Screening Report

Area of Interest (AOI) Information

Area : 6,010,163.38 ft²

Nov 21 2023 2:35:31 Pacific Standard Time

Summary

Name	Count	Area(ft²)	Length(ft)
Permitted Stationary Sources	0	N/A	N/A

NOTE: A larger buffer than 1000 feet may be warranted depending on proximity to significant sources.

Commerce 220 Warehouse Distribution Project

Summary of Energy Use During Construction

Construction equipment fuel	32,838	gallons (diesel)
Construction vehicle fuel	29,325	gallons (gasoline, diesel)
Total construction fuel	**62,162**	**gallons (gasoline, diesel)**

Summary of Energy Use During Construction - Electricity

Year	kWh per Year
2025	0

Summary of Annual Energy Use During Operations (2025)

Operation vehicle fuel	42,129	gallons	Gasoline
	249,798	gallons	Diesel
	13,980	gallons	Natural Gas
	35,233	kw-hours	Electricity

Operational Building Energy

Operation natural gas	0	MMBtu
Operation electricity	659,500	kw-hours

SECTION 1: INTRODUCTION

This Biological Resources Assessment (BRA) has been prepared by FirstCarbon Solutions (FCS) for the proposed SDG Commerce Court 220 Distribution Center Project (proposed project). The purpose of the BRA is to (1) document existing and potentially occurring biological resources on the project site and adjacent areas; (2) analyze potential project-related impacts on regulated biological resources; (3) summarize relevant local, State, and federal regulations; and (4) recommend appropriate measures to mitigate potential impacts on biological resources to less than significant levels.

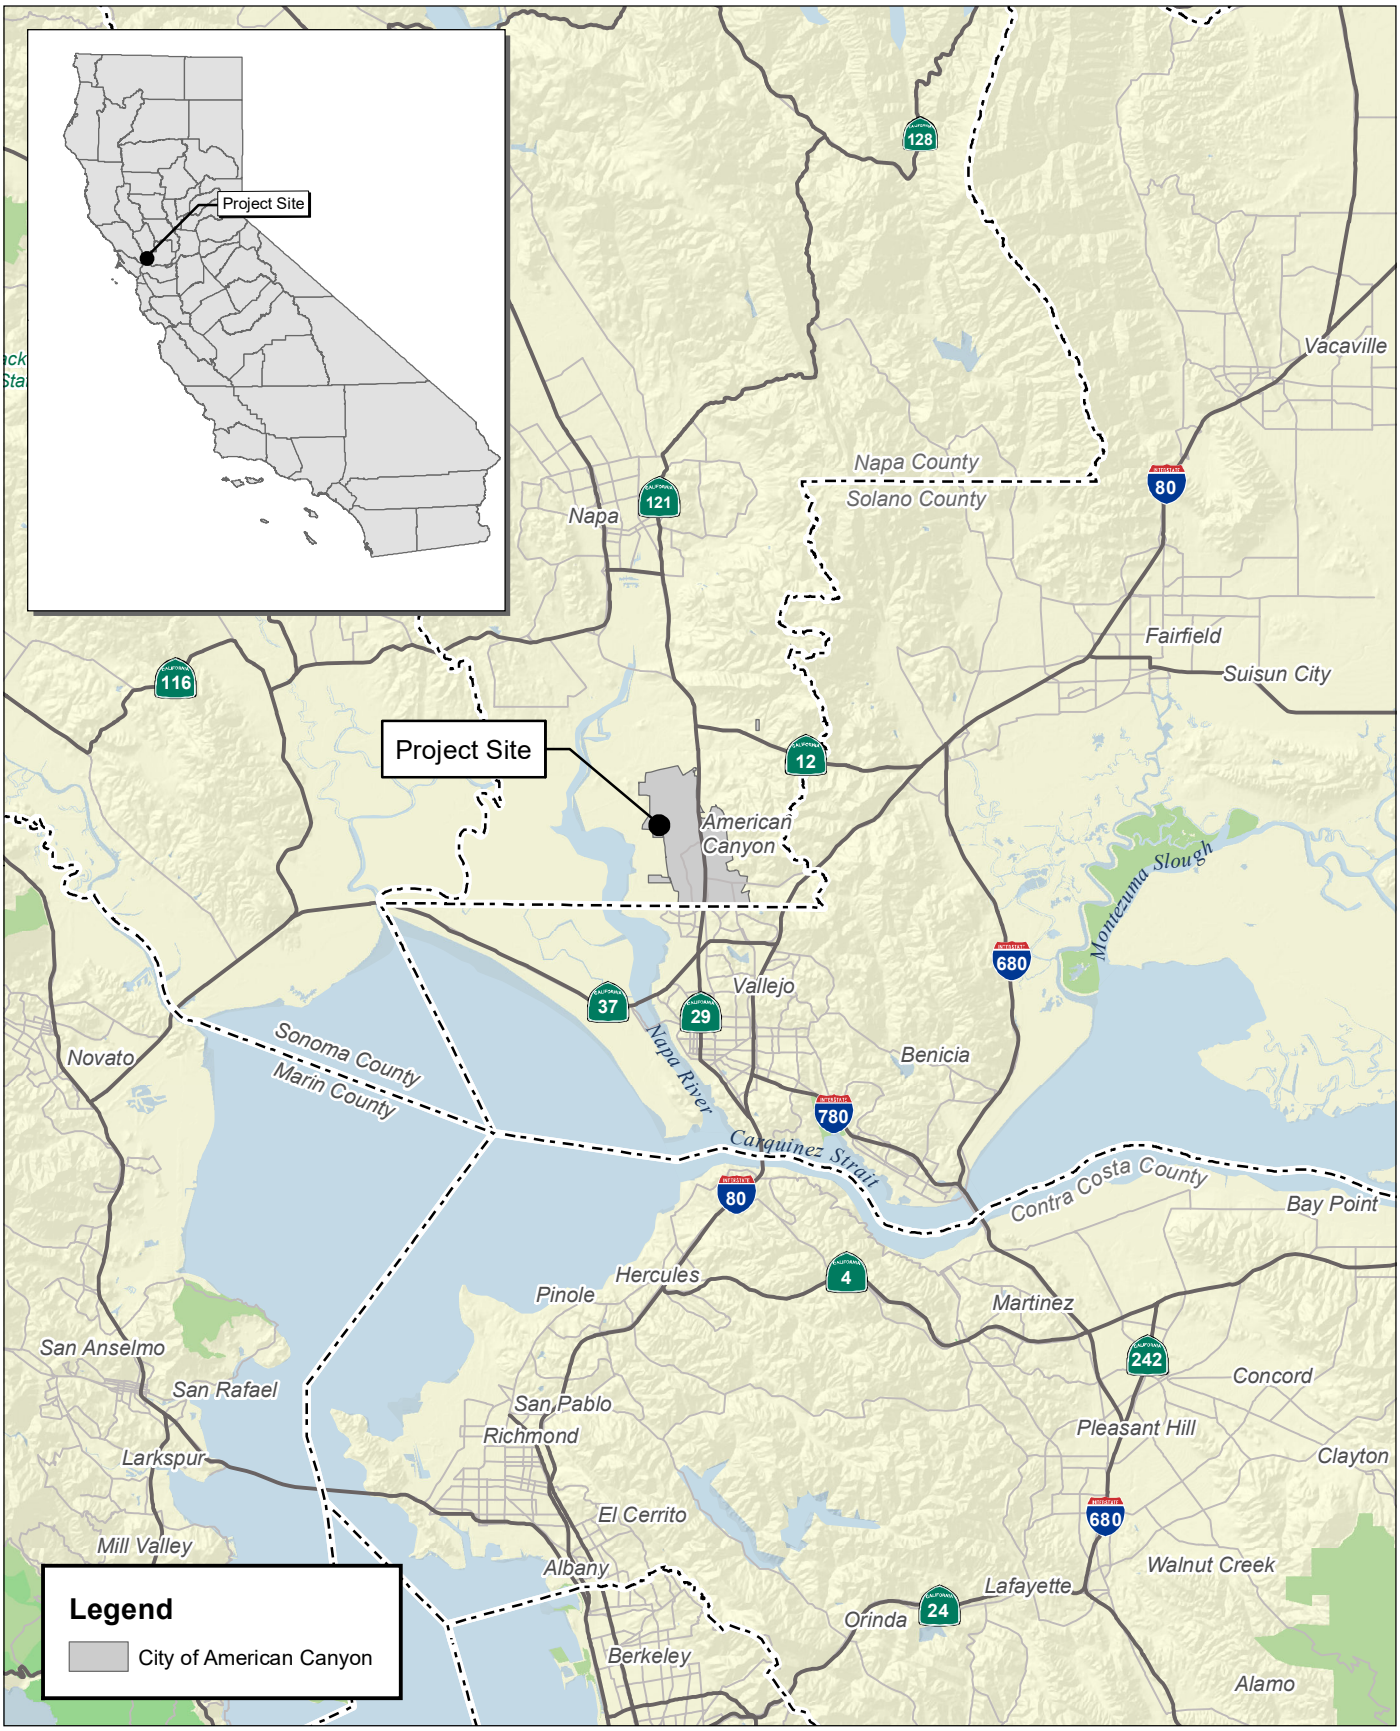
1.1 - Project Location

The approximately 10.17-acre project site is located in the City of American Canyon, in Napa County, California (Exhibit 1 and Exhibit 2). The project site is located on the *Cuttings Wharf, California* United States Geological Survey (USGS) 7.5-minute Topographic Quadrangle Map. The project site is generally trapezoidal in shape, bordered by the Commerce Court extension and eucalyptus trees to the east, eucalyptus trees and North Slough to the west, the future SDG Commerce 217 project site to the north, and the constructed and operational SDG Commerce 330 Distribution Center to the south.

1.2 - Project Description

The project applicant, SDG Commerce 220, LLC, proposes to develop a 219,834-square-foot wine storage and distribution center on the 443,005-square-foot project site (Exhibit 3). The warehouse would provide 23 truck doors and up to provisions for 4,400 square feet of office space. The warehouse would have perimeter concrete tilt-up wall panels with varying parapet heights and accent spandrel glass/metal canopy features around offices and corners of the building. The average roof height would be approximately 35 feet high and portions of the building exterior walls would have various heights to provide architectural relief. The building would be insulated and refrigerated at approximately 58°F (degrees Fahrenheit), making it suitable for storage of wine and related products. The amount of refrigeration necessary would be reduced through the use of intake louvers and fans, which would allow cool night air to be utilized.

1.3 - Project History



The project site is part of what was previously a larger 35.85-acre site. The site was subdivided into three lots (SDG Commerce 217, SDG Commerce 220, and SDG Commerce 330) via a tentative parcel map in February 2019. The southern parcel (SDG Commerce 330) was developed in 2021. The northern parcel (SDG Commerce 217) was entitled in 2021 and at the time of this writing is currently being developed. The central parcel (SDG Commerce 220) is the project site evaluated in this BRA. Exhibit 3 shows the relationship of the three parcels to each other. The following narrative provides background on the entire 35.85-acre project site.

Aerial photography dating back to 1937 indicates that the entire project site was occupied by planted ornamental trees; between then and the late 1950s, a eucalyptus grove was planted. From

the 1950s until 2001 the site remained relatively unchanged. From 2001 until circa 2012, the northwest corner of the site was used as a paintball field (Sherwood Forest Paintball Area) with the eucalyptus trees remaining in place.

In 2004, a warehouse was built directly to the north of the greater 35.8-acre site (as shown in Exhibit 2), and its development also included construction of Commerce Court cul-de-sac road improvements that terminated at on the northeast corner of the site. Also in 2004, the City of American Canyon installed underground utilities and a rock-paved access road through the middle of the eucalyptus grove adjacent to the east side of the project site. This work also included installation of a sanitary sewer force main that crosses the northern portion of the site (i.e., the 217 SDG Commerce parcel). In 2012 the entire 35.85-acre site was cleared and grubbed of eucalyptus trees and shrubs.

It should be noted that as part of the SDG Commerce 217 development, much of the SDG Commerce 220 project site was graded between May 29 and July 2, 2023, to procure existing, stockpiled soil for use as clean fill material for the SDG Commerce 217 site (See Appendix A for photographs). A Monk & Associates (M&A) authored *Addendum Letter to CEQA Biology Report Discussing Proposed Borrow Site* in September 2020 analyzed grading impacts (Appendix D.1). Additionally, an approved grading plan was issued by the City of American Canyon in March 2023 (Appendix D.1).

SECTION 2: REGULATORY SETTING

2.1 - Federal

2.1.1 - Endangered Species Act of 1973

The United States Fish and Wildlife Service (USFWS) has jurisdiction over species listed as threatened or endangered under the federal Endangered Species Act of 1973. Section 9 of Endangered Species Act protects listed species from "take," which is broadly defined as actions taken to "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or attempt to engage in any such conduct." The Endangered Species Act protects threatened and endangered plants and animals and their critical habitat. Candidate species are those proposed for listing; these species are usually treated by resource agencies as if they were actually listed during the environmental review process.

2.1.2 - Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) implements international treaties between the United States and other nations devised to protect migratory birds, their parts, eggs, and nests from activities such as hunting, pursuing, capturing, killing, selling, and shipping, unless expressly authorized in the regulations or by permit. All migratory birds and their nests are protected from take and other impacts under the MBTA (16 United States Code [USC] § 703, *et seq*.).

2.1.3 - Bald and Golden Eagle Protection Act

The golden eagle (*Aquila chrysaetos*) and bald eagle (*Haliaeetus leucocephalus*) are afforded additional protection under the Eagle Protection Act, amended in 1973 (16 USC § 669, *et seq*.) and the Bald and Golden Eagle Protection Act (16 USC §§ 668–668d).

2.1.4 - Clean Water Act

Section 404

The United States Army Corps of Engineers (USACE) administers Section 404 of the federal Clean Water Act (CWA), which regulates the discharge of dredge and fill material into waters of the United States.

As of the preparation of this report on August 28, 2023, the final "Revised Definition of Waters of the United States" rule was published in the Federal Register on January 18, 2023, and took effect on March 20, 2023. However, the final rule is not currently operative in certain states and for certain parties due to litigation. Moreover, the United States Environmental Protection Agency (EPA) and USACE (hereafter known as the agencies) are in receipt of the U.S. Supreme Court's May 25, 2023, decision in the case of *Sackett v. Environmental Protection Agency*. In light of this decision, the agencies will interpret the phrase "waters of the United States" consistent with the Supreme Court's decision in *Sackett*.[1] As a result of ongoing litigation, the agencies are interpreting "waters of the United States" consistent with the pre-2015 regulatory regime until further notice.

[1] United States Environmental Protection Agency (EPA). 2023. Website: https://www.epa.gov/wotus/current-implementation-waters-united-states. Accessed July 12, 2023.

Therefore, since the agencies are interpreting "waters of the United States" consistent with the pre-2015 regulatory regime until further notice, our analysis follows 40 Code of Federal Regulations 230.3(s) in effect under the pre-2015 regulatory regime, which defines "waters of the United States" as follows:

1. All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide.
2. All interstate waters including interstate wetlands.
3. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation, or destruction of which could affect interstate or foreign commerce including any such waters:
   a) Which are or could be used by interstate or foreign travelers for recreational or other purposes; or
   b) From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
   c) Which are used or could be used for industrial purposes by industries in interstate commerce.
4. All impoundments of waters otherwise defined as waters of the United States under this definition.
5. Tributaries of waters identified in paragraphs(s) (1) through (4) of this section.
6. The territorial sea.
7. Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs(s) (1) through (6) of this section; waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of the CWA (other than cooling ponds as defined in 40 Code of Federal Regulations 423.11(m) which also meet the criteria of this definition) are not waters of the United States.

Waters of the United States do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the CWA, the final authority regarding CWA jurisdiction remains with the EPA and/or USACE.

"Wetland" refers to areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and seasonal wetlands. Wetlands are considered jurisdictional if they fall under one of the categories of waters of the United States defined above. The USACE jurisdiction typically extends up to the ordinary high water mark (OHWM).

In general, a USACE permit must be obtained before placing fill in wetlands or other waters of the United States. The type of permit depends on the impacted acreage, the purpose of the proposed fill, and other factors.

Section 401

As stated in Section 401 of the CWA, "any applicant for a federal permit for activities that involve a discharge to waters of the State, shall provide the federal permitting agency a certification from the State in which the discharge is proposed that states that the discharge will comply with the applicable provisions under the Federal Clean Water Act." Therefore, before the USACE will issue a Section 404 permit, applicants must apply for and receive a Section 401 Water Quality Certification from the Regional Water Quality Control Board (RWQCB).

2.2 - State

2.2.1 - CEQA Guidelines

The California Environmental Quality Act (CEQA) requires public agencies to evaluate potential impacts to special-status species and their habitat. The following CEQA Guidelines Appendix G checklist questions serve as thresholds of significance when evaluating the potential impacts of a proposed project on biological resources. Impacts are considered significant if a project would:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as being a Candidate, Sensitive, or Special-status in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife (CDFW) or USFWS.
- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations, or by the CDFW or USFWS.
- Have a substantial adverse effect on federally and State-protected wetlands as defined by Section 404 of the CWA (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.
- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites.
- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.
- Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State Habitat Conservation Plan.

Oak Woodlands Conservation Act

California State Senate Bill (SB) 1334, the Oak Woodlands Conservation Act, became law on January 1, 2005, and was added to the CEQA statutes as 21083.4. This statute requires that a county must determine whether or not a project will result in a significant impact on oak woodlands and, if it is

determined that a project may result in a significant impact on oak woodlands then the County shall require one or more of the following mitigation measures:

- Conserve oak woodlands through the use of conservation easements.
- Plant an appropriate number of trees, including maintenance of plantings and replacement of failed plantings.
- Contribute funds to the Oak Woodlands Conservation Fund for the purpose of purchasing oak woodlands conservation easements.
- Other mitigation measures developed by the county.

2.2.2 - California Endangered Species Act

The State of California enacted the California Endangered Species Act (CESA) in 1984. CESA pertains to State-listed endangered and threatened species. CESA requires State agencies to consult with the CDFW when preparing CEQA documents to ensure that the State lead agency actions do not jeopardize the continued existence of a listed species or result in the destruction or adverse modification of habitat essential to the continued existence of those species, if there are reasonable and prudent alternatives available (Fish and Game Code [FGC] § 2080). CESA directs agencies to consult with the CDFW on projects or actions that could affect listed species, directs the CDFW to determine whether jeopardy would occur, and allows the CDFW to identify "reasonable and prudent alternatives" to the project consistent with conserving the species. CESA allows the CDFW to authorize exceptions to the State's prohibition against take of a listed species if the "take" of a listed species is incidental to carrying out an otherwise lawful project that has been approved under CEQA (FGC § 2081).

2.2.3 - California Fish and Game Code

Under CESA, the CDFW has the responsibility for maintaining a list of endangered and threatened species (FGC § 2070). Fish and Game Code Sections 2050 through 2098 outline the protection provided to California's rare, endangered, and threatened species. Fish and Game Code Section 2080 prohibits the taking of plants and animals listed under the CESA. Fish and Game Code Section 2081 established an incidental take permit program for State-listed species. The CDFW maintains a list of "Candidate" species that it formally notices as being under review for addition to the list of endangered or threatened species.

In addition, the Native Plant Protection Act of 1977 (NPPA) (FGC § 1900, *et seq*.) prohibits the taking, possessing, or sale within the State of any plants with a State designation of rare, threatened, or endangered (as defined by the CDFW). An exception to this prohibition in the NPPA allows landowners, under specified circumstances, to take listed plant species, provided that the owners first notify the CDFW and give the agency at least 10 days to come and retrieve (and presumably replant) the plants before they are plowed under or otherwise destroyed. Fish and Game Code Section 1913 exempts from "take" prohibition "the removal of endangered or rare native plants from a canal, lateral ditch, building site, or road, or other right-of-way." Project impacts to these species

are not considered significant unless the species are known to have a high potential to occur within the area of disturbance associated with construction of the proposed project.

In addition to formal listing under the Endangered Species Act and CESA, some species receive additional consideration by the CDFW and local lead agencies during the CEQA process. Species that may be considered for review are those listed as a Species of Special Concern. The CDFW maintains lists of Species of Special Concern that serve as species "watch lists." Species with this status may have limited distributions or limited populations, and/or the extent of their habitats has been reduced substantially, such that their populations may be threatened. Thus, their populations are monitored, and they may receive special attention during environmental review. While they do not have statutory protection, they may be considered rare under CEQA and specific protection measures may be warranted. In addition to Species of Special Concern, the CDFW Special Animals List identifies animals that are tracked by the California Natural Diversity Database (CNDDB) and may be potentially vulnerable but warrant no federal interest and no legal protection.

Sensitive species that would qualify for listing but are not currently listed are afforded protection under CEQA. CEQA Guidelines Section 15065 (Mandatory Findings of Significance) requires that a substantial reduction in numbers of a rare or endangered species be considered a significant effect. CEQA Guidelines Section 15380 (Rare or Endangered Species) provides for the assessment of unlisted species as rare or endangered under CEQA if the species can be shown to meet the criteria for listing. Unlisted plant species on the California Native Plant Society (CNPS) List ranked 1A, 1B, and 2 would typically require evaluation under CEQA.

Fish and Game Code Sections 3500 to 5500 outline protection for fully protected species of mammals, birds, reptiles, amphibians, and fish. Species that are fully protected by these sections may not be taken or possessed at any time. The CDFW cannot issue permits or licenses that authorize the take of any fully protected species, except under certain circumstances such as scientific research and live capture and relocation of such species pursuant to a permit for the protection of livestock.

Under Fish and Game Code Section 3503.5, it is unlawful to take, possess, or destroy any birds in the orders of *Falconiformes* or *Strigiformes* (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto. To comply with the requirements of CESA, an agency reviewing a proposed project within its jurisdiction must determine whether any State-listed endangered or threatened species may be present in the project study area and determine whether the proposed project will have a potentially significant impact on such species. In addition, the CDFW encourages informal consultation on any proposed project that may impact a Candidate species.

Project-related impacts to species on the CESA endangered or threatened list would be considered significant. State-listed species are fully protected under the mandates of CESA. "Take" of protected species incidental to otherwise lawful management activities may be authorized under Fish and Game Code Section 206.591. Authorization from the CDFW would be in the form of an Incidental Take Permit.

Fish and Game Code Section 1602 requires any entity to notify the CDFW before beginning any activity that "may substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of any river, stream, or lake" or "deposit debris, waste, or other materials that could pass into any river, stream, or lake." "River, stream, or lake" includes waters that are episodic and perennial and ephemeral streams, desert washes, and watercourses with a subsurface flow. A Lake or Streambed Alteration Agreement will be required if the CDFW determines that project activities may substantially adversely affect fish or wildlife resources through alterations to a covered body of water. CDFW jurisdiction typically extends to the edge or "drip line" of the riparian habitat or top of bank.

2.2.1 - California Porter-Cologne Water Quality Control Act

The RWQCB regulates actions that would involve "discharging waste, or proposing to discharge waste, within any region that could affect the water of the State" (Water Code § 13260(a)), pursuant to provisions of the Porter-Cologne Water Quality Act. "Waters of the State" are defined as "any surface water or groundwater, including saline waters, within the boundaries of the State" (Water Code § 13050(e)). In 2019, the California State Water Resources Control Board (State Water Board) published the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (Procedures) to guide wetland/waters of the State determinations and the permitting process.[2]

2.2.2 - California Native Plant Society

The CNPS maintains a rank of plant species that are native to California and that have low population numbers, limited distribution, or are otherwise threatened with extinction. This information is published in the Inventory of Rare and Endangered Vascular Plants of California. Following are the definitions of the CNPS ranks:

- **Rank 1A:** Plants presumed extirpated in California and either rare or extinct elsewhere
- **Rank 1B:** Plants rare, threatened, or endangered in California and elsewhere
- **Rank 2A:** Plants presumed extirpated in California but common elsewhere
- **Rank 2B:** Plants rare, threatened, or endangered in California but more common elsewhere
- **Rank 3:** Plants about which more information is needed
- **Rank 4:** Watch List: Plants of limited distribution

Potential impacts to populations of CNPS ranked plants receive consideration under CEQA review. All plants appearing on the CNPS List ranked 1 or 2 are considered to meet the CEQA Guidelines Section 15380 criteria. Rank 3 and 4 plants do not automatically meet this definition. Rank 4 plants do not clearly meet CEQA standards and thresholds for impact considerations. Nevertheless, some level of CEQA review is justified for California Rare Plant Rank (CRPR) 4 taxa, and under some circumstances, a full impact analysis is warranted. Taxa that can be shown to meet the criteria for endangered, rare, or threatened status under CEQA Section 15380(d) or that can be shown to be regionally rare or unique as defined in CEQA Section 15125(c) must be fully analyzed in a CEQA document. Some

[2] California State Water Resources Control Board (State Water Board). 2019. State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State. April 2, 2019.

circumstances, such as local rarity, having occurrences peripheral to the taxon's distribution, or having occurrences on unusual substrates or rare and declining habitats, provide justification for treating some CRPR 4 taxa occurrences as regionally rare or unique. One limitation to fully analyzing impacts on CRPR 4 taxa is the difficulty in obtaining current data on the number and condition of the occurrences.[3]

2.3 - Regional and Local

2.3.1 - City of American Canyon General Plan

The City of American Canyon General Plan sets forth the following goals, objectives, and policies relevant to biological resources on the project site. Only those applicable to the proposed project are discussed herein:

Goal 8 Protect and preserve the significant habitats, plants and wildlife that exist in the City and its Planning Area.

Objective 8.1 Maintain data and information regarding areas of significant biological value within the Planning Area to facilitate resource conservation and the appropriate management of development.

Policy 8.1.1 Acquire and maintain the most current information available regarding the status and location of sensitive biological elements (species and natural communities) within the City and, as appropriate, within the Sphere of Influence and Urban Limit Line.

Policy 8.1.4 Regularly monitor and review developments proposed within the City's Planning Area to assess their impacts on local biological resources and to recommend appropriate mitigation measures that the developer and/or government agency can implement.

Objective 8.2 Balance the preservation of natural habitat areas, including coastal saltmarsh, mixed hardwood forest, oak savanna, and wetland and riparian habitats, with new development in the City.

Policy 8.2.1 Land use applications for developments located within sensitive habitats, including coastal saltmarsh, mixed hardwood forest, oak savanna, and riparian habitats (see Figure 8-1) [General Plan], or with areas potentially occupied by vernal pools (see Figure 8-2) [General Plan] shall be accompanied by sufficient technical background data to enable an adequate assessment of the potential for impacts on these resources, and possible measures to reduce any identifiable impacts. In addition to examining Figure 8-1 [General Plan] for information on these sensitive habitats, an on-site assessment shall be conducted by a City approved qualified Biologist to determine whether sensitive habitats exist on-site. In instances where the potential

[3] California Native Plant Society (CNPS). 2020. Considerations for Including CRPR 4 Plant Taxa in CEQA Biological Resource Impact Analysis. Sacramento, CA. January 21, 2020.

for significant impacts exists, the applicant must submit a Biological Assessment Report prepared by a qualified professional.

Policy 8.3.1 b Development shall be designed and sited to preserve watercourses, riparian habitat, vernal pools, and wetlands in their natural condition, unless these actions result in an unfeasible project, in which case habitat shall be replaced in accord with subsection "g" (below).

Objective 8.3 Protect natural drainages and riparian corridors within the American Canyon Planning Area.

Policy 8.3.1 Review proposed developments in wetlands and riparian habitats to evaluate their conformance with the following policies and standards:

- The development plan shall fully consider the nature of existing biological resources and all reasonable measures shall be taken to avoid significant impacts, including retention of sufficient natural open space and undeveloped buffer zones.

Policy 8.3.1 e Development shall incorporate fences, walls, vegetative cover, or other measures to adequately buffer habitat areas, linkages or corridors from built environment.

Policy 8.3.1 f Roads and utilities shall be located and designed such that conflicts with biological resources, habitat areas, linkages or corridors are avoided where feasible.

Policy 8.3.1 g Future development shall utilize appropriate open space or conservation easements in order to protect sensitive species or their habitats.

Policy 8.3.5 Establish a network of open spaces along the City's natural drainages and riparian corridors and link significant biological habitats. Any recreational use of these areas shall be designed to avoid damaging sensitive habitat areas.

Policy 8.3.6 Preserve and integrate the City's natural drainages in new development, as opposed to their channelization or undergrounding, emphasizing opportunities for the development of pedestrian paths and greenbelts along their lengths throughout the City.

2.4 - City of American Canyon Ordinances

Municipal Code Chapter 18.40.110 sets forth the City’s Tree Ordinance. The ordinance states that existing trees shall be preserved on the site unless otherwise approved by the City Council as a part of the site development plans. Additionally, unless specifically approved by the City Council, any tree removed shall be replaced on the site. Replacement trees shall be a minimum size of a 24-inch box of the same species unless specifically approved by the City Council.

SECTION 3: METHODS

3.1 - Literature Review

Literature review was conducted to analyze existing documentation regarding biological resources and habitat conditions within the project site and is summarized below.

3.1.1 - Existing Documentation

As part of the literature review, an FCS Biologist compiled and analyzed existing environmental documentation for the project site and relevant areas in its vicinity. This documentation included literature pertaining to the habitat requirements of special-status species with the potential to occur in the project vicinity and federal register listings, protocols, and species data provided by the USFWS, CDFW, and CNPS. Additionally, FCS reviewed and evaluated all available supporting documentation provided by the applicant, including a pending USACE jurisdictional determination, and species-specific studies and habitat assessments. These documents are attached to this BRA (Appendix D), and include the following:

SDG Commerce 217 Documents

- Monk & Associates (M&A). 2020. Revised Biological Resource Analysis SDG Commerce 217 Distribution Center. City of American Canyon, California. March 2020.
- Monk & Associates (M&A). 2020. Addendum Letter to CEQA Biology Report Discussing Proposed Borrow Site SDG Commerce 217 Distribution Center. September 2020.

3.1.2 - Topographic Maps and Aerial Photographs

An FCS Biologist reviewed current USGS 7.5-minute topographic quadrangle map(s)and aerial photographs as a preliminary analysis of the existing conditions within the project site and

immediate vicinity.[4] Information obtained from the topographic maps included elevation, general watershed information, and potential drainage feature locations using Google Earth in conjunction with the EPA Watershed Assessment, Tracking, and Environmental Results System (WATERS).[5] Aerial photographs provided a perspective of the current site conditions relative to on-site and off-site land use, plant community locations, and potential locations of wildlife movement corridors.

3.1.3 - Soil Surveys

The United States Department of Agriculture (USDA) has published soil surveys that describe the soil series (i.e., group of soils with similar profiles) occurring within a particular area.[6] These profiles include major horizons with similar thickness, arrangement, and other important characteristics. These series are further subdivided into soil mapping units that provide specific information regarding soil characteristics. Many special-status plant species have a limited distribution based exclusively on soil type. Therefore, pertinent USDA soil survey maps were reviewed to determine the existing soil mapping units within the project site and to inform whether the soil conditions on-site are potentially suitable for any special-status plant species. However, Natural Resources Conservation Service (NRCS) soil maps utilize an approximately 1.4-acre minimum mapping unit, and line placement may not be accurate on a large (i.e., parcel-level) scale.

3.1.4 - Special-status Species Database Search

An FCS Biologist compiled a list of threatened, endangered, and otherwise special-status species previously recorded within the project vicinity based on a search of the USFWS Information for Planning and Consultation (IPaC) database,[7] the CNDDB, and the CNPS Electronic Inventory (CNPSEI) of Rare and Endangered Vascular Plants of California for the *Cuttings Wharf, California* USGS 7.5-minute Topographic Quadrangle Map, and the eight surrounding quadrangles.[8,9] The CNDDB Biogeographic Information and Observation System (BIOS 6) was used to determine the distance between the known occurrences of special-status species and the project site.[10]

3.2 - Field Surveys and Focused Surveys

FCS Biologists familiar with the biological resources of the region conducted field surveys on December 2, 2022, and March 17, 2023. The objective of the field surveys was to ascertain general site conditions, wildlife use, and identify whether existing vegetation communities provide suitable

habitat for special-status plant or wildlife species. Potentially sensitive areas identified during the literature review were ground-truthed during the field survey for mapping accuracy. Special attention was paid to sensitive habitats and areas potentially supporting special-status floral and faunal species.

Wildlife species detected during the reconnaissance-level surveys by sight, calls, tracks, scat, or other signs were recorded. Notations were made regarding suitable habitat for those special-status species determined to have the potential to occur within the project site.[11] Appropriate field guides were used to assist in species identification during surveys, such as Peterson, Reid, and Stebbins.[12,13,14] Online resources such as eBird and California Herps were also consulted, as necessary.[15,16]

M&A performed 10 field surveys on the greater 35-acre project site before the site was subdivided into three lots (SDG Commerce 217, SDG Commerce 220, and SDG Commerce 330). Consequently, the SDG Commerce 220 project site was included in these surveys which were conducted on March 1 and April 27, 2006; June 14, 2011; February 14, March 21, and June 12, 2012; May 18, 2017; March 30, 2018; December 19 and December 27, 2019. Additional details concerning these surveys can be found in Appendix D.1 of this document.

3.2.1 - Pre-construction Surveys for SDG Commerce 217

Seven pre-construction surveys were conducted by FCS between January 18 and April 7, 2023, for a total of approximately 30 survey hours. Surveys were conducted for the entirety of the Commerce 217 project site and relevant adjacent areas (which included the adjacent SDG Commerce 220 site). Surveys were conducted pursuant to the January 2021 Mitigation, Monitoring, and Reporting Program (MMRP) for the Commerce 217 Warehouse Project. Surveys included nesting birds (including Swainson's hawk) and burrowing owl detection. Surveys for western pond turtle adults and nests were also performed simultaneously while walking the site. Survey methods followed established procedures and applicable protocols, including the *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley (Protocol) and the Staff Report on Burrowing Owl Mitigation*.[17,18] Survey equipment included high-quality binoculars and a high-quality spotting scope. Surveys were conducted during the appropriate times of day (including peak bird detection periods between sunrise and 10:00 a.m.). Additional details concerning these surveys can be found in Appendix D.1 of this document.

3.2.2 - Special-status Animal Surveys for SDG Commerce 220

Eleven special-status animal surveys were conducted between January 18 and July 2, 2023, by Pinecrest Research Corp (Pinecrest) for the entirety of the Commerce 220 project site. Surveys were conducted by Dr. Christopher DiVittorio to determine the pre-construction presence or absence of several special-status species, including burrowing owl, Swainson's hawk, nesting raptors, nesting passerine birds, and western pond turtle. Survey methods followed established procedures and applicable protocols, including the R*ecommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley*, and the *Staff Report on Burrowing Owl Mitigation.*[19,20] Survey equipment included high-quality binoculars and a high-quality spotting scope. Surveys were conducted during the appropriate times of day (including peak bird detection periods between sunrise and 10:00 a.m.). Additional details concerning these surveys can be found in Appendix D.2 of this document.

3.2.3 - Protocol-level Rare Plant Surveys for SDG Commerce 220

Protocol-level rare plant surveys were conducted by Pinecrest during the growing season of 2023. An early-season site visit was performed on March 20. Mid-season site visits were performed on April 6, April 7, and May 29. A late-season site visit was also performed on July 2. Between the mid-season and late-season site visits the majority of the site was graded thus the late-season site visit focused on remaining vegetation surrounding the areas of disturbance. Rare plants recorded and mapped in the field, if present, include all plants that are federal or State-listed as Rare, Threatened, or Endangered, all federal and State candidates for listing, all plants included in Lists 1 through 4 of the CNPS Inventory, and plants that qualify under the definition of "rare" in CEQA Guidelines Section 15380.

Botanical surveys were performed by Dr. Christopher DiVittorio, with secondary identification on voucher and photograph specimens made by Dr. Zoya Akulova. During the site visit, Dr. DiVittorio surveyed the entirety of the project area using methods as specified in the CDFW publication titled *Protocols for Surveying and Evaluating Impacts to Special-Status Native Plant Populations and Sensitive Natural Communities*.[21] Surveys were conducted by walking the entire project area on foot in parallel lines approximately 15 feet apart, identifying every species that was flowering, and making note of any species that were past flowering or that had not yet flowered. Voucher specimens were taken of any species that required identification in the laboratory. All terminology follows currently accepted nomenclature as described in The Jepson Manual. Additional details concerning these surveys can be found in Appendix D.2 of this document.

3.3 - Wildlife Movement Corridors

Wildlife movement corridors link areas of suitable wildlife habitat that are otherwise separated by natural and anthropogenic dispersal barriers, including rugged terrain, changes in vegetation,

[19] Swainson's Hawk Technical Advisory Committee. 2000. Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley. California Department of Fish and Wildlife, May 31, 2000.

[21] California Department of Fish and Wildlife (CDFW). 2018. Protocols for Surveying and Evaluating Impacts to Special-Status Native Plant Populations and Sensitive Natural Communities. March 20, 2018.

development, or human disturbance. Urbanization and the resulting fragmentation of open space areas create isolated "islands" of wildlife habitat, forming separated populations. Corridors act as an effective link between populations.

The project site was evaluated for evidence of a wildlife movement corridor during the reconnaissance-level survey and review of aerial photographs, and CDFW's BIOS6 information on Bay Area Linkages. The focus of this study was to determine whether a change in land use at the project site could have significant impacts on the regional movement of wildlife. Conclusions are based on the information compiled during the literature review, aerial photographs, USGS topographic maps and resource maps for the vicinity; the field survey; and professional experience with the desired topography, habitat, and resource requirements of the special-status species potentially utilizing the project site and vicinity.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 4: RESULTS

This section summarizes the results of the literature research, database analyses, and field surveys listed in Section 3 above. Sensitive biological resources including special-status species and the impact analysis are addressed separately in Section 5 and 6 of this document.

4.1 - Environmental Setting

The project site is generally located on the northern boundary of the City of American Canyon, where commercial use is dominant. The project site is bordered by the Commerce Court extension and eucalyptus trees to the east, eucalyptus trees and North Slough to the west (beyond which is the Napa River), future SDG Commerce 217 project site to the north, and the active SDG Commerce 330 Distribution Center to the south.

4.1.1 - Topography and Hydrology

The project site is relatively flat with elevations ranging from 8 to 20 feet above sea level. The ground is undulating due to past land use disturbances including eucalyptus tree removal in 2012. The site slopes gently to the west toward the North Slough and the Napa River.

There are four wetland features (three seasonal wetlands and one linear wetland) along the northern boundary of the project site. In 2023, M&A mapped 0.023-acre of seasonal wetlands and 0.042-acre of linear wetlands within the delineation survey area. These wetlands have surface hydrologic connectivity to North Slough, which flows to the Napa River to the west. The Napa River is a traditional navigable water.

4.1.2 - Soils

The NRCS Web Soil Survey (WSS) depicts one soil type within the project site; Haire clay loam (148). This soil type and its primary characteristics are summarized in Table 1 and depicted in Exhibit 4.

Table 1: Soil Types Present within Project Site

Soil Name	Symbol	Slope	Description	Acreage
Haire Clay Loam	148	2-9%	Alluvium derived from sedimentary rock, moderately well drained, non-saline to very slightly saline.	10.17

4.2 - Vegetation Communities and Land Cover Types

The following section describes the vegetation communities and land cover types present on the project site. The location and extent of each vegetation community is shown on Exhibit 5. These results are generally consistent with the results presented in the M&A BRA.

4.2.1 - Non-native Annual Grassland–*Avena spp.–Bromus spp. Herbaceous Semi-Natural Alliance*

This vegetation type is typically described by being dominated by non-native annual grasses and annual or perennial forbs from dense to sparse cover with less than 10 percent tree or shrub cover. With a few exceptions, the plants are dead through the summer and fall dry season, persisting as seeds. This community usually occurs below 3,000 feet and is the most common herbaceous vegetation type of the region. This vegetation type is classified by the Manual of California Vegetation (MCV) as *Avena spp.–Bromus spp.* Herbaceous Semi-Natural Alliance, which has broad membership rules, but is dominated by a non-native annual grass species. The herb layer in this alliance is generally less than 1.2 meter and cover ranges from open to continuous. Trees and shrubs may be present at low cover. This community is found on various substrates including foothills, waste spaces, rangelands, and openings in woods.

The vast majority of the project site is generally considered non-native annual grassland, with a species composition that trends strongly toward ruderal. Individual scattered shrubs (including coyote brush [*Baccharis pilularis*]) and eucalyptus saplings and resprouts are not considered their own vegetation type due to small patch size, but rather a component of the grassland matrix (see membership rules, above).

The most predominant grass species within the project site included wild oats (*Avena sp*), canary-grass (*Phalaris aquatica)*, medusahead (*Taeniatherum caput-medusae*), wall barley (*Hordeum murinum*), but equally dominant are ruderal species including mustard (*Hirschfeldia incana)*, stinkwort (*Dittrichia graveolens*), Italian rye grass (*Festuca perennis*), ripgut brome (*Bromus diandrus*), soft chess (*Bromus hordeaceus*), slender wild oat (*Avena barbata*), common vetch (*Vicia sativa*), red-stem filaree (*Erodium cicutarium*), bull thistle (*Cirsium vulgare*), Italian thistle (*Carduus pycnocephalus*), bristly ox-tongue (*Helminthotheca echioides*), California burclover (*Medicago polymorpha*), and cut-leaf geranium (*Geranium dissectum*).

Large areas of this vegetation type were graded between May 29 and July 2, 2023 (see Appendix A and D.1). The grading did not encroach into the wetlands features or associated wetland buffer areas. The grading effectively eliminated the non-native grassland throughout much of the site.

Exhibit 5
Vegetation Communities and Land Cover Types

THIS PAGE INTENTIONALLY LEFT BLANK

4.2.2 - Seasonal Wetlands

Seasonal wetland habitat is present on the project site, as shown in Exhibit 5. In 2011, the USACE confirmed 0.049-acre of wetlands and 0.004-acre of "other waters" adjacent to the former gravel road on the eastern edge of the project site. On December 6, 2011, the USACE confirmed the extent of its jurisdiction on the project site (USACE File Number 2011-00322N). This determination expired on January 31, 2017, as a result, M&A conducted a reverification wetland delineation of the project site on November 16, 2016. The map was field confirmed by the USACE on May 18, 2017, and an approved jurisdictional determination (AJD) was issued on May 16, 2018. It should be noted that the 2018 AJD included one isolated wetland that is no longer part of the project site. In 2023, M&A mapped 0.023-acre of seasonal wetlands (W1-W3) and 0.042-acre of linear wetlands (LW1) within the project site. On August 30, 2023, the USACE issued a Preliminary Jurisdictional Determination (PJD) which can be found in Appendix D.2.

Vegetation observed within the seasonal wetlands included non-native and native species. Non-native species included spiny-fruit buttercup (*Ranunculus muricatus;* facultative wetland [FACW]) and Italian ryegrass (*Festuca perennis;* facultative [FAC]). Native species included creeping spikerush (*Eleocharis macrostachya;* obligate wetland species [OBL]), brown-headed rush (*Juncus phaeocephalus;* FACW) and spreading rush (*Juncus patens;* FACW). Mapped wetlands on the project site remain inundated and/or saturated seasonally for sufficient duration to satisfy wetland hydrology criteria. Hydrological indicators in the mapped wetlands include the presence of oxidized rhizosphere (a "primary" hydrological indicator) as well as biotic crust. Soil matrix colors in the wetland area identified in the field were noted as 10YR 3/2 with redoximorphic features. Soil matrix colors in areas mapped as non-hydric soils were noted as 10YR 3/3 and 10YR 3/2, with insufficient redoximorphic features. These wetland features were not impacted during the grading that occurred within upland portions of the project site between May 29 and July 2, 2023.

4.2.3 - Developed

While not a natural habitat type, urban/developed areas typically consist of buildings, hardscape such as asphalt or concrete and other man-made structures. Such areas typically provide little habitat value to most wildlife species. On-site, this landcover type can be found within the southeastern corner in the form of a construction trailer, a staging area, and a paved road that allows access into the site via Commerce Boulevard. The paved road runs half the length of the southern border of the project site.

4.3 - Wildlife

The vegetation community and land cover types discussed above provide habitat for numerous wildlife species. Wildlife activity during the 2023 field surveys consisted primarily of avian species, including Say's phoebe (*Sayornis saya*), American crow (*Corvus brachyrhynchos*), western bluebird (*Sialia mexicana*), Anna's hummingbird (*Calypte anna*), lesser goldfinch (*Spinus psaltria*), yellow-rumped warbler (*Setophaga coronate*), turkey vulture (*Cathartes aura*), red-shouldered hawk (*Buteo lineatus*), and California towhee (*Melozone crissalis*). Additionally, Botta's pocket gopher (*Thomomys bottae*) burrows, black-tailed jackrabbit (Lepus californicus), and Columbian black-tailed deer (*Odocoileus hemionus ssp. columbianus*) were observed. Noteworthy, no signs of current or past

presence of California ground squirrel (*Otospermophilus beecheyi*) burrows were observed on-site during the 2023 surveys.

In general, FCS field surveys found that the conditions related to wildlife habitat are consistent with the results presented in the March 2020 M&A BRA which lists the following common wildlife species as observed on or near the project site: wild turkey (*Meleagris gallopavo*), house finch (*Haemorhous mexicanus*), black phoebe (*Sayornis nigricans*), Say's phoebe, American crow, mourning dove (*Zenaida macroura*), black-tailed jackrabbit, California meadow vole (*Microtus californicus*), Botta's pocket gopher, and Mule deer (*Odocoileus hemionus*), among others, all of which have been observed on the project site. Red-shouldered hawk, tree swallows (*Tachycineta bicolor*), Nuttall's woodpecker (*Picoides nuttallii*), and northern flicker (*Colaptes auratus*), among others, likely nest in the eucalyptus trees that surround the project site to the west, north and south. Chestnut-backed chickadee (*Poecile rufescens*), brown creeper (*Certhia americana*), American robin (*Turdus migratorius*), northern mockingbird (*Mimus polyglottos*), spotted towhee (Pipilo maculatus), California towhee (*Pipilo crissalis*), dark-eyed junco (*Junco hyemalis*), Bullock's oriole (*Icterus bullockii*) and western gray squirrel (*Sciurus griseus*) were also observed in the immediate project vicinity.

Wildlife use is expected to have decreased since M&A's surveys because these surveys were conducted prior the construction of the warehouse to the south (SDG Commerce 330) and before the current construction began on the warehouse to the north (SDG Commerce 217). A comprehensive list of wildlife and plant species observed by FCS and Pinecrest can be found in Appendix E.

4.4 - Wildlife Movement Corridors and Nursey Sites

A wildlife corridor is an area of habitat connecting wildlife populations that can be separated by natural and anthropogenic dispersal barriers, including rugged terrain, changes in vegetation, development, or human disturbance. Wildlife corridors allow an exchange of individuals between populations, which may help prevent the negative effects of inbreeding and reduced genetic diversity (via genetic drift) that often occur within isolated populations.

The project site has been subject to decades of varying degrees of anthropogenic disturbances. More recently, adjacent developments include the construction of SDG Commerce 330 to the south and the current construction of SDG Commerce 217 to the north. Dense industrial developments are located north of the project site while a school and single-family residences are found to the south. Therefore, non-volant wildlife movement through the site is limited, and the site does not connect habitats suitable for sustainable wildlife populations. Wildlife may utilize the off-site eucalyptus grove and aquatic habitats (e.g., North Slough and Napa River) to the west for dispersal; however, the proposed project would be set back from the eucalyptus grove and aquatic habitats. No direct impacts to the eucalyptus grove and marsh habitat would occur from project construction.

There are no native wildlife nursery sites present within the project site.

4.5 - Protected Trees

No tree removal is proposed, the project site does not contain any trees.

4.6 - Habitat Conservation Plans

No habitat conservation plans exist for the project site.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 5: SENSITIVE BIOLOGICAL RESOURCES

The following section discusses the extent to which sensitive biological resources are present or expected on-site. Sensitive biological resources are protected by laws and regulations, including CEQA (see Section 2 for details).

5.1 - Sensitive Natural Communities

The CDFW maintains a list of natural communities that classifies vegetation types found within the State of California and ranks them based on rarity. Communities ranked S1-S3 are considered sensitive natural communities.[22] Wetlands and riparian habitats are also typically considered sensitive natural communities and are addressed in the environmental review process.

5.1.1 - Seasonal Wetland Communities

The vegetation communities of the four wetland features are dominated by both non-native, and native hydrophytic species as described in detail in Section 4.2.2. Naturally occurring seasonal wetland plant communities can be considered sensitive natural communities.

5.2 - Special-status Plant Species

The CNDDB and CNPS list 45 special-status or sensitive plant species that have been recorded within the *Cuttings Wharf, California,* USGS Topographic Quadrangle Map and the eight surrounding quadrangles (Appendix B).[23,24,25] The CNDDB occurrences within the vicinity of the project site are shown on Exhibit 6. A list of all plant species recorded on-site during the protocol-level floristic surveys is included in Appendix E. No rare or special-status plant species were observed during the appropriately timed protocol-level floristic surveys (see Section 3.2.3) and are therefore determined to be absent from the site. This result is also supported by M&A's March 2020 BRA, which additionally states that in the recent past, blue gum eucalyptus trees covered most of the project site dating back for several decades; these trees emit allelopathic (growth inhibiting) chemicals from their leaves, acorns and bark that prevent other plants from growing under them.[26]

Exhibit 6
CNDDB Special-Status Species Occurrences

THIS PAGE INTENTIONALLY LEFT BLANK

5.3 - Special-status Wildlife Species

The CNDDB identifies 43 federal and State-listed threatened and/or endangered wildlife species and State Species of Special Concern that have been recorded within the *Cuttings Wharf, California,* USGS Topographic Quadrangle Map and the eight surrounding quadrangles (Appendix B).[27,28] The CNDDB occurrences within the vicinity of the project site are shown on Exhibit 6. Thirty-five of these species are unlikely to occur on-site, as discussed in the Special-status Wildlife Species Habitat Value Evaluation Table (Appendix B, Table 2).

The remaining eight species (and functional groups like nesting birds and roosting bats that include special-status species) could have at least theoretical potential to occur on-site, perhaps as vagrant, dispersing, or foraging individuals, and are therefore discussed in more detail below.

5.3.1 - Swainson's Hawk

The Swainson's hawk (*Buteo swainsoni*) is a State-listed threatened species protected pursuant to CESA and Title 14 of the California Code of Regulations. It is protected from direct take under the Federal MBTA of 1918 (16 USC 703-711). Swainson's hawks, their active nests, eggs, and young are also protected under California Fish and Game Code (FGC §§ 3503, 3503.5, 3513, and 3800).

Swainson's hawk inhabits open to semi-open areas at low to middle elevations in valleys, dry meadows, foothills, and level uplands. It nests almost exclusively in trees and will nest in almost any tree species that is at least 10 feet tall.

Foraging habitats include grasslands, alfalfa fields, fallow fields, beet, tomato, and other low growing row or field crops, dry-land and irrigated pasture, and rice land when not flooded. Swainson's hawk generally forages in open habitats with short vegetation containing small mammals, reptiles, birds, and insects. Its primary prey in the Central Valley is California meadow vole. Agricultural areas are often preferred over more natural grassland habitats due to larger prey populations. During the nesting season Swainson's hawk usually forage within 2 miles of the nest.

Swainson's hawk does not require habitats that contain many perches because it most often searches for prey aerially, therefore it can occupy habitats with few or no perches except the nest tree. Swainson's hawks are regular summer visitors and breeders throughout the western states. In the fall months, most Swainson's hawks migrate to Argentina before returning to the United States to breed in the late spring (typically April). For decades, Argentina farmers were spraying insecticides over habitats that included gregarious night roosts of the Swainson's hawk, killing many thousands of these hawks. This practice was halted in the last 10 years and the Swainson's hawk population appears to be dramatically responding in California. While in the 1970s through 1990s there were only two relatively small populations of Swainson's hawks that remained resident in California year-round in the Davis area and in the Sacramento River Delta, resident and migrant populations of the

[27] California Department of Fish and Wildlife (CDFW). 2023. CNDDB RareFind 5 California Natural Diversity Database Query for Special-Status Species. Website: https://map.dfg.ca.gov/rarefind/view/RareFind.aspx. Accessed August 22, 2023.

[28] California Department of Fish and Wildlife (CDFW). 2023. Biogeographic Information and Observation System (BIOS 6). Website: https://map.dfg.ca.gov/bios/. Accessed August 22, 2023.

Swainson's hawks are now dramatically expanding their nesting distribution in California since insecticide use over Argentinian wintering grounds was halted. For example, Swainson's hawks were never recorded nesting in the Napa County area until relatively recently.[29]

The closest known record for nesting Swainson's hawk is 1.5 miles north of the project site (CNDDB Occurrence No. 2839). No individual Swainson's hawk or nests have been observed on the site or in the vicinity of the project site during the 11 surveys conducted by Pinecrest on the SDG Commerce 220 site or seven surveys conducted by FCS on the adjacent SDG Commerce 217 site between January and July 2023. However, the eucalyptus trees growing adjacent to the project site could provide suitable nesting habitat. Therefore, there is the possibility that Swainson's hawks could nest near this project site in future years.

5.3.2 - Western Burrowing Owl

The western burrowing owl (*Athene cunicularia*) is a California Species of Special Concern. Its nest, eggs, and young are also protected under California Fish and Game Code (FGC §§ 3503, 3503.5, and 3800). The burrowing owl is also protected from direct take under the MBTA (50 CFR 10.13).

Burrowing owl occurs in open, dry annual or perennial grasslands, deserts, and scrublands characterized by low growing vegetation. This species utilizes, modifies, and nests in burrows created by other species, most notably the California ground squirrel. They may also on occasion dig their own burrows or use man-made objects such as concrete culverts or rip-rap piles for cover.

The closest CNDDB record within the last 10 years was documented 2.7 miles north of the project site (CNDDB Occurrence No. 935). No evidence of burrowing owl activity was observed during the 11 surveys conducted by Pinecrest on the SDG Commerce 220 site or the seven surveys conducted by FCS on the adjacent SDG Commerce 217 site between January and July 2023. Furthermore, no California ground squirrel burrows were observed, and no other burrows or dens were observed that would provide suitable nesting habitat for burrowing owl.

However, it cannot be ruled out entirely that a vagrant burrowing owl may visit the site under unlikely circumstances before start of construction and could potentially be impacted by the proposed project.

5.3.3 - Northern Harrier

The northern harrier (*Circus hudsonius*) is a California Species of Special Concern. This raptor is protected under California Fish and Game Code Section 3503.5 that protects nesting raptors and their eggs/young and is also protected from direct take under the MBTA (50 CFR 10.13). Northern harriers build grass-lined nests on the ground within dense, low-lying vegetation in a variety of habitats, though they are typically found nesting in grassland or marsh habitats. They usually nest on level to near level ground. This species is particularly vulnerable to ground predators such as coyotes (*Canis latrans*), red fox (*Vulpes vulpes*), and various snake species.[30]

[29] Monk & Associates (M&A). 2020. Revised Biological Resource Analysis SDG Commerce 217 Distribution Center. March 2, 2020.
[30] Ibid.

The closest CNDDB record was documented 2.8 miles west of the project site (CNDDB Occurrence No. 29). No individual northern harriers or nests have been observed on the site or in the vicinity of the project site during the 11 surveys conducted by Pinecrest on the SDG Commerce 220 site or seven surveys conducted by FCS on the adjacent SDG Commerce 217 site between January and July 2023. However, northern harriers have the potential to nest in the open ruderal habitats on-site that provide marginal nesting habitat for this species. Therefore, there is the possibility that northern harriers could nest on or near this project site in the future.

5.3.4 - Golden Eagle

The golden eagle is a migratory California resident that resides in rolling foothills, mountain areas, sage-juniper flats, and deserts from sea level to 11,500 feet (3,833 meters). It feeds mostly on lagomorphs and rodents, and occasionally other mammals, birds, reptiles, and some carrion. The golden eagle hunts in open terrain including grasslands, deserts, savannas, and early successional stages of forest and shrub habitats. It is known to hunt in pairs and pirate food from other predators. This species nests in large trees in open areas on cliffs. The breeding season for the golden eagle ranges from January through August, with a peak in March through July.

The closest CNDDB record was documented 4.5 miles southeast of the project site (CNDDB Occurrence No. 40). No individual golden eagles or nests have been observed on the site or in the vicinity of the project site during the 11 surveys conducted by Pinecrest on the SDG Commerce 220 site or seven surveys conducted by FCS on the adjacent SDG Commerce 217 site between January and July 2023. Regardless, the eucalyptus trees growing adjacent to the project site could provide suitable nesting habitat. Therefore, it cannot be ruled out that golden eagles could nest near this project site in the future.

5.3.5 - White-tailed Kite

The white-tailed kite (*Elanus leucurus*) is a whitish falcon-shaped raptor. This sensitive bird is designated by CDFW as a fully protected species (FGC § 3511). Fully protected animal species may not be taken or possessed at any time and no licenses or permits may be issued for their take except for collecting these species for necessary scientific research and relocation of the bird species for the protection of livestock.

Nesting white-tailed kite habitat consists mainly of oak and sycamore woodlands, but the birds also use mature willows. White-tailed kite nests have been documented in a variety of tree species, including oak (*Quercus sp*.), cottonwood (*Populus sp*.), willow (*Salix sp*.), California sycamore (*Platanus racemosa*), and elder (*Acer sp.).*[31] Nests are placed near the top of dense oak, willow, or other tree stand approximately 20-100 feet above ground.[32] Nest trees have a dense canopy or are within a dense group of trees, such as riparian forest or oak woodland. Adjacent to their nesting woodland must be open foraging grasslands, where the birds can find their small mammal prey.[33]

[31] Science Applications International Corporation (SAIC). 2007. Draft Ecological Baseline Report for the Butte Regional Habitat Conservation Plan/Natural Community Conservation Plan. Prepared for the Butte County Association of Governments. May 2007.
[32] California Department of Fish and Wildlife (CDFW). 1988. California's Wildlife, Volume II: Birds. State of California Resources Agency. Sacramento, California.
[33] Gallagher, Sylvia. 1997. Atlas of Breeding Birds, Orange County, California. Sea and Sage Audubon Press, Irvine, CA.

White-tail kites forage in undisturbed, open grasslands, meadows, emergent wetlands, farmlands, crops, pastures, and other cultivated habitats. The white-tailed kite preys mostly on voles, but also takes other small, diurnal mammals, and occasionally birds, insects, reptiles, and amphibians.

The closest CNDDB record was documented 5.3 miles north of the project site (CNDDB Occurrence No. 181). Several white-tailed kite individuals were observed foraging over the site or in the vicinity of the project site during the 11 surveys conducted by Pinecrest on the SDG Commerce 220 site and seven surveys conducted by FCS on the adjacent SDG Commerce 217 site between January and July 2023. This species was observed on the following dates during 2023 surveys: March 20, April 4, April 5, April 6, April 7, April 24, April 28, and July 2. These individuals were observed to be continually harassed by several crows who were observed loitering around the eucalyptus grove. After continued interactions with the crows, white-tailed kite individuals flew off to the southwest out of sight and the location of their nest could not be determined.

The eucalyptus trees growing adjacent to the project site could provide suitable nesting habitat. Therefore, it cannot be ruled out that white-tailed kite could nest within relevant disturbance distance.

5.3.6 - Protected Nesting Birds (Including All Special-status Bird Species)

In addition to the specific special-status bird species discussed in more detail above, the active nests of most resident and migratory (game and non-game) birds (including the nests of additional special-status bird on-site) are protected by the MBTA and/or Fish and Game Code; and are therefore categorized as “special-status” wildlife functional group during this time. While a juvenile, red-shouldered hawk was observed perched off-site within a large eucalyptus tree to the north of the SDG Commerce 217 site during the 2023 surveys, no active nests were observed.

The project site is adjacent to eucalyptus groves which provide nesting opportunities for different taxa of birds, and the site itself contains the potential for ground nesters. Although the site has been significantly disturbed in the past, the grassland on-site may provide marginal foraging opportunities to support nesting and rearing habitat. Therefore, it cannot be ruled out that protected bird nests are present on or within the disturbance distance of the project site during the nesting season (typically considered to last from February 1 to August 31 for most species).

5.3.7 - Bats (Including Special-status Bats)

The project site is adjacent to eucalyptus groves which offer potentially viable roosting habitat for bat species. A CNDDB recorded presence of bat species 5.2 miles northwest of the project site (CNDDB Occurrence No. 44). Bats could potentially use cavities in trees to roost and forage over the grassland and shrubland. Of the special-status bat species that has potential to occur in the region, the pallid bat (*Antrozous pallidus*) would be more likely to roost in natural features, such as the eucalyptus grove rather than artificial structures.

Roosts are used during the daytime to seek refuge; at night between foraging excursions to rest, digest prey, seek refuge from predators or poor weather conditions, or for social purposes; and in winter for hibernation. Adult females and their young use some particularly secure roosts as

maternity roosts. The number of bats occupying a given roost can vary from a solitary individual to a large colony, depending on the species. Roosting sites are very sensitive to human disturbance, especially when bats are hibernating or rearing young.

At dusk, bats leave their roosts to forage for insects in nearby ponds or riparian habitats. Bats generally prey on insect species that are locally abundant near water bodies. Ecotone areas (areas of transition between habitats) are also used as foraging areas. The grassland habitat of the project site and eucalyptus grove adjacent has foraging and roosting potential for bat species. Therefore, it cannot be ruled out that bat roosts are within disturbance distance of the project site.

5.3.8 - Western Pond Turtle

The western pond turtle (*Actinemys marmorata*) is a California Species of Special Concern. This species feeds on aquatic plant material, including pond lilies, beetles, fishes, frogs, and a variety of invertebrate species. Pond turtles require basking sites such as partially submerged logs, rocks, mats of floating vegetation, or open mud banks. Turtles slip from basking sites to underwater retreats at the approach of humans or potential predators. In colder areas, this species hibernates underwater in bottom mud.

The closest CNDDB record was documented 0.4 mile northeast of the project site (CNDDB Occurrence No. 552). No western pond turtle individuals or nests have been observed on the site or in the vicinity of the project site during the 11 surveys conducted by Pinecrest on the SDG Commerce 220 site or seven surveys conducted by FCS on the adjacent SDG Commerce 217 site between January and July 2023. While there are seasonal wetland features present on-site there are no ponds or streams on-site that would be suitable for foraging or breeding. It cannot be ruled out entirely that a vagrant western pond turtle may be present on-site under unlikely circumstances before start of construction and could potentially be impacted by the project.

5.3.9 - Monarch Butterfly

The monarch butterfly (*Danaus plexippus*) is listed as Candidate under the Endangered Species Act, and wintering roosts are protected under the Fish and Game Code.

Preferred monarch habitat is filled with diverse nectar sources which support monarchs and native bees. Native milkweeds (*Asclepias* spp.) and other nectar sources provide monarchs with breeding habitat, resting, and refueling stops during migration, and food at overwintering sites.

Overwintering habitats consist of tree groves that typically occur within 1.5 miles of the Pacific coastline, or within the San Francisco Bay Area, where the proximity to large water bodies moderate temperature fluctuations. Overwintering begins in September or October. Suitable grove conditions include temperatures above freezing, high humidity, dappled sunlight, access to water and nectar, and protection from high winds and storms. Monarchs will select the native Monterey pine, Monterey cypress, western sycamore, and other native tree species when they are available, but will also utilize non-native eucalyptus species if other optimal habitat conditions are met. During breeding season in the late spring and summer, female monarch butterflies will lay their eggs on the underside of young leaves or flower buds of milkweeds, caterpillars then hatch within 3-5 days and begin to feed on milkweed leaves that provide energy and protective toxic compounds that protect

the caterpillars from predation. Within a month, the caterpillars will grow, produce a chrysalis, and emerge as fully formed adult butterflies.

While no milkweed has been recorded on-site as confirmed through protocol-level rare plant surveys, the project site is bounded by dense stands of eucalyptus trees, potentially suitable for overwintering monarchs. Overwintering colonies have been documented on Mare Island, approximately 7 miles to the south. For these reasons, the presence of overwintering monarchs within disturbance distance cannot be ruled out.

5.4 - State or Federally Protected Waters and Wetlands

There are four wetlands features present within the project site as shown on Exhibit 5 and in Appendix D.2.[34] The USACE issued a PJD on August 30, 2023 which includes 0.023-acre of seasonal wetlands and 0.042-acre of linear wetlands mapped within the project site. These wetlands have surface hydrologic connectivity to North Slough, which flows to the Napa River. The Napa River is a traditional navigable water. Consequently, the seasonal wetlands identified within the project site would likely be subject to USACE and RWQCB jurisdiction.

5.5 - Wildlife Movement Corridors and Nursery Sites

Field surveys and a query of CDFW's BIOS6 information on wildlife linkages in the Bay Area confirm the that the proposed project will not interfere with the movement of native wildlife. The project site and adjacent areas are not identified by CDFW (The Critical Linkages: Bay Area and Beyond project; BIOS 6)[35] as lands essential to maintain or restore functional connectivity among wildlands for all species or ecological processes of interest in the California Bay Area and as a vital adaptation strategy to conserve biodiversity during climate change.

The project site has a history of disturbance associated with eucalyptus tree removal in 2012, and continued disturbance associated with the paintball facility located immediately to the southeast. Additionally, construction of the SDG Commerce 330 Distribution Center to the south recently occurred and construction of the SDG Commerce 217 site to the north is currently underway.

Wildlife may utilize the off-site eucalyptus grove and aquatic habitats (e.g., North Slough and Napa River) to the west for dispersal; however, the proposed project would not encroach into the off-site eucalyptus grove or aquatic habitats.

Wildlife nursery sites include nesting birds and maternity bat roosts, aquatic breeding habitat, and special-status and non-special-status wildlife breeding or nesting colonies. No significant breeding/nesting colonies were observed during the wildlife surveys. However, individual nesting birds and roosting bats have the potential of being present on-site and within disturbance distance seasonally.

[34] Monk & Associates (M&A). 2023. Request for Reverification of Jurisdictional Determination and a PJD SDG Commerce 220 Project Site; USACE File Number: 2011-00322N American Canyon, California. May 31, 2023.

[35] California Department of Fish and Wildlife (CDFW). 2022. Biogeographic Information and Observation System (BIOS 6): The Critical Linkages: Bay Area & Beyond project. Website: https://map.dfg.ca.gov/bios/. Accessed August 21, 2023.

SECTION 6: IMPACT ANALYSIS AND RECOMMENDATIONS

The following discussion addresses potential project impacts on sensitive biological resources, including special-status species, and recommends mitigation measures to avoid and/or mitigate impacts to a less than significant level under CEQA Guidelines.

6.1 - Impact Analysis for Sensitive Natural Communities

Seasonal wetland communities are typically considered sensitive under CEQA. The wetland features on-site would be avoided by the proposed project through the implementation of 25-foot buffers (Exhibit 7). No other sensitive communities occur on-site. Therefore, no impacts on sensitive natural communities would occur.

6.2 - Impact Analysis for Special-status Species

The following section analyzes potential project-related impacts on special-status species potentially occurring on or within disturbance distance of the proposed project.

6.2.1 - Impact Analysis for Special-status Wildlife Species

Swainson's Hawk

Potentially suitable Swainson's hawk nesting trees are located adjacent to the project site. If a Swainson's hawk nest is active near the project site during construction, the proposed project could cause indirect harm to the species through the noise, light and other man-made disturbances resulting from project construction, which may result in this species abandoning its nests.

No Swainson hawks or nests were observed during the 18 field surveys conducted by FCS and Pinecrest in 2023. Out of an abundance of caution, FCS proposes that the project applicant implement the following mitigation measures (MM BIO-1a through MM BIO-1b) to avoid indirect impacts on Swainson's hawk nesting habitat and to establish adequate nest protection zones to conform with CDFW Guidelines:[36]

MM BIO-1a Pre-construction Surveys for Swainson's Hawk

Prior to ground disturbance that occurs during the nesting season for Swainson's hawk (generally March 20 to July 20), a qualified Biologist shall conduct Swainson's hawk nesting surveys within a 0.5-mile radius of the project site to determine whether nests are occupied. Occupancy shall be determined through observation of all accessible areas, including from public roads or other publicly accessible observation areas of Swainson's hawk activity (e.g., foraging) on and near the project site.

[36] California Department of Fish and Wildlife (CDFW). 2000. Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley. Swainson's Hawk Technical Advisory Committee. Sacramento, California. May 31, 2000.

The qualified Biologist shall follow the survey protocol outlined in CDFW's *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley*, which recommends surveys according to the following survey periods:

I. **January–March 20:** Conduct one survey total.
II. **March 20–April 5:** Conduct three surveys total. Surveys shall be conducted between sunrise to 10:00 a.m. and/or 4:00 p.m. to sunset.
III. **April 5–April 20:** Conduct three surveys total. Surveys shall be conducted between sunrise to 12:00 p.m. and/or 4:30 p.m. to sunset.
IV. **April 21–June 10:** Initiating surveys are not recommended. Monitoring of known nest sites only.
V. **June 10–July 30:** (post-fledging) Conduct three surveys total. Surveys shall be conducted between sunrise to 12:00 p.m. and/or 4:00 p.m. to sunset.

Pre-construction surveys shall be completed for at least the two survey periods immediately prior to a project's initiation.[37]

MM BIO-1b Swainson's Hawk Avoidance and Minimization and Construction Monitoring

If nests are located and determined to be occupied, minimization measures must be implemented, and construction monitoring conducted as follows:

1. Construction activities shall be prohibited within 600 feet of an active and occupied Swainson's hawk nest, or within 600 feet of nests under construction, to prevent nest abandonment.
2. Notwithstanding the foregoing, if site-specific conditions or the nature of the construction activity (e.g., other nearby development, limited activities) indicate that a smaller buffer, or no buffer at all, could be used, the project applicant may seek approval from the qualified Biologist who in coordination with the California Department of Fish and Wildlife (CDFW) shall determine the appropriate buffer size, which, once approved, shall govern.
3. No tree containing an active Swainson's hawk nest shall be removed.

Western Burrowing owl

No western burrowing owls have been observed on the project site during the 18 field surveys conducted by FCS and Pinecrest in 2023. Additionally, no suitable burrows or ground squirrels were observed on-site during the surveys. Therefore, the likelihood of presence on the project site is considered to be low. Since the western burrowing owl is a mobile species that could move onto the project site prior to development, pre-construction surveys are recommended out of an abundance of caution. If burrowing owl are present on-site before grading, the proposed project may result in impacts to the western burrowing owl, considered a potentially significant impact pursuant to CEQA.

[37] California Department of Fish and Wildlife (CDFW). 2000. Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley. Swainson's Hawk Technical Advisory Committee. Sacramento, California. May 31, 2000.

However, MM BIO-2 is designed to detect, avoid, and passively relocate owls, and therefore, any potential significant impacts on this species would be reduced to less than significant.

MM BIO-2 Pre-construction Surveys for Burrowing Owl (includes avoidance and passive relocation if found)

A qualified Biologist shall conduct a habitat assessment for wintering burrowing owl, and surveys if habitat is present. The qualified Biologist shall follow the California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation habitat assessment and survey methodology prior to project activities occurring during the burrowing owl wintering season from September 1 to January 31. The habitat assessment and surveys shall encompass a sufficient buffer zone to detect owls nearby that may be impacted, which shall be a minimum of 1,640 feet unless otherwise approved in writing by the CDFW. Surveys shall include four nonbreeding season surveys spread evenly throughout the nonbreeding season pursuant to the CDFW 2012 Staff Report. Time lapses between surveys or project activities shall trigger subsequent surveys, as determined by a qualified Biologist, including but not limited to a final survey within 24 hours prior to ground disturbance and before construction equipment mobilizes to the project area. The qualified Biologist shall have a minimum of 2 years of experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections.

Detected burrowing owls shall be avoided pursuant to the buffer zone prescribed in the CDFW 2012 Staff Report, unless otherwise approved in writing by CDFW, and any eviction plan shall be subject to CDFW review. Please be advised that CDFW does not consider eviction of burrowing owls (i.e., passive removal of an owl from its burrow or other shelter) as a "take" avoidance, minimization, or mitigation measure; therefore, off-site habitat compensation shall be included in the eviction plan. Habitat compensation acreages shall be approved by CDFW, as the amount depends on-site-specific conditions, and must be completed before project construction unless otherwise approved in writing by CDFW. Habitat compensation shall also include placement of a conservation easement and preparation and implementation of a long-term management plan prior to project construction.

Other Protected Nesting Birds (including northern harrier, golden eagle, white-tailed kite and others)

The adjacent areas of the project site provide suitable nesting habitat for a variety of species of nesting birds, including potentially for special-status bird species including northern harrier, golden eagle, white-tailed kite, and others. Disturbed grassland and barren areas provide potential nesting opportunities for ground nesting birds. Construction activities that occur during the avian nesting season (generally February 1 to August 31) could disturb protected nesting sites within the construction footprint and within disturbance distance. Grading and the removal of vegetation during the nesting season could result in direct harm to nesting birds, while noise, light, and other

construction-related disturbances may cause nesting birds adjacent to the vegetation removal areas to abandon their nests.

No active raptor nests were observed within the project site during the 2023 field surveys conducted by FCS and Pinecrest; however white-tail kite individuals were observed foraging over project site. Additionally, a juvenile, red-shouldered hawk was observed perched off-site within a large eucalyptus tree to the north of the SDG Commerce 217 site. Although no active nests have been observed on-site, it cannot be ruled out that avian species may nest within disturbance distance of the project site. With implementation of MM BIO-3, requiring pre-construction nesting bird surveys and avoidance of direct and indirect impacts on nests, potential project-related impacts on protected bird nests can be reduced to a less than significant level under CEQA.

MM BIO-3 Protection of Active Bird Nests (includes pre-construction survey and implementation of avoidance buffer, if found).

1. If the proposed project requires vegetation to be removed during the nesting season (February 1 to August 31), pre-construction surveys shall be conducted no more than 7 days prior to the start of ground or vegetation disturbance (including tree removal) to determine whether or not active nests are present.
2. If an active nest is located during pre-construction surveys, a qualified Biologist shall determine an appropriately sized avoidance buffer based on the species and anticipated disturbance level. (The California Department of Fish and Wildlife [CDFW] recommends a minimum no-disturbance buffer of 250 feet around active nests of non-listed bird species and a 500-foot no-disturbance buffer around active nests of non-listed raptors.) A qualified Biologist shall delineate the avoidance buffer using Environmentally Sensitive Area (ESA) fencing, pin flags, and/or yellow caution tape. The buffer zone shall be maintained around the active nest site(s) until the young have fledged and are foraging independently. No construction activities or construction foot traffic is allowed to occur within the avoidance buffer(s).
3. The qualified Biologist shall monitor the active nest during construction activities and modify the protection zone accordingly to prevent project-related nest disturbance, until the young have fledged.

Roosting Bats (including Pallid Bat)

The project site is adjacent to trees that could provide suitable bat roosting habitat, including for special-status bats such as pallid bat. Potential indirect impacts could occur to roosting bats due to the proximity to disturbance distance during project construction. These activities could potentially subject bats to risk of injury or disturbance, and they are likely to avoid using the area until such construction activities have dissipated or ceased. Relocation, in turn, could cause hunger or stress among individual bats by displacing them into adjacent territories belonging to other individuals.

With implementation of MM BIO-4, requiring pre-construction roosting bat surveys and avoidance of indirect impacts on active bat roosts, potential project-related impacts on protected roosting bats can be reduced to a less than significant level under CEQA.

MM BIO-4 Roosting Bat Pre-construction Survey and Avoidance

A qualified Biologist with relevant roosting bat experience shall conduct a survey for special-status bats during the appropriate time of day to maximize detectability to determine whether bat species are roosting near the work area no less than 7 days and no more than 14 days prior to beginning ground disturbance and/or construction. Survey methodology may include visual surveys of bats (e.g., observation of bats during foraging period), inspection for suitable habitat, bat sign (e.g., guano), or use of ultrasonic detectors (Anabat, etc.) within 250 feet of project construction activities (where accessible).

If the Biologist determines or presumes bats are present, the Biologist shall exclude the bats from suitable spaces by installing one-way exclusion devices. After the bats vacate the space, the Biologist shall close off the space to prevent recolonization. Grading shall only commence after the Biologist verifies 7 to 10 days later that the exclusion methods have successfully prevented bats from returning. To avoid impacts on non-volant (i.e., nonflying) bats, the Biologist shall only conduct bat exclusion and eviction from May 1 through October 1. Exclusion efforts may be restricted during periods of sensitive activity (e.g., during hibernation or while females in maternity colonies are nursing young).

Western Pond Turtle

No western pond turtles or nests were observed during the 2023 surveys conducted by FCS and Pinecrest. While the site appears to be unlikely to support western pond turtle, it cannot be ruled out entirely that a vagrant western pond turtle may be present on-site under unlikely circumstances before start of construction and could potentially be impacted by the project. Impacts to western pond turtle from the proposed project are considered potentially significant. MM BIO-5 would reduce this impact to a less than significant level through avoidance and minimization measures outlined below.

MM BIO-5 Protection of Western Pond Turtles

A qualified Biologist (i.e., a Biologist with at least 2 years of experience conducting surveys for western pond turtle detections) shall submit a wildlife exclusion fencing plan to the California Department of Fish and Wildlife (CDFW) for review and approval prior to starting construction. Exclusion fencing shall be installed along the western perimeter of the project site to prevent the species from traveling from North Slough onto the project site during construction. A qualified Biologist shall survey the project site and adjacent habitat within 72 hours of the start of project activities to determine whether western pond turtle or their nests are present and guide the installation of the exclusion fence. If western pond turtles are discovered,

a qualified Biologist with experience handling and relocating the species shall move the species to the nearest suitable habitat outside of the project area and exclusion fencing. If western pond turtle nests are found, CDFW shall be notified prior to starting project activities, and the nest site plus a 50-foot buffer around the nest site shall be fenced with orange construction fence until eggs hatch and young turtles disperse to the adjacent North Slough. In addition, if nest(s) are located during surveys, moth balls (naphthalene) shall be sprinkled around the vicinity of the nest (no closer than 5 feet) to mask human scent and discourage predators. Grading within the nest site's 50-foot buffer area shall be delayed until the young leave the nest as determined by a qualified Biologist. If the CDFW allows translocation of any nestling pond turtles this shall be completed by a qualified Biologist under the direction of the CDFW.

Monarch Butterfly

There is a potential for monarch overwintering in the eucalyptus woodland adjacent to the site. Construction activities, including dust, noise, and vibration adjacent to overwintering colonies could result in loss of overwintering monarch butterflies. Therefore, MM BIO-6 which includes a pre-construction survey and, if found, avoidance in coordination with USFWS and CDFW are recommended to reduce any potential impacts on monarch butterfly to less than significant.

MM BIO-6 Protection of Overwintering Monarch Butterfly

Activities such as vegetation removal, grading, or initial ground-disturbing activities shall be conducted between November 1 and July 31 (outside of the overwintering season) to the extent feasible. If such activities must be initiated during the overwintering season (August 1 through October 31), a pre-construction overwintering survey shall be conducted by a qualified Biologist no more than 7 days prior to vegetation removal, grading, or initial ground disturbance. The survey shall include the disturbance area and surrounding 250 feet to identify the location and status of any colonies that could potentially be affected either directly or indirectly by project activities. If no colonies are present, then project activities can commence as scheduled. If a colony is present, project construction shall cease immediately to avoid all direct and indirect impacts and report the presence of the colony to the United States Fish and Wildlife Service (USFWS) and California Department of Fish and Wildlife (CDFW) and follow all recommendations provided by USFWS and CDFW.

6.3 - Impact Analysis for Wildlife Nursery Sites and Wildlife Movement Corridors

The site does not function as a critical wildlife movement corridor, as discussed in Sections 4.4 and 5.5 above. This result is consistent with M&A's March 2020 BRA (Appendix D.1). Certain common wildlife may move within or cross the site; however, it does not function to connect valuable habitats together, but rather it currently funnels wildlife east into a pocket of land generally surrounded with dense developments, including State Route (SR) 29 to the east, commercial and industrial areas to

the north, and dense residential subdivision to the south, potentially constituting a population sink. Therefore, potential project-related impacts on wildlife movement are less than significant.

No substantial wildlife nursery sites, including breeding or nesting colonies, breeding ponds, or dens are present on-site. However, individual nesting birds and roosting bats have the potential of being present within disturbance distances seasonally. Potential impacts to individual nesting birds and roosting bats are addressed through the implementation of MM BIO-1 through MM BIO-4. As such, impacts to nursery sites would be less than significant.

6.4 - Impact Analysis for State and Federally Protected Waters and Wetlands

The proposed project would avoid all impacts on potential jurisdictional wetland features through the implementation of a wetland buffer avoidance area (Exhibit 7). Additionally, the proposed project would be required to comply with applicable laws and regulations related to jurisdictional waters and wetlands (see Regulatory Background section). These generally applicable laws and regulations are designed to avoid any net loss of area and function, reducing any potential indirect or residual impacts to less than significant under CEQA.

6.5- Protected Trees

The proposed project would not remove any trees as there are no trees located within the project site. Therefore, the proposed project would not remove any City protected trees and no conflicts would occur.

6.6- Conflict with Habitat Conservation Plans

No adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State Habitat Conservation Plan is applicable to the project site. Therefore, the proposed project would not conflict with the provisions of such a document.

Special-status Species Tables

THIS PAGE INTENTIONALLY LEFT BLANK

Table 1: Special-status Plant Species Habitat Value Evaluation

Scientific Name Common Name	Status			Habitat Description[4]	Habitat Value and Rationale
	ESA[1]	CESA[2]	CRPR[3]		
Agrostis hendersonii Henderson's bent grass	—	—	3.2	Valley and foothill grassland, vernal pools. Moist places in grassland or vernal pool habitat. Elevation: 65-1030 m. Blooming Period: April-June	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Allium peninsulare var. franciscanum Franciscan onion	—	—	1B.2	Cismontane woodland, valley, and foothill grassland. Clay soils; often on serpentine; sometimes on volcanics. Dry hillsides. Elevation: 5-320 m. Blooming Period: May-June	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Amorpha californica var. napensis Napa false indigo	—	—	1B.2	Dicot, perennial shrub found in broadleaf upland forest or chaparral openings Elevation: 30–590 m. Blooming period: April–July.	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Astragalus tener var. tener alkali milk-vetch	—	—	1B.2	Alkali playa, valley and foothill grassland, vernal pools. Low ground, alkali flats, and flooded lands; in annual grassland or in playas or vernal pools. Elevation: 0-170 m Blooming Period: May-July	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Balsamorhiza macrolepis big-scale balsamroot	—	—	1B.2	Chaparral, cismontane woodland and valley and foothill grassland. Sometimes occurs in serpentinite soils. Elevation: 45-1555 m. Blooming period: March-June.	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Blennosperma bakeri Sonoma sunshine	FE	SE	1B.1	Vernal pools, wet grasslands and swales. Elevation: 10-290 m. Blooming Period: March-May	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.

Scientific Name Common Name	Status			Habitat Description[4]	Habitat Value and Rationale
	ESA[1]	CESA[2]	CRPR[3]		
Blepharizonia plumosa big tarplant	—	—	1B.1	Valley and foothill grassland. Dry hills & plains in annual grassland. Clay to clay-loam soils; usually on slopes and often in burned areas. Elevation: 60-505 m. Blooming Period: July-October	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Brodiaea leptandra narrow-anthered brodiaea	—	—	1B.2	Monocot perennial herb found in open mixed-evergreen forest, chaparral, and gravelly soils. Elevation: 70–610 m. Blooming period: May–July.	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Calochortus pulchellus Mt. Diablo fairy-lantern	—	—	1B.2	Chaparral, cismontane woodland, riparian woodland, valley, and foothill grassland. Elevation: 30–840 m. Blooming period: April–June.	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Carex lyngbyei Lyngbye's sedge	—	—	2B.2	Marshes and swamps (brackish or freshwater). Elevation: 0–200 m. Blooming period: April–August	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Castilleja affinis var. neglecta Tiburon paintbrush	FE	ST	1B.2	Valley and foothill grassland. Rocky serpentine sites. Elevation: 120–400 m. Blooming period: April–June	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Ceanothus confusus Rincon Ridge ceanothus	—	—	1B.1	Volcanic slopes, chaparral, pine/oak woodland. Elevation: 75–1100 m. Blooming period: February–April	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Ceanothus purpureus holly-leaved ceanothus	—	—	1B.2	Chaparral, cismontane woodland on volcanic substrates or slopes. Elevation: 140–720 m. Blooming period: February–April	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.

Scientific Name Common Name	Status			Habitat Description[4]	Habitat Value and Rationale
	ESA[1]	CESA[2]	CRPR[3]		
Ceanothus sonomensis Sonoma ceanothus	—	—	1B.2	Chaparral, serpentine or volcanic substrates. Elevation: 140–795 m. Blooming period: March–April	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Centromadia parryi ssp. congdonii Congdon's tarplant	—	—	1B.1	Valley and foothill grassland. Alkaline soils sometimes described as heavy white clay. Elevation: 0–230 m. Blooming Period: March–October	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Centromadia parryi ssp. parryi pappose tarplant	—	—	1B.2	Chaparral, coastal prairie, meadows and seeps, coastal salt marsh, valley and foothill grassland. Vernally mesic, often alkaline sites. Elevation: 1-500 m. Blooming period: March–November	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Chloropyron molle ssp. molle soft salty bird's-beak	FE	CR	1B.2	Coastal salt marsh. In coastal salt marsh with Distichlis, Salicornia, Frankenia, etc. Elevation: 0-5 m. Blooming Period: July-November	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Cicuta maculata var. bolanderi Bolander's water-hemlock	—	—	2B.1	Marshes and swamps. In fresh or brackish water. Elevation: 0-20 m. Blooming Period: July-September	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Dirca occidentalis western leatherwood	—	—	1B.2	Broadleafed upland forest, chaparral, closed-cone coniferous forest, cismontane woodland, north coast coniferous forest, riparian forest, riparian woodland. On brushy slopes, mesic sites; mostly in mixed evergreen and foothill woodland communities. Elevation: 20–640 m. Blooming Period: November–March	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.

Scientific Name Common Name	Status			Habitat Description[4]	Habitat Value and Rationale
	ESA[1]	CESA[2]	CRPR[3]		
Downingia pusilla dwarf downingia	—	—	2B.2	Valley and foothill grassland (mesic sites), vernal pools. Vernal lake and pool margins with a variety of associates. In several types of vernal pools. Elevation: 1-490 m. Blooming period: March-May	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Erigeron greenei Greene's narrow-leaved daisy	—	—	1B.2	Perennial herb found in chaparral (serpentinite or volcanic) Elevation: 80 –1005 m Blooming period: May–September	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Eryngium jepsonii Jepson's coyote-thistle	—	—	1B.2	Vernal pools, valley and foothill grassland. In clay substrate. Elevation: 3–305 m. Blooming Period: May–June	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Extriplex joaquinana San Joaquin spearscale	—	—	1B.2	Chenopod scrub, meadows and seeps, Playas, Valley and foothill grassland. In seasonal alkali wetlands or alkali sink scrub with Distichlis spicata, Frankenia, etc. Elevation: 0–800 m. Blooming Period: April–September	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Fritillaria liliacea fragrant fritillary	—	—	1B.2	Coastal scrub, valley and foothill grassland, coastal prairie, and cismontane woodland. Often on serpentine; various soils reported though usually on clay, in grassland. Elevation: 3–385 m. Blooming Period: February–April	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.

Scientific Name Common Name	Status			Habitat Description[4]	Habitat Value and Rationale
	ESA[1]	CESA[2]	CRPR[3]		
Helianthella castanea Diablo helianthella	—	—	1B.2	Broadleafed upland forest, chaparral, cismontane woodland, coastal scrub, riparian woodland, valley and foothill grassland. Usually in chaparral/oak woodland interface in rocky, azonal soils. Often in partial shade. Elevation: 45-1070 m. Blooming Period: April–September	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Hemizonia congesta ssp. congesta congested-headed hayfield tarplant	—	—	1B.2	Valley and foothill grassland. Grassy valleys and hills, often in fallow fields; sometimes along roadsides. Elevation: 5-520 m. Bloom period: April-November	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Hesperolinon breweri Brewer's western flax	—	—	1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Often in rocky serpentine soil in serpentine chaparral and serpentine grassland. Elevation: 195-910 m. Blooming Period: May-July	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Holocarpha macradenia Santa Cruz tarplant	FT	CE	1B.1	Coastal prairie, coastal scrub, valley and foothill grassland. Light, sandy soil or sandy clay; often with nonnatives. Elevation: 10-275 m. Blooming Period: June–October	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Horkelia tenuiloba thin-lobed horkelia	—	—	1B.2	Broad-leafed upland forest, chaparral, valley and foothill grassland with sandy soils. Often found in mesic habitats. Elevation: 45-640 m. Blooming period: May–July (August)	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.

Scientific Name Common Name	Status			Habitat Description[4]	Habitat Value and Rationale
	ESA[1]	CESA[2]	CRPR[3]		
Isocoma arguta Carquinez goldenbush	—	—	1B.1	Valley and foothill grassland. Alkaline soils, flats, lower hills. On low benches near drainages and on tops and sides of mounds in swale habitat. Elevation: 1-50 m Blooming Period: April–December	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Lasthenia conjugens Contra Costa goldfields	FE	—	1B.1	Valley and foothill grassland, vernal pools, alkaline playas, cismontane woodland, swales, low depressions, in open grassy areas. Elevation: 1–450 m. Blooming Period: March–June	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Lathyrus jepsonii var. jepsonii Delta tule pea	—	—	1B.2	Marshes and swamps. In freshwater and brackish marshes. Often found with Typha, Aster lentus, Rosa californica, Juncus spp., Scirpus, etc. Usually on marsh and slough edges. Elevation: 0–5 m. Blooming Period: May–July	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Legenere limosa legenere	—	—	1B.1	Vernal pools and in beds of vernal pools. Elevation: 1–1005 m. Blooming Period: April–June	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Leptosiphon jepsonii Jepson's leptosiphon	—	—	1B.2	Dicot annual herb found in open to partially shaded grassy slopes. On volcanic soils or the periphery of serpentine substrates. Elevation: 100–570 m. Blooming period: March–May.	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.

Scientific Name Common Name	Status			Habitat Description[4]	Habitat Value and Rationale
	ESA[1]	CESA[2]	CRPR[3]		
Lilaeopsis masonii Mason's lilaeopsi	—	CR	1B.1	Marshes and swamps, riparian scrub. Tidal zones, in muddy or silty soil formed through river deposition or river bank erosion. In brackish or freshwater. Elevation: 0-10 m Blooming Period: April-November	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Lupinus sericatus Cobb Mountain lupine	—	—	1B.2	Perennial herb found in broadleafed upland forest, chaparral. cismontane woodland, lower montane coniferous forest. Elevation: 275–1525 m Blooming period: March–June.	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Polygonum marinense Marin knotweed	—	—	3.1	Marshes and swamps. Elevation: 0-10 m. Blooming period: May–August	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Rhynchospora californica California beaked-rush	—	—	1B.1	Bogs and fens, open marshes and swamps, lower montane coniferous forest, meadows and freshwater seeps. Elevation: 45-270 m. Blooming period: May–July	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Senecio aphanactis chaparral ragwort	—	—	1B.2	Dicot annual herb found in chaparral, cismontane woodland, and coastal scrub habitat. Prefers drying alkaline flats. Elevation: 15-800m. Blooming period: January–April.	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Sidalcea hickmanii ssp. napensis Napa checkerbloom	—	—	1B.1	Chamise chaparral, rocky volcanic soil. Elevation: 400-600 m. Blooming period: April-June	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.

Scientific Name Common Name	Status			Habitat Description[4]	Habitat Value and Rationale
	ESA[1]	CESA[2]	CRPR[3]		
Spergularia macrotheca var. longistyla long-styled sand-spurrey	—	—	1B.2	Marshes and swamps, meadows and seeps. Alkaline. Elevation: 0-220 m. Blooming Period: February–May	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Symphyotrichum lentum Suisun Marsh aster	—	—	1B.2	Marshes and swamps (brackish and freshwater). Most often seen along sloughs with Phragmites, Scirpus, blackberry, Typha, etc. Elevation: 0-15 m. Blooming Period: May–November	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Trichostema ruygtii Napa bluecurls	—	—	1B.2	Cismontane woodland, chaparral, valley and foothill grassland, vernal pools. Often in sunny, open areas Elevation: 30-600m. Blooming period: June–October	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Trifolium amoenum two-fork clover	FE	—	1B.1	Coastal bluff scrub, valley and foothill grassland (sometimes serpentinite). Elevation: 5-415 m. Blooming period: April–June	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Trifolium hydrophilum saline clover	—	—	1B.2	Marshes and swamps, valley and foothill grassland in mesic or alkaline soils, and vernal pools. Elevation: 0-300 m. Blooming period: April–June	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.
Viburnum ellipticum oval-leaved viburnum	—	—	2B.3	Chaparral, cismontane woodland, lower montane coniferous forest. Elevation: 215-1400 m. Blooming Period: May–June	**Absent:** The project site does not contain habitat suitable for this species. Absence confirmed through appropriately timed protocol-level rare plant surveys, in 2023.

Table 2: Special-status Wildlife Species Habitat Value Evaluation

Scientific Name Common Name	Status		Habitat Description[3]	Habitat Value and Rationale[4]
	ESA[1]	CESA/FGC[2]		
Amphibians				
Dicamptodon ensatus California giant salamander	—	SSC	Known from wet coastal forests near streams and seeps from Mendocino County south to Monterey County, and east to Napa County. Aquatic larvae found in cold, clear streams, occasionally in lakes and ponds. Adults known from wet forests under rocks and logs near streams and lakes.	**Absent: T**he project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Rana boylii pop. 1 foothill yellow-legged frog-north coast DPS	—	SSC	Partly-shaded, shallow streams and riffles with a rocky substrate in a variety of habitats. Needs at least some cobble-sized substrate for egg-laying. Needs at least 15 weeks to attain metamorphosis.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Rana draytonii California red-legged frog	FT	SSC	Lowlands and foothills in or near permanent sources of deep water with dense, shrubby or emergent riparian vegetation. Requires 11-20 weeks of permanent water for larval development	**Absent**. The project site is adjacent to mapped critical habitat for this species, but the project site is significantly developed, and the site and surrounding area does not provide suitable habitat. Absence confirmed through surveys in 2023.
Taricha rivularis red-bellied newt	—	SSC	Lives in terrestrial habitats, juveniles generally underground, adults active at surface in moist environments. Will migrate over 1 km to breed, typically in streams with moderate flow and clean, rocky substrate.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Birds				
Agelaius tricolor Tricolored blackbird	—	ST SSC	Breeds near fresh water in dense emergent vegetation.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.

Scientific Name Common Name	Status		Habitat Description[3]	Habitat Value and Rationale[4]
	ESA[1]	CESA/FGC[2]		
Aquila chrysaetos Golden eagle	—	FP	Typically frequents rolling foothills, mountain areas, sage-juniper flats and desert	**Low:** The species has been recorded 4.5 miles southeast of the project site and the site is adjacent to marginal nesting habitat for the species. This species was not observed during the 2023 surveys.
Athene cunicularia Burrowing owl	—	SSC	Open, dry annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	**Low**. The species has been recorded 2.7 miles north of the project site and the site provides marginal habitat for the species. This species was not observed during the 2023 surveys.
Buteo swainsoni Swainson's hawk	—	ST	Breeds in stands with few trees in juniper-sage flats, riparian areas, and in oak savannah. Requires adjacent suitable foraging areas such as grasslands or alfalfa fields supporting rodent populations.	**Low**. Land adjacent to the project site provides suitable nesting habitat. The closest known record of the species is 1.5 miles north of the project site. This species was not observed during the 2023 surveys.
Charadrius nivosus nivosus western snowy plover	FT	SSC	Sandy beaches, salt pond levees and shores of large alkali lakes. Needs sandy, gravelly or friable soils for nesting.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Circus hudsonius northern harrier	—	SSC	Coastal salt and freshwater marsh. Nest and forage in grasslands, from salt grass in desert sink to mountain cienagas. Nests on ground in shrubby vegetation, usually at marsh edge; nest built of a large mound of sticks in wet areas.	**Low**. The species has been recorded 1.8 miles west of the project site and the site provides marginal nesting habitat for the species. This species was not observed during the 2023 surveys.
Coturnicops noveboracensis yellow rail	—	SSC	Shallow marshes, and wet meadows; in winter, drier fresh-water and brackish marshes, as well as dense, deep grass, and rice fields.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Cypseloides niger black swift	—	SSC	Coastal belt of Santa Cruz and Monterey counties; central & southern Sierra Nevada; San Bernardino & San Jacinto mountains. Breeds in small colonies on cliffs behind or adjacent to waterfalls in deep canyons and sea-bluffs above the surf; forages widely.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.

Scientific Name Common Name	Status		Habitat Description[3]	Habitat Value and Rationale[4]
	ESA[1]	CESA/FGC[2]		
Elanus leucurus white-tailed kite	—	FP	Grasslands and open coastal scrub in coastal and valley lowlands; rarely found away from agricultural areas. Inhabits herbaceous, open stages of most habitats mostly in cismontane California.	**Low:** The species has been recorded 5.3 miles north of the project site and the site provides marginal nesting habitat for the species. Individuals were observed foraging over the project site in 2023.
Falco peregrinus anatum American peregrine falcon	FD	FP	Near wetlands, lakes, rivers, or other water; on cliffs, banks, dunes, mounds; also, human-made structures. Nest consists of a scrape or a depression or ledge in an open site.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Geothlypis trichas sinuosa saltmarsh common yellowthroat	—	SSC	Resident of the San Francisco Bay region, in fresh and saltwater marshes. Requires thick, continuous cover down to water surface for foraging; tall grasses, tule patches, willows for nesting.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Laterallus jamaicensis coturniculus California black rail	—	FP	Inhabits freshwater marshes, wet meadows and shallow margins of saltwater marshes bordering larger bays. Needs water depths of about 1 inch that do not fluctuate during the year and dense vegetation for nesting habitat.	**Absent: T**he project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Melospiza melodia maxillaris Suisun song sparrow	—	SSC	Resident of brackish-water marshes surrounding Suisun Bay. Inhabits cattails, tules and other sedges, and Salicornia; also known to frequent tangles bordering sloughs.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Melospiza melodia samuelis San Pablo song sparrow	—	SSC	Resident of salt marshes along the north side of San Francisco and San Pablo bays. Inhabits tidal sloughs in the Salicornia marshes; nests in Grindelia bordering slough channels.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Rallus obsoletus obsoletus California Ridgway's rail	FE	FP	Salt water and brackish marshes traversed by tidal sloughs in the vicinity of San Francisco Bay. Associated with abundant growths of pickleweed, but feeds away from cover on invertebrates from mud-bottomed sloughs	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.

Scientific Name Common Name	Status		Habitat Description[3]	Habitat Value and Rationale[4]
	ESA[1]	CESA/FGC[2]		
Riparia riparia bank swallow	—	ST	Nests in riparian scrub and riparian woodland. Requires vertical banks/cliffs with fine-textured/sandy soils near streams, rivers, lakes, ocean to dig nesting hole.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Xanthocephalus xanthocephalus yellow-headed blackbird	—	SSC	Nests in freshwater emergent wetlands with dense vegetation and deep water. Often along borders of lakes or ponds. Nests only where large insects such as Odonata are abundant, nesting timed with maximum emergence of aquatic insects.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Fish				
Acipenser medirostris pop. 1 green sturgeon-southern DPS	FT	—	Spawning occurs primarily in cool (11-15 C) sections of mainstem rivers in deep pools (8-9 meters) with substrate containing small to medium sized sand, gravel, cobble, or boulder.	**Absent:** The project site does not contain habitat suitable for this species.
Hypomesus transpacificus Delta smelt	FT	—	Aquatic and estuary habitats. Populations in the Sacramento-San Joaquin Delta.	**Absent:** The project site does not contain habitat suitable for this species.
Oncorhynchus mykiss irideus pop. 11 steelhead-Central Valley DPS	FT	—	Populations in the Sacramento and San Joaquin rivers and their tributaries.	**Absent: T**he project site does not contain habitat suitable for this species.
Pogonichthys macrolepidotus Sacramento splittail	—	SSC	Endemic to the lakes and rivers of the Central Valley, but now confined to the Delta, Suisun Bay and associated marshes. Slow moving river sections, dead end sloughs. Requires flooded vegetation for spawning and foraging for young.	**Absent:** The project site does not contain habitat suitable for this species.

