesel on-road and off-road equipment. Construction contractors are required to comply with the provisions of CCR Title 13, sections 2449 and 2485, and CARB regulations, which prohibit diesel-fueled commercial and off-road vehicles from idling for more than five minutes, minimizing unnecessary GHG emissions. Construction equipment would be subject to the USEPA Construction Equipment Fuel Efficiency Standard, which would minimize inefficient fuel consumption and thus GHG emissions. These construction equipment

standards (i.e., Tier 4 efficiency requirements) are contained in 40 Code of Federal Regulations Parts 1039, 1065, and 1068. Pursuant to applicable regulatory requirements of CALGreen, the project would comply with construction waste management practices to divert construction and demolition debris from landfills. These practices would result in efficient use of energy during construction and, therefore, would minimize unnecessary GHG emissions. Furthermore, in the interest of cost efficiency, construction contractors would not utilize fuel in a manner that is wasteful or unnecessary, which would also have the effect of minimizing GHG emissions.