Scientific Name Common Name	Status		Habitat Description[3]	Habitat Value and Rationale[4]
	ESA[1]	CESA/FGC[2]		
Spirinchus thaleichthys longfin smelt	FC	—	Longfin smelt spend their adult life in bays, estuaries, and nearshore coastal areas, and migrate into freshwater rivers to spawn. Spawning occurs primarily from January through March, after which most adults die.	**Absent:** The project site does not contain habitat suitable for this species.
Thaleichthys pacificus eulachon	FT	—	Found in Klamath River, Mad River, Redwood Creek, and in small numbers in Smith River and Humboldt Bay tributaries. Spawn in lower reaches of coastal rivers with moderate water velocities and bottom of pea-sized gravel, sand, and woody debris.	**Absent:** The project site does not contain habitat suitable for this species.
Invertebrates				
Branchinecta lynchi vernal pool fairy shrimp	FT	—	Small vernal pools with cool water (10ºC), moderate alkalinity and conductivity, and less than 1 m deep.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Bombus crotchii *Crotch bumble bee*	—	SC	This species occurs primarily in California, including coastal habitats, western Mojave Desert, San Joaquin Valley, and adjacent foothills through most of southwestern California. It inhabits arid grasslands and shrublands, and its food sources including milkweeds, pincushions, lupines, clovers, phacelias, sages, clarkias, poppies, and buckwheats.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Bombus occidentalis western bumble bee	—	SC	Formerly found in large parts of California but has been reduced in abundance and is now mostly restricted to high meadows or coastal environments. Species requires floral resources, and undisturbed nest and overwintering sites	**Absent:** Historic records from 1962 of this species were found 7 miles away from the project site, but no recent recorded occurrence exists. The site is site is heavily disturbed from years of anthropogenic disturbances. This species was not observed during the 2023 surveys.

Scientific Name Common Name	Status		Habitat Description[3]	Habitat Value and Rationale[4]
	ESA[1]	CESA/FGC[2]		
Danaus plexippus Monarch Butterfly	—	—	Occurs in temperate climates, such as eastern and western North America and undergoes long-distance migration. Lays eggs on obligate milkweed host plant (primarily Asclepias spp.). Inhabits a variety of open habitats including fields, meadows, weedy areas, marshes, and roadsides. Adults feed on variety of flowers including dogbane, lilac, red clover, lantana, thistles, goldenrods, blazing stars, ironweed, and tickseed sunflower.	**Low:** The species has been recorded 7 miles south of the project site. The site is adjacent to eucalyptus groves which provides marginal overwintering habitat for the species. This species was not observed during the 2023 surveys.
Desmocerus californicus dimorphus valley elderberry longhorn beetle	FT	—	Occurs only in the Central Valley of California, in association with blue elderberry (Sambucus mexicana). Prefers to lay eggs in elderberries 2-8 inches in diameter; some preference shown for "stressed" elderberries. Common in riparian scrub.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Speyeria callippe callippe callippe silverspot butterfly	FE	—	Restricted to the northern coastal scrub of the San Francisco peninsula. Hostplant is *Viola pedunculata*. Most adults found on east facing slopes; males congregate on hilltops in search of females.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Syncaris pacifica California freshwater shrimp	FE	—	Endemic to Marin, Napa, and Sonoma counties. Found in low elevation, low gradient streams where riparian cover is moderate to heavy. Shallow pools away from main streamflow. Winter: undercut banks with exposed roots. Summer: leafy branches touching water.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Mammals				
Antrozous pallidus Pallid bat	—	SSC	Found in deserts, grasslands, shrublands, woodlands, and forests. Most common in open, dry habitats with rocky areas for roosting. Roosts must protect bats from high temperatures and include trees and buildings. Species is very sensitive to disturbance of roosting sites.	**Low:** The project site is adjacent to a eucalyptus grove that has potential roosting habitat for this species. Record of this species was found 5.2 miles northwest of the project site. This species was not observed during the 2023 surveys.

Scientific Name Common Name	Status		Habitat Description[3]	Habitat Value and Rationale[4]
	ESA[1]	CESA/FGC[2]		
Microtus californicus sanpabloensis San Pablo vole	—	SSC	Saltmarshes of San Pablo Creek, on the south shore of San Pablo Bay. Constructs burrow in soft soil. Feeds on grasses, sedges and herbs. Forms a network of runways leading from the burrow.	**Absent: T**he project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Nyctinomops macrotis big free-tailed bat	—	SSC	Migrant bats using elevations from 0-2600 meters. Roosts in rock crevices cliffs as well as in buildings, caves, and tree cavities	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Reithrodontomys raviventris salt-marsh harvest mouse	—	FP	Only in the saline emergent wetlands of San Francisco Bay and its tributaries. Pickleweed is primary habitat but may occur in other marsh vegetation types and in adjacent upland areas. Does not burrow; builds loosely organized nests. Requires higher areas for flood escape.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Sorex ornatus sinuosus Suisun shrew	—	SSC	Tidal marshes of the northern shores of San Pablo and Suisun bays. Require dense low-lying cover and driftweed and other litter above the mean hightide line for nesting and foraging.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Sorex vagrans halicoetes salt-marsh wandering shrew	—	SSC	Salt marshes of the southern portion of the San Francisco Bay. Marsh, wetland, or swamps with Salicornia and abundant driftwood	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Taxidea taxus American badger	—	SSC	Found in drier open stages of most shrub, forest and herbaceous habitats with friable soils, specifically grassland environments. Natal dens occur on slopes.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.
Reptiles				
Emys marmorata western pond turtle	—	SSC	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches, usually with aquatic vegetation, below 6000 ft elevation.	**Low:** The species has been recorded 0.4 miles northeast of the project site. Adjacent aquatic habitat west of the site provides marginal habitat for this species. This species was not observed during the 2023 surveys.

Scientific Name Common Name	Status		Habitat Description[3]	Habitat Value and Rationale[4]
	ESA[1]	CESA/FGC[2]		
Masticophis lateralis euryxanthus Alameda whipsnake	FT	—	Typically found in chaparral and scrub habitats but will also use adjacent grassland, oak savanna and woodland habitats. Specifically, mostly south-facing slopes and ravines, with rock outcrops, deep crevices or abundant rodent burrows, where shrubs form a vegetative mosaic with oak trees and grasses.	**Absent:** The project site does not contain habitat suitable for this species. This species was not observed during the 2023 surveys.

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

---

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).

NOT FOR CONSULTATION

2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Mammals

NAME	STATUS
Salt Marsh Harvest Mouse Reithrodontomys raviventris Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/613	Endangered

Birds

NAME	STATUS
California Clapper Rail Rallus longirostris obsoletus Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/4240	Endangered
California Least Tern Sterna antillarum browni Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/8104	Endangered
Northern Spotted Owl Strix occidentalis caurina Wherever found There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/1123	Threatened
Western Snowy Plover Charadrius nivosus nivosus There is **final** critical habitat for this species. Your location does not overlap the critical habitat. https://ecos.fws.gov/ecp/species/8035	Threatened

Reptiles

NAME	STATUS

NOT FOR CONSULTATION

NAME	STATUS
Green Sea Turtle Chelonia mydas	Threatened

No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/6199

Amphibians

NAME	STATUS
California Red-legged Frog Rana draytonii	Threatened

Wherever found

There is **final** critical habitat for this species. Your location does not overlap the critical habitat.
https://ecos.fws.gov/ecp/species/2891

Fishes

NAME	STATUS
Tidewater Goby Eucyclogobius newberryi	Endangered

Wherever found

There is **final** critical habitat for this species. Your location does not overlap the critical habitat.
https://ecos.fws.gov/ecp/species/57

Insects

NAME	STATUS
Monarch Butterfly Danaus plexippus	Candidate

Wherever found

No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/9743

Crustaceans

NAME	STATUS
California Freshwater Shrimp Syncaris pacifica	Endangered

Wherever found

No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/7903

NOT FOR CONSULTATION

Conservancy Fairy Shrimp Branchinecta conservatio — Endangered
Wherever found
There is **final** critical habitat for this species. Your location does not overlap the critical habitat.
https://ecos.fws.gov/ecp/species/8246

Vernal Pool Fairy Shrimp Branchinecta lynchi — Threatened
Wherever found
There is **final** critical habitat for this species. Your location does not overlap the critical habitat.
https://ecos.fws.gov/ecp/species/498

Flowering Plants

NAME	STATUS

Contra Costa Goldfields Lasthenia conjugens — Endangered
Wherever found
There is **final** critical habitat for this species. Your location does not overlap the critical habitat.
https://ecos.fws.gov/ecp/species/7058

Showy Indian Clover Trifolium amoenum — Endangered
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/6459

Soft Bird's-beak Cordylanthus mollis ssp. mollis — Endangered
Wherever found
There is **final** critical habitat for this species. Your location does not overlap the critical habitat.
https://ecos.fws.gov/ecp/species/8541

NOT FOR CONSULTATION

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

There are no critical habitats at this location.

You are still required to determine if your project(s) may have effects on all above listed species.

Bald & Golden Eagles

Bald and golden eagles are protected under the Bald and Golden Eagle Protection Act and the Migratory Bird Treaty Act.

Any person or organization who plans or conducts activities that may result in impacts to bald or golden eagles, or their habitats, should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

Additional information can be found using the following links:

- Eagle Managment https://www.fws.gov/program/eagle-management
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf

There are bald and/or golden eagles in your project area.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list,click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.	Breeds Jan 1 to Aug 31
Golden Eagle *Aquila chrysaetos* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1680	Breeds Jan 1 to Aug 31

NOT FOR CONSULTATION

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

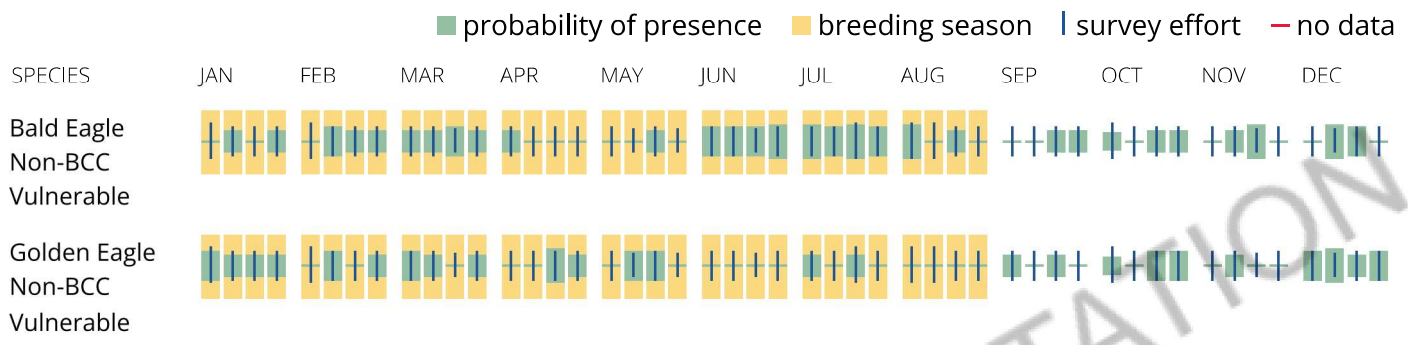
Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.



Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

NOT FOR CONSULTATION

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

What does IPaC use to generate the potential presence of bald and golden eagles in my specified location?

The potential for eagle presence is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply). To see a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs of bald and golden eagles in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What if I have eagles on my list?

NOT FOR CONSULTATION

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur. Please contact your local Fish and Wildlife Service Field Office if you have questions.

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern https://www.fws.gov/program/migratory-birds/species
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NOT FOR CONSULTATION

NAME	BREEDING SEASON
Allen's Hummingbird *Selasphorus sasin* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9637	Breeds Feb 1 to Jul 15
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.	Breeds Jan 1 to Aug 31
Belding's Savannah Sparrow *Passerculus sandwichensis beldingi* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/8	Breeds Apr 1 to Aug 15
Black Turnstone *Arenaria melanocephala* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds elsewhere
Bullock's Oriole *Icterus bullockii* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds Mar 21 to Jul 25
California Gull *Larus californicus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Mar 1 to Jul 31
California Thrasher *Toxostoma redivivum* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Jan 1 to Jul 31
Clark's Grebe *Aechmophorus clarkii* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Jun 1 to Aug 31
Common Yellowthroat *Geothlypis trichas sinuosa* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/2084	Breeds May 20 to Jul 31

NOT FOR CONSULTATION

Golden Eagle Aquila chrysaetos — Breeds Jan 1 to Aug 31

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Wrentit Chamaea fasciata This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Mar 15 to Aug 10

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

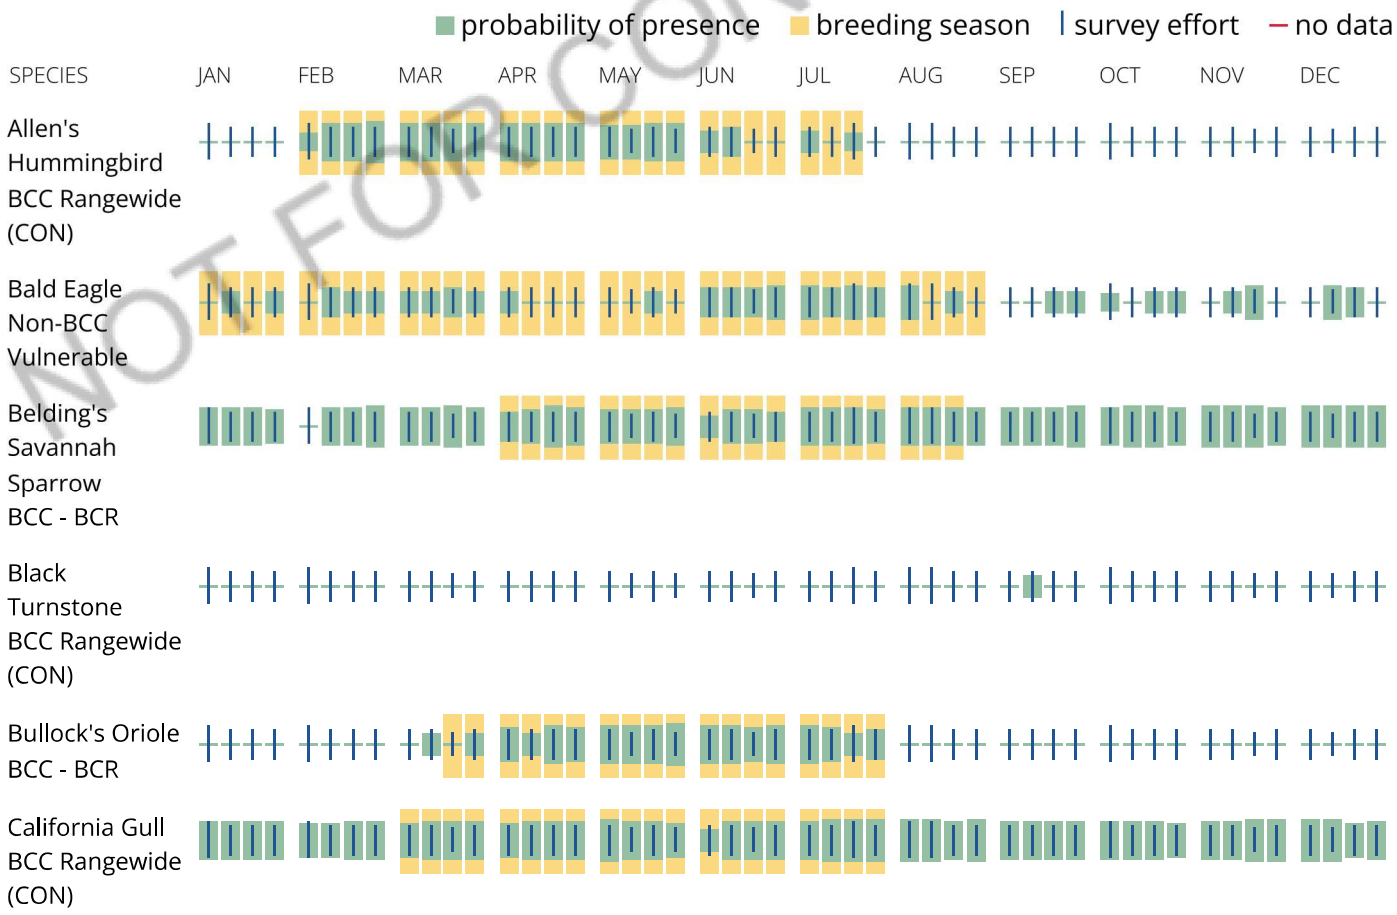
How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the

NOT FOR CONSULTATION

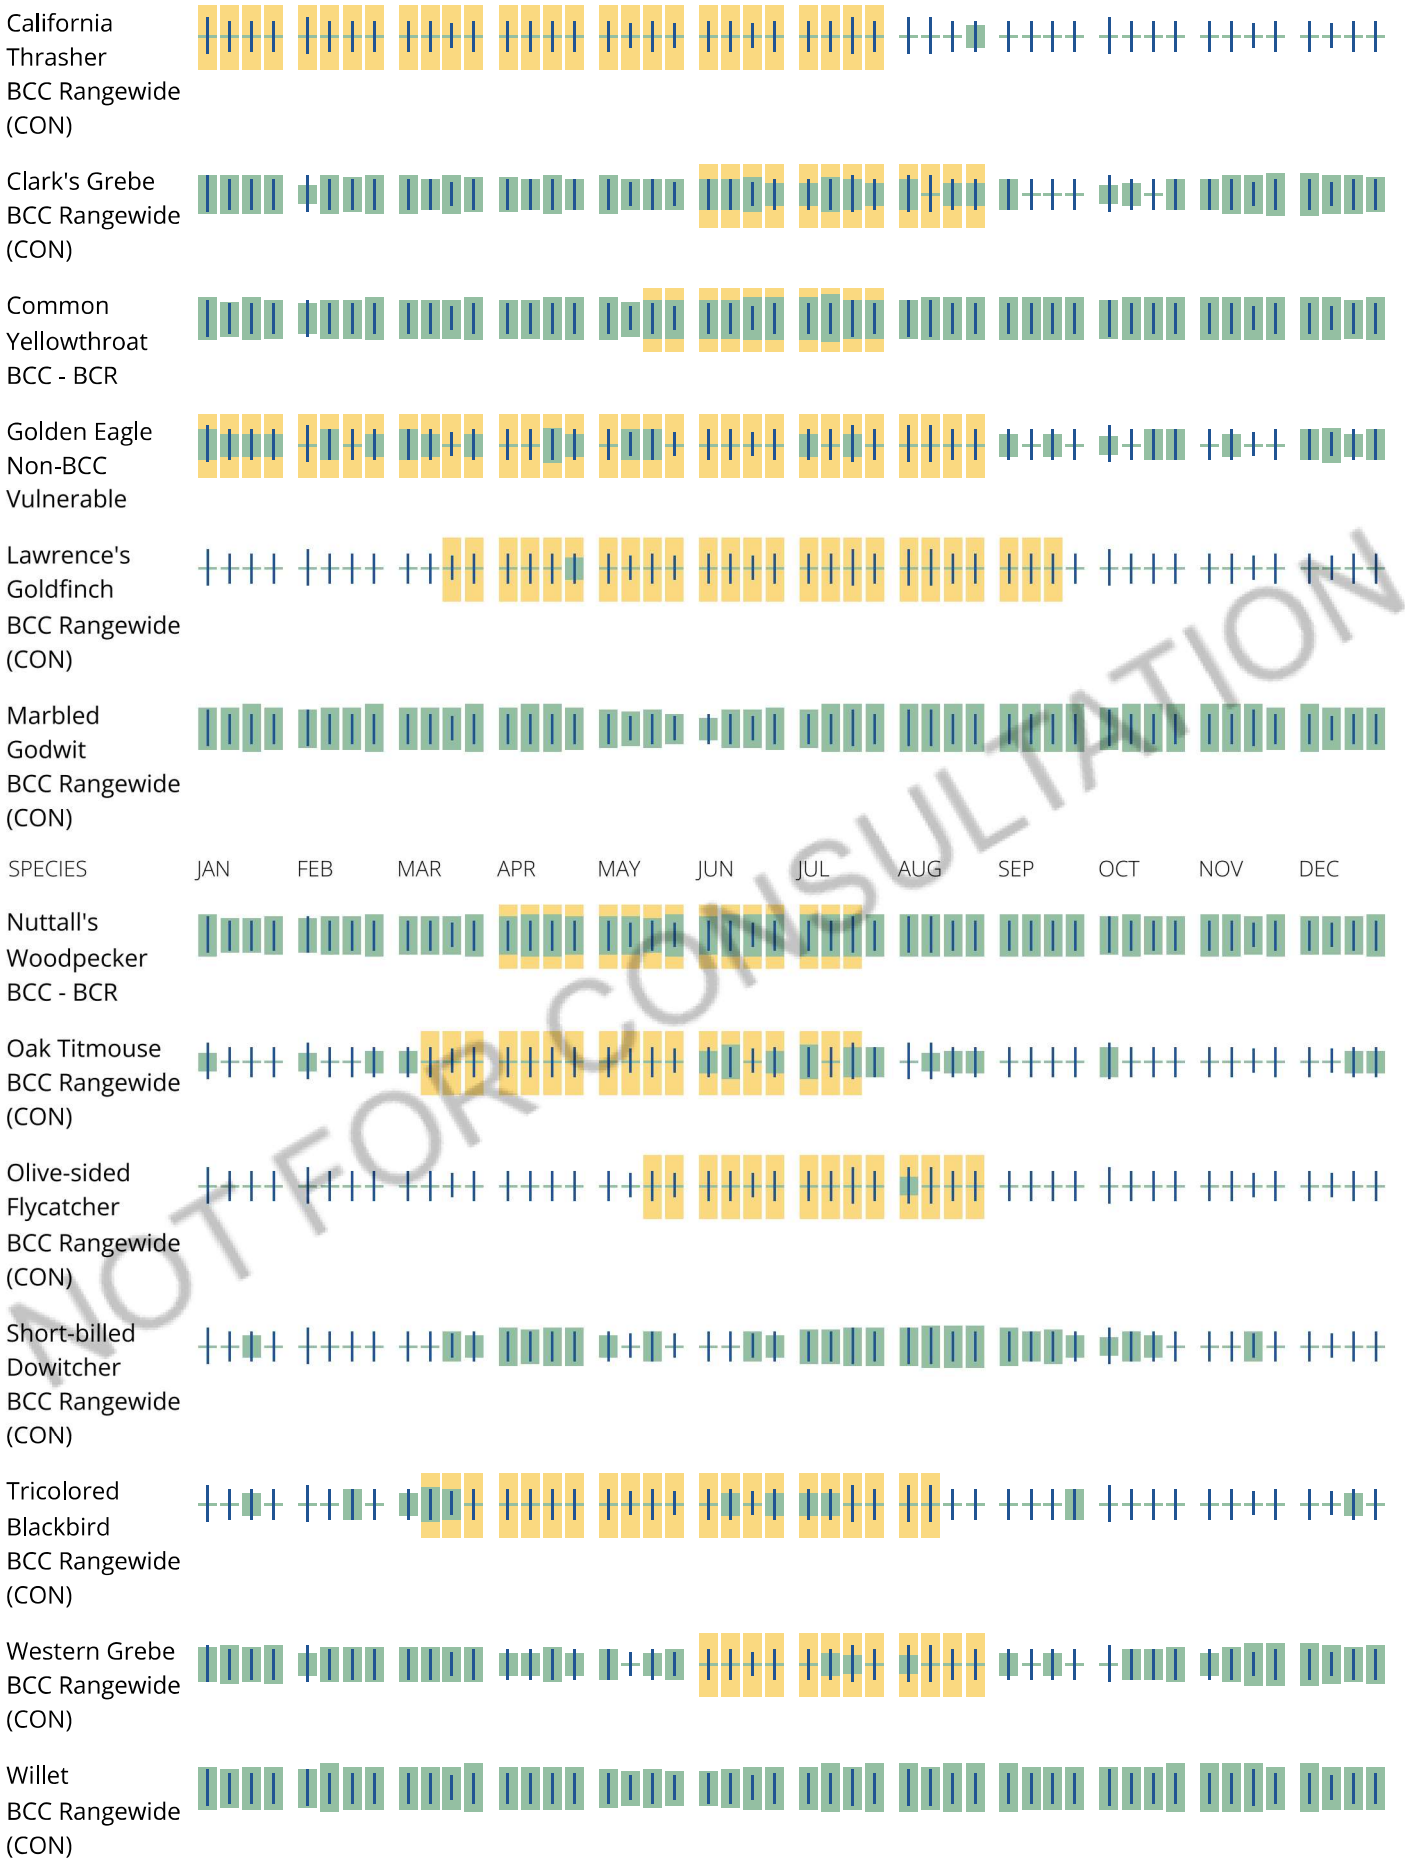
probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.



Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.



To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

(CON)

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets.

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may query your location using the RAIL Tool and look at the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird

NOT FOR CONSULTATION

on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key

NOT FOR CONSULTATION

component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

There are no refuge lands at this location.

Fish hatcheries

There are no fish hatcheries at this location.

NOT FOR CONSULTATION

Wetlands in the National Wetlands Inventory (NWI)

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Wetland information is not available at this time

This can happen when the National Wetlands Inventory (NWI) map service is unavailable, or for very large projects that intersect many wetland areas. Try again, or visit the NWI map to view wetlands at this location.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Subject: **Pre-construction Surveys and Implementation of CEQA Mitigation Measures BIO-1, BIO-2, BIO-3, BIO-4, and BIO-5 per the Mitigation Monitoring and Reporting Program for the Commerce 217 Warehouse Project, American Canyon, California**

Dear John:

This letter summarizes results of pre-construction burrowing owl (*Athene cunicularia*), Swainson's hawk (*Buteo swainsoni*), nesting raptor, nesting passerine bird, and western pond turtle (*Actinemys marmorata*) surveys conducted to-date by FirstCarbon Solutions (FCS) consulting Biologists Dr. Christopher DiVittorio and Bernhard Warzecha as they relate to compliance with CEQA Mitigation Measures (MM) BIO-1, MM BIO-2, MM BIO-3, MM BIO-4, and MM BIO-5 from the January 2021 Mitigation, Monitoring, and Reporting Program (MMRP) for the Commerce 217 Warehouse Project located in American Canyon, California.

The project site comprises a single parcel measuring 10.8 acres in size and consists of non-native annual and perennial grassland with several small, mapped wetland features. The site is bounded by Commerce Court to the east, a developed warehouse to the north, an open field to the south beyond which is another developed warehouse, and a eucalyptus grove to the west.

Methods

Between January 18 and April 7, 2023, FCS conducted seven nesting bird and burrowing owl detection surveys (including for Swainson's hawk) on the project site and relevant adjacent areas (where accessible), for a total of approximately 30 survey hours. Surveys for western pond turtle adults and nests were also performed simultaneously while walking the site.

Survey methods followed established procedures and applicable protocols, including the *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley* (Protocol) and the *Staff Report on Burrowing Owl Mitigation*.[1,2] Survey equipment included high-quality binoculars and a high-quality spotting scope.

Surveys were conducted during the appropriate times of day (including peak bird detection periods between sunrise and 10:00 a.m.). Surveys were conducted on foot. Survey dates conducted by FCS are shown below in Table 1.

Table 1: Survey Dates

Date	Swainson's Hawk	Burrowing Owl	Nesting Birds including Raptors
1/18/2023	First survey in Period I	Burrowing owl breeding season survey	Nesting bird surveys–All Species
3/20/2023	First survey in Period II	Burrowing owl breeding season survey	Nesting bird surveys–All Species
3/31/2023	Second survey in Period II	Burrowing owl breeding season survey	Nesting bird surveys–All Species
4/4/2023	Third survey in Period II	Burrowing owl breeding season survey	Nesting bird surveys–All Species
4/5/2023	First survey in Period III	Burrowing owl breeding season survey	Nesting bird surveys–All Species
4/6/2023	Second survey in Period III	Burrowing owl breeding season survey	Nesting bird surveys–All Species
4/7/2023	Third survey in Period III	Burrowing owl breeding season survey	Nesting bird surveys–All Species
4/24/2023 (planned)	Swainson's hawk presence/absence survey	Burrowing owl breeding season survey	Nesting bird surveys–All Species

Surveys were conducted by FCS consulting Biologists Dr. Christopher DiVittorio and Bernhard Warzecha, both of whom are experienced in conducting surveys for all of the aforementioned special-status species and have been previously approved by the California Department of Fish and Wildlife (CDFW). Additionally Mr. Warzecha and Dr. DiVittorio have previous experience and training in the monitoring of Swainson's hawk nesting, including Swainson's hawk identification and behavioral patterns.

Results

A list of all species of birds observed at the different time points is provided below. No nesting birds were observed on the project site itself, and no nests of any protected species were observed off-site in the areas that could be accessed. White-tailed kites (*Elanus leucurus*) were observed foraging in the field, but they did not appear to be nesting nearby, as described below. No Swainson's hawk or burrowing owl were observed during any of the avian surveys to-date. No adults or nests of western pond turtle were observed. All observed animal species are listed in Attachment A: Animal Species Observed.

Swainson's Hawk

No individuals of Swainson's hawk were observed during any of the surveys, and no raptor nests that could belong to Swainson's hawk were observed. The presence of other birds-of-prey utilizing territories on-site also indicates that Swainson's hawk are not utilizing this habitat currently. The negative survey results for Swainson's hawk despite approximately 30 survey hours satisfies the requirements of the survey protocol for this species, therefore it is reasonable to conclude Swainson's hawk are absent from the project site.

Nesting Birds (Including Raptors)

FCS Biologists observed no active nests within the vicinity of the project site. Several American crow were loitering around the eucalyptus grove to the east of the parcel and harassing white-tail kites that approached the grove; however, their nest could not be located. Several white-tail kites were observed each day foraging over the grassland habitat; however, each time they flew off to the southwest out of sight and the location of their nest could not be determined. One juvenile red-tailed hawk was observed within the large eucalyptus tree along the north property line; however, this individual flew off-site after approximately 20 minutes. No other active nests were observed as of April 7.

Burrowing Owl

No evidence of burrowing owl activity was observed during any of the field surveys. No California ground squirrel burrows were observed on-site, and no other burrows or dens were observed that would provide suitable nesting habitat for burrowing owl. Therefore, it is reasonable to conclude burrowing owl is absent from the project site.

Western Pond Turtle

No evidence of western pond turtle activity was observed during any of the field surveys. There are some wetland features on-site, however no ponds or streams suitable for western pond turtle exist on-site and no signs of adults or nests were observed. Therefore, it is reasonable to conclude western pond turtle is absent from the project site.

Compliance

With implementation of the pre-construction surveys, and implementation of the recommendations for Swainson's hawk, burrowing owl, nesting birds, and western pond turtle, the project is in compliance with MM BIO-1, MM BIO-2, MM BIO-3, MM BIO-4 and MM BIO-5.

FCS appreciates the opportunity to assist you on this project. If you have any questions concerning this letter report, please contact me at jwaligorski@fcs-intl.com.

Sincerely,

Janna Waligorski

Birds: juvenile red-shouldered hawk (*Buteo lineatus*) sitting in eucalyptus tree on N fenceline, Western bluebird (*Sialia mexicana*), Anna's hummingbird (*Calypte anna*), turkey vulture (*Cathartes aura*), American pelican (*Pelecanus erythrorhynchos*), black phoebe (*Sayornis nigricans*), white-crowned sparrow (*Zonotrichia leucophrys*), Northern flicker (*Colaptes auratus*), crow (*Corvus brachyrhynchos*)

Site Visit: 3/20/23

Start Time: 6:35 AM
Weather: no wind, 49 degF, 46% RH
Note: start at sunrise; park in SE corner

Bird Species: wild turkey (*Meleagris gallopavo*), turkey vulture (*Cathartes aura*), Canada goose (*Branta canadensis*), crow (*Corvus brachyrhynchos*), raven (*Corvus corax*), mourning dove (*Zenaida macroura*), lesser goldfinch (*Spinus psaltria*), dark-eyed junco (*Junco hyemalis*), Western bluebird (*Sialia mexicana*), red-shouldered blackbird (*Agelaius phoeniceus*), yellow-rumped warbler (*Setophaga coronata*), house finch (*Haemorhous mexicanus*), red-shouldered hawk (*Buteo lineatus*) two individuals soaring over the eucalyptus grove to the E of the site, house wren (*Troglodytes aedon*), American robin (*Turdus migratorius*), golden-crowned sparrow (*Zonotrichia atricapilla*), Nuttal's woodpecker (*Picoides nuttallii*), white-crowned sparrow (*Zonotrichia leucophrys*), American robin (*Turdus migratorius*), purple finch (*Haemorhous purpureus*), tree swallow (*Tachycineta bicolor*), American goldfinch (*Spinus tristis*), mallard ducks (*Anas platyrhynchos*), ruby-crowned kinglet (*Regulus calendula*), American pipit (*Anthus rubescens*), California gull (*Larus californicus*), brown-headed cowbird (*Molothrus ater*), Anna's hummingbird (*Calypte anna*), chestnut-backed chickadee (*Poecile rufescens*), White-tailed kite (*Elanus leucurus*)

Other Animals: black-tailed jackrabbit (*Lepus californicus*)

Flowering Plants: California poppy (*Eschscholzia californica*), coastal heron's bill (*Erodium cicutarium*), common groundsel (*Senecio vulgaris*), field marigold (*Calendula arvensis*)

Site Visit: 3/31/23

Start time: 6:30 AM
Weather: clear, wind 0 mph, 44.5 degF, 76.5% RH
Notes: parked NE corner

Bird species: American robin (*Turdus migratorius*), house finch (*Haemorhous mexicanus*), crow (*Corvus brachyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*), yellow-rumped warbler (*Setophaga coronata*), wild turkey (*Meleagris gallopavo*), mourning dove (*Zenaida macroura*), Western scrub jay (*Aphelocoma californica*), lesser goldfinch (*Spinus psaltria*), house wren (*Troglodytes aedon*), Canada goose (*Branta canadensis*), American goldfinch (*Spinus tristis*), house sparrow (*Passer domesticus*),

Allen's hummingbird (*Selasphorus sasin*), kildeer (*Charadrius vociferus*), raven (*Corvus corax*), unknown gull likely Western or California, American coot (*Fulica americana*), European starling (*Sturnus vulgaris*), ruby-crowned kinglet (*Regulus calendula*), black phoebe (*Sayornis nigricans*)

Other Animals: Mule deer (*Odocoileus hemionus*), domestic cat (*Felis catus*)

Site Visit: 4/4/23

Start time: 6:35 AM
Weather: clear, 49 degF, no wind, 81% RH, 6:15 AM first light, 7:15 first direct sunlight
Notes: parked SW corner

Bird Species: red-shouldered hawk (*Buteo lineatus*) perched on eucalyptus tree on N fenceline , wild turkey (*Meleagris gallopavo*) calling and all over parking area, White-tailed kite (*Elanus leucurus*) foraging and calling, house wren (*Troglodytes aedon*), house finch (*Haemorhous mexicanus*), mourning dove (*Zenaida macroura*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), raven (*Corvus corax*), lesser goldfinch (*Spinus psaltria*), purple finch (*Haemorhous purpureus*), song sparrow (*Melospiza melodia*), mallard ducks (*Anas platyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*), rock wren (*Salpinctes obsoletus*), black phoebe (*Sayornis nigricans*), European starling (*Sturnus vulgaris*), fox sparrow (*Passerella iliaca*), Northern mockingbird (*Mimus polyglottos*), tree swallow (*Tachycineta bicolor*), Canada goose (*Branta canadensis*), kildeer (*Charadrius vociferus*), Anna's hummingbird (*Calypte anna*), Western bluebird (*Sialia mexicana*)

Other Animals: black-tailed jackrabbit (*Lepus californicus*)

Site Visit: 4/5/23

Start time: 6:08 AM
Weather: 39 degF, 80% RH, no wind
Notes: met Jerry with Stravinsky on-site; parked SW corner

Bird Species: red-shouldered hawk (*Buteo lineatus*) called from southwest corner of eucalyptus grove once, wild turkey (*Meleagris gallopavo*), house finch (*Haemorhous mexicanus*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), California towhee (*Melozone crissalis*), raven (*Corvus corax*), mallard ducks (*Anas platyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*), White-tailed kite (*Elanus leucurus*) 3 hovering various times over the field, Nuttal's woodpecker (*Picoides nuttallii*), European starling (*Sturnus vulgaris*), white-crowned sparrow (*Zonotrichia leucophrys*), black phoebe (*Sayornis nigricans*)

Site Visit: 4/6/23

Start time: 6:17 AM
Weather: clear, 44 degF, 80% RH, no wind
Notes: fewer wildlife than yesterday; met Jerry with Stravinsky on-site; parked SW corner

Bird Species: wild turkey (*Meleagris gallopavo*), house finch (*Haemorhous mexicanus*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), California towhee (*Melozone crissalis*), brown creeper (*Certhia americana*), raven (*Corvus corax*), American robin (*Turdus migratorius*), Canada goose (*Branta canadensis*), red-shouldered hawk (*Buteo lineatus*) called from southwest corner of eucalyptus grove once similar to other mornings, White-tailed kite (*Elanus leucurus*) two individuals over east eucalyptus grove being chased by crows, song sparrow (*Melospiza melodia*), great blue heron (*Ardea herodias*) soaring overhead, unknown gulls soaring, lesser goldfinch (*Spinus psaltria*), Anna's hummingbird (*Calypte anna*), mallard ducks (*Anas platyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*)

Other Animals: runways of black-tailed jackrabbit (*Lepus californicus*) and California vole (*Microtus californicus*)

Site Visit: 4/7/23

Start time: 6:30 AM
Weather: cloudy, 54.5 degF, 79% RH, wind 1-2 mph
Notes: fewer birds today, met Jerry on-site

Bird Species: Bewick's wren (*Thryomanes bewickii*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), wild turkey (*Meleagris gallopavo*), hermit thrush (*Catharus guttatus*), Anna's hummingbird (*Calypte anna*), house wren (*Troglodytes aedon*), dark-eyed junco (*Junco hyemalis*), black phoebe (*Sayornis nigricans*), lesser goldfinch (*Spinus psaltria*), house finch (*Haemorhous mexicanus*), Nuttal's woodpecker (*Picoides nuttallii*), White-tailed kites (*Elanus leucurus*) being chased by crows then two foraging in field, cliff swallow (*Petrochelidon pyrrhonota*), cedar waxwing (*Bombycilla cedrorum*), American goldfinch (*Spinus tristis*), mallard ducks (*Anas platyrhynchos*), white-crowned sparrow (*Zonotrichia leucophrys*)

Other Animals: black-tailed jackrabbit (*Lepus californicus*)

Attention: Mr. Brian Doswald

RE: Addendum Letter to CEQA Biology Report Discussing Proposed Borrow Site SDG Commerce 217 Distribution Center, Napa, California APN: 058-030-065-000

Dear Mr. Doswald:

1. INTRODUCTION

Monk & Associates, Inc., (M&A) has prepared this Addendum to our March 2, 2020, *Revised Biological Resource Analysis* (biology report) for the SDG Commerce 217 Distribution Center located in the City of American Canyon, California (the "project site"). Since the time M&A prepared our biology report for the project site, it has been determined that it will be necessary to acquire soil from the adjacent parcel to the south (the "borrow area parcel") and transport this soil for use as clean fill on the project site. M&A has prepared this Addendum to our biology report to address the transportation of soil from the offsite borrow area parcel onto the project site and to analyze any affects this activity could have on mapped jurisdictional waters of the United States/State that lie inbetween the project site and the adjacent borrow area parcel. Mapped waters of the United States are shown on the attached exhibits.

2. DESCRIPTION OF THE PROJECT SITE AND ADJACENT BORROW AREA PARCEL

The project site and the adjacent borrow area parcel were once part of a contiguous approximately 35-acre project site that M&A conducted surveys on over multiple years dating between 2006 and 2018. Both the project site and adjacent borrow area parcel are dominated by ruderal (weedy) vegetation including stinkwort (*Dittrichia graveolens*), Italian rye grass (*Festuca perennis*), ripgut brome (*Bromus diandrus*), soft chess (*Bromus hordeaceus*), slender wild oat (*Avena barbata*), common vetch (*Vicia sativa*), red-stem filaree (*Erodium cicutarium*), bull thistle (*Cirsium vulgare*), Italian thistle (*Carduus pycnocephalus pycnocephalus*), bristly ox-tongue (*Helminthotheca echioides*), California burclover (*Medicago polymorpha*), and cut-leaf geranium (*Geranium dissectum*). These non-native, weedy species provide little habitat value to wildlife and they do not constitute a native plant community. Native, coyote brush (*Baccharis pilularis* subsp. *consanguinea*), a plant that responds to land disturbances, is also common on the 35 acres. Ruderal vegetation is the only vegetation community found on the project site. The adjacent borrow area parcel, however, in addition to supporting a ruderal herbaceous community also supports waters of the United States, as described below.

On May 16, 2018, the U.S. Army Corps of Engineers issued a jurisdictional determination confirming their jurisdiction over 0.043-acre of waters of the U.S. on the approximately 35-acre

parcel that comprises the project site, the adjacent borrow area parcel, and another property now known as 330 Commerce Center (see attached exhibits). The entire 0.043-acre of waters of the U.S. confirmed by the Corps is found on the adjacent borrow area parcel as shown on the attached exhibit "Borrow Site Rough Grading," Sheet 1 prepared by RSA on August 21, 2020. There are no waters of the United States or State on the project site.

3. DISCUSSION OF PROPOSED ACTIVITIES AND AVOIDANCE OF IMPACTS TO MAPPED WATERS OF THE UNITED STATES

The project applicant intends to rough grade the borrow area parcel and transport soil from that parcel onto the project site for use in development of the project site. In order to protect the waters of the United States/State that occur in between the project site and the borrow area parcel, a 25-foot buffer area around the outside edge of the wetlands will be staked and protected with fiber roll, silt fencing and high visibility orange construction fencing to prevent equipment from driving into the wetlands during hauling activities. See the attached exhibit.

With these protection measures in place, as shown on the attached Borrow Site Rough Grading exhibit, Sheet 1, attached, *there are no expected impacts to waters of the U.S./State from the transport of soil/materials from the borrow area parcel to the project site*.

This concludes our addendum to our biology report. If you have any questions or require additional information, please do not hesitate to contact me at (925) 323-4850 or Sarah@monkassociates.com. Thank you.

Sincerely,

Sarah Lynch
Senior Associate Biologist

1. INTRODUCTION

Monk & Associates, Inc. (M&A) has prepared this biological resource analysis for the proposed SDG Commerce 217 Distribution Center project site (herein referred to as the project site) located in the City of American Canyon, California (Figures 1 and 2). The purpose of our analysis is to provide a description of existing biological resources on the project site and to identify potentially significant impacts that could occur to sensitive biological resources from the construction of a distribution center and associated parking on the project site.

Biological resources include common plant and animal species, and special-status plants and animals as designated by the U.S. Fish and Wildlife Service (USFWS), California Department of Fish and Wildlife (CDFW), National Marine Fisheries Service (NMFS), and other resource organizations, including the California Native Plant Society (CNPS). Biological resources also include waters of the United States and State, as regulated by the U.S. Army Corps of Engineers (Corps), California Regional Water Quality Control Board (RWQCB), and CDFW. Our analysis includes a formal delineation of "waters of the U.S." that was confirmed in 2012 and reverified by the Corps in 2017.

This biological resources analysis also provides mitigation measures for "potentially significant" impacts that could occur to biological resources. Whenever possible, upon implementation, the prescribed mitigation measures would reduce impacts to levels considered less than significant pursuant to the California Environmental Quality Act (CEQA) (Pub. Resources Code §§ 21000 et seq.; 14 Cal. Code Regs §§ 15000 et seq). Accordingly, this report is suitable for review and inclusion in any review being conducted by the City of American Canyon for the proposed project pursuant to the CEQA.

2. PROPERTY LOCATION AND SETTING

The approximately 10-acre project site is located at 1075 Commerce Court, American Canyon, Napa County, California (Figures 1 and 2). The project site is bordered to the southeast by Jungle Paintball, a 40-acre paintball park. To the east is located a large eucalyptus grove with scattered mobile homes. Further to the east is Oat Hill, a geographically prominent hill west of Highway 29. A mix of open space, large warehouses and distribution centers occurs north of the project site. The American Canyon Wastewater Treatment Plant and treatment ponds is located west of the project site. The Napa River and associated marshes occur greater than 300 feet west of the project site. A large distribution center, known as the SDG Commerce 330 Distribution Center, is currently under construction occurs immediately to the south of the project site. Clark Ranch, Wetlands Edge Park, and salt marsh and mudflat habitats associated with the Napa River, occur further to the south of the project site. The Napa Valley Unified School District is constructing the Napa Junction Elementary School to the southeast, along Eucalyptus Drive. Figure 3 provides an aerial photograph that shows the project site features and the surrounding land use.

The 10.39-acre project site is part of a larger 35.85-acre parcel (formerly known as Lot 3) that is comprised of a highly disturbed, ruderal (weedy) plant community, that was recently graded and leveled. This site formerly was occupied by a grove of blue gum eucalyptus (*Eucalyptus globulus*) trees that were removed in 2012.

3. PROPOSED PROJECT

The applicant proposes to construct a 217,294-square foot distribution center with associated parking areas and a detention/bioretention pond on the 10.39-acre project site. Access to the distribution center will be provided by the Commerce Court extension, as illustrated on the Preliminary Site Plan (see attached Sheet A1).

4. ANALYSIS METHODS

Prior to preparing this biological resources analysis report, M&A researched the most recent version of CDFW's Natural Diversity Database, RareFind 5 application (CNDDB 2018) for historic and recent records of special-status plant and animal species (that is, threatened, endangered, rare) known to occur in the region of the project site. All special-status species records were compiled in tables. M&A examined all known record locations for special-status species to determine if special-status species could occur on the project site or within an area of affect.

M&A biologists have a long history of field surveys associated with the approximately 35-acre parcel. M&A biologists conducted site surveys on the parcel on March 1 and April 27, 2006, June 14, 2011, February 14, March 21, and June 12, 2012, May 18, 2017, and on March 30, 2018, December 19 and December 27, 2019. In 2006, and again in 2011, M&A conducted a wetland delineation on the entire parcel. This delineation of "waters of the U.S." was confirmed by the Corps in 2012 and reverified by this agency in 2017. The Corps Confirmed Reverification of Aquatic Resources Delineation Map is provided as Sheet 2.

During the site surveys and wetland delineations, M&A biologists recorded biological resources and assessed the likelihood of resource regulated areas on the project site. In addition to the wetland delineations, the survey involved searching all habitats on the site and recording all plant and wildlife species observed. M&A cross-referenced the habitats found on the project site against the habitat requirements of local or regionally known special-status species to determine if the proposed project could directly or indirectly impact such species. The results of our literature research and field reconnaissance are provided in the sections below.

5. RESULTS OF RESEARCH AND PROJECT SITE ANALYSES

5.1 Topography

The project site is relatively flat with elevations ranging from 8 to 20 feet above sea level. The ground is undulating due to past land use disturbances including eucalyptus tree removal in 2012. The site slopes gently to the west towards North Slough and the Napa River.

5.2 Hydrology

There are no drainages on the project site. There are no indicators of hydrology on the 10-acre project site (Sheet 2).

5.3 Plant Communities and Associated Wildlife Habitats

A complete list of plant species observed on the project site is presented in Table 1. Nomenclature used for plant names follows *The Jepson Manual* Second Edition (Baldwin 2012) and changes made to this manual as published on the Jepson Interchange Project website (http://ucjeps.berkeley.edu/interchange/index.html). Table 2 is a list of wildlife species observed on the project site during multiple years of surveys at the project site. Nomenclature for wildlife follows CDFW's *Complete list of amphibian, reptile, bird, and mammal species in California* (CDFW 2016) and any changes made to species nomenclature as published in scientific journals since the publication of CDFW's list.

5.3.1 RUDERAL HERBACEOUS VEGETATION

A complete list of plant species observed within the project site is presented in Table 1. The project site is dominated by ruderal vegetation including stinkwort (*Dittrichia graveolens*), Italian rye grass (*Festuca perennis*), ripgut brome (*Bromus diandrus*), soft chess (*Bromus hordeaceus*), slender wild oat (*Avena barbata*), common vetch (*Vicia sativa*), red-stem filaree (*Erodium cicutarium*), bull thistle (*Cirsium vulgare*), Italian thistle (*Carduus pycnocephalus pycnocephalus*), bristly ox-tongue (*Helminthotheca echioides*), California burclover (*Medicago polymorpha*), and cut-leaf geranium (*Geranium dissectum*). Native, coyote brush (*Baccharis pilularis* subsp. *consanguinea*), a plant that responds to land disturbances, such as is found on the project site, is also common on this parcel.

Typically, ruderal communities provide habitat for those animal species adapted to humans. Examples of animals associated with these communities include wild turkey (*Meleagris gallopavo*), house finch (*Haemorhous mexicanus*), black phoebe (*Sayornis nigricans*), Say's phoebe (*Sayornis saya*), American crow (*Corvus brachyrhynchos*), mourning dove (*Zenaida macroura*), California ground squirrel (*Otospermophilus beecheyi*), black-tailed jackrabbit (*Lepus californicus*), California meadow vole (*Microtus californicus*), and Botta's pocket gopher (*Thomomys bottae*), among others, all of which have been observed on the project site. Red-shouldered hawk (*Buteo lineatus*), tree swallows (*Tachycineta bicolor*), Nuttall's woodpecker (*Picoides nuttallii*), and northern flicker (*Colaptes auratus*), among others, likely nest in the eucalyptus trees that surround the project site to the west, north and south. Chestnut-backed chickadee (*Poecile rufescens*), brown creeper (*Certhia americana*), American robin (*Turdus migratorius*), northern mockingbird (*Mimus polyglottos*), spotted towhee (*Pipilo maculatus*), California towhee (*Pipilo crissalis*), dark-eyed junco (*Junco hyemalis*), Bullock's oriole (*Icterus bullockii*) and western gray squirrel (*Sciurus griseus*) were also observed in the immediate project vicinity.

5.4 Wildlife Corridors

Wildlife corridors are linear and/or regional habitats that provide connectivity to other natural vegetation communities within a landscape fractured by urbanization and other development. Wildlife corridors have several functions: 1) they provide avenues along which wide-ranging animals can travel, migrate, and breed, allowing genetic interchange to occur; 2) populations can move in response to environmental changes and natural disasters; and 3) individuals can recolonize habitats from which populations have been locally extirpated (Beier and Loe 1992). All three of these functions can be met if both regional and local wildlife corridors are accessible

to wildlife. Regional wildlife corridors provide foraging, breeding, and retreat areas for migrating, dispersing, immigrating, and emigrating wildlife populations. Local wildlife corridors also provide access routes to food, cover, and water resources within restricted habitats.

The proposed project will not interfere with the movement of native wildlife. The project site has a history of disturbance associated with eucalyptus tree removal in 2012, and continued disturbance associated with the paintball facility located immediately to the southeast and construction of the SDG Commerce 330 Distribution Center distribution center to the south. The eucalyptus grove and the marshes associated with the Napa River to the west of the project site provide a more valuable wildlife corridor for terrestrial wildlife.

6. SPECIAL-STATUS SPECIES DEFINITION

6.1 Definitions

For purposes of this analysis, special-status species are plants and animals that are legally protected under the California and Federal Endangered Species Acts (CESA and FESA, respectively) or other regulations, and species that are considered rare by the scientific community (for example, the CNPS). Special-status species are defined as:

- plants and animals that are listed or proposed for listing as threatened or endangered under the CESA (Fish and Game Code §2050 *et seq*.; 14 CCR §670.1 *et seq.*) or the FESA (50 CFR 17.12 for plants; 50 CFR 17.11 for animals; various notices in the Federal Register [FR] for proposed species);

- plants and animals that are candidates for possible future listing as threatened or endangered under the FESA (50 CFR 17; FR Vol. 64, No. 205, pages 57533-57547, October 25, 1999); and under the CESA (California Fish and Game Code §2068);

- plants and animals that meet the definition of endangered, rare, or threatened under the California Environmental Quality Act (CEQA) (14 CCR §15380) that may include species not found on either State or Federal Endangered Species lists;

- Plants occurring on Ranks 1A, 1B, 2A, 2B, 3, and 4 of CNPS' electronic *Inventory* (CNPS 2017). The California Department of Fish and Wildlife (CDFW) recognizes that Ranks 1A, 1B, 2A and 2B of the CNPS inventory contain plants that, in the majority of cases, would qualify for State listing, and CDFW requests their inclusion in EIRs. Plants occurring on CNPS Ranks 3 and 4 are "plants about which more information is necessary," and "plants of limited distribution," respectively (CNPS 2001) (CNPS 2017). Such plants may be included as special-status species on a case by case basis due to local significance or recent biological information (more on CNPS Rank species below);

- migratory nongame birds of management concern listed by U.S. Fish and Wildlife Service (Migratory Nongame Birds of Management Concern in the United States: The list 1995; Office of Migratory Bird Management; Washington D.C.; Sept. 1995);

- animals that are designated as "species of special concern" by CDFW (2018);

- Animal species that are “fully protected” in California (Fish and Game Codes 3511, 4700, 5050, and 5515).

- Bat Species that are designated on the Western Bat Working Group’s (WBWG) Regional Bat Species Priority Matrix as: “RED OR HIGH.” This priority is justified by the WBWG as follows: “Based on available information on distribution, status, ecology, and known threats, this designation should result in these bat species being considered the highest priority for funding, planning, and conservation actions. Information about status and threats to most species could result in effective conservation actions being implemented should a commitment to management exist. These species are imperiled or are at high risk of imperilment.”

In the paragraphs below we provide further definitions of legal status as they pertain to the special-status species discussed in this report or in the attached tables.

Federal Endangered or Threatened Species. A species listed as Endangered or Threatened under the FESA is protected from unauthorized “take” (that is, harass, harm, pursue, hunt, shoot, trap) of that species. If it is necessary to take a Federal listed Endangered or Threatened species as part of an otherwise lawful activity, it would be necessary to receive permission from the USFWS prior to initiating the take.

State Threatened Species. A species listed as Threatened under the state Endangered Species Act (§2050 of California Fish and Game Code) is protected from unauthorized “take” (that is, harass, pursue, hunt, shoot, trap) of that species. If it is necessary to “take” a state listed Threatened species as part of an otherwise lawful activity, it would be necessary to receive permission from CDFW prior to initiating the “take.”

California Species of Special Concern. These are species in which their California breeding populations are seriously declining and extirpation from all or a portion of their range is possible. This designation affords no legally mandated protection; however, pursuant to the CEQA Guidelines (14 CCR §15380), some species of special concern could be considered “rare.” Pursuant to its rarity status, any unmitigated impacts to rare species could be considered a “significant effect on the environment” (§15382). Thus, species of special concern must be considered in any project that will, or is currently, undergoing CEQA review, and/or that must obtain an environmental permit(s) from a public agency.

CNPS Rank Species. The CNPS maintains an “Inventory” of special status plant species. This inventory has four lists of plants with varying rarity. These lists are: Rank 1, Rank 2, Rank 3, and Rank 4. Although plants on these lists have no formal legal protection (unless they are also state or federal listed species), CDFW requests the inclusion of Rank 1 species in environmental documents. In addition, other state and local agencies may request the inclusion of species on other lists as well. The Rank 1 and 2 species are defined below:

- Rank 1A: Presumed extinct in California;
- Rank 1B: Rare, threatened, or endangered in California and elsewhere;
- Rank 2A: Plants presumed extirpated in California, but more common elsewhere;
- Rank 2B: Rare, threatened, or endangered in California, but more common elsewhere.

All of the plants constituting Rank 1B meet the definitions of Section 1901, Chapter 10 (Native Plant Protection Act) or Sections 2062 and 2067 (California Endangered Species Act) of the Fish and Game Code, and are eligible for state listing (CNPS 2001). Rank 2 species are rare in California, but more common elsewhere. Ranks 3 and 4 contain species about which there is some concern, and are reviewed by CDFW and maintained on "watch lists."

Additionally, in 2006 CNPS updated their lists to include "threat code extensions" for each list. For example, Rank 1B species would now be categorized as Rank 1B.1, Rank 1B.2, or Rank 1B.3. These threat codes are defined as follows:

- .1 is considered "seriously endangered in California (over 80% of occurrences threatened/high degree and immediacy of threat)";
- .2 is "fairly endangered in California (20-80% of occurrences threatened)";
- .3 is "not very endangered in California (less than 20% of occurrences threatened or no current threats known)."

Under the CEQA review process only CNPS Rank 1 and 2 species are considered since these are the only CNPS species that meet CEQA's definition of "rare" or "endangered." Impacts to Rank 3 and 4 species are not regarded as significant pursuant to CEQA.

Fully Protected Birds. Fully protected birds, such as the white-tailed kite and golden eagle, are protected under California Fish and Game Code (§3511). Fully protected birds may not be "taken" or possessed (i.e., kept in captivity) at any time.

6.2 Potential Special-Status Plants on the Project Site

Figure 4 provides a graphical illustration of the known records for special-status species within 3 miles of the project site and helps readers visually understand the number of sensitive species that occur in the vicinity of the project site. No special-status plants have been mapped on or adjacent to the project site. However, according to the CDFW's CNDDB, a total of eight special-status plant species are known to occur in the region of the project site (Table 3). Most of these plants occur in specialized habitats such as marshes, foothill grasslands, and vernal pools, none of which occur onsite. In the recent past, blue gum eucalyptus trees covered the majority of the project site dating back for several decades; these trees emit allelopathic (growth inhibiting) chemicals from their leaves, acorns and bark that prevent other plants from growing under them. Once bark and leaf debris accumulate on the ground beneath the trees, nearly nothing will grow there. Based on the negative findings during the multiple surveys conducted on this site in 2006, 2011, 2012, 2017, 2018 and 2019, special-status plants are not likely to be found onsite and mitigation for special-status plants should not be warranted.

6.3 Potential Special-Status Animals in the Project Site

Figure 4 provides a graphical illustration of the known records for special-status species within three miles of the project site and helps readers visually understand the number of sensitive species that occur in the vicinity of the project site. No special-status animal records have ever been mapped on or adjacent to the project site. However, a total of 18 special-status animal species are known to occur in the region of the project site (Table 4). Due to the disturbed nature of the project site and its history as a eucalyptus grove, there is a very low likelihood of special-status species occurring onsite. Regardless, due to the sensitivity of four of the special-status wildlife species known to occur in the area, we further discuss these species below.

6.3.1 California red-legged frog

The California red-legged frog (*Rana draytonii*) was federally-listed as threatened on May 23, 1996 (Federal Register 61: 25813-25833) and as such is protected pursuant to the Federal Endangered Species Act. On March 16, 2010 the USFWS issued the final designation for California red-legged frog Critical Habitat (USFWS 2010). *The project site does not fall within mapped critical habitat, although it is adjacent* (see Figure 5).

The California red-legged frog is also a state "species of special concern." While the state designation "species of special concern" does not provide any legally mandated protection, species of special concern must be considered in any project undergoing a CEQA review.

The California red-legged frog is typically found in ponds, slow-flowing portions of perennial and intermittent streams that maintain water in the summer months. This frog is also found in hillside seeps that maintain pool environments or saturated soils throughout the summer months. Populations probably cannot be maintained if all surface water disappears (i.e., no available surface water for egg laying and larval development habitat). Larval California red-legged frogs require 11-20 weeks of permanent water to reach metamorphosis (i.e., to change from a tadpole into a frog), in water depths of 10 to 20 inches (USFWS 2002). Riparian vegetation such as willows and emergent vegetation such as cattails are preferred red-legged frog habitats, though not necessary for this species to be present. Populations of California red-legged frog will be reduced in size or eliminated from ponds supporting non-native species such as bullfrog, Centrarchid fish species (such as sunfish, bluegill, or large-mouth bass), and signal and red swamp crayfish (*Pacifastacus leniusculus* and *Procambarus clarkii*, respectively), all of which are known California red-legged frog predators. However, the presence of these non-native species does not preclude the presence of the California red-legged frog.

California red-legged frogs also use upland habitats for migration and dispersal. The USFWS *Recovery Plan for the California Red-Legged Frog* states that frog overland excursions via uplands can vary between 0.25-mile up to 3 miles during the wet season, and that frogs "have been observed to make long-distance movements that are straight-line, point to point migrations rather than using corridors for moving in between habitats" (USFWS 2002). The information presented in the USFWS' Recovery Plan was taken from a publication by Bulger et al. (2003) that recounts a study in coastal redwoods in Santa Cruz area. M&A believes that such overland straight-line migrations are primarily limited to periods of heavy rainfall or during periods when ambient conditions exhibit high moisture levels such as in fog belts along the coast. Working in

Point Reyes National Seashore on the coast of California, Fellers and Kleeman (2007) found approximately 31 percent of California red-legged frogs moved more than 30 meters from their breeding sites and about 69 percent moved less than 30 meters from their breeding site during seasonal movement periods. Similarly, Bulger et al. (2003) found that 60 percent of their radio tagged frogs stayed within 30 meters of their breeding sites.

In locations that are characterized by hot and seasonally dry climates, the California red-legged frog is inclined to stay closer to its aquatic environments or will not migrate. Tatarian (2005) who studied an inland population of California red-legged frogs in eastern Contra Costa County where the climate is far drier than the coastal environment, found that all movements started after the first 0.5 cm of rain in the fall, with more terrestrial movements being made in the fall pre-breeding season (57%) than in the winter breeding season (32%) or spring post-breeding season (11%). Tatarian (op. cit.) also found that California red-legged frogs moved greater average distances aquatically (84.6 m) than terrestrially (27.7 m). Greater terrestrial distances were moved in the pre-breeding season (35.2 m) than in the breeding season (15.5 m) or post-breeding season (16.3 m) with the majority of movements occurring for only one of the 3-4 day survey periods. The majority of frogs (57%) were position faithful within a pool, indicating they did not migrate at all. These data suggest that long forays across the landscape found in coastal populations are less likely in dry inland locations.

The USFWS *Recovery Plan for the California Red-Legged Frog* states that populations are "most likely to persist where multiple breeding areas are embedded within a matrix of habitats used for dispersal." "The primary constituent elements for California red-legged frogs are aquatic and upland areas where suitable breeding and non-breeding habitat is interspersed throughout the landscape and is interconnected by unfragmented dispersal habitat" (USFWS 2002).

In the American Canyon/Napa area, there are no records for the California red-legged frog west of State Route 29 where the project site is located. The closest known California red-legged frog occurrence is 1.4 miles east of the project site (CNDDB Occurrence No. 896). The California red-legged frog at this location was found in a dry cement tank adjacent to a large quarry pond that supported bullfrogs (*Lithobates catesbeiana*). State Route 29 is located between this closest California red-legged frog record and the project site and constitutes an effective geographic barrier to overland California red-legged frog movements to/from the known record location and other extant California red-legged frog populations to the project site. There is no hydrologic connectivity over any undeveloped migration route between the known records for this species and the project site. Finally, the project site does not provide suitable habitat for the California red-legged frog. Based on all the available information, it can be concluded that the project site does not provide suitable habitat for the California red-legged frog. Similarly, the surrounding parcels with dense eucalyptus groves do not provide suitable habitat. Owing to the excessively disturbed conditions on the project site due to prior grading and tree removal activities, this species is not expected to occur on the project site. *Therefore, the proposed project will not impact the California red-legged frog and mitigation should not be warranted.*

6.3.2 SWAINSON'S HAWK

The Swainson's hawk (*Buteo swainsoni*) is a state-listed threatened species, protected pursuant to the California Endangered Species Act (CESA), and Title 14 of the California Code of Regulations. While it has no special federal status, it is protected from direct take under the Federal Migratory Bird Treaty Act of 1918 (16 U.S.C. 703-711). Swainson's hawks, their active nests, eggs, and young are also protected under California Fish and Game Code (§3503, §3503.5, §3513, and §3800).

Swainson's hawk inhabits open to semi-open areas at low to middle elevations in valleys, dry meadows, foothills, and level uplands (Kochert 1986). It nests almost exclusively in trees and will nest in almost any tree species that is at least 10 feet tall (Schmutz et. al. 1984). Nests are constructed in isolated trees that are dead or alive along drainages and in wetlands, or in windbreaks in fields and around farmsteads (Palmer 1988). Swainson's hawks occasionally nest in shrubs, on telephone poles, and on the ground. In the Central Valley of California, the majority of Swainson's hawk nests and territories are associated with riparian systems and nests are commonly found in cottonwoods and oaks (Schlorff et. al. 1984). They have also been documented nesting in eucalyptus (*Eucalyptus* spp.), black walnut (*Juglans hindsii*), black locust (*Robinia pseudoacacia*), almond (*Prunus dulcis*), Osage orange (*Maclura pomifera*), Arizona cypress (*Cupressus arizonica*), and pine (*Pinus* spp.).

Foraging habitats include grasslands, alfalfa fields, fallow fields, beet, tomato, and other low-growing row or field crops, dry-land and irrigated pasture, and rice land when not flooded (CDFG 1994). The Swainson's hawk generally forages in open habitats with short vegetation containing small mammals, reptiles, birds, and insects. Its primary prey in the Central Valley is California meadow vole (*Microtus californicus*). Agricultural areas are often preferred over more natural grassland habitats due to larger prey populations. In addition, agricultural practices (planting, maintenance, harvesting, disking) allow for access to prey, and very likely increase foraging success of Swainson's hawks by flushing prey (personal observations of G. Monk). During the nesting season Swainson's hawks usually forage within two miles of the nest. Swainson's hawk does not require habitats that contain many perches because it most often searches for prey aerially, therefore it can occupy habitats with few or no perches except the nest tree (James 1992).

Swainson's hawks are regular summer visitors and breeders throughout the western states. In the fall months, most Swainson's hawks migrate to Argentina before returning to the United States to breed in the late-spring (typically April). For decades, Argentina farmers were spraying insecticides over habitats that included gregarious night roosts of the Swainson's hawk, killing many thousands of these hawks. This practice was halted in the last 10 years and the Swainson's hawk population appears to be dramatically responding in California. While in the 1970s through 1990s there were only two relatively small populations of Swainson's hawks that remained resident in California year-round in the Davis area and in the Sacramento River Delta, resident and migrant populations of the Swainson's hawks are now dramatically expanding their nesting distribution in California since insecticide use over Argentinian wintering grounds was halted (G. Monk, personal observations). For example, Swainson's hawks were never recorded nesting in the Napa County area until relatively recently.

The closest known record for nesting Swainson's hawk is 2.6 miles northeast of the project site (CNDDB Occurrence No. 2744). No Swainson's hawk nests have been observed on the site or offsite in the vicinity of the project site during M&A's project site surveys. However, the nesting population appears to be increasing throughout its nesting range in northern California (recent CNDDB records and G. Monk general observations) and the eucalyptus trees growing adjacent to the project site provide suitable nesting habitat. Therefore, there is the possibility that Swainson's hawks could nest near this project site in future years. *Hence, prior to earth-disturbance or construction, nesting surveys must be conducted that confirm or negate this species' presence as a nesting bird on or adjacent to the project site. Accordingly, impacts to Swainson's hawk are regarded as potentially significant pursuant to the CEQA.* Mitigation could be implemented to reduce these impacts to levels regarded as less than significant pursuant to the CEQA. The Impacts and Mitigation Measures that follow in the sections below address these impacts.

6.3.3 WESTERN BURROWING OWL

The western burrowing owl (*Athene cunicularia hypugaea*) is a California "species of special concern." Its nest, eggs, and young are also protected under California Fish and Game Code (§3503, §3503.5, and §3800). The burrowing owl is also protected from direct take under the Migratory Bird Treaty Act (50 CFR 10.13). Finally, based upon this species' rarity status, any unmitigated impacts to rare species would be considered a "significant effect on the environment" pursuant to §21068 of the CEQA Statutes and §15382 of the CEQA Guidelines. Thus, this owl species must be considered in any project that will, or is currently, undergoing CEQA review, and/or that must obtain an environmental permit(s) from a public agency. When these owls occur on project sites, typically, mitigation requirements are mandated in the conditions of project approval from the CEQA lead agency.

Burrowing owl habitat is usually found in annual and perennial grasslands, characterized by low-growing vegetation. Often, the burrowing owl utilizes rodent burrows, typically California ground squirrel (*Otospermophilus beecheyi*) burrows, for nesting and cover. They may also on occasion dig their own burrows or use man-made objects such as concrete culverts or rip-rap piles for cover. They exhibit high site fidelity, reusing burrows year after year. Occupancy of suitable burrowing owl habitat can be verified at a site by observation of these owls during the spring and summer months or, alternatively, its molted feathers, cast pellets, prey remains, eggshell fragments, or excrement (white wash) at or near a burrow. Burrowing owls typically are not observed in grasslands with tall vegetation or wooded areas because the vegetation obscures their ability to detect avian and terrestrial predators. Since burrowing owls spend the majority of their time sitting at the entrances of their burrows, grazed grasslands seem to be their preferred habitat because it allows them to view the world at 360 degrees without obstructions.

The closest CNDDB record was documented 2.6 miles southeast of the project site in an area that has since been developed (CNDDB Occurrence No. 109). The project site was severely disturbed during the eucalyptus removal in 2012; thus, ground squirrel burrows are few and of recent origin. The mobility of the western burrowing owl enables the species to colonize the recent burrows. M&A did not observe western burrowing owls or any indirect evidence that burrowing owls are using or residing on the project site during any of the site surveys.

Regardless, the project site provides marginal nesting habitat for the western burrowing owl. *In order to confirm or negate the presence of western burrowing owls on site, surveys must be conducted prior to the commencement of earth-moving or construction*. *Accordingly, impacts to western burrowing owl are regarded as potentially significant pursuant to the CEQA.* Mitigation could be implemented to reduce these impacts to levels regarded as less than significant pursuant to the CEQA. The Impacts and Mitigation Measures that follow in the sections below address these impacts.

6.3.4 NORTHERN HARRIER

The northern harrier (*Circus cyaneus*) is a California species of special concern. This raptor is protected under California Fish and Game Code §3503.5 that protects nesting raptors and their eggs/young and is also protected from direct take under the Migratory Bird Treaty Act (50 CFR 10.13). Northern harriers build grass-lined nests on the ground within dense, low-lying vegetation in a variety of habitats, though they are typically found nesting in grassland or marsh habitats. They usually nest on level to near level ground. This species is particularly vulnerable to ground predators such as coyotes (*Canis latrans*), red fox (*Vulpes vulpes*), and various snake species. Ground nesting birds in general are also subject to disturbance by agricultural practices. Northern harriers may forage over the project site and may nest in the open ruderal habitats onsite that provide suitable nesting habitat for this species. Hence, the proposed project could result in impacts to nesting northern harriers.

The closest CNDDB record was documented 2.8 miles west of the project site (CNDDB Occurrence No. 29). The project site was severely disturbed during the eucalyptus removal in 2012. Regardless, the project site provides marginal nesting habitat for the northern harrier. *In order to confirm or negate the presence of northern harriers on site, surveys must be conducted prior to the commencement of earth-moving or construction*. *Accordingly, impacts to northern harrier are regarded as potentially significant pursuant to the CEQA.* Mitigation could be implemented to reduce these impacts to levels regarded as less than significant pursuant to the CEQA. The Impacts and Mitigation Measures that follow in the sections below address these impacts.

7. REGULATORY FRAMEWORK FOR NATIVE WILDLIFE, FISH, AND PLANTS

This section provides a discussion of those laws and regulations that are in place to protect native wildlife, fish, and plants. Under each law we discuss their pertinence to the proposed development.

7.1 Federal Endangered Species Act

The Federal Endangered Species Act (FESA) forms the basis for the federal protection of threatened or endangered plants, insects, fish and wildlife. FESA contains four main elements, they are as follows:

Section 4 (16 USCA §1533): Species listing, Critical Habitat Designation, and Recovery Planning: outlines the procedure for listing endangered plants and wildlife.

Section 7 (§1536): Federal Consultation Requirement: imposes limits on the actions of federal agencies that might impact listed species.

Section 9 (§1538): Prohibition on Take: prohibits the "taking" of a listed species by anyone, including private individuals, and State and local agencies.

Section 10: Exceptions to the Take Prohibition: non-federal agencies can obtain an incidental take permit through approval of a Habitat Conservation Plan.

In the case of salt water fish and other marine organisms, the requirements of FESA are enforced by the National Marine Fisheries Service (NMFS). The USFWS enforces all other cases. Below, Sections 9, 7, and 10 of FESA are discussed since they are the sections most relevant to the proposed project.

Section 9 of FESA as amended, prohibits the "take" of any fish or wildlife species listed under FESA as endangered. Under Federal regulation, "take" of fish or wildlife species listed as threatened is also prohibited unless otherwise specifically authorized by regulation. "Take," as defined by FESA, means "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." "Harm" includes not only the direct taking of a species itself, but the destruction or modification of the species' habitat resulting in the potential injury of the species. As such, "harm" is further defined to mean "an act which actually kills or injures wildlife; such an act may include significant habitat modification or degradation where it actually kills or injures wildlife by significantly impairing essential behavioral patterns, including breeding, feeding or sheltering" (50 CFR 17.3). A December 2001 decision by the 9th Circuit Court of Appeals (Arizona Cattle Growers' Association, Jeff Menges, vs. the U.S. Fish and Wildlife Service and Bureau of Land Management, and the Southwest Center for Biological Diversity) ruled that the USFWS must show that a threatened or endangered species is present on a project site and that it would be taken by the project activities. According to this ruling, the USFWS can no longer require mitigation based on the probability that the species could use the site. Rather they must show that it is actually present.

Section 9 applies to any person, corporation, federal agency, or any local or State agency. If "take" of a listed species is necessary to complete an otherwise lawful activity, this triggers the need to obtain a incidental take permit either through a Section 7 Consultation as discussed further below (for federal actions or private actions that are permitted or funded by a federal agency), or requires preparation of a Habitat Conservation Plan (HCP) pursuant to Section 10 of FESA (for state and local agencies, or individuals, and projects without a federal "nexus").

Section 7(a)(2) of the Act requires that each federal agency consult with the USFWS to ensure that any action authorized, funded or carried out by such agency is not likely to jeopardize the continued existence of an endangered or threatened species or result in the destruction or adverse modification of critical habitat for listed species. Critical habitat designations mean: (1) specific areas within a geographic region currently occupied by a listed species, on which are found those physical or biological features that are essential to the conservation of a listed species and that may require special management considerations or protection; and (2) specific areas outside the

geographical area occupied by a listed species that are determined essential for the conservation of the species.

The Section 7 consultation process only applies to actions taken by federal agencies that are considering authorizing discretionary projects. Section 7 is by and between the NMFS and/or the USFWS and the federal agency contemplating a discretionary approval (that is, the "federal nexus agency," for example, the Corps or the Federal Highway Administration). Private parties, cities, counties, etc. (i.e., applicants) may participate in the Section 7 consultation *at the discretion of the federal agencies conducting the Section 7 consultation*. The Section 7 consultation process is triggered by a determination of the "action agency" – that is, the federal agency that is carrying out, funding, or approving a project - that the project "may affect" a listed species or critical habitat. If an action is likely to adversely affect a listed species or designated critical habitat, formal consultation between the nexus agency and the USFWS/NMFS is required. As part of the formal consultation, the USFWS/NMFS may resolve any issues informally with the nexus agency or may prepare a formal Biological Opinion assessing whether the proposed action would be likely to result in "jeopardy" to a listed species or if it could adversely modify designated critical habitat. If the USFWS/NMFS prepares a Biological Opinion, it will contain either a "jeopardy" or "non-jeopardy" decision. If the USFWS/NMFS concludes that a proposed project would result in adverse modification of critical habitat or would jeopardize the continued existence of a federal listed species (that is, it will issue a jeopardy decision), the nexus federal agency would be most unlikely to authorize its discretionary permit. If the USFWS/NMFS prepares a "non-jeopardy" Biological Opinion, the nexus federal agency may authorize the discretionary permit making all conditions of the Biological Opinion conditions of its discretionary permit. A non-jeopardy Biological Opinion constitutes an "incidental take" permit that allows applicants to "take" federally-listed species while otherwise carrying out legally sanctioned projects.

For non-federal entities, for example private parties, cities, counties that are considering a discretionary permit, Section 10 provides the mechanism for obtaining take authorization. Under Section 10 of FESA, for the applicant to obtain an "incidental take permit," the applicant is required to submit a "conservation plan" to the USFWS or NMFS that specifies the impacts that are likely to result to federally-listed species, and the measures the applicant will undertake to minimize and mitigate such impacts, and the funding that will be available to implement those steps. Conservation plans under FESA have come to be known as "habitat conservation plans" or "HCPs" for short. The terms incidental take permit, Section 10 permit, and Section 10(a)(1)(B) permit are used interchangeably by the USFWS. Section 10(a)(2)(B) of FESA provides statutory criteria that must be satisfied before an incidental take permit can be issued.

7.1.1 Responsible Agency

FESA gives regulatory authority to the USFWS for federally-listed terrestrial species and non-anadromous fish. The NMFS has regulatory authority over federally-listed marine mammals and anadromous fish.

7.1.2 Applicability to the Proposed Project

The closest known California red-legged frog occurrence is 1.4 miles east of the project site (CNDDB Occurrence No. 896). The California red-legged frog was found in a dry cement tank

adjacent to a large quarry pond that supported bullfrogs. State Route 29 is located between the closest California red-legged frog record and the project site and constitutes an effective geographic barrier to overland California red-legged frog movements to/from the known record location and other extant California red-legged frog populations to the project site. There is no hydrologic connectivity along any undeveloped migration route between the known records for this species and the project site. Finally, the project site does not provide suitable habitat for the California red-legged frog. Based on all the available information, it can be concluded that the project site does not provide suitable habitat for the California red-legged frog. Owing to the excessively disturbed conditions on the project site due to prior grading and tree removal activities, this species is not expected to occur on the project site. Therefore, the proposed project will not impact the California red-legged frog.

No other federally listed species are expected to occur on the project site. The project site does not provide fisheries habitat as it consists entirely of upland communities. *Therefore, it can be stated with confidence that the proposed project would not impact federally listed plant, animal, or fish species.*

7.2 Federal Migratory Bird Treaty Act

The Migratory Bird Treaty Act of 1918 (16 U.S.C. §§ 703-712, July 3, 1918, as amended 1936, 1960, 1968, 1969, 1974, 1978, 1986 and 1989) makes it unlawful to "take" (kill, harm, harass, shoot, etc.) any migratory bird listed in Title 50 of the Code of Federal Regulations, Section 10.13, including their nests, eggs, or young. Migratory birds include geese, ducks, shorebirds, raptors, songbirds, wading birds, seabirds, and passerine birds (such as warblers, flycatchers, swallows, etc.).

7.2.1 Applicability to The Proposed Project

Western burrowing owl, northern harrier, Swainson's hawk, red-shouldered hawk, and red-tailed hawk (*Buteo jamaicensis*), among other raptors (birds of prey) could nest in the eucalyptus grove in the immediate vicinity of the project site. These raptors would be protected by the Migratory Bird Treaty Act. Also, the common songbirds that could forage on the site would be protected pursuant to this Act. As long as there is no direct mortality of species protected pursuant to this Act caused by development of the site, there should be no constraints to development of the site. To comply with the Migratory Bird Treaty Act, all active nest sites would have to be avoided while such birds were nesting. Upon completion of nesting, the project could commence as otherwise planned. Please review specific requirements for avoidance of nest sites for potentially occurring species in the Impacts and Mitigations section below.

7.3 California Endangered Species Act

7.3.1 Section 2081 of the California Endangered Species Act

In 1984, the state legislated the California Endangered Species Act (CESA) (Fish and Game Code §2050). The basic policy of CESA is to conserve and enhance endangered species and their habitats. State agencies will not approve private or public projects under their jurisdiction that would impact threatened or endangered species if reasonable and prudent alternatives are available. Because CESA does not have a provision for "harm" (see discussion of FESA, above),

CDFW considerations pursuant to CESA are limited to those actions that would result in the direct take of a listed species.

If CDFW determines that a proposed project could impact a state-listed threatened or endangered species, CDFW will provide recommendations for "reasonable and prudent" project alternatives. The CEQA lead agency can only approve a project if these alternatives are implemented, unless it finds that the project's benefits clearly outweigh the costs, reasonable mitigation measures are adopted, there has been no "irreversible or irretrievable" commitment of resources made in the interim, and the resulting project would not result in the extinction of the species. In addition, if there would be impacts to threatened or endangered species, the lead agency typically requires project applicants to demonstrate that they have acquired "incidental take" permits from CDFW and/or USFWS (if it is a Federal listed species) prior to allowing/permitting impacts to such species.

If proposed projects would result in impacts to a state-listed species, an "incidental take" permit pursuant to §2081 of the Fish and Game Code would be necessary (versus a Federal incidental take permit for Federal listed species). CDFW will issue an incidental take permit only if:

1) The authorized take is incidental to an otherwise lawful activity;
2) the impacts of the authorized take are minimized and fully mitigated;
3) measures required to minimize and fully mitigate the impacts of the authorized take:
    a) are roughly proportional in extent to the impact of the taking on the species;
    b) maintain the project applicant's objectives to the greatest extent possible; and,
    c) capable of successful implementation; and,
4) adequate funding is provided to implement the required minimization and mitigation measures and to monitor compliance with, and the effectiveness of, the measures.

If an applicant is preparing a habitat conservation plan (HCP) as part of the federal 10(a) permit process, the HCP might be incorporated into the §2081 permit if it meets the substantive criteria of §2081(b). To ensure that an HCP meets the mitigation and monitoring standards in Section 2081(b), an applicant should involve CDFW staff in development of the HCP. If a final Biological Opinion (federal action) has been issued for the project pursuant to Section 7 of the federal Endangered Species Act, it might also be incorporated into the §2081 permit if it meets the standards of §2081(b).

No §2081 permit may authorize the take of a species for which the Legislature has imposed strict prohibitions on all forms of "take." These species are listed in several statutes that identify "fully protected" species and "specified birds." *See* Fish and Game Code §§ 3505, 3511, 4700, 5050, 5515, and 5517. If a project is planned in an area where a "fully protected" species or a "specified bird" occurs, an applicant must design the project to avoid all take.

Fish and Game Code §2080.1 allows an applicant who has obtained a "non-jeopardy*"* federal Biological Opinion pursuant to Section 7 of the FESA, or who has received a federal 10(a) permit (federal incidental take permit) pursuant to the FESA, to submit the federal opinion or permit to CDFW for a determination as to whether the federal document is "consistent" with CESA. If after 30 days CDFW determines that the federal incidental take permit is consistent

with state law, and that all state-listed species under consideration have been considered in the federal Biological Opinion, then no further permit or consultation is required under CESA for the project. However, if CDFW determines that the federal opinion or permit is not consistent with CESA, or that there are state-listed species that were not considered in the federal Biological Opinion, then the applicant must apply for a state CESA permit under Section 2081(b). Section 2081(b) is of no use if an affected species is state-listed, but not federally-listed.

State and federal incidental take permits are issued on a discretionary basis, and are typically only authorized if applicants are able to demonstrate that impacts to the listed species in question are unavoidable, and can be mitigated to an extent that the reviewing agency can conclude that the proposed impacts would not jeopardize the continued existence of the listed species under review. Typically, if there would be impacts to a listed species, mitigation that includes habitat avoidance, preservation, and creation of endangered species habitat is necessary to demonstrate that projects would not threaten the continued existence of a species. In addition, management endowment fees are usually collected as part of the agreement for the incidental take permit(s). The endowment is used to manage any lands set-aside to protect listed species, and for biological mitigation monitoring of these lands over (typically) a five-year period.

7.3.2 Applicability to The Proposed Project

No state-listed plant species would likely occur on the project site due to an absence of habitat. The project site does not support any trees and does not provide nesting habitat for the Swainson's hawk. Suitable nesting habitat for this hawk exists in the eucalyptus trees on the adjacent properties; thus, preconstruction nesting surveys will be necessary to ensure that earth-work or construction does not occur while this raptor is nesting nearby or that if it does, it does not disturb the nesting birds. If the proposed project follows the proposed mitigation measures as detailed in the Impacts and Mitigation section below, *an Incidental Take Permit (ITP) from the CDFW should not be necessary for this project.*

7.4 California Fish and Game Code § 3503, 3503.5, 3511, and 3513

California Fish and Game Code §3503, 3503.5, 3511, and 3513 prohibit the "take, possession, or destruction of birds, their nests or eggs." Disturbance that causes nest abandonment and/or loss of reproductive effort (killing or abandonment of eggs or young) is considered "take." Such a take would also violate federal law protecting migratory birds (Migratory Bird Treaty Act).

All raptors (that is, hawks, eagles, owls) their nests, eggs, and young are protected under California Fish and Game Code (§3503.5). Additionally, "fully protected" birds, such as the white-tailed kite (*Elanus leucurus*) and golden eagle (*Aquila chrysaetos*), are protected under California Fish and Game Code (§3511). "Fully protected" birds may not be taken or possessed (that is, kept in captivity) at any time.

7.4.1 Applicability to the Proposed Project

Raptors that could be affected by the project include western burrowing owl, northern harrier, Swainson's hawk, red-shouldered hawk and red-tailed hawk. Preconstruction surveys would have to be conducted for these species to ensure that there is no direct take of these birds including their eggs, or young. Any active nests that were found during preconstruction surveys

would have to be avoided by the project. Suitable non-disturbance buffers would have to be established around nest sites until the nesting cycle is complete. More specifics on the size of buffers are provided below in the Impacts and Mitigations section.

7.5 City of American Canyon General Plan

The City of American Canyon General Plan sets forth the following goals, objectives, and policies relevant to biological resources on the project site. Only those applicable to the proposed project are discussed herein:

7.5.1 Goal 8, Objective 8.1 and Policies 8.1.1 and 8.1.4

- **Goal 8:** Protect and preserve the significant habitats, plants and wildlife that exist in the City and its Planning Area.
- **Objective 8.1:** Maintain data and information regarding areas of significant biological value within the Planning Area to facilitate resource conservation and the appropriate management of development.
- **Policy 8.1.1:** Acquire and maintain the most current information available regarding the status and location of sensitive biological elements (species and natural communities) within the City and, as appropriate, within the Sphere of Influence and Urban Limit Line.
- **Policy 8.1.4:** Regularly monitor and review developments proposed within the City's Planning Area to assess their impacts on local biological resources and to recommend appropriate mitigation measures that the developer and/or government agency can implement.

7.5.2 Applicability to the Proposed Project

Consistent with General Plan Policies 8.1.1 and 8.1.4, this report provides a detailed assessment of the biological resources present on the project site.

7.5.3 Objective 8.2 and Policy 8.2.1

- **Objective 8.2:** Balance the preservation of natural habitat areas, including coastal saltmarsh, mixed hardwood forest, oak savannah, and wetland and riparian habitats, with new development in the City.
- **Policy 8.2.1:** Land use applications for developments located within sensitive habitats, including coastal saltmarsh, mixed hardwood forest, oak savannah, and riparian habitats (see Figure 8-1) [General Plan], or with areas potentially occupied by vernal pools (see Figure 8-2) [General Plan] shall be accompanied by sufficient technical background data to enable an adequate assessment of the potential for impacts on these resources, and possible measures to reduce any identifiable impacts. In addition to examining Figure 8-1 [General Plan] for information on these sensitive habitats, an on-site assessment shall be conducted by a City approved qualified biologist to determine if sensitive habitats exist on-site. In instances where the potential for significant impacts exists, the applicant must submit a Biological Assessment Report prepared by a qualified professional.

7.5.4 APPLICABILITY TO THE PROPOSED PROJECT

Consistent with General Plan Policy 8.2.1, the project site has been evaluated for the presence of sensitive biological resources. This report represents a Biological Assessment Report documenting findings from background research, and presents the current habitats and species present on the project site.

7.5.5 OBJECTIVE 8.3 AND POLICY 8.3.1

- **Objective 8.3:** Protect natural drainages and riparian corridors within the American Canyon Planning Area.
- **Policy 8.3.1:** Review proposed developments in wetlands and riparian habitats to evaluate their conformance with the following policies and standards:
    a. The development plan shall fully consider the nature of existing biological resources and all reasonable measures shall be taken to avoid significant impacts, including retention of sufficient natural open space and undeveloped buffer zones.

7.5.6 APPLICABILITY TO THE PROPOSED PROJECT

No wetland, natural drainages or riparian habitats are proposed to be impacted, as there are none present on the 10-acre project site.

7.5.7 POLICY 8.3.1 B

- **Policy 8.3.1 b:** Development shall be designed and sited to preserve watercourses, riparian habitat, vernal pools, and wetlands in their natural condition, unless these actions result in an unfeasible project, in which case habitat shall be replaced in accord with subsection "g" (below).

7.5.8 APPLICABILITY TO THE PROPOSED PROJECT

Proposed development on the project site does not impact watercourses, riparian habitat, vernal pools or wetlands.

7.5.9 POLICY 8.3.1 E

- **Policy 8.3.1 e:** Development shall incorporate fences, walls, vegetative cover, or other measures to adequately buffer habitat areas, linkages or corridors from built environment.

7.5.10 APPLICABILITY TO THE PROPOSED PROJECT

Previous disturbance on the project site prohibits presence of land linkages, corridors, or habitat areas. Similarly, because creation of a mitigation site is not necessary for this site, there will be no habitat area or otherwise natural space in need of buffering.

7.5.11 POLICY 8.3.1 F

- **Policy 8.3.1 f:** Roads and utilities shall be located and designed such that conflicts with biological resources, habitat areas, linkages or corridors are avoided where feasible.

7.5.12 APPLICABILITY TO THE PROPOSED PROJECT

Consistent with Policy 8.3.1.f, and Policy 8.3.1.g roads and utilities have been designed to avoid conflicts with biological resources on the project site.

7.5.13 POLICY 8.3.1 G

- **Policy 8.3.1 g:** Future development shall utilize appropriate open space or conservation easements in order to protect sensitive species or their habitats.

7.5.14 POLICIES 8.3.5 AND 8.3.6

- **Policy 8.3.5:** Establish a network of open spaces along the City's natural drainages and riparian corridors and link significant biological habitats. Any recreational use of these areas shall be designed to avoid damaging sensitive habitat areas.
- **Policy 8.3.6:** Preserve and integrate the City's natural drainages in new development, as opposed to their channelization or undergrounding, emphasizing opportunities for the development of pedestrian paths and greenbelts along their lengths throughout the City.

7.5.15 APPLICABILITY TO THE PROPOSED PROJECT

There are no drainages on the project site or significant biological habitats onsite; hence, these policies do not apply to the proposed project.

8. CITY OF AMERICAN CANYON –ORDINANCES

8.1 Trees (Ord. 18.40.110)

A. Existing trees shall be preserved on the site unless otherwise approved by the city council as a part of the site development plans.

B. Unless specifically approved by the city council, any tree removed shall be replaced on the site. Replacement trees shall be a minimum size of a twenty-four-inch box of the same species unless specifically approved by the city council. (Ord. 98-10 § 1 (part), 1998).

8.1.1 APPLICABILITY TO THE PROPOSED PROJECT

The project site does not support any trees.

9. REGULATORY REQUIREMENTS PERTAINING TO WATERS OF THE UNITED STATES AND STATE

This section presents an overview of the criteria used by the U.S. Army Corps of Engineers, the California Regional Water Quality Control Board, the State Water Resources Control Board, and CDFW to determine those areas within a project area that would be subject to their regulation.

9.1 U.S. Army Corps of Engineers Jurisdiction and General Permitting

9.1.1 SECTION 404 OF THE CLEAN WATER ACT

Congress enacted the Clean Water Act "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters" (33 U.S.C. §1251(a)). Pursuant to Section 404 of the Clean Water Act (33 U.S.C. 1344), the U.S. Army Corps of Engineers (Corps) regulates the disposal of dredged or fill material into "waters of the United States" (33 CFR Parts 328 through 330). This requires project applicants to obtain authorization from the Corps prior to discharging dredged or fill materials into any water of the United States.

In the Federal Register "waters of the United States" are defined as, "...all interstate waters including interstate wetlands...intrastate lakes, rivers, streams (including intermittent streams), wetlands, [and] natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce..." (33 CFR Section 328.3).

Limits of Corps' jurisdiction:

(a) Territorial Seas. The limit of jurisdiction in the territorial seas is measured from the baseline in a seaward direction a distance of three nautical miles. (See 33 CFR 329.12)

(b) Tidal Waters of the United States. The landward limits of jurisdiction in tidal waters:

(1) Extends to the mean high tide line, or
(2) When adjacent non-tidal waters of the United States are present, the jurisdiction extends to the limits identified in paragraph (c) of this section.

(c) Non-Tidal Waters of the United States. The limits of jurisdiction in non-tidal waters:

(1) In the absence of adjacent wetlands, the jurisdiction extends to the ordinary high water mark, or
(2) When adjacent wetlands are present, the jurisdiction extends beyond the ordinary high water mark to the limit of the adjacent wetlands.
(3) When the water of the United States consists only of wetlands the jurisdiction extends to the limit of the wetland.

Section 404 jurisdiction in "other waters" such as lakes, ponds, and streams, extends to the upward limit of the ordinary high water mark (OHWM) or the upward extent of any adjacent wetland. The OHWM on a non-tidal water is:

- the "line on shore established by the fluctuations of water and indicated by physical characteristics such as a clear natural line impressed on the bank; shelving; changes in the character of soil; destruction of terrestrial vegetation; the presence of litter or debris; or other appropriate means that consider the characteristics of the surrounding areas" (33 CFR Section 328.3[e]).

Wetlands are defined as: "...those areas that are inundated or saturated by surface or ground water at a frequency and duration to support a prevalence of vegetation adapted for life in saturated soil conditions" (33 CFR Section 328.8 [b]). Wetlands usually must possess hydrophytic vegetation (i.e., plants adapted to inundated or saturated conditions), wetland hydrology (e.g., topographic low areas, exposed water tables, stream channels), and hydric soils (i.e., soils that are periodically or permanently saturated, inundated or flooded) to be regulated by the Corps pursuant to Section 404 of the Clean Water Act.

9.1.1.1 Significant Nexus of Tributaries

On December 2, 2008, the Corps and the Environmental Protection Agency (EPA) issued joint guidance on implementing the U.S. Supreme Court decision in the consolidated cases *Rapanos v. United States* and *Carabell v. United States* (herein referred to simply as "Rapanos") which address the jurisdiction over waters of the United States under the Clean Water Act. In this joint guidance these agencies provide guidance on where they will assert jurisdiction over waters of the U.S.

The EPA and Corps will assert jurisdiction over the following waters:

- Traditional navigable waters
- Wetlands adjacent to traditional navigable waters
- Non-navigable tributaries of traditional navigable waters that are relatively permanent where the tributaries typically flow year-round or have continuous flow at least seasonally (for example, typically three months).
- Wetlands that directly abut such tributaries.

The agencies generally will not assert jurisdiction over the following features:

- Swales or erosional features (e.g., gullies, small washes characterized by low volume, infrequent, or short duration flow); and
- Ditches (including roadside ditches) excavated wholly in and draining only uplands and that do not carry a relatively permanent flow of water.

The agencies will apply the significant nexus standard as follows:

- A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by all wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical and biological integrity of downstream traditional navigable waters; and

- Significant nexus includes consideration of hydrologic and ecologic factors.

9.1.1.2 Isolated Areas Excluded from Section 404 Jurisdiction

In addition to areas that may be exempt from Section 404 jurisdiction, some isolated wetlands and waters may also be considered outside of Corps jurisdiction as a result of the Supreme Court's decision in Solid Waste Agency of Northern Cook County (SWANCC) v. United States Army Corps of Engineers (531 U.S. 159 [2001]). Isolated wetlands and waters are those areas

that do not have a surface or groundwater connection to, and are not adjacent to a navigable "Waters of the U.S.," and do not otherwise exhibit an interstate commerce connection.

9.1.1.3 Permitting Corps Jurisdictional Areas

To remain in compliance with Section 404 of the Clean Water Act, project proponents and property owners (applicants) are required to be permitted by the Corps prior to discharging or otherwise impacting waters of the United States. In many cases, the Corps must visit a proposed project area (to conduct a "jurisdictional determination") to confirm the extent of area falling under their jurisdiction prior to authorizing any permit for that project area. Typically, at the time the jurisdictional determination is conducted, applicants (or their representative) will discuss the appropriate permit application that would be filed with the Corps for permitting the proposed impact(s) to "waters of the United States."

Pursuant to Section 404 of the Clean Water Act, the Corps normally provides two alternatives for permitting impacts to the type of "waters of the United States" found in the project area. The first alternative would be to use Nationwide Permit(s) (NWP). The second alternative is to apply to the Corps for an Individual Permit (33 CFR Section 235.5(2)(b)). The application process for Individual Permits is extensive and includes public interest review procedures (i.e., public notice and receipt of public comments) and must contain an "alternatives analysis" that is prepared pursuant to Section 404(b) of the Clean Water Act (33 U.S.C. 1344(b)). The alternatives analysis is also typically reviewed by the federal EPA and thus brings another resource agency into the permitting framework. Both the Corps and EPA take the initial viewpoint that there are practical alternatives to the proposed project if there would be impacts to waters of the U.S., and the proposed permitted action is not a water dependent project (e.g. a pier or a dredging project). Alternative analyses therefore must provide convincing reasons that the proposed permitted impacts are unavoidable. Individual Permits may be available for use in the event that discharges into regulated waters fail to meet conditions of NWP(s).

NWPs are a type of general permit administered by the Corps and issued on a nationwide basis that authorize minor activities that affect Corps regulated waters. Under NWP, if certain conditions are met, the specified activities can take place without the need for an individual or regional permit from the Corps (33 CFR, Section 235.5[c][2]). In order to use NWP(s), a project must meet 27 general nationwide permit conditions, and all specific conditions pertaining to the NWP being used (as presented at 33 CFR Section 330, Appendices A and C). It is also important to note that pursuant to 33 CFR Section 330.4(e), there may be special regional conditions or modifications to NWPs that could have relevance to individual proposed projects. Finally, pursuant to 33 CFR Section 330.6(a), Nationwide permittees may, and in some cases must, request from the Corps confirmation that an activity complies with the terms and conditions of the NWP intended for use (*i.e.,* must receive "verification" from the Corps).

Prior to finalizing design plans, the applicant needs to be aware that the Corps maintains a policy of "no net loss" of wetlands (waters of the United States) from project area development. Therefore, it is incumbent upon applicants that propose to impact Corps regulated areas to submit a mitigation plan that demonstrates that impacted regulated areas would be recreated (*i.e.,* impacts would be mitigated). Typically, the Corps requires mitigation to be "in-kind" (i.e., if a

stream channel would be filled, mitigation would include replacing it with a new stream channel), and at a minimum of a 1:1 replacement ratio (i.e., one acre or fraction there of recreated for each acre or fraction thereof lost). Often a 2:1 replacement ratio is required. Usually the 2:1 ratio is met by recreation or enhancement of an equivalent amount of wetland as is impacted, in addition to a requirement to preserve an equivalent amount of wetland as is impacted by the project. In some cases, the Corps allows "out-of-kind" mitigation if the compensation site has greater value than the impacted site. For example, if project designs call for filling an intermittent drainage, mitigation should include recreating the same approximate jurisdictional area (same drainage widths) at an offsite location or on a set-aside portion of the project area. Finally, there are many Corps approved wetland mitigation banks where wetland mitigation credits can be purchased by applicants to meet mitigation compensation requirements. Mitigation banks have defined service areas and the Corps may only allow their use when a project would have minimal impacts to wetlands.

9.1.2 APPLICABILITY TO THE PROPOSED PROJECT

M&A originally prepared a preliminary wetland delineation map of the 35 acre parcel in 2006; however, this map was never submitted to the Corps. In 2011, a formal wetland delineation was conducted on July 14th and July 20th by M&A biologists Ms. Hope Kingma and Mr. Tim O'Donnell. The wetland delineation report and map were submitted to the Corps on August 22, 2011, requesting confirmation of the extent of Corps jurisdiction at the American Canyon Flat Lands site. In a letter dated January 31, 2012 the extent of Corps jurisdiction was confirmed, based on a field investigation on September 21, 2011. That jurisdictional determination expired five (5) years from the date of that letter.

M&A biologists Ms. Hope Kingma and Mr. Devin Jokerst conducted another wetland delineation of the entire 35.85-acre parcel (known as Lot 3), which includes this project site, on November 16, 2016 to re-verify the extent of jurisdictional areas on the site. M&A used the Corps' 1987 *Wetlands Delineation Manual* in conjunction with the *Regional Supplement for the Arid West Region*. The jurisdictional determination request and the Draft Aquatic Resources Delineation Map (Sheet 2) were submitted to the Corps in December 2016. Mr. Bryan Matsumoto of the Corps conducted a site verification visit on May 18, 2017. On May 16, 2018 the Corps issued the jurisdictional determination confirming their jurisdiction over 0.043-acre of waters of the U.S. on the 35.43-acre parcel. The confirmed Jurisdictional Delineation Map (Sheet 2) and letter are attached. None of the jurisdictional features on that map occur on the 10-acre project site that is the subject of this report. *As such there will be no impacts to the waters of the U.S. for this project.*

9.2 State Water Resources Control Board (SWRCB) / California Regional Water Quality Control Board (RWQCB)

9.2.1 SECTION 401 OF THE CLEAN WATER ACT

The SWRCB and RWQCB regulate activities in "waters of the State" (which includes wetlands) through Section 401 of the Clean Water Act. While the Corps administers a permitting program that authorizes impacts to waters of the United States, including wetlands and other waters, any Corps permit authorized for a proposed project would be inoperative unless it is an NWP that has been certified for use in California by the SWRCB, or if the RWQCB has issued a project specific

certification of water quality. Certification of NWPs requires a finding by the SWRCB that the activities permitted by the NWP will not violate water quality standards individually or cumulatively over the term of the permit (the term is typically for five years). Certification must be consistent with the requirements of the federal Clean Water Act, the California Environmental Quality Act, the California Endangered Species Act, and the SWRCB's mandate to protect beneficial uses of waters of the State. Any denied (i.e., not certified) NWPs, and all Individual Corps permits, would require a project specific RWQCB certification of water quality.

9.2.2 Applicability to the Proposed Project

The Corps' Confirmed Reverification Aquatic Resources Delineation Map dated May 22, 2017 is provided as Sheet 2. The proposed project will not impact any waters of the State. *Therefore Section 401 of the Clean Water Act is not necessary for this project.*

9.3 California Department of Fish and Wildlife Protections

9.3.1 Section 1602 of California Fish and Game Code

Pursuant to Section 1602 of the California Fish and Game Code: "An entity may not substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake, unless all of the following occur:

(1) CDFW receives written notification regarding the activity in the manner prescribed by CDFW. The notification shall include, but is not limited to, all of the following:
   (A) A detailed description of the project's location and a map.
   (B) The name, if any, of the river, stream, or lake affected.
   (C) A detailed project description, including, but not limited to, construction plans and drawings, if applicable.
   (D) A copy of any document prepared pursuant to Division 13 (commencing with Section 21000) of the Public Resources Code.
   (E) A copy of any other applicable local, state, or federal permit or agreement already issued.
   (F) Any other information required by CDFW" (Fish & Game Code 2014).

Please see Section 1602 of the current California Fish and Game Code for further details.

Please also note that while not stated in the regulations above, CDFW typically considers its jurisdiction to include riparian vegetation (that is, the trees and bushes growing along the stream). Thus, any proposed activity in a natural stream channel that would substantially adversely affect an existing fish and/or wildlife resource, including its riparian vegetation, would require entering into a Streambed Alteration Agreement (SBAA) with CDFW prior to commencing with work in the stream. However, prior to authorizing such permits, CDFW typically reviews an analysis of the expected biological impacts, any proposed mitigation plans that would be implemented to offset biological impacts and engineering and erosion control plans.

9.3.2 APPLICABILITY TO THE PROPOSED PROJECT

There are no streams or drainages on the project site that would be regulated by CDFW. *Hence, an SBAA with CDFW would not be necessary for this project*.

10. STATE WATER RESOURCES CONTROL BOARD (SWRCB)/RWQCB – STORM WATER MANAGEMENT

10.1 Construction General Permit

While federal Clean Water Act NPDES regulations allow two permitting options for construction related stormwater discharges (individual permits and General Permits), the State Water Resources Control Board (SWRCB) has elected to adopt only one statewide Construction General Permit at this time that will apply to all stormwater discharges associated with construction activity, except from those on Tribal Lands, in the Lake Tahoe Hydrologic Unit, and those performed by the California Department of Transportation (CalTrans).

The Construction General Permit requires all dischargers where construction activity disturbs greater than one acre of land or those sites less than one acre that are part of a common plan of development or sale that disturbs more than one acre of land surface to:

1. Develop and implement a Storm Water Pollution Prevention Plan (SWPPP) which specifies Best Management Practices (BMPs) that will prevent all construction pollutants from contacting stormwater with the intent of keeping all products of erosion from moving off site into receiving waters.

2. Eliminate or reduce non-stormwater discharges to storm sewer systems and other waters of the nation. Achieve quantitatively-defined (i.e., numeric) pollutant-specific discharge standards, and conduct much more rigorous monitoring based on the project's projected risk level.

3. Perform inspections of all BMPs.

This Construction General Permit is implemented and enforced by the nine California Regional Water Quality Control Boards (RWQCBs). It is also enforceable through citizens' suits and represents a dramatic shift in the State Water Board's approach to regulating new and redevelopment sites, imposing new affirmative duties and fixed standards on builders and developers.

<u>Types of Construction Activity Covered by the Construction General Permit</u>

- clearing,
- grading,
- disturbances to the ground such as stockpiling, or excavation that results in soil disturbances of at least one acre or more of total land area.

Construction activity that results in soil disturbances to a smaller area would still be subject to this General Permit if the construction activity is part of a larger common plan of development that encompasses greater than one acre of soil disturbance, or if there is significant water quality impairment resulting from the activity.

Construction activity does not include:

- routine maintenance to maintain original line and grade,
- hydraulic capacity, or original purpose of the facility,
- nor does it include emergency construction activities required to protect public health and safety.

The Construction General Permit includes several "post-construction" requirements. These requirements entail that site designs provide no net increase in overall site runoff and match pre-project hydrology by maintaining runoff volume and drainage concentrations. To achieve the required results where impervious surfaces such as roofs and paved surfaces are being increased, developers must implement non-structural off-setting BMPs, such as landform grading, site design BMPs, and distributed structural BMPs (bioretention cells, rain gardens, and rain cisterns). This "runoff reduction" approach is essentially a State Water Board-imposed regulatory requirement to implement Low Impact Development ("LID") design features. Volume that cannot be addressed using non-structural BMPs must be captured in structural BMPs that are approved by the RWQCB.

Improving the quality of site runoff is necessary to improve water quality in impaired and threatened streams, rivers, and lakes (that is, water bodies on the EPA's 303(d) list). The RWQCB prioritizes the water bodies on the 303(d) list according to potential impacts to beneficial uses. Beneficial uses can include a wide range of uses, such as nautical navigation; wildlife habitat; fish spawning and migration; commercial fishing, including shellfish harvesting; recreation, including swimming, surfing, fishing, boating, beachcombing, and more; water supply for domestic consumption or industrial processes; and groundwater recharge, among other uses. The State is required to develop action plans and establish Total Maximum Daily Loads (TMDLs) to improve water quality within these impaired water bodies. The TMDL is the quantity of a pollutant that can be safely assimilated by a water body without violating the applicable water quality standards.

Pursuant to the CWA, the RWQCB regulates construction discharges under the National Pollutant Discharge Elimination System (NPDES). The project sponsor of construction or other activities that disturb more than 1 acre of land must obtain coverage under NPDES Construction General Permit Order 2009-0009-DWQ, administered by the RWQCB[1].

[1] CGP Order 2009-0009-DWQ remains in effect, but has been amended by CGP Order 2009-0014-DWQ, effective February 14, 2011, and CGP Order 2009-0016-DWQ, effective July 17, 2012. The first amendment merely provided additional clarification to Order 2009-0009-DWQ, while Order 2009-0016-DWQ eliminated numeric effluent limits on pH and turbidity (except in the case of active treatment systems), in response to a legal challenge to the original order.

10.1.1 APPLICABILITY TO THE PROPOSED PROJECT

To obtain coverage under the SWRCB administered Construction General Permit, the applicant (typically through its civil engineer) must electronically file a number of permit-related compliance documents (Permit Registration Documents (PRDs), including a Notice of Intent (NOI), a risk assessment, site map, signed certification, Stormwater Pollution Prevention Plan (SWPPP), Notice of Termination (NOT), NAL exceedance reports, and other site-specific PRDs that may be required. The PRDs must be prepared by a Qualified SWPPP Practitioner (QSP) or Qualified SWPPP Developer (QSD) and filed by a Legally Responsible Person (LRP) on the RWQCB's Stormwater Multi-Application Report Tracking System (SMARTS). (QSDs are typically civil engineers, professional hydrologists, engineering geologists, or landscape architects.) Once filed, these documents become immediately available to the public for review and comment. At a minimum, the SWPPP shall identify Best Management Practices (BMPs) for implementation during project construction that are in accordance with the applicable guidance and procedures contained in the California Stormwater Quality Association's *California Stormwater Best Management Practices Handbook* (2015).

10.2 RWQCB Municipal Storm Water Permitting Programs

The federal Clean Water Act (CWA) was amended in 1987 to address urban stormwater runoff pollution of the nation's waters. In 1990, the U.S. Environmental Protection Agency (USEPA) promulgated rules establishing Phase 1 of the National Pollutant Discharge Elimination System (NPDES) stormwater program. The Phase 1 program for Municipal Separate Storm Sewer System (MS4s) requires operators that serve populations of 100,000 or greater to implement a stormwater management program to control polluted discharges from these MS4s. While Phase 1 of the municipal stormwater program has focused on large urban areas, Phase 2 of the municipal stormwater program was promulgated by the USEPA for smaller urban areas including non-traditional Small MS4s, which are governmental facilities such as military bases, public campuses, and prison and hospital complexes.

MS4 permits require the discharger (or dischargers that are permitted by the MS4 permittees) to develop and implement a Storm Water Management Plan/Program (SWMP) with the goal of reducing the discharge of pollutants to the maximum extent practicable (MEP). MEP is the performance standard specified in Section 402(p) of the Clean Water Act. The management programs specify what best management practices (BMPs) will be used to address certain program areas. The program areas include public education and outreach; illicit discharge detection and elimination; construction and post-construction; and good housekeeping for municipal operations. In general, medium and large municipalities are required to conduct chemical monitoring, though small municipalities are not.

10.2.1 NPDES C.3 REQUIREMENTS

The NPDES C.3 requirements went into effect for any project (public or private) that is "deemed complete" by the City or County (Lead Agency) on or after February 15, 2005, and which will result in the creation or replacement (other than normal maintenance) of at least 10,000 square feet of impervious surface area (roofs, streets, patios, parking lots, etc. Provision C.3 requires the onsite treatment of stormwater prior to its discharge into downstream receiving waters. Note that these requirements are in addition to the existing NPDES requirements for erosion and

sedimentation controls during project construction that are typically addressed through acquisition of coverage under the SWRCB administered Construction General Permit. The C.3 requirements are typically required to be implemented by MS4 permittees (and their constituencies).

Projects subject to Provision C3 must include the capture and onsite treatment of all stormwater from the site prior to its discharge, including rainwater falling on building rooftops. Project applicants are required to implement appropriate source control and site design measures and to design and implement stormwater treatment measures in order to reduce the discharge of stormwater pollutants to the *maximum extent practicable.* While the Clean Water Act does not define "maximum extent practicable," the Stormwater Quality Management Plans required as a condition of the municipal NPDES permits identify control measures (known as Best Management Plans, or BMPs) and, where applicable, performance standards, to establish the level of effort required to satisfy the maximum extent practicable criterion. It is ultimately up to the professional judgment of the reviewing municipal staff in the individual jurisdictions to determine whether a project's proposed stormwater controls will satisfy the maximum extent practicable criterion. However, there are numeric criteria used to ensure that treatment BMPs have been adequately sized to accommodate and treat a site's stormwater. The C3 requirements are quite extensive, and their complete explanation is not provided here. However, the following are minimums that should be understood and adhered to:

- The applicant must provide a detailed and realistic site design *and impervious surface area calculations*. This site design *and calculations* will be used by the Lead Agency (County or City) to determine/*verify* the amount of impervious surface area that is being created or replaced. It should include all proposed buildings, roads, walkways, parking lots, landscape areas, etc., that are being created or redeveloped. If large (greater than 10,000 square feet) lots are being created an effort will need to be made to determine the total impervious surface area that could be created on that parcel. For example, if only a portion of the lot is shown as a "building envelope" then the lead agency will need to consider that a driveway will have to be constructed to access the envelope and that the envelope will then be developed as shown. If the C.3 thresholds are met (creation/redevelopment of 10,000 square feet of impervious surface area), a Stormwater Control Plan (SWCP) (if required by the Lead Agency, or whatever steps for compliance with Provision C3 are required locally) must accompany the application.

- If a SWCP is required by the Lead Agency for the project it must be stamped by a Licensed Civil Engineer, Architect, or Landscape Architect.

10.2.2 Applicability to the Proposed Project

The Water Board issued county-wide municipal stormwater permits in the early 1990s to operators of MS4s. On November 19, 2015, the Water Board re-issued these county-wide municipal stormwater permits as one Municipal Regional Stormwater NPDES Permit to regulate stormwater discharges from municipalities and local agencies. Permittees in the San Francisco Bay area are included in a Municipal Regional Permit (MRP), issued to 76 cities, counties and

flood control districts in 2009 and revised in 2015. Each of the Permittee's must file an Annual Report that is comprised of three parts: regional, countywide, and individual. Some requirements of the MRP are being implemented by the Bay Area Stormwater Management Agencies Association (BASMAA) on behalf of all the MRP Permittees. Other elements are being implemented collaboratively by the Permittees through their respective countywide programs. As such, BASMAA and the countywide programs have submitted Annual Report elements on the regional and countywide collaborative tasks, respectively, on behalf of the MRP Permittees and the individual MRP Permittees have also submitted Annual Report elements on the Permit Provisions they have implemented individually.

It is the applicant's responsibility to ensure that the project civil engineer prepares all required Storm Water Planning documents for submittal to the City of American Canyon to comply with its MS4 permit requirements. In addition, if the project includes a requirement to obtain a Clean Water Act Section 401 permit from the RWQCB, the Storm Water Management Plan (or equivalent plan) must be submitted to the RWQCB with the application package submitted for acquisition of a Section 401 permit (aka "water quality certification").

The applicant is proposing to treat all stormwater falling on impervious surfaces in the detention/bioretention basin located on the western edge of the project site (see Sheet UP4). Once treated, stormwater would be conveyed to "level spreader outfalls" that will be installed along the western project site boundary. The level spreader outfalls consist of perforated pipe set on contour that will discharge flows uniformly across a gradual slope covered by riprap, which will mimic sheet flow conditions similar to current project site runoff (see Storm Drain Level Spreader Detail). Accordingly, the project will not violate any water quality standards.

11. CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) REGULATIONS

A CEQA lead agency must determine if a proposed activity constitutes a project requiring further review pursuant to the CEQA. Pursuant to CEQA, a lead agency would have to determine if there could be significant adverse impacts to the environment from a proposed project. Typically, if within the city limits, the city would be the CEQA lead agency. If a discretionary permit (i.e., conditional use permit) would be required for a project (e.g. an occupancy permit must be issued), the lead agency typically must determine if there could be significant environmental impacts. This is usually accomplished by an "Initial Study." If there could be significant environmental impacts, the lead agency must determine an appropriate level of environmental review prior to approving and/or otherwise permitting the impacts. In some cases, there are "Categorical Exemptions" that apply to the proposed activity; thus, the activity is exempt from CEQA. The Categorical Exemptions are provided in CEQA. There are also Statutory Exemptions in CEQA that must be investigated for any proposed project. If the project is not exempt from CEQA, the lowest level of review typically reserved for projects with no significant effects on the environment would be for the lead agency to prepare a "Negative Declaration." If a proposed project would have only minimal impacts that can be mitigated to a level of no significance pursuant to the CEQA, then a "Mitigated Negative Declaration" is typically prepared by the lead agency. Finally, those projects that may have significant effects on the environment, or that have impacts that can't be mitigated to a level considered less than significant pursuant to the CEQA, typically must be reviewed via an Environmental Impact

Report (EIR). All CEQA review documents are subject to public circulation, and comment periods.

Section 15380 of CEQA defines "endangered" species as those whose survival and reproduction in the wild are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, disease, or other factors. "Rare" species are defined by CEQA as those who are in such low numbers that they could become endangered if their environment worsens; or the species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range and may be considered "threatened" as that term is used in FESA. The CEQA Guidelines also state that a project will normally have a significant effect on the environment if it will "substantially affect a rare or endangered species of animal or plant or the habitat of the species." The significance of impacts to a species under CEQA, therefore, must be based on analyzing actual rarity and threat of extinction to that species despite its legal status or lack thereof.

This report has been prepared as a Biology section that is suitable for incorporation into a Mitigated Negative Declaration. This document addresses potential impacts to species that would be defined as endangered or rare pursuant to Section 15380 of the CEQA and can be incorporated by the CEQA lead agency (in this case City of American Canyon) into an initial study or higher levels of CEQA review including incorporation into the biology section of an Environmental Impact Report.

12. IMPACTS ANALYSIS

Below the criteria used in assessing impacts to Biological Resources is presented.

12.1 Significance Criteria

A significant impact is determined using CEQA and CEQA Guidelines. Pursuant to CEQA §21068, a significant effect on the environment means a substantial, or potentially substantial, adverse change in the environment. Pursuant to CEQA Guideline §15382, a significant effect on the environment is further defined as a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historical or aesthetic significance. Other Federal, State, and local agencies' considerations and regulations are also used in the evaluation of significance of proposed actions.

Direct and indirect adverse impacts to biological resources are classified as "significant," "potentially significant," or "less than significant." Biological resources are broken down into four categories: vegetation, wildlife, threatened and endangered species, and regulated "waters of the United States" and/or stream channels.

12.1.1 THRESHOLDS OF SIGNIFICANCE

12.1.1.1 Plants, Wildlife, Waters

In accordance with Appendix G (Environmental Checklist Form) of the CEQA Guidelines, implementing the project would have a significant biological impact if it would:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.

- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.

- Have a substantial adverse effect on federally protected "wetlands" as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

- Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

12.1.1.2 Waters of the United States and State.

Pursuant to Section 404 of the Clean Water Act (33 U.S.C. 1344), the U.S. Army Corps of Engineers (Corps) regulates the discharge of dredged or fill material into waters of the United States, which includes wetlands, as discussed in the bulleted item above, and also includes "other waters" (stream channels, rivers) (33 CFR Parts 328 through 330). Substantial impacts to Corps regulated areas on a project site would be considered a significant adverse impact. Similarly, pursuant to Section 401 of the Clean Water Act, and to the Porter-Cologne Water Quality Control Act, the RWQCB regulates impacts to waters of the state. Thus, substantial impacts to RWQCB regulated areas on a project site would also be considered a significant adverse impact.

12.1.1.3 Stream Channels

Pursuant to Section 1602 of the California Fish and Game Code, CDFW regulates activities that divert, obstruct, or alter stream flow, or substantially modify the bed, channel, or bank of a stream which CDFW typically considers including riparian vegetation. Any proposed activity that would result in substantial modifications to a natural stream channel would be considered a significant adverse impact.

13. IMPACT ASSESSMENT AND PROPOSED MITIGATION

In this section we discuss potential impacts to sensitive biological resources, including special-status wildlife species. We follow each impact with a mitigation prescription that when

implemented would reduce impacts to the greatest extent possible. This impact analysis is based on the Preliminary Site Plan (Sheet A-1).

13.1 Impact BIO-1. Development of the Project Could Have a Potentially Significant Impact on Nesting Swainson's hawks (Potentially Significant)

The Swainson's hawk is a state listed threatened species. While the Swainson's hawk has no special federal status, it is protected from direct take under the Federal Migratory Bird Treaty Act of 1918 (16 U.S.C. 703-711). Swainson's hawks, their nests, eggs, and young are also protected under California Fish and Game Code (§3503, §3503.5, §3513, and §3800).

No Swainson's hawk nests have been observed on the site or offsite in the vicinity of the project site during M&A's multiple project site surveys; however, the nesting population appears to be increasing throughout its nesting range in northern California and thus, it could conceivably nest in trees near the project site in the future.

If Swainson's hawks are found to be nesting adjacent to the project site, implementation of the proposed project could be viewed by CDFW as a project that could impact nesting Swainson's hawks. Nest site disturbance which results in: (1) nest abandonment; (2) loss of young; (3) reduced health and vigor of eggs and/or nestlings (resulting in reduced survival rates), may ultimately result in the take (killing) of nestling or fledgling Swainson's hawks incidental to otherwise lawful activities. The taking of Swainson's hawks in this manner can be viewed by CDFW as a violation of the Section 2080 of the Fish and Game Code. This interpretation of take has been judicially affirmed by the landmark appellate court decision pertaining to CESA (CDFG v. ACID, 8 CA App. 4, 41554) (CDFG 1994).

Typically, CDFW requires that any impact to a Swainson's hawk nest be permitted through a Fish and Game Section 2081 management authorization. If an active nest is found adjacent to the project site within an area of influence (which is generally considered to be within 1,000 feet of the project site) "to avoid potential violation of Fish and Game Code 2080 (i.e., killing of listed species), project-related disturbance at active Swainson's hawk nesting sites should be reduced or eliminated during critical phases of the nesting cycle (March 1- September 15 annually)" (CDFG 1994). If disturbance would occur, a Fish and Game Section 2081 management authorization would be required. As such, in the absence of survey results, it must be concluded that impacts to Swainson's hawk from the proposed project would be *potentially significant pursuant to CEQA.* This impact could be mitigated to a level considered less than significant pursuant to CEQA.

The closest known record for nesting Swainson's hawk is 2.6 miles north of the project site (CNDDB Occurrence No. 2744). There are extensive foraging opportunities both around the closest nesting location and between this nesting location and the project site. Considering that the entire project site consisted of a eucalyptus grove until 2012, it did not historically provide potential foraging habitat. Also, as the project site is essentially surrounded by eucalyptus forest, it is not a foraging destination which would likely attract foraging Swainson's hawks. Furthermore, M&A has confirmed that the project site has a low rodent population, therefore development of the project site will not have a significant impact on Swainson's hawk foraging habitat. Therefore, no mitigation for the loss of foraging habitat is warranted for this project.

13.2 Mitigation Measure BIO-1. Mitigation for Potential Impacts to Nesting Swainson's Hawk

Preconstruction surveys shall be conducted for a quarter-mile radius around all project activities and shall be completed for at least two survey periods immediately prior to the project's initiation. The survey period timing and methodology shall be conducted in accordance with CDFW's *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley* (CDFG 1994), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements.

If Swainson's hawks are found to be nesting on the project site or within a ¼-mile of the project site, consultation with CDFW will be required. The size of the nest protection buffer will be determined during consultation with CDFW but at a minimum there will be a 300-foot non-disturbance buffer around the nest site.

Implementation of this mitigation measure would reduce potential impacts to nesting Swainson's hawk to a level considered less than significant pursuant to CEQA.

13.3 Impact BIO-2. Development of the Project Could Have a Potentially Significant Impact on Western Burrowing Owl (Potentially Significant)

The western burrowing owl is a California Species of Special Concern. This raptor (that is, bird of prey) is also protected under the Migratory Bird Treaty Act (50 CFR 10.13) and its nest, eggs, and young are protected under California Fish and Game Code Sections 3503, 3503.5. While western burrowing owls have not been observed on the project site and their likelihood of presence on the project site is considered to be low, limited suitable nesting habitat occurs on the project site. Since the western burrowing owl is a mobile species that could move onto the project site prior to development, preconstruction surveys would be necessary to determine its presence. Thus, the project may result in impacts to the western burrowing owl; this would be a *potentially significant impact pursuant to CEQA***.** This impact could be mitigated to a level considered less than significant pursuant to CEQA.

13.4 Mitigation Measure BIO-2. Mitigation for Potential Impacts to Western Burrowing Owl

Based on the presence of this species in the project vicinity and the potential habitat found on the project site, a preconstruction survey for burrowing owls should be conducted 14 days prior or less to initiating ground disturbance. As burrowing owls may recolonize a site after only a few days, time lapses between project activities trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance to ensure absence. If no owls are found during these surveys, no further regard for the burrowing owl would be necessary.

a. Burrowing owl surveys should be conducted by walking the entire project site. Pedestrian survey transects should be spaced to allow 100 percent visual coverage of the ground surface. The distance between transect center lines should be 7 meters to 20 meters and should be reduced to account for differences in terrain, vegetation density, and ground surface visibility.

Poor weather may affect the surveyor's ability to detect burrowing owls thus, avoid conducting surveys when wind speed is greater than 20 kilometers per hour and there is precipitation or dense fog. To avoid impacts to owls from surveyors, owls and/or occupied burrows should be avoided by a minimum of 50 meters (approximately 160 ft.) wherever practical to avoid flushing occupied burrows. Disturbance to occupied burrows should be avoided during all seasons.

b. If burrowing owls are detected on the site, the following restricted activity dates and setback distances are recommended per CDFW's Staff Report (2012).

- From April 1 through October 15, low disturbance and medium disturbance activities should have a 200 meter buffer while high disturbance activities should have a 500 meter buffer from occupied nests.
- From October 16 through March 31, low disturbance activities should have a 50 meter buffer, medium disturbance activities should have a 100 meter buffer, and high disturbance activities should have a 500 meter buffer from occupied nests.
- No earth-moving activities or other disturbance should occur within the afore-mentioned buffer zones of occupied burrows. These buffer zones should be fenced as well. If burrowing owls were found in the project area, a qualified biologist would also need to delineate the extent of burrowing owl habitat on the site.

Implementation of these mitigation measures would reduce potential impacts to burrowing owls to a level considered less than significant pursuant to CEQA.

13.5 Impact BIO-3: Development of the Project Would Have a Potentially Significant Impact on Tree or Ground Nesting Raptors (Potentially Significant)

Tree or ground nesting raptors that could be affected by the project include northern harrier, white-tailed kites, red-shouldered hawk and red-tailed hawk. Nesting raptors are protected by the federal Migratory Bird Treaty Act (MBTA) (16 U.S.C. 703-711 and 50 CFR 10.13). All nesting raptors, their eggs and young are protected pursuant to California Fish and Game Code §3503.5. Specific surveys for nesting raptors have not been conducted. In the absence of survey results indicating otherwise, it is conservatively assumed that implementation of the proposed project may impact nesting raptors which could result in nest abandonment and death of eggs or young. Therefore, impacts to nesting raptors are regarded as *potentially significant pursuant to CEQA***.** This impact could be mitigated to a level considered less than significant pursuant to CEQA.

13.6 Mitigation Measure BIO-3: Mitigation for Potential Impacts to Tree or Ground Nesting Raptors

To ensure that impacts to tree or ground nesting raptors are avoided or offset, the following mitigation measures will be implemented:

a. In order to avoid impacts to nesting raptors, a preconstruction nesting survey will be conducted by a qualified raptor biologist prior to commencing with earth-moving or construction work if this work would commence between February 1st and August 31st. The survey should be

conducted within the 30 day period prior to site disturbance. The raptor nesting surveys will include examination of all trees and ruderal habitat within 200 feet of the project site.

b. If nesting raptors are identified during the surveys, the dripline of the nest tree or ground-nesting site must be fenced with orange construction fencing (provided the nest site is on the project site), and a 200-foot radius around the nest tree or nest site must be staked with orange construction fencing. If the tree or nest site is located off the project site, then the buffer should be demarcated per above where the buffer occurs on the project site. The size of the buffer may be altered if a qualified raptor biologist conducts behavioral observations and determines the nesting raptors are well acclimated to disturbance. If this occurs, the raptor biologist should prescribe a modified buffer that allows sufficient room to prevent undue disturbance/harassment to the nesting raptors. No construction or earth-moving activity should occur within the established buffer until it is determined by a qualified raptor biologist that the young have fledged (that is, left the nest) and have attained sufficient flight skills to avoid project construction zones. This typically occurs by August 1st. This date may be earlier or later, and would have to be determined by a qualified raptor biologist. If a qualified biologist is not hired to watch the nesting raptors then the buffers should be maintained in place through the month of August and work within the buffer can commence on September 1st.

c. If the preconstruction nesting survey identifies a large stick or other type of raptor nest that appears inactive at the time of the survey, but there are territorial raptors evident in the nest site vicinity, a protection buffer (as described above) should be established around the potential nesting tree until the qualified raptor biologist determines that the nest is not being used. In the absence of conclusive observations indicating the nest site is not being used, the buffer should remain in place until a second follow-up nesting survey can be conducted to determine the status of the nest and eliminate the possibility that the nest is utilized by a late-spring nesting raptor (for example, red-tailed hawk). This second survey should be conducted even if construction has commenced. If during the follow-up late season nesting survey a nesting raptor is identified utilizing the nest, the protection buffer should remain until it is determined by a qualified raptor biologist that the young have fledged and have attained sufficient flight skills to avoid project construction zones. If the nest remains inactive, the protection buffer can be removed and construction and earth-moving activities can proceed unrestrained.

Implementation of these mitigation measures would reduce potential impacts to nesting raptors to a level considered less than significant pursuant to CEQA.

13.7 Impact BIO-4: Development of the Project Would Have a Potentially Significant Impact on Nesting Passerine Birds. (Potentially Significant)

Nesting passerine birds (i.e., perching birds) are protected by the federal Migratory Bird Treaty Act (MBTA) (16 U.S.C. 703-711 and 50 CFR 10.13) and by California Fish and Game Code §3503 and §3503.5 which protects nesting birds, their eggs and young. These birds frequently change nesting locations from year to year and thus, past nesting histories are not necessarily indicative of future nesting activities. Accordingly, impacts to nesting passerine birds, their eggs, and/or young resulting from the proposed project are considered potentially significant. *This impact could be mitigated to a level considered less than significant pursuant to CEQA.*

13.8 Mitigation Measure BIO-4: Mitigation for Potential Impacts to Nesting Passerine Birds.

To ensure that impacts to nesting passerine birds are avoided or offset, a nesting survey shall be conducted 15 days prior to commencing construction/ grading or tree removal activities if this work would commence between March 1 and September 1. If common passerine birds or special-status passerine birds are identified nesting on the project site, a non-disturbance buffer of 75 feet shall be established or as otherwise prescribed by a qualified ornithologist. The buffer shall be demarcated with orange construction fencing. Disturbance within the buffer shall be postponed until it is determined by a qualified ornithologist that the young have fledged and have attained sufficient flight skills to leave the area or that the nesting cycle has otherwise completed.

Typically, most passerine birds in the region of the project site are expected to complete nesting by August 1st. However, many species can complete nesting by the end of June or in early to mid-July. Regardless, nesting buffers shall be maintained until August 1st unless a qualified ornithologist determines that young have fledged and are independent of their nests at an earlier date. If buffers are removed prior to August 1st, the qualified biologist conducting the nesting surveys should prepare a report that provides details about the nesting outcome and the removal of buffers. This report shall be submitted to the City of American Canyon Planning Department prior to the time that nest protection buffers are removed if the date is before August 1st.

Implementation of this mitigation measure would reduce potential impacts nesting passerine birds to a level considered less than significant pursuant to CEQA.

Family Taxon Common Name	Status*	Flowering Period	Habitat	Area Locations	Probability on Project Site
Asteraceae					
Balsamorhiza macrolepis Big-scale balsam-root	Fed: - State: - CNPS: Rank 1B.2	March-June	Cismontane woodland; chaparral; valley and foothill grassland; [sometimes serpentinite]. 90 - 1555 meters	Closest record is from 2011 and is 3.0 miles east of the project site (Occurrence No. 7).	None. The project site is highly disturbed. No suitable habitat on the project site.
Symphyotrichum lentum Suisun Marsh aster	Fed: - State: - CNPS: Rank 1B.2	August-November	Marshes and swamps (brackish and fresh water)	Closest record is from 1993 and is 2.5 miles northwest of the project site (Occurrence No. 128).	None. The project site is highly disturbed. No suitable habitat on the project site.
Chenopodiaceae					
Extriplex joaquinana San Joaquin spearscale	Fed: - State: - CNPS: Rank 1B.2	April-October	Chenopod scrub; meadows; valley and foothill grassland; [alkaline].	Closest record is from and is 1.8 miles south of the project site (Occurrence No. 58).	None. The project site is highly disturbed. No suitable habitat on the project site.
Cyperaceae					
Carex lyngbyei Lyngbye's sedge	Fed: - State: - CNPS: Rank 2	May-August	Marshes or swamps (brackish or freshwater)	Closest record is from 2008 and is 2.3 miles northwest of the project site (Occurrence No. 28).	None. The project site is highly disturbed. No suitable habitat on the project site.
Fabaceae					
Astragalus tener tener Alkali milkvetch	Fed: - State: - CNPS: Rank 1B.2	March-June	Playas; mesic grasslands (adobe clay), vernal pools (alkaline).	Closest record is from 1993 and is 1.8 miles south of the project site (Occurrence No. 50).	None. The project site is highly disturbed. No suitable habitat on the project site.

Table 4

Special-Status Wildlife Species Known Within 3 Miles of the SDG 217 Commerce Distribution Center Project Site

Species	*Status	Habitat	Closest Locations	Probability on Project Site
Invertebrates				
Vernal pool fairy shrimp *Branchinecta lynchi*	Fed: FT State: - Other:	Endemic to the grasslands of the Central Valley, central coast mountains, and south coast mountains. Inhabit static rain-filled/vernal pools, small, clear water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression	Closest record is from 2003 and is 1.5 miles north of the project site (Occurrence No. 232).	None. No suitable habitat on the project site.
Fish				
Steelhead - Central California Coast DPS *Oncorhynchus mykiss irideus*	Fed: FT State: - Other:	From Russian River south to Soquel Creek, and to Pajaro River. Also found in San Francisco & San Pablo Bay Basins. Spawn in clear, cool, well oxygenated streams greater than 18 cm deep.	Closest record is from 2000 and is 0.39 miles southwest of the project site (Occurrence No. 4).	None. No suitable habitat on the project site.
Longfin smelt *Spirinichus thaleichthys*	Fed: -- State: CT Other:	Endemic to the Sacramento-San Joaquin River system. Inhabits open waters in the Delta and Suisun Bay. After spawning, larvae are carried downstream to brackish nursery areas.	Closest record is from 2012 and is1.2 miles west of the project site (Occurrence No. 26).	None. No suitable habitat on the project site.
Sacramento splittail *Pogonichthys macrolepidotus*	Fed: State: CSC Other:	Endemic to the lakes and rivers of the Central Valley; now confined to the delta, Suisun Bay, and associated marshes. Inhabits slow moving river sections and dead-end sloughs. Needs flooded vegetation for spawning.	Closest record is from 2001 and is 2.9 miles southwest of the project site (Occurrence No. 12).	None. No suitable habitat on the project site.
Amphibians				
California red-legged frog *Rana draytonii*	Fed: FT State: CSC Other:	Occurs in lowlands and foothills in deeper pools and streams, usually with emergent wetland vegetation. Requires 11-20 weeks of permanent water for larval development.	Closest record is from 2006 and is 1.4 miles east of the project site (Occurrence No. 896).	None. No suitable habitat on the project site.

Table 4

Special-Status Wildlife Species Known Within 3 Miles of the SDG 217 Commerce Distribution Center Project Site

Species	*Status	Habitat	Closest Locations	Probability on Project Site
Foothill yellow-legged frog *Rana boylii*	Fed: -- State: CC Other:	Found in partially shaded, shallow streams with rocky substrates. Requires perenial pools or flowing water. Needs some cobble-sized rocks as a substrate for egg laying. Requires water for 15 weeks for larval transformation.	Closest record is from 193X and is 1.2 miles east of the project site (Occurrence No. 2341).	None. No suitable habitat on the project site.
Reptiles				
Western pond turtle ** *Emys marmorata*	Fed: - State: CSC Other:	Inhabits ponds, marshes, rivers, streams, and irrigation ditches with aquatic vegetation. Needs suitable basking sites and upland habitat for egg laying. Occurs in the Central Valley and Contra Costa County.	Closest record is from 2002 and is 0.45 miles northeast of the project site (Occurrence No. 552).	None. No suitable habitat on or adjacent to the project site.
Birds				
Northern harrier *Circus cyaneus*	Fed: - State: CSC Other:	Nests on the ground or in shrubby vegetation typically in grasslands, fallow farm lands, near freshwater and salt water marshes.	Closest record is from 2004 and is 2.8 miles west of the project site (Occurrence No. 29).	Unlikely to nest onsite. Preconstruction surveys will be conducted.
Swainson's hawk *Buteo swainsoni*	Fed: - State: CT Other:	Migratory and resident raptor that breeds in open areas with scattered trees. Prefers riparian and sparse oak woodland habitats for nesting. Requires nearby grasslands, grain fields, or alfalfa for foraging.	Closest record is from 2013 and is 2.6 miles northeast of the project site (Occurrence No. 2744).	Unlikely to nest adjacent to project site. Preconstruction surveys will be conducted.
Ferruginous hawk *Buteo regalis*	Fed: -- State: WL Other:	Winter migrant to California where they prefer grasslands, cultivated fields and arid areas with an abundance of prey species, such as pocket gophers, black-tailed hares, and cottontails.	Closest record is from 1988 and is 3.0 miles north of the project site (Occurrence No. 28).	None. Does not nest in California.

Table 4

Special-Status Wildlife Species Known Within 3 Miles of the SDG 217 Commerce Distribution Center Project Site

Species	*Status	Habitat	Closest Locations	Probability on Project Site
Peregrine falcon *Falco peregrinus*	Fed: - State: - Other:	Nests on high cliffs near wetlands, lakes, rivers, or other water; also nests on human-made structures. Nest consists of a scrape on a depression or ledge in an open site. Was formerly state and federally listed but delisted due to species recovery.	Closest record is from 2015 and is 3.0 miles east of the project site (Occurrence No. 42).	None. No suitable nesting habitat on or near the project site.
California black rail *Laterallus jamaicensis coturniculus*	Fed: -- State: CT Other:	Inhabits salt marshes bordering larger bays. Prefers tidal salt marshes of pickleweed.	Closest record is from 2011 and is 2.5 miles northwest of the project site (Occurrence No. 31).	None. No suitable habitat on the project site.
California Ridgway's rail *Rallus obsoletus obsoletus*	Fed: FE State: CE Other:	Inhabits salt water and brackish marshes with tidal sloughs in San Francisco Bay. Prefers dense pickleweed for cover, but forages for invertebrates along mud-bottomed sloughs.	Closest record is from 1989 and is 2.4 miles northwest of the project site (Occurrence No. 16).	None. No suitable habitat on the project site.
Western burrowing owl *Athene cunicularia hypugaea*	Fed: -- State: CSC Other:	Found in open, dry annual or perennial grasslands, deserts and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	Closest record is from 1989 and is 2.6 miles southeast of the project site (Occurrence No. 109).	Unlikely to nest on the project site. Preconstruction surveys will be conducted.
Salt marsh common yellowthroat *Geothlypis trichas sinuosa*	Fed: - State: CSC Other:	Resident of freshwater and salt water marshes in the San Francisco Bay region. Requires thick, continuous cover for foraging and tall grasses, tules, or willows for nesting.	Closest record is from 2004 and is 2.5 miles northwest of the project site (Occurrence No. 37).	None. No suitable habitat on the project site.
San Pablo song sparrow *Melospiza melodia samuelis*	Fed: -- State: CSC Other:	More properly known as Samuels Song Sparrow. Resident of salt marshes along the north side of San Francisco and San Pablo Bays. Inhabits tidal sloughs in the California marshes; nests in grindelia bordering slough channels.	Closest record is from 2004 and is 2.8 miles west of the project site (Occurrence No. 17).	None. No suitable habitat on the project site.

Table 4

Special-Status Wildlife Species Known Within 3 Miles of the SDG 217 Commerce Distribution Center Project Site

Species	*Status	Habitat	Closest Locations	Probability on Project Site
Tricolored blackbird *Agelaius tricolor*	Fed: - State: CC Other: CSC	Colonial nester in dense cattails, tules, brambles or other dense vegetation. Requires open water, dense vegetation, and open grassy areas for foraging.	Closest record is from 2014 and is 1.6 miles northeast of the project site (Occurrence No. 243).	None. No suitable nesting habitat on the project site.
Mammals				
Salt marsh harvest mouse *Reithrodontomys raviventris*	Fed: FE State: CE Other:	Inhabits saline marshes in the San Francisco Estuary. Prefers pickleweed marshes. Requires higher areas for escaping high water.	Closest record is from 1989 and is 2.4 miles south of the project site (Occurrence No. 150).	None. No suitable habitat on the project site.

Attention: Mr. Brian Doswald

RE: Addendum Letter to CEQA Biology Report Discussing Proposed Borrow Site
SDG Commerce 217 Distribution Center, Napa, California
APN: 058-030-065-000

Dear Mr. Doswald:

1. INTRODUCTION

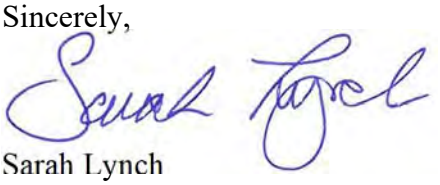
Monk & Associates, Inc., (M&A) has prepared this Addendum to our March 2, 2020, *Revised Biological Resource Analysis* (biology report) for the SDG Commerce 217 Distribution Center located in the City of American Canyon, California (the "project site"). Since the time M&A prepared our biology report for the project site, it has been determined that it will be necessary to acquire soil from the adjacent parcel to the south (the "borrow area parcel") and transport this soil for use as clean fill on the project site. M&A has prepared this Addendum to our biology report to address the transportation of soil from the offsite borrow area parcel onto the project site and to analyze any affects this activity could have on mapped jurisdictional waters of the United States/State that lie inbetween the project site and the adjacent borrow area parcel. Mapped waters of the United States are shown on the attached exhibits.

2. DESCRIPTION OF THE PROJECT SITE AND ADJACENT BORROW AREA PARCEL

The project site and the adjacent borrow area parcel were once part of a contiguous approximately 35-acre project site that M&A conducted surveys on over multiple years dating between 2006 and 2018. Both the project site and adjacent borrow area parcel are dominated by ruderal (weedy) vegetation including stinkwort (*Dittrichia graveolens*), Italian rye grass (*Festuca perennis*), ripgut brome (*Bromus diandrus*), soft chess (*Bromus hordeaceus*), slender wild oat (*Avena barbata*), common vetch (*Vicia sativa*), red-stem filaree (*Erodium cicutarium*), bull thistle (*Cirsium vulgare*), Italian thistle (*Carduus pycnocephalus pycnocephalus*), bristly ox-tongue (*Helminthotheca echioides*), California burclover (*Medicago polymorpha*), and cut-leaf geranium (*Geranium dissectum*). These non-native, weedy species provide little habitat value to wildlife and they do not constitute a native plant community. Native, coyote brush (*Baccharis pilularis* subsp. *consanguinea*), a plant that responds to land disturbances, is also common on the 35 acres. Ruderal vegetation is the only vegetation community found on the project site. The adjacent borrow area parcel, however, in addition to supporting a ruderal herbaceous community also supports waters of the United States, as described below.

On May 16, 2018, the U.S. Army Corps of Engineers issued a jurisdictional determination confirming their jurisdiction over 0.043-acre of waters of the U.S. on the approximately 35-acre

parcel that comprises the project site, the adjacent borrow area parcel, and another property now known as 330 Commerce Center (see attached exhibits). The entire 0.043-acre of waters of the U.S. confirmed by the Corps is found on the adjacent borrow area parcel as shown on the attached exhibit "Borrow Site Rough Grading," Sheet 1 prepared by RSA on August 21, 2020. There are no waters of the United States or State on the project site.



3. DISCUSSION OF PROPOSED ACTIVITIES AND AVOIDANCE OF IMPACTS TO MAPPED WATERS OF THE UNITED STATES

The project applicant intends to rough grade the borrow area parcel and transport soil from that parcel onto the project site for use in development of the project site. In order to protect the waters of the United States/State that occur in between the project site and the borrow area parcel, a 25-foot buffer area around the outside edge of the wetlands will be staked and protected with fiber roll, silt fencing and high visibility orange construction fencing to prevent equipment from driving into the wetlands during hauling activities. See the attached exhibit.

With these protection measures in place, as shown on the attached Borrow Site Rough Grading exhibit, Sheet 1, attached, *there are no expected impacts to waters of the U.S./State from the transport of soil/materials from the borrow area parcel to the project site*.

This concludes our addendum to our biology report. If you have any questions or require additional information, please do not hesitate to contact me at (925) 323-4850 or Sarah@monkassociates.com. Thank you.

Sincerely,

Sarah Lynch
Senior Associate Biologist

CONSTRUCTION OF A SILT FENCE:
(A) INSTALLATION SEQUENCE
(B) EXTENSION OF FABRIC INTO THE TRENCH

INSTALLATION OF SILT FENCE SEDIMENT BARRIER

1. LAY OUT A SUITABLE FENCE LINE AND SET POSTS ALONG IT. ON SLOPES, ALIGN THE FENCE ALONG THE CONTOUR AS CLOSELY AS POSSIBLE. IN SMALL SWALES, CURVE THE FENCE LINE UPSTREAM AT THE SIDES TO DIRECT THE FLOW TOWARD THE MIDDLE OF THE FENCE. THE SIDES SHOULD BE HIGHER THAN THE CENTER AS ILLUSTRATED AT RIGHT. SPACE POSTS ON 6' CENTERS AND DRIVE THEM A MINIMUM OF 12 IN (30 CM) INTO THE GROUND. POSTS FOR SILT FENCES CAN BE EITHER 1 1/2" (3.8 CM) MIN DIA. HARD WOOD OR 1.33 LB/FT (1.97 KG/M) STEEL WITH A MINIMUM LENGTH OF 5 FT (1.5 M). STEEL POSTS MUST HAVE PROJECTIONS FOR FASTENING WIRE TO THEM.
2. FASTEN THE FILTER FABRIC TO THE UPHILL SIDE OF THE FENCE POSTS, AND EXTEND TO 6 TO 8 IN (15 TO 20 CM) INTO THE TRENCH. THE HEIGHT OF THE FENCE SHOULD NOT EXCEED 36 IN (0.9 M). DO NOT STAPLE FABRIC ONTO TREES. CUT THE FILTER FABRIC FROM A CONTINUOUS ROLL TO AVOID THE USE OF JOINTS. WHEN JOINTS ARE NECESSARY, SPLICE THE FILTER CLOTH AT A SUPPORT POST, WITH A MINIMUM 6 IN (15 CM) OVERLAP, AND SECURELY FASTEN BOTH ENDS TO THE POST.
3. BACKFILL THE TRENCH OVER THE TOE OF THE FABRIC AND COMPACT THE SOIL.
4. PREFABRICATED SILT FENCE WITH POSTS MAY BE USED AS AN ALTERNATE TO SETTING STEEL OR WOOD POSTS.

1 SILT FENCE SEDIMENT BARRIER

SPECIAL-STATUS ANIMAL SURVEY REPORT

Date: August 8, 2023

To: Robert Carroll, FCS International.

From: Dr. Christopher T. DiVittorio, Pinecrest Research Corp., Inc.

Subject: Results of special-status animal surveys at 220 Commerce Court, Napa County, CA (FCS Project 5639.0001)

Robert Carroll,

This special-status animal survey report (Report) details the findings of eleven (11) wildlife surveys conducted between January 18 and July 2 in 2023 at the above-referenced property located in the County of Napa. The site consists of one parcel measuring 10.2 acres and assigned APN 058-030-069. Surveys were conducted in order to determine the pre-construction presence or absence of the following special-status animals: burrowing owl (*Athene cunicularia*), Swainson's hawk (*Buteo swainsoni*), nesting raptors, nesting passerine birds, and Western pond turtle. Surveys were conducted by consulting biologist Dr. Christopher DiVittorio.

Site Description

The entirety of the site is disked and mowed ruderal grassland, with the exception of a row of Eucalyptus trees along the northern property line. The ruderal grassland exhibits low cover of plants and low species diversity with very few native species (Figure 1). The habitat type of this area as determined by Sawyer et al. (2009) *Manual of California Vegetation 2nd Edition* (MCV) is *Bromus* (*diandrus, hordeaceous*)-*Brachypodium distachyon* Semi-Natural Herbaceous Stand. On the north side of the parcels is a row of bluegum Eucalyptus. The MCV classification of this habitat is *Eucalyptus* (*globulus, camaldulensis*) Semi-Natural Woodland Stands.

Methods

Between January 18 and July 2, 2023, eleven (11) surveys were conducted for nesting passerine birds, raptors (including Swainson's hawk), burrowing owl, and Western pond turtle. During each survey, the entirety of the "Commerce 220" site as well as the adjacent "Commerce 217" site were examined. These surveys included the entirety of both legal parcels, as well all of the vegetated areas up to the concrete paved area on the developed parcel to the south. Relevant adjacent areas were also examined with binoculars where possible. A total of approximately 45 survey hours were completed across all survey dates. All of the aforementioned animal types were surveyed for at each of the eleven site visits. Survey methods followed established procedures and applicable protocols, including the *Recommended Timing and Methodology for Swainson's Hawk Nesting fSurveys in California's Central Valley*, and the *Staff Report on*

Burrowing Owl Mitigation.[1,2] Survey equipment included high-quality binoculars and a high-quality spotting scope. Surveys were conducted during the appropriate times of day (including peak bird detection periods between sunrise and 10 a.m.). Surveys were conducted on foot. Survey dates with the corresponding Swainson's hawk survey periods are shown below.

Date	Swainson's Hawk Survey Period
1/18/2023	1st survey in Period I
3/20/2023	1st survey in Period II
3/31/2023	2nd survey in Period II
4/4/2023	3rd survey in Period II
4/5/2023	1st survey in Period III
4/6/2023	2nd survey in Period III
4/7/2023	3rd survey in Period III
4/24/2023	1st survey in Period IV
4/28/2023	2nd survey in Period IV
5/29/2023	3rd survey in Period IV
7/2/2023	1st survey in Period V

Results & Recommendations

A total of 56 unique species of birds were observed across the eleven site visits. A total of 4 other species of animals were observed across the eleven site visits. Transcribed field notes from each of the eleven site visits are provided in Appendix A, below. A master list of all species of birds and other animals encountered across the eleven site visits is provided in Appendix B, below.

Due to the lack of suitable nesting habitat on the project site itself, no nesting birds were observed in the project area, although nesting birds were observed in the *Eucalyptus* stands offsite. Of the nesting birds in the offsite *Eucalyptus* stands, none of these were special-status including raptors. White tailed kites (*Elanus leucurus*) were observed foraging in the field, but they did not appear to be nesting nearby, as described below. No Swainson's hawk or burrowing owl were observed during any of the avian surveys. No adults or nests of Western pond turtle were observed (Appendix A & B).

[1] Swainson's Hawk Technical Advisory Committee. 2000. *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley*. California Department of Fish and Wildlife, May 31, 2000.

[2] California Department of Fish and Wildlife 2012. *Staff Report on Burrowing Owl Mitigation*. State of California Natural Resource Agency Department of Fish and Game. March 7, 2012.

Swainson's hawk

No individuals of Swainson's hawk were observed during any of the surveys, and no raptor nests that could belong to Swainson's hawk were observed. The presence of other birds-of-prey utilizing territories onsite also indicates that Swainson's hawk are not utilizing this habitat currently since these species are antagonistic and do not typically share ranges. The negative survey results for Swainson's hawk despite approximately 45 survey hours satisfies the requirements of the survey protocol for this species, therefore it is reasonable to conclude Swainson's hawk are absent from the project site.

Nesting Birds (Including Raptors)

No active raptor nests were observed within the vicinity of the project site. Several American crow were loitering around the *Eucalyptus* grove to the east of the parcel and harassing White-tail kites that approached the grove, however their nest could not be located. Several White-tail kites were observed each day foraging over the grassland habitat, however each time they flew off to the southwest out of sight and the location of their nest could not be determined. One juvenile red-shouldered hawk was observed within a large *Eucalyptus* tree along the north property line however this individual flew offsite after approximately 20 minutes. No other active nests were observed during any of the eleven site visits.

Burrowing Owl

No evidence of burrowing owl activity was observed during any of the eleven field surveys. No California ground squirrel burrows were observed on-site, and no other burrows or dens were observed that would provide suitable nesting habitat for burrowing owl. Therefore, it is reasonable to conclude burrowing owl is absent from the project site.

Western Pond Turtle

No evidence of Western pond turtle activity was observed during any of the eleven field surveys. There are some wetland features onsite, however there are no ponds or streams onsite that would be suitable for Western pond turtle foraging or breeding. No signs of adults or nests were observed onsite or in the accessible vicinity of the site. Therefore, it is reasonable to conclude Western pond turtle is absent from the project site.

Based on the results of these eleven surveys, we conclude that there are no special-status animal species currently occupying the project site, and no compensatory mitigation for impacts to special-status animal species is recommended at this time. These results do not however, preclude the future existence of the above-referenced species onsite as they may recolonize the site if sufficient time has passed between these surveys and site development.

Please let me know if you have any questions about this or any other studies we've performed for this project.

Sincerely,

Christopher DiVittorio, PhD
President, PEC

Appendix A: Animal Survey Field Notes

The following is a transcription of field notes for each of the eleven (11) protocol-level surveys conducted at the project site. Special-status species, if any, are denoted with an asterisk (*).

Site Visit: 1/18/23

Time: 12:00 PM (approx.)
Weather: clear, no wind, 56degF
Notes: started mid-day
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Birds: juvenile red-shouldered hawk (*Buteo lineatus*) sitting in Eucalyptus tree on N fenceline, Western bluebird (*Sialia mexicana*), Anna's hummingbird (*Calypte anna*), turkey vulture (*Cathartes aura*), American pelican (*Pelecanus erythrorhynchos*), black phoebe (*Sayornis nigricans*), white-crowned sparrow (*Zonotrichia leucophrys*), Northern flicker (*Colaptes auratus*), crow (*Corvus brachyrhynchos*)

Other Animals: None

Site Visit: 3/20/23

Time: 6:35 AM
Weather: no wind, 49 degF, 46% RH
Notes: start at sunrise; park in SE corner
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey; early season plant survey
Personnel: Dr. Christopher DiVittorio

Bird Species: wild turkey (*Meleagris gallopavo*), turkey vulture (*Cathartes aura*), Canada goose (*Branta canadensis*), crow (*Corvus brachyrhynchos*), raven (*Corvus corax*), mourning dove (*Zenaida macroura*), lesser goldfinch (*Spinus psaltria*), dark-eyed junco (*Junco hyemalis*), Western bluebird (*Sialia mexicana*), red-shouldered blackbird (*Agelaius phoeniceus*), yellow-rumped warbler (*Setophaga coronata*), house finch (*Haemorhous mexicanus*), red-shouldered hawk (*Buteo lineatus*) two individuals soaring over the Eucalyptus grove to the E of the site, house wren (*Troglodytes aedon*), American robin (*Turdus migratorius*), golden-crowned sparrow (*Zonotrichia atricapilla*), Nuttal's woodpecker (*Picoides nuttallii*), white-crowned sparrow (*Zonotrichia leucophrys*), American robin (*Turdus migratorius*), purple finch (*Haemorhous purpureus*), tree swallow (*Tachycineta bicolor*), American goldfinch (*Spinus tristis*), mallard ducks (*Anas platyrhynchos*), ruby-crowned kinglet (*Regulus calendula*), American pipit (*Anthus rubescens*), California gull (*Larus californicus*), brown-headed cowbird (*Molothrus ater*), Anna's hummingbird (*Calypte anna*), chestnut-backed chickadee (*Poecile rufescens*), White-tailed kite (*Elanus leucurus*),

Other Animals: black-tailed jackrabbit (*Lepus californicus*),

Site Visit: 3/31/23

Time: 6:30 AM
Weather: clear, wind 0 mph, 44.5 degF, 76.5% RH
Notes: parked NE corner
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Bird species: American robin (*Turdus migratorius*), house finch (*Haemorhous mexicanus*), crow (*Corvus brachyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*), yellow-rumped warbler (*Setophaga coronata*), wild turkey (*Meleagris gallopavo*), mourning dove (*Zenaida macroura*), Western scrub jay (*Aphelocoma californica*), lesser goldfinch (*Spinus psaltria*), house wren (*Troglodytes aedon*), Canada goose (*Branta canadensis*), American goldfinch (*Spinus tristis*), house sparrow (*Passer domesticus*), Allen's hummingbird (*Selasphorus sasin*), kildeer (*Charadrius vociferus*), raven (*Corvus corax*), unknown gull likely Western or California, American coot (*Fulica americana*), European starling (*Sturnus vulgaris*), ruby-crowned kinglet (*Regulus calendula*), black phoebe (*Sayornis nigricans*),

Other Animals: Mule deer (*Odocoileus hemionus*), domestic cat (*Felis catus*),

Site Visit: 4/4/23

Start time: 6:35 AM
Weather: clear, 49 degF, no wind, 81% RH
Notes: parked SW corner; 6:15 AM first light, 7:15 first direct sunlight
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey; mid-season plant survey
Personnel: Dr. Christopher DiVittorio

Bird Species: red-shouldered hawk (*Buteo lineatus*) perched on Eucalyptus tree on N fenceline , wild turkey (*Meleagris gallopavo*) calling and all over parking area, White-tailed kite (*Elanus leucurus*) foraging and calling, house wren (*Troglodytes aedon*), house finch (*Haemorhous mexicanus*), mourning dove (*Zenaida macroura*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), raven (*Corvus corax*), lesser goldfinch (*Spinus psaltria*), purple finch (*Haemorhous purpureus*), song sparrow (*Melospiza melodia*), mallard ducks (*Anas platyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*), rock wren (*Salpinctes obsoletus*), black phoebe (*Sayornis nigricans*), European starling (*Sturnus vulgaris*), fox sparrow (*Passerella iliaca*), Northern mockingbird (*Mimus polyglottos*), tree swallow (*Tachycineta bicolor*), Canada goose (*Branta canadensis*), kildeer (*Charadrius vociferus*), Anna's hummingbird (*Calypte anna*), Western bluebird (*Sialia mexicana*),

Other Animals: black-tailed jackrabbit (*Lepus californicus*),

Site Visit: 4/5/23

Start time: 6:08 AM
Weather: 39 degF, 80% RH, no wind
Notes: met Jerry with Stravinsky onsite; parked SW corner
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Bird Species: red-shouldered hawk (*Buteo lineatus*) called from southwest corner of Eucalyptus grove once, wild turkey (*Meleagris gallopavo*), house finch (*Haemorhous mexicanus*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), California towhee (*Melozone crissalis*), raven (*Corvus corax*), mallard ducks (*Anas platyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*), White-tailed kite (*Elanus leucurus*) 3 hovering various times over the field, Nuttal's woodpecker (*Picoides nuttallii*), European starling (*Sturnus vulgaris*), white-crowned sparrow (*Zonotrichia leucophrys*), black phoebe (*Sayornis nigricans*),

Other Animals: None

Site Visit: 4/6/23

Start time: 6:17 AM
Weather: clear, 44 degF, 80% RH, no wind
Notes: fewer wildlife than yesterday; met Jerry with Stravinsky onsite; parked SW corner
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Bird Species: wild turkey (*Meleagris gallopavo*), house finch (*Haemorhous mexicanus*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), California towhee (*Melozone crissalis*), brown creeper (*Certhia americana*), raven (*Corvus corax*), American robin (*Turdus migratorius*), Canada goose (*Branta canadensis*), red-shouldered hawk (*Buteo lineatus*) called from southwest corner of Eucalyptus grove once similar to other mornings, White-tailed kite (*Elanus leucurus*) two individuals over east Eucalyptus grove being chased by crows, song sparrow (*Melospiza melodia*), great blue heron (*Ardea herodias*) soaring overhead, unknown gulls soaring, lesser goldfinch (*Spinus psaltria*), Anna's hummingbird (*Calypte anna*), mallard ducks (*Anas platyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*)

Other Animals: black-tailed jackrabbit (*Lepus californicus*) runways, California vole (*Microtus californicus*) runways

Site Visit: 4/7/23

Start time: 6:30 AM
Weather: cloudy, 54.5 degF, 79% RH, wind 1-2 mph, fewer birds today
Notes: met Jerry with Stravinsky onsite
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Bird Species: Bewick's wren (*Thryomanes bewickii*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), wild turkey (*Meleagris gallopavo*), hermit thrush (*Catharus guttatus*), Anna's hummingbird (*Calypte anna*), house wren (*Troglodytes aedon*), dark-eyed junco (*Junco hyemalis*), black phoebe (*Sayornis nigricans*), lesser goldfinch (*Spinus psaltria*), house finch (*Haemorhous mexicanus*), Nuttal's woodpecker (*Picoides nuttallii*), White-tailed kites (*Elanus leucurus*) being chased by crows then two foraging in field, cliff swallow (*Petrochelidon pyrrhonota*), cedar waxwing (*Bombycilla cedrorum*), American goldfinch (*Spinus tristis*), mallard ducks (*Anas platyrhynchos*), white-crowned sparrow (*Zonotrichia leucophrys*),

Other Animals: black-tailed jackrabbit (*Lepus californicus*),

Site Visit: 4/24/23

Start time: 6:30 AM
Weather: cloudy, then sunny; 61 degF, 64% RH, 1-3 mph wind
Notes: met Jerry with Stravinsky onsite for survey at 6:30, began preconstruction meeting 8:00 AM
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey; preconstruction meeting with geotechnical engineer, Stravinsky, civil engineer, SWPP monitor, etc.
Personnel: Dr. Christopher DiVittorio

Birds: violet-green swallow (*Tachycineta thalassina*), Brewer's blackbird (*Euphagus cyanocephalus*), California towhee (*Melozone crissalis*), dark-eyed junco (*Junco hyemalis*), black phoebe (*Sayornis nigricans*), lesser goldfinch (*Spinus psaltria*), crow (*Corvus brachyrhynchos*), Anna's hummingbird (*Calypte anna*), house wren (*Troglodytes aedon*), European starling (*Sturnus vulgaris*), white-crowned sparrow (*Zonotrichia leucophrys*), Nuttal's woodpecker (*Picoides nuttallii*), American goldfinch (*Spinus tristis*), Western bluebird (*Sialia mexicana*), turkey vulture (*Cathartes aura*), mourning dove (*Zenaida macroura*), White-tailed kite (*Elanus leucurus*) soaring and hovering over field, juvenile red-tailed hawk (*Buteo jamaicensis*) offsite to E flushed immediately out of site to the SE, peregrine falcon (*Falco peregrinus*) fly-through overhead, unidentified species of sparrow,

Other Animals: none

Other Notes: Red-tailed hawk nest on south side of existing warehouse to the south of project site is not active this year.

Site Visit: 4/28/23

Start time: 5:45 AM
Weather: cloudy, cold
Notes: met Jerry with Stravinsky onsite, Commerce 217 will be graded tomorrow; silt fencing installed and grass has been mowed since last visit; no burrows or other animal sign onsite; this counts towards the 24-hour BUOW preconstruction survey requirement
Purpose: preconstruction Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Birds: White-tailed kite (*Elanus leucurus*) hovering over field, turkey vulture (*Cathartes aura*), wild turkey (*Meleagris gallopavo*),

Other Animals: black-tailed jackrabbit (*Lepus californicus*),

Site Visit: 5/29/23

Start time: 8:30 AM
Weather: sunny
Notes: Commerce 220 site has been graded in addition to Commerce 217
Purpose: Swainson's hawk, other raptor, nesting passerine bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Birds: no sign of BUOW or Swainson's hawk; presence/absence survey only; no comprehensive bird list completed

Other Animals: none

Site Visit: 7/2/23

Start time: 1:00 PM
Weather: clear, sunny, 85 degF, 51% RH, 3-8 mph wind
Note: many species appear to have migrated offsite for the summer
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey

Bird Species:

house finch (*Haemorhous mexicanus*), Osprey (*Pandion haliaetus*), turkey vulture (*Cathartes aura*), lesser goldfinch (*Spinus psaltria*), red-tailed hawk (*Buteo jamaicensis*), Nuttal's woodpecker (*Picoides nuttallii*), kildeer (*Charadrius vociferus*), White-tailed kite (*Elanus leucurus*)

Other Animals: none

Appendix B: Master Species List

The following is a list of animal species observed across the eleven (11) site visits at the project site. Special-status species, if any, are denoted with an asterisk (*).

MASTER BIRD LIST

Allen's hummingbird (*Selasphorus sasin*)
American coot (*Fulica americana*)
American goldfinch (*Spinus tristis*)
American pelican (*Pelecanus erythrorhynchos*)
American pipit (*Anthus rubescens*)
American robin (*Turdus migratorius*)
Anna's hummingbird (*Calypte anna*)
Bewick's wren (*Thryomanes bewickii*)
black phoebe (*Sayornis nigricans*)
Brewer's blackbird (*Euphagus cyanocephalus*)
brown creeper (*Certhia americana*)
brown-headed cowbird (*Molothrus ater*)
California gull (*Larus californicus*)
California towhee (*Melozone crissalis*)
Canada goose (*Branta canadensis*)
cedar waxwing (*Bombycilla cedrorum*)
chestnut-backed chickadee (*Poecile rufescens*)
cliff swallow (*Petrochelidon pyrrhonota*)
crow (*Corvus brachyrhynchos*)
dark-eyed junco (*Junco hyemalis*)
European starling (*Sturnus vulgaris*)
fox sparrow (*Passerella iliaca*)
golden-crowned sparrow (*Zonotrichia atricapilla*)
great blue heron (*Ardea herodias*)
hermit thrush (*Catharus guttatus*)
house finch (*Haemorhous mexicanus*)
house sparrow (*Passer domesticus*)
house wren (*Troglodytes aedon*)
kildeer (*Charadrius vociferus*)
lesser goldfinch (*Spinus psaltria*)
mallard ducks (*Anas platyrhynchos*)
mourning dove (*Zenaida macroura*)
Northern flicker (*Colaptes auratus*)
Northern mockingbird (*Mimus polyglottos*)
Nuttal's woodpecker (*Picoides nuttallii*)
Osprey (*Pandion haliaetus*)
peregrine falcon (*Falco peregrinus*)
purple finch (*Haemorhous purpureus*)
raven (*Corvus corax*)
red-shouldered blackbird (*Agelaius phoeniceus*)
red-shouldered hawk (*Buteo lineatus*)
red-tailed hawk (*Buteo jamaicensis*)

rock wren (*Salpinctes obsoletus*)
ruby-crowned kinglet (*Regulus calendula*)
song sparrow (*Melospiza melodia*)
tree swallow (*Tachycineta bicolor*)
turkey vulture (*Cathartes aura*)
violet-green swallow (*Tachycineta thalassina*)
Western bluebird (*Sialia mexicana*)
Western scrub jay (*Aphelocoma californica*)
white-crowned sparrow (*Zonotrichia leucophrys*)
White-tailed kite (*Elanus leucurus*)
wild turkey (*Meleagris gallopavo*)
yellow-rumped warbler (*Setophaga coronata*)
unidentified gull likely Western or California
unidentified species of sparrow

MASTER OTHER ANIMALS LIST

black-tailed deer (*Odocoileus hemionus*)
black-tailed jackrabbit (*Lepus californicus*)
California vole (*Microtus californicus*) runways
domestic cat (*Felis catus*)

SPECIAL-STATUS PLANT SURVEY REPORT

Date: July 21, 2023

To: Jason Brandman, FCS International.

From: Dr. Christopher T. DiVittorio, Pinecrest Research Corp., Inc.

Subject: Results of special-status plant surveys at 220 Commerce Court, Napa County, CA (FCS Project 5639.0001)

To Whom It May Concern,

This rare plant survey report (Report) details the findings of three protocol-level special-status plant surveys conducted in 2023 at the above-referenced property located in the County of Napa. The site consists of one parcel measuring 10.2 acres and assigned APN 058-030-069.

Site Description

The entirety of the site is disked and mowed ruderal grassland, with the exception of some emergent wetland along the north property line. A stand of non-native *Eucalyptus* spp. exists to the west but this is offsite and located on the adjacent parcel. The ruderal grassland exhibits low cover of plants and low species diversity with very few native species (Figure 1). The habitat type of this area as determined by Sawyer et al. (2009) *Manual of California Vegetation 2nd Edition* (MCV) is *Bromus* (*diandrus, hordeaceous*)-*Brachypodium distachyon* Semi-Natural Herbaceous Stand. There is also some disturbed/previously developed habitat in the southeast corner (Figure 3). The project will affect only the ruderal grassland portion of the site.

Methods

Special-status plants are defined here to include: (1) all plants that are federal- or state-listed as rare, threatened or endangered, (2) all federal and state candidates for listing, (3) all plants included in Lists 1 through 4 of the CNPS Inventory, and (4) plants that qualify under the definition of "rare" in the California Environmental Quality Act, section 15380. Background information searches were conducted prior to all site visits to identify potential rare plant species or sensitive plant communities recognized by the California Department of Fish and Wildlife (CDFW) that may occur in the Study Area vicinity.

A table of these species, and their protection status, habitat requirements, and likelihood to occur in the Study Area is provided below in Appendix A. Sources for this table include the California Department of Fish and Wildlife (CDFW) Natural Diversity Database (CDFW 2023), the California Native Plant Society (CNPS) Electronic Inventory of Rare and Endangered Vascular Plants of California (CNPS 2023), and the knowledge of PEC staff. CNDDB searches were performed within a "9-quad" area encompassing the surrounding region.

Site visits were performed during the growing season of 2023. An early-season site visit was performed on March 20. Mid-season site visits were performed on April 6, April 7, and May 29. A late-season site visit was also performed on July 2. Between the mid-season and late-season site visits the site was graded thus the late-season site visit focused on remaining vegetation surrounding the areas of disturbance. Site visits were performed by PEC botanist Dr. Christopher DiVittorio, with secondary identification on voucher and photograph specimens made by PEC botanist Dr. Zoya Akulova. During each site visit, Dr. DiVittorio surveyed the entirety of the project area using methods as specified in the California Department of Fish & Wildlife (CDFW) publication titled *Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities*, dated March 20, 2018.

During each survey, the entirety of the "Commerce 220" site as well as the adjacent "Commerce 217" site were examined. These surveys included the entirety of both legal parcels, as well all of the vegetated areas up to the concrete paved area on the developed parcel to the south. Field surveys were conducted by walking the entire project area on foot in parallel lines approximately 15 feet apart, identifying every species that was flowering, and making note of any species that were past flowering or that had not yet flowered. Voucher specimens were taken of any species that required identification in the laboratory. All terminology follows currently accepted nomenclature as described in *The Jepson Manual* (2012).

Results & Recommendations

The project area is comprised of routinely disked ruderal *Bromus* (*diandrus, hordeaceous*) Semi-Natural Stands with some isolated individuals of *Baccharis pilularis* mostly near the edges of the site. A map of habitat types is shown in Figure 3. No special-status plant species or sensitive habitats were positively identified in the project area. A full list of the species encountered during the surveys is provided below in Appendix B. In total, 15 native species were observed onsite and 57 non-native species were observed. No special-status species were found thus we have no recommendations for mitigation or avoidance for this project.

Please let me know if you have any questions about this or any other studies we've performed for this project.

Sincerely,

Christopher DiVittorio, PhD
President, PEC

Appendix A: Special-Status Species Considered

The following is a list of sensitive and/or rare plants and habitats generated based on knowledge of the species and habitats of Napa County by PEC staff, from various State and Federal databases, and from the California Natural Diversity Database (CNDDB). Known occurrences within a "9-quad" region around the project site are shown in bold.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
PLANTS			
Alkali milk-vetch (*Astragalus tener* var. *tener*)	**—/—/1B.2**	**Alkali grassland**	**Very Low: No alkali habitat exists in the project area.**
Anthony peak lupine (*Lupinus antoninus*)	—/—/1B.2	Coniferous forest	None: No coniferous forest habitat exists in the project area.
Baker's goldfields (*Lasthenia californica* ssp. *bakeri*)	—/—/1B.2	Coastal grasslands	Very Low: Some grassland habitat exists in the project area.
Baker's larkspur (*Delphinium bakeri*)	FE/SE/1B.1	Coastal scrub	Very Low: No coastal scrub habitat exists in the project area.
Baker's manzanita (*Arctostaphylos bakeri* ssp. *bakeri*)	—/—/1B.1	Serpentine chaparral	None: No serpentine chaparral exists in the project area.
Baker's navarretia (*Navarretia leucocephala* ssp. *bakeri*)	**—/—/1B.1**	**Vernal pool**	**None: No vernal pool habitat exists in the project area.**
Beaked tracyina (*Tracyina rostrata*)	—/—/1B.2	Grassland, foothill woodland	Low: Some grassland habitat exists in the project area.
Bent flowered fiddleneck (*Amsinckia lunaris*)	—/—/1B.2	Grassland, foothill woodland	Low: Some grassland habitat exists in the project area.
Big-scale balsamroot (*Balsamorhiza macrolepis*)	**—/—/1B.2**	**Grassland**	**Low: Some grassland habitat exists in the project area.**
Big tarplant (*Blepharizonia plumosa*)	**—/—/1B.1**	**Chaparral, grassland**	**Low: Some grassland habitat exists in the project area.**
Blasdale's bent grass (*Agrostis blasdalei*)	—/—/1B.2	Coastal grassland	Very Low: Some grassland habitat exists in the project area.
Blue coast gilia (*Gilia capitata* ssp. *chamissonis*)	—/—/1B.1	Coastal sand dunes	None: No sand dune habitat exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Bluff wallflower (*Erysimum concinnum*)	—/—/1B.2	Coastal scrub	None: No coastal scrub habitat exists in the project area.
Bogg's Lake hedge-hyssop (*Gratiola heterosepala*)	—/—/1B.2	Vernal pool, pond	None: No vernal pool habitat exists in the project area.
Bolander's horkelia (*Horkelia bolanderi*)	—/—/1B.2	Coniferous forest, grassland	Low: Some grassland exists in the project area.
Bolander's water hemlock (*Cicuta maculata var. bolanderi*)	**—/—/2B.1**	**Salt marsh**	**None: No salt marsh habitat exists in the project area.**
Brandegee's eriastrum (*Eriastrum brandegeeae*)	—/—/1B.1	Chaparral	None: No chaparral habitat exists in the project area.
Brewer's calandrinia (*Calandrinia breweri*)	**—/—/4.2**	**Coastal scrub**	**None: No coastal scrub habitat exists in the project area.**
Brewer's western flax (*Hesperolinon breweri*)	**—/—/1B.2**	**Chaparral, grassland**	**Low: Some grassland habitat exists in the project area.**
Bristly leptosiphon (*Leptosiphon aureus*)	**—/—/4.2**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Bristly sedge (*Carex comosa*)	—/—/2B.1	Wetland, riparian	None: No potential wetland habitat exists in the project area.
Brownish beaked-rush (*Rhynchospora capitellata*)	—/—/2B.2	Wetland, riparian	None: No potential wetland habitat exists in the project area.
Burke's goldfields (*Lasthenia burkei*)	FE/SE/1B.1	Vernal pools, grassland	Low: Some grassland habitat exists in the project area.
California alkali grass (*Puccinellia simplex*)	—/—/1B.2	Alkali grassland	Very Low: No alkali grassland habitat exists in the project area.
California beaked-rush (*Rhynchospora californica*)	**—/—/1B.1**	**Freshwater wetlands**	**None: No potential wetland habitat exists in the project area.**
California satintail (*Imperata brevifolia*)	—/—/2B.1	Chaparral, coastal scrub	None: No chaparral habitat exists in the project area.
California sedge (*Carex californica*)	—/—/2B.3	Wetlands	None: No wetland habitat exists in the project area.
Calistoga ceanothus (*Ceanothus divergens*)	—/—/1B.2	Chaparral	None: No chaparral habitat exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Calistoga popcornflower (*Plagiobothrys strictus*)	FE/ST/1B.1	Wetland, riparian	None: No wetland habitat exists in the project area.
Carquinez goldenbrush (*Isocoma arguta*)	**—/—/1B.1**	**Grassland**	**Low: Some grassland habitat exists in the project area.**
Chaparral ragwort (*Senecio aphanactis*)	**—/—/1B.1**	**Coastal scrub, woodland**	**None: No coastal scrub habitat exists in the project area.**
Clara Hunt's milk vetch (*Astragalus claranus*)	—/—/1B.1	Chaparral, grassland	Low: Some grassland habitat exists in the project area.
Coast iris (*Iris longipetala*)	**—/—/4.2**	**Coastal grassland, wetland**	**Low: Some grassland habitat exists in the project area.**
Coast lily (*Lilium maritimum*)	—/—/1B.1	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.
Coastal bluff morning glory (*Calystegia purpurata* ssp. *saxicola*)	—/—/1B.2	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.
Cobb Mountain lupine (*Lupinus sericatus*)	**—/—/1B.2**	**Chaparral, coniferous forest**	**None: No chaparral habitat exists in the project area.**
Colusa layia (*Layia septentrionalis*)	—/—/1B.2	Chaparral, valley grassland	Low: Some grassland habitat exists in the project area.
Congdon's tarplant (*Centromadia parryi ssp. congdonii*)	**—/—/1B.1**	**Grassland**	**Low: Some grassland habitat exists in the project area.**
Congested-headed hayfield tarplant (*Hemizonia congesta* ssp. *congesta*)	—/—/1B.2	Grassland, coastal scrub	Low: Some grassland habitat exists in the project area.
Contra Costa goldfields (*Lasthenia conjugens*)	**FE/—/1B.1**	**Vernal pool**	**None: No vernal pool habitat exists in the project area.**
Crystal Springs lessingia (*Lessingia arachnoidea*)	—/—/1B.2	Serpentine grassland	None: No serpentine grassland habitat exists in the project area.
Cunningham Marsh cinquefoil (*Potentilla uliginosa*)	—/—/1A	Wetland	None: No wetland habitat exists in the project area.
Dark-eyed gilia (*Gilia millefoliata*)	—/—/1B.2	Coastal sand dunes	None: No coastal sand dune habitat exists in the project area.
Dark-mouthed triteleia (*Triteleia lugens*)	**—/—/4.3**	**Grassland, chaparral**	**Low: Some grassland habitat exists in the project area.**

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Deceiving sedge (*Carex saliniformis*)	—/—/1B.2	Grassland	Low: Some grassland habitat exists in the project area.
Deep-scarred cryptantha (*Cryptantha excavata*)	—/—/1B.2	Woodland	None: No woodland habitat exists in the project area.
Delta tule pea (*Lathyrus jepsonii* var. *jepsonii*)	**—/—/1B.2**	**Freshwater and brackish marsh**	**None: No marsh habitat exists in the project area.**
Diablo helianthella (*Helianthella castanea*)	**—/—/1B.2**	**Chaparral, grassland**	**Low: Some grassland habitat exists in the project area.**
Dimorphic snapdragon (*Antirrhinum subcordatum*)	—/—/4.3	Serpentine chaparral	None: No serpentine chaparral exists in the project area.
Dwarf downingia (*Downingia pusilla*)	**—/—/2B.2**	**Vernal pool, wetland**	**None: No vernal pool habitat exists in the project area.**
Dwarf soaproot (*Chlorogalum pomeridianum* var. *minus*)	—/—/1B.2	Serpentine chaparral	None: No serpentine chaparral exists in the project area.
Eel-grass pondweed (*Potamogeton zosteriformis*)	—/—/2B.2	Wetland, pond	None: No wetland habitat exists in the project area.
Fragrant fritillary (*Fritillaria liliacea*)	**—/—/1B.2**	**Grassland**	**Low: Some grassland habitat exists in the project area.**
Few-flowered navarretia (*Navarretia leucocephala* ssp. *pauciflora*)	FE/SE/1B.1	Vernal pool, wetland	None: No vernal pool habitat exists in the project area.
Franciscan onion (*Allium peninsulare* var. *franciscanum*)	**—/—/1B.2**	**Coastal grassland**	**Very Low: No coastal grassland habitat exists in the project area.**
Geysers panicum (*Panicum acuminatum* var. *thermale*)	—/—/1B.2	Chaparral, wetland	None: No chaparral habitat exists in the project area.
Glandular western flax (*Hesperolinon adenophyllum*)	—/—/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Golden larkspur (*Delphinium luteum*)	FE/SR/1B.1	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.
Grassleaf water plantain (*Alisma gramineum*)	—/—/2B.2	Wetland, pond	None: No wetland habitat exists in the project area.
Green monardella (*Monardella viridis*)	**—/—/4.3**	**Chaparral**	**None: No chaparral habitat exists in the project area.**

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Greene's narrow-leaved daisy (*Erigeron greenei*)	**—/—/1B.2**	**Serpentine chaparral**	**None: No serpentine chaparral habitat exists in the project area.**
Hall's harmonia (*Harmonia hallii*)	—/—/1B.2	Serpentine chaparral	None: No chaparral habitat exists in the project area.
Henderson's bent grass (*Agrostis hendersonii*)	**—/—/3.2**	**Vernal pool**	**None: No vernal pool habitat exists in the project area.**
Hoffman's bristly jewelflower (*Streptanthus glandulosus* spp. *hoffmanii*)	—/—/1B.3	Chaparral, woodland	None: No chaparral habitat exists in the project area.
Holly-leaved ceanothus (*Ceanothus purpureus*)	**—/—/1B.2**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Hospital Canyon larkspur (*Delphinium californicum* ssp. *interius*)	—/—/1B.2	Woodland	None: No woodland habitat exists in the project area.
Humboldt County milk vetch (*Astragalus agnicidus*)	—/—/1B.1	Coniferous forest	None: No coniferous forest habitat exists in the project area.
Jepson's coyote thistle (*Eryngium jepsonii*)	**—/—/4.2**	**Wetland, vernal pool**	**None: No wetland habitat exists in the project area.**
Jepson's leptosiphon (*Leptosiphon jepsonii*)	**—/—/1B.2**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Jepson's milk-vetch (*Astragalus rattanii* var. *jepsonianus*)	—/—/1B.2	Chaparral, grassland	Very Low: Some grassland habitat exists in the project area.
Johnny-nip (*Castilleja ambigua var. ambigua*)	—/—/4.2	**Wetland, riparian**	**None: No wetland habitat exists in the project area.**
Kenwood Marsh checkerbloom (*Sidalcea oregana* ssp. *valida*)	FE/SE/1B.1	Wetland	None: No wetland habitat exists in the project area.
Konocti manzanita (*Arctostaphylos manzanita* ssp. *elegans*)	—/—/1B.3	Chaparral, woodland	None: No chaparral habitat exists in the project area.
Lake County stonecrop (*Sedella leiocarpa*)	—/—/1B.1	Wetland	None: No wetland habitat exists in the project area.
Legenere (*Legenere limosa*)	**—/—/1B.1**	**Wetland, grassland**	**Very Low: Some grassland habitat exists in the project area.**
Loch Lomond button-celery (*Eryngium constancei*)	FE/SE/1B.1	Vernal pool	None: No vernal pool habitat exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Lobb's aquatic buttercup (*Ranunculus lobbii*)	**—/—/4.2**	**Vernal pool**	**None: No vernal pool habitat exists in the project area.**
Long-styled sand-spurrey (*Spergularia macrotheca* var. *longistyla*)	**—/—/1B.2**	**Wetland, grassland**	**Very Low: Some grassland habitat exists in the project area.**
Lyngbye's sedge (*Carex lyngbyei*)	**—/—/2B.2**	**Salt marsh**	**None: No salt marsh habitat exists in the project area.**
Many-flowered navarretia (*Navarretia leucocephala* spp. *plieantha*)	FE/SE/1B.2	Vernal pool	None: No wetland habitat exists in the project area.
Maple-leaved checkerbloom (*Sidalcea malachroides*)	—/—/4.2	Coastal grassland, coniferous forest	Very Low: No coastal grassland habitat exists in the project area.
Marin checker lily (*Fritillaria lanceolata* var. *tristulis*)	—/—/1B.1	Grassland	Low: Some grassland habitat exists in the project area.
Marin checkerbloom (*Sidalcea hickmanii* spp. *viridis*)	—/—/1B.2	Grassland	Low: Some grassland habitat exists in the project area.
Marin County navarretia (*Navarretia rosulata*)	—/—/1B.2	Serpentine forest	None: No serpentine habitat exists in the project area.
Marin knotweed (*Polygonum marinense*)	**—/—/3.1**	**Coastal salt marsh**	**None: No coastal salt marsh habitat exists in the project area.**
Marin manzanita (*Arctostaphylos virgata*)	—/—/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Marin western flax (*Hesperolinon congestum*)	FT/ST/1B.1	Chaparral	None: No chaparral habitat exists in the project area.
Marsh checkerbloom (*Sidalcea oregana* ssp. *hydrophila*)	—/—/1B.2	Wetland, riparian	None: No wetland habitat exists in the project area.
Marsh microseris (*Microseris paludosa*)	—/—/1B.2	Wetland, grassland	Very Low: Some grassland habitat exists in the project area.
Marsh pea (*Lathyrus palustris*)	—/—/2B.1	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.
Mason's ceanothus (*Ceanothus masonii*)	—/SR/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Mason's lilaeopsis (*Lilaeopsis masonii*)	**—/SR/1B.1**	**Freshwater and brackish marsh**	**None: No marsh habitat exists in the project area.**

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Milo Baker's lupine (*Lupinus milo-bakeri*)	—/—/1B.1	Woodland, grassland	None: No woodland habitat exists in the project area.
Modest rockcress (*Arabis modesta*)	**—/—/4.3**	**Chaparral, forest**	**None: No chaparral habitat exists in the project area.**
Morrison's jewelflower (*Streptanthus morrisonii* ssp. *morrisonii*)	—/—/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Mt. Diablo fairy-lantern (*Calochortus pulchellus*)	**—/—/1B.2**	**Chaparral, grassland**	**Very Low: Some grassland habitat exists in the project area.**
Mt. St. Helena morning glory (*Calystegia collina* ssp. *oxyphylla*)	—/—/4.2	Serpentine chaparral	None: No serpentine habitat exists in the project area.
Mt. Tamalpais bristly jewelflower (*Streptanthus glandulosus* spp. *pulchellus*)	—/—/1B.2	Chaparral, grassland	Very Low: Some grassland habitat exists in the project area.
Mt. Tamalpais manzanita (*Arctostaphylos montana* spp. *montana*)	—/—/1B.3	Chaparral	None: No chaparral habitat exists in the project area.
Mt. Tamalpais thistle (*Cirsium hydrophilum* var. *vaseyi*)	—/—/1B.2	Grassland	Low: Some grassland habitat exists in the project area.
Napa bluecurls (*Trichostema ruygtii*)	**—/—/1B.2**	**Grassland**	**Medium: Some grassland habitat exists in the project area.**
Napa blue grass (*Poa napensis*)	FE/SE/1B.1	Wetland, grassland	Very Low: Some grassland habitat exists in the project area.
Napa checkerbloom (*Sidalcea hickmanii* ssp. *napensis*)	**—/—/1B.1**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Napa false indigo (*Amorpha californica* var. *napensis*)	**—/—/1B.2**	**Forest, woodland**	**None: No woodland habitat exists in the project area.**
Napa lomatium (*Lomatium repostum*)	**—/—/1B.2**	**Woodland, chaparral**	**None: No woodland habitat exists in the project area.**
Narrow-anthered brodiaea (*Brodiaea leptandra*)	**—/—/1B.2**	**Woodland, grassland**	**Very Low: Some grassland habitat exists in the project area.**
Nodding harmonia (*Harmonia nutans*)	**—/—/4.3**	**Woodland, chaparral**	**None: No chaparral habitat exists in the project area.**
North Coast semaphore grass (*Pleuropogon hooverianus*)	—/—/1B.1	Wetland, vernal pool	None: No wetland habitat exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Nuttall's ribbon-leaved pondweed (*Potamogeton epihydrus*)	—/—/2B.2	Pond	None: No pond habitat exists in the project area.
Oval-leaved viburnum (*Viburnum ellipticum*)	**—/—/2B.3**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Pacific gilia (*Gilia capitata* ssp. *pacifica*)	—/—/1B.2	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.
Pacific Grove clover (*Trifolium polyodon*)	—/—/1B.1	Grassland, wetland	Very Low: Some grassland habitat exists in the project area.
Pappose tarplant (*Centromadia parryi* ssp. *parryi*)	**—/—/1B.2**	**Grassland, wetland**	**Low: Some grassland habitat exists in the project area.**
Parry's rough tarplant (*Centromadia parryi ssp. rudisi*)	**—/—/4.2**	**Grassland**	**Low: Some grassland habitat exists in the project area.**
Pennell's bird's beak (*Cordylanthus tenuis* ssp. *capillaris*)	FE/SR/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Perennial goldfields (*Lasthenia californica* ssp. *macrantha*)	—/—/1B.2	Coastal scrub	None: No coastal scrub habitat exists in the project area.
Peruvian dodder (*Cuscuta obtusiflora* var. *glandulosa*)	—/—/1B.2	Parasitic plant, grassland, chaparral	Low: Some grassland habitat exists in the project area.
Petaluma popcornflower (*Plagiobothrys mollis* var. *vestitus*)	—/—/1A	Coastal salt marsh	None: No coastal salt marsh habitat exists in the project area.
Pink sand verbena (*Abronia umbellata* var. *breviflora*)	—/—/1B.1	Coastal sand dune	None: No sand dune habitat exists in the project area.
Pitkin Marsh lily (*Lilium pardalinum* ssp. *pitkinense*)	FE/SE/1B.1	Wetland	None: No wetland habitat exists in the project area.
Pitkin Marsh paintbrush (*Castilleja uliginosa*)	FE/SE/1A	Wetland	None: No wetland habitat exists in the project area.
Point Reyes checkerbloom (*Sidalcea calycosa* ssp. *rhizomata*)	—/—/1B.2	Coastal salt marsh	None: No salt marsh habiat exists in the project area.
Point Reyes salty bird's beak (*Chloropyron maritimum* ssp. *palustre*)	—/—/1B.2	Coastal salt marsh	None: No salt marsh habitat exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Purple-stemmed checkerbloom (*Sidalcea malviflora* spp. *purpurea*)	—/—/1B.2	Wetland	None: No wetland habitat exists in the project area.
Pygmy cypress (*Hesperocyparis pygmaea*)	—/—/1B.2	Hardpan soil	None: No hardpan forest habitat exists in the project area.
Raiche's manzanita (*Arctostaphylos stanfordiana* ssp. *raichei*)	—/—/1B.1	Chaparral	None: No chaparral habitat exists in the project area.
Raiche's red ribbons (*Clarkia concinna* spp. *raichei*)	—/—/1B.1	Coastal scrub	None: No coastal scrub habitat exists in the project area.
Redwood lily (*Lilium rubescens*)	**—/—/4.2**	**Chaparral, forest**	**None: No chaparral habitat exists in the project area.**
Rincon Ridge ceanothus (*Ceanothus confusus*)	**—/—/1B.1**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Rincon Ridge manzanita (*Arctostaphylos stanfordiana* ssp. *decumbens*)	—/—/1B.1	Chaparral	None: No chaparral habitat exists in the project area.
Rose leptosiphon (*Leptosiphon rosaceus*)	—/—/1B.1	Coastal scrub	None: No coastal scrub habitat exists in the project area.
Round-headed beaked rush (*Rhynchospora globularis*)	—/—/2B.1	Wetland, riparian	None: No wetland habitat exists in the project area.
Round-headed Chinese houses (*Collinsia corymbosa*)	—/—/1B.2	Coastal grassland	None: No coastal grassland habitat exists in the project area.
Round-leaved filaree (*California macrophylla*)	—/—/1B.2	Foothill grassland	Low: Some grassland habitat exists in the project area.
Saline clover (*Trifolium hydrophilum*)	**—/—/1B.2**	**Wetland, riparian**	**None: No potential wetland habitat exists in the project area.**
San Antonio Hills monardella (*Monardella antonina ssp. antonina*)	**—/—/3.0**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
San Francisco spineflower (*Chorizanthe cuspidata* var. *cuspidata*)	—/—/1B.2	Coastal sand dunes	None: No coastal sand dune habitat exists in the project area.
San Joaquin spearscale (*Extriplex joaquinana*)	**—/—/1B.2**	**Alkali scrub, grassland**	**Very Low: Some grassland habitat exists in the project area.**
Santa Cruz clover (*Trifolium buckwestiorum*)	—/—/1B.1	Wetland, grassland	Very Low: Some grassland habitat exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Santa Cruz microseris (*Stebbinsoseris decipiens*)	—/—/1B.2	Coastal scrub	None: No coastal scrub habitat exists in the project area.
Santa Cruz tarplant (*Holocarpha macradenia*)	FT/SE/1B.1	Coastal grassland	None: No coastal grassland habitat exists in the project area.
Santa Rosa horkelia (*Horkelia tenuiloba*)	—/—/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Seaside bittercress (*Cardamine angulata*)	—/—/2B.2	Forest, riparian	None: No forest habitat exists in the project area.
Sebastopol meadowfoam (*Limnanthes vinculans*)	FE/SE/1B.1	Wetland, vernal pool	None: No wetland habitat exists in the project area.
Serpentine cryptantha (*Cryptantha dissita*)	—/—/1B.2	Serpentine chaparral	None: No chaparral habitat exists in the project area.
Serpentine daisy (*Erigeron serpentinus*)	—/—/1B.3	Serpentine chaparral	None: No serpentine chaparral exists in the project area.
Short-leaved evax (*Hesperevax sparsiflora var. brevifolia*)	—/—/1B.2	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.
Slender Orcutt grass (*Orcuttia tenuis*)	FT/SE/1B.1	Vernal pool	None: No vernal pool habitat exists in the project area.
Small-flowered calycadenia (*Calycadenia micrantha*)	—/—/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Small groundcone (*Kopsiopsis hookeri*)	—/—/2B.3	Redwood forest	None: No redwood forest habitat exists in the project area.
Small spikerush (*Eleocharis parvula*)	**—/—/3.0**	**Woodland, chaparral**	**None: No chaparral habitat exists in the project area.**
Soft salty bird's beak (*Chloropyron molle* ssp. *molle*)	**FE/ST/1B.2**	**Coastal salt marsh**	**None: No salt marsh habitat exists in the project area.**
Sonoma alopecurus (*Alopecurus aequalis* var. *sonomensis*)	FE/—/1B.1	Wetland, vernal pool	None: No wetland habitat exists in the project area.
Sonoma beardtongue (*Penstemon newberryi* var. *sonomensis*)	—/—/1B.3	Chaparral	None: No chaparral habitat exists in the project area.
Sonoma ceanothus (*Ceanothus sonomensis*)	**—/—/1B.2**	**Chaparral**	**None: No chaparral habitat exists in the project area.**

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Sonoma spineflower (*Chorizanthe valida*)	FE/SE/1B.1	Coastal grassland	Very Low: Some grassland habitat exists in the project area.
Sonoma sunshine (*Blennosperma bakeri*)	**FE/SE/1B.1**	**Grassland, wetland**	**Very Low: Some grassland habitat exists in the project area.**
St. Helena fawn lily (*Erythronium helenae*)	**—/—/4.2**	**Grassland, chaparral**	**Very Low: Some grassland habitat exists in the project area.**
Streamside daisy (*Erigeron biolettii*)	**—/—/4.2**	**Grassland, chaparral**	**Very Low: Some grassland habitat exists in the project area.**
Suisun marsh aster (*Symphyotrichum lentum*)	**—/—/1B.2**	**Freshwater and brackish marsh**	**None: No marsh habitat exists in the project area.**
Supple daisy (*Erigeron supplex*)	—/—/1B.2	Coastal scrub	None: No coastal scrub habitat exists in the project area.
Swamp harebell (*Campanula californica*)	—/—/1B.2	Coastal grassland, wetland	Very Low: Some grassland habitat exists in the project area.
Tamalpais jewelflower (*Streptanthus batrachopus*)	—/—/1B.3	Serpentine	None: No serpentine habitat exists in the project area.
Tamalpais lessingia (*Lessingia micradenia* var. *micradenia*)	—/—/1B.2	Grassland	Low: Some grassland habitat exists in the project area.
Tamalpais oak (*Quercus parvula* var. *tamalpaisensis*)	—/—/1B.3	Woodland	None: No woodland habitat exists in the project area.
The Cedars fairy lantern (*Calochortus raichei*)	—/—/1B.2	Hardpan chaparral	None: No chaparral habitat exists in the project area.
The Cedars manzanita (*Arctostaphylos bakeri* ssp. *sublaevis*)	—/—/1B.2	Hardpan chaparral	None: No chaparral habitat exists in the project area.
Thin-lobed horkelia (*Horkelia tenuiloba*)	**—/—/1B.2**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Thurber's reed grass (*Calamagrostis crassiglumis*)	—/—/2B.1	Coastal scrub, wetland	None: No wetland habitat exists in the project area.
Tiburon buckwheat (*Eriogonum luteolum* var. *caninum*)	—/—/1B.2	Serpentine grassland	Very Low: No serpentine grassland exists in the project area.
Tiburon paintbrush (*Castilleja affinis* var. *neglecta*)	**FE/ST/1B.2**	**Serpentine grassland**	**Very Low: No serpentine grassland exists in the project area.**

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Tracy's clarkia (*Clarkia gracilis ssp. tracyi*)	**—/—/4.2**	**Serpentine chaparral**	**None: No serpentine grassland exists in the project area.**
Two-carpellate western flax (*Hesperolinon bicarpellatum*)	—/—/1B.2	Serpentine chaparral	None: No serpentine chaparral exists in the project area.
Twig-like snapdragon (*Antirrhinum virga*)	**—/—/1B.1**	**Serpentine chaparral**	**None: No serpentine habitat exists in the project area.**
Two-carpellate western flax (*Hesperolinon bicarpellatum*)	**—/—/1B.2**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Two-fork clover (*Trifolium amoenum*)	**FE/—/1B.1**	**Grassland, wetland**	**Very Low: Some grassland habitat exists in the project area.**
Vine Hill ceanothus (*Ceanothus foliosus* var. *vineatus*)	—/—/1B.1	Chaparral	None: No chaparral habitat exists in the project area.
Vine Hill clarkia (*Clarkia imbricata*)	FE/SE/1B.1	Chaparral, grassland	Very Low: Some grassland habitat exists in the project area.
Vine Hill manzanita (*Arctostaphylos densiflora*)	—/SE/1B.1	Chaparral	None: No chaparral habitat exists in the project area.
Watershield (*Brasenia schreberi*)	—/—/2B.3	Pond	None: No pond habitat exists in the project area.
Western leatherwood (*Dirca occidentalis*)	**—/—/1B.2**	**Woodland, chaparral**	**None: No woodland habitat exists in the project area.**
White-beaked rush (*Rhynchospora alba*)	—/—/2B.2	Wetland, riparian	None: No wetland habitat exists in the project area.
White-flowered rein orchid (*Piperia candida*)	—/—/1B.2	Coniferous forest	None: No coniferous forest habitat exists in the project area.
White-rayed pentachaeta (*Pentachaeta bellidiflora*)	FE/SE/1B.1	Grassland	Low: Some grassland habitat exists in the project area.
Wolly-headed gilia (*Gilia capitata* ssp. *tomentosa*)	—/—/1B.1	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.
Wolly-headed lessingia (*Lessingia hololeuca*)	**—/—/3.0**	**Forest, grassland**	**Very Low: Some grassland habitat exists in the project area.**
Wolly meadowfoam (*Limnanthes floccosa* ssp. *floccosa*)	—/—/4.2	Vernal pool	None: No wetland habitat exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Wolly spineflower (*Chorizanthe cuspidata* var. *villosa*)	—/—/1B.2	Coastal sand dunes	None: No sand dune habitat exists in the project area.
MOSSES, LICHENS & LIVERWORTS			
Angel's hair lichen (*Ramalina thrausta*)	—/—/2B.1	Forest, woodland	None: No forest habitat exists in the project area.
Coastal triquetrella (*Triquetrella californica*)	—/—/1B.2	Forest, woodland	None: No forest habitat exists in the project area.
Elongate copper moss (*Mielichhoferia elongata*)	—/—/4.3	Rock outcrops	None: No rock outcrop habitat exists in the project area.
Koch's cord moss (*Entosthodon kochii*)	—/—/1B.3	Forest, woodland	None: No forest habitat exists in the project area.

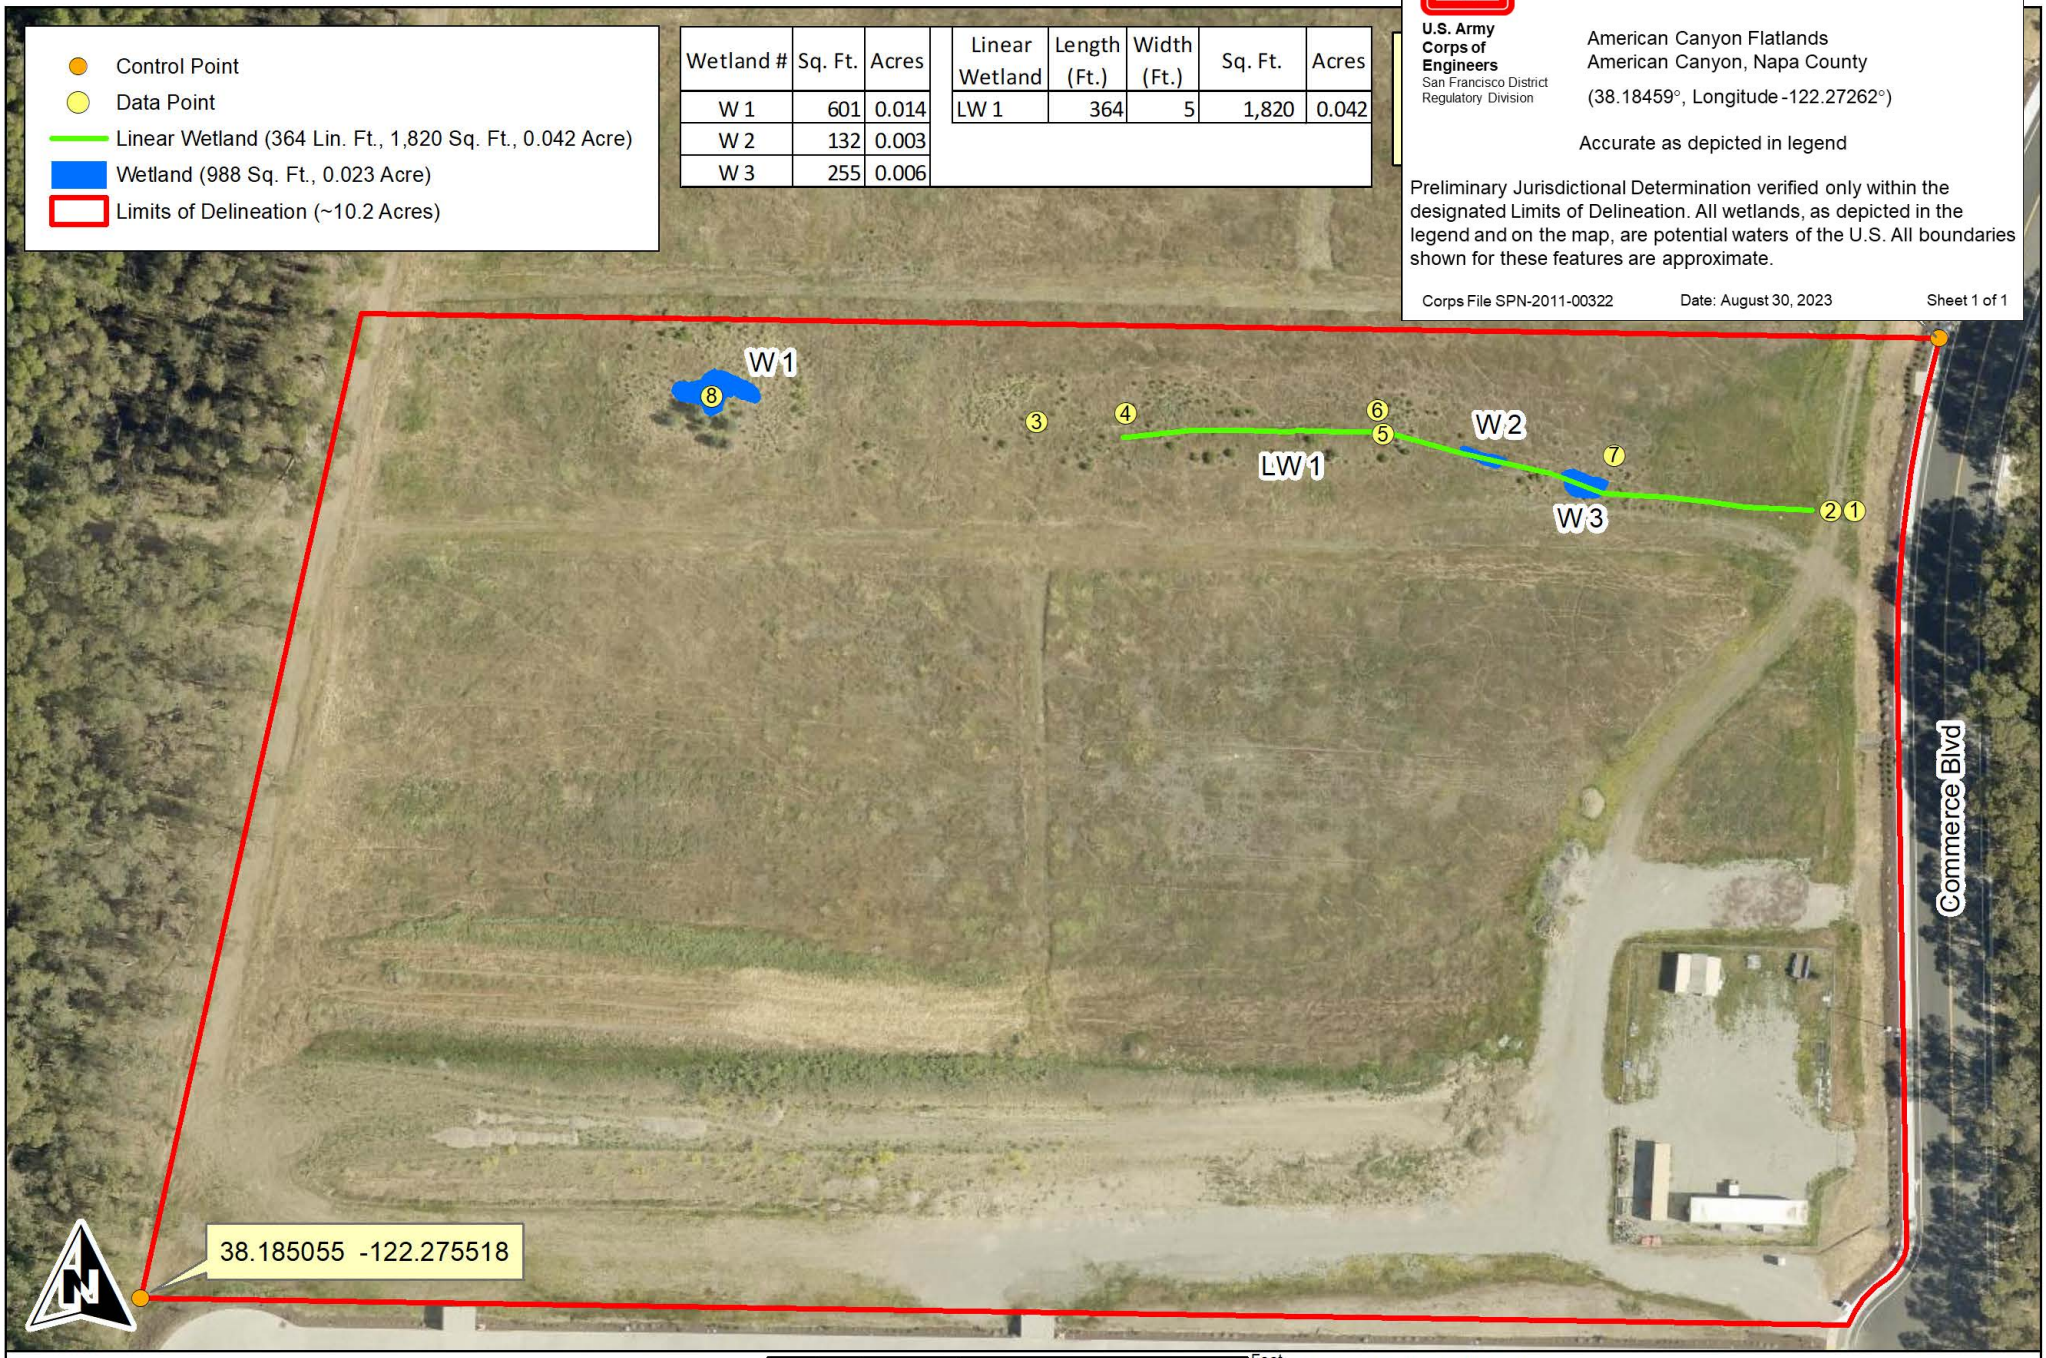
List 2B = plants rare, threatened or endangered in California, but more common elsewhere
List 3 = plant is likely rare but more information is required
List 4 = plants of limited distribution

Appendix B: Plant Species Observed Onsite

The following is a list of plant species generated based on knowledge of the species and habitats of Napa County by PEC staff, and from various State and Federal databases, as described in the *Methods* section, above. Special-status species, if any, are denoted with an asterisk (*).



Non-Native Plant Species:

bird's foot trefoil (*Lotus corniculatus*)
bishop's weed (*Ammi majus*)
black mustard (*Brassica nigra*)
bluegum (*Eucalyptus globulus*)
bristly ox-tongue (*Helminthotheca echioides*)
bull thistle (*Cirsium vulgare*)
bur clover (*Medicago polymorpha*)
cheeseweed (*Malva parviflora*)
chicory (*Cichorium intybus*)
common dandelion (*Taraxacum officinale*)
common groundsel (*Senecio vulgaris*)
crane's bill filaree (*Erodium botrys*)
curly dock (*Rumex crispus*)
false brome (*Brachypodium distachyon*)
fennel (*Foeniculum vulgare*)
field bindweed (*Convolvulus arvensis*)
field marigold (*Calendula arvensis*)
foxtail barley (*Hordeum murinum*)
Fuller's teasel (*Dipsacus fullonum*)
hairgrass (*Aira caryophyllea*)
hairy vetch (*Vicia villosa*)
Harding grass (*Phalaris aquatica*)
hedge parsley (*Torilis arvensis*)
Himalayan blackberry (*Rubus armeniacus*)
Italian ryegrass (*Festuca perennis*)
Italian thistle (*Circium pycnocephalus*)
Jersey cudweed (*Pseudognaphalium luteoalbum*)
narrowleaf cottonrose (*Logfia gallica*)
New Zealand flax (*Phormium colensoi*)
pennyroyal (*Mentha pulegium*)
pineapple weed (*Matricaria discoidea*)
poison hemlock (*Conium maculatum*)
prickly lettuce (*Lactuca serriola*)
purple star thistle (*Centaurea calcitrapa*)
red brome (*Bromus madritensis*)
reed fescue (*Festuca arundinacea*)
ribwort (*Plantago lanceolata*)
ripgut brome (*Bromus diandrus*)
rose clover (*Trifolium hirtum*)
scarlet pimpernel (*Lysimachia arvensis*)
seaside barley (*Hordeum marinum*)

sheep sorrel (*Rumex acetocella*)
shortpod mustard (*Hirschfeldia incana*)
shrubby germander (*Teucrium fruticans*)
smooth cat's ear (*Hypochaeris glabra*)
soft chess (*Bromus hordeaceous*)
spring vetch (*Vicia sativa*)
sweet pea (*Lathyrus latifolius*)
tall flatsedge (*Cyperus eragrostis*)
weedy brome (*Bromus caroli-henrici*)
wild geranium (*Geranium dissectum*)
wild lettuce (*Lactuca saligna*)
wild oatgrass (*Avena barbata*)
wild radish (*Raphanus sativa*)
woolly grevillea (*Grevillea lanigera*)
yellow star thistle (*Centaurea solstitialis*)
Zorro fescue (*Festuca myuros*)

Native Plant Species:

blue-eyed grass (*Sisyrinchium bellum*)
bog rush (*Juncus patens*)
California poppy (*Eschscholzia californica*)
common madia (*Madia elegans*)
common yarrow (*Achillea millefolium*)
coyote brush (*Baccharis pilularis*)
hairy gumweed (*Grindelia hirsutula*)
ladies' tobacco (*Pseudognaphalium californicum*)
meadow barley (*Hordeum brachyantherum*)
mountain dandelion (*Agoseris heterophylla*)
narrow-leaved miner's lettuce (*Claytonia parviflora*)
poison oak (*Toxicodendron diversilobum*)
saltgrass (*Distichlis spicata*)
slender tarweed (*Madia gracilis*)
toyon (*Heteromeles arbutifolia*)

Plant and Wildlife List

THIS PAGE INTENTIONALLY LEFT BLANK

WILDLIFE AND PLANT SPECIES LIST

Table 1: Wildlife Species List

Wildlife Species	
Scientific Name	**Common Name**
Agelaius phoeniceus	red-shouldered blackbird
Anas platyrhynchos	mallard ducks
Anthus rubescens	American pipit
Aphelocoma californica	western scrub jay
Ardea herodias	great blue heron
Bombycilla cedrorum	cedar waxwing
Branta canadensis	Canada goose
Buteo lineatus	red-shouldered hawk
Calypte anna	Anna's hummingbird
Cathartes aura	turkey vulture
Catharus guttatus	hermit thrush
Colaptes auratus	northern flicker
Corvus brachyrhynchos	crow
Corvus corax	raven
Elanus leucurus	white-tailed kite
Felis catus	domestic cat
Fulica americana	American coot
Haemorhous mexicanus	house finch
Haemorhous purpureus	purple finch
Junco hyemalis	dark-eyed junco
Larus californicus	California gull
Lepus californicus	black-tailed jackrabbit
Meleagris gallopavo	wild turkey
Melospiza melodia	song sparrow
Melozone crissalis	California towhee
Microtus californicus	California vole
Molothrus ater	brown-headed cowbird
Odocoileus hemionus	mule deer
Passerella iliaca	fox sparrow
Pelecanus erythrorhynchos	American pelican

Wildlife Species	
Scientific Name	**Common Name**
Petrochelidon pyrrhonota	cliff swallow
Picoides nuttallii	Nuttal's woodpecker
Poecile rufescens	chestnut-backed chickadee
Regulus calendula	ruby-crowned kinglet
Salpinctes obsoletus	rock wren
Sayornis nigricans	black phoebe
Setophaga coronata	yellow-rumped warbler
Sialia mexicana	western bluebird
Spinus psaltria	lesser goldfinch
Spinus tristis	American goldfinch
Sturnus vulgaris	European starling
Tachycineta bicolor	tree swallow
Thryomanes bewickii	Bewick's wren
Troglodytes aedon	house wren
Turdus migratorius	American robin
Zenaida macroura	mourning dove
Zonotrichia atricapilla	golden-crowned sparrow
Zonotrichia leucophrys	white-crowned sparrow

Table 2: Plant Species List

Plant Species	
Scientific Name	**Common Name**
Achillea millefolium	common yarrow
Agoseris heterophylla	mountain dandelion
Aira caryophyllea	hairgrass
Ammi majus	bishop's weed
Avena barbata	wild oatgrass
Baccharis pilularis	coyote brush
Brachypodium distachyon	false brome
Brassica nigra	black mustard
Bromus caroli-henrici	weedy brome
Bromus diandrus	ripgut brome
Bromus hordeaceous	soft chess

Plant Species	
Scientific Name	**Common Name**
Bromus madritensis	red brome
Calendula arvensis	field marigold
Centaurea calcitrapa	purple star thistle
Centaurea solstitialis	yellow star thistle
Cichorium intybus	chicory
Circium pycnocephalus	Italian thistle
Cirsium sp.	upland thistle
Cirsium vulgare	bull thistle
Claytonia parviflora	narrow-leaved miner's lettuce
Conium maculatum	poison hemlock
Convolvulus arvensis	field bindweed
Cyperus eragrostis	tall flatsedge
Diatoms sp.	algal mats
Dipsacus fullonum	Fuller's teasel
Distichlis spicata	saltgrass
Erodium botrys	crane's bill filaree
Erodium cicutarium	coastal heron’s bill
Eschscholzia californica	California poppy
Eucalyptus globulus)	bluegum
Festuca arundinacea	reed fescue
Festuca myuros	Zorro fescue
Festuca perennis	Italian ryegrass
Foeniculum vulgare	fennel
Geranium dissectum	wild geranium
Grevillea lanigera	woolly grevillea
Grindelia hirsutula	hairy gumweed
Helminthotheca echioides	bristly ox-tongue
Heteromeles arbutifolia	toyon
Hirschfeldia incana	shortpod mustard
Hordeum brachyantherum	meadow barley
Hordeum marinum	seaside barley
Hordeum murinum	foxtail barley
Hypochaeris glabra	smooth cat’s ear
Juncus patens	bog rush

Plant Species	
Scientific Name	**Common Name**
Lactuca saligna	wild lettuce
Lactuca serriola	prickly lettuce
Lathyrus latifolius	sweet pea
Logfia gallica	narrowleaf cottonrose
Lotus corniculatus	bird's foot trefoil
Lysimachia arvensis	scarlet pimpernel
Madia elegans	common madia
Madia gracilis	slender tarweed
Malva parviflora	cheeseweed
Matricaria discoidea	pineapple weed
Medicago polymorpha	bur clover
Mentha pulegium	pennyroyal
Phalaris aquatica	harding grass
Phormium colensoi	New Zealand flax
Plantago lanceolata	ribwort
Pseudognaphalium californicum	ladies’ tobacco
Pseudognaphalium luteoalbum	Jersey cudweed
Raphanus sativa	wild radish
Rubus armeniacus	Himalayan blackberry
Rumex acetocella	sheep sorrel
Rumex crispus	curly dock
Rumex sp.	docks
Senecio vulgaris	common groundsel
Sisyrinchium bellum	blue-eyed grass
Taraxacum officinale	common dandelion
Teucrium fruticans	shrubby germander
Torilis arvensis	hedge parsley
Toxicodendron diversilobum	poison oak
Trifolium hirtum	rose clover
Vicia sativa	spring vetch
Vicia villosa	hairy vetch

Madera, CA 93637

Subject: **Pre-construction Surveys and Implementation of CEQA Mitigation Measures BIO-1, BIO-2, BIO-3, BIO-4, and BIO-5 per the Mitigation Monitoring and Reporting Program for the Commerce 217 Warehouse Project, American Canyon, California**

Dear John:

This letter summarizes results of pre-construction burrowing owl (*Athene cunicularia*), Swainson's hawk (*Buteo swainsoni*), nesting raptor, nesting passerine bird, and western pond turtle (*Actinemys marmorata*) surveys conducted to-date by FirstCarbon Solutions (FCS) consulting Biologists Dr. Christopher DiVittorio and Bernhard Warzecha as they relate to compliance with CEQA Mitigation Measures (MM) BIO-1, MM BIO-2, MM BIO-3, MM BIO-4, and MM BIO-5 from the January 2021 Mitigation, Monitoring, and Reporting Program (MMRP) for the Commerce 217 Warehouse Project located in American Canyon, California.

The project site comprises a single parcel measuring 10.8 acres in size and consists of non-native annual and perennial grassland with several small, mapped wetland features. The site is bounded by Commerce Court to the east, a developed warehouse to the north, an open field to the south beyond which is another developed warehouse, and a eucalyptus grove to the west.

Methods

Between January 18 and April 7, 2023, FCS conducted seven nesting bird and burrowing owl detection surveys (including for Swainson's hawk) on the project site and relevant adjacent areas (where accessible), for a total of approximately 30 survey hours. Surveys for western pond turtle adults and nests were also performed simultaneously while walking the site.

Survey methods followed established procedures and applicable protocols, including the *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley* (Protocol) and the *Staff Report on Burrowing Owl Mitigation*.[1,2] Survey equipment included high-quality binoculars and a high-quality spotting scope.

Surveys were conducted during the appropriate times of day (including peak bird detection periods between sunrise and 10:00 a.m.). Surveys were conducted on foot. Survey dates conducted by FCS are shown below in Table 1.

Table 1: Survey Dates

Date	Swainson's Hawk	Burrowing Owl	Nesting Birds including Raptors
1/18/2023	First survey in Period I	Burrowing owl breeding season survey	Nesting bird surveys–All Species
3/20/2023	First survey in Period II	Burrowing owl breeding season survey	Nesting bird surveys–All Species
3/31/2023	Second survey in Period II	Burrowing owl breeding season survey	Nesting bird surveys–All Species
4/4/2023	Third survey in Period II	Burrowing owl breeding season survey	Nesting bird surveys–All Species
4/5/2023	First survey in Period III	Burrowing owl breeding season survey	Nesting bird surveys–All Species
4/6/2023	Second survey in Period III	Burrowing owl breeding season survey	Nesting bird surveys–All Species
4/7/2023	Third survey in Period III	Burrowing owl breeding season survey	Nesting bird surveys–All Species
4/24/2023 (planned)	Swainson's hawk presence/absence survey	Burrowing owl breeding season survey	Nesting bird surveys–All Species

Surveys were conducted by FCS consulting Biologists Dr. Christopher DiVittorio and Bernhard Warzecha, both of whom are experienced in conducting surveys for all of the aforementioned special-status species and have been previously approved by the California Department of Fish and Wildlife (CDFW). Additionally Mr. Warzecha and Dr. DiVittorio have previous experience and training in the monitoring of Swainson's hawk nesting, including Swainson's hawk identification and behavioral patterns.

Results

A list of all species of birds observed at the different time points is provided below. No nesting birds were observed on the project site itself, and no nests of any protected species were observed off-site in the areas that could be accessed. White-tailed kites (*Elanus leucurus*) were observed foraging in the field, but they did not appear to be nesting nearby, as described below. No Swainson's hawk or burrowing owl were observed during any of the avian surveys to-date. No adults or nests of western pond turtle were observed. All observed animal species are listed in Attachment A: Animal Species Observed.

Swainson's Hawk

No individuals of Swainson's hawk were observed during any of the surveys, and no raptor nests that could belong to Swainson's hawk were observed. The presence of other birds-of-prey utilizing territories on-site also indicates that Swainson's hawk are not utilizing this habitat currently. The negative survey results for Swainson's hawk despite approximately 30 survey hours satisfies the requirements of the survey protocol for this species, therefore it is reasonable to conclude Swainson's hawk are absent from the project site.

Nesting Birds (Including Raptors)

FCS Biologists observed no active nests within the vicinity of the project site. Several American crow were loitering around the eucalyptus grove to the east of the parcel and harassing white-tail kites that approached the grove; however, their nest could not be located. Several white-tail kites were observed each day foraging over the grassland habitat; however, each time they flew off to the southwest out of sight and the location of their nest could not be determined. One juvenile red-tailed hawk was observed within the large eucalyptus tree along the north property line; however, this individual flew off-site after approximately 20 minutes. No other active nests were observed as of April 7.

Burrowing Owl

No evidence of burrowing owl activity was observed during any of the field surveys. No California ground squirrel burrows were observed on-site, and no other burrows or dens were observed that would provide suitable nesting habitat for burrowing owl. Therefore, it is reasonable to conclude burrowing owl is absent from the project site.

Western Pond Turtle

No evidence of western pond turtle activity was observed during any of the field surveys. There are some wetland features on-site, however no ponds or streams suitable for western pond turtle exist on-site and no signs of adults or nests were observed. Therefore, it is reasonable to conclude western pond turtle is absent from the project site.

Compliance

With implementation of the pre-construction surveys, and implementation of the recommendations for Swainson's hawk, burrowing owl, nesting birds, and western pond turtle, the project is in compliance with MM BIO-1, MM BIO-2, MM BIO-3, MM BIO-4 and MM BIO-5.

FCS appreciates the opportunity to assist you on this project. If you have any questions concerning this letter report, please contact me at jwaligorski@fcs-intl.com.

Sincerely,

Janna Waligorski

Attachment A:
Animal Species Observed

Commerce 217/220 Species List

Site Visit: 1/18/23

Birds: juvenile red-shouldered hawk (*Buteo lineatus*) sitting in eucalyptus tree on N fenceline, Western bluebird (*Sialia mexicana*), Anna's hummingbird (*Calypte anna*), turkey vulture (*Cathartes aura*), American pelican (*Pelecanus erythrorhynchos*), black phoebe (*Sayornis nigricans*), white-crowned sparrow (*Zonotrichia leucophrys*), Northern flicker (*Colaptes auratus*), crow (*Corvus brachyrhynchos*)

Site Visit: 3/20/23

Start Time: 6:35 AM
Weather: no wind, 49 degF, 46% RH
Note: start at sunrise; park in SE corner

Bird Species: wild turkey (*Meleagris gallopavo*), turkey vulture (*Cathartes aura*), Canada goose (*Branta canadensis*), crow (*Corvus brachyrhynchos*), raven (*Corvus corax*), mourning dove (*Zenaida macroura*), lesser goldfinch (*Spinus psaltria*), dark-eyed junco (*Junco hyemalis*), Western bluebird (*Sialia mexicana*), red-shouldered blackbird (*Agelaius phoeniceus*), yellow-rumped warbler (*Setophaga coronata*), house finch (*Haemorhous mexicanus*), red-shouldered hawk (*Buteo lineatus*) two individuals soaring over the eucalyptus grove to the E of the site, house wren (*Troglodytes aedon*), American robin (*Turdus migratorius*), golden-crowned sparrow (*Zonotrichia atricapilla*), Nuttal's woodpecker (*Picoides nuttallii*), white-crowned sparrow (*Zonotrichia leucophrys*), American robin (*Turdus migratorius*), purple finch (*Haemorhous purpureus*), tree swallow (*Tachycineta bicolor*), American goldfinch (*Spinus tristis*), mallard ducks (*Anas platyrhynchos*), ruby-crowned kinglet (*Regulus calendula*), American pipit (*Anthus rubescens*), California gull (*Larus californicus*), brown-headed cowbird (*Molothrus ater*), Anna's hummingbird (*Calypte anna*), chestnut-backed chickadee (*Poecile rufescens*), White-tailed kite (*Elanus leucurus*)

Other Animals: black-tailed jackrabbit (*Lepus californicus*)

Flowering Plants: California poppy (*Eschscholzia californica*), coastal heron's bill (*Erodium cicutarium*), common groundsel (*Senecio vulgaris*), field marigold (*Calendula arvensis*)

Site Visit: 3/31/23

Start time: 6:30 AM
Weather: clear, wind 0 mph, 44.5 degF, 76.5% RH
Notes: parked NE corner

Bird species: American robin (*Turdus migratorius*), house finch (*Haemorhous mexicanus*), crow (*Corvus brachyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*), yellow-rumped warbler (*Setophaga coronata*), wild turkey (*Meleagris gallopavo*), mourning dove (*Zenaida macroura*), Western scrub jay (*Aphelocoma californica*), lesser goldfinch (*Spinus psaltria*), house wren (*Troglodytes aedon*), Canada goose (*Branta canadensis*), American goldfinch (*Spinus tristis*), house sparrow (*Passer domesticus*),

Allen's hummingbird (*Selasphorus sasin*), kildeer (*Charadrius vociferus*), raven (*Corvus corax*), unknown gull likely Western or California, American coot (*Fulica americana*), European starling (*Sturnus vulgaris*), ruby-crowned kinglet (*Regulus calendula*), black phoebe (*Sayornis nigricans*)

Other Animals: Mule deer (*Odocoileus hemionus*), domestic cat (*Felis catus*)

Site Visit: 4/4/23

Start time: 6:35 AM
Weather: clear, 49 degF, no wind, 81% RH, 6:15 AM first light, 7:15 first direct sunlight
Notes: parked SW corner

Bird Species: red-shouldered hawk (*Buteo lineatus*) perched on eucalyptus tree on N fenceline , wild turkey (*Meleagris gallopavo*) calling and all over parking area, White-tailed kite (*Elanus leucurus*) foraging and calling, house wren (*Troglodytes aedon*), house finch (*Haemorhous mexicanus*), mourning dove (*Zenaida macroura*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), raven (*Corvus corax*), lesser goldfinch (*Spinus psaltria*), purple finch (*Haemorhous purpureus*), song sparrow (*Melospiza melodia*), mallard ducks (*Anas platyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*), rock wren (*Salpinctes obsoletus*), black phoebe (*Sayornis nigricans*), European starling (*Sturnus vulgaris*), fox sparrow (*Passerella iliaca*), Northern mockingbird (*Mimus polyglottos*), tree swallow (*Tachycineta bicolor*), Canada goose (*Branta canadensis*), kildeer (*Charadrius vociferus*), Anna's hummingbird (*Calypte anna*), Western bluebird (*Sialia mexicana*)

Other Animals: black-tailed jackrabbit (*Lepus californicus*)

Site Visit: 4/5/23

Start time: 6:08 AM
Weather: 39 degF, 80% RH, no wind
Notes: met Jerry with Stravinsky on-site; parked SW corner

Bird Species: red-shouldered hawk (*Buteo lineatus*) called from southwest corner of eucalyptus grove once, wild turkey (*Meleagris gallopavo*), house finch (*Haemorhous mexicanus*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), California towhee (*Melozone crissalis*), raven (*Corvus corax*), mallard ducks (*Anas platyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*), White-tailed kite (*Elanus leucurus*) 3 hovering various times over the field, Nuttal's woodpecker (*Picoides nuttallii*), European starling (*Sturnus vulgaris*), white-crowned sparrow (*Zonotrichia leucophrys*), black phoebe (*Sayornis nigricans*)

Site Visit: 4/6/23

Start time: 6:17 AM
Weather: clear, 44 degF, 80% RH, no wind
Notes: fewer wildlife than yesterday; met Jerry with Stravinsky on-site; parked SW corner

Bird Species: wild turkey (*Meleagris gallopavo*), house finch (*Haemorhous mexicanus*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), California towhee (*Melozone crissalis*), brown creeper (*Certhia americana*), raven (*Corvus corax*), American robin (*Turdus migratorius*), Canada goose (*Branta canadensis*), red-shouldered hawk (*Buteo lineatus*) called from southwest corner of eucalyptus grove once similar to other mornings, White-tailed kite (*Elanus leucurus*) two individuals over east eucalyptus grove being chased by crows, song sparrow (*Melospiza melodia*), great blue heron (*Ardea herodias*) soaring overhead, unknown gulls soaring, lesser goldfinch (*Spinus psaltria*), Anna's hummingbird (*Calypte anna*), mallard ducks (*Anas platyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*)

Other Animals: runways of black-tailed jackrabbit (*Lepus californicus*) and California vole (*Microtus californicus*)

Site Visit: 4/7/23

Start time: 6:30 AM
Weather: cloudy, 54.5 degF, 79% RH, wind 1-2 mph
Notes: fewer birds today, met Jerry on-site

Bird Species: Bewick's wren (*Thryomanes bewickii*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), wild turkey (*Meleagris gallopavo*), hermit thrush (*Catharus guttatus*), Anna's hummingbird (*Calypte anna*), house wren (*Troglodytes aedon*), dark-eyed junco (*Junco hyemalis*), black phoebe (*Sayornis nigricans*), lesser goldfinch (*Spinus psaltria*), house finch (*Haemorhous mexicanus*), Nuttal's woodpecker (*Picoides nuttallii*), White-tailed kites (*Elanus leucurus*) being chased by crows then two foraging in field, cliff swallow (*Petrochelidon pyrrhonota*), cedar waxwing (*Bombycilla cedrorum*), American goldfinch (*Spinus tristis*), mallard ducks (*Anas platyrhynchos*), white-crowned sparrow (*Zonotrichia leucophrys*)

Other Animals: black-tailed jackrabbit (*Lepus californicus*)

Attention: Mr. Brian Doswald

RE: Addendum Letter to CEQA Biology Report Discussing Proposed Borrow Site
SDG Commerce 217 Distribution Center, Napa, California
APN: 058-030-065-000

Dear Mr. Doswald:

1. INTRODUCTION

Monk & Associates, Inc., (M&A) has prepared this Addendum to our March 2, 2020, *Revised Biological Resource Analysis* (biology report) for the SDG Commerce 217 Distribution Center located in the City of American Canyon, California (the "project site"). Since the time M&A prepared our biology report for the project site, it has been determined that it will be necessary to acquire soil from the adjacent parcel to the south (the "borrow area parcel") and transport this soil for use as clean fill on the project site. M&A has prepared this Addendum to our biology report to address the transportation of soil from the offsite borrow area parcel onto the project site and to analyze any affects this activity could have on mapped jurisdictional waters of the United States/State that lie inbetween the project site and the adjacent borrow area parcel. Mapped waters of the United States are shown on the attached exhibits.

2. DESCRIPTION OF THE PROJECT SITE AND ADJACENT BORROW AREA PARCEL

The project site and the adjacent borrow area parcel were once part of a contiguous approximately 35-acre project site that M&A conducted surveys on over multiple years dating between 2006 and 2018. Both the project site and adjacent borrow area parcel are dominated by ruderal (weedy) vegetation including stinkwort (*Dittrichia graveolens*), Italian rye grass (*Festuca perennis*), ripgut brome (*Bromus diandrus*), soft chess (*Bromus hordeaceus*), slender wild oat (*Avena barbata*), common vetch (*Vicia sativa*), red-stem filaree (*Erodium cicutarium*), bull thistle (*Cirsium vulgare*), Italian thistle (*Carduus pycnocephalus pycnocephalus*), bristly ox-tongue (*Helminthotheca echioides*), California burclover (*Medicago polymorpha*), and cut-leaf geranium (*Geranium dissectum*). These non-native, weedy species provide little habitat value to wildlife and they do not constitute a native plant community. Native, coyote brush (*Baccharis pilularis* subsp. *consanguinea*), a plant that responds to land disturbances, is also common on the 35 acres. Ruderal vegetation is the only vegetation community found on the project site. The adjacent borrow area parcel, however, in addition to supporting a ruderal herbaceous community also supports waters of the United States, as described below.

On May 16, 2018, the U.S. Army Corps of Engineers issued a jurisdictional determination confirming their jurisdiction over 0.043-acre of waters of the U.S. on the approximately 35-acre

parcel that comprises the project site, the adjacent borrow area parcel, and another property now known as 330 Commerce Center (see attached exhibits). The entire 0.043-acre of waters of the U.S. confirmed by the Corps is found on the adjacent borrow area parcel as shown on the attached exhibit "Borrow Site Rough Grading," Sheet 1 prepared by RSA on August 21, 2020. There are no waters of the United States or State on the project site.

3. DISCUSSION OF PROPOSED ACTIVITIES AND AVOIDANCE OF IMPACTS TO MAPPED WATERS OF THE UNITED STATES

The project applicant intends to rough grade the borrow area parcel and transport soil from that parcel onto the project site for use in development of the project site. In order to protect the waters of the United States/State that occur in between the project site and the borrow area parcel, a 25-foot buffer area around the outside edge of the wetlands will be staked and protected with fiber roll, silt fencing and high visibility orange construction fencing to prevent equipment from driving into the wetlands during hauling activities. See the attached exhibit.

With these protection measures in place, as shown on the attached Borrow Site Rough Grading exhibit, Sheet 1, attached, *there are no expected impacts to waters of the U.S./State from the transport of soil/materials from the borrow area parcel to the project site*.

This concludes our addendum to our biology report. If you have any questions or require additional information, please do not hesitate to contact me at (925) 323-4850 or Sarah@monkassociates.com. Thank you.

Sincerely,

Sarah Lynch
Senior Associate Biologist

1. INTRODUCTION

Monk & Associates, Inc. (M&A) has prepared this biological resource analysis for the proposed SDG Commerce 217 Distribution Center project site (herein referred to as the project site) located in the City of American Canyon, California (Figures 1 and 2). The purpose of our analysis is to provide a description of existing biological resources on the project site and to identify potentially significant impacts that could occur to sensitive biological resources from the construction of a distribution center and associated parking on the project site.

Biological resources include common plant and animal species, and special-status plants and animals as designated by the U.S. Fish and Wildlife Service (USFWS), California Department of Fish and Wildlife (CDFW), National Marine Fisheries Service (NMFS), and other resource organizations, including the California Native Plant Society (CNPS). Biological resources also include waters of the United States and State, as regulated by the U.S. Army Corps of Engineers (Corps), California Regional Water Quality Control Board (RWQCB), and CDFW. Our analysis includes a formal delineation of "waters of the U.S." that was confirmed in 2012 and reverified by the Corps in 2017.

This biological resources analysis also provides mitigation measures for "potentially significant" impacts that could occur to biological resources. Whenever possible, upon implementation, the prescribed mitigation measures would reduce impacts to levels considered less than significant pursuant to the California Environmental Quality Act (CEQA) (Pub. Resources Code §§ 21000 et seq.; 14 Cal. Code Regs §§ 15000 et seq). Accordingly, this report is suitable for review and inclusion in any review being conducted by the City of American Canyon for the proposed project pursuant to the CEQA.

2. PROPERTY LOCATION AND SETTING

The approximately 10-acre project site is located at 1075 Commerce Court, American Canyon, Napa County, California (Figures 1 and 2). The project site is bordered to the southeast by Jungle Paintball, a 40-acre paintball park. To the east is located a large eucalyptus grove with scattered mobile homes. Further to the east is Oat Hill, a geographically prominent hill west of Highway 29. A mix of open space, large warehouses and distribution centers occurs north of the project site. The American Canyon Wastewater Treatment Plant and treatment ponds is located west of the project site. The Napa River and associated marshes occur greater than 300 feet west of the project site. A large distribution center, known as the SDG Commerce 330 Distribution Center, is currently under construction occurs immediately to the south of the project site. Clark Ranch, Wetlands Edge Park, and salt marsh and mudflat habitats associated with the Napa River, occur further to the south of the project site. The Napa Valley Unified School District is constructing the Napa Junction Elementary School to the southeast, along Eucalyptus Drive. Figure 3 provides an aerial photograph that shows the project site features and the surrounding land use.

The 10.39-acre project site is part of a larger 35.85-acre parcel (formerly known as Lot 3) that is comprised of a highly disturbed, ruderal (weedy) plant community, that was recently graded and leveled. This site formerly was occupied by a grove of blue gum eucalyptus (*Eucalyptus globulus*) trees that were removed in 2012.

3. PROPOSED PROJECT

The applicant proposes to construct a 217,294-square foot distribution center with associated parking areas and a detention/bioretention pond on the 10.39-acre project site. Access to the distribution center will be provided by the Commerce Court extension, as illustrated on the Preliminary Site Plan (see attached Sheet A1).

4. ANALYSIS METHODS

Prior to preparing this biological resources analysis report, M&A researched the most recent version of CDFW's Natural Diversity Database, RareFind 5 application (CNDDB 2018) for historic and recent records of special-status plant and animal species (that is, threatened, endangered, rare) known to occur in the region of the project site. All special-status species records were compiled in tables. M&A examined all known record locations for special-status species to determine if special-status species could occur on the project site or within an area of affect.

M&A biologists have a long history of field surveys associated with the approximately 35-acre parcel. M&A biologists conducted site surveys on the parcel on March 1 and April 27, 2006, June 14, 2011, February 14, March 21, and June 12, 2012, May 18, 2017, and on March 30, 2018, December 19 and December 27, 2019. In 2006, and again in 2011, M&A conducted a wetland delineation on the entire parcel. This delineation of "waters of the U.S." was confirmed by the Corps in 2012 and reverified by this agency in 2017. The Corps Confirmed Reverification of Aquatic Resources Delineation Map is provided as Sheet 2.

During the site surveys and wetland delineations, M&A biologists recorded biological resources and assessed the likelihood of resource regulated areas on the project site. In addition to the wetland delineations, the survey involved searching all habitats on the site and recording all plant and wildlife species observed. M&A cross-referenced the habitats found on the project site against the habitat requirements of local or regionally known special-status species to determine if the proposed project could directly or indirectly impact such species. The results of our literature research and field reconnaissance are provided in the sections below.

5. RESULTS OF RESEARCH AND PROJECT SITE ANALYSES

5.1 Topography

The project site is relatively flat with elevations ranging from 8 to 20 feet above sea level. The ground is undulating due to past land use disturbances including eucalyptus tree removal in 2012. The site slopes gently to the west towards North Slough and the Napa River.

5.2 Hydrology

There are no drainages on the project site. There are no indicators of hydrology on the 10-acre project site (Sheet 2).

5.3 Plant Communities and Associated Wildlife Habitats

A complete list of plant species observed on the project site is presented in Table 1. Nomenclature used for plant names follows *The Jepson Manual* Second Edition (Baldwin 2012) and changes made to this manual as published on the Jepson Interchange Project website (http://ucjeps.berkeley.edu/interchange/index.html). Table 2 is a list of wildlife species observed on the project site during multiple years of surveys at the project site. Nomenclature for wildlife follows CDFW's *Complete list of amphibian, reptile, bird, and mammal species in California* (CDFW 2016) and any changes made to species nomenclature as published in scientific journals since the publication of CDFW's list.

5.3.1 RUDERAL HERBACEOUS VEGETATION

A complete list of plant species observed within the project site is presented in Table 1. The project site is dominated by ruderal vegetation including stinkwort (*Dittrichia graveolens*), Italian rye grass (*Festuca perennis*), ripgut brome (*Bromus diandrus*), soft chess (*Bromus hordeaceus*), slender wild oat (*Avena barbata*), common vetch (*Vicia sativa*), red-stem filaree (*Erodium cicutarium*), bull thistle (*Cirsium vulgare*), Italian thistle (*Carduus pycnocephalus pycnocephalus*), bristly ox-tongue (*Helminthotheca echioides*), California burclover (*Medicago polymorpha*), and cut-leaf geranium (*Geranium dissectum*). Native, coyote brush (*Baccharis pilularis* subsp. *consanguinea*), a plant that responds to land disturbances, such as is found on the project site, is also common on this parcel.

Typically, ruderal communities provide habitat for those animal species adapted to humans. Examples of animals associated with these communities include wild turkey (*Meleagris gallopavo*), house finch (*Haemorhous mexicanus*), black phoebe (*Sayornis nigricans*), Say's phoebe (*Sayornis saya*), American crow (*Corvus brachyrhynchos*), mourning dove (*Zenaida macroura*), California ground squirrel (*Otospermophilus beecheyi*), black-tailed jackrabbit (*Lepus californicus*), California meadow vole (*Microtus californicus*), and Botta's pocket gopher (*Thomomys bottae*), among others, all of which have been observed on the project site. Red-shouldered hawk (*Buteo lineatus*), tree swallows (*Tachycineta bicolor*), Nuttall's woodpecker (*Picoides nuttallii*), and northern flicker (*Colaptes auratus*), among others, likely nest in the eucalyptus trees that surround the project site to the west, north and south. Chestnut-backed chickadee (*Poecile rufescens*), brown creeper (*Certhia americana*), American robin (*Turdus migratorius*), northern mockingbird (*Mimus polyglottos*), spotted towhee (*Pipilo maculatus*), California towhee (*Pipilo crissalis*), dark-eyed junco (*Junco hyemalis*), Bullock's oriole (*Icterus bullockii*) and western gray squirrel (*Sciurus griseus*) were also observed in the immediate project vicinity.

5.4 Wildlife Corridors

Wildlife corridors are linear and/or regional habitats that provide connectivity to other natural vegetation communities within a landscape fractured by urbanization and other development. Wildlife corridors have several functions: 1) they provide avenues along which wide-ranging animals can travel, migrate, and breed, allowing genetic interchange to occur; 2) populations can move in response to environmental changes and natural disasters; and 3) individuals can recolonize habitats from which populations have been locally extirpated (Beier and Loe 1992). All three of these functions can be met if both regional and local wildlife corridors are accessible

to wildlife. Regional wildlife corridors provide foraging, breeding, and retreat areas for migrating, dispersing, immigrating, and emigrating wildlife populations. Local wildlife corridors also provide access routes to food, cover, and water resources within restricted habitats.

The proposed project will not interfere with the movement of native wildlife. The project site has a history of disturbance associated with eucalyptus tree removal in 2012, and continued disturbance associated with the paintball facility located immediately to the southeast and construction of the SDG Commerce 330 Distribution Center distribution center to the south. The eucalyptus grove and the marshes associated with the Napa River to the west of the project site provide a more valuable wildlife corridor for terrestrial wildlife.

6. SPECIAL-STATUS SPECIES DEFINITION

6.1 Definitions

For purposes of this analysis, special-status species are plants and animals that are legally protected under the California and Federal Endangered Species Acts (CESA and FESA, respectively) or other regulations, and species that are considered rare by the scientific community (for example, the CNPS). Special-status species are defined as:

- plants and animals that are listed or proposed for listing as threatened or endangered under the CESA (Fish and Game Code §2050 *et seq*.; 14 CCR §670.1 *et seq.*) or the FESA (50 CFR 17.12 for plants; 50 CFR 17.11 for animals; various notices in the Federal Register [FR] for proposed species);

- plants and animals that are candidates for possible future listing as threatened or endangered under the FESA (50 CFR 17; FR Vol. 64, No. 205, pages 57533-57547, October 25, 1999); and under the CESA (California Fish and Game Code §2068);

- plants and animals that meet the definition of endangered, rare, or threatened under the California Environmental Quality Act (CEQA) (14 CCR §15380) that may include species not found on either State or Federal Endangered Species lists;

- Plants occurring on Ranks 1A, 1B, 2A, 2B, 3, and 4 of CNPS' electronic *Inventory* (CNPS 2017). The California Department of Fish and Wildlife (CDFW) recognizes that Ranks 1A, 1B, 2A and 2B of the CNPS inventory contain plants that, in the majority of cases, would qualify for State listing, and CDFW requests their inclusion in EIRs. Plants occurring on CNPS Ranks 3 and 4 are "plants about which more information is necessary," and "plants of limited distribution," respectively (CNPS 2001) (CNPS 2017). Such plants may be included as special-status species on a case by case basis due to local significance or recent biological information (more on CNPS Rank species below);

- migratory nongame birds of management concern listed by U.S. Fish and Wildlife Service (Migratory Nongame Birds of Management Concern in the United States: The list 1995; Office of Migratory Bird Management; Washington D.C.; Sept. 1995);

- animals that are designated as "species of special concern" by CDFW (2018);

- Animal species that are “fully protected” in California (Fish and Game Codes 3511, 4700, 5050, and 5515).

- Bat Species that are designated on the Western Bat Working Group’s (WBWG) Regional Bat Species Priority Matrix as: “RED OR HIGH.” This priority is justified by the WBWG as follows: “Based on available information on distribution, status, ecology, and known threats, this designation should result in these bat species being considered the highest priority for funding, planning, and conservation actions. Information about status and threats to most species could result in effective conservation actions being implemented should a commitment to management exist. These species are imperiled or are at high risk of imperilment.”

In the paragraphs below we provide further definitions of legal status as they pertain to the special-status species discussed in this report or in the attached tables.

Federal Endangered or Threatened Species. A species listed as Endangered or Threatened under the FESA is protected from unauthorized “take” (that is, harass, harm, pursue, hunt, shoot, trap) of that species. If it is necessary to take a Federal listed Endangered or Threatened species as part of an otherwise lawful activity, it would be necessary to receive permission from the USFWS prior to initiating the take.

State Threatened Species. A species listed as Threatened under the state Endangered Species Act (§2050 of California Fish and Game Code) is protected from unauthorized “take” (that is, harass, pursue, hunt, shoot, trap) of that species. If it is necessary to “take” a state listed Threatened species as part of an otherwise lawful activity, it would be necessary to receive permission from CDFW prior to initiating the “take.”

California Species of Special Concern. These are species in which their California breeding populations are seriously declining and extirpation from all or a portion of their range is possible. This designation affords no legally mandated protection; however, pursuant to the CEQA Guidelines (14 CCR §15380), some species of special concern could be considered “rare.” Pursuant to its rarity status, any unmitigated impacts to rare species could be considered a “significant effect on the environment” (§15382). Thus, species of special concern must be considered in any project that will, or is currently, undergoing CEQA review, and/or that must obtain an environmental permit(s) from a public agency.

CNPS Rank Species. The CNPS maintains an “Inventory” of special status plant species. This inventory has four lists of plants with varying rarity. These lists are: Rank 1, Rank 2, Rank 3, and Rank 4. Although plants on these lists have no formal legal protection (unless they are also state or federal listed species), CDFW requests the inclusion of Rank 1 species in environmental documents. In addition, other state and local agencies may request the inclusion of species on other lists as well. The Rank 1 and 2 species are defined below:

- Rank 1A: Presumed extinct in California;
- Rank 1B: Rare, threatened, or endangered in California and elsewhere;
- Rank 2A: Plants presumed extirpated in California, but more common elsewhere;
- Rank 2B: Rare, threatened, or endangered in California, but more common elsewhere.

All of the plants constituting Rank 1B meet the definitions of Section 1901, Chapter 10 (Native Plant Protection Act) or Sections 2062 and 2067 (California Endangered Species Act) of the Fish and Game Code, and are eligible for state listing (CNPS 2001). Rank 2 species are rare in California, but more common elsewhere. Ranks 3 and 4 contain species about which there is some concern, and are reviewed by CDFW and maintained on "watch lists."

Additionally, in 2006 CNPS updated their lists to include "threat code extensions" for each list. For example, Rank 1B species would now be categorized as Rank 1B.1, Rank 1B.2, or Rank 1B.3. These threat codes are defined as follows:

- .1 is considered "seriously endangered in California (over 80% of occurrences threatened/high degree and immediacy of threat)";
- .2 is "fairly endangered in California (20-80% of occurrences threatened)";
- .3 is "not very endangered in California (less than 20% of occurrences threatened or no current threats known)."

Under the CEQA review process only CNPS Rank 1 and 2 species are considered since these are the only CNPS species that meet CEQA's definition of "rare" or "endangered." Impacts to Rank 3 and 4 species are not regarded as significant pursuant to CEQA.

Fully Protected Birds. Fully protected birds, such as the white-tailed kite and golden eagle, are protected under California Fish and Game Code (§3511). Fully protected birds may not be "taken" or possessed (i.e., kept in captivity) at any time.

6.2 Potential Special-Status Plants on the Project Site

Figure 4 provides a graphical illustration of the known records for special-status species within 3 miles of the project site and helps readers visually understand the number of sensitive species that occur in the vicinity of the project site. No special-status plants have been mapped on or adjacent to the project site. However, according to the CDFW's CNDDB, a total of eight special-status plant species are known to occur in the region of the project site (Table 3). Most of these plants occur in specialized habitats such as marshes, foothill grasslands, and vernal pools, none of which occur onsite. In the recent past, blue gum eucalyptus trees covered the majority of the project site dating back for several decades; these trees emit allelopathic (growth inhibiting) chemicals from their leaves, acorns and bark that prevent other plants from growing under them. Once bark and leaf debris accumulate on the ground beneath the trees, nearly nothing will grow there. Based on the negative findings during the multiple surveys conducted on this site in 2006, 2011, 2012, 2017, 2018 and 2019, special-status plants are not likely to be found onsite and mitigation for special-status plants should not be warranted.

6.3 Potential Special-Status Animals in the Project Site

Figure 4 provides a graphical illustration of the known records for special-status species within three miles of the project site and helps readers visually understand the number of sensitive species that occur in the vicinity of the project site. No special-status animal records have ever been mapped on or adjacent to the project site. However, a total of 18 special-status animal species are known to occur in the region of the project site (Table 4). Due to the disturbed nature of the project site and its history as a eucalyptus grove, there is a very low likelihood of special-status species occurring onsite. Regardless, due to the sensitivity of four of the special-status wildlife species known to occur in the area, we further discuss these species below.

6.3.1 California red-legged frog

The California red-legged frog (*Rana draytonii*) was federally-listed as threatened on May 23, 1996 (Federal Register 61: 25813-25833) and as such is protected pursuant to the Federal Endangered Species Act. On March 16, 2010 the USFWS issued the final designation for California red-legged frog Critical Habitat (USFWS 2010). *The project site does not fall within mapped critical habitat, although it is adjacent* (see Figure 5).

The California red-legged frog is also a state "species of special concern." While the state designation "species of special concern" does not provide any legally mandated protection, species of special concern must be considered in any project undergoing a CEQA review.

The California red-legged frog is typically found in ponds, slow-flowing portions of perennial and intermittent streams that maintain water in the summer months. This frog is also found in hillside seeps that maintain pool environments or saturated soils throughout the summer months. Populations probably cannot be maintained if all surface water disappears (i.e., no available surface water for egg laying and larval development habitat). Larval California red-legged frogs require 11-20 weeks of permanent water to reach metamorphosis (i.e., to change from a tadpole into a frog), in water depths of 10 to 20 inches (USFWS 2002). Riparian vegetation such as willows and emergent vegetation such as cattails are preferred red-legged frog habitats, though not necessary for this species to be present. Populations of California red-legged frog will be reduced in size or eliminated from ponds supporting non-native species such as bullfrog, Centrarchid fish species (such as sunfish, bluegill, or large-mouth bass), and signal and red swamp crayfish (*Pacifastacus leniusculus* and *Procambarus clarkii*, respectively), all of which are known California red-legged frog predators. However, the presence of these non-native species does not preclude the presence of the California red-legged frog.

California red-legged frogs also use upland habitats for migration and dispersal. The USFWS *Recovery Plan for the California Red-Legged Frog* states that frog overland excursions via uplands can vary between 0.25-mile up to 3 miles during the wet season, and that frogs "have been observed to make long-distance movements that are straight-line, point to point migrations rather than using corridors for moving in between habitats" (USFWS 2002). The information presented in the USFWS' Recovery Plan was taken from a publication by Bulger et al. (2003) that recounts a study in coastal redwoods in Santa Cruz area. M&A believes that such overland straight-line migrations are primarily limited to periods of heavy rainfall or during periods when ambient conditions exhibit high moisture levels such as in fog belts along the coast. Working in

Point Reyes National Seashore on the coast of California, Fellers and Kleeman (2007) found approximately 31 percent of California red-legged frogs moved more than 30 meters from their breeding sites and about 69 percent moved less than 30 meters from their breeding site during seasonal movement periods. Similarly, Bulger et al. (2003) found that 60 percent of their radio tagged frogs stayed within 30 meters of their breeding sites.

In locations that are characterized by hot and seasonally dry climates, the California red-legged frog is inclined to stay closer to its aquatic environments or will not migrate. Tatarian (2005) who studied an inland population of California red-legged frogs in eastern Contra Costa County where the climate is far drier than the coastal environment, found that all movements started after the first 0.5 cm of rain in the fall, with more terrestrial movements being made in the fall pre-breeding season (57%) than in the winter breeding season (32%) or spring post-breeding season (11%). Tatarian (op. cit.) also found that California red-legged frogs moved greater average distances aquatically (84.6 m) than terrestrially (27.7 m). Greater terrestrial distances were moved in the pre-breeding season (35.2 m) than in the breeding season (15.5 m) or post-breeding season (16.3 m) with the majority of movements occurring for only one of the 3-4 day survey periods. The majority of frogs (57%) were position faithful within a pool, indicating they did not migrate at all. These data suggest that long forays across the landscape found in coastal populations are less likely in dry inland locations.

The USFWS *Recovery Plan for the California Red-Legged Frog* states that populations are "most likely to persist where multiple breeding areas are embedded within a matrix of habitats used for dispersal." "The primary constituent elements for California red-legged frogs are aquatic and upland areas where suitable breeding and non-breeding habitat is interspersed throughout the landscape and is interconnected by unfragmented dispersal habitat" (USFWS 2002).

In the American Canyon/Napa area, there are no records for the California red-legged frog west of State Route 29 where the project site is located. The closest known California red-legged frog occurrence is 1.4 miles east of the project site (CNDDB Occurrence No. 896). The California red-legged frog at this location was found in a dry cement tank adjacent to a large quarry pond that supported bullfrogs (*Lithobates catesbeiana*). State Route 29 is located between this closest California red-legged frog record and the project site and constitutes an effective geographic barrier to overland California red-legged frog movements to/from the known record location and other extant California red-legged frog populations to the project site. There is no hydrologic connectivity over any undeveloped migration route between the known records for this species and the project site. Finally, the project site does not provide suitable habitat for the California red-legged frog. Based on all the available information, it can be concluded that the project site does not provide suitable habitat for the California red-legged frog. Similarly, the surrounding parcels with dense eucalyptus groves do not provide suitable habitat. Owing to the excessively disturbed conditions on the project site due to prior grading and tree removal activities, this species is not expected to occur on the project site. *Therefore, the proposed project will not impact the California red-legged frog and mitigation should not be warranted.*

6.3.2 SWAINSON'S HAWK

The Swainson's hawk (*Buteo swainsoni*) is a state-listed threatened species, protected pursuant to the California Endangered Species Act (CESA), and Title 14 of the California Code of Regulations. While it has no special federal status, it is protected from direct take under the Federal Migratory Bird Treaty Act of 1918 (16 U.S.C. 703-711). Swainson's hawks, their active nests, eggs, and young are also protected under California Fish and Game Code (§3503, §3503.5, §3513, and §3800).

Swainson's hawk inhabits open to semi-open areas at low to middle elevations in valleys, dry meadows, foothills, and level uplands (Kochert 1986). It nests almost exclusively in trees and will nest in almost any tree species that is at least 10 feet tall (Schmutz et. al. 1984). Nests are constructed in isolated trees that are dead or alive along drainages and in wetlands, or in windbreaks in fields and around farmsteads (Palmer 1988). Swainson's hawks occasionally nest in shrubs, on telephone poles, and on the ground. In the Central Valley of California, the majority of Swainson's hawk nests and territories are associated with riparian systems and nests are commonly found in cottonwoods and oaks (Schlorff et. al. 1984). They have also been documented nesting in eucalyptus (*Eucalyptus* spp.), black walnut (*Juglans hindsii*), black locust (*Robinia pseudoacacia*), almond (*Prunus dulcis*), Osage orange (*Maclura pomifera*), Arizona cypress (*Cupressus arizonica*), and pine (*Pinus* spp.).

Foraging habitats include grasslands, alfalfa fields, fallow fields, beet, tomato, and other low-growing row or field crops, dry-land and irrigated pasture, and rice land when not flooded (CDFG 1994). The Swainson's hawk generally forages in open habitats with short vegetation containing small mammals, reptiles, birds, and insects. Its primary prey in the Central Valley is California meadow vole (*Microtus californicus*). Agricultural areas are often preferred over more natural grassland habitats due to larger prey populations. In addition, agricultural practices (planting, maintenance, harvesting, disking) allow for access to prey, and very likely increase foraging success of Swainson's hawks by flushing prey (personal observations of G. Monk). During the nesting season Swainson's hawks usually forage within two miles of the nest. Swainson's hawk does not require habitats that contain many perches because it most often searches for prey aerially, therefore it can occupy habitats with few or no perches except the nest tree (James 1992).

Swainson's hawks are regular summer visitors and breeders throughout the western states. In the fall months, most Swainson's hawks migrate to Argentina before returning to the United States to breed in the late-spring (typically April). For decades, Argentina farmers were spraying insecticides over habitats that included gregarious night roosts of the Swainson's hawk, killing many thousands of these hawks. This practice was halted in the last 10 years and the Swainson's hawk population appears to be dramatically responding in California. While in the 1970s through 1990s there were only two relatively small populations of Swainson's hawks that remained resident in California year-round in the Davis area and in the Sacramento River Delta, resident and migrant populations of the Swainson's hawks are now dramatically expanding their nesting distribution in California since insecticide use over Argentinian wintering grounds was halted (G. Monk, personal observations). For example, Swainson's hawks were never recorded nesting in the Napa County area until relatively recently.

The closest known record for nesting Swainson's hawk is 2.6 miles northeast of the project site (CNDDB Occurrence No. 2744). No Swainson's hawk nests have been observed on the site or offsite in the vicinity of the project site during M&A's project site surveys. However, the nesting population appears to be increasing throughout its nesting range in northern California (recent CNDDB records and G. Monk general observations) and the eucalyptus trees growing adjacent to the project site provide suitable nesting habitat. Therefore, there is the possibility that Swainson's hawks could nest near this project site in future years. *Hence, prior to earth-disturbance or construction, nesting surveys must be conducted that confirm or negate this species' presence as a nesting bird on or adjacent to the project site. Accordingly, impacts to Swainson's hawk are regarded as potentially significant pursuant to the CEQA.* Mitigation could be implemented to reduce these impacts to levels regarded as less than significant pursuant to the CEQA. The Impacts and Mitigation Measures that follow in the sections below address these impacts.

6.3.3 WESTERN BURROWING OWL

The western burrowing owl (*Athene cunicularia hypugaea*) is a California "species of special concern." Its nest, eggs, and young are also protected under California Fish and Game Code (§3503, §3503.5, and §3800). The burrowing owl is also protected from direct take under the Migratory Bird Treaty Act (50 CFR 10.13). Finally, based upon this species' rarity status, any unmitigated impacts to rare species would be considered a "significant effect on the environment" pursuant to §21068 of the CEQA Statutes and §15382 of the CEQA Guidelines. Thus, this owl species must be considered in any project that will, or is currently, undergoing CEQA review, and/or that must obtain an environmental permit(s) from a public agency. When these owls occur on project sites, typically, mitigation requirements are mandated in the conditions of project approval from the CEQA lead agency.

Burrowing owl habitat is usually found in annual and perennial grasslands, characterized by low-growing vegetation. Often, the burrowing owl utilizes rodent burrows, typically California ground squirrel (*Otospermophilus beecheyi*) burrows, for nesting and cover. They may also on occasion dig their own burrows or use man-made objects such as concrete culverts or rip-rap piles for cover. They exhibit high site fidelity, reusing burrows year after year. Occupancy of suitable burrowing owl habitat can be verified at a site by observation of these owls during the spring and summer months or, alternatively, its molted feathers, cast pellets, prey remains, eggshell fragments, or excrement (white wash) at or near a burrow. Burrowing owls typically are not observed in grasslands with tall vegetation or wooded areas because the vegetation obscures their ability to detect avian and terrestrial predators. Since burrowing owls spend the majority of their time sitting at the entrances of their burrows, grazed grasslands seem to be their preferred habitat because it allows them to view the world at 360 degrees without obstructions.

The closest CNDDB record was documented 2.6 miles southeast of the project site in an area that has since been developed (CNDDB Occurrence No. 109). The project site was severely disturbed during the eucalyptus removal in 2012; thus, ground squirrel burrows are few and of recent origin. The mobility of the western burrowing owl enables the species to colonize the recent burrows. M&A did not observe western burrowing owls or any indirect evidence that burrowing owls are using or residing on the project site during any of the site surveys.

Regardless, the project site provides marginal nesting habitat for the western burrowing owl. *In order to confirm or negate the presence of western burrowing owls on site, surveys must be conducted prior to the commencement of earth-moving or construction*. *Accordingly, impacts to western burrowing owl are regarded as potentially significant pursuant to the CEQA.* Mitigation could be implemented to reduce these impacts to levels regarded as less than significant pursuant to the CEQA. The Impacts and Mitigation Measures that follow in the sections below address these impacts.

6.3.4 NORTHERN HARRIER

The northern harrier (*Circus cyaneus*) is a California species of special concern. This raptor is protected under California Fish and Game Code §3503.5 that protects nesting raptors and their eggs/young and is also protected from direct take under the Migratory Bird Treaty Act (50 CFR 10.13). Northern harriers build grass-lined nests on the ground within dense, low-lying vegetation in a variety of habitats, though they are typically found nesting in grassland or marsh habitats. They usually nest on level to near level ground. This species is particularly vulnerable to ground predators such as coyotes (*Canis latrans*), red fox (*Vulpes vulpes*), and various snake species. Ground nesting birds in general are also subject to disturbance by agricultural practices. Northern harriers may forage over the project site and may nest in the open ruderal habitats onsite that provide suitable nesting habitat for this species. Hence, the proposed project could result in impacts to nesting northern harriers.

The closest CNDDB record was documented 2.8 miles west of the project site (CNDDB Occurrence No. 29). The project site was severely disturbed during the eucalyptus removal in 2012. Regardless, the project site provides marginal nesting habitat for the northern harrier. *In order to confirm or negate the presence of northern harriers on site, surveys must be conducted prior to the commencement of earth-moving or construction*. *Accordingly, impacts to northern harrier are regarded as potentially significant pursuant to the CEQA.* Mitigation could be implemented to reduce these impacts to levels regarded as less than significant pursuant to the CEQA. The Impacts and Mitigation Measures that follow in the sections below address these impacts.

7. REGULATORY FRAMEWORK FOR NATIVE WILDLIFE, FISH, AND PLANTS

This section provides a discussion of those laws and regulations that are in place to protect native wildlife, fish, and plants. Under each law we discuss their pertinence to the proposed development.

7.1 Federal Endangered Species Act

The Federal Endangered Species Act (FESA) forms the basis for the federal protection of threatened or endangered plants, insects, fish and wildlife. FESA contains four main elements, they are as follows:

Section 4 (16 USCA §1533): Species listing, Critical Habitat Designation, and Recovery Planning: outlines the procedure for listing endangered plants and wildlife.

Section 7 (§1536): Federal Consultation Requirement: imposes limits on the actions of federal agencies that might impact listed species.

Section 9 (§1538): Prohibition on Take: prohibits the "taking" of a listed species by anyone, including private individuals, and State and local agencies.

Section 10: Exceptions to the Take Prohibition: non-federal agencies can obtain an incidental take permit through approval of a Habitat Conservation Plan.

In the case of salt water fish and other marine organisms, the requirements of FESA are enforced by the National Marine Fisheries Service (NMFS). The USFWS enforces all other cases. Below, Sections 9, 7, and 10 of FESA are discussed since they are the sections most relevant to the proposed project.

Section 9 of FESA as amended, prohibits the "take" of any fish or wildlife species listed under FESA as endangered. Under Federal regulation, "take" of fish or wildlife species listed as threatened is also prohibited unless otherwise specifically authorized by regulation. "Take," as defined by FESA, means "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." "Harm" includes not only the direct taking of a species itself, but the destruction or modification of the species' habitat resulting in the potential injury of the species. As such, "harm" is further defined to mean "an act which actually kills or injures wildlife; such an act may include significant habitat modification or degradation where it actually kills or injures wildlife by significantly impairing essential behavioral patterns, including breeding, feeding or sheltering" (50 CFR 17.3). A December 2001 decision by the 9th Circuit Court of Appeals (Arizona Cattle Growers' Association, Jeff Menges, vs. the U.S. Fish and Wildlife Service and Bureau of Land Management, and the Southwest Center for Biological Diversity) ruled that the USFWS must show that a threatened or endangered species is present on a project site and that it would be taken by the project activities. According to this ruling, the USFWS can no longer require mitigation based on the probability that the species could use the site. Rather they must show that it is actually present.

Section 9 applies to any person, corporation, federal agency, or any local or State agency. If "take" of a listed species is necessary to complete an otherwise lawful activity, this triggers the need to obtain a incidental take permit either through a Section 7 Consultation as discussed further below (for federal actions or private actions that are permitted or funded by a federal agency), or requires preparation of a Habitat Conservation Plan (HCP) pursuant to Section 10 of FESA (for state and local agencies, or individuals, and projects without a federal "nexus").

Section 7(a)(2) of the Act requires that each federal agency consult with the USFWS to ensure that any action authorized, funded or carried out by such agency is not likely to jeopardize the continued existence of an endangered or threatened species or result in the destruction or adverse modification of critical habitat for listed species. Critical habitat designations mean: (1) specific areas within a geographic region currently occupied by a listed species, on which are found those physical or biological features that are essential to the conservation of a listed species and that may require special management considerations or protection; and (2) specific areas outside the

geographical area occupied by a listed species that are determined essential for the conservation of the species.

The Section 7 consultation process only applies to actions taken by federal agencies that are considering authorizing discretionary projects. Section 7 is by and between the NMFS and/or the USFWS and the federal agency contemplating a discretionary approval (that is, the "federal nexus agency," for example, the Corps or the Federal Highway Administration). Private parties, cities, counties, etc. (i.e., applicants) may participate in the Section 7 consultation *at the discretion of the federal agencies conducting the Section 7 consultation*. The Section 7 consultation process is triggered by a determination of the "action agency" – that is, the federal agency that is carrying out, funding, or approving a project - that the project "may affect" a listed species or critical habitat. If an action is likely to adversely affect a listed species or designated critical habitat, formal consultation between the nexus agency and the USFWS/NMFS is required. As part of the formal consultation, the USFWS/NMFS may resolve any issues informally with the nexus agency or may prepare a formal Biological Opinion assessing whether the proposed action would be likely to result in "jeopardy" to a listed species or if it could adversely modify designated critical habitat. If the USFWS/NMFS prepares a Biological Opinion, it will contain either a "jeopardy" or "non-jeopardy" decision. If the USFWS/NMFS concludes that a proposed project would result in adverse modification of critical habitat or would jeopardize the continued existence of a federal listed species (that is, it will issue a jeopardy decision), the nexus federal agency would be most unlikely to authorize its discretionary permit. If the USFWS/NMFS prepares a "non-jeopardy" Biological Opinion, the nexus federal agency may authorize the discretionary permit making all conditions of the Biological Opinion conditions of its discretionary permit. A non-jeopardy Biological Opinion constitutes an "incidental take" permit that allows applicants to "take" federally-listed species while otherwise carrying out legally sanctioned projects.

For non-federal entities, for example private parties, cities, counties that are considering a discretionary permit, Section 10 provides the mechanism for obtaining take authorization. Under Section 10 of FESA, for the applicant to obtain an "incidental take permit," the applicant is required to submit a "conservation plan" to the USFWS or NMFS that specifies the impacts that are likely to result to federally-listed species, and the measures the applicant will undertake to minimize and mitigate such impacts, and the funding that will be available to implement those steps. Conservation plans under FESA have come to be known as "habitat conservation plans" or "HCPs" for short. The terms incidental take permit, Section 10 permit, and Section 10(a)(1)(B) permit are used interchangeably by the USFWS. Section 10(a)(2)(B) of FESA provides statutory criteria that must be satisfied before an incidental take permit can be issued.

7.1.1 Responsible Agency

FESA gives regulatory authority to the USFWS for federally-listed terrestrial species and non-anadromous fish. The NMFS has regulatory authority over federally-listed marine mammals and anadromous fish.

7.1.2 Applicability to the Proposed Project

The closest known California red-legged frog occurrence is 1.4 miles east of the project site (CNDDB Occurrence No. 896). The California red-legged frog was found in a dry cement tank

adjacent to a large quarry pond that supported bullfrogs. State Route 29 is located between the closest California red-legged frog record and the project site and constitutes an effective geographic barrier to overland California red-legged frog movements to/from the known record location and other extant California red-legged frog populations to the project site. There is no hydrologic connectivity along any undeveloped migration route between the known records for this species and the project site. Finally, the project site does not provide suitable habitat for the California red-legged frog. Based on all the available information, it can be concluded that the project site does not provide suitable habitat for the California red-legged frog. Owing to the excessively disturbed conditions on the project site due to prior grading and tree removal activities, this species is not expected to occur on the project site. Therefore, the proposed project will not impact the California red-legged frog.

No other federally listed species are expected to occur on the project site. The project site does not provide fisheries habitat as it consists entirely of upland communities. *Therefore, it can be stated with confidence that the proposed project would not impact federally listed plant, animal, or fish species.*

7.2 Federal Migratory Bird Treaty Act

The Migratory Bird Treaty Act of 1918 (16 U.S.C. §§ 703-712, July 3, 1918, as amended 1936, 1960, 1968, 1969, 1974, 1978, 1986 and 1989) makes it unlawful to "take" (kill, harm, harass, shoot, etc.) any migratory bird listed in Title 50 of the Code of Federal Regulations, Section 10.13, including their nests, eggs, or young. Migratory birds include geese, ducks, shorebirds, raptors, songbirds, wading birds, seabirds, and passerine birds (such as warblers, flycatchers, swallows, etc.).

7.2.1 Applicability to The Proposed Project

Western burrowing owl, northern harrier, Swainson's hawk, red-shouldered hawk, and red-tailed hawk (*Buteo jamaicensis*), among other raptors (birds of prey) could nest in the eucalyptus grove in the immediate vicinity of the project site. These raptors would be protected by the Migratory Bird Treaty Act. Also, the common songbirds that could forage on the site would be protected pursuant to this Act. As long as there is no direct mortality of species protected pursuant to this Act caused by development of the site, there should be no constraints to development of the site. To comply with the Migratory Bird Treaty Act, all active nest sites would have to be avoided while such birds were nesting. Upon completion of nesting, the project could commence as otherwise planned. Please review specific requirements for avoidance of nest sites for potentially occurring species in the Impacts and Mitigations section below.

7.3 California Endangered Species Act

7.3.1 Section 2081 of the California Endangered Species Act

In 1984, the state legislated the California Endangered Species Act (CESA) (Fish and Game Code §2050). The basic policy of CESA is to conserve and enhance endangered species and their habitats. State agencies will not approve private or public projects under their jurisdiction that would impact threatened or endangered species if reasonable and prudent alternatives are available. Because CESA does not have a provision for "harm" (see discussion of FESA, above),

CDFW considerations pursuant to CESA are limited to those actions that would result in the direct take of a listed species.

If CDFW determines that a proposed project could impact a state-listed threatened or endangered species, CDFW will provide recommendations for "reasonable and prudent" project alternatives. The CEQA lead agency can only approve a project if these alternatives are implemented, unless it finds that the project's benefits clearly outweigh the costs, reasonable mitigation measures are adopted, there has been no "irreversible or irretrievable" commitment of resources made in the interim, and the resulting project would not result in the extinction of the species. In addition, if there would be impacts to threatened or endangered species, the lead agency typically requires project applicants to demonstrate that they have acquired "incidental take" permits from CDFW and/or USFWS (if it is a Federal listed species) prior to allowing/permitting impacts to such species.

If proposed projects would result in impacts to a state-listed species, an "incidental take" permit pursuant to §2081 of the Fish and Game Code would be necessary (versus a Federal incidental take permit for Federal listed species). CDFW will issue an incidental take permit only if:

1) The authorized take is incidental to an otherwise lawful activity;
2) the impacts of the authorized take are minimized and fully mitigated;
3) measures required to minimize and fully mitigate the impacts of the authorized take:
    a) are roughly proportional in extent to the impact of the taking on the species;
    b) maintain the project applicant's objectives to the greatest extent possible; and,
    c) capable of successful implementation; and,
4) adequate funding is provided to implement the required minimization and mitigation measures and to monitor compliance with, and the effectiveness of, the measures.

If an applicant is preparing a habitat conservation plan (HCP) as part of the federal 10(a) permit process, the HCP might be incorporated into the §2081 permit if it meets the substantive criteria of §2081(b). To ensure that an HCP meets the mitigation and monitoring standards in Section 2081(b), an applicant should involve CDFW staff in development of the HCP. If a final Biological Opinion (federal action) has been issued for the project pursuant to Section 7 of the federal Endangered Species Act, it might also be incorporated into the §2081 permit if it meets the standards of §2081(b).

No §2081 permit may authorize the take of a species for which the Legislature has imposed strict prohibitions on all forms of "take." These species are listed in several statutes that identify "fully protected" species and "specified birds." *See* Fish and Game Code §§ 3505, 3511, 4700, 5050, 5515, and 5517. If a project is planned in an area where a "fully protected" species or a "specified bird" occurs, an applicant must design the project to avoid all take.

Fish and Game Code §2080.1 allows an applicant who has obtained a "non-jeopardy*"* federal Biological Opinion pursuant to Section 7 of the FESA, or who has received a federal 10(a) permit (federal incidental take permit) pursuant to the FESA, to submit the federal opinion or permit to CDFW for a determination as to whether the federal document is "consistent" with CESA. If after 30 days CDFW determines that the federal incidental take permit is consistent

with state law, and that all state-listed species under consideration have been considered in the federal Biological Opinion, then no further permit or consultation is required under CESA for the project. However, if CDFW determines that the federal opinion or permit is not consistent with CESA, or that there are state-listed species that were not considered in the federal Biological Opinion, then the applicant must apply for a state CESA permit under Section 2081(b). Section 2081(b) is of no use if an affected species is state-listed, but not federally-listed.

State and federal incidental take permits are issued on a discretionary basis, and are typically only authorized if applicants are able to demonstrate that impacts to the listed species in question are unavoidable, and can be mitigated to an extent that the reviewing agency can conclude that the proposed impacts would not jeopardize the continued existence of the listed species under review. Typically, if there would be impacts to a listed species, mitigation that includes habitat avoidance, preservation, and creation of endangered species habitat is necessary to demonstrate that projects would not threaten the continued existence of a species. In addition, management endowment fees are usually collected as part of the agreement for the incidental take permit(s). The endowment is used to manage any lands set-aside to protect listed species, and for biological mitigation monitoring of these lands over (typically) a five-year period.

7.3.2 Applicability to The Proposed Project

No state-listed plant species would likely occur on the project site due to an absence of habitat. The project site does not support any trees and does not provide nesting habitat for the Swainson's hawk. Suitable nesting habitat for this hawk exists in the eucalyptus trees on the adjacent properties; thus, preconstruction nesting surveys will be necessary to ensure that earth-work or construction does not occur while this raptor is nesting nearby or that if it does, it does not disturb the nesting birds. If the proposed project follows the proposed mitigation measures as detailed in the Impacts and Mitigation section below, *an Incidental Take Permit (ITP) from the CDFW should not be necessary for this project.*

7.4 California Fish and Game Code § 3503, 3503.5, 3511, and 3513

California Fish and Game Code §3503, 3503.5, 3511, and 3513 prohibit the "take, possession, or destruction of birds, their nests or eggs." Disturbance that causes nest abandonment and/or loss of reproductive effort (killing or abandonment of eggs or young) is considered "take." Such a take would also violate federal law protecting migratory birds (Migratory Bird Treaty Act).

All raptors (that is, hawks, eagles, owls) their nests, eggs, and young are protected under California Fish and Game Code (§3503.5). Additionally, "fully protected" birds, such as the white-tailed kite (*Elanus leucurus*) and golden eagle (*Aquila chrysaetos*), are protected under California Fish and Game Code (§3511). "Fully protected" birds may not be taken or possessed (that is, kept in captivity) at any time.

7.4.1 Applicability to the Proposed Project

Raptors that could be affected by the project include western burrowing owl, northern harrier, Swainson's hawk, red-shouldered hawk and red-tailed hawk. Preconstruction surveys would have to be conducted for these species to ensure that there is no direct take of these birds including their eggs, or young. Any active nests that were found during preconstruction surveys

would have to be avoided by the project. Suitable non-disturbance buffers would have to be established around nest sites until the nesting cycle is complete. More specifics on the size of buffers are provided below in the Impacts and Mitigations section.

7.5 City of American Canyon General Plan

The City of American Canyon General Plan sets forth the following goals, objectives, and policies relevant to biological resources on the project site. Only those applicable to the proposed project are discussed herein:

7.5.1 Goal 8, Objective 8.1 and Policies 8.1.1 and 8.1.4

- **Goal 8:** Protect and preserve the significant habitats, plants and wildlife that exist in the City and its Planning Area.
- **Objective 8.1:** Maintain data and information regarding areas of significant biological value within the Planning Area to facilitate resource conservation and the appropriate management of development.
- **Policy 8.1.1:** Acquire and maintain the most current information available regarding the status and location of sensitive biological elements (species and natural communities) within the City and, as appropriate, within the Sphere of Influence and Urban Limit Line.
- **Policy 8.1.4:** Regularly monitor and review developments proposed within the City's Planning Area to assess their impacts on local biological resources and to recommend appropriate mitigation measures that the developer and/or government agency can implement.

7.5.2 Applicability to the Proposed Project

Consistent with General Plan Policies 8.1.1 and 8.1.4, this report provides a detailed assessment of the biological resources present on the project site.

7.5.3 Objective 8.2 and Policy 8.2.1

- **Objective 8.2:** Balance the preservation of natural habitat areas, including coastal saltmarsh, mixed hardwood forest, oak savannah, and wetland and riparian habitats, with new development in the City.
- **Policy 8.2.1:** Land use applications for developments located within sensitive habitats, including coastal saltmarsh, mixed hardwood forest, oak savannah, and riparian habitats (see Figure 8-1) [General Plan], or with areas potentially occupied by vernal pools (see Figure 8-2) [General Plan] shall be accompanied by sufficient technical background data to enable an adequate assessment of the potential for impacts on these resources, and possible measures to reduce any identifiable impacts. In addition to examining Figure 8-1 [General Plan] for information on these sensitive habitats, an on-site assessment shall be conducted by a City approved qualified biologist to determine if sensitive habitats exist on-site. In instances where the potential for significant impacts exists, the applicant must submit a Biological Assessment Report prepared by a qualified professional.

7.5.4 APPLICABILITY TO THE PROPOSED PROJECT

Consistent with General Plan Policy 8.2.1, the project site has been evaluated for the presence of sensitive biological resources. This report represents a Biological Assessment Report documenting findings from background research, and presents the current habitats and species present on the project site.

7.5.5 OBJECTIVE 8.3 AND POLICY 8.3.1

- **Objective 8.3:** Protect natural drainages and riparian corridors within the American Canyon Planning Area.
- **Policy 8.3.1:** Review proposed developments in wetlands and riparian habitats to evaluate their conformance with the following policies and standards:
    a. The development plan shall fully consider the nature of existing biological resources and all reasonable measures shall be taken to avoid significant impacts, including retention of sufficient natural open space and undeveloped buffer zones.

7.5.6 APPLICABILITY TO THE PROPOSED PROJECT

No wetland, natural drainages or riparian habitats are proposed to be impacted, as there are none present on the 10-acre project site.

7.5.7 POLICY 8.3.1 B

- **Policy 8.3.1 b:** Development shall be designed and sited to preserve watercourses, riparian habitat, vernal pools, and wetlands in their natural condition, unless these actions result in an unfeasible project, in which case habitat shall be replaced in accord with subsection "g" (below).

7.5.8 APPLICABILITY TO THE PROPOSED PROJECT

Proposed development on the project site does not impact watercourses, riparian habitat, vernal pools or wetlands.

7.5.9 POLICY 8.3.1 E

- **Policy 8.3.1 e:** Development shall incorporate fences, walls, vegetative cover, or other measures to adequately buffer habitat areas, linkages or corridors from built environment.

7.5.10 APPLICABILITY TO THE PROPOSED PROJECT

Previous disturbance on the project site prohibits presence of land linkages, corridors, or habitat areas. Similarly, because creation of a mitigation site is not necessary for this site, there will be no habitat area or otherwise natural space in need of buffering.

7.5.11 POLICY 8.3.1 F

- **Policy 8.3.1 f:** Roads and utilities shall be located and designed such that conflicts with biological resources, habitat areas, linkages or corridors are avoided where feasible.

7.5.12 APPLICABILITY TO THE PROPOSED PROJECT

Consistent with Policy 8.3.1.f, and Policy 8.3.1.g roads and utilities have been designed to avoid conflicts with biological resources on the project site.

7.5.13 POLICY 8.3.1 G

- **Policy 8.3.1 g:** Future development shall utilize appropriate open space or conservation easements in order to protect sensitive species or their habitats.

7.5.14 POLICIES 8.3.5 AND 8.3.6

- **Policy 8.3.5:** Establish a network of open spaces along the City's natural drainages and riparian corridors and link significant biological habitats. Any recreational use of these areas shall be designed to avoid damaging sensitive habitat areas.
- **Policy 8.3.6:** Preserve and integrate the City's natural drainages in new development, as opposed to their channelization or undergrounding, emphasizing opportunities for the development of pedestrian paths and greenbelts along their lengths throughout the City.

7.5.15 APPLICABILITY TO THE PROPOSED PROJECT

There are no drainages on the project site or significant biological habitats onsite; hence, these policies do not apply to the proposed project.

8. CITY OF AMERICAN CANYON –ORDINANCES

8.1 Trees (Ord. 18.40.110)

A. Existing trees shall be preserved on the site unless otherwise approved by the city council as a part of the site development plans.

B. Unless specifically approved by the city council, any tree removed shall be replaced on the site. Replacement trees shall be a minimum size of a twenty-four-inch box of the same species unless specifically approved by the city council. (Ord. 98-10 § 1 (part), 1998).

8.1.1 APPLICABILITY TO THE PROPOSED PROJECT

The project site does not support any trees.

9. REGULATORY REQUIREMENTS PERTAINING TO WATERS OF THE UNITED STATES AND STATE

This section presents an overview of the criteria used by the U.S. Army Corps of Engineers, the California Regional Water Quality Control Board, the State Water Resources Control Board, and CDFW to determine those areas within a project area that would be subject to their regulation.

9.1 U.S. Army Corps of Engineers Jurisdiction and General Permitting

9.1.1 SECTION 404 OF THE CLEAN WATER ACT

Congress enacted the Clean Water Act "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters" (33 U.S.C. §1251(a)). Pursuant to Section 404 of the Clean Water Act (33 U.S.C. 1344), the U.S. Army Corps of Engineers (Corps) regulates the disposal of dredged or fill material into "waters of the United States" (33 CFR Parts 328 through 330). This requires project applicants to obtain authorization from the Corps prior to discharging dredged or fill materials into any water of the United States.

In the Federal Register "waters of the United States" are defined as, "...all interstate waters including interstate wetlands...intrastate lakes, rivers, streams (including intermittent streams), wetlands, [and] natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce..." (33 CFR Section 328.3).

Limits of Corps' jurisdiction:

(a) Territorial Seas. The limit of jurisdiction in the territorial seas is measured from the baseline in a seaward direction a distance of three nautical miles. (See 33 CFR 329.12)

(b) Tidal Waters of the United States. The landward limits of jurisdiction in tidal waters:

(1) Extends to the mean high tide line, or
(2) When adjacent non-tidal waters of the United States are present, the jurisdiction extends to the limits identified in paragraph (c) of this section.

(c) Non-Tidal Waters of the United States. The limits of jurisdiction in non-tidal waters:

(1) In the absence of adjacent wetlands, the jurisdiction extends to the ordinary high water mark, or
(2) When adjacent wetlands are present, the jurisdiction extends beyond the ordinary high water mark to the limit of the adjacent wetlands.
(3) When the water of the United States consists only of wetlands the jurisdiction extends to the limit of the wetland.

Section 404 jurisdiction in "other waters" such as lakes, ponds, and streams, extends to the upward limit of the ordinary high water mark (OHWM) or the upward extent of any adjacent wetland. The OHWM on a non-tidal water is:

- the "line on shore established by the fluctuations of water and indicated by physical characteristics such as a clear natural line impressed on the bank; shelving; changes in the character of soil; destruction of terrestrial vegetation; the presence of litter or debris; or other appropriate means that consider the characteristics of the surrounding areas" (33 CFR Section 328.3[e]).

Wetlands are defined as: "...those areas that are inundated or saturated by surface or ground water at a frequency and duration to support a prevalence of vegetation adapted for life in saturated soil conditions" (33 CFR Section 328.8 [b]). Wetlands usually must possess hydrophytic vegetation (i.e., plants adapted to inundated or saturated conditions), wetland hydrology (e.g., topographic low areas, exposed water tables, stream channels), and hydric soils (i.e., soils that are periodically or permanently saturated, inundated or flooded) to be regulated by the Corps pursuant to Section 404 of the Clean Water Act.

9.1.1.1 Significant Nexus of Tributaries

On December 2, 2008, the Corps and the Environmental Protection Agency (EPA) issued joint guidance on implementing the U.S. Supreme Court decision in the consolidated cases *Rapanos v. United States* and *Carabell v. United States* (herein referred to simply as "Rapanos") which address the jurisdiction over waters of the United States under the Clean Water Act. In this joint guidance these agencies provide guidance on where they will assert jurisdiction over waters of the U.S.

The EPA and Corps will assert jurisdiction over the following waters:

- Traditional navigable waters
- Wetlands adjacent to traditional navigable waters
- Non-navigable tributaries of traditional navigable waters that are relatively permanent where the tributaries typically flow year-round or have continuous flow at least seasonally (for example, typically three months).
- Wetlands that directly abut such tributaries.

The agencies generally will not assert jurisdiction over the following features:

- Swales or erosional features (e.g., gullies, small washes characterized by low volume, infrequent, or short duration flow); and
- Ditches (including roadside ditches) excavated wholly in and draining only uplands and that do not carry a relatively permanent flow of water.

The agencies will apply the significant nexus standard as follows:

- A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by all wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical and biological integrity of downstream traditional navigable waters; and

- Significant nexus includes consideration of hydrologic and ecologic factors.

9.1.1.2 Isolated Areas Excluded from Section 404 Jurisdiction

In addition to areas that may be exempt from Section 404 jurisdiction, some isolated wetlands and waters may also be considered outside of Corps jurisdiction as a result of the Supreme Court's decision in Solid Waste Agency of Northern Cook County (SWANCC) v. United States Army Corps of Engineers (531 U.S. 159 [2001]). Isolated wetlands and waters are those areas

that do not have a surface or groundwater connection to, and are not adjacent to a navigable "Waters of the U.S.," and do not otherwise exhibit an interstate commerce connection.

9.1.1.3 Permitting Corps Jurisdictional Areas

To remain in compliance with Section 404 of the Clean Water Act, project proponents and property owners (applicants) are required to be permitted by the Corps prior to discharging or otherwise impacting waters of the United States. In many cases, the Corps must visit a proposed project area (to conduct a "jurisdictional determination") to confirm the extent of area falling under their jurisdiction prior to authorizing any permit for that project area. Typically, at the time the jurisdictional determination is conducted, applicants (or their representative) will discuss the appropriate permit application that would be filed with the Corps for permitting the proposed impact(s) to "waters of the United States."

Pursuant to Section 404 of the Clean Water Act, the Corps normally provides two alternatives for permitting impacts to the type of "waters of the United States" found in the project area. The first alternative would be to use Nationwide Permit(s) (NWP). The second alternative is to apply to the Corps for an Individual Permit (33 CFR Section 235.5(2)(b)). The application process for Individual Permits is extensive and includes public interest review procedures (i.e., public notice and receipt of public comments) and must contain an "alternatives analysis" that is prepared pursuant to Section 404(b) of the Clean Water Act (33 U.S.C. 1344(b)). The alternatives analysis is also typically reviewed by the federal EPA and thus brings another resource agency into the permitting framework. Both the Corps and EPA take the initial viewpoint that there are practical alternatives to the proposed project if there would be impacts to waters of the U.S., and the proposed permitted action is not a water dependent project (e.g. a pier or a dredging project). Alternative analyses therefore must provide convincing reasons that the proposed permitted impacts are unavoidable. Individual Permits may be available for use in the event that discharges into regulated waters fail to meet conditions of NWP(s).

NWPs are a type of general permit administered by the Corps and issued on a nationwide basis that authorize minor activities that affect Corps regulated waters. Under NWP, if certain conditions are met, the specified activities can take place without the need for an individual or regional permit from the Corps (33 CFR, Section 235.5[c][2]). In order to use NWP(s), a project must meet 27 general nationwide permit conditions, and all specific conditions pertaining to the NWP being used (as presented at 33 CFR Section 330, Appendices A and C). It is also important to note that pursuant to 33 CFR Section 330.4(e), there may be special regional conditions or modifications to NWPs that could have relevance to individual proposed projects. Finally, pursuant to 33 CFR Section 330.6(a), Nationwide permittees may, and in some cases must, request from the Corps confirmation that an activity complies with the terms and conditions of the NWP intended for use (*i.e.,* must receive "verification" from the Corps).

Prior to finalizing design plans, the applicant needs to be aware that the Corps maintains a policy of "no net loss" of wetlands (waters of the United States) from project area development. Therefore, it is incumbent upon applicants that propose to impact Corps regulated areas to submit a mitigation plan that demonstrates that impacted regulated areas would be recreated (*i.e.,* impacts would be mitigated). Typically, the Corps requires mitigation to be "in-kind" (i.e., if a

stream channel would be filled, mitigation would include replacing it with a new stream channel), and at a minimum of a 1:1 replacement ratio (i.e., one acre or fraction there of recreated for each acre or fraction thereof lost). Often a 2:1 replacement ratio is required. Usually the 2:1 ratio is met by recreation or enhancement of an equivalent amount of wetland as is impacted, in addition to a requirement to preserve an equivalent amount of wetland as is impacted by the project. In some cases, the Corps allows "out-of-kind" mitigation if the compensation site has greater value than the impacted site. For example, if project designs call for filling an intermittent drainage, mitigation should include recreating the same approximate jurisdictional area (same drainage widths) at an offsite location or on a set-aside portion of the project area. Finally, there are many Corps approved wetland mitigation banks where wetland mitigation credits can be purchased by applicants to meet mitigation compensation requirements. Mitigation banks have defined service areas and the Corps may only allow their use when a project would have minimal impacts to wetlands.

9.1.2 Applicability to the Proposed Project

M&A originally prepared a preliminary wetland delineation map of the 35 acre parcel in 2006; however, this map was never submitted to the Corps. In 2011, a formal wetland delineation was conducted on July 14th and July 20th by M&A biologists Ms. Hope Kingma and Mr. Tim O'Donnell. The wetland delineation report and map were submitted to the Corps on August 22, 2011, requesting confirmation of the extent of Corps jurisdiction at the American Canyon Flat Lands site. In a letter dated January 31, 2012 the extent of Corps jurisdiction was confirmed, based on a field investigation on September 21, 2011. That jurisdictional determination expired five (5) years from the date of that letter.

M&A biologists Ms. Hope Kingma and Mr. Devin Jokerst conducted another wetland delineation of the entire 35.85-acre parcel (known as Lot 3), which includes this project site, on November 16, 2016 to re-verify the extent of jurisdictional areas on the site. M&A used the Corps' 1987 *Wetlands Delineation Manual* in conjunction with the *Regional Supplement for the Arid West Region*. The jurisdictional determination request and the Draft Aquatic Resources Delineation Map (Sheet 2) were submitted to the Corps in December 2016. Mr. Bryan Matsumoto of the Corps conducted a site verification visit on May 18, 2017. On May 16, 2018 the Corps issued the jurisdictional determination confirming their jurisdiction over 0.043-acre of waters of the U.S. on the 35.43-acre parcel. The confirmed Jurisdictional Delineation Map (Sheet 2) and letter are attached. None of the jurisdictional features on that map occur on the 10-acre project site that is the subject of this report. *As such there will be no impacts to the waters of the U.S. for this project.*

9.2 State Water Resources Control Board (SWRCB) / California Regional Water Quality Control Board (RWQCB)

9.2.1 Section 401 of the Clean Water Act

The SWRCB and RWQCB regulate activities in "waters of the State" (which includes wetlands) through Section 401 of the Clean Water Act. While the Corps administers a permitting program that authorizes impacts to waters of the United States, including wetlands and other waters, any Corps permit authorized for a proposed project would be inoperative unless it is an NWP that has been certified for use in California by the SWRCB, or if the RWQCB has issued a project specific

certification of water quality. Certification of NWPs requires a finding by the SWRCB that the activities permitted by the NWP will not violate water quality standards individually or cumulatively over the term of the permit (the term is typically for five years). Certification must be consistent with the requirements of the federal Clean Water Act, the California Environmental Quality Act, the California Endangered Species Act, and the SWRCB's mandate to protect beneficial uses of waters of the State. Any denied (i.e., not certified) NWPs, and all Individual Corps permits, would require a project specific RWQCB certification of water quality.

9.2.2 Applicability to the Proposed Project

The Corps' Confirmed Reverification Aquatic Resources Delineation Map dated May 22, 2017 is provided as Sheet 2. The proposed project will not impact any waters of the State. *Therefore Section 401 of the Clean Water Act is not necessary for this project.*

9.3 California Department of Fish and Wildlife Protections

9.3.1 Section 1602 of California Fish and Game Code

Pursuant to Section 1602 of the California Fish and Game Code: "An entity may not substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake, unless all of the following occur:

(1) CDFW receives written notification regarding the activity in the manner prescribed by CDFW. The notification shall include, but is not limited to, all of the following:
   (A) A detailed description of the project's location and a map.
   (B) The name, if any, of the river, stream, or lake affected.
   (C) A detailed project description, including, but not limited to, construction plans and drawings, if applicable.
   (D) A copy of any document prepared pursuant to Division 13 (commencing with Section 21000) of the Public Resources Code.
   (E) A copy of any other applicable local, state, or federal permit or agreement already issued.
   (F) Any other information required by CDFW" (Fish & Game Code 2014).

Please see Section 1602 of the current California Fish and Game Code for further details.

Please also note that while not stated in the regulations above, CDFW typically considers its jurisdiction to include riparian vegetation (that is, the trees and bushes growing along the stream). Thus, any proposed activity in a natural stream channel that would substantially adversely affect an existing fish and/or wildlife resource, including its riparian vegetation, would require entering into a Streambed Alteration Agreement (SBAA) with CDFW prior to commencing with work in the stream. However, prior to authorizing such permits, CDFW typically reviews an analysis of the expected biological impacts, any proposed mitigation plans that would be implemented to offset biological impacts and engineering and erosion control plans.

9.3.2 APPLICABILITY TO THE PROPOSED PROJECT

There are no streams or drainages on the project site that would be regulated by CDFW. *Hence, an SBAA with CDFW would not be necessary for this project*.

10. STATE WATER RESOURCES CONTROL BOARD (SWRCB)/RWQCB – STORM WATER MANAGEMENT

10.1 Construction General Permit

While federal Clean Water Act NPDES regulations allow two permitting options for construction related stormwater discharges (individual permits and General Permits), the State Water Resources Control Board (SWRCB) has elected to adopt only one statewide Construction General Permit at this time that will apply to all stormwater discharges associated with construction activity, except from those on Tribal Lands, in the Lake Tahoe Hydrologic Unit, and those performed by the California Department of Transportation (CalTrans).

The Construction General Permit requires all dischargers where construction activity disturbs greater than one acre of land or those sites less than one acre that are part of a common plan of development or sale that disturbs more than one acre of land surface to:

1. Develop and implement a Storm Water Pollution Prevention Plan (SWPPP) which specifies Best Management Practices (BMPs) that will prevent all construction pollutants from contacting stormwater with the intent of keeping all products of erosion from moving off site into receiving waters.

2. Eliminate or reduce non-stormwater discharges to storm sewer systems and other waters of the nation. Achieve quantitatively-defined (i.e., numeric) pollutant-specific discharge standards, and conduct much more rigorous monitoring based on the project's projected risk level.

3. Perform inspections of all BMPs.

This Construction General Permit is implemented and enforced by the nine California Regional Water Quality Control Boards (RWQCBs). It is also enforceable through citizens' suits and represents a dramatic shift in the State Water Board's approach to regulating new and redevelopment sites, imposing new affirmative duties and fixed standards on builders and developers.

<u>Types of Construction Activity Covered by the Construction General Permit</u>

- clearing,
- grading,
- disturbances to the ground such as stockpiling, or excavation that results in soil disturbances of at least one acre or more of total land area.

Construction activity that results in soil disturbances to a smaller area would still be subject to this General Permit if the construction activity is part of a larger common plan of development that encompasses greater than one acre of soil disturbance, or if there is significant water quality impairment resulting from the activity.

Construction activity does not include:

- routine maintenance to maintain original line and grade,
- hydraulic capacity, or original purpose of the facility,
- nor does it include emergency construction activities required to protect public health and safety.

The Construction General Permit includes several "post-construction" requirements. These requirements entail that site designs provide no net increase in overall site runoff and match pre-project hydrology by maintaining runoff volume and drainage concentrations. To achieve the required results where impervious surfaces such as roofs and paved surfaces are being increased, developers must implement non-structural off-setting BMPs, such as landform grading, site design BMPs, and distributed structural BMPs (bioretention cells, rain gardens, and rain cisterns). This "runoff reduction" approach is essentially a State Water Board-imposed regulatory requirement to implement Low Impact Development ("LID") design features. Volume that cannot be addressed using non-structural BMPs must be captured in structural BMPs that are approved by the RWQCB.

Improving the quality of site runoff is necessary to improve water quality in impaired and threatened streams, rivers, and lakes (that is, water bodies on the EPA's 303(d) list). The RWQCB prioritizes the water bodies on the 303(d) list according to potential impacts to beneficial uses. Beneficial uses can include a wide range of uses, such as nautical navigation; wildlife habitat; fish spawning and migration; commercial fishing, including shellfish harvesting; recreation, including swimming, surfing, fishing, boating, beachcombing, and more; water supply for domestic consumption or industrial processes; and groundwater recharge, among other uses. The State is required to develop action plans and establish Total Maximum Daily Loads (TMDLs) to improve water quality within these impaired water bodies. The TMDL is the quantity of a pollutant that can be safely assimilated by a water body without violating the applicable water quality standards.

Pursuant to the CWA, the RWQCB regulates construction discharges under the National Pollutant Discharge Elimination System (NPDES). The project sponsor of construction or other activities that disturb more than 1 acre of land must obtain coverage under NPDES Construction General Permit Order 2009-0009-DWQ, administered by the RWQCB[1].

[1] CGP Order 2009-0009-DWQ remains in effect, but has been amended by CGP Order 2009-0014-DWQ, effective February 14, 2011, and CGP Order 2009-0016-DWQ, effective July 17, 2012. The first amendment merely provided additional clarification to Order 2009-0009-DWQ, while Order 2009-0016-DWQ eliminated numeric effluent limits on pH and turbidity (except in the case of active treatment systems), in response to a legal challenge to the original order.

10.1.1 APPLICABILITY TO THE PROPOSED PROJECT

To obtain coverage under the SWRCB administered Construction General Permit, the applicant (typically through its civil engineer) must electronically file a number of permit-related compliance documents (Permit Registration Documents (PRDs), including a Notice of Intent (NOI), a risk assessment, site map, signed certification, Stormwater Pollution Prevention Plan (SWPPP), Notice of Termination (NOT), NAL exceedance reports, and other site-specific PRDs that may be required. The PRDs must be prepared by a Qualified SWPPP Practitioner (QSP) or Qualified SWPPP Developer (QSD) and filed by a Legally Responsible Person (LRP) on the RWQCB's Stormwater Multi-Application Report Tracking System (SMARTS). (QSDs are typically civil engineers, professional hydrologists, engineering geologists, or landscape architects.) Once filed, these documents become immediately available to the public for review and comment. At a minimum, the SWPPP shall identify Best Management Practices (BMPs) for implementation during project construction that are in accordance with the applicable guidance and procedures contained in the California Stormwater Quality Association's *California Stormwater Best Management Practices Handbook* (2015).

10.2 RWQCB Municipal Storm Water Permitting Programs

The federal Clean Water Act (CWA) was amended in 1987 to address urban stormwater runoff pollution of the nation's waters. In 1990, the U.S. Environmental Protection Agency (USEPA) promulgated rules establishing Phase 1 of the National Pollutant Discharge Elimination System (NPDES) stormwater program. The Phase 1 program for Municipal Separate Storm Sewer System (MS4s) requires operators that serve populations of 100,000 or greater to implement a stormwater management program to control polluted discharges from these MS4s. While Phase 1 of the municipal stormwater program has focused on large urban areas, Phase 2 of the municipal stormwater program was promulgated by the USEPA for smaller urban areas including non-traditional Small MS4s, which are governmental facilities such as military bases, public campuses, and prison and hospital complexes.

MS4 permits require the discharger (or dischargers that are permitted by the MS4 permittees) to develop and implement a Storm Water Management Plan/Program (SWMP) with the goal of reducing the discharge of pollutants to the maximum extent practicable (MEP). MEP is the performance standard specified in Section 402(p) of the Clean Water Act. The management programs specify what best management practices (BMPs) will be used to address certain program areas. The program areas include public education and outreach; illicit discharge detection and elimination; construction and post-construction; and good housekeeping for municipal operations. In general, medium and large municipalities are required to conduct chemical monitoring, though small municipalities are not.

10.2.1 NPDES C.3 REQUIREMENTS

The NPDES C.3 requirements went into effect for any project (public or private) that is "deemed complete" by the City or County (Lead Agency) on or after February 15, 2005, and which will result in the creation or replacement (other than normal maintenance) of at least 10,000 square feet of impervious surface area (roofs, streets, patios, parking lots, etc. Provision C.3 requires the onsite treatment of stormwater prior to its discharge into downstream receiving waters. Note that these requirements are in addition to the existing NPDES requirements for erosion and

sedimentation controls during project construction that are typically addressed through acquisition of coverage under the SWRCB administered Construction General Permit. The C.3 requirements are typically required to be implemented by MS4 permittees (and their constituencies).

Projects subject to Provision C3 must include the capture and onsite treatment of all stormwater from the site prior to its discharge, including rainwater falling on building rooftops. Project applicants are required to implement appropriate source control and site design measures and to design and implement stormwater treatment measures in order to reduce the discharge of stormwater pollutants to the *maximum extent practicable.* While the Clean Water Act does not define "maximum extent practicable," the Stormwater Quality Management Plans required as a condition of the municipal NPDES permits identify control measures (known as Best Management Plans, or BMPs) and, where applicable, performance standards, to establish the level of effort required to satisfy the maximum extent practicable criterion. It is ultimately up to the professional judgment of the reviewing municipal staff in the individual jurisdictions to determine whether a project's proposed stormwater controls will satisfy the maximum extent practicable criterion. However, there are numeric criteria used to ensure that treatment BMPs have been adequately sized to accommodate and treat a site's stormwater. The C3 requirements are quite extensive, and their complete explanation is not provided here. However, the following are minimums that should be understood and adhered to:

- The applicant must provide a detailed and realistic site design *and impervious surface area calculations*. This site design *and calculations* will be used by the Lead Agency (County or City) to determine/*verify* the amount of impervious surface area that is being created or replaced. It should include all proposed buildings, roads, walkways, parking lots, landscape areas, etc., that are being created or redeveloped. If large (greater than 10,000 square feet) lots are being created an effort will need to be made to determine the total impervious surface area that could be created on that parcel. For example, if only a portion of the lot is shown as a "building envelope" then the lead agency will need to consider that a driveway will have to be constructed to access the envelope and that the envelope will then be developed as shown. If the C.3 thresholds are met (creation/redevelopment of 10,000 square feet of impervious surface area), a Stormwater Control Plan (SWCP) (if required by the Lead Agency, or whatever steps for compliance with Provision C3 are required locally) must accompany the application.

- If a SWCP is required by the Lead Agency for the project it must be stamped by a Licensed Civil Engineer, Architect, or Landscape Architect.

10.2.2 Applicability to the Proposed Project

The Water Board issued county-wide municipal stormwater permits in the early 1990s to operators of MS4s. On November 19, 2015, the Water Board re-issued these county-wide municipal stormwater permits as one Municipal Regional Stormwater NPDES Permit to regulate stormwater discharges from municipalities and local agencies. Permittees in the San Francisco Bay area are included in a Municipal Regional Permit (MRP), issued to 76 cities, counties and

flood control districts in 2009 and revised in 2015. Each of the Permittee's must file an Annual Report that is comprised of three parts: regional, countywide, and individual. Some requirements of the MRP are being implemented by the Bay Area Stormwater Management Agencies Association (BASMAA) on behalf of all the MRP Permittees. Other elements are being implemented collaboratively by the Permittees through their respective countywide programs. As such, BASMAA and the countywide programs have submitted Annual Report elements on the regional and countywide collaborative tasks, respectively, on behalf of the MRP Permittees and the individual MRP Permittees have also submitted Annual Report elements on the Permit Provisions they have implemented individually.

It is the applicant's responsibility to ensure that the project civil engineer prepares all required Storm Water Planning documents for submittal to the City of American Canyon to comply with its MS4 permit requirements. In addition, if the project includes a requirement to obtain a Clean Water Act Section 401 permit from the RWQCB, the Storm Water Management Plan (or equivalent plan) must be submitted to the RWQCB with the application package submitted for acquisition of a Section 401 permit (aka "water quality certification").

The applicant is proposing to treat all stormwater falling on impervious surfaces in the detention/bioretention basin located on the western edge of the project site (see Sheet UP4). Once treated, stormwater would be conveyed to "level spreader outfalls" that will be installed along the western project site boundary. The level spreader outfalls consist of perforated pipe set on contour that will discharge flows uniformly across a gradual slope covered by riprap, which will mimic sheet flow conditions similar to current project site runoff (see Storm Drain Level Spreader Detail). Accordingly, the project will not violate any water quality standards.

11. CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) REGULATIONS

A CEQA lead agency must determine if a proposed activity constitutes a project requiring further review pursuant to the CEQA. Pursuant to CEQA, a lead agency would have to determine if there could be significant adverse impacts to the environment from a proposed project. Typically, if within the city limits, the city would be the CEQA lead agency. If a discretionary permit (i.e., conditional use permit) would be required for a project (e.g. an occupancy permit must be issued), the lead agency typically must determine if there could be significant environmental impacts. This is usually accomplished by an "Initial Study." If there could be significant environmental impacts, the lead agency must determine an appropriate level of environmental review prior to approving and/or otherwise permitting the impacts. In some cases, there are "Categorical Exemptions" that apply to the proposed activity; thus, the activity is exempt from CEQA. The Categorical Exemptions are provided in CEQA. There are also Statutory Exemptions in CEQA that must be investigated for any proposed project. If the project is not exempt from CEQA, the lowest level of review typically reserved for projects with no significant effects on the environment would be for the lead agency to prepare a "Negative Declaration." If a proposed project would have only minimal impacts that can be mitigated to a level of no significance pursuant to the CEQA, then a "Mitigated Negative Declaration" is typically prepared by the lead agency. Finally, those projects that may have significant effects on the environment, or that have impacts that can't be mitigated to a level considered less than significant pursuant to the CEQA, typically must be reviewed via an Environmental Impact

Report (EIR). All CEQA review documents are subject to public circulation, and comment periods.

Section 15380 of CEQA defines "endangered" species as those whose survival and reproduction in the wild are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, disease, or other factors. "Rare" species are defined by CEQA as those who are in such low numbers that they could become endangered if their environment worsens; or the species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range and may be considered "threatened" as that term is used in FESA. The CEQA Guidelines also state that a project will normally have a significant effect on the environment if it will "substantially affect a rare or endangered species of animal or plant or the habitat of the species." The significance of impacts to a species under CEQA, therefore, must be based on analyzing actual rarity and threat of extinction to that species despite its legal status or lack thereof.

This report has been prepared as a Biology section that is suitable for incorporation into a Mitigated Negative Declaration. This document addresses potential impacts to species that would be defined as endangered or rare pursuant to Section 15380 of the CEQA and can be incorporated by the CEQA lead agency (in this case City of American Canyon) into an initial study or higher levels of CEQA review including incorporation into the biology section of an Environmental Impact Report.

12. IMPACTS ANALYSIS

Below the criteria used in assessing impacts to Biological Resources is presented.

12.1 Significance Criteria

A significant impact is determined using CEQA and CEQA Guidelines. Pursuant to CEQA §21068, a significant effect on the environment means a substantial, or potentially substantial, adverse change in the environment. Pursuant to CEQA Guideline §15382, a significant effect on the environment is further defined as a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historical or aesthetic significance. Other Federal, State, and local agencies' considerations and regulations are also used in the evaluation of significance of proposed actions.

Direct and indirect adverse impacts to biological resources are classified as "significant," "potentially significant," or "less than significant." Biological resources are broken down into four categories: vegetation, wildlife, threatened and endangered species, and regulated "waters of the United States" and/or stream channels.

12.1.1 THRESHOLDS OF SIGNIFICANCE

12.1.1.1 Plants, Wildlife, Waters

In accordance with Appendix G (Environmental Checklist Form) of the CEQA Guidelines, implementing the project would have a significant biological impact if it would:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.

- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.

- Have a substantial adverse effect on federally protected "wetlands" as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

- Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

12.1.1.2 Waters of the United States and State.

Pursuant to Section 404 of the Clean Water Act (33 U.S.C. 1344), the U.S. Army Corps of Engineers (Corps) regulates the discharge of dredged or fill material into waters of the United States, which includes wetlands, as discussed in the bulleted item above, and also includes "other waters" (stream channels, rivers) (33 CFR Parts 328 through 330). Substantial impacts to Corps regulated areas on a project site would be considered a significant adverse impact. Similarly, pursuant to Section 401 of the Clean Water Act, and to the Porter-Cologne Water Quality Control Act, the RWQCB regulates impacts to waters of the state. Thus, substantial impacts to RWQCB regulated areas on a project site would also be considered a significant adverse impact.

12.1.1.3 Stream Channels

Pursuant to Section 1602 of the California Fish and Game Code, CDFW regulates activities that divert, obstruct, or alter stream flow, or substantially modify the bed, channel, or bank of a stream which CDFW typically considers including riparian vegetation. Any proposed activity that would result in substantial modifications to a natural stream channel would be considered a significant adverse impact.

13. IMPACT ASSESSMENT AND PROPOSED MITIGATION

In this section we discuss potential impacts to sensitive biological resources, including special-status wildlife species. We follow each impact with a mitigation prescription that when

implemented would reduce impacts to the greatest extent possible. This impact analysis is based on the Preliminary Site Plan (Sheet A-1).

13.1 Impact BIO-1. Development of the Project Could Have a Potentially Significant Impact on Nesting Swainson's hawks (Potentially Significant)

The Swainson's hawk is a state listed threatened species. While the Swainson's hawk has no special federal status, it is protected from direct take under the Federal Migratory Bird Treaty Act of 1918 (16 U.S.C. 703-711). Swainson's hawks, their nests, eggs, and young are also protected under California Fish and Game Code (§3503, §3503.5, §3513, and §3800).

No Swainson's hawk nests have been observed on the site or offsite in the vicinity of the project site during M&A's multiple project site surveys; however, the nesting population appears to be increasing throughout its nesting range in northern California and thus, it could conceivably nest in trees near the project site in the future.

If Swainson's hawks are found to be nesting adjacent to the project site, implementation of the proposed project could be viewed by CDFW as a project that could impact nesting Swainson's hawks. Nest site disturbance which results in: (1) nest abandonment; (2) loss of young; (3) reduced health and vigor of eggs and/or nestlings (resulting in reduced survival rates), may ultimately result in the take (killing) of nestling or fledgling Swainson's hawks incidental to otherwise lawful activities. The taking of Swainson's hawks in this manner can be viewed by CDFW as a violation of the Section 2080 of the Fish and Game Code. This interpretation of take has been judicially affirmed by the landmark appellate court decision pertaining to CESA (CDFG v. ACID, 8 CA App. 4, 41554) (CDFG 1994).

Typically, CDFW requires that any impact to a Swainson's hawk nest be permitted through a Fish and Game Section 2081 management authorization. If an active nest is found adjacent to the project site within an area of influence (which is generally considered to be within 1,000 feet of the project site) "to avoid potential violation of Fish and Game Code 2080 (i.e., killing of listed species), project-related disturbance at active Swainson's hawk nesting sites should be reduced or eliminated during critical phases of the nesting cycle (March 1- September 15 annually)" (CDFG 1994). If disturbance would occur, a Fish and Game Section 2081 management authorization would be required. As such, in the absence of survey results, it must be concluded that impacts to Swainson's hawk from the proposed project would be *potentially significant pursuant to CEQA.* This impact could be mitigated to a level considered less than significant pursuant to CEQA.

The closest known record for nesting Swainson's hawk is 2.6 miles north of the project site (CNDDB Occurrence No. 2744). There are extensive foraging opportunities both around the closest nesting location and between this nesting location and the project site. Considering that the entire project site consisted of a eucalyptus grove until 2012, it did not historically provide potential foraging habitat. Also, as the project site is essentially surrounded by eucalyptus forest, it is not a foraging destination which would likely attract foraging Swainson's hawks. Furthermore, M&A has confirmed that the project site has a low rodent population, therefore development of the project site will not have a significant impact on Swainson's hawk foraging habitat. Therefore, no mitigation for the loss of foraging habitat is warranted for this project.

13.2 Mitigation Measure BIO-1. Mitigation for Potential Impacts to Nesting Swainson's Hawk

Preconstruction surveys shall be conducted for a quarter-mile radius around all project activities and shall be completed for at least two survey periods immediately prior to the project's initiation. The survey period timing and methodology shall be conducted in accordance with CDFW's *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley* (CDFG 1994), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements.

If Swainson's hawks are found to be nesting on the project site or within a ¼-mile of the project site, consultation with CDFW will be required. The size of the nest protection buffer will be determined during consultation with CDFW but at a minimum there will be a 300-foot non-disturbance buffer around the nest site.

Implementation of this mitigation measure would reduce potential impacts to nesting Swainson's hawk to a level considered less than significant pursuant to CEQA.

13.3 Impact BIO-2. Development of the Project Could Have a Potentially Significant Impact on Western Burrowing Owl (Potentially Significant)

The western burrowing owl is a California Species of Special Concern. This raptor (that is, bird of prey) is also protected under the Migratory Bird Treaty Act (50 CFR 10.13) and its nest, eggs, and young are protected under California Fish and Game Code Sections 3503, 3503.5. While western burrowing owls have not been observed on the project site and their likelihood of presence on the project site is considered to be low, limited suitable nesting habitat occurs on the project site. Since the western burrowing owl is a mobile species that could move onto the project site prior to development, preconstruction surveys would be necessary to determine its presence. Thus, the project may result in impacts to the western burrowing owl; this would be a *potentially significant impact pursuant to CEQA***.** This impact could be mitigated to a level considered less than significant pursuant to CEQA.

13.4 Mitigation Measure BIO-2. Mitigation for Potential Impacts to Western Burrowing Owl

Based on the presence of this species in the project vicinity and the potential habitat found on the project site, a preconstruction survey for burrowing owls should be conducted 14 days prior or less to initiating ground disturbance. As burrowing owls may recolonize a site after only a few days, time lapses between project activities trigger subsequent take avoidance surveys including but not limited to a final survey conducted within 24 hours prior to ground disturbance to ensure absence. If no owls are found during these surveys, no further regard for the burrowing owl would be necessary.

a. Burrowing owl surveys should be conducted by walking the entire project site. Pedestrian survey transects should be spaced to allow 100 percent visual coverage of the ground surface. The distance between transect center lines should be 7 meters to 20 meters and should be reduced to account for differences in terrain, vegetation density, and ground surface visibility.

Poor weather may affect the surveyor's ability to detect burrowing owls thus, avoid conducting surveys when wind speed is greater than 20 kilometers per hour and there is precipitation or dense fog. To avoid impacts to owls from surveyors, owls and/or occupied burrows should be avoided by a minimum of 50 meters (approximately 160 ft.) wherever practical to avoid flushing occupied burrows. Disturbance to occupied burrows should be avoided during all seasons.

b. If burrowing owls are detected on the site, the following restricted activity dates and setback distances are recommended per CDFW's Staff Report (2012).

- From April 1 through October 15, low disturbance and medium disturbance activities should have a 200 meter buffer while high disturbance activities should have a 500 meter buffer from occupied nests.
- From October 16 through March 31, low disturbance activities should have a 50 meter buffer, medium disturbance activities should have a 100 meter buffer, and high disturbance activities should have a 500 meter buffer from occupied nests.
- No earth-moving activities or other disturbance should occur within the afore-mentioned buffer zones of occupied burrows. These buffer zones should be fenced as well. If burrowing owls were found in the project area, a qualified biologist would also need to delineate the extent of burrowing owl habitat on the site.

Implementation of these mitigation measures would reduce potential impacts to burrowing owls to a level considered less than significant pursuant to CEQA.

13.5 Impact BIO-3: Development of the Project Would Have a Potentially Significant Impact on Tree or Ground Nesting Raptors (Potentially Significant)

Tree or ground nesting raptors that could be affected by the project include northern harrier, white-tailed kites, red-shouldered hawk and red-tailed hawk. Nesting raptors are protected by the federal Migratory Bird Treaty Act (MBTA) (16 U.S.C. 703-711 and 50 CFR 10.13). All nesting raptors, their eggs and young are protected pursuant to California Fish and Game Code §3503.5. Specific surveys for nesting raptors have not been conducted. In the absence of survey results indicating otherwise, it is conservatively assumed that implementation of the proposed project may impact nesting raptors which could result in nest abandonment and death of eggs or young. Therefore, impacts to nesting raptors are regarded as *potentially significant pursuant to CEQA***.** This impact could be mitigated to a level considered less than significant pursuant to CEQA.

13.6 Mitigation Measure BIO-3: Mitigation for Potential Impacts to Tree or Ground Nesting Raptors

To ensure that impacts to tree or ground nesting raptors are avoided or offset, the following mitigation measures will be implemented:

a. In order to avoid impacts to nesting raptors, a preconstruction nesting survey will be conducted by a qualified raptor biologist prior to commencing with earth-moving or construction work if this work would commence between February 1st and August 31st. The survey should be

conducted within the 30 day period prior to site disturbance. The raptor nesting surveys will include examination of all trees and ruderal habitat within 200 feet of the project site.

b. If nesting raptors are identified during the surveys, the dripline of the nest tree or ground-nesting site must be fenced with orange construction fencing (provided the nest site is on the project site), and a 200-foot radius around the nest tree or nest site must be staked with orange construction fencing. If the tree or nest site is located off the project site, then the buffer should be demarcated per above where the buffer occurs on the project site. The size of the buffer may be altered if a qualified raptor biologist conducts behavioral observations and determines the nesting raptors are well acclimated to disturbance. If this occurs, the raptor biologist should prescribe a modified buffer that allows sufficient room to prevent undue disturbance/harassment to the nesting raptors. No construction or earth-moving activity should occur within the established buffer until it is determined by a qualified raptor biologist that the young have fledged (that is, left the nest) and have attained sufficient flight skills to avoid project construction zones. This typically occurs by August 1st. This date may be earlier or later, and would have to be determined by a qualified raptor biologist. If a qualified biologist is not hired to watch the nesting raptors then the buffers should be maintained in place through the month of August and work within the buffer can commence on September 1st.

c. If the preconstruction nesting survey identifies a large stick or other type of raptor nest that appears inactive at the time of the survey, but there are territorial raptors evident in the nest site vicinity, a protection buffer (as described above) should be established around the potential nesting tree until the qualified raptor biologist determines that the nest is not being used. In the absence of conclusive observations indicating the nest site is not being used, the buffer should remain in place until a second follow-up nesting survey can be conducted to determine the status of the nest and eliminate the possibility that the nest is utilized by a late-spring nesting raptor (for example, red-tailed hawk). This second survey should be conducted even if construction has commenced. If during the follow-up late season nesting survey a nesting raptor is identified utilizing the nest, the protection buffer should remain until it is determined by a qualified raptor biologist that the young have fledged and have attained sufficient flight skills to avoid project construction zones. If the nest remains inactive, the protection buffer can be removed and construction and earth-moving activities can proceed unrestrained.

Implementation of these mitigation measures would reduce potential impacts to nesting raptors to a level considered less than significant pursuant to CEQA.

13.7 Impact BIO-4: Development of the Project Would Have a Potentially Significant Impact on Nesting Passerine Birds. (Potentially Significant)

Nesting passerine birds (i.e., perching birds) are protected by the federal Migratory Bird Treaty Act (MBTA) (16 U.S.C. 703-711 and 50 CFR 10.13) and by California Fish and Game Code §3503 and §3503.5 which protects nesting birds, their eggs and young. These birds frequently change nesting locations from year to year and thus, past nesting histories are not necessarily indicative of future nesting activities. Accordingly, impacts to nesting passerine birds, their eggs, and/or young resulting from the proposed project are considered potentially significant. *This impact could be mitigated to a level considered less than significant pursuant to CEQA.*

13.8 Mitigation Measure BIO-4: Mitigation for Potential Impacts to Nesting Passerine Birds.

To ensure that impacts to nesting passerine birds are avoided or offset, a nesting survey shall be conducted 15 days prior to commencing construction/ grading or tree removal activities if this work would commence between March 1 and September 1. If common passerine birds or special-status passerine birds are identified nesting on the project site, a non-disturbance buffer of 75 feet shall be established or as otherwise prescribed by a qualified ornithologist. The buffer shall be demarcated with orange construction fencing. Disturbance within the buffer shall be postponed until it is determined by a qualified ornithologist that the young have fledged and have attained sufficient flight skills to leave the area or that the nesting cycle has otherwise completed.

Typically, most passerine birds in the region of the project site are expected to complete nesting by August 1st. However, many species can complete nesting by the end of June or in early to mid-July. Regardless, nesting buffers shall be maintained until August 1st unless a qualified ornithologist determines that young have fledged and are independent of their nests at an earlier date. If buffers are removed prior to August 1st, the qualified biologist conducting the nesting surveys should prepare a report that provides details about the nesting outcome and the removal of buffers. This report shall be submitted to the City of American Canyon Planning Department prior to the time that nest protection buffers are removed if the date is before August 1st.

Implementation of this mitigation measure would reduce potential impacts nesting passerine birds to a level considered less than significant pursuant to CEQA.

Raccoon	*Procyon lotor*
Feral cat	*Felis catus*

Table 3

Special-Status Plant Species Known Within 3 Miles of the SDG 217 Commerce Distribution Center Project Site

Family Taxon Common Name	Status*	Flowering Period	Habitat	Area Locations	Probability on Project Site
Asteraceae					
Balsamorhiza macrolepis Big-scale balsam-root	Fed: - State: - CNPS: Rank 1B.2	March-June	Cismontane woodland; chaparral; valley and foothill grassland; [sometimes serpentinite]. 90 - 1555 meters	Closest record is from 2011 and is 3.0 miles east of the project site (Occurrence No. 7).	None. The project site is highly disturbed. No suitable habitat on the project site.
Symphyotrichum lentum Suisun Marsh aster	Fed: - State: - CNPS: Rank 1B.2	August-November	Marshes and swamps (brackish and fresh water)	Closest record is from 1993 and is 2.5 miles northwest of the project site (Occurrence No. 128).	None. The project site is highly disturbed. No suitable habitat on the project site.
Chenopodiaceae					
Extriplex joaquinana San Joaquin spearscale	Fed: - State: - CNPS: Rank 1B.2	April-October	Chenopod scrub; meadows; valley and foothill grassland; [alkaline].	Closest record is from and is 1.8 miles south of the project site (Occurrence No. 58).	None. The project site is highly disturbed. No suitable habitat on the project site.
Cyperaceae					
Carex lyngbyei Lyngbye's sedge	Fed: - State: - CNPS: Rank 2	May-August	Marshes or swamps (brackish or freshwater)	Closest record is from 2008 and is 2.3 miles northwest of the project site (Occurrence No. 28).	None. The project site is highly disturbed. No suitable habitat on the project site.
Fabaceae					
Astragalus tener tener Alkali milkvetch	Fed: - State: - CNPS: Rank 1B.2	March-June	Playas; mesic grasslands (adobe clay), vernal pools (alkaline).	Closest record is from 1993 and is 1.8 miles south of the project site (Occurrence No. 50).	None. The project site is highly disturbed. No suitable habitat on the project site.

Table 3

Special-Status Plant Species Known Within 3 Miles of the SDG 217 Commerce Distribution Center Project Site

Family Taxon Common Name	Status*	Flowering Period	Habitat	Area Locations	Probability on Project Site
Lathyrus jepsonii jepsonii Delta tule pea	Fed: - State: - CNPS: Rank 1B.2	May-September	Marshes and swamps (freshwater and brackish).	Closest record is from 1978 and is 2.6 miles northwest of the project site (Occurrence No. 13).	None. The project site is highly disturbed. No suitable habitat on the project site.
Trifolium amoenum Showy Indian clover	Fed: FE State: - CNPS: Rank 1B.1	April-June	Valley and foothill grassland (sometimes serpentinite)	Closest record is from 1952 and is 1.2 miles east of the project site (Occurrence No. 23).	None. The project site is highly disturbed. No suitable habitat on the project site.
Orobanchaceae					
Castilleja affinis neglecta Tiburon paintbrush	Fed: FE State: CT CNPS: Rank 1B.2	April-June	Valley and foothill grassland [serpentinite]	Closest record is from 2013 and is 3.0 miles east of the project site (Occurrence No. 5).	None. The project site is highly disturbed. No suitable habitat on the project site.
Chloropyron molle molle Soft bird's-beak	Fed: FE State: CR CNPS: Rank 1B.2	July-September	Marshes and swamps (coastal salt).	Closest record is from 2010 and is 2.3 miles north of the project site (Occurrence No. 3).	None. The project site is highly disturbed. No suitable habitat on the project site.

Table 4

Special-Status Wildlife Species Known Within 3 Miles of the SDG 217 Commerce Distribution Center Project Site

Species	*Status	Habitat	Closest Locations	Probability on Project Site
Invertebrates				
Vernal pool fairy shrimp *Branchinecta lynchi*	Fed: FT State: - Other:	Endemic to the grasslands of the Central Valley, central coast mountains, and south coast mountains. Inhabit static rain-filled/vernal pools, small, clear water sandstone-depression pools and grassed swale, earth slump, or basalt-flow depression	Closest record is from 2003 and is 1.5 miles north of the project site (Occurrence No. 232).	None. No suitable habitat on the project site.
Fish				
Steelhead - Central California Coast DPS *Oncorhynchus mykiss irideus*	Fed: FT State: - Other:	From Russian River south to Soquel Creek, and to Pajaro River. Also found in San Francisco & San Pablo Bay Basins. Spawn in clear, cool, well oxygenated streams greater than 18 cm deep.	Closest record is from 2000 and is 0.39 miles southwest of the project site (Occurrence No. 4).	None. No suitable habitat on the project site.
Longfin smelt *Spirinichus thaleichthys*	Fed: -- State: CT Other:	Endemic to the Sacramento-San Joaquin River system. Inhabits open waters in the Delta and Suisun Bay. After spawning, larvae are carried downstream to brackish nursery areas.	Closest record is from 2012 and is1.2 miles west of the project site (Occurrence No. 26).	None. No suitable habitat on the project site.
Sacramento splittail *Pogonichthys macrolepidotus*	Fed: State: CSC Other:	Endemic to the lakes and rivers of the Central Valley; now confined to the delta, Suisun Bay, and associated marshes. Inhabits slow moving river sections and dead-end sloughs. Needs flooded vegetation for spawning.	Closest record is from 2001 and is 2.9 miles southwest of the project site (Occurrence No. 12).	None. No suitable habitat on the project site.
Amphibians				
California red-legged frog *Rana draytonii*	Fed: FT State: CSC Other:	Occurs in lowlands and foothills in deeper pools and streams, usually with emergent wetland vegetation. Requires 11-20 weeks of permanent water for larval development.	Closest record is from 2006 and is 1.4 miles east of the project site (Occurrence No. 896).	None. No suitable habitat on the project site.

Table 4

Special-Status Wildlife Species Known Within 3 Miles of the SDG 217 Commerce Distribution Center Project Site

Species	*Status	Habitat	Closest Locations	Probability on Project Site
Foothill yellow-legged frog *Rana boylii*	Fed: -- State: CC Other:	Found in partially shaded, shallow streams with rocky substrates. Requires perenial pools or flowing water. Needs some cobble-sized rocks as a substrate for egg laying. Requires water for 15 weeks for larval transformation.	Closest record is from 193X and is 1.2 miles east of the project site (Occurrence No. 2341).	None. No suitable habitat on the project site.
Reptiles				
Western pond turtle ** *Emys marmorata*	Fed: - State: CSC Other:	Inhabits ponds, marshes, rivers, streams, and irrigation ditches with aquatic vegetation. Needs suitable basking sites and upland habitat for egg laying. Occurs in the Central Valley and Contra Costa County.	Closest record is from 2002 and is 0.45 miles northeast of the project site (Occurrence No. 552).	None. No suitable habitat on or adjacent to the project site.
Birds				
Northern harrier *Circus cyaneus*	Fed: - State: CSC Other:	Nests on the ground or in shrubby vegetation typically in grasslands, fallow farm lands, near freshwater and salt water marshes.	Closest record is from 2004 and is 2.8 miles west of the project site (Occurrence No. 29).	Unlikely to nest onsite. Preconstruction surveys will be conducted.
Swainson's hawk *Buteo swainsoni*	Fed: - State: CT Other:	Migratory and resident raptor that breeds in open areas with scattered trees. Prefers riparian and sparse oak woodland habitats for nesting. Requires nearby grasslands, grain fields, or alfalfa for foraging.	Closest record is from 2013 and is 2.6 miles northeast of the project site (Occurrence No. 2744).	Unlikely to nest adjacent to project site. Preconstruction surveys will be conducted.
Ferruginous hawk *Buteo regalis*	Fed: -- State: WL Other:	Winter migrant to California where they prefer grasslands, cultivated fields and arid areas with an abundance of prey species, such as pocket gophers, black-tailed hares, and cottontails.	Closest record is from 1988 and is 3.0 miles north of the project site (Occurrence No. 28).	None. Does not nest in California.

Table 4

Special-Status Wildlife Species Known Within 3 Miles of the SDG 217 Commerce Distribution Center Project Site

Species	*Status	Habitat	Closest Locations	Probability on Project Site
Peregrine falcon *Falco peregrinus*	Fed: - State: - Other:	Nests on high cliffs near wetlands, lakes, rivers, or other water; also nests on human-made structures. Nest consists of a scrape on a depression or ledge in an open site. Was formerly state and federally listed but delisted due to species recovery.	Closest record is from 2015 and is 3.0 miles east of the project site (Occurrence No. 42).	None. No suitable nesting habitat on or near the project site.
California black rail *Laterallus jamaicensis coturniculus*	Fed: -- State: CT Other:	Inhabits salt marshes bordering larger bays. Prefers tidal salt marshes of pickleweed.	Closest record is from 2011 and is 2.5 miles northwest of the project site (Occurrence No. 31).	None. No suitable habitat on the project site.
California Ridgway's rail *Rallus obsoletus obsoletus*	Fed: FE State: CE Other:	Inhabits salt water and brackish marshes with tidal sloughs in San Francisco Bay. Prefers dense pickleweed for cover, but forages for invertebrates along mud-bottomed sloughs.	Closest record is from 1989 and is 2.4 miles northwest of the project site (Occurrence No. 16).	None. No suitable habitat on the project site.
Western burrowing owl *Athene cunicularia hypugaea*	Fed: -- State: CSC Other:	Found in open, dry annual or perennial grasslands, deserts and scrublands characterized by low-growing vegetation. Subterranean nester, dependent upon burrowing mammals, most notably, the California ground squirrel.	Closest record is from 1989 and is 2.6 miles southeast of the project site (Occurrence No. 109).	Unlikely to nest on the project site. Preconstruction surveys will be conducted.
Salt marsh common yellowthroat *Geothlypis trichas sinuosa*	Fed: - State: CSC Other:	Resident of freshwater and salt water marshes in the San Francisco Bay region. Requires thick, continuous cover for foraging and tall grasses, tules, or willows for nesting.	Closest record is from 2004 and is 2.5 miles northwest of the project site (Occurrence No. 37).	None. No suitable habitat on the project site.
San Pablo song sparrow *Melospiza melodia samuelis*	Fed: -- State: CSC Other:	More properly known as Samuels Song Sparrow. Resident of salt marshes along the north side of San Francisco and San Pablo Bays. Inhabits tidal sloughs in the California marshes; nests in grindelia bordering slough channels.	Closest record is from 2004 and is 2.8 miles west of the project site (Occurrence No. 17).	None. No suitable habitat on the project site.

Table 4

Special-Status Wildlife Species Known Within 3 Miles of the SDG 217 Commerce Distribution Center Project Site

Species	*Status	Habitat	Closest Locations	Probability on Project Site
Tricolored blackbird *Agelaius tricolor*	Fed: - State: CC Other: CSC	Colonial nester in dense cattails, tules, brambles or other dense vegetation. Requires open water, dense vegetation, and open grassy areas for foraging.	Closest record is from 2014 and is 1.6 miles northeast of the project site (Occurrence No. 243).	None. No suitable nesting habitat on the project site.
Mammals				
Salt marsh harvest mouse *Reithrodontomys raviventris*	Fed: FE State: CE Other:	Inhabits saline marshes in the San Francisco Estuary. Prefers pickleweed marshes. Requires higher areas for escaping high water.	Closest record is from 1989 and is 2.4 miles south of the project site (Occurrence No. 150).	None. No suitable habitat on the project site.

Attention: Mr. Brian Doswald

RE: Addendum Letter to CEQA Biology Report Discussing Proposed Borrow Site SDG Commerce 217 Distribution Center, Napa, California APN: 058-030-065-000

Dear Mr. Doswald:

1. INTRODUCTION

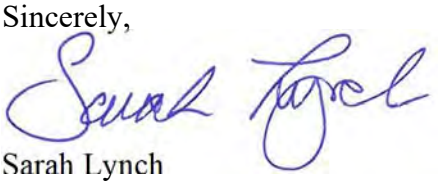
Monk & Associates, Inc., (M&A) has prepared this Addendum to our March 2, 2020, *Revised Biological Resource Analysis* (biology report) for the SDG Commerce 217 Distribution Center located in the City of American Canyon, California (the "project site"). Since the time M&A prepared our biology report for the project site, it has been determined that it will be necessary to acquire soil from the adjacent parcel to the south (the "borrow area parcel") and transport this soil for use as clean fill on the project site. M&A has prepared this Addendum to our biology report to address the transportation of soil from the offsite borrow area parcel onto the project site and to analyze any affects this activity could have on mapped jurisdictional waters of the United States/State that lie inbetween the project site and the adjacent borrow area parcel. Mapped waters of the United States are shown on the attached exhibits.

2. DESCRIPTION OF THE PROJECT SITE AND ADJACENT BORROW AREA PARCEL

The project site and the adjacent borrow area parcel were once part of a contiguous approximately 35-acre project site that M&A conducted surveys on over multiple years dating between 2006 and 2018. Both the project site and adjacent borrow area parcel are dominated by ruderal (weedy) vegetation including stinkwort (*Dittrichia graveolens*), Italian rye grass (*Festuca perennis*), ripgut brome (*Bromus diandrus*), soft chess (*Bromus hordeaceus*), slender wild oat (*Avena barbata*), common vetch (*Vicia sativa*), red-stem filaree (*Erodium cicutarium*), bull thistle (*Cirsium vulgare*), Italian thistle (*Carduus pycnocephalus pycnocephalus*), bristly ox-tongue (*Helminthotheca echioides*), California burclover (*Medicago polymorpha*), and cut-leaf geranium (*Geranium dissectum*). These non-native, weedy species provide little habitat value to wildlife and they do not constitute a native plant community. Native, coyote brush (*Baccharis pilularis* subsp. *consanguinea*), a plant that responds to land disturbances, is also common on the 35 acres. Ruderal vegetation is the only vegetation community found on the project site. The adjacent borrow area parcel, however, in addition to supporting a ruderal herbaceous community also supports waters of the United States, as described below.

On May 16, 2018, the U.S. Army Corps of Engineers issued a jurisdictional determination confirming their jurisdiction over 0.043-acre of waters of the U.S. on the approximately 35-acre

parcel that comprises the project site, the adjacent borrow area parcel, and another property now known as 330 Commerce Center (see attached exhibits). The entire 0.043-acre of waters of the U.S. confirmed by the Corps is found on the adjacent borrow area parcel as shown on the attached exhibit "Borrow Site Rough Grading," Sheet 1 prepared by RSA on August 21, 2020. There are no waters of the United States or State on the project site.



3. DISCUSSION OF PROPOSED ACTIVITIES AND AVOIDANCE OF IMPACTS TO MAPPED WATERS OF THE UNITED STATES

The project applicant intends to rough grade the borrow area parcel and transport soil from that parcel onto the project site for use in development of the project site. In order to protect the waters of the United States/State that occur in between the project site and the borrow area parcel, a 25-foot buffer area around the outside edge of the wetlands will be staked and protected with fiber roll, silt fencing and high visibility orange construction fencing to prevent equipment from driving into the wetlands during hauling activities. See the attached exhibit.

With these protection measures in place, as shown on the attached Borrow Site Rough Grading exhibit, Sheet 1, attached, *there are no expected impacts to waters of the U.S./State from the transport of soil/materials from the borrow area parcel to the project site*.

This concludes our addendum to our biology report. If you have any questions or require additional information, please do not hesitate to contact me at (925) 323-4850 or Sarah@monkassociates.com. Thank you.

Sincerely,

Sarah Lynch
Senior Associate Biologist

INSTALLATION OF SILT FENCE SEDIMENT BARRIER

1. LAY OUT A SUITABLE FENCE LINE AND SET POSTS ALONG IT. ON SLOPES, ALIGN THE FENCE ALONG THE CONTOUR AS CLOSELY AS POSSIBLE. IN SMALL SWALES, CURVE THE FENCE LINE UPSTREAM AT THE SIDES TO DIRECT THE FLOW TOWARD THE MIDDLE OF THE FENCE. THE SIDES SHOULD BE HIGHER THAN THE CENTER AS ILLUSTRATED AT RIGHT. SPACE POSTS ON 6' CENTERS AND DRIVE THEM A MINIMUM OF 12 IN (30 CM) INTO THE GROUND. POSTS FOR SILT FENCES CAN BE EITHER 1 1/2" (3.8 CM) MIN DIA. HARD WOOD OR 1.33 LB/FT (1.97 KG/M) STEEL WITH A MINIMUM LENGTH OF 5 FT (1.5 M). STEEL POSTS MUST HAVE PROJECTIONS FOR FASTENING WIRE TO THEM.
2. FASTEN THE FILTER FABRIC TO THE UPHILL SIDE OF THE FENCE POSTS, AND EXTEND TO 6 TO 8 IN (15 TO 20 CM) INTO THE TRENCH. THE HEIGHT OF THE FENCE SHOULD NOT EXCEED 36 IN (0.9 M). DO NOT STAPLE FABRIC ONTO TREES. CUT THE FILTER FABRIC FROM A CONTINUOUS ROLL TO AVOID THE USE OF JOINTS. WHEN JOINTS ARE NECESSARY, SPLICE THE FILTER CLOTH AT A SUPPORT POST, WITH A MINIMUM 6 IN (15 CM) OVERLAP, AND SECURELY FASTEN BOTH ENDS TO THE POST.
3. BACKFILL THE TRENCH OVER THE TOE OF THE FABRIC AND COMPACT THE SOIL.
4. PREFABRICATED SILT FENCE WITH POSTS MAY BE USED AS AN ALTERNATE TO SETTING STEEL OR WOOD POSTS.

SPECIAL-STATUS ANIMAL SURVEY REPORT

Date: August 8, 2023

To: Robert Carroll, FCS International.

From: Dr. Christopher T. DiVittorio, Pinecrest Research Corp., Inc.

Subject: Results of special-status animal surveys at 220 Commerce Court, Napa County, CA (FCS Project 5639.0001)

Robert Carroll,

This special-status animal survey report (Report) details the findings of eleven (11) wildlife surveys conducted between January 18 and July 2 in 2023 at the above-referenced property located in the County of Napa. The site consists of one parcel measuring 10.2 acres and assigned APN 058-030-069. Surveys were conducted in order to determine the pre-construction presence or absence of the following special-status animals: burrowing owl (*Athene cunicularia*), Swainson's hawk (*Buteo swainsoni*), nesting raptors, nesting passerine birds, and Western pond turtle. Surveys were conducted by consulting biologist Dr. Christopher DiVittorio.

Site Description

The entirety of the site is disked and mowed ruderal grassland, with the exception of a row of Eucalyptus trees along the northern property line. The ruderal grassland exhibits low cover of plants and low species diversity with very few native species (Figure 1). The habitat type of this area as determined by Sawyer et al. (2009) *Manual of California Vegetation 2nd Edition* (MCV) is *Bromus* (*diandrus, hordeaceous*)-*Brachypodium distachyon* Semi-Natural Herbaceous Stand. On the north side of the parcels is a row of bluegum Eucalyptus. The MCV classification of this habitat is *Eucalyptus* (*globulus, camaldulensis*) Semi-Natural Woodland Stands.

Methods

Between January 18 and July 2, 2023, eleven (11) surveys were conducted for nesting passerine birds, raptors (including Swainson's hawk), burrowing owl, and Western pond turtle. During each survey, the entirety of the "Commerce 220" site as well as the adjacent "Commerce 217" site were examined. These surveys included the entirety of both legal parcels, as well all of the vegetated areas up to the concrete paved area on the developed parcel to the south. Relevant adjacent areas were also examined with binoculars where possible. A total of approximately 45 survey hours were completed across all survey dates. All of the aforementioned animal types were surveyed for at each of the eleven site visits. Survey methods followed established procedures and applicable protocols, including the *Recommended Timing and Methodology for Swainson's Hawk Nesting fSurveys in California's Central Valley*, and the *Staff Report on*

Burrowing Owl Mitigation.[1,2] Survey equipment included high-quality binoculars and a high-quality spotting scope. Surveys were conducted during the appropriate times of day (including peak bird detection periods between sunrise and 10 a.m.). Surveys were conducted on foot. Survey dates with the corresponding Swainson's hawk survey periods are shown below.

Date	Swainson's Hawk Survey Period
1/18/2023	1st survey in Period I
3/20/2023	1st survey in Period II
3/31/2023	2nd survey in Period II
4/4/2023	3rd survey in Period II
4/5/2023	1st survey in Period III
4/6/2023	2nd survey in Period III
4/7/2023	3rd survey in Period III
4/24/2023	1st survey in Period IV
4/28/2023	2nd survey in Period IV
5/29/2023	3rd survey in Period IV
7/2/2023	1st survey in Period V

Results & Recommendations

A total of 56 unique species of birds were observed across the eleven site visits. A total of 4 other species of animals were observed across the eleven site visits. Transcribed field notes from each of the eleven site visits are provided in Appendix A, below. A master list of all species of birds and other animals encountered across the eleven site visits is provided in Appendix B, below.

Due to the lack of suitable nesting habitat on the project site itself, no nesting birds were observed in the project area, although nesting birds were observed in the *Eucalyptus* stands offsite. Of the nesting birds in the offsite *Eucalyptus* stands, none of these were special-status including raptors. White tailed kites (*Elanus leucurus*) were observed foraging in the field, but they did not appear to be nesting nearby, as described below. No Swainson's hawk or burrowing owl were observed during any of the avian surveys. No adults or nests of Western pond turtle were observed (Appendix A & B).

[1] Swainson's Hawk Technical Advisory Committee. 2000. *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley*. California Department of Fish and Wildlife, May 31, 2000.

[2] California Department of Fish and Wildlife 2012. *Staff Report on Burrowing Owl Mitigation*. State of California Natural Resource Agency Department of Fish and Game. March 7, 2012.

Swainson’s hawk

No individuals of Swainson's hawk were observed during any of the surveys, and no raptor nests that could belong to Swainson's hawk were observed. The presence of other birds-of-prey utilizing territories onsite also indicates that Swainson's hawk are not utilizing this habitat currently since these species are antagonistic and do not typically share ranges. The negative survey results for Swainson’s hawk despite approximately 45 survey hours satisfies the requirements of the survey protocol for this species, therefore it is reasonable to conclude Swainson's hawk are absent from the project site.

Nesting Birds (Including Raptors)

No active raptor nests were observed within the vicinity of the project site. Several American crow were loitering around the *Eucalyptus* grove to the east of the parcel and harassing White-tail kites that approached the grove, however their nest could not be located. Several White-tail kites were observed each day foraging over the grassland habitat, however each time they flew off to the southwest out of sight and the location of their nest could not be determined. One juvenile red-shouldered hawk was observed within a large *Eucalyptus* tree along the north property line however this individual flew offsite after approximately 20 minutes. No other active nests were observed during any of the eleven site visits.

Burrowing Owl

No evidence of burrowing owl activity was observed during any of the eleven field surveys. No California ground squirrel burrows were observed on-site, and no other burrows or dens were observed that would provide suitable nesting habitat for burrowing owl. Therefore, it is reasonable to conclude burrowing owl is absent from the project site.

Western Pond Turtle

No evidence of Western pond turtle activity was observed during any of the eleven field surveys. There are some wetland features onsite, however there are no ponds or streams onsite that would be suitable for Western pond turtle foraging or breeding. No signs of adults or nests were observed onsite or in the accessible vicinity of the site. Therefore, it is reasonable to conclude Western pond turtle is absent from the project site.

Based on the results of these eleven surveys, we conclude that there are no special-status animal species currently occupying the project site, and no compensatory mitigation for impacts to special-status animal species is recommended at this time. These results do not however, preclude the future existence of the above-referenced species onsite as they may recolonize the site if sufficient time has passed between these surveys and site development.

Please let me know if you have any questions about this or any other studies we've performed for this project.

Sincerely,

Christopher DiVittorio, PhD

Appendix A: Animal Survey Field Notes

The following is a transcription of field notes for each of the eleven (11) protocol-level surveys conducted at the project site. Special-status species, if any, are denoted with an asterisk (*).

Site Visit: 1/18/23

Time: 12:00 PM (approx.)
Weather: clear, no wind, 56degF
Notes: started mid-day
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Birds: juvenile red-shouldered hawk (*Buteo lineatus*) sitting in Eucalyptus tree on N fenceline, Western bluebird (*Sialia mexicana*), Anna's hummingbird (*Calypte anna*), turkey vulture (*Cathartes aura*), American pelican (*Pelecanus erythrorhynchos*), black phoebe (*Sayornis nigricans*), white-crowned sparrow (*Zonotrichia leucophrys*), Northern flicker (*Colaptes auratus*), crow (*Corvus brachyrhynchos*)

Other Animals: None

Site Visit: 3/20/23

Time: 6:35 AM
Weather: no wind, 49 degF, 46% RH
Notes: start at sunrise; park in SE corner
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey; early season plant survey
Personnel: Dr. Christopher DiVittorio

Bird Species: wild turkey (*Meleagris gallopavo*), turkey vulture (*Cathartes aura*), Canada goose (*Branta canadensis*), crow (*Corvus brachyrhynchos*), raven (*Corvus corax*), mourning dove (*Zenaida macroura*), lesser goldfinch (*Spinus psaltria*), dark-eyed junco (*Junco hyemalis*), Western bluebird (*Sialia mexicana*), red-shouldered blackbird (*Agelaius phoeniceus*), yellow-rumped warbler (*Setophaga coronata*), house finch (*Haemorhous mexicanus*), red-shouldered hawk (*Buteo lineatus*) two individuals soaring over the Eucalyptus grove to the E of the site, house wren (*Troglodytes aedon*), American robin (*Turdus migratorius*), golden-crowned sparrow (*Zonotrichia atricapilla*), Nuttal's woodpecker (*Picoides nuttallii*), white-crowned sparrow (*Zonotrichia leucophrys*), American robin (*Turdus migratorius*), purple finch (*Haemorhous purpureus*), tree swallow (*Tachycineta bicolor*), American goldfinch (*Spinus tristis*), mallard ducks (*Anas platyrhynchos*), ruby-crowned kinglet (*Regulus calendula*), American pipit (*Anthus rubescens*), California gull (*Larus californicus*), brown-headed cowbird (*Molothrus ater*), Anna's hummingbird (*Calypte anna*), chestnut-backed chickadee (*Poecile rufescens*), White-tailed kite (*Elanus leucurus*),

Other Animals: black-tailed jackrabbit (*Lepus californicus*),

Site Visit: 3/31/23

Time: 6:30 AM
Weather: clear, wind 0 mph, 44.5 degF, 76.5% RH
Notes: parked NE corner
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Bird species: American robin (*Turdus migratorius*), house finch (*Haemorhous mexicanus*), crow (*Corvus brachyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*), yellow-rumped warbler (*Setophaga coronata*), wild turkey (*Meleagris gallopavo*), mourning dove (*Zenaida macroura*), Western scrub jay (*Aphelocoma californica*), lesser goldfinch (*Spinus psaltria*), house wren (*Troglodytes aedon*), Canada goose (*Branta canadensis*), American goldfinch (*Spinus tristis*), house sparrow (*Passer domesticus*), Allen's hummingbird (*Selasphorus sasin*), kildeer (*Charadrius vociferus*), raven (*Corvus corax*), unknown gull likely Western or California, American coot (*Fulica americana*), European starling (*Sturnus vulgaris*), ruby-crowned kinglet (*Regulus calendula*), black phoebe (*Sayornis nigricans*),

Other Animals: Mule deer (*Odocoileus hemionus*), domestic cat (*Felis catus*),

Site Visit: 4/4/23

Start time: 6:35 AM
Weather: clear, 49 degF, no wind, 81% RH
Notes: parked SW corner; 6:15 AM first light, 7:15 first direct sunlight
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey; mid-season plant survey
Personnel: Dr. Christopher DiVittorio

Bird Species: red-shouldered hawk (*Buteo lineatus*) perched on Eucalyptus tree on N fenceline , wild turkey (*Meleagris gallopavo*) calling and all over parking area, White-tailed kite (*Elanus leucurus*) foraging and calling, house wren (*Troglodytes aedon*), house finch (*Haemorhous mexicanus*), mourning dove (*Zenaida macroura*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), raven (*Corvus corax*), lesser goldfinch (*Spinus psaltria*), purple finch (*Haemorhous purpureus*), song sparrow (*Melospiza melodia*), mallard ducks (*Anas platyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*), rock wren (*Salpinctes obsoletus*), black phoebe (*Sayornis nigricans*), European starling (*Sturnus vulgaris*), fox sparrow (*Passerella iliaca*), Northern mockingbird (*Mimus polyglottos*), tree swallow (*Tachycineta bicolor*), Canada goose (*Branta canadensis*), kildeer (*Charadrius vociferus*), Anna's hummingbird (*Calypte anna*), Western bluebird (*Sialia mexicana*),

Other Animals: black-tailed jackrabbit (*Lepus californicus*),

Site Visit: 4/5/23

Start time: 6:08 AM
Weather: 39 degF, 80% RH, no wind
Notes: met Jerry with Stravinsky onsite; parked SW corner
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Bird Species: red-shouldered hawk (*Buteo lineatus*) called from southwest corner of Eucalyptus grove once, wild turkey (*Meleagris gallopavo*), house finch (*Haemorhous mexicanus*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), California towhee (*Melozone crissalis*), raven (*Corvus corax*), mallard ducks (*Anas platyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*), White-tailed kite (*Elanus leucurus*) 3 hovering various times over the field, Nuttal's woodpecker (*Picoides nuttallii*), European starling (*Sturnus vulgaris*), white-crowned sparrow (*Zonotrichia leucophrys*), black phoebe (*Sayornis nigricans*),

Other Animals: None

Site Visit: 4/6/23

Start time: 6:17 AM
Weather: clear, 44 degF, 80% RH, no wind
Notes: fewer wildlife than yesterday; met Jerry with Stravinsky onsite; parked SW corner
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Bird Species: wild turkey (*Meleagris gallopavo*), house finch (*Haemorhous mexicanus*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), California towhee (*Melozone crissalis*), brown creeper (*Certhia americana*), raven (*Corvus corax*), American robin (*Turdus migratorius*), Canada goose (*Branta canadensis*), red-shouldered hawk (*Buteo lineatus*) called from southwest corner of Eucalyptus grove once similar to other mornings, White-tailed kite (*Elanus leucurus*) two individuals over east Eucalyptus grove being chased by crows, song sparrow (*Melospiza melodia*), great blue heron (*Ardea herodias*) soaring overhead, unknown gulls soaring, lesser goldfinch (*Spinus psaltria*), Anna's hummingbird (*Calypte anna*), mallard ducks (*Anas platyrhynchos*), red-shouldered blackbird (*Agelaius phoeniceus*)

Other Animals: black-tailed jackrabbit (*Lepus californicus*) runways, California vole (*Microtus californicus*) runways

Site Visit: 4/7/23

Start time: 6:30 AM
Weather: cloudy, 54.5 degF, 79% RH, wind 1-2 mph, fewer birds today
Notes: met Jerry with Stravinsky onsite
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Bird Species: Bewick's wren (*Thryomanes bewickii*), crow (*Corvus brachyrhynchos*), yellow-rumped warbler (*Setophaga coronata*), wild turkey (*Meleagris gallopavo*), hermit thrush (*Catharus guttatus*), Anna's hummingbird (*Calypte anna*), house wren (*Troglodytes aedon*), dark-eyed junco (*Junco hyemalis*), black phoebe (*Sayornis nigricans*), lesser goldfinch (*Spinus psaltria*), house finch (*Haemorhous mexicanus*), Nuttal's woodpecker (*Picoides nuttallii*), White-tailed kites (*Elanus leucurus*) being chased by crows then two foraging in field, cliff swallow (*Petrochelidon pyrrhonota*), cedar waxwing (*Bombycilla cedrorum*), American goldfinch (*Spinus tristis*), mallard ducks (*Anas platyrhynchos*), white-crowned sparrow (*Zonotrichia leucophrys*),

Other Animals: black-tailed jackrabbit (*Lepus californicus*),

Site Visit: 4/24/23

Start time: 6:30 AM
Weather: cloudy, then sunny; 61 degF, 64% RH, 1-3 mph wind
Notes: met Jerry with Stravinsky onsite for survey at 6:30, began preconstruction meeting 8:00 AM
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey; preconstruction meeting with geotechnical engineer, Stravinsky, civil engineer, SWPP monitor, etc.
Personnel: Dr. Christopher DiVittorio

Birds: violet-green swallow (*Tachycineta thalassina*), Brewer's blackbird (*Euphagus cyanocephalus*), California towhee (*Melozone crissalis*), dark-eyed junco (*Junco hyemalis*), black phoebe (*Sayornis nigricans*), lesser goldfinch (*Spinus psaltria*), crow (*Corvus brachyrhynchos*), Anna's hummingbird (*Calypte anna*), house wren (*Troglodytes aedon*), European starling (*Sturnus vulgaris*), white-crowned sparrow (*Zonotrichia leucophrys*), Nuttal's woodpecker (*Picoides nuttallii*), American goldfinch (*Spinus tristis*), Western bluebird (*Sialia mexicana*), turkey vulture (*Cathartes aura*), mourning dove (*Zenaida macroura*), White-tailed kite (*Elanus leucurus*) soaring and hovering over field, juvenile red-tailed hawk (*Buteo jamaicensis*) offsite to E flushed immediately out of site to the SE, peregrine falcon (*Falco peregrinus*) fly-through overhead, unidentified species of sparrow,

Other Animals: none

Other Notes: Red-tailed hawk nest on south side of existing warehouse to the south of project site is not active this year.

Site Visit: 4/28/23

Start time: 5:45 AM
Weather: cloudy, cold
Notes: met Jerry with Stravinsky onsite, Commerce 217 will be graded tomorrow; silt fencing installed and grass has been mowed since last visit; no burrows or other animal sign onsite; this counts towards the 24-hour BUOW preconstruction survey requirement
Purpose: preconstruction Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Birds: White-tailed kite (*Elanus leucurus*) hovering over field, turkey vulture (*Cathartes aura*), wild turkey (*Meleagris gallopavo*),

Other Animals: black-tailed jackrabbit (*Lepus californicus*),

Site Visit: 5/29/23

Start time: 8:30 AM
Weather: sunny
Notes: Commerce 220 site has been graded in addition to Commerce 217
Purpose: Swainson's hawk, other raptor, nesting passerine bird, BUOW, western pond turtle survey
Personnel: Dr. Christopher DiVittorio

Birds: no sign of BUOW or Swainson's hawk; presence/absence survey only; no comprehensive bird list completed

Other Animals: none

Site Visit: 7/2/23

Start time: 1:00 PM
Weather: clear, sunny, 85 degF, 51% RH, 3-8 mph wind
Note: many species appear to have migrated offsite for the summer
Purpose: Swainson's hawk, other raptor, nesting bird, BUOW, western pond turtle survey

Bird Species:

house finch (*Haemorhous mexicanus*), Osprey (*Pandion haliaetus*), turkey vulture (*Cathartes aura*), lesser goldfinch (*Spinus psaltria*), red-tailed hawk (*Buteo jamaicensis*), Nuttal's woodpecker (*Picoides nuttallii*), kildeer (*Charadrius vociferus*), White-tailed kite (*Elanus leucurus*)

Other Animals: none

Appendix B: Master Species List

The following is a list of animal species observed across the eleven (11) site visits at the project site. Special-status species, if any, are denoted with an asterisk (*).

MASTER BIRD LIST

Allen's hummingbird (*Selasphorus sasin*)
American coot (*Fulica americana*)
American goldfinch (*Spinus tristis*)
American pelican (*Pelecanus erythrorhynchos*)
American pipit (*Anthus rubescens*)
American robin (*Turdus migratorius*)
Anna's hummingbird (*Calypte anna*)
Bewick's wren (*Thryomanes bewickii*)
black phoebe (*Sayornis nigricans*)
Brewer's blackbird (*Euphagus cyanocephalus*)
brown creeper (*Certhia americana*)
brown-headed cowbird (*Molothrus ater*)
California gull (*Larus californicus*)
California towhee (*Melozone crissalis*)
Canada goose (*Branta canadensis*)
cedar waxwing (*Bombycilla cedrorum*)
chestnut-backed chickadee (*Poecile rufescens*)
cliff swallow (*Petrochelidon pyrrhonota*)
crow (*Corvus brachyrhynchos*)
dark-eyed junco (*Junco hyemalis*)
European starling (*Sturnus vulgaris*)
fox sparrow (*Passerella iliaca*)
golden-crowned sparrow (*Zonotrichia atricapilla*)
great blue heron (*Ardea herodias*)
hermit thrush (*Catharus guttatus*)
house finch (*Haemorhous mexicanus*)
house sparrow (*Passer domesticus*)
house wren (*Troglodytes aedon*)
kildeer (*Charadrius vociferus*)
lesser goldfinch (*Spinus psaltria*)
mallard ducks (*Anas platyrhynchos*)
mourning dove (*Zenaida macroura*)
Northern flicker (*Colaptes auratus*)
Northern mockingbird (*Mimus polyglottos*)
Nuttal's woodpecker (*Picoides nuttallii*)
Osprey (*Pandion haliaetus*)
peregrine falcon (*Falco peregrinus*)
purple finch (*Haemorhous purpureus*)
raven (*Corvus corax*)
red-shouldered blackbird (*Agelaius phoeniceus*)
red-shouldered hawk (*Buteo lineatus*)
red-tailed hawk (*Buteo jamaicensis*)

rock wren (*Salpinctes obsoletus*)
ruby-crowned kinglet (*Regulus calendula*)
song sparrow (*Melospiza melodia*)
tree swallow (*Tachycineta bicolor*)
turkey vulture (*Cathartes aura*)
violet-green swallow (*Tachycineta thalassina*)
Western bluebird (*Sialia mexicana*)
Western scrub jay (*Aphelocoma californica*)
white-crowned sparrow (*Zonotrichia leucophrys*)
White-tailed kite (*Elanus leucurus*)
wild turkey (*Meleagris gallopavo*)
yellow-rumped warbler (*Setophaga coronata*)
unidentified gull likely Western or California
unidentified species of sparrow

MASTER OTHER ANIMALS LIST

black-tailed deer (*Odocoileus hemionus*)
black-tailed jackrabbit (*Lepus californicus*)
California vole (*Microtus californicus*) runways
domestic cat (*Felis catus*)

SPECIAL-STATUS PLANT SURVEY REPORT

Date: July 21, 2023

To: Jason Brandman, FCS International.

From: Dr. Christopher T. DiVittorio, Pinecrest Research Corp., Inc.

Subject: Results of special-status plant surveys at 220 Commerce Court, Napa County, CA (FCS Project 5639.0001)

To Whom It May Concern,

This rare plant survey report (Report) details the findings of three protocol-level special-status plant surveys conducted in 2023 at the above-referenced property located in the County of Napa. The site consists of one parcel measuring 10.2 acres and assigned APN 058-030-069.

Site Description

The entirety of the site is disked and mowed ruderal grassland, with the exception of some emergent wetland along the north property line. A stand of non-native *Eucalyptus* spp. exists to the west but this is offsite and located on the adjacent parcel. The ruderal grassland exhibits low cover of plants and low species diversity with very few native species (Figure 1). The habitat type of this area as determined by Sawyer et al. (2009) *Manual of California Vegetation 2nd Edition* (MCV) is *Bromus* (*diandrus, hordeaceous*)-*Brachypodium distachyon* Semi-Natural Herbaceous Stand. There is also some disturbed/previously developed habitat in the southeast corner (Figure 3). The project will affect only the ruderal grassland portion of the site.

Methods

Special-status plants are defined here to include: (1) all plants that are federal- or state-listed as rare, threatened or endangered, (2) all federal and state candidates for listing, (3) all plants included in Lists 1 through 4 of the CNPS Inventory, and (4) plants that qualify under the definition of "rare" in the California Environmental Quality Act, section 15380. Background information searches were conducted prior to all site visits to identify potential rare plant species or sensitive plant communities recognized by the California Department of Fish and Wildlife (CDFW) that may occur in the Study Area vicinity.

A table of these species, and their protection status, habitat requirements, and likelihood to occur in the Study Area is provided below in Appendix A. Sources for this table include the California Department of Fish and Wildlife (CDFW) Natural Diversity Database (CDFW 2023), the California Native Plant Society (CNPS) Electronic Inventory of Rare and Endangered Vascular Plants of California (CNPS 2023), and the knowledge of PEC staff. CNDDB searches were performed within a "9-quad" area encompassing the surrounding region.

Site visits were performed during the growing season of 2023. An early-season site visit was performed on March 20. Mid-season site visits were performed on April 6, April 7, and May 29. A late-season site visit was also performed on July 2. Between the mid-season and late-season site visits the site was graded thus the late-season site visit focused on remaining vegetation surrounding the areas of disturbance. Site visits were performed by PEC botanist Dr. Christopher DiVittorio, with secondary identification on voucher and photograph specimens made by PEC botanist Dr. Zoya Akulova. During each site visit, Dr. DiVittorio surveyed the entirety of the project area using methods as specified in the California Department of Fish & Wildlife (CDFW) publication titled *Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities*, dated March 20, 2018.

During each survey, the entirety of the "Commerce 220" site as well as the adjacent "Commerce 217" site were examined. These surveys included the entirety of both legal parcels, as well all of the vegetated areas up to the concrete paved area on the developed parcel to the south. Field surveys were conducted by walking the entire project area on foot in parallel lines approximately 15 feet apart, identifying every species that was flowering, and making note of any species that were past flowering or that had not yet flowered. Voucher specimens were taken of any species that required identification in the laboratory. All terminology follows currently accepted nomenclature as described in *The Jepson Manual* (2012).

Results & Recommendations

The project area is comprised of routinely disked ruderal *Bromus* (*diandrus, hordeaceous*) Semi-Natural Stands with some isolated individuals of *Baccharis pilularis* mostly near the edges of the site. A map of habitat types is shown in Figure 3. No special-status plant species or sensitive habitats were positively identified in the project area. A full list of the species encountered during the surveys is provided below in Appendix B. In total, 15 native species were observed onsite and 57 non-native species were observed. No special-status species were found thus we have no recommendations for mitigation or avoidance for this project.

Please let me know if you have any questions about this or any other studies we've performed for this project.

Sincerely,

Christopher DiVittorio, PhD
President, PEC

Figure 3: Habitat Map

Appendix A: Special-Status Species Considered

The following is a list of sensitive and/or rare plants and habitats generated based on knowledge of the species and habitats of Napa County by PEC staff, from various State and Federal databases, and from the California Natural Diversity Database (CNDDB). Known occurrences within a "9-quad" region around the project site are shown in bold.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
PLANTS			
Alkali milk-vetch (*Astragalus tener* var. *tener*)	**—/—/1B.2**	**Alkali grassland**	**Very Low: No alkali habitat exists in the project area.**
Anthony peak lupine (*Lupinus antoninus*)	—/—/1B.2	Coniferous forest	None: No coniferous forest habitat exists in the project area.
Baker's goldfields (*Lasthenia californica* ssp. *bakeri*)	—/—/1B.2	Coastal grasslands	Very Low: Some grassland habitat exists in the project area.
Baker's larkspur (*Delphinium bakeri*)	FE/SE/1B.1	Coastal scrub	Very Low: No coastal scrub habitat exists in the project area.
Baker's manzanita (*Arctostaphylos bakeri* ssp. *bakeri*)	—/—/1B.1	Serpentine chaparral	None: No serpentine chaparral exists in the project area.
Baker's navarretia (*Navarretia leucocephala* ssp. *bakeri*)	**—/—/1B.1**	**Vernal pool**	**None: No vernal pool habitat exists in the project area.**
Beaked tracyina (*Tracyina rostrata*)	—/—/1B.2	Grassland, foothill woodland	Low: Some grassland habitat exists in the project area.
Bent flowered fiddleneck (*Amsinckia lunaris*)	—/—/1B.2	Grassland, foothill woodland	Low: Some grassland habitat exists in the project area.
Big-scale balsamroot (*Balsamorhiza macrolepis*)	**—/—/1B.2**	**Grassland**	**Low: Some grassland habitat exists in the project area.**
Big tarplant (*Blepharizonia plumosa*)	**—/—/1B.1**	**Chaparral, grassland**	**Low: Some grassland habitat exists in the project area.**
Blasdale's bent grass (*Agrostis blasdalei*)	—/—/1B.2	Coastal grassland	Very Low: Some grassland habitat exists in the project area.
Blue coast gilia (*Gilia capitata* ssp. *chamissonis*)	—/—/1B.1	Coastal sand dunes	None: No sand dune habitat exists in the project area.
Bluff wallflower (*Erysimum concinnum*)	—/—/1B.2	Coastal scrub	None: No coastal scrub habitat exists in the project area.
Bogg's Lake hedge-hyssop (*Gratiola heterosepala*)	—/—/1B.2	Vernal pool, pond	None: No vernal pool habitat exists in the project area.
Bolander's horkelia (*Horkelia bolanderi*)	—/—/1B.2	Coniferous forest, grassland	Low: Some grassland exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Bolander's water hemlock (*Cicuta maculata var. bolanderi*)	**—/—/2B.1**	**Salt marsh**	**None: No salt marsh habitat exists in the project area.**
Brandegee's eriastrum (*Eriastrum brandegeeae*)	—/—/1B.1	Chaparral	None: No chaparral habitat exists in the project area.
Brewer's calandrinia (*Calandrinia breweri*)	**—/—/4.2**	**Coastal scrub**	**None: No coastal scrub habitat exists in the project area.**
Brewer's western flax (*Hesperolinon breweri*)	**—/—/1B.2**	**Chaparral, grassland**	**Low: Some grassland habitat exists in the project area.**
Bristly leptosiphon (*Leptosiphon aureus*)	**—/—/4.2**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Bristly sedge (*Carex comosa*)	—/—/2B.1	Wetland, riparian	None: No potential wetland habitat exists in the project area.
Brownish beaked-rush (*Rhynchospora capitellata*)	—/—/2B.2	Wetland, riparian	None: No potential wetland habitat exists in the project area.
Burke's goldfields (*Lasthenia burkei*)	FE/SE/1B.1	Vernal pools, grassland	Low: Some grassland habitat exists in the project area.
California alkali grass (*Puccinellia simplex*)	—/—/1B.2	Alkali grassland	Very Low: No alkali grassland habitat exists in the project area.
California beaked-rush (*Rhynchospora californica*)	**—/—/1B.1**	**Freshwater wetlands**	**None: No potential wetland habitat exists in the project area.**
California satintail (*Imperata brevifolia*)	—/—/2B.1	Chaparral, coastal scrub	None: No chaparral habitat exists in the project area.
California sedge (*Carex californica*)	—/—/2B.3	Wetlands	None: No wetland habitat exists in the project area.
Calistoga ceanothus (*Ceanothus divergens*)	—/—/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Calistoga popcornflower (*Plagiobothrys strictus*)	FE/ST/1B.1	Wetland, riparian	None: No wetland habitat exists in the project area.
Carquinez goldenbrush (*Isocoma arguta*)	**—/—/1B.1**	**Grassland**	**Low: Some grassland habitat exists in the project area.**
Chaparral ragwort (*Senecio aphanactis*)	**—/—/1B.1**	**Coastal scrub, woodland**	**None: No coastal scrub habitat exists in the project area.**
Clara Hunt's milk vetch (*Astragalus claranus*)	—/—/1B.1	Chaparral, grassland	Low: Some grassland habitat exists in the project area.
Coast iris (*Iris longipetala*)	**—/—/4.2**	**Coastal grassland, wetland**	**Low: Some grassland habitat exists in the project area.**
Coast lily (*Lilium maritimum*)	—/—/1B.1	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Coastal bluff morning glory (*Calystegia purpurata* ssp. *saxicola*)	—/—/1B.2	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.
Cobb Mountain lupine (*Lupinus sericatus*)	**—/—/1B.2**	**Chaparral, coniferous forest**	**None: No chaparral habitat exists in the project area.**
Colusa layia (*Layia septentrionalis*)	—/—/1B.2	Chaparral, valley grassland	Low: Some grassland habitat exists in the project area.
Congdon's tarplant (*Centromadia parryi ssp. congdonii*)	**—/—/1B.1**	**Grassland**	**Low: Some grassland habitat exists in the project area.**
Congested-headed hayfield tarplant (*Hemizonia congesta* ssp. *congesta*)	—/—/1B.2	Grassland, coastal scrub	Low: Some grassland habitat exists in the project area.
Contra Costa goldfields (*Lasthenia conjugens*)	**FE/—/1B.1**	**Vernal pool**	**None: No vernal pool habitat exists in the project area.**
Crystal Springs lessingia (*Lessingia arachnoidea*)	—/—/1B.2	Serpentine grassland	None: No serpentine grassland habitat exists in the project area.
Cunningham Marsh cinquefoil (*Potentilla uliginosa*)	—/—/1A	Wetland	None: No wetland habitat exists in the project area.
Dark-eyed gilia (*Gilia millefoliata*)	—/—/1B.2	Coastal sand dunes	None: No coastal sand dune habitat exists in the project area.
Dark-mouthed triteleia (*Triteleia lugens*)	**—/—/4.3**	**Grassland, chaparral**	**Low: Some grassland habitat exists in the project area.**
Deceiving sedge (*Carex saliniformis*)	—/—/1B.2	Grassland	Low: Some grassland habitat exists in the project area.
Deep-scarred cryptantha (*Cryptantha excavata*)	—/—/1B.2	Woodland	None: No woodland habitat exists in the project area.
Delta tule pea (*Lathyrus jepsonii* var. *jepsonii*)	**—/—/1B.2**	**Freshwater and brackish marsh**	**None: No marsh habitat exists in the project area.**
Diablo helianthella (*Helianthella castanea*)	**—/—/1B.2**	**Chaparral, grassland**	**Low: Some grassland habitat exists in the project area.**
Dimorphic snapdragon (*Antirrhinum subcordatum*)	—/—/4.3	Serpentine chaparral	None: No serpentine chaparral exists in the project area.
Dwarf downingia (*Downingia pusilla*)	**—/—/2B.2**	**Vernal pool, wetland**	**None: No vernal pool habitat exists in the project area.**
Dwarf soaproot (*Chlorogalum pomeridianum* var. *minus*)	—/—/1B.2	Serpentine chaparral	None: No serpentine chaparral exists in the project area.
Eel-grass pondweed (*Potamogeton zosteriformis*)	—/—/2B.2	Wetland, pond	None: No wetland habitat exists in the project area.
Fragrant fritillary (*Fritillaria liliacea*)	**—/—/1B.2**	**Grassland**	**Low: Some grassland habitat exists in the project area.**

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Few-flowered navarretia (*Navarretia leucocephala* ssp. *pauciflora*)	FE/SE/1B.1	Vernal pool, wetland	None: No vernal pool habitat exists in the project area.
Franciscan onion (*Allium peninsulare* var. *franciscanum*)	**—/—/1B.2**	**Coastal grassland**	**Very Low: No coastal grassland habitat exists in the project area.**
Geysers panicum (*Panicum acuminatum* var. *thermale*)	—/—/1B.2	Chaparral, wetland	None: No chaparral habitat exists in the project area.
Glandular western flax (*Hesperolinon adenophyllum*)	—/—/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Golden larkspur (*Delphinium luteum*)	FE/SR/1B.1	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.
Grassleaf water plantain (*Alisma gramineum*)	—/—/2B.2	Wetland, pond	None: No wetland habitat exists in the project area.
Green monardella (*Monardella viridis*)	**—/—/4.3**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Greene's narrow-leaved daisy (*Erigeron greenei*)	**—/—/1B.2**	**Serpentine chaparral**	**None: No serpentine chaparral habitat exists in the project area.**
Hall's harmonia (*Harmonia hallii*)	—/—/1B.2	Serpentine chaparral	None: No chaparral habitat exists in the project area.
Henderson's bent grass (*Agrostis hendersonii*)	**—/—/3.2**	**Vernal pool**	**None: No vernal pool habitat exists in the project area.**
Hoffman's bristly jewelflower (*Streptanthus glandulosus* spp. *hoffmanii*)	—/—/1B.3	Chaparral, woodland	None: No chaparral habitat exists in the project area.
Holly-leaved ceanothus (*Ceanothus purpureus*)	**—/—/1B.2**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Hospital Canyon larkspur (*Delphinium californicum* ssp. *interius*)	—/—/1B.2	Woodland	None: No woodland habitat exists in the project area.
Humboldt County milk vetch (*Astragalus agnicidus*)	—/—/1B.1	Coniferous forest	None: No coniferous forest habitat exists in the project area.
Jepson's coyote thistle (*Eryngium jepsonii*)	**—/—/4.2**	**Wetland, vernal pool**	**None: No wetland habitat exists in the project area.**
Jepson's leptosiphon (*Leptosiphon jepsonii*)	**—/—/1B.2**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Jepson's milk-vetch (*Astragalus rattanii* var. *jepsonianus*)	—/—/1B.2	Chaparral, grassland	Very Low: Some grassland habitat exists in the project area.
Johnny-nip (*Castilleja ambigua var. ambigua*)	—/—/4.2	**Wetland, riparian**	**None: No wetland habitat exists in the project area.**
Kenwood Marsh checkerbloom (*Sidalcea oregana* ssp. *valida*)	FE/SE/1B.1	Wetland	None: No wetland habitat exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Konocti manzanita (*Arctostaphylos manzanita* ssp. *elegans*)	—/—/1B.3	Chaparral, woodland	None: No chaparral habitat exists in the project area.
Lake County stonecrop (*Sedella leiocarpa*)	—/—/1B.1	Wetland	None: No wetland habitat exists in the project area.
Legenere (*Legenere limosa*)	**—/—/1B.1**	**Wetland, grassland**	**Very Low: Some grassland habitat exists in the project area.**
Loch Lomond button-celery (*Eryngium constancei*)	FE/SE/1B.1	Vernal pool	None: No vernal pool habitat exists in the project area.
Lobb's aquatic buttercup (*Ranunculus lobbii*)	**—/—/4.2**	**Vernal pool**	**None: No vernal pool habitat exists in the project area.**
Long-styled sand-spurrey (*Spergularia macrotheca* var. *longistyla*)	**—/—/1B.2**	**Wetland, grassland**	**Very Low: Some grassland habitat exists in the project area.**
Lyngbye's sedge (*Carex lyngbyei*)	**—/—/2B.2**	**Salt marsh**	**None: No salt marsh habitat exists in the project area.**
Many-flowered navarretia (*Navarretia leucocephala* spp. *plieantha*)	FE/SE/1B.2	Vernal pool	None: No wetland habitat exists in the project area.
Maple-leaved checkerbloom (*Sidalcea malachroides*)	—/—/4.2	Coastal grassland, coniferous forest	Very Low: No coastal grassland habitat exists in the project area.
Marin checker lily (*Fritillaria lanceolata* var. *tristulis*)	—/—/1B.1	Grassland	Low: Some grassland habitat exists in the project area.
Marin checkerbloom (*Sidalcea hickmanii* spp. *viridis*)	—/—/1B.2	Grassland	Low: Some grassland habitat exists in the project area.
Marin County navarretia (*Navarretia rosulata*)	—/—/1B.2	Serpentine forest	None: No serpentine habitat exists in the project area.
Marin knotweed (*Polygonum marinense*)	**—/—/3.1**	**Coastal salt marsh**	**None: No coastal salt marsh habitat exists in the project area.**
Marin manzanita (*Arctostaphylos virgata*)	—/—/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Marin western flax (*Hesperolinon congestum*)	FT/ST/1B.1	Chaparral	None: No chaparral habitat exists in the project area.
Marsh checkerbloom (*Sidalcea oregana* ssp. *hydrophila*)	—/—/1B.2	Wetland, riparian	None: No wetland habitat exists in the project area.
Marsh microseris (*Microseris paludosa*)	—/—/1B.2	Wetland, grassland	Very Low: Some grassland habitat exists in the project area.
Marsh pea (*Lathyrus palustris*)	—/—/2B.1	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.
Mason's ceanothus (*Ceanothus masonii*)	—/SR/1B.2	Chaparral	None: No chaparral habitat exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Mason's lilaeopsis (*Lilaeopsis masonii*)	**—/SR/1B.1**	**Freshwater and brackish marsh**	**None: No marsh habitat exists in the project area.**
Milo Baker's lupine (*Lupinus milo-bakeri*)	—/—/1B.1	Woodland, grassland	None: No woodland habitat exists in the project area.
Modest rockcress (*Arabis modesta*)	**—/—/4.3**	**Chaparral, forest**	**None: No chaparral habitat exists in the project area.**
Morrison's jewelflower (*Streptanthus morrisonii* ssp. *morrisonii*)	—/—/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Mt. Diablo fairy-lantern (*Calochortus pulchellus*)	**—/—/1B.2**	**Chaparral, grassland**	**Very Low: Some grassland habitat exists in the project area.**
Mt. St. Helena morning glory (*Calystegia collina* ssp. *oxyphylla*)	—/—/4.2	Serpentine chaparral	None: No serpentine habitat exists in the project area.
Mt. Tamalpais bristly jewelflower (*Streptanthus glandulosus* spp. *pulchellus*)	—/—/1B.2	Chaparral, grassland	Very Low: Some grassland habitat exists in the project area.
Mt. Tamalpais manzanita (*Arctostaphylos montana* spp. *montana*)	—/—/1B.3	Chaparral	None: No chaparral habitat exists in the project area.
Mt. Tamalpais thistle (*Cirsium hydrophilum* var. *vaseyi*)	—/—/1B.2	Grassland	Low: Some grassland habitat exists in the project area.
Napa bluecurls (*Trichostema ruygtii*)	**—/—/1B.2**	**Grassland**	**Medium: Some grassland habitat exists in the project area.**
Napa blue grass (*Poa napensis*)	FE/SE/1B.1	Wetland, grassland	Very Low: Some grassland habitat exists in the project area.
Napa checkerbloom (*Sidalcea hickmanii* ssp. *napensis*)	**—/—/1B.1**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Napa false indigo (*Amorpha californica* var. *napensis*)	**—/—/1B.2**	**Forest, woodland**	**None: No woodland habitat exists in the project area.**
Napa lomatium (*Lomatium repostum*)	**—/—/1B.2**	**Woodland, chaparral**	**None: No woodland habitat exists in the project area.**
Narrow-anthered brodiaea (*Brodiaea leptandra*)	**—/—/1B.2**	**Woodland, grassland**	**Very Low: Some grassland habitat exists in the project area.**
Nodding harmonia (*Harmonia nutans*)	**—/—/4.3**	**Woodland, chaparral**	**None: No chaparral habitat exists in the project area.**
North Coast semaphore grass (*Pleuropogon hooverianus*)	—/—/1B.1	Wetland, vernal pool	None: No wetland habitat exists in the project area.
Nuttall's ribbon-leaved pondweed (*Potamogeton epihydrus*)	—/—/2B.2	Pond	None: No pond habitat exists in the project area.
Oval-leaved viburnum (*Viburnum ellipticum*)	**—/—/2B.3**	**Chaparral**	**None: No chaparral habitat exists in the project area.**

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Pacific gilia (*Gilia capitata* ssp. *pacifica*)	—/—/1B.2	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.
Pacific Grove clover (*Trifolium polyodon*)	—/—/1B.1	Grassland, wetland	Very Low: Some grassland habitat exists in the project area.
Pappose tarplant (*Centromadia parryi* ssp. *parryi*)	**—/—/1B.2**	**Grassland, wetland**	**Low: Some grassland habitat exists in the project area.**
Parry's rough tarplant (*Centromadia parryi ssp. rudisi*)	**—/—/4.2**	**Grassland**	**Low: Some grassland habitat exists in the project area.**
Pennell's bird's beak (*Cordylanthus tenuis* ssp. *capillaris*)	FE/SR/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Perennial goldfields (*Lasthenia californica* ssp. *macrantha*)	—/—/1B.2	Coastal scrub	None: No coastal scrub habitat exists in the project area.
Peruvian dodder (*Cuscuta obtusiflora* var. *glandulosa*)	—/—/1B.2	Parasitic plant, grassland, chaparral	Low: Some grassland habitat exists in the project area.
Petaluma popcornflower (*Plagiobothrys mollis* var. *vestitus*)	—/—/1A	Coastal salt marsh	None: No coastal salt marsh habitat exists in the project area.
Pink sand verbena (*Abronia umbellata* var. *breviflora*)	—/—/1B.1	Coastal sand dune	None: No sand dune habitat exists in the project area.
Pitkin Marsh lily (*Lilium pardalinum* ssp. *pitkinense*)	FE/SE/1B.1	Wetland	None: No wetland habitat exists in the project area.
Pitkin Marsh paintbrush (*Castilleja uliginosa*)	FE/SE/1A	Wetland	None: No wetland habitat exists in the project area.
Point Reyes checkerbloom (*Sidalcea calycosa* ssp. *rhizomata*)	—/—/1B.2	Coastal salt marsh	None: No salt marsh habiat exists in the project area.
Point Reyes salty bird's beak (*Chloropyron maritimum* ssp. *palustre*)	—/—/1B.2	Coastal salt marsh	None: No salt marsh habitat exists in the project area.
Purple-stemmed checkerbloom (*Sidalcea malviflora* spp. *purpurea*)	—/—/1B.2	Wetland	None: No wetland habitat exists in the project area.
Pygmy cypress (*Hesperocyparis pygmaea*)	—/—/1B.2	Hardpan soil	None: No hardpan forest habitat exists in the project area.
Raiche's manzanita (*Arctostaphylos stanfordiana* ssp. *raichei*)	—/—/1B.1	Chaparral	None: No chaparral habitat exists in the project area.
Raiche's red ribbons (*Clarkia concinna* spp. *raichei*)	—/—/1B.1	Coastal scrub	None: No coastal scrub habitat exists in the project area.
Redwood lily (*Lilium rubescens*)	**—/—/4.2**	**Chaparral, forest**	**None: No chaparral habitat exists in the project area.**
Rincon Ridge ceanothus (*Ceanothus confusus*)	**—/—/1B.1**	**Chaparral**	**None: No chaparral habitat exists in the project area.**

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Rincon Ridge manzanita (*Arctostaphylos stanfordiana* ssp. *decumbens*)	—/—/1B.1	Chaparral	None: No chaparral habitat exists in the project area.
Rose leptosiphon (*Leptosiphon rosaceus*)	—/—/1B.1	Coastal scrub	None: No coastal scrub habitat exists in the project area.
Round-headed beaked rush (*Rhynchospora globularis*)	—/—/2B.1	Wetland, riparian	None: No wetland habitat exists in the project area.
Round-headed Chinese houses (*Collinsia corymbosa*)	—/—/1B.2	Coastal grassland	None: No coastal grassland habitat exists in the project area.
Round-leaved filaree (*California macrophylla*)	—/—/1B.2	Foothill grassland	Low: Some grassland habitat exists in the project area.
Saline clover (*Trifolium hydrophilum*)	**—/—/1B.2**	**Wetland, riparian**	**None: No potential wetland habitat exists in the project area.**
San Antonio Hills monardella (*Monardella antonina ssp. antonina*)	**—/—/3.0**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
San Francisco spineflower (*Chorizanthe cuspidata* var. *cuspidata*)	—/—/1B.2	Coastal sand dunes	None: No coastal sand dune habitat exists in the project area.
San Joaquin spearscale (*Extriplex joaquinana*)	**—/—/1B.2**	**Alkali scrub, grassland**	**Very Low: Some grassland habitat exists in the project area.**
Santa Cruz clover (*Trifolium buckwestiorum*)	—/—/1B.1	Wetland, grassland	Very Low: Some grassland habitat exists in the project area.
Santa Cruz microseris (*Stebbinsoseris decipiens*)	—/—/1B.2	Coastal scrub	None: No coastal scrub habitat exists in the project area.
Santa Cruz tarplant (*Holocarpha macradenia*)	FT/SE/1B.1	Coastal grassland	None: No coastal grassland habitat exists in the project area.
Santa Rosa horkelia (*Horkelia tenuiloba*)	—/—/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Seaside bittercress (*Cardamine angulata*)	—/—/2B.2	Forest, riparian	None: No forest habitat exists in the project area.
Sebastopol meadowfoam (*Limnanthes vinculans*)	FE/SE/1B.1	Wetland, vernal pool	None: No wetland habitat exists in the project area.
Serpentine cryptantha (*Cryptantha dissita*)	—/—/1B.2	Serpentine chaparral	None: No chaparral habitat exists in the project area.
Serpentine daisy (*Erigeron serpentinus*)	—/—/1B.3	Serpentine chaparral	None: No serpentine chaparral exists in the project area.
Short-leaved evax (*Hesperevax sparsiflora var. brevifolia*)	—/—/1B.2	Coastal grassland	Very Low: No coastal grassland habitat exists in the project area.
Slender Orcutt grass (*Orcuttia tenuis*)	FT/SE/1B.1	Vernal pool	None: No vernal pool habitat exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Small-flowered calycadenia (*Calycadenia micrantha*)	—/—/1B.2	Chaparral	None: No chaparral habitat exists in the project area.
Small groundcone (*Kopsiopsis hookeri*)	—/—/2B.3	Redwood forest	None: No redwood forest habitat exists in the project area.
Small spikerush (*Eleocharis parvula*)	**—/—/3.0**	**Woodland, chaparral**	**None: No chaparral habitat exists in the project area.**
Soft salty bird's beak (*Chloropyron molle* ssp. *molle*)	**FE/ST/1B.2**	**Coastal salt marsh**	**None: No salt marsh habitat exists in the project area.**
Sonoma alopecurus (*Alopecurus aequalis* var. *sonomensis*)	FE/—/1B.1	Wetland, vernal pool	None: No wetland habitat exists in the project area.
Sonoma beardtongue (*Penstemon newberryi* var. *sonomensis*)	—/—/1B.3	Chaparral	None: No chaparral habitat exists in the project area.
Sonoma ceanothus (*Ceanothus sonomensis*)	**—/—/1B.2**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Sonoma spineflower (*Chorizanthe valida*)	FE/SE/1B.1	Coastal grassland	Very Low: Some grassland habitat exists in the project area.
Sonoma sunshine (*Blennosperma bakeri*)	**FE/SE/1B.1**	**Grassland, wetland**	**Very Low: Some grassland habitat exists in the project area.**
St. Helena fawn lily (*Erythronium helenae*)	**—/—/4.2**	**Grassland, chaparral**	**Very Low: Some grassland habitat exists in the project area.**
Streamside daisy (*Erigeron biolettii*)	**—/—/4.2**	**Grassland, chaparral**	**Very Low: Some grassland habitat exists in the project area.**
Suisun marsh aster (*Symphyotrichum lentum*)	**—/—/1B.2**	**Freshwater and brackish marsh**	**None: No marsh habitat exists in the project area.**
Supple daisy (*Erigeron supplex*)	—/—/1B.2	Coastal scrub	None: No coastal scrub habitat exists in the project area.
Swamp harebell (*Campanula californica*)	—/—/1B.2	Coastal grassland, wetland	Very Low: Some grassland habitat exists in the project area.
Tamalpais jewelflower (*Streptanthus batrachopus*)	—/—/1B.3	Serpentine	None: No serpentine habitat exists in the project area.
Tamalpais lessingia (*Lessingia micradenia* var. *micradenia*)	—/—/1B.2	Grassland	Low: Some grassland habitat exists in the project area.
Tamalpais oak (*Quercus parvula* var. *tamalpaisensis*)	—/—/1B.3	Woodland	None: No woodland habitat exists in the project area.
The Cedars fairy lantern (*Calochortus raichei*)	—/—/1B.2	Hardpan chaparral	None: No chaparral habitat exists in the project area.
The Cedars manzanita (*Arctostaphylos bakeri* ssp. *sublaevis*)	—/—/1B.2	Hardpan chaparral	None: No chaparral habitat exists in the project area.

Taxon	Status[1] Fed/State/CNPS	Habitat	Potential to Occur Within the Project Area
Thin-lobed horkelia (*Horkelia tenuiloba*)	**—/—/1B.2**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Thurber's reed grass (*Calamagrostis crassiglumis*)	—/—/2B.1	Coastal scrub, wetland	None: No wetland habitat exists in the project area.
Tiburon buckwheat (*Eriogonum luteolum* var. *caninum*)	—/—/1B.2	Serpentine grassland	Very Low: No serpentine grassland exists in the project area.
Tiburon paintbrush (*Castilleja affinis* var. *neglecta*)	**FE/ST/1B.2**	**Serpentine grassland**	**Very Low: No serpentine grassland exists in the project area.**
Tracy's clarkia (*Clarkia gracilis ssp. tracyi*)	**—/—/4.2**	**Serpentine chaparral**	**None: No serpentine grassland exists in the project area.**
Two-carpellate western flax (*Hesperolinon bicarpellatum*)	—/—/1B.2	Serpentine chaparral	None: No serpentine chaparral exists in the project area.
Twig-like snapdragon (*Antirrhinum virga*)	**—/—/1B.1**	**Serpentine chaparral**	**None: No serpentine habitat exists in the project area.**
Two-carpellate western flax (*Hesperolinon bicarpellatum*)	**—/—/1B.2**	**Chaparral**	**None: No chaparral habitat exists in the project area.**
Two-fork clover (*Trifolium amoenum*)	**FE/—/1B.1**	**Grassland, wetland**	**Very Low: Some grassland habitat exists in the project area.**
Vine Hill ceanothus (*Ceanothus foliosus* var. *vineatus*)	—/—/1B.1	Chaparral	None: No chaparral habitat exists in the project area.
Vine Hill clarkia (*Clarkia imbricata*)	FE/SE/1B.1	Chaparral, grassland	Very Low: Some grassland habitat exists in the project area.
Vine Hill manzanita (*Arctostaphylos densiflora*)	—/SE/1B.1	Chaparral	None: No chaparral habitat exists in the project area.
Watershield (*Brasenia schreberi*)	—/—/2B.3	Pond	None: No pond habitat exists in the project area.

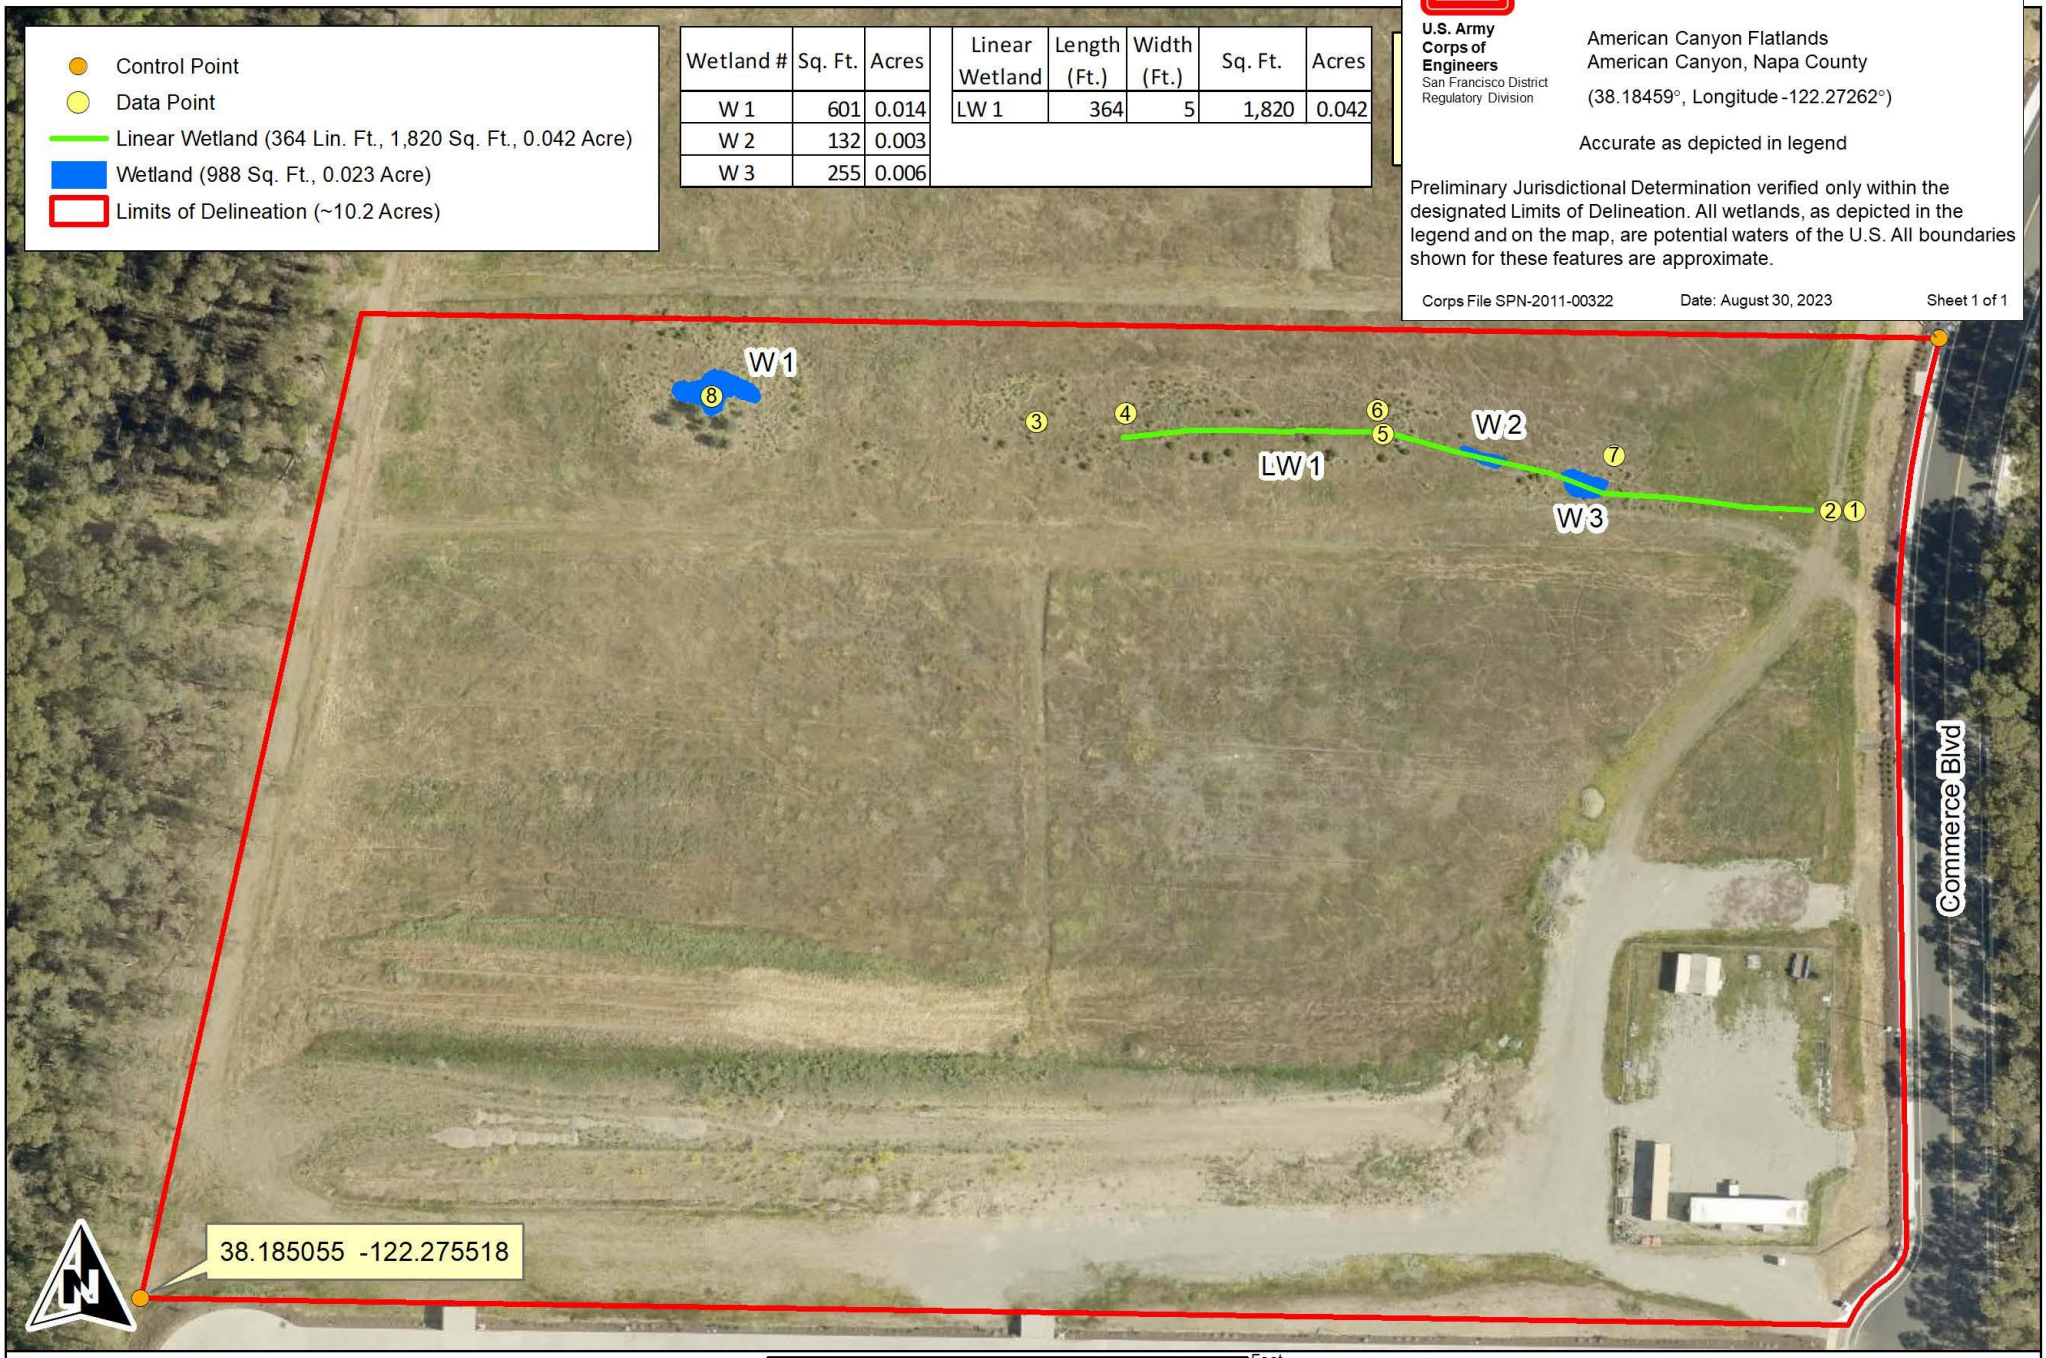
Appendix B: Plant Species Observed Onsite

The following is a list of plant species generated based on knowledge of the species and habitats of Napa County by PEC staff, and from various State and Federal databases, as described in the *Methods* section, above. Special-status species, if any, are denoted with an asterisk (*).

Non-Native Plant Species:



bird's foot trefoil (*Lotus corniculatus*)
bishop's weed (*Ammi majus*)
black mustard (*Brassica nigra*)
bluegum (*Eucalyptus globulus*)
bristly ox-tongue (*Helminthotheca echioides*)
bull thistle (*Cirsium vulgare*)
bur clover (*Medicago polymorpha*)
cheeseweed (*Malva parviflora*)
chicory (*Cichorium intybus*)
common dandelion (*Taraxacum officinale*)
common groundsel (*Senecio vulgaris*)
crane's bill filaree (*Erodium botrys*)
curly dock (*Rumex crispus*)
false brome (*Brachypodium distachyon*)
fennel (*Foeniculum vulgare*)
field bindweed (*Convolvulus arvensis*)
field marigold (*Calendula arvensis*)
foxtail barley (*Hordeum murinum*)
Fuller's teasel (*Dipsacus fullonum*)
hairgrass (*Aira caryophyllea*)
hairy vetch (*Vicia villosa*)
Harding grass (*Phalaris aquatica*)
hedge parsley (*Torilis arvensis*)
Himalayan blackberry (*Rubus armeniacus*)
Italian ryegrass (*Festuca perennis*)
Italian thistle (*Circium pycnocephalus*)
Jersey cudweed (*Pseudognaphalium luteoalbum*)
narrowleaf cottonrose (*Logfia gallica*)
New Zealand flax (*Phormium colensoi*)
pennyroyal (*Mentha pulegium*)
pineapple weed (*Matricaria discoidea*)
poison hemlock (*Conium maculatum*)
prickly lettuce (*Lactuca serriola*)
purple star thistle (*Centaurea calcitrapa*)
red brome (*Bromus madritensis*)
reed fescue (*Festuca arundinacea*)
ribwort (*Plantago lanceolata*)
ripgut brome (*Bromus diandrus*)
rose clover (*Trifolium hirtum*)
scarlet pimpernel (*Lysimachia arvensis*)
seaside barley (*Hordeum marinum*)

sheep sorrel (*Rumex acetocella*)
shortpod mustard (*Hirschfeldia incana*)
shrubby germander (*Teucrium fruticans*)
smooth cat's ear (*Hypochaeris glabra*)
soft chess (*Bromus hordeaceous*)
spring vetch (*Vicia sativa*)
sweet pea (*Lathyrus latifolius*)
tall flatsedge (*Cyperus eragrostis*)
weedy brome (*Bromus caroli-henrici*)
wild geranium (*Geranium dissectum*)
wild lettuce (*Lactuca saligna*)
wild oatgrass (*Avena barbata*)
wild radish (*Raphanus sativa*)
woolly grevillea (*Grevillea lanigera*)
yellow star thistle (*Centaurea solstitialis*)
Zorro fescue (*Festuca myuros*)

Native Plant Species:

blue-eyed grass (*Sisyrinchium bellum*)
bog rush (*Juncus patens*)
California poppy (*Eschscholzia californica*)
common madia (*Madia elegans*)
common yarrow (*Achillea millefolium*)
coyote brush (*Baccharis pilularis*)
hairy gumweed (*Grindelia hirsutula*)
ladies' tobacco (*Pseudognaphalium californicum*)
meadow barley (*Hordeum brachyantherum*)
mountain dandelion (*Agoseris heterophylla*)
narrow-leaved miner's lettuce (*Claytonia parviflora*)
poison oak (*Toxicodendron diversilobum*)
saltgrass (*Distichlis spicata*)
slender tarweed (*Madia gracilis*)
toyon (*Heteromeles arbutifolia*)

RE: Geotechnical Engineering Investigation
Proposed SDG Commerce 220, LLC Distribution Center
1055 Commerce Court
American Canyon, California

Dear Mr. Wojtas:

In accordance with your request, we have completed a Geotechnical Engineering Investigation for the above-referenced site. The results of our investigation are presented in the attached report.

If you have any questions or if we may be of further assistance, please do not hesitate to contact our office at or (916) 564-2200.

Respectfully submitted,
KRAZAN & ASSOCIATES, INC.

GEOTECHNICAL ENGINEERING INVESTIGATION
PROPOSED SDG COMMERCE 220, LLC DISTRIBUTION CENTER
1055 COMMERCE COURT
AMERICAN CANYON, CALIFORNIA

INTRODUCTION

This report presents the results of our Geotechnical Engineering Investigation for the proposed SDG Commerce 220 Distribution Center to be located at Commerce Court near Eucalyptus Drive in American Canyon, California. Discussions regarding site conditions are presented herein, together with conclusions and recommendations pertaining to site preparation, Engineered Fill, utility trench backfill, drainage and landscaping, foundations, concrete floor slabs and exterior flatwork, retaining walls, pavement design and soil cement reactivity.

A site plan showing the approximate boring locations is presented following the text of this report. A description of the field investigation, boring logs, and the boring log legend are presented in Appendix A. Appendix A contains a description of the laboratory-testing phase of this study, along with the laboratory test results. Appendices B and C contain guides to earthwork and pavement specifications. When conflicts in the text of the report occur with the general specifications in the appendices, the recommendations in the text of the report have precedence.

PURPOSE AND SCOPE

This investigation was conducted to evaluate the soil and groundwater conditions at the site, to make geotechnical engineering recommendations for use in design of specific construction elements, and to provide criteria for site preparation and Engineered Fill construction.

Our scope of services was outlined in our proposal dated October 13, 2020 (KA Proposal P721-20 and included the following:

- A site reconnaissance by a member of our engineering staff to evaluate the surface conditions at the project site.
- A field investigation consisting of drilling 24 borings to depths ranging from approximately 10 to 50 feet for evaluation of the subsurface conditions at the project site.
- Performing laboratory tests on representative soil samples obtained from the borings to evaluate the physical and index properties of the subsurface soils.

- Evaluation of the data obtained from the investigation and an engineering analysis to provide recommendations for use in the project design and preparation of construction specifications.

- Preparation of this report summarizing the results, conclusions, recommendations, and findings of our investigation.

PROPOSED CONSTRUCTION

We understand that design of the proposed development is currently underway; structural load information and other final details pertaining to the structures are unavailable. On a preliminary basis, it is understood that development will include the construction of an approximately 220,000 square foot distribution center building. It is anticipated the building will be a single-story concrete tilt-up structure utilizing concrete slab-on-grade construction. Foundation loads are anticipated to be light to moderate. On-site paved areas and landscaping are also planned for the development of the project.

In the event, these structural or grading details are inconsistent with the final design criteria, the Soils Engineer should be notified so that we may update this writing as applicable.

SITE LOCATION, SITE HISTORY AND SITE DESCRIPTION

The site is roughly rectangular in shape encompasses approximately 10.17 acres. The site is located near the south end of Commerce Court, approximately ¾ mile south of Green Island Road in American Canyon, California. The site has a street address of 1055 Commerce Court. The site is surrounded by vacant land, wetlands, groves of trees, and industrial developments.

Site history was obtained by reviewing historical aerial photographs taken in 1948, 1982, 1993, 2002, 2005, 2010, 2012 and 2018. Review of the 1948 aerial photograph indicates that the project site was occupied by a grove of trees. Commerce Boulevard Extension trended north-south along the eastern edge of the site. The surrounding land was occupied by groves of trees. A stream trending north-south was located west of the project site.

Review of the 1982 through 2010 aerial photographs indicate that the project site conditions appeared to be relatively similar to that noted in the 1948 aerial photograph.

Review of the 2012 and 2018 aerial photographs indicate that the project site and the land to the north and south had been cleared of the trees and were vacant.

Presently, the site predominately consists of vacant land. Several stockpiles of soil and rock are located within the site. The southeast corner of the site is utilized as a storage area with chain link fencing. The surface soils have a loose consistency and contain a moderate amount of grass and weeds. The site is bordered by vacant land with some wetlands to the north, Commerce Court and a grove of trees to the east, a warehouse and parking lot to the south, and a grove of trees, wetlands and river to the west. Commerce Court is a paved road and is elevated several feet above the project site. Buried utility lines may be located along Commerce Court. The site gently slopes from east to west.

GEOLOGIC SETTING

The subject site is located in the north-eastern portion of the San Francisco Bay Region, within the Coast Ranges Geomorphic Province of California. The Coast Range Geomorphic Province borders the Coast of California and generally consists, more or less, of a discontinuous series of northwesterly/southeasterly trending mountain ranges, ridges, and intervening valleys characterized by intense, complex folding and faulting. The ridges are most often comprised of granitic, metavolcanic, and metasedimentary rocks. Numerous northwest to southeast trending faults parallel the trend of the Coast Ranges.

The project site is located in a seismically active region, which is situated on a tectonic plate boundary marked by the San Andreas Fault System and several northwest trending active and potentially active faults. The site is in close proximity to several major faults, including the West Napa, Green Valley, Hayward-Rodgers Creek, Mount Diablo Thrust, Calaveras, and San Andreas faults located approximately 0.8 miles west, 8.0 miles east, 11 miles west, 24 miles south, 29 miles southeast, and 30 miles west of the site, respectively. Although the site is in close proximity to several faults, the site is not within a State of California Earthquake Fault Zone or Special Study Zone for faulting. The site is located approximately 3,200 feet west of the West Napa Fault and 600 feet from the California Earthquake fault zone for the West Napa Fault. The site is not located on a State of California Seismic Hazard Zone Map.

The probability of one or more earthquakes of magnitude 6.7 (Richter scale) or higher occurring in the San Francisco Bay Area within a 30-year period of time is evaluated by the U.S. Geological Survey (USGS) Working Group on California Earthquake Probabilities on a periodic basis. The result of the 2008 evaluation indicated a 63 percent likelihood that such an earthquake event will occur in the Bay Area between 2007 and 2036 (USGS 2008). The faults with the greater probability of a magnitude 6.7 or higher earthquake are the Hayward fault at 31 percent and the San Andreas fault at 21 percent.

Based on published geologic maps of the area the near-surface deposits in the vicinity of the subject site are indicated to be comprised of late Pleistocene to Holocene fan deposits of sand, gravel, silt and clay that are moderately to poorly sorted and moderately to poorly bedded. The site is located at an elevation of approximately 20 feet above sea level. Groundwater in the vicinity of the site is typically encountered at depths of approximately 11 to 25 feet.

FIELD AND LABORATORY INVESTIGATIONS

Subsurface soil conditions were explored by drilling 24 borings to depths ranging from approximately 10 to 50 feet below existing site grade, using a truck-mounted drill rig. In addition, 3 bulk subgrade samples were obtained from the site for laboratory R-value testing. The approximate boring and bulk sample locations are shown on the site plan. During drilling operations, penetration tests were performed at regular intervals to evaluate the soil consistency and to obtain information regarding the engineering properties of the subsoils. Soil samples were retained for laboratory testing. The soils encountered were continuously examined and visually classified in accordance with the Unified Soil Classification System. A more detailed description of the field investigation is presented in Appendix A.

Laboratory tests were performed on selected soil samples to evaluate their physical characteristics and engineering properties. The laboratory-testing program was formulated with emphasis on the evaluation of natural moisture, density, gradation, shear strength, consolidation potential, expansion potential, plasticity, R-value and moisture density relationships of the materials encountered. In addition, chemical tests were performed to evaluate the soil-cement reactivity. Details of the laboratory test program and results of the laboratory test are summarized in Appendix A. This information, along with the field observations, was used to prepare the final boring logs in Appendix A.

SOIL PROFILE AND SUBSURFACE CONDITIONS

Based on our findings, the subsurface conditions encountered appear typical of those found in the geologic region of the site. In general, the surface soils consisted of approximately 6 to 12 inches of soft silty clay or sandy clay, or very loose silty sand. These soils are disturbed, have low strength characteristics, and are highly compressible when saturated. Within portions of the site, approximately 6 to 12 inches of fill material was encountered. The fill material predominately consisted of sandy silt, silty sand, gravelly clayey sand, or gravelly sand. The thickness and extent of fill material was determined based on limited test borings and visual observation. Thicker fill may be present at the site. Limited testing was performed on the fill soils during the time of our field and laboratory investigations. The limited testing indicates that the fill soils ranged from loosely placed to compacted.

Beneath the loose surface soils and fill material, approximately 17½ feet of stiff to hard sandy clay, silty clay, and medium dense/very stiff clayey sand/sandy clay were encountered. Field and laboratory tests suggest that these soils are moderately strong and slightly to moderately compressible. The clayey soils had a moderate to high potential for expansion. Penetration resistance ranged from 12 to 63 blows per foot. Dry densities ranged from 89 to 122 pcf. Representative soil samples consolidated approximately 0 to 6 percent under a 2 ksf load when saturated. Representative soil samples had angles of internal friction between 12 and 18 degrees. A representative sample of the clayey soil had an expansion index of 89.

Below 18½ feet, layers of predominately stiff to very stiff sandy clay and silty clay, and medium dense silty sand/sandy silt were encountered. These soils contained varying amounts of gravel. Field and laboratory tests suggest that these soils are moderately strong and slightly compressible. Penetration resistance ranged from 13 to 29 blows per foot. Dry densities ranged from 90 to 111 pcf. These soils had similar strength characteristics than the upper soils and extended to the termination depth of our borings.

For additional information about the soils encountered, please refer to the logs of borings in Appendix A.

GROUNDWATER

Test boring locations were checked for the presence of groundwater during and immediately following the drilling operations. The historic high groundwater depth for the region was determined to be 10 feet below existing site grade, based on the State of California Department of Water Resources data from 2

wells within 1.5 miles of the site. Free groundwater was encountered between depths of 18½ and 22½ feet during our subsurface investigation.

It should be recognized that water table elevations may fluctuate with time, being dependent upon seasonal precipitation, irrigation, land use, and climatic conditions, as well as other factors. Therefore, water level observations at the time of the field investigation may vary from those encountered during the construction phase of the project. The evaluation of such factors is beyond the scope of this report.

SOIL LIQUEFACTION

Soil liquefaction is a state of soil particle suspension, caused by a complete loss of strength when the effective stress drops to zero. Liquefaction normally occurs in soils, such as sands, in which the strength is purely frictional. However, liquefaction has occurred in soils other than clean sands. Liquefaction usually occurs under vibratory conditions, such as those induced by seismic events.

To evaluate the liquefaction potential of the site, the following items were evaluated:

1) Soil type

2) Groundwater depth

3) Relative density

4) Initial confining pressure

5) Intensity and duration of groundshaking

The predominant soils within the project site consist of alternating layers of silty clays, sandy clays, clayey sands, and silty sand/sandy silt. Groundwater was encountered at depths as shallow as 18½ feet below existing site grade during our exploratory drilling. Information obtained from the Department of Water Resources indicated that water wells had historic groundwater elevations as shallow as 10 feet below existing site grade within the project site vicinity.

The potential for soil liquefaction during a seismic event was evaluated using the LIQUEFYPRO computer program (version 5.9d) developed by CivilTech Software. For the analysis, a maximum earthquake magnitude of 6.7 was used. A peak horizontal ground surface acceleration of 0.986g was considered conservative and appropriate for the liquefaction analysis. An estimated high groundwater depth of 10 feet was used for our analysis. The computer analysis indicates that soils above a depth of 10 feet are non-liquefiable due to the absence of groundwater. The soils below a depth of 10 feet have a slight to very low potential for liquefaction under seismic shaking due to predominately medium dense/stiff to very stiff sandy and clayey soils. The analysis also indicates that the total and differential seismic induced settlement is not anticipated to exceed 1 and ⅔ inch, respectively. Accordingly, measures to mitigate liquefaction potential are not necessary.

CONCLUSIONS AND RECOMMENDATIONS

Based on the findings of our field and laboratory investigations, along with previous geotechnical experience in the project area, the following is a summary of our evaluations, conclusions, and recommendations.

Administrative Summary

In brief, the subject site and soil conditions, with the exception of the loose surface soils, fill material, expansive nature of the clayey soils, moderately compressible upper native soils, and previous and existing developments, appear to be conducive to the development of the project. The surface soils and fill material have a loose consistency. These soils are disturbed, have low strength characteristics, and are highly compressible when saturated. Accordingly, it is recommended that the surface soils be recompacted. This compaction effort should stabilize the surface soils and locate any unsuitable or pliant areas not found during our field investigation.

The site was previously utilized as agricultural land consisting of orchards. In addition, a fenced storage area is located in the southeast corner and several stockpiles of soil and rock are located within the site. Associated with these developments may be buried structures, such as utility lines and irrigation lines that extend into portions of the project site. Demolition activities should include proper removal of any buried structures. Any surface or buried structures, including utilities or loosely backfilled excavations, encountered during construction should be properly removed and the resulting excavations backfilled with Engineered Fill. It is suspected that demolition activities of the existing structures will disturb the upper soils. After demolition activities it is recommended that these disturbed soils be removed and/or recompacted. This compaction effort should stabilize the upper soils and locate any unsuitable or pliant areas not found during our field investigation.

The upper native soils at the site are moderately compressible and subject to excessive total and differential settlement. Therefore, it is recommended that following stripping and fill removal operations, the upper 24 inches of soil within the proposed building areas be excavated worked until uniform and free from large clods, moisture-conditioned to a minimum of 2 percent above optimum moisture content and recompacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557. In addition, in order to reduce the potential for differential settlement, it is recommended that the proposed structure foundations be supported by a minimum of 24 inches of Engineered Fill. Over-excavation should extend to a minimum of 5 feet beyond structural elements. The on-site, native soils and fill material will be suitable for reuse as Engineered Fill, provided they are cleansed of excessive organics, debris, and fragments larger than 4 inches in maximum dimension. Prior to backfilling, the bottom of the excavation should be proof rolled and observed by Krazan & Associates, Inc. to verify stability. This compaction effort should stabilize the surface soils and locate any unsuitable or pliant areas not found during our field investigation. Fill material should be compacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557.

The upper soils within the site are predominately silty clays, sandy clays, clayey sands, gravelly clayey sands, sandy silts, silty sands, and gravelly sands. The clayey soils appeared to have a moderate to high swell potential. The estimated swell pressures of the clayey soils may cause minor movement effecting

slabs and possible stucco or similar brittle exterior finishes. To reduce potential soil movement, it is recommended the upper 30 inches of soil within slab-on-grade and adjacent exterior flatwork areas consist of 24 inches of non-expansive Engineered Fill overlain by 6 inches of Class 2 aggregate base. During construction, it is recommended that additional tests should be performed on the on-site soils to verify their physical and index properties.

As an alternative to the use of non-expansive soils, the upper 30 inches of soil supporting the slab areas can consist of lime-treated clayey soils. The lime-treated soils should be recompacted to a minimum of 90 percent of maximum density. Preliminary application rate of lime should be 5 percent by dry weight. The lime material should be calcium oxide, commonly known as quick-lime. The clayey soils should be above optimum moisture during the mixing operations.

Sidewalks not located adjacent to the buildings may be supported on 4 inches of Class 2 aggregate base compacted to a minimum of 95 percent of maximum density. Prior to placing the aggregate base, the subgrade soils should be excavated/scarified to a minimum depth of 12 inches, moisture-conditioned to a minimum of 3 percent above optimum moisture content and compacted to between 90 and 95 percent of maximum density based on ASTM Test Method D1557. As an alternative, the aggregate base can be placed over 12 inches of lime-treated subgrade. The Owner should be aware some movement of the sidewalks may occur which could result in cracking and vertical offsets.

Buried utility lines are located along Commerce Court on the east side of the site and may extend into the site. Demolition activities should include proper removal of any buried structures. Any buried structures encountered during construction should be properly removed and the resulting excavations cleaned to firm native ground and backfilled with Engineered Fill. Disturbed areas caused by demolition activities should be removed and/or recompacted.

The site was previously occupied by a eucalyptus grove. Tree removal operations should include roots greater than 1 inch in diameter. The resulting excavations should be cleaned to firm native ground and backfilled with Engineered Fill compacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557.

Sandy soil conditions were encountered at the site. These cohesionless soils have a tendency to cave in trench wall excavations. Shoring or sloping back trench sidewalls may be required within these sandy soils.

A bioretention/detention pond is included in the project plans. The biorention/detention pond should be located at least 50 feet from the structure. Alternatively, the pond can be lined.

After completion of the recommended site preparation, the site should be suitable for shallow footing support. The proposed structure footings may be designed utilizing an allowable bearing pressure of 3,000 psf for dead-plus-live loads. Footings should have a minimum embedment of 18 inches.

Groundwater Influence on Structures/Construction

During our field investigations, groundwater was encountered at depths of 18½ and 22½ feet below site grade. Therefore, dewatering and/or waterproofing may be required should structures or excavations extend below the groundwater table. If groundwater is encountered, our firm should be consulted prior to dewatering the site. Installation of a standpipe piezometer is suggested prior to construction should groundwater levels be a concern.

In addition to the groundwater level, if earthwork is performed during or soon after periods of precipitation, the subgrade soils may become saturated, "pump," or not respond to densification techniques. Typical remedial measures include: discing and aerating the soil during dry weather; mixing the soil with dryer materials; removing and replacing the soil with an approved fill material; or mixing the soil with an approved lime or cement product. Our firm should be consulted prior to implementing remedial measures to observe the unstable subgrade conditions and provide appropriate recommendations.

Site Preparation

General site clearing should include removal of vegetation; concrete and metal debris; existing utilities; structures including foundations; basement walls and floors; existing stockpiled soil; trees and associated root systems; rubble; rubbish; and any loose and/or saturated materials. Site stripping should extend to a minimum depth of 2 to 4 inches, or until all organics in excess of 3 percent by volume are removed. Deeper stripping may be required in localized areas. These materials will not be suitable for use as Engineered Fill. However, stripped topsoil may be stockpiled and reused in landscape or non-structural areas.

The site was previously utilized as agricultural land consisting of orchards. In addition, a fenced storage area is located in the southeast corner and several stockpiles of soil and rock are located within the site. Associated with these developments are buried structures such, as utility lines that are located along the edges of the site and within the project site vicinity. Demolition activities should include proper removal of any buried structures. Any buried structures encountered during construction should be properly removed and/or relocated and the resulting excavations backfilled. Excavations, depressions, or soft and pliant areas extending below planned finished subgrade levels should be cleaned to firm, undisturbed soil and backfilled with Engineered Fill. In general, any septic tanks, debris pits, cesspools, or similar structures should be entirely removed. Concrete footings should be removed to an equivalent depth of at least 3 feet below proposed footing elevations or as recommended by the Soils Engineer. Any other buried structures should be removed in accordance with the recommendations of the Soils Engineer. The resulting excavations should be backfilled with Engineered Fill.

The site was previously occupied by a eucalyptus grove. Tree root removal operations should include roots greater than 1 inch in diameter. The resulting excavations should be backfilled with Engineered Fill compacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557.

It is recommended that following stripping, tree removal operations and fill removal operations, the upper 24 inches of native soils within the proposed building areas be excavated, worked until uniform and free from large clods, moisture-conditioned to a minimum of 2 percent above optimum moisture content, and recompacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557. In addition, it is recommended that the proposed structure foundations be supported by a minimum of 24 inches of Engineered Fill. Over-excavation should extend to a minimum of 5 feet beyond structural elements. The on-site, native soil and fill material will be suitable for reuse as Engineered Fill, provided it is cleansed of excessive organics, debris, and fragments larger than 4 inches in maximum dimension. Prior to backfilling, the bottom of the excavation should be proof rolled and observed by Krazan & Associates, Inc. to verify stability. This compaction effort should stabilize the surface soils and locate any unsuitable or pliant areas not found during our field investigation. Fill material should be compacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557.

Following stripping and fill removal operations, the exposed subgrade in exterior flatwork and pavement areas should be excavated/scarified to a minimum depth of 12 inches, worked until uniform and free from large clods, moisture-conditioned to a minimum of 2 percent above optimum moisture content, and recompacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557. Limits of recompaction should extend 3 feet beyond structural elements. This compaction effort should stabilize the surface soils and located any unsuitable or pliant areas not found during our field investigation.

It is recommended that the upper 30 inches of soil within proposed slab-on-grade and adjacent exterior flatwork areas consist of non-expansive or lime-treated Engineered Fill. The intent is to support slab-on-grade and exterior flatwork areas with 24 inches of non-expansive or lime-treated fill, overlain by 6 inches of compacted Class 2 aggregate base. Alternatively, the upper 30 inches may consist of lime-treated Engineered Fill. The fill placement serves two functions: 1) it provides a uniform amount of soil, which will more evenly distribute the soil pressures and 2) it reduces moisture content fluctuation in the clayey material beneath the building area. The non-expansive fill material should be a well-graded silty sand or sandy silt soil. A clean sand or very sandy soil is not acceptable for this purpose. A sandy soil will allow the surface water to drain into the expansive clayey soil below, which may result in soil swelling. Imported Fill should be approved by the Soils Engineer prior to placement. The fill should be placed as specified as Engineered Fill. In addition, it is recommended conventional foundations and slabs be nominally reinforced to reduce cracking and vertical offsets.

Sidewalks not located adjacent to the buildings may be supported on 4 inches of Class 2 aggregate base compacted to a minimum of 95 percent of maximum density. Prior to placing the aggregate base, the subgrade soils should be excavated/scarified to a minimum depth of 12 inches, moisture-conditioned to a minimum of 3 percent above optimum moisture content and compacted to between 90 and 95 percent of maximum density based on ASTM Test Method D1557. As an alternative, the aggregate base can be placed over 12 inches of lime-treated subgrade. The Owner should be aware some movement of the sidewalks may occur which could result in cracking and vertical offsets.

The upper soils, during wet winter months, become very moist due to the absorptive characteristics of the soil. Earthwork operations performed during winter months may encounter very moist unstable soils, which may require removal to grade a stable building foundation. Project site winterization consisting of placement of aggregate base and protecting exposed soils during the construction phase should be performed.

A bioretention/detention pond is included in the project plans. The biorention/detention pond should be located at least 50 feet from the structure. Alternatively, the pond can be lined.

A representative of our firm should be present during all site clearing and grading operations to test and observe earthwork construction. This testing and observation is an integral part of our service as acceptance of earthwork construction is dependent upon compaction of the material and the stability of the material. The Soils Engineer may reject any material that does not meet compaction and stability requirements. Further recommendations of this report are predicated upon the assumption that earthwork construction will conform to recommendations set forth in this section and the Engineered Fill section.

Engineered Fill

The organic-free, on-site, upper native soils and fill material are predominately silty clays, sandy clays, clayey sands, gravelly clayey sands, sandy silts, silty sands, and gravelly sands. The clayey soils will not be suitable for re-use as non-expansive Engineered Fill. These clayey soils will be suitable for reuse for fill placement within the upper 30 inches of slab-on-grade and adjacent exterior flatwork areas, provided they are lime-treated. The preliminary application rate of lime should be 5 percent by dry weight. The lime material should be calcium oxide, commonly known as quick-lime. The clayey soils should be at or near optimum moisture-condition during mixing operations. Additional testing is recommended to determine the appropriate application rate of lime prior to placement. These clayey soils will be suitable for reuse as General Engineered Fill, provided they are cleansed of excessive organics, debris, and moisture-conditioned to at least 2 percent above optimum moisture. It is recommended that additional testing be performed on the on-site soils and fill material to evaluate the physical and index properties prior to reuse as Engineered Fill.

The preferred materials specified for Engineered Fill are suitable for most applications with the exception of exposure to erosion. Project site winterization and protection of exposed soils during the construction phase should be the sole responsibility of the Contractor, since he has complete control of the project site at that time.

Imported Fill material should be predominately non-expansive granular material with a plasticity index less than 10 and a UBC Expansion Index less than 15. Imported Fill should be free from rocks and lumps greater than 4 inches in diameter. All Imported Fill material should be submitted for approval to the Soils Engineer at least 48 hours prior to delivery to the site.

Fill soils should be placed in lifts approximately 6 inches thick, moisture-conditioned to a minimum of 2 percent above optimum moisture content, and compacted to achieve at least 90 percent of maximum density based on ASTM Test Method D1557. Additional lifts should not be placed if the previous lift did not meet the required dry density or if soil conditions are not stable.

Drainage and Landscaping

The ground surface should slope away from building pad and pavement areas toward appropriate drop inlets or other surface drainage devices. In accordance with Section 1804 of the 2019 California Building Code, it is recommended that the ground surface adjacent to foundations be sloped a minimum of 5 percent for a minimum distance of 10 feet away from structures, or to an approved alternative means of drainage conveyance. Swales used for conveyance of drainage and located within 10 feet of foundations should be sloped a minimum of 2 percent. Impervious surfaces, such as pavement and adjacent exterior concrete flatwork, within 10 feet of building foundations should be sloped a minimum of 1 percent away from the structure. Drainage gradients should be maintained to carry all surface water to collection facilities and off-site. These grades should be maintained for the life of the project.

Slots or weep holes should be placed in drop inlets or other surface drainage devices in pavement areas to allow free drainage of adjoining base course materials. Cutoff walls should be installed at pavement edges adjacent to vehicular traffic areas these walls should extend to a minimum depth of 12 inches below pavement subgrades to limit the amount of seepage water that can infiltrate the pavements. Where cutoff walls are undesirable subgrade drains can be constructed to transport excess water away from planters to drainage interceptors. If cutoff walls can be successfully used at the site, construction of subgrade drains is considered unnecessary.

Utility Trench Backfill

Utility trenches should be excavated according to accepted engineering practices following OSHA (Occupational Safety and Health Administration) standards by a Contractor experienced in such work. The responsibility for the safety of open trenches should be borne by the Contractor. Traffic and vibration adjacent to trench walls should be reduced; cyclic wetting and drying of excavation side slopes should be avoided. Depending upon the location and depth of some utility trenches, groundwater flow into open excavations could be experienced, especially during or shortly following periods of precipitation.

Sandy soil conditions were encountered at the site. These cohesionless soils have a tendency to cave in trench wall excavations. Shoring or sloping back trench sidewalls may be required within these sandy soils.

Utility trench backfill placed in or adjacent to buildings and exterior slabs should be compacted to at least 90 percent of maximum density based on ASTM Test Method D1557. The utility trench backfill placed in pavement areas should be compacted to at least 90 percent of maximum density based on ASTM Test Method D1557. Pipe bedding should be in accordance with pipe manufacturer's recommendations.

The Contractor is responsible for removing all water-sensitive soils from the trench regardless of the backfill location and compaction requirements. The Contractor should use appropriate equipment and methods to avoid damage to the utilities and/or structures during fill placement and compaction.

Foundations

The proposed structure may be supported on a shallow foundation system bearing on a minimum of 24 inches of Engineered Fill. Spread and continuous footings can be designed for the following maximum allowable soil bearing pressures:

Load	Allowable Loading
Dead Load Only	2,250 psf
Dead-Plus-Live Load	3,000 psf
Total Load, Including Wind or Seismic Loads	4,000 psf

The footings should have a minimum depth of 18 inches below pad subgrade (soil grade) or adjacent exterior grade, whichever is lower. Footings should have a minimum width of 12 inches, regardless of load. Ultimate design of foundations and reinforcement should be performed by the project Structural Engineer. A modulus of subgrade reaction of 35 pci can be used for the on-site soils.

The total soil movement is not expected to exceed 1 inch. Differential movement measured across a horizontal distance of 40 feet should be less than 1 inch. Most of the settlement is expected to occur during construction as the loads are applied. However, additional post-construction settlement may occur if the foundation soils are flooded or saturated.

The footing excavations should not be allowed to dry out any time prior to pouring concrete. It is recommended that footings be reinforced by at least one No. 4 reinforcing bar in both top and bottom.

Resistance to lateral footing displacement can be computed using an allowable friction factor of 0.3 acting between the base of foundations and the supporting subgrade. Lateral resistance for footings can alternatively be developed using an allowable equivalent fluid passive pressure of 250 pounds per cubic foot acting against the appropriate vertical footing faces. The frictional and passive resistance of the soil may be combined without reduction in determining the total lateral resistance. A ⅓ increase in the above value may be used for short duration, wind, or seismic loads.

Floor Slabs and Exterior Flatwork

In areas that will utilize moisture-sensitive floor coverings, concrete slab-on-grade floors should be underlain by a water vapor retarder. The water vapor retarder should be installed in accordance with accepted engineering practice. The water vapor retarder should consist of a vapor retarder sheeting underlain by a minimum of 3 inches of compacted, clean, gravel of ¾-inch maximum size. To aid in concrete curing an optional 2 to 4 inches of granular fill may be placed on top of the vapor retarder. The granular fill should consist of damp clean sand with at least 10 to 30 percent of the sand passing the 100

sieve. The sand should be free of clay, silt, or organic material. Rock dust which is manufactured sand from rock crushing operations is typically suitable for the granular fill. This granular fill material should be compacted. Floor slabs subject to forklift traffic should be underlain by a minimum of 2 inches of Class 2 aggregate base compacted to a minimum of 95 percent of maximum density based on ASTM Test Method D1557. Slabs can be designed utilizing a modulus of subgrade reaction of 100 pci.

The floor slab should be a minimum of 6 inches thick and reinforced at a minimum with No. 4 reinforcement bars at 24 inches on-center each way within the middle one-third. Thicker floor slabs with increased concrete strength and reinforcement should be designed wherever large vehicular loads, heavy concentrated loads, heavy equipment, or machinery is anticipated.

The exterior floors should be poured separately in order to act independently of the walls and foundation system. All fills required to bring the building pads to grade should be Engineered Fills.

Moisture within the structure may be derived from water vapors, which were transformed from the moisture within the soils. This moisture vapor can travel through the vapor membrane and penetrate the slab-on-grade. This moisture vapor penetration can affect floor coverings and produce mold and mildew in the structure. To reduce moisture vapor intrusion, it is recommended that a vapor retarder be installed. It is recommended that the utility trenches within the structure be compacted, as specified in our report, to reduce the transmission of moisture through the utility trench backfill. Special attention to the immediate drainage and irrigation around the building is recommended. Positive drainage should be established away from the structure and should be maintained throughout the life of the structure. Ponding of water should not be allowed adjacent to the structure. Over-irrigation within landscaped areas adjacent to the structure should not be performed. In addition, ventilation of the structure (i.e. ventilation fans) is recommended to reduce the accumulation of interior moisture.

Lateral Earth Pressures and Retaining Walls

Walls retaining horizontal backfill and capable of deflecting a minimum of 0.1 percent of its height at the top may be designed using an equivalent fluid active pressure of 50 pounds per square foot per foot of depth. Walls that are incapable of this deflection or walls that are fully constrained against deflection may be designed for an equivalent fluid at-rest pressure of 70 pounds per square foot per foot per depth. Expansive soils should not be used for backfill against walls. The wedge of non-expansive backfill material should extend from the bottom of each retaining wall outward and upward at a slope of 2:1 (horizontal to vertical) or flatter. The stated lateral earth pressures do not include the effects of hydrostatic water pressures generated by infiltrating surface water that may accumulate behind the retaining walls; or loads imposed by construction equipment, foundations, or roadways.

Retaining and/or below grade walls should be drained with either perforated pipe encased in free-draining gravel or a prefabricated drainage system. The gravel zone should have a minimum width of 12 inches wide and should extend upward to within 12 inches of the top of the wall. The upper 12 inches of backfill should consist of native soils, concrete, asphaltic concrete or other suitable backfill to minimize surface drainage into the wall drain system. The aggregate should conform to Class 2 permeable materials graded in accordance with the CalTrans Standard Specifications (2018). Prefabricated

drainage systems, such as Miradrain®, Enkadrain®, or an equivalent substitute, are acceptable alternatives in lieu of gravel provided they are installed in accordance with the manufacturer's recommendations. If a prefabricated drainage system is proposed, our firm should review the system for final acceptance prior to installation.

Drainage pipes should be placed with perforations down and should discharge in a non-erosive manner away from foundations and other improvements. The pipes should be placed no higher than 6 inches above the heel of the wall in the center line of the drainage blanket and should have a minimum diameter of 4 inches. Collector pipes may be either slotted or perforated. Slots should be no wider than ⅛ inch, while perforations should be no more than ¼ inch in diameter. If retaining walls are less than 6 feet in height, the perforated pipe may be omitted in lieu of weep holes on 4 feet maximum spacing. The weep holes should consist of 4-inch diameter holes (concrete walls) or unmortared head joints (masonry walls) and not be higher than 18 inches above the lowest adjacent grade. Two 8-inch square overlapping patches of geotextile fabric (conforming to the CalTrans Standard Specifications for "edge drains") should be affixed to the rear wall opening of each weep hole to retard soil piping.

During grading and backfilling operations adjacent to any walls, heavy equipment should not be allowed to operate within a lateral distance of 5 feet from the wall or within a lateral distance equal to the wall height, whichever is greater, to avoid developing excessive lateral pressures. Within this zone, only hand operated equipment ("whackers," vibratory plates, or pneumatic compactors) should be used to compact the backfill soils.

R-Value Test Results and Pavement Design

Three subgrade soil samples were obtained from the project site for R-Value testing at the locations shown on the attached site plan. The samples were tested in accordance with the State of California Materials Manual Test Designation 301. The results of the tests are as follows:

Sample	Depth	Description	R-Value at Equilibrium
1	12-24"	Silty Clay (CL)	Less than 5
2	12-24"	Silty Clay (CL)	Less than 5
3	12-24"	Silty Clay (CL)	Less than 5

The test results are low and indicate poor subgrade support characteristics under dynamic traffic loads. The following table shows the recommended pavement sections for various traffic indices.

Traffic Index	Asphaltic Concrete	Class II Aggregate Base*	Class III Aggregate Subbase	Compacted Subgrade**
4.0	2.0"	8.5"	--	12.0"
4.0	2.0"	4.5"	4.5"	12.0"
4.5	2.5"	9.0"	--	12.0"
4.5	2.5"	4.0"	5.5"	12.0"

5.0	2.5"	11.0"	--	12.0"
5.0	2.5"	5.0"	6.5"	12.0"
5.5	3.0"	11.5"	--	12.0"
5.5	3.0"	5.0"	7.0"	12.0"
6.0	3.0"	13.5"	--	12.0"
6.0	3.0"	6.5"	8.0"	12.0"
6.5	3.5"	14.0"	--	12.0"
6.5	3.5"	6.0"	9.0"	12.0"
7.0	4.0"	15.5"	--	12.0"
7.0	4.0"	6.5"	10.0"	12.0"
7.5	4.0"	17.0"	--	12.0"
7.5	4.0"	7.5"	10.5"	12.0"

**** 95% compaction based on ASTM Test Method D1557 or CAL 216***
***** 90% compaction based on ASTM Test Method D1557 or CAL 216***

The following table shows the recommended pavement sections for various traffic indices based on the upper 12 inches of subgrade soil being lime-treated with 5 percent Calcium Quicklime.

Traffic Index	Asphaltic Concrete	Class II Aggregate Base*	Lime-Treated Compacted Subgrade**
4.0	2.0"	4.0"	12.0"
4.5	2.5"	4.0"	12.0"
5.0	2.5"	4.0"	12.0"
5.5	3.0"	4.0"	12.0"
6.0	3.0"	5.0"	12.0"
6.5	3.5"	5.0"	12.0"
7.0	4.0"	6.0"	12.0"
7.5	4.0"	6.0"	12.0"

**** 95% compaction based on ASTM Test Method D1557 or CAL 216***
***** 90% compaction based on ASTM Test Method D1557 or CAL 216***

If traffic indices are not available, an estimated (typical value) index of 4.5 may be used for light automobile traffic, and an index of 7.0 may be used for light truck traffic.

The following recommendations are for light-duty and heavy-duty Portland Cement Concrete Pavement Sections based on the design procedures developed by the Portland Cement Association. The PCC Pavement should be reinforced with a minimum of No. 4 bars placed at a minimum of 24 inches on center in each direction.

PORTLAND CEMENT PAVEMENT
LIGHT DUTY

Traffic Index	Portland Cement Concrete***	Class II Aggregate Base*	Compacted Subgrade**
4.5	6.0"	5.0"	12.0"
4.5	6.0"	2.0"	12.0"****

HEAVY DUTY

Traffic Index	Portland Cement Concrete***	Class II Aggregate Base*	Compacted Subgrade**
7.0	7.0"	6.0"	12.0"
7.0	6.5"	1.5"	12.0"****

**** 95% compaction based on ASTM Test Method D1557 or CAL 216***
***** 90% compaction based on ASTM Test Method D1557 or CAL 216***
******Minimum compressive strength of 4000 psi***
*******Lime-Treated subgrade compacted to a minimum of 90% of maximum density based on ASTM Test Method D1557***

It is recommended that any uncertified fill material encountered within pavement areas be removed and/or recompacted. The fill material should be moisture-conditioned to near optimum moisture and recompacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557. As an alternative, the Owner may elect not to recompact the existing fill within paved areas. However, the Owner should be aware that the paved areas may settle which may require annual maintenance. At a minimum, it is recommended that the upper 12 inches of subgrade soil be moisture-conditioned as necessary and recompacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557.

Seismic Parameters – 2019 California Building Code

The Site Class per Section 1613 of the 2019 California Building Code (2019 CBC) and ASCE 7-16, Chapter 20 is based upon the site soil conditions. It is our opinion that a Site Class D is most consistent with the subject site soil conditions. For seismic design of the structures based on the seismic provisions of the 2019 CBC, we recommend the following parameters:

Seismic Item	Value	CBC Reference
Site Class	D	Section 1613.2.2
Site Coefficient F_a	1.000	Table 1613.2.3 (1)
S_s	2.162	Section 1613.2.1
S_{MS}	2.162	Section 1613.2.3
S_{DS}	1.442	Section 1613.2.4
Site Coefficient F_v	1.700	Table 1613.2.3 (2)
S_1	0.782	Section 1613.2.1
S_{M1}	1.329	Section 1613.2.3
S_{D1}	0.886	Section 1613.2.4
T_S	0.615	Section 1613.2

* Based on Equivalent Lateral Force (ELF) Design Procedure being used.

Soil Cement Reactivity

Excessive sulfate in either the soil or native water may result in an adverse reaction between the cement in concrete (or stucco) and the soil. HUD/FHA and CBC have developed criteria for evaluation of sulfate levels and how they relate to cement reactivity with soil and/or water.

Soil samples were obtained from the site and tested in accordance with State of California Materials Manual Test Designation 417. The sulfate concentrations detected from these soil samples were greater than 0.02 percent and are above the maximum allowable values established by HUD/FHA and CBC. Therefore, it is recommended that a Type II cement be used within the concrete to compensate for sulfate reactivity with the cement.

Chemical tests were performed on a near-surface soil sample. The test results indicate that the soils are moderately corrosive to buried metal objects. Therefore, buried metal should be protected using either non-corrosive backfill, protective coatings, wrappings, sacrificial anodes, or a combination of these methods in accordance with the manufacturer's recommendations.

Compacted Material Acceptance

Compaction specifications are not the only criteria for acceptance of the site grading or other such activities. However, the compaction test is the most universally recognized test method for assessing the performance of the Grading Contractor. The numerical test results from the compaction test cannot be used to predict the engineering performance of the compacted material. Therefore, the acceptance of compacted materials will also be dependent on the stability of that material. The Soils Engineer has the option of rejecting any compacted material regardless of the degree of compaction if that material is considered to be unstable or if future instability is suspected. A specific example of rejection of fill material passing the required percent compaction is a fill which has been compacted with an in-situ moisture content significantly less than optimum moisture. This type of dry fill (brittle fill) is susceptible to future settlement if it becomes saturated or flooded.

Testing and Inspection

A representative of Krazan & Associates, Inc. should be present at the site during the earthwork activities to confirm that actual subsurface conditions are consistent with the exploratory fieldwork. This activity is an integral part of our service, as acceptance of earthwork construction is dependent upon compaction testing and stability of the material. This representative can also verify that the intent of these recommendations is incorporated into the project design and construction. Krazan & Associates, Inc. will not be responsible for grades or staking, since this is the responsibility of the Prime Contractor.

LIMITATIONS

Soils Engineering is one of the newest divisions of Civil Engineering. This branch of Civil Engineering is constantly improving as new technologies and understanding of earth sciences advance. Although your site was analyzed using the most appropriate and most current techniques and methods, undoubtedly there will be substantial future improvements in this branch of engineering. In addition to

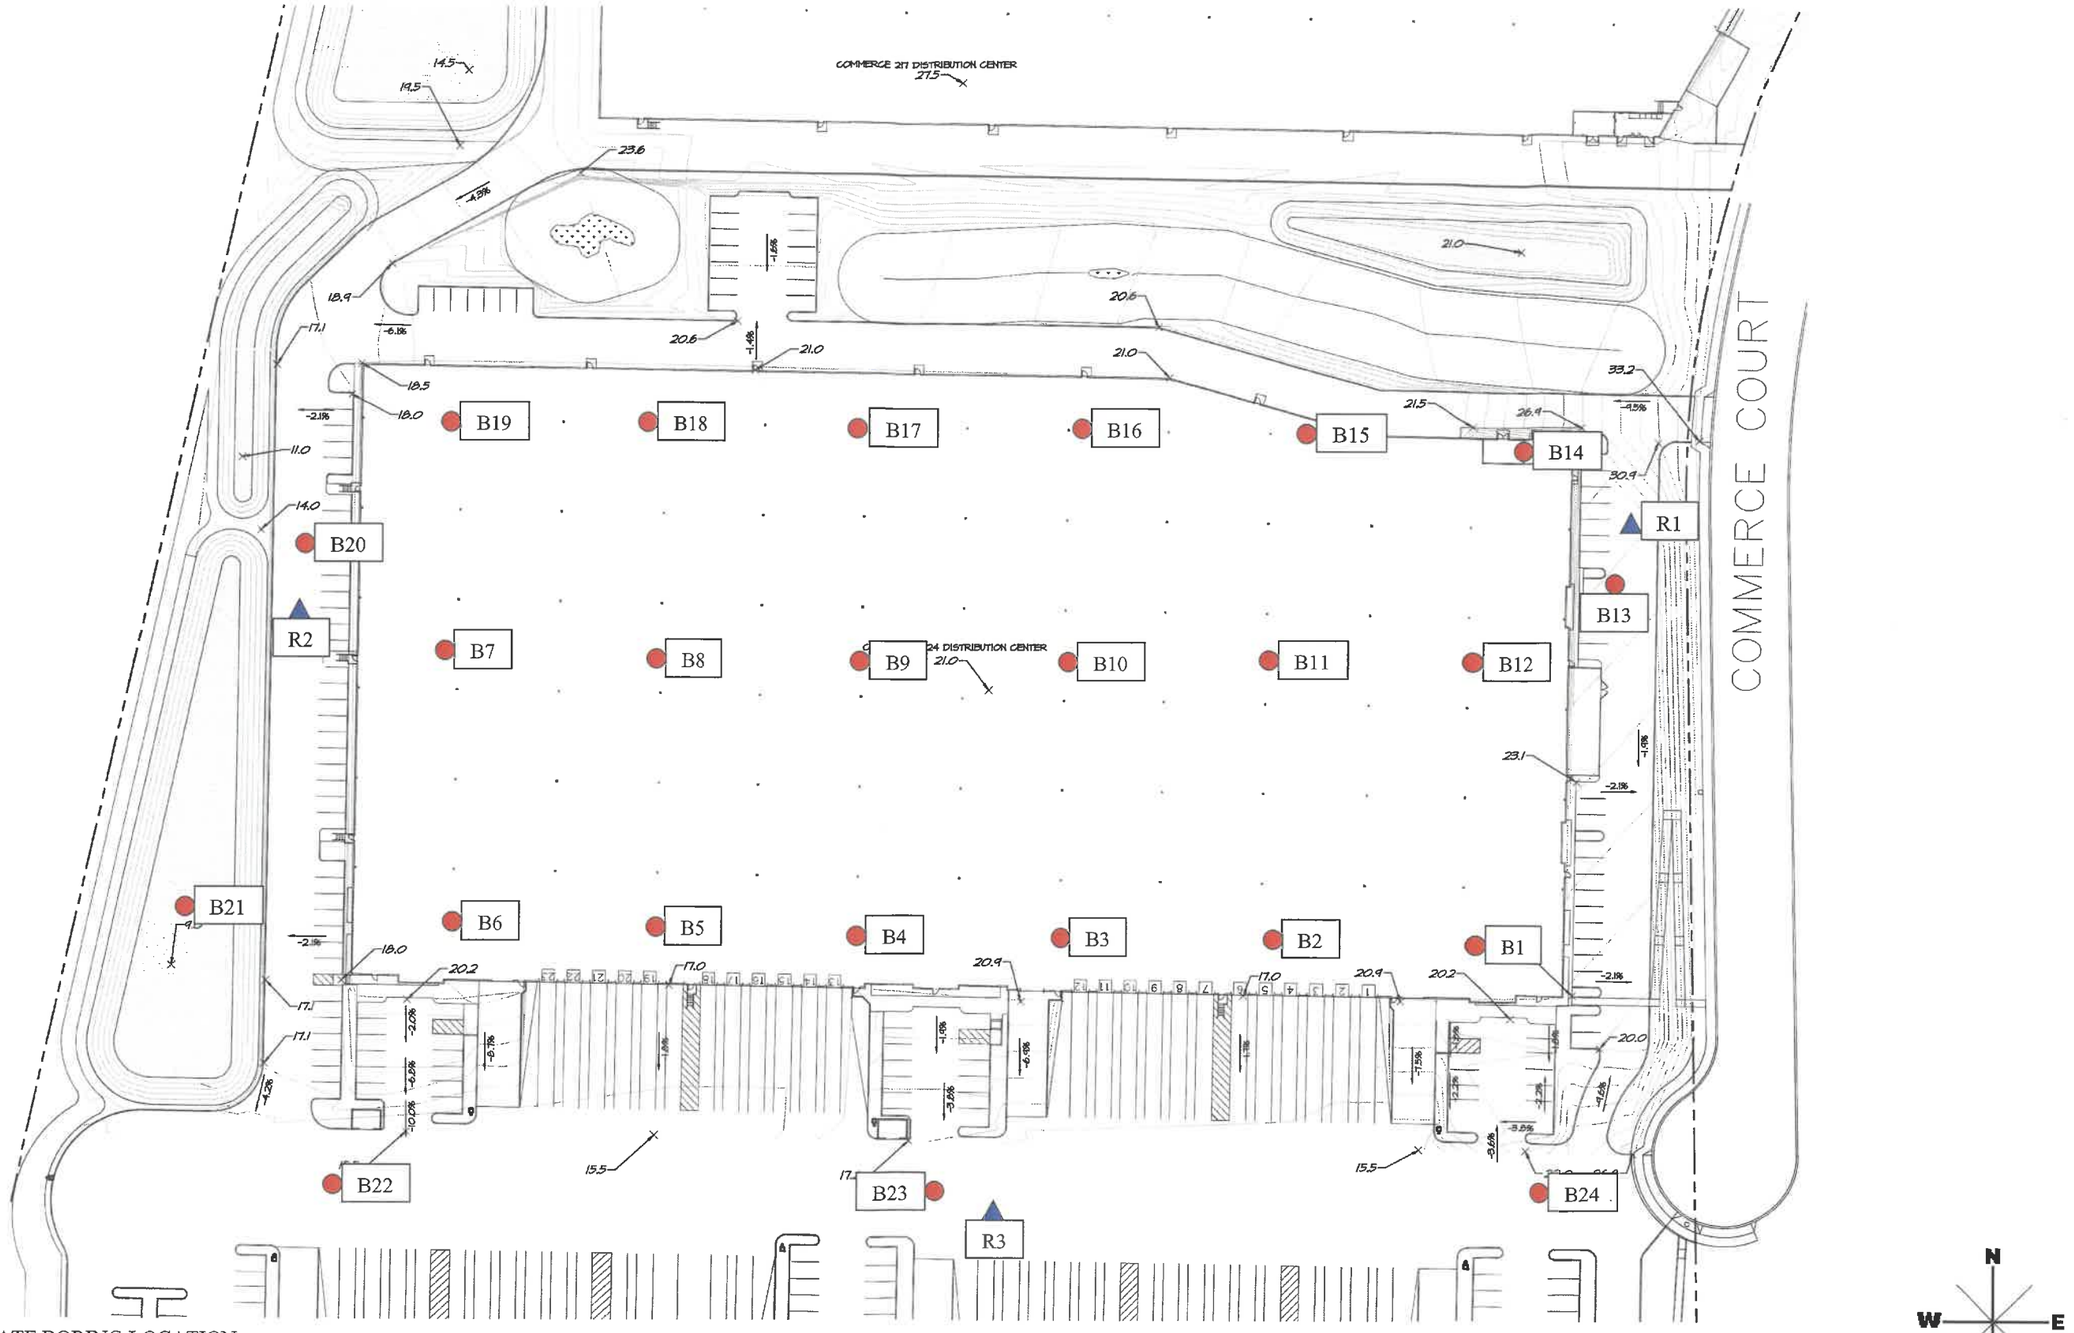
advancements in the field of Soils Engineering, physical changes in the site, either due to excavation or fill placement, new agency regulations, or possible changes in the proposed structure after the soils report is completed may require the soils report to be professionally reviewed. In light of this, the Owner should be aware that there is a practical limit to the usefulness of this report without critical review. Although the time limit for this review is strictly arbitrary, it is suggested that 2 years be considered a reasonable time for the usefulness of this report.

Foundation and earthwork construction is characterized by the presence of a calculated risk that soil and groundwater conditions have been fully revealed by the original foundation investigation. This risk is derived from the practical necessity of basing interpretations and design conclusions on limited sampling of the earth. The recommendations made in this report are based on the assumption that soil conditions do not vary significantly from those disclosed during our field investigation. If any variations or undesirable conditions are encountered during construction, the Soils Engineer should be notified so that supplemental recommendations may be made.

The conclusions of this report are based on the information provided regarding the proposed construction. If the proposed construction is relocated or redesigned, the conclusions in this report may not be valid. The Soils Engineer should be notified of any changes so the recommendations may be reviewed and re-evaluated.

This report is a Geotechnical Engineering Investigation with the purpose of evaluating the soil conditions in terms of foundation design. The scope of our services did not include any Environmental Site Assessment for the presence or absence of hazardous and/or toxic materials in the soil, groundwater, or atmosphere; or the presence of wetlands. Any statements, or absence of statements, in this report or on any boring log regarding odors, unusual or suspicious items, or conditions observed, are strictly for descriptive purposes and are not intended to convey engineering judgment regarding potential hazardous and/or toxic assessment.

The geotechnical engineering information presented herein is based upon professional interpretation utilizing standard engineering practices and a degree of conservatism deemed proper for this project. It is not warranted that such information and interpretation cannot be superseded by future geotechnical engineering developments. We emphasize that this report is valid for the project outlined above and should not be used for any other sites.



If you have any questions, or if we may be of further assistance, please do not hesitate to contact our office at (916) 564-2200.

Respectfully submitted,

APPENDIX A

FIELD AND LABORATORY INVESTIGATIONS

Field Investigation

The field investigation consisted of a surface reconnaissance and a subsurface exploratory program. Twenty-four 4½-inch to 6½-inch exploratory borings were advanced. The boring locations are shown on the site plan.

The soils encountered were logged in the field during the exploration and, with supplementary laboratory test data, are described in accordance with the Unified Soil Classification System.

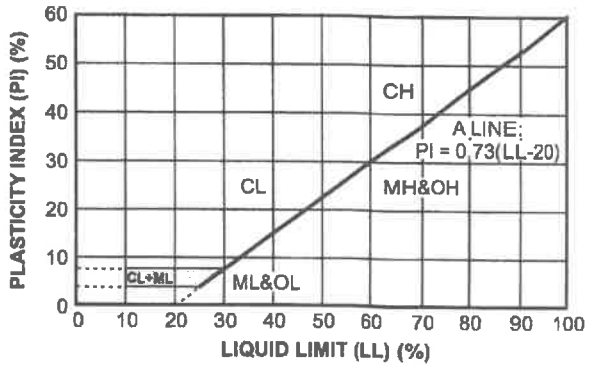
Modified standard penetration tests and standard penetration tests were performed at selected depths. These tests represent the resistance to driving a 2½-inch and 1½-inch diameter split barrel sampler, respectively. The driving energy was provided by a hammer weighing 140 pounds falling 30 inches. Relatively undisturbed soil samples were obtained while performing this test. Bag samples of the disturbed soil were obtained from the auger cuttings. The modified standard penetration tests are identified in the sample type on the boring logs with a full shaded in block. The standard penetration tests are identified in the sample type on the boring logs with half of the block shaded. All samples were returned to our Clovis laboratory for evaluation.

Laboratory Investigation

The laboratory investigation was programmed to determine the physical and mechanical properties of the foundation soil underlying the site. Test results were used as criteria for determining the engineering suitability of the surface and subsurface materials encountered.

In-situ moisture content, dry density, consolidation, direct shear, and sieve analysis tests were completed for the undisturbed samples representative of the subsurface material. Atterberg limits, expansion index and R-value tests were completed for select bag samples obtained from auger cuttings. These tests, supplemented by visual observation, comprised the basis for our evaluation of the site material.

The logs of the exploratory borings and laboratory determinations are presented in this Appendix.



UNIFIED SOIL CLASSIFICATION SYSTEM

UNIFIED SOIL CLASSIFICATION AND SYMBOL CHART			
COARSE-GRAINED SOILS (more than 50% of material is larger than No. 200 sieve size.)			
GRAVELS More than 50% of coarse fraction larger than No. 4 sieve size	Clean Gravels (Less than 5% fines)	GW	Well-graded gravels, gravel-sand mixtures, little or no fines
		GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
	Gravels with fines (More than 12% fines)	GM	Silty gravels, gravel-sand-silt mixtures
		GC	Clayey gravels, gravel-sand-clay mixtures
SANDS 50% or more of coarse fraction smaller than No. 4 sieve size	Clean Sands (Less than 5% fines)	SW	Well-graded sands, gravelly sands, little or no fines
		SP	Poorly graded sands, gravelly sands, little or no fines
	Sands with fines (More than 12% fines)	SM	Silty sands, sand-silt mixtures
		SC	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS (50% or more of material is smaller than No. 200 sieve size.)			
SILTS AND CLAYS Liquid limit less than 50%		ML	Inorganic silts and very fine sands, rock flour, silty of clayey fine sands or clayey silts with slight plasticity
		CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays
		OL	Organic silts and organic silty clays of low plasticity
SILTS AND CLAYS Liquid limit 50% or greater		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
		CH	Inorganic clays of high plasticity, fat clays
		OH	Organic clays of medium to high plasticity, organic silts
HIGHLY ORGANIC SOILS		PT	Peat and other highly organic soils

CONSISTENCY CLASSIFICATION	
Description	**Blows per Foot**
Granular Soils	
Very Loose	< 5
Loose	5 – 15
Medium Dense	16 – 40
Dense	41 – 65
Very Dense	> 65
Cohesive Soils	
Very Soft	< 3
Soft	3 – 5
Firm	6 – 10
Stiff	11 – 20
Very Stiff	21 – 40
Hard	> 40

GRAIN SIZE CLASSIFICATION		
Grain Type	*Standard Sieve Size*	*Grain Size in Millimeters*
Boulders	Above 12 inches	Above 305
Cobbles	12 to 13 inches	305 to 76.2
Gravel	3 inches to No. 4	76.2 to 4.76
Coarse-grained	3 to ¾ inches	76.2 to 19.1
Fine-grained	¾ inches to No. 4	19.1 to 4.76
Sand	No. 4 to No. 200	4.76 to 0.074
Coarse-grained	No. 4 to No. 10	4.76 to 2.00
Medium-grained	No. 10 to No. 40	2.00 to 0.042
Fine-grained	No. 40 to No. 200	0.042 to 0.074
Silt and Clay	Below No. 200	Below 0.074

PLASTICITY CHART

APPENDIX B

EARTHWORK SPECIFICATIONS

GENERAL

When the text of the report conflicts with the general specifications in this appendix, the recommendations in the report have precedence.

SCOPE OF WORK: These specifications and applicable plans pertain to and include all earthwork associated with the site rough grading, including but not limited to the furnishing of all labor, tools, and equipment necessary for site clearing and grubbing, stripping, preparation of foundation materials for receiving fill, excavation, processing, placement and compaction of fill and backfill materials to the lines and grades shown on the project grading plans, and disposal of excess materials.

PERFORMANCE: The Contractor shall be responsible for the satisfactory completion of all earthwork in accordance with the project plans and specifications. This work shall be inspected and tested by a representative of Krazan and Associates, Inc., hereinafter known as the Soils Engineer and/or Testing Agency. Attainment of design grades when achieved shall be certified by the project Civil Engineer. Both the Soils Engineer and the Civil Engineer are the Owner's representatives. If the Contractor should fail to meet the technical or design requirements embodied in this document and on the applicable plans, he shall make the necessary readjustments until all work is deemed satisfactory as determined by both the Soils Engineer and the Civil Engineer. No deviation from these specifications shall be made except upon written approval of the Soils Engineer, Civil Engineer or project Architect.

No earthwork shall be performed without the physical presence or approval of the Soils Engineer. The Contractor shall notify the Soils Engineer at least 2 working days prior to the commencement of any aspect of the site earthwork.

The Contractor agrees that he shall assume sole and complete responsibility for job site conditions during the course of construction of this project, including safety of all persons and property; that this requirement shall apply continuously and not be limited to normal working hours; and that the Contractor shall defend, indemnify and hold the Owner and the Engineers harmless from any and all liability, real or alleged, in connection with the performance of work on this project, except for liability arising from the sole negligence of the Owner or the Engineers.

TECHNICAL REQUIREMENTS: All compacted materials shall be densified to a density not less than 90 percent relative compaction based on ASTM Test Method D1557 or CAL-216, as specified in the technical portion of the Soil Engineer's report. The location and frequency of field density tests shall be as determined by the Soils Engineer. The results of these tests and compliance with these specifications shall be the basis upon which satisfactory completion of work will be judged by the Soils Engineer.

SOILS AND FOUNDATION CONDITIONS: The Contractor is presumed to have visited the site and to have familiarized himself with existing site conditions and the contents of the data presented in the soil report.

The Contractor shall make his own interpretation of the data contained in said report, and the Contractor shall not be relieved of liability under the Contract documents for any loss sustained as a result of any variance between conditions indicated by or deduced from said report and the actual conditions encountered during the progress of the work.

DUST CONTROL: The work includes dust control as required for the alleviation or prevention of any dust nuisance on or about the site or the borrow area, or off-site if caused by the Contractor's operation either during the performance of the earthwork or resulting from the conditions in which the Contractor leaves the site. The Contractor shall assume all liability, including court costs of codefendants, for all claims related to dust or windblown materials attributable to his work.

SITE PREPARATION

Site preparation shall consist of site clearing and grubbing and the preparations of foundation materials for receiving fill.

CLEARING AND GRUBBING: The Contractor shall accept the site in this present condition and shall demolish and/or remove from the area of designated project earthwork all structures, both surface and subsurface, trees, brush, roots, debris, organic matter, and all other matter determined by the Soils Engineer to be deleterious or otherwise unsuitable. Such materials shall become the property of the Contractor and shall be removed from the site.

Tree root systems in proposed building areas should be removed to a minimum depth of 3 feet and to such an extent which would permit removal of all roots larger than 1 inch. Tree roots removed in parking areas may be limited to the upper 1½ feet of the ground surface. Backfill of tree root excavations should not be permitted until all exposed surfaces have been inspected and the Soils Engineer is present for the proper control of backfill placement and compaction. Burning in areas which are to receive fill materials shall not be permitted.

SUBGRADE PREPARATION: Surfaces to receive Engineered Fill, building or slab loads shall be prepared as outlined above, excavated/scarified to a depth of 12 inches, moisture-conditioned as necessary, and compacted to 90 percent relative compaction.

Loose soil areas, areas of uncertified fill, and/or areas of disturbed soils shall be moisture-conditioned as necessary and recompacted to 90 percent relative compaction. All ruts, hummocks, or other uneven surface features shall be removed by surface grading prior to placement of any fill materials. All areas which are to receive fill materials shall be approved by the Soils Engineer prior to the placement of any of the fill material.

EXCAVATION: All excavation shall be accomplished to the tolerance normally defined by the Civil Engineer as shown on the project grading plans. All over-excavation below the grades specified shall be backfilled at the Contractor's expense and shall be compacted in accordance with the applicable technical requirements.

FILL AND BACKFILL MATERIAL: No material shall be moved or compacted without the presence of the Soils Engineer. Material from the required site excavation may be utilized for construction site fills provided prior approval is given by the Soils Engineer. All materials utilized for constructing site fills shall be free from vegetation or other deleterious matter as determined by the Soils Engineer.

PLACEMENT, SPREADING AND COMPACTION: The placement and spreading of approved fill materials and the processing and compaction of approved fill and native materials shall be the responsibility of the Contractor. However, compaction of fill materials by flooding, ponding, or jetting shall not be permitted unless specifically approved by local code, as well as the Soils Engineer.

Both cut and fill areas shall be surface-compacted to the satisfaction of the Soils Engineer prior to final acceptance.

SEASONAL LIMITS: No fill material shall be placed, spread, or rolled while it is frozen or thawing or during unfavorable wet weather conditions. When the work is interrupted by heavy rains, fill operations shall not be resumed until the Soils Engineer indicates that the moisture content and density of previously placed fill are as specified.

APPENDIX C

PAVEMENT SPECIFICATIONS

1. DEFINITIONS - The term "pavement" shall include asphaltic concrete surfacing, untreated aggregate base, and aggregate subbase. The term "subgrade" is that portion of the area on which surfacing, base, or subbase is to be placed.

The term "Standard Specifications": hereinafter referred to is the 2018 Standard Specifications of the State of California, Department of Transportation, and the "Materials Manual" is the Materials Manual of Testing and Control Procedures, State of California, Department of Public Works, Division of Highways. The term "relative compaction" refers to the field density expressed as a percentage of the maximum laboratory density as defined in the applicable tests outlined in the Materials Manual.

2. SCOPE OF WORK - This portion of the work shall include all labor, materials, tools, and equipment necessary for, and reasonably incidental to the completion of the pavement shown on the plans and as herein specified, except work specifically noted as "Work Not Included."

3. PREPARATION OF THE SUBGRADE - The Contractor shall prepare the surface of the various subgrades receiving subsequent pavement courses to the lines, grades, and dimensions given on the plans. The upper 12 inches of the soil subgrade beneath the pavement section shall be compacted to a minimum relative compaction of 90 percent. The finished subgrades shall be tested and approved by the Soils Engineer prior to the placement of additional pavement courses.

4. UNTREATED AGGREGATE BASE - The aggregate base material shall be spread and compacted on the prepared subgrade in conformity with the lines, grades, and dimensions shown on the plans. The aggregate base material shall conform to the requirements of Section 26 of the Standard Specifications for Class 2 material, 1½ inches maximum size. The aggregate base material shall be spread and compacted in accordance with Section 26 of the Standard Specifications. The aggregate base material shall be spread in layers not exceeding 6 inches and each layer of aggregate material course shall be tested and approved by the Soils Engineer prior to the placement of successive layers. The aggregate base material shall be compacted to a minimum relative compaction of 95 percent.

5. AGGREGATE SUBBASE - The aggregate subbase shall be spread and compacted on the prepared subgrade in conformity with the lines, grades, and dimensions shown on the plans. The aggregate subbase material shall conform to the requirements of Section 25 of the Standard Specifications for Class 2 material. The aggregate subbase material shall be compacted to a minimum relative compaction of 95 percent, and it shall be spread and compacted in accordance with Section 25 of the Standard Specifications. Each layer of aggregate subbase shall be tested and approved by the Soils Engineer prior to the placement of successive layers.

6. ASPHALTIC CONCRETE SURFACING - Asphaltic concrete surfacing shall consist of a mixture of mineral aggregate and paving grade asphalt, mixed at a central mixing plant and spread and compacted on a prepared base in conformity with the lines, grades and dimensions shown on the plans. The viscosity grade of the asphalt shall be PG 64-10. The mineral aggregate shall be Type B, ½ inch maximum size, medium grading and shall conform to the requirements set forth in Section 39. The drying, proportioning and mixing of the materials shall conform to Section 39.

The prime coat, spreading and compacting equipment and spreading and compacting mixture shall conform to the applicable chapters of Section 39, with the exception that no surface course shall be placed when the atmospheric temperature is below 50° F. The surfacing shall be rolled with a combination of steel wheel and pneumatic rollers, as described in Section 39-6. The surface course shall be placed with an approved self-propelled mechanical spreading and finishing machine.

7. FOG SEAL COAT - The fog seal (mixing type asphaltic emulsion) shall conform to and be applied in accordance with the requirements of Section 37.

1.0 SUMMARY

Cameron-Cole, LLC (Cameron-Cole) has completed a Phase I Environmental Site Assessment (ESA) for the 10.17-acre property located at 1055 Commerce Court, American Canyon, Napa County, California, hereinafter referred to as the “property”, “subject property”, or “SP”. The assessment was performed in accordance with the Master Environmental Services Agreement between Cameron-Cole, LLC and First Carbon Solutions (FCS) dated January 20, 2023, and authorized by Ms. Mary Bean on January 23, 2023. The scope of services conforms to the scope and limitations of the American Society for Testing and Materials International (ASTM International) Standard Practice for Environmental Site Assessments, Designation: E1527-21. The purpose of this Phase I ESA is to identify, to the extent feasible pursuant to the ASTM International Standard E1527-21, recognized environmental conditions (RECs) in connection with the subject property.

According to records maintained by the Napa County Assessor’s office, the subject property is associated with assessor parcel number (APN) 058-030-069. The subject property is an undeveloped 10.17-acre parcel located at 1055 Commerce Court, American Canyon, Napa County, California. The subject property is currently owned by the Stravinski Development Group.

The goal of this Phase I ESA is to identify the presence or likely presence of hazardous substances or petroleum products on the subject property under conditions that indicate an existing release, a past release, or a material threat of release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water on the property. The findings of this report are summarized below and may include known or suspected RECs, Controlled Recognized Environmental Conditions (CRECs), Historical Recognized Environmental Conditions (HRECs), Vapor Encroachment Conditions (VECs), or Business Environmental Risks (BERs) identified during the performance of this Phase I ESA.

There were no RECs, CRECs, HRECS, VECs, or BERs identified at the subject property at the time of this report.

2.0 INTRODUCTION

2.1 Purpose

Cameron-Cole performed a Phase I ESA for the 10.17-acre property located at 1055 Commerce Court, American Canyon, Napa County, California in accordance with the Master Environmental Services Agreement between Cameron-Cole, LLC and First Carbon Solutions (the User) on behalf of the Stravinski Development Group (the Owner). The assessment was conducted in general conformance with the ASTM International Standard E1527-21 Standard Practice for Environmental Site Assessments. This ESA was designed to identify, to the extent feasible, the presence or likely presence of RECs in connection with the property.

The purpose of this Phase I ESA is to allow the "User" to benefit from one of the defenses referenced in the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability: the innocent landowner defense, the contiguous property owner defense, or bona fide prospective purchaser defense. These defenses are collectively referred to as the "landowner liability protections," or "LLPs". ASTM International Standard E1527-21 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B). Cameron-Cole considers FCS to be the Client and "User" of this report.

The goal of this Phase I ESA is to identify RECs in connection with the subject property consistent with ASTM International Standard E1527-21. A REC is defined as:

> *1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; 2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or 3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.*

2.2 Detailed Scope of Services

This Phase I ESA was conducted in accordance with and the Master Environmental Services Agreement between Cameron-Cole, LLC and First Carbon Solutions and authorized by Ms. Mary Bean on January 23, 2023. The scope of services consists of completing a Phase I ESA in general accordance with ASTM International Standard E1527-21 and the Scope of Services specified in the Master Agreement.

2.3 Significant Assumptions

Historical resources, personal interviews, and federal and state agency files regarding site operations and past historical use have been considered when presenting Cameron-Cole's findings and opinions. Cameron-Cole considers all information provided by our environmental database subcontractor regarding regulatory status of facilities to be current, accurate, and complete. Although Cameron-Cole made no independent investigation as to the accuracy and completeness of other information derived from secondary sources, Cameron-Cole assumes such information is reliable and representative of site conditions.

2.4 Limitations and Exceptions of Assessment

2.4.1 Site-Specific Limitations

Subsurface investigations were not conducted as part of this assessment.

2.4.2 Data Gaps

A data gap is a lack of, or inability to, obtain information required by ASTM International Standard E1527-21 despite good faith efforts to gather such information. Data gaps may result from incompleteness in any of the activities required by ASTM International Standard E1527-21. According to the ASTM International Standard Practice E1527-21, data gaps are only significant if "other information and/or professional experience raise reasonable concerns involving the data gap." As of the date of this report, Cameron-Cole has not received documents pertaining to historic releases on the site from the County of Napa. In the opinion of Cameron-Cole, this gap does not represent a "significant" data gap as additional information was identified through on-line available sources and on-property observations.

2.4.3 General Limitations and Exceptions

The Phase I ESA is produced in accordance with customary principles and practices in the applicable fields of environmental science and engineering. Cameron-Cole is not responsible for conclusions, opinions, or recommendations made by others based upon the information presented herein.

Although industry standard practices are employed, Phase I ESAs are inherently limited, given that findings and conclusions are developed from limited site evaluation and research. In performing a Phase I ESA, Cameron-Cole can only rely upon those records regarding the subject property and surrounding properties which are available to the public and which can reasonably be obtained by Cameron-Cole. Cameron-Cole's opinions, conclusions and recommendations are therefore limited to those which can be derived from such available and reasonably obtainable records. It is often necessary for Cameron-Cole to rely on information prepared or obtained by others in order to complete the Phase I ESA. Cameron-Cole makes no warranty or representation as to the accuracy or completeness of information obtained from third parties. Additionally, changes may result with the passage of time with respect to characteristics of the subject property and those of surrounding properties. Cameron-Cole and its representatives do not warrant for or against future changes in operations or conditions, nor do they warrant for or against conditions present of a type or at a location not specifically addressed in the Phase I ESA.

Subject to the limitations stated herein, the opinions presented in Phase I ESAs are valid for a period of 180 days from the date of issuance.

Air, soil, and groundwater testing are not part of the Phase I ESA Report. This Phase I ESA is not intended to establish whether air, soil, or groundwater contamination, or waste disposal is present or not present on the subject property or on surrounding properties. Knowledge of actual environmental conditions on the subject property or on any surrounding properties can only be obtained from air, soil, and groundwater testing, the installation of groundwater monitoring wells, and possible additional testing, all of which are outside the scope of the Phase I ESA.

Reasonable efforts were made within the scope of the Phase I ESA to identify the presence of underground storage tanks (USTs), aboveground storage tanks (ASTs), and ancillary equipment on or near the subject property. Limitations to the Phase I ESA exist regarding USTs and ASTs, in as much as information was

obtained by Cameron-Cole solely through its review of unobstructed and readily accessible areas, database information, and interviews. Such methods (which are considered industry standard) do not preclude the actual presence of subsurface equipment (including USTs) or regulated materials that are hidden from view due to historical activity such as site paving, re-grading, construction, or debris pile storage. Similarly, it is possible that additional UST facilities not listed in regulatory database files may exist at the subject property or on properties adjacent to the subject property due to owner/operator registration negligence, filing errors with the state regulatory agency or other reasons over which Cameron-Cole has no control or ability to determine.

Conclusions in the Phase I ESA regarding potential environmental impacts of properties and facilities surrounding the subject property are based upon reasonably available information obtained from environmental databases and inferred groundwater flow direction.

No environmental assessment can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of a Phase I ESA is solely intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with the subject property, and this practice recognizes reasonable limits of time and cost. The Phase I ESA has been prepared for the exclusive use and benefit of FCS subject to the terms and conditions specified in the Master Environmental Services Agreement between Cameron-Cole, LLC. and FCS. The Phase I ESA is for the sole and exclusive use and benefit of FCS, our client. Cameron-Cole makes no warranty as to the Phase I ESA except as to FCS's exclusive use of the Phase I ESA. The Client bears the sole responsibility for ensuring that the Phase I ESA is distributed or disseminated to only those third parties to whom FCS is strictly obligated by contract, law, regulation, or ordinance to provide it. Cameron-Cole disclaims any and all liability to any person or entity other than FCS who uses or relies on the Phase I ESA in any way whatsoever without the express written consent of both FCS and Cameron-Cole.

Third-party reliance letters may be issued upon request and upon payment of the then current fee for such letters, and only if Cameron-Cole and FCS provide express written consent for any such reliance letters.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property is located at 1055 Commerce Court, American Canyon, Napa County, California. A Site Vicinity Map is provided as Figure 1 and a Property Map is provided as Figure 2. According to records maintained by the Napa County Assessor's office, the subject property is associated with APN 058-030-69.

3.2 Site and Vicinity Characteristics

The subject property consists of one parcel with surface area totaling 10.17 acres. The subject property is undeveloped and is surrounded by a warehouse to the south and undeveloped land to the north and west. The adjoining property east is used as a rural residential and outdoor recreational paintball facility. The warehouse on the adjoining property south, 1005 Commerce Court, contains Valley Wine Warehouse, Boissett Collection, Wine Direct, and Western Wine Services.

3.3 Current Uses of the Property

The subject property is currently undeveloped land.

3.4 Descriptions of Structures, Roads, and Other Improvements to the Site

The property can be accessed from Commerce Court which adjoins the eastern property boundary. The majority of the subject property is undeveloped with natural vegetation. There are no structures currently on the subject property. Temporary structures were formerly located on the southeastern corner of the site (see historical review Section 5.7). The area has been cleared of vegetation and gravel pathways remain in the area. Additionally, two stormwater drains are located on the subject property along Commerce Court.

4.0 USER PROVIDED INFORMATION

For the User to qualify for one of the LLPs offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, Section 6 of ASTM International Standard E1527-21 requires the User to provide the environmental professional (EP) the following information:

- The existence of environmental cleanup liens;
- Activity and Use Limitations (AULs) recorded against the subject property;
- Specialized knowledge or experience of the User;
- Relationship of the purchase price to the fair market value of the property if it were not contaminated;
- Commonly known or reasonably ascertainable information about the subject property; and
- The degree of obviousness of the presence of contamination at the subject property.

A User Questionnaire was completed by Ms. Janna Waligorski Hudson, Senior Project Manager, FCS, on March 28, 2023 (Appendix B).

4.1 Title Records

A historical chain-of-title report and an environmental lien report were not provided by the User or obtained and reviewed by Cameron-Cole as part of the approved scope of services for this project. The property is owned by the Stravinski Development Group (SDG).

4.2 Environmental Liens or Activity and Use Limitations

Ms. Hudson indicated via a completed User Questionnaire that she was not aware of any environmental liens or AULs, such as engineering controls, land use restrictions, and institutional controls that have been filed or recorded on the subject property.

4.3 Specialized Knowledge

Ms. Hudson indicated she does not possess specialized knowledge or experience that is material to RECs in connection with the subject property.

4.4 Commonly Known or Reasonably Ascertainable Information

Ms. Hudson was asked to provide any commonly known or reasonably ascertainable information within the local community about the subject property that is material to RECs in connection with the subject property. She indicated that she was not aware of any information regarding the subject property.

Ms. Hudson stated on the questionnaire the Final Initial Study for the SDG Commerce 330 Warehouse project dated January 2019 included the subject property. She stated that the study referenced a Phase I ESA prepared by ATC and dated June 2018 which also included the subject property. Ms. Hudson provided the *Final Initial Study for the SDG Commerce 330 Warehouse Project,* Grassetti Environmental Consulting, January 2019 and the *Geotechnical Engineering Investigation, Proposed SDG Commerce 224 (Draft)*, Krazan & Associates, Inc., January 18, 2021. Ms. Hudson stated she did not have access to the Phase I ESA prepared by ATC in 2018.

4.5 Valuation Reduction for Environmental Issues

Ms. Hudson indicated she was not involved in the purchase of the property.

4.6 Owner, Property Manager, and Occupant Information

According to Ms. Hudson, there are no current occupants of the subject property.

4.7 Proceedings Involving the Property

Ms. Hudson indicated that she is unaware of any proceedings regarding the subject property.

4.8 Reason for Performing Phase I ESA

Ms. Hudson indicated via a User Questionnaire completed on March 28, 2023, that the reason for performing the Phase I ESA is to satisfy one of the requirements for the innocent landowner defense under CERCLA and to understand potential environmental conditions that could materially impact the operation of the business associated with the parcel of commercial real estate.

5.0 RECORDS REVIEW

5.1 Standard Environmental Record Sources and Other Ascertainable Records Sources

Envirosite provided Cameron-Cole with a comprehensive government agency information search in accordance with ASTM International Standard E1527-21. The regulatory search information and a legend of the database acronyms are presented as Appendix C, Regulatory Agency Search Report Maps depicting properties listed in the various databases searched by Envirosite are also provided. The table below provides a summary of the identified standard (ASTM required) federal, state, tribal, and local environmental database records reviewed along with each record's approximate minimum search distance (AMSD) from the subject property.

SP = Subject property

5.2 Standard Environmental Record and Other Ascertainable Records Review

The following discussion provides a review of results from the standard environmental records and other ascertainable records search with respect to the subject property as well as the adjacent or nearby properties. Per the discretion of the EP, some results may be omitted from this review if they are interpreted to be not of environmental significance based on threat of a material release, distance from the subject property, lower topographic elevations, and interpreted groundwater flow direction. The complete Envirosite report is included as Appendix C and contains all points of interest that were identified within the AMSD.

SUBJECT PROPERTY

The subject property was not identified in any of the standard or other ascertainable records databases searched.

Through the review of historical sources (2018 Phase I ESA by ATC), Cameron-Cole identified that the property at 2 Eucalyptus Drive was listed in the NPDES and the Napa County LUST databases. This property historically included the subject property until approximately 2012. In 1990, the property was inspected by Napa County officials. Two 10,000-gallon USTs, one 3,000-gallon UST, 55-gallon drums, and hazardous materials were observed in the eastern section of the property, which is currently the adjoining property east of the subject property. These items have since been removed from the adjoining property east. Through the review of the prior Phase I and Phase II ESAs (Section 5.7.8) conducted on the property, Cameron-Cole does not consider the historic listing of 2 Eucalyptus Drive in these databases to be an environmental threat to the subject property.

Adjacent and Nearby Off-Site Properties within the AMSD

The following provides a summary of relevant identified off-site points of interest with respect to interpreted groundwater flow direction which is inferred to flow west (see Sections 5.6.1 and 6.2.1).

South (cross-gradient)

The SDG Commerce 330 Warehouse site is located on the adjoining property south, 420 feet cross-gradient from the subject property, and is listed in the CALEPA SITES – CA, CIWQS – CA, NPDES – CA, and RFR - CA databases.

- The description provided for the site in the CALEPA SITES – CA database references “construction storm water.” No violations are listed for the site in the database.
- The CIWQS – CA database lists this site as the Commerce Blvd Pipeline Project. No violations are listed for the site in the database.
- The NPDES – CA database lists the site in the construction program and the status is listed as terminated. No violations are listed for the site in the database.
- The RFR – CA database lists the site as an active storm water construction site. No violations are listed for the site in the database.

This site does not appear to present an environmental threat to the subject property.

The Napa Junction Elementary School Project, located 1,229 feet southeast and cross-gradient from the subject property, is listed in the CALEPA SITES – CA, CIWQS – CA, CIWQS 2 – CA, and RFR - CA databases.

- The CALEPA SITES – CA database lists this site as a “Wetlands – Fill and Dredge Material”. Violations are not listed in the database.
- This site is listed in the CIWQS - CA database and no violations are listed for the site in the database.
- This site is listed in the CIWQS 2 - CA database and no violations are listed for the site in the database. The site is listed as a dredge/fill site.
- This site is listed in the RFR – CA database and no violations are listed for the site in the database. The site is listed as a dredge/fill site.

This site does not appear to present an environmental threat to the subject property.

The remaining sites located south of the subject property listed in the database search are located between ¼ and ½ mile south of the subject property. After review of the database listings, these sites do not appear to present an environmental threat to the subject property.

West (downgradient)

The American Canyon Wastewater Treatment Facility site is located at 151 Mezzetta Court, 1,021 feet down gradient from the subject property, and is listed in the CALEPA SITES – CA, CHMIRS – CA, CIWQS – CA, CIWQS 2 – CA, DOCKET, ECHO, EMI – CA, FRS, HAZNET – CA, HWG – CA, ICIS, INACTIVE PCS, MANIFEST EPA, NPDES – CA, PCS ENF, PCS FACILITY, RCRA_NONGEN, RFR - CA databases.

- The CALEPA SITES- CA database lists this site with the descriptions “US EPA Air Emissions Inventory System”, “Waste Discharge Requirements”, “Forestry & Silviculture”, and “Chemical Storage Facilities.” The site is a sewage treatment facility. Violations were not listed in this database for the site.
- The CHMIRS – CA database description states that “valves were left open on the affluent pond which resulted in the release of approximately 10,000 gal of raw sewage which was released into a tributary of the Napa River. Release is contained but unrecoverable.” The incident date was February 10, 2014.
- This site is listed in the CIWQS – CA database as the American Canyon Water Recycling Program site. Violations were not listed in this database for the site.
- This site is listed in the CIWQS 2 – CA again as the American Canyon Water Reclamation Facility. Violations were not listed in this database for the site.
- The DOCKET database lists the site with the Enforcement Action Case Number, CA-200018545.
- This site is listed in the ECHO database. The database indicates that the no violations are identified.

- This site is listed in the EMI - CA database. The database indicates that the site is in the San Francisco Bay Area Air Basin.
- This site is listed in the FRS database and no violations are listed for the site in the database.
- This site is listed in the HAZNET - CA database and no violations are listed for the site in the database.
- This site is listed in the HWG - CA database and no violations are listed for the site in the database.
- This site is listed in the ICIS database and no violations are listed for the site in the database.
- This site is listed in the INACTIVE PCS database. The site has a NPDES Individual Permit. The permit status is expired. No violations are listed for the site in the database.
- This site is listed in the MANIFEST EPA database and no violations are listed for the site in the database.
- This site is listed in the NPDES - CA database and no violations are listed for the site in the database.
- This site is listed in the PCS ENF database. The ENF type is listed as a State Clean Water Act Penalty.
- This site is listed in the PCS FACILITY database. The site has a NPDES Individual Permit. The permit status is effective. No violations are listed for the site in the database.
- This site is listed in the RCRA_NONGEN database and no violations are listed for the site in the database.
- This site is listed in the RFR - CA database and no violations are listed for the site in the database.

Based on a review of the available database details, the downgradient direction, and distance to the subject property, this site does not appear to present an environmental threat to the subject property.

North (cross-gradient)

No properties were identified in the database searches within ¼ mile north of the subject property. The facilities listed within ¼ and ½ mile north of the subject property do not appear to present an environmental threat to the subject property.

East (upgradient)

No properties were identified in the database searches within ½ mile east of the subject property. The facilities listed within ½ and 1 mile east of the subject property do not appear to present an environmental threat to the subject property.

5.3 Vapor Encroachment Condition Summary

Cameron-Cole conducted a review of available environmental records and conditions observed on the subject property and adjoining parcels to evaluate the potential for a VEC to exist on the subject property. Cameron-

Cole did not identify on-property or off-property land/business uses conducive to a VEC impact to the subject property.

5.4 Unmappable Sites

The Envirosite Report (Appendix C) includes a summary of identified points of intertest that may be in the general area of the subject property; yet do not have adequate location addresses or latitude/longitude coordinates to pinpoint their exact location in relation to the subject property. No unmappable sites were reported in the database search.

5.5 Additional Environmental Record Sources

5.5.1 County Property Assessor/Appraiser

According to records maintained by the Napa County Assessor's office, the subject property is identified by APN 058-030-069. These records do not identify buildings associated with the subject property.

5.5.2 Fire/Police officials

Cameron-Cole contacted the American Canyon Fire Protection District on March 24, 2023, requesting records pertaining to fires or responses to incidents, spills, or releases of hazardous substances or petroleum products at, or in the immediate vicinity of the property. Martha Banuelos responded on behalf of the American Canyon Fire Protection District and stated that, "The Fire District does not maintain environmental records on properties."

5.5.3 Other Record Sources

Cameron-Cole contacted the County of Napa Environmental Health Division on March 24, 2023, requesting records regarding environmental violations, releases, or hazardous material or petroleum product storage, storage tanks, or other environmental concerns associated with the subject property. A public records request was submitted to the County of Napa Public Records Department. No response has been received as of the date of this report.

5.6 Physical Setting Sources

5.6.1 Topography

Figure 1 is a Site Vicinity Map which includes information from the 2021 USGS 7.5 Minute Series, Cuttings Warf quadrangle. The map was reviewed to establish the physical setting of the subject site and surrounding area. The site lies approximately 19 feet above mean sea level and generally slopes to the west.

5.6.2 Soils/Geology

The Envirosite report provides a summary of the United States Department of Agriculture (USDA) Soil Survey of the subject property's general area. According to the Envirosite Report, the Clear Lake and Haire series are the primary soil types in the area. The Clear Lake series is a poorly drained clay with high corrosion potential. The Haire series is a moderately well drained clay loam with high corrosion potential. According to California GeoTracker, geology beneath the site is identified as Pleistocene-aged, older alluvium, lake, playa and terrace deposits.

5.6.3 Hydrology

Based on topographic maps, and considering regional flow patterns, the groundwater flow in the vicinity of the site is inferred to be to the west. It must be noted that groundwater flow direction can be influenced by factors such as surface topography, underground structures, seasonal fluctuation, soil and bedrock geology,

and production wells which were not considered in this interpretation.

5.7 Historical Use Information

Available historical resources were consulted to develop a history of the previous uses of the property to help identify the likelihood of past uses having led to RECs in connection with the property. Copies of the aerial photographs, historical topographic maps, Fire Insurance Maps, and City Directory Report are provided in Appendix D.

5.7.1 Aerial Photographs

Envirosite provided aerial photographs which depict the subject property for the years 1937, 1948, 1957, 1958, 1965, 1966, 1968, 1970, 1971, 1973, 1975, 1982, 1983, 1985, 1988, 1989, 1993, 1996, 1998, 2005, 2009, 2010, 2012, 2014, 2016, 2018, and 2020. These photographs are included in Appendix D.

Date: 1937

Scale: 1" = 500'

Subject Property: The subject property appears to be used agriculturally.

Adjoining North: The property appears to be undeveloped land with a grove of trees.

Adjoining East: The property appears to be used agriculturally.

Adjoining South: The property appears to be to be used agriculturally.

Adjoining West: The property appears to be to be used agriculturally.

Surrounding Area: The surrounding area is mixed undeveloped and agricultural land.

Date: 1948 through 1958

Scale: 1" = 500'

Subject Property: The subject property appears to be undeveloped land with a grove of trees.

Adjoining North: The property appears to be undeveloped land with a grove of trees.

Adjoining East: The property appears to be undeveloped land with a grove of trees.

Adjoining South: The property appears to be undeveloped land with a grove of trees.

Adjoining West: The property appears to be undeveloped land with a grove of trees.

Surrounding Area: The surrounding area is mainly undeveloped land.

Date: 1965

Scale: 1" = 500'

Subject Property: The subject property appears to be undeveloped land with a grove of trees.

Adjoining North: The property is partially cleared and partially with trees.

Adjoining East: The property appears to have been cleared of trees but remains undeveloped.

Adjoining South: The property appears to be used undeveloped land with a grove of trees.

Adjoining West: The property appears to be used undeveloped land with a grove of trees.

Surrounding Area: The surrounding area is mixed undeveloped and agricultural land.

Date: 1966 through 1998

Scale: 1” = 500’ and 1” =1000’

Subject Property: The subject property appears to be undeveloped land with a grove of trees.

Adjoining North: The property appears to be undeveloped land with a grove of trees.

Adjoining East: The property appears to be undeveloped land with a grove of trees.

Adjoining South: The property appears to be undeveloped land with a grove of trees.

Adjoining West: The property appears to be undeveloped land with a grove of trees.

Surrounding Area: The surrounding area appears to be undeveloped. The pond along North Slough currently on the nearby property to the southwest first appears on the 1975 aerial photograph.

Date: 2005 through 2018

Scale: 1” = 500’ and 1” =1000’

Subject Property: The subject property appears to be undeveloped land and cleared of trees in 2012.

Adjoining North: The property appears to be undeveloped land with a grove of trees. A small building is located on the property in 2005 and the property is cleared of trees in 2012.

Adjoining East: The property appears to be undeveloped land with trees.

Adjoining South: The property appears to be undeveloped land and cleared of trees in 2012.

Adjoining West: The property appears to be undeveloped land.

Surrounding Area: The American Canyon Wastewater Treatment Plant to the northwest of the subject property appears in 2005. Additionally, buildings to the north and south of the subject property appear as well as additional paved roads.

Date: 2020

Scale: 1” = 500’

Subject Property: The subject property appears to be undeveloped land. Small temporary structures are located on the southeast corner of the property and appear to be associated with staging for construction of the southern adjacent property. Grading activity appears along the southern border of the subject property and may be the result of the southern adjacent property development.

Adjoining North: The property appears to be undeveloped land.

Adjoining East: The property appears to be undeveloped land with trees.

Adjoining South: The current warehouse building appears on the property.

Adjoining West: The property appears to be undeveloped land.

Surrounding Area: The surrounding area appears to be mixed residential, industrial, and undeveloped.

5.7.2 Fire Insurance Maps (Sanborn Maps)

The Fire Insurance Maps Report provided by Envirosite indicated that coverage does not exist for the subject property and vicinity.

5.7.3 Recorded Land Title Records

A historical chain-of-title report was not provided by the User of the report and was not obtained by Cameron-Cole as part of the approved scope of services for this project.

5.7.4 Historical USGS Topographic Maps

Envirosite provided historical topographic maps which depict the subject property for the years 1919, 1942, 1949, 1951, 1949 (revised 1968), 1949 (revised 1981), 2012, 2015, 2018, and 2021. These historical topographic maps are included in Appendix D.

Date: 1916 and 1942, Mare Island Quadrangle

Scale: 1:62500

Subject Property: The subject property appears to be undeveloped land.

Adjoining North: The property appears to be undeveloped land.

Adjoining East: The property appears to be undeveloped land.

Adjoining South: The property appears to be undeveloped land.

Adjoining West: The property appears to be undeveloped land.

Surrounding Area: The surrounding area appears to be undeveloped.

Date: 1949 through 2021, Cuttings Wharf Quadrangle

Scale: 1:2400

Subject Property: The subject property appears to be undeveloped land.

Adjoining North: The property appears to be undeveloped land. A small building is located on the property on the 1951 topographic map.

Adjoining East: The property appears to be undeveloped land.

Adjoining South: The property appears to be undeveloped land.

Adjoining West: The property appears to be undeveloped land.

Surrounding Area: The surrounding area appears to be undeveloped.

5.7.5 Local Street Directories

Historical street directories for the subject property and surrounding property addresses were provided by Envirosite. A copy of the City Directory Report is provided in Appendix D.

Subject Property

No results were noted for the subject property address, 1055 Commerce Court, in directories dated 1993 through 2018.

Adjacent Properties

The address 2 Eucalyptus Drive includes the adjoining property east and historically included the subject property and the adjoining properties north and south until approximately 2012. The address is listed as George and Patricia Couch in 2010, 2013, 2015, 2016, and 2018 and as a paintball business in 2002, 2006, and 2011. No results were noted for the remaining adjoining property addresses in directories dated 1993

through 2018.

5.7.6 Building Department Records

Historical use of the subject property was researched using other standard historical sources. Therefore, Building Department records were not reviewed as part of this assessment.

5.7.7 Zoning/Land Use Records

Historical use of the subject property was researched using other standard historical sources. Therefore, historical Zoning/Land Use records were not reviewed as part of this assessment.

5.7.8 Prior Assessment Reports

Phase I Environmental Site Assessment, Couch Property, October 2004

Cameron-Cole reviewed the *Phase I Environmental Site Assessment, Couch Property* prepared by Environmental Science Associates and dated October 2004. The assessment was conducted on an approximate 106-acre property with the address 2 Eucalyptus Drive. The subject property is in the western section of this larger property.

The assessment identified six RECs including, the undocumented and illegal storage of hazardous materials and waste on the property which were identified by Napa County during an inspection in 1990. At the time of the assessment, it appeared that the 10,000-gallon former underground storage tanks, drums and other containers containing hazardous materials had been removed. However, gas cylinders and a 3,000-gallon underground storage tank remained on the northeastern portion of the property and were considered a REC. The possibility of methamphetamine labs operating on the property, the possibility of soil containing oil deposited on the northeastern portion of the property including a wood cutting area, two water wells located on the property, and outhouses located on the property were also considered RECs.

The RECs identified during this assessment appear to have been associated with the northeastern portion of the 106-acre property and were not located with the subject property.

Phase II Soil Investigation, Couch Property, July 2005

Cameron-Cole reviewed the *Phase II Soil Investigation, Couch Property* prepared by Kleinfelder and dated July 2005. The investigation consisted of nine hollow-stem auger borings, four hand auger boring, and two test pits TP-1 and TP-2 located on the 106-acre property. The file reviewed did not include the figures, tables, and appendices to support the letter report. However, the 2018 Phase I ESA performed by ATC included a figure which depicts borings B-4 and B-9 through B-12 installed during this investigation on the adjoining properties north and south, and no borings located on the subject property.

A total of 34 soil samples were submitted for laboratory analysis and groundwater was not encountered in any of the borings. The laboratory analysis did not reveal “a significant release” in any of the samples. Concentrations of total petroleum hydrocarbons (TPH) including diesel (TPH-d), motor oil (TPH-mo), and gasoline (TPH-g), benzene, toluene, ethylbenzene and xylene (BTEX), methyl tert-butyl ether (MTBE), polycyclic aromatic hydrocarbons (PAH), pesticides, and E. Coli were either below laboratory detection limits or detected below the reported Environmental Screening Levels (ESLs) as defined by the San Francisco Bay Water Board (February 2005) in all samples analyzed. Metals and total coliform were detected above ESLs. However, Kleinfelder concluded that the results did not appear to reflect a significant release.

Phase I Environmental Site Assessment, 2 Eucalyptus Drive, March 2006

Cameron-Cole reviewed the *Phase I Environmental Site Assessment, 2 Eucalyptus Drive* prepared by Innovated & Creative Environmental Solutions (ICES) and dated March 16, 2006. This assessment was completed on the 106-acre property that includes the subject property.

The assessment resulted in three recommendations. ICES recommended that soil samples be collected in the western portion of the property to assess the potential presence of organochlorine pesticides, arsenic, lead, and mercury associated with the eucalyptus grove. This area appears to include the subject property. ICES also recommended soil samples be collected in the wood cutting area, located in the southeastern portion of the property, and from the northeastern portion of the property. These areas do not include the subject property. A Phase II addressing these recommendations was not identified during this investigation.

Phase I Environmental Site Assessment, 2 Eucalyptus Drive, December 2009

Cameron-Cole reviewed the *Phase I Environmental Site Assessment, 2 Eucalyptus Drive* prepared by Kleinfelder and dated December 2009. This assessment also addressed the 106-acre property within which the subject property was located.

The assessment identified two RECs for the site. Kleinfelder stated that there was evidence that "residual petroleum hydrocarbons, solvents, and certain metals may have been released in shallow soil" in the eastern and western portions of the property. The western portion includes the subject property. Kleinfelder also stated that, "….it is possible that the paint within the paintballs may have contained lead and was released to soil." The area of the site that was used for paintball activities includes the subject property.

Kleinfelder recommended that the three wells on the eastern portion of the property be sampled and abandoned. They recommended that a soil and groundwater investigation be conducted on the site. Additionally, Kleinfelder recommended that the surface water in the creek located to the west of the site be sampled, the septic tank located in the eastern portion should be abandoned, and an asbestos survey should be conducted.

Limited Site Investigation, 2 Eucalyptus Drive, April 2010

Cameron-Cole reviewed the *Limited Site Investigation, 2 Eucalyptus Drive* prepared by ICES and dated April 19, 2010. A total of eight soil samples from eight separate locations (TP-1 through TP-8) were collected during the investigation. The investigation appeared to address the Paintball Jungle (West) and the Hurst Firewood Area. The Hurst Firewood Area was located on the property located southeast of the subject property. The test pits TP-1 through TP-4 were located on the western portion of the site, Paintball Jungle (West), and it appears from the figure provided that TP-2 and TP-3 were located on the subject property.

One soil sample was collected from each test pit. The samples were analyzed for TPHg, TPHd, and TPHmo by EPA method 8015B, volatile organic compounds (VOCs) by EPA method 8260B, and CAM 17 metals by EPA method 6020A. The concentrations were compared to the residential ESLs. TPHg, TPHd, TPHmo and VOCs were not detected above laboratory detection limits or above the residential ESLs with the exception of TPHd in TP-2 (160 mg/kg). The residential ESL was reported to be 83 mg/kg. ICES stated that since TP-2 was located in the eucalyptus grove, the elevated concentration identified in the sample may have been the result of the natural oil compounds in eucalyptus trees.

Arsenic (8.8 mg/kg) and vanadium (46 mg/kg and 63 mg/kg) were identified at concentrations above the stated residential RSLs (0.39 mg/kg and 16 mg/kg, respectively) in TP-2 and TP-3. However, ICES stated that the concentrations identified were within background levels for area soils. Lead was not identified in the

samples collected from TP-2 and TP-3 above the stated residential RSLs.

ICES stated that, “Based on the findings of this and previous investigations, it appears that the surficial soil within the Site has generally not been impacted by previous activities.”

Phase I Environmental Site Assessment, SDG Commerce 330 Distribution Center, June 2018

Cameron-Cole reviewed the *Phase I Environmental Site Assessment of SDG Commerce 330 Distribution Center* prepared by ATC Group Services, LLC and dated June 6, 2018. The SDG Commerce 330 Distribution Center property included the subject property and the adjoining properties north and south and was associated with the single APN 058-030-065. The property was approximately 35.85 acres of undeveloped land. The findings and conclusions of the assessment identified one REC, one HREC, and one de minimis condition as quoted from the text below.

> *Note 1) A Phase I ESA was conducted by Environmental Science Associates in 2004. The site reconnaissance of the Couch Property identified small quantities of hazardous wastes and some soil staining. It appeared that the hazardous materials noted by the County in 1990 had been removed by the property owners, except for the gas cylinders and 3,000 gallon former underground storage tank. It is unknown where the County had observed the drums containing hazardous materials, the 10,000-gallon former underground storage tanks (USTs), and the other containers of hazardous materials. However, areas that had recently been disturbed and areas with a lack of vegetation were noted during the site reconnaissance. It appears that some of the hazardous materials, drums and the 10,000-gallon tanks may have been removed by the property owners. Based on the fact that the locations of the former USTs noted above is unknown and the lack of sampling including groundwater sampling, ATC considers the potential impacts from the USTs to be a recognized environmental condition.*
>
> *Note 2) A Phase II Soil Investigation by Kleinfelder dated July 25, 2005. The investigation was conducted in response to several recognized environmental conditions which were noted in the report by Environmental Science Associates. The investigation was conducted in March through May 2005 and consisted of nine Hollow-stem auger borings, four hand auger, borings, and two test pits. A total of 34 soil samples were submitted for analysis. Groundwater was not sampled or analyzed during this investigation. Analytical tables were referenced in the report but no tables were included in the copy of the report obtained by ATC. Although this investigation was conducted on the approximately 106-acre Couch Property, only borings B-4 through B-12 (Appendix B) were advanced on the 35.85-acre property which is the subject of this report. The concentration of Chromium in B-12 at 15 feet below ground surface (bgs) was noted at the 130 milligrams per kilogram (mg/kg) which was noted above the screening levels used. However, concentrations of chromium in two samples collected at shallower levels from the same boring were noted below this level and, therefore, Kleinfelder determined the elevated concentration of chromium at 15 feet bgs was not due to a significant release. It should be noted that although the concentration of chromium noted above in boring B-12 at 130 mg/kg is above the 2005 ESLs, the concentration is below the current version of the February 2016 ESLs. As such the noted levels of chromium is considered an historical recognized environmental concern.*
>
> *Note 3) Based on Kleinfelder’s Phase I investigation completed in 2009, the Concentrated Area was reported previously occupied by a trailer a methamphetamine lab in 2000. EPA guidelines note that soil sampling in areas of methamphetamine labs may be warranted if the ground is visibly stained or otherwise affected (e.g., odors burn piles, dead vegetation, or remnants of reaction waste). ATC did*

not observe evidence of dead vegetation or discarded waste on the day of the site reconnaissance (refer to Section 6.0). Thus, ATC considers the previous methamphetamine lab site to be a de minimis condition to the property.

Limited Phase II Subsurface Investigation, 35.85 Acre Parcel, APN 058-030-065, March 2019

Cameron-Cole reviewed the *Limited Phase II Subsurface Investigation, 35.85 Acre Parcel, APN 058-030-065,* prepared by ATC Group Services, LLC and dated March 25, 2019. The Phase II investigation addressed the REC identified during the Phase I ESA dated June 6, 2018, outlined in Note 1 above. On November 6, 2018, ATC advanced two borings along the western border of the adjoining property north. ATC encountered difficulty in the field preventing them from completing boring SB-1. At SB-2, soil samples were field screened with a photo ionization detector (PID) and samples were collected for laboratory analysis from 10, 20, and 38 feet bgs. SB-3 was advanced with a hydropunch sampler for the purpose of collecting a groundwater sample. Groundwater was not encountered at 40 ft bgs in either boring.

The soil samples were analyzed for TPH by EPA method 8015, VOCs by EPA Method 8260, and CAM 17 by EPA Methods. The Phase II compared the laboratory results to the Tier 1 ESLs from the San Francisco Bay Regional Water Quality Control Board (RWQCB) dated February 2016. TPH and VOCs were not detected above laboratory detection limits in any of the soil samples analyzed. Arsenic was detected at a maximum concentration of 11 milligrams per kilogram (mg/kg), which is above the ESL. However, the Phase II stated that this concentration is at the established background concentration for arsenic in California soils. The remaining metals were either not detected above laboratory detection limits or below the ESL.

The Phase II states that, “Since this investigation indicates that it would appear to be unlikely that impacts from the Couch property could impact the subject property, the recognized environmental condition noted in the Phase I ESA by ATC dated June 6, 2018, is no longer considered to exist. Further investigation of potential impacts from the Couch property on the subject property is not recommended at this time.”

Final Initial Study for the SDG Commerce 330 Warehouse Project, January 2019

Cameron-Cole reviewed the *Final Initial Study for the SDG Commerce 330 Warehouse Project*, prepared by Grassetti Environmental Consulting and dated January 2019. The project site addressed in the report includes the subject property and the adjoining properties north and south. No environmental concerns were identified through this review.

Geotechnical Engineering Investigation, Proposed SDG Commerce 224, January 2021 (Draft)

Cameron-Cole reviewed the draft *Geotechnical Engineering Investigation, Proposed SDG Commerce 224,* prepared by Krazan & Associates, Inc. and dated January 18, 2021. The report addressed the subject property located at 1055 Commerce Court, American Canyon, California. The report was “conducted to evaluate the soil and groundwater conditions at the site, to make geotechnical engineering recommendations.” During the investigation, groundwater was encountered in the borings at depth varying from 18.5 to 22.5 ft bgs. Laboratory analysis of soils or groundwater for hazardous substances or petroleum products was not conducted.

5.8 Historical Use Information on Adjoining Properties

The following is a summary of adjoining property historical uses based on a review of the historical records reviewed in Section 5.6.

North: The adjoining property to the north appears to have been undeveloped containing a

eucalyptus grove from at least 1937 until approximately 2012. The property was used for paintball activities from at least 1992 until approximately 2012. A small building appears on the northwest corner of the property in 2005.

East: The adjoining property to the east appears to have been undeveloped containing a eucalyptus grove from at least 1937. The property was used for paintball activities from at least 1992 to present day. Historically, temporary residences and animal pens were located on the property. The northeast portion of the property, northeast of the subject property, is residential. The property historically contained undocumented and illegal storage of hazardous materials and waste which were identified by Napa County during an inspection in 1990. Additionally, two 10,000-gallon USTs, a 3,000-gallon UST, drums and other containers containing hazardous materials were in the northeast portion of the property. These items have since been removed.

South: The adjoining property to the south appears to have been undeveloped containing a eucalyptus grove from at least 1937 until approximately 2012. The property was used for paintball activities from at least 1992 until approximately 2012. The current warehouse building was constructed on the property in approximately 2020.

West: The adjoining property to the west appears to have been undeveloped containing a eucalyptus grove from at least 1937 to the present. The property contains the North Slough.

In accordance with ASTM International E1527-21, 8.3.1, the objective of compiling and analyzing historical property information and developing a history of the previous uses of the subject property, adjoining properties, and surrounding area is to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the subject property. All obvious uses of the subject property must be identified from the present, back to the subject property's first developed use, or back to 1940, whichever is earlier. The report must describe all identified uses, justify the earliest date identified for the subject property's first developed use, and explain the reason for any gaps in the history of use. This task requires reviewing as many of the standard historical resources in 8.3.4.1 through 8.3.4.8 as are necessary and both reasonably ascertainable and likely to be useful. Data failure occurs when all the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objective has not been met. Data failure is not uncommon in trying to identify historical uses at 5-year intervals back to first use or 1940 (whichever is earlier). If the data failure represents a significant data gap to the Environmental Professional (EP), ASTM International Standard E1527-21 requires documentation of the impact of the data gap on the ability of the EP to identify RECs. No significant historical use information data gaps were encountered.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

The methodology used by the Cameron-Cole representative during the March 13, 2023, site reconnaissance consisted of visual observations of readily accessible areas of the subject property to determine the presence or absence of hazardous substance or petroleum product storage areas or spills as indicated by stressed vegetation, soil staining, storage tanks, drums, etc.

6.2 General Site Setting

The subject property is approximately 10.17 acres located at 1055 Commerce Court with the Napa County Assessor's office associated APN 058-030-069. The subject property currently consists of undeveloped land with natural vegetation. The property is currently not being used and it remains undeveloped with no structures or occupants. Evidence of the southeast corner of the property previously used as a staging area during the development of the adjoining property south was observed during the site visit. The area was cleared of vegetation, gravel pathways exist, and footprint areas where temporary offices were located and miscellaneous trash and refuse associated with storage of building materials including rock piles were observed. An observed elongated soil mound was observed along the southern border of the subject property. The owner's representative of the subject property, Mr. John Wojtas of SDG, stated that this soil was placed there during the development of the adjoining property south.

6.2.1 Geologic, Hydrogeologic, and Topographic Conditions

Based on topographic maps, and considering regional flow patterns, the groundwater flow in the vicinity of the site is inferred to be generally to the west. It must be noted that groundwater flow direction can be influenced by factors such as surface topography, underground structures, seasonal fluctuation, soil and bedrock geology, and production wells which were not considered in this interpretation.

6.2.2 General Description of Structures

There were no noted structures on the subject property during site reconnaissance. Evidence of temporary structures previously located on the southeast corner of the site was observed. The area had been cleared of vegetation and gravel pathways remained in the area.

6.2.3 Roads

Commerce Court borders the subject property to the east.

6.2.4 Potable Water Supply

A potable water source was not observed during the site visit. The owner of the property, SDG, indicates potable water in the area is supplied by the City of American Canyon.

6.2.5 Sewage Disposal System

There were two stormwater drains located on the subject property at the time of site reconnaissance. The owner of the property, SDG, indicates sewage services in the area is provided by the City of American Canyon.

6.3 Subject Property Observations

6.3.1 Hazardous Substances and Petroleum Products in Connection with Identified Uses

No hazardous substances or petroleum products were observed on the subject property during the March 13, 2023, site reconnaissance.

6.3.2 Storage Tanks

There were no storage tanks located on the subject property during the site reconnaissance.

6.3.3 Odors

Noticeable odors were not identified at the subject property at the time of the site reconnaissance.

6.3.4 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.3.5 Drums

Cameron-Cole did not observed drums on the subject property by during the site reconnaissance.

6.3.6 Pits, Ponds, or Lagoons

There were no pits, ponds, or lagoons noted onsite during the site reconnaissance.

6.3.7 Stained Soil or Pavement

A very minimal oil sheen was observed on a puddle of water in the western portion of the site. The sheen was determined to be de minimis and is likely attributed to naturally occurring oils from the historic eucalyptus groves on and adjacent to the subject property.

6.3.8 Stressed Vegetation

Stressed vegetation was not observed during the site reconnaissance.

6.3.9 Solid Waste

A *de minimis* amount of household waste was noted during site reconnaissance. No hazardous waste was observed during the site reconnaissance. Several rock piles were present throughout the subject property. A large mound of soil was observed on the southern edge of the site. The owner representative of the subject property, Mr. John Wojtas, stated that the soil observed on the property was excess soil placed there during the development of the adjoining property south.

6.3.10 Wastewater

Cameron-Cole did not observe any wastewater on site.

6.3.11 Wells

No groundwater wells were observed during the site reconnaissance.

6.3.12 Septic Systems

Septic systems were not observed at the time of site reconnaissance.

7.0 INTERVIEWS

7.1 Site Owner/Occupants

A questionnaire was provided to the owner representative, Mr. John Wojtas. Mr. Wojtas indicated that there was a previous ESA and a Geotechnical report conducted on the property. Cameron-Cole obtained the prior reports from the City of American Canyon website and FCS.

7.2 Past Owners, Operators, Occupants

Past owners, operators, or occupants were not interviewed for this ESA.

7.3 User

Ms. Janna Waligorski Hudson, Senior Project Management, First Carbon Solutions, completed the User Questionnaire. A summary of the responses is provided in Section 4.0, and a copy of the questionnaire is provided in Appendix B.

7.4 State and/or Local Government officials

Cameron-Cole contacted the American Canyon Fire Protection District on March 24, 2023, requesting records pertaining to fires or responses to incidents, spills, or releases of hazardous substances or petroleum products at, or in the immediate vicinity of the property. Martha Banuelos responded on behalf of the American Canyon Fire Protection District and stated that, “The Fire District does not maintain environmental records on properties.”

Cameron-Cole contacted the County of Napa Environmental Health Division on March 24, 2023, requesting records regarding environmental violations, releases, or hazardous material or petroleum product storage, storage tanks, or other environmental concerns associated with the subject property. A public records request was submitted to the County of Napa Public Records Department. No response has been received as of the date of this report.

8.0 FINDINGS AND CONCLUSIONS

The goal of this Phase I ESA is to identify the presence or likely presence of hazardous substances or petroleum products on the subject property under conditions that indicate an existing release, a past release, or a material threat of release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water on the property. The findings of this report are summarized below and may include known or suspected RECs, CRECs, HRECs, VECs, BERs identified during the performance of this Phase I ESA.

- Through the review of historical aerial photographs, it is possible that the subject property has historically been used for agricultural purposes. Cameron-Cole notes that application of pesticides, herbicides, or fertilizers are commonly associated with properties developed for agricultural purposes. Proper application of these materials is not considered a release under the ASTM International E1527-21 Standard Practice. Therefore, the potential presence of these substances on the property would not be considered a REC, unless evidence of improper application, a spill or release, or a material threat of a spill or release were identified during the Phase I assessment. No evidence of improper application, releases, or potential releases of agricultural chemicals were noted in the report. The possible historic use of the subject property for agricultural purposes is not considered a recognized environmental condition for the subject property.

- The subject property contained a eucalyptus tree grove from at least 1937 through approximately 2012. The property was used for paintball activities from approximately 1992 until approximately 2012.

  During the *Limited Site Investigation, 2 Eucalyptus Drive* prepared by ICES and dated April 19, 2010, two test pits were installed on the subject property, TP-2 and TP-3. One soil sample was collected from each test pit at 6-9 ft. bgs. TPHd was detected in TP-2 (160 mg/kg) above the reported residential ESL (83 mg/kg). ICES stated that since TP-2 was located in the eucalyptus grove, the elevated concentration identified in the sample may have been the result of the natural oil compounds in eucalyptus trees. Arsenic (8.8 mg/kg) and vanadium (46 mg/kg and 63 mg/kg) were also identified at concentrations above the stated residential RSLs in TP-2 and TP-3. However, ICES stated that the concentrations identified were within background levels for area soils.

  The current Tier 1 ESL (2019) for TPHd is 230 mg/kg and the 2019 Tier 1 ESLs for arsenic and vanadium are 0.067 mg/kg and 18 mg/kg, respectively. Therefore, the concentration of TPHd identified in 2010 is below the current Tier 1 ESL. Although the concentrations of arsenic and vanadium remain above the current Tier 1 ESL, the concentrations are within background levels for California soils. Evidence was not identified during this assessment that the petroleum products or hazardous substances have been used or stored on the subject property. The concentrations of TPHd, arsenic, and vanadium identified during the 2010 Limited Site Investigation in soils on the subject property are not considered recognized environmental conditions for the subject property.

There were no RECs, CRECs, HRECS, VECs, or BERs identified at the subject property at the time of this report.

9.0 DEVIATIONS

There were no contractual excluded elements or deviations from the ASTM International Standard E1527-21.

11.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

The following Cameron-Cole personnel were involved with the site inspection, records search, regulatory review, and drafting of the Phase I Environmental Site Assessment Report for the property located at 1055 Commerce Court, American Canyon, Napa County, California.

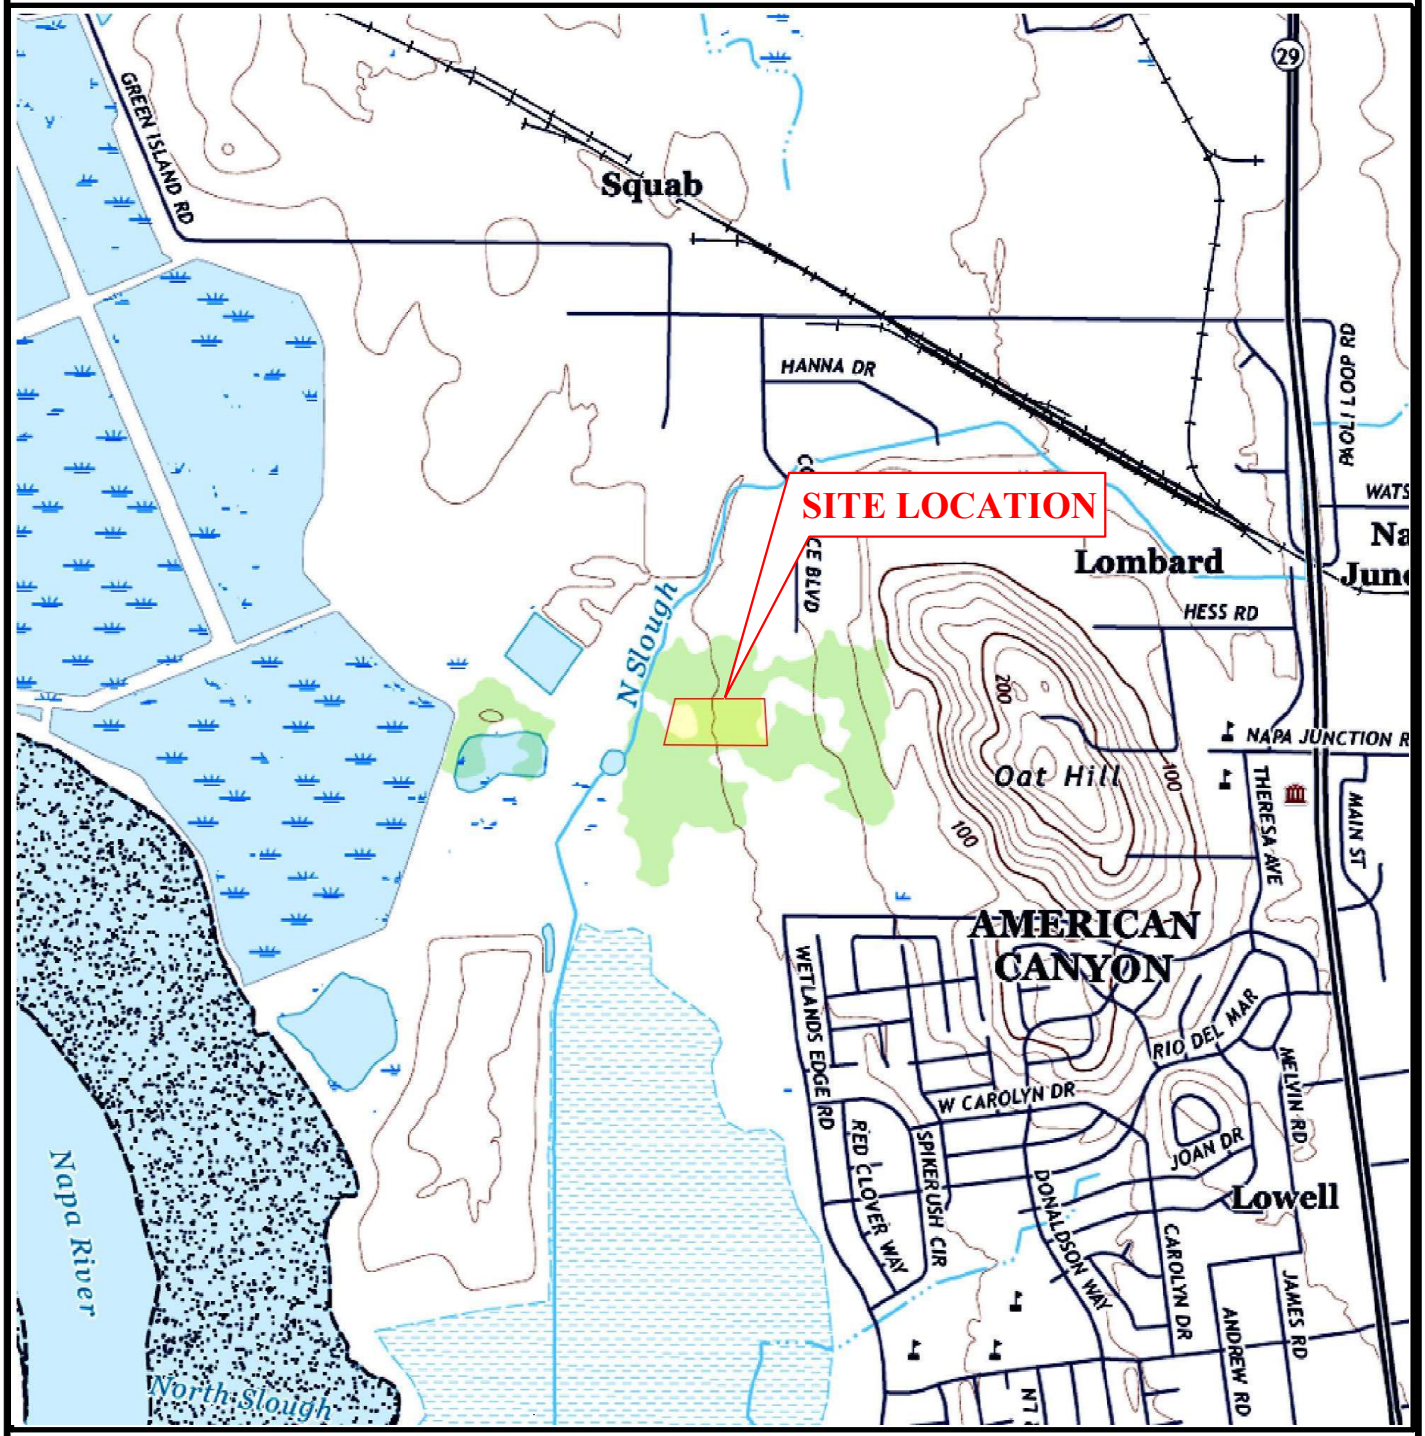
Prepared by:

Angela Mattemill
Environmental Scientist

This is to certify that I have reviewed and approve the contents of the Phase I Environmental Site Assessment Report for the property located at 1055 Commerce Court, American Canyon, California. Certification of the environmental professional are provided in Section 14, and professional qualifications are provided in Appendix G.

Reviewed by:

Robert Fagerness, PE
Senior Engineer



12.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 312.10 of 40 CFR 312, and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

AN ADEC INNOVATION

PHASE I ESA USER'S QUESTIONNAIRE

In order to qualify for protection from land owner liability under CERCLA as an *innocent landowner, bona fide prospective purchaser,* or *contiguous property owner*, ASTM standard practice E1527-21 and the federal AAI rule (40 CFR 312) require that the User of the Phase I ESA report provide certain information (if available) to the Environmental Professional completing the assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Information that is not or cannot be provided to the Environmental Professional may be identified as a "data gap" in the Phase I ESA report.

Property Information.

Cameron-Cole/Client Project #: 02-5639 Property Name: SDG Commerce 220

Property Address: 1055 Commerce Court

City: American Canyon State: CA Zip: 94503

Property Owner Name: Stravinski Development Group

Please answer the following questions as completely as possible. Attach additional pages as needed.

1. **Reason for Completion.** Is the reason for performing the Phase I to satisfy one of the requirements for the innocent landowner defense under CERCLA AND/OR to understand potential environmental conditions that could materially impact the operation of the business associated with the parcel of commercial real estate?

   X_____ Yes _____ No

   Other (indicate if required for property transaction, sale, purchase, exchange, lending requirement, etc). _____
   To support analysis of the project under CEQA

2. **Environmental Cleanup Liens.** Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

   _____ Yes ____X_____ No

   If yes, describe or attach details of the lien_____
   _____

3. **Activity and Land Use Limitations.** Are you aware of any activity and use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded as applicable to the property as a result of environmental contamination, investigation, cleanup, or related matters?

   _____ Yes __X_____ No

   If yes, describe or attach details of the limitations_____
   _____

CAMERON-COLE
AN ADEC INNOVATION

PHASE I ESA USER'S QUESTIONNAIRE

4. **Specialized Knowledge or Experience**. As the User of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property, such that you would have specialized knowledge about chemicals and processes used by this type of business?

   _____ Yes ___X_____ No

   If yes, describe or attach details of your specialized knowledge or experience_____
   _____

5. **Relationship of Purchase Price to Fair Market Value of Property**. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, do you have any reason to believe that the reduced purchase price may be related to contamination known or believed to be present at the property?

   _____ Yes, I have reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property?

   _____ No, I have no reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property?

   _____X____ Not applicable. User is not involved in a purchase of the property.

6. **Commonly Known or Reasonably Ascertainable Information**. Are you aware of commonly known or reasonably ascertainable information about the property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products? For example:

   Do you know the past uses of the property?
   _____ Yes (describe) _____
   _____
   __X_____ No

   Do you know of chemicals, hazardous substances or petroleum products that are present or once were present at the property?
   _____ Yes (describe) _____
   _____
   ___X_____ No

   Do you know of spills or other releases of chemicals, hazardous substances or petroleum products that have taken place at the property?
   _____ Yes (describe) _____
   _____
   ____X____ No

   Do you know of any environmental cleanups that have taken place at the property?
   _____ Yes (describe) _____
   _____
   ____X____ No

CAMERON-COLE
AN ADEC INNOVATION

PHASE I ESA USER'S QUESTIONNAIRE

7. **The Degree of Obviousness of Contamination.** E1527-21 and the federal AAI rule (40 CFR 312.31) require that the Phase I ESA consider the degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation. Based on your knowledge and experience related to the property, are there any *obvious* indictors that point to the presence or likely presence of contamination at the property?

   _____ Yes (describe) _____
   _____
   ___X_____ No

8. **Availability of Previous Environmental Reports.** Are you aware of previous environmental site assessment reports, other environmental reports, documents, correspondence, etc. concerning the property and its environmental condition?

   ____X____ Yes (please identify and provide copies, if available) _____
   January 2019 Final Initial Study for the SDG Commerce 330 Warehouse Project appears to consider the subject site. It references a Phase I ESA conducted by ATC in June 2018. I do not have access to the 2018 Phase I ESA document. The 2019 Final Initial Study indicates that the 2018 Phase I ESA summarized previous ESA's conducted on the larger 106-acre Couch Property, of which the subject property was a part of.
   _____
   _____ No

9. **Proceedings Involving the Property.** Are you aware of any proceedings involving the property? For example:

   Are you aware of any pending, threatened or past litigation relevant to hazardous substances or petroleum products in, on or from the property?
   _____ Yes (describe) _____
   _____
   ___X_____ No

   Are you aware of any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?
   _____ Yes (describe) _____
   _____
   _____X___ No

   Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?
   _____ Yes (describe) _____
   _____
   ___X_____ No

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Waste Details

Waste Line Number :	1
Is DOT Hazardous :	Y
DOT ID Number :	NA3077
DOT Information :	NA3077, HAZARDOUS WASTE, SOLID, N.O.S., 9, PG III
Non Waste Description :	N/R
Quantity :	35 Pounds
Quantity Tons, Acute, Non-Acute :	0.0175, 0, 0.0175
Quantity Kg, Acute, Non-Acute :	0, 15.873026
Management Method :	H132 - LANDFILL (WITH PRIOR TREATMENT AND/OR STABILIZATION)
Is EPA Waste :	Y
Federal Code :	D009
State Code :	CA - 181

Waste Line Number :	2
Is DOT Hazardous :	N
DOT ID Number :	N/R
DOT Information :	N/R
Non Waste Description :	USED OIL FILTERS CONTAMINATED WITH AMMONIA AND DEBRIS
Quantity :	6 Pounds
Quantity Tons, Acute, Non-Acute :	0.003, 0, 0.003
Quantity Kg, Acute, Non-Acute :	0, 2.72109
Management Method :	H132 - LANDFILL (WITH PRIOR TREATMENT AND/OR STABILIZATION)
Is EPA Waste :	N
Federal Code :	N/R
State Code :	CA - 181

Waste Line Number :	3
Is DOT Hazardous :	N
DOT ID Number :	N/R
DOT Information :	N/R
Non Waste Description :	OILY DEBRIS
Quantity :	60 Pounds
Quantity Tons, Acute, Non-Acute :	0.03, 0, 0.03
Quantity Kg, Acute, Non-Acute :	0, 27.2109
Management Method :	H132 - LANDFILL (WITH PRIOR TREATMENT AND/OR STABILIZATION)
Is EPA Waste :	N
Federal Code :	N/R
State Code :	CA - 223

Source Description
Source Description : The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
OSHA-OIS

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

(E-GGRT, accessible through an EPA web page, is used to submit annual reports in support of the EPA rule for mandatory reporting of greenhouse gases (GHG) by large GHG emissions sources. Implementation of 40 CFR part 98 is referred to as the greenhouse gas reporting program (GHGRP). This comprehensive, nationwide emissions data will provide a better understanding of the sources of GHGs and will guide development of the policies and programs to reduce emissions. The publically available data will allow reporters to track their own emissions, compare them to similar facilities, and aid in identifying cost effective opportunities to reduce emissions in the future.

FRS Environmental Interest

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Report Cycle :	2019
Hazardous Waste Page Number :	16
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	NON-RCRA HAZARDOUS WASTE LIQUID, (ETHYLENEDIAMINE-TETRAACETIC ACID (EDTA))
Primary NAICS :	312111 - Soft Drink Manufacturing
Source Code :	G11 - Discarding off-specification, out-of-date, and/or unused chemicals or products
Form Code :	W219 - Other organic liquid (specify in comments)
Management Method :	H141 - The site receiving this waste stored/bulked and transferred the waste with no treatment or recovery (H010-H129), fuel blending (H061), or disposal (H131-H135) at that receiving site.
Generation Tons :	0.2

Source Description

Source Description :

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :	All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI). The Energy Information Administration (EIA) is an independent agency within U.S. Department of Energy that develops surveys, collects energy data, and analyzes and models energy issues. The EIA-860 database supports the annual electric generator report and contains electric utility and non-utility (including independent power producers, combined heat and power producers, and other industrials) generator-specific plant data, including county and state location and ownership information.
Source Description :	The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Waste Generator Details

Details for this site have been truncated due to the large number of available details for this site within this dataset. For the complete details for this site, contact your Envirosite account representative for a complimentary site report containing all of the details available.

State Waste :

2017: 221 - Waste oil and mixed oil, 0.8 tons to CAD008302903
2017: 331 - Off-specification, aged or surplus organics, 0.08 tons to CAD008302903
2017: 223 - Unspecified oil-containing waste, 0.1 tons to CAD008302903
2017: 791 - Liquids with pH <= 2, 0.07 tons to CAT080014079
2017: 331 - Off-specification, aged or surplus organics, 4.58 tons to CAD008302903
2016: 135 - Unspecified aqueous solution, 0.175 tons to CAT080014079
2016: 331 - Off-specification, aged or surplus organics, 1.05 tons to CAT080014079
2016: 352 - Other organic solids, 0.0105 tons to CAT080014079
2016: 221 - Waste oil and mixed oil, 0.2 tons to CAD008302903
2016: 181 - Other inorganic solid waste, 0.1 tons to CAT080014079
2016: 512 - Other empty containers 30 gallons or more, 0.02 tons to CAT080014079
2016: 551 - Laboratory waste chemicals, 0.075 tons to CAD008302903
2016: 331 - Off-specification, aged or surplus organics, 0.2 tons to CAD008302903
2016: 141 - Off-specification, aged or surplus inorganics, 0.0575 tons to CAD008302903
2016: 122 - Alkaline solution without metals pH >= 12.5, 0.2 tons to CAD008302903
2016: 331 - Off-specification, aged or surplus organics, 3.9725 tons to CAD008302903
2016: 791 - Liquids with pH <= 2, 0.0675 tons to CAT080014079
2015: 331 - Off-specification, aged or surplus organics, 0.905 tons to CAD008302903
2015: 223 - Unspecified oil-containing waste, 0.1425 tons to CAD008302903
2015: 221 - Waste oil and mixed oil, 0.1475 tons to CAD008302903
2015: 214 - Unspecified solvent mixture, 0.0015 tons to CAT080014079
2015: 512 - Other empty containers 30 gallons or more, 0.025 tons to CAT080014079
2015: 791 - Liquids with pH <= 2, 0.051 tons to CAT080014079
2014: 214 - Unspecified solvent mixture, 0.01 tons to CAD008302903
2014: 141 - Off-specification, aged or surplus inorganics, 0.015 tons to CAD008302903
2014: 791 - Liquids with pH <= 2, 0.0425 tons to CAT080014079
2014: 331 - Off-specification, aged or surplus organics, 0.925 tons to CAT080014079

Source Description

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Description :

A breach in a secondary treatment pond is possibly the cause of this release, caller states the exact cause is still under investigation. Caller estimates a possible release of over 1000 gallons over an extended period of time. Caller states it looks like grey bio-waste. The source seems to originate in the incorporated area of the City of American Canyon, flowing into the Unincorporated area of Napa County. Caller states that as of today the release is secured.

Source Description

Source Description : The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Waste Generator Details

State Waste :

2019: 135 - Unspecified aqueous solution, 1.26000 tons to CAD008488025
2019: 141 - Off-specification, aged or surplus inorganics, 1.45950 tons to CAD008488025
2019: 791 - Liquids with pH <= 2, 1.87650 tons to CAD008488025
2019: 181 - Other inorganic solid waste, 0.28000 tons to CAD028409019
2019: 122 - Alkaline solution without metals pH >= 12.5, 2.31850 tons to CAD008488025
2019: 791 - Liquids with pH <= 2, 0.41700 tons to CAD008488025
2019: 551 - Laboratory waste chemicals, 0.04250 tons to CAD028409019
2019: 123 - Unspecified alkaline solution, 1.45950 tons to CAD008488025
2019: 331 - Off-specification, aged or surplus organics, 0.16500 tons to CAD028409019

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description
Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description
Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Site History :

RP (NV Caststone, LLC) requested agency oversight to facilitate site closure. Site recently used to manufacture architectural cast stone (concrete products). Former industrial uses included diesel engine repair and parts cleaning (1984-2003?). Environmental impacts appear to be associated with past use of an underground oil/water separator collecting wastewater from a wash pad. 2011 data reported groundwater COCs exceeding 2019 ESLs included Petroleum - diesel and select metals (AS, Ba, Cd, Cr, Pb and Hg); soil impacts were limited to low concentrations of As and Pb (at or below background limits). Groundwater plume confined to northeast corner of the site, not fully delineated. Soil vapor data not previously collected for the site.

RB Case Number :	28S0071
Potential Media Affected :	Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern :	Arsenic, Chromium, Lead, Mercury (elemental), Other Metal, Total Petroleum Hydrocarbons (TPH)

Completed Activities

Completed Date : 2014-05-01
Area Name : PROJECT WIDE
Sub Area Name : N/R
Document Type : Preliminary Assessment Report

Comments : DTSC conducted a reassessment of sites in EPA's CERCLIS database on EPA's behalf. The regional waterboard had reviewed past soil and groundwater investigations and determined that no further action was required. Based on this information and available sampling data, DTSC recommended no further federal assessment under CERCLA.

Completed Date : 2008-05-28
Area Name : PROJECT WIDE
Sub Area Name : N/R
Document Type : Site Screening

Comments : The Triage recommended No Further Action. A Sensitive Receptor Survey and Risk Based Corrective Action Assessment submitted to the SF Water Board indicate that the contaminant residuals present at the site do not pose a significant health risk to current or future occupants of the site. Based on this Report, a No Further Action Letter was issued by the SF Board dated November 20, 2000.

Completed Date : 1990-03-29
Area Name : PROJECT WIDE
Sub Area Name : N/R
Document Type : Preliminary Assessment Report

Comments : PRELIM ASSESS DONE ECOLOGY AND ENVIRONMENT PRELIMINARY ASSESSMENT 2/12/90. SITE POSES A HIGH POTENTIAL OF RELEASE TO SURFACE WATER. EPA RECOMMENDATION-MEDIUM PRIORITY SSI.

Source Description

Source Description : The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.
TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Source Description :

NCDB supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

AFS contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description : ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
NCDB supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description
Source Description : The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description : The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Site History :

The property has been used for vehicle storage and dismantling for the past 29 years. A fire occurred on site in October 2017, and the Owner has been removing fire damaged vehicles and burn debris from the property since then. A workplan for site investigations was prepared and approved by the Water Board in July 2018. Two time extensions have been allowed for investigation report submittal, due to delays in debris removal; currently report is due July 5, 2019. Some sites proposed for investigation may still be inaccessible, but all accessible locations proposed for sampling will be addressed. Remaining proposed sites to be sampled will be evaluated once debris removal is complete.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description
Source Description : The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Agency Contact: 916-322-2861
Most Recent Contact: 01/11/2023

FA 2 - CA: Financial Assurance Information for solid waste facilities

Agency Version Date: 07/08/2022
Agency Update Frequency: Varies
Planned Next Contact: 03/30/2023
Agency: Department of Environment & Natural Resources
Agency Contact: 916-341-6066
Most Recent Contact: 01/04/2023

OTHER ASCERTAINABLE RECORDS (cont.)

FIRE AREAS - CA: The multi-agency statewide database of fire perimeters.

Agency Version Date: 12/22/2022
Agency Update Frequency: No Update
Planned Next Contact: 03/20/2023
Agency: California Department of Forestry and Fire Protection
Agency Contact: 916-445-4302
Most Recent Contact: 12/22/2022

HAZNET - CA: Listing of hazardous waste manifests from when hazardous waste is transported from generators to permitted recycling treatment storage or disposal facilities by registered hazardous waste transporters

Agency Version Date: 04/05/2021
Agency Update Frequency: Annually
Planned Next Contact: 05/30/2023
Agency: California Environmental Protection Agency
Agency Contact: 916-341-5791
Most Recent Contact: 03/03/2023

HIGH FIRE - CA: Fire hazard severity zones mapped as areas of significant fire hazards on the basis of fuels terrain weather and other factors

Agency Version Date: 02/17/2023
Agency Update Frequency: No update
Planned Next Contact: 05/16/2023
Agency: California Department of Forestry and Fire Protection
Agency Contact: 916-445-4302
Most Recent Contact: 02/17/2023

HIST CORTESE - CA: The historical compliance document used in providing information about the location of hazardous material release sites utilized by the state local agencies and developers

Agency Version Date: 01/19/2023
Agency Update Frequency: Quarterly
Planned Next Contact: 04/17/2023
Agency: Department of Toxic Substance Control
Agency Contact: 916-322-2861
Most Recent Contact: 01/19/2023

HIST HAZNET - CA: List of hazardous waste manifests from when hazardous waste is transported from generators to permitted recycling treatment storage or disposal facilities by registered hazardous waste transporters that are no longer in current agency list.

Agency Version Date: 10/10/2018
Agency Update Frequency: Annually
Planned Next Contact: 04/27/2023
Agency: California Environmental Protection Agency
Agency Contact: 916-341-5791
Most Recent Contact: 01/31/2023

HIST HWP - CA: List of the Department of Toxic Substance Control's hazardous waste transporters and corrective action that are no longer in current agency list.

Agency Version Date: 01/18/2019
Agency Update Frequency: Annually
Planned Next Contact: 04/05/2023
Agency: Department of Toxic Substance Control
Agency Contact: 916-322-2861
Most Recent Contact: 01/09/2023

HIST LDS - CA: List of areas of land on or in which hazardous waste is placed or the largest area in which there is significant likelihood of mixing hazardous waste constituents in the same area that are no longer in current agency list.

Agency Version Date: 05/20/2018
Agency Update Frequency: Annually
Planned Next Contact: 05/03/2023
Agency: State Water Qualilty Control Board
Agency Contact: 916-341-5791

HIST PWS ENF
Historical Public Water Supply locations with Enforcement Violations
Environmental Protection Agency
(800) 426-4791
List of Safe Drinking Water Information Systems (SDWIS) with enforcement violations that are no longer in current agency list.

NWIS
National Water Information Systems
United States Geological Society
(703) 648-5953
Information on all water resources for the United States. This database contains all current and historical data for the nation.

PWS
Public Water Supply
Environmental Protection Agency
(800) 426-4791
Safe drinking water information Systems

PWS ENF
Public Water Supply locations with Enforcement Violations
Environmental Protection Agency
(800) 426-4791
Safe drinking water information Systems with enforcememnt violations

WELLS - GAMA - CA
California Groundwater Ambient Monitoring Assessment
State Water Resources Control Board
916-341-5791
Brings together datasets from California state agencies including: Public Health Water Resources and Pesticide Regulation as well as from the US Geological Survey Lawrence Livermore National Laboratory and the Water Boards. It shows results for untreated raw water in different types of wells for naturally-occurring and man-made chemicals.

FLOOD Q3
Flood data
Environmental Protection Agency
(202) 566-1667
Q3 Flood Data

HYDROLOGIC UNIT
Hydrologic Unit Maps
USGS
The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

DAMS - CA
California Dam Inundation Maps
Department of Water Resources
916-845-8275
Dam inundation maps show the maximum extent of damage of a flood wave from a dam failure

OIL & GAS WELLS - CA
Oil and Gas Well Data
State of California Department of Conservation
916-327-1042
Oil and gas well locations and detail for all 6 districts

RADON
National Radon Database
U.S. Environmental Protection Agency
215-814-2469
A study of the EPA/State Residential Radon Survey and the National Residential Radon Survey.

RADON - CA
Radon tested locations in California
California Department of Health Services
(916) 449-5674
A table of long term and short term indoor radon measurments

RADON EPA
RADON EPA
U.S. Environmental Protection Agency
215-814-2469
EPA list of Radon zones

AIRPORT FACILITIES
Airport landing facilities
Federal Aviation Administration
(866) 835-5322
Airport landing facilities

BASINS
Better Assessment Science Integrating point & Non-point Sources
U.S. Environmental Protection Agency
855-246-3642
Integrated geographical information system national watershed data and environmental assessment known as Better Assessment Science Integrating point & Non-point Sources

DIGITAL OBSTACLE
Obstacles of interest to aviation users
Federal Aviation Administration
855-379-6518
The Digital Obstacle File describes all known obstacles of interest to aviation users in the U.S. with limited coverage of the Pacific the Caribbean Canada and Mexico. The obstacles are assigned unique numerical identifiers; accuracy codes and listed in order of ascending latitude within each state or area by FAA Region.

EPICENTERS
National Geographical Data Center
National Geographical Data Center
303-497-6826
List of recent and historic earthquakes and information.

FLOOD DFIRM
National Flood Hazard Layer Database
Federal Emergency Management Agency
The National Flood Hazard Layer Database (NFHL) is a computer database that contains the flood hazard map information from FEMAs Flood Map Modernization program. These map data are from Digital Flood Insurance Rate Map (DFIRM) databases and Letters of Map Revision.

Prepared for Envirosite Corporation By:

Property Archives

Envirosite's Standard City Directory Report is a screening tool designed to assist in historical use determination of a subject property and adjacent properties. It includes a search of Property Archives digital datasets and national book collections including the Library of Congress and/or the Allen County Public Library at five year intervals or the closest available intervals.

RESEARCH SUMMARY:

The following research sources were consulted in the preparation of this report:

SOURCE:	***YEAR:***
Property Archives	2018, 2015, 2010, 2006, 2002, 1998, 1993

Property Archives is a proprietary and comprehensive dataset of over 1.5 billion commercial, industrial and residential records, business names and uses and occupant records for every city and town in the United States, from recent years to the early 1990s. Property Archives dataset is wholly owned and operated by Property Archives, LLC

This report was prepared by Property Archives, LLC for Envirosite Corporation

Property Archives

SUBJECT PROPERTY:

1055 Commerce Court , American Canyon, CA 94503

ADJOINING PROPERTIES:

Eucalyptus Dr, American Canyon, CA

Commerce Ct, American Canyon, CA (aka Commerce Blvd)

Historical Information Gatherers

This Research Summary identifies the products and services provided by Historical Information Gatherers, Inc. (HIG) for the above referenced site location. All products are provided as PDFs unless otherwise noted.

FIM+ Maps

The HIG Historical Map Collection and the United States Library of Congress Map Collection were searched for fire insurance maps (FIMs), real estate atlases and similar maps for the site location and adjoining properties. No FIMs or similar maps were identified for the site location and/or adjoining properties.

Disclaimer & Limitation of Liability

This Research Summary and the related documents and images provided by Historical Information Gatherers (hereafter referred to as the "Site Specific HIG Data") contain information obtained from a variety of public and private sources. Additional information for the site and surrounding properties may exist. Accordingly, there can be no guaranty or warranty that the information provided is complete for its particular intended purpose. No warranty expressed or implied, is made whatsoever in connection with the Site Specific HIG Data. Historical Information Gatherers specifically disclaims the making of any such warranties, including without limitation, merchantability or fitness for a particular purpose. Historical Information Gatherers, its officers, employees and independent contractors cannot be held liable to anyone for any loss or damage, whether arising out of errors or omissions, negligence, accident or any other cause, resulting directly or indirectly from any information provided or any information not provided in the Site Specific HIG Data. Any liability on the part of Historical Information Gatherers is strictly limited to a refund equal to the amount paid for the Site Specific HIG Data.

HIG Copyright Notice

This Research Summary and the selection, arrangement and compilation of Site Specific HIG Data are the property of Historical Information Gatherers. © Copyright 2023 by Historical Information Gatherers, Inc. All rights reserved. The person or entity that ordered and paid for the Site Specific HIG Data is granted a personal, non-assignable, limited license to reproduce the Site Specific HIG Data solely for purposes of providing supporting documentation for reports produced for the site location which is noted on page one of this Research Summary. Any other reproduction or other use of the Site Specific HIG Data in any media or format, in whole or in part, is expressly prohibited without prior written permission from Historical Information Gatherers, and the person or entity that ordered and paid for the Site Specific HIG Data assumes all liability for the making of any such reproductions.

Licensing Agreement

The licensing agreement between Historical Information Gatherers and infoGroup provides that Historical Information Gatherers may create photocopies or reproductions of portions of Polk City Directories, Hill-Donnelley Criss-Cross Directories and other directories under infoGroup copyright. The licensing agreement also permits the person or entity that ordered and paid for the Site Specific HIG Data to include photocopies or reproductions of portions of Polk City Directories, Hill-Donnelley Criss-Cross Directories and other directories under infoGroup copyright as supporting documents for reports produced for the site which is the subject of the Site Specific HIG Data.

APPENDIX E

Interview Documentation

Interview with User

Date: March 28, 2023

Name: Ms. Janna Waligorski Hudson

Title: Senior Project Manager, FCS

Interviewed by: Angela Mattmiller, Cameron-Cole, LLC

Ms. Hudson was interviewed via a User Questionnaire completed on March 28, 2023. Ms. Hudson indicated that she was unaware of chemicals, hazardous substances, or petroleum products that are present on the property. Ms. Hudson indicated that she was not aware of any AULs, such as engineering controls, land use restrictions, and institutional controls that have been filed or recorded on the subject property.

A summary of the responses is provided in Section 4.0, and a copy of the questionnaire is provided in Appendix B.

Interview with Owner

Date: March 22, 2023

Name: Mr. John Wojtas

Title: Owner Representative, Stravinski Development Group

Interviewed by: Angela Mattmiller, Cameron-Cole, LLC

Mr. Wojtas was interviewed via an Owner Questionnaire completed on March 22, 2023. Mr. Wojtas indicated that he was unaware of chemicals, hazardous substances, or petroleum products that are present on the property. Mr. Wojtas indicated that he was not aware of any AULs, such as engineering controls, land use restrictions, and institutional controls that have been filed or recorded on the subject property.

A copy of the questionnaire is provided in Appendix B.

Interview with Local officials

Date: March 24, 2023

Name: American Canyon Fire Protection District

Title: N/A

Interviewed by: Angela Mattmiller, Cameron-Cole, LLC

Cameron-Cole contacted the American Canyon Fire Protection District on March 24, 2023, requesting records pertaining to fires or responses to incidents, spills, or releases of hazardous substances or petroleum products at, or in the immediate vicinity of the property. Martha Banuelos responded on behalf of the American Canyon Fire Protection District and stated that, "The Fire District does not maintain environmental records on properties."

Date: March 24, 2023

Name: County of Napa Environmental Health Division

Title: N/A

Interviewed by: Angela Mattmiller, Cameron-Cole, LLC

Cameron-Cole contacted the County of Napa Environmental Health Division on March 24, 2023, requesting records regarding environmental violations, releases, or hazardous material or petroleum product storage, storage tanks, or other environmental concerns associated with the subject property. A public records request was submitted to the County of Napa Public Records Department. No response has been received as of the date of this report.

APPENDIX F

Professional Qualifications

Qualifications of Professionals

Angela Mattmiller, Environmental Scientist

Angela Mattmiller has more than nine years of relevant professional experience in environmental science. Ms. Mattmiller has at least six years of experience performing Phase I and Phase II Environmental Site Assessments. Ms. Mattmiller is responsible for performing technical data analysis, developing site maps of groundwater elevation and chemical iso-concentration contours, and preparing environmental reports for various projects. Ms. Mattmiller is specifically involved in assisting clients with their various compliance requirements.

Education:	B.S. Environmental Science, University of Florida, 2002
	ASTM International Standard Practice E1527 Training Courses for Phase I Environmental Site Assessments, 2006, 2007 and 2008
	Environmental Date Resources Due Diligence at Dawn AAI and Liability Course, 2007
Certifications:	40-hour Hazardous Waste Operations and Emergency Response Training
	8-hour HAZWOPER Refresher

Robert Fagerness, PE, Senior Engineer

Mr. Fagerness has more than 33 years of experience conducting Phase I and II Environmental Site Assessments (ESAs), site remediation, environmental compliance, and permitting. His expertise includes collecting soil, groundwater, and soil vapor data; interpreting data; developing SWPPP and Spill Prevention Control and Countermeasure plans; conducting Hazardous Waste Tank Assessments; and providing various environmental permitting services, including human health risk evaluation and National Pollutant Discharge Elimination System (NPDES) permits. Mr. Fagerness is adept in project and construction management, environmental and subsurface investigations, and local, State, and federal agencies coordination. Mr. Fagerness has worked with numerous clients, including investors and lending institutions, to complete thousands of Phase I ESAs for property transactions as part of the due diligence process in compliance with the Comprehensive Environmental Response, Compensation, and Liability Act of 1980. He has assessed different property types, including commercial, industrial, and multi-family residential developments, as well as self-storage facilities, gas stations, automotive services developments, dry cleaners, day cares, and hotels.

Education:	B.S. Environmental Resources Engineering University of California, Humboldt, CA
	M.S. Civil Engineering, University of California, Sacramento, CA
Certifications:	Licensed Civil Engineer California

2. SSA OUTPUT FILES

I. Executive Summary

A hydrograph analysis was performed for the proposed SDG Commerce 220 Distribution Center project located at Commerce Boulevard in American Canyon, California.

The project site hydrology study was calculated using the following City of American Canyon Engineering Standards Plan and Specifications (ESPS):

Design Area: Detention Basin

Design Method: Unit Hydrograph

Design Return: 100-year/24-hour

Peak discharge from a detention basin shall not exceed 90% of the undeveloped peak flow from the 24-hour, 100-year event.

Pre-Project Peak Flow Rates:

Existing Watershed: $Q_{100\text{-yr-Pre}} = 29.3$ cfs
Existing Watershed: $Q_{100\text{-yr-Pre-90\%}} = 26.4$ cfs

Post-Project Watershed peak flow rates:

Proposed Detention: $V_{100\text{yr-Detained}} = 30{,}930\ ft^3$
Proposed Watershed: $Q_{100\text{-yr Post-Total}} = 24.5$ cfs < 26.4 cfs

Post-project peak runoff rates do not exceed the allowable 90% pre-project stormwater runoff rate, see SSA Output Files for detailed watershed calculations in Attachment 2.

II. Purpose

This report addresses City of American Canyon drainage and hydromodification requirements for the Commerce 220 Distribution Center, including a pre and post construction hydrologic analysis and on-site stormwater detention.

III. Existing Conditions

The Commerce 220 Distribution Center project is located on Commerce Court in American Canyon, California, see Vicinity Map in Attachment 1. The parcel APN is 058-030-069, and has an area of 10.17 acres. The existing site is currently undeveloped.

An additional 13.68 acres is included in the runoff calculations to account for run-on from the upslope drainage from the adjacent property, just east of this development. The run-on areas include a 0.98-acre segment of impervious area on Commerce Boulevard and 12.70 acres of wooded area. The point of concentration for this upslope drainage is the culvert and drain inlets at Commerce Court. Access to the site will be from Commerce Court.

The predominant soil type in the project area is Haire Clay Loam, which is of the Hydraulic Soil Group D, see Hydrologic Soil Map in Attachment 1. The property is relatively flat with gentle slopes draining toward the west. Runoff from the property flows via surface flows to the west property line. Stormwater is ultimately conveyed through the North Slough to the Napa River.

IV. Proposed Development

The project will include the construction of a new warehouse building, including a new driveway, loading docks, and parking areas. A detention pond with biotreatment will be installed on site per BASMAA standards.

IV.A. Run-On Subbasins

The site run-on analysis was determined using the American Canyon Engineering Standard Plans & Specifications (ESPS) and modeled in Autodesk Storm & Sanitary Analysis (SSA). Run-on flows east to west and will be capture by swales and conveyed under Commerce Boulevard by three (3) concrete culverts. Approximately one third of the project run-on will follow existing drainage paths through a series of mapped wetlands and will not be treated or detained in the detention pond. This portion of the run-on will be routed and discharged towards the northwest corner of the property. The remaining two thirds of the run-on will be routed through the on-site storm drain system to the detention pond, see Proposed Conditions Hydrology Exhibit in Attachment 1.

IV.B. On-site Subbasins

Subbasin B consists of the warehouse roof, ADA walkway access, parking lots and driveway surrounding the warehouse. Subbasin C consists of wetlands located to the north of the warehouse, and vegetated area located to the west. Subbasin D consists of the truck loading docks and two parking lots located to the south of the warehouse. Subbasin D has been accounted for in the Hydrology Analysis for ICC 330 Distribution Center, see Proposed Conditions Hydrology Exhibit in Attachment 1.

IV.C. Stormwater Detention

The detention pond is located along the west property line and is designed with biotreatment. The detention pond capacity is 87,684 cubic feet, and will store and treat stormwater from the on-site and offsite watershed. The hydrograph analysis results in a required storage volume of 30,930 cubic feet for the proposed development. Four storm drain outlet structures will be located on the west side of the pond. All structures will control the stormwater outflow through side opening cutouts in the precast structure and receives low flows from the bio-retention sub-drain network. Each side opening has a 12” wide by 9” tall cut-out at an elevation of 11.00 ft, as shown on the Use Permit Plans. The side openings allow stormwater to infiltrate into the biotreatment during smaller storm events per BASMAA standards. Stormwater from the detention pond will discharge to level spreaders along the western property line.

V. PRE & POST-DEVELOPMENT DRAINAGE STUDY

This drainage study computes the pre and post development peak flow rates from the project area for the 100-year, 24-hour design storm. The flow rates were calculated using the City of American Canyon Engineering Standards Plan and Specifications (ESPS). The stormwater quality design storm of intensity (I) = 0.2 in/hr is addressed by the BASMAA Stormwater Control Plan.

The following precipitation data for the project site was collected from the NOAA Atlas 14, Volume 6 – California, see NOAA Precipitation Frequency table in Attachment 1:

Table 1 - NOAA Precipitation Data

Storm Frequency	Precipitation Depth (inches, in 24-hour period)
100-yr	7.36

V. A. Existing Conditions

The method used for studying the site stormwater runoff is a hydrograph analysis. The unit hydrograph rainfall distribution for the City of American Canyon falls under Type IA - Distribution. The SCS hydrograph analysis is based on the National Resources Conservation Service Technical Release 55 for Urban Hydrology for Small Watersheds (TR-55) method.

One watershed was used to model the existing run-on from the upslope area and runoff from the project site. The existing runoff for the 100-year, 24-hour storm event is as follows, refer to SSA Output Files in Attachment 2 for calculations.

Table 2 – Existing Stormwater Runoff

Existing Watershed	A	23.84	[acre]
Existing Impervious Area	A_{Paved}	0.98	[acre]
Existing Curve Number	CN	83	
Existing Time of Concentration	T_C	28.15	[min]
Total Existing Peak Flow (100-yr)	**$Q_{100YEAR-EXIST}$**	**29.3**	**[cfs]**

V. B. Proposed Conditions

The post-development peak flow rates were designed not to exceed 90% of the pre-development peak flow rates for 100-year, 24-hour storm event per City of American Canyon ESPS. Stormwater detention will be provided by a detention pond with biotreatment. Benefits from infiltration within the detention pond were included in the hydrology calculations and were obtained from the USGS Web Soil Survey, see Attachment 1 for additional information.

The proposed watershed was modeled with four subbasin watersheds. Subbasin A is the run-on. Subbasin B is the proposed project run-off to be detained. Subbasin C is the undeveloped run-off that will drain directly off-site (un-detained). Subbasin D is the proposed project run-off that was

included in the Hydrology Analysis for ICC 330 Distribution Center project. The proposed runoff for the 100-year, 24-hour storm event can be found in the SSA Output Files in Attachment 2.

Table 3 – Proposed Stormwater Runoff

Proposed Total Watershed	A	26.62	[acre]
Proposed Total Impervious Area	A_{Paved}	4.25	[acre]
Proposed Curve Number	CN	Varies	
Proposed Time of Concentration	T_C	Varies	[min]
Total Proposed Peak Flow (100-yr)	**$Q_{100YEAR-EXIST}$**	**24.5**	**[cfs]**

Note: A summary of the subbasins can be found in the found in the SSA output files in Attachment 2.

VI. CONCLUSION

The proposed project will result in a net decrease in peak stormwater runoff rates from the existing site conditions. The proposed detention pond, metering structures, and outfalls along the western property line will result in a proposed peak runoff rate (24.5 cfs) that is less than the existing peak runoff rate (29.3 cfs) and less than 90% of the existing peak runoff rate (26.4 cfs). Therefore, the proposed stormwater detention and treatment satisfies the City of American Canyon ESPS and the BASMAA stormwater standards.

Totals for Area of Interest			**23.8**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Saturated Hydraulic Conductivity (Ksat)

Map unit symbol	Map unit name	Rating (micrometers per second)	Acres in AOI	Percent of AOI
131	Fagan clay loam, 5 to 15 percent slopes	2.7000	2.6	10.9%
134	Fagan clay loam, 30 to 50 percent slopes, slipped	2.7000	0.6	2.6%
148	Haire clay loam, 2 to 9 percent slopes	2.7000	20.6	86.5%
Totals for Area of Interest			**23.8**	**100.0%**

Description

Saturated hydraulic conductivity (Ksat) refers to the ease with which pores in a saturated soil transmit water. The estimates are expressed in terms of micrometers per second. They are based on soil characteristics observed in the field, particularly structure, porosity, and texture. Saturated hydraulic conductivity is considered in the design of soil drainage systems and septic tank absorption fields.

For each soil layer, this attribute is actually recorded as three separate values in the database. A low value and a high value indicate the range of this attribute for the soil component. A "representative" value indicates the expected value of this attribute for the component. For this soil property, only the representative value is used.

The numeric Ksat values have been grouped according to standard Ksat class limits.

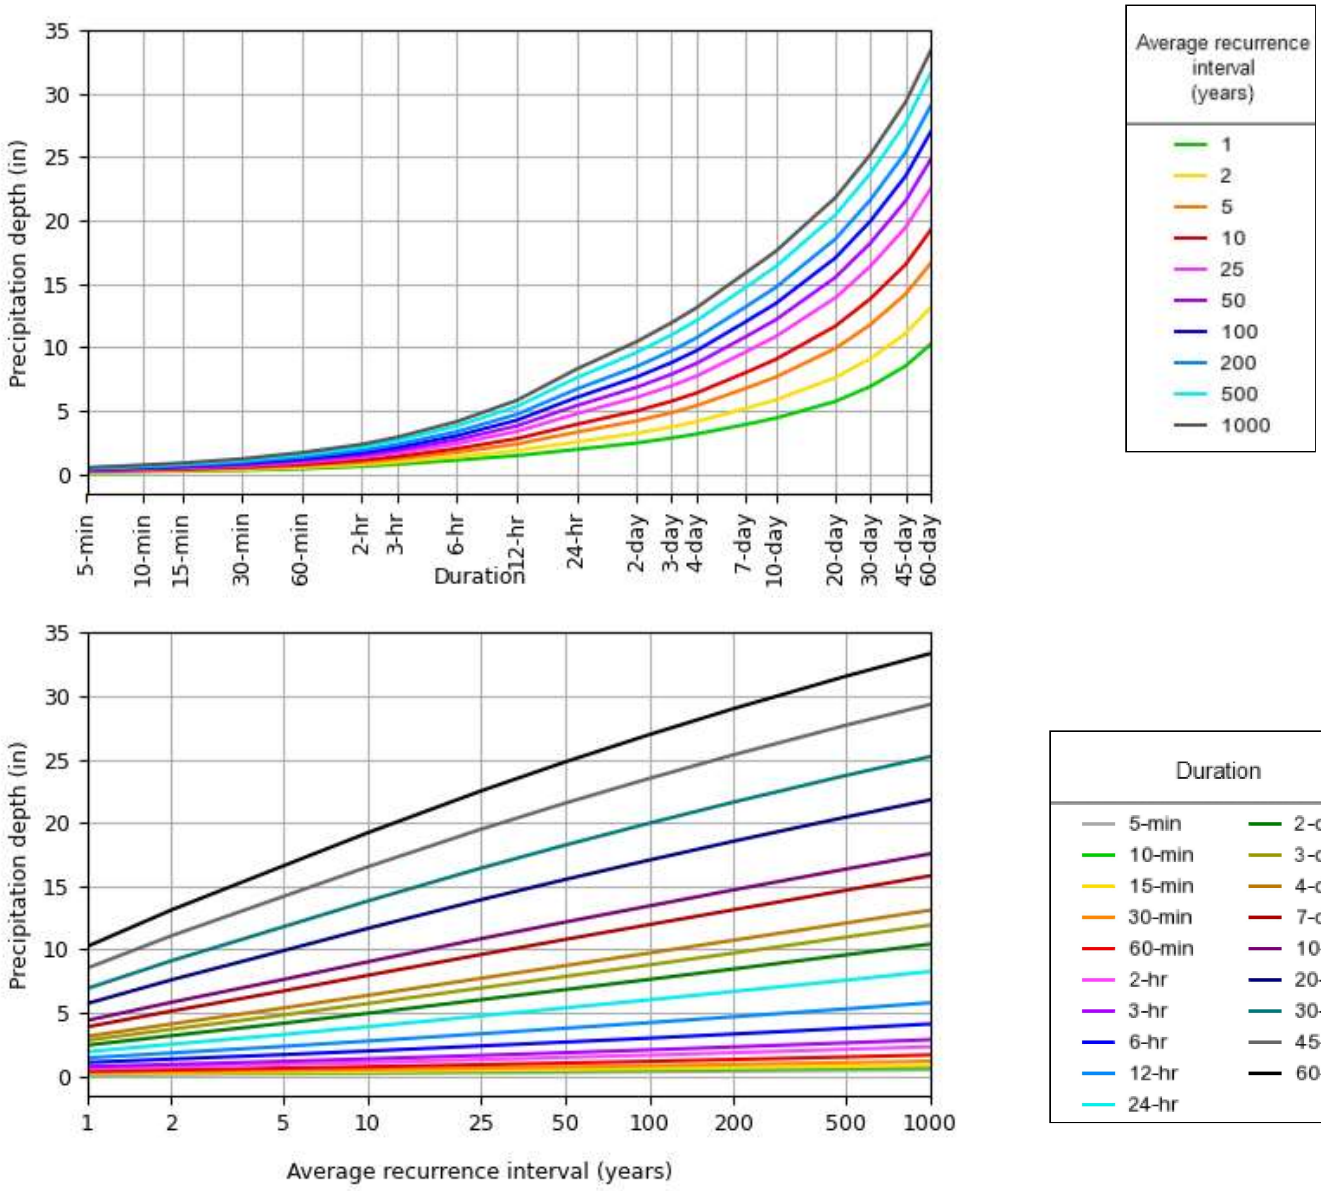
[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).



Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Please refer to NOAA Atlas 14 document for more information.

Table 2-2a Runoff curve numbers for urban areas [1]

Cover description: Cover type and hydrologic condition	Average percent impervious area [2]	Curve numbers for hydrologic soil group: A	B	C	D
Fully developed urban areas (vegetation established)					
Open space (lawns, parks, golf courses, cemeteries, etc.) [3]:					
Poor condition (grass cover < 50%)		68	79	86	89
Fair condition (grass cover 50% to 75%)		49	69	79	84
Good condition (grass cover > 75%)		39	61	74	80
Impervious areas:					
Paved parking lots, roofs, driveways, etc. (excluding right-of-way)		98	98	98	98
Streets and roads:					
Paved; curbs and storm sewers (excluding right-of-way)		98	98	98	98
Paved; open ditches (including right-of-way)		83	89	92	93
Gravel (including right-of-way)		76	85	89	91
Dirt (including right-of-way)		72	82	87	89
Western desert urban areas:					
Natural desert landscaping (pervious areas only) [4]		63	77	85	88
Artificial desert landscaping (impervious weed barrier, desert shrub with 1- to 2-inch sand or gravel mulch and basin borders)		96	96	96	96
Urban districts:					
Commercial and business	85	89	92	94	95
Industrial	72	81	88	91	93
Residential districts by average lot size:					
1/8 acre or less (town houses)	65	77	85	90	92
1/4 acre	38	61	75	83	87
1/3 acre	30	57	72	81	86
1/2 acre	25	54	70	80	85
1 acre	20	51	68	79	84
2 acres	12	46	65	77	82
Developing urban areas					
Newly graded areas (pervious areas only, no vegetation) [5]		77	86	91	94
Idle lands (CN's are determined using cover types similar to those in table 2-2c).					

[1] Average runoff condition, and $I_a = 0.2S$.

[2] The average percent impervious area shown was used to develop the composite CN's. Other assumptions are as follows: impervious areas are directly connected to the drainage system, impervious areas have a CN of 98, and pervious areas are considered equivalent to open space in good hydrologic condition. CN's for other combinations of conditions may be computed using figure 2-3 or 2-4.

[3] CN's shown are equivalent to those of pasture. Composite CN's may be computed for other combinations of open space cover type.

[4] Composite CN's for natural desert landscaping should be computed using figures 2-3 or 2-4 based on the impervious area percentage (CN = 98) and the pervious area CN. The pervious area CN's are assumed equivalent to desert shrub in poor hydrologic condition.

[5] Composite CN's to use for the design of temporary measures during grading and construction should be computed using figure 2-3 or 2-4 based on the degree of development (impervious area percentage) and the CN's for the newly graded pervious areas.

Table 2-2c Runoff curve numbers for other agricultural lands [1]

Cover description		Curve numbers for hydrologic soil group			
Cover type	Hydrologic condition	A	B	C	D
Pasture, grassland, or range—continuous forage for grazing. [2]	Poor	68	79	86	89
	Fair	49	69	79	84
	Good	39	61	74	80
Meadow—continuous grass, protected from grazing and generally mowed for hay.	—	30	58	71	78
Brush—brush-weed-grass mixture with brush the major element. [3]	Poor	48	67	77	83
	Fair	35	56	70	77
	Good	30 [4]	48	65	73
Woods—grass combination (orchard or tree farm). [5]	Poor	57	73	82	86
	Fair	43	65	76	82
	Good	32	58	72	79
Woods. [6]	Poor	45	66	77	83
	Fair	36	60	73	79
	Good	30 [4]	55	70	77
Farmsteads—buildings, lanes, driveways, and surrounding lots.	—	59	74	82	86

1 Average runoff condition, and $I_a = 0.2S$.

2 *Poor:* <50%) ground cover or heavily grazed with no mulch.
Fair: 50 to 75% ground cover and not heavily grazed.
Good: > 75% ground cover and lightly or only occasionally grazed.

3 *Poor:* <50% ground cover.
Fair: 50 to 75% ground cover.
Good: >75% ground cover.

4 Actual curve number is less than 30; use CN = 30 for runoff computations.

5 CN's shown were computed for areas with 50% woods and 50% grass (pasture) cover. Other combinations of conditions may be computed from the CN's for woods and pasture.

6 *Poor:* Forest litter, small trees, and brush are destroyed by heavy grazing or regular burning.
Fair: Woods are grazed but not burned, and some forest litter covers the soil.
Good: Woods are protected from grazing, and litter and brush adequately cover the soil.

Time of Concentration

TOC Method : SCS TR-55

Sheet Flow Equation :

Tc = (0.007 * ((n * Lf)^0.8)) / ((P^0.5) * (Sf^0.4))

Where :

Tc = Time of Concentration (hr)
n = Manning's roughness
Lf = Flow Length (ft)
P = 2 yr, 24 hr Rainfall (inches)
Sf = Slope (ft/ft)

Shallow Concentrated Flow Equation :

V = 16.1345 * (Sf^0.5) (unpaved surface)
V = 20.3282 * (Sf^0.5) (paved surface)
V = 15.0 * (Sf^0.5) (grassed waterway surface)
V = 10.0 * (Sf^0.5) (nearly bare & untilled surface)
V = 9.0 * (Sf^0.5) (cultivated straight rows surface)
V = 7.0 * (Sf^0.5) (short grass pasture surface)
V = 5.0 * (Sf^0.5) (woodland surface)
V = 2.5 * (Sf^0.5) (forest w/heavy litter surface)
Tc = (Lf / V) / (3600 sec/hr)

Where:

Tc = Time of Concentration (hr)
Lf = Flow Length (ft)
V = Velocity (ft/sec)
Sf = Slope (ft/ft)

Channel Flow Equation :

V = (1.49 * (R^(2/3)) * (Sf^0.5)) / n
R = Aq / Wp
Tc = (Lf / V) / (3600 sec/hr)

Where :

Tc = Time of Concentration (hr)
Lf = Flow Length (ft)
R = Hydraulic Radius (ft)
Aq = Flow Area (ft²)
Wp = Wetted Perimeter (ft)
V = Velocity (ft/sec)
Sf = Slope (ft/ft)
n = Manning's roughness

Sheet Flow Computations	Subarea A	Subarea B	Subarea C
Manning's Roughness :	0.8	0.00	0.00
Flow Length (ft) :	100	0.00	0.00
Slope (%) :	8.9	0.00	0.00
2 yr, 24 hr Rainfall (in) :	4.47	0.00	0.00
Velocity (ft/sec) :	0.10	0.00	0.00
Computed Flow Time (min) :	17.41	0.00	0.00

Shallow Concentrated Flow Computations	Subarea A	Subarea B	Subarea C
Flow Length (ft) :	933	881	0.00
Slope (%) :	4.8	2.12	0.00

$Q_{100\text{-}YR\text{-}90\%} = 26.3$ CFS

Project Description

File Name ..... SDG 220 Post.SPF

Project Options

Flow Units ..... CFS
Elevation Type ..... Elevation
Hydrology Method ..... SCS TR-55
Time of Concentration (TOC) Method ..... SCS TR-55
Link Routing Method ..... Kinematic Wave
Enable Overflow Ponding at Nodes ..... YES
Skip Steady State Analysis Time Periods ... YES

Analysis Options

Start Analysis On ..... Mar 13, 2023 00:00:00
End Analysis On ..... Mar 14, 2023 00:00:00
Start Reporting On ..... Mar 13, 2023 00:00:00
Antecedent Dry Days ..... 0 days
Runoff (Dry Weather) Time Step ..... 0 01:00:00 days hh:mm:ss
Runoff (Wet Weather) Time Step ..... 0 00:05:00 days hh:mm:ss
Reporting Time Step ..... 0 00:00:30 days hh:mm:ss
Routing Time Step ..... 30 seconds

Rainfall Details

Subbasin : A01

Input Data

Area (ac)	5.17
Peak Rate Factor	484.00
Weighted Curve Number	81.40
Rain Gage ID	Rain Gage-02

Composite Curve Number

Soil/Surface Description	Area (acres)	Soil Group	Curve Number
Paved roads with curbs & sewers	0.37	D	98.00
Woods & grass combination, Fair	1.10	C	76.00
Woods & grass combination, Fair	0.40	C	76.00
Woods & grass combination, Fair	3.30	D	82.00
Composite Area & Weighted CN	5.17		81.40

Time of Concentration

TOC Method : SCS TR-55

Sheet Flow Equation :

Tc = (0.007 * ((n * Lf)^0.8)) / ((P^0.5) * (Sf^0.4))

Where :

Tc = Time of Concentration (hr)
n = Manning's roughness
Lf = Flow Length (ft)
P = 2 yr, 24 hr Rainfall (inches)
Sf = Slope (ft/ft)

Shallow Concentrated Flow Equation :

V = 16.1345 * (Sf^0.5) (unpaved surface)
V = 20.3282 * (Sf^0.5) (paved surface)
V = 15.0 * (Sf^0.5) (grassed waterway surface)
V = 10.0 * (Sf^0.5) (nearly bare & untilled surface)
V = 9.0 * (Sf^0.5) (cultivated straight rows surface)
V = 7.0 * (Sf^0.5) (short grass pasture surface)
V = 5.0 * (Sf^0.5) (woodland surface)
V = 2.5 * (Sf^0.5) (forest w/heavy litter surface)
Tc = (Lf / V) / (3600 sec/hr)

Where:

Tc = Time of Concentration (hr)
Lf = Flow Length (ft)
V = Velocity (ft/sec)
Sf = Slope (ft/ft)

Channel Flow Equation :

V = (1.49 * (R^(2/3)) * (Sf^0.5)) / n
R = Aq / Wp
Tc = (Lf / V) / (3600 sec/hr)

Where :

Tc = Time of Concentration (hr)
Lf = Flow Length (ft)
R = Hydraulic Radius (ft)
Aq = Flow Area (ft²)
Wp = Wetted Perimeter (ft)
V = Velocity (ft/sec)
Sf = Slope (ft/ft)
n = Manning's roughness

3. 10-YEAR HGL PIPE PROFILES

I. Introduction

This report demonstrates that the proposed on-site storm drains, drop inlets, and spillways have sufficient capacity to convey stormwater, as intended, for the SDG Commerce 220 Distribution Center project.

II. Off Site Stormwater Run-on

Stormwater run-on to the site is generated by 12.7 acres of up-slope tributary east of the project site. The area is undeveloped with slopes ranging from 5 - 20%. Three existing culverts convey run-on across Commerce Boulevard. Approximately 1/3 of the project run-on will follow existing drainage paths through a series of mapped wetlands and will not be treated or detained in the detention pond. This portion of the run-on will be routed and discharged towards the northwest corner of the property. The remaining 2/3 of the run-on will be routed through the on-site storm drain system to the detention pond. The runoff is ultimately conveyed to the North Slough.

III. Methodology

Hydraulic calculations are included for all stormwater conveyance systems on the proposed site. The storm drain pipe network & conveyance systems have been designed for the 10-year design storm event without surcharge per City of American Canyon standards. Drain inlets, outlets, and spillways are designed for the 100-year design storm. The storm drain network was modeled using Storm & Sanitary Analysis (SSA) while the capacity of the other structures were determined using hydraulic equations pertaining to that structure. A time of concentration of 6 minutes has been assumed for all developed areas, see On-site Hydraulic Calculation in Attachment 1. Additionally, a hydraulic grade line analysis has been performed for all storm drains during the 10-year, 24-hour storm event, see 10-year HGL Analysis in Attachment 2. The maximum water elevation for the 10-year storm in the Detention Pond was used as the tailwater for the storm drain system. There was no tailwater elevation for the outfall conditions to the west to the property.

Refer to Use Permit Plans for grading and drainage design. See Proposed Conditions Hydrology Exhibit and schematic maps attached in On-site Hydraulic Calculation in Attachment 1.

IV. Storm Drain Hydraulics

The sites storm drains range from 8 to 30 inches. All storm drains flow by gravity to their designated outfalls. Each storm drain is designed to convey the 10-year and 100-year storm event for the area captured by the storm drain. Autodesk SSA was used to model the storm drain network and determine the capacity of proposed storm drain system.

Mannings Equation: $Q = VA = [(k/n)(R_h^{2/3})(S^{1/2})](A)$

k = 1.49 n = 0.012 (Smooth Walled Corrugated Polyethylene Pipe)

R_h = Varies S = Varies

A = Varies

The SSA model produced profiles of the hydraulic grade line (HGL) for the 10-year design storm event. The profile of the HGL shows the system is adequately sized for the 10-year storm event, see 10-year HGL Analysis in Attachment 2.

V. DI Hydraulics

The drop inlets will capture sheet flow runoff from paved areas around the site. The drop inlets are 36-inch by 36-inch and 48-inch by 48-inch. The peak flows from the areas flowing to each drop inlet were modeled in Autodesk SSA and have been included in Attachment 2. Based on the attached weir hydraulics and the 100-yr peak flows, none of the drain inlets are calculated to exceed one (1) inch of head on the inlets during the 100-yr peak flows.

Weir Equation: $Q = 3.3P(h^{1.5}) \rightarrow h = [Q/(3.3P)]^{2/3}$

$Q_{max\ 36x36}$ = 0.50 cfs (from subbasin B21)

$Q_{max\ 48x48}$ = 0.50 cfs (from subbasin B22)

P = 77% of total grate perimeter

VI. Spillway Hydraulics

The detention pond will require a spillway for emergency overflows and an overland release route for the detention pond. The Ogee Spillway calculation was used to determine the spillway flow rates. The maximum capacity of a 15' wide, 1.8' high spillway (height based on spillway elevation to top of pond) is 142.2 cfs. The peak flows from the 100-yr storm are calculated to be 23.9 cfs. Therefore, the spillway would have sufficient capacity for overland release of the 100-yr peak flows.

Ogee Spillway Equation: $Q = C_d(2g)^{1/2}(H_d)^{3/2}$

C_d = From attached chart $g = 32.2\ ft/sec^2$ H_d = 1.8 ft

$Q_{100\text{-}yr\ Post\text{-}Detained}$ = 23.9 cfs

VII. Level Spreader Hydraulics

There are five 24" diameter, 20' long level spreaders that inlet to the detention pond. Each inflow level spreader has sufficient hydraulic capacity for the calculated flows, which were modeled in Autodesk SSA. The total inflow into the detention pond is 23.9 cfs.

There are four 24" diameter, 60' long level spreaders proposed for the detention pond overflow structures. Each overflow level spreader receives 4.3 cfs from the detention pond and has sufficient hydraulic capacity for the calculated flows, which were also modeled in Autodesk SSA. The total outflow from the detention pond is 17.07 cfs. Refer to the Level Spreader Hydraulics in Attachment 2 for a summary of flows to each level spreader.

The Francis formula was used to determine the level spreader outflow rates.

Francis Formula

Rectangular Weir Equation: $Q = 3.33\ (b-0.2h)(h)^{3/2}$

b = width of weir h= height of water above weir

VIII. Run-on Hydraulics

The run-on from the upslope tributary area, east of Commerce Boulevard is collected will be capture by swales and conveyed under Commerce Boulevard by three existing concrete culverts. Approximately 1/3 of the project run-on will be routed through the north undisturbed area of the site via surface flow and will not be treated or detained in the detention pond. This portion of the run-on will be routed and discharged towards the northwest corner of the property. Two (2) 18" storm drain pipes route this run-on. The hydraulic grade line analysis has been performed for the storm drains during the 10-year, 24-hour storm event, see 10-year HGL Analysis in Attachment 2.

IX. Conclusion

The stormwater conveyance systems for the SDG Commerce 220 Distribution Center have been designed to satisfy the City of American Canyon ESPS. All stormwater structures and conveyance systems have been designed to accommodate flows during the 10-yr design storm event. Additionally , the project provides appropriate overland release routes where the storm drain system has not been designed to accommodate the 100-year flows.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Napa County, California
Survey Area Data: Version 15, Sep 1, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 26, 2022—Apr 25, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
131	Fagan clay loam, 5 to 15 percent slopes	C	2.6	10.9%
134	Fagan clay loam, 30 to 50 percent slopes, slipped	C	0.6	2.6%
148	Haire clay loam, 2 to 9 percent slopes	D	20.6	86.5%
Totals for Area of Interest			**23.8**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Saturated Hydraulic Conductivity (Ksat)

Map unit symbol	Map unit name	Rating (micrometers per second)	Acres in AOI	Percent of AOI
131	Fagan clay loam, 5 to 15 percent slopes	2.7000	2.6	10.9%
134	Fagan clay loam, 30 to 50 percent slopes, slipped	2.7000	0.6	2.6%
148	Haire clay loam, 2 to 9 percent slopes	2.7000	20.6	86.5%
Totals for Area of Interest			**23.8**	**100.0%**

Description

Saturated hydraulic conductivity (Ksat) refers to the ease with which pores in a saturated soil transmit water. The estimates are expressed in terms of micrometers per second. They are based on soil characteristics observed in the field, particularly structure, porosity, and texture. Saturated hydraulic conductivity is considered in the design of soil drainage systems and septic tank absorption fields.

For each soil layer, this attribute is actually recorded as three separate values in the database. A low value and a high value indicate the range of this attribute for the soil component. A "representative" value indicates the expected value of this attribute for the component. For this soil property, only the representative value is used.

The numeric Ksat values have been grouped according to standard Ksat class limits.

[1] Precipitation frequency (PF) estimates in this table are based on frequency analysis of partial duration series (PDS).

Numbers in parenthesis are PF estimates at lower and upper bounds of the 90% confidence interval. The probability that precipitation frequency estimates (for a given duration and average recurrence interval) will be greater than the upper bound (or less than the lower bound) is 5%. Estimates at upper bounds are not checked against probable maximum precipitation (PMP) estimates and may be higher than currently valid PMP values.

Table 2-2a Runoff curve numbers for urban areas [1]

Cover description: Cover type and hydrologic condition	Average percent impervious area [2]	Curve numbers for hydrologic soil group: A	B	C	D
Fully developed urban areas (vegetation established)					
Open space (lawns, parks, golf courses, cemeteries, etc.) [3]:					
Poor condition (grass cover < 50%)		68	79	86	89
Fair condition (grass cover 50% to 75%)		49	69	79	84
Good condition (grass cover > 75%)		39	61	74	80
Impervious areas:					
Paved parking lots, roofs, driveways, etc. (excluding right-of-way)		98	98	98	98
Streets and roads:					
Paved; curbs and storm sewers (excluding right-of-way)		98	98	98	98
Paved; open ditches (including right-of-way)		83	89	92	93
Gravel (including right-of-way)		76	85	89	91
Dirt (including right-of-way)		72	82	87	89
Western desert urban areas:					
Natural desert landscaping (pervious areas only) [4]		63	77	85	88
Artificial desert landscaping (impervious weed barrier, desert shrub with 1- to 2-inch sand or gravel mulch and basin borders)		96	96	96	96
Urban districts:					
Commercial and business	85	89	92	94	95
Industrial	72	81	88	91	93
Residential districts by average lot size:					
1/8 acre or less (town houses)	65	77	85	90	92
1/4 acre	38	61	75	83	87
1/3 acre	30	57	72	81	86
1/2 acre	25	54	70	80	85
1 acre	20	51	68	79	84
2 acres	12	46	65	77	82
Developing urban areas					
Newly graded areas (pervious areas only, no vegetation) [5]		77	86	91	94
Idle lands (CN's are determined using cover types similar to those in table 2-2c).					

[1] Average runoff condition, and $I_a = 0.2S$.

[2] The average percent impervious area shown was used to develop the composite CN's. Other assumptions are as follows: impervious areas are directly connected to the drainage system, impervious areas have a CN of 98, and pervious areas are considered equivalent to open space in good hydrologic condition. CN's for other combinations of conditions may be computed using figure 2-3 or 2-4.

[3] CN's shown are equivalent to those of pasture. Composite CN's may be computed for other combinations of open space cover type.

[4] Composite CN's for natural desert landscaping should be computed using figures 2-3 or 2-4 based on the impervious area percentage (CN = 98) and the pervious area CN. The pervious area CN's are assumed equivalent to desert shrub in poor hydrologic condition.

[5] Composite CN's to use for the design of temporary measures during grading and construction should be computed using figure 2-3 or 2-4 based on the degree of development (impervious area percentage) and the CN's for the newly graded pervious areas.

Table 2-2c Runoff curve numbers for other agricultural lands [1]

Cover description		Curve numbers for hydrologic soil group			
Cover type	Hydrologic condition	A	B	C	D
Pasture, grassland, or range—continuous forage for grazing. [2]	Poor	68	79	86	89
	Fair	49	69	79	84
	Good	39	61	74	80
Meadow—continuous grass, protected from grazing and generally mowed for hay.	—	30	58	71	78
Brush—brush-weed-grass mixture with brush the major element. [3]	Poor	48	67	77	83
	Fair	35	56	70	77
	Good	30 [4]	48	65	73
Woods—grass combination (orchard or tree farm). [5]	Poor	57	73	82	86
	Fair	43	65	76	82
	Good	32	58	72	79
Woods. [6]	Poor	45	66	77	83
	Fair	36	60	73	79
	Good	30 [4]	55	70	77
Farmsteads—buildings, lanes, driveways, and surrounding lots.	—	59	74	82	86

1 Average runoff condition, and $I_a = 0.2S$.

2 *Poor:* <50%) ground cover or heavily grazed with no mulch.
Fair: 50 to 75% ground cover and not heavily grazed.
Good: > 75% ground cover and lightly or only occasionally grazed.

3 *Poor:* <50% ground cover.
Fair: 50 to 75% ground cover.
Good: >75% ground cover.

4 Actual curve number is less than 30; use CN = 30 for runoff computations.

5 CN's shown were computed for areas with 50% woods and 50% grass (pasture) cover. Other combinations of conditions may be computed from the CN's for woods and pasture.

6 *Poor:* Forest litter, small trees, and brush are destroyed by heavy grazing or regular burning.
Fair: Woods are grazed but not burned, and some forest litter covers the soil.
Good: Woods are protected from grazing, and litter and brush adequately cover the soil.

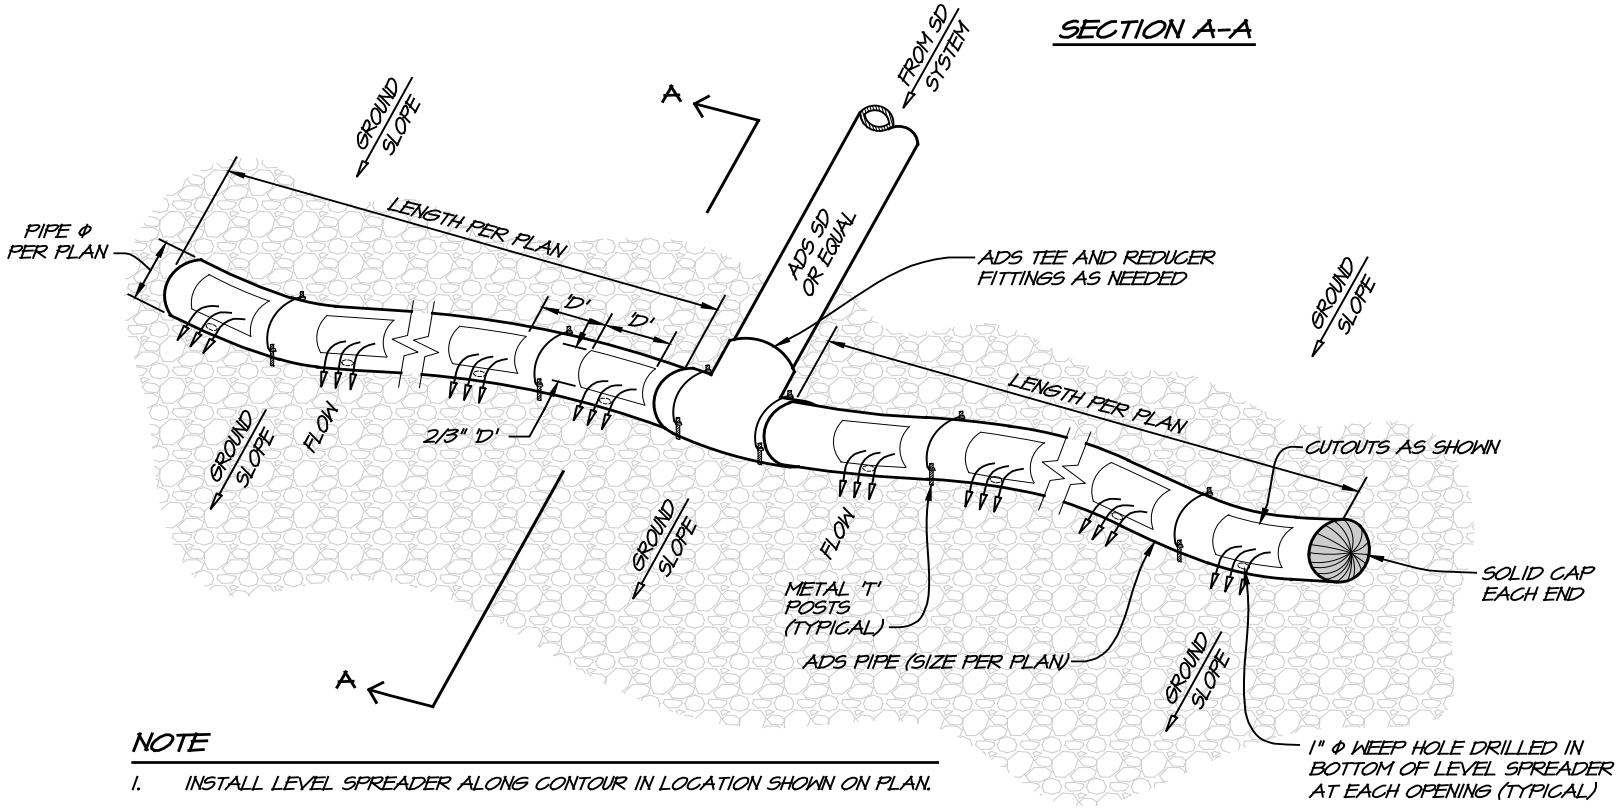
Assumptions:

-Width of weir is equal to the diameter of Level Spreader(LS)



-Spacing between weirs is equal to the diameter of LS

-Height of weir is equal to 2/3 the diameter of LS

-Maximum # of weir openings account for Tee fitting from inlet pipe of same size as level spreader. Remaining length is used at the ends.

SECTION A-A

Subbasin Hydrology

Subbasin : A01

Input Data

Area (ac)	5.17
Peak Rate Factor	484.00
Weighted Curve Number	81.40
Rain Gage ID	Rain Gage-02

Composite Curve Number

Soil/Surface Description	Area (acres)	Soil Group	Curve Number
Paved roads with curbs & sewers	0.37	D	98.00
Woods & grass combination, Fair	1.10	C	76.00
Woods & grass combination, Fair	0.40	C	76.00
Woods & grass combination, Fair	3.30	D	82.00
Composite Area & Weighted CN	5.17		81.40

Time of Concentration

TOC Method : SCS TR-55

Sheet Flow Equation :

Tc = (0.007 * ((n * Lf)^0.8)) / ((P^0.5) * (Sf^0.4))

Where :

Tc = Time of Concentration (hr)
n = Manning's roughness
Lf = Flow Length (ft)
P = 2 yr, 24 hr Rainfall (inches)
Sf = Slope (ft/ft)

Shallow Concentrated Flow Equation :

V = 16.1345 * (Sf^0.5) (unpaved surface)
V = 20.3282 * (Sf^0.5) (paved surface)
V = 15.0 * (Sf^0.5) (grassed waterway surface)
V = 10.0 * (Sf^0.5) (nearly bare & untilled surface)
V = 9.0 * (Sf^0.5) (cultivated straight rows surface)
V = 7.0 * (Sf^0.5) (short grass pasture surface)
V = 5.0 * (Sf^0.5) (woodland surface)
V = 2.5 * (Sf^0.5) (forest w/heavy litter surface)
Tc = (Lf / V) / (3600 sec/hr)

Where:

Tc = Time of Concentration (hr)
Lf = Flow Length (ft)
V = Velocity (ft/sec)
Sf = Slope (ft/ft)

Channel Flow Equation :

V = (1.49 * (R^(2/3)) * (Sf^0.5)) / n
R = Aq / Wp
Tc = (Lf / V) / (3600 sec/hr)

Where :

Tc = Time of Concentration (hr)
Lf = Flow Length (ft)
R = Hydraulic Radius (ft)
Aq = Flow Area (ft²)
Wp = Wetted Perimeter (ft)
V = Velocity (ft/sec)
Sf = Slope (ft/ft)
n = Manning's roughness

Rain Gage ID	Rain Gage-02

Composite Curve Number

Soil/Surface Description	Area (acres)	Soil Group	Curve Number
Paved parking & roofs	0.10	D	98.00
Composite Area & Weighted CN	0.10		98.00

Time of Concentration

Junction Input

Output Summary Results

Peak Inflow (cfs)	12.87
Peak Lateral Inflow (cfs)	0.00
Peak Outflow (cfs)	10.61
Peak Exfiltration Flow Rate (cfm)	1.88
Max HGL Elevation Attained (ft)	11.87
Max HGL Depth Attained (ft)	1.37
Average HGL Elevation Attained (ft)	11.21
Average HGL Depth Attained (ft)	0.71
Time of Max HGL Occurrence (days hh:mm)	0 08:08
Total Exfiltration Volume (1000-ft³)	2.374
Total Flooded Volume (ac-in)	0
Total Time Flooded (min)	0
Total Retention Time (sec)	0.00

Project Description

File Name ..... SDG 220 Post.SPF

Project Options

Flow Units ..... CFS
Elevation Type ..... Elevation
Hydrology Method ..... SCS TR-55
Time of Concentration (TOC) Method ..... SCS TR-55
Link Routing Method ..... Kinematic Wave
Enable Overflow Ponding at Nodes ..... YES
Skip Steady State Analysis Time Periods ... YES

Analysis Options

Start Analysis On ..... Mar 13, 2023 00:00:00
End Analysis On ..... Mar 14, 2023 00:00:00
Start Reporting On ..... Mar 13, 2023 00:00:00
Antecedent Dry Days ..... 0 days
Runoff (Dry Weather) Time Step ..... 0 01:00:00 days hh:mm:ss
Runoff (Wet Weather) Time Step ..... 0 00:05:00 days hh:mm:ss
Reporting Time Step ..... 0 00:00:30 days hh:mm:ss
Routing Time Step ..... 30 seconds

Rainfall Details

Subbasin Hydrology

Subbasin : A01

Input Data

Area (ac)	5.17
Peak Rate Factor	484.00
Weighted Curve Number	81.40
Rain Gage ID	Rain Gage-02

Composite Curve Number

Soil/Surface Description	Area (acres)	Soil Group	Curve Number
Paved roads with curbs & sewers	0.37	D	98.00
Woods & grass combination, Fair	1.10	C	76.00
Woods & grass combination, Fair	0.40	C	76.00
Woods & grass combination, Fair	3.30	D	82.00
Composite Area & Weighted CN	5.17		81.40

Time of Concentration

TOC Method : SCS TR-55

Sheet Flow Equation :

Tc = (0.007 * ((n * Lf)^0.8)) / ((P^0.5) * (Sf^0.4))

Where :

Tc = Time of Concentration (hr)
n = Manning's roughness
Lf = Flow Length (ft)
P = 2 yr, 24 hr Rainfall (inches)
Sf = Slope (ft/ft)

Shallow Concentrated Flow Equation :

V = 16.1345 * (Sf^0.5) (unpaved surface)
V = 20.3282 * (Sf^0.5) (paved surface)
V = 15.0 * (Sf^0.5) (grassed waterway surface)
V = 10.0 * (Sf^0.5) (nearly bare & untilled surface)
V = 9.0 * (Sf^0.5) (cultivated straight rows surface)
V = 7.0 * (Sf^0.5) (short grass pasture surface)
V = 5.0 * (Sf^0.5) (woodland surface)
V = 2.5 * (Sf^0.5) (forest w/heavy litter surface)
Tc = (Lf / V) / (3600 sec/hr)

Where:

Tc = Time of Concentration (hr)
Lf = Flow Length (ft)
V = Velocity (ft/sec)
Sf = Slope (ft/ft)

Channel Flow Equation :

V = (1.49 * (R^(2/3)) * (Sf^0.5)) / n
R = Aq / Wp
Tc = (Lf / V) / (3600 sec/hr)

Where :

Tc = Time of Concentration (hr)
Lf = Flow Length (ft)
R = Hydraulic Radius (ft)
Aq = Flow Area (ft²)
Wp = Wetted Perimeter (ft)
V = Velocity (ft/sec)
Sf = Slope (ft/ft)
n = Manning's roughness

I. Project Data

Table 1. Project Data Form

Project Name/Number	Commerce 220 Distribution Center (4122068.0)
Application Submittal Date	March 17, 2023
Project Location	1055 Commerce Ct. American Canyon, California 94503 APN: 058-030-069
Project Phase	Conditional Use Permit
Project Type and Description	New warehouse
Total Project Site Area (acres)	10.2 Acres
Total New and Replaced Impervious Surface Area	346,605 sq. ft
Total Pre-Project Impervious Surface Area	0 sq. ft
Total Post-Project Impervious Surface Area	346,605 sq. ft

II. Setting

II.A. Project Location and Description

The Commerce 220 Distribution Center project is located on Commerce Ct. in American Canyon, California 94503. The APN is 058-030-069. Refer to Attachment 1 for the Vicinity Map. The parcel is zoned as Commercial Recreation (CR) by the City of American Canyon and is currently undeveloped. The project will include the construction of a new warehouse and parking area. The warehouse will function as a distribution center. This project will not be phased and will be built in a single phase of construction. Refer to Attachment 2 for Site Stormwater Control Plan.

The proposed area to be disturbed is greater than 1 acre, so a Stormwater Pollution Prevention Plan will be prepared and a Notice of Intent (NOI) will be obtained prior to the beginning of construction.

II.B. Existing Site Features and Conditions

The existing site is currently an undeveloped grassy field. Access to the parcel is off of Commerce Ct. Features of the site include grasses and shrubs and a gravel road along the eastern side of the parcel. The site is bounded by undeveloped parcels to the east and west, a commercial warehouse to the south and a commercial warehouse currently under construction to the north.

The predominant soil type in the project area is Haire clay loam, which is of the Hydraulic Soil Group D. Refer to Attachment 1 for the Soils Map. The project area is relatively flat with gentle slopes to the west. Stormwater is ultimately conveyed to the Napa River.

II.C. Opportunities and Constraints for Stormwater Control

Stormwater treatment facilities have been integrated into the planning, design, construction, operation, and maintenance of the proposed development. The following potential opportunities and constraints were considered in determining the best stormwater control design for this development.

Opportunities for the site include landscaped areas to the west of the building. A bioretention basin will be installed in this area to treat stormwater runoff prior to discharge from the site. Runoff will be conveyed to the bioretention basin via surface flows and an on-site storm drain network.

Constraints include the site location and existing grades. The site is generally flat and is not located near an existing storm drain system. To accommodate this, the warehouse was designed at a finished floor elevation so that stormwater could flow into the bioretention basin, and the subsequent outflow from this basin would outfall onto nearby fields along existing drainage patterns.

III. Low Impact Development Design Strategies

III.A. Optimization of Site Layout

1. Limitation of development envelope

   The shallow slopes of the site make the chosen development areas suitable for development.

2. Preservation of natural drainage features

   Natural existing drainage features include mapped wetlands on-site as well as gently sloping terrain that allows stormwater runoff to remain as predominantly sheet flow. A bioretention/detention basin has been proposed for the project to treat and detain storm water before it leaves the site. Level spreaders are proposed at the outfall of the proposed bioretention/detention basin to allow post-development stormwater runoff to be returned to sheet flow.

3. Minimization of imperviousness

   Walkways and parking areas are designed to the minimum widths necessary without compromising public safety and a walkable environment.

4. Use of drainage as a design element

   A bioretention/detention basin is incorporated into the aesthetic landscape design of the site.

III.B. Use of Permeable Pavements

Permeable pavements are not proposed at this time.

III.C. Dispersal of Runoff to Pervious Areas

Stormwater runoff will be directed to the bioretention/detention basin.

III.D. Stormwater Control Measures

A bioretention basin has been incorporated as a stormwater control measure. The bioretention basin will collect and treat onsite stormwater as well as from portions of Commerce Boulevard. Refer to Attachment 2 for Stormwater Control Plan.

IV. Documentation of Drainage

IV.A Drainage Management Areas

Table 2. Drainage Management Areas

DMA Name	Impervious Area (square feet)	Pervious Area (square feet)	Total Area (square feet)
DMA 1	297,608	11,720	309,328
DMA 2	0	12,083	12,083
DMA 3	48,997	1,744	50,741

Drainage Management Area Description

DMA 1 consists of the warehouse roof area, the parking areas, and drive aisles. Stormwater is conveyed via storm drains to Bioretention Facility 1 on the west side of the property.

DMA 2 consists of the landscaped area within the proposed bioretention/detention basin west of the warehouse and parking areas. This area will drain to Bioretention Facility 1.

DMA 3 consists of the parking lot and landscaped area south of the warehouse. This area will drain to the south via sheet flow and storm drains to neighboring Bioretention Facility located on Commerce 330 Distribution Center. The Commerce 330 Bioretention Facility was designed to accommodate up to 56,200 SF of new impervious area from the Commerce 220 parcel.

STA 1 is a Self-Treating area that does not receive stormwater runoff from the proposed improvements and consists of grassy areas on the west side of the parcel that drains directly off-site.

STA 2 is a Self-Treating area that does not receive stormwater runoff from the proposed improvements and consists of grassy areas and mapped wetlands on the north side of the parcel that drains directly off-site.

IV.B. Tabulation and Sizing Calculations

Table 3. Information Summary for Bioretention Basin and Alternate BMP Design

DMA	Total Project Area (Square Feet)
DMA 1	309,328
DMA 2	12,083

Table 4. Self-Treating Areas

DMA	Total Project Area (Square Feet)
STA 1	14,747
STA 2	62,066

Table 5. Self-Retaining Areas

There are no Self-Retaining Areas.

Table 6. Areas Draining to Self-Retaining Areas

There are no impervious areas draining to Self-Retaining Areas.

Table 7. Areas Draining to Bioretention Basins

DMA Name	DMA Area (Square Feet)	Post-project surface type	DMA Runoff Factor	DMA Area x Runoff Factor	Basin Name		
					Bioretention Facility 1		
DMA 1	297,608	Impervious	1	297,608	Sizing Factor	Minimum Basin size	Proposed Basin
DMA 1	11,720	Pervious	0.1	1,172			
DMA 2	0	Impervious	1	0			
DMA 2	12,083	Pervious	0.1	1,208			
Total>				299,988	0.04	12,000	12,638

Table 8. Alternate BMPs

There are no Alternate BMPs.

V. Source Control Measures

V.A. Site activities and potential sources of pollutants

The site activities and potential sources of pollutants for the Commerce 220 Distribution Center project are listed in table 9, below:

Table 9. Control Table

Potential Sources of Runoff Pollutants	Permanent Source Control BMPs	Operational Source Control BMPs
A. On-site storm drain inlets (unauthorized non-stormwater discharges and accidental spills or leaks)	▪ Mark all inlets with the words “No Dumping! Flows to River” or similar.	▪ Maintain and periodically repaint or replace inlet markings. ▪ Provide stormwater pollution prevention information to new site owners, lessees, or operators. ▪ See applicable operational BMPs in Fact Sheet SC-74, “Drainage System Maintenance.” ▪ Include the following in lease agreements: “Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains."

Potential Sources of Runoff Pollutants	Permanent Source Control BMPs	Operational Source Control BMPs
B. Interior floor drains and elevator shaft sump pumps	▪ Interior floor drains will be plumbed to the sanitary sewer.	▪ Inspect and maintain drains to prevent blockages and overflow.
C. Interior parking garages	N/A	N/A
D_1. Need for future indoor & structural pest control	▪ Building design shall incorporate features that discourage entry of pests.	▪ Provide Integrated Pest Management information to owners, lessees, and operators.
D_2. Landscape / outdoor pesticide use / building and grounds maintenance	▪ Final landscape plans will accomplish all of the following: ▪ Preserve existing native trees, shrubs, and ground cover to the maximum extent possible. ▪ Minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution. ▪ Where landscaped areas are used to retain or detain stormwater, specify plants that are tolerant of saturated soil conditions. ▪ Use pest-resistant plants, especially adjacent to hardscape. ▪ To ensure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.	▪ Maintain landscaping using minimum or no pesticides. ▪ See applicable operational BMPs in Fact Sheet SC-41, "Building and Grounds Maintenance." ▪ Provide IPM information to new owners, lessees and operators.
E. Pools, spas, ponds, decorative fountains, and other water features	N/A	N/A
F. Food service	N/A	N/A
G. Refuse areas	▪ Refuse areas shall be paved with an impervious surface, designed not to allow run-on from adjoining areas, and screened to prevent off-site transport of trash. ▪ Refuse areas shall contain a roof to minimize direct precipitation. ▪ Refuse areas will consist of shared trash enclosures with the Commerce 330 Distribution Center. These do not have connections to the sanitary sewer and will	▪ Provide adequate number of receptacles. ▪ Inspect receptacles regularly; repair or replace leaky receptacles. ▪ Keep receptacles covered. ▪ Prohibit/prevent dumping of liquid or hazardous wastes. ▪ Post "no hazardous materials" signs. ▪ Inspect and pick up litter daily and clean up spills immediately. ▪ Keep spill control materials available on-site.

Potential Sources of Runoff Pollutants	Permanent Source Control BMPs	Operational Source Control BMPs
	continue to be cleaned and dry swept as necessary.	▪ Clean by dry-sweeping only, or with wet/dry vacuum. ▪ See Fact Sheet SC-34, "Waste Handling and Disposal"
H. Industrial processes	N/A	N/A
I. Outdoor Storage of Equipment or Materials	N/A	N/A
J. Vehicle / equipment cleaning	N/A	N/A
K. Vehicle / equipment repair and maintenance	N/A	N/A
L. Fuel dispensing areas	N/A	N/A
M. Loading docks	▪ Loading docks utilize a dock seal at each dock to prevent spills and leaks from reaching exterior storm drain system.	▪ Clean up spills prior to disconnecting trucks from loading docks.
N. Fire sprinkler test water	▪ Fire sprinkler test water shall be discharged to the sanitary sewer.	▪ See the note in Fact Sheet SC-41, "Building and Grounds Maintenance"
O. Miscellaneous drain or wash water or other sources • Boiler drain lines • Condensate drain lines • Rooftop equipment • Drainage sumps • Roofing, gutters, and trim • Other sources	▪ Boiler drain lines shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain. ▪ Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system. ▪ Rooftop equipment with potential to produce pollutants shall be roofed and/or have secondary containment. ▪ Any drainage sumps on-site shall feature a sediment sump to reduce the quantity of sediment in pumped water.	▪ If architectural copper is used, implement the following BMPs for management of rinse water during installation: ▪ If possible, purchase copper materials that have been pre-patinated at the factory. ▪ If patination is done on-site, prevent rinse water from entering storm drains by discharging to landscaping or by collecting in a tank and hauling off-site. ▪ Consider coating the copper materials with an impervious coating that prevents further corrosion and runoff. ▪ Implement the following BMPs during routine maintenance: ▪ Prevent rinse water from entering storm drains by discharging to landscaping or by collecting in a tank and hauling off-site.
P. Plazas, sidewalks, and parking lots		▪ Sweep plazas, sidewalks, and parking lots regularly to prevent accumulation of litter and debris. Collect debris from pressure washing to prevent entry into the storm drain system. Collect wash water containing any cleaning agent or degreaser and discharge to the sanitary sewer not to a storm drain.

V.B. Features, Materials, and Methods of Construction of Source Control BMPs

Source control BMPs will be designed and implemented per construction specifications and CASQA BMP fact sheets.

VI. Stormwater Facility Maintenance

VI.A. Ownership and Responsibility for Maintenance in Perpetuity

The applicant accepts responsibility for interim operation and maintenance of stormwater treatment and flow-control facilities until such time as this responsibility is formally transferred to a subsequent owner.

The owner shall execute a Post-Construction BMP Maintenance Agreement with the City of American Canyon upon request.

VI.B. Summary of Maintenance Requirements for Each Stormwater Facility

The site incorporates one bioretention facility. The bioretention facility requires as-needed maintenance for any damage that may occur. Semi-annual inspections are required for possible erosion, damaged vegetation, debris, and health of any trees or shrubs. These inspections usually occur at the beginning of the wet season and end of the wet season. Any dead or diseased vegetation should be removed and replaced during the inspection. An annual inspection is required to complete the annual report for the bioretention basin. During this inspection mulch may be added, and tree stakes and wires replaced.

VII. Construction Checklist

Table 10. Construction Checklist

Stormwater Control Plan Page #	Source Control or Treatment Control Measure	Sheet
3	Bioretention Basin	DMA, UP3.0, UP3.3
4	A. On-site storm drain inlets	UP3.0, UP3.1, UP4.0
4	B. Interior floor drains and elevator shaft sump pumps	See Architectural Plan
4	D1. Need for future indoor & structural pest control	See Architectural Plan
4 & 5	D2. Landscape/ outdoor pesticide use/ building and ground maintenance	See Landscape Plan
5	G. Refuse areas	See Architectural Plan
6	M. Loading docks	See Architectural Plan
6	N. Fire sprinkler test water	See Architectural Plan
6	O. Miscellaneous drain or wash	See Architectural Plan
6	P. Plazas, sidewalks, and parking lots	UP3.0, UP3.1

VIII. Certifications

The preliminary design of stormwater treatment facilities and other stormwater pollution control measures in this Stormwater Control Plan are in accordance with the current edition of the BASMAA Post-Construction Manual.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Napa County, California
Survey Area Data: Version 15, Sep 1, 2022

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Mar 26, 2022—Apr 25, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
148	Haire clay loam, 2 to 9 percent slopes	D	10.2	100.0%
Totals for Area of Interest			**10.2**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

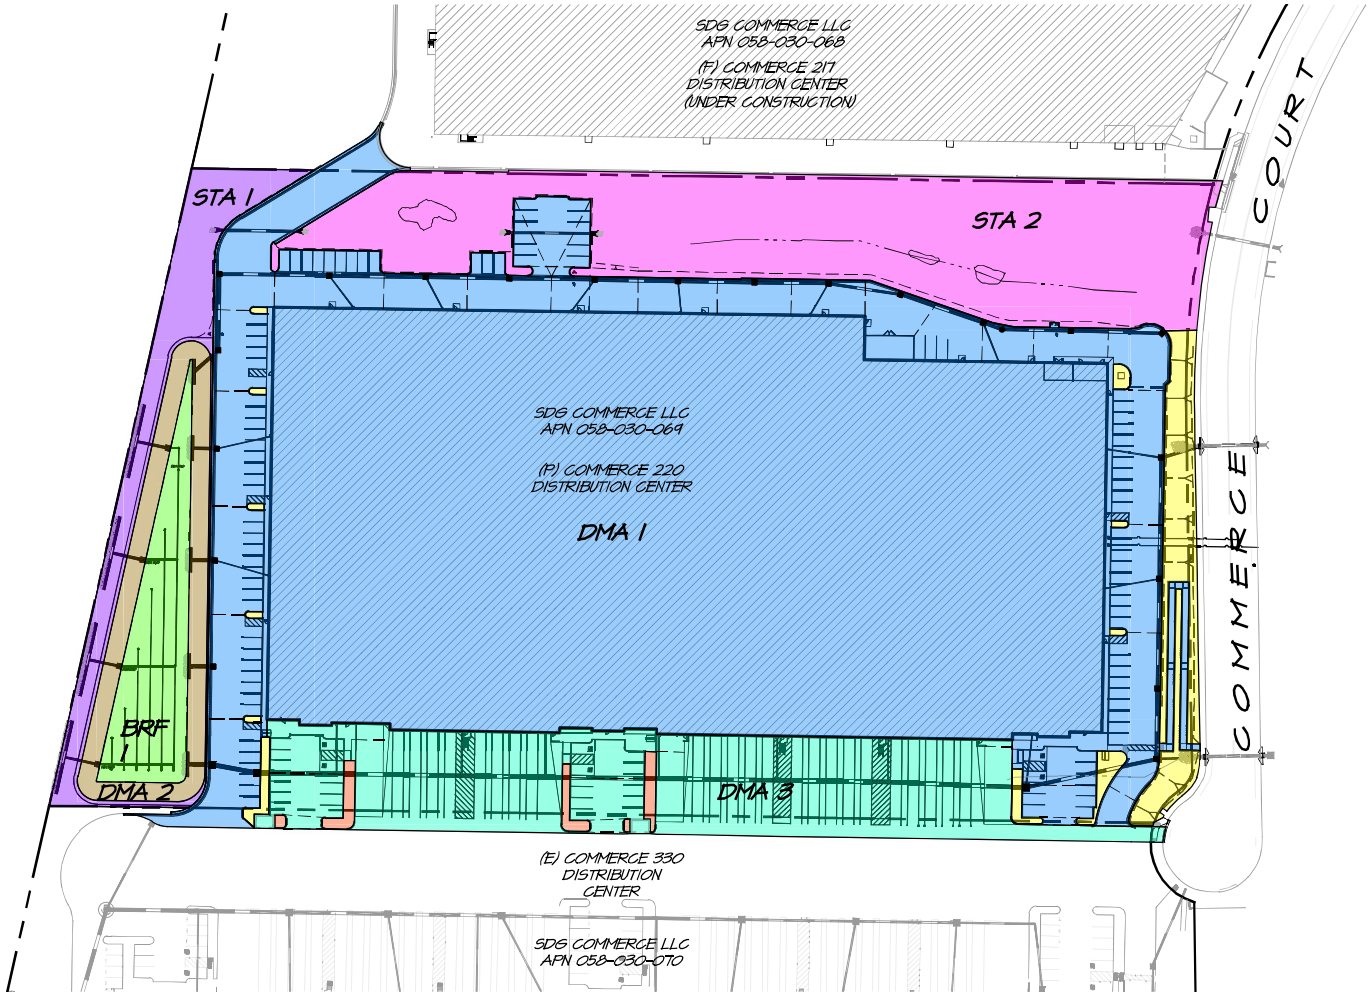
Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition



Component Percent Cutoff: None Specified

Tie-break Rule: Higher

RESOLUTION NO. 2023-72

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON, CALIFORNIA APPROVING A CITYWIDE POLICY ESTABLISHING VEHICLE MILES TRAVELED (VMT) AS THE STANDARD OF MEASUREMENT FOR POTENTIAL VEHICLE TRAFFIC IMPACTS CONSISTENT WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA)

WHEREAS, the California Environmental Quality Act (CEQA) was enacted by the State of California in 1970 to ensure the long-term protection of the environment and requires public agencies to analyze and disclose the effects of their actions on the environment; and

WHEREAS, in spite of more than 50 years of CEQA regulation, climate change caused in part by policies that favor the single occupant automobile represents a growing danger to human health, safety, economic prosperity, basic services, and natural resources; and

WHEREAS, the State of California as a whole, and Napa County residents, the economy, and environment have experienced adverse effects associated with climate change, such as a prolonged wildfire seasons and firestorms, rising temperatures, mudslides, severe droughts, property destruction and damage to infrastructure; and

WHEREAS, American Canyon has a long history of supporting policies to protect the environment. In 2013, American Canyon's Energy Efficiency Climate Action Plan (EECAP) was the first Climate Action Plan adopted in Napa County; and

WHEREAS, on June 18, 2019, the City Council approved a Countywide Commitment to Address Climate Change Proclamation declaring the City's support of local actions to address climate change including joining the Napa Countywide Climate Action Committee (CAC); and

WHEREAS, in July 2019, the City approved the Broadway District Specific Plan, which furthers the intent of SB743 by promoting integrated land uses that facilitate transportation through many forms, such as bicycle, walking, transit, and carpooling; and

WHEREAS, on November 16, 2021, the City Council approved a Climate Emergency Proclamation; and

WHEREAS, on February 1, 2022, the City Council approved a Climate Emergency Resolution; and

WHEREAS, public agencies in California have historically attempted to combat traffic congestion by relying on a metric known as "Level of Service" (LOS) standards. Developed in the post-war US specifically for highway travel, the LOS standard assesses the relationship between traffic speed, volume and density, putting a priority on how well automobiles flow through a street network; and

WHEREAS, the LOS standard fails to combat congestion in the long run because it considers all vehicles equally: a single person in a car counts as much as 50 people in a bus, even though 50 people in a single vehicle contribute far less to congestion than 50 people in 50 vehicles. The convenience of a short term free-flowing roadway only encourages more single occupant automobiles. Thus, measuring only the vehicles on a crowded roadway misses the fact that some of those vehicles are causing a real problem; and

WHEREAS, policies, such as LOS that prioritize use of the single occupant automobile result in expensive road improvements and encourage urban sprawl to the detriment of other mobility alternatives, such as walking, biking, and transit; and

WHEREAS, according to the California Air Resources Board (CARB), emphasis on prioritizing single-occupant automobile convenience has resulted in transportation as the leading source of GHG pollution in California of which passenger vehicles represent the largest single source of transportation GHG emissions in California; and

WHEREAS, in 2013, the State of California Legislature passed, and Governor Brown signed Senate Bill (SB) 743 (Steinberg). SB 743 helps reduce greenhouse gas (GHG) emissions overall by promoting integrated land uses that facilitate transportation through many forms, such as bicycle, walking, transit, and carpooling; and

WHEREAS, in furtherance of its intent, Senate Bill 743 directs OPR to produce CEQA guidance for cities to reduce automobile travel by replacing LOS from transportation analysis under CEQA with Vehicle Miles Traveled ("VMT"), or another measure that "promote(s) greenhouse gas emissions reduction, development of multimodal transportation networks, and a diversity of land uses"; and

WHEREAS, the California Office of Planning and Research (OPR) develops CEQA Guidelines to interpret CEQA statutes and published court decisions, including several appendices to the CEQA Guidelines that contain forms and guidance for lead agencies when performing environmental review; and

WHEREAS, public agencies are encouraged to develop standards and procedures to implement CEQA Guidelines, such as replacing LOS from transportation analysis under CEQA with VMT by adopting local CEQA thresholds of significance; and

WHEREAS, California cities, as of July 1, 2020, began implementing the new law on applicable projects.; and

WHEREAS, State law allows lead agencies to set VMT thresholds of significance based either on local or regional per capita averages; and

WHEREAS, effective October 1, 2018, the California Air Resources Board (CARB) target for the nine-county San Francisco Bay Area region is a 19 percent reduction in per capita greenhouse gas emissions from passenger vehicles by 2035, when compared to 2005; and

WHEREAS, when a public agency develops a local threshold of significance, CEQA Guidelines require the threshold of significance be adopted through a public review process and supported by substantial evidence; and

WHEREAS, establishing a VMT standard will further accomplish SB 743 by measuring mobility at a "holistic" level, such as the amount and distance people drive, taking the number of passengers within a vehicle into account; and

WHEREAS, General Plan Goal 1U directs the City to "Conduct decisive near-term action to reduce greenhouse gas emissions in American Canyon"; and

WHEREAS, General Plan Policy 1.37.4 directs the City to "Reduce vehicle miles travelled by encouraging future land uses that feature a compact mixed-use urban form connected with pedestrian and bicycle trails"; and

WHEREAS, adopting a VMT policy will fulfill General Plan goals and policies to reduce GHG emissions and bring the City of American Canyon's transportation analysis methodology in line with State and City goals pursuant to Senate Bill 743 and the General Plan; and

WHEREAS, CEQA Guidelines Section 15064.7(b) directs the City to adopt thresholds of significance based on substantial evidence by ordinance, resolution, rule or regulation through a public process; and

WHEREAS, on behalf of the City, GHD prepared a Technical Memorandum that provides supporting documentation for appropriate VMT Thresholds in the City of American Canyon; and

WHEREAS, the GHD Technical Memorandum would establish the City follow the framework suggested by the Governor's Office of Planning and Research (OPR) in its Technical Advisory on Evaluating Transportation Impacts in CEQA; and

WHEREAS, the City's Traffic Model, as prepared by GHD, calculates the existing rate of residential VMT per capita is estimated to be 16.6 miles and the existing daily rate of VMT per employee is estimated to be 34.1 miles; and

WHEREAS, on August 24, 2023, the City of American Canyon Planning Commission unanimously recommended approval of the VMT policy; and

WHEREAS, on September 5, 2023, the City Council considered the VMT policy, at which time all those in attendance were given the opportunity to speak on this proposal, and all comments were reviewed and considered.

NOW, THEREFORE, BE IT RESOLVED that the City Council of the City of American Canyon accepts the Technical Memorandum prepared by GHD that provides supporting documentation for appropriate VMT Thresholds in the City of American Canyon. A copy of the Technical Memorandum is incorporated into this Resolution as Exhibit A.

NOW, THEREFORE, BE IT FURTHER RESOLVED that the City Council of the City of American Canyon approves a Senate Bill (SB) 743 California Environmental Quality Act (CEQA) VMT Policy as follows:

SECTION 1: CEQA FINDINGS

The VMT Policy is exempt from review under the California Environmental Quality Act ("CEQA") pursuant to Public Resources Code Section 21065 (definition of a CEQA "project"), CEQA Guidelines Section 15064.7 (requirements for adopting thresholds of significance), and CEQA Guidelines Section 15061(b)(3) (commonsense exemption), CEQA Guidelines Section 15307 Actions by Regulatory Agencies for Protection of Natural Resources, and CEQA Guidelines Section 15308 Actions by Regulatory Agencies for Protection of the Environment. CEQA Guidelines Section 15307 and 15308 are applicable because the proposed VMT Policy will fulfill the City's implementation of SB 743 which is intended to address climate change impacts that pose an immediate and growing threat to California's economy, environment, and public health.

SECTION 2: BASELINE VEHICLE MILES TRAVELLED (VMT)

The VMT for the General Plan, long-range plans, discretionary development applications, and transportation projects shall be evaluated in relation to the City of American Canyon Average VMT which is 16.6 miles per resident and 34.1 miles per employee.

SECTION 3. CEQA VMT THRESHOLDS

The VMT threshold of significance shall be 19% below the Citywide average. Unless exempt as described in this Resolution, this VMT threshold standard shall apply to all General Plan amendments, long-range plans, discretionary development applications, and transportation projects.

SECTION 4. CEQA LAND USE VMT SCREENING CRITERIA EXEMPTIONS

The following screening criteria shall exempt General Plan, long-range plans, and discretionary development applications from a VMT analysis:

TYPE	SCREENING CRITERIA
CEQA Exemption	Any project exempt from CEQA.
Development Agreement	Any project entitled under the terms of a Development Agreement currently in effect.
Program Environmental Impact Report (EIR)	Any project consistent with a Program EIR for which a VMT analysis has been conducted.
Near transit station	Any Project located within ½ mile of an existing major transit stop or an existing stop along a high-quality transit corridor (CEQA Guidelines section 15064.3(b)(1)) (OPR Technical Advisory)
Affordable Housing	Housing affordable to residents earning up to 120% of the Napa County Area Median Income (AMI) shall be presumed to have a less-than-significant impact. (OPR Technical Advisory)
Local-Serving Retail/Service/Recreational Land Use	A local-serving retail/service or recreational project with a documented trade area up to 6 miles. (OPR Technical Advisory)
Mixed-Use Projects	Evaluate each mixed-use component independently and apply the significance threshold for each project type (residential /retail). An off-site trip reduction may be calculated using the Institute of Transportation Engineer's (ITE's) internal capture methodology. (OPR Technical Advisory)

SECTION 5. CEQA LAND USE VMT SCREENING CRITERIA EXEMPTIONS

The following screening criteria shall exempt City-initiated Transportation projects from a VMT analysis:

TYPE
• Projects addressed at a programmatic level, such as in a Regional Transportation Plan EIR, whose impacts have been mitigated to less-than-significant. (CEQA Guidelines Section 15064.3(b))
• Rehabilitation, maintenance, replacement, safety, and repair projects on existing transportation assets (e.g., highways; roadways; bridges; culverts; Transportation Management System field elements such as cameras, message signs, detection, or signals; tunnels; transit systems; and assets that serve bicycle and pedestrian facilities) that do not add additional motor vehicle capacity.
• Roadside safety devices or hardware installation such as median barriers and guardrails.
• Roadway shoulder enhancements to provide "breakdown space," dedicated space for use only by transit vehicles, to provide bicycle access, or to otherwise improve safety, but which will not be used as automobile vehicle travel lanes.
• Auxiliary lane additions to improve roadway safety if less than one mile in length.
• Traffic lane installation, removal, or reconfiguration not for through traffic, such as left, right, and U-turn pockets, two-way left turn lanes, or emergency breakdown lanes that are not utilized as through lanes.
• Roadway capacity addition on local or collector streets when the project substantially improves pedestrian, cyclist, and, if applicable, transit conditions.
• General-purpose lane (including ramps) conversion to managed lanes or transit lanes, or changing lane management in a manner that would not substantially increase vehicle travel.
• Addition of a new permanently restricted transit vehicle lane.
• Reduction in number of through lanes.
• Grade separation to separate vehicles from rail, transit, pedestrians or bicycles, or to replace a lane in order to separate preferential vehicles (e.g., HOV, HOT, or trucks) from general vehicles.
• Traffic control device installation, removal, or reconfiguration, including Transit Signal Priority (TSP) features.
• Traffic metering system installation, detection systems, cameras, changeable message signs and other electronics designed to optimize vehicle, bicycle, or pedestrian flow.
• Signal timing to optimize vehicle, bicycle, or pedestrian flow.
• Roundabout or traffic circle installation.
• Traffic calming device installation or reconfiguration.
• Adoption of or increase in tolls.
• Addition of tolled lanes, where tolls are sufficient to mitigate VMT increase.
• New transit service initiation.
• Conversion of streets from one-way to two-way operation with no net increase in number of traffic lanes.
• Off-street or on-street parking space removal or relocation.
• On-street parking or loading restrictions (including meters, time limits, accessible spaces, and preferential/reserved parking permit programs) adoption or modification.

TYPE
• Traffic wayfinding signage. • Rehabilitation and maintenance projects that do not add motor vehicle capacity. • Addition of new or enhanced bike or pedestrian facilities on existing streets/highways or within existing public rights-of-way. • Addition of Class I bike paths, trails, multi-use paths, or other off-road facilities that serve non-motorized travel. • Installation of publicly available alternative fuel/charging infrastructure. • Addition of passing lanes, truck climbing lanes, or truck brake-check lanes in rural areas that do not increase overall vehicle capacity along the corridor.

SECTION 6. AMENDMENTS TO CEQA LAND USE VMT SCREENING CRITERIA EXEMPTIONS
The VMT CEQA Screening Criteria exemptions listed in Section 4 and 5 of this Resolution are intended to identify most, but not all potential exemptions.

Interpretation for General Plan, Long-range Plans, and Discretionary Development Applications: Interpretation of VMT exemptions for project types not specifically listed above shall be conducted by the Community Development Director or designee, consistent with the process codified in American Canyon Municipal Code Section 19.01.120 Interpretation.

Interpretation for City-Initiated Transportation Projects: Interpretation of VMT exemptions for project types not specifically listed above shall be conducted by the Public Works Director or designee consistent with the process codified in American Canyon Municipal Code Section 19.01.120 Interpretation.

Administrative Modification: Amendments to VMT Screening Criteria exemptions by State Law, including but not limited to the California Environmental Quality Act (Public Resources Code *§§21000 et seq.*) shall be incorporated into the VMT Screening Exemption Resolution by reference.

SECTION 7. SEVERABILITY. If any section, sentence, clause or phrase of this Resolution is for any reason held to be invalid or unconstitutional by a decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining portions of this Resolution. The City Council declares that it would have passed this Resolution and adopted this Resolution and each section, sentence, clause or phrase thereof, irrespective of the fact that one or more sections, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

PASSED, APPROVED and ADOPTED at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 5th day of September, 2023, by the following vote:

AYES:	**Councilmembers Aboudamous, Joseph, Oro, Vice Mayor Washington, and Mayor Garcia**
NOES:	**None**
ABSTAIN:	**None**
ABSENT:	**None**

Leon Garcia

Leon Garcia, Mayor

ATTEST:

Taresa Geilfuss, CMC, City Clerk

APPROVED AS TO FORM:

William D. Ross, City Attorney

EXHIBITS

A. Technical Memorandum Supporting Documentation for VMT Thresholds Resolution

EXHIBIT A

DRAFT Technical Memorandum

July 18, 2023

To	Brent Cooper, City of American Canyon	**Email**	bcooper@cityofamericancanyon.org
From	Don Hubbard and Colin Burgett, GHD	**Project No.**	11207243
Project Name	American Canyon General Plan Update		
Subject	Supporting Documentation for VMT Thresholds Resolution		

1. Introduction

SB 743 changed the way that transportation impacts are to be evaluated under CEQA. The key change was that vehicle delay, as measured using vehicular level-of-service (LOS), is no longer considered an impact under CEQA. It has been replaced as a metric with vehicle-miles traveled (VMT), with increases in VMT being considered a significant impact under CEQA.

The change in how transportation impacts are to be assessed has triggered a need for the City to develop thresholds of significance compatible with the new system. The consulting team has worked with City staff to develop these thresholds. The purpose of this memo is to document the key elements of the thresholds.

2. State Reduction Targets

SB 375 assigned the task of setting regional targets for greenhouse gas (GHG) emission reductions from passenger vehicles to the California Air Resources Board (CARB). These targets are based on extensive analysis by CARB on what actions are needed for different sectors (transportation, energy generation, building energy use, etc.) for the state to reach its GHG reduction goals. CARB has set a target reduction for GHGs from passenger vehicles in the MTC/ABAG region at a 19% reduction by 2035[1]. Based on the substantial evidence provided by CARB, we can assume that if future developments in American Canyon generate 19% fewer VMT/unit than the corresponding existing units, then those developments will have a less-than-significant VMT impact.

3. Analysis of VMT Impacts of Residential, Office and Industrial Developments

The choice of which baseline to use for VMT evaluation is left to the lead agency. The VMT generated by new projects could, for example, be compared to the existing regional average, or the existing county-wide average, or the existing local (city-wide) average. In this case we recommend that new

[1] See: https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-program/regional-plan-targets

developments in American Canyon be compared to existing developments in American Canyon. The recommendation to use a local average is based on the fact that the community character and physical characteristics of American Canyon are so different from the most populous parts of the MTC region (San Jose, San Francisco, Oakland, etc.) that using a regional average dominated by the largest jurisdictions would not be an apples-to-apples comparison. Moreover, so long as each jurisdiction in the region makes a 19% reduction from its existing uses, the aggregate result for the region as a whole would meet the State's goals. Regarding the development types being evaluated, we recommend that the City follow the framework suggested by the Governor's Office of Planning and Research (OPR) in its Technical Advisory on Evaluating Transportation Impacts in CEQA[2]:

- Residential developments should be evaluated using VMT/capita as the metric. This includes trips of all types where one end of the trip is the traveler's residence (work commute trips, shopping trips, school trips, etc.).
- Office and industrial developments should be evaluated using VMT/employee as the metric. This VMT is for the employees' own trips to work, and does not include trips made by other people to the employee's worksite.

GHD utilized the American Canyon Travel Demand Model (ACTDM), incorporating U.S. Census data relevant to work commute patterns, and regional trip length data relevant to VMT attributable to trips outside the model area, to estimate the average existing rates of residential VMT per Capita, and non-residential VMT per Employee, and the associated thresholds:

Residential VMT (attributable to homes in American Canyon):

Residential VMT	/ Population	=	Existing VMT/Capita	*	19% reduction	=	Threshold VMT/Capita
381,468	22,959		16.6		81%		13.5

The residential VMT is the sum of the VMT attributable to all home-based trip productions to/from dwelling units located in American Canyon, incorporating the distance for each trip from the distance matrix in the model. This includes VMT taking place outside the area of the model's traffic analysis zones. These outer areas are represented with external links representing the average distance trips to/from American Canyon make in their respective directions.

Employment VMT (attributable to work trips to/from jobs in American Canyon):

Employment VMT	/ Jobs	=	Existing VMT/Job	*	19% reduction	=	Threshold VMT/job
151,916	4,442		34.2		81%		27.7

The employment VMT is the sum of all home-based work trips to and from places of employment in American Canyon. This includes VMT taking place outside the area of the model's traffic analysis zones (trips to and from homes located in other jurisdictions outside of the City and model area). These outer areas are represented with external links representing the average distance trips from the outer areas to work sites in American Canyon.

4. Analysis of VMT Impacts of Retail & Hotel Developments

Retail, hotel and service developments need to be handled somewhat differently for other types of non-residential land uses, such as office or industrial buildings. This is because they attract trips from customers, patrons, or visitors in addition to commute trips made by their own employees. These two components of the traffic generated by retail and service uses need to be handled separately:

[2] See: **https://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf**

- ***VMT attributable to retail, hotel and service employees should be evaluated in the same manner as for office or industrial uses.*** That is, the average automobile commute lengths should be compared to the target reduction from the city-wide average rate of VMT/job.
- ***VMT attributable to retail customers should be assessed based on the anticipated net change in total regional VMT attributable to customer trips to/from the proposed development.*** OPR recommends that the impact of visitor/customer trips for retail uses be assessed based on whether overall VMT for the region increases or decreases as a result of the development. For local-serving retail and service developments, a presumption may be made that visitor trips to these uses will be short trips that substitute for longer trips to a more distant store of a similar type. The International Council of Shopping Centers has developed a classification system for retail developments of various sorts[3] and performed research into the trade area size of each (see Table 1). Based on this information, we have determined that Community Centers, Neighborhood Centers, and Strip/Convenience Centers are local-serving and can be presumed to have less-than-significant VMT impacts. Other types of retail developments would require quantitative assessment of their trade area to determine their VMT impacts.
- ***VMT attributable to hotel guests should be assessed in a similar manner as retail customers, based on whether total VMT for the region would increase as a result of guest VMT attributable to the hotel development.*** Most hotels provide lodging for guests that, in the absence of a proposed new hotel, would simply stay at another hotel or lodging facility in the area. The assessment of VMT attributable to hotel guests should therefore be based on the net effect of the proposed hotel location, compared to the VMT that would be generated by those guests if they stayed at other lodging options in the area..

5. Analysis of VMT Impacts of Transportation Projects

Transportation projects serve trips but do not generate them the way that land development projects do. They may, however, increase VMT by inducing more or longer vehicle trips than would have taken place if the project were not constructed. OPR recommends that the VMT impacts of a transportation project should be considered significant if the project results in a net increase in regional VMT. This can be determined using the City's traffic model. However, model analysis are not needed for certain types of projects that OPR has determined are not likely to lead to a measurable and substantial effect on VMT[4]. These include:

- Projects addressed at a programmatic level, such as in a Regional Transportation Plan EIR, whose impacts have been mitigated to less-than-significant. (CEQA Guidelines Section 15064.3(b))
- Rehabilitation, maintenance, replacement, safety, and repair projects on existing transportation assets (e.g., highways; roadways; bridges; culverts; Transportation Management System field elements such as cameras, message signs, detection, or signals; tunnels; transit systems; and assets that serve bicycle and pedestrian facilities) that do not add additional motor vehicle capacity.
- Roadside safety devices or hardware installation such as median barriers and guardrails.
- Roadway shoulder enhancements to provide "breakdown space," dedicated space for use only by transit vehicles, to provide bicycle access, or to otherwise improve safety, but which will not be used as automobile vehicle travel lanes.

[3] See: https://www.icsc.com/uploads/research/general/US_CENTER_CLASSIFICATION.pdf
[4] See: https://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf

- Auxiliary lane additions to improve roadway safety if less than one mile in length.
- Traffic lane installation, removal, or reconfiguration not for through traffic, such as left, right, and U-turn pockets, two-way left turn lanes, or emergency breakdown lanes that are not utilized as through lanes.
- Roadway capacity addition on local or collector streets when the project substantially improves pedestrian, cyclist, and, if applicable, transit conditions.
- General-purpose lane (including ramps) conversion to managed lanes or transit lanes, or changing lane management in a manner that would not substantially increase vehicle travel.
- Addition of a new permanently restricted transit vehicle lane.
- Reduction in number of through lanes.
- Grade separation to separate vehicles from rail, transit, pedestrians or bicycles, or to replace a lane in order to separate preferential vehicles (e.g., HOV, HOT, or trucks) from general vehicles.
- Traffic control device installation, removal, or reconfiguration, including Transit Signal Priority (TSP) features.
- Traffic metering system installation, detection systems, cameras, changeable message signs and other electronics designed to optimize vehicle, bicycle, or pedestrian flow.
- Signal timing to optimize vehicle, bicycle, or pedestrian flow.
- Roundabout or traffic circle installation.
- Traffic calming device installation or reconfiguration.
- Adoption of or increase in tolls.
- Addition of tolled lanes, where tolls are sufficient to mitigate VMT increase.
- New transit service initiation.
- Conversion of streets from one-way to two-way operation with no net increase in number of traffic lanes.
- Off-street or on-street parking space removal or relocation.
- On-street parking or loading restrictions (including meters, time limits, accessible spaces, and preferential/reserved parking permit programs) adoption or modification.
- Traffic wayfinding signage.
- Rehabilitation and maintenance projects that do not add motor vehicle capacity.
- Addition of new or enhanced bike or pedestrian facilities on existing streets/highways or within existing public rights-of-way.
- Addition of Class I bike paths, trails, multi-use paths, or other off-road facilities that serve non-motorized travel.
- Installation of publicly available alternative fuel/charging infrastructure.
- Addition of passing lanes, truck climbing lanes, or truck brake-check lanes in rural areas that do not increase overall vehicle capacity along the corridor.

Table 1: U.S. Shopping Center Classifications and Trade Area Size

U.S. Shopping-Center Classification and Characteristics												
Type of Shopping Center	Concept	Center Count	Aggregate GLA (Sq. Ft.)	% Share of Industry GLA	Average Size (Sq. Ft.)	Typical GLA Range (Sq. Ft.)	Acres	# of Anchors	% Anchor GLA	Typical Number of Tenants	Typical Type of Anchors	Trade Area Size
General-Purpose Centers		**112,520**										
Super-Regional Mall	Similar in concept to regional malls, but offering more variety and assortment.	620	778,336,548	10.2%	1,255,382	800,000+	60-120	3+	50-70%	NA	Full-line or junior department store, mass merchant, discount department store and/or fashion apparel store.	5-25 miles
Regional Mall	General merchandise or fashion-oriented offerings. Typically, enclosed with inward-facing stores connected by a common walkway. Parking surrounds the outside perimeter.	600	353,795,548	4.7%	589,659	400,000-800,000	40-100	2+	50-70%	40-80 stores	Full-line or junior department store, mass merchant, discount department store and/or fashion apparel store.	5-15 miles
Community Center ("Large Neighborhood Center")	General merchandise or convenience- oriented offerings. Wider range of apparel and other soft goods offerings than neighborhood centers. The center is usually configured in a straight line as a strip, or may be laid out in an L or U shape, depending on the site and design.	9,776	1,930,849,736	25.4%	197,509	125,000-400,000	10-40	2+	40-60%	15-40 stores	Discount store, supermarket, drug, large-specialty discount (toys, books, electronics, home improvement/furnishings or sporting goods, etc.)	3-6 miles
Neighborhood Center	Convenience oriented.	32,588	2,340,711,371	30.8%	71,827	30,000-125,000	3-5	1+	30-50%	5-20 stores	Supermarket	3 miles
Strip/Convenience	Attached row of stores or service outlets managed as a coherent retail entity, with on-site parking usually located in front of the stores. Open canopies may connect the store fronts, but a strip center does not have enclosed walkways linking the stores. A strip center may be configured in a straight line, or have an "L" or "U" shape. A convenience center is among the smallest of the centers, whose tenants provide a narrow mix of goods and personal services to a very limited trade area.	68,936	911,202,922	12.0%	13,218	< 30,000	<3	Anchor-less or a small convenience-store anchor.	NA	NA	Convenience store, such as a mini-mart.	<1 mile
Specialized-Purpose Centers		**3,275**										
Power Center	Category-dominant anchors, including discount department stores, off-price stores, wholesale clubs, with only a few small tenants.	2,258	990,416,667	13.0%	438,626	250,000-600,000	25-80	3+	70-90%	NA	Category killers, such as home improvement, discount department, warehouse club and off-price stores	5-10 miles
Lifestyle	Upscale national-chain specialty stores with dining and entertainment in an outdoor setting.	491	164,903,247	2.2%	335,852	150,000-500,000	10-40	0-2	0-50%	NA	Large format upscale specialty	8-12 miles
Factory Outlet	Manufacturers' and retailers' outlet stores selling brand-name goods at a discount.	367	87,368,113	1.2%	238,060	50,000-400,000	10-50	NA	NA	NA	Manufacturers' and retailers' outlets	25-75 miles
Theme/Festival	Leisure, tourist, retail and service-oriented offerings with entertaiment as a unifying theme. Often located in urban areas, they may be adapted from older--sometimes historic--buildings and can be part of a mixed-use project.	159	23,498,769	0.3%	147,791	80,000-250,000	5-20	Unspecified	NA	NA	Restaurants, entertainment	25-75 miles
Limited-Purpose Property		**62**										
Airport Retail	Consolidation of retail stores located within a commercial airport	62	15,452,860	0.2%	249,240	75,000-300,000	NA	NA	NA	NA	No anchors; retail includes specialty retail and restaurants	NA
Total Industry		**115,857**										
Total Industry	**Traditional + Specialty + Special Purpose**	**115,857**	**7,596,535,781**	**100.0%**	**65,568**

Documents Incorporated by Reference in Draft EIR

As permitted by CEQA Guidelines Section 15150, this Draft EIR has referenced several technical studies, analyses, and previously certified environmental documentation. Information from the documents, which have been incorporated by reference, has been briefly summarized in the appropriate section(s). The relationship between the incorporated part of the referenced document and the Draft EIR has also been described. The documents and other sources that have been used in the preparation of this Draft EIR include but are not limited to:

- City of American Canyon General Plan
- American Canyon Municipal Code
- Napa County Airport Land Use Compatibility Plan
- City of American Canyon Urban Water Management Plan

In accordance with CEQA Guidelines Section 15150(b), the General Plan, the referenced documents and other sources used in the preparation of the Draft EIR are available for review at the American Canyon City Hall at the address shown below:

City of American Canyon City Hall
4381 Broadway Street, Suite 201
American Canyon, CA 94503
Hours: Monday–Friday: 8:00 a.m. to 5:00 p.m.
Saturday–Sunday: Closed

Active Adults Center
2185 Elliot Drive
American Canyon, CA 94503
Hours: Monday - Friday 9:00 a.m. to 2:00 p.m.
Saturday–Sunday: Closed

American Canyon Library
300 Crawford Way
American Canyon, CA 94503
Hours: Monday, Tuesday, and Thursday–
Saturday: 10:00 a.m. to 6:00 p.m.
Wednesday: 12:00 p.m. to 8:00 p.m.
Sunday: Closed

SDG Commerce 220 Draft EIR - Attachment 8: Summary of Mitigation Measures

Table ES-1: Executive Summary Matrix

Impacts	Mitigation Measures	Level of Significance After Mitigation
Section 3.1—Aesthetics, Light, and Glare		
Impact AES-1: The proposed project, located in a non-urbanized area, would not substantially degrade the existing visual character or the quality of public views of the site and its surroundings. (Public views are those that are experienced from a publicly-accessible vantage point.)	No mitigation is necessary.	Less than significant impact.
Impact AES-2: The proposed project may create a new source of substantial light or glare which could adversely affect day or nighttime views in the area.	No mitigation is necessary.	Less than significant impact.
Cumulative Impact	No mitigation is necessary.	Less than significant impact.
Section 3.2—Air Quality		
Impact AIR-1: The proposed project could conflict with or obstruct implementation of the applicable air quality plan.	**MM AIR-1: Implement BAAQMD Best Management Practices to Control Dust During Construction** The following dust control measures, as recommended by the Bay Area Air Quality Management District (BAAQMD), shall be included in the design of the proposed project and implemented during construction: • All exposed non-paved surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and access roads) shall be watered at least two times per day and/or non-toxic soil stabilizers shall be applied to exposed non-paved surfaces. • All haul trucks transporting soil, sand, or other loose material off-site shall be covered and/or shall maintain at least 2 feet of freeboard. • All visible mud or dirt tracked out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. the use of dry power sweeping is prohibited. • All vehicle speeds on unpaved roads shall be limited to 15 miles per hour. • All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. building pads shall be laid as soon as possible after grading unless seeding or soil binders are used. idling times shall be minimized either by shutting equipment off when not in use or reducing	Less than significant impact with mitigation incorporated.

Impacts	Mitigation Measures	Level of Significance After Mitigation
	the maximum idling time to 5 minutes, as required by the California airborne toxics control measure (ACTM) Title 13, Section 2485 of California Code of Regulations. clear signage regarding idling restrictions shall be provided for construction workers at all access points. • All construction equipment shall be maintained and properly tuned in accordance with the manufacturer's specifications. all equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation. • The prime construction contractor shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. the construction contractor shall take corrective action within 48 hours. the BAAQMD's and the City's phone numbers shall also be visible to ensure compliance with applicable regulations.	
Impact AIR-2: The proposed project would result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State ambient air quality standard.	Implement MM AIR-1.	Less than significant impact with mitigation incorporated.
Impact AIR-3: The proposed project would not expose sensitive receptors to substantial pollutant concentrations.	No mitigation is necessary.	Less than significant impact.
Impact AIR-4: The proposed project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.	No mitigation is necessary.	Less than significant impact.
Cumulative Impact	No mitigation is necessary.	Less than significant impact.
Section 3.3—Biological Resources		
Impact BIO-1: The proposed project could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service.	**MM BIO-1a: Pre-construction Surveys for Swainson's Hawk** Prior to ground disturbance that occurs during the nesting season for Swainson's hawk (generally March 20 to July 20), a qualified Biologist shall conduct Swainson's hawk nesting surveys within a 0.5-mile radius of the project site to determine whether nests are occupied. Occupancy shall be determined through observation of all accessible areas, including from	Less than significant impact with mitigation incorporated.

Impacts	Mitigation Measures	Level of Significance After Mitigation
	public roads or other publicly accessible observation areas of Swainson's hawk activity (e.g., foraging) on and near the project site. The qualified Biologist shall follow the survey protocol outlined in the California Department of Fish and Wildlife (CDFW) *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley*, which recommends surveys according to the following survey periods: **I. January–March 20:** Conduct one survey total. **II. March 20–April 5:** Conduct three surveys total. Surveys shall be conducted between sunrise to 10:00 a.m. and/or 4:00 p.m. to sunset. **III. April 5–April 20:** Conduct three surveys total. Surveys shall be conducted between sunrise to 12:00 p.m. and/or 4:30 p.m. to sunset. **IV. April 21–June 10:** Initiating surveys are not recommended. Monitoring of known nest sites only. **V. June 10–July 30:** (post-fledging) Conduct three surveys total. Surveys shall be conducted between sunrise to 12:00 p.m. and/or 4:00 p.m. to sunset. Pre-construction surveys shall be completed for at least the two survey periods immediately prior to a project's initiation. **MM BIO-1b: Swainson's Hawk Avoidance and Minimization and Construction Monitoring** Following the implementation of MM BIO-1a, if nests are located and determined to be occupied, minimization measures must be implemented, and construction monitoring conducted as follows: 1. Construction activities shall be prohibited within 600 feet of an active and occupied Swainson's hawk nest, or within 600 feet of nests under construction, to prevent nest abandonment. 2. Notwithstanding the foregoing, if site-specific conditions or the nature of the construction activity (e.g., other nearby development, limited activities) indicate that a smaller buffer, or no buffer at all, could be used, the project applicant may seek approval from the qualified Biologist who in coordination with the California Department of Fish and Wildlife (CDFW) shall determine the appropriate buffer size, which, once approved, shall govern.	

Impacts	Mitigation Measures	Level of Significance After Mitigation
	3. No tree containing an active Swainson's hawk nest shall be removed. **MM BIO-1c: Pre-construction Surveys for Burrowing Owl (includes avoidance and passive relocation if found)** A qualified Biologist shall conduct a habitat assessment for wintering burrowing owl, and surveys if habitat is present. The qualified Biologist shall follow the California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation habitat assessment and survey methodology prior to project activities occurring during the burrowing owl wintering season from September 1 to January 31. The habitat assessment and surveys shall encompass a sufficient buffer zone to detect owls nearby that may be impacted, which shall be a minimum of 1,640 feet unless otherwise approved in writing by the CDFW. Surveys shall include four nonbreeding season surveys spread evenly throughout the nonbreeding season pursuant to the CDFW 2012 Staff Report. Time lapses between surveys or project activities shall trigger subsequent surveys, as determined by a qualified Biologist, including but not limited to a final survey within 24 hours prior to ground disturbance and before construction equipment mobilizes to the project area. The qualified Biologist shall have a minimum of 2 years of experience implementing the CDFW 2012 Staff Report survey methodology resulting in detections. Detected burrowing owls shall be avoided pursuant to the buffer zone prescribed in the CDFW 2012 Staff Report, unless otherwise approved in writing by CDFW, and any eviction plan shall be subject to CDFW review. Please be advised that CDFW does not consider eviction of burrowing owls (i.e., passive removal of an owl from its burrow or other shelter) as a "take" avoidance, minimization, or mitigation measure; therefore, off-site habitat compensation shall be included in the eviction plan. Habitat compensation acreages shall be approved by CDFW, as the amount depends on-site-specific conditions and must be completed before project construction unless otherwise approved in writing by CDFW. Habitat compensation shall also include placement of a conservation easement and preparation and implementation of a long-term management plan prior to project construction.	

	MM BIO-1d: Protection of Active Bird Nests (includes pre-construction survey and implementation of avoidance buffer, if found). 1. If the proposed project requires vegetation to be removed during the nesting season (February 1 to August 31), pre-construction surveys shall be conducted no more than 7 days prior to the start of ground or vegetation disturbance (including tree removal) to determine whether or not active nests are present within the project site and buffer area as appropriate. 2. If an active nest is located during pre-construction surveys, a qualified Biologist shall determine an appropriately sized avoidance buffer based on the species and anticipated disturbance level. (The California Department of Fish and Wildlife [CDFW] recommends a minimum no-disturbance buffer of 250 feet around active nests of non-listed bird species and a 500-foot no-disturbance buffer around active nests of non-listed raptors.) A qualified Biologist shall delineate the avoidance buffer using Environmentally Sensitive Area (ESA) fencing, pin flags, and/or yellow caution tape. The buffer zone shall be maintained around the active nest site(s) until the young have fledged and are foraging independently. No construction activities or construction foot traffic is allowed to occur within the avoidance buffer(s). 3. The qualified Biologist shall monitor the active nest during construction activities and modify the protection zone accordingly to prevent project-related nest disturbance, until the young have fledged. **MM BIO-1e: Roosting Bat Pre-construction Survey and Avoidance** A qualified Biologist with relevant roosting bat experience shall conduct a survey for special-status bats during the appropriate time of day to maximize detectability to determine whether bat species are roosting near the work area no less than 7 days and no more than 14 days prior to beginning ground disturbance and/or construction. Survey methodology may include visual surveys of bats (e.g., observation of bats during foraging period), inspection for suitable habitat, bat sign (e.g., guano), or use of ultrasonic detectors (Anabat, etc.) within 250 feet of project construction activities (where accessible). If the Biologist determines or presumes bats are present, the Biologist shall exclude the bats from suitable spaces by installing one-way exclusion devices. After the bats vacate the space, the Biologist shall close off the	

Impacts	Mitigation Measures	Level of Significance After Mitigation
	space to prevent recolonization. Grading shall only commence after the Biologist verifies 7 to 10 days later that the exclusion methods have successfully prevented bats from returning. To avoid impacts on non-volant (i.e., nonflying) bats, the Biologist shall only conduct bat exclusion and eviction from May 1 through October 1. Exclusion efforts may be restricted during periods of sensitive activity (e.g., during hibernation or while females in maternity colonies are nursing young). **MM BIO-1f: Protection of Western Pond Turtles** A qualified Biologist (i.e., a Biologist with at least 2 years of experience conducting surveys for western pond turtle detections) shall submit a wildlife exclusion fencing plan to the California Department of Fish and Wildlife (CDFW) for review and approval prior to starting construction. Exclusion fencing shall be installed along the western perimeter of the project site to prevent the species from traveling from North Slough onto the project site during construction. A qualified Biologist shall survey the project site and adjacent habitat within 72 hours of the start of project activities to determine whether western pond turtle or their nests are present and guide the installation of the exclusion fence. If western pond turtles are discovered, a qualified Biologist with experience handling and relocating the species shall move the species to the nearest suitable habitat outside of the project area and exclusion fencing. If western pond turtle nests are found, CDFW shall be notified prior to starting project activities, and the nest site plus a 50-foot buffer around the nest site shall be fenced with orange construction fence until eggs hatch and young turtles disperse to the adjacent North Slough. In addition, if nest(s) are located during surveys, moth balls (naphthalene) shall be sprinkled around the vicinity of the nest (no closer than 5 feet) to mask human scent and discourage predators. Grading within the nest site's 50-foot buffer area shall be delayed until the young leave the nest as determined by a qualified Biologist. If the CDFW allows translocation of any nestling pond turtles this shall be completed by a qualified Biologist under the direction of the CDFW. **MM BIO-1g: Protection of Overwintering Monarch Butterfly** Activities such as vegetation removal, grading, or initial ground-disturbing activities shall be conducted between November 1 and July 31 (outside of the overwintering season) to the extent feasible. If such activities must be	

Impacts	Mitigation Measures	Level of Significance After Mitigation
	initiated during the overwintering season (August 1 through October 31), a pre-construction overwintering survey shall be conducted by a qualified Biologist no more than 7 days prior to vegetation removal, grading, or initial ground disturbance. The survey shall include the disturbance area and surrounding 250 feet to identify the location and status of any colonies that could potentially be affected either directly or indirectly by project activities. If no colonies are present, then project activities can commence as scheduled. If a colony is present, project construction shall cease immediately to avoid all direct and indirect impacts and report the presence of the colony to the United States Fish and Wildlife Service (USFWS) and California Department of Fish and Wildlife (CDFW) and follow all recommendations provided by USFWS and CDFW.	
Impact BIO-2: The proposed project could have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service.	No mitigation required.	Less than significant impact.
Impact BIO-3: The proposed project could have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.	Implementation of MM BIO-1a through MM BIO-1e.	Less than significant impact with mitigation incorporated.
Impact BIO-4: The proposed project could interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites.	No mitigation required.	Less thank significant.
Cumulative Impact	Implementation of MM BIO-1a through MM BIO-1g.	Less than significant impact with mitigation incorporated.

Impacts	Mitigation Measures	Level of Significance After Mitigation
Section 3.4—Cultural Resources and Tribal Cultural Resources		
Impact CUL-1: The proposed project would not cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5.	**MM CUL-1a:** All construction personnel directly involved with project-related ground disturbance shall attend a "tailgate" Worker Environmental Awareness Program (WEAP) training for archaeological resources. The training shall include visual aids, a discussion of applicable laws and statutes relating to archaeological resources, types of resources that may found within the project site, and procedures to be followed in the event such resources are encountered. The training shall be conducted by an Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology. **MM CUL-1b:** An Archaeological Monitor reporting to the qualified Archaeologist, shall be present during the clearing, grading, and trenching phases of the proposed project to check for the inadvertent discovery of archaeological resources or human remains. Over the course of the proposed project, should the Archaeologist determine that the probability of inadvertent discovery is low, they may make a recommendation to the lead agency that monitoring be reduced to regular periodic or "spot-check" monitoring, or that monitoring may cease altogether. **MM CUL-1c:** If buried cultural resources are discovered during construction, operations shall stop in the immediate vicinity of the find and a qualified Archaeologist shall be consulted to determine whether the resource requires further study. The qualified Archaeologist shall make recommendations to the lead agency on the measures that shall be implemented to protect the discovered resources, including but not limited to excavation of the finds and evaluation of the finds in accordance with Section 15064.5 of the CEQA Guidelines. Potentially significant cultural resources consist of, but are not limited to, stone, bone, fossils, wood, or shell artifacts or features, including hearths, structural remains, or historic dumpsites. Any previously undiscovered resources found during construction within the Master Plan area should be recorded on appropriate California Department of Parks and Recreation (DPR) forms and evaluated for significance in terms of CEQA Guidelines. If the resources are determined to be unique historic resources as defined under Section 15064.5 of the CEQA Guidelines, mitigation measures shall be	Less than significant Impact with mitigation incorporated

Impacts	Mitigation Measures	Level of Significance After Mitigation
	identified by the monitor and recommended to the lead agency. Appropriate mitigation measures for significant resources could include avoidance or capping, incorporation of the site in green space, parks, or open space, or data recovery excavations of the finds. No further grading shall occur in the area of the discovery until the lead agency approves the measures to protect these resources. Any archaeological artifacts recovered as a result of mitigation shall be donated to a qualified scientific institution approved by the lead agency where they would be afforded long-term preservation to allow future scientific study.	
Impact CUL-2: The proposed project could cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5.	Implementation of MM CUL-1a, MM CUL-1b, and MM CUL-1c.	Less than significant impact with mitigation incorporated.
Impact CUL-3: The proposed project could disturb human remains, including those interred outside of formal cemeteries.	**MM CUL-3:** In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken: 1. There shall be no further excavation or disturbance within 100 feet of the remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98. 2. Where the following conditions occur, the landowner or authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance	Less than significant impact with mitigation incorporated.

Impacts	Mitigation Measures	Level of Significance After Mitigation
	with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance: • The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission. • The descendant identified fails to make a recommendation. • The landowner or authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner. Additionally, California Public Resources Code Section 15064.5 requires the following relative to Native American Remains: • When an initial study identifies the existence of, or the probable likelihood of, Native American Remains within a project, a lead agency shall work with the appropriate Native Americans as identified by the NAHC as provided in Public Resources Code Section 5097.98. The applicant may develop a plan with respect to their respective individual development proposals for treating or disposing of, with appropriate dignity, the human remains, and any items associated with Native American Burials with the appropriate Native Americans as identified by the NAHC.	
Impact CUL-4: The proposed project may cause a substantial adverse change in the significance of a Tribal Cultural Resource.	MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3.	Less than significant impact with mitigation incorporated.
Impact CUL-5: The proposed project may cause a substantial adverse change in the significance of a tribal cultural resource.	MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3.	Less than significant impact with mitigation incorporated.
Cumulative Impact	MM CUL-1a, MM CUL-1b, MM CUL-1c, and MM CUL-3.	Less than significant impact with mitigation incorporated.
Section 3.5—Energy		
Impact ENER-1: The proposed project would not result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of	No mitigation is necessary.	Less than significant impact.

Impacts	Mitigation Measures	Level of Significance After Mitigation
energy resources, during project construction or operation.		
Impact ENER-2: The proposed project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency.	No mitigation is necessary.	Less than significant impact.
Cumulative Impact	No mitigation is necessary.	Less than significant impact.
Section 3.6—Geology and Soils		
Impact GEO-1: The proposed project may expose people or structures to potential substantial adverse effects associated with seismic hazards.	**MM GEO-1:** Prior to the issuance of the building permit, recommendations from the Geotechnical Engineering Investigation prepared by Krazan & Associates (Environmental Impact Report [EIR] Appendix E) shall be incorporated into all project plans and applicable construction-related permits and submitted to the City of American Canyon for review and approval.	Less than significant impact with mitigation incorporated.
Impact GEO-2: The proposed project may result in substantial soil erosion or the loss of topsoil.	**MM HYD-1:** Prior to the issuance of grading permits or building permits (whichever occurs first), the project applicant shall obtain coverage under the National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (General Permit) (Order WQ 2022-0057-DWQ, NPDES No. CAS000002) by preparing a Storm Water Pollution Prevention Plan (SWPPP) and submitting it, along with a Notice of Intent (NOI), to the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB). The City of American Canyon shall confirm that the applicant has prepared a SWPPP and obtained coverage under the General Permit prior to issuance of grading or building permits. The SWPPP shall identify a practical sequence for Best Management Practice (BMP) implementation and maintenance, site restoration, contingency measures, responsible parties, and agency contacts. The SWPPP shall address both the project site and adjacent parcel where soil stockpiles would be removed and the borrow pit would be created to provide fill for the project site. The SWPPP shall include but not be limited to the following elements: • Temporary erosion control measures shall be employed for disturbed areas.	Less than significant impact with mitigation incorporated.

Impacts	Mitigation Measures	Level of Significance After Mitigation
	• No disturbed surfaces shall be left without erosion control measures in place during the winter and spring months. disturbed areas shall be covered with soil stabilizers, mulch, fiber rolls, or temporary vegetation. • Sediment shall be retained on-site by a system of sediment basins, traps, or other appropriate measures. drop inlets shall be lined with filter fabric/geotextile. • Discharge from the stormwater system shall be diffused in such a way as to mimic existing overland flow conditions. • The construction contractor shall prepare standard operating procedures for the handling of hazardous materials on the construction site to eliminate or reduce discharge of materials to storm drains. this may include locating construction-related equipment and processes that contain or generate pollutants in a secure way, away from storm drains, gutters, and wetlands; parking, fueling, and cleaning all vehicles and equipment in the secure area; designating concrete washout areas; and preventing or containing potential leakage or spilling from sanitary facilities. • BMP performance and effectiveness shall be determined either by visual means where applicable (e.g., observation of above-normal sediment release), or by actual water sampling in cases where verification of contaminant reduction or elimination (such as inadvertent petroleum release) is required by the RWQCB to determine adequacy of the measure. • In the event of significant construction delays or delays in final landscape installation, native grasses or other appropriate vegetative cover shall be established on the construction site as soon as possible after disturbance as an interim erosion control measure throughout the wet season. Prior to issuance of grading permits for the proposed project, the applicant shall submit to the City of American Canyon for review and approval a SWPPP in accordance with the requirements of the Statewide General Permit. The SWPPP shall be implemented during construction.	
Impact GEO-3: The proposed project would not be located on a geologic unit or soil that would become unstable as a result of the project, and potentially result	No mitigation is necessary.	Less than significant impact.

Impacts	Mitigation Measures	Level of Significance After Mitigation
in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse.		
Impact GEO-4: The proposed project may create substantial risks to life or property as a result of expansive soil conditions on the project site.	Implement Mitigation Measure GEO-1.	Less than significant impact with mitigation incorporated.
Impact GEO-5: The proposed project may directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.	**MM GEO-5:** Although extremely unlikely, should any significant paleontological resources (e.g., bones, teeth, well-preserved plant elements) be unearthed by the construction crew, their activities shall be diverted at least 15 feet from the find until a professional Paleontologist has assessed it and, if deemed significant, salvaged in a timely manner. Collected fossils shall be deposited in an appropriate repository, such as the University of California Museum of Paleontology (UCMP), where they shall be properly curated and made available for future research.	Less than significant impact with mitigation incorporated.
Cumulative Impact	Implement Mitigation Measure GEO-1, MM HYD-1, and MM GEO-5.	Less than significant impact with mitigation incorporated.
Section 3.7—Greenhouse Gas Emissions		
Impact GHG-1: The proposed project would not generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.	No mitigation is necessary.	Less than significant impact.
Impact GHG-2: The proposed project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.	No mitigation is necessary.	Less than significant impact.
Cumulative Impact	No mitigation is necessary.	Less than significant impact.
Section 3.8—Hazards and Hazardous Materials		
Impact HAZ-1: Buildout of the proposed project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials and would not create a significant hazard to the public or the environment	No mitigation is necessary.	Less than significant impact.

Impacts	Mitigation Measures	Level of Significance After Mitigation
through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment.		
Impact HAZ-2: The proposed project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.	No mitigation is necessary.	Less than significant impact.
Impact HAZ-3: The proposed project would not be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would not create a significant hazard to the public or the environment.	No mitigation is necessary.	Less than significant impact.
Impact HAZ-4: The proposed project would not create aviation safety hazards for persons residing or working within 2 miles of the Napa County Airport.	Less than significant impact.	No mitigation is necessary.
Impact HAZ-5: The proposed project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.	Less than significant impact.	No mitigation is necessary.
Cumulative Impact	Less than significant impact.	No mitigation is necessary.
Section 3.09—Hydrology and Water Quality		
Impact HYD-1: The proposed project could violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality.	**MM HYD-1:** Prior to the issuance of grading permits or building permits (whichever occurs first), the project applicant shall obtain coverage under the National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (General Permit) (Order WQ 2022-0057-DWQ, NPDES No. CAS000002) by preparing a Storm Water Pollution Prevention Plan (SWPPP) and submitting it, along with a Notice of Intent (NOI), to the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB). The City of American Canyon shall confirm that the applicant has prepared a SWPPP and obtained coverage under the General Permit prior to issuance of grading or building permits. The SWPPP shall identify a	Less than significant impact with mitigation incorporated.

Impacts	Mitigation Measures	Level of Significance After Mitigation
	practical sequence for Best Management Practice (BMP) implementation and maintenance, site restoration, contingency measures, responsible parties, and agency contacts. The SWPPP shall address both the project site and adjacent parcel where soil stockpiles would be removed and the borrow pit would be created to provide fill for the project site. The SWPPP shall include but not be limited to the following elements: • Temporary erosion control measures shall be employed for disturbed areas. • No disturbed surfaces shall be left without erosion control measures in place during the winter and spring months. • Disturbed areas shall be covered with soil stabilizers, mulch, fiber rolls, or temporary vegetation. • Sediment shall be retained on-site by a system of sediment basins, traps, or other appropriate measures. drop inlets shall be lined with filter fabric/geotextile. • Discharge from the stormwater system shall be diffused in such a way as to mimic existing overland flow conditions. • The construction contractor shall prepare standard operating procedures for the handling of hazardous materials on the construction site to eliminate or reduce discharge of materials to storm drains. this may include locating construction-related equipment and processes that contain or generate pollutants in a secure way, away from storm drains, gutters, and wetlands; parking, fueling, and cleaning all vehicles and equipment in the secure area; designating concrete washout areas; and preventing or containing potential leakage or spilling from sanitary facilities. • BMP performance and effectiveness shall be determined either by visual means where applicable (e.g., observation of above-normal sediment release), or by actual water sampling in cases where verification of contaminant reduction or elimination (such as inadvertent petroleum release) is required by the RWQCB to determine adequacy of the measure. • In the event of significant construction delays or delays in final landscape installation, native grasses or other appropriate vegetative cover shall be established on the construction site as soon as possible after disturbance as an interim erosion control measure throughout the wet season.	

Impacts	Mitigation Measures	Level of Significance After Mitigation
	Prior to issuance of grading permits for the proposed project, the applicant shall submit to the City of American Canyon for review and approval a SWPPP in accordance with the requirements of the Statewide General Permit. The SWPPP shall be implemented during construction.	
Impact HYD-2: The proposed project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin.	No mitigation is necessary.	Less than significant impact.
Impact HYD-3: The proposed project would not substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: (i) result in substantial erosion or siltation on- or off-site; (ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site; (iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or (iv) impede or redirect flood flows.	No mitigation is necessary.	Less than significant impact.
Cumulative Impact	Implementation of MM HYD-1	Less than significant impact with mitigation incorporated.
Section 3.10—Land Use and Planning		
Impact LU-1: The proposed project would not conflict with the applicable provisions of the City of American Canyon General Plan.	No mitigation is necessary.	Less than significant impact.
Impact LU-2: The proposed project would not conflict with the applicable provisions of the American Canyon Municipal Code.	No mitigation is necessary.	Less than significant impact.

Impacts	Mitigation Measures	Level of Significance After Mitigation
Impact LU-3: The proposed project would not conflict with the applicable provisions of the Napa County Airport Land Use Compatibility Plan.	No mitigation is necessary.	Less than significant impact.
Cumulative Impact	No mitigation is necessary.	Less than significant impact.
Section 3.11—Noise		
Impact NOI-1: The proposed project would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.	No mitigation is necessary.	Less than significant impact.
Impact NOI-2: The proposed project would not result in generation of excessive groundborne vibration or groundborne noise levels.	No mitigation is necessary.	Less than significant impact.
Impact NOI-3: The proposed project would not expose people residing or working in the project area to excessive noise levels for a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport.	No mitigation is necessary.	Less than significant impact.
Cumulative Impact	No mitigation is necessary.	Less than significant impact.
Section 3.12—Public Services		
Impact PUB-1: The proposed project would not result in a need for new or expanded fire protection facilities that may have physical impacts on the environment.	No mitigation is necessary.	Less than significant impact.
Impact PUB-2: The proposed project would not result in a need for new or expanded police protection facilities that may have physical impacts on the environment.	No mitigation is necessary.	Less than significant impact.
Cumulative Impact	No mitigation is necessary.	Less than significant impact.

Impacts	Mitigation Measures	Level of Significance After Mitigation
Section 3.13—Transportation and Traffic		
Impact TRANS-1: The proposed project would not conflict with a program plan, ordinance or policy of the circulation system, including transit, roadway, bicycle and pedestrian facilities.	No mitigation is required.	Less than significant impact.
Impact TRANS-2: The proposed project would conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b).	**MM TRANS-2: Transportation Demand Management Program** The proposed project shall develop a Transportation Demand Management (TDM) program to encourage employees to choose non-personal vehicle modes of transportation for commuting. This includes a commute trip reduction marketing initiative, through which the employer would disseminate information about available transportation options. Strategies would include encouraging ride sharing among project employees and linking them to resources to find rideshare partners working nearby, such as through the Napa Valley Transportation Authority (NVTA) V-Commute program or the regional 511.org program. Marketing materials can also inform employees of resources such as the Guaranteed Ride Home Program, which provides free rides home in emergency situations for employees using non-personal vehicle transportation modes.	Significant and unavoidable impact.
Impact TRANS-3: The proposed project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).	No mitigation is required.	Less than significant impact.
Impact TRANS-4: The proposed project would not result in inadequate emergency access.	No mitigation is required.	Less than significant impact.
Cumulative Impact	Implementation of MM TRANS-2	Significant and unavoidable impact.
Section 3.14—Utilities		
Impact UTIL-1: The proposed project would not require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or	No mitigation is necessary.	Less than significant impact.

Impacts	Mitigation Measures	Level of Significance After Mitigation
relocation of which could cause significant environmental effects.		
Impact UTIL-2: The proposed project would have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years.	No mitigation is necessary.	Less than significant impact.
Impact UTIL-3: The proposed project would not result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments.	No mitigation is necessary.	Less than significant impact.
Impact UTIL-4: The proposed project would not generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals.	No mitigation is necessary.	Less than significant impact.
Cumulative Impact	No mitigation is necessary.	Less than significant impact.

Attachment 9: Public Notice Package

City of American Canyon
Revised Notice of Availability of a Draft Environmental Impact Report for the Proposed SDG Commerce 220 Distribution Center Project and Public Workshop to Solicit Comments on the Environmental Document

Date: June 11, 2024

To: State Clearinghouse and Interested Public Agencies, Parties, and Organizations

From: William He, AICP, Senior Planner, City of American Canyon

Subject: Notice of Availability of a Draft Environmental Impact Report for the Proposed SDG Commerce 220 Distribution Center Project (State Clearinghouse [SCH] No. 2023100842) and public workshop.

NOTICE IS HEREBY GIVEN that, pursuant to the requirements of the California Environmental Quality Act (CEQA), the City of American Canyon (Lead Agency) has prepared a Draft Environmental Impact Report (Draft EIR) for the proposed SDG Commerce 220 Distribution Center Project (proposed project), which is now available for public review.

Document Availability

The Draft EIR, including the technical appendices and any documents incorporated by reference, can be reviewed at the following website: https://ceqanet.opr.ca.gov/2023100842 and https://cityofamcan.org/projectreview . A hard copy of the Draft EIR and technical appendices can also be reviewed at these locations during the identified business hours:

American Canyon City Hall
4831 Broadway Street, Suite 201
American Canyon, CA 94503
Monday through Friday 8 a.m. – 5 p.m.
Saturday–Sunday: Closed

Active Adults Center
2185 Elliot Drive
American Canyon, CA 94503
Hours: Monday - Friday 9:00 a.m. to 2:00 p.m.
Saturday–Sunday: Closed

American Canyon Library
300 Crawford Way
American Canyon, CA 94503
Monday, Tuesday, and Thursday through Saturday 10 a.m. – 6 p.m.
Wednesday 12 p.m. – 8 p.m.
Sunday Closed

52-Day Comment Period on Draft Program EIR

The City of American Canyon is soliciting comments from responsible agencies, trustee agencies, public agencies, organizations, and members of the public regarding the Draft EIR. In accordance with the time limits established by CEQA, the Draft EIR public review period will begin on **June 11, 2024,** and end on **August 2, 2024**. The lead agency has added 7 more days to the required 45- day review period. Please provide your written/typed comments (including name, affiliation, telephone number, and contact information) via US mail or web link shown below by 5:00 p.m. on **Friday, August 2, 2024:**

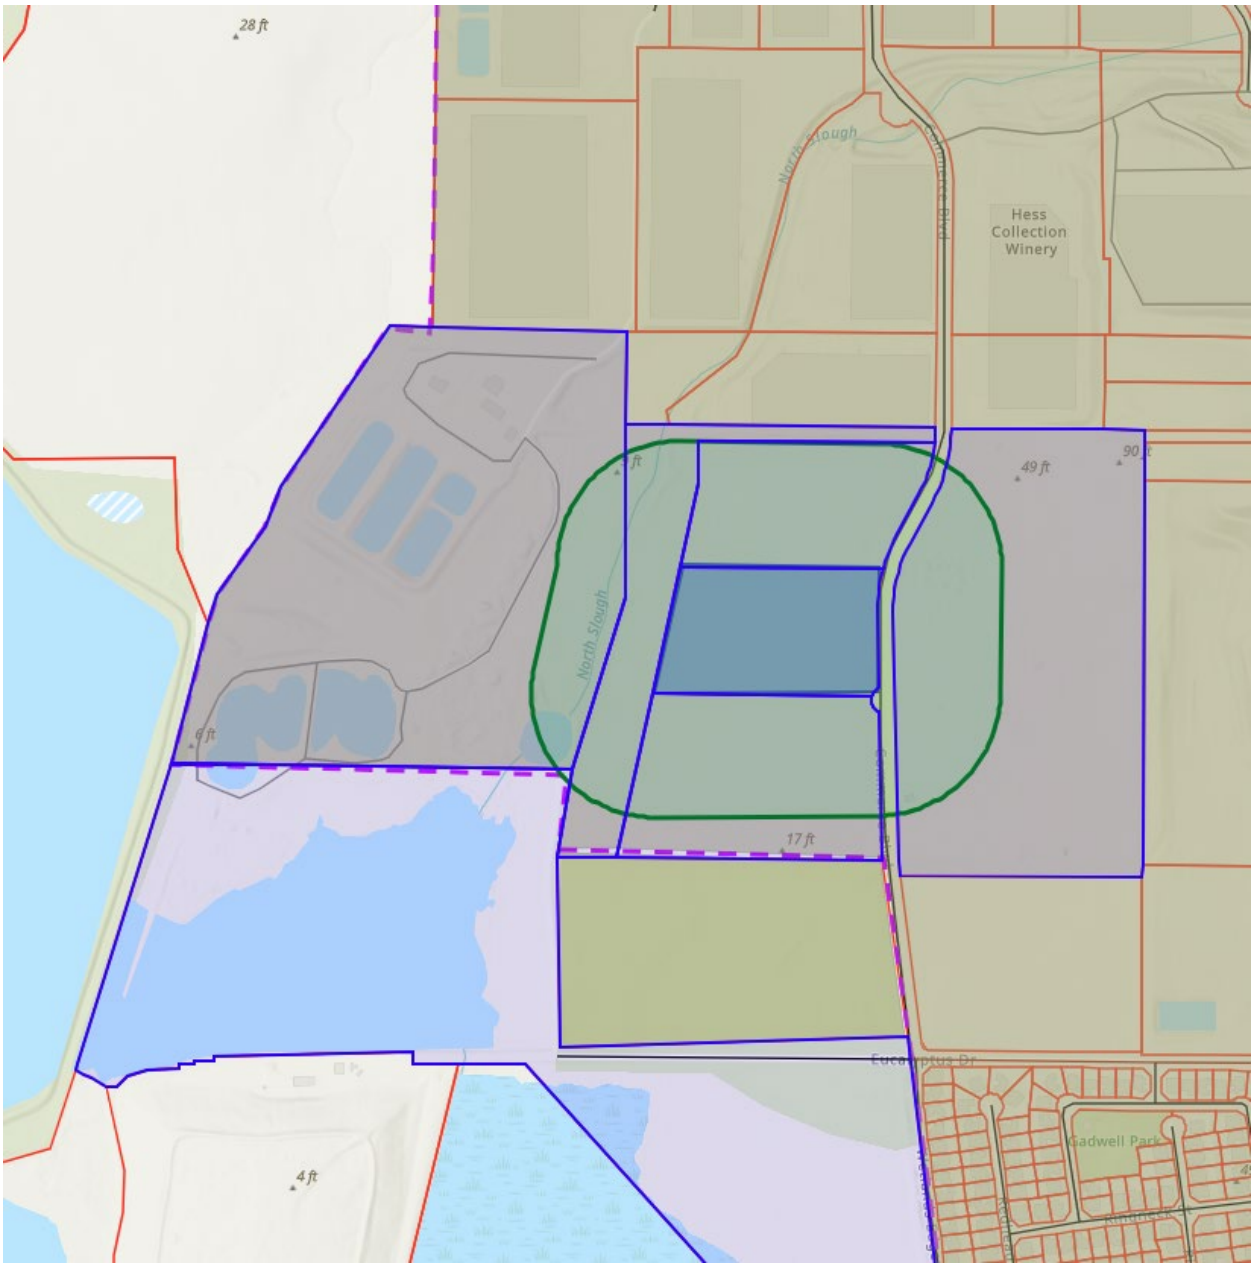
SDG Commerce 220 Project
City of American Canyon
4381 Broadway Street, Suite 201
American Canyon, CA 94503
Comment Submittal Web Form link:
https://cityofamcan.org/SDG220.

Public Workshop

During the review period, the City will hold a workshop to provide additional information on the Draft EIR for the SDG Commerce 220 Distribution Center Project. For accurate administrative record purposes, oral comments received at the Planning Commission workshop will not be included in the Draft EIR. To include comments in the Draft EIR, please provide written comments as described above. The workshop will be held during a Planning Commission Workshop on **July 30, 2024 at 6:30pm** at the American Canyon City Hall, City Council Chambers, 4381 Broadway Street, American Canyon, CA 94503.

Proposed Project

Location: The project site is located at 1055 Commerce Court in the City of American Canyon, in Napa County, California. The project site consists of Assessor's Parcel Number (APN) 058-030-069 (10.17 acres) plus small additional improvement areas (consisting primarily of parking lot improvements and connections to adjoining land uses) for a total of 10.45 acres. The rectangular project site is bounded by a eucalyptus grove and North Slough (west), a parcel entitled for a wine distribution warehouse known as SDG Commerce 217 currently under construction (north), Commerce Court beyond which is a paintball recreation area (east), and a wine distribution warehouse known as SDG Commerce 330 (south). The project site is located on the *Cuttings Wharf, California*, United States Geological Survey (USGS) 7.5-minute Topographic Quadrangle Map, Township 4 North, Range 4 West, Section 14 (Latitude 38° 11' 22" North; Longitude 122° 16' 19" West).



Summary: The applicant, SDG Commerce 220, LLC proposes to develop a 219,834-square-foot wine storage and distribution center on the 443,005-square-foot project site. The warehouse would provide 23 truck doors and approximately 4,400 square feet of office space. It would have perimeter concrete tilt wall panels with varying parapet heights and accent spandrel glass/metal canopy features around offices and corners of the building. The average roof height would be approximately 35 feet high and portions of the building exterior walls would have various heights to provide architectural relief. The building would be insulated and refrigerated at approximately 58°F (degrees Fahrenheit), making it suitable for storage of wine and related products. The amount of refrigeration necessary would be reduced through the use of intake louvers and fans, which would allow cool night air to be utilized.

Anticipated Significant Environmental Effects
The following significant environmental effects are anticipated as a result of the project:

- **Vehicle Miles Traveled:** The Project's Vehicle Miles Traveled (VMT) would not be reduced by at least 19 percent below current levels. Mitigation is provided but due to the location of the project in elation to transit services, achieving this level of mitigation is considered infeasible

and therefore, impacts would remain significant and unavoidable. As such, the proposed project would also have a cumulatively considerable contribution to VMT impacts.

All other project related environmental effects were concluded to be less than significant or less than significant with the implementation mitigation. As stated in the DEIR, the site is not listed as a hazardous materials site enumerated under Government Code Section 65962.5.

Response to DEIR, 1055 Commerce Ct.

From: Yvonne Baginski, yvonnebaginski@gmail.com

June 26, 2024

Thank you for the opportunity to respond to the DEIR for the SDG project on 1055 Commerce Ct. in American Canyon.

Here is a list of my questions/concerns and recommendations:

1. This DEIR is frankly, moot. This property has been graded, the trees cutdown and it 2qw parking lot for laborers working to build out on the the warehouses on adjoining property. With the exception of two small wetlands, property is devoid of any vegetation to support wildlife. The wetlands are also cordoned off with orange plastic fencing, thereby making them inaccessible to wildlife. It is just packed dirt now. There is no accurate measure of environmental or wildlife impact.
2. Knowing this, one cannot ignore the surrounding and adjacent lands that support a number of species of wildlife that are on the threatened or "special" species list. While this DEIR is specific to this piece of land, there are animals in the adjacent lands needing protection. There is a cumulative effect of the construction of three warehouses, and this is noted in the DEIR. As is, the decline in wildlife is evident after construction started. If there was no verified count of wildlife species living in this area, we cannot accurately measure the decline in wildlife, Wildlife decline is an assumption based on anecdotal evidence. For example, there are fewer ground squirrels seen when walking the trails. We don't see many nocturnal species unless we are on the gounds at night,etc.
3. In February, 2024, I saw numerous monarch butterflies in the Eucalyptus trees directly adjacent to the property. It was a warm sunny day, and I estimate 20-30 monarchs flying around. It is possible that there are overwintering monarchs in those eucalyptus trees. The time to see these overwintering monarchs is in the WINTER months, and that's not when the EIR biologist was in the field. I asked on the NEXT DOOR website whether other people have noticed the monarchs, and received several photos and stories, so I know they are in the area. At this time, there is no protection in place for the eucalyptus trees behind the site. I also suspect that construction noise and lights will make it more difficult for the

monarchs to continue living in those trees. The excessiveness of noise, lighting, dust and fumes will also be driving out any other animals living there...including the birds and bats. I am asking whether there could be a time-limited intervention preventing construction work during certain times of the day/night. Can this be made a quiet/dark site at during nighttime hours so that the nocturnal animals have someplace to live/hunt? No lights or trucks after 5 p.m.? This would be extended to when the warehouses become operational.

4. Re; the wetlands: How will they be maintained, managed and protected? Who will be responsible for their upkeep? There are three wetlands on the property and they have a building/asphalt barrier between them. If wildlife is denied access to these wetlands, what is the purpose to keeping them intact? Can the asphalt barrier in-between the wetlands be removed? Can a wildlife corridor be made on the property from the wetlands to the North Slough? Or, just between the two wetlands? Is there a management plan in place for the wetlands?
5. Where do the roosting bats go when they're evicted? The eucalyptus trees are not protected and are slated to be cleared. There is no conservation area for the bats/birds/butterflies. Would this property owner consider placing bat roosting boxes and a raptor nest site on the property?
6. Due to the proximity of the property to the estuary, is it possible for the landscaping to be native trees and plants conducive to the local wildlife? Specifically live oaks, willows, and developing a riparian habitat around the wetlands. Shouldn't the landscape architect be working with a wildlife biologist to develop the best habitat to replace what has been destroyed? Can the landscaping planned for this area be traded out for native plants?
7. The proximity of monarchs and other butterflies would also point to the necessity of building pollinator-friendly landscaping...including milkweed and other native flowering plants. In reviewing the landscaping for this property, the recommended plantings are standard-issue and not specific to this micro-climate or location. Will the landscaper consider a native plants, pollinator friendly landscape?
8. Pesticide use is especially destructive to bees, and butterflies. Having native plants and a riparian habitat will reduce the use of pesticides. Would the property developer agree to a no pesticide/herbicide policy ? This is especially relevant with the use of bait station boxes. This area is used by raptors (hawks, eagles, etc.) for hunting. The bait station boxes are filled with a poison which takes 3-4 days to kill the rodent. During this time, the rodent is "slowing" down in the fields and becomes easy prey. While bait stations are legal (the pesticide industry has very powerful lobbyists), there are snap trap alternatives that won't

harm the wildlife up the chain or cause undue suffering. Please consider no pesticides/herbicides/bait stations to protect wildlife. Restrict rodent killing to snap traps only.

9. Right now, the biggest risk to the local wildlife is the continual destruction of their habitat with no replacement/restoratkl . The animals have nowhere to go. This translates to a certain death. There are no surveys or "before and after" wildlife counts after the construction of a warehouse. These building developers aren't planting or replacing habitat. Switching to native, local landscaping would be an easy transition. No lighting/trucks during dark hours. Will the landscape architect consult with wildilfe biologists on what could be done to enhance wildlife habitat on the property?
10. As American Canyon works towards meeting carbon reduction goals, there's no mention in this DEIR on whether this warehouse will be using MCE, rather than PG&E for electricity. What about rooftop solar? Will there be an EV station on site for employee/visitor vehicles?
11. Re: Swainson Hawks and other birds...could the landscaping professionals meet with the Napa-Solano Audobon Society to create a plants and nesting site plan that would be conducive to the area?
12. A jurisdictional "no killing of any wildlife" rule during and after construction. Any wildlife injured would be taken immediately to the local wildlife rehabilitation center. I am asking that signs be posted throughout the construction area to that effect, with the name, phone number and location of the wildlife rehabilitation center prominently posted.

Those are my current thoughts, and I would appreciate a response and an opportunity to work with you all in creating a wildlife friendly site on this property.

CDFW CEQA Review - Extension Request

Magnuson, Nicholas@Wildlife <Nicholas.Magnuson@Wildlife.ca.gov>

You don't often get email from nicholas.magnuson@wildlife.ca.gov. Learn why this is important

Hi William,

This is Nick Magnuson, CDFW environmental scientist covering Napa County and the cities of Benicia and Vallejo. I'm currently reviewing SCH 2023100842, SDG Commerce 220 Distribution Center Project – Draft EIR.

With this message, I'm requesting from you and the City of American Canyon a one-week extension on the review timeline in which to submit CDFW comments on the EIR. This will ensure a thorough and accurate review and will be greatly appreciated. With the extension granted, the City would receive comments no later than Friday, August 2nd.

Please let me know if this is agreeable at your earliest convenience.

Thank you,
Nick

Hi William,

This is Nick Magnuson, CDFW. We are preparing to submit comments for SCH 2023100842 and upon inspection of recent aerial imagery noticed some equipment staging and possible earthmoving. We wanted to confirm that the Project we are preparing comments for has not started already.

Let me know if any questions or clarifications.

Thank you,
Nick

Subject: SDG Commerce 220 Distribution Center Project, Draft Environmental Impact Report, SCH No. 2023100842, Napa County

Dear Mr. He:

The California Department of Fish and Wildlife (CDFW) received a Notice of Availability of a Draft Environmental Impact Report (EIR) from the City of American Canyon (City) for SDG Commerce 220 Distribution Center Project (Project) pursuant the California Environmental Quality Act (CEQA) and CEQA Guidelines.[1] CDFW previously submitted comments in response to the Notice of Preparation of the Environmental Impact Report (NOP) in a letter dated November 17, 2023.

CDFW is submitting comments on the draft EIR to inform the City, as the Lead Agency, of potentially significant impacts to biological resources associated with the Project. **Thank you** for including in the draft EIR mitigation measures CDFW has recommended for past projects to mitigate impacts to special-status species such as burrowing owl (*Athene cunicularia*) and western pond turtle (*Actinemys marmorata*).

Based on Google Earth aerial imagery, it appears that Project construction may have prematurely started as recent equipment staging and earthmoving are visible. CDFW notified you of this issue via email on July 17, 2024 and you indicated that your records do not show any grading permits issued for the SDG Commerce 220 property and the Project should not start construction. **CDFW requests that the City investigate any unauthorized Project construction to uphold protection of fish and wildlife resources and compliance with CEQA and other environmental laws.**

CDFW ROLE

CDFW is a **Trustee Agency** with responsibility under CEQA pursuant to CEQA Guidelines section 15386 for commenting on projects that could impact fish, plant, and wildlife resources. CDFW is also considered a **Responsible Agency** if a project would require discretionary approval, such as permits issued under the California Endangered

[1] CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

Docusign Envelope ID: 7827FEA8-FCC7-4528-9330-EC2F750F3EBA

Species Act (CESA) or Native Plant Protection Act, the Lake and Streambed Alteration (LSA) Agreement, or other provisions of the Fish and Game Code that afford protection to the state's fish and wildlife trust resources.

PROJECT DESCRIPTION SUMMARY

Proponent: SDG Commerce 220, LLC

Objective: The Project would develop a 219,834-square-foot wine storage and distribution center, including the construction of vehicular access areas and drive isles and sharing a driveway with a neighboring facility. Additional vehicle parking spaces will be built, including 134 car spaces, 23 truck parking stalls,19 electric vehicle stalls, and 3 bicycle storage lockers with room for 12 bicycles. Construction activities are expected to span 9.5 months and will include landscaping and the construction of large concrete slabs and wall panels using typical construction equipment.

Location: The Project site is located on 1055 Commerce Court in the City of American Canyon, Napa County; Latitude 38.185969 North, Longitude -122.274294 West; and encompasses approximately 10.45 acres.

REGULATORY REQUIREMENTS

California Endangered Species Act

Please be advised that a CESA Incidental Take Permit (ITP) must be obtained if the Project has the potential to result in "take" of plants or animals listed under CESA either during construction or over the life of the Project. **The Project has the potential to impact Swainson's hawk (*Buteo swainsoni*), CESA listed as threatened species, as further described below.** Issuance of an ITP is subject to CEQA documentation; the CEQA document must specify impacts, mitigation measures, and a mitigation monitoring and reporting program. If the Project will impact CESA listed species, early consultation is encouraged, as significant modification to the Project and mitigation measures may be required in order to obtain an ITP.

CEQA requires a Mandatory Finding of Significance if a project is likely to substantially restrict the range or reduce the population of a threatened or endangered species. (Pub. Resources Code, §§ 21001, subd. (c) & 21083; CEQA Guidelines, §§ 15380, 15064, & 15065.). Impacts must be avoided or mitigated to less-than-significant levels unless the CEQA Lead Agency makes and supports Findings of Overriding Consideration (FOC). The CEQA Lead Agency's FOC does not eliminate the Project proponent's obligation to comply with CESA.

Docusign Envelope ID: 7827FEA8-FCC7-4528-9330-EC2F750F3EBA

Raptors and Other Nesting Birds

CDFW has jurisdiction over actions that may result in the disturbance or destruction of active nest sites or the unauthorized take of birds. Fish and Game Code sections protecting birds, their eggs, and nests include sections 3503 (regarding unlawful take, possession or needless destruction of the nests or eggs of any bird), 3503.5 (regarding the take, possession or destruction of any birds-of-prey or their nests or eggs), and 3513 (regarding unlawful take of any migratory nongame bird). Migratory birds are also protected under the federal Migratory Bird Treaty Act.

COMMENTS AND RECOMMENDATIONS

CDFW offers the comments and recommendations below, which are also included in **Attachment 1,** to assist the City in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources.

I. Mitigation Measure Related Impact Shortcomings

MANDATORY FINDINGS OF SIGNIFICANCE. Does the Project have potential to substantially reduce the number or restrict the range of an endangered, rare, or threatened species? Does the Project have impacts that are individually limited, but cumulatively considerable?

AND

Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or U.S. Fish and Wildlife Service?

COMMENT 1: Swainson's hawk, draft EIR pages 3.3-15, 3.3-38, 3.3-39, and ES-8, Biological Resources Assessment page 42.

Issue: The draft EIR does not adequately mitigate potential impacts to Swainson's hawk. Mitigation Measure (MM) BIO-1b: Swainson's Hawk Avoidance and Minimization and Construction Monitoring of the draft EIR (page ES-8, 3.3-38) includes an insufficient buffer distance for occupied Swainson's hawk nests. Additionally, the draft EIR does not mitigate the loss of Swainson's hawk foraging habitat despite the Project site providing potentially suitable foraging habitat for this species and potentially suitable nest trees. There are unprocessed years 2023 and 2024 California Natural Diversity Database (CNDDB) records of potentially nesting Swainson's hawks approximately 1.4 miles north of the Project site, and a year 2021 CNDDB record of confirmed nesting Swainson's hawks along Fagan Creek approximately 1.9 miles north of the Project site,

Docusign Envelope ID: 7827FEA8-FCC7-4528-9330-EC2F750F3EBA

which is part of a cluster of nesting records indicating the Project site is likely used for foraging by nesting Swainson's hawks.

Specific impacts, why they may occur and be potentially significant:

Nesting Swainson's hawks

Thank you for including in MM BIO-1b (b) protocol-level Swainson's hawk surveys pursuant to the 2000 *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley* (https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=83990&inline) (draft EIR pages 3.4-35, 3.4-36, and 3.4-37). However, the proposed buffer distance of 600 feet (200 yards) around any detected active nests is potentially inadequate and therefore the Project has the potential to impact nesting Swainson's hawk through auditory or visual disturbances above ambient levels, which may result in Swainson's hawk nest abandonment and loss of eggs or reduced health and vigor and loss of young. This above survey protocol includes project activities which occur greater than 200 yards in a category of low disturbance to the reproductive success of individuals (TAC 2000 page 5). However, this "low" level of disturbance may still result in take, and a 600-foot buffer may not be adequate to prevent take of nesting Swainson's hawk. A more protective 0.5-mile buffer is recommended in both the *Staff Report Regarding Mitigation for Impacts to Swainson's Hawks (Buteo swainsoni) in the Central Valley of California* (https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=83992&inline) and the *Swainson's Hawk Survey Protocols, Impact Avoidance, and Minimization Measures for Renewable Energy Projects in the Antelope Valley of Los Angeles and Kern Counties, California* (https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=83991&inline) and should be implemented for this Project (CDFG 2012, and CEC and CDFG 2010).

Swainson's hawk foraging habitat

The Project's footprint will occupy approximately 10.45 acres (draft EIR page ES-1), displacing undeveloped grassland habitat. The draft EIR has established the potential for Swainson's hawk to nest in the vicinity of the Project site. However, it has not addressed mitigation for the loss of Swainson's hawk foraging habitat. Regarding nesting birds and all special-status bird species, the Biological Resources Assessment (page 42) states that "Although the site has been significantly disturbed in the past, the grassland on-site may provide marginal foraging opportunities to support nesting and rearing habitat." The draft EIR (page 3.3-15) states that "During the nesting season Swainson's hawk usually forage within 2 miles of the nest." Nesting Swainson's hawk adults and fledged young are limited in their foraging range and any in the vicinity of the Project site would likely rely on resources on it. Swainson's hawk chicks once fledged rely on nearby foraging resources to a greater extent than adults and are usually limited in their foraging scope to within just 0.5 miles from the nest (Woodbridge 1998).

Docusign Envelope ID: 7827FEA8-FCC7-4528-9330-EC2F750F3EBA

Additionally, in 2016, CDFW released a Status Review for Swainson's hawk in California and recommended the species retain its status as threatened under CESA (CDFW 2016). The review states there is no indication the species has reoccupied its historical range and the distribution of Swainson's hawk remains largely unchanged and restricted. Additionally, the review cites the **primary threat** to Swainson's hawk continues to be habitat loss, **especially the loss of suitable foraging habitat**. One recent study done by CDFW scientists indicated Swainson's hawk populations have been increasing, but also cautioned using this data to inform conservation planning, stating this apparent stability remains largely unclear (Furnas et al. 2022). The study cites concerns regarding impacts to Swainson's hawk from urban development, reduction in grasslands, and orchard and vineyard cultivation, all of which are prominent impacts in Napa County, where the Project is proposed.

Potentially significant impacts

Swainson's hawk is CESA listed as a threatened species and therefore is considered to be a threatened species pursuant to CEQA Guidelines section 15380. Therefore, if an active Swainson's hawk nest is disturbed by the Project or its foraging habitat is removed, the Project may result in a substantial reduction in the number or restriction in the range of a threatened species, which is considered a **Mandatory Finding of Significance** pursuant to CEQA Guidelines section 15065, subdivision (a)(1).

Other large development projects in Napa County have not been required to mitigate for Swainson's hawk foraging habitat, despite CDFW's recommendations. Therefore, the net loss of foraging habitat from the proposed Project, in conjunction with other projects that have not mitigated for loss of Swainson's hawk foraging habitat, may also contribute to a significant cumulative impact to Swainson's hawk, which is a **Mandatory Finding of Significance.**

Recommended Mitigation Measures: To reduce potential impacts to Swainson's hawk to less-than-significant and comply with CESA, CDFW recommends incorporating the following into Mitigation Measures into MM BIO-1.

Swainson's Hawk Surveys: If Project activities are scheduled during the nesting season for Swainson's hawks (March 1 to September 15), prior to beginning work on the Project, a qualified biologist shall conduct surveys according to the *Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley* (https://nrm.dfg.ca.gov/FileHandler.ashx?DocumentID=83990&inline) and prepare a report documenting the survey results. Survey methods shall be closely followed by starting early in the nesting season (late March to early April) to maximize the likelihood of detecting an active nest (nests, adults, and chicks are more difficult to detect later in the growing season because trees become less transparent as vegetation increases). Surveys shall be conducted: 1) within a minimum 0.5-mile radius of the

Docusign Envelope ID: 7827FEA8-FCC7-4528-9330-EC2F750F3EBA

Project site or a larger area if needed to identify potentially impacted active nests, unless otherwise approved by CDFW in writing, and 2) for at least the two survey periods immediately prior to initiating Project-related construction activities. Surveys shall occur annually for the duration of the Project. The qualified biologist shall have a minimum of two years of experience implementing the survey methodology resulting in detections.

Swainson's Hawk Avoidance Buffer: If active Swainson's hawk nests are detected, the Project shall immediately notify CDFW and implement a 0.5-mile construction avoidance buffer around the nest until the nest is no longer active as determined by a qualified biologist, unless otherwise approved by CDFW in writing. Any detected nesting Swainson's hawk shall be monitored by the qualified biologist to ensure it is not disturbed during construction activities, unless otherwise approved in writing by CDFW. If take of Swainson's hawk cannot be avoided, the Project shall consult with CDFW pursuant to CESA and obtain an ITP.

Swainson's Hawk Foraging Habitat Mitigation: Prior to Project construction, the Project shall provide Swainson's hawk foraging habitat mitigation at a 1:1 ratio, which shall include: 1) permanent preservation of the species' foraging habitat through a conservation easement and implementing and funding a long-term management plan in perpetuity, or 2) purchase of Swainson's hawk foraging habitat credits at a mitigation bank, unless otherwise approved in writing by CDFW. The Project shall obtain CDFW's written approval of the habitat mitigation acreage and proposed habitat mitigation land or credits.

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations. (Pub. Resources Code, § 21003, subd. (e)). Accordingly, please report any special-status species and natural communities detected during Project surveys to CNDDB. The CNDDB field survey form can be filled out and submitted online at the following link: https://wildlife.ca.gov/Data/CNDDB/Submitting-Data. The types of information reported to CNDDB can be found at the following link: https://www.wildlife.ca.gov/Data/CNDDB/Plants-and-Animals.

ENVIRONMENTAL DOCUMENT FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of environmental document filing fees is necessary. Fees are payable upon filing of the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the environmental document filing fee is

Docusign Envelope ID: 7827FEA8-FCC7-4528-9330-EC2F750F3EBA

required in order for the underlying Project approval to be operative, vested, and final. (See Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.).

CONCLUSION

CDFW appreciates the opportunity to comment on the draft EIR to assist the City in identifying and mitigating Project impacts on biological resources.

Questions regarding this letter or further coordination should be directed to Nicholas Magnuson, Environmental Scientist, at Nicholas.Magnuson@wildlife.ca.gov or (707) 815-4166; or Melanie Day, Senior Environmental Scientist (Supervisory), at Melanie.Day@wildlife.ca.gov or (707) 210-4415.

Sincerely,

DocuSigned by:
