The organization asserted the City may not make required findings to approve the proposed project entitlements because the proposed project is in conflict with General Plan Natural and Historic/Cultural Resources Policy 8.43, which encourages activities to control alien plants. The organization reiterated previous comments about invasive plant species.

Refer to Response to CASHEN-12.

Response to NSRRG-36
The organization cited comments in its letter that the Draft EIR is wholly inadequate under CEQA and must be revised and recirculated.

As indicated in Response NSRRG-1 through Response to NSRRG-35g, none of the alleged deficiencies is supported by substantial evidence and, therefore, there is no legal basis to revise and recirculate the Draft EIR.

Response to CLARK-1
The commenter provided introductory remarks and no further response is required.

Response to CLARK-2
The commenter re-states the project description and provides the project site plan. No further response is required.

Response to CLARK-3
The commenter states the Draft EIR concludes significant and unavoidable impacts would occur related to Consistency with an Air Quality Management Plan and Cumulative Criteria Pollutant Emissions. The commenter asserts the Draft EIR's conclusions are not supported by substantial evidence and there are other project impacts and feasible mitigation measures that were not discussed in the Draft EIR. The comment concludes that a revised Draft EIR should be prepared to address these issues they identified.

The Draft EIR impact analysis is based on the City-approved Project Description and applicant provided site plans and information. This information was provided by architects, engineers, and planners with extensive knowledge of the proposed project and project operations. As described in Impact AIR-1, the Draft EIR considered project impacts in relation to the applicable AQP, the BAAQMD 2017 Clean Air Plan. As described in Impact AIR-2, the Draft EIR considered the cumulative impact of criteria pollutant emissions from the proposed project. The commenter does not provide a specific example of what significant impacts were not addressed. Furthermore, all potential mitigation measures were considered and ultimately, the mitigation measures included in the Draft EIR would be only measures that could feasibly be implemented by the City. The commenter does not elaborate on what specific feasible mitigation measures the City did not consider in the Draft EIR. See also Response to comment SWAPE-2e, in which the City addressed a long list of proposed additional mitigation measures suggested by another commenter.

Response to CLARK-4
The commenter states the air dispersion modeling tool used to model the proposed project's health risk impacts (AERMOD) does not account for the impact of building downwash. The commenter explains that building downwash could increase health risk impacts on nearby sensitive receptors and should be considered in a revised Draft EIR.

As disclosed in Section 3.2, Air Quality, as well as Appendix B of the Draft EIR, the HRA modeling on-site and off-site project emissions is consistent with the BAAQMD's December 2020 Health Risk Assessment Modeling Protocol, which states that "Building downwash for point sources that are within the area of influence of a building must be considered when running AERMOD. A building is considered sufficiently close to a stack to cause wake effects when the distance between the stack and the nearest part of the building is less than or equal to five times the lesser of the building

height or the projected weight of the building (PBW) . . . "[3] Because of the frequent mobilization of equipment and vehicles across the approximately 161-acre site during both construction and operation of the proposed project, project emissions were included in the HRA modeling as area sources rather than point sources. In addition, during Phase 1 construction, no building was present on-site that would create the downwash effect described by the commenter. Because the BAAQMD recommends the consideration of building downwash in air dispersion modeling when modeling point sources and because the proposed project did not include point sources, building downwash was not considered in the HRA modeling.

Moreover, as shown in Draft EIR Section 3.2, Air Quality, tables 3.2-14 and 3.2-15, the proposed project would not exceed applicable thresholds for health risks at the maximally impacted receptor or community wide. The Draft EIR considered both construction and operation when determining impacts related to health risks on nearby sensitive receptors. Furthermore, the HRA concluded that the main source of a cumulative community health risk within 1,000 feet of the project site are existing sources, not the proposed project. Thus, the addition of any building downwash impacts would be minimal and would not lead to exceedances of BAAQMD health risk thresholds.

Response to CLARK-5
The commenter states the Draft EIR must assess the impact for all toxic air compounds (TACs) that would be released during construction and operation of the project. The commenter describes types of TACs that could be emitted by the proposed project, the health risks those TACs pose to humans, and that the Draft EIR did not adequately consider all TACs that could be emitted. The commenter explains that only analyzing diesel particulate matter (DPM) emissions as part of the health risk analysis deems the Draft EIR incomplete and the City should prepare a revised Draft EIR.

The commenter is incorrect in asserting that "the City's analysis ignores the presence of TACs being emitted with diesel exhaust during the construction and operational phases of the project without making any attempt to quantify the impacts." The Draft EIR considered DPM as the primary TAC to contribute to health risks because of the proposed project's anticipated truck traffic and a 10-year ARB research program demonstrated that exhaust from diesel-fueled engines is a human carcinogen and that chronic (long-term) inhalation exposure to DPM poses a chronic long-term health risk. In addition, as described in the Draft EIR and by the California Almanac of Emissions and Air Quality, the majority of the estimated health risk from TACs for the State of California can be attributed to relatively few compounds, the most important of which is exhaust from diesel-fueled engines. Moreover, as described in the ARB's Consolidated Table of California Office of Environmental Health Hazard Assessment (OEHHA)/ARB Approved Risk Assessment Health Values, the cancer potency factor of 1.1 attributed to DPM, which was utilized in the HRA prepared for the proposed project, considers all speciated TACs included in DPM.[4] Therefore, the use of the cancer potency factor of 1.1 for DPM in the HRA incorporated consideration of the additional diesel-related TACs that would be emitted during project construction and operation.

Response to CLARK-6

The organization summarizes the requirements of MM AQ-2d and suggests the City should mandate the proposed project utilize newer model year heavy-heavy-duty (HHD) truck fleets. The organization explains it is possible to estimate emissions from on-road mobile sources in California using the ARB EMFAC model and presents their analysis for how using model year 2018 HHD trucks would reduce emissions from the proposed project truck operations.

As noted in the Draft EIR, the reason model year 2014 HHD trucks were used as the basis for MM AIR-2d is because this is the first model year that would result in a reduction in trucking emissions, assuming a worst-case scenario of 100 percent of trucks accessing the site to be that specific model year. More stringent and alternative trucking mitigation measures were considered for the proposed project but were ultimately determined to be financially infeasible due to the size of the proposed project and the anticipated volume of trucks. At present, few potential end users for the proposed project have entire fleets that, on an overall basis, meet the emissions profile for model years of 2018 or later. This economic reality reflects the substantial cost associated with the purchase of each new truck. Fleets typically contain trucks purchased in different years. Older trucks are gradually retired. Operators purchase new trucks with the expectation and need to get many years of use from each truck in order to justify the cost of the purchase. Because 2014 is now eight years in the past (as opposed to only four), and because some additional time will pass before the proposed project can be approved and become operational, the City determined that requiring the use of a fleet that meets the emissions profile for model year 2014 during project operation was a reasonable, if aggressive, mitigation measure. The City reasonably concluded that to require fleets to meet the emissions profiles for even newer model year trucks would be infeasible. The objective of MM AIR-2d is to require the proposed project to result in emission reductions from trucking activities without imposing unrealistic and infeasible burdens on future end users and the proposed project itself. The commenter's suggestion to alter the required minimum model year from 2014 to 2018 is unrealistic in the current marketplace and would place unreasonable financial burdens on the applicant and future tenants. If the City approves the proposed project, the City will want the project to succeed in the marketplace and thereby benefit the local and regional economies, generating employment and taxes that can fund government services.

Response to CLARK-7

The commenter lists mitigation measures recommended by the ARB and Air Districts that reduce operational nitrogen oxide (NO_X) and GHG emissions that were not included in the Draft EIR. The organization states the Draft EIR did not consider feasible mitigation measures that would further reduce NO_X and GHG emissions.

Only operational criteria pollutant emissions were found to have a significant unavoidable impact after mitigation. As such, no additional mitigation is required for construction criteria pollutant emissions, toxic air contaminant emissions, or GHG emissions because they would be less than significant after mitigation. Table 3-2 provides an analysis of the feasibility of implementing the additional mitigation measures suggested by the commenter. As indicated in the table, the proposed mitigation measures are either (1) not necessary; (2) not feasible; (3) already included as mitigation; or (4) included as new mitigation measures.

Table 3-2: Feasibility Analysis of Proposed Additional Mitigation Measures

Proposed Mitigation Measure	Analysis
Include contractual language in tenant lease agreements that requires tenants to use the cleanest vehicle technologies available, and to provide the necessary infrastructure to support zero-emission vehicles and equipment on-site.	**Already Included as Mitigation:** The fleet operator would be required to comply with MM Air-2d (truck fleets must meet or exceed model year 2014 for all heavy-duty trucks during operation of the proposed project), existing regulations such as Advanced Clean Trucks, ARB's Heavy-Duty (Tractor-Trailer) Greenhouse Gas Regulation, and Periodic Smoke Inspection Program. Transition to zero-emission fleet would advance with the technology and regulation. Furthermore, MM GHG-1d requires that parking areas for passenger vehicles shall be designed to accommodate EV charging stations, and each loading dock at the project site is required to be outfitted with at least one 240-volt outlet to accommodate truck and Transport Refrigeration Unit (TRU) charging and/or electrical power connection while goods are being loaded and unloaded from trucks.
Include contractual language in tenant lease agreements that requires all TRUs entering the project site be plug-in capable.	**Not Feasible:** Project end users are unknown at the time of Final EIR publication and, thus, it would be speculative to place restrictions on on-site equipment. Furthermore, imposing onerous requirements on the potential equipment of future unknown users could put the project at a competitive disadvantage by limiting the universe of potential future end users, and may also be technologically infeasible due to the performance needs of the end user. However, to support the transition to plug-in capable TRUs, MM GHG-1d requires that each loading dock at the project site be outfitted with at least one 240-volt outlet to accommodate truck and TRU charging and/or electrical power connection while goods are being loaded and unloaded from trucks.
Include contractual language in tenant lease agreements that requires future tenants to exclusively use zero-emission light and medium-duty delivery trucks and vans.	**Not Feasible:** Project end users are unknown at the time of Final EIR publication and, thus, no information is known about what types of light- and medium-duty vehicles would be used as part of business operations. Imposing onerous requirements on the potential vehicles of future unknown users could create hardships for future employees and visitors of the project site, could put the project at a competitive disadvantage by limiting the universe of potential future end users, and may also be technologically infeasible due to the performance needs of the end user.
Include contractual language in tenant lease agreements that requires all TRUs, trucks and cars entering the project site be zero-emission.	**Not Feasible:** Project end users are unknown at the time of Final EIR publication and, thus, it would be speculative to place restrictions on fleet equipment. Furthermore, imposing onerous requirements on the potential fleet of future unknown users could put the project at a competitive disadvantage by limiting the universe of

Proposed Mitigation Measure	Analysis
	potential future end users, and may be technologically infeasible due to the performance needs of the end user. An absolute prohibition on the use of vehicles with internal combustion engineers could create hardships for future employees and visitors of the project site. The State of California is the appropriate level of government for creating incentives and/or mandates regarding the electrification of the State vehicle fleet.
Include contractual language in tenant lease agreements that requires all heavy-duty trucks entering or on the project site to be model year 2019 or later, expedite a transition to zero-emission vehicles, and be fully zero-emission beginning in 2030.	**Not Feasible:** Project end users are unknown at the time of Final EIR publication and, thus, it would be speculative to place restrictions on fleet equipment. Furthermore, imposing onerous requirements on the potential fleet of future unknown users could put the project at a competitive disadvantage by limiting the universe of potential future end users, and may be technologically infeasible due to the performance needs of the end user. However, MM AIR-2d does require that truck fleets meet or exceed model year 2014 for heavy-duty trucks used during project operation, and MM AIR-2g requires that the project applicant provide information on available incentives to support the advanced deployment of clean fleets.
Include contractual language in tenant lease agreements that requires the tenant be in, and monitor compliance with, all current air quality regulations for on-road trucks including ARB's Heavy-Duty (Tractor-Trailer) Greenhouse Gas Regulation, Periodic Smoke Inspection Program (PSIP), and the Statewide Truck and Bus Regulation.	**Not Feasible:** ARB regulations are enforced by the State and local agencies, and operators must comply with State rules and regulations to legally operate in California. The measure would be onerous and difficult to enforce due to the unknown future operators of the proposed project and may put the project at a competitive disadvantage through the requirement of additional leasing terms, while not providing effective or quantifiable air quality or GHG emission reduction benefits.
Include contractual language in tenant lease agreements restricting trucks and support equipment from idling longer than 5 minutes while on-site.	**Already Included as Mitigation:** MM AIR-2e limits idling to no more than 5 minutes of idling in accordance with State law.
Include rooftop solar panels for each proposed warehouse to the extent feasible, with a capacity that matches the maximum allowed for distributed solar connections to the grid.	**Already Included as Mitigation:** MM GHG-1d requires the proposed project to be powered with 100 percent carbon-free electricity. This requirement could be met by installing on-site solar photovoltaic systems.
Have truck routes clearly marked with trailblazer signs, so that trucks will not enter residential areas.	**Not Necessary:** Both Devlin Road and Green Island Road are designated truck routes. Thus, whichever way trucks turn, they would be on a truck route that connects to SR-29. Hence, this mitigation measure would not reduce emissions.
Limit the daily number of trucks allowed at the proposed project to levels analyzed in the CEQA document. If higher daily truck volumes are anticipated to visit the site, the City as the Lead	**Not Necessary:** As explained in Master Response 4, the traffic analysis conducted for the proposed project utilized the best available research studies to develop conservative estimates of the number of truck trips that

Proposed Mitigation Measure	Analysis
Agency should commit to reevaluating the proposed project through CEQA prior to allowing this land use or higher activity level.	would be expected to occur as a result of the proposed land uses for the project. The modeling for the project appropriately reflects the proposed land uses and anticipated traffic associated with the proposed land use. The transportation impact for the proposed project was found to be less than significant. CEQA only requires mitigation for significant impacts, therefore further mitigation is not necessary.
Ensure that any check-in point for trucks is well inside the project site to ensure that there are no trucks queueing outside of the facility.	**Not Effective:** This mitigation measure does not reduce emissions. However, the proposed project site plan does include adequate on-site roads and parking to ensure that any truck queueing would not be expected to occur outside of the facility.
Establish overnight parking within the industrial building where trucks can rest overnight.	**Not Effective and Not Feasible:** This mitigation measure does not reduce emissions, and because the potential end users of the facility are unknown, it would be onerous to require that a portion of the interior warehouse space be dedicated to truck parking.
Establish area(s) within the project site for repair needs.	**Not Effective:** This mitigation measure does not reduce emissions. Furthermore, as the potential end users of the project site are unknown, could put the project at a competitive disadvantage by limiting the universe of potential future end users, it would be onerous to require the establishment of a repair center when the operational details of the end user are unknown. However, it should be noted that the proposed project site plans do include adequate truck parking to ensure that vehicles potentially needing repair would be able to park on-site while repairs were being completed, in the event such an occurrence was a part of the future project operations.

Response to CLARK-8

The commenter suggests the on-site diesel-powered generator usage could increase compared to the Draft EIR analysis and result in further DPM emissions due to usage during extreme heat events (EHE) and subsequent Public Safety Power Shutoffs (PSPS). The commenter describes what an EHE is and how they occur, as well the resulting impacts on diesel generator usage.

As described in the Draft EIR, the BAAQMD regulates backup emergency generators, fire pumps, and other sources of TACs through its New Source Review (Regulation 2, Rule 5) permitting process.[5] The Draft EIR states the proposed project would include three backup diesel generators and three diesel-fueled fire pumps, each assumed to be rated at 50 horsepower and operate for a 4-hour maintenance period one day per month, totaling an estimated 48 hours of operation per year. In addition, the project applicant would be required to submit a permit application for each generator

[5] Bay Area Air Quality Management District (BAAQMD). 2016. New Source Review Permitting Guidance. Website: http://www.baaqmd.gov/permits/permitting-manuals/nsr-permitting-guidance. Accessed May 18, 2021.

to the BAAQMD and ensure compliance with the permit requirements. The regulation and permitting of backup generators is the jurisdiction of the BAAQMD. Renewable permits are issued by the BAAQMD, and compliance with permitting conditions is enforced by the air district. As such, compliance with the permit would satisfy all requirements of the BAAQMD and would not warrant a revised Draft EIR. It should be further noted that the commenter does not provide substantiating evidence to support the claim that backup (emergency) generators will be utilized on an increasing basis into the future, and this is a speculative assertion without supporting evidence.

Response to CLARK-9
The organization concludes that their facts identified in the comment letter demonstrates a revised Draft EIR should be prepared and must re-evaluate the significant impacts that would occur. As stated in Response to CLARK-3 through CLARK-8, none of the organization's statements change the validity of the Draft EIR and a revised Draft EIR is not warranted.

Response to CLARK-10
The organization's credentials are presented, and no further response is required.

Response to S&W-1
The comment consists of a cover letter. No response is necessary.

Response to S&W-2
The comment consists of the Table of Contents. No response is necessary.

Response to S&W-3
The commenters provided introductory remarks. No response is necessary.

Response to S&W-4
The commenters provided a list of documents supporting their comments. No response is necessary.

Response to S&W-5a
The commenters summarized the methodology Monk & Associates used to delineate the aquatic sources/wetlands on the project site. No response is necessary.

Response to S&W-5b
The commenters reviewed the Monk & Associates 2016 wetland jurisdictional delineation appended to the Draft EIR for consistency with the delineation methodology referenced in Comment S&W-5a. The commenters noted what they regard as errors in data points such as miscalculated absolute percent cover and incorrectly identified hydric soil indicators. The commenters noted data point (DP) DP-40, -97, -98, -105, and -110 incorrectly identified *Helminthotheca echioides* as Facultative Upland (FACU) when it should have been identified as Facultative (FAC). The commenters pointed out this error would change the findings at these data points from an upland to a wetland.

The City acknowledges the 2016 Monk & Associates delineation contains some minor errors mentioned by the commenter. *Helminthotheca echioides* was misidentified as FACU at those data points. DP-40, -98, -105, and -110 were also incorrectly identified as uplands. For DP-97 *Helminthotheca echioides* was misidentified, which would change the hydrophytic vegetation indicator from a "no" to a "yes"; however, this data point was lacking wetland hydrology and hydric

soils, so the conclusion that DP-97 was an upland is correct. The errors at issue, however, do not undermine the analysis or conclusions in the Draft EIR. The Draft EIR did not rely on the Monk & Associates 2016 wetland jurisdictional delineation report. Instead, wetland impacts were calculated using the United States Army Corp of Engineers (USACE) Approved Jurisdictional Delineation dated October 25, 2016.

Response to S&W-5c
The commenters noted the Approved Jurisdictional Delineation (AJD) was valid for 5 years and has since expired. The commenters stated the proposed project would need to obtain an updated AJD. The project applicant submitted an application to the USACE prior to the AJD expiring and received confirmation from the USACE Project Manager, Mr. Bryan Matsumoto, (via a phone call to HBG) that, because the application was submitted prior to the AJD expiring, the USACE will be using the AJD dated October 25, 2021, to process the permit. The AJD therefore remains valid and sufficient for the USACE.

The commenters also stated they reviewed Google Earth aerial imagery and it is their opinion, based on Google Earth aerial imagery, that wetland conditions may not have been identified in Monk & Associates 2016 wetland jurisdictional delineation report. The commenters do not indicate what year the Google Earth aerial imagery was reviewed, so the City is unable to confirm if this is a valid point. Nonetheless, the Draft EIR did not rely on the Monk & Associates 2016 wetland jurisdictional delineation report. Wetland impacts were calculated using the USACE AJD dated October 25, 2016. It should also be noted the USACE must submit a proposed AJD to the EPA for review prior to the USACE officially approving the jurisdictional delineation. This means that not only did the USACE review the Monk & Associates 2016 wetland jurisdictional delineation report and conduct their own site visit and analysis, but also that the EPA reviewed the USACE's determination and approved the AJD.

Response to S&W-6a
The commenters stated that Phase 1 will impact 0.496-acre of wetlands and Phase 2 will impact 3.7-acres, and that the Draft EIR based its assessment on Phase 1 and 2 being constructed concurrently over an 18-month period as the worst-case scenario. The commenters suggested a prolonged construction period that extends beyond 18 months and extends over several years (multiple nesting seasons, multiple "rainy seasons") increases the potential for construction-related impacts to aquatic resources (e.g., water quality issues and in-air construction noise) and requests an explanation to support this assumption.

Constructing Phase 1 and 2 concurrently over an 18-month period would impact 0.496-acre of wetlands for Phase 1 and 3.7 acres of wetlands for Phase 2 for a total of 4.196 acres of wetlands, which is the worst-case scenario, meaning the maximum acreage of wetland impacts would be 4.196 acres. The "worst-case scenario" assumption is not linked to the number of months it would take to complete each Phase but rather is a function of the acreage of wetland impacts. Phase 2 wetland impacts were assessed based on a full buildout with a maximum impact of 3.7 acres of wetlands. It is possible that, once Phase 2 has gone through the entitlement process, the site plan may be modified to reduce impacts to under 3.7 acres, just as Phase 1 has avoided impacts.

The project construction would occur over at least two nesting periods. If nesting does occur in the project vicinity and construction has commenced, it should be assumed the nesting bird(s) are habituated to the ambient level of noise and disturbance emanating from the project site. Therefore, a prolonged construction period that extends beyond 18 months would not increase construction-related impacts. It should be noted that if construction takes 18 months to complete or longer, all mitigation measures outlined in the Draft EIR would apply for the entirety of the construction period, including additional nesting bird surveys if construction is paused for more than seven (7) days. Therefore, there is no basis to assume new impacts would occur if Phases 1 and 2 take two months to complete or 24 months, or if it is split to where Phase 1 is constructed first and then Phase 2 is begins the following year. Regardless, for consistency and to address the commenters concerns, MM BIO-4 is revised to include the following language:

If construction activities are discontinued for more than 7 days, an additional nesting bird survey shall be performed.

The change is noted in Section 5, Errata.

See also Master Response 3.

Response to S&W-6b
The commenters stated the Draft EIR does not include a functional assessment of the wetlands or a functional impact analysis. The commenters suggested a wetland impact analysis is incomplete without a functional assessment that evaluates hydrologic, water quality, and habitat functions of the site wetlands.

Functional assessments were conducted to determine plant and animal communities supported on the project site, and these functional assessments were used in the impact analysis and subsequent mitigation requirements. The Draft EIR acknowledges the project site contains one upland plant community described as Annual Grassland, and two wetland plant communities, Seasonal Wetlands and Vernal Pools, as shown in Draft EIR Section 3.3, Biological Resources, Exhibit 3.3-2. Plant communities are assemblages of plant species growing in an area of similar biological environmental factors. One of the functions of wetlands are the plant communities they support. To determine whether the wetlands or uplands supported special-status plants, in support of CEQA and agency requirements, Helm Biological Consulting (HBC) conducted botanical survey assessments during spring 2021. As described in their rare plant survey, HBC identified the three plant communities. In addition to this plant communities assessment/rare plant survey conducted by HBC, the Draft EIR acknowledges that, based on a spring season site reconnaissance survey conducted on April 16 and May 24, 2021, HBG determined the site was suitable foraging habitat for State listed threatened Swainson's hawk and golden eagle. HBG also made an assessment of the potential for the wetlands to support each animal species noted in the CNDDB as occurring within a 10-mile radius of the project site, or that is known to occur in the general vicinity based on the knowledge of HBG Biologists. Over 40 animals were included in this assessment, as is discussed in the HBG report (Draft EIR, Appendix C), and this information was used to assess impacts to wetlands and species that could be using the wetlands or uplands. Therefore, a number of "functional" assessments were conducted

to determine CEQA impacts and recommend mitigation measures to offset these impacts to less than significant.

The Regional Water Quality Control Board (RWQCB) State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (Procedures) requires approved mitigation plans contain performance standards that assess whether the proposed project is achieving its objectives. Performance standards, according to the Procedures, must be based on objective and verifiable attributes using a functional assessment method, such as the California Rapid Assessment Method (CRAM). The purpose of the CRAM referenced in the Draft EIR in Section 3.3, Biological Resources, on page 3.3-34 is to satisfy this requirement. The Performance Standards listed in the Draft EIR in MM BIO-3d on page 3.3-33 are based on completed biological assessments (plant survey, wetland delineation, general habitat assessment etc.), and they include objective and verifiable attributes based on completed assessments and structured to assess whether the proposed project is achieving its objectives. Once CRAM is completed and the RWQCB has reviewed and commented on the mitigation plan, the Performance Standards may be modified to include additional attributes and performance standards, if warranted, to satisfy the Procedures.

Response to S&W-7
The commenters noted discrepancies in wetland acreages, shapes of wetlands, and numbering of each individual wetland when you compare the Monk & Associates 2016 wetland delineation maps and data to the USACE's AJD and the Draft EIR. One discrepancy noted is the Draft EIR provides the impact area to W-89 as 189 square feet while the AJD map has it listed as 195 square feet.

The Draft EIR impact calculation of 189 square feet is correct. The impact is based on the limit of fill material placed within the wetland. Based on calculations made by HBG, the fill material would impact 189 square feet and would avoid 6 square feet of W-89.

The commenters also noted that IW-9 was not included on the AJD map, which was used in the Draft EIR. The commenters questioned whether or not the USACE omitted IW-9 purposely or if it was an oversight, because there was not a data point supporting this change.

It is common for the USACE to request edits to a wetland delineation map after reviewing wetland delineation report data and conducting a site visit(s). The USACE may increase or decrease wetland area, which may change a wetland shape, add wetland areas that were missed, and/or remove areas mapped as wetlands that the USACE may determine not to meet the definition of a wetland. When the USACE staff conducts site visits to verify wetland delineation, they will often take data to verify changes they request. The data may be in the form of a wetland data sheet(s), notes, and/or photographs. The fact that Monk & Associates updated the numbering of all the wetlands on the AJD map based on this change, and the fact that the EPA had to review the data prior to the USACE finalizing the AJD, makes it very unlikely this was an oversight by the USACE.

Response to S&W-8
The commenters stated that treated stormwater would be delivered to newly created wetlands on the Wetland Preserve. The commenters suggested without a pre- and post-project water budget

analysis for the wetlands, the determination that additional wetlands would not be impacted is not supported.

The main source of hydrology for the unimpacted wetlands is direct precipitation and a significant amount of water flow from a culvert near the northeastern boundary which flows east to west toward No Name Creek. In addition, the site generally slopes from east to west across the Phase 1 and 2 project sites. The Phase 2 project also has topography that slopes from south to north. With the main sources of hydrology being direct precipitation and waterflow from a culvert near the northeastern boundary, and the topography of the site generally sloping from east to west, there is no basis to assume that proposed project development would indirectly impact the wetland hydrology of the remaining wetlands.

With respect to wetland mitigation, new wetlands would be created/established up and downstream of the remaining wetlands. As part of the Wetland Mitigation and Monitoring Plan that would be submitted to the RWQCB during the application review process, a water budget analysis would be conducted to ensure that the position of created/established wetlands do not indirectly impact the hydrology of existing wetlands.

Response to S&W-9

The commenters stated that the project proposed the use of specialized bio soils in the bioretention facility to remove pollutants. The commenters referenced a statement in the Draft EIR in Section 3.8, Hydrology and Water Quality, Section 3.8.6 that suggests that the Wetland Preserve would facilitate the natural sequestration of pollutants of stormwater that is leaving the project site.

The proposed project would not discharge untreated stormwater into the Wetland Preserve or created/established wetlands or the remaining unimpacted wetlands. Instead, all stormwater would be treated to City of American Canyon and RWQCB standards prior to being discharged off-site into the Wetland Preserve. The use of specialized bio soils in bioretention facilities are a standard practice that allow them to function optimally to remove solids and sequester contaminants in site-specific runoff before stormwaters leave the site. The fact that wetland preserve would contain biosoils is not an indication that water quality control is an intended primary function of the preserve.

Response to S&W-10a

The commenters suggested that the USACE “requires” a 100-foot buffer around vernal pools and references the draft Mitigation and Monitoring Guidelines for Vernal Pools that was released for public comment in 2016.

The USACE currently does not require buffers around vernal pool preserves or mitigation sites. The stated objective of the USACE’s draft Mitigation and Monitoring Guidelines for Vernal Pools is to provide “guidance” to select appropriate compensatory mitigation sites, construct compensatory vernal pools and complexes, and establish a monitoring program that will adequately assess compliance with the performance standards established in the mitigation plan. Within the guidance under “Construction Technique,” a minimum 100-foot buffer around a vernal pool preserve or mitigation site is suggested. These are guidelines, not requirements. More importantly, these

guidelines have not been finalized or incorporated into the South Pacific Division Final Regional Compensatory Mitigation and Monitoring Guidelines. Specific to this project site and the Wetland Preserve, the two unimpacted vernal pools' main source of hydrology are direct precipitation and surface water flow from a culvert near the northeastern boundary, which flows east to west toward No Name Creek. Therefore, the surface hydrology feeding the two unimpacted vernal pools and the proposed created/established vernal pool would not be impacted by the proximity of the proposed development to the vernal pools. In addition, although the bioretention basins may require periodic maintenance, the bioretention basins would also provide a minimum 100-foot buffer from the two unimpacted vernal pools.

Response to S&W-10b
The commenters noted that the buffer areas surrounding the unimpacted IW-7, -8, -9, and -10 appear to show an approximately 100-foot buffer and are labeled as "Proposed Landscaped Area." The commenters stated it is unclear if the buffer adjacent to IW-7, -8, -9, and -10 will consist of native or ornamental vegetation or if it will be intensely maintained as manipulated landscaped areas. The commenters stated indirect impacts through a disturbed or landscaped buffer are not discussed.

The final buffer widths would be determined during the permitting process with the RWQCB. The landscaping within the buffers would consist of native grasses and shrubs, approved by the RWQCB, that would require no maintenance once established. The mitigation plan would include temporary watering until the grasses and/or shrubs are established and then watering would cease. Maintenance may include invasive low intensity tasks such as removing trash and replacing grasses or shrubs as needed. Establishing a buffer with native grasses and or shrubs is not anticipated to indirectly impact the unimpacted wetlands IW-7, 8, 9, and 10. Therefore mitigation measures are not required.

Response to S&W-10c
The commenters suggested that development surrounding the unimpacted wetlands IW-7, -8, -9, and -10 will isolate these wetlands from the remaining wetland complex to the north, and that this disconnection and overall reduction in buffer widths is not analyzed or discussed.

Wetlands IW-7, -8, -9, and -10 are currently hydrologically isolated from the wetlands to the north, which was determined by Monk and Associates, verified by the USACE and EPA and reflected in the AJD. This hydrological isolation is an existing condition, and therefore does not warrant a discussion or mitigation measure. Given the small area of these wetlands, the currently isolated nature of the wetlands, and the non-native annual grasses surrounding these wetlands, the reduced buffer would not have an adverse effect on the hydrology or plant composition to wetlands IW-7, -8, -9, and -10. Therefore, mitigation measures are not required.

The Draft EIR does analyze and discuss in Impact BIO-4 in Section 3.3, Biological Resources, page 3.3-37 how the proposed development would impact the movement of any native resident or migratory fish or wildlife species, migratory wildlife corridors or use of wildlife nursery sites on the site. Although this analysis does not specifically reference IW-7, 8, 9, and 10, it does reference sensitive habitats and "wetlands," which would include IW-7, 8, 9, and 10.

Response to S&W-11

The commenters referenced language in the Procedures that requires compensatory mitigation to be developed using a watershed profile and requires that the watershed profile include information sufficient to evaluate direct, secondary (indirect), and cumulative impacts of project. The commenters stated that the Draft EIR does not address impacts to wetland functions associated with reduced buffer widths, increased noise, lights, and traffic compared to existing conditions.

Refer to Response S&W-6b, Response to S&W-10a through Response to S&W-10c regarding impacts to wetland functions associated with reduced buffer widths.

HBG determined that an increase in noise, lights and traffic generated by the project compared to existing conditions would not result in significant direct, indirect or cumulative impacts to wetland functions, and therefore do not require mitigation under CEQA Guidelines. This assessment is based on the following:

The project site is currently surrounded an all four sides by commercial development and is bisected by a new road and public trail extension, all of which generates noise, light, vehicle traffic and pedestrian noise and traffic. The entire northern boundary of the Wetland Preserve directly abuts the recently-constructed Napa Logistics Park commercial warehouse development. This development exposes the Wetland Preserve to vehicle and semi-truck noise, lights and traffic 24 hours a day 7 days a week. The eastern boundary of the Wetland Preserve abuts railroad tracks and commercial development and is less than 1,200 linear feet from SR 29, which generates a significant amount of traffic noise 24 hours a day 7 days a week. The western boundary of the Wetland Preserve is adjacent to a wine distribution warehouse and an ongoing construction site for a new warehouse that is part of the Napa Logistics Park project. The existing wine distribution warehouse and ongoing construction of the new Napa Logistics Park warehouses also exposes the Wetland Preserve to noise, light and traffic. The southern and southwestern boundary of the project site is bounded by railroad tracks, commercial development and Green Island Road. Green Island Road is a route semi-trucks use to deliver and receive goods from the many warehouses that currently surround the project site and Wetland Preserve. In addition, the City of American Canyon recently completed the Devlin Road and Vine Trail Extension Project. This project consists of a new road bisecting the project site and Wetland Preserve connecting Green Island Road with Devlin Road abutting the Napa Logistics Park commercial development. The new Devlin Road Extension and Vine Trail Extension directs semi-truck traffic, vehicle traffic and pedestrians through the project site bisecting the Wetland Preserve generating noise, light, vehicle traffic and pedestrian noise and traffic. Although the proposed project would increase noise, light and traffic, the Wetland Preserve is surrounded on all four sides by commercial development, and bisected by a road and pedestrian trail. Therefore, the avian and terrestrial species that use the wetlands and uplands within the Wetland Preserve have habituated to the significant level of noise, light, traffic and pedestrian disturbances that currently exist and the levels of disturbances that the proposed project would not result in significant direct, indirect or cumulative impacts to wetland functions, and therefore do not require mitigation under CEQA Guidelines.

The commenters also stated that the Draft EIR does not address cumulative wetland impacts that incorporate current development trends in the area and continued aquatic habitat fragmentation.

As discussed on pages 4-5 and 4-6 of the Draft EIR, the proposed project would potentially contribute to the cumulative loss of biological resources in the City of American Canyon and the effects of ongoing urbanization in the region. The proposed project, in conjunction with other development planned in the City of American Canyon and Napa County, would contribute to the cumulative loss of ruderal/annual grassland and wetland habitat for resident and migratory wildlife species and federal and State listed plants and animals. Compliance with the mitigation measures outlined in Draft EIR Section 3.3, Biological Resources, would reduce the impact of the proposed project's contribution to the cumulative impacts to less than significant. Therefore, a mitigation measure specific to cumulative wetland impacts is not required.

Response to S&W-12

The commenters suggested that they are unable to evaluate if the proposed mitigation will adequately replace lost wetland functions because the Draft EIR does not provide assessment of wetland functions, water budget analysis, and, in general, information necessary to determine whether the wetlands can be successfully created.

Refer to Response to S&W-6b and Response to S&W-8 regarding impacts to wetland functions and water budget analysis.

Response to S&W-13a

The commenters suggested that creating vernal pools is difficult and successful wetland creation is largely driven by ability to provide appropriate hydrology, and referenced federal and State guidelines which also speak of the difficulty in creating vernal pools. The commenters stated a hydrologic analysis that demonstrates wetland creation potential in the proposed mitigation area is not provided in the Draft EIR.

Establishing an appropriate hydroperiod (i.e., the timing and duration of inundation) is particularly critical to vernal pool ecosystems and can be difficult to create. Topographic and geologic factors can have a significant effect on vernal pool hydroperiod. The topography within the Wetland Preserve is relatively flat, which, topographically, makes this area ideal for creating/establishing vernal pools; and the United States Geological Survey (USGS) soil survey maps indicate the majority of the Wetland Preserve does support clay soils, which are also ideal for creating vernal pools. To ensure excavated depressions 1 to 3 feet below grade support clay soils and could pond and hold water for a duration long enough to support vernal pools, HBG and HBC conducted an assessment of the soil profile. Using a backhoe, 25 soil pits were dug to approximately 4 feet in depth. Soil texture and color were then recorded throughout the profile for each soil pit. Results indicated a restrictive layer composed of clay soil is found 12-30 inches below the surface. This layer of clay soil supports the existing vernal pool hydrology and would allow the establishment of vernal pools within the Wetland Preserve. Based on the Wetland Preserve's flat topography, restrictive layer of clay soil just below the surface, and the fact that the site currently supports vernal pools, HBG is confident vernal pools can be successfully established and functioning within a 5-year monitoring period. The location of each established vernal pool would be selected based on the soil profile, and water budget analysis referenced to Response to S&W-8.

Response to S&W-13b

S&W suggests that the Procedures and the USACE may require mitigation ratios greater than 1:1 for impacts to vernal pools, and the information in the Draft EIR does not support the conclusion that the proposed established/created wetlands would replace all the wetland functions at the time of Phase 2.

The proposed 1:1 wetland establishment mitigation ratio for permanent wetland impacts meets the federal and State "no-net-loss" of wetland area policy. Typically, the USACE and RWQCB will require a mitigation ratio greater than 1:1 if wetland mitigation is implemented after or concurrent with the start of project construction and if there is a low level of confidence a selected site can support wetlands.

S&W suggests that the Draft EIR does not support the conclusion that the proposed established/created wetlands would replace all the wetland functions at the time of Phase 2.

The impact analysis discussed in the Draft EIR under Impact BIO-2 states "to offset the loss of the 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools from Phase 2, and to ensure there is no-net loss of wetland or vernal pool area, the applicant shall establish/create 2.57 acres of seasonal wetlands (1:1 ratio) and of 1.13 acres of vernal pool wetlands (1:1 ratio) for Phase 2 at least 1 year prior to the start of Phase 2 construction." As discussed above in Response to S&W-13a, HBG has a high level of confidence that the Wetland Preserve can support the establishment of vernal pools, and that, when constructed a minimum of 1 year prior to the start of Phase 2 construction, these vernal pools will be functioning (e.g., providing flood storage, avian and terrestrial habitat, provide habitat suitable for vernal pool plants, etc.) similar to the vernal pools that would be impacted by Phase 2. Based on HBG's assessment, the Wetland Preserve is ideal for establishing vernal pools, and the vernal pools will begin functioning as vernal pools within 1 year after construction, and the 1:1 mitigation ratio that was proposed to offset wetland impacts for Phase 2 will be considered adequate.

Response to S&W-14

The commenters suggested that the 1990 Federal Mitigation Memorandum of Agreement between the USACE and EPA requires the applicant to complete a thorough mitigation sequencing wherein impacts to aquatic resources are first avoided, then minimized, and unavoidable impacts mitigated. The commenters stated the Draft EIR does not address how the proposed project completed this sequencing.

The 1990 Federal Mitigation Memorandum of Agreement is a federal process and an agreement, as stated by S&W, between two federal agencies. Although the requirements in this agreement will be assessed by the USACE and EPA during the Clean Water Act Section 404 permitting process, during the design process "practicable" alternatives were assessed to first avoid impacts to wetlands, then minimize impacts to wetlands, and where impacts were unavoidable, mitigation measures were proposed. The term 'practicable' was applied in accordance with 40 Code of Federal Regulations Section 230.3(q) meaning "available and capable of being done after taking into consideration cost, existing technology, and logistics in light of overall project purposes." During the design process, alternative site designs proposed to avoid and minimize impacts considered several specific constraints of a practicable project site plan that were needed in order to satisfy the overall project

purpose. These specific site design constraints included the need to: (1) provide sufficient building square footage capable of accommodating large manufacturing, and/or fulfillment and distribution tenants that require large surface and vertical area structures (i.e., high-cube warehouse buildings), (2) provide sufficient area to accommodate loading docks and circulation routes that can accommodate tractor-semitrailers and delivery vans, and parking to accommodate tractor-semitrailers, vans and personnel vehicles, (3) provide sufficient space to comply with Statewide General Permit for Stormwater Discharges Associated with Industrial Activities, (4) provide for water, sewer, and electric utilities sufficient for an industrial facility, or in an area where those utilities may be practicably extended to the project site, and (5) provide sufficient area to implement wetland mitigation to offset unavoidable impacts to aquatic resources.

Considering these constraints, the proposed Phase 1 design avoided 0.350 acres of wetlands and both Phase 1 and Phase 2 designs minimized impacts to existing wetlands within the Wetland Preserve area by positioning the bioretention basins between the Wetland Preserve and warehouse development.

Response to S&W-15a
The commenters stated that the proposed 5 years of mitigation monitoring is the minimum requirement in the State's Procedures. The commenters referenced the 10-year monitoring guidelines for vernal pools suggested in the draft Mitigation and Monitoring Guidelines for Vernal Pools.

The guidelines that the commenters referenced are in draft form and have not been finalized or incorporated into the South Pacific Division Final Regional Compensatory Mitigation and Monitoring Guidelines, and currently the USACE does not require 10 years of monitoring for vernal pools. Regardless, as discussed previously in Response to S&W-13a, the Wetland Preserve can support the establishment of vernal pools, and once constructed, these vernal pools will provide functions (e.g., provide flood storage, avian and terrestrial habitat, provide habitat suitable for vernal pool plants, etc.) similar to the vernal pools impacted within a short period of time. Based on HBG's assessment, the Wetland Preserve is ideal for establishing vernal pools, and the vernal pools will begin functioning as vernal pools within 1 year after construction, a 5-year monitoring period is sufficient to determine whether the vernal pools have met the performance standards and have replaced the functions of the vernal pools impacted.

Response to S&W-15b
The commenters summarized the Draft EIR MM BIO-3d and suggests that without an understanding of the impacted wetland functions, there is not a basis for establishing mitigation goals or ecological performance standards.

Refer to Response to S&W-6b.

Response to S&W-15c
The commenters suggested that the Draft EIR does not describe use of reference wetlands in the mitigation approach, which is needed to define the performance standards.

The Draft EIR acknowledges in MM BIO-3d that the Wetland Mitigation and Monitoring Plan shall be prepared in accordance with the California State Water Resources Control Board (State Water Board) Procedures. The Procedures require the use of "reference aquatic resources," as correctly stated by S&W. Therefore, MM BIO-3d requires, by referencing the Procedures in MM BIO-3d, the use of "reference aquatic resources" to assist in developing performance standards.

Response to S&W-16a
The commenters stated that City policy requires riparian corridors to be protected by an adequate buffer width and references the buffer guidelines for vernal pools suggested in the draft Mitigation and Monitoring Guidelines for Vernal Pools.

Although No Name Creek is referenced as a creek on the USGS map, it does not support riparian vegetation and is a seasonal wetland, therefore the City riparian corridor policy does not apply. As shown on the Draft EIR Exhibit 3.3-2 Plant Communities map, the area where No Name Creek occurs is labeled as a Seasonal Wetland Community, and it is also labeled as a wetland on the USACE AJD. Thus, the City's riparian corridor buffer policy does not apply on this project site. With respect to the vernal pool buffer comment please refer to Response to S&W-10a.

Response to S&W-16b
The commenters suggested that the lack of project buffer impact analysis makes it difficult to evaluate if the proposed buffer plantings referenced on the Draft EIR Exhibit 3.3-4 are adequate compensation to replace the lost buffer.

The purpose of the proposed tree and shrub plantings referenced on the Draft EIR Exhibit 3.3-4 is to provide vertical structure within the Wetland Preserve to enhance its habitat value. Currently there are no trees within the Wetland Preserve and few shrubs. The tree and shrub plantings were not proposed as "mitigation" or proposed to provide a "buffer" between the project site and the Wetland Preserve. With respect to buffers around unimpacted wetlands and vernal pools, please refer to Response to S&W-10a through Response to S&W-10-c and Response to S&W-11.

Response to S&W-17
The commenters summarized the resources used in their groundwater review. No response is necessary.

Response to S&W-18a
The commenters summarized the findings of the Water Supply Assessment and noted that the City of American Canyon does not use groundwater as part of its municipal water supply. No response is necessary.

Response to S&W-18a
The commenters summarized the findings of the Water Supply Assessment. No response is necessary.

Response to S&W-18c
The commenters summarized the findings of the Water Supply Assessment. The commenters noted that the Water Supply Assessment indicated that the proposed project would be required to comply with the City's Zero Water Footprint Policy and the Draft EIR did not address this requirement.

The Draft EIR's water supply analysis, which was based on the Water Supply Assessment, concluded that adequate water supplies would be available to serve the project and no mitigation was necessary. Hence, the Draft EIR's analysis did not rely on the City's Zero Water Footprint Policy to reach this CEQA conclusion.

The neighboring Napa Logistics Park Project, which involves similar types of end users as the proposed Giovannoni Logistics Center, achieved compliance with the Zero Water Footprint Policy. Therefore, it would be expected that the proposed project could achieve compliance as well. Regardless, how the applicant achieves compliance with the City's Zero Water Footprint Policy is outside the scope of the Draft EIR.

Response to S&W-19
The commenters stated that the loss of pervious surface coverage would not have a significant effect on groundwater recharge and, thus, would not change the groundwater budget for the basin. No response is necessary.

Response to S&W-20
The commenters summarized the resources used in their high-level stormwater review. No response is necessary.

Response to S&W-21
The commenters summarized the findings of their stormwater review and noted that Phase 2 does not appear to benefit from Devlin Road in terms of stormwater retention and, therefore, the stormwater basins and bioretention will likely have to be larger than Phase 1.

Phase 2 encompasses 113 acres and would support up to 1.3 million square feet. By virtue of having more square footage than Phase 1, it will likely have more impervious surface coverage and, thus, need larger basins and bioretention areas.

Response to S&W-22
The commenters reiterated their findings. Refer to Response to S&W-5 through Response to S&W-21.

Response to S&W-23
The commenter listed the references used. No response is necessary.

Response to S&W-24
The commenter provided his curriculum vitae. No response is necessary.

Response to CASHEN-1
The commenter provided introductory remarks. No response is necessary.

Response to CASHEN-2
The commenter disputed the Draft EIR's conclusion that the proposed project would not have any impact on vernal pool fairy shrimp. The commenter stated that the project site provides potential habitat for vernal pool fairy shrimp habitat and alleged that the 2016-2017 surveys for this species that did not find presence of this species are outdated. The commenter claimed that thousands of vernal pool shrimp were detected in vernal pools located 2,700 feet northwest of the project site.

Generally, when surveys are older than 5 years the United States Fish and Wildlife Service (USFWS) may request new surveys to be conducted, or they may not. Nonetheless, the referenced vernal pool branchiopod protocol surveys were less than 5 years old when the Draft EIR was released and, from a biological standpoint, the surveys were reliable and sufficient to support the conclusion that federally listed threatened vernal pool fairy shrimp do not occur on the project site. As the commentor notes, thousands of vernal pool fairy shrimp have occurred within 2,700 feet of the project site for many years, but the surveys show they have not become established within the project site. This indicates that the on-site seasonal wetland and vernal pool habitats are likely not sufficient to support vernal pool fairy shrimp. Therefore, no impacts to vernal pool fairy shrimp would result from construction of the proposed project.

Response to CASHEN-3
The commenter claimed that the Draft EIR failed to evaluate the following Bird Species of Conservation Concern: California gull, savannah sparrow, and marbled godwit. The commenter also stated that the Draft EIR failed to evaluate impacts to cackling geese, which likely occur on the project site because they have been detected at the neighboring Napa Logistics Park.

Marbled godwit, California gull, and savannah sparrow have all been documented within or flying over the project site by biologists with HBG and Monk & Associates. Marbled godwit is an abundant wintering shorebird found along the shoreline of San Francisco Bay, ocean beaches, and wetlands. They nest in the Northern Plains and are not included on CDFW's Special Animals List (latest update in July 2022). There is no reason that impacts to this abundant species needs to be a topic for evaluation in the EIR. California gull is a common wintering species in the San Francisco Bay Area that nests at primarily inland bodies of water in the American west. It is considered a CDFW Watch List species with respect to nesting colonies, none of which occur on or near the project site. By mentioning savannah sparrow, it appears that the commenter is referring to Bryant's savannah sparrow, a subspecies of the widespread and common savannah sparrow, which is considered a species of special concern in California primarily because of its limited range. The Bryant's subspecies of savannah sparrow occupies tidal marshes, moist grasslands and some adjacent ruderal areas within a narrow coastal strip between Humboldt Bay and Morro Bay, and would not be expected within the Giovannoni project site in American Canyon.

Cackling goose (*Branta hutchinsii*) is a goose species once considered conspecific with the common Canada goose (*Branta canadensis*). Cackling goose is a common species; however, the Aleutian subspecies of cackling goose was listed as endangered under the federal Endangered Species Act until its recovery to a population of over 100,000 individuals and its delisting from the Act in 2001. The Aleutian subspecies remains on the CDFW Watch List.

Note that MM BIO-4 requiring nesting surveys for all bird species during the breeding season would ensure significant impacts to all nesting bird species would not occur.

Response to CASHEN-4
The commenter disputed the Draft EIR's conclusion that the short-eared owl does not occur on the project site because of lack of suitable habitat. The commenter claimed that the project site does in fact provide suitable habitat including voles, freshwater marshes, and ungrazed grassland and noted that one was observed during a survey at the neighboring Napa Logistics Park.

The Draft EIR Appendix C.1 Biological Resources Report determined the project site did not support suitable habitat for the short-eared owl (a California Species of Special Concern and USFWS Bird Species of Conservation Concern), at least in part because the property is currently surrounded on all four sides by commercial development or heavily trafficked roadways and is bisected by a new road and public trail extension that create disturbances, all of which would not be conducive to nesting by this sensitive species. Although nesting by this species is not likely for this reason, nesting by short-eared owl, a species that resembles northern harrier in its habitat requirements and foraging habits (northern harrier by day and short-eared owl at night), is possible. For this reason, recommended nesting surveys for northern harrier (see MM BIO-1c) should include concurrent searches for nesting short-eared owl and mitigate for the presence of nesting birds, if found. Refer to Response to CDFW-8a for revised wording of MM BIO-1c, which now provides for the possibility of finding nesting short-eared owl as well as northern harrier. Implementation of MM BIO-1c would ensure potential impacts to short-eared owl, as well as those for northern harrier, would be less than significant.

Response to CASHEN-5a
The commenter noted that the Draft EIR concluded that the proposed project would not impact rare plants and stated that the rare plant surveys that were the basis of this conclusion are invalid because they were conducted in 2021, which was a drought year.

The Draft EIR did not rely solely on HBC's 2021 botanical surveys. Referenced in the Draft EIR Appendix C.1 Biological Resources Report, the biological evaluation also considered plant data in the aquatic resources delineation prepared by Monk & Associates, and Biological Resource Reports prepared by Monk & Associates for the Devlin Road and Vine Trail Extension Project and the Green Island Road Reconstruction and Widening Project. In addition, HBG's biological evaluation considered plant data in the CNDDB to determine whether populations of endangered, threatened, or rare species have occurred on the site historically or are currently known to exist in the project vicinity. All of this data was sufficient to analyze the proposed project's potential impacts to plant species. The data relied on included data taken in wet years as well as drought years.

Response to CASHEN-5b
The commenter claimed the rare plant surveys did not encompass the blooming periods of all target species, including Napa bluecurls and pappose tarplant and, thus, the Draft EIR's conclusion that the proposed project would not impact rare plants are not supported by sufficient evidence.

The blooming periods listed in Appendix A of the 2021 HBC rare plant survey report are general approximations provided by the California Native Plant Society and may vary depending on weather

patterns. Because of blooming periods varying from year to year, and in accordance with the CDFW's protocol, HBC conducted visits to several reference sites with known special-status plants targeted for field surveys to determine whether those special-status plants were identifiable at the times of year the botanical field surveys took place. HBC conducted botanical surveys during the spring of 2021 and survey dates were chosen based on the reference sites and when the special-status plants would likely be in bloom or otherwise visible. Because of significant early fall rainfall in 2020, lack of spring rainfall in 2021 and warm weather, the flowering periods were several months in advance of normal blooming periods. The last rainfall event that was not trace amounts, occurred on March 18, 2021. Based on the weather patterns leading up to the spring surveys for 2021 and based on the reference sites known to support the target plants, the dates HBC conducted the surveys on were reliable and sufficient to capture blooming periods or a visual image of the target species.

Response to CASHEN-6

The commenter noted the Draft EIR indicated that the proposed project would impact 3.7 acres of palustrine emergent wetlands, seasonal wetlands, and vernal pools but did discuss the ecological functions of wetlands or evaluate indirect impacts on wetlands outside the development footprint. The commenter claimed that the proposed Wetland Preserve would function as an island surrounded by urban development and would be subject to human disturbance. The commenter also noted MM LU-3 seeks to reduce the avian attractants and, thus, would further diminish the Wetland Preserve's functions. The commenter alleged that because of these reasons, MM BIO-2 and MM BIO-3 would not reduce the proposed project's impacts on wetlands to a less than significant level.

Functional assessments were conducted to determine plant and animal communities supported on the project site, and these functional assessments were then used in the impact analysis and subsequent mitigation requirements. Refer to Response to S&W-6b for further discussion.

As shown in Draft EIR Exhibit 3.3-3, the Wetland Preserve would contain No Name Creek, which is hydrologically connected to the Napa Logistics Park Wetland Preserve to the north. It would also be contiguous to wetland areas within the Biaggi Bros. property to the west. Thus, the commenter's claims that the Wetland Preserve would be an island are his opinion not supported by evidence.

With respect to the commenter's suggestion that MM LU-3 seeks to reduce the avian attractants and, thus, would further diminish the Wetland Preserve's please refer to CASHEN-14 for further discussion on the implications of MM LU-3.

Response to CASHEN-7a

The commenter noted the MM LU-3 would incorporate measures to reduce bird attractant potential of the wetland area and, therefore, it is reasonable to assume the wildlife hazard reduction measures required under MM LU-3 would include measures to reduce the attraction of Swainson's hawks to the Wetland Preserve. The commenter referenced the Draft EIR's discussion of Swainson's hawk foraging habitat and disputed the statement that there have been a limited number of occurrences of the species within a 10-mile radius of the project site. The commenter claimed that both the California Natural Diversity Database and eBird database have numerous records of Swainson's hawk occurrences within 10 miles of the project site.

With respect to the commenter's suggestion that MM LU-3 would include measures to reduce the attraction Swainson's hawks to the Wetland Preserve, refer to Response to CASHEN-14. The California Natural Diversity Data Base is a reliable source of scientific data and was used to determine the number of occurrences of Swainson's hawk within a 10-mile radius of the project site. The commenter references the eBird data base, which shows multiple sightings of Swainson's hawk in the project area; but a knowledgeable person's interpretation of the eBird data would recognize that the multiple sightings of Swainson's hawk are of multiple observers seeing the same bird(s) over and over. Based upon the limited number of known Swainson's hawk to occur within a 10-mile radius of the project site, the acreage of existing foraging habitat currently protected, and the addition of a 45-acre open space area providing suitable foraging habitat for the species, there is more than sufficient foraging habitat near the project site. Accordingly, the proposed project would not result in significant impacts to foraging habitat nor affect the nesting populations of Swainson's hawk near the project site either directly, indirectly, or cumulatively. Therefore, no mitigation is warranted for Swainson's hawk foraging habitat. Refer to Master Response 1—Impacts to Swainson's Hawk/Golden Eagle Foraging Habitat, for further discussion.

Response to CASHEN-7b
The commenter alleged that the Draft EIR's biological survey on included a single survey for the Swainson's hawk and did not adhere to Swainson's hawk survey protocol, which require three independent surveys to be completed.

Two surveys were conducted to analyze project impacts, not one as suggested by the commenter. The Draft EIR acknowledges in Section 3.3, Biological Resources, page 3.3-4 that HBG conducted spring season site reconnaissance surveys on April 16 and May 24, 2021, and HBG drove about 10 miles of local roads surrounding the project site during both the April and May 2021 field reviews to inspect trees for raptor nest structures. No Swainson's hawk nest structures were observed during either reconnaissance. The Draft EIR also acknowledges, by referencing Appendix C.1 Biological Resources Report, that the analysis relied on CNDDB data of Swainson's hawk locations, and Biological Resource Reports prepared by Monk & Associates for the Devlin Road and Vine Trail Extension Project and the Green Island Road Reconstruction and Widening Project. This data was sufficient to analyze potential impacts the project may have on Swainson's hawk. Some mitigation measures developed in the Giovannoni Draft EIR were in part based on the mitigation requirements spelled out in the Monk & Associates environmental reports, which were certified by the City of American Canyon for projects that have been constructed or a currently in construction. Implementation of MM BIO-1a and MM BIO-4 would ensure project impacts to Swainson's hawk are less than significant.

Response to CASHEN-7c
The commenter disputed a statement that there is sufficient Swainson's hawk foraging habitat in the project vicinity such that the development of the proposed project would not cause a significant loss of this habitat. The commenter referenced CDFW mitigation guidelines for Swainson's hawk foraging habitat and claimed that the proposed project would result in an unmitigated significant impact in this regard.

Swainson's hawk foraging habitat mitigation is addressed in Master Response 1 (Impacts to Swainson's Hawk/Golden Eagle Foraging Habitat).

Response to CASHEN-8
The commenter noted that the Draft EIR indicated that a golden eagle was spotted during a field survey and indicated the development of the proposed project would result in the loss of golden eagle foraging habitat.

Development of the proposed project would remove some foraging area for this species. Development of the proposed project would also provide and preserve in perpetuity approximately 45 acres of open space that would include habitat currently suitable for foraging by the golden eagle, as indicated by the observation of a golden eagle foraging on the site in spring 2021. The adjacent Napa Logistics Park Project has preserved 37 acres of grassland and wetlands in perpetuity that provides foraging habitat for golden eagle. Between these two preservation areas abutting and directly adjacent to the project site, approximately 82 acres of suitable habitat would be available for the golden eagle. In addition, there are several large open space preserves within 2 and 5 miles of the project site that combined provide approximately 2,000 acres of suitable foraging habitat. Based upon the limited number of golden eagle records within a 10-mile radius of the project site, there is sufficient foraging habitat in and within the vicinity of the project site. Based upon the limited number of known golden eagle to occur within a 10-mile radius of the project site, the acreage of existing foraging habitat currently protected, and the addition of a 45-acre open space of suitable golden eagle foraging habitat as part of the project, the proposed project would not result in significant impacts to foraging habitat directly, indirectly, or cumulatively. Therefore, no mitigation is warranted for golden eagle foraging habitat.

Importantly, the Golden Eagle Protection Act provides criminal penalties for persons who "take, possess, sell, purchase, barter, offer to sell, purchase or barter, transport, export or import, at any time or any manner, any bald eagle . . . [or any golden eagle], alive or dead, or any part (including feathers), nest, or egg thereof." The Act defines "take" as "pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or disturb." Regulations further define "disturb" as "to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available, (1) injury to an eagle, (2) a decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior, or (3) nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior" (50 Code of Federal Regulations [CFR] 22.6). Although the proposed project would result in a net loss of foraging habitat, such a net loss occurring in the particular area in which the project site is located would not result in a "take" as defined by the Golden Eagle Protection Act.

For further discussion refer to Master Response 1 (Swainson's Hawk/Golden Eagle Foraging Habitat Mitigation).

Response to CASHEN-9
The commenter claimed that the northern harrier forages and may nest at the project site. The commenter claimed that MM BIO-1c would do nothing to mitigate loss of habitat and the potential

loss of breeding territory. The commenter claimed that the proposed Wetland Preserve would not mitigate the loss of habitat for the species because it does not contain the requisite habitat.

Development of the proposed project would remove some foraging and breeding habitat for this species. Development of the proposed project would also provide and preserve in perpetuity approximately 45 acres of open space that would include habitat currently suitable for foraging and breeding habitat by the northern harrier as indicated by the observation of a northern harrier foraging in the site. The adjacent Napa Logistics Park Project has preserved 37 acres of grassland and wetlands in perpetuity that provides foraging habitat for northern harrier and there are several large open space preserves within 2 and 5 miles of the project site that combined provide approximately 2,000 acres of suitable foraging and breeding habitat. Based upon the number of known northern harrier to occur within a 10-mile radius of the project site, the acreage of existing northern harrier habitat currently protected, and the addition of a 45-acre open space area of suitable northern harrier foraging habitat as part of the project, the proposed project would not result in significant impacts to northern harrier directly, indirectly, or cumulatively, therefore no mitigation is warranted for northern harrier foraging or breeding habitat.

The operative significance threshold for impacts to northern harrier, an unlisted species, is whether the proposed project would have a substantial adverse effect on the species, either directly or through habitat modifications. Although the proposed project would result in a net loss of potential northern harrier foraging habitat, such a net loss occurring in the particular area in which the project site is located would not cause a substantial adverse effect on the species. There is no need to "net out the impact of a proposed project" for that impact to be less than significant. (See, *Save Panoche Valley v. San Benito County* (2013) 217 Cal.App.4th 503, 529.)

Response to CASHEN-10
The commenter stated that MM BIO-1d does not require habitat compensation if burrowing owls are detected and stated that the proposed Wetland Preserve would not mitigate the loss of habitat.

Similar to Response to CASHEN-8 and CASHEN-9, based upon the lack of burrowing owls and burrowing owl habitat on the project site, the number of known burrowing owls to occur within a 10-mile radius of the project site and the acreage of existing suitable habitat currently protected within 2 and 5 miles of the project site, the proposed project would not result in significant impacts to burrowing owl habitat directly, indirectly, or cumulatively, therefore no mitigation is warranted for burrowing owl habitat. It should be noted the applicant agrees that, if burrowing owl is ultimately found on the site and burrow eviction/relocation of burrowing owls during the non-nesting season is a selected strategy to move forward with the project without direct impacts to burrowing owl individuals, the applicant will coordinate this effort with CDFW and provide habitat mitigation consistent with the 2012 CDFW Staff Report on burrowing owl. Modifications to MM BIO-1d, as shown in the Errata, confirm this requirement.

Also note that mitigation recommendations in the CDFW 2012 Staff Report do not carry the force of law, as burrowing owls are not listed under CESA, and the Staff Report was not subject to any formal rulemaking process. Moreover, the operative significance threshold for impacts to burrowing owl, an unlisted species, is whether the proposed project would have a substantial adverse effect on the

species, either directly or through habitat modifications. Although the proposed project would result in the loss of burrowing owl nests or a net loss of potential burrowing owl foraging habitat, such losses would not cause a substantial adverse effect on the species. There is no need to "net out the impact of a proposed project" for that impact to be less than significant. (See, *Save Panoche Valley v. San Benito County* (2013) 217 Cal.App.4th 503, 529.)

Response to CASHEN-11
The commenter claimed the merlin and ferruginous hawk have been detected north of the project site and stated the project site provides foraging habitat. The commenter alleged MM LU-3 would directly functionally eliminate habitat for these two species.

Merlin and ferruginous hawk are raptor species on the CDFW Watch List with respect to wintering habitat. Both of these raptors are species with widespread winter ranges that include much of the western United States and beyond, including portions of the San Francisco Bay Area and inland valleys. They occur in small numbers throughout and can be found in grasslands, pastures, undeveloped and even developed urban to rural sites, golf courses, etc. Occasional use of the project site by either of these species is likely to occur, but there is nothing peculiar about the property that would warrant protection or mitigation on the basis of the site being an important wintering site for either species. In addition, similar to Response to CASHEN-8 and CASHEN-9, based on the acreage of existing suitable habitat currently protected within 2 and 5 miles of the project site, the proposed project would not result in significant impacts to merlin or ferruginous hawk habitat directly, indirectly, or cumulatively, therefore no mitigation is warranted for merlin or ferruginous hawk habitat. The operative significance threshold for impacts to these unlisted species is whether the proposed project would have a substantial adverse effect on the species, either directly or through habitat modifications. Although the proposed project would result in the loss of potential foraging habitat, such losses would not cause a substantial adverse effect on the species. There is no need to "net out the impact of a proposed project" for that impact to be less than significant. (See, *Save Panoche Valley v. San Benito County* (2013) 217 Cal.App.4th 503, 529.) In addition, implementation of MM LU-3 will not functionally eliminate the habitat for these two species. Refer to Response to CASHEN-14 for further discussion on the implications of MM LU-3.

Response to CASHEN-12
The commenter alleged the proposed project has the potential to introduce invasive plant species or facilitate their spread during construction. The commenter claimed that because the proposed project does not set forth mitigation for invasive plant species, it does not comply with General Plan Policy 8.4.3.

Based on the fact that the majority of the project site, once developed, will consist of hard surfaces (building foundations, asphalt parking lots, access roads etc.) that do not provide a growth medium for plants, the proposed developed portion of the project site could not support invasive plant species even if they were inadvertently introduced during or after construction. The managed landscaped areas within the development could provide a limited opportunity for an invasive plant; however, these areas are managed landscaped areas with planted trees and shrubs that would be managed, by techniques such as weeding, to allow for the growth of the plants, included in the landscape plan once proposed. Therefore, no mitigation is warranted for invasive plant species

during construction or after construction on the developed portion of the project site. If an invasive plant is introduced into the Wetland Preserve, the Draft EIR set forth mitigation measures under MM BIO-3d. MM BIO-3d provides mitigation measures in Draft EIR Section 3.3, Biological Resources, page 3.3-36 to monitor for the establishment of an invasive plant species in wetlands and provides a contingency measure on page 3.3-37 to address invasive plant species should the invasive plant performance standard not be met.

Response to CASHEN-13
The commenter noted that a 0.5-mile radius was used as the geographical area for the Draft EIR's cumulative biological analysis and no justification was provided as to why this was appropriate. The commenter claimed the Draft EIR discussed foraging habitat using a much larger geographical area and, thus, used two different geographical areas for the cumulative analysis. The commenter reiterated previous comments about loss of foraging habitat and Impact MM LU-3 would have on the Wetland Preserve as foraging habitat.

In Chapter 4, Cumulative Effects, the geographic scope for each topic is identified and the rationale for it is explained. For Biological Resources, 0.5-mile was used because of the project site's location between the marshes associated with the Napa River and urban development with the City of American Canyon. Thus, 0.5-mile would encompass this geographical area.

The discussion of the abundance of Swainson's hawk foraging habitat in the project vicinity in Section 3.3, Biological Resources, was a separate analysis. Regardless, much of that foraging habitat is within 0.5-mile of the project site. The discussion of impacts to the ability of the Wetland Preserve to provide foraging habitat is discussed below in CASHEN-7a.

Refer to Master Response 1 for further discussion of foraging habitat.

Response to CASHEN-14
The commenter alleged that MM LU-3 would preclude implementation of MM BIO-2 and MM BIO-3 because it would require modification of the landscape, hazing, or removal of hazardous wildlife species. The commenter suggested that implementation of MM LU-3 would require the use of pyrotechnics, propane cannons or directional sonic/hailing devices, the effects of which were not evaluated in the Draft EIR.

MM LU-3 is patterned after a similar mitigation measure set forth in the Napa Logistics Park Phase 2 EIR to minimize the avian attractant attributes of that project's 37-acre Wetland Preserve. In the case of Napa Logistics Park, the intent was to minimize the avian attractant attributes of where standing water would occur through design practices (i.e., employing certain shapes that are not appealing to avian species). Importantly, hazing or hazardous wildlife species removal was not employed in the Napa Logistics Park. Given that Napa Logistics Park is nearly built out and the Wetland Preserve has been established for several years, there is evidence that the successful implementation of MM LU-3 and MM BIO-2 and MM BIO-3 can be achieved. Furthermore, a Wildlife Hazard Assessment has already been prepared, in accordance with MM LU-3, and demonstrates that the construction of the proposed project would not cause an increase above the existing level of activity of birds or other wildlife, and would not present a hazard to Napa County Airport flight operations. It is predicted that

the overall wildlife activity on the property would remain at or below current levels. The Wildlife Hazard Memo is included in Appendix L of this Final EIR.

Lastly, the commenter's claim that pyrotechnics, propane cannons, or directional sonic/hailing devices would be used is speculative, unsupported by any statements in the Draft EIR.

Response to CASHEN-15
The commenter referenced MM BIO-1a and claimed it violates the Swainson's Hawk Technical Committee survey protocol by allowing construction to commence after the first survey, which may cause impacts on the species. The commenter also alleged that MM BIO-1a only requires a 1,000-foot buffer, whereas CDFW mitigation guidelines call for a 0.25-mile buffer.

There are no trees on the project site and, thus, the Swainson's hawk does not have the potential to nest on-site. Instead, MM BIO-1a applies to Swainson's hawk nesting within the zone of influence, which is generally defined as within 1,000 feet of the project site. Refer to Response to CDFW-5a and Response to CDFW-5b for further discussion.

See also Master Response 1 (Swainson's Hawk/Golden Eagle Foraging Habitat Mitigation).

Response to CASHEN-16
The commenter referenced MM BIO-1b and claimed that it does not require that the surveys adhere to USFWS survey protocol, does not include 1-mile non-disturbance buffer, and does not provide evidence that a reduced buffer would be sufficient to mitigate impacts on golden eagles.

As discussed in Draft EIR Section 3.3, Biological Resources, page 3.3-25, there are no trees on the project site and, thus, the golden eagle does not have the potential to nest on-site. Instead, MM BIO-1b applies to golden eagle nesting within the zone of influence, which is generally defined as within 1,000 feet of the project site. The USFWS Interim Golden Eagle inventory and monitoring protocols provides recommendations for determining and evaluating potential golden eagle use of habitat, including nest sites, roosts, and territories, as well as the rationale for identifying and evaluating foraging locations during breeding and non-breeding periods and buffer recommendations. The purpose of the data gathered is to provide information on the baseline circumstances for evaluation of permit applications and foundation for permit conditions during the National Environmental Policy Act (NEPA) process. A Pre-construction Notification was submitted to the USACE with information regarding golden eagle foraging habitat on the project site, known golden eagle sightings within a 10-mile radius of the project site, proposed 1,000-foot minimum buffer from a nest, and proposed pre-construction surveys that would be implemented prior to the start of construction. Based on the USACE's assessment, initiation of an Endangered Species Act Section 7 consultation for golden eagle was not warranted. Regardless, MM BIO-1b establishes a minimum 1000-foot buffer zone, which means the qualified Raptor Biologist could require a larger buffer than 1000 feet or adhere to the USFWS 1-mile buffer recommendation or establish a buffer greater than 1 mile if it is determined, by the qualified Raptor Biologist, that a larger buffer is warranted. Construction activities vary and may include low disturbance activities such as engineering surveys, high levels of disturbance such as large-scale grading, or there may be areas that may have no disturbances for long periods. The qualified Biologist shall establish an appropriate buffer to avoid

project impacts that could result in nest abandonment, loss of young, and/or injury or mortality of burrowing owls. Implementation of MM BIO-1b would ensure project impacts to golden eagle are less than significant.

Response to CASHEN-17
The commenter referenced MM BIO-1c and claimed that it does not provide evidence that a 500-foot buffer would be sufficient to protect northern harrier nest.

MM BIO-1c states the northern harrier nest must be protected by implementing a minimum 500-foot radius buffer zone around the nest, and that the qualified Raptor Biologist could modify the buffer zone considering the type of construction activity that may occur, physical barriers between the construction site and active nest, and the behavioral factors and extent that northern harrier may have acclimated to disturbance. This means the minimum buffer is a 500-foot radius; however, according to MM BIO-1c the qualified Raptor Biologist could increase the buffer radius if deemed necessary to protect the nest. Implementation of MM BIO-1c and MM BIO-4 would ensure project impacts to northern harrier are less than significant.

Response to CASHEN-18a
The commenter referenced MM BIO-1d and claimed that the 100-foot non-disturbance buffer for an occupied burrowing owl nest is inconsistent with CDFW mitigation guidelines, which recommend a 500-meter buffer from occupied burrows and activities causing a high level of disturbance.

As stated above, the CDFW mitigation guidelines recommend a 500-meter buffer from activities causing a high level of disturbance. Construction activities vary and may include low disturbance activities such as engineering surveys, high levels of disturbance such as large-scale grading, or there may be areas within a large construction site, such as the project site, that may have no disturbances for long periods. MM BIO-1d establishes a minimum 100-foot buffer zone, which means the qualified Raptor Biologist could require a larger buffer than 100 feet or 500 meters if it is determined, by the qualified Raptor Biologist, that a larger buffer is warranted based on the location of a nest, reaction of the burrowing owl to the disturbance, and the activity being conducted from the occupied nest to avoid project impacts that could result in nest abandonment, loss of young, and/or injury or mortality of burrowing owls.

Response to CASHEN-18b
The commenter referenced MM BIO-1d and claimed that passive relocation may have adverse impacts associated with loss of habitat, increased stress on burrowing owls, increased depredation, increase energetic costs, and competition for fewer available burrows.

MM BIO-1d does not allow passive relocation of burrowing owls during the breeding season. The passive relocation effort outlined in MM BIO-1d is restricted to relocating owls during the nonbreeding season often referred to as overwintering owls. If burrowing owl are found to be present during the breeding season (February 1 to August 31), the proposed project ground-disturbing activities shall follow the CDFW 2012 Staff Report recommended avoidance protocol whereby occupied burrows shall be avoided with a non-disturbance buffer. Therefore, implementation of MM BIO-1d would ensure project impacts to overwintering owls and breeding pairs would be reduced to less than significant.

It should be noted that the applicant agrees that, if burrowing owl is ultimately found on the site and burrow eviction/relocation of burrowing owls during the non-nesting season is a selected strategy to move forward with the project without direct impacts to burrowing owl individuals, the applicant will coordinate this effort with CDFW and provide habitat mitigation consistent with the 2012 CDFW Staff Report on burrowing owl. Modifications to MM BIO-1d, as shown in the Errata, confirm this requirement.

The operative significance threshold for impacts to burrowing owl, an unlisted species, is whether the proposed project would have a substantial adverse effect on the species, either directly or through habitat modifications. Although the project could lead to the loss of a burrowing owl nest during the nonbreeding season, such an impact will not cause a substantial adverse effect on the species. There is no need to "net out the impact of a proposed project" for that impact to be less than significant. (See, *Save Panoche Valley v. San Benito County* (2013) 217 Cal.App.4th 503, 529.)

Response to CASHEN-19
The commenter referenced MM BIO-2 and MM BIO-3 and claimed they failed to demonstrate why the mitigation ratios would be sufficient to mitigate wetland impacts. The commenter reiterated previous comments about MM LU-3 precluding implementation of MM BIO-2 and MM BIO-3.

With respect to the mitigation ratio comment please refer to Response to S&W-13b; with respect to the MM LU-3 comment refer to Response to CASHEN-14.

Response to CASHEN-20a
The commenter referenced MM BIO-4 and claimed it failed to established standards for nest searching techniques, minimum level of effort, and qualifications of the Biologist.

MM BIO-4 does establish standards for conducting pre-construction breeding bird survey. Standards include timeframes when the survey can begin, provides a specific survey geographic range outside of the project site for ground nesting birds, passerines, accipiters, and other raptors. MM BIO-4 establishes a standard for repeating surveys should project construction get delayed, and requires a qualified Biologist to conduct the survey. As correctly stated by CASHEN-20a, actually detecting a physical nest can be difficult especially for ground nesting birds. Typically, an experienced Biologist will mark the nest location but if a nest is not found the qualified Biologist would mark an area where a bird exhibiting nesting behavior is active.

Response to CASHEN-20b
The commenter referenced MM BIO-4 and claimed it failed to provide evidence that buffer sizes would prevent negative impacts to nesting birds. The commenter claimed construction noise levels may reach 90 A-weighted decibel (dBA) at a distance of 50 feet and, thus, a 50-foot buffer would not be sufficient.

To clarify, Draft EIR Section 3.10, Noise, page 3.10-17, disclosed construction noise levels may be as high as 90 dBA maximum noise/sound level (L_{max}) (i.e., instantaneous noise level). Actual average noise levels during construction activities would be lower. Regardless, the buffers outlined in MM BIO-4 are minimum buffers and may be increased should the qualified Biologist determine a larger buffer is warranted to protect a nest. Construction activities vary and may include low disturbance

activities such as pedestrian engineering surveys, high levels of disturbance such as large-scale grading or pile driving, or there may be areas within a large construction site, such as the project site, that may have no disturbances for long periods. MM BIO-4 establishes minimum buffer zone requirements, which means the qualified Raptor Biologist could require a 500-meter buffer for a passerine nest if it is determined, by the qualified Raptor Biologist, that a larger buffer is warranted based on the location of a nest, reaction of the bird species to the disturbance, and the activity being conducted from the occupied nest.

Response to CASHEN-20c
The commenter referenced MM BIO-4 and claimed it does not contain performance standards for validation of the adequacy of the nest buffers or compliance for construction workers.

The MM BIO-4 requires buffer zones to be maintained until it can be documented that either the nest has failed, or the young have fledged, which is the industry standard approach. The Biologist must document the nest has either failed or the young have fledged prior to the buffer being removed. With respect to ensuring construction crews abide by the nesting bird buffers, this would be required to be noted on construction plans and, thus, construction personnel would be aware of this requirement.

Response to CASHEN-21
The commenter provided his curriculum vitae. No response is necessary.

Response to SM-1
The commenter summarized the findings of his review. Refer to Response to SM-2 through Response to SM-5, as well as Master Response 4.

Response to SM-2
The commenter alleged that project trip generation could be much higher than assumed because it used the lowest Institute of Transportation Engineers (ITE) trip rate a warehouse land use. The commenter asserted that a Cold Storage Warehouse trip rate should have been used, which would have resulted in more peak-hour trips. The commenter referenced a study from Western Riverside County that showed that an Amazon warehouse with more than 2,000 employees generated more than 5,000 trips per day. The commenter also claimed that truck trip generation was under counted, citing the same study.

Although the ITE Trip Generation Manual (10th Edition) provides multiple rates for various types of High-Cube land uses, the "High-Cube Transload and Short-Term Storage Warehouse" land use was selected because these rates were based upon a compilation of approximately 100 separate surveys sites whereas the published rates for the other High-Cube land uses (High-Cube Fulfillment Center, High-Cube Parcel Hub, and High-Cube Cold Storage) consisted of five or fewer site surveys each. Therefore, the rates for the "High-Cube Transload and Short-term Storage Warehouse" were applied since they were the most statistically robust data set available when compared with the other remaining options.

Response to SM-3
The commenter claimed that the VMT analysis improperly used the Statewide model, which is too coarse for a particular project. The commenter claimed a regional travel demand model should have

been used and said a one-way commute VMT for the two higher income categories working in American Canyon is 31.3 miles.

The applied commute VMT per employee data of 16.24 miles was obtained from the California Statewide Travel Demand Model (CSTDM), which as noted in above responses produces VMT performance metrics that are directly comparable to those suggested for use in the OPR Technical Advisory, and accounts for local and regional demographic characteristics including the locations of jobs and housing. The alternative methodology suggested by the commenter entails using Longitudinal Employer-Household Dynamics (LEHD) and LEHD Origin-Destination Employment Statistics (LODES) information developed from US Census data, which while informative, does not produce results that can be directly compared to the applied significance threshold. This is evidenced by the substantial amount of factoring and adjusting used by the commenter to develop alternative estimates. The use of data produced by the CSTDM as applied is preferable since it similarly accounts for demographic patterns, more accurately accounts for actual driving distances on roadways, and requires substantially fewer assumptions and factoring adjustments than the approach suggested by the commenter.

Response to SM-4
The commenter stated that the Draft EIR should have required a TDM Program and noted some challenges for the proposed project in this regard.

This Final EIR includes a new mitigation measure, MM AIR-2f, which requires the implementation of a TDM Program. This change is included in Section 5, Errata.

The Draft EIR did discuss project accessibility to transit, bicycles, and pedestrians in Impact TRANS-1 and found that the proposed project would be accessible to these modes of transportation.

Response to SM-5
The commenter reiterated prior remarks about trip generation and alleged that the GHG emissions analysis may be underestimated. Refer to Response to SM-3.

Response to SM-6
The commenter provided his curriculum vitae. No response is necessary.

SECTION 4: RESPONSES TO JUNE 23, 2022, PLANNING COMMISSION MEETING COMMENTS

4.1 - Introduction

City of American Canyon solicited public comments on the Giovannoni Logistics Center Project Draft Environmental Impact Report (Draft EIR) (State Clearinghouse No. 2021010104) on June 23, 2022, at a Planning Commission meeting at American Canyon City Hall. Comments were provided in oral form and summarized in meeting minutes. Although the City of American Canyon is not obligated by the California Environmental Quality Act (CEQA) to provide written responses to oral comments, the City has nonetheless elected to respond to the comments made at the meeting in order to address concerns and questions related to the evaluation of the proposed project's environmental impacts in the Draft EIR. These written responses become part of the Final EIR for the project in accordance with CEQA Guidelines Section 15132.

This section is organized as follows:

- **Section 4.1—Introduction.** Provides an overview of the section.
- **Section 4.2—List of Speakers.** Provides the list of individuals who provided comments at the June 23, 2022, Planning Commission meeting.
- **Section 4.3—Planning Commission Transcript.**
- **Section 4.4—Responses to Planning Commission Comments.** Provides responses to all applicable verbal and written comments received at the Community Meetings.

4.2 - List of Speakers and Authors

A list of the speakers who provided verbal comments on each community meeting is presented below. Each speaker has been assigned a code. Individual comments within each communication have been numbered so comments can be crossed-referenced with responses.

June 23, 2022, Planning Commission Meeting

Speaker

Chris James
Joe Livaich
Planning Commission Chair Crystal Mallare
Planning Commission Vice Chair Tammy Wong
Planning Commissioner Tyrone Navarro

4.3 - June 23, 2022, Planning Commission Meeting Minutes

The meeting minutes are reproduced in the following pages are from the June 23, 2022, Planning Commission Meeting.

THIS PAGE INTENTIONALLY LEFT BLANK

CITY OF AMERICAN CANYON
REGULAR PLANNING COMMISSION MEETING

ACTION MINUTES
June 23, 2022

6:30 P.M. REGULAR MEETING
The meeting was called to order at 6:31 p.m.

CALL TO ORDER

PLEDGE
The pledge of allegiance was recited.

MEETING ANNOUNCEMENT
Chair Mallare made the meeting announcement.

ROLL CALL
Present: Commissioners Eric Altman, Tyrone Navarro, Vice Chair Tammy Wong, Chair Crystal Mallare
Absent: Commissioner Andrew Goff

PUBLIC COMMENT
Chair Mallare opened public comment. Written Comments: None. Oral Comments: None

AGENDA CHANGES
There were no agenda changes.

CONSENT CALENDAR

Minutes of May 26, 2022
Action: Approve the minutes of May 26, 2022

Action: Motion to approve the consent calendar was made by Commissioner Navarro, seconded by Vice Chair Wong and CARRIED by a roll call vote.

PUBLIC HEARINGS

Home2Suites Major Modification to revise Condition 40 of Resolution 2020-02 to substitute undergrounding overhead utilities and poles with two relocated overhead utility poles and two additional riser poles across the Project Frontage

Action: A Resolution of the Planning Commission of the City of American Canyon, California approving a Major Modification to Condition 40 of Resolution 2020-02 for the Home2Suites Design Permit to substitute a utility undergrounding requirement with two relocated overhead utility poles and two additional riser poles across the project Highway 29 frontage at 3701 Main St., APN 059-072-002 (PL22-0007)

Commissioners received a report from Associate Planner William He. Mark Stumm with Home2Suites provided additional information.

Chair Mallare recused herself from the item at 6:51 due to conflict of interest.

Commissioners discussed the item.

City Attorney William Ross provided information related to the end consistency of PG&E to underground utilities and provided direction to the Commission regarding their discretion related to a decision on in this item.

Vice Chair Wong opened Public Comment. Written comment: none Oral comment: Chris James was called to speak. Public comment was closed.

Speakers: Bret Tremblay on behalf of Home2Suites

Commissioners further deliberated on the item.

Action: Motion to continue the Public Hearing to next regularly scheduled Planning Commission meeting with a recommendation to City staff to begin exploring a comprehensive undergrounding plan and if possible, start initiating a conversation for such comprehensive plan with City Council, but most immediately addressing the concerns for the Home2Suites project. was made by Commissioner Altman, seconded by Commissioner Navarro and CARRIED by a roll call vote.

Chair Mallare resumed participation in the meeting at 7:58 p.m.

BUSINESS

Giovannoni Logistics Center Draft Environmental Impact Report (DEIR) Public Review Workshop

Action: Receive and file Giovannoni Logistics Center DEIR and provide comments on its environmental findings and conclusions.

Community Development Director Brent Cooper introduced the applicant Joe Livaich from Buzz Oats Construction and Grant Gruber and Mary Bean from First Carbon Solutions, who prepared the EIR. Grant Gruber from Frist Carbon Solutions shared a presentation.

Chair Mallare opened Public Comments
Written comments: none. Oral comments: Chris James was called to speak. Chair Mallare closed Public Comments

The applicant, Joe Livaich from Buzz Oats Construction provided additional information.

Commissioners discussed the item.

Action: The report was acknowledged and filed.

MANAGEMENT AND STAFF ORAL REPORTS

Active Planning Projects

Action: Review Active Planning Project List

Community Development Director Brent Cooper reported on Active Planning Projects including the hotel at Napa Valley Ruins and Gardens, the Residences at Napa Junction, Home2Suites, Fume Conditional Use Permit, SDG 217 project, General Plan Housing Element outreach, General Plan Notice of Preparation for Environmental Impact report, Napa Cove, Watson Ranch homes at the North end of Summerwood, Napa Junction medical building, Canyon Estates, PG&E, Paoli Watson Lane annexation, Oat Hill residential project.

Associate Planner William He provided an update on PG&E landscaping for their project.

COMMISSIONER ITEMS

Commissioners reported on items of interest.

ADJOURNMENT

The meeting adjourned at 8:44 p.m.

CERTIFICATION

Respectfully Submitted,

Nicolle Jones, Administrative Technician

4.4 - Responses to June 23, 2022, Planning Commission Meeting Comments

4.4.1 - Introduction

Responses to comments made at the June 23, 2022, Planning Commission meeting are provided through both master responses and individual responses. Master responses are provided in Section 2 of this document.

4.4.2 - Responses to Comments

Individual Responses

Responses have been prepared for all comments pertaining to the Draft EIR. An individualized response has been provided to each comment.

Chris James

Summary of Comments
Mr. James noted that that "this has come up so quickly" and lamented that State Route (SR) 29 has been turned into a "concrete thoroughfare." Mr. James expressed concern about air pollution from idling trucks and traffic congestion. He expressed general displeasure with the project vicinity being the "Warehouse District for Napa County."

Response to Comments
The applicant filed the application to develop the Giovannoni Logistics Center Project with the City of American Canyon in November 2020. The environmental review process began in January 2021 with the issuance of the Notice of Preparation (NOP). The Draft EIR was released for public review on May 20, 2022. By the time of the June 23, 2022, Planning Commission meeting, 19 months had elapsed since the filing of the application. When compared to the entitlement timeline of other recent development projects (e.g., Napa Logistics Park Phase 2, Napa Airport Corporate Center, and Broadway District Specific Plan), the timeline for the Giovannoni Logistics Center was equal to, if not a bit more prolonged, than the timelines for those projects. This greater amount of time devoted to the Giovannoni Logistics Center Project demonstrates that the City conducted a deliberate review of the project application and by no means has rushed it through the process.

Air pollution, including diesel particulate matter (DPM) from trucks, was addressed in the Draft EIR in Section 3.2, Air Quality. Mitigation Measure (MM) AIR-2d requires that the truck fleet serving the proposed project meet or exceed the emissions profile of Model Year 2014 heavy trucks. Furthermore, State law limits diesel engine idling to no more than 5 minutes and many truck fleets are equipped with auxiliary power units that allow the diesel engine to be shut off but still allow electrical systems to be powered. The Draft EIR found that impacts on nearby sensitive receptors from DPM emissions would be less than significant.

Lastly, the Green Island Business Park, as well as the Napa County Airport Industrial Area, are the two largest industrially zoned areas in Napa County. This reflects the following: (1) proximity to the SR-12/SR-29 junction; (2) compatibility with the Napa County Airport, the Napa Sanitation District Soscol Water Recycling Facility, and the Devlin Road Transfer Station; (3) the availability of freight rail

service; and (4) the land use restrictions set forth in Measure P, which make it extremely difficult to rezone agricultural, open space, and watershed land in unincorporated Napa County to urban use. Likewise, sensitive receptor land uses such as residential, schools, and convalescent facilities would be incompatible in the Green Island Business Park. In sum, light industrial/heavy commercial land uses (including warehouse) are the highest and best uses for the Green Island Business Park.

Joe Livaich

Note to Reader: Mr. Livaich is a representative of the applicant Buzz Oates

Summary of Comments

Mr. Livaich noted that Buzz Oates is a vertically integrated developer, signifying that it would entitle, develop, and operate the proposed project. He indicated that the types of tenants are "open ended" and could include bio tech, wine-related businesses, and advanced manufacturing.

Response to Comments

None of these issues pertain to the Draft EIR and, thus, no response is necessary.

Planning Commission Chair Crystal Mallare

Summary of Comments

Chair Mallare inquired about how Buzz Oates identifies tenants. Mr. Livaich noted that regional consolidation of separate smaller spaces into a single larger space is a trend Buzz Oates has observed and expects to see played out at the proposed project.

Response to Comments

None of these issues pertain to the Draft EIR and, thus, no response is necessary.

Planning Commission Vice Chair Tammy Wong

Summary of Comments

Vice Chair Wong inquired about how employment was calculated. Mr. Livaich noted employment was calculated using standard employment rates that are based on employees per square feet.

Response to Comments

The methodology used to calculate employment is explained in Response to GSEJA-8a in Section 3, Response to Written Comments.

Planning Commissioner Tryonne Navarro

Summary of Comments

Commissioner Navarro expressed concern about traffic from a project of this size.

Response to Comments

Transportation impacts were evaluated in Draft EIR Section 3.12, Transportation. The analysis found that all of the proposed project's transportation impacts were less than significant and did not require mitigation.

SECTION 5: ERRATA

The following are revisions to the Draft EIR for the Giovannoni Logistics Center Project. These revisions are minor modifications and clarifications to the document, and do not change the significance of any of the environmental issue conclusions within the Draft EIR. The revisions are listed by page number. All additions to the text are underlined (underlined) and all deletions from the text are stricken (~~stricken~~).

5.1 - Changes in Draft EIR

Section 2, Project Description

Page 2-9, First Sentence

A statement on Page 2-9 has been revised to reflect the schedule used in the air quality analysis. The text edit does not change any conclusions in the Draft EIR.

> For the purposes of providing a conservative, worst-case scenario, this Draft EIR assumes that Phases 1 and 2 would be developed concurrently over a period of 20 to 24~~18~~ months.

Section 3.2, Air Quality

Page 3.2-59, Mitigation Measures AIR-2e, AIR-2f, and AIR-2g

Mitigation Measures (MM) AIR-2e, MM AIR-2f, and MM AIR-2g have been added to reduce operational criteria pollutant emissions. However, the residual significance of Impact AIR-1 and AIR-2 remain significant and unavoidable.

MM AIR-2e Prior to the issuance of the certificate of occupancy for each building with dock doors, signage shall be posted identifying idling restrictions and contact information to report violations to the building manager.

MM AIR-2f Prior to the issuance of the certificate of occupancy for each building with a separate end user, the City shall confirm that the end user has prepared a Transportation Demand Management Plan (TDM Plan). The TDM Plan shall be prepared by a qualified transportation consultant and identify strategies to reduce single-occupant vehicle trips. Examples of TDM strategies may include but are not limited to:

- Ridesharing/Ride Matching
- Vanpools
- Transit subsidies
- Preferential parking for rideshare or vanpool vehicles
- Employee lockers
- Secure bicycle parking
- Employee locker rooms
- Provide TDM information in employee breakroom

MM AIR-2g As a part of future lease agreements, the project proponent shall provide all future tenants at the project site information on available California Air Resources Board (ARB) and Bay Area Air Quality Management District (BAAQMD) incentive programs, such as the Carl Moyer Program and the Voucher Incentive Program, that support upgrading truck fleets to clean air technology equipment.

Section 3.3, Biological Resources

Page 3.3-24, Last Paragraph, First Sentence

The first sentence has been corrected to indicate that Huffman Broadway Group (HBG) conducted Swainson's hawk nesting surveys in April and May 2021.

> Although eucalyptus and other large trees located within ~~about~~ 0.25 mile from the project site provide potential nesting habitat, no nesting by Swainson's hawk (or any raptor species) was noted during surveys for Swainson's hawk conducted by HBG ~~Helm Biological Consulting~~ in April and May 2021.

Pages 3.3-26 and 3.3-27, Mitigation Measure BIO-1a

MM BIO-1a has been revised to address comments made by the California Department of Fish and Wildlife (CDFW).

MM BIO-1a Pre-construction surveys for Swainson's hawk shall be conducted in the project ~~site~~ vicinity prior to initiation of project construction activities, and each year following initiation of construction if project activities are delayed or discontinued for 7 or more days prior to the second survey period (March 20 to April 5), and are scheduled to recommence construction activities during the second survey period but before August 1. These pre-construction surveys shall include investigation of all potential nesting trees within a half-mile radius around all project activities and shall be completed for at least two survey periods immediately prior to commencement of project construction. Surveys shall be conducted in accordance with the California Department of Fish and Wildlife (CDFW) "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFW 2000) ~~follow California Department of Fish and Wildlife (CDFW) guidelines for conducting surveys for Swainson's hawk that were developed by the Swainson's Hawk Technical Advisory Committee~~ to maximize the potential for locating nesting Swainson's hawk and reduce the potential for nest failures due to project activities and/or disturbances.

If no nesting Swainson's hawk are found during the ~~first non-optional~~ second survey period starting March 20, then project construction may commence. If during the third surveys (April 5–April 20) Swainson's hawk are found to be nesting in the project vicinity and construction has commenced, it shall be assumed the Swainson's hawk commenced nesting and thus the Swainson's hawk are habituated to the ambient level of noise and disturbance emanating from the project site.

If Swainson's hawk are found to be nesting within 1,000 feet of the project site, a non-disturbance buffer shall be established to keep all construction activities a minimum of 1,000 feet from the nest site. The CDFW shall be consulted regarding the adequacy of the buffer established by the qualified Raptor Biologist. At that time the necessity for acquiring a Fish and Game Section 2081 Incidental Take Permit (ITP) authorization would be determined. An ITP authorization shall be required if there were a valid concern the project activities would result in the "take" of an adult Swainson's hawk, eggs, or nestlings.

Surveys shall be conducted by a qualified Raptor Biologist with at least 2 years of experience surveying for and detecting Swainson's hawk pursuant to "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" survey protocol. No disturbance such as construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is complete based on monitoring of the active nest by a qualified Biologist.

Page 3.3-27, Mitigation Measure BIO-1b

MM BIO-1b has been revised to address comments made by the CDFW.

MM BIO-1b No more than 30 days prior to the first ground disturbance activity, pre-construction golden eagle nesting surveys shall be conducted in the project ~~site~~ vicinity by a qualified Raptor Biologist. The qualified Raptor Biologist shall have at least 2 years of experience surveying for and detecting nesting golden eagles. Pre-construction surveys shall include investigation of all potential nesting trees within a survey area determined by the qualified Raptor Biologist, but no less than a 0.5-mile radius around all project activities. ~~survey area for golden eagle be determined by the qualified Raptor Biologist.~~ If active golden eagle nests are identified within any trees within the survey areas ~~a 0.5-mile radius~~ of the project site, a qualified Raptor Biologist shall establish a protection buffer at a minimum of 1,000 feet that is adequate to ensure noise or activity from the proposed project would not cause nest disturbance or young or adult bird mortality. Buffer zones may vary in size as some golden eagles are more acclimated to disturbance than others. Size of buffer zone may be increased ~~modified~~ by the qualified Raptor Biologist considering the type of construction activity that may occur and the behavioral factors and extent that golden eagle may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young golden eagles have fledged or that the nesting cycle is complete based on monitoring of the active nest by a qualified Biologist. ~~Surveys shall be conducted by a qualified Raptor Biologist.~~

Pages 3.3-27 and 3.3-28, Mitigation Measure BIO-1c

MM BIO-1c has been revised to address comments made by the CDFW.

MM BIO-1c Prior to ground disturbance, a pre-construction nesting survey shall be conducted for northern harrier and short-eared owl by a qualified Raptor Biologist if construction is scheduled during the nesting season (February 1 through September 1). The qualified Raptor Biologist shall have at least 2 years of experience surveying for and detecting nesting northern harrier and short-eared owl. To determine whether northern harrier or short-eared owl is nesting on-site, a qualified Raptor Biologist(s) shall conduct walking transects through the project site grassland habitat searching for nests and minimum 500-foot radius from the project site. Where the survey area encroaches onto private property not accessible to the public (e.g., fenced in commercial property, residential backyard, etc., the qualified Biologist shall either contact the property owner for permission to physically access the property or conduct a visual survey of adjacent areas by scanning with binoculars or a spotting scope. An active northern harrier or short-eared owl nest must be protected by implementing a minimum 500-foot radius buffer zone around the nest marked with orange construction fencing. If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Size of buffer zone could be ~~modified~~ increased considering the type of construction activity that may occur, physical barriers between the construction site and active nest, and the behavioral factors and extent that northern harrier or short-eared owl may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is otherwise determined to be complete based on monitoring of the active nest by a qualified Raptor Biologist.

Page 3.3-28, Mitigation Measure BIO-1d

MM BIO-1d has been revised to address comments made by the CDFW.

MM BIO-1d Prior to any ground disturbance, pre-construction surveys for burrowing owl shall be conducted within a minimum of 150 meters of the project site. Where the survey area encroaches onto private property not accessible to the public (e.g., fenced in commercial property, residential backyard, etc.), the qualified Biologist shall either contact the property owner for permission to physically access the property or conduct a visual survey of adjacent areas by scanning with binoculars or a spotting scope. The pre-construction surveys shall be conducted within 2 weeks prior to the onset of any ground-disturbing activities. Surveys shall be conducted by a qualified Biologist following California Department of Fish and Wildlife (CDFW) 2012 staff report survey methods and Biologist qualifications to establish the status of burrowing owl on the project site.

- If burrowing owl are found to occupy the project site during the nonbreeding season (September 1 to January 31), occupied burrows shall be avoided by establishing a no-disturbance buffer zone a minimum of 100 feet around the burrow. Buffers may be adjusted to address site-specific conditions using the

impact assessment approach described in the CDFW 2012 staff report. If a qualified Raptor Biologist determines the location of an occupied burrow/s may be impacted even with a 100-foot buffer, or the burrow(s) are in a location(s) on the project site where a buffer cannot be established without preventing the proposed project from moving forward, then a passive relocation effort may be instituted to relocate the individual(s) out of harm's way pursuant to a Burrowing Owl Exclusion Plan prepared in accordance with the CDFW 2012 staff report.

- If burrowing owl are found to be present during the breeding season (February 1 to August 31), the proposed project ground-disturbing activities shall follow the CDFW 2012 staff report recommended avoidance protocol whereby occupied burrows shall be avoided with a no-disturbance buffer.
- If burrowing owls are ultimately found on the site and burrow eviction/ relocation of burrowing owls during the non-nesting season is a selected strategy to move forward with the project without direct impacts to burrowing owl individuals, the applicant shall coordinate this effort with CDFW and provide habitat mitigation consistent with the 2012 CDFW Staff Report on burrowing owl.

Page 3.3-39, Mitigation Measure BIO-4

MM BIO-4 has been revised to address comments made by the CDFW.

MM BIO-4 If construction occurs during the breeding season of migratory and resident birds (February 1 to August 31), a qualified Biologist shall conduct a pre-construction breeding bird survey in areas of suitable habitat within ~~15~~ 7 days prior to the onset of construction activity. ~~Nesting bird surveys shall cover the proposed project footprint and adjacent areas.~~ Surveys shall be conducted within the project footprint and 50 feet from the construction limits for nesting passerines, 250 feet from the construction limits for nesting accipiters and 1,000 feet from the construction limits for nesting raptors. If the survey area is found to be absent of nesting birds, no further mitigation would be required. However, if construction activities are delayed by more than 7 days, an additional nesting bird survey shall be performed. If bird nests are found, appropriate buffer zones shall be established around all active nests to protect nesting adults and their young from direct or indirect impacts related to project construction disturbance. Size of buffer zones shall be determined per recommendations of the qualified Biologist based on site conditions and species involved. At a minimum a 1,000-foot buffer shall be established for nesting Swainson's hawk and golden eagle; 500-foot buffer for nesting tricolored blackbirds, northern harriers and other non-listed raptors; 250-foot buffer for nesting accipiters; and minimum 50-foot buffers shall be established for nesting passerines and all other non-raptor or passerine nesting birds. If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Buffer zones shall be maintained until it can be documented that either the nest has failed, or the young have fledged.

Section 3.4, Cultural Resources

Page 3.4-22, Mitigation Measure CUL-2b

MM CUL-2b has been revised to strike the phrase 'and historical research' at the request of the Yocha Dehe Wintun Nation.

MM CUL-2b An Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology shall be present on-site during all earth disturbing activities. If prehistoric or historic-period archaeological resources are encountered, all construction activities within 100 feet of the find shall halt and the City of American Canyon shall be notified. Prehistoric archaeological materials may include obsidian and chert flaked stone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil ("midden") containing heat-affected rocks, artifacts, or shellfish remains; and stone milling equipment (e.g., mortars, pestles, hand stones, or milling slabs); and battered stone tools, such as hammerstones and pitted stones. Historic-period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse.

The Archaeologist shall inspect the findings within 24 hours of discovery. If it is determined the project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines), mitigation shall be implemented in accordance with Public Resources Code Section 21083.2 and Section 15126.4 of the CEQA Guidelines, with a preference for preservation in place. Consistent with Section 15126.4(b)(3), this may be accomplished through planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement. If avoidance is not feasible, a qualified Archaeologist shall prepare and implement a detailed treatment plan in consultation with the City of American Canyon. Treatment of unique archaeological resources shall follow the applicable requirements of Public Resources Code Section 21083.2. Treatment for most resources would consist of (but would not be limited to) sample excavation, artifact collection, and site documentation, ~~and historical research,~~ with the aim to target the recovery of important scientific data contained in the portion(s) of the significant resource to be impacted by the proposed project. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and State repositories, libraries, and interested professionals.

Section 3.7, Hazards and Hazardous Materials

Travel Behavior Memorandum

THIS PAGE INTENTIONALLY LEFT BLANK

FEHR PEERS

Memorandum

Date:	June 16, 2022
To:	Joe Livaich, Buzz Oates Construction, Inc.
From:	Kevin Johnson & David Robinson, Fehr & Peers
Subject:	**American Canyon Industrial Warehouse Travel Behavior Data**

WC22-3900

This memorandum describes the travel behavior data collected for the proposed 208-acre high-cube industrial warehouse project (the Project) in American Canyon, CA. Fehr & Peers understands the uniqueness of warehousing and logistics facilities that make them extremely difficult to study with traditional data collection methods. Fehr & Peers combined traffic count data previously collected in San Joaquin County for similar warehousing uses with new mobile device origin-destination data from StreetLight for similar industrial warehouse sites around the Bay Area to provide Buzz Oates Construction, Inc. with detailed trip generation, vehicle origin-destination pattern, and average trip length data. This data will be used to support the ongoing VMT and GHG analyses. In the Draft EIR, heavy duty truck trips were not accounted for in either the VMT analysis or the GHG analysis, which relied in part on the VMT analysis. This omission of heavy-duty truck trips in the VMT analysis is consistent with guidance from the Office of Planning and Research. A primary objective of the analysis in this memorandum is to address whether VMT from such heavy-duty truck trips would be more or less than 15 percent below the regional average for the Bay Area.

Trip Generation Data Collection

The following section describes the traffic count data source used to understand the potential trip generation of the Project.

San Joaquin Countywide Warehousing Data Collection Effort

The data used to estimate the trip generation of the Project is from the San Joaquin Countywide Warehousing Data Collection effort. This data collection effort was undertaken by Fehr & Peers in June 2021 to better understand the travel behavior of existing warehousing buildings across San Joaquin County, as a review of local and regional planning studies revealed a lack of data and understanding of the travel characteristics of these types of facilities. Specifically, there was a lack of local or national trip generation data for warehousing uses, a lack of understanding of the travel patterns and demographics of warehouse users, and a lack of inclusion of these facilities in regional travel forecasting models.

Fehr & Peers coordinated the collection of 72 hours of driveway vehicle classification count data at 39 warehousing buildings across San Joaquin County in June 2021. The data collection was performed by National Data & Surveying Services (NDS) using cameras to count and classify vehicles entering and exiting the individual building driveways. Fehr & Peers staff visited each of the 39 warehousing buildings on one day during the data collection to observe the following:

- Check traffic and weather conditions
- Confirm the placement of the cameras
- Observe activity levels at the surveyed buildings
- Count the number of truck bays
- Classify the buildings
- Observe general operations and travel behavior

Fehr & Peers used this data to develop average trip generation rates per thousand square feet (KSF) for warehousing uses in San Joaquin County. The 39 warehousing buildings, including their occupying tenant, type of warehouse, and square footage, are listed below.

San Joaquin Countywide Warehousing Data Collection					
City	Tenant	Address	# Driveways	Type	Square Feet
Lathrop	California Logistics	11900/11940/11960/11980 S Harlan Rd, Lathrop, CA 95330	3	Warehouse	1,235,000

Warehousing Trip Generation Data

The average trip generation rates per KSF of building space from the June 2021 San Joaquin Countywide Warehousing Data Collection effort, stratified by autos, medium-duty trucks, and heavy-duty trucks, are provided in **Table 1**. The trip generation rates were checked for reasonableness against trip generation data from the Institute of Institute of Transportation Engineers (ITE) Trip Generation Manual, which are also provided.

As shown in **Table 1**, the average daily trip generation per KSF of building space for all 39 buildings in San Joaquin County where driveway count data was collected in June 2021 is 0.078 medium-duty truck trips, 0.447 heavy-duty truck trips, and 0.995 auto trips. The average daily total trip generation rate of 1.52 vehicle trips per KSF is generally consistent with ITE trip generation data, being roughly ten percent lower than Code 152 from the 9th Edition and roughly nine percent higher than Code 154 from the 10th Edition. The average AM peak hour and PM peak hour total trip generation rates of 0.18 and 0.21 trips per KSF are both higher than ITE trip generation data and comprise a higher percentage of total daily trip generation. ITE does not provide trip generation rates for warehousing uses by vehicle classification for comparison.

Table 1: San Joaquin County Warehousing Trip Generation Rates per KSF

Source	AM Peak Hour				PM Peak Hour				Daily

Trip Length Data Collection

The following section describes the mobile device data obtained from StreetLight used to understand the origin-destination patterns and average trip lengths of heavy-duty truck trips generated by similar industrial warehousing sites around the Bay Area.

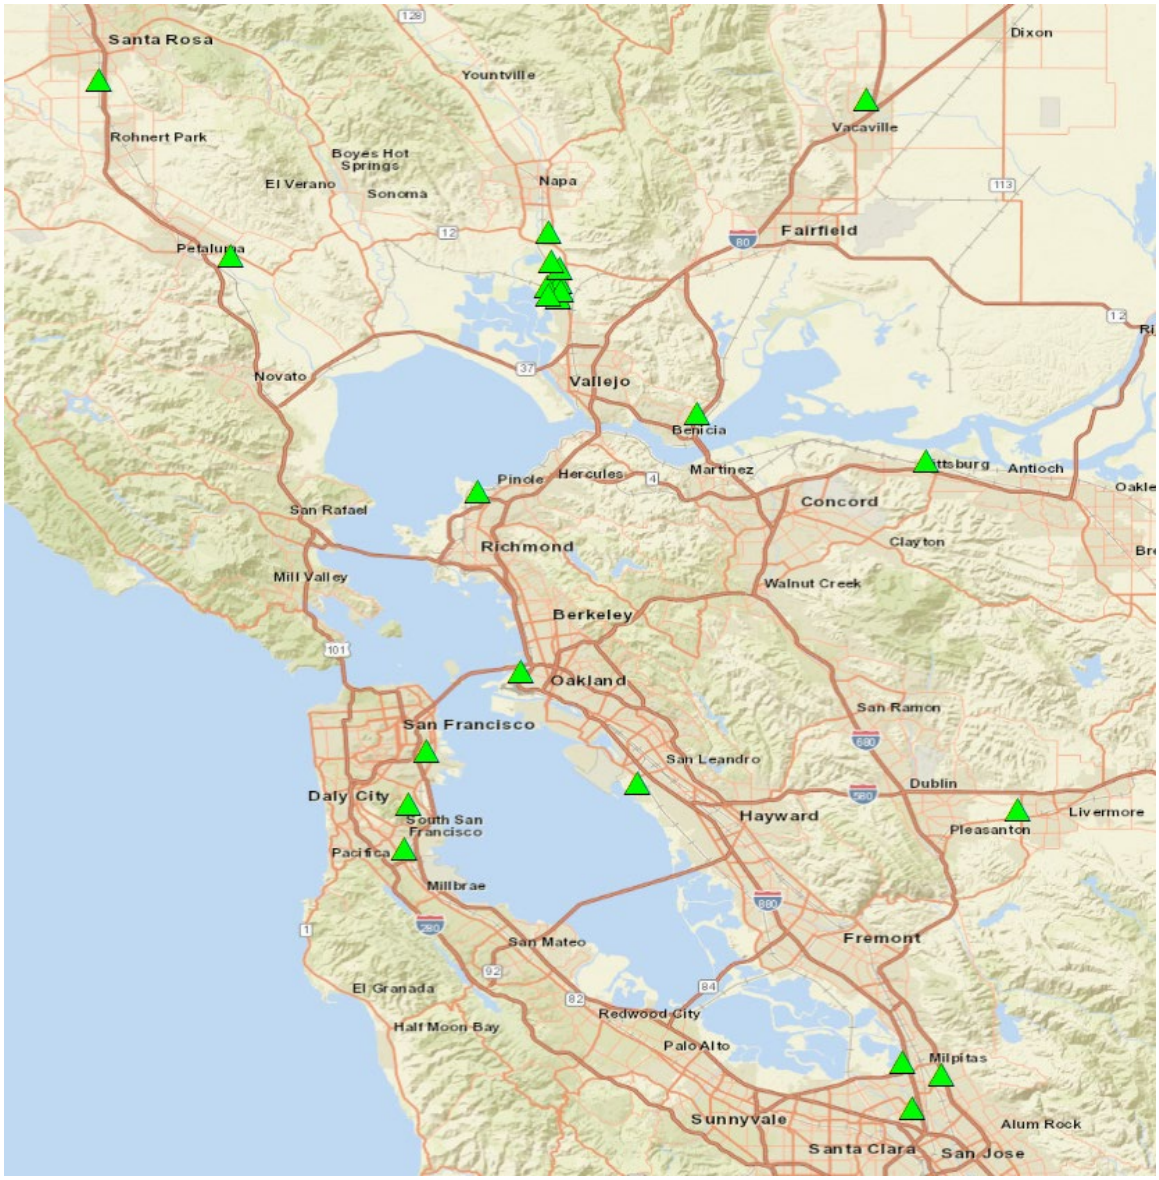
Mobile Device Data from StreetLight

Fehr & Peers obtained StreetLight's GPS-based commercial vehicle data product for 23 existing industrial warehousing sites around the Bay Area, including eight sites in Napa County of which four were located within the City of American Canyon. We relied on StreetLight's "O-D to Pre-set Geography" product to analyze travel patterns to and from the land use zone system at the census block group level, which has over 23,000 zones within California.

Zone System

A land use zone system was developed for the 23 existing industrial warehousing sites, each of which included a separate zone for each of the existing buildings or groupings of buildings. The analysis tracked all heavy-duty truck trips starting or ending at one of these zones. The start of trips coming to the zones and end of trips leaving the zones were tagged to the national census block group system, allowing for aggregation to any desired geography such as the city or county level.

The land use zone system consisted of eight industrial warehousing sites in Napa County, which are listed below**,** and include similar existing warehousing sites in full operation during the data collection period. These sites were selected to understand the potential average trip length of heavy-duty truck trips generated by the Project.



- Biagi Brothers - Napa County
- Valley Wine - American Canyon
- Vin Lux - American Canyon
- WineDirect - American Canyon
- Napa Corporate Center Warehouses - Napa
- American Canyon Warehouses
- Napa County Airport Warehouses
- Wineshipping - Napa County

The land use zone system also consisted of 15 industrial warehousing sites in other parts of the Bay Area, which are listed below**,** and include similar existing warehousing sites in full operation during the data collection period. These sites were selected to understand how the potential average trip length of heavy-duty truck trips generated by the Project compares to the existing average trip length for similar sites around the Bay Area.

- San Francisco County - Bayview Area
- San Mateo County - Brisbane Area
- San Mateo County - Prologis SFO Area
- Santa Clara County - Western Milpitas Area
- Santa Clara County - Milpitas I-680 Area
- Santa Clara County - San Jose Area
- Alameda County - Livermore Area
- Alameda County - Prologis Port of Oakland Area
- Alameda County - San Leandro Area
- Contra Costa County - Pittsburg Area
- Contra Costa County - Richmond Area
- Solano County - Benicia Area
- Solano County - Vacaville Area
- Sonoma County - Petaluma Area
- Sonoma County - Santa Rosa Area

The comparable industrial warehousing sites zone system is illustrated on **Figure 1**.

Figure 1: Comparable Industrial Warehousing Sites Zone System

Data Product

Fehr & Peers obtained the GPS-based origin and destination to pre-set geography data product from StreetLight for heavy-duty truck trips generated by similar industrial warehousing sites around the Bay Area.

Data Periods

Data was obtained for the Fall 2021 (September 1 through November 30) data period.

The data was stratified as described below.

- Day Type – average weekday (Tuesday to Thursday) and average weekend day (Saturday and Sunday)
- Day Part - Early AM, AM Peak Period (6 AM to 10 AM), Mid-Day, PM peak period (3 PM to 7 PM), Late-Night, and Daily 24-Hour

Premium trip metrics were also obtained for the origin-destination data, providing trip length and trip time information.

Data Analysis

The mobile device data from StreetLight was then analyzed to understand overall heavy-duty truck travel patterns at the census block group level. Trip length information was also analyzed to determine an average trip length associated with heavy-duty truck trips generated by the existing industrial warehousing sites.

Average Trip Length Data

StreetLight Data Sample Size

The data obtained from StreetLight included roughly 10,000 heavy-duty truck data samples for the Fall 2021 data period.

Warehousing Average Trip Length Data

The average trip lengths of heavy-duty truck trips generated by the 23 existing industrial warehousing sites over the daily 24-hour period on an average weekday (Tuesday to Thursday) from the Fall 2021 data period are summarized in **Table 2**.

Table 2: Heavy-Duty Truck Average Trip Lengths

Comparable Industrial Warehousing Site	Sample Size (Observed Trips)	Average Trip Length (miles)	Comparison to "All Bay Area Sites"
Biagi Brothers - Napa County	18	19.7	-66%
Valley Wine - American Canyon	80	18.7	-68%
Vin Lux - American Canyon	55	49.7	-15%
WineDirect - American Canyon	29	30.3	-48%
Napa Corporate Center Warehouses - Napa	37	38.7	-34%
American Canyon Warehouses	351	46.1	-21%

Wineshipping - Napa County	90	19.7	-66%
Napa County Warehouses	854	35.6	-39%
San Francisco County - Bayview Area	85	41.7	-28%
San Mateo County - Brisbane Area	957	28.1	-52%
San Mateo County - Prologis SFO Area	15	114.4	97%
Santa Clara County - Western Milpitas Area	10	8.8	-85%
Santa Clara County - Milpitas I-680 Area	771	54.1	-7%
Santa Clara County - San Jose Area	749	69.5	19%
Alameda County - Livermore Area	629	91.3	57%
Alameda County - Prologis Port of Oakland Area	61	76.9	32%
Alameda County - San Leandro Area	744	78.2	34%
Contra Costa County - Pittsburg Area	30	48.1	-17%

Table 2: Heavy-Duty Truck Average Trip Lengths

Comparable Industrial Warehousing Site	Sample Size (Observed Trips)	Average Trip Length (miles)	Comparison to "All Bay Area Sites"
Contra Costa County - Richmond Area	196	114.0	96%
Solano County - Benicia Area	320	63.4	9%
Solano County - Vacaville Area	219	38.4	-34%
Sonoma County - Petaluma Area	147	59.9	3%
Sonoma County - Santa Rosa Area	92	44.9	-23%
Other Bay Area Warehouses	5,025	62.0	7%
All Bay Area Warehouses	5,879	58.2	0%
West Tracy Warehouses	3,840	56.1	-4%

Note: This table provides sample size and average trip length data for the daily 24-hour period on an average weekday (Tuesday to Thursday) from the Fall 2021 data period. Green font indicates the heavy-duty truck average trip length for the site is greater than the average trip length for all 23 Bay Area warehouses combined. Red font indicates the heavy-duty truck average trip length for the site is less than the average trip length for all 23 Bay Area warehouses combined.
Source: Fehr & Peers.

As shown in **Table 2**, the average trip length of heavy-duty truck trips generated by the eight existing Napa County industrial warehousing sites in full operation during the data collection period is 35.6 miles, which is roughly 39 percent lower than the average trip length for all 23 Bay Area warehousing sites combined. Furthermore, all eight industrial warehousing sites in Napa County had an observed heavy-duty truck average trip length less than the average trip length for all 23 Bay Area warehousing sites combined. This data suggests that industrial warehousing sites constructed in Napa County are intended to serve a more local area than warehouses built in other parts of the Bay Area.

Data for similar warehousing sites in West Tracy from the San Joaquin Countywide Warehousing Data Collection effort are provided for comparison and reasonableness checking purposes.

Heavy-Duty Truck Distribution Patterns

The heavy-duty truck inbound and outbound origin-destination distribution patterns generated by the 23 existing industrial warehousing sites from the Fall 2021 data period is presented on **Figure 3** and **Figure 4**, respectively.

Figure 3: Heavy-Duty Truck Inbound Distribution Pattern

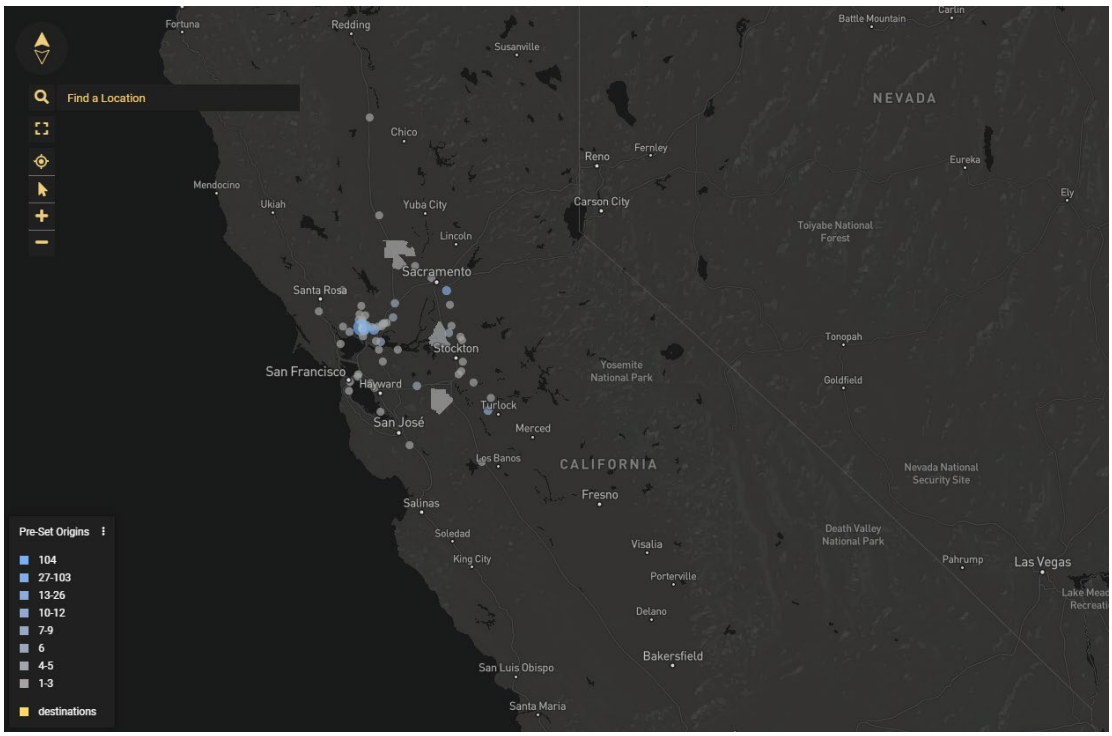

Figure 4: Heavy-Duty Truck Outbound Distribution Pattern

Key Findings

The following key data findings from the American Canyon industrial warehouse travel behavior data collection effort are suitable for use in the ongoing air quality analysis:

- The average daily trip generation per KSF of warehousing building space is 0.078 medium-duty truck trips, 0.447 heavy-duty truck trips, 0.995 auto trips, and 1.52 total vehicle trips.
- The average trip length of heavy-duty truck trips generated by the eight existing Napa County industrial warehousing sites in full operation during the data collection period is 35.6 miles.
- The average trip length of heavy-duty truck trips generated by the eight existing Napa County industrial warehousing sites is roughly 39 percent lower than the average trip length for all 23 Bay Area warehousing sites combined.

Appendix K:
Fire Fiscal Impact Analysis

THIS PAGE INTENTIONALLY LEFT BLANK

MEMORANDUM

To: Joseph Livaich, Buzz Oates Construction, Inc.

From: Jamie Gomes and Sean Fisher

Subject: American Canyon Giovannoni Logistics Center Fire Services Fiscal Analysis; EPS #222024

Date: May 6, 2022

Introduction

Buzz Oates Construction, Inc. (Applicant) retained Economic & Planning Systems, Inc. (EPS) to evaluate the fiscal impacts of the proposed Giovannoni Logistics Center Project (Project) on the American Canyon Fire Protection District (Fire District). The Project is anticipated to be an entirely non-residential development project with up to approximately 2.4 million square feet of buildings that may be constructed. This memorandum summarizes an evaluation of the estimated fiscal impacts of the Project on the Fire District.

This fiscal impact analysis (Analysis) examines the Project's estimated fiscal impact on the Fire District's annual operating budget. Specifically, the Analysis estimates whether projected revenues from the Project will adequately cover the costs of delivering fire and emergency medical services to the Project's structures, employees and visitors. As described in the Draft Environmental Impact Report (EIR) for the Project, this Analysis is based on the assumption that the Fire District will provide these services.

The technical analysis, including data, assumptions, and detailed calculations underlying the Analysis, is provided in **Appendices A** through **D**.

Project Land Uses

The Project entitlement includes the ability to construct up to 5 buildings containing up to approximately 2.4 million building square feet. **Table A-2** in **Appendix A** summarizes the Project's land use plan at buildout.

Overview of Results

As shown in **Table 1**, the Project (at buildout) is estimated to generate approximately $198,000 in annual revenues to the Fire District as compared to approximately $306,000 in new Fire District expenditures for an annual estimated deficit of $108,000. Separately, the Project is anticipated to generate approximately $2.5 million in one-time Fire Mitigation Fee revenues for new Fire District capital equipment and facilities.

Table 2 provides more detail regarding the annual revenue and expenditure estimates in this fiscal analysis. The remainder of this memorandum briefly summarizes the methodologies used to derive these annual revenue and expenditure estimates.

Methodology and Assumptions

This section briefly summarizes the underlying methodology and assumptions used to estimate the fiscal impact of the Project on the Fire District. It describes assumptions concerning estimating the cost of fire service delivery and the methodology used to forecast the Project's anticipated revenues to the Fire District.

General Assumptions

The Analysis is based on the Fire District's Budget for Fiscal Year (FY) 2021–22 and information on the Fire District's Fire Mitigation Fee and Fire Services Fee. All costs and revenues are shown in constant 2022 dollars. General fiscal and demographic assumptions are detailed in **Table A-1** in **Appendix A**. This Analysis also used information from the following sources: Project Applicant, County Assessor and Auditor-Controller, and State Department of Finance (DOF).

It is important to note that the actual fiscal impacts of new development in the Project will vary from those presented in this Analysis if development plans or other assumptions (e.g., assessed valuations, building square footages) change from those presented in this Analysis.

General Fund Revenue- and Expenditure-Estimating Assumptions

The primary focus of this Analysis considers only discretionary revenues that will be generated by the Project. Discretionary revenues to the Fire District include the Fire District's share of the ad-valorem property tax plus payment of the Fire Services Fee. Separately, this report also quantifies the total estimated fire mitigation fees payable by the Project.

Fire Mitigation Fee	$2,523,000
Total One Time Revenues	**$2,523,000**

Source: EPS.

Development Assumptions

Listed below are brief summaries of land use and other development-related assumptions:

- **Land Use:** The Project is entitled to accommodate non-residential development as described above.
- **Employee Estimates:** Using an assumed 1,000 building square foot per employee, EPS estimated the total number of employees that may work within the Project. In estimating certain annual revenues and expenditures (service demands) related to the Project, EPS developed a "persons-served" population estimate to approximate the impacts of an employee in the Project relative to a resident. EPS uses a factor of 0.5 for every employee to derive the Project's persons-served population. **Table A-3** in **Appendix A** shows the estimated persons served anticipated to be generated by the Project.
- **Project Assessed Value:** The estimated assessed valuation of the Project was provided by Project Applicant based on comparable projects. Estimated buildout assessed values for the Project are calculated in **Table D-1** in **Appendix D**.

Revenue-Estimating Methodology

As described in more detail below, EPS used a marginal-revenue case-study approach to estimate Project-related revenues. The marginal-revenue case-study approach simulates actual revenue generation resulting from new development.

Table B-1 in **Appendix B** summarizes estimated annual and one-time revenues resulting from the Project. Ongoing annual revenues include property tax and the Fire Services Fee. One-time revenues include the Fire Mitigation Fee.

Property Tax

Estimated annual property tax revenue resulting from development in the Project is presented in **Table B-2** in **Appendix B**. The Fire District appears to receive approximately 4.8 percent of the total 1-percent ad-valorem property tax that is levied on assessed value. As shown in **Table B-2**, the Project is estimated to generate annual property tax revenue to the Fire District of approximately $186,000.

Fire Service Fee

Table B-3 shows the Project's estimated annual Fire Services Fee revenues of approximately $11,800 based on the Project's building characteristics and equivalent dwelling unit (EDU) calculations (See **Table B-4**) applicable for the Fire Services Fee.

One-Time Fire Mitigation Fee Revenue

Using the Fire District's fee schedule, **Table B-5** calculates the estimated Project's Fire Mitigation Fee payments of approximately $2.5 million.

Expenditure-Estimating Methodology

Average-Cost Expenditures

Expenditure estimates are based on the City's FY 2021-22 budget and EPS's estimates of persons served within the Project – as described earlier. This Analysis estimates expenditure impacts of the Project using an average-cost approach, which uses the City's FY 2021-22 budgeted expenditures on a Fire District-wide basis and calculates an average cost per-persons-served basis to forecast expenditures required to serve new development.

Table C-1 in **Appendix C** shows the two Fire District expenditure categories for which the average-cost method was used – General Operations Fund and Fleet, Facilities, and Equipment Capital Fund.

General Operations Fund

Table C-1 shows the FY 21-22 General Operations fund budget by category of expenditure and EPS's calculation of the average cost per-person-served. As depicted on **Table C-1**, the Analysis incorporates one adjustment to the average-cost approach specifically as it relates to Personnel costs. An adjustment factor of 70% was used for Personnel costs reflecting the fact that certain Fire District personnel costs (e.g., chief, assistant chief, administrative, etc.) are generally fixed and will not incrementally increase as a result of the Project. The adjustment factor in **Table C-1** accounts for the estimated fixed portion of personnel costs. Based on the information in **Table C-1** and on the estimated persons-served in the Project, **Table C-2** calculates the estimated annual expenditures required to serve the Project at buildout is provided in **Table C-2**.

Fleet, Facilities and Equipment Capital Fund

In addition to the General Operations Fund, this Analysis also considers the Fleet, Facilities and Equipment Capital Fund. This fund was included in the Analysis to be comprehensive noting that in the past the Fire District has elected to use a portion of its discretionary revenue to make periodic contributions to fleet, facilities, and equipment (i.e., capital items). With a project of this size and scale that will pay approximately $2.5 million in Fire Mitigation Fees to the Fire District, there may be discussions between the Applicant and Fire District whether the need to include this component in the Analysis is warranted or duplicative. As noted elsewhere in this Analysis, the Fire Mitigation Fee already includes a $0.50 per building square foot fee addition accounting for the size (height) of proposed buildings.

Technical Appendices

The technical calculations used in this Analysis are shown in **Appendices A** through **D** (**Tables A-1** through **D-3**):

- **Appendix A** indicates the proposed land uses and general assumptions used in this Analysis.
- **Appendix B** identifies the projected revenues that will be generated by the Project for the Fire Districts funds.
- **Appendix C** details the estimated expenditures for the Fire District to provide services to the Project.
- **Appendix D** shows the projected assessed value of the Project, which serves as the basis for calculating property tax revenues.

[1] An adjustment factor may be used to reflect the fact that new persons served may not increase certain expenditures at a 1:1 ratio. This analysis assumes an adjustment factor for personnel expenditures as costs pertaining to certain positions, such as the Fire Chief and Assistant Chief are fixed and would not grow with additional development within the District.
[2] Expenditure category not anticipated to be impacted by Project development.
[3] Specific for capital expenditures required due to Project development are not known at this time. As such, en estimate of facilities and equipment spending are estimates using a per persons served methodology based on the long term average cost for each category. Refer to Table C-3 for details.

BUZZ OATES

July 13, 2022

Mr. Geoff Belyea
Chief, American Canyon Fire Protection District
911 Donaldson Way East
American Canyon, CA 94503

Subject: Giovannoni Logistics Center (Project)

Applicant: Buzz Oates Construction, Inc. (Applicant)

Project Description: The Project is anticipated to be an entirely non-residential development project with up to approximately 2.4 million square feet of high-cube warehouse building space. The project contains a 68.8-acre Phase 1, creation of a 44.8-acre open space preserve, and a 85.9-acre Phase 2.

Issue: Estimated Annual Fiscal Impacts to the American Canyon Fire Protection District (Fire District) and costs of One-Time Fire Mitigation Fee.

Fiscal Impact Analysis: Economic & Planning Systems, Inc. (EPS) conducted a fiscal impact analysis of the Project forecasting estimated general operations fund revenues would accrue to the Fire District from the Project as compared to the Fire District's annual operating costs to serve the Project. In working with the Fire District's staff and financial consultant, the fiscal impact analysis projected the following annual operating deficit to the Fire District, prior to any fiscal mitigation.

Table 1: Estimated Annual Fiscal Impacts (2022 $)

Item	Estimated Revenues/Expenditures (Rounded)
Annual Fiscal Impact	
Annual Revenues	$198,000
Annual Expenditures	$356,000
Net Annual Surplus/(Deficit)	**($158,000)**

One-Time Fire Mitigation Fee Calculation: The table below shows the estimated one-time Fire District mitigation fee that could be applicable to the Project.

Table 2: One Time Fire Mitigation Fee (2022 $)

Item	Assumption/ Source	Building Square Footage	Fire Mitigation Fee Revenues (2022$)
Fire Mitigation Fee per Square Foot [1]	$1.0512		
Logistics Center Land Uses	Table A-2		
Building A		600,243	$630,975
Building B		469,512	$493,551
Building C		715,489	$752,122
Building D		292,480	$307,455
Building E		322,240	$338,739
Total Logistics Center		**2,399,964**	**$2,522,842**

Source: American Canyon Fire Protection District; Buzz Oates; EPS.

[1] The fire mitigation fee is a one-time service fee charged by the American Canyon Fire Protection District.

Proposal: For the benefit of the Fire District, the Applicant proposes to form a Mello-Roos Community Facilities District (CFD) or other similar public financing instrument for public safety services funding. The initial annual maximum special tax would be set equal to the estimated $158,000 in annual fiscal deficit (at project buildout), and would subject to annual escalation (as noted below). In consideration for this offer, Applicant proposes the Fire District exempt Applicant from the One-Time Fire Mitigation Fee.

Mello-Roos CFD Details: The CFD must be formed on full legal parcels and would include all legal parcels that are a part of the Project. Only developable land shall be subject to the tax with any publicly owned land or land that remains in open space, environmental mitigation or public use not being subject to the annual special tax. Project APNs currently include: 057-090-008, 057-130-034, and 057-130-036.

The initial annual special tax will be based on a maximum annual cost of $158,000 (in 2022 $) that would be apportioned to the estimated developable area within the CFD. The annual special tax is proposed to include an annual escalator equal to the consumer price index for all urban consumers (CPI – U) for San Francisco-Oakland-Hayward, subject to a maximum of 3 percent per year.

BUZZ OATES

As described below, only developed property would be subject to the annual special tax. Developed property will be defined in the CFD Rate and Method of Apportionment of Special Tax (RMA) to mean any parcel with a structure for which a building permit has been issued. Developed Property will be taxed at the maximum annual special tax rate once it becomes a Developed Property (i.e., after a building permit has been issued). Since undeveloped land places little demands on fire and emergency medical services, undeveloped property will not be subject to the maximum special tax. The CFD is not proposed to include a termination date and may be collected by the Fire District in perpetuity.

For example, the 38.8 acre Building A parcel would be subject to an annual tax special tax of $39,297.41.

($158,000 / 156 developable acres = $1,012.82 / acre * 38.8 Building A parcel = $39,297.41 annual tax)

The Giovannoni Logistics Center is the second project for the developer in the City of American Canyon, with the first being the 120,080 square foot warehouse at 100 Jim Oswalt Way.

We look forward to working with the Fire Protection District and City on this endeavor to create further lasting community benefits.

All the best,

Joe Livaich
Vice President, Planning & Preconstruction Services
Buzz Oates Construction, Inc.

Memo

Subject: Wildlife Hazard Assessment for the Giovannoni Logistics Center Property

Dear Mr. Livaich,

This memorandum describes the methods and results of the wildlife hazards assessment that was conducted for the Giovannoni Logistics Center (project), in the City of American Canyon, California (Figure 1). The 208-acre project site is semi-rectangular in shape, and is bounded by industrial development in the Green Island Business Park (west), the Napa Logistics Project and Devlin Road (north), the Napa Branch Line (east), and Green Island Road, a stone supply business, and a wine distribution warehouse (south). The airfield of the Napa County Airport is located less than one mile north of the project site.

The proposed project would develop a 2.4 million square foot logistics center on approximately 161 acres of the project site (Figure 2). The remaining 47 acres would be preserved as open space. In conjunction with the proposed project, the City of American Canyon would extend Devlin Road through the project site.

Phase 1 is comprised of the 94.7 acre-area east of the Devlin Road extension. This area will support two warehouse buildings totaling 1,069,904 square feet. A total of 0.496 acres of palustrine emergent wetlands will be permanently filled in Phase 1. As such, 0.992 acres of wetlands (a 2:1 ratio) will be established in the Proposed Wetland Preserve area in the northern portion of the project site. Phase 2, the 113.1-acre area west of Devlin Road, is conceptually proposed for the remaining 1.3 million square feet of high cube warehouse. Phase 2 would commence once Phase 1 is completed. If constructed, Phase 2 would impact approximately 3.7 acres of wetlands, which would be mitigated at a 1:1 ratio. The wetlands created within the 44.8 acre Proposed Wetland Preserve as part of project mitigation would total approximately 4.7 acres (*Biological Resources Report for Giovannoni Logistics Center*, Huffman-Broadway Group, May 28, 2021; Figures 3 and 4).

Policy 3.3.5 of the Airport Land Use Compatibility Plan (ALUCP) for the Napa County Airport and Parrett Field provides as follows:

> Land uses which may produce hazards to aircraft in flight shall not be permitted within any airport' s planning area. Specific characteristics to be avoided include: (1) glare or distracting lights which could be mistaken for airport lights; (2) sources of dust, steam, or smoke which may impair pilot visibility; (3) sources of electrical interference with aircraft communications or navigation; and (4) any use which may attract large flocks of birds, especially landfills and certain agricultural uses.

The Draft EIR for the Giovannoni Logistics Center includes Mitigation Measure LU-3, which is intended to ensure compliance with ALUCP Policy 3.3.5. That mitigation measure reads as follows:

> Prior to issuance of grading permits, the applicant shall retain a qualified Biologist to assess potential wildlife hazards to aviation. The assessment shall evaluate the characteristics of the emergent wetlands, drainages, other potential wildlife attractant features (i.e., ponded water) located within the open space area and identify management practices (e.g., storm drainage, vegetation, etc.) to prevent the creation of attractants for large flocks or birds or other wildlife species that may present safety hazards to aviation activities. As part of the assessment, the applicant shall consult with Napa County Airport and Napa County Airport Land Use Commission (ALUC) representatives, as appropriate, regarding findings and recommendations. The applicant shall submit a report to the City of American Canyon prepared by a qualified Biologist that confirms the wildlife hazard assessment' s findings and recommendations are incorporated into the design of the open space preserve.

This memorandum is intended to satisfy the requirement from Mitigation Measure LU-3 for the preparation of a wildlife hazard assessment for the project. The memorandum specifically addresses whether, and to what extent, the proposed land uses, including the wetland preserve component, could attract large flocks of birds or other wildlife species that may present safety hazards to the Napa County Airport.

Methods

A desktop review of project background documents, aerial imagery, and wildlife occurrence databases including the California Department of Fish and Wildlife's Natural Diversity Database (CNDDB) was conducted on September 22, 2022 to identify habitats and species with potential to occur within the survey area. The survey area encompassed the 208-acre parcel and an additional 250-foot buffer extending beyond the parcel boundaries. A pedestrian reconnaissance-level survey was conducted on September 22, 2022 by AECOM biologist Ranie Shreckengost. Hand-written notes, binoculars, and the ArcGIS Field Maps application were used to navigate the site, record observations, and document habitat types/quality and site conditions.

Results

The project site is surrounded by urban development in the City of American Canyon to the north, east, and south, with an adjacent, undeveloped, grassland-dominant parcel bordering Devlin Road immediately west of the project site. The vegetation is dominated by non-native annual grasses. Evidence of vegetation management and stormwater management channels was observed along Devlin Road which divides the property into eastern and western halves. A dry, ephemeral drainage channel was observed within the northern portion of the property and appeared to flow from east to west. This feature flows underneath Devlin Road via a stormwater management channel and shallow bridge. Small, intermittent, seasonal wetland features and hydrology was observed in the form of drainage patterns, microtopographic relief, and hydrophytic vegetation concentrated along the northern portion of the property. These features are primarily located within the extents of the Proposed Wetland Preserve area shown in Figure 2.

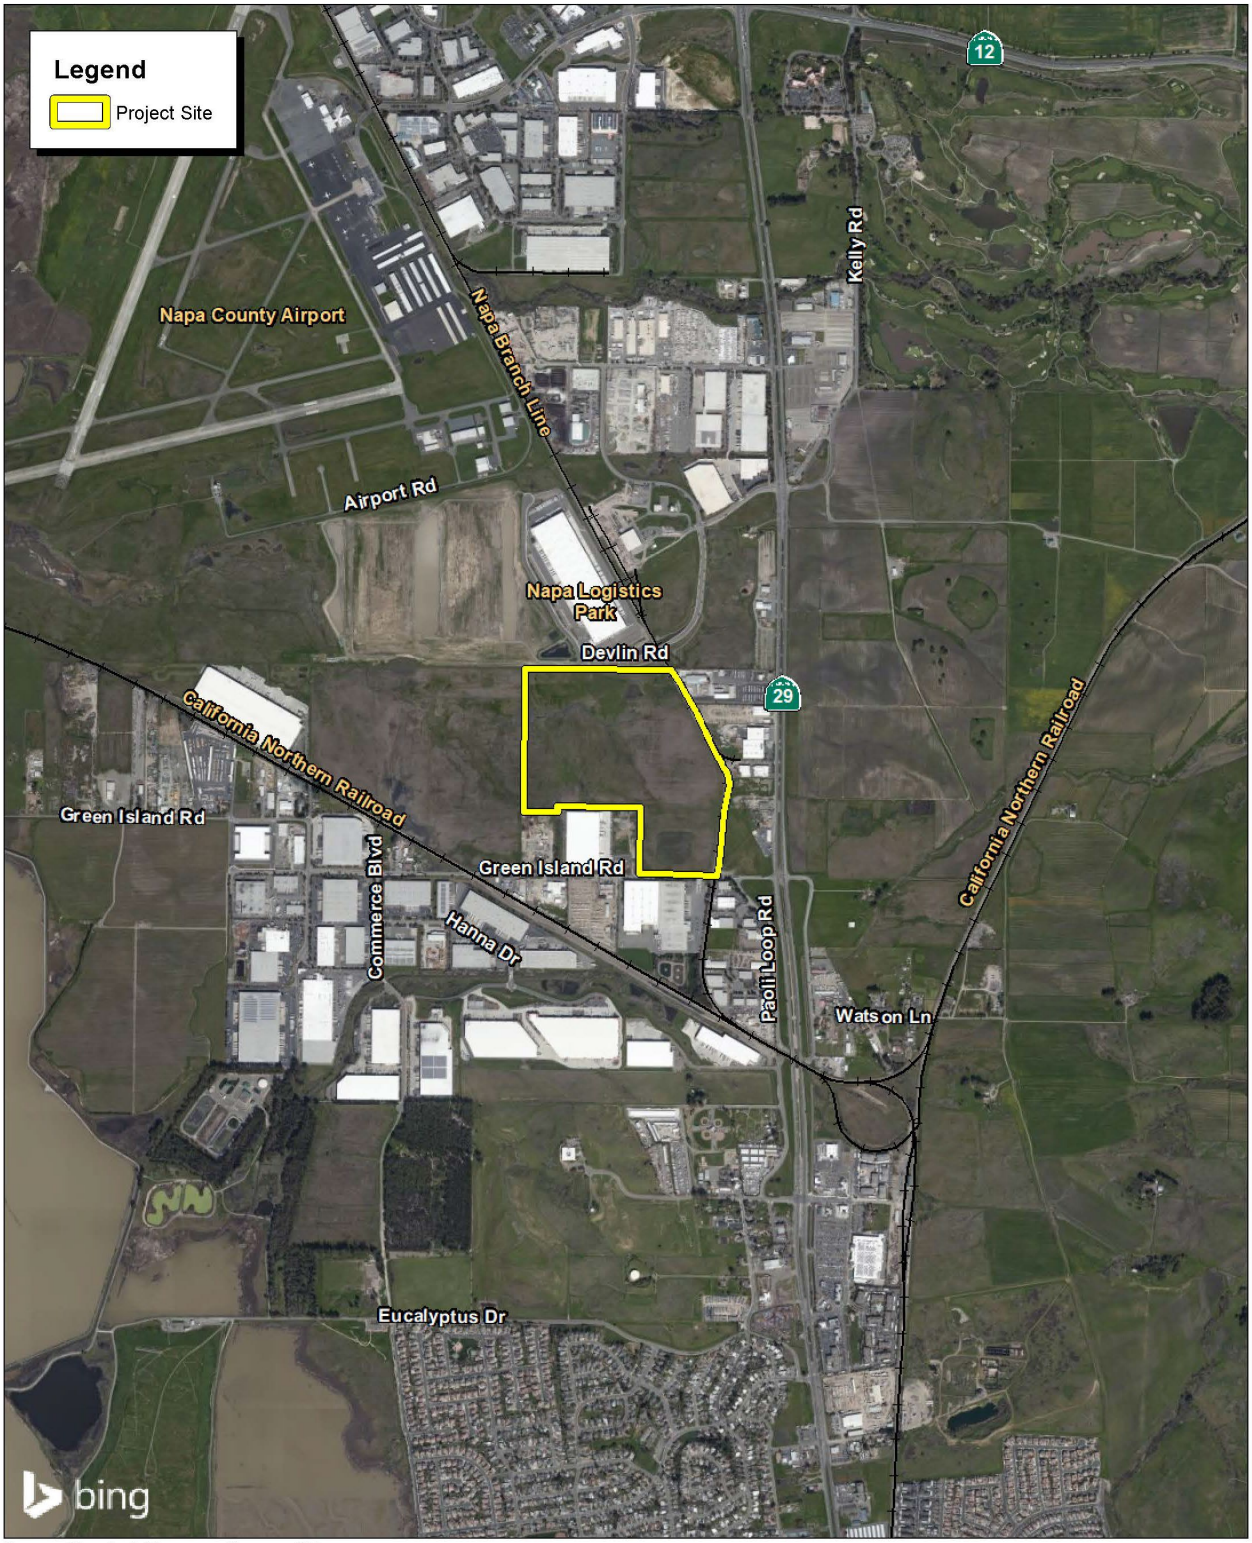
A large, square, elevated earthen mound was observed in the southeastern portion of the property at the approximate location of Proposed Building A (Phase 1) within the proposed project site (Figure 2). The vegetation growing upon and around this mound appeared to be mostly ruderal. Tarps were observed on the ground covering portions of the mound.

A single Cooper's hawk (*Accipiter cooperii*) was observed during the survey. Cooper's hawk is a CDFW Watch List species, and like most nesting birds and raptors, their nests are protected by the Migratory Bird Treaty Act of 1918. No special-status species were observed during the survey. No active or historic bird nests were observed. Wildlife and vegetation species observed during the field survey are listed below in **Table 1**.

A map depicting the location of the proposed development site is included as **Figure 1**, and the site plan, wetland impacts, and proposed wetland mitigation areas are shown in **Figures 2, 3, and 4**. Representative site photographs are provided in **Attachment A**.

Table 1. Plant and wildlife species observed during the September 22, 2022 reconnaissance survey.

Scientific Name	Common Name
Amphibians and Reptiles	
Sceloporus occidentalis	Western fence lizard
Birds	
Zenaida macroura	Mourning dove
Charadrius vociferus	Killdeer
Cathartes aura	Turkey vulture
Haemorhous mexicanus	House finch
Accipiter cooperii	Cooper's hawk
Tyrannus verticalis	Western kingbird
Corvus brachyrhynchos	American crow (12 individuals)
Mammals	
Lepus californicus	Black-tailed jackrabbit
Canis latrans	Coyote
Plants	
Taeniatherum caput-medusae	Medusa-head grass
Centaurea solstitialis	Yellow star-thistle
Poa sp.	Annual grasses
Avena barbata	California wild oat
Baccharis pilularis	Coyote brush
Helminthotheca echioides	Bristly oxtongue
Hemizonia congesta	Hayfield tarweed
Polypogon monspeliensis	Rabbitfoot grass
Rubus armeniacus	Himalayan blackberry
Nigella arvensis	Wild fennel



Discussion

The buildings associated with the project development site are not expected to result in a significant attraction of birds or other wildlife to the property. Some vegetation will be removed and replaced with buildings, resulting in the reduction of existing non-native grassland habitat within the development site. Anticipated changes to the existing wildlife habitat associated with the proposed construction activities include grading, excavation, permanent development, storm water controls, lighting, irrigation, noise, and increased human presence.

The development of Phase 1 and Phase 2 features is unlikely to result in an increase in wildlife activity due to the disturbances caused by the lighting, human presence, and noise associated with the new development site, in addition to the existing baseline noise and activity from nearby vehicular traffic and the Napa County Airport air and vehicular traffic. Natural or man-made features that could attract wildlife to the property post-construction include the proposed stormwater retention basins; however, the stormwater retention basins are unlikely to result in significant additional wildlife attraction because the systems are designed for quick drainage, and because the basins will be surrounded by development.

A majority of the wetland impacts will be mitigated at a 1:1 ratio, with only 0.496 acres of net gain in palustrine emergent wetlands across the site. The impacted wetlands are located within a contiguous grassland landscape and are, on average, no more than 1,500 feet south of the Proposed Wetland Preserve, where mitigation wetlands would be created among approximately 45 acres of existing wetlands. The creation of wetlands associated with the project is not expected to cause an overall increase in the current level of bird or other wildlife activity at the project site, because a majority of the wetlands being filled within the parcel would be replaced at a 1:1 ratio and would be located among existing wetland features that dominate the northern portion of the project site.

In summary, the construction and development associated with the Giovannoni Logistics Center would not cause an increase above the existing level of activity of birds or other wildlife. Therefore, the project land uses would not present a hazard to Napa County Airport flight operations. It is predicted that the overall wildlife activity on the property would remain at or below current levels, based on our understanding of the planned development and our best professional assessment of the existing habitat.

SECTION 1: INTRODUCTION

On October 31, 2022, the City of American Canyon (City) released a document described as the (proposed) Final Environmental Impact Report (Final EIR) for the Giovannoni Logistics Center Project (proposed project). In issuing this document, City staff intended that, upon certification by the American Canyon City Council, the document would become the official Final EIR for the proposed project.

On November 17, 2022, the American Canyon Planning Commission considered the project entitlements and recommended approval of all items (including certification of the Final EIR) to the American Canyon City Council. Following the Planning Commission meeting; however, the City was made aware of public noticing issues associated with the Draft Environmental Impact Report (Draft EIR), which was released for public review on May 20, 2022. In particular, a representative of the Center for Biological Diversity (CBD) claimed that CBD had submitted to City staff a request for notice of the availability of the Draft EIR at the time it was released for public review but had not received any such notice prior to, or at the time of, the May 20, 2022, release of the document. Out of an abundance of caution, the City agreed to delay action by the City Council on the project and EIR until such time as CBD had been given a full 45-day period in which to comment on the Draft EIR, consistent with the statutory time periods for such comments set forth in Public Resources Code Section 21091, subdivision (a). Because no other person or entity claimed a similar lack of adequate notice on the Draft EIR, the City did not grant any other persons or entities a similar 45-day period in which to provide official comments on the Draft EIR. Even so, prior to and during the period in which potential action on the proposed project by the City Council was delayed in order to accommodate CBD, several government agencies and private organizations submitted to the City new or additional comments on the proposed project, mainly focusing on the original (proposed) Final EIR issued on October 31, 2022. Those comments are addressed herein, although such written responses are not required by the California Environmental Quality Act (CEQA).

In accordance with CEQA Guidelines Section 15088, the City of American Canyon (Lead Agency) has evaluated the comments received on the Giovannoni Logistics Center Project Draft Environmental Impact Report (EIR), including the comments submitted by CBD on January 13, 2023. Pursuant to CEQA Guidelines Section 15132, this Final EIR includes all of the following: a list of persons, organizations, and agencies that provided comments on the Draft EIR; responses to the first set of comments received regarding the Draft EIR; responses to comments on the Draft EIR submitted by CBD on January 13, 2023; responses to certain additional correspondence on the Final EIR received by the City in November and December 2022; errata, or revisions to the Draft EIR; and a Mitigation Monitoring and Reporting Program (MMRP) for use by the City of American Canyon during its review. The document issued on October 31, 2022, and characterized as the Final EIR in fact, in turn out, was only a portion of the eventual Final EIR, which now includes this Volume 2 of the Final EIR (February 3, 2023).

This new volume of the Final EIR is organized into four sections:

- **Section 1–Introduction.** Provides an introduction to the Final EIR Volume 2.

- **Section 2–Master Responses.** Provides a single, comprehensive response to similar comments about a particular topic. Where noted, the Master Responses contained in Final EIR Volume 2 supersede those in Final EIR Volume 1.
- **Section 3–Responses to Written Comments.** Provides a list of the individuals, agencies, and organizations that commented during the second Draft EIR review period. Copies of all of the letters received regarding the Draft EIR and responses to all significant environmental issues in those letters are also included in this section.
- **Section 4–Errata.** Includes an addendum listing refinements and clarifications on the Draft EIR, which have been incorporated. Where noted, the refinements and clarifications contained in Final EIR Volume 2 supersede those in Final EIR Volume 1.
- **Appendices**. Includes appendices that are cited as supporting evidence in Sections 2 and 3, as well as an updated Water Supply Assessment (WSA) for the Project (dated December 6, 2023) (Appendix Q.1) and a related technical memorandum prepared by Balance Hydrologics (dated February 7, 2023) (Appendix Q.2), concluding that the conclusions of the updated WSA are unchanged notwithstanding (i) the American Canyon City Council's adoption on September 6, 2022 (via Resolution 2022-84) of an amendment to the City's 2015 Urban Water Management Plan (UWMP) and (ii) the City's release on January 18, 2023, of its Final 2020 UWMP.

The Final EIR includes the following contents:

- Draft EIR (provided under separate cover)
- Draft EIR Appendices (provided under separate cover)
- Final EIR Volume 1 (provided under separate cover)
- Final EIR Volume 1 Appendices (provided under separate cover)
- Final EIR Volume 2 (contained herein)
- Final EIR Volume 2 Appendices (contained herein)
- Mitigation Monitoring and Reporting Program (provided under separate cover)

SECTION 2: MASTER RESPONSES

Master responses address similar comments made by multiple public agencies or organizations through written comments submitted to the City of American Canyon. Master responses are provided in the order in which they are referenced in the responses in Section 3. Where noted, Master Responses in this Final EIR Volume 2 supersede those contained Final EIR Volume 1

2.1 - List of Master Responses

- Master Response A—Swainson's Hawk and Other Raptors
- Master Response B—Utility Lines and Access Road
- Master Response C—Wetlands
- Master Response D—Vehicle Miles Traveled

2.2 - Master Responses

Master Response A—Swainson's Hawk and Other Raptors

Note to Reader: Master Response A supersedes Master Response 1 in Final EIR Volume 1.

Summary of Relevant Comments

Letters from Napa/Solano Residents for Responsible Development (Napa/Solano Residents), the California Department of Fish and Wildlife (CDFW), Friends of the Swainson's Hawk (Friends), Raptors are the Solution (RATS), Napa Solano Audubon Society (NSAC), and the Center For Biological Diversity (CBD) all express similar general concerns about the loss of Swainson's hawk foraging habitat and contend that mitigation is required for the loss of this habitat, which the commenters argue constitutes a significant environmental effect.

In letters dated December 2, 2022, and January 9, 2022, respectively, both CDFW and Friends express general concern about the loss of Swainson's hawk foraging habitat resulting from the project and argue that the California Environmental Quality Act (CEQA) requires the City to impose mitigation for the loss of this habitat. The CDFW letter specifically argues that the Draft EIR should have concluded that the loss of Swainson's hawk is cumulatively considerable, and that the City should have imposed mitigation for habitat loss at a ratio of 1:1.

In support of this suggestion, CDFW cites an April 2016 document entitled, *Five Year Status Review for Swainson's Hawk (Buteo swainsoni)* (Five Year Review). Based on that document, CDFW states that "there is no indication the species has reoccupied its historical range and the distribution of Swainson's hawk remains largely unchanged and restricted. Additionally, the review cites the primary threat to Swainson's hawk continues to be habitat loss, especially the loss of suitable foraging habitat." The CDFW letter does acknowledge a more recent study (Furnas et al. 2022) that "indicates that Swainson's hawk populations have been increasing," but notes that the same study "also cautioned using this data to inform conservation planning, stating this apparent stability remains largely unclear" and expressed "concerns regarding impacts to Swainson's hawk from urban

development, reduction in grasslands, and orchard and vineyard cultivation, all of which are prominent impacts in Napa County, where the project is proposed."

The Friends letter largely argues that the City is bound by the opinions and recommendations of the CDFW, expressed in its letter dated December 2, 2022. The Friends letter suggests that, as a legal matter, any net loss of habitat should be considered significant. The Friends letter also references the Five Year Review prepared by the CDFW. In addition, the Napa/Solano Residents and CBD letters provided comments about loss of foraging habitat for the golden eagle and northern harrier.

Response

The Draft EIR and Final EIR Volume 1 made the following key findings regarding the Swainson's hawk:

- The Swainson's hawk is classified as a California Threatened Species under the California Endangered Species Act (CESA); it is not a federally listed species. Thus, CDFW is the only State or federal resource agency with legal jurisdiction over the species. This jurisdiction arises under CESA (California Fish and Game Code [FGC] § 2050 *et seq*.), which prohibits the "take" of the species except as authorized through, among other mechanisms, the issuance of incidental take permits under Fish and Game Code Section 2081.
- Most of the information about the status of the Swainson's hawk originated from CDFW and often has been sporadic. For example, CESA requires 5-year reviews about the status of listed species. This obligation is not always satisfied on a timely basis, however. As explained in the opening paragraph of its 2016 5-Year Review, CDFW's last review for the Swainson's hawk was published in 1993. This substantial lapse of time (over 22 years) between the two reports suggests that the 2016 5-Year Review may have been overly reliant on outdated information.
- Swainson's hawk were observed foraging over the project site during reconnaissance surveys conducted by Helm Biological Consulting (HBC) in April and May of 2021. However, no Swainson's hawk have been observed nesting on the project site. Nor are there any documented nests in the immediate vicinity of the project site. The nearest known Swainson's Hawk nest site recorded in the California Natural Diversity Base (CNDB) is approximately 1.2 miles north of the project site, though one of the commenters (Scott Cashen, in a letter attached to the Napa/Solano Residents letter) states that a nest was observed at a location 0.8 mile from the project site in May of 2021. The project site provides suitable foraging habitat for the Swainson's hawk but does not provide suitable nesting habitat because there are no trees. According to the CDFW's Life History Account for the Swainson's Hawk, this species can forage in riparian habitat, sparsely vegetated flat lands, open desert, grassland, or cropland containing scattered large trees or small groves. In the project vicinity, all of these habitat types exist with the exception of open desert. The proposed project would provide an approximately 45-acre on-site Wetland Preserve, which would also be suitable for Swainson's hawk foraging. When this on-site preserve is combined with the nearby 37-acre Napa Logistics Wetland Preserve, the 308-acre American Canyon California red-legged frog preserve, the 620-acre Newell Open Space preserve, and the 1,039-acre Lynch Canyon Open Space Preserve, there are more than 2,000 acres of permanently preserved acreage suitable for Swainson's hawk foraging in southern Napa County. HBG also conducted an analysis in the Final EIR and found that there is an additional approximately 339 acres of potential foraging

habitat within privately-owned farmland within just 0.5 mile of the project site. Furthermore, as shown in Exhibit A (a graphic showing Important Bird Areas), the eastern portion of the approximately 78,000-acre San Pablo Bay Wetlands Important Bird Area designated by National Audubon Society is located just to the west of the project site. In addition, the larger area in which the project site is located contains many additional areas suitable as Swainson's hawk foraging areas and many other privately-owned and vacant parcels between the project site and the City of Napa containing several known nesting territories. Thus, the overall area includes abundant foraging habitat and nesting habitat.

It is not accurate, as some commenters have suggested, that the on-site Wetlands Preserve will have little or no value as foraging habitat. As pointed out in the Draft EIR, suitable foraging areas for Swainson's hawk include grasslands, pastures, alfalfa and other hay crops, and certain grain and row croplands. While Swainson's hawk will generally avoid permanently-inundated emergent wetlands as foraging areas, many extensive foraging habitats for Swainson's hawk throughout the Central Valley are in vernal pool landscapes that offer a mix of both upland grasslands and seasonal wetlands. Thus, not only do Swainson's hawk commonly forage in vernal pool landscapes, but they currently forage over the site of the proposed project, which is a combination of grasslands and seasonal wetlands. The value of the Wetland Preserve (with upland grasslands along with both pre-existing and created seasonal wetlands) as a raptor foraging habitat would be nearly equivalent to that of the project site. In addition, it should be pointed out that the wetlands that currently exist on the project site and that either exist or are to be created within the Wetland Preserve are seasonal wetlands that are or will be filled with water during the winter months (given sufficient rainfall), dry out in the spring, and remain dry throughout the summer. Swainson's hawk seldom winters in California and would only be expected to occur in the project area during the spring and summer months when seasonal wetlands are dry and would provide optimal conditions for foraging.

- As chronicled in a May 2022 article ("Rapid Growth of the Swainson's Hawk Population in California Since 2005") authored by multiple CDFW Biologists, the Swainson's hawk has made a remarkable recovery in California during the past 40 years, going from an estimated 375 breeding pairs in the early 1980s to close to 19,000 breeding pairs in 2018.

This last point was supported by the post-2016 study mentioned in the CDFW letter, namely, *Rapid growth of the Swainson's Hawk population in California since 2005*, published in 2022 by three CDFW Biologists (Brett Furnas, Erin Nicole Tennant, and David H. Wright) and their colleague Biologist Carrie Battistone. The City considers the 2022 article to be more authoritative than the 2016 5-Year Review because the 2022 article is both more recent and more comprehensive. Based, in part, on the fact that three of the four authors of the 2022 article are CDFW Biologists, the City finds their conclusions to be credible and persuasive. The authors of the 2022 article summarized their conclusions as follows in the Abstract portion of the document:

> *By 1979 Swainson's Hawks (Buteo swainsoni) had declined to as low as 375 breeding pairs throughout their summer range in California. Shortly thereafter the species was listed as threatened in the state*. To evaluate the hawk's population trend since then,

> we analyzed data from 1,038 locations surveyed throughout California in either 2005, 2006, 2016, or 2018. *We estimated a total statewide population of 18,810 breeding pairs (95% CI: 11,353–37,228) in 2018*, and found that alfalfa (Medicago sativa, lucerne) cultivation, agricultural crop diversity, and the occurrence of non-agricultural trees for nesting were positively associated with hawk density. We also concluded that *California's Swainson's Hawk summering population grew rapidly between 2005 and 2018 at a rate of 13.9% per year* (95% CI: 7.8–19.2%). *Despite strong evidence that the species has rebounded overall in California*, Swainson's Hawks remain largely extirpated from Southern California where they were historically common. Further, we note that the increase in Swainson's Hawks has been coincident with expanded orchard and vineyard cultivation which is not considered suitable for nesting. Therefore, we recommend more frequent, improved surveys to monitor the stability of the species' potential recovery and to better understand the causes. *Our results are consistent with increasing raptor populations in North America and Europe that contrast with overall global declines especially in the tropics*. (Italics added.)

As this quotation reveals, although the 2022 article does express the caveat that more frequent and better surveys are needed to monitor the population, the overall conclusion of the report is that the Swainson's hawk population is rebounding from the very low levels that existed in 1983, when the species was listed as threatened under CESA, even though the species has not reoccupied its former habitat in many parts of the State.

The Central Valley is the current primary habitat of the species, where populations are doing far better than before despite the land use changes occurring since 1979. At one point, the study states that "hawk populations have increased . . . dramatically in the Central Valley."

The 2022 article notes that, although "[h]abitat loss from urban encroachment (e.g., residential, industrial) and certain forms of agriculture were probable causes of the species' decline in some areas of California," other possible or likely factors for very low numbers in late 1970s and early 1980s were (i) the lingering effects of the pesticide DDT, which adversely affected egg shells of many bird species, (ii) insecticide poisoning in Argentina, and (iii) "agricultural intensification" outside of California "on both summer and winter grounds (e.g., Colorado and Argentina), including removal of nesting and roosting trees and destruction of riparian habitats[.]" Because the 2022 article identifies several factors, the article does *not* appear to support the contention in the December 2, 2022, CDFW letter that "the primary threat to Swainson's hawk continues to be habitat loss, especially the loss of suitable foraging habitat."

The authors of the 2022 article explain that the rebounding numbers in California are consistent with similar trends for osprey and bald eagles in parts of North America after the banning of DDT:

> We found strong evidence of rapid population growth of Swainson's Hawks in California between 2005 and 2018. Our results (e.g., 95% CI: 8–19% per year) are comparable to rapid growth rates documented for Osprey (*Pandion haliaetus*) in Chesapeake Bay (8.1%, 95% CI: 4.1–12.2, 1973–1995, Watts and Paxton 2007) and

> for Bald Eagle (*Haliaeetus leucocephalus*) in Chesapeake Bay (9.6%, 95% CI: 8.9–10.3, 1977–2001, Watts et al. 2008) and in Central California (14.2%, 95% CI: 12.5–15.9, 1993–2012, Sorenson et al. 2017) after the banning of DDT. Our estimated growth rate, however, was larger than an independent estimation of the rate of annual increase (6.6%, 95% CI: 4.9–8.4) from the Northern American Breeding Bird Survey (BBS) in California for the same timespan (https://www.mbr-pwrc.usgs.gov/bbs/trend/tf19.shtml, Link and Sauer 2002). Comparison of the BBS results among regions shows that the population growth in California has been much faster than throughout the species entire breeding range in North America (1.2% per year, 95% CI: 0.9–1.5). This difference is consistent with recovery from a historical decline that was more severe in California than elsewhere (White 1994; Sarasola et al. 2008).

The authors identified a number of factors that could help to explain the species' improved fortunes in California in recent years:

> It is not certain why Swainson's Hawks have rebounded in California and whether the species will increase further. Progress with riparian restoration efforts in the Central Valley may be one reason, as these riparian restorations have been associated with increased populations of other avian species (Dybala et al. 2018; Pandolfino and Handel 2018). Our finding that abundance was correlated with agricultural crop diversity and alfalfa cultivation may indicate that Swainson's Hawks have successfully adjusted to the use of managed landscapes which might have an artificially elevated carrying capacity. The diversity and spatiotemporal patterning of California agriculture may provide Swainson's Hawk greater access to rodent prey in areas of lower vegetation cover (Bechard 1982). Irrigated alfalfa fields are an important foraging resource to Swainson's Hawks, because this crop supports high small mammal and insect abundances which become easy prey during periodic harvests (Smallwood 1995). Although the total area of alfalfa cultivation in California has remained relatively constant since 1980, crop yields have increased over the same time period in response to the growing needs of the state's dairy industry (Putnam et al. 2007).
>
> Winter range conditions may be equally important to the conservation and sustained recovery of Swainson's Hawks in California. The population summering in California that uses the Central Valley is genetically distinct from hawks summering throughout other parts of North America (Hull et al. 2008). This may partially be the result of different migratory pathways (Airola et al. 2019). The California population appears to display a lot of variation in where it winters (Sarasola et al. 2008), including more northerly locations in Western Mexico and Central America where they may have benefited from conversion of less suitable natural areas (e.g., woodland and desert) to agriculture that provides improved habitat conditions (Airola et al. 2019). A shorter migratory pathway may also afford demographic advantages including increased survival during transit and a longer, more-flexible reproductive phenology (Heath et al. 2012; Klaassen et al. 2014).

> In contrast to the historical population decline in parts of western North America, several studies suggest that the Swainson's Hawk population in California may now be rebounding in some places. Gifford et al. (2012) showed an increase in population size for portions of the Central Valley, where most of the Swainson's Hawks occur, during 2003–2009. The Butte Valley population in northeastern California has increased 4-fold over the past 40 years (Kane et al. 2020).

The authors give credit to conservations actions and the banning of DDT in areas outside of California and the United States:

> [T]here is also increasing evidence that species in North America and Europe have rebounded in response to conservation actions including habitat restoration and the banning of DDT (Deinet et al. 2013; Rosenberg et al. 2019). This suggests that conservation efforts in other regions of the world have a similar potential to reverse the global decline of raptors.

Despite the environmental good news laid out in the 2022 article, the City agrees with CDFW's statement in its December 2, 2022, letter that the study does include some caveats and cautions, which the City takes seriously:

> Despite an overall increasing summer range population of the Swainson's Hawks in California, we recommend caution with respect to conservation planning for the species in the state. The stability of the recovery remains unclear. For example, increasing population trends of the species in other areas of North America have switched direction over time in some places (Kirk and Hyslop 1998; Hoffman and Smith 2003). In California, orchard cultivation has expanded by >100% since 2000 (Chen et al. 2019), and these tree crops are low-quality foraging and nesting habitat for breeding Swainson's Hawks (Swolgaard et al. 2008; Battistone et al. 2019). It is unclear why hawk populations have increased so dramatically in the Central Valley where most of the orchard expansion has also occurred. We also remain concerned about urban and energy development, diminishing grasslands, pesticide poisoning, water availability, and climate change (CDFW 2016). For example, as climate changes, farmers may shift crops which could alter habitat conditions for hawks. Additionally, recent solar energy and nut orchard installations in the Antelope Valley of the west Mojave Desert may limit further potential expansion of Southern California breeding territories via removal of nest trees and foraging habitat. For these reasons, we recommend expanded, more frequent monitoring (e.g., every 5 years) of Swainson's Hawks throughout California.

These qualifications suggest the need to avoid overconfidence about the recent upward trends in hawk populations in California. Even so, after carefully reviewing the 2016 5-Year Review, the 2022 article, and the empirical information gathered in support of the Draft EIR, the City stands by its conclusions that project-specific impacts on Swainson's hawk foraging habitat are less than significant and that cumulative effects are less than cumulatively considerable. In standing by these conclusions, the City notes for the benefit of its sister agency that the City's assessments under

CEQA appropriately differ from CDFW's ongoing Statewide assessments under CESA. Notably, CDFW has not argued that the loss of foraging habitat constitutes a "take" under CESA that requires the applicant to obtain a CESA incidental take permit under Fish and Game Code Section 2081.

While CEQA and CESA both generally require that public agencies mitigate the harmful environmental effects of proposed projects, the requirements and standards under the two statutes differ in important respects. CEQA requires agencies to assess the significance of impacts against the backdrop of existing environmental conditions, regardless of what those are. (See CEQA Guidelines § 15125, subd. (a)). Indeed, courts have found that, even where a project may perpetuate (but not make worse) negative existing conditions for listed species, CEQA creates no duty to improve those existing conditions. (See, e.g., *North Coast Rivers Alliance v. Westlands Water District* (2014) 227 Cal.App.4th 832, 871-874 [court upholds water district's reliance on a CEQA exemption for the approval of a short-term water contract requiring exports from degraded Sacramento-San Joaquin River Delta]; see also *World Business Academy v. California State Lands Commission* (2018) 24 Cal.App.5th 476, 501-510 [court finds a State agency's reliance on a CEQA exemption proper for an action extending in time the operation of a nuclear power plant; the perpetuation of existing dangers associated with nuclear power do not represent adverse change in environment]).

Thus, the pertinent baseline condition for purposes of the City's assessment of impacts to Swainson's hawk foraging habitat is the fact that, as the 2022 article makes very clear, the current key habitat for the species is located in the Central Valley, where hawk populations are on the increase. The fact that the species formerly occupied much larger parts of California than it does today is relevant under CESA but is not necessarily relevant under CEQA.

While CEQA essentially embodies a "do no significant harm" philosophy, taking the existing environment as it currently exists, CESA allows CDFW, when planning and permitting under that statute, to account for the degraded status of existing environmental conditions insofar as they are currently adversely affecting a listed species on an ongoing basis. Notably, Fish and Game Code Section 2052 states generally that "it is the policy of the State to *conserve*, protect, *restore*, and *enhance* any endangered species or any threatened species and its habitat[.]" (Italics added.) All three of these highlighted verbs conserve, restore, and enhance suggest that, in some instances at least, improvements over existing conditions may be needed to avoid jeopardizing the continued existence of a species under CESA, as required by CESA.

Fish and Game Code Section 2055 applies a duty to conserve to State agencies by proclaiming that "it is the policy of this State that all State agencies, boards, and commissions shall seek to conserve endangered species and threatened species[.]" To "conserve" in this context means to use "all methods and procedures which are necessary to bring any endangered species or threatened species to the point at which the measures provided pursuant to this chapter are no longer necessary" (FGC § 2061). Under CESA, then, "conservation" may sometimes mean more than just a duty to prevent existing conditions from getting worse. Improvements over existing conditions may sometimes be necessary. Such improvements are never required under CEQA.

In light of these respective differences in approaches required under CEQA and CESA, it is possible for a lead agency such as the City of American Canyon, in assessing impacts on listed species under

CEQA in light of existing conditions, to find an absence of any significant impacts triggering mitigation obligations under CEQA, and to have CDFW, in assessing known population trends and known threats to the same species, to find a need for continuing efforts to conserve, restore, and enhance existing conditions for that species. Here, CDFW appropriately looks forward to a day when Swainson's hawk will reoccupy all of their historic habitat in California.

Under CEQA, the relevant question is whether the proposed project will "substantially reduce the number or restrict the range" of the Swainson's hawk (in light of existing conditions). (See CEQA Guidelines § 15065, subd. (a)(1) [mandatory findings of significance]). Notwithstanding the recent input from CDFW and Friends of the Swainson's Hawk, the City answers this question in the negative. Given the remaining Swainson's hawk foraging habitat in the vicinity of the project site, as well as the fact that the primary current "range" of the hawk is the Central Valley, the loss of current foraging habitat on the project site cannot reasonably be said to "restrict the range" of the species, much less to a substantial degree. Nor will the project *substantially* reduce the number of Swainson's hawk individuals, particularly when the modest loss of habitat acreage is viewed against the backdrop of the rebounding numbers in the State, as described in the 2022 article. The City does not believe that development of the project site will cause the deaths of any individual hawks that would have lived but for the proposed project. Individual hawks have the ability to fly over substantial distances in search of food, and ample food sources will exist in the project vicinity even with the proposed project in place. Indeed, the on-site Wetland Preserve will provide food sources to the extent that prey species could occupy the preserve, even if wetland habitat is not ideal foraging habitat.

The Friends of the Swainson's Hawk letter misstates the law in contending that "CEQA requires a mandatory finding of significance if a project's impacts to threatened or endangered species are likely to occur." This formulation could be understood to incorrectly suggest that *any* level of adverse impact, no matter how limited, requires a mandatory finding of significance. As noted above, the actual language of the relevant mandatory finding asks whether a project would "*substantially* reduce the number or restrict the range of an endangered, rare or threatened species[.]" (Italics added.) For the reasons just mentioned, the City does not find that the proposed project will have any such substantial effect. This does not mean, of course, that the City does not fully support CDFW's efforts under CESA to manage the species so that, as its current condition continues to improve, the Swainson's hawk will ultimately reoccupy most or all of its historic range.

Additional information about impacts to Swainson's hawk can be found in individual responses to comments included in Section 3, Response to Written Comments, of this Volume 2 of the Final EIR.

Other Raptors

Golden Eagle

CDFW's Life History Account indicates that the golden eagle feeds on small mammals, reptiles, and birds, as well as carrion. The Life History Account also indicates that the golden eagle forages in open terrain, including grasslands, deserts, savannas, and early successional stages of forests. Like the Swainson's hawk, the golden eagle is a hardy species that can survive on a range of prey in a variety of very different habitats throughout California; it does not only occur in southern Napa County.

A single golden eagle was observed foraging over the project site during reconnaissance surveys conducted by HBC in April of 2021. However, no golden eagles have been observed nesting on the project site. Nor are there any documented nests in the immediate vicinity of the project site. Data from the CNDB revealed four golden eagle nest sites within 10 miles of the project site. The closest was an extirpated nest site from 3.2 miles north of the project site with an additional nest site within the Newell Open Space approximately 4.5 miles east of the project site. The project site provides suitable foraging habitat for golden eagle but does not provide suitable nesting habitat because there are no trees.

As explained above with respect to the Swainson's hawk, the proposed project would provide an approximately 45-acre Wetland Preserve adjacent to the 37-acre Napa Logistics Wetland Preserve, both of which would provide suitable foraging habitat for golden eagle. The more than 2,000 acres of permanently preserved acreage suitable as foraging habitat for Swainson's hawk would also be available as a foraging area for golden eagle, along with an additional 339 acres of vacant undeveloped land not proposed for development within 0.5 mile of the project site, the easternmost portions of the San Pablo Bay Wetlands Important Bird Area designated by National Audubon just west of the project site, and many other privately-owned and vacant parcels within the region.

Accordingly, for the same reasons the proposed project would not result in a significant indirect or cumulative loss of Swainson's hawk foraging habitat, the proposed project also would not result in a significant indirect or cumulative loss of golden eagle nesting or foraging habitat.

Northern Harrier

CDFW's Life History Account indicates that the northern harrier feeds on voles, small mammals, birds, frogs, small reptiles, crustaceans, and insects. The Life History Account also indicates that the northern harrier forages and nests in grassland, wetlands, grain fields, and sagebrush flats. Like the Swainson's hawk, the northern harrier is a hardy species that can survive on a range of prey in a variety of very different habitats throughout California; it does not only occur in southern Napa County.

All areas vacant parcels, both publicly and privately-owned within the region discussed above as being available as foraging areas for Swainson's hawk and golden eagle are available as foraging habitat for northern harrier. Accordingly, for the same reasons the proposed project would not result in an indirect or cumulative loss of Swainson's hawk foraging habitat, it would also not result in a significant indirect or cumulative loss of northern harrier foraging habitat.

Master Response B—Utility Lines and Access Road

Summary of Relevant Comments

Napa/Solano Residents and CBD referenced "a new road and dirt berm" within the western portion of the site that was not disclosed in the Draft EIR or Final EIR [Volume I]. It was alleged that this new "road" has the potential for negative impacts on wildlife and wetlands, specifically vehicle strikes and the reduction in acreage for the Wetland Preserve.

Response

Note to Reader: Monk & Associates, a biological consulting firm involved with both the Napa Logistics Park Phase 2 Project and Giovannoni Logistics Center Project, provided substantial input with this response.

The unpaved access road allows for access to the Napa Logistics Park sewer and recycled water pipelines that cross the Giovannoni site. This utility alignment was disclosed and evaluated in the Napa Logistics Park Phase 2 Final EIR, which the City certified in 2015. Napa Logistics Park Phase 2 Project Draft EIR Exhibit 2-9a depicts the conceptual alignment that was evaluated and is provided in Appendix M.1. Additionally, the approved Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program (MMRP), which lists specific mitigation measures relevant to impacts associated with doing work in the utility alignment, is also provided in Appendix M.2.

Prior to the implementation of the approved off-site utility improvements for the Napa Logistics Park Phase 2 Project, all conditions of approval in the MMRP for the Napa Logistics Park Phase 2 Project associated with the off-site utility improvements were complied with; and documentation of compliance was submitted to the City. This included the following:

1) Acquisition of appropriate resource agency permits for the bore and jack under No Name Creek.
2) Protocol special-status plant surveys conducted over the entire Giovannoni property in 2016 by Monk & Associates and focused surveys over the proposed utility work area conducted again in 2019 by Monk & Associates with results submitted to the City in 2019.
3) Pre-construction surveys of the proposed utility work area conducted in 2021 by Monk & Associates with results for Swainson's hawk surveys and nesting bird surveys submitted to City prior to the start of work in 2021.
4) Installation of silt fencing around the perimeter of any waters of the United States/State along the utility work area (i.e., existing utility easement) to ensure that there were no impacts to waters of the United States/State. Note that, additionally, wattles surrounded the work area to ensure no translocation of sediment off-site.

No waters of the United States or State were filled (even *de minimis* fill) as part of the utility connection work.

The new road is a graveled access road that was constructed over the top of the sewer and water lines that were installed. This road remains the only way to access the utility lines for maintenance, as its southern extent on the property is bounded by railroad tracks. The "dirt berm" is not a permanent feature but a temporary stockpile that was left in place from the Napa Logistics Park Phase 2 utility work for use by the Giovannoni Logistics Center Project (proposed project) in coordination with the applicant. This stockpile was fully encircled by hay wattle and then hydroseeded, as were all disturbed soils associated with the Napa Logistics Park Phase 2 utility work before work concluded, to ensure no movement of sediment into waters of the United States/State. This temporary stockpile will only remain in place until it is used for the proposed project.

The utility alignment is disclosed in the City's 2015 Sewer Master Plan; refer to Exhibit B. A 20-foot utility easement across the Giovannoni property has existed since 1978 as recorded by Napa County (Appendix M.3). In 2019, the City of American Canyon recorded a Property Acquisition Agreement to prepare for the construction of the sewer line (Appendix M.4), which was completed in 2022. The associated Union Pacific Railroad Permit is provided in Appendix M.5. The associated CDFW Permit is provided in Appendix M.6. The City Council Resolution is provided in Appendix M.7. The Agreement is provided in Appendix M.8. The Close Out Letter summarizing the completion of the utility alignment is provided in Appendix M.9. Finally, the Resolution accepting the completed improvements is provided in Appendix M.10.

Impacts Associated With Unpaved Access Road

The unpaved access road is used for maintenance and upkeep purposes by City staff or contractors; it is not accessible to the public. This road is unpaved and is used on a less-than-daily basis. As this is a graveled access "road" intended solely to facilitate sewer line and waterline maintenance that terminates at the railroad tracks at the southern boundary of the Giovannoni property, there will be little risk of wildlife mortality due to collision or modification of wildlife behavior due to vehicular access being limited to maintenance contractors, the slow speeds necessitated by the graveled substrate, and the fact that this is essentially a dead-end road that was constructed solely for utility line maintenance. While the physical environment was altered during the construction of the sewer line and waterline installation through excavation, these environmental impacts were fully vetted under CEQA as part of the approved Napa Logistics Park Phase 2 Project, and the road was constructed in compliance with all conditions outlined in the MMRP for the project, including all required pre-construction surveys being conducted in 2021, prior to the start of work, as mentioned above.

The graveled access "road" was placed over this excavation area at approximately the same grade as the surrounding uplands (i.e., no berm was constructed) and only differs from its surroundings with respect to its graveled substrate and constitutes a negligible change to the physical environment post construction. There is no anticipated alteration to the chemical environment, as the gravel is inert and the vehicular access needed for maintenance of the utility lines will be exceedingly infrequent and highly regulated. Given the highly-regulated nature of access along this road, there will be no appreciable increase in use by humans or spread of exotics through future road use. Monk & Associates conducted postconstruction surveys of the area in June of 2022 and no evidence of new infestations of invasive species were observed.

Notably, this unpaved access road was not yet in existence on January 12, 2021, when the Notice of Preparation (NOP) for the proposed project was issued. This Draft EIR was therefore not required to describe what at the time would be future conditions in which the road had been completed. Under CEQA Guidelines Section 15125, subdivision (a)(1), the "environmental setting" as described in an EIR should reflect "physical environmental conditions as they exist at the time the notice of preparation is published[.]" Furthermore, "[t]his environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant." Here, the Draft EIR appropriately described conditions on the project site as they existed as of January 12, 2021.

As the Draft EIR makes clear, moreover, the proposed two-phase development associated with the proposed project would ultimately consume approximately 163 acres of the 208-site. (See, e.g., DEIR, p. ES-1.) The remaining 45 acres of the overall project site would be preserved as wetlands. (Ib.) It is clear, then, that the road in its current form represents only a temporary condition, in that most, if not all, of the area in question will ultimately be paved over as part of Phase 2 of the proposed project. Although the developer will not be able to build a structure over the sewer alignment, nothing would prevent putting the alignment within a parking lot. As long as the easement holder can gain access to the sewer line for maintenance purposes, the developer will not be prohibited from developing in some fashion the raw land on which the road currently exists. When necessary, the easement holder can dig up the pavement for maintenance purposes and then replace the pavement.

Notably, nothing in CEQA requires that off-site infrastructure projects such as the sewer alignment and gravel road serving the Napa Logistics Park Phase 2 Project must be analyzed twice, even if such and alignment and road run across a property, such as the Giovannoni site, that would subsequently be proposed for development and be subject to its own EIR. The commenter has cited no case or other authority supporting its contention on this point.

CEQA generally requires that EIRs for development projects such as the Napa Logistics Park Phase 2 Project include analysis of any environmental effects associated with any off-site infrastructure that may be needed to serve such projects. (See, e.g., *Plan for Arcadia, Inc. v. Arcadia City Council* (1974) 42 Cal.App.3d 712, 726 [shopping center, parking lot, and adjacent road widening "should be regarded as a single project"]; *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal.App.4th 713, 732 [EIR for residential development should have included a wastewater treatment plant expansion that was a "crucial element" of development]; and *Tuolumne County Citizens for Responsible Growth, Inc. v. City of Sonora* (2007) 155 Cal.App.4th 1214, 1231 [environmental analysis for proposed home improvement center project was deficient for not addressing impacts of road realignment necessitated by the project]).

Once such off-site infrastructure projects have CEQA clearance and have obtained whatever other agency approvals are required for the commencement of construction, those projects can proceed even if some or all of the land they go through may be subject to pending development applications that trigger EIRs. As discussed above, the portions of sewer and recycled water pipelines and associated gravel access road serving the Napa Logistics Park that cross the Giovannoni site have obtained all such required agency approvals.

Impacts to Wetlands

The utility line connection from the Napa Logistics Park Phase 2 Project to Green Island Road did not impact any waters of the United States/State. Access, excavation, and fill (i.e., backfill of soil and the addition of gravel) were all designed and field-adjusted to avoid impacts to existing wetlands, including avoiding impacts to No Name Creek by bore and jacking under this creek to connect the utilities with Napa Logistics Park in accordance with the MMRP for that project. Silt fencing was installed around the perimeter of any waters of the United States/State along the utility work area (i.e., existing utility easement) prior to work to ensure no *de minimis* fill entered waters of the United States/State. Note that, additionally, wattles surrounded the work area to ensure the

avoidance of translocation of sediment off-site, and all areas of disturbed soil were hydroseeded at the completion of activities.

It is unlikely that any existing wetland or other water features have been indirectly impacted by the utility connection for the Napa Logistics Park Phase 2 Project, as, given the level topography with depressional microrelief, the wetlands on the project site are primarily fed through vertical precipitation. Further, as mentioned above, the postconstruction grades remain substantially the same as under pre-construction conditions, since the graveled access for the utility lines are essentially the alignment that was graveled over the top for access and the "road" was not raised up. Similarly, there is no associated "berm" to block flows or otherwise change the hydrology of the site; the temporary soil stockpile may redirect sheet flows originating from a small hillock located southwest of the unpaved access road, but this temporary stockpile area does not block sheet flows and, again, this pile will be removed, as it is not intended to be a permanent feature on the landscape. Finally, this stockpile is small and does not affect the total hydrology of the area. Note that No Name Creek is still the primary hydrologic contributor to the Wetland Preserve and that the creek's hydrology has not been affected. Plus, there are acres of surrounding undeveloped landscape that serve as the watershed to the existing wetlands and the preserve area. In short, the hydrology of the preserve remains intact.

Though a conflict between the unpaved access road and the mitigation area is not anticipated, City staff nevertheless believes that it would be prudent to include language in the project approval documents that ensure the proposed mitigation wetlands are not constructed either on the Napa Logistics Park sewer and recycled water pipeline easement or within or immediately adjacent to the unpaved access road associated with the easement. City staff therefore recommends that the existing relevant mitigation measure be modified to include a new performance standard providing that the proposed mitigation wetlands will be constructed a minimum of 20 feet from the easement or unpaved access road associated with the easement. Language has been added to Mitigation Measure (MM) BIO-2 to achieve this outcome. In response to this comment, the MM BIO-2 shall be revised as follows:

MM BIO-2 To offset the loss of the 0.496 acre of seasonal wetland impacts from Phase 1, and 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools from Phase 2, and to ensure there is no-net loss of wetland area, the applicant shall establish/create 0.992 acre of palustrine emergent wetlands (2:1 ratio) for Phase 1 concurrent with project construction, and 2.57 acres of seasonal wetlands (1:1 ratio) and 1.13 acres of vernal pool wetlands (1:1 ratio) for Phase 2 at least 1 year prior to the start of Phase 2 construction, on the 45-acre Wetland Preserve. The established/created wetlands will be constructed a minimum of 20 feet from the Napa Logistics Park sewer and recycled water pipeline easement or unpaved access road associated with the easement. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland.

Reduction in Size of Wetlands Area

The earth disturbance associated with the graveled access road does extend into areas proposed for wetland creation, although the road itself does not. However, these areas of earth disturbance occur within an existing utility line easement that was fully analyzed for the utility connection with Green Island Road for the Napa Logistics Park Phase 2 Project, approved by the City. Additionally, per the applicant, the wetland mitigation plan for the proposed project is conceptual only at this stage; it has not yet been fully vetted by the United States Army Corps of Engineers (USACE) and the Regional Water Quality Control Board (RWQCB). The conceptual locations of proposed created wetlands may be shifted to avoid impacting the new utility lines as necessary while maintaining the same created wetland acreage to meet a 1:1 mitigation to impacts ratio as outlined in the Draft EIR. In practice, it is not unusual during wetland creation for a certain amount of "field-fit" during construction to occur, as current site conditions are taken into account during the wetland creation work. Further, prior earth disturbance, especially if restricted to the upper soil horizons, is not necessarily a barrier to wetland creation as wetland creation requires its own extensive earthwork to ensure the presence of a water restricting layer (i.e., hardpan or claypan). Monk & Associates has more than 20 years of experience in constructing mitigation wetlands and is exceedingly familiar with the process. Specifically, Monk & Associates has successfully created more than an acre of seasonal wetlands in the Napa Logistics Wetland Preserve just north of the proposed project. Monk & Associates is confident that the presence of the gravel road associated with the sewer alignment for the Napa Logistics Park Phase 2 Project will not frustrate the creation of the Napa Logistics Wetland Preserve as described in the Draft EIR for the proposed project and consistent with the governing mitigation measures (MM BIO-2, MM BIO-3a, MM BIO-3b, and MM BIO-3c).

Importantly, the on-site wetlands mitigation strategy, despite the detailed performance standards found in these CEQA mitigation measures, still remains somewhat conceptual at present, as noted earlier. The details will be worked out as part of the regulatory processes conducted by the USACE under the federal Clean Water Act and by the RWQCB under the State Porter-Cologne Water Quality Control Act. Those two regulatory agencies will ensure that the wetlands mitigation strategy, as ultimately permitted, will meet the strict requirements of those statutes and associated regulations and other guidance. Under CEQA case law, compliance with regulatory requirements "is a common and reasonable mitigation measure." (*Oakland Heritage Alliance v. City of Oakland* (2011) 195 Cal.App.4th 884, 906; see also *Citizens for a Sustainable Treasure Island v. City and County of San Francisco* (2014) 227 Cal.App.4th 1036, 1060 ["mitigation measures requiring adherence to regulatory requirements or other performance criteria are permitted"]). Independent of those federal and State requirements, the mitigation will also have to satisfy the performance standards developed by the City in the above-referenced mitigation measures.

Regarding the claims that the proposed Wetlands Preserve has been reduced by 1.5 acres as a result of the access road, this is an overestimation in the reduced acreage of the preserve. Most of the graveled access "road" that is located within the area proposed for the Giovannoni Logistics Center wetland is a temporary access road used to construct the new utility lines as part of the approved Napa Logistics Park Phase 2 Project. The earth disturbance generated by the graveled access road was superficial only except where the utility lines were installed (which is predominantly outside the proposed preserve) and remains largely in contour with the surrounding landscape. The temporary

access road only differs from its surroundings in the surface substrate (gravel), which should not impede or modify the flow pattern on the project site. There is a temporary stockpile that remains on-site from the construction of the utility connection, but this will be used as part of the proposed project and will not remain permanently in place. This temporary stockpile does not preclude flow northwest to and through the proposed Wetland Preserve. The established drainage pattern of the site remains intact to either side of this temporary stockpile. At most, the proposed Wetland Preserve area has been reduced by the area of the gravel road (less than 0.2-acre). The presence of the underground utility lines would not preclude this area's use as part of the Wetland Preserve as this less than 0.2-acre area is still available as upland watershed. This small area would only be unsuitable for wetland creation given that wetland creation activities in this area might damage the underground utilities.

In summary, the gravel road over the Napa Logistics Park Phase 2 Project sewer alignment has created a temporary condition that arose after the NOP was issued and will be replaced by development contemplated by the proposed project, as analyzed in the Draft EIR. The alignment and road were the subject of impact analysis in the prior EIR for the Napa Logistics Park Phase 2 Project and have received all permitting needed prior to earth disturbance. The placement of the road will not preclude implementation of the wetlands mitigation strategy set forth in the Draft EIR. Under the circumstances, nothing in CEQA requires that the City reissue the original Draft EIR in order to show the road in various graphics and to include some discussion of it within various impact analyses.

Master Response C—Wetlands

Summary of Relevant Comments

Both the Napa/Solano Residents and CBD letters provided comments on the wetland delineation. Many of these comments reiterated previous comments made by S&W and Cashen, including comments identifying purported flaws in methodology, discrepancies in acreage, the lack of a functional assessment, and stormwater runoff impacts on the Wetland Preserve.

Response

2016 Monk & Associates Delineation

The City acknowledges the 2016 Monk & Associates delineation contains some minor errors mentioned by the commenter. At the start of Monk & Associates' wetland delineation field work, the 2014 National Wetland Plant List (NWPL) was in effect and *Helminthotheca echioides* was listed as a Facultative Upland FACU (non-wetland) plant species. On May 12, 2016, several days into the wetland delineation field work, the 2016 NWPL was released to the public[1] and the status of *Helminthotheca echioides* was changed to Facultative Wetland (FAC). Because of the change in this plant's wetland indicator status, DP-40, -98, -105, and -110 were also incorrectly identified as uplands. For DP-97, *Helminthotheca echioides'* status was written in accordance with the 2014 NWPL. Following the newly released 2016 NWPL, the hydrophytic vegetation indicator would change

[1] While the title page of the 2016 National Wetland Plant List has an April 28, 2016 publication date, *the document was not released for public use until May 12, 2016*. The May 12, 2016 date was when the "2016 regional lists were organized and assembled for NWPL website publication" (M&A email communication with Dr. Paul Minkin, Director, National Wetland Plant List, USACE).

from a "no" to a "yes"; however, this data point was lacking wetland hydrology and hydric soils, so the conclusion that DP-97 was an upland is correct.

These errors—if such a characterization is accurate—do not, however, undermine the analysis or conclusions in the Draft EIR. The Draft EIR did not rely on the Monk & Associates 2016 wetland jurisdictional delineation report. Instead, wetland impacts were calculated using the USACE Approved Jurisdictional Delineation dated October 25, 2016.

Furthermore, it should be noted that the original Final EIR Response to Comment S&W-5c, as set forth in the (proposed) Final EIR published on October 31, 2022, incorrectly stated the Approved Jurisdictional Determination (AJD) date as October 25, 2021. The correct AJD date is October 25, 2016; and according to USACE Project Manager, Mr. Bryan Matsumoto, because the USACE application was submitted prior to the AJD expiring, the USACE will be using the AJD dated October 25, 2016, to process the permit. The AJD therefore remains valid and sufficient for the USACE and for assessing wetland impacts in the Draft EIR.

Acreage Discrepancies

Constructing Phase 1 and 2 concurrently over an 18-month period would impact 0.496-acre of wetlands for Phase 1 and 3.7 acres of wetlands for Phase 2, for a total of 4.196 acres of wetlands, which is the worst-case scenario, meaning the maximum acreage of wetland impacts would be 4.196 acres. The "worst-case scenario" assumption is not linked to the number of months it would take to complete each Phase but rather is a function of the potential total acreage of wetland impacts. Phase 2 wetland impacts were assessed based on a full buildout with a maximum impact of 3.7 acres of wetlands. It is possible that, once Phase 2 has gone through the entitlement process, the site plan may be modified to reduce impacts to under 3.7 acres, just as Phase 1 has avoided impacts.

Functional Assessments

Functional assessments were conducted to determine plant and animal communities supported on the project site, and these functional assessments were used in the impact analysis and subsequent mitigation requirements. The Draft EIR acknowledges the project site contains one upland plant community described as Annual Grassland, and two wetland plant communities, seasonal wetlands, and vernal pools, as shown in Draft EIR Section 3.3, Biological Resources, Exhibit 3.3-2. Plant communities are assemblages of plant species growing in an area of similar biological environmental factors. One of the functions of wetlands are the plant communities they support. To determine whether the wetlands or uplands supported special-status plants, in support of CEQA and agency requirements, HBC conducted botanical survey assessments during spring 2021, and spring and summer 2022. As described in these rare plant surveys, HBC identified the three plant communities. In addition to this plant communities assessment/rare plant survey conducted by HBC, the Draft EIR acknowledges that, based on a spring season site reconnaissance survey conducted on April 16 and May 24, 2021, HBC determined the site was suitable foraging habitat for State listed threatened Swainson's hawk and golden eagle. The 2022 Rare Plant survey is included in this Final EIR as Appendix O.

The assessments did not only include rare plant surveys and evaluation for presence of wildlife species as suggested in this comment, but also included: wetland hydrology and hydric soil

attributes; plant communities and vegetation stratum attributes within the wetlands; focused surveys to determine attributes such as whether the wetlands or uplands supported California red-legged frog, federal or State listed brachiopods or rare plants; and an assessment of over 40 animals and 37 plant species, as discussed in the HBC report (Draft EIR, Appendix C). Detailed functional assessments used to assess wetland attributes and impacts, and used to develop a wetland mitigation plan to offset these impacts included the following:

- Monk & Associates (M&A) conducted a 2016 wetland jurisdictional delineation in accordance with the USACE 1987 *Wetlands Delineation Manual* in conjunction with the regional supplement for the Arid West Region. Within the majority of the wetlands, attributes recorded included percent cover of plant species within four different vegetation strata (trees, shrubs, herbaceous, and vine biotic structures), indicators of wetland hydrology attributes (ponded water, saturated soils, sediment deposits etc.), and hydric soil attributes.
- Dry season and Wet season brachiopod surveys were conducted by LSA Associates Inc., (LSA) and M&A in 2016-2017 to determine whether the wetlands functioned as habitat for branchiopods. As part of this assessment, the Wet season survey recorded wetland hydrology attributes to include average and maximum depth of ponded water and surface area.
- A habitat assessment for the federally threatened California red-legged frog was conducted by Dr. Mark Jennings in 2021. The habitat assessment was conducted in accordance with the United States Fish and Wildlife Service (USFWS) protocol for the California red-legged frog habitat assessment[2] and observations were made regarding any amphibians and reptiles observed, or to be potentially inhabiting the vicinity.
- Special-status plant surveys were conducted by HBC during spring of 2021, and spring and summer of 2022 to assess the potential of the wetlands to support special-status plants, using the CDFW protocols identified in "*Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities*" dated March 20, 2018. In addition to determining whether the wetlands or uplands supported special-status plants, HBC also identified the three plant communities described as annual grassland, seasonal wetlands, and vernal pools. One of the attributes of wetlands is the support of its plant communities.
- HBC also made an assessment of the potential for the wetlands to support each animal species noted in the CNDDB as occurring within a 10-mile radius of the project site, or that is known to occur in the general vicinity based on the knowledge of HBC Biologists. Over 40 animals and 37 plant species were included in this assessment, as is discussed in the HBC report (Draft EIR, Appendix C), and this information was used to assess impacts to wetlands and species that could be using the wetlands or uplands.

As described previously, and in the Draft EIR and Final EIR, comprehensive functional assessments were conducted, which assessed attributes of the wetland sufficient to evaluate wetland impacts, and also proposed wetland mitigation ratios and performance standards sufficient to offset wetland

[2] United States Fish and Wildlife Service (USFWS). 2005. Revised guidance on site assessments and field surveys for the California red-legged frog. August 2005. Draft EIR Appendix C.

impacts as outlined in the Draft EIR. Therefore, a number of "functional" assessments were conducted to determine CEQA impacts and recommend mitigation measures to offset these impacts to less than significant.

Performance Standards

The RWQCB State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (Procedures) requires that approved mitigation plans contain performance standards that assess whether the proposed project is achieving its objectives. Performance standards, according to the Procedures, must be based on objective and verifiable attributes using a functional assessment method, such as the California Rapid Assessment Method (CRAM). The purpose of the CRAM referenced in the Draft EIR in Section 3.3, Biological Resources, on page 3.3-34 is to satisfy this requirement. The Performance Standards listed in the Draft EIR in MM BIO-3d on page 3.3-33 are based on completed biological assessments (plant survey, wetland delineation, general habitat assessment, etc.), and they include objective and verifiable attributes based on completed assessments and structured to assess whether the proposed project is achieving its objectives. Once CRAM is completed and the RWQCB has reviewed and commented on the mitigation plan, the Performance Standards may be modified to include additional attributes and performance standards, if warranted, to satisfy the Procedures.

Hydrology and Water Budget Analysis

The main source of hydrology for the unimpacted wetlands is direct precipitation and a significant amount of water flow from a culvert near the northeastern boundary, which flows east to west toward No Name Creek. In addition, the site generally slopes from east to west across the Phase 1 and Phase 2 project sites. The Phase 2 project also has topography that slopes from south to north. With the main sources of hydrology being direct precipitation and waterflow from a culvert near the northeastern boundary, and the topography of the site generally sloping from east to west, there is no basis to assume that proposed project development would indirectly impact the wetland hydrology of the remaining wetlands.

With respect to wetland mitigation, new wetlands would be created/established up and downstream of the remaining wetlands. As part of the Wetland Mitigation and Monitoring Plan that would be submitted to the RWQCB during the application review process, a water budget analysis would be conducted to ensure that the position of created/established wetlands do not indirectly impact the hydrology of existing wetlands.

A pre- and post-project water budget analysis is not required to determine whether there will be sufficient hydrology to create additional wetlands, or if newly created wetlands will impact existing wetlands. Reasonable assumptions can be made based on topography data, soil structure data, hydrology inputs (e.g., direct precipitation, overland flow, point source flows data), and anthropogenic factors (e.g., existing roads, fence lines, proposed structures etc.) to determine the likelihood that a site could support the hydrology required to create wetlands and to guide the location of where newly created wetlands should be positioned within the landscape to maximize hydrology inputs and avoid impacting hydrology of existing wetlands.

Data used to determine whether there would be sufficient hydrology to support created wetlands included the following:

- **Topography:** Topographic factors have a significant effect on the ability of hydrology to support seasonal wetlands and vernal pools. If the topography is steeply sloped, water tends to flow downhill; if the topography is flat, water tends to pond in low depressional areas. Based on the topographic survey data, the topography within the Wetland Preserve is relatively flat, sloping slightly east to west, which makes this area ideal for capturing and holding direct precipitation. Precipitation that falls directly onto created wetland depressions will collect, and the depressions will hold rainwater much more efficiently than compared to a site with steep topography.
- **Soil:** Soil structure has a significant effect on the ability of a created wetland to support and maintain wetland hydrology. Hydrology can be contained within a seasonal wetland when the soils have the ability to hold water at or near the surface at a frequency and for a duration sufficient to support, and that under normal circumstances do support, a prevalence of wetland vegetation. Based on United States Geological Survey (USGS) soil survey maps, the majority of the Wetland Preserve does support clay soils. Clay soils have a low permeability rate and are, therefore, ideal for creating wetlands in topographically flat areas. To ensure the USGS soil survey was accurate, and that the site could support hydrology necessary to create wetlands, HBC conducted a detailed assessment of the soil profile within and near areas proposed to create wetlands. soil pits were dug to approximately 4 feet in depth, and soil texture and color were then recorded throughout the profile for each soil pit. Results indicated that a restrictive layer composed of clay soil is found 12-30 inches below the surface. Based on this layer of clay soil supporting many of the existing seasonal wetlands and vernal pool hydrology, an assumption was made that this soil type could also hold water generated by direct precipitation within newly created wetlands.
- **Existing Hydrology Inputs:** The primary source of water for the majority of wetlands is direct precipitation. In addition, several wetlands in the northeast receive input from a culvert near the northeastern boundary, which flows east to west. The seasonal wetland contained within a segment of No Name Creek along the northwestern area of the Wetland Preserve may also receive surface flow from several “ditches” that transect the site from east to west and south to north.
- **Anthropogenic Factors:** The design of the Wetland Mitigation Plan considered anthropogenic factors that could have an impact (adverse or beneficial impact) on the ability of created wetlands to support wetland hydrology or potentially degrade the ability of a created wetland to offset the wetland impacts. Anthropogenic factors included existing fence lines, which often create topographic high areas that block surface water flow; existing and proposed underground utilities and rights-of-way, which create maintenance issues if a wetland is created on such a utility or right-of-way; the proposed development projects; and the newly constructed Devlin Road Extension.

Based on the topographic, geologic, hydrologic, and anthropogenic factors referenced above and in the Draft EIR, the location of each proposed created wetland shown in the Draft EIR, Exhibit 3.3-4,

Wetland Mitigation Plan, was selected to maximize the natural input of direct precipitation and surface flow to support sufficient hydrology within the created wetland and to avoid impacting existing wetlands. This data alone is sufficient to reasonably determine that hydrology (water flows) will be sufficient to create the additional wetlands and to reasonably determine that the created new wetlands will not impact the remaining existing wetlands. As correctly stated in comments on the Draft EIR, additional data will be provided to the San Francisco Bay RWQCB, including a water budget analysis, as part of the Wetland Mitigation and Monitoring Plan. If during the RWQCB review process it is determined that a created wetland may indirectly impact the hydrology of an existing wetland, the position of the created wetland would be adjusted to avoid such an impact.

Vegetated Buffers to Protect Wetlands

As addressed in the Final EIR Volume 1, in Response S&W-10a, S&W-10c and S&W-16b, and further addressed in this response, there are adequate vegetated buffers shown between the Phase 1 development and the unimpacted and proposed created wetlands within the Wetland Preserve. The Draft EIR does not explicitly state minimum or maximum buffers, but clearly shows proposed vegetated bioretention basin buffers surrounding the Wetland Preserve ranging from 25 feet to 150 feet. The vegetated bioretention basin buffers shown in the Draft EIR would be considered the "minimum" vegetated buffer widths for Phase 1.

The bioretention basins abutting the Wetland Preserve are considered to be a vegetated buffer in the Draft EIR. The vegetated bioretention basins will be vegetated and portions will be ponded during the winter. The vegetated bioretention basins will provide habitat to support terrestrial, semi-aquatic, and wetland-dependent species. Terrestrial animals will be able to move unabated to and from the Wetland Preserve and the vegetated buffer, and the berm surrounding the vegetated bioretention basins will be slightly raised providing a visual and noise screen. It is true that the bioretention ponds may require periodic inspections and/or maintenance yearly, just as all wetland mitigation sites require periodic inspections and maintenance. However, these yearly inspections or maintenance activities will typically be minor in nature (e.g., person walking on the site, hand removal of sediment or debris, etc.) and therefore have no adverse effect on the ability of the bioretention basins to provide adequate buffer protection. During the permitting process with the RWQCB, the proposed vegetated buffers shown in the Draft EIR for Phase 1 may increase, but they will not be less than what is presented in the Draft EIR. With respect to Phase 2, vegetated buffers between the development and the Wetland Preserve would be similar (e.g., range from 25-150 feet), with a minimum of 25 feet from Phase 2 hardscaped development (buildings, parking lots, non-pervious unvegetated surfaces etc.).

Wildlife Corridor

Although the property is currently nearly entirely surrounded by development, as correctly stated in the Draft EIR, connectivity to adjacent wetland preserves and undeveloped parcels to the northeast and southeast will remain accessible to terrestrial and avian species. As addressed elsewhere in this Final EIR, and discussed further in this response, the Wetland Preserve is not an "island" completely cut off from wildlife being able to move on and off the property or Wetland Preserve.

The Wetland Preserve contains No Name Creek, which is hydrologically connected to the Napa Logistics Park Wetland Preserve approximately 60 linear feet to the north via an existing clear span

bridge. The majority of wildlife moving to and from the Wetland Preserve to the Napa Logistics Park Wetland Preserve could, and likely do, move through the channel under this clear span bridge to avoid passing over Devlin Road. With respect to the newly constructed Devlin Road Extension, the culvert is smaller, connecting the east and west sides of the Wetland Preserve; however, it is large enough to allow for most terrestrial wildlife found near the project site, with the exception of deer, to move under the culvert between the east and west side of the Wetland Preserve. Along the northwestern corner, the Wetland Preserve abuts a constructed wetland area within the Biaggi Bros. property that is separated only by a barbed wire fence. Barbed wire fences are not an obstruction to the types of terrestrial species that would be found in this general area (e.g., deer, coyotes, raccoons, skunks etc.). In addition, wildlife can continue to access undeveloped parcels to the northeast and southeast by crossing over existing railroad tracks. Refer to Exhibit C (Wetland Preserve Connectivity) for the locations of hydrologic connectivity and terrestrial wildlife corridors and access points.

Master Response D—Vehicle Miles Traveled

Note to Reader: Master Response D supersedes Master Response 4 in Final EIR Volume 1.

Summary of Relevant Comments

Napa/Solano Residents and CBD referenced the Vehicle Miles Traveled (VMT) analysis and reiterated previous comments that it inadequate.

Response

To preface this response, VMT is a relatively new area of CEQA, having only been added to the Appendix G Checklist in late 2018 and only applying to environmental documents issued on or after July 1, 2020. Similar to the early years of greenhouse gas (GHG) emissions being introduced to the environmental review process, there is a range of guidance—sometimes conflicting—as to how to evaluate VMT. Likewise, many lead agencies have not adopted their own VMT thresholds or issued any guidance regarding methodology, which is the case for the City of American Canyon. Furthermore, the Napa-Solano regional traffic model is limited in its abilities to calculate project-level VMT. Lastly, there is very little in the way of guidance for evaluating VMT for industrial or warehousing projects. With these factors in mind, W-Trans evaluated VMT with the best information available using the most relevant guidance.

Giovannoni VMT Analysis

Guidance contained in the *Technical Advisory on Evaluating Transportation Impacts in CEQA*, 2018, California Governor's Office of Planning and Research (OPR) (OPR Technical Advisory) was used in selecting an appropriate VMT threshold of significance for the proposed project. While this publication provides no specific direction on the threshold that should be applied to warehouse-related land uses, the publication does indicate that office-related land uses should use a metric based on automobile commute VMT per employee, with a significance threshold tied to the regional average VMT per employee. Basing the proposed warehouse project's VMT analysis on a commute VMT per employee performance metric was deemed appropriate since the employee automobile commute characteristics of a warehouse project are similar to those produced by an office project. The term "regional" refers to the Metropolitan Planning Organization (MPO) boundary that the site is located within; for American Canyon, this is the nine-county Bay Area overseen by the

Metropolitan Transportation Commission (MTC). This approach to defining "regional" is consistent with direction provided by OPR in an online document entitled, "SB 743 Frequently Asked Questions." That document defines "regional" as "the full geography within the jurisdictional borders of a Metropolitan Planning Organization or a regional transportation planning agency." Accordingly, the proposed project's VMT significance threshold was based on an automobile commute VMT per employee performance metric that that was compared to the nine-county Bay Area regional average.

With respect to the use of a significance threshold for commute VMT per employee that is equal to the regional average, rather than 15 percent below the regional average as suggested in the OPR Technical Advisory for office uses, thresholds adopted by other jurisdictions, including Sacramento County and San José, were reviewed as noted in the project's Draft EIR. As discussed in the *Transportation Analysis Guidelines*, County of Sacramento, 2020, "placing industrial land uses in less urban areas characterized by having higher VMT per employee allows land in efficient VMT areas to be more effectively utilized as high-density residential and commercial or office/business professional uses. This threshold is consistent with achieving an overall reduction in regional VMT, as it recognizes that industrial uses, which are relatively lower total VMT generating uses, are most appropriate in areas that have a lower potential to reduce VMT because it results in more available land within areas with a high potential to achieve VMT reductions available for more dense development." Note that Sacramento County applies the same significance threshold for both industrial and warehousing uses. San José applied similar logic in developing its VMT thresholds for industrial and warehousing uses, which are also equal to the regional average VMT per employee.

It is also noted that during "office hours" webinars conducted by OPR in summer 2020, OPR staff acknowledged that industrial/warehousing projects are different from traditional "office" developments, and OPR offered the opinion that jurisdictions looking to establish significance thresholds for such uses may benefit from reviewing the thresholds set by San José. The proposed project's applied VMT significance threshold was developed using the evidence provided by these sources, including the overall premise that locating industrial and warehouse projects in less VMT-efficient areas can play an important role in reducing the community's *overall* VMT, helping to achieve established GHG reduction targets.

Notwithstanding the foregoing, it is worth noting that, although the Draft EIR used a threshold of commute VMT per employee that is equal to the regional average rather than 15 percent below the regional average as suggested in the OPR Technical Advisory for office uses, the VMT for the proposed project is actually substantially more than 15 percent below regional average. As shown in Draft EIR on page 3.12-18, Table 3.12-9, Vehicle Miles Traveled Summary, the regional average VMT per employee is 23.0 miles, while the proposed project's VMT per employee is 16.24 miles, which is roughly 29 percent below the regional average. Thus, the Draft EIR would have reached the same conclusion with respect to the VMT-related impacts of the proposed project—namely, that they were less than significant—even if the City had used the OPR-recommended threshold of 15 percent below the regional average for office projects.

The California Statewide Travel De"and 'odel (CSTDM) was determined to be the best available source of traffic analysis zone (TAZ)-level VMT data when the proposed project's NOP was released

(January 2021). While a model including the Napa-Solano region exists, it was deemed inappropriate for use in the proposed project's VMT analysis because it truncates vehicle trip lengths at the county line, thereby resulting in an incomplete calculation of a project's potential trip lengths.

Since the Napa-Solano travel demand model does not account for full trip lengths and is not capable of calculating a regional commute VMT per employee metric tied to the nine-county Bay Area used to establish the VMT significance threshold, it was necessary to research other appropriate sources for this value. The City of Vallejo Transportation Impact Analysis Guidelines were deemed to be an appropriate source, not only because of Vallejo's proximity to the proposed project, but because Vallejo faces the same constraints as American Canyon and Napa County in establishing VMT metrics and averages using the Napa-Solano model.

Medium- and Heavy-Duty Truck Trips from Logistics Operations

As explained above, the VMT analysis in the Draft EIR focused on employee trips and not on truck trips associated with the anticipated functioning of the proposed project's logistics operations. This focus on employee trips in cars and light-duty trucks rather than incoming and outgoing trips by medium- or heavy-duty trips associated with logistics operations is consistent with direction provided by OPR and with the legislation (Senate Bill [SB] 743 of 2013) that authorized OPR and the California Natural Resources Agency (CNRA) to promulgate what became CEQA Guidelines Section 15064.3.

As the Draft EIR explained on page 3.12-17, the OPR Technical Advisory defines "automobile," as the term is used in Section 15064. 3, as referring to "on-road passenger vehicles, specifically cars and light trucks." (Technical Advisory, page 4.) Thus, OPR understands the requirement to address transportation VMT as not reaching heavy-duty trucks. The focus on automobiles and not on heavy-duty trucks is consistent with the policy focus behind the elimination of automobile delay as a factor in assessing the significance of transportation-related impacts, as set forth in SB 743. Public Resources Code Section 21099, subdivision (b)(1), directed the OPR and CNRA to develop alternative significance criteria that would "promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." Accounting for heavy-duty trucks engaged in interstate commerce would not contribute to these policy goals, as local and State governments have little or no control over interstate commerce involving trucking.

The focus on automobile travel, rather than truck travel, is also evident from the direction that the Legislature gave to OPR and CNRA regarding the identification of the possible metrics that the two agencies might choose to embrace during the formulation of an eventual CEQA Guidelines provision (ultimately Section 15064.3) replacing "*automobile* delay, as described solely by level of service or similar measures of vehicular capacity or traffic congestion," as a basis for assessing the significance of transportation-related impacts. The potential metrics included "vehicle miles traveled, vehicle miles traveled per capita, *automobile* trip generation rates, or *automobile* trips generated." (Public Resources Code [PRC] § 21099(b)(1), italics added.)

Furthermore, as the Draft EIR explained in its discussion of environmental effects associated with GHG emissions, "[e]missions associated with heavy-duty trucks involved in goods movements are generally controlled on the technology side and through fleet turnover of older trucks and engines

to newer and cleaner trucks and engines. The following State strategies reduce GHG emissions from medium and heavy-duty trucks:

- California Air Resources Board (ARB) Mobile Source Strategy focuses on reducing GHGs by transitioning to zero and low emission vehicles and from medium-duty and heavy-duty trucks. ARB's Sustainable Freight Action Plan establishes a goal to improve freight efficiency by 25 percent by 2030, deploy over 100,000 freight vehicles and equipment capable of zero-emission operation and maximize both zero and near-zero-emission freight vehicles and equipment powered by renewable energy by 2030.
- ARB's Truck and Bus Regulation requires diesel-fueled trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses were required to meet particulate matter (PM) filter requirements beginning January 1, 2012. Lighter and older heavier trucks had a compliance date of January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent.
- ARB's Emissions Reduction Plan for Ports and Goods Movement (Goods Movement Plan) in California focuses on reducing heavy-duty truck-related emissions and the establishment of emissions standards for trucks, fleet turnover, truck retrofits, and restriction on truck idling. While the focus of the Goods Movement Plan is to reduce criteria air pollutant and air toxic emissions, the strategies to reduce these pollutants would also generally have a beneficial effect in reducing GHG emissions.

Trucks and truck fleet owners and operators accessing the proposed project would be subject to the above trucking and freight regulations. Thus, these strategies would contribute to controlling heavy-duty truck GHG emissions associated with the proposed project, and the proposed project would not conflict with or inhibit these Statewide strategies." (Draft EIR, page 3.6-57, footnotes omitted.)

In sum, not only do local governments have little or no control over interstate trucking operations, but GHG emissions (and thus VMT as a source of such emissions) resulting from medium- and heavy-duty truck trips are being addressed separately from GHG emissions (and thus VMT as a source of such emissions) from cars and light trucks. For these reasons, the transportation VMT analysis contained in the Draft EIR met applicable legal standards despite not accounting for medium- and heavy-duty truck trips that, if the proposed project is approved, will result from project operations as a logistics facility.

Even so, however, a post Draft EIR technical study performed by a leading transportation consultant has found that the significance conclusions in the VMT analysis would not have changed if the analysis were expanded to account for medium- and heavy-duty trucks engaged in logistic operations. The conclusion would still be that VMT-related impacts are less than significant.

Appendix J to the Final EIR Volume 1 is a June 16, 2022, technical memorandum prepared for Joe Livaich of Buzz Oates Construction by Kevin Johnson and David Robinson of Fehr & Peers, a leading transportation consultant, on the subject of "American Canyon Industrial Warehouse Travel Behavior Data." According to its authors, "[a] primary objective of the analysis in this memorandum is to address whether VMT from such heavy-duty truck trips would be more or less than 15 percent

below the regional average for the Bay Area." The authors conservatively chose to look at this particular metric because, as noted earlier, the OPR Technical Advisory proposed a significance threshold of 15 percent below the regional average for office projects (although, for reasons discussed above, that threshold was not used in the Draft EIR). The threshold of 15 percent below the regional average was thus the most conservative threshold recommended by OPR, and more conservative than the one used in the Draft EIR.

The Fehr & Peers technical memorandum "describes the travel behavior data collected for the proposed 208-acre high-cube industrial warehouse project (the proposed project) in American Canyon, CA. Fehr & Peers understands the uniqueness of warehousing and logistics facilities that make them extremely difficult to study with traditional data collection methods. Fehr & Peers combined traffic count data previously collected in San Joaquin County for similar warehousing uses with new mobile device origin-destination data from StreetLight for similar industrial warehouse sites around the Bay Area to provide Buzz Oates Construction, Inc. with detailed trip generation, vehicle origin-destination pattern, and average trip length data." (Fehr & Peers, page 1.)

"This data collection effort was undertaken by Fehr & Peers in June 2021 to better understand the travel behavior of existing warehousing buildings across San Joaquin County, as a review of local and regional planning studies revealed a lack of data and understanding of the travel characteristics of these types of facilities. Specifically, there was a lack of local or national trip generation data for warehousing uses, a lack of understanding of the travel patterns and demographics of warehouse users, and a lack of inclusion of these facilities in regional travel forecasting models." (Fehr & Peers, page 2.)

"Fehr & Peers coordinated the collection of 72 hours of driveway vehicle classification count data at 39 warehousing buildings across San Joaquin County in June 2021. The data collection was performed by National Data and Surveying Services (NDS) using cameras to count and classify vehicles entering and exiting the individual building driveways. Fehr & Peers staff visited each of the 39 warehousing buildings on one day during the data collection to observe the following:

- Check traffic and weather conditions
- Confirm the placement of the cameras
- Observe activity levels at the surveyed buildings
- Count the number of truck bays
- Classify the buildings
- Observe general operations and travel behavior

Fehr & Peers used this data to develop average trip generation rates per thousand square feet (KSF) for warehousing uses in San Joaquin County." (Fehr & Peers, page 2.)

Fehr & Peers obtained StreetLight's GPS-based commercial vehicle data product for 23 existing industrial warehousing sites around the Bay Area, including eight sites in Napa County, of which four were located within the City of American Canyon. Fehr & Peers relied on StreetLight's "O-D to Pre-set Geography" product to analyze travel patterns to and from the land use zone system at the census block group level, which has over 23,000 zones within California.

A land use zone system was developed for the 23 existing industrial warehousing sites, each of which included a separate zone for each of the existing buildings or groupings of buildings. The analysis tracked all heavy-duty truck trips starting or ending at one of these zones. The start of trips coming to the zones and end of trips leaving the zones were tagged to the national census block group system, allowing for aggregation to any desired geography such as the city or county level.

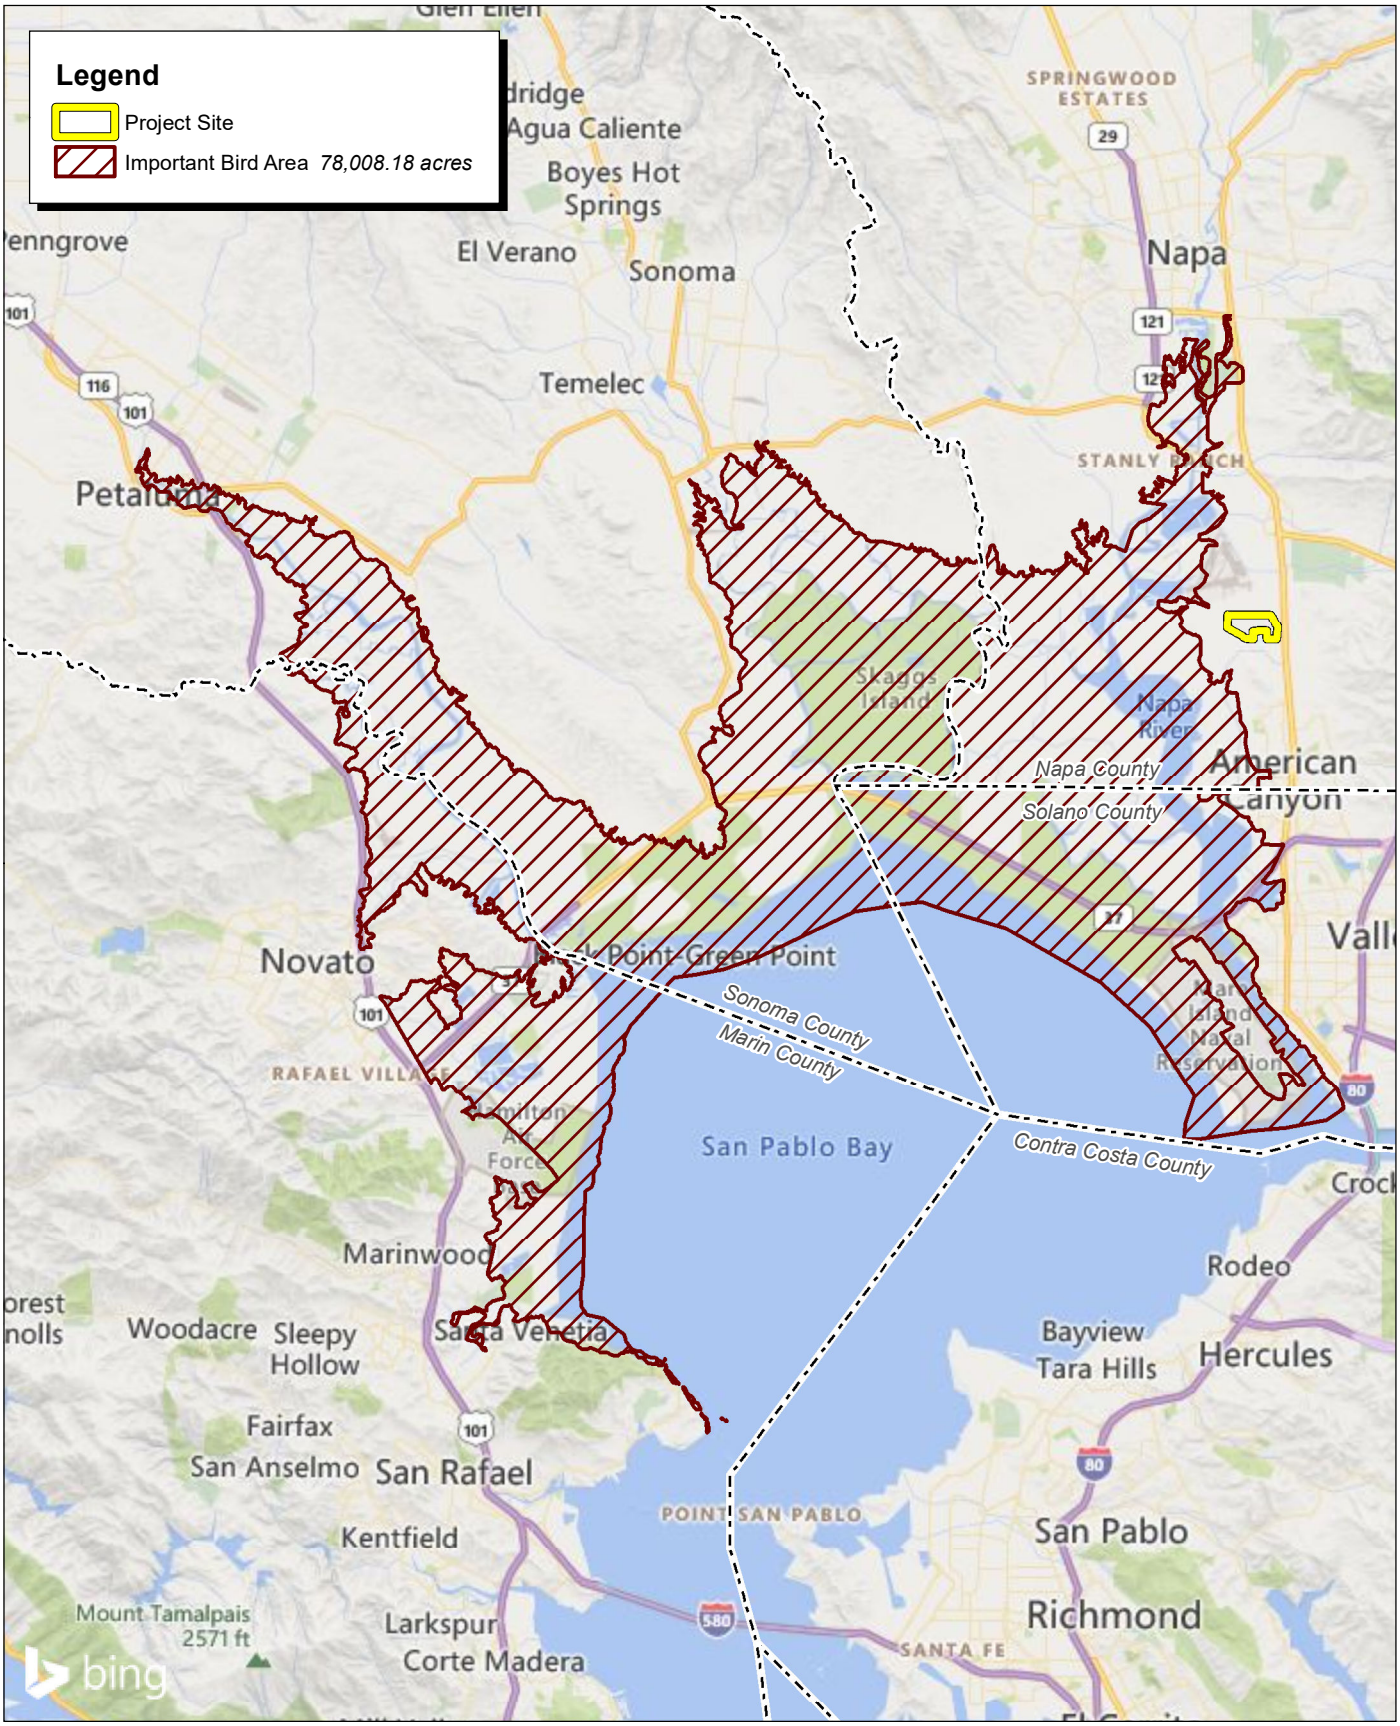
The land use zone system consisted of eight industrial warehousing sites in Napa County, which are listed below, and include similar existing warehousing sites in full operation during the data collection period. These sites were selected to understand the potential average trip length of heavy-duty truck trips generated by the proposed project.

The "key findings" of the Fehr & Peers study, summarized on page 12, were as follows:

- The average daily trip generation per KSF of warehousing building space is 0.078 medium-duty truck trips, 0.447 heavy-duty truck trips, 0.995 auto trips, and 1.52 total vehicle trips.
- The average trip length of heavy-duty truck trips generated by the eight existing Napa County industrial warehousing sites in full operation during the data collection period is 35.6 miles.
- The average trip length of heavy-duty truck trips generated by the eight existing Napa County industrial warehousing sites is roughly 39 percent lower than the average trip length for all 23 Bay Area warehousing sites combined.

In short, if the Draft EIR had taken account of medium- and heavy-duty truck trips from logistics operations, as Golden State Environmental Justice Alliance (GSEJA) suggested was necessary, the analysis would still have concluded that the proposed project would have less than significant VMT-related impacts.

This conclusion is also relevant to the analysis of GHG emissions for the proposed project, which employed a significance threshold very similar to one adopted relatively recently by the Bay Area Air Quality Management District (BAAQMD), by which one factor indicating a less than significant operational GHG impact was VMT 15 percent below the existing VMT per employee in the Bay Area Region. (Draft EIR, pages 3.6-45 and 3.6-56.) As the preceding discussion indicates, the VMT per employee for the proposed project is roughly 30 percent below the regional average. If medium- and heavy-duty truck traffic from project operations is added to the discussion, the VMT from such traffic is roughly 39 percent below the regional average. Additionally, the trip lengths included in the GHG impact analysis modeling software, CalEEMod, were extended from the default trip length to a length of 32.8 miles. This trip length conservatively represents the distance between the project site and the Port of Oakland. Where many of the truck trips associated with the proposed project would be expected to occur more locally, this trip length potentially over-estimates the transportation-related GHG emissions associated with the proposed project and helps to ensure that the GHG emissions estimate included in the GHG impact analysis is conservative. Thus, the Fehr & Peers study reinforces and fortifies the Draft EIR's conclusion that operational GHG impacts are less than significant (Draft EIR, page 3.6-59), just as it reinforces and fortifies the Draft EIR's conclusion that VMT-related impacts are less than significant.



In summary, in the Draft EIR the City articulated the rationale for omitting truck trips, relying on language from the OPR Advisory, Public Resources Code Section 21099, and CEQA Guidelines Section 15064.3. In the Draft EIR, the City also discussed that the State has multiple policies and regulations in place to reduce GHG emissions from truck trips, which have already reduced emissions from trucks and will continue to achieve emissions into the future (Draft EIR, pp. 3.6-56– 3.6-58, 3.12-6–3.12-7, and 3.12-16–3.12-17.) Even so, the City included in the October 31, 2022 (proposed) Final EIR an updated analysis showing that the truck traffic expected to occur due to operations of the proposed project would also be 15 percent below the regional average. This information amplified and clarified the prior analysis and did not reveal any new or worsened expected impacts of the proposed project, and thus did not trigger recirculation of the EIR. The updated information in this modified (and superseding) Master Response on VMT (Master Response D) similarly does not trigger recirculation. The new information does not, as CBD contends, represent any kind of concession that the Draft EIR's approach to VMT was legally insufficient or problematic. Rather, the new information in the October 31, 2022, and February 3, 2023, Final EIR documents shows that, even if the City were to accept CBD's theory that CEQA required VMT analysis to consider truck trips, the VMT-related impacts of the proposed project would still be less than significant.

This last conclusion is based on information reflecting the expert judgment of Fehr & Peers about how best to ascertain regional average truck trips. Fehr & Peers used locally collected empirical data, as opposed to national data published in the Institute of Transportation Engineers (ITE) manual. The study utilized existing data and is project-specific, as opposed to the ITE manual. The VMT study developed a truck trip generation rate for the proposed project, which was then compared to the regional average. As included in the GHG emissions impact section for the proposed project, a conservative truck trip length of 36 miles was included in the CalEEMod modeling for the proposed project, consistent with the findings of the VMT study. This Master Response (D) further details the substantial evidence that supports the City's reliance on the new VMT study as part of its overall evaluation of the potential impacts of the proposed project.

OPR issued a 2018 Technical Advisory recommendation that, for certain uses (employee trips), being 15 percent below the regional average translates into a less than significant VMT impact.[3] Like Fehr & Peers, OPR is an expert. Furthermore, the BAAQMD 2022 GHG significance thresholds include a recommendation that, if a proposed project has a VMT that is 15 percent below the regional average, then, if the proposed project meets other specific project design thresholds such as prohibiting natural gas infrastructure, the proposed project would have a less than significant impact for GHG emissions impacts. Thus, the Fehr & Peers study reinforces, and provides substantial evidence supporting, the City's conclusion that the proposed project's GHG emissions are less than significant.

SECTION 3: RESPONSES TO WRITTEN COMMENTS

3.1 - List of Authors

As explained in Section 1, Introduction, of this volume (Volume 2) of this Final EIR, the City, on October 31, 2022, released a document described as the (proposed) Final EIR for the proposed project. In issuing that document, City staff intended that, upon certification by the American Canyon City Council, the document would become the official Final EIR for the proposed project. This plan changed, however, when the City provided the Center for Biological Diversity (CBD) with an extra 45 days in which to provide the City with comments on the Draft EIR. This dispensation delayed the date on which the City Council would be in a position to certify an expanded Final EIR, which took account of CBD's comments and responses to those comments.

In preparing the current new volume (Volume 2) of the Final EIR to include responses to comments from CBD, the City has also chosen to respond to certain additional correspondence it has received subsequent to the end of the original public review period on the Draft EIR. The City has done so on a voluntary basis, in the interest of ensuring the authors of such correspondence that the City has considered the concerns they have expressed in that correspondence, which was mainly on the (proposed) Final EIR as issued on October 31, 2022.

A list of all of public agencies and organizations that authored this above-described correspondence is presented below. Each comment has been assigned a code. Individual comments within each communication have been numbered so comments can be crossed-referenced with responses. Following this list, the text of the communication is reprinted and followed by the corresponding response. As explained above, the City was only required by the California Environmental Quality Act (CEQA) to respond to comments from CBD, as these were comments on the Draft EIR, and CBD had not participated in the earlier public review period for that document. The City has responded to the correspondence from other entities on a voluntary basis, as those entities either participated in the earlier public review period or had the opportunity to do so but did not do so due to having received actual or constructive notice of the availability of the Draft EIR for public review.

3.2 - Responses to Comments

3.2.1 - Introduction

In accordance with CEQA Guidelines Section 15088, the City of American Canyon, as the lead agency, evaluated the comments received from the CBD on the Draft EIR (State Clearinghouse [SCH] No. 2021010104) for the Giovannoni Logistics Center project, and has prepared the following responses to the comments received from that organization. The City has also chosen to voluntarily respond to additional correspondence received from other entities, as explained in Sections 1, Introduction, and 3.1, List of Authors, above. The response to these comments are part of (Volume 2 of) the Final EIR for the project in accordance with CEQA Guidelines Section 15132.

3.2.2 - Comment Letters and Responses

Subject: Giovannoni Logistics Center Project, Final Environmental Impact Report, SCH No. 2021010104, City of American Canyon, Napa County

Dear Mr. Cooper:

The California Department of Fish and Wildlife (CDFW) previously submitted comments on the Draft Environmental Impact Report (DEIR), prepared by the City of American Canyon (City) for the Giovannoni Logistics Center Project (Project) pursuant the California Environmental Quality Act (CEQA) and CEQA Guidelines.[1] On November 4, 2022, the City, as Lead Agency, notified CDFW the Final EIR (FEIR) was available, including responses to comments CDFW submitted on the DEIR. CDFW has determined the City's responses in the FEIR are inadequate to address impacts to Swainson's hawk (*Buteo swainsoni*) and is submitting this letter to address outstanding concerns. 1

In 2016, CDFW released a Status Review for Swainson's hawk in California and recommended the species retain its status as threatened under the California Endangered Species Act (CESA) (CDFW 2016). The review states there is no indication the species has reoccupied its historical range and the distribution of Swainson's hawk remains largely unchanged and restricted. Additionally, the review cites the **primary threat** to Swainson's hawk continues to be habitat loss, **especially the loss of suitable foraging habitat**. One recent study done by CDFW scientists indicated Swainson's hawk populations have been increasing, but also cautioned using this data to inform conservation planning, stating this apparent stability remains largely unclear (Furnas et al. 2022). The study cites concerns regarding impacts to Swainson's hawk from urban development, reduction in grasslands, and orchard and vineyard cultivation, all of which are prominent impacts in Napa County, where the Project is proposed.

Master Response 1 in the FEIR states that there is "more than sufficient foraging habitat in the area" for Swainson's hawk, referencing approximately 2,000 acres of preserved foraging habitat within the Project vicinity, and therefore there is "no potential for

[1] CEQA is codified in the California Public Resources Code in section 21000 et seq. The "CEQA Guidelines" are found in Title 14 of the California Code of Regulations, commencing with section 15000.

DocuSign Envelope ID: 4EC2BA7F-50B7-4CF9-89E2-961CFBF49BE0

significant indirect or cumulative impacts associated with habitat for Swainson's hawk in this area and the proposed project would not add to any such impact." However, the proposed Project would remove 154.7 acres of Swainson's hawk foraging habitat, resulting in a net loss of habitat that is equivalent to approximately 7% of the preserved foraging habitat the FEIR states is available in the vicinity of the Project, which is a significant proportion. While the proposed Project does include the establishment of a 45-acre Wetland Preserve (Mitigation Measure BIO-2), this is included as mitigation for impacts to wetlands, not as mitigation for impacts to Swainson's hawk. Swainson's hawk is not typically associated with wetlands, though they may be found foraging in wetlands if they are adjacent to grasslands (Shannon Skalos, CDFW Avian Specialist, personal communication, November 22, 2022). As the Project would remove the majority of grasslands on the property, the suitability of the wetland preserve area as Swainson's hawk foraging habitat would likely be greatly reduced. 1

In summary, the loss of foraging habitat is the primary threat to Swainson's hawk and the FEIR does not propose mitigation for potentially significant impacts to Swainson's hawk foraging habitat. Additionally, several other large development projects near the proposed Project have not been required to mitigation for Swainson's hawk foraging habitat, despite CDFW's strong recommendations to mitigate in order to reduce impacts to Swainson's hawk to less-than-significant. Therefore, the net loss of 154.7 acres of foraging habitat from the proposed Project, in conjunction with nearby projects that have not mitigated for loss of Swainson's hawk foraging habitat, would contribute to a **significant cumulative impact to a state threatened species**. As stated previously, CDFW strongly recommends the City, as Lead Agency, require the Project to mitigate for the loss of Swainson's hawk foraging habitat at a minimum 1:1 ratio to reduce impacts to Swainson's hawk to less-than-significant.

Questions regarding this letter or further coordination should be directed to Alicia Bird, Environmental Scientist, at (707) 980-5154 or alicia.bird@wildlife.ca.gov; or Melanie Day, Senior Environmental Scientist (Supervisory), at (707) 210-4415 or melanie.day@wildlife.ca.gov.

Response to CDFW-1

The agency reiterated comments from its first comment letter submitted to the City of American Canyon on July 18, 2022, and disputed the conclusions found in Final EIR Volume 1 about the significance of the loss of foraging habitat for Swainson's hawk.

Loss of foraging habitat for Swainson's hawk is addressed in Master Response A.

Re: **Agenda Item 3 – Comments on Giovannoni Logistics Center Project Proposed by Buzz Oates Construction, Inc. (PL20-0042, PL20-0043 and SCH #2021010104)**

Dear Chair Mallare, Honorable Planning Commission Members, Mr. Cooper and Ms. Jones:

We are writing on behalf of Napa/Solano Residents for Responsible Development ("Napa/Solano Residents") to provide comments on the Giovannoni Logistics Center Project, PL20-0042, PL20-0043 and SCH #2021010104, ("Project")

1

printed on recycled paper

The Project appears as Item 3 on the agenda for the November 17, 2022 City of American Canyon ("City") Planning Commission ("Commission") hearing. The Commission will consider adopting resolutions recommending that the City Council (1) certify the Final Environmental Impact Report ("FEIR), adopt CEQA findings of fact, adopt a Statement of Overriding Considerations and adopt a Mitigation Monitoring and Reporting Program; (2) approve a design permit for Phase 1 of the Project; and (3) approve a Tentative Parcel Map for Phase 1 of the Project.

The City, as lead agency under the California Environmental Quality Act[1] ("CEQA"), prepared the Draft Environmental Impact Report ("DEIR")[2] and FEIR for the Project. Napa/Solano Residents' comments on the DEIR explained how the DEIR failed to comply with CEQA's basic requirement to act as an "informational document," in that it lacked meaningful details in critical areas, such as air quality, health risk, biological resources, greenhouse gas ("GHG") and transportation impacts, without which the public and decisionmakers cannot adequately assess the Project's significant impacts. Because of the DEIR's shortcomings, it was deficient as a matter of law because it failed to properly disclose and mitigate the Project's potentially significant impacts. The DEIR also lacked substantial evidence to support the City's conclusions regarding the Project's impacts and proposed mitigation. These deficiencies rendered the document inadequate for purposes of compliance with CEQA. 1 CONT

The City's FEIR contains responses to Napa/Solano Residents' DEIR comments and attempts to address some of the issues raised. As discussed below, however, the FEIR fails to resolve or mitigate many of the Project's potentially significant impacts. Moreover, the FEIR fails to disclose and/or discuss significant new information regarding the Project's environmental setting, which requires that the EIR be revised and recirculated for public review and comment.

We reviewed the FEIR, and available supporting documents with the assistance of our expert consultants, including wetlands biologist Sarah Corbin, wildlife biologist Scott Cashen, whose comments on the FEIR are included as Exhibit A, Exhibit B, respectively.[3] The City must address and respond to their

comments separately and fully.[4] We reserve the right to supplement these comments at later hearings and proceedings related to the Project.[5]

1
CONT

I. STATEMENT OF INTEREST

Napa/Solano Residents is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential environmental impacts associated with Project development. Napa/Solano Residents includes American Canyon residents James Aken, Samantha Spangler, Evelyn Hernandez, and Alex Somodio, and members of the International Brotherhood of Electrical Workers Local 180, Plumbers & Steamfitters Local 343, Sheet Metal Workers Local 104, Sprinkler Fitters Local 483, District Council of Ironworkers and their members and their families, and other individuals that live and/or work in the City of American Canyon and Napa/Solano Counties.

Napa/Solano Residents supports the development of sustainable commercial and industrial centers where properly analyzed and carefully planned to minimize impacts on public health and the environment. Logistics centers like the Project should avoid adverse impacts to air quality, biological resources, transportation, and public health, and should take all feasible steps to ensure unavoidable impacts are mitigated to the maximum extent feasible. Only by maintaining the highest standards can commercial and industrial development truly be sustainable.

2

The individual members of Napa/Solano Residents and the members of the affiliated labor organizations live, work, recreate and raise their families in and around American Canyon and Napa County. They would be directly affected by the Project's environmental and health and safety impacts. Individual members may also work constructing the Project itself. They would be the first in line to be exposed to any health and safety hazards which may be present on the Project site. They each have a personal interest in protecting the Project area from unnecessary, adverse environmental and public health impacts.

Napa/Solano Residents and its members also have an interest in enforcing environmental laws that encourage sustainable development and ensure a safe working environment for the members they represent. Environmentally detrimental

printed on recycled paper

projects can jeopardize future jobs by making it more difficult and more expensive for industry to expand in American Canyon and Napa County, and by making it less desirable for businesses to locate and people to live and recreate in the County, including the Project vicinity. Continued environmental degradation can, and has, caused construction moratoriums and other restrictions on growth that, in turn, reduces future employment opportunities. 2 CONT

Finally, Napa/Solano Residents is concerned with projects that can result in serious environmental harm without providing countervailing economic benefits. CEQA provides a balancing process whereby economic benefits are weighed against significant impacts to the environment.[6] It is in this spirit we offer these comments.

II. THE CITY MUST REVISE AND RECIRCULATE THE DEIR TO ADDRESS SIGNIFICANT NEW INFORMATION.

Lead agencies are required to recirculate an EIR for further public review and comment if significant new information is added to the EIR after notice of public review but before certification.[7] Recirculation is required when the addition of new information deprives the public of a meaningful opportunity to comment on a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect.[8] New information can include "changes in the project or environmental setting as well as additional data or other information."[9] The purpose of recirculation is to give the public and other agencies an opportunity to evaluate the new data and the validity of conclusions drawn from it.[10] 3

Recirculation is also required where significant new information surfaces prior to certification of an EIR but the lead agency failed to add that information to the EIR.[11] Such information must be added to the EIR—and the EIR must be recirculated—if the information would trigger the recirculation requirement under CEQA Guidelines section 15088.5. Failure to include such information thwarts the goals of the EIR process by not disclosing to the public and government agencies critical information necessary to evaluate the significance of the Project's impacts.[12]

A. There Is A Significant Change To The Project's Environmental Setting.

On November 9, 2022, wildlife biologist Scott Cashen performed a site visit to the Project site.[13] During this visit, he observed and documented a new road and dirt berm that has been installed on the western portion of the Project site.[14] This new road extends north-south through the entire Project site, and cuts directly through the proposed wetlands preserve on the northern portion of the site. The approximate extent of the new road and associated earth disturbance is depicted in the following image provided by Ms. Corbin:[15] 4

Nowhere in the DEIR or FEIR is this new road disclosed. It is not identified in the Project description and is not addressed in the DEIR's impacts analysis or mitigation discussion, nor does it appear in any of the aerial photos or diagrams in

[13] Cashen FEIR Comments, pg. 1.
[14] *Id.*
[15] Corbin FEIR Comments, pg. 11.

printed on recycled paper

the DEIR. It is conspicuously absent from all of the descriptions and diagrams of the 45 acre "wetland preserve," [16] despite the fact that it cuts directly across the preserve and encroaches on areas slated for wetlands mitigation. Nor has the City disclosed this information or attempted to assess its impacts in the FEIR.

As Mr. Cashen points out, roads can have several effects that cause negative impacts to wildlife: mortality from road construction, mortality from collision with vehicles, modification of animal behavior, alteration of the physical environment, alteration of the chemical environment, spread of exotics, and increased use of areas by humans.[17] Mr. Cashen states that the new road has already likely had impacts but the City's failure to even disclose the existence of this new road, let alone analyze its potential impacts, precludes an assessment of the full extent of such impacts.[18] The public and other governmental agencies have been denied the opportunity to evaluate the new information and its significance in violation of CEQA.

4
CONT

Wetlands biologist Sarah Corbin explains how the new road and associated land disturbances raise additional uncertainty about whether the proposed "wetland preserve" can adequately mitigate the Project's impacts to wetlands and habitat. Ms. Corbin confirms that the new road clearly cuts through the proposed wetlands preserve area, comes very close to directly impacting the existing wetlands within the wetlands preserve area and may have indirectly impacted these wetlands by cutting off wetland hydrology.[19] The earth disturbance associated with the road appears to extend into areas proposed for wetlands creation in this area. Moreover, Ms. Corbin estimates that the wetland preserve area has been reduced by approximately 1.5 acres due to construction of the road.[20] Likely indirect impacts to No-Name Creek and the wetlands preserve area include "untreated stormwater runoff (the road appears to be graveled and will contribute fine particulate laden runoff with or without regular use), impact of the wetland buffer within the wetland preserve in the area near the road, and disturbance associated with use such as noise, air pollution, and trash."[21] Finally, heavy equipment used to construct the road compacted soils within the earth disturbance footprint,

---

[16] *See e.g.,* DEIR Preliminary Site Plan Phase 1 (Exh. 2-4) and diagrams/aerial photos of wetlands impacts and proposed mitigation area (Exhs. 3.3-2, 3.3-3, 3.3-4 and 3.3-5).

[18] *Id.*
[19] Corbin FEIR Comments, pg. 11.
[20] *Id.*
[21] *Id.*

printed on recycled paper

limiting root establishment and plan growth in the area.[22] These disturbances will make it significantly more difficult to create wetlands on site and to replace the lost functions of the impacted wetlands.[23] None of these impacts are discussed in the DEIR's impact analysis or discussion of the proposed wetlands mitigation area, nor are they addressed in the FEIR.

EIRs are required to include a description of the physical environmental conditions in the vicinity of a project, in order to provide baseline physical conditions by which the lead agency determines the significance of the project's impacts.[24] Because the new road is a significant change to the Project's environmental setting, and may represent an undisclosed change to the Project itself which may substantially increase the severity of the Project's biological and wetland impacts, the City must at a minimum disclose in a revised and recirculated EIR when, how and why the road was constructed, what it is used for and how often, whether it is a permanent improvement to the Project site, and whether the land disturbances caused by construction and use of the road impacted any of the existing wetlands areas. Moreover, the recirculated EIR must reevaluate all potentially significant impacts to the Project site's biological and wetlands resources in light of the new road feature, as well as its impacts on the proposed wetlands preserve's ability to adequately mitigate the Project's impacts. 4 CONT

B. The FEIR Fails to Disclose or Discuss the Proposed Development Agreement for the Project.

The DEIR's Project Description lists the Discretionary/Ministerial approvals required for the Project, including a use permit, tentative parcel map, design permit, lot line adjustment, and grading and building permits.[25] Neither the DEIR nor the FEIR contain any mention of a development agreement. However, on the City's Active Community Development Project list dated September 2022, there is a reference to a proposed development agreement for this Project; the list notes that an application for the proposed development agreement was submitted on August 1, 2022 and is on hold as of September 1, 2022 pending entitlement approvals.[26] 5

printed on recycled paper

A development agreement is a contract between an agency and a developer establishing certain development rights with any person having a legal or equitable interest in the property at issue. The purpose of a development agreement is generally to extend the life of the entitlements in exchange for the provision of public benefits and to reduce the economic risk of development.[27] While a development agreement must advance an agency's local planning policies, it may also contain provisions that vary from otherwise applicable zoning standards and land use requirements as long as the project is consistent with the general plan and any applicable specific plan.[28] For this reason, it is critical that the terms of a proposed development agreement be disclosed to the public and analyzed during the Project's CEQA review in order to determine whether the development agreement may have potentially significant impacts that are not otherwise inherent in the project.

When a development agreement is required to implement a project, it is considered part of the project under CEQA.[29] Development agreements must be enacted in accordance with the Government Code and applicable local planning codes, and must undergo environmental review at the time of adoption. Therefore, any development agreement for the Project must be described in the EIR and considered by the City's decision makers at the same time as the rest of the Project approvals. 5 CONT

Both the DEIR and the FEIR fail to disclose the terms being considered for inclusion in the Project's proposed agreement, despite the fact that the FEIR was released after the Project's proposed development agreement application was filed with the City. The EIR must be revised to correct this omission. In particular, the public must be allowed to consider whether the proposed development agreement will have significant impacts in addition to the impacts disclosed in the FEIR *before* the City enters into a long-term contract with the Applicant which could guarantee the long-term existence of those impacts during the life of the contract. A proposed development agreement for the Project, undisclosed or discussed in the DEIR or FEIR, is significant new information requiring revision and recirculation of the EIR under CEQA.[30]

III. THE FEIR FAILS TO ADEQUATELY DISCLOSE OR MITIGATE THE PROJECT'S POTENTIALLY SIGNIFICANT IMPACTS.

A. The VMT Analysis Remains Unsupported by Substantial Evidence.

In our comments on the DEIR, we explained in detail how the VMT analysis completely failed to provide any evidence, analysis or explanation for the 23-miles per employee figure selected as the VMT significance threshold, or the 16.24 miles per employee figure selected as the projected VMT for the Project. The FEIR fails to respond to these comments or to provide any basis on which these figures could be evaluated.

First, the FEIR's VMT significance threshold remains unsupported by substantial evidence. The DEIR stated that it relied on "established policies currently used by the OPR, Sacramento County, and the city of San Jose" in selecting its significance threshold: "a VMT impact would be identified at an industrial project if the project VMT per employee is higher than the regional average VMT per employee."[31] The DEIR defined "regional average VMT" as the nine county Bay Area average and asserted that this average is 23 miles per employee as reportedly stated by the City of Vallejo in its CEQA Transportation Impact Analysis Guidelines.[32] However, this is the entire extent of the "analysis" performed by the City in adopting 23 miles per employee as the VMT significance threshold in the DEIR. The DEIR didn't make even the slightest effort to explain how Vallejo derived that number and whether it is an appropriate significance threshold for this Project. 6

The FEIR provide no additional information on this issue, other than pointing out that Vallejo's Guidelines were deemed an appropriate source because of Vallejo's proximity to the proposed project and because Vallejo "faces the same constraints as American Canyon and Napa County in establishing VMT metrics and averages using the Napa-Solano model."[33] There remains no explanation of how Vallejo concluded 23 miles per employee was an appropriate VMT threshold, and the City's adoption of that figure cannot be evaluated. The City therefore still lacks substantial evidence to support its reliance on the selected VMT threshold.

[31] DEIR, pg. 3.2-17.
[32] *Ibid.*
[33] FEIR, pg. 2-10.

printed on recycled paper

Similarly, our DEIR comments detailed at length the DEIR's failure to include any analysis of the Project's estimated VMT. As discussed therein, the DEIR purported to pull a number from the California Statewide Travel Demand Model ("CSTDM") with no explanation of what the model was, how the number was computed or whether it was appropriately adopted as the estimated VMT for the Project. The entirety of the DEIR's VMT "analysis" for this 2.4 million square foot warehouse Project was as follows:

> According to Statewide Travel Demand Model estimates, this project is located within a Traffic Analysis Zone (TAZ) with a projected VMT per employee of 16.24 miles. Because this per capita VMT rate is lower than the significance threshold of 23.0 miles, the project would be considered to have a less-than-significant impact.

6 CONT

The DEIR simply adopted the 16.24 number as the "Project VMT rate" with no further discussion.[34] No other information about the CSTDM was included in the DEIR; it is not even cited in the references for the DEIR or the Traffic Impact Study supporting the Transportation analysis.[35] The DEIR and supporting materials provided no information allowing the reader to verify the 16.24 number, and offered no explanation of what a TAZ is, what it purports to measure or why 16.24 miles per employee can simply be adopted as the estimated VMT for the Project. As transportation expert Norman Marshall stated in his DEIR comments, "it is impossible to know how the DEIR arrived at 16.24 as the Project VMT using the CSTDM, because neither the DEIR nor the technical appendices contain any detail, analysis or calculations supporting that figure."[36]

In order to derive the 16.24 miles figure from the model, the City's consultants would have had to run the model by inputting certain assumptions. However, the DEIR provided no explanation of how the model was used or what assumptions were made; its analysis was a black box—a practice prohibited by CEQA.[37] The DEIR therefore provided no basis on which the public could evaluate

[34] *Id.*, Appendix H, pg. 20, Table 10.
[35] *See* DEIR, Appendix H.
[36] Marshall Comments, pg. 8.
[37] *Santiago County Water Dist. v. County of Orange* (1981) 118 Cal.App.3d 818, 831 (CEQA document may not rely on missing information because it "must contain facts and analysis, not just the bare conclusions of a public agency. An agency's opinion concerning matters within its expertise is of obvious value, but the public and decision-makers, for whom the EIR is prepared, should also have

printed on recycled paper

the City's conclusions, or assess whether it was appropriate for the City to compare the results to a regional average VMT derived from a different source based on similarly undocumented calculations.

The FEIR fails to address any of these points. It simply states that the CSTDM "produces performance metrics that are directly comparable to those suggested for use in the OPR Technical Advisory, and accounts for local and regional demographic characteristics including the locations of jobs and housing."[38] This conclusory statement is not further explained or supported, and sheds no light on *how* the model was used to produce a figure of 16.24 miles or whether it is appropriate to compare that figure to the 23.00 miles significance threshold. The FEIR therefore continues to impermissibly rely on hidden analysis, in violation of CEQA.[39]

Finally, we previously pointed out that the California Department of Transportation ("Caltrans"), which developed the CSTDM, includes the following language on the model's home webpage: "[t]he CSTDM provides an advanced tour/activity models to help Caltrans develop and evaluate transportation related policies and programs of projects that best meet our mobility goals. *This model is not an appropriate tool for individual project level analysis.*"[40] Neither the DEIR nor the FEIR even attempt to explain why, despite this admonition, the CSTDM was used as the sole source for estimating this Project's VMT impacts. 6 CONT

The CEQA Guidelines are explicit that, while a lead agency has discretion to choose the most appropriate methodology to evaluate a project's VMT impacts, any assumptions used to estimate VMT "should be documented and explained in the environmental document prepared for the project."[41] The Guidelines expressly apply section 15151's standard of adequacy to the VMT analysis: "the EIR should be prepared with a sufficient degree of analysis to provide decision makers with

---

before them the basis for that opinion so as to enable them to make an independent, reasoned judgment.")

[38] FEIR, pg. 3-320.

printed on recycled paper

information which enables them to make a decision which intelligently takes account of environmental consequences."[42]

The DEIR's VMT analysis complied with none of these CEQA requirements, as there was essentially no analysis and its conclusions relied on wholly unsupported and unexplained assumptions. The FEIR does nothing to rectify these errors. A conclusory discussion of a significant environmental impact can support a court's determination that an EIR is inadequate as an informational document without reference to substantial evidence review.[43] 6 CONT

B. Impacts to Wetlands Remain Significant and Unmitigated.

In her DEIR comments, Ms. Corbin detailed at length the deficiencies in the in the DEIR's wetlands impact analysis and the glaring lack of evidence demonstrating that the proposed wetlands mitigation would be effective. The FEIR fails to adequately address those concerns, as explained at length in Ms. Corbin's FEIR comments.

1. The Wetlands Impact Analysis is Based on an Inaccurate Wetlands Delineation.

As explained in her DEIR comments, Ms. Corbin identified numerous errors in the DEIR's wetlands delineation. These errors mean that there were more wetland areas on the Project site than are reflected in the DEIR and therefore, the wetlands impact analysis was based on inaccurate information. 7

In response, the City acknowledges the wetland delineation errors pointed out by Ms. Corbin, but asserts that the errors "do not undermine the analysis or conclusions in the DEIR" because the DEIR did not rely on the City's consultant's delineation report.[44] Rather, the FEIR claims, wetland impacts were calculated using the United States Army Corps of Engineers ("Corps") Approved Jurisdictional Determination ("AJD") dated October 25, 2016. However, the FEIR fails to mention that the Corps' 2016 AJD used the information provided by City as the basis for their review; the Corps did not catch the errors and incorporated them into the AJD.[45] The fact that the Corps carried the City's errors into its AJD doesn't change

[42] 14 CCR § 15064.3(b)(4), 14 CCR § 15151.
[43] *Sierra Club v. County of Fresno* (2018) 6 Cal. 5th 502, 514.
[44] FEIR, pg. 3-297.
[45] Corbin FEIR comments, pg. 2.

printed on recycled paper

the fact that the DEIR's CEQA analysis is based on an admittedly inaccurate wetlands delineation, and that there are more wetlands on the Project site than assumed in the DEIR. This is especially relevant because two of the locations that clearly meet wetlands criteria but were not delineated as wetland appear to be in areas in which the Project proposes to "create" wetland for Project mitigation.[46] And, as Ms. Corbin points out, "[i]ncorrect identification of the existing site wetlands will carry the inaccuracies through to the functional assessment (wetlands won't be evaluated), buffer impact analysis (buffers won't be assigned if wetlands aren't mapped), and the mitigation strategy (wetlands cannot be considered in mitigation sequencing if not identified)."[47]

2. The Wetlands Analysis is Incomplete as the DEIR failed to Include a Proper Functional Assessment.

In her DEIR comments, Ms. Corbin explained that the DEIR failed to include a functional assessment of the Project site's existing wetlands and therefore no functional impact analysis was performed (nor is such an analysis possible absent the assessment.) In the FEIR, the City claims that functional assessments were in fact conducted for the Project site because the City completed a rare plant survey and evaluated the site for presence of wildlife species.

7
CONT

The FEIR response fails to resolve the underlying problem. While these surveys can be used as part of a comprehensive functional assessment of the Project site's wetlands, they do not by themselves constitute a complete and proper functional assessment. Vegetation and wildlife habitat are two characteristics of a wetland but do not comprise all components of a wetland's ecological condition, function or value. An organized assessment framework is needed to allow a consistent evaluation of a wetland's attributes and to provide a basis on which to evaluate impacts and necessary mitigation.

According to Ms. Corbin, some of the elements of a formal functional assessment that are missing from the DEIR (and FEIR) include "organized analyses (not simply observational statements) related to the wetlands' hydrology (e.g., water sources, hydroperiods, hydrologic connectivity), buffer and landscape (e.g., buffer width and condition), physical structures (e.g., topographic complexity) typical of vernal pool and seasonal depressional wetlands, plant community interspersion,

[46] *Id.*
[47] *Id.*

printed on recycled paper

and assessment of anthropogenic stressors."[48] Without a formal functional assessment of the Project's wetlands, the Project's impacts simply cannot be accurately analyzed, nor can appropriate mitigation be devised or evaluated. This is a fatal flaw in the FEIR's wetlands analysis and mitigation which must resolved in a revised and recirculated EIR.

3. There is No Substantial Evidence Supporting the Efficacy of the Proposed Wetlands Mitigation.

As discussed above, the FEIR's lack of a proper functional assessment precludes both an analysis of wetland impacts and identification of appropriate mitigation—if existing wetlands functions are not accurately characterized, those functions cannot be replaced through mitigation. The wetlands mitigation measures proposed in the DEIR included a number of performance standards (e.g., MM-BIO-3d). However, as Ms. Corbin previously commented, without a complete understanding of the impacted wetlands' functions, there is no basis for establishing mitigation goals and performance standards. Beyond this threshold issue, Ms. Corbin identified a number of additional deficiencies that prevents the City from concluding that the Project's wetlands impacts can be adequately mitigated.[49] 7 CONT

The FEIR fails to resolve these issues. Ms. Corbin's comments on the FEIR explain that a quantitative analysis of the sources of water for the Project site's wetlands is essential to design proper on-site wetland mitigation. Without a pre- and post-Project water budget analysis, there is no basis to assume that there is sufficient hydrology to create the additional wetlands necessary to mitigate the Project's impacts. Nor can it be shown that creation of new wetlands in the proposed wetland preserve will not impact the remaining existing wetlands. The FEIR concedes that a water budget analysis is necessary to ensure that the position of created/established wetlands in the mitigation area do not indirectly impact the hydrology of existing preserved wetlands.[50] However, such an analysis will not be performed until later, as part of the Wetlands Mitigation and Monitoring Plan to be submitted to the Regional Water Quality Control Board ("RWQCB"). Such deferred analysis of these potentially significant impacts violates CEQA.[51]

[48] Id, pg. 3.

[51] *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 307.

printed on recycled paper

Ms. Corbin describes the importance of functional, vegetated wetland buffers, which are intended to reduce wetland impacts from adjacent uses. Buffers protect wetland functions by providing a visual and noise screen from adjacent land uses, protect wetlands from direct physical impacts, remove sediments and contaminants from upland sources and provide upland habitat support to terrestrial, semi-aquatic and wetland-dependent species.[52] The FEIR fails to even identify minimum buffer widths for the proposed wetland preserve, and suggests that the presence of bioretention basins adjacent to the preserve would provide adequate buffer protection. However, these stormwater ponds would not provide a visual or noise screen, would not provide upland habitat and would introduce disturbance (e.g., maintenance) directly adjacent to the preserve. Without identified buffer widths, there is no basis on which to assume that the wetland preserve will not suffer degradation by the adjacent development and wetland functions will be diminished.

The City maintains that wetland buffer widths will be determined later by the RWQCB. However, without that information wetland impacts cannot be properly analyzed, nor can the adequacy of the proposed mitigation be assessed. 7 CONT

C. Impacts to Biological Resources Remain Significant and Unmitigated.

Biological resources expert Scott Cashen identified numerous ways in which the DEIR lacked substantial evidence supporting its biological resources impacts analyses and related conclusions regarding the efficacy of mitigation measures. As detailed in his attached FEIR comments, Mr. Cashen explains how the FEIR largely fails to resolve these issues, and that numerous impacts remain significant and unmitigated. For example, Mr. Cashen describes the ongoing deficiencies in the City's analysis of wildlife habitat on the Project site, especially with respect to wetlands, and the lack of evidence supporting the City's analysis of impacts to special status species Swainson's hawk and golden eagle and the resulting failure to adopt mitigation for these species.

1. The FEIR Does Not Include a Functional Assessment of the Project Site's Existing Wetlands or Assess the Ability of the Proposed Wetland Preserve to Provide Habitat.

Mr. Cashen's DEIR comments echoed Ms. Corbin's criticism that the DEIR failed to include a functional assessment of the Project site's wetlands, without

[52] Corbin FEIR Comments, pgs. 4-5.

printed on recycled paper

which the City cannot perform an adequate impact analysis or craft appropriate mitigation. The FEIR's response states: "[f]unctional assessments were conducted to determine plant and animal communities supported on the project site, and these functional assessments were then used in the impact analysis and subsequent mitigation requirements."[53]

As explained in detail above and in Ms. Corbin's FEIR comments, the City has not yet performed an adequate functional assessment of the on-site wetlands. In claiming that such an assessment was done, the FEIR refers to the DEIR's discussion of a rare plant survey and evaluation of the site for presence of specific wildlife species. The FEIR states that "seasonal wetlands provide wildlife with a seasonal water source that supports various animal species during the winter and spring months and sometimes into the early summer. Amphibians will lay their eggs in seasonal wetland habitats and complete much of their life cycle in the wetlands. No Name Creek would be considered a wildlife corridor, but the property is nearly entirely surrounded by development so the extent of wildlife corridors on the property is limited."[54] While these generic statements describe activities and observations that may comprise part of a functional assessment, they are not sufficient.

7
CONT

As Mr. Cashen points out, there is still no discussion in the FEIR of the importance of the wetlands as habitat to the observed migratory waterfowl and shorebirds. At a minimum, the DEIR should have identified: "(a) the specific animal species that use the wetlands as a seasonal water source and the functions the wetlands fulfill for those animals (e.g., provision of food resources, sheltering, courtship and pair formation); (b) the specific amphibian species that use the on-site wetlands as habitat; and (c) the species that use No Name Creek as a wildlife corridor."[55] The FEIR's continued reliance on a few plant and animal surveys does not address the lack of a full functional assessment.

Mr. Cashen also explained in his DEIR comments how the proposed wetlands preserve would function as a "habitat island" surrounded by industrial development, which significantly limits its value as wildlife mitigation habitat. The FEIR responds "[a]s shown in Draft EIR Exhibit 3.3-3, the Wetland Preserve would contain No Name Creek, which is hydrologically connected to the Napa Logistics Park Wetland Preserve to the north. It would also be contiguous to wetland areas

[53] FEIR, pg. 3-310.
[54] DEIR, pg. 3.3-3.
[55] Cashen FEIR comments, pg. 8.

printed on recycled paper

within the Biaggi Bros. property to the west. Thus, the commenter's claims that the Wetland Preserve would be an island are his opinion not supported by evidence."[56] These statements are directly contradicted by the City's own DEIR, as quoted above, stating that "the property is nearly entirely surrounded by development so the extent of wildlife corridors on the property is limited." Mr. Cashen further provides substantial evidence showing the *lack* of hydrologic connectivity to the nearby Napa Logistics Park and Biaggi Bros. wetlands.[57] There remain significant questions regarding the proposed wetland preserve's ability to provide wildlife habitat, as explained in detail and supported by substantial evidence cited by Mr. Cashen. The FEIR fails to resolve these questions. 7 CONT

2. The FEIR Fails to Adequately Assess Impacts to Swainson's Hawk and Golden Eagle.

As originally documented in the DEIR, special status species Swainson's Hawk and golden eagle have been observed foraging on the Project site. However, the DEIR concluded without substantial evidence that that the Project would not result in significant impacts to foraging habitat, nor affect the nesting populations of Swainson's hawk or golden eagle near the Project site either directly, indirectly or cumulatively and further concluded that no mitigation was warranted for loss of foraging habitat for these species. Mr. Cashen's DEIR comments explained in detail how the City's impact analysis was unsupported by substantial evidence. The FEIR fails to address these errors. Impacts to these special status species therefore remain potentially significant and unmitigated. 8

Mr. Cashen previously commented that, as an initial matter, the City's efforts to identify the extent of Swainson's hawk nests near the Project site were completely inadequate. The FEIR responded by pointing out that its consultants conducted two surveys to analyze impacts to Swainson's hawk, and drove 10 miles of local roads surrounding the Project site to look for nests. This does not resolve the issue raised by Mr. Cashen, as none of these activities adhere to Swainson's hawk survey protocol, which recommends three surveys in each of three discrete time periods between March 20 and July 30.[58] Moreover, the City's consultants failed to detect an active Swainson's hawk nest located 0.8 miles north of the Project

[56] FEIR, pg. 3-310.
[57] Cashen FEIR comments, pgs. 8-9.
[58] Cashen FEIR comments, pg. 13.

printed on recycled paper

site (within the area the City claimed to survey); this nest was detected just two days after one of the City's two surveys.[59]

Mr. Cashen also provides substantial evidence rebutting the FEIR's continued (unsubstantiated) assertion that there are but a limited number of Swainson's hawk records within a 10-mile radius of the Project site, and provides evidence directly rebutting the FEIR's unsupported assertion that "[t]he closest known nesting record for Swainson's hawk as reported in the CNDDB is a nest site last active in 2008 (CNDDB Occurrence No. 1718) located approximately 2.1 miles north of the Project Site." Mr. Cashen cites evidence of 18 records of active Swainson's hawk nests between 2017 and 2022 within 10 miles of the Project site.[60] The FEIR's ongoing incorporation of demonstrably false information on Swainson's hawk nest site is a crucial flaw, as that information formed the foundation of the DEIR's original impact analysis and conclusion that compensatory mitigation is not warranted. The FEIR repeats the false assumption that there is ample foraging habitat for the "limited number" of known Swainson's hawks to occur within 10 miles of the Project site. Mr. Cashen's FEIR comments again explain, supported by evidence, why this assertion is untrue and why compensatory mitigation is warranted.[61]

8
CONT

The EIR's golden eagle impact analysis is similarly based on demonstrably faulty assumptions. Mr. Cashen previously commented that because the DEIR failed to incorporate mitigation for the Project's impacts on golden eagle habitat, potentially significant impacts on the species remain unmitigated. The FEIR responded in part that while the Project would remove some foraging area for this species, it would also provide and preserve in perpetuity approximately 45 acres of open space that would include habitat "currently suitable" for foraging by the golden eagle, as indicated by the observation of a golden eagle foraging on the site in spring 2021."[62] Mr. Cashen identifies several flaws with the FEIR's responses.

First, the FEIR assumes that development of the Project (which would reduce more than 200 acres of open space to 45 acres) would not alter habitat quality for the golden eagle. Mr. Cashen explains that "[b]ecause golden eagles require large patches of habitat that are relatively isolated from human disturbance, there is virtually zero possibility that golden eagles will forage in a 45-acre patch of habitat

[59] *Id.*
[60] *Id.,* pg. 14.
[61] Cashen FEIR Comments, pgs. 12-17.
[62] FEIR, pg. 3-312.

printed on recycled paper

that is bisected by a major road and surrounded by industrial development."[63] The fact that a golden eagle was foraging at the 208-acre Project site in spring 2021—before construction of this Project or adjacent projects—is not evidence that golden eagles will forage at the 45-acre preserve after the Project is developed.

Second, as explained by Mr. Cashen, breeding golden eagles occupy and aggressively defend discrete territories, often for many decades. When territory is eliminated by development, this results in a net loss in the reproductive potential of the local population, as under most circumstances the pair cannot simply establish a new territory. Accordingly, even assuming there is additional nearby golden eagle foraging habitat, a territorial pair associated with foraging habitat at the Project site cannot merely move to nearby habitat as it will be aggressively defended by eagles occupying that space.[64] 8 CONT

Finally, Mr. Cashen points out that the FEIR makes the same unsupported assumption that there are a limited number of golden eagle records within a 10-mile radius of the project site, and therefore concludes that there is sufficient foraging habitat in and within the vicinity of the Project site. This determination is unsupported because the DEIR failed to establish the number of golden eagle records within 10 miles, nor did it establish the amount of foraging habitat needed to maintain golden eagle territories in the vicinity of the Project site. In order to support these claims, the City would have had to perform protocol-level surveys or obtain data from the USFWS's Eagle Permit Coordinator,[65] neither of which was done here. The FEIR does nothing to rectify these shortcomings, and the conclusion that the Project's impacts to the golden eagle remain unsupported by substantial evidence.

IV. THE CITY MAY NOT MAKE THE NECESSARY FINDINGS TO APPROVE THE TENTATIVE PARCEL MAP AND DESIGN PERMIT.

9

Approval of the Design Permit for the Project requires that the City make certain findings, including that the Project complies with all applicable General Plan policies.[66] Additionally, the City may not approve the Project's Tentative Parcel Map if it finds that the design or improvement of the proposed subdivision is

[63] Cashen FEIR Comments, pg. 18.
[64] *Id.*
[65] *Id.*
[66] American Canyon Municipal Code § 19.41.050 C.

printed on recycled paper

not consistent with the City's General Plan,[67] that the design or proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat,[68] or that the design or improvements are likely to cause serious public health problems.[69]

As discussed above and in the accompanying expert comments, the DEIR failed to disclose, analyze or effectively mitigate the Project's potentially significant impacts on air quality, public health, biological resources and transportation, and the FEIR fails to resolve these deficiencies. These impacts create inconsistencies with General Plan polices which the FEIR fails to resolve. As a result of these inconsistencies, the City is unable to make the necessary findings to approve the Project's local land use permits.

As an initial matter, the City may not make the required finding, pursuant to Municipal Code section section18.20.055 F., that the Project will not be materially detrimental to the general health, safety or general welfare of the public and residents in the vicinity of the Project. As discussed above, the Health Risk Assessment performed for the Project has serious flaws which prevent it from adequately analyzing health risks to sensitive receptors from the Project's air emissions. 9 CONT

The City is precluded from making required findings pursuant to Municipal Code sections 19.41.050 C (for approval of a Design Permit) and 18.20.055 B (for approval of the Tentative Parcel Map) because it cannot find that the Project complies with and is consistent with applicable General Plan policies. Our analysis of the FEIR reflected in these comments show that the Project fails to comply with several key policies in the General Plan, including the following.

(a) Circulation Element. Guiding Policy 1.11 calls for the reduction of total vehicle miles traveled by City residents, and Policy 1.24 states that new development will be responsible for mitigation of transportation impacts. As explained in detail above, the FEIR's VMT analysis remains completely unsupported and does not demonstrate that the Project will reduce VMT as compared to existing averages. Because the City has failed to demonstrate that the

[67] American Canyon Municipal Code § 18.20.055 B.
[68] American Canyon Municipal Code § 18.20.055 E.
[69] American Canyon Municipal Code § 18.20.055 F.

printed on recycled paper

Project's VMT impacts will be less than significant, the City cannot make the required finding of consistency with the General Plan's Circulation Element.

(b) Natural and Historic/Cultural Resources Element. The General Plan includes several applicable policies with respect to the Project's impacts to biological resources.

- Policy 8.21 provides that land use applications for developments located within sensitive habitats, including riparian habitats or habitats within areas occupied by vernal pools, shall be accompanied by sufficient technical background data to enable an adequate assessment of the potential for impacts on these resources and possible measures to reduce any identifiable impacts. As discussed herein, the FEIR lacks sufficient technical background data to assess impacts to wetlands or to mitigate such impacts because it lacks any lacks any functional assessment of the existing wetlands on the Project site. Moreover, the FEIR completely fails to examine the Project's impacts on foraging habit for several special status bird species.
- Policy 8.31 requires that for developments in wetlands and riparian habitats, retained riparian corridors "shall be protected by an adequate buffer with a minimum 100 foot protection zone…" The Project's proposed buffer zones associated with No-Name Creek and the associated wetlands are not discussed in the FEIR, the DEIR or supporting technical documents, nor are they labeled in figures. Using the figure scales strongly suggests that buffer widths adjacent to Project development will be less than 100 feet in many places.[70]
- Policy 8.41 requires that development plans incorporate all reasonable mitigation measures to avoid significantly impacting vernal pools. As discussed herein, the FEIR's lack of a functional assessment of the Project site's wetlands, including vernal pools, makes it impossible to evaluate the efficacy of the proposed mitigation measures.
- Policy 8.42 requires preservation, where possible, of the habitat of rare, threatened or endangered species, specifically including the northern harrier and golden eagle. Both of those species have been observed foraging at the Project site, and as discussed in detail above, the FEIR fails to evaluate the loss of foraging habitat, let alone make any efforts to preserve such habitat.

9 CONT

[70] Corbin DEIR Comments, pg. 8.

printed on recycled paper

- Policy 8.43 encourages activities that improve the biological value and integrity of the City's natural resources through, *inter alia,* control of alien plants. The Project has the potential to introduce invasive plant species and to facilitate their spread.[71] Construction vehicles and equipment are common vectors for transporting invasive plant seeds or spores from one place to another, and soil and vegetation disturbance associated with construction creates suitable conditions for establishment of invasive plants.[72] The FEIR fails to include any mitigation to minimize the Project's potential to introduce invasive plant species or facilitate their spread.

9 CONT

The FEIR fails to address or remedy these inconsistencies with General Plan policies, and the City accordingly may not make the necessary findings to support the required discretionary approvals for the Project.

V. THE CITY MAY NOT ADOPT THE STATEMENT OF OVERIDING CONSIDERATIONS BECAUSE IT HAS NOT ADOPTED ALL FEASIBLE AIR QUALITY MITIGATION MEASURES.

The City proposes to adopt a statement of overriding considerations for the Project's significant and unavoidable air quality impacts as the Project's emissions would exceed the Bay Area Air Quality Management District's ("BAAQMD's") significance thresholds, and because the Project would result in a cumulatively considerable net increase of criteria pollutants. Before an impact can be declared significant and unavoidable, the lead agency must first adopt all feasible mitigation measures to reduce the impact to the greatest extent feasible, and must provide a detailed, evidence-based response to feasible mitigation recommended by commenters when such measures would substantially lessen an environmental impact.[73]

10

In his DEIR comments, air emissions expert James Clark recommended a number of mitigation measures to reduce the Project's operational air emissions, including:

[71] Cashen FEIR Comments, pgs. 23-25.
[72] *Ibid.*
[73] Pub. Res. Code § 21081; 14 CCR §15093; *Covington v. Great Basin Unified Air Pollution Control District* (2019) 43 Cal.App.5th 867, 879-883.

printed on recycled paper

- Include contractual language in tenant lease agreements that requires all TRUs entering the project site be plug-in capable.
- Include contractual language in tenant lease agreements that requires future tenants to exclusively use zero-emission light and medium-duty delivery trucks and vans.
- Include contractual language in tenant lease agreements requiring all TRUs, trucks, and cars entering the Project site be zero-emission.
- Include contractual language in tenant lease agreements that requires all heavy-duty trucks entering or on the project site to be model year 2019 or later, expedite a transition to zero emission, and be fully zero-emission beginning in 2030.

The FEIR declines to adopt any of these measures, claiming that they are infeasible because the Project's users (tenants) are unknown at this time and that it would be speculative to include such restrictions. The FEIR also claims that imposing "onerous requirements" on future unknown users could put the project at a competitive disadvantage by limiting the universe of potential future end users.

10 CONT

The FEIR fails to explain why the fact that the Project's future tenants are unknown makes the proposed restrictions infeasible. Nor is the FEIR's assertion a reasonable one because the Project includes other mitigation measures that regulate the use of equipment of future users of the Project site. For example, MM AIR-2d requires that the applicant certify that the truck fleet utilizing the Project's warehouses meet or exceeds model year 2014 for all heavy duty trucks during the operation of the Project. The owners of these future truck fleets are currently unknown, yet the City found this to be a feasible mitigation measure.

The FEIR also fails to explain why the proposed mitigation measures are "onerous" or to provide any support for the contention that such requirements "could" put the Project at a competitive disadvantage. The FEIR's "conclusory statements unsupported by factual information" do not suffice as adequate responses to the proposed mitigation.[74] CEQA requires good faith, reasoned analysis in response,[75] which the FEIR fails to provide. Because the City failed to adopt all feasible air quality mitigation, it cannot adopt the proposed statement of overriding considerations.

[74] 14 CCR §15088(c).
[75] *Covington*, 43 Cal.App.5th at 879.

printed on recycled paper

VI. CONCLUSION

For the foregoing reasons, the Commission should not recommend certification of the FEIR, nor approval of the Design Permit and Tentative Parcel Map. The Commission should direct that the City revise and recirculate the EIR with a full analysis of the Project's potentially significant impacts and propose appropriate mitigation. Thank you for your attention to these comments. Please include them in the record of proceedings for the Project.

11

Sincerely,

Richard M. Franco

EXHIBIT A

SHANNON & WILSON

November 16, 2022

Mr. Richard M. Franco
Adams Broadwell Joseph & Cardozo PC
601 Gateway Blvd., Suite 1000
South San Francisco, CA 94080

RE: WETLAND REVIEW OF FINAL ENVIRONMENTAL IMPACT REPORT, GIOVANNONI LOGISTICS CENTER, CITY OF AMERICAN CANYON, CALIFORNIA

Dear Mr. Franco:

This letter outlines our responses to the City's Responses to Written Comments in the Final Environmental Impact Report (FEIR) (State Clearinghouse Number 2021010104) for the Giovannoni Logistics Center Project (Project) in City of American Canyon (City), Napa County, California.[1] 1

COMMENT RESPONSE

This letter uses the same comment numbering system (e.g., S&W-5a) established in the FEIR by the City in responding to the written comments provided in our first review report, Water Resources Review of Draft Environmental Impact Report (DEIR), Giovannoni Logistics Center (enclosed).[2] 2

Comment Response to S&W-5b – Wetland Delineation Errors

The City acknowledges that errors within the 2016 Monk & Associates (M&A) Wetland Jurisdictional Delineation Report[3] resulted in wetland areas that were erroneously identified as upland areas (specifically at DP-40, -98, -105, and -110). The City posits that although 3

[3] Monk and Associates (M&A) 2016, Request for a confirmed/approved jurisdictional determination aquatic resources delineation report, Giovannoni property, City of American Canyon, Napa County, California: Report prepared by Monk and Associates, Walnut Creek, Calif., for Albert D. Giovannoni Trust, Napa, Calif., August, 308 p.

they included the M&A report in the DEIR to document existing conditions, that the errors are inconsequential because the wetland impact quantifications were based on the U.S. Army Corps of Engineers (USACE) Approved Jurisdictional Determination (AJD). However, the AJD incorporated the erroneous delineation provided by M&A. The USACE used the information the M&A report provided as the basis for their JD review, but did not catch these errors. The City acknowledges that the delineation provided to the USACE was incorrect; therefore, the DEIR's wetland analysis is based on an inaccurate delineation. This is particularly relevant because two of the locations that clearly meet wetland criteria but were not delineated as wetland (DP-40 and DP-110) appear to strongly coincide with the areas the Project proposes to "create" wetland for Project mitigation. Incorrect identification of the existing site wetlands will carry the inaccuracies through to the functional assessment (wetlands won't be evaluated), buffer impact analysis (buffers won't be assigned if wetlands aren't mapped), and the mitigation strategy (wetlands cannot be considered in mitigation sequencing if not identified). 3 CONT

Comment Response to S&W-5c – Expired Approved Jurisdictional Determination (AJD)

The City provided new information regarding the USACE AJD, namely that the USACE changed the AJD date to October 25, 2021. Other than stating this information was relayed in a phone call, no documentation of the new AJD was provided. Wetland boundaries change over time based on changing site conditions, which is why the USACE considers wetland delineations valid for only 5 years after a delineation is confirmed. If the USACE had been made aware of the errors in the previous delineation, it seems unlikely that they would have extended the AJD for a second 5-year period without further review. The City should have been more forthright with the USACE on their knowledge that there were errors in the delineation prior to asking for an extension of the AJD. 4

Comment Response to S&W-6a – Construction Phasing Assumption

In our DEIR review, we identified a statement in DEIR Section 2.3.13 that said, "For the purposes of providing a conservative, worst-case scenario, this Draft EIR assumes that Phase 1 and Phase 2 would be developed concurrently over a period of 18 months." We commented that concurrent construction would not be the "worst-case scenario" because sequential or spaced-out construction would increase construction-related impacts to aquatic resources. In the City's response to this comment, they assert that the DEIR's assumption that concurrent construction of the Project Phase 1 and Phase 2 being a "worst-case scenario" is a function of the total wetland impacts and is not related to the 5

number of months construction would take place. However, this is in direct contradiction to DEIR Section 2.3.13 quoted above. In their response, the City further states that "a prolonged construction period that extends beyond 18 months would not increase construction related impacts." However, the inherent impacts and risks associated with construction, such as construction noise disturbance and risk of spills (e.g., hydraulic line breaks) are directly correlated to the duration of construction. A shorter construction window will result in a shorter impact window and less chance of a spill occurring than that of a longer construction project.

5 CONT

Comment Response to S&W-6b – Absent Functional Assessments

The City erroneously states that functional assessments were conducted for the site wetlands because the Project completed a rare plant survey and evaluated the site for presence of specific wildlife species. These surveys can be used in conjunction with a complete functional assessment, such as California Rapid Assessment Method for Wetlands to assess the Project areas wetlands' condition, but do not constitute a functional assessment of the site wetlands. Vegetation composition and wildlife habitat are two characteristics of a wetland, but they do not make up all of the components of a wetland's ecological condition, function, or value. Use of an organized assessment framework allows a consistent evaluation of a wetland's attributes and a basis upon which to evaluate impacts and associated mitigation. Elements of a formal functional assessment that are missing from the DEIR and FEIR include organized analyses (not simply observational statements) related to the wetlands' hydrology (e.g., water sources, hydroperiods, hydrologic connectivity), buffer and landscape (e.g., buffer width and condition), physical structures (e.g., topographic complexity) typical of vernal pool and seasonal depressional wetlands, plant community interspersion, and assessment of anthropogenic stressors.

6

The City cites and acknowledges that the Regional Water Quality Control Board (RWQCB) requires a formal functional assessment to provide appropriate and adequate mitigation[4] but relies on the future RWQCB review and permit process to meet the current needs under the California Environmental Quality Act (CEQA). The missing functional assessments means that the Project's environmental impacts cannot be fully identified and that therefore the proposed mitigation cannot assume to result in a no-net loss of wetland function.

[4] FEIR 3-299

Comment Response to S&W-7 – Wetland Impact Inconsistencies

The City states that the DEIR impact calculation of 189 square feet (sf) of Wetland W-89 is correct, that construction fill will avoid 6 square feet of Wetland W-89, and that they are therefore only mitigating for the 189 sf of Wetland W-89 impact. It is nonsensical to state that filling 97% of a small, 195-square-foot wetland would not have any impact on the remaining 3%, or 6 square feet. The remaining portion of Wetland W-89 will no longer perform functions as it did when part of the larger wetland unit and depending on topography along the wetland margin (where the 6 sf of "unimpacted wetland" is likely located), may lose the ability retain hydrology and therefore would likely not remain as wetland. The Project should include the entirety of Wetland W-89 in its impact analysis. 7

Comment Response to S&W-8 – Indirect Hydrologic Impacts

Regarding the lack of documentation addressing indirect hydrologic impacts to unimpacted site wetlands, the City describes general site topography and suggests that lack of quantitative information regarding site wetland water budgets does not affect the quality of the DEIR analysis. The City then acknowledges that a water budget is needed to ensure that the proposed created wetlands do not indirectly impact the existing wetlands, but the budget has not been completed. We maintain that without a quantitative analysis of wetland hydrology sources, there is no basis to assume that constructing the development immediately adjacent to the site's wetlands will not result in indirect hydrology impacts. Furthermore, the DEIR has not shown that there is sufficient hydrology to create additional wetlands, which is key to mitigating wetland impacts and functional loss of the wetlands. 8

Comment Response to S&W-9 – Wetland Water Quality Imapcts

9

The City clarifies that the wetland preserve will not serve as water quality treatment for the Project's stormwater discharge. No further comment.

Comment Response to S&W-10a, 10b, and 10c – Inadequate Buffer Widths

10

Functional, vegetated, wetland buffers are intended to reduce wetland impacts from adjacent land uses through physical, chemical, and/or biological processes. Buffers protect wetland functions by providing a visual and noise screen from adjacent land use; protect from direct physical impact; remove sediments and contaminants from upland sources; and

provide upland habitat support to terrestrial, semi-aquatic, and wetland-dependent species, facilitating wildlife movement through the landscape.[5]

The Phase 1 Project, does not identify even minimum buffer widths associated with the proposed wetland preserve and suggests that the presence of the periodically maintained bioretention basins adjacent to the preserve would provide adequate buffer protection to the wetland preserve. However, the stormwater ponds would not provide a visual or noise screen, would not provide upland habitat, and would introduce disturbance (maintenance) adjacent to the preserve. In addition, no buffers have been identified on the wetland preserve on the Phase 2 portion of the Project site.

Buffer effectiveness in protecting wetland functions is increased by larger and vegetated buffers that are permanently protected.[6] The City not only fails to identify any minimum buffer width associated with the proposed wetland preservation, but limits future buffer protection by placing stormwater infrastructure adjacent to the proposed preserve boundary. The buffers associated with the unimpacted IW-7, -8, -9, and -10 will be designated landscape areas, vulnerable to future disturbance. Without stated buffer widths, there is no basis on which to assume that the wetland preserve will not be degraded by the adjacent development and land use and that significant indirect wetland impacts will not occur. Furthermore, without adequate wetland buffers, wetland functions will be lost in the preserved wetlands and will diminish the potential functions that may be achieved in the proposed created wetlands. 10 CONT

The City states that wetland buffer widths will be determined in the future by the RWQCB. However, CEQA requires that the Project mitigate significant environmental impacts to a less than significant level; this determination is not supported because the processes to identify protections required to mitigate environmental impacts have yet to occur.

Comment Response to S&W-11 – Indirect and Cumulative Impacts

The City states that the proposed wetland preserve is surrounded on all four sides by commercial development[7] and that therefore significant impacts to wetland function will 11

[5] Kihslinger, Rebecca L.; McElfish, James M. Jr.; and Nichols, Sandra S., Planner's guide to wetland buffers for local governments (2008). KIP Data Sets and Technical Reports. 106. https://digitalcommons.usf.edu/kip_data/106

[7] FEIR 3-302

not occur. While the proposed location of the wetland preserve is flanked on the west, north, and east by the land uses and developments described in the FEIR, the southern boundary is adjacent to a broad swath of undeveloped land ranging from approximately 800 feet to over 1,500 feet. The proposed Phase 1 development brings the noise, light, and traffic described in the FEIR adjacent to the proposed preserve, reducing the existing 800 to 1,500-foot buffer to an undisclosed distance, but based on Project drawings, appears to be less than 100 feet. We are left to assume that the Phase 2 development may also propose development adjacent to the proposed preserve on the west side of the site. Refer to response in S&W 10-a -b, and -c above describing environmental impacts associated with lack of appropriate buffers and the resulting unmitigated loss of wetland functions. 11 CONT

Regarding cumulative impacts, the City identifies the Project's contribution to continued fragmentation and loss of grassland and wetland habitat for resident and migratory wildlife, including federal and state listed species and then refers broadly to all of the minimization measures in DEIR Section 3.3. Fragmentation and loss of habitat will have direct impacts on listed species that may be minimized through some measures, but because of the flawed analysis, the DEIR has not shown that they have identified or quantified the potential resulting indirect and cumulative impacts.

Comment Response to S&W-12 – Wetland Mitigation

We maintain that without an adequate functional assessment to fully assess Project wetland impacts (see Comment Response to S&W-6b above), the proposed conceptual mitigation cannot be appropriately tailored to provide those impacted functions or mitigate the loss of wetlands. Furthermore, the wetland preservation site has not been shown to be appropriate for wetland creation, a key tenet of their overall mitigation strategy. 12

Comment Response to S&W-13a and b– Mitigation Ratios

In our review of the DEIR, we note that wetland creation, and in particular vernal pool wetland creation, is an inherently high risk mitigation type that warrants a higher mitigation ratio than the proposed 2:1 and 1:1 mitigation to impact ratios proposed for Phase 1 and 2, respectively. The State guidance document, *Staff Report Including the Substitute Environmental Documentation for the State Policy for Water Quality Control: State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (Procedures Staff Report) describes that this is largely due to the importance and difficulty 13

of establishing appropriate hydrology to support the created wetlands, particularly when creation requires supporting structures.[8]

In the FEIR's response to S&W-13a, the City describes findings of soil explorations that indicate a restrictive clay layer is located approximately 12 to 30 inches below ground surface.[9] However, presence of an adequate impervious layer is only one piece of assessing adequate hydrology potential; a complete understanding of existing hydrology and future hydrologic conditions is critical to confirming that the proposed 4.69 acres of created wetland will receive adequate hydrology to meet wetland criteria. The City makes observational statements regarding water sources to the existing Project site wetlands, but provides no quantitative information supporting their assertion that the site will continue to support the existing wetlands given the manipulation of Project site surface water, nor that there will be adequate water to support the creation of an additional 4.69 acres. Although not explicitly stated, if the reader assumes that the proposed detention basin system and outfall is a component of supporting the created wetland system (i.e., a supporting structure), the need for a higher mitigation ratio is called for as outlined in the State's Procedures Staff Report. 13 CONT

Given the lack of quantitative hydrologic data to demonstrate that 4.69 acres of additional wetland can be created, the City's statement that the vernal pools will be fully functioning wetlands within 1 year is not supported and consequently, neither are the proposed mitigation ratios.

Comment Response to S&W-14 – Mitigation Sequencing

Our review of the DEIR found that the City did not provide a description of the required mitigation sequencing process. In the FEIR, the City provides a description of considerations used in establishing the proposed Phase 1 development footprint. No justification is provided for the Phase 2 development, which results in 3.71 acres of wetland impact, including the entirety of Wetland 16, a 3.3-acre wetland. The City's statement that both Phase 1 and Phase 2 designs avoid and minimize wetland impacts is not supported because no design alternatives are provided for Phase 2, nor is a description of the avoidance and minimization measures specific to the Phase 2 development. An alternatives 14

[8] California State Water Resources Control Board (CSWRCB), 2019, Staff report including the substitute environmental documentation, state policy for water quality control: state wetland definition and procedures for discharges of dredged or fill material to waters of the state (rev.): April 2, SCH#2011012009, 253 p., available: https://www.waterboards.ca.gov/press_room/press_releases/2021/staffreport.pdf

[9] FEIR 3-303

analysis is fundamental to avoiding and minimizing wetland impacts. Based on a schematic design analysis of the space available on the Phase 2 site, while focusing on avoidance of the largest 3.3-acre wetland (Wetland 16), it appears that the same available square footage used in the Phase 1 development could be accommodated without directly impacting Wetland 16. The City has not demonstrated why the Phase 2 impacts are unavoidable or cannot at a minimum, be minimized. 14 CONT

Comment Response to S&W-15a – Monitoring Period

Our review of the DEIR found that the City's proposed standard 5-year mitigation monitoring period is insufficient to document successful mitigation implementation. The City suggests that because the USACE's *Draft Mitigation and Monitoring Guidelines for Vernal Pools* is in draft form[10], the supplement's requirement that vernal pools be monitored for 10 years is not applicable. Despite this document being in draft form, it represents best available science and should be utilized as a minimum standard for determining the monitoring period. Regardless, the USACE's *Regional Compensatory Mitigation and Monitoring Guidelines for the South Pacific Division*[11] is finalized and identifies vernal pools as an aquatic resource that warrants longer monitoring than the standard 5 years: "Monitoring periods of more than 5 years are warranted for aquatic resources with slow development rates. Examples of such aquatic resources within the South Pacific Division include vernal pools…" We maintain that the minimum 5-year monitoring period is not adequate to confirm mitigation success, especially given the absence of quantitative hydrologic information that supports the creation of an additional 4.69 acres of wetland. 15

Comment Response to S&W-15b – Performance Standards

We maintain that that without a complete understanding of the impacted wetland functions, there is no basis for establishing mitigation goals and performance standards to document replacement of the lost wetland functions. Further, the performance standards proposed in DEIR are not adequate to verify if the stated mitigation goals have been met. 16

[10] U.S. Army Corps of Engineers (Corps), 2016, Draft mitigation and monitoring guidelines for vernal pools: U.S. Army Corps of Engineers South Pacific Division, November, 23 p., available: https://www.spd.usace.army.mil//Portals/13/docs/regulatory/publicnotices/DVPGL.pdf.

[11] U.S. Army Corps of Engineers (Corps), 2015, Final 2015 regional compensatory mitigation and monitoring guidelines for South Pacific division: January, 70 p., available: https://www.spd.usace.army.mil/portals/13/docs/regulatory/mitigation/mitmon.pdf.

For example, page 3.3-34 of the DEIR states that the mitigation will establish 1.13 acres of vernal pool wetland. By definition, vernal pools must have surface water inundation during the wet season. The performance standard listed in the DEIR does not require documentation of the extent or duration of the wetland hydrology. As written, it requires only 1 data point be documented at each wetland; this would provide insufficient information to prove that vernal pool hydrology is present, especially given the size of the proposed wetland areas, many of which are over 0.5-acre large and two proposed areas are greater than 1 acre. The DEIR performance standard requires a minimum of 0.5-inch of inundation for at least 7 days and/or saturation for at least 14 days and/or at least one primary or two secondary wetland hydrology indicators listed in the USACE Arid West Regional Manual (many of which do not require surface water inundation to be present). This means that the created wetlands could have only saturated soils within the upper 12 inches of soil with no surface water inundation (meeting primary Hydrology Indicator A3 - Saturation), for 5 years in a row, and the performance standard would be met. This example illustrates that the hydrology performance standard as written, would confirm presence of a wetland, but would not confirm presence of vernal pools, meaning that the functions specific to vernal pools would be lost and the performance standards would still be met. Creating vernal pools is a stated goal of their mitigation plan but establishing an appropriate vernal pool hydroperiod is very difficult to achieve. In order to replace lost wetland functions to meet their mitigation requirements the performance standards need to require the information necessary to prove that vernal pools were created. This is another example of how the proposed mitigation does not replace lost functions and does not support a finding of no significant environmental impact.

16 CONT

Comment Response to S&W-15c – Use of Reference Wetland

The City acknowledges that use of reference wetland is required in developing the Project's mitigation plan, and specifically, the performance standards. The City writes:

> "The Draft EIR acknowledges in MMBIO-3d that the Wetland Mitigation and Monitoring Plan shall be prepared in accordance with the California State Water Resources Control Board Procedures. The Procedures require the use of reference aquatic resources, as correctly stated by S&W. Therefore, MM BIO-3d requires, by referencing the Procedures in MM BIO-3d, the use of reference aquatic resources to assist in development performance standards."

17

The City does not clarify if a reference wetland was used in preparing the proposed performance standards in the DEIR so we assume they did not. This is another example of the City's proposed mitigation not adequately demonstrating avoidance of significant environmental impact.

Comment Response to S&W-16 a and b – Buffer Mitigation

Our review of the DEIR identified that the City was not complying with City policy 8.3.1, which states:

> "Where riparian corridors are retained, they shall be protected by an adequate buffer with a minimum 100 foot protection zone from the edge of the tree, shrub, or herb canopy."

In the FEIR, the City argues the policy does not apply to the portion of No-Name Creek on the Project site because there is no existing riparian vegetation, and the area is a seasonal wetland[12]. However, wetlands and streams are not mutually exclusive and herbaceous vegetation is present in the area next to the mapped No-Name Creek, providing riparian vegetation. The City's Biological Habitats Map in their 2019 General Plan identifies an "Other riparian and Blue-Line St[r]eams" area in approximately the northwest corner of the Project site[13]. The M&A delineation report references No-Name Creek in the northwest corner of the Project site and the M&A *Vernal Pool Branchiopod Surveys* report[14] includes a photograph of the creek (Photograph #6) showing significant channelized flow on the Project site. Absence of a No-Name Creek label on the USACE AJD is not a reason to discount its presence, especially given that the stream appears to coincide with the mapped wetlands. The California Department of Fish and Wildlife Geographic Information System (GIS) California Streams data set[15] shows No-Name Creek in the northwest corner of the Project area. In several locations (pages 3.3-29 and 3.3-38) the DEIR states that the entirety of No Name Creek will be incorporated into the wetland preserve. We maintain that the City does not adequately explain why the 100-foot riparian corridor protection zone is not applied to No-Name Creek within the Project site.

New Road and Impacts to Proposed Wetland Preserve

Review of Google Earth aerial photography shows that a road was built across the Phase 2 site, connecting the southern and northern property boundaries (see enclosed New Road and Giovannoni Maps Overlay. The maps were created using ESRI ArcMap by digitizing the new road and the associated earth disturbance footprints shown on Google Earth imagery dated June 2022. We then georeferenced the DEIR Phase 1 Wetland Impact Exhibit 3.3-3 and the Wetland Mitigation Plan Exhibit 3.3-4 to overlay the new road disturbance footprints with these DEIR exhibits. Given the methods used in creating the enclosed overlay figures, the representation is approximate; however, the road clearly cuts through the proposed wetland preserve area, comes very close to directly impacting the existing wetlands within the wetland preserve and may have indirectly impacted these wetlands by cutting off wetland hydrology. Additionally, the earth disturbance footprint extends into the wetland preserve in areas proposed for wetland creation. 19

The new road results in direct and indirect impacts to the wetland preserve, the existing wetland in the vicinity, and No-Name Creek. Based on measurements using the overlay maps, the wetland preserve area has been reduced by approximately 1.5 acres. This 1.5-acre estimate includes the area of the new road within the preserve footprint and the area of the preserve that became disconnected from the body of the preserve as a result of the road construction Additionally, indirect impacts to No-Name Creek and the preserve wetlands are associated with the road, including untreated stormwater runoff (the road appears to be graveled and will contribute fine particulate laden runoff with or without regular use), impact of the wetland buffer within the wetland preserve in the area near the road, and disturbance associated with use such as noise, air pollution, and trash. The heavy equipment used to construct the road compacted the soils within the earth disturbance footprint, limiting root establishment and plant growth in this area. These construction disturbances will make it significantly more difficult to create wetlands in this area as well as replace the lost function of the impacted wetlands.

CONCLUSIONS

As described above, we maintain that the incorrect identification of Project site wetlands and absence of complete functional assessments for the impacted site wetlands result in an incomplete impacts analysis. Also, deficiencies including inadequate buffer widths, absence of quantitative hydrologic data to support wetland creation potential, low mitigation ratios, inadequate hydrologic performance standards, and lack of documented mitigation sequencing for Phase 2 indicate that the City has not provided sufficient information to 20

establish that the proposed mitigation can avoid or minimize the Project's significant environmental impacts.

1 INTRODUCTION

This report summarizes the findings of our water resources reviews of Section 3.03 Biological Resources and Section 3.08 Hydrology and Water Quality of the Draft Environmental Impact Report (DEIR) (State Clearinghouse Number 2021010104), including referenced and supporting material, for the Giovannoni Logistics Center project (Project) in City of American Canyon, Napa County, California (City) (Firstcarbon Solutions, 2022). The reviews focused on adequacy of wetland, groundwater, and stormwater (collectively called water resources) impact analysis and adequacy of the associated proposed mitigation. Independent analyses and assessments have not been performed. This report summarizes the analyses presented in the DEIR and supporting documents upon which the findings of impacts on water resources are based. Depth and extent of review varies by discipline. Descriptions of the specific discipline reviews and the review findings are outlined in the sections below. 3

2 WETLAND RESOURCES REVIEW

2.1 Supporting Documentation

In addition to Section 3.03 of the DEIR, our review of the Project's wetland related impacts and mitigation relied on the following documents: 4

- DEIR Appendix C.1 – Giovannoni Logistics Center Biological Resources Report (Huffman-Broadway Group, Inc., 2021)
- DEIR Appendix C.2 – Monk and Associates 2016 Wetland Jurisdictional Delineation Report (Monk, 2016a)
- DEIR Appendix C.3 – USACE 2016 Wetland Verification Map (Monk, 2016b)
- DEIR Appendix C.6 – Monk 2018 Devlin Road Biological Resources Assessment (Monk, 2018)
- DEIR Appendix C.7 – Monk Green Island Road Widening Biological Resources Assessment (Monk, 2019)

2.2 Wetland Delineation

Project site wetlands were delineated by Monk in April and May of 2016 (Monk, 2016a). The 2016 delineation report states the wetland delineations were completed using the *1987 Corps of Engineers Wetlands Delineation Manual* (U.S. Army Corps of Engineers [Corps], 1987) 5

and the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region (Version 2.0)* (U.S. Army Engineer Research and Development Center [USAERDC], 2008). The delineation methodology described in the Monk 2016 report is consistent with the *State Water Boards State Wetland Definition and Procedures for Discharges of Dredge of Fill Material to Waters of the State* (State Procedures) (California State Water Resources Control Board [CSWRCB], 2019a).

Of the 142 wetland determination data sheets included in the 2016 Monk report, we reviewed 20 representative data sheets for consistency with the Corps manuals identified above, including review of percent vegetative cover and dominant species calculations, species' indicator statuses, and consistency of observed soils with the chosen hydric soil indicators. We found errors in data sheets such as incorrect dominant species identification (Data Points [DPs] 89, 111, and 120), miscalculated absolute percent cover (DPs 42 and 43), and incorrectly identified hydric soil indicators (DP 43), none of which impacted the report's wetland and upland determinations. However, in data sheet DP 110, Monk incorrectly identifies *Helminthotheca echioides* as a Facultative Upland (FACU) species; the Corps 2020 National Wetland Plant List identifies the species as a Facultative (FAC) species in the current Arid West region (Corps, 2020). The Corps' 2014 Arid West Regional Wetland Plant List identified the species as FACU (Corps, 2014), but the Corps 2016 Arid West Regional Plant List incorporated the species' wetland indicator status change to FAC and was published April 28, 2016, making it the correct plant list to reference during the Monk data analysis and report preparation (report dated August 2016). Assigning *H. echiodes* a FAC wetland indicator status changes the findings on DP 110 from upland to wetland condition, meaning that more wetland was present on the project site during the Monk delineation fieldwork than is reflected in the Monk report and DEIR. A search for *H. echiodes* in the remaining wetland determination sheets identified DPs 40, 97, 98, and 105 as locations where application of the species' correct indicator status would change the data sheet finding from upland to wetland. The locations of DP 40 and 110, as shown on the 2016 delineation maps, approximately coincide with two of the areas the Project proposes to create wetland for mitigation of Project impacts (as shown on DEIR Exhibit 3.3-4).

5
CONT

The Monk delineation and Corps Approved Jurisdictional Determination (AJD) is six years old. We reviewed recent Google Earth aerial imagery of the project site during spring and identified areas that appear to demonstrate potential wetland condition that were not identified as wetland in the 2016 Monk report, particularly the area north of No Name Creek (general location of DP 110). Corps AJDs are valid for five years and the Project will need to obtain an updated AJD (Corps, 2016a). The Corps applies the AJD expiration because wetland boundaries are expected to change over time due to both natural (e.g., climate patterns) and human-caused activities (Corps, 2005). Given the age of the delineation, the errors identified in the wetland determination data forms, and the

associated potential for revised wetland extents, it is likely that the wetland boundaries are not accurately identified, and additional wetland is present on the site. 5 CONT

2.3 Wetland Impacts

The DEIR states that the Project's Phases 1 and 2 will impact 0.496 acre and 3.7 acres, respectively, of wetland and notes that Phase 2 wetland impact quantities may change as design progresses. Our review covered the adequacy of the wetland impact analysis presented in the DEIR and supporting documents.

One of their main assumptions used to support the basis of the Project's impact analysis is not supported. The DEIR Project Description Section 2.3.13 states, "For the purposes of providing a conservative, worst-case scenario, this Draft EIR assumes that Phases 1 and 2 would be developed concurrently over a period of 18 months." However, a prolonged construction schedule that extends beyond 18 months and instead extends over several years (e.g., multiple nesting seasons and multiple "rainy seasons") increases the potential for construction-related impacts to aquatic resources (e.g., water quality issues and in-air construction noise). The DEIR does not explain or support their assumption. 6

The DEIR does not include a functional assessment of the site wetlands and no functional impact analysis is provided. Wetland impact analyses are incomplete without a functional assessment that evaluates hydrologic, water quality, and habitat functions of the site wetlands. Functions typical of vernal pool and other seasonal wetlands, such as those on the Project site, typically include providing rest and forage for migratory waterfowl along the Pacific Flyway; breeding habitat for amphibians and invertebrates; flood storage potential; and filtration of pollutants and excess nutrients from surface water and groundwater. The DEIR states that a functional assessment, such as the California Rapid Assessment Method, will be completed with the Project's Wetland Mitigation and Monitoring Plan. As described below in Section 2.4, the Project's proposed wetland mitigation cannot be deemed adequate without including consideration of impacted and mitigated wetland functions.

2.3.1 Wetland Impact Inconsistencies

Our review identified several discrepancies between the DEIR and supporting documents.

In comparing the itemized wetland impact areas in DEIR Table 3.3-1 with the wetland areas in the 2016 Monk report, we noted that the Project proposes to impact 189 square feet of Wetland W-89 while the Monk report quantifies W-89 size as 195 square feet, a discrepancy of 6 square feet. Although this does not change the Phase 1 impact quantity when converted to acres, the Project should count the entirety of the wetland as impacted. 7

We identified inconsistencies in the position and presence of Wetland IW-9 in the 2016 Monk report delineation figure and the AJD and DEIR wetland figures. In the 2016 Monk report, Wetland IW-9 is a 2,625-square-foot isolated linear wetland in the southeast portion of the project area that would partially coincide with or be immediately adjacent to the Project development footprint (DEIR Appendix C, p. C-129). The 2016 Monk report also includes Wetland IW-9 in its Attachment A Table of Aquatic Resources. However, the wetland is absent from the Monk October 2016 Confirmed Aquatic Resources Delineation Map/USACE 2016 Wetland Verification Map (DEIR Appendix C, p. C-419) and the wetlands are re-numbered accordingly. The wetland's absence is carried through in the DEIR figures and analysis. There is no wetland determination data sheet to support the wetland's inclusion or exclusion and no discussion of the change in the DEIR or supporting documents. It is not clear if the omission was purposeful or an oversight; however, IW-9, as originally shown in the 2016 Monk report, is not included in the DEIR impact analysis.

7 CONT

The DEIR Exhibit 3.3-3 includes Wetland W-90 within the Project footprint and excludes it from the proposed wetland preserve. However, there is no discussion of direct or indirect impacts to W-90 included in the DEIR.

2.3.2 Indirect and Cumulative Impacts

2.3.2.1 Hydrology Impacts

The DEIR states underground piping will convey stormwater from the Project's new pollutant generating impervious surfaces to bioretention and detention basins on the north boundary of the development. The DEIR Exhibit 3.3-4 identifies "passive or active control device to allow treated stormwater to enter the [created] wetland swale." However, the Project documents do not identify how site drainage patterns to and hydrology sources in the unimpacted wetlands will be maintained. Without pre-Project and post-Project water budget analyses for the site wetlands, their determination that additional wetlands will not be impacted is not supported.

8

2.3.2.2 Water Quality Impacts

The Project proposes use of a specialized biosoil in the bioretention facility to remove pollutants. However, DEIR Section 3.8.6 states: "The wetland preserve would facilitate the natural sequestration of pollutants of stormwater leaving the project site." Incorporation of the wetland preserve into the Project's post-construction stormwater management strategy would have long-term detrimental impacts to these wetlands and does not support their determination that additional wetlands will not be impacted.

9

2.3.2.3 Reduced Buffer Widths

The State Procedures manual (CSWRCB, 2019a) states that buffers help "ensure the long-term viability of those [aquatic] resources" and that "buffers may also provide habitat or corridors necessary for the ecological functioning of aquatic resources." The Corps South Pacific Division requires that mitigation plans "provide and maintain a buffer of at least 100 feet around all vernal pool preserves and mitigation sites" in their draft *Mitigation and Monitoring Guidelines for Vernal Pools* supplement (Corps, 2016b). Buffer widths between wetlands and the Project footprint are not provided, but use of the DEIR figures' scales suggests they are less than 100 feet in many places, particularly adjacent to the northern boundary of the Project footprint. 10

DEIR Exhibit 3.3-3 Phase 1 Wetland Impacts, Wetlands IW-7, 8, 9 and 10, appear to show an approximately 100-foot buffer adjacent to the Project. However, the buffer areas are identified as 'Proposed Landscape Areas.' This is not further defined, and it is not clear if the proposed landscape area buffers will consist of native or ornamental plants and whether they will be intensely maintained as manipulated landscape areas. Indirect impacts to these wetlands through a disturbed or landscaped buffer are not discussed in the DEIR.

Further, the connections and corridor between the wetlands in the southeastern Project area (Wetlands IW-7 to IW-10) and the remaining wetland complex to the north and east will disappear once the wetlands are flanked by the development. This corridor disconnection, the overall reduction of undeveloped buffer widths of wetlands that remain post-Project, and the indirect effects on the site wetlands are not analyzed or discussed.

2.3.2.4 Cumulative Impacts

The State Procedures manual (CSWRCB, 2019a) requires that compensatory mitigation be developed using a watershed profile, which "shall include information sufficient to evaluate direct, secondary (indirect), and cumulative impacts of [a] project…" The DEIR does not include an analysis of indirect impacts to wetland function associated with reduced buffer widths and increased noise, lights, and traffic compared to that of the existing condition. The DEIR does not include an analysis of cumulative wetland impacts that incorporates current development trends in the area and the associated continued aquatic habitat fragmentation. 11

2.4 Proposed Mitigation

Our review of the adequacy of the Project's proposed mitigation in offsetting the Project's wetland-related impacts follows. 12

2.4.1 Wetland Mitigation

The DEIR includes a conceptual mitigation plan shown in Exhibit 3.34 that provides a proposed wetland preservation area adjacent to the northern boundary of the Project and states that a detailed Wetland Mitigation and Monitoring Plan will be prepared but is not included in the DEIR. The DEIR states that the plan will propose to preserve 7.58 acres of existing seasonal wetlands and 0.13 acre of vernal pools; create 0.992 acre of seasonal wetlands in advance of, or concurrent with, Phase 1; and create 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools in advance of Phase 2.

12 CONT

We are unable to evaluate if the proposed mitigation will adequately replace lost wetland function because the DEIR and supporting documentation does not include an assessment of impacted wetland function. Additionally, a water budget analysis, typically supported by hydrology monitoring in the proposed wetland creation areas, is not included. Overall, the Project does not provide the information necessary to determine that the proposed wetland acreages can be successfully created.

Our review of conceptual mitigation elements provided in the DEIR follows.

2.4.1.1 Mitigation Ratios

The Project proposes to mitigate for Phases 1 and 2 wetland impacts at 2:1 and 1:1 mitigation to impact ratios, respectively. The DEIR justifies the lower Phase 2 mitigation ratio because the mitigation will be constructed "at least 1 year prior to the start of Phase 2 construction." Both Devlin Road and Green Island Biological Resource reports, two nearby projects that have completed project permitting, identify 2:1 as the typical Corps and Regional Water Quality Control Board required ratio. Of note, unlike this Project, the Devlin Road and Green Island projects did not impact vernal pool wetlands (Monk, 2018 and 2019). The Corps' *Final 2015 Regional Compensatory Mitigation and Monitoring Guidelines for South Pacific Division* identifies vernal pools as both "difficult to replace resources" and "regionally significant habitat types," (Corps, 2015) making vernal pool wetland creation an inherently high risk mitigation that warrants a higher than typical mitigation ratio.

13

A State guidance document that includes mitigation requirements, *Staff Report Including the Substitute Environmental Documentation for the State Policy for Water Quality Control: State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (Procedures Staff Report), lists the difficulties of wetland replacement, using vernal pools as an example, and identifies mitigation that requires supporting structures, such as the Project's proposed detention basin system and outfall, as factors that would increase required mitigation ratios (CSWRCB, 2019b). Successful wetland creation is largely driven by ability to provide appropriate hydrology, however, hydrologic analysis that

demonstrates wetland creation potential in the proposed mitigation area is not provided in the DEIR.

The Procedures Staff Report also identifies use of a mitigation bank as an avenue to avoid mitigating for temporal wetland loss, similar to the Project's justification for mitigating Phase 2 at a 1:1 ratio. However, the construction schedule for Phase 2 is not set, with references to both concurrent and possibly back-to-back construction. Mitigation banks must demonstrate achieved wetland functions, frequently over several years, prior to the sale of credits. The Project's assumption that the proposed constructed wetlands will have replaced all lost wetland function at the time of Phase 2 construction is not supported by the information provided and therefore, neither is the proposed 1:1 mitigation ratio. Further, the Corps states that mitigation ratios greater than 1:1 are typically required because "mitigation sites often provide reduced functions compared to the impacted aquatic resources (Corps, 2015)." 13 CONT

Although ultimately the required compensatory mitigation ratios will be provided and approved by the regulatory agencies, the proposed ratios in the DEIR are low given the information provided above.

2.4.1.2 Mitigation Sequencing

The 1990 Federal Mitigation Memorandum of Agreement between the Corps and U.S. Environmental Protection Agency (EPA) requires applicants to complete a thorough mitigation sequencing process, wherein impacts to aquatic resources are first avoided to the maximum extent practicable, remaining impacts are minimized, and unavoidable impacts are then offset through compensatory mitigation (Corps and EPA, 1990). The DEIR does not address how the Project completed the required mitigation sequencing process during design, including but not limited to design decisions regarding building size and/or location, and whether higher quality and higher functioning aquatic resources were prioritized for avoidance. 14

2.4.1.3 Mitigation Monitoring and Performance Standards

The Project proposes five years of monitoring, the minimum required in the State Procedures. The Corps *Regional Compensatory Mitigation and Monitoring Guidelines for the South Pacific Division* (Corps, 2015) identifies vernal pools as an aquatic resource that warrants longer monitoring periods than the standard five years: "Monitoring periods of more than 5 years are warranted for aquatic resources with slow development rates. Examples of such aquatic resources within the South Pacific Division include vernal pools… (Corps, 2015)." The Corps' *Draft Mitigation and Monitoring Guidelines for Vernal Pools* supplement further requires that vernal pool construction projects be monitored for a 15

minimum of ten years. (Corps, 2016b). The DEIR proposed five-year mitigation monitoring period is not consistent with these federal guidelines.

Mitigation measure BIO-3d in Section 3.3 of the DEIR provides performance standards to be incorporated into the Project mitigation plan. Performance standards are tools to assess achievement of the mitigation's stated goals and objectives. The DEIR Section 3-03 Mitigation Measure states that the "basic objective of the Wetland Mitigation and Monitoring Plan is to ensure that project wetland impacts, and compensatory mitigation proposed to offset the wetland impacts, shall provide a no-net loss of area of wetlands, and wetlands established/created shall be in-kind to the wetlands impacted." More detailed mitigation goals and objectives that would relate to the project's impacts to wetlands with varied habitat conditions (e.g., isolated vs. non-isolated) are not included in the DEIR. Without an understanding of the impacted wetland functions, there is no basis for establishing meaningful mitigation goals and associated meaningful ecological performance standards to achieve no net loss. 15 CONT

The Procedures Staff Report outlines the problematic trend mirrored by the DEIR in focusing on mitigation area and vegetation cover requirements without replacing lost ecological function, resulting in failure to comply with the State's 'no net loss' policy (CSWRCB, 2019b). Further, the State Procedures manual states: "The use of reference aquatic resources to establish performance standards will help ensure that those performance standards are reasonably achievable, by reflecting the range of variability exhibited by the regional class of aquatic resources as a result of natural processes and anthropogenic disturbances." The DEIR does not describe use of reference wetlands in the mitigation approach, which is needed to define the performance standards.

2.4.2 Buffer Mitigation

City policy 8.3.1 requires, "Where riparian corridors are retained, they shall be protected by an adequate buffer width of a minimum 100-foot protection zone…" The Corps South Pacific Division requires that mitigation plans "provide and maintain a buffer of at least 100 feet around all vernal pool preserves and mitigation sites" in their draft *Mitigation and Monitoring Guidelines for Vernal Pools* supplement (Corps, 2016b). Proposed buffer widths associated with No Name Creek and the associated wetlands are not discussed in the DEIR or supporting documents nor labeled in the figures. However, an approximate use of the figure scale suggests that buffer widths adjacent to the Project are less than 100 feet in many places. 16

DEIR Exhibit 3.3-4 Wetland Mitigation Plan states that the project will "plant trees and shrubs in select locations adjacent to established wetlands on the east and west side and adjacent to No Name Creek." The DEIR does not include extent (area) or specific locations

of plantings and does not state whether these plantings will be maintained, incorporated into the mitigation performance standards, and monitored. The lack of Project buffer impact analysis makes it difficult to evaluate if the proposed buffer plantings are adequate compensation to replace lost buffer function. 16 CONT

3 GROUNDWATER RESOURCES REVIEW

3.1 Supporting Documentation

Our review and assessment of potential impacts of the Project on groundwater resources relied on the following documents: 17

- Section 3.8 of the DEIR – Hydrology and Water Quality
- Draft Water Supply Assessment (DWSA) for the Giovannoni Logistics Center Project (Balance Hydrologics, 2021)

3.2 Water Supply Demand

The water supply to the Project, as defined in the DEIR, will not be derived from groundwater and therefore will not diminish groundwater levels.

The Project's water demand will be supplied by the City. Potential impacts to groundwater levels and flows due to the Project's water supply demand are therefore predicated on the sources of water from which the City derives its water supply and the degree to which the Project demand affects the City's projected future supplies. Both of these issues are discussed and evaluated in the DWSA, which relied on the 2015 Urban Water Management Plan (Kennedy Jenks Consultants, 2016).

18

The DWSA states that, at present, the City does not rely on groundwater for any part of its supply. Section 2.3 of the DWSA does, however, indicate that the City may consider adding groundwater as a source, depending on needs and opportunities.

The DWSA indicates that the Project's stated water supply demand falls within the City's anticipated supply through 2040 and would not prevent the City from meeting the anticipated demands, even in progressively dry years. These conclusions are based on their following assumptions:

- Between 23% and 32% of the Project's water supply demand will be filled by recycled water. Achieving this goal is predicated on the Project being hooked up to the City's recycled water infrastructure. The DWSA indicates that use of the recycled water is feasible given the City's projected expansion in demand and their capacity to meet that demand.

- The City will be able to capitalize on carryover water from the State Water Plan as described in Section 4.2.1 of the DWSA to make up for shortfalls during dry periods, or the City's actual consumption will continue to be significantly below projected demand as was recorded in the six years between 2015 and 2020.
- Project water demand conforms to the following stated estimates.

  Potable water use:

  - Phase 1: 10.8 acre-feet per year (afy)
  - Phase 2: 13.1 afy

  Recycled water use:

  - Phase 1: 37.0 afy
  - Phase 2: 45.0 afy

18 CONT

The DWSA states that the Project will be required to comply with the City's Zero Water Footprint policy, which will require the Project to commit to offsetting their potable water demand through off-site conservation measures. The DEIR does not address this requirement. To meet this requirement, the Project will be required to offset 100% of their potable water consumption through one or more types of actions that reduce the City's water consumption. The DWSA describes some potential qualifying actions as follows.

- Funding conversion of irrigated landscape areas to recycled water.
- Funding or assisting the City to improve the efficiency of the City's water distribution system by reducing system losses.

3.3 Loss of Recharge

The proximity of the Project to groundwater discharge areas limits reductions in groundwater recharge due to the conversion of open space to impervious surfaces.

The Project is located less than two miles from the wetland areas associated with the Napa River and Fagan Marsh, which are the discharge areas for the surficial aquifer in the Project area. The water table (uppermost groundwater level) within that proximity to groundwater discharge areas is expected to be shallow, leaving little space available for groundwater storage. Infiltration recharge is expected to be small and not expected to contribute significantly to groundwater flow. A reduction in pervious surface will therefore not likely change the groundwater water budget for the groundwater basin.

19

4 HIGH LEVEL STORMWATER REVIEW

4.1 Supporting Documentation

Our review and assessment of potential stormwater-related impacts of the Project focused only on the completeness of the analyses described in the DEIR with respect to the size and scope of the Project. The accuracy of the referenced studies was not evaluated. Our review relied on and was limited to the following documents. 20

- Section 3.8 of the DEIR – Hydrology and Water Quality
- Draft Water Supply Assessment (DWSA) for the Giovannoni Logistics Center Project (Balance Hydrologics, 2021)
- Memo on Preliminary Hydrologic and Hydraulic Modeling for the Proposed Giovannoni Logistics Center (Balance Hydrologics, 2020)

4.2 Summary

The DWSA acknowledges that the Project will be required to prepare a Stormwater Control Plan (SCP) in accordance with the Bay Area Stormwater Management Agencies Association Post-Construction Manual that must describe post-construction stormwater treatment measures, such as bioretention facilities and source control Best Management Practices, and a strategy for the ongoing maintenance of those facilities. A SCP has not been included in the DEIR.

The DEIR does describe the results of a preliminary assessment that focused on the potential change in peak runoff associated with Phase 1 of the Project. Important findings and dependencies include the following:

- The Project will leave approximately 22.6% (47 acres) of the 208 acres as open space. 21
- The Project will be required to demonstrate a 10% reduction in peak runoff flows from the current (pre-developed) condition.
- Modeling performed as part of the preliminary assessment demonstrates that more than the required 10% reduction in peak runoff flows will be achieved through the development and implementation of two detention basins, one bioretention area dedicated for water quality, and one basin sized to comply with both flood control and water quality treatment standards.
- Only Phase 1 was considered.
- The ability of the Project to meet the 10% reduction requirement for Phase 1 appears to be dependent on the construction of the Devlin Road extension, which will result in more than the required reductions in peak flow runoff.

- It does not appear that Phase 2 construction will benefit from the Devlin Road extension or a feature similar to it in function with respect to stormwater retention. It therefore appears likely that the size of the detention basins and bioretention areas for the Phase 2 component of the Project will likely have to be larger than those planned for Phase 1.

21 CONT

5 MAIN CONCLUSIONS

- More wetland was present on the project site during the 2016 Monk delineation fieldwork than is reflected in the Monk report and DEIR.
- Wetland impact analysis is not complete; namely, it is lacking analysis and discussion of impacted wetland functions, impacts associated with reduced buffer widths, impacts associated with modified surface water drainage, and cumulative impacts associated with the area's development trends.
- We are unable to evaluate if the proposed conceptual mitigation will adequately offset wetland impacts because impacted wetland functions are not evaluated nor has analysis been completed to support the probable success of wetland creation.
- Proposed wetland mitigation ratios for Phases 1 and 2 are low, given State and Federal guidance.

22

- The proposed five-year mitigation monitoring period is not consistent with Corps guidelines for compensatory mitigation involving vernal pool wetlands.
- The DEIR lacks detailed mitigation goals and objectives and associated performance standards. The provided conceptual mitigation does not incorporate reference wetlands in the strategy and as presented, is not sufficient to comply with the State's no-net-loss policy.
- The Project will not have a significant adverse impact on groundwater resources.
- It does not appear that Phase 2 construction will benefit from the Devlin Road extension or a feature similar to it in function with respect to stormwater retention.
- It appears likely that the size of the detention basins and bioretention areas for the Phase 2 component of the Project will have to be larger than those planned for Phase 1. The preliminary hydrologic assessment required for the proposed project is therefore incomplete.

EXHIBIT B

Scott Cashen, M.S.—Independent Biological Resources Consultant

November 15, 2022

Mr. Richard M. Franco
Adams Broadwell Joseph & Cardozo
601 Gateway Boulevard, Suite 1000
South San Francisco, CA 94080

Subject: Comments on the Final Environmental Impact Report for the Giovannoni Logistics Center Project

Dear Mr. Franco:

This letter contains my comments on the Final Environmental Impact Report ("FEIR") prepared by the City of American Canyon ("City") for the Giovannoni Logistics Center Project ("Project"). Buzz Oates LLC ("Applicant") is proposing to develop a 2.4-million-square-foot logistics center on approximately 163 acres of an approximately 208-acre site located in the northwestern portion of the City of American Canyon. The remaining 44.8 acres of the site would serve as mitigation for the Project's impacts to wetlands and wildlife habitat. I submitted a comment letter on the Draft Environmental Impact Report ("DEIR") that was prepared for the Project. That letter established my professional qualifications and described the actions I took to evaluate the DEIR and underlying analyses. This letter addresses the FEIR and the City's responses to comments. 1

New Road

On November 9, 2022, I inspected the Project site from various vantage points along Green Island Road and Devlin Road. During the site visit I noticed a new road (and dirt berm) had been installed on the Project site (Figure 1, below). The new road extends north-south through the Project site and into the proposed wetland preserve (Figure 2, below). The new road was not included in the DEIR's Project description, nor was it depicted on the map of the proposed wetland preserve.[1] 2

Roads have negative effects on biotic integrity in both terrestrial and aquatic ecosystems. Roads of all kinds have seven general effects: mortality from road construction, mortality from collision with vehicles, modification of animal behavior, alteration of the physical environment, alteration of the chemical environment, spread of exotics, and increased use of areas by humans.[2] The new road on the Project site almost certainly has already had one or more of these effects, but because the road is not discussed in the DEIR or FEIR, I cannot assess the full extent of the road's effects on the site's plant and animal populations or the biotic integrity of the proposed wetland preserve.

Vernal Pool Fairy Shrimp (Cashen-2)

The Project site provides potential habitat for the vernal pool fairy shrimp, a federally threatened species. LSA conducted dry season vernal pool fairy shrimp surveys at the Project site in summer of 2016, and Monk & Associates conducted wet season surveys in winter of 2016-2017. I commented that the results of those surveys are outdated and can no longer be used to assume absence of the species at the Project site. The FEIR provided the following response:

> "Generally, when surveys are older than 5 years the United States Fish and Wildlife Service (USFWS) may request new surveys to be conducted, or they may not. Nonetheless, the referenced vernal pool branchiopod protocol surveys were less than 5 years old when the Draft EIR was released and, from a biological standpoint, the surveys were reliable and sufficient to support the conclusion that federally listed threatened vernal pool fairy shrimp do not occur on the project site."

3

The statement that the surveys were less than 5 years old when the DEIR was released is false. The surveys terminated on February 15, 2017.[3] The DEIR was released on May 20, 2022. Furthermore, the issue is not whether the surveys were reliable and sufficient to support the absence determination, but rather, that fairy shrimp easily could have colonized the Project site since February 2017. This is the reason why the USFWS considers the survey results valid for

[3] DEIR, Appendix C.5, pp. 2 and 3.

no more than five years. The FEIR provides no evidence that the USFWS has made an exception for the Project. As a result, I maintain the conclusion that the City does not have sufficient evidence to support the determination that the Project would have no impact on the vernal pool fairy shrimp.

3 CONT

Birds of Conservation Concern (Cashen-3)

Comment Cashen-3 pertained to the DEIR's failure to analyze impacts to the marbled godwit and two other USFWS Bird Species of Conservation Concern ("BCC") that were detected at the Project site. The FEIR provided the following response:

> "Marbled godwit is an abundant wintering shorebird found along the shoreline of San Francisco Bay, ocean beaches, and wetlands. They nest in the Northern Plains and are not included on CDFW's Special Animals List (latest update in July 2022). There is no reason that impacts to this abundant species needs to be a topic for evaluation in the EIR."

The FEIR's response does not rectify the issue. The fact that the marbled godwit nests in the Northern Plains is irrelevant because the species is listed as a Bird Species of Conservation Concern due to its *nonbreeding* status in Coastal California.[4] The FEIR provides no evidence to substantiate the claim that the marbled godwit is an abundant species. Nonetheless, other factors beyond abundance dictate a species' conservation status. The USFWS explains: "[o]ur conservation assessment was based on several factors, including population abundance and trends, threats on breeding and nonbreeding grounds, and size of breeding and nonbreeding ranges."[5] It is unclear why the marbled godwit is not on CDFW's Special Animals List, although this omission appears to be an oversight.

4

The DEIR failed to disclose and analyze potentially significant impacts to the cackling goose, which is considered a special-status species on its wintering grounds in California. The FEIR provided the following response:

> "Cackling goose (*Branta hutchinsii*) is a goose species once considered conspecific with the common Canada goose (*Branta canadensis*). Cackling goose is a common species; however, the Aleutian subspecies of cackling goose was listed as endangered under the federal Endangered Species Act until its recovery to a population of over 100,000 individuals and its delisting from the Act in 2001. The Aleutian subspecies remains on the CDFW Watch List. Note that MM BIO-4 requiring nesting surveys for all bird species during the breeding season would ensure significant impacts to all nesting bird species would not occur."

The FEIR's response does not resolve the issue. As noted in the response, the Aleutian subspecies (*Branta hutchinsii leucopareia*) is a special-status species. To clarify, this is the subspecies referenced in Comment Cashen-3. My previous comment letter established the importance of the Project site as wintering habitat for cackling geese (including *B. h.*

[4] U.S. Fish and Wildlife Service. 2021. Birds of Conservation Concern 2021. United States Department of the Interior, U.S. Fish and Wildlife Service, Migratory Birds, Falls Church, Virginia. Table 6.
[5] *Ibid*, p. 4.

leucopareia). The nesting bird survey required under MM BIO-4 does not mitigate Project impacts because the issue of conservation concern for the Aleutian subspecies is the loss of wintering habitat—not construction impacts to nest sites (*B. h. leucopareia* does not breed in California).[6]

4 CONT

Short-eared Owl (Cashen-4)

Comment Cashen-4 pertained to the DEIR's failure to analyze the Project's potentially significant impacts on the short-eared owl and its habitat due to the false belief that no suitable habitat was present at the Project site. The FEIR's response states:

> "The Draft EIR Appendix C.1 Biological Resources Report determined the project site did not support suitable habitat for the short-eared owl (a California Species of Special Concern and USFWS Bird Species of Conservation Concern), at least in part because the property is currently surrounded on all four sides by commercial development or heavily trafficked roadways and is bisected by a new road and public trail extension that create disturbances, all of which would not be conducive to nesting by this sensitive species."

Although this rationale was not articulated in Appendix C.1 (which merely states: "[s]uitable habitat is not present at the site"), it is valid reasoning due to the indirect effects of development, roads, and traffic on habitat. However, for all other species addressed in the FEIR, the FEIR continues to provide opposing reasoning: that Project impacts would be less-than-significant because the onsite preserve would provide habitat for those species (e.g., golden eagle, northern harrier, and Swainson's hawk, among others).

5

Response to Comment Cashen-4 then states:

> "Although nesting by this species is not likely for this reason, nesting by short-eared owl, a species that resembles northern harrier in its habitat requirements and foraging habits (northern harrier by day and short-eared owl at night), is possible. For this reason, recommended nesting surveys for northern harrier (see MM BIO-1c) should include concurrent searches for nesting short-eared owl and mitigate for the presence of nesting birds, if found. Refer to Response to CDFW-8a for revised wording of MM BIO-1c, which now provides for the possibility of finding nesting short-eared owl as well as northern harrier. Implementation of MM BIO-1c would ensure potential impacts to short-eared owl, as well as those for northern harrier, would be less than significant."

The FEIR's response does not rectify the issue because there remains no analysis of the significance of the Project's impacts on short-eared owl habitat. Implementation of MM BIO-1c, which requires a pre-construction survey and nest buffer, does not mitigate the Project's permanent impacts to habitat.

[6] California Natural Diversity Database. 2022 July. Special Animals List.

Special-Status Plants (Cashen-5a and -5b)

Many special-status plant species are annual plants that are only evident when environmental conditions are appropriate. The botanical survey report prepared by Helm Biological Consulting ("HBC") states that nine of the special-status plant species that could occur at the Project site are wetland dependent, and that drought conditions prior to HBC's field surveys could have affected HBC's ability to detect presence of those nine species.[7]

The survey protocols issued by the California Department of Fish and Wildlife ("CDFW") and California Native Plant Society ("CNPS") identify the need for the botanist(s) to visit nearby reference sites when special-status plants are known to occur in the type(s) of habitat present in a particular project area.[8] The purpose of these reference site visits is to confirm that special-status plants that may occur at the project site would be evident and identifiable when the botanical field surveys take place.

HBC identified 23 "target" special-status plant species that are known to occur within a 10-mile radius of the Project site, and that are associated with habitats that are known to occur at the site. HBC visited three reference sites that contained six of these target species. It is unclear if the reference site visits provided evidence that these six target species would be identifiable when HBC conducted its surveys because HBC's survey report did not identify when the reference site visits were conducted, nor did it discuss HBC's observations of phenological development of the target species at the reference sites. 6

As discussed in my previous comment letter, Helm's surveys did not encompass the blooming periods of Napa bluecurls (*Trichostema ruygtii*) or pappose tarplant (*Centromadia parryi* ssp. *parryi*), both of which Helm identified as target species. Furthermore, Helm did not visit reference sites to verify that either species would be identifiable at the Project site when he conducted his surveys. The FEIR provided the following response to this issue:

> "Because of significant early fall rainfall in 2020, lack of spring rainfall in 2021 and warm weather, the flowering periods were several months in advance of normal blooming periods. The last rainfall event that was not trace amounts, occurred on March 18, 2021. Based on the weather patterns leading up to the spring surveys for 2021 and based on the reference sites known to support the target plants, the dates HBC conducted the surveys on were reliable and sufficient to capture blooming periods or a visual image of the target species."[9]

These statements are not supported by data or other scientific evidence. Because HBC did not visit reference sites containing Napa bluecurls and pappose tarplant, the botanist had no evidence to support his belief that the surveys (conducted prior to the reported blooming periods) would provide reliable information on absence of these two species from the Project site. As discussed in my previous comments, data maintained by the California Consortium of Herbaria provides

[7] DEIR, Appendix C.9, Brent Helm 2021 Rare Plant Survey Report, Appendix A.
[8] California Department of Fish and Wildlife. 2018. Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities. *See also* California Native Plant Society. 2001 (revised). CNPS Botanical Survey Guidelines.
[9] FEIR, RTC Cashen-5b.

evidence of the times of year a species is identifiable. Based on those data, Napa bluecurls has never been identifiable in April or May (i.e., when HBC's surveys were conducted), and pappose tarplant is almost never identifiable in April or May.

An additional flaw with the City's rationale is that it ignores species-specific variation in reproductive strategies (and phenology). Whereas some species respond to abnormal climatic conditions by flowering earlier in the year, others respond by remaining dormant (i.e., not germinating). For example, routine monitoring of sites known to contain Contra Costa goldfields (one HBC's target species) has revealed thousands of plants during years with normal rainfall, but *zero plants* during drought years.[10]

Reliance on Other Survey Data

The FEIR argues that the DEIR did not rely solely on HBC's 2021 botanical surveys. The FEIR states:

> "the biological evaluation also considered plant data in the aquatic resources delineation prepared by Monk & Associates, and Biological Resource Reports prepared by Monk & Associates for the Devlin Road and Vine Trail Extension Project and the Green Island Road Reconstruction and Widening Project. In addition, HBG's biological evaluation considered plant data in the CNDDB to determine whether populations of endangered, threatened, or rare species have occurred on the site historically or are currently known to exist in the project vicinity. All of this data was sufficient to analyze the proposed project 's potential impacts to plant species."[11]

6 CONT

These additional sources of information do not rectify the issues raised in my previous comment letter. Special-status plant surveys were not conducted for the Green Island Road Reconstruction and Widening Project,[12] and the Biological Resources Report states the following with respect to the surveys that were conducted for the Devlin Road and Vine Trail Extension Project:

> "No special-status plants were identified on the Project Site by Monk & Associates while conducting various studies on the property in 2016, including an aquatic resources delineation and other evaluations conducted during the March to July flowering season of 2016. **However, these studies did not constitute protocol surveys**. Therefore, HBG has retained Dr. Brent Helm to conduct protocol rare plant surveys during the 2021 flowering season."[13]

With respect to plant data in the CNDDB, the CNDDB is a positive detection database. This means the CNDDB would only have records of rare plants at the Project site if: (a) surveys had been conducted (historically) at the Project site; (b) rare plants had been detected; and (c) the observer submitted the rare plant data to the CNDDB. The CNDDB cautions: "[p]laces that are

[10] California Natural Diversity Database. 2022. RareFind 5 [Internet]. California Department of Fish and Wildlife [Oct 31, 2022].
[11] FEIR, RTC Cashen-5a.
[12] DEIR, Appendix C.7, pp. 2 and 8.
[13] DEIR, Appendix C.1, p. 24. [emphasis added].

empty or have limited information in the database often signify that little survey work has been done there. You cannot imply that there is less diversity in these places due to lack of information. There are no organized inventory or survey efforts designed specifically to populate the database."[14] Because the Project site is private property, there has been no opportunity for botanists to survey the site and submit the associated survey data to the CNDDB. For these reasons, plant data from Monk & Associates and in the CNDDB do not justify the DEIR's determination that "no special-status plant species occur on the project site." 6 CONT

Wetlands (Cashen-6)

Comment Cashen-6 pertained to Project impacts to wetlands. One of the issues I raised was the DEIR's failure to discuss the ecological functions of the wetlands at the Project site. The FEIR's response states: "[f]unctional assessments were conducted to determine plant and animal communities supported on the project site, and these functional assessments were then used in the impact analysis and subsequent mitigation requirements. Refer to Response to S&W-6b for further discussion." Although the DEIR states that Monk & Associates observed "several species of waterfowl and shorebirds in the on-site seasonal wetlands," there is no discussion of the importance of those wetlands as habitat for migratory waterfowl and shorebirds. The remainder of the DEIR's "functional assessment" is limited to the following statements:

> "Seasonal wetlands provide wildlife with a seasonal water source that supports various animal species during the winter and spring months and sometimes into the early summer. Amphibians will lay their eggs in seasonal wetland habitats and complete much of their life cycle in the wetlands. No Name Creek would be considered a wildlife corridor, but the property is nearly entirely surrounded by development so the extent of wildlife corridors on the property is limited."[15]

7

These vague statements do not constitute a functional assessment. The DEIR must identify: (a) the specific animal species that use the wetlands as a seasonal water source and the functions the wetlands fulfill for those animals (e.g., provision of food resources, sheltering, courtship and pair formation); (b) the specific amphibian species that use the on-site wetlands as habitat;[16] and (c) the species that use No Name Creek as a wildlife corridor.

I commented that the Applicant's proposed wetland preserve would function as a habitat "island" surrounded by urban (industrial) development. The FEIR provided the following response to this issue:

> "As shown in Draft EIR Exhibit 3.3-3, the Wetland Preserve would contain No Name Creek, which is hydrologically connected to the Napa Logistics Park Wetland Preserve to the north. It would also be contiguous to wetland areas within the Biaggi Bros. property to the west. Thus, the commenter's claims that the Wetland Preserve would be an island are his opinion not supported by evidence."

[14] California Natural Diversity Database. 2018 Apr 2. CNDDB Key Facts. p. 1.
[15] DEIR, p. 3.3-3.
[16] The only information the DEIR provides in this regard is that "Pacific treefrog (*Pseudacris regilla*) was noted by Monk & Associates Biologists while studying the Green Island Road Extension."

It is incredible that the FEIR would state "the property is nearly entirely surrounded by development so the extent of wildlife corridors on the property is limited," but then state that the Wetland Preserve's function as a habitat island is an "opinion not supported by evidence." Nevertheless, none of the exhibits (figures) in the DEIR depict hydrologic connectivity between the proposed wetland preserve and the Napa Logistics Park Wetland Preserve to the north. To the contrary, Figure 2 in DEIR Appendix C.6 identifies the area between the two preserves as "slated for development," as shown in Figure 3, below. The new road that has been constructed in the Phase II portion of the Project site blocks connectivity with the Biaggi Bros. wetlands, which merely add approximately 3 acres to the habitat "island" (Figure 4, below). Even if the new road is removed, connectivity to the Biaggi Bros. wetlands would not eliminate the habitat "island" that the DEIR proposes as mitigation. Furthermore, even if the Napa Logistics Center Phase II Project does not directly impact No Name Creek, the proposed wetlands preserve would continue to function as a habitat island for most species because it would be surrounded by roads and industrial development.

7
CONT

Construction Impacts on Wetland Functions (S&W-6a)

Comment S&W-6a pertained to the potential for more severe construction-related impacts if the construction schedule extended beyond the 18-month period stipulated in the DEIR. The FEIR's response states: "[t]he project construction would occur over at least two nesting periods. If nesting does occur in the project vicinity and construction has commenced, it should be assumed the nesting bird(s) are habituated to the ambient level of noise and disturbance emanating from the project site." The FEIR's response does not rectify the issue because even species that appear to habituate to anthropogenic sources of noise and disturbance are susceptible to adverse impacts.[17] Francis and Barber (2013) reported: "we have shown how behavioral modifications among individuals confronted with noise – even those individuals that outwardly appear to habituate – can lead to decreased fitness."[18]

[17] Manci KM, Gladwin DN, Villella R, Cavendish MG. 1988. Effects of aircraft noise and sonic booms on domestic animals and wildlife: a literature synthesis. National Ecology Research Center Report # NERC-88/29. *See also* Wright MD, Goodman P, Cameron TC. 2010. Exploring behavioural responses of shorebirds to impulsive noise. Wildfowl 60:150-167.

[18] Francis CD, Barber JR. 2013. A framework for understanding noise impacts on wildlife: an urgent conservation priority. Frontiers in Ecology and the Environment 11:305-313.

Ecological Integrity of the Wetland Preserve (S&W-11)

Response to Comment S&W-11 states: "HBG determined that an increase in noise, lights and traffic generated by the project compared to existing conditions would not result in significant direct, indirect or cumulative impacts to wetland functions, and therefore do not require mitigation under CEQA Guidelines." This determination is not reflected in the DEIR, which provided *no analysis* of how noise, lights, and traffic associated with the Project might impact wetland functions (including their function as wildlife habitat).

Response to Comment S&W-11 provides the following rationale:

> "The western boundary of the Wetland Preserve is adjacent to a wine distribution warehouse and an ongoing construction site for a new warehouse that is part of the Napa Logistics Park project…The new Devlin Road Extension and Vine Trail Extension directs semi-truck traffic, vehicle traffic and pedestrians through the project site bisecting the Wetland Preserve generating noise, light, vehicle traffic and pedestrian noise and traffic. Although the proposed project would increase noise, light and traffic, the Wetland Preserve is surrounded on all four sides by commercial development, and bisected by a road and pedestrian trail. Therefore, the avian and terrestrial species that use the wetlands and uplands within the Wetland Preserve have habituated to the significant level of noise, light, traffic and pedestrian disturbances that currently exist and the levels of disturbances that the proposed project would not result in significant direct, indirect or cumulative impacts to wetland functions, and therefore do not require mitigation under CEQA Guidelines."

7
CONT

The FEIR's rationale suffers three critical flaws. First, the FEIR misapplies the baseline setting for biological resources. The DEIR's description of the biological setting was based on: (a) field visits between December of 2020 and April of 2021, and (b) studies previously prepared for the proposed Project by other consultants (primarily field work conducted by Monk & Associates in 2016).[19] The "ongoing construction site" for the new wine warehouse (Napa Logistics Park Phase II) and the Devlin Road/Vine Trail Extension did not exist in April of 2021, and only one of the buildings associated with the Napa Logistics Park Phase I Project had been constructed when Monk & Associates conducted its surveys in 2016. Therefore, the wildlife species detected within the Wetland Preserve in 2016, and between December 2020 and April 2021, existed in an environment lacking "the significant level of noise, light, traffic and pedestrian disturbances that currently exist." In other words, the FEIR cannot assume the wildlife species that were habituated to 2016 disturbance levels are now habituated to current (and future) disturbance levels.

Second, the FEIR assumes that additional levels of disturbance from noise, light, traffic, and pedestrians would not have significant cumulative effects. This is not a valid assumption because impacts from noise, light, traffic, and human activity are additive. Therefore, the disturbance effects associated with the Project would compound the disturbance effects from the surrounding projects. These combined disturbance effects are likely to surpass the tolerance

[19] DEIR, p. 3.3-20.

threshold of many species[20] and would significantly impact the Wetland Preserve's function as wildlife habitat.

Third, although a few "weedy" species thrive in urban environments, most species that appear to habituate to noise, light, traffic, and human activity have reduced fitness (i.e., reduced survival and reproductive rates).[21] The Wetland Preserve would function as a population "sink" (an area where mortality is greater than reproductive success) for these species. There is no evidence that a 45-acre wetland preserve, surrounded by industrial development, and bisected by a major road, can function as viable habitat for the sensitive species impacted by the Project. To the contrary, there is overwhelming scientific evidence that the only species that would persist in that environment are weedy species and habitat generalists with small home ranges.[22]

Response to Comment S&W-16b states: "[t]he purpose of the proposed tree and shrub plantings referenced on the Draft EIR Exhibit 3.3-4 is to provide vertical structure within the Wetland Preserve to enhance its habitat value." By definition, habitat "enhancement" benefits species. This is inconsistent with Response to Comment Cashen-14 and the Applicant's Wildlife Hazard Assessment, which state that the Wetland Preserve would be designed to discourage birds and keep overall wildlife activity "at <u>or below</u> current levels."[23]

7 CONT

Furthermore, most of the species associated with grassland and vernal pool (or seasonal wetland) environments are adapted to open landscapes lacking trees and shrubs. Planting trees and shrubs in the Wetland Preserve would *degrade* habitat for these species (e.g., northern harrier, short-eared owl, burrowing owl, golden eagle, Swainson's hawk,[24] shorebirds, and waterfowl). This is important because the FEIR asserts that the addition of the Wetland Preserve would prevent the Project from having significant impacts on the northern harrier, golden eagle, and Swainson's hawk.

Swainson's Hawk (Cashen 7a and 7b)

<u>Environmental Setting</u>

I commented that the Applicant's effort to locate Swainson's hawk nests that could be affected by the Project was limited to a single survey (on April 16, 2021), and that this survey effort was insufficient because it did not adhere to the Swainson's hawk survey protocol. The FEIR provided the following response to this issue:

8

> "Two surveys were conducted to analyze project impacts, not one as suggested by the commenter. The Draft EIR acknowledges in Section 3.3, Biological Resources, page 3.3-4 that HBG conducted spring season site reconnaissance

[20] *For example, see* Miller JR, Wiens JA, Hobbs NT, Theobald DM. 2003. Effects of human settlement on bird communities in lowland riparian areas of Colorado (USA). Ecological Applications 13(4):1041-1059.
[21] *For example, see* Francis CD, Barber JR. 2013. A framework for understanding noise impacts on wildlife: an urgent conservation priority. Frontiers in Ecology and the Environment 11:305-313.
[22] Meffe GK, Carroll CR. 1994. Principles of Conservation Biology. Sinauer Associates, Inc. Sunderland, MA. pp. 246 and 247.
[23] FEIR, RTC Cashen-14 and Appendix L. [emphasis added].
[24] Although golden eagles and Swainson's hawks nest in trees, they forage in open landscapes lacking trees.

> surveys on April 16 and May 24, 2021, and HBG drove about 10 miles of local roads surrounding the project site during both the April and May 2021 field reviews to inspect trees for raptor nest structures."[25]

According to HBG's Biological Resources Report, in 2016 and 2017 Monk & Associates conducted a Swainson's hawk survey within a mile of Napa Logistics Phase II project, and "HBG wildlife biologist Emilie Strauss conducted a similar survey for nesting Swainson's hawk for the Giovannoni Logistics Project on April 16, 2021. Ms. Strauss covered approximately 10 miles of local roads to inspect trees within approximately one mile from the Giovannoni Project Site and, again, no Swainson's hawk nests or any other raptor nests were found."[26] Regardless of whether HBG conducted one or two surveys, the survey effort did not adhere to the Swainson's hawk survey protocol, which recommends three surveys in Period II (Mar 20-Apr 5), three surveys in Period III (Apr 5-Apr 20), and three surveys in Period V (Jun 10-Jul 30).[27] Moreover, the HBG biologist failed to detect an active Swainson's hawk nest located 0.8 miles north of the Project site (i.e., within the survey area).[28] This nest was detected a mere two days later (April 18, 2021) by biologists working for a different consulting company,[29] and contrary to the FEIR's claim, it provides direct evidence that the City failed to acquire the data needed to analyze the Project's impacts on the Swainson's hawk.

8
CONT

The FEIR states:

> "The Draft EIR also acknowledges, by referencing Appendix C.1 Biological Resources Report, that the analysis relied on CNDDB data of Swainson's hawk locations, and Biological Resource Reports prepared by Monk & Associates for the Devlin Road and Vine Trail Extension Project and the Green Island Road Reconstruction and Widening Project. This data was sufficient to analyze potential impacts the project may have on Swainson's hawk."

As discussed further below, the DEIR's analysis omitted nearly all of the CNDDB data on Swainson's hawk nest locations. The statement that the DEIR also relied on the Biological Resource Reports prepared for the Devlin Road and Green Island Road projects does not alleviate the issue because Swainson's hawk surveys were not conducted for the Green Island Road Project, and the two surveys that were conducted for the Devlin Road Project did not adhere to the survey protocol.[30]

Comment Cashen-7a pertained to the DEIR's failure to substantiate the assertion that there are only a "limited number of Swainson's hawk records within a 10-mile radius of the project site."

---

[25] FEIR, RTC Cashen-7b.
[26] DEIR, Appendix C.1, pp. 28 and 29.
[27] Swainson's Hawk Technical Advisory Committee. 2000 May 31. Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley.
[28] Elliot R, CNDDB. 2022 (update). Unprocessed Data from CNDDB Online Field Survey Form [ds1002]. Biogeographic Information and Observation System (BIOS). Calif. Dept. of Fish and Wildlife. Available at: <http://bios.dfg.ca.gov>.
[29] *Ibid*.
[30] Monk & Associated conducted surveys on April 5 and June 10, 2016, and February 27, 2017. The February survey was incapable of providing data on nest sites because Swainson's hawks do not arrive in Napa County until mid-March.

To the contrary, the CNDDB and the eBird database have numerous records of Swainson's hawks within 10 miles of the Project site. The FEIR provided the following response to this issue:

> "The California Natural Diversity Data Base is a reliable source of scientific data and was used to determine the number of occurrences of Swainson's hawk within a 10-mile radius of the project site. The commenter references the eBird data base, which shows multiple sightings of Swainson's hawk in the project area; but a knowledgeable person's interpretation of the eBird data would recognize that the multiple sightings of Swainson's hawk are of multiple observers seeing the same bird(s) over and over."

I agree that the CNDDB is a reliable source of scientific data; however, nowhere does the DEIR report the number of Swainson's hawk occurrences within a 10-mile radius of the Project site. In addition to this issue, the DEIR provided false information on the status of Swainson's hawk nest sites in the vicinity of the Project site. The DEIR states: "[t]he closest known nesting record for Swainson's hawk as reported in the CNDDB is a nest site last active in 2008 (CNDDB Occurrence No. 1718) located approximately 2.1 miles north of the Project Site."[31] This suggests that there have not been any active Swainson's hawk nests within 10 miles of the Project site since 2008, *which is absolutely false*. The CNDDB has 18 records of Swainson's hawk nests that were active between 2017 and 2022, and that are located within 10 miles of the Project site.[32] These records indicate presence of at least six active nesting territories,[33] including an active nest territory located approximately 0.8 miles north of the Project site.[34]

8
CONT

The FEIR's statement that "a knowledgeable person's interpretation of the eBird data would recognize that the multiple sightings of Swainson's hawk are of multiple observers seeing the same bird(s) over and over" is disingenuous because I did not claim that the each eBird data point represented a unique bird (nor did I claim that each data point represented the same bird). The importance of the eBird data is that they provide additional evidence that the DEIR erred in its belief that there are only a "limited number of Swainson's hawk records within a 10-mile radius of the project site." Irrespective of how many individual birds are associated with the eBird records, the data provide an indication of where Swainson's hawk activity is concentrated in the region. Figure 5 depicts the eBird data from 2021. These data reveal the following:

1. Most of the Swainson's hawk activity (sightings) was north of the Project site where multiple nesting territories are located.
2. Birds associated with these territories foraged in areas west of their territories. Some birds also foraged in areas south of their territories, including at the Project site. This is

[31] DEIR, Appendix C.1, p. 28.
[32] Elliot R, CNDDB. 2022 (update). Unprocessed Data from CNDDB Online Field Survey Form [ds1002]. Biogeographic Information and Observation System (BIOS). Calif. Dept. of Fish and Wildlife. Available at: <http://bios.dfg.ca.gov>.
[33] As reported in Master Response 1, Swainson's hawks may change nesting locations from year to year. However, the number of active nests detected in a given year represents the minimum number of nesting territories. The CNDDB has records of six active nests within 10-miles of the Project site in 2021.
[34] Elliot R, CNDDB. 2022 (update). Unprocessed Data from CNDDB Online Field Survey Form [ds1002]. Biogeographic Information and Observation System (BIOS). Calif. Dept. of Fish and Wildlife. Available at: <http://bios.dfg.ca.gov>.

supported by HBG's observations of Swainson's hawks foraging at the Project site during surveys conducted in April and May 2021.[35,36]

3. The data do not support the City's argument that Newell Open Space and Lynch Canyon Open Space provide foraging habitat for Swainson's hawks. In 2021, there was one eBird record of a "possible Swainson's hawk" at Lynch Canyon Open Space, and no records of Swainson's hawks at Newell Open Space.

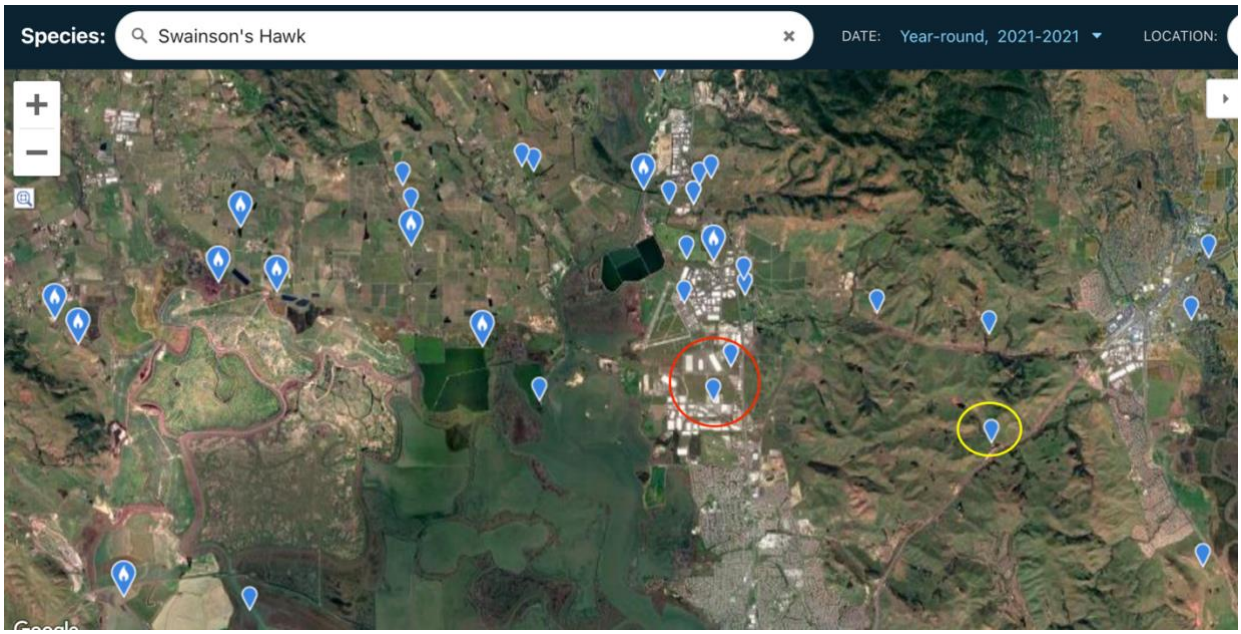

Figure 5. eBird data of Swainson's hawk detections (blue pins) in 2021. The Project site is located within the red circle; the "possible Swainson's hawk" at Lynch Canyon Open Space is located within the yellow circle.

8 CONT

Impact Analysis

The DEIR's incorporation of false information on Swainson's hawk nest sites is a critical flaw because that information was the foundation of the DEIR's impact analysis and the City's subsequent conclusion that compensatory mitigation is not warranted. For example, Master Response 1 in the FEIR states:

> "there are several large open space preserves within 2 and 5 miles of the project site that, combined, provide approximately 2,000 acres of suitable foraging habitat for the Swainson's hawk within a 10-mile radius of the project site. This demonstrates that, based upon the limited number of known Swainson's hawk to occur within a 10-mile radius of the project site, and with the acreage of existing foraging habitat currently protected, there is more than sufficient foraging habitat near the project site. Accordingly, the proposed project would not result in significant impacts to foraging habitat nor affect the nesting populations of

[35] DEIR, p. 3.3-24.
[36] These observations are not in the eBird database.

> Swainson's hawk near the project site either directly, indirectly, or cumulatively. Therefore, no mitigation is warranted for Swainson's hawk foraging habitat."

Whereas the 2,000 acres of foraging habitat referenced in the City's response might be sufficient for the single nesting territory identified in the DEIR, it is not enough to support the six (or more) active nesting territories that occur within 10 miles of the Project site. As a frame of reference, Swainson's hawk home range sizes in the Central Valley range from 6,820 to 9,978 acres.[37] Furthermore, research has shown that survival of breeding Swainson's hawks is dependent on several factors, not just the total amount of suitable foraging habitat. For example, Briggs et al. (2011) reported: "[t]he distance an individual had to travel to agriculture, where most individuals forage, was negatively related to survival."[38] Even if the Project does not cause a significant reduction in available foraging habitat, it would force the Swainson's hawks that nest north of the Project site to travel further to forage, which in turn would affect their survival.

Need for Compensatory Mitigation

Master Response 1 states:

> "Widespread nesting recovery documented by Furnas et al. (2022) has yet to be incorporated into CDFW policy and/or in records kept within the CNDDB. Accordingly, the "Staff Report Regarding Mitigation for Impacts to Swainson's Hawks (*Buteo swainsoni*) in the Central Valley of California" (Staff Report), besides being geographically inappropriate for the proposed project in Napa County, is also not relevant to current nest territory expansion of the Swainson's hawk population into Napa County and elsewhere in the State. Thus, this document is not appropriately used as a basis for determining mitigation ratios for impacts to annual grassland in Napa County. The Staff Report recommends mitigation for projects that impacts foraging habitat within 10 miles of an "active" Swainson's hawk nest (as defined by the CDFW Staff Report). For the reasons provided previously, this mitigation requirement does not reflect the current population expansion of the Swainson's hawk in California, and its use is geographically limited."

8 CONT

CDFW's Staff Report focuses on Swainson's hawks in the Central Valley because there were no Swainson's hawk nest sites west of the Central Valley when the Staff Report was issued. However, the underlying threats addressed in the Staff Report (e.g., habitat loss) apply to birds west of the Central Valley. There is nothing unique about Napa County that makes the Swainson's hawks in Napa County less susceptible to the threats addressed in the Staff Report.

Whereas the Furnas et al. (2022) study suggests a substantial recovery of the Swainson's hawk population, the authors cautioned: "[d]espite an overall increasing summer range population of the Swainson's hawks in California, we recommend caution with respect to conservation

[37] California Department of Fish and Wildlife. 2016. Status Review: Swainson's Hawk (*Buteo swainsoni*) in California. Table 1.
[38] Briggs CW, Woodbridge B, Collopy MW. 2011. Correlates of Survival in Swainson's Hawks Breeding in Northern California. Journal of Wildlife Management 75(6):1307-1314.

planning for the species in the state. The stability of the recovery remains unclear." Furthermore, the CEQA significance threshold adopted in the EIR is whether:

> "The proposed project could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service."

Habitat loss is known to have a substantial adverse effect on the Swainson's hawk, which remains a state-listed species.[39] Therefore, Project impacts to the Swainson's hawk are potentially significant.

8 CONT

Habitat Value of the Wetland Preserve

The FEIR argues (in part) that no mitigation is warranted for impacts to Swainson's hawk foraging habitat because the Project includes "addition of a 45-acre open space area providing suitable foraging habitat for the species."[40] This argument is inconsistent with scientific evidence that shows Swainson's hawks avoid foraging in built-up areas.[41] As reported by Monk & Associates, the tall walls of a warehouse inhibit Swainson's hawk's sight and maneuverability with respect to hunting and "stooping" (diving) for prey.[42]

Golden Eagle (Cashen-8)

Comment Cashen-8 states: "[b]ecause the DEIR does not incorporate mitigation for the Project's negative impacts on golden eagle foraging habitat, potentially significant impacts on the species remain unmitigated." The FEIR provided the following response to this issue:

> "Development of the proposed project would remove some foraging area for this species. Development of the proposed project would also provide and preserve in perpetuity approximately 45 acres of open space that would include habitat currently suitable for foraging by the golden eagle, as indicated by the observation of a golden eagle foraging on the site in spring 2021. The adjacent Napa Logistics Park Project has preserved 37 acres of grassland and wetlands in perpetuity that provides foraging habitat for golden eagle. Between these two preservation areas abutting and directly adjacent to the project site, approximately 82 acres of suitable habitat would be available for the golden eagle. In addition, there are several large open space preserves within 2 and 5 miles of the project site that combined provide approximately 2,000 acres of suitable foraging habitat."

[42] Monk & Associates. 2020 Dec 15. Response to Comments Regarding the Mitigation Negative Declaration Safe Harbor 3.0 Project (SCH No. 2020110227) Napa County, California. p. 4.

A fundamental flaw with the FEIR's logic is that it assumes the Project would not alter habitat quality, which is a function of various biotic and abiotic factors. As explained in my previous comments, and the comments issued by CDFW, golden eagles are highly sensitive to human disturbance.[43] Because golden eagles require large patches of habitat that are relatively isolated from human disturbance, there is virtually zero possibility that golden eagles will forage in a 45-acre patch of habitat that is bisected by a major road and surrounded by industrial development. Furthermore, there are no eBird records of golden eagles at the 37-acre preserve associated with the Napa Logistics Park Project, nor does the DEIR provide evidence that golden eagles have ever been observed foraging at that preserve. The fact that a golden eagle was foraging at the 208-acre Project site in spring 2021, prior to construction of the Devlin Road Extension and Phase II of the Napa Logistics Park Project, is not evidence that golden eagles will forage at the 45-acre preserve after the Project is constructed.

Breeding golden eagles occupy discrete territories, which are often occupied for many decades.[44] These territories maintain the local-area eagle population.[45] When one of the eagles dies, it is replaced by a "floater" (subadult or nonbreeding adult) that fills the territory vacancy. However, when the territory is eliminated (e.g., due to development), the pair is forced to become "floaters" and there is an overall net loss in the reproductive potential of the local-area population (i.e., under most circumstances the pair cannot simply establish a new territory elsewhere). Consequently, although death of an eagle has an impact on the population, the primary threat to persistence of the local-area population is the loss of historical territories. 9 CONT

Golden eagles aggressively defend their territories, are known to have territories in the open space preserves located 2 to 5 miles from the Project site,[46] and seldom range further than 3 km (1.86 miles) from their territory centers.[47] According to the Applicant's Biological Resources Report: "[b]reeding season raptor observations included foraging Northern harrier…as well as foraging by state listed threatened Swainson's hawk (*Buteo swainsoni*). A California Fully Protected golden eagle (*Aquila chrysaetos*) was also observed over the Project Site… These three special status raptor species have nested in this part of Napa County in the past, and **it is entirely possible these individuals could be nesting somewhere in the vicinity of the Project Site**."[48] This conclusion is consistent with eBird records, which suggest there may be a golden eagle territory west of Hwy 29/12. The Project would directly, indirectly, and cumulatively impact habitat for that territory (if present). The 2,000 acres of open space preserves east of Hwy 29/12 have no value in maintaining a territory west of Hwy 29/12 because foraging habitat

[48] DEIR, Appendix C.1, p. 21. [emphasis added].

at the open space preserves is already occupied (defended) by other territorial pairs. In other words, the territorial pair associated with foraging habitat at the Project site cannot merely forage at the open space preserves once habitat is eliminated from the Project site, because eagles that occupy the preserves will aggressively defend their habitat from intruders.

Baseline Setting and Project Impacts

Response to Comment Cashen-8 states: "[b]ased upon the limited number of golden eagle records within a 10-mile radius of the project site, there is sufficient foraging habitat in and within the vicinity of the project site."[49] This determination is not supported by evidence because the DEIR did not establish the number of golden eagle records within a 10-mile radius of the Project site, nor did it establish the amount of foraging habitat needed to maintain golden eagle territories in the vicinity of the Project site.

The DEIR states:

> "The closest known nesting record for golden eagle as reported in the CNDDB is a nest site (CNDDB Occurrence No. 82) located approximately 3.2 miles north of the Project Site in a eucalyptus tree surrounded by a vineyard. The CNDDB reports that this tree was cut down in 2008 and no longer provides a suitable golden eagle nest site. An additional nesting record is a nest site found by biologists with Monk & Associates approximately 4.5 miles east of the Project Site within the Newell Open Space within the City of American Canyon. This nest, also in a eucalyptus tree, was active in 2016 and 2017."[50]

9 CONT

The CNDDB does not provide adequate information on golden eagle nest sites in the vicinity of the Project site due to a backlog of nest records, and because information on golden eagle nest sites often is not reported due to concerns of persecution. Although the CNDDB can be used as a tool, obtaining adequate information on golden eagle nest sites in the vicinity of the Project site requires: (a) protocol-level surveys,[51] or at a minimum, (b) acquisition of data from the USFWS's Eagle Permit Coordinator. HBG did not conduct either of these tasks. The City has no basis for its determination that "there is sufficient foraging habitat in and within the vicinity of the project site" without knowledge of the breeding territories (i.e., abundance and location) in the vicinity of the Project site.

Response to Comment Cashen-8 states the following regarding compliance with the Eagle Act: "[a]lthough the proposed project would result in a net loss of foraging habitat, such a net loss occurring in the particular area in which the project site is located would not result in a "take" as defined by the Golden Eagle Protection Act." This statement is not supported by scientific evidence or analysis. The Eagle Act defines "take" as "pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest or disturb." "Disturb" means: "to agitate or bother a Bald or Golden eagle to a degree that causes, or is likely to cause, based on the best scientific

information available, 1) injury to an eagle, 2) a decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior, or 3) nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior." In addition to immediate impacts, this definition also covers impacts that result from human-induced alterations initiated around a previously used nest site during a time when eagles are not present, if, upon the eagle's return, such alterations agitate or bother an eagle to a degree that injures an eagle or substantially interferes with normal breeding, feeding, or sheltering habits and causes, or is likely to cause, a loss of productivity or nest abandonment.[52] Loss of foraging habitat qualifies as a form of disturbance under the Eagle Act because habitat loss can decrease productivity (i.e., #2 above) or cause nest abandonment (i.e., #3 above). At a minimum, the incremental loss of habitat from the Project site, in conjunction with habitat loss caused by other projects in the region, would cause a potentially significant cumulative impact on the golden eagle. Because the Project site is known to be used as foraging habitat for the golden eagle, and because the DEIR does not incorporate effective mitigation, the Project's contribution to a significant cumulative impact is cumulatively considerable.

9 CONT

Northern Harrier (Cashen-9)

Although the DEIR states "the proposed project would result in an approximately 163-acre reduction in avian foraging habitat,"[53] it provides no analysis of the significance of this impact on the northern harrier. The FEIR provided the following response to this issue:

> "The operative significance threshold for impacts to northern harrier, an unlisted species, is whether the proposed project would have a substantial adverse effect on the species, either directly or through habitat modifications. Although the proposed project would result in a net loss of potential northern harrier foraging habitat, such a net loss occurring in the particular area in which the project site is located would not cause a substantial adverse effect on the species. There is no need to "net out the impact of a proposed project" for that impact to be less than significant. (See, Save Panoche Valley v. San Benito County (2013) 217 Cal.App.4th 503, 529.)"[54]

10

There are three flaws with the FEIR's response. First, the impact would not be limited to "potential" foraging habitat. The Project site is known to provide foraging habitat for the northern harrier because harriers were observed foraging over the Project site during winter and spring (breeding) season surveys conducted by Helm Biological Consulting.[55] In addition, I observed a northern harrier foraging at the site during my site visit on November 9, 2022. Second, although the DEIR states "nesting by this species at the site is possible," there is no analysis of the net loss of nesting habitat.[56] Third, the FEIR fails to explain why the habitat loss "would not cause a substantial adverse effect on the species." As discussed in my previous comments, one of the primary threats to the northern harrier is the loss and degradation of

[52] Legal Protections for the Golden Eagle. 24 Jun 2015 email communication to Scott Cashen from Heather Beeler, Eagle Permit Coordinator, USFWS.

[54] FEIR, RTC Cashen-9.
[55] DEIR, p. 3.3-25.
[56] *Ibid*.

nesting and foraging habitat.[57] Because nesting territories are the ultimate source of population recruitment (stability), and because reproductive success is dependent on access to high quality foraging habitat, the net loss of habitat from the Project site could indeed have a substantial adverse effect on the species. For these reasons, Project impacts on the northern harrier remain significant.

10 CONT

Burrowing Owl (Cashen-10)

Response to Comment Cashen-10 states:

> "based upon the lack of burrowing owls and burrowing owl habitat on the project site, the number of known burrowing owls to occur within a 10-mile radius of the project site and the acreage of existing suitable habitat currently protected within 2 and 5 miles of the project site, the proposed project would not result in significant impacts to burrowing owl habitat directly, indirectly, or cumulatively, therefore no mitigation is warranted for burrowing owl habitat."

Burrowing owls often use burrows created by ground squirrels. The Biological Resource Report states that the only location supporting ground squirrels in December 2020 and April 2021 was an area around the rubble pile and compost at the perimeter of Clark's Rocks along Green Island Road.[58] I observed several ground squirrels along the northern border of Project site during my 9 November 2022 site visit. Therefore, it appears ground squirrels colonized additional portions of the Project site after HBG's reconnaissance-level investigation. Whereas the Project site may have lacked burrowing habitat between December 2020 and April 2021, it currently provides potential habitat for burrowing owls.

11

The DEIR states: "[a] small number of burrowing owl have been recorded in the CNDDB within the general project vicinity, with the nearest reports from as close as about 1.7 miles north of the project site and about 2.5 miles south."[59] The fact that only a "small number" of burrowing owls have been recorded in the vicinity of the Project site increases the severity of the Project's potential impacts; it does not eliminate the potential for significant impacts (as suggested in the FEIR's response). Because nesting burrowing owls may already be extirpated from Napa County, the presence of nesting burrowing owls at the Project site would be extremely significant from a conservation perspective. Furthermore, because burrowing owls have high fidelity to nest sites, the protected open space habitat located 2 to 5 miles from the Project site has no value to owls that are displaced from the Project site (i.e., the owls will not merely "move" 2 to 5 miles to the protected open spaces). This issue is compounded by the EIR's failure to provide evidence that the protected areas (i.e., Newell Open Space, Lynch Canyon Open Space, and CRLF Preserve) support burrowing owls. Based on data provided in the CNDDB and eBird databases, Lynch Canyon Open Space supports wintering burrowing owls, but none of the sites support breeding burrowing owls.

[59] DEIR, p. 3.3-25.

Burrowing Owl Surveys

CDFW's comment letter recommended protocol-level breeding and nonbreeding surveys for burrowing owls in order to provide an adequate environmental setting, and to reduce impacts to burrowing owl to less-than-significant levels.[60] The FEIR provided the following response:

> "The biological resource report referenced in the Draft EIR made an assessment that the project site did not support suitable habitat for burrowing owl. This assessment demonstrated that, based on the absence of suitable habitat on the project site due to general lack of California ground squirrel and ground squirrel colonies, and the fact no burrowing owl were observed during several biological field surveys conducted by Huffman- Broadway Group (HBG) Biologists between December 2020 and April 2021, Helm Biological Consulting in December 2020 and April and May 2021, or during previous biological studies conducted by Monk & Associates, LSA Associates, or Rana Resources, and that the nearest burrowing owl recorded in the California Natural Diversity Database (CNDDB) is 1.7 miles from the project site, breeding and nonbreeding surveys are not warranted."

11
CONT

As discussed above, the Project site currently provides potential habitat for burrowing owls. The fact that the nearest burrowing owl record in the CNDDB is 1.7 miles from the Project site is not evidence that surveys are unwarranted because 1.7 miles is well within the dispersal distance of burrowing owls.[61] The argument that protocol-level surveys are unwarranted because other (non-protocol) surveys failed to detect burrowing owls at the site is a logical fallacy: if non-protocol level surveys provided sufficient data on burrowing owls there would be no need for a survey protocol. Burrowing owls can be difficult to detect due to their cryptic coloration, extensive use of burrows, and tendency to flush (fly away) when approached.[62] As a result, burrowing owls are not reliably detected during surveys for other resources, such as those listed in the FEIR's response (e.g., the rare plant surveys conducted by Helm Biological Consulting). Furthermore, the burrowing owl survey protocol establishes minimum requirements for the timing and number of surveys. These minimum requirements were based on detection probabilities reported in scientific studies.[63] Because the non-protocol surveys conducted for the Project did not adhere to the minimum survey requirements established in the protocol, they do not provide substantial evidence that burrowing owls would have been detected during those surveys.

[63] *See Appendix D In:* California Department of Fish and Game. 2012. Staff Report on Burrowing Owl Mitigation.

Impacts and Mitigation

The FEIR states:

> "if burrowing owl is ultimately found on the site and burrow eviction/relocation of burrowing owls during the non-nesting season is a selected strategy to move forward with the project without direct impacts to burrowing owl individuals, the applicant will coordinate this effort with CDFW and provide habitat mitigation consistent with the 2012 CDFW Staff Report on burrowing owl. Modifications to MM BIO-1d, as shown in the Errata, confirm this requirement."[64]

The mitigation requirements of MM BIO-1d are vague and do not ensure Project impacts to burrowing owls would be reduced to less-than-significant levels. MM BIO-1d does not identify: (a) the habitat mitigation that would be provided (e.g., quantity and location of compensation habitat); (b) performance standards for the mitigation; (c) the monitoring and reporting program; (d) the mechanism for ensuring protection and management of the habitat mitigation; and (e) financial assurances. There are no potential compensation sites in Napa County that contain breeding burrowing owls. Furthermore, burrowing owls rarely colonize (or recolonize) other areas after they are displaced from a project site, despite the presence of apparently suitable habitat elsewhere.[65] Therefore, the Applicant would either need to: (a) acquire compensation habitat in another county, or (b) acquire compensation land in Napa County and hope that it someday attracts breeding owls. The first scenario would not mitigate the Project's extremely significant impact on the Napa County burrowing owl population; the second scenario is unlikely to benefit burrowing owls, especially in absence of contingency measures and enforceable performance standards. 11 CONT

The FEIR concludes: "[a]lthough the proposed project would result in the loss of burrowing owl nests or a net loss of potential burrowing owl foraging habitat, such losses would not cause a substantial adverse effect on the species."[66] This conclusion is absurd. Currently, there are no known burrowing owl nest sites, and very few wintering sites, in Napa County. Therefore, impacts to occupied burrows at the Project site would be an extremely significant impact because loss of those burrows (and owls) would further reduce the potential for recovery of the Napa County burrowing owl population. This constitutes a substantial adverse effect on the species. Because the FEIR does incorporate mitigation to address this issue, the Project's impacts on the burrowing owl remain potentially significant and probably unmitigable.

Invasive Plants (Cashen-12)

Comment Cashen-12 discussed the DEIR's failure to incorporate mitigation that would minimize the Project's potential to introduce invasive plant species or facilitate their spread. The FEIR's response states: 12

[64] FEIR, RTC Cashen-10.
[65] Rosenburg DK, Haley KL. 2004. The Ecology of Burrowing Owls in the Agroecosystem of the Imperial Valley, California. Studies in Avian Biology 27:120-135. *See also* Wilkerson RL, Siegel RB. 2010. Assessing changes in the distribution and abundance of burrowing owls in California, 1993-2007. Bird Populations 10:1-36.
[66] FEIR, RTC Cashen-10.

> "The managed landscaped areas within the development could provide a limited opportunity for an invasive plant; however, these areas are managed landscaped areas with planted trees and shrubs that would be managed, by techniques such as weeding, to allow for the growth of the plants, included in the landscape plan once proposed. Therefore, no mitigation is warranted for invasive plant species during construction or after construction on the developed portion of the project site."

The FEIR's response is somewhat inconsistent with Response to Comment S&W-10b, which indicates the landscaped areas would consist of native grasses and shrubs (not trees), and that "[m]aintenance may include invasive [*sic*] low intensity tasks such as removing trash and replacing grasses or shrubs as needed." Whereas the Applicant may intend to conduct "weeding" in the managed landscape areas, the removal of invasive plants from those areas is not incorporated as a mandatory (enforceable) mitigation measure.

The FEIR states the following regarding invasive plants in the Wetland Preserve:

> "If an invasive plant is introduced into the Wetland Preserve, the Draft EIR set forth mitigation measures under MM BIO-3d. MM BIO-3d provides mitigation measures in Draft EIR Section 3.3, Biological Resources, page 3.3-36 to monitor for the establishment of an invasive plant species in wetlands and provides a contingency measure on page 3.3-37 to address invasive plant species should the invasive plant performance standard not be met."[67]

12
CONT

There are four major flaws with the City's rationale. First, MM BIO-3d defines invasive plants as species rated as "high" by the California Invasive Plant Council ("Cal-IPC"). This is inconsistent with the Cal-IPC definition, which is: "plants that are not native to an environment, and once introduced, they establish, quickly reproduce and spread, and cause harm to the environment, economy, or human health."[68] All of the plants listed in the Cal-IPC Inventory have the potential to cause significant impacts on the environment, not just those rated as "high" by Cal-IPC.[69]

Second, MM BIO-3d allows up to 5% absolute cover of invasive plant species rated as "high" upon cessation of the 5-year maintenance and monitoring period. The Cal-IPC states the following regarding "high" species: "[t]hese species have severe ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal and establishment. Most are widely distributed ecologically."[70] Thus, any amount of "high" species that occur in the Wetland Preserve are likely to multiply and spread into surrounding areas after cessation of the 5-year maintenance period.

[67] FEIR, RTC Cashen-12.
[68] Cal-IPC. 2022. About invasive plants (web page). Available at: <https://www.cal-ipc.org/plants/impact/>. (Accessed 12 Nov 2022).
[69] *See* Cal-IPC. 2022. Cal-IPC Inventory (web page). Available at: <https://www.cal-ipc.org/plants/inventory/>.
[70] *Ibid.*

Third, the monitoring required under MM BIO-3d is limited to data collection from at least one, 5-foot radius sample plot at each of the established/created wetlands. Thus, there would be no monitoring for invasive plants in the majority of the Wetland Preserve.

Fourth, the invasive plant performance standards proposed in MM BIO-3d apply only to the established/created wetlands;[71] there are no performance standards for invasive plants in the upland areas.

12 CONT

The California Invasive Plant Council has published guidelines for preventing the spread of invasive plants.[72] In addition, the U.S. Department of the Interior's "Early Detection Rapid Response" framework describes the proactive approach needed to minimize the colonization or spread of invasive plants.[73] The strategies described in these two documents are feasible and they should be incorporated as required mitigation. Because the FEIR fails to incorporate appropriate mitigation, potentially significant impacts associated with the colonization and spread of invasive plants remain potentially significant.

Cumulative Impacts (Cashen-13)

A fundamental flaw with the DEIR's cumulative impacts analysis is that it applies a narrow scale (i.e., 0.5-mile radius from the Project site) to identify other projects that could contribute to cumulative effects, but a much broader scale (i.e., a 10-mile radius or the "American Canyon area") to analyze the abundance of remaining habitat. The FEIR's response to this issue was limited to the following statements: "[t]he discussion of the abundance of Swainson's hawk foraging habitat in the project vicinity in Section 3.3, Biological Resources, was a separate analysis. Regardless, much of that foraging habitat is within 0.5-mile of the project site."[74] The FEIR's response is confusing because the flaw in the DEIR's cumulative impacts analysis was applied to all of the special-status species analyzed in DEIR, not just the Swainson's hawk. Furthermore, the assertion that "much of that [Swainson's hawk] foraging habitat is within 0.5-mile of the project site" is not supported by evidence. To the contrary, under the cumulative impacts scenario there will be virtually no foraging habitat remaining within 0.5-miles of the Project site (*see* Figure 6, below).

13

Response to Comment Cashen-13 reiterates the City's position that the area within 0.5-miles of the Project site is an appropriate scope for analyzing cumulative impacts to biological resources. Figure 6, below, depicts the cumulative impacts scenario within 0.5-miles of the Project site. As is overly evident in the figure, minimal habitat would remain within 0.5-miles of the Project site, and thus the cumulative impact to habitat is significant. The proposed Wetland Preserve does not mitigate the impact because it: (a) would be exposed to numerous edge effects (e.g., noise, human activity) that functionally eliminate habitat, (b) would be designed and managed to discourage wildlife use, and (c) is too small to satisfy the habitat patch size requirements of the

[71] It is unclear if the "established wetlands" are synonymous with the "created wetlands" or the existing wetlands.
[72] Cal-IPC. 2012. Preventing the Spread of Invasive Plants: Best Management Practices for Land Managers (3rd ed.). Cal-IPC Publication 2012-03. California Invasive Plant Council, Berkeley, CA.
[73] U.S. Department of the Interior. 2016. Safeguarding America's lands and waters from invasive species: A national framework for early detection and rapid response, Washington D.C., 55p.
[74] FEIR, RTC Cashen-13.

species that would be impacted by the Project (e.g., northern harrier and golden eagle, among others). The fact that there are open space preserves two to five miles from the Project site does not render the cumulative impact less-than-significant because those preserves are not located within the geographic scope of the City's cumulative impacts analysis. Therefore, the City must either: (a) make the determination that the Project's contribution to cumulative impacts is significant and unavoidable, or (b) issue a revised DEIR that identifies and provides analysis of cumulative projects within the same geographic area that is used to analyze abundance of remaining habitat (e.g., a 10-mile radius).

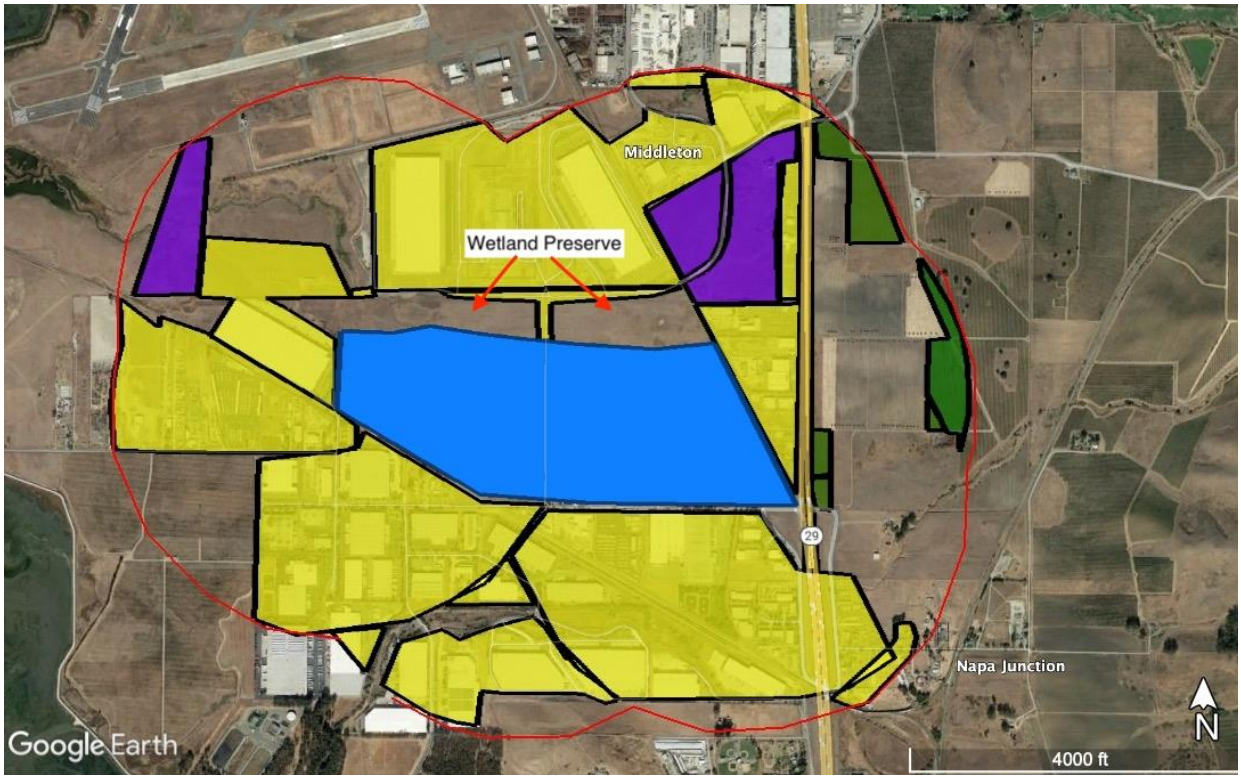

Figure 6. Cumulative impacts within 0.5 miles (red line) of the Project site (blue polygon). Yellow polygons depict existing development. Purple polygons depict cumulative projects identified in the DEIR (Napa-Vallejo Waste, Napa Airport Corporate Center, and Sentinels of Freedom). Green polygons depict vineyards, which do not provide foraging habitat for Swainson's hawks, golden eagles, and northern harriers.

13 CONT

MITIGATION ISSUES

Nest Buffers

14

Several of the DEIR's mitigation measures incorporate nest buffers (construction set-back distances) that are much smaller than those recommended in USFWS and CDFW guidelines. For example, although the USFWS recommends a 1-mile buffer zone around golden eagle nests, MM BIO-1b only requires a 1,000-foot buffer zone. It is important to note that the buffers

recommended in the USFWS and CDFW guidelines are based on the best available scientific information and were not arbitrarily derived. In contrast, the FEIR continues to omit scientific evidence that the buffers proposed in the various mitigation measures would be sufficient.

The FEIR argues that adherence to the buffer distances recommended by the USFWS and CDFW is not necessary because a "qualified biologist" could require a larger buffer if deemed necessary. For example, the FEIR's response to Comment Cashen-16 states:

> "Regardless, MM BIO-1b establishes a minimum 1000-foot buffer zone, which means the qualified Raptor Biologist could require a larger buffer than 1000 feet or adhere to the USFWS 1-mile buffer recommendation or establish a buffer greater than 1 mile if it is determined, by the qualified Raptor Biologist, that a larger buffer is warranted."

The fact that the Project biologist *could* require a larger buffer does ensure Project impacts would be reduced to less-than-significant levels. Based on my experience with construction projects, construction contractors are only willing to implement legally binding mitigation measures, because implementation of more restrictive measures increases construction costs and delays. In this case, there is no legal mechanism that would ensure the construction contractor adheres to a larger buffer, especially because (according to the MMRP) the City would verify compliance with the mitigation measure *before* any construction-related ground disturbance, and before the Project biologist could evaluate construction activities to determine whether larger buffers are warranted. In addition, the Project biologist would be hired by the Applicant or construction contractor. This creates an inherent conflict between the needs of the organism (e.g., nesting bird), and the Applicant's and biologist's desire to create a mutually beneficially financial situation. These issues are exacerbated by the FEIR's failure to establish: (1) a mechanism for documenting the rationale behind the selected buffer size, and for ensuring larger buffers recommended by the biologist are enforced, and (2) a monitoring and reporting program designed to evaluate the adequacy of the reduced buffers and trigger adaptive management measures if needed. For these reasons, the reduced buffers proposed in the FEIR do not ensure effective mitigation.

13 CONT

14 CONT

Biologist Qualifications

Although the FEIR states that the "qualified Raptor Biologist" (MM BIO-1a, -1b, -1c) or "qualified Biologist" (MM BIO-4) could require larger nest buffers, it fails to provide assurances that the biologist would have the expertise needed to determine when a larger buffer is warranted. For example, the only requirement that MM BIO-1b establishes for the qualified Raptor Biologist is that the biologist have: "at least 2 years of experience surveying for and detecting nesting golden eagles." The fact that a biologist has detected nesting eagles does not mean that they have knowledge and experience with eagle behavior and the various disturbance factors that influence reproductive success.

15

Swainson's Hawk (Cashen-15)

MM BIO-1a requires installation of a 1,000-foot buffer around Swainson's hawk nest sites. CDFW mitigation guidelines call for a ¼-mile or ½-mile buffer.[75] The DEIR does not provide evidence that a 1,000-foot buffer would be sufficient to prevent impacts, nor does it require monitoring to validate the adequacy of a 1,000-foot buffer. The FEIR provided the following response to this issue:

> "There are no trees on the project site and, thus, the Swainson' s hawk does not have the potential to nest on-site. Instead, MM BIO-1a applies to Swainson's hawk nesting within the zone of influence, which is generally defined as within 1,000 feet of the project site."[76]

16

The CDFW defines the zone of influence (buffer zone) as either ¼-mile (near urban areas) or ½-mile (in nesting areas away from urban development).[77] I am unaware of any scientific literature that defines the zone of influence as 1,000 feet, nor does the FEIR cite literature substantiating that zone of influence (which appears to have been arbitrarily derived by Monk & Associates). As a result, the FEIR does not resolve the issues I raised in Comment Cashen-15.

Burrowing Owl (Cashen-18b)

"Passive relocation" involves installation of one-way doors in burrow openings to evict burrowing owls and prevent burrow re-occupation. The DEIR did not disclose or evaluate impacts to burrowing owls due to burrow exclusion, nor did it identify mitigation measures sufficient to reduce such impacts below a level of significance. The FEIR provided the following response to this issue:

> "MM BIO-1d does not allow passive relocation of burrowing owls during the breeding season. The passive relocation effort outlined in MM BIO-1d is restricted to relocating owls during the nonbreeding season often referred to as overwintering owls. If burrowing owl are found to be present during the breeding season (February 1 to August 31), the proposed project ground- disturbing activities shall follow the CDFW 2012 Staff Report recommended avoidance protocol whereby occupied burrows shall be avoided with a non-disturbance buffer. Therefore, implementation of MM BIO-1d would ensure project impacts to overwintering owls and breeding pairs would be reduced to less than significant."

17

As discussed in my previous comment letter and in CDFW's Staff Report on Burrowing Owl Mitigation, passive relocation (i.e., eviction) can cause significant impacts to burrowing owls regardless of when the owls are evicted. My comment letter identified the types of impacts that

[75] California Department of Fish and Game. 1994. Staff report regarding mitigation for impacts to Swainson's hawks (*Buteo swainsoni*) in the Central Valley of California. p. 11.
[76] FEIR, RTC Cashen-15.
[77] California Department of Fish and Game. 1994. Staff report regarding mitigation for impacts to Swainson's hawks (*Buteo swainsoni*) in the Central Valley of California. p. 11.

can occur to burrowing owls evicted during the nonbreeding season (e.g., loss of refuge from predators).

The FEIR's determination that MM BIO-1d would ensure Project impacts would be reduced to less than significant levels because the Applicant "shall follow the CDFW 2012 Staff Report recommended avoidance protocol" is not supported by evidence because MM BIO-1d does not require adherence to the impact avoidance measures in CDFW's Staff Report. For example, the 100-foot buffer required under MM BIO-1d is substantially less than the 500-meter (1,640-foot) buffer recommended by CDFW. CDFW's Staff Report states: "if it is decided to allow activities closer than the setback distances recommended, a broad-scale, long-term, scientifically-rigorous monitoring program ensures that burrowing owls are not detrimentally affected by alternative approaches."[78] Not only does MM BIO-1d fail to require this level of monitoring, but it requires no monitoring whatsoever. 17 CONT

Nesting Birds (Cashen-20)

Comment Cashen-20a pertained to MM BIO-4's failure to establish standards for the: (a) nest searching techniques, (b) minimum level of effort (i.e., survey hours per unit area), and (c) qualifications of the biologist conducting the survey. The FEIR provided the following response: "MM BIO-4 does establish standards for conducting pre-construction breeding bird survey. Standards include timeframes when the survey can begin, provides a specific survey geographic range outside of the project site for ground nesting birds." The FEIR's response does not rectify the issue because it does not address the standards discussed in my comment.

Comment Cashen-20b stated that the 50-foot nest buffers proposed in MM BIO-4 would not be sufficient to prevent noise impacts on nesting birds. The DEIR indicates that construction noise levels may reach 90 dBA at a distance of 50 feet.[79] The FEIR provided the following response: 18

> "To clarify, Draft EIR Section 3.10, Noise, page 3.10-17, disclosed construction noise levels may be as high as 90 dBA maximum noise/sound level (Lmax) (i.e., instantaneous noise level). Actual average noise levels during construction activities would be lower. Regardless, the buffers outlined in MM BIO-4 are minimum buffers and may be increased should the qualified Biologist determine a larger buffer is warranted to protect a nest."

The FEIR's response circumvents the issue. According to the DEIR, construction equipment would result in a reasonable worst-case hourly average of 86 dBA Leq at a distance of 50 feet from the acoustic center of the construction area. Noise at this level would have adverse effects on nesting birds. For example, multiple bird studies have documented changes in song characteristics, reproduction, abundance, stress hormone levels, and species richness at levels ≥45 dBA.[80]

[78] California Department of Fish and Game. 2012. Staff Report on Burrowing Owl Mitigation. pp. 9 and 10.
[79] DEIR, p. 3.10-17.
[80] Shannon G, McKenna MF, Angeloni LM, Crooks KR, Fristrup KM, Brown E, Warner KA, Nelson MD, White C, Briggs J, McFarland S. 2016. A synthesis of two decades of research documenting the effects of noise on wildlife. Biological Reviews 91(4):982-1005.

Response to Comment Cashen-20b further states: "the buffers outlined in MM BIO-4 are minimum buffers and may be increased should the qualified Biologist determine a larger buffer is warranted to protect a nest." A fundamental flaw with this reasoning is that it fails to account for the fact that disturbance levels (e.g., from construction activity and noise) may increase after the buffer is established.[81] Therefore, a buffer deemed appropriate during the first week of construction—or prior to initiation of construction, as suggested in MM BIO-4—may not be appropriate during the second week of construction. MM BIO-4 fails to account for this possibility because it does not incorporate construction monitoring, nest monitoring, or any other system for evaluating and adjusting the buffer once it is established by the Project biologist. This issue is compounded by the absence of performance standards for MM BIO-4. Response to Comment Cashen-20c states:

> "The MM BIO-4 requires buffer zones to be maintained until it can be documented that either the nest has failed, or the young have fledged, which is the industry standard approach. The Biologist must document the nest has either failed or the young have fledged prior to the buffer being removed. With respect to ensuring construction crews abide by the nesting bird buffers, this would be required to be noted on construction plans and, thus, construction personnel would be aware of this requirement."

18 CONT

Maintaining the buffer until the nest is no longer active is not a performance standard, nor is documenting the fate of the nest. An appropriate performance standard would incorporate a quantifiable metric of nesting success (e.g., young successfully fledge from 75% of the nests in the Project area). MM BIO-4 allows the Project biologist to establish nest buffers considerably smaller than the minimum no-disturbance buffers recommended by CDFW and USFWS (and in scientific literature), then remove the buffers after Project activities have caused the associated nests to fail. This approach does not mitigate Project impacts on nesting birds.

The FEIR's response further indicates that nest monitoring is not needed because the construction personnel would be aware of the nest buffer requirements. This is not a reliable approach to mitigation. Even when construction workers are aware of buffer requirements, they do not always adhere to those buffer requirements. I have watched construction workers violate nest buffers demarcated by girders, flagging, and "keep out" signs. I am also aware of instances in which construction workers covertly destroyed nests so work could proceed in a given area. Even when construction workers have good intentions, it is extremely difficult to convey the mitigation requirements to all personnel due to the number of subcontractors involved at various stages of construction (and most construction workers do not review the construction plans, but rather, they follow orders from the foreman).

CONCLUSION

The FEIR fails to rectify the issues raised in my previous comment letter, and those in the comment letter submitted by the CDFW. The Project would have significant direct and indirect impacts on sensitive biological resources, and it would have a considerable contribution to

19

[81] The FEIR (pp. 3-318 and -319) acknowledges: "[c]onstruction activities vary and may include low disturbance activities such as engineering surveys, high levels of disturbance such as large-scale grading, or there may be areas within a large construction site, such as the project site, that may have no disturbances for long periods."

significant cumulative impacts. The proposed wetland "preserve" is bisected by a major road and would be surrounded by industrial development. As a result, the "preserve" would not have ecological integrity, and it would not mitigate the Project's significant impacts on habitat. The FEIR's mitigation measures do not adhere to CDFW and USFWS guidelines, and thus they would not reduce the Project's impacts to less-than-significant levels.

The "analysis" in the FEIR is not supported by evidence, is lacking entirely, or is based on erroneous information. The cumulative impacts analysis is fatally flawed because it applies one geographic scale to identify cumulative projects, but a much larger scale to identify abundance of remaining habitat. The FEIR is replete with contradictory reasoning in order to achieve the desired determinations. For example, the FEIR argues that the short-eared owl is unlikely to occur at the Project site because the site is completely surrounded by industrial development, but it also argues that the onsite wetland preserve would not function as a habitat "island" after the Project is constructed.

19 CONT

In conclusion, there is insufficient information to support the findings in the FEIR. To the contrary, there is abundant evidence that directly contradicts those finding. The Project would have significant impacts that were not properly analyzed, and the mitigation proposed in the FEIR is scientifically indefensible. For these reasons, the DEIR needs to be revised and recirculated for public review.

Sincerely,

Scott Cashen, M.S.
Senior Biologist

Scott Cashen, M.S.
Senior Wildlife Biologist

Scott Cashen has 28 years of professional experience in natural resources management. During that time he has worked as a field biologist, forester, environmental consultant, and instructor of Wildlife Management. Mr. Cashen focuses on CEQA/NEPA compliance issues, endangered species, scientific field studies, and other topics that require a high level of scientific expertise.

Mr. Cashen has knowledge and experience with numerous taxa, ecoregions, biological resource issues, and environmental regulations. As a biological resources expert, Mr. Cashen is knowledgeable of the various agency-promulgated guidelines for field surveys, impact assessments, and mitigation. Mr. Cashen has led field investigations on several special-status species, including ones focusing on the yellow-legged frog, red-legged frog, desert tortoise, steelhead, burrowing owl, California spotted owl, northern goshawk, willow flycatcher, Peninsular bighorn sheep, red panda, and various forest carnivores.

Mr. Cashen is a recognized expert on the environmental impacts of renewable energy development. He has been involved in the environmental review process of over 100 solar, wind, biomass, and geothermal energy projects. Mr. Cashen's role in this capacity has encompassed all stages of the environmental review process, from initial document review through litigation support. Mr. Cashen provided expert witness testimony on several of the Department of the Interior's "fast-tracked" renewable energy projects. His testimony on those projects helped lead agencies develop project alternatives and mitigation measures to reduce environmental impacts associated with the projects.

Mr. Cashen was a member of the independent scientific review panel for the Quincy Library Group project, the largest community forestry project in the United States. As a member of the panel, Mr. Cashen was responsible for advising the U.S. Forest Service on its scientific monitoring program, and for preparing a final report to Congress describing the effectiveness of the Herger-Feinstein Forest Recovery Act of 1998.

AREAS OF EXPERTISE

- CEQA, NEPA, and Endangered Species Act compliance issues
- Comprehensive biological resource assessments
- Endangered species management
- Renewable energy development
- Scientific field studies, grant writing and technical editing

EDUCATION

M.S. Wildlife and Fisheries Science - The Pennsylvania State University (1998)
Thesis: *Avian Use of Restored Wetlands in Pennsylvania*
B.S. Resource Management - The University of California, Berkeley (1992)

PROFESSIONAL EXPERIENCE

Litigation Support / Expert Witness

Mr. Cashen has served as a biological resources expert for over 125 projects subject to environmental review under the California Environmental Quality Act (CEQA) and/or the National Environmental Policy Act (NEPA). As a biological resources expert, Mr. Cashen reviews CEQA/NEPA documents and provides his clients with an assessment of biological resource issues. He then submits formal comments on the scientific and legal adequacy of the project's environmental documents (e.g., Environmental Impact Report). If needed, Mr. Cashen conducts field studies to generate evidence for legal testimony, or he can obtain supplemental testimony from his deep network of species-specific experts. Mr. Cashen has provided written and oral testimony to the California Energy Commission, California Public Utilities Commission, and U.S. district courts. His clients have included law firms, non-profit organizations, and citizen groups.

Forestry

Mr. Cashen has five years of experience working as a consulting forester on projects throughout California. Mr. Cashen has consulted with landowners and timber operators on forest management practices; and he has worked on a variety of forestry tasks including selective tree marking, forest inventory, harvest layout, erosion control, and supervision of logging operations. Mr. Cashen's experience with many different natural resources enable him to provide a holistic approach to forest management, rather than just management of timber resources.

REPRESENTATIVE EXPERIENCE

- Lead Consultant - CalFire fuels treatment projects *(SD and Riverside Counties)*
- Lead Consultant and supervisor of harvest activities – San Diego Gas and Electric Bark Beetle Tree Removal Project *(San Diego)*
- Crew Leader - Hillslope Monitoring Program *(CalFire: throughout California)*
- Consulting Forester – Forest inventories and timber harvest projects *(various clients throughout California)*

Grant Writing and Technical Editing

Mr. Cashen has prepared and submitted over 50 proposals and grant applications. Many of the projects listed herein were acquired through proposals he wrote. Mr. Cashen's clients and colleagues have recognized his strong scientific writing skills and ability to generate technically superior proposal packages. Consequently, he routinely prepares funding applications and conducts technical editing for various clients.

Private Organizations

Adams Broadwell (AB-NOV. 17)[2]

Response to AB-NOV. 17-1
The commenter provided introductory remarks and alleged that the Giovannoni Logistics Center project EIR is legally inadequate.

The commenter's specific comments about the EIR are addressed in Response to AB-NOV.17-2 through Response to AB-NOV.17-3.

Response to AB-NOV. 17-2
The commenter provided a statement of interest. No response is necessary.

Response to AB-NOV. 17-3
The commenter asserted that the Draft EIR must be revised and recirculated to address new information. This comment is addressed in further detail in Response to AB NOV.17-4.

Response to AB-NOV. 17-4
The commenter claimed there is a significant change to the project's environmental setting, noting that a "new road and dirt berm" had been installed within the western portion of the project site in Fall 2022. The commenter alleged that the Draft EIR did not disclose this road or its impacts and mitigation measures.

The utility alignment and unpaved road are addressed in Master Response B.

Response to AB-NOV. 17-5
The commenter alleged that the Final EIR failed to disclose or discuss the proposed Development Agreement.

The Final EIR did not disclose or discuss the Development Agreement because such a discretionary approval is not being sought by the applicant in conjunction with the Phase I entitlements. Should the applicant seek to pursue a Development Agreement for Phase II, such an approval may trigger additional environmental review. However, it would be speculative to engage in further discussion of this issue as it relates to the Giovannoni Logistics Center project.

On a broader note, the courts have held that, where an EIR failed to mention a proposed Development Agreement that did not change the terms or character of the proposed development addressed in the EIR, the lack of any reference to the Development Agreement was not a prejudicial abuse of discretion. (*Rialto Citizens for Responsible Growth v. City of Rialto* (2012) 208 Cal.App.4th 899, 925-927; see also *Native Sun/Lyon Communities v. City of Escondido* (1993) 15 Cal.App.4th 892, 909 [no violation of CEQA occurred where an EIR mentioned the possible approval of the Development Agreement but did not describe its proposed terms].)

[2] The law firm of Adams Broadwell submitted comments on behalf of Napa/Solano Residents for Responsible Development.

Response to AB-NOV. 17-6
The commenter alleged that the Vehicle Miles Traveled (VMT) analysis remained unsupported by substantial evidence and reiterated previous comments about this analysis that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022.

VMT is addressed in Master Response D.

Response to AB-NOV. 17-7
The commenter alleged that impacts to biological resources remain significant and unmitigated. The comment reiterated previous comments regarding the wetland delineation that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022.

Wetlands are addressed in Master Response C.

Response to AB-NOV. 17-7 continued
The commenter also claims the United States Army Corp of Engineers (USACE) carried the City's errors into its Approved Jurisdictional Determination (AJD).

This comment is inaccurate. The City did not submit the Monk and Associates 2016 wetland jurisdictional delineation to the USACE, so this was not the City's error as inaccurately claimed by the commenter. It is also inaccurate to claim the USACE carried the errors referenced in the Final EIR Response S&W-5b onto the AJD, and the commenter provided no evidence that the USACE did carry this error into the AJD. The facts that the USACE conducted its own independent review of the Monk & Associates 2016 wetland jurisdictional delineation and conducted its own independent field review, as well as the fact that the United States Environmental Protection Agency reviewed the USACE data prior to the USACE finalizing the AJD, makes it very unlikely this was an oversight by the USACE. The USACE AJD is a reasonably accurate delineation of the location and extent of wetlands on the project site.

Response to AB-NOV. 17-7 continued
The commenter also claims the Draft EIR failed to include a proper and comprehensive functional assessment and stated that the rare plant survey and evaluation for presence of wildlife species "do not themselves constitute a complete and proper functional assessment."

Wetlands are addressed in Master Response C.

Response to AB-NOV. 17-7 continued
The commenter also reiterated previous comments that in the absence of a pre- and post-project water budget analysis, there is no basis to assume that there is sufficient hydrology to create the additional wetlands, and that it cannot be shown that creation of new wetlands in the proposed Wetland Preserve will not impact the remaining existing wetlands.

Wetlands are addressed in Master Response C.

Response to AB-NOV. 17-7 continued
The commenter reiterated previous comments that describe the importance of vegetated buffers to protect wetland functions by providing a visual and noise screen from adjacent land uses, to protect

wetlands from direct physical impacts, to remove sediments and contaminants from upland sources, and to provide upland habitat support to terrestrial, semi-aquatic and wetland-dependent species. The commenter suggests the Final EIR fails to identify minimum buffer widths for the proposed Wetland Preserve and suggests that the presence of bioretention basins adjacent to the preserve would not provide adequate buffer protection.

Wetlands are addressed in Master Response C.

Response to AB-NOV. 17-7 continued
The commenter also states that Mr. Cashen pointed out that the Final EIR Volume 1 failed to discuss the importance of the wetlands as habitat to the observed migratory waterfowl and shorebirds.

The Draft EIR included a Biological Resources Report prepared by Helm Biological Consulting (HBC) titled Biological Resources Report, Giovannoni Logistics Center, American Canyon, California. In this biological resource report, HBC does acknowledge the wetlands do provide habitat to several species of waterfowl, waterbirds, and shorebirds, including those observed on the site during field reviews, such as mallard (Anas platyrhynchos), American wigeon (Anas americana), greater yellowlegs (Tringa melanoleuca), long-billed curlew (Numenius americanus), marbled godwit (Limosa fedoa), western sandpiper (Calidris mauri), and Wilson's snipe (Gallinago delicata). HBC also reviewed the potential of the wetlands to provide habitat for special-status waterfowl, waterbirds, and shorebirds as shown in Table 2 of the HBC report. In addition, as addressed in the Master Response C, Wetlands, functional assessments were conducted to determine plant and animal communities supported on the project site, and these functional assessments were then used in the impact analysis and subsequent mitigation requirements.

Response to AB-NOV. 17-8
The commenter alleged that the Final EIR failed to adequately assess impacts to the Swainson's hawk and golden eagle. The commenter reiterated previous comments that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022. Referring to comments provided by Scott Cashen in a separate letter attached to the Adams Broadwell comments (see Comment CASHEN.NOV. 15-8), the commenter suggests that the Draft EIR concluded, without substantial evidence, that the proposed project would not result in significant impacts to foraging habitat or affect the nesting populations of Swainson's hawk or golden eagle near the project site either directly, indirectly or cumulatively, and that, for these reasons, no mitigation was warranted for loss of foraging habitat for these species. The commenter disagrees with these conclusions.

Master Response A addresses the potential loss of foraging habitat for Swainson's hawk and golden eagle as a result of the project. Substantial evidence was provided in the Draft EIR and in Final EIR Volume 1, and further evidence is provided in Master Response A, that the proposed project would not result in significant impacts to foraging habitat. The potential that the project could affect nesting populations of Swainson's hawk and golden eagle is addressed in Response to CASHEN NOV.15-8 and Response to CASHEN NOV.15-9.

Response to AB-NOV. 17-9
The commenter claimed that the City may not make the necessary findings to approve the tentative parcel map and design permit. The comment reiterated previous comments regarding conflicts with

General Plan policies that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022. These comments were addressed in the Final EIR Volume 1 in Response to NSRRG-35a through Response to Response to NSRRG-35g.

Response to AB-NOV. 17-10
The commenter stated that the City may not adopt the Statement of Overriding Consideration because it has not adopted all feasible air quality mitigation measures.

The comment letter argued that the City is failing to require the project proponent to comply with various air quality mitigation measures suggested in earlier correspondence. The commenter asserts these proposed measures are feasible and thus must be imposed under CEQA. In response to this comment and other similar comments, Joe Livaich, a representative of Buzz Oates, provided the City with a letter in which he explained why, in his informed opinion based on his professional experience, the rejected measures proposed by Napa-Solano Residents for Responsible Growth are not feasible. Mr. Livaich states that a reasonable and prudent investor would resist these suggested measures because they would place the Giovannoni Logistics Park at a competitive disadvantage relative to its competitors. City staff finds his reasoning and the evidence he invokes to be persuasive. Staff is aware that, under CEQA case law, a lead agency may reject proposed mitigation as infeasible if such mitigation could affect a project's rate of return such that a reasonable and prudent investor would find the return to be insufficient in light of the economic risks involved. (See, e.g., *Uphold Our Heritage v. Town of Woodside* (2007) 147 Cal.App.4th 587, 600; and *San Franciscans Upholding the Downtown Plan v. City and County of San Francisco* (2002) 102 Cal.App.4th 656, 693–694 [applying the prudent person standard to determine economic feasibility of proposed alternatives].)

Mr. Livaich's letter is provided in Appendix N.

Response to AB-NOV. 17-11
The commenter provided closing remarks. No response is necessary.

Response to AB-NOV. 17-Attachments
The commenter provided new comments from S&W and Scott Cashen. They are addressed as follows:

Response to S&W.NOV. 16-3
The commenter suggest that the USACE AJD incorporated errors that the commenter and the City recognized was within the 2016 Monk & Associates (M&A) Wetland Jurisdictional Delineation Report. The commenter then suggests, assuming the USACE incorporated these areas into the AJD, that the Draft EIR's wetland analysis is based on an inaccurate delineation.

Wetlands are addressed in Master Response C. In addition, the commenter states, without evidence, "*The USACE used the information the M&A report provided as the basis for their JD review, but did not catch these errors.*" The commenter has no evidence that the USACE did not catch and consider these errors when they reviewed the report independently and conducted an independent site visit prior to issuing the AJD.

Response to S&W.NOV. 16-4
The commenter stated that the City provided new information regarding the USACE AJD, namely, that the USACE changed the AJD date to October 25, 2021.

In the Final EIR Response to Comment S&W-5c, as found in Volume 1 published on October 31, 2022, the City incorrectly stated the AJD date as October 25, 2021. The correct AJD date is October 25, 2016; and according to USACE project Manager, Mr. Bryan Matsumoto, because the USACE application was submitted prior to the AJD expiring, the USACE will be using the AJD dated October 25, 2016, to process the permit. The AJD therefore remains valid and sufficient for the USACE and for assessing wetland impacts in the Draft EIR.

Response to S&W.NOV. 16-5
The commenter states that the Draft EIR Section 2.3.13 said, "For the purposes of providing a conservative, worst-case scenario, this Draft EIR assumes that Phase 1 and Phase 2 would be developed concurrently over a period of 18 months." The commenter disagrees with this statement, suggesting the "worst-case scenario" would be sequential or spaced-out construction, which would increase construction-related impacts to aquatic resources. The commenter suggests that construction impacts and the risks associated with construction noise disturbance and risk of spills (e.g., hydraulic line breaks) are directly correlated to the duration of construction. A shorter construction window, the commenter says, will result in a shorter impact window and less chance of a spill occurring than that of a longer construction project.

Phase 1 and 2 is anticipated to be constructed concurrently over an 18-month period, or in sequential order (e.g., approximately 9 months for Phase 1, once Phase 1 is complete then 9 months for Phase 2). The City disagrees with the commenter's suggestion that construction in sequential order would increase construction-related impacts compared to construction being conducted concurrently over an 18-month period. Mitigation measures outlined in the Draft EIR for noise disturbances and other construction-related impacts such as spills (e.g., hydraulic line breaks) or biological impacts would ensure the level of construction-related impacts is less than significant. For example, implementation of a Stormwater Mitigation Plan would ensure construction-related impacts such as spills and management of stormwater and sedimentation would not result in increased risk to wetlands or other aquatic or biological resources on or adjacent to the project site, whether or not the project was constructed concurrently or in sequential order.

Response to S&W.NOV. 16-5 continued:
The commenter also disagrees with the City's Final EIR Response to Comment S&W-6a, which states that "a prolonged construction period that extends beyond 18 months would not increase construction-related impacts."

The response suggests that a prolonged construction period that extends beyond 18 months was specific to direct wetland impacts, not indirect impacts or other construction-related impacts (noise, traffic etc.) associated with a prolonged construction period. That being said, the construction period is not anticipated to extend beyond 18 months to construct both Phase 1 and Phase 2.

Response to S&W.NOV. 16-6
The commenter disagrees that a proper wetland functional assessment was conducted and states elements of a formal functional assessment are missing from the Draft EIR and Final EIR such as wetlands' hydrology (e.g., water sources, hydroperiods, hydrologic connectivity), buffer and landscape (e.g., buffer width and condition), physical structures (e.g., topographic complexity) typical of vernal pool and seasonal depressional wetlands, plant community interspersion, and assessment of anthropogenic stressors.

Wetlands are addressed in Master Response C. Also refer to Response to AB-NOV. 17-7 in Final EIR Volume 1.

Response to S&W.NOV. 16-7
The commenter stated that it is " . . . nonsensical to state that filling 97% of a small, 195-square-foot wetland would not have any impact on the remaining 3%, or 6 square feet." The commenter goes on to state that the remaining portion of Wetland W-89 will no longer perform functions as it did when part of the larger wetland unit and, depending on topography along the wetland margin (where the 6 square feet of "unimpacted wetland" is likely located), may lose the ability retain hydrology and therefore would likely not remain as wetland. The project should include the entirety of Wetland W-89 in its impact analysis.

The City disagrees with the commenter's assumption that the remaining 6 square feet of wetland will no longer perform functions as it would have when it was part of the 195-square-foot wetland. The W-89 is a seasonal wetland supported by direct precipitation. The remaining unimpacted 6 square feet will continue to receive precipitation, continue to support wetlands plants and hydric soils, and continue to provide habitat for a wide variety of plants and animals.

Response to S&W.NOV. 16-8
The commenter reiterated previous comments that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022. These comments suggested that without a quantitative analysis of wetland hydrology sources, there is no basis to assume that constructing the development immediately adjacent to the site's wetlands will not result in indirect hydrology impacts.

As stated in Final EIR Volume 1 Response to Comment S&W-8, the main source of hydrology for the unimpacted wetlands is direct precipitation and a significant amount of water flow from a culvert near the northeastern boundary which flows east to west toward No Name Creek. In addition, the site generally slopes from east to west across the Phase 1 and 2 project sites. The Phase 2 project also has topography that slopes from south to north. With the main sources of hydrology being direct precipitation and waterflow from a culvert near the northeastern boundary, and the topography of the site generally sloping from east to west, there is no basis to assume that proposed project development would indirectly impact the wetland hydrology of the remaining wetlands. The City maintains that the project will not result in indirect hydrology impacts to the existing wetlands.

Response to S&W.NOV. 16-8 continued
The commenter then stated that the City acknowledged that a water budget is needed to ensure that the proposed created wetlands do not indirectly impact the existing wetlands.

The City did not acknowledge that a water budget is needed to ensure the proposed created wetlands do not indirectly impact the existing wetlands. The City acknowledged that as part of the Wetland Mitigation and Monitoring Plan that would be submitted to the Regional Water Quality Control Board (RWQCB) during the application review process, a water budget analysis would be conducted to ensure that the position of created/ established wetlands do not indirectly impact the hydrology of existing wetlands. If it is determined that the position of a proposed created/established wetland may indirectly impact an existing wetland, then the position of that wetland would be adjusted to avoid such an impact. The City maintains that there will be sufficient hydrology to establish the wetland acreage required to offset the project impacts within the Wetland Preserve; and the City further maintains that the position of wetland presented in the Draft EIR may need to be adjusted if a water budget analysis is conducted and data shows a proposed wetland position may indirectly impact an existing wetland. Refer to Master Response C for further discussion.

Response to S&W.NOV. 16-9
The commenter reiterated that the City clarified that the Wetland Preserve will not serve as water quality treatment for the project's stormwater discharge. No further response is required.

Response to S&W.NOV. 16-10
The commenter reiterated previous comments that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022. The commenter states the Phase 1 project does not identify even minimum buffer widths associated with the proposed Wetland Preserve and suggests that the presence of the periodically maintained bioretention basins adjacent to the preserve are not adequate buffer protection to the Wetland Preserve. The commenter also states that the stormwater ponds would not provide a visual or noise screen, would not provide upland habitat, and would introduce disturbance (maintenance) adjacent to the preserve, and no buffers have been identified on the Wetland Preserve on the Phase 2 portion of the project site.

Wetlands are addressed in Master Response C.

Response to S&W.NOV. 16-11
The commenter disagrees with the Final EIR Volume 1 Response to Comment S&W-11 and suggests that the analyses in the Draft EIR and Final EIR are flawed because they did not consider the impacts of noise, light, and traffic that the Phase 1 and Phase 2 development would have on the Wetland Preserve. The commenter states that, while the proposed location of the Wetland Preserve is flanked on the west, north, and east by the land uses and developments described in the Final EIR, the southern boundary is adjacent to a broad swath of undeveloped land ranging from approximately 800 feet to over 1,500 feet. The proposed Phase 1 development brings the noise, light, and traffic described in the Final EIR adjacent to the proposed preserve, reducing the existing 800 to 1,500-foot buffer to an undisclosed distance, but based on project drawings, appears to be less than 100 feet.

The commenter is correct that the development for Phase 1 will bring noise, light, and traffic to the southern boundary of the Wetland Preserve, thereby reducing the buffer from 800 to 1,500 to in some areas less than 100 feet, and the City assumes the Phase 2 development would also bring

noise, light, and traffic a similar distance to the Wetland Preserve. The assessment in the Draft EIR and Final EIR, although not specifically stated, considered the location of the Phase 1 and 2 development and the potential effect noise, light and traffic could have on the Wetland Preserve. As addressed in the Response to Comment S&W-11, and further addressed below, the project will increase noise, light, and traffic, but these impacts will not result in significant effects on the Wetland Preserve. This assessment is based on the Wetland Preserve are already being surrounded an all four sides by commercial development, and bisected by a road and pedestrian trail, causing fauna using the area to be already habituated to effects associated with human presence. In addition, the Phase 1 development includes bioretention basins between the Phase 1 development and the Wetland Preserve, providing a noise, visual and sound buffer between the hardscaped areas (i.e., parking, traffic, buildings etc.) and the Wetland Preserve; and the City assumes that Phase 2 development would have similar bioretention basins positions between the Wetland Preserve and hardscaped areas of Phase 2.

Therefore, although the buffers along the southern boundary will be reduced by the Phase 1 and 2 development, the avian and terrestrial species that use the wetlands and uplands within the Wetland Preserve have habituated to the significant levels of noise, light, traffic, and pedestrian disturbances that currently exist. Given the bioretention basins are positioned between the Wetland Preserve and Phase 1 and 2 hardscaped area, thus providing a buffer to disturbances, and given the existing noise, light, traffic, and pedestrian disturbances that currently exist, the levels of disturbances the project will add from reducing the buffer distance along the southern boundary will not result in significant direct, indirect, or cumulative impacts to wetland functions, and therefore do not require mitigation under CEQA.

Response to S&W.NOV. 16-11 continued
The commenter also disagrees with the City's assessment that compliance with the mitigation measures outlined in Draft EIR Section 3.3, Biological Resources, would reduce the impact of the proposed project's contribution to the cumulative impacts to less than significant.

In addition, the City maintains that compliance with the mitigation measures outlined in Draft EIR Section 3.3, Biological Resources, would reduce the impact of the proposed project's contribution to the cumulative impacts, including fragmentation, to less than significant. Therefore, a mitigation measure specific to cumulative wetland impacts and habitat fragmentation is not required. See also Master Response C (Wetlands).

Response to S&W.NOV. 16-12
The commenter reiterated previous comments that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022. The commenter maintains that an adequate functional assessment to fully assess project wetland impacts was not performed and therefore the proposed conceptual mitigation could not be appropriately tailored to provide those impacted functions or mitigate the loss of wetlands. The commenter also maintains that the wetland preservation site has not been shown to be appropriate for wetland creation.

This comment is addressed in detail in Final EIR Volume 1 Response to AB-NOV. 17-7 and Master Response C. The City maintains that comprehensive functional assessments were conducted, which

assessed attributes of the wetlands sufficient to evaluate wetland impacts, and sufficient to propose wetland mitigation ratios and performance standards to offset wetland impacts. The City also maintains that sufficient data was obtained to determine that the Wetland Preserve could support the creation/establishment of additional wetlands to offset wetland impacts associated with the project.

Response to S&W.NOV. 16-13
The commenter reiterated previous comments that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022. The commenter disagrees with the Final EIR's response to S&W-13a and 13b and maintains that quantitative hydrologic data is required to demonstrate that an additional wetland can be created and that the vernal pools will be fully functioning wetlands within 1 year.

This comment is addressed in detail in Final EIR Volume 1 Response to AB-NOV. 17-7 and Master Response C. The City maintains that sufficient data, including hydrology data, was obtained to determine that the Wetland Preserve could support the creation/establishment of additional wetlands to offset wetland impacts associated with the project, and the created vernal pools would be functioning within 1 year.

Response to S&W.NOV. 16-14
Based on its review of the Draft EIR, the commenter states that the City did not provide a description of the required mitigation sequencing process. In the Final EIR Volume 1, the City provides a description of considerations used in establishing the proposed Phase 1 development footprint. The commenter adds that no justification is provided for the Phase 2 development, which results in 3.71 acres of wetland impact, including the entirety of Wetland 16, a 3.3-acre wetland. The commenter also questions the City's statement that both Phase 1 and Phase 2 designs avoid and minimize wetland impacts, and asserts that this statement is not supported because no design alternatives are provided for Phase 2, nor is a description of the avoidance and minimization measures specific to the Phase 2 development. The commenter further states that an alternatives analysis is fundamental to avoiding and minimizing wetland impacts. The commenter suggested that, based on a schematic design analysis of the space available on the Phase 2 site, while focusing on avoidance of the largest 3.3-acre wetland (Wetland 16), it appears that the same available square footage used in the Phase 1 development could be accommodated without directly impacting Wetland 16. Finally, the commenter concludes that the City has not demonstrated why the Phase 2 impacts are unavoidable or cannot at a minimum, be minimized.

In response to these concerns, the City notes that Mitigation Measures (MM) BIO-2, MM BIO-3a, MM BIO-3b, MM BIO-3c, and MM BIO-3d all contain performance standards and identify when each required element must be completed. These measures have all been drafted consistent with CEQA Guidelines requirements for feasible mitigation. The commenter's comments reflect nothing more than a difference of opinion regarding how to draft mitigation measures, and nothing said in the comments points to legal inadequacies in MM BIO-2, MM BIO-3a, MM BIO-3b, MM BIO-3c, and MM BIO-3d. Refer to Master Response C for further discussion of wetlands.

Response to S&W.NOV. 16-15
The commenter reiterated previous comments that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022. The commenter disagrees with the Final EIR's Response to Comment S&W-15a to the effect that the City's proposed 5-year mitigation monitoring period is sufficient to document successful mitigation implementation. The commenter references the USACE's 2015 *Regional Compensatory Mitigation and Monitoring Guidelines* for the South Pacific Division, which suggests monitoring periods longer than 5-years may be warranted for aquatic resources with a slow development rate. Vernal pools are listed as one aquatic resource the guidelines recommend have a longer monitoring period.

The City maintains that a minimum 5-year monitoring period is adequate to confirm mitigation success. If mitigation performance standards are not met within the 5-year monitoring period, then contingency measures would be implemented. The contingency measures provided in the Draft EIR require the monitoring obligations to continue (i.e., beyond the minimum 5 years) until the RWQCB gives final confirmation that the mitigation met all the performance standards.

Response to S&W.NOV. 16-16
The commenter reiterated previous comments that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022. The commenter maintains that an adequate functional assessment was not performed and therefore there is no basis for establishing mitigation goals and performance standards to document replacement of the lost wetland functions. The commenter also suggests that the performance standards proposed in Draft EIR are not adequate to verify whether the stated mitigation goals have been met.

This comment is addressed in detail in Response to AB-NOV. 17-7 and Master Response C. The City maintains that comprehensive functional assessments were conducted, which assessed attributes of the wetlands sufficient to evaluate wetland impacts, and sufficient to propose wetland mitigation ratios and performance standards to offset wetland impacts. The performance standards outlined in the Draft EIR are "minimum" performance standards required to determine whether the wetland goals are being met. Additional performance standards will likely be added by the USACE pursuant to the Clean Water Act and by the RWQCB pursuant to the Porter-Cologne Water Quality Control Act during the wetland permitting processes conducted by the two expert agencies.

Response to S&W.NOV. 16-17
The commenter reiterates the City's response to the Final EIR Comment S&W-15c. The commenter then states the City did not clarify whether a reference wetland was used in preparing the proposed performance standards in the Draft EIR and suggests that the failure to use a reference wetland is an example of why the City's proposed mitigation does not adequately demonstrate the avoidance of significant environmental impact.

The commenter is correct in that the City did not use a reference wetland to prepare the performance standards. A reference wetland is typically not used to prepare performance standards or to demonstrate avoidance of significant environmental effects. A reference wetland is one tool used to assess whether a created/established wetland is progressing toward the mitigation goals.

Response to S&W.NOV. 16-18
The commenter reiterated previous comments that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022. The commenter disagrees with the Final EIR Response to Comment S&W-16a and b, and maintains that the City is not complying with City policy 8.3.1. The commenter states that wetlands and streams are not mutually exclusive and herbaceous vegetation is present in the area next to the mapped No Name Creek, providing riparian vegetation.

Herbaceous vegetation (non-woody plants such as grasses, flowering plants etc.) next to the mapped seasonal wetland, referred as No Name Creek by the commenter, does not constitute what is considered riparian vegetation for the purpose of local, State and federal regulations. CDFW's *A Filed Guide to Lake and Streambed Alteration Agreements Sections 1600-1607 California Fish and Game Code* dated January 1994 defines "Riparian Vegetation" as vegetation composed primarily of woody hydrophytes, such as willows, alders, cottonwoods, sycamores, box elders, aspens etc. The definition does not include upland herbaceous vegetations, which is found throughout the entire project site. The City maintains the seasonal wetland referenced does not support riparian vegetation, does not exhibit natural physical features that creeks typically exhibit such as scour, shelving, debris deposits etc. which would indicate the fluctuation and flow of surface water, and does not exhibit an ordinary high water mark (OHWM) which defines the federal geographic and jurisdictional limits of creeks according to 33 Code of Federal Regulations Section 329.11(a)1. Therefore, the City maintains the reach of No Name Creek within the Wetland Preserve is not subject to creek setbacks required pursuant to the 2019 General Plan Policy 8.3.1.

Response to S&W.NOV. 16-18 continued
The commenter references the City's Biological Habitats Map in their 2019 General Plan, which identifies an "Other riparian and Blue-Line St[r]eams" area in approximately the northwest corner of the project site, and the M&A delineation report, which references No Name Creek in the northwest corner of the project site. The commenter also references the M&A *Vernal Pool Branchiopod Surveys* report and suggests that the photograph of the seasonal wetland (Photograph No. 6) exhibits significant channelized flow.

It is common for wetland complexes and vernal pool complexes to fill with water and flow topographically downslope after storm events. The photograph referenced was taken on January 5, 2017 after several days of "*heavy rains*" according to the data sheets in the M&A *Vernal Pool Branchiopod Surveys* report. The Photograph No. 6 referenced does show water that appears to be slowly moving, which is to be expected as the seasonal wetland is downslope from the majority of the existing wetlands on the project site. Photograph No. 6 also shows clear evidence of rooted herbaceous vegetation within the seasonal wetland and a uniform channel width, but no riparian vegetation. The uniform width of the seasonal wetland was likely not formed by water velocity, but is the result of the seasonal wetland being excavated in an attempt to drain or move water off the site. There are several linear ditches, referred to as "linear wetlands "on the USACE AJD map, on the project site that were clearly constructed and are not natural features.

If water velocity had created the uniform widths of the channel, then an "ordinary high water mark" would have been evident and M&A would have labeled this reach of the seasonal wetland as a "creek," and the USACE would have required the seasonal wetland to be labeled a "creek" with the

width of the OHWM noted on the map. The City agrees with M&A delineation report and the USACE's conclusions that this reach of No Name Creek is functioning as seasonal wetland and, therefore, it is not subject to creek setbacks required pursuant to the 2019 General Plan Policy 8.3.1.

Response to S&W.NOV. 16-18 continued
The commenter also suggests that the absence of a No Name Creek label on the USACE AJD is not a reason to discount its presence, especially given that the stream appears to coincide with the mapped wetlands. The CDFW Geographic Information System (GIS) California Streams data set shows No Name Creek in the northwest corner of the project area. In several locations (pages 3.3-29 and 3.3-38), the Draft EIR states that the entirety of No Name Creek will be incorporated into the Wetland Preserve. The commenter maintains that the City does not adequately explain why the 100-foot riparian corridor protection zone is not applied to No Name Creek within the project site.

An aquatic feature labeled as a "Creek" on the City's Biological Habitats Map, CDFW GIS California Streams data set, or the United States Geological Survey (USGS) quadrangle maps does not guarantee the feature is really a creek, and it does not guarantee the extent and location of the creek is correctly mapped. The data on these maps are typically gathered from aerial imagery interpretation and not verified by conducting a site visit. That being said, the data can be helpful when planning to conduct field work but it cannot be relied on to verify the presence or absence of a creek or the accuracy of the location of a creek. Field work to verify the presence or absence of a creek, riparian vegetation associated with a creek, or a wetland, ditch, or an upland that may look like a creek from an aerial must be verified by collecting data on the ground.

The M&A delineation report references No Name Creek in the northwest corner of the project site, but labels it as a seasonal wetland on the delineation map, not a creek, based on field data taken on the ground. If that segment of No Name Creek was functioning as a creek and exhibiting an OHWM M&A would have referenced the OHWM in the delineation report and on the delineation map. In addition, the USACE would have required the seasonal wetland to be mapped as a creek with an OHWM labeled on the AJD. Although the commenter clearly does not have faith in the USACE's ability to distinguish between a seasonal wetland and a creek, the City does. In light of the fact that neither M&A nor the USACE found that the seasonal wetland was exhibiting an OHWM, and the fact that the seasonal wetland does not support riparian vegetation, the City agrees with the M&A delineation report and the USACE's conclusions that this reach of No Name Creek is functioning as a seasonal wetland and, therefore, it is not subject to creek setbacks required pursuant to the 2019 General Plan Policy 8.3.1. Nevertheless, vegetated buffers between the Phase 2 development and the seasonal wetland the commenter is suggesting is a creek, would be similar to the Phase 1 vegetated buffers (e.g., range from 25-150 feet), with a minimum 25-foot buffer from Phase 2 hardscaped development (buildings, parking lots, non-pervious unvegetated surfaces etc.).

Response to S&W.NOV. 16-19
The commenter suggests a newly installed gravel maintenance road and subsurface sewer pipe would results in direct and indirect impacts to the Wetland Preserve, the existing wetland in the vicinity, and No Name Creek.

This comment is addressed in Master Response B.

Response to S&W.NOV. 16-20
The commenter summarizes its conclusions. No response required.

Response to CASHEN.NOV. 15-2
The commenter suggests that the gravel maintenance road will have negative effects on the biotic integrity of terrestrial and aquatic ecosystems within the Wetland Preserve. Cashen goes on to state because the road is not discussed in the Draft EIR or Final EIR, the full extent of the road's effects on the site's plant and animal populations or the biotic integrity of the proposed Wetland Preserve cannot be assessed.

This comment is addressed in Master Response B.

Response to CASHEN.NOV. 15-3
The commenter states that the FEIR response that the surveys were less than 5 years old when the Draft EIR was released is false. The surveys terminated on February 15, 2017. The Draft EIR was released on May 20, 2022. The commenter also reiterated previous comments that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022, to the effect that the results of the vernal pool fairy shrimp surveys were outdated and can no longer be used to assume absence of the species at the project site. The commenter then states "the issue is not whether the surveys were reliable and sufficient to support the absence determination, but rather, that fairy shrimp easily could have colonized the project site since February 2017. This is the reason why the United States Fish and Wildlife Service (USFWS) considers the survey results valid for no more than five years." The commenter states that the Final EIR provides no evidence that the USFWS has made an exception for the project, and argues that the City does not have sufficient evidence to support the determination that the proposed project would have no impact on the vernal pool fairy shrimp.

The commenter is correct the vernal pool shrimp surveys were completed on February 15, 2017, and the Draft EIR was released on May 20, 2022, which is 5 years and 3 months. Nonetheless, as previously stated in Final EIR Response to Cashen-2, when surveys are older than 5 years the USFWS may request new surveys to be conducted, or it may not.

The City relied on the Biological Resources Report prepared by HBC to determine whether the proposed project would have an effect on vernal pool fairy shrimp. The Biological Resources Report was completed in May of 2021 and concluded the proposed project would have no significant effect to vernal pool fairy shrimp based on the referenced surveys. In addition, the vernal pool fairy shrimp surveys were submitted to the USACE, along with the Pre-construction Notification application for the Phase 1 Giovannoni Logistics Center Project, on July 10, 2021. The USACE, acting as the federal lead agency, is required under Section 7 of the Endangered Species Act to consult with the USFWS if a project USACE is permitting may have an effect on a federally listed species. The USACE reviewed the project and survey results and determined consultation with the USFWS for fairy shrimp was not warranted.

Although the vernal pool fairy shrimp surveys were 5 years and 3 months old from the date the Draft EIR was issued, and are now nearly 6 years old, based on the Biological Resources Report conclusions that the proposed project would have no effect on vernal pool fairy shrimp and the fact that the USACE did initiate a vernal pool fairy shrimp consultation with the USFWS, the City maintains the

surveys were reliable and sufficient to support the conclusion in the Draft EIR that federally listed threatened vernal pool fairy shrimp do not occur on the project site.

Notably, CEQA requirements are independent of the Endangered Species Act and Clean Water Act (CWA) requirements, and the conclusions in an EIR, if supported by substantial evidence, can be achieved through means other than compliance with formal survey requirements or protocols under other environmental statutes, such as the Endangered Species Act. (See, e.g., *Association of Irritated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1396-1398 [EIR for proposed dairy was not required to conduct ESA protocol surveys to determine the presence or absence of endangered kit fox]). The same is true, of course, for methodologies recommended by nongovernmental entities such as the California Native Plant Society (CNPS).

Response to CASHEN.NOV. 15-4
The commenter suggests the Draft EIR failed to analyze impacts to the marbled godwit, Cackling goose, and the Aleutian subspecies of cackling goose and the Final EIR response did not rectify the issue.

Marbled godwit: The Final EIR clarified that marbled godwit is an abundant shorebird in the San Francisco Bay region and is not included on CDFW's Special Animals list. In his comment, Mr. Cashen reiterates his concern for marbled godwit as a Bird Species of Conservation Concern by USFWS and indicates this designation relates to the threats on both breeding and nonbreeding grounds.

Mr. Cashen seems to be directing his remarks to the fact that Biologists with M&A observed marbled godwit at the site during their biological studies related to the Green Island Road Widening and Devlin Road Extension projects in 2018 and 2019, as mentioned in the Draft EIR. The project site is not within the breeding range of this species, which breeds in the Northern Plains. Though USFWS may have concerns with respect to wintering habitat for marbled godwits on a large scale (as Mr. Cashen points out), marbled godwit is one of the most abundant shorebirds using the mudflats and shoreline of San Francisco Bay in the winter. Though the seasonal wetlands at the project site may provide suitable winter habitat for marbled godwit, the extent of such habitat on the site is comparatively small and unimportant compared to the extensive mudflats and other wintering habitats for the species within the region. One of the Biologists working on the project site may have observed an incidental visit to the site by a marbled godwit, but there is no aspect of the quality of the on-site habitat that makes the site uniquely suited to support this species.

The Final EIR pointed out that marbled godwit is not on CDFW's Special Animals List, which includes USFWS Bird Species of Conservation Concern, and Mr. Cashen points out that this must be an oversight. CDFW updates the Special Animals List on a quarterly basis, and just released its updated Special Animals List (dated January 2023). Marbled godwit is still not on the list.

Aleutian subspecies of cackling goose: In his comment, Mr. Cashen indicates his view that the Final EIR (Volume 1, issued on October 31, 2022) did not appropriately respond to his comments on the Draft EIR in which he suggested that the project site is an important wintering habitat for this special-status species. Volume 1 of the Final EIR provided a history of the status of this subspecies of

cackling goose (once considered conspecific with Canada goose) and its recovery leading to its Delisting from the federal Endangered Species Act. Aleutian cackling goose is on CDFW's Watch List.

Aleutian cackling goose breeds off the coast of Alaska on the Aleutian and neighboring islands and winters primarily in the Sacramento and San Joaquin Valleys, though some geese winter along the coast in Northern California. Winter habitats are inland lakes and marshes that provide roosting areas protected from predators. Winter habitats include agricultural lands such as flooded rice fields, pastures, crop stubble in which the geese consume grass, sprouted grain, waste crops following harvest, and grassy fields in urban and suburban settings, including golf courses. Aleutian cackling goose was not observed during field reviews of the site. Like with the marbled godwit, incidental use of the seasonal wetlands and grasslands of the project site by an Aleutian cackling goose is certainly possible, but there is no aspect of the quality of the on-site habitat that makes the site uniquely suited to support this subspecies.

Response to CASHEN.NOV. 15-5
The commenter is not satisfied with the Final EIR Volume 1's Response to Cashen-4 comment and suggests the Final EIR does not rectify the issue raised in that comment because there remains no analysis of the significance of the project's impacts on short-eared owl habitat.

The Final EIR Volume 1 Response to Cashen-4 recognized that nesting and foraging habitats for short-eared owl (a California designated Species of Special Concern specifically for nesting) are similar to those of northern harrier (the harrier occupies this niche during the day and the owl at night), and that the project site could conceivably serve as a wintering habitat or even nesting site for either species. Northern harriers are a fairly common wintering species with a history of some nesting in appropriate habitats in the San Francisco Bay Area. Although wintering short-eared owls can be found in appropriate habitats, nesting by short-eared owl in the Bay Area is a fairly rare occurrence. The ebird report of short-eared owl near the project site mentioned by the commenter was of a wintering individual observed near Napa Logistics on February 22, 2022.

Based on Mr. Cashen's valid comments on the Draft EIR with respect to this species, the mitigation measure requiring pre-construction surveys for northern harrier was modified to also include short-eared owl (with similar habitat requirements) to ensure protection of any nesting owls that might be found prior to construction, regardless of how unlikely that occurrence may be. The Final EIR discusses that the Wetland Preserve included as part of the proposed project would provide foraging habitat for northern harrier; and it should be noted that, as short-eared owl shares the foraging habitat requirements of northern harrier, the Reserve would provide a foraging area for short-eared owl as well. Also note that both northern harrier (once referred to as the Marsh Hawk) and short-eared owl prefer foraging habitats with a mix of uplands and wetlands, and the Wetland Preserve should serve as quality foraging area for both species.

Response to CASHEN.NOV. 15-6
The commenter reiterated previous comments that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022, regarding the data used to assess potential impacts to special-status plant species. The commenter also stated that it was unclear whether the reference site visits provided evidence that these six target species would be identifiable when HBC conducted

its surveys because HBC's survey report did not identify when the reference site visits were conducted and did not discuss HBC's observations of phenological development of the target species at the reference sites.

Although not explicitly stated in the survey reports, the reference sites listed in HBC's 2021 botanical survey report did provide evidence of the six targeted species listed. In addition, the references sites listed in HBC's 2022 botanical survey also provided evidence of the targeted species listed.

The commenter also disagreed with the Final EIR Volume 1 Response to Cashen-5b and suggested that pappose tarplant and Napa bluecurls are almost never identifiable in April or May (i.e., when HBC's surveys were conducted). In support of this point, Mr. Cashen cites data maintained by the California Consortium of Herbaria. The Final EIR response to Cashen-5b stated:

> "Because of significant early fall rainfall in 2020, lack of spring rainfall in 2021 and warm weather, the flowering periods were several months in advance of normal blooming periods. The last rainfall event that was not trace amounts, occurred on March 18, 2021. Based on the weather patterns leading up to the spring surveys for 2021 and based on the reference sites known to support the target plants, the dates HBC conducted the surveys on were reliable and sufficient to capture blooming periods or a visual image of the target species."

As stated in the Final EIR Volume 1 Response to Cashen-5b, blooming periods may vary depending on weather patterns. Because of blooming periods varying from year to year, and in accordance with the CDFW's protocol, HBC conducted visits to several reference sites with known special-status plants targeted for field surveys to determine whether those special-status plants were identifiable at the times of year the botanical field surveys took place. Based on the time of the year the targeted plants were blooming on the reference sites, HBC then conducted the protocol surveys on the project site, per CDFW's protocol. Because of blooming periods changing during the 2022 survey compared to the 2021 survey, HBC conducted the surveys on April 6, 2022, May 8, 2022, June 17, 2022, July 1, 2022, and September 19, 2022. The 2022 survey dates would cover the blooming period Napa bluecurls and pappose tarplant suggested by the commenter. Regardless, Napa bluecurls and pappose tarplant are hardy plants that can be identified from the previous year's growth. If the survey observed previous year's growth of the Napa bluecurls or pappose tarplant, the reports would have reflected such growth. The M&A 2017 survey did not observe them blooming on-site or observe remnants from the previous year's growth. In addition, HBC did not observe Napa bluecurls and pappose tarplant blooming on-site during the 2021 and 2022 surveys or observe remnants of from the previous year's growth.

As described above, based on the data provided in the botanical surveys and the fact that the target plants listed in the 2021 and 2022 survey reports were observed at the reference sites, the City maintains that the botanical survey conducted by HBC, and the other plant data referenced in the Final EIR response to Cashen-5, were sufficient to analyze the proposed project 's potential impacts to plant species. To date, there has been 3 years of protocol-level special-status native plant surveys conducted on-site. No special-status species blooming or special-status plant growth from previous years were observed during any of these surveys. M&A completed their surveys in 2017, and HBC

conducted their surveys in 2021 and 2022. Refer to Appendix O for a copy of HBC's protocol-level plant survey titled *2022 Protocol-Level Special-Status Native Plant Surveys at the Giovannoni Logistics Center Project, Napa County, California dated November 2022*.

Response to CASHEN.NOV. 15-7
The commenter reiterated previous comments that were included in the Napa-Solano Residents for Responsible Growth letter dated July 20, 2022, suggesting the Draft EIR failed to include a proper and comprehensive ecological functional assessment and that the Wetland Preserve would function as a habitat "island" surrounded by urban (industrial) development.

As addressed in Volume 1 of the Final EIR in Response S&W-6b, 8, 12 and CASHEN-6, and further addressed in response to Response to AB-NOV. 17-7 and Master Response C-Wetlands, comprehensive assessments were conducted, which assessed attributes of the impacted wetlands sufficient to evaluate wetland functional impacts, and to propose wetland mitigation ratios and performance standards sufficient to offset wetland impacts as outlined in the Draft EIR. With respect to the Wetland Preserve functioning as a habitat island, as addressed in Final EIR Volume 1 responses to CASHEN-6 and AB Comment 8, the Wetland Preserve is hydrologically connected to the Napa Logistics Park Wetland Preserve to the north and would also be contiguous to wetland areas within the Biaggi Bros. property to the west. Connectivity to adjacent undeveloped parcels to the northeast and southeast will remain for terrestrial and avian species, including areas within the nearby San Pablo Bay Wetlands Important Bird Area. Refer to Exhibit C, which illustrates the hydrological connectivity and wildlife corridors referenced in this response.

Response to CASHEN.NOV. 15-7 continued
The commenter reiterated previous comments that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022, suggesting there would be more severe construction-related impacts (e.g., water quality, air, noise nesting bird impacts etc.) if the construction schedule extended beyond the 18-month period stipulated in the Draft EIR.

The Draft EIR stipulated that the worst-case scenario, when assessing impacts, would consist of Phases 1 and 2 being constructed concurrently over an 18-month period. (Draft EIR, p. 2-9.) Master Response 3 in Final EIR Volume 1 explained this approach in greater detail, including why the worst-case scenario was conservative for biological resource impact analysis in particular. As was explained there:

> [U]sing a "front loaded" buildout horizon allowed the Draft EIR to disclose the maximum amount of impacts to aquatic resources wetland impacts.
>
> Constructing Phase 1 and 2 concurrently over an 18-month period would impact 0.496-acre of wetlands for Phase 1 and 3.7 acres of wetlands for Phase 2 for a total of 4.196 acres of wetlands, which is the worst-case scenario, meaning the maximum acreage of wetland impacts would be 4.196 acres. The "worst-case scenario" assumption is not linked to the number of months it would take to complete each Phase but rather is a function of the acreage of wetland impacts. Phase 2 wetland impacts were assessed based on a full buildout with a maximum impact of 3.7 acres

of wetlands. It is possible that, once Phase 2 has gone through the entitlement process, the site plan may be modified to reduce impacts to under 3.7 acres, just as Phase 1 has avoided impacts.

It should be noted that, if construction takes 18 months to complete or longer, all mitigation measures outlined in the Draft EIR would apply for the entirety of the construction period. Therefore, there is no basis to assume new impacts would occur if Phases 1 and 2 take two months to complete or 24 months. It should also be noted that the project will occur over at least two nesting periods, and if birds do nest in the project vicinity and construction has commenced, it should be assumed that the nesting bird(s) are habituated to the ambient level of noise and disturbance emanating from the project site. Therefore, a prolonged construction period that extends beyond 18 months would not increase the chance of construction-related impacts. Regardless, for consistency and to address the commenters concerns, MM BIO-4 was revised to require additional pre-construction breeding bird surveys if construction activities are discontinued for more than 7 days.

The construction period is not anticipated to extend beyond 18-months to construct both Phase 1 and Phase 2; therefore, the City maintains its assessment that constructing Phase 1 and 2 concurrently over an 18-month period as the worst-case scenario was sufficient to support the impact conclusions in the Draft EIR.

Response to CASHEN.NOV. 15-7 continued
The commenter disagrees with the Final EIR Volume 1 Response to Comment S&W-11, which provides the rationale that increases in noise, lights, and traffic generated by the project compared to existing conditions would not result in significant direct, indirect, or cumulative impacts to wetland functions, and therefore do not require mitigation under CEQA Guidelines.

The City maintains the rationale provided in the Final EIR Volume 1's Responses to Comments S&W-11 and S&W.NOV. 16-11, which conclude that increases in noise, lights, and traffic generated by the project compared to existing conditions would not result in significant direct, indirect, or cumulative impacts to wetland functions.

Response to CASHEN.NOV. 15-7 continued
The commenter suggests that planting trees and shrubs contradicts the Wildlife Hazzard Assessment and the Response to Comment Cashen-14, which addresses airport wildlife hazards and responses to potential airport wildlife hazards. The commenter implies that, to the extent that trees or shrubs could have biological benefits, such benefits, by possibly attracting avian species, could undermine the City's separate strategy, driven by airport compatibility concerns, of not attracting species that could increase dangers of bird strikes on airplanes. The commenter then makes a different point, stating that planting shrubs and trees would "degrade" habitat for the northern harrier, short-eared owl, burrowing owl, golden eagle, Swainson's hawk, shorebirds, and waterfowl.

The number of shrubs and trees planted will be limited to select areas near select wetlands in order to enhance the habitat complexity of the Wetland Preserve. It is anticipated that approximately 10

trees and up to 30 shrubs planted in clusters would be used to enhance the habitat complexity. These plantings would enhance wetland habitat values, not degrade them. At the same time, these plantings, while benefiting wetland-dependent species, will not be so plentiful as to adversely affect avian species adapted to open grasslands. Such species, moreover, do sometimes make use of shrubs and trees within grassland environments. Notably, an HBC Biologist conducting a site visit did observe a northern harrier perched on one of the few shrubs on the project site, which indicates the northern harrier may benefit from additional shrubs and trees to perch on and rest or look for prey. Still, the anticipated plantings should not attract avian species to such an extent that there would be an increased possibility of bird strikes compared with existing conditions.

Response to CASHEN.NOV. 15-8

The commenter suggests that the Draft EIR concluded, without substantial evidence, that the proposed project would not affect the nesting populations of Swainson's hawk or golden eagle near the project site either directly, indirectly or cumulatively. The commenter reiterated previous comments that were included in Napa-Solano Residents for Responsible Growth letter dated July 20, 2022 to the effect that the City's efforts to identify the extent of Swainson's hawk nests near the project site were completely inadequate; and the commenter suggests that Swainson's hawk survey protocol, which recommends three surveys in each of three discrete time periods between March 20 and July 30, are required to adequately identify the extent of Swainson's hawk. The commenter provides evidence rebutting the Final EIR Volume 1's assertion that there are but a limited number of Swainson's hawk records within a 10-mile radius of the project site, and provides evidence directly rebutting the Final EIR Volume 1's unsupported assertion that "[t]he closest known nesting record for Swainson's hawk as reported in the CNDDB is a nest site last active in 2008 (CNDDB Occurrence No. 1718) located approximately 2.1 miles north of the project site." The commenter states a Swainson's hawk nest was located 0.8 mile from the project site two days after the City's survey, and cites evidence of 18 records of active Swainson's hawk nests between 2017 and 2022 within 10 miles of the project site. Mr. Cashen also indicates that ebird records suggest that Swainson's hawks may not be using either the Newell Open Space or Lynch Canyon Open Space areas, which were included in the EIR analysis of protected public areas within 10 miles of the project site and which could be available for use by Swainson's hawk nesting within 10 miles of the project site.

A summary of the information sources used in preparation of the Draft EIR analysis of impacts to Swainson's hawk and golden eagle is provided below. As addressed in the Final EIR Volume 2 in Master Response A and CASHEN-7a-c in Final EIR Volume 1, the substantial evidence assessed to make determinations regarding the significance of the impacts to Swainson's hawk and golden eagle included the following:

- Site assessment of the project site and spring season site reconnaissance surveys conducted by an HBC Biologist on April 16 and May 24, 2021, which is referenced in the HBC Biological Resources Report appended to the Draft EIR. During the site reconnaissance, Swainson's hawk and a golden eagle were observed exhibiting foraging behavior over the project site. The site reconnaissance included driving about 10 miles of local roads surrounding the project site to inspect trees for raptor nest structures. No Swainson's hawk or golden eagle nest structures were observed during either reconnaissance.

- California Natural Diversity Database (CNDDB) of known/recorded information for the occurrence of nesting Swainson's hawk and golden eagle within a 10-mile radius of the project site. Based on the CNDDB search, nine known or suspected active Swainson's hawk nests were recorded between 2003-2013, and 2 known or suspected golden eagle nests were recorded between 1988-2005.
- A protocol nesting survey for Swainson's hawk conducted by M&A for the Napa Logistics project (adjacent property to the north of the Giovannoni site) in 2016/2017.
- Swainson's hawk and golden eagle data provided in the Biological Resource Reports prepared by M&A for the Devlin Road and Vine Trail Extension project and the Green Island Road Reconstruction and Widening project.
- The Napa Airport Corporate Center Final EIR, which provided an inventory of open space preserve acreage within close proximity to the project site.
- Several reports prepared by Swainson's hawk experts including Dr. Bloom's 1979 report titled "The Status of the Swainson's Hawk; CDFW-led surveys in 1988 and 2005-2007," which showed a steady increase in Swainson's hawk breeding pair population when compared to Dr. Bloom's 1979 report; Dr. Brett Furnas' 2022 study titled " Rapid Growth of the Swainson's Hawk Population in California Since 2005," which has yet to be incorporated into CDFW policy.
- CDFW's Life History Account data, which indicates that, like the Swainson's hawk, the golden eagle feeds on small mammals, reptiles, and birds, as well as on carrion, and forages in a variety of habitats, including grasslands, deserts, savannas, and early successional stages of forests. Like the Swainson's hawk, the golden eagle can survive on a range of prey in a variety of very different habitats throughout California. Accordingly, for the same reasons the proposed project would not result in an indirect or cumulative loss of Swainson's hawk foraging habitat, the proposed project also would not result in a significant indirect or cumulative loss of golden eagle foraging habitat.

A recent consultation by HBC with the CNDDB (January 2023) found eight occurrence reports of nest sites used by Swainson's hawk and four by golden eagles within 10 miles of the project site. One of the Swainson's hawk nest sites was located east of Interstate 80 (I-80) more than 7 miles southwest of the project site, but the other seven nest sites were located north of the project site between American Canyon and the City of Napa. The four golden eagle nests reported in the CNDDB were located between 3.4 and 7.8 miles from the project site. These seven Swainson's hawk nest sites documented multiple instances of either attempted or successful nesting by Swainson's hawk between 2007 and 2013 at locations that are between 1.2 miles and 5 miles north of the project site boundary. A check of recent ebird sightings of Swainson's hawk in the project area found additional reports of Swainson's hawk, with evidence of potential nesting in 2016, 2021, and 2022 at locations on Soscol Road and near Sheehy Creek, which are locations also mentioned in the CNDDB reports. Mr. Cashen cites his research that documents 18 records of active Swainson's hawk nests over a 5-year period between 2017 and 2022 within 10 miles of the project site and a Swainson's hawk nest found 0.8 mile from the project site in May of 2022 that was not located during the reconnaissance surveys conducted for the EIR. Surveys conducted for the EIR in April and May of 2021 were not surveys conducted according to CDFW protocol. These surveys found Swainson's hawk and a golden

eagle foraging over the project site; and the EIR recognized the potential for nesting in the project vicinity by either species, but no evidence of nesting by either species was observed within about a mile from the project site.

The information included in the Draft EIR that included results of HBC's reconnaissance surveys, Swainson's hawk and golden eagle nesting records from the CNDDB, and the data obtained from the aforementioned surveys and reports used in the Draft EIR and Final EIR was sufficient to determine the extent of Swainson's hawk and golden eagle nests near the project site and to make a determination that impacts to Swainson's hawk and golden eagle nests as a result of the project were potentially significant and required mitigation. As stated in the Biological Resources Report prepared by HBC regarding Swainson's hawk: "future nesting in suitable nest trees as close as about 0.5 mile from the Giovannoni Logistics project site cannot be ruled out." Therefore, recommended mitigation included in Final EIR MM BIO-1a, which required, prior to the start of construction, that a Swainson's hawk protocol survey be conducted in accordance with the CDFW "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California' s Central Valley." Note that such protocol surveys conducted prior to construction would determine if active Swainson's hawk nests are present in the vicinity of the project during the construction period and would trigger appropriate protections as provided by Draft EIR MM BIO-1a to ensure that disturbances to active nests do not occur. Recent additional evidence of the potential for nesting by Swainson's hawk or golden eagle in the project vicinity–which include updated CNDDB data, recent ebird reports of nesting by Swainson's hawk in the area, and data mentioned by the commenter regarding additional nesting records within 10 miles of the site and even within 0.8 mile of the site–do not change the findings in the EIR that pre-construction protocol surveys are necessary and, in fact, only serve to reinforce the mitigation measures required by the EIR (and as revised in Response to CASHEN.NOV.15-15 and CASHEN.NOV.15-16).

Response to CASHEN.NOV. 17-8 continued
The commenter suggests that the Draft EIR concluded, without substantial evidence, that the proposed project would not result in significant impacts to foraging habitat for Swainson's hawk or golden eagle near the project site either directly, indirectly, or cumulatively, and further concluded that, as a result, no mitigation was warranted for loss of foraging habitat for these species.

The loss of potential foraging habitat for Swainson's hawk is addressed in Master Response A.

Response to CASHEN.NOV. 17-8 continued
The commenter suggests that findings regarding the amount of foraging habitat in protected open space within 10 miles of the project may not be correct. The commenter cites that home ranges are much larger than the 2,000 acres stated as available to Swainson's hawks in the area and that 2,000 acres may not be enough to support the six active nesting territories currently found in the project vicinity. Mr. Cashen alleges that development of the site would require the hawks to forage further north, traveling greater distances, which could compromise survival. Mr. Cashen also indicates that ebird records suggest that Swainson's hawks may not be using either the Newell Open Space or Lynch Canyon Open Space areas, which were included in the EIR analysis of protected public areas within 10 miles of the project site and which could be available for use by Swainson's hawk foraging within 10 miles of the project site.

The EIR makes several points related to the extent of potential foraging habitat that would be available to Swainson's hawk within protected public open space within 10 miles of the site. The proposed project would provide an approximately 45-acre wetland preserve, which would provide Swainson's hawk foraging habitat. When the on-site preserve is combined with the 37-acre Napa Logistics Wetland Preserve, the 308-acre American Canyon California red-legged frog preserve, the 620-acre Newell Open Space preserve, the 1,039-acre Lynch Canyon Open Space Preserve, there are more than 2,000 acres of permanently preserved acreage suitable for Swainson's hawk foraging. In addition, the Final EIR Volume 1 Response to Cashen-13 regarding cumulative impacts provides a quantification of the amount of foraging habitat available to Swainson's hawk within 0.5 mile of the project site. Such foraging habitats near the project site include the proposed 45-acre on-site Wetland Preserve, the 37-acre Napa Logistics Park Preserve, and approximately 339 acres of potential habitat within privately owned land in the area for a total of 412 acres of potential foraging habitat exclusively within a 0.5-mile radius.

This amount of suitable foraging habitat near the site would be available to any Swainson's hawk nesting near the project site without traveling further north to find suitable foraging areas. The commenter indicates that this amount of foraging habitat would not meet the needs of the six nesting territories for Swainson's hawk in the project vicinity. Based on the information available from the CNDDB, it appears as though there may be as many as six Swainson's hawk nesting territories north of the project, but there is nothing in the CNDDB data or ebird data or otherwise that suggests that all six would be active during the same nesting season. In addition, habitat within the Lynch Canyon Open Space consists of rolling hills vegetated with annual grasslands and riparian canyons suitable habitat for foraging by Swainson's hawks. The Newell Open Space contains some forested area, but the presence of open grasslands within this Open Space area is also capable of supporting foraging by the species. The lack of ebird sightings in either location does not mean that use of these areas for this purpose does not occur.

Response to CASHEN.NOV. 17-8 continued
Mr. Cashen suggests that the 45-acre Wetland Preserve cannot provide foraging habitat for Swainson's hawk because Swainson's hawks avoid foraging in built-up areas where high walls inhibit sight and maneuverability necessary for foraging**.** Other comments (see Comment CBD-18) suggest that the Wetland Preserve would provide less than optimal quality habitat for foraging by Swainson's hawk because the hawks tend to avoid foraging in wetland habitats.

Mr. Cashen cites that M&A statement regarding the fact that Swainson's hawk avoid foraging in areas with pre-existing buildings and suggests that the Swainson's hawk will not use the 45-acre Wetland Preserve as a foraging area. It should be pointed out that the project site itself is surrounded by development, including the buildings for the Napa Logistics project to the north and a wine warehouse to the south, and Swainson's hawks were observed foraging over the project site every time project Biologists visited the project site during the spring or summer months. It is expected that Swainson's hawk would use the proposed Wetland Preserve in addition to the adjacent Napa Logistics Park Preserve.

As pointed out in the Draft EIR, suitable foraging areas for Swainson's hawk include grasslands, pastures, alfalfa and other hay crops, and certain grain and row croplands. While Swainson's hawk

will generally avoid permanently-inundated emergent wetlands as foraging areas, many extensive foraging habitats for Swainson's hawk throughout the Central Valley are in vernal pool landscapes that offer a mix of both upland grasslands and seasonal wetlands. The comment that the 45-acre Wetland Preserve would not provide suitable foraging habitat cannot be correct, as not only do Swainson's hawks commonly forage in vernal pool landscapes, but they currently forage over the site of the proposed project, which is a combination of grasslands and seasonal wetlands. The value of the Wetland Preserve (with upland grasslands along with both pre-existing and created seasonal wetlands) as a raptor foraging habitat would be nearly equivalent to that of the project site in its current condition. In addition, it should be pointed out that the wetlands that currently exist on the project site and that either exist or are to be created within the Wetland Preserve are seasonal wetlands that are filled with water during the winter months (given sufficient rainfall), dry out in the spring, and remain dry throughout the summer. Swainson's hawk seldom winters in California and would only be expected to occur in the project area during the spring and summer months when seasonal wetlands are dry and would provide optimal conditions for foraging.

Response to CASHEN.NOV. 15-9
The commenter indicates that because some records of nesting by golden eagles are suppressed in the CNDDB, it is necessary to acquire additional information pertaining to golden eagle nesting in the project area. The commenter further indicates that the proposed project would result in a significant cumulative loss of foraging habitat and may result in a "take" of golden eagle as defined by the Golden Eagle Protection Act.

The EIR included readily available information from the CNDDB regarding the location of golden eagle nest sites in the vicinity. This information revealed four golden eagle nest sites within 10 miles of the project site. Among these were an extirpated nest site from 3.2 miles north of the site and an additional nest site within the Newell Open Space approximately 4.5 miles east of the project. This information, coupled with the observation of a golden eagle foraging at the project site during spring surveys conducted by HBC in April of 2021, is sufficient information to make a determination that the proposed project may result in impacts to nesting golden eagle that would be considered potentially significant and requiring mitigation. The Biological Resources Report prepared by HBC makes a statement regarding potential nesting for golden eagle similar to the one made for Swainson's hawk, namely, that with potential nest trees near the site and known prior nests in the general area of American Canyon, nesting in suitable nest trees near the project site "cannot be ruled out." Therefore, the Final EIR Volume 1 recommended MM BIO-1b, which requires that, prior to the start of construction, a golden eagle protocol survey be conducted. Note that such a survey conducted prior to construction would determine if active golden eagle nests are present in the vicinity of the project during the construction period and would trigger appropriate protections as provided by MM BIO-1b to ensure that disturbances to active nests do not occur.

The loss of potential foraging habitat for golden eagle is addressed in Master Response A. The Master Response explains, based on CEQA criteria, why loss of suitable habitat for golden eagle would not cause a substantial adverse impact with respect to the loss of foraging habitat.

Response to CASHEN.NOV. 15-10

Mr. Cashen indicates that the EIR should note that northern harrier does in fact forage on the project site and explains why, in his opinion, the loss of suitable habitat for this species would cause a substantial adverse impact on the species, including the loss of foraging habitat.

The EIR clearly states that the project site provides suitable nesting and foraging habitat for northern harrier. Northern harrier was observed on the site each time a Biologist visited the site, including foraging individuals in the winter and also during the summer, and it was acknowledged that these individuals seen during summer could represent individuals nesting somewhere in the vicinity of the project. Because of anticipated impacts of the project, the EIR requires MM BIO-2c to conduct pre-construction surveys for northern harrier and establish appropriate buffer zones to protect any nesting pairs encountered. The extensive discussion of the significance of the loss of foraging habitat for Swainson's hawk contained within Master Response A applies to loss of potential foraging habitat within the project site for northern harrier as well, and explains, based on CEQA criteria, why loss of suitable habitat for northern harrier would not cause a substantial adverse impact on the species, including the loss of foraging habitat.

Response to CASHEN.NOV. 15-11

The commenter indicates that burrowing owl habitat exists on the project site and that a protocol survey for burrowing owls should be conducted to verify whether burrowing owl is present on the site. The commenter also indicates that MM BIO-1d does not ensure that impacts to burrowing owl would be reduced to less than significant levels as greater detail on habitat mitigation that would be provided if burrowing owls were to be found on the site during pre-construction surveys is needed, including performance standards, monitoring and reporting programs, and site management. Mr. Cashen also indicates that any burrowing owl found would constitute a significant impact, as no breeding burrowing owls and few wintering owls are known from Napa County.

Protocol surveys for burrowing owl were not conducted for this site because habitat assessment conducted for the site during initial site reconnaissance did not find extensive habitat for burrowing owl on the project site. Burrowing owls generally occur in areas with burrows of California ground squirrel that could be occupied by burrowing owl and with low height vegetation near burrows and in foraging areas. Vegetation throughout the site was either vegetation within wetlands (with saturated soils that would not be conducive to creation of ground squirrel dens nor occupation by burrowing owl) or tall-growing upland vegetation of a stature too high to accommodate burrowing owl. Nearly the entire site was devoid of ground squirrels or ground squirrel colonies. As indicated in the Draft EIR, during initial site surveys, ground squirrels were observed only in the vicinity of the rubble pile and compost at the perimeter of Clark's Rocks along Green Valley Road. Mr. Cashen states that additional ground squirrels were found by him along the northern perimeter of the site (apparently along the border with Napa Logistics). The Draft EIR points out, however, that the project site has been subject to review by Biologists working for four separate biological consulting firms over the 5-year period between 2016 and 2021, and none encountered burrowing owl on the property.

As the majority of the site was characterized by wetlands or high-growing vegetation not conducive to burrowing owl, and as the site was nearly devoid of ground squirrels or ground squirrel colonies,

with only small areas of the site of a nature that they could even remotely be occupied by burrowing owl, it was determined that nearly the entire site could not support burrowing owl. However, because of the limited areas of the site with presence of ground squirrels and suitable vegetative characteristics, the EIR included MM BIO-1d, which requires that preconstruction surveys be conducted in order to ensure that burrowing owl had not moved onto the site and to ensure that no burrowing owls (either wintering or nesting) were in harm's way when construction was initiated.

MM BIO-1d recommends establishment of appropriate buffer zones around any burrowing owl present at the site during construction activities, and mentions possible passive relocation of a burrowing owl only if found as a wintering species. According to CDFW adopted survey protocol and mitigation guidelines for burrowing owls as described in a March 7, 2012 Staff Report, such a relocation would require consultation with CDFW, preparation of a relocation plan, and habitat compensation. At this juncture, such compensation would only be needed if a decision was eventually made to relocate a wintering owl from a construction site. Given the nature of the on-site habitat, which is for the most part not conducive to occupation by burrowing owl, the fact that burrowing owl is apparently extirpated as a nesting species and nearly extirpated as a wintering species from Napa County (as indicated by the commenter), the remote probability of encountering a wintering owl in the limited areas of suitable habitat during pre-construction surveys, and the speculative nature of whether such events could lead to a decision to passively relocate such an owl, the need for habitat compensation for this project is purely speculative and a remote possibility at best. Certainly, such a speculative venture would not need a detailed plan as part of an EIR to include performance standards, monitoring requirements, management, etc.

Response to CASHEN.NOV. 15-12
The commenter disagrees with the Final EIR Volume 1 Response to Comment CASHEN-12, which addresses the commenter's concern that the project has the potential to introduce invasive plant species or facilitate their spread during construction. The commenter also criticizes the Response to Comment S&W-10b found in Volume 1 of the Final EIR, and states that MM BIO-3d is not sufficient to reduce the colonization and spread of invasive plants to a level that is insignificant. He states that, whereas the applicant may intend to conduct "weeding" in the managed landscape areas, the removal of invasive plants from those areas is not incorporated as a mandatory (enforceable) mitigation measure.

To address the commenter's concern, MM BIO-3d has been modified to include language requiring the managed landscaped areas to remove species rated as "high" by the California Invasive Plant Council (Cal-IPC) or on the "Alert" or "Watch" list.

Response to CASHEN.NOV. 15-12 continued
The commenter also suggests all of the plants listed in the Cal-IPC Inventory have the potential to cause significant impacts on the environment, not just those rated as "high" by Cal-IPC.

The commenter is correct any plant that is non-native to a region has the potential to adversely affect the environment. The Cal-IPC rates non-native plants into five categories. The Cal-IPC ratings that have the most impact to the least are listed as follows:

- **High**–These species have severe ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal and establishment. Most are widely distributed ecologically.
- **Moderate**–These species have substantial and apparent—but generally not severe—ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal, though establishment is generally dependent upon ecological disturbance. Ecological amplitude and distribution may range from limited to widespread.
- **Limited**–These species are invasive but their ecological impacts are minor on a Statewide level or there was not enough information to justify a higher score. Their reproductive biology and other attributes result in low to moderate rates of invasiveness. Ecological amplitude and distribution are generally limited, but these species may be locally persistent and problematic.
- **Alert**–An Alert is listed on species with High or Moderate impacts that have limited distribution in California, but may have the potential to spread much further.
- **Watch**–These species have been assessed as posing a high risk of becoming invasive in the future in California.

Based on the Cal-IPC rating system, the plants listed as "High" have the potential to cause "severe ecological impacts," which would be considered a significant impact that requires mitigation. Plants rated as "Moderate" or "Limited" do not pose "severe ecological impacts" but do pose a certain level of risk. Plants rated on the Alert or Watch list may include species with High ratings or species that pose a high risk of becoming invasive in California. To address the commenter's concern and to ensure consistency, MM BIO-3d has been modified to include a condition which requires the managed landscaped areas and Wetland Preserve to remove species rated as "High" or on the "Alert" or "Watch" list if the plant/s have a 5 percent or greater absolute cover.

Response to CASHEN.NOV. 15-12 continued
The commenter also suggested that the invasive species performance standard would end after the 5-year monitoring period, and expressed concerns that the monitoring required under MM BIO-3d is limited to data collection from at least one, 5-foot radius sample plot at each of the established/created wetlands. Thus, the commenter expressed concern that there would be no monitoring for invasive plants in the majority of the Wetland Preserve, including the upland areas.

Once the Wetland Preserve meets all the performance standards, a long-term management plan will be prepared. Monitoring of invasive species would be included in this long-term management plan.

To address the commenter's concern, the MM BIO-3d performance standards have been modified to include more coverage over the established/created wetland and include monitoring in the upland areas. The monitoring requirement will include a 5-foot radius sample plot every fifty-feet along a transect through each established/created wetland. In addition, a minimum of three 5-foot radius sample plots on the east side and three on the west side will be placed at random upland locations along a linear transect east to west within the Wetland Preserve. Within the uplands, the 5 percent

absolute cover of invasive plant species performance standard would apply only for plants that currently do not exist on the site rated as "High" or on the "Alert" or "Watch" list. In addition, the performance standards now include language requiring the long-term management plan to include a management activity to control plants rated as "High" or on the "Alert" or "Watch" list that exceed 5 percent absolute cover similar to the 5 year performance standards.

The City maintains MM BIO-3d, with the edits referenced in this response, is sufficient to address potential impacts associated with invasive plant species that may be introduced on the landscaped areas within the project site and within the Wetland Preserve to a level of less than significant.

Response to CASHEN.NOV. 15-13
The commenter suggests the Draft EIR's cumulative impacts analysis is flawed because it applies a narrow scale (i.e., 0.5-mile radius from the project site) to identify other projects that could contribute to cumulative effects for all special-status species analyzed in Draft EIR, not just the Swainson's hawk. The commenter suggests the proposed Wetland Preserve does not mitigate the impact because it: (a) would be exposed to numerous edge effects (e.g., noise, human activity) that functionally eliminate habitat, (b) would be designed and managed to discourage wildlife use, and (c) is too small to satisfy the habitat patch size requirements of the species that would be impacted by the project (e.g., northern harrier and golden eagle, among others). The commenter also suggested the assertion that "much of that [Swainson's hawk] foraging habitat is within 0.5- mile of the project site" is not supported by evidence. To the contrary, it is claimed, under the cumulative impacts scenario there will be virtually no foraging habitat remaining within 0.5-mile of the project site.

As stated in the Final EIR Volume 1 Response to CASHEN-13, for Biological Resources, 0.5-mile was used because of the project site's location between the marshes associated with the Napa River and urban development with the City of American Canyon. The City maintains the use of 0.5-mile radius to assess cumulative effects for all special-status species analyzed was sufficient to support the conclusion in the Draft EIR. As the Draft EIR explained, "[t]he project site is located at the transition between urban development and the marshes associated with the Napa River; accordingly, habitats in these areas tend to be disrupted and impacts would be localized." (Draft EIR, p. 4-5.)

The City does not agree with the commenter's view that the Wetland Preserve has very limited value for mitigation purposes. As described in Response to AB-8, the 45-acre Wetland Preserve is hydrologically connected to the existing 37-acre Napa Logistics Park Preserve, and is adjacent to and hydrologically connected with the nearby approximately 78,000-acre designated San Pablo Bay Wetlands Important Bird Area. The Wetland Preserve abuts a constructed wetland area within the Biaggi Bros. property separated only by a barbed wire fence, and terrestrial wildlife can move between the 45-acre Wetland Preserve 37-acre Napa Logistics Park Preserve wildlife via a large clear span bridge that crosses under Devlin Road connecting the Wetland Preserve to the Napa Logistics Park. In addition, terrestrial wildlife can continue to access undeveloped parcels to the northeast and southeast by crossing over existing railroad tracks or a culvert that crosses under the railroad tracks. The City also maintains that the Wetland Preserve and wetlands that will be established within the Wetland Preserve will adequately mitigate the project's biological impacts.

The commenter's assertion that "under the cumulative impacts scenario there will be virtually no foraging habitat remaining within 0.5-mile of the project site" is demonstrably inaccurate. The 45-acre Wetland Preserve will provide foraging habitat for Swainson's hawk, northern harrier, and golden eagle, among other avian species. Coupled with the 37-acre Napa Logistics Park Preserve, the 45-acre Wetland Preserve will create a combined total of 82 acres of "preserved" foraging habitat within the 0.5-mile radius. In addition, as supported by the commenter's Figure 6, there remains a significant amount of farmed land suitable as foraging habitat for the Swainson's hawk, northern harrier, and golden eagle within the 0.5-mile radius. Based on the commenter's Figure 6, excluding the areas the commenter asserts are not suitable foraging habitat, there are approximately 339 acres of potential foraging habitat, plus the 45-acre Wetland Preserve and 37-acre Napa Logistics Park Preserve, for a total of 412 acres of potential foraging habitat exclusively within the 0.5-mile radius.

As was discussed both in Section 3.3 (Biological Resources) of the Draft EIR (see esp. p. 3.3-24) and in Master Response A (Swainson's Hawk and Other Raptors) in the Final EIR Volume 2, there is abundant protected habitat for Swainson's hawk and golden eagle to access outside of the 0.5-mile radius from the project site. Indeed, there are several thousand acres of preserved land suitable for foraging habitat within 2 to 5 miles of the project site. This is in addition to the approximately 412 acres of suitable foraging habitat within the 0.5-mile radius geographic scope of the City's cumulative impacts analysis. Taken together, the existence of all of this foraging habitat in the general vicinity of the project supports the City's conclusion that the project will result in less than cumulatively considerable impacts on Swainson's hawk foraging habitat and that, as a result, no mitigation is warranted. The same is true for golden eagle, northern harrier, and other avian species that forage on the project site.

Response to CASHEN.NOV. 15-14

The commenter suggests that construction setback distance should pre-construction surveys discover a nesting golden eagle are smaller than that recommended by USFWS or CDFW guidelines, and suggests that the 1,000-foot buffer distance referenced in the EIR was based on previous evaluations conducted for the City of American Canyon by M&A. The commenter suggests that a buffer zone distance used by the above-referenced agencies, which is based on best available scientific information, should be used instead.

The 1,000-foot buffer zone distance used in the EIR for golden eagle was, at least in part, based on a variety of environmental documents that had been previously prepared for the City of American and had been implemented by the City in the past. The Final EIR Volume 1 indicates that the 1,000-foot buffer distance used in the EIR is a minimum that could be increased by the qualified Raptor Biologist and recognizes the USFWS and CDFW buffer distances of 1 mile for golden eagle. In recognition of this, the minimum buffer distance cited in MM BIO-1b has been revised to be consistent with agency guidelines. MM BIO-1b is also revised to accommodate the comment in CASHEN.NOV. 15-14 regarding the qualifications of the qualified Raptor Biologist. MM BIO-1b is revised as follows:

MM BIO-1b No more than 30 days prior to the first ground disturbance activity, pre-construction golden eagle nesting surveys shall be conducted in the project vicinity by a qualified

> Raptor Biologist. The qualified Raptor Biologist shall have a minimum of a 4-year college degree in wildlife biology or related environmental science, at least 2 years conducting wildlife surveys, and a familiarity with golden eagle and its local ecology. Preconstruction surveys shall include investigation of all potential nesting trees within a survey area determined by the qualified Raptor Biologist, but no less than a 1 mile radius around all project activities. If active golden eagle nests are identified within any trees within the survey areas a 1 mile radius of the project site, a qualified Raptor Biologist shall establish a protection buffer of approximately 1 mile that is adequate to ensure noise or activity from the proposed project would not cause nest disturbance of young or adult bird mortality. Buffer zones may vary in size as some golden eagles are more acclimated to disturbance than others. Size of buffer zone may be modified by the qualified Raptor Biologist considering the type of construction activity that may occur and the behavioral factors and extent that golden eagle may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young golden eagles have fledged or that the nesting cycle is complete based on monitoring of the active nest by the qualified Biologist.

Response to CASHEN.NOV. 15-15
The commenter questions qualifications for the qualified Raptor Biologist of 2 years of experience surveying for and detecting nesting golden eagles.

A requirement that the qualified Raptor Biologist have at least 2 years of experience surveying for and detecting nesting golden eagles is not out of the mainstream for qualifications necessary to conduct such surveys. Nevertheless, the minimum qualifications for the Raptor Biologist to conduct golden eagle surveys has been modified as indicated in Response to CASHEN.NOV. 15-14.

Response to CASHEN.NOV. 15-16
The commenter suggests that construction setback distance should pre-construction surveys discover a nesting Swainson's hawk is smaller than that recommended by USFWS or CDFW guidelines, and suggests that the 1,000-foot buffer distance referenced in the EIR was based on previous evaluations conducted for the City of American Canyon by M&A. The commenter suggests use of a buffer zone distance used by the above-referenced agencies (0.25 mile for projects in urbanized areas), which is based on best available scientific information, should be used instead.

The 1,000-foot buffer zone distance used in the EIR for Swainson's hawk was, at least in part, based on a variety of environmental documents that had been previously prepared for the City of American and had been implemented by the City in the past. The Final EIR indicates that the 1,000-foot buffer distance used in the EIR is a minimum that could be increased by the qualified Raptor Biologist and recognizes the USFWS and CDFW buffer distances of 0.25-mile for Swainson's hawk. In recognition of this, the minimum buffer distance has been revised to be consistent with agency guidelines. The minimum qualifications for the Raptor Biologist to conduct Swainson's hawk surveys has been modified as was also done for golden eagle surveys described in Response to CASHEN.NOV. 15-14.

The surveys required in the EIR are to be conducted in accordance with CDFW's "Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFW 2000). The protocol recommends a preliminary (optional survey) between January and March 20, but required surveys conducted during March 20 to April 5, April 5 to April 20, and June 10 to July 30. These pre-construction surveys shall include investigation of all potential nesting trees within 0.5-mile radius around all project activities and shall be completed for at least two survey periods immediately prior to commencement of project construction.

MM BIO-1a is revised as follows:

MM BIO-1a Pre-construction surveys for Swainson's hawk shall be conducted in the project site vicinity prior to initiation of project construction activities and each year following initiation of construction if project activities are delayed or discontinued for 7 or more days prior to the first required survey period (March 20 to April 5) and are scheduled to recommence construction activities during the second survey period but before August 1. These pre-construction surveys shall include investigation of all potential nesting trees within a half-mile radius around all project activities and shall be completed for at least two survey periods immediately prior to commencement of project construction. Surveys shall be conducted in accordance with CDFW's "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFW 2000) to maximize the potential for locating nesting Swainson's hawk and reduce the potential for nest failures due to project activities and/or disturbances.

If no nesting Swainson's hawk are found during the first or second required survey periods starting March 20 and extending to April 20, then project construction may commence. If during the third survey (June 10 to July 30) Swainson's hawk are found to be nesting in the project vicinity and construction has commenced, it shall be assumed the Swainson's hawk commenced nesting and thus the Swainson's hawk are habituated to the ambient level of noise and disturbance emanating from the project site. If Swainson's hawk are found to be nesting within 0.25 mile of the project site, a non-disturbance buffer shall be established to keep all construction activities a minimum of 0.25 mile from the nest site. The CDFW shall be consulted regarding the adequacy of the buffer established by the qualified Raptor Biologist. At that time the necessity for acquiring a Fish and Game Section 2081 Incidental Take Permit (ITP) authorization would be determined. An ITP authorization shall be required if there were a valid concern the project activities would result in the "take" of an adult Swainson's hawk, eggs, or nestlings.

Surveys shall be conducted by a qualified Raptor Biologist with at least a minimum of a 4-year college degree in wildlife biology or related environmental science, familiarity with Swainson's hawk and its local ecology, and 2 years of experience surveying for and detecting Swainson's hawk pursuant to "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" survey protocol. No disturbance such as construction or earthmoving activity shall

occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is complete based on monitoring of the active nest by a qualified Biologist.

Response to CASHEN.NOV. 15-17
The commenter indicates that greater information is needed to ensure significant impacts are mitigated if a passive relocation program is initiated to relocate an owl wintering on the site within a proposed construction zone. The commenter states his opinion that a 100-foot buffer zone to protect a burrowing owl, if found on the site near proposed construction, is less than CDFW guidelines and may not be as sufficient to protect an occupied burrow.

For additional information related to details needed to ensure impacts are mitigated to levels of insignificance should a passive relocation program be necessary, please refer to Response CASHEN.NOV. 15-11 above. Also note that as a Species of Special Concern, burrowing owl is not a listed species and the CDFW adopted survey protocol and mitigation guidelines for burrowing owl as described in the March 7, 2012 Staff Report are guidelines and not legal requirements. Guidelines for buffer zones to protect nesting burrowing owl (ranging between 50m to 500m depending on time of year and disturbance level) are more rigorous than for an occupied burrow during the winter. A 100-foot buffer zone for an occupied burrow in the winter is typical and would be considered a minimum. The buffer zone could be modified by the qualified Raptor Biologist considering the type of construction activity that may occur, as well as behavioral factors and extent that burrowing owl may have acclimated to disturbance.

Response to CASHEN.NOV. 15-18
The commenter indicates that the buffer zone requirements to protect active nests of nesting birds is inadequate.

In response to the commenter's concerns, MM BIO-4 has been clarified to increase the required setback from active nests of birds protected by the Migratory Bird Treaty Act and California Fish and Game Code.

MM BIO-4 If construction occurs during the breeding season of migratory and resident birds (February 1 to August 31), a qualified Biologist shall conduct a pre-construction breeding bird survey in areas of suitable habitat within 7 days prior to the onset of construction activity. Surveys shall be conducted within the project footprint and 100 ~~50~~ feet from the construction limits for nesting passerines, 250 feet from the construction limits for nesting accipiters and a minimum of 500 feet from the construction limits for nesting raptors. If the survey area is found to be absent of nesting birds, no further mitigation would be required. However, if construction activities are delayed by more than 7 days, an additional nesting bird survey shall be performed. If bird nests are found, appropriate buffer zones shall be established around all active nests to protect nesting adults and their young from direct or indirect impacts related to project construction disturbance. Size of buffer zones shall be determined per recommendations of the qualified Biologist based on-site conditions and species involved, but typical buffers around active nests are 500 feet

for large raptors such as buteos, 250 feet for small raptors such as accipiters, and 100 feet for passerines (songbirds) and other bird species. For special-status species, a 0.25 mile buffer shall be established for nesting Swainson's hawk; 1 mile for golden eagle; and a 500-foot buffer for nesting tricolored blackbirds. If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Buffer zones shall be maintained until it can be documented that either the nest has failed, or the young have fledged.

Re: **Agenda Item 17 –December 6, 2022 City Council meeting--Comments on Giovannoni Logistics Center Project proposed by Buzz Oates Construction, Inc. (PL20-0042, PL20-0043 and SCH #2021010104)**

Dear Mayor Garcia, Vice Mayor Aboudamous, Honorable City Council Members, Mr. Cooper, Mr. He and Ms. Jones:

We are writing on behalf of Napa/Solano Residents for Responsible Development ("Napa/Solano Residents") to provide comments on the Giovannoni Logistics Center Project, PL20-0042, PL20-0043 and SCH #2021010104, ("Project") The Project appears as Item 17 on the agenda for the December 6, 2022 City of American Canyon ("City") City Council ("Council") hearing. The Council will consider adopting resolutions to (1) certify the Final Environmental Impact Report ("FEIR), adopt CEQA findings of fact, adopt a Statement of Overriding Considerations and adopt a Mitigation Monitoring and Reporting Program; (2) approve a design permit for Phase 1 of the Project; and (3) approve a Tentative Parcel Map for Phase 1 of the Project. 1

5188-013acp

printed on recycled paper

The City, as lead agency under the California Environmental Quality Act[1] ("CEQA"), prepared the Draft Environmental Impact Report ("DEIR")[2] and Final Environmental Impact Report ("FEIR") for the Project. Napa/Solano Residents' July 2022 comments on the DEIR (including expert technical comments)[3] explained how the DEIR failed to comply with CEQA's basic requirement to act as an "informational document," in that it lacked meaningful details in critical areas, such as air quality, health risk, biological resources including wetlands, greenhouse gas ("GHG") and transportation impacts, without which the public and decisionmakers were unable to adequately assess the Project's significant impacts. Residents' comments further explained that, because of the DEIR's shortcomings, it was deficient as a matter of law because it failed to properly disclose and mitigate the Project's potentially significant impacts. The DEIR also lacked substantial evidence to support the City's conclusions regarding the Project's impacts and proposed mitigation. These deficiencies rendered the DEIR inadequate for purposes of compliance with CEQA.

The City released the FEIR in November 2022. The FEIR contains responses to Napa/Solano Residents' DEIR comments and attempts to address some of the issues raised. As discussed in our November 17, 2022 letter to the Planning Commission[4], however, the FEIR fails to meaningfully respond to many of Residents' DEIR comments and fails to resolve or mitigate many of the Project's potentially significant impacts. In particular, the FEIR fails to analyze or even mention the construction of a new road that runs directly through the Project's proposed 45-acre open space/wetlands preserve, an area intended to serve as mitigation for the Project's wetlands impacts. Moreover, the FEIR acknowledges, but fails to correct, significant errors in the mapping of the Project site's existing wetland areas. The FEIR remains deficient as a matter of law and the Planning Commission's recommendation for Council to certify the FEIR and approve the Project was not based on substantial evidence. 1 CONT

On December 2, 2022, we received a letter from American Canyon City Attorney William Ross, in which Mr. Ross advised that he and City staff "will recommend that the December 6, 2022 City Council Hearing on the Giovannoni

Logistics Center Project Final Environmental Impact Report, be continued to the February 21, 2023, City Council meeting."[5] We agree with the recommendation to continue the hearing on this Project to February or later, so that the City may revise and recirculate the EIR to address its numerous deficiencies and produce for public review any proposed development agreement for the Project. We reserve the right to supplement these comments at any later hearings and proceedings related to the Project.[6]

1 CONT

I. STATEMENT OF INTEREST

Napa/Solano Residents is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential environmental impacts associated with Project development. Napa/Solano Residents includes American Canyon residents James Aken, Samantha Spangler, Evelyn Hernandez, and Alex Somodio, and members of the International Brotherhood of Electrical Workers Local 180, Plumbers & Steamfitters Local 343, Sheet Metal Workers Local 104, Sprinkler Fitters Local 483, District Council of Ironworkers and their members and their families, and other individuals that live and/or work in the City of American Canyon and Napa/Solano Counties and would be directly affected by the Project's environmental and health and safety impacts. Napa/Solano Residents and its members also have an interest in enforcing environmental laws that encourage sustainable development and ensure a safe working environment for the members they represent.

2

II. THE CITY MUST REVISE AND RECIRCULATE THE EIR TO ADDRESS SIGNIFICANT NEW INFORMATION INVOLVING CHANGES TO THE PROJECT'S ENVIRONMENTAL SETTING.

Lead agencies are required to recirculate an EIR for further public review and comment if significant new information is added to the EIR after notice of public review but before certification.[7] Recirculation is required when the addition of new information deprives the public of a meaningful opportunity to comment on a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect.[8] New information can include "changes in the project or environmental setting as well as additional data or other information."[9] The

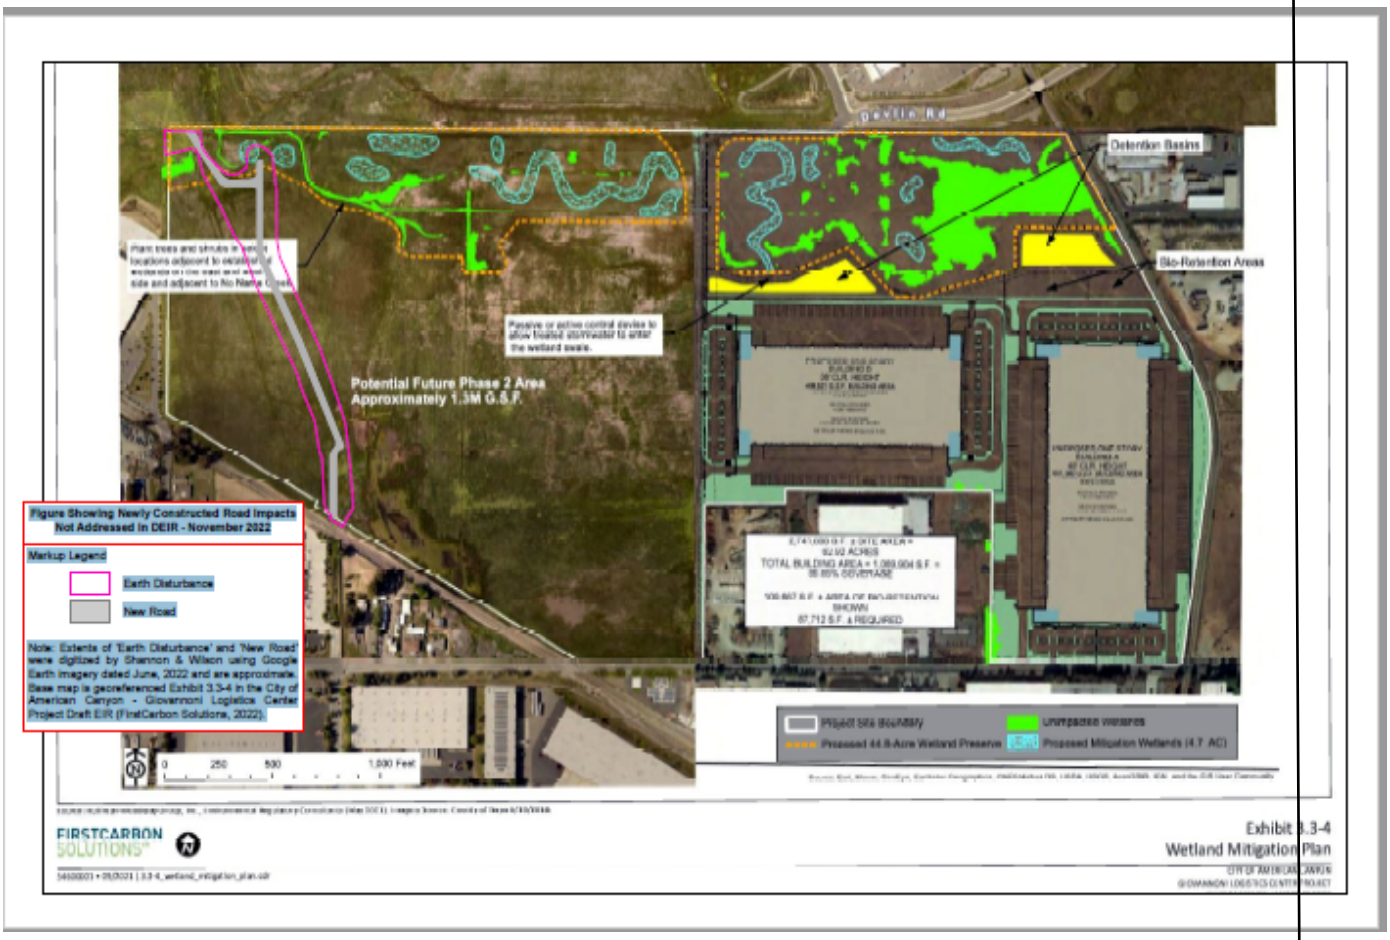
purpose of recirculation is to give the public and other agencies an opportunity to evaluate the new data and the validity of conclusions drawn from it.[10]

Recirculation is also required where significant new information surfaces prior to certification of an EIR but the lead agency failed to add that information to the EIR.[11] Such information must be added to the EIR—and the EIR must be recirculated—if the information would trigger the recirculation requirement under CEQA Guidelines section 15088.5. Failure to include such information thwarts the goals of the EIR process by not disclosing to the public and government agencies critical information necessary to evaluate the significance of the Project's impacts.[12]

3 CONT

A. There Is A Significant Change To The Project's Environmental Setting.



In our comments to the Planning Commission, we explained that on November 9, 2022, wildlife biologist Scott Cashen performed a site visit to the Project site.[13] During this visit, he observed and documented a new gravel road and dirt berm that has been installed on the western portion of the Project site.[14] This new road extends north-south through the entire Project site, and cuts directly through the proposed wetlands preserve on the northern portion of the site. The road is a fundamental change in the baseline conditions at the Project site which affects the EIR's underlying analysis of the Project's wetland impacts and reduces the feasibility and efficacy of the EIR's proposed wetland mitigation.

4

The approximate extent of the new road and associated earth disturbance is depicted in the following image provided by Ms. Corbin, in which the new road's impacts are overlayed on an FEIR image showing the wetland mitigation plan.[15] (A larger version of this image is attached hereto as **Exhibit B.**)

[10] *Spring Valley Lake Ass'n v. City of Victorville* (2016) 248 Cal.App.4th 91, 108.

[14] *Id.*
[15] See Corbin FEIR Comments (Exhibit A to 11/16/22 Franco letter), pg. 11; the original image is Exhibit 3.3-4 to the DEIR.

printed on recycled paper

Nowhere in the EIR is this new road disclosed. It was not identified in the DEIR's Project description or environmental setting discussion, and was not addressed in the DEIR's impacts analysis or mitigation discussion, nor did it appear in any of the aerial photos or diagrams in the DEIR. The public was therefore uninformed about the road during the DEIR's public comment period. Nor has the City subsequently disclosed this information to the public or attempted to assess its impacts in the FEIR. It remains conspicuously absent from all of the FEIR's descriptions and diagrams of the 45 acre "wetland preserve,"[16] despite the fact that it cuts directly across the preserve and encroaches on areas slated for wetlands mitigation. 4 CONT

As Mr. Cashen pointed out, roads can have several effects that cause negative impacts to wildlife: mortality from road construction, mortality from collision with vehicles, modification of animal behavior, alteration of the physical environment,

[16] *See e.g.,* DEIR Preliminary Site Plan Phase 1 (Exh. 2-4) and diagrams/aerial photos of wetlands impacts and proposed mitigation area (Exhs. 3.3-2, 3.3-3, 3.3-4 and 3.3-5).

printed on recycled paper

alteration of the chemical environment, spread of exotics, and increased use of areas by humans.[17] Mr. Cashen states that the new road has already likely had impacts but the City's failure to even disclose the existence of this new road, let alone analyze its potential impacts, precludes an assessment of the full extent of such impacts.[18] The public and other governmental agencies have been denied the opportunity to evaluate the new information and its significance, in violation of CEQA.

Wetlands biologist Sarah Corbin explains how the new road and associated land disturbances raise additional uncertainty about whether the proposed "wetland preserve" can adequately mitigate the Project's impacts to wetlands and habitat.[19] Ms. Corbin confirms that the new road clearly cuts through the proposed wetlands preserve area, comes very close to directly impacting the existing wetlands within the wetlands preserve area and may have indirectly impacted these wetlands by cutting off wetland hydrology.[20] The earth disturbance associated with the road appears to extend into areas proposed for wetlands creation in this area. Moreover, Ms. Corbin estimates that the wetland preserve area has been reduced by approximately 1.5 acres due to construction of the road.[21] Likely indirect impacts to No-Name Creek and the wetlands preserve area include "untreated stormwater runoff (the road appears to be graveled and will contribute fine particulate laden runoff with or without regular use), impact of the wetland buffer within the wetland preserve in the area near the road, and disturbance associated with use such as noise, air pollution, and trash."[22] Finally, heavy equipment used to construct the road compacted soils within the earth disturbance footprint, limiting root establishment and plan growth in the area.[23] These disturbances will make it significantly more difficult to create wetlands on site and to replace the lost functions of the impacted wetlands.[24] None of these impacts were discussed in the DEIR's impact analysis or discussion of the proposed wetlands mitigation area, nor are they addressed in the FEIR.

4
CONT

EIRs are required to include a description of the physical environmental conditions in the vicinity of a project, in order to provide baseline physical conditions by which the lead agency determines the significance of the project's

printed on recycled paper

impacts.[25] Because the new road is a significant change to the Project's environmental setting, and may represent an undisclosed change to the Project itself which could substantially increase the severity of the Project's biological and wetland impacts, the City must at a minimum disclose in a revised and recirculated EIR when, how and why the road was constructed, what it is used for and how often, whether it is a permanent improvement to the Project site, and whether the land disturbances caused by construction and use of the road impacted any of the existing wetland areas. Moreover, the recirculated EIR must reevaluate all potentially significant impacts to the Project site's biological and wetlands resources in light of the new road feature, as well as its impacts on the proposed wetlands preserve's ability to adequately mitigate the Project's impacts. 4 CONT

Even after all of the foregoing issues were raised at the November 17, 2022 Planning Commission hearing on this Project, the City has not addressed them. The staff report to the Council for this hearing makes no effort to answer or even to acknowledge the serious questions raised with respect to the new road's impacts. The Council should instruct staff to revise and recirculate the EIR to address these matters.

B. It is Irrelevant Whether the New Gravel Road was Approved in Connection with a Different Project Because the City has Never Disclosed or Analyzed the Road's Impacts on this Project.

At the November 17 Planning Commission hearing, it was disclosed that the new gravel road was a maintenance road constructed in connection with new wastewater and recycled water pipelines constructed across the Giovannoni Project site pursuant to the approved EIR for the neighboring Napa Logistics Park Phase 2 project ("Napa Logistics Project") immediately to the north.[26] On November 18, Napa/Solano Residents sent a California Public Records Act ("PRA") request to the City requesting, *inter alia*, immediate access to all documents relating to construction of parallel wastewater and recycled water pipelines and associated maintenance road constructed on the Project site in connection with the Napa Logistics Project. 5

[25] 14 CCR § 15125.

[26] The Giovannoni Logistics Center Draft EIR ("DEIR") mentions that these two pipelines were constructed across the Project site in Spring 2021, in connection with the Napa Logistics Project. (DEIR, pg. 2-1). Again, there is no mention of a gravel road in the DEIR or FEIR, nor is it depicted in any of the photos, drawings or diagrams of the Project site.

printed on recycled paper

On November 22, November 29, December 1 and December 2, the City produced certain documents responsive to Napa/Solano Residents' PRA request. While it remains unclear whether all responsive documents have been produced, especially with respect to the new gravel maintenance road, the documents produced to date appear to confirm that the new pipelines were constructed in connection with the Napa Logistics Project. For example, the Napa Logistics Project EIR includes discussion of construction of new recycled water and wastewater pipelines that would be constructed as part of "off-site utility work," and would run through north to south through the Giovannoni Project site to connect to a new sewer pump station at Green Island Road, near the Giovannoni property's southern boundary.[27] Notably, the Napa Logistics Project EIR includes mitigation measures to avoid impacts of *pipeline* construction on Giovannoni property wetlands, but does not discuss or analyze a gravel maintenance road.

The City's PRA document production also included a January 30, 2020 Property Acquisition Agreement, pursuant to which the Giovannoni Project site property owners granted a number of easements to the City.[28] One of the easements is a sewer easement that appears to correspond to the new pipelines constructed in connection with the Napa Logistics Project EIR. Neither the Agreement nor its exhibits refer to a gravel maintenance road alongside or atop the new pipelines.

5
CONT

The City also produced a series of approved technical drawings, dated June 11, 2021, that relate to the new Green Island Road Sewer Pump station.[29] These drawings include depictions of the new sewer pipelines installed within the sewer easement, as well as a 17' gravel sewer access road running through the Giovannoni Project site from north to south, also within the sewer easement.[30]

Finally, the City produced an October 10, 2022 engineering consultant report regarding the completed construction of the Green Island Road Sewer Pump station and the new pipelines running through the Giovannoni property.[31] This report describes the project as including "construction of the new pump station and associated sanitary sewer line. A gravel access road was constructed on top of

[27] **Exhibit C,** Excerpts from Napa Logistics Park Phase 2 DEIR, at pgs. 2-29, 2-30, 3.3-18, 3.3-34—36, and Appendix J-3.
[28] **Exhibit D,** January 30, 2020 Property Acquisition Agreement.
[29] **Exhibit E,** June 11, 2021 Approved Technical Drawings.

[31] **Exhibit F,** October 10, 2022 letter re Geotechnical Observation and Testing Services, Green Island Pump Station and Sanitary Sewer.

printed on recycled paper

majority of the sanitary sewer for maintenance access."[32] The report also notes that the construction included "access road subgrade and aggregate base compaction."[33]

While the City's document production sheds some light on the purpose of the construction of the new gravel road across the Property site, major legal and factual questions remain unanswered. The City was obviously aware that new pipelines and a maintenance road would be built through the Project site, but didn't even attempt to analyze the impacts of those activities with respect to the Giovannoni Project, including the Project's proposed wetlands preserve. The glaring CEQA deficiency raised at the Planning Commission remains: the FEIR fails to disclose critical information relating to the Project's environmental setting and the feasibility of a proposed wetlands mitigation plan that ignores the construction of a road running through the area slated to be preserved as open space in perpetuity. This is a major informational and evidentiary deficiency in the FEIR which requires recirculation. 5 CONT

The City or the Applicant may contend that no further CEQA review is required because the road was analyzed in another CEQA document, the Napa Logistics Project EIR. But prior CEQA review of the road is immaterial to the issue raised by Napa/Solano Residents. The issue is not whether the road was properly entitled before it was constructed. Even if the new gravel access road was properly approved and permitted in connection with another project, the issue remains that the road *was never disclosed or analyzed in connection with this Project;* such disclosure and analysis is essential because the existence of the road has a direct effect on the City's wetland impact analysis and wetland mitigation measures proposed in the Giovannoni EIR. Regardless of whether the road was legally constructed, the fact remains that the EIR for the Giovannoni Project never disclosed that the road would be constructed across the property, including across the new proposed wetland preserve. The City's entire wetlands mitigation plan is therefore in serious doubt, and for this reason alone the Council may not certify the FEIR.

C. The Project's Wetlands Mitigation Plan has Additional Serious Flaws.

In our DEIR comments (including technical comments by wetlands biologist Sarah Corbin), we detailed at length the deficiencies in the DEIR's wetlands impact analysis and the lack of evidence demonstrating that the proposed wetlands mitigation would be effective. The FEIR fails to adequately address those concerns, 6

[32] *Id.,* pg. 1.
[33] *Id.*

printed on recycled paper

as we explained our FEIR comments to the Planning Commission. Those errors include the following.

As explained in her DEIR comments, Ms. Corbin identified numerous errors in the DEIR's wetlands delineation. These errors mean that there were more wetland areas on the Project site than are reflected in the DEIR and therefore, the wetlands impact analysis was based on inaccurate information.

In response, the FEIR acknowledged the wetland delineation errors pointed out by Ms. Corbin, but asserted that the errors "do not undermine the analysis or conclusions in the DEIR" because the DEIR had not relied on the City's consultant's delineation report.[34] Rather, the FEIR claims, wetland impacts were calculated using the United States Army Corps of Engineers ("Corps") Approved Jurisdictional Determination ("AJD") dated October 25, 2016. However, the FEIR fails to mention that the Corps' 2016 AJD used the information provided by City as the basis for their review; the Corps did not catch the errors and incorporated them into the AJD.[35] This is especially relevant because two of the locations that clearly meet wetlands criteria but were not delineated as wetland appear to be in areas in which the Project proposes to "create" wetland for Project mitigation.[36] And, as Ms. Corbin points out, "[i]ncorrect identification of the existing site wetlands will carry the inaccuracies through to the functional assessment (wetlands won't be evaluated), buffer impact analysis (buffers won't be assigned if wetlands aren't mapped), and the mitigation strategy (wetlands cannot be considered in mitigation sequencing if not identified)."[37]

6
CONT

The fact that the Corps carried the City's consultant's errors into its AJD doesn't change the fact that the FEIR's CEQA analysis is based on an admittedly inaccurate wetlands delineation, and that there are more wetlands on the Project site than assumed in the FEIR. In order to certify the FEIR and approve the Project, the Council must certify that it has reviewed and considered the information in the FEIR, and that the FEIR reflects its "independent judgment and analysis."[38] The Council, as final decision maker for the lead agency, may not base its certification upon an admittedly erroneous wetlands delineation made by another agency. The City, as lead agency, owes a duty to the public under CEQA to release a proper EIR,[39] and is ultimately responsible for the EIR's contents.

[39] *Mission Oaks Ranch, Ltd. V. County of Santa Barbara* (1998) 65 Cal.App.4th 713,723.

printed on recycled paper

Additional flaws in the DEIR's wetlands analysis and mitigation were detailed at length in our prior comments and were not resolved in the FEIR. These include:

- The FEIR lacks a proper functional assessment of the Project site's existing wetlands and therefore no functional impact analysis was performed. Without a formal functional assessment of the Project's wetlands, the Project's impacts simply cannot be accurately analyzed.
- Without a full understanding and characterization of the Project site's wetlands' functions, those functions cannot be replaced through mitigation nor can appropriate mitigation be devised or evaluated.
- The FEIR lacks a quantitative analysis of the sources of water for the Project site's wetlands, which is essential to design proper on-site wetland mitigation. Without a pre- and post-Project water budget analysis, there is no basis to assume that there is sufficient hydrology to create the additional wetlands necessary to mitigate the Project's impacts. Nor can it be shown that creation of new wetlands in the proposed wetland preserve will not impact the remaining existing wetlands.

6 CONT

These numerous deficiencies make clear that the FEIR's analysis and mitigation of the Project's significant impacts to wetlands do not comply with CEQA.

III. THE CITY MUST PRODUCE ANY PROPOSED DEVELOPMENT AGREEMENT FOR PUBLIC REVIEW PRIOR TO APPROVING THE PROJECT

The DEIR's Project Description lists the Discretionary/Ministerial approvals required for the Project, including a use permit, tentative parcel map, design permit, lot line adjustment, and grading and building permits.[40] Neither the DEIR nor the FEIR contain any mention of a development agreement. However, on the City's Active Community Development Project list dated November 2022, there is a reference to a proposed development agreement for this Project; the list notes that an application for the proposed development agreement was submitted on August 1, 2022 and is on hold as of September 1, 2022 pending entitlement approvals.[41]

7

[40] DEIR, pgs. 2-10 – 2-11.
[41] https://www.cityofamericancanyon.org/home/showpublisheddocument/18493/637989446453530000

printed on recycled paper

A development agreement is a contract between an agency and a developer establishing certain development rights with any person having a legal or equitable interest in the property at issue. The purpose of a development agreement is generally to extend the life of the entitlements in exchange for the provision of public benefits and to reduce the economic risk of development.[42] While a development agreement must advance an agency's local planning policies, it may also contain provisions that vary from otherwise applicable zoning standards and land use requirements as long as the project is consistent with the general plan and any applicable specific plan.[43] For this reason, it is critical that the terms of a proposed development agreement be disclosed to the public and analyzed during the Project's CEQA review in order to determine whether the development agreement may have potentially significant impacts that are not otherwise inherent in the project.

When a development agreement is required to implement a project, it is considered part of the project under CEQA.[44] Development agreements must be enacted in accordance with the Government Code and applicable local planning codes, and must undergo environmental review at the time of adoption. Therefore, any development agreement for the Project must be described in the EIR and considered by the City's decision makers at the same time as the rest of the Project approvals. 7 CONT

Napa/Solano Residents' November 18, 2022 PRA request included a request for any proposed development agreement for the Project, documents submitted in connection with any application for such agreement and related correspondence. The City produced a small number of documents in response, including an application for a development agreement relating to the Project, but no agreement was produced. We requested clarification regarding whether any documents responsive to this request had been withheld on grounds of privilege or exemption.[45] The City responded that no responsive documents had been withheld.[46] If the City intends to enter a development agreement with respect to the Project, the proposed agreement must be disclosed to the public and analyzed in the EIR before the City can consider certification of the FEIR and approval of the Project.

[46] **Exhibit H,** November 29, 2022 letter from William D. Ross to Richard M. Franco.

printed on recycled paper

IV. CONCLUSION

For the foregoing reasons, Residents supports a hearing continuance. The Council may not certify the FEIR, nor issue the Project's other approvals, until the FEIR complies with CEQA. The Council should direct that the City revise and recirculate the EIR with a full analysis of the Project's potentially significant impacts and propose appropriate mitigation. Thank you for your attention to these comments. Please include them in the record of proceedings for the Project. 8

Sincerely,

Richard M. Franco

Re: Request for Public Records Dated November 18, 2022; Documents Related to the Giovannoni Logistics Center Project; Fourth Response; Notice of Recommendation of Continuance of December 6, 2022 Hearing to February 21, 2023

Dear Mr. Franco:

On behalf of the City of American Canyon ("City"), this letter is the third communication responding to your request for *immediate access* to records made under the Public Records Act, Government Code Section 6250, *et seq.* ("PRA") dated November 18, 2022 on behalf of the Napa/Solano Residents for Responsible Development regarding documents related to the Giovannoni Logistics Center Project, PL20-0042; PL20-0043 and SCH No. 2021010104 ("Project") proposed by Buzz Oates Construction, Inc. ("Applicant") (the "Request"). On November 22 we transmitted an initial response, and supplemented that response on November 29, 2022, and again on December 1, 2022. 1

Pursuant to the telephonic conversation had with this office and yours on December 1, 2022, and your follow up email of the same day, below are further responsive documents.

Responsive Documents

The following documents are being made available at the previous link sent in a subfolder entitled "12.2.22": 2

1. CDFW Permit;
2. 2022.10.10_Napa Sewer Pump Station Close Out Letter;

Re: Geotechnical Observation and Testing Services
Green Island Pump Station and Sanitary Sewer
Green Island Road
American Canyon, California

Introduction

In this letter we summarize the results of our geotechnical observation and testing services at the referenced development. We previously performed a geotechnical and fault investigation for the development and presented the results in our July 29, 2016 report titled, "Geotechnical and Geologic Fault Investigation, Napa Logistics Park – Phase 2 Devlin Road, American Canyon, California." 1

Project Description

The project included construction of the new pump station and associated sanitary sewer line. A gravel access road was constructed on top of majority of the sanitary sewer for maintenance access. Also, new sections of water line, and electrical were also constructed for the pump station. New sections of sidewalk and driveway were also constructed at the pump station. Other improvements necessary for site development were also constructed. 2

Scope of Services

Our geotechnical observation and testing services began June 24, 2021 and included utilities, road subgrade and aggregate base, and, flatwork subgrade and aggregate base and lasted until August 23, 2022, the date of our last requested site visit. The scope of our construction observation and testing services for geotechnical aspects of this project included a combination of part- and full-time observation and testing on an on-call basis as set forth in our agreement with you. A general list of construction work involving our geotechnical engineering services is presented below. 3

1. Placement and compaction of utility trench backfill.
2. Flatwork and pavement subgrade preparation and compaction.
3. Placement and compaction of flatwork and pavement aggregate base.
4. Access road subgrade and aggregate base compaction

CORNERSTONE EARTH GROUP

Services Performed

During construction, we provided geotechnical observation services along with periodic field density testing at various locations and elevations across the site. Our observations and field density test results were recorded in the Daily Field Reports (DFR), Nos. 132 through 245, for the period from June 24, 2021 through August 23, 2022. Laboratory testing consisted of 6 compaction curve tests. These tests were conducted for the various fill materials used at the site. Records of the field density tests and laboratory testing are kept in our files for a period of three years after completion of the project and are available for your review, if desired.

4

Meaning of "Observation"

"Observation", as used in this document, means that we observed the progress of the work on an intermittent basis, and performed tests on selected soil and rock materials. Our opinion about the general conformance of geotechnical aspects of construction to the project plans and specifications is based on these observations and test results.

5

Opinion

Based on our field observations and test results, it is our opinion that the geotechnical aspects of the construction for the project that we observed and tested have been performed in general conformance with the project plans and specifications.

6

Closure

Our geotechnical services, including our professional opinions and conclusions, are made for the sole use of Orchard Partners, LLC, in accordance with generally accepted soil and foundation engineering principles and practices in the San Francisco Bay Area at this time. However, we do not undertake the guarantee of any aspects of the construction that we observed and tested, nor do we relieve the contractor of his primary responsibility to produce a completed project conforming to the project plans and specifications. No warranties are either expressed or implied.

7

Should you have any questions, or if we can be of further service, please contact us at your earliest convenience.

Sincerely,

Cornerstone Earth Group, Inc.

Nicholas S. Devlin, P.E.
Principal Engineer

Re: **Giovannoni Logistics Center Project proposed by Buzz Oates Construction, Inc. (PL20-0042, PL20-0043 and SCH #2021010104)**

Dear Mr. Ross:

Thank you for your November 22 letter responding to our November 18 immediate access Public Records Act ("PRA") request.

With respect to the documents produced in response to our Request No. 1, please confirm whether that production includes all responsive documents, or whether responsive documents were withheld on privilege or PRA exemption grounds. If documents responsive to Request No. 1 were withheld, please identify the specific privilege or exemptions on which the City relies. 1

With respect to the timing of the City's document production, if the City does not intend to schedule the Project for consideration by the City Council on December 6, your anticipated schedule of rolling production beginning no later than the middle of next week is acceptable, assuming that production will be complete at least two weeks prior to any scheduled City Council hearing for the Project. As you know, we requested immediate access to the records on November 18, which was more than two weeks prior to the next regularly scheduled City Council hearing date. The purpose of our request was to immediately access public records necessary to foster informed public participation and to enable the decision makers to consider the environmental factors necessary to make a reasoned decision on the Project, and to support that decision with substantial evidence. Documents responsive to our Request No. 2 (relating to the pipelines and maintenance road) relate to significant

printed on recycled paper

new information not disclosed or analyzed in the DEIR or FEIR. I also note that the Napa Logistics Park Phase II EIR and related documents, which discussion at the November 17 Planning Commission hearing disclosed as relevant to the pipeline and road issue for the Giovannoni Project, are unavailable on the City's website. Therefore, your anticipated schedule of rolling production beginning no later than the middle of next week is acceptable so long as access to responsive records is provided at least two weeks prior to any hearing for the Project. 1 CONT

Please feel free to contact me to discuss.

Sincerely,

Richard M. Franco

Re: Request for Public Records Dated November 18, 2022; Documents Related to the Giovannoni Logistics Center Project; Second Response

Dear Mr. Franco:

On behalf of the City of American Canyon ("City"), this letter is the second communication responding to your request for *immediate access* to records made under the Public Records Act, Government Code Section 6250, *et seq.*[1] ("PRA") dated November 18, 2022 on behalf of the Napa/Solano Residents for Responsible Development regarding documents related to the Giovannoni Logistics Center Project, PL20-0042; PL20-0043 and SCH No. 2021010104 ("Project") proposed by Buzz Oates Construction, Inc. ("Applicant") (the "Request"). On November 22 we transmitted an initial response, among other things, providing documents responsive to Request category 1 below. 1

The Request requested:

1. Any proposed Development Agreement for the Project, including the proposed Development Agreement referenced in the City of American Canyon's list of Active Community Development Projects dated September 20221, all documents submitted in connection with any application for Development Agreement, and all related correspondence;
2. All documents and correspondence, including any permits issued by the City of American Canyon or any other governmental entity, relating to the construction of parallel wastewater and recycled water pipelines and associated maintenance road constructed on the Project site in connection with the Napa Logistics Park Phase II project;

[1] All section references will be to the Government Code, unless otherwise noted.

3. Any permits, applications for permits and other documents and correspondence submitted to the United States Army Corps of Engineers with respect to the Project and/or Project site;
4. Any permits, applications for permits and other documents and correspondence submitted to the Regional Water Quality Control Board with respect to the Project and/or Project site.

1 CONT

Timing of Document Releases

Regarding the timing of the release of the requested records, please note that even requests for "immediate" access are subject to implied rules of reason to protect records against damage or theft, prevent interference with the orderly function of agency staff, and to allow an agency a reasonable opportunity to search for, collect, and if necessary, redact exempt information prior to the records being disclosed in an inspection. (*Bruce v. Gregory* (1967) 65 Cal.2d 666, 676; *Rosenthal v. Hansen* (1973) 34 Cal.App.3d 754, 761; 64 Ops.Cal.Atty.Gen. 317 (1981)).

2

Thus in addition to the responsive documents below, we continue to search City records in various departments for additional responsive records.

Responsive Documents and Clarification Needed

Given the contents of the DEIR and FEIR describing the Project environmental setting, further specification of your request is needed regarding Request Category 2. Notwithstanding the aforementioned clarification, records we believe may be responsive to Request Category 2 may be accessed by clicking https://app.box.com/s/5kvceoov8xq225l90v7usbpqkko3z41c.

Regarding Request Categories 3 and 4, given the contents of the DEIR and FEIR please further define your request with respect to the US Army Corps of Engineers and Regional Water Quality Control Board.

3

Pending the clarifications noted above, with respect to all Request Categories, we are actively searching City records for non-exempt responsive documents, which will be furnished to you as soon as possible, if any are found.

If you have further information and/or authority which you believe requires disclosure of additional records under the PRA, we will review that information and/or authority.

Law Governing PRA Exemptions

With respect to documents produced pursuant to this communication, although no documents have been withheld under applicable exemptions, it is noted that any further public records that may be located that are responsive to the Request may be withheld or redacted under any applicable privilege or exemption under the PRA or other applicable law as discussed further below and as may be further asserted *after* the search for responsive public records is complete.

4

The City objects to releasing any City draft documents which may be exempt from disclosure as "preliminary drafts, notes or inter-agency or intra-agency memoranda that are *not* retained by the public agency in the ordinary course of business. (Section 6254(a)).

Also, the PRA specifically exempts from disclosure:

> "records, the disclosure of which is exempted or prohibited pursuant to federal or state law, including, but not limited to, provisions of the Evidence Code relating to privilege."
>
> (Section 6254(k)).

The City will exempt records to the extent that the disclosure of such records is exempt or prohibited pursuant to federal or state law, including, but not limited to, provisions of the Evidence Code relating to privilege. (Gov Code Section 6254(k)). Information transmitted between a client and their attorney in confidence (including, but not limited to, legal opinions and advice) is privileged and is not required to be disclosed. Disclosure of such records may also be prohibited. (Evid. Code sections 950-962; Bus. & Prof. Code section 6068). This exemption protects from disclosure the entirety of confidential communications between attorney and client, including factual and other information not in itself privileged outside of attorney-client communication. (*Costco Wholesale Corporation v. Superior Court* (2009) 47 Cal.4th 725, 733; *Fireman's Fund Insurance Company v. Superior Court* (2011) 196 Cal.App.4th 1263, 1272-75; *Clark v. Superior Court* (2011) 196 Cal.App.4th 37, 49-54.). Similarly, the PRA protects from disclosure under any circumstances, any "writing that reflects an attorney's impressions, conclusions, opinions, or legal research or theories" and any other information that constitutes attorney work product under Civil Code of Procedure section 2018.030. 4 CONT

The Attorney Work Product Doctrine applies to:

> (a) A writing that reflects an attorney's impressions, conclusions, opinions, or legal research or theories is not discoverable under any circumstances.
>
> (b) The work product of an attorney, other than a writing described in subdivision (a), is not discoverable unless the court determines that denial of discovery will unfairly prejudice the party seeking discovery in preparing that party's claim or defense or will result in an injustice.

(Code Civ. Proc., § 2018.030)

Therefore, emails and communications sent by City staff and public officials to and from the City Attorney are protected by the attorney-client and attorney work-product privileges and will not be disclosed.

The City also objects to releasing any draft documents which may be exempt from

disclosure as "preliminary drafts, notes or inter-agency or intra-agency memoranda that are *not* retained by the public agency in the ordinary course of business. (Section 6254(a)).

Again, it is noted that no documents related to Request Category 1 disclosed in the initial City Request response nor any documents produced in this communication were withheld under applicable exemptions.

Re: Giovannoni Logistics Center Project, Final Environmental Impact Report, SCH No. 2021010104, City of American Canyon, Napa County

Dear Mr. Cooper:

Friends of the Swainson's Hawk is a citizen advocacy group for conservation of the state listed Swainson hawk. Since 1994, we have monitored and commented on CEQA documents in the range of the California Swainson's hawk. There is more information about us at www.swainsonshawk.org. We learned of this project in December of 2022 and therefore were unable to comment on the Draft EIR.

We understand that you have extended comment on the FEIR for Giovannoni Logistics Center into February, 2023. This letter explains why we believe adoption of the FEIR and the project would be contrary to state law, and we urge you to correct the FEIR to conform to the requirements of the California Environmental Quality Act (CEQA). 1

Please send notices of any hearings and availability of documents to us as follows: Friends of the Swainson's Hawk, 8867 Bluff Lane, Fair Oaks, CA. 95628, friendsoftheswainsonshawk@gmail.com.

The project site is 208 acres, primarily grassland. Biological review documented the presence of northern harrier, Golden eagle and Swainson's hawk foraging on site in April, 2021. The biological review noted that these species are known to nest in Napa County.

We have reviewed the California Department of Fish and Wildlife's December 2, 2022 letter to you on the FEIR. The Department found that the City's environmental review was inadequate to address impacts of the Swainson's Hawk. City's finding in the FEIR that the impacts on Swainson's hawk, a state listed "threatened" species, are less than significant is not supported by substantial evidence and is contrary to applicable law.

The California Department of Fish and Wildlife ("CDFW")performed a Status Review titled "SWAINSON'S HAWK (*Buteo swainsoni*) IN CALIFORNIA (Reported to California Fish and Game Commission) 2016 FIVE-YEAR STATUS REPORT (attached). That Report, at page 4, stated:

"the Department recommends retaining the Threatened classification for this species based on the following:

- On-going cumulative loss of foraging habitats throughout California
- Significantly reduced abundance throughout much of the breeding range compared to historic estimates
- An overall reduction in the hawk's breeding range in California " (CDFW, *id*, p. 4.)

1 CONT

Central to the Department's review was the finding that "The primary threat to the Swainson's hawk population in California continues to be habitat loss, especially the loss of suitable foraging habitat, but also nesting habitat in some portions of the species' breeding range due to urban development and incompatible agriculture." (CDFW, *id*, p. 3.)

The proposed project would remove 154.7 acres of Swainson's hawk foraging habitat without providing compensatory permanent conservation of like foraging habitat. CDFW has also identified a cumulative loss of habitat from similar projects in the vicinity for which the City has failed to require mitigation. The cumulative impact is significant to the loss of foraging habitat for the Swainson's hawks nesting in the vicinity of the proposed project, which is on the western edge of the Swainson's hawk range. Loss of these nestlings due to lack of prey availability could likely affect the range of the Swainson's hawk in California.

The City has stated in its response to comments in the Final EIR that "there is no potential for significant indirect or cumulative impacts associated with habitat for Swainson's hawk in the area and the proposed project would not add to any such impact." There is a lack of substantial evidence to support this conclusory statement. CDFW has identified cumulative loss of habitat to which this project contributes. (See attached CDFW letter.)

There is a direct and cumulative impact on Swainson's hawk foraging habitat and the City is obligated to require mitigation to reduce that impact to less than significant. The Department has recommended that permanent conservation of at least 154.7 acres of like habitat would be necessary to reduce impacts to less than significant.

I. The Significance of CDFW Admonition re Failure to Mitigate for Removal Swainson's Hawk Foraging Habitat

"CEQA requires a mandatory finding of significance if a project's impacts to threatened or endangered species are likely to occur (Sections 21001 [c], 21083, Guidelines Sections 15380, 15064, 15065). Impacts must be avoided or mitigated to less than significant levels unless the CEQA Lead Agency makes and supports Findings of Overriding Consideration." (The *Staff Report Regarding Mitigation for Impacts on Swainson's Hawk in the Central Valley of California*, California Department of Fish and Game, November 8, 1994, page 4)

1
CONT

The City must take into account that the Department under state law is the Trustee Agency and Responsible Agency for listed species under the California Endangered Species Act. The Department advised the City, as it routinely has advised local governments throughout the range of the Swainson's hawk in California, to include Swainson's hawk foraging habitat mitigation as described in the Staff Report Regarding Mitigation for Impacts to Swainson's Hawks (CDFG, 1994) to reduce impacts to foraging habitat to less than significant. This guidance ensures that project throughout that range meet consistent standards for mitigation.

The FEIR states that the project area is foraging habitat for Swainson's hawk but claims that impacts of the project to Swainson's hawk are not significant because preserved foraging habitat exists in the area. The presence of preserved habitat in the area does not reduce the significance of the project's permanent removal of over 154 acres of foraging habitat currently available to nesting pairs in the region.

There is no authority for City's novel assertion that mitigation for loss of SWH foraging habitat is not required if preserves of foraging habitat exist in the area. Nor is there authority for the proposition that loss of SWH foraging habitat which is near habitat preserves is less than significant.

This finding directly contradicts the recommendations of the California Department of Fish and Wildlife in their Guidance (CDFG, 1994) and in their letter to the City on this project. The Department guidance does not depend on whether there is available land for foraging to determine appropriateness of mitigation for loss of foraging habitat to urban use. The Department's guidance is based on the project distance from known nesting sites.

II. Specific Requirements for Foraging Habitat Mitigation Measures

The City must adopt a legally adequate mitigation monitoring or reporting program in compliance with CEQA. (CEQA Guidelines, § 15074, subd. (d).) To comply with CEQA "[t]he

reporting or monitoring program shall be designed to ensure compliance during project implementation." (Pub. Resources Code, § 21081.6, subd. (a)(1); CEQA Guidelines, §§ 15074, subd. (d), 15097, subd. (a).) The City may not simply rely on a "summary" that merely relists the various mitigation measures in the absence of a discussion of implementation or evidence that the measures will be enforced.

CEQA requires that mitigation measures be capable of enforcement. To ensure that mitigation achieves the less than significant impact threshold, both the location of the mitigation lands, the conservation easement and the conservation operator should be approved by the California Department of Fish and Wildlife. Mitigation for loss of foraging habitat requires that a conservation easement held by a credible conservation manager, including an endowment for the permanent enforcement and monitoring of the habitat mitigation easement, be recorded prior to the issuance of a development permit.

The CDFW has a model easement which can be utilized with willing agricultural land owners. The Swainson's hawk foraging habitat easement differs from an agricultural land conservation easement primarily in the addition of restrictions against orchards and vineyards and other crop types that interfere with foraging for small rodents.

1
CONT

We recommend that the City or developer may want to contact California Farmland Trust for more information about how that nonprofit can provide conservation easement services to the developer and County. The contact information is:

Charlotte Mitchell, Executive Director
California Farmland Trust
P.O. Box 1960
Elk Grove, CA 95759
cmitchell@cafarmtrust.org
P: (916) 687-3178 | C: (916) 544-2712

There are other land management conservation operators who can provide services to ensure CEQA mitigation is provided for loss of foraging habitat. We also have a model conservation easement for Swainson's hawk foraging habitat that we can provide you.

III. CEQA Standards

A CEQA lead agency must approve mitigation measures sufficient to reduce potentially significant impacts "to a point where ***clearly*** no significant effects would occur." (Cal. Code Regs. tit. 14 ("CEQA Guidelines"), § 15070, subd. (b)(1) (emphasis added).) This is assured by incorporation into a Mitigation Monitoring and Reporting Plan ("MMRP'). (CEQA, § 21081.6(a)(1).) "The purpose of these requirements is to ensure that feasible mitigation measures will actually be implemented as a condition of development, and not merely adopted and then neglected or disregarded." (*Federation of Hillside & Canyon v. City of Los Angeles* ("Federation") (2000) 83 Cal.App.4th 1252, 1261.)

The City attempts to avoid this state imposed legal obligation by claiming that loss of foraging habitat for the Swainson's hawk is not significant. Yet the state, over the last forty years, has established repeatedly, with scientific evidence, that loss of foraging habitat of the Swainson's hawk can have significant impacts on the species.

Consider that **CEQA Guideline 15065(a)(1) and (3)** requires that: "A lead agency shall find that a project may have a significant effect on the environment and thereby require an EIR to be prepared for the project where there is substantial evidence, in light of the whole record, that any of the following conditions may occur:

> "(**1)** The project has the potential to substantially degrade the quality of the environment; substantially reduce the habitat of a fish or wildlife species; cause a fish or wildlife population to drop below self-sustaining levels; threaten to eliminate a plant or animal community; substantially reduce the number or restrict the range of an endangered, rare or threatened species; or . . . ."
>
> (2) . . .
>
> "**(3)** The project has possible environmental effects that are individually limited but cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.

1
CONT

Substantial evidence which mandates the application of CEQA Guideline 15065(a)(1) and especially 15065(a)(3) is set forth in CDFW's "***Five Year Status Review for Swainson's Hawk***, 2016, ATTACHED, which found that "The primary threat to the Swainson's Hawk population in California continues to be habitat loss, especially the loss of suitable foraging habitat, but also nesting habitat in some portions of the species breeding range due to urban development and incompatible agriculture. This impact may have been the greatest factor in reducing Swainson's Hawk range and abundance in California over the last century." CDFW *id* p. 3. See also discussion at pages 4, 9, 10, 11,

The Department has advised the City that the loss of foraging habitat due to the project is significant and has advised the City that reduction of the impacts to less than significant requires at least 155 acres of suitable mitigation land permanently preserved.

In conclusion, the law requires that an EIR be prepared to ensure that all project impacts are assessed and mitigated to less than significant. If Swainson's Hawk foraging habitat will be lost to the species as a consequence of project approval by the City, the City is obligated under CEQA to include the mitigation recommended by the Department.

Sincerely,

James P. Pachl

Fish and Game Commission

From: Charlton H. Bonham
Director

Subject: Five Year Status Review for Swainson's Hawk (*Buteo swainsoni*)

Attached is the Five Year Status Review for Swainson's Hawk (*Buteo swainsoni*). This Status Review updates descriptions, habitat requirements, threats, research needs, etc., for this species. The Status Review recommends retaining this species as Threatened.

The Swainson's hawk was listed as a threatened species by the California Fish and Game Commission in 1983, pursuant to the CESA (Title 14, California Code of Regulations, §670.5(b)(5)(A)). According to FGC Section 2077, the Department is required to reevaluate Threatened and Endangered species every 5 years by developing a Status Review. The last status review for the Swainson's Hawk was completed in 1993. This status review was prepared to satisfy several management and reporting objectives including Section 2077.

If you have any questions regarding this item, please contact Dr. Eric Loft, Chief, Wildlife Branch, at (916) 445-3555.

I. COMMON NAME, SCEINTIFIC NAME AND CLASSIFICATION

Common Name: Swainson's Hawk

Scientific Name: *Buteo swainsoni*

Current Classification: State Threatened

II. RECOMMENDED ACTION

The California Department of Fish and Wildlife (Department) recommends that Swainson's Hawk retain threatened status under the California Endangered Species Act.

III. SUMMARY OF REASONS FOR RECOMMENDED ACTION

The Swainson's Hawk was listed as a threatened species by the California Fish and Game Commission in 1983, pursuant to the California Endangered Species Act (CESA; Title 14, California Code of Regulations, §670.5(b)(5)(A)). The last status review was completed in 1993 (California Department of Fish and Game 1993). Timely 5-year status reviews have not been possible due to budget, staff, and workload priorities.

The primary threat to the Swainson's Hawk population in California continues to be habitat loss, especially the loss of suitable foraging habitat, but also nesting habitat in some portions of the species' breeding range due to urban development and incompatible agriculture. This impact may have been the greatest factor in reducing Swainson's Hawk range and abundance in California over the last century (California Department of Fish and Game 1993, California Department of Conservation 2011).

Urban development continues to reduce Swainson's Hawk foraging habitat in the Central Valley, particularly in the southern Sacramento Valley (California Department of Conservation 2011). Swainson's Hawk densities are the greatest in this portion of their range, particularly in Sacramento, Yolo, and San Joaquin Counties (see Figure 2). While the Swainson's Hawk is a focus of planning efforts, current General Plans within Sacramento and San Joaquin counties contain goals of converting large areas of natural and agricultural lands that contain suitable Swainson's Hawk foraging habitat to urban features that do not provide foraging habitat (Sacramento County 2011, San Joaquin County 1992). San Joaquin County, however, does have in place an approved Habitat Conservation Plan under which Swainson's Hawk preservation is a major emphasis. In Yolo County, one of the densest areas of hawk territories in the State, current policies focus on preserving both agriculture and Swainson's Hawk foraging habitat. Current efforts under the developing Yolo County Natural Heritage Program (http://www.yolohabitatconservancy.org/) are aimed at maintaining this focus into the

future, thereby potentially lessening the long-term impacts to the species once the plan is approved and implemented.

Agricultural cropping patterns directly influence the distribution and abundance of the Swainson's Hawk in the Central Valley (Estep 1989). Swainson's Hawks can forage in natural grasslands, pasture, hay crops, and some irrigated crops but do not preferentially forage in other agricultural crops such as orchards and vineyards once these crops develop their typical canopy (Estep 2009, Swolgaard et al. 2008). This dependence on land use patterns poses a continuing vulnerability for a large percentage of the remaining population based on current trends toward cultivation of largely incompatible crop-types such as orchards and vineyards (California Department of Conservation Agricultural Land Mapping 2010). Compatible crop types do, however, provide a very important benefit to the species (Estep 2008). The lack of suitable nesting habitat throughout much of the San Joaquin Valley, due to conversion of riparian systems and woodland communities to agriculture, also limits the distribution and abundance of Swainson's Hawks (California Department of Fish and Game 1993). The loss of historic sage-steppe/grassland foraging habitat may also be a significant factor in a continuing decline of Swainson's Hawks in portions of the Great Basin and Mojave Desert regions of the state (California Department of Fish and Game 1993). Disturbances on the hawk's Mexican and South American wintering grounds, or during migration, may also contribute to population declines (Goldstein et al. 1996, Sarasola et al. 2005).

At this time, the Department recommends retaining the Threatened classification for this species based on the following:

- On-going cumulative loss of foraging habitats throughout California
- Significantly reduced abundance throughout much of the breeding range compared to historic estimates
- An overall reduction in the hawk's breeding range in California

IV. SPECIES DESCRIPTION AND BIOLOGY

The Swainson's Hawk is a medium-sized raptor with relatively long, pointed wings that curve up while in flight (California Department of Fish and Game 1993). There are three main plumage morphological types: light, rufous, and dark, with several intermediates (Woodbridge 1985). Light morph adults have dark heads, a light chin, and a dark breast band, set off distinctively from the lighter colored belly. In dark morph adults, however, the entire body of the bird may be a drake brown to sooty black. The cere (the fleshy region at the base of the upper bill) is bright yellow and set off distinctively from the dark head. The throat is white or partially white in dark morph adults and the wings are bicolored underneath, with the wing linings generally lighter than the dark, and with gray flight feathers. The light colored leading edge of the wing is a diagnostic feature. Juveniles have the same characteristic underwing markings; however there is more spotting and streaks on the breast and sides than adults (Bechard et al. 2010). Adults generally weigh from 550 to 1100 grams (19 to 39 oz); females, which range between 650 and 1100 grams (23 to 39 oz), are heavier than males, which range from 550 to 850

grams (19 to 30 oz) (Anderson pers. comm. 2012, Bradbury pers. comm. 2012, Estep pers. comm. 2012). Butte Valley hawks in northeastern California seem to be slightly larger than in other areas of the state, with females from 880 to 1300 grams, and males from 620 to 970 grams (Briggs pers. comm. 2012).

The Swainson's Hawk was historically a species adapted to open grasslands and prairies, but it has become increasingly dependent on agriculture as native plant communities have been converted to agricultural lands (California Department of Fish and Game 1993). This bird also forages in large numbers in managed wetlands during the dry summer months when the vegetation in these wetlands is being mowed or disced (Feliz pers. comm. 2012). The diet of the Central Valley population is varied. The California vole (*Microtus californicus*) is the staple of the diet; however, a variety of other small mammals, birds, and insects are also taken (Estep 1989).

The Swainson's Hawk breeds in the western United States, and Canada (California Department of Fish and Game 1993). Its winter range occurs in isolated areas of California, Mexico and Central America, through South America and as far south as Argentina (Bechard et al. 2010, Kochert et al. 2011). Generally the Swainson's Hawk is found in wintering areas from early November through mid-March (England et al. 1997, Kochert et al. 2011, Bradbury pers. comm. 2012). In 1997, six Swainson's Hawks from the Central Valley were fitted with satellite transmitters and tracked to determine routes of migration and the locations of wintering areas (Bechard et al. 2010). Central Valley birds were located wintering in a region north of Mexico City, Mexico, and near Bogota, Colombia (England et al. 1997), although a hawk from northeastern California was tracked to Argentina during the winter of 1996 (Feliz pers. comm. 2012). One unpublished telemetry study found that Central Valley hawks mostly winter in Central Mexico, but some also end up in central and northern South America (Anderson pers. comm. 2014). A current telemetry study on hawk in the Natomas area of California, has tracked several birds (N= 2 to 4) to Argentina, while the remaining birds went to northern South America, Central America, and Mexico (Anderson pers. comm. 2014). After their long migration north, Swainson's Hawks arrive at their breeding sites in the Central Valley between March and April (Bechard et al. 2010).

Swainson's Hawks are generally monogamous, with some undocumented cases of polyandry (Briggs pers. comm. 2012), and show a high degree of site fidelity by returning to the same territory year after year (England et al. 1997, Bechard et al. 2010). Breeding pairs begin to build nests soon after they arrive at their territory, and lay eggs between late-March to early-April (England et al. 1997, Bradbury pers. comm. 2012). Clutch size is between 1 and 4 eggs, but most often 2 or 3 eggs are laid (Bechard et al. 2010). The incubation period lasts 34-35 days (Bechard et al. 2010). The young typically fledge from the nest about 6 weeks after hatching, but may leave the nest as early as 5 weeks old and remain on nearby branches (Bradbury pers. comm. 2012). Craighead and Craighead (1956) reported fledging success of 0.6 young per pair. Studies conducted in the Sacramento Valley reported an average of 1.4 to 1.8 young per successful nest (Estep 2008). In the Butte Valley, Briggs (2007) found productivity to be at 2.01 fledged young per successful breeding attempt. Throughout California, most young have fledged by

mid- to late-August, at which point pre-migratory groups begin to form (Bechard et al. 2010). In the Central Valley most young fledge during the first part of July (Bradbury pers. comm. 2012). Migration back to the wintering grounds begins mid-August, and by October most hawks have left California (Kochert et al. 2011).

Several studies on breeding home range have been conducted on California's Swainson's Hawk population. In the Central Valley, home range size varies from 2760 to 4038 ha, with a relatively smaller home range size of 405 ha found in the Butte Valley (Table 1). Home range size is thought to be related to quality of, and distance to foraging habitat (Estep 1989, Babcock 1995, Bechard et al. 2010).

Home Range Size (ha)	Area	Reference
2760.4	Central Valley	Estep 1989
405	Butte Valley	Woodbridge 1991
4038.4	Central Valley	Babcock 1995
3265.4	Central Valley	Sernke 1999

Table 1. Home range for the Swainson's Hawk in California.

Swainson's Hawks in the Central Valley often nest at the periphery of riparian forests or in riparian corridors where they have greater access to foraging areas, but virtually any suitable tree may be used (Estep 1989, England et al. 1995, Bechard et al. 2010). Hawks will also use lone trees in agricultural fields or pastures, and roadside trees when they are adjacent to suitable foraging habitat (Estep 1989, Anderson et al. 2007). Estep (1989) found Valley oak (*Quercus lobata*), Fremont cottonwood (*Populus fremontii*), walnut (*Juglans sp.*), and willow (*Salix* sp.) are the most commonly used nest-tree species, with an average height ranging from 12.6 to 25 m (41.3 to 82.0 ft), Similarly, Anderson et al. (2007) found Valley oak, cottonwood, willow and *Eucalyptus* spp. were more frequently used, with an average height between 14.8 to 16.2 m (48.6 to 53.1 ft).

In the Great Basin, Swainson's Hawks occupy the juniper/sagebrush community typical of the area; however, much of the lowlands have been converted to agriculture (Bloom 1980, Woodbridge et al. 1995). Junipers (*Juniperus occidentalis*), with an average height of 4.6 m (15.0 ft), are most commonly used as nest trees in the Great Basin (California Department of Fish and Game 1993). The diet of the Great Basin population consists largely of montane meadow voles (*Microtus montanus*) and Belding's ground squirrels (*Spermophilus beldingi*) (California Department of Fish and Game 1993).

Other areas in California inhabited by small populations of Swainson's Hawk include the isolated desert areas in the Mojave National Preserve regions of the western Mojave Desert, the greater Antelope Valley near Lancaster, and in the Owen's Valley along the eastern edge of the Sierra Nevada (see Figure 2). Joshua tree (*Yucca brevifolia*), ornamental trees, and lone trees along roadsides or on private property are commonly used as nest trees in these regions (Bloom 1980).

V. HABITAT REQUIREMENTS

Large open areas of suitable foraging habitat with abundant and available prey base in association with suitable nesting habitat are basic requirements for the successful reproduction of Swainson's Hawk (Estep 1989). Historically, the natural foraging habitat of the Swainson's Hawk was primarily open stands of grass-dominated vegetation and relatively sparse shrublands (Bloom 1980, Bechard et al. 2010). However, much of the original foraging habitat in California has been converted to either urban landscapes or agricultural production. Consequently, the Swainson's Hawk has shifted its foraging strategy to rely more heavily on agricultural crops (Bloom 1980, Estep 2009).

Today, suitable foraging habitat includes a variety of agriculture crops, grassland, and pasture. In the Central Valley, Swainson's Hawks forage more often in mixed agricultural lands that support irrigated hay crops (e.g. alfalfa), as well as dryland pasture, grassy ruderal lots, and some irrigated crops, due to a higher accessibility and relative abundance of prey (Bloom 1980, Estep 1989, Babcock 1995, Smallwood 1995, Swolgaard et al. 2008, Anderson et al. 2011). Alfalfa fields are more routinely used by foraging Swainson's Hawks than any other crop type (Bloom 1980, Woodbridge 1985, Estep 1989, Babcock 1995, Sernka 1999, Swolgaard et al. 2008, Anderson et al. 2011). Anderson et al. (2011) reported that 63% of observed foraging occurred in alfalfa.

The ability of the hawk to use agricultural crops for foraging is dependent on a complex interaction of crop structure and the timing of agricultural practices (Bechard 1982, Schmutz 1987, Estep1989, Woodbridge 1991, Smallwood 1995, Sernka 1999, Estep 2009). Prey species may be displaced during irrigation, burning, and harvesting activities, which often allows for ample foraging opportunities for Swainson's Hawks and other predators (Sernka 1999). The availability of prey is also largely dependent on the crop structure. Certain crops provide improved foraging opportunities for Swainson's Hawks due to high prey numbers, low vegetation structure, and favorable farming practices (e.g. mowing, irrigating; Estep 1989, Babcock 1995, Sernka 1999, Swolgaard et al. 2008, Estep 2008, Estep 2009). Some crops and managed wetlands are useful in foraging for a period after harvest, but may remain relatively unavailable in other periods of crop growth; likewise, other crops are available early in the season when a less dense vegetative structure and shorter height allows for access to prey (England pers. comm. 2012, Feliz pers. comm. 2012).

In a report to the Yolo Natural Heritage Program, Estep (2009) described the relative value (low to high) of vegetative structure and accessibility of different agricultural crop types in Yolo County to foraging Swainson's Hawk. Based on two main components, prey accessibility and prey availability, Estep (pers. comm. 2012) places high value on alfalfa, and on wheat, tomatoes, and beets during harvest; moderate value on irrigated and non-irrigated pasture, grasslands, and some other annually rotated crops; low value safflower, sunflower, corn and rice; and little to no value on orchards and vineyards. The variety of habitats used for foraging by this hawk suggests that maintenance of large heterogeneous areas of agricultural habitats and grasslands, which include a high

percentage of alfalfa, should be a priority for conservation of the species (Swolgaard et al. 2008, Estep 2009, Anderson et al. 2011).

Unsuitable or low value foraging habitat includes any habitat which does not support adequate prey abundance, as well as any habitat in which prey are inaccessible to foraging hawks due to vegetation characteristics (e.g. vineyards, mature orchards, cotton fields, dense or tall vegetation). For example, orchards and vineyards in general are not suitable foraging habitat for Swainson's Hawk due to the dense woody cover making prey unavailable (Estep 1989, Babcock 1995). In a study to ascertain the extent of vineyard use by Swainson's Hawk in the Central Valley, Swolgaard et al. (2008) observed relatively low foraging levels in vineyards and stated that "large contiguous areas of vineyards are likely unsuitable for foraging by Swainson's Hawk at a population level."

Suitable nesting habitat includes trees within mature riparian forest or corridors, lone oak trees and oak groves, and mature roadside trees. It is thought that trees on the periphery of riparian habitat are preferred by Swainson's Hawk (Estep 1989, England et al. 1995, Bechard et al. 2010). The majority of documented Swainson's Hawk nest trees in the Central Valley have been found in riparian systems in Sacramento, Sutter, Yolo, and San Joaquin counties, making this habitat type critically important (Schlorff and Bloom 1983). This is likely the case for nesting hawks in the San Joaquin Valley as well; however the hawks that regularly nest here have not been extensively studied. A portion of the Swainson's Hawk population also resides in the Great Basin of Northeastern California where hawks typically nest in juniper trees (Bloom 1980). Swainson's Hawks have been observed in several studies to select nest sites in greater densities when near large tracts of agricultural lands than when adjacent to non-agricultural lands (e.g. urban, annual grassland, or even vernal pool landscapes; Bloom 1980; Estep 1989; Babcock 1995; Smallwood 1995; Swolgaard et al. 2008). Data collected during Department Swainson's Hawk nest surveys in 2002 through 2009 indicated that nests were clumped at higher densities in mixed agricultural landscapes (Gifford et al. 2012). Nest sites are generally adjacent to, or within easy flying distance to suitable foraging habitat that provides available prey resources (England et al. 1995). The Swainson's Hawk is also known to nest within urban environments, such as Davis, Stockton and Sacramento, California; however, what is known about these nesting pairs is largely anecdotal as there have been no focused studies on these hawks.

Wintering habitat in California is less critical for Swainson's Hawk because only a small number of hawks have been documented to over winter in California (Herzog 1996; Anderson pers. comm. 2012; eBird 2012). In the Central Valley Delta region, overwintering hawks have been documented to roost in numbers of 10 to 30 individuals, mostly comprised of adults and some juveniles, in large cottonwoods or eucalyptus trees (Anderson pers. comm. 2012). During the day these hawks disperse on the nearby landscape to forage either individually or in groups with red-tailed hawks, Ferruginous hawks, rough-legged hawks, corvid species, and other raptors. It is unknown where these wintering birds originated (Anderson pers. comm. 2012).

During the breeding season and just prior to their annual fall migration period, Swainson's Hawk in California often congregate in groups from 5 up to 100+ individuals (Anderson pers. comm. 2012). Foraging often occurs during congregation, but communal roosting may also take place. Congregations during the breeding season happen nearer nesting sites and groups will sometimes form during any portion of the nesting cycle (nest building to fledgling care). Late summer-fall congregations may occur during delayed migration periods lasting up to three months starting in early August through late October. These congregation areas can occur anywhere there is food available, but are typically associated with alfalfa, other hay crops, and various row crops (excluding orchards and vineyards) that have been recently mowed, disced, harvested or irrigated (Anderson pers. comm. 2012). Support for practices that provide for these critical breeding and pre-migration congregation areas is an important conservation need.

VI. NATURE AND DEGREE OF THREAT

Foraging Habitat Conversion to Urban and Non-Suitable Habitat

Fragmentation of habitat has been observed to adversely affect long-term viability of animal populations, and can be defined as dissection of habitat into smaller portions that does not allow free movement of individuals (Fahrig 2003). Habitat fragmentation has two components, both of which contribute significantly to, and may even cause, extinctions for some species: (1) reduction in total habitat area, and (2) redistribution of the remaining area into disjunct fragments (Wilcove et al. 1986).

Significant loss of agricultural lands and foraging habitat has occurred in counties within the Sacramento and San Joaquin valleys due to urban development. According to the State of California's 2008-2010 California Farmland Conversion Report (California Department of Conservation 2014), Southern California and San Joaquin Valley counties were included in the "top ten list" of California counties with the most acres converted from farmland to urban land. Irrigated farmland was the source of 25 percent of all new urban land statewide, with another 30 percent of new urban land derived from dryland farming and grazing uses, and 45 percent from natural vegetation or vacant lands. Direct conversion of irrigated farmland to urban land was 25 percent of total new urban growth for both the Sacramento and San Joaquin valleys. Land idling was the most prevalent in the southern San Joaquin Valley and counties in the Sacramento-San Joaquin Delta. If current trends in habitat conversion of compatible agriculture to urban development continue, the Swainson's Hawk population will likely experience reduced foraging opportunities, which may result in a further reduction in the species' range, distribution, and abundance.

Native foraging habitat in the lowland areas of the Great Basin also has been converted to agricultural land (Bloom 1980). The smaller Great Basin Swainson's Hawk population, while not subject to the same urban development pressures as the Central Valley population, is becoming more dependent on the agricultural system of the region to provide suitable foraging habitat (California Department of Fish and Game 1993). As

agricultural conversion continues to replace native habitat, the suitability of crop-types could determine the level of Swainson's Hawk foraging use. Ultimately the distribution of crops dictates the distribution and abundance of Swainson's Hawks in the Great Basin as it does in the Central Valley (California Department of Fish and Game 1993).

There has been a steady decline in active Swainson's Hawk territories occupying rangeland habitat in the Great Basin region of the state. Overgrazing and fire suppression have caused an increase in juniper forest and sagebrush communities (Miller and Rose 1999, Miller et al. 2001). The Swainson's Hawk decline in this area may have been a result of the increase in juniper/sage habitat at the expense of sage-steppe/grassland communities. Replacement of sage-steppe/grassland with juniper/sage habitats results in a reduction of microtine rodents and ground squirrels, the principal prey of the Swainson's Hawk in the Great Basin (California Department of Fish and Game 1993). While Swainson's Hawks have steadily declined in rangeland habitats of the Great Basin, there has been an apparent increase in breeding pairs utilizing agricultural foraging habitats such as alfalfa fields, largely due to greater prey densities and availability of prey in these areas (California Department of Fish and Game 1993).

Habitat Conversion to Vineyards and Orchards

Vineyards and orchards are considered low value foraging habitat for Swainson's Hawk because of low prey density and vegetation structure which prevents hawks from stooping on prey (Estep 1989, Smallwood 1995). Statewide, wine grape acreage has approximately doubled since 1990 (California Department of Conservation Agricultural Land Mapping 2010). Conversion of undeveloped land to vineyards involves the clearing of native upland and riparian vegetation. This type of conversion has the potential to affect Swainson's Hawk breeding and foraging habitat.

The 2008-2010 California Farmland Conversion Report (California Department of Conservation 2014) states that while urbanization is a leading component of agricultural land conversion throughout the state, economic and resource availability factors (i.e. water) also lead to conversion to more intensive agricultural uses, including orchards and vineyards. Conversion from grasslands to orchards, mainly almonds, was the most widespread form of conversion in 2010, with the Sacramento Valley having more conversions to high density olive orchards. Again, if conversion of compatible foraging habitat to non-habit continues, the Swainson's Hawk population in California will likely be impacted.

Breeding Habitat Conversion

Swainson's Hawks are not exclusively or predominately associated with nests in riparian areas, although a significant portion of the known nesting population in the Sacramento and San Joaquin Valleys occur in riparian areas (Bloom 1980, Estep 1989). Loss of suitable breeding habitat through conversion of riparian and woodland habitat to agriculture and unsuitable urban environments is a concern for breeding Swainson's Hawks across California, particularly in the San Joaquin Valley where suitable nest trees

are in lower abundance. Loss of lone trees along roadsides to road maintenance and construction may also impact breeding Swainson's Hawks as many of these trees are in proximity to suitable foraging habitat and are often used by Swainson's Hawks.

Implementation of levee vegetation removal policies could result in significant impacts to Central Valley Swainson's Hawk populations as a large portion of suitable nesting habitat may be removed. In April 2010, the Department's Director and the Department of Water Resources wrote a letter to the U.S. Army Corps of Engineers (Corps; DWR and CDFW 2010) expressing concern over the Corps' issuance and use of a new levee vegetation removal policy (USACE ETL 1110-2-571), and stating that "the proposed vegetation policy will likely have devastating environmental impacts, as the remnants of the once vast riparian forests and adjacent riverine ecosystems of the Central Valley are now concentrated on the banks and levees of its flood channels".

Climate Change

Climate change adds unpredictability to the existing suitable breeding and foraging habitats and could cause additional stress on Swainson's Hawk populations. These impacts, both to suitable habitats and to populations, can be generally anticipated based on current climate research. However, the level of these impacts is impossible to predict with accuracy or precision. Most climate projection studies agree that California will retain its typical Mediterranean climate (i.e. cool, wet winters and hot, dry summers), yet the degree of wetness/dryness will likely be amplified and vary by location across California (Pierce et al. 2011, Cayan et al. 2012,). Impacts may include increased winter runoff and flooding (with possible impacts to riparian nesting habitat) and sea level rise (with possible inundation of low-lying nesting or foraging habitat), more frequent extreme temperature events, and less snowpack (Pierce et al. 2011, Cayan et al. 2012).

Limited water availability in the summertime may significantly reduce the supply of water and therefore reduce prevalence of alfalfa and other high-quality foraging habitat. In addition, drought conditions associated with long-term changes in precipitation may negatively impact prey abundance (CDFW 2016), and consequently impact breeding success and survival of Swainson's Hawks.

The 2006 Executive Order S-06-06 calls for the increased production and use of bioenergy, including ethanol and biodiesel fuels made from renewable resources, largely comprised of corn. The market price for energy crops could result in farmers shifting to those crops that do not provide high value habitat to the Swainson's Hawk. For example, one study looking at agriculture impacts of climate change in Yolo County predicts that crops with high water utilization, such as alfalfa, are likely to become more scarce on the landscape in the future if water availability declines, and crops with a higher cash value per unit of water, such as vegetables, fruits and nuts will become more common (Jackson et al. 2009). Other potential indirect impacts may come from practices aimed at mitigating climate change. The future agricultural landscape could change from the existing mosaic of crops to grasses that can be used for carbon sequestration. Changing crop types to those less frequently irrigated and harvested, or those that would store

carbon for a longer time period could still provide habitat, but research is needed to understand the potential scale of the changes and how that could affect the range and reproductive success of the Swainson's Hawk (Bradbury 2009).

Renewable Energy Facilities

Wind energy project areas contribute to direct mortality of Swainson's Hawk through turbine strikes, particularly where wind resource areas overlap with hawk foraging areas. Swainson's Hawk mortality from wind turbines has been documented by Kingsley and Whittam (2001). The Solano County Wind Resource Area, which overlaps with the range of Central Valley Swainson's Hawks, has one of the highest raptor abundances of California's wind resource areas and initial studies show substantial numbers of bird and bat mortalities related to wind development. Birds most susceptible to this source of mortality are those that fly at or below the maximum blade height of wind turbines, particularly while hunting (Orloff and Flannery 1992), as is the case with Swainson's Hawks.

Disease

There have been some documented cases of Swainson's Hawk having experienced West Nile Virus (WNV) mortality. One Swainson's Hawk has been reported to test positive for WNV in California (reported in South Lake Tahoe area, but thought to have been brought from Mono County; Center for Disease Control and Prevention database), and another was confirmed positive by the Department's Wildlife Investigation Laboratory in 2015 from Contra Costa County (Rogers pers. comm. 2015). Eleven Swainson's Hawks were found dead with WNV infection in the USA from 1999 to 2004 (Nemeth et al. 2006). However, the extent of vulnerability WNV presents to the Swainson's Hawk is unknown at this time. Increased levels of WNV in California populations could exacerbate the effects of other threats on this species.

Contaminants

Insecticides are responsible for high mortality rates in hawks that migrate to Argentina. Prior to northerly migration, when flocks feed on insects in nearby harvested agriculture fields, several large-scale mortality events of Swainson's Hawks (>1000's found dead) were reported in Argentina due to applications of organophosphate and carbamate insecticides in agricultural fields (Goldstein et al. 1996). However, many of the birds that breed in California winter in Mexico, where the timing of pesticide applications poses less of a threat. Therefore, the importance of this factor for California's breeding hawks is unclear.

Application of anticoagulant rodenticide (AR) is a known threat to raptors due to ingestion of poisoned prey. Numerous field monitoring studies on raptor species indicate lethal and sublethal impacts of AR exposure (Stone et al. 2003, Murray 2011, Thomas et al. 2011, Christensen et al. 2012). Pesticide use throughout the Swainson's Hawk's range, specifically targeting ground squirrels, may also impact Swainson's Hawks and cause

secondary poisoning. In 2015, the Department's Wildlife Investigation Laboratory confirmed two AR exposures for Swainson's Hawks, both from Contra Costa County, with the cause of death in one due to AR toxicosis (Rogers pers. comm. 2015). Although the evidence indicates raptors are negatively affected by pesticide use, further research is needed to determine what extent Swainson's Hawks also incur these same impacts.

Other Direct Mortality Agents

Swainson's Hawk mortality is reported occasionally in California. Direct mortality of birds can be due to several actions as also described elsewhere in this document, including trimming of nest trees (typically due to construction or utility maintenance activities), shooting, vehicle collisions, electrocution, or pesticides. Biologists have only occasionally found shot or electrocuted Swainson's Hawks.

Stochastic Events

A mass mortality event of wintering Swainson's Hawk was observed in Argentina during November of 2003 when 113 Swainson's Hawks were found dead as a result of a single hailstorm (Sarasola et al. 2005). In addition, 14 hawks with severe injuries were recovered alive, but only 10 of these survived. Another 45 dead birds of 11 species were collected in the area. Interviews with local landowners conducted in other areas of these wintering grounds provided further evidence of past hailstorm-related mortality involving the hawk, suggesting that such events commonly occur in the Argentine Pampas. This potential cause of mass mortality of Swainson's Hawk wintering in agricultural areas of Argentina may be significant when added to the increased mortality associated with poisoning events during the last decade. Even though California's Central Valley Swainson's Hawk population is known to largely over-winter in Mexico, the Central Valley population may experience similar events.

VII. HISTORICAL AND CURRENT DISTRIBUTION

Historical Distribution (pre-1980)

Information gathered through an extensive search of the literature and museum records allowed Bloom (1980) to estimate the historic range of the Swainson's Hawk in California (Figure 1). From this analysis, Swainson's Hawks were found throughout the state except in the Sierra Nevada, North Coast Ranges and Klamath Mountains (Bloom 1980). Historically, the species was found in large, open grassland valleys with scattered trees or groups of trees. Swainson's Hawks also established breeding territories in foothill and canyon habitat. The valleys and deserts of southern California and the coastal valleys from the Santa Rosa Valley south to the Mexican border supported significant populations of Swainson's Hawks.

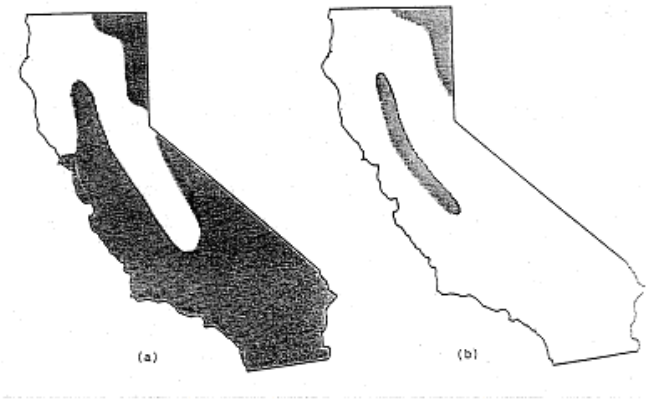

Figure 1. This figure was taken from Bloom 1980 and shows the historic (a) and current (b) range of Swainson's Hawk in California, as understood at that time.

In 1979, Bloom surveyed much of the state to determine the current distribution of Swainson's Hawks (Bloom 1980). In his report he depicted eight major geographic regions in California where Swainson's Hawk were found. The greatest number of nesting Swainson's Hawks were located in the Central Valley and also in the Great Basin of northeastern California from Butte Valley east to Nevada, south-central Modoc County and eastern Lassen County (Bloom 1980). In addition, Swainson's Hawks were also located in the Shasta and Owens valleys, and the Mojave Desert (Bloom 1980). Bloom's description of Swainson's Hawk distribution remains consistent with current knowledge and more recent data do not contradict Bloom's estimate of distribution as explained below.

Current Distribution (post-1980)

In 1988, the Department surveyed the entire Central Valley, coastal valleys, and parts of Southern California, and was provided with information from cooperators in the Great Basin region of the state. In addition, information on Swainson's Hawk activity was gathered by the Department from 1979 to 1993 throughout the state (California Department of Fish and Game 1993). These data revealed no change in the distribution of the Swainson's Hawk in California since Bloom's 1980 report (California Department of Fish and Game 1993).

In 2005 and 2006 another statewide survey of Swainson's Hawk breeding pairs was conducted using a stratified random sample design (Anderson et al. in prep). The results of these survey findings roughly duplicate Bloom's (1980) earlier findings, with the majority of Swainson's Hawk records located in the Central Valley, and with the next large population center in the Great Basin. However, this survey was only focused within the current known distribution and did not cover areas of the state where Swainson's Hawk had historically nested and the species was presumed extirpated (Anderson et al. in prep). For example, additional areas not included in the 2005 and 2006 survey include some areas in Sonoma and Napa counties. Recently, 3 to 4 Swainson's Hawk nests have

been detected in upland habitat at the north end of San Francisco baylands near Highway 37 (Fish pers. comm. 2012). These nests have been monitored as part of the Golden Gate Raptor Observatory's Bay Area Raptor Nesting Survey over the last few years.

The Department's California Natural Diversity Database (CNDDB) records contain 2,394 Swainson's Hawk occurrence records, ranging from 1894 to present (California Natural Diversity Database; December 1, 2015). Eighty-five percent (2029/2394) of the CNDDB records occur within the Central Valley, and 59% (1407/2394) occur within Sacramento, Yolo, Solano, and San Joaquin counties. CNDDB records largely corroborate Bloom (1980) and Anderson et al. (in prep) results in that the majority of the records occur within the Central Valley (Figure 2). A majority of records (n=2140) are from 1990 on. Of equal importance, in areas of the state where Bloom reported that the Swainson's Hawk had been extirpated, CNDDB similarly contained no Swainson's Hawk records. There are no CNDDB records in the Sierra Nevada, North Coast Ranges, and Klamath Mountains, and with the exception of a handful of new records in Napa County, Sonoma County, and two records in San Luis Obispo County. CNDDB provides no indication that the species has reoccupied historical range in coastal valleys from Santa Rosa south.

EBird (http://ebird.org) is a citizen science database that houses bird observation data. To supplement CNDDB data, we extracted likely breeding records (e.g. observations with noted breeding activity, nest location, eggs or young) for Swainson's Hawks in California from 1995 during the breeding season (April through August). We found 716 breeding records in eBird, some of which may duplicate CNDDB occurrences (see Figure 2). Some caution should be used when interpreting eBird data for breeding activity. EBird is an observational database not meant to track breeding status of any one species, and designation of breeding status from extracted data in this case was largely gleaned from the notes a submitter entered. Therefore, some breeding observations may have been missed, while others misclassified. Although the incoming data to eBird receives some level of scrutiny via automated filters and volunteer reviewers, there is still some margin of error. Alternately, incoming records for CNDDB receive a much higher level of verification before it is added and viewable.

The data for Swainson's Hawk recorded in the CNDDB and eBird is not collected in a systematic fashion and for this reason its use as the principle measure for describing the species' distribution and range is open to criticism. Nevertheless, the accumulation of over 2,300 Swainson's Hawk observational records in CNDDB and over 700 in eBird can be used, in conjunction with other records, to form a better understanding of the species' current distribution and range.

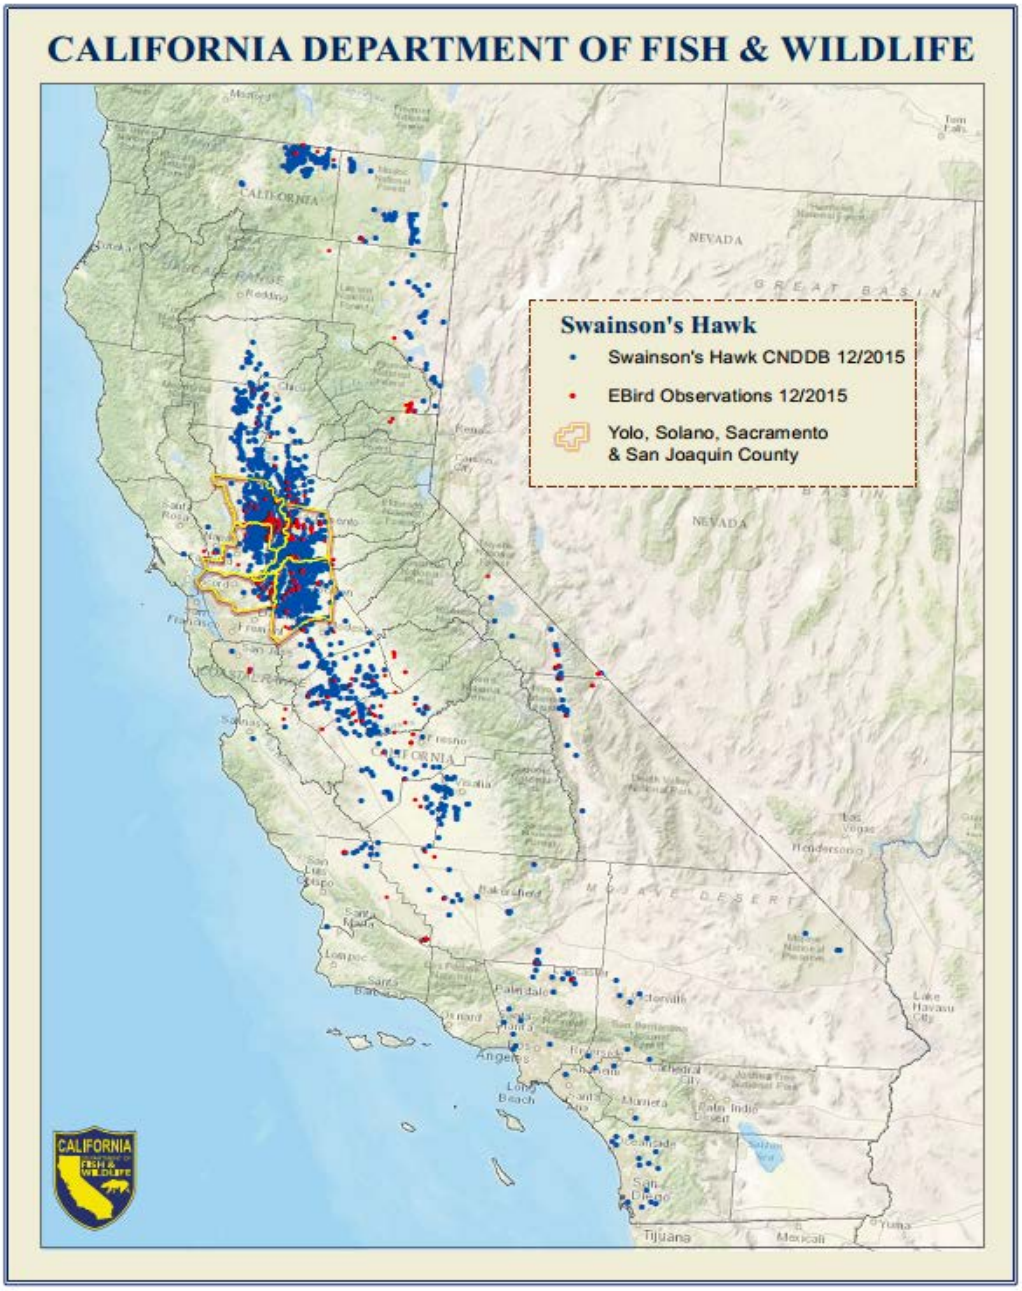

Figure 2. CNDDB and eBird data for Swainson's Hawk in California (extracted from CNDDB 12/1/2015 and eBird in 12/15/2016). The majority of the Central Valley's Swainson's Hawk population lies within an area that includes Sacramento, Yolo, Solano, and San Joaquin counties.

As previously mentioned, Bloom (1980), Gifford et al. (2012), Anderson et.al. (in prep.), CNDDB occurrence records, and eBird breeding records all indicate that the majority of Swainson's Hawk nests are located in the Central Valley and that the nesting density in the Central Valley is unevenly distributed. Approximately 70 to 80% of the Central Valley population is located in the southern Sacramento-northern San Joaquin Valley, a

region composed of four counties: Yolo, Solano, Sacramento, and San Joaquin (Bloom 1980, Anderson et.al. in prep., Gifford et al. 2012). These four counties are located in the Central Valley, where suitable irrigated farmland is the primary land-use (Estep 1989). Numbers of breeding pairs decreased both to the north and south of this four county region, and no significant foothill breeding populations have been documented. Another important Swainson's Hawk population center is in the Great Basin.

The distribution of the Swainson's Hawk has changed little since Bloom (1980) originally described the species distribution. With few exceptions, areas within the historical range, particularly along the Central Coast and southern regions, have not been reoccupied, and the Central Valley and Great Basin continue to provide the species its core habitat in California. However, the Antelope Valley is considered reoccupied by some, probably as a result of irrigated agriculture, as well as some inner coastal valleys, portions of the Sierra foothills, and some portions of the San Joaquin Valley (Estep pers. comm. 2012).

VIII. HISTORICAL AND CURRENT ABUNDANCE

Historical Abundance

Historically, the Swainson's Hawk was considered one of California's most common nesting buteos (Sharp 1902), but the population declined dramatically around 1900, concurrent with a contraction of the species' range, particularly along the central and southern coastal areas of California. Bloom (1980) estimated as many as 17,136 pairs of Swainson's Hawks historically nested in California (includes data from 1880-1969). This estimated 90% decline in the population and the loss of a significant portion of its range prompted the hawk's listing by the State of California as a Threatened species in 1983 by the California Fish and Game Commission pursuant to CESA. (See Cal. Code Regs., tit. 14, §670.5(b)(5)(A).

Current Abundance

In a 1979 survey, Bloom (1980) estimated that there were only 375 ($\pm$50) breeding pairs of Swainson's Hawks remaining in California. Since this estimate was made and the hawk was listed in 1983, interest in the Swainson's Hawk has grown considerably. Thus there has been an increased survey effort throughout the state. This increase in data collection efforts may be one reason we see higher breeding densities reported from certain areas within the state. A 1988 estimate of the Central Valley population was obtained using nest density information contained in the study by Estep (1989), where an area estimate of the habitat was multiplied by a breeding density of 0.16 pairs/sq km (0.42/sq mi) (the lowest breeding density of Estep's four study areas in the Central Valley, totaling an area of 374.4 sq km). The results indicated an estimate of 430 pairs in the Central Valley. This estimate was further subdivided into three main regions of the Central Valley: 80 pairs were estimated south of and including the Merced River, 35 pairs north of Sutter Buttes in Sutter County, and 315 pairs between these areas. Using

survey data and population estimates derived by biologists working in the Great Basin region, the population for that area was estimated to be 110 pairs (Estep 1989). In addition, five pairs were estimated for the Owens Valley area, and five for the Mojave Desert area (Estep 1989). The species was assumed to be extirpated from Southern California and coastal valleys. The individual estimates were combined to form a total statewide estimate of 550 breeding pairs in 1988 (Estep 1989). Neither Bloom 1980 nor Estep 1989 methods to estimate the population of hawks was sufficient to provide a statistically rigorous estimate.

More recently, Anderson et al. (in prep) completed a survey of the statewide breeding Swainson's Hawk population in 2005 and of the Central Valley breeding population 2006, and estimated the number of breeding pairs statewide at 1,893 (95% CI, 1462-2325) in 2005 and an estimated the number of breeding pairs in the Central Valley at 2,251 (95% CI, 1811-2690) in 2006. Another recent survey of nesting Swainson's Hawk was conducted in a portion of the Central Valley (Butte to San Joaquin counties) during the period 2002 to 2009 (Gifford et al. 2012). The latter survey yielded yearly estimates for numbers of breeding pairs of Swainson's Hawks in the Central Valley north of the Stanislaus River and south of Red Bluff: in 2002 the estimate was 593 (388-798) breeding pairs; in 2003 the estimate was 1,008 (720-1,296) breeding pairs; and in 2009 the estimate was 941 (692-1,190) breeding pairs (Gifford et al. 2012). Both Anderson et al. (in prep) and Gifford et al. (2012) methods employed to estimate the population of hawks were sufficient to provide a statistically rigorous population estimate, and are designed to be repeatable in order to accurately detect changes in the breeding population of Swainsons's Hawks within each of their study areas.

Compared to historical distribution and abundance, current surveys have indicated a smaller population occupying a restricted range that includes the core habitat areas of the Central Valley and Great Basin. Surveys subsequent to Bloom's 1979 inventory (Bloom 1980) have resulted in higher population estimates within these core areas, but it is unknown if this was due to an increase in survey effort or an actual increase in the population. Recent surveys employing repeatable survey designs hold promise for future comparative analysis.

IX. POPULATION TREND

Raptors may experience year-to-year changes or fluctuations in their population numbers due to a variety of factors including changes in prey abundance, habitat, and weather. In order to detect long-term changes over time (i.e. trends) in California's Swainson's Hawk population, it is necessary to collect data over a sufficient number of years to span any short-term population fluctuations or cycles (Hatfield et al. 1996; Newton 1998; Lewis and Gould 2000).

Historical statewide population estimates were based on a limited number of annual surveys and were not designed to be repeated (Bloom 1980, Estep 1989). Anderson et al. (in prep.) used repeatable survey efforts statewide with a repeatable survey design over

two years to estimate the number of nesting hawks. Gifford's et al. (2012) also used repeatable survey efforts and covers a seven year interval; however, the study area is limited to the northern portion of the Central Valley and again, and the time period is insufficient to span population fluctuations or cycles (Hatfield et al. 1996; Newton 1998; Lewis and Gould 2000). Due to differences between the two studies in survey design, duration and scope, neither of these surveys can currently be used to accurately estimate a statewide trend for Swainson's Hawk.

The Breeding Bird Survey (BBS) is a dataset that spans a sufficient length of time to be useful in detecting trends in the Swainson's Hawk populations. The BBS is a long-term, large scale avian monitoring program initiated in 1966 (1968 in California) to track the status and trend of North American bird populations. Each year during the height of the avian breeding season, participants skilled in avian identification collect bird population data along randomly selected roadside survey routes. The raw data for survey routes in California are accessible on the BBS website, http://www.pwrc.usgs.gov/BBS/. In addition to collecting and storing raw data the website also provides tools for trend analysis.

The BBS data has been used in over 450 publications and is often the only long-term data set available for avian trend analysis. However, use of BBS data is controversial because of a number of possible sources of error. These include missing data, observer bias, alternating observers, biases due to road-only surveys, and BBS's index method for population abundance (rather than a true estimate of the population). The BBS data on Swainson's Hawk for California are marked as "data with an important deficiency" (USGS 2012). Data may be so marked because:

1. The regional abundance is less than 0.1 birds/route (very low abundance),
2. The sample is based on less than 5 routes for the long-term (very small samples), or
3. The results are so imprecise that a 5% per year would not be detected over the long-term.

Cautious of the potential for errors in interpretation, the BBS appears to be useful for analyzing population trends for Swainson's Hawk populations in California. More than 30 routes monitored over the last 40 years have recorded the occurrence of Swainson's Hawk (Sauer et al. 2011; USGS 2012). The roadside surveys are conducted in peak breeding season while Swainson's Hawk are active, visible and easily identified as they rear young. Therefore, the data collected by BBS presents a potentially valuable resource for trend analyses.

The trend analysis presented in Figure 3 for Swainson's Hawk populations is taken from the BBS website and is based on the current BBS hierarchical model for population change (Sauer and Link 2011, Sauer et al 2011). The analysis tools used were from the Species Group Summaries Results where the species group is Neotropic Migrant, the Period is 1968-2009, and the Region is California. This tool gives a Swainson's Hawk trend index of 3.6 at ($P<0.05$, $N=38$), which translates into an increasing trend of 3.6%

per year. The index value is a measure of percent change per year, and in this case is listed as "significant." The P value is the likelihood that the result is attributable to chance alone, and in this case the P value is significant. Figure 3 suggests that a low initial value for Swainson's Hawk detected followed by a slow rate of increase thru the 1990s, followed by a faster rate of increase in 2000's.

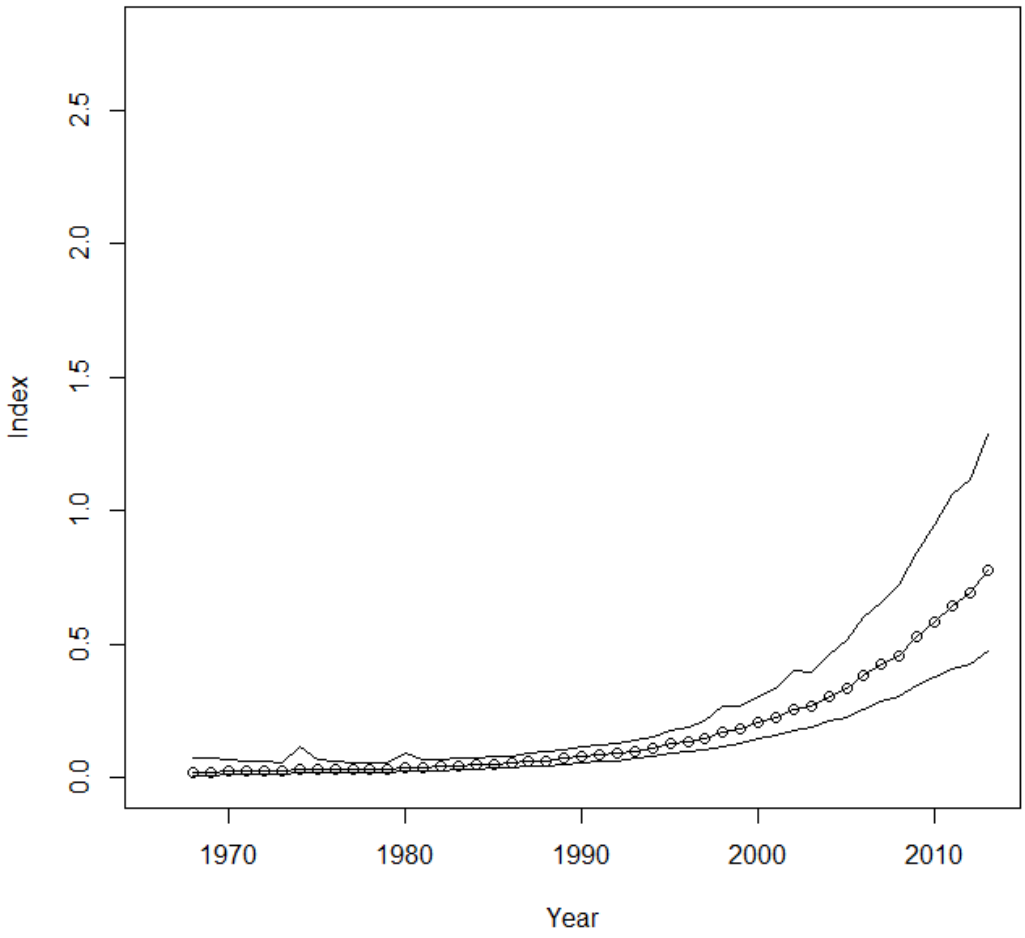

Figure 3. Breeding Bird Survey trend (with 95% confidence intervals shown) for the Swainson's Hawk from 38 survey routes in California from 1966 to 2013. The x axis is year and the y axis is the relative abundance estimates for all years, estimated as yearly predicted abundances from the hierarchical model analysis (see Sauer and Link 2011).

As mentioned earlier there are only three statewide estimates for breeding pairs of Swainson's Hawk ranging from 1980 to 2007 (Bloom 1980; Estep 1989; Anderson et al. in prep). The 1979 and 1988 surveys yielded comparable population estimates: 375 (±50) and 550 breeding pairs respectively (Bloom 1980; Estep 1989). The 1988 survey effort was designed to be repeatable and consisted of several years of surveys. The 2005 statewide survey yielded a higher population estimate (1,893 pairs; Anderson et al. in prep.). This more recent effort was a stratified random sample that involved numerous

biologists throughout the state; a level of effort substantially greater than previous efforts which undoubtedly influenced its greater population estimate.

Based on the results of the three statewide surveys occurring in California, it is possible to conclude that the population is increasing over time. However, this perception is tempered by the differences in effort, design, technique and time frame of data collection of the three studies. The latest population estimate (Anderson et al. in prep) is still below the historical population estimate, and there is little evidence to indicate that this hawk has reoccupied much of its former range in the central and south coast valley and Southern California. Although the three statewide estimates are not sufficient to form a trend line, cautious speculation that the Swainson's Hawk population has experienced a modest increase within the Central Valley may be warranted .

X. EXISTING MANAGEMENT EFFORTS

Regulations, Protections, and Conservation

California Endangered Species Act (CESA; Fish and G. Code, § 2050 et seq.). The Swainson's Hawk was listed as a threatened species in 1983 by the California Fish and Game Commission pursuant to CESA, (Cal. Code Regs., tit. 14, § 670.5(b)(5)(A).)

Under CESA it is unlawful to take (Fish & G. Code, §86) a species listed as "threatened" of "endangered" (or a candidate) by the State of California unless 1) the take is incidental to an otherwise lawful activity, 2) the impacts of the lawful take are fully minimized and mitigated, 3) the take is consistent with Fish and Game Code sections 2112 and 2114, and 4) adequate funding to implement the permitted take's mitigation and monitoring measures is ensured.

Section 2053 of the Fish and Game Code states, in part, "it is the policy of the state that state agencies should not approve projects as proposed which would jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of habitat essential to the continued existence of those species, if there are reasonable and prudent alternatives available consistent with conserving the species and or its habitat which would prevent jeopardy." Section 2054 states "The Legislature further finds and declares that, in the event specific economic, social, and or other conditions make infeasible such alternatives, individual projects may be approved if appropriate mitigation and enhancement measures are provided."

Loss or alteration of foraging habitat or nest site disturbance which results in: (1) nest abandonment; (2) loss of young; (3) reduced health and vigor of eggs and/or nestlings (resulting in reduced survival rates), may ultimately result in the take of nestling or fledgling Swainson's Hawks incidental to otherwise lawful activities. The taking of Swainson's Hawks in this manner can be a violation of CESA. This interpretation of take has been judicially affirmed by the 1992 landmark appellate

court decision, *Department of Fish and Game v. Anderson-Cottonwood Irrigation District* (8 Cal.App. 4th, 1568), which emphasized that the intent and purpose of CESA applies to all activities that take or kill endangered or threatened species, even when the taking is incidental to otherwise legal activities.

California Environmental Quality Act (CEQA, Pub. Resources Code, § 21000 et seq.). CEQA requires adoption of mandatory findings of significance if a project's impacts to threatened or endangered species are likely to occur (§21001 (c), §21083, Guidelines §15380, §15064, and §15065). Impacts must be avoided or mitigated to less than significant levels unless the CEQA Lead Agency makes and supports findings of Overriding Consideration. Mitigation for impacts to Swainson's Hawk foraging habitat varies among CEQA lead agencies, but essentially does not occur at a rate greater than 1:1 habitat lost to habitat protected.

Fish and Game Code §§ 3503, 3503.5, and 3800. These Fish and Game Code sections prohibit the take, possession, or destruction of birds, their nests or eggs.

Migratory Bird Treaty Act (MBTA). Swainson's Hawks are protected under the federal MBTA of 1918 (16 U.S.C. 703 711). The MBTA makes it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed in §50 of the Code of Federal Regulations (C.F.R.) Part 10, including feathers or other parts, nests, eggs or products, except as allowed by implementing regulations (50 C.F.R. 21).

Conservation Plans

Regional conservation planning efforts take a comprehensive approach to ecosystem conservation while allowing land use authorities the ability to manage anticipated growth and development. A few regional conservation plans currently being administered are designed to provide conservation of nesting and foraging Swainson's Hawk habitat within the bird's nesting range, including: the San Joaquin County Multi-species Habitat Conservation and Open Space Plan, the Natomas Basin Habitat Conservation Plan, the Metro Air Park Habitat Conservation Plan, and the East Contra Costa County Habitat Conservation Plan and Natural Community Conservation Plan. Each of these plans has a unique strategy for providing conservation value for the Swainson's Hawk; however none of these provide habitat at a rate greater than 1:1 habitat lost to habitat protected. In addition to the plans described above, there are several jurisdictions with conservation plans in the development stage which aim to provide good conservation value to the Swainson's Hawk, including: Butte County, Yolo County, Solano County, Sacramento County, Yuba and Sutter Counties, and Placer County.

XI. DATA GAPS

The Swainson's Hawk has been listed under the California Endangered Species Act since 1983, and yet there is still much to learn about the species. Several surveys have been conducted throughout the state, but the purposes and methodologies have been independent for each. Some long-term studies have been or are being conducted in Yolo

County and Butte Valley; however, these studies provide information at a regional scale rather than statewide (Estep pers. comm. 2012).

A long-term repeatable statewide breeding/nest survey, possibly using a stratified random sampling survey design, is needed to assess the population's trend, distribution and range, temporal variation, and abundance. Surveys outside of the known range should be included to determine if range expansions are occurring and at what level.

Additional research is needed to inform managers who are responsible for conserving the species. Research topics of need include: assessing survival, recruitment levels, breeding success, characteristics of migration, disease and parasites, and contaminant studies, specifically how contaminants may affect egg shells.

Nongame Bird and Mammal Section Report #94.18

State of California

Memorandum

To : Div. Chiefs - IFD, BDD, NHD, WMD
Reg. Mgrs. - Regions 1, 2, 3, 4

Date : November 8, 1994

From : Department of Fish and Game

Subject : Staff Report Regarding Mitigation for Impacts to Swainson's Hawks (*Buteo swainsoni*) in the Central Valley of California

I am hereby transmitting the Staff Report Regarding Mitigation for Impacts to Swainson's Hawks in the Central Valley of California for your use in reviewing projects (California Environmental Quality Act [CEQA] and others) and in developing 2081 Management Authorizations and 2090 Biological Opinions which may affect Swainson's hawk habitat in the Central Valley. The staff report has been developed during the last 18 months by the Environmental Services Division (ESD) in cooperation with the Wildlife Management Division (WMD) and Regions 1, 2, and 4. It has been sent out for public review on several occasions and redrafted as appropriate.

Either the mitigation measures in the staff report may be used or project specific measures may be developed. Alternative project specific mitigation measures proposed by the Department Divisions/Regions or by project sponsors will also be considered. However, such mitigation measures must be submitted to ESD for review. The review process will focus on the consistency of the proposed measure with Department, Fish and Game Commission, and legislative policy and with laws regarding raptors and listed species. ESD will coordinate project specific mitigation measure review with WMD.

If you have any questions regarding the report, please contact Mr. Ron Rempel, Program Supervisor, Habitat Conservation Planning and Endangered Species Permitting, Environmental Services Division at (916) 654-9980.

Staff Report regarding Mitigation for Impacts to Swainson's Hawks (*Buteo swainsoni*) in the Central Valley of California

INTRODUCTION

The Legislature and the Fish and Game Commission have developed the policies, standards and regulatory mandates which, if implemented, are intended to help stabilize and reverse dramatic population declines of threatened and endangered species. In order to determine how the Department of Fish and Game (Department) could judge the adequacy of mitigation measures designed to offset impacts to Swainson's hawks in the Central Valley, Staff (WMD, ESD and Regions) has prepared this report. To ensure compliance with legislative and Commission policy, mitigation requirements which are consistent with this report should be incorporated into: (1) Department comments to Lead Agencies and project sponsors pursuant to the California Environmental Quality Act (CEQA); (2) Fish and Game Code Section 2081 Management Authorizations (Management Authorizations); and (3) Fish and Game Code Section 2090 Consultations with State CEQA Lead Agencies.

The report is designed to provide the Department (including regional offices and divisions), CEQA Lead Agencies and project proponents the context in which the Environmental Services Division (ESD) will review proposed project specific mitigation measures. This report also includes "model" mitigation measures which have been judged to be consistent with policies, standards and legal mandates of the Legislature and Fish and Game Commission. Alternative mitigation measures, tailored to specific projects, may be developed if consistent with this report. Implementation of mitigation measures consistent with this report are intended to help achieve the conservation goals for the Swainson's hawk and should complement multi-species habitat conservation planning efforts currently underway.

The Department is preparing a recovery plan for the species and it is anticipated that this report will be revised to incorporate recovery plan goals. It is anticipated that the recovery plan will be completed by the end of 1995. The Swainson's hawk recovery plan will establish criteria for species recovery through preservation of existing habitat, population expansion into former habitat, recruitment of young into the population, and other specific recovery efforts.

During project review the Department should consider whether a proposed project will adversely affect suitable foraging habitat within a ten (10) mile radius of an active (used during one or more of the last 5 years) Swainson's hawk nest(s). Suitable Swainson's hawk foraging habitat will be those habitats and crops identified in Bechard (1983), Bloom (1980), and Estep (1989). The following vegetation types/agricultural crops are considered small mammal and insect foraging habitat for Swainson's hawks:

- alfalfa
- fallow fields
- beet, tomato, and other low-growing row or field crops
- dry-land and irrigated pasture

- rice land (when not flooded)
- cereal grain crops (including corn after harvest)

The ten mile radius standard is the flight distance between active (and successful) nest sites and suitable foraging habitats, as documented in telemetry studies (Estep 1989, Babcock 1993). Based on the ten mile radius, new development projects which adversely modify nesting and/or foraging habitat should mitigate the project's impacts to the species. The ten mile foraging radius recognizes a need to strike a balance between the biological needs of reproducing pairs (including eggs and nestlings) and the economic benefit of developments) consistent with Fish and Game Code Section 2053.

Since over 95% of Swainson's hawk nests occur on private land, the Department's mitigation program should include incentives that preserve agricultural lands used for the production of crops, which are compatible with Swainson's hawk foraging needs, while providing an opportunity for urban development and other changes in land use adjacent to existing urban areas.

LEGAL STATUS

Federal

The Swainson's hawk is a migratory bird species protected under the Migratory Bird Treaty Act (MBTA) of 1918 (16 U.S.C. 703-711). The MBTA makes it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed in Section 50 of the Code of Federal Regulations (C.F.R.) Part 10, including feathers or other parts, nests, eggs or products, except as allowed by implementing regulations (50 C.F.R. 21).

State

The Swainson's hawk has been listed as a threatened species by the California Fish and Game Commission pursuant to the California Endangered Species Act (CESA), see Title 14, California Code of Regulations, Section 670.5(b)(5)(A).

**LEGISLATIVE AND COMMISSION POLICIES,
LEGAL MANDATES AND STANDARDS**

The FGC policy for threatened species is, in part, to: "Protect and preserve all native species ... and their habitats...." This policy also directs the Department to work with all interested persons to protect and preserve sensitive resources and their habitats. Consistent with this policy and direction, the Department is enjoined to implement measures that assure protection for the Swainson's hawk.

The California State Legislature, when enacting the provisions of CESA, made the following findings and declarations in Fish and Game Code Section 2051:

> a) "Certain species of fish, wildlife, and plants have been rendered extinct as a consequence of man's activities, untempered by adequate concern and conservation";
>
> b) "Other species of fish, wildlife, and plants are in danger of, or threatened with, extinction because their habitats are threatened with destruction, adverse modification, or severe curtailment because of overexploitation, disease, predation, or other factors (emphasis added)";and
>
> c) "These species of fish, wildlife, and plants are of ecological, educational, historical, recreational, esthetic, economic, and scientific value to the people of this state, and the conservation, protection, and enhancement of these species and their habitat is of statewide concern" (emphasis added).

The Legislature also proclaimed that it "is the policy of the state to conserve, protect, restore, and enhance any endangered or threatened species and its habitat and that it is the intent of the Legislature, consistent with conserving the species, to acquire lands for habitat for these species" (emphasis added).

Section 2053 of the Fish and Game Code states, in part, "it is the policy of the state that state agencies should not approve projects as proposed which would jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of habitat essential to the continued existence of those species, if there are reasonable and prudent alternatives available consistent with conserving the species and or its habitat which would prevent jeopardy" (emphasis added).

Section 2054 states "The Legislature further finds and declares that, in the event specific economic, social, and or other conditions make infeasible such alternatives, individual projects may be approved if appropriate mitigation and enhancement measures are provided" (emphasis added).

Loss or alteration of foraging habitat or nest site disturbance which results in:

(1) nest abandonment; (2) loss of young; (3) reduced health and vigor of eggs and/or nestlings (resulting in reduced survival rates), may ultimately result in the take (killing) of nestling or fledgling Swainson's hawks incidental to otherwise lawful activities. The taking of Swainson's hawks in this manner can be, a violation of Section 2080 of the Fish and Game Code. This interpretation of take has been judicially affirmed by the landmark appellate court decision pertaining to CESA (DFG v. ACID, 8 CA App.4, 41554). The essence of the decision emphasized that the intent and purpose of CESA applies to all activities that take or kill endangered or threatened species, even when the taking is incidental to otherwise legal activities. To avoid potential violations of Fish and Game Code Section 2080, the Department recommends and encourages project sponsors to obtain 2081 Management Authorizations for their projects.

Although this report has been prepared to assist the Department in working with the development community, the prohibition against take (Fish and Game Code Section 2080) applies to all persons, including those engaged in agricultural activities and routine maintenance of facilities. In addition, sections 3503, 3503.5, and 3800 of the Fish and Game Code prohibit the take, possession, or destruction of birds, their nests or eggs.

To avoid potential violation of Fish and Game Code Section 2080 (i.e. killing of a listed species), project-related disturbance at active Swainson's hawk nesting sites should be reduced or eliminated during critical phases of the nesting cycle (March 1 - September 15 annually). Delineation of specific activities which could cause nest abandonment (take) of Swainson's hawk during the nesting period should be done on a case-by-case basis.

CEQA requires a mandatory findings of significance if a project's impacts to threatened or endangered species are likely to occur (Sections 21001 (c), 21083, Guidelines Sections 15380, 15064, 15065). Impacts must be avoided or mitigated to less than significant levels unless the CEQA Lead Agency makes and supports findings of Overriding Consideration. The CEQA Lead Agency's Findings of Overriding Consideration does not eliminate the project sponsor's obligation to comply with Fish and Game Code Section 2080.

NATURAL HISTORY

The ~~Swainson's~~ hawk (Buteo swainsoni) is a large, broad winged buteo which frequents open country. They are about the same size as a red-tailed hawk (Buteo jatnaicensis), but trimmer, weighing approximately 800-1100 grams (1.75 - 2 lbs). They have about a 125 cm. (4+foot) wingspan. The basic body plumage may be highly variable and is characterized by several color morphs - light, dark, and rufous. In dark phase birds, the entire body of the bird may be sooty black. Adult birds generally have dark backs. The ventral or underneath sections may be light with a characteristic dark, wide "bib" from the lower throat down to the upper breast, light colored wing linings and pointed wing tips. The tail is gray ventrally with a subterminal dusky band, and narrow, less conspicuous barring proximally. The sexes are similar in appearance; females however, are slightly larger and heavier than males, as is the case in most sexually dimorphic raptors. There are no recognized subspecies (Palmer 1988).

The Swainson's hawk is a long distance migrator. The nesting grounds occur in northwestern Canada, the western U.S., and Mexico and most populations migrate to wintering grounds in the open pampas and agricultural areas of South America (Argentina, Uruguay, southern Brazil). The species is included among the group of birds known as "neotropical migrants". Some individuals or small groups (20-30 birds) may winter in the U.S., including California (Delta Islands). This round trip journey may exceed 14,000 miles. The birds return to the nesting grounds and establish nesting territories in early March.

Swainson's hawks are monogamous and remain so until the loss of a mate (Palmer 1988). Nest construction and courtship continues through April. The clutch (commonly 3-4 eggs) is generally laid in early April to early May, but may occur later. Incubation lasts 34-35 days, with both parents participating in the brooding of eggs and young. The young fledge (leave the nest) approximately 42-44 days after hatching and remain with their parents until they depart in the fall. Large groups (up to 100+ birds) may congregate in holding areas in the fall and may exhibit a delayed migration depending upon forage availability. The specific purpose of these congregation areas is as yet unknown, but is likely related to: increasing energy reserves for migration; the timing of migration; aggregation into larger migratory groups (including assisting the young in learning migration routes); and providing a pairing and courtship opportunity for unattached adults.

Foraging Requirements

Swainson's hawk nests in the Central Valley of California are generally found in scattered trees or along riparian systems adjacent to agricultural fields or pastures. These open fields and pastures are the primary foraging areas. Major prey items for Central Valley birds include: California voles (*Microtus californicus*), valley pocket gophers (*Thomomys bottae*), deer mice (*Peromyscus maniculatus*), California ground squirrels (*Spermophilus beecheyi*), mourning doves (*Zenaida macroura*), ring-necked pheasants (*Phasianus colchicus*), meadowlarks (*Sturnella neglecta*), other passerines, grasshoppers (*Conocephalinae sp*.), crickets (*Gryllidae sp*.), and beetles (Estep 1989). Swainson's hawks generally search for prey by soaring in open country and agricultural fields similar to northern hariers (*Circus cyaneus*) and ferruginous hawks (*Buteo regalis*). Often several hawks may be seen foraging together following tractors or other farm equipment capturing prey escaping from farming operations. During the breeding season, Swainson's hawks eat mainly vertebrates (small rodents and reptiles), whereas during migration vast numbers of insects are consumed (Palmer 1988).

Department funded research has documented the importance of suitable foraging habitats (e.g., annual grasslands, pasture lands, alfalfa and other hay crops, and combinations of hay, grain and row crops) within an energetically efficient flight distance from active Swainson's hawk nests (Estep pers. comm.). Recent telemetry studies to determine foraging requirements have shown that birds may use in excess of 15,000 acres of habitat or range up to 18.0 miles from the nest in search of prey (Estep 1989, Babcock 1993). The prey base (availability and abundance) for the species is highly variable from year to year, with major prey population (small mammals and insects) fluctuations occurring based on rainfall patterns, natural cycles and agricultural cropping and harvesting patterns. Based on these variables, significant acreages of potential foraging habitat (primarily agricultural lands) should be preserved per nesting pair (or aggregation of

nesting pairs) to avoid jeopardizing existing populations. Preserved foraging areas should be adequate to allow additional Swainson's hawk nesting pairs to successfully breed and use the foraging habitat during good prey production years.

Suitable foraging habitat is necessary to provide an adequate energy source for breeding adults, including support of nestlings and fledglings. Adults must achieve an energy balance between the needs of themselves and the demands of nestlings and fledglings, or the health and survival of both may be jeopardized. If prey resources are not sufficient, or if adults must hunt long distances from the nest site, the energetics of the foraging effort may result in reduced nestling vigor with an increased likelihood of disease and/or starvation. In more extreme cases, the breeding pair, in an effort to assure their own existence, may even abandon the nest and young (Woodbridge 1985).

Prey abundance and availability is determined by land and farming patterns including crop types, agricultural practices and harvesting regimes. Estep (1989) found that 73.4% of observed prey captures were in fields being harvested, disced, mowed, or irrigated. Preferred foraging habitats for Swainson's hawks include:

- alfalfa;
- fallow fields;
- beet, tomato, and other low-growing row or field crops;
- dry-land and irrigated pasture;
- rice land (during the non-flooded period); and
- cereal grain crops (including corn after harvest).

Unsuitable foraging habitat types include crops where prey species (even if present) are not available due to vegetation characteristics (e.g. vineyards, mature orchards, and cotton fields, dense vegetation).

Nesting Requirements

Although the Swainson's hawk's current nesting habitat is fragmented and unevenly distributed, Swainson's hawks nest throughout most of the Central Valley floor. More than 85% of the known nests in the Central Valley are within riparian systems in Sacramento, Sutter, Yolo, and San Joaquin counties. Much of the potential nesting habitat remaining in this area is in riparian forests, although isolated and roadside trees are also used. Nest sites are generally adjacent to or within easy flying distance to alfalfa or hay fields or other habitats or agricultural crops which provide an abundant and available prey source. Department research has shown that valley oaks (Quercus lobata), Fremont's cottonwood (Populus fremontii), willows (Salix spp.), sycamores (Platanus spp.), and walnuts (juglans spp.) are the preferred nest trees for Swainson's hawks (Bloom 1980, Schlorff and Bloom 1983, Estep 1989).

Fall and Winter Migration Habitats

During their annual fall and winter migration periods, Swainson's hawks may congregate in large groups (up to 100+ birds). Some of these sites may be used during delayed migration periods lasting up to three months. Such sites have been identified in Yolo, Tulare, Kern and San Joaquin counties and protection is needed for these critical foraging areas which support birds during their long migration.

Historical and Current Population Status

The Swainson's hawk was historically regarded as one of the most common and numerous raptor species in the state, so much so that they were often not given special mention in field notes. The breeding population has declined by an estimated 91% in California since the turn of the century (Bloom 1980). The historical Swainson's hawk population estimates are based on current densities and extrapolated based on the historical amount of available habitat. The historical population estimate is 4,284-17,136 pairs (Bloom 1980). In 1979, approximately 375 (± 50) breeding pairs of Swainson's hawks were estimated in California, and 280 (75%) of those pairs were estimated to be in the Central Valley (Bloom 1980). In 1988, 241 active breeding pairs were found in the Central Valley, with an additional 78 active pairs known in northeastern California. The 1989 population estimate was 430 pairs for the Central Valley and 550 pairs statewide (Estep, 1989). This difference in population estimates is probably a result of increased survey effort rather than an actual population increase.

Reasons for decline

The dramatic Swainson's hawk population decline has been attributed to loss of native nesting and foraging habitat, and more recently to the loss of suitable nesting trees and the conversion of agricultural lands. Agricultural lands have been converted to urban land uses and incompatible crops. In addition, pesticides, shooting, disturbance at the nest site, and impacts on wintering areas may have contributed to their decline. Although losses on the wintering areas in South America may occur, they are not considered significant since breeding populations outside of California are stable. The loss of nesting habitat within riparian areas has been accelerated by flood control practices and bank stabilization programs. Smith (1977) estimated that in 1850

over 770,000 acres of riparian habitat were present in the Sacramento Valley. By the mid-1980s, Warner and Hendrix (1984) estimated that there was only 120,000 acres of riparian habitat remaining in the Central Valley (Sacramento and San Joaquin Valleys combined). Based on Warner and Hendrix's estimates approximately 93% of the San Joaquin Valley and 73% of the Sacramento Valley riparian habitat has been eliminated since 1850.

MANAGEMENT STRATEGIES

Management and mitigation strategies for the Central Valley population of the Swainson's hawk should ensure that:

- suitable nesting habitat continues to be available (this can be accomplished by protecting existing nesting habitat from destruction or disturbance and by increasing the number of suitable nest trees); and

- foraging habitat is available during the period of the year when Swainson's hawks are present in the Central Valley (this should be accomplished by maintaining or creating adequate and suitable foraging habitat in areas of existing and potential nest sites and along migratory routes within the state).

A key to the ultimate success in meeting the Legislature's goal of maintaining habitat sufficient to preserve this species is the implementation of these management strategies in cooperation with project sponsors and local, state and federal agencies.

DEPARTMENT'S ROLES AND RESPONSIBILITIES IN PROJECT CONSULTATION AND ADMINISTRATION OF CEQA AND THE FISH AND GAME CODE

The Department, through its administration of the Fish and Game Code and its trust responsibilities, should continue its efforts to minimize further habitat destruction and should seek mitigation to offset unavoidable losses by (1) including the mitigation measures in this document in CEQA comment letters and/or as management conditions in Department issued Management Authorizations or (2) by developing project specific mitigation measures (consistent with the Commission's and the Legislature's mandates) and including them in CEQA comment letters and/or as management conditions in Fish and Game Code Section 2081 Management Authorizations issued by the Department and/or in Fish and Game Code Section 2090 Biological Opinions.

The Department should submit comments to CEQA Lead Agencies on all projects which adversely affect Swainson's hawks. CEQA requires a mandatory findings of significance if a project's impacts to threatened or endangered species are likely to occur (Sections 21001 fc), 21083. Guidelines 15380, 15064, 15065). Impacts must be: (1) avoided; or (2) appropriate mitigation must be provided to reduce impacts to less than significant levels; or (3) the lead agency must make and support findings of overriding consideration. If the CEQA Lead Agency makes a Finding of Overriding Consideration, it does not eliminate the project sponsor's obligation to comply with the take prohibitions of Fish and Game Code Section 2080. Activities

which result in (1) nest abandonment; (2) starvation of young; and/or (3) reduced health and vigor of eggs and nestlings may result in the take (killing) of Swainson's hawks incidental to otherwise lawful activities (urban development, recreational activities, agricultural practices, levee maintenance and similar activities. The taking of Swainson's hawk in this manner may be a violation of Section 2080 of the Fish and Game Code. To avoid potential violations of Fish and Game Code Section 2080, the Department should recommend and encourage project sponsors to obtain 2081 Management Authorizations.

In aggregate, the mitigation measures incorporated into CEQA comment letters and/or 2081 Management Authorizations for a project should be consistent with Section 2053 and 2054 of the Fish and Game Code. Section 2053 states, in part, "it is the policy of the state that state agencies should not approve projects as proposed which would jeopardize the continued existence of'any endangered or threatened species or result in the destruction or adverse modification of habitat essential to the continued existence of those species, if there are reasonable and prudent alternatives available consistent with conserving the species and or its habitat which would prevent jeopardy" - Section 2054 states: "The Legislature further finds and declares that, in the event specific economic, social, and or other conditions make infeasible such alternatives, individual projects may be approved if appropriate mitigation and enhancement measures are provided."

State lead agencies are required to consult with the Department pursuant to Fish and Game Code Section 2090 to ensure that any action authorized, funded, or carried out by that state agency will not jeopardize the continued existence of any threatened or endangered species. Comment letters to State Lead Agencies should also include a reminder that the State Lead Agency has the responsibility to consult with the Department pursuant to Fish and Game Code Section 2090 and obtain a written findings (Biological Opinion). Mitigation measures included in Biological Opinions issued to State Lead Agencies must be consistent with Fish and Game Code Sections 2051-2054 and 2091-2092.

NEST SITE AND HABITAT LOCATION INFORMATION SOURCES

The Department's Natural Diversity Data Base (NDDB) is a continually updated, computerized inventory of location information on the State's rarest plants, animals, and natural communities. Department personnel should encourage project proponents and CEQA Lead Agencies, either directly or through CEQA comment letters, to purchase NDDB products for information on the locations of Swainson's hawk nesting areas as well as other sensitive species. The Department's Nongame Bird and Mammal Program also maintains information on Swainson's hawk nesting areas and may be contacted for additional information on the species.

Project applicants and CEQA Lead Agencies may also need to conduct site specific surveys (conducted by qualified biologists at the appropriate time of the year using approved protocols) to determine the status (location of nest sites, foraging areas, etc.) of listed species as part of the CEQA and 2081 Management Authorization process. Since these studies may require multiple years to complete, the Department shall identify any needed studies at the earliest possible time in the project review process. To facilitate project review and reduce the potential for costly

project delays, the Department should make it a standard practice to advise developers or others planning projects that may impact one or more Swainson's hawk nesting or foraging areas to initiate communication with the Department as early as possible .

MANAGEMENT CONDITIONS

Staff believes the following mitigation measures (nos. 1-4) are adequate to meet the Commission's and Legislature's policy regarding listed species and are considered as preapproved for incorporation into any Management Authorizations for the Swainson's hawk issued by the Department. The incorporation of measures 1-4 into a CEQA document should reduce a project's impact to a Swainson's hawk(s) to less than significant levels. Since these measures are Staff recommendations, a project sponsor or CEQA Lead agency may choose to negotiate project specific mitigation measures which differ. In such cases, the negotiated Management Conditions must be consistent with Commission and Legislative policy and be submitted to the ESD for review and approval prior to reaching agreement with the project sponsor or CEQA Lead Agency.

Staff recommended Management Conditions are:

1. No intensive new disturbances (e.g. heavy equipment operation associated with construction, use of cranes or draglines, new rock crushing activities) or other project related activities which may cause nest abandonment or forced fledging, should be initiated within 1/4 mile (buffer zone) of an active nest between March 1 - September 15 or until August 15 if a Management Authorization or Biological Opinion is obtained for the project. The buffer zone should be increased to ½ mile in nesting areas away from urban development (i.e. in areas where disturbance [e.g. heavy equipment operation associated with construction, use of cranes or draglines, new rock crushing activities] is not a normal occurrence during the nesting season). Nest trees should not be removed unless there is no feasible way of avoiding it. If a nest tree must be removed, a Management Authorization (including conditions to off-set the loss of the nest tree) must be obtained with the tree removal period specified in the Management Authorization, generally between October 1- February 1. If construction or other project related activities which may cause nest abandonment or forced fledging are necessary within the buffer zone, monitoring of the nest site (funded by the project sponsor) by a qualified biologist (to determine if the nest is abandoned) should be required . If it is abandoned and if the nestlings are still alive, the project sponsor shall fund the recovery and hacking (controlled release of captive reared young) of the nestling(s). Routine disturbances such as agricultural activities, commuter traffic, and routine facility maintenance activities within 1/4 mile of an active nest should not be prohibited.

2. Hacking as a substitute for avoidance of impacts during the nesting period may be used in unusual circumstances after review and approval of a hacking plan by ESD and WMD. Proponents who propose using hacking will be required to fund the full costs of the effort, including any telemetry work specified by the

Department.

3. To mitigate for the loss of foraging habitat (as specified in this document), the Management Authorization holder/project sponsor shall provide Habitat Management (HM) lands to the Department based on the following ratios:

(a) Projects within I mile of an active nest tree shall provide:

- one acre of HM land (at least 10% of the HM land requirements shall be met by fee title acquisition or a conservation easement allowing for the active management of the habitat, with the remaining 90% of the HM lands protected by a conservation easement [acceptable to the Department] on agricultural lands or other suitable habitats which provide foraging habitat for Swainson's hawk) for each acre of development authorized (1:1 ratio); or

- One-half acre of HM land (all of the HM land requirements shall be met by fee title acquisition or a conservation easement [acceptable to the Department) which allows for the active management of the habitat for prey production on-the HM lands) for each acre of development authorized (0.5:1 ratio).

(b) Projects within 5 miles of an active nest tree but greater than 1 mile from the nest tree shall plovide 0.75 acres of HM land for each acre of urban development authorized (0-75:1 ratio). All HM lands protected under this requirement may be protected through fee title acquisition or conservation easement (acceptable to the Department) on agricultural lands or other suitable habitats which provide foraging habitat for Swainson's hawk.

(c) Projects within 10 miles of an active nest tree but gleater than 5 miles from an active nest tree shall provide 0.5 acres of HM land for each acre of urban development authorized (0.5:1 ratio). All HM lands- protected under this requirement may be protected through fee title acquisition or a conservation easement (acceptable to the Department) on agricultural lands or other suitable habitats which provide foraging habitat for Swainson's hawk.

4. Management Authorization holders/project sponsors shall provide for the long-term management of the HM lands by funding a management endowment (the interest on which shall be used for managing the HM lands) at the rate of $400 per HM land acre (adjusted annually for inflation and varying interest rates).

Some project sponsors may desire to provide funds to the Department for HM land protection. This option is acceptable to the extent the proposal is consistent with Department policy regarding acceptance of funds for land acquisition. All HM lands should be located in areas which are consistent with a multi-species habitat conservation focus. Management

Authorization holders/project sponsors who are willing to establish a significant mitigation bank (> 900 acres) should be given special consideration such as 1.1 acres of mitigation credit for each acre preserved.

PROJECT SPECIFIC MITIGATION MEASURES

Although this report includes recommended Management Measures, the Department should encourage project proponents to propose alternative mitigation strategies that provide equal or greater protection of the species and which also expedite project environmental review or issuance of a CESA Management Authorization. The Department and sponsor may choose to conduct cooperative, multi-year field studies to assess the site's habitat value and determine its use by nesting and foraging Swainson's hawk. Study plans should include clearly defined criteria for judging the project's impacts on Swainson's hawks and the methodologies (days of monitoring, foraging effort/efficiency, etc.) that will be used.

The study plans should be submitted to the Wildlife Management Division and ESD for review. Mitigation measures developed as a result of the study.must be reviewed by ESD (for consistency with the policies of the Legislature and Fish and Game Commission) and approved by the Director.

EXCEPTIONS

Cities, counties and project sponsors should be encouraged to focus development on open lands within already urbanized areas. Since small disjunct parcels of habitat seldom provide foraging habitat needed to sustain the reproductive effort of a Swainson's hawk pair, Staff does not recommend requiring mitigation pursuant to CEQA nor a Management Authorization by the Department for infill (within an already urbanized area) projects in areas which have less than 5 acres of foraging habitat and are surrounded by existing urban development, unless the project area is within 1/4 mile of an active nest tree.

REVIEW

Staff should revise this report at least annually to determine if the proposed mitigation strategies should be retained, modified or if additional mitigation strategies should be included as a result of new scientific information.

Re: Giovannoni Logistics Center Project; Final Environmental Impact Report, SCH No. 2021010104, City of American Canyon, Napa County

Dear Mr. Cooper:

Raptors Are The Solution is a fiscally-sponsored project of Earth Island Institute, based in Berkeley, California. Our mission is to educate people about the ecological role of birds of prey, and work to eliminate toxic rodenticides to prevent further poisonings of wildlife, children, and pets. We work through public education, legislation, and litigation when necessary.

Our organization is also very concerned about the status of raptor populations in the state of California, including the Swainson's hawk, which is listed as threatened, under the California Endangered Species Act. As you are likely aware, raptors in general are quite vulnerable to the numerous environmental challenges presented by the ever-growing human population: only about 40 percent make it through their first year. Habitat loss is one of those challenges and an important factor leading to raptor declines. 1

We echo the concerns raised in the very thorough letter of January 9, 2023 submitted to you by Friends of the Swainson's Hawk (FOSH) and agree with their concerns about the inadequacy of the FEIR.

Like FOSH, we have reviewed the California Department of Fish and Wildlife's (CDFW) December 2, 2022 letter to you on the FEIR, which found that the city's environmental review

was inadequate to address impacts to the Swainson's hawk from the Giovannoni Logistics Center Project. This project destroys at least 154.7 acres of important foraging habitat for northern harriers, golden eagles, and Swainson's hawks, and CDFW has identified a **cumulative loss of habitat** from similar projects in the vicinity, in violation of the California Environmental Quality Act. We ask that you deny this project due to its unacceptable, irreversible impacts to raptors, including the threatened Swainson's hawk, and we agree with CDFW that your environmental review is inadequate to address impacts to this important raptor. Surely you can find less damaging locations in which to build this logistics center. We ask to be notified of future hearings and documents via raptorsarethesolution@gmail.com

Subject: Giovannoni Logistics Center Project, Final Impact Report
SCH No. 2021010104, City of American Canyon, Napa County

Dear Mr. Cooper,

On behalf of our 1000 member Napa-Solano Audubon Society Chapter, I would like to second the concern regarding the Giovannoni Project written to you by Erin Chappell, Regional Manager of the California State Fish and Wildlife Department, dated December 2, 2022. Although surrounded by other development, the Giovannoni Project is located in prime grassland foraging habitat of the Swainson's Hawk (Buteo swainsoni), a California "Threatened" species, which we believe has had 2-3 active nests in the near vicinity, and within 1 - 2 miles of this development site. This hawk is a rare species in Napa County and this project, with the loss of more grassland habitat, will certainly impact their breeding success. Since other development projects in this area have previously encroached on Swainson's Hawk's nesting and feeding habitat without the proper mitigation of similar grassland acreage, this project will further severely impact them. We believe it is essential that this project mitigate an equal or greater grassland acreage which is suitable for foraging Swainson's Hawks. We are aware that it is common practice to mitigate similar habitat acreage by as much as a 3:1 ratio. As pointed out by Erin Chappell, this project would eliminate over 150 acres of prime foraging habitat, therefore we are requesting that the City of American Canyon permanently set aside a minimum of 450 acres of suitable Swainson's Hawk foraging land to protect this species in our County or nearby lands. In addition, these grasslands are occupied by wintering Burrowing Owls (Athene cunicularia), a "Species of Concern" that is rapidly declining in population in our state, and especially in the Bay Area, due to loss of habitat. Burrowing Owls migrate to our area in winter and use ground squirrel burrows in grasslands for protection and hunt for small prey nearby. Grasslands in our county are a critical wintering habitat to protect this species. 1

In an effort to protect these two, threatened and declining species, we hope the City of American Canyon will honor this request to mitigate substantial land to alleviate the loss of habitat by the Giovannoni Project and adjacent American Canyon and Napa County development projects. We would like to send representatives to any future meeting where this topic is open for public comment. Please include our organization on the notification list for this project and any future development projects in American Canyon.

Sincerely,

Mark Stephenson

Re: Giovannoni Logistics Center Project Final Environmental Impact Report (SCH # 2021010104)

Dear Mr. Cooper:

Please accept these comments submitted on behalf of the Center for Biological Diversity (the "Center") regarding the Final Environmental Impact Report (EIR) for the Giovannoni Logistics Center Project ("Project") (State Clearinghouse No. 2021010104).

The Center is a non-profit, public interest environmental organization dedicated to the protection of native species and their habitats through science, policy, and environmental law. The Center has over 1.7 million members and online activists throughout California and the United States. The Center has worked for many years to protect imperiled plants and wildlife, open space, air and water quality, and overall quality of life for people in Napa County. 1

As a threshold matter, the Center is concerned about the City's failure to follow CEQA's notice requirements for the Project's environmental review process. Despite the Center's repeated requests, the City failed to notify the Center regarding its publication of the environmental documents for the Project and its public hearings to consider the Project. This was a violation of CEQA's notice requirements. (Pub. Resources Code, § 21092, subd. (b)(3); CEQA Guidelines § 15087, subd. (a).) Only after the Center submitted a formal letter to the City did the City acknowledge that it had had some issues with the e-mail server.[1] To remedy the violation, the City agreed to extend the comment period until January 16th, and to respond in writing to comments received by the Center before that deadline. The City to date has not confirmed that no other interested parties failed to receive notice. The City also appears to have failed to post notice of the public review period for the draft EIR in the Napa Valley Register, the newspaper

[1] Telephone call

of general circulation for the area.[2] Publication in the affected area's newspaper of general circulation is "a form [of notice] calculated to come to the attention of members of the public," and the City's failure to do this is in line with a general disregard for public notice. (*California Aviation Council v. County of Amador* (1988) 200 Cal.App.3d 337, 344.) In line with the City's general disregard for the notice requirements, it also failed to post the final EIR on CEQAnet. The courts have repeatedly stated that public participation is a fundamental purpose of the CEQA process. (*Laurel Heights Improvement Ass'n v Regents of Univ. of Cal.* (1988) 47 Cal. 3d 376, 404; *County of Inyo v Yorty* (1973) 32 Cal.App.3d 795, 810; *California Bldg. Indus. Ass'n v Bay Area Air Quality Mgmt. Dist.* (2015) 62 Cal. 4th 369, 383.) The City's actions here do not achieve that fundamental purpose. To remedy this violation, the City must confirm with evidence that no other interested parties failed to receive notice and should recirculate the EIR for comment with full public notice. 1 CONT

The Project would worsen the greenhouse gas emissions, air quality, and traffic in the City of American Canyon and Napa County, and harm important biological resources. To address these concerns and comply with the California Environmental Quality Act (CEQA), the City must fully disclose all impacts and consider and incorporate enforceable, evidence-backed mitigation measures for GHG emissions, air quality, transportation, and biological resources.

I. The EIR Failed to Properly Analyze or Adequately Mitigate Greenhouse Gas Emissions.

A. Climate Change Is a Catastrophic and Pressing Threat to California.

A strong, international scientific consensus has established that human-caused climate change is causing widespread harms to human society and natural systems, and that climate change threats are becoming increasingly dangerous. The Intergovernmental Panel on Climate Change (IPCC), the leading international scientific body for the assessment of climate change, concluded in its 2014 Fifth Assessment Report that: "[w]arming of the climate system is unequivocal, and since the 1950s, many of the observed changes are unprecedented over decades to millennia. The atmosphere and ocean have warmed, the amounts of snow and ice have diminished, and sea level has risen," and further that "[r]ecent climate changes have had widespread impacts on human and natural systems." (IPCC 2014.) These findings were echoed in the United States' own 2014 Third National Climate Assessment and 2017 Climate Science Special Report, prepared by scientific experts and reviewed by the National Academy of Sciences and multiple federal agencies. The Third National Climate Assessment concluded that "[m]ultiple lines of independent evidence confirm that human activities are the primary cause of the global warming of the past 50 years" and "[i]impacts related to climate change are already evident in many regions and are expected to become increasingly disruptive across the nation throughout this century and beyond." (Melillo 2014.) The 2017 Climate Science Special Report similarly concluded: 2

[2] The Center received word that the City published notice in the Vallejo Times-Herald but has not found any record of notice on the Times-Herald's website. Nevertheless, the City of Vallejo is a separate jurisdiction from the City and would not reach City or County residents affected by the Project.

> [B]ased on extensive evidence, it is extremely likely that human activities, especially emissions of greenhouse gases, are the dominant cause of the observed warming since the mid-20th century. For the warming over the last century, there is no convincing alternative explanation supported by the extent of the observational evidence.

The U.S. National Research Council concluded that "[c]limate change is occurring, is caused largely by human activities, and poses significant risks for—and in many cases is already affecting—a broad range of human and natural systems." (NRC 2010.) Based on observed and expected harms from climate change, in 2009 the U.S. Environmental Protection Agency found that greenhouse gas pollution endangers the health and welfare of current and future generations. (74 Fed. Reg. 66496 (Dec. 15, 2009) [U.S. EPA, Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act; Final Rule].)

These authoritative climate assessments decisively recognize the dominant role of greenhouse gases in driving climate change. As stated by the Third National Climate Assessment: "observations unequivocally show that climate is changing and that the warming of the past 50 years is primarily due to human-induced emissions of heat-trapping gases." (Mellilo 2014.) The Assessment makes clear that "reduc[ing] the risks of some of the worst impacts of climate change" will require "aggressive and sustained greenhouse gas emission reductions" over the course of this century. (Melillo 2014 at 13, 14, and 649.)

2
CONT

The impacts of climate change will be felt by humans and wildlife. Climate change is increasing stress on species and ecosystems—causing changes in distribution, phenology, physiology, vital rates, genetics, ecosystem structure and processes—in addition to increasing species extinction risk. (Warren 2008.) Climate-change-related local extinctions are already widespread and have occurred in hundreds of species. (Wiens 2016.) Catastrophic levels of species extinctions are projected during this century if climate change continues unabated. (Thomas 2004; Maclean 2011; Urban 2015.) In California, climate change will transform our climate, resulting in such impacts as increased temperatures and wildfires, and a reduction in snowpack and precipitation levels and water availability.

Therefore, immediate and aggressive greenhouse gas emissions reductions are necessary to keep warming well below 2°C above pre-industrial levels. The IPCC Fifth Assessment Report and other expert assessments have established global carbon budgets, or the total amount of carbon that can be burned while maintaining some probability of staying below a given temperature target. According to the IPCC, total cumulative anthropogenic emissions of CO2 must remain below about 1,000 GtCO2 from 2011 onward for a 66 percent probability of limiting warming to 2°C above pre-industrial levels, and to 400 GtCO2 from 2011 onward for a 66 percent probability of limiting warming to 1.5°C. (IPCC 2013 at 25; IPCC 2014 at 63-64 & Table 2.) These carbon budgets have been reduced to 850 GtCO2 and 240 GtCO2, respectively, from 2015 onward. (Rogelj 2016 at Table 2.) As of 2022, climate policies by the world's countries would lead to an estimated 2.7°C of warming, and possibly up to 3.6°C of warming, well above the level needed to avoid the worst dangers of climate change. (Climate Action Tracker 2021.)

The United States has contributed more to climate change than any other country. The U.S. is the world's biggest cumulative emitter of greenhouse gas pollution, responsible for 27 percent of cumulative global CO2 emissions since 1850, and the U.S. is currently the world's second highest emitter on an annual and per capita basis. (World Resources Institute 2020.) Nonetheless, U.S. climate policy is wholly inadequate to meet the international climate target to hold global average temperature rise to well below 2°C above pre-industrial levels to avoid the worst dangers of climate change. Current U.S. climate policy has been ranked as "insufficient" by an international team of climate policy experts and climate scientists which concluded that "the US' climate policies and action in 2030 need substantial improvements." (Climate Action Tracker 2022.)

In its 2018 Special Report on Global Warming of 1.5°C, the IPCC—the leading international scientific body for the assessment of climate change—described the devastating harms that would occur at 2°C warming. The report highlights the necessity of limiting warming to 1.5°C to avoid catastrophic impacts to people and life on Earth. (IPCC 2018.) The report also provides overwhelming evidence that climate hazards are more urgent and more severe than previously thought, and that aggressive reductions in emissions within the next decade are essential to avoid the most devastating climate change harms.

2
CONT

In response to inadequate action on the national level, California has taken steps through legislation and regulation to fight climate change and reduce statewide GHG emissions. Enforcement and compliance with these steps are essential to help stabilize the climate and avoid catastrophic impacts to our environment. California has a mandate under AB 32 to reach 1990 levels of GHG emissions by the year 2020, equivalent to approximately a 15 percent reduction from a business-as-usual projection. (Health & Saf. Code, § 38550.) Based on the warning of the Intergovernmental panel on Climate Change and leading climate scientists, Governor Brown issued an executive order in April 2015 requiring GHG emission reduction 40 percent below 1990 levels by 2030. (Executive Order B-30-15 (2015).) The Executive Order is line with a previous Executive Order mandating the state reduce emission levels to 80 percent below 1990 levels by 2050 in order to minimize significant climate change impacts. (Executive Order S-3-05 (2005).) In enacting SB 375, the state has also recognized the critical role that land use planning plays in achieving greenhouse gas emission reductions in California.

The state Legislature has found that failure to achieve greenhouse gas reduction would be "detrimental" to the state's economy. (Health & Saf. Code § 38501(b).) In his 2015 Inaugural Address, Governor Brown reiterated his commitment to reduce greenhouse gas emissions with three new goals for the next fifteen years:

- Increase electricity derived from renewable sources to 50 percent;
- Reduce today's petroleum use in cars and trucks by 50 percent;
- Double the efficiency of existing buildings and make heating fuels cleaner.

(Brown 2015 Address.)

Although some sources of GHG emissions may seem insignificant, climate change is a problem with cumulative impacts and effects. (*Ctr. for Biological Diversity v. Nat'l Highway Traffic Safety Admin.* (9th Cir. 2008) 538 F.3d 1172, 1217 ("the impact of greenhouse gas

emissions on climate change is precisely the kind of cumulative impacts analysis" that agencies must conduct).) One source or one small project may not appear to have a significant effect on climate change, but the combined impacts of many sources can drastically damage California's climate as a whole. Therefore, project-specific GHG emission disclosure, analysis and mitigation is vital to California meeting its climate goals and maintaining our climate.

The impacts of climate change are already being felt by humans and wildlife. Human-induced climate change, including more frequent and intense extreme events, has caused widespread adverse impacts and related losses and damages to nature and people. (IPCC 2022.) This rise in weather and climate extremes has led to some irreversible impacts, as natural and human systems are pushed beyond their ability to adapt. (IPCC 2022.)

Thousands of studies conducted by researchers around the world have documented changes in surface, atmospheric, and oceanic temperatures; melting glaciers; diminishing snow cover; shrinking sea ice; rising sea levels; ocean acidification; and increasing atmospheric water vapor. (USGCRP 2017.) In California, climate change will result in impacts including, but not limited to, increased temperatures and wildfires and a reduction in snowpack, precipitation levels, and water availability. 2 CONT

In the IPCC's most recent report, entitled Climate Change 2022: Impacts, Adaptation and Vulnerability, it found that warming is proceeding even faster than anticipated, and the best-case scenario for climate change is slipping out of reach. (IPCC 2022.) The report now estimates that, over the next 20 years, the world will cross the global warming threshold of 1.5°C. And unless there are immediate, rapid and large-scale reductions in greenhouse gas emissions, limiting warming to close to 1.5°C—or even 2°C—will be beyond reach. The United Nations Secretary General described the forecasts in this report as an "atlas of human suffering." (Borenstein 2022.)

Given the increasingly urgent need for drastic action to reduce GHG emissions, the FEIR's failure to fully disclose, analyze, mitigate, or consider alternatives to reduce the Project's significant climate change effects is all the more alarming.

B. The EIR's Threshold of Significance Forecloses Consideration of Foreseeable GHG Impacts and Is Not Supported by Substantial Evidence.

The EIR estimates the Project's GHG emissions to be approximately 21,360 MTCO2e annually during the life of the Project. (DEIR at 3.6-53.) The EIR then purports to evaluate this enormous emissions impact against the Bay Area Air Quality Management District's (BAAQMD) new 2022 significance thresholds for office projects, limiting its review of climate impacts to a 15 percent reduction in employee VMT. (DEIR at 3.6-44, 45.) In applying the threshold, however, the EIR omits consideration of the VMT from truck trips, the main driver of GHG emissions for this project, and finds that the Project's GHG impacts are less-than-significant. (DEIR at 3.6-59.) 3

A lead agency's selection of a threshold of significance must be supported with substantial evidence. Moreover, a determination that an environmental impact complies with a particular threshold of significance does not relieve a lead agency of its obligation to consider evidence that indicates the impact may be significant despite compliance with the threshold. (CEQA Guidelines § 15064(b)(2).) If evidence shows that an environmental impact might be significant despite the significance standard used in the EIR, the agency must address that evidence. (*Protect the Historic Amador Waterways v. Amador Water Agency* (2004) 116 Cal.App.4th 1099, 1111.)

BAAQMD recently updated its thresholds of significance for climate land use impacts. The new thresholds require that projects meet a VMT target, depending on whether the project consists of office, retail, or residential uses. (BAAQMD 2022.) The BAAQMD guidelines did not adopt a significance threshold for industrial land uses. The EIR's use of BAAQMD's significance threshold for office projects is not supported by substantial evidence and drastically downplays the Project's significant GHG emissions impacts.

3
CONT

The EIR selected the threshold for office projects, which sets a target of reducing project-generated VMT to 15% below the existing VMT per employee. (DEIR at 3.6-45.) From there, the EIR concludes that the Project will not have a significant impact on GHG emissions because employee commutes will be 15% below existing VMT. (DEIR at 3.6-56.)

This threshold omits consideration of the VMT from truck trips, the main driver of GHG emissions for this project. (DEIR at 3.6-53.) The EIR's choice to omit analysis of the greenhouse gas impacts of heavy trucks is inexcusable. Substantial evidence demonstrates that the Project will generate hundreds of truck trips each day, which emit greenhouse gases. The EIR acknowledges that truck trips to transport goods are a main driver of vehicle trips generated by industrial land uses (DEIR at 3.6-45) and estimates that 528 trucks will access the project site each day (DEIR, Appendix H at 19). However, the EIR maintains that these truck trips, no matter their possible number, cannot possibly cause GHG impacts.

The EIR argues that omitting truck trips from the significance threshold is appropriate because the GHG emissions of truck trips are addressed by statewide standards, not by land use decisions. (DEIR at 3.6-45.) This argument ignores what CEQA is meant to do – namely, ensure that a lead agency fully evaluates, discloses, and mitigates wherever feasible a project's significant environmental effects. (Pub. Resources Code, §§ 21000, *et seq*.) The EIR may consider what mitigation is within the City's jurisdiction when analyzing feasible mitigation measures, but these statewide standards do not absolve the EIR of CEQA's requirement that it disclose and analyze all potentially significant impacts associated with a project. Significance thresholds must not foreclose consideration of any potentially significant environmental effect, or the CEQA analysis is deficient. (*Protect the Historic Amador Waterways v. Amador Water Agency* (2004) 116 Cal.App.4th 1099, 1109 ["A threshold of significance cannot be applied in a

way that would foreclose the consideration of other substantial evidence tending to show the environmental effect to which the threshold relates might be significant."].)

The GHG analysis here is similar to the one that failed in *Friends of Oroville v. City of Oroville* (2013) 219 Cal.App.4th 832, 842. In that case, the Court held that the City of Oroville had failed to adequately assess the impact of a project's greenhouse gas emission because it had improperly applied the threshold for determining the significance of project greenhouse gas emissions. (*Ibid.*) There, the EIR used the "Scoping Plan Measures" from the Assembly Bill 32 Scoping Plan to create a significance threshold. (*Id.* at 843.) However, it concluded that the plan's transportation measures need not be applied to the project because they were meant to be implemented at a state-wide level. (*Ibid*.) The court found that the City had made a "meaningless" comparison of the proposed store's emissions to statewide emissions and had failed to calculate the project's emissions. (*Ibid.*) The court said that by choosing a framework that excluded consideration of transportation impacts, the EIR "ignore[ed] the elephant in the room," since 68% of the Project's GHG emissions came from transportation impacts. (*Ibid*.) By relying on an inapplicable state-wide plan to disclaim responsibility to fully analyze and disclose impacts, that EIR – and this one, too – are deficient.

3
CONT

The EIR makes a second attempt at justifying its astounding threshold by attributing its choice to "a lack of guidance on this subject from expert regulatory agencies." (EIR at 3.6-45.) There is ample guidance available to craft a relevant threshold. In the BAAQMD 2017 guidelines, the significance threshold for industrial land uses was 1,100 MT per year, 4.6 MT per person (employees and residents) per year, or compliance with a qualified GHG Reduction Strategy. (BAAQMD 2017.) South Coast Air Quality Management District (SCAQMD) has established a 10,000 MTCO2e CEQA threshold of significance for industrial facilities. (SCAQMD 2019.) Indeed, because the 2022 update to the guidance did not include a threshold that applied to industrial projects, the 2017 threshold is still the most recent guideline that the BAAQMD has given for industrial projects. The 2022 update did not repeal the 2017 guidance. Therefore, the 2017 threshold still represents the last time that BAAQMD considered and formally adopted a threshold for industrial uses, and the City offers no explanation for refusing to consider that threshold. Finally, warehouse projects, as a matter of course, disclose and study the impact of truck trips in their greenhouse gas impacts analysis, in part because truck trips are the greatest source of GHG emissions.[3] The California Attorney General, in its Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act for Warehouse Projects, also highlights the necessity of fully analyzing impacts from truck trips. (AGO 2021.)

The City provides no reasonable factual or policy basis for inventing a modified version of the 2022 BAAQMD threshold to apply to industrial uses.

[3] See Renaissance Ranch DEIR at 4.8-23-24; Speedway Commerce Center II Specific Plan DEIR at 4.8-16-17; Hesperia Commerce Center II DEIR at 4.6-26-27; Beaumont Summit Station Specific Plan DEIR at 4.7-24-25. The Center does not here comment on the adequacy of the GHG analysis in any of these EIRs beyond noting that they did not choose significance thresholds that foreclosed consideration of GHG emissions from trucks.

C. Evidence Shows that the Project Will Have Significant GHG Impacts

Under any accepted threshold of significance for industrial projects, there is ample evidence to suggest that the Project would have significant GHG impacts. By any measure, 21,360 MTCO2e per year is a significant level of emissions. (DEIR at 3.6-53.)

The Project's GHG emissions significantly exceed the 2017 BAAQMD threshold in every aspect. The Project's emissions are more than 20 times higher than the 1,100 MY per year total emissions threshold, and its per person emissions are 5.8 MT, meaning the Project exceeds the 4.6 MT per person threshold by more than a metric ton per person. The Project is not consistent with a qualified GHG reduction plan, as the EIR acknowledges. (DEIR at 3.6-54.) The Project also exceeds SCAQMD's 10,000 MTCO2e CEQA threshold of significance for industrial facilities. This again shows the overwhelming significance of the Project's GHG emissions, and highlights that the threshold the City selected obscures impacts that would are otherwise significant. 4

Both the 2017 BAAQMD thresholds and the current SCAQMD thresholds were formally adopted by those agencies after long consideration and a formal notice and comment rulemaking process and are supported by substantial evidence. Under either of these thresholds—or any threshold supported by substantial evidence—the Project's anticipated annual GHG emissions of over 20,000 MTCO2e annually is profoundly significant.

C. The EIR Underestimates GHG Emissions the Project Will Generate.

The DEIR here grossly underestimates the vehicle trips associated with the Project, the main driver of the Project's air quality and greenhouse gas impacts. (DEIR at 3.6-53.) It estimates that the Project will generate 528 daily truck trips, which it calculated using the Institute of Transportation Engineers (ITE) Common Trip Generation Rates. (DEIR at 3.12-12.) The ITE estimates trip generations based on the type of facility and square footage of the facility. (ITE 2017.) The DEIR uses the rate for "High-Cube Transload and Short-term Storage Warehouse," which has a generation rate of .1 trips per unit. (DEIR, Appendix H at 13.) Other types of warehouse projects identified by ITE, such as High-Cube Fulfillment Center Warehouses and High-Cube Parcel Hub Warehouses, have significantly higher vehicle trip estimates, 1.37 and .64 trips per unit, respectively. (ITE 2017.) 5

The DEIR provides no information or evidence justifying its selection of high-cube short-term storage and warehousing when other types of high cube warehouse centers result in truck trip estimates orders of magnitude higher. The DEIR describes the Project generally as a "high-cube warehouse" and as a "logistics center." (DEIR at 2-4.) The DEIR lacks additional detail about the type of warehouse facility it anticipates constructing. It does not place limits on the type of e-commerce facility that could operate on the site. It says that, given the "lack of information regarding potential future tenants," it is possible that the warehouse could be used

for cold storage but does not account for that possibility in the trip generation analysis.[4] Absent additional information, it appears that any tenant could operate a high-cube fulfillment center warehouse, a high-cube parcel hub warehouse, or high-cube cold storage warehouse on the site, which would generate significantly more truck trips than the DEIR disclosed, analyzed, or mitigated. The DEIR's approach violates CEQA's requirement that an EIR fully analyze and attempt to mitigate all significant direct and indirect impacts of a project. (CEQA Guidelines, § 15126.2; Pub. Resources Code, § 21002.)

The FEIR defends the choice of the high-cube transload and short-term storage warehouse rate ("transload rate") on the grounds that that rate was based on over 100 site surveys, while rates for the other types of warehousing were based on fewer data points. (FEIR at 3-319.) Even if the rate chosen was based on a larger data set, that has no bearing on whether it was the appropriate estimate for this Project. The transload rate might be average of more data points, but those additional data points represent a wider range of warehousing types and are therefore less representative of the high-cube, potentially cold storage warehouse proposed here. The EIR has not offered evidence that the transload rate is reflective of the future uses, and future trip generation, of this warehouse type. 5 CONT

The City must support its choice to rely upon the lowest estimate or select an estimate that more conservatively and accurately accounts for the Project's potential to generate truck trips. Should the City ultimately rely on these lower estimates, the City must condition any project approval on a lease provision that guarantees a Project tenant could not operate a high-cube fulfillment center, a parcel hub warehouse, or a cold-storage warehouse on the site, absent additional environmental review and mitigation.

Further, the number of generated passenger car trips is contradicted by the number of people that the EIR claims the Project will employ at full build-out. It estimates 3,643 employees, but only 2,832 passenger car trips per day. (DEIR Appendix H at 13.) Even if only 75% of the employees commuted to the site on a given day, their commutes alone would be 5,464 trips, already almost double the total estimated daily trips. The EIR must standardize these conflicting numbers by either admitting the Project will not have the level of employment, and therefore the level of local economic benefit, that Project advocates claim, or that it will have much higher car trip generation.

Finally, the DEIR omits one of the key sources of GHG emissions that will result from the Project: vegetation removal. (DEIR at 3.6-53.) The Project anticipates grading at least 163 acres of land currently covered in a variety of different vegetation, including wetlands and

[4] In fact, the EIR includes a cold storage scenario in its GHG analysis but uses the same number for estimated emissions from trucks in both the cold storage and dry storage scenarios. (DEIR at 3.6-53.) However, the ITE estimates that cold storage warehouses will generate 0.12 trips per unit, not 0.10. (ITE 2017.) By using the lowest possible trip generation estimate even when explicitly analyzing a different kind of warehouse, the EIR again misleads the public about the Project's GHG emissions.

grassland. (DEIR at 2-4.) The DEIR nowhere estimates the anticipated loss of sequestered carbon.

The removal and degradation of ecosystems have been found to result in the loss of both above- and below-ground carbon storage (e.g., Austreng 2012.) California's wetland and grassland ecosystems are significant carbon sinks. (Bohlman et al., 2018; Dass et al., 2018; Janzen, 2004; Luo et al., 2007; Wohlfahrt et al., 2008.) With much of the stored carbon located in their roots and soils, there is potential for long-term storage that is more resilient to changing environmental conditions (Aranjuelo et al., 2011; Booker et al., 2013; Evans et al., 2014; Vicente-Serrano et al., 2013.)

5 CONT

CalEEMod, the land use emissions model used in the DEIR, has a module to estimate the changes in carbon sequestration capacity resulting from changes in vegetation on-site. (CalEEMod 2021.) The DEIR thus has no excuse for its failure to estimate the emissions associated with the loss of at almost 200 acres of vegetation, topsoil, and overburden, all of which sequester carbon. The DEIR must make a good faith effort to estimate these emissions and include them in the Project's overall estimated GHG footprint.

D. The EIR's New VMT Study Fails to Provide Evidence that the Project's GHG Impacts Are Less Than Significant.

In response to the many comments identifying the above deficiencies in the VMT analysis, the EIR added a new study that purports to show that even if the EIR had considered heavy duty truck trips, which it did not, the Project's VMT would still be 15% below the regional average. (FEIR, Appendix J at 3.) The study's conclusion is faulty, and its findings are not supported by substantial evidence. Accordingly, the study does not correct the EIR's clear failure to incorporate heavy truck emissions into its GHG significance threshold.

The new study collected and summarized many data points, to little effect. First, it estimated warehouse trip generation per thousand feet of warehouse space by monitoring warehouses in San Joaquin County. (FEIR, Appendix J at 5.) It found a trip generation rate similar to the estimate from the ITE Trip Generation Manual used in the DEIR. Then, it tracked all heavy-duty truck trips starting or ending at eight industrial warehousing sites in Napa County and 15 sites in other parts of the Bay Area. (*Id.* at 7-8.) The average truck trip length for all sites was 58.2 miles, and the average for Napa County sites was 35.6 miles. (*Ibid.*) The study hypothesized that, assuming the Project site ultimately generates the same number of trips as whatever unknown number of trips is average for other Bay Area sites, and those trips are an average of 35.6 miles long, then the Project's heavy-truck VMT would be lower than the regional average. (*Id.* at 14) However, the study offers no evidence for these assumptions.

6

First, the study fails to account for the number of truck trips generated by the project. Even if, as the study claims, warehouses in Napa County are intended to serve a more local area than warehouses elsewhere (without disclosing the region this Project is intended to serve), those

warehouses may generate more truck trips as their trucks make shorter, more frequent circuits to their local destinations. (FEIR, Appendix J at 12.)

Further, the study offers no evidence that the Project will have an average truck trip length of 35.6 miles. Four of the eight warehouse sites that were used to develop the Napa County average are specifically wine warehouses. (FEIR, Appendix J at 11.) Since these sites are presumably serving local wine producers, it is logical that their trips would be shorter. There is no indication that the Project would have mostly tenants in the wine industry, so there is no evidence that the average applies.

The EIR cannot rely on a regional average absent evidence that the Project would be in line with the regional average. Otherwise, all warehouse projects in Napa County, regardless of the size or intensity of use or number of truck trips generated, could conclude that their heavy-duty truck VMT is within the threshold of significance, simply because the County average is below the regional average. CEQA requires that an EIR contain substantial evidence supporting its factual conclusions, and the regional average contains no support regarding the project's individual impacts.

6 CONT

E. Because the EIR Improperly Found that the Project's GHG Emissions Were Less Than Significant, It Failed to Consider, Much Less Adopt, Feasible Mitigation Measures to Reduce or Avoid the Project's GHG Impacts.

The EIR fails to meet the City's obligation to adopt all feasible mitigation to reduce the Project's significant GHG impacts, such as the basic mitigation measures that have become standard for new warehouse development. Examples of such measures include those listed in the Fontana Ordinance No. 1891, which were specifically formulated to mitigate impacts from warehouse development and protect residents and the air basin from cumulative environmental impacts. (City of Fontana 2022.) The California Office of the Attorney General also has published a document entitled "Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act" to help lead agencies comply with these requirements. (AGO 2021.) Nearly all of the example mitigation measures in this document have been adopted in a warehouse project in California, demonstrating their feasibility.

7

Whether a mitigation measure is economically unfeasible "is not measured by increased cost or lost profit, but upon whether the effect of the proposed mitigation is such that the project is rendered impractical." (*Uphold Our Heritage v. Town of Woodside* (2007) 147 Cal.App.4th 587, 600, internal citation omitted.) The City must adopt additional mitigation unless it can demonstrate with substantial evidence and analysis that this alternative is infeasible. (*Los Angeles Unified Sch. Dist. v. City of Los Angeles* (1997) 58 Cal.App.4th 1019, 1029.) The EIR does not fulfill this obligation.

Specifically, the EIR fails to require the project to use all electrical equipment on site, and the EIR does not show with substantial evidence that is infeasible.

Requiring Electrical Equipment on Site

During construction, exhaust emissions from heavy-duty construction equipment will be the biggest source of on-site GHG emissions. (DEIR at 3.6-40-41). During operation, warehouses require cargo handling equipment, like forklifts and pallet jacks, that also produce considerable GHG emissions if they run on diesel. (CARB 2020.) However, the EIR claims that requiring electrical equipment on-site would not be feasible for two reasons. (FEIR at 3-100.) First, because the project end users are not known, the requirement would be "speculative." It is not speculative to require something of tenants before knowing who the tenants are, and other statements in the EIR contradict this statement. In fact, the EIR does put requirements on unknown end users, as warehouse EIRs commonly do. For example, the MM-AIR-2f requires end users to establish a rideshare program with financial incentives. (FEIR at 3-102.) In this case, it is reasonable to assume that some of the tenants will almost certainly use on-site equipment like forklifts, and therefore that they can use zero emissions equipment.

Second, the EIR claims the requirement could put the project at a competitive disadvantage and might be technologically infeasible depending on the performance needs of the end user. (FEIR at 3-100.) However, zero emissions equipment requirements are becoming more and more common because the technology is available now. The City of Fontana Warehouse Ordinance requires that all on-site motorized equipment be zero emission. (City of Fontana at 9-73.1). The Speedway Commerce Center II Project in San Bernadino County and the Beaumont Summit Station Project in Riverside County both require that all outdoor cargo handling equipment is zero-emission and powered by electricity (Speedway Commerce Center DEIR at 1-16; Beaumont Summit Station DEIR at 4.2-22). Additionally, the California Air Resources Board ("CARB") recommended that warehouses require that all service equipment (like yard hostlers, yard equipment, forklifts, and pallet jacks) that tenants use on-site to be zero emission in 2019. CARB said that the equipment was "widely available" in 2020. (CARB 2020). Further, CARB provides incentive funding to purchase zero emissions equipment through the Clean Off-Road Equipment Voucher Incentive. The Funding Finder website for the Voucher Incentive lists 51 programs that are available to buyers in Napa County. (California CORE Funding Finder Tool.) The California Attorney General also recommends that warehouses use all on-site electrical equipment. (AGO 2021.) The EIR did not provide substantial evidence that this measure is infeasible. In fact, the evidence shows that it is feasible and common.

7 CONT

II. Although the Project Will Have Significant Impacts on Air Quality, the EIR Fails to Adopt all Feasible Mitigation Measures.

The Project will have significant air quality impacts because it will result in exceedances of the regional emissions thresholds for VOC and NOx, for which the region is already in non-attainment. (DEIR at 3.2-45.) VOC and NOx are precursors to ozone, for which the region is already in nonattainment. (DEIR at 4-4.) Ozone (commonly referred to as smog) is created by the atmospheric mixing of chemicals released from fossil fuel combustion – such as VOC and NOx – and sunlight. Ozone poses one of the greatest health risks, prompting the EPA to strengthen its National Ambient Air Quality Standard for Ozone in 2015. (ALA 2022.) It has been linked to an increased incidence and risk of cancer, birth defects, low birth weights and premature death, in addition to a variety of cardiac and lung diseases such as asthma, COPD, stroke, and heart attack. (Laurent 2016; ALA 2020.)

8

Air quality is a significant environmental and public health concern in California. Unhealthy, polluted air contributes to and exacerbates many diseases and increases mortality rates. The U.S. government has estimated that between 10 to 12 percent of total health costs can be attributed to air pollution. (VCAPCD 2003.) Air pollution and its impacts are felt most heavily by young children, the elderly, pregnant women and people with existing heart and lung disease. People living in poverty are also more susceptible to air pollution as they are less able to relocate to less polluted areas, and their homes and places of work are more likely to be located near sources of pollution, such as freeways or ports, as these areas are more affordable. (ALA 2022.) Warehouse projects are well-documented sources of air quality degradation that can create serious, negative health outcomes for surrounding communities. (Betancourt 2012, pp. 4-5.)

Even despite undercounting impacts from mobile sources (*ante* section I.C), the EIR still recognizes that the Project will have a significant impact on air quality. However, the EIR fails to adopt commonsense, available mitigation measures, or explain why adopting such measures would be infeasible.

8
CONT

By proposing inadequate mitigation and then concluding that the Project's air quality impacts are significant and unavoidable, the City has fallen short of CEQA's requirement that lead agencies consider all feasible mitigation to reduce or avoid the Project's significant impacts. (See Pub. Resources Code, § 21002 [It is the "policy of the state that public agencies should not approve projects as proposed if there are feasible alternatives or feasible mitigation measures which will avoid or substantially lessen the significant environmental effects of such projects."], CEQA Guidelines, §§ 15092(b), 15043, 15126.4, subd. (a)(1).) Here, the EIR adopts inadequate mitigation measures that fall far short of recommended best practices.

VOC Emissions

The EIR admits that VOC emissions during operations will exceed the thresholds adopted by BAAQMD. (DEIR at 3.2-45.) Because the impact is significant, the EIR has an obligation to adopt all feasible mitigation measures. However, the EIR adopts a mitigation measure that allows the use of architectural coating products with levels of VOC up to five times higher than the California Attorney General's recommendation of a 10 g/L limit. (*Id.* at ES-7; AGO 2021.) By falling so far short of the Attorney General's best practices, the EIR fails to properly mitigate a significant impact. The Project must revise MM-AIR-2c to require the use of low-VOC products with less than 10 g/L.

In comments on the DEIR, the SWAPE comment letter suggested that the EIR should adopt a VOC limit of 10 g/L for paints and coatings used on the Project, consistent with the Attorney General's guidance. (FEIR at 82.) The FEIR responded that it is not necessary to modify MM AIR-2b (the measure that applies to coatings used during construction) to include a 10 g/L limit because VOC emissions during construction are already less than significant and so do not need to be mitigated. (*Id.* at 120.) That response is incomplete. Because architectural coatings are periodically reapplied during project operation (and the EIR says that these reapplications are the "principal" source of VOC emissions under control of the project (DEIR at

3.2-44)), MM AIR-2c applies the 50 g/L limit to coatings used during operation. (*Id.* at 3.2-58.) The FEIR does not address why the limit in MM AIR-2c cannot be modified to 10 g/L to more effectively mitigate VOC emissions during operation, which are significant and do need to be mitigated.

Idling times

The EIR admits that NOx emissions during operations will exceed the thresholds adopted by BAAQMD. (DEIR at 3.2-45.) Because the impact is significant, the EIR has an obligation to adopt all feasible mitigation measures. However, the EIR adopts a so-called mitigation measure that allows trucks to idle for up to five minutes—more than twice as long as the California Attorney General's recommendation of a two-minute limit. (DEIR at 3.2-58, AGO 2021.) Further, a five-minute idling restriction is required by the California Airborne Toxics Control Measure. Therefore, it is not truly mitigation measure, it is a promise to follow the law. As the California Attorney General notes, compliance with regulations is a baseline expectation and should not be labeled a mitigation measure. (AGO 2021.) Again the EIR replaces a recommended, feasible mitigation measure with a much weaker substitute that does not properly mitigate a significant impact. The Project must revise MM-AIR-2a to require idling times to be kept under two minutes.

8
CONT

The FEIR does not provide substantial evidence that limiting idling to two minutes is not feasible. Since state law limits idling to five minutes, the FEIR claims that a lower limit on idling would be "very difficult to enforce and would create confusion between local and State" idling restrictions. (FEIR at 3-101.) These claims are flawed. First, since the state law limiting idling to five minutes is enforced, it is not clear why two minutes would be any more difficult to enforce. Second, mitigation measures, by their very nature, are meant to establish higher standards than applicable law. As the California Attorney General has said, a requirement that is already a part of an applicable law should not be called a mitigation measure.

Reduce Impacts to Sensitive Receptors

The Project is likely to have significant impacts on sensitive receptors because it will generate a number of car and truck trips that are not correctly analyzed in the EIR. The EIR concludes that the Project will not expose sensitive receptors to substantial pollutant concentrations based on a Health Risk Assessment that uses unsupported estimates of trip generation. (DEIR at 3.2-59-61; *Ante* section I.C.) There is a residential neighborhood within half a mile of the project site, a school within one mile, and numerous other sensitive receptors all along SR 29. The Project will increase the traffic that passes by these sensitive receptors by an amount that is likely to be higher than the EIR estimates, by up to an order of magnitude. (*Ante* section I.C.)

Despite this, the Project will not adopt any of the mitigation measures that the California Attorney General recommends to protect sensitive receptors from trucking impacts. These include:

- Creating physical, structural, and/or vegetative buffers that adequately prevent or substantially reduce pollutant dispersal between warehouses and any areas where sensitive receptors are likely to be present, such as homes, schools, daycare centers, hospitals, community centers, and parks.
- Providing adequate areas for on-site parking, on-site queuing, and truck check-in that prevent trucks and other vehicles from parking or idling on public streets
- Locating warehouse dock doors and other onsite areas with significant truck traffic and noise away from sensitive receptors, e.g., placing these dock doors on the north side of the facility if sensitive receptors are adjacent to the south side of the facility.
- Screening dock doors and onsite areas with significant truck traffic with physical, structural, and/or vegetative barriers that adequately prevent or substantially reduce pollutant dispersal from the facility towards sensitive receptors
(AGO 2021)

8 CONT

III. The EIR Fails to Properly Analyze or Mitigate Transportation Impacts.

Completion of the Project will bring substantial additional traffic to the area. (EIR at 3.12-11; Betancourt et al. at 4.) Trucks serving facilities often idle on public streets and clog local roads when warehouses are at capacity, creating traffic congestion and hazards to local drivers who depend on these roads. (Betancourt et al. at 4.) Per CalEnviroScreen 4.0, this region is already heavily burdened, with traffic burdens falling in the 83rd highest percentile. (CalEnviroScreen 2022.) The addition of a major hub for trucks requires further analysis of the Project's impacts on transportation, including analysis of trucking impacts.

9

Almost all the project generated trips will travel on SR 29 because it is the only highway that connects to the site.[5] SR 29 is already overloaded with traffic and often has long queues and delays during peak hours. (City of American Canyon General Plan at 9-10.) The road passes within 500 feet of numerous sensitive receptors, including a park, a preschool and elementary school, two daycares, and four churches.

Because the EIR's analysis omits construction-related transportation and undercounts trip generation, it ignores the significant impacts that increased traffic on SR 29 will have. More traffic on an already-overburdened road will increase delays and truck idling, which in turn will impact all of the sensitive receptors along it.

a. The EIR Does Not Disclose the Transportation Impacts of Construction.

The FEIR fails to disclose the impact on VMT that the Project will have during construction when trucks, equipment, employees, and building materials will constantly come in and out of the Project site. (DEIR Section 3.12 generally.) To construct 2.4 million total square feet of warehouse (DEIR at ES-1) will require substantial labor, equipment, and staff that will need to be transported to the Project site. The EIR must carefully and completely assess the

10

[5] If a significant number of trucks do not use SR 29, that would be a violation of American Canyon's Guiding Policy 1.3, which is to "discourage regional traffic from bypassing SR 29 and impacting City streets." (City of American Canyon General Plan at 16.)

impacts that construction traffic will have on traffic and transportation in the local community. This is a major environmental impact of the Project that the DEIR ignores, in violation of CEQA. The Transportation section of the DEIR must be revised and expanded analysis to include all CEQA-required analysis. 10 CONT

b. The EIR's Analysis of Transportation Impacts During Operation Relies on the Same Inadequate Analysis that Ignores Truck Trips and Significantly Underestimates Trip Generation.

The EIR repeats the same failed analysis that ignores truck trip generation to conclude that the impact on VMT is not significant. The EIR concludes that it is appropriate to omit heavy-truck VMTs from the significance calculation because "local and state governments have little or no control over interstate trucking." (DEIR at 3.12-17.) Again, the limits of the City's jurisdiction have no bearing on the Project's significant environmental effects. Further, the EIR's conclusion that transportation impacts will not be significant is also based on the same incorrect, unsupported trip generation estimate. (DEIR at 3.12-11.) In sum, the EIR's conclusion that the Project will not have a significant impact on transportation is not supported by substantial evidence. (*Ante* section I.C; section I.B.) 11

c. The EIR Makes no Attempt to Mitigate Transportation Impacts.

The EIR does not adopt one single measure to mitigate the impacts of increased trips along SR 29. It must adopt the recommended measure below or explain why it is not feasible.

Public Transit

The EIR fails to adopt common-sense measures to mitigate employee VMT. The California Attorney General recommends that developers consult with local public transit agencies and construct new transit stops to improve public transit access around warehouses. (AGO 2021.) The City of American Canyon General Plan includes a policy that development plans will link employment centers to transit. (DEIR at 3.2-27.) The #11 Napa-Vallejo Connector bus route runs right past the project site, but it only stops 1.6 miles before the site and then again 2.9 miles after. (Vine Transit.) That is not walking distance, and the EIR admits that the site is not assessable via public transit unless an employee chooses to load their bike on the bus and then bike along a major highway. (DEIR at 3.12-15.) 12

The EIR must either require the applicant to fund the creation of a new bus stop that would make it possible for employees to get to work via public transit or explain why a bus that passes right by a warehouse where 3,643 people will work cannot feasibly stop there.

IV. The EIR Inadequately Analyzes and Mitigates the Project's Significant Impacts on Biological Resources.

Napa County is a biodiversity hotspot both within California and globally. It is located within the California Floristic Province, one of five Mediterranean biomes around the world known for high levels of plant diversity and endemism (Cowling et al., 1996; Rundel et al., 13

2016). Due to its dynamic topography, which ranges in elevation from 0 to 4,200 feet above mean sea level, and its varying microclimates, Napa County boasts a unique and diverse assemblage of habitats that host numerous plants and wildlife. (Napa County 2005.) These ecosystems are the backbone of Napa's idyllic scenery, and they provide important ecosystem services vital to the County's prosperity and way of life, such as erosion control, water quality protection, groundwater recharge, flood protection, resiliency to climate change, and more. It's therefore vital that development in American Canyon protect the area's significant biological resources.

13 CONT

a. Impacts to Wetlands Were Incorrectly Analyzed and Inadequately Mitigated.

The wetlands in and near the Project area provide important live-in habitat as well as local, regional, and global connectivity for the area's rich biodiversity. The Project – with its construction, buildings, roads, and associated activity —will permanently alter the form and function of these sensitive habitats. The EIR admits this. The EIR also admits that the wetland delineation conducted for the EIR contains errors (FEIR at 3-296-97), which suggests that there is more wetland area in the Project area that is not included in the analysis. Therefore, the EIR does not adequately describe the baseline conditions and cannot provide an in-depth analysis of or adequate mitigation for the Project's impacts to wetlands and the special-status species that rely on the wetlands. The EIR fails to comply with CEQA.

14

i. **The Wetland Analysis Fails Because the EIR's Baseline is Improper.**

To meaningfully assess a project's environmental effects, it's critical that the EIR accurately describes existing environmental conditions in and in the vicinity of the proposed project. (CEQA Guidelines §15125; *Communities for a Better Env't v South Coast Air Quality Mgmt. Dist.* (2010) 48 Cal. 4th 310, 320; *Save Our Peninsula Comm. v Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 119.) That description serves as the "baseline" for measuring the project's impacts to the environment and whether those impacts are significant. (CEQA Guidelines §§15125, 15126.2(a).)

The Project site is currently undeveloped, containing both wetlands and grasslands. The Project will pave over at least four acres of wetland habitat. (DEIR, Appendix C at 47-48.) The EIR uses a wetland determination done by Monk and Associates ("Monk report") to identify what areas of the Project site are wetland. (DEIR, Appendix C at 109.) Sarah Corbin, a senior biologist and Certified Professional Wetland Scientist, conducted a wetland analysis that found mistakes in the Monk report that make the results inconsistent with the current guidance from the U.S. Army Corps of Engineers. (FEIR, Corbin Report at 79.) Among other mistakes, the report incorrectly used an outdated plant list that identified *Helminthotheca echioides* as an upland species instead of as a wetland indicator species. (*Ibid*.) According to the Army Corps, *Helminthotheca echioides* is a wetland indicator. (*Ibid*.) Therefore, the areas on the Project site where *Helminthotheca echioides* was found are wetland but are not identified as such. The Corbin report identifies at least four locations on the project site where a correct analysis would

15

change the determination from upland to wetland. (*Ibid*.) Moreover, two of those misidentified locations are places where the Project plans to *create* wetland to mitigate project impacts. (*Ibid*.)

This is a significant mistake that invalidates the EIR's analysis of wetland impacts. It is not possible to understand the extent of impacts to wetlands without knowing how much wetland is on the site and where it is. By basing the analysis on an incorrect delineation, all of the EIR's wetland analysis—including the determination of how much wetland will be destroyed by the project, how much will be protected in the preserve, the role that existing wetland plays in the ecosystem, and the environmental impact of losing whatever amount will be lost—are all incorrect.

The City compounded this error by providing the faulty Monk Report to the U.S. Army Corps of Engineers (Corps). The Corps relied upon the Monk Report in issuing its Approved Jurisdictional Determination ("AJD"). (Adams Broadwell Letter, Exhibit A at 28.)

15 CONT

The City recognized its error, acknowledging that the Monk Report failed to disclose or identify existing wetlands on site. (FEIR at 3-296-97). In response to comments, the City attempted to dispel any such error by claiming that the EIR analysis is based on the AJD instead of on the Monk report directly. (*Ibid*.) This only confirms that the City's analysis is based on an incorrect wetlands determination and remains inadequate.

In addition, the EIR fails to disclose that the Project area is immediately adjacent to and connected via No Name Creek and its associated wetlands with a Napa River core vernal pool recovery area, as designated in the Recovery Plan for Vernal Pool Ecosystems of California and Southern Oregon ("Recovery Plan," USFWS 2005). Any impacts to the No Name Creek and its associated wetlands could therefore impact the identified core vernal pool recovery area. Such impacts were not adequately disclosed, assessed, or mitigated.

ii. The City Failed to Adopt all Feasible Mitigation for the Project's Impacts to Wetlands.

An EIR must describe mitigation measures to minimize the significant environmental effects identified in the EIR. (Pub Res C §§21002.1(a), 21061, 21100(b)(3); CEQA Guidelines §15126.4(a)(1)). Mitigation measures must be feasible and enforceable. (Pub Res C §21081.6(b); CEQA Guidelines §15126.4(a)(1-2).) Mitigation measures must be sufficiently detailed that it is possible to gauge their effectiveness, and the EIR must show by substantial evidence that the measure will be effective. (See, e.g. *Preserve Wild Santee v. City of Santee* (2012) 210 Cal.App.4th 260, 281 [plan for active habitat management did not describe anticipated management actions or include standards or guidelines for actions that might be taken]; *Sacramento Old City Ass'n v City Council* (1991) 229 Cal.App.3d 1011, 1027.) When comments suggest additional mitigation and are supported by expert opinion or technical evidence, the EIR must provide a detailed evidence-based response. (*Covington v. Great Basin Unified Air Pollution Control Dist.* (2019) 43 Cal.App.5th 867, 879.)

16

The Project plans to offset Phase 1 impacts to seasonal wetland with constructed wetlands in a 2:1 ratio; and Phase 2 impacts to season wetlands and vernal pools in a 1:1 ratio. (DEIR at 3.3-28-29.) These ratios are too low and not effective.

Mitigation must prioritize *avoiding* impacts to sensitive habitats like vernal pools and seasonal wetlands and other sensitive natural communities. If impacts are unavoidable, *only then* should preservation and enhancement/creation be considered. It is much more challenging to repair functionality to degraded ecosystems. In-kind mitigation should be undertaken at a minimum of 3:1 given that these habitats support numerous special-status species and high levels of biodiversity, can be important for wildlife connectivity and climate change resilience, and so much of these habitats have already been lost. Mitigation that consists of restored or created habitat should be provided at a minimum 5:1 mitigation ratio and should include long-term monitoring, adaptive management strategies, and well-defined measurable success criteria, to be funded in perpetuity.

Multiple scientific studies specifically address the need for higher mitigation ratios (along with long-term monitoring, identified and measurable success criteria, and adaptive management strategies) to improve chances of adequately mitigating impacts to habitats and species (Matthews & Endress, 2008; Mitsch & Wilson, 1996; Moilanen et al., 2009; Stein et al., 2018; Sudol & Ambrose, 2002; Windmiller & Calhoun, 2007; Zedler & Callaway, 1999). Moilanen et al. (2009) found that "very high offset ratios may be needed to guarantee a robustly fair exchange" and that "considerations of uncertainty, correlated success/failure, and time discounting should be included in the determination of the offset ratio to avoid a significant risk that the exchange is unfavorable for conservation in the long run." The preservation of high-quality wetland habitat in and near the Project area should be prioritized, the minimum acreage of wetland habitat mitigation should be greater if habitat is being restored or created, and mitigation should be planned in a way that is protective from edge effects and fragmentation to improve the probability of ecologically functional mitigation. Created and restored habitat mitigation ratios should be much higher than preservation mitigation ratios, and they should be coupled with extended years of effective monitoring and adaptive management strategies. (Ambrose et al., 2006; Moilanen et al., 2009; Sudol & Ambrose, 2002). Scientists recommend 15-20 years or more of monitoring and adaptive management to determine the success, or lack thereof, of enhanced, restored, or created habitat. (Mitsch & Wilson, 1996; Zedler & Callaway, 1999). The City is required to consider all feasible mitigation. (Pub Res C §§21002, 21002.1 (b), 21081(a).). The City has not demonstrated that it considered higher ratios, nor why higher ratios are infeasible. If higher mitigation ratios are not feasible, the DEIR must provide evidence and analysis supporting that conclusion.

16
CONT

The City's mitigation plan and analysis suffers from other serious problems. First, the discussion of wetland mitigation fails to mention that the project site will be specifically designed to discourage wildlife use by intentionally removing any features that would attract large flocks of birds or other wildlife. (DEIR at 3.9-52; FEIR Appendix L at 4.) The Project will evaluate the emergent wetlands and "other potential wildlife attractant features" in the Wetland Preserve to make sure they are managed such that they do not attract wildlife that might be a safety hazard for the nearby Napa County Airport. (FEIR Appendix L at 4.) This management might include draining ponded water, or unspecified "vegetation." (*Ibid*.) The FEIR concludes that, because the development of the site will cause wildlife disturbances from lighting, human presence, and noise, and the wetland will be mitigated at a 1:1 ratio, the wildlife activity on the property would remain "at or below current levels." (*Id*. at 6.) The EIR is working at cross-

purposes by claiming that the Wetland Preserve will be such effective habitat that it completely mitigates the impact of losing 163 acres of established habitat, but also that the Preserve will not attract significant wildlife. The resulting claim—that one acre of removed wetland can be effectively mitigated with one acre of created wetland that is managed to remove "wildlife attractants"—is not supported by substantial evidence and must be corrected.

Second, the EIR fails to disclose that a gravel road has already been constructed through the area to be set aside as wetlands preserve. (Recording of American Canyon Planning Commission Meeting (Nov. 17, 2022).) The City must disclose and analyze the new road's direct and indirect effects on the function of the preserve in order to provide substantial evidence that the preserve will be effective. Third, the inaccurate wetland delineation raises serious questions about whether the mitigation plan is mitigating the correct acreage of existing wetland, and whether any of the areas where wetland will be created are, in fact, already wetland. In fact, the EIR shows that the EIR plans to "create" wetland on at least two locations that a correct wetland delineation would have identified as already containing wetland. (FEIR, Corbin Report at 79.) The City cannot possibly provide substantial evidence that the preserve will be effective until it provides a corrected wetland delineation. 16 CONT

b. The EIR Does not Adequately Analyze or Mitigate the Project's Impact to Wildlife Connectivity.

The EIR acknowledges that No Name Creek is a "major wildlife corridor" (DEIR at 3.3-38) and that a number of wildlife species were observed on the site, but maintains that the project will not result in significant impacts to the movement of wildlife (*Id.* at 3.3-38). This conclusion is not supported by substantial evidence. It ignores the likelihood that development adjacent to the creek will affect its function as a wildlife corridor, even if the creek itself is not directly paved over. Negative edge effects from human activity, such as traffic, lighting, noise, domestic pets, pollutants, invasive weeds, and increased fire frequency, have been found to be biologically significant up to 300 meters (~1000 feet) away from anthropogenic features in terrestrial systems (Environmental Law Institute, 2003). Edge effects will be particularly acute in this case, where the adjacent development will be designed specifically to repel wildlife. 17

The EIR does not account for the impact of the existing Devlin Road and the newly constructed gravel road on the ability of wildlife to safely use the Wetland Preserve, or the possible impacts of the roads and increased traffic on those roads on the health of the Creek and associated wetlands. The EIR must include an analysis of how connectivity between wetlands and upland habitat and No Name Creek's function as a wildlife corridor will be affected by being further hemmed in by development, and must adequately mitigate the Project's impacts.

In addition, the EIR does not take into account the need for connectivity between aquatic resources and sufficient upland habitat within the Wetland Preserve. Exhibit 3.3-3 shows the Project Level Site Plan and the Potential Future Phase 2 Area would come very close to aquatic features in the Wetland Preserve, which could have negative effects on the functionality of the existing and created wetlands the preserve is supposed to protect. The EIR fails to provide any setbacks or buffers from riparian and wetland habitats. Connectivity between riparian and other wetland habitats and upland terrestrial habitat is important for wildlife that rely on these habitats.

A literature review found that recommended buffers around aquatic resources for wildlife often far exceeded 100 meters (~325 feet) (Robins, 2002). For example, Kilgo et al. (1998) recommend more than 1,600 feet of riparian buffer to sustain bird diversity. In addition, amphibians, which are considered environmental health indicators, have been found to migrate over 1,000 feet between aquatic and terrestrial habitats through multiple life stages (Cushman, 2006; Fellers & Kleeman, 2007; Semlitsch & Bodie, 2003; Trenham & Shaffer, 2005). For example, California red-legged frogs have been found to migrate about 600 feet between breeding ponds and non-breeding upland habitat and streams, with some individuals roaming over 4,500 feet from the water (Fellers & Kleeman, 2007). Western pond turtle nests have been found up to 1,919 feet from aquatic habitats and individuals have been documented to move regularly between aquatic habitats with long-distance movements of up to 2,018 feet (Sloan, 2012). Therefore, any wetland preserve should have designated setbacks or buffers appropriate for the species that are known to occur or have the potential to occur in or near the Project area.

As detailed in a 2021 Center Report (Yap et al., 2021), roads and development create barriers that lead to habitat loss and fragmentation, which harms native wildlife, plants, and people. Limiting movement and dispersal can affect species' ability to find food, shelter, mates, and refugia after disturbances like fires or floods. Individuals can die off, populations can become isolated, sensitive species can become locally extinct, and important ecological processes like plant pollination and nutrient cycling can be lost. As barriers to wildlife movement, poorly-planned development and roads can affect an animal's behavior, movement patterns, reproductive success, and physiological state, which can lead to significant impacts on individual wildlife, populations, communities, landscapes, and ecosystem function (Brehme et al., 2013; Ceia-Hasse et al., 2018; Haddad et al., 2015; Marsh & Jaeger, 2015; Mitsch & Wilson, 1996; Trombulak & Frissell, 2000; van der Ree et al., 2011). For example, habitat fragmentation has also been found to increase local extinction risk in amphibians and reptiles (Brehme et al., 2018; Cushman, 2006; Delaney et al., 2021), cause high levels of avoidance behavior and mortality in birds and insects (Benítez-López et al., 2010; Kantola et al., 2019; Loss et al., 2014), and alter pollinator behavior and degrade habitats (Aguilar et al., 2008; Goverde et al., 2002; Trombulak & Frissell, 2000).

17
CONT

The EIR failed to disclose impacts to wildlife connectivity by relying on conclusory assertions that the Wetland Preserve will fully mitigate all impacts. This conclusion is not supported by substantial evidence because it does not acknowledge the scientific evidence on the harms of edge effects or habitat fragmentation. Further, it relies on the Wetland Preserve consisting of existing and created wetlands with no guarantee of success (see above discussion) to mitigate impacts, without admitting that the Preserve itself will be fragmented by the existing Devlin Road as well as a newly constructed road. The EIR must be amended to properly analyze these impacts and develop effective mitigation to preserve habitat connectivity.

The preservation of No Name Creek and its associated wetlands and upland habitat as a functional wildlife corridor is important because these habitats support high levels of biodiversity and are connected to a California Audubon-designated Important Bird Area ("IBA") (see below

for more details on the IBA).[6] The riparian area also likely serves as an important movement corridor for wide-ranging species that need regional connectivity, like mountain lions, bobcats, deer, and badgers, as well as less mobile species that require more localized connectivity between aquatic and upland habitat, like western pond turtles and California red-legged frogs.

Riparian ecosystems have long been recognized as biodiversity hotspots performing important ecological functions in a transition zone between freshwater systems and upland habitats. Many species that rely on these aquatic habitats also rely on the adjacent upland habitats (e.g., riparian areas along streams, and grassland habitat adjacent to wetlands). In fact, 60% of amphibian species, 16% of reptiles, 34% of birds and 12% of mammals in the Pacific Coast ecoregion depend on riparian-stream systems for survival. (Kelsey and West 1998.) Loss of biodiversity due to habitat removal, degradation, and fragmentation contributes to ecosystem degradation, which will diminish a multitude of ecosystem services in the long-term. 17 CONT

It is estimated that 90-95% of historic riparian habitat in the state has been lost (Bowler, 1989; Riparian Habitat Joint Venture, 2009). Using 2002 land cover data from CalFire, the Riparian Habitat Joint Venture estimated that riparian vegetation makes up less than 0.5% of California's total land area at about 360,000 acres (Riparian Habitat Joint Venture, 2004). This is alarming because riparian habitats perform a number of biological and physical functions that benefit wildlife, plants, and humans, and loss of what little is left will have severe, harmful impacts on special-status species, overall biodiversity, wildlife connectivity, and ecosystem function. California cannot afford to lose more riparian corridors.

c. The EIR Does not Properly Analyze or Mitigate the Project's Impacts to Swainson's Hawk.

The EIR admits that the project site provides suitable foraging habitat for the Swainson's hawk and that Swainson's hawks have been observed foraging there. (DEIR at 3.3-24) As the California Department of Fish and Wildlife commented, loss of foraging habitat is the primary threat to Swainson's hawk populations in California. (FEIR at 31.) Yet the EIR claims that the loss of 163 acres of Swainson's hawk foraging habitat will have no significant impact to its foraging habitat, either directly, indirectly, or cumulatively without providing substantial evidence to support such claims. (DEIR at 3.9-51, 3.3-24.)

The California Department of Fish and Wildlife (CDFW) determined that the Project EIR is "inadequate to address impacts to Swainson's hawk." (CDFW 2022.) In its letter reviewing the Final EIR, CDFW noted that the Project would remove an amount of habitat that is equal to 7% of the preserved foraging habitat that is available near the Project, which is a "significant proportion." (*Ibid*.) Further, the EIR does not propose mitigation for the loss of foraging habitat. (*Ibid*.) CDFW concludes that the Project would contribute a "**significant cumulative impact to a state threatened species**" and strongly recommends that the Project mitigate for foraging habitat. (*Ibid.)* 18

[6] Audubon Important Bird Areas of California, available at https://www.audubon.org/important-bird-areas/state/california?field_iba_status=1&priority=2 (Accessed January 3, 2023).

Swainson's hawk is a raptor species native to California that is a threatened species under the California Endangered Species Act. (CDFW 2016.) Historically, Swainson's hawk was common throughout most of California. Currently, there are estimated to be under 2,000 breeding pairs anywhere in the state—a 80% decrease from historic levels. (*Ibid*.) The primary threat to the hawk is habitat loss, which may have been the greatest factor in reducing its range and abundance in California over the last century. (*Ibid*.) Swainson's hawk need natural grasslands, pasture, or hay crops to forage, which makes them dependent on land use patterns and vulnerable to development of incompatible land uses and to habitat fragmentation. (*Ibid*.) Therefore, maintaining large heterogenous areas of grasslands is a priority for protecting the species. (*Ibid*.) Swainson's hawk is vulnerable to impacts from urban development, reduction in grasslands, and orchard and vineyard cultivation, all of which are occurring at significant levels in Napa County. (CDFW 2022.)

The EIR claims that the 45-acre preserve will completely mitigate the impact to the Swainson's hawk foraging habitat. The EIR's only other mitigation measures for Swainson's hawk focus on buffer areas around observed nests, which do not address the area's primary use to the hawk as foraging habitat. The City provides no evidence to support its conclusion that 45 acres of wildlife preserve will effectively mitigate for the loss of 163 acres of foraging habitat, especially because the analysis does not acknowledge or analyze the limited functionality of a small island of existing and created wetlands that is surrounded by wildlife-repellant development and has roads running through it. Moreover, Swainson's hawk is not typically associated with wetlands. (CDFW 2022.) The Project would remove the majority of the grasslands on the property, without mitigation. (*Ibid*.) The City has offered no evidence that the hawk will be able to make use of this wetland area in place of grasslands. The EIR also asserts that the total 2,000 acres of habitat available within five miles of the Project site will be sufficient foraging habitat. (DEIR at 3.3-24.) To calculate this number, it totals up various small pieces of land available in a patchwork around and between intensive development. Claiming that the hawk can use any nearby piece of mostly undeveloped space, no matter how hemmed in or degraded, again ignores scientific evidence on the effects of development on the habitat value of areas. Further, the presence of preserved habitat elsewhere does not mean that that the permanent removal of these 163 acres can't be significant. There is no evidence for the assertion that mitigation for loss of habitat is not required as long as habitat remains somewhere else.

18
CONT

Edge effects from the light and noise that will be generated by Project construction and operation have documented effects on bird species. (Environmental Law Institute, 2003.) For example, field observations and controlled laboratory experiments have shown that traffic noise can significantly degrade habitat value for migrating songbirds (Ware et al., 2015). Subjects exposed to 55 and 61 dBA (simulated traffic noise) exhibited decreased feeding behavior and duration, as well as increased vigilance behavior. (*Ibid*.) Such behavioral shifts increase the risk of starvation, thus decreasing survival rates. In particular, this evidence of traffic effects calls for careful consideration of the roads through the preserve, one of which was not acknowledged in the EIR.

In addition, the use of anticoagulant rodenticides in the Project area should be prohibited. Secondary poisoning has been documented in many non-target animals, especially predators, including mountain lions (Department of Pesticide Regulation, 2018), coyotes (Riley et al., 2003), bobcats (Riley et al., 2007; Serieys et al., 2015, 2021), San Joaquin kit fox (McMillin et al., 2008), California fishers (Gabriel et al., 2012), raptors (Lima & Salmon, 2010), and many more. Special-status species, including Swainson's hawk, golden eagles, northern harriers, and others that are known to occur or have the potential to occur in the Project are vulnerable to poisoning. The poisons can also leach into the water and soils, harming other animals and plants across the landscape. Instead, alternatives to the use of harmful rodenticides, such as promoting the presence of natural predators, should be considered. A 2017 study conducted in the Ventura County Watershed Protection District found that attracting raptors to flood control facilities by installing raptor perches and nesting facilities (e.g., barn owl boxes, hawk nesting platforms) nearby was 50% more effective at preventing new rodent burrows compared to rodenticides (Ventura County Public Works Agency, 2017). The authors estimated that this technique could result in savings of about $7,500 annually. Not only is this method cost-effective, but it would also avoid exposing a multitude of non-target species to harmful rodenticides.

18 CONT

In sum, the proposed Project would increase human activity and traffic around the project site, which could have significant impacts to Swainson's hawk. Simply conducting pre-construction nesting bird surveys and making available fragmented pieces of significantly degraded habitat does not reduce the Project's impacts on special-status birds to less than significant.

d. The EIR Does not Properly Analyze or Mitigate the Project's Impacts to Other Special-Status Bird Species.

The golden eagle is a fully protected species that is highly sensitive to human disturbance. (Steenhof et al. 2014, Spaul and Heath 2016, Spaul and Heath 2017). A golden eagle was observed foraging at the Project Site during a wildlife survey. (DEIR at 3.3-25). The Project will result in the net loss of more than 160 acres of potential foraging habitat. (DEIR at 3.9-51). Habitat loss and fragmentation from development is a serious threat to golden eagle populations, which are declining in California. (Phillips, 1986; Weins, 2022). However, the EIR concludes that the loss of this habitat is not significant and does not mitigate it. Therefore, potentially significant impacts to the golden eagle remain unmitigated.

The northern harrier is California Species of Special Concern. Northern harriers were also observed foraging at the Project site. (DEIR at 3.3-25). The loss and degradation of foraging habitat is a primary threat to the northern harrier. (Shuford, 2008). The EIR again does not address the potential loss of foraging and breeding habitat. Further, the proposed Wetland Preserve will not provide functional habitat for the norther harrier, because the species requires large, undisturbed habitats. (*Ibid*.) The EIR must acknowledge and mitigate these impacts.

19

The EIR fails to adequately disclose, assess, and mitigate impacts to resident and migratory birds, including but not limited to golden eagles, northern harriers, tri-colored blackbirds, and burrowing owls. In fact, the EIR fails to mention that the Project area is adjacent to a California Audubon-designated IBA of global priority for resident and migratory birds

within the Pacific Flyway, a north-south migratory corridor the extends from Alaska to Patagonia.[7] Not only is the San Pablo Bay Wetlands IBA just west of the Project area, but the No Name Creek in the northwest corner of the Project site is connected to that IBA and likely feeds into it. IBAs are critical for regional, state, and global connectivity particularly for migratory birds that require habitat along their migratory path to find food, shelter, and nesting habitat. Therefore, the Project area's wetlands and grasslands are an extension of the IBA and provide important habitat and connectivity for birds that rely on the area for food and shelter.

As mentioned above, edge effects from Project construction and operation will have impacts on the IBA and special-status birds. Negative edge effects from human activity, traffic, lighting, noise, domestic pets, pollutants, and invasive weeds have been found to be biologically significant up to 300 meters (~1000 feet) away from anthropogenic features in terrestrial systems (Environmental Law Institute, 2003). This is important to consider when open space like designated IBAs are adjacent to the Project area, as birds and other wildlife have been found to be sensitive to edge effects. For example, field observations and controlled laboratory experiments have shown that traffic noise can significantly degrade habitat value for migrating songbirds (Ware et al., 2015). Subjects exposed to 55 and 61 dBA (simulated traffic noise) exhibited decreased feeding behavior and duration, as well as increased vigilance behavior (Ware et al. 2015). Such behavioral shifts increase the risk of starvation, thus decreasing survival rates. Another study found a 28% decrease in bird abundance in areas when traffic noise was present compared to when there was no traffic noise (McClure et al., 2013). The EIR failed to disclose and adequately analyze and mitigate the Project's impacts to special-status birds.

19 CONT

V. The City Must Revise and Recirculate the EIR to Address Significant New Information Provided in the FEIR and at the Planning Commission Meeting.

"Public participation is an essential part of the CEQA process." (CEQA Guidelines § 15201.) To that end, CEQA requires lead agencies to make the Draft EIR available for public review and comment, and then to respond to those comments. (Pub. Res. Code § 21092, CEQA Guidelines § 15088(a).) The information in a draft EIR must provide the public with "a meaningful opportunity to comment" on a project's impacts. (*Spring Valley Lake Assn. v. City of Victorville* (2016) 248 Cal.App.4th 91, 108 [recirculation was required where draft EIR omitted air quality information].) Given the public's vital role in the CEQA process, a lead agency must recirculate an EIR for additional of public review and comment when, after the close of the comment period, "new significant information" shows that the draft EIR's analysis was fundamentally inadequate and conclusory in nature such that that meaningful public review and comment were precluded. (CEQA Guidelines § 15088.5(a)(4).) New information is significant where the EIR is changed in a way that "deprives the public of a *meaningful* opportunity to comment" on a substantial adverse effect or feasible (but unimplemented) mitigation measures or alternatives. (CEQA Guidelines § 15088.5(a) [emphasis added].) Where new information demonstrates the inadequacy of the draft EIR's analysis, recirculation is required "so that the public is not denied an 'opportunity to test, assess, and evaluate the data and make an informed judgment as to the validity of the conclusions to be drawn therefrom.'" (*Save Our Peninsula*

20

[7] Audubon Important Bird Areas of California, available at https://www.audubon.org/important-bird-areas/state/california?field_iba_status=1&priority=2 (Accessed January 3, 2023).

Committee v. Monterey County Bd. of Supervisors (2001) 87 Cal.App.4th 99, 131 [emphasis added].)

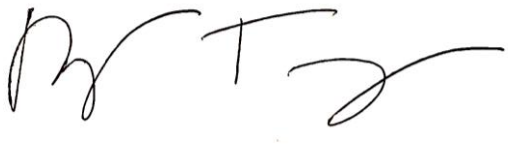
A revised EIR is required here for two reasons. First, as disclosed at the Planning Commission meeting and more fully discussed in the November 17th letter submitted to the Commission by Richard M. Franco on behalf of Napa/Solano Residents for Responsible Development, a new gravel road was recently built through the proposed wetlands preserve. (Adams Broadwell Letter.) The EIR repeatedly relies on the 45-acre wetland preserve on the site to mitigate impacts to wetlands, wildlife connectivity, and sensitive species. (DEIR at ES-11-14, 2-6.) For impacts to riparian habitats, the wetlands preserve is the only mitigation measure offered. (*Id*. at 11.) The preserve is a central part of the mitigation scheme. Nowhere does the EIR mention that a road has been built through it, and the road is absent from all maps and diagrams of the site. The fact that the preserve is not a completely protected area is significant new information that requires a new analysis of its ability to mitigate impacts to biological resources. 20 CONT

Second, in an eleventh-hour attempt to address the EIR's glaring deficiencies, the City issued a new study that purports to show the Project's VMT will be more than 15% below the regional average. New information cannot remedy a DEIR's inadequate analysis of a project's impacts in the first instance. (*Ukiah Citizens for Safety First v. City of Ukiah* (2016) 248 Cal.App.4th 256, 266-67.) Further, this new information substantially changes the claims made in the DEIR. Instead of claiming that truck VMTs should be foreclosed from the GHG significance analysis, the City is now claiming in the alternative that truck VMTs will be below the significance threshold, based on a new data of average truck trip lengths for warehouses in Napa County. As discussed above, this claim amounts to saying that warehouses in Napa County can never produce significant GHG emissions from truck trips, because the impacts of truck trips generated by any Napa warehouse can be analyzed and pronounced insignificant via reference to the lower average trip lengths of other Napa County warehouses. This is a startling claim that the public certainly deserves a chance to assess.

By offering significant new information in the FEIR and at the Planning Commission meeting, the City's environmental review process has deprived the public of a meaningful opportunity to comment. The City will therefore need to recirculate a revised EIR for public review and comment prior to approving the Project.

VI. Conclusion

Thank you for the opportunity to submit comments on the Final EIR for the Giovannoni Project. Due to the shortcomings described above, the City should make corrections to the EIR and Project—including properly analyzing and mitigating for the Project's significant impacts to GHG emissions, air quality, transportation, and biological impacts—and recirculate a revised and legally adequate EIR for public review and comment. 21



Given the possibility that the Center will be required to pursue legal remedies in order to ensure that the City complies with its legal obligations including those arising under CEQA, we note the City's statutory duty to maintain and preserve all documents and communications that

may constitute part of the "administrative record" of this proceeding. (§ 21167.6(e); *Golden Door Properties, LLC v. Superior Court* (2020) 53 Cal.App.5th 733.) The administrative record encompasses any and all documents and communications that relate to any and all actions taken by the City with respect to the Project, and includes "pretty much everything that ever came near a proposed [project] or [] the agency's compliance with CEQA . . . ." (*County of Orange v. Superior Court* (2003) 113 Cal.App.4th 1, 8.) The administrative record further includes all correspondence, emails, and text messages sent to or received by the City's representatives or employees that relate to the Project, including any correspondence, emails, and text messages sent between the City's representatives or employees and the Project applicant's representatives or employees. Maintenance and preservation of the administrative record requires that, *inter alia*, the City (1) suspend all data destruction policies; and (2) preserve all relevant hardware unless an exact replica of each file is made.

THIS PAGE INTENTIONALLY LEFT BLANK

Center For Biological Diversity (CBD)

Response to CBD-1

The commenter provided introductory remarks and noted that the City failed to provide notice of Draft EIR availability to CBD. The commenter requested that the City of American Canyon confirm that every party that requested notice received notice. The commenter alleged that it appeared that the City did not publish notice of the Draft EIR review period in the Napa Valley Register.

The City acknowledges that the commenter's organization was omitted from the original Draft EIR notification in May 2022 and corrected that error by providing the commenter with an additional 45-day review period that began December 2, 2022. Although the commenter participated in and provided comments at the November 17, 2022 Planning Commission Meeting, the commenter did not mention to the City the earlier lack of adequate notice of the availability of the Draft EIR until December 1, 2022, five days prior to City Council meeting at which the project was scheduled to be considered for approval. Shortly after the issue was raised, the City agreed to allow the commenter a full 45-day period in which to submit formal comments on the Draft EIR. This opportunity was not extended to others; however, as the City had provided adequate legal notice with respect to all other interested persons and parties, as reflected in the City's standard mailing list for development projects (from which CBD had inadvertently been omitted) and in the publication of the Notice of Availability of the Draft EIR in the Vallejo Times Herald (Appendix P: Public Notices).

Response to CBD-2

The commenter provided general comments about climate change posing a catastrophic and pressing threat to California. The City does not deny the significance of climate change, as is evidenced through the discussion included in the introductory portions of the greenhouse gas (GHG) chapter in the EIR.

Response to CBD-3

The commenter notes that the Draft EIR used a significance threshold to evaluate the potential impacts from GHG emissions that was based on employee VMT. The commenter states that this threshold omits VMT from truck trips and, thus, understates the project's GHG impacts. Furthermore, the commenter states that the updated thresholds of significance for climate land use impacts established by the Bay Area Air Quality Management District (BAAQMD) in 2022 did not adopt a significance threshold for industrial land use, and that the Draft EIR's use of the BAAQMD updated significance threshold is not supported by substantial evidence and downplays the proposed project's GHG emissions impacts.

VMT is addressed in Master Response D.

The updated BAAQMD threshold of significance for GHG emissions impacts is based on the fair share concept as authorized by the *Center for Biological Diversity v. Department of Fish & Wildlife* case (2015) (62 Cal.4th 204, 223) as discussed in the Draft EIR, pp. 3.6-41–3.6-44. Under this approach, not every source of emissions needs to be considered in a local agency's threshold, especially since the State of California, independent of the local agency, is addressing numerous emission sources through Statewide policies (such as, here, ARB's Sustainable Freight Strategy, which is discussed in the Draft EIR on pages 3.6-28, 3.6-31-3.6-32, 3.6-45, 3.6-57, 3.6-62, and 3.6-67). As included in the

Draft EIR sections cited above, the City provides a detailed rationale to support the selection of the significance thresholds. As explained on pages 3.6-44 through 3.6-46 of the Draft EIR,

> the City of American Canyon exercises its discretion as the CEQA lead agency to embrace and adopt the BAAQMD's . . . approach, with minor refinements, as being reflective of what the City considers to be the best current thinking on the subject. As the Supreme Court said in Center for Biological Diversity v. Department of Fish & Wildlife [2015] 62 Cal.4th at p. 228), "[a] lead agency enjoys substantial discretion in its choice of methodology."
>
> The refinements made by the City relate to the manner of dealing with VMT. The BAAQMD proposal does not specify what level of VMT reduction, vis-à-vis a regional average, should be used for an industrial project such as the proposed project. Rather, BAAQMD is silent on this subject. The City therefore had to consider how to address this particular issue. One option was to consider the approach that BAAQMD is considering with respect to retail projects: to assess whether such projects will result in a net increase in existing VMT. A second option was to consider BAAQMD's approach with respect to residential projects: to assess whether such projects will result in 15 percent below the existing regional VMT per capita. And a third option was to consider BAAQMD's approach with respect to office projects: to assess whether such projects will result in VMT 15 percent below the existing VMT per employee.
>
> Because industrial projects more closely resemble office projects than residential projects, and because the BAAQMD approach for office projects is more conservative than the approach for retail projects, the City has conservatively determined that it should use the BAAQMD' s proposed approach used for office projects: 15 percent below the existing VMT per employee.
>
> BAAQMD's silence on the issue of how to address VMT with respect to industrial projects is not the only example of a lack of guidance on this subject from expert regulatory agencies. Neither CEQA Guidelines Section 15064.3 nor the 2018 Technical Advisory on Evaluating Transportation Impact in CEQA published by the Governor' s Office of Planning and Research (OPR) provides specific guidance related to industrial land uses. As with the proposed BAAQMD thresholds, OPR's Technical Advisory provides guidance relative to VMT significance criteria for residential, office, and retail uses but does not address industrial land uses.
>
> The majority of trips generated by industrial land uses are typically attributed to employees and heavy- duty vehicles used to transport commercial goods. CEQA Guidelines Section 15064.3(a) states that VMT refers to the amount and distance of *automobile* travel attributable to a project (italics added). The OPR Technical Advisory states that the term "automobile," as used in Section 15064.3(a), refers to on-road passenger vehicles, specifically cars and light trucks; heavy vehicles are not included in the definition.
>
> The legislature's stated intent in abandoning level of service as a metric for transportation-related impacts, as set forth in Public Resources Code Section 21099(b)(1), was to promote

> the reduction of GHG emissions, the development of multimodal transportation networks, and a diversity of land uses. The GHG emissions of trips associated with heavy vehicles serving industrial uses are addressed through the implementation of Statewide programs such as the ARB's Sustainable Freight Strategy, which through regulations such as the Truck and Bus Regulation and ACT Regulation will transition a larger and larger portion of heavy-duty trucks operating within California to be electric through 2050. Additionally, heavy-duty vehicle trips associated with industrial land uses would occur regardless of the available modes of transportation (e.g., walking, bicycling, public transit) or the mix of land uses in the project vicinity. Therefore, limiting the VMT analysis to employee automobile travel is consistent with State policy to reduce GHG emissions from land use decisions and the availability of alternatives to automobile travel. For these reasons, the City has determined that it is appropriate to employ a VMT metric for GHG analysis based on the proposed BAAQMD approach for office land uses, namely, one focused on employee VMT.

The City stands by this reasoning, but notes that, as explained in Master Response D, the Final EIR includes a technical study by transportation Fehr and Peers that addresses whether VMT impacts would be significant if truck trips were added into the analysis. For reasons explained in detail in the Master Response, the conclusion was in the negative. Thus, the Final EIR, in effect, renders moot the commenter's criticism of the approach to VMT analysis set forth in the Draft EIR.

It is worth noting, however, that the Draft EIR *does* account for GHG emissions associated with truck traffic. (See Draft EIR, pp. 3.6-48 ["truck travel distances utilized in emission estimates contained in this analysis were assumed to be 32.8 miles per trip"], 3.6-53 [Table 3.6-4 (Operational GHG Emissions) show GHG emissions from trucks as 13,175 MT CO_2e/year].) The document therefore fully discloses these emissions. As explained above, though, the BAAQMD threshold, as refined by the City to address VMT from industrial land uses, treats those emissions as less than significant where an industrial project's VMT is 15 percent or more below the regional average. As explained in Master Response D, the project's truck trips came in at roughly 39 percent below the regional (Bay Area) average.

The commenter further states that the GHG analysis included in the Draft EIR is similar to the analysis included in *Friends of Oroville v. City of Oroville* (2013) 219 Cal.App.4th 832, 842. In that case, the court held that the City of Oroville as lead agency had failed to adequately assess the impact of a project's greenhouse gas emissions. The court criticized the lead agency for giving too much weight to the project's supposed consistency with the original California Air Resources Board (ARB) Scoping Plan, which did not address transportation sources and thus did not address the majority of the project's GHG emissions. However, in the preparation of the Draft EIR for this proposed project, the City of American Canyon relied on an actual significance threshold adopted by BAAQMD, an expert agency. The BAAQMD's inclusion of VMT considerations into its updated adopted threshold expressly accounts for transportation emissions. In more recent cases, the court has encouraged local agencies to follow thresholds developed by BAAQMD and other expert agencies. The California Supreme Court did so in *Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th 204, 223). Notably, *Friends of Oroville* was issued before that Supreme Court decision, and recommends the use of the so-called "business-as-usual" methodology that the Supreme Court found to be problematic. (Compare *Friends of Oroville v. City of Oroville* (2013) 219

Cal.App.4th 832, 843 with CBD v. CDFW (2015) 62 Cal.4th at pp. 227.) *Friends of Oroville*, then, is a precedent of questionable validity

As the lead agency for the project, the City has discretion to consider the 2022 BAAQMD threshold and to tailor it to address industrial uses, particularly insofar as the City was very conservative in how it did so, especially when it added in truck trips in the Final EIR. The City considered the 2017 industrial threshold, previously established by BAAQMD, to be out of date and was not bound to use it. " A lead agency enjoys substantial discretion in its choice of methodology." (*Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th at p. 228.). Per BAAQMD guidance, the expert air quality scientist staff that prepared the air quality and GHG sections of the Draft EIR consulted with the BAAQMD and received guidance that the updated BAAQMD threshold was appropriate to apply to a warehousing and logistics project, such as the proposed project.[4] This guidance from the BAAQMD, as an agency with expertise in the evaluation and reduction of GHG emissions impacts, supported the City in the selection of the 2022 BAAQMD climate change land use project design thresholds as appropriate thresholds to evaluate the potential impacts of the proposed project.

Response to CBD-4
The commenter alleged that evidence shows that the project will have significant GHG impacts based on comparison to the formerly recommended 2017 BAAQMD GHG emissions thresholds of significance for industrial projects.

As previously discussed, the City as lead agency has discretion to select the thresholds of significance used to evaluate the potential impacts of a project. For the proposed project, the City provided a detailed rationale for selecting the recently updated 2022 BAAQMD climate change land use thresholds of significance to evaluate the potential GHG emissions impacts of the proposed project, and selected this updated threshold based, in part, upon guidance received from the BAAQMD upon consultation between BAAQMD staff and the air quality scientist staff that evaluated the potential impacts of the proposed project.[5] BAAQMD staff has furthermore provided guidance to air quality scientist staff that the 2017 BAAQMD GHG thresholds of significance are outdated, since these thresholds were designed to show that projects were consistent with the State's attainment of the emission reductions required under AB 32 and the 2020 emission reduction targets included therein, and do not include the 2030 emission reduction goals included in SB 32.[6] Under the updated recommended threshold of significance, which are based on the "fair share" concept for evaluating the cumulative nature of GHG emissions impacts, the proposed project has a less than significant impact for GHG emissions.

Furthermore, the proposed project is arguably an example of a sustainability showcase project, as detailed in the submitted December 2, 2022, letter from Joe Livaich at Buzz Oates Construction to Mr. Brent Cooper (and provided in Appendix N). The proposed project will be powered by 100

[4] Young, A., personal communication, May 5, 2022.

[6] Young, A. *Question about GHG Thresholds for CEQA document in Unincorporated Contra Costa County.* Email message to Jessica Coria, air quality scientist staff involved with preparation of the Air Quality and GHG Impact Analysis sections.

percent on-site solar energy, will not include the use of any natural gas, will utilize recycled water sources, will provide electric infrastructure to support future needs of "clean fleet readiness," and will support the use of electric vehicles (EV) through providing enhanced EV charging. As further detailed in the Transportation section of the Draft EIR, the proposed project would implement a Transportation Demand Management (TDM) Plan and would be subject to trip monitoring throughout the life of the proposed project to ensure that the trips associated with the project do not exceed what was estimated to occur as part of the City's impact analysis. The truck trips associated with the proposed project, as analyzed in the Final EIR, are more than 15 percent below the regional average, and these emissions are accounted for and planned to be reduced under the ARB Sustainable Freight Strategy, as discussed in the Draft EIR on pages 3.6-28, 3.6-31-3.6-32, 3.6-45, 3.6-57, 3.6-62, and 3.6-67. For these reasons, per BAAQMD guidelines, the potential GHG emissions impacts of the proposed project are less than significant.

Response to CBD-5

The commenter alleged that the EIR underestimated project-generated GHG emissions, due to underestimating the vehicle trips associated with the proposed project. The commenter states that the Institute of Transportation Engineers (ITE) Common Trip Generation Rate for a "High-Cube Transload and Short-term Storage Warehouse," which was used in the Draft EIR to evaluate the truck trips that would be associated with the proposed project (Draft EIR 2.12-12), was inappropriately selected, and that the ITE trip generation for other types of warehouses, including fulfillment centers and parcel hub warehouses, are higher and should have been selected instead. The commenter states that the number of generated passenger car trips is contradicted by the number of people that the EIR claims the project will employ at full buildout, and states that the Draft EIR estimates 3,643 employees, but only includes 2,832 passenger car trips per day in the GHG impact analysis.

The selection of the ITE trip generation rate for a "High-Cube Transload and Short-term Storage Warehouse" is based on the professional experience of the air quality and GHG emissions experts who prepared the GHG analysis for the proposed project. The proposed use of the project site is for a warehouse and logistics center, which is envisioned to support the winery industry prevalent in the region surrounding the project site. The warehousing, storage, and distribution of wine-related products is accurately represented by the ITE trip generation rate selected for the proposed project. Furthermore, the selection of a trip generation rate recommended by the commenter, such as those for fulfillment centers or parcel hub warehouses, would overestimate the potential trips associated with the envisioned end use of the proposed project. These trip generation rates are commonly used to evaluate the trips associated with fulfillment centers, such as Amazon warehouses, which is not consistent with the proposed end use of the proposed project. This is detailed in the Draft EIR at pages 2-4 and 3.12-12. Additionally, the trip lengths included in the GHG impact analysis modeling software, CalEEMod, were extended from the default trip length to a length of 32.8 miles. This trip length conservatively represents the distance between the project site and the Port of Oakland. Because many of the truck trips associated with the proposed project would be expected to occur more locally, this trip length potentially over-estimates the transportation-related GHG emissions associated with the proposed project and helps to ensure that the GHG emissions estimate included in the GHG impact analysis is conservative. As included in Appendix B (please see emission summary tables beginning on pgs. 34 and 42), trucking associated with the operation of the proposed project is estimated to contribute to GHG emissions of approximately 13,500 metric tons CO_2e per year

before mitigation, and an estimated 13,175 metric tons CO_2e per year after the implementation of proposed mitigation measures to reduce emissions from heavy-duty trucks.

Regarding the number of passenger car trips included in the GHG emissions analysis, the commenting agency alleges that the number of passenger car trips is erroneously evaluated at 2,832 passenger car trips per day in the GHG impact analysis, where the Draft EIR had estimated 3,643 employees to be associated with the proposed project. In fact, as described in the Draft EIR at page 2-8, there are 3,643 employees estimated to be associated with commerce, both directly and *indirectly*, around the proposed project site. Only approximately 2,400 employees are expected to be employed on-site at the proposed project, so the GHG impact analysis trip generation rate for passenger cars, with an estimated 2,832 passenger cars per day, is a conservative estimate that accurately represents the potential daily passenger car trips that could be associated with the proposed project. The figure for an eventual 3,643 employees engaged in commerce *associated* with the proposed project reflects future employees working for businesses located *outside* the project site. This economic information was included in the EIR in order to make the point that the project may well indirectly spawn additional economic growth in the region (i.e., have a "multiplier effect"). If and when new development that complements the land uses associated with the project is proposed, such new development will be subject to rules and regulations addressing the GHG emissions of new structures and operations.

Finally, the commenter states that a source of GHG emissions, vegetation removal, was incorrectly omitted from the Draft EIR GHG impact analysis. The 2022 BAAQMD thresholds of significance for evaluating the potential climate change impacts of land use project does not discuss evaluating the potential loss of sequestered carbon as a part of proposed projects, and CEQA does not require the consideration of loss of sequestration as a part of project impact analysis, as further discussed below.

CEQA Guidelines Section 15064.4, which identifies agencies' obligations to consider GHG-related impacts, requires a singular focus on the effects of project emissions. This section is entitled, "Determining the Significance of Impacts from Greenhouse Gas Emissions," and the directives in the section are consistent with that limited focus. This same exclusive focus on emissions (as opposed to lost sequestration) is also evident from the two questions relating to climate change posed in the sample Initial Study checklist found in Appendix G to the CEQA Guidelines. Those questions ask whether a proposed project would either "[g]enerate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment" or "[c]onflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases."

The limited focus on emissions is a result of the original 2007 legislative directive by which the Governor's Office of Planning and Research (OPR) and the California Natural Resource Agency (CNRA) developed and promulgated the subsequent CEQA Guidelines dealing with GHG emissions. This statute, Public Resources Code Section 21083.05, was amended again in 2012, but its focus on emissions is still unmistakable:

> "The Office of Planning and Research shall periodically update the guidelines for the mitigation of *greenhouse gas emissions or the effects of greenhouse gas emissions*

> as required by this division, including, but not limited to, effects associated with transportation or energy consumption to incorporate new information or criteria established by the State Air Resources Board pursuant to Division 25.5 (commencing with Section 38500) of the Health and Safety Code." (Italics added.).

The exclusive focus on emissions associated with transportation and energy consumption, and the failure to require analysis of issues such as climate change adaptation or the loss of carbon sequestration, was the product of political compromise embodied in Senate Bill (SB) 97 of 2007 (Stats. 2007, ch. 185). That legislation was caught up in the fraught budget negotiations of that year:

> For two months this summer, Republican lawmakers blocked adoption of the state budget in part because of concerns about whether and how global warming should be considered an issue for CEQA purposes. Manufacturing, development, petroleum and other interests urged lawmakers to keep global warming issues out of environmental reviews for land use plans, transportation plans, development projects and anything else that could be a "project" under CEQA. Their concerns stemmed from recent litigation over the lack of global warming considerations in environmental impact reports, including a suit (since settled) that Attorney General Jerry Brown filed over San Bernardino County's updated general plan (see *CP&DR*, July 2007; *In Brief*, September 2007). As part of the budget settlement, the Legislature approved SB 97 (Dutton), which exempts transportation and flood control projects funded by the 2006 state bonds from global warming considerations.
>
> However, the bill concedes to environmentalists on the primary point: global warming is a CEQA issue. The bill directs OPR to prepare "guidelines for the mitigation of greenhouse gas emissions or the effects of greenhouse gas emissions." The bill gives OPR a July 1, 2009, deadline, and mandates that the Resources Agency adopt the Guidelines by January 1, 2010. The legislation further requires OPR to update the Guidelines periodically based on State Air Resources Board (ARB) information and criteria.
>
> (*Greenhouse Gas Guidelines May Get Political From Outset*, California, Climate change, Environment Watch, Paul Shigley, California Planning and Development Report, Vol. 22 No. 10 Oct 2007 [Sep 24, 2007].)[7]

After the Legislature, in 2006, had enacted the Global Warming Solutions Act of 2006 (commonly known as AB 32), some legislators were concerned that, through pending litigation filed by then-Attorney General Jerry Brown and others, the courts might conclude that then-extant CEQA documents for major projects might be set aside for failure to address GHG-related impacts. Through SB 97, these documents were immunized against legal arguments to the effect that that they were inadequate for failing to address GHG-related impacts. The Legislature also chose to delay the

[7] The quoted article may be viewed online at: Website: https://www.cp-dr.com/articles/node-1794.

issuance of new CEQA Guidelines dealing with greenhouse gas emissions until 2010 in order to allow for a kind of transition period until analysis of GHG emissions–but not adaptation or sequestration–could be phased in.

These requirements and limitations were set forth in former Section 21097 of the Public Resources Code, which expired by its own terms in 2010:

a) The failure to analyze adequately the effects of greenhouse gas emissions otherwise required to be reduced pursuant to regulations adopted by the State Air Resources Board under Division 25.5 (commencing with Section 38500) of the Health and Safety Code in an environmental impact report, negative declaration, mitigated negative declaration, or other document required pursuant to this division for either a transportation project funded under the Highway Safety, Traffic Reduction, Air Quality, and Port Security Bond Act of 2006 (Chapter 12.49 (commencing with Section 8879.20) of Division 1 of Title 2 of the Government Code), or a project funded under the Disaster Preparedness and Flood Prevention Bond Act of 2006 (Chapter 1.699 (commencing with Section 5096.800) of Division 5), does not create a cause of action for a violation of this division.

b) Nothing in this section shall be construed as a limitation to comply with any other requirement of this division or any other provision of law.

c) This section shall apply retroactively to an environmental impact report, negative declaration, mitigated negative declaration, or other document required pursuant to this division that has not become final.

d) This section shall remain in effect only until January 1, 2010, and as of that date is repealed, unless a later enacted statute, that is enacted before January 1, 2010, deletes or extends that date.

As this language makes clear, SB 97 was no ordinary CEQA bill. It did not unleash OPR and CNRA to promulgate whatever CEQA Guidelines provisions they saw fit on the broad subject of climate change. Rather, the direction given was very precise: the exclusive focus was to be on the effects of GHG emissions, with emphasis on emissions from transportation sources and energy consumption. Section 15064.4 and Appendix G reflect this precise direction. One legal commentator described the political climate that led to SB 97 as follows:

> There was a significant debate in 2007 whether legislation should be enacted to protect EIRs against legal challenges based on AB 32. After substantial debate, the Legislature adopted only a limited provision to protect certain bonded infrastructure projects against such challenges. For all other projects, the Legislature directed the Office of Planning and Research (OPR) to prepare guidelines for mitigating the effects *of GHG emissions* by July 1, 2009, and directed the Resources Agency to adopt these guidelines by Jan. 1, 2010.

> (*Legal Perspectives on Recent California Climate Change Legislation*, Bureau of National Affairs (2009), p. 231:2091, italics added.)[8]

In short, it is clear that CEQA does not require analysis of the extent to which a project, by removing existing vegetation from a project site, could contribute to a loss of carbon sequestration.

The GHG impact analysis included in the Draft EIR correctly evaluates the potential GHG emissions of the proposed project, and under CEQA does not need to include the emissions associated with the potential loss of carbon sequestration through changes to vegetation on the project site.

Response to CBD-6
The commenter alleged that the Final EIR Volume 1 new VMT study failed to provide evidence that project GHG impacts are less than significant, and that the conclusion of the study is faulty and not supported by substantial evidence. The commenter stated that the VMT study failed to account for the number of truck trips generated by the project.

VMT is addressed in Master Response D. See also Response to CBD-3.

Response to CBD-7
The commenter alleged the EIR improperly found the project's GHG emissions were less than significant and thus failed to consider feasible mitigation measures to reduce or avoid the project's GHG Emissions.

Considerations of feasibility only come into play where a significant effect exists. As previously discussed, in the preparation of the GHG impact analysis for the proposed project, the City relied on thresholds of significance for the GHG impact analysis as established by an expert agency on the evaluation of GHG impacts, the BAAQMD. As compared to the project design thresholds recommended by BAAQMD to evaluate the impact of the proposed project, and through the evaluation of the proposed project per the CEQA Guidelines Appendix G checklist questions, the EIR found that the potential GHG emissions impacts of the proposed project are less than significant. It should be noted that, despite having less than significant GHG effects, the proposed project incorporates many control measures and project design features that will reduce the potential GHG emissions from the construction and operation of the proposed project.

As detailed under the response to SWAPE-2e and the response to CLARK-7, and in the submitted December 2, 2022, letter from Joe Livaich at Buzz Oates Construction to Mr. Brent Cooper (provided in Appendix N), the proposed project will be powered by 100 percent on-site solar energy, will not include the use of any natural gas, will utilize recycled water sources, will provide electric infrastructure to support future needs of "clean fleet readiness," and will support the use of EVs through provided enhanced charging, beyond code requirements. As further detailed in the Transportation section of the Draft EIR, the proposed project would implement a TDM Plan and will contribute significant financial support to improve Level of Service (LOS) and to reduce congestion,

[8] This document can be viewed at: Website: https://www.hklaw.com/-/media/files/insights/publications/2009/03/legal-perspectives-on-recent-california-climate-ch/files/legal-perspectives-on-recent-california-climate-ch/fileattachment/maclean319.pdf.

and associated traffic-related emissions impacts, on nearby roadways and highways. These measures help to position the project as a sustainability leader in the Northern California region and support the EIR finding that the proposed project has a less than significant impact as compared to the project design thresholds recommended by the BAAQMD in 2022.

The commenter states that the California Office of the Attorney General also has published a document entitled "Warehouse projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act" (2021) to help lead agencies comply with these requirements. Many of the best practices recommended in this guidance are already included in the project design, as discussed above, and the feasibility of further measures to reduce emissions was detailed in the response to SWAPE-2e and response to CLARK-7. In the absence of a significant GHG impact, further mitigation measures to reduce such an impact are not necessary or required under CEQA.

Response to CBD-8
The commenter alleged that the EIR failed to adopt all feasible mitigation measures for the proposed project's significant unavoidable air quality impact.

The comment reiterated previous comments regarding feasible mitigation measures for air quality impacts that were included in Golden State Environmental Justice Alliance letter and the Napa-Solano Residents for Responsible Growth letter dated July 20, 2022. These comments were addressed in the Final EIR in Response to SWAPE-2e and Response to CLARK-7. Note that three additional air quality mitigation measures were added in the Final EIR Errata in Volume 1 of the Final EIR (see pages 5-1–5-2) in response to this and other similar comments. An additional change to the Air Quality MM AIR-2c is made in Response to Comment CBD-8:

MM AIR-2c Prior to issuing any certificate of occupancy for the proposed project, the project applicant shall provide the City with documentation demonstrating the use of "Low-VOC" architectural coatings and electric landscaping equipment during the operation of the proposed project. "Low-VOC" architectural coatings used during project operation ~~construction~~ shall not exceed 10 ~~50~~ grams of reactive organic gases (ROG) or volatile organic compounds (VOC) per liter of product. Landscaping equipment referred to in this requirement shall include lawnmowers, leaf blowers, and chainsaws.

The comment letter argued that the City is failing to require the project proponent to comply with various air quality mitigation measures suggested in earlier correspondence. The commenter asserts these proposed measures are feasible and thus must be imposed under CEQA. As noted above, the City has adopted one such suggestion (adopt a VOC limit of 10 g/L for paints and coatings used during project operations).[9] In response to this comment, Joe Livaich, a representative of Buzz Oates, provided the City with a letter in which he explained why, in his informed opinion based on his professional experience, the rejected measures proposed by Napa-Solano Residents for Responsible Growth are not feasible. Mr. Livaich states that a reasonable and prudent investor would resist these

[9] No parallel change is required for MM AIR-2a and MM AIR-2b, which address construction-related emissions, as construction-related emissions can be mitigated to less than significant levels without such a change. (See Draft EIR, p. 3.2-49.)

suggested measures because they would place the Giovannoni Logistics Park at a competitive disadvantage relative to its competitors. City staff finds his reasoning and the evidence he invokes to be persuasive. Staff is aware that, under CEQA case law, a lead agency may reject proposed mitigation as infeasible if such mitigation could affect a project's rate of return such that a reasonable and prudent investor would find the return to be insufficient in light of the economic risks involved. (See, e.g., U*phold Our Heritage v. Town of Woodside* (2007) 147 Cal.App.4th 587, 600; and *San Franciscans Upholding the Downtown Plan v. City and County of San Francisco* (2002) 102 Cal.App.4th 656, 693–694 [applying the prudent person standard to determine economic feasibility of proposed alternatives]).

Mr. Livaich's letter is provided in Appendix N.

Response to CBD-9
The commenter alleged the EIR failed to properly analyze or mitigate transportation impacts. The commenter asserted that the EIR did not evaluate trucking impacts and understates impacts to State Route (SR) 29. The commenter stated that the project will contribute to additional congestion on SR-29, which will increase truck idling and, in turn, increase exposure of sensitive receptors to pollutants.

The Draft EIR analysis evaluated all of the topics on the CEQA Guidelines Appendix G checklist that pertain to transportation; refer to Draft EIR page 3.12-13. This list of topics includes conflicts with circulation system plans or programs, VMT, roadway safety, and emergency access. Truck trips were accounted for in all of these analyses. For example, trucks were specifically accounted for in the project trip generation table; refer to Table 3.12-5 on page 3.12-12 of the Draft EIR. The roadway safety analysis specifically evaluated how trucks would access the proposed project; refer to Draft EIR, page 3.12-18.

Regarding impacts to SR-29, the intersection of SR-29/South Kelly Road was studied in Impact TRANS-1 and the proposed project would not have a significant impact on this intersection. Thus, it can be inferred that the proposed project would not cause vehicles (including trucks) to excessively idle at this location.

Furthermore, it should be noted that the trip distribution table (Table 3.12-6 on page 3.12-12) assumes that 50 percent of project-related trips would come from the north in the AM peak-hour and 55 percent would come from the same direction in the PM peak-hour. Most of these trips would use Devlin Road since it provides the most direct route to SR-29/South Kelly Road. Furthermore, trips destined for I-80 would continue on South Kelly Road to SR-12; they would not travel on SR-29. These northbound trips also avoid residential areas and, thus, would not expose sensitive receptors to pollution.

As for southbound trips, Table 3-1 summarizes truck traffic volumes on SR-29 within American Canyon. As shown in the table, SR-29 within American Canyon carries a substantial number of existing diesel trucks on a daily basis. Five-axle trucks (i.e., heavy-duty tractor trailers) represent the single largest category of trucks. Hence, sensitive receptors along this corridor are already exposed to pollution under existing conditions.

Table 3-1: State Route 29 Truck Trip Summary (2020)

Location	Total Daily Vehicle Trips	Total Daily Truck Trips	Truck Percentage	2-Axle Trucks	3-Axle Trucks	4-Axle Trucks	5-Axle Trucks
Napa/Solano County Line	40,000	2,768	6.92	1,236	350	74	1,591
SR-12/SR-29 Junction	36,500	2,537	6.95	980	266	78	1,213

Source: California Department of Transportation (Caltrans). 2022. Traffic Census Program. Website: https://dot.ca.gov/programs/traffic-operations/census.

The ARB defines "high-volume roadways" as ones that carry in excess of 50,000 vehicles per day in a rural area or 100,000 vehicles per day in an urban area. The ARB recommends strategies to reduce air pollution exposure along high volume roadways. As shown in Table 3-1, SR-29 carries roughly 40,000 daily vehicle trips at the Napa/Solano County line and only 36,500 daily vehicle trips at its junction with SR-12. Thus, SR-29 within American Canyon would not be classified as a "high-volume roadway" pursuant to ARB guidance and, thus, strategies to reduce air pollution exposure along this roadway would not apply.

In sum, the addition of the proposed project's 264[10] daily truck trips (or 1,944 total trips) to the segment of SR-29 south of the project site would not result in a substantial increase in pollution exposure along this roadway because it does not meet CARB guidance as a "high-volume roadway."

Response to CBD-10

The commenter alleged that the EIR did not disclose construction-related VMT impacts.

Construction VMT was provided in the CalEEMod modeling output in Draft EIR Appendix B. This value was factored into the construction criteria pollutant and GHG emissions analysis.

There is no guidance for construction-related VMT impacts in the context of transportation, much less any thresholds of significance. This is because VMT is recognized as a long-term, ongoing concern in the context of regional mobility, as opposed to a short-term concern. Thus, evaluating short-term construction-related VMT would provide no material insight into the issue of long-term regional mobility. Furthermore, evaluating construction VMT would constitute "double counting" because these trips are operational in nature for construction workers and vendors and, thus, are already accounted for in local, regional, and Statewide operational VMT numbers. For these reasons, there was no legal requirement to evaluate construction VMT in the EIR.

[10] The proposed project would generate 528 truck trips, with 50 percent assumed to travel south on SR-29; refer to Table 3.12-5 and Table 3.12-6. Hence, 264 trucks would travel south on SR-29.

Response to CBD-11
The commenter alleged that the EIR's analysis of transportation impacts during operation relies on the same inadequate analysis that ignores truck trips and significantly underestimates trip generation.

Truck trips were specifically accounted for in the project trip generation table; refer to Table 3.12-5 on page 3.12-12. As previously discussed, these trips were accounted for in the circulation system analysis in Impact TRANS-1.

Master Response D addresses how truck trips were accounted for in the VMT analysis. See also Response to CBD-3.

Response to CBD-12
The commenter alleged that the EIR makes no attempt to mitigate transportation impacts and stated that the EIR must impose a mitigation measure to fund the construction of a new bus stop on the project frontage.

As discussed in the Draft EIR page 3.12-6, no fixed route bus service occurs on either Green Island Road or Devlin Road. Furthermore, the Draft EIR concluded that all transit impacts were less than significant and did not require mitigation. Thus, there is no legal basis under CEQA to require a mitigation measure for the development of a bus stop that would serve a nonexistent bus route.

The Final EIR set forth a new air quality mitigation measure for the implementation of a TDM Plan for each new building as the development proceeds (MM AIR-2f). TDM strategies may include rideshare, vanpools, employee lockers, and secure bicycle parking. These are all considered more effective strategies to reduce emissions associated with single-occupant vehicle trips than constructing a bus stop in an area unserved by bus service.

Response to CBD-13
The commenter alleged the EIR inadequately analyzed and mitigated the project's significant impacts on biological resources.

This comment provides a general discussion of biological conditions in Napa County. No EIR-specific comments were provided and no further response is necessary.

Response to CBD-14
The commenter alleges that impacts to wetlands were incorrectly analyzed and inadequately mitigated. The commenter also states that the EIR admits that the wetland delineation conducted for the EIR contains errors (Final EIR at 3-296-97), and suggests that there is more wetland area on the project site than the EIR recognizes. The commenter thus concludes that the EIR does not adequately describe the baseline conditions and cannot provide an in-depth analysis of, or provide adequate mitigation for, the proposed project's impacts to wetlands and the special-status species that rely on the wetlands.

Wetlands are addressed in Master Response C. The specific comments mentioned are also similar to those addressed in Response S&W.NOV. 16-3. Although the City acknowledges that the 2016 M&A

delineation contains some minor errors, the City has explained that the Draft EIR did not rely on the M&A 2016 wetland jurisdictional delineation report. Instead, the wetland impact analysis relied on (among other sources of information) the USACE AJD dated October 25, 2016.

Response to CBD-15

In this comment, the author alleges, in points similar to those made in comment CDB-14, that the baseline data in the EIR pertaining to the wetlands present on the project site is incorrect as the EIR includes mistakes from the M&A wetland delineation report, and that the USACE improperly relied on this report in issuing its AJD. The commenter further alleges the City compounded the error by providing the M&A wetland delineation report to the USACE. The commenter additionally states that the EIR fails to disclose that the project area is immediately adjacent to and connected via No Name Creek and its associations with the Napa River core vernal pool recovery area, and claims that any impact to No Name Creek and its associated wetlands could, therefore, impact the Napa River core vernal pool recovery area.

The City is not the party that provided the 2016 M&A wetland delineation report to the USACE. Rather, M&A provided the 2016 M&A wetland delineation report to the USACE in a letter dated August 29, 2016 on behalf of the Albert D. Giovannoni Trust.

The Draft EIR does disclose and discuss the fact that the project site is near two core areas referred to as the "Napa River Core Area." The Draft EIR discloses that one core area is located approximately 2.5 miles northeast of the project site at the SR-12 /SR-121 interchange, and that the second one is adjacent to the project site near the northwest boundary of the Wetland Preserve area. The Draft EIR also discloses that the project site itself is not within a core area.

The Wetland Preserve supports the seasonal wetland segment of what is referenced as No Name Creek. The Wetland Preserve maintains the hydrological connectivity of No Name Creek within the Wetland Preserve, and with the preserved and proposed established/created mitigation wetlands (which includes a vernal pool) to the segment of No Name Creek connected to the Napa River core vernal pool recovery area. Existing wildlife corridors to and from the Wetland Preserve and Napa River core vernal pool recovery area adjacent to the project site will be maintained, and vegetated bioretention basins will provide an approximately 25- to 150-foot buffer between the hardscaped areas (i.e., parking, traffic, buildings etc.) and the Wetland Preserve, and the Phase 2 development would very likely have similar bioretention basins positioned between the Wetland Preserve and hardscaped areas of Phase 2. Based on the fact that the Draft EIR did disclose and discuss the Napa River core vernal pool recovery area, and given the Wetland Preserve will maintain the hydrological connectivity and existing wildlife corridors to the Napa River core vernal pool recovery area, and given the vegetated buffers the bioretention basins will provide buffering the Wetland Preserve from light, noise, and sound generated from the project, the Phase 1 and Phase 2 projects will have less than a significant effect on the Napa River core vernal pool recovery area. As a result, mitigation measures are not, and need not be, proposed.

Wetlands are further addressed in Master Response C.

Response to CBD-16

The commenter alleges that the wetland impact evaluation in the EIR did not prioritize avoidance of wetlands, recommended wetland mitigation ratios that were too low, and did not include sufficient periods of success monitoring. The commenter also argues that the Wetland Preserve is compromised by the need to limit wildlife populations that may be a safety hazard at the Napa County Airport and by the presence of a gravel road constructed through the area. In a point similar one raised in Comment Cashen-14 (responded to in Volume 1 of the Final EIR), the commenter notes that the Wetland Preserve would be managed to ensure the wetlands are not an attractant to wildlife that could pose a safety hazard to the Napa Airport. The commenter then alleges that the EIR is working at cross-purposes by claiming that the Wetland Preserve will be such effective habitat it will completely mitigate the loss of 163 acres of established habitat, but also not attract wildlife species. The commenter then states that the EIR failed to disclose a gravel road that has been constructed through the areas set aside for the Wetland Preserve and that the impacts of the road were not analyzed.

The commenter next suggests that wetland mitigation ratios were too low, that a ratio of 3:1 for in-kind mitigation and 5:1 for restored or created habitat is more appropriate, and that the mitigation plan should include long-term monitoring, adaptive management strategies, and well-defined measurable success criteria, to be funded in perpetuity. The commenter then goes on to state her opinion that the City has not demonstrated that it considered higher ratios or why higher ratios are infeasible.

It is unclear how the commenter defines “in-kind” compared to “restored or created habitat.” The City, in this response, assumes “in-kind” means restoring, establishing, or creating wetlands of the same type, meaning that if a project impacts vernal pools, for example, the project proponent should restore, establish, or create vernal pools (as opposed to some other kind of wetland). In contrast, an example of “out-of-kind mitigation” would occur where a development impacts vernal pools but, as mitigation, restores, establishes, or creates a different type of wetland such as a seasonal wetlands. Typically, the RWQCB (under the Porter-Cologne Water Quality Control Act) and USACE (under the CWA) require a higher mitigation ratio for out-of-kind mitigation.

The City considered in-kind wetland mitigation and ratios that would offset impacts to wetlands and the functions the wetlands provide to less than significant. The proposed mitigation ratio of 2:1, in-kind, wetland establishment, for Phase 1, and 1:1, in-kind, wetland establishment for Phase 2 meets the federal and State “no-net-loss” of wetland area policy, and would reduce impacts to wetlands and their functions to less than significant. The City recognizes, for the similar reasons referenced by the commenter, that typically the USACE and RWQCB will require a mitigation ratio greater than 1:1 if wetland mitigation is implemented after or concurrent with the start of project construction and/or if there is a low level of confidence that a selected site can support wetlands.

Notably, the avoidance of any “net loss of wetland area,” as required by MM BIO-3a, at least arguably goes beyond what CEQA requires insofar as this performance standard seeks to avoid any net harm to existing environmental conditions. In general, “[t]he goal of mitigation measures is not to net out the impact of a proposed project, but to reduce the impact to insignificant levels.” (*Save Panoche Valley v. San Benito County* (2013) 217 Cal.App.4th 503, 529.) To the extent that the higher

mitigation ratios proposed by the commenter could lead to a substantial improvement compared with existing conditions, such ratios would go far beyond what is required by CEQA. As explained in Master Response A (Swainson's Hawk and Other Raptors), CEQA creates no duty to improve existing conditions. (See, e.g., *North Coast Rivers Alliance v. Westlands Water District* (2014) 227 Cal.App.4th 832, 871-874 [court upholds water district's reliance on a CEQA exemption for the approval of a short-term water contract requiring exports from degraded Sacramento-San Joaquin River Delta]; see also *World Business Academy v. California State Lands Commission* (2018) 24 Cal.App.5th 476, 501-510 [court finds a State agency's reliance on a CEQA exemption proper for an action extending in time the operation of a nuclear power plant; the perpetuation of existing dangers associated with nuclear power do not represent adverse change in environment].)

Establishing an appropriate hydroperiod (i.e., the timing and duration of inundation) is particularly critical to vernal pool ecosystems and can be difficult to create. Topographic and geologic factors can have a significant effect on vernal pool hydroperiod. The topography within the Wetland Preserve is relatively flat, which, topographically, makes this area ideal for creating/establishing vernal pools and seasonal wetlands. To ensure excavated depressions 1-3 feet below grade support clay soils that would pond and hold water for a duration long enough to support vernal pools, an assessment of the soil profile was conducted. Numerous soil pits were dug to approximately 4 feet in depth, and soil texture and color were then recorded throughout the profile for each soil pit. Results indicated a restrictive layer composed of clay soil is found 12-30 inches below the surface. This layer of clay soil supports the existing vernal pool hydrology and will allow the establishment of vernal pools within the Wetland Preserve. Based on the Wetland Preserve's flat topography, restrictive layer of clay soil just below the surface, and the fact that the site currently supports vernal pools, the City is confident vernal pools and seasonal wetlands can be successfully established and functioning within 1 year and will meet all the performance standards within a 5-year monitoring period.

For the reasons discussed above, and given the functional assessments conducted to determine plant and animal communities, wetland hydrology and hydric soil attributes, plant communities and vegetation stratum attributes, the City has a high level of confidence the Wetland Preserve can support the establishment of vernal pools and seasonal wetlands and they will be functioning within 1 year (e.g., providing flood storage, avian and terrestrial habitat, provide habitat suitable for vernal pool plants, etc.) similar to the seasonal wetlands that would be impacted by Phase 1 and seasonal wetlands and vernal pools that would be impacted by Phase 2.

Refer to Master Response A for a discussion on the rationale for not requiring additional mitigation beyond the 45-acre Wetland Preserve to offset impacts to foraging habitat for a number of raptors. Refer to Master Response C for additional information related to the functional assessment, performance standards, hydrology and water budget analysis, vegetated buffers, and wildlife corridors in support of the wetland ratios and the City's level of confidence that the mitigation will be successful.

A Wildlife Hazard Assessment (WHA) was prepared in accordance with MM LU-3 after the release of the Draft EIR. The WHA demonstrates that the construction of the proposed project (Phase 1 and 2 and the Wetland Preserve) would not cause an increase above the existing level of activity of birds or other wildlife, and would not present a hazard to Napa County Airport flight operations. The WHA

predicted the overall wildlife activity on the property would remain at or below current levels. Therefore, there is no need, as the commenter suggests, for an additional requirement that the Wetland Preserve be actively managed so as to avoid creating wildlife attractants such as ponded water or particular types of vegetation.

The EIR did not claim or imply the 45-acre Wetland Preserve would offset *all* the habitat for all of the species that currently use the 163-acre site (e.g., as foraging habitat for a number of raptor species). Rather, the goal of the preserve is to avoid a net loss of *wetland* acreage. Some net loss of other habitat types will occur (though not "substantial" losses). As described in *Master Response A—Swainson's Hawk and Other Raptors*, the 45-acre Wetland Preserve along with vacant parcels, both publicly and privately owned within the region, as being available as foraging areas for Swainson's hawk and other raptors. Accordingly, for the same reasons the proposed project would not result in an indirect or cumulative loss of Swainson's hawk foraging habitat, it would also not result in a significant indirect or cumulative loss of foraging habitat for other raptors. At the same time, the proposed project should not *increase*, over existing levels, the number of birds that use the property in its undeveloped state.

Wetlands are further addressed in Master Response C. The utility lines and access road are addressed in Master Response B.

Response to CBD-17
The commenter alleges that the EIR did not analyze or mitigate the project's impacts to No Name Creek, which serves as a wildlife corridor through the project site, or account for connectivity between aquatic resources and upland habitat with the Wetland Preserve, and with buffers around the aquatic resources. The commenter references several studies, which included descriptions of the movement of California red-legged frog and western pond turtles, and recommends the Wetland Preserve should have designated setbacks appropriate for the species known to occur on the site. The commenter indicates that the project must address impacts to wildlife connectivity from the "negative edge effects" from human activity such as traffic, lighting, noise, domestic pets, pollution, invasive weeds, and increased fire frequency.

The Draft EIR evaluated impacts on fish and wildlife movement corridors on pages 3.3-37 through 3.3-39. The analysis found that the proposed project's 45-acre Wetland Preserve would protect the most biologically sensitive portions of the site and would also be connected to the adjoining Napa Logistics Park Wetland Preserve. The Draft EIR also determined that the project site does not provide suitable habitat for the California red-legged frog (CLRF) or the western pond turtle (refer to page 3.3-23). With respect to CLRF, this conclusion was supported by the Habitat Assessment for California red-legged frog conducted by species expert and herpetologist Mark Jennings of Rana Resources, which is included as Attachment 3 of the Draft EIR. Thus, there is no basis to evaluate wildlife movement impacts with these two species. For a more detailed discussion of the buffers and wildlife corridors provided by the Wetland Preserve, please refer, for additional details, to the Vegetated Buffers to Protect Wetlands and Wildlife Corridor section of the Master Response C—Wetlands.

The project site is surrounded on four sides by urban development and infrastructure and, thus, traffic, lighting, and noise are currently present. That being said, Phase 1 and 2 development will bring these disturbances closer to the southern boundary of the Wetland Preserve. These impacts have been addressed in Responses to S&W.NOV. 16-5 and 16-11. With respect to invasive species, please refer to Response to CASHEN.NOV. 15-12. See also changes to MM BIO-3d performance standards discussed in Response to CASHEN.NOV. 15-12 and shown in the Errata portion of (this) Volume 2 of the Final EIR.

The Devlin Road extension is a baseline condition and recognized and considered in the EIR; refer to pages 2-1 through 2-3 of the Draft EIR. The exhibits showing the Wetland Preserve and the location and extent of the established wetlands clearly delineate the location of the new Devlin Road extension. Wetland mitigation proposed in the Wetland Preserve considered the location of the Devlin Road extension and the culvert connecting the east and west side of the Wetland Preserve. With respect to environmental impacts associated with the Devlin Road extension, those impacts were disclosed and evaluated in the Devlin Road and Napa Valley Vine Trail Extension Project Mitigated Negative Declaration adopted by the City in 2018.

The City agrees with the commenter regarding the importance of riparian zones and the use of these riparian corridors, or protected open space areas in general, as wildlife corridors. The 45-acre Wetland Preserve, which includes the No Name Creek seasonal wetland swale but no riparian areas, will provide an important wildlife corridor for the species that currently use or occupy the project site. Terrestrial animals will be able to move through the Wetland Preserve and to adjacent open space areas or preserves such as the Napa Logistics Wetland Preserve. For a more detailed discussion regarding the buffers and wildlife corridors provided by the Wetland Preserve, please refer, for additional details, to the section of the Master Response C—Wetlands dealing with the Vegetated Buffers to Protect Wetlands and Wildlife Corridor.

The Draft EIR determined that the project site does not provide suitable habitat for the California red-legged frog or the western pond turtle; refer to page 3.3-23 of that document. Thus, there is no basis to evaluate wildlife movement impacts with these species.

The utility lines and access road are addressed in Master Response B.

Response to CBD-18

The commenter alleged that the EIR did not properly analyze or mitigate the project's impacts related to the potential loss of foraging habitat for Swainson's hawk. The commenter cites data alleging that there are only 2,000 breeding pairs in California. Additional comments pertain to the viability of the Wetland Preserve to serve as suitable foraging habitat for Swainson's hawk, stating that the Wetland Preserve is a small island of existing and created wetlands that is surrounded by wildlife-repellant development and has roads running through it, with wetlands of limited value as a foraging area, and edge effects from light and noise.

The potential loss of foraging habitat for Swainson's hawk is addressed in Master Response A.

The data cited by the commenter that there are only 2,000 Swainson's hawk breeding pairs in California is not accurate. As discussed in Master Response A, a May 2022 article ("Rapid Growth of the Swainson's hawk population in California Since 2005") authored by multiple CDFW Biologists, the Swainson's hawk has made a remarkable recovery in California during the past 40 years going from an estimated 375 breeding pairs in the early 1980s to close to 19,000 breeding pairs in 2018.

The commenter argues that, because Swainson's hawk does not use wetlands as foraging areas, the Wetland Preserve provides limited value for this purpose. As pointed out in the Draft EIR, however, suitable foraging areas for Swainson's hawk include grasslands, pastures, alfalfa and other hay crops, and certain grain and row croplands. And while Swainson's hawk will generally avoid permanently-inundated emergent wetlands as foraging areas, many extensive foraging habitats for Swainson's hawk throughout the Central Valley are in vernal pool landscapes that offer a mix of both upland grasslands and seasonal wetlands. Not only do Swainson's hawks commonly forage in vernal pool landscapes, but they currently forage over the site of the proposed project, which is a combination of grasslands and seasonal wetlands. The value of the Wetland Preserve (with upland grasslands along with both pre-existing and created seasonal wetlands) as a raptor foraging habitat would be nearly equivalent to that of the project site in its current condition. In addition, the wetlands that currently exist on the project site and that either exist or are to be created within the Wetland Preserve are seasonal wetlands that are filled with water during the winter months (given sufficient rainfall), dry out in the spring, and remain dry throughout the summer. Swainson's hawk seldom winters in California and would only be expected to occur in the project area during the spring and summer months when seasonal wetlands are dry and would provide optimal conditions for foraging. In other words, the newly created wetlands will only be wet when the Swainson's hawk is not present; they will provide good foraging habitat during the dry parts of the years when the species is present.

Additional comments also pertain to the viability of the Wetland Preserve to serve as suitable foraging habitat for Swainson's hawk. A similar comment suggesting that the Wetland Preserve will be a small island of existing and created wetlands was addressed in Volume 1 of Final EIR in the Response to Comments CASHEN-6 and AB Comment 8, and in this document (Volume 2) in Response to Comment Cashen.NOV. 15-7. Note that the Wetland Preserve is hydrologically connected to the Napa Logistics Park Wetland Preserve to the north and would be contiguous to wetland areas within the Biaggi Bros. property to the west. Connectivity to adjacent undeveloped parcels to the northeast and southeast will remain for terrestrial and avian species, including areas within the nearby San Pablo Bay Wetlands Important Bird Area. The effects of noise, light, and traffic within the Wetland Preserve were addressed in Volume 1 of the Final in the Response to Comment S&W-11 and in this Volume (2) of the Final EIR in the Response to Comment S&W.NOV. 16-11. For a more detailed discussion of the buffers and wildlife corridors provided by the Wetland Preserve, please refer, for additional details, to the section of the Master Response C addressing Vegetated Buffers to Protect Wetlands and Wildlife Corridor. HBC determined that an increase in noise, lights, and traffic generated by the project compared to existing conditions would not result in significant direct, indirect, or cumulative impacts to wetland functions. Habitat fragmentation issues associated with Devlin Road and the gravel road are addressed in Master Response B.

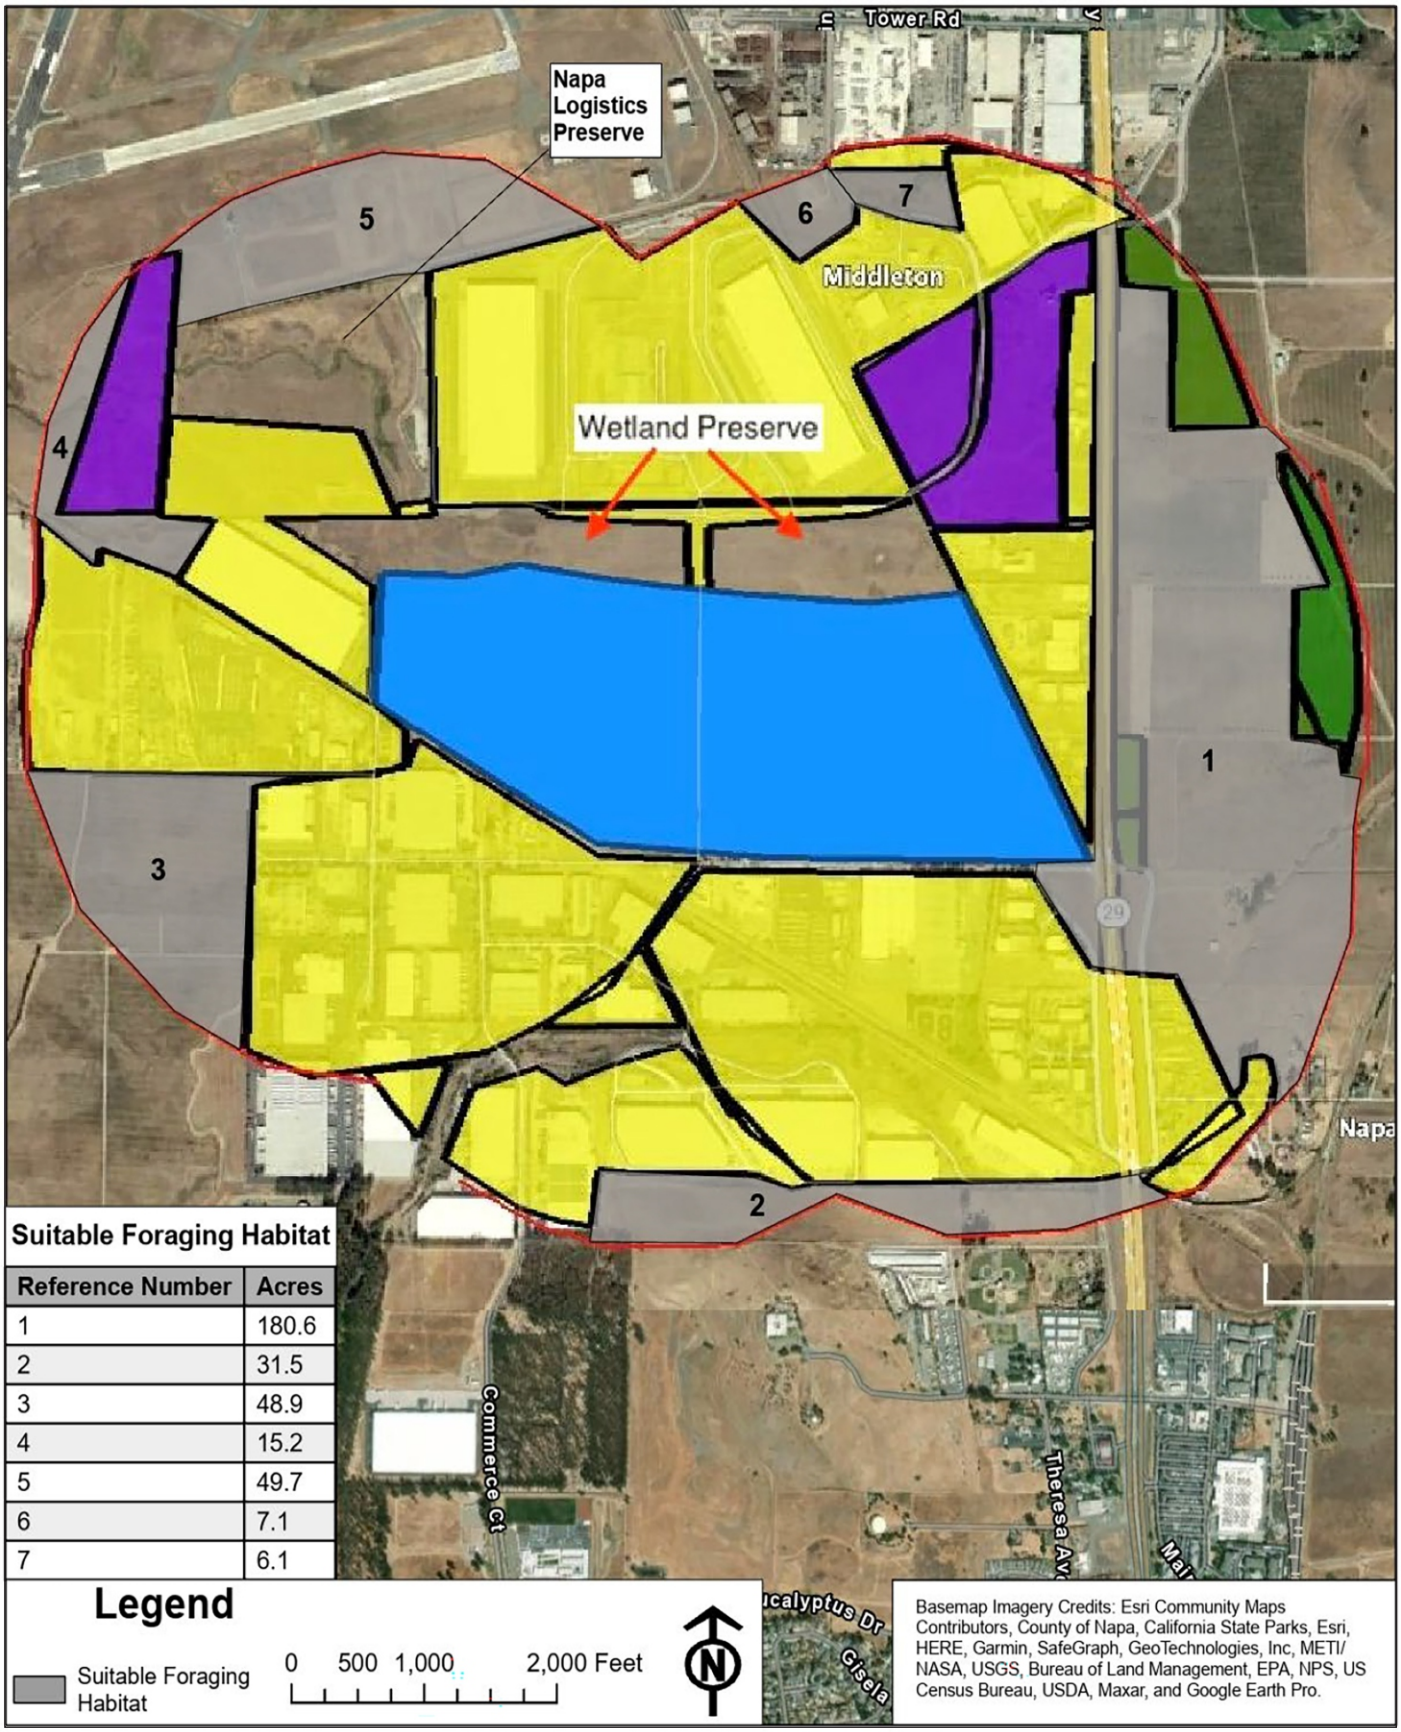
Response to CBD-19

The commenter alleged that the EIR did not properly analyze or mitigate the project's impacts on other special-status bird species, including the golden eagle, northern harrier, tricolored blackbird, and burrowing owl.

Golden Eagle: Potential loss of foraging habitat for golden eagle is addressed in Master Response A. The status of golden eagle as a nesting species at the project site and the general vicinity is discussed in this Volume (2) of the Final EIR in Response to CASHEN.NOV. 15-8 and in Response to CASHEN.NOV. 15-9. Potential impacts to nesting golden eagle and an updated MM BIO-1b for pre-construction surveys and establishment of protective buffer zones around any discovered active nests during construction activities are discussed in Response to CASHEN.NOV.15-14.

Northern Harrier: See Response to CASHEN.NOV. 15-10 earlier in this Volume (2) of the Final EIR. Because of anticipated impacts of the proposed project, the EIR requires MM BIO-2c to conduct pre-construction surveys for northern harrier and establish appropriate buffer zones of no disturbance to protect any nesting pairs encountered. The extensive discussion of the reasons why the loss of foraging habitat for Swainson's hawk is not significant contained within Master Response A applies to loss of potential foraging habitat within the project site for northern harrier as well.

Tricolored Blackbird: See discussion in the Draft EIR on pages 3.3-6 and 3.3-26. Because no habitat for a tricolored blackbird nesting colony was found on the project site, no impacts to nesting tricolored blackbird are expected. Note that MM BIO-4 (as modified in the Errata portions of both Volume 1 and Volume 2 of the Final EIR) provides that, if pre-construction bird nesting surveys were to actually encounter nesting tricolored blackbirds, the colony would be protected with a 500 foot no disturbance buffer zone during construction.



Burrowing Owl: See discussion of the status of burrowing owl on the project site, potential impacts and required mitigation in Response to CASHEN.NOV.15-11, as set forth earlier in this Volume (2) of the Final EIR.

Issues relating to raptors are further addressed in Master Response A.

Response to CBD-20

The commenter stated that the City must revise and recirculate the EIR to address significant new information provided in the Final EIR Volume 1 and the November 17, 2022 Planning Commission meeting concerning the utility alignment that crosses the western portion of the project site.

The utility alignment is addressed in Master Response B, which explains why new information in Volume 2 of the Final EIR does not require recirculation of any portion of the Draft EIR.

Suitable Foraging Habitat

SECTION 4: ERRATA

The following are additional revisions to the Draft EIR for the Giovannoni Logistics Center Project, above and beyond the revisions already shown in Section 5 of Volume 1 of the Final EIR (as released on October 31, 2022).[1] These additional revisions are minor modifications and clarifications to the document, and do not change the significance of any of the environmental issue conclusions within the Draft EIR. The revisions are listed by page number. All additions to the text are underlined (underlined) and all deletions from the text are stricken (~~stricken~~).

4.1 - Changes in Response to Specific Comments

Section ES, Executive Summary

Page ES-7, MM AIR-2c

MM AIR-2c has been amended to reduce the Volatile Organic Compound (VOC) content of architectural coatings to 10 grams/liter. (Note that Reactive Organic Gases and VOCs are the same thing).

MM AIR-2c Prior to issuing any certificate of occupancy for the proposed project, the project applicant shall provide the City with documentation demonstrating the use of "Low-VOC" architectural coatings and electric landscaping equipment during the operation of the proposed project. "Low-VOC" architectural coatings used during project operation ~~construction~~ shall not exceed 10 ~~50~~ grams of reactive organic gases (ROG) or volatile organic compounds (VOC) per liter of product. Landscaping equipment referred to in this requirement shall include lawnmowers, leaf blowers, and chainsaws.

Pages ES-8 and ES-9, MM BIO-1a

MM BIO-1a has been amended to include additional buffering measures for the Swainson's Hawk and minimum credential for biologists conducting surveys.

MM BIO-1a Pre-construction surveys for Swainson's hawk shall be conducted in the project site vicinity prior to initiation of project construction activities and each year following initiation of construction if project activities are delayed or discontinued for 7 or more days prior to the first required ~~second~~ survey period (March 20 to April 5) and are scheduled to recommence construction activities during the second survey period but before August 1. These pre-construction surveys shall include investigation of all potential nesting trees within a half-mile radius around all project activities and shall be completed for at least two survey periods immediately prior to commencement of project construction. Surveys shall be conducted in accordance with CDFW's "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFW 2000) to maximize the potential for

[1] For a discussion of the relationship between the two volumes of the Final EIR, see the discussion on pages 1-1 and 1-2 of this volume (Volume 2) of the Final EIR (February 3, 2023).

locating nesting Swainson's hawk and reduce the potential for nest failures due to project activities and/or disturbances.

If no nesting Swainson's hawks are found during the first or second required survey periods starting March 20 and extending to April 20, then project construction may commence. If during the third survey (~~April 5–April 20~~ June 10 to July 30) Swainson's hawks are found to be nesting in the project vicinity and construction has commenced, it shall be assumed the Swainson's hawk commenced nesting and thus the Swainson's hawk are habituated to the ambient level of noise and disturbance emanating from the project site. If Swainson's hawks are found to be nesting within ~~1,000 feet~~ 0.25-mile of the project site, a non-disturbance buffer shall be established to keep all construction activities a minimum of 0.25-mile ~~1,000 feet~~ from the nest site. The CDFW shall be consulted regarding the adequacy of the buffer established by the qualified Raptor Biologist. At that time the necessity for acquiring a Fish and Game Section 2081 Incidental Take Permit (ITP) authorization would be determined. An ITP authorization shall be required if there were a valid concern the project activities would result in the "take" of an adult Swainson's hawk, eggs, or nestlings.

Surveys shall be conducted by a qualified Raptor Biologist with at least a minimum of a 4- year college degree in wildlife biology or related environmental science, familiarity with Swainson's hawk and its local ecology, and 2 years of experience surveying for and detecting Swainson's hawk pursuant to "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" survey protocol. No disturbance such as construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is complete based on monitoring of the active nest by a qualified Biologist.

Pages ES-9 and ES-10, MM BIO-1b

MM BIO-1b has been amended to include additional buffering measures for the Golden Eagle and minimum credential for biologists conducting surveys.

MM BIO-1b No more than 30 days prior to the first ground disturbance activity, pre-construction golden eagle nesting surveys shall be conducted in the project vicinity by a qualified Raptor Biologist. The qualified Raptor Biologist shall have a minimum of a 4- year college degree in wildlife biology or related environmental science, at least 2 years conducting wildlife surveys, and a familiarity with golden eagle and its local ecology. ~~at least 2 years of experience surveying for and detecting nesting golden eagles.~~ Pre-construction surveys shall include investigation of all potential nesting trees within a survey area determined by the qualified Raptor Biologist, but no less than a 1 ~~0.5~~ mile radius around all project activities. If active golden eagle nests are identified within any trees within the survey areas a 1 ~~0.5~~ mile radius of the project site, a qualified Raptor Biologist shall establish a protection buffer ~~at a minimum~~ of approximately 1 mile ~~1,000~~ feet that is adequate to ensure noise or activity from the proposed project would not cause nest disturbance of ~~or~~ young or adult bird

mortality. Buffer zones may vary in size as some golden eagles are more acclimated to disturbance than others. Size of buffer zone may be ~~increased~~ modified by the qualified Raptor Biologist considering the type of construction activity that may occur and the behavioral factors and extent that golden eagle may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young golden eagles have fledged or that the nesting cycle is complete based on monitoring of the active nest by the qualified Biologist.

Page ES-11, MM BIO-2

MM BIO-2 has been amended to include additional buffering measures for wetlands developed near the utility pipeline alignment.

MM BIO-2 To offset the loss of the 0.496 acre of seasonal wetland impacts from Phase 1, and 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools from Phase 2, and to ensure there is no-net loss of wetland area, the applicant shall establish/create 0.992 acre of palustrine emergent wetlands (2:1 ratio) for Phase 1 concurrent with project construction, and 2.57 acres of seasonal wetlands (1:1 ratio) and 1.13 acres of vernal pool wetlands (1:1 ratio) for Phase 2 at least 1 year prior to the start of Phase 2 construction, on the 45-acre Wetland Preserve. The established/created wetlands will be constructed a minimum of 20 feet from the Napa Logistics Park sewer and recycled water pipeline easement or unpaved access road associated with the easement. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland.

Page ES-15, Performance Standards

The performance standards for MM BIO 3d have been added to the Executive Summary matrix.

Performance Standards

Performance Standards shall include at a minimum the following:

Years 1, 2, 3, 4 and 5 Performance Standards for Wetland Hydrology

Each year wetland hydrology shall be measured during the winter when surface and/or subsurface hydrology would be observable. A minimum of 1 data point shall be taken in each of the established/created wetlands. In addition, wetland hydrologic indicators shall be recorded each spring during the vegetation monitoring period.

Year 1:

Performance standard would be met for Year 1-5 if:

- The created wetlands remain inundated to a minimum depth of 0.5 inch or greater for at least 7 days and/or saturated for at least 14 days and/or at least one primary or two

secondary wetland hydrology indicators listed in the *Arid West Region Wetland Determination Data Forms* are recorded.

Contingency Measures:

If the annual performance standard is not being met for any given monitoring year the Permittee shall prepare an analysis of the cause(s) of failure and, if determined necessary, implement remedial action. If the Plan Area has not met the performance standard, the Permittee's maintenance and monitoring obligations shall continue until the RWQCB and USACE give final project confirmation.

Remedial action may include re-grading to achieve wetland hydrology, which would improve hydric soil formation.

Years 1, 2, 3, 4, and 5 Performance Standards for Increase in Colonization of Wetland Vegetation

Each year during the spring or early summer wetland vegetation cover shall be measured by conducting a site visit and recording absolute cover and dominant plant species observed within the wetland buffer area. A minimum of 1 data point shall be taken in each of the established/created wetlands. The colonization of wetland vegetation shall be measured by determining overall absolute plant cover values each year. This shall be accomplished by measuring absolute cover values within a 5-foot radius sample plot every 50 feet along a transect through each established/created wetland. In addition, to monitor for invasive plant species within the uplands which are not detected in the baseline survey, a minimum of three 5-foot radius sample plots on the east side and three on the west side will be placed at random upland locations along a linear transect east to west within the Wetland Preserve. During Year 4 and 5 the managed landscaped areas within the development will be visually surveyed for evidence of invasive plant species. Performance Standards for each monitoring year are listed below.

Year 1:

Performance standard would be met for Year 1 if:

- At least one hydrophytic plant species colonizes the established/created seasonal wetlands and vernal pools; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 5 percent or greater.

Year 2:

Performance standard would be met for Year 2 if:

- At least one hydrophytic plant species colonizes the established/created seasonal wetlands and vernal pools; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 10 percent or greater.

Year 3:

Performance standard would be met for Year 3 if:

- At least two hydrophytic plant species colonizes the established/created seasonal wetlands;
- At least two native hydrophytic plant species colonizes the established/created vernal pools and at least one is a vernal pool habitat indicator species; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 20 percent or greater and comprised of native and naturalized species.

Year 4:

Performance standard would be met for Year 4 if:

- At least two hydrophytic plant species colonize the established/created seasonal wetlands.
- At least two native hydrophytic plant species colonizes the established/created vernal pools and at least one is a vernal pool habitat indicator species.
- The average absolute cover of wetland vegetation within an established/created seasonal wetland and vernal pool is 30 percent or greater.
- To meet the wetland performance standard invasive plant species within the wetlands shall not comprise greater than 5 percent of the total absolute cover. To meet the upland performance standard, invasive plant species, which currently are not supported in the uplands within the Wetland Preserve, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating.
- The managed landscaped areas within the development will be visually surveyed for evidence of invasive plant species. To meet the managed landscape performance standard, invasive plant species, which currently are not supported in the uplands within the Wetland Preserve, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating.

Year 5:

Performance standard would be met for Year 5 if:

- At least two hydrophytic plant species documented during the CRAM assessment for the palustrine emergent wetlands impacted on the Phase 1 project site colonize the established/created seasonal wetlands.
- At least two native vernal pool habitat indicator species documented during the CRAM assessment for the vernal pool on the Phase 2 project site colonizes the established/created vernal pools.

- The average absolute cover of wetland vegetation within the established/created seasonal wetland (non-vernal pool wetlands) is 40 percent or greater; and the average absolute cover of wetland vegetation within the established/created vernal pools is 40 percent or greater of which greater than 50 percent of the vegetation cover consists of two or more dominate native vernal pool habitat indicator plants.
- To meet the wetland performance standard invasive plant species within the wetlands shall not comprise greater than 5 percent of the total absolute cover. To meet the upland performance standard, invasive plant species, which currently are not supported in the uplands, within the Wetland Preserve shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating.
- The managed landscaped areas within the development will be visually surveyed for evidence of invasive plant species. To meet the managed landscape performance standard, invasive plant species, which currently are not supported in the uplands within the Wetland Preserve, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating.

Contingency Measures:

If the annual performance standard is not being met for any given monitoring year the Permittee shall prepare an analysis of the cause(s) of failure and, if determined necessary, implement remedial action. Remedial action may include hydroseeding with native species, or addition of supplemental topsoil or mulch to promote growth, control of invasive using mechanical equipment, grazing animals.

Year 5 No-Net-Loss Performance Standard for Phase 1 Impacts

Performance standard would be met for Year 5 when;

- A wetland delineation is performed and verified by the USACE and confirms a minimum of 0.992 acre of wetlands have been established/created within the Wetland Preserve.

Year 5 No-Net-Loss Performance Standard for Phase 2 Impacts

The Phase 2 no-net-loss performance standard would be measured when an application for the Phase 2 project is submitted to the RWQCB and USACE, and the Phase 2 project is approved. Once Phase 2 has been approved by the RWQCB and USACE, this performance standard may be modified depending on the level of wetland impacts authorized by the RWQCB and USACE, meaning this performance standard may decrease if the wetlands impacted for Phase 1 are less than 3.7 acres.

Performance standard would be met for Year 5 when;

- A wetland delineation is performed and verified by the USACE and confirms a minimum of 2.57 acres of seasonal wetland and 1.13 acres of vernal pools have been established/created within the Wetland Preserve.

Year 5 Long-Term Protection and Long-Term Funding

Performance standard would be met for Year 5 once:

- The Wetland Preserve has been placed under a conservation easement; and
- A long-term financing mechanism (e.g., non-wasting endowment, trusts, contractual arrangement etc.) to fund implementation of the long-term management of the Wetland Preserve has been secured.

Page ES-15, MM BIO-4

MM BIO-4 has been amended to include additional buffering measures for nesting birds.

MM BIO-4 If construction occurs during the breeding season of migratory and resident birds (February 1 to August 31), a qualified Biologist shall conduct a pre-construction breeding bird survey in areas of suitable habitat within 7 days prior to the onset of construction activity. Surveys shall be conducted within the project footprint and 100 ~~50~~ feet from the construction limits for nesting passerines, 250 feet from the construction limits for nesting accipiters and a minimum of 500 ~~1,000~~ feet from the construction limits for nesting raptors. If the survey area is found to be absent of nesting birds, no further mitigation would be required. However, if construction activities are delayed by more than 7 days, an additional nesting bird survey shall be performed. If bird nests are found, appropriate buffer zones shall be established around all active nests to protect nesting adults and their young from direct or indirect impacts related to project construction disturbance. Size of buffer zones shall be determined per recommendations of the qualified Biologist based on-site conditions and species involved, but typical buffers around active nests are 500 feet for large raptors such as buteos, 250 feet for small raptors such as accipiters, and 100 feet for passerines (songbirds) and other bird species. For special status species, a 0.25-mile ~~At a minimum a 1,000-foot buffer~~ shall be established for nesting Swainson's hawk; 1 mile for ~~and~~ golden eagle; and a 500-foot buffer for nesting tricolored blackbirds~~, northern harriers and other non-listed raptors; 250-foot buffer for nesting accipiters; and minimum 50-foot buffers shall be established for nesting passerines and all other non-raptor or passerine nesting birds.~~ If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Buffer zones shall be maintained until it can be documented that either the nest has failed, or the young have fledged.

Section 3.2, Air Quality

Pages 3.2-58 and 3.2-59, MM AIR-2c

MM AIR-2c has been amended to reduce the Volatile Organic Compound (VOC) content of architectural coatings to 10 grams/liter. (Note that Reactive Organic Gases and VOCs are the same thing).

MM AIR-2c Prior to issuing any certificate of occupancy for the proposed project, the project applicant shall provide the City with documentation demonstrating the use of "Low-VOC" architectural coatings and electric landscaping equipment during the operation of the proposed project. "Low-VOC" architectural coatings used during project operation ~~construction~~ shall not exceed 10 ~~50~~ grams of reactive organic gases (ROG) or volatile organic compounds (VOC) per liter of product. Landscaping equipment referred to in this requirement shall include lawnmowers, leaf blowers, and chainsaws.

Section 3.3, Biological Resources

Pages 3.3-26 and 3.3-27, MM BIO-1a

MM BIO-1a has been amended to include additional buffering measures for the Swainson's Hawk and minimum credential for biologists conducting surveys.

MM BIO-1a: Pre-construction surveys for Swainson's hawk shall be conducted in the project site vicinity prior to initiation of project construction activities and each year following initiation of construction if project activities are delayed or discontinued for 7 or more days prior to the first required ~~second~~ survey period (March 20 to April 5) and are scheduled to recommence construction activities during the second survey period but before August 1. These pre-construction surveys shall include investigation of all potential nesting trees within a half-mile radius around all project activities and shall be completed for at least two survey periods immediately prior to commencement of project construction. Surveys shall be conducted in accordance with CDFW's "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFW 2000) to maximize the potential for locating nesting Swainson's hawk and reduce the potential for nest failures due to project activities and/or disturbances.

If no nesting Swainson's hawks are found during the first or second required survey periods starting March 20 and extending to April 20, then project construction may commence. If during the third survey (~~April 5–April 20~~ June 10 to July 30) Swainson's hawks are found to be nesting in the project vicinity and construction has commenced, it shall be assumed the Swainson's hawk commenced nesting and thus the Swainson's hawk are habituated to the ambient level of noise and disturbance emanating from the project site. If Swainson's hawks are found to be nesting within ~~1,000 feet~~ 0.25-mile of the project site, a non-disturbance buffer shall be established to keep all construction activities a minimum of 0.25-mile ~~1,000 feet~~ from the nest site. The CDFW shall be consulted regarding the adequacy of the buffer established

by the qualified Raptor Biologist. At that time the necessity for acquiring a Fish and Game Section 2081 Incidental Take Permit (ITP) authorization would be determined. An ITP authorization shall be required if there were a valid concern the project activities would result in the "take" of an adult Swainson's hawk, eggs, or nestlings.

Surveys shall be conducted by a qualified Raptor Biologist with at least a minimum of a 4- year college degree in wildlife biology or related environmental science, familiarity with Swainson's hawk and its local ecology, and 2 years of experience surveying for and detecting Swainson's hawk pursuant to "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" survey protocol. No disturbance such as construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is complete based on monitoring of the active nest by a qualified Biologist.

Page 3.3-27, MM BIO-1b

MM BIO-1b has been amended to include additional buffering measures for the Golden Eagle and minimum credential for biologists conducting surveys.

MM BIO-1b: No more than 30 days prior to the first ground disturbance activity, pre-construction golden eagle nesting surveys shall be conducted in the project vicinity by a qualified Raptor Biologist. The qualified Raptor Biologist shall have a minimum of a 4- year college degree in wildlife biology or related environmental science, at least 2 years conducting wildlife surveys, and a familiarity with golden eagle and its local ecology. ~~at least 2 years of experience surveying for and detecting nesting golden eagles.~~ Pre-construction surveys shall include investigation of all potential nesting trees within a survey area determined by the qualified Raptor Biologist, but no less than a 1 ~~0.5~~-mile radius around all project activities. If active golden eagle nests are identified within any trees within the survey areas a 1 ~~0.5~~-mile radius of the project site, a qualified Raptor Biologist shall establish a protection buffer ~~at a minimum~~ of approximately 1 mile ~~1,000~~ feet that is adequate to ensure noise or activity from the proposed project would not cause nest disturbance of ~~or~~ young or adult bird mortality. Buffer zones may vary in size as some golden eagles are more acclimated to disturbance than others. Size of buffer zone may be ~~increased~~ modified by the qualified Raptor Biologist considering the type of construction activity that may occur and the behavioral factors and extent that golden eagle may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young golden eagles have fledged or that the nesting cycle is complete based on monitoring of the active nest by the qualified Biologist.

Page 3.3-29, MM BIO-2

MM BIO-2 has been amended to include additional buffering measures for wetlands developed near the utility pipeline alignment.

MM BIO-2 To offset the loss of the 0.496 acre of seasonal wetland impacts from Phase 1, and 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools from Phase 2, and to ensure there is no-net loss of wetland area, the applicant shall establish/create 0.992 acre of palustrine emergent wetlands (2:1 ratio) for Phase 1 concurrent with project construction, and 2.57 acres of seasonal wetlands (1:1 ratio) and 1.13 acres of vernal pool wetlands (1:1 ratio) for Phase 2 at least 1 year prior to the start of Phase 2 construction, on the 45-acre Wetland Preserve. The established/created wetlands will be constructed a minimum of 20 feet from the Napa Logistics Park sewer and recycled water pipeline easement or unpaved access road associated with the easement. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland.

Pages 3.3-34 through 3.3-37, Performance Standards

The performance standards for MM BIO 3d have been amended.

Performance Standards

Performance Standards shall include at a minimum the following:

Years 1, 2, 3, 4 and 5 Performance Standards for Wetland Hydrology

Each year wetland hydrology shall be measured during the winter when surface and/or subsurface hydrology would be observable. A minimum of 1 data point shall be taken in each of the established/created wetlands. In addition, wetland hydrologic indicators shall be recorded each spring during the vegetation monitoring period.

Year 1:

Performance standard would be met for Year 1-5 if:

- The created wetlands remain inundated to a minimum depth of 0.5 inch or greater for at least 7 days and/or saturated for at least 14 days and/or at least one primary or two secondary wetland hydrology indicators listed in the *Arid West Region Wetland Determination Data Forms* are recorded.

Contingency Measures:

If the annual performance standard is not being met for any given monitoring year the Permittee shall prepare an analysis of the cause(s) of failure and, if determined necessary, implement remedial action. If the Plan Area has not met the performance standard, the Permittee's maintenance and monitoring obligations shall continue until the RWQCB and USACE give final project confirmation.

Remedial action may include re-grading to achieve wetland hydrology, which would improve hydric soil formation.

Years 1, 2, 3, 4, and 5 Performance Standards for Increase in Colonization of Wetland Vegetation

Each year during the spring or early summer wetland vegetation cover shall be measured by conducting a site visit and recording absolute cover and dominant plant species observed within the wetland buffer area. A minimum of 1 data point shall be taken in each of the established/created wetlands. The colonization of wetland vegetation shall be measured by determining overall absolute plant cover values each year. This shall be accomplished by measuring absolute cover values within a 5-foot radius sample plot every 50 feet along a transect through each established/created wetland. In addition, to monitor for invasive plant species within the uplands which are not detected in the baseline survey, a minimum of three 5-foot radius sample plots on the east side and three on the west side will be placed at random upland locations along a linear transect east to west within the Wetland Preserve. During Year 4 and 5 the managed landscaped areas within the development will be visually surveyed for evidence of invasive plant species. Performance Standards for each monitoring year are listed below.

Year 1:

Performance standard would be met for Year 1 if:

- At least one hydrophytic plant species colonizes the established/created seasonal wetlands and vernal pools; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 5 percent or greater.

Year 2:

Performance standard would be met for Year 2 if:

- At least one hydrophytic plant species colonizes the established/created seasonal wetlands and vernal pools; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 10 percent or greater.

Year 3:

Performance standard would be met for Year 3 if:

- At least two hydrophytic plant species colonizes the established/created seasonal wetlands;
- At least two native hydrophytic plant species colonizes the established/created vernal pools and at least one is a vernal pool habitat indicator species; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 20 percent or greater and comprised of native and naturalized species.

Year 4:

Performance standard would be met for Year 4 if:

- At least two hydrophytic plant species colonize the established/created seasonal wetlands.
- At least two native hydrophytic plant species colonizes the established/created vernal pools and at least one is a vernal pool habitat indicator species.
- The average absolute cover of wetland vegetation within an established/created seasonal wetland and vernal pool is 30 percent or greater.
- To meet the wetland performance standard invasive plant species within the wetlands shall not comprise greater than 5 percent of the total absolute cover. To meet the upland performance standard, invasive plant species, which currently are not supported in the uplands within the Wetland Preserve, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating.
- The managed landscaped areas within the development will be visually surveyed for evidence of invasive plant species. To meet the managed landscape performance standard, invasive plant species, which currently are not supported in the uplands within the Wetland Preserve, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating.

Year 5:

Performance standard would be met for Year 5 if:

- At least two hydrophytic plant species documented during the CRAM assessment for the palustrine emergent wetlands impacted on the Phase 1 project site colonize the established/created seasonal wetlands.
- At least two native vernal pool habitat indicator species documented during the CRAM assessment for the vernal pool on the Phase 2 project site colonizes the established/created vernal pools.
- The average absolute cover of wetland vegetation within the established/created seasonal wetland (non-vernal pool wetlands) is 40 percent or greater; and the average absolute cover of wetland vegetation within the established/created vernal pools is 40 percent or greater of which greater than 50 percent of the vegetation cover consists of two or more dominate native vernal pool habitat indicator plants.
- To meet the wetland performance standard invasive plant species within the wetlands shall not comprise greater than 5 percent of the total absolute cover. To meet the upland performance standard, invasive plant species, which currently are not supported in the uplands, within the Wetland Preserve shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating.

- The managed landscaped areas within the development will be visually surveyed for evidence of invasive plant species. To meet the managed landscape performance standard, invasive plant species, which currently are not supported in the uplands within the Wetland Preserve, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating.

Contingency Measures:

If the annual performance standard is not being met for any given monitoring year the Permittee shall prepare an analysis of the cause(s) of failure and, if determined necessary, implement remedial action. Remedial action may include hydroseeding with native species, or addition of supplemental topsoil or mulch to promote growth, control of invasive using mechanical equipment, grazing animals.

Year 5 No-Net-Loss Performance Standard for Phase 1 Impacts

Performance standard would be met for Year 5 when;

- A wetland delineation is performed and verified by the USACE and confirms a minimum of 0.992 acre of wetlands have been established/created within the Wetland Preserve.

Year 5 No-Net-Loss Performance Standard for Phase 2 Impacts

The Phase 2 no-net-loss performance standard would be measured when an application for the Phase 2 project is submitted to the RWQCB and USACE, and the Phase 2 project is approved. Once Phase 2 has been approved by the RWQCB and USACE, this performance standard may be modified depending on the level of wetland impacts authorized by the RWQCB and USACE, meaning this performance standard may decrease if the wetlands impacted for Phase 1 are less than 3.7 acres.

Performance standard would be met for Year 5 when;

- A wetland delineation is performed and verified by the USACE and confirms a minimum of 2.57 acres of seasonal wetland and 1.13 acres of vernal pools have been established/created within the Wetland Preserve.

Year 5 Long-Term Protection and Long-Term Funding

Performance standard would be met for Year 5 once:

- The Wetland Preserve has been placed under a conservation easement; and
- A long-term financing mechanism (e.g., non-wasting endowment, trusts, contractual arrangement etc.) to fund implementation of the long-term management of the Wetland Preserve has been secured.

Page 3.3-39, MM BIO-4

MM BIO-4 has been amended to include additional buffering measures for nesting birds.

MM BIO-4 If construction occurs during the breeding season of migratory and resident birds (February 1 to August 31), a qualified Biologist shall conduct a pre-construction breeding bird survey in areas of suitable habitat within 7 days prior to the onset of construction activity. Surveys shall be conducted within the project footprint and 100 ~~50~~ feet from the construction limits for nesting passerines, 250 feet from the construction limits for nesting accipiters and a minimum of 500 ~~1,000~~ feet from the construction limits for nesting raptors. If the survey area is found to be absent of nesting birds, no further mitigation would be required. However, if construction activities are delayed by more than 7 days, an additional nesting bird survey shall be performed. If bird nests are found, appropriate buffer zones shall be established around all active nests to protect nesting adults and their young from direct or indirect impacts related to project construction disturbance. Size of buffer zones shall be determined per recommendations of the qualified Biologist based on-site conditions and species involved, but typical buffers around active nests are 500 feet for large raptors such as buteos, 250 feet for small raptors such as accipiters, and 100 feet for passerines (songbirds) and other bird species. For special status species, a 0.25-mile ~~At a minimum a 1,000-foot buffer~~ shall be established for nesting Swainson's hawk; 1 mile for ~~and~~ golden eagle; and a 500-foot buffer for nesting tricolored blackbirds, ~~northern harriers and other non-listed raptors; 250-foot buffer for nesting accipiters; and minimum 50-foot buffers shall be established for nesting passerines and all other non-raptor or passerine nesting birds.~~ If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Buffer zones shall be maintained until it can be documented that either the nest has failed, or the young have fledged.

Pages 3.9-38 and 3.39, General Plan Policy 8.3.2

The consistency analysis with General Plan Policy 8.3.2 has been amended to reflect that there is no riparian habitat within the project site.

Policy 8.3.2	Prohibit development and grading that alters the biological integrity of the Riparian Corridors as depicted on the Biological Habitats Map, unless no feasible alternative exists or the damaged habitat is replaced with habitat of equivalent value. Development that is permitted within Riparian Corridors shall: a. minimize removal of vegetation, erosion, sedimentation and runoff by appropriate protection or vegetation and landscape; b. provide for sufficient passage of native and anadromous fish;	**Consistent:** Policy 8.3.2 is not implicated by the project, as the project site contains no riparian vegetation or habitat. The herbaceous vegetation (non-woody plants such as grasses, flowering plants etc.) next to No Name Creek does not constitute what is considered riparian vegetation for the purpose of local, state and federal regulations. As defined by the California Department of Fish and Wildlife, "Riparian Vegetation" is vegetation composed primarily of woody hydrophytes, such as willows, alders, cottonwoods, sycamores, box elders, aspens etc. The definition does not include upland herbaceous vegetations,

	c. minimize wastewater discharges and entrapment; d. prevent ground water depletion or substantial interference with surface and subsurface flows; e. provide for natural vegetation buffers; f. minimize the channelization of streams and other watercourses; g. provide for the enhancement of riparian corridors.	which is found throughout the entire project site. ~~A segment of No Name Creek is located within the proposed Wetland Preserve. For those riparian areas located where development is proposed, mitigation is proposed requiring any impacted riparian areas to be offset through restoration of comparable habitat within the Wetland Preserve. The features impacted by the project cannot be avoided due to their location; however, their loss would be offset through the creation of compensatory features in the preserve.~~

THIS PAGE INTENTIONALLY LEFT BLANK

Table 1: Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
Section 3.1 – Aesthetics, Light, and Glare					
MM AES-2: Prior to issuance of building permits for the proposed project, the project applicant shall prepare and submit a photometric plan to the City of American Canyon for review and approval. The photometric plan must demonstrate that all exterior light fixtures would be directed downward or employ full cutoff fixtures to minimize light spillage and avoid interference with aviation operations at the Napa County Airport. The approved plan shall be incorporated into the final building plans.	Approval of plan	Prior to issuance of building permits	City of American Canyon		
Section 3.2 – Air Quality/Greenhouse Gas Emissions					
MM AIR-2: All construction activity: During construction activities, the following air pollution control measures shall be implemented: • All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day, or more as needed. • All haul trucks transporting soil, sand, or other loose material offsite shall be covered. • All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited. • All vehicle speeds on unpaved roads and surfaces shall be limited to 15 mph. • All roadways, driveways, and sidewalks shall be paved as soon as possible. • Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.	Notes on construction plans; Site inspection	During construction activities	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
• Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 2 minutes (beyond the 5 minute limit required by the California airborne toxics control measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points. • All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified visible emissions evaluator. • A publicly visible sign shall be posted with a name and telephone number of the applicant's representative for dust complaints. This person shall respond and take corrective action within 2 business days of a complaint or issue notification. The Bay Area Air Quality Management District's phone number shall also be visible to ensure compliance with applicable regulations.					
MM AIR-3a: During onsite construction activities, the applicant shall require the use of clean construction equipment. All diesel equipment shall be powered by Tier 3 engines or equivalent. In addition, all off-road equipment idling shall be limited to 2 minutes.	Notes on construction plans; Site inspection	During onsite construction activities	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
MM AIR-3b: Prior to issuance of the final certificate of occupancy for each building, the following measures to reduce emissions from onsite heavy duty trucks shall be implemented: a) Post signs in all loading/unloading areas informing truck drivers California Air Resources Board (CARB) diesel anti-idling regulations. The signs shall include telephone numbers of the building facilities manager and the CARB to report violations. b) Require facility management to be trained in CARB anti-idling regulations. Anti-idling training shall be incorporated into the facility operations manual or equivalent document. c) Provide tenants with information about SmartWay or other organizations that seek to reduce air emissions associated with goods movement.	Site inspection	Prior to issuance of the final certificate of occupancy for each building	City of American Canyon		
Section 3.3 –Biological Resources					
MM BIO-1a: Prior to any vegetation removal or ground disturbing activities in the off-site development areas, focused surveys shall be conducted to determine the presence of special-status plant species with potential to occur in the off-site development area. Surveys shall be conducted in accordance with the Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities (CDFG 2009). These guidelines require rare plant surveys to be conducted at the proper time of year when rare or endangered species are both "evident" and identifiable. Field surveys shall be scheduled to coincide with known blooming periods, and/or during periods of physiological development that are necessary to identify the plant species of concern. If no special-status plant species are found on the off-site development areas, then the project will	Submittal of documentation	Prior to any vegetation removal or ground disturbing activities in the off-site development areas	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
not have any impacts to the species and no additional mitigation measures are necessary. If any of the special-status plant species are found on the off-site development areas and cannot be avoided, the following measures shall be required: • Where surveys determine that special-status plant species are present within the off-site development areas, direct and indirect impacts of the project on the species (e.g., alkali milk-vetch, big-scale balsamroot, Contra Costa goldfields, dwarf downingia, legenere, San Joaquin spearscale, saline clover, and showy Indian clover) shall be avoided where feasible through the establishment of activity exclusion zones, where no ground-disturbing activities shall take place, including construction of new facilities, construction staging, or other temporary work areas. Activity exclusion zones for special-status plant species shall be established prior to construction activities around each occupied habitat site, the boundaries of which shall be clearly marked with standard orange plastic construction exclusion fencing or its equivalent. The establishment of activity exclusion zones shall not be required if no construction-related disturbances would occur within 250 feet of the occupied habitat site. The size of activity exclusion zones may be reduced through consultation with a qualified biologist and with concurrence from USFWS or CDFW, as applicable, based on site-specific conditions.					

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
MM BIO-1b: If special status plants are found in the off-site development areas and cannot be avoided, the Applicant shall retain a qualified biologist and consult with the USFWS or CDFW, as applicable, to prepare a special-status plant mitigation and monitoring plan to determine feasible impact minimization and mitigation for those special status plants, which may include but are not limited to elements as applicable to the species, based on the project impacts, and as modified by the resource agencies: • On-site seed/propagule salvage and transplantation to mitigate for unavoidable temporary construction impacts to special status plants habitat in the off-site development areas. • Incorporating project site management requirements designed to reduce ongoing impacts from project operation, including controlling public access to avoided special status plants habitat remaining on-site. • A salvage/transplanting program shall be developed, as part of a special-status plant mitigation and monitoring plan, for the salvage and transfer of special status plants populations from the off-site development areas before the initiation of construction activities to another location either off-site or on-site that will be preserved in perpetuity (via conservation easement, deed restriction, or other appropriate legal means). Permits may be required from the CDFW or USFWS if a listed species is found and may require further mitigation in consultation with the appropriate agency or agencies. (Note: Salvage/transplantation methods for the salvaged plant population must be developed on a species-by-species basis and would likely include the involvement of local conservation easements/preserves/ open space, where	Submittal of documentation	Prior to any vegetation removal or ground disturbing activities in the off-site development areas	City of American Canyon; United States Fish and Wildlife Service; California Department of Fish and Wildlife		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
applicable to ensure preservation in perpetuity). The salvage of special-status plant species must be performed at the correct time of year and transplanting must be successfully completed during the same year as construction was completed. The propagation program shall include establishment of success criteria for the affected special status plants. • Efforts shall be made to salvage portions of the habitat or plant populations that will be lost as a result of implementation of the proposed project. In addition to salvaging of special status plants themselves, salvage efforts shall include topsoil and seed-banks surrounding impacted plants, if doing so will not contribute to the spread of invasive or noxious plant species. • If the resource agencies determine that implementation of Mitigation Measure BIO-1b is insufficient to mitigate for the loss of special status plants, the applicant shall instead implement Mitigation Measure BIO-1d.					
MM BIO-1c: If special status plants are found on-site and Mitigation Measure BIO-1b is implemented, the Applicant shall design and implement a monitoring program as part of the special-status plant mitigation and monitoring plan to evaluate compliance with and the effectiveness of these mitigation measures. The monitoring program shall be conducted by a qualified botanist, and shall take place periodically during project construction, and annually, following the completion of construction, for 5 years. The project applicant shall bear the financial responsibility for mitigation measure monitoring and reporting for the entirety of the 5 year reporting period. If the monitoring program identifies mitigation measure noncompliance or ineffectiveness, the project applicant shall fund and	Submittal of documentation	Prior to any vegetation removal or ground disturbing activities in the off-site development areas	City of American Canyon; United States Fish and Wildlife Service; California Department of Fish and Wildlife		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
implement remedial measures including, but not limited to, on-site habitat restoration, re-seeding, the installation and maintenance of additional fencing, and other appropriate measures. The project applicant shall ensure that sufficient funding exists to complete all reasonably foreseeable remedial actions prior to the commencement of project construction. Annual monitoring reports shall be submitted to the USFWS or CDFW as applicable.					
MM BIO-1d: In lieu of on-site mitigation pursuant to Mitigation Measure BIO-1b and Mitigation Measure BIO-1c, as allowed in writing by the City (for CEQA-protected species only) or CDFW (for state-listed species) or USFWS (for federally listed species), mitigation requirements may be satisfied via the purchase of qualified mitigation credits or the preservation of off-site habitat. Appropriate off-site conservation opportunities shall be identified and, if feasible, protected in perpetuity through the purchase of conservation easements and/or mitigation bank credits. The habitat value of off-site conservation areas shall be enhanced where feasible through means such as reducing grazing intensity and restricting access. At a minimum, the loss of individuals or acres of occupied habitat (as appropriate) of a special-status species shall be compensated for through the acquisition, protection, and subsequent management of other existing occurrences at a ratio of 1:1. The resource agencies may increase the ratio depending on the rarity of the affected rare plant species (i.e., a listed species), and the abundance of the rare plant habitat impacted.	Verification of purchase of credits	Prior to any vegetation removal or ground disturbing activities in the off-site development areas	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
MM BIO-2a: (Swainson's Hawk) Pre-construction surveys shall be conducted for a half-mile radius around all project activities and shall be completed for at least two survey periods immediately prior to project initiation. The surveys shall be conducted in accordance with CDFW's "Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFG 2000), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements, as set forth in the "Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley." If no nesting Swainson's hawks are identified during the April surveys (first survey), project construction can commence. If during the second survey (June), Swainson's hawks are found nesting in the project vicinity and project construction commenced in April/May, it should be assumed that the Swainson's hawks commenced nesting while the project site was under construction and thus, that the hawks are habituated to the ambient level of noise and disturbance emanating from the project site. If Swainson's hawks nest on or within the area of influence of the project site (which is generally considered to be within 1,320 feet (1/4 mile) of the project site, impacts to nesting Swainson's hawks would be regarded as significant pursuant to the CEQA, and implementation of avoidance measures below would be necessary to ensure the project does not impact the nesting Swainson's hawks. If Swainson's hawks are found to be nesting on or within	Notes on construction plans; Submittal of documentation; Site inspection	Prior to project initiation; During construction activities (if Swainson's hawks are found to be nesting within 1,320 feet of the project site)	City of American Canyon; California Department of Fish and Wildlife		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
1,320 feet (1/4 mile) of the project site, a non-disturbance buffer shall be established that keeps all project activities a minimum of 1,320 feet from the nest site. If the 1,320 foot buffer only partially intersects the project site, that intersecting area shall be demarked in orange construction fencing and will ensure that noise/disturbance related impacts emanating from the project site remains at least 1,320 feet from the nest site. No project activities would be allowed in the orange construction fenced off area constituting the buffer. If a qualified raptor biologist makes a determination that the nesting Swainson's hawks are shielded from disturbance by geographic barriers or are well acclimated to higher levels of disturbance (for example if the nesting attempt commenced after the project was under construction, or the nest site is adjacent to preexisting high levels of disturbance), the biologist may justify a recommendation for a smaller buffer. CDFW shall be consulted regarding the qualified raptor biologists' recommendations for an appropriate non-disturbance buffer. At that time the necessity of acquiring a Fish and Game Section 2081 management authorization would also be determined. A Section 2081 management authorization would be required if there was a valid concern that project activities could result in "take" of adult Swainson's hawks, their nestlings, or eggs. Under all circumstances the nesting buffer must ensure that all project related disturbance remains far enough away from the Swainson's hawk nest site to ensure that the level of construction related disturbance does not result in deleterious effects on the nesting hawks, their eggs, or nestlings. If the nesting buffer is reduced to less than 1,320					

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
feet, a qualified raptor biologist shall monitor the nesting hawks initially for a period long enough to understand the nesting hawks response to disturbance, and thereafter on a routine basis (at least 3 times a week, or as required by the CDFW) until the nestlings successfully fledge and become independent of the nesting tree. Any buffer that is smaller than 1,320 feet may have to be increased in size again if the nesting hawks respond poorly to a reduced buffer. No project-related disturbance shall be allowed in the nesting buffer until the young fledge the nest or the nesting attempt is otherwise complete for the year. The buffer should remain in place until the fledglings become independent of the nesting tree. The young can be considered successfully fledged when the hawks no longer return to the nesting tree for several consecutive nights. Implementation of this mitigation measure would reduce potential impacts to Swainson's hawk to a level considered less than significant pursuant to CEQA.					
MM BIO-2b: (Northern Harrier and Ground Nesting Birds) Prior to ground disturbance a nesting survey shall be conducted for ground nesting raptors and birds, including the northern harrier, during the nesting season, between February 1 and September 1. Typically, the northern harrier builds a grass-lined nest on the ground in grassland habitat. In order to determine if this raptor or other ground-nesting species are nesting on-site, a qualified biologist shall conduct walking transects through the project site's herbaceous and grassland habitats. If a northern harrier nest is identified, a qualified biologist who frequently works with nesting raptors/birds shall prescribe adequate nesting buffers to protect the nesting birds from harm. These buffers shall be established with orange construction fencing. If the nest is	Notes on construction plans; Submittal of documentation; Site inspection	Prior to ground disturbance during the nesting season (February 1 to September 1); During construction activities (if nesting raptors and birds are found to be nesting within the project site)	City of American Canyon; California Department of Fish and Wildlife		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
located outside of the project site, then the buffer should be demarcated where the buffer intersects the project site. No construction or earth-moving activity shall occur within the established buffer until the young have fledged (that is, left the nest) and have attained sufficient flight skills to avoid project construction zones. If a qualified biologist is not hired to monitor the nesting raptors then the buffers shall be maintained in place through the end of August.					
MM BIO-2c: (Tricolored Blackbird and Other Nesting Birds) If construction is to commence between February 1 and September 1, a nesting bird survey shall be conducted 15 days prior to earth moving or the commencement of construction work. If any birds are found nesting on the project site or within a zone of influence of the project site, qualified biologist who frequently works with nesting birds shall prescribe adequate nesting buffers to protect the nesting birds from harm. No construction or earth-moving activity shall occur within any nest protection buffer until it is determined by a qualified biologist that the nesting cycle is complete and any young that fledge have attained sufficient flight skills to avoid being impacted by the proposed project.	Notes on construction plans; Submittal of documentation; Site inspection	Prior to ground disturbance during the nesting season (February 1 to September 1); During construction activities (if nesting birds are found to be nesting within the project site)	City of American Canyon; California Department of Fish and Wildlife		
MM BIO-4a: Prior to issuance of grading permits, the project applicant shall obtain all requisite approvals and permits from the USACE and RWQCB for on-site and off-site impacts to waters of the United States and waters of the State. Mitigation of impacts shall be achieved through either (1) creation and preservation of seasonal wetland habitat within the 37-acre Preserve Area, or (2) off-site restoration of features of equal or greater value, or (3) purchase of credits at an agency-approved mitigation bank in the region at a ratio to be determined through consultation with the USACE and RWQCB, but no less than a 1:1 ratio.	Submittal of documentation	Prior to issuance of grading permits	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
MM BIO-4b: The project shall avoid impacts to wetlands occurring within the proposed sewer alignment by adjusting staging, access, and excavation areas to accommodate existing wetlands, and by installing silt fence around the perimeter of any existing wetlands adjacent to pipeline installation work.	Notes on construction plans; Site inspection	Prior to and during off-site construction activities	City of American Canyon		
MM BIO-5a: Impacts within No Name Creek (above the ordinary high water mark but below the top-of-bank) shall be mitigated to the satisfaction of the California Department of Fish and Wildlife (CDFW) as part of the issuance of a Streambed Alteration Agreement pursuant to Section 1602 of the Fish and Game Code. Prior to issuance of grading permits, the project applicant shall obtain all requisite approvals and permits from CDFW for on-site and off-site impacts to No Name Creek. Mitigation for impacts to the tops of bank of No Name Creek shall be mitigated at a ratio of at least 3:1 or at a higher mitigation ratio as required by CDFW based on the linear feet of creek bank impacted by the proposed clearspan bridge. The applicant shall implement mitigation that includes creation of riparian habitat along North Slough within the project boundary through the planting of native trees such as oaks and other riparian tree and/or shrub species as determined appropriate in the 1602 Agreement. The planting shall be irrigated through an establishment period as determined in the 1602 Agreement. The riparian enhancement shall be monitored for approximately 5 years or as otherwise determined in the 1602 Agreement, and annual monitoring reports shall be prepared throughout the monitoring period. The monitoring plan shall include success criteria as required by the 1602 Agreement. Monitoring	Submittal of documentation	Prior to issuance of grading permits	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
reports shall be submitted to CDFW and the City of American Canyon. In the event that any stormwater outfall is necessary within No Name Creek, mitigation for these impacts will be included in the mitigation requirements described above. If impacts occur within United States Army Corps of Engineers (USACE) jurisdiction, the mitigation for the impacts shall be included within a Corps permit application and impacts shall be mitigated via the creation of new wetlands at a minimum ratio of 2:1 (or as otherwise determined by the USACE) within the 37-acre wetland preserve on-site. Monitoring of the created wetlands shall be conducted for at least 5 years and annual monitoring reports shall be prepared and submitted to the USACE, the Regional Water Quality Control Board, and the City of American Canyon. Success criteria shall be established in accordance with the USACE permit.					
MM BIO-5b: The project shall bore and jack the new sewer and recycled water lines under No Name Creek, if the western alignment is selected, to avoid potential impacts to waters of the U.S or the creek. Prior to the issuance of construction permits for the off-site utilities, the applicant shall submit a plan for this work demonstrating that no impacts to the waters of the U.S. shall occur. All necessary approvals from CDFW or USACE shall be obtained prior to the start of this construction.	Notes on construction plans; Submittal of documentation; Site inspection	Prior to the issuance of construction permits for the off-site utilities	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
Section 3.4 –Cultural Resources					
MM CUL-1: If prehistoric or historic-period archaeological resources are encountered, all construction activities within 100 feet of the find shall halt and the City of American Canyon shall be notified. Prehistoric archaeological materials might include obsidian and chert flakedstone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil ("midden") containing heat-affected rocks, artifacts, or shellfish remains; and stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); and battered stone tools, such as hammerstones and pitted stones. Historic-period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse. A Secretary of the Interior-qualified archaeologist shall inspect the findings within 24 hours of discovery. If it is determined that the project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines) mitigation shall be implemented in accordance with PRC Section 21083.2 and Section 15126.4 of the CEQA Guidelines, with a preference for preservation in place. Consistent with Section 15126.4(b)(3), this may be accomplished through planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement. If avoidance is not feasible, a qualified archaeologist shall prepare and implement a detailed treatment plan in consultation with the City of American Canyon. Treatment of unique archaeological resources shall follow the applicable requirements of PRC Section 21083.2. Treatment for most resources would consist of (but would not be not limited to) sample excavation,	Notes on construction plans; Submittal of documentation; Site inspection	During ground disturbing activities	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
artifact collection, site documentation, and historical research, with the aim to target the recovery of important scientific data contained in the portion(s) of the significant resource to be impacted by the Project. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and state repositories, libraries, and interested professionals.					
MM CUL-3: If potential fossils are discovered during project implementation, all earthwork or other types of ground disturbance within 100 feet of the find shall stop immediately until a qualified professional paleontologist can assess the nature and importance of the find. The paleontologist shall report his/her findings to the City of American Canyon. Based on the scientific value or uniqueness of the find, the paleontologist shall either record the find and recommend that the City of American Canyon allow work to continue, or recommend salvage and recovery of the fossil. The paleontologist shall, if required, propose modifications to the stop-work radius based on the nature of the find, site geology, and the activities occurring on the site. If treatment and salvage is required, recommendations will be consistent with Society of Vertebrate Paleontology guidelines and currently accepted scientific practice. If required, treatment for fossil remains shall include preparation and recovery of fossil materials so that they can be housed in an appropriate museum or university collection, and, if required, shall also include preparation of a report for publication describing the finds.	Notes on construction plans; Submittal of documentation; Site inspection	During ground disturbing activities	City of American Canyon; American Canyon Fire Protection District		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
MM CUL-4: In the event of discovery or recognition of any human remains during construction activities, such activities within 100 feet of the find shall cease until the Napa County Coroner has been contacted to determine that no investigation of the cause of death is required. The Native American Heritage Commission (NAHC) will be contacted within 24 hours if it is determined that the remains are Native American. The NAHC will then identify the person or persons it believes to be the most likely descendant from the deceased Native American (PRC Section 5097.98), who in turn would make recommendations to the City of American Canyon for the appropriate means of treating the human remains and any associated funerary objects [CEQA Guidelines Section 15064.5(d)].	Notes on construction plans; Submittal of documentation; Site inspection	During ground disturbing activities	City of American Canyon; Napa County Coroner		
Section 3.5 – Geology, Soils, and Seismicity					
MM GEO-1a: Prior to the issuance of the first construction permit, the project applicant shall retain a California registered geologist or geotechnical engineer to prepare a fault investigation study for the portion of the West Napa Fault that is located within the project site. The fault investigation study shall identify the location of the fault within the project site and determine appropriate setback requirements in accordance with the Alquist-Priolo Earthquake Fault Zoning Act and the California Building Standards Code. The fault investigation study shall be submitted to the City of American Canyon for review and approval as part of the construction permit application. The recommendations of the approved study shall be incorporated into the project plans and all applicable construction-related permits to ensure all geotechnical issues are addressed in compliance with current building code requirements.	Approval of study and plans	Prior to the issuance of the first construction permit	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
MM GEO-1b: Prior to the issuance of building permits for each structure, the project applicant shall submit a design-level Geotechnical Investigation to the City of American Canyon for review and approval. The investigation shall be prepared by a qualified engineer and identify necessary grading and building practices necessary to achieve compliance with the latest adopted edition of the California Building Standards Code geologic, soils, and seismic requirements, including abatement of expansive soil conditions. The report shall also determine the final design parameters for walls, foundations, foundation slabs, and surrounding related improvements (e.g., utilities roadways, parking lots, and sidewalks). The measures identified in the approved report shall be incorporated into the project plans and all applicable construction-related permits.	Approval of plans	Prior to the issuance of building permits for each structure	City of American Canyon		
Section 3.6 – Hazards and Hazardous Materials					
MM HAZ-1a: Prior to construction, all contractor and subcontractor personnel shall receive training regarding the appropriate work practices necessary to effectively comply with the applicable environmental laws and regulations, including, without limitation, hazardous material spill prevention and response measures.	Notes on construction plans; Submittal of documentation	Prior to construction	City of American Canyon		
MM HAZ-1b: Prior to issuance of the certificate of occupancy for any uses that involve the storage or use of acutely hazardous materials, the tenant shall consult with the California Emergency Management Agency to determine the guidelines and regulations applicable to the operations. If required, tenants shall prepare a Risk Management Plan consistent with CalARP prior to undertaking any storage or use of acutely hazardous materials.	Approval of plan	Prior to issuance of the certificate of occupancy for any uses that involve the storage or use of acutely hazardous materials	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
MM HAZ-1c: During construction and operations, hazardous materials shall not be disposed of or released onto the ground, the underlying groundwater, or any surface water. Totally enclosed containment shall be provided for all trash. All hazardous construction waste shall be removed to a hazardous waste facility permitted or otherwise authorized to treat, store or dispose of such materials.	Notes on construction plans; Submittal of documentation; Site inspection	During construction and operations	City of American Canyon		
Section 3.7 – Hydrology and Water Quality					
MM HYD-1a: Prior to issuance of grading permits for the proposed project, the City of American Canyon shall verify that the applicant has prepared a Stormwater Pollution Prevention Plan (SWPPP) in accordance with the requirements of the statewide Construction General Permit. The SWPPP shall be designed to address the following objectives: (1) all pollutants and their sources, including sources of sediment associated with construction, construction site erosion, and all other activities associated with construction activity are controlled; (2) where not otherwise required to be under a Regional Water Quality Control Board permit, all non-stormwater discharges are identified and either eliminated, controlled, or treated; (3) site best management practices (BMPs) are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized non-stormwater discharges from construction activity; and (4) stabilization BMPs are installed to reduce or eliminate pollutants after construction are completed. The SWPPP shall be prepared by a qualified SWPPP developer. The SWPPP shall include the minimum BMPs required for the identified Risk Level. BMP implementation shall be consistent with the BMP requirements in the most recent version of the California	Approval of plan; Notes on construction plans; Site inspection	Prior to issuance of grading permits	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
Stormwater Quality Association Stormwater Best Management Handbook-Construction or the Caltrans Stormwater Quality Handbook Construction Site BMPs Manual.					
MM HYD-1b: Prior to issuance of building permits for the proposed project, the project applicant shall prepare a Stormwater Control Plan that includes post-construction stormwater controls in the site design to satisfy requirements of the Phase II Small MS4 Permit. This shall include a review of the final Stormwater Control Plan by the City of American Canyon to ensure the required controls are in place. Provision E.12.h of the MS4 Permit requires an operation and maintenance program be implemented for post-construction stormwater management features. Responsible parties and funding for long-term maintenance of all BMPs must be specified. This plan shall specify a regular inspection schedule of stormwater treatment facilities in accordance with the requirements of the MS4 Permit. Reports documenting inspections and any remedial action conducted shall be submitted regularly to the City for review and approval.	Approval of plan	Prior to issuance of building permits	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
Section 3.8 – Land Use					
MM LU-3: Prior to issuance of the first building permit, the project applicant shall retain a qualified biologist to prepare a wildlife management plan for the landscaping and storm water detention basins. The plan shall incorporate applicable Federal Aviation Administration guidance for wildlife management and provide recommendations for the design and operation of the landscaping and storm water detention basins to ensure that they do not serve as attractants for wildlife or large flocks of birds that may be potentially incompatible with aviation operations. As part of plan development, the applicant shall consult with Napa County Airport representatives. The City of American Canyon shall confirm that the wildlife management plan's recommendations are reflected in the design and maintenance plans for the landscaping and storm water detention basins. The plan shall: • If necessary, refine or adapt water management designs to comply with the guidance set forth FAA guidance. Once developed, the project proponent shall provide copies of its stormwater management plans to the airport management for review by an FAA qualified Wildlife Biologist to confirm that the proposed slope design and bio retention plantings are consistent with Advisory Circular 150/5200-33B. • Refine or adapt project landscape designs to include materials that will not be attractive to potentially hazardous wildlife. The project proponent should provide copies of its proposed landscape plans and plant palettes to airport management for review by an FAA-qualified Wildlife Hazard Damage Biologist to confirm that the proposed landscaping will be consistent with airport operations.	Approval of plan	Prior to issuance of the first building permit	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
• Develop design standards to address aviation and wildlife hazard management concerns. The project applicant shall develop specific design standards for incorporation into lease documents that address wildlife hazard management. For example, site users shall be directed to store all refuse in covered bins or dumpsters and equip signs and light standards with non-perching devices. • Establish a process for ongoing coordination with the Napa County Airport staff regarding wildlife management, facility management procedures, and airport operations so that changes in wildlife activity during or following project construction can be identified and addressed.					
Section 3.9 – Noise					
MM NOI-1: During construction activities, the following noise attenuation measures and practices shall be implemented: • Construction activities shall be limited to the hours between 7 a.m. to 7 p.m. The City of American Canyon shall have the discretion to permit construction activities to occur outside of allowable hours if compelling circumstances warrant such an exception (e.g., weather conditions necessary to pour concrete). • All construction equipment shall use noise-reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer. If no noise reduction features were installed by the manufacturer, then the contractor shall require that at least a muffler be installed on the equipment. • Construction staging and heavy equipment maintenance activities shall be performed a minimum distance of 300 feet from the nearest residence, unless safety or technical factors take precedence (e.g., a heavy equipment breakdown).	Notes on construction plans; Site inspection	During construction activities	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
• During the grading phase of the off-site utility work, temporary sound barriers shall be utilized to block the line of site from operating heavy construction equipment to any residence within 150 feet of an active construction area.					
Section 3.10 – Public Services and Utilities					
MM PSU-6: Prior to issuance of building permits, the project applicant shall prepare and submit a Waste Management Plan to the City of American Canyon for review and approval. The plan shall estimate volume or weight of project construction and demolition debris; materials type to be generated; the maximum volume or weight of such materials that can feasibly be diverted via reuse or recycling, the vendor or facility proposed to use, collect, or receive that material; the estimated volume or weight of construction and demolition materials that will be land filled; and project square footage. The approved plan shall be implemented during construction activities.	Approval of plan	Prior to issuance of building permits	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
Section 3.11 – Transportation					
MM TRANS-1a: To mitigate this significant impact of greater trip generation from more intense land uses on the project site, the Applicant shall establish a Transportation Demand Management (TDM) program. The intent of the TDM program is to ensure that traffic volumes generated by Project do not exceed that which would occur from warehouse-only uses. Notwithstanding its intent, the applicant shall implement this mitigation measure regardless of the mix of uses (warehouse-only or warehouse/industrial/office) that is eventually built. The Applicant shall enter into a TDM Agreement prior to the issuance of the first building permit. The TDM Agreement shall require that an effective TDM program be implemented prior to the first certificate of occupancy and be subjected to on-going periodic monitoring thereafter. The TDM Agreement shall also include a financial guarantee satisfactory to the City. The City will deem the TDM program to be effective if the monitoring results indicate that AM peak-hour volumes are no more than 780 vehicles (and PM peak-hour volumes are no more than 704 vehicles). The TDM program shall be implemented at the applicant's cost, with no cost to the City, regardless of the eventual mix of uses and shall at a minimum include a permanent vehicle counting station at the single public access point. Examples of measures that may be considered as part of an effective TDM program include but are not limited to the following: • Starting and ending workday shifts during off-peak hours (i.e., not between 7:00 a.m. to 9:00 a.m. or 3:00 p.m. to 6:00 p.m.)—if done for the manufacturing use, this would decrease overall AM peak-hour vehicle trips from 1,310 to 510 and PM peak-hour vehicle trips from 1,243 to 479.	Approval of TDM program	Prior to the issuance of the first building permit	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
• Implement shuttle service to key employment centers or park-and-ride lots in the area for those employees whose workday shift start during peak hours. • Car-share program • Shuttles to regional transit • Transit subsidies • Carpool/vanpool subsidies • Employer-owned/sponsored vanpools • Flex-time and telecommute programs • Use of rail to transport employees and/or the delivery of goods The Applicant shall retain a transportation planning/ engineering consultant to analyze the effectiveness of the TDM program in a written report. The TDM Report will include data collected from the permanent vehicle counting station and a determination of employee commute methods, which shall be informed by surveying all employees working at the site. The TDM Report shall be submitted to the City on a periodic on-going basis and it shall form the basis of on-going determinations by the City as to the effectiveness of the TDM program. So long as the City deems the TDM program effective (i.e. when monitoring results indicate that AM peak-hour volumes are no more than 780 vehicles and PM peak-hour volumes are no more than 704 vehicles), the additional, potentially significant traffic impacts related to the mix of warehouse, industrial and office are mitigated to a less than significant level. At any time that the City determines the TDM program is not effective, then this additional significant traffic impact shall be mitigated by the implementation of Mitigation Measure TRANS-1b.					

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
MM TRANS-1b: If at any point the City determines the TDM program established as part of the Mitigation Measure TRANS-1a is not effective to reduce peak-hour traffic so that it does not exceed the TDM thresholds (780 vehicles during the AM peak hour and 704 vehicles during the PM peak hour), then the Applicant shall pay an additional amount for each and every peak-hour trip that is recorded by the counting device that exceeds the TDM threshold, based on the method described in the EIR Impact Analysis for this mitigation measure. The "on-going TIF" paid pursuant to this mitigation measure is in addition to the "one-time TIF" paid at the time of issuance of the first building permit in accordance with Mitigation Measure TRANS-1c. This mitigation measure shall be incorporated into the TDM agreement required as part of MM TRANS-1a.	Routine monitoring; receipt of fees	During operation of the proposed project	City of American Canyon		
MM TRANS-1c: The project applicant will be responsible for paying the City's Traffic Impact Fee for the proposed development. The funds collected under this program would be used to make improvements to a number of intersections throughout American Canyon which improvements would lessen the significant cumulative transportation impacts. However, because these projects for which the Applicant would make a fair share contribution pursuant to this mitigation measure rely upon a discretionary funding and approval by a third party (Caltrans), the impact would remain significant and unavoidable.	Receipt of fees	Prior to issuance of building permits	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
MM TRANS-1d: Prior to issuance of the first certificate of occupancy for the proposed project, the project applicant shall construct the following improvements along South Kelly Road, or, at the sole discretion of the City, enter into an off-site improvement agreement and prove an acceptable financial guarantee ensuring that these improvements will be completed: (1) At the intersection of SR-29 at South Kelly Road: - Northbound approach: 3 through lanes, 2 left-turn lanes, 1 right-turn lane - Southbound approach: 3 through lanes, 1 left-turn lane, 1 right-turn lane - Eastbound approach: 1 through lane, 2 left-turn lanes, 1 right-turn lane - Westbound approach: 1 through lane, 2 left-turn lanes, 1 right-turn lane (2) At the intersection of South Kelly Road and Devlin Road: - Northbound approach: 1 through lane, 1 right-turn lane - Southbound approach: 1 through lane, 1 left-turn lane - Private driveway: None - Westbound approach: 1 left-turn lane, 1 right-turn lane (3) South Kelly Road, between Devlin Road and SR-29 intersections: - 2 westbound receiving lanes, 1 eastbound lane, and 1 two-way left-turn lane. The length of the turn lanes on SR-29 shall be in accordance with the Caltrans Highway Design Manual requirements for a 55 mph highway, and shall accommodate sufficient vehicle	Acceptance of improvements	Prior to issuance of the first certificate of occupancy	City of American Canyon; California Department of Transportation; County of Napa		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
storage length for STAA vehicles under Existing Plus Background Plus Project conditions such that the intersection operates at least LOS D. The length of the turn lanes on South Kelly Road shall accommodate sufficient vehicle storage length under Existing Plus Background Plus Project conditions such that the intersection operates at least LOS D. The Applicant shall fund 100 percent of the cost of this improvement. To the extent this improvements represent oversizing that is over and above what would be necessary to mitigate the impacts of the project, the Applicant shall be eligible for reimbursement for costs above its fair share from other nearby private development that will also contribute traffic to this intersection. Prior to incurring any expenses for they may be eligible for reimbursement, the Applicant shall enter into a reimbursement agreement with the City. The implementation of this mitigation measure would be done in conjunction with construction that has already been planned and approved. The additional construction activity may incrementally increase construction traffic, noise, and air emissions in the activity area, but would not change the analysis, conclusions, or mitigation measures in this EIR. Construction activity associated with this mitigation measure would be required to comply with all applicable local and state laws and regulations such as dust suppression, limitations on hours of construction, stormwater runoff controls, and other similar requirements designed to reduce or avoid environmental impacts. Because the South Kelly Road intersection at SR-29 is impacted in the PM peak hour as a result of downstream					

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
queues, the impact at this intersection would remain significant and unavoidable with the implementation of this mitigation measure without changes to SR-29 through the City of American Canyon (between Napa Junction Road and American Canyon Road). As a result of the implementation of this mitigation measure, the significant impacts at the South Kelly Road intersection with Devlin Road are reduced to a less than significant level.					
MM TRANS-1e: Prior to issuance of the first construction permit for each building in the proposed project, the project applicant shall pay a fair share contribution of the estimated construction costs for regional projects on the state highway system. The fair share shall be calculated at the time payment is required, based on the projected traffic of the proposed use of the building, and the estimated cost of the construction at that time. Fair share shall be calculated by following the "Method for Calculating Equitable Mitigation Measures" from Caltrans Guide to the Preparation of Transportation Impact Studies (2002.)" The SR-12-29/SR221-Soscol Ferry Road Flyover Ramp is currently estimated at $40 million according to the Draft Environmental Impact Report (dated March 2015). Because this project for which the Applicant would make a fair share contribution pursuant to this mitigation measure rely upon discretionary funding and approval by a 3rd party (Caltrans), the impact would remain significant and unavoidable. The aforementioned parties (Caltrans, NCTPA, and the City of American Canyon, at minimum) will need to develop formal agreements regarding the funding sources for these projects and the mechanism for collecting and	Receipt of fees	Prior to issuance of the first construction permit for each building	City of American Canyon; California Department of Transportation; County of Napa		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
transferring the funds for this mitigation measures to be feasible.					
MM TRANS-1f: Prior to issuance of the first construction permit for each building in the proposed project, the project applicant shall pay a fair share contribution of the estimated construction costs for regional projects on the state highway system. The fair share shall be calculated at the time payment is required, based on the projected traffic of the proposed use of the building, and the estimated cost of the construction at that time. Fair share shall be calculated by following the "Method for Calculating Equitable Mitigation Measures" from Caltrans Guide to the Preparation of Transportation Impact Studies (2002.)" The grade-separated Airport Boulevard/SR-12-29 Interchange Project planned by Caltrans is currently estimated at $73 million according to the NCTPA SR-29 Gateway Corridor Improvement Plan (dated February 2014). Because this project for which the Applicant would make a fair share contribution pursuant to this mitigation measure rely upon discretionary funding and approval by a third party (Caltrans), the impact would remain significant and unavoidable. The aforementioned parties (Caltrans, NCTPA, and the City of American Canyon, at minimum) will need to develop formal agreements regarding the funding sources for these projects and the mechanism for collecting and transferring the funds for this mitigation measures to be feasible.	Receipt of fees	Prior to issuance of the first construction permit	City of American Canyon; California Department of Transportation; County of Napa

				Date	Initial
MM TRANS-2a: Prior to issuance of the first certificate of occupancy for the proposed project or when monitoring determines that it is warranted, the project applicant shall construct improvements at the intersection of South Kelly Road/Devlin Road (#1). The improvements shall consist of the installation of a signal and a westbound left-turn pocket on South Kelly Road, with a reimbursement agreement for the cost in excess of its fair share of the signal cost, thus improving the intersection LOS to acceptable conditions. The roadway change to westbound South Kelly Road is currently proposed as part of Mitigation Measure TRANS-1d.	Acceptance of improvements	Prior to issuance of the first certificate of occupancy for the proposed project or when monitoring determines that it is warranted	City of American Canyon; County of Napa; California Department of Transportation		
MM TRANS-6: Prior to issuance of building permits for each building, the project applicant shall prepare and submit a site plan to the City of American Canyon for review and approval that depicts a minimum number of ADA-accessible parking spaces at each building; the internal stop signs depicted on Exhibit 3.11-14; and the bike racks or lockers at strategic locations to serve the project buildings. The approved plans shall be incorporated into the improvement plans for the project.	Approval of plan	Prior to issuance of building permits	City of American Canyon		
MM TRANS-8: Prior to issuance of building permits for each building, the project applicant shall prepare and submit a site plan to the City of American Canyon for review and approval that depicts pedestrian facilities and crosswalks that facilitate safe, accessible pedestrian travel between the internal roadways and the building entrances. The approved plans shall be incorporated into the improvement plans for the project.	Approval of plan	Prior to issuance of building permits	City of American Canyon		

Table 1 (cont.): Napa Logistics Park Phase 2 Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
MM TRANS-9: The project applicant shall develop and submit a Construction Management Plan (CMP) to the City of American Canyon prior to commencement of any construction activities, including construction activities associated with the transportation mitigation measures. The provisions of a CMP shall specifically address the characteristics of construction-related traffic associated with development. Such plans identify construction phasing and the level and type of construction-related traffic. The CMP shall identify construction truck routes to access the project site, lane closures on existing public streets (if needed) including a plan for any necessary traffic control measures, and on-site staging requirements, and other information as required by the City. Once the construction truck routes have been approved, but before construction has started, the applicant shall conduct a survey of existing conditions of pavement along the approved truck routes and submit documentation of the results to the City. When construction has been substantially completed such that there will be no further construction truck trips, the applicant shall re-survey the construction truck routes. The project applicant shall be responsible for repairing damage to roadways used for construction vehicle access to the site and attributable to the project so that the roadway conditions are returned to their pre-construction conditions (or better) as documented in the pre-construction survey along the truck routes following the construction of the project.	Approval of plan	Prior to commencement of any construction activities	City of American Canyon

CF 2801

An easement, 20.00 feet wide, for the purpose of construction, operation and maintenance of underground sewer lines, water lines and appurtenances thereto, the western line of which is parallel with and 12.00 feet westerly, at right angles, from the following described line:

Beginning at the northeastern corner of the lands of Albert Giovannoni, as the same is shown on Map No. 320 entitled "Record of Survey Map of a portion of the lands of George M. Lawrence, et ux," filed in Book 4 of Surveys, page 46, Napa County Records; thence westerly along the northern line of the 112.47 acre parcel of land described in the deed to Albert Giovannoni, recorded in Book 519 of Official Records, page 183, Napa County Records, 1,684 feet; thence South 00 degrees 55 minutes 44 seconds East 1,754 feet, more or less, to a point on the southern line of said 112.47 acre parcel, being the true point of commencement; running thence from said true point of commencement North 00 degrees 55 minutes 44 seconds West 1,754 feet, more or less, to the northern line of said 112.47 acre parcel.

The western line and the eastern line of said 20.00 foot easement shall be prolonged or shortened so as to terminate at the northern line and the southern line of the hereinabove referred to 112.47 acre parcel.

M.4 - Property Acquisition Agreement

THIS PAGE INTENTIONALLY LEFT BLANK

PROPERTY ACQUISITION AGREEMENT

This Property Acquisition Agreement ("**Agreement**") is entered into by "Right From the Start" ("**PROPERTY OWNER**"), a California non-profit public benefit Corporation, and the City of American Canyon ("**CITY**"), a municipal corporation (collectively referred herein as the "**PARTIES.**")

RECITALS

WHEREAS, in the Memorandum of Understanding ("**MOU**") between the CITY and the (the Albert D. Giovannoni Trust ("**Trust**"), dated February 29, 2016, CITY and Trust agreed to enter into this Agreement to consummate the exchange of property rights and to more fully describe each party's obligations hereunder; and

WHEREAS, PROPERTY OWNER is the successor in interest to the Trust and is the fee owner of approximately 200 acres of real property (APN's 057-090-008, 057-130-034, and 057-130-036, hereinafter, "**Property**"), located in American Canyon, Napa County, California, as more specifically depicted in Exhibit A; and

WHEREAS, the CITY's *General Plan Circulation Element* anticipates a capital project extending Devlin Road south from its current terminus just north of the Property, across the Property to a new connection at Green Island Road ("**Devlin Road Segment H Project**" or "**Devlin Project**") as depicted and described in Exhibit B; and

WHEREAS, the CITY's Capital Improvement Program ("**CIP**") includes a capital project widening and reconstructing Green Island Road across the Property's southern frontage ("**GIR Project**"), which is depicted and described in Exhibit C; and

WHEREAS, the CITY seeks to construct a new gravity sewer pipeline across the Property in a manner consistent with its *2016 Sewer Master Plan* ("**Sewer Project**"); and

WHEREAS, the public interest disfavors construction of structures, permanent objects, and/or the planting of trees at or near the ground surface above public utilities because said objects generally obstruct or impede CITY's maintenance activities for these public utilities and to the extent the CITY must incur additional costs to otherwise maintain utility systems in a state of good repair (or replace them altogether), those costs must be borne by the public through the imposition of taxes, service charges, and/or fees; and

WHEREAS, CITY policies and practices that serve the public interest by prohibiting new structures, permanent objects, and/or trees at or near the ground surface above public utilities generally act as "no-build encumbrances" ("**General Utility Encumbrance**") when they are located on private property; and

WHEREAS, CITY Sewer Project would act as a General Utility Encumbrance on the Property; and

WHEREAS, a continuous 20-feet wide easement ("**Existing Utility Easement**") traverses the Property from the northern property line to the southern property line at a location approximately 1,600 feet west of the Devlin Project; and

WHEREAS, the Existing Utility Easement is "for the purpose of construction, operation, and maintenance of underground sewer lines, water lines, and appurtenances" (hereinafter, as more specifically described in that certain documents entitled *Grant of Easement* and filed with the Napa County Recorder as Napa County Document No. 1978-0009644) and said Existing Utility Easement acts as a "20-foot wide no-build encumbrance" on the Property ("**Existing Utility Encumbrance**"); and

WHEREAS, CITY, as successor-in-interest to the American Canyon County Water District, is the exclusive beneficiary of the Existing Utility Easement; and

WHEREAS, CITY, as successor-in-interest to the American Canyon County Water District, owns existing sewer utility improvements ("**Existing Sewer**") traversing the Property in, or within close proximity to the Existing Utility Easement; and

WHEREAS, the *2016 Sewer Master Plan* found the Existing Sewer is insufficient to serve future development within its tributary shed area and recommends CITY undertake the Sewer Project to replace the Existing Sewer; and

WHEREAS, the California Department of Conservation has identified an earthquake fault known as the *West Napa Fault* on the Property which generally traverses in a north-south manner at a location approximately 1,200 west of the future Devlin Project; and

WHEREAS, Public Resources Code **section** 2621 *et seq.* ("**Alquist-Priolo Act**") prohibits construction of habitable structures within 50-ft of known earthquake faults, and thus, the *West Napa Fault* acts as an irrevocable "100-ft wide no-build encumbrance" on the Property ("**Seismic Encumbrance**"); and

WHEREAS, the PARTIES have the mutual interest in reducing and co-locating the various "no-build encumbrances" (*e.g.*, Existing Utility Encumbrance, General Utility Encumbrance, and Seismic Encumbrance) on the Property by: 1) terminating the Existing Utility Easement; 2) abandoning the Existing Sewer; and 3) constructing the Sewer Project within a new easement ("**Sewer Easement**") that is within the Seismic Encumbrance; and

WHEREAS, the PARTIES have the mutual interest in completing the Devin Project and locating new public utilities within the Devlin Road right-of-way; and

WHEREAS, the PARTIES have the mutual interest in widening and improving Green Island Road, and relocating public utilities within a Green Island Road public road right-of-way and public utility easement; and

WHEREAS, to avoid damage to the new Devlin Road roadway and the improved Green Island Road roadway in the future, it is in the PARTIES' mutual interest to install utility stubs to serve future development of the Property in conjunction with the Devlin Road Project and the GIR Project; and

WHEREAS, the CITY seeks to construct the Devlin Project, the GIR Project and the Sewer Project as soon as possible.

NOW, THEREFORE, in valuable consideration thereof the benefits provided herein, the PARTIES agree as follows:

1. CITY Obligation. The CITY shall accomplish the following, at the City's sole cost and expense:

a. Construct the Devlin Road Project, the GIR Project, and the Sewer Project.

b. Abandon the Existing Sewer *in situ*. Notwithstanding the foregoing, should the Existing Sewer be required to be removed at any time, whether for development purposes, the requirements of CITY or another governmental agency, or otherwise, then the CITY - at its sole cost - shall be responsible for the subsequent removal of the abandoned Existing Sewer, which shall be removed within a reasonable period of time following the event or notice triggering such removal. The obligation contained within this Section 1.b shall survive the termination of this Agreement or the Close of Escrow.

c. Upon completion of the Sewer Project, the City shall quitclaim to the PROPERTY OWNER the Existing Utility Easement (approximately 35,000 square feet) as described in Section 5 below.

d. Upon request of PROPERTY OWNER in conjunction with development of the Property, the CITY shall quitclaim the Slope Easement as described in Section 2.b below to PROPERTY OWNER.

e. All work performed under this Agreement by the CITY, or the CITY's agents, contractors and representatives, shall conform to all applicable federal, state and local laws, rules, regulations and ordinances, including building, fire and sanitary laws, ordinances, and regulations relating to such work, and shall be done in a good workmanlike manner. The CITY's obligation to comply with all applicable laws shall expressly include the obligation to comply with all applicable laws, rules, regulations and ordinances regarding wetlands, which are located on or adjacent to the Property.

2. PROPERTY OWNER Obligations. The PROPERTY OWNER shall accomplish the following transfers of property rights

a. Grant fee title to approximately 188,898 square feet of right-of-way for the Devlin Project ("**Devlin Right-of-Way**") as depicted in the "Devlin Right-of-Way Plat and as described in its Legal Description" in Exhibit H.

b. Grant to the CITY an exclusive approximately 167,740 square-foot slope easement associated with the Devlin Project ("**Devlin Slope Easement**") as described in Exhibit D. The improvements located within the Devlin Slope Easement shall be limited to earthen materials serving as a compacted embankment supporting the roadway whose final surface elevation will be higher than the existing ground surface elevation of the Property in certain locations. The PARTIES intend for the Devlin Slope Easement to be temporary in nature and to not encumber or otherwise preclude development of the Property. The Devlin Slope Easement shall remain until PROPERTY OWNER chooses to develop the Property in a manner such that the Property's final ground surface elevation is increased in height up to the Devlin Road roadway surface elevation. Once the Property is developed in a manner that eviscerates the need for the earthen embankment to support the roadway, PROPERTY OWNER shall submit a request to the CITY to quitclaim the Devlin Slope Easement to PROPERTY OWNER as described in Section 1.d above, and the City shall promptly execute and record any documents necessary to quitclaim the Devlin Slope Easement to Property Owner.

c. Grant to the CITY an exclusive approximately 51,087 square feet Sewer Easement for the Sewer Project as described in Exhibit E. The PARTIES acknowledge and agree the alignment of the Sewer Easement shall closely align with the Seismic Encumbrance.

d. Grant fee title to approximately 23,182 square feet of right-of-way for the GIR Project ("**Green Island Right-of-Way**", and together with the Devlin Right-of-Way, the "**Rights of Way**") as depicted and described in Exhibit I.

e. Grant to the CITY an approximately 11,936 square feet temporary construction easement ("**Green Island TCE**") for use in connection with the GIR Project as depicted and described in Exhibit F. The Green Island TCE will remain in place for the duration of the construction of the Green Island Project. Upon expiration of the Green Island TCE, CITY shall, at CITY's sole cost and expense, immediately restore the Green Island TCE to the condition existing immediately prior to CITY's initial entry on the Green Island TCE Area. The restoration obligation contained within this 2.e shall survive the termination of this Agreement or the Close of Escrow. Furthermore, once the GIR Project construction is complete, the City shall promptly execute and record any documents necessary to quitclaim the Green Island TCE to Property Owner.

f. Grant to the CITY an approximately 1,260 square feet public utility easement for the GIR Project ("**Green Island PUE**", and together with the Devlin Slope Easement and Green Island TCE, the "**Easements**") as depicted and described in Exhibit G.

3. Project(s) Design.

a. Devlin Project. The Devlin Project will generally be consistent with the Devlin Project Plans (Exhibit B). The PARTIES intend for the CITY to install at the City's sole cost and expense the following driveways and utility stubs within the Devlin Road Right-of-Way ("**Devlin Utility Stubs**") to serve future development of the Property:

i. Three (3) driveways, three (3) potable water connections, three (3) recycled water connections, and two (2) sewer lateral connection extending to APN 057-090-008.

ii. Two (2) driveways, two (2) potable water connections, two (2) recycled water connections lateral and one (1) sewer connection extending to APN 057-130-034.

The CITY intends to install Devlin Utility Stubs in conjunction with the Devlin Road Project to accommodate future development while avoiding unnecessary damage to the new roadway. The exact number and/or locations of Devlin Utility Stubs are to be agreed upon by the PARTIES prior to the CITY's issuance of a Notice Inviting Bids for the Devlin Project: Notwithstanding the foregoing, in no event shall CITY be precluded from issuing a Notice Inviting Bids and/or otherwise proceeding with construction of Devlin Project if the PARTIES have not reached agreement on the exact number and and/or location of the Devlin Utility Stubs.

b. GIR Project. The GIR Project will be generally consistent with the GIR Project Plans (Exhibit C). The PARTIES intend for the CITY to install at the City's sole cost and expense the following utility stubs within the Green Island Road Right-of-Way ("**Green Island Utility Stubs**") to serve future development of the Property:

i. Two (2) driveways, two (2) potable water connections, two (2) recycled water connections lateral and two (2) sewer connections extending to APN 057-090-036.

The CITY intends to install Green Island Utility Stubs in conjunction with the GIR Project to accommodate future development while avoiding unnecessary damage to the new roadway. The exact number and locations of Green Island Utility Stubs are to be agreed upon by the PARTIES prior to the CITY's issuance of a Notice Inviting Bids for the Devlin Project. Notwithstanding the foregoing, in no event shall CITY be precluded from issuing a Notice Inviting Bids and/or otherwise proceeding with construction of GIR Project if the PARTIES have not reached agreement on the exact number and location of the Green Island Utility Stubs.

c. Sewer Project. PARTIES acknowledge and agree that the Existing Sewer is not located entirely within the Existing Utility Easement. The Sewer Project consists of the installation of a new gravity sewer pipeline to replace the Existing Sewer. The new gravity sewer pipeline installed in conjunction with the Sewer Project shall be available to serve the Property, however the CITY shall have no obligation to install any utility stubs from said pipeline to serve future development of the Property. It is the intent of the parties that the CITY shall install the Sewer Project. Notwithstanding the foregoing, if the CITY has not commenced the installation of the Sewer Project prior to the date that PROPERTY OWNER seeks discretionary approval from the CITY to develop the Property (as described in Section 6 below), PROPERTY OWNER may connect to sewer lines in Green Island Road and/or Devlin Road provided sufficient capacity exists in those lines to serve the development of the Property.

d. Property Utilities. PROPERTY OWNER shall not be precluded from establishing utility connections to serve the Property from the utilities within the Devlin Road and/or Green Island Road Right-of-Way in addition to the utility connections installed by the CITY pursuant to Sections 3.(a) and 3.(b) above. In the event PROPERTY OWNER installs utility connections within the Devlin Road and/or Green Island Road Right-of-Way after completion of the Devlin Project and/or GIR Project respectively, then PROPERTY OWNER shall mitigate any damage to the roadway and surrounding improvements by restoring it to substantially the same condition that existed prior to Property Owner's installation of such utility connections.

e. Restoration. Upon completion of the GIR Project and Devlin Project, CITY shall, at CITY's sole cost and expense, immediately restore any damage to the Property arising out of or related to the CITY's work on such project to the condition existing immediately prior to CITY's initial entry onto the Property. The restoration obligation contained within this Section 3.e shall survive the termination of this Agreement or the Close of Escrow.

4. Consideration. Except as described in Sections 57.(c) and 9.(f).iv below, performance by the CITY of its obligations described herein shall be considered just compensation for the acquisition of the property rights from the PROPERTY OWNER and no additional compensation shall be owed to the PROPERTY OWNER by the CITY.

5. Quitclaim of Existing Utility Easement.

a. Within 30 days of the issuance of a Notice of Completion for the Sewer Project as per Section 1 above, the City shall conduct a public hearing consistent with the procedures for the vacation of "public service easements" set forth in Public Streets and Highway Code Section 8300 *et seq.*, and after the City Council considers all the evidence submitted, it shall find that the Existing Utility Easement is unnecessary for present or prospective public use, and then adopt a resolution vacating the Existing Utility Easement ("**Vacation Resolution**").

b. Within 45 days after adopting the Vacation Resolution, CITY shall execute and record a quitclaim deed to the PROPERTY OWNER for the Existing Utility Easement (the "**Quitclaim Deed**"), and deliver a recorded copy of the Quitclaim Deed to PROPERTY OWNER.

6. Future Development of Property.

a. The CITY approval of the Agreement, and/or construction of the Devlin Project, GIR Project, Sewer Project, or any utility stub connections to the Property does not constitute approval by the CITY of any development project on the Property nor confer any development rights to PROPERTY OWNER.

b. Notwithstanding the forgoing, if and when PROPERTY OWNER seeks discretionary approval from the CITY to develop Property ("**Future Development**"), fulfillment of the terms and conditions of the Agreement by the PARTIES shall be recognized as adequate consideration for PROPERTY OWNER's share of the costs to construct the Devlin Project and GIR Project. CITY shall not exact any reimbursement from PROPERTY OWNER in conjunction with discretionary approval from the CITY for costs incurred in the construction of the Devlin Project or the GIR Project, subject to the limitations described in subsection 6.(c) below.

c. The limitation on exactions described in subsection 6.(b) above shall apply only to the extent the Future Development consists of "warehousing and storage uses" as defined by Title 19 - Zoning of the American Canyon Municipal Code (ACMC 19.5.060) as in existence at the time of the Effective Date (the "**Property Zoning**"). In the event Future Development consists of more intense land uses than warehousing and storage uses, then this limitation shall not be applicable. Moreover, in no instance shall the limitation on exactions described in subsection 6.(b) above apply to the imposition of any "development impact fees" such as the Traffic Impact Fee, Inclusionary Housing Fees, Water Capacity Fees, Wastewater Capacity Fees, Parks and Civic Facilities Fees, nor any other similar enacted development fees of the CITY, nor shall it limit the CITY's imposition of any Mitigation Measures identified during CITY's consideration of potential environmental impacts of the Future Development pursuant to the California Environmental Quality Act (Public Resources Code Section 21000 *et seq.*). In addition, in no instance shall the limitation on exactions described in subsection 6.(b) above apply to the imposition of requirements necessary to demonstrate consistency with the CITY's Zero Water Footprint Policy.

7. Costs. CITY is responsible for 100% of the costs of the items listed below. Work may be done as part of one large contract or multiple smaller contracts. Work may be done by contractors hired by the CITY or by a third-party on behalf of the CITY.

a. Geotechnical information, environmental studies, design and/or regulatory permits necessary as a matter of course or by regulating authorities to complete the Devlin Project, the GIR Project, and the Sewer Project.

b. Construction of the improvements for the Devlin Project and the GIR Project, including the Devlin Utility Stubs and Green Island Utility Stubs.

c. Costs and expenses relating to the preparation, filing, processing, approval and recordation of the acquisition of the Devlin Right of Way, Green Island Right-of-Way, Green Island TCE, Green Island PUE and Devlin Slope Easement.

d. Abandonment and removal of Existing Sewer as described in Section 1 above, if necessary.

8. Property Acquisition - Condition of Title and Property.

a. Title Report. Within ten (10) days after the Effective Date, CITY shall order current preliminary title report(s) (the "Preliminary Report(s)") for the Property from Placer Title Company of Napa ("**Title Company**") as well as a "pro forma" preliminary title report for the (i) Devlin Right of Way, (ii) Devlin Slope Easement, (iii) Green Island Right-of-Way, (iv) Green Island PUE, and (v) Sewer Easement showing the condition of title of the rights of way and easements after the Closing (which pro forma preliminary title report is referred to as the "Pro Forma"). The CITY shall have ten (10) days after receipt of each report to approve or reject the reports. The CITY shall approve or disapprove of any exceptions to title by the delivery to PROPERTY OWNER, and Title Company, of written notice of such approval or disapproval. If PROPERTY OWNER is in receipt of a notice of disapproval, it shall have up to and including the date that is ten (10) days prior to the Closing to remove or cause to be removed any exceptions so disapproved. If PROPERTY OWNER fails or is unable to remove such disapproved exceptions within said period, the CITY may terminate this Agreement or elect to close without further liability to PROPERTY OWNER.

b. The Preliminary Report including the Pro Forma shall constitute commitments by the Title Company, upon payment of its usual and customary premiums therefore, to issue a CLTA Standard Coverage Owners Title Insurance Policy with such endorsements as the CITY may require ("**Title Policy**") insuring that the Rights of Way and Easements are free and clear of all covenants, conditions, restrictions, rights, rights of way, easements, liens, encumbrances or any other matters affecting title to or use of the Rights of Way and Easements after the property exchange, subject only to the exceptions which have been approved by the CITY, respectively ("**Approved Exceptions**").

c. Except as otherwise provided in this Agreement, PROPERTY OWNER hereby specifically disclaims any warranty, guaranty or representation, oral or written, past, present or future, of, as to or concerning (i) the nature and condition of the Rights of Way and Easement areas, including, but not by way of limitation, the water, soil, geology, environmental conditions (including the presence or absence of any Hazardous Materials), and the suitability thereof for any and all activities and uses which CITY may elect to conduct thereon; (ii) the nature and extent of any right-of-way, easement, lease, possessory interest, lien, encumbrance, license, reservation, condition or otherwise; and (iii) the compliance of the Rights of Way or Easement areas or its operation with any laws, ordinances or regulations of any government or other body. The transfer of the Rights of Way and Easements as provided for herein is made on an "AS IS" basis, and CITY expressly acknowledges that, in consideration of the agreements of PROPERTY OWNER herein, and except as otherwise expressly specified herein. PROPERTY OWNER makes no warranty or representation, express or implied, or arising by operation of law, including, but in no way limited to, any warranty of condition, habitability, merchantability or fitness for a particular purpose of the rights of way and easements.

9. Escrow and Closing.

a. Escrow. This Agreement shall serve as instructions to the Title Company, for consummation of the transactions herein described. PROPERTY OWNER and the CITY agree to execute such additional escrow instructions as may be necessary or appropriate to enable Title Company to comply with the provisions of this Agreement.

b. The Closing. The "Closing" shall mean the date upon which all documents required to effect the transactions described herein are recorded. The Closing date shall occur within ten

(10) days. The PARTIES agree to extend the Closing for reasonable periods of time thereafter to prepare necessary documents, prepare legal descriptions, obtain partial releases from lenders, obtain lien waivers, or prepare and obtain any other documents to effectuate the purposes and intentions of this Agreement.

c. Deliveries at Closing. On or before the date of the Closing, PROPERTY OWNER shall execute and deliver, or cause to be executed and delivered, the following documents and sums to Title Company:

i. PROPERTY OWNER shall deliver to Title Company, the grant deed(s) conveying fee title to the Rights of Way and Easements (the "**Grant Deed**"), and such escrow instructions, and other documents and the sums of money, according to the terms of this Agreement, including recording fees as may be required by Title Company to effectuate the grant the Rights of Way and Easements free and clear of all covenants, conditions, restrictions, rights, rights of way, easements, liens, encumbrances or any other matters affecting title to or use of the right of way and easements, subject only to the Approved Exceptions.

ii. PROPERTY OWNER and the CITY shall timely deliver all other documents and sums as might reasonably be required to be delivered or paid by PROPERTY OWNER and the CITY, respectively, and in accordance with the terms of this Agreement, to carry out the transactions described in this Agreement at the Closing.

d. Closing Conditions. Closing shall not occur unless and until:

i. The PROPERTY OWNER shall have deposited with Title Company all documents and sums required by this Agreement, including execution of the Grant Deed, and all contingencies and conditions set forth in the Agreement have been satisfied or waived.

ii. Title Company shall be prepared to issue or cause to be issued a Title Policy with liability in amounts to be approved by the CITY, ensuring that the Rights of Way and Easements are free and clear of all covenants, conditions, restrictions, rights, rights of way, easements, liens, encumbrances or any other matters affecting title to or use of the Rights of Way and Easements, subject only to the Approved Exceptions.

e. Closing Procedures. Upon receipt of all documents and sums required by this Agreement at the Closing, and upon satisfaction or waiver of all contingencies and conditions as set forth in this Agreement, Title Company shall, at the Closing:

i. Record the Grant Deed executed by PROPERTY OWNER and the CITY and Title Company on the Official Records of Napa County as may be required to effectuate the property exchange. Record all deed of trust modifications and other documentation that may be required in connection with the property acquisition.

ii. Issue or cause to be issued to the CITY the Title Policy with liability in the amount to be directed by the CITY, insuring title to the Rights of Way and Easements, free and clear of all covenants, conditions, restrictions, rights, rights of way, easements, liens, encumbrances or any other matters affecting title to or use of the Rights of Way and Easements, subject only to the Approved Exceptions.

iii. Deliver conformed copies of the Grant Deed, and all other appropriate documents to CITY at the Closing.

f. Proration and Escrow Costs.

i. At the Closing, the CITY shall pay the premium for the CITY's Title Policy on the Rights of Way and easements.

ii. Real Property taxes required to be paid as a condition to Closing the property acquisition shall be paid by the CITY.

iii. The CITY shall pay all escrow fees and charges incurred in connection with the property acquisition, except as otherwise set forth in this Agreement.

iv. CITY shall be responsible for reimbursing PROPERTY OWNER for all of the out-of-pocket costs, fees and expenses incurred by PROPERTY OWNER in any way connected with the property exchange or this Agreement, in an amount not to exceed $10,000.

g. Signing of Other Documents; Compliance with Regulations. The PARTIES will do all things and sign all documents that are reasonably necessary for the Closing to occur consistent with the terms of this Agreement. Furthermore, the PARTIES will comply at their own expense with all applicable laws and governmental regulations required for the Closing to occur, including, but not limited to, any required filings with governmental authorities.

10. Termination. In the event of the failure of any of the conditions precedent under Sections 9.(c) and (d), above, or the property acquisition cannot be completed for whatever reason or any other condition precedent to the performance by the CITY or PROPERTY OWNER under this Agreement cannot be satisfied, and such contingency is not waived by the other party as provided herein, the Agreement shall terminate and the escrow shall be cancelled and the PARTIES shall have no further liability under the Agreement to each other as a result of such termination. If escrow fails to close because of the default of either Party, the defaulting Party shall be liable for all escrow cancellation charges. If escrow fails to close for any other reason, the PARTIES shall equally split all Escrow cancellation charges.

11. Notices. Any notice, request, demand or other communication required or permitted to be given hereunder shall be in writing, may be personally served, emailed, telecopied, telexed or sent by an internationally recognized overnight delivery or courier service and shall be deemed to have been given when delivered in person or by courier or overnight service or upon receipt of an email, telecopy or telex, addressed to the recipients as follows:

12. Indemnification.

a. The CITY hereby waives and releases, and shall indemnify, hold harmless, and defend PROPERTY OWNER, its successors and assigns, its officers, agents, consultants, servants and employees from and against all Losses incurred by the PROPERTY OWNER, arising in any manner out of (i) the physical condition of the Rights of Way and Easements, (ii) the use, occupancy, or presence of the CITY, its contractors, subcontractors, employees, representatives, invitees or agents on the Property, and/or (iii) the performance, or failure by the CITY, its contractors, subcontractors, employees, agents or representatives, to perform its work or any obligation of CITY arising under this Agreement, and/or (iv) the sole or contributing acts or omissions of the CITY, its contractors, subcontractors, employees, representatives, invitees or agents on the Property. As used in this Section 12.a, the term **"Loss" or "Losses"** means all losses, damages, claims, demands, costs, liabilities, judgments, fines, fees (including, without limitation, reasonable attorney fees) and expenses (including, without limitation, costs of investigation, defense expenses at arbitration, trial or appeal and without institution of arbitration or suit, and, with respect to damage or destruction of property, cleanup, repair, and replacement expenses) of any nature arising from or in connection with death of or injury to persons (including, without limitation, exposure to hazardous or toxic substances), or damage to or destruction of property (including, without limitation, contamination by hazardous or toxic substances and any required testing, removal, or cleanup thereof). The indemnity obligations of CITY under this Agreement shall survive any termination of this Agreement.

b. The PROPERTY OWNER hereby waives and releases, and shall indemnify, hold harmless, and defend CITY, its elected and appointed officials, officers, agents, consultants, attorneys, employees and volunteers from and against all Losses incurred by the CITY, arising in any manner out of (i) the use, occupancy, or presence of the PROPERTY OWNER, its contractors, subcontractors, employees, representatives, invitees or agents on the Property, and/or (ii) the performance, or failure by the PROPERTY OWNER, its contractors, subcontractors, employees, agents or representatives, to perform its work or any obligation of PROPERTY OWNER arising under this Agreement, and/or (iii) the sole or contributing acts or omissions of the PROPERTY OWNER, its contractors, subcontractors, employees, representatives, invitees or agents on the Property. As used in this Section 12.b, the term **"Loss" or "Losses"** means all losses, damages, claims, demands, costs, liabilities, judgments, fines, fees (including, without limitation, reasonable attorney fees) and expenses (including, without limitation, costs of investigation, defense expenses at arbitration, trial or appeal and without institution of arbitration or suit, and, with respect to damage or destruction of property, cleanup, repair, and replacement expenses) of any nature arising from or in connection with death of or injury to persons (including, without limitation, exposure to hazardous or toxic substances), or damage to or destruction of property (including, without limitation, contamination by hazardous or toxic substances and any required testing, removal, or cleanup

thereof). The indemnity obligations of PROPERTY OWNER under this Agreement shall survive any termination of this Agreement.

13. General Provisions

a. Successors and Assigns; Covenants run with the Land. This Agreement shall be binding upon and inure to the benefit of the PARTIES and their respective successors and permitted assigns, and on all PARTIES having or acquiring any right, title or interest in the parcels described above or any part thereof, and all of the covenants and conditions herein shall run with the land.

b. Further Assurances. Each party agrees to cooperate with the other party and take all actions reasonably required to carry out the intentions of the PARTIES under this Agreement.

c. Applicable Law and Venue. This Agreement shall be governed by and interpreted under the laws of the State of California. The venue for any legal action in State court filed by a party to this Agreement for the purpose of interpreting or enforcing any provision of this Agreement shall be in the Superior Court of California, County of Napa. The venue for any legal action in Federal court filed by a party to this Agreement for the purpose of interpreting or enforcing any provision of this Agreement within the jurisdiction of the Federal courts shall be the Northern District of California. The appropriate venue for arbitration, mediation, or similar legal proceeding under this Agreement shall be in Napa County, California; however, nothing in this Agreement section shall obligate a party to submit to arbitration any dispute arising under this Agreement.

d. Attorneys' Fees. If any dispute arises under or by reason of this Agreement, the party prevailing in such dispute shall be entitled to recover its costs, including reasonable attorneys' fees. Attorneys' fees under this Section shall include attorneys' fees on any appeal and, in addition, a Party entitled to attorneys' fees shall be entitled to all other reasonable costs and expenses incurred in connection with such action. In addition to the foregoing award of attorneys' fees to the prevailing party, the prevailing party in any lawsuit shall be entitled to its attorneys' fees incurred in any post-judgment proceedings to collect or enforce the judgment. This provision is separate and several and shall survive the merger of this Agreement into any judgment on this Agreement.

e. Entire Agreement. This Agreement and the other documents and agreements referenced herein embody the entire agreement and understanding between the PARTIES hereto relating to the subject matter hereof, and supersede all prior negotiations, agreements and understandings, oral or written, with respect to that subject matter.

f. Modification: Waiver. This Agreement may be amended, waived or discharged only by an instrument in writing executed by the party against whom enforcement of such amendment, waiver or discharge is sought, expressly indicating the intention to amend, waive or discharge this Agreement. No waiver by any party or any failure or refusal by another party to comply with its obligations shall be deemed a waiver of any other or subsequent failure or refusal to so comply.

g. Counterparts. This Agreement may be executed in two or more counterparts, each of which shall be deemed to be an original, but all of which together shall constitute one and the same instrument.

h. Effective Date. The Effective Date shall be that date on which all PARTIES have executed this Agreement.

i. Interpretation & Captions. In this Agreement, the neuter gender includes the feminine and masculine, the singular number includes the plural, and the words "person" and "party" include a corporation, partnership, firm, trust, or association, whenever the context so requires. The captions of the sections of this Agreement are for convenience and reference only, and the words contained therein shall in no way be held to explain, modify, amplify or aid in the interpretation, construction or meaning of the provisions of this Agreement.

j. Non-Business Days. Whenever notice must be given, documents must be delivered or any other action must be taken under this Agreement by a last day that falls on a day on which banking institutions in the State of California are authorized by law to close (a "Non-Business Day"), then the PARTIES shall have until the next following day that is not a Non-Business Day to take such action.

k. Severability. If any term, provision, covenant or condition of this Agreement is held by a court of competent jurisdiction to be invalid, void, unenforceable, either in whole or in part, such decision shall not affect the remainder of this Agreement; and it is hereby declared to be the intention of the PARTIES that the term, provision, covenant or condition held invalid, void or unenforceable shall be limited by such court to the extent necessary to make it valid and enforceable.

l. Time of Essence. Time is of the essence in this Agreement.

m. Third Party Beneficiaries. This Agreement confers no rights on any party except the signatories to this Agreement.

n. Assignment. Neither party shall have the right to transfer or assign any of its rights or obligations under this Agreement without the prior written consent of the other party, except that PROPERTY OWNER may assign this Agreement to a third party acquiring title to the Property and be relieved of all liability or responsibility under this Agreement, provided that such assignee fully assumes all of PROPERTY OWNER's obligations hereunder in a writing approved and duly executed by the CITY and the assignee.

o. Obligations Survive the Closing. All obligations to be performed at a time after the Closing, whether specifically referred to as surviving the Closing or not, and all covenants, representations and warranties of the PARTIES, will survive the Closing.

p. Rights and Remedies are Cumulative. Unless stated otherwise in this Agreement, the rights and remedies of the PARTIES are cumulative. A party's exercise of any of its right or remedies will not preclude its exercise, at the same or at different times, of any other rights or remedies for the same, or any other default.

q. Possession of Property. The PARTIES agree that the CITY may take possession of the Rights of Way and easements for all purposes immediately following the Closing.

r. Force Majeure. No party shall be deemed to be in default where failure or delay in the performance of any of its obligations under this Agreement is caused by floods, earthquakes, other acts of God, fires, wars, terrorism, riots or similar hostilities, strikes and other labor difficulties beyond a party's control, shortage of materials (exclusive of prefab/modular building products), prohibitory court actions (such as restraining orders or injunctions), or other causes beyond a party's control. If any such events shall occur, the time for performance by any party of its obligations hereunder shall be extended for the period of time that such events prevented such performance.

s. Specific Performance. PARTIES agree the Property is unique and that the CITY shall be entitled to the remedy of specific performance.

t. Exhibits. Exhibits A, B, C, D, E, F, G, H, and I to this Agreement are incorporated by reference and made a part of this Agreement.

IN WITNESS WHEREOF, the PARTIES have executed this Property Exchange and Acquisition Agreement as of the day and year first written above.

PIPELINE CROSSING AGREEMENT

Mile Post: 62.54, Schellville (CFNR) Subdivision
Location: American Canyon, Napa County, California

THIS AGREEMENT ("Agreement") is made and entered into as of February 12, 2021, ("Effective Date") by and between **UNION PACIFIC RAILROAD COMPANY**, a Delaware corporation, ("Licensor") and **CITY OF AMERICAN CANYON**, to be addressed at 4381 Broadway Street, Suite 201American Canyon, California 94503 ("Licensee").

IT IS MUTUALLY AGREED BY AND BETWEEN THE PARTIES HERETO AS FOLLOWS:

Article 1. LICENSOR GRANTS RIGHT.

A. In consideration of the license fee to be paid by Licensee set forth below and in further consideration of the covenants and agreements to be performed by Licensee, Licensor hereby grants to Licensee the right to construct and thereafter, during the term hereof, maintain and operate one (1) 12-inch underground plastic sanitary sewer pipe encased in a 24-inch steel only, including any appurtenances required for the operation of said pipeline (collectively, "Licensee's Facilities") across Licensor's real property, trackage, or other facilities located in American Canyon, Napa County, State of California ("Railroad Property"). The specific specifications and limited purpose for Licensee's Facilities on, along, across and under Railroad Property are described in and shown on the Print and Specifications dated February 03, 2021, attached hereto as **Exhibit A** and made a part hereof.

B. Licensee represents and warrants that Licensee's Facilities will (i) only be used for one (1) 12-inch underground plastic sanitary sewer pipe encased in a 24-inch steel, and (ii) not be used to convey any other substance, any fiber optic cable, or for any other use, whether such use is currently technologically possible, or whether such use may come into existence during the life of this Agreement.

C. Licensee acknowledges that if it or its contractor provides Licensor with digital imagery depicting Licensee's Facilities ("Digital Imagery"), Licensee authorizes Licensor to use the Digital Imagery in preparing **Exhibit A**. Licensee represents and warrants that through a license or otherwise, it has the right to use the Digital Imagery and to permit Licensor to use the Digital Imagery in said manner.

Article 2. LICENSE FEE.

Upon execution of this Agreement, the Licensee shall pay to the Licensor a one-time License Fee of **Eleven Thousand Nine Hundred Ten Dollars ($11,910.00)**.

Article 3. TERM.

This Agreement shall take effect as of the Effective Date first herein written and shall continue in full force and effect until terminated as provided in the "TERMINATION; REMOVAL OF LICENSEE'S FACILITIES" Section of **Exhibit B**.

Article 4. **LICENSEE'S COMPLIANCE WITH GENERAL TERMS.**

Licensee represents and warrants that all work on Licensee's Facilities performed by Licensee or its contractors will strictly comply with all terms and conditions set forth herein, including the General Terms and Conditions, attached hereto as Exhibit B and made a part hereof.

Article 5. **INSURANCE.**

A. During the term of this Agreement, Licensee shall fully comply or cause its contractor(s) to fully comply with the insurance requirements described in **Exhibit C**, attached hereto and made a part hereof. Upon request only, Licensee shall send copies of all insurance documentation (e.g., certificates, endorsements, etc.) to Licensor at the address listed in the "NOTICES" Section of this Agreement.

B. If Licensee is subject to statute(s) limiting its insurance liability and/or limiting its ability to obtain insurance in compliance with **Exhibit C** of this Agreement, those statutes shall apply.

Article 6. **DEFINITION OF LICENSEE.**

For purposes of this Agreement, all references in this Agreement to Licensee will include Licensee's contractors, subcontractors, officers, agents and employees, and others acting under its or their authority (collectively, a "Contractor"). If a Contractor is hired by Licensee to perform any work on Licensee's Facilities (including initial construction and subsequent relocation, maintenance, and/or repair work), then Licensee shall provide a copy of this Agreement to its Contractor(s) and require its Contractor(s) to comply with all terms and conditions of this Agreement, including the indemnification requirements set forth in the "INDEMNITY" Section of **Exhibit B**. Licensee shall require any Contractor to release, defend, and indemnify Licensor to the same extent and under the same terms and conditions as Licensee is required to release, defend, and indemnify Licensor herein.

Article 7. **ATTORNEYS' FEES, EXPENSES, AND COSTS.**

If litigation or other court action or similar adjudicatory proceeding is undertaken by Licensee or Licensor to enforce its rights under this Agreement, all fees, costs, and expenses, including, without limitation, reasonable attorneys' fees and court costs, of the prevailing Party in such action, suit, or proceeding shall be reimbursed or paid by the Party against whose interest the judgment or decision is rendered. The provisions of this Article shall survive the termination of this Agreement.

Article 8. **WAIVER OF BREACH.**

The waiver by Licensor of the breach of any condition, covenant or agreement herein contained to be kept, observed and performed by Licensee shall in no way impair the right of Licensor to avail itself of any remedy for any subsequent breach thereof.

Article 9. **ASSIGNMENT.**

A. Licensee shall not assign this Agreement, in whole or in part, or any rights herein granted, without the written consent of Licensor, which must be requested in writing by Licensee. Any assignment or attempted transfer of this Agreement or any of the rights herein granted, whether voluntary, by operation of law, or otherwise, without Licensor's written consent, will be absolutely void and may result in Licensor's termination of this Agreement pursuant to the "TERMINATION; REMOVAL OF LICENSEE'S FACILITIES" Section of **Exhibit B.**

B. Upon Licensor's written consent to any assignment, this Agreement will be binding upon and inure to the benefit of the parties thereto, successors, heirs, and assigns, executors, and administrators.

Article 10. SEVERABILITY.

Any provision of this Agreement which is determined by a court of competent jurisdiction to be invalid or unenforceable shall be invalid or unenforceable only to the extent of such determination, which shall not invalidate or otherwise render ineffective any other provision of this Agreement.

Article 11. NOTICES.

Except Licensee's commencement of work notice(s) required under **Exhibit B**, all other notices required by this Agreement must be in writing, and (i) personally served upon the business address listed below ("Notice Address"), (ii) sent overnight via express delivery by a nationally recognized overnight delivery service such as Federal Express Corporation or United Parcel Service to the Notice Address, or (iii) by certified mail, return receipt requested to the Notice Address. Overnight express delivery notices will be deemed to be given upon receipt. Certified mail notices will be deemed to be given three (3) days after deposit with the United States Postal Service.

EXHIBIT B

GENERAL TERMS AND CONDITIONS

Section 1. LIMITATION AND SUBORDINATION OF RIGHTS GRANTED.

A. The foregoing grant is subject and subordinate to the prior and continuing right and obligation of Licensor to use and maintain its entire property including the right and power of Licensor to construct, maintain, repair, renew, use, operate, change, modify or relocate railroad tracks, signal, communication, fiber optics, or other wirelines, pipelines and other facilities upon, along or across any or all parts of its property, all or any of which may be freely done at any time or times by Licensor without liability to Licensee or to any other party for compensation or damages.

B. The foregoing grant is also subject to all outstanding superior rights (including those in favor of licensees and lessees of Railroad Property) and the right of Licensor to renew and extend the same, and is made without covenant of title or for quiet enjoyment. It shall be Licensee's sole obligation to obtain such additional permission, license and grants necessary on account of any such existing rights.

Section 2. ENGINEERING REQUIREMENTS; PERMITS.

A. Licensee's Facilities will be designed, constructed, operated, maintained, repaired, renewed, modified, reconstructed, removed, or abandoned in place on Railroad Property by Licensee or its contractor to Licensor's satisfaction and in strict conformity with: (i) Licensor's current engineering standards and specifications, including those for shoring and cribbing to protect Licensor's railroad operations and facilities ("UP Specifications"), except for variances approved in advance in writing by Licensor's Assistant Vice President Engineering – Design or its authorized representative ("UP Engineering Representative"); (ii) such other additional safety standards as Licensor, in its sole discretion, elects to require, including, without limitation, American Railway Engineering and Maintenance-of-Way Association ("AREMA") standards and guidelines (collectively, "UP Additional Requirements"); and (iii) all applicable laws, rules, and regulations, including any applicable Federal Railroad Administration and Federal Energy Regulatory Commission regulations and enactments (collectively, "Laws"). If there is any conflict between UP Specifications, UP Additional Requirements, and Laws, the most restrictive will apply.

B. Licensee shall keep the soil over Licensee's Facilities thoroughly compacted, and maintain the grade over and around Licensee's Facilities even with the surface of the adjacent ground.

C. If needed, Licensee shall secure, at Licensee's sole cost and expense, any and all necessary permits required to perform any work on Licensee's Facilities.

Section 3. NOTICE OF COMMENCEMENT OF WORK; EMERGENCIES.

A. Licensee and its contractors are strictly prohibited from commencing any work associated with Licensee's Facilities without Licensor's written approval that the work will be in strict compliance with the "ENGINEERING REQUIREMENTS; PERMITS" Section of this Exhibit B. Upon Licensor's approval, Licensee shall contact both of Licensor's field representatives ("Licensor's Field Representatives") at least ten (10) days before commencement of any work on Licensee's Facilities.

B. Licensee shall not commence any work until: (1) Licensor has determined whether flagging or other special protective or safety measures ("Safety Measures") are required for performance of the work pursuant to the "FLAGGING" Section of this **Exhibit B** and provided Licensee written authorization to commence work; and (2) Licensee has complied with the "PROTECTION OF FIBER OPTIC CABLE SYSTEMS" Section of this **Exhibit B**.

C. If, at any time, an emergency arises involving Licensee's Facilities, Licensee or its contractor shall immediately contact Licensor's Response Management Communications Center at (888) 877-7267.

Section 4. FLAGGING.

A. Following Licensee's notice to Licensor's Field Representatives required under the "NOTICE OF COMMENCEMENT OF WORK; EMERGENCIES" Section of this **Exhibit B**, Licensor shall inform Licensee if Safety Measures are required for performance of the work by Licensee or its contractor on Railroad Property. If Safety Measures are required, no work of any kind may be performed by Licensee or its contractor(s) until arrangements for the Safety Measures have been made and scheduled. If no Safety Measures are required, Licensor will give Licensee written authorization to commence work.

B. If any Safety Measures are performed or provided by Licensor, including but not limited to flagging, Licensor shall bill Licensee for such expenses incurred by Licensor, unless Licensor and a federal, state, or local governmental entity have agreed that Licensor is to bill such expenses to the federal, state, or local governmental entity. Additional information regarding the submission of such expenses by Licensor and payment thereof by Licensee can be found in the "LICENSEE'S PAYMENT OF EXPENSES" Section of this **Exhibit B**. If Licensor performs any Safety Measures, Licensee agrees that Licensee is not relieved of any of responsibilities or liabilities set forth in this Agreement.

C. For flagging, the rate of pay per hour for each flagger will be the prevailing hourly rate in effect for an eight-hour day for the class of flagmen used during regularly assigned hours and overtime in accordance with Labor Agreements and Schedules in effect at the time the work is performed. In addition to the cost of such labor, a composite charge for vacation, holiday, health and welfare, supplemental sickness, Railroad Retirement and unemployment compensation, supplemental pension, Employees Liability and Property Damage, and Administration will be included, computed on actual payroll. The composite charge will be the prevailing composite charge in effect at the time the work is performed. One and one-half times the current hourly rate is paid for overtime, Saturdays and Sundays, and two and one-half times current hourly rate for holidays. Wage rates are subject to change, at any time, by law or by agreement between Licensor and its employees, and may be retroactive as a result of negotiations or a ruling of an authorized governmental agency. Additional charges on labor are also subject to change. If the wage rate or additional charges are changed, Licensee (or the governmental entity, as applicable) shall pay on the basis of the new rates and charges.

D. Reimbursement to Licensor will be required covering the full eight-hour day during which any flagger is furnished, unless the flagger can be assigned to other railroad work during a portion of such day, in which event reimbursement will not be required for the portion of the day during which the flagger is engaged in other railroad work. Reimbursement will also be required for any day not actually worked by the flaggers following the flaggers' assignment to work on the project for which Licensor is required to pay the flaggers and which could not reasonably be avoided by Licensor by assignment of such flaggers to other work, even though Licensee may not be working during such time. When it becomes necessary for Licensor to bulletin and assign an employee to a flagging position in compliance with union collective bargaining agreements, Licensee must provide Licensor a minimum of

five (5) days notice prior to the cessation of the need for a flagger. If five (5) days notice of cessation is not given, Licensee will still be required to pay flagging charges for the days the flagger was scheduled, even though flagging is no longer required for that period. An additional ten (10) days notice must then be given to Licensor if flagging services are needed again after such five day cessation notice has been given to Licensor.

Section 5. SAFETY.

A. Safety of personnel, property, rail operations and the public is of paramount importance in the prosecution of any work on Railroad Property performed by Licensee or its contractor, and takes precedence over any work on Licensee's Facilities to be performed Licensee or its contractors. Licensee shall be responsible for initiating, maintaining and supervising all safety operations and programs in connection with any work on Licensee's Facilities. Licensee and its contractor shall, at a minimum comply, with Licensor's then current safety standards located at the below web address ("Licensor's Safety Standards") to ensure uniformity with the safety standards followed by Licensor's own forces. As a part of Licensee's safety responsibilities, Licensee shall notify Licensor if it determines that any of Licensor's Safety Standards are contrary to good safety practices. Licensee and its contractor shall furnish copies of Licensor's Safety Standards to each of its employees before they enter Railroad Property.

Union Pacific Current Safety Requirements

B. Licensee shall keep the job site on Railroad Property free from safety and health hazards and ensure that their employees are competent and adequately trained in all safety and health aspects of the work.

C. Licensee represents and warrants that all parts of Licensee's Facilities within and outside of the limits of Railroad Property will not interfere whatsoever with the constant, continuous, and uninterrupted use of the tracks, property, and facilities of Licensor, and nothing shall be done or suffered to be done by Licensee at any time that would in any manner impair the safety thereof.

D. Licensor's operations and work performed by Licensor's personnel may cause delays in Licensee's or its contractor's work on Licensee's Facilities. Licensee accepts this risk and agrees that Licensor shall have no liability to Licensee or any other person or entity for any such delays. Licensee must coordinate any work on Railroad Property by Licensee or any third party with Licensor's Field Representatives in strict compliance with the "NOTICE OF COMMENCEMENT OF WORK; EMERGENCIES" Section of this **Exhibit**

E. Licensor shall have the right, if it so elects, to provide any support it deems necessary for the safety of Licensor's operations and trackage during Licensee's or its contractor's construction, maintenance, repair, renewal, modification, relocation, reconstruction, or removal of Licensee's Facilities. In the event Licensor provides such support, Licensor shall invoice Licensee, and Licensee shall pay Licensor as set forth in the "LICENSEE'S PAYMENT OF EXPENSES" Section of this **Exhibit B**.

F. Licensee may use unmanned aircraft systems ("UAS") to inspect Licensee's Facilities only upon the prior authorization from and under the direction of Licensor's Field Representatives. Licensee represents and warrants that its use of UAS on Railroad Property will comply with Licensor's then-current Unmanned Aerial Systems Policy and all applicable laws, rules and regulations, including any applicable Federal Aviation Administration regulations and enactments pertaining to UAS.

Section 6. **PROTECTION OF FIBER OPTIC CABLE SYSTEMS.**

Fiber optic cable systems may be buried on Railroad Property. Protection of the fiber optic cable systems is of extreme importance since any break could disrupt service to users resulting in business interruption and loss of revenue and profits. In addition to the notifications required under the "NOTICE OF COMMENCEMENT OF WORK; EMERGENCIES" Section of this **Exhibit B**, Licensee shall telephone Licensor during normal business hours (7:00 a.m. to 9:00 p.m. Central Time, Monday through Friday, except for holidays) at 1-800-336-9193 (also a 24-hour, 7-day number for emergency calls) to determine if fiber optic cable is buried anywhere on Railroad Property to be used by Licensee. If it is, Licensee shall telephone the telecommunications company(ies) involved, and arrange for a cable locator, make arrangements for relocation or other protection of the fiber optic cable, all at Licensee's expense, and will not commence any work on Railroad Property until all such protection or relocation has been completed.

Section 7. **LICENSEE'S PAYMENT OF EXPENSES.**

A. Licensee shall bear the entire cost and expense of the design, construction, maintenance, modification, reconstruction, repair, renewal, revision, relocation, or removal of Licensee's Facilities.

B. Licensee shall fully pay for all materials joined, affixed to and labor performed on Railroad Property in connection with the construction, maintenance, modification, reconstruction, repair, renewal, revision, relocation, or removal of Licensee's Facilities, and shall not permit or suffer any mechanic's or materialman's lien of any kind or nature to be enforced against the property for any work done or materials furnished thereon at the instance or request or on behalf of Licensee. Licensee shall promptly pay or discharge all taxes, charges, and assessments levied upon, in respect to, or on account of Licensee's Facilities, to prevent the same from becoming a charge or lien upon any property of Licensor, and so that the taxes, charges, and assessments levied upon or in respect to such property shall not be increased because of the location, construction, or maintenance of Licensee's Facilities or any improvement, appliance, or fixture connected therewith placed upon such property, or on account of Licensee's interest therein. Where such tax, charge, or assessment may not be separately made or assessed to Licensee but shall be included in the assessment of the property of Licensor, then Licensee shall pay to Licensor an equitable proportion of such taxes determined by the value of Licensee's property upon property of Licensor as compared with the entire value of such property.

C. As set forth in the "FLAGGING" Section of this **Exhibit B**, Licensor shall have the right, if it so elects, to provide any Safety Measures Licensor deems necessary for the safety of Licensor's operations and trackage during Licensee's or its contractor's construction, maintenance, modification, reconstruction, repair, renewal, revision, relocation, or removal of Licensee's Facilities, including, but not limited to supervision, inspection, and flagging services. In the event Licensor provides such Safety Measures, Licensor shall submit an itemized invoice to Licensee's notice recipient listed in the "NOTICES" Article of this Agreement. Licensee shall pay to Licensor the total amount listed on such invoice within thirty (30) days of Licensee's receipt of such invoice.

Section 8. **MODIFICATIONS TO LICENSEE'S FACILITIES.**

A. This grant is subject to Licensor's safe and efficient operation of its railroad, and continued use and improvement of Railroad Property (collectively, "Railroad's Use"). Accordingly, Licensee shall, at its sole cost and expense, modify, reconstruct, repair, renew, revise, relocate, or remove (individually, "Modification", or collectively, "Modifications") all or any portion of Licensee's Facilities as Licensor may designate or identify, in its sole discretion, in the furtherance of Railroad's Use.

B. Upon any Modification of all or any portion of Licensee's Facilities to another location on Railroad Property, Licensor and Licensee shall execute a Supplemental Agreement to this Pipeline Agreement to document the Modification(s) to Licensee's Facilities on Railroad Property. If the Modifications result in Licensee's Facilities moving off of Railroad Property, this Agreement will terminate upon Licensee's completion of such Modification(s) and all requirements contained within the "TERMINATION; REMOVAL OF LICENSEE'S FACILITIES" Section of this **Exhibit B**. Any such Modification(s) off of Railroad Property will not release Licensee from any liability or other obligation of Licensee arising prior to and upon completion of any such Modifications to the Licensee's Facilities.

Section 9. RESTORATION OF RAILROAD PROPERTY.

In the event Licensee, in any manner moves or disturbs any property of Licensor in connection with the construction, maintenance, modification, reconstruction, repair, renewal, revision, relocation, or removal of Licensee's Facilities, then, Licensee shall, as soon as possible and at Licensee's sole cost and expense, restore Licensor's property to the same condition as the same were before such property was moved or disturbed.

Section 10. INDEMNITY.

A. Definitions. As used in this Section:

1. "Licensor" includes Licensor, its affiliates, its and their officers, directors, agents and employees, and other railroad companies using Railroad Property at or near the location of Licensee's installation and their officers, directors, agents, and employees.

2. "Licensee" includes Licensee and its agents, contractors, subcontractors, sub-subcontractors, employees, officers, and directors, or any other person or entity acting on its behalf or under its control.

3. "Loss" includes claims, suits, taxes, loss, damages (including punitive damages, statutory damages, and exemplary damages), costs, charges, assessments, judgments, settlements, liens, demands, actions, causes of action, fines, penalties, interest, and expenses of any nature, including court costs, reasonable attorneys' fees and expenses, investigation costs, and appeal expenses.

B. Licensee shall release, defend, indemnify, and hold harmless Licensor from and against any and all Loss, even if groundless, fraudulent, or false, that directly or indirectly arises out of or is related to Licensee's construction, maintenance, modification, reconstruction, repair, renewal, revision, relocation, removal, presence, use, or operation of Licensee's Facilities, including, but not limited to, any actual or alleged:

1. Bodily harm or personal injury (including any emotional injury or disease) to, or the death of, any person(s), including, but not limited to, Licensee, Licensor, any telecommunications company, or the agents, contractors, subcontractors, sub-subcontractors, or employees of the foregoing;

2. Damage to or the disturbance, loss, movement, or destruction of Railroad Property, including loss of use and diminution in value, including, but not limited to, any telecommunications system(s) or fiber optic cable(s) on or near Railroad

Property, any property of Licensee or Licensor, or any property in the care, custody, or control of Licensee or Licensor;

3. Removal of person(s) from Railroad Property;

4. Any delays or interference with track or Railroad's Use caused by Licensee's activity(ies) on Railroad Property, including without limitation the construction, maintenance, modification, reconstruction, repair, renewal, revision, relocation, or removal of Licensee's Facilities or any part thereof, any activities, labor, materials, equipment, or machinery in conjunction therewith;

5. Right(s) or interest(s) granted pursuant to this Agreement;

6. Contents escaping from Licensee's Facilities, including without limitation any actual or alleged pollution, contamination, breach, or environmental Loss;

7. Licensee's breach of this Agreement or failure to comply with its provisions, including, but not limited to, any violation or breach by Licensee of any representations and warranties Licensee has made in this Agreement; and

8. Violation by Licensee of any law, statute, ordinance, governmental administrative order, rule, or regulation, including without limitation all applicable Federal Railroad Administration regulations.

C. THE FOREGOING OBLIGATIONS SHALL APPLY TO THE FULLEST EXTENT PERMITTED BY LAW FOR THE BENEFIT OF LICENSOR TO LOSSES CAUSED BY, ARISING FROM, RELATING TO, OR RESULTING FROM, IN WHOLE OR IN PART, THE NEGLIGENCE OF LICENSOR, AND SUCH NEGLIGENCE OF LICENSOR SHALL NOT LIMIT, DIMINISH, OR PRECLUDE LICENSEE'S OBLIGATIONS TO LICENSOR IN ANY RESPECT. NOTWITHSTANDING THE FOREGOING, SUCH OBLIGATION TO INDEMNIFY LICENSOR SHALL NOT APPLY TO THE EXTENT THE LOSS IS CAUSED BY THE SOLE, ACTIVE AND DIRECT NEGLIGENCE, GROSS NEGLIGENCE, OR WILLFUL MISCONDUCT OF LICENSOR AS DETERMINED IN A FINAL JUDGMENT BY A COURT OF COMPETENT JURISDICTION.

Section 11. TERMINATION; REMOVAL OF LICENSEE'S FACILITIES.

A. If Licensee does not use the right herein granted on Licensee's Facilities for one (1) year, or if Licensee continues in default in the performance of any provision of this Agreement for a period of thirty (30) days after written notice from Licensor to Licensee specifying such default, Licensor may, at its sole discretion, terminate this Agreement by written notice to Licensee at the address listed in the "NOTICES" Article of this Agreement. This Agreement will not terminate until Licensee complies with Paragraphs "C" and "D" of this Section found below.

B. In addition to the provisions of Paragraph "A" above, this Agreement may be terminated by written notice given by either party, without cause, upon thirty (30) days written notice to the non-terminating party at the address listed in the "NOTICES" Article of this Agreement. This Agreement will not terminate until Licensee complies with Paragraphs "C" and "D" of this Section found below.

C. Prior to the effective date of any termination described in this Section, Licensee shall submit an application to Licensor's online Utility Contracts System at this link for Licensee's removal, or if applicable, abandonment in place of Licensee's Facilities located on Railroad Property ("Removal/Abandonment

Work"). Upon the UP Engineering Representative's approval of Licensee's application for the Removal/Abandonment Work, Licensor and Licensee shall execute a separate consent document that will govern Licensee's performance of the Removal/Abandonment Work from those portions of Railroad Property not occupied by roadbed and/or trackage ("Consent Document"). Licensee shall then restore the impacted Railroad Property to the same or reasonably similar condition as it was prior to Licensee's installation of Licensee's Facilities. For purposes of this Section, Licensee's (i) performance of the Removal/Abandonment Work, and (ii) restoration work will hereinafter be collectively referred to as the "Restoration Work".

D. Following Licensee's completion of the Restoration Work, Licensee shall provide a written certification letter to Licensor at the address listed in the "NOTICES" Article of this Agreement which certifies that the Restoration Work has been completed in accordance with the Consent Document. Licensee shall report to governmental authorities, as required by law, and notify Licensor immediately if any environmental contamination is discovered during Licensee's performance of the Restoration Work. Upon discovery, the Licensee shall initiate any and all removal, remedial and restoration actions that are necessary to restore the property to its original, uncontaminated condition. Licensee shall provide written certification to Licensor at the address listed in the "NOTICES" Article of this Agreement that environmental contamination has been remediated and the property has been restored in accordance with Licensor's requirements. Upon Licensor's receipt of Licensee's restoration completion certifications, this Agreement will terminate.

E. In the event that Licensee fails to complete any of the Restoration Work, Licensor may, but is not obligated, to perform the Restoration Work. Any such work actually performed by Licensor will be at the cost and expense of Licensee. In the event that Licensor performs any of the Restoration Work, Licensee shall release Licensor from any and all Loss (defined in the "INDEMNITY" Section of this **Exhibit B**) arising out of or related to Licensor's performance of the Restoration Work.

F. Termination of this Agreement for any reason will not affect any of rights or obligations of the parties which may have accrued, or liabilities or Loss (defined in the "INDEMNITY" Section of this **Exhibit B)**, accrued or otherwise, which may have arisen prior to such termination.

EXHIBIT C

INSURANCE REQUIREMENTS

In accordance with Article 5 of this Agreement, Licensee shall (1) procure and maintain at its sole cost and expense, or (2) require its Contractor(s) to procure and maintain, at their sole cost and expense, the following insurance coverage:

A. **Commercial General Liability Insurance**. Commercial general liability (CGL) with a limit of not less than $2,000,000 each occurrence and an aggregate limit of not less than $4,000,000. CGL insurance must be written on ISO occurrence form CG 00 01 12 04 (or a substitute form providing equivalent coverage).

The policy must also contain the following endorsement, WHICH MUST BE STATED ON THE CERTIFICATE OF INSURANCE:

- Contractual Liability Railroads ISO form CG 24 17 10 01 (or a substitute form providing equivalent coverage) showing "Union Pacific Railroad Company Property" as the Designated Job Site.

B. Business Automobile Coverage Insurance. Business auto coverage written on ISO form CA 00 01 10 01 (or a substitute form providing equivalent liability coverage) with a limit of not less $2,000,000 for each accident, and coverage must include liability arising out of any auto (including owned, hired, and non-owned autos).

The policy must contain the following endorsements, WHICH MUST BE STATED ON THE CERTIFICATE OF INSURANCE:

- "Coverage For Certain Operations In Connection With Railroads" ISO form CA 20 70 10 01 (or a substitute form providing equivalent coverage) showing "Union Pacific Railroad Company Property" as the Designated Job Site.

C. **Workers' Compensation and Employers' Liability Insurance**. Coverage must include but not be limited to:

- Licensee's statutory liability under the workers' compensation laws of the state(s) affected by this Agreement.

- Employers' Liability (Part B) with limits of at least $500,000 each accident, $500,000 disease policy limit $500,000 each employee.

If Licensee is self-insured, evidence of state approval and excess workers' compensation coverage must be provided. Coverage must include liability arising out of the U. S. Longshoremen's and Harbor Workers' Act, the Jones Act, and the Outer Continental Shelf Land Act, if applicable.

D. **Environmental Liability Insurance**. Environmental Legal Liability Insurance (ELL) applicable to bodily injury, property damage, including loss of use of damaged property or of property that has not been physically injured or destroyed, cleanup costs, and defense, including costs and expenses incurred in the investigation, defense, or settlement of claims, or compliance with statute, all in connection with any loss arising from the insured's performance under this Agreement. Except with respect to the limits of insurance, and any rights or duties specifically assigned to the first named insured, this insurance must apply as if each named insured were the only named insured; and separately to the

additional insured against which claim is made or suit is brought. Coverage shall be maintained in an amount of at least $2,000,000 per loss, with an annual aggregate of at least $4,000,000.

Licensee warrants that any retroactive date applicable to ELL insurance coverage under the policy is the same as or precedes the Effective Date of this Agreement, and that continuous coverage will be maintained for a period of five (5) years beginning from the time the work under this Agreement is completed or if coverage is cancelled for any reason the policies extended discovery period, if any, will be exercised for the maximum time allowed.

E. **Railroad Protective Liability Insurance**. Licensee must maintain for the duration of work "Railroad Protective Liability" insurance written on ISO occurrence form CG 00 35 12 04 (or a substitute form providing equivalent coverage) on behalf of Licensor only as named insured, with a limit of not less than $2,000,000 per occurrence and an aggregate of $6,000,000. The definition of "JOB LOCATION" and "WORK" on the declaration page of the policy shall refer to this Agreement and shall describe all WORK or OPERATIONS performed under this Agreement. Notwithstanding the foregoing, Licensee does not need Railroad Protective Liability Insurance after its initial construction work is complete and all excess materials have been removed from Licensor's property; PROVIDED, however, that Licensee shall procure such coverage for any subsequent maintenance, repair, renewal, modification, reconstruction, or removal work on Licensee's Facilities.

F. **Umbrella or Excess Insurance**. If Licensee utilizes umbrella or excess policies, and these policies must "follow form" and afford no less coverage than the primary policy.

Other Requirements

G. All policy(ies) required above (except business automobile, workers' compensation and employers' liability) must include Licensor as "Additional Insured" using ISO Additional Insured Endorsement CG 20 26 (or substitute form(s) providing equivalent coverage). The coverage provided to Licensor as additional insured shall not be limited by Licensee's liability under the indemnity provisions of this Agreement. BOTH LICENSOR AND LICENSEE EXPECT THAT LICENSOR WILL BE PROVIDED WITH THE BROADEST POSSIBLE COVERAGE AVAILABLE BY OPERATION OF LAW UNDER ISO ADDITIONAL INSURED FORM CG 20 26.

H. Punitive damages exclusion, if any, must be deleted (and the deletion indicated on the certificate of insurance), unless (a) insurance coverage may not lawfully be obtained for any punitive damages that may arise under this Agreement, or (b) all punitive damages are prohibited by all states in which this Agreement will be performed.

I. Licensee waives all rights of recovery, and its insurers also waive all rights of subrogation of damages against Licensor and its agents, officers, directors and employees for damages covered by the workers' compensation and employers' liability or commercial umbrella or excess liability obtained by Licensee required in this Agreement, where permitted by law. This waiver must be stated on the certificate of insurance.

J. All insurance policies must be written by a reputable insurance company acceptable to Licensor or with a current Best's Insurance Guide Rating of A- and Class VII or better, and authorized to do business in the state(s) in which the work is to be performed.

K. The fact that insurance is obtained by Licensee will not be deemed to release or diminish the liability of Licensee, including, without limitation, liability under the indemnity provisions of this Agreement. Damages recoverable by Licensor from Licensee or any third party will not be limited by the amount of the required insurance coverage.

4381 BROADWAY STREET
SUITE 201
AMERICAN CANYON CA 94503

Jason Holley:

Attached is your original copy of our Agreement, fully executed on behalf of the Railroad Company. When you or your representative enters the Railroad Company's property, a copy of this fully-executed document must be available at the site to be shown on request to any Railroad employee or official.

In accordance with the terms of the Agreement, you are required to notify the following Railroad Company's field representative, Manager of Signal Maintenance, and the Telecommunications ("Call Before You Dig") number at least 10 days in advance of the date you plan on entering the right of way for further instructions and approval to commence construction.

UP.info@railpros.com (877)-315-0513 x. 116	**California Northern Railroad Company (CFNR)** **Genesee & Wyoming Railroad Services, Inc.** 904-596-7782 gwappswest@gwrr.com

Telecommunications ("Call Before You Dig"): 1-800-336-9193

As an additional note, the top of the casing must be a minimum of two feet below any existing fiber optic cable. Any open excavation required within five feet of the fiber optic cable must be dug by hand.

All future insurance notices should be forwarded to my attention per the address below with the Folder number identified:

CHARLTON H. BONHAM, Director

January 22, 2021

Mr. Ernie Knodel
Orchard Partners, LLC
3697 Mt. Diablo Boulevard, Suite 200
Lafayette, CA 94549

Dear Mr. Knodel:

Amendment of Lake or Streambed Alteration, Notification No. 1600-2016-0209-R3, NAPA LOGISTICS PARK PHASE 2 PROJECT

The California Department of Fish and Wildlife (CDFW) received your request to amend Lake or Streambed Alteration Agreement 1600-2016-0209-R3 (Agreement) and the required fee in the amount of $1,526.00 for a major amendment.

Your request to amend the Agreement includes using the jack and bore method to install two utility lines (i.e., potable water and sewage) under No Name Creek, and an unnamed ephemeral channel at the northern boundary of the project site, to connect to potable water and sewer lines.

The Agreement's Project Description is amended as follows (amended language in ***bold italics***; deleted language in ~~strikethrough~~):

The project is limited to: 1) installing and removing a temporary double rail car bridge, 2) installing a permanent car bridge, ~~and~~ 3) installing a new storm drain outfall and associated energy dissipater***, and 4) using the jack and bore method to install two utility lines (i.e., potable water and sewer) under No Name Creek and an unnamed ephemeral channel at the northern boundary of the project site.***

Temporary Access Bridge
The temporary bridge will include: 1) Excavation and placement of 2-foot-deep, 5-foot wide, 21-foot-long steel grade beam support footings on each bank of the channel; 2) Placement of two railcar bridge deck components, each approximately 10-foot-wide by 65-feet-long; 3) Placement of 20-foot wide roadway fill material ranging from 6 inches to 2-feet deep for approach ramps to the temporary railcar bridge; And 4) removal of temporary bridge, approach ramps and support footings to be restored to pre-existing conditions (Exhibit B; Sheet 6).

Permanent Clear Span Pre-cast Bridge
The permanent bridge installation will be located immediately adjacent to the temporary bridge site and will include: 1) Excavating and placing two 5-foot-wide, 20-foot-long

DocuSign Envelope ID: 1A1D0DBD-432D-4478-B241-E307080A7314

concrete support footings, where each footing will be reinforced by twelve 30-inch diameter concrete piers (6 on each abutment) backfilled with native material to match existing grade; 2) Installing and attaching a 60-foot long, 40-foot wide bridge deck and utilities to support footings; 3) Installing four pre-cast concrete wing walls, each approximately 10 feet long. Each will be buried in the bank 5 to 9 feet deep below existing ground, and will extend approximately 11 feet above ground to match the bridge footing elevation; and 4) Compacting 5 to 6 feet deep fill and roadbed material behind and above the bridge elements and wing walls (Exhibit B; Sheets 4-5).

Outfall and Energy Dissipater
The storm drain outfall and associated energy dissipater will include: 1) Excavating and placing two 24-inch diameter precast concrete outfall pipes per Caltrans standards; 2) Excavating and installing approximately 600 square feet of non-grouted rock to be placed below the outfall pipes as energy dissipation. All rock will be backfilled with approximately 2 feet of native soil and planted with native species (Exhibit B; Sheets 8-9).

Jack and Bore Utilities
The project will use the jack and bore method to install two utility lines (i.e., water and sewage) that shall be at least 5 feet below the streambed of No Name Creek and an unnamed ephemeral channel at the northern boundary of the project site.

The Agreement measures are amended as follows (amended language in ***bold italics***; deleted language in ~~strikethrough~~):

Jack and Bore

2.53 Frac-out Containment. Jack and bore operations shall not commence until all materials necessary to contain a frac-out or fluid spill are on site and immediately available, as outlined in the Frac-Out Contingency Plan for the Napa Logistics Park Phase II Project – American Canyon, California, prepared by Monk & Associates, dated October 22, 2020 (Exhibit C).

2.54 Frac-out Contingency. In the event of a frac-out, all drilling shall cease and all personnel shall implement the Frac-Out Contingency Plan (see Measure 2.53). Jack and bore operations shall not resume until approved by CDFW.

2.55 Jack and Bore Entry and Exit Locations. Jack and bore entry and exit pits shall be located a minimum of 15 feet from top of bank. The exit and entry pits shall be appropriately sized to contain drilling fluids and cuttings. Control measures to ensure drilling mud is contained shall be monitored for effectiveness and shall be repaired or replaced as needed.
2.56 Drilling Mud. At no time shall drill cuttings, drilling mud, and/or materials or water contaminated with bentonite or any other substance deemed deleterious to

DocuSign Envelope ID: 1A1D0DBD-432D-4478-B241-E307080A7314

fish or wildlife be allowed to enter the stream or be placed where they may be washed into the stream. Any contaminated water/materials from the drilling and/or project activities shall be pumped into a holding facility and removed for proper disposal.

RESOLUTION NO. 2022-67

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON AUTHORIZING THE CITY MANAGER TO EXECUTE A TERMINATION OF AMENDED AND RESTATED IMPROVEMENT AGREEMENT AND FIRST AMENDMENT TO SUBDIVISION IMPROVEMENT AND REIMBURSEMENT AGREEMENT FOR THE NAPA LOGISTICS PARK PHASE 2 PROJECT

WHEREAS, DWF IV NLP II, LLC ("Developer") is the developer of the Napa Logistics Park Phase 2 project ("Phase 2" or "Project"). Developer formerly owned the entirety of the Phase 2 site, consisting of an approximately 172.61-acre parcel (formerly Napa County Assessor Parcel Number 057-090-083). Developer currently owns Lots 1 and 2 of the Phase 2 site; and

WHEREAS, on December 15, 2015, the City Council (A) certified a Final Environmental Impact Report ("EIR") under the provisions of the California Environmental Quality Act (Pub. Res. Code § 21000 *et seq.*) ("CEQA") for the Project, and (B) approved a Conditional Use Permit ("CUP") for the Project. The CUP includes several conditions of approval, including conditions related to certain required public and private improvements (the "CUP Conditions"); and

WHEREAS, on November 7, 2017, the City Council adopted Ordinance 2017-08, authorizing a Development Agreement for the Project that would extend the CUP by an additional ten (10) years. To comply with CEQA, the City Council approved an Initial Study/Addendum prepared by First Carbon Solutions, dated August 31, 2017 ("2017 Addendum"). The City and Developer then entered into that certain Development Agreement, dated November 7, 2017, and recorded on November 8, 2017 (the "Phase 2 Development Agreement"); and

WHEREAS, on March 22, 2018, by Resolution No. 2018-06, the City Planning Commission approved a Tentative Parcel Map, further subdividing Phase 2 into six (6) legal lots: (a) three (3) buildable lots of 58.19 acres, 37.40 acres, and 24.51 acres each (the "Development Parcels"), and (b) the collective remainder lots including an 8.54 acre lot for storm drainage purposes, a designated remainder lot of 37.21 acres which is subject to a wetlands conservation easement, and public road rights of way totaling 6.67 acres (the "Tentative Map Approval"). The Tentative Map Approval includes several conditions of approval, including conditions related to certain required public and private improvements (the "Map Conditions"). Map Condition 8 incorporates by reference as Map Conditions all CUP Conditions.; and

WHEREAS, on June 27, 2018 the City and Developer entered into an Amended and Restated Improvement Agreement (recorded on July 2, 2018) (the "Amended and Restated Improvement Agreement"), documenting certain improvement requirements for the Project; and

WHEREAS, on December 18, 2018, the City and Developer entered into that certain Subdivision Improvement and Reimbursement Agreement (recorded on December 18, 2018) (the "Subdivision Improvement and Reimbursement Agreement"), documenting certain improvement requirements for the Project; and

WHEREAS, on March 4, 2019, Developer recorded the Parcel Map-Napa Logistics Park Phase 2 ("Parcel Map"). Following recordation of the Parcel Map, Developer transferred Lot 4 to the Pacific Gas & Electric Company ("PG&E"), and Developer transferred Lot 3 and the designated remainder lot to the Napa

DocuSign Envelope ID: 87F61699-998F-4DCB-A07C-C2B064E701DA

Logistics Park Association. Developer and PG&E also entered into a partial assignment and assumption of the Phase 2 Development Agreement, by which Developer retained certain improvement obligations. Developer currently owns Lots 1 and 2 of the original Phase 2 site; and

WHEREAS, both the Amended and Restated Improvement Agreement and the Subdivision Improvement and Reimbursement Agreement addressed and implemented requirements for certain roadway improvements at SR-29 and South Kelly Road (the "Original South Kelly Improvements"), as set forth in CUP Condition 16.1, the Map Conditions, MM-TRANS-1d, MM-TRANS-2a, the Napa Logistics Park Phase I approvals, and other Project approvals. The Subdivision Improvement and Reimbursement Agreement also addressed certain Transportation Demand Management ("TDM") requirements for the Project, as set forth in CUP Conditions 16. e and 17, MM-TRANS-1a and MM-TRANS-1b, and other Project approvals; and

WHEREAS, the Original South Kelly Improvements were premised on conservative assumptions about the Project's land uses, development square footage, and trip generation as analyzed in the Final EIR, and they were based on the City's, County's, Napa Valley Transportation Authority's ("NVTA"), and Caltrans' plans for traffic improvements along the SR-29 corridor as of 2015. The Project's actual buildout has resulted in less intensive land uses, reduced development square footage, and fewer traffic trips compared to what was assumed and analyzed in the Final EIR and 2017 Addendum. In addition, the City, County, NVTA, and Caltrans have since updated their plans for traffic improvements along the SR-29 corridor.; and

WHEREAS, Developer and the City now desire to modify the Original Roadway Improvements to reflect the actual land uses, development square footage, and trip generation for the Project as-built, and the agencies' updated improvement plans for the SR-29 corridor ("Modified South Kelly Improvements"); and

WHEREAS, Developer and the City further desire to clarify the Transportation Demand Management ("TDM") requirements for the Project and the current status of those requirements; and

WHEREAS, Developer and the City further desire to document the Modified South Kelly Improvements and clarified TDM requirements in a single agreement; and

WHEREAS, the City has analyzed an Initial Study/Addendum prepared by First Carbon Solutions, dated June 2022 (“2022 Addendum”), which evaluated whether approval of the Modified South Kelly Improvements and other items included in this Amendment have the potential to cause new or substantially more severe environmental impacts over the Project impacts evaluated and identified in the Final EIR and 2017 Addendum, or whether there is any new information of substantial importance, which was not known and could not have been known at the time the Final EIR was certified as complete, that would require additional environmental review pursuant to Public Resources Code section 21166 and the CEQA Guidelines sections 15162–15164. The 2022 Initial Study/Addendum determined that there is no potential for new or more severe significant environmental impacts, and the City Staff has determined that no subsequent EIR is required; and

WHEREAS, the 2022 Addendum provides the basis and substantial evidence supporting the Modified South Kelly Improvements and modified TDM.

DocuSign Envelope ID: 87F61699-998F-4DCB-A07C-C2B064E701DA

NOW, THEREFORE, BE IT RESOLVED that the City Council of the City of American Canyon hereby adopts the 2022 Addendum which provides the basis and substantial evidence supporting the proposed Modified South Kelly Improvements and modified TDM attached hereto as Exhibit A and incorporated herein; and

NOW, THEREFORE, BE IT FURTHER RESOLVED that the City Council of the City of American Canyon hereby authorizes the City Manager to execute the Termination of Amended and Restated Improvement Agreement and First Amendment to Subdivision Improvement and Reimbursement Agreement for the Napa Logistics Phase 2 Project, attached hereto as Exhibit B and incorporated herein; and

PASSED, APPROVED and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 2nd day of August, 2022 by the following vote:

AYES: Councilmembers Joseph, Oro, Washington, Vice Mayor Aboudamous, and Mayor Garcia

SECTION 1: INTRODUCTION

This Initial Study/Addendum and attached supporting documents have been prepared to determine whether and to what extent the Napa Logistics Park Phase II Project (NLP2) 2015 Final Environmental Impact Report (2015 FEIR) (State Clearinghouse No. 2014082033) prepared for the City of American Canyon remains sufficient to address the potential impacts of the proposed South Kelly Road and State Route (SR) 29 Improvements Project (proposed improvements), or whether additional documentation is required under the California Environmental Quality Act (CEQA) (Public Resources Code [PRC] § 21000, *et seq*.).

1.1 - Environmental Checklist

Pursuant to Public Resources Code Section 21166, and CEQA Guidelines Sections 15162 and 15164, subdivision (a), the attached Addendum has been prepared to evaluate the proposed improvements. The attached Addendum uses the standard environmental checklist categories provided in Appendix G of the CEQA Guidelines but provides answer columns for evaluation consistent with the considerations listed under CEQA Guidelines Section 15162, subdivision (a).

1.2 - Environmental Analysis and Conclusions

CEQA Guidelines Section 15164, subdivision (a) provides that the lead agency or a responsible agency shall prepare an Addendum to a previously certified Environmental Impact Report (EIR) or Negative Declaration (ND) if some changes or additions are necessary but none of the conditions described in CEQA Guidelines Section 15162 calling for preparation of a subsequent Environmental Impact Report (EIR) or ND have occurred (CEQA Guidelines, § 15164, subd. (a)).

An Addendum need not be circulated for public review but can be included in or attached to the FEIR or ND (CEQA Guidelines § 15164, subd. (c)). The decision-making body shall consider the Addendum the 2015 FEIR prior to making a decision on the proposed improvements (CEQA Guidelines § 15164, subd. (d)). An agency must also include a brief explanation of the decision not to prepare a subsequent EIR or ND pursuant to Section 15162 (CEQA Guidelines § 15164, subd. (e)).

Consequently, once an EIR or ND has been certified for a project, no subsequent EIR or ND is required under CEQA unless, based on substantial evidence:

(1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or ND . . . due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; [1]

(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or ND . . . due to the

[1] CEQA Guidelines Section 15382 defines "significant effect on the environment" as " . . . a substantial, or potentially substantial adverse change in any of the physical conditions within the area affected by the project, including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance . . ." (see also PRC § 21068).

involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

(3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, or the ND was adopted. . . shows any of the following:

A. The project will have one or more significant effects not discussed in the previous EIR or ND or negative declaration;

B. Significant effects previously examined will be substantially more severe than shown in the previous EIR or ND;

C. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or

D. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR or ND would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative (CEQA Guidelines § 15162, subd. (a); see also PRC § 21166).

This Initial Study/Addendum, checklist, and attached documents constitute substantial evidence supporting the conclusion that preparation of a supplemental or subsequent EIR or ND is not required prior to approval of the above-referenced permits by responsible and trustee agencies and provides the required documentation under CEQA.

This Initial Study/Addendum addresses the impacts of the proposed South Kelly Road and SR-29 Improvements Project in relation to the conclusions of the 2015 FEIR.

1.2.1 - Findings

There are no substantial changes in the proposed improvements or in the circumstances in which the proposed improvements would be undertaken that would require major revisions of the 2015 FEIR. The proposed revisions do not require preparation of a new subsequent or supplemental EIR, due to either the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. As illustrated herein, the proposed improvements are consistent with the previous 2015 FEIR and would involve only minor changes; therefore, an Addendum is appropriate CEQA compliance for the proposed improvements.

1.2.2 - Conclusions

The City of American Canyon may approve the proposed South Kelly Road and SR-29 Improvements Project based on this Initial Study/Addendum. The impacts of the proposed improvements remain within the impacts previously analyzed in the EIR (CEQA Guidelines § 15164).

1.3 - Mitigation Monitoring and Reporting Program

As required by Public Resources Code Section 21081.6, subdivision (a)(1), an Amended Mitigation Monitoring and Reporting Program (MMRP) has been prepared for the proposed improvements in order to monitor the implementation of the mitigation measures that have been adopted for the proposed project. Any long-term monitoring of mitigation measures imposed on the overall development will be implemented through the MMRP.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 2: PROJECT DESCRIPTION

2.1 - Location and Setting

2.1.1 - Location

The project site is located in the City of American Canyon, Napa County, California; refer to Exhibit 1. The project site consists of the segment of South Kelly Road between SR-29 and Devlin Road; refer to Exhibit 2. The project site is located on the *Cuttings Wharf, California,* United States Geological Survey 7.5-Minute Topographical Quadrangle (Latitude 38° 12' 26" North; Longitude 122° 15' 27" West).

2.1.2 - Environmental Setting

South Kelly Road is a two-lane collector that provides access to the Napa Valley Business Park[2] and Napa Logistics Park from SR-12 and SR-29. The intersection of SR-29/South Kelly Road is controlled by a signal, while the intersection of Devlin Road/South Kelly Road is all-way stop controlled. The existing South Kelly Road right-of-way contains asphalt-concrete pavement, curb, gutter, street lighting, and unpaved disturbed areas used for parking, non-native annual grassland with a substantial ruderal component, a seasonal wetland swale, which drains a larger seasonal wetland south of the project site to a double culvert draining runoff under the intersection South Kelly Rd and Devlin Rd to Napa River.

South Kelly Road is a truck route and carries a substantial number of heavy vehicles, which has resulted in significant wear and tear to the roadway. Evidence of asphalt concrete failure is visible in numerous places between SR-29 and Devlin Road. Exhibit 3 provides a photograph of South Kelly Road between SR-29 and Devlin Road.

2.2 - Project Background

In 2010, Napa County approved the entitlements for Phase I of the Napa Logistics Park. These entitlements included a use permit, tentative parcel map, and development agreement for a 646,000-square-foot warehouse on 38 acres of the project site. In 2011, the City of American Canyon annexed the entire 218-acre Napa Logistics Park property. The Napa Logistics Park applicant completed the Phase I warehouse in 2016 and the building is used as an IKEA customer fulfillment center.

In 2015, the American Canyon City Council approved a Conditional Use Permit for Phase II of the Napa Logistics Park and certified the 2015 FEIR. The 2015 FEIR contemplated the development of an up to 2.27-million-square-foot logistics center on 173 acres of the Napa Logistics Park property.

The 2015 FEIR required a number of circulation improvements to accommodate the anticipated 2.27 million square feet of development, including to the intersection of SR-29/South Kelly Road.

[2] The Napa Valley Business Park was formerly known as the Napa County Airport Industrial Area

Improvements contemplated at the time were set forth in Mitigation Measure (MM) TRANS-1d (components shown in ***bold italic*** are already constructed and operational as of 2022):

(1) At the intersection of SR-29 at South Kelly Road:
- Northbound approach: 3 through lanes, 2 left-turn lanes, 1 right-turn lane
- Southbound approach: 3 through lanes, 1 left-turn lane, 1 right-turn lane
- Eastbound approach: 1 through lane, 2 left-turn lanes, 1 right-turn lane
- Westbound approach: 1 through lane, 2 left-turn lanes, 1 right-turn lane

(2) At the intersection of South Kelly Road and Devlin Road:
- Northbound approach: 1 through lane, ***1 right-turn lane***
- Southbound approach: ***1 through lane, 1 left-turn lane***
- Private driveway: None[3]
- Westbound approach: 1 left-turn lane, 1 right-turn lane

(3) South Kelly Road, between Devlin Road and SR-29 intersections:
- 2 westbound receiving lanes, 1 eastbound lane, and 1 two-way left-turn lane.

In 2017, the Napa Logistics Park owner requested, and the City of American Canyon approved, a Development Agreement with a term of 10 years. The Napa Logistics Park owner has obtained four subsequent approvals from the City:

(1) on January 25, 2018, the City Planning Commission approved a Design Permit for a building ("Building 4"). Building 4 is 702,000 square feet and is used as a warehouse;

(2) on March 22, 2018, the City Planning Commission approved a Tentative Parcel Map, and the City Council approved a final Parcel Map on November 20, 2018;

(3) on July 25, 2019, the City Planning Commission approved a Design Permit for a building ("Building 5"). Building 5 is 100,000 square feet and is used as a regional service center; and

(4) on June 25, 2020, the City Planning Commission approved a Design Permit for a building ("Building 3"). Building 3 is 201,817 square feet and is used as a warehouse.

The parcel containing Building 5 was acquired by PG&E on December 23, 2020. PG&E obtained a new Design Permit and Variance from the City Planning Commission on September 30, 2021, for a 118,467-square-foot Regional Service Center.

2.3 - Project Characteristics

2.3.1 - Project Summary

With the construction of the PG&E Regional Service Center (anticipated in 2022), Napa Logistics Park will contain 1,003,817 square feet of development, which represents a reduction of 55 percent from the 2,270,640 million square feet of development that was evaluated and disclosed in the 2015 FEIR.

[3] Although MM TRANS-1d did not indicate a need for a private driveway, as of 2022 a 1-lane, exit only driveway is constructed and operational.

Table 1 compares the end uses contemplated by the 2015 FEIR and the actual uses that were developed. Accordingly, the extent of roadway improvements included in the 2015 FEIR can appropriately be re-evaluated to confirm what is required to support the actual buildout of Napa Logistics Park.

Table 1: Comparison of End Uses

Building/Use	Square Footage	
	2015 FEIR	Actual (End User)
2	100,000	0
3	1,000,000	201,817 (Amazon Warehouse)
4	703,040	702,000 (Biagi Bros. Warehouse)
5	467,600	100,000 (PG&E regional service center)
Total	**2,270,640**	**1,003,817**
Difference	**(1,266,823)**	

Note: Building 2 will never be developed
Source: Orchard Partners 2022.

In light of the substantial reduction in square footage, the applicant proposes to amend the improvements required by the 2015 FEIR, First Amended and Restated Improvement Agreement, and related NLP2 approvals, as follows:

Amended CUP Condition 16.a/Amended MM TRANS-1d

The project applicant shall make a fair share payment to the City to support the City's implementation of the following improvements to SR-29. This amended mitigation is based on improvements that have already been constructed, the project's reduced trip generation, and the project's reduced extent of development as documented in the 2022 transportation impact study.

- South Kelly Road between SR-29 and Devlin Road would be widened to accommodate a third maneuvering lane.
- The eastbound approach at SR-29 would have a left-turn lane, a shared left-turn/through lane, and a right-turn lane.
- The southbound approach would be widened to add a right-turn lane on SR-29.
- The northbound approach left-turn lane on SR-29 would be extended.
- SR-29 would not be widened to provide three through lanes, as contemplated in the 2015 FEIR.

Exhibit 4a, 4b, 5a, 5b depict the proposed improvements plan.

Table 2 shows the requested revisions to Mitigation Measure TRANS 1-D and 2-A in the 2015 FEIR.

Table 2: Revisions to Mitigation Measures TRANS 1-D and TRANS 2-A

Intersection/ Road Segment	Approach	Number of Travel Lanes	
		2015 FEIR Mitigation	Revised Mitigation
SR-29/South Kelly Road	Northbound	3 through, 2 left, 1 right	2 through, 1 left[1]
	Southbound	3 through, 1 left, 1 right	2 through, 1 left, 1 right
	Eastbound	1 through, 2 left, 1 right	1 left, 1 left/through, 1 right
	Westbound	1 through, 2 left, 1 right	1 through, 1 left[1]
Devlin Road/South Kelly Road	Northbound	1 through, 1 right	1 through[1]
	Southbound	1 through, 1 left	1 through, 1 left[1]
	Private Driveway	None[2]	1 lane-exit only[1]
	Westbound	1 left, 1 right	1 left, 1 right
South Kelly Road: Devlin Road to SR-29	Westbound	2 receiving lanes	2 receiving lanes
	Eastbound	1 eastbound lane	1 eastbound lane
	Center Lane	1 two-way left-turn lane	1 two-way left-turn lane

Notes:
[1] Existing Configuration
[2] Did not exist at time of 2015 FEIR

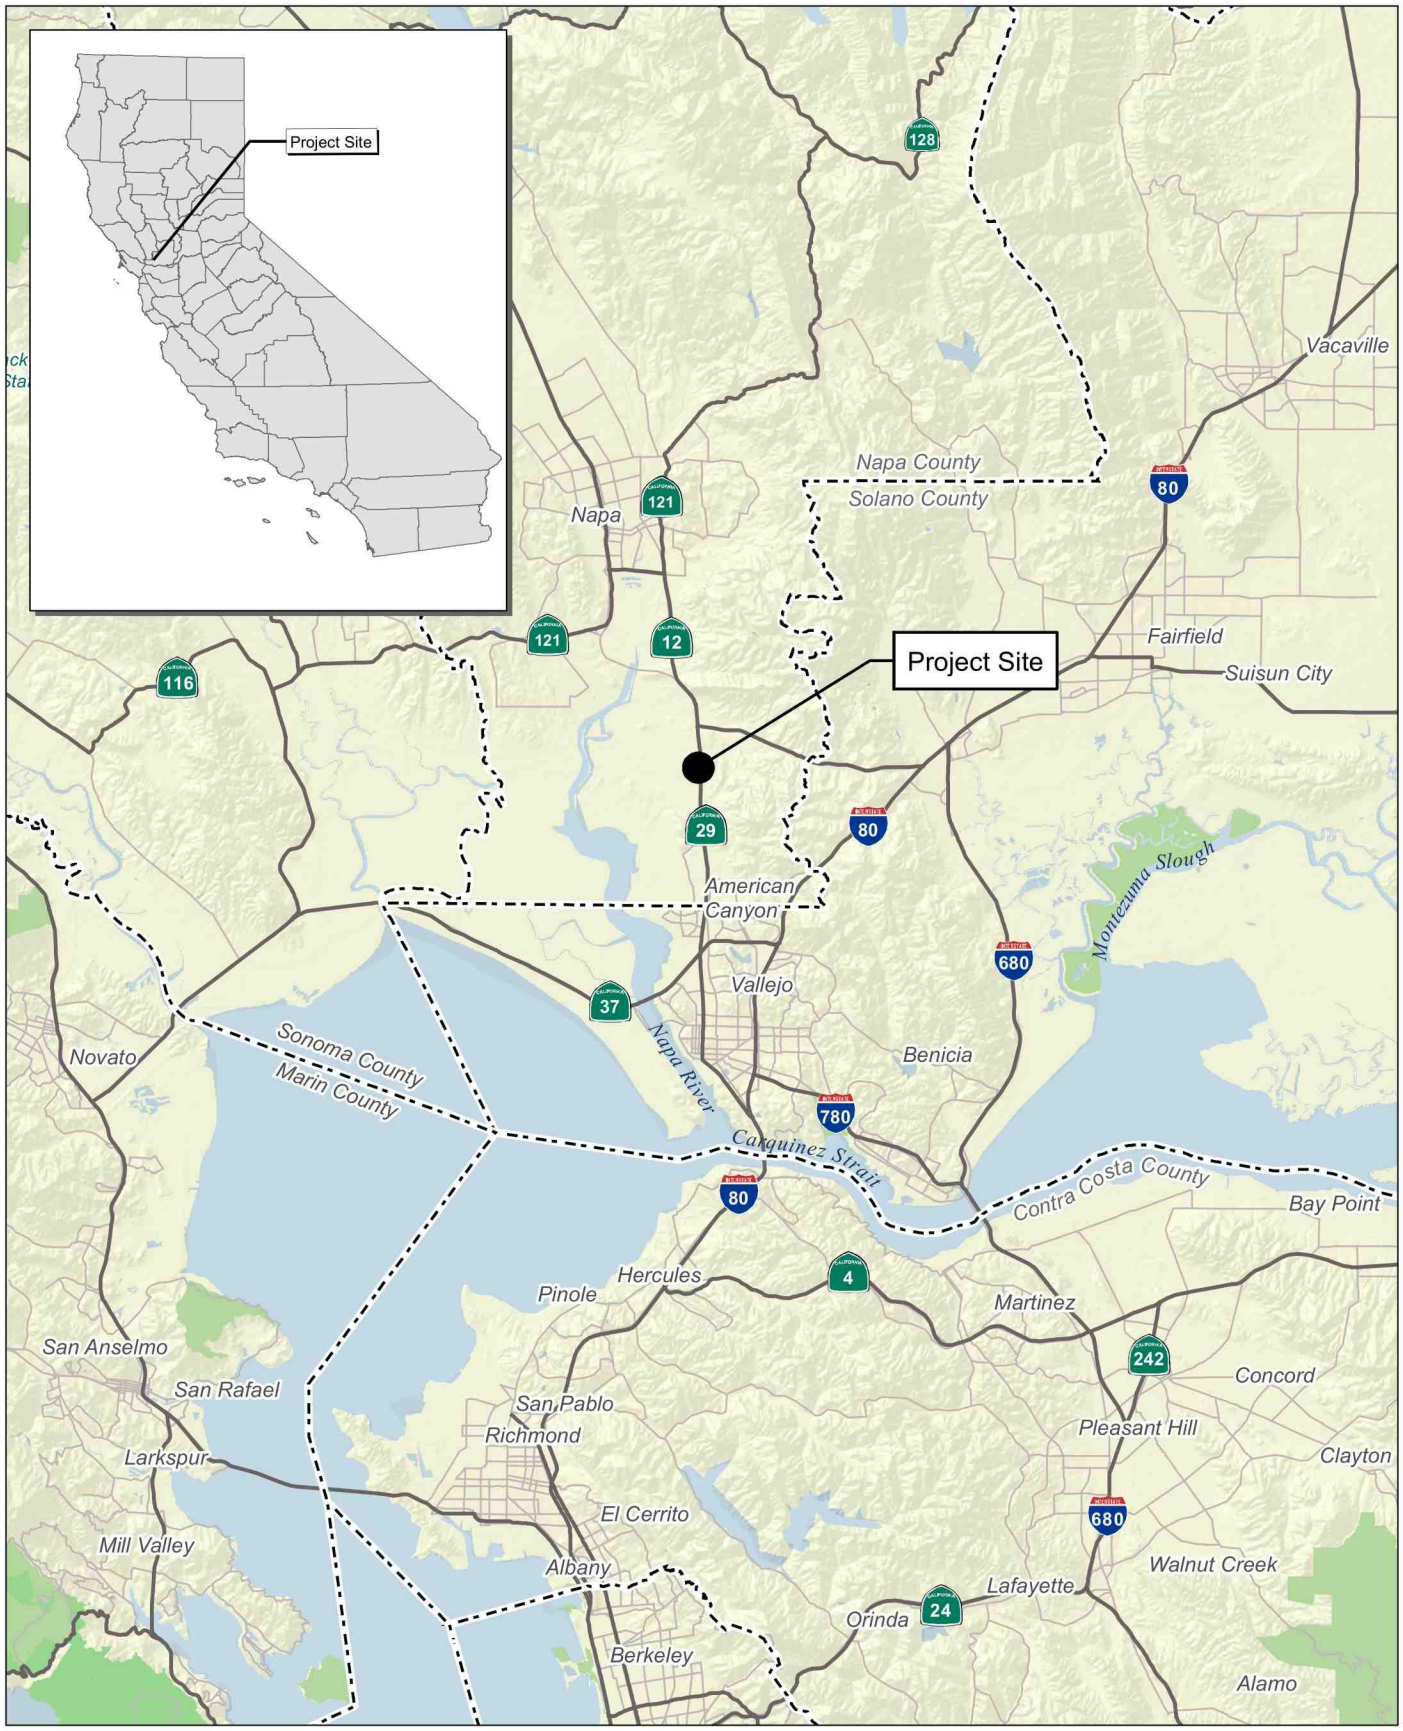
Amended CUP Conditions 16.e.; 17/Amended MM TRANS-1a and MM-TRANS-1b.

The project applicant shall establish a Transportation Demand Management (TDM) program, subject to review and approval by the City. The intent of the TDM program is to ensure that traffic volumes generated by the project do not exceed that which would occur from warehouse-only uses. Notwithstanding its intent, the applicant shall implement this mitigation measure regardless of the mix of uses (warehouse-only or warehouse/industrial/office) that is eventually built.

To ensure its enforceability, the project applicant shall incorporate the TDM program into the CC&Rs for the Napa Logistics Park. The CC&Rs shall require the Association to monitor each Occupant's compliance with the TDM program and to allocate to an Owner or Owners any fines imposed by the City in connection with an Occupant's violation of the TDM program.

The applicant has already fully complied with this condition and mitigation measure. The applicant submitted, and the City approved, a Transportation Demand Management program for the project, entitled "Napa Logistics Park Transportation Demand Management (TDM) Strategies and Monitoring," prepared by Fehr & Peers and dated October 2020. The applicant incorporated the TDM program into the Declaration of Covenants, Conditions, and Restrictions and Grant of Easements for Napa Logistics Park (recorded on September 12, 2017, as Instrument No. 2017-0020645 in the Official Records of the County), as subsequently amended. Section 3.3.14 of the CC&Rs requires the Association to monitor each Occupant's compliance with the TDM Program and

to allocate to an Owner or Owners any fines imposed by the City in connection with an Occupant's violation of the TDM Program.



2.4 - Discretionary Approvals

The proposed improvements require discretionary approvals from the City of American Canyon, including but not limited to the following:

- Adoption of Addendum
- Approval of Preliminary Improvement Plans
- Approval of a Second Amended and Restated Improvement Agreement
- Adoption of Amended MMRP

The proposed improvements may also require approvals from other agencies, including but not limited to an encroachment permit from Caltrans.

SECTION 3: CEQA CHECKLIST

The purpose of the checklist is to evaluate the categories in terms of any changed condition (e.g., changed circumstances, project changes, or new information of substantial importance) that may result in a changed environmental result (e.g., a new significant impact or substantial increase in the severity of a previously identified significant effect) (CEQA Guidelines § 15162).

The questions posed in the checklist come from Appendix G of the CEQA Guidelines. A "no" answer does not necessarily mean that there are no potential impacts relative to the environmental category but that there is no change in the condition or status of the impact since it was analyzed and addressed with mitigation measures in the 2015 FEIR. These environmental categories might be answered with a "no" in the checklist, since the proposed improvements do not introduce changes that would result in a modification to the conclusion of the previously approved CEQA document.

This Initial Study/Addendum addresses the conclusions of the proposed South Kelly Road and SR-29 Improvements Project.

3.1 - Explanation of Checklist Evaluation Categories

(1) Conclusion in 2015 FEIR and Related Documents

This column summarizes the conclusion of the 2015 FEIR relative to the environmental issue listed under each topic.

(2) Do the Proposed Changes Involve New Impacts?

Pursuant to CEQA Guidelines Section 15162, subdivision (a)(1), this column indicates whether the changes represented by the proposed South Kelly Road and State Route 29 Improvements Project will result in new significant environmental impacts not previously identified or mitigated by the 2015 FEIR or whether the changes will result in a substantial increase in the severity of a previously identified significant impact.

(3) New Circumstances Involving New Impacts?

Pursuant to CEQA Guidelines Section 15162, subdivision (a)(2), this column indicates whether there have been substantial changes with respect to the circumstances under which the proposed South Kelly Road and State Route 29 Improvements Project is undertaken that will require major revisions to the 2019 FEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

(4) New Information Requiring New Analysis or Verification?

Pursuant to CEQA Guidelines Section 15162, subdivision (a)(3)(A-D), this column indicates whether new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the 2015 FEIR was certified, shows any of the following:

(A) The South Kelly Road and State Route 29 Improvements Project will have one or more significant effects not discussed in the previous EIR or negative declaration;

(B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;

(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the South Kelly Road and State Route 29 Improvements Project, but the project proponents decline to adopt the mitigation measure or alternative; or

(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

If the additional analysis completed as part of this environmental review were to find that the conclusions of the proposed South Kelly Road and State Route 29 Improvements Project remain the same and no new significant impacts are identified, or identified impacts are not found to be substantially more severe, or additional mitigation is not necessary, then the question would be answered "no" and no additional environmental document would be required.

(5) Mitigation Measures Implemented or Address Impacts

Pursuant to CEQA Guidelines Section 15162, subdivision (a)(3), this column indicates whether the 2015 FEIR provides mitigation measures to address effects in the related impact category. Any previously adopted mitigation measures will identified. The response will also address proposed revisions to previously adopted mitigation measures. These mitigation measures will be implemented with the construction of the proposed improvements, as applicable. If "NA" is indicated, the 2015 FEIR has concluded that the impact either does not occur with this proposed project or is not significant, and therefore no additional mitigation measures are needed.

3.2 - Discussion and Mitigation Sections

(1) Discussion

A discussion of the elements of the checklist is provided under each environmental category in order to clarify the answers. The discussion provides information about the particular environmental issue, how the proposed improvements relate to the issue, and the status of any mitigation that may be required or that has already been implemented.

(2) Mitigation Measures

Applicable mitigation measures from the Initial Study that apply to the proposed improvements are listed under each environmental category.

(3) Conclusions

A discussion of the conclusion relating to the analysis is contained in each section.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
I. Aesthetics, Light, and Glare *Except as provided in Public Resources Code Section 21099, would the project:*					
a) Have a substantial adverse effect on a scenic vista?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on a scenic vista.	**No.** There are no new circumstances that would result in new or more severe impacts on a scenic vista.	**No.** No new information of substantial importance indicates the need for additional analysis of scenic vistas.	None
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic building within a State Scenic Highway?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on State Scenic Highways.	**No.** There are no new circumstances that would result in new or more severe impacts on State Scenic Highways.	**No.** No new information of substantial importance indicates the need for additional analysis of State Scenic Highways.	None
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on visual character.	**No.** There are no new circumstances that would result in new or more severe impacts on visual character.	**No.** No new information of substantial importance indicates the need for additional analysis of visual character.	None
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	Less than significant impact after mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on light and glare.	**No.** There are no new circumstances that would result in new or more severe impacts on light and glare.	**No.** No new information of substantial importance indicates the need for additional analysis of light and glare.	MM AES-3 *[MM AES-3 does not apply to the proposed improvements]*

Discussion

a) The 2015 FEIR indicated that the approximately 173-acre project site contains flat undeveloped land, seasonal marshes, the 37-acre Wetland Preserve, and No Name Creek. The project site does not contain any visual resources that would be considered a scenic vista, and the City of American Canyon General Plan does not identify any scenic vistas on the project site. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The proposed improvements would consist of low-profile items such as additional turn lanes, curb, gutter, and storm drainage facilities, and they would be aesthetically comparable to the improvements studied in the 2015 FEIR. As such, the proposed improvements would not alter any aesthetic conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR indicated that SR-29 is located 0.3 mile to the east and is classified as an "Eligible" State Scenic Highway. However, because of the presence of structures, topography, and vegetation, the project site is not visible from SR-29. The 2015 FEIR indicated that no impacts would occur.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The proposed improvements would consist of low-profile items such as additional turn lanes, curb, gutter, and storm drainage facilities, and they would be aesthetically comparable to the improvements studied in the 2015 FEIR. As such, the proposed improvements would not alter any aesthetic conclusions set forth in the 2015 FEIR.

c) The 2015 FEIR indicated that the approximately 173-acre project site contains flat undeveloped land, seasonal marshes, the 37-acre Wetland Preserve, and No Name Creek. The project site is surrounded by the Napa County Airport, the Devlin Road Transfer Station, Napa Logistics Phase I, the Napa Branch railroad line, and Devlin Road (and associated overcrossing). The NLP2 Project would develop approximately 2,271,000 square feet of industrial uses such as warehouse, distribution, e-commerce, manufacturing, and accessory retail/office uses. The 37-acre Wetland Preserve would be maintained by the NLP2 Project. The 2015 FEIR noted that project buildings would be similar in size, character, building materials, and end uses to other surrounding land uses and thus would be visually compatible. The 2015 FEIR concluded that development of the NLP2 Project would not degrade the visual character of the project site or its surroundings. Impacts would be less than significant.

The proposed improvements would consist of low-profile items such as additional turn lanes, curb, gutter, and storm drainage facilities, and they would be aesthetically comparable to the improvements studied in the 2015 FEIR. The proposed improvements would not conflict with any applicable zoning and other regulations governing scenic quality. As such, the proposed improvements would not alter any aesthetic conclusions set forth in the 2015 FEIR.

d) The 2015 FEIR indicated that the project site does not contain any existing sources of light and glare. The project site is adjacent to the Napa County Airport and has the potential to introduce new sources of light and glare that may interfere with aviation activities. The 2015 FEIR set forth Mitigation Measure (MM) AES-3 requiring the project applicant, prior to issuance of building permits, to prepare a photometric plan demonstrating that all exterior light fixtures are directed downward or employ full cut-off fixtures to minimize light spillage and avoid interference with airport operations. With the implementation of MM AES-3, the 2015 FEIR concluded that impacts would be reduced to a level of less than significant.

Street lighting currently exists along the segment of South Kelly Road between SR-29 and Devlin Road. The proposed improvements would maintain the existing street lighting; no new lights would be installed. In addition, the applicant has already fully complied with and implemented MM AES-3 as the City has approved the photometric plan for the buildings and incorporated it into the final building plans. Thus, MM AES-3 would not apply to the proposed improvements and the proposed improvements would not alter any light and glare conclusions set forth in the 2015 FEIR.

Mitigation Measures

MM AES-3 Prior to issuance of building permits for the proposed project, the project applicant shall prepare and submit a photometric plan to the City of American Canyon for review and approval. The photometric plan must demonstrate that all exterior light fixtures would be directed downward or employ full cutoff fixtures to minimize light spillage and avoid interference with aviation operations at the Napa County Airport. The approved plan shall be incorporated into the final building plans. **(This mitigation measure does not apply to the proposed improvements).**

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
II. Agricultural and Forest Resources *In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the State's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:*					
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on Important Farmland.	**No.** There are no new circumstances that would result in new or more severe impacts on Important Farmland.	**No.** No new information of substantial importance indicates the need for additional analysis of Important Farmland.	None
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on agricultural zoning or Williamson Act contracts.	**No.** There are no new circumstances that would result in new or more severe impacts on agricultural zoning or Williamson Act contracts	**No.** No new information of substantial importance indicates the need for additional analysis of agricultural zoning or Williamson Act contracts.	None
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	No impact.	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on conflicts with forest zoning.	**No.** There are no new circumstances that would result in new or more severe impacts on conflicts with forest zoning.	**No.** No new information of substantial importance indicates the need for additional analysis of conflicts with forest zoning.	None

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
d) Result in the loss of forest land or conversion of forest land to non-forest use?	No impact.	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on loss of forest land.	**No.** There are no new circumstances that would result in new or more severe impacts on loss of forest land.	**No.** No new information of substantial importance indicates the need for additional analysis of loss of forest land.	None
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on surrounding agricultural uses.	**No.** There are no new circumstances that would result in new or more severe impacts on surrounding agricultural uses.	**No.** No new information of substantial importance indicates the need for additional analysis of surrounding agricultural uses.	None

Discussion

a) The 2015 FEIR indicated that the project site is mapped as "Farmland of Local Importance" and "Other Land," which does not fall under the Important Farmland umbrella. Thus, the proposed NLP2 Project would not convert Important Farmland to non-agricultural use. The 2015 FEIR concluded that no impacts would occur.

The proposed improvements would not result in any change to the farmland designation for the project site and no updated designation has occurred since certification of the 2015 FEIR. The proposed improvement area remains mapped as "Urban Built-Up Land." The proposed improvement area is not used, and has no potential to be used, for agriculture or forestry. As such, the proposed improvements would not alter any agriculture and forestry conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR indicated that the project site is zoned "Business/Industrial Park," a non-agricultural zoning district, by the Napa County Airport Industrial Area Specific Plan. Additionally, the project site is not encumbered by an active Williamson Act contract. These conditions preclude the possibility of conflicts with agricultural zoning or Williamson Act contracts. The 2015 FEIR concluded that no impacts would occur.

The proposed improvements would not result in any change to the zoning applicable to the project site and no zoning changes have occurred since the 2015 FEIR was certified. The

proposed improvement area does not have a zoning designation. Additionally, no Williamson Act contracts have been executed for the project site or proposed improvement area since certification of the 2015 FEIR. The proposed improvement area is not used, and has no potential to be used, for agriculture or forestry. As such, the proposed improvements would not alter any agriculture and forestry conclusions set forth in the 2015 FEIR.

c) The 2015 FEIR indicated that the project site is zoned "Business/Industrial Park" by the Napa County Airport Industrial Area Specific Plan, a non-forest zoning district. This condition precludes the possibility of conflicts with forest zoning. The 2015 FEIR concluded that no impacts would occur.

The proposed improvements would not change the zoning designation for the site and no changes have occurred with respect to the project site zoning designation since certification of the 2015 FEIR. The proposed improvement area does not have a zoning designation. The proposed improvement area is not used, and has no potential to be used, for agriculture or forestry. As such, the proposed improvements would not alter any agriculture and forestry conclusions set forth in the 2015 FEIR.

d) The 2015 FEIR indicated that the project site contains undeveloped land and does not contain any stands of trees that would meet the State's definition of forest land or timberland. Thus, the NLP2 Project would not convert forest land to non-forest use. The 2015 FEIR concluded that no impacts would occur.

The proposed improvements would not change the nature of the existing project site and no changes have occurred related to forest land or timberland on the site since the 2015 FEIR was certified. The proposed improvement area does not contain any stands of trees that would meet the State's definition of forest land or timberland. The proposed improvement area is not used, and has no potential to be used, for agriculture or forestry. As such, the proposed improvements would not alter any agriculture and forestry conclusions set forth in the 2015 FEIR.

e) The 2015 FEIR indicated that the project site is surrounded by urban uses and infrastructure on all sides and, therefore, would not result in the conversion of Important Farmland to non-agricultural use. The 2015 FEIR concluded that no impacts would occur.

The project site and the proposed improvement area remain surrounded by urban uses and infrastructure on all sides, and thus the proposed improvements have no potential to result in conversion of farmland or forest land. The proposed improvements would not change the nature of the existing project site and the surrounding area, and no changes related to agricultural, or forestry resources have occurred in the vicinity of the project site since the 2015 FEIR was certified. As such, the proposed improvements would not alter any agriculture and forestry conclusions set forth in the 2015 FEIR.

Mitigation Measures

None.

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
III. Air Quality *Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:*					
a) Conflict with or obstruct implementation of the applicable air quality plan?	Significant unavoidable impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on an applicable air quality plan.	**No.** There are no new circumstances that would result in new or more severe impacts on an applicable air quality plan.	**No.** No new information of substantial importance indicates the need for additional analysis of an applicable air quality plan.	MM AIR-2, MM AIR-3a, and MM AIR-3b
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	Significant unavoidable impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts associated with any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard.	**No.** There are no new circumstances that would result in new or more severe impacts associated with any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard.	**No.** No new information of substantial importance indicates the need for additional analysis of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard.	MM AIR-3a and MM AIR-3b
c) Expose sensitive receptors to substantial pollutant concentrations?	Significant unavoidable impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on sensitive receptors.	**No.** There are no new circumstances that would result in new or more severe impacts on sensitive receptors.	**No.** No new information of substantial importance indicates the need for additional analysis of sensitive receptors.	MM AIR-2, MM AIR-3a, and MM AIR-3b
d) Result in other emissions (such as those leading to odors or) adversely affecting a substantial number of people?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts associated with objectionable odors.	**No.** There are no new circumstances that would result in new or more severe impacts associated with objectionable odors.	**No.** No new information of substantial importance indicates the need for additional analysis of objectionable odors.	None

Discussion

a) The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The proposed improvements would consist of low-profile items such as additional turn lanes, curb, gutter, and storm drainage facilities, and they would be comparable to, or less than, the roadway improvements studied as a part of the NLP2 2015 FEIR. The proposed improvements would not alter any air quality conclusions set forth in the 2015 FEIR.

The 2015 FEIR found that the NLP2 Project would have a significant and unavoidable impact related to its potential to conflict with or obstruct implementation of the applicable air quality plan, because operation of the NLP2 Project would exceed certain criteria pollutant thresholds. The 2015 FEIR evaluated three criteria related to the Bay Area Air Quality Management District's (BAAQMD's) 2010 Air Quality Plan (AQP), as described below. Since the release of the 2015 FEIR, BAAQMD has released a 2017 Clean Air Plan. Ramboll Environ compared how the delay in project implementation would affect the conclusions reached in the 2015 FEIR with respect to the 2010 AQP. The 2017 Clean Air Plan is based on an updated assessment of the Bay Area's emissions, but it does not change significance criteria for evaluating air quality and greenhouse gas impacts under CEQA. Thus, no other significance finding, or air quality assessment included in the 2015 FEIR would be impacted by the release of the 2017 Clean Air Plan.

The potential impacts of the NLP2 Project were considered significant and unavoidable due to the emissions exceedance described in Impact AIR-3. The conclusions of Impact AIR-3 would not change through the implementation of the proposed improvements, or with a comparison to the 2017 Clean Air Plan. Therefore, the conclusion of Impact AIR-1 from the 2015 FEIR would still apply to the proposed project.

Mitigation measures included in the 2015 FEIR to reduce air quality impacts, including MM AIR-2 and AIR-3a, continue to apply to the proposed project and will help to reduce the potential air quality impacts related to the construction, but the residual significance of the NLP2 Project impact would remain significant and unavoidable. As such, the implementation of the proposed improvements would not alter any conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR found that the NLP2 Project would emit criteria pollutants from construction and operational activities that would exceed BAAQMD significance thresholds.

As analyzed in the 2015 FEIR, NO_X (nitrogen oxides) emissions from construction exceeded the significance threshold before mitigation but were found to be below the threshold after mitigation. The NLP2 project is smaller in scope than what was contemplated as part of the 2015 FEIR, and the roadway improvements included as part of the proposed project are also less than what was included as part of the 2015 FEIR air quality analysis. MM AIR-3a requires that all diesel equipment be powered by Tier 3 engines or equivalent. The NLP2 Project would continue to be required to comply with this mitigation measure, including during construction of the proposed project. The criteria pollutant emissions generated by the construction of the

proposed project, including NO_X emissions, would be less than those originally contemplated in the 2015 FEIR, and would continue to remain below the BAAQMD significance thresholds with the implementation of required mitigation.

ROG and NO_X emissions from operations also exceeded the BAAQMD significance thresholds, as analyzed in the 2015 FEIR. MM AIR-3b mitigated emissions from heavy-duty trucks since emissions from heavy-duty trucks would be a large contributor to emissions. Since the effectiveness of this measure was uncertain, this impact was determined to be significant and unavoidable. Emissions from truck travel tend to decrease with time as new trucks with more effective emissions controls are phased into the fleet. Thus, with a delay in implementation, emissions from trucks would likely be lower than those estimated in the 2015 FEIR. Additionally, as further discussed in the Traffic Impact Study conducted by Fehr & Peers for the proposed project (included as Appendix A), the full build-out of the NLP2 Project will generate an estimated 45% fewer truck trips than originally expected, further reducing the emissions generated from heavy duty-trucks. The operation of the NLP2 Project would generate fewer criteria pollutants than those projected under the 2015 FEIR. The implementation of the roadway improvements that constitute the proposed project will further help to improve traffic flow, reducing congestion and traffic delays in the area, and further help to reduce the air quality impacts from the operation of the NLP2 project. The operation of the proposed project would not generate more emissions than those already included and analyzed in the 2015 FEIR.

MM AIR-2 and AIR-3a would apply to the proposed project, since they pertain to construction activities. MM AIR-3b continues to apply to the NLP2 Project but would not apply to the proposed project because it pertains to operational activities unrelated to the proposed project. The residual significance of this impact would remain significant and unavoidable. As such, the proposed improvements would not alter any conclusions set forth in the 2015 FEIR.

c) The 2015 FEIR evaluated the potential human health impacts from the NLP2 Project on surrounding sensitive receptors, as well as the potential cumulative impact of the project. The cumulative impact was determined to be significant and unavoidable based on the NLP2 Project's contribution to existing community health risks in the NLP2 Project Area.

The health impact of construction activities is based on location and magnitude of emissions. A delay in implementation would not change the location of emissions. As discussed above, construction emissions are not expected to change with the delay in implementation. In fact, construction emissions tend to decrease with time because of the phase-in of equipment with cleaner engines. Thus, the impact from construction is not expected to increase as a result of a delay in implementation. Further, the proposed project includes less roadway improvements than what was analyzed as part of the 2015 FEIR, including less grading and paving activities. Therefore, the emissions that would occur due to the construction of the proposed project are less than those evaluated in the 2015 FEIR.

In the 2015 FEIR, the health impact of operations was based on on-road activity, rail activity, auto manufacturing, and emergency generators. None of these activities would be affected by the proposed improvements.

Additionally, the 2015 FEIR indicated that the NLP2 Project warehouse and manufacturing uses had the potential to handle hazardous materials and thus could result in the accidental release of hazardous air pollutants. The 2015 FEIR set forth MM HAZ-1b to reduce impacts to a level of less than significant. MM HAZ-1b requires that the tenant consult with the California Emergency Management Agency (CalEMA) to determine guidelines and regulations applicable to the operations and prepare a Risk Management Plan if required. This mitigation measure would not apply to the proposed improvements.

MM AIR-2 and AIR-3a would apply since they pertain to construction activities and would serve to reduce the potential air quality impacts of the proposed project. MM AIR-3b would not apply to the proposed project, because it pertains to operational activities. The residual significance of this impact would remain significant and unavoidable. As such, the proposed project would not alter any conclusions set forth in the 2015 FEIR.

d) The 2015 FEIR acknowledged that the NLP2 Project's potential manufacturing uses may involve the use of paint shops. The 2015 FEIR stated BAAQMD records for odor complaints at a similar facility in Fremont yielded no results from 2011 through 2014. This impact was considered less than significant, based on the lack of odor complaints at the surrogate facility, the similar distances of the residences to the facilities, and the respective positions of the facilities relative to the prevailing winds.

During construction activities, the various diesel-powered vehicles and equipment in use on-site would create localized odors that could travel off-site due to wind and atmospheric conditions. These odors would be intermittent and would not likely be noticeable for extended periods of time beyond the boundaries of project site. In addition, the construction equipment would operate sporadically throughout the project site and any odors would be spread over the site and not concentrated at one particular point. As a result, the potential for construction odor impacts from the proposed project would be less than significant.

The 2015 FEIR assumed an intense auto-manufacturing use, and so the analysis assessed a conservative, worst case for odor impacts. If manufacturing uses are not included in the final tenant mix, warehousing and E-commerce or other less intense uses allowed on the project site would have a reduced likelihood of odor impacts and are thus covered by the conservative analysis. Land uses that are typically identified as sources of objectionable odors include landfills, transfer stations, sewage treatment plants, wastewater pump stations, composting facilities, feed lots, coffee roasters, asphalt batch plants, and rendering plants. The proposed improvements involve additional turn lanes at SR-29/South Kelly Road and the reconstruction of South Kelly Road between SR-29 and Devlin Road. These activities would not involve manufacturing uses or paint shop uses. As such, the proposed improvements would not alter any conclusions set forth in the 2015 FEIR.

The proposed project would not result in any peculiar effects and would not result in new or more severe impacts related to odors during project construction or operation than what was previously analyzed in the 2015 FEIR.

Mitigation Measures

MM AIR-2 All construction activity: During construction activities, the following air pollution control measures shall be implemented:

- All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day or more as needed.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
- All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads and surfaces shall be limited to 15 miles per hour (mph).
- All roadways, driveways, and sidewalks shall be paved as soon as possible.
- Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 2 minutes (beyond the 5-minute limit required by the California Airborne Toxics Control Measure (ATCM) Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified visible emissions evaluator.
- A publicly visible sign shall be posted with a name and telephone number of the applicant's representative for dust complaints. This person shall respond and take corrective action within 2 business days of a complaint or issue notification. The BAAQMD's phone number shall also be visible to ensure compliance with applicable regulations.

MM AIR-3a During on-site construction activities, the applicant shall require the use of clean construction equipment. All diesel equipment shall be powered by Tier 3 engines or equivalent. In addition, all off-road equipment idling shall be limited to 2 minutes.

MM AIR-3b Prior to issuance of the final certificate of occupancy for each building, the following measures to reduce emissions from on-site heavy-duty trucks shall be implemented:

a) Post signs in all loading/unloading areas informing truck drivers California Air Resources Board (ARB) diesel anti-idling regulations. The signs shall include

telephone numbers of the building facilities manager and the CARB to report violations.

b) Require facility management to be trained in California ARB anti-idling regulations. Anti-idling training shall be incorporated into the facility operations manual or equivalent document.

c) Provide tenants with information about SmartWay or other organizations that seek to reduce air emissions associated with goods movement. **(This mitigation measure does not apply to the proposed improvements).**

Conclusion

The conclusions from the 2015 FEIR related to air quality impacts would remain unchanged with the approval of the proposed improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
IV. Biological Resources *Would the project:*					
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service?	Less than significant impact after mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on special status species.	**No.** There are no new circumstances that would result in new or more severe impacts on special status species.	**No.** No new information of substantial importance indicates the need for additional analysis of special status species.	MM BIO-1a, MM BIO-1b, MM BIO-1c, MM BIO-1d, MM BIO-2a, MM BIO-2b, and MM BIO-2c
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on riparian habitat or on other sensitive natural community.	**No.** There are no new circumstances that would result in new or more severe impacts on riparian habitat.	**No.** No new information of substantial importance indicates the need for additional analysis of riparian habitat.	None
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	Less than significant impact after mitigation	**No.** The proposed improvements do not involve changes that could result in a new impact on potentially State or federally protected wetlands.	**No.** There are no new circumstances that would result in new or more severe impacts on State or federally protected wetlands.	**No.** No new information of substantial importance indicates the need for additional analysis of State or federally protected wetland (State and federal jurisdictional determination).	MM BIO-4a MM BIO-4b MM BIO-5a MM BIO-5b *[Only MM BIO-4a would apply to the proposed improvements]*

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of wildlife nursery sites?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on fish or wildlife movement.	**No.** There are no new circumstances that would result in new or more severe impacts on fish or wildlife movement.	**No.** No new information of substantial importance indicates the need for additional analysis of fish or wildlife movement.	None
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on local biological policies or ordinances.	**No.** There are no new circumstances that would result in new or more severe impacts on fish or local biological policies or ordinances.	**No.** No new information of substantial importance indicates the need for additional analysis of local biological policies or ordinances.	None
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on an adopted Habitat Conservation Plan or Natural Community Conservation Plan.	**No.** There are no new circumstances that would result in new or more severe impacts on an adopted Habitat Conservation Plan or Natural Community Conservation Plan.	**No.** No new information of substantial importance indicates the need for additional analysis of an adopted Habitat Conservation Plan or Natural Community Conservation Plan.	None

Discussion

a) The 2015 FEIR indicated that the area provided suitable habitat for rare plants (alkali milk-vetch, big-scale balsamroot, Contra Costa goldfields, dwarf downingia, legenere, San Joaquin spearscale, saline clover, and showy Indian clover), California red-legged frog, western pond turtle, tricolored blackbird, Swainson's hawk, nesting northern harrier, other ground-nesting raptors, nesting birds, and vernal pool fairy shrimp. The 2015 FEIR set forth MM BIO-1a, BIO-1b, BIO-2a, BIO-2b, and BIO-2c, which require surveys for the affected species prior to construction and implementation of avoidance or relocation measures, to reduce impacts to less than significant.

The proposed improvements would not result in new or more severe impacts. The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, disturbed areas, non-native annual grassland with a substantial ruderal component, a seasonal wetland swale, which drains a larger seasonal wetland south of the project site to a double culvert draining runoff under the intersection South Kelly Rd and Devlin Rd to Napa River. Trees suitable for bird nesting are present within disturbance distance of the proposed improvements, which includes construction activities and laydown areas which could produce noise that could disturb active nests in the project vicinity. Potential impacts to these habitat categories, nesting birds, and potentially occurring special-status or sensitive species are fully analyzed in the 2015 FEIR. There have been no changes to the habitat categories or potentially occurring special-status or sensitive species since the 2015 FEIR was certified.

Thus, MM BIO-1a, BIO-1b, BIO-1c, BIO-1d, BIO-2a, BIO-2b, and BIO-2c would apply and reduce impacts to a level of less than significant. As such, the proposed improvements would not alter any conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR indicated that the project site does not contain any riparian habitat, which precludes the possibility of impacts. The 2015 FEIR concluded that no impacts would occur.

The proposed improvements would not result in new or more severe impacts. There have not been any changes with respect to the presence of riparian habitat or other sensitive natural communities since the 2015 FEIR was certified. The proposed improvement area does not contain any riparian habitat or other sensitive natural community, which continues to preclude the possibility of impacts. As such, the proposed improvements would not alter any conclusions set forth in the 2015 FEIR.

c) The 2015 FEIR indicated that the project site contains 3.49 acres of seasonal wetlands, with 0.24 acre impacted by proposed improvements development activities, including construction of a new sewer alignment. Additionally, the project site contains No Name Creek and proposed improvements activities would involve disturbance to portions of the waterway. The 2015 FEIR set forth MM BIO-4a, BIO-4b, BIO-5a, and BIO-5b, which require the applicant obtain the requisite approvals and implement the required mitigation measures imposed by the resource agencies to reduce impacts to a level of less than significant. These mitigation measures would apply to the additional wetland creation required under the Development Agreement. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would not result in new or more severe impacts. The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road, outside of the area around No Name Creek. The proposed sewer alignment has already been constructed and the proposed improvements would have no effect upon this component.

The existing right-of-way contains asphalt-concrete pavement, curb, gutter, disturbed areas, a non-native annual grassland with a substantial ruderal component, and a seasonal wetland

swale, which drains a larger seasonal wetland south of the project site to a double culvert draining runoff under the intersection South Kelly Road and Devlin Road to Napa River.

The seasonal wetland located partially within the project site is potentially a State and/or federally protected wetland, pending formal jurisdictional determination by the United States Army Corps of Engineers (USACE) and Regional Water Quality Control Board (RWQCB).

Thus, MM BIO-4a would apply and reduce impacts to a level of less than significant. As such, the proposed improvements would not alter any conclusions set forth in the 2015 FEIR. Mitigation Measures MM BIO-4b, 5a, and 5b would not apply as they related to development adjacent to the No Name Creek area as well as to a proposed sewer alignment that is already constructed and operational).

d) The 2015 FEIR indicated that the project site does not serve as a wildlife or fish movement corridor because of surrounding barriers such as urban development and SR-29. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would not result in new or more severe impacts. The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. The proposed improvement area does not serve as a fish or wildlife corridor. It contains no natural waterways or other features that would facilitate fish and wildlife movement. The project site and proposed improvement area remain surrounded by barriers to wildlife and fish movement, including urban development and SR-29. As such, the proposed improvements would not alter any conclusions set forth in the 2015 FEIR.

e) The 2015 FEIR indicated that there are no trees on the project site and, therefore, the NLP2 Project is not subject to the City of American Canyon tree preservation requirements (Municipal Code Chapter 18.40). No conflicts with local biological ordinances or policies would occur. The 2015 FEIR concluded that no impact would occur.

The proposed improvements would not result in new or more severe impacts. The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. There are no trees or other resources subject to local requirements within the right-of-way. As such, the proposed improvements would not alter any conclusions set forth in the 2015 FEIR.

f) The 2015 FEIR indicated that the project site was not within the boundaries of an adopted habitat conservation plan or natural community conservation plan. No conflicts with adopted conservation plans would occur. The 2015 FEIR concluded that no impact would occur.

The proposed improvements would not result in new or more severe impacts. The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-

way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. The right-of-way is not within the boundaries of an adopted habitat conservation plan or natural community conservation plan. As such, the proposed improvements would not alter any conclusions set forth in the 2015 FEIR.

Mitigation Measures

MM BIO-1a Prior to any vegetation removal or ground disturbing activities in the off-site development areas, focused surveys shall be conducted to determine the presence of special-status plant species with potential to occur in the off-site development area. Surveys shall be conducted in accordance with the Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities (CDFG 2009). These guidelines require rare plant surveys to be conducted at the proper time of year when rare or endangered species are both "evident" and identifiable. Field surveys shall be scheduled to coincide with known blooming periods, and/or during periods of physiological development that are necessary to identify the plant species of concern. If no special-status plant species are found on the off-site development areas, then the project will not have any impacts to the species and no additional mitigation measures are necessary. If any of the special-status plant species are found on the off-site development areas and cannot be avoided, the following measures shall be required:

- Where surveys determine that special-status plant species are present within the off-site development areas, direct and indirect impacts of the project on the species (e.g., alkali milk-vetch, big-scale balsamroot, Contra Costa goldfields, dwarf downingia, legenere, San Joaquin spearscale, saline clover, and showy Indian clover) shall be avoided where feasible through the establishment of activity exclusion zones, where no ground-disturbing activities shall take place, including construction of new facilities, construction staging, or other temporary work areas. Activity exclusion zones for special-status plant species shall be established prior to construction activities around each occupied habitat site, the boundaries of which shall be clearly marked with standard orange plastic construction exclusion fencing or its equivalent. The establishment of activity exclusion zones shall not be required if no construction-related disturbances would occur at SR-29/South Kelly Road and within 250 feet of the occupied habitat site. The size of activity exclusion zones may be reduced through consultation with a qualified biologist and with concurrence from the United States Fish and Wildlife Service (USFWS) or California Department of Fish and Wildlife (CDFW), as applicable, based on site-specific conditions.

MM BIO-1b If special status plants are found in the off-site development areas and cannot be avoided, the applicant shall retain a qualified biologist and consult with the United States Fish and Wildlife Service (USFWS) or California Department of Fish and Wildlife (CDFW), as applicable, to prepare a special-status plant mitigation and monitoring plan to determine feasible impact minimization and mitigation for those

special status plants, which may include but are not limited to elements as applicable to the species, based on the project impacts, and as modified by the resource agencies:

- On-site seed/propagule salvage and transplantation to mitigate for unavoidable temporary construction impacts to special status plants habitat in the off-site development areas.
- Incorporating project site management requirements designed to reduce ongoing impacts from project operation, including controlling public access to avoided special status plants habitat remaining on-site.
- A salvage/transplanting program shall be developed, as part of a special-status plant mitigation and monitoring plan, for the salvage and transfer of special status plants populations from the off-site development areas before the initiation of construction activities to another location either off-site or on-site that will be preserved in perpetuity (via conservation easement, deed restriction, or other appropriate legal means). Permits may be required from the CDFW or USFWS if a listed species is found and may require further mitigation in consultation with the appropriate agency or agencies. (Note: Salvage/transplantation methods for the salvaged plant population must be developed on a species-by-species basis and would likely include the involvement of local conservation easements/preserves/open space, where applicable to ensure preservation in perpetuity). The salvage of special-status plant species must be performed at the correct time of year and transplanting must be successfully completed during the same year as construction was completed. The propagation program shall include establishment of success criteria for the affected special status plants.
- Efforts shall be made to salvage portions of the habitat or plant populations that will be lost as a result of implementation of the proposed improvements. In addition to salvaging of special status plants themselves, salvage efforts shall include topsoil and seed-banks surrounding impacted plants, if doing so will not contribute to the spread of invasive or noxious plant species.
- If the resource agencies determine that implementation of MM BIO-1b is insufficient to mitigate for the loss of special status plants, the applicant shall instead implement MM BIO-1d.

MM BIO-1c If special status plants are found on-site and MM BIO-1b is implemented, the applicant shall design and implement a monitoring program as part of the special-status plant mitigation and monitoring plan to evaluate compliance with and the effectiveness of these mitigation measures. The monitoring program shall be conducted by a qualified botanist, and shall take place periodically during project construction, and annually, following the completion of construction, for 5 years. The project applicant shall bear the financial responsibility for mitigation measure monitoring and reporting for the entirety of the 5-year reporting period. If the monitoring program identifies mitigation measure noncompliance or ineffectiveness, the project applicant shall fund and implement remedial measures

including, but not limited to, on-site habitat restoration, re-seeding, the installation and maintenance of additional fencing, and other appropriate measures. The project applicant shall ensure that sufficient funding exists to complete all reasonably foreseeable remedial actions prior to the commencement of project construction. Annual monitoring reports shall be submitted to the United States Fish and Wildlife Service (USFWS) or California Department of Fish and Wildlife (CDFW) as applicable.

MM BIO-1d In lieu of on-site mitigation pursuant to MM BIO-1b and MM BIO-1c, as allowed in writing by the City (for CEQA-protected species only) or CDFW (for State-listed species) or USFWS (for federally listed species), mitigation requirements may be satisfied via the purchase of qualified mitigation credits or the preservation of off-site habitat.

Appropriate off-site conservation opportunities shall be identified and, if feasible, protected in perpetuity through the purchase of conservation easements and/or mitigation bank credits. The habitat value of off-site conservation areas shall be enhanced where feasible through means such as reducing grazing intensity and restricting access. At a minimum, the loss of individuals or acres of occupied habitat (as appropriate) of a special-status species shall be compensated for through the acquisition, protection, and subsequent management of other existing occurrences at a ratio of 1:1. The resource agencies may increase the ratio depending on the rarity of the affected rare plant species (i.e., a listed species), and the abundance of the rare plant habitat impacted.

MM BIO-2a (Swainson's Hawk) Pre-construction surveys shall be conducted for a half-mile radius around all project activities and shall be completed for at least two survey periods immediately prior to project initiation. The surveys shall be conducted in accordance with CDFW's "Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFG 2000), which identifies different survey windows throughout the pre-nesting and nesting season (ranging from January 1 through July 30/post-fledging) that have different survey methodologies and requirements, as set forth in the "Recommended Timing and Methodology for Swainson's Hawk Nesting Surveys in California's Central Valley."

If no nesting Swainson's hawks are identified during the April surveys (first survey), project construction can commence. If during the second survey (June), Swainson's hawks are found nesting in the project vicinity and project construction commenced in April/May, it should be assumed that the Swainson's hawks commenced nesting while the project site was under construction and, thus, that the hawks are habituated to the ambient level of noise and disturbance emanating from the project site.

If Swainson's hawks nest on or within the area of influence of the project site (which is generally considered to be within 1,320 feet (.25 mile) of the project site, impacts to nesting Swainson's hawks would be regarded as significant pursuant to the CEQA,

and implementation of avoidance measures below would be necessary to ensure the project does not impact the nesting Swainson's hawks.

If Swainson's hawks are found to be nesting on or within 1,320 feet (.25 mile) of the project site, a non-disturbance buffer shall be established that keeps all project activities a minimum of 1,320 feet from the nest site. If the 1,320-foot buffer only partially intersects the project site, that intersecting area shall be demarked in orange construction fencing and will ensure that noise/disturbance related impacts emanating from the project site remains at least 1,320 feet from the nest site. No project activities would be allowed in the orange construction fenced off area constituting the buffer.

If a qualified raptor biologist makes a determination that the nesting Swainson's hawks are shielded from disturbance by geographic barriers or are well acclimated to higher levels of disturbance (for example if the nesting attempt commenced after the project was under construction, or the nest site is adjacent to preexisting high levels of disturbance), the biologist may justify a recommendation for a smaller buffer. CDFW shall be consulted regarding the qualified raptor biologists' recommendations for an appropriate non-disturbance buffer. At that time the necessity of acquiring a Fish and Game Section 2081 management authorization would also be determined. A Section 2081 management authorization would be required if there was a valid concern that project activities could result in "take" of adult Swainson's hawks, their nestlings, or eggs.

Under all circumstances the nesting buffer must ensure that all project-related disturbance remains far enough away from the Swainson's hawk nest site to ensure that the level of construction related disturbance does not result in deleterious effects on the nesting hawks, their eggs, or nestlings. If the nesting buffer is reduced to less than 1,320 feet, a qualified raptor biologist shall monitor the nesting hawks initially for a period long enough to understand the nesting hawks response to disturbance, and thereafter on a routine basis (at least 3 times a week, or as required by the CDFW) until the nestlings successfully fledge and become independent of the nesting tree. Any buffer that is smaller than 1,320 feet may have to be increased in size again if the nesting hawks respond poorly to a reduced buffer.

No project-related disturbance shall be allowed in the nesting buffer until the young fledge the nest or the nesting attempt is otherwise complete for the year. The buffer should remain in place until the fledglings become independent of the nesting tree. The young can be considered successfully fledged when the hawks no longer return to the nesting tree for several consecutive nights.

Implementation of this mitigation measure would reduce potential impacts to Swainson's hawk to a level considered less than significant pursuant to CEQA.

MM BIO-2b (Northern Harrier and Ground Nesting Birds) Prior to ground disturbance a nesting survey shall be conducted for ground nesting raptors and birds, including the northern harrier, during the nesting season, between February 1 and September 1. Typically, the northern harrier builds a grass-lined nest on the ground in grassland habitat. In order to determine if this raptor or other ground-nesting species are nesting on-site, a qualified biologist shall conduct walking transects through the project site's herbaceous and grassland habitats. If a northern harrier nest is identified, a qualified biologist who frequently works with nesting raptors/birds shall prescribe adequate nesting buffers to protect the nesting birds from harm. These buffers shall be established with orange construction fencing. If the nest is located outside of the project site, then the buffer should be demarcated where the buffer intersects the project site. No construction or earth-moving activity shall occur at SR-29/South Kelly Road and within the established buffer until the young have fledged (that is, left the nest) and have attained sufficient flight skills to avoid project construction zones. If a qualified biologist is not hired to monitor the nesting raptors, then the buffers shall be maintained in place through the end of August.

MM BIO-2c (Tricolored Blackbird and Other Nesting Birds) If construction is to commence between February 1 and September 1, a nesting bird survey shall be conducted 15 days prior to earth moving or the commencement of construction work. If any birds are found nesting on the project site or within a zone of influence of the project site, qualified biologist who frequently works with nesting birds shall prescribe adequate nesting buffers to protect the nesting birds from harm. No construction or earth-moving activity shall occur at SR-29/South Kelly Road and within any nest protection buffer until it is determined by a qualified biologist that the nesting cycle is complete and any young that fledge have attained sufficient flight skills to avoid being impacted by the proposed improvements.

MM BIO-4a Prior to issuance of grading permits, the project applicant shall obtain all requisite approvals and permits from the United States Army Corps of Engineers (USACE) and Regional Water Quality Control Board (RWQCB) for on-site and off-site impacts to waters of the United States and waters of the State. Mitigation of impacts shall be achieved through either (1) creation and preservation of seasonal wetland habitat within the 37-acre Preserve Area, or (2) off-site restoration of features of equal or greater value, or (3) purchase of credits at an agency-approved mitigation bank in the region at a ratio to be determined through consultation with the USACE and RWQCB, but no less than a 1:1 ratio.

MM BIO-4b The project shall avoid impacts to wetlands occurring within the proposed sewer alignment by adjusting staging, access, and excavation areas to accommodate existing wetlands and by installing silt fence around the perimeter of any existing wetlands adjacent to pipeline installation work. **(This mitigation measure does not apply to the proposed improvements. The sewer pipeline has already been installed and the applicant has already complied with this mitigation measure.)**

MM BIO-5a Impacts within No Name Creek (above the ordinary high-water mark but below the top-of-bank) shall be mitigated to the satisfaction of the CDFW as part of the issuance of a Streambed Alteration Agreement pursuant to Section 1602 of the Fish and Game Code. Prior to issuance of grading permits, the project applicant shall obtain all requisite approvals and permits from CDFW for on-site and off-site impacts to No Name Creek.

Mitigation for impacts to the tops of bank of No Name Creek shall be mitigated at a ratio of at least 3:1 or at a higher mitigation ratio as required by CDFW based on the linear feet of creek bank impacted by the proposed clearspan bridge. The applicant shall implement mitigation that includes creation of riparian habitat along North Slough within the project boundary through the planting of native trees such as oaks and other riparian tree and/or shrub species as determined appropriate in the 1602 Agreement. The planting shall be irrigated through an establishment period as determined in the 1602 Agreement. The riparian enhancement shall be monitored for approximately 5 years or as otherwise determined in the 1602 Agreement, and annual monitoring reports shall be prepared throughout the monitoring period. The monitoring plan shall include success criteria as required by the 1602 Agreement. Monitoring reports shall be submitted to CDFW and the City of American Canyon.

In the event that any stormwater outfall is necessary within No Name Creek, mitigation for these impacts will be included in the mitigation requirements described above. If impacts occur at SR-29/South Kelly Road and within USACE jurisdiction, the mitigation for the impacts shall be included within a Corps permit application and impacts shall be mitigated via the creation of new wetlands at a minimum ratio of 2:1 (or as otherwise determined by the USACE) within the 37-acre wetland preserve on-site. Monitoring of the created wetlands shall be conducted for at least 5 years and annual monitoring reports shall be prepared and submitted to the USACE, the RWQCB, and the City of American Canyon. Success criteria shall be established in accordance with the USACE permit. **(This mitigation measure does not apply to the proposed improvements. The applicant has already completed the work within No Name Creek and complied with this mitigation measure. The proposed improvements will not involve impacts to No Name Creek.)**

MM BIO-5b The project shall bore and jack the new sewer and recycled water lines under No Name Creek, if the western alignment is selected, to avoid potential impacts to waters of the U.S. or the creek. Prior to the issuance of construction permits for the off-site utilities, the applicant shall submit a plan for this work demonstrating that no impacts to the waters of the U.S. shall occur. All necessary approvals from CDFW or USACE shall be obtained prior to the start of this construction. **(This mitigation measure does not apply to the proposed improvements. The applicant has already installed the new sewer and recycled water lines and complied with this mitigation measure.)**

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the proposed improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
V. Cultural and Tribal Cultural Resources *Would the project:*					
a) Cause a substantial adverse change in the significance of a historical resource as pursuant to Section 15064.5?	Less than significant impact with mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on historic resources.	**No.** There are no new circumstances that would result in new or more severe impacts on historic resources.	**No.** No new information of substantial importance indicates the need for additional analysis of historic resources.	MM CUL-1
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	Less than significant impact with mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on archaeological resources.	**No.** There are no new circumstances that would result in new or more severe impacts on archaeological resources.	**No.** No new information of substantial importance indicates the need for additional analysis of archaeological resources.	MM CUL-1
c) Disturb any human remains, including those interred outside of formal cemeteries?	Less than significant impact with mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on burial sites.	**No.** There are no new circumstances that would result in new or more severe impacts on burial sites.	**No.** No new information of substantial importance indicates the need for additional analysis of burial sites.	MM CUL-4
Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:					
d) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	N/A	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on tribal cultural resources.	**No.** There are no new circumstances that would result in new or more severe impacts on tribal cultural resources.	**No.** No new information of substantial importance indicates the need for additional analysis of tribal cultural resources.	MM CUL-1

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
e) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	N/A	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on tribal cultural resources.	**No.** There are no new circumstances that would result in new or more severe impacts on tribal cultural resources.	**No.** No new information of substantial importance indicates the need for additional analysis of tribal cultural resources.	MM CUL-1

Discussion

Cultural Resources

a) The 2015 FEIR indicated that the cultural resources field survey identified a collapsed water tank on-site. The structure was assessed for historic significance, and the assessment determined that the water tank did not meet national or state criteria for listing on a historic register and was not a historic resource. The 2015 FEIR concluded that no tribal cultural resources had been recorded within the NLP2 Project vicinity, nor were any encountered during the field survey. However, subsurface construction activities associated with new development, such as trenching and grading, could potentially damage or destroy previously undiscovered historic resources. This was found to be a potentially significant impact, and MM CUL-1 was proposed that requires cessation of construction activities if previously undiscovered resources are encountered during construction. In the event of discovery, an evaluation of the resource or resources must be conducted by a qualified archaeologist, and proper recovery and recordation procedures must be followed. Implementation of this mitigation measure would reduce impacts to a level of less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. Although the likelihood of finding undiscovered historic resources is low, MM CUL-1 would continue to apply and reduce impacts to a level of less than significant. As such, the proposed improvements would not alter any cultural resources conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR concluded that no archaeological resources, including tribal cultural resources, had been recorded within the NLP2 Project vicinity, nor were any encountered during the field survey. However, subsurface construction activities associated with new development, such as trenching and grading, could potentially damage or destroy previously undiscovered archaeological resources. This was found to be a potentially significant impact, and MM CUL-1 was proposed that requires cessation of construction activities if previously undiscovered resources are encountered during construction. In the event of discovery, an evaluation of the resource or resources must be conducted by a qualified archaeologist, and proper recovery and recordation procedures must be followed. Implementation of this mitigation measure would reduce impacts to a level of less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. Although the likelihood of finding undiscovered archaeological resources is low, MM CUL-1 would continue to apply and reduce impacts to a level of less than significant. As such, the proposed improvements would not alter any cultural resources conclusions set forth in the 2015 FEIR.

c) The 2015 FEIR concluded that no known human remains were known to be present within the project site, nor were any encountered during the field survey. However, subsurface construction activities associated with new development such as trenching, and grading could potentially encounter previously undiscovered human remains. This was determined to be a potentially significant impact. Accordingly, MM CUL-4 requires notification of the Napa County Coroner and the Native American Heritage Commission (NAHC) in the event human remains are encountered and the implementation of appropriate treatment procedures. Implementation of this mitigation measure would reduce impacts to a level of less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. Although the likelihood of finding undiscovered human remains is low, MM CUL-4 would continue to apply and reduce impacts to a level of less than significant. As such, the proposed improvements would not alter any cultural resources conclusions set forth in the 2015 FEIR.

Tribal Cultural Resources

d-e) The 2015 FEIR did not evaluate tribal cultural resources, as this topic was not on the CEQA Appendix G Checklist at the time the EIR was certified. The proposed improvements have no potential to cause new or more severe impacts to tribal cultural resources as compared to the improvements originally required in the 2015 FEIR. The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. There are no known tribal cultural resources within the right-of-way and the likelihood of finding undiscovered tribal cultural resources is low. In addition, MM CUL-1 would

continue to apply and reduce any potential impacts to a level of less than significant. As such, the proposed improvements would not alter any cultural resources conclusions set forth in the 2015 FEIR.

Mitigation Measures

MM CUL-1 If prehistoric or historic-period archaeological resources are encountered, all construction activities within 100 feet of the find shall halt and the City of American Canyon shall be notified. Prehistoric archaeological materials might include obsidian and chert flaked stone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil ("midden") containing heat-affected rocks, artifacts, or shellfish remains; and stone milling equipment (e.g., mortars, pestles, handstones, or milling slabs); and battered stone tools, such as hammerstones and pitted stones. Historic-period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse. A Secretary of the Interior-qualified archaeologist shall inspect the findings within 24 hours of discovery. If it is determined that the project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines) mitigation shall be implemented in accordance with PRC Section 21083.2 and Section 15126.4 of the CEQA Guidelines, with a preference for preservation in place. Consistent with Section 15126.4(b)(3), this may be accomplished through planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement. If avoidance is not feasible, a qualified archaeologist shall prepare and implement a detailed treatment plan in consultation with the City of American Canyon. Treatment of unique archaeological resources shall follow the applicable requirements of PRC Section 21083.2. Treatment for most resources would consist of (but would not be not limited to) sample excavation, artifact collection, site documentation, and historical research, with the aim to target the recovery of important scientific data contained in the portion(s) of the significant resource to be impacted by the proposed improvements. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and state repositories, libraries, and interested professionals.

MM CUL-4 In the event of discovery or recognition of any human remains during construction activities, such activities within 100 feet of the find shall cease until the Napa County Coroner has been contacted to determine that no investigation of the cause of death is required. The Native American Heritage Commission (NAHC) will be contacted within 24 hours if it is determined that the remains are Native American. The NAHC will then identify the person or persons it believes to be the most likely descendant from the deceased Native American (PRC §5097.98), who in turn would make recommendations to the City of American Canyon for the appropriate means of treating the human remains and any associated funerary objects [CEQA Guidelines §15064.5(d)].

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
VI. Energy *Would the project:*					
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	N/A	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on energy consumption.	**No.** There are no new circumstances that would result in new or more severe impacts on energy consumption.	**No.** No new information of substantial importance indicates the need for additional analysis of energy consumption.	None
b) Conflict with or obstruct a State or local plan for renewable energy or energy efficiency?	N/A	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on renewable energy or energy efficiency.	**No.** There are no new circumstances that would result in new or more severe impacts on renewable energy or energy efficiency.	**No.** No new information of substantial importance indicates the need for additional analysis of renewable energy or energy efficiency.	None

Discussion

a) The 2015 FEIR did not evaluate energy conservation as this topic was not on the CEQA Appendix G Checklist at the time the EIR was certified. The proposed improvements consist of reconstructing South Kelly Road between SR-29 and Devlin Road and adding turn lanes at the eastbound approach to SR-29. Construction of the proposed improvements would involve the same or less energy use as compared to the improvements originally analyzed under the 2015 FEIR. Construction activities would involve the use of diesel fuel. The limited scope of the improvements would allow them to be implemented over a relatively short construction schedule. In addition, construction vehicles and equipment would comply with new regulatory requirements intended to improve construction efficiency, including limiting idling time and use of U.S. EPA tiered equipment. Thus, wasteful, inefficient, or unnecessary consumption of diesel fuel would not occur. No net increase in operational energy consumption is anticipated as no additional light fixtures or other electrical devices would be installed as a part of the proposed improvements. Thus, energy consumption would not be wasteful, inefficient, or unnecessary, and the proposed improvements would not result in new or more severe energy impacts.

b) The 2015 FEIR did not evaluate conflicts with renewable energy or energy efficiency plans as this topic was not on the CEQA Appendix G Checklist at the time the EIR was certified. The proposed improvements consist of reconstructing South Kelly Road between SR-29 and Devlin Road and adding turn lanes at eastbound approach to SR-29. Construction of the proposed improvements would not result in any new or more severe impacts compared to the improvements originally required by the 2015 FEIR.

The proposed improvements would not conflict with any renewable energy or energy efficiency plans, such as Title 24 or CalGreen, as these do not apply to road improvement projects. No net increase in operation energy consumption is anticipated as no additional light fixtures or other electrical devices would be installed. Thus, no conflicts with renewable energy or energy efficiency plans would occur and the proposed improvements would not result in new or more severe impacts.

2015 FEIR Mitigation Measures

None.

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
VII. Geology, Seismicity, and Soils *Would the project:*					
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:					
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	Less than significant impact with mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on an earthquake fault.	**No.** There are no new circumstances that would result in new or more severe impacts on an earthquake fault.	**No.** No new information of substantial importance indicates the need for additional analysis of an earthquake fault.	MM GEO-1a *[MM GEO-1a does not apply to the proposed improvements]*
ii) Strong seismic ground shaking?	Less than significant impact with mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on strong seismic ground shaking.	**No.** There are no new circumstances that would result in new or more severe impacts on strong seismic ground shaking.	**No.** No new information of substantial importance indicates the need for additional analysis of strong seismic ground shaking.	MM GEO-1b
iii) Seismic-related ground failure, including liquefaction?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on seismic-related ground failure, including liquefaction.	**No.** There are no new circumstances that would result in new or more severe impacts on seismic-related ground failure, including liquefaction.	**No.** No new information of substantial importance indicates the need for additional analysis of seismic-related ground failure, including liquefaction.	None
iv) Landslides?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on landslides.	**No.** There are no new circumstances that would result in new or more severe impacts on landslides.	**No.** No new information of substantial importance indicates the need for additional analysis of landslides.	None

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
b) Result in substantial soil erosion or the loss of topsoil?	Less than significant impact with mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on soil erosion.	**No.** There are no new circumstances that would result in new or more severe impacts on soil erosion.	**No.** No new information of substantial importance indicates the need for additional analysis of soil erosion.	MM HYD-1a
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on unstable geologic units or soils.	**No.** There are no new circumstances that would result in new or more severe impacts on unstable geologic units or soils.	**No.** No new information of substantial importance indicates the need for additional analysis of unstable geologic units or soils.	None
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	Less than significant impact with mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on expansive soils.	**No.** There are no new circumstances that would result in new or more severe impacts on expansive soils.	**No.** No new information of substantial importance indicates the need for additional analysis of expansive soils.	MM GEO-1b
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on septic systems.	**No.** There are no new circumstances that would result in new or more severe impacts on septic systems.	**No.** No new information of substantial importance indicates the need for additional analysis of septic systems.	None
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	Less than significant impact with mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on paleontological resources.	**No.** There are no new circumstances that would result in new or more severe impacts on paleontological resources.	**No.** No new information of substantial importance indicates the need for additional analysis of paleontological resources.	MM CUL-3

Discussion

a) The 2015 FEIR indicated that the project site is within an Alquist-Priolo Earthquake Fault Zone associated with the West Napa Fault. The 2015 FEIR set forth MM GEO-1a, which requires the applicant to retain a geologist or geotechnical engineer to conduct a fault investigation and establish appropriate fault setbacks, to reduce impacts to a level of less than significant.

The 2015 FEIR indicated that the NLP2 Project may be susceptible to strong ground shaking. As such, the 2015 FEIR set forth MM GEO-1b, which requires compliance with all applicable California Building Standards Code seismic design standards, to reduce impacts to a level of less than significant.

The 2015 FEIR concluded that the NLP 2 Project vicinity is characterized by flat relief. This condition precludes the possibility of earthquake-induced landsliding. Accordingly, the 2015 FEIR found that no impacts resulting from landsliding would occur.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. There have been no changes to the underlying fault zones since the 2015 FEIR was certified, and the proposed improvements do not present any new or more severe seismic risk compared to the improvements originally required in the 2015 FEIR. In addition, new information shows that no earthquake faults are located within the proposed improvement area. Thus, MM GEO-1a would not apply. However, MM GEO-1b would apply and reduce impacts to a level of less than significant. As such, the proposed improvements would not alter any geology, soils, or seismicity conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR concluded that there could be potential erosion impacts resulting from grading and excavation during construction activities. During these activities, the potential exists for surface water to carry sediment from on-site erosion into the stormwater system and local waterways, and soil erosion may occur along project boundaries during construction in areas where temporary soil storage is required. The 2015 FEIR set forth MM HYD-1a, which requires implementation of erosion control measures, and which would reduce impacts to a level of less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. Because the project under review consists of roadway improvements and is not a structure, this mitigation measure does not apply. However, the project would be designed to comply with the City's standard construction best practices for erosion and stormwater runoff. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. Construction activities would involve demolition of existing asphalt-concrete sections, grading, paving, and installation of storm drainage improvements. The proposed construction would be substantially similar to the construction activities for the improvements originally required by the 2015 FEIR and do not have the potential to cause new or more severe erosion impacts. In addition, MM HYD-1a

would continue to apply and reduce impacts to a level of less than significant. As such, the proposed improvements would not alter any geology, soils, or seismicity conclusions set forth in the 2015 FEIR.

c) The 2015 FEIR indicated that the project site is underlain by well compacted alluvium soils, which are stable geologic units and suitable for supporting the NLP2 Project. These characteristics indicate that the NLP2 Project would not be susceptible to landslides, lateral spreading, subsidence, collapse, ground failure, liquefaction, or liquefaction-related phenomena. The 2015 FEIR concluded that impacts would be less than significant.

There have been no changes to the underlying soils or geological units since the 2015 FEIR was certified, and the proposed improvements do not present any new or more severe seismic risk compared to the improvements originally required in the 2015 FEIR. As such, the proposed improvements would not alter any geology, soils, or seismicity conclusions set forth in the 2015 FEIR.

d) The 2015 FEIR concluded that the soils underlying the project site possessed significant shrink/swell potential and therefore were expansive. The 2015 FEIR set forth MM GEO-1b, which requires compliance with all applicable California Building Standards Code (CBC) design standards to reduce impacts to a level of less than significant.

There have been no changes to the underlying soils since the 2015 FEIR was certified, and the proposed improvements do not present any new or more severe seismic risk compared to the improvements originally required in the 2015 FEIR. MM GEO-1b would apply and reduce impacts to a level of less than significant. As such, the proposed improvements would not alter any geology, soils, or seismicity conclusions set forth in the 2015 FEIR.

e) The NLP2 Project would be served with sanitary sewer service provided by the City of American Canyon; no septic or alternative wastewater disposal systems would be used. This condition precludes the possibility of related impacts. The 2015 FEIR concluded that no impacts would occur.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. No sewer, septic or alternative wastewater disposal systems would be installed. As such, the proposed improvements would not alter any geology, soils, or seismicity conclusions set forth in the 2015 FEIR.

f) The 2015 FEIR concluded that no known recorded paleontological resources were present within the NLP2 Project vicinity. However, subsurface construction activities associated with new development such as trenching, and grading could potentially damage or destroy previously undiscovered paleontological resources. This was determined to be a potentially significant impact. Accordingly, MM CUL-3 requires a qualified paleontologist to evaluate any fossils encountered during construction. Implementation of this mitigation measure would reduce impacts to a level of less than significant.

There have been no changes with respect to paleontological resources since the 2015 FEIR was certified, and the proposed improvements do not have the potential for new or more severe paleontological impacts compared to the improvements originally required in the 2015 FEIR. The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. There are no known paleontological resources within the proposed improvement area. Although the likelihood of finding undiscovered paleontological resources is low, MM CUL-3 would continue to apply and reduce impacts to a level of less than significant. As such, the proposed improvements would not alter any paleontological resources conclusions set forth in the 2015 FEIR.

Mitigation Measures

MM GEO-1a Prior to the issuance of the first construction permit, the project applicant shall retain a California registered geologist or geotechnical engineer to prepare a fault investigation study for the portion of the West Napa Fault that is located within the project site. The fault investigation study shall identify the location of the fault within the project site and determine appropriate setback requirements in accordance with the Alquist-Priolo Earthquake Fault Zoning Act and the California Building Standards Code (CBC). The fault investigation study shall be submitted to the City of American Canyon for review and approval as part of the construction permit application. The recommendations of the approved study shall be incorporated into the project plans and all applicable construction-related permits to ensure all geotechnical issues are addressed in compliance with current building code requirements. **(This mitigation measure does not apply to the proposed improvements).**

MM GEO-1b Prior to the issuance of building permits for each structure, the project applicant shall submit a design-level Geotechnical Investigation to the City of American Canyon for review and approval. The investigation shall be prepared by a qualified engineer and identify necessary grading and building practices necessary to achieve compliance with the latest adopted edition of the California Building Standards Code geologic, soils, and seismic requirements, including abatement of expansive soil conditions. The report shall also determine the final design parameters for walls, foundations, foundation slabs, and surrounding related improvements (e.g., utilities roadways, parking lots, and sidewalks). The measures identified in the approved report shall be incorporated into the project plans and all applicable construction-related permits.**(Because the project under review consists of roadway improvements, and is not a structure, this mitigation measure does not apply.)**

MM CUL-3 If potential fossils are discovered during project implementation, all earthwork or other types of ground disturbance within 100 feet of the find shall stop immediately until a qualified professional paleontologist can assess the nature and importance of the find. The paleontologist shall report his/her findings to the City of American Canyon. Based on the scientific value or uniqueness of the find, the paleontologist shall either record the find and recommend that the City of American Canyon allow

work to continue or recommend salvage and recovery of the fossil. The paleontologist shall, if required, propose modifications to the stop-work radius based on the nature of the find, site geology, and the activities occurring on the site. If treatment and salvage is required, recommendations will be consistent with Society of Vertebrate Paleontology (SVP) guidelines and currently accepted scientific practice. If required, treatment for fossil remains shall include preparation and recovery of fossil materials so that they can be housed in an appropriate museum or university collection, and, if required, shall also include preparation of a report for publication describing the finds.

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
VIII. Greenhouse Gas Emissions *Would the project:*					
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	Less than significant impact after mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on greenhouse gas emissions.	**No.** There are no new circumstances that would result in new or more severe impacts on greenhouse gas emissions.	**No.** No new information of substantial importance indicates the need for additional analysis of greenhouse gas emissions.	MM AIR-3b
b) Conflict with any applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on greenhouse gas reduction plans.	**No.** There are no new circumstances that would result in new or more severe impacts on greenhouse gas reduction plans.	**No.** No new information of substantial importance indicates the need for additional analysis of greenhouse gas reduction plans.	None

Discussion

a) The 2015 FEIR indicated that the NLP2 Project would emit short-term construction greenhouse gas (GHG) emissions totaling 5,451 metric tons of carbon dioxide equivalents ($MTCO_2e$), which were determined to be less than significant.

The 2015 FEIR indicated that the NLP2 Project would result in unmitigated operational GHG emissions totaling 28,396 $MTCO_2e$ annually. The BAAQMD annual threshold for operational emissions is 10,000 $MTCO_2e$. The 2015 FEIR set forth MM AIR-3b to reduce impacts; however, it would not reduce annual emissions to below 10,000 $MTCO_2e$. The 2015 FEIR concluded that the residual significance of this impact was significant and unavoidable.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. Construction of the proposed improvements would result in short-term GHG emissions. These emissions were contemplated by the 2015 FEIR and would be within the 5,451 metric-ton GHG emissions budget. The proposed improvement would not generate new trips or introduce new operational GHG emissions sources. Thus, MM AIR-3b would not apply. As such, the proposed improvements would not alter any GHG impact conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR concluded that no conflicts with an applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of GHG would occur, and impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. Construction of the proposed improvements would result in short-term GHG emissions. These emissions were contemplated by the 2015 FEIR and would be within the 5,451 metric-ton GHG emissions budget. The proposed improvement would not generate new trips or introduce new operational GHG emissions sources. Thus, the improvements would not have the potential to conflict with an applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of GHG. As such, the proposed improvements would not alter any GHG impact conclusions set forth in the Final EIR.

Mitigation Measures

MM AIR-3b.

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the proposed improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
IX. Hazards and Hazardous Materials *Would the project:*					
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	Less than significant impact after mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on hazardous materials.	**No.** There are no new circumstances that would result in new or more severe impacts on hazardous materials.	**No.** No new information of substantial importance indicates the need for additional analysis of hazardous materials.	MM HAZ-1a, MM HAZ-1b, and MM HAZ-1c *[MM HAZ-1b does not apply to the proposed improvements]*
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	Less than significant impact after mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on reasonably foreseeable upset and accident conditions.	**No.** There are no new circumstances that would result in new or more severe impacts on reasonably foreseeable upset and accident conditions.	**No.** No new information of substantial importance indicates the need for additional analysis of reasonably foreseeable upset and accident conditions.	MM HAZ-1a, MM HAZ-1b, and MM HAZ-1c *[MM HAZ-1b does not apply to the proposed improvements]*
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	No impact.	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste.	**No.** There are no new circumstances that would result in new or more severe impacts on hazardous or acutely hazardous materials, substances, or waste.	**No.** No new information of substantial importance indicates the need for additional analysis of hazardous or acutely hazardous materials, substances, or waste.	None.
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on hazardous materials sites	**No.** There are no new circumstances that would result in new or more severe impacts on hazardous materials sites compiled pursuant to Government	**No.** No new information of substantial importance indicates the need for additional analysis of hazardous	None

a significant hazard to the public or the environment?		compiled pursuant to Government Code Section 65962.5.	Code Section 65962.5.	materials sites compiled pursuant to Government Code Section 65962.5.	
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	Less than significant impact after mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on airports.	**No.** There are no new circumstances that would result in new or more severe impacts on airports.	**No.** No new information of substantial importance indicates the need for additional analysis of airports.	MM LU-3 *[MM LU-3 does not apply to the proposed improvements]*
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on emergency evacuation or response.	**No.** There are no new circumstances that would result in new or more severe impacts on emergency evacuation or response.	**No.** No new information of substantial importance indicates the need for additional analysis of emergency evacuation or response.	None
g) Expose people or structures, either directly or indirectly to a significant risk of loss, injury or death involving wildland fires?	No impact.	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on wildland fires.	**No.** There are no new circumstances that would result in new or more severe impacts on wildland fires.	**No.** No new information of substantial importance indicates the need for additional analysis of wildland fires.	None.

Discussion

a-b) The 2015 FEIR indicated that construction and operational activities would involve the use of hazardous materials. The 2015 FEIR set forth MMs HAZ-1a, HAZ-1b, and HAZ-1c, which require training of construction workers in spill prevention and response, preparation of Risk

Management Plan for any use that would handle hazardous materials, and proper disposal of hazardous wastes, respectively, to reduce impacts to a level of less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. Construction activities would involve the use of the same types of hazardous materials disclosed and analyzed in the EIR, such as diesel fuel, greases, lubricants, and oils, and would not create the potential for new or more severe hazard impacts from routine transport, use, or disposal of hazardous materials, or reasonably foreseeable upset and accident conditions. MMs HAZ-1a and HAZ-1c would continue to apply and reduce impacts to a level of less than significant. MM HAZ-1b would not apply since it pertains to operational activities. As such, the proposed improvements would not alter any hazards or hazardous materials conclusions set forth in the 2015 FEIR.

c) The 2015 FEIR indicated that the nearest school (Napa Junction Elementary School) was located 1.3 miles to the southeast and thus was not within 0.25 mile of the project site. This condition precluded the possibility of the proposed uses having adverse impacts on schools located within a 0.25-mile radius of the project site. The 2015 FEIR concluded that no impact would occur.

Napa Junction Elementary School has since closed. There are no other schools within 0.25 mile of the proposed improvements. As such, the proposed improvements would not alter any hazards or hazardous materials conclusions set forth in the 2015 FEIR.

d) The 2015 FEIR indicated that a Phase I Environmental Site Assessment (Phase I ESA) had been prepared for the project site. The Phase I ESA included records review, site reconnaissance, and soil testing, and found that the project site was not listed on a hazardous material database compiled pursuant to Government Code Section 65962.5 and did not contain any recognized environmental constraints that required abatement. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. The Phase I prepared as part of the 2015 FEIR covers the proposed improvement areas. The State Water Resources Control Board Geotracker database indicates that there are no documented releases of hazardous materials within the right-of-way. The improvement area is not listed on a hazardous material database compiled pursuant to Government Code Section 65962.5 and does not contain any recognized environmental constraints that require abatement. As such, the proposed improvements would not alter any hazards or hazardous materials conclusions set forth in the 2015 FEIR.

e) The 2015 FEIR indicated that the project site was within Zone D of the Napa County Airport Land Use Compatibility Plan. The 2015 FEIR found that the proposed 2,271,000 square feet of warehouse, distribution, e-commerce, manufacturing, and accessory retail/office were consistent with the Airport Land Use Compatibility Plan's (ALUCP's) compatibility requirements. The 2015 FEIR acknowledged that the Phase I project was required to develop and implement

a Wildlife Management Plan for the Wetland Preserve. The NLP2 Project was required to prepare a Wildlife Management Plan for the detention ponds and project site landscaping (MM LU-3.) With the implementation of MM LU-3, the 2015 FEIR concluded that impacts would be less than significant. The project sponsor has since prepared a Wildlife Management Plan addressing the requirements for Phase I and NLP2 and has fully complied with MM LU-3 (see Appendix C.)

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The proposed improvements would consist of low-profile items such as additional turn lanes, curb, gutter, and storm drainage facilities that are consistent with the ALUCP and that would not have the potential to create aviation noise impacts or safety hazards. Furthermore, the proposed improvements would not involve the introduction of sources of electrical interference, distracting lights, or wildlife attractants (e.g., ponds) near Napa County Airport. Thus, MM LU-3 and the Wildlife Management Plan would not apply. As such, the proposed improvements would not alter any aviation conclusions set forth in the 2015 FEIR.

f) The 2015 FEIR indicated that the NLP2 Project would take primary access from Devlin Road and secondary gated access from the Napa County Airport and provide two points of access. Additionally, the City's planned extension of Devlin Road to Green Island Road would create an additional emergency response and evacuation route. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements would improve emergency access and evacuation to the project vicinity by providing a second westbound lane on South Kelly Road. Furthermore, the planned extension of Devlin Road is under construction at the time of this writing and is expected to be completed by the end of 2022. Overall, the South Kelly Road improvements and the Devlin Road extension would improve emergency access and evacuation in the project vicinity. As such, the proposed improvements would not alter any emergency response and evacuation conclusions set forth in the 2015 FEIR.

g) The 2015 FEIR indicated that the NLP2 Project site is surrounded by urban development and infrastructure on three sides and undeveloped marshy habitat on the fourth side; thus, it would not be susceptible to wildland fires. The 2015 FEIR concluded that no impact would occur.

The surrounding conditions remain the same as studied in the 2015 FEIR and continue to preclude wildfire impacts. The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The surrounding area consists of the Devlin Road Transfer Station (west), light industrial uses (north), SR-29 (east), and a vacant property contemplated to support commercial/industrial development (south). This area is characterized as mostly developed and, thus, is not susceptible to wildland fire risks. As such, the proposed improvements would not alter any wildland fire conclusions set forth in the 2015 FEIR.

Mitigation Measures

MM HAZ-1a Prior to construction, all contractor and subcontractor personnel shall receive training regarding the appropriate work practices necessary to effectively comply with the applicable environmental laws and regulations, including, without limitation, hazardous material spill prevention and response measures.

MM HAZ-1b Prior to issuance of the certificate of occupancy for any uses that involve the storage or use of acutely hazardous materials, the tenant shall consult with the California Emergency Management Agency (CalEMA) to determine the guidelines and regulations applicable to the operations. If required, tenants shall prepare a Risk Management Plan consistent with the California Accidental Release Prevention (CalARP) Program prior to undertaking any storage or use of acutely hazardous materials. **(This mitigation measure does not apply to the proposed improvements).**

MM HAZ-1c During construction and operations, hazardous materials shall not be disposed of or released onto the ground, the underlying groundwater, or any surface water. Totally enclosed containment shall be provided for all trash. All hazardous construction waste shall be removed to a hazardous waste facility permitted or otherwise authorized to treat, store or dispose of such materials.

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
X. Hydrology and Water Quality *Would the project:*					
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	Less than significant impact after mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on water quality standards or waste discharge requirements.	**No.** There are no new circumstances that would result in new or more severe impacts on water quality standards or waste discharge requirements.	**No.** No new information of substantial importance indicates the need for additional analysis of water quality standards or waste discharge requirements.	MM HYD-1a and MM HYD-1b *[MM HYD-1b does not apply to the proposed improvements]*
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on groundwater.	**No.** There are no new circumstances that would result in new or more severe impacts on groundwater.	**No.** No new information of substantial importance indicates the need for additional analysis of groundwater.	None
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:					
(i) result in substantial erosion or siltation on- or off-site;	Less than significant impact after mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on erosion.	**No.** There are no new circumstances that would result in new or more severe impacts on erosion.	**No.** No new information of substantial importance indicates the need for additional analysis of erosion. 		control or sustainable groundwater management plans.	management plans.	or sustainable groundwater management plans.	

Discussion

a) The 2015 FEIR indicated that construction and operational activities associated with development of the NLP2 Project had the potential to result in pollution entering downstream waterways. The 2015 FEIR set forth MMs HYD-1a (short-term construction water quality measures) and HYD-1b (long-term operational water quality measures) to reduce impacts to a level of less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. Construction activities would involve demolition of existing asphalt-concrete sections, grading, paving, and installation of storm drainage improvements. MM HYD-1a would apply and would require that stormwater pollution prevention measures be implemented during construction. This would reduce impacts to a level of less than significant. MM HYD-1b would not apply because it pertains to privately-owned and maintained storm drainage improvements whereas the proposed storm drainage improvements would be part of the municipal system. As such, the proposed improvements would not alter any water quality conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR indicated that there is an existing agricultural well within the project site that is used to irrigate site improvements associated Napa Logistics Park Phase I; however, use of this well would be discontinued once recycled water services is extended to the project site. Additionally, the 2015 FEIR indicated that the project site is not well suited for groundwater recharge because of the underlying clay soils. Thus, the NLP2 Project would not contribute to groundwater overdraft or interfere with groundwater recharge. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. There are no groundwater wells within the right-of-way and, thus, none would be altered by the proposed improvements. Furthermore, the proposed improvements would not require any form of irrigation (including groundwater) or have any other groundwater demand. As such, the proposed improvements would not alter any groundwater conclusions set forth in the 2015 FEIR.

c) The 2015 FEIR indicated that the NLP2 Project contemplated a network of storm drainage facilities consisting of catch basins, underground piping, and bio swales that would route runoff to several detention basins. The basins would be designed such that runoff is impounded and discharged a rate less than the pre-development condition of the project site into No Name Creek. This would serve to prevent runoff from inundating downstream waterways in a manner that causes erosion or flooding. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. Construction activities would involve the installation of storm drainage improvements that would be designed in accordance with City standards to ensure that runoff does not inundate downstream waterways. As such, the proposed improvements would not alter any water quality conclusions set forth in the 2015 FEIR.

d) The 2015 FEIR indicated that there are no inland bodies of water susceptible to a seiche in the project vicinity, and it noted that the project site is not located along the Pacific coast and thus would not be susceptible to tsunami inundation. In addition, the 2015 FEIR found that there are no steep slopes or volcanic features that could produce a mudflow the project vicinity. The 2015 FEIR concluded that no impact would occur.

The conditions in the vicinity of the project site remain the same as studied in the 2015 FEIR and preclude the possibility of seiche, tsunami, or mudflow impacts. The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. This area is more than 2.5 miles from the Napa River and contains flat relief. As such, the proposed improvements would not alter any seiche, tsunami, or mudflow conditions conclusions set forth in the 2015 FEIR.

e) The 2015 FEIR did not evaluate conflicts with water quality control or groundwater sustainability plans, as this topic was not on the CEQA Appendix G Checklist at the time the EIR was certified. The proposed improvements would not involve the drilling of new groundwater wells and, therefore, would not conflict with a water quality control or groundwater sustainability plan. No impact would occur.

Mitigation Measures

MM HYD-1a Prior to issuance of grading permits for the proposed project, the City of American Canyon shall verify that the applicant has prepared a Storm Water Pollution Prevention Plan (SWPPP) in accordance with the requirements of the statewide Construction General Permit. The SWPPP shall be designed to address the following objectives: (1) all pollutants and their sources, including sources of sediment associated with construction, construction site erosion, and all other activities associated with construction activity are controlled; (2) where not otherwise required to be under a Regional Water Quality Control Board (RWQCB) permit, all non-stormwater discharges are identified and either eliminated, controlled, or

treated; (3) site best management practices (BMPs) are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized non-stormwater discharges from construction activity; and (4) stabilization BMPs are installed to reduce or eliminate pollutants after construction are completed. The SWPPP shall be prepared by a qualified SWPPP developer. The SWPPP shall include the minimum BMPs required for the identified Risk Level. BMP implementation shall be consistent with the BMP requirements in the most recent version of the California Stormwater Quality Association's (CASQA's) Stormwater Best Management Handbook–Construction or the Caltrans Stormwater Quality Handbook Construction Site BMPs Manual.

MM HYD-1b Prior to issuance of building permits for the proposed project, the project applicant shall prepare a Stormwater Control Plan that includes post-construction stormwater controls in the site design to satisfy requirements of the Phase II Small MS4 Permit. This shall include a review of the final Stormwater Control Plan by the City of American Canyon to ensure the required controls are in place.

Provision E.12.h of the MS4 Permit requires an operation and maintenance program be implemented for post-construction stormwater management features. Responsible parties and funding for long-term maintenance of all BMPs must be specified. This plan shall specify a regular inspection schedule of stormwater treatment facilities in accordance with the requirements of the MS4 Permit. Reports documenting inspections and any remedial action conducted shall be submitted regularly to the City for review and approval. **(This mitigation measure would not apply because it pertains to privately-owned and maintained storm drainage improvements whereas the proposed storm drainage improvements would be part of the municipal system).**

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
XI. Land Use and Planning *Would the project:*					
a) Physically divide an established community?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on division of an established community.	**No.** There are no new circumstances that would result in new or more severe impacts on division of an established community.	**No.** No new information of substantial importance indicates the need for additional analysis of division of an established community.	None
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	Less than significant impact after mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on conflicts with any applicable land use plan, policy, or regulation.	**No.** There are no new circumstances that would result in new or more severe impacts on conflicts with any applicable land use plan, policy, or regulation.	**No.** No new information of substantial importance indicates the need for additional analysis of conflicts with any applicable land use plan, policy, or regulation.	MM LU-3 *[MM LU-3 does not apply to the proposed improvements]*

Discussion

a) The 2015 FEIR indicated that the project site contains undeveloped land; there are no occupied structures on-site. This condition precludes the possibility of division of an established community. The 2015 FEIR concluded that no impact would occur.

There are no established communities in the vicinity. In addition, the proposed improvements would occur within an existing right-of-way which already contains asphalt-concrete pavement, curb, gutter, and disturbed areas. Because the road right-of-way already exists, the proposed improvements have no potential to create new or more severe impacts with respect to dividing an established community. As such, the proposed improvements would not alter any land use conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR indicated that the NLP2 Project's 2,271,000 square feet of warehouse, distribution, e-commerce, manufacturing, and accessory retail/office uses were consistent with the allowable uses and development standards of the General Plan's land use designation of "Industrial" and the Napa County Airport Industrial Area Specific Plan's zoning of "Business/Industrial Park." The 2015 FEIR found that the proposed 2,271,000 square feet of

warehouse, distribution, e-commerce, manufacturing, and accessory retail/office were consistent with the Airport Land Use Compatibility Plan's compatibility requirements; however, the proposed detention ponds and landscaping had the potential to create wildlife attractant hazards for aviation. The 2015 FEIR set forth MM LU-3, requiring the applicant to retain a qualified biologist to prepare a Wildlife Management Plan to ensure that the detention ponds and landscaping will be designed and managed to reduce wildlife impacts. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements were contemplated by the 2015 FEIR, which was certified by the American Canyon City Council in 2015. As such, they represent the official circulation policy of the City of American Canyon and, thus, are consistent with General Plan and zoning. The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The proposed improvements would consist of low-profile items such as additional turn lanes, curb, gutter, and storm drainage facilities that would not have the potential to create aviation safety hazards. Furthermore, the proposed improvements would not involve the introduction of sources of electrical interference, distracting lights, or wildlife attractants (e.g., ponds) near Napa County Airport. Thus, MM LU-3 would not apply. In addition, for the same reasons explained above, the proposed improvements are consistent with the ALUCP, and MM LU-3 would not apply. As such, the proposed improvements would not alter any land use conclusions set forth in the 2015 FEIR.

Mitigation Measures

MM LU-3 Prior to issuance of the first building permit, the project applicant shall retain a qualified biologist to prepare a Wildlife Management Plan for the landscaping and storm water detention basins. The plan shall incorporate applicable Federal Aviation Administration (FAA) guidance for wildlife management and provide recommendations for the design and operation of the landscaping and stormwater detention basins to ensure that they do not serve as attractants for wildlife or large flocks of birds that may be potentially incompatible with aviation operations. As part of plan development, the applicant shall consult with Napa County Airport representatives. The City of American Canyon shall confirm that the Wildlife Management Plan's recommendations are reflected in the design and maintenance plans for the landscaping and stormwater detention basins. The plan shall:

- If necessary, refine or adapt water management designs to comply with the guidance set forth FAA guidance. Once developed, the project proponent shall provide copies of its stormwater management plans to the airport management for review by an FAA qualified Wildlife Biologist to confirm that the proposed slope design and bio retention plantings are consistent with Advisory Circular 150/5200-33B.
- Refine or adapt project landscape designs to include materials that will not be attractive to potentially hazardous wildlife. The project proponent should provide copies of its proposed landscape plans and plant palettes to airport management

for review by an FAA-qualified Wildlife Hazard Damage Biologist to confirm that the proposed landscaping will be consistent with airport operations.

- Develop design standards to address aviation and wildlife hazard management concerns. The project applicant shall develop specific design standards for incorporation into lease documents that address wildlife hazard management. For example, site users shall be directed to store all refuse in covered bins or dumpsters and equip signs and light standards with non-perching devices.
- Establish a process for ongoing coordination with the Napa County Airport staff regarding wildlife management, facility management procedures, and airport operations so that changes in wildlife activity during or following project construction can be identified and addressed. **(This mitigation measure would not apply).**

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
XII. Mineral Resources *Would the project:*					
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on loss of known mineral resources of statewide importance.	**No.** There are no new circumstances that would result in new or more severe impacts on loss of known mineral resources of statewide importance.	**No.** No new information of substantial importance indicates the need for additional analysis of known mineral resources of statewide importance.	None
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on loss of known mineral resources of local importance.	**No.** There are no new circumstances that would result in new or more severe impacts on loss of known mineral resources of local importance.	**No.** No new information of substantial importance indicates the need for additional analysis of known mineral resources of local importance.	None

Discussion

a-b) The 2015 FEIR indicated that the project site contains undeveloped land and does not support mineral extraction operation. This condition precludes the loss of mineral resources. The 2015 FEIR concluded that no impact would occur.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The existing right-of-way contains asphalt-concrete pavement, curb, gutter, and disturbed areas. No mineral resources of statewide or local importance exist within this area. As such, the proposed improvements would not alter any mineral resources conclusions set forth in the 2015 FEIR.

Mitigation Measures

None.

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
XIII. Noise *Would the project:*					
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	Less than significant impact after mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts associated with noise levels in excess of standards established by applicable local, regional, or national regulations.	**No.** There are no new circumstances that would result in new or more severe impacts associated with noise levels in excess of standards established by applicable local, regional, or national regulations.	**No.** No new information of substantial importance indicates the need for additional analysis of noise levels in excess of standards established by applicable local, regional, or national regulations.	MM NOI-1
b) Generation of excessive groundborne vibration or groundborne noise levels?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts associated with groundborne vibration.	**No.** There are no new circumstances that would result in new or more severe impacts associated with groundborne vibration.	**No.** No new information of substantial importance indicates the need for additional analysis of groundborne vibration.	None
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts associated with aviation noise.	**No.** There are no new circumstances that would result in new or more severe impacts associated with aviation noise.	**No.** No new information of substantial importance indicates the need for additional analysis of aviation noise.	None

Discussion

a) The 2015 FEIR found that construction activities associated with NLP2 Project construction had the potential to expose surrounding receptors to noise levels in excess of adopted standards. The 2015 FEIR set forth MM NOI-1 requiring the implementation of construction noise

attenuation measures, including limits on hours of activities, the use of noise-reduction features on construction equipment, and the use of temporary noise barriers when construction activities occur at SR-29/South Kelly Road and within 300 feet of an occupied residence. With the implementation of MM NOI-1, the 2015 FEIR concluded that impacts would be reduced to a level of less than significant.

The proposed off-site roadway improvements are overall less than what were analyzed in the 2015 FEIR. These current proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The closest sensitive receptor to proposed construction footprint is the single-family residence south of S. Kelly Road and west of SR-29. This receptor location was also identified and analyzed in the 2015 FEIR. The façade of this closest residence would be located approximately 310 feet from the nearest proposed construction footprint. At this distance, reasonable worst-case construction noise levels could range up to approximately 73 dBA L_{max}, intermittently, and could have an hourly average of up to 69 dBA L_{eq}, at the façade of the nearest single-family residential home when multiple pieces of equipment operate simultaneously at the nearest construction footprint. These noise levels would occur for only a short period, as noise levels would drop off at a rate of 6 decibels per doubling of distance as construction equipment moves across the site. Therefore, noise levels from construction activities would be less than the City's daytime standard of 75 dBA L_{eq} between the hours of 7:00 a.m. and 7:00 p.m. at the closest residential receptor.

Compliance with MM NOI-1, which includes limits on construction activities to daytime hours, would ensure that project construction activities would not result in a substantial temporary increase in nighttime ambient noise levels that would result in annoyance or sleep disturbance of nearby sensitive receptors. Therefore, similar to the overall conclusion of the 2015 FEIR, temporary construction noise impacts would be less than significant with implementation of MM NOI-1.

Furthermore, since the proposed improvements only consist of a roadway improvement project, it would not result in any new stationary noise sources. In addition, the proposed improvements are not a trip generating project, and would therefore not result in any increase in traffic noise levels along roadway segments in the project vicinity.

Therefore, the project would not result in new or more severe temporary or permanent substantial noise increase impacts beyond what was previously analyzed in the 2015 FEIR.

b) The 2015 FEIR indicated that the closest vibration-sensitive land use was 1,500 feet from areas that would be disturbed by construction activities. Because the intensity of groundborne vibration dissipates with distance, this structure is located sufficiently far enough away that construction and operational activities would not cause structural damage. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. Construction activities would involve the

heavy equipment that would generate vibration. The closest structure to the proposed construction footprint is the warehouse structure located north of S. Kelly Road. The façade of this closest structure would be located approximately 55 feet from the nearest proposed construction footprint. At this distance, reasonable worst-case groundborne vibration levels would range up to 0.06 PPV from operation of the types of equipment that would produce the highest vibration levels (a large vibratory roller). This is below the FTA's Construction Vibration Impact Criteria[4] of 0.3 PPV for this type of structure, a building of engineered concrete and masonry construction. In addition, the closest residential structure to the construction footprint where heavy construction equipment would operate is the single-family residence south of S. Kelly Road and west of SR-29. As noted previously, this receptor location was also identified and analyzed in the 2015 FEIR. The façade of this closest residence would be located approximately 310 feet from the nearest proposed construction footprint. At this distance, reasonable worst-case groundborne vibration levels would range up to 0.005 PPV from operation of the types of equipment that would produce the highest vibration levels. This is below the FTA's Construction Vibration Impact Criteria[5] of 0.2 PPV for this type of structure, a building of non-engineered timber and masonry construction. Therefore, project related construction vibration impacts would be less than significant.

Furthermore, since the proposed improvements are not a trip generating project, implementation of the proposed project would not include any new permanent sources that would generate groundborne vibration levels that could be perceptible without instruments as measured at existing land uses in the project vicinity. Therefore, the proposed project would not generate groundborne vibration or groundborne noise levels in excess of established standards and there would be no impact related to operational groundborne vibration.

Therefore, the project would not result in any new or more severe impacts related to groundborne vibration impacts beyond what was previously analyzed in the 2015 FEIR.

c) The 2015 FEIR indicated that Napa County Airport is located immediately north of the project site. The developable portions of the project site are outside the 65 dBA Community Noise Equivalent Level (CNEL) aviation noise contour for the airport for Year 2022 aircraft operations. Thus, the portions of the project site where aviation noise levels would be observed by humans would be within acceptable standards. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur within the previously analyzed project boundaries, at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The site of these roadway improvements is not located within the vicinity of a private airstrip. The nearest public airport to the project site is the Napa County Airport, located approximately 0.75 miles northwest of the project boundaries. The project site is located outside of the 65 dBA CNEL airport noise contours of this closest airport. Therefore, implementation of the project would not expose persons residing or working in the project

[4] Federal Transit Administration (FTA). 2018. Transit Noise and Vibration Impact Assessment Manual. September.
[5] Ibid.

vicinity to noise levels from airport activity in excess of normally acceptable standards, and a less than significant impact would occur. Therefore, the project would not result in any peculiar effects and would not result in new impacts related to airport noise impacts beyond what was previously analyzed in the 2015 FEIR.

Mitigation Measures

MM NOI-1 During construction activities, the following noise attenuation measures and practices shall be implemented:

- Construction activities shall be limited to the hours between 7:00 a.m. and 7:00 p.m. The City of American Canyon shall have the discretion to permit construction activities to occur outside of allowable hours if compelling circumstances warrant such an exception (e.g., weather conditions necessary to pour concrete).
- All construction equipment shall use noise-reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer. If no noise reduction features were installed by the manufacturer, then the contractor shall require that at least a muffler be installed on the equipment.
- Construction staging and heavy equipment maintenance activities shall be performed a minimum distance of 300 feet from the nearest residence, unless safety or technical factors take precedence (e.g., a heavy equipment breakdown).
- During the grading phase of the off-site utility work, temporary sound barriers shall be utilized to block the line of site from operating heavy construction equipment to any residence within 150 feet of an active construction area.

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
XIV. Population and Housing *Would the project:*					
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts associated with growth inducement.	**No.** There are no new circumstances that would result in new or more severe impacts associated with growth inducement.	**No.** No new information of substantial importance indicates the need for additional analysis of growth inducement.	None
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts associated with displacement of housing.	**No.** There are no new circumstances that would result in new or more severe impacts associated with displacement of housing.	**No.** No new information of substantial importance indicates the need for additional analysis of displacement of housing.	None

Discussion

a) The 2015 FEIR indicated that the NLP2 Project's 2,271,000 square feet of warehouse, distribution, e-commerce, manufacturing, and accessory retail/office would create as many as 5,801 jobs. The California Employment Development Department indicated that there were more than 15,000 unemployed persons in Napa and Solano Counties as of July 2015, and, therefore, there was enough available labor that the NLP2 Project employment opportunities could be filled from the local labor force. Additionally, the NLP2 Project contemplated the extension of recycled water and sewer from Green Island Road to the project site. The 2015 FEIR noted that the extension of these utility lines would occur through lands that are within the boundaries of the Napa County Airport Industrial Area Specific Plan and thus have already been contemplated to support urban development. Thus, these extensions would be "growth accommodating" because they would serve planned growth. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The proposed improvements do not have the potential to induce unplanned population growth in the area, either directly or indirectly. The improvements are intended to address the transportation needs of growth and development that has already occurred in the project vicinity. Furthermore, the areas that

would directly benefit from the improvements are already developed or entitled for urban development; the improvements would not open new areas to urban development. Lastly, the improvements do not involve the development of new dwelling units or permanent employment opportunities and, thus, would not facilitate direct population growth in this regard. As such, the proposed improvements would not alter any growth inducement conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR indicated that the project site does not contain any dwelling units. This condition precludes the possibility of displacement or persons or housing. The 2015 FEIR concluded that no impact would occur.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. No dwelling units exist within this area. As such, the proposed improvements would not alter any housing displacement conclusions set forth in the 2015 FEIR.

Mitigation Measures

None.

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
XV. Public Services *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:*					
a) Fire protection?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on fire protection.	**No.** There are no new circumstances that would result in new or more severe impacts on fire protection.	**No.** No new information of substantial importance indicates the need for additional analysis of fire protection.	None
b) Police protection?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on police protection.	**No.** There are no new circumstances that would result in new or more severe impacts on police protection.	**No.** No new information of substantial importance indicates the need for additional analysis of police protection.	None
c) Schools?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on schools.	**No.** There are no new circumstances that would result in new or more severe impacts on schools.	**No.** No new information of substantial importance indicates the need for additional analysis of schools.	None
d) Parks?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on parks.	**No.** There are no new circumstances that would result in new or more severe impacts on parks.	**No.** No new information of substantial importance indicates the need for additional analysis of parks.	None
e) Other public facilities?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on other public facilities.	**No.** There are no new circumstances that would result in new or more severe impacts on other public facilities.	**No.** No new information of substantial importance indicates the need for additional analysis of other public facilities.	None

Discussion

a) The 2015 FEIR indicated that the American Canyon Fire Protection District would provide fire protection and emergency medical services to the NLP2 Project. The Fire Protection District provided a written response indicating that response times to the Green Island Industrial Area are often below the 5-minute response time objective, but the planned extension of Devlin Road to Green Island Road would be expected to improve this condition. The Fire Protection District also noted that new development would be required to pay a Fire Mitigation Fee and a Fire Service Fee, which would serve to maintain adequate levels of fire protection and emergency medical services. Finally, the Fire Protection District indicated that Station 11 was adequate to serve the NLP2 Project. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements would improve emergency access to the project vicinity by providing a second westbound lane on South Kelly Road. Furthermore, the improvements do not involve the development of new dwelling units or permanent employment opportunities and, thus, would not increase demand for fire protection or emergency medical services such that new or expanded facilities would be required. As such, the proposed improvements would not alter any public services conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR indicated the American Canyon Police Department would provide law enforcement services to the NLP2 Project. The Police Department indicated that alarm calls are its primary concern and noted that the City's standard conditions of approvals require that police review of a project's security plan. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements would ease emergency access to the project vicinity by providing additional through lanes and turn lanes as described in MM TRANS-1d, thereby facilitating service by emergency responders. Furthermore, the improvements do not involve the development of new dwelling units or permanent employment opportunities and, thus, would not increase demand for police protection such that new or expanded facilities would be required. As such, the proposed improvements would not alter any public services conclusions set forth in the 2015 FEIR.

c) The 2015 FEIR indicated that the NLP2 Project does not include any residential uses and therefore would not directly induce population growth. Additionally, the employment opportunities created by the NLP2 Project would not cause substantial indirect population growth. The 2015 FEIR concluded that the NLP2 Project would not create a need for new or expanded school facilities, and, therefore, no impacts would occur.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements would not involve the

development of new dwelling units or permanent employment opportunities and, thus, would not increase enrollment in local schools such that new or expanded facilities would be required. As such, the proposed improvements would not alter any public services conclusions set forth in the 2015 FEIR.

d) The 2015 FEIR indicated that the NLP2 Project does not include any residential uses and therefore would not directly induce population growth. Additionally, the employment opportunities created by the NLP2 Project would not cause substantial indirect population growth. The 2015 FEIR concluded that the NLP2 Project would not create a need for new or expanded park facilities, and, therefore, no impacts would occur.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements would not involve the development of new dwelling units or permanent employment opportunities and, thus, would not increase use of local parks such that new or expanded facilities would be required. As such, the proposed improvements would not alter any public services conclusions set forth in the 2015 FEIR.

e) The 2015 FEIR indicated that the NLP2 Project does not include any residential uses and therefore would not directly induce population growth. Additionally, the employment opportunities created by the NLP2 Project would not cause substantial indirect population growth. The 2015 FEIR concluded that the NLP2 Project would not create a need for new or expanded public facilities such as libraries, and, therefore, no impacts would occur.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements would not involve the development of new dwelling units or permanent employment opportunities and, thus, would not increase use of public facilities (e.g., libraries) such that new or expanded facilities would be required. As such, the proposed improvements would not alter any public services conclusions set forth in the 2015 FEIR.

Mitigation Measures

None.

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
XVI. Recreation *Would the project:*					
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on deterioration of existing park lands.	**No.** There are no new circumstances that would result in new or more severe impacts on deterioration of existing park lands.	**No.** No new information of substantial importance indicates the need for additional analysis of deterioration of existing park lands.	None
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	No impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on new or expanded park facilities.	**No.** There are no new circumstances that would result in new or more severe impacts on new or expanded park facilities.	**No.** No new information of substantial importance indicates the need for additional analysis of new or expanded park facilities.	None

Discussion

a-b) The 2015 FEIR indicated that the NLP2 Project does not involve the development of residential uses and would not directly induce population growth that result in a need for new or expanded recreational facilities. Additionally, the 2015 FEIR indicated that the NLP2 Project would not cause a physical deterioration of existing recreational facilities. The 2015 FEIR concluded that no impacts would occur.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements would not involve the development of new dwelling units or permanent employment opportunities and, thus, would not increase use of local parks or recreational facilities such that new or expanded facilities would be required. As such, the proposed improvements would not alter any growth inducement conclusions set forth in the 2015 FEIR.

Mitigation Measures

None.

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
XVII. Transportation *Would the project:*					
a) Conflict with a program plan, ordinance, or policy of the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	Significant unavoidable impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on measures of effectiveness of transportation.	**No.** There are no new circumstances that would result in new or more severe impacts on measures of effectiveness of transportation.	**No.** No new information of substantial importance indicates the need for additional analysis of measures of effectiveness of transportation.	MM TRANS-1a, MM TRANS-1b, MM TRANS-1c, MM TRANS-1d, MM TRANS-1e, MM TRANS-1f, MM TRANS-2a *[MM TRANS-1d as modified would apply to the proposed improvements; none of the other listed measures would apply]*
b) Would the project conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b)?	N/A	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on measures of effectiveness of transportation.	**No.** There are no new circumstances that would result in new or more severe impacts on measures of effectiveness of transportation.	**No.** No new information of substantial importance indicates the need for additional analysis of measures of effectiveness of transportation.	None
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	Less than significant impact after mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on hazards due to a design feature.	**No.** There are no new circumstances that would result in new or more severe impacts on hazards due to a design feature.	**No.** No new information of substantial importance indicates the need for additional analysis of hazards due to a design feature.	MM TRANS-6 and MM TRANS-9 *[MM TRANS-9 would apply to the proposed improvements]*
d) Result in inadequate emergency access?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on emergency access.	**No.** There are no new circumstances that would result in new or more severe impacts on emergency access.	**No.** No new information of substantial importance indicates the need for additional analysis of emergency access.	None

Discussion

The analysis in this section is based on a Memorandum prepared by Fehr & Peers, which is provided in Appendix A.

a) The 2015 FEIR evaluated NLP2 Project-related impacts on traffic under Existing Plus Project, Existing Plus Background Development Plus Project, and Cumulative Conditions. The analysis found that the NLP2 Project would contribute new trips to up to 20 intersections that would operate at unacceptable levels during one or more peak hours evaluated. The 2015 FEIR set forth MM TRANS-1a, MM TRANS-1b, MM TRANS-1c, MM TRANS-1d, MM TRANS-1e, MM TRANS-1f, and MM TRANS-2a, which require implementation of a transportation demand management program and improvements at impacted facilities; however, not all facilities would be restored to acceptable levels because of the lack of feasible or effective mitigation. The 2015 FEIR concluded that impacts would be significant and unavoidable.

   The proposed improvements consist of a modification of those contemplated by MM TRANS-1a, MM TRANS-1b, MM TRANS-1d, and MM TRANS-2a. To determine if the modified improvements would facilitate acceptable level of service, Fehr & Peers evaluated the actual trip generation from the NLP2 Project and determined that there was a net decrease of 836 AM Peak Hour trips and 850 PM Peak Hour trips relative to what was disclosed in the 2015 FEIR. As such, the modified improvements facilitate acceptable level of service. Furthermore, the proposed improvements themselves do not trigger additional vehicle trips that would create a need for additional traffic improvements. The remaining MMs (TRANS-1c, TRANS-1e, and TRANS-1f) do not apply because they involve transportation demand management measures, require payment of traffic impact fees, or pertain to other intersections. As such, the proposed improvements would not alter any emergency response conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR did not evaluate vehicle miles traveled, as this topic was not on the CEQA Appendix G Checklist at the time the EIR was certified. The proposed improvements consist of reconstructing South Kelly Road between SR-29 and Devlin Road and adding turn lanes at SR-29/South Kelly Road. The improvements are intended to accommodate traffic from existing and planned projects in the vicinity; they would not generate any new trips by themselves. As such, the improvements would not increase vehicle miles traveled.

c) The 2015 FEIR indicated that the NLP2 Project would not contribute to collision rates at study intersections that are above average or increase railroad grade crossing safety hazards. The 2015 FEIR assessed site access and internal circulation and set forth MM TRANS-6, which requires additional site design features be incorporated to reduce impacts to a level of less than significant. Lastly, the 2015 FEIR assessed temporary construction traffic and parking impacts and set forth MM TRANS-9, which requires the applicant to prepare a Construction Management Plan to reduce impacts to a level of less than significant. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. These improvements do not possess any site access or internal circulation features and, therefore, MM TRANS-6 does not apply. Construction of the improvements would result in temporary lane closures and detours and, therefore, MM TRANS-9 would apply and reduce impacts to a level of less than significant. As such, the proposed improvements would not alter any emergency response conclusions set forth in the 2015 FEIR.

d) The 2015 FEIR indicated that the NLP2 Project would take primary access from Devlin Road and secondary gated access from the Napa County Airport and thus would provide two points of access. Additionally, the planned extension of Devlin Road to Green Island Road would create an additional emergency response route. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements would improve emergency access to the project vicinity by providing a second westbound lane on South Kelly Road. Furthermore, the planned extension of Devlin Road is under construction at the time of this writing and is expected to be completed by the end of 2022. Overall, the South Kelly Road improvements and the Devlin Road extension would improve emergency access in the project vicinity. As such, the proposed improvements would not alter any emergency response conclusions set forth in the 2015 FEIR.

Mitigation Measures

MM TRANS-1a ***[This mitigation measure has been amended, based on a 2022 Transportation Impact Study prepared by Fehr & Peers]***

The project applicant shall establish a Transportation Demand Management (TDM) program, subject to review and approval by the City. The intent of the TDM program is to ensure that traffic volumes generated by the Project do not exceed that which would occur from warehouse-only uses. Notwithstanding its intent, the applicant shall implement this mitigation measure regardless of the mix of uses (warehouse-only or warehouse/industrial/office) that is eventually built.

(The applicant has already fully complied with this condition and mitigation measure. The applicant submitted, and the City approved, a Transportation Demand Management program for the Project, entitled "Napa Logistics Park Transportation Demand Management (TDM) Strategies and Monitoring," prepared by Fehr & Peers and dated October 2020. The applicant incorporated the TDM program into the Declaration of Covenants, Conditions, and Restrictions and Grant of Easements for Napa Logistics Park (recorded on September 12, 2017, as Instrument No. 2017-0020645 in the Official Records of the County), as subsequently amended. Section 3.3.14 of the CC&Rs requires the Association to monitor each Occupant's compliance with the TDM Program and to allocate to an

Owner or Owners any fines imposed by the City in connection with an Occupant's violation of the TDM Program.)

To mitigate this significant impact of greater trip generation from more intense land uses on the project site, the applicant shall establish a Transportation Demand Management (TDM) program. The intent of the TDM program is to ensure that traffic volumes generated by Project do not exceed that which would occur from warehouse-only uses. Notwithstanding its intent, the applicant shall implement this mitigation measure regardless of the mix of uses (warehouse-only or warehouse/industrial/office) that is eventually built.

The applicant shall enter into a TDM Agreement prior to the issuance of the first building permit. The TDM Agreement shall require that an effective TDM program be implemented prior to the first certificate of occupancy and be subjected to on-going periodic monitoring thereafter. The TDM Agreement shall also include a financial guarantee satisfactory to the City. The City will deem the TDM program to be effective if the monitoring results indicate that AM peak-hour volumes are no more than 780 vehicles (and PM peak-hour volumes are no more than 704 vehicles).

The TDM program shall be implemented at the applicant's cost, with no cost to the City, regardless of the eventual mix of uses and shall at a minimum include a permanent vehicle counting station at the single public access point. Examples of measures that may be considered as part of an effective TDM program include but are not limited to the following:

- Starting and ending workday shifts during off-peak hours (i.e., not between 7:00 a.m. and 9:00 a.m. or 3:00 p.m. and 6:00 p.m.)—if done for the manufacturing use, this would decrease overall AM peak-hour vehicle trips from 1,310 to 510 and PM peak-hour vehicle trips from 1,243 to 479.
- Implement shuttle service to key employment centers or park-and-ride lots in the area for those employees whose workday shift start during peak hours.
- Car-share program
- Shuttles to regional transit
- Transit subsidies
- Carpool/vanpool subsidies
- Employer-owned/sponsored vanpools
- Flex-time and telecommute programs
- Use of rail to transport employees and/or the delivery of goods

The applicant shall retain a transportation planning/engineering consultant to analyze the effectiveness of the TDM program in a written report. The TDM Report will include data collected from the permanent vehicle counting station and a determination of employee commute methods, which shall be informed by surveying all employees working at the site. The TDM Report shall be submitted to the City on a periodic on-going basis, and it shall form the basis of on-going

determinations by the City as to the effectiveness of the TDM program. So long as the City deems the TDM program effective (i.e., when monitoring results indicate that AM peak-hour volumes are no more than 780 vehicles and PM peak-hour volumes are no more than 704 vehicles), the additional, potentially significant traffic impacts related to the mix of warehouse, industrial and office are mitigated to a less than significant level. At any time that the City determines the TDM program is not effective, then this additional significant traffic impact shall be mitigated by the implementation of MM TRANS-1b. **(This mitigation measure does not apply to the proposed improvements. The TDM plan has already been completed and is included in the CC&Rs for all Napa Logistics Park properties.).**

MM TRANS-1b ***[This mitigation measure has been amended, based on a 2022 Transportation Impact Study prepared by Fehr & Peers]***

To ensure its enforceability, the project applicant shall incorporate the TDM program into the CC&Rs for the Napa Logistics Park. The CC&Rs shall require the Association to monitor each Occupant's compliance with the TDM program and to allocate to an Owner or Owners any fines imposed by the City in connection with an Occupant's violation of the TDM program.

(The applicant has already fully complied with this condition and mitigation measure. The applicant submitted, and the City approved, a Transportation Demand Management program for the Project, entitled "Napa Logistics Park Transportation Demand Management (TDM) Strategies and Monitoring," prepared by Fehr & Peers and dated October 2020. The applicant incorporated the TDM program into the Declaration of Covenants, Conditions, and Restrictions and Grant of Easements for Napa Logistics Park (recorded on September 12, 2017, as Instrument No. 2017-0020645 in the Official Records of the County), as subsequently amended. Section 3.3.14 of the CC&Rs requires the Association to monitor each Occupant's compliance with the TDM Program and to allocate to an Owner or Owners any fines imposed by the City in connection with an Occupant's violation of the TDM Program.)

If at any point the City determines the TDM program established as part of the MM TRANS-1a is not effective to reduce peak-hour traffic so that it does not exceed the TDM thresholds (780 vehicles during the AM peak hour and 704 vehicles during the PM peak hour), then the applicant shall pay an additional amount for each and every peak-hour trip that is recorded by the counting device that exceeds the TDM threshold, based on the method described in the EIR Impact Analysis for this mitigation measure. The "on-going TIF" paid pursuant to this mitigation measure is in addition to the "one-time TIF" paid at the time of issuance of the first building permit in accordance with MM TRANS-1c. This mitigation measure shall be incorporated into the TDM agreement required as part of MM TRANS-1a. **(This mitigation measure does not apply to the proposed improvements. The TDM plan**

has already been completed and is included in the CC&Rs for all Napa Logistics Park properties).

MM TRANS-1c The project applicant will be responsible for paying the City's Traffic Impact Fee for the proposed development. The funds collected under this program would be used to make improvements to a number of intersections throughout American Canyon which improvements would lessen the significant cumulative transportation impacts. However, because these projects for which the applicant would make a fair share contribution pursuant to this mitigation measure rely upon a discretionary funding and approval by a third party (Caltrans), the impact would remain significant and unavoidable. **(This mitigation measure has already been addressed and does not apply to the proposed improvements).**

MM TRANS-1d ***[This mitigation measure has been amended, based on a 2022 Transportation Impact Study prepared by Fehr & Peers]***

The project applicant shall make a fair share contribution to support construction by the City of identified improvements to SR-29, based on the reduced extent of development as codified in the 2022 transportation impact study:

(1) At the intersection of SR-29 at South Kelly Road:
- Northbound approach: 3 through lanes, 2 left-turn lanes, 1 right-turn lane *(existing configuration)*
- Southbound approach: 3 through lanes 2 through lanes, 1 left-turn lane, 1 right-turn lane
- Eastbound approach: 1 left-turn lane, 1 left/through lane, 1 through lane, 2 left-turn lanes, 1 right-turn lane
- Westbound approach: 1 through lane, 1 left-turn lane, 2 left-turn lanes, 1 right-turn lane *(existing configuration)*

(2) At the intersection of South Kelly Road and Devlin Road:
- Northbound approach: 1 through lane, 1 right-turn lane *(existing configuration)*
- Southbound approach: 1 through lane, 1 left-turn lane *(existing configuration)*
- Private driveway: None, One-lane exit only (*existing configuration)*
- Westbound approach: 1 left-turn lane, 1 right-turn lane **(this improvement is included in the improvement plans to be implemented by DWF IV Napa Logistics Holdings.)**

(3) South Kelly Road, between Devlin Road and SR-29 intersections:
- 2 westbound receiving lanes, 1 eastbound lane, and 1 two-way left-turn lane. **(this improvement is included in the improvement plans to be implemented by DWF IV Napa Logistics Holdings.)**

The length of the turn lanes on SR-29 shall be in accordance with the Caltrans Highway Design Manual requirements for a 55-mph highway and shall accommodate sufficient vehicle storage length for STAA vehicles under Existing Plus Background Plus Project conditions such that the intersection operates at least LOS D.

The length of the turn lanes on South Kelly Road shall accommodate sufficient vehicle storage length under Existing Plus Background Plus Project conditions such that the intersection operates at least LOS D.

The applicant shall fund 100 percent of the cost of this improvement. To the extent this improvement represents oversizing that is over and above what would be necessary to mitigate the impacts of the project, the applicant shall be eligible for reimbursement for costs above its fair share from other nearby private development that will also contribute traffic to this intersection. Prior to incurring any expenses for they may be eligible for reimbursement; the applicant shall enter into a reimbursement agreement with the City.

The implementation of this mitigation measure would be done in conjunction with construction that has already been planned and approved. The additional construction activity may incrementally increase construction traffic, noise, and air emissions in the activity area, but would not change the analysis, conclusions, or mitigation measures in this EIR. Construction activity associated with this mitigation measure would be required to comply with all applicable local and State laws and regulations such as dust suppression, limitations on hours of construction, stormwater runoff controls, and other similar requirements designed to reduce or avoid environmental impacts.

Because the South Kelly Road intersection at SR-29 is impacted in the PM peak hour as a result of downstream queues, the impact at this intersection would remain significant and unavoidable with the implementation of this mitigation measure without changes to SR-29 through the City of American Canyon (between Napa Junction Road and American Canyon Road).

As a result of the implementation of this mitigation measure, the significant impacts at the South Kelly Road intersection with Devlin Road are reduced to a less than significant level.

MM TRANS-1e Prior to issuance of the first construction permit for each building in the proposed project, the project applicant shall pay a fair share contribution of the estimated construction costs for regional projects on the state highway system. The fair share shall be calculated at the time payment is required, based on the projected traffic of the proposed use of the building, and the estimated cost of the construction at that time. Fair share shall be calculated by following the “Method for Calculating Equitable Mitigation Measures” from Caltrans Guide to the Preparation of Transportation Impact Studies (2002).

The SR-12-29/SR221-Soscol Ferry Road Flyover Ramp is currently estimated at $40 million according to the Draft EIR (dated March 2015).

Because this project, for which the applicant would make a fair share contribution pursuant to this mitigation measure, relies upon discretionary funding and approval by a third party (Caltrans), the impact would remain significant and unavoidable. The aforementioned parties (Caltrans, NCTPA, and the City of American Canyon, at minimum) will need to develop formal agreements regarding the funding sources for these projects and the mechanism for collecting and transferring the funds for this mitigation measures to be feasible. **(This mitigation measure does not apply to the proposed improvements as no building construction permit would be issued).**

MM TRANS-1f Prior to issuance of the first construction permit for each building in the proposed project, the project applicant shall pay a fair share contribution of the estimated construction costs for regional projects on the state highway system. The fair share shall be calculated at the time payment is required, based on the projected traffic of the proposed use of the building, and the estimated cost of the construction at that time. Fair share shall be calculated by following the "Method for Calculating Equitable Mitigation Measures" from Caltrans Guide to the Preparation of Transportation Impact Studies (2002).

The grade-separated Airport Boulevard/SR-12-29 Interchange Project planned by Caltrans is currently estimated at $73 million according to the NCTPA SR-29 Gateway Corridor Improvement Plan (dated February 2014).

Because this project for which the applicant would make a fair share contribution pursuant to this mitigation measure rely upon discretionary funding and approval by a third party (Caltrans), the impact would remain significant and unavoidable. The aforementioned parties (Caltrans, NCTPA, and the City of American Canyon, at minimum) will need to develop formal agreements regarding the funding sources for these projects and the mechanism for collecting and transferring the funds for this mitigation measures to be feasible. **(This mitigation measure does not apply to the proposed improvements as no building construction permit would be issued).**

MM TRANS-2a Prior to issuance of the first certificate of occupancy for the proposed project or when monitoring determines that it is warranted, the project applicant shall construct improvements at the intersection of South Kelly Road/Devlin Road (#1). The improvements shall consist of the installation of a signal and a westbound left-turn pocket on South Kelly Road, with a reimbursement agreement for the cost in excess of its fair share of the signal cost, thus improving the intersection LOS to acceptable conditions. The roadway change to westbound South Kelly Road is currently proposed as part of MM TRANS-1d. **(This mitigation measure does not apply to the proposed improvements as no certificate of occupancy would be issued).**

MM TRANS-6 Prior to issuance of building permits for each building, the project applicant shall prepare and submit a site plan to the City of American Canyon for review and approval that depicts a minimum number of ADA-accessible parking spaces at each building; the internal stop signs depicted on Exhibit 3.11-14; and the bike racks or lockers at strategic locations to serve the project buildings. The approved plans shall be incorporated into the improvement plans for the project. **(This mitigation measure does not apply to the proposed improvements as no building permit would be issued).**

MM TRANS-8 Prior to issuance of building permits for each building, the project applicant shall prepare and submit a site plan to the City of American Canyon for review and approval that depicts pedestrian facilities and crosswalks that facilitate safe, accessible pedestrian travel between the internal roadways and the building entrances. The approved plans shall be incorporated into the improvement plans for the project. **(This mitigation measure does not apply to the proposed improvements as no building permit would be issued).**

MM TRANS-9 The project applicant shall develop and submit a Construction Management Plan (CMP) to the City of American Canyon prior to commencement of any construction activities, including construction activities associated with the transportation mitigation measures. The provisions of a CMP shall specifically address the characteristics of construction-related traffic associated with development. Such plans identify construction phasing and the level and type of construction-related traffic. The CMP shall identify construction truck routes to access the project site, lane closures on existing public streets (if needed) including a plan for any necessary traffic control measures, and on-site staging requirements, and other information as required by the City.

Once the construction truck routes have been approved, but before construction has started, the applicant shall conduct a survey of existing conditions of pavement along the approved truck routes and submit documentation of the results to the City. When construction has been substantially completed such that there will be no further construction truck trips, the applicant shall re-survey the construction truck routes. The project applicant shall be responsible for repairing damage to roadways used for construction vehicle access to the site and attributable to the project so that the roadway conditions are returned to their pre-construction conditions (or better) as documented in the pre-construction survey along the truck routes following the construction of the project.

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
XVIII. Utilities and Service Systems *Would the project:*					
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on utilities.	**No.** There are no new circumstances that would result in new or more severe impacts on utilities.	**No.** No new information of substantial importance indicates the need for additional analysis of utilities.	None
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on water supply.	**No.** There are no new circumstances that would result in new or more severe impacts on water supply.	**No.** No new information of substantial importance indicates the need for additional analysis of water supply.	None
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on wastewater.	**No.** There are no new circumstances that would result in new or more severe impacts on wastewater.	**No.** No new information of substantial importance indicates the need for additional analysis of wastewater.	None
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	Less than significant impact with mitigation incorporated	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on solid waste.	**No.** There are no new circumstances that would result in new or more severe impacts on solid waste.	**No.** No new information of substantial importance indicates the need for additional analysis of solid waste.	MM PSU-6 *[This measure does not apply to the proposed improvements]*

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
e) Comply with federal, State, and local management and reduction statutes and regulations related to solid waste?	Less than significant impact with mitigation incorporated	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on solid waste.	**No.** There are no new circumstances that would result in new or more severe impacts on solid waste.	**No.** No new information of substantial importance indicates the need for additional analysis of solid waste.	MM PSU-6 *[This measure does not apply to the proposed improvements]*

Discussion

a) The 2015 FEIR indicated that the NLP2 Project would generate an average of 59,926 gallons per day of effluent per day. The 2015 FEIR noted that the American Canyon Wastewater Treatment Plant has 2.5 million gallons per day (mgd) of treatment capacity, with plans to expand it to 4.0 mgd. The proposed project's effluent would represent 2.4 percent of existing capacity and 1.6 percent of the expanded capacity. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements do not involve the development of new dwelling units or permanent employment opportunities and, thus, would not increase demand for water or wastewater such that new or expanded facilities would be required. As such, the proposed improvements would not alter any utility conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR indicated that a Water Supply Assessment had been prepared that served as the basis for the assessment of impacts on water supply. The Water Supply Assessment determined that the NLP2 Project would demand 39.74 acre-feet of potable water and 88.47 acre-feet of recycled water annually. The Water Supply Assessment indicated that the City of American Canyon's potable water supplies were anticipated to increase from 5,591 acre-feet in 2015 to 6,723 acre-feet in 2035, and recycled water supplies were anticipated to increase from 370 acre-feet in 2015 to 1,225 acre-feet in 2035; therefore, sufficient supplies would be available to serve the proposed improvements. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements do not involve the development of new dwelling units or permanent employment opportunities and, thus, would not increase demand for water such that new supplies or expanded facilities would be required. As such, the proposed improvements would not alter any water conclusions set forth in the 2015 FEIR.

c) The 2015 FEIR indicated that the NLP2 Project would generate an average of 59,926 gallons per day of effluent per day. The 2015 FEIR noted that the American Canyon Wastewater Treatment Plant has 2.5 mgd of treatment capacity, with plans to expand it to 4.0 mgd. The proposed project's effluent would represent 2.4 percent of existing capacity and 1.6 percent of the expanded capacity. The 2015 FEIR concluded that impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements do not involve the development of new dwelling units or permanent employment opportunities and, thus, would not increase demand for wastewater such that additional treatment capacity would be required. As such, the proposed improvements would not alter any utility conclusions set forth in the 2015 FEIR.

d-e) The 2015 FEIR indicated that the NLP2 Project would generate 6,148 cubic yards of solid waste during construction and 7,631 cubic yards of solid waste annually during operations. As such, the 2015 FEIR set forth MM PSU-6 (Waste Management Plan) to reduce impacts to a level of less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements do not involve the development of new dwelling units or permanent employment opportunities and, thus, would not increase generation of solid waste such that additional landfill capacity would be required. Thus, MM PSU-6 would not apply. As such, the proposed improvements would not alter any solid waste conclusions set forth in the 2015 FEIR.

Mitigation Measures

MM PSU-6 Prior to issuance of building permits, the project applicant shall prepare and submit a Waste Management Plan to the City of American Canyon for review and approval. The plan shall estimate volume or weight of project construction and demolition debris; materials type to be generated; the maximum volume or weight of such materials that can feasibly be diverted via reuse or recycling, the vendor or facility proposed to use, collect, or receive that material; the estimated volume or weight of construction and demolition materials that will be land filled; and project square footage. The approved plan shall be implemented during construction activities **(This mitigation measure does not apply to roadway improvement projects).**

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
XIX. Wildfire *If located in or near State Responsibility Areas or lands classified as very high fire hazard severity zones, would the project:*					
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on wildfire.	**No.** There are no new circumstances that would result in new or more severe impacts on wildfire.	**No.** No new information of substantial importance indicates the need for additional analysis of wildfire.	None
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on wildfire.	**No.** There are no new circumstances that would result in new or more severe impacts on wildfire.	**No.** No new information of substantial importance indicates the need for additional analysis of wildfire.	None
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on wildfire.	**No.** There are no new circumstances that would result in new or more severe impacts on wildfire.	**No.** No new information of substantial importance indicates the need for additional analysis of wildfire.	None
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts on wildfire.	**No.** There are no new circumstances that would result in new or more severe impacts on wildfire.	**No.** No new information of substantial importance indicates the need for additional analysis of wildfire.	None

Discussion

a-d) The 2015 FEIR indicated that the NLP2 Project site is surrounded by urban development and infrastructure on three sides and undeveloped marshy habitat on the fourth side; thus, it would not be susceptible to wildland fires. The 2015 FEIR concluded that no impact would occur.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The surrounding area consists of the Devlin Road Transfer Station (west), light industrial uses (north), SR-29 (east), and a vacant property contemplated to support commercial/industrial development (south). This area is characterized as mostly developed and, thus, is not susceptible to wildland fire risks. Thus, it would not affect emergency response to wildfires, require the installation of wildfire fighting infrastructure, or be susceptible to post-fire hazards. As such, the proposed improvements would not alter any wildfire conclusions set forth in the 2015 FEIR.

Mitigation Measures

None.

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
XX. Mandatory Findings of Significance					
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number, or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	Less than significant impact with mitigation	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts associated with degrading the quality of the environment, substantially reducing the habitat of a fish or wildlife species, causing a fish or wildlife population to drop below self-sustaining levels, threatening to eliminate a plant or animal community, reducing the number or restrict the range of a rare or endangered plant or animal, or eliminating important examples of the major periods of California history or prehistory.	**No.** There are no new circumstances that would result in new or more severe impacts associated degrading the quality of the environment, substantially reducing the habitat of a fish or wildlife species, causing a fish or wildlife population to drop below self-sustaining levels, threatening to eliminate a plant or animal community, reducing the number or restrict the range of a rare or endangered plant or animal, or eliminating important examples of the major periods of California history or prehistory.	**No.** No new information of substantial importance indicates the need for additional analysis of degrading the quality of the environment, substantially reducing the habitat of a fish or wildlife species, causing a fish or wildlife population to drop below self-sustaining levels, threatening to eliminate a plant or animal community, reducing the number or restrict the range of a rare or endangered plant or animal, or eliminating important examples of the major periods of California history or prehistory.	MM BIO-1a, MM BIO-1b, MM BIO-2a, MM BIO-2b, MM BIO-2c, MM BIO-4a, MM BIO-4b, MM BIO-5a, MM BIO-5b, MM CUL-1, MM CUL-3, and MM CUL-4 *[MM BIO-1a, MM BIO-1b, MM BIO-2a, MM BIO-2b, MM BIO-2c, MM BIO-4a, MM CUL-1, MM CUL-3, and MM CUL-4 Would apply to the proposed improvements]*
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts associated with cumulatively considerable impacts.	**No.** There are no new circumstances that would result in new or more severe impacts associated with cumulatively considerable impacts	**No.** No new information of substantial importance indicates the need for additional analysis of cumulatively considerable impacts	None

Environmental Issue Area	Conclusion in 2015 FEIR	Do the Proposed Changes Involve New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Requiring New Analysis or Verification?	Mitigation Measures
current projects, and the effects of probable future projects)?					
c) Does the project have environmental effects, which will cause substantial adverse effects on human beings, either directly or indirectly?	Less than significant impact	**No.** The proposed improvements do not involve changes that would result in new or more severe impacts associated with environmental effects that will cause substantial adverse effects on human beings.	**No.** There are no new circumstances that would result in new or more severe impacts associated with environmental effects that will cause substantial adverse effects on human beings.	**No.** No new information of substantial importance indicates the need for additional analysis of environmental effects that will cause substantial adverse effects on human beings.	None

Discussion

a) The 2015 FEIR indicated that the NLP2 Project would have a less than significant impact on listed species, migratory species, or riparian habitat. The NLP2 Project would incorporate MMs BIO-1a, BIO-1b, BIO-2a, BIO-2b, BIO-2c, BIO-4a, BIO-4b, BIO-5a, and BIO-5b, which ensure that precautions are taken prior to construction to ensure that protected bird species would not be disturbed. The 2015 FEIR indicated that construction activities may encounter undiscovered cultural resources, and, therefore, MMs CUL-1, CUL-3, and CUL-4 would be implemented to reduce impacts to a level of less than significant. The 2015 FEIR concluded impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. MMs BIO-1a, BIO-1b, BIO-2a, BIO-2b, BIO-2c, BIO-4a, would apply; however, MMs BIO-4b, BIO-5a, and BIO-5b would not. As such, the proposed improvements would not alter any conclusions set forth in the 2015 FEIR.

b) The 2015 FEIR indicated that many of the NLP2 Project's impacts would occur during construction, with a few lasting operational effects. With regard to remaining areas of analysis, cumulatively, the NLP2 Project would not result in significant long-term impacts that would substantially combine with impacts of other current or probable future impacts. The NLP2 Project would not create impacts that are cumulatively considerable. The 2015 FEIR concluded impacts would be less than significant.

The proposed improvements would occur at SR-29/South Kelly Road and within the South Kelly Road right-of-way between SR-29 and Devlin Road. The improvements are intended to address traffic impacts from existing and approved projects in the vicinity. It would not generate new

vehicle trips. As such, the proposed improvements would not alter any conclusions set forth in the 2015 FEIR.

c) The preceding sections of this Initial Study/Addendum discuss various types of impacts that could have adverse effects on human beings, including:

- Dust and air pollutants during project construction activities (Section 3, Air Quality)
- Operational emissions (Section 3, Air Quality)

Each type of impact with the potential to cause substantial adverse effects on human beings has been evaluated, and this Initial Study/Addendum concludes that these potential impacts would not substantially increase with development of the NLP2 project and would be consistent with the results concluded in the 2015 FEIR.

Mitigation Measures

MMs BIO-1a, BIO-1b, BIO-2a, BIO-2b, BIO-2c, BIO-4a, BIO-4b, BIO-5a, BIO-5b, CUL-1, CUL-3, and CUL-4

Conclusion

The conclusions from the 2015 FEIR would remain unchanged with the approval of the improvements.

EXEMPT from recording fee pursuant to Government Code Section 27383

TERMINATION OF AMENDED AND RESTATED IMPROVEMENT AGREEMENT

AND

FIRST AMENDMENT TO SUBDIVISION IMPROVEMENT AND REIMBURSEMENT AGREEMENT

Napa Logistics Park

This Termination of Amended and Restated Improvement Agreement and First Amendment to Subdivision Improvement and Reimbursement Agreement (collectively, this "Amendment"), is made by and between the CITY OF AMERICAN CANYON ("City"), a California Municipal Corporation, and DWF IV NLP II, LLC, a Delaware limited liability company ("Developer") and is effective as of August ___, 2022 (the "Effective Date").

RECITALS

A. Developer is the developer of the Napa Logistics Park Phase 2 project ("Phase 2" or "Project"). Developer formerly owned the entirety of the Phase 2 site, consisting of an approximately 172.61-acre parcel (formerly Napa County Assessor Parcel Number 057-090-083). Developer currently owns Lots 1 and 2 of the Phase 2 site, as more particularly described on Exhibit A.

B. On December 15, 2015, the City Planning Commission recommended the City Council certify a Final Environmental Impact Report ("EIR") under the provisions of the California Environmental Quality Act (Pub. Res. Code § 21000 *et seq.*) ("CEQA") for the Project, and the City Council: (A) (i) certified the Final EIR as adequate to address environmental impacts associated with the Project, (ii) adopted a Statement of Overriding Considerations for the Project, and (iii) adopted the Mitigation Monitoring and Reporting Program ("MMRP") for the Project, based on all of the evidence presented to the City Council, as set out in City Council Resolution 2015-106, and (B) approved a Conditional Use Permit ("CUP") for the Project by adopting City Council Resolution 2015-107. The CUP

includes several conditions of approval, including conditions related to certain required public and private improvements (the "CUP Conditions").

C. On November 7, 2017, the City Council adopted Ordinance 2017-08, authorizing a Development Agreement for the Project to extend the CUP by an additional ten (10) years. To comply with CEQA, the City Council approved an Initial Study/Addendum prepared by First Carbon Solutions, dated August 31, 2017 ("2017 Addendum"). The City and Developer then entered into that certain Development Agreement, dated November 7, 2017, and recorded on November 8, 2017, as Instrument No. 2017-0025000 in the Official Records of the County (the "Phase 2 Development Agreement").

D. On January 25, 2018, by Resolution No. 2018-02, the City Planning Commission approved a Design Permit application for a building in Phase 2 and issued conditions of approval in connection therewith (the "Building 4 Conditions").

E. On March 22, 2018, by Resolution No. 2018-06, the City Planning Commission approved a Tentative Parcel Map, further subdividing Phase 2 into six (6) legal lots: (a) three (3) buildable lots of 58.19 acres, 37.40 acres, and 24.51 acres each (the "Development Parcels"), and (b) the collective remainder lots including an 8.54 acre lot for storm drainage purposes, a designated remainder lot of 37.21 acres which is subject to a wetlands conservation easement, and public road rights of way totaling 6.67 acres (the "Tentative Map Approval"). The Tentative Map Approval includes several conditions of approval, including conditions related to certain required public and private improvements (the "Map Conditions"). Map Condition 8 incorporates by reference as Map Conditions all CUP Conditions.

F. On June 27, 2018 the City and Developer entered into that certain Amended and Restated Improvement Agreement (recorded on July 2, 2018 as Instrument No. 2018-0013094 in the Official Records of the County) (the "Amended and Restated Improvement Agreement"), documenting certain improvement requirements for the Project.

G. On December 18, 2018, the City and Developer entered into that certain Subdivision Improvement and Reimbursement Agreement (recorded on December 18, 2018, as Instrument No. 2018-0024204 in the Official Records of the County) (the "Subdivision Improvement and Reimbursement Agreement"), documenting certain improvement requirements for the Project.

H. On March 4, 2019, Developer recorded Parcel Map—Napa Logistics Park Phase 2 in Book 28 of Parcel Maps, Pages 1 through 4, in the Official Records of the County ("Parcel Map"). Following recordation of the Parcel Map, Developer transferred Lot 4 to the Pacific Gas & Electric Company ("PG&E"), and Developer transferred Lot 3 and the designated remainder lot to the Napa Logistics Park Association. Developer and PG&E also entered into a partial assignment and assumption of the Phase 2 Development Agreement, by which Developer retained

certain improvement obligations. Developer currently owns Lots 1 and 2 of the original Phase 2 site, as more particularly described on Exhibit A.

I. On June 25, 2020, by Resolution No. 2020-06, the City Planning Commission approved a Design Permit application for a building in Phase 2 and issued conditions of approval in connection therewith (the "Building 3 Conditions").

J. Both the Amended and Restated Improvement Agreement and the Subdivision Improvement and Reimbursement Agreement addressed and implemented requirements for certain roadway improvements at SR-29 and South Kelly Road (the "Original South Kelly Improvements"), as set forth in CUP Condition 16.1, the Map Conditions, MM-TRANS-1d, MM-TRANS-2a, the Napa Logistics Park Phase I approvals, and other Project approvals. The Subdivision Improvement and Reimbursement Agreement also addressed certain Transportation Demand Management ("TDM") requirements for the Project, as set forth in CUP Conditions 16.e and 17, MM-TRANS-1a and MM-TRANS-1b, and other Project approvals.

K. The Original South Kelly Improvements were premised on conservative assumptions about the Project's land uses, development square footage, and trip generation as analyzed in the Final EIR, and were based on the City's, County's, Napa Valley Transportation Authority's ("NVTA"), and Caltrans' plans for traffic improvements along the SR-29 corridor as of 2015. The Project's actual buildout has resulted in less intensive land uses, reduced development square footage, and fewer traffic trips compared to what was assumed and analyzed in the Final EIR and 2017 Addendum. In addition, the City, County, NVTA, and Caltrans have since updated their plans for traffic improvements along the SR-29 corridor.

L. Developer and the City now desire to modify the Original Roadway Improvements to reflect the actual land uses, development square footage, and trip generation for the Project as-built, and the agencies' updated improvement plans for the SR-29 corridor ("Modified South Kelly Improvements"). The Modified South Kelly Improvements are depicted in the preliminary plans, engineer's estimate, and contractor's estimate previously submitted to the City and listed on Exhibit C (the "Modified South Kelly Improvement Plans"), and are described on Exhibit D and in the Project's Amended MMRP, dated June 2022.

M. Developer and the City further desire to clarify the Transportation Demand Management ("TDM") requirements for the Project and the current status of those requirements. The clarified TDM requirements for the Project are described on Exhibit D and in the Project's Amended MMRP, dated June 2022.

N. Developer and the City further desire to document the Modified South Kelly Improvements and clarified TDM requirements in a single agreement.

O. The City has approved an Initial Study/Addendum prepared by First Carbon Solutions, dated July 2022 ("2022 Addendum"), which evaluated whether approval of the Modified South Kelly Improvements and other items included in this Amendment have the potential to cause new or substantially more severe environmental impacts over the Project impacts evaluated and identified in the Final EIR and 2017 Addendum, or whether there is any new information of substantial importance, which was not known and could not have been known at the time the Final EIR was certified as complete, that would require additional environmental review pursuant to Public Resources Code section 21166 and the CEQA Guidelines sections 15162–15164. The 2022 Initial Study/Addendum determined that there is no potential for new or more severe significant environmental impacts, and the City has determined that no subsequent EIR is required. The City has also approved an Amended MMRP for the Project, dated June 2022, which addresses the Modified South Kelly Improvements and the TDM requirements, and which identifies those Mitigation Measures that continue to apply to the Project and those that have been completed or no longer apply.

P. Since the Amended and Restated Improvement Agreement and the Subdivision Improvement and Reimbursement Agreement both address the Original South Kelly Improvements and since there are no other improvements or Developer obligations otherwise outstanding under the Amended and Restated Improvement Agreement, the Parties now desire to: (1) terminate the Amended and Restated Improvement Agreement, and (2) amend the Subdivision Improvement and Reimbursement Agreement to require the Modified South Kelly Improvements in lieu of the Original South Kelly Improvements, to specify the Parties' respective rights and obligations for the construction and funding of the Modified South Kelly Improvements, to clarify the TDM requirements, and to make corresponding revisions to all other Project approvals, entitlements, and requirements.

NOW, THEREFORE, for and in consideration of the City and Developer ("Parties") agree as follows:

TERMINATION OF AMENDED AND RESTATED IMPROVEMENT AGREEMENT

Napa Logistics Park Phases I and II

1. **Termination**. The Parties agree that the Amended and Restated Improvement Agreement is terminated as of the Effective Date.

2. **Improvements.** Developer shall have no further obligations with respect to the Improvements listed in Section 2, including subsections (a) through (e), of the Amended and Restated Improvement Agreement. These Improvements

are superseded and replaced by the Modified South Kelly Improvements, which will be governed by this Amendment, as set forth below.

3. **Security**. The Parties acknowledge that Developer caused Bank of America, N.A. to issue and annually renew Irrevocable Standby Letters of Credit, naming the City as beneficiary, as security for the obligations set forth in the Amended and Restated Improvement Agreement (the "Letters of Credit"). The Parties agree that the Letters of Credit may now be cancelled. The City shall provide Developer with its written consent to cancel the Letters of Credit within five (5) business days following Developer's payment of the fair share obligation described in Section 4 of this Amendment.

FIRST AMENDMENT TO SUBDIVISION IMPROVEMENT AND REIMBURSEMENT AGREEMENT

Napa Logistics Park Phase 2

4. **Amendment to Section 2.c**. Section 2.c of the Subdivision Improvement and Reimbursement Agreement is deleted and replaced in its entirety as follows.

> **CUP Condition 16.a: South Kelly Improvements.** The Parties hereby agree to modify the roadway improvements required at SR-29 and South Kelly Road, as originally set forth in CUP Condition 16.a, Mitigation Measure TRANS-1d, and Mitigation Measure TRANS-2a ("Original South Kelly Improvements"). The modified improvements at SR-29 and South Kelly Road ("Modified South Kelly Improvements") are depicted on the improvement plans listed on Exhibit C, and are described on Exhibit D and in the Project's Amended MMRP dated June 2022.
>
> The Parties agree and acknowledge that Developer shall have no further obligations with respect to the Original South Kelly Improvements, and that the City did not require construction of the Original South Kelly Improvements prior to issuing certificates of occupancy for the Project.
>
> Developer's obligation with respect to the Modified South Kelly Improvements is limited to making a fair share payment to the City, in the amount of $1,001,354.12, reflecting 83% of the engineer's estimate for the work. The fair share payment shall be due to the City within 60 days following the Effective Date.
>
> The City shall be responsible for all other obligations relating to the Modified South Kelly Improvements, including without limitation, obtaining any required encroachment permits from the County or

Caltrans; acquiring any necessary easements or rights-of-way; constructing, repairing, and replacing the Modified South Kelly Improvements; and satisfying any other applicable obligations for the Modified South Kelly Improvements identified in Section 1 of this Subdivision Improvement and Reimbursement Agreement.

5. Amendment to Section 2.d. Section 2.d of the Subdivision Improvement and Reimbursement Agreement is deleted and replaced in its entirety as follows.

CUP Condition 17: TDM. The Parties agree and acknowledge that Developer has submitted, and the City has approved, a Transportation Demand Management program for the Project, entitled "Napa Logistics Park Transportation Demand Management (TDM) Strategies and Monitoring," prepared by Fehr & Peers and dated October 2020 (the "TDM Program"). The Parties further agree and acknowledge that the TDM Program has been incorporated into the Declaration of Covenants, Conditions, and Restrictions and Grant of Easements for Napa Logistics Park (recorded on September 12, 2017 as Instrument No. 2017-0020645 in the Official Records of the County), as subsequently amended (the "CC&Rs"). Section 3.3.14 of the CC&Rs requires the Association to monitor each Occupant's compliance with the TDM Program and to allocate to an Owner or Owners any fines imposed by the City in connection with an Occupant's violation of the TDM Program.

The Parties hereby agree to clarify and/or modify the TDM requirements as originally set forth in the Project approvals, including CUP Condition 16.e, CUP Condition 17, and Mitigation Measures TRANS-1a and TRANS-1b, such that Developer is not required to satisfy any further TDM requirements beyond those it has already completed as described in the paragraph above. Without limitation, Developer is not required to enter into any further TDM Agreement, conduct additional monitoring, install a permanent vehicle counting station, or make any further financial guarantee to the City. The City finds that the TDM Program as implemented through the CC&Rs is effective, and Developer is hereby deemed to have complied with all applicable TDM requirements for the Project.

6. Addition of New Section 2.f. A new Section 2.f is added to the Subdivision Improvement and Reimbursement Agreement as follows.

Applicability to Other Project Approvals. The provisions of this Subdivision and Improvement Agreement, including the requirements for the Modified South Kelly Improvements and TDM requirements as described herein, shall control over and be automatically substituted into all

other Project approvals, entitlements, and agreements that address the same improvements or requirements.

7. Amendment to Exhibit C. Exhibit C to the Subdivision Improvement and Reimbursement Agreement, listing the Improvement Plans, is hereby amended to include the Improvement Plans listed on Exhibit C to this Amendment.

8. Amendment to Exhibit D. Exhibit D to the Subdivision Improvement and Reimbursement Agreement, describing the covered Improvements, is hereby amended with respect to CUP Conditions 16.a, 16.e, and 17 as shown on Exhibit D to this Amendment.

9. Section 3.b. The Parties agree and acknowledge that Developer's payment under Section 4 of this Amendment represents the Project's fair share of the construction costs for the Modified South Kelly Improvements. The reimbursement provisions of Section 3.b of the Subdivision Improvement and Reimbursement Agreement shall continue to apply only for the limited purpose of entitling Developer to reimbursement for the planning and engineering costs for the Modified South Kelly Improvements, which Developer paid for and advanced 100%.

10. Deletion of Section 3.e. Section 3.e of the Subdivision Improvement and Reimbursement Agreement is hereby deleted in its entirety. City shall be solely responsible for constructing the Modified South Kelly Improvements and Developer shall be responsible only for making the fair share payment described in Section 4 of this Amendment.

11. Full Force and Effect. The Subdivision Improvement and Reimbursement Agreement, as amended by this Amendment, shall continue to remain in full force and effect. This Amendment and the Subdivision Improvement and Reimbursement Agreement shall be construed as a whole in order to effectuate the intent of the Parties as specified in this Amendment. All provisions of the Subdivision Improvement and Reimbursement Agreement affected by this Amendment shall be deemed amended regardless of whether so specified in this Amendment. This Amendment shall be binding upon and inure to the benefit of the Parties and their respective successors and assigns.

12. Indemnification. Developer shall defend, indemnify, and hold harmless the City of American Canyon, its elected and appointed officials, employees, volunteers, and legal counsel, as set forth in the Phase 2 Development Agreement.

MISCELLANEOUS AGREEMENTS

13. Defined Terms. Defined terms used in this Amendment which are not defined herein shall have the same meaning as set forth in the Subdivision Improvement and Reimbursement Agreement.

14. **Captions**. The section headings or captions appearing in this Amendment are for convenience only, are not a part of this Amendment and are not to be considered in interpreting this Amendment.

15. **Counterparts**. This Amendment may be executed in counterparts, each of which shall be deemed an original, but all of which taken together shall constitute but one and the same document.

16. **Entire Agreement; Modification**. This Amendment constitutes the complete agreement between the Parties regarding the subject matter hereof, and supersedes any prior oral or written agreements between the Parties. There are no verbal agreements that change this Amendment, and no waiver of any of their respective terms will be effective, unless in writing executed by the Parties.

[Amendment continued on next page]

IN WITNESS WHEREOF, the parties hereto have executed this Amendment as of the Effective Date.

LIST OF MODIFIED SOUTH KELLY IMPROVEMENT PLANS

(Kier & Wright, dated July 2021)

EXHIBIT D

AMENDED IMPROVEMENTS

AMENDED IMPROVEMENTS
Amended CUP Condition 16.a/Amended MM TRANS-1d The project applicant shall make a fair share payment to the City to support the City's implementation of the following improvements to SR-29. This scope is based on improvements that have already been constructed, the project's reduced trip generation, and the project's reduced extent of development as documented in the 2022 transportation impact study. (1) At the intersection of SR-29 at South Kelly Road: - Southbound approach: construct 1 new right-turn lane - Eastbound approach: replace existing left-turn lane and through-right lane with 1 new left-turn lane, 1 new left-through lane, and 1 new right-turn lane. (2) At the intersection of South Kelly Road and Devlin Road: - Westbound approach: construct 1 new left-turn lane (3) South Kelly Road, between Devlin Road and SR-29 intersections: - Westbound lane: construct new 2nd westbound lane - Center Lane: construct 1 new two-way left-turn lane
Amended CUP Conditions 16.e.; 17/Amended MM TRANS-1a and MM-TRANS-1b. The project applicant shall establish a Transportation Demand Management (TDM) program, subject to review and approval by the City. The intent of the TDM program is to ensure that traffic volumes generated by the Project do not exceed that which would occur from warehouse-only uses. Notwithstanding its intent, the applicant shall implement this mitigation measure regardless of the mix of uses (warehouse-only or warehouse/industrial/office) that is eventually built. To ensure its enforceability, the project applicant shall incorporate the TDM program into the CC&Rs for the Napa Logistics Park. The CC&Rs shall require the Association to monitor each Occupant's compliance with the TDM program and to allocate to an Owner or Owners any fines imposed by the City in connection with an Occupant's violation of the TDM program. **(The applicant has already fully complied with this condition and mitigation measure. The applicant submitted, and the City approved, a Transportation Demand Management program for the Project, entitled "Napa Logistics Park Transportation Demand Management (TDM) Strategies and Monitoring," prepared by Fehr & Peers and dated October 2020. The applicant incorporated the TDM program into the Declaration of Covenants, Conditions, and Restrictions and Grant of Easements for Napa Logistics Park (recorded on September 12, 2017 as Instrument No. 2017-0020645**

AMENDED IMPROVEMENTS
in the Official Records of the County), as subsequently amended. Section 3.3.14 of the CC&Rs requires the Association to monitor each Occupant's compliance with the TDM Program and to allocate to an Owner or Owners any fines imposed by the City in connection with an Occupant's violation of the TDM Program.)

CITY OF AMERICAN CANYON CONSTRUCTION NOTES:

1. CONTRACTOR AGREES TO ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR THE JOB SITE DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE CITY REPRESENTATIVES HARMLESS FROM ANY AND ALL LIABILITY, REAL AND/OR ALLEGED, IN CONJUNCTION WITH THE PERFORMANCE OF THIS PROJECT.
2. CONTRACTOR SHALL BE HELD RESPONSIBLE FOR ANY AND ALL DAMAGES TO EXISTING STRUCTURES AND UTILITIES DURING CONSTRUCTION.
3. CONTRACTOR SHALL VERIFY LOCATIONS, LEVELS, DISTANCES, AND FEATURES THAT MAY AFFECT THE WORK. SHOULD EXISTING CONDITIONS DIFFER FROM THOSE SHOWN OR INDICATED, OR IF IT APPEARS THAT THESE PLANS, STANDARD SPECIFICATIONS, AND SPECIAL PROVISIONS DO NOT ADEQUATELY DETAIL THE WORK TO BE DONE, CONTRACTOR SHALL NOTIFY THE ENGINEER PRIOR TO CONTINUING WITH ANY RELATED WORK. NO ALLOWANCE WILL BE MADE IN HIS BEHALF FOR ANY EXTRA EXPENSE RESULTING FROM FAILURE OR NEGLECT IN DETERMINING THE CONDITIONS UNDER WHICH WORK IS TO BE PERFORMED. NOTED DIMENSIONS TAKE PRECEDENCE OVER SCALE.
4. A SET OF SIGNED BLUEPRINTS AND A SET OF SPECIFICATIONS WILL BE KEPT AT ALL TIMES AT THE JOB SITE ON WHICH ALL CHANGES OR VARIATIONS IN THE WORK, INCLUDING ALL EXISTING UTILITIES, ARE TO BE RECORDED AND/OR CORRECTED DAILY AND SUBMITTED TO THE CITY ENGINEER WHEN THE WORK TO BE DONE IS COMPLETED.
5. CONTRACTOR TO EXPOSE AND CHECK LOCATIONS OF EXISTING INVERTS PRIOR TO CONSTRUCTION.
6. CONTRACTOR SHALL NOTIFY ALL PUBLIC OR PRIVATE UTILITY COMPANIES 48 HOURS PRIOR TO COMMENCEMENT OF WORK ADJACENT TO EXISTING UTILITY LINES UNLESS ENCROACHMENT PERMIT SPECIFIES OTHERWISE.
7. CONTRACTOR SHALL CONTACT THE CITY'S DIRECTOR OF PUBLIC WORKS, OR HIS DESIGNEE, TO ARRANGE A PRE-CONFERENCE FOR THE PURPOSE OF REVIEWING JOB REQUIREMENTS AND CITY PROCEDURES.
8. PRIOR TO THE START OF CONSTRUCTION, CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (800-642-2444) FOR THE LOCATION OF EXISTING UTILITY FACILITIES.
9. ALL MATERIALS SHALL BE FURNISHED AND INSTALLED BY THE CONTRACTOR UNLESS OTHERWISE NOTED.
10. CONTRACTOR SHALL COORDINATE ALL NECESSARY UTILITY RELOCATIONS, IF REQUIRED, WITH THE APPROPRIATE UTILITY COMPANIES.
11. CONTRACTOR SHALL NOTIFY THE DIRECTOR OF PUBLIC WORKS AT LEAST 72 HOURS IN ADVANCE OF COMMENCEMENT OF ANY PART OF THE WORK.
12. PRIOR TO COMMENCEMENT OF ANY CONSTRUCTION ACTIVITIES, CONTRACTOR SHALL LOCATE, BY EXCAVATION, EXISTING WATER FACILITIES TO ASCERTAIN VERTICAL AND HORIZONTAL POSITION. IF CONFLICTS ARISE, DEVELOPER'S ENGINEER SHALL SUBMIT AN ALTERNATE DESIGN ACCEPTABLE TO THE CITY'S DIRECTOR OF PUBLIC WORKS.
13. CONTRACTOR SHALL PROVIDE RECORD DRAWINGS PER CITY OF AMERICAN CANYON REQUIREMENTS.

CALTRANS GENERAL NOTES

1. ALL CONSTRUCTION SHALL CONFORM TO THESE PLANS, LATEST VERSION OF CALTRANS STANDARD DETAILS AND SPECIFICATIONS, THE STANDARD DETAILS AND SPECIFICATIONS OF THE CITY OF AMERICAN CANYON, DATED 1995 THE COUNTY OF NAPA STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION, WHERE APPLICABLE.
2. ALL WORK PERFORMED WITHIN STATE HIGHWAY RIGHT-OF-WAY MUST CONFORM TO ALL APPLICABLE DEPARTMENTAL CONSTRUCTION STANDARDS INCLUDING BUT NOT LIMITED TO: STANDARD SPECIFICATIONS, STANDARD PLANS, PROJECT DEVELOPMENT PROCEDURES MANUAL, HIGHWAY DESIGN MANUAL AND SPECIAL PROVISIONS.
3. CONTRACTOR MUST KEEP THE PERMIT PACKAGE OR A COPY THEREOF AT THE WORK SITE AT ALL TIMES AND MUST SHOW IT UPON REQUEST TO ANY DEPARTMENT REPRESENTATIVE OR LAW ENFORCEMENT OFFICE.
4. DEVIATIONS FROM PLANS, SPECIFICATIONS, AND/OR THE PERMIT CONDITIONS AS DEFINED IN GENERAL PROVISION NUMBER 5 ARE NOT ALLOWED WITHOUT PRIOR APPROVAL FROM THE DEPARTMENT'S REPRESENTATIVE.
5. CONTRACTOR NEED TO PROVIDE LANE CLOSURE REQUEST SUBMITTALS AND NOTIFICATION OF CLOSURES TO THE DEPARTMENT PER STANDARD SPECIFICATIONS. THE CONTRACTOR MUST NOTIFY THE DEPARTMENT'S REPRESENTATIVE AND THE TRAFFIC MANAGEMENT CENTER (TMC) BEFORE INITIATING A LANE CLOSURE OR CONDUCTING AN ACTIVITY THAT MAY CAUSE A TRAFFIC IMPACT. IN EMERGENCY SITUATIONS WHEN THE CORRECTIVE WORK OR THE EMERGENCY ITSELF MAY AFFECT TRAFFIC, THE DEPARTMENT'S REPRESENTATIVE AND THE TMC MUST BE NOTIFIED AS SOON AS POSSIBLE.
6. AS REQUIRED BY LAW, THE CONTRACTOR MUST PROVIDE TRAFFIC CONTROL PROTECTION, WARNING SIGNS, LIGHTS, SAFETY DEVICES, ETC., AND TAKE ALL OTHER MEASURES NECESSARY FOR THE TRAVELING PUBLIC'S SAFETY. WHILE PROVIDING TRAFFIC CONTROL, THE NEEDS OF ALL ROAD USERS, INCLUDING BUT NOT LIMITED TO MOTORISTS, BICYCLISTS AND PEDESTRIANS, INCLUDING PERSONS WITH DISABILITIES IN ACCORDANCE WITH THE AMERICANS WITH DISABILITIES ACT, MUST BE AN ESSENTIAL PART OF THE WORK ACTIVITY.
7. PERMITTEE IS RESPONSIBLE FOR RESTORATION AND REPAIR OF STATE HIGHWAY RIGHT-OF-WAY RESULTING FROM PERMITTED WORK (STREETS AND HIGHWAYS CODE, SECTION 670 ET SEQ.).
8. UPON COMPLETION OF WORK, CONTRACTOR MUST REMOVE AND DISPOSE OF ALL SCRAPS, REFUSE, BRUSH, TIMBER, MATERIALS, ETC. OFF THE STATE HIGHWAY RIGHT-OF-WAY. THE AESTHETICS OF THE HIGHWAY MUST BE AS IT WAS BEFORE WORK STARTED OR BETTER.
9. THE CONTRACTOR SHALL NOTIFY THE CITY ENGINEER 48 HOURS PRIOR TO REQUIRED INSPECTIONS AND CONSTRUCTION STAKING.
10. CONTRACTOR SHALL KEEP THE NAPA COUNTY SHERIFF, AMERICAN CANYON FIRE DISTRICT, AND ENGINEER INFORMED DAILY REGARDING EXCAVATIONS, BARRICADES, AND DETOURS.
11. CONTRACTOR SHALL LEAVE EMERGENCY TELEPHONE NUMBERS WITH THE ABOVE DEPARTMENTS AND ENGINEER.
12. THE CONTRACTOR SHALL KEEP EXISTING STREETS FREE FROM DIRT AND DEBRIS DURING ALL PHASES OF CONSTRUCTION.
13. THE CONTRACTOR SHALL PROVIDE DUST CONTROL AT ALL TIMES. PRIOR TO OBTAINING WATER FROM FIRE HYDRANTS, THE CONTRACTOR SHALL OBTAIN A HYDRANT WATER METER FROM THE CALIFORNIA WATER SERVICE COMPANY (OR CITY WATER RESOURCES DIVISION, WHERE APPROPRIATE).
14. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (U.S.A.) 800-227-2600, 48 HOURS PRIOR TO START OF EXCAVATION OR DEMOLITION OF IMPROVEMENTS SO THAT UTILITIES MAY BE NOTIFIED AND LINES MARKED.
15. ANY DAMAGE TO THE EXISTING FACILITIES, INCLUDING LANDSCAPING, IRRIGATION, FENCES, WALLS, SIDEWALK AND OTHER PAVEMENT SURFACES, SHALL BE REPAIRED AT CONTRACTOR'S EXPENSE.

KIER & WRIGHT GENERAL NOTES

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE ELEVATIONS OF THE EXISTING STORM DRAINS, SEWERS AND WATER PRIOR TO COMMENCING THE WORK. NOTIFY THE ENGINEER IF ACTUAL IS DIFFERENT FROM PLANS.
2. CONSTRUCTION CONTRACTOR AGREES THAT IN ACCORDANCE WITH GENERALLY ACCEPTED CONSTRUCTION PRACTICES, CONSTRUCTION CONTRACTOR WILL BE REQUIRED TO ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THE PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL BE MADE TO APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS, AND CONSTRUCTION CONTRACTOR FURTHER AGREES TO DEFEND, INDEMNIFY AND HOLD DESIGN PROFESSIONAL HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THE PROJECT, EXPECTING LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF DESIGN PROFESSIONAL.
3. TOPOGRAPHY SHOWN ON THE PLANS REPRESENTS APPROXIMATE CONDITIONS AS OF SEPTEMBER 2013.
4. CONTRACTOR SHALL REPLACE OR REPAIR, AT CONTRACTOR'S OWN EXPENSE, ALL DAMAGED, REMOVED, OR OTHERWISE DISTURBED WALLS, FENCES, SERVICES, UTILITIES, IMPROVEMENTS OF FEATURES OF WHATEVER NATURE TO THEIR ORIGINAL CONDITION WHETHER SHOWN ON THE PLANS OR NOT; PROVIDED SUCH REPAIR OR REPLACEMENT IS CAUSED BY CONTRACT WORK OPERATORS.
5. UNAUTHORIZED CHANGES AND USES: THE ENGINEER PREPARING THESE PLAN WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING AND MUST BE APPROVED BY THE PREPARE OF THESE PLANS.
6. LOCATIONS OF EXISTING UNDERGROUND FACILITIES AND UTILITIES SHOWN ARE APPROXIMATE AND ARE BASED ON FIELD SURVEY AND/OR AVAILABLE UTILITY COMPANY INFORMATION. IT IS THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE ACTUAL LOCATION OF UTILITIES PRIOR TO THE COMMENCEMENT OF WORK. AS REQUIRED, PHYSICAL VERIFICATION OF UTILITY LOCATION SHALL BE PERFORMED BY POT HOLING OR HAND DIGGING AND CAREFUL SUBSURFACE PROBING IN CONFORMANCE WITH ARTICLE 6 OF THE CAL/OSHA CONSTRUCTION SAFETY ORDER. ANY DEVIATIONS FROM LOCATIONS SHOWN ON THE PLANS SHALL BE BROUGHT TO THE ENGINEERS ATTENTION BEFORE STARTING CONSTRUCTION.
7. CONSTRUCTION CONTRACTORS SHALL MUFFLE AND SHIELD INTAKES AND EXHAUSTS, SHROUD OR SHIELD IMPACT TOOLS, AND USE ELECTRIC-POWERED RATHER THAT DIESEL-POWERED CONSTRUCTION EQUIPMENT (AS FEASIBLE).
8. ALL STATIONARY NOISE-GENERATING EQUIPMENT SHALL BE LOCATED AS FAR AWAY AS POSSIBLE FROM NEIGHBORING PROPERTY LINES.
9. ALL CONSTRUCTION EQUIPMENT SHALL BE MAINTAINED AND OPERATED ACCORDING TO MANUFACTURER'S MAINTENANCE SCHEDULES AND RECOMMENDATIONS TO MINIMIZE NOISE AND EXHAUST EMISSIONS (PARTICULAR NITROGEN OXIDES).
10. THE DEVELOPER SHALL BE RESPONSIBLE FOR SECURING AND COMPLYING WITH APPROPRIATE PERMITS FROM THE BAY AREA AIR QUALITY MANAGEMENT DISTRICT FOR ANY EQUIPMENT OR PROCESSES THAT COULD RESULT IN EMISSIONS OF CRITERIA, TOXIC OR ODOROUS EMISSIONS.
11. THE CONTRACTOR IS REQUIRED TO HIRE A TESTING LABORATORY TO PERFORM COMPACTION TESTS. THE TEST RESULTS SHALL BE SUBMITTED TO THE CITY'S CONSTRUCTION ENGINEER PRIOR TO ANY OFF-SITE PAVING.
12. GRADING CONTRACTOR SHALL MAINTAIN A WATER TRUCK ON SITE DURING ALL GRADING ACTIVITY TO WATER GRADE MATERIAL AND CONTROL DUST. CONTRACTOR SHALL COVER STOCKPILED DIRT WITH PLASTIC AND ANCHOR THE PLASTIC TO THE GROUND. ALL GRADING, EARTH-MOVING OR EXCAVATION SHALL CEASE WHEN WINDS EXCEED 20 MPH.

CULTURAL RESOURCE NOTES:

1. THE PROJECT SPONSOR WILL HIRE A QUALIFIED ARCHAEOLOGIST TO MONITOR ALL EXCAVATION ACTIVITIES, INCLUDING GRADING AND TRENCHING ACTIVITIES, WHO WILL ADVISE THE SPONSOR ON APPROPRIATE EXCAVATION LEVELS, AND CONDUCT SPOT CHECKS OF ALL EXCAVATED MATERIALS AND OPEN EXCAVATION AREAS. THE ARCHAEOLOGIST WILL ALSO BRIEF PROJECT PERSONNEL AND CONSTRUCTION WORKERS ON THE POTENTIAL FOR FINDING ARCHAEOLOGICAL RESOURCES AT THE SITE, PREPARE MATERIALS THAT DESCRIBE THE APPURTENANCE OF POTENTIAL RESOURCES, AND APPRISE PERSONNEL OF THE PROCEDURES TO FOLLOW IF SUCH RESOURCES ARE FOUND.
2. IF ARCHAEOLOGICAL RESOURCES ARE UNCOVERED, WORK AT THE PLACE OF DISCOVERY SHALL BE HALTED IMMEDIATELY, FOR A PERIOD NOT TO EXCEED FOUR WEEKS, AND A QUALIFIED ARCHAEOLOGIST SHOULD EVALUATE THE FIND. PREHISTORIC ARCHAEOLOGICAL SITE INDICATORS INCLUDE; OBSIDIAN AND CHART FLAKES AND CHIPPED STONE TOOLS; GRINDING AND MASHING IMPLEMENTS SUCH AS SLABS AND HANDSTONES, AND MORTARS AND PESTLES; AND LOCALLY DARKENED MIDDEN SOILS CONTAINING SOME OF THE PREVIOUSLY LISTED ITEMS PLUS FRAGMENTS OF BONE AND FIRE AFFECTED STONES. IF THE ARCHAEOLOGICAL RESOURCES ARE DETERMINED BY THE ARCHAEOLOGIST TO BE SIGNIFICANT, THE PROJECT SPONSOR WILL, AFTER CONSULTATION WITH NAPA COUNTY, CONSTRUCT A PUBLICLY ACCESSIBLE HISTORIC DISPLAY THAT DOCUMENTS THE FIND AT THE PROJECT SITE.
3. IF HUMAN REMAINS ARE ENCOUNTERED DURING PROJECT CONSTRUCTION, THE PROJECTS SPONSOR AND/OR ITS EMPLOYEES SHALL NOTIFY THE NAPA COUNTY CORNER'S OFFICE IMMEDIATELY. UPON DETERMINATION BY THE COUNTY CORNER'S THAT THE REMAINS ARE NATIVE AMERICAN, THE CORONER SHALL CONTACT THE CALIFORNIA NATIVE AMERICAN HERITAGE COMMISSION. PURSUANT TO SUBDIVISION(C) OF SECTION 7050.5 OF THE HEALTH AND SAFETY CODE, AND THE COUNTY COORDINATOR OF INDIAN AFFAIRS.

NOTES -GEOTECHINCAL REPORT

1. THE PROJECT GEOTECHNICAL REPORT PREPARED BY CORNERSTONE EARTH GROUP, DATED NOVEMBER 2, 2017 SHOULD BE USED AND REFERRED TO FOR ADDITIONAL RECOMMENDATIONS NOT PROVIDED IN THESE NOTES.
2. SITE PREPARATION: AREAS TO BE DEVELOPED SHOULD BE CLEARED OF VEGETATION AND DEBRIS, INCLUDING THAT LEFT BY THE REMOVAL OF OBSOLETE STRUCTURES. TREES AND SHRUBS THAT WILL NOT BE PART OF THE PROPOSED DEVELOPMENT SHOULD BE REMOVED AND THEIR PRIMARY ROOT SYSTEM GRUBBED. CLEARED AND GRUBBED MATERIAL SHOULD BE REMOVED FROM THE SITE AND DISPOSED OF IN ACCORDANCE WITH COUNTY HEALTH DEPARTMENT GUIDELINES.
3. VOIDS CREATED DURING CLEARING SHOULD BE BACKFILLED WITH ENGINEERED FILL AS RECOMMENDED HEREIN.
4. STRIPPING, AREAS TO BE GRADED SHOULD BE STRIPPED OF THE UPPER FEW INCHES OF SOIL CONTAINING ORGANIC MATTER. SOIL CONTAINING MORE THAN THREE PERCENT BY WEIGHT ORGANIC MATTER SHOULD BE CONSIDERED ORGANIC. SURFICIAL STRIPPING SHOULD EXTEND ABOUT 3 TO 6 INCHES BELOW EXISTING GRADE IN VEGETATED AREAS. THE ACTUAL STRIPPING DEPTHS SHOULD BE DETERMINED BY REPRESENTATIVE OF THE GEOTECHNICAL ENGINEER IN THE FIELD AT THE TIME OF STRIPPING. THE STRIPPING SHOULD BE REMOVED FROM THE SITE OR IS SUITABLE STOCKPILED FOR RE-USE AS TOPSOIL IN LANDSCAPING.
5. AT ALL TIMES, TEMPORARY CONSTRUCTION EXCAVATIONS SHOULD CONFORM TO THE REGULATIONS OF THE DATE OF CALIFORNIA DEPARTMENT OF INDUSTRIAL RELATIONS, DIVISIONS OF INDUSTRIAL SAFETY OR OTHER STRICTER GOVERNING REGULATIONS.
8. ALL FILL MATERIALS SHOULD BE FREE OF PERISHABLE MATTER AND ROCKS OR LUMPS OVER 6 INCHES IN DIAMETER, AND MUST BE APPROVED BY THE GEOTECHNICAL ENGINEER PRIOR TO USE.
9. WE JUDGE THE ON-SITE SOILS GENERALLY SUITABLE FOR USE AS GENERAL FILL BUT WILL NOT BE SUITABLE FOR USE AS NON-EXPANSIVE FILL UNLESS THEY ARE CHEMICALLY TREATED.
10. IN GENERAL, IMPORTED FILL, IF NEEDED SHOULD BE INORGANIC WITH A PLASTICITY INDEX (PI) OF 15 OR LESS, AND NOT CONTAIN RECYCLED ASPHALT CONCRETE WHERE IT WILL BE USED WITHIN THE BUILDING AREA. THE GEOTECHNICAL ENGINEER SHOULD APPROVE IMPORTED MATERIAL PRIOR TO USE AS COMPACT FILL. THE GRADING CONTRACTOR IS RESPONSIBLE FOR SUBMITTING, AT LEAST 5 DAYS IN ADVANCE OF ITS INTENDED USE, SAMPLES OF THE PROPOSED IMPORT MATERIALS FOR LABORATORY TESTING AND APPROVAL BY THE SOIL ENGINEER.
11. APPROVED FILL MATERIAL SHOULD BE PLACED IN 8-INCH LIFTS. UNIFORMLY MOISTURE-CONDITIONED TO NEAR OPTIMUM AND PROPERLY COMPACTED. FILL PLACEMENT, MOISTURE CONDITIONING, AND COMPACTION SHOULD BE IN ACCORDANCE WITH THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
14. ALL STRUCTURE FILLS, INCLUDING THOSE PLACED TO ESTABLISH SITE SURFACE DRAINAGE, SHOULD BE COMPACTED TO AT LEAST 90 PERCENT RELATIVE COMPACTION OR PER THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
15. EXPANSIVE SOILS USED AS FILL SHOULD BE MOISTURE-CONDITIONED TO AT LEAST 3 PERCENT ABOVE OPTIMUM PER THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
16. IN GENERAL, CUT AND FILL SLOPES SHOULD BE DESIGNED AND CONSTRUCTED AT SLOPE GRADIENTS OF 3:1 (HORIZONTAL TO VERTICAL) OR FLATTER, UNLESS OTHERWISE APPROVED BY THE GEOTECHNICAL ENGINEER IN SPECIFIED AREAS.

GRADING NOTES

1. ALL GRADING SHALL BE DONE IN ACCORDANCE WITH RECOMMENDATIONS IN THE GEOTECHNICAL AND FOUNDATION INVESTIGATION PREPARED FOR THIS SITE.
2. CONTRACTOR SHALL DETERMINE HIS OWN EARTH QUANTITIES AND BASE HIS BID ACCORDINGLY.
3. TOP OF CURB ELEVATION IS 0.5' ABOVE THE A.C. PAVING AND SPOT ELEVATIONS ARE TO FINISHED SURFACE (UNLESS OTHERWISE NOTED).
4. COMPACTION TO BE DETERMINED USING ASTM D1557, LATEST EDITION LABORATORY TEST PROCEDURE.
5. ALL UTILITY STRUCTURES INCLUDING, BUT NOT LIMITED TO MANHOLES, CATCH BASINS, WATER VALVES, FIRE HYDRANTS, TELEPHONE AND ELECTRIC VAULTS, AND PULL BOXES, THAT LIE WITHIN THE PUBLIC RIGHT-OF-WAY EASEMENTS OR AREAS AFFECTED BY WORK ON THIS PROJECT SHALL BE ADJUSTED TO GRADE BY THE CONTRACTOR OR THE RESPECTIVE UTILITY COMPANY FOR WHICH THE CONTRACTOR IS RESPONSIBLE TO AFFECT COORDINATION.
6. THE TYPES, LOCATIONS, SIZES AND/OR DEPTHS OF EXISTING UNDERGROUND UTILITIES AS SHOWN ON THESES IMPROVEMENT PLANS WERE OBTAINED FROM SOURCES OF VARYING RELIABILITY. THE CONTRACTOR IS CAUTIONED THAT ONLY ACTUAL EXCAVATION WILL REVEAL THE TYPES, EXTENT, SIZES, LOCATIONS AND DEPTHS OF SUCH UNDERGROUND UTILITIES. A REASONABLE EFFORT HAS BEEN MADE TO LOCATE AND DELINEATE ALL KNOWN UNDERGROUND UTILITIES. HOWEVER, THE ENGINEER CAN NOT ASSUME RESPONSIBILITY FOR THE COMPLETENESS OR ACCURACY OF THEIR DELINEATION OF SUCH UNDERGROUND UTILITIES WHICH MAY BE ENCOUNTERED, BUT ARE NOT SHOWN ON THESE DRAWINGS.
7. CONTRACTOR SHALL UNCOVER AND EXPOSE ALL EXISTING UTILITY AND SEWER LINES WHERE THEY ARE TO BE CROSSED, ABOVE OR BELOW, BY THE NEW FACILITY BEING CONSTRUCTED IN ORDER TO VERIFY THE GRADE AND TO ASSURE THAT THERE IS SUFFICIENT CLEARANCE. PIPE SHALL NOT BE STRUNG NOR TRENCHING COMMENCED UNTIL ALL CROSSINGS HAVE BEEN VERIFIED FOR CLEARANCE. IF THE CONTRACTOR FAILS TO FOLLOW THIS PROCEDURE, HE WILL BE SOLELY RESPONSIBLE FOR ANY EXTRA WORK OR MATERIAL REQUIRED IF MODIFICATIONS TO THE DESIGN ARE NECESSARY.
8. THE CONTRACTOR SHALL SET HIS STRING OR WIRE THROUGH AT LEAST THREE GRADE STAKES TO VERIFY GRADE. IF THE STAKES DO NOT PRODUCE A UNIFORM GRADE, NOTIFY THE ENGINEER IMMEDIATELY AND HAVE THE GRADES CHECKED PRIOR THE TRENCHING OR PLACEMENT OF CONCRETE.
9. ALL WORK, IN THE PUBLIC RIGHT-OF-WAY, SHALL CONFORM TO THE CALTRANS STANDARD SPECIFICATIONS AND REQUIREMENTS.

EROSION AND SEDIMENT CONTROL MEASURES

1. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE EFFECTIVE FOR THE DURATION OF CONSTRUCTION.
2. AFTER THE UNDERGROUND STORM DRAIN SYSTEM IS INSTALLED, THE CATCH BASINS WILL BE INSTALLED (AS SOON AS PRACTICAL) AND ROCK BARRIER BAGS WILL BE PLACED AROUND THOSE CATCH BASINS AS SHOWN ON THIS PLAN UNTIL THIS SITE IS PAVED.
3. SHOULD THE ON-SITE STORM DRAINS NOT BE INSTALLED COMPLETELY BY OCTOBER 15, THE CONTRACTOR SHALL CONSTRUCT TEMPORARY SEDIMENT BASINS AT THE EXISTING STORM PIPES STUBBED TO THE SITE.
4. PERSON RESPONSIBLE FOR IMPLEMENTATION OF EROSION AND SEDIMENTATION PLAN.

   NAME: TBD
   ADDRESS: TBD
   TELEPHONE: TBD

5. THE CONTRACTOR SHALL PLACE 3"-6" COARSE AGGREGATE AS A GRAVEL ROADWAY (12" MIN. THICK FOR THE FULL WIDTH AND 50 FEET LONG) AT EACH D/W ENTRANCE TO SITE. ANY MUD THAT IS TRACKED ONTO PUBLIC STREETS SHALL BE REMOVED THAT SAME DAY AND AS REQUIRED BY THE CITY OF AMERICAN CANYON.
6. ALL EROSION CONTROL MEASURES SHALL BE MAINTAINED UNTIL DISTURBED AREAS ARE STABILIZED AND CHANGES TO THIS EROSION AND SEDIMENT CONTROL PLAN SHALL BE MADE TO MEET FIELD CONDITIONS ONLY WITH THE APPROVAL OF OR AT THE DIRECTION OF THE CITY ENGINEER.
7. ALL PAVED AREAS SHALL BE KEPT CLEAR OF EARTH MATERIAL AND DEBRIS. THE SITE SHALL BE MAINTAINED SO AS TO MINIMIZE SEDIMENT-LADEN RUN-OFF TO ANY STORM DRAINAGE SYSTEM.
8. ALL EROSION CONTROL FACILITIES MUST BE INSPECTED AND REPAIRED AT THE END OF EACH WORKING DAY.
9. SEDIMENT BASINS SHALL BE CLEANED OUT WHENEVER SEDIMENT REACHES THE SEDIMENT CLEANOUT LEVEL INDICATED ON THE PLANS.
10. BORROW AREAS AND TEMPORARY STOCKPILES SHALL BE PROTECTED WITH APPROPRIATE EROSION CONTROL MEASURES TO THE SATISFACTION OF THE CITY ENGINEER.
11. ALL CUT AND FILL SLOPES ARE TO BE PROTECTED TO PREVENT OVERBANK FLOW.
12. INLETS WHICH ARE NOT USED IN CONJUNCTION WITH ROCK BARRIER BAGS OR SEDIMENT BASINS SHOULD BE COVERED, OR OTHERWISE ADJUSTED TO PREVENT INFLOW, UNLESS THE AREA DRAINED IS UNDISTURBED OR STABILIZED.

DUST ABATEMENT NOTES:

THE CONSTRUCTION CONTRACTOR IS REQUIRED TO IMPLEMENT A DUST ABATEMENT PROGRAM. ELEMENTS OF THIS PROGRAM SHALL INCLUDE THE FOLLOWING.

1. WATER ALL ACTIVE CONSTRUCTION AREAS AT LEAST TWICE DAILY;
2. COVER ALL TRUCKS HAULING SOIL, SAND, AND OTHER LOOSE MATERIALS OR REQUIRE ALL TRUCKS TO MAINTAIN AT LEAST TWO FEET OF FREEBOARD (I.E. THE MINIMUM REQUIRED SPACE BETWEEN THE TOP OF THE LOAD AND THE TOP OF THE TRAILER);
3. PAVE, APPLY WATER THREE TIMES DAILY, OR APPLY (NON-TOXIC) SOIL STABILIZERS ON ALL UNPAVED ACCESS ROADS, PARKING AREAS AND STAGING AREAS AT CONSTRUCTION SITE;
4. SWEEP DAILY (PREFERABLY WITH WATER SWEEPERS) ALL PAVED ACCESS ROADS, PARKING AREAS, AND AREAS AT CONSTRUCTION SITE;
5. SWEEP STREETS DAILY (PREFERABLY WITH WATER SWEEPERS) IF VISIBLE SOIL MATERIAL IS CARRIED ONTO ADJACENT PUBLIC STREETS;
6. HYDROSEED OR APPLY (NON-TOXIC) SOIL STABILIZERS TO INACTIVE CONSTRUCTION AREAS (PREVIOUSLY GRADED AREAS INACTIVE FOR TEN DAYS OR MORE);
7. ENCLOSE, COVER, WATER TWICE DAILY OR APPLY (NON-TOXIC) SOIL STABILIZER TO EXPOSED STOCKPILES (DIRT, SAND, ETC.);
8. LIMIT TRAFFIC SPEEDS ON UNPAVED ROADS TO 15 MILES PER HOUR;

CITY OF AMERICAN CANYON CONSTRUCTION NOTES:

1. CONTRACTOR AGREES TO ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR THE JOB SITE DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE CITY REPRESENTATIVES HARMLESS FROM ANY AND ALL LIABILITY, REAL AND/OR ALLEGED, IN CONJUNCTION WITH THE PERFORMANCE OF THIS PROJECT.
2. CONTRACTOR SHALL BE HELD RESPONSIBLE FOR ANY AND ALL DAMAGES TO EXISTING STRUCTURES AND UTILITIES DURING CONSTRUCTION.
3. CONTRACTOR SHALL VERIFY LOCATIONS, LEVELS, DISTANCES, AND FEATURES THAT MAY AFFECT THE WORK. SHOULD EXISTING CONDITIONS DIFFER FROM THOSE SHOWN OR INDICATED, OR IF IT APPEARS THAT THESE PLANS, STANDARD SPECIFICATIONS, AND SPECIAL PROVISIONS DO NOT ADEQUATELY DETAIL THE WORK TO BE DONE, CONTRACTOR SHALL NOTIFY THE ENGINEER PRIOR TO CONTINUING WITH ANY RELATED WORK. NO ALLOWANCE WILL BE MADE IN HIS BEHALF FOR ANY EXTRA EXPENSE RESULTING FROM FAILURE OR NEGLECT IN DETERMINING THE CONDITIONS UNDER WHICH WORK IS TO BE PERFORMED. NOTED DIMENSIONS TAKE PRECEDENCE OVER SCALE.
4. A SET OF SIGNED BLUEPRINTS AND A SET OF SPECIFICATIONS WILL BE KEPT AT ALL TIMES AT THE JOB SITE ON WHICH ALL CHANGES OR VARIATIONS IN THE WORK, INCLUDING ALL EXISTING UTILITIES, ARE TO BE RECORDED AND/OR CORRECTED DAILY AND SUBMITTED TO THE CITY ENGINEER WHEN THE WORK TO BE DONE IS COMPLETED.
5. CONTRACTOR TO EXPOSE AND CHECK LOCATIONS OF EXISTING INVERTS PRIOR TO CONSTRUCTION.
6. CONTRACTOR SHALL NOTIFY ALL PUBLIC OR PRIVATE UTILITY COMPANIES 48 HOURS PRIOR TO COMMENCEMENT OF WORK ADJACENT TO EXISTING UTILITY LINES UNLESS ENCROACHMENT PERMIT SPECIFIES OTHERWISE.
7. CONTRACTOR SHALL CONTACT THE CITY'S DIRECTOR OF PUBLIC WORKS, OR HIS DESIGNEE, TO ARRANGE A PRE-CONFERENCE FOR THE PURPOSE OF REVIEWING JOB REQUIREMENTS AND CITY PROCEDURES.
8. PRIOR TO THE START OF CONSTRUCTION, CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (800-642-2444) FOR THE LOCATION OF EXISTING UTILITY FACILITIES.
9. ALL MATERIALS SHALL BE FURNISHED AND INSTALLED BY THE CONTRACTOR UNLESS OTHERWISE NOTED.
10. CONTRACTOR SHALL COORDINATE ALL NECESSARY UTILITY RELOCATIONS, IF REQUIRED, WITH THE APPROPRIATE UTILITY COMPANIES.
11. CONTRACTOR SHALL NOTIFY THE DIRECTOR OF PUBLIC WORKS AT LEAST 72 HOURS IN ADVANCE OF COMMENCEMENT OF ANY PART OF THE WORK.
12. PRIOR TO COMMENCEMENT OF ANY CONSTRUCTION ACTIVITIES, CONTRACTOR SHALL LOCATE, BY EXCAVATION, EXISTING WATER FACILITIES TO ASCERTAIN VERTICAL AND HORIZONTAL POSITION. IF CONFLICTS ARISE, DEVELOPER'S ENGINEER SHALL SUBMIT AN ALTERNATE DESIGN ACCEPTABLE TO THE CITY'S DIRECTOR OF PUBLIC WORKS.
13. CONTRACTOR SHALL PROVIDE RECORD DRAWINGS PER CITY OF AMERICAN CANYON REQUIREMENTS.

CALTRANS GENERAL NOTES

1. ALL CONSTRUCTION SHALL CONFORM TO THESE PLANS, CALTRANS STANDARD DETAILS AND SPECIFICATION, DATED JULY 2015, THE STANDARD DETAILS AND SPECIFICATIONS OF THE CITY OF AMERICAN CANYON, DATED 1995 THE COUNTY OF NAPA STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION, WHERE APPLICABLE.
2. THE ENGINEER SHALL PROVIDE STAKING TO ESTABLISH GRADE AS PROVIDED FOR IN THE PROJECT SPECIFICATIONS.
3. THE CONTRACTOR SHALL NOTIFY THE CITY ENGINEER 48 HOURS PRIOR TO REQUIRED INSPECTIONS AND CONSTRUCTION STAKING.
4. CONTRACTOR SHALL KEEP THE NAPA COUNTY SHERIFF, AMERICAN CANYON FIRE DISTRICT, AND ENGINEER INFORMED DAILY REGARDING EXCAVATIONS, BARRICADES, AND DETOURS.
5. CONTRACTOR SHALL LEAVE EMERGENCY TELEPHONE NUMBERS WITH THE ABOVE DEPARTMENTS AND ENGINEER.
6. THE CONTRACTOR SHALL KEEP EXISTING STREETS FREE FROM DIRT AND DEBRIS DURING ALL PHASES OF CONSTRUCTION.
7. THE CONTRACTOR SHALL PROVIDE DUST CONTROL AT ALL TIMES. PRIOR TO OBTAINING WATER FROM FIRE HYDRANTS, THE CONTRACTOR SHALL OBTAIN A HYDRANT WATER METER FROM THE CALIFORNIA WATER SERVICE COMPANY (OR CITY WATER RESOURCES DIVISION, WHERE APPROPRIATE).
8. THE CONTRACTOR SHALL MAINTAIN ACCESS TO PLACES OF RESIDENCE AND BUSINESS ALONG THE STREETS TO BE REPAIRED THROUGHOUT THE LIFE OF THE CONTRACT. ALL STREETS SHALL BE FULLY OPEN TO THROUGH TRAFFIC BETWEEN THE HOURS OF 3:30 PM AND 7:00 AM.
9. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (U.S.A.) 800-227-2600, 48 HOURS PRIOR TO START OF EXCAVATION OR DEMOLITION OF IMPROVEMENTS SO THAT UTILITIES MAY BE NOTIFIED AND LINES MARKED.
10. THE CONTRACTOR WILL BE REQUIRED TO PAY ANY ADDITIONAL FEES FOR INSPECTION OF ANY WORK PERFORMED OUTSIDE OF THE CITY'S NORMAL WORKING HOURS. SAID FEE WILL BE IN ACCORDANCE WITH THE LATEST PUBLIC WORKS OVERTIME INSPECTION FEE POLICY AND ARRANGEMENTS FOR INSPECTIONS SERVICES DETERMINED PRIOR TO THE WORK.
11. ANY DAMAGE TO THE EXISTING FACILITIES, INCLUDING LANDSCAPING, IRRIGATION, FENCES, WALLS, SIDEWALK AND OTHER PAVEMENT SURFACES, SHALL BE REPAIRED AT CONTRACTOR'S EXPENSE.
12. COMPACTION TESTING WILL BE PERFORMED ON ALL STREET WORK TO VERIFY THAT COMPACTION CONFORMS TO CITY STANDARDS.
13. THE INITIAL TEST AND ONE RETEST WILL BE PERFORMED BY THE CITY (24 HOURS NOTICE REQUIRED). ALL ADDITIONAL TESTING WILL BE AT THE CONTRACTOR'S EXPENSE.
14. ALL RETURN RADII AND CURVE DATA ARE TO FACE OF CURB OR TO CONTROL LINES.

KIER & WRIGHT GENERAL NOTES

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE ELEVATIONS OF THE EXISTING STORM DRAINS, SEWERS AND WATER PRIOR TO COMMENCING THE WORK. NOTIFY THE ENGINEER IF ACTUAL IS DIFFERENT FROM PLANS.
2. CONSTRUCTION CONTRACTOR AGREES THAT IN ACCORDANCE WITH GENERALLY ACCEPTED CONSTRUCTION PRACTICES, CONSTRUCTION CONTRACTOR WILL BE REQUIRED TO ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THE PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY: THAT THIS REQUIREMENT SHALL BE MADE TO APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS, AND CONSTRUCTION CONTRACTOR FURTHER AGREES TO DEFEND, INDEMNIFY AND HOLD DESIGN PROFESSIONAL HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THE PROJECT, EXPECTING LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF DESIGN PROFESSIONAL.
3. TOPOGRAPHY SHOWN ON THE PLANS REPRESENTS APPROXIMATE CONDITIONS AS OF SEPTEMBER 2013.
4. CONTRACTOR SHALL REPLACE OR REPAIR, AT CONTRACTOR'S OWN EXPENSE, ALL DAMAGED, REMOVED, OR OTHERWISE DISTURBED WALLS, FENCES, SERVICES, UTILITIES, IMPROVEMENTS OF FEATURES OF WHATEVER NATURE TO THEIR ORIGINAL CONDITION WHETHER SHOWN ON THE PLANS OR NOT; PROVIDED SUCH REPAIR OR REPLACEMENT IS CAUSED BY CONTRACT WORK OPERATORS.
5. UNAUTHORIZED CHANGES AND USES: THE ENGINEER PREPARING THESE PLAN WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING AND MUST BE APPROVED BY THE PREPARE OF THESE PLANS.
6. LOCATIONS OF EXISTING UNDERGROUND FACILITIES AND UTILITIES SHOWN ARE APPROXIMATE AND ARE BASED ON FIELD SURVEY AND/OR AVAILABLE UTILITY COMPANY INFORMATION. IT IS THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE ACTUAL LOCATION OF UTILITIES PRIOR TO THE COMMENCEMENT OF WORK. AS REQUIRED, PHYSICAL VERIFICATION OF UTILITY LOCATION SHALL BE PERFORMED BY POT HOLING OR HAND DIGGING AND CAREFUL SUBSURFACE PROBING IN CONFORMANCE WITH ARTICLE 6 OF THE CAL/OSHA CONSTRUCTION SAFETY ORDER. ANY DEVIATIONS FROM LOCATIONS SHOWN ON THE PLANS SHALL BE BROUGHT TO THE ENGINEERS ATTENTION BEFORE STARTING CONSTRUCTION.
7. CONSTRUCTION CONTRACTORS SHALL MUFFLE AND SHIELD INTAKES AND EXHAUSTS, SHROUD OR SHIELD IMPACT TOOLS, AND USE ELECTRIC-POWERED RATHER THAT DIESEL-POWERED CONSTRUCTION EQUIPMENT (AS FEASIBLE).
8. ALL STATIONARY NOISE-GENERATING EQUIPMENT SHALL BE LOCATED AS FAR AWAY AS POSSIBLE FROM NEIGHBORING PROPERTY LINES.
9. ALL CONSTRUCTION EQUIPMENT SHALL BE MAINTAINED AND OPERATED ACCORDING TO MANUFACTURER'S MAINTENANCE SCHEDULES AND RECOMMENDATIONS TO MINIMIZE NOISE AND EXHAUST EMISSIONS (PARTICULAR NITROGEN OXIDES).
10. THE DEVELOPER SHALL BE RESPONSIBLE FOR SECURING AND COMPLYING WITH APPROPRIATE PERMITS FROM THE BAY AREA AIR QUALITY MANAGEMENT DISTRICT FOR ANY EQUIPMENT OR PROCESSES THAT COULD RESULT IN EMISSIONS OF CRITERIA, TOXIC OR ODOROUS EMISSIONS.
11. THE CONTRACTOR IS REQUIRED TO HIRE A TESTING LABORATORY TO PERFORM COMPACTION TESTS. THE TEST RESULTS SHALL BE SUBMITTED TO THE CITY'S CONSTRUCTION ENGINEER PRIOR TO ANY OFF-SITE PAVING.
12. GRADING CONTRACTOR SHALL MAINTAIN A WATER TRUCK ON SITE DURING ALL GRADING ACTIVITY TO WATER GRADE MATERIAL AND CONTROL DUST. CONTRACTOR SHALL COVER STOCKPILED DIRT WITH PLASTIC AND ANCHOR THE PLASTIC TO THE GROUND. ALL GRADING, EARTH-MOVING OR EXCAVATION SHALL CEASE WHEN WINDS EXCEED 20 MPH.

CULTURAL RESOURCE NOTES:

1. THE PROJECT SPONSOR WILL HIRE A QUALIFIED ARCHAEOLOGIST TO MONITOR ALL EXCAVATION ACTIVITIES, INCLUDING GRADING AND TRENCHING ACTIVITIES, WHO WILL ADVISE THE SPONSOR ON APPROPRIATE EXCAVATION LEVELS, AND CONDUCT SPOT CHECKS OF ALL EXCAVATED MATERIALS AND OPEN EXCAVATION AREAS. THE ARCHAEOLOGIST WILL ALSO BRIEF PROJECT PERSONNEL AND CONSTRUCTION WORKERS ON THE POTENTIAL FOR FINDING ARCHAEOLOGICAL RESOURCES AT THE SITE, PREPARE MATERIALS THAT DESCRIBE THE APPURTENANCE OF POTENTIAL RESOURCES, AND APPRISE PERSONNEL OF THE PROCEDURES TO FOLLOW IF SUCH RESOURCES ARE FOUND.
2. IF ARCHAEOLOGICAL RESOURCES ARE UNCOVERED, WORK AT THE PLACE OF DISCOVERY SHALL BE HALTED IMMEDIATELY, FOR A PERIOD NOT TO EXCEED FOUR WEEKS, AND A QUALIFIED ARCHAEOLOGIST SHOULD EVALUATE THE FIND. PREHISTORIC ARCHAEOLOGICAL SITE INDICATORS INCLUDE; OBSIDIAN AND CHART FLAKES AND CHIPPED STONE TOOLS; GRINDING AND MASHING IMPLEMENTS SUCH AS SLABS AND HANDSTONES, AND MORTARS AND PESTLES; AND LOCALLY DARKENED MIDDEN SOILS CONTAINING SOME OF THE PREVIOUSLY LISTED ITEMS PLUS FRAGMENTS OF BONE AND FIRE AFFECTED STONES. IF THE ARCHAEOLOGICAL RESOURCES ARE DETERMINED BY THE ARCHAEOLOGIST TO BE SIGNIFICANT, THE PROJECT SPONSOR WILL, AFTER CONSULTATION WITH NAPA COUNTY, CONSTRUCT A PUBLICLY ACCESSIBLE HISTORIC DISPLAY THAT DOCUMENTS THE FIND AT THE PROJECT SITE.
3. IF HUMAN REMAINS ARE ENCOUNTERED DURING PROJECT CONSTRUCTION, THE PROJECTS SPONSOR AND/OR ITS EMPLOYEES SHALL NOTIFY THE NAPA COUNTY CORNER'S OFFICE IMMEDIATELY. UPON DETERMINATION BY THE COUNTY CORNER'S THAT THE REMAINS ARE NATIVE AMERICAN, THE CORONER SHALL CONTACT THE CALIFORNIA NATIVE AMERICAN HERITAGE COMMISSION. PURSUANT TO SUBDIVISION(C) OF SECTION 7050.5 OF THE HEALTH AND SAFETY CODE, AND THE COUNTY COORDINATOR OF INDIAN AFFAIRS.

NOTES -GEOTECHINCAL REPORT

1. THE PROJECT GEOTECHNICAL REPORT PREPARED BY CORNERSTONE EARTH GROUP, DATED **XXXXXXX** SHOULD BE USED AND REFERRED TO FOR ADDITIONAL RECOMMENDATIONS NOT PROVIDED IN THESE NOTES.
2. SITE PREPARATION: AREAS TO BE DEVELOPED SHOULD BE CLEARED OF VEGETATION AND DEBRIS, INCLUDING THAT LEFT BY THE REMOVAL OF OBSOLETE STRUCTURES. TREES AND SHRUBS THAT WILL NOT BE PART OF THE PROPOSED DEVELOPMENT SHOULD BE REMOVED AND THEIR PRIMARY ROOT SYSTEM GRUBBED. CLEARED AND GRUBBED MATERIAL SHOULD BE REMOVED FROM THE SITE AND DISPOSED OF IN ACCORDANCE WITH COUNTY HEALTH DEPARTMENT GUIDELINES.
3. VOIDS CREATED DURING CLEARING SHOULD BE BACKFILLED WITH ENGINEERED FILL AS RECOMMENDED HEREIN.
4. STRIPPING, AREAS TO BE GRADED SHOULD BE STRIPPED OF THE UPPER FEW INCHES OF SOIL CONTAINING ORGANIC MATTER. SOIL CONTAINING MORE THAN THREE PERCENT BY WEIGHT ORGANIC MATTER SHOULD BE CONSIDERED ORGANIC. SURFICIAL STRIPPING SHOULD EXTEND ABOUT 3 TO 6 INCHES BELOW EXISTING GRADE IN VEGETATED AREAS. THE ACTUAL STRIPPING DEPTHS SHOULD BE DETERMINED BY REPRESENTATIVE OF THE GEOTECHNICAL ENGINEER IN THE FIELD AT THE TIME OF STRIPPING. THE STRIPPING SHOULD BE REMOVED FROM THE SITE OR IS SUITABLE STOCKPILED FOR RE-USE AS TOPSOIL IN LANDSCAPING.
5. AT ALL TIMES, TEMPORARY CONSTRUCTION EXCAVATIONS SHOULD CONFORM TO THE REGULATIONS OF THE DATE OF CALIFORNIA DEPARTMENT OF INDUSTRIAL RELATIONS, DIVISIONS OF INDUSTRIAL SAFETY OR OTHER STRICTER GOVERNING REGULATIONS.
8. ALL FILL MATERIALS SHOULD BE FREE OF PERISHABLE MATTER AND ROCKS OR LUMPS OVER 6 INCHES IN DIAMETER, AND MUST BE APPROVED BY THE GEOTECHNICAL ENGINEER PRIOR TO USE.
9. THE UPPER 6 INCHES OF FILL BENEATH THE BUILDING AREA SHOULD CONSIST OF NON-EXPANSIVE, CRUSHED GRANULAR BASE HAVING AN R-VALUE OF AT LEAST 50 AND NO MORE THAN 10 PERCENT PASSING THE NO. 200 SIEVE, SUCH AS A CLASS 2 AGGREGATE BASE.
10. WE JUDGE THE ON-SITE SOILS GENERALLY SUITABLE FOR USE AS GENERAL FILL BUT WILL NOT BE SUITABLE FOR USE AS NON-EXPANSIVE FILL UNLESS THEY ARE CHEMICALLY TREATED.
11. IN GENERAL, IMPORTED FILL, IF NEEDED SHOULD BE INORGANIC WITH A PLASTICITY INDEX (PI) OF 15 OR LESS, AND NOT CONTAIN RECYCLED ASPHALT CONCRETE WHERE IT WILL BE USED WITHIN THE BUILDING AREA. THE GEOTECHNICAL ENGINEER SHOULD APPROVE IMPORTED MATERIAL PRIOR TO USE AS COMPACT FILL. THE GRADING CONTRACTOR IS RESPONSIBLE FOR SUBMITTING, AT LEAST 5 DAYS IN ADVANCE OF ITS INTENDED USE, SAMPLES OF THE PROPOSED IMPORT MATERIALS FOR LABORATORY TESTING AND APPROVAL BY THE SOIL ENGINEER.
12. APPROVED FILL MATERIAL SHOULD BE PLACED IN 8-INCH LIFTS. UNIFORMLY MOISTURE-CONDITIONED TO NEAR OPTIMUM AND PROPERLY COMPACTED. FILL PLACEMENT, MOISTURE CONDITIONING, AND COMPACTION SHOULD BE IN ACCORDANCE WITH THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
14. ALL STRUCTURE FILLS, INCLUDING THOSE PLACED TO ESTABLISH SITE SURFACE DRAINAGE, SHOULD BE COMPACTED TO AT LEAST 90 PERCENT RELATIVE COMPACTION OR PER THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
15. EXPANSIVE SOILS USED AS FILL SHOULD BE MOISTURE-CONDITIONED TO AT LEAST 3 PERCENT ABOVE OPTIMUM PER THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
16. IN GENERAL, CUT AND FILL SLOPES SHOULD BE DESIGNED AND CONSTRUCTED AT SLOPE GRADIENTS OF 3:1 (HORIZONTAL TO VERTICAL) OR FLATTER, UNLESS OTHERWISE APPROVED BY THE GEOTECHNICAL ENGINEER IN SPECIFIED AREAS.

GRADING NOTES

1. ALL GRADING SHALL BE DONE IN ACCORDANCE WITH RECOMMENDATIONS IN THE GEOTECHNICAL AND FOUNDATION INVESTIGATION PREPARED FOR THIS SITE.
2. CONTRACTOR SHALL DETERMINE HIS OWN EARTH QUANTITIES AND BASE HIS BID ACCORDINGLY.
3. TOP OF CURB ELEVATION IS 0.5' ABOVE THE A.C. PAVING AND SPOT ELEVATIONS ARE TO FINISHED SURFACE (UNLESS OTHERWISE NOTED).
4. COMPACTION TO BE DETERMINED USING ASTM D1557, LATEST EDITION LABORATORY TEST PROCEDURE.
5. STORM DRAIN PIPE WITHIN THE PUBLIC OR PRIVATE STREET RIGHT OF WAY SHALL BE RCP CLASS III OR BETTER UNLESS OTHERWISE NOTED. BEDDING SHALL BE PER THE CITY OF AMERICAN CANYON STANDARDS.
6. ON-SITE STORM DRAIN PIPE SHALL BE: 10" DIAMETER AND SMALLER SDR 35 PVC OR HDPE WITH RUBBER GASKETS MEETING ASTM F477. 12" DIAMETER TO BE SDR 35 PVC, CLASS III RCP OR BLUE SEAL HDPE AS MANUFACTURED BY HANCOR WITH WATER TIGHT JOINTS MEETING ASTM F477 AND ASTM D3212. 15" THROUGH 24" DIAMETERS; PIPE TO BE CLASS III RCP OR BLUE SEAL HDPE AS SPECIFIED ABOVE. PIPES LARGER THAN 24" IN DIAMETER SHALL BE CLASS III RCP UNLESS OTHERWISE NOTED. NO MATERIAL SUBSTITUTION SHALL BE ALLOWED FOR DUCTILE IRON PIPE (DIP).
7. ALL UTILITY STRUCTURES INCLUDING, BUT NOT LIMITED TO MANHOLES, CATCH BASINS, WATER VALVES, FIRE HYDRANTS, TELEPHONE AND ELECTRIC VAULTS, AND PULL BOXES, THAT LIE WITHIN THE PUBLIC RIGHT-OF-WAY EASEMENTS OR AREAS AFFECTED BY WORK ON THIS PROJECT SHALL BE ADJUSTED TO GRADE BY THE CONTRACTOR OR THE RESPECTIVE UTILITY COMPANY FOR WHICH THE CONTRACTOR IS RESPONSIBLE TO AFFECT COORDINATION.
8. THE TYPES, LOCATIONS, SIZES AND/OR DEPTHS OF EXISTING UNDERGROUND UTILITIES AS SHOWN ON THESES IMPROVEMENT PLANS WERE OBTAINED FROM SOURCES OF VARYING RELIABILITY. THE CONTRACTOR IS CAUTIONED THAT ONLY ACTUAL EXCAVATION WILL REVEAL THE TYPES, EXTENT, SIZES, LOCATIONS AND DEPTHS OF SUCH UNDERGROUND UTILITIES. A REASONABLE EFFORT HAS BEEN MADE TO LOCATE AND DELINEATE ALL KNOWN UNDERGROUND UTILITIES. HOWEVER, THE ENGINEER CAN NOT ASSUME RESPONSIBILITY FOR THE COMPLETENESS OR ACCURACY OF THEIR DELINEATION OF SUCH UNDERGROUND UTILITIES WHICH MAY BE ENCOUNTERED, BUT ARE NOT SHOWN ON THESE DRAWINGS.
9. CONTRACTOR SHALL UNCOVER AND EXPOSE ALL EXISTING UTILITY AND SEWER LINES WHERE THEY ARE TO BE CROSSED, ABOVE OR BELOW, BY THE NEW FACILITY BEING CONSTRUCTED IN ORDER TO VERIFY THE GRADE AND TO ASSURE THAT THERE IS SUFFICIENT CLEARANCE. PIPE SHALL NOT BE STRUNG NOR TRENCHING COMMENCED UNTIL ALL CROSSINGS HAVE BEEN VERIFIED FOR CLEARANCE. IF THE CONTRACTOR FAILS TO FOLLOW THIS PROCEDURE, HE WILL BE SOLELY RESPONSIBLE FOR ANY EXTRA WORK OR MATERIAL REQUIRED IF MODIFICATIONS TO THE DESIGN ARE NECESSARY.
10. THE CONTRACTOR SHALL SET HIS STRING OR WIRE THROUGH AT LEAST THREE GRADE STAKES TO VERIFY GRADE. IF THE STAKES DO NOT PRODUCE A UNIFORM GRADE, NOTIFY THE ENGINEER IMMEDIATELY AND HAVE THE GRADES CHECKED PRIOR THE TRENCHING OR PLACEMENT OF CONCRETE.
11. ADJUSTMENTS TO BUILDING PAD ELEVATIONS OR PARKING LOT GRADES TO ACHIEVE EARTHWORK BALANCE SHALL BE MADE ONLY WITH APPROVAL OF THE ENGINEER.
12. ALL WORK, ON-SITE AND IN THE PUBLIC RIGHT-OF-WAY, SHALL CONFORM TO THE CITY OF AMERICAN CANYON STANDARDS AND REQUIREMENTS.

EROSION AND SEDIMENT CONTROL MEASURES

1. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE EFFECTIVE FOR THE DURATION OF CONSTRUCTION.
2. AFTER THE UNDERGROUND STORM DRAIN SYSTEM IS INSTALLED, THE CATCH BASINS WILL BE INSTALLED (AS SOON AS PRACTICAL) AND ROCK BARRIER BAGS WILL BE PLACED AROUND THOSE CATCH BASINS AS SHOWN ON THIS PLAN UNTIL THIS SITE IS PAVED.
3. SHOULD THE ON-SITE STORM DRAINS NOT BE INSTALLED COMPLETELY BY OCTOBER 15, THE CONTRACTOR SHALL CONSTRUCT TEMPORARY SEDIMENT BASINS AT THE EXISTING STORM PIPES STUBBED TO THE SITE.
4. PERSON RESPONSIBLE FOR IMPLEMENTATION OF EROSION AND SEDIMENTATION PLAN.

   NAME: XXX
   ADDRESS: XXX
   TELEPHONE: XXX
5. THE CONTRACTOR SHALL PLACE 3"-6" COARSE AGGREGATE AS A GRAVEL ROADWAY (12" MIN. THICK FOR THE FULL WIDTH AND 50 FEET LONG) AT EACH D/W ENTRANCE TO SITE. ANY MUD THAT IS TRACKED ONTO PUBLIC STREETS SHALL BE REMOVED THAT SAME DAY AND AS REQUIRED BY THE CITY OF AMERICAN CANYON.
6. ALL EROSION CONTROL MEASURES SHALL BE MAINTAINED UNTIL DISTURBED AREAS ARE STABILIZED AND CHANGES TO THIS EROSION AND SEDIMENT CONTROL PLAN SHALL BE MADE TO MEET FIELD CONDITIONS ONLY WITH THE APPROVAL OF OR AT THE DIRECTION OF THE CITY ENGINEER.
7. ALL PAVED AREAS SHALL BE KEPT CLEAR OF EARTH MATERIAL AND DEBRIS. THE SITE SHALL BE MAINTAINED SO AS TO MINIMIZE SEDIMENT-LADEN RUN-OFF TO ANY STORM DRAINAGE SYSTEM.
8. ALL EROSION CONTROL FACILITIES MUST BE INSPECTED AND REPAIRED AT THE END OF EACH WORKING DAY.
9. SEDIMENT BASINS SHALL BE CLEANED OUT WHENEVER SEDIMENT REACHES THE SEDIMENT CLEANOUT LEVEL INDICATED ON THE PLANS.
10. BORROW AREAS AND TEMPORARY STOCKPILES SHALL BE PROTECTED WITH APPROPRIATE EROSION CONTROL MEASURES TO THE SATISFACTION OF THE CITY ENGINEER.
11. ALL CUT AND FILL SLOPES ARE TO BE PROTECTED TO PREVENT OVERBANK FLOW.
12. INLETS WHICH ARE NOT USED IN CONJUNCTION WITH ROCK BARRIER BAGS OR SEDIMENT BASINS SHOULD BE COVERED, OR OTHERWISE ADJUSTED TO PREVENT INFLOW, UNLESS THE AREA DRAINED IS UNDISTURBED OR STABILIZED.

UTILITY NOTES

1. BACKFILLING AND COMPACTION FOR ALL TRENCHES SHALL BE INSPECTED AND APPROVED BY THE GEOTECHNICAL ENGINEER.
2. CONTRACTOR TO VERIFY ALL EXISTING INVERT ELEVATIONS FOR STORM DRAIN AND SANITARY SEWER CONSTRUCTION PRIOR TO ANY SITE WORK. ALL WORK FOR STORM DRAIN AND SANITARY SEWER INSTALLATION SHALL BEGIN AT THE DOWNSTREAM CONNECTION POINT. THIS WILL ALLOW FOR ANY NECESSARY ADJUSTMENTS TO BE MADE PRIOR TO THE INSTALLATION OF THE ENTIRE LINE. IF THE CONTRACTOR FAILS TO BEGIN AT THE DOWNSTREAM CONNECTION POINT AND WORKS UPSTREAM, HE SHALL PROCEED AT HIS OWN RISK AND BE RESPONSIBLE FOR ANY ADJUSTMENTS NECESSARY.
3. ALL WORK ON WATER AND SEWER SYSTEMS, SHALL CONFORM TO THE CITY OF AMERICAN CANYON STANDARDS AND REQUIREMENTS.
4. GENERAL CONTRACTOR SHALL COORDINATE ALL UNDERGROUND UTILITIES. PROVIDE 6" MINIMUM BETWEEN PIPES CROSSING ELECTRICAL LINES HORIZONTALLY AND 12" MINIMUM BETWEEN PARALLEL PIPES CROSSING ELECTRICAL LINES.
5. FOR UTILITY MATERIALS AND TYPES, SEE THE PROJECT SPECIFICATIONS.
6. WATER LINES SHALL BE 12" MINIMUM ABOVE SANITARY SEWER LINE AT ALL CROSSINGS.
7. ASBESTOS CEMENT (A.C.P.) PIPE SHALL NOT BE ALLOWED UNDER ANY CIRCUMSTANCES.
8. TRENCHING AND BACKFILL SHALL COMPLY WITH AMERICAN CANYON STANDARDS. CONTRACTOR SHALL COMPLY WITH ALL APPLICABLE SAFETY STANDARDS FOR TRENCH SAFETY. ALL PIPES HAVING LESS THAN 3' OF COVER SHALL BE BACKFILLED WITH CLASS II AGGREGATE BASE.

DUST ABATEMENT NOTES:

THE CONSTRUCTION CONTRACTOR IS REQUIRED TO IMPLEMENT A DUST ABATEMENT PROGRAM. ELEMENTS OF THIS PROGRAM SHALL INCLUDE THE FOLLOWING.

1. WATER ALL ACTIVE CONSTRUCTION AREAS AT LEAST TWICE DAILY;
2. COVER ALL TRUCKS HAULING SOIL, SAND, AND OTHER LOOSE MATERIALS OR REQUIRE ALL TRUCKS TO MAINTAIN AT LEAST TWO FEET OF FREEBOARD (I.E. THE MINIMUM REQUIRED SPACE BETWEEN THE TOP OF THE LOAD AND THE TOP OF THE TRAILER);
3. PAVE, APPLY WATER THREE TIMES DAILY, OR APPLY (NON-TOXIC) SOIL STABILIZERS ON ALL UNPAVED ACCESS ROADS, PARKING AREAS AND STAGING AREAS AT CONSTRUCTION SITE;
4. SWEEP DAILY (PREFERABLY WITH WATER SWEEPERS) ALL PAVED ACCESS ROADS, PARKING AREAS, AND AREAS AT CONSTRUCTION SITE;
5. SWEEP STREETS DAILY (PREFERABLY WITH WATER SWEEPERS) IF VISIBLE SOIL MATERIAL IS CARRIED ONTO ADJACENT PUBLIC STREETS;
6. HYDROSEED OR APPLY (NON-TOXIC) SOIL STABILIZERS TO INACTIVE CONSTRUCTION AREAS (PREVIOUSLY GRADED AREAS INACTIVE FOR TEN DAYS OR MORE);
7. ENCLOSE, COVER, WATER TWICE DAILY OR APPLY (NON-TOXIC) SOIL STABILIZER TO EXPOSED STOCKPILES (DIRT, SAND, ETC.);
8. LIMIT TRAFFIC SPEEDS ON UNPAVED ROADS TO 15 MILES PER HOUR;

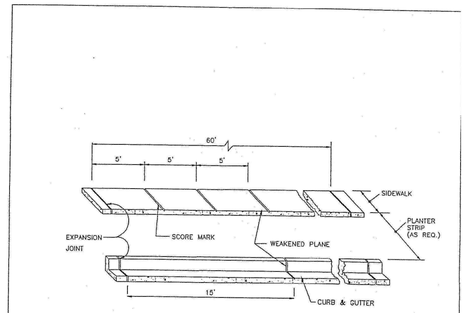
NOTES:



1. ALL CONCRETE SHALL BE CLASS A, 3000 P.S.I. MINIMUM, WITH 1 1/2 LBS. POLYPROPYLENE FIBERS PER CUBIC YARD.
2. ALL CORNERS SHALL BE FINISHED WITH A 1/2 INCH RADIUS.
3. BROOM FINISH WALK AT RIGHT ANGLES TO CURB; CURB AND GUTTER PARALLEL TO STREET.
4. INSCRIBE A 3 INCH HIGH "W" OR "S" ON FACE OF THE CURB DIRECTLY ABOVE THE WATER OR SANITARY SEWER SERVICE.
5. ALL CONCRETE SHALL HAVE A MINIMUM 4" CUSHION OF CLASS 2 A.B. @ 95% RELATIVE COMPACTION (D1557-78) ON COMPACTED SUB-GRADE.

CITY OF AMERICAN CANYON

CURB AND GUTTER

DATE 5/1/95 | SCALE NONE | STANDARD DWG. # 3.07

MARK CLARKSON, P.E., DIRECTOR OF PUBLIC WORKS

NOTES:

1. WEAKENED PLANE 1/4" WIDE x 3/4" DEEP IN SIDEWALKS, 1/4" WIDE x 1-1/2" DEEP IN CURB.
2. EXPANSION JOINTS-MATERIAL TO BE 1/4" THICK PREMOLDED JOINT FILLER FULL THICKNESS OF CONCRETE. APPROVED MECHANICAL JOINTS MAY BE USED IN WALKS IN LIEU OF EXPANSION JOINTS.
3. SCORE MARK-FOR SIDEWALKS 6' AND MORE IN WIDTH-LONGITUDINAL SCORE MARK ALONG CENTER OF WALK.
4. EXPANSION JOINTS SHALL BE INSTALLED IN THE CURB AND GUTTER AT ALL CURB RETURNS.
5. EXPANSION JOINTS SHALL BE PLACED IN THE SIDEWALK AT THE SAME LOCATION AS THOSE IN THE CURB AND GUTTER WHEN THE SIDEWALK IS ADJACENT TO THE CURB AND GUTTER.
6. SIDEWALK SHALL HAVE A 4" BASE OF CLASS 2 AB, 4" CONCRETE SLAB AND SLOPE 1/4" PER FOOT TOWARD THE STREET.
7. STANDARD WIDTH OF SIDEWALK IS 5', 6' FOR CONTINUOUS, 10' CONTINUOUS WITH TREE WELLS, AND 5' WITH PLANTER STRIP.

CITY OF AMERICAN CANYON

SPACING EXPANSION JOINTS

DATE 5/1/95 | SCALE NONE | STANDARD DWG. # 3.08

MARK CLARKSON, P.E., DIRECTOR OF PUBLIC WORKS

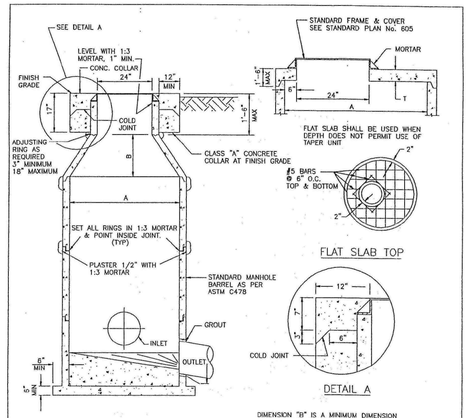


TABLE OF DIMENSIONS

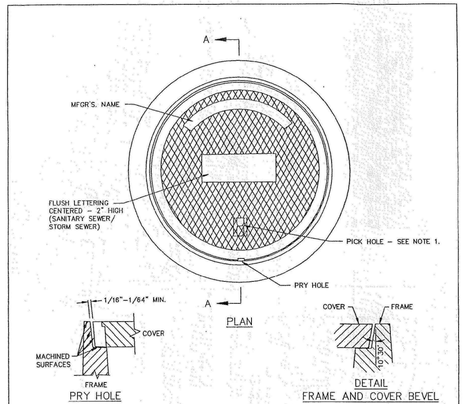
M.H.	A	B	T MIN.
48"	48"	18"	6"
60"	60"	30"	8"
72"	72"	42"	8"

DIMENSION "B" IS A MINIMUM DIMENSION AND MAY BE GREATER IF DEPTH PERMITS.

RISER SECTIONS, CONES, AND ADJUSTING RINGS SHALL CONFORM TO ASTM DESIGNATION C-478.

FRAME SHALL BE SECURED TO RISER OR FLAT SLAB TOP WITH CEMENT MORTAR.

NOTES:



1. ECCENTRIC CONES SHALL BE USED WHERE SPECIFIED ON THE PLANS. JOINTS MAY BE EITHER KEYED OR TONGUE AND GROVE.
2. RAM-NEK OR APPROVED EQUAL MAY BE USED IN JOINTS, ELIMINATING NECESSITY FOR OUTSIDE PLASTERING OF JOINTS.
3. CONE SECTION MAY BE EITHER CONCENTRIC OR ECCENTRIC.
4. LARGER DIAMETER BARRELS MAY BE REQUIRED UNDER SPECIAL CIRCUMSTANCES, SEE TABLE.
5. CONCRETE BLOCK AND BASE SHALL BE A MIN. OF CLASS A/3000 PSI CONCRETE.
6. ALL CONCRETE JOINTS SHALL BE CLEANED, WETTED AND MORTARED PRIOR TO SETTING NEXT JOINT. JOINTS SHALL THEN BE PATCHED, TROWELED AND BRUSED SMOOTH. BASE OF MANHOLE SHALL BE GROUTED AND SACKED.
7. MANHOLE COVER FRAME SHALL BE ADJUSTED TO GROVE AND CROSS-SLOPE OF PAVEMENT PRIOR TO POURING CONCRETE BLOCK.

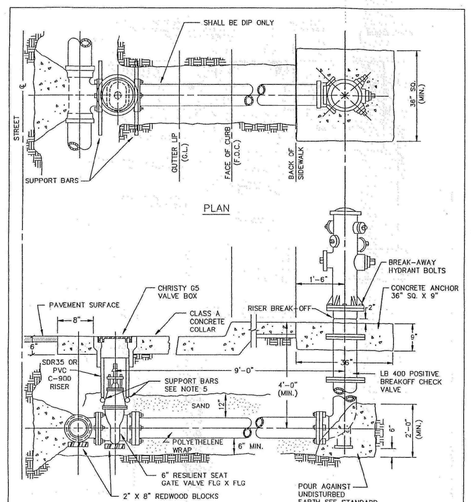
CITY OF AMERICAN CANYON

STANDARD PRECAST MANHOLE (DRAINAGE)

DATE 5/1/95 | SCALE NONE | STANDARD DWG. # 5.01

MARK CLARKSON, P.E., DIRECTOR OF PUBLIC WORKS

NOTES:



1. COVER MAY BE FURNISHED WITH OR WITHOUT RIBS BUT MUST BE DESIGNED FOR H-20 HIGHWAY LOADING. PICK HOLE SHALL FIT A STANDARD PICK AND BE FORMED OR PROVIDED WITH A CUP OR CHANNEL SECTION BENEATH HOLE SUCH THAT BARS OR STICKS CANNOT FALL THROUGH.
2. ALL MATERIAL USED IN MANUFACTURING SHALL CONFORM TO A.S.T.M. DESIGNATION A-159-G3000.
3. MINIMUM WEIGHT COMPONENTS: COVER - 130 LBS. FRAME - 135 LBS.

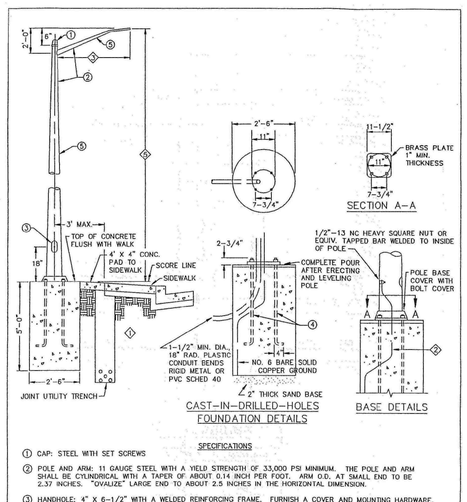
CITY OF AMERICAN CANYON

STANDARD MANHOLE FRAME & COVER

DATE 5/1/95 | SCALE NONE | STANDARD DWG. # 6.05

MARK CLARKSON, P.E., DIRECTOR OF PUBLIC WORKS

NOTES:



1. A BLUE HYDRANT MARKER OF STIMSONITE 88 OR EQUAL SHALL BE INSTALLED IN THE STREET MARKING THE LOCATION OF EACH HYDRANT (PUBLIC OR PRIVATE) 12" FROM THE CENTERLINE ON THE HYDRANT SIDE.
2. ENCASE ALL METALLIC SURFACES BELOW GROUND WITH POLYETHELENE.
3. FIRE HYDRANT SHALL BE CLOW MODEL #960, MUELLEN A-81 OR LONG BEACH #615 (TYPE III, 2 2-1/2" & 1 4-1/2" OUTLETS)
4. ALL HOSE OUTLET CAPS SHALL BE ATTACHED TO HYDRANT BY CHAIN.
5. VALVE BOX TO BE SET ON TWO 3/4" G.S. PIPES EXTENDED ACROSS TRENCH AND INTO UNDISTURBED EARTH.

CITY OF AMERICAN CANYON

FIRE HYDRANT INSTALLATION WATER DISTRIBUTION SYSTEM

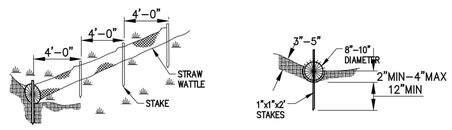
DATE 5/1/95 | SCALE NONE | STANDARD DWG. # 7.07

MARK CLARKSON, P.E., DIRECTOR OF PUBLIC WORKS

SPECIFICATIONS

1. CAP: STEEL WITH SET SCREWS
2. POLE AND ARM: 11 GAUGE STEEL WITH A YIELD STRENGTH OF 33,000 PSI MINIMUM. THE POLE AND ARM SHALL BE CYLINDRICAL, WITH A TAPER OF ABOUT 0.14 INCH PER FOOT. ARM O.D. AT SMALL END TO BE 2.37 INCHES. "OVALIZE" LARGE END TO ABOUT 2.5 INCHES IN THE HORIZONTAL DIMENSION.
3. HANDHOLE: 4" X 6-1/2" WITH A WELDED REINFORCING FRAME. FURNISH A COVER AND MOUNTING HARDWARE.
4. ANCHOR BOLTS: 4 EACH 1" X 36" X 4" WITH 6 INCH MINIMUM THREAD LENGTH. FURNISH 2 HEX NUTS AND 2 ROUND WASHERS WITH EACH BOLT.
5. FINISH: GALVANIZE ALL PARTS AFTER ALL CUTTING AND WELDING. POLE AND ARM PER ASTM 123. REMOVABLE PARTS PER ASTM 153.

GENERAL NOTES



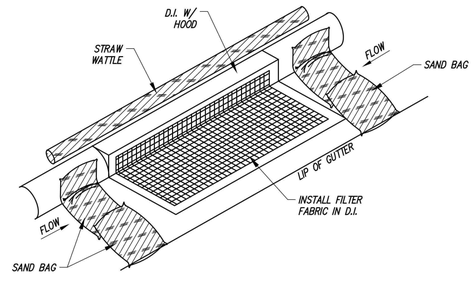
1. WHEN SETTING POLES IN WIDE SIDEWALKS (GREATER THAN 6' WIDE), SET C OF POLE 2'-0" FROM FACE OF CURB.
2. WHEN SETTING POLES PROVIDE A DRAINAGE HOLE UNDER THE STEEL PLATE TO THE CENTER OF THE POLE. FORM HOLE BEFORE CONCRETE SETS USING A PIECE OF WELDING ROD OR EQUIVALENT.
3. 8-FOOT MAST ARMS FOR RESIDENTIAL STREETS, 10-FOOT MAST ARMS FOR MAJOR COMMERCIAL STREETS.
4. INSTALL A NO. 3-1/2 PULLBOX PER CAL-TRANS STANDARD EVERY 200 FEET AND AT EVERY POLE LOCATION.
5. MOUNTING HEIGHT FOR RESIDENTIAL OR CUL-DE-SAC SHALL BE 28' ALL OTHERS SHALL BE 32.5'.

CITY OF AMERICAN CANYON

STANDARD STREET LIGHT POLE

DATE 5/1/95 | SCALE NONE | STANDARD DWG. # 8.01

MARK CLARKSON, P.E., DIRECTOR OF PUBLIC WORKS



NOTE:

1. STRAW WATTLES ARE TUBES MADE FROM STRAW BOUND W/BIO-DEGRADABLE NETTING. NO PLASTIC MATERIALS ALLOWED. THEY ARE APPROX. 8"-10" DIA AND 20-30 FT LONG.
2. STRAW WATTLES TRAP SEDIMENT AND REDUCE SHEET AND HILL EROSION BY REDUCING SLOPE GRADIENT. INCREASING INFILTRATION RATES AND BY PRODUCING A FAVORABLE ENVIRONMENT FOR PLANT ESTABLISHMENT.
3. STRAW WATTLE INSTALLATION REQUIRES THE PLACEMENT AND SECURE STAKING OF THE WATTLE IN A TRENCH 2"-4" DEEP, DUG ON CONTOUR. RUNOFF MUST NOT BE ALLOWED TO RUN UNDER OR AROUND WATTLE.
4. IF MORE THAN ONE FIBER ROLL IS PLACED IN A ROW, THE ROLLS MUST BE OVERLAPPED, NOT ABUTTED.
5. TURN THE ENDS OF THE FIBER ROLL UP-SLOPE TO PREVENT RUNOFF FROM GOING AROUND THE ROLL.

CONTRACTORS LICENSE NO. 704195 A

September 28, 2021

Orchard Partners, LLC
3697 Mt. Diablo Boulevard Suite 200
Lafayette, CA 94539

Attention: Mr. Ernie Knodel

Subject: Scope of Work Summary and Proposal for S. Kelly / Hwy 29 Improvements project located in American Canyon, CA.
DeSilva Gates Estimate #2107048

Dear Mr. Knodel,

DeSilva Gates Construction is pleased to provide for your review the attached proposal for the S. Kelly Road and Hwy 29 street Improvements project in American Canyon. This Proposal is based solely on Unapproved South Kelly Road Street Improvement Plans and the Hwy 29 Post Mile 2.3 to Post Mile 5.0 Street Improvement Plans both dated February 2021 and both prepared by Kier & Wright.

The following Qualifications govern our Proposal and are considered as included in any future Contract Agreement reached between Orchard Partners, LLC and DeSilva Gates Construction (DGC) for this project.

SPECIFIC INCLUSIONS:

1. Includes equipment mobilizations in and out: One (1) each Mobilization for each phase of work.
2. USA site and pothole improvements as needed to protect any new or existing utilities.
3. We reserve the right to complete our own site topography if awarded the job in order to compare the existing topographic elevations to those provided by the engineer's plans for bidding purposes. If DGC decides to build a model of the site for utilizing a GPS system, we request all files and other information needed from the engineer to be given to DGC at no additional cost. If variations in existing grades are found upon review of the DeSilva Gates Construction survey, we reserve the right to discuss the discrepancies with the Owner and Engineer, and to make any final quantity adjustments to the bid and contract.
4. Install one each Construction Entrances and remove (See alternates); rumble plates are not included.
5. Includes traffic control plan for both Hwy 29 and S. Kelly.
6. Includes 4 each Changeable Message boards; one for each leg of the Hwy 29 and S. Kelley intersection. Two months of rental is included.
7. Includes installation and removal of Krail adjacent to the S. Kelly and Hwy 29 improvements. Also, included are three (3) each ABSORB 350 arrays at the end of each length of the krail.
8. Export an anticipated +/- 2,920 cy of "Clean" material offsite. Quantities are based on Engineer's plan topo, prior to DGC performing their own topographic survey to confirm site elevations.

9. Install and modify Storm Drain per the plans and the attached bid form.
10. Finish grade site areas from back of walk to back of walk including sidewalks, curb and gutter and asphalt concrete paving areas.
11. Furnish and install Recycled CL II AB per plans and the attached bid form.
12. Furnish and install site concrete (C&G, Sidewalk) per the plans and attached bid form. Includes Bioswale curbs.
13. Back up curbs and walks with native material.
14. Furnish and install asphalt concrete per the plans and the attached bid form. Proposal is based on installing the entire paving section during the same paving mobilization. Includes lowering existing water valves prior to the grind and overlay and raise to grade after paving. Grind and Overlay is variable thickness; asphalt overlay based on an average of 3.3"
15. Includes bioswale improvements; excavation and offhaul of 135 cy, furnish and install 100 lf of 4" perforated PVC pipe, 12" CL2 Permeable and 18" Bioswale soil. Does not include any irrigation or planting.
16. Work 5 each 8 hour ***"NIGHT"*** shifts as required; if work can be performed behind Krail without impeding traffic night shifts will not be used.
17. Site sanitary for DGC crews / subcontractors.
18. Includes dust control during the actual performance of work while actively working onsite; "off-hours and or weekends" dust control is not included.
19. Cleanup of generated debris after completion

ADDITIONAL QUALIFICATIONS / CLARIFICATIONS:

1. All soil or soil rock mixtures to be exported from the site shall be free of deleterious materials and are assumed to be suitable for unrestricted re-use on residential or commercial sites. Owner to provide all necessary soil sampling and analysis requested by soil re-use site.
2. No price protection for the oil used in asphalt concrete, prime coat, and fog seals can be obtained or extended on this project. Today's F.O.B refinery cost of asphalt oil is **$625.00** per ton. Any increases in the price of asphalt oil between now and the placement of asphalt concrete pavement may result in additional costs that are to be negotiated prior to performing the asphalt concrete paving work.
3. Construction water was bid from the existing local governing Water Agency at fire hydrants adjacent to the site. Cost of water, all hook-ups and obtaining temporary hydrant meters to be paid by DGC. (No other source of construction water is included in our unit prices. Hauling water from offsite sources excluded. Assumes no drought restrictions for obtaining water from existing hydrants or blow-offs on the project).
4. Offhaul is based on dumpsite / receiving site availability after a weather event.
5. ***The future / potential impacts of AB5 are unknown at this time. All impacts to this Proposal due to the effects of AB5 are excluded from this Proposal.***
6. Alternate No. 1 & 2 Construction Entrance. Includes installation and remove of one each Construction Entrance.
7. Alternate No. 3 Temp Strip for Krail. Includes restriping as required prior to installation of Krail.

SPECIFIC EXCLUSIONS:

1. Removal of surface or buried debris, tree trimming, arborist cost, or handling of any neighbor's personal property (fences, landscape, debris, irrigation, etc.); MBTA survey; any other above or below ground demolition, relocation, salvage or removal; debris picking, or removal not shown on the plans.
2. Locating, testing, identifying, handling, removing, transporting or any associated disposal fees for hazardous, toxic or contaminated material whether naturally occurring or man-made.
3. Removing, replacing, handling or processing of over optimum, unsuitable material.
4. Signal Modifications.
5. Removal, replacement or modification of existing headwall at the southeast corner intersection of S. Kelly and Devlin Road.
6. Air, dust or vibration monitoring.
7. Work in inclement weather or in over optimum moisture conditions.
8. Amending of native soils or import of topsoil.
9. SC-70 prime oil and SS-1 fog seal.
10. SWPPP or Erosion Control installation or removal, site winterization, access roads; QSD or QSP testing, monitoring plans or implementation.
11. OCIP Credits.
12. Irrigation or landscaping.
13. Repairs to existing roadways due to construction traffic.
14. Survey, obtaining or cost of permits including but not limited to grading permit, haul route permit, bonds, fees, plans, ***staking***, layout, engineering, compaction or material analysis testing or inspection.
15. Joint trench, electrical, irrigation or landscaping.
16. SWPPP or Erosion Control installation or removal, site winterization, access roads; QSD or QSP testing, monitoring plans or implementation.

STANDARD CONDITIONS:

1. One initial move-in per phase of work and one continuous operation each move-in.
2. Any phasing of work will result in additional costs due to reduction in production and additional move-ins.
3. Quantities and pricing are subject to review of final signed and approved plans along with any topographic discrepancies which may occur after the site is re-surveyed prior to starting the earthwork.
4. Any work requested by the Owner/Client to be performed in inclement weather or over optimum moisture conditions, will result in additional costs and will be billed as Time and Material.
5. DeSilva Gates Construction's price for erosion control will be for the construction of only those erosion control facilities and SWPPP devices shown on the plans, which facilities have been designed for the Owner by third parties. DGC's sole responsibility as to the erosion control and SWPPP is to furnish and install the facilities shown on the plans in a workmanlike manner. Owner will be fully responsible for, and DGC assumes no responsibility for the design, effectiveness or adequacy of the erosion control facilities and SWPPP. Any and all work required to remove, repair, maintain, replace, augment or modify the erosion control facilities and SWPPP will be performed on a Time and

Material basis at the written direction of the Owner. All losses (including without limitation, all fines and/ or citations) whatsoever relating in any manner to the erosion control and SWPPP will be the sole responsibility of Pulte, unless the losses are solely attributable to the contractor's failure to install the facilities in a workmanlike manner.

6. All Inclusions, Exclusions and Conditions are to be incorporated as an Exhibit to any contract reached between the two parties.
7. All excavated material encountered onsite is assumed to be acceptable as engineered fill. No special handling, re-handling, or select material stockpiling has been figured into our bid proposal prices for earthwork.
8. There will be no repairs of damage to work performed and installed by others, at our expense, without written approval by DeSilva Gates "prior" to any damage repairs.
9. If the job is operated with any non-union subcontractor's onsite, a separate gate may be required for the use of DGC employees and its Subcontractors.
10. This proposal is based upon the (Owner and/or General Contractor) and DeSilva Gates Construction reaching mutual agreement in the Terms and Conditions of a Contract for this project.
11. This proposal remains in effect for thirty (30) days from receipt.

We look forward to working with you on this project. Please do not hesitate to call us with any questions or comments you may have in regards to the attached Bid Proposal.

Sincerely,
DeSilva Gates Construction, L.P.

TERMINATION OF AMENDED AND RESTATED IMPROVEMENT AGREEMENT

DBL

AND

FIRST AMENDMENT TO SUBDIVISION IMPROVEMENT AND REIMBURSEMENT AGREEMENT

Napa Logistics Park

This Termination of Amended and Restated Improvement Agreement and First Amendment to Subdivision Improvement and Reimbursement Agreement (collectively, this "Amendment"), is made by and between the CITY OF AMERICAN CANYON ("City"), a California Municipal Corporation, and DWF IV NLP II, LLC, a Delaware limited liability company ("Developer") and is effective as of August 2, 2022 (the "Effective Date").

RECITALS

A. Developer is the developer of the Napa Logistics Park Phase 2 project ("Phase 2" or "Project"). Developer formerly owned the entirety of the Phase 2 site, consisting of an approximately 172.61-acre parcel (formerly Napa County Assessor Parcel Number 057-090-083). Developer currently owns Lots 1 and 2 of the Phase 2 site, as more particularly described on Exhibit A.

B. On December 15, 2015, the City Planning Commission recommended the City Council certify a Final Environmental Impact Report ("EIR") under the provisions of the California Environmental Quality Act (Pub. Res. Code § 21000 *et seq.*) ("CEQA") for the Project, and the City Council: (A) (i) certified the Final EIR as adequate to address environmental impacts associated with the Project, (ii) adopted a Statement of Overriding Considerations for the Project, and (iii) adopted the Mitigation Monitoring and Reporting Program ("MMRP") for the Project, based on all of the evidence presented to the City Council, as set out in City Council Resolution 2015-106, and (B) approved a Conditional Use Permit ("CUP") for the Project by adopting City Council Resolution 2015-107. The CUP

includes several conditions of approval, including conditions related to certain required public and private improvements (the "CUP Conditions").

C. On November 7, 2017, the City Council adopted Ordinance 2017-08, authorizing a Development Agreement for the Project to extend the CUP by an additional ten (10) years. To comply with CEQA, the City Council approved an Initial Study/Addendum prepared by First Carbon Solutions, dated August 31, 2017 ("2017 Addendum"). The City and Developer then entered into that certain Development Agreement, dated November 7, 2017, and recorded on November 8, 2017, as Instrument No. 2017-0025000 in the Official Records of the County (the "Phase 2 Development Agreement").

D. On January 25, 2018, by Resolution No. 2018-02, the City Planning Commission approved a Design Permit application for a building in Phase 2 and issued conditions of approval in connection therewith (the "Building 4 Conditions").

E. On March 22, 2018, by Resolution No. 2018-06, the City Planning Commission approved a Tentative Parcel Map, further subdividing Phase 2 into six (6) legal lots: (a) three (3) buildable lots of 58.19 acres, 37.40 acres, and 24.51 acres each (the "Development Parcels"), and (b) the collective remainder lots including an 8.54 acre lot for storm drainage purposes, a designated remainder lot of 37.21 acres which is subject to a wetlands conservation easement, and public road rights of way totaling 6.67 acres (the "Tentative Map Approval"). The Tentative Map Approval includes several conditions of approval, including conditions related to certain required public and private improvements (the "Map Conditions"). Map Condition 8 incorporates by reference as Map Conditions all CUP Conditions.

F. On June 27, 2018 the City and Developer entered into that certain Amended and Restated Improvement Agreement (recorded on July 2, 2018 as Instrument No. 2018-0013094 in the Official Records of the County) (the "Amended and Restated Improvement Agreement"), documenting certain improvement requirements for the Project.

G. On December 18, 2018, the City and Developer entered into that certain Subdivision Improvement and Reimbursement Agreement (recorded on December 18, 2018, as Instrument No. 2018-0024204 in the Official Records of the County) (the "Subdivision Improvement and Reimbursement Agreement"), documenting certain improvement requirements for the Project.

H. On March 4, 2019, Developer recorded Parcel Map—Napa Logistics Park Phase 2 in Book 28 of Parcel Maps, Pages 1 through 4, in the Official Records of the County ("Parcel Map"). Following recordation of the Parcel Map, Developer transferred Lot 4 to the Pacific Gas & Electric Company ("PG&E"), and Developer transferred Lot 3 and the designated remainder lot to the Napa Logistics Park Association. Developer and PG&E also entered into a partial assignment and assumption of the Phase 2 Development Agreement, by which Developer retained

certain improvement obligations. Developer currently owns Lots 1 and 2 of the original Phase 2 site, as more particularly described on Exhibit A.

I. On June 25, 2020, by Resolution No. 2020-06, the City Planning Commission approved a Design Permit application for a building in Phase 2 and issued conditions of approval in connection therewith (the "Building 3 Conditions").

J. Both the Amended and Restated Improvement Agreement and the Subdivision Improvement and Reimbursement Agreement addressed and implemented requirements for certain roadway improvements at SR-29 and South Kelly Road (the "Original South Kelly Improvements"), as set forth in CUP Condition 16.1, the Map Conditions, MM-TRANS-1d, MM-TRANS-2a, the Napa Logistics Park Phase I approvals, and other Project approvals. The Subdivision Improvement and Reimbursement Agreement also addressed certain Transportation Demand Management ("TDM") requirements for the Project, as set forth in CUP Conditions 16.e and 17, MM-TRANS-1a and MM-TRANS-1b, and other Project approvals.

K. The Original South Kelly Improvements were premised on conservative assumptions about the Project's land uses, development square footage, and trip generation as analyzed in the Final EIR, and were based on the City's, County's, Napa Valley Transportation Authority's ("NVTA"), and Caltrans' plans for traffic improvements along the SR-29 corridor as of 2015. The Project's actual buildout has resulted in less intensive land uses, reduced development square footage, and fewer traffic trips compared to what was assumed and analyzed in the Final EIR and 2017 Addendum. In addition, the City, County, NVTA, and Caltrans have since updated their plans for traffic improvements along the SR-29 corridor.

L. Developer and the City now desire to modify the Original Roadway Improvements to reflect the actual land uses, development square footage, and trip generation for the Project as-built, and the agencies' updated improvement plans for the SR-29 corridor ("Modified South Kelly Improvements"). The Modified South Kelly Improvements are depicted in the preliminary plans, engineer's estimate, and contractor's estimate previously submitted to the City and listed on Exhibit C (the "Modified South Kelly Improvement Plans"), and are described on Exhibit D and in the Project's Amended MMRP, dated June 2022.

M. Developer and the City further desire to clarify the Transportation Demand Management ("TDM") requirements for the Project and the current status of those requirements. The clarified TDM requirements for the Project are described on Exhibit D and in the Project's Amended MMRP, dated June 2022.

N. Developer and the City further desire to document the Modified South Kelly Improvements and clarified TDM requirements in a single agreement.

O. The City has approved an Initial Study/Addendum prepared by First Carbon Solutions, dated July 2022 ("2022 Addendum"), which evaluated whether approval of the Modified South Kelly Improvements and other items included in this Amendment have the potential to cause new or substantially more severe environmental impacts over the Project impacts evaluated and identified in the Final EIR and 2017 Addendum, or whether there is any new information of substantial importance, which was not known and could not have been known at the time the Final EIR was certified as complete, that would require additional environmental review pursuant to Public Resources Code section 21166 and the CEQA Guidelines sections 15162–15164. The 2022 Initial Study/Addendum determined that there is no potential for new or more severe significant environmental impacts, and the City has determined that no subsequent EIR is required. The City has also approved an Amended MMRP for the Project, dated June 2022, which addresses the Modified South Kelly Improvements and the TDM requirements, and which identifies those Mitigation Measures that continue to apply to the Project and those that have been completed or no longer apply.

P. Since the Amended and Restated Improvement Agreement and the Subdivision Improvement and Reimbursement Agreement both address the Original South Kelly Improvements and since there are no other improvements or Developer obligations otherwise outstanding under the Amended and Restated Improvement Agreement, the Parties now desire to: (1) terminate the Amended and Restated Improvement Agreement, and (2) amend the Subdivision Improvement and Reimbursement Agreement to require the Modified South Kelly Improvements in lieu of the Original South Kelly Improvements, to specify the Parties' respective rights and obligations for the construction and funding of the Modified South Kelly Improvements, to clarify the TDM requirements, and to make corresponding revisions to all other Project approvals, entitlements, and requirements.

NOW, THEREFORE, for and in consideration of the City and Developer ("Parties") agree as follows:

TERMINATION OF AMENDED AND RESTATED IMPROVEMENT AGREEMENT

Napa Logistics Park Phases I and II

1. **Termination**. The Parties agree that the Amended and Restated Improvement Agreement is terminated as of the Effective Date.

2. **Improvements**. Developer shall have no further obligations with respect to the Improvements listed in Section 2, including subsections (a) through (e), of the Amended and Restated Improvement Agreement. These Improvements

are superseded and replaced by the Modified South Kelly Improvements, which will be governed by this Amendment, as set forth below.

3. **Security**. The Parties acknowledge that Developer caused Bank of America, N.A. to issue and annually renew Irrevocable Standby Letters of Credit, naming the City as beneficiary, as security for the obligations set forth in the Amended and Restated Improvement Agreement (the "Letters of Credit"). The Parties agree that the Letters of Credit may now be cancelled. The City shall provide Developer with its written consent to cancel the Letters of Credit within five (5) business days following Developer's payment of the fair share obligation described in Section 4 of this Amendment.

FIRST AMENDMENT TO SUBDIVISION IMPROVEMENT AND REIMBURSEMENT AGREEMENT

Napa Logistics Park Phase 2

4. **Amendment to Section 2.c**. Section 2.c of the Subdivision Improvement and Reimbursement Agreement is deleted and replaced in its entirety as follows.

> **CUP Condition 16.a: South Kelly Improvements.** The Parties hereby agree to modify the roadway improvements required at SR-29 and South Kelly Road, as originally set forth in CUP Condition 16.a, Mitigation Measure TRANS-1d, and Mitigation Measure TRANS-2a ("Original South Kelly Improvements"). The modified improvements at SR-29 and South Kelly Road ("Modified South Kelly Improvements") are depicted on the improvement plans listed on Exhibit C, and are described on Exhibit D and in the Project's Amended MMRP dated June 2022.
>
> The Parties agree and acknowledge that Developer shall have no further obligations with respect to the Original South Kelly Improvements, and that the City did not require construction of the Original South Kelly Improvements prior to issuing certificates of occupancy for the Project.
>
> Developer's obligation with respect to the Modified South Kelly Improvements is limited to making a fair share payment to the City, in the amount of $1,001,354.12, reflecting 83% of the engineer's estimate for the work. The fair share payment shall be due to the City within 60 days following the Effective Date.
>
> The City shall be responsible for all other obligations relating to the Modified South Kelly Improvements, including without limitation, obtaining any required encroachment permits from the County or

Caltrans; acquiring any necessary easements or rights-of-way; constructing, repairing, and replacing the Modified South Kelly Improvements; and satisfying any other applicable obligations for the Modified South Kelly Improvements identified in Section 1 of this Subdivision Improvement and Reimbursement Agreement.

5. **Amendment to Section 2.d**. Section 2.d of the Subdivision Improvement and Reimbursement Agreement is deleted and replaced in its entirety as follows.

> **CUP Condition 17: TDM.** The Parties agree and acknowledge that Developer has submitted, and the City has approved, a Transportation Demand Management program for the Project, entitled "Napa Logistics Park Transportation Demand Management (TDM) Strategies and Monitoring," prepared by Fehr & Peers and dated October 2020 (the "TDM Program"). The Parties further agree and acknowledge that the TDM Program has been incorporated into the Declaration of Covenants, Conditions, and Restrictions and Grant of Easements for Napa Logistics Park (recorded on September 12, 2017 as Instrument No. 2017-0020645 in the Official Records of the County), as subsequently amended (the "CC&Rs"). Section 3.3.14 of the CC&Rs requires the Association to monitor each Occupant's compliance with the TDM Program and to allocate to an Owner or Owners any fines imposed by the City in connection with an Occupant's violation of the TDM Program.
>
> The Parties hereby agree to clarify and/or modify the TDM requirements as originally set forth in the Project approvals, including CUP Condition 16.e, CUP Condition 17, and Mitigation Measures TRANS-1a and TRANS-1b, such that Developer is not required to satisfy any further TDM requirements beyond those it has already completed as described in the paragraph above. Without limitation, Developer is not required to enter into any further TDM Agreement, conduct additional monitoring, install a permanent vehicle counting station, or make any further financial guarantee to the City. The City finds that the TDM Program as implemented through the CC&Rs is effective, and Developer is hereby deemed to have complied with all applicable TDM requirements for the Project.

6. **Addition of New Section 2.f**. A new Section 2.f is added to the Subdivision Improvement and Reimbursement Agreement as follows.

> **Applicability to Other Project Approvals**. The provisions of this Subdivision and Improvement Agreement, including the requirements for the Modified South Kelly Improvements and TDM requirements as described herein, shall control over and be automatically substituted into all

other Project approvals, entitlements, and agreements that address the same improvements or requirements.

7. **Amendment to Exhibit C.** Exhibit C to the Subdivision Improvement and Reimbursement Agreement, listing the Improvement Plans, is hereby amended to include the Improvement Plans listed on Exhibit C to this Amendment.

8. **Amendment to Exhibit D.** Exhibit D to the Subdivision Improvement and Reimbursement Agreement, describing the covered Improvements, is hereby amended with respect to CUP Conditions 16.a, 16.e, and 17 as shown on Exhibit D to this Amendment.

9. **Section 3.b**. The Parties agree and acknowledge that Developer's payment under Section 4 of this Amendment represents the Project's fair share of the construction costs for the Modified South Kelly Improvements. The reimbursement provisions of Section 3.b of the Subdivision Improvement and Reimbursement Agreement shall continue to apply only for the limited purpose of entitling Developer to reimbursement for the planning and engineering costs for the Modified South Kelly Improvements, which Developer paid for and advanced 100%.

10. **Deletion of Section 3.e**. Section 3.e of the Subdivision Improvement and Reimbursement Agreement is hereby deleted in its entirety. City shall be solely responsible for constructing the Modified South Kelly Improvements and Developer shall be responsible only for making the fair share payment described in Section 4 of this Amendment.

11. **Full Force and Effect**. The Subdivision Improvement and Reimbursement Agreement, as amended by this Amendment, shall continue to remain in full force and effect. This Amendment and the Subdivision Improvement and Reimbursement Agreement shall be construed as a whole in order to effectuate the intent of the Parties as specified in this Amendment. All provisions of the Subdivision Improvement and Reimbursement Agreement affected by this Amendment shall be deemed amended regardless of whether so specified in this Amendment. This Amendment shall be binding upon and inure to the benefit of the Parties and their respective successors and assigns.

12. **Indemnification**. Developer shall defend, indemnify, and hold harmless the City of American Canyon, its elected and appointed officials, employees, volunteers, and legal counsel, as set forth in the Phase 2 Development Agreement.

MISCELLANEOUS AGREEMENTS

13. **Defined Terms**. Defined terms used in this Amendment which are not defined herein shall have the same meaning as set forth in the Subdivision Improvement and Reimbursement Agreement.

14. **Captions**. The section headings or captions appearing in this Amendment are for convenience only, are not a part of this Amendment and are not to be considered in interpreting this Amendment.

15. **Counterparts**. This Amendment may be executed in counterparts, each of which shall be deemed an original, but all of which taken together shall constitute but one and the same document.

16. **Entire Agreement; Modification**. This Amendment constitutes the complete agreement between the Parties regarding the subject matter hereof, and supersedes any prior oral or written agreements between the Parties. There are no verbal agreements that change this Amendment, and no waiver of any of their respective terms will be effective, unless in writing executed by the Parties.

[Amendment continued on next page]

IN WITNESS WHEREOF, the parties hereto have executed this Amendment as of the Effective Date.

EXHIBIT C

CITY OF AMERICAN CANYON
CONSTRUCTION NOTES:

1. CONTRACTOR AGREES TO ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR THE JOB SITE DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE CITY REPRESENTATIVES HARMLESS FROM ANY AND ALL LIABILITY, REAL AND/OR ALLEGED, IN CONJUNCTION WITH THE PERFORMANCE OF THIS PROJECT.
2. CONTRACTOR SHALL BE HELD RESPONSIBLE FOR ANY AND ALL DAMAGES TO EXISTING STRUCTURES AND UTILITIES DURING CONSTRUCTION.
3. CONTRACTOR SHALL VERIFY LOCATIONS, LEVELS, DISTANCES, AND FEATURES THAT MAY AFFECT THE WORK. SHOULD EXISTING CONDITIONS DIFFER FROM THOSE SHOWN OR INDICATED, OR IF IT APPEARS THAT THESE PLANS, STANDARD SPECIFICATIONS, AND SPECIAL PROVISIONS DO NOT ADEQUATELY DETAIL THE WORK TO BE DONE, CONTRACTOR SHALL NOTIFY THE ENGINEER PRIOR TO CONTINUING WITH ANY RELATED WORK. NO ALLOWANCE WILL BE MADE IN HIS BEHALF FOR ANY EXTRA EXPENSE RESULTING FROM FAILURE OR NEGLECT IN DETERMINING THE CONDITIONS UNDER WHICH WORK IS TO BE PERFORMED. NOTED DIMENSIONS TAKE PRECEDENCE OVER SCALE.
4. A SET OF SIGNED BLUEPRINTS AND A SET OF SPECIFICATIONS WILL BE KEPT AT ALL TIMES AT THE JOB SITE ON WHICH ALL CHANGES OR VARIATIONS IN THE WORK, INCLUDING ALL EXISTING UTILITIES, ARE TO BE RECORDED AND/OR CORRECTED DAILY AND SUBMITTED TO THE CITY ENGINEER WHEN TIME WORK TO BE DONE IS COMPLETED.
5. CONTRACTOR TO EXPOSE AND CHECK LOCATIONS OF EXISTING INVERTS PRIOR TO CONSTRUCTION.
6. CONTRACTOR SHALL NOTIFY ALL PUBLIC OR PRIVATE UTILITY COMPANIES 48 HOURS PRIOR TO COMMENCEMENT OF WORK ADJACENT TO EXISTING UTILITY LINES UNLESS ENCROACHMENT PERMIT SPECIFIES OTHERWISE.
7. CONTRACTOR SHALL CONTACT THE CITY'S DIRECTOR OF PUBLIC WORKS, OR HIS DESIGNEE, TO ARRANGE A PRE-CONFERENCE FOR THE PURPOSE OF REVIEWING JOB REQUIREMENTS AND CITY PROCEDURES.
8. PRIOR TO THE START OF CONSTRUCTION, CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (800-642-2444) FOR THE LOCATION OF EXISTING UTILITY FACILITIES.
9. ALL MATERIALS SHALL BE FURNISHED AND INSTALLED BY THE CONTRACTOR UNLESS OTHERWISE NOTED.
10. CONTRACTOR SHALL COORDINATE ALL NECESSARY UTILITY RELOCATIONS, IF REQUIRED, WITH THE APPROPRIATE UTILITY COMPANIES.
11. CONTRACTOR SHALL NOTIFY THE DIRECTOR OF PUBLIC WORKS AT LEAST 72 HOURS IN ADVANCE OF COMMENCEMENT OF ANY PART OF THE WORK.
12. PRIOR TO COMMENCEMENT OF ANY CONSTRUCTION ACTIVITIES, CONTRACTOR SHALL LOCATE, BY EXCAVATION, EXISTING WATER FACILITIES TO ASCERTAIN VERTICAL AND HORIZONTAL POSITION. IF CONFLICTS ARISE, DEVELOPER'S ENGINEER SHALL SUBMIT AN ALTERNATE DESIGN ACCEPTABLE TO THE CITY'S DIRECTOR OF PUBLIC WORKS.
13. CONTRACTOR SHALL PROVIDE RECORD DRAWINGS PER CITY OF AMERICAN CANYON REQUIREMENTS.

CALTRANS GENERAL NOTES

1. ALL CONSTRUCTION SHALL CONFORM TO THESE PLANS, LATEST VERSION OF CALTRANS STANDARD DETAILS AND SPECIFICATIONS, THE STANDARD DETAILS AND SPECIFICATIONS OF THE CITY OF AMERICAN CANYON, DATED 1995 THE COUNTY OF NAPA STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION, WHERE APPLICABLE.
2. ALL WORK PERFORMED WITHIN STATE HIGHWAY RIGHT-OF-WAY MUST CONFORM TO ALL APPLICABLE DEPARTMENTAL CONSTRUCTION STANDARDS INCLUDING BUT NOT LIMITED TO: STANDARD SPECIFICATIONS, STANDARD PLANS, PROJECT DEVELOPMENT PROCEDURES MANUAL, HIGHWAY DESIGN MANUAL AND SPECIAL PROVISIONS.
3. CONTRACTOR MUST KEEP THE PERMIT PACKAGE OR A COPY THEREOF AT THE WORK SITE AT ALL TIMES AND MUST SHOW IT UPON REQUEST TO ANY DEPARTMENT REPRESENTATIVE OR LAW ENFORCEMENT OFFICE.
4. DEVIATIONS FROM PLANS, SPECIFICATIONS, AND/OR THE PERMIT CONDITIONS AS DEFINED IN GENERAL PROVISION NUMBER 5 ARE NOT ALLOWED WITHOUT PRIOR APPROVAL FROM THE DEPARTMENT'S REPRESENTATIVE.
5. CONTRACTOR NEED TO PROVIDE LANE CLOSURE REQUEST SUBMITTALS AND NOTIFICATION OF CLOSURES TO THE DEPARTMENT PER STANDARD SPECIFICATIONS. THE CONTRACTOR MUST NOTIFY THE DEPARTMENT'S REPRESENTATIVE AND THE TRAFFIC MANAGEMENT CENTER (TMC) BEFORE INITIATING A LANE CLOSURE OR CONDUCTING AN ACTIVITY THAT MAY CAUSE A TRAFFIC IMPACT. IN EMERGENCY SITUATIONS WHEN THE CORRECTIVE WORK OR THE EMERGENCY ITSELF MAY AFFECT TRAFFIC, THE DEPARTMENT'S REPRESENTATIVE AND THE TMC MUST BE NOTIFIED AS SOON AS POSSIBLE.
6. AS REQUIRED BY LAW, THE CONTRACTOR MUST PROVIDE TRAFFIC CONTROL PROTECTION, WARNING SIGNS, LIGHTS, SAFETY DEVICES, ETC., AND TAKE ALL OTHER MEASURES NECESSARY FOR THE TRAVELING PUBLIC'S SAFETY. WHILE PROVIDING TRAFFIC CONTROL, THE NEEDS OF ALL ROAD USERS, INCLUDING BUT NOT LIMITED TO MOTORISTS, BICYCLISTS AND PEDESTRIANS, INCLUDING PERSONS WITH DISABILITIES IN ACCORDANCE WITH THE AMERICANS WITH DISABILITIES ACT, MUST BE AN ESSENTIAL PART OF THE WORK ACTIVITY.
7. PERMITTEE IS RESPONSIBLE FOR RESTORATION AND REPAIR OF STATE HIGHWAY RIGHT-OF-WAY RESULTING FROM PERMITTED WORK (STREETS AND HIGHWAYS CODE, SECTION 670 ET SEQ.).
8. UPON COMPLETION OF WORK, CONTRACTOR MUST REMOVE AND DISPOSE OF ALL SCRAPS, REFUSE, BRUSH, TIMBER, MATERIALS, ETC. OFF THE STATE HIGHWAY RIGHT-OF-WAY. THE AESTHETICS OF THE HIGHWAY MUST BE AS IT WAS BEFORE WORK STARTED OR BETTER.
9. THE CONTRACTOR SHALL NOTIFY THE CITY ENGINEER 48 HOURS PRIOR TO REQUIRED INSPECTIONS AND CONSTRUCTION STAKING.
10. CONTRACTOR SHALL KEEP THE NAPA COUNTY SHERIFF, AMERICAN CANYON FIRE DISTRICT, AND ENGINEER INFORMED DAILY REGARDING EXCAVATIONS, BARRICADES, AND DETOURS.
11. CONTRACTOR SHALL LEAVE EMERGENCY TELEPHONE NUMBERS WITH THE ABOVE DEPARTMENTS AND ENGINEER.
12. THE CONTRACTOR SHALL KEEP EXISTING STREETS FREE FROM DIRT AND DEBRIS DURING ALL PHASES OF CONSTRUCTION.
13. THE CONTRACTOR SHALL PROVIDE DUST CONTROL AT ALL TIMES. PRIOR TO OBTAINING WATER FROM FIRE HYDRANTS, THE CONTRACTOR SHALL OBTAIN A HYDRANT WATER METER FROM THE CALIFORNIA WATER SERVICE COMPANY (OR CITY WATER RESOURCES DIVISION, WHERE APPROPRIATE).
14. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (U.S.A.) 800-227-2600, 48 HOURS PRIOR TO START OF EXCAVATION OR DEMOLITION OF IMPROVEMENTS SO THAT UTILITIES MAY BE NOTIFIED AND LINES MARKED.
15. ANY DAMAGE TO THE EXISTING FACILITIES, INCLUDING LANDSCAPING, IRRIGATION, FENCES, WALLS, SIDEWALK AND OTHER PAVEMENT SURFACES, SHALL BE REPAIRED AT CONTRACTOR'S EXPENSE.

KIER & WRIGHT GENERAL NOTES

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE ELEVATIONS OF THE EXISTING STORM DRAINS, SEWERS AND WATER PRIOR TO COMMENCING THE WORK. NOTIFY THE ENGINEER IF ACTUAL IS DIFFERENT FROM PLANS.
2. CONSTRUCTION CONTRACTOR AGREES THAT IN ACCORDANCE WITH GENERALLY ACCEPTED CONSTRUCTION PRACTICES, CONSTRUCTION CONTRACTOR WILL BE REQUIRED TO ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THE PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL BE MADE TO APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS, AND CONSTRUCTION CONTRACTOR FURTHER AGREES TO DEFEND, INDEMNIFY AND HOLD DESIGN PROFESSIONAL HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THE PROJECT, EXPECTING LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF DESIGN PROFESSIONAL.
3. TOPOGRAPHY SHOWN ON THE PLANS REPRESENTS APPROXIMATE CONDITIONS AS OF SEPTEMBER 2013.
4. CONTRACTOR SHALL REPLACE OR REPAIR, AT CONTRACTOR'S OWN EXPENSE, ALL DAMAGED, REMOVED, OR OTHERWISE DISTURBED WALLS, FENCES, SERVICES, UTILITIES, IMPROVEMENTS OF FEATURES OF WHATEVER NATURE TO THEIR ORIGINAL CONDITION WHETHER SHOWN ON THE PLANS OR NOT; PROVIDED SUCH REPAIR OR REPLACEMENT IS CAUSED BY CONTRACT WORK OPERATORS.
5. UNAUTHORIZED CHANGES AND USES: THE ENGINEER PREPARING THESE PLAN WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING AND MUST BE APPROVED BY THE PREPARE OF THESE PLANS.
6. LOCATIONS OF EXISTING UNDERGROUND FACILITIES AND UTILITIES SHOWN ARE APPROXIMATE AND ARE BASED ON FIELD SURVEY AND/OR AVAILABLE UTILITY COMPANY INFORMATION. IT IS THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE ACTUAL LOCATION OF UTILITIES PRIOR TO THE COMMENCEMENT OF WORK. AS REQUIRED, PHYSICAL VERIFICATION OF UTILITY LOCATION SHALL BE PERFORMED BY POT HOLING OR HAND DIGGING AND CAREFUL SUBSURFACE PROBING IN CONFORMANCE WITH ARTICLE 8 OF THE CAL/OSHA CONSTRUCTION SAFETY ORDER. ANY DEVIATIONS FROM LOCATIONS SHOWN ON THE PLANS SHALL BE BROUGHT TO THE ENGINEERS ATTENTION BEFORE STARTING CONSTRUCTION.
7. CONSTRUCTION CONTRACTORS SHALL MUFFLE AND SHIELD INTAKES AND EXHAUSTS, SHROUD OR SHIELD IMPACT TOOLS, AND USE ELECTRIC-POWERED RATHER THAT DIESEL-POWERED CONSTRUCTION EQUIPMENT (AS FEASIBLE).
8. ALL STATIONARY NOISE-GENERATING EQUIPMENT SHALL BE LOCATED AS FAR AWAY AS POSSIBLE FROM NEIGHBORING PROPERTY LINES.
9. ALL CONSTRUCTION EQUIPMENT SHALL BE MAINTAINED AND OPERATED ACCORDING TO MANUFACTURER'S MAINTENANCE SCHEDULES AND RECOMMENDATIONS TO MINIMIZE NOISE AND EXHAUST EMISSIONS (PARTICULAR NITROGEN OXIDES).
10. THE DEVELOPER SHALL BE RESPONSIBLE FOR SECURING AND COMPLYING WITH APPROPRIATE PERMITS FROM THE BAY AREA AIR QUALITY MANAGEMENT DISTRICT FOR ANY EQUIPMENT OR PROCESSES THAT COULD RESULT IN EMISSIONS OF CRITERIA, TOXIC OR ODOROUS EMISSIONS.
11. THE CONTRACTOR IS REQUIRED TO HIRE A TESTING LABORATORY TO PERFORM COMPACTION TESTS. THE TEST RESULTS SHALL BE SUBMITTED TO THE CITY'S CONSTRUCTION ENGINEER PRIOR TO ANY OFF-SITE PAVING.
12. GRADING CONTRACTOR SHALL MAINTAIN A WATER TRUCK ON SITE DURING ALL GRADING ACTIVITY TO WATER GRADE MATERIAL AND CONTROL DUST. CONTRACTOR SHALL COVER STOCKPILED DIRT WITH PLASTIC AND ANCHOR THE PLASTIC TO THE GROUND. ALL GRADING, EARTH-MOVING OR EXCAVATION SHALL CEASE WHEN WINDS EXCEED 20 MPH.

CULTURAL RESOURCE NOTES:

1. THE PROJECT SPONSOR WILL HIRE A QUALIFIED ARCHAEOLOGIST TO MONITOR ALL EXCAVATION ACTIVITIES, INCLUDING GRADING AND TRENCHING ACTIVITIES, WHO WILL ADVISE THE SPONSOR ON APPROPRIATE EXCAVATION LEVELS, AND CONDUCT SPOT CHECKS OF ALL EXCAVATED MATERIALS AND OPEN EXCAVATION AREAS. THE ARCHAEOLOGIST WILL ALSO BRIEF PROJECT PERSONNEL AND CONSTRUCTION WORKERS ON THE POTENTIAL FOR FINDING ARCHAEOLOGICAL RESOURCES AT THE SITE, PREPARE MATERIALS THAT DESCRIBE THE APPURTENANCE OF POTENTIAL RESOURCES, AND APPRISE PERSONNEL OF THE PROCEDURES TO FOLLOW IF SUCH RESOURCES ARE FOUND.
2. IF ARCHAEOLOGICAL RESOURCES ARE UNCOVERED, WORK AT THE PLACE OF DISCOVERY SHALL BE HALTED IMMEDIATELY, FOR A PERIOD NOT TO EXCEED FOUR WEEKS, AND A QUALIFIED ARCHAEOLOGIST SHOULD EVALUATE THE FIND. PREHISTORIC ARCHAEOLOGICAL SITE INDICATORS INCLUDE: OBSIDIAN AND CHART FLAKES AND CHIPPED STONE TOOLS; GRINDING AND MASHING IMPLEMENTS SUCH AS SLABS AND HANDSTONES, AND MORTARS AND PESTLES; AND LOCALLY DARKENED MIDDEN SOILS CONTAINING SOME OF THE PREVIOUSLY LISTED ITEMS PLUS FRAGMENTS OF BONE AND FIRE AFFECTED STONES. IF THE ARCHAEOLOGICAL RESOURCES ARE DETERMINED BY THE ARCHAEOLOGIST TO BE SIGNIFICANT, THE PROJECT SPONSOR WILL, AFTER CONSULTATION WITH NAPA COUNTY, CONSTRUCT A PUBLICLY ACCESSIBLE HISTORIC DISPLAY THAT DOCUMENTS THE FIND AT THE PROJECT SITE.
3. IF HUMAN REMAINS ARE ENCOUNTERED DURING PROJECT CONSTRUCTION, THE PROJECTS SPONSOR AND/OR ITS EMPLOYEES SHALL NOTIFY THE NAPA COUNTY CORNER'S OFFICE IMMEDIATELY. UPON DETERMINATION BY THE COUNTY CORNER'S THAT THE REMAINS ARE NATIVE AMERICAN, THE CORONER SHALL CONTACT THE CALIFORNIA NATIVE AMERICAN HERITAGE COMMISSION, PURSUANT TO SUBDIVISION(C) OF SECTION 7050.5 OF THE HEALTH AND SAFETY CODE, AND THE COUNTY COORDINATOR OF INDIAN AFFAIRS.

NOTES -GEOTECHINCAL REPORT

1. THE PROJECT GEOTECHNICAL REPORT PREPARED BY CORNERSTONE EARTH GROUP, DATED NOVEMBER 2, 2017 SHOULD BE USED AND REFERRED TO FOR ADDITIONAL RECOMMENDATIONS NOT PROVIDED IN THESE NOTES.
2. SITE PREPARATION: AREAS TO BE DEVELOPED SHOULD BE CLEARED OF VEGETATION AND DEBRIS, INCLUDING THAT LEFT BY THE REMOVAL OF OBSOLETE STRUCTURES. TREES AND SHRUBS THAT WILL NOT BE PART OF THE PROPOSED DEVELOPMENT SHOULD BE REMOVED AND THEIR PRIMARY ROOT SYSTEM GRUBBED. CLEARED AND GRUBBED MATERIAL SHOULD BE REMOVED FROM THE SITE AND DISPOSED OF IN ACCORDANCE WITH COUNTY HEALTH DEPARTMENT GUIDELINES.
3. VOIDS CREATED DURING CLEARING SHOULD BE BACKFILLED WITH ENGINEERED FILL AS RECOMMENDED HEREIN.
4. STRIPPING, AREAS TO BE GRADED SHOULD BE STRIPPED OF THE UPPER FEW INCHES OF SOIL CONTAINING ORGANIC MATTER: SOIL CONTAINING MORE THAN THREE PERCENT BY WEIGHT ORGANIC MATTER SHOULD BE CONSIDERED ORGANIC. SUBFICIAL STRIPPING SHOULD EXTEND ABOUT 3 TO 5 INCHES BELOW EXISTING GRADE IN VEGETATED AREAS. THE ACTUAL STRIPPING DEPTHS SHOULD BE DETERMINED BY REPRESENTATIVE OF THE GEOTECHNICAL ENGINEER IN THE FIELD AT THE TIME OF STRIPPING. THE STRIPPING SHOULD BE REMOVED FROM THE SITE OR IS SUITABLE STOCKPILED FOR RE-USE AS TOPSOIL IN LANDSCAPING.
5. AT ALL TIMES, TEMPORARY CONSTRUCTION EXCAVATIONS SHOULD CONFORM TO THE REGULATIONS OF THE DATE OF CALIFORNIA DEPARTMENT OF INDUSTRIAL RELATIONS, DIVISIONS OF INDUSTRIAL SAFETY OR OTHER STRICTER GOVERNING REGULATIONS.
8. ALL FILL MATERIALS SHOULD BE FREE OF PERISHABLE MATTER AND ROCKS OR LUMPS OVER 6 INCHES IN DIAMETER, AND MUST BE APPROVED BY THE GEOTECHNICAL ENGINEER PRIOR TO USE.
9. WE JUDGE THE ON-SITE SOILS GENERALLY SUITABLE FOR USE AS GENERAL FILL BUT WILL NOT BE SUITABLE FOR USE AS NON-EXPANSIVE FILL UNLESS THEY ARE CHEMICALLY TREATED.
10. IN GENERAL, IMPORTED FILL, IF NEEDED SHOULD BE INORGANIC WITH A PLASTICITY INDEX (PI) OF 15 OR LESS, AND NOT CONTAIN RECYCLED ASPHALT CONCRETE WHERE IT WILL BE USED WITHIN THE BUILDING AREA. THE GEOTECHNICAL ENGINEER SHOULD APPROVE IMPORTED MATERIAL PRIOR TO USE AS COMPACT FILL. THE GRADING CONTRACTOR IS RESPONSIBLE FOR SUBMITTING, AT LEAST 5 DAYS IN ADVANCE OF ITS INTENDED USE, SAMPLES OF THE PROPOSED IMPORT MATERIALS FOR LABORATORY TESTING AND APPROVAL BY THE SOIL ENGINEER.
11. APPROVED FILL MATERIAL SHOULD BE PLACED IN 8-INCH LIFTS. UNIFORMLY MOISTURE-CONDITIONED TO NEAR OPTIMUM AND PROPERLY COMPACTED. FILL PLACEMENT, MOISTURE CONDITIONING, AND COMPACTION SHOULD BE IN ACCORDANCE WITH THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
14. ALL STRUCTURE FILLS, INCLUDING THOSE PLACED TO ESTABLISH SITE SURFACE DRAINAGE, SHOULD BE COMPACTED TO AT LEAST 90 PERCENT RELATIVE COMPACTION OR PER THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
15. EXPANSIVE SOILS USED AS FILL SHOULD BE MOISTURE-CONDITIONED TO AT LEAST 3 PERCENT ABOVE OPTIMUM PER THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
16. IN GENERAL, CUT AND FILL SLOPES SHOULD BE DESIGNED AND CONSTRUCTED AT SLOPE GRADIENTS OF 3:1 (HORIZONTAL TO VERTICAL) OR FLATTER, UNLESS OTHERMISE APPROVED BY THE GEOTECHNICAL ENGINEER IN SPECIFIED AREAS.

GRADING NOTES

1. ALL GRADING SHALL BE DONE IN ACCORDANCE WITH RECOMMENDATIONS IN THE GEOTECHNICAL AND FOUNDATION INVESTIGATION PREPARED FOR THIS SITE.
2. CONTRACTOR SHALL DETERMINE HIS OWN EARTH QUANTITIES AND BASE HIS BID ACCORDINGLY.
3. TOP OF CURB ELEVATION IS 0.5' ABOVE THE A.C. PAVING AND SPOT ELEVATIONS ARE TO FINISHED SURFACE (UNLESS OTHERWISE NOTED).
4. COMPACTION TO BE DETERMINED USING ASTM D1557, LATEST EDITION LABORATORY TEST PROCEDURE.
5. ALL UTILITY STRUCTURES INCLUDING, BUT NOT LIMITED TO MANHOLES, CATCH BASINS, WATER VALVES, FIRE HYDRANTS, TELEPHONE AND ELECTRIC VAULTS, AND PULL BOXES, THAT LIE WITHIN THE PUBLIC RIGHT-OF-WAY EASEMENTS OR AREAS AFFECTED BY WORK ON THIS PROJECT SHALL BE ADJUSTED TO GRADE BY THE CONTRACTOR OR THE RESPECTIVE UTILITY COMPANY FOR WHICH THE CONTRACTOR IS RESPONSIBLE TO AFFECT COORDINATION.
6. THE TYPES, LOCATIONS, SIZES AND/OR DEPTHS OF EXISTING UNDERGROUND UTILITIES AS SHOWN ON THESES IMPROVEMENT PLANS WERE OBTAINED FROM SOURCES OF VARYING RELIABILITY. THE CONTRACTOR IS CAUTIONED THAT ONLY ACTUAL EXCAVATION WILL REVEAL THE TYPES, EXTENT, SIZES, LOCATIONS AND DEPTHS OF SUCH UNDERGROUND UTILITIES. A REASONABLE EFFORT HAS BEEN MADE TO LOCATE AND DELINEATE ALL KNOWN UNDERGROUND UTILITIES. HOWEVER, THE ENGINEER CAN NOT ASSUME RESPONSIBILITY FOR THE COMPLETENESS OR ACCURACY OF THEIR DELINEATION OF SUCH UNDERGROUND UTILITIES WHICH MAY BE ENCOUNTERED, BUT ARE NOT SHOWN ON THESE DRAWINGS.
7. CONTRACTOR SHALL UNCOVER AND EXPOSE ALL EXISTING UTILITY AND SEWER LINES WHERE THEY ARE TO BE CROSSED, ABOVE OR BELOW, BY THE NEW FACILITY BEING CONSTRUCTED IN ORDER TO VERIFY THE GRADE AND TO ASSURE THAT THERE IS SUFFICIENT CLEARANCE. PIPE SHALL NOT BE STRUNG NOR TRENCHING COMMENCED UNTIL ALL CROSSINGS HAVE BEEN VERIFIED FOR CLEARANCE. IF THE CONTRACTOR FAILS TO FOLLOW THIS PROCEDURE, HE WILL BE SOLELY RESPONSIBLE FOR ANY EXTRA WORK OR MATERIAL REQUIRED IF MODIFICATIONS TO THE DESIGN ARE NECESSARY.
8. THE CONTRACTOR SHALL SET HIS STRING OR WIRE THROUGH AT LEAST THREE GRADE STAKES TO VERIFY GRADE. IF THE STAKES DO NOT PRODUCE A UNIFORM GRADE, NOTIFY THE ENGINEER IMMEDIATELY AND HAVE THE GRADES CHECKED PRIOR THE TRENCHING OR PLACEMENT OF CONCRETE.
9. ALL WORK, IN THE PUBLIC RIGHT-OF-WAY, SHALL CONFORM TO THE CALTRANS STANDARD SPECIFICATIONS AND REQUIREMENTS.

EROSION AND SEDIMENT CONTROL MEASURES

1. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE EFFECTIVE FOR THE DURATION OF CONSTRUCTION.
2. AFTER THE UNDERGROUND STORM DRAIN SYSTEM IS INSTALLED, THE CATCH BASINS WILL BE INSTALLED (AS SOON AS PRACTICAL) AND ROCK BARRIER BAGS WILL BE PLACED AROUND THOSE CATCH BASINS AS SHOWN ON THIS PLAN UNTIL THIS SITE IS PAVED.
3. SHOULD THE ON-SITE STORM DRAINS NOT BE INSTALLED COMPLETELY BY OCTOBER 15, THE CONTRACTOR SHALL CONSTRUCT TEMPORARY SEDIMENT BASINS AT THE EXISTING STORM PIPES STUBBED TO THE SITE.
4. PERSON RESPONSIBLE FOR IMPLEMENTATION OF EROSION AND SEDIMENTATION PLAN.

   NAME: TBD
   ADDRESS: TBD
   TELEPHONE: TBD

5. THE CONTRACTOR SHALL PLACE 3"-6" COARSE AGGREGATE AS A GRAVEL ROADWAY (12" MIN. THICK FOR THE FULL WIDTH AND 50 FEET LONG) AT EACH D/W ENTRANCE TO SITE. ANY MUD THAT IS TRACKED ONTO PUBLIC STREETS SHALL BE REMOVED THAT SAME DAY AND AS REQUIRED BY THE CITY OF AMERICAN CANYON.
6. ALL EROSION CONTROL MEASURES SHALL BE MAINTAINED UNTIL DISTURBED AREAS ARE STABILIZED AND CHANGES TO THIS EROSION AND SEDIMENT CONTROL PLAN SHALL BE MADE TO MEET FIELD CONDITIONS ONLY WITH THE APPROVAL OF OR AT THE DIRECTION OF THE CITY ENGINEER.
7. ALL PAVED AREAS SHALL BE KEPT CLEAR OF EARTH MATERIAL AND DEBRIS. THE SITE SHALL BE MAINTAINED SO AS TO MINIMIZE SEDIMENT-LADEN RUN-OFF TO ANY STORM DRAINAGE SYSTEM.
8. ALL EROSION CONTROL FACILITIES MUST BE INSPECTED AND REPAIRED AT THE END OF EACH WORKING DAY.
9. SEDIMENT BASINS SHALL BE CLEANED OUT WHENEVER SEDIMENT REACHES THE SEDIMENT CLEANOUT LEVEL INDICATED ON THE PLANS.
10. BORROW AREAS AND TEMPORARY STOCKPILES SHALL BE PROTECTED WITH APPROPRIATE EROSION CONTROL MEASURES TO THE SATISFACTION OF THE CITY ENGINEER.
11. ALL CUT AND FILL SLOPES ARE TO BE PROTECTED TO PREVENT OVERBANK FLOW.
12. INLETS WHICH ARE NOT USED IN CONJUNCTION WITH ROCK BARRIER BAGS OR SEDIMENT BASINS SHOULD BE COVERED, OR OTHERMISE ADJUSTED TO PREVENT INFLOW, UNLESS THE AREA DRAINED IS UNDISTURBED OR STABILIZED.

DUST ABATEMENT NOTES:

THE CONSTRUCTION CONTRACTOR IS REQUIRED TO IMPLEMENT A DUST ABATEMENT PROGRAM. ELEMENTS OF THIS PROGRAM SHALL INCLUDE THE FOLLOWING.

1. WATER ALL ACTIVE CONSTRUCTION AREAS AT LEAST TWICE DAILY;
2. COVER ALL TRUCKS HAULING SOIL, SAND, AND OTHER LOOSE MATERIALS OR REQUIRE ALL TRUCKS TO MAINTAIN AT LEAST TWO FEET OF FREEBOARD (I.E. THE MINIMUM REQUIRED SPACE BETWEEN THE TOP OF THE LOAD AND THE TOP OF THE TRAILER);
3. PAVE, APPLY WATER THREE TIMES DAILY, OR APPLY (NON-TOXIC) SOIL STABILIZERS ON ALL UNPAVED ACCESS ROADS, PARKING AREAS AND STAGING AREAS AT CONSTRUCTION SITE;
4. SWEEP DAILY (PREFERABLY WITH WATER SWEEPERS) ALL PAVED ACCESS ROADS, PARKING AREAS, AND AREAS AT CONSTRUCTION SITE;
5. SWEEP STREETS DAILY (PREFERABLY WITH WATER SWEEPERS) IF VISIBLE SOIL MATERIAL IS CARRIED ONTO ADJACENT PUBLIC STREETS;
6. HYDROSEED OR APPLY (NON-TOXIC) SOIL STABILIZERS TO INACTIVE CONSTRUCTION AREAS (PREVIOUSLY GRADED AREAS INACTIVE FOR TEN DAYS OR MORE);
7. ENCLOSE, COVER, WATER TWICE DAILY OR APPLY (NON-TOXIC) SOIL STABILIZER TO EXPOSED STOCKPILES (DIRT, SAND, ETC.);
8. LIMIT TRAFFIC SPEEDS ON UNPAVED ROADS TO 15 MILES PER HOUR;

NOTE:

1. STRAW WATTLES ARE TUBES MADE FROM STRAW BOUND W/BIO-DEGRADABLE NETTING. NO PLASTIC MATERIALS ALLOWED. THEY ARE APPROX. 8"-10" DIA AND 20-30 FT LONG.
2. STRAW WATTLES TRAP SEDIMENT AND REDUCE SHEET AND RILL EROSION BY REDUCING SLOPE GRADIENT, INCREASING INFILTRATION RATES AND BY PRODUCING A FAVORABLE ENVIRONMENT FOR PLANT ESTABLISHMENT.
3. STRAW WATTLE INSTALLATION REQUIRES THE PLACEMENT AND SECURE STAKING OF THE WATTLE IN A TRENCH 2"-4" DEEP, DUG ON CONTOUR. RUNOFF MUST NOT BE ALLOWED TO RUN UNDER OR AROUND WATTLE.
4. IF MORE THAN ONE FIBER ROLL IS PLACED IN A ROW, THE ROLLS MUST BE OVERLAPPED, NOT ABUTTED.
5. TURN THE ENDS OF THE FIBER ROLL UP-SLOPE TO PREVENT RUNOFF FROM GOING AROUND THE ROLL.

EXHIBIT C

CITY OF AMERICAN CANYON CONSTRUCTION NOTES:

1. CONTRACTOR AGREES TO ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR THE JOB SITE DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE CITY REPRESENTATIVES HARMLESS FROM ANY AND ALL LIABILITY, REAL AND/OR ALLEGED, IN CONJUNCTION WITH THE PERFORMANCE OF THIS PROJECT.
2. CONTRACTOR SHALL BE HELD RESPONSIBLE FOR ANY AND ALL DAMAGES TO EXISTING STRUCTURES AND UTILITIES DURING CONSTRUCTION.
3. CONTRACTOR SHALL VERIFY LOCATIONS, LEVELS, DISTANCES, AND FEATURES THAT MAY AFFECT THE WORK. SHOULD EXISTING CONDITIONS DIFFER FROM THOSE SHOWN OR INDICATED, OR IF IT APPEARS THAT THESE PLANS, STANDARD SPECIFICATIONS, AND SPECIAL PROVISIONS DO NOT ADEQUATELY DETAIL THE WORK TO BE DONE, CONTRACTOR SHALL NOTIFY THE ENGINEER PRIOR TO CONTINUING WITH ANY RELATED WORK. NO ALLOWANCE WILL BE MADE IN HIS BEHALF FOR ANY EXTRA EXPENSE RESULTING FROM FAILURE OR NEGLECT IN DETERMINING THE CONDITIONS UNDER WHICH WORK IS TO BE PERFORMED. NOTED DIMENSIONS TAKE PRECEDENCE OVER SCALE.
4. A SET OF SIGNED BLUEPRINTS AND A SET OF SPECIFICATIONS WILL BE KEPT AT ALL TIMES AT THE JOB SITE ON WHICH ALL CHANGES OR VARIATIONS IN THE WORK, INCLUDING ALL EXISTING UTILITIES, ARE TO BE RECORDED AND/OR CORRECTED DAILY AND SUBMITTED TO THE CITY ENGINEER WHEN THE WORK TO BE DONE IS COMPLETED.
5. CONTRACTOR TO EXPOSE AND CHECK LOCATIONS OF EXISTING INVERTS PRIOR TO CONSTRUCTION.
6. CONTRACTOR SHALL NOTIFY ALL PUBLIC OR PRIVATE UTILITY COMPANIES 48 HOURS PRIOR TO COMMENCEMENT OF WORK ADJACENT TO EXISTING UTILITY LINES UNLESS ENCROACHMENT PERMIT SPECIFIES OTHERWISE.
7. CONTRACTOR SHALL CONTACT THE CITY'S DIRECTOR OF PUBLIC WORKS, OR HIS DESIGNEE, TO ARRANGE A PRE-CONFERENCE FOR THE PURPOSE OF REVIEWING JOB REQUIREMENTS AND CITY PROCEDURES.
8. PRIOR TO THE START OF CONSTRUCTION, CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (800-642-2444) FOR THE LOCATION OF EXISTING UTILITY FACILITIES.
9. ALL MATERIALS SHALL BE FURNISHED AND INSTALLED BY THE CONTRACTOR UNLESS OTHERWISE NOTED.
10. CONTRACTOR SHALL COORDINATE ALL NECESSARY UTILITY RELOCATIONS, IF REQUIRED, WITH THE APPROPRIATE UTILITY COMPANIES.
11. CONTRACTOR SHALL NOTIFY THE DIRECTOR OF PUBLIC WORKS AT LEAST 72 HOURS IN ADVANCE OF COMMENCEMENT OF ANY PART OF THE WORK.
12. PRIOR TO COMMENCEMENT OF ANY CONSTRUCTION ACTIVITIES, CONTRACTOR SHALL LOCATE, BY EXCAVATION, EXISTING WATER FACILITIES TO ASCERTAIN VERTICAL AND HORIZONTAL POSITION. IF CONFLICTS ARISE, DEVELOPER'S ENGINEER SHALL SUBMIT AN ALTERNATE DESIGN ACCEPTABLE TO THE CITY'S DIRECTOR OF PUBLIC WORKS.
13. CONTRACTOR SHALL PROVIDE RECORD DRAWINGS PER CITY OF AMERICAN CANYON REQUIREMENTS.

CALTRANS GENERAL NOTES

1. ALL CONSTRUCTION SHALL CONFORM TO THESE PLANS, CALTRANS STANDARD DETAILS AND SPECIFICATION, DATED JULY 2015, THE STANDARD DETAILS AND SPECIFICATIONS OF THE CITY OF AMERICAN CANYON, DATED 1995 THE COUNTY OF NAPA STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION, WHERE APPLICABLE.
2. THE ENGINEER SHALL PROVIDE STAKING TO ESTABLISH GRADE AS PROVIDED FOR IN THE PROJECT SPECIFICATIONS.
3. THE CONTRACTOR SHALL NOTIFY THE CITY ENGINEER 48 HOURS PRIOR TO REQUIRED INSPECTIONS AND CONSTRUCTION STAKING.
4. CONTRACTOR SHALL KEEP THE NAPA COUNTY SHERIFF, AMERICAN CANYON FIRE DISTRICT, AND ENGINEER INFORMED DAILY REGARDING EXCAVATIONS, BARRICADES, AND DETOURS.
5. CONTRACTOR SHALL LEAVE EMERGENCY TELEPHONE NUMBERS WITH THE ABOVE DEPARTMENTS AND ENGINEER.
6. THE CONTRACTOR SHALL KEEP EXISTING STREETS FREE FROM DIRT AND DEBRIS DURING ALL PHASES OF CONSTRUCTION.
7. THE CONTRACTOR SHALL PROVIDE DUST CONTROL AT ALL TIMES. PRIOR TO OBTAINING WATER FROM FIRE HYDRANTS, THE CONTRACTOR SHALL OBTAIN A HYDRANT WATER METER FROM THE CALIFORNIA WATER SERVICE COMPANY (OR CITY WATER RESOURCES DIVISION, WHERE APPROPRIATE).
8. THE CONTRACTOR SHALL MAINTAIN ACCESS TO PLACES OF RESIDENCE AND BUSINESS ALONG THE STREETS TO BE REPAIRED THROUGHOUT THE LIFE OF THE CONTRACT. ALL STREETS SHALL BE FULLY OPEN TO THROUGH TRAFFIC BETWEEN THE HOURS OF 3:30 PM AND 7:00 AM.
9. THE CONTRACTOR SHALL NOTIFY UNDERGROUND SERVICE ALERT (U.S.A.) 800-227-2600, 48 HOURS PRIOR TO START OF EXCAVATION OR DEMOLITION OF IMPROVEMENTS SO THAT UTILITIES MAY BE NOTIFIED AND LINES MARKED.
10. THE CONTRACTOR WILL BE REQUIRED TO PAY ANY ADDITIONAL FEES FOR INSPECTION OF ANY WORK PERFORMED OUTSIDE OF THE CITY'S NORMAL WORKING HOURS. SAID FEE WILL BE IN ACCORDANCE WITH THE LATEST PUBLIC WORKS OVERTIME INSPECTION FEE POLICY AND ARRANGEMENTS FOR INSPECTIONS SERVICES DETERMINED PRIOR TO THE WORK.
11. ANY DAMAGE TO THE EXISTING FACILITIES, INCLUDING LANDSCAPING, IRRIGATION, FENCES, WALLS, SIDEWALK AND OTHER PAVEMENT SURFACES, SHALL BE REPAIRED AT CONTRACTOR'S EXPENSE.
12. COMPACTION TESTING WILL BE PERFORMED ON ALL STREET WORK TO VERIFY THAT COMPACTION CONFORMS TO CITY STANDARDS.
13. THE INITIAL TEST AND ONE RETEST WILL BE PERFORMED BY THE CITY (24 HOURS NOTICE REQUIRED). ALL ADDITIONAL TESTING WILL BE AT THE CONTRACTOR'S EXPENSE.
14. ALL RETURN RADII AND CURVE DATA ARE TO FACE OF CURB OR TO CONTROL LINES.

KIER & WRIGHT GENERAL NOTES

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING THE ELEVATIONS OF THE EXISTING STORM DRAINS, SEWERS AND WATER PRIOR TO COMMENCING THE WORK. NOTIFY THE ENGINEER IF ACTUAL IS DIFFERENT FROM PLANS.
2. CONSTRUCTION CONTRACTOR AGREES THAT IN ACCORDANCE WITH GENERALLY ACCEPTED CONSTRUCTION PRACTICES, CONSTRUCTION CONTRACTOR WILL BE REQUIRED TO ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THE PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL BE MADE TO APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS, AND CONSTRUCTION CONTRACTOR FURTHER AGREES TO DEFEND, INDEMNIFY AND HOLD DESIGN PROFESSIONAL HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THE PROJECT, EXPECTING LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF DESIGN PROFESSIONAL.
3. TOPOGRAPHY SHOWN ON THE PLANS REPRESENTS APPROXIMATE CONDITIONS AS OF SEPTEMBER 2013.
4. CONTRACTOR SHALL REPLACE OR REPAIR, AT CONTRACTOR'S OWN EXPENSE, ALL DAMAGED, REMOVED, OR OTHERWISE DISTURBED WALLS, FENCES, SERVICES, UTILITIES, IMPROVEMENTS OF FEATURES OF WHATEVER NATURE TO THEIR ORIGINAL CONDITION WHETHER SHOWN ON THE PLANS OR NOT; PROVIDED SUCH REPAIR OR REPLACEMENT IS CAUSED BY CONTRACT WORK OPERATIONS.
5. UNAUTHORIZED CHANGES AND USES: THE ENGINEER PREPARING THESE PLAN WILL NOT BE RESPONSIBLE FOR, OR LIABLE FOR, UNAUTHORIZED CHANGES TO OR USES OF THESE PLANS. ALL CHANGES TO THE PLANS MUST BE IN WRITING AND MUST BE APPROVED BY THE PREPARE OF THESE PLANS.
6. LOCATIONS OF EXISTING UNDERGROUND FACILITIES AND UTILITIES SHOWN ARE APPROXIMATE AND ARE BASED ON FIELD SURVEY AND/OR AVAILABLE UTILITY COMPANY INFORMATION. IT IS THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE ACTUAL LOCATION OF UTILITIES PRIOR TO THE COMMENCEMENT OF WORK. AS REQUIRED, PHYSICAL VERIFICATION OF UTILITY LOCATION SHALL BE PERFORMED BY POT HOLING OR HAND DIGGING AND CAREFUL SUBSURFACE PROBING IN CONFORMANCE WITH ARTICLE 6 OF THE CAL/OSHA CONSTRUCTION SAFETY ORDER. ANY DEVIATIONS FROM LOCATIONS SHOWN ON THE PLANS SHALL BE BROUGHT TO THE ENGINEERS ATTENTION BEFORE STARTING CONSTRUCTION.
7. CONSTRUCTION CONTRACTORS SHALL MUFFLE AND SHIELD INTAKES AND EXHAUSTS, SHROUD OR SHIELD IMPACT TOOLS, AND USE ELECTRIC-POWERED RATHER THAT DIESEL-POWERED CONSTRUCTION EQUIPMENT (AS FEASIBLE).
8. ALL STATIONARY NOISE-GENERATING EQUIPMENT SHALL BE LOCATED AS FAR AWAY AS POSSIBLE FROM NEIGHBORING PROPERTY LINES.
9. ALL CONSTRUCTION EQUIPMENT SHALL BE MAINTAINED AND OPERATED ACCORDING TO MANUFACTURER'S MAINTENANCE SCHEDULES AND RECOMMENDATIONS TO MINIMIZE NOISE AND EXHAUST EMISSIONS (PARTICULAR NITROGEN OXIDES).
10. THE DEVELOPER SHALL BE RESPONSIBLE FOR SECURING AND COMPLYING WITH APPROPRIATE PERMITS FROM THE BAY AREA AIR QUALITY MANAGEMENT DISTRICT FOR ANY EQUIPMENT OR PROCESSES THAT COULD RESULT IN EMISSIONS OF CRITERIA, TOXIC OR ODOROUS EMISSIONS.
11. THE CONTRACTOR IS REQUIRED TO HIRE A TESTING LABORATORY TO PERFORM COMPACTION TESTS. THE TEST RESULTS SHALL BE SUBMITTED TO THE CITY'S CONSTRUCTION ENGINEER PRIOR TO ANY OFF-SITE PAVING.
12. GRADING CONTRACTOR SHALL MAINTAIN A WATER TRUCK ON SITE DURING ALL GRADING ACTIVITY TO WATER GRADE MATERIAL AND CONTROL DUST. CONTRACTOR SHALL COVER STOCKPILED DIRT WITH PLASTIC AND ANCHOR THE PLASTIC TO THE GROUND. ALL GRADING, EARTH-MOVING OR EXCAVATION SHALL CEASE WHEN WINDS EXCEED 20 MPH.

CULTURAL RESOURCE NOTES:

1. THE PROJECT SPONSOR WILL HIRE A QUALIFIED ARCHAEOLOGIST TO MONITOR ALL EXCAVATION ACTIVITIES, INCLUDING GRADING AND TRENCHING ACTIVITIES, WHO WILL ADVISE THE SPONSOR ON APPROPRIATE EXCAVATION LEVELS, AND CONDUCT SPOT CHECKS OF ALL EXCAVATED MATERIALS AND OPEN EXCAVATION AREAS. THE ARCHAEOLOGIST WILL ALSO BRIEF PROJECT PERSONNEL AND CONSTRUCTION WORKERS ON THE POTENTIAL FOR FINDING ARCHAEOLOGICAL RESOURCES AT THE SITE, PREPARE MATERIALS THAT DESCRIBE THE APPURTENANCE OF POTENTIAL RESOURCES, AND APPRISE PERSONNEL OF THE PROCEDURES TO FOLLOW IF SUCH RESOURCES ARE FOUND.

2. IF ARCHAEOLOGICAL RESOURCES ARE UNCOVERED, WORK AT THE PLACE OF DISCOVERY SHALL BE HALTED IMMEDIATELY, FOR A PERIOD NOT TO EXCEED FOUR WEEKS, AND A QUALIFIED ARCHAEOLOGIST SHOULD EVALUATE THE FIND. PREHISTORIC ARCHAEOLOGICAL SITE INDICATORS INCLUDE; OBSIDIAN AND CHART FLAKES AND CHIPPED STONE TOOLS; GRINDING AND MASHING IMPLEMENTS SUCH AS SLABS AND HANDSTONES, AND MORTARS AND PESTLES; AND LOCALLY DARKENED MIDDEN SOILS CONTAINING SOME OF THE PREVIOUSLY LISTED ITEMS PLUS FRAGMENTS OF BONE AND FIRE AFFECTED STONES. IF THE ARCHAEOLOGICAL RESOURCES ARE DETERMINED BY THE ARCHAEOLOGIST TO BE SIGNIFICANT, THE PROJECT SPONSOR WILL AFTER CONSULTATION WITH NAPA COUNTY, CONSTRUCT A PUBLICLY ACCESSIBLE HISTORIC DISPLAY THAT DOCUMENTS THE FIND AT THE PROJECT SITE.

3. IF HUMAN REMAINS ARE ENCOUNTERED DURING PROJECT CONSTRUCTION, THE PROJECTS SPONSOR AND/OR ITS EMPLOYEES SHALL NOTIFY THE NAPA COUNTY CORNER'S OFFICE IMMEDIATELY. UPON DETERMINATION BY THE COUNTY CORNER'S THAT THE REMAINS ARE NATIVE AMERICAN, THE CORONER SHALL CONTACT THE CALIFORNIA NATIVE AMERICAN HERITAGE COMMISSION. PURSUANT TO SUBDIVISION(C) OF SECTION 7050.5 OF THE HEALTH AND SAFETY CODE, AND THE COUNTY COORDINATOR OF INDIAN AFFAIRS.

NOTES -GEOTECHINCAL REPORT

1. THE PROJECT GEOTECHNICAL REPORT PREPARED BY CORNERSTONE EARTH GROUP, DATED XXXXXXX SHOULD BE USED AND REFERRED TO FOR ADDITIONAL RECOMMENDATIONS NOT PROVIDED IN THESE NOTES.
2. SITE PREPARATION: AREAS TO BE DEVELOPED SHOULD BE CLEARED OF VEGETATION AND DEBRIS, INCLUDING THAT LEFT BY THE REMOVAL OF OBSOLETE STRUCTURES. TREES AND SHRUBS THAT WILL NOT BE PART OF THE PROPOSED DEVELOPMENT SHOULD BE REMOVED AND THEIR PRIMARY ROOT SYSTEM GRUBBED. CLEARED AND GRUBBED MATERIAL SHOULD BE REMOVED FROM THE SITE AND DISPOSED OF IN ACCORDANCE WITH COUNTY HEALTH DEPARTMENT GUIDELINES.
3. VOIDS CREATED DURING CLEARING SHOULD BE BACKFILLED WITH ENGINEERED FILL AS RECOMMENDED HEREIN.
4. STRIPPING, AREAS TO BE GRADED SHOULD BE STRIPPED OF THE UPPER FEW INCHES OF SOIL CONTAINING ORGANIC MATTER. SOIL CONTAINING MORE THAN THREE PERCENT BY WEIGHT ORGANIC MATTER SHOULD BE CONSIDERED ORGANIC. SURFICIAL STRIPPING SHOULD EXTEND ABOUT 3 TO 6 INCHES BELOW EXISTING GRADE IN VEGETATED AREAS. THE ACTUAL STRIPPING DEPTHS SHOULD BE DETERMINED BY REPRESENTATIVE OF THE GEOTECHNICAL ENGINEER IN THE FIELD AT THE TIME OF STRIPPING. THE STRIPPING SHOULD BE REMOVED FROM THE SITE OR IS SUITABLE STOCKPILED FOR RE-USE AS TOPSOIL IN LANDSCAPING.
5. AT ALL TIMES, TEMPORARY CONSTRUCTION EXCAVATIONS SHOULD CONFORM TO THE REGULATIONS OF THE DATE OF CALIFORNIA DEPARTMENT OF INDUSTRIAL RELATIONS, DIVISIONS OF INDUSTRIAL SAFETY OR OTHER STRICTER GOVERNING REGULATIONS.
8. ALL FILL MATERIALS SHOULD BE FREE OF PERISHABLE MATTER AND ROCKS OR LUMPS OVER 6 INCHES IN DIAMETER, AND MUST BE APPROVED BY THE GEOTECHNICAL ENGINEER PRIOR TO USE.
9. THE UPPER 6 INCHES OF FILL BENEATH THE BUILDING AREA SHOULD CONSIST OF NON-EXPANSIVE, CRUSHED GRANULAR BASE HAVING AN R-VALUE OF AT LEAST 50 AND NO MORE THAN 10 PERCENT PASSING THE NO. 200 SIEVE, SUCH AS A CLASS 2 AGGREGATE BASE.
10. WE JUDGE THE ON-SITE SOILS GENERALLY SUITABLE FOR USE AS GENERAL FILL BUT WILL NOT BE SUITABLE FOR USE AS NON-EXPANSIVE FILL UNLESS THEY ARE CHEMICALLY TREATED.
11. IN GENERAL, IMPORTED FILL IF NEEDED SHOULD BE INORGANIC WITH A PLASTICITY INDEX (PI) OF 15 OR LESS, AND NOT CONTAIN RECYCLED ASPHALT CONCRETE WHERE IT WILL BE USED WITHIN THE BUILDING AREA. THE GEOTECHNICAL ENGINEER SHOULD APPROVE IMPORTED MATERIAL PRIOR TO USE AS COMPACT FILL. THE GRADING CONTRACTOR IS RESPONSIBLE FOR SUBMITTING, AT LEAST 5 DAYS IN ADVANCE OF ITS INTENDED USE, SAMPLES OF THE PROPOSED IMPORT MATERIALS FOR LABORATORY TESTING AND APPROVAL BY THE SOIL ENGINEER.
12. APPROVED FILL MATERIAL SHOULD BE PLACED IN 8-INCH LIFTS. UNIFORMLY MOISTURE-CONDITIONED TO NEAR OPTIMUM AND PROPERLY COMPACTED. FILL PLACEMENT, MOISTURE CONDITIONING, AND COMPACTION SHOULD BE IN ACCORDANCE WITH THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
14. ALL STRUCTURE FILLS, INCLUDING THOSE PLACED TO ESTABLISH SITE SURFACE DRAINAGE, SHOULD BE COMPACTED TO AT LEAST 90 PERCENT RELATIVE COMPACTION OR PER THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
15. EXPANSIVE SOILS USED AS FILL SHOULD BE MOISTURE-CONDITIONED TO AT LEAST 3 PERCENT ABOVE OPTIMUN PER THE GEOTECHNICAL ENGINEER'S RECOMMENDATIONS.
16. IN GENERAL, CUT AND FILL SLOPES SHOULD BE DESIGNED AND CONSTRUCTED AT SLOPE GRADIENTS OF 3:1 (HORIZONTAL TO VERTICAL) OR FLATTER, UNLESS OTHERMISE APPROVED BY THE GEOTECHNICAL ENGINEER IN SPECIFIED AREAS.

GRADING NOTES

1. ALL GRADING SHALL BE DONE IN ACCORDANCE WITH RECOMMENDATIONS IN THE GEOTECHNICAL AND FOUNDATION INVESTIGATION PREPARED FOR THIS SITE.
2. CONTRACTOR SHALL DETERMINE HIS OWN EARTH QUANTITIES AND BASE HIS BID ACCORDINGLY.
3. TOP OF CURB ELEVATION IS 0.5' ABOVE THE A.C. PAVING AND SPOT ELEVATIONS ARE TO FINISHED SURFACE (UNLESS OTHERWISE NOTED).
4. COMPACTION TO BE DETERMINED USING ASTM D1557, LATEST EDITION LABORATORY TEST PROCEDURE.
5. STORM DRAIN PIPE WITHIN THE PUBLIC OR PRIVATE STREET RIGHT OF WAY SHALL BE RCP CLASS III OR BETTER UNLESS OTHERWISE NOTED. BEDDING SHALL BE PER THE CITY OF AMERICAN CANYON STANDARDS.
6. ON-SITE STORM DRAIN PIPE SHALL BE: 10" DIAMETER AND SMALLER SDR 35 PVC OR HDPE WITH RUBBER GASKETS MEETING ASTM F477. 12" DIAMETER TO BE SDR 35 PVC, CLASS III RCP OR BLUE SEAL HDPE AS MANUFACTURED BY HANCOR WITH WATER TIGHT JOINTS MEETING ASTM F477 AND ASTM D3212. 15" THROUGH 24" DIAMETERS; PIPE TO BE CLASS III RCP OR BLUE SEAL HDPE AS SPECIFIED ABOVE. PIPES LARGER THAN 24" IN DIAMETER SHALL BE CLASS III RCP UNLESS OTHERWISE NOTED. NO MATERIAL SUBSTITUTION SHALL BE ALLOWED FOR DUCTILE IRON PIPE (DIP).
7. ALL UTILITY STRUCTURES INCLUDING, BUT NOT LIMITED TO MANHOLES, CATCH BASINS, WATER VALVES, FIRE HYDRANTS, TELEPHONE AND ELECTRIC VAULTS, AND PULL BOXES, THAT LIE WITHIN THE PUBLIC RIGHT-OF-WAY EASEMENTS OR AREAS AFFECTED BY WORK ON THIS PROJECT SHALL BE ADJUSTED TO GRADE BY THE CONTRACTOR OR THE RESPECTIVE UTILITY COMPANY FOR WHICH THE CONTRACTOR IS RESPONSIBLE TO AFFECT COORDINATION.
8. THE TYPES, LOCATIONS, SIZES AND/OR DEPTHS OF EXISTING UNDERGROUND UTILITIES AS SHOWN ON THESES IMPROVEMENT PLANS WERE OBTAINED FROM SOURCES OF VARYING RELIABILITY. THE CONTRACTOR IS CAUTIONED THAT ONLY ACTUAL EXCAVATION WILL REVEAL THE TYPES, EXTENT, SIZES, LOCATIONS AND DEPTHS OF SUCH UNDERGROUND UTILITIES. A REASONABLE EFFORT HAS BEEN MADE TO LOCATE AND DELINEATE ALL KNOWN UNDERGROUND UTILITIES. HOWEVER, THE ENGINEER CAN NOT ASSUME RESPONSIBILITY FOR THE COMPLETENESS OR ACCURACY OF THESE DELINEATION OF SUCH UNDERGROUND UTILITIES WHICH MAY BE ENCOUNTERED, BUT ARE NOT SHOWN ON THESE DRAWINGS.
9. CONTRACTOR SHALL UNCOVER AND EXPOSE ALL EXISTING UTILITY AND SEWER LINES WHERE THEY ARE TO BE CROSSED, ABOVE OR BELOW, BY THE NEW FACILITY BEING CONSTRUCTED IN ORDER TO VERIFY THE GRADE AND TO ASSURE THAT THERE IS SUFFICIENT CLEARANCE. PIPE SHALL NOT BE STRUNG NOR TRENCHING COMMENCED UNTIL ALL CROSSINGS HAVE BEEN VERIFIED FOR CLEARANCE. IF THE CONTRACTOR FAILS TO FOLLOW THIS PROCEDURE, HE WILL BE SOLELY RESPONSIBLE FOR ANY EXTRA WORK OR MATERIAL REQUIRED IF MODIFICATIONS TO THE DESIGN ARE NECESSARY.
10. THE CONTRACTOR SHALL SET HIS STRING OR WIRE THROUGH AT LEAST THREE GRADE STAKES TO VERIFY GRADE. IF THE STAKES DO NOT PRODUCE A UNIFORM GRADE, NOTIFY THE ENGINEER IMMEDIATELY AND HAVE THE GRADES CHECKED PRIOR THE TRENCHING OR PLACEMENT OF CONCRETE.
11. ADJUSTMENTS TO BUILDING PAD ELEVATIONS OR PARKING LOT GRADES TO ACHIEVE EARTHWORK BALANCE SHALL BE MADE ONLY WITH APPROVAL OF THE ENGINEER.
12. ALL WORK, ON-SITE AND IN THE PUBLIC RIGHT-OF-WAY, SHALL CONFORM TO THE CITY OF AMERICAN CANYON STANDARDS AND REQUIREMENTS.

EROSION AND SEDIMENT CONTROL MEASURES

1. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE EFFECTIVE FOR THE DURATION OF CONSTRUCTION.
2. AFTER THE UNDERGROUND STORM DRAIN SYSTEM IS INSTALLED, THE CATCH BASINS WILL BE INSTALLED (AS SOON AS PRACTICAL) AND ROCK BARRIER BAGS WILL BE PLACED AROUND THOSE CATCH BASINS AS SHOWN ON THIS PLAN UNTIL THIS SITE IS PAVED.
3. SHOULD THE ON-SITE STORM DRAINS NOT BE INSTALLED COMPLETELY BY OCTOBER 15, THE CONTRACTOR SHALL CONSTRUCT TEMPORARY SEDIMENT BASINS AT THE EXISTING STORM PIPES STUBBED TO THE SITE.
4. PERSON RESPONSIBLE FOR IMPLEMENTATION OF EROSION AND SEDIMENTATION PLAN.

   NAME: XXX
   ADDRESS: XXX
   TELEPHONE: XXX

5. THE CONTRACTOR SHALL PLACE 3"-6" COARSE AGGREGATE AS A GRAVEL ROADWAY (12" MIN. THICK FOR THE FULL WIDTH AND 50 FEET LONG) AT EACH D/W ENTRANCE TO SITE. ANY MUD THAT IS TRACKED ONTO PUBLIC STREETS SHALL BE REMOVED THAT SAME DAY AND AS REQUIRED BY THE CITY OF AMERICAN CANYON.
6. ALL EROSION CONTROL MEASURES SHALL BE MAINTAINED UNTIL DISTURBED AREAS ARE STABILIZED AND CHANGES TO THIS EROSION AND SEDIMENT CONTROL PLAN SHALL BE MADE TO MEET FIELD CONDITIONS ONLY WITH THE APPROVAL OF OR AT THE DIRECTION OF THE CITY ENGINEER.
7. ALL PAVED AREAS SHALL BE KEPT CLEAR OF EARTH MATERIAL AND DEBRIS. THE SITE SHALL BE MAINTAINED SO AS TO MINIMIZE SEDIMENT-LADEN RUN-OFF TO ANY STORM DRAINAGE SYSTEM.
8. ALL EROSION CONTROL FACILITIES MUST BE INSPECTED AND REPAIRED AT THE END OF EACH WORKING DAY.
9. SEDIMENT BASINS SHALL BE CLEANED OUT WHENEVER SEDIMENT REACHES THE SEDIMENT CLEANOUT LEVEL INDICATED ON THE PLANS.
10. BORROW AREAS AND TEMPORARY STOCKPILES SHALL BE PROTECTED WITH APPROPRIATE EROSION CONTROL MEASURES TO THE SATISFACTION OF THE CITY ENGINEER.
11. ALL CUT AND FILL SLOPES ARE TO BE PROTECTED TO PREVENT OVERBANK FLOW.
12. INLETS WHICH ARE NOT USED IN CONJUNCTION WITH ROCK BARRIER BAGS OR SEDIMENT BASINS SHOULD BE COVERED, OR OTHERMISE ADJUSTED TO PREVENT INFLOW, UNLESS THE AREA DRAINED IS UNDISTURBED OR STABILIZED.

UTILITY NOTES

1. BACKFILLING AND COMPACTION FOR ALL TRENCHES SHALL BE INSPECTED AND APPROVED BY THE GEOTECHNICAL ENGINEER.
2. CONTRACTOR TO VERIFY ALL EXISTING INVERT ELEVATIONS FOR STORM DRAIN AND SANITARY SEWER CONSTRUCTION PRIOR TO ANY SITE WORK. ALL WORK FOR STORM DRAIN AND SANITARY SEWER INSTALLATION SHALL BEGIN AT THE DOWNSTREAM CONNECTION POINT. THIS WILL ALLOW FOR ANY NECESSARY ADJUSTMENTS TO BE MADE PRIOR TO THE INSTALLATION OF THE ENTIRE LINE. IF THE CONTRACTOR FAILS TO BEGIN AT THE DOWNSTREAM CONNECTION POINT AND WORKS UPSTREAM, HE SHALL PROCEED AT HIS OWN RISK AND BE RESPONSIBLE FOR ANY ADJUSTMENTS NECESSARY.
3. ALL WORK ON WATER AND SEWER SYSTEMS, SHALL CONFORM TO THE CITY OF AMERICAN CANYON STANDARDS AND REQUIREMENTS.
4. GENERAL CONTRACTOR SHALL COORDINATE ALL UNDERGROUND UTILITIES. PROVIDE 6" MINIMUM BETWEEN PIPES CROSSING ELECTRICAL LINES HORIZONTALLY AND 12" MINIMUM BETWEEN PARALLEL PIPES CROSSING ELECTRICAL LINES.
5. FOR UTILITY MATERIALS AND TYPES, SEE THE PROJECT SPECIFICATIONS.
6. WATER LINES SHALL BE 12" MINIMUM ABOVE SANITARY SEWER LINE AT ALL CROSSINGS.
7. ASBESTOS CEMENT (A.C.P.) PIPE SHALL NOT BE ALLOWED UNDER ANY CIRCUMSTANCES.
8. TRENCHING AND BACKFILL SHALL COMPLY WITH AMERICAN CANYON STANDARDS. CONTRACTOR SHALL COMPLY WITH ALL APPLICABLE SAFETY STANDARDS FOR TRENCH SAFETY. ALL PIPES HAVING LESS THAN 3' OF COVER SHALL BE BACKFILLED WITH CLASS II AGGREGATE BASE.

DUST ABATEMENT NOTES:

THE CONSTRUCTION CONTRACTOR IS REQUIRED TO IMPLEMENT A DUST ABATEMENT PROGRAM. ELEMENTS OF THIS PROGRAM SHALL INCLUDE THE FOLLOWING.

1. WATER ALL ACTIVE CONSTRUCTION AREAS AT LEAST TWICE DAILY;
2. COVER ALL TRUCKS HAULING SOIL, SAND, AND OTHER LOOSE MATERIALS OR REQUIRE ALL TRUCKS TO MAINTAIN AT LEAST TWO FEET OF FREEBOARD (I.E. THE MINIMUM REQUIRED SPACE BETWEEN THE TOP OF THE LOAD AND THE TOP OF THE TRAILER);
3. PAVE, APPLY WATER THREE TIMES DAILY, OR APPLY (NON-TOXIC) SOIL STABILIZERS ON ALL UNPAVED ACCESS ROADS, PARKING AREAS AND STAGING AREAS AT CONSTRUCTION SITE;
4. SWEEP DAILY (PREFERABLY WITH WATER SWEEPERS) ALL PAVED ACCESS ROADS, PARKING AREAS, AND AREAS AT CONSTRUCTION SITE;
5. SWEEP STREETS DAILY (PREFERABLY WITH WATER SWEEPERS) IF VISIBLE SOIL MATERIAL IS CARRIED ONTO ADJACENT PUBLIC STREETS;
6. HYDROSEED OR APPLY (NON-TOXIC) SOIL STABILIZERS TO INACTIVE CONSTRUCTION AREAS (PREVIOUSLY GRADED AREAS INACTIVE FOR TEN DAYS OR MORE);
7. ENCLOSE, COVER, WATER TWICE DAILY OR APPLY (NON-TOXIC) SOIL STABILIZER TO EXPOSED STOCKPILES (DIRT, SAND, ETC.);
8. LIMIT TRAFFIC SPEEDS ON UNPAVED ROADS TO 15 MILES PER HOUR;

CONTRACTORS LICENSE NO. 704195 A

September 28, 2021

Orchard Partners, LLC
3697 Mt. Diablo Boulevard Suite 200
Lafayette, CA 94539

Attention: Mr. Ernie Knodel

Subject: Scope of Work Summary and Proposal for S. Kelly / Hwy 29 Improvements project located in American Canyon, CA.
DeSilva Gates Estimate #2107048

Dear Mr. Knodel,

DeSilva Gates Construction is pleased to provide for your review the attached proposal for the S. Kelly Road and Hwy 29 street Improvements project in American Canyon. This Proposal is based solely on Unapproved South Kelly Road Street Improvement Plans and the Hwy 29 Post Mile 2.3 to Post Mile 5.0 Street Improvement Plans both dated February 2021 and both prepared by Kier & Wright.

The following Qualifications govern our Proposal and are considered as included in any future Contract Agreement reached between Orchard Partners, LLC and DeSilva Gates Construction (DGC) for this project.

SPECIFIC INCLUSIONS:

1. Includes equipment mobilizations in and out: One (1) each Mobilization for each phase of work.
2. USA site and pothole improvements as needed to protect any new or existing utilities.
3. We reserve the right to complete our own site topography if awarded the job in order to compare the existing topographic elevations to those provided by the engineer's plans for bidding purposes. If DGC decides to build a model of the site for utilizing a GPS system, we request all files and other information needed from the engineer to be given to DGC at no additional cost. If variations in existing grades are found upon review of the DeSilva Gates Construction survey, we reserve the right to discuss the discrepancies with the Owner and Engineer, and to make any final quantity adjustments to the bid and contract.
4. Install one each Construction Entrances and remove (See alternates); rumble plates are not included.
5. Includes traffic control plan for both Hwy 29 and S. Kelly.
6. Includes 4 each Changeable Message boards; one for each leg of the Hwy 29 and S. Kelley intersection. Two months of rental is included.
7. Includes installation and removal of Krail adjacent to the S. Kelly and Hwy 29 improvements. Also, included are three (3) each ABSORB 350 arrays at the end of each length of the krail.
8. Export an anticipated +/- 2,920 cy of "Clean" material offsite. Quantities are based on Engineer's plan topo, prior to DGC performing their own topographic survey to confirm site elevations.

9. Install and modify Storm Drain per the plans and the attached bid form.
10. Finish grade site areas from back of walk to back of walk including sidewalks, curb and gutter and asphalt concrete paving areas.
11. Furnish and install Recycled CL II AB per plans and the attached bid form.
12. Furnish and install site concrete (C&G, Sidewalk) per the plans and attached bid form. Includes Bioswale curbs.
13. Back up curbs and walks with native material.
14. Furnish and install asphalt concrete per the plans and the attached bid form. Proposal is based on installing the entire paving section during the same paving mobilization. Includes lowering existing water valves prior to the grind and overlay and raise to grade after paving. Grind and Overlay is variable thickness; asphalt overlay based on an average of 3.3"
15. Includes bioswale improvements; excavation and offhaul of 135 cy, furnish and install 100 lf of 4" perforated PVC pipe, 12" CL2 Permeable and 18" Bioswale soil. Does not include any irrigation or planting.
16. Work 5 each 8 hour ***"NIGHT"*** shifts as required; if work can be performed behind Krail without impeding traffic night shifts will not be used.
17. Site sanitary for DGC crews / subcontractors.
18. Includes dust control during the actual performance of work while actively working onsite; "off-hours and or weekends" dust control is not included.
19. Cleanup of generated debris after completion

ADDITIONAL QUALIFICATIONS / CLARIFICATIONS:

1. All soil or soil rock mixtures to be exported from the site shall be free of deleterious materials and are assumed to be suitable for unrestricted re-use on residential or commercial sites. Owner to provide all necessary soil sampling and analysis requested by soil re-use site.
2. No price protection for the oil used in asphalt concrete, prime coat, and fog seals can be obtained or extended on this project. Today's F.O.B refinery cost of asphalt oil is **$625.00** per ton. Any increases in the price of asphalt oil between now and the placement of asphalt concrete pavement may result in additional costs that are to be negotiated prior to performing the asphalt concrete paving work.
3. Construction water was bid from the existing local governing Water Agency at fire hydrants adjacent to the site. Cost of water, all hook-ups and obtaining temporary hydrant meters to be paid by DGC. (No other source of construction water is included in our unit prices. Hauling water from offsite sources excluded. Assumes no drought restrictions for obtaining water from existing hydrants or blow-offs on the project).
4. Offhaul is based on dumpsite / receiving site availability after a weather event.
5. ***The future / potential impacts of AB5 are unknown at this time. All impacts to this Proposal due to the effects of AB5 are excluded from this Proposal.***
6. Alternate No. 1 & 2 Construction Entrance. Includes installation and remove of one each Construction Entrance.
7. Alternate No. 3 Temp Strip for Krail. Includes restriping as required prior to installation of Krail.

SPECIFIC EXCLUSIONS:

1. Removal of surface or buried debris, tree trimming, arborist cost, or handling of any neighbor's personal property (fences, landscape, debris, irrigation, etc.); MBTA survey; any other above or below ground demolition, relocation, salvage or removal; debris picking, or removal not shown on the plans.
2. Locating, testing, identifying, handling, removing, transporting or any associated disposal fees for hazardous, toxic or contaminated material whether naturally occurring or man-made.
3. Removing, replacing, handling or processing of over optimum, unsuitable material.
4. Signal Modifications.
5. Removal, replacement or modification of existing headwall at the southeast corner intersection of S. Kelly and Devlin Road.
6. Air, dust or vibration monitoring.
7. Work in inclement weather or in over optimum moisture conditions.
8. Amending of native soils or import of topsoil.
9. SC-70 prime oil and SS-1 fog seal.
10. SWPPP or Erosion Control installation or removal, site winterization, access roads; QSD or QSP testing, monitoring plans or implementation.
11. OCIP Credits.
12. Irrigation or landscaping.
13. Repairs to existing roadways due to construction traffic.
14. Survey, obtaining or cost of permits including but not limited to grading permit, haul route permit, bonds, fees, plans, ***staking***, layout, engineering, compaction or material analysis testing or inspection.
15. Joint trench, electrical, irrigation or landscaping.
16. SWPPP or Erosion Control installation or removal, site winterization, access roads; QSD or QSP testing, monitoring plans or implementation.

STANDARD CONDITIONS:

1. One initial move-in per phase of work and one continuous operation each move-in.
2. Any phasing of work will result in additional costs due to reduction in production and additional move-ins.
3. Quantities and pricing are subject to review of final signed and approved plans along with any topographic discrepancies which may occur after the site is re-surveyed prior to starting the earthwork.
4. Any work requested by the Owner/Client to be performed in inclement weather or over optimum moisture conditions, will result in additional costs and will be billed as Time and Material.
5. DeSilva Gates Construction's price for erosion control will be for the construction of only those erosion control facilities and SWPPP devices shown on the plans, which facilities have been designed for the Owner by third parties. DGC's sole responsibility as to the erosion control and SWPPP is to furnish and install the facilities shown on the plans in a workmanlike manner. Owner will be fully responsible for, and DGC assumes no responsibility for the design, effectiveness or adequacy of the erosion control facilities and SWPPP. Any and all work required to remove, repair, maintain, replace, augment or modify the erosion control facilities and SWPPP will be performed on a Time and

Material basis at the written direction of the Owner. All losses (including without limitation, all fines and/ or citations) whatsoever relating in any manner to the erosion control and SWPPP will be the sole responsibility of Pulte, unless the losses are solely attributable to the contractor's failure to install the facilities in a workmanlike manner.

6. All Inclusions, Exclusions and Conditions are to be incorporated as an Exhibit to any contract reached between the two parties.
7. All excavated material encountered onsite is assumed to be acceptable as engineered fill. No special handling, re-handling, or select material stockpiling has been figured into our bid proposal prices for earthwork.
8. There will be no repairs of damage to work performed and installed by others, at our expense, without written approval by DeSilva Gates "prior" to any damage repairs.
9. If the job is operated with any non-union subcontractor's onsite, a separate gate may be required for the use of DGC employees and its Subcontractors.
10. This proposal is based upon the (Owner and/or General Contractor) and DeSilva Gates Construction reaching mutual agreement in the Terms and Conditions of a Contract for this project.
11. This proposal remains in effect for thirty (30) days from receipt.

We look forward to working with you on this project. Please do not hesitate to call us with any questions or comments you may have in regards to the attached Bid Proposal.

Sincerely,
DeSilva Gates Construction, L.P.

AMENDED IMPROVEMENTS

AMENDED IMPROVEMENTS
Amended CUP Condition 16.a/Amended MM TRANS-1d The project applicant shall make a fair share payment to the City to support the City's implementation of the following improvements to SR-29. This scope is based on improvements that have already been constructed, the project's reduced trip generation, and the project's reduced extent of development as documented in the 2022 transportation impact study. (1) At the intersection of SR-29 at South Kelly Road: - Southbound approach: construct 1 new right-turn lane - Eastbound approach: replace existing left-turn lane and through-right lane with 1 new left-turn lane, 1 new left-through lane, and 1 new right-turn lane. (2) At the intersection of South Kelly Road and Devlin Road: - Westbound approach: construct 1 new left-turn lane (3) South Kelly Road, between Devlin Road and SR-29 intersections: - Westbound lane: construct new 2nd westbound lane - Center Lane: construct 1 new two-way left-turn lane
Amended CUP Conditions 16.e.; 17/Amended MM TRANS-1a and MM-TRANS-1b. The project applicant shall establish a Transportation Demand Management (TDM) program, subject to review and approval by the City. The intent of the TDM program is to ensure that traffic volumes generated by the Project do not exceed that which would occur from warehouse-only uses. Notwithstanding its intent, the applicant shall implement this mitigation measure regardless of the mix of uses (warehouse-only or warehouse/industrial/office) that is eventually built. To ensure its enforceability, the project applicant shall incorporate the TDM program into the CC&Rs for the Napa Logistics Park. The CC&Rs shall require the Association to monitor each Occupant's compliance with the TDM program and to allocate to an Owner or Owners any fines imposed by the City in connection with an Occupant's violation of the TDM program. **(The applicant has already fully complied with this condition and mitigation measure. The applicant submitted, and the City approved, a Transportation Demand Management program for the Project, entitled "Napa Logistics Park Transportation Demand Management (TDM) Strategies and Monitoring," prepared by Fehr & Peers and dated October 2020. The applicant incorporated the TDM program into the Declaration of Covenants, Conditions, and Restrictions and Grant of Easements for Napa Logistics Park (recorded on September 12, 2017 as Instrument No. 2017-0020645**

AMENDED IMPROVEMENTS
in the Official Records of the County), as subsequently amended. Section 3.3.14 of the CC&Rs requires the Association to monitor each Occupant's compliance with the TDM Program and to allocate to an Owner or Owners any fines imposed by the City in connection with an Occupant's violation of the TDM Program.)

RESOLUTION NO. 2022-94

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON TAKING THE FOLLOWING ACTION IN CONJUNCTION WITH THE NAPA LOGISTICS PARK PHASE 2 PROJECT: ACCEPTANCE OF THE NEW GREEN ISLAND ROAD SEWER PUMP STATION ASSOCIATED WITH THE NAPA LOGISTICS PARK PHASE 2 PROJECT.

WHEREAS, on December 15, 2015, The Planning Commission approved the Napa Logistics Park Phase 2 Conditional Use Permit (Resolution No. 2015-09) to develop the 173 acres with up to 2,271,000 square feet of warehouse, distribution, e-commerce, manufacturing, and accessory retail/office space uses. Per CUP Condition #16b, the project is required to decommission the existing 18-inch sanitary force main within the project site boundaries and install new gravity sanitary sewer main from the Green Island Road Pump Station; and

WHEREAS, The Planning Commission approved the Tentative Map for the Napa Logistics Park Phase 2 Project to subdivide the 173 acres parcel into four lots, public rights-of-way, and one remainder parcel on APN 057-090-083 (Resolution No. 2018-06). Per Map Condition 39b, the project is conditioned to design and construct offsite public gravity sewer and pump station to replace the existing Green Island Pump Station; and

WHEREAS, on December 19, 2018, the City of American Canyon and DWF IV NLP II, LLC, a Delaware limited liability company, entered into a Subdivision Improvement and Reimbursement Agreement for the development of Napa Logistics Park Phase 2 (Napa County Official Records 2018-0024204); and

WHEREAS, The City of American Canyon Public Works Department approved the City of American Canyon New Green Island Road Sewer Pump Station Improvement Plan (Exhibit A); and

WHEREAS, on October 11, 2022, the project engineer, submitted a letter certifying the improvements and grading associated with the project have been constructed in substantial conformance with the approved plans and any subsequent revisions (Exhibit B); and

WHEREAS, on October 11, 2022, the project engineer submitted the Project Record Drawings (Exhibit C).

WHEREAS, The New Green Island Road Sewer Pump Station associated with the Napa Logistics Park Phase 2 Project have been completed to the City's satisfaction. Therefore, it is appropriate to accept them into the City's system for operation and maintenance.

NOW, THEREFORE, BE IT FURTHER RESOLVED that the City Council of the City of American Canyon hereby accepts all the public improvements constructed per the approved plans.

BUZZ OATES

December 2, 2022

Mr. Brent Cooper, AICP
Community Development Director
City of American Canyon
4381 Broadway, Suite 201
American Canyon, CA 94503

Dear Mr. Cooper,

In a letter to the City of American Canyon dated November 17, 2022, legal counsel for Napa/Solano Residents for Responsible Development offered comments on the Final Environmental Impact Report (Final EIR) for the proposed Giovannoni Logistics Center project (the Project). Among the comments was the contention that there remained feasible air quality mitigation measures, as proposed in earlier correspondence, that were not being recommended for approval. These proposed measures had been addressed in the Final EIR in various places, such as Table 3-1: Proposed Mitigation Measure Feasibility Analysis (pp. 3-94 through 3-98) and in responses to comments from Clark & Associates (pages 2-82 and 2-83). I have reviewed those responses and offer the following thoughts as to why I agree with the conclusions reached, rejecting various suggested measures as infeasible. In my opinion, a reasonable and prudent investor would resist the adoption of those measures due to the economic costs and risks involved. We ask the City not to impose those measures on the Project. I will explain.

The Project will promote positive contributions to the local American Canyon economy and greater Napa Valley Region via new capital investment, significant creation of new jobs, traffic impact minimization, environmental impact minimization, along with the expansion and diversification of the local tax base.

Buzz Oates LLC will establish an entitled logistics center serving significant unmet demand for new warehousing and logistics space, which will create a competitive advantage attracting new businesses and job creation to the City of American Canyon.

At final buildout, the Giovannoni Logistics Center will total 208 acres with 2.4 million square feet of building area. 45 acres are permanently dedicated to environmental conservation.

The Giovannoni site is the largest undeveloped site in the City of American Canyon. The Giovannoni site has sat vacant for decades with the City of American Canyon annexing the property into the City in 2005.

The Giovannoni Logistics Center is already designed to go above and beyond what the California Building Code requires. We have agreed to many environmental mitigation measures proposed by the City of American Canyon and outside stakeholder groups commenting on the EIR, including some offered through comments on the Draft EIR. We are treating this project as a "sustainability showcase project" for the City.

The Giovannoni Logistics Center will be the most "environmentally sustainable logistics park in northern California." The park will be powered by 100% on-site solar energy, we will not use any natural gas, 75%

of water use will be from recycled water sources, we will provide enhanced EV charging through Tier II CalGreen standards, we will provide infrastructure to meet future needs of "clean fleet readiness" trucking, and provide truck plug ins at dock doors. We are committed to making these improvements, but ultimately, we must pass these costs on to our tenants to keep the project economically feasible for our investors. We do not believe that we can bear the economic costs and risks associated with the proposed air quality mitigation measures rejected as infeasible in the Final EIR.

The market for logistics facilities is a highly competitive market and we must balance costs with the ability to attract tenants. A competitive market will dictate what prospective tenants are willing to pay for rent. Costs from legal challenges, environmental mitigation measures, offsite improvements, impact fees, and infrastructure improvement fund contributions are all passed onto prospective tenants in the form of rent payments. We calculate rental rates based on costs absorbed to date. A difference of a penny per foot in monthly building lease payments can make or break a deal.

We do not want to create a situation where we cannot attract tenants to the park because mitigation measures, associated costs, and/or operational requirements are too onerous. Prospective tenants will choose to locate somewhere else if they feel they cannot reasonably meet the requirements placed on the Project by the City. We need to strike a balance between providing environmental enhancements and maintaining the viability of attracting businesses to the City of American Canyon.

Unlike many developers, the developer of the Giovannoni Logistics Center (Buzz Oates) is a vertically integrated company that entitles property, vertically constructs buildings, finds high quality tenants for building use, and manages buildings as long-term investments. The long-view focus of assets means the developer makes decisions based on improving the quality of properties, and that quality passes directly to developer's investors and tenants. This approach creates a long-term commitment to the City of American Canyon and its residents.

Per our ground lease with non-profit public benefit property owner Right From the Start, we are making a nearly 100-year commitment to the City of American Canyon. We are long-term partners in every community they invest in.

We will build the Project in multiple phases, optimizing the buildout to meet current and future market demands, minimizing traffic impacts, minimizing environmental impacts, and maximizing community benefits by not overbuilding all at once.

The thoughtful approach to site development not only targets the successful buildout of the entire site, but also capitalizes on the City's traffic-reducing infrastructure investments.

The expansion and widening of Green Island Road along with the Devlin Road extension running directly through the Giovannoni site are the Project's main circulation routes. The industrial collector roadway system for designated truck routes will minimize traffic impacts. The developer will make a significant capital investment in the Green Island Road project by participating in the City's Community Facility District for the project. The Project will also utilize existing rail service running to the site, therefore minimizing traffic and environmental impacts. The Project promotes a quality visual appearance through the establishment of design and landscaping standards.

BUZZ OATES

The Giovannoni Logistics Center is the second project for the developer in the City of American Canyon, with the first being the 120,080 square foot warehouse at 100 Jim Oswalt Way.

We are very proud of the Project, including all of the elements that reduce its impacts on the environment, including on air quality. Quite frankly, the Project will be "greener" than any of the logistics projects in place or in the works owned or leased by our competitors. We do not believe, however, that we can take on any additional costs without undermining the prudence of the huge investments that we are making.

We look forward to working with the City on this endeavor to create further lasting community benefits.

All the best,

Joe Livaich
Vice President, Planning & Preconstruction Services
Buzz Oates Construction, Inc.

November 2022

2022 PROTOCOL-LEVEL SPECIAL-STATUS NATIVE PLANT SURVEYS AT THE GIOVANNONI LOGISTICS CENTER PROJECT, NAPA COUNTY, CALIFORNIA

INTRODUCTION

Helm Biological Consulting (HBC), a division of Tansley Team, Inc., was contracted by Huffman-Broadway Group (HBG), Inc. to conduct botanical surveys for the presence of special-status plant species with the potential to occur at the Giovannoni Logistics Project (hereafter "Project"), Napa County, California.

PROJECT LOCATION

The Project consists of roughly 208 acres and is situated west of the Calistoga Branch of the Southern Pacific Railroad; north of Green Island Road and the Santa Rosa Branch of the Southern Pacific Railroad; and South of Devin Road, Middleton, Napa County, California (Figure 1).

DEFINITIONS

Several terms relating to biological resources used in the report are described briefly below.

COMMUNITY

A community is an assemblage of populations of plants, animals, bacteria, and fungi that live in an environment and interact with one another, forming a distinctive living system with its own composition, structure, environmental relationships, development, and functions (Whittaker 1975).

SENSITIVE NATURAL COMMUNITY

Sensitive natural communities are communities that are of limited distribution statewide or within a county or region and are often vulnerable to environmental effects of projects. These communities may or may not contain special-status plants or their habitat (CDFW 2018). A sensitive community has particularly high ecological value or functions and is considered important because its degradation or destruction could threaten populations of dependent plant and wildlife species and significantly reduce the regional distribution and viability of the community.

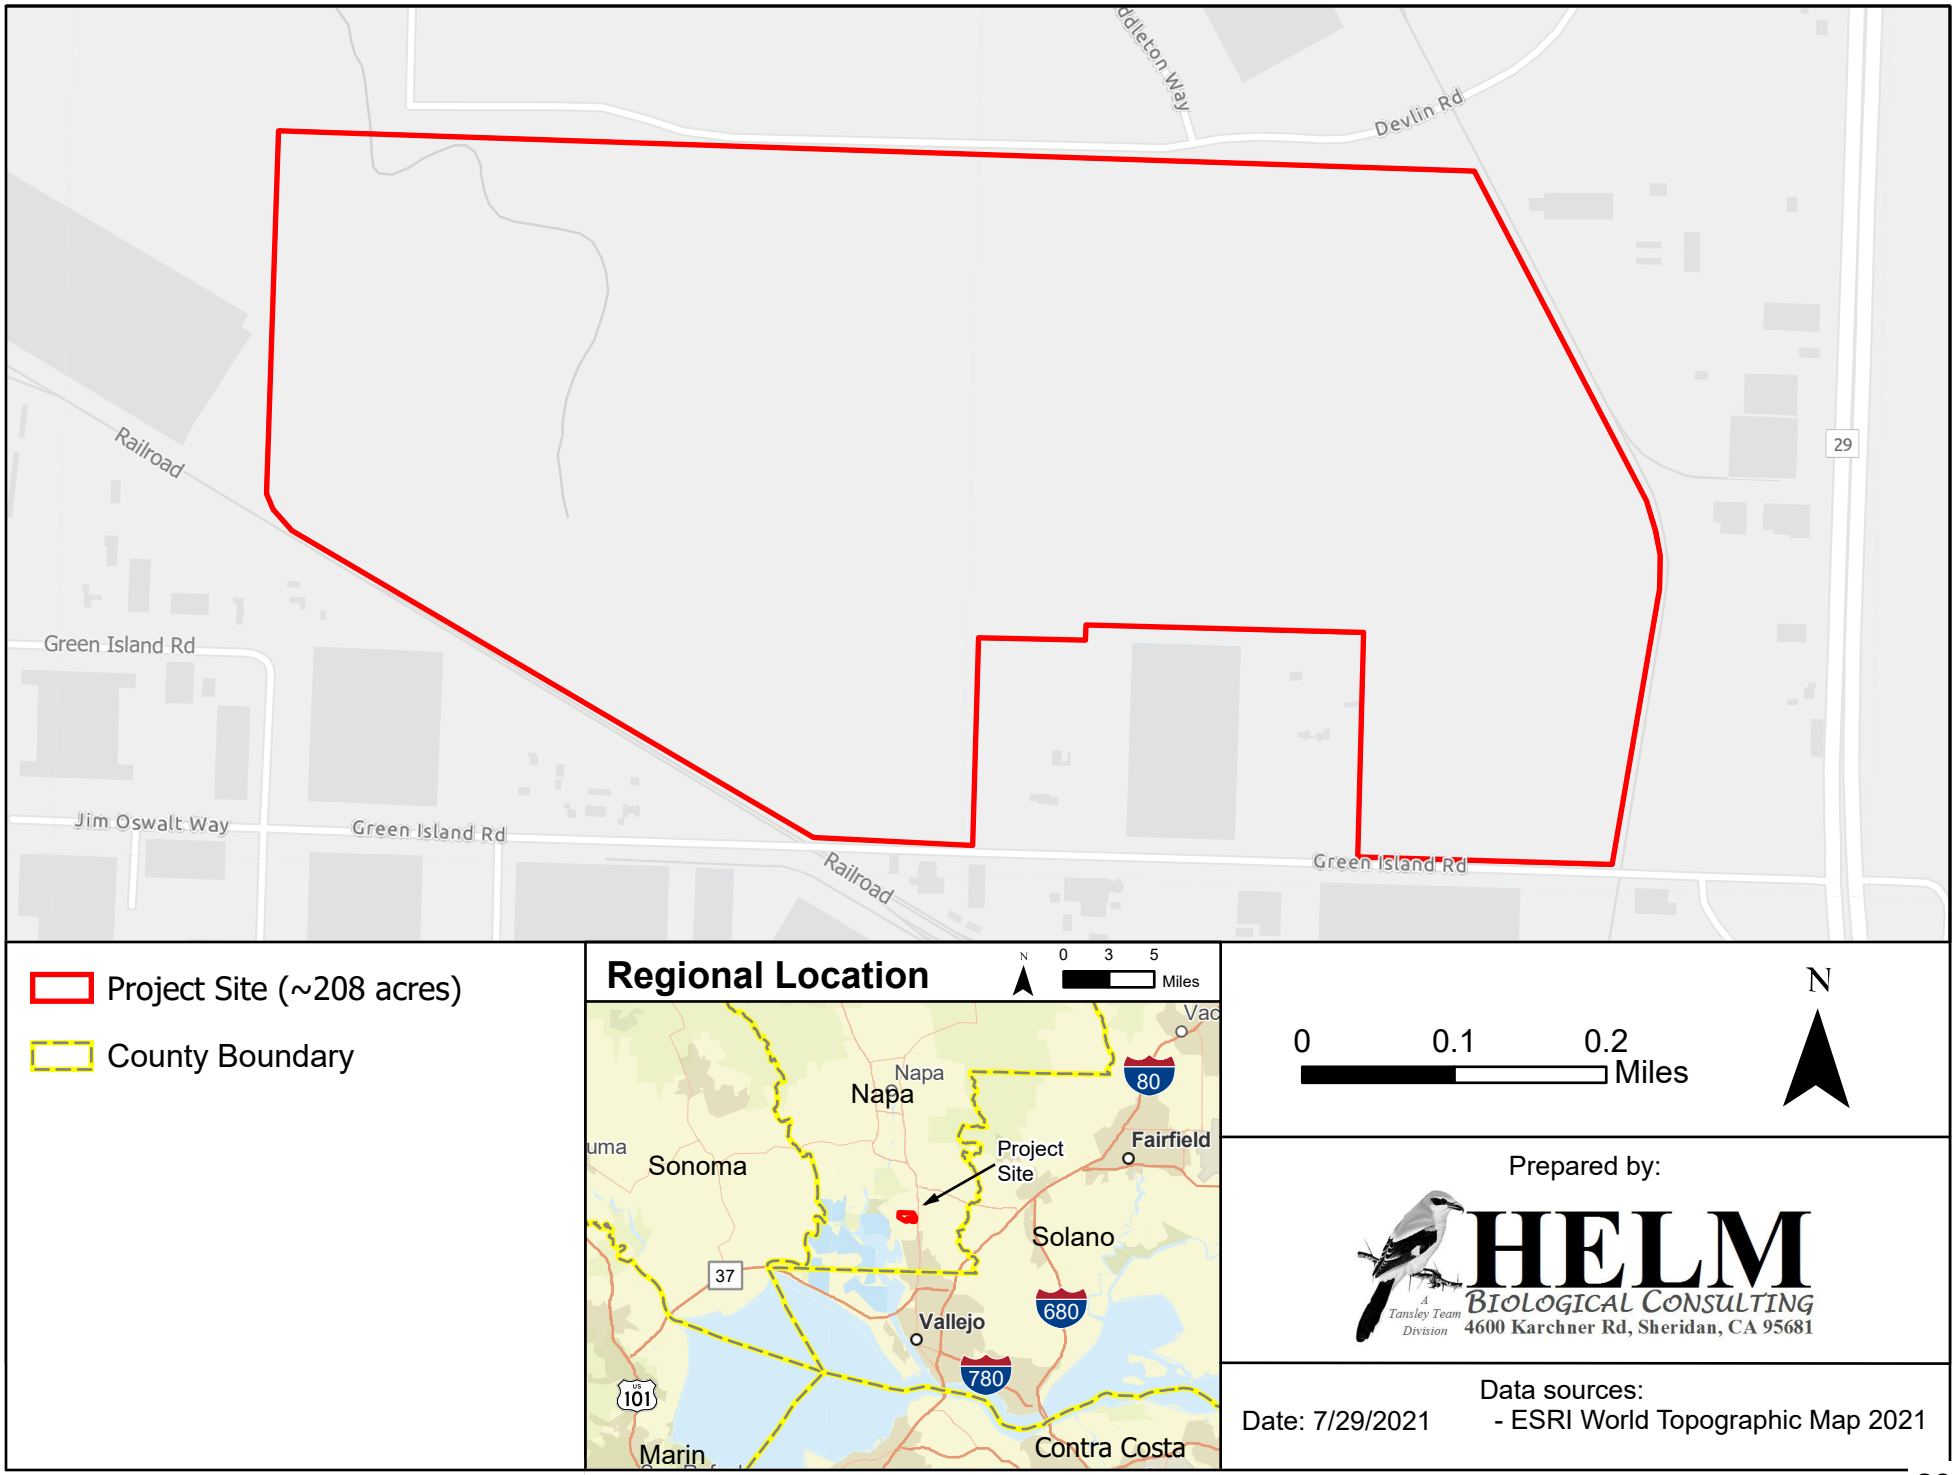

Figure 1. Location of Giovannoni Logistics Center Project

As the number and extent of sensitive natural communities continue to diminish, the endangerment status of dependent special-status (i.e., rare, threatened, or endangered) species could become more precarious, and populations of currently stable species (i.e., non special-status species) could become rare. Loss of sensitive natural communities can also eliminate or reduce important ecosystem functions, such as water filtration by wetlands and bank stabilization by riparian forests or wetlands.

The California Department of Fish and Wildlife's Vegetation Classification and Mapping Program (VegCAMP) and the California Native Plant Society's Vegetation Program use a rank calculator to rank Natural Communities using standardized quantitative rarity and threat parameters and compute weighted scores for rarity and threats. This evaluation is done at both the Global (full natural range within and outside of California) and State (within California) levels resulting in a single G (global) and S (state) rank ranging from 1 (very rare and threatened) to 5 (demonstrably secure). The definitions of global and state rarities are the same for 1 through 5 and listed below:

- **1:** critically imperiled; at very high risk of extinction or elimination due to very restricted range, very few populations or occurrences (five or fewer known populations), very steep declines, very severe threats, or other factors
- **2:** imperiled; at high risk of extinction or elimination due to restricted range, few populations or occurrences (six to 20 extant populations), steep declines, severe threats, or other factors
- **3:** vulnerable; at moderate risk of extinction or elimination due to a fairly restricted range, relatively few populations or occurrences (21 to 100 extant populations), recent and widespread declines, threats, or other factors
- **4:** apparently secure; at fairly low risk of extinction or elimination due to an extensive range and/or many populations or occurrences (100 to 1,000 known extant populations) but with possible cause for some concern as a result of local recent declines, threats, or other factors
- **5:** secure; at very low risk or extinction or elimination due to a very extensive range, abundant populations or occurrences (1,000+ extant populations], and little to no concern from declines or threats

Natural Communities with ranks of S1-S3 are considered Sensitive Natural Communities to be addressed in the environmental review processes of CEQA and its equivalents. (CDFW 2022b).

Loss or disturbance of these sensitive communities may constitute significant adverse impact as defined under the California Environmental Quality Act (CEQA). This definition applies to certain natural communities because of their relative scarcity and ecological values, and the vulnerability of remaining occurrences to elimination.

HABITAT

Habitat is the place or type of site where a plant or animal naturally or normally lives and grows.

SPECIAL-STATUS PLANT SPECIES

For the purposes of this document, special status plants include all those that meet one or more of the following criteria:

- Listed or proposed for listing as threatened or endangered under the federal endangered Species Act (ESA) or candidates for possible future listing as threatened or endangered under the ESA (50 C.F.R., § 17.12).

- Listed or candidates for listing by the State of California as threatened or endangered under California Endangered Species Act (CESA) (Fish & Game Code, § 2050 et seq.). In CESA, "endangered species" means a native species or subspecies of plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, or disease (Fish & Game Code, § 2062). "Threatened species" means a native species or subspecies of plant that, although not presently threatened with extinction, is likely to become an endangered species in the foreseeable future in the absence of the special protection and management efforts required by CESA (Fish & Game Code, § 2067). "Candidate species" means a native species or subspecies of plant that the California Fish and Game Commission has formally noticed as being under review by California Department of Fish and Wildlife (CDFW) for addition to either the list of endangered species or the list of threatened species, or a species for which the California Fish and Game Commission has published a notice of proposed regulation to add the species to either list (Fish & Game Code, § 2068).
- Listed as rare under the California Native Plant Protection Act (Fish & Game Code, § 1900 et seq.). A plant is rare when, although not presently threatened with extinction, the species, subspecies, or variety is found in such small numbers throughout its range that it may be endangered if its environment worsens (Fish & Game Code, § 1901).

- Meet the definition of endangered, rare, or threatened species under CEQA Guidelines section 15380, subdivisions (b) and (d), which may include:
    - Plants tracked by the California Natural Diversity Database (CNDDB) as California Rare Plant Rank (CRPR) 1 or 2; and
    - Plants that may warrant consideration on the basis of declining trends, recent taxonomic information, or other factors. This includes plants tracked by the CNDDB as CRPR 3 or 4.

- Considered locally significant plants, that is, plants that are not rare from a statewide perspective but are rare or uncommon in a local context such as within a county or region (CEQA Guidelines, § 15125, subd. [c]), or as designated in local or regional plans, policies, or ordinances (CEQA Guidelines, Appendix G). Examples include plants that are at the outer limits of their known geographic range or plants occurring on an atypical soil type.

The remainder of this report discusses the methods and results of the 2022 special-status native plant surveys at the Project.

METHODS

In an effort to determine if the Project supports special-status plants, and in support of CEQA and agency requirements, HBC conducted botanical surveys during the spring, summer and fall of 2022. These surveys utilized CDFW's protocols identified in "Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities" dated March 20, 2018. The method included a pre-field survey and a field survey, both described below.

PRE-FIELD SURVEY

Prior to conducting field surveys, a computer search of the CNDDB and the California Native Plant Society (CNPS) On-line Inventory of Rare and Endangered Plants was conducted to determine whether any special-status plants had been reported onsite or within a 10-mile radius of the Project (CDFW 2022a and CNPS 2022). This search was also used to compile a list of special-status plants that would be targeted during field surveys.

In addition, the following resources were compiled and reviewed:

- US Geological Survey topographic maps (USGS 2022)
- Existing project documents provided by HBG (i.e., Biological Resource Analysis [Monk & Associates, Inc. 2018])
- US Department of Agriculture (USDA), Natural Resources Conservation Service (NRCS) Web Soil Survey (USDA NRCS 2022)
- Project descriptions and initial project designs provided by HBG and/or Buzz Oates

FIELD SURVEY

Special-status plant species identified during the pre-survey investigation as having the potential to occur on the study site were targeted during field surveys. Field surveys for special-status plants incorporated floristic survey methods, as recommended by CDFW (2018). Floristic survey methods require identification of all plant species located onsite. Each species encountered was identified to the extent necessary to determine if it had any legally protected status. Floristic surveys were conducted to ensure that special-status plant species were not inadvertently overlooked because they were not targeted for surveys. Botanical field surveys were conducted by Dr. Brent Helm on April 6, 2022, May 8, 2022, June 17, 2022, July 1, 2022, and September 19, 2022. Dr. Helm walked meandering transects throughout the Project to ensure all habitats were

adequately sampled. Plants were identified using keys in The Jepson Manual (Baldwin *et al* 2012) and recorded in field notes.

In addition, any milkweed species (*Asclepias* ssp.) encountered were mapped and their populations counted/estimated. Milkweed is critical for the survival of the monarch butterfly (*Danaus plexippus*). Caterpillars of this iconic butterfly species feed exclusively on the leaves of milkweeds. On December 15, 2020, the U.S. Fish and Wildlife Service (USFWS) announced the proposed listing of the monarch as "Warranted, but Precluded". This means that, while the USFWS has determined the Monarch meets the definition of a threatened or endangered species, there are currently not enough resources (e.g., funding, personnel) to list the species presently, although listing could occur in the future. The monarch is also considered a "Conservation Priority" under CESA.

Several reference sites with known special-status plants targeted for field surveys were visited to:

1. Determine whether those special-status plants were identifiable at the times of year the botanical field surveys took place; and
2. To obtain a visual image of the special-status plants, associated habitat, and associated natural communities.

Reference sites included:

- Little Egbert Tract for Suisun Marsh aster, Mason's lilaeopsis and Delta tule pea.
- Sacramento Utilities Municipal District's Rancho Seco Conservation Bank lands for legenere and dwarf downingia.
- Gentry Logistics Project, Suisun for Contra Costa goldfields, Delta tule pea, saline clover, and Suisun Marsh aster.

RESULTS

ENVIRONMENTAL CONDITIONS

HISTORIC CONDITIONS

Historically, the Project laid roughly midway between the foothills of the Sulfur Springs Mountains and the tidal marshes of the Napa River and was part of the watershed for an unnamed tributary (dubbed "South Fork" for the purposes of this discussion) of Fagan Slough. The multiple tributaries, of which Fagan Slough was one, was appropriately named - Brazos ("Arms" in Spanish) given to the cluster of tidal channels in this region. However, given the Site's, elevation it was probably just above the tidal influence of the Napa River. Prior to the turn of the century, the South Fork of the Fagan Slough onsite was orientated in a west-east direction. The headwaters of this drainage originated in the foothills to the east of the Project. However, by the early 1900's, most of the upper portion of the South Fork had been diverted and channelized. During a similar time period, a substantial ditch (orientated in a north-south direction) was excavated in an attempt to drain a large wetland (situated along the northern edge of the Santa Rosa Branch of the Southern Pacific Railroad) into the South Fork onsite. Unfortunately with the offsite portions of the South Fork diverted or removed, the upper portion of the North Fork onsite received reduced flows. Further hydrologic inputs to this drainage were reduced from the construction of several ditches, most orientated in an east-west fashion along the northern boundary of the Project. The overall effect of these ditches has reduced the resident time of surface water onsite.

Additionally, the disking that has occurred onsite tended to "smear" the wetlands across the landscape which increased the ponding surface area while decreasing the ponding depth and duration. Disking also decreases soil compaction; therefore, increasing the soils ability to absorb water, thus delaying the onset of ponding and decreasing ponding duration within the wetlands.

In conclusion, most of the disturbances to the site occurred long before historical aerial photographs and topographic maps could have documented the changes. The railroads, numerous roads, channels, and ditches had occurred prior to or just after the turn of the century.

CURRENT CONDITIONS

CLIMATE

The climate at the Project is typical of the northern portion of the Bay Area, with an average low temperature in January of 38.5 degrees Fahrenheit (ºF) and average high temperature in July of 83.3 ºF. Rainfall averages 24.2 inches per year, most of which falls during the winter months. On average, there are 265 sunny days per year at the Project (Bestplaces 2022).

TOPOGRAPHY AND HYDROLOGY

The Project consist of a relatively flat piece of ground sloping from east to west with the highest elevation at roughly 60 feet (ft) above mean sea level (msl) located in the southeast corner and lowest elevation in the northwest corner of roughly 25 ft msl.

The Project occurs within the Tulucay Creek-Frontal San Pablo Bay Estuaries watershed, Environmental Protection Agency (EPA) Hydrologic Unit Code (HUC10) 1805000204 (Figure 2). Additionally, most of the Project occurs within the Tulucay Creek-Frontal San Pablo Bay Estuaries subwatershed (HUC12: 180500020402), while a small portion of the Project along the southern boundary occurs in the American Canyon Creek-Frontal San Pablo Bay Estuaries (HUC12: 180500020401) (Figure 2). The Napa River occurs roughly 1.8 miles to the west and roughly 1.3 miles to the southwest of the Project.

Direct inception of rainfall occurs within the numerous depressional areas consisting of seasonally inundated wetlands (vernal pools and seasonal wetlands). However, ditches have been historically excavated in an attempt to drain many of the larger onsite wetlands (See Historic Conditions section above for more details). Most of the ditches are orientated to drain to the north where they intercept remnant segments, or channelized portions thereof, of the South Fork of Fagan Slough/Creek. Additional hydrologic surface inputs to the remaining channels of Fagan Slough are derived from upslope but offsite watersheds that have been diverted into ditches which convey storm water and irrigation runoff to the northeast corner of the site via a culvert situated under the Calistoga Branch of the Southern Pacific Railroad. Other hydrological inputs may be derived from irrigation and storm water runoff occurring within the large industrial areas located to the south of the Site.

SOILS

According to the Web Soil Survey (USDA NRCS 2022), three soil map units are present onsite (Table 1 and Figure 3).

VEGETATION COMMUNITIES

The combination of the Project's climate, hydrology, soils and disturbance regime (draining and disking) supports community types typical of the North Bay Area. The majority of the site consists of annual grasslands with scattered seasonally inundated wetlands; the wetlands consist of vernal pools, seasonal pools, seasonal swales, and ditches (See Exhibit A for Confirmed Aquatic Resources Delineation Map).

A description of each of the two community/habitat types including dominant vegetation is provided below.

Annual Grassland. Due to the current ungrazed condition of the Site, the annual grassland habitat consists of mostly thatchy nonnative annual grass species including: medusa-head grass (*Elymus caput-medusae*), soft chess (*Bromus hordeaceus*), wild oat (*Avena barbata*), ripgut brome (*Bromus diandrus*), and hare barley (*Hordeum murinum* ssp. *leporinum*).

Subdominant grasses include Mediterranean barley (*Hordeum marinum* ssp. *gussoneanum*), Italian ryegrass (*Festuca perennis*), and annual bluegrass (*Poa annua*), especially when this habitat transitions to the wetlands onsite. Forbs are present, but generally are more abundant along the site's edges or where the grassland shifts to wetland. These forbs include field mustard (*Brassica rapa*), broadleaf filaree (*Erodium bothrys*), wild lettuce (*Lactuca serriola*), wild mustards *(Raphanus sativa and R. raphanistrum)*), and yellow star thistle (*Centaurea solstitialis*).

Seasonal Wetlands

Vernal Pool. Vernal pools are seasonally flooded landscape depressions where water ponds because of limitations to surface or subsurface drainage. Surface drainage is prevented by a depressed or concave topography. Soil layers impervious to the downward infiltration of water inhibit subsurface drainage resulting in swallow ponding during the wet-season. Vernal pools support distinct vegetation adapted to periodic or continuous inundation during the wet season, and the absence of either ponded water or wet soil during the dry season.

Vernal pools are considered sensitive natural communities by USFWS and CDFW and their occurrences are tracked by CNDDB.

Vernal pools are lentic habitats which pond water rather than conveying it (lotic) such as swales, ditches, and ephemeral drainages. The adjective "vernal" refers to its occurrence in the spring". However, the term "vernal" is used in this report to denote the presence of two or more vernal habitat indicator plants (*Downingia* ssp., *Lasthenia* ssp., *Eryngium* ssp., *Plagiobothrys* ssp., *Psilocarpus* ssp., etc.). In contrast, the term "seasonal" refers to those wetlands that are seasonally inundated but do not support the presence of two or more vernal habitat indicator plants.

Vernal pools occurring onsite support plant species typical of a combination of the Santa Rosa Region and the Solano-Colusa Region (Keeler-Wolf et al. 1998). Vernal pool basins are dominated by small stipitate popcorn flower (*Plagiobotrys stipitatus var. micranthus)* and annual semaphoregrass (*Pleuropogon californicus*). Other subdominant species included: water pygmy-weed (*Crassula aquatica*), common spike rush (*Eleocharis macrostachya*), smooth goldfields (*Lasthenia glaberrima*), Jepson's button celery (*Eryngium aristulatum* var. *aristulatum*), and hyssop loosestrife (*Lythrum hyssopifolia*).

Other plant species which occur to a lesser extent onsite include water-starwort (*Callitriche marginata*), Italian ryegrass (*Festuca perennis*), Mediterranean barley (*Hordeum marinum* subsp. *gussoneanum*), toad rush (*Juncus bufonius*), and annual blue grass (*Poa annua*).

Seasonal Pool. Seasonal pools are shallow to deep topographic depressions underlain by soils with slow water permeability that promote ponding or soil saturation during the wet season. It is presumed that most of the seasonal pools onsite were historically vernal pools that have had their hydroregimes altered (either increased or decreased) due to human activities (e.g., disking, draining, ground water pumping, irrigation runoff, etc.).

The vegetation within seasonal pools is similar to vernal pools described above, except they lack the presence of two or more vernal habitat plant indicators. Seasonal wetlands support a number of plant species adapted to periodic inundation during the growing season. Typical seasonal wetland plant species include Italian ryegrass (*Festuca perennis*), rabbit's foot grass (*Polypogon monspeliensis*), ditch beard grass (*Polypogon interruptus*), Bermuda grass (*Cynodon dactylon*),

curly dock (*Rumex cripus*), Baltic rush (*Juncus balticus* ssp. *ater*), Mediterranean barley (*Hordeum marinum* ssp. *gussoneanum*), toad rush (*Juncus bufonius var. bufonius*), and umbrella sedge (*Cyperus eragrostis*).

Seasonal Swale. Swales are broad, shallow (< 1 ft deep), seasonally inundated areas that primarily convey water during and shortly after rain events. Surface runoff collects in swales, wetting and saturating the soil for short periods. Swales are typically vegetated and have poorly defined channels that lack a distinct bed and bank.

Swale vegetation is a transitional community that is wetter than the surrounding annual grassland but drier than an ephemeral drainage. Similar to pool habitats, there are two types of swales onsite depending on the presence or absence of vernal habitat plant indicators. Vernal swales have plant compositions similar to vernal pools, whereas seasonal swales have plant species compositions more similar to seasonal pools. The major difference between swales and pools is the hydrologic regime. Swales generally convey water whereas pools pond it. Some of the swales are more incised at the northwest corner of the site, where the historic meanders of the South Fork of Fagan Slough were located (see Historic Condition section above).

The seasonal swales onsite are dominated in wetter areas by plant species associated with emergent marsh habitat which are characterized by a predominance of perennial monocots (a subclass of herbaceous seed plants with a single stem/leaf structure) that grow in permanently or semi-permanently flooded (or saturated) soils that emerge from the water. The plants associated with this habitat include Baltic rush (*Juncus balticus* ssp. *ater*), Mexican rush (*J. mexicanus*), common spike rush (*Eleocharis macrostachya*), and umbrella sedge (*Cyperus eragrostis*). Some of the deeper areas are dominated entirely by Bermuda grass (*Cynodon dactylon*) with patches of broadleaf cattail *(Typha latifolia)*,

Ditch. Ditch habitats onsite are human excavated channels for the purposes of surface water conveyance offsite. These habitats are general "V" or "U" shaped in cross-section and are 1-3 feet wide and general 1-2 feet in depth. The smaller ditches generally occur in the southern portion of the Project and are oriented in a north-south direction, thus draining the larger wetlands and terminating into the west-east orientated larger ditches or swales located in the northern portion of the Project. The larger ditches flow surface water from the east to the west.

Vegetation within the ditch habitat is dependent on the hydrologic regime. The larger deeper ditches have similar vegetation composition to the seasonal swale habitat described above. Similarly, the small and medium size ditches have vegetation similar to the annual grassland and swale habitats, respectively.

SPECIAL-STATUS PLANTS

The search of the CNNDB and CNPS On-line Inventory of Rare and Endangered Plants did not reveal any special-plant species occurring onsite (CNPS 2022). However, 35 special-status plants are known to occur within a 10-mile radius of the Project (Figure 4). However, of these 35 plants only 20 were associated with habitats that are known to occur onsite (Appendix A). The remaining 15 plants were not considered to have potential to occur onsite since they inhabit plant communities (i.e., chaparral, cismontane woodland, coastal brackish or saltwater marsh and swamps, coastal scrub, coast bluff shrub, and lower montane coniferous forest) that are not present onsite.

No special-status plant species were observed onsite. In general, most of the plants listed in Appendix A are not likely to occur onsite. Only a few have low potential for future occurrence. A list of all vascular plant species observed onsite during field surveys is included in Appendix B. Representative photographs of habitat onsite are included in Appendix C.

SENSITIVE COMMUNITIES/HABITATS

WATERS OF THE U.S. AND STATE, INCLUDING WETLANDS

In general, any Waters of the U.S. and State, including wetlands, such as the vernal pool, seasonal pool, seasonal swale, and ditch habitats occurring on site are considered sensitive habitats.

VERNAL POOLS

The equivalent to vernal pool habitat onsite, would be Sawyer *et al.* (2009) *Lasthenia glaberrima - Pleuropogon californicus* association under the *Lasthenia glaberrima* alliance, which has a global and state rarity ranking of 2 (G2 and S2) and therefore is considered a sensitive natural community regardless of its wetland status.

CNDDB Special Status Plant Occurrences

1 - *Agrostis hendersonii* (Henderson's bent grass)
2 - *Allium peninsulare var. franciscanum* (Franciscan onion)
3 - *Amorpha californica var. napensis* (Napa false indigo)
4 - *Astragalus tener var. tener* (alkali milk-vetch)
5 - *Balsamorhiza macrolepis* (big-scale balsamroot)
6 - *Blepharizonia plumosa* (big tarplant)
7 - *Brodiaea leptandra* (narrow-anthered brodiaea)
8 - *Carex lyngbyei* (Lyngbye's sedge)
9 - *Castilleja affinis var. neglecta* (Tiburon paintbrush)
10 - *Ceanothus confusus* (Rincon Ridge ceanothus)
11 - *Ceanothus purpureus* (holly-leaved ceanothus)
12 - *Centromadia parryi ssp. congdonii* (Congdon's tarplant)
13 - *Centromadia parryi ssp. parryi* (pappose tarplant)
14 - *Chloropyron molle ssp. molle* (soft salty bird's-beak)
15 - *Cicuta maculata var. bolanderi* (Bolander's water-hemlock)
16 - *Downingia pusilla* (dwarf downingia)
17 - *Erigeron greenei* (Greene's narrow-leaved daisy)
18 - *Eryngium jepsonii* (Jepson's coyote-thistle)
19 - *Extriplex joaquinana* (San Joaquin spearscale)
20 - *Fritillaria liliacea* (fragrant fritillary)
21 - *Helianthella castanea* (Diablo helianthella)
22 - *Hesperolinon breweri* (Brewer's western flax)
23 - *Isocoma arguta* (Carquinez goldenbush)
24 - *Lasthenia conjugens* (Contra Costa goldfields)
25 - *Lathyrus jepsonii var. jepsonii* (Delta tule pea)
26 - *Legenere limosa* (legenere)
27 - *Leptosiphon jepsonii* (Jepson's leptosiphon)
28 - *Lilaeopsis masonii* (Mason's lilaeopsis)
29 - *Polygonum marinense* (Marin knotweed)
30 - *Rhynchospora californica* (California beaked-rush)
31 - *Senecio aphanactis* (chaparral ragwort)
32 - *Symphyotrichum lentum* (Suisun Marsh aster)
33 - *Trichostema ruygtii* (Napa bluecurls)
34 - *Trifolium amoenum* (two-fork clover)
35 - *Trifolium hydrophilum* (saline clover)
36 - *Viburnum ellipticum* (oval-leaved viburnum)

DISCUSSION

To date, there has been three years of protocol-level special-status native plant surveys conducted onsite. No special-status species were observed during any of these surveys. Monk & Associates completed their surveys in 2017, where HBC conducted their surveys in 2021 and 2022. Looking at the list of vascular plant species observed at the Project for all three years (Appendix A), they have been a total of 150 plant species observed onsite. The differences between the three years are not so much the total plant species (species richness) observed per year, but rather the change in species. For example, many of the marsh plants such as the rushes (*Juncus phaecephalus* and *J. xiphiodes*), broad-leaved cattail (*Typha latifolia*), and common tule (*Schoenoplectus acutus* var. *occidentalis*) observed by Monk & Associates (2018) have not been observed on site since. Although the Project site management and maintenance has not changed, (Livaich pers. comm.) the site's climate has.

The year Monk & Associates conducted their survey was a very above-average annual rainfall year. The National Weather Service station at Napa State Hospital (NWS 2022) received 45 inches of rain from October 1, 2016 through September 30, 2017 (rainy season). This total made for the third wettest raining season in records dating back to 1892. In contrast, the 2020-2021 rainy season had less than 8.5 inches of rainfall (Table 2). The second year of HBC plant surveys onsite followed a below-average rainfall rainy season (20.86 inches) but was closer to the average of 25.49 then the two preceding years (Table 2).

Table 1. Rainfall Totals (in inches) per Month for the Last Three Rainy-seasons (October through September) for Carneros, Napa County, California

	Rainy-Season Year			
Month	**Average**	**2021-2022**	**2020-2021**	**2019-2020**

APPENDIX A.
SPECIAL-STATUS PLANT SPECIES ORIGINALLY TARGETED FOR SURVEYS AT THE GIOVANNONI LOGISTICS CENTER PROJECT

Appendix A. Special-Status Plant Species Originally Targeted for Surveys at the Giovannoni Logistics Center Project

Scientific Name	Common Name	Plant Family	Lifeform	Blooming Period	Special-Status Listings and Ranks					General Habitat	Potential To Occur Onsite
					Fed List	State List	Global Rank	State Rank	Ca Rare Plant Rank		
Agrostis hendersonii	Henderson's bent grass	Poaceae	annual herb	Apr-Jun	None	None	G2Q	S2	3.2	Valley and foothill grassland, Vernal pools	**Not likely.** This species is a wetland dependent and generally associated with fairly pristine vernal pool habitats, which are not present onsite.
Allium peninsulare var. franciscanum	Franciscan onion	Alliaceae	perennial bulbiferous herb	(Apr) May-Jun	None	None	G5T2	S2	1B.2	Clay soils (volcanic or serpentine) in Cismontane woodland, Valley and foothill grassland	**Not likely.** Although clay soils (Clear Lake)occur onsite, this species is general associated with volcanic or serpentine derived soils which are not present onsite.
Amorpha californica var. napensis	Napa false indigo	Fabaceae	perennial deciduous shrub	Apr-Jul	None	None	G4T2	S2	1B.2	Broad-leafed upland forest, Chaparral, Cismontane woodland,	**None**. No suitable habitat (forest, woodland, chaparral) present on site.
Astragalus tener var. tener	alkali milk-vetch	Fabaceae	annual herb	Mar-Jun	None	None	G2T1	S1	1B.2	Playas, Valley and foothill grassland, Vernal pools	**Not Likely.** No Astragalus species were observed onsite. This species generally occurs in alkaline soils which are not present onsite.
Balsamorhiza macrolepis	big-scale balsamroot	Asteraceae	perennial herb	Mar-Jun	None	None	G2	S2	1B.2	Chaparral, Cismontane woodland, Valley and foothill grassland	**Not Likely.** No Balsamorhiza species were observed onsite. This species is perennial and would have been present and visible during surveys.
Blepharizonia plumosa	big tarplant	Asteraceae	annual herb	Jul-Oct	None	None	G1G2	S1S2	1B.1	Valley and foothill grassland, usually on clay	**Low.** Although no Blepharizonia species were observed onsite, low quality habitat (disturbed and thatchy annual grassland) habitat occurs onsite.
Brodiaea leptandra	narrow-anthered brodiaea	Themidaceae	perennial bulbiferous herb	May-Jul	None	None	G3?	S3?	1B.2	Broad-leafed upland forest, Chaparral, Cismontane woodland, Lower montane coniferous forest, Valley and foothill grassland	**Low.** Although no Brodiaea species were observed onsite, low quality habitat (disturbed and thatchy annual grassland) habitat occurs onsite.
Carex lyngbyei	Lyngbye's sedge	Cyperaceae	perennial rhizomatous herb	Apr-Aug	None	None	G5	S3	2B.2	Marshes and swamps	**Not Likely.** No Carex species were observed onsite. This species is perennial and would have been present and visible during surveys.
Castilleja affinis var. neglecta	Tiburon paintbrush	Orobanchaceae	perennial herb (hemiparasitic)	Apr-Jun	FE	ST	G4G5T1T2	S1S2	1B.2	Valley and foothill grassland	**Not Likely.** This species has a very limited distribution and is associated with serpentine soils which are not present onsite.
Ceanothus confusus	Rincon Ridge ceanothus	Rhamnaceae	perennial evergreen shrub	Feb-Jun	None	None	G1	S1	1B.1	Closed-cone coniferous forest, chaparral, cismontane woodland. Usually on volcanic or serpentine soils.	**None**. No Ceanothus species observed on site. This species is a perennial shrub and would have been visible during surveys, if present.

Appendix A. Special-Status Plant Species Originally Targeted for Surveys at the Giovannoni Logistics Center Project

Scientific Name	Common Name	Plant Family	Lifeform	Blooming Period	Special-Status Listings and Ranks					General Habitat	Potential To Occur Onsite
					Fed List	State List	Global Rank	State Rank	Ca Rare Plant Rank		
Ceanothus purpureus	holly-leaved ceanothus	Rhamnaceae	perennial evergreen shrub	Feb-Jun	None	None	G2	S2	1B.2	Chaparral, cismontane woodland, rocky volcanic soils.	**None**. No Ceanothus species observed on site. This species is a perennial shrub and would have been visible during surveys, if present.
Centromadia parryi ssp. congdonii	Congdon's tarplant	Asteraceae	annual herb	May-Oct (Nov)	None	None	G3T1T2	S1S2	1B.1	Valley and foothill grassland	**Low.** This species is wetland dependent and its presence could be affected by the below annual rainfall that occurred in 2020/2021 wet-season.
Centromadia parryi ssp. parryi	pappose tarplant	Asteraceae	annual herb	May-Nov	None	None	G3T2	S2	1B.2	Chaparral, Coastal prairie, Marshes and swamps, Meadows and seeps, Valley and foothill grassland	**Low.** This species is wetland dependent and its presence could be affected by the below annual rainfall that occurred in 2020/2021 wet-season.
Chloropyron molle ssp. molle	soft salty bird's-beak	Orobanchaceae	annual herb (hemiparasitic)	Jun-Nov	FE	CR	G2T1	S1	1B.2	Coastal salt marshes and swamps	**None**. No suitable habitat (salt marsh) present on site.
Cicuta maculata var. bolanderi	Bolander's water-hemlock	Apiaceae	perennial herb	Jul-Sep	None	None	G5T4T5	S2?	2B.1	Marshes and swamps	**Low.** This species is wetland dependent and its presence could be affected by the below annual rainfall that occurred in 2020/2021 wet-season.
Downingia pusilla	dwarf downingia	Campanulaceae	annual herb	Mar-May	None	None	GU	S2	2B.2	Valley and foothill grassland, Vernal pools	**Not Likely.** This species is wetland dependent and generally associated with deep and fairly pristine vernal pool habitats, which are not present onsite.
Erigeron greenei	Greene's narrow-leaved daisy	Asteraceae	perennial herb	May-Sep	None	None	G3	S3	1B.2	Chaparral. Serpentinite or volcanic soils.	**None**. No suitable habitat (serpentine chaparral) present on site.
Eryngium jepsonii	Jepson's coyote-thistle	Apiaceae	perennial herb	Apr-Aug	None	None	G2	S2	1B.2	Valley and foothill grassland, Vernal pools	**Low.** This species is wetland dependent and its presence could be affected by the below annual rainfall that occurred in 2020/2021 wet-season.
Extriplex joaquinana	San Joaquin spearscale	Chenopodiaceae	annual herb	Apr-Oct	None	None	G2	S2	1B.2	Chenopod scrub, Meadows and seeps, Playas, Valley and foothill grassland	**Not Likely.** No Extriplex species were observed onsite. This species generally occurs in alkaline soils which are not present onsite.
Fritillaria liliacea	fragrant fritillary	Liliaceae	perennial bulbiferous herb	Feb-Apr	None	None	G2	S2	1B.2	Cismontane woodland, Coastal prairie, Coastal scrub, Valley and foothill grassland	**Low.** No Fritillaria species were observed onsite. Although low quality habitat (disturbed thatchy annual grassland) exist onsite.
Helianthella castanea	Diablo helianthella	Asteraceae	perennial herb	Mar-Jun	None	None	G2	S2	1B.2	Broadleafed upland forest, chaparral, cismontane woodland, coastal scrub, riparian woodland	**None.** No Isocoma species were observed onsite. This species is a perennial shrub and would have been visible during surveys, if present. It generally occurs in rocky chaparral/oak woodland habitat which is not present on site.

Appendix A. Special-Status Plant Species Originally Targeted for Surveys at the Giovannoni Logistics Center Project

Scientific Name	Common Name	Plant Family	Lifeform	Blooming Period	Special-Status Listings and Ranks					General Habitat	Potential To Occur Onsite
					Fed List	State List	Global Rank	State Rank	Ca Rare Plant Rank		
Hesperolinon breweri	Brewer's western flax	Linaceae	annual herb	May-Jul	None	None	G2	S2	1B.2	Chaparral, cismontane woodland, valley and foothill grassland. Usually on serpentine.	**None**. No suitable habitat (serpentine chaparral and grassland) present on site.
Isocoma arguta	Carquinez goldenbush	Asteraceae	perennial shrub	Aug-Dec	None	None	G1	S1	1B.1	Valley and foothill grassland	**None.** No Isocoma species were observed onsite. This species is a perennial shrub and would have been visible during surveys, if present.
Lasthenia conjugens	Contra Costa goldfields	Asteraceae	annual herb	Mar-Jun	FE	None	G1	S1	1B.1	Vernal pools within Cismontane woodland, Playas, Valley and foothill grassland	**Low.** This species is wetland dependent and its presence could be affected by the below annual rainfall that occurred in 2021/2022 wet-season.
Lathyrus jepsonii var. jepsonii	Delta tule pea	Fabaceae	perennial herb	May-Jul (Aug-Sep)	None	None	G5T2	S2	1B.2	Marshes and swamps	**None.** This species is generally associated with tidal influenced perennial waterways. This species was present and highly visible at the chosen Reference Site. Therefore, this species would have been observed onsite, if present.
Legenere limosa	legenere	Campanulaceae	annual herb	Apr-Jun	None	None	G2	S2	1B.1	Vernal pools	**Not likely.** This species is a wetland dependent and generally associated with fairly deep and pristine vernal pool habitats, which are not present onsite.
Leptosiphon jepsonii	Jepson's leptosiphon	Polemoniaceae	annual herb	Mar-May	None	None	G2G3	S2S3	1B.2	Chaparral, Cismontane woodland, Valley and foothill grassland	**Low.** No Leptosiphon species were observed onsite. Although low quality habitat (disturbed annual grassland) exists onsite.
Lilaeopsis masonii	Mason's lilaeopsis	Apiaceae	perennial rhizomatous herb	Apr-Nov	None	SR	G2	S2	1B.1	Mudflats within marshes and swamps, Riparian scrub	**None.** This species is generally associated with tidal influenced perennial waterways. This species was present and highly visible at the chosen Reference Site. Therefore, this species would have been observed onsite, if present.
Polygonum marinense	Marin knotweed	Polygonaceae	annual herb	(Apr)May-Aug(Oct)	None	None	G2Q	S2	3.1	Coastal salt marshes and brackish swamps	**None**. No suitable habitat (salt marsh) present on site.
Rhynchospora californica	California beaked-rush	Cyperaceae	perennial rhizomatous herb	May-Jul	None	None	G1	S1	1B.1	Bogs and fens, seeps, freshwater marshes and swamps, lower montane coniferous forest.	**Low.** This species is wetland dependent and its presence could be affected by the below annual rainfall that occurred in 2021/2022 wet-season.
Senecio aphanactis	chaparral ragwort	Asteraceae	annual herb	Jan-Apr(May)	None	None	G3	S2	2B.2	Chaparral, cismontane woodland, coastal scrub.	**None**. No suitable habitat (chaparral, scrub) present on site.
Symphyotrichum lentum	Suisun Marsh aster	Asteraceae	perennial rhizomatous herb	(Apr) May-Nov	None	None	G2	S2	1B.2	Marshes and swamps	**None.** This species is generally associated with tidal influenced perennial waterways. This species was present and highly visible at the chosen Reference Site. Therefore, this species would have been observed onsite, if present.

Appendix A. Special-Status Plant Species Originally Targeted for Surveys at the Giovannoni Logistics Center Project

Scientific Name	Common Name	Plant Family	Lifeform	Blooming Period	Special-Status Listings and Ranks					General Habitat	Potential To Occur Onsite
					Fed List	State List	Global Rank	State Rank	Ca Rare Plant Rank		
Trichostema ruygtii	Napa bluecurls	Lamiaceae	annual herb	Jun-Oct	None	None	G1G2	S1S2	1B.2	Chaparral, Cismontane woodland, Lower montane coniferous forest, Valley and foothill grassland, Vernal pools	**Not likely.** No Trichostema species were observed onsite. Although low quality habitat (disturbed annual grassland and vernal pools) exist onsite.
Trifolium amoenum	two-fork clover	Fabaceae	annual herb	Apr-Jun	FE	None	G1	S1	1B.1	Coastal bluff scrub, Valley and foothill grassland	**Low.** This species is wetland dependent and its presence could be affected by the below annual rainfall that occurred in 2021/2022 wet-season.
Trifolium hydrophilum	saline clover	Fabaceae	annual herb	Apr-Jun	None	None	G2	S2	1B.2	Marshes and swamps, Valley and foothill grassland, Vernal pools	**Low.** This species is wetland dependent and its presence could be affected by the below annual rainfall that occurred in 2021/2022 wet-season.

Federal	Definition
FE	Federally Endangered (listed as Endangered under Federal Endangered Species Act [ESA])

State	Definition
SR	Listed as rare under California Endangered Species Act (CESA)
ST	Listed as threatened under the CESA

Global Rank	Definition
G1	Critically Imperiled — At very high risk of extinction due to extreme rarity (often 5 or fewer populations), very steep declines, or other factors.
G2	Imperiled — At high risk of extinction due to very restricted range, very few populations (often 20 or fewer), steep declines, or other factors.
G3	Vulnerable — At moderate risk of extinction or elimination due to a restricted range, relatively few populations (often 80 or fewer), recent and widespread declines, or other factors.
G5	Secure — Common; widespread and abundant.
GU	Unrankable — Currently unrankable due to a lack of information or due to substantially conflicting information about status or trends.
G#G#	Range Rank — A numeric range rank (e.g., G2G3) is used to indicate the range of uncertainty about the exact status of a taxon or community.
G#T#	Infraspecific Taxon — The status of infraspecific taxa (subspecies or varieties) are indicated by a "T-rank" following the species' Global Rank. Rules for assigning T-ranks follow the same principles as those for Global Ranks. However, a T-rank cannot imply the subspecies or variety is more abundant than the species. With the subspecies, the G-rank reflects the condition of the entire species, whereas the T-rank reflects the global situation of just the subspecies or variety.
?	Qualifier: Inexact Numeric Rank — A question mark represents a rank qualifier, denoting an inexact or uncertain numeric rank.
Q	Qualifier: Questionable Taxonomy — The distinctiveness of this entity as a taxon or community at the current level is questionable; resolution of this uncertainty may result in change from a species to a subspecies or hybrid, or inclusion of this taxon or type in another taxon or type, with the resulting taxon having a lower-priority (numerically higher) conservation status rank.

State Rank	Description
S1	Critically Imperiled — Critically imperiled in the state because of extreme rarity (often 5 or fewer occurrences) or because of some factor(s) such as very steep declines making it especially vulnerable to extirpation from the state.
S2	Imperiled — Imperiled in the state because of rarity due to very restricted range, very few populations (often 20 or fewer), steep declines, or other factors making it very vulnerable to extirpation from the nation or state.
S3	Vulnerable — Vulnerable in the state due to a restricted range, relatively few populations (often 80 or fewer), recent and widespread declines, or other factors making it vulnerable to extirpation.
S#S#	Range Rank — A numeric range rank (e.g., S2S3) is used to indicate any range of uncertainty about the status of the species or community.
?	Qualifier: Inexact or Uncertain — A question mark represents a rank qualifier, denoting an inexact or uncertain numeric rank.

APPENDIX B.
LIST OF ALL VASCULAR PLANT SPECIES OBSERVED

Appendix A. Vascular Plant Species Observed at the Giovannoni Logistics Center Project, Napa County, California

List of Vascular Plants Observed in the Project		Observations		
Scientific Name	**Common Name**	**2016****	**2021**	**2022**
Agoseris grandiflora	Bigflower agoseris	X		
*Agrostis stolonifera**	Creeping bent grass			X
Alisma lanceolatum	Lance-leaf water-plantain	X		
*Amaranthus albus**	Pigweed amaranth		X	X
*Anthemis cotula**	Mayweed	X	X	X
*Atriplex prostrata**	Fat-hen			X
*Avena barbata**	Slender oats	X	X	X
Baccharis pilularis	Coyote brush		X	X
Bellardia trixago	Mediterranean linseed	X		
*Brassica rapa**	Field mustard	X	X	X
*Briza minor**	Little quaking grass	X	X	X
*Bromus diandrus**	Ripgut grass	X	X	X
*Bromus hordeaceus**	Soft brome	X	X	X
Calendula arvensis	Field-marigold	X		
Callitriche marginata	California water starwort	X	X	X
*Capsella bursa-pastoris**	Shepherd's purse			X
Cardamine californica	Bitter cress	X		
Carduus pycnocephalus ssp. *pycnocephalus*	Italian thistle	X	X	X
Castelleja attenuata	Valley tassels	X		X
Castelleja exerta subsp. exerta	Purple owl's- clover	X		
*Centaurea calitrapa**	Purple starthistle	X		
*Centaurea solstitialis**	Yellow starthistle		X	X
Centromadia pungens	Common spikeweed		X	X
*Cerastium arvense ssp. strictum**	Meadow chickweed	X		
*Cerastium glomeratum**	Mouse-ear chickweed		X	X
*Chenopodium album**	Lamb's quarters			X
*Chichorium intybus**	Chicory	X	X	X
*Cirsium vulgare**	Bull thistle	X	X	X
Claytonia perfoliata ssp. perfoliata	Miner's lettuce	X	X	X
*Convolvulus arvensis**	Field bindweed	X	X	X
*Cotula coronopifolia**	Brass buttons	X	X	X
Crassula aquatica	Water pygmy-weed	X	X	X
Croton setiger	Turkey-mullein		X	X
*Crypsis schoenoides**	Swampgrass, swamp timothy		X	X
Cuscuta sp.	Dodder	X		
*Cynara cardunculus**	Artichoke thistle		X	X
*Cynodon dactylon**	Bermuda grass		X	X
Cyperus eragrostis	Tall flatsedge	X	X	X
Deinandra corymbosa	Coast tarweed	X		
Dichelostemma capitatum subsp. capitatum	Blue dicks	X		X
Downingia concolor var. *concolor*	Spotted throat downingia	X		X
Eleocharis macrostachya	Common spike rush	X	X	X

Appendix A. Vascular Plant Species Observed at the Giovannoni Logistics Center Project, Napa County, California

List of Vascular Plants Observed in the Project		Observations		
Scientific Name	**Common Name**	**2016****	**2021**	**2022**
Elymus caput-medusae *	Medusa-head grass	X	X	X
Elymus multisetus	Big squirreltail	X		
Elymus triticoides	Beardless wild rye		X	X
Epilobium brachycarpum	Tall annual willow herb		X	X
Epilobium ciliatum	Slender willow herb	X	X	X
Erigeron canadensis	Canadian horseweed		X	X
*Erodium botrys**	Broadleaf filaree	X	X	X
*Erodium cicutarium**	Red-stem filaree	X	X	X
*Erodium moschatum**	White-stem filaree		X	X
Eryngium aristulatum var. aristulatum	Jepson's button celery	X	X	X
*Euphorbia maculata**	Spotted spurge			X
*Euphorbia oblongata**	Eggleaf spurge		X	
*Festuca arundinacea**	Tall festuca		X	X
*Festuca bromoides**	Six-weeks grass	X	X	X
*Festuca perennis**	Italian ryegrass	X	X	X
*Foeniculum vulgare**	Fennel	X	X	X
Fraxinus latifolia	Oregon ash		X	X
Galium aparine	Bedstraw	X	X	X
*Geranium dissectum**	Cut-leave geranium	X	X	X
*Glyceria declinata**	Waxy manna grass		X	X
Gnaphalium palustre	Lowland cudweed		X	X
*Helminthotheca echioides**	Prickly ox-tongue	X	X	X
Hemizonia congesta ssp. *luzulifolia*	White hayfield tarweed	X	X	X
Heterotheca grandiflora	Telegraph weed			X
*Hirschfeldia incana**	Short-pod mustard		X	X
Hordeum brachyantherum ssp. *brachyantherum*	Meadow barley	X	X	X
Hordeum marinum ssp. *gussoneanum**	Mediterranean barley	X	X	X
Hordeum murinum ssp. *leporinum**	Hare barley	X	X	X
Juncus balticus ssp. *ater*	Baltic rush	X	X	X
Juncus bufonius var. *bufonius*	Toad rush	X	X	X
Juncus mexicanus	Mexican rush	X	X	X
Juncus phaecephalus	Brown-headed rush	X		
Juncus xiphiodes	Iris-leaved rush	X		
*Kickxia elantine**	Sharp-leaved fluellin			X
*Lactuca serriola**	Prickly wild lettuce	X	X	X
*Lamium amplexicaule**	Giraffes head			X
Lasthenia glaberrima	Smooth goldfields	X	X	X
Leontodon saxatilis ssp. *longirostris**	Hairy hawkbit	X	X	X
*Lepidium latifolium**	Perennial peppergrass	X	X	X
Leymus triticoides	Creeping wildrye		X	X
*Linum bienne**	Flax	X		
*Lotus corniculatus**	Birds' foot trefoil	X	X	X

NOTICE OF PUBLIC HEARING

On **Thursday, November 17, 2022**, at the hour of **6:30 p.m.**, at **4381 Broadway, Suite 201** (in the Council Chambers of the American Canyon City Hall), a public hearing will be held by the Planning Commission of the City of American Canyon to consider the following:
APPLICATION:The Planning Commission will consider adopting a Resolution recommending the City Council certify the Giovannoni Logistics Center Final Environmental Impact Report (Final EIR) (State Clearinghouse Number 2021010104), a Project consisting of up to 2.4 million square feet of high cube warehouse on 208-acres. The Planning Commission also will consider adopting Resolutions recommending the City Council approve:
1. A Design Permit for two high-cube warehouse buildings within the Giovannoni Logistics Center Project at 300 Green Island Road and 1200 Devlin Road totaling 1,069,904 square feet on 69.8 acres.
2. A Tentative Parcel Map to create two parcels within the Giovannoni Logistics Center for the two proposed high cube warehouse buildings on 69.8 acres.

PROJECT DESCRIPTION: The proposed project being considered for a recommendation to the City Council is approval of the Final EIR as described above to develop up to 2.4 million square feet of high cube warehouse on the 208-acre project site. Building height is 36 feet with a maximum parapet height of 56 feet, 4 inches above finished grade. The proposed buildings would consist of concrete tilt-up panel construction. Vehicular access would be provided from Green Island Road and Devlin Road.

ENVIRONMENTAL REVIEW: The proposed Giovannoni Logistics Center was evaluated under the California Environmental Quality Act with an Environmental Impact Report (EIR) (SCH# 2021010104). The EIR provides a project-level analysis of the environmental effects of the Giovannoni Logistics Center Project. The environmental impacts of the proposed project are analyzed in the EIR to the degree of specificity appropriate, in accordance with CEQA Guidelines Section 15146.

PROJECT LOCATION: North of Green Island Road, bisected by Devlin Road, American Canyon, CA 94503; Assessor's Parcel Numbers 057-090-008, 057-130-034, 057-130-036

APPLICANT:Buzz Oates LLC
Consistent with the California Governor's Executive Order N-29-20 promoting social distancing, there will be no physical or in-person meeting location available to the public for this meeting. Instead, the meeting will be conducted by teleconference via a Zoom connection where the Planning Commission and staff will participate with both audio and video presence. The meeting will be accessible for all members of the public to attend via the City's website, YouTube, and Cable TV Channel 28 and public comments enabled via email and phone.
Written comments may be submitted to Brent Cooper by email at whe@cityofamericancanyon.org or hardcopy at 4381 Broadway, Suite 201, American Canyon, CA 94503, prior to the public hearing.
If you challenge the particular proceedings in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the City prior to the public hearing.
Public meetings/
events sponsored or conducted by the City of American Canyon are held in accessible sites. Requests for accommodations may be made by calling (707)647-4577 (voice) or 711 for the California Relay Service or by e-mailing the ADA Coordinator, Cherri Walton, at cwalton@cityofamericancanyon.org at least 72 hours in advance of the event. Copies of documents distributed at the meeting are available in alternative formats upon request.

STATE OF CALIFORNIA
COUNTY OF SOLANO, S.S.

PC NOTICE 11-17-22 GIOVANNONI EIR DESIGN PERM

I am a citizen of the United States. I am over the age of eighteen years and not a party to or interested in the above-entitled matter. I am the Legal Advertising Clerk of the printer and publisher of the Vallejo Times-Herald, a newspaper published in the English language in the City of Vallejo, County of Solano, State of California.

I declare that the Vallejo Times-Herald is a newspaper of general circulation as defined by the laws of the State of California as determined by this court's order dated June 12, 1952 in the action entitled In the Matter of the Ascertainment and Establishment of the Standing of Vallejo Times-Herald as a Newspaper of General Circulation, Case Number 25864. Said order states "Vallejo Times-Herald" has been established, printed and published in the City Vallejo, County of Solano, State of California; That it is a newspaper published daily for the dissemination of local and telegraphic news and intelligence of general character and has a bona fide subscription list of paying subscribers; and...THEREFORE, IT IS ORDERED, ADJUDGED AND DECREED:...That "Vallejo Times-Herald" is a newspaper of general circulation for the City of Vallejo, County of Solano, California. Said order has not been revoked.

I declare that this notice, of which the annexed is a printed copy, has been published in each regular and entire issue of said newspaper and not in any supplement thereof on the following dates, to wit:

11/05/2022

I certify (or declare) under penalty of perjury that the foregoing is true and correct.

Dated at Vallejo, California, this
5th day of November 2022

On Tuesday, December 6, 2022, at the hour of 6:30 p.m., at 4381 Broadway, Suite 201 (in the Council Chambers of the American Canyon City Hall), a public hearing will be held by the City Council of the City of American Canyon to consider the following:

APPLICATION: The City Council will consider adopting a Resolution to certify the Giovannoni Logistics Center Final Environmental Impact Report (Final EIR) (State Clearinghouse Number 2021010104), a Project consisting of up to 2.4 million square feet of high cube warehouse on 208acres.

The City Council also will consider adopting Resolutions to approve:
1. A Design Permit for two high-cube warehouse buildings within the Giovannoni Logistics Center Project at 300 Green Island Road and 1200 Devlin Road totaling 1,069,904 square feet on 69.8 acres.
2. A Tentative Parcel Map to create two parcels within the Giovannoni Logistics Center for the two proposed high cube warehouse buildings on 69.8 acres.

PROJECT DESCRIPTION: The Planning Commission reviewed the project on November 17, 2022, and recommended City Council approval. These approvals include: 1) the Final EIR as described above to develop up to 2.4 million square feet of high cube warehouse on the 208-acre project site; 2) A Design Permit to construct two high-cube warehouse buildings within the Giovannoni Logistics Center Project at 300 Green Island Road and 1200 Devlin Road totaling 1,069,904 square feet on 69.8 acres. Building height is 36 feet with a maximum parapet height of 56 feet, 4 inches above finished grade. The proposed buildings would consist of concrete tilt-up panel construction. Vehicular access would be provided from Green Island Road and Devlin Road; and 3) A Tentative Parcel Map to create two parcels within the Giovannoni Logistics Center for the two proposed high cube warehouse buildings on 69.8 acres.

ENVIRONMENTAL REVIEW: The proposed Giovannoni Logistics Center was evaluated under the California Environmental Quality Act with an Environmental Impact Report (EIR) (SCH# 2021010104). The EIR provides a project-level analysis of the environmental effects of the Giovannoni Logistics Center Project. The environmental impacts of the proposed project are analyzed in the EIR to the degree of specificity appropriate, in accordance with CEQA Guidelines Section 15146.

PROJECT LOCATION: North of Green Island Road, bisected by Devlin Road, American Canyon, CA 94503; Assessor's Parcel Numbers 057-090-008, 057-130-034, 057-130-036

APPLICANT: Buzz Oates LLC

Consistent with Government Code Section 54953 and the American Canyon City Council Resolution Declaring the Existence of a Local Emergency due to the COVID-19 Pandemic, City Council and other public meetings will be conducted both in person at City Hall, 4381 Broadway, Suite 201, and also via Zoom Teleconferencing to promote local, state, and federal guidelines and social distancing recommendations for the containment of the coronavirus. City officials and members of the public are invited to attend the meeting either in person or via teleconference. This meeting will be broadcast live to residents on Napa Valley TV, on our website, and on YouTube.

Written comments may be submitted to the city clerk at cityclerk@cityofamericancanyon.org. Hardcopy comments may be delivered to City Hall at 4381 Broadway, Suite 201, American Canyon, CA 94503, prior to the public hearing or to the City Council meeting.

If you challenge the proceedings in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the City prior to the public hearing.

Public meetings/events sponsored or conducted by the City of American Canyon are held in accessible sites. Requests for accommodations may be made by calling (707) 647-4369 (voice) or 711 for the California Relay Service or by e-mailing cityclerk@cityofamericancanyon.org at least 72 hours in advance of the event. Copies of documents distributed at the meeting are available in alternative formats upon request.

NOTICE OF PUBLIC HEARING

On Tuesday, December 6, 2022, at the hour of 6:30 p.m., at 4381 Broadway, Suite 201 (in the Council Chambers of the American Canyon City Hall), a public hearing will be held by the City Council of the City of American Canyon to consider the following:

APPLICATION: The City Council will consider adopting a Resolution to certify the Giovannoni Logistics Center Final Environmental Impact Report (Final EIR) (State Clearinghouse Number 2021010104), a Project consisting of up to 2.4 million square feet of high cube warehouse on 208-acres.

The City Council also will consider adopting Resolutions to approve:
1. A Design Permit for two high-cube warehouse buildings within the Giovannoni Logistics Center Project at 300 Green Island Road and 1200 Devlin Road totaling 1,069,904 square feet on 69.8 acres.
2. A Tentative Parcel Map to create two parcels within the Giovannoni Logistics Center for the two proposed high cube warehouse buildings on 69.8 acres.

PROJECT DESCRIPTION: The Planning Commission reviewed the project on November 17, 2022, and recommended City Council approval. These approvals include: 1) the Final EIR as described above to develop up to 2.4 million square feet of high cube warehouse on the 208-

CITY OF AMERICAN CANYON

Notice of Extended Comment Period of a Draft Environmental Impact Report (Draft EIR)

The Draft Environmental Impact Report (DEIR) (SCH # 2021010104) for the GIOVANNONI LOGISTICS CENTER PROJECT is available for review. Public comment on this document is invited for an extended 62-day period from May 20, 2022 through July 20, 2022. More information is provided below.

On May 20, 2022, notice was given that the City of American Canyon had completed a Draft EIR. The Draft EIR was distributed to public agencies and interested parties for public review pursuant to the California Environmental Quality Act (CEQA) and the California Public Resources Code, starting a 45-day public comment period set to conclude on July 5, 2022. This notice is to announce that the public comment period has been extended by 15 days to July 20, 2022, to allow public agencies and interested parties a total of 60 days to review and submit comments on the Draft EIR. The City continues to provide online links to the documents as well as information on additional viewing methods of the Draft EIR as detailed below.

PROJECT LOCATION: The semi-rectangular project site is bounded by industrial development in the Green Island Business Park (west), the Napa Logistics Project and Devlin Road (north), the Napa Branch Line (east), and Green Island Road, a stone supply business, and a wine distribution warehouse (south).

PROJECT DESCRIPTION: The proposed Giovannoni Logistics Center consists of the development up to 2.4 million square feet of high cube warehouse on a 208-acre site. The two-phase project will include an approximately 45-acre wetland preserve.

SIGNIFICANT IMPACTS: The Draft EIR identifies significant impacts in the following California Environmental Quality

- Aesthetics, Light, and Glare
- Air Quality
- Biological Resources
- Cultural Resources/Tribal Cultural Resources
- Energy
- Geology, Soils, and Seismicity
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use
- Noise
- Public Services
- Transportation
- Utilities and Service Systems

ADDRESS WHERE COPY OF DRAFT EIR IS AVAILABLE: The Draft EIR and other project materials are available for public review and download on the City of American Canyon website at https://cityofamericancanyon.org/review Printed copies of the document are available for public review at the following locations during normal business hours:

City of American Canyon Community Development Department
4381 Broadway, Suite 201
American Canyon, CA 94503

American Canyon Library
300 Crawford Way
American Canyon, CA 94503

All written comments on the Draft EIR must be received by the City no later than 4:00 pm on July 20, 2022 to be considered. Pursuant to Section 15088a of the CEQA Guidelines, late comments will be considered only at the City's discretion. Comments must be directed to:

Nicolle Jones

RE: Giovannoni WSA analysis within the context of the recently released 2020 UWMP for the City of American Canyon

Dear Joe Livaich:

In early 2021, Balance was contracted to complete a water supply assessment ('WSA') for the Giovannoni Logistics Center ('Project') in the City of American Canyon in Napa County, California. The draft document was submitted to the client in September 2021, and that version was included as an appendix to the Project Draft EIR submitted in the spring of 2022. A final version of the WSA was prepared in December 2022 in preparation for City Council approval; that version was predominantly unchanged from the earlier draft version, with only some formatting and minor editorial revisions.

As is typical for WSA documents, the study relied heavily on analyses contained within the Urban Water Management Plan ('UWMP') of the proposed water supplier, in this case the City of American Canyon. When the WSA was initially prepared, the most recent UWMP available from the City was the 2015 version, so the system-wide supply and demand numbers used for context in the WSA came from that analysis. The WSA concluded that adequate water supply will be available to meet anticipated system-wide demand (including that of the Project) under all planning scenarios within the planning period through 2040.

In September 2022, the American Canyon City Council passed a resolution approving, as an additional appendix to the 2015 UWMP, a 'Demonstration of Reduced Delta Reliance' in compliance with the Sacramento-San Joaquin Delta Reform Act of 2009. This appendix (which also appears as Appendix A in the 2020 UWMP) is largely a documentation exercise, showing the degree to which the City would increase regional self-reliance in their water supply, reducing demands on water imports from the Delta. The City expects to increase regional self-reliance through water-use efficiency improvements, increases in recycled water use, and reduction in system losses.

The Final 2020 UWMP for American Canyon was released on January 18, 2023. This planning update included revised projections of City-wide available supply and demand, based on updated water usage and availability numbers, revised planning guidance contained within the 2020 UWMP Guidebook (issued by DWR in March 2021), and adjusted estimates of population and other growth within the City.

In general, these updates resulted in decreases in both supply and demand, when compared year-to-year to the projections contained within the 2015 UWMP. Normal-year supply was estimated to be 20 to 30 percent less than that estimated in 2015, and demand was estimated to be about 20 percent less. More specific to the Project, Commercial/Industrial/Institutional ('C/I/I') demand was projected to be about 30 percent less than that projected in the 2015 UWMP. The 2020 UWMP concluded that there were potential water supply shortages under all dry- and multi-dry-year scenarios, whereas the 2015 projected shortages under only the 2035 and 2040 single-dry-year scenarios. However, both UWMPs concluded that these supply constraints can be resolved through the purchase of "supplemental imported water through existing agreements through the planning horizon (2045) for all water year scenarios" (2020 UWMP, pg. 1-2).

As detailed in the WSA, the Project is anticipated to use up to 24 acre-feet per year ('afy') of potable water and 82 afy of recycled water (after full development of the project site). The updated projections of C/I/I demand in the 2020 UWMP, while less than that projected in 2015, could still accommodate the increase in potable demand associated with the project. As shown in the excerpt of Table 4-2 from the 2020 UWMP below, C/I/I demand is expected to increase by 68 afy over each 5-year planning increment[1], about 2.8 times the anticipated potable demand of the project[2].

Submittal Table 4-2 Retail: Use for Potable and Non-Potable[1] Water - Projected

Use Type	Additional Description (as needed)	Projected Water Use[2] *Report To the Extent that Records are Available*				
Drop down list May select each use multiple times These are the only Use Types that will be recognized by the WUEdata online submittal tool		2025	2030	2035	2040	2045 (opt)
Add additional rows as needed						
Single Family		1,451	1,592	1,733	1,874	2,024
Multi-Family		161	177	193	208	225
Commercial	Includes industrial/ institutional	832	900	969	1,037	1,106
Landscape		139	139	139	139	139

Other Potable	Private fire protection services, temporary watering of construction sites	73	73	73	73	73
Losses		199	216	233	250	267
	TOTAL	2,918	3,160	3,339	3,581	3,834

[1] *Recycled water demands are NOT reported in this table. Recycled water demands are reported in Table 6-4.* [2] *Units of measure (AF, CCF, MG) must remain consistent throughout the UWMP as reported in Table 2-3.*

NOTES: Units of measure in this UWMP are acre-feet (AF).

[1] For context, the projected C/I/I demand increases in the 2015 UWMP were about 90 afy for each 5-year planning increment.

[2] For the purposes of this assessment, potable demand is the limiting factor; the City has ample recycled water supply, and benefits from maximized use of recycled water. See Section 4.3 in the Project WSA for additional discussion.

In summary, the Water Supply Assessment for the Giovannoni Logistics Center was prepared in 2021, using the most recent Urban Water Management Plan for the City available at that time. That document concluded that supply was available to meet the projected Project and City-wide demand under all year-type scenarios through the planning period. The 2020 UWMP, while projecting lower demand and even less available supply than that projected in the 2015 UWMP, still concluded that available additional supply can be purchased to overcome potential drought-scenario shortfalls through the 2045 planning period. The 2020 UWMP analysis included more than enough projected increase in C/I/I demand to accommodate the Project's anticipated potable water usage. Thus, even though a formal update of the WSA is not required (the analysis was completed long before the 2020 UWMP was published), we would not expect the conclusions of the WSA to change under the 2020 UWMP analysis. We conclude that the Project WSA is consistent with Water Code section 10910—the City has sufficient water to serve the Project, in addition to the City's existing and planned future uses (including agricultural and manufacturing uses) during normal, single-dry, and multiple-dry water years during the next 20-year time period.

We hope that this letter helps provide context for the Project relative to the most recent planning scenarios for the City of American Canyon. Please let me know if you have any questions or need any further information on this matter.

Sincerely,

EXECUTIVE SUMMARY

Giovannoni Logistics Center ("Project") in the City of American Canyon in Napa County, California, is a proposed light industrial project. The Project is bounded by the Napa Logistics Park and Devlin Road to the north, Green Island Road and warehouses to the south, Green Island Road Business Park to the west, and Union Pacific Railroad/Napa Branch Line to the east. The Project is broken up into two construction phases. Phase 1 is the eastern portion of the project including two warehouses with roughly 1.1 million square feet of warehouse space. Phase 2 is the western portion of the project with conceptually up to 1.3 million square feet of similar uses.

This Water Supply Assessment (WSA) presents the proposed potable and recycled water use for the Project, and assesses the potential impact to citywide supply and demand projections through the year 2040 for the City of American Canyon. The Project would be served by water provided by the City of American Canyon. Phase 1 is estimated to use up to 10.8 acre-feet per year (afy) of potable water to serve the two warehouses at the site, and up to 37.1 afy of recycled water, predominantly for landscape irrigation. Phase 2 is estimated to use up to 13.1 afy of potable water for warehouses and up to 45.0 afy of recycled water for landscape irrigation.

The Project will use less potable water over the long-term than was assumed in the demand analysis in the City's Urban Water Management Plan (UWMP) for the project site (133.3 afy less). In addition, compliance with the City's Zero Water Footprint policy would offset the Project's potable demand through off-site implementation of project-funded water conservation measures of up to 23.9 afy. The citywide supply/demand analysis in this WSA anticipates sufficient supply in all normal years, but shortfalls in water supply during dry-year scenarios in 2035 and 2040, consistent with the analysis in the 2015 UWMP. State Water Project carryover water is anticipated to be available in amounts great enough to accommodate these deficiencies. In addition, the City may choose to make use of other options available, including Advanced Table A Water, drought demand restrictions, or water purchases on the open market. As such, adequate supply is projected to be available under all planning scenarios.

The City produces recycled water to meet demand and, along with recycled water supplied by the Napa Sanitation District, has sufficient long-term supply capacity to meet projected demand both at the project site and throughout the City's service area.

1 INTRODUCTION

This report analyzes the projected water supply and demand for the Giovannoni Logistics Center (Project) in the City of American Canyon in Napa County, California. The Water Supply Assessment (WSA) is intended to support environmental planning documentation for the Project, which includes approximately 2.4 million square feet of warehouse space.

1.1 Regulatory Background

Section 10910 of the California Water Code (as revised by Senate Bill 610, or SB610) requires: "The city or county, at the time that it determines whether an environmental impact report, a negative declaration, or a mitigated negative declaration is required for any project subject to the California Environmental Quality Act, pursuant to Section 21080.1 of the Public Resources Code, "…[to] identify a water system…that may supply water for the project," and to prepare a WSA to address the increased water use over existing conditions. The WSA is intended to:

1. Identify the water system or systems that would (or may) supply water to the project;
2. Compare project water demands with those projections included in the most-recently adopted Urban Water Management Plan or Plans for those service providers; and
3. Assess whether the public water system's total projected water availability for the entire system(s) during normal, single dry, and multiple dry years over a 20-year period will meet the projected water demand associated with the proposed project, in addition to the public water system's existing and planned future uses (including agricultural and manufacturing uses).

Within this assessment, California Water Code Section 10910(4)(d) requires a discussion of existing water supply entitlements, water rights, or water service contracts relevant to the public water system(s). Also, Section 10910 (2)(f) requires that "If a water supply for a proposed project includes groundwater, the following additional information shall be included in the water supply assessment: (1) a review of any information contained in the urban water management plan relevant to the identified water supply for the proposed project (2) a description of any groundwater basin or basins from which the proposed project will be supplied."

The proposed Project is a logistics warehouse complex on approximately 208 acres with 2.4 million square feet of warehouse space. Section 10912(a) of the California Water Code outlines the types of projects requiring a Water Supply Assessment, including:

- "A proposed industrial, manufacturing, or processing plant or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area."

As such, the Project requires a WSA. See Section 3.1 for a discussion of estimated water demand for the Project.

Water supply for the proposed project would be served by the City of American Canyon ("City"). Water sources available to the City are discussed in Section 2. The City prepared a 2015 Urban Water Management (UWMP) (Kennedy Jenks, 2016) that projected water supply and demand within the service district through 2040. While the Project was not explicitly named in the 2015 UWMP, the UWMP did generally account for projected increases in demand associated with expected development in the city limits of American Canyon, including the parcel for the Project. Section 3.2 discusses the differences in potable and recycled water demand of the proposed project area compared to the assumed demand. Section 4 compares the system-wide supply and demand for the City to assess whether there is sufficient supply to support existing water uses, the Project, and other planned future uses through 2040.

1.2 Project Location

The Project is located in the northern portion of the City of American Canyon in Napa County, California. The proposed development is bounded by the Napa Logistics Park and Devlin Road to the north, Green Island Road and warehouses to the south, Green Island Road Business Park to the west, and Union Pacific Railroad/Napa Branch Line to the east. The Project is broken up into two construction phases. Phase 1 is the eastern portion of the project including two warehouses, roughly 1.1 million square feet of warehouse floor space. Phase 2 is the western portion of the project with conceptually up to 1.3 million square feet of warehouse space.

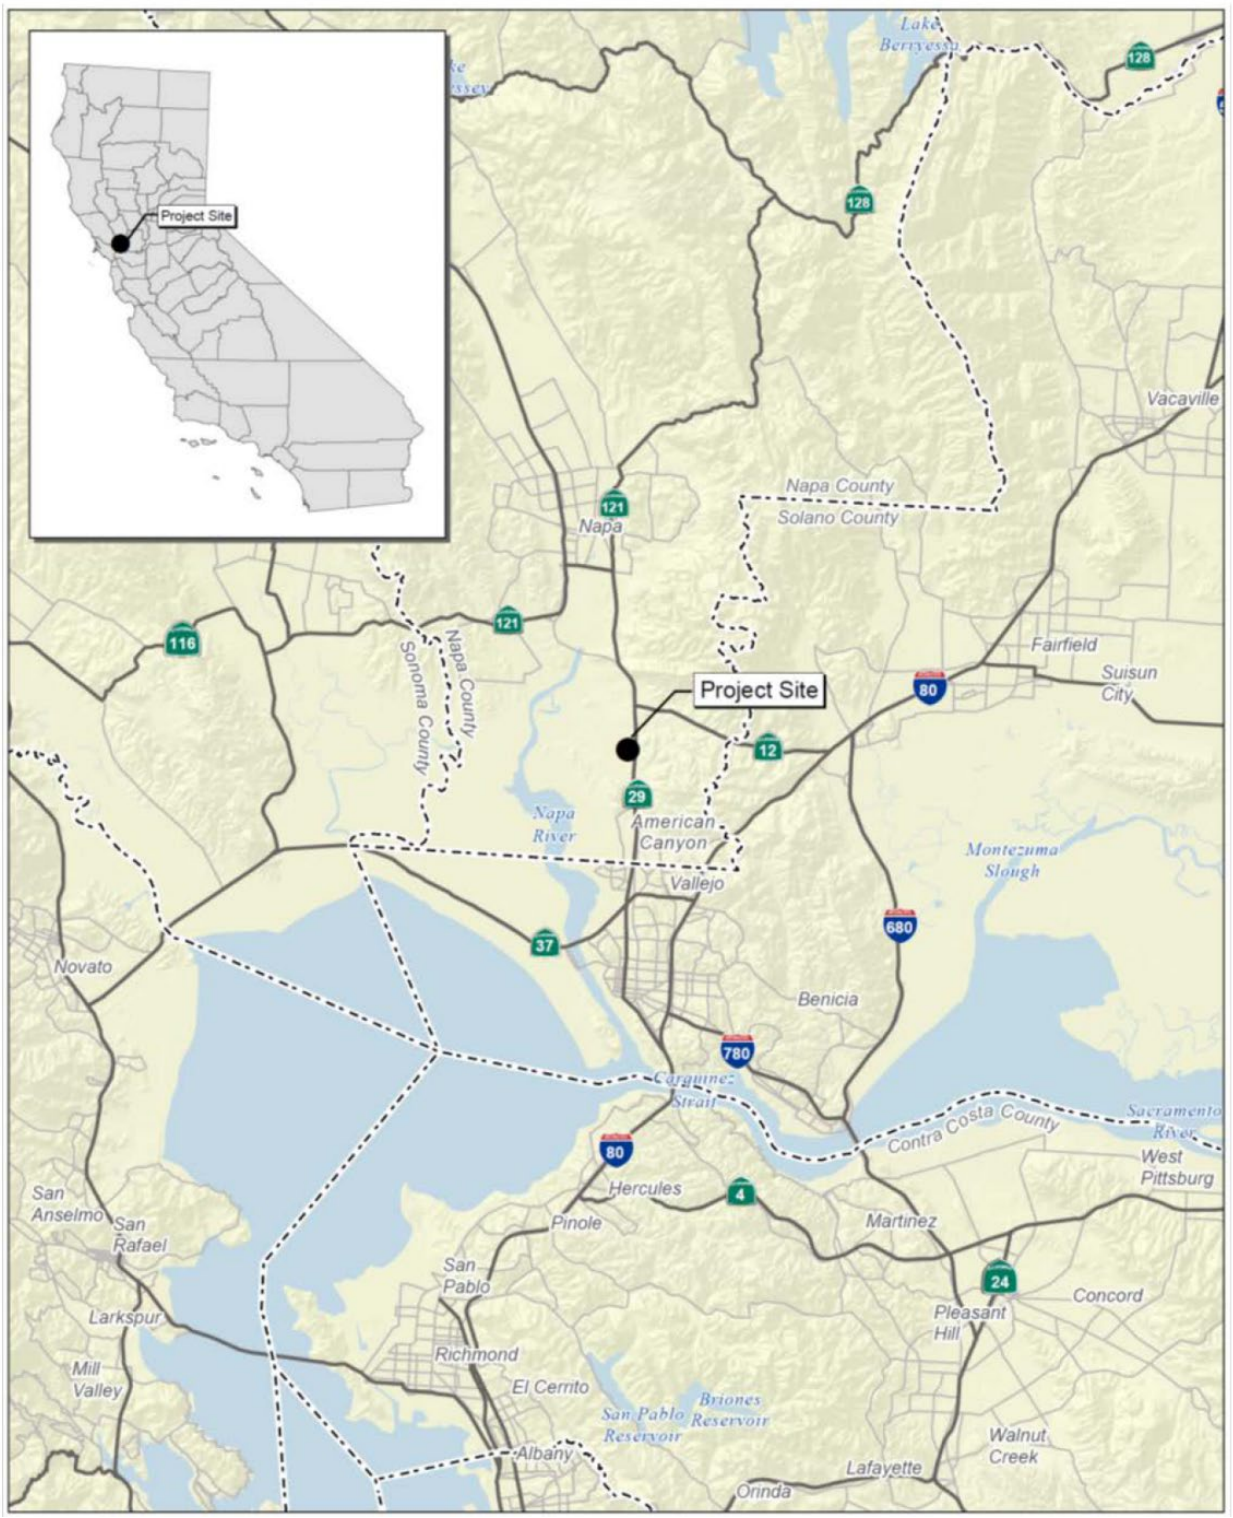

Figure 1-1 Project Location

1.3 Existing Conditions

The project site is currently undeveloped parcels composed generally of mix grasses and several seasonal wetlands. Most of the seasonal wetlands on the proposed project site are located on the northern edges of the parcel and will be left as a wetland/mitigation preserve outside the development footprint of the project.

1.4 Proposed Project

The proposed project entails developing 208-acres for light industrial uses constructed in two phases. Phase 1 is the 94.7-acre area east of Devlin Road extension, including two warehouses, totaling roughly 1.1 million square feet, associated impervious surfaces, stormwater facilities, and wetland preservation areas. Phase 2 is the 113.1-acre area west of Devlin Road, and would conceptually include up to 1.3 million square feet of warehouse space and associated infrastructure. In total the Project would develop 161 acres, leaving 47 acres as open space, including the northern portion of the project site adjacent to No Name Creek. **Figure 1-2** shows the proposed project layout, as described in the Project's Stormwater Control Plan (Balance, 2021)[1].

Potable water supply for the Project will be served by the City of American Canyon, and landscape irrigation will be supplied by recycled water, also from the City, via water infrastructure installed within Devlin Road extension. Laterals would extend from Devlin Road water lines to project warehouses (**Figure 1-3**).

[1] Note that only Phase I is shown in the figure. Phase II is being evaluated at a programmatic level, and thus specific site plans for this portion of the site have not yet been completed. It is expected that the site would include warehouses, similar to Phase I, with up to 1.3 million square feet of floor space.

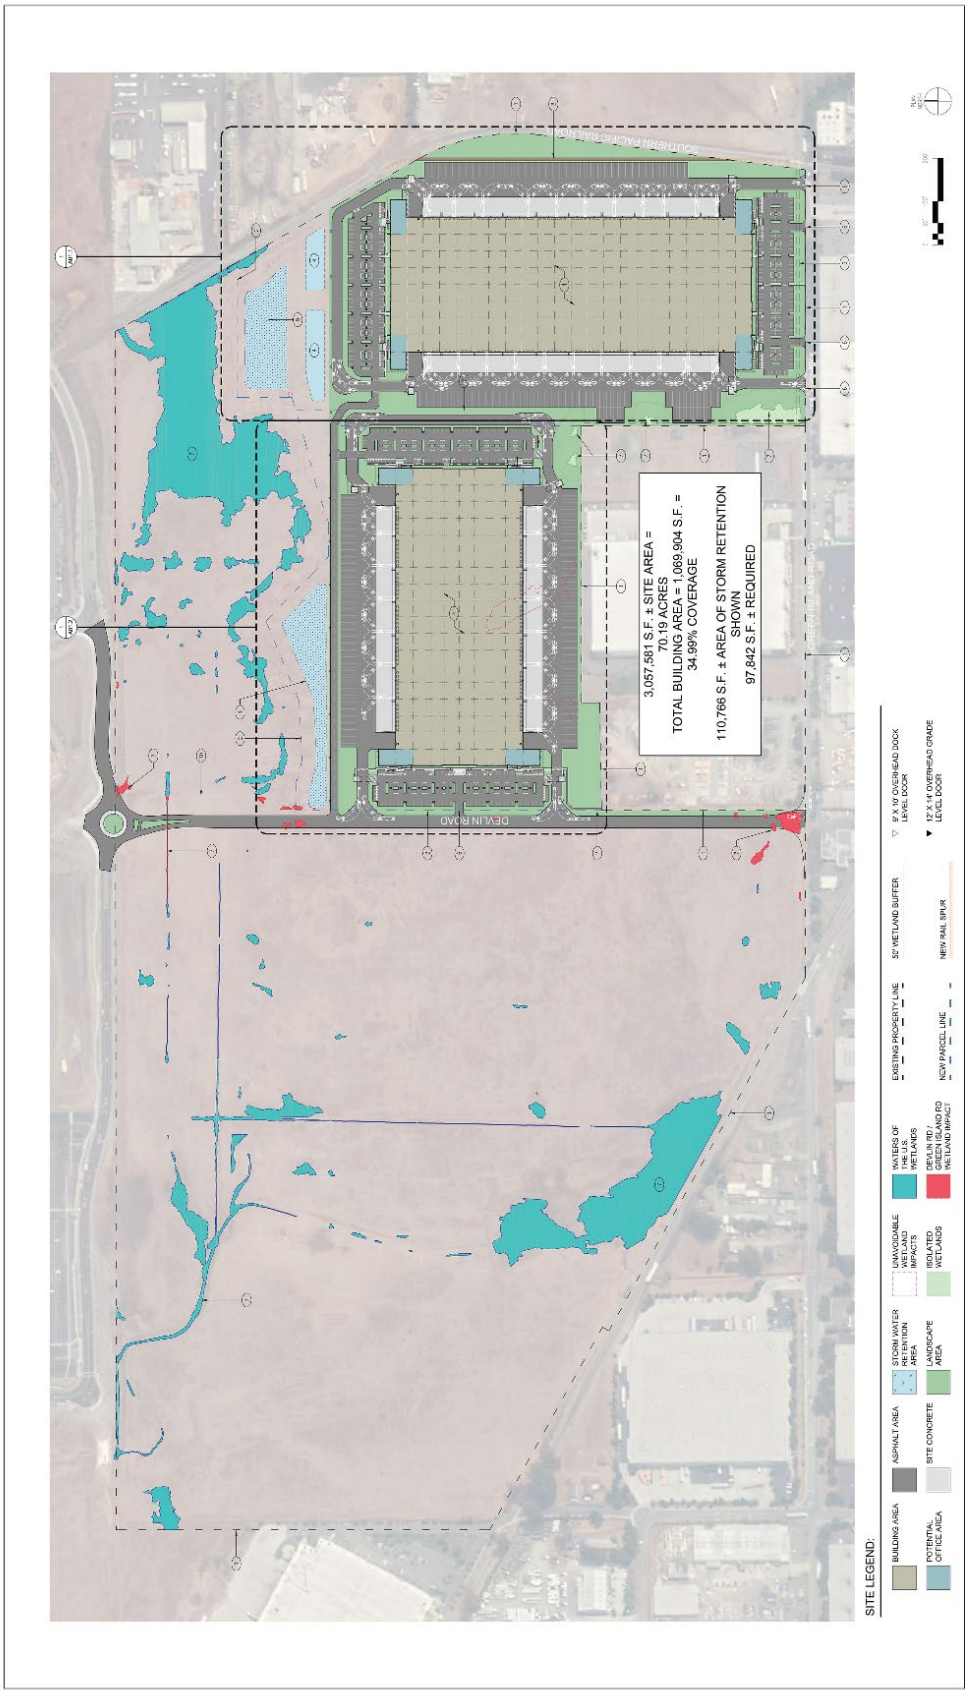

Figure 1-2 Proposed Project

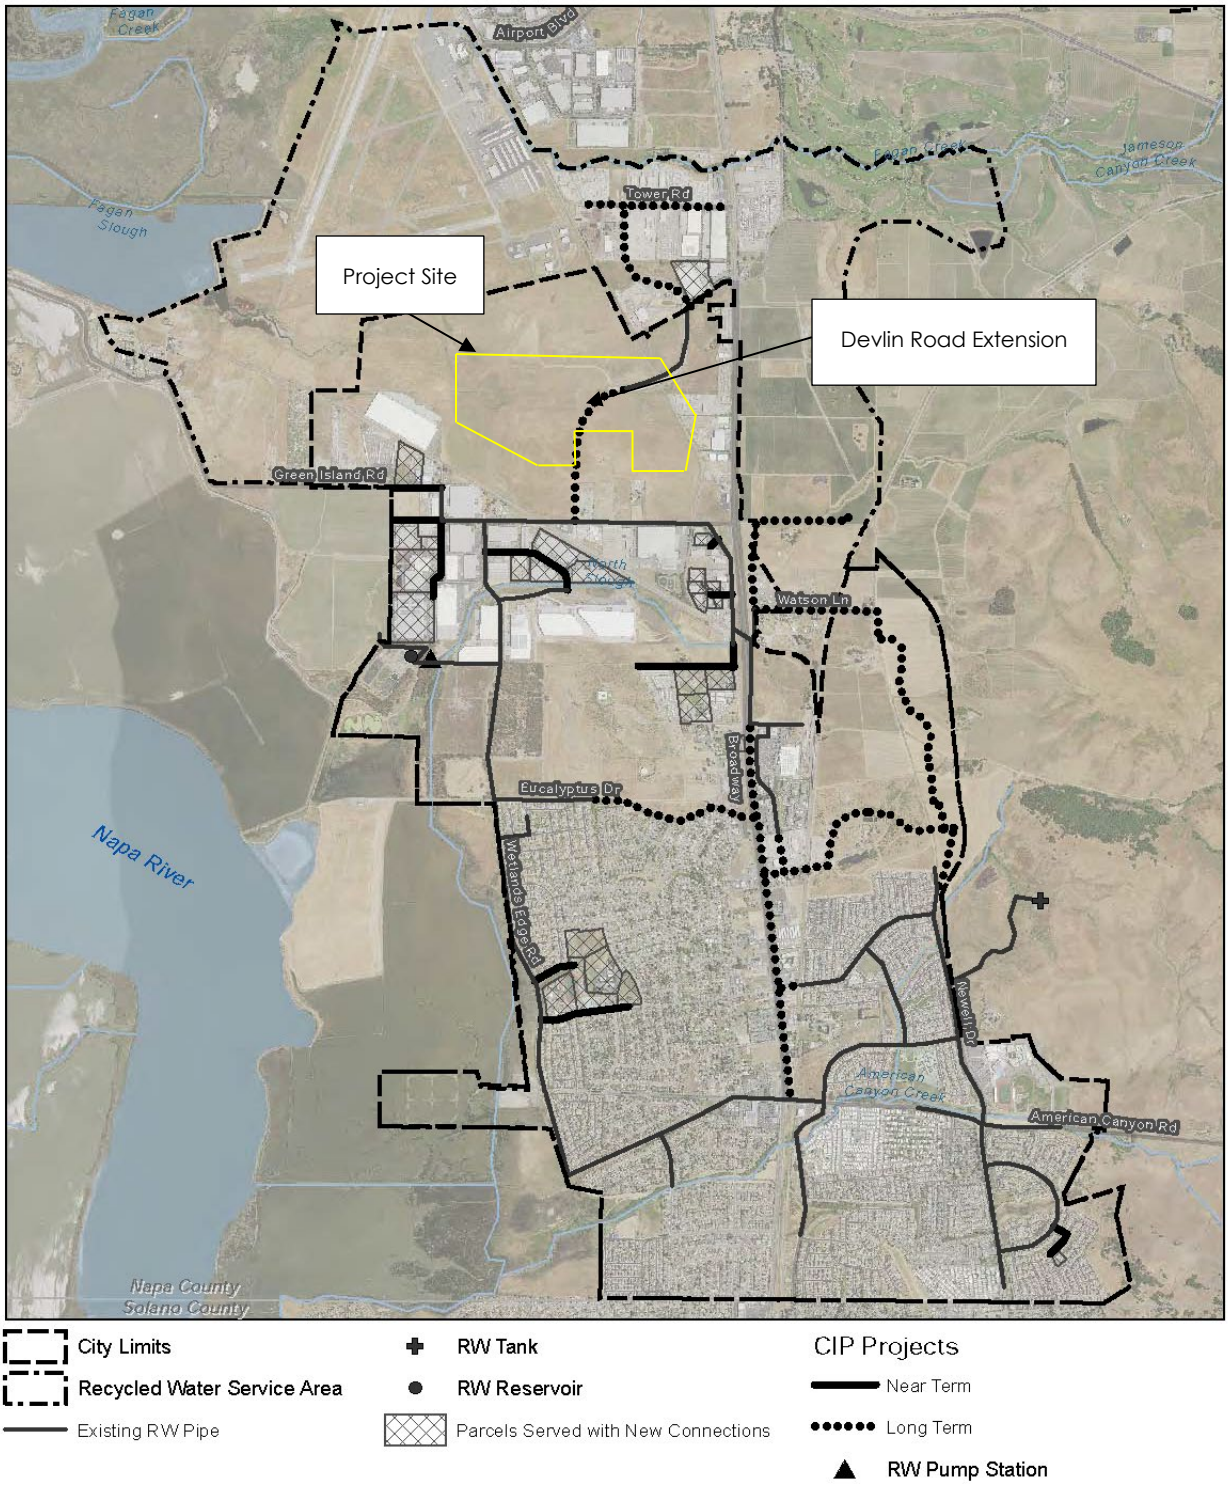

Figure 1-3 **Existing and Planned Recycled Water System for the City of American Canyon, California**. As reported in the City of American Canyon Recycled Water Master Plan, 2016.

2 WATER SUPPLY

American Canyon obtains its water supply from a variety of sources, all of which (except for recycled water) are imported from outside of the City. All of the City's imported water comes through the North Bay Aqueduct (NBA) system. The following sections summarize the various sources of water for American Canyon (see also **Table 1**). These descriptions were summarized from American Canyon 2015 Urban Water Management Plan (2015 UWMP; Kennedy Jenks, 2016).

2.1 State Water Project

A significant portion of the City's supply is obtained through various indirect contracts for water from the State Water Project (SWP). The Napa Flood Control and Water Conservation District (District) is the State Water Contractor with the California Department of Water Resources (DWR), and the City receives its water through subcontracts with the District.

2.1.1 TABLE A ALLOCATION

In January 1967, the American Canyon County Water Agency [2] entered into an agreement with the District for water supply from the North Bay Aqueduct. In 2010, the agreement allowed for the delivery of up to 5,200 acre-feet of water per year[3]. This contract runs through 2035 with provisions for extension. The actual amount of SWP water available to the City under the "Table A" allocation process (the method used by DWR to allocate water in the SWP system) varies from year to year due to hydrologic conditions, water demands of other contractors, SWP facility capacity, and environmental/regulatory requirements. Deliveries have varied between 5% (in 2014) and 100% (last occurring in 2017) of the contracted amount.

2.1.2 ARTICLE 21

Article 21 is a long-term water supply contract with DWR. This contract varies each year depending on excess water in the Delta, excess water not allocated for other purposes or water deliveries, and the capacity within the City's own system to store the Article 21 purchased water.

[2] A predecessor agency to the City of American Canyon, which wasn't incorporated until 1992.
[3] 500 AF of this water was obtained through a purchase of water, by the Napa Sanitation District, from Kern County Water Agency in 2000.

Table 1 Current Sources of water supply for American Canyon

Source	Contracted Volume/Capacity (afy)
State Water Project ('Table A' allotment)[1]	5,200
Vallejo Permit (Raw) Water[2]	500
Vallejo Treated Water	
(2011-2015)	2,074
(2016-2021)	2,640
(2021-onward)	3,206
Vallejo Emergency (Raw) Water [3]	500
Groundwater [4]	0
American Canyon Recycled Water [5]	1,271
Napa Sanitation District Recycled Water	591

Notes:

[1] *Includes allottment for American Canyon and additional supply from Kern County Water Agency.*

[2] *Non-Table A water.*

[3] *Available only in dry years.*

[4] *No groundwater is used for City-wide supply*

[5] *As reported in 2015 UWMP . Maximum capacity of City's recycled water treatment system by 2035*

2.2 Water from the City of Vallejo

In 1996, the City entered into an agreement with the City of Vallejo to allow the purchase of additional water supply. Vallejo receives its water from a variety of sources, including SWP water and an appropriative water right. Under the Vallejo Agreement, a specific source is identified for Permit Water supply (see **Section 2.2.1**, below), but not for Treated or Emergency Water (**Sections 2.2.2** and **2.2.3**).

2.2.1 Vallejo Permit Water (Raw)

Vallejo holds an appropriative right for Sacramento Bay-Delta water from the State Water Resources Control Board that pre-dates the construction of the SWP. The City has an agreement with Vallejo for delivery of up to 500 acre-feet of water under this permit. This source of water is more reliable than the City's Table A supply, but the Vallejo Agreement still allows for reductions. Addendum 2 to the 1996 Vallejo Agreement states that "In the event the State Water Resources Control Board, or any other agency, restricts Vallejo's diversion of water [under the appropriative pre-SWP contract] for any reason

whatsoever, American Canyon's diversions will be reduced in the same proportion". As such, the City may not receive its full allotment during dry years[4].

2.2.2 Vallejo Treated Water (Potable)

In 1996, the City entered into an agreement with Vallejo to purchase up to 629 acre-feet of potable treated water supply. This agreement included the option for additional (cumulative) purchases in 5-year increments through 2021. Ultimately, this results in a total of 3,206 acre-feet of treated water available for purchase each year by the City from Vallejo for 2021-2040.

A specific source for Treated Water is not identified in the Vallejo Agreement; thus, the ultimate source of this water is a blend of all of Vallejo's water sources. Under certain conditions, the maximum delivery of this supply may be "reduced in the same proportions as any reduction to Vallejo customers inside the Vallejo City limits"[5].

2.2.3 Vallejo Emergency Water (Raw)

When the City's Table A water allotment is curtailed, the City has the option to purchase up to 500 acre-feet of emergency raw water supply from Vallejo, under an agreement amended in 1996. The 2015 UWMP assumes that this water would be available under a dry-year and multiple-dry-year scenarios, but not during a normal year.

2.3 Groundwater

The City of American Canyon does not currently rely on groundwater as a source of water, though the 2015 UWMP states that the City remains open to the possibility and will consider potential supply opportunities as they present themselves. The Project will not be using groundwater sources and therefore detailed information on groundwater outlined in Section 10910(f) of the California Water Code is not required for this Water Supply Assessment.

[4] Vallejo Permit Water delivery was curtailed in both 2014 and 2015, for example. However, the City received its full allotment before the curtailment took effect.

[5] Vallejo Water Service Agreement, May 1, 1996 (Appendix E.4 in the 2005 American Canyon UWMP).

2.4 Other Sources of Potable Supply

2.4.1 Dry-Year Water Bank

In 2009, the City (along with other SWP contractors) entered into an agreement with DWR to obtain emergency supplies if rice farmers in the Sacramento Valley are willing to make their supplies available. The year-to-year availability of this supply is not known, and thus supplies are not factored into long-term planning in the 2015 UWMP.

2.4.2 Turn-back Water Pool Program

DWR has a program for interested SWP contractors called the Turn-back Water Pool Program. SWP contractors may choose to sell Table A water or purchase turn-back pool water that is available through the program. Water from this pool program was not included in the reliability assessment in the 2015 UWMP because the program operates on an as-available basis and long-term availability is not reliable. The amount of pool water available to the City is not a significant amount. For example, during 2010 the City purchased 17 acre-feet, and in 2012 it purchased 64 acre-feet. However, between 2015-2020 the City did not purchase any water from the Turn-back Pool Program.

2.4.3 Napa Treated Water

The City has an agreement with the City of Napa for the purchase of treated (potable) water under emergency conditions, or when the NBA system is offline for maintenance or other reasons. This water source is not a water supply and is not included in the reliability assessment in the 2015 UWMP since it is only available during emergencies. Napa treated water, however, does provide operational flexibility (such as providing water to customers even when the City's water treatment plant is off-line for an extended period of time). During 2010, the City purchased 306 acre-feet of treated water when the plant was off-line for maintenance-related issues. Under this informal arrangement, the Napa treated water purchase counts against the City's SWP Table A allotment and is not an additional supply (and is not included in **Table 1**).

2.4.4 Dry Year Transfer Program

During dry years, varying amounts of additional water may be made available to SWP contractors through DWR's Dry Year Transfer Program, which allows for transfers through a combination of crop idling, groundwater substitution and changes in reservoir operation. For example, in 2015 the City of American Canyon purchased 92 af of additional supply (for that year) through this program. While this option is available to the

City on a per-year authorization, the long-term reliability of this supply is not known and included only as potential supplementary supply for the analysis in this WSA.

2.4.5 Yuba Accord

In 2008, DWR adapted the Lower Yuba River Accord, an agreement to settle issues related to in-stream flows in the Yuba River and fisheries habitat. As part of that agreement, DWR is able to purchase water from the Yuba River Water Agency to, in part, offer to participating SWP contractors as a transfer during dry years. The Napa County FCWCD has authorized the execution of Yuba Accord Dry-year Water Purchase Agreement, and the City has the option to purchase water through this agreement in dry years, though at a cost that is considerably higher than under normal conditions. In 2015, the City authorized the purchase of 124 af through this program in response to cover projected water supply shortfalls during the drought. While this option is available to the City in drought conditions, the availability and reliability of such water past 2020 is unknown[6], and therefore has not been included as long-term reliable supply for the analysis in this WSA.

2.5 Recycled Water

2.5.1 American Canyon Recycled Water

In 2010, the City completed the first phase of its Recycled Water Distribution System Project, which included a one-million-gallon reservoir, distribution piping, and associated improvements at the City's water treatment plant. Initially, 13 users were connected to the system and 73 acre-feet of water was delivered in 2010. Ultimately, the Recycled Water Master Plan in 2016 projected over 1,200 acre-feet of water demand at build-out in 2035 for landscaping and agricultural irrigation. However, utilization of this supply is dependent on connection of additional users and completion of additional distribution pipe segments. Currently, the City produces recycled water to meet demand on an as-needed basis.

The City is currently taking steps to increase capacity of their system to meet this demand in the future. The analysis in this WSA uses 1,271afy as the full system capacity by 2035, as reported in the 2015 UWMP.

[6] The original term of the NCFCWCD agreement was through the end of 2015, but an amendment in 2014 authorized an extension until the end of 2020.

2.5.2 Napa Sanitation District Recycled Water

In addition to the City's recycled water supply, Napa Sanitation District (NSD) has an existing recycled water supply pipe that extends to northern portions of the Airport Industrial Area (north of Fagan Creek). In 2015, NSD provided 210 acre-feet of recycled water to the City's users. The 2015 UWMP projected that NSD will provide up to 391 acre-feet of recycled water in 2020, up to 491 acre-feet in 2025, and 591 acre-feet in 2030 and onwards.

3 WATER DEMAND

The following section summarizes the anticipated potable- and recycled-water demand for the proposed Project, and compares the anticipated demand of the Project to demand assumptions in the 2015 UWMP for those parcels. **Section 3.3** discusses system-wide demand for the City.

3.1 Project Demand

As described in **Section 1.4**, the proposed Project contains two warehouse buildings for Phase I, and additional warehouse buildings as part of Phase II. In addition, the Project will include associated landscaping areas that will require seasonal irrigation. The wetland preservation area is not expected to require supplemental water after the establishment of mitigation wetlands.

3.1.1 POTABLE WATER

Potable water demand for the Project was estimated by CBG Engineers (see **Appendix A**) based on demand factors contained in the 2016 City of American Canyon Potable Water Master plan, and is summarized in **Table 2**. These estimates were calculated using an average day demand of 0.015 gpd/sf which is the average water use across all the industrial sector and believed to be an overly high estimate of water use for this project[7]. Therefore, revised potable water use projections for the Project were calculated using averages from other similar commercial warehouse projects with more in-depth water demand estimates and/or metered water usage, as further discussed below.

The Napa Airport Corporate Center (NACC) is an industrial warehouse development just North of the Project in the City of American Canyon. Multiple industrial warehouse buildings are planned in this development (buildings B, D, E, G, and H). Details of the water demand estimates are reported in the NACC Water Supply Assessment report (Balance Hydrologics, 2015), with an estimated average day demand of 0.006 gpd/sf[8] . Similarly, Suisun Logistics Center is a planned industrial warehouse project in Fairfield, California also owned and operated by Buzz Oates. That project used water meter data

[7] Warehouse space typically uses less water than most other industrial uses that often include industrial process water in addition to the water needed to supply employees (sinks, bathrooms, etc.).

[8] Building A of the NACC project is considered mix-used and was left out of the average day demand calculation for the industrial warehouse water demand estimates.

from similar Buzz Oates developments in Fairfield to project anticipated potable water demand. Using actual water use from four industrial developments, Suisun Logistics Center average day demand is estimated at 0.01 gpd/sf (**Appendix B**). In order to provide a more realistic estimate of potable water demand for the Giovannoni Project, we averaged various demand rates described above (CBG, NACC, and Suisun Logistics Center), resulting in an average day demand of 0.009 gpd/sf. This revised average day demand was used to calculate a revised potable water use for the Project and is summarized in **Table 2**. We estimate the total potable water demand of the project at build-out to be 23.9 afy (15.9 afy less than the usage originally estimated by CBG Engineers).

For the purposes of this WSA, all indoor water demand is assumed to be from potable water. The applicant has not indicated that recycled water would be used for non-potable indoor uses, though that would remain an option to further reduce potable water demand at the site, should the applicant choose[9]. **Table 2** shows the estimated potable water demand for each building of the Project.

[9] The applicant is required to offset potable demand through implementation of the City's Zero Water Footprint policy (see Chapter 5). Use of recycled water for non-potable indoor uses would reduce the amount of the offset needed. However, because the applicant has not indicated this option, this WSA assumes all indoor water use will be from potable supply in order to provide a conservatively high estimate of potable water use.

Table 2 Estimated water demand for the Giovannoni Logistics Center Project, American Canyon, California

Project feature	Building floor area (sq. ft.)	Potable water use[1] (afy)	Revised potable water (afy)	Recycled water use[3] (afy)	Total water use (afy)
Building A - Phase 1	601,383	10.1	6.1	20.8	30.9
Building B - Phase 1	468,521	7.9	4.7	16.2	24.1
Phase 2	1,300,000	21.8	13.1	45.0	66.9
Total	**2,369,904**	**39.8**	**23.9**	**82.1**	**121.9**

Notes:

[1] cbg project estimate based on average day demand of 0.015 gpd/sf from American Canyon Potable Water Master Plan. See Appendix A for details.

[2] Revised potable water use estimates based on average day demand of 0.009 gpd/sf. This is an average generated from three commerical water demand estimates.

[3] Recycled water will be used for all landscape irrigation. Recycled water should be available to the project. Recycled demand estimated using demand factors from Table 3.13 in the 2010 UWMP.

3.1.2 Recycled Water

The Project is proposing to use recycled water for all irrigation needs. Estimated recycled water use within the project is summarized in **Table 2**. The current project plans do not have estimates for the area of irrigated landscaping. We approximated Project irrigation water demand by applying the average ratio of 0.604 between irrigated area and building footprint from the neighboring NACC project (Balance Hydrologics, 2015), with a demand factor of 2.5 acre-feet/acre (from Table 3.13 in the 2010 UWMP). These irrigation demand estimates may be high if the Project plans to landscape with xeric or native plant species that have lower-than-typical irrigation needs.

The recycled water usage estimates in **Table 2** are intended to be used for environmental planning documentation. Actual use per building may vary based on final site plans, but total use is expected to be consistent with (or less than) these assumptions. As stated above, all non-potable indoor water use is anticipated to be served by potable supply, though the option remains open to serve with recycled water, should the applicant choose.

3.2 Project Demand Comparison to UWMP

The following sections compare the current estimates of water demand for the Project to those assumed for that parcel in the 2015 UWMP.

3.2.1 POTABLE WATER

In order to project future system-wide water demand for the 2015 UWMP, the standard demand factors from the 2010 UWMP were used along with a variety of growth-rate estimates for various land-use sectors. For the commercial/industrial sector, the City analyzed the acreage of vacant land zoned for those uses, and applied a water use factor of 675 gallons/day/acre (gpd/ac) to each parcel. The project's demand has been incorporated into long-term projections under an assumption of a build-out use of 675 gpd/ac (0.76 afy per acre).

Table 3 compares the estimated project demand with the assumptions for the parcel included in the 2015 UWMP. Due to relatively low water-use of warehouse space compared to industrial-sector averages, the incorporation of recycled water for irrigation purposes, and the designation of a portion of the site for wetland preservation that will not require supplemental water supply, the Project is expected to use 133.3 afy less water than expected under the 2015 UWMP growth scenario. Implementation of the City's Zero Water Footprint Policy (see Chapter 5) would result in an additional 23.9-acre-foot reduction in potable water demand relative to the UWMP system-wide demand analysis.

Table 3 Estimated water demand compared to assumptions within the 2015 American Canyon UWMP

	Potable Water				*Recycled Water*	
	UWMP[1]	**Project[2]**	**Difference**	**ZWF offset[3]**	**UWMP[4]**	**Project[5]**
	(afy)	(afy)	(afy)	(afy)	(afy)	(afy)
Phase 1	71.6	10.8	-60.9	-10.8	...	37.1
Phase 2	85.6	13.1	-72.5	-13.1	...	45.0
Total	**157.2**	**23.9**	**-133.3**	**-23.9**		**82.1**

Notes:

[1] Commerical demand factors, 2010 UWMP, Table 3.13.

[2] From Table 2.

[3] Required project compliance with the City's Zero Water Footprint policy. The Project will offset potable water use through implentation of various items from the City's "toolbox".

[4] UWMP did not project irrigation demand on a parcel-by-parcel basis. Because Project irrigation will be supplied by recycled water, comparison against projections in the UWMP is not necessary.

[5] Irrigated landcape; from Table 2.

3.2.2 Recycled Water

The American Canyon UWMP assumes irrigation use to be 2.5 acre-feet of water per acre of landscaping, but (unlike for potable demand) did not project recycled water demand associated with particular parcels anticipated for development. Because recycled water use offsets demand for potable (or raw imported) water and it is in the City's best interest to maximize use of recycled water, the Project's recycled water demand is assessed relative to the recycled-water demand goals outlined in the UWMP.

The 2016 Recycled Water Master Plan showed a delivery of 248 acre-feet for an existing 21 users between August 2013 and July 2014. In 2019, 282 acre-feet[10] of recycled water was delivered to customers which is still below the projected 391 acre-feet of recycled water in 2020. This Project would add an estimated 82.1afy of recycled water demand (see **Table 3**, above).

3.3 System-wide Demand

3.3.1 Recent Actual System Demand

The 2015 UWMP provides a comprehensive assessment of anticipated future water demand that included projections for both potable[11] and recycled water for 2015-2040. However, actual water usage between 2015 and 2020 differed from what was projected in the UWMP, suggesting that demand patterns for 2015-2040 may be different as well.

Table 4 shows the actual water usage within the City's distribution area since the 2015 UWMP was completed, as well as the interpolated yearly demand based on the projections in the UWMP. **Figure 3-1** highlights these recent trends. Since 2015, potable water demand has been much lower than that anticipated in the UWMP.

[10] From the Napa Valley Wine Insider Digest, August 2021. Napa County recycled water was used at record levels amid the recent drought. Balance did not have access to reliable annual data since the 2015 UWMP was released.

[11] Raw water used for agricultural irrigation is included as part of potable demand in the UWMP.

Table 4 Recent potable and recycled water usage for American Canyon

	2015	2016	2017	2018	2019	2020
	(afy)	(afy)	(afy)	(afy)	(afy)	(afy)
Total potable water use[1]	2,968	2,572	2,558	2,667	2,418	2,665
Total projected potable water demand (2015 UWMP)[2]	2,976	3,062	3,148	3,233	3,319	3,405
Total City recycled water use[3]	**180**	**na**	**na**	**na**	**282**	**na**
Total projected recycled water demand (2015 UWMP)	385	509	634	758	883	1,007
Total water usage (actual)	**3,148**	**2,572**	**2,558**	**2,667**	**2,700**	**2,665**
Total projected water demand (2015 UWMP)	3,361	3,571	3,781	3,992	4,202	4,412

Notes:

[1] *Actual water usage from Napa County Flood Control and Water Conservation District SWP delivery accounting tables (provided by the City) plus agricultural raw water. Agricultural raw water use estimated to remain at 2015 level (56 AFY) through 2020, then be reduced to zero thereafter.*

[2] *Linear interpolation of 2015 usage and UWMP projected potable water demand for 2020.*

[3] *Actual recycled water usage, 2015 value obtained from the 2015 UWMP, 2019 value obtained from Napa Valley Wine Insider Digest, all other values not readily available.*

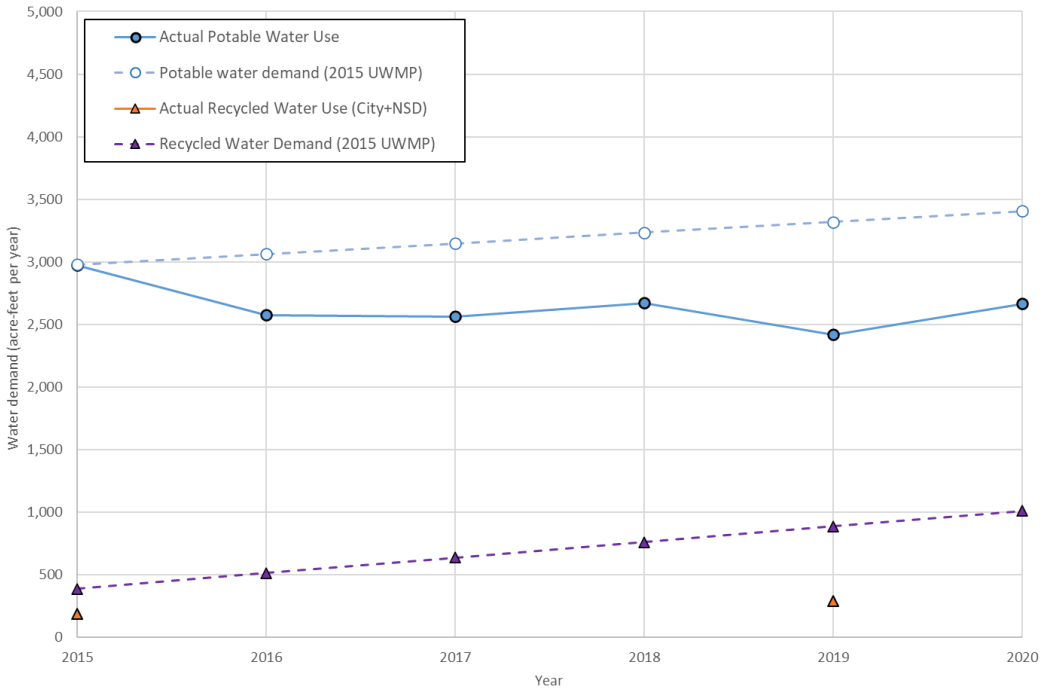

Figure 3-1 Potable and Recycled Water Demand vs. Actual Water Use

3.3.2 PROJECTED SYSTEM DEMAND

Projected Demand (2015 UWMP)

The 2015 UWMP projected future demand on a parcel-by-parcel basis relative to expected growth under the City's general plan. The analysis assumed that recycled water would be available to meet a portion of the total demand, with the remainder supplied by potable water. **Table 5** shows the water demand as presented in the 2015 UWMP.

Table 5 Projected potable, recycled, and total water demand for American Canyon through 2040, as presented in the 2015 UWMP

	2015 [5]	2020	2025	2030	2035	2040
	(afy)	(afy)	(afy)	(afy)	(afy)	(afy)
Projected potable water demand (UWMP) [1]	*2345*	*3,150*	*3,350*	*3,606*	*3,862*	*4,131*
Projected potable system losses (UWMP) [2]	*631*	*255*	*272*	*292*	*313*	*335*
Recycled water demand (UWMP) [3]	*385*	*1,007*	*1,146*	*1,351*	*1,862*	*1,862*
Total water demand (UWMP) [4]	**3,361**	**4,412**	**4,768**	**5,249**	**6,037**	**6,328**

Notes:

[1] *From 2015 American Canyon UWMP, Tables 4-3, excluding system losses.*

[2] *From 2015 American Canyon UWMP, Tables 4-3, system losses only*

[3] *From 2015 American Canyon UWMP, Tables 4-10*

[4] *Sum of potable demand, system losses, and recycled water demand, consistent with Table 4-10 in the 2015*

[5] *Actual values for 2015 presented in 2015 American Canyon UWMP, Tables 4-2. All other values are projected values.*

Unbilled Water Losses

The UWMP assumed that unbilled water losses[12] would be 7.5 percent for each year between 2020-2040. This is consistent with standards adopted by the California Urban Water Conservation Council (CUWCC), which provides that systems that experience greater than 10-percent losses annually undergo a water audit. In 2015, water delivery and water-use records indicate that system losses were 22 percent. The City is currently undertaking an aggressive response to the situation by replacing leaky services and water mains to reduce system loss. The City assumed it would reduce system losses to 7.5 percent of the total potable and raw water deliveries by 2020. In 2015, the City replaced more than 120 segments of residential services lines as part of its program to reduce distribution system losses.

[12] Referred to as "Unaccounted-for System Losses" in the UWMP, and "system losses" elsewhere in this WSA.

4 SUPPLY AND DEMAND COMPARISON

This section compares future City-wide water demand, to anticipated available supply under 'normal year,' 'single dry year,' and 'multiple dry year' scenarios. The scenarios presented herein have been summarized from the 2015 UWMP analysis for City-wide system planning.

The following analysis addresses potable and recycled water separately, as recycled water supply is considered reliable (and available at 100 percent of capacity) under all year-types. Reliability of potable water varies by year type as a percentage of contracted amount, as shown in **Table 6** and further described below.

Table 6 **Supply reliability for various American Canyon water sources**. Assumed percent of contracted amount for various year-type scenarios.

	2021-2040	Year Type				
Source	**Contracted or Available Volume**	**Normal Year**	**Single Dry Year**	**Dry year 1**	**Dry year 2**	**Dry year 3**
SWP (Table A allotment)	5,200	62%	5%	22%	22%	22%
Vallejo Permit Water [1]	500	100%	100%	100%	100%	100%
Vallejo Treated Water [1]	Varies [2]	100%	80%	80%	80%	80%
Vallejo Emergency Water [1]	500	0%	100%	100%	100%	80%
Groundwater [3]	n/a	--	--	--	--	--
American Canyon Recycled Water	n/a [4]	100%	100%	100%	100%	100%

Notes:

[1] *Percentages from 2015 UWMP, Table 7-4, 7-5, 7-6*

[2] *Contracted amount is 2,074 in 2015, 2,640 in 2020, and 3,206 2021-onward.*

[3] *Groundwater is not a source for City-wide supply.*

[4] *Recycled water is produced to meet demand; ultimately, maximum production capacity of City's recycled water system is expected to be 1,000 afy.*

4.1 Potable Water

Table 7 summarizes available potable water supply under 'normal year', 'single dry year', and 'multiple dry year' scenarios. As outlined in **Section 2**, the City's potable water supply relies exclusively on imported water, both from the SWP and through the City of Vallejo. A percentage of the full contracted amount is assumed for each source type under each scenario (**Table 6**, above). These percentages are based on guidance by DWR, analysis in the City's UWMP and the Vallejo UWMP. Resulting supply volumes for each source

under the various scenarios through 2040 are shown in **Table 7**. The supply and demand for potable water for each of the year-types is discussed below[13].

4.1.1 Normal Year

In a 'normal year', the City's 2015 UWMP assumes 'Table A' SWP deliveries would be 62 percent of the total contracted amount. Treated water from Vallejo water and raw Vallejo Permit water are assumed to be 100 percent available in normal years, consistent with the 2015 UWMP.

The UWMP concluded that future supply is available to meet anticipated demand in normal years through build-out in 2035, as does the analysis in this WSA (**Table 8**). Excess supply in normal years ranges from a low of 2,653 in 2040 to a high of 3,497 afy in 2025.

4.1.2 Single Dry Year

Under the "single-dry-year" scenario, the 2015 UWMP assumed SWP Table A deliveries to be curtailed to 5 percent of the contracted amount (see **Table 7 and Table 8**).

As discussed in Section 2.2, all water from Vallejo is considered a more reliable source than the City's SWP supply. The 2015 UWMP assumes that raw Vallejo Permit Water is available at 100 percent and Treated Vallejo Water are available at 80 percent of the contracted amount during single dry years. In addition, the full allotment of raw Vallejo Emergency Water (500 acre-feet) would be available under dry-year conditions. The analysis herein uses these same assumptions.

The 2015 UWMP shows that single-dry-year supply is not significantly currently constrained and the City will be able to reliably meet potable demand until the year 2030[14]. Single-dry-year deficiencies are anticipated starting in 2035 (**Table 8**). The City has several options available to resolve dry-year supply deficiencies, as described in **Section 4.2**.

[13] The analysis does not include adjustments for reduced demand of the Project relative to the assumptions in the UWMP for that parcel. As discussed in 3.2, the Project is expected to use 133.3 afy less than anticipated for those parcels in the UWMP, and will fund ZWF demand offsets of approximately 23.9 afy. Other recently completed projects or projects currently in the planning process may also affect projected demand, but have not been included in this analysis.

[14] Slight deficiencies are shown for dry-year supply in 2020 and 2030, but only by less than 2% of the total supply.

4.1.3 MULTIPLE DRY YEARS

The multiple-dry-year scenario, as described in the UWMP, consists of three consecutive years of reduced water deliveries, though none are reduced to the same degree as the single-dry-year scenario[15]. The UWMP assumed that SWP Table A water would be reduced to 22 percent of the contracted amount for each of three years (see **Table 7** and **Table 8**).

Raw Permit water are assumed to be available at 100 percent, and Treated water from Vallejo are assumed to be available at 80 percent of the contracted amount for years 1, 2, and 3 of the multi-year drought following the assumptions in the 2015 UWMP. Vallejo Emergency water is assumed to be available at the full contracted amount (500 acre-feet) for each of the three years of a multi-year drought, consistent with the 2015 UWMP.

The 2015 UWMP projects that water supply will exceed demand during a three-year drought through the full 2040 planning period (**Table 8**).

[15] The reference period used for the multi-dry-year scenario in the UWMP is the drought from 1990-1992. From a planning perspective, the UWMP assumed that a three-year drought is unlikely to include the "single dry-year" scenario.

4.2 Potable Water Deficiency Resolution

The above analysis compares potable water supply and normal-year demand, and projects supply shortages in several of the 'dry-year' and 'multi-dry-year' planning scenarios. This section describes a series of options available to the City to eliminate those shortfalls in order to provide reliable supply. Estimated SWP carryover water (see **Section 4.2.1**) would be sufficient to eliminate dry-year supply shortfalls, and could also be used in combination with drought demand reductions to further improve supply reliability.

4.2.1 SWP Carryover Water

If the City does not use its entire allotment of Table A water in a given year, the remaining water will carry-over to the following year, assuming there is adequate storage in SWP reservoirs to contain the excess supply[16]. Between 2015 and 2020, the City has stored between 35 and 2,600 acre-feet of carry-over water in a given year (**Table 9**), which has helped to meet demand during recent dry years. Because of the variability of carryover supply and the periodic "re-set" of the accounting when reservoirs are full, it is not considered a consistent yearly supply for planning purposes, but it does allow the City extra flexibility during droughts. As such, we have incorporated carry-over water into the analysis in this WSA.

We assume that 1,156 acre-feet of carryover water, the average over the last six years (**Table 9**), would be available at the beginning of a dry year and the first year of a multi-year drought. Projected excess normal-year supply ranges from 2,653 to 3,497 acre-feet for 2020-2040 (see **Table 8**), suggesting that the 1,156 acre-feet is a reasonable and somewhat conservative estimate for planning purposes[17]. In the second and third year of a multi-year drought, we assume that the remaining carry-over supply (assuming there is any) would continue to carry over to subsequent years to supplement supplies.

[16] In years when SWP reservoirs spill, the carry-over water is released, effectively re-setting carryover accounting to zero. Typically, however, ample storage is available in dry years.

[17] By definition, a single-dry-year would follow a normal or wet year, as would the first year of a three-year drought.

Table 9 **Recent SWP carryover water supply for the City of American Canyon.** Values from Napa County Flood Control and Water Conservation District SWP delivery accounting tables (provided by the City).

	2015	2016	2017	2018	2019	2020	Mean
Table A deliveries (% of total contract amount)[1]	25%	75%	100%	50%	85%	20%	59%
Available carryover water (remaining from previous year, in afy)[1]	876	1,087	127	2,210	35	2,600	1,156

Notes:

[1] From Napa County Flood Control and Water Conservation District SWP delivery accounting tables (provided by the City).

For example, in Single Dry Year scenario for 2035, 1,156 acre-feet would be available to meet the supply deficit of -350 acre-feet (from **Table 8**). The difference (806 af) would be available if there was another drought year. Under the above assumptions, the City would be able to meet projected supply deficiencies under all dry- and multi-dry-year scenarios within the planning period (2015-2040) through the use of available carry-over water.

4.2.2 Advanced Table A Program

A recent court settlement (Area of Origin Settlement[18], 2014), clarifies another potential mechanism for the Napa County FCWCD, the Solano County Water Agency, and Yuba City (along with subcontractors to those agencies, which includes American Canyon) to obtain water during dry periods. The Advanced Table A Program allows these agencies to 'borrow' against future SWP deliveries during times when annual deliveries are not sufficient to meet demand. The agreement requires that all Table A and Table A Carryover water be used prior to utilizing the Advanced Table A Program, but under those circumstances the City could request an advance of up to 949 af from future years' Table A allotments.

The projections in **Table 10** do not rely on the use of the Advanced Table A Program water to meet dry-year demand, as estimated Table A Carryover is enough to cover supply deficiencies for all scenarios. However, this Program provides an important tool available

[18] Superior Court of the State of California, County of Sacramento, Case No. 34-2008-00001633 8-CU BC GDS.

to the City should unforeseen circumstances result in significantly lower-than-expected carryover.

Table 10 Potable water deficiency resolution for dry- and multi-dry-year scenarios.

The table shows that all dry-year deficiencies can be met through carry-over water. In addition, the City has several other options available to help meet supply shortages during droughts.

Notes:

[1] *From Table 8*

[2] *Table A water not used in the prior year may be used in the following year, assuming storage is available; estimated from previous six years of carryover availability (see Table 9). Assume 1,156 af of available in a dry year and the first year of a multi-year drought. Remaining carryover after the first year of a drought is available in the second year, and remaining water after the second year is available in the third year of a drought.*

[3] *When the City exhausts its supply of carryover water, the City can "borrow" against future SWP deliveries, up to 949 af. Projected water shortages can be met solely through carryover supply, so no Advanced water is projected to be needed to meet demand.*

[4] *The City may chose to offset supply deficiency through demand reduction (drought restrictions) during dry periods. All supply deficiencies are projected to be satisfied through carryover water; restrictions are not likely to be required, but remain an option for the City, if needed; see Table 11 for projected estimated volume for drought conservation savings.*

[5] *The City also has the option to purchase additional water on the open market. While not required to meet long-term supply deficiencies the City may chose to use this option during droughts,*

[6] *Supply minus demand from above, plus additional supply available through carryover, "Advanced Table A", demand savings, and open market purchases.*

4.2.3 Drought-year Demand Reductions

It is important to note that the demand projections in the 2015 UWMP (as well as for the analysis in this WSA) were not explicitly adjusted for voluntary or mandatory water-use reduction measures that may be implemented in response to drought conditions[19]. The City has a Water Shortage Contingency Plan that outlines four stages of water demand reduction measures that could be utilized when water supply is constrained due to environmental or other conditions. The City projects demand reductions of 10/20/30/50 percent corresponding to each of the tiers, beginning with voluntary actions at Tier 1, and moving to increasingly restrictive mandatory measures for Tiers 2-4.

On June 1, 2021, in response to on-going statewide drought conditions, the City declared a Stage 1 drought emergency that called for a voluntary reduction from residential and commercial customers compared to the previous year. On July 20, 2021, the City declared a Stage 2 drought emergency, enacting mandatory water-use restrictions, requiring all water customers to reduce their water use by 20%. As of the end of August, 2021, water conservation measures have resulted in an 18 percent decrease from residential customers and 13 percent decrease from commercial customers.

Because estimated carryover water was sufficient to satisfy projected shortages, the supply and demand analysis in **Table 10** does not account for drought-year demand reduction. However, the City may choose to use these measures to provide additional flexibility during droughts. Assuming drought reductions of 13 percent, similar to what was achieved in 2014, the City could be expected to reduce demand in future years ranging between 305 af in 2015 and 537 af in 2040 (**Table 11**). While these volumes would not solely eliminate projected dry-year shortages, these measures could be used in conjunction with the above measures to provide additional buffer, as needed, if other supplies are unexpectedly curtailed. Stronger restrictions (level 3 or 4), could be used to achieve greater reductions if necessary, but are not likely to be needed.

[19] For the purposes of the UWMP and this WSA, demand is assumed to be the same in normal- and dry-year scenarios for a given planning period.

Table 11 **Projected drought-year demand savings**. Estimated drought conservation volume (potable demand reduction) that could be used during future droughts to help the City manage supply shortages. Volumes based on 13% savings achieved between 2013 and 2014.

	2015 (afy)	2020 (afy)	2025 (afy)	2030 (afy)	2035 (afy)	2040 (afy)
Projected normal-year potable demand[1]	2,345	3,150	3,350	3,606	3,862	4,131
Estimated drought conservation volume[2]	305	410	436	469	502	537

Notes:
[1] *From Table 5*
[2] *13% of potable demand.*

4.2.4 Open Market Purchases

As discussed in Section 2.4 the City has the option to purchase additional water from a variety of other sources on an as-needed and as-available basis. These potential purchases were not considered as a reliable long-term supply for the purposes of this WSA, though the City could choose to purchase additional supply in dry years when normal supplies are constrained. In fact, the City chose to utilize this option in 2015, and purchased 216 af of additional supply through the Dry Year Transfer and Yuba Accord Programs. As with the above options, Open Market Purchases can provide additional operational flexibility for the City during dry periods when other supplies are reduced.

4.3 Recycled Water

As discussed in Section 2.5, the City's recycled water system has a supply capacity of up to 1,271 acre-feet per year by 2035, and NSD has agreed to provide up to 591 acre-feet to supply the northern portion of the Airport Industrial Area (which is located within the City's water service area). Practically, however, the City produces recycled water to meet demand, as shown in **Table 8** (above). Because recycled water is derived from wastewater that is: 1) less susceptible to fluctuation due to climatic conditions, and 2) available in excess of the capacity of the recycled water system, recycled water is assumed to be 100 percent available during single- and multi-year-drought scenarios.

Table 8 presents recycled water supply versus demand for the 2015-2040 planning period under various year-type scenarios. Because recycled water use offsets water that would otherwise be delivered from limited potable or imported-water supply, it is in the City's best interest to maximize recycled water use by way of increasing the number of recycled water users tied into the system.

The projections for recycled water use in the 2015 UWMP were, in effect, operational goals to maximize recycled water use. The UWMP projected 1,862 acre-feet of recycled water use by 2035. Recent recycled water use has been much lower than projected in the UWMP. For example, in 2019 water demand was projected to be about 883 AF, but the City only used 282 AF of recycled water. The City expects a significant expansion in the recycled water delivery system by 2035, allowing full use of the system by that time. Recycled water demand by sector is shown in **Table 12.**

Table 12 Summary of potential recycled water demand, by sector

Utility land-use classification	Potable offset demand[1] (afy)	Buildout demand[2] (afy)
Single-family residential	--	22.8
Multi-family residential	--	41.8
Commercial	3.4	49.7
Industrial	4.7	209.9
Institutional/Governmental	101.9	127.4
Landscape	69.4	119.5
Open Space	--	--
Watson Ranch	--	253.2
Recreation	--	204.3
Agricultural	68.1	173.2
Total	**247.5**	**1,201.9**

Notes:

[1] Adapted from GHD, 2016, Table 14. Projected demand used in the WSA analysis (Table 6) are lower than the numbers shown here in order to provide a conservative estimate of future demand.

[2] Buildout demand for Institutional/Gonvernmental assumes the American Canyon High School will halve existing demand by fixing suspected leaks in the irrigation system.

4.4 Summary

In summary, the analysis in this WSA shows that the City's water supply is sufficient to meet projected demand, in all years and under all normal-, dry, and multi-dry-year scenarios. The analysis shows that demand will exceed supply during some dry years, but the City will still be able to meet demand through the use of carryover SWP water, or through some combination of carryover SWP water, Advanced Table A Water, demand reductions, and/or additional purchases on the open market. In addition, recycled water supply in the City is available to meet existing and projected demand, and available in sufficient volume to support non-potable uses at the Project site. Use of recycled water at the site will increase the City's utilization of this supply.

5 ZERO WATER FOOTPRINT POLICY

In October 2007, the City adopted a policy to regulate water use for new development. Under this Zero Water Footprint (ZWF) policy, new accounts are required to offset the proposed project's potable water use through off-site water conservation measures, conversion of off-site potable irrigation to recycled water, on-site demand reduction (relative to existing use), or by acquiring additional supply. The City has provided a list of potential conservation, repair, and other projects within the service area that could be used as offsets for new service accounts. In 2011, the City adopted an additional policy that further refined the offset options available to meet the ZWF requirements.

5.1 Project ZWF Compliance

The proposed Project is required to comply with the City's ZWF policy, and will offset all of its potable water demand. The Project will offset its potable water demand by implementing several items off of the City's offset "toolbox", likely to include a combination of off-site landscape irrigation water conversion and conversion of existing potable water customers.

Anticipated potable water use for the Project, once completed, would be 23.9 afy. ZWF offset totals will be required to be at least that amount.

5.2 City-wide Compliance

On the whole, compliance with the City's ZWF policy should essentially result in no net increase in potable water demand[20] as new projects are built within the City's water distribution area. The effect of this policy was not explicitly accounted for in the long-term potable demand projections in the 2015 UWMP or for this WSA. However, two of the main ways that projects can reach compliance with the ZWF policy would be through funding conversion of irrigated landscape areas to recycled water, and improving the efficiency of the City's water distribution system (reducing system losses). The analysis in this WSA has included projections of both recycled water system expansion and reduced potable water losses that would, at least in part, be funded through implementation of the ZWF policy.

[20] Or alternatively, offset increases in demand with increased volume of reliable supply.

6 LIMITATIONS

This technical report was prepared in general accordance with the accepted standard-of-practice existing in Northern California at the time the analyses were performed. No other warranty is made or implied. Readers are asked to contact us if they have additional relevant information or wish to propose revisions or modified descriptions of conditions, such that the best data can be applied at the earliest possible date.

April 12, 2021

Mr. Paul Fuchslin
Director of Engineering
Solano Irrigation District
810 Vaca Valley Pkwy Suite 201
Vacaville, CA 95688

SUBJECT: Proposed Water Usage for the Suisun Logistics Center and Highway 12 Logistics Center Projects – Suisun City – CA.

The intent of this memo is to provide clarity as to the yearly anticipated water usage demand for both proposed Buzz Oates City of Suisun City projects (Suisun Logistics Center & Highway 12 Logistics Center).

High-Cube Warehouse and Distribution buildings are not a water-intensive use, especially when compared to other heavy industrial uses. Most of the water demand for High-Cube Warehouse and Distribution comes from landscape irrigation. Buzz Oates intends to minimize landscape irrigation, further reducing anticipated water demand.

We requested water meter data for similar buildings developed, constructed, owned, and operated by Buzz Oates from the City of Fairfield Water Department to provide accurate water usage loads.

Michael Hether, Assistant Public Works Director provided the attached usage data that spans approximately 5 years, 7 months. The annual acre-foot usage was calculated as an aggregate spanning the entire duration of building operation by utilizing the average daily usage data for domestic, irrigation, and fire suppression demands. Broken down, this equates to 0.29228 acre feet per year per developable acre of water demand.

Total water demand equals approximately +/-62 acre-feet when applied to the proposed City of Suisun City projects. See below breakdown. I have also attached the usage data provided by the City of Fairfield for reference.

ADRESS	Sq. Ft.	Acres	Yearly Acre Feet	Acre Feet Per Developable Acre
2975 Cordelia Rd.	473,136	24.25	0.840132626	
2925 Cordelia Rd.	318,402	18.73	10.05492075	
2875 Cordelia Rd.	176,760	9.32	3.022470217	
2825 Cordelia Rd.	36,950	3.99	2.534983094	
		56.29	16.45	**0.29228**

Suisun Logistics Center — 120 developable acres (x 0.29228) = 35.0736

Highway 12 Logistics Center — 93 developable (x0.29228) = 27.182

TOTAL — **62.255 ANTICIPATED YEARLY ACRE-FOOT USAGE**

RAK CIVIL ENGINEERS
ROBERT A. KARN & ASSOCIATES, INC.
707 Beck Avenue, Fairfield, California 94533 Phone (707) 435-9999 Fax (707) 435-9998

I have attached the water usage data provided by the City of Fairfield for your records. Please let me know if you have any questions or require additional data related to the proposed water usage.

Thank you,

Tony Perfetto
Project Manager

1.13 - Statement of Overriding Considerations 113

CEQA FINDINGS OF FACT AND STATEMENT OF OVERRIDING CONSIDERATIONS

1.1 - Introduction

The State Guidelines (Guidelines) promulgated pursuant to the California Environmental Quality Act (CEQA) provide:

> No public agency shall approve or carry out a project for which an EIR has been completed which identifies one or more significant environmental effects of the project unless the public agency makes one or more written findings for each of those significant effects, accompanied by a brief explanation of the rationale for each finding. The possible findings are:
>
> (a) Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the Final EIR (hereinafter referred to as "finding (1)");
>
> (b) Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency (hereinafter referred to as "finding (2)"); or
>
> (c) Specific economic, legal, social, technological or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the Final EIR (hereinafter referred to as "finding (3)").

The required findings shall be supported by substantial evidence in the record. (Guidelines § 15091).

The Final EIR incorporates the Draft EIR. References herein to the "EIR" are to the collective documentation contained in the Draft EIR and Final EIR. All acronyms used within this document shall have the same meaning as defined in the Draft EIR.

1.2 - Statement of Findings

An Environmental Impact Report (EIR) pursuant to CEQA has been prepared by the City of American Canyon (Lead Agency). The EIR for the Giovannoni Logistics Center Project (proposed project) identifies significant effects on the environment, which may occur as a result of the proposed project.

Section 1.5. sets forth potential environmental effects of the proposed project for which it can be seen with certainty there is no potential for significant adverse environmental impacts.

Section 1.6 sets forth potential environmental effects of the proposed project which are not significant because of the proposed project's design or feasible mitigation to below a level of significance.

Section 1.7 discloses environmental impacts that remain significant and unavoidable even with incorporation of feasible mitigation.

Section 1.8 summarizes alternatives discussed in the Draft EIR and makes findings with respect to the feasibility of alternatives and whether the alternatives would lessen the significant environmental effects of the proposed project.

The following sets forth all significant effects of the proposed project and with respect to each effect, makes one or more findings set forth in Section 1.1, Introduction, and provides facts in support of such findings.

The EIR provides additional facts in support of the findings herein. The mitigation measures set forth in the Mitigation Monitoring and Reporting Program (MMRP) (Attachment A) are incorporated by reference in these findings, and the findings in Sections 1.6 and 1.7 refer to individual mitigation measures as appropriate. In the event of any inconsistencies between the mitigation measures set forth herein and the MMRP, the MMRP shall control.

1.3 - Project Summary

1.3.1 - Project Description

The applicant, Buzz Oates LLC, proposes to develop a 2.4-million-square-foot logistics center on approximately 163 acres of an approximately 208-acre project site. The remaining 44.8 acres would be preserved as open space/Wetland Preserve.

The applicant has developed design-level site plans for Phase 1 of the proposed project, which includes a 94.7-acre area east of Devlin Road. This area will support two high-cube warehouse buildings. One building would be rail-served by the adjacent Napa Branch Line. Each building would provide docks, grade level roll-up doors, and trailer parking stalls. The facility would be enclosed with a secure perimeter and access would be restricted to authorized users.

Phase 2 of the proposed project would occur on a 113.1-acre area west of Devlin Road. This area is conceptually proposed for the remaining 1.3 million square feet of high-cube warehouse. Phase 2 would commence once Phase 1 is completed. Accordingly, the EIR evaluates Phase 1 at a project level and Phase 2 at a program level of analysis.

Table 1: Giovannoni Logistics Center Project Summary

Phase	Acres	Building/Square Feet	End Use/Characteristics
1 (Project Level)	94.7	A/627,976	High-Cube Warehouse/36 feet clear height
		B/469,512	High-Cube Warehouse/36 feet clear height
		Subtotal: 1,097,488	—
2 (Program Level)	113.1	1.3 million	High-Cube Warehouse
Total	**208**	**2.4 million**	—

Notes:
Total values are rounded
Source: RMW Architecture Interiors 2020.

Devlin Road Extension

As a separate City project, Devlin Road was extended approximately 3,000 linear feet from Green Island Road to Middleton Way (Napa Logistics Park), closing a gap in the City's roadway network. The extension was contemplated by the City of American Canyon General Plan Circulation Element. The extended roadway provides one lane in each direction. Driveway access to the proposed project would be taken from Devlin Road and Green Island Road.

The Napa Valley Vine Trail follows the Devlin Road extension.

Green Island Road Improvements

As a separate City project, Green Island Road would be improved. The roadway would be widened, and half width improvements would be installed along the project frontage. The new Green Island Road / Devlin Road intersection would provide turn lanes.

Open Space Preservation

The applicant would permanently preserve approximately 44.8 acres of the project site as open space. This area coincides with the northern portion of the project site where No Name Creek meanders. This would create a contiguous open space area with the adjoining 37-acre Napa Logistics Park Wetland Preserve.

Storm Drainage

The proposed project would provide 110,766 square feet (2.6 acres) of storm drainage retention on-site including bioswales and basins.

Utilities

Water

The City of American Canyon would provide potable water and recycled water service to the proposed project. Potable and recycled water infrastructure was installed within Devlin Road. Service laterals would extend from the Devlin Road water lines to project buildings.

Wastewater

The City of American Canyon would provide wastewater collection and treatment service to the proposed project. Sewer infrastructure was installed within Devlin Road. Service laterals would extend from the Devlin Road sewer line to project buildings.

Electricity and Natural Gas

Marin Clean Energy would procure, and Pacific Gas and Electric Company (PG&E) would deliver electricity to the proposed project. PG&E would procure and deliver natural gas to the proposed project. Electric and natural gas infrastructure was installed within Devlin Road. Service laterals would extend from the Devlin Road facilities to project buildings. However, the project will not utilize natural gas as a design feature.

1.3.2 - Project Objectives

The underlying purpose of the proposed project is to develop industrially-zoned, undeveloped land within the American Canyon city limits to its highest and best use.

The objectives of the proposed project are to:

1. Promote economic growth in American Canyon by attracting new industries.
2. Promote development that generates net positive tax revenues for the City by generating more in new tax revenues than are consumed by City expenditures on services provided to the development.
3. Create new employment opportunities for residents of Napa County and the surrounding region.
4. Develop compatible land uses near the Napa County Airport in the interests of avoiding interference with aviation operations.
5. Improve American Canyon's jobs-housing ratio by adding new employment opportunities.
6. Continue the orderly development of the Devlin Road corridor with a well-designed project.
7. Further the goals and policies of the City of American Canyon General Plan by developing land contemplated to support urban development to its highest and best use.
8. Preserve the most biologically sensitive portions of the project site as open space.
9. Install circulation improvements along Green Island Road and Devlin Road that provide efficient ingress and egress to the proposed project while also ensuring these facilities operate at acceptable levels.
10. Promote public safety by incorporating security measures into the project design.
11. Mitigate impacts on the environment through implementation of feasible mitigation measures.

1.3.3 - Required Approvals

Discretionary approvals and permits are required by the City of American Canyon for implementation of the proposed project. The project application would require the following discretionary approvals and actions, including:

- Use Permit
- Tentative Parcel Map
- Design Permits
- Lot Line Adjustment

Subsequent ministerial actions would be required to implement the proposed project, including issuance of grading and building permits.

1.4 - Background

The City of American Canyon released a Notice of Preparation (NOP) for public review from January 12, 2021, to February 10, 2021 (30-day review period). The NOP and copies of comments received are included as Appendix A to the Draft EIR.

The Draft EIR was initially circulated for a 45-day public review period between Friday, May 20, 2022, and 4:00 p.m. Tuesday, July 5, 2022. Subsequently, the City provided an updated Appendix A (NOP comment letters) and an updated Appendix C (additional supporting biological resource studies), and extended the public comment period by 15 days to July 20, 2022, to allow public agencies and interested parties a total of 62 days to review and submit comments on the Draft EIR. During the public review period, the Draft EIR, including the technical appendices, was available for review at the City of American Canyon offices and the American Canyon Library. In addition, the Draft EIR was posted on the City of American Canyon website at https://bit.ly/3MxXX2k during the public review period.

On February 2, 2021, a scoping meeting was held virtually through Zoom. The meeting was held at 3:00 p.m. during which individuals and organizations/agency representatives were invited to provide oral comments on the Giovannoni Logistics Center Project.

On May 20, 2022, the City released the Draft EIR for public comment for an anticipated 45-day review period to end at 4:00 PM Tuesday, July 5, 2022. The City subsequently provided an updated Appendix A (NOP comment letters) and an updated Appendix C (additional supporting biological resource studies) and extended the public comment period by 15 days to July 20, 2022, to allow public agencies and interested parties a total of 62 days to review and submit comments on the Draft EIR.

On October 31, 2022, the City issued a document entitled, Final Environmental Impact Report for the Giovannoni Logistics Center Project, which included, among other information, responses to all significant environmental issues raised in timely comments on the Final EIR.

On November 17, 2022, the Planning Commission conducted a duly-noticed public hearing to evaluate the Giovannoni Logistics Center Project and the proposed Final EIR and determined that

based on all of the evidence presented, including, but not limited to, written and oral testimony given at meetings, recommended that the City Council certify the Final EIR as adequate to address environmental impacts associated with the Giovannoni Logistics Center Project, adopt a Statement of Overriding Considerations for the Project, and adopt the Mitigation Monitoring and Reporting Program.

On December 1, 2022, Community Development Director Brent Cooper and the City Council received by email a letter from Hallie Kutak, Staff Attorney for the Center for Biological Diversity (CBD), in which Ms. Kutak stated that, on February 9, 2021, April 25, 2022, and May 12, 2022, CBD had requested that the City provide CBD with notice of availability of the Draft EIR, but that CBD had never received such notice. Ms. Kutak suggested that "[a]t a minimum, the City should postpone the City Council's hearing to consider and approve the project for at least 45 days from the date of this letter" (i.e., until January 15, 2023).

On December 2, 2022, City Attorney William D. Ross responded to the letter from Ms. Kutak, confirming that the City had inadvertently failed to provide the notice requested by CBD, and stating that City staff would therefore recommend to the City Council that CBD be given until January 16, 2023, to submit to the City comments on the Draft EIR, and that City Council delay its consideration of the merits of the Giovannoni Logistics Center Project then scheduled for December 6, 2022, until February 21, 2023.

On December 6, 2022, the City Council conducted a duly-noticed public hearing to evaluate the Giovannoni Logistics Center Project and Final EIR but, rather than take action on the Project that evening, chose to continue the public hearing to February 21, 2023, in order to allow CBD the opportunity to comment on the proposed draft EIR until January 16, 2023, consistent with the suggestion made by Ms. Kutak in her letter. Because CBD had not received proper notice of the availability of the Draft EIR, but no other party was known to be in a similar situation, the City Council did not extend the same opportunity for additional time to comment on the Draft EIR to any other organization, individual, or agency.

On February 10, 2023, the City issued Volume 2 of the Final EIR for the Giovannoni Logistics Center Project, which augmented but did not replace or supersede the ostensible "Final EIR" previously issued by the City on October 31, 2022, which was now recharacterized as Volume 1 of the Final EIR. Volume 2 responded to all significant environmental issues raised in CBD's comments on the Draft EIR, and also responded to additional correspondence the City had received between November 2022 and mid-January 2023 from the California Department of Fish and Wildlife, Napa/Solano Residents for Responsible Development, Friends of the Swainson's Hawk, Raptors Are The Solution (RATS), and Napa Solano Audubon Society.

On February 21, 2023, shortly before the City Council held a public hearing on the proposed project, the City received written correspondence from the City of Vallejo, which contended, among other things, that the Water Supply Assessment (WSA) for the proposed project was inadequate and that, as a result, the water supply analysis in the Final EIR was also inadequate.

Later that evening (February 21, 2023), the City Council held and completed the public hearing on the proposed project, but continued its deliberations and any action on the proposed project until March 21, 2023, in order to allow City staff adequate time to review the recent correspondence from the City of Vallejo and to ascertain whether it contained any legal or factual merit.

Shortly after the February 21, 2023, public hearing, William D. Ross, City Attorney for American Canyon, contacted American Canyon's water attorneys at the firm of Somach, Simmons & Dunn (Somach) and asked them to review the City of Vallejo correspondence and report back to him their reactions to the legal and factual arguments contained therein.

On March 10, 2023, attorneys Alexis K. Stevens and Kelley M. Taber of the Somach law firm provided to Mr. Ross a detailed legal memorandum addressing, point by point, the contentions made by Vallejo in its correspondence of February 21, 2023. The letter concluded that, notwithstanding the contentions made by the City of Vallejo, the WSA for the Project was legally adequate and was factually accurate in concluding that the City of American Canyon has ample water to supply the Project along with other planned development during single dry and multiple dry year scenarios during a 20-year planning period.

On March 21, 2023, the City Council resumed its deliberation on the Project, setting the stage for certification of the Final EIR and related Project approvals, including these Findings.

For purposes of these Findings, the "EIR" shall consist of the Draft EIR, all appendices attached to the Draft EIR, and the two-volume Final EIR.

The City Council of the City of American Canyon has considered all oral and written comments regarding environmental issues in the two-volume Final EIR and determined, based on all of the evidence presented, including but not limited to the EIR, written and oral testimony given at public meetings and hearings in connection therewith, and the submission of comments from the public, organizations and regulatory agencies, as well as all other relevant information in the administrative record, the following environmental impacts associated with the proposed project are: (1) less than significant and do not require mitigation; or (2) potentially significant but will be avoided or reduced to a level of insignificance through the identified mitigation measures; or (3) significant and cannot be fully mitigated to a level of less than significant but will be substantially lessened to the extent feasible by the identified mitigation measures.

The City of American Canyon concludes that implementation of the proposed project could result in potentially significant and significant adverse environmental impacts. Accordingly, as discussed above, the City of American Canyon is required to make certain findings with respect to these impacts pursuant to CEQA Guidelines Section 15091. Accordingly, the City of American Canyon hereby makes these required findings, as set forth in this document ("Findings"). These Findings summarize the environmental determinations about the project's significant impacts before and after mitigation, and summarize the project's individual and cumulative impacts. These Findings do not attempt to describe the full analysis of each environmental impact. Instead, they provide a summary description of each significant impact and the applicable mitigation measures identified in the EIR and adopted by the City of American Canyon, and state the conclusions regarding the

significance of each impact after incorporation of the identified mitigation measures. A comprehensive explanation of these environmental impact conclusions can be found in the EIR, as supplemented and explained in staff reports and materials presented by the project applicant, City of American Canyon staff and various project consultants, and other relevant materials in the administrative record.

The EIR contains substantial evidence to support all conclusions presented in these Findings.

As reflected in public comments, there is disagreement among various parties regarding particular conclusions in the EIR. Relevant case law interpreting the CEQA statute and Guidelines provides the standards for treating disagreement among experts in the context of an EIR, as follows: Where evidence and opinions conflict on an issue concerning the environment, and the Lead Agency knows of these controversies in advance, the EIR and/or related findings must acknowledge the controversies, summarize the conflicting opinions of the experts, and include sufficient information on the controversy. In making a decision on a project where there is disagreement among experts, the Lead Agency is not obligated to select the viewpoint that purports to be the most environmentally sensitive. Instead, decision-makers are vested with the discretion to weigh expert opinion and choose which they intend to rely on and are not required to resolve a dispute among experts. In their proceedings, decision-makers must consider comments received concerning the adequacy of the EIR and address any objections raised in these comments. However, decision-makers are not obligated to follow any directives, recommendations, or suggestions presented in comments on an EIR, and can certify an EIR without needing to resolve disagreements among experts.

In making its decision to certify the EIR and approve the proposed project, the City of American Canyon recognizes that a range of technical and scientific opinion exists with respect to certain environmental issues, particularly with respect to air quality impacts. As noted in the record of proceedings for the proposed project, the air quality analysis is based, in part, on technical inputs into the CalEEMod modeling that reflect the best professional judgment of the air quality specialists at First Carbon Solutions who prepared the air quality analysis. This analysis was then reviewed by City of American Canyon planners with expertise in CEQA and environmental analysis. CalEEMod allows modelers to alter default assumptions in order to best reflect the circumstances and attributes of the particular projects being analyzed. The Lead Agency has acquired a comprehensive and well-rounded understanding of the range of this technical and scientific opinion by its review of the EIR; as well as by its review of the information provided by the experts who prepared the EIR; the Lead Agency's other consultants and its staff; along with testimony, letters, reports, and other relevant materials in the administrative record, as well as its own experience and expertise in these matters. The materials reviewed by the Lead Agency include conflicting expert opinions and conflicting statements of facts, as well as other comments on the environmental issues set forth in the EIR. This comprehensive review has enabled the Lead Agency to make its decisions after weighing and considering the various viewpoints on these important issues, and the Lead Agency has made determinations of significant effects based on substantial evidence, not public controversy or speculation. Accordingly, the Lead Agency hereby certifies that its Findings and determinations are based on all of the evidence contained in the EIR, as well as the evidence and other information

in the record addressing the environmental impacts of the proposed project, and hereby elects to rely on the analysis and evidence set forth in the EIR.

The EIR is incorporated into these Findings in its entirety. Without limitation, this incorporation is intended to elaborate on the scope and nature of mitigation measures, the basis for determining the significance of impacts, the comparative analysis of alternatives, and the reasons for approving the proposed project in spite of the potential for associated significant and unavoidable adverse impacts.

1.5 - Potential Environmental Effects Which are Not Significant or Less Than Significant

The City of American Canyon has heard, been presented with, reviewed, and considered all of the information and data in the administrative record, including the Draft and Final EIR, and all oral and written evidence presented to it during all meetings and hearings. The EIR reflects the independent judgment of the City of American Canyon and is deemed adequate for purposes of making decisions on the merits of the proposed project.

Consistent with Public Resources Code Section 21002.1 and Section 15128 of the CEQA Guidelines, the EIR focused its analysis on potentially significant impacts, and limited discussion of other impacts for which it can be seen with certainty there is no potential for significant adverse environmental impacts. CEQA Guidelines Section 15091 does not require specific findings to address environmental effects that an EIR identifies as "no impact" or a "less than significant" impact and for which no mitigation is necessary. Based on its independent judgment and the entire administrative record before it, the City of American Canyon has determined that the following potential environmental effects will not be significant and no mitigation is necessary for the reasons stated below.

1.5.1 - Aesthetics, Light, and Glare

Potential Effect

Impact AES-1: The proposed project would not have a substantial adverse effect on a scenic vista (**Draft EIR Page 3.1-4–5**).

Findings: Less than significant impact (Draft EIR, Page 3.1-5). No mitigation is necessary.

Facts in Support of Findings

Neither the City of American Canyon nor the Napa County General Plan identifies the project site as a scenic vista or scenic resource. Additionally, the project site does not contain any scenic vistas or features associated with scenic vistas (e.g., ridgelines, peaks, overlooks), and none are visible from the project site.

The project site is located in a portion of the City of American Canyon that is generally not visible from park and recreational areas, community gathering facilities, or residential areas. There are no prominent long-distance views of the project site, and, as such, the proposed project would not have the potential to obstruct views from high vantage points or sensitive viewpoints of the City.

Potential Effect

Impact AES-2: The proposed project would not substantially degrade the existing visual character or quality of the site and its surroundings (**Draft EIR Page 3.1-5–6**).

Findings: Less than significant impact (Draft EIR, Page 3.1-6). No mitigation is necessary.

Facts in Support of Findings

Phase 1

The Phase 1 warehouses would be similar in appearance to the structures in the neighboring Napa Logistics Park and the Green Island Business Park. Additionally, an approximately 44.8-acre open space area containing No Name Creek and wetlands would be permanently preserved within the northern portion of the site. These are the most significant aesthetic features on the project site.

Phase 2

Though no design-level plans have been prepared at the time of this writing, it is expected that the Phase 2 buildings would be similar in appearance to the Phase 1 buildings.

The development of the proposed project would change the visual character of the project site; however, it would be compatible with surrounding uses and consistent with the City of American Canyon General Plan land use designation of "Industrial" for the project site. Therefore, the proposed project would not substantially degrade the visual quality of the project area or its surroundings.

Cumulative Impacts

The proposed project, in conjunction with other past, present, and reasonably foreseeable projects in the applicable geographic area, would not have a cumulatively significant impact related to light and glare. (**Draft EIR, Page 4-3–4**).

Findings: Less than significant cumulative impact (Draft EIR, Page 4-4). No mitigation is necessary.

Facts in Support of Findings

The geographic scope of the cumulative aesthetics, light, and glare analysis is the 0.25-mile radius surrounding the project site. This is the area within view of the project site and, therefore, the area most likely to experience cumulative changes in visual character or experience cumulative light and glare impacts.

Several of the projects listed in Table 4-1 of the Draft EIR are immediately adjacent to or within 0.25mile of the project site.

The project site and the surrounding area have long been planned to accommodate large industrial and warehouse uses and are isolated and separate from the residential areas of the City. The existing surrounding uses are large industrial uses. Although the development of the proposed project would fundamentally change the visual character of the project site, it would be compatible with

surrounding industrial uses and would be consistent with the City of American Canyon General Plan land use designation for the project site. Because the proposed project would preserve approximately 44.8 acres of the project site that contain No Name Creek and associated wetlands, this area would continue to provide a visual buffer between the industrial uses and the undeveloped marsh area near the Napa River. The project site would feature attractive landscaping consisting of trees, shrubs, and groundcover. Design Permits would be required from the City to approve the specific building and site design on each lot, including building height. Furthermore, due to its location, the proposed project would not degrade any views of a scenic vista such as the Napa River or Sulphur Springs Hills. Other past projects, present projects under construction, and reasonably foreseeable projects in the surrounding area would be subject to similar landscaping and design requirements.

The past, present, and reasonably foreseeable developments near the project site have contributed to—and would continue to contribute to—ambient light and glare in the project vicinity. The proposed project would install new sources of light and glare on the project site from exterior building lighting, security lighting, and lights and glare associated with vehicles accessing the project site. Mitigation Measure (MM) AES-3 requires new exterior lighting fixtures to employ full cut-off fixtures to direct light downward and eliminate spillage. Other past, present, and reasonably foreseeable future developments in the project vicinity that involve the installation of new exterior lighting fixtures have been and would be required to implement similar standard measures to prevent light spillage.

1.5.2 - Air Quality

Potential Effect

Impact AIR-3: The proposed project would not expose sensitive receptors to substantial pollutant concentrations. (**Draft EIR Page 3.2-59–63**).

Findings: Less than significant impact (Draft EIR, Page 3.2-63). No mitigation is necessary.

Facts in Support of Findings

The proposed project could expose sensitive receptors to elevated pollutant concentrations if it causes or contributes significantly to elevated pollutant concentration levels. The closest sensitive receptors include a single-family residence located approximately 200 feet south of the project site, as well as Calvary Baptist Christian Academy (Draft EIR Page 3.2-15 –16). Localized emissions are typically evaluated in terms of air concentration rather than mass so they can be more readily correlated to potential health effects. A construction and operational Health Risk Assessment (HRA) was prepared for the proposed project (Draft EIR, Appendix B).

Construction and Operation

Construction and Operational Related Diesel Particulate Matter

The proposed project could accommodate the construction and operation of 2.4 million square feet of cold storage space and the subsequent operation of TRUs in addition to truck and passenger vehicle activities. Therefore, the HRA analyzes the cold storage project scenario as a conservative assessment.

The proposed project would develop Phase 1, which would become operational immediately following the completion of construction activities. As Phase 1 would become operational, Phase 2 of the proposed project would begin construction, resulting in an overlap of construction and operational emissions. The HRA analyzes the proposed project's Phase 1 construction diesel particulate matter (DPM) emissions for the first year, Phase 1 operational and Phase 2 construction DPM emissions for the second year, and Phase 1 and 2 operational DPM emissions for the remainder of the 30-year exposure duration, consistent with the Bay Area Air Quality Management District's (BAAQMD) Health Risk Assessment Guidelines. The HRA also analyzes the proposed project's Phase 1 construction DPM emissions for the first year; Phase 1 operational and Phase 2 construction DPM emissions for the second year; Phase 1 and 2 operational DPM emissions of school receptor exposure at the Calvary Baptist Christian Academy; and the proposed project's operational DPM emission concentrations for the remainder of the 13-year exposure duration for a K-12 school, consistent with the BAAQMD's Health Risk Assessment Guidelines. As shown in Table 3.2-14 of the Draft EIR, the proposed project would not result in significant health impacts to the maximally impacted residential or school receptors under the cold storage scenario.

Community Health Risk Assessment

A community HRA was conducted in accordance with BAAQMD recommendations. The cumulative health risk values were determined by adding the health risk values from refined modeling of the proposed project to the screening-level health risk values from each individual stationary and mobile source within a 1,000-foot radius of the site. The HRA concluded that the main source of a cumulative community health risk within 1,000 feet of the project site are the existing sources. Health risks to nearby sensitive receptors would not exceed the BAAQMD community health risk significance thresholds. As the proposed project did not result in an exceedance of project-level BAAQMD significance thresholds, the proposed project would not result in a potentially significant impact and the proposed project's impacts would not be cumulatively considerable.

Carbon Monoxide Hotspot

The proposed project would not generate sufficient vehicle traffic during project operation to substantiate creating a CO hotspot.

Cumulative

Additionally, the proposed project's health risk impacts and $PM_{2.5}$ concentration at sensitive receptors are below BAAQMD cumulative impact thresholds and the proposed project would not result in a cumulatively considerable contribution to any potentially significant cumulative impact.

Potential Effect

Impact AIR-4: The proposed project would not result in emissions (such as those leading to odors) adversely affecting a substantial number of people. (**Draft EIR Pages 3.2-63—64**)

Findings: Less than significant impact. (Draft EIR Page 3.2-64). No mitigation is necessary.

Facts in Support of Findings

Construction

During construction activities, construction equipment exhaust and application of asphalt and architectural coatings would temporarily and intermittently generate odors. Additionally, noxious odors would be confined to the immediate vicinity of the construction equipment. It is anticipated that by the time such emissions reach any sensitive receptor sites, they would be diluted to well below any air quality or odor concern level.

Operation

The types of uses that are considered to have objectionable odors include wastewater treatments plants, compost facilities, landfills, solid waste transfer stations, fiberglass manufacturing facilities, paint/coating operations (e.g., auto body shops), dairy farms, petroleum refineries, asphalt batch plants, chemical manufacturing, and food manufacturing facilities. Specific uses of the proposed project's buildings have not been determined; however, it is not anticipated that a Wastewater Treatment Plant (WWTP) or solid waste transfer station would be accommodated. Food manufacturing plants and chemical manufacturing have odor screening distances of one mile and two miles, respectively, from the facility to sensitive receptors (Draft EIR, Table 3.2-8). Sensitive receptors surrounding the project site within these screening distances are generally to the south and consist of school and residential land uses. The future tenants propose the land use for distribution and/or sortation facilities, thus implementation of the proposed project would not create or expose a substantial number of people to objectionable odors.

The proposed project would not result in any localized construction fugitive dust impacts or any CO hotspots or project-level health risk impacts to sensitive receptors or create objectionable odors affecting a substantial number of people. Therefore, the proposed project would not contribute to any potential significant cumulative significant impact related to localized criteria pollutant impacts from fugitive dust, CO, or objectionable odors.

1.5.3 - Biological

Potential Effect

Impact BIO-5: The proposed project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance. (**Draft EIR Pages 3.3-39–40**).

Findings: Less than significant impact (Draft EIR Page 3.2-40). No mitigation is necessary.

Facts in Support of Findings

Phases 1 and 2

No trees are present on the project site and, therefore, no tree removal would occur. The proposed project would not conflict with any local policies related to protection of natural resources.

All work for the proposed project would take place consistent with biological requirements of the General Plan and Zoning Ordinance of the City of American Canyon. Studies of sensitive biological resources have been either conducted by Huffman Broadway Group (HBG) as part of the Biological

Resources Report or were conducted by other consultants and independently reviewed and incorporated into the Biological Resources Report, consistent with General Plan Policy 8.2.1. The proposed project results in impacts to palustrine emergent wetlands and vernal pool wetlands and the applicant has prepared a conceptual plan to mitigate for these wetlands consistent with General Plan Policy 8.3.1.a, which requires the development plan to consider the nature of existing biological resources and all reasonable measures to avoid significant impacts, including retention of sufficient natural open space and undeveloped buffer zones; General Plan Policy 8.3.1.h, which requires in summary developments shall mitigate unavoidable adverse impacts to waters of the United States, wetlands, and riparian habitats by replacement on an in-kind basis and such replacement should occur on the original development site, whenever possible, and; General Plan Policy 8.4.3, which encourages activities that improve the biological value and integrity of the City's natural resources through vegetation restoration, control of alien plants and animals, and landscape buffering. The wetland mitigation would be accomplished through establishment of an approximately 45-acre Wetland Preserve within the project site to include preserving 7.58 acres of existing seasonal wetlands and 0.13 acres of vernal pools and establishment/creation of an additional approximately 3.56 acres of seasonal wetlands and 1.13 acres of vernal pools to compensate in-kind for permanent impacts to seasonal wetlands from the proposed project.

1.5.4 - Cultural and Tribal Cultural Resources

Potential Effect

Impact CUL-1: The proposed project would not cause a substantial adverse change in the significance of a historical resource pursuant to Guidelines §15064.5 (**Draft EIR Page 3.4-20—21**).

Findings: No impact (Draft EIR Page 3.4-21). No mitigation is necessary.

Facts in Support of Findings

Historic resources in this context refer to the built environment, mainly buildings and structures over 45 years in age that may be eligible for inclusion on the CRHR or NRHP. Records search results, conducted at the NWIC, identified one historic resource (P-28-001439) located within the project site and three historic resources (P-28-000384, P-28-002466 and NAP-HRI-001) located within the 0.5-mile records search radius. Historic resource P-28-001439 was evaluated relative to the four CRHR eligibility criteria and found to be ineligible to meet any of the criteria for historic and/or architectural significance required for listing on the NRHP, CRHR, or at the local level. No additional historic resources were encountered during the pedestrian field survey and evaluation.

1.5.5 - Greenhouse Gas Emissions

Potential Effect

Impact GHG-2: The proposed project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases (**Draft EIR Pages 3.6-62—69**).

Findings: Less than significant impact (Draft EIR Page 3.6-68). No mitigation is necessary.

Facts in Support of Findings

The following discusses project consistency with applicable plans adopted to reduce greenhouse gas (GHG) emissions, including the California Air Resources Board (ARB) 2017 Scoping Plan, MTC/Association of Bay Area Governments (ABAG) Plan Bay Area 2040, and the City of American Canyon Energy Efficiency Climate Action Plan (EECAP).

California Air Resources Board Scoping Plan

The principal State plan and policy for GHG emission reduction targets are set forth in Executive Order S-03-05, AB 32, and the subsequent SB 32. The quantitative goal of AB 32 was to reduce GHG emissions to 1990 levels by 2020. AB 32 required the ARB to develop a Scoping Plan that describes California's approach to reduce GHGs to achieve the 2020 emission target. SB 32 then accelerated the GHG emission reduction goals of AB 32. The 2017 Scoping Plan Update, the most recent update to the ARB Scoping Plan, reflects the 2030 target of a 40 percent reduction below 1990 levels as set by Executive Order B-30-15 and codified by SB 32. It applies to State agencies but is not directly applicable to cities, counties, or individual projects (i.e., the Scoping Plan does not require the City to adopt policies, programs, or regulations to reduce GHG emissions). However, new regulations adopted by the State agencies outlined in the Scoping Plan result in GHG emissions reductions at the local level. As a result, local jurisdictions benefit from reductions in transportation emissions rates, increases in water efficiency in the building and landscape codes, and other Statewide actions that affect a local jurisdiction's emissions inventory from the top down.

Transportation Sector

Trucks

The following State strategies reduce GHG emissions from medium and heavy-duty trucks:

- ARB's Mobile Source Strategy focuses on reducing GHGs by transitioning to zero and low emission vehicles and from medium-duty and heavy-duty trucks.
- ARB's Sustainable Freight Action Plan establishes a goal to improve freight efficiency by 25 percent by 2030, deploy over 100,000 freight vehicles and equipment capable of zero-emission operation and maximize both zero and near-zero-emission freight vehicles and equipment powered by renewable energy by 2030.
- ARB's Truck and Bus Regulation requires diesel-fueled trucks and buses that operate in California to be upgraded to reduce emissions. Newer heavier trucks and buses must meet PM filter requirements beginning January 1, 2012. Lighter and older heavier trucks must be replaced starting January 1, 2015. By January 1, 2023, nearly all trucks and buses will need to have 2010 model year engines or equivalent.
- ARB's Emissions Reduction Plan for Ports and Goods Movement (Goods Movement Plan) in California focuses on reducing heavy-duty truck-related emissions and the establishment of emissions standards for trucks, fleet turnover, truck retrofits, and restriction on truck idling. While the focus of the Goods Movement Plan is to reduce criteria air pollutant and air toxic emissions, the strategies to reduce these pollutants would also generally have a beneficial effect in reducing GHG emissions.

The proposed project would be subject to the above trucking and freight regulations which would contribute to controlling heavy-duty truck GHG emissions associated with the proposed project. The proposed project would not conflict with or inhibit these Statewide strategies. Any on-site trucks would be required to comply with ARB's Heavy-Duty (Tractor-Trailer) GHG Regulation, which requires SmartWay tractor trailers that include idle-reduction technologies, aerodynamic technologies, and low-rolling resistant tires that would reduce fuel consumption and associated GHG emissions. Furthermore, truck manufacturers would be required to comply with the ARB Advanced Clean Trucks (ACT) Rule, which requires manufacturers of medium- and heavy-duty trucks and vans to sell zero-emission trucks as an increasing percentage of their annual California sales from 2024 to 2035. Under the ACT Rule, by 2035, zero-emission truck/chassis sales would need to be 55 percent of Class 2b to Class 3 truck sales, 75 percent of Class 4 to Class 8 straight truck sales, and 40 percent of truck tractor sales. As the proposed project would not include any feature or design which would prohibit the implementation of these vehicle emission standards, the proposed project would be consistent with these requirements.

Passenger Vehicles

Statewide strategies to reduce GHG emissions from passenger vehicles and the transportation sector in general include the Low Carbon Fuel Standard (LCFS) and changes in the Corporate Average Fuel Economy Standards (e.g., Pavley I and Pavley California Advanced Clean Cars program). Furthermore, Executive Order N-79-20 would also require that 100 percent of new passenger cars and trucks sold in California be zero-emission by 2035, which would indirectly contribute to the extent of electric vehicle (EV) utilization in the proposed project's passenger vehicle fleet beyond 2035. The proposed project would not include any feature or design which would prohibit the implementation of these vehicle emission standards and thus would be consistent with these requirements.

Energy Sector

Energy use generated by the proposed project represents the second largest source of emissions after considering mobile source GHG emissions (Draft EIR, Table 3.6-4). As required by MM GHG-1c, the proposed project would meet the Tier 2 energy efficiency requirements of the current CALGreen and Building Energy Efficiency Standards. Moreover, the proposed project would be sourcing electricity from on-site generation sources and/or utility providers in the State. As required by MM GHG-1e, any electricity consumed by the proposed project would be from carbon-free sources, such as an on-site photovoltaic system. If the proposed project secures electricity purchases from a utility provider, the proposed project would be required by MM GHG-1e to purchase 100 percent carbon-free electricity through the year 2045, at which time utility providers would be required to supply 100 percent carbon-free electricity for all in-state sales, as required by SB 100. As such, the proposed project would meet the requirements contained in the 2019 California Building Code and would be consistent with the State's current CALGreen and Building Energy Efficiency Standards and the State's renewable energy legislation, SB 100.

Other Sources

Other sources of GHG emissions include solid waste disposal, which is associated with landfilling municipal solid waste. The amount of methane emitted to the atmosphere as a fraction of the total amount of methane generated from landfills has declined as more landfills implement mitigation measures and existing systems are operated more efficiently as a result of ARB's Landfill Methane

Control Measure. Therefore, the proposed project would be consistent with the State's goals for the recycling and waste sector.

Metropolitan Transportation Commission Plan Bay Area

As part of the implementing framework for Plan Bay Area 2050, local governments have identified planned development areas to focus growth. The project site is within the Napa County Airport Land Use Compatibility Plan area and is in an area with existing infrastructure. Thus, the proposed project would be consistent with the overall goals and the land use concept plan of Plan Bay Area 2050.

The closest public transit option would be the Vine bus system, operated by the Napa Valley Transportation Authority. The closest Vine stop is the American Canyon City Hall bus stop on Napa-Vallejo Connector Route 11. The stop is 1.5 miles from the project site. As such, it is not likely that many employees would travel to the project site using public transit.

City of American Canyon Energy Efficient Climate Action Plan

The EECAP identifies reduction measures and implementation responsibilities that the City used to achieve the State-recommended GHG emissions reduction target of 15 percent below 2005 emission levels by the year 2020 to fulfill the requirements of AB 32 and SB 375. The City would impose the requirements of these measures as applicable through local regulations and ordinances. As shown in Table 3.6-6 of the Draft EIR, the proposed project incorporates features that would contribute to the City's strategy to minimize GHG emissions. With these features, the proposed project would not conflict with the applicable measures and implementing actions identified by the City of American Canyon EECAP.

SB 32 2017 Scoping Plan Update

None of the 2017 Scoping Plan Update measures are applicable to the proposed project (Draft EIR, Table 3.6-6). Thus, the proposed project's implementation would not conflict with the reduction measures proposed in SB 32.

Potential Effect

Impact GHG-4: The proposed project would not conflict with State or local renewable efficiency objectives (**Draft EIR Pages 3.6-73—74**).

Findings: Less than significant impact (Draft EIR Page 3.6-74). No mitigation is necessary.

Facts in Support of Findings

The proposed project would comply with existing State energy standards and be consistent with the energy efficiency goals and measures contained in the City's General Plan Natural and Historic and Cultural Resources Element and EECAP.

The proposed project would be designed in accordance with Title 24, California's Energy Efficiency Standards for Nonresidential Buildings techniques and practices, ensuring that the proposed project would not result in the use of energy in a wasteful manner. Furthermore, the proposed project would be designed to accommodate rooftop photovoltaic electricity generation panel arrays for

solar electricity generation and MM GHG-1e would require the proposed project to source its electricity from 100 percent carbon-free sources.

The City's General Plan Natural and Historic and Cultural Resources Element contains policies related to energy conservation that are relevant to the proposed project, such as Goal 8F to reduce consumption of nonrenewable energy sources and support the development and utilization of new energy sources. Compliance with Title 24 standards would help the project meet this goal, and implementation of MMs GHG-1a through GHG-1e would further serve to reduce project reliance on nonrenewable energy resources. Moreover, the proposed project would be consistent with the energy efficiency measures contained in the EECAP (Draft EIR, Table 3.6-5).

Cumulative Impacts

The proposed project, in conjunction with other past, present, and reasonably foreseeable planned and approved projects in the vicinity, would not have a cumulatively significant impact related to geology, soils, and seismicity. (**Draft EIR, Page 4-8–9**).

Findings: Less than significant impact (Draft EIR, Page 4-9). No cumulative mitigation is required.

Facts in Support of Findings

The geographic scope of the cumulative geology, soils, and seismicity analysis is the project vicinity. Adverse effects associated with geologic, soil, and seismic hazards tend to be site specific, because each project site has its own geologic and soils conditions, and each project has its own design characteristics, localized within the area near the project site most affected by project activities (generally within a 0.5-mile radius).

Past, present, and future development projects in the project vicinity have the potential to exacerbate exposure to seismic hazards. The West Napa Fault bisects the project site and, thus, the project site may be susceptible to fault rupture during a seismic event. The project's incremental contribution to cumulative impacts is less than significant and does not require additional mitigation. MM GEO-1a requires the project applicant to retain a qualified geotechnical consultant to prepare a fault investigation study and ensure project plans comply with all required setback requirements. Additionally, the project site may be subject to strong ground shaking during an earthquake; thus, MM GEO-1b requires the project applicant to retain a qualified geotechnical consultant to prepare a design-level geotechnical study and implement all California Building Standards Code applicable requirements into project plans. Other nearby past, present, and reasonably foreseeable development projects have and may exacerbate exposure to similar potential seismic hazards and would be required to comply with the relevant State and local laws designed to mitigate seismic hazards and mitigation measures imposed under CEQA.

Development activities could lead to increased erosion rates of on-site soils, which could cause unstable ground surfaces and increased sedimentation in nearby streams and drainage channels. MM HYD-1a requires implementation of standard stormwater pollution prevention measures to ensure earthwork activities do not result in substantial erosion off-site. This mitigation requires compliance with the National Pollution Discharge Elimination System (NPDES) stormwater permitting

program, which requires the preparation and implementation of Stormwater Pollution Prevention Programs for construction activities that disturb more than 1 acre and the implementation of Best Management Practices (BMPs) that ensure the reduction of pollutants during stormwater discharges, as well as compliance with all applicable water quality requirements. The proposed project would be required to comply with these regulations, as have and would other nearby past, present, and reasonably foreseeable development projects.

The project site contains native soils that have shrink-swell characteristics, which may exacerbate exposure of project structures to expansive soil hazards. MM GEO-1b requires the project applicant to retain a qualified geotechnical consultant to prepare a design-level geotechnical study and incorporate all California Building Standards Code applicable requirements into project plans. Other nearby past, present, and reasonably foreseeable development projects could be exposed to expansive soil hazards and, therefore, have been and would be required to implement similar mitigation measures based on State and local regulations and CEQA requirements.

Paleontological resources impacts tend to be localized, because the integrity of any given resource depends on what occurs in the immediate vicinity around that resource, such as disruption of soils; therefore, in addition to the project site itself, the area near the project site would be the area most affected by project activities (generally within a 0.5-mile radius). Given that the proposed project would not have a known, direct impact on any known paleontological resources, cumulative project impacts are less than significant. Construction activities associated with cumulative development projects in the project vicinity may have the potential to encounter undiscovered paleontological resources. These cumulative projects listed in Table 4-1 of the Draft EIR would be required to mitigate for impacts through compliance with applicable federal and State laws governing paleontological resources.

1.5.6 - Hazards and Hazardous Materials

Potential Effect

Impact HAZ-1: Buildout of the proposed project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials and would not create a significant hazard to the public or the environment through the foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment (**Draft EIR Pages 3.7-11—12**).

Findings: Less than significant impact (Draft EIR Page 3.7-12). No mitigation is necessary.

Facts in Support of Findings

The construction and operational activities of the proposed project would not create a significant hazard to the public or environment.

Construction

Potential hazardous materials transported, used, or disposed of during project construction would be limited to commonly used substances such as gasoline, diesel, oil, grease, mechanical fluids, paints, and cleaning solvents. Construction equipment would be serviced by trained technicians and potentially hazardous materials would be stored in secured facilities. Furthermore, the safe handling

of these commonly used substances is governed by occupational health and safety laws and regulations and construction contract requirements. Therefore, the use of this equipment and these substances during construction would not present any undue risks to the public or the environment.

Operation

No large quantity hazardous materials users are contemplated as end users of the proposed project. Project end users would be expected to handle small quantities of commonly used hazardous substances, such as cleaning solvents and fuels, as part of daily operations. Given the small quantities involved and the characteristics of use (e.g., routine maintenance and cleaning), their use would not be considered a potential risk to human health or the environment. The use of acutely hazardous materials of any quantity that have the potential to result in releases that could potentially expose substantial numbers of people or the environment to harm is not anticipated by project end uses.

Potential Effect

Impact HAZ-2: The proposed project would not be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would not create a significant hazard to the public or the environment (**Draft EIR Pages 3.7-12—13**).

Findings: Less than significant impact (Draft EIR Page 3.7-13). No mitigation is necessary.

Facts in Support of Findings

The proposed project would not be exposed to hazards or hazardous materials from past uses of the project site.

Cortese List

The project site is not listed on the Cortese List, which includes various hazardous materials databases compiled pursuant to Government Code 65962.5.

Four sites within 0.5 mile of the project site are listed on the Cortese List. All are listed as "Case Closed," signifying that the regulatory agency with jurisdiction has determined that no further action is necessary. Thus, they do not pose a risk to human health or the environment.

Agricultural Chemicals

The project site does not support cultivated agriculture. Aerial photographs and historic topographical maps indicate that the project site has not supported cultivated agricultural production. Thus, there is no basis to assume presence of agricultural chemicals, including herbicides and pesticides.

Hazardous Building Materials

The project site does not contain any structures. Aerial photographs and historic topographical maps indicate that the project site has not supported structures. Thus, there is no basis to assume presence of hazardous building materials including asbestos, lead, or PCBs.

Radon

No indoor radon tests performed by the California Department of Health Services in the project site area code, 94503, have indicated indoor radon levels above pCi/l. Moreover, the proposed project proposes slab-on-grade construction, which has a low susceptibility to radon intrusion.

Electromagnetic Fields

There are no high-voltage electrical facilities within 0.5 mile of the project site. As such, the proposed project site would not be exposed to high levels of low-frequency EMFs.

Potential Effect

Impact HAZ-3: The proposed project would not create aviation safety hazards for persons residing or working within 2 miles of the Napa County Airport. (**Draft EIR Pages 3.7-13—15).**

Findings: Less than significant impact (Errata). No mitigation is necessary.

The 208-acre project site is located 2,400 feet south of the Napa County Airport and is within Zone D of the Napa County Airport Land Use Compatibility Plan. The Napa County Airport Land Use Compatibility Plan states that most nonresidential uses are considered "normally acceptable" within Zone D. Schools, libraries, hospitals, nursing homes, large shopping malls, amphitheaters, and ponds are identified as "not normally acceptable" within Zone D. In addition, uses that are hazardous to flight are prohibited (i.e., features that attract large numbers of birds and are sources of smoke, glare, distracting lights, or electrical interference). The Airport Land Use Compatibility Plan (ALUCP) encourages clustering to maximize open land areas and requires limits on building envelopes and building heights on all development plans within 100 feet of approach zones. The proposed project's end uses are all nonresidential and are acceptable within Zone D. Finally, there are no project attributes that would produce sources of smoke, glare, distracting lights, or electrical interference. Therefore, the proposed project complies with the applicable safety requirements of Zone D. As such, the proposed project would not create aviation safety hazards for persons residing or working within 2 miles of the Napa County Airport. Impacts would be less than significant, and no mitigation is necessary.

Potential Effect

Impact HAZ-4: The proposed project would not impair emergency response or evacuation in the project vicinity (**Draft EIR Pages 3.7-14—15).**

Findings: Less than significant impact (Draft EIR Page 3.7-15). No mitigation is necessary.

Facts in Support of Findings

Phase 1 would have four driveways on Green Island Road and three driveways on Devlin Road providing vehicular access to the project site. Reciprocal access would be provided between the two Phase 1 buildings. Accordingly, the proposed project would provide two points of emergency access in compliance with California Fire Code requirements. Thus, the proposed project would enhance access by emergency responders and would not impair emergency response or evacuation in the project vicinity.

Cumulative Impacts

The proposed project, in conjunction with other past, approved, and reasonably foreseeable future projects, would not have a cumulatively significant impact related to hazards and hazardous materials. (Draft EIR, Page 4-10).

Findings: Less than significant cumulative impact (Draft EIR, Page 4-10). No mitigation is necessary.

Facts in Support of Findings

For most topics the geographic scope of the cumulative hazards and hazardous materials analysis is the project area. Adverse effects of hazards and hazardous materials tend to be localized; therefore, the area near the project area would be most affected by project activities. For the transport of hazardous materials, the geographic scope includes local and regional transportation facilities.

The proposed project would not result in any significant impacts associated with hazardous materials because there is no evidence of contamination from past uses, and any use or storage of hazardous materials during construction or operations would be subject to compliance with regulatory requirements and mitigation measures. As with the proposed project, other past, present, and reasonably foreseeable projects have been and would continue to be required to comply with applicable federal, State, and local regulatory requirements regarding the transport of hazardous materials, clean up of hazardous materials, and the use and storage of hazardous materials during construction and operation. Additionally, hazardous material impacts tend to be localized to individual project sites.

The proposed project would create a wetland preserve in the northern portion of the project site. Mitigation is proposed requiring the implementation of a wildlife management plan to minimize the avian attractant potential of the Wetlands Preserve to avoid creating hazards to aviation. Other past, present, and reasonably foreseeable projects would not create a wildlife attractant hazard for the Napa County Airport, because required compliance with the Napa County ALUCP and Federal Aviation Administration (FAA) regulations would ensure that inappropriate land uses do not locate near the airport. Additionally, stormwater and landscaping features of the proposed project and other land uses would include management plans to avoid or reduce the potential for wildlife hazards.

1.5.7 - Hydrology and Water Quality

Potential Effect

Impact HYD-2: The proposed project would not deplete the groundwater supplies or interfere substantially with groundwater recharge (**Draft EIR Pages 3.8-12 –13**).

Findings: Less than significant impact (Draft EIR Page 3.8-13). No mitigation is necessary.

Facts in Support of Findings

Groundwater Overdraft

The proposed project would not rely on groundwater wells as a water supply source and would not exacerbate groundwater overdraft (to the extent that it exists) or conflict with the provisions of a sustainable groundwater management plan.

Groundwater Recharge

The proposed project would result in an increase in additional pervious surfaces. However, the groundwater recharge potential of the project site is limited due to its relatively low elevation and its proximity to the Napa River where groundwater levels tend to be high and soils in the lowest portions of the site are often saturated.

Potential Effect

Impact HYD-3: The proposed project would not create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems (**Draft EIR Pages 3.8-13—14**).

Findings: Less than significant impact (Draft EIR Page 3.8-14). No mitigation is necessary.

Facts in Support of Findings

The proposed project would increase the amount of impervious surface coverage on the project site and would create the potential for increased runoff leaving the project site that may create potential flooding conditions in downstream waterways. However, the proposed project would install a storm drainage system designed for a 15-year storm event. Inlets would capture surface runoff and convey it to four basins which would provide 110,766 square feet (2.6 acres) of stormwater retention.

Additionally, in accordance with Section C.3 of the San Francisco Bay Regional Water Quality Control Board (RWQCB) Municipal Regional Permit (Order No. R2-2015-0049, NPDES Permit No. CAS612008 (or more recent permit) as required under MM HYD-1b, the proposed project would implement Low Impact Development (LID) stormwater management methods into the on-site storm drainage system consisting of rainwater harvesting and use, infiltration, evapotranspiration, or biotreatment.

These measures would serve to slow, reduce, and meter the volume of runoff leaving the project site and ensure that downstream storm drainage facilities are not inundated with project-related stormwater.

Cumulative Impacts

The proposed project, in conjunction with other past, present, and reasonably foreseeable planned and approved projects in the vicinity, would not have a cumulatively significant impact related to hydrology and water quality. (**Draft EIR, Page 4-11**).

Findings: Less than significant cumulative impact (Draft EIR, Page 4-11). No mitigation is necessary.

Facts in Support of Findings

The geographic scope of the cumulative hydrology and water quality analysis is the No Name Creek watershed, which generally encompasses the area within 0.5 mile of the project site. Hydrologic and water quality impacts tend to be localized to a watershed; therefore, the area within the No Name Creek watershed would be most affected by project activities.

The proposed project would involve short-term construction and long-term operational activities that would have the potential to degrade water quality in downstream water bodies. These activities are subject to regulatory requirements that would ensure no significant adverse impacts would occur. MM HYD-1a and MM HYD-1b would require implementation of various construction and operational water quality control measures that would prevent the release of pollutants into downstream waterways. These measures include preparation of a Stormwater Pollution Prevention Plan (SWPPP) in accordance with the requirements of the statewide Construction General Permit and compliance with the Municipal Regional Permit, including implementation of BMPs and LID features.

Other past, present, and reasonably foreseeable projects that propose new development have been and would be required to implement similar mitigation measures in accordance with applicable laws and regulations. The combined implementation of construction and operation water quality control measures by other past, present, and reasonably foreseeable projects would avoid, or reduce to a less than significant level, any related cumulative impacts on downstream waterways including the Napa River.

All other project-related hydrology impacts were found to be less than significant and did not require mitigation (e.g., groundwater and drainage). Other past, present, and reasonably foreseeable projects that result in groundwater and drainage impacts have been and would be required to comply with applicable laws and regulations designed to protect groundwater resources and ensure adequate drainage facilities are provided for all projects and include facilities to prevent and reduce runoff from development sites.

1.5.8 - Land Use

Potential Effect

Impact LU-1: The proposed project would not conflict with the applicable provisions of the City of American Canyon General Plan (**Draft EIR Pages 3.9-6—48**).

Findings: Less than significant impact (Draft EIR Page 3.9-48). No mitigation is necessary.

Facts in Support of Findings

Phase 1

The applicant has developed site design-level plans for Phase 1, the 94.7-acre area east of the Devlin Road extension. This area will support two high-cube warehouse buildings totaling 1,069,904 square feet. The Phase 1 end uses would be consistent with the types of permitted uses set forth in the General Plan. Additionally, Phase 1 would have a 0.26 floor area ratio (FAR) and would be within the General Plan's allowable FAR of 0.50 for labor-intensive uses and FAR of 0.70 for low labor uses. The

proposed high-cube warehouses would have 36 feet clear height and, thus, be within the 40-foot height limit.

Phase 2

Phase 2, the 113.1-acre area west of Devlin Road, is conceptually proposed for the remaining 1.3 million square feet of high-cube warehouse. The Phase 2 end uses would be consistent with the types of permitted uses set forth in the General Plan. Additionally, Phase 2 would have a 0.26 FAR and would be within the General Plan's allowable FAR of 0.50 for labor-intensive uses and FAR of 0.70 for low labor uses.

Phases 1 and 2

Table 3.9-2 of the Draft EIR evaluates Phase 1 and Phase 2 consistency with the relevant goals, objectives, and policies of the City of American Canyon General Plan. As shown in the table, City staff concludes that the proposed project is consistent with all applicable goals, objectives, and policies.

Potential Effect

Impact LU-2: The proposed project would not conflict with the applicable provisions of the American Canyon Municipal Code (**Draft EIR Pages 3.9-48—49**).

Findings: Less than significant impact (Draft EIR Page 3.9-48). No mitigation is necessary.

Facts in Support of Findings

Phase 1

The applicant has developed site design-level plans for Phase 1, the 94.7-acre area east of the Devlin Road extension. This area will support two high-cube warehouse buildings totaling 1,069,904 square feet. The Phase 1 end uses would be consistent with the types of permitted uses set forth in the Zoning Ordinance for the General Industrial zoning district. Additionally, Phase 1 would have a 0.26 FAR and would be within the Zoning Ordinance's allowable FAR of 0.50 for labor-intensive uses and FAR of 0.70 for low labor uses. The proposed high-cube warehouses would have 36 feet clear height and, thus, be within the 40-foot height limit set by the Zoning Ordinance.

Phase 2

Phase 2, the 113.1-acre area west of Devlin Road, is conceptually proposed for the remaining 1.3 million square feet of high-cube warehouse. The Phase 2 end uses would be consistent with the types of permitted uses set forth in the Zoning Ordinance for the General Industrial zoning district. Additionally, Phase 2 would have a 0.26 FAR and would be within the General Plan's allowable FAR of 0.50 for labor-intensive uses and FAR of 0.70 for low labor uses. Impacts would be less than significant.

Cumulative Impacts

The proposed project, in conjunction with past, present, and reasonably foreseeable development, would not result in a cumulatively significant land use impact. (**Draft EIR, Page 4-11 –12**).

Findings: Less than significant cumulative impact (Draft EIR, Page 4-12). No mitigation is necessary.

Facts in Support of Findings

The geographic scope of the cumulative land use analysis is the area within 1 mile of the project site. Existing development in this area is predominantly industrial uses, including the airport. Projects under construction include the Napa Logistics Park Project, which is approved for warehouse and other similar uses. Foreseeable future development in the area includes the Napa Airport Corporate Center and the Devlin Road Transfer Station Construction and Demolition Debris Facility.

The proposed project would be consistent with the American Canyon General Plan, American Canyon Zoning Ordinance, and the Napa County ALUCP because its proposed uses are allowed under these plans. Projects under consideration in the area and reasonably foreseeable future projects would be required to be consistent with the General Plan, the City's Zoning Ordinance, and the ALUCP. Additionally, the proposed project and other nearby development would be and have been required to implement wildlife management plans to ensure compatibility with airport operations.

1.5.9 - Noise

Potential Effect

Impact NOI-2: The proposed project would not result in generation of excessive groundborne vibration or groundborne noise levels (**Draft EIR Pages 3.10-22 –23**).

Findings: Less than significant impact (Draft EIR Page 3.10-23). No mitigation is necessary.

Facts in Support of Findings

In general, if groundborne vibration levels do not exceed levels considered perceptible, then groundborne noise levels would not be perceptible in most interior environments. Because the City of American Canyon does not have quantitative groundborne vibration thresholds for construction or operation, the Federal Transit Administration (FTA) vibration impact criteria are utilized to analyze vibration impacts. A significant impact would occur if existing structures at the project site or in the project vicinity would be exposed to groundborne vibration levels in excess of levels established by the FTA's Construction Vibration Impact Criteria for the listed type of structure, as shown in Table 3.10-5 of the Draft EIR.

Construction

Large vibratory rollers could be used in the site preparation phase of construction. This equipment produces groundborne vibration levels ranging up to 0.201 inch per second (in/sec) PPV at 25 feet from the operating equipment, the greatest groundborne vibration levels of heavy construction equipment that could be used.

The façade of the commercial building south of the project site on Green Island Road would be located approximately 120 feet from the nearest point on the project site where the heaviest construction equipment would potentially operate. This is the nearest off-site receptor to the project construction footprint where the heaviest construction equipment would operate. At this distance, groundborne vibration levels would range up to 0.008 PPV from operation of the types of equipment that would produce the highest vibration levels. This is well below the FTA's Construction Vibration Impact Criteria of 0.2 PPV for this type of structure.

Operation

Implementation of the proposed project would not include any permanent sources that would expose persons in the project vicinity to groundborne vibration levels that could be perceptible without instruments at any existing sensitive land use in the project vicinity.

The Napa Branch Line railroad is located approximately 130 feet east of the nearest proposed façade of the project. Based on FTA vibration screening criteria, potential groundborne vibration impacts would be less than significant for the proposed type of structure. There are no other existing significant permanent sources of groundborne vibration in the project vicinity to which the proposed project would be exposed.

Potential Effect

Impact NOI-3: The proposed project would not expose people residing or working in the project area to excessive noise levels for a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport (**Draft EIR Page 3.10-24**).

Findings: Less than significant impact (Draft EIR Page 3.10-24). No mitigation is necessary.

Facts in Support of Findings

A significant impact would occur if the proposed project would expose people residing or working in the project area to excessive noise levels for a project located in the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport. The City's Policy 11.4.1 restricts the development of uses located within the 65 CNEL contour of Napa Airport to industrial, agricultural, or other open space uses. Policy 11.4.2 requires that development in the vicinity of Napa Airport comply with the noise standards contained in the ALUP.

The project site is not located within the vicinity of a private airstrip. However, the Napa County Airport is located approximately 1 mile north of the project site. The project site is located outside of the 55 dBA CNEL airport noise contours (Draft EIR, Exhibit 3.10-2). Though aircraft noise is occasionally audible on the project site from aircraft flyovers, aircraft noise associated with nearby airport activity would not expose people residing or working near the project site to excessive noise levels. These noise levels are considered normally acceptable for new industrial land use development within the City as shown in Exhibit 3.10-1 of the Draft EIR.

Cumulative Impacts

The proposed project, in conjunction with past, present, and reasonably foreseeable development, would not result in a cumulatively significant noise impact. (**Draft EIR, Page 4-12**).

Findings: Less than significant cumulative impact (Draft EIR, Page 4-12). No mitigation is necessary.

Facts in Support of Findings

The geographic scope of the cumulative noise analysis is the project vicinity, including surrounding sensitive receptors. Noise impacts tend to be localized; therefore, the area near the project site (approximately 0.25 mile) would be the area most affected by project activities. Furthermore, given the properties and the distance between other past, present, and reasonably foreseeable development projects (more than 0.5 mile away), project-related noise would not combine with other sources further away.

The proposed project's construction noise levels may cause a temporary substantial increase in noise levels at nearby receptors. Mitigation is proposed that would require implementation of construction noise attenuation measures to reduce noise levels. Other projects in the project vicinity that could be under construction at the same time as the proposed project (such as Napa Logistics Park Phase 1 and Napa Corporate Center) could combine to expose nearby sensitive receptors to excessive construction noise from trucks and equipment. However, noise is a localized phenomenon, the properties of noise are not additive, construction activities on these projects may not overlap, and all projects would be subject to the City's noise ordinance requirements and mitigation measures.

The proposed project's construction and operational vibration levels would not exceed annoyance thresholds. Because vibration is a highly localized phenomenon, there would be no possibility for vibration associated with the proposed project to combine with vibration from other projects because of their distances from the project site.

As discussed in Section 3.9, Noise, of the Draft EIR, after mitigation the proposed project's vehicular trips would not make a substantial incremental contribution to ambient noise levels under baseline-with-project and future-with-project conditions. These noise levels account for existing vehicle trips as well as vehicle trips from future projects. Furthermore, the proposed project's contribution to vehicular noise levels would not exceed the applicable thresholds of significance, which take into account existing noise levels as well as noise from trips associated with other planned or approved projects. Finally, because most of the other projects included within the scope of the transportation analysis are more than 1 mile from the project site, cumulative vehicular trips would be unlikely to add to roadway noise levels in the project vicinity.

1.5.10 - Public Services

Potential Effect

Impact PS-1: The proposed project would not result in a need for new or expanded fire protection facilities that may have physical impacts on the environment (**Draft EIR Pages 3.11-4 –5**).

Findings: Less than significant impact (Draft EIR Page 3.11-5). No mitigation is necessary.

Facts in Support of Findings

The proposed project would be served with fire protection and emergency medical services provided by the American Canyon Fire Protection District. While the proposed project would increase the number of calls for service, the Fire District's existing facilities are adequate to serve the proposed

project and there is no need to develop new or expanded fire protection facilities to serve the project.

The proposed project would take vehicular access from Green Island Road and the Devlin Road extension, which is currently under construction. All access points would be accessible to large emergency vehicles such as fire engines. This would comply with California Fire Code requirements for emergency vehicle accessibility.

The project site is located 3.1 miles from Station 11, via Paoli Loop Road and Green Island Road. However, emergency responders can avoid Paoli Loop Road by making a left turn directly onto Green Island Road from State Route (SR) 29, reducing the travel distance to 2.2 miles. Assuming a travel speed of 35 miles per hour, response time from Station 11 to the project site would be 3 minutes and 46 seconds. This would be within the Fire District's 5-minute response time objective. However, congestion on SR-29 may increase travel time such that it exceeds the 5-minute response time objective.

The proposed project would be required to pay a "Fire Mitigation Fee," a one-time assessment to all new development, and a "Fire Service Fee," an annual assessment for each parcel. Additionally, the applicant and Fire District have agreed to a Memorandum of Understanding (MOU) for the applicant to fund Fire District operational shortfalls in perpetuity through the creation of a Community Facilities District (CFD).

Potential Effect

Impact PS-2: The proposed project would not result in a need for new or expanded police protection facilities that may have physical impacts on the environment (**Draft EIR Pages 3.11-5—6**).

Findings: Less than significant impact (Draft EIR Page 3.11-5). No mitigation is necessary.

Facts in Support of Findings

The proposed project would be served with police protection provided by the American Canyon Police Department. The proposed project would be surrounded with a secure perimeter and would only be accessible to authorized users via either a mechanical gate with key card access or a manned security booth, depending on the end user. The proposed project would be expected to be staffed 24 hours a day, 7 days a week. Security measures including exterior lighting, alarm systems, and video surveillance would be employed to deter and prevent criminal activity. The Police Department will have the opportunity to review and comment on security measures during the plan check review process. For these reasons, the proposed project would be expected to generate minimal calls for service and, therefore, would not create a need for new or expanded police facilities.

Cumulative Impacts

The proposed project, in conjunction with other past, present, and reasonably foreseeable developments, would not have a cumulatively significant impact related to police protection, fire protection and emergency medical services (**Draft EIR, Page 4-13**).

Findings: Less than significant cumulative impact (Draft EIR, Page 4-13). No mitigation is necessary.

Facts in Support of Findings

Fire Protection and Emergency Medical Services

The geographic scope of the cumulative fire protection and emergency medical services analysis is the American Canyon Fire Protection District service area, which includes the American Canyon city limits.

The project site is located within 3.1 miles of the nearest fire station and is within an acceptable response time for fire protection (5 minutes or less). As such, the proposed project would not create a need for new or expanded fire protection facilities and would not result in a physical impact on the environment. Additionally, the proposed project would comply with all applicable requirements of the California Fire Code, including provision of adequate emergency access points, and it would be accessible to fire apparatus. Other past, present, and reasonably foreseeable development projects in the Fire District service area have been and would be reviewed for impacts on fire protection and emergency medical services and have been and would be required to address any potential impact with mitigation. Additionally, the Fire District plans for service needs consistent with existing demands and growth anticipated in the City planning documents.

Police Protection

The geographic scope of the cumulative police protection analysis is the service area of the American Canyon Police Department, which consists of the American Canyon city limits.

The proposed project and other past, present, and reasonably foreseeable projects in the police service area have been and would continue to be reviewed for impacts on police services and also have been and would continue to be required to address any potential impact with mitigation. Additionally, the Police Department plans for service needs consistent with existing demands and growth anticipated in the City planning documents.

1.5.11 - Transportation

Potential Effect

TRANS-1: The proposed project would not conflict with a program plan, ordinance or policy of the circulation system, including transit, roadway, bicycle and pedestrian facilities (**Draft EIR Pages 3.12-13–16**).

Findings: Less than significant impact (Draft EIR Page 3.12-16). No mitigation is necessary.

Facts in Support of Findings

Phases 1 and 2

Existing Plus Project Conditions

Upon the addition of project-related traffic to the Existing volumes, all study intersections are expected to continue operating at Level of Service (LOS) C or better (Draft EIR, Table 3.12-7).

Future Conditions

Future (2040) AM and PM peak-hour volume projections for SR-29/South Kelly Road were derived from a buildout analysis which is contained in the Napa Junction III Transportation Impact Analysis Report, Omni-Means, LTD, 2011. Under the anticipated Future volumes, the study intersections are expected to operate acceptably during the AM and PM peak hours except for SR-29/South Kelly Road, which is expected to operate at LOS F during both peak hours. Future volumes are shown in Exhibit 3.12-5 of the Draft EIR and operating conditions are summarized in Table 3.12-8 of the Draft EIR.

Because SR-29 is exempt from the City's LOS standard and Caltrans no longer applies an LOS standard, the LOS F operation is considered acceptable. While there are future plans for SR-29 to have three through lanes in each direction through American Canyon, funding has not been identified for this capacity enhancement. Thus, the two through lanes configuration was used for the analysis.

Furthermore, the future year analysis results for facilities along SR-29 (specifically, the intersection of SR-29/South Kelly Road) is deemed to be more conservative than what was presented for this intersection in the Watson Ranch Specific Plan EIR (September 2018) which indicated LOS C and D operation for the AM and PM peak-hours, respectively.

Future Plus Project Conditions

Upon the addition of project-generated traffic to the anticipated Future volumes, all unsignalized study intersections are expected to operate acceptably. SR-29/South Kelly Road would continue to operate at LOS F during both peak-hours. Future Plus Project traffic volumes are shown in Exhibit 3.12-6 of the Draft EIR and operating conditions are summarized in Table 3.12-8 of the Draft EIR.

As discussed above, there are future plans for SR-29 to have three travel lanes in each direction through American Canyon. As required by the City in its Traffic Impact Fee Program, the proposed project would pay a proportional share fee toward the cost of this planned future infrastructure improvement.

Transit

While existing stops are not located within 0.5 mile of the project site, employees could ride a bicycle along Devlin Road to the nearest transit stop at the intersection of Airport Boulevard/Devlin Road. This is consistent with the various City of American Canyon General Plan policies that promote transit accessibility.

Bicycles

Access for bicyclists is provided by Class II bike lanes on Devlin Road between Middleton Way and South Kelly Road together with shared use of minor streets. The proposed project would include bicycle lanes along the project's Devlin Road frontage and a multimodal path along the north side of Green Island Road. Planned Class I and II bicycle facilities on South Kelly Road and Green Island Road, as well as the Napa Valley Vine Trail along Devlin Road, would improve bicycle connectivity near the project site. This is consistent with the various City of American Canyon General Plan policies that promote bicycle mobility.

Pedestrian

Upon completion of the project, sidewalks will be provided along Devlin Road between Green Island Road to South Kelly Road. The proposed project also includes construction of a multimodal path along Green Island Road, which would be available for use by pedestrians. This is consistent with the various City of American Canyon General Plan policies that promote pedestrian mobility.

Potential Effect

TRANS-2: The proposed project would not conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b) (**Draft EIR Pages 3.12-16–18**).

Findings: Less than significant impact (Draft EIR Page 3.12-18). No mitigation is necessary.

Facts in Support of Findings

Phases 1 and 2

The impact of a proposed project is determined by the increase in Vehicle Miles Traveled (VMT) because of the project. Because the City of American Canyon has no established thresholds of significance related to VMT and the Napa County travel demand model is not currently available for use as a source for VMT analysis, the project-related VMT impacts were quantitatively assessed based on guidance provided by the Governor's Office of Planning and Research (OPR) in the publication Transportation Impacts (SB 743) CEQA Guidelines Update and Technical Advisory, 2018.

Based on a review of established policies currently used by the OPR, Sacramento County, and the City of San José, a VMT impact would be identified at an industrial project if the project VMT per employee is higher than the regional average VMT per employee. This focus on employee trips, as opposed to truck traffic associated with the proposed land uses, reflects the focus in CEQA Guidelines Section 15064.3 on VMT associated with automobiles and light trucks.

For this study, the regional average VMT is defined as the nine county Bay Area average. As reported by the City of Vallejo in their CEQA Transportation Impact Analysis Guidelines (dated October 2020), the Nine County Bay Area Average VMT per employee is 23 miles per employee. According to Statewide Travel Demand Model estimates, the proposed project is located within a Traffic Analysis Zone (TAZ) with a projected VMT per employee of 16.24 miles. Because this per capita VMT rate is lower than the significance threshold of 23 miles, the proposed project would be considered to have a less than significant VMT impact. A more conservative methodology sometimes used by OPR for other employment-based land uses states that a project generating a VMT that is 15 percent or more below the regional average VMT is presumed to have a less than significant VMT impact. Under this methodology the project would be considered to have a less than significant VMT impact since the VMT per employee of 16.24 miles is less than the threshold of 19.55 miles. A summary of the VMT findings is provided in Table 3.12-9 of the Draft EIR.

It is worth noting that, although the Draft EIR used a threshold of commute VMT per employee that is equal to the regional average rather than 15 percent below the regional average as suggested in the Technical Advisory on VMT prepared by the Governor’s Office of Planning and Research (OPR) for office uses, the VMT for the proposed project is actually substantially more than 15 percent below

regional average. As shown in Draft EIR on page 3.12-18, Table 3.12-9, Vehicle Miles Traveled Summary, the regional average VMT per employee is 23.0 miles, while the proposed project's VMT per employee is 16.24 miles, which is roughly 29 percent below the regional average. Thus, the Draft EIR would have reached the same conclusion with respect to the VMT-related impacts of the proposed project—namely, that they were less than significant—even if the City had used the OPR-recommended threshold of 15 percent below the regional average for office projects.

It is also worth noting that, although the VMT analysis in the Draft EIR did not take direct account of medium- and heavy-duty truck trips, a post-Draft EIR technical study performed by a leading transportation consultant found that the significance conclusions in the VMT analysis would not have changed if the analysis were expanded to account for medium- and heavy-duty trucks engaged in logistic and warehousing operations. The conclusion would still be that VMT-related impacts are less than significant.

Appendix J to Volume 1 of the Final EIR is a June 16, 2022, technical memorandum prepared for Joe Livaich of Buzz Oates Construction by Kevin Johnson and David Robinson of Fehr & Peers, a leading transportation consultant, on the subject of "American Canyon Industrial Warehouse Travel Behavior Data." According to its authors, "[a] primary objective of the analysis in this memorandum is to address whether VMT from such heavy-duty truck trips would be more or less than 15 percent below the regional average for the Bay Area." The authors conservatively chose to look at this particular metric because, as noted earlier, the OPR Technical Advisory proposed a significance threshold of 15 percent below the regional average for office projects (although, for reasons discussed above, that threshold was not used in the Draft EIR). The threshold of 15 percent below the regional average was thus the most conservative threshold recommended by OPR, and more conservative than the one used in the Draft EIR. The authors concluded that, if the Draft EIR had taken account of medium- and heavy-duty truck trips from logistics operations, the analysis would still have concluded that the proposed project would have less than significant VMT-related impacts.

Potential Effect

TRANS-3: The proposed project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment) (**Draft EIR Pages 3.12-18 –19**).

Findings: Less than significant impact (Draft EIR Page 3.12-19). No mitigation is necessary.

Facts in Support of Findings

Phase 1

W-Trans evaluated site access and sight distance for Phase 1 of the proposed project.

Site Access

Vehicular access to Phase 1 would be provided via four driveways on Green Island Road and four driveways on Devlin Road. All driveways and internal roadways would be designed to current City standards to accommodate heavy vehicles, accommodating the access requirements for both emergency and passenger vehicles.

Sight Distance

Sight distances along Green Island Road from the project driveways were evaluated based on sight distance criteria contained in the Highway Design Manual published by Caltrans. Based on the posted speed limit of 40 miles per hour (mph), the minimum stopping sight distance required is 300 feet; a review in the field shows that sight distances at the project driveway locations on Green Island Road would be adequate, provided any vegetation or buildings are sited to ensure maintenance of adequate sight lines. The sight lines for driveways on the Devlin Road connection are expected to be adequate based on a review of the site plans.

Phase 2

Phase 2 access would be provided via Green Island Road and Devlin Road. Standard design and engineering practices would dictate that driveways would be aligned with those on the opposite side of both Green Island Road Devlin Road and spaced sufficiently from other driveways and the western Green Island Road railroad grade crossing to avoid conflicting turning movements or the creation of safety hazards.

Potential Effect

TRANS-4: The proposed project would not result in inadequate emergency access (**Draft EIR Pages 3.12-19–20**).

Findings: Less than significant impact (Draft EIR Page 3.12-20). No mitigation is necessary.

Facts in Support of Findings

Phase 1 and 2

Pursuant to the California Fire Code, a minimum of two points of access would need to be provided to each building. Compliance would ensure that adequate emergency response is provided.

Vehicular access to Phase 1 would be provided via four driveways on Green Island Road and four driveways on Devlin Road. Construction of the Devlin Road extension is expected to be completed by the time Phase 1 is completed. This would provide a parallel north–south route to SR-29, providing an alternative route for emergency response. Vehicular access to Phase 2 would be provided by driveways on Green Island Road and Devlin Road.

Cumulative Impacts

The proposed project, in conjunction with other past, present, and reasonably foreseeable developments, would not have a cumulatively significant impact related to transportation (**Draft EIR, Page 4-13–14**).

Findings: Less than significant cumulative impact (Draft EIR, Page 4-14). No mitigation is necessary.

Facts in Support of Findings

The geographic scope of the cumulative transportation analysis is the nine county San Francisco Bay Area region. VMT is evaluated and regulated at a regional level and, thus, the San Francisco Bay Area region is an appropriate geographical area.

Impact TRANS-1 concluded that the proposed project would not have a significant impact on the circulation system and, therefore, no mitigation would be necessary. As such, the proposed project would not have a cumulatively considerable contribution in this regard. Impact TRANS-2 concluded that the proposed project would not have a significant impact on VMT because the proposed project would have a VMT rate of 16.24, well below the regional average of 23.00. As such, the proposed project would not have a cumulatively considerable contribution to VMT.

With respect to Impact TRANS-3, the potential hazards from design features or incompatible uses are project site specific (e.g., site access, sight distance, etc.) and would not combine with other projects. The proposed project and other past, present, and reasonably foreseeable future projects have complied and must comply with local, standard requirements for transportation-related design features specifically adopted to avoid and reduce hazards from project design or the location of incompatible uses, thereby reducing the potential for significant cumulative impacts to less than significant levels.

With respect to Impact TRANS-4, the provision of adequate emergency access is site specific and would not combine with other projects. The proposed project and other past, present, and reasonably foreseeable future projects must comply with local, standard requirements for adequate emergency access specifically adopted to avoid or reduce the potential for inadequate access. Furthermore, the proposed project and other projects would not have significant impacts on the performance of the study intersections and, therefore, it can be inferred that it would also not impair emergency response to the project vicinity.

1.5.12 - Utilities and Service Systems

Potential Effect

Impact USS-1: The proposed project would not require the City of American Canyon to obtain additional water supplies in order to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years (**Draft EIR Pages 3.13-16—31**).

Findings: Less than significant impact (Draft EIR Page 3.13-31). No mitigation is necessary.

Facts in Support of Findings

The analysis in the water supply assessment (WSA) shows that the City's water supply is sufficient to meet projected demand, in all years and under all normal-, dry-, and multi-dry year scenarios. The analysis shows that demand will exceed supply during some dry years, but the City will still be able to meet demand through the use of carryover State Water Project (SWP) water or through some combination of carryover SWP water, Advanced Table A Water, demand reductions, and/or additional purchases on the open market. In addition, recycled water supply in the City is available to meet existing and projected demand and available in sufficient volume to support non-potable uses at the project site. Use of recycled water at the site will increase the City's utilization of this supply.

Phases 1 and 2

Potable water demand for the project was estimated by CBG Engineers based on demand factors contained in the 2016 City of American Canyon Potable Water Master plan (Draft EIR, Table 3.13-3). The average day demand of 0.015 gallons per day/square-foot used to calculate the estimates are believed to be an overly high estimate of water use for this project. To provide a more realistic estimate of potable water demand for the proposed Giovannoni Logistics Center Project, the WSA prepared for the proposed project (Draft EIR, Appendix I) averaged the demand rates of the Napa Airport Corporate Center (NACC) (0.006 gpd/square-foot), the CBG Engineers estimate (0.015 gpd/square-foot), and the Suisun Logistics Center (0.01 gpd/square-foot) (Draft EIR, Appendix B), resulting in an average day demand of 0.009 gpd/square-foot. The WSA estimates the total potable water demand of the proposed project at buildout to be 23.9 AFY (15.9 AFY less than the usage originally estimated by CBG Engineers) (Draft EIR, Table 3.13-3).

For the purposes of the WSA, all indoor water demand is assumed to be from potable water. In the future, recycled water could be used for non-potable indoor uses, further reducing potable water demand. Table 3.13-3 of the Draft EIR shows the estimated potable water demand for each building of the proposed project.

Recycled Water

The proposed project would use recycled water for all irrigation needs and for toilet flushing. Estimated recycled water use within the project is summarized in Table 3.13-3 of the Draft EIR. The current project plans do not have estimates for the area of irrigated landscaping; thus demand was approximated by applying the average ratio of 0.604 between irrigated area and building footprint from the neighboring NACC project, with a demand factor of 2.5 acre-feet/acre (from Table 3.13 in the 2010 Urban Water Management Plan (UWMP)). The irrigation demand of the proposed project may be lower if landscaping with lower-than-typical irrigation needs is used. Actual use per building may vary based on final site plans, but total use is expected to be consistent with (or less than) these assumptions (Draft EIR, Table 3.13-3).

Project Demand Comparison to Urban Water Management Plan

Potable Water Demand

The proposed project is expected to use 133.3 AFY less water than expected under the 2015 UWMP growth scenario. Implementation of the City's Zero Water Footprint Policy would result in an additional 23.9-acre-foot reduction in potable water demand relative to the UWMP systemwide demand analysis (Draft EIR, Table 3.13-4).

Recycled Water

The American Canyon UWMP assumes irrigation use to be 2.5 acre-feet of water per acre of landscaping but did not project recycled water demand associated with particular parcels anticipated for development. Because recycled water use offsets demand for potable (or raw imported) water and it is in the City's best interest to maximize use of recycled water, the project's recycled water demand is assessed relative to the recycled water demand goals outlined in the UWMP.

The 2016 Recycled Water Master Plan showed a delivery of 248 acre-feet for an existing 21 users between August 2013 and July 2014. In 2019, 282 acre-feet of recycled water was delivered to customers which is still below the projected 391 acre-feet of recycled water in 2020. The proposed project would add an estimated 82.1 AFY of recycled water demand.

Systemwide Demand

Recent Actual System Demand

Table 3.13-5 of the Draft EIR shows the actual water usage within the City's distribution area since the 2015 UWMP was completed, as well as the interpolated yearly demand based on the projections in the UWMP. Since 2015, potable water demand has been much lower than that anticipated in the UWMP.

Projected System Demand

The 2015 UWMP projected future demand on a parcel-by-parcel basis relative to expected growth under the City's general plan. The analysis assumed that recycled water would be available to meet a portion of the total demand, with the remainder supplied by potable water. Table 3.13-6 of the Draft EIR shows the water demand as presented in the 2015 UWMP.

Unbilled Water Losses

The UWMP assumed that unbilled water losses would be 7.5 percent for each year between 2020-2040, consistent with standards adopted by the California Urban Water Conservation Council. In 2015, water delivery and water use records indicate that system losses were 22 percent. In 2015, the City replaced more than 120 segments of residential service lines as part of its program to reduce distribution system losses. The City assumed it would reduce system losses to 7.5 percent of the total potable and raw water deliveries by 2020.

Supply and Demand Comparison

The scenarios presented herein have been summarized from the 2015 UWMP analysis for citywide system planning. This analysis addresses potable and recycled water separately.

Potable Water

The City's potable water supply relies exclusively on imported water, both from the SWP and through the City of Vallejo. A percentage of the full contracted amount is assumed for each source type under each scenario. These percentages are based on guidance by California Department of Water Resources (DWR), analysis in the City's UWMP and the Vallejo UWMP. The supply and demand for potable water under 'normal year,' 'single dry year,' and 'multiple dry year' scenarios is discussed as follows.

Normal Year

The UWMP concluded that future supply is available to meet anticipated demand in normal years through buildout in 2035, as does the analysis in the WSA (Table 8). Excess supply in normal years ranges from a low of 2,653 in 2040 to a high of 3,497 AFY in 2025 (Draft EIR, Table 3.13-9).

Single Dry Year

The 2015 UWMP shows that single dry year supply is not significantly currently constrained and the City will be able to reliably meet potable demand until the year 2030. Single dry year deficiencies are

anticipated starting in 2035 (Draft EIR, Table 3.13-9). The City has several options available to resolve dry year supply deficiencies.

Multiple Dry Years

The multiple dry year scenario, as described in the UWMP, consists of three consecutive years of reduced water deliveries, though none are reduced to the same degree as the single dry year scenario. The 2015 UWMP projects that water supply will exceed demand during a 3-year drought through the full 2040 planning period (Draft EIR, Table 3.13-9).

Potable Water Deficiency Resolution

This section describes a series of options available to the City to eliminate supply shortages in several of the "dry year" and "multiple dry year" planning scenarios in order to provide reliable supply. Estimated SWP carryover water would be sufficient to eliminate dry year supply shortfalls and could also be used in combination with drought demand reductions to further improve supply reliability.

State Water Project Carryover Water

If the City does not use its entire allotment of Table A water in a given year, the remaining water will carry over to the following year, assuming there is adequate storage in SWP reservoirs to contain the excess supply. Between 2015 and 2020, the City has stored between 35 and 2,600 acre-feet of carryover water in a given year (Draft EIR, Table 3.13-10), which has helped to meet demand during recent dry years. This is not considered a consistent yearly supply for planning purposes, but it does allow the City extra flexibility during droughts. As such, the carryover water has been incorporated into the analysis in the WSA.

It is assumed that 1,156 acre-feet of carryover water would be available at the beginning of a dry year and the first year of a multi-year drought. Projected excess normal year supply ranges from 2,653 to 3,497 acre-feet for 2020-2040, suggesting that 1,156 acre-feet is a reasonable and somewhat conservative estimate for planning purposes. In the second and third year of a multi-year drought, the remaining carryover supply (presuming there is any) would continue to carry over to subsequent years to supplement supplies.

Under the above assumptions, the City would be able to meet projected supply deficiencies under all dry and multiple dry year scenarios within the planning period (2015-2040) through the use of available carryover water.

Advanced Table A Program

The Advanced Table A Program allows the Napa County Flood Control and Water Conservation District, the Solano County Water Agency, and Yuba City (along with subcontractors to those agencies, which includes American Canyon) to borrow against future SWP deliveries during times when annual deliveries are not sufficient to meet demand. Should all Table A and Table A carryover water be used, the City could request an advance of up to 949 acre-feet from future years' Table A allotments. The projections in Table 3.13-11 of the Draft EIR do not rely on the use of the Advanced Table A Program water to meet dry year demand, as estimated Table A carryover is enough to cover

supply deficiencies for all scenarios. However, this program provides an important tool available to the City should unforeseen circumstances result in significantly lower-than-expected carryover.

Drought Year Demand Reductions

The demand projections in the 2015 UWMP and the analysis in the WSA were not explicitly adjusted for voluntary or mandatory water use reduction measures that may be implemented in response to drought conditions. The City has a Water Shortage Contingency Plan that outlines water demand reduction measures that could be utilized when water supply is constrained.

On June 1, 2021, the City declared a Stage 1 drought emergency that called for a voluntary reduction from residential and commercial customers. On July 20, 2021, the City declared a Stage 2 drought emergency requiring all water customers to reduce their water use by 20 percent. As of the end of August 2021, water conservation measures have resulted in an 18 percent decrease from residential customers and 13 percent decrease from commercial customers.

Because estimated carryover water was sufficient to satisfy projected shortages, the supply and demand analysis in Table 3.13-11 does not account for drought year demand reduction. However, the City may choose to use these measures to provide additional flexibility during droughts. Assuming drought reductions of 13 percent, similar to what was achieved in 2014, the City could be expected to reduce demand in future years ranging between 305 acre-feet in 2015 and 537 acre-feet in 2040 (Draft EIR, Table 3.13-12). These measures could be used in conjunction with the above measures to provide an additional buffer, as needed, if other supplies are unexpectedly curtailed.

Open Market Purchases

The City has the option to purchase additional water from a variety of other sources on an as-needed and as-available basis. These potential purchases were not considered as a reliable long-term supply for the purposes of the WSA. Open Market Purchases can provide additional operational flexibility for the City during dry periods when other supplies are reduced.

Recycled Water

The City's recycled water system has a supply capacity of up to 1,271 AFY by 2035, and NapaSan has agreed to provide up to 591 acre-feet to supply the northern portion of the Airport Industrial Area (which is located within the City's water service area). Practically, however, the City produces recycled water to meet demand, as shown in Table 3.13-8. Recycled water is assumed to be 100 percent available during single- and multi-year-drought scenarios. Table 3.13-9 of the Draft EIR presents recycled water supply versus demand for the 2015-2040 planning period under various year-type scenarios.

The UWMP projected 1,862 acre-feet of recycled water use by 2035. Recent recycled water use has been much lower than projected in the UWMP. The City expects a significant expansion in the recycled water delivery system by 2035, allowing full use of the system by that time. Recycled water demand by sector is shown in Table 3.13-13 of the Draft EIR.

Potential Effect

Impact USS-2: The proposed project would not create a need for new or expanded wastewater collection or treatment facilities (**Draft EIR Pages 3.13-31—32**).

Findings: Less than significant impact (Draft EIR Page 3.13-32). No mitigation is necessary.

Facts in Support of Findings

Phases 1 and 2

The proposed project would be served by City of American Canyon for wastewater collection and treatment. The proposed project would connect to both an existing 12-inch diameter sewer line within Green Island Road and a future sewer line within the Devlin Road extension. Both lines convey effluent to the Green Island Road Sanitary Pump Station and ultimately the City's Water Reclamation Facility. The proposed project would generate 402,500 gallons of effluent per day (0.41 mgd) at buildout. Phase 1 of the proposed project would generate 276,800 gallons per day (0.28 mgd) and Phase 2 would generate 125,700 gallons (0.13 mgd) (Draft EIR, Table 3.13-14).

The Water Reclamation Facility has an existing design capacity of 2.5 mgd, with a phased improvement plan outlined to increase the plant capacity over time to 4 mgd. The proposed project's wastewater generation of 0.41 mgd would represent 16 percent of the existing treatment capacity and 10 percent of the future capacity. As such, existing and planned treatment capacity would be sufficient to serve the proposed project.

Potential Effect

Impact USS-3: The proposed project would not result in a need for new or expanded off-site storm drainage facilities (**Draft EIR Pages 3.13-32—33**).

Findings: Less than significant impact (Draft EIR Page 3.13-33). No mitigation is necessary.

Facts in Support of Findings

The proposed project would increase the amount of impervious surface coverage on the project site and would create the potential for increased runoff leaving the project site that may create potential flooding conditions in downstream waterways.

The proposed project would provide 110,766 square feet (2.6 acres) of storm drainage retention on-site. A network of underground piping ranging from 12- to 48-inches in diameter would convey runoff to bioretention and detention basins in the northern portion of the property.

In accordance with applicable provisions of Section C.3 of the San Francisco Bay RWQCB Municipal Regional Permit (Order No. R2-2015-0049, NPDES Permit No. CAS612008) (or more recent permit) as required under Mitigation Measure (MM) HYD-1b, the proposed project would implement LID stormwater management methods into the on-site storm drainage system consisting of rainwater harvesting and use, infiltration, evapotranspiration, or biotreatment.

These measures would serve to slow, reduce, and meter the volume of runoff leaving the project site and ensure that downstream storm drainage facilities are not inundated with project-related stormwater such that new or expanded facilities would be required.

Potential Effect

Impact USS-4: The proposed project's solid waste would not create a need for additional landfill capacity (**Draft EIR Pages 3.13-33—34**).

Findings: Less than significant impact (Draft EIR Page 3.13-34). No mitigation is necessary.

Facts in Support of Findings

This impact discussion assesses whether the proposed project would be served by a landfill with adequate capacity or comply with federal, State, and local statutes and regulations related to solid waste. Solid waste would be generated by construction and operational activities.

Construction Waste

Using a nonresidential construction waste generation rate published by the United States Environmental Protection Agency (EPA), development of the proposed project would generate an estimated 6,536 cubic yards of construction debris (Draft EIR, Table 3.13-15). This waste volume represents less than 0.01 percent of the 38.8 million cubic yards of remaining capacity at the Potrero Hills Landfill. Moreover, these values do not account for construction and demolition (C&D) debris recycling that would serve to divert waste from the landfill.

Operational Waste

Based on rates provided by Cal Recycle, the proposed project would generate an estimated 8,064 cubic yards of operational solid waste on an annual basis at buildout (Draft EIR, 3.13-16). This waste volume represents less than 0.01 percent of the 38.8 million cubic yards of remaining capacity at the Potrero Hills Landfill. Moreover, these values do not account for recycling and waste reduction activities that would serve to divert waste from the landfill.

Cumulative Impacts

The proposed project, in conjunction with other past, present, and reasonably foreseeable developments, would not have a cumulatively significant impact related to utilities and service systems (**Draft EIR, Page 4-14–16**).

Findings: Less than significant cumulative impact (Draft EIR, Page 4-16). No mitigation is necessary.

Facts in Support of Findings

Water

The geographic scope of the cumulative potable water analysis is the City of American Canyon Public Works Department service area, which includes the American Canyon city limits.

As previously discussed, the proposed project's demands would represent less than 1 percent of potable water supplies and 7 percent of recycled water supplies. Furthermore, the City of American Canyon's 2015 UWMP estimates that sufficient water is available to meet the needs of the service area through the year 2040, which accounts for the City of American Canyon's long-term growth assumptions. The City has adopted the Zero Water Footprint Policy that requires all new development to completely offset its potable water demand. The proposed project is required to

comply with this policy, as would other projects listed in Table 4-1 of the Draft EIR that are served by the City of American Canyon's Water Service Area.

For those projects that are located within the City's water service area and areas in the County that were included in the original water district service area, the 2015 UWMP anticipates adequate water supplies for all water year scenarios through 2040. These projects also would be required to demonstrate that they would be served with potable water service as a standard requirement of the development review process, and these projects may be required to implement water conservation measures and to meet the requirements of the Zero Water Footprint Policy. Furthermore, the proposed project does not require any off-site water facilities to be constructed and expanded and, thus, would not result in physical impacts on the environment from such activities.

Notably, Volume 2 of the Final EIR included an updated version of the Water Supply Assessment (WSA) prepared for the Project (dated December 6, 2022). The original WSA had been included within Appendix I to the Draft EIR. Volume 2 of the Final EIR also includes a technical memorandum prepared by WSA author Balance Hydrologics addressing whether the conclusions of the updated WSA remained valid in light of (i) the City Council's adoption on September 6, 2022 (via Resolution 2022-84) of an amendment to the City's 2015 UWMP to demonstrate compliance with Policy WR P1 (Reduce Reliance on the Delta Through Improved Regional Water Self -Reliance) of the Delta Plan adopted by the Delta Stewardship Council and (ii) the City's 2020 UWMP, which had been released to the public on January 18, 2023. The new memorandum concluded that neither the City Council's adoption of Resolution 2022-84 nor the 2020 UWMP provided any basis for altering the conclusion from the original and updated WSAs that the City's water system can meet the projected water demand of the Giovannoni Logistics Center Project in addition to existing and planned future uses over a 20-year projected time frame.

On the night of the scheduled February 21, 2023, hearing on the proposed project, the City received a letter from the City of Vallejo (Vallejo) alleging that the WSA was deficient and that, as a consequence, the water supply analysis in the FEIR was also deficient. More specifically, the letter contended that American Canyon's water supplies might not be sufficient to serve the project site, as those supplies included water purchased from Vallejo that had a limited place of use, which might not include the project site, and that litigation between the two cities cast further doubt on the validity of the WSA.

Shortly thereafter, William D. Ross, City Attorney for American Canyon, contacted American Canyon's water attorneys at the firm of Somach, Simmons & Dunn (Somach) and asked them to review the City of Vallejo correspondence and report back to him their reactions to the legal and factual arguments contained therein.

On March 10, 2023, attorneys Alexis K. Stevens and Kelley M. Taber of the Somach law firm provided to Mr. Ross a detailed legal memorandum addressing, point by point, the contentions made by Vallejo in its correspondence of February 21, 2023. The letter concluded that, notwithstanding the contentions made by Vallejo, the WSA was legally adequate and was factually accurate in concluding

that American Canyon has ample water to supply the proposed project along with other planned development during single dry and multiple dry year scenarios during a 20-year planning period. Among other conclusions, the memorandum explained that

> The WSA evaluates the Project water demand in the context of the City's full portfolio of available water supplies. The WSA does not assume that Vallejo Permit Water will be used to serve the Project, or that Vallejo Permit Water is necessary to meet the Project demand. The WSA and EIR show surplus potable water supply larger than the total Vallejo Permit Water in virtually every water year scenario. (DEIR Table 3.13-9.) The very low Project water demand (approximately 24 acre feet per year [AFY]) is well within American Canyon's total available supply and the estimated demand for urban and industrial use. Based on its portfolio of supply, American Canyon would not need to rely explicitly on Vallejo Permit Water to supply the Project and nothing in the WSA or EIR demonstrates that the City intends to serve the Project specifically with Vallejo Permit Water.
>
> ***
>
> The WSA, including the 2023 Update Memo, demonstrates that American Canyon has available supply to meet the Project's 24 AF per year (AFY) demand, without Vallejo water. Only 23 percent of the City's water supply is from the City of Vallejo in a "normal" year. As noted by Vallejo, the Project site is outside the place of use for Vallejo Permit Water, and thus the litigation could have no direct impact on that source of water for Project water supply.
>
> The Vallejo 2020 UWMP stated the following regarding its sale of water to American Canyon: "The [City's] contract does not allow for restrictions or reductions. For demand projection purposes, the full 3,074 AFY is assumed." In this case, the cited 3,074 AFY refers to the sum of raw (500 AFY), treated (2,074 AFY), and emergency water (500 AFY). The WSA assumed up to 3,706 AFY of available supply from Vallejo (in a 'normal year' occurring in 2045), but reduced to 3,565 AFY during dry years occurring in 2045 (treated water is assumed to be reduced by 20 percent, but 500 AFY of 'emergency water' would be available during those periods). Importantly, the American Canyon 2020 UWMP assumed a total supply from Vallejo of only up to 1,129 AFY (500 AFY of raw water plus 629 AFY of treated water) in normal years through the full planning period, and still concludes that sufficient water is available through purchase of supplemental water to meet demand.
>
> The litigation over the 1996 Agreement is in its early stages and it would be speculative to assume that it will result in any particular outcome. A discussion of the pending litigation would not add anything substantial to an understanding of Project water availability, particularly in light of Vallejo's adopted 2020 UWMP, which states the contract water cannot be reduced.

As described in the WSA, the City has alternative water supplies, including the option to purchase water if needed. The WSA assumed a reduction in supply from Vallejo during single-dry- and multi-dry-year scenarios. Furthermore, the American Canyon 2020 UWMP assumed only 629 AFY of treated water supplied from Vallejo (as opposed to the 2,074 assumed in the Vallejo 2020 UWMP). Should the litigation over the 1996 Agreement result in a further reduction in the City's portfolio of supply, it is reasonable to assume the City would acquire a substitute supply. The City's 2015 and 2020 UWMPs both concluded that predicted water supply constraints can be resolved through the purchase of "supplemental imported water through existing agreements through the planning horizon (2045) for all water year scenarios" (2020 UWMP, pp. 1-2.) Although the WSA did not assume that purchased water was a reliable enough supply for the purposes of accounting in the formal supply/demand projections, the fact remains that water purchases, both temporary and permanent, are commonly used in California to redirect water resources to areas of greatest need, consistent with the legislative policy of the state to facilitate water transfers. (See Wat. Code, §§ 475, 480 et seq.)

Wastewater

The geographic scope of the cumulative wastewater analysis is the American Canyon Wastewater Treatment Plant service area, which encompasses the American Canyon city limits and areas within the Napa County Airport Industrial Park south of Fagan Creek.

The treatment plant has an existing design capacity of 2.5 million gallons per day (mgd) and the City has plans to increase it to 4 mgd over time. All future projects that are tributary to the American Canyon Wastewater Treatment Plant would be required to demonstrate that sewer service is available to ensure that adequate sanitation can be provided. As previously discussed, the proposed project's estimated wastewater generation would represent 10 percent of the average daily flow treated by the expanded WWTP.

The sewer flows assumed from the proposed project are significantly less than anticipated for industrial projects in previous City planning documents. This is a result of the conservation activities that reduce water use and, in turn, reduce sewer flows. The original planning documents were drafted prior to the State passing all the conservations laws (2008-2010) and before the City defined the Zero Water Footprint Policy. The City has verified that the treatment plant has enough capacity to serve the planned development for Phases 1 and 2 of the proposed project, along with other projects that would be tributary to the WWTP.

Storm Drainage

All future development projects in the City are required to provide storm drainage facilities that collect and detain stormwater. The storm drainage facility shall include provisions for future upstream development and no development shall discharge at a rate that exceeds the capacity of any portion of the existing downstream system. Runoff from storms up to the 100-year return frequency are conveyed through storm facilities and disposed of in a manner that protects public and private improvements from flood hazards. The proposed project would install an on-site storm drainage system consisting of inlets, piping, and a series of detention basins. The peak discharge

from the detention basin shall not exceed 90 percent of the undeveloped peak flow from the 24-hour, 100-year storm event. As such, the proposed project would ensure no net increase in stormwater would leave the project site during a peak storm event and would avoid cumulatively significant stormwater impacts to downstream waterways at times when capacity is most constrained. The proposed project would implement standard stormwater pollution prevention measures during construction to ensure downstream water quality impacts are minimized to the greatest extent possible. In addition, the proposed project would provide water quality measures to prevent pollution during project operations. Most past, and all present and reasonably foreseeable future development must comply with these State and local requirements that ensure no significant adverse cumulative impacts would result.

Solid Waste

The geographic scope of the cumulative solid waste analysis is the City of American Canyon. American Canyon Recology provides solid waste and recycling collection services to commercial customers in the City of American Canyon.

Many past and all present and reasonably foreseeable future development projects, which have or would generate construction and operational solid waste and, depending on the volumes and end uses, have been or would be required to implement recycling and waste reduction measures. As previously discussed, the proposed project's construction and operational solid waste generation would represent less than 1 percent of the remaining capacity at this facility. As such, landfill capacity is sufficient to serve the proposed project as well as existing and planned land uses in the City of American Canyon for the foreseeable future. Additionally, the nearby Devlin Road Transfer Station offers construction and demolition debris recycling and incentivizes such activities through pricing. Thus, it would be expected that some of the projects listed in Table 4-1 of the Draft EIR would use such debris recycling services, which would divert materials from landfills, thereby extending the operational life of Potrero Hills Landfill.

1.6 - Potential Environmental Effects Which Can Be Mitigated Below a Level of Significance

The City of American Canyon hereby finds that feasible mitigation measures have been identified in the EIR that will avoid or substantially lessen the following potentially significant environmental impacts (i.e., mitigate them to a less than significant level). The potentially significant impacts, and the mitigation measures that will reduce them to a less than significant level, are as follows:

1.6.1 - Aesthetics

Potential Effect

Impact AES-3: The proposed project may create a new source of substantial light or glare which would adversely affect day or nighttime views in the area (**Draft EIR Page 3.1-6–7**).

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.1-7). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM AES-3 Prior to issuance of building permits for the proposed project, the project applicant shall prepare and submit a photometric plan to the City of American Canyon for review and approval which demonstrates that all exterior light fixtures would be directed downward or employ full cut-off fixtures to minimize light spillage and avoid interference with aviation operations at the Napa County Airport. The approved plan shall be incorporated into the proposed project.

Facts in Support of Findings

Phases 1 and 2

The proposed project development would result in the installation of new sources of light and glare on the project site. These new sources of light include additional street lighting along internal roadways, building-mounted light fixtures, and pole-mounted light fixtures within parking areas. Additionally, illuminated signage may be employed. Mitigation Measure (MM) AES-3 requires the project applicant to prepare and submit a photometric plan to the City of American Canyon for review and approval to demonstrate that all exterior light fixtures would be directed downward or employ full cut-off fixtures to minimize light spillage and avoid interference with aviation operations at the Napa County Airport. Downward-directed lighting and full cut-off fixtures would prevent the trespass of light and glare onto neighboring properties or conflict with aviation operations.

The City finds that MM AES-3 is feasible, is adopted, and will further reduce impacts related to light and glare. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts associated with aesthetics would be less than significant with mitigation incorporated.

1.6.2 - Biological Resources

Potential Effect

Impact BIO-1: The proposed project could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or Unites States Fish and Wildlife Service (**Draft EIR Page 3.3-22–28; Final EIR, vol. 2, Pages 4-1 – 4-2; see also Final EIR, vol. 2, Master Response A**).

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.-26). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM BIO-1a Pre-construction surveys for Swainson's hawk shall be conducted in the project site vicinity prior to initiation of project construction activities and each year following

initiation of construction if project activities are delayed or discontinued for 7 or more days prior to the first required survey period (March 20 to April 5) and are scheduled to recommence construction activities during the second survey period but before August 1. These pre-construction surveys shall include investigation of all potential nesting trees within a half-mile radius around all project activities and shall be completed for at least two survey periods immediately prior to commencement of project construction. Surveys shall be conducted in accordance with CDFW's "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFW 2000) to maximize the potential for locating nesting Swainson's hawk and reduce the potential for nest failures due to project activities and/or disturbances.

If no nesting Swainson's hawks are found during the first or second required survey periods starting March 20 and extending to April 20, then project construction may commence. If during the third survey (June 10 to July 30) Swainson's hawks are found to be nesting in the project vicinity and construction has commenced, it shall be assumed the Swainson's hawk commenced nesting and thus the Swainson's hawk are habituated to the ambient level of noise and disturbance emanating from the project site. If Swainson's hawks are found to be nesting within 0.25-mile of the project site, a non-disturbance buffer shall be established to keep all construction activities a minimum of 0.25-mile from the nest site. The CDFW shall be consulted regarding the adequacy of the buffer established by the qualified Raptor Biologist. At that time the necessity for acquiring a Fish and Game Section 2081 Incidental Take Permit (ITP) authorization would be determined. An ITP authorization shall be required if there were a valid concern the project activities would result in the "take" of an adult Swainson's hawk, eggs, or nestlings.

Surveys shall be conducted by a qualified Raptor Biologist with at least a minimum of a 4- year college degree in wildlife biology or related environmental science, familiarity with Swainson's hawk and its local ecology, and 2 years of experience surveying for and detecting Swainson's hawk pursuant to "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" survey protocol. No disturbance such as construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is complete based on monitoring of the active nest by a qualified Biologist.

MM BIO-1b No more than 30 days prior to the first ground disturbance activity, pre-construction golden eagle nesting surveys shall be conducted in the project vicinity by a qualified Raptor Biologist. The qualified Raptor Biologist shall have a minimum of a 4- year college degree in wildlife biology or related environmental science, at least 2 years conducting wildlife surveys, and a familiarity with golden eagle and its local ecology. Pre-construction surveys shall include investigation of all potential nesting trees within a survey area determined by the qualified Raptor Biologist, but no less than a 1 mile radius around all project activities. If active golden eagle nests are identified within any trees within the survey areas a 1 mile radius of the project site, a

qualified Raptor Biologist shall establish a protection buffer of approximately 1 mile feet that is adequate to ensure noise or activity from the proposed project would not cause nest disturbance of young or adult bird mortality. Buffer zones may vary in size as some golden eagles are more acclimated to disturbance than others. Size of buffer zone may be modified by the qualified Raptor Biologist considering the type of construction activity that may occur and the behavioral factors and extent that golden eagle may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young golden eagles have fledged or that the nesting cycle is complete based on monitoring of the active nest by the qualified Biologist.

MM BIO-1c Prior to ground disturbance, a pre-construction nesting survey shall be conducted for northern harrier and short-eared owl by a qualified Raptor Biologist if construction is scheduled during the nesting season (February 1 through September 1). The qualified Raptor Biologist shall have at least 2 years of experience surveying for and detecting nesting northern harrier and short-eared owl. To determine whether northern harrier or short-eared owl is nesting on-site, a qualified Raptor Biologist(s) shall conduct walking transects through the project site grassland habitat searching for nests and minimum 500-foot radius from project site. Where the survey area encroaches onto private property not accessible to the public (e.g., fenced in commercial property, residential backyard, etc., the qualified Biologist shall either contact the property owner for permission to physically access the property or conduct a visual survey of adjacent areas by scanning with binoculars or a spotting scope. An active northern harrier or short-eared owl nest must be protected by implementing a minimum 500-foot radius buffer zone around the nest marked with orange construction fencing. If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Size of buffer zone could be increased considering the type of construction activity that may occur, physical barriers between the construction site and active nest, and the behavioral factors and extent that northern harrier or short-eared owl may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is otherwise determined to be complete based on monitoring of the active nest by a qualified Raptor Biologist.

MM BIO-1d Prior to any ground disturbance, pre-construction surveys for burrowing owl shall be conducted within a minimum of 150 meters of the project site. Where the survey area encroaches onto private property not accessible to the public (e.g., fenced in commercial property, residential backyard, etc.), the qualified Biologist shall either contact the property owner for permission to physically access the property or conduct a visual survey of adjacent areas by scanning with binoculars or a spotting scope. The pre-construction surveys shall be conducted within 2 weeks prior to the onset of any ground-disturbing activities. Surveys shall be conducted by a qualified

Biologist following California Department of Fish and Wildlife (CDFW) 2012 staff report survey methods and Biologist qualifications to establish the status of burrowing owl on the project site.

- If burrowing owl are found to occupy the project site during the nonbreeding season (September 1 to January 31), occupied burrows shall be avoided by establishing a no-disturbance buffer zone a minimum of 100 feet around the burrow. Buffers may be adjusted to address site-specific conditions using the impact assessment approach described in the CDFW 2012 staff report. If a qualified Raptor Biologist determines the location of an occupied burrow/s may be impacted even with a 100-foot buffer, or the burrow(s) are in a location(s) on the project site where a buffer cannot be established without preventing the proposed project from moving forward, then a passive relocation effort may be instituted to relocate the individual(s) out of harm's way pursuant to a Burrowing Owl Exclusion Plan prepared in accordance with the CDFW 2012 staff report.
- If burrowing owl are found to be present during the breeding season (February 1 to August 31), the proposed project ground-disturbing activities shall follow the CDFW 2012 staff report recommended avoidance protocol whereby occupied burrows shall be avoided with a no-disturbance buffer.
- If burrowing owls are ultimately found on the site and burrow eviction/ relocation of burrowing owls during the non-nesting season is a selected strategy to move forward with the project without direct impacts to burrowing owl individuals, the applicant shall coordinate this effort with CDFW and provide habitat mitigation consistent with the 2012 CDFW Staff Report on burrowing owl.

Facts in Support of Findings

Implementation MM BIO-1a, MM BIO-1b, MM BIO-1c and MM BIO-1d would avoid the "take" of Swainson's hawk and golden eagle defined by California Endangered Species Act (CESA); avoid disturbing a northern harrier or burrowing owl active nest; and avoid harming a burrowing owl during the nonbreeding season if it is occupying a burrow within the project site.

Special-status Plants

HBG retained Dr. Brent Helm of Helm Biological Consulting, a division Tansley Team, Inc., to conduct botanical surveys for the presence of special-status plant species with the potential to occur at the site. These botanical surveys utilized CDFW protocols identified in "Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities" dated March 20, 2018.

Helm Biological Consulting conducted a 10-mile radius search using the California Natural Diversity Database (CNDDB) and determined 23 special-status plant species were associated with habitats that are known to occur near the project site. Helm Biological Consulting conducted botanical surveys during the spring of 2021 and survey dates were chosen based on when the special-status plants would be in bloom or otherwise visible. Based on the Helm Biological Consulting botanical

survey results, no special-status plant species occur on the project site. Therefore, no impacts to special-status species would occur from construction of the proposed project.

Special-status Animals

Monarch Butterfly

No trees are present on the project site so there is no possibility for the presence of a monarch butterfly overwintering site at the project site. Studies of the site or portions of the site have not indicated the presence of milkweed plants of the genus Asclepias that serve as the larval host plant for monarchs. Therefore, no potentially significant impacts to monarch butterflies would result from construction of the proposed project.

Vernal Pool Fairy Shrimp

LSA Inc. conducted dry season vernal pool fairy shrimp surveys in summer of 2016, and Monk & Associates, Inc. conducted wet season vernal pool fairy shrimp surveys in winter of 2016-2017. Survey methods were conducted in accordance with the USFWS revised Survey Guidelines for the Listed Large Branchiopods (May 31, 2015). No vernal pool fairy shrimp were observed during the dry or wet season surveys. Therefore, no impacts to vernal pool fairy shrimp would result from construction of the proposed project.

California Red-legged Frog

A habitat assessment prepared for the project site by Rana Resources found that the project site lacks habitat necessary to support the California red-legged frog. There is no suitable breeding or rearing habitat for California red-legged frog on-site due to the shallow and ephemeral nature of the seasonal wetlands and the lack of any suitable riparian vegetation for cover. Therefore, no impacts to California red-legged frog would result from construction of the proposed project.

Western Pond Turtle

Suitable habitat for western pond turtle does not occur on the site due to the shallow and ephemeral nature of the seasonal wetlands, which are inundated for only about 3 to 4 months out of the year and even less in drought years. Surrounding uplands of suitable shrub/woodlands and appropriate basking sites are also lacking. No impacts to western pond turtle would result from development of the proposed project.

Swainson's Hawk

The operative significance thresholds for impacts to Swainson's hawk are (i) whether the proposed project would have a substantial adverse effect on the species, either directly or through habitat modifications, or (ii) whether the project would substantially reduce the number or restrict the range of the species. Although the project will result in a net loss of foraging habitat, such a net loss occurring in the particular area in which the project site is located will not cause either a substantial adverse effect on the species, a substantial reduction in its numbers, or a substantial restriction of its range. There is no need to "net out the impact of a proposed project" for that impact to be less than significant. (See *Save Panoche Valley v. San Benito County* (2013) 217 Cal.App.4th 503, 529). There are no trees located on the project site, and no large trees capable of supporting nesting by Swainson's hawk in the immediate project vicinity. The non-native grasslands and seasonal wetlands and swales found on the property provide suitable foraging habitat for Swainson's hawk that may

nest away from the project site. Swainson's hawk was observed foraging on the site during surveys conducted in April and May 2021. Development of the proposed project would remove some foraging area for this species. However, development of the proposed project would also provide and preserve in perpetuity approximately 44.8 acres of open space that would include habitat currently suitable for foraging by the Swainson's hawk. The adjacent Napa Logistics Park Project has preserved 37 acres of grassland and wetlands in perpetuity that provides foraging habitat for Swainson's hawk. Between these two preservation areas abutting and directly adjacent to the project site, approximately 82 acres of suitable habitat would be available for the Swainson's hawk. In addition, there are several large open space preserves within 2 and 5 miles of the project site, which combined provide approximately 2,000 acres of suitable foraging habitat. The relatively small loss of foraging habitat on the project site will not affect the range of the species or cause the loss of substantial numbers of individual hawks. The proposed 45-acre Wetland Preserve with its seasonal wetlands would be available to provide foraging habitat for the Swainson's hawk in perpetuity. Additionally, less than 2 miles from the project site are 620 acres of dedicated open space (Newell Open Space) that are also preserved in perpetuity. The Newell Open Space appears to primarily comprise annual grassland with discrete areas of oak woodland and riparian woodland. Further, the Newell Open Space abuts other dedicated open space preserves, including the 1,039-acre Lynch Canyon Open Space Park and the American Canyon 308-acre California red-legged frog preserve. Combined, these open spaces dedicate over 2,000 acres of open space that can be used for foraging by the Swainson's hawk because the open space supports the small mammals, amphibians, reptiles, and birds on which Swainson's hawks prey. This demonstrates that based on the limited number of Swainson's hawk records in Napa County, there is more than sufficient foraging habitat in the area that will be preserved in perpetuity to support actively nesting hawks and that further provide foraging habitat for other raptors of concern, specifically golden eagles and western burrowing owls. Accordingly, the proposed project would not result in significant impacts to foraging habitat either directly, indirectly, or cumulatively. The net loss of foraging habitat resulting from the proposed project will not cause either a substantial adverse effect on the species, a substantial reduction in its numbers, or a substantial restriction of its range. Construction of the proposed project would not be expected to affect the nesting population of Swainson's hawk known from Napa County. Accordingly, additional preservation over and above the 45-acre Wetland Preserve is not warranted for the proposed project. Based upon the limited number of known Swainson's hawk to occur within a 10-mile radius of the project site and the acreage of existing foraging habitat currently protected, the proposed project would not result in significant impacts to foraging habitat directly, indirectly, or cumulatively. Therefore, no mitigation is warranted for Swainson's hawk foraging habitat.

Although eucalyptus and other large trees located within about 0.25 mile from the project site provide potential nesting habitat, no nesting by Swainson's hawk (or any raptor species) was noted during surveys for nesting Swainson's hawk conducted by HBG in April and May 2021. Pre-construction nesting surveys, as described in MM BIO-1a, are warranted to ensure that the proposed project will not impact Swainson's hawk.

Golden Eagle

There are no trees located on the project site, and no large trees capable of supporting nesting by golden eagle in the immediate vicinity of the project site; however, the non-native grasslands and seasonal wetlands and swales found on the property provide suitable foraging habitat for golden

eagle that may nest away from the project site. Accordingly, for the same reasons the proposed project would not result in an indirect or cumulative loss of Swainson's hawk foraging habitat, it would also not result in a significant indirect or cumulative loss of golden eagle foraging habitat.

A single golden eagle was observed exhibiting foraging behavior on the site in spring 2021. No nesting by golden eagle (or any raptor species) was noted during surveys for nesting Swainson's hawk conducted in April and May 2021.

As golden eagle has been known to nest in the general area of the City of American Canyon, future nesting in suitable nest trees as close as about 0.25 mile from the project site cannot be ruled out. Pre-construction surveys for golden eagle, as described in MM BIO-1b, are warranted to ensure that construction activities do not result in impacts to nesting individuals of this species.

Northern Harrier

Suitable nesting habitat for the northern harrier (a State Designated Species of Special Concern) occurs within the non-native grasslands and seasonal wetlands and swales found within the project site. Northern harrier individuals were observed foraging over the project site during both winter and spring (breeding) seasons during surveys conducted by Helm Biological Consulting. Pre-construction surveys for northern harrier, as described in MM BIO-1c, are warranted to ensure that construction activities do not result in impacts to nesting harriers.

Burrowing Owl

A small number of burrowing owl have been recorded in the CNDDB within the general project vicinity, with the nearest reports from as close as about 1.7 miles north of the project site and about 2.5 miles south. No burrowing owl or occupied California ground squirrel burrows were observed on the project site during a field review conducted by Helm Biological Consulting in December 2020 and April and May 2021, or during previous biological studies conducted by Monk & Associates, LSA Associates, or Rana Resources. It is possible that ground squirrel could establish colonies on the site in the future prior to project construction, providing new occupiable habitats for burrowing owl. The proposed project shall implement MM BIO-1d to ensure that no burrowing owl would be impacted by construction activities.

Tricolored Blackbird

Helm Biological Consulting has concluded that vegetative characteristics of preferred nesting habitat for tricolored blackbird does not occur at the project site. Therefore, no impacts to tricolored blackbird nesting colonies would result from implementation of the proposed project.

The City finds that MM BIO-1a, MM BIO-1b, MM BIO-1c and MM BIO-1d are feasible, are adopted, and will further reduce impacts to related species. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts associated with biology would be less than significant with mitigation incorporated.

Potential Effect

Impact BIO-2: The proposed project could have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulation or by the California Department of Fish and Wildlife or United States Fish and Wildlife Service (**Draft EIR Page 3.3-28–29; Final EIR, vol. 2, Page 4-3; see also Master Response A**).

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.3-29). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM BIO-2 To offset the loss of the 0.496 acre of seasonal wetland impacts from Phase 1, and 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools from Phase 2, and to ensure there is no-net loss of wetland area, the applicant shall establish/create 0.992 acre of palustrine emergent wetlands (2:1 ratio) for Phase 1 concurrent with project construction, and 2.57 acres of seasonal wetlands (1:1 ratio) and 1.13 acres of vernal pool wetlands (1:1 ratio) for Phase 2 at least 1 year prior to the start of Phase 2 construction, on the 45-acre Wetland Preserve. The established/created wetlands will be constructed a minimum of 20 feet from the Napa Logistics Park sewer and recycled water pipeline easement or unpaved access road associated with the easement. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland.

Facts in Support of Findings

The proposed project would impact a total of 3.70 acres of wetland. Implementation of MM BIO-2 would offset permanent impacts to the palustrine emergent wetlands and vernal pools and ensure there is no net loss of wetland area.

The portion of the project site along the northern boundary contained within the confines of No Name Creek would be subject to the regulatory jurisdiction of the CDFW under Fish and Game Code Section 1602. No impacts would occur and there would be no requirement to obtain a Streambed Alteration Agreement from the CDFW. As the area of No Name Creek is contained within the approximately 45-acre Wetland Preserve, no impacts to the palustrine emergent wetland swale/seasonal wetland associated with No Name Creek would occur from either Phase 1 or 2 of the proposed project.

The City finds that MM BIO-2 is feasible, is adopted, and will further reduce impacts related to wetlands. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts would be less than significant with mitigation incorporated.

Potential Effect

Impact BIO-3: The proposed project could have a substantial adverse effect on State or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruptions, or other means (**Draft EIR Page 3.3-29–36; Final EIR, vol. 2, Pages 4-3 – 4-7; see also Final EIR, vol. 2, Master Response C**).

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.3-32). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM BIO-3a Prior to issuance of the Phase 1 grading permit, the project applicant shall apply for and obtain a Nationwide Permit from the San Francisco District of the United States Army Corps of Engineers (USACE) for discharge within 0.004 acre of wetlands/waters of the United States under Clean Water Act (CWA) Section 404 jurisdiction. For the USACE permit to be valid, the applicant shall apply for and obtain the accompanying Section 401 Water Quality Certification from the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB). The applicant shall apply for and obtain a separate Waiver of Waste Discharge Requirements from the San Francisco Bay RWQCB for impacts to 0.496 acre of wetlands/waters of the State. To offset the loss of 0.496 acre of permanent wetland impacts and to ensure there is no-net loss of wetland area, the applicant shall establish/create 0.992 acre of wetlands (2:1 ratio), prior to or concurrent with the start of construction, on the 45-acre Wetland Preserve. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland. The applicant shall implement the terms of the approved permit(s).

MM BIO-3b Prior to issuance of the Phase 2 grading permit, the project applicant shall apply for and obtain an Individual Permit from the San Francisco District of the United States Army Corps of Engineers (USACE) for the placement of fill material within approximately 3.7 acres of wetlands/waters of the United States under Clean Water Act (CWA) Section 404 jurisdiction. For the USACE permit to be valid, the applicant shall apply for and obtain the accompanying Section 401 Water Quality Certification from the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB). The applicant shall apply for and obtain a separate Waiver of Waste Discharge Requirements from the San Francisco Bay RWQCB for the discharge of fill material within approximately 3.7 acres of waters of the State. To offset the loss of 3.7 acres of permanent wetland impacts and to ensure there is no-net loss of wetland area or permanent loss of functions and values, the applicant shall establish/create 2.57 acres of seasonal wetlands (1:1 ratio) and 1.13 acres of vernal pools (1:1 ratio), at a minimum of 1 year prior to the start of construction, on the 45-acre Wetland Preserve. The established/created wetlands and vernal pools shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and

RWQCB's definition of a wetland. The applicant shall implement the terms of the approved permit(s).

MM BIO-3c Prior to issuance of the Phase 1 grading permit, a Wetland Mitigation and Monitoring Plan shall be prepared and submitted to the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB) for review as part of the process for obtaining a permit from the agency. The Wetland Mitigation and Monitoring Plan shall address the loss of 0.496 acre of wetlands impact due to Phase 1 of the proposed project as well as the potential loss of approximately 3.7 acres of wetlands that as part of Phase 2. The Wetland Mitigation and Monitoring Plan shall include in irrevocable instrument (e.g., deed restriction or conservation easements) that shall restrict use of both the 0.992 acre of created wetlands for Phase 1 as well as approximately 3.7 acres of additional wetlands created for Phase 2. The Wetland Mitigation and Monitoring Plan shall also include a long-term endowment that would be fully funded by the proposed project to manage the approximately 45-acre open space preserve and created wetlands in perpetuity. If additional wetland mitigation lands are required to compensate for wetland impacts associated with Phase 2, wetlands shall be established/created at a minimum 1:1 ratio (1 acre established/created for every acre permanently impacted) on appropriate mitigation land, approved by the RWQCB and United States Army Corps of Engineers (USACE), within the Phase 2 project site's Hydraulic Unit Code (HUC) 10 watershed. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland. The applicant shall implement the terms of the approved permit(s).

MM BIO-3d Prior to issuance of the Phase 1 and Phase 2 grading permit, a Wetland Mitigation and Monitoring Plan shall be submitted to the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB) for review as part of the process for obtaining a permit from the agency. The Wetland Mitigation and Monitoring Plan shall be prepared in accordance with the Subpart J–Compensatory Mitigation for Losses of Aquatic Resources outlined in the California State Water Resources Control Board (State Water Board) Procedures, and in accordance with the State Water Board Implementation Guidance dated April 2020, and in accordance with the United States Army Corps of Engineers (USACE) Compensatory Mitigation Rule (33 Code of Federal Regulations Part 332)

The basic objective of the Wetland Mitigation and Monitoring Plan is to ensure that project wetland impacts, and compensatory mitigation proposed to offset the wetland impacts, shall provide a no-net-loss of area of wetlands, and wetlands established/created shall be in-kind to the wetlands impacted. In summary, the Wetland Mitigation and Monitoring Plan shall at a minimum:

1. Preserve 7.58 acres of existing seasonal wetlands and 0.13 acre of vernal pools within the 45-acre Wetland Preserve.

2. Establish within the Wetland Preserve approximately 0.992 acre of seasonal wetlands in advance of or concurrent with implementation of Phase 1 impacts to 0.496 acre of palustrine emergent wetlands at a 2:1 ratio.
3. Establish within the Wetland Preserve approximately 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools in advance of implementation of future Phase 2, assuming Phase 2 is built out, to address the potential maximum losses of approximately 3.7 acres of wetlands that may occur.
4. Provide financial assurances to ensure a high level of confidence that the compensatory mitigation shall be successfully completed, in accordance with applicable performance standards.
5. Design ecological performance standards to assess whether the Wetland Mitigation and Monitoring Plan is achieving the overall objectives, so that it can be objectively evaluated to determine whether it is developing into the desired resource type (vernal pool, seasonal wetland e.g.), and attaining any other applicable metrics such as acres, number of native plant species, water saturation and/or ponding depth etc.
6. Monitor the site for a duration necessary to determine whether the Wetland Mitigation and Monitoring Plan is meeting the performance standards. Established palustrine emergent wetlands and vernal pools typically develop quickly on soils with clay restrictive horizon. The 45-acre Wetland Preserve does have a clay restrictive layer approximately 8–18 inches below the surface, therefore a 5-year monitoring period would be sufficient to determine whether performance standards are met. This monitoring period may be extended if performance standards are not met due to how the wetlands were constructed or natural events such as severe droughts.
7. Protect the approximately 45-acre Wetland Preserve in perpetuity using a conservation easement and provide an endowment sufficient to fund the Long-Term Management Plan.
8. An overall assessment of the condition of the wetlands that shall be permanently impacted by the proposed project shall be conducted using the California Rapid Assessment Method (CRAM) for depressional wetlands, or a hybrid approach based on CRAM. Each similar wetland type that may be impacted shall be assessed to describe the floristic community and record the native and non-native dominant plants within the vernal pool and palustrine emergent wetlands. Physical structure such as topographic complexity and physical features that may provide habitat for aquatic species (e.g., boulders, woody debris etc.) shall be recorded and used to design the created/established wetlands. The purpose of this assessment is to ensure the design of the wetlands shall provide habitat that is similar to the wetlands being impacted to ensure the impacted wetlands are mitigated in-kind.

Performance Standards

Performance Standards shall include at a minimum the following:

Years 1, 2, 3, 4 and 5 Performance Standards for Wetland Hydrology

Each year wetland hydrology shall be measured during the winter when surface and/or subsurface hydrology would be observable. A minimum of 1 data point shall be taken in each of the established/created wetlands. In addition, wetland hydrologic indicators shall be recorded each spring during the vegetation monitoring period.

Year 1:

Performance standard would be met for Year 1-5 if:

- The created wetlands remain inundated to a minimum depth of 0.5 inch or greater for at least 7 days and/or saturated for at least 14 days and/or at least one primary or two secondary wetland hydrology indicators listed in the *Arid West Region Wetland Determination Data Forms* are recorded.

Contingency Measures:

If the annual performance standard is not being met for any given monitoring year the Permittee shall prepare an analysis of the cause(s) of failure and, if determined necessary, implement remedial action. If the Plan Area has not met the performance standard, the Permittee's maintenance and monitoring obligations shall continue until the RWQCB and CDFW give final project confirmation.

Remedial action may include re-grading to achieve wetland hydrology, which would improve hydric soil formation.

Years 1, 2, 3, 4, and 5 Performance Standards for Increase in Colonization of Wetland Vegetation

Each year during the spring or early summer wetland vegetation cover shall be measured by conducting a site visit and recording absolute cover and dominant plant species observed within the wetland buffer area. A minimum of 1 data point shall be taken in each of the established/created wetlands. The colonization of wetland vegetation shall be measured by determining overall absolute plant cover values each year. This shall be accomplished by measuring absolute cover values within a 5-foot radius sample plot every 50 feet along a transect through each established/created wetland. In addition, to monitor for invasive plant species within the uplands which are not detected in the baseline survey, a minimum of three 5-foot radius sample plots on the east side and three on the west side will be placed at random upland locations along a linear transect east to west within the Wetland Preserve. During Year 4 and 5 the managed landscaped areas within the development will be visually surveyed for evidence of invasive plant species. Performance Standards for each monitoring year are listed below.

Year 1:

Performance standard would be met for Year 1 if:

- At least one hydrophytic plant species colonizes the established/created seasonal wetlands and vernal pools; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 5 percent or greater.

Year 2:

Performance standard would be met for Year 2 if:

- At least one hydrophytic plant species colonizes the established/created seasonal wetlands and vernal pools; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 10 percent or greater.

Year 3:

Performance standard would be met for Year 3 if:

- At least two hydrophytic plant species colonizes the established/created seasonal wetlands;
- At least two native hydrophytic plant species colonizes the established/created vernal pools and at least one is a vernal pool habitat indicator species; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 20 percent or greater and comprised of native and naturalized species.

Year 4:

Performance standard would be met for Year 4 if:

- At least two hydrophytic plant species colonize the established/created seasonal wetlands.
- At least two native hydrophytic plant species colonizes the established/created vernal pools and at least one is a vernal pool habitat indicator species.
- The average absolute cover of wetland vegetation within an established/created seasonal wetland and vernal pool is 30 percent or greater.
- To meet the wetland performance standard invasive plant species within the wetlands shall not comprise greater than 5 percent of the total absolute cover. To meet the upland performance standard, invasive plant species, which currently are not supported in the uplands within the Wetland Preserve, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as “High” by California Invasive Plant Council (Cal-IPC) and species on the ”Alert” or “Watch” list with a High rating.
- The managed landscaped areas within the development will be visually surveyed for evidence of invasive plant species. To meet the managed landscape performance standard, invasive plant species, which currently are not supported in the uplands within the Wetland Preserve, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as “High” by

California Invasive Plant Council (Cal-IPC) and species on the ”Alert” or “Watch” list with a High rating.

Year 5:

Performance standard would be met for Year 5 if:

- At least two hydrophytic plant species documented during the CRAM assessment for the palustrine emergent wetlands impacted on the Phase 1 project site colonize the established/created seasonal wetlands.
- At least two native vernal pool habitat indicator species documented during the CRAM assessment for the vernal pool on the Phase 2 project site colonizes the established/created vernal pools.
- The average absolute cover of wetland vegetation within the established/created seasonal wetland (non-vernal pool wetlands) is 40 percent or greater; and the average absolute cover of wetland vegetation within the established/created vernal pools is 40 percent or greater of which greater than 50 percent of the vegetation cover consists of two or more dominate native vernal pool habitat indicator plants.
- To meet the wetland performance standard invasive plant species within the wetlands shall not comprise greater than 5 percent of the total absolute cover. To meet the upland performance standard, invasive plant species, which currently are not supported in the uplands, within the Wetland Preserve shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as “High” by California Invasive Plant Council (Cal-IPC) and species on the “Alert” or “Watch” list with a High rating.
- The managed landscaped areas within the development will be visually surveyed for evidence of invasive plant species. To meet the managed landscape performance standard, invasive plant species, which currently are not supported in the uplands within the Wetland Preserve, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as “High” by California Invasive Plant Council (Cal-IPC) and species on the “Alert” or “Watch” list with a High rating.

Contingency Measures:

If the annual performance standard is not being met for any given monitoring year the Permittee shall prepare an analysis of the cause(s) of failure and, if determined necessary, implement remedial action. Remedial action may include hydroseeding with native species, or addition of supplemental topsoil or mulch to promote growth, control of invasive using mechanical equipment, grazing animals.

Year 5 No-Net-Loss Performance Standard for Phase 1 Impacts

Performance standard would be met for Year 5 when;

- A wetland delineation is performed and verified by the USACE and confirms a minimum of 0.992 acre of wetlands have been established/created within the Wetland Preserve.

Year 5 No-Net-Loss Performance Standard for Phase 2 Impacts

The Phase 2 no-net-loss performance standard would be measured when an application for the Phase 2 project is submitted to the RWQCB and USACE, and the Phase 2 project is approved. Once Phase 2 has been approved by the RWQCB and USACE, this performance standard may be modified depending on the level of wetland impacts authorized by the RWQCB and USACE, meaning this performance standard may decrease if the wetlands impacted for Phase 1 are less than 3.7 acres.

Performance standard would be met for Year 5 when;

- A wetland delineation is performed and verified by the USACE and confirms a minimum of 2.57 acres of seasonal wetland and 1.13 acres of vernal pools have been established/created within the Wetland Preserve.

Year 5 Long-Term Protection and Long-Term Funding

Performance standard would be met for Year 5 once:

- The Wetland Preserve has been placed under a conservation easement; and
- A long-term financing mechanism (e.g., non-wasting endowment, trusts, contractual arrangement etc.) to fund implementation of the long-term management of the Wetland Preserve has been secured.

Facts in Support of Findings

Implementation of MM BIO-3a, MM BIO-3b, MM BIO-3c, and MM BIO-3d, would offset permanent impacts in-kind to the palustrine emergent wetland and in-kind to the vernal pools and ensure there is no net loss of wetland area.

Region 1 of the USFWS developed the "Recovery Plan for Vernal Pool Ecosystems of California and Southern Oregon" dated December 15, 2005. The recovery plan includes designated "core" areas that are specific sites necessary to recover endangered or threatened species or to conserve the species of concern addressed in this recovery plan. The project site is near two core areas referred to as the "Napa River Core Area." The project site itself is not within a core area and does not support vernal pool complexes that support plants and animals targeted in the USFWS recovery plan. Furthermore, Phase 1 of the proposed project would establish a 45-acre Wetland Preserve that may provide long-term, beneficial impacts to the adjacent Napa River Core Area and recovery plan by providing protected wetland and vernal pool habitat in proximity to the Napa River Core Area. For these reasons, no adverse impacts to the Napa River Core Area would occur from construction of the proposed project. No mitigation is warranted for the Napa River Core Area.

Phase 1

Grading activities would result in the permanent placement of fill material (soil) into 0.496 acres of palustrine emergent wetlands considered waters of the State under the Porter-Cologne Water Quality Control Act. Of the 0.496 acres of waters of the State, the USACE has determined 0.004 acres are considered waters of the United States under the federal CWA. The applicant would be required to obtain a Nationwide Permit from the USACE for discharge within 0.004 acre of wetlands under CWA Section 404 jurisdiction along with an accompanying Section 401 Water Quality Certification from the San Francisco Bay RWQCB. The applicant would also need to obtain a separate Waiver of Waste Discharge from the San Francisco Bay RWQCB for impacts to 0.496 acre of waters of the State, as described in MM BIO-3a. The City of American Canyon processed a separate Nationwide Permit for impacts to 0.21 acre on the 8.3-acre project site for the Devlin Road/Vine Trail Extension project.

Exhibit 3.3-4 of the Draft EIR depicts the Wetlands Mitigation Plan, and Draft EIR Table 3.3-1 details enumeration of the wetland impacts within the proposed project development.

Phase 2

Phase 2 of the proposed project would impact approximately 2.57 acres of seasonal wetlands and 1.13 acres of vernal pool wetlands considered both waters of the State and waters of the United States (Draft EIR, Exhibit 3.3-5). Per MM BIO-3b, the applicant would be required to obtain an Individual Permit from the USACE and submit a plan to compensate for wetland losses as well as a detailed alternatives analysis under the Section 404(b)(1) guidelines. A CWA Section 401 Water Quality Certification from the San Francisco Bay RWQCB and a Waiver of Waste Discharge Requirements for San Francisco Bay RWQCB pursuant to the Porter-Cologne Water Quality Control Act would also be required.

MM BIO-3d would require a detailed Wetland Mitigation and Monitoring Plan be prepared and submitted to the San Francisco Bay RWQCB for review as part of the process for obtaining a permit from the agency.

The City finds that MM BIO-3a, MM BIO-3b, MM BIO-3c and MM BIO-3d are feasible, are adopted, and will further reduce impacts related to riparian habitat, wetlands and natural communities. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts associated with biology would be less than significant with mitigation incorporated.

Potential Effect

Impact BIO-4: The proposed project could interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impeded the use of wildlife nursery sites (**Draft EIR Page 3.3-37–39; Final EIR, vol. 2, Page 4-7**).

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.3-39). Changes or alterations have been required in, or incorporated into, the project

which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM BIO-4 If construction occurs during the breeding season of migratory and resident birds (February 1 to August 31), a qualified Biologist shall conduct a pre-construction breeding bird survey in areas of suitable habitat within 7 days prior to the onset of construction activity. Surveys shall be conducted within the project footprint and 100 feet from the construction limits for nesting passerines, 250 feet from the construction limits for nesting accipiters and a minimum of 500 feet from the construction limits for nesting raptors. If the survey area is found to be absent of nesting birds, no further mitigation would be required. However, if construction activities are delayed by more than 7 days, an additional nesting bird survey shall be performed. If bird nests are found, appropriate buffer zones shall be established around all active nests to protect nesting adults and their young from direct or indirect impacts related to project construction disturbance. Size of buffer zones shall be determined per recommendations of the qualified Biologist based on-site conditions and species involved, but typical buffers around active nests are 500 feet for large raptors such as buteos, 250 feet for small raptors such as accipiters, and 100 feet for passerines (songbirds) and other bird species. For special status species, a 0.25-mile buffer shall be established for nesting Swainson's hawk; 1 mile for golden eagle; and a 500-foot buffer for nesting tricolored blackbirds. If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Buffer zones shall be maintained until it can be documented that either the nest has failed, or the young have fledged.

Facts in Support of Findings

Phases 1 and 2

The development of the proposed project would not result in significant impacts to movement of any native resident or migratory fish or wildlife species, migratory wildlife corridors or use of wildlife nursery sites on the site. As discussed previously, the proposed project contains mitigation measures to address impacts to sensitive habitat, including the preparation and implementation of a detailed Compensatory Wetland Mitigation Plan. As previously discussed, the site design includes the preservation of the approximately 45-acre Wetland Preserve. Any species of fauna that may be displaced during preparation of the site for development of the proposed project should find nearby available habitats, including habitats within the Wetland Preserve and the 37-acre preserve on the adjacent property. The major wildlife corridor along No Name Creek will remain unaffected as the entirety of No Name Creek shall be incorporated into the Wetland Preserve. The proposed project would not result in substantial change in animal populations at the site, nor would it cause a fish or wildlife population to drop below self-sustaining levels.

Nesting Birds

Nesting bird species protected by the federal Migratory Bird Treaty Act (MBTA) or California Fish and Game Code could be impacted during project construction. If construction occurs during the breeding season of migratory and resident birds (February 1 to August 31), MM BIO-4 would require a qualified Biologist conduct a pre-construction breeding bird survey in areas of suitable habitat within 15 days prior to the onset of construction activity in order to reduce any potential impacts to nesting birds to less than significant levels.

Water Quality

Construction activities for Phase 1 of the proposed project will occur within 0.496 acre of wetlands near areas within the upper reaches of No Name Creek. Construction of Phase 2 may affect 3.7 acres of wetlands near No Name Creek. However, implementation of a SWPPP, with identification of proper construction techniques and BMPs, would be required and would provide assurance that water quality of nearby waterways is not affected by on-site construction activities. Indirect impacts to resident animal populations in downstream areas would not result from the proposed project due to elevated turbidity levels from increased sedimentation or increases in other contaminants in stormwater runoff.

The City finds that MM BIO-4 is feasible, is adopted, and will further reduce impacts related to biological resources. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts associated with biology would be less than significant with mitigation incorporated.

Cumulative Impacts

The proposed project's cumulative impacts related to biological resources would be less than significant. (**Draft EIR, Page 4-5–7; Final EIR, vol. 2, Master Responses A and C**).

Findings: Less than significant cumulative impact with mitigation incorporated (Draft EIR, Page 4-7). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM BIO-1a, MM BIO-1b, MM BIO-1c, MM BIO BIO-1d, MM BIO-2, MM BIO-3a, MM BIO-3b, and MM BIO-4.

Facts in Support of Findings

The geographic scope of the cumulative biological resources analysis is a 0.5-mile radius of the project site. The project site is located at the transition between urban development and the marshes associated with the Napa River; accordingly, habitats in these areas tend to be disrupted and impacts would be localized.

The proposed project has the potential to impact special-status plant species and several special-status bird species, including Swainson's hawk, golden eagle, northern harrier, and burrowing owl. With the implementation of MM BIO-1a through MM BIO-2, impacts to these species as a result of development of the proposed project would be reduced to less than significant levels. Although there would be loss of foraging habitat, the cumulative loss of this resource would not be considerable due to the abundance of habitat in the American Canyon area. These mitigation measures would be consistent with other mitigation measures implemented for other projects within the local vicinity of the proposed project including the Devlin Road project and the Green Island Road Reconstruction and Widening project. With the implementation of these mitigation measures, any potentially significant cumulative impacts of the probable future projects in Table 4-1 of the Draft EIR, together with the proposed project, would be reduced to less than significant levels.

The proposed project would impact approximately 0.496 acres of palustrine emergent wetlands. Plans for wetland mitigation, including the preservation of an approximately 44.8-acre Wetland Preserve, to include existing wetlands as well as established/created wetlands, are intended to offset wetland impacts of buildout development of the project site. No Name Creek is contained within the approximately 44.8-acre Wetland Preserve; no impacts to the palustrine emergent wetland swale associated with No Name Creek would occur from the proposed project in the area east of Devlin Road. No impacts would occur to areas that would be subject to California Department of Fish and Wildlife (CDFW) jurisdiction under Fish and Game Code Section 1602, therefore the development of the proposed project would not result in greater cumulative impacts to sensitive natural communities or riparian habitats.

The development of Phase 1 and 2 of the proposed project would impact 0.496 acres of palustrine emergent wetlands considered waters of the State under the Porter-Cologne Water Quality Control Act as well as 0.004 acres of palustrine emergent wetlands considered waters of the United States. As described in MM BIO-3a, these impacts would require that the applicant apply for and obtain a Nationwide Permit from the USACE and a Section 401 Water Quality Certification from the San Francisco Bay RWQCB for discharge within 0.004 acres of wetlands. The applicant would also need to apply for and obtain a separate Waiver of Waste Discharge from the San Francisco Bay RWQCB for impacts to 0.496 acres of waters of the State.

The development of Phase 2 of the proposed project would impact approximately 3.7 acres of wetlands considered both waters of the United States and State. These impacts would require that the applicant submit a separate application for an Individual Permit from USACE to include a plan to compensate for wetland losses as well as a detailed alternatives analysis under the Section 404(b)(1) guidelines to include a detailed evaluation of both on-site and off-site alternatives for the proposed project. Similar to Phase 1, these impacts would also require a Clean Water Act (CWA) Section 401 Water Quality Certification and a Waiver of Waste Discharge Requirements from the San Francisco Bay RWQCB, as described in MM BIO-3b.

As described in MM BIO-2, to compensate the loss of these wetlands an approximately 44.8-acre Wetland Preserve fronting the northern boundary of the project site would preserve 7.71 acres of existing wetlands and create approximately 4.7 acres of new wetlands within the Wetland Preserve. The creation of this Wetland Preserve and new wetlands would help offset any significant

cumulative impacts to jurisdictional wetlands by the proposed project or other projects listed in Table 4-1 of the Draft EIR and reduce them to less than significant levels overall.

The wildlife corridor along No Name Creek would remain unaffected by the development of the proposed project and would be entirely contained and incorporated into the Wetland Preserve. Therefore, the proposed project would not result in substantial change in animal populations at the site, nor would it cause a fish or wildlife population to drop below self-sustaining levels. Additionally, the requirement for the implementation of a SWPPP would assure that water quality of nearby waterways is not affected by on-site construction activities. This mitigation measure would be consistent with other mitigation measure implemented for other projects listed in Table 4-1, including the Devlin Road project and the Green Island Road Reconstruction and Widening project. As a result, the proposed project would not result in greater cumulative impacts to potential wildlife corridors.

The development of the proposed project does have the potential to impact nesting birds if construction includes the removal of vegetation occurs during the breeding season (February 1 to August 31). However, the implementation of MM BIO-4 would avoid direct and indirect impacts to nesting birds by requiring pre-construction nesting bird surveys and establishing buffer zones around any active nests. This mitigation measure would be consistent with other mitigation measures implemented for other projects listed in Table 4-1 of the Draft EIR, including the Devlin Road project and the Green Island Road Reconstruction and Widening project. With the implementation of MM BIO-4a, any cumulative impacts by the proposed project would be reduced to less than significant levels.

The City finds that MM BIO-1a, MM BIO-1b, MM BIO-1c, MM BIO BIO-1d, MM BIO-2, MM BIO-3a, MM BIO-3b, and MM BIO-4 are feasible, are adopted, and will further reduce cumulative impacts related to biological resources. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, direct and indirect cumulative impacts associated with biology would be less than significant with mitigation incorporated.

1.6.3 - Cultural Resources and Tribal Cultural Resources

Potential Effect

Impact CUL-2: The proposed project could cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5 (**Draft EIR Pages 3.4-21–22**).

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.4-22). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM CUL-2a No ground disturbance shall take place within 100 feet of informal archaeological resource 483A-001. The resource shall be preserved in place.

MM CUL-2b An Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology shall be present on-site during all earth disturbing activities. If prehistoric or historic-period archaeological resources are encountered, all construction activities within 100 feet of the find shall halt and the City of American Canyon shall be notified. Prehistoric archaeological materials may include obsidian and chert flaked stone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil ("midden") containing heat-affected rocks, artifacts, or shellfish remains; and stone milling equipment (e.g., mortars, pestles, hand stones, or milling slabs); and battered stone tools, such as hammerstones and pitted stones. Historic-period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse.

The Archaeologist shall inspect the findings within 24 hours of discovery. If it is determined the project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines), mitigation shall be implemented in accordance with Public Resources Code Section 21083.2 and Section 15126.4 of the CEQA Guidelines, with a preference for preservation in place. Consistent with Section 15126.4(b)(3), this may be accomplished through planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement. If avoidance is not feasible, a qualified Archaeologist shall prepare and implement a detailed treatment plan in consultation with the City of American Canyon. Treatment of unique archaeological resources shall follow the applicable requirements of Public Resources Code Section 21083.2. Treatment for most resources would consist of (but would not be limited to) sample excavation, artifact collection, and site documentation, with the aim to target the recovery of important scientific data contained in the portion(s) of the significant resource to be impacted by the proposed project. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and State repositories, libraries, and interested professionals.

Facts in Support of Findings

Records search results from the NWIC identified one informal archaeological resource (483A-001) within the project site and three prehistoric archaeological resources (P-28-000643, P-28-001156 and P-28-002458) located within the 0.5-mile records search radius. Additionally, the Sacred Lands Files search conducted by the Native American Heritage Commission (NAHC) came back positive for TCRs within the project site. Resource 483A-001 is located within 44.8 acres of the project site that will remain undeveloped for the purposes of environmental conservation, and will not be subjected to any ground-disturbing activities. MM CUL-2a ensures that no ground disturbance shall take place within 100 feet of informal archaeological resource 483A-001. The resource shall be preserved in place.

No additional archaeological resources were encountered during the pedestrian field survey; however, poor soil visibility and the presence of several archaeological resources in the immediate vicinity increases the possibility of resources being encountered during project construction.

Implementation of MM CUL-2b requires a qualified Archaeologist to be present on-site during all earth disturbing activities, reducing potential impacts to archaeological resources that may be discovered during project construction. If a potential resource is identified, construction would be required to stop until appropriate identification and treatment measures are implemented.

The City finds that MM CUL-2a and MM CUL-2b are feasible, are adopted, and will further reduce impacts related to archaeological resources. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts associated with archaeological resources would be less than significant with mitigation incorporated.

Potential Effect

Impact CUL-3: The proposed project could disturb human remains, including those interred outside of formal cemeteries (**Draft EIR Pages 3.4-23–24**).

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.4-23). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM CUL-3 In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken:

1. There shall be no further excavation or disturbance within 100 feet of the remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98.
2. Where the following conditions occur, the landowner or authorized representative shall rebury the Native American human remains and associated

grave goods with appropriate dignity either in accordance with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance:

- The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission.
- The descendant identified fails to make a recommendation.
- The landowner or authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.

Additionally, California Public Resources Code Section 15064.5 requires the following relative to Native American Remains:

- When an initial study identifies the existence of, or the probable likelihood of, Native American Remains within a project, a lead agency shall work with the appropriate Native Americans as identified by the NAHC as provided in Public Resources Code Section 5097.98. The applicant may develop a plan with respect to their respective individual development proposals for treating or disposing of, with appropriate dignity, the human remains, and any items associated with Native American Burials with the appropriate Native Americans as identified by the NAHC.

Facts in Support of Findings

While no formal cemeteries or areas containing human remains are known to be in the project vicinity, the possibility always exists that construction-related ground disturbance may uncover previously undiscovered human remains. In the unlikely event such a discovery is made, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 must be followed. Implementation of MM CUL-3, which details inadvertent discovery procedures, would reduce potential impacts to previously undiscovered human remains to a less than significant level.

The City finds that MM CUL-3 is feasible, is adopted, and will further reduce impacts related to previously undiscovered human remains. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts associated with cultural resources would be less than significant with mitigation incorporated.

Potential Effect

Impact CUL-4: The proposed project may cause a substantial adverse change in the significance of a Tribal Cultural Resource (**Draft EIR Pages 3.4-24–26**).

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.4-26). Changes or alterations have been required in, or incorporated into, the project

which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM CUL-4 A Tribal Monitor representing the Yocha Dehe Wintun Nation shall be present during all project-related ground disturbance. Additionally, the Yocha Dehe Wintun Nation's Treatment Protocol (Protocol) shall be followed with respect to Tribal Cultural Resources (TCRs). The purpose of the Protocol is to formalize procedures for the treatment of Native American human remains, grave goods, ceremonial items, and items of cultural patrimony, if any are found in conjunction with development, including archaeological studies, excavation, geotechnical investigations, grading, and any ground-disturbing activity. This Protocol also formalizes procedures for Tribal Monitoring during archaeological studies, grading, and ground-disturbing activities.

1. Cultural Affiliation: The Yocha Dehe Wintun Nation (Tribe) traditionally occupied lands in Yolo, Solano, Lake, Colusa, and Napa Counties. The Tribe has designated its Cultural Resources Committee (Committee) to act on the Tribe's behalf with respect to the provisions of this Protocol. Any human remains which are found in conjunction with projects on lands culturally affiliated with the Tribe shall be treated in accordance with Section III of this Protocol. Any other cultural resources shall be treated in accordance with Section IV of this Protocol.
2. Inadvertent Discovery of Native American Human Remains: Whenever Native American human remains are found during the course of a project, the determination of Most Likely Descendant (MLD) under California Public Resources Code Section 5097.98 will be made by the Native American Heritage Commission (NAHC) upon notification to the NAHC of the discovery of said remains at a project site. If the location of the site and the history and prehistory of the area is culturally affiliated with the Tribe, the NAHC contacts the Tribe; a Tribal member will be designated by the Tribe to consult with the landowner and/or project proponents. Should the NAHC determine that a member of an Indian tribe other than Yocha Dehe Wintun Nation is the MLD, and the Tribe agrees with this determination, the terms of this Protocol relating to the treatment of such Native American human remains shall not be applicable; however, that situation is very unlikely.
3. Treatment of Native American Remains: In the event that Native American human remains are found during development of a project and the Tribe or a member of the Tribe is determined to be MLD pursuant to Section II of this Protocol, the following provisions shall apply. The Medical Examiner shall immediately be notified, ground-disturbing activities in that location shall cease and the Tribe shall be allowed, pursuant to California Public Resources Code Section 5097.98(a), to (1) inspect the site of the discovery and (2) make determinations as to how the human remains and grave goods shall be treated and disposed of with appropriate dignity. The Tribe shall complete its inspection and make its MLD recommendation within 48 hours of getting access to the site.

The Tribe shall have the final determination as to the disposition and treatment of human remains and grave goods. Said determination may include avoidance of the human remains, reburial on-site, or reburial on tribal or other lands that will not be disturbed in the future. The Tribe may wish to rebury said human remains and grave goods or ceremonial and cultural items on or near the site of their discovery, in an area which will not be subject to future disturbances over a prolonged period of time. Reburial of human remains shall be accomplished in compliance with the California Public Resources Code Sections 5097.98(a) and (b). The term "human remains" encompasses more than human bones because the Tribe's traditions call for the burial of associated cultural items with the deceased (funerary objects), and/or the ceremonial burning of Native American human remains, funerary objects, grave goods, and animals. Ashes, soils, and other remnants of these burning ceremonies, as well as associated funerary objects and unassociated funerary objects buried with or found near the Native American Remains are to be treated in the same manner as bones or bone fragments that remain intact.

4. Non-Disclosure of Location of Reburials: Unless otherwise required by law, the site of any reburial of Native American human remains shall not be disclosed and will not be governed by public disclosure requirements of the California Public Records Act, California Government Code Section 6250 et seq. The Medical Examiner shall withhold public disclosure of information related to such reburial pursuant to the specific exemption set forth in California Government Code Section 6254(r). The Tribe will require that the location for reburial is recorded with the California Historic Resources Inventory System (CHRIS) on a form acceptable to the CHRIS center. The Tribe may also suggest that the landowner enter into an agreement regarding the confidentiality of site information that will run with title on the property.
5. Treatment of Cultural Resources: Treatment of all cultural items, including ceremonial items and archaeological items will reflect the religious beliefs, customs, and practices of the Tribe. All cultural items, including ceremonial items and archaeological items, which may be found at a project site shall be turned over to the Tribe for appropriate treatment, unless ordered by a court or agency of competent jurisdiction. The project proponent shall waive any and all claims to ownership of Tribal ceremonial and cultural items, including archaeological items, which may be found on a project site in favor of the Tribe. If any intermediary, (for example, an Archaeologist retained by the project proponent) is necessary, said entity or individual shall not possess those items for longer than is reasonably necessary, as determined solely by the Tribe.
6. Inadvertent Discoveries: If additional significant sites or sites not identified as significant in a project environmental review process, but later determined to be significant, are located within a project impact area, such sites will be subjected to further archaeological and cultural significance evaluation by the project proponent, the Lead Agency, and the Tribe to determine whether additional mitigation measures are necessary to treat sites in a culturally appropriate

manner consistent with CEQA requirements for mitigation of impacts to cultural resources. If there are human remains present that have been identified as Native American, all work will cease for a period of up to 30 days in accordance with Federal Law.

Facts in Support of Findings

Records search results from the NWIC indicate several prehistoric sites are located within the project vicinity, and a review of the NAHC Sacred Lands File was positive for recorded TCRs being located within the project site. On February 9, 2021, a response was received from the Yocha Dehe Wintun Nation stating that the project site falls within the Tribe's traditional use area and could impact known cultural resources important to the Tribe, constituting a significant impact. Implementation of Tribe-provided recommended mitigation measures and protocols, MM CUL-4, would reduce potential impacts to TCRs to a less than significant level.

The City finds that MM CUL-4 is feasible, is adopted, and will further reduce impacts related to TCRs. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts associated with cultural resources would be less than significant with mitigation incorporated.

Potential Effect

Impact CUL-5: The proposed project may cause a substantial adverse change in the significance of a tribal cultural resource (**Draft EIR Pages 3.4-26–27**).

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.4-27). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM CUL-2a, MM CUL-2b, MM CUL-3 and MM CUL-4.

Facts in Support of Findings

FCS sent letters containing project information and requesting any additional information to each tribal representative identified by the NAHC on February 8, 2021. A second follow up letter and/or email was sent on May 13, 2021. On May 21, 2021, a third and final attempt was made via phone call. On February 9, 2021, a response was received from the Yocha Dehe Wintun Nation stating that the project site falls within the Tribe's traditional use area and could impact known cultural resources important to the Tribe. The Tribe provided recommended mitigation measures and protocols (MM CUL-4).

Tribal consultation pursuant to AB 52 has been initiated by the City of American Canyon and is ongoing. The City of American Canyon, in its capacity as Lead Agency, has not identified any TCRs within the project site that are significant pursuant to criteria set forth in subdivision (c) of Public

Resources Code Section 5024.1. However, the possibility remains that TCRs in the form of subsurface archaeological resources or human remains may be encountered during project construction. Implementation of MM CUL-2a, MM CUL-2b, MM CUL-3, and MM CUL-4 would require construction monitoring by a qualified Archaeologist and Native American Monitor. These measures would reduce potential impacts to TCRs to a less than significant level.

The City finds that MM CUL-2a and MM CUL-2b are feasible, are adopted, and will further reduce impacts related to archaeological resources. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts associated with archaeological resources would be less than significant with mitigation incorporated.

Cumulative Impacts

With the implementation of mitigation, the proposed project would not result in a significant cumulative impact to cultural resources in the City of American Canyon or surrounding area. (**Draft EIR, Page 4-7–8**).

Findings: Less than significant cumulative impact with mitigation incorporated (Draft EIR, Page 4-8). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM CUL-2a, MM CUL-2b, MM CUL-3 and MM CUL-4.

Facts in Support of Findings

The geographic scope of the cumulative cultural resources analysis is a 0.5-mile radius of the project site. Cultural resource impacts tend to be localized because the integrity of any given resource depends on what occurs only in the immediate vicinity around that resource, such as disruption of soils; therefore, in addition to the project site (including the off-site construction areas), the area near the project site would be the area most affected by project activities (generally within a 500-foot radius).

No listed historic or archaeological resources are within the project boundaries. Thus, none would be adversely impacted by project construction, therefore no cumulative impacts would occur within the City of American Canyon or its immediate vicinity. Construction activities associated with cumulative development projects in the project vicinity may have the potential to encounter undiscovered cultural resources. The cumulative projects listed in Table 4-1 of the Draft EIR would be required to mitigate impacts through compliance with applicable federal and State laws governing cultural resources.

Additionally, the implementation of standard construction mitigation measures would ensure undiscovered cultural resources are not adversely affected by project-related construction activities,

which would prevent the destruction or degradation of potentially significant cultural resources in the project vicinity. Given the standard archaeological resources mitigation measures that would apply to the cumulative projects listed in Table 4-1 (including the proposed project), the cumulative impact related to archaeological resources would be less than significant with mitigation (MM CUL-2a, 2b, and 3).

There is the possibility that previously undiscovered Tribal Cultural Resources (TCRs) could be encountered by subsurface earthwork activities associated with the cumulative projects; however, the implementation of MM CUL-4 would ensure that undiscovered TCRs are not adversely affected by cumulative project-related construction activities. Given the low potential for disruption, the standard conditions of approval, and mitigation measures that cumulative projects would be required to implement, the proposed project, in conjunction with other planned and approved projects, would result in a less than significant cumulative impact with mitigation related to TCRs.

The City finds that MM CUL-2a, MM CUL-2b, MM CUL-3, and MM CUL-4, are feasible, are adopted, and will further reduce cumulative impacts related to cultural resources. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, the proposed project would not result in a significant cumulative impact to cultural resources in the City of American Canyon or surrounding area.

1.6.4 - Geology, Soils and Seismicity

Potential Effect

Impact GEO-1: The proposed project may expose people or structures to potential substantial adverse effects associated with seismic hazards (**Draft EIR Pages 3.5-12–14**).

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.5-14). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM GEO-1a Prior to the issuance of building permits for each Phase 2 structure, the project applicant shall submit plans to the City of American Canyon for review and approval that demonstrate a minimum 50-foot setback between the West Napa Fault and each building. The approved plans shall be incorporated into the proposed project.

MM GEO-1b Prior to the issuance of building permits for each Phase 1 and 2 structure, the project applicant shall submit a design-level Geotechnical Investigation to the City of American Canyon for review and approval. The investigation shall be prepared by a qualified engineer and identify grading and building practices necessary to achieve compliance with the latest adopted edition of the California Building Standards Code (CBC) geologic, soils, and seismic requirements, including abatement of expansive soil conditions. The report shall also determine the final design parameters for walls,

foundations, foundation slabs, and surrounding related improvements (e.g., utilities roadways, parking lots, and sidewalks). The measures identified in the approved report shall be incorporated into the project plans and all applicable construction-related permits.

Facts in Support of Findings

Fault Rupture

Phase 1

There are no active earthquake faults within Phase 1. For these reasons, Phase 1 of the proposed project would not be subject to fault rupture during a seismic event nor would it exacerbate exposure to fault rupture hazards.

Phase 2

Cornerstone Earth Group conducted a Geological Fault Investigation in 2017 that identified the precise location of the West Napa Fault within Phase 2 of the project site. Pursuant to State law, a 50-foot setback must be established from the fault to the nearest building. Mitigation Measure (MM) GEO-1a requires the applicant to prepare and submit plans for Phase 2 when building permits are sought, demonstrating the required setbacks and ensuring that the proposed project does not exacerbate exposure to fault rupture hazards.

Strong Ground Shaking

Phases 1 and 2

Phase 1 is located in a seismically active region of California and is susceptible to strong ground shaking during a seismic event.

A design-level geotechnical report for the proposed project would be prepared by the time building permits are sought and would provide recommendations to minimize ground shaking hazards. Accordingly, MM GEO-1b would require the applicant to submit such a study to the City of American Canyon for review and approval. Standard soil engineering and building design practices would include standards for foundations and structural support of buildings to ensure that they withstand strong ground shaking during a seismic event and avoid the exacerbation of exposure to such hazards. The implementation of this mitigation measure would ensure that the proposed project is not exposed to strong ground shaking hazards.

Ground Failure and Liquefaction

Phases 1 and 2

The Geotechnical Engineering Report determined that the project site is underlain by high plasticity soils, which are considered too stiff and dense to be susceptible to liquefaction. Thus, the proposed project would not be susceptible to ground failure, liquefaction, or liquefaction-related phenomena and impacts would be less than significant and no mitigation is required.

Landslides

Phases 1 and 2

The project site contains relatively flat relief, with an approximately 15-foot difference in elevation across the site. There are no slopes near the project site that may be susceptible to landslides during a seismic event. There is no potentially significant environmental impact and no mitigation is required.

The City finds that MM GEO-1a and MM GEO-1b are feasible, are adopted, and will further reduce impacts related to fault rupture and ground shaking. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts would be less than significant with mitigation incorporated.

Potential Effect

Impact GEO-2: The proposed project may result in substantial soil erosion or the loss of topsoil (**Draft EIR Pages 3.5-14–15**).

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.5-15). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM HYD-1a Prior to issuance of grading permits for the proposed project, the applicant shall submit to the City of American Canyon for review and approval a Storm Water Pollution Prevention Plan (SWPPP) in accordance with the requirements of the statewide Construction General Permit. The SWPPP shall be designed to address the following objectives: (1) all pollutants and their sources (e.g., runoff), including sources of sediment associated with construction, construction site erosion, and all other activities associated with construction activity, are controlled; (2) where not otherwise required to be under a Regional Water Quality Control Board (RWQCB) permit, all non-stormwater discharges are identified and either eliminated, controlled, or treated; (3) site Best Management Practices (BMPs) (e.g., silt fencing, street sweeping, routine inspection, etc.) are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized non-stormwater discharges from construction activity; and (4) stabilization BMPs are installed to reduce or eliminate pollutants after construction are completed. The SWPPP shall be prepared by a qualified SWPPP developer. The SWPPP shall include the minimum BMPs required for the identified Risk Level. BMP implementation shall be consistent with the BMP requirements in the most recent version of the California Stormwater Quality Association (CASQA) Stormwater Best Management Handbook–Construction or the California Department of Transportation (Caltrans) Stormwater Quality Handbook Construction Site BMPs Manual. The SWPPP shall be implemented during construction.

Facts in Support of Findings

The proposed project would involve grading, building construction, paving, and utility installation activities that may cause erosion and sedimentation which could accumulate in downstream waterways, resulting in the blockage of flows, potentially causing increased localized ponding or flooding. MM HYD-1a in Section 3.8, Hydrology and Water Quality, of the Draft EIR would require the implementation of stormwater quality control measures during construction activities to prevent pollutants from entering downstream waterways.

The City finds that MM HYD-1a is feasible, is adopted, and will further reduce impacts related to erosion and sedimentation. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts would be less than significant with mitigation incorporated.

Potential Effect

Impact GEO-4: The proposed project may create substantial risks to life or property as a result of expansive soil conditions on the project site (**Draft EIR Page 3.5-16)**.

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.5-16). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM GEO-1b Prior to the issuance of building permits for each Phase 1 and 2 structure, the project applicant shall submit a design-level Geotechnical Investigation to the City of American Canyon for review and approval. The investigation shall be prepared by a qualified engineer and identify grading and building practices necessary to achieve compliance with the latest adopted edition of the California Building Standards Code (CBC) geologic, soils, and seismic requirements, including abatement of expansive soil conditions. The report shall also determine the final design parameters for walls, foundations, foundation slabs, and surrounding related improvements (e.g., utilities roadways, parking lots, and sidewalks). The measures identified in the approved report shall be incorporated into the project plans and all applicable construction-related permits.

Facts in Support of Findings

The Geotechnical Engineering Report found that the project site is underlain by soils with high clay content and are therefore capable of being expansive. The design-level Geotechnical Investigation required by MM GEO-1b would outline standard grading and soil engineering practices to abate these potential hazards.

The City finds that MM GEO-1b is feasible, is adopted, and will further reduce impacts related to expansive soils. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts would be less than significant with mitigation incorporated.

Potential Effect

Impact GEO-5: The proposed project may directly or indirectly destroy a unique paleontological resource or site or unique geologic feature (**Draft EIR Page 3.5-16—17)**.

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.5-17). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM GEO-5 If potential fossils are discovered during project implementation, all earthwork or other types of ground disturbance within 100 feet of the find shall stop immediately until a qualified professional Paleontologist can assess the nature and importance of the find. Based on the scientific value or uniqueness of the find, the Paleontologist shall either record the find and recommend that the City of American Canyon allow work to continue or recommend salvage and recovery of the fossil. The Paleontologist shall, if required, propose modifications to the stop-work radius based on the nature of the find, site geology, and the activities occurring on the site. If treatment and salvage is required, recommendations will be consistent with Society of Vertebrate Paleontology guidelines and currently accepted scientific practice. If required, treatment for fossil remains shall include preparation and recovery of fossil materials so that they can be housed in an appropriate museum or university collection, and, if required, shall also include preparation of a report for publication describing the finds.

Facts in Support of Findings

The surface of the project site consists of Holocene fan deposits (Qf), Holocene–Pleistocene fan deposits (Qpf), early to middle Pleistocenefan or terrace deposits (Qoa), and the Pliocene Huichica Formation (Th). Also in the surrounding 0.5-mile radius (dashed outline) are modern artificial fill (af, afbm), Holocene–Pleistocene landslide deposits (Qls), the Plio-Pleistocene Petaluma Formation (Tsp), the Pliocene Sonoma Volcanics andesite (Tsv), and the Cretaceous Great Valley Sequence (Kgv).

Modern and Holocene deposits are too young to be fossiliferous, whereas andesite is a nonfossiliferous volcanic rock. Additionally, there are no recorded vertebrate or plant localities within Napa County.

For these reasons, the project site is not located in an area that is considered likely to have paleontological resources present. However, if significant paleontological resources are discovered,

implementation of MM GEO-5 will reduce this potential impact to a less than significant level. There are no unique geologic features present on the project site or off-site development areas.

The City finds that MM GEO-5 is feasible, is adopted, and will further reduce impacts related to undiscovered paleontological resources. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts would be less than significant with mitigation incorporated.

1.6.5 - Greenhouse Gas Emissions and Energy

Potential Effect

Impact GHG-1: The proposed project would generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment (**Draft EIR Page 3.6-50—62)**.

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.6-62). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM GHG-1a Prior to the issuance of any grading permits, the project applicant shall provide the City of American Canyon with documentation (e.g., site plans) demonstrating project construction will include the following construction Best Management Practices (BMPs):

- At least 15 percent of the construction fleet for each project phase shall be alternatively fueled or electric.
- At least 10 percent of building materials used for project construction shall be sourced from local suppliers.
- At least 65 percent of construction and demolition waste materials shall be recycled or reused.
- At least one contractor that has a business location in American Canyon shall be contracted for project construction.
- All construction contracts shall include language that requires all off-road equipment with a power rating below 19 kilowatts (e.g., plate compactors, pressure washers) used during construction be electrically powered.
- Architectural coatings used for project construction shall be “Low-VOC,” containing no greater than 50 grams of volatile organic compounds (VOC) per liter of product.
- Project construction shall prohibit the use of generators and shall establish grid power connection to electrical equipment needs.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California

Airborne Toxics Control Measure [ATCM] Title 13, Section 2485 of California Code of Regulations). Clear signage regarding idling restrictions shall be provided for construction workers at all access points.

- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
- The prime construction contractor shall post a publicly visible sign with their telephone number and contractor to contact. The construction contractor shall take corrective action within 48 hours. The Bay Area Air Quality Management District (BAAQMD) phone number shall also be identified and visible to ensure compliance with applicable regulations.

MM GHG-1b Prior to the issuance of any building permits, the project applicant shall provide the City of American Canyon with documentation (e.g., site plans) demonstrating the proposed project is designed without the use of any natural gas -fueled appliances or natural gas plumbing.

MM GHG-1c Prior to issuance of any building permits, the project applicant shall demonstrate to the satisfaction of the City of American Canyon (e.g., shown on site plans), that the proposed buildings are designed and will be built to, at a minimum, the Tier 2 advanced energy efficiency requirements of the Nonresidential Voluntary Measures of the California Green Building Standards Code, Division A5.2, Energy Efficiency, as outlined under Section A5.203.1.2.2.

MM GHG-1d Prior to issuance of any building permits, the project applicant shall demonstrate to the satisfaction of the City of American Canyon (e.g., shown on site plans), that the proposed parking areas for passenger automobiles and trucks are designed and will be built to accommodate electric vehicle (EV) charging stations. At a minimum, the parking shall be designed to accommodate a number of EV charging stations equal to the Tier 2 Nonresidential Voluntary Measures of the California Green Building Standards Code, Section A5.106.5.3.2.

Prior to the issuance of any building permits, the project applicant shall demonstrate to the satisfaction of the City of American Canyon (e.g., shown on site plans), that each loading dock is outfitted with at least one 240-volt outlet to accommodate truck and Transport Refrigeration Unit (TRU) charging and/or electrical power connection while trucks are loading and unloading goods.

MM GHG-1e Prior to the issuance of any building permit for the proposed project, the project applicant shall provide the City with documentation (e.g., site plans) demonstrating to the City's satisfaction that the electricity demand will be supplied with 100 percent carbon-free electricity sources through the year 2045.

Facts in Support of Findings

The proposed project would generate GHG emissions during construction and operation. Neither the BAAQMD nor City have an emissions threshold for determining potentially significant impacts related to construction GHG emissions; therefore, the BAAQMD's recommended GHG-reducing BMPs were utilized as the basis for determining the proposed project's construction-related impact. The proposed project would include the applicable GHG-reducing BMPs during construction through implementation of MM GHG-1a. MM GHG-1a notably has more construction BMPs than those recommended by the BAAQMD. The project applicant has identified these additional construction BMPs as feasible and applicable means to maximize GHG emission reductions during project construction; therefore, MM GHG-1a incorporates additional BMPs beyond those recommended by the BAAQMD to further the proposed project's contribution to its "fair share" in GHG emission reductions during construction toward the State's long-term climate goal of carbon neutrality by 2045. Because MM GHG-1a would require the proposed project to meet and exceed implementation of the BAAQMD-recommended BMPs for reducing construction GHG emissions, project construction would be considered to commit its "fair share" of GHG emission reductions consistent with the State's long-term climate goal of carbon neutrality and would therefore be less than significant.

GHG emissions associated with full operation of the proposed project for the anticipated first operation in 2023 are shown in Table 3.6-4 of the Draft EIR, which incorporates implementation of MMs AIR-2c and AIR-2d. As discussed in Section 3.2, Air Quality, of the Draft EIR, MM AIR-2c would be required to ensure the use of low-VOC (i.e., reactive organic gas [ROG]) architectural coating products that contain no more than 50 grams of VOC per liter of product to reduce the generation of ROG emissions during project operation. Any GHG emissions generated during architectural coating reapplication would be captured under area-source emissions as shown in Table 3.6-4 of the Draft EIR. As shown therein, area-source emissions generated during project operation would be less than 0.5 MT CO_2e per year and was therefore rounded down to zero. As such, MM AIR-2c would result in a negligible effect on operational GHG emissions generated by the proposed project.

As discussed in Section 3.2, Air Quality of the Draft EIR, MM AIR-2d would be required to ensure the trucking fleet accessing the project site would be comprised of vehicles no older than model year 2014 to reduce tailpipe nitrogen oxide (NO_X) emissions. Model year 2014 was selected because it is the first homogenous model year for a trucking fleet in Napa County, based on EMFAC2017 data, to demonstrate a reduction in NO_X emissions when compared with unmitigated emission estimates. This is considered a feasible trucking mitigation measure as the ARB's Truck and Bus Regulation[101] would otherwise require trucks greater than a 26,000-pound gross vehicle weight rating which operate in California to be no older than 2010 model year by the time the proposed project would become operational in 2023. This would allow the proposed project to utilize trucks which are 9 years old and would not constitute an infeasible financial burden.

While the trucking fleet serving the proposed project would represent the greatest GHG emission source during project operation, as illustrated in Table 3.6-4 of the Draft EIR, MM AIR-2d was determined to be the most feasible trucking mitigation to reduce tailpipe emissions of all types, including GHG emissions, due to the size of the trucking fleet. With over 500 trucks accessing the proposed project each day, the financial burden associated with implementing more stringent trucking mitigation is very likely to amount a cost greater than what a "prudent investor" would

otherwise bear to develop the proposed project. In addition, the other principal emission source of passenger vehicles would not be possible to mitigate through project design as the operation of privately owned vehicles by employees and visitors would not be under the direct control of the proposed project.

Moreover, as discussed under Impact GHG-1, MMs GHG-1b through GHG-1e would ensure project consistency with the BAAQMD's proposed 2022 GHG significance thresholds, as refined by the City, by prohibiting the use of natural gas infrastructure, complying with the Tier 2 EV charging infrastructure requirements of CALGreen, complying with the Tier 2 energy efficiency standards of CALGreen, and sourcing project electricity consumption from carbon-free sources. In addition, MMs GHG-1b through GHG-1e would reduce the proposed project's reliance on fossil fuels and reduce the potential for wasteful, inefficient, or unnecessary consumption of energy resources.

Lastly, as discussed further under Impact GHG-1, the proposed project would demonstrate a 15 percent reduction in employee-generated VMT from the region's existing employee VMT, consistent with the BAAQMD's proposed 2022 GHG significance thresholds for VMT reductions for other identified land use types, including office uses, which the City has determined are similar to industrial uses. In addition, the proposed project's trucking operations would be subject to incrementally more stringent tailpipe emission standards and fleet turnover requirements through various ARB programs and rules, further facilitating the use of EVs and reducing the generation of truck-generated GHG emissions. The City finds that MM GHG-1a through MM GHG-1e are feasible, are adopted, and will further reduce impacts related to GHG emissions. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts would be less than significant with mitigation incorporated.

Potential Effect

Impact GHG-3: The proposed project would not result in a potential significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation. (**Draft EIR Pages 6.6-69—73**)

Findings: Less than significant impact (Draft EIR Page 3.6-72). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

Implement Mitigation measures MM GHG-1a through MM GHG-1e.

Facts in Support of Findings

A significant impact would occur if the proposed project would result in the inefficient, wasteful, or unnecessary use of energy.

Construction

The anticipated construction schedule for the proposed project was assumed to begin in January 2022 and conclude in August 2023. If the anticipated construction schedule moves to later years, construction energy demand would likely decrease because of improvements in technology and more stringent regulatory requirements. Project construction would require energy for the manufacture and transportation of building materials, preparation of the site (e.g., site clearing, and grading), and the actual construction of the building. Petroleum-based fuels such as diesel fuel and gasoline would be the primary sources of energy for these tasks. Construction equipment is estimated to consume a total of 51,911 gallons of diesel fuel and an estimated 337,528 gallons of gasoline and diesel would be consumed by vehicle travel during construction (Draft EIR, Appendix B).

Other equipment could include construction lighting, field services (office trailers), and electrically driven equipment such as pumps and other tools. Singlewide mobile office trailers are commonly used in construction staging areas. A typical 720-square-foot office trailer would consume approximately 20,152 kilowatt-hours (kWh) during the 20-month construction phase (Draft EIR, Appendix B).

The proposed project's construction is not anticipated to result in unusually high energy use. Limitations on idling of vehicles and equipment and requirements that equipment be properly maintained would result in fuel savings. Similarly, compliance with State regulations would limit idling from both on-road and off-road diesel-powered equipment and are enforced by the ARB.

Additionally, the overall construction schedule and process is already designed to be efficient to avoid excess monetary costs. For example, equipment and fuel are not typically used wastefully due to the added expense associated with renting the equipment, maintaining it, and fueling it. Therefore, the opportunities for future efficiency gains during construction are limited. Therefore, it is anticipated that the construction phase of the proposed project would not result in wasteful, inefficient, and unnecessary consumption of energy.

Operation

Operation of the proposed project would consume an estimated 24,495,402 kWh of electricity and an estimated 9,060,000 kBTU of natural gas annually under the cold storage project scenario and an estimated 8,834,476 kWh of electricity and an estimated 8,260,000 kBTU of natural gas annually under the dry storage project scenario (Draft EIR, Table 3.6-7). As previously discussed, the proposed project would be considered to result in a potentially significant impact if it would result in wasteful, inefficient, or unnecessary consumption of energy resources. Considering the guidance provided by Appendix F of the CEQA Guidelines and the Appellate Court decision in *League to Save Lake Tahoe Mountain etc. v. County of Placer* (2022) 75 Cal.App.5th 63, 164-168, the proposed project would be considered to result in wasteful, inefficient, or unnecessary consumption of energy resources if it would conflict with the following energy conservation goals:

- Decreasing overall per capita energy consumption;
- Decreasing reliance on fossil fuels such as coal, natural gas, or oil; and
- Increasing reliance on renewable energy sources.

Decreasing Overall Per Capita Energy Consumption

The proposed project would result in an approximately 29 percent reduction in employee VMT from regional average estimates, which would result in an overall decrease in per capita transportation energy consumption with respect to employee transportation energy resources. Trucking activities envisioned by the proposed project would be generally controlled by new technologies and the mandatory turnover of fleets through medium and heavy-duty truck emission standards and regulations (Draft EIR Pages 3.6-50—60). Moreover, the movement of freight goods and trucking and locomotive travel distances subsequent to that activity is largely dictated by market demand rather than the implementation of specific development projects. As such, the proposed project would not change overall energy consumption related to trucking and locomotive activities, and overall energy consumption related to employee transportation would decrease from the region's current average employee transportation behavior.

Because energy consumption data for the City is not available, County estimates were used to determine the proposed project's per capita energy consumption. The County currently has estimated per capita energy consumption of 7,471 kWh and 28.45 MMBtu per year. The proposed project would result in up to 24,495,402 kWh per year and up to 9,060 MMBtu per year under a cold storage scenario starting in 2023 without considering any mitigation (Draft EIR, Table 3.6-7). The number of estimated employees is used to identify the proposed project's per capita energy consumption. The proposed project's estimated 3,643 employees would result in a per capita energy consumption of 6,724 kWh per year and 2.49 MMBtu per year, both of which would be below the County's average electricity and natural gas consumption rates.

With implementation of MM GHG-1c, the proposed project is likely to consume less electricity than what is disclosed in Table 3.6-7 of the Draft EIR due to the required additional energy efficiency improvements and the fact that CalEEMod Version 2020.4.0 assumes minimum energy efficiency design compliance with the 2019 California Building Code. Should the permitting of the proposed project occur after January 1, 2023, the proposed project would be subject to additional energy efficiency standards beyond what is currently required at the time of this analysis. Nonetheless, implementation of MM GHG-1b would require the proposed project to implement an all-electric building design, likely resulting in greater electricity consumption than what would otherwise occur but reducing natural gas-related energy consumption by 100 percent, thereby contributing to the overall decrease in per capita energy consumption.

Decreasing Reliance on Fossil Fuels

The proposed project would be considered to conflict with this criterion if it did not take steps to decrease the reliance on fossil fuels. The implementation of MMs GHG-1a, GHG-1b, and GHG-1d would actively promote the proposed project's decreased reliance on fossil fuels through the design and operation of the proposed project. MM GHG-1a would require the project applicant to utilize electric and alternatively fueled construction equipment and local contractors, among other requirements, which would reduce the proposed project's commitment of fossil fuel energy resources during project construction. MM GHG-1b would require the proposed project to prohibit the installation of natural gas infrastructure, thereby precluding the proposed project's future use of natural gas. Lastly, MM GHG-1d would require the proposed project to source 100 percent of its electricity from carbon-free sources.

Increasing Reliance on Renewable Energy Sources

As previously discussed, MM GHG-1a and MM GHG-1b would increase the proposed project's reliance on renewable energy sources during project construction. MM GHG-1c would require the proposed project's buildings be designed and constructed in accordance with the State's Tier 2 Nonresidential Building Energy Efficiency Standards. The proposed project would also be designed to accommodate rooftop photovoltaic panel arrays should they be installed. MM GHG-1e would additionally require that the proposed project source its electricity consumption from carbon-free sources, either with on-site renewable generation technologies or through subscription with a 100 percent carbon-free electricity service with PG&E or MCE.

In addition, MM GHG-1d would require the proposed passenger vehicle and truck parking areas to accommodate more EV charging stations than would be required with minimum code compliance. Loading docks would also be required to contain 240-volt outlets to accommodate EV and TRU charging for trucks. At a minimum, the parking shall be designed to accommodate EV charging stations in an amount equal to the Tier 2 Nonresidential Voluntary Measures of the California Green Building Standards Code, Section A5.106.5.3.2. As a result, the proposed project's energy consumption would not be wasteful, inefficient, or unnecessary.

The City finds that MM GHG-1a through MM GHG-1e are feasible, are adopted, and will further reduce impacts related to GHG emissions. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts would be less than significant with mitigation incorporated.

1.6.6 - Hydrology and Water Quality

Potential Effect

Impact HYD-1: Construction activities and changes to drainage patterns associated with the proposed project may degrade surface water quality in downstream water bodies (**Draft EIR Page 3.8-10—12)**.

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.8-12). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM HYD-1a Prior to issuance of grading permits for the proposed project, the applicant shall submit to the City of American Canyon for review and approval a Storm Water Pollution Prevention Plan (SWPPP) in accordance with the requirements of the statewide Construction General Permit. The SWPPP shall be designed to address the following objectives: (1) all pollutants and their sources (e.g., runoff), including sources of sediment associated with construction, construction site erosion, and all other activities associated with construction activity, are controlled; (2) where not

otherwise required to be under a Regional Water Quality Control Board (RWQCB) permit, all non-stormwater discharges are identified and either eliminated, controlled, or treated; (3) site Best Management Practices (BMPs) (e.g., silt fencing, street sweeping, routine inspection, etc.) are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized non-stormwater discharges from construction activity; and (4) stabilization BMPs are installed to reduce or eliminate pollutants after construction are completed. The SWPPP shall be prepared by a qualified SWPPP developer. The SWPPP shall include the minimum BMPs required for the identified Risk Level. BMP implementation shall be consistent with the BMP requirements in the most recent version of the California Stormwater Quality Association (CASQA) Stormwater Best Management Handbook–Construction or the California Department of Transportation (Caltrans) Stormwater Quality Handbook Construction Site BMPs Manual. The SWPPP shall be implemented during construction.

MM HYD-1b Prior to the issuance of building permits, the project applicant shall submit a Stormwater Control Plan to the City of American Canyon for review and approval. The plan shall be developed using the California Stormwater Quality Association (CASQA) "New Development and Redevelopment Handbook" and include the applicable provisions of Section C.3 of the San Francisco Bay Regional Water Quality Control Board (RWQCB) Municipal Regional Permit (Order No. R2-2015-0049, NPDES Permit No. CAS612008 (or more recent permit). The Stormwater Control Plan shall identify pollution prevention measures and Best Management Practices (BMPs) to control stormwater pollution from operational activities and facilities and provide maintenance in perpetuity. The Stormwater Control Plan shall include Low Impact Development (LID) design concepts, as well as concepts that accomplish a "first flush" objective that would remove contaminants from the first 2 inches of stormwater before it enters area waterways. The project applicant shall also prepare and submit an Operations and Maintenance Agreement to the City, identifying procedures to ensure stormwater quality control measures work properly during operations.

Facts in Support of Findings

Phases 1 and 2

Chemicals, such as gasoline, diesel fuel, lubricating oil, hydraulic oil, lubricating grease, automatic transmission fluid, paints, solvents, glues, and other substances, could be used during construction and an accidental release of any of these substances could degrade the quality of the surface water runoff and adversely affect receiving waters. As such, MM HYD-1a would require the development and implementation of a SWPPP to outline site-specific stormwater quality control measures (such as Best Management Practices [BMPs]) during construction activities to prevent pollutants from entering downstream waterways.

The increase in impervious area increases the efficiency by which sediment and other pollutants are delivered downstream. Concentration of flow by the storm drain system could increase the erosive energy of flows, thereby increasing sediment supply from the project site. Runoff from landscaped

areas may also contain residual pesticides and nutrients. Consequently, there is potential for long-term degradation of runoff water quality from the implementation of the project. The project proposes the following post-construction stormwater management features, according to a three-tiered LID/BMP design approach:

- The purpose of site design BMPs is to maintain pre-development runoff characteristics, protect sensitive resource areas, and attempt to minimize new impervious areas. The site has been designed to limit the amount of disturbed area and new impervious areas.
- Source control BMPs use structural controls and operational procedures to limit pollutants at their source. The project would implement the following source control BMPs: mark "No Dumping! Flows to River" on storm drain inlets; plumb interior floor drains to sanitary sewer; carefully manage pesticide use for landscaped areas; post "Do Not Dump Hazardous Materials Here" on refuse areas; utilize enclosed trash compactors; grade loading docks to minimize run-on and contain spills; and drain parking areas to bioretention planters.
- Treatment control BMPs are designed to reduce the amount of pollutants in stormwater and to reduce runoff rates or volumes. All new impervious areas will be routed through either a bioretention basin or an infiltration planter. The floors of bioretention basins will be amended with a layer of gravel overlain by a layer of specialized biosoil. The biosoil will be a sandy loam material to promote infiltration while allowing for vegetation to establish. An underdrain will be installed to facilitate infiltration as the local soils have low infiltration potential. Bioretention basins have been configured to drain within 48 hours to prevent vector concerns.

Additionally, the wetland preserve would facilitate the natural sequestration of stormwater pollutants leaving the project site.

MM HYD-1b would require (1) that the Stormwater Control Plan be reviewed and verified by the City of American Canyon to ensure the proposed stormwater controls are adequate pursuant to the requirements of Order No. R2-2015-0049 (or more recent permit), and (2) that an operation and maintenance program is in place to ensure the long-term functionality of the stormwater controls. Various RWQCBs determined that BMPs in MM HYD-1b are known to be effective in protecting receiving waters.

The City finds that MM HYD-1a and MM HYD-1b are feasible, are adopted, and will further reduce impacts related to surface water quality. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts would be less than significant with mitigation incorporated.

1.6.7 - Land Use

Potential Effect

Impact LU-3: The proposed project may conflict with the applicable provisions of the Napa County Airport Land Use Compatibility Plan (**Draft EIR Page 3.9-49—52)**.

Findings: Less than significant impact with mitigation incorporated (Draft EIR, Page 3.9-42). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM AES-3 and MM LU-3

MM LU-3 Prior to issuance of grading permits, the applicant shall retain a qualified Biologist to assess potential wildlife hazards to aviation. The assessment shall evaluate the characteristics of the emergent wetlands, drainages, other potential wildlife attractant features (i.e., ponded water) located within the open space area and identify management practices (e.g., storm drainage, vegetation, etc.) to prevent the creation of attractants for large flocks or birds or other wildlife species that may present safety hazards to aviation activities. As part of the assessment, the applicant shall consult with Napa County Airport and Napa County Airport Land Use Commission (ALUC) representatives, as appropriate, regarding findings and recommendations. The applicant shall submit a report to the City of American Canyon prepared by a qualified Biologist that confirms the wildlife hazard assessment's findings and recommendations are incorporated into the design of the open space preserve.

Facts in Support of Findings

Phases 1 and 2

Airport Land Use Compatibility Review

The project site falls within the Napa County ALUCP Area.

The (ALUCP) establishes policies and compatibility zones addressing four key focus areas: noise, safety, airspace protection, and overflight. The project site falls entirely within Zone D. Zone D encompasses the common traffic pattern. These areas are routinely overflown by aircraft. Zone D is characterized by moderate risk, frequent noise intrusion and routine overflights below 1,000 feet above ground level. Within Zone D, indoor uses are limited to densities of no more than 100 people per net acre. Uses with an outdoor component can have up to 150 people per net acre. The ALUCP does not limit the number of people that can be clustered in any one acre of the parcel within Zone D.

Additionally, the ALUCP prohibits residential uses and uses posing hazards to flight. Hazards to flight include objects that penetrate FAR Part 77 airspace surfaces, uses that would attract large numbers of birds, and uses that would create smoke, glare, distracting lights, or electronic interference.

Maximum Density

The proposed project includes several buildings that would facilitate development of industrial uses, including warehousing, manufacturing, and general office uses. These land uses are generally consistent with ALUCP criteria, provided that the uses do not attract large concentrations of people.

The ALUCP sets forth a maximum density criterion of 100 people per net acre for Zone D. The ALUCP identifies three methods for calculating density: (1) parking ordinance; (2) maximum occupancy; and

(3) other methodologies in cases where density cannot be reasonably estimated based upon parking or square footage.

The maximum occupancy methodology is most appropriate because it is based on typical Building Code occupancy limits, which can be calculated based on the known project characteristics. Because the ancillary office space within each building is the most intense use, it has been broken out separately from the warehouse use.[2] Table 3.9-3 of the Draft EIR summarizes the maximum occupancy calculation.

The project complies with the density recommendation of no more than 100 persons per net acre (Draft EIR, 3.9-4).

Wildlife Attractants

The two aspects of the proposed project that have the greatest potential for creating aviation safety hazards are the open space area and the stormwater basins.

As previously discussed, a 45-acre Wetland Preserve will be established as part of the proposed project. This area contains wetlands that currently attract wildlife (e.g., avian species). Avian species are considered potential hazards to aviation activities due to the potential for bird strikes. The proposed project would create new wetland features to offset those impacted as result of the proposed project. However, it would not substantially increase the bird attractant potential because the new compensatory wetlands represent a small portion of the total open space area. Thus, the proposed project would not introduce new aviation hazards in this respect.

The proposed stormwater basins would be designed to drain out within 48 hours of a 10-year storm event, minimizing the amount of time the basins would hold standing water. This would reduce their avian attractant attributes. Additionally, basins would not represent a greater attractant than standing water in the project vicinity during and immediately after a storm event.

Furthermore, the proposed project would result in an approximately 163-acre reduction in avian foraging habitat as a result of the development of the proposed structures and infrastructure. The proposed project also would include landscaping and on-site drainage facilities that would be designed and managed to discourage wildlife use of the site. This would further minimize the avian attractant attributes of the project site relative to existing conditions.

Overall, the proposed project would not increase the avian attractant attributes of the project site or nearby areas under the Napa County Airport flight path compared to existing conditions.

The ALUCP indicates that projects that have the potential to attract wildlife are required to prepare a Wildlife Hazards Assessment and MM LU-3 would require the preparation of such an assessment and implementation of the recommendations into the design of the open space area.

Light, Glare, Dust, Steam, and Other Aviation Hazards

The ALUCP Policy 3.3.5 states the following:

Policy 3.3.5 Land uses which may produce hazards to aircraft in flight shall not be permitted within any airport's planning area. Specific characteristics to be avoided include: (1)

glare or distracting lights which could be mistaken for airport lights; (2) sources of dust, steam, or smoke which may impair pilot visibility; (3) sources of electrical interference with aircraft communications or navigation; and (4) any use which may attract large flocks of birds, especially landfills and certain agricultural uses.

MM AES-3 requires all exterior lighting to use full cut-off fixtures and be directed downward to prevent interference with Napa County Airport operations. Together, the implementation of these two mitigation measures would ensure that the proposed project would not create hazards to aviation.

The City finds that MM AES-3 and MM LU-3 are feasible, are adopted, and will further reduce impacts related to land use. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts would be less than significant with mitigation incorporated.

1.6.8 - Noise

Potential Effect

Impact NOI-1: The proposed project could generate a substantial temporary or permanent increase in ambient noise levels in noise-sensitive locations in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies (**Draft EIR Page 3.10-15—22)**.

Findings Less Than Significant Impact with Mitigation Incorporated (Draft EIR, Page 3.10-22). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR (State CEQA Guidelines § 15091(a)(1)).

Mitigation Measures

MM NOI-1 Implementation of the following multi-part mitigation measure is required to reduce potential construction period noise impacts:

- The construction contractor shall ensure that all equipment driven by internal combustion engines shall be equipped with mufflers that are in good condition and appropriate for the equipment.
- The construction contractor shall ensure that unnecessary idling of internal combustion engines (i.e., idling in excess of 5 minutes) is prohibited.
- The construction contractor shall utilize “quiet” models of air compressors and other stationary noise sources where technology exists.
- At all times during project grading and construction, the construction contractor shall ensure that stationary noise-generating equipment shall be located as far as practicable from sensitive receptors and placed so that emitted noise is directed away from adjacent residences.

- The construction contractor shall ensure that the construction staging areas shall be located to create the greatest feasible distance between the staging area and noise-sensitive receptors nearest the project site.
- The construction contractor shall ensure that all on-site construction activities, including the operation of any tools or equipment used in construction, drilling, repair, alteration, grading, or demolition work, are limited to between the daytime hours of 7:00 a.m. to 7:00 p.m. Monday through Saturday. No construction shall be permitted on Sundays and federal holidays.

Facts in Support of Findings

Construction

A significant impact would occur if construction noise impacts were greater than 75 dBA between the hours of 7:00 a.m. and 7:00 p.m. or greater than 60 dBA from 7:00 p.m. to 7:00 a.m., per the City's policies, and would result in a substantial temporary increase in ambient noise levels that could result in annoyance or sleep disturbance of nearby sensitive receptors.

Construction-related Traffic Noise

Short-term noise impacts could result from the transport of workers and construction equipment and materials to and from the project site. This would incrementally increase noise levels on access roads leading to the site. Because workers and construction equipment would use existing routes, noise from passing trucks would be similar to existing vehicle-generated noise on these local roadways. Typically, a doubling of the Average Daily Traffic (ADT) hourly volumes on a roadway segment is required in order to result in an increase of 3 dBA in traffic noise levels. This is the lowest change that can be perceptible to the human ear in outdoor environments. Project-related construction trips would not be expected to double the hourly or daily traffic volumes along any roadway segment in the project vicinity. For this reason, short-term intermittent noise from construction trips would not be expected to result in a perceptible increase in hourly or daily average traffic noise levels in the project vicinity.

Construction Equipment Operational Noise

Short-term noise impacts could result from construction activity related to the proposed project. Similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase.

The site preparation phase involves the use of earthmoving equipment, which tends to generate the highest noise levels. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full power operation followed by 3 or 4 minutes at lower power settings.

Construction of the project is expected to require the use of scrapers, bulldozers, water trucks, haul trucks, and pickup trucks. The maximum noise level generated by each scraper, bulldozer and grader is assumed to be 85 dBA L_{max} at 50 feet from this equipment. (Draft EIR, Table 3.10-2). Each doubling of sound sources with equal strength increases a sound level by 3 dBA. Thus, a reasonable worst-case combined noise level during this phase of construction would be 90 dBA L_{max} at a distance of 50

feet from the acoustic center of a construction area. This would result in a reasonable worst-case hourly average of 86 dBA L_{eq}.

The closest façade of the closest noise-sensitive receptor to the project site would be located 1,240 feet from the acoustic center of construction activity where multiple pieces of heavy construction equipment would operate simultaneously during construction of the proposed parking areas near the project's northeastern boundary. At this distance, construction noise levels could range up to approximately 62 dBA L_{max}, with a relative worst-case hourly average of 57 dBA L_{eq} at this receptor. These noise levels could occur temporarily.

These construction noise levels are within the construction noise limits established by the City of no greater than 75 dBA during the hours of 7:00 a.m. to 7:00 p.m.; but these levels could exceed the City's nighttime threshold for construction noise of 60 dBA. Thus, MM NOI-1 would require all on-site construction activities be limited to between the daytime hours of 7:00 a.m. to 7:00 p.m. MM NOI-1 would further reduce impacts from construction noise by requiring mufflers on construction equipment powered by internal engines. MM NOI-1 also would require contractors to limit idling times of vehicles with internal combustion engines to 5 minutes or less and utilize quiet mode on air compressors and other stationary noise sources. Furthermore, MM NOI-1 would require contractors to locate stationary noise-generating equipment as far away as the equipment allows and also be placed such that noise is directed away from adjacent residential homes.

Operation

Implementation of the project would result in mobile and stationary operational noise sources.

Mobile Source Operational Noise Impacts

A significant impact would occur if implementation of the proposed project would result in a substantial increase in traffic noise levels compared with traffic noise levels existing without the project. A change of 5 dBA is considered the minimum readily perceptible change to the human ear in outdoor environments. Therefore, for purposes of this analysis, a 3 dBA or greater increase above traffic noise levels that would exist without the project would be considered a substantial permanent increase in traffic noise levels.

The traffic study prepared by W-Trans concluded that the highest traffic noise level increase with implementation of the proposed project would occur along South Kelly Road under Existing Plus Project conditions and would result in traffic noise levels ranging up to 59.1 dBA L_{dn} as measured at 50 feet from the centerline of the nearest travel lane, representing an increase of 2.5 dBA over existing conditions for this roadway segment (Draft EIR, Table 3.10-6). This increase is less than a 3 dBA or greater increase that would be considered a substantial increase.

Stationary Source Operational Noise Impacts

A significant impact would occur if operational noise levels generated by stationary noise sources at the proposed project site would result in a substantial permanent increase in ambient noise levels in excess of the City's noise performance standards. The City requires that new industrial, commercial, and related land uses demonstrate that they would not directly cause ambient noise levels to exceed an exterior L_{dn} of 65 dBA in areas containing housing, schools, health care facilities, or other "noise-sensitive" land uses.

Parking Lot Activities

The proposed project would generate noise from parking lot activities. Typical parking lot activities generate noise levels ranging from approximately 60 dBA to 70 dBA L_{max} at 50 feet.

The closest façade of the nearest noise-sensitive receptor to the project site would be located 1,360 feet southwest of the nearest proposed parking areas. Noise levels associated with daily parking lot activities would attenuate to approximately 41 dBA L_{max} at this façade. Assuming a reasonable worst-case scenario of one parking movement for every parking stall within a single hour would result in an hourly average noise level of 24 dBA L_{eq} as measured at this nearest façade. If these noise levels were to occur every hour for a 24-hour period, they would result in a reasonable worst-case average noise level of 30 dBA L_{dn} as measured at this nearest receptor (Draft EIR, Appendix G).

Therefore, the proposed project's reasonable worst-case parking lot noise levels would not cause ambient noise levels to exceed an exterior L_{dn} of 65 dBA as measured at the nearest receptor. Existing traffic noise levels along Green Island Road are 62 dBA L_{dn} (Draft EIR, Table 3.10-6). Therefore, project parking lot activities would not result in a substantial permanent increase in ambient noise levels in the project vicinity.

Mechanical Equipment Operations

The proposed project would generate noise from new exterior mechanical equipment sources. A reference noise level for typical rooftop mechanical ventilation systems was used. Noise levels from commercially available rooftop mechanical ventilation equipment range from 50 dBA to 60 dBA L_{eq} at a distance of 25 feet.

The closest façade of the nearest noise-sensitive receptor to the project site would be located approximately 1,470 feet southwest of the nearest potential location for proposed rooftop mechanical ventilation equipment. At this distance, noise generated by typical rooftop mechanical ventilation equipment would attenuate to below 22 dBA L_{eq} at the nearest façade. If these noise levels were to occur every hour for a 24-hour period, they would result in a reasonable worst-case average noise level of 29 dBA L_{dn} as measured at this nearest receptor (Draft EIR, Appendix G).

Therefore, the proposed project's reasonable worst-case mechanical ventilation equipment operation noise levels would not cause ambient noise levels to exceed an exterior L_{dn} of 65 dBA as measured at the nearest receptor. As discussed above, existing traffic noise levels along Green Island Road are 62 dBA L_{dn}. Therefore, noise levels from proposed mechanical ventilation equipment operations would not result in a substantial permanent increase in ambient noise levels in the project vicinity.

Truck Loading Activities

Noise would be also generated by truck loading and unloading activities at the loading docks along the western side of the proposed building and at the proposed surface level loading areas on the north and south sides of the building. Typical maximum noise levels from truck loading and unloading activity are 70 dBA L_{max} as measured at 50 feet.

The closest façade of the nearest noise-sensitive receptor to the project site would be located approximately 1,600 feet from the nearest loading docks. Assuming a reasonable worst-case

scenario of one truck loading operation for every loading stall and every loading dock within a single hour would result in an hourly average noise level of 40 dBA L_{max} and 29 dBA L_{eq} as measured at the nearest façade of the residence. If these noise levels were to occur every hour for a 24-hour period, they would result in a reasonable worst-case average noise level of 35 dBA L_{dn} as measured at this nearest receptor (Draft EIR, Appendix G).

The proposed project's reasonable worst-case truck loading/unloading activity noise levels would not cause ambient noise levels to exceed an exterior L_{dn} of 65 dBA as measured at the nearest receptor. As discussed above, existing traffic noise levels along Green Island Road are 62 dBA L_{dn}. Therefore, project truck loading/unloading activities would not result in a substantial permanent increase in ambient noise levels in the project vicinity.

Stationary Source Operational Noise Impact Conclusion

None of the project stationary operational noise sources would result in an increase of 3 dBA or greater above the City's performance threshold of 65 dBA L_{dn} for stationary noise sources as measured at the nearest sensitive receptor. Table 3.10-7 of the Draft EIR provides a summary of the stationary source operation noise impacts.

The City finds that MM NOI-1 is feasible, is adopted, and will further reduce impacts related to noise. Accordingly, the City finds that, pursuant to Public Resources Code Section 21081(a)(1) and State CEQA Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the proposed project that mitigate or avoid the potentially significant impacts as identified in the EIR. Therefore, impacts would be less than significant with mitigation incorporated.

1.7 - Impacts Identified in the Draft EIR as Being Significant and Unavoidable Even After the Incorporation of All Feasible Mitigation Measures

The Lead Agency hereby finds that, despite the incorporation of feasible mitigation measures outlined in the EIR and the attached MMRP, the following impacts from the proposed project and related approvals cannot be fully mitigated to a less than significant level and a Statement of Overriding Considerations is therefore included herein. There are no feasible mitigation measures, including those proposed by parties who submitted comments on the Draft EIR, that can reduce these impacts to less than significant levels.

1.7.1 - Air Quality

Impact AIR-1: The proposed project would conflict with or obstruct implementation of the applicable air quality plan (**Draft EIR Pages 3.2-38–45; Final EIR, vol. 2, Page 4-1**).

Findings: Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, Section 15091(a)(1).) However, impacts would still remain significant and unavoidable even with mitigation incorporated. Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measure or project alternatives identified in the EIR. (State CEQA Guidelines, Section 15091(a)(3).) (Draft EIR, Page 3.2-45).

Mitigation Measures

MM AIR-2a The following Best Management Practices (BMPs), as recommended by the Bay Area Air Quality Management District (BAAQMD), shall be included in the design of the project and implemented during construction:

- All active construction areas shall be watered at least two times per day.
- All exposed non-paved surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and access roads) shall be watered at least three times per day and/or non-toxic soil stabilizers shall be applied to exposed non-paved surfaces.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered and/or shall maintain at least 2 feet of freeboard.
- All visible mud or dirt tracked out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 miles per hour.
- All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California Airborne Toxics Control Measure (ATCM) Title 13, Section 2485 of California Code of Regulations). Clear signage regarding idling restrictions shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
- The prime construction contractor shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The City and the construction contractor shall take corrective action within 48 hours. The BAAQMD's phone number shall also be visible to ensure compliance with applicable regulations.

MM AIR-2b Prior to the issuance of grading or building permits, the project applicant shall provide the City with documentation demonstrating the use of "Low-VOC" architectural coatings during the proposed project's construction. "Low-VOC" architectural coatings used during project construction shall not exceed 50 grams of reactive organic gases (ROG) or volatile organic compounds (VOC) per liter of product.

MM AIR-2c Prior to issuing any certificate of occupancy for the proposed project, the project applicant shall provide the City with documentation demonstrating the use of "Low-VOC" architectural coatings and electric landscaping equipment during the operation of the proposed project. "Low-VOC" architectural coatings used during

project operation shall not exceed 10 grams of reactive organic gases (ROG) or volatile organic compounds (VOC) per liter of product. Landscaping equipment referred to in this requirement shall include lawnmowers, leaf blowers, and chainsaws.

MM AIR-2d Prior to issuing the certificate of occupancy for the proposed project, the project applicant shall provide the City with documentation demonstrating the use of a truck fleet that meets or exceeds model year 2014 for all heavy-duty trucks during operation of the proposed project. If the project applicant does not own the truck fleet that would be used during operation of the proposed project, the project applicant shall provide the City with documentation from the truck fleet owner or operator demonstrating that trucks utilized for operation of the proposed project will meet or exceed model year 2014. If any change occurs where a new truck fleet is utilized during operation of the proposed project, the project applicant shall provide the City with documentation demonstrating that the new truck fleet meets or exceeds this requirement.

To monitor and ensure that trucks that meet a model year of 2014 or newer are used for the proposed project, the fleet operator shall maintain records of all trucks and equipment associated with the proposed project's operation and make these records available to the City upon request. Alternatively, the City may require periodic reporting and provision of written records by operators and conduct regular inspections of the records to the maximum extent feasible and practicable.

MM AIR-2e Prior to the issuance of the certificate of occupancy for each building with dock doors, signage shall be posted identifying idling restrictions and contact information to report violations to the building manager.

MM AIR-2f Prior to the issuance of the certificate of occupancy for each building with a separate end user, the City shall confirm that the end user has prepared a Transportation Demand Management Plan (TDM Plan). The TDM Plan shall be prepared by a qualified transportation consultant and identify strategies to reduce single-occupant vehicle trips. Examples of TDM strategies may include but are not limited to:

- Ridesharing/Ride Matching
- Vanpools
- Transit subsidies
- Preferential parking for rideshare or vanpool vehicles
- Employee lockers
- Secure bicycle parking
- Employee locker rooms
- Provide TDM information in employee breakroom

MM AIR-2g As a part of future lease agreements, the project proponent shall provide all future tenants at the project site information on available California Air Resources Board (ARB) and Bay Area Air Quality Management District (BAAQMD) incentive programs,

such as the Carl Moyer Program and the Voucher Incentive Program, that support upgrading truck fleets to clean air technology equipment.

Facts in Support of Findings

The BAAQMD 2017 Clean Air Plan is a regional and multiagency effort to reduce air pollution in the Air Basin. A consistency determination with the 2017 Clean Air Plan fulfills the CEQA goal of informing decision-makers of the proposed project's environmental effects under consideration early enough to ensure that air quality concerns are fully addressed.

In part, the regional population, housing, and employment projections developed by the ABAG for the San Francisco Bay Area Air Basin (SFAAB) are based on cities' general plan land use designations. These projections form the foundation for the emissions inventory of the 2017 Clean Air Plan. Projects consistent with the local general plan are considered consistent with the regional air quality plan. The project site is designated "Industrial" by the City of American Canyon General Plan and zoned "General Industrial." The proposed project is consistent with these General Plan land use designations. Thus, the proposed project would generally be consistent with the underlying general plan land use designation and would not have the potential to substantially affect housing, employment, and population projections in the region that are the basis of the 2017 Clean Air Plan projections. The proposed project would not conflict with the control measures of the 2017 Clean Air Plan (Draft EIR, Table 3.2-9).

The BAAQMD's CEQA Air Quality Guidelines further recommend determining a project's consistency with the 2017 Clean Air Plan, in part, by determining a project's consistency with the significance thresholds presented in Table 3.2-7 of the Draft EIR. As discussed under Impact AIR-2 below, the proposed project would generate emissions which exceed the BAAQMD's significance thresholds after the implementation of applicable and feasible mitigation and would result in a significant and unavoidable impact. As discussed below under Impact AIR-2, implementation of MM AIR-2a and MM AIR-2b would sufficiently reduce project construction emissions to less than significant levels. Implementation of MM AIR-2c and MM AIR-2d would not be sufficient to reduce project operation emissions to less than significant levels.

As discussed under Impact AIR-2, unmitigated project operation would result in ROG and NO_X emissions which exceed BAAQMD significance thresholds. NO_X emissions generated during project operation would principally be generated by the operation of the trucking fleet, irrespective of whether the fleet would accommodate the use of TRUs. MM AIR-2d would be required to ensure the trucking fleet accessing the project site would be comprised of vehicles no older than model year 2014 to reduce tailpipe NO_X emissions. MM AIR-2e would require that anti-idling signage be posted in loading dock areas. MM AIR-2f requires that a TDM Program be implemented.

As discussed further in Impact AIR-2 below, implementation of MM AIR-2c would result in a reduction of ROG emissions under both dry storage and cold storage scenarios; however, these emissions would still exceed the BAAQMD significance thresholds for ROG emissions of 10 tons per year and 54 average pounds per day. Furthermore, as discussed in Impact AIR-2, with the implementation of MM AIR-2d, NO_X emissions during project operation would be reduced under

both dry storage and cold storage scenarios; however, emissions would still exceed the BAAQMD significance thresholds for NO_X emissions of 10 tons per year and 54 average pounds per day.

Because the proposed project would generate emissions which exceed the BAAQMD's significance thresholds and BAAQMD's CEQA Air Quality Guidelines recommend determining a project's consistency with the 2017 Clean Air Plan, in part, by determining a project's consistency with the BAAQMD significance thresholds, the proposed project would be inconsistent with the 2017 Clean Air Plan.

The City finds that MM AIR-2a through MM AIR-2g are feasible, are adopted, and will reduce impacts to the greatest extent feasible. However, impacts would still remain significant and unavoidable even with mitigation incorporated.

Impact AIR-2: The proposed project would result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable deferral or State ambient air quality standard (**Draft EIR Pages 3.2-45–59**).

Findings: Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, Section 15091(a)(1).) However, impacts would still remain significant and unavoidable even with mitigation incorporated. Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measure or project alternatives identified in the EIR. (State CEQA Guidelines, Section 15091(a)(3).) (Draft EIR, Page 3.2-59).

Mitigation Measures

MM AIR-2a, MM AIR-2b, MM AIR-2c, MM AIR-2d, MM AIR-2e, MM AIR-2f and MM AIR-2g.

Facts in Support of Findings

This impact is related to the cumulative effect of a project's regional criteria pollutant emissions. The cumulative analysis focuses on whether a specific project would result in cumulatively considerable emissions. According to Section 15064(h)(4) of the CEQA Guidelines, the existence of significant cumulative impacts caused by other projects alone does not constitute substantial evidence that the project's incremental effects would be cumulatively considerable. Rather, the determination of cumulative air quality impacts for construction and operational emissions is based on whether the project would result in regional emissions that exceed the BAAQMD regional thresholds of significance for construction and operations on a project level. A project that would not exceed the BAAQMD thresholds of significance on the project level also would not be considered to result in a cumulatively considerable contribution to these regional air quality impacts.

Construction

Construction Fugitive Dust

The BAAQMD bases the determination of significance for fugitive dust on a consideration of the BMPs to be implemented. If all appropriate emissions control measures are implemented for a

project as recommended by the BAAQMD, then fugitive dust emissions during construction are not considered significant. MM AIR-2a would ensure implementation of construction BMPs recommended by the BAAQMD irrespective of the emissions reductions achieved by those BMPs. With this mitigation measure, short-term construction fugitive dust impacts would be less than significant.

Construction Air Pollutant Emissions: ROG, NO_X, PM_{10}, $PM_{2.5}$

CalEEMod, Version 2020.4.0, was used to estimate the proposed project's construction emissions. Estimated construction emissions are compared with the applicable thresholds of significance established by the BAAQMD to assess ROG, NO_X, exhaust PM_{10}, and exhaust $PM_{2.5}$ construction emissions to determine significance for this impact. As the BAAQMD dust control measures would be required to ensure fugitive dust impacts are less than significant, the emission estimates shown below account for the implementation of MM AIR-2a.

ROG emissions generated mainly during architectural coating activities during project construction would exceed BAAQMD significance thresholds (Draft EIR, Table 3.2-10), requiring the implementation of MM AIR-2b, which would require the use of low-VOC (i.e., ROG) architectural coating products during project construction. MM AIR-2b would result in reducing ROG emissions from 68 average pounds per day to 33 average pounds per day, which is below the BAAQMD significance threshold of 54 pounds per day for ROG emissions during project construction (Draft EIR, Table 3.2-11). Therefore, project construction emissions would be less than significant with the implementation of MMs AIR-2a and AIR-2b.

Operation

Operational Air Pollutant Emissions: ROG, NO_X, PM_{10}, $PM_{2.5}$

Operational emissions would include area, energy, and mobile sources. Area sources would include emissions from architectural coatings, consumer products, and landscape equipment. Energy sources include emissions from the combustion of natural gas for water heaters and other heat sources. Mobile sources include exhaust and road dust emissions from the automobiles that would travel to and from the project site. Mobile sources also include exhaust from trailer-mounted TRUs which would accompany any freight truck carrying refrigerated goods. Stationary sources include emissions from stationary source equipment, such as backup generators, that would require a permit issued by the BAAQMD. Pollutants of concern include ROG, NO_X, PM_{10}, and $PM_{2.5}$.

Project operations were analyzed at full buildout immediately following the completion of construction for Phase 2 in August 2023 as a conservative estimate of operational emissions beginning in the earliest year of full operation.

The cold storage project scenario would also include the operation of TRUs, which are analyzed using weighted averages for emission factors retrieved from the ARB's OFFROAD2017 database for in-state truck TRUs, in-state van TRUs, in-state gen-set TRUs, in-state trailer TRUs, out-of-state gen-set TRUs, out-of-state trailer TRUs, and locomotive TRUs, all utilizing aggregate horsepower bins. These vehicle categories encompass all possible TRU emission factors contained in the database. Each truck is assumed to be accompanied by a TRU and each of the 528 truck trips is one-way, this analysis assumes a truck and TRU population of 266. Each TRU is assumed to spend an average of four hours

running on-site for unloading and loading purposes, and an average of two hours off-site traveling to and from the Port of Oakland.

The locomotive emission estimates assume a monthly average of 500,000 ton-miles of locomotive deliveries. Assuming an average travel distance of 50 miles and an average loaded railcar weight of 65 tons, this would represent nearly two loaded, 20-railcar locomotive deliveries per week. Operational emission estimates for the proposed project are contained in Table 3.2-12 of the Draft EIR. For detailed assumptions used to estimate emissions, see Draft EIR, Appendix B.

The proposed project would result in operational-related criteria air pollutants or ozone precursors which would exceed the BAAQMD's thresholds of significance, specifically with respect to ROG and NO_X emissions (Draft EIR, Table 3.2-12). MM AIR-2c would be required to ensure the use of low-VOC architectural coatings for any reapplication of paints and coatings and the use of electric landscaping equipment, including chainsaws, lawnmowers, and leaf blowers during project operation. The trucking fleet would generate the majority of operational NO_X emissions, thus MM AIR-2d would be required to ensure that a more fuel-efficient, lower-emission trucking fleet—one which demonstrates a model year 2014 or newer for all heavy-duty trucks upon first implementation—is utilized during project operation.

Under a dry storage scenario, implementation of MM AIR-2c would result in a reduction of ROG emissions during project operation from approximately 13 tons per year and 70 average pounds per day to approximately 12 tons per year and 64 average pounds per day, which would still exceed the BAAQMD significance thresholds for ROG emissions of 10 tons per year and 54 average pounds per day. Under a cold storage scenario, implementation of MM AIR-2c would result in a reduction of ROG emissions during project operation from approximately 16 tons per year and 90 average pounds per day to approximately 15 tons per year and 85 average pounds per day, which would still exceed the applicable BAAQMD significance thresholds (Draft EIR, Table 3.2-13).

Under a dry storage scenario, implementation of MM AIR-2d would result in a reduction of NO_X emissions during project operation from approximately 40 tons per year and 217 average pounds per day to approximately 35 tons per year and 192 average pounds per day, which would still exceed the BAAQMD significance thresholds for NO_X emissions of 10 tons per year and 54 average pounds per day. Under a cold storage scenario, implementation of MM AIR-2d would result in a reduction of NO_X emissions during project operation from approximately 71 tons per year and 388 average pounds per day to approximately 66 tons per year and 362 average pounds per day, which would still exceed the applicable BAAQMD significance thresholds (Draft EIR, Table 3.2-13).

CalEEMod, Version 2020.4.0, utilizes a Statewide average VOC (i.e., ROG) per building square-foot metric, irrespective of land use type, derived from the ARB's Statewide 2008 Consumer Product Inventory. Nonresidential land uses, such as the proposed project, are likely to result in fewer operational ROG emissions generated by the use of consumer products than what is demonstrated in this analysis. The principal source for operational ROG emissions would be the use of consumer products by employees and visitors and these uses would not be under the control of the property owner or tenant. As such, mitigation targeting the use of consumer products was omitted from this analysis.

Operational Carbon Monoxide Hotspot

The CO emissions from traffic generated by the proposed project are a concern at the local level.

The BAAQMD recommends a screening analysis to determine whether a project has the potential to contribute to a CO hotspot. The screening criteria identify when site-specific CO dispersion modeling is necessary. The proposed project would result in a less than significant impact to air quality for local CO if all the following screening criteria are met:

1. The project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans; and
2. The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour; and
3. The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, bridge underpass, natural or urban street canyon, below-grade roadway).

The Traffic Impact Study (TIS) prepared for the proposed project concluded that no intersections impacted by the proposed project would experience traffic volumes of 44,000 vehicles per hour. Nonetheless, accumulation of local CO concentration can occur when a transportation facility's design or orientation prevents the adequate dispersion of CO emissions from vehicles. However, adjacent roadways that would receive new vehicle trips generated by the proposed project do not include roadway segments where vertical or horizontal atmospheric mixing is substantially limited.

As discussed in Section 3.12, Transportation of the Draft EIR, all studied roadway segments and intersections would operate at acceptable levels of service with traffic generated by the proposed project in combination with existing traffic levels. Because the proposed project would operate at acceptable levels of service consistent with the City of American Canyon standards, the proposed project would be consistent with an adopted congestion management program. Therefore, the proposed project would not exceed the CO screening criteria and would have a less than significant impact related to CO.

Consequently, implementation of MM AIR-2a and MM AIR-2b would sufficiently reduce project construction emissions to less than significant levels; however, implementation of MM AIR-2c and MM AIR-2d would not be sufficient to reduce project operation emissions to less than significant levels. The City finds that MM AIR-2a through MM AIR-2g are feasible, are adopted, and will reduce impacts to the greatest extent feasible. However, impacts related to project operation emissions would remain significant and unavoidable even with mitigation incorporated.

Cumulative Impacts

Because of emissions from existing nearby projects, the proposed project would have a significant cumulative impact on air quality. (**Draft EIR, Page 4-4–5**).

Findings: Significant cumulative impact (Draft EIR, Page 4-5). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, Section 15091(a)(1).) However, impacts would still remain significant and unavoidable even with mitigation incorporated. Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measure or project alternatives identified in the EIR. (State CEQA Guidelines, Section 15091(a)(3).)

Facts in Support of Findings

The geographic scope of the cumulative air quality analysis is the San Francisco Bay Area Air Basin, which covers all or portions of the counties of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Sonoma, and Solano. The BAAQMD CEQA Guidelines' cumulative significance criteria are used in the cumulative analysis of air quality.

A project would be judged to conflict with or obstruct implementation of the regional air quality plan if it would result in substantial new regional emissions not foreseen in the air quality planning process. Regional emissions forecasts in the air quality plan are based on population and employment forecasts based on City and County General Plans. The proposed project is consistent with land use designations and applicable goals and policies of the American Canyon General Plan, site zoning, and other applicable land use regulatory documents and thus is considered planned growth. Because the proposed project would not result in unplanned growth or in VMT, it would not conflict with or obstruct implementation of the air quality plan in this regard. Additionally, the proposed project would meet all of the applicable Land Use Measures and Energy and Climate Measures contained in the BAAQMD's Clean Air Plan.

If a project does not exceed the BAAQMD established numerical thresholds, its emissions would not be cumulatively considerable, resulting in less than significant air quality impacts to the region's existing air quality conditions. As discussed in Impact AIR-2, the proposed project would emit operational criteria pollutant emissions (ROGs and oxides of nitrogen) at levels that would exceed the BAAQMD CEQA Guidelines and significance thresholds. Proposed mitigation would not reduce these emissions to below BAAQMD thresholds. Therefore, the proposed project would contribute to a cumulatively considerable (i.e., significant and unavoidable) regional air quality impact with regard to criteria pollutants and consistency with the BAAQMD's current Clean Air Plan.

1.7.2 - Greenhouse Gas Emissions and Energy

Cumulative Impacts

The proposed project's cumulative impacts related to greenhouse gas emissions would be cumulatively significant. (**Draft EIR, Page 4-9–10**).

Findings: Significant cumulative impact (Draft EIR, Page 4-10). Changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effects as identified in the EIR. (State CEQA Guidelines, Section 15091(a)(1).) However, impacts would still remain significant and

unavoidable even with mitigation incorporated. Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measure or project alternatives identified in the EIR. (State CEQA Guidelines, Section 15091(a)(3).)

Facts in Support of Findings

The geographic scope of the cumulative GHG emissions analysis is the San Francisco Bay Area Air Basin, which covers all or portions of the counties of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Sonoma, and Solano. In a larger sense, however, the relevant geographic area is the entire Earth, as explained by the California Supreme Court. "[B]ecause of the global scale of climate change, any one project's contribution is unlikely to be significant by itself." (*Center for Biological Diversity v. Department of Fish and Wildlife* (2015) 62 Cal.4th 204, 219.) "'With respect to climate change, an individual project's emissions would most likely not have any appreciable impact on the global problem by themselves, but they would contribute to the significant cumulative impact caused by GHG emissions from other sources around the globe. The question therefore becomes whether the proposed project's incremental addition of GHG emissions is "cumulatively considerable" in light of the global problem, and thus significant.'" (*Id.*, quoting Crockett, Addressing the Significance of Greenhouse Gas Emissions Under CEQA: California's Search for Regulatory Certainty in an Uncertain World (July 2011) Golden Gate U. Envtl. L.J. 203, 207–208).)

The proposed project would emit new GHG emissions, as would other past, present, and reasonably foreseeable projects within the Air Basin. The BAAQMD has not set a numerical threshold of significance for GHG emissions from construction, but has set a threshold for GHG emissions from operation as well as a threshold on a per-service population basis. The proposed project would comply with relevant elements of the City of American Canyon EECAP, but would exceed both of the BAAQMD operational GHG thresholds and as such could be considered cumulatively significant. GHG emissions from the proposed project's potential new stationary source were found to exceed the BAAQMD significance threshold for GHG from stationary sources and as such could be considered cumulatively significant. Therefore, the proposed project, in conjunction with other past, present, and reasonably foreseeable future development in the Air Basin and around the world, would result in a significant cumulative GHG emissions impact.

1.8 - Findings Regarding Alternatives

1.8.1 - Introduction

This section presents findings regarding alternatives to the proposed project. The section provides a summary and discussion of the feasibility of the following alternatives evaluated in the Draft EIR:

- **Alternative 1: No Project/No Development Alternative.** The project site would remain undeveloped for the foreseeable future and no development would occur.
- **Alternative 2: No Project/Existing General Plan Alternative.** A 2.4-million-square-foot food and beverage processing facility would be developed on the project site.

- **Alternative 3: Reduced Density Alternative.** A 1.6-million-square-foot logistics center would be developed on the project site, which represents a 25 percent reduction in square footage relative to the proposed project. The layout and project boundaries would remain the same as the proposed project.
- **Alternative 4: Phase 1 Only Alternative.** Phase 1 of the proposed project would be developed, which consists of approximately 1.1 million square feet of high-cube warehouse on 95 acres. Phase 2 would not be developed, and the remaining 113 acres would remain undeveloped.

In accordance with CEQA Guidelines Section 15126.6, the EIR contained a comparative impact assessment of alternatives to the proposed project. The primary purpose of this analysis is to provide decision-makers and interested agencies, organizations and individuals with information about a reasonable range of potentially feasible project alternatives, which could avoid or reduce any of the proposed project's significant adverse environmental effects. Important considerations for the alternatives analyses are noted below:

- An EIR need not consider every conceivable alternative to a project;
- An EIR should identify alternatives that were considered by the lead agency, but rejected as infeasible during the scoping process;
- Reasons for rejecting an alternative include:
  - Failure to meet most of the basic project objectives identified in Section 1.3.2, Project Objectives;
  - Infeasibility; and
  - Inability to avoid significant environmental effects.

With respect to project alternatives, "[t]he issue of feasibility arises at two different junctures: (1) in the assessment of alternatives in the EIR and (2) during the agency's later consideration of whether to approve the project." (*California Native Plant Society v. City of Santa Cruz* (2009) 177 Cal. App. 4th 957, 981 (*CNPS*), citing *Mira Mar Mobile Community v. City of Oceanside* (2004) 119 Cal.App.4th 477, 489 (*Mira Mar*).) "But 'differing factors come into play at each stage.'" (*CNPS*, *supra*, 177 Cal.App.4th at p. 981, citing Kostka & Zischke, Practice Under the Cal. Environmental Quality Act [Cont.Ed.Bar 2d ed. 2009] (*Kostka*) § 15.9, p. 740.) "For the first phase—inclusion in the EIR—the standard is whether the alternative is *potentially* feasible." (*CNPS*, *supra*, 177 Cal.App.4th at p. 981, citing *Mira Mar*, *supra*, 119 Cal.App.4th at p. 489; CEQA Guidelines, § 15126.6, subd. (a).) "By contrast, at the second phase—the final decision on project approval—the decision-making body evaluates whether the alternatives are *actually* feasible." (*CNPS*, *supra*, 177 Cal.App.4th at p. 981, citing CEQA Guidelines, § 15091, subd. (a)(3).) "At that juncture, the decisionmakers may reject as infeasible alternatives that were identified in the EIR as potentially feasible." (*CNPS*, *supra*, 177 Cal.App.4th at p. 981, citing *Mira Mar*, *supra*, 119 Cal.App.4th at p. 489.)

"While it is up to the EIR preparer to identify alternatives as potentially feasible, the decision-making body 'may or may not reject those alternatives as being infeasible' when it comes to project approval." (*CNPS*, *supra*, 177 Cal.App.4th at p. 999, quoting *Sierra Club v. County of Napa*, *supra*, 121 Cal.App.4th at p. 1504.) "Rejection by the decision makers does not undermine the validity of

the EIR's alternatives analysis." (*CNPS*, *supra*, 177 Cal.App.4th at p. 999, citing *Mira Mar*, *supra*, 119 Cal.App.4th at p. 489.) "Like mitigation measures, potentially feasible alternatives 'are suggestions which may or may not be adopted by the decisionmakers.'" (*CNPS*, *supra*, 177 Cal.App.4th at p. 999, quoting *No Slo Transit, Inc. v. City of Long Beach* (1987) 197 Cal.App.3d 241, 256.)

"When it comes time to decide on project approval, the public agency's decision-making body evaluates whether the alternatives are *actually* feasible." (*CNPS*, *supra*, 177 Cal.App.4th at p. 999, citing *Mira Mar*, *supra*, 119 Cal.App.4th at p. 489, and CEQA Guidelines, § 15091, subd. (a)(3).) "While staff may draft the necessary findings, the decision-making body is responsible for the ultimate determination of feasibility, which cannot be delegated." (*CNPS*, *supra*, 177 Cal.App.4th at p. 999, citing CEQA Guidelines, §§ 15025, subd. (b)(2), § 15091, subd. (a)(3).) "At this final stage of project approval, the agency considers whether "[s]pecific economic, legal, social, technological, or other considerations ... make infeasible the mitigation measures or alternatives identified in the environmental impact report." (*CNPS*, *supra*, 177 Cal.App.4th at p. 1000, citing Pub. Resources Code, § 21081, subd. (a)(3).) "Broader considerations of policy thus come into play when the decision-making body is considering actual feasibility than when the EIR preparer is assessing potential feasibility of the alternatives." (*CNPS*, *supra*, 177 Cal.App.4th at p. 1000.) Thus, "it does not subvert the CEQA environmental review process for the ultimate decision maker to reject as infeasible alternatives identified in the EIR." (*Ibid*.)

At the decision-making stage, "'feasibility' under CEQA encompasses 'desirability' to the extent that desirability is based on a reasonable balancing of the relevant economic, environmental, social, and technological factors." (*City of Del Mar v. City of San Diego* (1982) 133 Cal.App.3d 410, 417; *CNPS*, *supra*, 177 Cal.App.4th at p. 1001; *San Diego Citizenry Group v. County of San Diego* (2013) 219 Cal.App.4th 1, 17.)

The concept of "feasibility" also encompasses the question of whether a particular alternative promotes the underlying goals and objectives of a project. (*Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1506-1509 [upholding CEQA findings rejecting alternatives in reliance on applicant's project objectives]; see also *CNPS*, *supra*, 177 Cal.App.4th at p. 1001 [*"*an alternative 'may be found infeasible on the ground it is inconsistent with the project objectives as long as the finding is supported by substantial evidence in the record'"], quoting *Kostka*, § 17.30, p. 825); *Citizens for Open Government v. City of Lodi* (2012) 205 Cal.App.4th 296, 314-315 (*Citizens for Open Government*) [court upholds agency's project approval where a rejected alternative would not "entirely fulfill" a particular project objective and "would be 'substantially less effective' in meeting" the lead agency's "goals"]; *In re Bay-Delta Programmatic Environmental Impact Report Coordinated Proceedings* (2008) 43 Cal.4th 1143, 1165, 1166 (*Bay-Delta*) ["a lead agency may structure its EIR alternative analysis around a reasonable definition of underlying purpose and need not study alternatives that cannot achieve that basic goal"]; and *Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4th 704, 715 [court upholds finding rejecting lower density housing alternative as infeasible, citing city council's conclusion that the fact that "'the houses would be necessarily more expensive than those of the proposed project' and would defeat the project objective of providing the 'the least expensive

single-family housing for the vicinity'"].)

CEQA does not require that an analysis of alternate sites always be included in an EIR. Pursuant to CEQA Guidelines Section 15126.6(f)(2), in making the decision to include or exclude analysis of an alternate site, the "key question and first step in analysis is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the project need to be considered for inclusion in the EIR."

The Draft EIR evaluates the feasibility of three alternative locations located within 1 mile of the project site either in the City of American Canyon or within unincorporated Napa County (Draft EIR, Exhibit 5-1). The three alternative locations considered in the Draft EIR are Sentinels of Freedom Property, Commerce Court, and Hess Vineyards. All three alternative locations do not constitute feasible alternatives because none of the properties are owned, controlled, or otherwise accessible to the project applicant and each of the properties are too small to accommodate the level of development contemplated by the proposed project. Furthermore, the Commerce Court location is the subject of an active development application and the Hess Vineyards location was re-designated from "Industrial" to "Agriculture, Watershed, and Open Space" by the Napa County Zoning Ordinance in 2008. None of these three sites would meet CEQA Guidelines criteria for a feasible alternative location (Draft EIR, Table 5-8).

Alternative 1: No Project/No Development Alternative.

CEQA Guidelines Section 15126.6(e) requires that an EIR evaluate a "No Project Alternative," which is intended to allow decision-makers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project. In cases where the project constitutes a land development project, the No Project Alternative is the "circumstance under which the project does not proceed." For many projects, the No Project Alternative represents a "No Development" scenario, in which the project site remains in its existing condition and no development occurs for the foreseeable future. However, CEQA Guidelines Section 15126.6(e)(3)(B) establishes that "If disapproval of the project under consideration would result in predictable actions by others such as the proposal of some other project, this 'no project' consequence should be discussed." In the interests of informed decision-making, the EIR considered both a No Project/No Development Alternative and a No Project/Existing General Plan Alternative.

The No Project/No Development Alternative would avoid the proposed project's significant and unavoidable impacts and would avoid any potential impacts related to all environmental topical areas. However, this alternative would not advance any of the project objectives, including those related to facilitating the development of land planned for business park/industrial uses to its highest and best use; positively contributing to the local economy; providing the City of American Canyon with a high-quality, employment-generating industrial development; and serving local and regional demand for manufacturing, logistics warehouse, and other industrial uses. Finally, it should be noted that the project site is zoned for industrial use, has been the subject of previous industrial development proposals, and is currently served with infrastructure suitable for this type of development. Thus, should the proposed project not advance, it would be expected that another industrial development proposal would be submitted.

Finding: Based on the discussion in the EIR and all other evidence before it, the City finds that the No Project/No Development Alternative does not advance any of the project objectives and would therefore represent an undesirable policy outcome. The City Council therefore rejects the No Project/No Development Alternative as infeasible.

Alternative 2: No Project/Existing General Plan Alternative.

Under the No Project/Existing General Plan Alternative, a 2.4-million- square- foot food and beverage processing facility would be developed on the project site. This alternative would not avoid the significant and unavoidable air quality and GHG emissions impacts associated with the proposed project and in fact would increase the severity of these impacts. The No Project/Existing General Plan Alternative would increase the severity of impacts associated with land use, noise, public services, transportation, and utilities. Additionally, the No Project/Existing General Plan Alternative would have similar impacts on aesthetics, biological resources, cultural resources, geology, hazards, and hydrology and water quality.

- The No Project/Existing General Plan Alternative, in theory, would advance most of the project objectives, including those related to facilitating the development of land planned for business park/industrial uses to its highest and best use; positively contributing to the local economy; providing the City of American Canyon with a high-quality, employment-generating industrial development. The change of the end use, however, would not advance as well as the proposed project the objectives of promoting economic growth in American Canyon by attracting new industries; promoting development that generates net positive tax revenues for the City by generating more in new tax revenues than are consumed by City expenditures on services provided to the development; and creating new employment opportunities for residents of Napa County and the surrounding region. The City is unaware of any proposal to develop a new beverage processing facility in the project area, making the economic benefits of such a use more hypothetical than real at present.

Finding: Based on the discussion in the EIR and all other evidence before it, the City Council finds that the No Project/Existing General Plan Alternative does not advance all of the project objectives, or does not advance them as well as the proposed project would, and thus would represent a less desirable policy outcome as compared with the proposed project, which would fully meet the project objectives and is an active development proposal would bring the City of American Canyon all of the benefits set forth in the Statement of Overriding Considerations. Because of the strong market for logistics and warehousing uses, which reflects consumers' growing preferences for home deliveries of items formerly purchased at so-called brick and mortar retail facilities, the City Council sees the proposed project as an opportunity to allow an entrepreneur to serve the City's residents and the residents of the larger region in a manner that is beneficial to both the entrepreneur and the residents, as well as to the City itself. The City Council sees no reason to impose on the applicant a development configuration or land use substantially at odds with what the applicant has proposed, particularly when such a configuration or use would produce greater levels of some environmental impacts. A local agency decision-

making body "may approve a developer's choice of a project once its significant adverse environmental effects have been reduced to an acceptable level that is, all avoidable significant damage to the environment has been eliminated and that which remains is otherwise acceptable." (*Laurel Hills Homeowners Assn. v. City Council* (1978) 83 Cal.App.3d 515, 521 (*Laurel Hills*); see also *Citizens for Open Government*, *supra*, 205 Cal.App.4th at pp. 314-315 [court upholds agency's project approval where a rejected alternative would not "entirely fulfill" a particular project objective and "would be 'substantially less effective' in meeting" the agency's "goals"].) For all of these reasons, and each of them, the City Council rejects Alternative 2 as infeasible.

Alternative 3: Reduced Density Alternative.

Under the Reduced Density Alternative, a 1.6-million- square- foot logistics center would be developed on the project site, which represents a 25 percent reduction in square footage relative to the proposed project. The layout and project boundaries would remain the same as the proposed project. The alternative would lessen the severity of, but would not avoid, the significant and unavoidable air quality and GHG emissions impacts associated with the proposed project. Additionally, the Reduced Density Alternative would lessen the severity of several of the significant impacts that can be reduced to a level of less than significant with mitigation (e.g., hydrology and water quality, and noise).

Although the Reduced Density Alternative would advance all of the project objectives, several of them would be advanced to a lesser degree, resulting in fewer positive economic benefits. For example, this alternative would be expected to employ fewer workers than the proposed project and would generate less tax revenue for the City. More specifically, this alternative would be less effective than the proposed project in meeting objectives related to promoting economic growth in American Canyon by attracting new industries; promoting development that generates net positive tax revenues for the City by generating more in new tax revenues than are consumed by City expenditures on services provided to the development; creating new employment opportunities for residents of Napa County and the surrounding region; and facilitating the development of land planned for business park/industrial uses to its highest and best use.

Finding: Based on the discussion in the EIR and all other evidence before it, the City Council finds that the Reduced Density Alternative advances several project objectives to a lesser degree than the proposed project and would therefore represent a less desirable policy outcome as compared with the proposed project, which would fully meet the project objectives and would bring the City of American Canyon all of the benefits set forth in the Statement of Overriding Considerations. The primary difference between the alternative and the proposed project is that the alternative is 25 percent smaller. The City Council sees no compelling need to impose such a size reduction on the applicant in light of the economic challenges associated with developing land (i.e., "making it pencil"). As a representative of the applicant has said, "Buzz Oates LLC will establish an entitled logistics center serving significant unmet demand for new warehousing and logistics space"; "[t]he market for logistics facilities is a highly competitive market and we must balance costs with the ability to

attract tenants"; and "[w]e do not believe … that we can take on any additional costs without undermining the prudence of the huge investments that are we making." (Letter from Joe Livaich, Buzz Oates LLC, to Brent Cooper, City of American Canyon (Dec. 2, 2022 [Appendix N to Final EIR, vol. 2].)

The City Council is inclined to defer to the applicant with regard to the optimal size of the project, given the economic realities the applicant is facing and the fact that environmental impacts of the alternative would not be substantially less than those of the project. A local agency decision-making body "may approve a developer's choice of a project once its significant adverse environmental effects have been reduced to an acceptable level that is, all avoidable significant damage to the environment has been eliminated and that which remains is otherwise acceptable." (*Laurel Hills*, *supra*, 83 Cal.App.3d at p. 521; see also *Citizens for Open Government*, *supra*, 205 Cal.App.4th at pp. 314-315 [court upholds agency's project approval where a rejected alternative would not "entirely fulfill" a particular project objective and "would be 'substantially less effective' in meeting" the agency's "goals"].) For all of these reasons, and each of them, the City Council rejects Alternative 3 as infeasible.

Alternative 4: Phase 1 Only Alternative.

Under the Phase 1 Only Alternative, only Phase 1 of the proposed project would be developed, which consists of approximately 1.1 million square feet of high-cube warehouse on 95 acres. Phase 2 would not be developed, and the remaining 113 acres would remain undeveloped. This alternative would lessen the severity of, but would not avoid, the significant and unavoidable air quality and GHG emissions impacts associated with the proposed project. Additionally, the Phase 1 Only Alternative would lessen the severity of several of the significant impacts that can be reduced to a level of less than significant with mitigation (e.g., biological resources, cultural resources, hydrology and water quality, and noise).

The Phase 1 Only Alternative would advance all of the project objectives, but several of them would be advanced to a lesser degree, resulting in fewer positive economic benefits and employing fewer workers than the proposed project. More specifically, this alternative would be less effective than the proposed project in meeting objectives related to promoting economic growth in American Canyon by attracting new industries; promoting development that generates net positive tax revenues for the City by generating more in new tax revenues than are consumed by City expenditures on services provided to the development; creating new employment opportunities for residents of Napa County and the surrounding region; and facilitating the development of land planned for business park/industrial uses to its highest and best use.

As a practical matter, the project applicant has a 100-year lease agreement with the property owner, and it would be impractical to forego development on the Phase 2 portion of the project site. Moreover, the project site is the single largest undeveloped site in the City of American Canyon and is zoned for industrial use. Preserving 113 acres of the site as a wetland preserve would not represent the highest and best use of the property, particularly since approximately 44.8 acres of the project site would be assigned for this use.

Finding: Based on the discussion in the EIR and all other evidence before it, the City Council finds that the Phase I Only Alternative advances several project objectives to a lesser degree than the proposed project and would therefore represent a less desirable policy outcome as compared with the proposed project, which would fully meet the project objectives and would bring the City of American Canyon all of the benefits set forth in the Statement of Overriding Considerations. The primary difference between the alternative and the proposed project is the amount and size of the development that would occur. The applicant would be prohibited from building a second phase, notwithstanding the general plan and zoning designations of the site, which favor development. The City Council sees no compelling need to impose such a size reduction on the applicant in light of the clear economic benefits of the second phase and the fact that the applicant, consistent with the planned uses for the property, has invested in the project in the hope of developing both phases, at a pace dictated by market conditions. The City Council concludes that the second phase is important to the applicant from an economic standpoint. (See, e.g., Letter from Joe Livaich, Buzz Oates LLC, to Brent Cooper, City of American Canyon (Dec. 2, 2022 [Appendix N to Final EIR, vol. 2].) The second phase would also generate tax revenues for the City, employ local residents, and serve local and regional demand for logistics and warehousing uses.

The City Council is inclined to defer to the applicant with regard to the optimal size of the project, given the economic realities the applicant is facing. A local agency decision-making body "may approve a developer's choice of a project once its significant adverse environmental effects have been reduced to an acceptable level that is, all avoidable significant damage to the environment has been eliminated and that which remains is otherwise acceptable." (*Laurel Hills*, *supra*, 83 Cal.App.3d at p. 521; see also *Citizens for Open Government*, *supra*, 205 Cal.App.4th at pp. 314-315 [court upholds agency's project approval where a rejected alternative would not "entirely fulfill" a particular project objective and "would be 'substantially less effective' in meeting" the agency's "goals"].) For all of these reasons, and each of them, the City Council rejects Alternative 4 as infeasible.

Environmentally Superior Alternative

Section 15126.6(e)(2) of the State CEQA Guidelines indicates that an analysis of alternatives to a proposed project shall identify an environmentally superior alternative among the alternatives evaluated in an EIR.

Three of the project alternatives would lessen the environmental impacts relative to the proposed project to a certain degree (as described above and further in the Draft EIR). The No Project/Existing General Plan Alternative would result in greater environmental impacts in some environmental topic areas. If the No Project/No Development Alternative is the environmentally superior alternative—which is the case here as it avoids all project impacts, but fails to satisfy any of the project objectives—the EIR must also identify another environmentally superior alternative among the remaining alternatives. Based on these Findings, of the three remaining alternatives, the Phase I

Only Alternative would be considered the environmentally superior alternative, even though it fails to fully implement project objectives and is therefore infeasible.

1.9 - Findings Regarding Cumulative Impacts

Consistent with CEQA's requirements, the EIR for the proposed project includes an analysis of cumulative impacts in every topical discussion. As discussed above, except as to cumulative air quality impacts, all other cumulative impacts associated with the proposed project are less than significant with the implementation of applicable mitigation and compliance with applicable regulations. Cumulative air quality impacts remain significant even with incorporation of all feasible mitigation.

1.10 - Findings Regarding Growth Inducement

State CEQA Guidelines Section 15126.2(e) requires a discussion of the ways in which a proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Typical growth-inducing factors might be the extension of urban services or transportation infrastructure to a previously unserved or underserved area, or the removal of major barriers to development.

There are two types of growth-inducing impacts that a project may have: direct and indirect. To assess the potential for growth-inducing impacts, the project's characteristics that may encourage and facilitate activities that individually or cumulatively may affect the environment must be evaluated (CEQA Guidelines § 15126.2(e)). CEQA Guidelines, as interpreted by the City, state that a significant growth-inducing impact may result if the project would:

- Induce substantial population growth in an area (for example, by proposing new homes and commercial or industrial businesses beyond the land use density/intensity envisioned in the general plan);
- Substantially alter the planned location, distribution, density, or growth rate of the population of an area; or
- Include extensions of roads or other infrastructure not assumed in the general plan or adopted capital improvements project list when such infrastructure exceeds the needs of the project and could accommodate future developments.

Direct growth-inducing impacts occur when the development of a project imposes new burdens on a community by directly inducing unplanned population growth, or by leading to the construction of additional developments in the same area. Also included in this category are projects that remove physical obstacles to population growth (such as a new road into an undeveloped area or a WWTP with excess capacity that could allow additional development in the service area). Construction of these types of infrastructure projects cannot be considered isolated from the development they facilitate and serve. Projects that physically remove obstacles to growth, or projects that indirectly induce growth may provide a catalyst for future unrelated development in an area such as a new residential community that requires additional commercial uses to support residents.

The proposed project does not include residential uses and therefore would not directly induce population growth.

The proposed project would develop approximately 2.4 million square feet of new high-cube warehouse uses and would employ an estimated 1,200 workers during construction and 3,643 workers when fully operational at buildout. The proposed project's warehouses would likely be built incrementally over a period of years and, thus, jobs would be added in phases as the project builds out. As such, there would not be an "overnight" influx of new employment opportunities.

The California Employment Development Department estimated the combined Napa-Solano labor force at 273,500 in October 2021, which is sufficiently large enough to fill the proposed project's estimated employment opportunities such that unplanned growth would not occur.

During the NOP review period, the County of Napa requested the Draft EIR evaluate whether there is sufficient housing for project employees. Because prospective employees have not been identified, statements about housing for project employees would be speculative. Nonetheless, the City of American Canyon has more than 2,400 dwelling units in the pipeline (Draft EIR, Table 4-1). The City's population was estimated to be 20,837. Thus, the addition of more than 2,400 dwelling units to the City's housing inventory would more than offset the employment growth attributable to the proposed project.

The proposed project would be served by connections to existing water, wastewater, storm drainage, electricity, and natural gas lines that exist in Green Island Road or Devlin Road. No extension of infrastructure into unserved areas would be required and, therefore, no removal of physical barriers to growth would occur. As such, the proposed project would not indirectly induce substantial population growth (Draft EIR, Pages 6-1—2).

1.11 - Findings Regarding Significant Irreversible Environmental Changes

According to Sections 15126(c) and 15126.2(d) of the State CEQA Guidelines, the Lead Agency must address any significant irreversible environmental changes that would occur should the project be implemented. Generally, a project would result in significant irreversible environmental changes if any of the following would occur:

- The project would involve a large commitment of nonrenewable resources;
- The primary and secondary impacts of the project would generally commit future generations to similar uses;
- The project involves uses in which irreversible damage could result from any potential environmental accidents; or
- The proposed consumption of resources is not justified.

Construction of the proposed project would include the consumption of resources that are not replenishable, or which may renew so slowly to be considered nonrenewable. These resources would include the following: certain types of lumber and other forest products; aggregate materials used in concrete and asphalt such as sand, gravel, and stone; metals such as steel, copper, and lead;

petrochemical construction materials such as plastics; and water. Fossil fuels such as gasoline and oil would also be consumed in the use of construction vehicles and equipment. Development would not be expected to involve an unusual commitment of nonrenewable resources, nor be expected to consume any resources in a wasteful manner. Construction-related impacts related to electricity and fuel consumption would be less than significant.

The irreversible long-term environmental changes associated with the proposed project would include an increase in local and regional vehicular traffic, and the resultant increase in air pollutants, GHG emissions, and noise generated by this traffic. The proposed project would also irreversibly increase the commitment of energy resources, potable water supply, wastewater treatment, solid waste disposal, and public services, such as providing police and fire services, to support the proposed project through its lifetime. However, features incorporated into the proposed project and proposed mitigation measures would minimize the significant effects of the environmental changes associated with the proposed project to the maximum degree feasible.

As explained in the Draft EIR, the proposed project will not result in the wasteful, inefficient, and unnecessary consumption of energy, will not cause the need for additional natural gas or electrical energy-producing facilities, and, therefore, will not create a significant impact on energy resources. Rather, the proposed project would be well-positioned to serve the North Bay Counties of Napa, Solano, and Sonoma due to its proximity to SR-29/SR-12 corridors.

1.12 - Findings Regarding Recirculation

During the public review period after the Draft EIR was published, the City received certain additional information. Lead Agency staff and consultants involved in preparing the various studies, reports and analyses included in the Draft EIR have also presented additional information since the publication of the Draft EIR. Some of this information was contained in comments submitted on the Draft EIR, and in responses to those comments contained in the Final EIR. Other information was presented at or before public meetings/hearings on the EIR. The EIR incorporates feasible mitigation, additions, clarifications, modifications, and other changes, in response to comments and as determined appropriate by Lead Agency staff and required under CEQA.

Under *Laurel Heights Improvement Ass'n v. Regents of Univ. of Cal*. (1993) 6 C4th 1112 (Laurel Heights II) and the CEQA Guidelines (14 Cal Code Regs §15088.5(a)(3)), when information added to the Final EIR consists of a suggested additional mitigation measure, recirculation is required only if the new mitigation measure meets all of the following criteria (*South County Citizens for Smart Growth v. County of Nevada* (2013) 221 Cal.App.4th 316, 330):

- It is feasible;
- It is considerably different from the alternatives or mitigation measures already evaluated in the Draft EIR;
- It would clearly lessen the project's significant environmental impacts; and
- It is not adopted.

Recirculation is only required only if each of the above tests is met. (*South County Citizens*, *supra* at 330). As described in detail in Table 31 of Volume 1 of the Final EIR, mitigation measures proposed during the public comment period are either (1) not necessary; (2) not feasible; (3) or are already included as mitigation. (See also Final EIR, vol. 2, Responses to Comments AB.NOV. 17-10 and CBD-8.) MM AIR-2e and MM AIR-2f have been adopted to further reduce air quality impacts as noted in Final EIR, Vol. 1, Section 5, Errata. Neither additional mitigation measure has any significant effects. However, the residual significance of Impact AIR-1 and AIR-2 remains significant and unavoidable even with the implementation of the additional mitigation.

Nor does the new information in Volume 2 of the Final EIR necessitate recirculation, as some commenters have suggested. In particular, as explained in Master Response B, information regarding the construction of a gravel road on the project site above a sewer alignment serving the Napa Logistics Park Phase 2 project did not disclose any previously undisclosed significant environmental effects or any substantial increases in the severity of previously disclosed environmental impacts. Rather, the sewer lines and the gravel road were the subject or prior CEQA analysis for a different project and were constructed only after receipt of all required permits and other regulatory approvals. The wetlands mitigation for the proposed project remains viable notwithstanding the existence of the gravel road, which will be temporary in character, in any event.

The City Council has considered all relevant information including the opinions and comments of interested agencies, organizations and individuals. The Lead Agency finds that the additional mitigation does not meet the test for recirculation. Additionally, the City finds that none of the additional information provided during the public comment period demonstrates any of the following situations requiring recirculation identified in CEQA Guideline 15088.5 have occurred:

- A new significant environmental impact that would result from the project (or any alternative) or from a new mitigation measure proposed to be implemented.
- A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
- A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the significant environmental impacts of the project (or an alternative), but the project's proponents decline to adopt it.
- The Draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

Based on the foregoing and as explained in more detail in the Final EIR, and having reviewed all the information in the record of proceedings, the City Council of American Canyon hereby finds that this additional information does not constitute significant new information nor does it require recirculation of the EIR. The additional information merely clarifies or amplifies an adequate EIR.

1.13 - Statement of Overriding Considerations

CEQA requires that a Lead Agency's decision-making body balance the benefits of a project against its unavoidable environmental risk in determining whether to approve the project. If the decision-making body determines that the benefits outweigh the unavoidable adverse effects, those effects

may be considered "acceptable" pursuant to CEQA Guidelines Section 15093(a). CEQA requires that the decision-making body support, in writing, the specific reasons for considering a project acceptable when significant impacts are infeasible to mitigate. Those reasons must be based on substantial evidence in the EIR or elsewhere in the administrative record pursuant to CEQA Guidelines Section 15093(b). The decision-making body's written reasons are referred to as a Statement of Overriding Considerations.

As explained in the above Findings of Fact, most of the project's impacts on the environment would either be insignificant or, through the incorporation of mitigation measures as conditions of approval of the project, can be reduced to less than significant. As set forth in Section 1.7 above, however, even with implementation of all available mitigation, the proposed project would result in significant unavoidable impacts related to project level inconsistencies with the BAAQMD regional air quality plan and cumulative criteria pollutant emissions. Further, as set forth in Section 1.8 above, there are no feasible alternatives to the project, which would mitigate or avoid those environmental impacts and which would meet project objectives. Accordingly, as set forth below, the City of American Canyon declares that pursuant to the State CEQA Guidelines Section 15093, the City of American Canyon has balanced the benefits of the proposed project against any unavoidable environmental impacts in determining whether to approve the proposed project. Pursuant to the State CEQA Guidelines, if the benefits of the proposed project outweigh the proposed project's unavoidable adverse environmental impacts, those impacts may be considered "acceptable."

Having reduced the adverse significant environmental effect of the proposed project to the extent feasible by adopting the mitigation measures contained in the EIR, the MMRP, and these Findings, having considered the entire administrative record on the proposed project, and having weighed the benefits of the proposed project against its unavoidable adverse impact after mitigation, the City of American Canyon has determined that each of the following social, economic and environmental benefits of the proposed project separately and individually outweigh all the potential unavoidable adverse impacts and render those potential adverse environmental impacts acceptable based upon the following overriding considerations:

- The project applicant would construct the Napa Valley Vine Trail segment along the project frontage with Devlin Road.
- The proposed project would provide and preserve in perpetuity approximately 45 acres of wetlands that would include habitat currently suitable for foraging by the Swainson's hawk. This permanent preservation respects the natural environment and provides both open space and aesthetic relief from developed urban areas.
- The proposed project would contribute to the City's economic base and is estimated to create 3,643 new local employment opportunities that would Improve American Canyon's jobs-housing ratio. The development of up to 3,643 new jobs in a housing-rich part of the Bay Area region would allow employees to work closer to where they live, thereby reducing vehicle miles traveled.
- The proposed project would stimulate capital investment and expand the tax base.

- The proposed project would meet demand for, bring new businesses to the City and develop compatible land uses near the Napa County Airport. By developing the proposed project's 2.4 million square feet of high-cube warehouse near the airport and transportation corridors, it would contribute to reducing trip length by locating these facilities closer to customers within this region.
- The proposed project would advance the City's goal of orderly development that maintains American Canyon's distinctive character. The proposed project would promote the development of industries that capitalize on the geographic advantages of the City while ensuring consistency with the patterns and distribution of use and density depicted on the Land Use Plan Map (Figure 1-1 of the General Plan).
- The proposed project would help maintain consistency with and carry out the goals, objectives, and policies of the City of American Canyon General Plan. The stated goals, objectives, and policies set forth in the City's Land Use and Planning element recognize the need to accommodate new development by providing a full mix of uses to support its population. Providing new commercial opportunities would help implement several General Plan goals as illustrated in Table 3.9-2 of the Draft EIR.

The substantial evidence supporting the enumerated benefits of the Project can be found in the preceding findings, in the Project itself, in the record of proceedings as defined below, in the City's General Plan, and in pertinent sections of the City's Zoning Ordinance. Each of the overriding considerations set forth above constitutes a separate and independent ground for finding that the benefits of the proposed project outweigh its significant adverse environmental effects and is an overriding consideration warranting approval. Thus, if a court were to find that any particular benefit is not supported by substantial evidence, the City Council would rely on whatever benefit(s) that the court did find were supported by substantial evidence.

Custodian of Record; Scope and Content of Record

The documents and materials that constitute the record of proceedings on which these Findings have been based are located at the Community Development Department at 4381 Broadway Street, Suite 201, American Canyon, CA 94503. This information is provided in compliance with Public Resources Code Section 21081.6.

Various documents, information, testimony, reports, studies, analyses and other materials (both oral and written) constitute the record upon which the City bases these Findings and are the basis for the City's approval and/or adoption contained herein. These Findings cite specific pieces of evidence, but none of the City's findings are based solely on those cited pieces of evidence. Rather, these Findings are based upon the entire record, and the Lead Agency intends to rely upon all supporting evidence in the record for each of its conclusions contained herein.

The documents in the record include all items referenced in Public Resources Code Section 21167.6(e):

(i) All project application materials;

(ii) The project EIR (including the Draft EIR, the Final EIR, and all appendices attached thereto);

(iii) All staff reports and related documents prepared by the lead agency and/or consultants with respect to the lead agency's compliance with the substantive and procedural requirements of this division and with respect to the action on the project;

(iv) All staff reports and related documents prepared by the lead agency and written testimony or documents submitted by any person relevant to any findings or Statement of Overriding Considerations adopted by the lead agency pursuant to this division;

(v) All documentary and oral evidence received and reviewed at public hearings, public meetings, study sessions, and workshops on the Project EIR, and any transcript or minutes of the proceedings at which any advisory body or decision-making body heard testimony on, or considered the Project EIR;

(vi) All notices issued by the lead agency to comply with this division or with any other law governing the processing and approval of the project;

(vii) All written comments received in response to, or in connection with, the Project EIR, including comments on the Draft EIR;

(viii) All written evidence or correspondence submitted to, or transferred from, the lead agency with respect to compliance with this division or with respect to the project;

(ix) Any proposed decisions or findings submitted to the decision-makers by lead agency staff, or the project proponent, project opponents, or other interested agencies, organizations and/or individuals;

(x) The documentation of the final decision, including the Project EIR and all documents, in addition to those referenced in paragraph (c), cited or relied on in the findings or in a Statement of Overriding Considerations adopted pursuant to this division;

(xi) For documentary and informational purposes, all locally-adopted land use plans and ordinances, including, without limitation, general plans, specific plans and ordinances, master plans together with environmental review documents, findings, mitigation monitoring programs, and other documentation relevant to planned growth in the area;

(xii) Any other written materials relevant to the lead agency's compliance with this division or to its decision on the merits of the project, including any drafts of any environmental document or portions thereof, which have been released for public review, and copies of studies or other documents relied upon in any environmental document prepared for the project and either made available to the public during the public review period or included in the lead agency's files on the project, and all internal agency communications, including staff notes and memoranda related to the project or to compliance with this division;

(xiii) The full written record before any inferior administrative decision-making body whose decision was appealed to a superior administrative decision-making body prior to the filing of litigation; and

(xiv) Any additional items not included above if otherwise required by law.

PREFACE

Section 21081.6 of the California Environmental Quality Act (CEQA) and CEQA Guidelines Section 15097 require a Lead Agency to adopt a Mitigation Monitoring and Reporting Program (MMRP) whenever it adopts a Mitigated Negative Declaration (MND) in conjunction with a project approval. The purpose of the MMRP is to ensure compliance with the mitigation measures occurs during project implementation.

The Initial Study and Mitigated Negative Declaration (IS/MND) prepared for the Giovannoni Logistics Center Project concluded that project implementation could result in potentially significant effects on the environment and mitigation measures were incorporated into the proposed project or are required as a condition of project approval that reduce these potential impacts to a less than significant level. This MMRP documents how and when the mitigation measures adopted by the lead agency will be implemented and confirms that potential environmental impacts are reduced to less than significant levels as identified in the MND.

This document does not discuss those subjects that the environmental analysis demonstrates would result in less than significant impacts and for which no mitigation was proposed or necessary.

THIS PAGE INTENTIONALLY LEFT BLANK

Table 1: Giovannoni Logistics Center Project Mitigation Monitoring and Reporting Program

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
3.1 Aesthetics, Light, and Glare					
MM AES-3: Prior to issuance of building permits for the proposed project, the project applicant shall prepare and submit a photometric plan to the City of American Canyon for review and approval which demonstrates that all exterior light fixtures would be directed downward or employ full cut-off fixtures to minimize light spillage and avoid interference with aviation operations at the Napa County Airport. The approved plan shall be incorporated into the proposed project.	Approval of plan	Prior to issuance of building permits for the proposed project	City of American Canyon		
3.2 Air Quality					
MM AIR-2a: The following Best Management Practices (BMPs), as recommended by the Bay Area Air Quality Management District (BAAQMD), shall be included in the design of the project and implemented during construction: • All active construction areas shall be watered at least two times per day. • All exposed non-paved surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and access roads) shall be watered at least three times per day and/or non-toxic soil stabilizers shall be applied to exposed non-paved surfaces. • All haul trucks transporting soil, sand, or other loose material off-site shall be covered and/or shall maintain at least 2 feet of freeboard. • All visible mud or dirt tracked out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited. • All vehicle speeds on unpaved roads shall be limited to 15 miles per hour.	Notes on construction plans; Site inspection	During construction	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
• All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used. • Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California Airborne Toxics Control Measure (ATCM) Title 13, Section 2485 of California Code of Regulations). Clear signage regarding idling restrictions shall be provided for construction workers at all access points. • All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation. • The prime construction contractor shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The City and the construction contractor shall take corrective action within 48 hours. The BAAQMD's phone number shall also be visible to ensure compliance with applicable regulations.					
MM AIR-2b: Prior to the issuance of grading or building permits, the project applicant shall provide the City with documentation demonstrating the use of "Low-VOC" architectural coatings during the proposed project's construction. "Low-VOC" architectural coatings used during project construction shall not exceed 50 grams of reactive organic gases (ROG) or volatile organic compounds (VOC) per liter of product.	Submittal of documentation	Prior to the issuance of grading or building permits	City of American Canyon		
MM AIR-2c: Prior to issuing any certificate of occupancy for the proposed project, the project applicant shall provide the City with documentation demonstrating the use of "Low-VOC"	Submittal of documentation	Prior to issuing any certificate of	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
architectural coatings and electric landscaping equipment during the operation of the proposed project. "Low-VOC" architectural coatings used during project operation shall not exceed 10 grams of reactive organic gases (ROG) or volatile organic compounds (VOC) per liter of product. Landscaping equipment referred to in this requirement shall include lawnmowers, leaf blowers, and chainsaws.		occupancy for the proposed project			
MM AIR-2d: Prior to issuing the certificate of occupancy for the proposed project, the project applicant shall provide the City with documentation demonstrating the use of a truck fleet that meets or exceeds model year 2014 for all heavy-duty trucks during operation of the proposed project. If the project applicant does not own the truck fleet that would be used during operation of the proposed project, the project applicant shall provide the City with documentation from the truck fleet owner or operator demonstrating that trucks utilized for operation of the proposed project will meet or exceed model year 2014. If any change occurs where a new truck fleet is utilized during operation of the proposed project, the project applicant shall provide the City with documentation demonstrating that the new truck fleet meets or exceeds this requirement. To monitor and ensure that trucks that meet a model year of 2014 or newer are used for the proposed project, the fleet operator shall maintain records of all trucks and equipment associated with the proposed project's operation and make these records available to the City upon request. Alternatively, the City may require periodic reporting and provision of written records by operators and conduct regular inspections of the records to the maximum extent feasible and practicable.	Submittal of documentation	Prior to issuing the certificate of occupancy for the proposed project	City of American Canyon		
MM AIR-2e: Prior to the issuance of the certificate of occupancy for each building with dock doors, signage shall be	Site inspection	Prior to the issuance of the certificate of occupancy for each	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
posted identifying idling restrictions and contact information to report violations to the building manager.		building with dock doors			
MM AIR-2f: Prior to the issuance of the certificate of occupancy for each building with a separate end user, the City shall confirm that the end user has prepared a Transportation Demand Management Plan (TDM Plan). The TDM Plan shall be prepared by a qualified transportation consultant and identify strategies to reduce single-occupant vehicle trips. Examples of TDM strategies may include but are not limited to: • Ridesharing/Ride Matching • Vanpools • Transit subsidies • Preferential parking for rideshare or vanpool vehicles • Employee lockers • Secure bicycle parking • Employee locker rooms • Provide TDM information in employee breakroom	Submittal of documentation	Prior to the issuance of the certificate of occupancy for each building with a separate end user	City of American Canyon		
MM AIR-2g: As a part of future lease agreements, the project proponent shall provide all future tenants at the project site information on available California Air Resources Board (ARB) and Bay Area Air Quality Management District (BAAQMD) incentive programs, such as the Carl Moyer Program and the Voucher Incentive Program, that support upgrading truck fleets to clean air technology equipment.	Submittal of documentation	Prior to the issuance of the certificate of occupancy	City of American Canyon		
3.3 Biological Resources					
MM BIO-1a: Pre-construction surveys for Swainson's hawk shall be conducted in the project site vicinity prior to initiation of project construction activities and each year following initiation of construction if project activities are delayed or discontinued for 7 or more days prior to the first required survey period (March 20 to April 5), and are scheduled to	Notes on construction plans; Submittal of documentation; Site inspection	Prior to initiation of project construction activities and each year following initiation of construction if	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
recommence construction activities during the second survey period but before August 1. These pre-construction surveys shall include investigation of all potential nesting trees within a half-mile radius around all project activities and shall be completed for at least two survey periods immediately prior to commencement of project construction. Surveys shall be conducted in accordance with CDFW's "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFW 2000) to maximize the potential for locating nesting Swainson's hawk and reduce the potential for nest failures due to project activities and/or disturbances. If no nesting Swainson's hawk are found during the first or second required survey period starting March 20, and extending to April 20, then project construction may commence. If during the third survey (June 10 to July 30) Swainson's hawk are found to be nesting in the project vicinity and construction has commenced, it shall be assumed the Swainson's hawk commenced nesting and thus the Swainson's hawk are habituated to the ambient level of noise and disturbance emanating from the project site. If Swainson's hawk are found to be nesting within 0.25 mile of the project site, a non-disturbance buffer shall be established to keep all construction activities a minimum of 0.25 mile from the nest site. The CDFW shall be consulted regarding the adequacy of the buffer established by the qualified Raptor Biologist. At that time the necessity for acquiring a Fish and Game Section 2081 Incidental Take Permit (ITP) authorization would be determined. An ITP authorization shall be required if there were a valid concern the project activities would result in the "take" of an adult Swainson's hawk, eggs, or nestlings. Surveys shall be conducted by a qualified Raptor Biologist with at least a minimum of a 4-year college degree in wildlife		project activities are delayed or discontinued for 7 or more days prior to the second survey period (March 20 to April 5)			

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
biology or related environmental science, familiarity with Swainson's hawk and its local ecology, and 2 years of experience surveying for and detecting Swainson's hawk pursuant to "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" survey protocol. No disturbance such as construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is complete based on monitoring of the active nest by a qualified Biologist.					
MM BIO-1b: No more than 30 days prior to the first ground disturbance activity, pre-construction golden eagle nesting surveys shall be conducted in the project vicinity by a qualified Raptor Biologist. The qualified Raptor Biologist shall have a minimum of a 4-year college degree in wildlife biology or related environmental science, at least 2 years conducting wildlife surveys, and a familiarity with golden eagle and its local ecology. Pre-construction surveys shall include investigation of all potential nesting trees within a survey area determined by the qualified Raptor Biologist, but no less than a 1-mile radius around all project activities. If active golden eagle nests are identified within any trees within the survey areas a 1-mile radius of the project site, a qualified Raptor Biologist shall establish a protection buffer of approximately 1 mile that is adequate to ensure noise or activity from the proposed project would not cause nest disturbance of young or adult bird mortality. Buffer zones may vary in size as some golden eagles are more acclimated to disturbance than others. Size of buffer zone may be modified by the qualified Raptor Biologist considering the type of construction activity that may occur and the behavioral factors and extent that golden eagle may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that	Notes on construction plans; Submittal of documentation; Site inspection	No more than 30 days prior to the first ground disturbance activity	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
the young golden eagles have fledged or that the nesting cycle is complete based on monitoring of the active nest by a qualified Biologist.					
MM BIO-1c: Prior to ground disturbance, a pre-construction nesting survey shall be conducted for northern harrier and short-eared owl by a qualified Raptor Biologist if construction is scheduled during the nesting season (February 1 through September 1). The qualified Raptor Biologist shall have at least 2 years of experience surveying for and detecting nesting northern harrier and short-eared owl. To determine whether northern harrier or short-eared owl is nesting on-site, a qualified Raptor Biologist(s) shall conduct walking transects through the project site grassland habitat searching for nests and minimum 500-foot radius from the project site. Where the survey area encroaches onto private property not accessible to the public (e.g., fenced in commercial property, residential backyard, etc., the qualified Biologist shall either contact the property owner for permission to physically access the property or conduct a visual survey of adjacent areas by scanning with binoculars or a spotting scope. An active northern harrier or short-eared owl nest must be protected by implementing a minimum 500-foot radius buffer zone around the nest marked with orange construction fencing. If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Size of buffer zone could be modified increased considering the type of construction activity that may occur, physical barriers between the construction site and active nest, and the behavioral factors and extent that northern harrier or short-eared owl may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is otherwise determined to be	Notes on construction plans; Submittal of documentation; Site inspection	Prior to ground disturbance	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
complete based on monitoring of the active nest by a qualified Raptor Biologist.					
MM BIO-1d: Prior to any ground disturbance, pre-construction surveys for burrowing owl shall be conducted within a minimum of 150 meters of the project site. Where the survey area encroaches onto private property not accessible to the public (e.g., fenced in commercial property, residential backyard, etc.), the qualified Biologist shall either contact the property owner for permission to physically access the property or conduct a visual survey of adjacent areas by scanning with binoculars or a spotting scope. The pre-construction surveys shall be conducted within 2 weeks prior to the onset of any ground-disturbing activities. Surveys shall be conducted by a qualified Biologist following California Department of Fish and Wildlife (CDFW) 2012 staff report survey methods and Biologist qualifications to establish the status of burrowing owl on the project site. • If burrowing owl are found to occupy the project site during the nonbreeding season (September 1 to January 31), occupied burrows shall be avoided by establishing a no-disturbance buffer zone a minimum of 100 feet around the burrow. Buffers may be adjusted to address site-specific conditions using the impact assessment approach described in the CDFW 2012 staff report. If a qualified Raptor Biologist determines the location of an occupied burrow/s may be impacted even with a 100-foot buffer, or the burrow(s) are in a location(s) on the project site where a buffer cannot be established without preventing the proposed project from moving forward, then a passive relocation effort may be instituted to relocate the individual(s) out of harm's way pursuant to a Burrowing Owl Exclusion Plan prepared in accordance with the CDFW 2012 staff report. • If burrowing owl are found to be present during the breeding season (February 1 to August 31), the proposed	Notes on construction plans; Submittal of documentation; Site inspection	Prior to any ground disturbance	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
project ground-disturbing activities shall follow the CDFW 2012 staff report recommended avoidance protocol whereby occupied burrows shall be avoided with a no-disturbance buffer. • If burrowing owls are ultimately found on the site and burrow eviction/ relocation of burrowing owls during the non-nesting season is a selected strategy to move forward with the project without direct impacts to burrowing owl individuals, the applicant shall coordinate this effort with CDFW and provide habitat mitigation consistent with the 2012 CDFW Staff Report on burrowing owl.					
MM BIO-2: To offset the loss of the 0.496 acre of seasonal wetland impacts from Phase 1, and 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools from Phase 2, and to ensure there is no-net loss of wetland area, the applicant shall establish/create 0.992 acre of palustrine emergent wetlands (2:1 ratio) for Phase 1 concurrent with project construction, and 2.57 acres of seasonal wetlands (1:1 ratio) and 1.13 acres of vernal pool wetlands (1:1 ratio) for Phase 2 at least 1 year prior to the start of Phase 2 construction, on the 45-acre Wetland Preserve. The established/created wetlands will be constructed a minimum of 20 feet from the Napa Logistics Park sewer and recycled water pipeline easement or unpaved access road associated with the easement. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland.	Submittal of documentation	Prior to issuance of grading permits	City of American Canyon		
MM BIO-3a: Prior to issuance of the Phase 1 grading permit, the project applicant shall apply for and obtain a Nationwide Permit from the San Francisco District of the United States Army Corps of Engineers (USACE) for discharge within 0.004 acre of wetlands/waters of the United States under Clean Water Act Section 404 jurisdiction. For the USACE permit to be	Submittal of documentation	Prior to issuance of the Phase 1 grading permit	City of American Canyon; San Francisco District of the United States Army Corps of Engineers; San

				Date	Initial
valid, the applicant shall apply for and obtain the accompanying Section 401 Water Quality Certification from the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB). The applicant shall apply for and obtain a separate Waiver of Waste Discharge Requirements from the San Francisco Bay RWQCB for impacts to 0.496 acre of wetlands/waters of the State. To offset the loss of 0.496 acre of permanent wetland impacts and to ensure there is no-net loss of wetland area, the applicant shall establish/create 0.992 acre of wetlands (2:1 ratio), prior to or concurrent with the start of construction, on the 45-acre Wetland Preserve. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland. The applicant shall implement the terms of the approved permit(s).			Francisco Bay Regional Water Quality Control Board		
MM BIO-3b: Prior to issuance of the Phase 2 grading permit, the project applicant shall apply for and obtain an Individual Permit from the San Francisco District of the United States Army Corps of Engineers (USACE) for the placement of fill material within approximately 3.7 acres of wetlands/waters of the United States under Clean Water Act Section 404 jurisdiction. For the USACE permit to be valid, the applicant shall apply for and obtain the accompanying Section 401 Water Quality Certification from the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB). The applicant shall apply for and obtain a separate Waiver of Waste Discharge Requirements from the San Francisco Bay RWQCB for the discharge of fill material within approximately 3.7 acres of waters of the State. To offset the loss of 3.7 acres of permanent wetland impacts and to ensure there is no-net loss of wetland area or permanent loss of functions and values, the applicant shall establish/create 2.57 acres of seasonal wetlands (1:1 ratio) and 1.13 acres of vernal pools (1:1 ratio), at a minimum of 1 year prior to the start of construction, on the 45-	Submittal of documentation	Prior to issuance of the Phase 2 grading permit	City of American Canyon; San Francisco District of the United States Army Corps of Engineers; San Francisco Bay Regional Water Quality Control Board

				Date	Initial
acre Wetland Preserve. The established/created wetlands and vernal pools shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland. The applicant shall implement the terms of the approved permit(s).					
MM BIO-3c: Prior to issuance of the Phase 1 grading permit, a Wetland Mitigation and Monitoring Plan shall be prepared and submitted to the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB) for review as part of the process for obtaining a permit from the agency. The Wetland Mitigation and Monitoring Plan shall address the loss of 0.496 acre of wetlands impact due to Phase 1 of the proposed project as well as the potential loss of approximately 3.7 acres of wetlands that as part of Phase 2. The Wetland Mitigation and Monitoring Plan shall include in irrevocable instrument (e.g., deed restriction or conservation easements) that shall restrict use of both the 0.992 acre of created wetlands for Phase 1 as well as approximately 3.7 acres of additional wetlands created for Phase 2. The Wetland Mitigation and Monitoring Plan shall also include a long-term endowment that would be fully funded by the proposed project to manage approximately 45-acre open space preserve and created wetlands in perpetuity. If additional wetland mitigation lands are required to compensate for wetland impacts associated with Phase 2, wetlands shall be established/created at a minimum 1:1 ratio (1 acre established/created for every acre permanently impacted) on appropriate mitigation land, approved by the RWQCB and United States Army Corps of Engineers (USACE), within the Phase 2 project site's Hydraulic Unit Code (HUC) 10 watershed. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland. The applicant shall implement the terms of the approved permit(s).	Submittal of documentation	Prior to issuance of the Phase 1 grading permit	City of American Canyon; San Francisco Bay Regional Water Quality Control Board		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
MM BIO-3d: Prior to issuance of the Phase 1 and Phase 2 grading permit, a Wetland Mitigation and Monitoring Plan shall be submitted to the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB) for review as part of the process for obtaining a permit from the agency. The Wetland Mitigation and Monitoring Plan shall be prepared in accordance with the Subpart J–Compensatory Mitigation for Losses of Aquatic Resources outlined in the California State Water Resources Control Board (State Water Board) Procedures, and in accordance with the State Water Board Implementation Guidance dated April 2020, and in accordance with the United States Army Corps of Engineers (USACE) Compensatory Mitigation Rule (33 Code of Federal Regulations Part 332) The basic objective of the Wetland Mitigation and Monitoring Plan is to ensure that project wetland impacts, and compensatory mitigation proposed to offset the wetland impacts, shall provide a no-net-loss of area of wetlands, and wetlands established/created shall be in-kind to the wetlands impacted. In summary, the Wetland Mitigation and Monitoring Plan shall at a minimum: 1. Preserve 7.58 acres of existing seasonal wetlands and 0.13 acre of vernal pools within the 45-acre Wetland Preserve. 2. Establish within the Wetland Preserve approximately 0.992 acre of seasonal wetlands in advance of or concurrent with implementation of Phase 1 impacts to 0.496 acre of palustrine emergent wetlands at a 2:1 ratio. 3. Establish within the Wetland Preserve approximately 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools in advance of implementation of future Phase 2, assuming Phase 2 is built out, to address the potential maximum losses of approximately 3.7 acres of wetlands that may occur.	Submittal of documentation	Prior to issuance of the Phase 1 and Phase 2 grading permit	City of American Canyon; San Francisco Bay Regional Water Quality Control Board		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
4. Provide financial assurances to ensure a high level of confidence that the compensatory mitigation shall be successfully completed, in accordance with applicable performance standards. 5. Design ecological performance standards to assess whether the Wetland Mitigation and Monitoring Plan is achieving the overall objectives, so that it can be objectively evaluated to determine whether it is developing into the desired resource type (vernal pool, seasonal wetland e.g.), and attaining any other applicable metrics such as acres, number of native plant species, water saturation and/or ponding depth etc. 6. Monitor the site for a duration necessary to determine whether the Wetland Mitigation and Monitoring Plan is meeting the performance standards. Established palustrine emergent wetlands and vernal pools typically develop quickly on soils with clay restrictive horizon. The 45-acre Wetland Preserve does have a clay restrictive layer approximately 8–18 inches below the surface therefore a 5-year monitoring period would be sufficient to determine whether performance standards are met. This monitoring period may be extended if performance standards are not met due to how the wetlands were constructed or natural events such as severe droughts. 7. Protect the approximately 45-acre Wetland Preserve in perpetuity using a conservation easement, and provide an endowment sufficient to fund the Long-Term Management Plan. 8. An overall assessment of the condition of the wetlands that shall be permanently impacted by the proposed project shall be conducted using the California Rapid Assessment Method (CRAM) for depressional wetlands, or a hybrid approach based on CRAM. Each similar wetland type that may be impacted shall be assessed to describe the floristic community and record the native and non-native dominant					

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
plants within the vernal pool and palustrine emergent wetlands. Physical structure such as topographic complexity and physical features that may provide habitat for aquatic species (e.g., boulders, woody debris etc.) shall be recorded and used to design the created/established wetlands. The purpose of this assessment is to ensure the design of the wetlands shall provide habitat that is similar to the wetlands being impacted to ensure the impacted wetlands are mitigated in-kind **Performance Standards** Performance Standards shall include at a minimum the following: ***Years 1, 2, 3, 4 and 5 Performance Standards for Wetland Hydrology*** Each year wetland hydrology shall be measured during the winter when surface and/or subsurface hydrology would be observable. A minimum of 1 data point shall be taken in each of the established/created wetlands. In addition, wetland hydrologic indicators shall be recorded each spring during the vegetation monitoring period. *Year 1:* Performance standard would be met for Year 1-5 if: • The created wetlands remain inundated to a minimum depth of 0.5 inch or greater for at least 7 days and/or saturated for at least 14 days and/or at least one primary or two secondary wetland hydrology indicators listed in the *Arid West Region Wetland Determination Data Forms* are recorded. *Contingency Measures:* If the annual performance standard is not being met for any given monitoring year the Permittee shall prepare an analysis of the cause(s) of failure and, if determined necessary,					

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
implement remedial action. If the Plan Area has not met the performance standard, the Permittee's maintenance and monitoring obligations shall continue until the RWQCB and USACE give final project confirmation. Remedial action may include re-grading to achieve wetland hydrology, which would improve hydric soil formation. ***Years 1, 2, 3, 4, and 5 Performance Standards for Increase in Colonization of Wetland Vegetation*** Each year during the spring or early summer wetland vegetation cover shall be measured by conducting a site visit and recording absolute cover and dominant plant species observed within the wetland buffer area. A minimum of 1 data point shall be taken in each of the established/created wetlands. The colonization of wetland vegetation shall be measured by determining overall absolute plant cover values each year. This shall be accomplished by measuring absolute cover values within a 5-foot radius sample plot every 50 feet along a transect through each established/created wetland. In addition, to monitor for invasive plant species within the uplands which are not detected in the baseline survey, a minimum of three 5-foot radius sample plots on the east side and three on the west side will be placed at random upland locations along a linear transect east to west within the Wetland Preserve. During Year 4 and 5 the managed landscaped areas within the development will be visually surveyed for evidence of invasive plant species. Performance Standards for each monitoring year are listed below. *Year 1:* Performance standard would be met for Year 1 if: • At least one hydrophytic plant species colonizes the established/created seasonal wetlands and vernal pools; and					

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
• The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 5 percent or greater. *Year 2:* Performance standard would be met for Year 2 if: • At least one hydrophytic plant species colonizes the established/created seasonal wetlands and vernal pools; and • The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 10 percent or greater. *Year 3:* Performance standard would be met for Year 3 if: • At least two hydrophytic plant species colonizes the established/created seasonal wetlands; • At least two native hydrophytic plant species colonizes the established/created vernal pools and at least one is a vernal pool habitat indicator species; and • The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 20 percent or greater and comprised of native and naturalized species. *Year 4:* Performance standard would be met for Year 4 if: • At least two hydrophytic plant species colonize the established/created seasonal wetlands. • At least two native hydrophytic plant species colonizes the established/created vernal pools and at least one is a vernal pool habitat indicator species. • The average absolute cover of wetland vegetation within an established/created seasonal wetland and vernal pool is 30 percent or greater.					

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
• To meet the wetland performance standard invasive plant species within the wetlands shall not comprise greater than 5 percent of the total absolute cover. To meet the upland performance standard, invasive plant species, which currently are not supported in the uplands within the Wetland Preserve, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating. • The managed landscaped areas within the development will be visually surveyed for evidence of invasive plant species. To meet the managed landscape performance standard, invasive plant species, which currently are not supported in the uplands within the Wetland Preserve, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating. *Year 5:* Performance standard would be met for Year 5 if: • At least two hydrophytic plant species documented during the CRAM assessment for the palustrine emergent wetlands impacted on the Phase 1 project site colonize the established/created seasonal wetlands. • At least two native vernal pool habitat indicator species documented during the CRAM assessment for the vernal pool on the Phase 2 project site colonizes the established/created vernal pools. • The average absolute cover of wetland vegetation within the established/created seasonal wetland (non-vernal pool wetlands) is 40 percent or greater; and the average absolute cover of wetland vegetation within the established/created vernal pools is 40 percent or greater of which greater than 50					

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
percent of the vegetation cover consists of two or more dominate native vernal pool habitat indicator plants. • To meet the wetland performance standard invasive plant species within the wetlands shall not comprise greater than 5 percent of the total absolute cover. To meet the upland performance standard, invasive plant species, which currently are not supported in the uplands, within the Wetland Preserve shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating. • The managed landscaped areas within the development will be visually surveyed for evidence of invasive plant species. To meet the managed landscape performance standard, invasive plant species, which currently are not supported in the uplands within the Wetland Preserve, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating. *Contingency Measures:* If the annual performance standard is not being met for any given monitoring year the Permittee shall prepare an analysis of the cause(s) of failure and, if determined necessary, implement remedial action. Remedial action may include hydroseeding with native species, or addition of supplemental topsoil or mulch to promote growth, control of invasive using mechanical equipment, grazing animals. ***Year 5 No-Net-Loss Performance Standard for Phase 1 Impacts*** Performance standard would be met for Year 5 when;					

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
• A wetland delineation is performed and verified by the USACE and confirms a minimum of 0.992 acre of wetlands have been established/created within the Wetland Preserve. ***Year 5 No-Net-Loss Performance Standard for Phase 2 Impacts*** The Phase 2 no-net-loss performance standard would be measured when an application for the Phase 2 project is submitted to the RWQCB and USACE, and the Phase 2 project is approved. Once Phase 2 has been approved by the RWQCB and USACE, this performance standard may be modified depending on the level of wetland impacts authorized by the RWQCB and USACE, meaning this performance standard may decrease if the wetlands impacted for Phase 1 are less than 3.7 acres. Performance standard would be met for Year 5 when; • A wetland delineation is performed and verified by the USACE and confirms a minimum of 2.57 acres of seasonal wetland and 1.13 acres of vernal pools have been established/created within the Wetland Preserve. ***Year 5 Long-Term Protection and Long-Term Funding*** Performance standard would be met for Year 5 once: • The Wetland Preserve has been placed under a conservation easement; and • A long-term financing mechanism (e.g., non-wasting endowment, trusts, contractual arrangement etc.) to fund implementation of the long-term management of the Wetland Preserve has been secured.					
MM BIO-4: If construction occurs during the breeding season of migratory and resident birds (February 1 to August 31), a qualified Biologist shall conduct a pre-construction breeding bird survey in areas of suitable habitat within 7 days prior to the onset of construction activity. Surveys shall be conducted	Notes on construction plans; Submittal of documentation; Site inspection	If construction occurs during the breeding season of migratory and resident birds	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
within the project footprint and 100 feet from the construction limits for nesting passerines, 250 feet from the construction limits for nesting accipiters and a minimum of 500 feet from the construction limits for nesting raptors. If the survey area is found to be absent of nesting birds, no further mitigation would be required. However, if construction activities are delayed by more than 7 days, an additional nesting bird survey shall be performed. If bird nests are found, appropriate buffer zones shall be established around all active nests to protect nesting adults and their young from direct or indirect impacts related to project construction disturbance. Size of buffer zones shall be determined per recommendations of the qualified Biologist based on site conditions and species involved, but typical buffers around active nests are 500 feet for large raptors such as buteos, 250 feet for small raptors such as accipiters, and 100 feet for passerines (songbirds) and other bird species. For special-status species, a 0.25-mile buffer shall be established for nesting Swainson's hawk; 1 mile for golden eagle; and a 500-foot buffer for nesting tricolored blackbirds. If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Buffer zones shall be maintained until it can be documented that either the nest has failed, or the young have fledged.		(February 1 to August 31)			
3.4 Cultural Resources and Tribal Cultural Resources					
MM CUL-2a: No ground disturbance shall take place within 100 feet of informal archaeological resource 483A-001. The resource shall be preserved in place.	Notes on construction plans; Site inspection	During construction	City of American Canyon		
MM CUL-2b: An Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology shall be present on-site during all earth disturbing activities. If prehistoric or historic-period archaeological resources are encountered, all construction activities within 100 feet of the	Notes on construction plans; Site inspection; Submittal of documentation	During construction	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
find shall halt and the City of American Canyon shall be notified. Prehistoric archaeological materials may include obsidian and chert flaked stone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil ("midden") containing heat-affected rocks, artifacts, or shellfish remains; and stone milling equipment (e.g., mortars, pestles, hand stones, or milling slabs); and battered stone tools, such as hammerstones and pitted stones. Historic-period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse. The Archaeologist shall inspect the findings within 24 hours of discovery. If it is determined the project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines), mitigation shall be implemented in accordance with Public Resources Code Section 21083.2 and Section 15126.4 of the CEQA Guidelines, with a preference for preservation in place. Consistent with Section 15126.4(b)(3), this may be accomplished through planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement. If avoidance is not feasible, a qualified Archaeologist shall prepare and implement a detailed treatment plan in consultation with the City of American Canyon. Treatment of unique archaeological resources shall follow the applicable requirements of Public Resources Code Section 21083.2. Treatment for most resources would consist of (but would not be limited to) sample excavation, artifact collection, and site documentation, with the aim to target the recovery of important scientific data contained in the portion(s) of the significant resource to be impacted by the proposed project. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely					

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and State repositories, libraries, and interested professionals.					
MM CUL-3: In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken: 1. There shall be no further excavation or disturbance within 100 feet of the remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98. 2. Where the following conditions occur, the landowner or authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance: • The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission.	Notes on construction plans; Site inspection; Submittal of documentation	During construction	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
• The descendant identified fails to make a recommendation. • The landowner or authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner. Additionally, California Public Resources Code Section 15064.5 requires the following relative to Native American Remains: • When an initial study identifies the existence of, or the probable likelihood of, Native American Remains within a project, a lead agency shall work with the appropriate Native Americans as identified by the NAHC as provided in Public Resources Code Section 5097.98. The applicant may each develop a plan with respect to their respective individual development proposals for treating or disposing of, with appropriate dignity, the human remains, and any items associated with Native American Burials with the appropriate Native Americans as identified by the NAHC.					
MM CUL-4: A Tribal Monitor representing the Yocha Dehe Wintun Nation shall be present during all project-related ground disturbance. Additionally, the Yocha Dehe Wintun Nation's Treatment Protocol (Protocol) shall be followed with respect to Tribal Cultural Resources (TCRs). The purpose of the protocol is to formalize procedures for the treatment of Native American human remains, grave goods, ceremonial items, and items of cultural patrimony, if any are found in conjunction with development, including archaeological studies, excavation, geotechnical investigations, grading, and any ground-disturbing activity. This Protocol also formalizes procedures for Tribal Monitoring during archaeological studies, grading, and ground-disturbing activities.	Notes on construction plans; Site inspection; Submittal of documentation	During construction	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
1. Cultural Affiliation: The Yocha Dehe Wintun Nation (Tribe) traditionally occupied lands in Yolo, Solano, Lake, Colusa, and Napa Counties. The Tribe has designated its Cultural Resources Committee (Committee) to act on the Tribe's behalf with respect to the provisions of this Protocol. Any human remains which are found in conjunction with projects on lands culturally affiliated with the Tribe shall be treated in accordance with Section III of this Protocol. Any other cultural resources shall be treated in accordance with Section IV of this Protocol. 2. Inadvertent Discovery of Native American Human Remains**:** Whenever Native American human remains are found during the course of a project, the determination of Most Likely Descendant (MLD) under California Public Resources Code Section 5097.98 will be made by the Native American Heritage Commission (NAHC) upon notification to the NAHC of the discovery of said remains at a project site. If the location of the site and the history and prehistory of the area is culturally affiliated with the Tribe, the NAHC contacts the Tribe; a Tribal member will be designated by the Tribe to consult with the landowner and/or project proponents. Should the NAHC determine that a member of an Indian tribe other than Yocha Dehe Wintun Nation is the MLD, and the Tribe agrees with this determination, the terms of this Protocol relating to the treatment of such Native American human remains shall not be applicable; however, that situation is very unlikely. 3. Treatment of Native American Remains: In the event that Native American human remains are found during development of a project and the Tribe or a member of the Tribe is determined to be MLD pursuant to Section II of this Protocol, the following provisions shall apply. The Medical Examiner shall immediately be notified, ground-disturbing activities in that location shall cease and the Tribe shall be					

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
allowed, pursuant to California Public Resources Code Section 5097.98(a), to (1) inspect the site of the discovery and (2) make determinations as to how the human remains and grave goods shall be treated and disposed of with appropriate dignity. The Tribe shall complete its inspection and make its MLD recommendation within 48 hours of getting access to the site. The Tribe shall have the final determination as to the disposition and treatment of human remains and grave goods. Said determination may include avoidance of the human remains, reburial on-site, or reburial on tribal or other lands that will not be disturbed in the future. The Tribe may wish to rebury said human remains and grave goods or ceremonial and cultural items on or near the site of their discovery, in an area which will not be subject to future disturbances over a prolonged period of time. Reburial of human remains shall be accomplished in compliance with the California Public Resources Code Sections 5097.98(a) and (b). The term "human remains" encompasses more than human bones because the Tribe's traditions call for the burial of associated cultural items with the deceased (funerary objects), and/or the ceremonial burning of Native American human remains, funerary objects, grave goods, and animals. Ashes, soils, and other remnants of these burning ceremonies, as well as associated funerary objects and unassociated funerary objects buried with or found near the Native American remains are to be treated in the same manner as bones or bone fragments that remain intact. 4. Non-Disclosure of Location of Reburials**:** Unless otherwise required by law, the site of any reburial of Native American human remains shall not be disclosed and will not be governed by public disclosure requirements of the California Public Records Act, California Government Code Section 6250 *et seq*. The Medical Examiner shall withhold public					

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
disclosure of information related to such reburial pursuant to the specific exemption set forth in California Government Code Section 6254(r). The Tribe will require that the location for reburial is recorded with the California Historic Resources Inventory System (CHRIS) on a form acceptable to the CHRIS center. The Tribe may also suggest the landowner enter into an agreement regarding the confidentiality of site information that will run with title on the property. 5. Treatment of Cultural Resources**:** Treatment of all cultural items, including ceremonial items and archaeological items will reflect the religious beliefs, customs, and practices of the Tribe. All cultural items, including ceremonial items and archaeological items, which may be found at a project site shall be turned over to the Tribe for appropriate treatment, unless ordered by a court or agency of competent jurisdiction. The project proponent shall waive any and all claims to ownership of Tribal ceremonial and cultural items, including archaeological items, which may be found on a project site in favor of the Tribe. If any intermediary, (for example, an Archaeologist retained by the project proponent) is necessary, said entity or individual shall not possess those items for longer than is reasonably necessary, as determined solely by the Tribe. 6. Inadvertent Discoveries**:** If additional significant sites or sites not identified as significant in a project environmental review process, but later determined to be significant, are located within a project impact area, such sites will be subjected to further archaeological and cultural significance evaluation by the project proponent, the Lead Agency, and the Tribe to determine whether additional mitigation measures are necessary to treat sites in a culturally appropriate manner consistent with CEQA requirements for mitigation of impacts to cultural resources. If there are human remains present that have been identified as Native

American, all work will cease for a period of up to 30 days in accordance with Federal Law.					
3.5 Geology, Soils, and Seismicity					
MM GEO-1a: Prior to the issuance of building permits for each Phase 2 structure, the project applicant shall submit plans to the City of American Canyon for review and approval that demonstrate a minimum 50-foot setback between the West Napa Fault and each building. The approved plans shall be incorporated into the proposed project.	Submittal of documentation	Prior to the issuance of building permits for each Phase 2 structure	City of American Canyon		
MM GEO-1b: Prior to the issuance of building permits for each Phase 1 and 2 structure, the project applicant shall submit a design-level Geotechnical Investigation to the City of American Canyon for review and approval. The investigation shall be prepared by a qualified engineer and identify grading and building practices necessary to achieve compliance with the latest adopted edition of the California Building Standards Code (CBC) geologic, soils, and seismic requirements, including abatement of expansive soil conditions. The report shall also determine the final design parameters for walls, foundations, foundation slabs, and surrounding related improvements (e.g., utilities roadways, parking lots, and sidewalks). The measures identified in the approved report shall be incorporated into the project plans and all applicable construction-related permits.	Submittal of documentation	Prior to the issuance of building permits for each Phase 1 and 2 structure	City of American Canyon		
MM GEO-5: If potential fossils are discovered during project implementation, all earthwork or other types of ground disturbance within 100 feet of the find shall stop immediately until a qualified professional Paleontologist can assess the nature and importance of the find. Based on the scientific value or uniqueness of the find, the Paleontologist shall either record the find and recommend that the City of American Canyon allow work to continue or recommend salvage and recovery of the fossil. The Paleontologist shall, if required,	Notes on construction plans; Site inspection; Submittal of documentation	During construction	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
propose modifications to the stop-work radius based on the nature of the find, site geology, and the activities occurring on the site. If treatment and salvage is required, recommendations will be consistent with Society of Vertebrate Paleontology guidelines and currently accepted scientific practice. If required, treatment for fossil remains shall include preparation and recovery of fossil materials so that they can be housed in an appropriate museum or university collection, and, if required, shall also include preparation of a report for publication describing the finds.					
3.6 Greenhouse Gas Emissions and Energy					
MM GHG-1a: Prior to the issuance of any grading permits, the project applicant shall provide the City of American Canyon with documentation (e.g., site plans) demonstrating project construction will include the following construction Best Management Practices (BMPs): • At least 15 percent of the construction fleet for each project phase shall be alternatively fueled or electric. • At least 10 percent of building materials used for project construction shall be sourced from local suppliers. • At least 65 percent of construction and demolition waste materials shall be recycled or reused. • At least one contractor that has a business location in American Canyon shall be contracted for project construction. • All construction contracts shall include language that requires all off-road equipment with a power rating below 19 kilowatts (e.g., plate compactors, pressure washers) using during construction be electrically powered. • Architectural coatings used for project construction shall be "Low-VOC," containing no greater than 50 grams of volatile organic compounds (VOC) per liter of product.	Submittal of documentation; Notes on construction plans; Site inspection	Prior to the issuance of any grading permits	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
• Project construction shall prohibit the use of generators and shall establish grid power connection to electrical equipment needs. • Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California Airborne Toxics Control Measure [ATCM] Title 13, Section 2485 of California Code of Regulations). Clear signage regarding idling restrictions shall be provided for construction workers at all access points. • All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation. • The prime construction contractor shall post a publicly visible sign with their telephone number and contractor to contact. The construction contractor shall take corrective action within 48 hours. The BAAQMD's phone number shall also be identified and visible to ensure compliance with applicable regulations.					
MM GHG-1b: Prior to the issuance of any building permits, the project applicant shall provide the City of American Canyon with documentation (e.g., site plans) demonstrating the proposed project is designed without the use of any natural gas -fueled appliances or natural gas plumbing.	Submittal of documentation	Prior to the issuance of any building permits	City of American Canyon		
MM GHG-1c: Prior to issuance of any building permits, the project applicant shall demonstrate to the satisfaction of the City of American Canyon (e.g., shown on-site plans), that the proposed buildings are designed and will be built to, at a minimum, the Tier 2 advanced energy efficiency requirements of the Nonresidential Voluntary Measures of the California	Submittal of documentation	Prior to the issuance of any building permits	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
Green Building Standards Code, Division A5.2, Energy Efficiency, as outlined under Section A5.203.1.2.2.					
MM GHG-1d: Prior to issuance of any building permits, the project applicant shall demonstrate to the satisfaction of the City of American Canyon (e.g., shown on-site plans), that the proposed parking areas for passenger automobiles and trucks are designed and will be built to accommodate electric vehicle (EV) charging stations. At a minimum, the parking shall be designed to accommodate a number of EV charging stations equal to the Tier 2 Nonresidential Voluntary Measures of the California Green Building Standards Code, Section A5.106.5.3.2. Prior to the issuance of any building permits, the project applicant shall demonstrate to the satisfaction of the City of American Canyon (e.g., shown on-site plans), that each loading dock is outfitted with at least one 240-volt outlet to accommodate truck and Transport Refrigeration Unit (TRU) charging and/or electrical power connection while trucks are loading and unloading goods.	Submittal of documentation	Prior to the issuance of any building permits	City of American Canyon		
MM GHG-1e: Prior to the issuance of any building permit for the proposed project, the project applicant shall provide the City with documentation (e.g., site plans) demonstrating to the City's satisfaction that the electricity demand will be supplied with 100 percent carbon-free electricity sources through the year 2045.	Submittal of documentation	Prior to the issuance of any building permit for the proposed project	City of American Canyon		
3.8 Hydrology and Water Quality					
MM HYD-1a: Prior to issuance of grading permits for the proposed project, the applicant shall submit to the City of American Canyon for review and approval a Storm Water Pollution Prevention Plan (SWPPP) in accordance with the requirements of the statewide Construction General Permit. The SWPPP shall be designed to address the following	Notes on construction plans; Site inspection; Submittal of documentation	Prior to issuance of grading permits for the proposed project	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
objectives: (1) all pollutants and their sources (e.g., runoff), including sources of sediment associated with construction, construction site erosion, and all other activities associated with construction activity, are controlled; (2) where not otherwise required to be under a Regional Water Quality Control Board (RWQCB) permit, all non-stormwater discharges are identified and either eliminated, controlled, or treated; (3) site Best Management Practices (BMPs) (e.g., silt fencing, street sweeping, routine inspection, etc.) are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized non-stormwater discharges from construction activity; and (4) stabilization BMPs are installed to reduce or eliminate pollutants after construction are completed. The SWPPP shall be prepared by a qualified SWPPP developer. The SWPPP shall include the minimum BMPs required for the identified Risk Level. BMP implementation shall be consistent with the BMP requirements in the most recent version of the California Stormwater Quality Association (CASQA) Stormwater Best Management Handbook–Construction or the California Department of Transportation (Caltrans) Stormwater Quality Handbook Construction Site BMPs Manual. The SWPPP shall be implemented during construction.					
MM HYD-1b: Prior to the issuance of building permits, the project applicant shall submit a Stormwater Control Plan to the City of American Canyon for review and approval. The plan shall be developed using the California Stormwater Quality Association (CASQA) "New Development and Redevelopment Handbook" and include applicable provisions of Section C.3 of the San Francisco Bay Regional Water Quality Control Board (RWQCB) Municipal Regional Permit (Order No. R2-2015-0049, NPDES Permit No. CAS612008 (or more recent permit). The Stormwater Control Plan shall identify pollution prevention measures and Best Management Practices (BMPs) to control	Site inspection; Submittal of documentation	Prior to the issuance of building permits	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
stormwater pollution from operational activities and facilities and provide maintenance in perpetuity. The Stormwater Control Plan shall include Low Impact Development (LID) design concepts, as well as concepts that accomplish a "first flush" objective that remove contaminants from the first 2 inches of stormwater before it enters area waterways. The project applicant shall also prepare and submit an Operations and Maintenance Agreement to the City, identifying procedures to ensure stormwater quality control measures work properly during operations.					
3.9 Land Use					
MM LU-3: Prior to issuance of grading permits, the applicant shall retain a qualified Biologist to assess potential wildlife hazards to aviation. The assessment shall evaluate the characteristics of the emergent wetlands, drainages, other potential wildlife attractant features (i.e., ponded water) located within the open space area and identify management practices (e.g., storm drainage, vegetation, etc.) to prevent the creation of attractants for large flocks or birds or other wildlife species that may present safety hazards to aviation activities. As part of the assessment, the applicant shall consult with Napa County Airport and Napa County Airport Land Use Commission (ALUC) representatives, as appropriate, regarding findings and recommendations. The applicant shall submit a report to the City of American Canyon prepared by a qualified Biologist that confirms the wildlife hazard assessment's findings and recommendations are incorporated into the design of the open space preserve.	Submittal of documentation	Prior to issuance of grading permits	City of American Canyon		
3.10 Noise					
MM NOI-1: Implementation of the following multi-part mitigation measure is required to reduce potential construction period noise impacts:	Notes on construction plans; Site inspection	During construction	City of American Canyon		

Mitigation Measures	Method of Verification	Timing of Verification	Responsible for Verification	Verification of Completion	
				Date	Initial
• The construction contractor shall ensure that all equipment driven by internal combustion engines shall be equipped with mufflers that are in good condition and appropriate for the equipment. • The construction contractor shall ensure that unnecessary idling of internal combustion engines (i.e., idling in excess of 5 minutes) is prohibited. • The construction contractor shall utilize "quiet" models of air compressors and other stationary noise sources where technology exists. • At all times during project grading and construction, the construction contractor shall ensure that stationary noise-generating equipment shall be located as far as practicable from sensitive receptors and placed so that emitted noise is directed away from adjacent residences. • The construction contractor shall ensure that the construction staging areas shall be located to create the greatest feasible distance between the staging area and noise-sensitive receptors nearest the project site. The construction contractor shall ensure that all on-site construction activities, including the operation of any tools or equipment used in construction, drilling, repair, alteration, grading, or demolition work, are limited to between the daytime hours of 7:00 a.m. to 7:00 p.m. Monday through Saturday. No construction shall be permitted on Sundays and federal holidays.					

THIS PAGE INTENTIONALLY LEFT BLANK

RESOLUTION NO. 2023-XX

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON APPROVING THE GIOVANNONI LOGISTICS CENTER PHASE 1 DESIGN PERMIT TO ALLOW UP TO 1,069,904 SQUARE FEET OF HIGH-CUBE WAREHOUSE USES ON 70.2 ACRES LOCATED NORTH OF GREEN ISLAND ROAD AND EAST OF DEVLIN ROAD, APN 057-090-008, 057-130-034, 057-130-036, (FILE NO. PL 20-0042)

WHEREAS, pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon (City) adopted a General Plan to provide comprehensive long-range planning and a blueprint of the City's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

WHEREAS, Buzz Oates LLC, ("applicant"), submitted a Giovannoni Logistics Center Phase 1 Design Permit application to develop a 70.2-acre area east of Devlin Road for two high-cube warehouse buildings totaling 1,069,904 square feet (the proposed project); and

WHEREAS, Building A, located at 300 Green Island Road, is proposed to be 627,976 square feet, and may be rail-served by the adjacent Napa Branch Line; and

WHEREAS, Building B, located at 1200 Devlin Road, is proposed to be 469,512 square feet; and

WHEREAS, both buildings would provide docks, grade level roll-up doors, and trailer parking stalls and enclosed with a secure perimeter; and

WHEREAS, access would be restricted to authorized users; and

WHEREAS, on November 17, 2022, the Planning Commission conducted a duly-noticed public hearing to evaluate the Giovannoni Logistics Center Phase 1 Design Permit and heard all public speakers and considered all written materials including the staff report and oral testimony given at the meeting; and

WHEREAS, on February 21, 2023, the City Council certified that the Final Environmental Impact Report (EIR) (SCH# 2021010104) has been completed in compliance with the California Environmental Quality Act (CEQA) and as adequately reflects the City's independent judgement and analysis regarding the potential environmental impacts associated with the Giovannoni Logistics Center Project, and adopt CEQA Findings of Fact, a Statement of Overriding Considerations, for the Project, and adopt the Mitigation Monitoring and Reporting Program for the Project; and

WHEREAS, the Giovannoni Logistics Center Final EIR specifically evaluated the Phase 1 Design Permit at a Project level and the City Council reviewed and considered the information contained in the Final EIR prior to approving the proposed project; and

WHEREAS, on December 6, 2022 and February 21, 2023, the City Council conducted a duly-noticed public hearing to evaluate the Giovannoni Logistics Center Phase 1 Design Permit, heard all public speakers and considered all written materials including the staff report and oral testimony given at the meeting, and subsequently deliberated on the Phase 1 Design Permit on March 21, 2023.

NOW, THEREFORE, BE IT RESOLVED that the City Council makes all the required findings to approve the Giovannoni Logistics Center Phase 1 Design Permit, as follows:

SECTION 1: Design Permit Findings

Approval of the Design Permit requires all the following findings be made, pursuant to American Canyon Municipal Code Section 19.41.050:

A. The project complies with all applicable provisions of the Zoning Ordinance and any applicable approvals granted for the project by any decision-making authority.

The proposed two warehouses comply with the General Industrial zoning height, bulk, and setback regulations.

B. The project and its design comply with any applicable design guidelines.

The project complies with the design and development principles set out in the General Plan as Policy 1.22.4 and 1.22., as follows:

- *The architectural façade includes a variety of colors, materials, and articulating features. There are changes in color that vary from white and gray. The architectural detailing around windows, building corners, parapet, and articulated sidings of the main entrance gives a sense of human scale. There are also scoring lines on the concrete shell walls that break up the expanse.*

- *The main entry into the warehouse provides transparent building elements into the ground floor, and the exterior scoring lines gives the external appearance a modern look for an industrial facility. The ground floor of the southern elevation has store-front like windows that capture natural light.*

- *The façade includes articulation, gray painted squares, and a white parapet trim to provide visual relief and interest.*

- *The southwest building entrance is clearly identified with the articulated white and grey siding. The entrance also has storefront like windows for natural light.*

- *The building design includes tall parapet to screen rooftop structures and the mechanical equipment and a condition of approval requires adequate equipment screening at the time of building permit issuance.*

- *The site is well landscaped, including trees throughout the parking areas and along the southern, western, and northern edges of the site, and plantings within the stormwater bio-retention area that runs along the northwest side of the site.*

- *There are clearly marked pedestrian routes in the parking lot leading to the front office of the building.*

C. The project and its design comply with all applicable general plan policies.

The project complies with all applicable general plan policies because the proposed use is included in the Industrial use designation; the building and site design comply with the Design Guidelines set out in the General Plan as Policy 1.22.4 and 1.22.7; and the project will contribute to the provision of necessary transportation improvements called for in the 2018 Circulation Element update because it will pay the Traffic Impact Fees, as periodically adjusted.

D. The project complies with applicable policies of Napa County Airport Land Use Compatibility Plan.

The project site falls entirely within Zone D of the Napa County Airport Land Use Compatibility Plan (ALUCP) Area. Zone D is characterized by moderate risk, frequent noise intrusion, and routine overflights below 1,000 feet above ground level. The ALUCP indicates that warehousing, low intensity light industrial uses and office uses are normally acceptable uses.

The ALUCP sets forth maximum density criterion of 100 people per net acre for Zone D Therefore, the proposed project complies with the building height requirements of the Napa County Airport land use compatibility plan. As described in the Giovannoni Logistics Center Final EIR (SCH# 2021010104), the maximum site density complies with the density recommendation of no more than 100 persons per net acre.

In addition to the 70.2-acre development site, an additional 45 acres of the project site would be permanently preserved as a Wetland Preserve. This area contains wetlands that currently attract wildlife (e.g., avian species). Avian species are considered potential hazards to aviation activities due to the potential for bird strikes. The two aspects of the proposed project that have the greatest potential for creating aviation safety hazards are the open space area and the stormwater basins.

The proposed project would create new wetland features to offset those impacted as result of the proposed project. However, it would not substantially increase the bird attractant potential because the new compensatory wetlands represent a small portion of the total open space area. Thus, the proposed project would not introduce new aviation hazards in this respect.

The proposed stormwater basins would be designed to drain out within 48 hours of a 10-year storm event. This rapid drainage rate would minimize the amount of time the basins would hold standing water, which, in turn, would reduce their avian attractant attributes. Additionally, standing water would be prevalent in many areas in the project vicinity during and immediately after a storm event; thus, the basins would not represent a greater attractant in this respect. Moreover, the basins are not intended to hold water for extended periods or to be used as an aesthetic water feature.

Furthermore, the proposed project overall would result in an approximately 163-acre reduction in avian foraging habitat as a result of the development of the proposed structures and infrastructure. This would further minimize the avian attractant attributes of the project site relative to existing conditions.

The ALUCP indicates that projects that have the potential to attract wildlife are required to prepare a Wildlife Hazards Assessment. Accordingly, Mitigation Measure LU-3 requires the preparation of such an assessment and implementation of the recommendations into the design of the open space area. This would serve to minimize, if not eliminate, the wildlife attractant attributes in a manner that reduces impacts to a level of less than significant. This mitigation measure has already been satisfied through the preparation by biologists in the consulting firm AECOM of the September 27, 2022, Wildlife Hazard Assessment for the Giovannoni Logistics Center Property. This document concluded, for a variety of reasons, that the proposed project would not cause an increase above the existing level of activity of birds or other wildlife, and thus did not propose any recommendations to modify the open space area design.

The proposed project's end uses include high-cube warehouse and ancillary office, which are considered normally acceptable by the ALUCP as long as they do not create hazards. In this case, Mitigation Measure AES-3 requires all exterior lighting to use full cut-off fixtures and be directed downward to prevent interference with Napa County Airport operations. Moreover, the proposed project would reduce the amount of natural vegetation on the project site by 163 acres. The proposed project also would include landscaping and on-site drainage facilities that would be designed and managed to discourage wildlife use of the site. Mitigation Measure LU-3 requires the applicant to retain a qualified Biologist to prepare a

wildlife hazard assessment that would identify any measures needed to reduce the bird attractant potential of the wetland area, consistent with the ALUCP's policies. Collectively, the implementation of these two mitigation measures would ensure that the proposed project would not create hazards to aviation. As noted above, Mitigation Measure LU-3 has already been satisfied. The September 27, 2022, Wildlife Hazard Assessment for the Giovannoni Logistics Center Property summarized its key conclusions as follows:

> *The buildings associated with the project development site are not expected to result in a significant attraction of birds or other wildlife to the property. Some vegetation will be removed and replaced with buildings, resulting in the reduction of existing non-native grassland habitat within the development site. Anticipated changes to the existing wildlife habitat associated with the proposed construction activities include grading, excavation, permanent development, storm water controls, lighting, irrigation, noise, and increased human presence.*
>
> *The development of Phase 1 and Phase 2 features is unlikely to result in an increase in wildlife activity due to the disturbances caused by the lighting, human presence, and noise associated with the new development site, in addition to the existing baseline noise and activity from nearby vehicular traffic and the Napa County Airport air and vehicular traffic. Natural or man-made features that could attract wildlife to the property post-construction include the proposed stormwater retention basins; however, the stormwater retention basins are unlikely to result in significant additional wildlife attraction because the systems are designed for quick drainage, and because the basins will be surrounded by development.*
>
> *A majority of the wetland impacts will be mitigated at a 1:1 ratio, with only 0.496 acres of net gain in palustrine emergent wetlands across the site. The impacted wetlands are located within a contiguous grassland landscape and are, on average, no more than 1,500 feet south of the Proposed Wetland Preserve, where mitigation wetlands would be created among approximately 45 acres of existing wetlands. The creation of wetlands associated with the project is not expected to cause an overall increase in the current level of bird or other wildlife activity at the project site, because most of the wetlands being filled within the parcel would be replaced at a 1:1 ratio and would be located among existing wetland features that dominate the northern portion of the project site.*

In summary, the construction and development associated with the Giovannoni Logistics Center would not cause an increase above the existing level of activity of birds or other wildlife. Therefore, the project land uses would not present a hazard to Napa County Airport flight operations. It is predicted that the overall wildlife activity on the property would remain at or below current levels, based on our understanding of the planned development and our best professional assessment of the existing habitat.

E. The project's quality and character are compatible with the surrounding area, unless physically deteriorated or blighted, and will not be materially detrimental to existing development.

The project is compatible with the quality and character of the surrounding area because it maintains sufficient setbacks and has landscaped parking areas and perimeters. Additionally, the building is detailed with appropriate windows, doors, awnings, and a roofline with a parapet to screen roof level installations. The white and gray colors and sequential scoring match the adjacent warehouse buildings to the west and east of the site.

F. The proposed design is compatible with existing development in the area in terms of scale, height, bulk, proportion, materials, cohesiveness, and color, and the preservation of privacy.

The project is compatible with existing development in the area as adjacent planned buildings are a similar scale and height. The building is setback from Devlin Road and Green Island Road and screened with landscaping that is native or adapted to the region. The design, exterior materials, and colors are industrial in character, but fit with the palette of other newly-constructed industrial buildings.

G. The design improves the community's appearance by avoiding both excessive variety and monotonous repetition.

The project avoids monotonous repetition with architectural features around entrances and building corners, variation in elevation treatment, and a range of compatible colors on the exterior walls. The grey trim differentiates this building from its neighbors. The site also has many landscaped areas which create separation and interest in the design.

H. The proposed design promotes a harmonious transition in terms of scale and character between areas of different general plan land use designations and zoning districts.

The project consists of two one-story distribution facilities. The perimeter landscaping consists of numerous deciduous and evergreen trees that complement the surroundings. The project buildings will be painted gray and white. The buildings will also be scored and the offices will have soft corners with transparent glass walls to reduce monotony.

I. The proposed design provides for adequate and safe on-site vehicular and pedestrian circulation.

Each building will have two driveway access points to the adjacent street. Entry points for each building provide good sight lines. The parking lot provides accessible parking, electric vehicle parking, and striped pedestrian pathways. The site will also provide sidewalks for the street and building entries. The site has adequate parking lot lighting that illuminates at night without producing glare onto neighboring parcels. The site will safely accommodate vehicular and pedestrian movements related to this industrial project.

SECTION 2: Conditions of Approval

General

1. The Design Permit approval is granted for two high-cube warehouse buildings within the Project totaling 1,069,904 square feet on a 70.2-acre site east of Devlin Road and north of Green Island Road. Building A, located at 300 Green Island Road is proposed to be 627,976 square feet; and Building B, located at 1200 Devlin Road is proposed to be 469,512 square feet. (APN 057-360-007) as shown on Exhibit A. Exhibit A includes the following:
    a. Architectural Plans prepared by RMW Architecture, dated 11-11-2020 consisting of 12 sheets, including Photometric Renderings, Preliminary Site Plan, Roof Plan Floor Plan, and Elevations
    b. Civil Plans prepared by CBG Engineers, dated 09-17-21 consisting of 6 sheets, Tentative Map, Existing Site Conditions, Preliminary Grading and Drainage Plan, Preliminary Utility Plan, Preliminary Stormwater Control Plan, and Preliminary Fire Access Plan.
    c. Preliminary Planting Plan prepared by RMW Architecture, dated 11-11-2020 consisting of 1 sheet.
    d. Photometric Plans prepared by Cal Lighting, dated 11-13-2020 consisting of 4 sheets, showing proposed lighting and site photometric plan.

2. The applicant shall defend, indemnify, and hold harmless the City of American Canyon ("City"), its elected and appointed officials, officers, employees, attorneys, representatives, boards, commissions, consultants, volunteers and agents from and against all claims, actions, including actions to arbitrate

or mediate, damages, losses, judgments, liabilities, expenses and other costs, or proceedings against the City, its elected and appointed officials, officers, employees, attorneys, representatives, boards, commissions, volunteers, or agents to attack, modify, set aside, void, or annul an approval, conditional approval, permit, entitlement, environmental document, environmental clearance, mitigation plan, or any other document or any of the proceedings, acts, or determinations taken, done, or made prior to granting of such approval, conditional approval, permit, entitlement, environmental clearance, environmental document, mitigation plan, or other documents, by the City, including, without limitation, an action against an advisory agency, appeal board, or legislative body within the applicable limitation period.

The obligation to defend, indemnify and hold the City harmless shall include the payment of all legal costs and attorney's fees (including a third party award of attorney's fees), arising out of, resulting from, or in connection with the City's act or acts leading up to and including approval of any environmental document or mitigation plan granting approvals to the applicant, incurred on behalf of, or by, the City, its elected and appointed officials, officers, employees, representatives, attorneys, boards, commissions, volunteers and agents in connection with the defense of any claim, action, or proceeding challenging the entire or a portion of an approval, conditional approval, permit, entitlement or any other document of any related claim.

The obligation to defend, indemnify, and hold the City harmless shall include, but not be limited to, the cost of preparation of any administrative record by the City, staff time, copying costs, court costs, or attorney's fees arising out of a suit or challenge contesting the adequacy of a permit, approval, conditional approval, entitlement, environmental document, mitigation plan, environmental clearance, or any other document or approval related to the applicant's project.

The City will promptly notify the applicant of any claim, action, or proceeding and will cooperate fully in the defense. If the City fails to promptly notify the applicant of any claim, action, or proceeding, or the City fails to cooperate fully in the defense, the applicant shall not be responsible to defend, indemnify, or hold harmless the City.

In the event a legal challenge to a City permit, approval, conditional approval, environmental document, environmental clearance, mitigation plan, entitlement or any other document, proceeding, determination, or action related to the applicant's project is successful, and an award of attorneys' fees is granted against the City, the applicant shall be responsible to timely pay the full amount of such an award.

3. The applicant is responsible for paying all charges related to the processing of this discretionary case application within 30 days of the issuance of the final invoice or prior to the issuance of building permits for this project, whichever occurs first. Failure to pay all charges shall result in delays in the issuance of required permits or the revocation of the approval of this application.

4. The date upon which the approval is final shall be considered the day of the imposition of the fees, dedications, reservations and exactions required by these conditions approval for the purposes of protesting the imposition pursuant to California Government Code Section 66020.

5. The application shall not be deemed final until the applicant and property owner(s) execute and return the "Confirmation of Conditions of Approval" form as shown as Exhibit B to this Resolution.

6. Expiration of this Approval. In accordance with American Canyon Municipal Code (ACMC) Section 19.41.060 the approval shall become null and void and of no effect if no construction permits have been issued and construction commenced within two years of the date upon which this approval is final.

This provision shall not apply to applications approved in conjunction with another discretionary permit. In these cases, the expiration period shall coincide with that of the associated period.

An extension of time may be granted by the Community Development Director upon the written request by a responsible party before the expiration of the two-year period, provided that the Director can make the findings that there have been no substantial changes in the approved plans, and that there has been no change of circumstances which would prevent any of the required findings of approval to be made.

Planning

7. All plans submitted for review and approval and all development shall be in substantial conformance with the approved exhibits, except where modified by a condition of approval. The Community Development Director or designee may approve minor changes to the project as approved by the City Council on the plans submitted for the construction permits with a determination that the changes are in substantial compliance with the representation of the project as reviewed by the Planning Commission and City Council, that the proposed change will be in compliance with the required development standards, and the change will not materially affect adjacent private or public property.

8. The conditions of this Permit shall be printed on the first sheet of each plan set submitted for a building permit pursuant to this Design Permit, under the title 'Design Permit Conditions'. The second sheet may also be used if the first sheet is not of sufficient size to list all of the conditions. The sheet(s) containing the conditions shall be of the same size as those sheets containing the construction drawings; 8-1/2" by 11" sheets are not acceptable.

9. Plans submitted for building permits shall include all exterior site lighting including building mounted lighting, lighting within the parking areas and along walkways that provide a minimum of 1-foot candle illumination of these areas. Lighting shall be shielded as appropriate and avoid light spillage or glare from the project site. Exterior light fixtures on buildings shall be oriented downward and shall be shielded to return potential light and glare impacts.

10. All new roof top equipment is required to be screened with a parapet equal or taller than the mechanical equipment. Alternative methods and materials for screening will be subject to the review and approval of the Community Development Director.

11. This permit does not include approval for signs. The applicant shall obtain a separate sign permit prior to installation of any sign. The signs shall be subject to ACMC Section 19.23.

12. Prior to building permit issuance, the applicant shall submit final landscape plans that comply with the State of California Water Efficient Landscape Ordinance. The landscape architect shall document and attest to the compliance with the State ordinance on the landscape plans. The plans shall incorporate the following requirements:

    a. All trees must be 15 gallons in size or larger.

    b. Provide cross sections for the north and south landscaping areas showing trees, landscaping, etc. that ensure that proposed trees would not be planted above proposed utilities or inappropriately planted in bio-retention areas. Ensure the landscape plans are reconciled with the civil plans and continue to provide a robust tree palette.

13. Prior to the issuance of a certificate of occupancy, the project landscape architect shall certify that all plant materials have been installed in accordance with the approved landscape plan.

14. All tree stakes and ties shall be removed within one year following installation or as soon as trees are able to stand erect without support.

15. Clear sight triangles shall be maintained at all driveways. Low-lying plantings and other site fixtures, including signs, shall be no taller than 30 inches within the site vision triangles.

16. All planting shall be maintained in good growing condition. Such maintenance shall include, where appropriate, pruning, mowing, weeding, cleaning of debris and trash, fertilizing, and regular watering. Whenever necessary, planting shall be replaced with other plant materials to ensure continued compliance with applicable landscaping requirements. Required irrigation systems shall be fully maintained in sound operating condition with heads periodically cleaned and replaced when missing to insure continued regular watering of landscape areas, and health and vitality of landscape materials.

Building and Safety

17. Construction and grading activities on the site shall be limited to between 7:00 a.m. and 6:00 p.m. Monday through Friday. Work between the hours of 6:00 pm and 7:00 am and work on weekends and holidays requires prior written approval from the Building Official. If weekends and holiday work is approved construction and grading activities on the site shall be limited to between 8:00 a.m. to 6:00 p.m. on Saturdays, and between 10:00 a.m. and 6:00 p.m. on Sundays and State and Federal holidays.

18. All construction plans and buildings onsite shall conform to the California Code of Regulations, Title 24. All building plans shall include all necessary recommendations from the Geotechnical Report for the site, to be superseded only by the California Code if any conflicts arise.

19. According to CBC 11B-228.3.2.1, provide the applicable amount of electrical vehicle charging stations (EVCS) and van accessible EVCS spaces for the employee parking lot.

20. Prior to the final inspection, the applicant shall submit a letter of certification to the Building Official from the project architect, civil engineer, and landscape architect certifying that all improvements have been constructed in accordance with the approved building plans. A Certified Access Specialist (CASP) shall also submit a letter certifying that all improvements have been constructed in compliance with applicable state and federal accessibility standards. Determination of consistency shall be subject to the review and approval of the Building Official.

21. Construction and Demolition Debris Recycling: Prior to issuance of a building permit the applicant shall submit a Construction Waste Management (CWM) plan for the diversion of at least 70 percent of the debris from the building demolition and construction. The plan shall include the qualified recycler that will be used, the methods of managing diversion of construction materials on site, and the proposed documentation that will be submitted to confirm that the diversion goal has been met.

Fire Protection

The following Fire Protection conditions shall be satisfactorily addressed on the building permit submittal:

22. Prior to City issuance of the first building permit, in accordance with ACFPD Agreement 2022-29, the Applicant shall form a Mello-Roos Community Facilities District or similar public financing mechanism

(CFD) on full legal parcels that are a part of the Project. A copy of Agreement 2022-29 is included with this Resolution as Exhibit C.

23. In accordance with the standard mitigation measures and conditions of approval set forth by the City of American Canyon, the developer shall pay the Fire Impact Fees (see current Standard Fees and Charges adopted by resolution), prior to the issuance of any building permits.

24. New buildings and additions to existing buildings shall conform to requirements set forth in the currently adopted editions of the California Building Code, California Fire Code, City of American Canyon standards and Nationally Recognized Standards.

25. There shall be no deferred submittals for fire protection equipment and related utilities. Fire protection plans shall not be attached to or bound with the building plan submittal package. This includes but is not limited to Automatic Fire Sprinkler, Fire Alarm, Fixed Fire Protection, and Civil plans.

26. All Fire-related underground piping and fire appurtenances shall be shown on the Civil plan submittal. In addition to the Civil plan submittal, at least one (1) plan set under separate cover shall be submitted to American Canyon Building Division for routing to the American Canyon Fire Protection District detailing all underground piping and related fire appurtenances including but not limited to underground piping, underground sweep detail, underground trench details showing depth of burial, type of backfill, manufacturer's specifications of piping, valves joints, fittings and calculated size and locations of thrust blocks, hydrants locations (designate public or private), gate shut-off valves, PIV's, FDC's, fire pumps, fire pump and/or riser rooms. The applicant will need to submit all related Fire information on a separate plan for Fire review. The Fire-related portions of the civil plan shall not be bound with the building plan.

27. Underground utility contractor, architect and fire sprinkler contractor shall coordinate the location of risers and control valves prior to the issuance of a building permit.

28. An approved water supply capable of supplying the required fire flow for fire protection systems shall be provided to all premises upon which facilities or buildings are hereby constructed or moved into or within the City. Required fire flow and hydrant distribution shall be in accordance with Appendix B and C of the California Fire Code. Applicant shall demonstrate on plan submittal; square footage of each building on plan and provide the required fire flow information. Applicant shall demonstrate that the number and spacing of onsite fire hydrants meets with requirements of the California Fire Code. ***See sample below regarding fire flow and hydrant detail information needed.***

BUILDING FIRE FLOW REQUIREMENTS – CFC TABLES B105.2 & B105.1(2)

INFORMATION BELOW IS A SAMPLE AND FOR REFERENCE ONLY

Table B105.1(2) – Building size = 129, 600 square feet

Construction type = Type IIA

FF = 5,250 gpm at 20 psi

Duration = 4 hours

Table B105.2 – Fire sprinkler allowance = - 50%

5,250 – 2,625 = 2,625 gpm

FF = 2,625 gpm @ 20 psi

Duration = 2 hours

Table CC105.1 – Approximate number of hydrants = 3

Average spacing = 400 feet + 25% allowable increase = 500

Maximum distance from street or frontage = 225 feet = 50% allowable increase = 337.5

29. The fire protection equipment shall be located within an interior room having an approved exterior access door or in an exterior enclosure attached to the building, specifically, for the purpose of housing such equipment.

30. Prior to building permit issuance, provide a fire department circulation plan using the City's ladder truck and demonstrate clear turning movements into and out of the project. The final design of fire department access components shall be reviewed and approved by the Fire Marshal prior to installation. Please show how fire apparatus can position near the building on either side, with the ability to turn the apparatus around to leave the project site.

31. Fire Apparatus Access Roads shall be designed in accordance with provisions set forth in the California Fire Code Chapter 5 and Appendix D as amended by the City of American Canyon and the applicable Public Works Standard.

32. Fire apparatus access roads shall have an unobstructed minimum width of 20 feet (curb to curb) and a minimum unobstructed vertical clearance of 13' 6". They shall have an all-weather paved surface capable of supporting a GVW of 71,000 pounds.

33. Access roads shall be completed with all-weather surfaces prior to the stockpiling of combustible materials or beginning combustible construction. Fire apparatus access shall be provided to within 150 feet of the most remote portions of all building from an approved exterior route. If this cannot be achieved fire apparatus turn-arounds will be needed.

34. Fire apparatus access roads shall not be obstructed in any manner, including the parking of vehicles. Vertical traffic calming in the form of speed pumps, humps or dips are prohibited along fire access roads without prior approval of the fire Code Official. The minimum width and clearances established in Section 503.2.1 shall be maintained at all times.

35. When required by the Fire Chief, fire apparatus access roads shall be designated as Fire Lanes and appropriate signs and/or markings installed in accordance with the California Vehicle Code and approved City standards.

36. Where applicable, improvement plan submittals for permit shall include locations of fire lane red curbing and fire lane signage. Please refer to and include City Public Works Standard FP-2A & 2B with plan submittals for permitting.

37. The City of American Canyon requires that a fire hydrant be in service within 250 feet of the furthest point of construction prior to the stockpiling of combustible materials for the beginning of construction.

38. Fire Department Connections (FDC) shall be located not more than 100 ft. from the nearest fire hydrant.

39. Improvement Plans submitted for permit shall include City of American Canyon "Underground" standards, detail drawings and the applicable City of American Canyon Public Works Standard detail (W-7A, B, C or D) for Fire Service double detector check installations. *Also, a separate set of plans shall be submitted detailing all related underground Fire utilities and appurtenances including but not limited to; All underground piping, type, sizes, depth of burial, fittings, thrust blocks, risers, pumps, hydrants, FDC's, etc.*

40. System Protection Area Limitations NFPA 13 – 8.2.1 Maximum floor area on any one floor to be protected by sprinklers supplied by any one sprinkler system riser or combined system riser shall be as follows:

    1. Light Hazard – 52,000 sf – per riser
    2. Ordinary Hazard - 52,000 sf – per riser
    3. *Extra Hazard – Hydraulically calculated - 40,000 sf – per riser
    4. Storage – High-piled storage (as defined in 3.9.1.16) and storage covered by other NFPA standards – 40,000 sf – per riser

Public Works

General Conditions of Approval

41. The Applicant shall be responsible for all City plan check and inspection costs. The Applicant shall establish a Developer Deposit Account with the City upon the initiation of plan check services. The amount of the initial deposit shall be determined by the City Engineer. Additional funds may be required based upon actual costs.

42. All improvements shall be designed in accordance with the American Canyon Municipal Code (ACMC), City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

43. All new utilities to serve the project, shall be placed underground. Exceptions may be allowed for surface-mounted transformers, pedestal mounted terminal boxes, and meter cabinets.

44. Unless otherwise explicitly permitted, all existing wells, septic tanks, and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Services or other designated agency. If there are none, the project engineer shall provide a letter describing the scope of the search done to make this determination.

45. A detailed Soils Investigation/Geotechnical Report shall be prepared and submitted for review. The report shall address, at a minimum, potential for liquefaction, R-values, expansive soils, and seismic risk. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report.

46. A drainage report prepared by a California Registered Civil Engineer shall be submitted for review with the initial submittal of the Improvement Plans. The report shall include detailed hydrologic and hydraulic calculations to support the design and sizing of all public and private drainage facilities including storm drains and detention facilities. The report shall address existing downstream storm drain facilities and hydraulic conditions which may impact the design of proposed facilities and improvements.

47. A final detailed post-construction Stormwater Control Plan (SWCP) that identifies and sizes all permanent post-construction stormwater treatment BMPs shall be prepared and submitted for review and approval. The SCWP shall be prepared in accordance with the latest edition of the *Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual* and the requirements of the State Water Resources Control Board Phase II Municipal Separate Storm Water System (MS4) General Permit (Order 2013-0001 DWQ). It is the City's discretion whether to accept alternative treatment facilities other than bioretention.

48. A Post Construction Stormwater Operations and Maintenance Plan that includes a plan sheet showing all storm drain and water quality infrastructure that is to be maintained, along with detailed instructions and schedules for the ongoing maintenance and operation of all post-construction stormwater BMPs shall be submitted for review and approval by the City Engineer. Once approved, the property owner(s) shall enter into an agreement with the City that provides the terms, conditions, and security associated with the ongoing requirements of the post-construction Stormwater Best Management Practices.

49. The Applicant shall secure all necessary rights-of-way and public and private easements for both onsite and offsite improvements. The applicant shall prepare all necessary legal descriptions and deeds.

50. To the extent any offsite public improvements require the acquisition of property not currently owned by the Applicant or the City, the Applicant shall first make a good-faith effort to acquire the necessary property rights, however if the Applicant makes such an effort and is unable to acquire such rights, then the Applicant may request the City acquire the necessary property rights through the exercise of eminent domain provided that the Applicant enters first into an agreement with the City to pay for all costs incurred by the City to acquire such rights and if the City does not acquire the rights necessary to allow the offsite public improvements to be completed by the Applicant within statutory timeline provided by law, then the Applicant shall be relieved of the obligation to construct those off-site improvements only to the extent they require property not currently owned by the Applicant or the City. The Applicant shall make a good-faith effort to identify and acquire the necessary property rights at the earliest opportunity.

51. The Applicant shall submit site Improvement Plans, prepared by a registered Civil Engineer, for review and approval of the City's Public Works Department. **Please be aware that this is separate submittal from the building permit application.** The final plan set shall include all civil, landscape and joint trench drawings under a single cover sheet. No final grading or other construction shall be performed until the Improvement Plans have been approved. The Applicant shall not begin clearing, grubbing, or rough grading at the site prior to approval of the Improvement Plans, unless explicitly approved by the City of American Canyon through the standard grading and utilities only permit process. An Encroachment Permit is required for any work within City right of way. Encroachment Permits will not be issued prior to the approval of the Improvement Plans.

52. All public water service laterals or services (domestic, recycled and fire water) shall include approved backflow prevention devices.

53. Cathodic protection shall be provided for all water valves, fittings, hydrants, meters, backflow devices and other metal appurtenances, regardless of the findings of any soils corrosivity analysis.

54. The Applicant shall keep adjoining public and private streets free and clean of project dirt, mud, materials, and debris during the construction period in accordance with SWPPP using appropriate BMPs and as is found necessary by the City Engineer.

55. If any hazardous material is encountered during the construction of this project, all work shall be immediately stopped and the Fire Department, Napa County Department of Environmental Services or other designated agency, and the City Inspector shall be notified immediately. Work shall not proceed until clearance has been issued by all of these agencies.

56. Prior to final preparation of the subgrade and placement of base materials, all underground utilities shall be installed, and service connections stubbed out behind the sidewalk. Public utilities, Cable TV, sanitary sewers, and water lines shall be installed in a manner that will not disturb the street pavement, curb, gutter and sidewalk, when future service connections or extensions are made.

57. Where soil or geologic conditions encountered in grading operations are different from that anticipated in the soil and/or geologic investigation report, or where such conditions warrant changes to the recommendations contained in the original soil investigation, a revised soil or geologic report shall be submitted for approval by the City Engineer. Additionally, if field conditions warrant installation of any subdrains, the location, size and construction details must be provided to the City for review and approval prior to construction.

58. All new fire hydrants shall be covered with burlap sacks until the hydrants have been tested and found to be in conformance with City flow requirements. No storage of combustible materials or construction of building shall be permitted until all hydrants meet City flow requirements.

59. Prior to placing the final lift of asphalt, all public storm drains and sanitary sewer lines shall be video inspected at the Applicant's expense. All video media (CD, DVD, or portable hard drive) shall be submitted to the City. If any inadequacies are found, they shall be repaired prior to the placement of the final lift of asphalt.

60. All streets, curbs, gutters, sidewalks or other public facilities damaged in the course of construction associated with this Project shall be the responsibility of the Applicant and shall be repaired to the satisfaction of the City at the Applicant's expense.

61. After all of the new underground utilities within existing public streets have been installed, the entire affected areas shall be milled and repaved to present a neat finished pavement area. Multiple trench patches are not acceptable.

62. All construction stormwater pollution prevention best management practices (BMP's) shall be installed as the first order of work and in accordance with the State Water Resources Control Board's General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ, as amended), the Applicant's Storm Water Pollution Prevention Plan (SWPPP), and the City's Erosion and Sediment control Plan in accordance with the City's MS4 Permit. All stormwater BMP's shall be maintained to the satisfaction of the Qualified SWPPP Developer (QSD), Qualified SWPPP Practitioner (QSP), and the City Engineer.

63. With the exception of water used for loading and testing of potable water lines, all construction water used for the project shall be obtained from a source other than American Canyon potable water sources. The Applicant shall provide verification that an outside source of construction water, e.g., recycled water, has been established and will be available for the duration of the project construction.

64. The development shall comply with the City's Zero Water Footprint policy.

65. All landscaping shall be designed to use recycled water for irrigation. Recycled water landscaping shall be designed to comply with California Code of Regulations Title 22 and shall include design details to prevent runoff of recycled water. The irrigation system shall include an ET/SMART controller.

66. All buildings shall be dual plumbed to use recycled water for non-potable uses.

Public Works Special Conditions of Approval

67. The Applicant shall submit Improvement Plans prepared by a registered Civil Engineer (Engineer of Record) in substantial conformance with the preliminary civil plans titled "Giovannoni Logistics Center East Tentative Parcel Map" prepared by CBG Civil Engineers dated September 17, 2021, except as modified by these conditions.

68. Improvement Plans and Final Map shall be tied to the State of California coordinate system.

69. The Applicant shall construct all of the on-site private streets, water, recycled water, sewer, storm drainage and storm quality **"Private Improvements"** generally shown on the Preliminary Plans and more specifically described below. All private street, water, recycled water sewer, storm drainage and stormwater quality improvements shall be designed in accordance with the City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

    a. Storm Drain Facilities:
    Construct private on-site drainage facilities, detention facilities, and other appurtenances to collect and convey all surface drainage to an approved private storm drain facility or outfall. Onsite drainage facilities shall provide for the positive drainage of all adjacent upstream or upgrade properties to prevent ponding. Existing run-on from adjacent properties shall not be obstructed and shall be conveyed onsite. Off-site peak storm water discharge shall not exceed 90% of the undeveloped peak flow from the 24-hour, 100-year event. The storm drains and detention facilities shall be substantially consistent with the Preliminary Plans. However, the sizing of all storm drains and detention facilities shall be determined by the approved final drainage report.

    b. Stormwater Quality Facilities:
    Permanent on-site private post-construction stormwater treatment BMPs shall be designed and constructed in accordance with the approved final SWCP.

    c. Recycled Water Services:
    Separate recycled water services shall be provided for domestic non-potable uses and irrigation uses.

70. Per the Subdivision Improvement and Reimbursement Agreement between the City of American Canyon and DWF IV NLP II, LLC, Napa County Official Record 2018-0024204, the Applicant shall reimburse the City its fair share cost for the improvement of South Kelly Road from its intersection with Devlin Road up to intersection with Highway 29. The fair share cost, based on the project's proportional share of net new trips is 12% of the total cost of the required roadway improvements. The total cost of the roadway improvement is $1,206,450.75. Therefore, the applicant's fair share obligation is $144,774.09.

71. Per the Subdivision Improvement and Reimbursement Agreement between the City of American Canyon and DWF IV NLP II, LLC, Napa County Official Record 2018-0024204, the Applicant shall reimburse the City its fair share cost for the construction of the Permanent Sewer Solution, which consists of new offsite public gravity sewer, pump station and force main which replaced the existing Green Island Pump Station. The fair share cost is based on the project's sewer flow. The fair share cost, based on the project's sewer flow is 12% of the total cost of the required sewer improvements. The total cost of the sewer improvement is $6,710,227.41. Therefore, the applicant's fair share obligation is $805,227.29.

72. Prior to SUBMITTAL OF THE IMPROVEMENT PLANS, the Applicant shall:

    a. Submit the City's "Improvement Plan Checklist".
    b. Pay an initial cash deposit for City plan check services in amount to be determined by the City prior to the time of submittal. The Project engineer shall contact City staff to discuss submittal details to determine initial deposit amount.
    c. Provide the following:
        (1) Public Street Repair Plan
        (2) Utility Plan and Joint Trench Plan
        (3) Construction Storm Water Pollution Prevention Plan (SWPPP) and a City Erosion and Sediment Control Plan
        (4) Drainage Report
        (5) Post-Construction Stormwater Control Plan (SWCP)
        (6) Geotechnical Report
        (7) Construction Traffic Control Plan.
        (8) Traffic Impact Study
        (9) Application for Water and Sewer Service

73. Pothole and physically determine (by way of a survey performed by the Engineer of record) the actual horizontal location and vertical depth of all existing underground utilities throughout the proposed area of work and provide the design of all new utility installations required to serve the project including a schedule for implementation of such work as to prevent disrupting of utility service to adjacent properties.

74. Prior to APPROVAL OF THE IMPROVEMENT PLANS, the Applicant shall:

    a. Merge the two existing parcels (APNs 057-130-034 and 057-130-036) into a single parcel through the recordation of a lot merger or lot line adjustment.

    b. Provide written acknowledgment by the Geotechnical Engineer of Record that the Plans incorporate all design and construction criteria specified in the Geotechnical Report.

    c. Furnish proof of the acquisition of all rights of entry and/or temporary and permanent easements necessary to construct the project and the location of all such rights on the Plans.

    d. Furnish proof that all permits that may be required by the California Department of Fish & Wildlife, State and Regional Water Quality Control Board, US Army Corps of Engineers and any other regulatory agencies with jurisdiction over the proposed construction have been obtained.

    e. Fill out and submit the City's Erosion and Sediment Control Plan (ESCP) Template. Applicant may refer to a SWPPP, as appropriate, by referencing page number within the SWPPP that addresses the requirements of the ESCP.

f. Submit a copy of the Notice of Intent and Wastewater Discharge Identification Number (WDID#) for coverage under the State Water Resources Control Board's General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ).

75. Prior to COMMENCEMENT OF CONSTRUCTION ACTIVITIES, the Applicant shall:

a. Pay off all current account balances with the City of American Canyon.

b. Pay an inspection fee in amount to be determined at the time of commencement for the City's inspection of the Public Improvements.

c. Conduct a pre-construction meeting with representatives of the City whereby the Applicant, the Legally Responsible Party (LRP), Qualified SWPPP Practitioner (QSP), Qualified SWPPP Developer (QSD), and/or the Contractor provides the following:

(1) Six (6) full-size bond copies of the approved Improvement Plans for the City's use.
(2) One (1) job-site copy of the latest edition of the City Standards for the Contractor use.
(3) One (1) job-site copy of the SWPPP for use by the LRP, QSP, QSD, and Contractor.
(4) Electronic copies of Improvement Plans and SWPPP.

76. Prior to APPROVAL OF A BUILDING PERMIT, the Applicant shall:

Pay all account balances and current City and American Canyon Fire District fees (Mitigation & Capacity) based on the rates in effect at the time of permit issuance. These fees include but may not be limited to the following: Traffic Mitigation, General Plan Update, Civic Facilities, Fire District, Water Capacity, Wastewater Capacity, Zero Water Footprint Mitigation, and Affordable Housing Nexus.

77. A. Prior to issuance of the first building permit, the Applicant shall enter into a Recorded a Transportation Demand Management (TDM) Program Agreement (“TDM Agreement”) that ensures the cumulative Project trip generation does not exceed the Giovannoni Logistics Center Final EIR (SCH# 2021010104) Trip Generation assumptions. The TDM Agreement shall encompass the entire Giovannoni Logistics Center Project.

B. The TDM Agreement shall include a financial guarantee satisfactory to the City. The City shall deem the TDM program to be effective if the monitoring results indicate that AM peak-hour volumes are no more than 240 vehicles and PM peak-hour volumes are no more than 264 vehicles.

C. The TDM program shall be implemented at the applicant’s cost, with no cost to the City, regardless of the eventual mix of uses and shall at a minimum include a permanent vehicle counting station at

each public access point. The TDM program shall include a requirement to start and end workday shifts during off-peak hours (i.e., not between 7:00 a.m. to 9:00 a.m. or 3:00 p.m. to 6:00 p.m.).

In addition to requiring off-peak workday shift changes, additional examples of measures that may be considered as part of an effective TDM program include but are not limited to the following:

- Implement shuttle service to key employment centers or park-and-ride lots in the area for those employees whose workday shift start during peak hours.
- Car-share program
- Shuttles to regional transit
- Transit subsidies
- Carpool/vanpool subsidies
- Employer-owned/sponsored vanpools
- Flex-time and telecommute programs
- Use of rail to transport employees and/or the delivery of goods

D. The Applicant shall retain a transportation planning/ engineering consultant to analyze the effectiveness of the TDM program in a written report. The TDM Report will include data collected from the permanent vehicle counting station and a determination of employee commute methods, which shall be informed by surveying all employees working at the site. The TDM Report shall be submitted to the City on a periodic on-going basis and it shall form the basis of on-going determinations by the City as to the effectiveness of the TDM program. So long as the City deems the TDM program effective (i.e. when monitoring results indicate that AM peak-hour volumes are no more than 240 vehicles and PM peak-hour volumes are no more than 264 vehicles). At any time the City determines the Project exceeds the Giovannoni Logistics Center Final EIR (SCH# 2021010104) Trip Generation assumptions, the additional traffic impact shall be mitigated by Paragraph B.

E. If at any point the City determines the TDM program established as part of Paragraph A through D is not effective to reduce peak-hour traffic to within the TDM thresholds (240 vehicles during the AM peak hour and 264 vehicles during the PM peak hour), the Applicant shall pay an additional amount for each and every peak-hour trip that is recorded by the counting device that exceeds the TDM threshold, equal to the latest adopted Traffic Impact Fee ("TIF") program in effect at the time. The "on-going TIF" paid pursuant to this condition of approval is in addition to the "one-time TIF" paid at the time of issuance of the first building permit.

78. Prior to OCCUPANCY OF THE BUILDING, the Applicant shall:

    a. Restore all adjacent off-site road surfaces to pre-project conditions.

    b. Submit a certification by the Geotechnical Engineer of Record that all the work has been completed in substantial conformance with the recommendations in Soils Investigation/Geotechnical Report.

    c. Provide a mylar and digital copy of the Improvement Plans that include all as-built or field changes, in digital (.pdf) and AutoCAD (.dwg) format, compatible with the City's current version, and tied to the City's coordinate system.

    d. Provide a letter stating that all of the Developer's Conditions of Approval have been met.

    e. Provide a letter from the Civil Engineer of Record certifying that all the site improvements were constructed and inspected in substantial conformance with the approved plans and City Standards.

f. Enter and record a post-construction Stormwater Operations and Maintenance Agreement with the City.

Mitigation Measures

79. MM AES-3: Prior to issuance of building permits for the proposed project, the project applicant shall prepare and submit a photometric plan to the City of American Canyon for review and approval which demonstrates that all exterior light fixtures would be directed downward or employ full cut-off fixtures to minimize light spillage and avoid interference with aviation operations at the Napa County Airport. The approved plan shall be incorporated into the proposed project.

80. MM AIR-2a: The following Best Management Practices (BMPs), as recommended by the Bay Area Air Quality Management District (BAAQMD), shall be included in the design of the project and implemented during construction:

- All active construction areas shall be watered at least two times per day.
- All exposed non-paved surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and access roads) shall be watered at least three times per day and/or non-toxic soil stabilizers shall be applied to exposed non-paved surfaces.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered and/or shall maintain at least 2 feet of freeboard.
- All visible mud or dirt tracked out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 miles per hour. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California Airborne Toxics Control Measure (ATCM) Title 13, Section 2485 of California Code of Regulations). Clear signage regarding idling restrictions shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
- The prime construction contractor shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The City and the construction contractor shall take corrective action within 48 hours. The BAAQMD's phone number shall also be visible to ensure compliance with applicable regulations.

81. MM AIR-2b: Prior to the issuance of grading or building permits, the project applicant shall provide the City with documentation demonstrating the use of "Low-VOC" architectural coatings during the proposed project's construction. "Low-VOC" architectural coatings used during project construction shall not exceed 50 grams of reactive organic gases (ROG) or volatile organic compounds (VOC) per liter of product.

82. MM AIR-2c: Prior to issuing any certificate of occupancy for the proposed project, the project applicant shall provide the City with documentation demonstrating the use of "Low-VOC" architectural coatings and electric landscaping equipment during the operation of the proposed

project. “Low-VOC” architectural coatings used during project operation shall not exceed 10 grams of reactive organic gases (ROG) or volatile organic compounds (VOC) per liter of product. Landscaping equipment referred to in this requirement shall include lawnmowers, leaf blowers, and chainsaws.

83. MM AIR-2d: Prior to issuing the certificate of occupancy for the proposed project, the project applicant shall provide the City with documentation demonstrating the use of a truck fleet that meets or exceeds model year 2014 for all heavy- duty trucks during operation of the proposed project. If the project applicant does not own the truck fleet that would be used during operation of the proposed project, the project applicant shall provide the City with documentation from the truck fleet owner or operator demonstrating that trucks utilized for operation of the proposed project will meet or exceed model year 2014. If any change occurs where a new truck fleet is utilized during operation of the proposed project, the project applicant shall provide the City with documentation demonstrating that the new truck fleet meets or exceeds this requirement.

    To monitor and ensure that trucks that meet a model year of 2014 or newer are used for the proposed project, the fleet operator shall maintain records of all trucks and equipment associated with the proposed project’s operation and make these records available to the City upon request. Alternatively, the City may require periodic reporting and provision of written records by operators and conduct regular inspections of the records to the maximum extent feasible and practicable.

84. MM AIR-2e: Prior to the issuance of the certificate of occupancy for each building with dock doors, signage shall be posted identifying idling restrictions and contact information to report violations to the building manager.

85. MM AIR-2f: Prior to the issuance of the certificate of occupancy for each building with a separate end user, the City shall confirm that the end user has prepared a Transportation Demand Management Plan (TDM Plan). The TDM Plan shall be prepared by a qualified transportation consultant and identify strategies to reduce single-occupant vehicle trips. Examples of TDM strategies may include but are not limited to:

    - Ridesharing/Ride Matching
    - Vanpools
    - Transit subsidies
    - Preferential parking for rideshare or vanpool vehicles
    - Employee lockers
    - Secure bicycle parking
    - Employee locker rooms
    - Provide TDM information in employee breakroom

86. MM AIR-2g: Prior to the issuance of the certificate of occupancy, as a part of future lease agreements, the project proponent shall provide all future tenants at the project site information on available California Air Resources Board (ARB) and Bay Area Air Quality Management District (BAAQMD) incentive programs, such as the Carl Moyer Program and the Voucher Incentive Program, that support upgrading truck fleets to clean air technology equipment.

87. MM BIO-1a: Pre-construction surveys for Swainson’s hawk shall be conducted in the project site vicinity prior to initiation of project construction activities and each year following initiation of construction if project activities are delayed or discontinued for 7 or more days prior to the first required survey period (March 20 to April 5), and are scheduled to recommence construction activities during the second survey period but before August 1. These pre-construction surveys shall include investigation of all potential nesting trees within a half-mile radius around all project activities and

shall be completed for at least two survey periods immediately prior to commencement of project construction. Surveys shall be conducted in accordance with CDFW's "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFW 2000) to maximize the potential for locating nesting Swainson's hawk and reduce the potential for nest failures due to project activities and/or disturbances.

If no nesting Swainson's hawk are found during the first or second required survey period starting March 20 and extending to April 20, then project construction may commence. If during the third surveys (June 10 to July 30) Swainson's hawk are found to be nesting in the project vicinity and construction has commenced, it shall be assumed the Swainson's hawk commenced nesting and thus the Swainson's hawk are habituated to the ambient level of noise and disturbance emanating from the project site.

If Swainson's hawk are found to be nesting within 0.25 mile of the project site, a non-disturbance buffer shall be established to keep all construction activities a minimum of 0.25 mile from the nest site. The CDFW shall be consulted regarding the adequacy of the buffer established by the qualified Raptor Biologist. At that time the necessity for acquiring a Fish and Game Section 2081 Incidental Take Permit (ITP) authorization would be determined. An ITP authorization shall be required if there were a valid concern the project activities would result in the "take" of an adult Swainson's hawk, eggs, or nestlings.

88. Surveys shall be conducted by a qualified Raptor Biologist with at least a minimum of a 4- year college degree in wildlife biology or related environmental science, familiarity with Swainson's hawk and its local ecology, and 2 years of experience surveying for and detecting Swainson's hawk pursuant to "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" survey protocol. No disturbance such as construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is complete based on monitoring of the active nest by a qualified Biologist.

89. MM BIO-1b: No more than 30 days prior to the first ground disturbance activity, pre-construction golden eagle nesting surveys shall be conducted in the project vicinity by a qualified Raptor Biologist. The qualified Raptor Biologist shall have a minimum of a 4- year college degree in wildlife biology or related environmental science, and at least 2 years of experience surveying for and detecting nesting golden eagles and its local ecology. Preconstruction surveys shall include investigation of all potential nesting trees within a survey area determined by the qualified Raptor Biologist, but no less than a 0.5-mile radius around all project activities. If active golden eagle nests are identified within any trees within the survey areas a 1.0-mile radius of the project site, a qualified Raptor Biologist shall establish a protection buffer of approximately 1.0 mile that is adequate to ensure noise or activity from the proposed project would not cause nest disturbance of young or adult bird mortality. Buffer zones may vary in size as some golden eagles are more acclimated to disturbance than others. Size of buffer zone may be modified by the qualified Raptor Biologist considering the type of construction activity that may occur and the behavioral factors and extent that golden eagle may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young golden eagles have fledged or that the nesting cycle is complete based on monitoring of the active nest by a qualified Biologist.

90. MM BIO-1c: Prior to ground disturbance, a pre-construction nesting survey shall be conducted for northern harrier and short-eared owl by a qualified Raptor Biologist if construction is scheduled during the nesting season (February 1 through September 1). The qualified Raptor Biologist shall have at least

2 years of experience surveying for and detecting nesting northern harrier and short-eared owl. To determine whether northern harrier or short-eared owl is nesting on-site, a qualified Raptor Biologist(s) shall conduct walking transects through the project site grassland habitat searching for nests and minimum 500-foot radius from the project site. Where the survey area encroaches onto private property not accessible to the public (e.g., fenced in commercial property, residential backyard, etc., the qualified Biologist shall either contact the property owner for permission to physically access the property or conduct a visual survey of adjacent areas by scanning with binoculars or a spotting scope. An active northern harrier or short-eared owl nest must be protected by implementing a minimum 500-foot radius buffer zone around the nest marked with orange construction fencing. If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Size of buffer zone could be modified increased considering the type of construction activity that may occur, physical barriers between the construction site and active nest, and the behavioral factors and extent that northern harrier or short-eared owl may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is otherwise determined to be complete based on monitoring of the active nest by a qualified Raptor Biologist.

91. MM BIO-1d: Prior to any ground disturbance, pre- construction surveys for burrowing owl shall be conducted within a minimum of 150 meters of the project site. Where the survey area encroaches onto private property not accessible to the public (e.g., fenced in commercial property, residential backyard, etc.), the qualified Biologist shall either contact the property owner for permission to physically access the property or conduct a visual survey of adjacent areas by scanning with binoculars or a spotting scope. The pre- construction surveys shall be conducted within 2 weeks prior to the onset of any ground-disturbing activities. Surveys shall be conducted by a qualified Biologist following California Department of Fish and Wildlife (CDFW) 2012 staff report survey methods and Biologist qualifications to establish the status of burrowing owl on the project site.

    a. If burrowing owl are found to occupy the project site during the nonbreeding season (September 1 to January 31), occupied burrows shall be avoided by establishing a no- disturbance buffer zone a minimum of 100 feet around the burrow. Buffers may be adjusted to address site-specific conditions using the impact assessment approach described in the CDFW 2012 staff report. If a qualified Raptor Biologist determines the location of an occupied burrow/s may be impacted even with a 100-foot buffer, or the burrow(s) are in a location(s) on the project site where a buffer cannot be established without preventing the proposed project from moving forward, then a passive relocation effort may be instituted to relocate the individual(s) out of harm's way pursuant to a Burrowing Owl Exclusion Plan prepared in accordance with the CDFW 2012 staff report.

    b. If burrowing owl are found to be present during the breeding season (February 1 to August 31), the proposed project ground-disturbing activities shall follow the CDFW 2012 staff report recommended avoidance protocol whereby occupied burrows shall be avoided with a no-disturbance buffer.

    c. If burrowing owls are ultimately found on the site and burrow eviction/ relocation of burrowing owls during the non-nesting season is a selected strategy to move forward with the project without direct impacts to burrowing owl individuals, the applicant shall coordinate this effort with CDFW and provide habitat mitigation consistent with the 2012 CDFW Staff Report on burrowing owl.

92. MM BIO-2: Prior to issuance of grading permits. To offset the loss of the 0.496 acre of seasonal wetland impacts from Phase 1, and 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools from Phase 2, and to ensure there is no-net loss of wetland area, the applicant shall establish/create 0.992 acre of palustrine emergent wetlands (2:1 ratio) for Phase 1 concurrent with project construction, and 2.57 acres of seasonal wetlands (1:1 ratio) and 1.13 acres of vernal pool wetlands (1:1 ratio) for Phase 2 at least 1 year prior to the start of Phase 2 construction, on the 45-acre Wetland Preserve. The established/created wetlands will be constructed a minimum of 20-feet from the Napa Logistics Park sewer and recycled water pipeline easement or unpaved access road associated with the easement. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland.

93. MM BIO-3a: Prior to issuance of the Phase 1 grading permit, the project applicant shall apply for and obtain a Nationwide Permit from the San Francisco District of the United States Army Corps of Engineers (USACE) for discharge within 0.004 acre of wetlands/waters of the United States under Clean Water Act Section 404 jurisdiction. For the USACE permit to be valid, the applicant shall apply for and obtain the accompanying Section 401 Water Quality Certification from the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB). The applicant shall apply for and obtain a separate Waiver of Waste Discharge Requirements from the San Francisco Bay RWQCB for impacts to 0.496 acre of wetlands/waters of the State. To offset the loss of 0.496 acre of permanent wetland impacts and to ensure there is no- net loss of wetland area, the applicant shall establish/create 0.992 acre of wetlands (2:1 ratio), prior to or concurrent with the start of construction, on the 45-acre Wetland Preserve. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland. The applicant shall implement the terms of the approved permit(s).

94. MM BIO-3c: Prior to issuance of the Phase 1 grading permit, a Wetland Mitigation and Monitoring Plan shall be prepared and submitted to the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB) for review as part of the process for obtaining a permit from the agency. The Wetland Mitigation and Monitoring Plan shall address the loss of 0.496 acre of wetlands impact due to Phase 1 of the proposed project as well as the potential loss of approximately 3.7 acres of wetlands that as part of Phase 2.

    The Wetland Mitigation and Monitoring Plan shall include in irrevocable instrument (e.g., deed restriction or conservation easements) that shall restrict use of both the 0.992 acre of created wetlands for Phase 1 as well as approximately 3.7 acres of additional wetlands created for Phase 2. The Wetland Mitigation and Monitoring Plan shall also include a long-term endowment that would be fully funded by the proposed project to manage approximately 45-acre open space preserve and created wetlands in perpetuity. If additional wetland mitigation lands are required to compensate for wetland impacts associated with Phase 2, wetlands shall be established/created at a minimum 1:1 ratio (1 acre established/created for every acre permanently impacted) on appropriate mitigation land, approved by the RWQCB and United States Army Corps of Engineers (USACE), within the Phase 2 project site's Hydraulic Unit Code (HUC) 10 watershed. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland. The applicant shall implement the terms of the approved permit(s).

95. MM BIO-3d: Prior to issuance of the Phase 1 and Phase 2 grading permit, a Wetland Mitigation and Monitoring Plan shall be submitted to the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB) for review as part of the process for obtaining a permit from the agency. The Wetland Mitigation and Monitoring Plan shall be prepared in accordance with the Subpart J– Compensatory Mitigation for Losses of Aquatic Resources outlined in the California State Water

Resources Control Board (State Water Board) Procedures, and in accordance with the State Water Board Implementation Guidance dated April 2020, and in accordance with the United States Army Corps of Engineers (USACE) Compensatory Mitigation Rule (33 Code of Federal Regulations Part 332).

96. The basic objective of the Wetland Mitigation and Monitoring Plan is to ensure that project wetland impacts, and compensatory mitigation proposed to offset the wetland impacts, shall provide a no-net-loss of area of wetlands, and wetlands established/created shall be in-kind to the wetlands impacted. In summary, the Wetland Mitigation and Monitoring Plan shall at a minimum:

    a. Preserve 7.58 acres of existing seasonal wetlands and 0.13 acre of vernal pools within the 45-acre Wetland Preserve.

    b. Establish within the Wetland Preserve approximately 0.992 acre of seasonal wetlands in advance of or concurrent with implementation of Phase 1 impacts to 0.496 acre of palustrine emergent wetlands at a 2:1 ratio.

    c. Establish within the Wetland Preserve approximately 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools in advance of implementation of future Phase 2, assuming Phase 2 is built out, to address the potential maximum losses of approximately 3.7 acres of wetlands that may occur.

    d. Provide financial assurances to ensure a high level of confidence that the compensatory mitigation shall be successfully completed, in accordance with applicable performance standards.

    e. Design ecological performance standards to assess whether the Wetland Mitigation and Monitoring Plan is achieving the overall objectives, so that it can be objectively evaluated to determine whether it is developing into the desired resource type (vernal pool, seasonal wetland e.g.), and attaining any other applicable metrics such as acres, number of native plant species, water saturation and/or ponding depth etc.

    f. Monitor the site for a duration necessary to determine whether the Wetland Mitigation and Monitoring Plan is meeting the performance standards. Established palustrine emergent wetlands and vernal pools typically develop quickly on soils with clay restrictive horizon. The 45-acre Wetland Preserve does have a clay restrictive layer approximately 8–18 inches below the surface therefore a 5- year monitoring period would be sufficient to determine whether performance standards are met. This monitoring period may be extended if performance standards are not met due to how the wetlands were constructed or natural events such as severe droughts.

    g. Protect the approximately 45-acre Wetland Preserve in perpetuity using a conservation easement, and provide an endowment sufficient to fund the Long-Term Management Plan.

    h. An overall assessment of the condition of the wetlands that shall be permanently impacted by the proposed project shall be conducted using the California Rapid Assessment Method (CRAM) for depressional wetlands, or a hybrid approach based on CRAM. Each similar wetland type that may be impacted shall be assessed to describe the floristic community and record the native and non-native dominant plants within the vernal pool and palustrine emergent wetlands. Physical structure such as topographic complexity and physical features that may provide habitat for aquatic species (e.g., boulders, woody debris etc.) shall be recorded and used to design the created/established wetlands. The purpose of this assessment is to ensure the design of the wetlands shall provide habitat that is similar to the wetlands being impacted to ensure the impacted wetlands are mitigated in-kind.

    Performance Standards

Performance Standards shall include at a minimum the following:

Years 1, 2, 3, 4 and 5 Performance Standards for Wetland Hydrology

Each year wetland hydrology shall be measured during the winter when surface and/or subsurface hydrology would be observable. A minimum of 1 data point shall be taken in each of the established/created wetlands. In addition, wetland hydrologic indicators shall be recorded each spring during the vegetation monitoring period.

Year 1:

Performance standard would be met for Year 1-5 if:

- The created wetlands remain inundated to a minimum depth of 0.5 inch or greater for at least 7 days and/or saturated for at least 14 days and/or at least one primary or two secondary wetland hydrology indicators listed in the *Arid West Region Wetland Determination Data Forms* are recorded.

Contingency Measures:

If the annual performance standard is not being met for any given monitoring year the Permittee shall prepare an analysis of the cause(s) of failure and, if determined necessary, implement remedial action. If the Plan Area has not met the performance standard, the Permittee's maintenance and monitoring obligations shall continue until the RWQCB and CDFW give final project confirmation.

Remedial action may include re-grading to achieve wetland hydrology, which would improve hydric soil formation.

Years 1, 2, 3, 4, and 5 Performance Standards for Increase in Colonization of Wetland Vegetation

Each year during the spring or early summer wetland vegetation cover shall be measured by conducting a site visit and recording absolute cover and dominant plant species observed within the wetland buffer area. A minimum of 1 data point shall be taken in each of the established/created wetlands. The colonization of wetland vegetation shall be measured by determining overall absolute plant cover values each year. This shall be accomplished by measuring absolute cover values within a 5-foot radius sample plot every 50 feet along a transect through each established/created wetland. In addition, to monitor for invasive plant species within the uplands which are not detected in the baseline survey, a minimum of three 5-foot radius sample plots on the east side and three on the west side will be placed at random upland locations along a linear transect east to west within the Wetland Preserve. Performance Standards for each monitoring year are listed below.

Year 1:

Performance standard would be met for Year 1 if:

- At least one hydrophytic plant species colonizes the established/created seasonal wetlands and

vernal pools; and

- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 5 percent or greater.

Year 2:

Performance standard would be met for Year 2 if:

- At least one hydrophytic plant species colonizes the established/created seasonal wetlands and vernal pools; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 10 percent or greater.

Year 3:

Performance standard would be met for Year 3 if:

- At least two hydrophytic plant species colonizes the established/created seasonal wetlands;
- At least two native hydrophytic plant species colonizes the established/created vernal pools and at least one is a vernal pool habitat indicator species; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 20 percent or greater and comprised of native and naturalized species.

Year 4:

Performance standard would be met for Year 4 if:

- At least two hydrophytic plant species colonize the established/created seasonal wetlands.
- At least two native hydrophytic plant species colonizes the established/created vernal pools and at least one is a vernal pool habitat indicator species.
- The average absolute cover of wetland vegetation within an established/created seasonal wetland and vernal pool is 30 percent or greater.
- To meet the wetland performance standard invasive plant species within the wetlands shall not comprise greater than 5 percent of the total absolute cover. To meet the upland performance standard, invasive plant species, which currently are not supported in the uplands, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as “High” by California Invasive Plant Council (Cal-IPC) and species on the “Alert” or “Watch” list with a High rating.

Year 5:

Performance standard would be met for Year 5 if:

- At least two hydrophytic plant species documented during the CRAM assessment for the palustrine emergent wetlands impacted on the Phase 1 project site colonize the established/created seasonal wetlands.

- At least two native vernal pool habitat indicator species documented during the CRAM assessment for the vernal pool on the Phase 2 project site colonizes the established/created vernal pools.

- The average absolute cover of wetland vegetation within the established/created seasonal wetland (non-vernal pool wetlands) is 40 percent or greater; and the average absolute cover of wetland vegetation within the established/created vernal pools is 40 percent or greater of which greater than 50 percent of the vegetation cover consists of two or more dominate native vernal pool habitat indicator plants.

    - To meet the wetland performance standard invasive plant species within the wetlands shall not comprise greater than 5 percent of the total absolute cover. To meet the upland performance standard, invasive plant species, which currently are not supported in the uplands, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating.

    Contingency Measures:
    If the annual performance standard is not being met for any given monitoring year the Permittee shall prepare an analysis of the cause(s) of failure and, if determined necessary, implement remedial action. Remedial action may include hydroseeding with native species, or addition of supplemental topsoil or mulch to promote growth.

    Year 5 No-Net-Loss Performance Standard for Phase 1 Impacts

    Performance standard would be met for Year 5 when;

    - A wetland delineation is performed and verified by the USACE and confirms a minimum of 0.992 acre of wetlands have been established/created within the Wetland Preserve.

Year 5 No-Net-Loss Performance Standard for Phase 2 Impacts

The Phase 2 no-net-loss performance standard would be measured when an application for the Phase 2 project is submitted to the RWQCB and USACE, and the Phase 2 project is approved. Once Phase 2 has been approved by the RWQCB and USACE, this performance standard may be modified depending on the level of wetland impacts authorized by the RWQCB and USACE, meaning this performance standard may decrease if the wetlands impacted for Phase 1 are less than 3.7 acres. Performance standard would be met for Year 5 when;

- A wetland delineation is performed and verified by the USACE and confirms a minimum of 2.57 acres of seasonal wetland and 1.13 acres of vernal pools have been established/created within the Wetland Preserve.

Year 5 Long-Term Protection and Long-Term Funding

Performance standard would be met for Year 5 once:

- The Wetland Preserve has been placed under a conservation easement; and

A long-term financing mechanism (e.g., non-wasting endowment, trusts, contractual arrangement etc.) to fund implementation of the long-term management of the Wetland Preserve has been secured.

97. MM BIO-4: If construction occurs during the breeding season of migratory and resident birds (February 1 to August 31), a qualified Biologist shall conduct a pre-construction breeding bird survey in areas of suitable habitat within 7 days prior to the onset of construction activity. Surveys shall be conducted within the project footprint and 100 feet from the construction limits for nesting passerines, 250 feet from the construction limits for nesting accipiters and a minimum of 500 feet from the construction limits for nesting raptors. If the survey area is found to be absent of nesting birds, no further mitigation would be required. However, if construction activities are delayed by more than 7 days, an additional nesting bird survey shall be performed.

    If bird nests are found, appropriate buffer zones shall be established around all active nests to protect nesting adults and their young from direct or indirect impacts related to project construction disturbance. Size of buffer zones shall be determined per recommendations of the qualified Biologist based on site conditions and species involved, but typical buffers around active nests are 500 feet for large raptors such as buteos, 250 feet for small raptors such as accipiters, and 100 feet for passerines (songbirds) and other bird species. For special status species, a 0.25-mile shall be established for nesting Swainson's hawk; 1.0 mile for golden eagle; and a 500-foot buffer for nesting tricolored blackbirds. If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Buffer zones shall be maintained until it can be documented that either the nest has failed, or the young have fledged.

98. MM CUL-2a: No ground disturbance shall take place within 100 feet of informal archaeological resource 483A-001. The resource shall be preserved in place.

99. MM CUL-2b: An Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology shall be present on-site during all earth disturbing activities. If prehistoric or historic-period archaeological resources are encountered, all construction activities within 100 feet of the find shall halt and the City of American Canyon shall be notified. Prehistoric archaeological materials may include obsidian and chert flaked stone tools (e.g., projectile points, knives, scrapers) or toolmaking debris; culturally darkened soil ("midden") containing heat-affected rocks, artifacts, or shellfish remains; and stone milling equipment (e.g., mortars, pestles, hand stones, or milling slabs); and battered stone tools, such as hammerstones and pitted stones. Historic- period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse.

    The Archaeologist shall inspect the findings within 24 hours of discovery. If it is determined the project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines), mitigation shall be implemented in accordance with Public Resources Code Section 21083.2 and Section 15126.4 of the CEQA Guidelines, with a preference for preservation in place. Consistent with Section 15126.4(b)(3), this may be accomplished through planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement. If avoidance is not feasible, a qualified Archaeologist shall prepare and implement a detailed treatment plan in consultation with the City of American Canyon. Treatment of unique archaeological resources shall follow the applicable requirements of Public Resources Code Section 21083.2. Treatment for most resources would consist of (but would not be limited to) sample excavation, artifact collection, and site documentation, with the aim to target the recovery of important scientific data contained in the portion(s) of the significant

resource to be impacted by the proposed project. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and State repositories, libraries, and interested professionals.

100. MM CUL-3: In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken:

a. There shall be no further excavation or disturbance within 100 feet of the remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98.

b. Where the following conditions occur, the landowner or authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance:

- The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission.
- The descendant identified fails to make a recommendation.
- The landowner or authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.

Additionally, California Public Resources Code Section 15064.5 requires the following relative to Native American Remains:

(1) When an initial study identifies the existence of, or the probable likelihood of, Native American Remains within a project, a lead agency shall work with the appropriate Native Americans as identified by the NAHC as provided in Public Resources Code Section 5097.98. The applicant may each develop a plan with respect to their respective individual development proposals for treating or disposing of, with appropriate dignity, the human remains, and any items associated with Native American Burials with the appropriate Native Americans as identified by the NAHC.

101. MM CUL-4: A Tribal Monitor representing the Yocha Dehe Wintun Nation shall be present during all project-related ground disturbance. Additionally, the Yocha Dehe Wintun Nation's Treatment Protocol (Protocol) shall be followed with respect to Tribal Cultural Resources (TCRs). The purpose of the protocol is to formalize procedures for the treatment of Native American human remains, grave goods, ceremonial items, and items of cultural patrimony, if any are found in conjunction with development, including archaeological studies, excavation, geotechnical investigations, grading, and any ground-disturbing activity. This Protocol also formalizes procedures for Tribal Monitoring during archaeological studies, grading, and ground-disturbing activities.

a. Cultural Affiliation: The Yocha Dehe Wintun Nation (Tribe) traditionally occupied lands in Yolo, Solano, Lake, Colusa, and Napa Counties. The Tribe has designated its Cultural Resources

Committee (Committee) to act on the Tribe's behalf with respect to the provisions of this Protocol. Any human remains which are found in conjunction with projects on lands culturally affiliated with the Tribe shall be treated in accordance with Section III of this Protocol. Any other cultural resources shall be treated in accordance with Section IV of this Protocol.

b. Inadvertent Discovery of Native American Human Remains: Whenever Native American human remains are found during the course of a project, the determination of Most Likely Descendant (MLD) under California Public Resources Code Section 5097.98 will be made by the Native American Heritage Commission (NAHC) upon notification to the NAHC of the discovery of said remains at a project site. If the location of the site and the history and prehistory of the area is culturally affiliated with the Tribe, the NAHC contacts the Tribe; a Tribal member will be designated by the Tribe to consult with the landowner and/or project proponents.

   Should the NAHC determine that a member of an Indian tribe other than Yocha Dehe Wintun Nation is the MLD, and the Tribe agrees with this determination, the terms of this Protocol relating to the treatment of such Native American human remains shall not be applicable; however, that situation is very unlikely.

c. Treatment of Native American Remains: In the event that Native American human remains are found during development of a project and the Tribe or a member of the Tribe is determined to be MLD pursuant to Section II of this Protocol, the following provisions shall apply. The Medical Examiner shall immediately be notified, ground-disturbing activities in that location shall cease and the Tribe shall be allowed, pursuant to California Public Resources Code Section 5097.98(a), to (1) inspect the site of the discovery and (2) make determinations as to how the human remains and grave goods shall be treated and disposed of with appropriate dignity. The Tribe shall complete its inspection and make its MLD recommendation within 48 hours of getting access to the site. The Tribe shall have the final determination as to the disposition and treatment of human remains and grave goods. Said determination may include avoidance of the human remains, reburial on-site, or reburial on tribal or other lands that will not be disturbed in the future. The Tribe may wish to rebury said human remains and grave goods or ceremonial and cultural items on or near the site of their discovery, in an area which will not be subject to future disturbances over a prolonged period of time. Reburial of human remains shall be accomplished in compliance with the California Public Resources Code Sections 5097.98(a) and (b). The term "human remains" encompasses more than human bones because the Tribe’s traditions call for the burial of associated cultural items with the deceased (funerary objects), and/or the ceremonial burning of Native American human remains, funerary objects, grave goods, and animals. Ashes, soils, and other remnants of these burning ceremonies, as well as associated funerary objects and unassociated funerary objects buried with or found near the Native American remains are to be treated in the same manner as bones or bone fragments that remain intact.

d. Non-Disclosure of Location of Reburials: Unless otherwise required by law, the site of any reburial of Native American human remains shall not be disclosed and will not be governed by public disclosure requirements of the California Public Records Act, California Government Code Section 6250 et seq. The Medical Examiner shall withhold public disclosure of information related to such reburial pursuant to the specific exemption set forth in California Government Code Section 6254(r). The Tribe will require that the location for reburial is recorded with the California Historic Resources Inventory System (CHRIS) on a form acceptable to the CHRIS center. The Tribe may also suggest the landowner enter into an agreement regarding the confidentiality of site information that will run with title on the property.

e. Treatment of Cultural Resources: Treatment of all cultural items, including ceremonial items and archaeological items will reflect the religious beliefs, customs, and practices of the Tribe. All

cultural items, including ceremonial items and archaeological items, which may be found at a project site shall be turned over to the Tribe for appropriate treatment, unless ordered by a court or agency of competent jurisdiction. The project proponent shall waive any and all claims to ownership of Tribal ceremonial and cultural items, including archaeological items, which may be found on a project site in favor of the Tribe. If any intermediary, (for example, an Archaeologist retained by the project proponent) is necessary, said entity or individual shall not possess those items for longer than is reasonably necessary, as determined solely by the Tribe.

f. Inadvertent Discoveries: If additional significant sites or sites not identified as significant in a project environmental review process, but later determined to be significant, are located within a project impact area, such sites will be subjected to further archaeological and cultural significance evaluation by the project proponent, the Lead Agency, and the Tribe to determine whether additional mitigation measures are necessary to treat sites in a culturally appropriate manner consistent with CEQA requirements for mitigation of impacts to cultural resources. If there are human remains present that have been identified as Native American, all work will cease for a period of up to 30 days in accordance with Federal Law.

102. MM GEO-1b: Prior to the issuance of building permits for each Phase 1 and 2 structure, the project applicant shall submit a design-level Geotechnical Investigation to the City of American Canyon for review and approval. The investigation shall be prepared by a qualified engineer and identify grading and building practices necessary to achieve compliance with the latest adopted edition of the California Building Standards Code (CBC) geologic, soils, and seismic requirements, including abatement of expansive soil conditions. The report shall also determine the final design parameters for walls, foundations, foundation slabs, and surrounding related improvements (e.g., utilities roadways, parking lots, and sidewalks). The measures identified in the approved report shall be incorporated into the project plans and all applicable construction-related permits.

103. MM GEO-5: If potential fossils are discovered during project implementation, all earthwork or other types of ground disturbance within 100 feet of the find shall stop immediately until a qualified professional Paleontologist can assess the nature and importance of the find. Based on the scientific value or uniqueness of the find, the Paleontologist shall either record the find and recommend that the City of American Canyon allow work to continue or recommend salvage and recovery of the fossil. The Paleontologist shall, if required, propose modifications to the stop-work radius based on the nature of the find, site geology, and the activities occurring on the site. If treatment and salvage is required, recommendations will be consistent with Society of Vertebrate Paleontology guidelines and currently accepted scientific practice. If required, treatment for fossil remains shall include preparation and recovery of fossil materials so that they can be housed in an appropriate museum or university collection, and, if required, shall also include preparation of a report for publication describing the finds.

104. MM GHG-1a: Prior to the issuance of any grading permits, the project applicant shall provide the City of American Canyon with documentation (e.g., site plans) demonstrating project construction will include the following construction Best Management Practices (BMPs):

a. At least 15 percent of the construction fleet for each project phase shall be alternatively fueled or electric.

b. At least 10 percent of building materials used for project construction shall be sourced from local suppliers.

c. At least 65 percent of construction and demolition waste materials shall be recycled or reused.

d. At least one contractor that has a business location in American Canyon shall be contracted

for project construction.

e. All construction contracts shall include language that requires all off-road equipment with a power rating below 19 kilowatts (e.g., plate compactors, pressure washers) using during construction be electrically powered.

f. Architectural coatings used for project construction shall be "Low-VOC," containing no greater than 50 grams of volatile organic compounds (VOC) per liter of product.

g. Project construction shall prohibit the use of generators and shall establish grid power connection to electrical equipment needs.

h. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California Airborne Toxics Control Measure [ATCM] Title 13, Section 2485 of California Code of Regulations). Clear signage regarding idling restrictions shall be provided for construction workers at all access points.

i. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.

j. The prime construction contractor shall post a publicly visible sign with their telephone number and contractor to contact. The construction contractor shall take corrective action within 48 hours. The BAAQMD's phone number shall also be identified and visible to ensure compliance with applicable regulations.

105. MM GHG-1b: Prior to the issuance of any building permits, the project applicant shall provide the City of American Canyon with documentation (e.g., site plans) demonstrating the proposed project is designed without the use of any natural gas -fueled appliances or natural gas plumbing.

106. MM GHG-1c: Prior to issuance of any building permits, the project applicant shall demonstrate to the satisfaction of the City of American Canyon (e.g., shown on-site plans), that the proposed buildings are designed and will be built to, at a minimum, the Tier 2 advanced energy efficiency requirements of the Nonresidential Voluntary Measures of the California Green Building Standards Code, Division A5.2, Energy Efficiency, as outlined under Section A5.203.1.2.2.

107. MM GHG-1d: Prior to issuance of any building permits, the project applicant shall demonstrate to the satisfaction of the City of American Canyon (e.g., shown on-site plans), that the proposed parking areas for passenger automobiles and trucks are designed and will be built to accommodate electric vehicle (EV) charging stations. At a minimum, the parking shall be designed to accommodate a number of EV charging stations equal to the Tier 2 Nonresidential Voluntary Measures of the California Green Building Standards Code, Section A5.106.5.3.2.

108. MM GHG-1d: Prior to the issuance of any building permits, the project applicant shall demonstrate to the satisfaction of the City of American Canyon (e.g., shown on-site plans), that each loading dock is outfitted with at least one 240-volt outlet to accommodate truck and Transport Refrigeration Unit (TRU) charging and/or electrical power connection while trucks are loading and unloading goods.

109. MM GHG-1e: Prior to the issuance of any building permit for the proposed project, the project applicant shall provide the City with documentation (e.g., site plans) demonstrating to the City's satisfaction that the electricity demand will be supplied with 100 percent carbon-free electricity sources through the year 2045. As City decision maker, the City Council requires this mitigation measure be accomplished with on-site solar panel electricity.

110. MM HYD-1a: Prior to issuance of grading permits for the proposed project, the applicant shall submit to the City of American Canyon for review and approval a Storm Water Pollution Prevention Plan (SWPPP) in accordance with the requirements of the statewide Construction General Permit. The SWPPP shall be designed to address the following objectives: (1) all pollutants and their sources (e.g., runoff), including sources of sediment associated with construction, construction site erosion, and all other activities associated with construction activity, are controlled; (2) where not otherwise required to be under a Regional Water Quality Control Board (RWQCB) permit, all non-stormwater discharges are identified and either eliminated, controlled, or treated; (3) site Best Management Practices (BMPs) (e.g., silt fencing, street sweeping, routine inspection, etc.) are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized non-stormwater discharges from construction activity; and (4) stabilization BMPs are installed to reduce or eliminate pollutants after construction are completed. The SWPPP shall be prepared by a qualified SWPPP developer. The SWPPP shall include the minimum BMPs required for the identified Risk Level. BMP implementation shall be consistent with the BMP requirements in the most recent version of the California Stormwater Quality Association (CASQA) Stormwater Best Management Handbook–Construction or the California Department of Transportation (Caltrans) Stormwater Quality Handbook Construction Site BMPs Manual. The SWPPP shall be implemented during construction.

111. MM HYD-1b: Prior to the issuance of building permits, the project applicant shall submit a Stormwater Control Plan to the City of American Canyon for review and approval. The plan shall be developed using the California Stormwater Quality Association (CASQA) "New Development and Redevelopment Handbook" and include applicable provisions of Section C.3 of the San Francisco Bay Regional Water Quality Control Board (RWQCB) Municipal Regional Permit (Order No. R2-2015-0049, NPDES Permit No. CAS612008 (or more recent permit). The Stormwater Control Plan shall identify pollution prevention measures and Best Management Practices (BMPs) to control stormwater pollution from operational activities and facilities and provide maintenance in perpetuity. The Stormwater Control Plan shall include Low Impact Development (LID) design concepts, as well as concepts that accomplish a "first flush" objective that remove contaminants from the first 2 inches of stormwater before it enters area waterways. The project applicant shall also prepare and submit an Operations and Maintenance Agreement to the City, identifying procedures to ensure stormwater quality control measures work properly during operations.

112. MM LU-3: Prior to issuance of grading permits, the applicant shall retain a qualified Biologist to assess potential wildlife hazards to aviation. The assessment shall evaluate the characteristics of the emergent wetlands, drainages, other potential wildlife attractant features (i.e., ponded water) located within the open space area and identify management practices (e.g., storm drainage, vegetation, etc.) to prevent the creation of attractants for large flocks or birds or other wildlife species that may present safety hazards to aviation activities. As part of the assessment, the applicant shall consult with Napa County Airport and Napa County Airport Land Use Commission (ALUC) representatives, as appropriate, regarding findings and recommendations. The applicant shall submit a report to the City of American Canyon prepared by a qualified Biologist that confirms the wildlife hazard assessment's findings and recommendations are incorporated into the design of the open space preserve.

113. MM NOI-1: Implementation of the following multi-part mitigation measure is required to reduce potential construction period noise impacts:

a. The construction contractor shall ensure that all equipment driven by internal combustion engines shall be equipped with mufflers that are in good condition and appropriate for the equipment.

b. The construction contractor shall ensure that unnecessary idling of internal combustion engines (i.e., idling in excess of 5 minutes) is prohibited.

c. The construction contractor shall utilize "quiet" models of air compressors and other stationary noise sources where technology exists.

d. At all times during project grading and construction, the construction contractor shall ensure that stationary noise- generating equipment shall be located as far as practicable from sensitive receptors and placed so that emitted noise is directed away from adjacent residences.

e. The construction contractor shall ensure that the construction staging areas shall be located to create the greatest feasible distance between the staging area and noise-sensitive receptors nearest the project site.

114. MM NOI-1: The construction contractor shall ensure that all on-site construction activities, including the operation of any tools or equipment used in construction, drilling, repair, alteration, grading, or demolition work, are limited to between the daytime hours of 7:00 a.m. to 7:00 p.m. Monday through Saturday. No construction shall be permitted on Sundays and federal holidays.

PASSED, APPROVED and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 21st day of March, 2023, by the following vote:

GIOVANNONI LOGISTICS CENTER

GREEN ISLAND ROAD AT HIGHWAY 29
CITY OF AMERICAN CANYON, CA

ATTACHMENT 2.EXHIBIT A

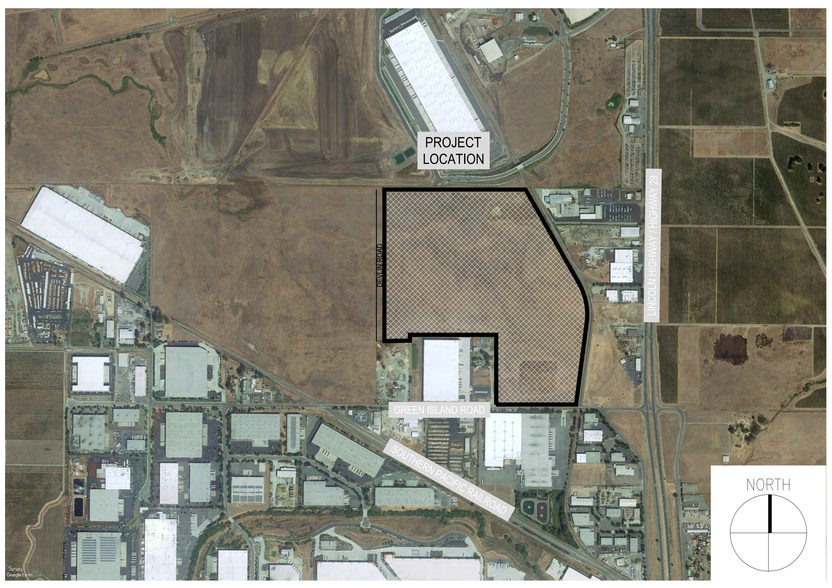
PERSPECTIVE RENDERINGS OF TYPICAL LOGISTIC CENTER BUILDINGS

PROJECT NARRATIVE:

Site: The project site is located along Lincoln Highway 29 & Green Valley Road. in the City of American Canyon, California. The project will include approximately +/- 70 acres of land and encompass two separate buildings. Buildings A and B will be located on the East side of Devlin Road. Total has a Gross Square Footage of all buildings will be +/- 1.07 million sf of floor space. See individual building square footages below:

Building A: 627,976 square feet.
Building B: 469,512 square feet.

Industrial buildings will be of Type VB construction, site cast, tilted concrete panels with a variety of architectural enhancements. The typical wall panels are to be enhanced with reveals and a textured elastomeric, multicolored coating system. The areas around the building entries are also enhanced with tinted glazing in aluminum frames with overhead steel-framed painted canopies. The placement of these enhancements is focused at those locations most visible from the public roadways.



Site Access and Parking:
Entry into the site can be accessed at three entrance drives proposed along Green Island Road. Additional site entry can be obtained at Delvin Road The site will include a semi-truck access aisles that will be separate from employee vehicle parking.

Signage: The proposed signage in this submittal includes is for reference only. Criteria for future tenant signage will be provided at a later and under a separate permit as required.

Landscaping: The project will be fully landscaped using plants appropriate for and indigenous to the City of American Canyon. Low water use plants will be used extensively, while moderate water use plants will be concentrated at accent points, such as driveways and building entries. For further landscaping design information, see "Design Notes" on the LP Preliminary Landscape Plan.

Sustainable Materials & Construction Practices: The project will incorporate a variety of sustainable materials and construction practices to include the following: 1) A storm water pollution prevention plan to minimize contamination, erosion, and dust pollution during construction. All storm water runoff from impervious surfaces (roofs and paving) will be routed through a specially designed water quality detention and treatment basin. Additionally, on-site detention will be provided to meet the City of American Canyon standards. 2) Storage and collection of recyclable materials. 3) Construction waste management. 4) Environmental tobacco smoke control. 5) Heat reflecting roof membranes. 6) Light pollution reduction. 7) Water efficient landscaping. 8) Water use reduction methods. 9) Low VOC emitting sealants, adhesives, coatings, floorings, and wood materials. 10) Roof structures designed to accommodate additional weight for roof-top photovoltaic electricity generation panel arrays. 11) California Green Building Code compliant electric vehicle charging stations at seven locations. 12) The project architect is a LEED accredited professional and will apply his knowledge of LEED techniques and practices to the project design and construction.

- ISOLATED WETLANDS
- DEVLIN RD / GREEN ISLAND RD WETLAND IMPACT
- NEW PARCEL LINE
- NEW RAIL SPUR
- 12' X 14' OVERHEAD GRADE LEVEL DOOR

KEYNOTES:

1. EXISTING PROPERTY LINES.
2. PROPOSED PROPERTY LINES, SEE CIVIL DRAWINGS
3. EXISTING SITE EASEMENTS, SEE CIVIL DRAWINGS FOR MORE INFORMATION.
4. PROPOSED WATER DETENTION BASIN, SEE CIVIL DRAWINGS
5. NEW MONUMENT SIGN. SEE SHEET A01.5 FOR MORE INFORMATION.
6. NEW CURB CUTS, SEE CIVIL DRAWINGS.
7. EXISTING WETLANDS, SEE SITE LEGEND FOR MORE INFORMATION
8. FUTURE RAILROAD SPUR
9. PROPOSED BIO-RETENTION AREA, SEE CIVIL DRAWINGS.
10. LINE OF WETLAND BUFFER. SEE SITE LEGEND.

BUILDING B

APN :	2016-001650
ZONING:	GI - GENERAL INDUSTRIAL
TOTAL GROSS SITE AREA:	3,057,581 G.S.F. = 70.19 ACRES
NET SITE AREA:	1,326,308 N.S.F. = 30.45 ACRES
BUILDING AREA:	469,521 S.F.
SITE COVERAGE:	37.87%
CONSTRUCTION TYPE:	II-B
BUILDING HEIGHT:	56'-4"
CLEAR HEIGHT:	36'-0"
NUMBER OF STORIES:	1
PARKING:	430 STALLS TOTAL

PARKING STANDARDS: (AMERICAN CANYON MUNICIPAL CODE CH. 19.21)

- STANDARD STALLS: 9' X 19' (17' WITH A 2'-0" OVERHANG)
- COMPACT STALLS: 8' X 16' (14' WITH A 2'-0" OVERHANG) (40% MAX)
- DRIVE ISLES: 25'-0" ONE-WAY, 25'-0' MIN TWO-WAY
- FIRE TRUCK RADIUS: 25'-0" INSIDE, 50' OUTSIDE
- EMERGENCY ACCESS AISLE: 20'-0" MIN

REQUIRED PARKING (NAPA COUNTY ZONING CH. 18.110.030):

- WAREHOUSE: 1 PER EACH 1,000 SQ. FT. FOR THE FIRST 10,000 SQ. FT., AND 1 PER 2,000 SQ. FT. FOR ALL WAREHOUSE AREA EXCEEDING 10,000 SQ. FT . (469,512 - 10,000 = 459,512 / 2,000 = 229.75 = 230 + 10 = 240 STALLS)
- OFFICE: 1 PER 300 SQ. FT. OF GROSS FLOOR AREA (OFFICE SPACE T.B.D.)

BICYCLE PARKING: (AMERICAN CANYON MUNICIPAL CODE, CH. 19.21, TABLE 19.21.050)

- TOTAL AUTOMOBILE PARKING SPACES: 200 - 299 = 8

(BICYCLE PARKING SHOULD BE LOCATED IN HIGHLY VISIBLE LOCATIONS AND SHOULD BE LOCKABLE)

ACCESSIBLE & DESIGNATED PARKING STALLS (REQUIRED AND PROVIDED) :

PER 2019 CBC TABLE 11B-208.2: 401 TO 500 STALLS, 9 ADA STALLS REQUIRED
VAN ACCESSIBLE STALLS: EVERY 6 OR FRACTION OF SIX, AT LEAST ONE SHALL BE VAN PARKING.
(9 STALLS = 2 VAN ACCESSIBLE)
10 ADA STALLS (INCLUDING 2 VAN ACCESSIBLE STALLS) PROVIDED.

PER 2019 CALIFORNIA GREEN BUILDING CODE TABLE 5.106.5.2: 201 AND OVER STALLS, AT LEAST 8% OF TOTAL. (432 * 0.08 = 34.4 = 35)
PER 2019 CALIFORNIA GREEN BUILDING CODE TABLE 5.106.5.3.3, 201 AND OVER STALLS, 6% OF TOTAL STALLS TO BE ELECTRICAL VEHICLE CHARGING STATIONS (EVCS). (430 * 0.06 = 25.8 = 26)

PER CBC TABLE 11B-228.3.2.1, 26 TO 50 EVCS STALLS, 1 VAN ACCESSIBLE EVCS, 1 STANDARD ACCESSIBLE EVCS AND 1 AMBULATORY EVCS ARE REQUIRED.
OF THE 26 EVCS REQUIRED, 1 VAN EVCS AND 1 STANDARD ADA EVCS AND 1 AMBULATORY ARE PROVIDED AS SHOWN.
OF THE 34 CLEAN AIR STALLS, 26 ARE EVCS AND (35 - 26) = 9 STALLS ARE TO BE LABELLED WITH PAINTED LETTERS PER CALGREEN SECTION 5.106.5.2.1 STATING 'CLEAN AIR / VANPOOL / EV'. THE LOWER EDGE OF THE LAST WORK IS TO ALIGN WITH THE END OF THE PARKING STALL.

Coprosma p. 'Verde Vista'	NCN	Low	1 Gallon	3' OC	2' X 4'
Cotoneaster dammen	Bearberry	Low	1 Gallon	4' OC	1' X 6'
Juniper c. 'Blue Pacific'	Shore Juniper	Low	1 Gallon	4' OC	1' X 6'
Myoporum 'Pink'	NCN	Low	1 Gallon	5' OC	1' X 8'

COVER

Landscape Planters-3" Layer of Recycled Wood mulch in all landscape planters

BIO RETENTION TREATMENT

48 lbs. per acre Pacific Coast Seed

Apply Compact Bio Swale Mix via hydroseed at the following rates:

Bio Swale Seed Mix	48/lbs/ac
Mulch	2000 lbs/ac
M-Binder Tackifier	180 lbs/ac

WELO NOTES

1. ALL PLANTS AND TREES ARE WUCULS LOW OR MEDIUM WATER VARIETIES.
2. SOIL AMENDMENTS WILL BE INCORPORATED PER SOILS TEST. COMPOST WILL BE ORGANIC COMPOSTED GREEN WASTE.
3. ALL PLANTER AREAS SHALL BE TREATED WITH A 3" LAYER OF RECYCLED MULCH.
4. A FULLY AUTOMATIC IRRIGATION SYSTEM THAT MEETS THE CURRENT WATER EFFICIENT LANDSCAPE ORDINANCE REQUIREMENTS SHALL BE INSTALLED INCLUDING THE FOLLOWING:
5. AN ET (SMART) CONTROLLER AND ET SENSOR SHALL BE USED FOR WEATHER BASED IRRIGATION CONTROL.
6. A MASTER VALVE AND FLOW SENSOR SHALL BE INSTALLED IN THE SYSTEM.
7. ALL PLANTER AREAS SHALL BE IRRIGATED WITH POINT SOURCE-DRIP IRRIGATION.
8. TREES SHALL RECEIVE DEEP WATER BUBBLERS ON SEPARATE VALVES.
9. WELO DOCUMENTATION SHALL BE SUBMITTED WITH LANDSCAPE IMPROVEMENT PLANS (CONSTRUCTION DOCUMENTS).

BUILDING A PRELIMINARY LANDSCAPE NOTES

1. THERE IS APPROXIMATELY 195,250 SQ' OF LANDSCAPE PLANTER AREA.
2. THERE IS 10.4% LANDSCAPE AREA WITHIN THE PARKING AND CIRCULATION AREAS.
3. THERE ARE 430 PARKING STALLS AND 143 SHADE TREES. REQUIREMENT OF 1 TREE PER 3 STALLS SINGLE LOADED AND 1 PER 6 STALLS DOUBLE LOADED HAS BEEN MET.

BUILDING B PRELIMINARY LANDSCAPE NOTES

1. THERE IS APPROXIMATELY 186,547 SQ' OF LANDSCAPE PLANTER AREA.
2. THERE IS 11.3% LANDSCAPE AREA WITHIN THE PARKING AND CIRCULATION AREAS.
3. THERE ARE 430 PARKING STALLS AND 139 SHADE TREES. REQUIREMENT OF 1 TREE PER 3 STALLS SINGLE LOADED AND 1 PER 6 STALLS DOUBLE LOADED HAS BEEN MET.

RESOLUTION NO. 2022-29

A RESOLUTION OF THE BOARD OF DIRECTORS OF THE AMERICAN CANYON FIRE PROTECTION DISTRICT APPROVING THE MEMORANDUM OF UNDERSANDING BETWEEN THE AMERICAN CANYON FIRE PROTECTION DISTRICT AND BUZZ OATES LLC.

WHEREAS, the American Canyon Fire Protection District ("District") provides fire protection services to the City of American Canyon ("City"); and

WHEREAS, the commitments shall only take effect in the event the City approves the Giovannoni Logistics Center ("Project") and Buzz Oats LLC ("Applicant") or assignee build and implements the Project; and

WHEREAS, applicant is seeking entitlements from the City of American Canyon for the Project which is anticipated to be an entirely non-residential development project (with up to approximately 2.4 million square feet of high-cube warehouse building space; and

WHEREAS, if approved, the Project will include a 68.8-acre Phase 1, an 85.9-acre Phase 2, and a 44.8-acre open space preserve; and

WHEREAS, the Project will require fire protection services; and

WHEREAS, a fiscal impact analysis of the Project was conducted by Economic & Planning Systems, Inc (EPS). The EPS Study related to the District's ability to provide fire protection services to the Project. EPS projected that the District would face an annual operating deficit to provide fire services to the Project of $158,000; and

WHEREAS, the District charges a one-time fire mitigation fee at the time when the City issues building permits for new development in order to assist in funding fire protection services required by the development authorized by the building permit; and

WHEREAS, both the District and the Applicant have determined that the normal approach of a One-time Fire Mitigation Fee and Aerial Truck Ladder Fee is less desirable than an alternative approach that combines the payment of the One-Time Fire Mitigation Fee with the generation of annual payments on an ongoing basis in lieu of payment of the one-time Aerial Truck Ladder Fee; and

WHEREAS, Both the District and the Applicant have determined that such annual payments could be generated if the Applicant forms a Mello-Roos Community Facilities District or similar public financing mechanism (CFD); and

WHEREAS, for the benefit of the District, the Applicant shall use commercially reasonable efforts to form a Mello-Roos Community Facilities District or similar public financing mechanism (CFD); and

WHEREAS, the assessor's parcel numbers (APNs) for the parcels that make up the Project currently include: 057-090-008, 057-130-034, and 057-130-036. Only Developable Property, estimated to be a total of 156 acres, shall be subject to the Special Tax, and only when that property becomes Developed Property.; and

WHEREAS, developed Property shall be defined in the CFD Rate and Method of Apportionment of Special Tax (RMA) to mean any parcel with a structure for which a building permit has been issued; and

WHEREAS, in consideration for the Applicant's willingness to generate an annual Special Tax, the District shall exempt the Applicant from the District's Aerial Truck Ladder Fee of $.50 per square foot. The Applicant will still be required to pay the one-time Fire Mitigation Fee of $.5512 per square foot or rate then in effect, at the time of issuance of building permits by the City.

NOW, THEREFORE, IT IS HEREBY RESOLVED by the Board of Directors of the American Canyon Fire Protection District approve the Memorandum of Understading between the American Canyon Fire Protection District and Buzz Oats, LLC.

PASSED, APPROVED AND ADOPTED this 25th day of October, 2022, by the following vote:

RESOLUTION NO. 2023-XX

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF AMERICAN CANYON APPROVING THE GIOVANNONI LOGISTICS CENTER TENTATIVE PARCEL MAP TO CREATE A TWO-LOT SUBDIVISION FOR UP TO 1,069,904 SQUARE FEET OF HIGH CUBE WAREHOUSE USES ON 70.2 ACRES; LOCATED NORTH OF GREEN ISLAND ROAD AND EAST OF DEVLIN ROAD, APN 057-090-008, 057-130-034, 057-130-036, (FILE NO. PL 20-0043)

WHEREAS, pursuant to Section 65300 of the State Planning and Zoning Law, the City of American Canyon (City) adopted a General Plan to provide comprehensive long-range planning and a blueprint of the City's future form, including land use and circulation maps that specify the roadway network and the distribution of types and intensities of land; and

WHEREAS, Buzz Oates LLC, ("applicant"), submitted a Giovannoni Logistics Center Tentative Parcel Map application to create a two-lot parcel map north of Green Island Road, and east of Devlin Road for up to 1,069,904 square feet of high-cube warehouse buildings (the proposed project); and

WHEREAS, Lot 1 located at 300 Green Island Road comprises 38.36 acres, and Lot 2 located at 1200 Devlin Road comprises 31.44 acres; and

WHEREAS, on November 17, 2022, the Planning Commission conducted a duly-noticed public hearing to evaluate the Giovannoni Logistics Center Tentative Parcel Map and heard all public speakers and considered written materials including the staff report and oral testimony given at the meeting; and

WHEREAS, on December 6, 2022 the City Council certified that the Final Environmental Impact Report (EIR) (SCH# 2021010104) has been completed in compliance with the California Environmental Quality Act (CEQA) and as adequately reflects the City's independent judgement and analysis regarding the potential environmental impacts associated with the Giovannoni Logistics Center Project, and adopt CEQA Findings of Fact, a Statement of Overriding Considerations, for the Project, and adopt a the Mitigation Monitoring and Reporting Program for the Project; and

WHEREAS, the Giovannoni Logistics Center Final EIR specifically evaluated the Tentative Parcel Map at a Project level and the City Council reviewed and considered the information contained in the Final EIR prior to approving the proposed project; and

WHEREAS, on December 6, 2022 and February 21, 2023, the City Council conducted a duly-noticed public hearing to evaluate the Giovannoni Logistics Center Tentative Parcel Map, heard all public speakers and considered written materials including the staff report and oral testimony given at the meeting, and subsequently deliberated on the Tentative Parcel Map on March 21, 2023.

NOW, THEREFORE, BE IT RESOLVED that the City Council makes all the required findings to approve the Giovannoni Logistics Center Tentative Parcel Map, as follows:

SECTION 1: Tentative Parcel Map Findings

Approval of the Tentative Parcel Map requires **that none of** the following findings be made, pursuant to American Canyon Municipal Code Section 18.20.055:

A. That the proposed tentative parcel map is not consistent with the City's General Plan or its elements, or other applicable plans.

This Finding cannot be made. The project site is designated for high cube warehouse buildings consistent with allowable uses in the General Plan Industrial land use district. The General Industrial zoning district requires a minimum of 40,000 square feet for parcels. Both proposed Tentative Parcel Map lots are at least 31 acres. Both parcels have safe and adequate access to a public right-of-way and have been designed to accommodate needed utilities and stormwater drainage.

B. That the design and improvement of the proposed tentative parcel map is not consistent with the City's General Plan or its elements, or other applicable plans.

This Finding cannot be made. As required by the City's General Plan, the Tentative Map shows proposed roadways and infrastructure sufficient to accommodate up to 1,069,904 square feet of high-cube warehouse buildings.

C. That the site is not physically suitable for the type of development proposed.

This Finding cannot be made. The project site, with the conditions for offsite transportation and utility improvements, will be suitable for up to 1,069,904 square feet of high-cube warehouse buildings anticipated as part of the Giovannoni Logistics Center Project. The Geotechnical and Geologic Fault Investigation prepared by Cornerstone Earth Group (November 2, 2017 – Project No. 582-4-1) demonstrates that there is no geological fault within the proposed Tentative Parcel Map. The preliminary grading and drainage plan, stormwater plan, preliminary utility plan, and fire access plan prepared by CBG Engineers demonstrates that the proposed type of development proposed can be accommodated within the parcel map.

D. That the site is not physically suitable for the density of development proposed.

This Finding cannot be made. Please refer to the discussion under Findings No. A, B and C above.

E. That the design of the subdivision or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

This Finding cannot be made. The impacts of the proposed Project, including the Tentative Parcel Map remain within the impacts previously analyzed and the findings in the Giovannoni Logistics Center Final Environmental Impact Report (SCH# 2021010104). The draft Final Environmental Impact Report and statement of overriding considerations specifically contemplated the proposed Tentative Parcel Map. The Project has the potential to significantly impact the following resources: Aesthetics, Biological Resources, Cultural Resources, Geology, Soils and Seismicity, Greenhouse Gas Emissions and Energy, Hydrology and Water Quality, Land Use, and Noise. However, each of these potential impacts would be reduced to a less than significant level through the implementation of the mitigation measures contained in the Mitigation Monitoring and Reporting Program for the Project. The Project has significant and unavoidable impacts for Air Quality, and Greenhouse Gas Emissions and Energy. However, the draft Statement of Overriding Considerations concludes that economic, social, and environmental benefits of the Project outweigh the significant and unavoidable adverse impacts.

F. That the design of the subdivision or the type of improvements is likely to cause serious public health problems.

This Finding cannot be made. The proposed Giovannoni Logistics Center Tentative Parcel Map Project uses are consistent with the other adjacent industrial uses and the conditions of approval, particularly those related to mitigation measures identified in the Final EIR, required off-site roadway and utility improvements, will ensure that the proposed development will not create any nuisance or be materially detrimental to public health, or property in the area. The closest residence is 1,250 feet southwest of the project and is too far from the site for the project to cause serious public health problems to the residences.

G. That the design of the subdivision or the type of improvements will conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision.

This Finding cannot be made. There is no documentation that public easements for access through or use of the property have been established, other than the recorded easements identified on the parcel map, which will be maintained or replaced by equivalent easements to accommodate public utilities.

H. That the discharge of wastewater, including sewage and stormwater runoff, from the proposed subdivision would result in a violation of existing water quality requirements prescribed by the Regional Water Quality Control Board (RWQCB).

This Finding cannot be made. The proposed map has been reviewed by City staff and staff has determined that it complies with all applicable water quality requirements of the Regional Water Quality Control board and city standards.

SECTION 2: Conditions of Approval

General

1. The Tentative Parcel Map approval is granted for a subdivision that will create two industrial lots for up to 1,069,904 square feet on a 70.2-acre site east of Devlin Road and north of Green Island Road. Lot 1 located at 300 Green Island Road comprises 38.36 acres, and Lot 2 located at 1200 Devlin Road comprises 31.44 acres as shown on Exhibit A. Exhibit A includes the following:

   a. Civil Plans prepared by CBG Engineers, dated 09-17-21 consisting of 6 sheets, Tentative Map, Existing Site Conditions, Preliminary Grading and Drainage Plan, Preliminary Utility Plan, Preliminary Stormwater Control Plan, and Preliminary Fire Access Plan.

2. The applicant shall defend, indemnify, and hold harmless the City of American Canyon ("City"), its elected officials, officers, employees, attorneys, representatives, boards, commissions, consultants, volunteers and agents from and against all claims, actions, including actions to arbitrate or mediate, damages, losses, judgments, liabilities, expenses and other costs, or proceedings against the City, its elected officials, officers, employees, attorneys, representatives, boards, commissions, volunteers, or agents to attack, modify, set aside, void, or annul an approval, conditional approval, permit, entitlement, environmental document, environmental clearance, mitigation plan, or any other document or any of the proceedings, acts, or determinations taken, done, or made prior to granting of such approval, conditional approval, permit, entitlement, environmental clearance, environmental document, mitigation plan, or other documents, by the City, including, without limitation, an action against an advisory agency, appeal board, or legislative body within the applicable limitation period.

   The obligation to defend, indemnify and hold the City harmless shall include the payment of all legal costs and attorney's fees (including a third party award of attorney's fees), arising out of, resulting from, or in connection with the City's act or acts leading up to and including approval of any environmental document or mitigation plan granting approvals to the applicant, incurred on behalf of, or by, the City, its elected officials, officers, employees, representatives, attorneys, boards, commissions, volunteers and agents in connection with the defense of any claim, action, or proceeding challenging the entire or a portion of an approval, conditional approval, permit, entitlement or any other document of any related claim.

   The obligation to defend, indemnify, and hold the City harmless shall include, but not be limited to, the cost of preparation of any administrative record by the City, staff time, copying costs, court costs, or attorney's fees arising out of a suit or challenge contesting the adequacy of a permit, approval, conditional approval, entitlement, environmental document, mitigation plan, environmental clearance, or any other document or approval related to the applicant's project.

The City will promptly notify the applicant of any claim, action, or proceeding and will cooperate fully in the defense. If the City fails to promptly notify the applicant of any claim, action, or proceeding, or the City fails to cooperate fully in the defense, the applicant shall not be responsible to defend, indemnify, or hold harmless the City.

In the event a legal challenge to a City permit, approval, conditional approval, environmental document, environmental clearance, mitigation plan, entitlement or any other document, proceeding, determination, or action related to the applicant's project is successful, and an award of attorneys' fees is granted against the City, the applicant shall be responsible to timely pay the full amount of such an award.

3. The applicant is responsible for paying all charges related to the processing of this discretionary case application within 30 days of the issuance of the final invoice or prior to the issuance of building permits for this project, whichever occurs first. Failure to pay all charges shall result in delays in the issuance of required permits or the revocation of the approval of this application.

4. The date upon which the approval is final shall be considered the day of the imposition of the fees, dedications, reservations and exactions required by these conditions approval for the purposes of protesting the imposition pursuant to California Government Code Section 66020.

5. The application shall not be deemed final until the applicant and property owner(s) execute and return the "Confirmation of Conditions of Approval" form as shown as Exhibit B to this Resolution.

6. Expiration of this Approval. In accordance with American Canyon Municipal Code (ACMC) Section 18.20.060 the approval shall become null and void and of no effect if a final map has not been submitted for processing within twenty-four months from the date of final action by the city council to approve or conditionally approve a tentative parcel map.

   Where the City Engineer determines that a subdivider is required to expend one hundred twenty-five thousand dollars or more to construct or improve public facilities outside the boundaries of the tentative parcel map that are reasonably related to the proposed development on said site, a final parcel map shall be submitted for processing within thirty-six months from the date of final action by the city council to approve or conditionally approve a tentative parcel map.

   The City Council may extend the expiration date of a tentative parcel map for not more than twelve months at any one time. All actions of the city council to extend a tentative map shall be at a duly noticed public hearing in accordance with the provisions of this title.

Planning

7. All plans submitted for review and approval and all development shall be in substantial conformance with the approved exhibits, except where modified by a condition of approval. The Community Development Director or designee may approve minor changes to the project as approved by the City Council on the plans submitted for the construction permits with a determination that the changes are in substantial compliance with the representation of the project as reviewed by the Planning Commission and City Council, that the proposed change will be in compliance with the required development standards, and the change will not materially affect adjacent private or public property.

Building and Safety

8. Construction and grading activities on the site shall be limited to between 7:00 a.m. and 6:00 p.m. Monday through Friday. Work between the hours of 6:00 pm and 7:00 am and work on weekends and holidays requires prior written approval from the Building Official. If weekends and holiday work is

approved construction and grading activities on the site shall be limited to between 8:00 a.m. to 6:00 p.m. on Saturdays, and between 10:00 a.m. and 6:00 p.m. on Sundays and State and Federal holidays.

9. All construction plans and buildings onsite shall conform to the California Code of Regulations, Title 24. All building plans shall include all necessary recommendations from the Geotechnical Report for the site, to be superseded only by the California Code if any conflicts arise.

10. According to CBC 11B-228.3.2.1, provide the applicable amount of electrical vehicle charging stations (EVCS) and van accessible EVCS spaces for the employee parking lot.

11. Prior to the final inspection, the applicant shall submit a letter of certification to the Building Official from the project architect, civil engineer, and landscape architect certifying that all improvements have been constructed in accordance with the approved building plans. A Certified Access Specialist (CASP) shall also submit a letter certifying that all improvements have been constructed in compliance with applicable state and federal accessibility standards. Determination of consistency shall be subject to the review and approval of the Building Official.

12. Construction and Demolition Debris Recycling: Prior to issuance of a building permit the applicant shall submit a Construction Waste Management (CWM) plan for the diversion of at least 70 percent of the debris from the building demolition and construction. The plan shall include the qualified recycler that will be used, the methods of managing diversion of construction materials on site, and the proposed documentation that will be submitted to confirm that the diversion goal has been met.

Fire Protection

The following Fire Protection conditions shall be satisfactorily addressed on the building permit submittal:

13. Prior to recordation of the Parcel Map, or City issuance of a building permit, whichever occurs first, the Applicant shall form a Mello-Roos Community Facilities District or similar public financing mechanism (CFD) on full legal parcels that are a part of the Project in accordance with ACFPD Agreement 2022-29. A copy of Agreement 2022-29 is included with this Resolution as Exhibit C.

14. In accordance with the standard mitigation measures and conditions of approval set forth by the City of American Canyon, the developer shall pay the Fire Impact Fees (see current Standard Fees and Charges adopted by resolution), prior to the issuance of any building permits.

15. New buildings and additions to existing buildings shall conform to requirements set forth in the currently adopted editions of the California Building Code, California Fire Code, City of American Canyon standards and Nationally Recognized Standards.

16. There shall be no deferred submittals for fire protection equipment and related utilities. Fire protection plans shall not be attached to or bound with the building plan submittal package. This includes but is not limited to Automatic Fire Sprinkler, Fire Alarm, Fixed Fire Protection and Civil plans.

17. All Fire related underground piping and fire appurtenances shall be shown on the Civil plan submittal. In addition to the Civil plan submittal, at least (1) plan set under separate cover shall be submitted to American Canyon Building Division for routing to the American Canyon Fire Protection District detailing all underground piping and related fire appurtenances including but not limited to underground piping, underground sweep detail, underground trench details showing depth of burial, type of backfill, manufacturer's specifications of piping, valves joints, fittings and calculated size and locations of thrust blocks, hydrants locations (designate public or private), gate shut-off valves, PIV's, FDC's, fire pumps, fire pump and/or riser rooms. The applicant will need to submit all related Fire

information on a separate plan for Fire review. The Fire related portions of the civil plan shall not be bound with the building plan.

18. Underground utility contractor, architect and fire sprinkler contractor shall coordinate the location of risers and control valves prior to the issuance of a building permit.

19. An approved water supply capable of supplying the required fire flow for fire protection systems shall be provided to all premises upon which facilities or buildings are hereby constructed or moved into or within the City. Required fire flow and hydrant distribution shall be in accordance with Appendix B and C of the California Fire Code. Applicant shall demonstrate on plan submittal; square footage of each building on plan and provide the required fire flow information. Applicant shall demonstrate that the number and spacing of onsite fire hydrants meets with requirements of the California Fire Code. ***See sample below regarding fire flow and hydrant detail information needed.***

    BUILDING FIRE FLOW REQUIREMENTS – CFC TABLES B105.2 & B105.1(2)

    INFORMATION BELOW IS A SAMPLE AND FOR REFERENCE ONLY

    Table B105.1(2) – Building size = 129, 600 square feet

    Construction type = Type IIA

    FF = 5,250 gpm at 20 psi

    Duration = 4 hours

    Table B105.2 – Fire sprinkler allowance = - 50%

    5,250 – 2,625 = 2,625 gpm

    FF = 2,625 gpm @ 20 psi

    Duration = 2 hours

    Table CC105.1 – Approximate number of hydrants = 3

    Average spacing = 400 feet + 25% allowable increase = 500

    Maximum distance from street or frontage = 225 feet = 50% allowable

    increase = 337.5

20. The fire protection equipment shall be located within an interior room having an approved exterior access door or in an exterior enclosure attached to the building, specifically, for the purpose of housing such equipment.

21. Prior to building permit issuance, provide a fire department circulation plan using the City's ladder truck and demonstrate clear turning movements into and out of the project. The final design of fire department access components shall be reviewed and approved by the Fire Marshal prior to installation. Please show how fire apparatus can position near the building on either side, with the ability to turn the apparatus around to leave the project site.

22. Fire Apparatus Access Roads shall be designed in accordance with provisions set forth in the California Fire Code Chapter 5 and Appendix D as amended by the City of American Canyon and the applicable Public Works Standard.

23. Fire apparatus access roads shall have an unobstructed minimum width of 20 feet (curb to curb) and a minimum unobstructed vertical clearance of 13' 6". They shall have an all-weather paved surface capable of supporting a GVW of 71,000 pounds.

24. Access roads shall be completed with all-weather surfaces prior to the stockpiling of combustible materials or beginning combustible construction. Fire apparatus access shall be provided to within 150 feet of the most remote portions of all building from an approved exterior route. If this cannot be achieved fire apparatus turn-arounds will be needed.

25. Fire apparatus access roads shall not be obstructed in any manner, including the parking of vehicles. Vertical traffic calming in the form of speed pumps, humps or dips are prohibited along fire access roads without prior approval of the fire Code Official. The minimum width and clearances established in Section 503.2.1 shall be maintained at all times.

26. When required by the Fire Chief, fire apparatus access roads shall be designated as Fire Lanes and appropriate signs and/or markings installed in accordance with the California Vehicle Code and approved City standards.

27. Where applicable, improvement plan submittals for permit shall include locations of fire lane red curbing and fire lane signage. Please refer to and include City Public Works Standard FP-2A & 2B with plan submittals for permitting.

28. The City of American Canyon requires that a fire hydrant be in service within 250 feet of the furthest point of construction prior to the stockpiling of combustible materials for the beginning of construction.

29. Fire Department Connections (FDC) shall be located not more than 100 ft. from the nearest fire hydrant.

30. Improvement Plans submitted for permit shall include City of American Canyon "Underground" standards, detail drawings and the applicable City of American Canyon Public Works Standard detail (W-7A, B, C or D) for Fire Service double detector check installations. *Also, a separate set of plans shall be submitted detailing all related underground Fire utilities and appurtenances including but not limited to; All underground piping, type, sizes, depth of burial, fittings, thrust blocks, risers, pumps, hydrants, FDC's, etc.*

31. System Protection Area Limitations NFPA 13 – 8.2.1 Maximum floor area on any one floor to be protected by sprinklers supplied by any one sprinkler system riser or combined system riser shall be as follows:

    1. Light Hazard – 52,000 sf – per riser
    2. Ordinary Hazard - 52,000 sf – per riser
    3. *Extra Hazard – Hydraulically calculated - 40,000 sf – per riser
    4. Storage – High-piled storage (as defined in 3.9.1.16) and storage covered by other NFPA standards – 40,000 sf – per riser

Public Works

<u>General Conditions of Approval</u>

32. The Applicant shall be responsible for all City plan check and inspection costs. The Applicant shall establish a Developer Deposit Account with the City upon the initiation of plan check services. The amount of the initial deposit shall be determined by the City Engineer. Additional funds may be required based upon actual costs.

33. All improvements shall be designed in accordance with the American Canyon Municipal Code (ACMC), City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

34. All new utilities to serve the project, shall be placed underground. Exceptions may be allowed for surface mounted transformers, pedestal mounted terminal boxes and meter cabinets.

35. Unless otherwise explicitly permitted, all existing wells, septic tanks and/or underground fuel storage tanks shall be abandoned under permit and inspection of Napa County Department of Environmental Services or other designated agency. If there are none, the project engineer shall provide a letter describing the scope of the search done to make this determination.

36. A detailed Soils Investigation/Geotechnical Report shall be prepared and submitted for review. The report shall address, at a minimum, potential for liquefaction, R-values, expansive soils and seismic risk. The improvement plans shall incorporate all design and construction criteria recommended in the Geotechnical Report.

37. A drainage report prepared by a California Registered Civil Engineer shall be submitted for review with the initial submittal of the Improvement Plans. The report shall include detailed hydrologic and hydraulic calculations to support the design and sizing of all public and private drainage facilities including storm drains and detention facilities. The report shall address existing downstream storm drain facilities and hydraulic conditions which may impact the design of proposed facilities and improvements.

38. A final detailed post-construction Stormwater Control Plan (SWCP) that identifies and sizes all permanent post-construction stormwater treatment BMPs shall be prepared and submitted for review and approval. The SCWP shall be prepared in accordance with the latest edition of the *Bay Area Stormwater Management Agencies Association (BASMAA) Post-Construction Manual* and the requirements of the State Water Resources Control Board Phase II Municipal Separate Storm Water System (MS4) General Permit (Order 2013-0001 DWQ). It is the City's discretion whether to accept alternative treatment facilities other than bioretention.

39. A Post Construction Stormwater Operations and Maintenance Plan that includes a plan sheet showing all storm drain and water quality infrastructure that is to be maintained, along with detailed instructions and schedules for the ongoing maintenance and operation of all post-construction stormwater BMPs shall be submitted for review and approval by the City Engineer. Once approved, the property owner(s) shall enter into an agreement with the City that provides the terms, conditions, and security associated with the ongoing requirements of the post-construction Stormwater Best Management Practices.

40. A Final Map, as defined in the Subdivision Map Act, shall be prepared by a licensed surveyor or civil engineer. The Final Map shall show all parcels, rights-of-way, and easement(s), and shall be submitted to the City Engineer for review. The Final Map shall be in substantial conformance with the approved Tentative Map and all applicable conditions of approval. The Final Map is not valid until it has been approved by the City and recorded. Closure calculations shall be provided at the

time of initial Final Map submittal. All calculated points within the map shall be based upon one common set of coordinates. All information shown on the Final Map shall be directly verifiable by information shown on the closure calculation printout. The point(s) of beginning shall be clearly defined. All lot acreages shall be shown on the Final Map and shall be verifiable from information shown on the closure calculation printout. A current title report (within past 30 days) shall be submitted at the time of initial Final Map submittal.

41. The Applicant shall secure all necessary rights-of-way and public and private easements for both onsite and offsite improvements. The applicant shall prepare all necessary legal descriptions and deeds.

42. To the extent any offsite public improvements require the acquisition of property not currently owned by the Applicant or the City, the Applicant shall first make a good-faith effort to acquire the necessary property rights, however if the Applicant makes such an effort and is unable to acquire such rights, then the Applicant may request the City acquire the necessary property rights through the exercise of eminent domain provided that the Applicant enters first into an agreement with the City to pay for all costs incurred by the City to acquire such rights and if the City does not acquire the rights necessary to allow the offsite public improvements to be completed by the Applicant within statutory timeline provided by law, then the Applicant shall be relieved of the obligation to construct those off-site improvements only to the extent they require property not currently owned by the Applicant or the City. The Applicant shall make a good-faith effort to identify and acquire the necessary property rights at the earliest opportunity.

43. The Applicant shall submit site Improvement Plans, prepared by a registered Civil Engineer, for review and approval of the City's Public Works Department. **Please be aware that this is separate submittal from the building permit application.** The final plan set shall include all civil, landscape and joint trench drawings under a single cover sheet. No final grading or other construction shall be performed until the Improvement Plans have been approved. The Applicant shall not begin clearing, grubbing, or rough grading at the site prior to approval of the Improvement Plans, unless explicitly approved by the City of American Canyon through the standard grading and utilities only permit process. An Encroachment Permit is required for any work within City right of way. Encroachment Permits will not be issued prior to the approval of the Improvement Plans.

44. All public water service laterals or services (domestic, recycled and fire water) shall include approved backflow prevention devices.

45. Cathodic protection shall be provided for all water valves, fittings, hydrants, meters, backflow devices and other metal appurtenances, regardless of the findings of any soils corrosivity analysis.

46. The Applicant shall keep adjoining public and private streets free and clean of project dirt, mud, materials, and debris during the construction period in accordance with SWPPP using appropriate BMPs and as is found necessary by the City Engineer.

47. If any hazardous material is encountered during the construction of this project, all work shall be immediately stopped and the Fire Department, Napa County Department of Environmental Services or other designated agency, and the City Inspector shall be notified immediately. Work shall not proceed until clearance has been issued by all of these agencies.

48. Prior to final preparation of the subgrade and placement of base materials, all underground utilities shall be installed, and service connections stubbed out behind the sidewalk. Public utilities, Cable TV,

sanitary sewers, and water lines shall be installed in a manner that will not disturb the street pavement, curb, gutter and sidewalk, when future service connections or extensions are made.

49. Where soil or geologic conditions encountered in grading operations are different from that anticipated in the soil and/or geologic investigation report, or where such conditions warrant changes to the recommendations contained in the original soil investigation, a revised soil or geologic report shall be submitted for approval by the City Engineer. Additionally, if field conditions warrant installation of any subdrains, the location, size and construction details must be provided to the City for review and approval prior to construction.

50. All new fire hydrants shall be covered with burlap sacks until the hydrants have been tested and found to be in conformance with City flow requirements. No storage of combustible materials or construction of building shall be permitted until all hydrants meet City flow requirements.

51. Prior to placing the final lift of asphalt, all public storm drains and sanitary sewer lines shall be video inspected at the Applicant's expense. All video media (CD, DVD, or portable hard drive) shall be submitted to the City. If any inadequacies are found, they shall be repaired prior to the placement of the final lift of asphalt.

52. All streets, curbs, gutters, sidewalks or other public facilities damaged in the course of construction associated with this Project shall be the responsibility of the Applicant and shall be repaired to the satisfaction of the City at the Applicant's expense.

53. After all of the new underground utilities within existing public streets have been installed, the entire affected areas shall be milled and repaved to present a neat finished pavement area. Multiple trench patches are not acceptable.

54. All construction stormwater pollution prevention best management practices (BMP's) shall be installed as the first order of work and in accordance with the State Water Resources Control Board's General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ, as amended), the Applicant's Storm Water Pollution Prevention Plan (SWPPP), and the City's Erosion and Sediment control Plan in accordance with the City's MS4 Permit. All stormwater BMP's shall be maintained to the satisfaction of the Qualified SWPPP Developer (QSD), Qualified SWPPP Practitioner (QSP), and the City Engineer.

55. With the exception of water used for loading and testing of potable water lines, all construction water used for the project shall be obtained from a source other than American Canyon potable water sources. The Applicant shall provide verification that an outside source of construction water, e.g., recycled water, has been established and will be available for the duration of the project construction.

56. The development shall comply with the City's Zero Water Footprint policy.

57. All landscaping shall be designed to use recycled water for irrigation. Recycled water landscaping shall be designed to comply with California Code of Regulations Title 22 and shall include design details to prevent runoff of recycled water. The irrigation system shall include an ET/SMART controller.

58. All buildings shall be dual plumbed to use recycled water for non-potable uses.

<u>Public Works Special Conditions of Approval</u>

59. The Applicant shall submit Improvement Plans prepared by a registered Civil Engineer (Engineer of Record) in substantial conformance with the preliminary civil plans titled "Giovannoni Logistics Center East Tentative Parcel Map" prepared by CBG Civil Engineers dated September 17, 2021, except as modified by these conditions.

60. Improvement Plans and Final Map shall be tied to the State of California coordinate system.

61. The Applicant shall construct all of the on-site private streets, water, recycled water, sewer, storm drainage and storm quality **"Private Improvements"** generally shown on the Preliminary Plans and more specifically described below. All private street, water, recycled water sewer, storm drainage and stormwater quality improvements shall be designed in accordance with the City of American Canyon Engineering Standard Plans and Specifications for Public Improvements (City Standards), except as specifically noted otherwise in these conditions.

    a. Storm Drain Facilities:
    Construct private on-site drainage facilities, detention facilities, and other appurtenances to collect and convey all surface drainage to an approved private storm drain facility or outfall. Onsite drainage facilities shall provide for the positive drainage of all adjacent upstream or upgrade properties to prevent ponding. Existing run-on from adjacent properties shall not be obstructed and shall be conveyed onsite. Off-site peak storm water discharge shall not exceed 90% of the undeveloped peak flow from the 24-hour, 100-year event. The storm drains and detention facilities shall be substantially consistent with the Preliminary Plans. However, the sizing of all storm drains and detention facilities shall be determined by the approved final drainage report.

    b. Stormwater Quality Facilities:
    Permanent on-site private post-construction stormwater treatment BMPs shall be designed and constructed in accordance with the approved final SWCP.

    c. Recycled Water Services:
    Separate recycled water services shall be provided for domestic non-potable uses and irrigation uses.

62. Per the Subdivision Improvement and Reimbursement Agreement between the City of American Canyon and DWF IV NLP II, LLC, Napa County Official Record 2018-0024204, the Applicant shall reimburse the City its fair share cost for the improvement of South Kelly Road from its intersection with Devlin Road up to intersection with Highway 29. The fair share cost, based on the project's proportional share of net new trips is 12% of the total cost of the required roadway improvements. The total cost of the roadway improvement is $1,206,450.75. Therefore, the applicant's fair share obligation is $144,774.09.

63. Per the Subdivision Improvement and Reimbursement Agreement between the City of American Canyon and DWF IV NLP II, LLC, Napa County Official Record 2018-0024204, the Applicant shall reimburse the City its fair share cost for the construction of the Permanent Sewer Solution, which consists of new offsite public gravity sewer, pump station and force main which replaced the existing Green Island Pump Station. The fair share cost, based on the project's sewer flow is 12% of the total cost of the required sewer improvements. The total cost of the sewer improvement is $6,710,227.41. Therefore, the applicant's fair share obligation is $805,227.29.

64. Prior to SUBMITTAL OF THE IMPROVEMENT PLANS, the Applicant shall:

    a. Submit the City's "Improvement Plan Checklist".

b. Pay an initial cash deposit for City plan check services in amount to be determined by the City prior to the time of submittal. The Project engineer shall contact City staff to discuss submittal details to determine initial deposit amount.
c. Provide the following:
   (1) Public Street Repair Plan
   (2) Utility Plan and Joint Trench Plan
   (3) Construction Storm Water Pollution Prevention Plan (SWPPP) and a City Erosion and Sediment Control Plan
   (4) Drainage Report
   (5) Post-Construction Stormwater Control Plan (SWCP)
   (6) Geotechnical Report
   (7) Construction Traffic Control Plan.
   (8) Traffic Impact Study
   (9) Application for Water and Sewer Service

65. Pothole and physically determine (by way of a survey performed by the Engineer of record) the actual horizontal location and vertical depth of all existing underground utilities throughout the proposed area of work and provide the design of all new utility installations required to serve the project including a schedule for implementation of such work as to prevent disrupting of utility service to adjacent properties.

66. Prior to APPROVAL OF THE IMPROVEMENT PLANS, the Applicant shall:

    a. Merge the two existing parcels (APNs 057-130-034 and 057-130-036) into a single parcel through the recordation of a lot merger or lot line adjustment.

    b. Provide written acknowledgment by the Geotechnical Engineer of Record that the Plans incorporate all design and construction criteria specified in the Geotechnical Report.

    c. Furnish proof of the acquisition of all rights of entry and/or temporary and permanent easements necessary to construct the project and the location of all such rights on the Plans.

    d. Furnish proof that all permits that may be required by the California Department of Fish & Wildlife, State and Regional Water Quality Control Board, US Army Corps of Engineers and any other regulatory agencies with jurisdiction over the proposed construction have been obtained.

    e. Fill out and submit the City's Erosion and Sediment Control Plan (ESCP) Template. Applicant may refer to a SWPPP, as appropriate, by referencing page number within the SWPPP that addresses the requirements of the ESCP.

    f. Submit a copy of the Notice of Intent and Wastewater Discharge Identification Number (WDID#) for coverage under the State Water Resources Control Board's General Construction Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Order 2009-0009-DWQ).

67. Prior to RECORDATION OF THE FINAL MAP, the Applicant shall:

    a. Construct all of the Private Improvements to the satisfaction of the City. Alternatively, the Applicant may enter into a Subdivision Improvement Agreement with the City agreeing to complete all of the Private Improvements prior to Occupancy of the first unit. Such an Agreement will require the Applicant to provide bonds, proof of workers compensation insurance, and general liability insurance in the forms and amounts as deemed satisfactory to the City.

b. Establish a Shared Maintenance Agreement between the owners of each parcel for the long term and ongoing maintenance and operation of all shared private improvements. Specifically, the parcel owners shall be responsible for the ongoing maintenance and operation of all onsite stormwater quality facilities and shared storm drains. The Shared Maintenance Agreement shall be prepared to run with the land of each parcel. The Shared Maintenance Agreement shall be submitted to the City for review and approval prior to recordation.

c. Generally, in substantial conformance with that which is shown on the approved Tentative Map, convey all easements and dedications, public and private, for the construction, use and/or maintenance of roads or other access, drainage facilities, utilities and post-construction storm water management facilities on the Final Map. All dedications to the City shall be Irrevocable Offers of Dedication. Specific conveyances include:

    i. Private reciprocal easements in favor of all parcels for all shared stormwater treatment facilities, shared storm drains, and for lot-to-lot surface stormwater runoff.

d. Furnish proof of the payment of the mapping service fee as required by Napa County Board of Supervisors Resolution No. 92-119.

68. Prior to COMMENCEMENT OF CONSTRUCTION ACTIVITIES, the Applicant shall:

a. Pay off all current account balances with the City of American Canyon.

b. Pay an inspection fee in amount to be determined at the time of commencement for the City's inspection of the Public Improvements.

c. Conduct a pre-construction meeting with representatives of the City whereby the Applicant, the Legally Responsible Party (LRP), Qualified SWPPP Practitioner (QSP), Qualified SWPPP Developer (QSD), and/or the Contractor provides the following:

    i. Six (6) full-size bond copies of the approved Improvement Plans for the City's use.
    ii. One (1) jobsite copy of the latest edition of the City Standards for the Contractor use.
    iii. One (1) jobsite copy of the SWPPP for use by the LRP, QSP, QSD, and Contractor.
    iv. Electronic copies of Improvement Plans and SWPPP.

69. Prior to APPROVAL OF A BUILDING PERMIT, the Applicant shall:

Pay all account balances and current City and American Canyon Fire District fees (Mitigation & Capacity) based on the rates in effect at the time of permit issuance. These fees include but may not be limited to the following: Traffic Mitigation, General Plan Update, Civic Facilities, Fire District, Water Capacity, Wastewater Capacity, Zero Water Footprint Mitigation and Affordable Housing Nexus.

70. A. Prior to issuance of the first building permit, the Applicant shall enter into a Recorded a Transportation Demand Management (TDM) Program Agreement (“TDM Agreement”) that ensures the cumulative Project trip generation does not exceed the Giovannoni Logistics Center Final EIR (SCH#

2021010104) Trip Generation assumptions. The TDM Agreement shall encompass the entire Giovannoni Logistics Center Project.

B. The TDM Agreement shall include a financial guarantee satisfactory to the City. The City shall deem the TDM program to be effective if the monitoring results indicate that AM peak-hour volumes are no more than 240 vehicles and PM peak-hour volumes are no more than 264 vehicles.

C. The TDM program shall be implemented at the applicant's cost, with no cost to the City, regardless of the eventual mix of uses and shall at a minimum include a permanent vehicle counting station at each public access point. The TDM program shall include a requirement to start and end workday shifts during off-peak hours (i.e., not between 7:00 a.m. to 9:00 a.m. or 3:00 p.m. to 6:00 p.m.).

In addition to requiring off-peak work day shift changes, additional examples of measures that may be considered as part of an effective TDM program include but are not limited to the following:

- Implement shuttle service to key employment centers or park-and-ride lots in the area for those employees whose workday shift start during peak hours.
- Car-share program
- Shuttles to regional transit
- Transit subsidies
- Carpool/vanpool subsidies
- Employer-owned/sponsored vanpools
- Flex-time and telecommute programs
- Use of rail to transport employees and/or the delivery of goods

D. The Applicant shall retain a transportation planning/engineering consultant to analyze the effectiveness of the TDM program in a written report. The TDM Report will include data collected from the permanent vehicle counting station and a determination of employee commute methods, which shall be informed by surveying all employees working at the site. The TDM Report shall be submitted to the City on a periodic on-going basis and it shall form the basis of on-going determinations by the City as to the effectiveness of the TDM program. So long as the City deems the TDM program effective (i.e. when monitoring results indicate that AM peak-hour volumes are no more than 240 vehicles and PM peak-hour volumes are no more than 264 vehicles). At any time the City determines the Project exceeds the Giovannoni Logistics Center Final EIR (SCH# 2021010104) Trip Generation assumptions, the additional traffic impact shall be mitigated by Paragraph B.

E. If at any point the City determines the TDM program established as part of Paragraph A through D is not effective to reduce peak-hour traffic to within the TDM thresholds (240 vehicles during the AM peak hour and 264 vehicles during the PM peak hour), the Applicant shall pay an additional amount for each and every peak-hour trip that is recorded by the counting device that exceeds the TDM threshold, equal to the latest adopted Traffic Impact Fee ("TIF") program in effect at the time. The "on-going TIF" paid pursuant to this condition of approval is in addition to the "one-time TIF" paid at the time of issuance of the first building permit.

71. Prior to OCCUPANCY OF THE BUILDING, the Applicant shall:

    a. Restore all adjacent off-site road surfaces to pre-project conditions.

    b. Submit a certification by the Geotechnical Engineer of Record that all the work has been completed in substantial conformance with the recommendations in Soils Investigation/Geotechnical Report.

c. Provide a mylar and digital copy of the Improvement Plans that include all as-built or field changes, in digital (.pdf) and AutoCAD (.dwg) format, compatible with the City's current version, and tied to the City's coordinate system.

d. Provide a letter stating that all of the Developer's Conditions of Approval have been met.

e. Provide a letter from the Civil Engineer of Record certifying that all the site improvements were constructed and inspected in substantial conformance with the approved plans and City Standards.

f. Enter and record a post-construction Stormwater Operations and Maintenance Agreement with the City.

Mitigation Measures

72. MM AES-3: Prior to issuance of building permits for the proposed project, the project applicant shall prepare and submit a photometric plan to the City of American Canyon for review and approval which demonstrates that all exterior light fixtures would be directed downward or employ full cut-off fixtures to minimize light spillage and avoid interference with aviation operations at the Napa County Airport. The approved plan shall be incorporated into the proposed project.

73. MM AIR-2a: The following Best Management Practices (BMPs), as recommended by the Bay Area Air Quality Management District (BAAQMD), shall be included in the design of the project and implemented during construction:

- All active construction areas shall be watered at least two times per day.
- All exposed non-paved surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and access roads) shall be watered at least three times per day and/or non-toxic soil stabilizers shall be applied to exposed non-paved surfaces.
- All haul trucks transporting soil, sand, or other loose material off-site shall be covered and/or shall maintain at least 2 feet of freeboard.
- All visible mud or dirt tracked out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
- All vehicle speeds on unpaved roads shall be limited to 15 miles per hour. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California Airborne Toxics Control Measure (ATCM) Title 13, Section 2485 of California Code of Regulations). Clear signage regarding idling restrictions shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.
- The prime construction contractor shall post a publicly visible sign with the telephone number and person to contact regarding dust complaints. The City and the construction contractor shall take corrective action within 48 hours. The BAAQMD's phone number shall also be visible to ensure compliance with applicable regulations.

74. MM AIR-2b: Prior to the issuance of grading or building permits, the project applicant shall provide the City with documentation demonstrating the use of “Low-VOC” architectural coatings during the proposed project's construction. “Low-VOC” architectural coatings used during project construction shall not exceed 50 grams of reactive organic gases (ROG) or volatile organic compounds (VOC) per liter of product.

75. MM AIR-2c: Prior to issuing any certificate of occupancy for the proposed project, the project applicant shall provide the City with documentation demonstrating the use of “Low-VOC” architectural coatings and electric landscaping equipment during the operation of the proposed project. “Low-VOC” architectural coatings used during project operation shall not exceed 10 grams of reactive organic gases (ROG) or volatile organic compounds (VOC) per liter of product. Landscaping equipment referred to in this requirement shall include lawnmowers, leaf blowers, and chainsaws.

76. MM AIR-2d: Prior to issuing the certificate of occupancy for the proposed project, the project applicant shall provide the City with documentation demonstrating the use of a truck fleet that meets or exceeds model year 2014 for all heavy- duty trucks during operation of the proposed project. If the project applicant does not own the truck fleet that would be used during operation of the proposed project, the project applicant shall provide the City with documentation from the truck fleet owner or operator demonstrating that trucks utilized for operation of the proposed project will meet or exceed model year 2014. If any change occurs where a new truck fleet is utilized during operation of the proposed project, the project applicant shall provide the City with documentation demonstrating that the new truck fleet meets or exceeds this requirement.

    To monitor and ensure that trucks that meet a model year of 2014 or newer are used for the proposed project, the fleet operator shall maintain records of all trucks and equipment associated with the proposed project’s operation and make these records available to the City upon request. Alternatively, the City may require periodic reporting and provision of written records by operators and conduct regular inspections of the records to the maximum extent feasible and practicable.

77. MM AIR-2e: Prior to the issuance of the certificate of occupancy for each building with dock doors, signage shall be posted identifying idling restrictions and contact information to report violations to the building manager.

78. MM AIR-2f: Prior to the issuance of the certificate of occupancy for each building with a separate end user, the City shall confirm that the end user has prepared a Transportation Demand Management Plan (TDM Plan). The TDM Plan shall be prepared by a qualified transportation consultant and identify strategies to reduce single-occupant vehicle trips. Examples of TDM strategies may include but are not limited to:

    - Ridesharing/Ride Matching
    - Vanpools
    - Transit subsidies
    - Preferential parking for rideshare or vanpool vehicles
    - Employee lockers
    - Secure bicycle parking
    - Employee locker rooms
    - Provide TDM information in employee breakroom

79. MM AIR-2g: Prior to the issuance of the certificate of occupancy, as a part of future lease agreements, the project proponent shall provide all future tenants at the project site information on available California Air Resources Board (ARB) and Bay Area Air Quality Management District (BAAQMD)

incentive programs, such as the Carl Moyer Program and the Voucher Incentive Program, that support upgrading truck fleets to clean air technology equipment.

80. MM BIO-1a: Pre-construction surveys for Swainson's hawk shall be conducted in the project site vicinity prior to initiation of project construction activities and each year following initiation of construction if project activities are delayed or discontinued for 7 or more days prior to the first required survey period (March 20 to April 5), and are scheduled to recommence construction activities during the second survey period but before August 1. These pre-construction surveys shall include investigation of all potential nesting trees within a half-mile radius around all project activities and shall be completed for at least two survey periods immediately prior to commencement of project construction. Surveys shall be conducted in accordance with CDFW's "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" (CDFW 2000) to maximize the potential for locating nesting Swainson's hawk and reduce the potential for nest failures due to project activities and/or disturbances.

    If no nesting Swainson's hawk are found during the first or second required survey period starting March 20 and extending to April 20, then project construction may commence. If during the third surveys (June 10 to July 30) Swainson's hawk are found to be nesting in the project vicinity and construction has commenced, it shall be assumed the Swainson's hawk commenced nesting and thus the Swainson's hawk are habituated to the ambient level of noise and disturbance emanating from the project site.

    If Swainson's hawk are found to be nesting within 0.25 mile of the project site, a non-disturbance buffer shall be established to keep all construction activities a minimum of 0.25 mile from the nest site. The CDFW shall be consulted regarding the adequacy of the buffer established by the qualified Raptor Biologist. At that time the necessity for acquiring a Fish and Game Section 2081 Incidental Take Permit (ITP) authorization would be determined. An ITP authorization shall be required if there were a valid concern the project activities would result in the "take" of an adult Swainson's hawk, eggs, or nestlings.

81. Surveys shall be conducted by a qualified Raptor Biologist with at least a minimum of a 4- year college degree in wildlife biology or related environmental science, familiarity with Swainson's hawk and its local ecology, and 2 years of experience surveying for and detecting Swainson's hawk pursuant to "Recommended timing and methodology for Swainson's Hawk Nesting Surveys in California's Central Valley" survey protocol. No disturbance such as construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is complete based on monitoring of the active nest by a qualified Biologist.

82. MM BIO-1b: No more than 30 days prior to the first ground disturbance activity, pre-construction golden eagle nesting surveys shall be conducted in the project vicinity by a qualified Raptor Biologist. The qualified Raptor Biologist shall have a minimum of a 4- year college degree in wildlife biology or related environmental science, and at least 2 years of experience surveying for and detecting nesting golden eagles and its local ecology. Preconstruction surveys shall include investigation of all potential nesting trees within a survey area determined by the qualified Raptor Biologist, but no less than a 0.5-mile radius around all project activities. If active golden eagle nests are identified within any trees within the survey areas a 1.0-mile radius of the project site, a qualified Raptor Biologist shall establish a protection buffer of approximately 1.0 mile that is adequate to ensure noise or activity from the proposed project would not cause nest disturbance of young or adult bird mortality. Buffer zones may vary in size as some golden eagles are more acclimated to disturbance than others. Size of buffer zone

may be modified by the qualified Raptor Biologist considering the type of construction activity that may occur and the behavioral factors and extent that golden eagle may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young golden eagles have fledged or that the nesting cycle is complete based on monitoring of the active nest by a qualified Biologist.

83. MM BIO-1c: Prior to ground disturbance, a pre-construction nesting survey shall be conducted for northern harrier and short-eared owl by a qualified Raptor Biologist if construction is scheduled during the nesting season (February 1 through September 1). The qualified Raptor Biologist shall have at least 2 years of experience surveying for and detecting nesting northern harrier and short-eared owl. To determine whether northern harrier or short-eared owl is nesting on-site, a qualified Raptor Biologist(s) shall conduct walking transects through the project site grassland habitat searching for nests and minimum 500-foot radius from the project site. Where the survey area encroaches onto private property not accessible to the public (e.g., fenced in commercial property, residential backyard, etc., the qualified Biologist shall either contact the property owner for permission to physically access the property or conduct a visual survey of adjacent areas by scanning with binoculars or a spotting scope. An active northern harrier or short-eared owl nest must be protected by implementing a minimum 500-foot radius buffer zone around the nest marked with orange construction fencing. If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Size of buffer zone could be modified increased considering the type of construction activity that may occur, physical barriers between the construction site and active nest, and the behavioral factors and extent that northern harrier or short-eared owl may have acclimated to disturbance. No construction or earthmoving activity shall occur within the established buffer zone until it is determined by a qualified Raptor Biologist that the young have fledged or that the nesting cycle is otherwise determined to be complete based on monitoring of the active nest by a qualified Raptor Biologist.

84. MM BIO-1d: Prior to any ground disturbance, pre- construction surveys for burrowing owl shall be conducted within a minimum of 150 meters of the project site. Where the survey area encroaches onto private property not accessible to the public (e.g., fenced in commercial property, residential backyard, etc.), the qualified Biologist shall either contact the property owner for permission to physically access the property or conduct a visual survey of adjacent areas by scanning with binoculars or a spotting scope. The pre- construction surveys shall be conducted within 2 weeks prior to the onset of any ground-disturbing activities. Surveys shall be conducted by a qualified Biologist following California Department of Fish and Wildlife (CDFW) 2012 staff report survey methods and Biologist qualifications to establish the status of burrowing owl on the project site.

    a. If burrowing owl are found to occupy the project site during the nonbreeding season (September 1 to January 31), occupied burrows shall be avoided by establishing a no- disturbance buffer zone a minimum of 100 feet around the burrow. Buffers may be adjusted to address site-specific conditions using the impact assessment approach described in the CDFW 2012 staff report. If a qualified Raptor Biologist determines the location of an occupied burrow/s may be impacted even with a 100-foot buffer, or the burrow(s) are in a location(s) on the project site where a buffer cannot be established without preventing the proposed project from moving forward, then a passive relocation effort may be instituted to relocate the individual(s) out of harm's way pursuant to a Burrowing Owl Exclusion Plan prepared in accordance with the CDFW 2012 staff report.

    b. If burrowing owl are found to be present during the breeding season (February 1 to August 31), the proposed project ground-disturbing activities shall follow the CDFW 2012 staff report

recommended avoidance protocol whereby occupied burrows shall be avoided with a no-disturbance buffer.

c. If burrowing owls are ultimately found on the site and burrow eviction/ relocation of burrowing owls during the non-nesting season is a selected strategy to move forward with the project without direct impacts to burrowing owl individuals, the applicant shall coordinate this effort with CDFW and provide habitat mitigation consistent with the 2012 CDFW Staff Report on burrowing owl.

85. MM BIO-2: Prior to issuance of grading permits. To offset the loss of the 0.496 acre of seasonal wetland impacts from Phase 1, and 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools from Phase 2, and to ensure there is no-net loss of wetland area, the applicant shall establish/create 0.992 acre of palustrine emergent wetlands (2:1 ratio) for Phase 1 concurrent with project construction, and 2.57 acres of seasonal wetlands (1:1 ratio) and 1.13 acres of vernal pool wetlands (1:1 ratio) for Phase 2 at least 1 year prior to the start of Phase 2 construction, on the 45-acre Wetland Preserve. The established/created wetlands will be constructed a minimum of 20-feet from the Napa Logistics Park sewer and recycled water pipeline easement or unpaved access road associated with the easement. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland.

86. MM BIO-3a: Prior to issuance of the Phase 1 grading permit, the project applicant shall apply for and obtain a Nationwide Permit from the San Francisco District of the United States Army Corps of Engineers (USACE) for discharge within 0.004 acre of wetlands/waters of the United States under Clean Water Act Section 404 jurisdiction. For the USACE permit to be valid, the applicant shall apply for and obtain the accompanying Section 401 Water Quality Certification from the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB). The applicant shall apply for and obtain a separate Waiver of Waste Discharge Requirements from the San Francisco Bay RWQCB for impacts to 0.496 acre of wetlands/waters of the State. To offset the loss of 0.496 acre of permanent wetland impacts and to ensure there is no- net loss of wetland area, the applicant shall establish/create 0.992 acre of wetlands (2:1 ratio), prior to or concurrent with the start of construction, on the 45-acre Wetland Preserve. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland. The applicant shall implement the terms of the approved permit(s).

87. MM BIO-3c: Prior to issuance of the Phase 1 grading permit, a Wetland Mitigation and Monitoring Plan shall be prepared and submitted to the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB) for review as part of the process for obtaining a permit from the agency. The Wetland Mitigation and Monitoring Plan shall address the loss of 0.496 acre of wetlands impact due to Phase 1 of the proposed project as well as the potential loss of approximately 3.7 acres of wetlands that as part of Phase 2.

    The Wetland Mitigation and Monitoring Plan shall include in irrevocable instrument (e.g., deed restriction or conservation easements) that shall restrict use of both the 0.992 acre of created wetlands for Phase 1 as well as approximately 3.7 acres of additional wetlands created for Phase 2. The Wetland Mitigation and Monitoring Plan shall also include a long-term endowment that would be fully funded by the proposed project to manage approximately 45-acre open space preserve and created wetlands in perpetuity. If additional wetland mitigation lands are required to compensate for wetland impacts associated with Phase 2, wetlands shall be established/created at a minimum 1:1 ratio (1 acre established/created for every acre permanently impacted) on appropriate mitigation land, approved by the RWQCB and United States Army Corps of Engineers (USACE), within the Phase

2 project site's Hydraulic Unit Code (HUC) 10 watershed. The established/created wetlands shall be monitored for a minimum of 5 years to ensure the wetlands meet the USACE's and RWQCB's definition of a wetland. The applicant shall implement the terms of the approved permit(s).

88. MM BIO-3d: Prior to issuance of the Phase 1 and Phase 2 grading permit, a Wetland Mitigation and Monitoring Plan shall be submitted to the San Francisco Bay Regional Water Quality Control Board (San Francisco Bay RWQCB) for review as part of the process for obtaining a permit from the agency. The Wetland Mitigation and Monitoring Plan shall be prepared in accordance with the Subpart J– Compensatory Mitigation for Losses of Aquatic Resources outlined in the California State Water Resources Control Board (State Water Board) Procedures, and in accordance with the State Water Board Implementation Guidance dated April 2020, and in accordance with the United States Army Corps of Engineers (USACE) Compensatory Mitigation Rule (33 Code of Federal Regulations Part 332).

89. The basic objective of the Wetland Mitigation and Monitoring Plan is to ensure that project wetland impacts, and compensatory mitigation proposed to offset the wetland impacts, shall provide a no-net-loss of area of wetlands, and wetlands established/created shall be in-kind to the wetlands impacted. In summary, the Wetland Mitigation and Monitoring Plan shall at a minimum:

    a. Preserve 7.58 acres of existing seasonal wetlands and 0.13 acre of vernal pools within the 45-acre Wetland Preserve.

    b. Establish within the Wetland Preserve approximately 0.992 acre of seasonal wetlands in advance of or concurrent with implementation of Phase 1 impacts to 0.496 acre of palustrine emergent wetlands at a 2:1 ratio.

    c. Establish within the Wetland Preserve approximately 2.57 acres of seasonal wetlands and 1.13 acres of vernal pools in advance of implementation of future Phase 2, assuming Phase 2 is built out, to address the potential maximum losses of approximately 3.7 acres of wetlands that may occur.

    d. Provide financial assurances to ensure a high level of confidence that the compensatory mitigation shall be successfully completed, in accordance with applicable performance standards.

    e. Design ecological performance standards to assess whether the Wetland Mitigation and Monitoring Plan is achieving the overall objectives, so that it can be objectively evaluated to determine whether it is developing into the desired resource type (vernal pool, seasonal wetland e.g.), and attaining any other applicable metrics such as acres, number of native plant species, water saturation and/or ponding depth etc.

    f. Monitor the site for a duration necessary to determine whether the Wetland Mitigation and Monitoring Plan is meeting the performance standards. Established palustrine emergent wetlands and vernal pools typically develop quickly on soils with clay restrictive horizon. The 45-acre Wetland Preserve does have a clay restrictive layer approximately 8–18 inches below the surface therefore a 5- year monitoring period would be sufficient to determine whether performance standards are met. This monitoring period may be extended if performance standards are not met due to how the wetlands were constructed or natural events such as severe droughts.

    g. Protect the approximately 45-acre Wetland Preserve in perpetuity using a conservation easement, and provide an endowment sufficient to fund the Long-Term Management Plan.

    h. An overall assessment of the condition of the wetlands that shall be permanently impacted by the proposed project shall be conducted using the California Rapid Assessment Method (CRAM) for depressional wetlands, or a hybrid approach based on CRAM. Each similar wetland type that may be impacted shall be assessed to describe the floristic community and record the native and non-

native dominant plants within the vernal pool and palustrine emergent wetlands. Physical structure such as topographic complexity and physical features that may provide habitat for aquatic species (e.g., boulders, woody debris etc.) shall be recorded and used to design the created/established wetlands. The purpose of this assessment is to ensure the design of the wetlands shall provide habitat that is similar to the wetlands being impacted to ensure the impacted wetlands are mitigated in-kind.

Performance Standards

Performance Standards shall include at a minimum the following:

Years 1, 2, 3, 4 and 5 Performance Standards for Wetland Hydrology

Each year wetland hydrology shall be measured during the winter when surface and/or subsurface hydrology would be observable. A minimum of 1 data point shall be taken in each of the established/created wetlands. In addition, wetland hydrologic indicators shall be recorded each spring during the vegetation monitoring period.

Year 1:

Performance standard would be met for Year 1-5 if:

- The created wetlands remain inundated to a minimum depth of 0.5 inch or greater for at least 7 days and/or saturated for at least 14 days and/or at least one primary or two secondary wetland hydrology indicators listed in the *Arid West Region Wetland Determination Data Forms* are recorded.

Contingency Measures:

If the annual performance standard is not being met for any given monitoring year the Permittee shall prepare an analysis of the cause(s) of failure and, if determined necessary, implement remedial action. If the Plan Area has not met the performance standard, the Permittee's maintenance and monitoring obligations shall continue until the RWQCB and CDFW give final project confirmation.

Remedial action may include re-grading to achieve wetland hydrology, which would improve hydric soil formation.

Years 1, 2, 3, 4, and 5 Performance Standards for Increase in Colonization of Wetland Vegetation

Each year during the spring or early summer wetland vegetation cover shall be measured by conducting a site visit and recording absolute cover and dominant plant species observed within the wetland buffer area. A minimum of 1 data point shall be taken in each of the established/created wetlands. The colonization of wetland vegetation shall be measured by determining overall absolute plant cover values each year. This shall be accomplished by measuring absolute cover values within a 5-foot radius sample plot every 50 feet along a transect through each established/created wetland. In addition, to monitor for invasive plant species

within the uplands which are not detected in the baseline survey, a minimum of three 5-foot radius sample plots on the east side and three on the west side will be placed at random upland locations along a linear transect east to west within the Wetland Preserve. Performance Standards for each monitoring year are listed below.

Year 1:

Performance standard would be met for Year 1 if:

- At least one hydrophytic plant species colonizes the established/created seasonal wetlands and vernal pools; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 5 percent or greater.

Year 2:

Performance standard would be met for Year 2 if:

- At least one hydrophytic plant species colonizes the established/created seasonal wetlands and vernal pools; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 10 percent or greater.

Year 3:

Performance standard would be met for Year 3 if:

- At least two hydrophytic plant species colonizes the established/created seasonal wetlands;
- At least two native hydrophytic plant species colonizes the established/created vernal pools and at least one is a vernal pool habitat indicator species; and
- The average absolute cover of wetland vegetation within an established/created seasonal wetlands and vernal pools is 20 percent or greater and comprised of native and naturalized species.

Year 4:

Performance standard would be met for Year 4 if:

- At least two hydrophytic plant species colonize the established/created seasonal wetlands.
- At least two native hydrophytic plant species colonizes the established/created vernal pools and at least one is a vernal pool habitat indicator species.
- The average absolute cover of wetland vegetation within an established/created seasonal wetland and vernal pool is 30 percent or greater.

- To meet the wetland performance standard invasive plant species within the wetlands shall not comprise greater than 5 percent of the total absolute cover. To meet the upland performance standard, invasive plant species, which currently are not supported in the uplands, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating.

Year 5:

Performance standard would be met for Year 5 if:

- At least two hydrophytic plant species documented during the CRAM assessment for the palustrine emergent wetlands impacted on the Phase 1 project site colonize the established/created seasonal wetlands.
- At least two native vernal pool habitat indicator species documented during the CRAM assessment for the vernal pool on the Phase 2 project site colonizes the established/created vernal pools.
- The average absolute cover of wetland vegetation within the established/created seasonal wetland (non-vernal pool wetlands) is 40 percent or greater; and the average absolute cover of wetland vegetation within the established/created vernal pools is 40 percent or greater of which greater than 50 percent of the vegetation cover consists of two or more dominate native vernal pool habitat indicator plants.
- To meet the wetland performance standard invasive plant species within the wetlands shall not comprise greater than 5 percent of the total absolute cover. To meet the upland performance standard, invasive plant species, which currently are not supported in the uplands, shall not comprise greater than 5 percent of the total absolute cover. Invasive plants shall be defined as species rated as "High" by California Invasive Plant Council (Cal-IPC) and species on the "Alert" or "Watch" list with a High rating.

Contingency Measures:

If the annual performance standard is not being met for any given monitoring year the Permittee shall prepare an analysis of the cause(s) of failure and, if determined necessary, implement remedial action. Remedial action may include hydroseeding with native species, or addition of supplemental topsoil or mulch to promote growth.

Year 5 No-Net-Loss Performance Standard for Phase 1 Impacts

Performance standard would be met for Year 5 when;

- A wetland delineation is performed and verified by the USACE and confirms a minimum of 0.992 acre of wetlands have been established/created within the Wetland Preserve.

Year 5 No-Net-Loss Performance Standard for Phase 2 Impacts

The Phase 2 no-net-loss performance standard would be measured when an application for the Phase 2 project is submitted to the RWQCB and USACE, and the Phase 2 project is approved. Once Phase 2 has been approved by the RWQCB and USACE, this performance standard may be modified depending on the level of wetland impacts authorized by the RWQCB and USACE, meaning this performance standard may decrease if the wetlands impacted for Phase 1 are less than 3.7 acres.

Performance standard would be met for Year 5 when;

- A wetland delineation is performed and verified by the USACE and confirms a minimum of 2.57 acres of seasonal wetland and 1.13 acres of vernal pools have been established/created within the Wetland Preserve.

Year 5 Long-Term Protection and Long-Term Funding

Performance standard would be met for Year 5 once:

- The Wetland Preserve has been placed under a conservation easement; and

  A long-term financing mechanism (e.g., non-wasting endowment, trusts, contractual arrangement etc.) to fund implementation of the long-term management of the Wetland Preserve has been secured.

90. MM BIO-4: If construction occurs during the breeding season of migratory and resident birds (February 1 to August 31), a qualified Biologist shall conduct a pre-construction breeding bird survey in areas of suitable habitat within 7 days prior to the onset of construction activity. Surveys shall be conducted within the project footprint and 100 feet from the construction limits for nesting passerines, 250 feet from the construction limits for nesting accipiters and a minimum of 500 feet from the construction limits for nesting raptors. If the survey area is found to be absent of nesting birds, no further mitigation would be required. However, if construction activities are delayed by more than 7 days, an additional nesting bird survey shall be performed.

    If bird nests are found, appropriate buffer zones shall be established around all active nests to protect nesting adults and their young from direct or indirect impacts related to project construction disturbance. Size of buffer zones shall be determined per recommendations of the qualified Biologist based on site conditions and species involved, but typical buffers around active nests are 500 feet for large raptors such as buteos, 250 feet for small raptors such as accipiters, and 100 feet for passerines (songbirds) and other bird species. For special status species, a 0.25-mile shall be established for nesting Swainson's hawk; 1.0 mile for golden eagle; and a 500-foot buffer for nesting tricolored blackbirds. If an active nest is located outside of the project site, the buffer shall be extended onto the project site and demarcated where it intersects the project site. Buffer zones shall be maintained until it can be documented that either the nest has failed, or the young have fledged.

91. MM CUL-2a: No ground disturbance shall take place within 100 feet of informal archaeological resource 483A-001. The resource shall be preserved in place.

92. MM CUL-2b: An Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology shall be present on-site during all earth disturbing activities. If prehistoric or historic-period archaeological resources are encountered, all construction activities within 100 feet of the find shall halt and the City of American Canyon shall be notified. Prehistoric archaeological materials may include obsidian and chert flaked stone tools (e.g., projectile points, knives, scrapers)

or toolmaking debris; culturally darkened soil ("midden") containing heat-affected rocks, artifacts, or shellfish remains; and stone milling equipment (e.g., mortars, pestles, hand stones, or milling slabs); and battered stone tools, such as hammerstones and pitted stones. Historic- period materials might include stone, concrete, or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse.

The Archaeologist shall inspect the findings within 24 hours of discovery. If it is determined the project could damage a historical resource or a unique archaeological resource (as defined pursuant to the CEQA Guidelines), mitigation shall be implemented in accordance with Public Resources Code Section 21083.2 and Section 15126.4 of the CEQA Guidelines, with a preference for preservation in place. Consistent with Section 15126.4(b)(3), this may be accomplished through planning construction to avoid the resource; incorporating the resource within open space; capping and covering the resource; or deeding the site into a permanent conservation easement. If avoidance is not feasible, a qualified Archaeologist shall prepare and implement a detailed treatment plan in consultation with the City of American Canyon. Treatment of unique archaeological resources shall follow the applicable requirements of Public Resources Code Section 21083.2. Treatment for most resources would consist of (but would not be limited to) sample excavation, artifact collection, and site documentation, with the aim to target the recovery of important scientific data contained in the portion(s) of the significant resource to be impacted by the proposed project. The treatment plan shall include provisions for analysis of data in a regional context, reporting of results within a timely manner, curation of artifacts and data at an approved facility, and dissemination of reports to local and State repositories, libraries, and interested professionals.

93. MM CUL-3: In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken:

    a. There shall be no further excavation or disturbance within 100 feet of the remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains, and any associated grave goods as provided in Public Resource Code Section 5097.98.

    b. Where the following conditions occur, the landowner or authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the MLD or on the project site in a location not subject to further subsurface disturbance:

        - The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the commission.
        - The descendant identified fails to make a recommendation.
        - The landowner or authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner.

        Additionally, California Public Resources Code Section 15064.5 requires the following relative to Native American Remains:

i. When an initial study identifies the existence of, or the probable likelihood of, Native American Remains within a project, a lead agency shall work with the appropriate Native Americans as identified by the NAHC as provided in Public Resources Code Section 5097.98. The applicant may each develop a plan with respect to their respective individual development proposals for treating or disposing of, with appropriate dignity, the human remains, and any items associated with Native American Burials with the appropriate Native Americans as identified by the NAHC.

94. MM CUL-4: A Tribal Monitor representing the Yocha Dehe Wintun Nation shall be present during all project-related ground disturbance. Additionally, the Yocha Dehe Wintun Nation's Treatment Protocol (Protocol) shall be followed with respect to Tribal Cultural Resources (TCRs). The purpose of the protocol is to formalize procedures for the treatment of Native American human remains, grave goods, ceremonial items, and items of cultural patrimony, if any are found in conjunction with development, including archaeological studies, excavation, geotechnical investigations, grading, and any ground-disturbing activity. This Protocol also formalizes procedures for Tribal Monitoring during archaeological studies, grading, and ground-disturbing activities.

    a. Cultural Affiliation: The Yocha Dehe Wintun Nation (Tribe) traditionally occupied lands in Yolo, Solano, Lake, Colusa, and Napa Counties. The Tribe has designated its Cultural Resources Committee (Committee) to act on the Tribe's behalf with respect to the provisions of this Protocol. Any human remains which are found in conjunction with projects on lands culturally affiliated with the Tribe shall be treated in accordance with Section III of this Protocol. Any other cultural resources shall be treated in accordance with Section IV of this Protocol.

    b. Inadvertent Discovery of Native American Human Remains: Whenever Native American human remains are found during the course of a project, the determination of Most Likely Descendant (MLD) under California Public Resources Code Section 5097.98 will be made by the Native American Heritage Commission (NAHC) upon notification to the NAHC of the discovery of said remains at a project site. If the location of the site and the history and prehistory of the area is culturally affiliated with the Tribe, the NAHC contacts the Tribe; a Tribal member will be designated by the Tribe to consult with the landowner and/or project proponents.

    Should the NAHC determine that a member of an Indian tribe other than Yocha Dehe Wintun Nation is the MLD, and the Tribe agrees with this determination, the terms of this Protocol relating to the treatment of such Native American human remains shall not be applicable; however, that situation is very unlikely.

    c. Treatment of Native American Remains: In the event that Native American human remains are found during development of a project and the Tribe or a member of the Tribe is determined to be MLD pursuant to Section II of this Protocol, the following provisions shall apply. The Medical Examiner shall immediately be notified, ground-disturbing activities in that location shall cease and the Tribe shall be allowed, pursuant to California Public Resources Code Section 5097.98(a), to (1) inspect the site of the discovery and (2) make determinations as to how the human remains and grave goods shall be treated and disposed of with appropriate dignity. The Tribe shall complete its inspection and make its MLD recommendation within 48 hours of getting access to the site. The Tribe shall have the final determination as to the disposition and treatment of human remains and grave goods. Said determination may include avoidance of the human remains, reburial on-site, or reburial on tribal or other lands that will not be disturbed in the future. The Tribe may wish to rebury said human remains and grave goods or ceremonial and cultural items on or near the site of their discovery, in an area which will not be subject to future disturbances over a prolonged period of time. Reburial of human remains shall be accomplished in compliance with the California Public Resources Code Sections 5097.98(a) and (b). The term "human remains"

encompasses more than human bones because the Tribe's traditions call for the burial of associated cultural items with the deceased (funerary objects), and/or the ceremonial burning of Native American human remains, funerary objects, grave goods, and animals. Ashes, soils, and other remnants of these burning ceremonies, as well as associated funerary objects and unassociated funerary objects buried with or found near the Native American remains are to be treated in the same manner as bones or bone fragments that remain intact.

d. Non-Disclosure of Location of Reburials: Unless otherwise required by law, the site of any reburial of Native American human remains shall not be disclosed and will not be governed by public disclosure requirements of the California Public Records Act, California Government Code Section 6250 et seq. The Medical Examiner shall withhold public disclosure of information related to such reburial pursuant to the specific exemption set forth in California Government Code Section 6254(r). The Tribe will require that the location for reburial is recorded with the California Historic Resources Inventory System (CHRIS) on a form acceptable to the CHRIS center. The Tribe may also suggest the landowner enter into an agreement regarding the confidentiality of site information that will run with title on the property.

e. Treatment of Cultural Resources: Treatment of all cultural items, including ceremonial items and archaeological items will reflect the religious beliefs, customs, and practices of the Tribe. All cultural items, including ceremonial items and archaeological items, which may be found at a project site shall be turned over to the Tribe for appropriate treatment, unless ordered by a court or agency of competent jurisdiction. The project proponent shall waive any and all claims to ownership of Tribal ceremonial and cultural items, including archaeological items, which may be found on a project site in favor of the Tribe. If any intermediary, (for example, an Archaeologist retained by the project proponent) is necessary, said entity or individual shall not possess those items for longer than is reasonably necessary, as determined solely by the Tribe.

f. Inadvertent Discoveries: If additional significant sites or sites not identified as significant in a project environmental review process, but later determined to be significant, are located within a project impact area, such sites will be subjected to further archaeological and cultural significance evaluation by the project proponent, the Lead Agency, and the Tribe to determine whether additional mitigation measures are necessary to treat sites in a culturally appropriate manner consistent with CEQA requirements for mitigation of impacts to cultural resources. If there are human remains present that have been identified as Native American, all work will cease for a period of up to 30 days in accordance with Federal Law.

95. MM GEO-1b: Prior to the issuance of building permits for each Phase 1 and 2 structure, the project applicant shall submit a design-level Geotechnical Investigation to the City of American Canyon for review and approval. The investigation shall be prepared by a qualified engineer and identify grading and building practices necessary to achieve compliance with the latest adopted edition of the California Building Standards Code (CBC) geologic, soils, and seismic requirements, including abatement of expansive soil conditions. The report shall also determine the final design parameters for walls, foundations, foundation slabs, and surrounding related improvements (e.g., utilities roadways, parking lots, and sidewalks). The measures identified in the approved report shall be incorporated into the project plans and all applicable construction-related permits.

96. MM GEO-5: If potential fossils are discovered during project implementation, all earthwork or other types of ground disturbance within 100 feet of the find shall stop immediately until a qualified professional Paleontologist can assess the nature and importance of the find. Based on the scientific value or uniqueness of the find, the Paleontologist shall either record the find and recommend that the City of American Canyon allow work to continue or recommend salvage and recovery of the fossil.

The Paleontologist shall, if required, propose modifications to the stop-work radius based on the nature of the find, site geology, and the activities occurring on the site. If treatment and salvage is required, recommendations will be consistent with Society of Vertebrate Paleontology guidelines and currently accepted scientific practice. If required, treatment for fossil remains shall include preparation and recovery of fossil materials so that they can be housed in an appropriate museum or university collection, and, if required, shall also include preparation of a report for publication describing the finds.

97. MM GHG-1a: Prior to the issuance of any grading permits, the project applicant shall provide the City of American Canyon with documentation (e.g., site plans) demonstrating project construction will include the following construction Best Management Practices (BMPs):

    a. At least 15 percent of the construction fleet for each project phase shall be alternatively fueled or electric.

    b. At least 10 percent of building materials used for project construction shall be sourced from local suppliers.

    c. At least 65 percent of construction and demolition waste materials shall be recycled or reused.

    d. At least one contractor that has a business location in American Canyon shall be contracted for project construction.

    e. All construction contracts shall include language that requires all off-road equipment with a power rating below 19 kilowatts (e.g., plate compactors, pressure washers) using during construction be electrically powered.

    f. Architectural coatings used for project construction shall be "Low-VOC," containing no greater than 50 grams of volatile organic compounds (VOC) per liter of product.

    g. Project construction shall prohibit the use of generators and shall establish grid power connection to electrical equipment needs.

    h. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California Airborne Toxics Control Measure [ATCM] Title 13, Section 2485 of California Code of Regulations). Clear signage regarding idling restrictions shall be provided for construction workers at all access points.

    i. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified mechanic and determined to be running in proper condition prior to operation.

    j. The prime construction contractor shall post a publicly visible sign with their telephone number and contractor to contact. The construction contractor shall take corrective action within 48 hours. The BAAQMD's phone number shall also be identified and visible to ensure compliance with applicable regulations.

98. MM GHG-1b: Prior to the issuance of any building permits, the project applicant shall provide the City of American Canyon with documentation (e.g., site plans) demonstrating the proposed project is designed without the use of any natural gas -fueled appliances or natural gas plumbing.

99. MM GHG-1c: Prior to issuance of any building permits, the project applicant shall demonstrate to the satisfaction of the City of American Canyon (e.g., shown on-site plans), that the proposed buildings are designed and will be built to, at a minimum, the Tier 2 advanced energy efficiency requirements of the Nonresidential Voluntary Measures of the California Green Building Standards

Code, Division A5.2, Energy Efficiency, as outlined under Section A5.203.1.2.2.

100. MM GHG-1d: Prior to issuance of any building permits, the project applicant shall demonstrate to the satisfaction of the City of American Canyon (e.g., shown on-site plans), that the proposed parking areas for passenger automobiles and trucks are designed and will be built to accommodate electric vehicle (EV) charging stations. At a minimum, the parking shall be designed to accommodate a number of EV charging stations equal to the Tier 2 Nonresidential Voluntary Measures of the California Green Building Standards Code, Section A5.106.5.3.2.

101. MM GHG-1d: Prior to the issuance of any building permits, the project applicant shall demonstrate to the satisfaction of the City of American Canyon (e.g., shown on-site plans), that each loading dock is outfitted with at least one 240-volt outlet to accommodate truck and Transport Refrigeration Unit (TRU) charging and/or electrical power connection while trucks are loading and unloading goods.

102. MM GHG-1e: Prior to the issuance of any building permit for the proposed project, the project applicant shall provide the City with documentation (e.g., site plans) demonstrating to the City's satisfaction that the electricity demand will be supplied with 100 percent carbon-free electricity sources through the year 2045. As City decision maker, the City Council requires this mitigation measure be accomplished with on-site solar panel electricity.

103. MM HYD-1a: Prior to issuance of grading permits for the proposed project, the applicant shall submit to the City of American Canyon for review and approval a Storm Water Pollution Prevention Plan (SWPPP) in accordance with the requirements of the statewide Construction General Permit. The SWPPP shall be designed to address the following objectives: (1) all pollutants and their sources (e.g., runoff), including sources of sediment associated with construction, construction site erosion, and all other activities associated with construction activity, are controlled; (2) where not otherwise required to be under a Regional Water Quality Control Board (RWQCB) permit, all non-stormwater discharges are identified and either eliminated, controlled, or treated; (3) site Best Management Practices (BMPs) (e.g., silt fencing, street sweeping, routine inspection, etc.) are effective and result in the reduction or elimination of pollutants in stormwater discharges and authorized non-stormwater discharges from construction activity; and (4) stabilization BMPs are installed to reduce or eliminate pollutants after construction are completed. The SWPPP shall be prepared by a qualified SWPPP developer. The SWPPP shall include the minimum BMPs required for the identified Risk Level. BMP implementation shall be consistent with the BMP requirements in the most recent version of the California Stormwater Quality Association (CASQA) Stormwater Best Management Handbook–Construction or the California Department of Transportation (Caltrans) Stormwater Quality Handbook Construction Site BMPs Manual. The SWPPP shall be implemented during construction.

104. MM HYD-1b: Prior to the issuance of building permits, the project applicant shall submit a Stormwater Control Plan to the City of American Canyon for review and approval. The plan shall be developed using the California Stormwater Quality Association (CASQA) "New Development and Redevelopment Handbook" and include applicable provisions of Section C.3 of the San Francisco Bay Regional Water Quality Control Board (RWQCB) Municipal Regional Permit (Order No. R2-2015-0049, NPDES Permit No. CAS612008 (or more recent permit). The Stormwater Control Plan shall identify pollution prevention measures and Best Management Practices (BMPs) to control stormwater pollution from operational activities and facilities and provide maintenance in perpetuity. The Stormwater Control Plan shall include Low Impact Development (LID) design concepts, as well as concepts that accomplish a "first flush" objective that remove contaminants

from the first 2 inches of stormwater before it enters area waterways. The project applicant shall also prepare and submit an Operations and Maintenance Agreement to the City, identifying procedures to ensure stormwater quality control measures work properly during operations.

105. MM LU-3: Prior to issuance of grading permits, the applicant shall retain a qualified Biologist to assess potential wildlife hazards to aviation. The assessment shall evaluate the characteristics of the emergent wetlands, drainages, other potential wildlife attractant features (i.e., ponded water) located within the open space area and identify management practices (e.g., storm drainage, vegetation, etc.) to prevent the creation of attractants for large flocks or birds or other wildlife species that may present safety hazards to aviation activities. As part of the assessment, the applicant shall consult with Napa County Airport and Napa County Airport Land Use Commission (ALUC) representatives, as appropriate, regarding findings and recommendations. The applicant shall submit a report to the City of American Canyon prepared by a qualified Biologist that confirms the wildlife hazard assessment's findings and recommendations are incorporated into the design of the open space preserve.

106. MM NOI-1: Implementation of the following multi-part mitigation measure is required to reduce potential construction period noise impacts:

a. The construction contractor shall ensure that all equipment driven by internal combustion engines shall be equipped with mufflers that are in good condition and appropriate for the equipment.

b. The construction contractor shall ensure that unnecessary idling of internal combustion engines (i.e., idling in excess of 5 minutes) is prohibited.

c. The construction contractor shall utilize "quiet" models of air compressors and other stationary noise sources where technology exists.

d. At all times during project grading and construction, the construction contractor shall ensure that stationary noise- generating equipment shall be located as far as practicable from sensitive receptors and placed so that emitted noise is directed away from adjacent residences.

e. The construction contractor shall ensure that the construction staging areas shall be located to create the greatest feasible distance between the staging area and noise-sensitive receptors nearest the project site.

107. MM NOI-1: The construction contractor shall ensure that all on-site construction activities, including the operation of any tools or equipment used in construction, drilling, repair, alteration, grading, or demolition work, are limited to between the daytime hours of 7:00 a.m. to 7:00 p.m. Monday through Saturday. No construction shall be permitted on Sundays and federal holidays.

PASSED, APPROVED and **ADOPTED** at a regularly scheduled meeting of the City Council of the City of American Canyon held on the 21st day of March, 2023, by the following vote:

AYES:

RESOLUTION NO. 2022-29

A RESOLUTION OF THE BOARD OF DIRECTORS OF THE AMERICAN CANYON FIRE PROTECTION DISTRICT APPROVING THE MEMORANDUM OF UNDERSANDING BETWEEN THE AMERICAN CANYON FIRE PROTECTION DISTRICT AND BUZZ OATES LLC.

WHEREAS, the American Canyon Fire Protection District ("District") provides fire protection services to the City of American Canyon ("City"); and

WHEREAS, the commitments shall only take effect in the event the City approves the Giovannoni Logistics Center ("Project") and Buzz Oats LLC ("Applicant") or assignee build and implements the Project; and

WHEREAS, applicant is seeking entitlements from the City of American Canyon for the Project which is anticipated to be an entirely non-residential development project (with up to approximately 2.4 million square feet of high-cube warehouse building space; and

WHEREAS, if approved, the Project will include a 68.8-acre Phase 1, an 85.9-acre Phase 2, and a 44.8-acre open space preserve; and

WHEREAS, the Project will require fire protection services; and

WHEREAS, a fiscal impact analysis of the Project was conducted by Economic & Planning Systems, Inc (EPS). The EPS Study related to the District's ability to provide fire protection services to the Project. EPS projected that the District would face an annual operating deficit to provide fire services to the Project of $158,000; and

WHEREAS, the District charges a one-time fire mitigation fee at the time when the City issues building permits for new development in order to assist in funding fire protection services required by the development authorized by the building permit; and

WHEREAS, both the District and the Applicant have determined that the normal approach of a One-time Fire Mitigation Fee and Aerial Truck Ladder Fee is less desirable than an alternative approach that combines the payment of the One-Time Fire Mitigation Fee with the generation of annual payments on an ongoing basis in lieu of payment of the one-time Aerial Truck Ladder Fee; and

WHEREAS, Both the District and the Applicant have determined that such annual payments could be generated if the Applicant forms a Mello-Roos Community Facilities District or similar public financing mechanism (CFD); and

WHEREAS, for the benefit of the District, the Applicant shall use commercially reasonable efforts to form a Mello-Roos Community Facilities District or similar public financing mechanism (CFD); and

WHEREAS, the assessor's parcel numbers (APNs) for the parcels that make up the Project currently include: 057-090-008, 057-130-034, and 057-130-036. Only Developable Property, estimated to be a total of 156 acres, shall be subject to the Special Tax, and only when that property becomes Developed Property.; and

WHEREAS, developed Property shall be defined in the CFD Rate and Method of Apportionment of Special Tax (RMA) to mean any parcel with a structure for which a building permit has been issued; and

WHEREAS, in consideration for the Applicant's willingness to generate an annual Special Tax, the District shall exempt the Applicant from the District's Aerial Truck Ladder Fee of $.50 per square foot. The Applicant will still be required to pay the one-time Fire Mitigation Fee of $.5512 per square foot or rate then in effect, at the time of issuance of building permits by the City.

NOW, THEREFORE, IT IS HEREBY RESOLVED by the Board of Directors of the American Canyon Fire Protection District approve the Memorandum of Understading between the American Canyon Fire Protection District and Buzz Oats, LLC.

PASSED, APPROVED AND ADOPTED this 25th day of October, 2022, by the following vote:

SUBJECT: Giovannoni Logistics Center Project: City of Vallejo February 21, 2023 Comments

DATE: March 20, 2023

We have evaluated the issues raised by the City of Vallejo (Vallejo or City) in its February 21, 2023 comments on the Giovannoni Logistics Center Project (Project) (Vallejo Letter). Vallejo raises concerns about the Project water supply and the adequacy of the WSA and final environmental impact report (Final EIR). We address each of Vallejo's issues.

Vallejo Comment: "Vallejo has not been contacted to consider the impact on its water rights through the proposed City Council actions and approvals." (Vallejo Letter, pp. 1-2.)

Vallejo objects that the Project Water Supply Assessment (WSA) "mischaracterizes Vallejo's water rights" because the WSA characterizes the water that American Canyon receives from Vallejo pursuant to the two cities' 1996 water service agreement (1996 Agreement) as "a blend of all of Vallejo's water sources." Vallejo further objects that the WSA does not identify that only one of Vallejo's water rights has an authorized place of use that includes American Canyon, and that water right – License 7848 (referred to as Vallejo Permit Water) – does not extend to the whole of American Canyon. Vallejo requests that American Canyon reassess the WSA and the Project Final EIR's conclusions regarding the Vallejo Permit Water serving the Project. Vallejo further states that even if the Project is within the place of use for License 7848, American Canyon "should consider developing an alternative water supply for the Project." Finally, Vallejo suggests that the City is a responsible agency under the California Environmental Quality Act (CEQA) for the Project.

Response:

First, Vallejo is not a responsible agency under CEQA for the Project. Vallejo has no discretionary approval authority over any aspect of the Project. American Canyon does not require Vallejo's permission to supply water to the Project.

Second, the quoted language describing the water American Canyon receives under the 1996 Agreement was made in reference to City-wide supply (not specific to the Project) and was summarized from information in the City's 2015 Urban Water Management Plan (UWMP), which was the information available at the time the WSA was prepared. That portion of the Vallejo water description was removed in the 2020 UWMP. The 1996 Agreement and the City's obligations thereunder are also the subject of pending litigation between the City and American Canyon.

A February 7, 2023 memorandum from Balance Hydrologics (2023 Update Memo) updates the WSA with information from the 2020 UWMP and describes why the information in the 2020 UWMP does not change any of the conclusions in the WSA regarding the sufficiency of the Project water supply:

> [T]he Water Supply Assessment for the Giovannoni Logistics Center was prepared in 2021, using the most recent Urban Water Management Plan for the City available at that time. That document concluded that supply was available to meet the projected Project and City-wide demand under all year type scenarios through the planning period. The 2020 UWMP, while projecting lower demand and even less available supply than that projected in the 2015 UWMP, still concluded that available additional supply can be purchased to overcome potential drought-scenario shortfalls through the 2045 planning period. The 2020 UWMP analysis included more than enough projected increase in C/I/I demand to accommodate the Project's anticipated potable water usage. Thus, even though a formal update of the WSA is not required (the analysis was completed long before the 2020 UWMP was published), we would not expect the conclusions of the WSA to change under the 2020 UWMP analysis.

Because the WSA conclusions remain valid, and the Final EIR relied on the conclusions in the WSA, the Final EIR's conclusions regarding the Project water supply remain valid.

The WSA evaluates the Project water demand in the context of the City's full portfolio of available water supplies. The WSA does not assume that Vallejo Permit Water will be used to serve the Project, or that Vallejo Permit Water is necessary to meet the Project demand. The WSA and EIR show surplus potable water supply larger than the total Vallejo Permit Water in virtually every water year scenario. (DEIR Table 3.13-9.) The very low Project water demand (approximately 24 acre feet per year [AFY]) is well within American Canyon's total available supply and the estimated demand for urban and industrial use. Based on its portfolio of supply, American Canyon would not need to rely explicitly on Vallejo Permit Water to supply the Project and nothing in the WSA or EIR demonstrates that the City intends to serve the Project specifically with Vallejo Permit Water.

Vallejo Comment: The proposed City Council actions and approvals fail to consider the ongoing litigation between American Canyon and Vallejo relative to the 1996 Water Service Agreement (1996 Agreement). (Vallejo Letter, pp. 2-3.)

Vallejo contends that the lawsuit American Canyon filed against Vallejo over the 1996 Agreement raises questions about the reliability of the Project water supply, and argues the WSA should have been updated to reflect the litigation, and that the lack of information about the litigation "renders the WSA unreliable and incomplete."

Response:

The WSA, including the 2023 Update Memo, demonstrates that American Canyon has available supply to meet the Project's 24 AF per year (AFY) demand, without Vallejo water. Only 23 percent of the City's water supply is from the City of Vallejo in a "normal" year. As noted by Vallejo, the Project site is outside the place of use for Vallejo Permit Water, and thus the litigation could have no direct impact on that source of water for Project water supply.

The Vallejo 2020 UWMP stated the following regarding its sale of water to American Canyon: "The [City's] contract does not allow for restrictions or reductions. For demand projection purposes, the full 3,074 AFY is assumed." In this case, the cited 3,074 AFY refers to the sum of raw (500 AFY), treated (2,074 AFY), and emergency water (500 AFY). The WSA assumed up to 3,706 AFY of available supply from Vallejo (in a 'normal year' occurring in 2045), but reduced to 3,565 AFY during dry years occurring in 2045 (treated water is assumed to be reduced by 20 percent, but 500 AFY of 'emergency water' would be available during those periods). Importantly, the American Canyon 2020 UWMP assumed a total supply from Vallejo of only up to 1,129 AFY (500 AFY of raw water plus 629 AFY of treated water) in normal years through the full planning period, and still concludes that sufficient water is available through purchase of supplemental water to meet demand.

The litigation over the 1996 Agreement is in its early stages and it would be speculative to assume that it will result in any particular outcome. A discussion of the pending litigation would not add anything substantial to an understanding of Project water availability, particularly in light of Vallejo's adopted 2020 UWMP, which states the contract water cannot be reduced.

As described in the WSA, the City has alternative water supplies, including the option to purchase water if needed. The WSA assumed a reduction in supply from Vallejo during single-dry- and multi-dry-year scenarios. Furthermore, the American Canyon 2020 UWMP assumed only 629 AFY of treated water supplied from Vallejo (as opposed to the 2,074 assumed in the Vallejo 2020 UWMP). Should the litigation over the 1996 Agreement result in a further reduction in the City's portfolio of supply, it is reasonable to assume the City would acquire a substitute supply. The City's 2015 and 2020 UWMPs both concluded that predicted water supply constraints can be resolved through the purchase of "supplemental imported water through existing agreements through the planning horizon (2045) for all water year

scenarios" (2020 UWMP, pp. 1-2.) Although the WSA did not assume that purchased water was a reliable enough supply for the purposes of accounting in the formal supply/demand projections, the fact remains that water purchases, both temporary and permanent, are commonly used in California to redirect water resources to areas of greatest need, consistent with the legislative policy of the state to facilitate water transfers. (See Wat. Code, §§ 475, 480 et seq.)

Vallejo Comment: American Canyon failed to consider Vallejo's comments to American Canyon's water supply documents, including Vallejo's April 6, 2022 comments to American Canyon's Draft 2020 Urban Water Management Plan. (Vallejo Letter, p. 3.)

Vallejo objects that American Canyon did not provide a response to Vallejo's comments on the City's draft 2020 UWMP and "did not revise the plan" before adopting it in January 2023.

Response:

American Canyon complied with all applicable requirements for its 2020 UWMP. American Canyon was not required to respond to Vallejo's comments on the draft 2020 UWMP. As discussed above, the place of use for License 7848 and the amount of water available to American Canyon under the 1996 Agreement is not relevant to the WSA's conclusions about the adequacy of the Project water supply. The record supporting the Project EIR demonstrates that there is sufficient water to serve the Project under all reasonably foreseeable future conditions, and there is no need for American Canyon to "develop[] an alternative water source" to serve the Project.

ITEM NUMBER: 12.

TITLE
Annual Comprehensive Financial Report

RECOMMENDATION
Receive and file the Annual Comprehensive Financial Report and related communications from the City's external auditor for Fiscal Year 2021-22.

CONTACT
Juan Gomez, Finance Director

BACKGROUND & ANALYSIS
After the conclusion of each fiscal year, an independent auditor (currently Richardson & Co.) reviews the reporting of the City's financial statements in accordance with industry accounting standards. The result is an "Annual Comprehensive Financial Report (ACFR)".

The City's Fiscal Year 2021-22 ACFR was finalized on March 16, 2023 (Attachment 1). It includes financial statements for the City of American Canyon and the American Canyon Fire Protection District. It also contains the independent auditor's report, which describes the scope of the audit as well as the auditor's opinion on the financial statements. For the Fiscal Year 2021-22 ACFR, the City received an "unmodified" opinion. An "unmodified" opinion is only issued when there are no significant reporting issues, the financial statements are free of material misstatements, and information is presented in accordance with Generally Accepted Accounting Principles (GAAP). This opinion indicates that the City's financial condition, position, and operations are fairly presented in the financial statements. This is important to financial statement users and provides comfort to the City's creditors, while enabling the City to obtain better interest rates on any new debt issuances.

City management assumes full responsibility for the completeness and reliability of all of the information presented in the ACFR. The City has established a comprehensive internal control framework designed to protect the City's assets from loss, theft, or misuse and provide sufficient reliable information that the City of American Canyon's financial statements are in conformity with GAAP. The cost of internal controls should not outweigh the resulting benefits and internal controls are designed to provide reasonable assurance, not absolute assurance, that the financial statements will be free from material misstatements. City management asserts that, to the best of our knowledge and belief, the financial report is complete and reliable in all material respects.

The Fiscal Year 2021-22 ACFR includes an introductory section that profiles the City, discusses the local economy, recounts key projects, and details financial planning issues and future challenges, as well as other vital topics. Included in the report is the Certificate of Achievement for Excellence in Financial Reporting presented to the City by the Government Finance Officers Association for its prior year (Fiscal Year 2020-21). Staff has submitted the Fiscal Year 2021-22 ACFR for the same award and expects to receive it in time for presentation in next year's ACFR.

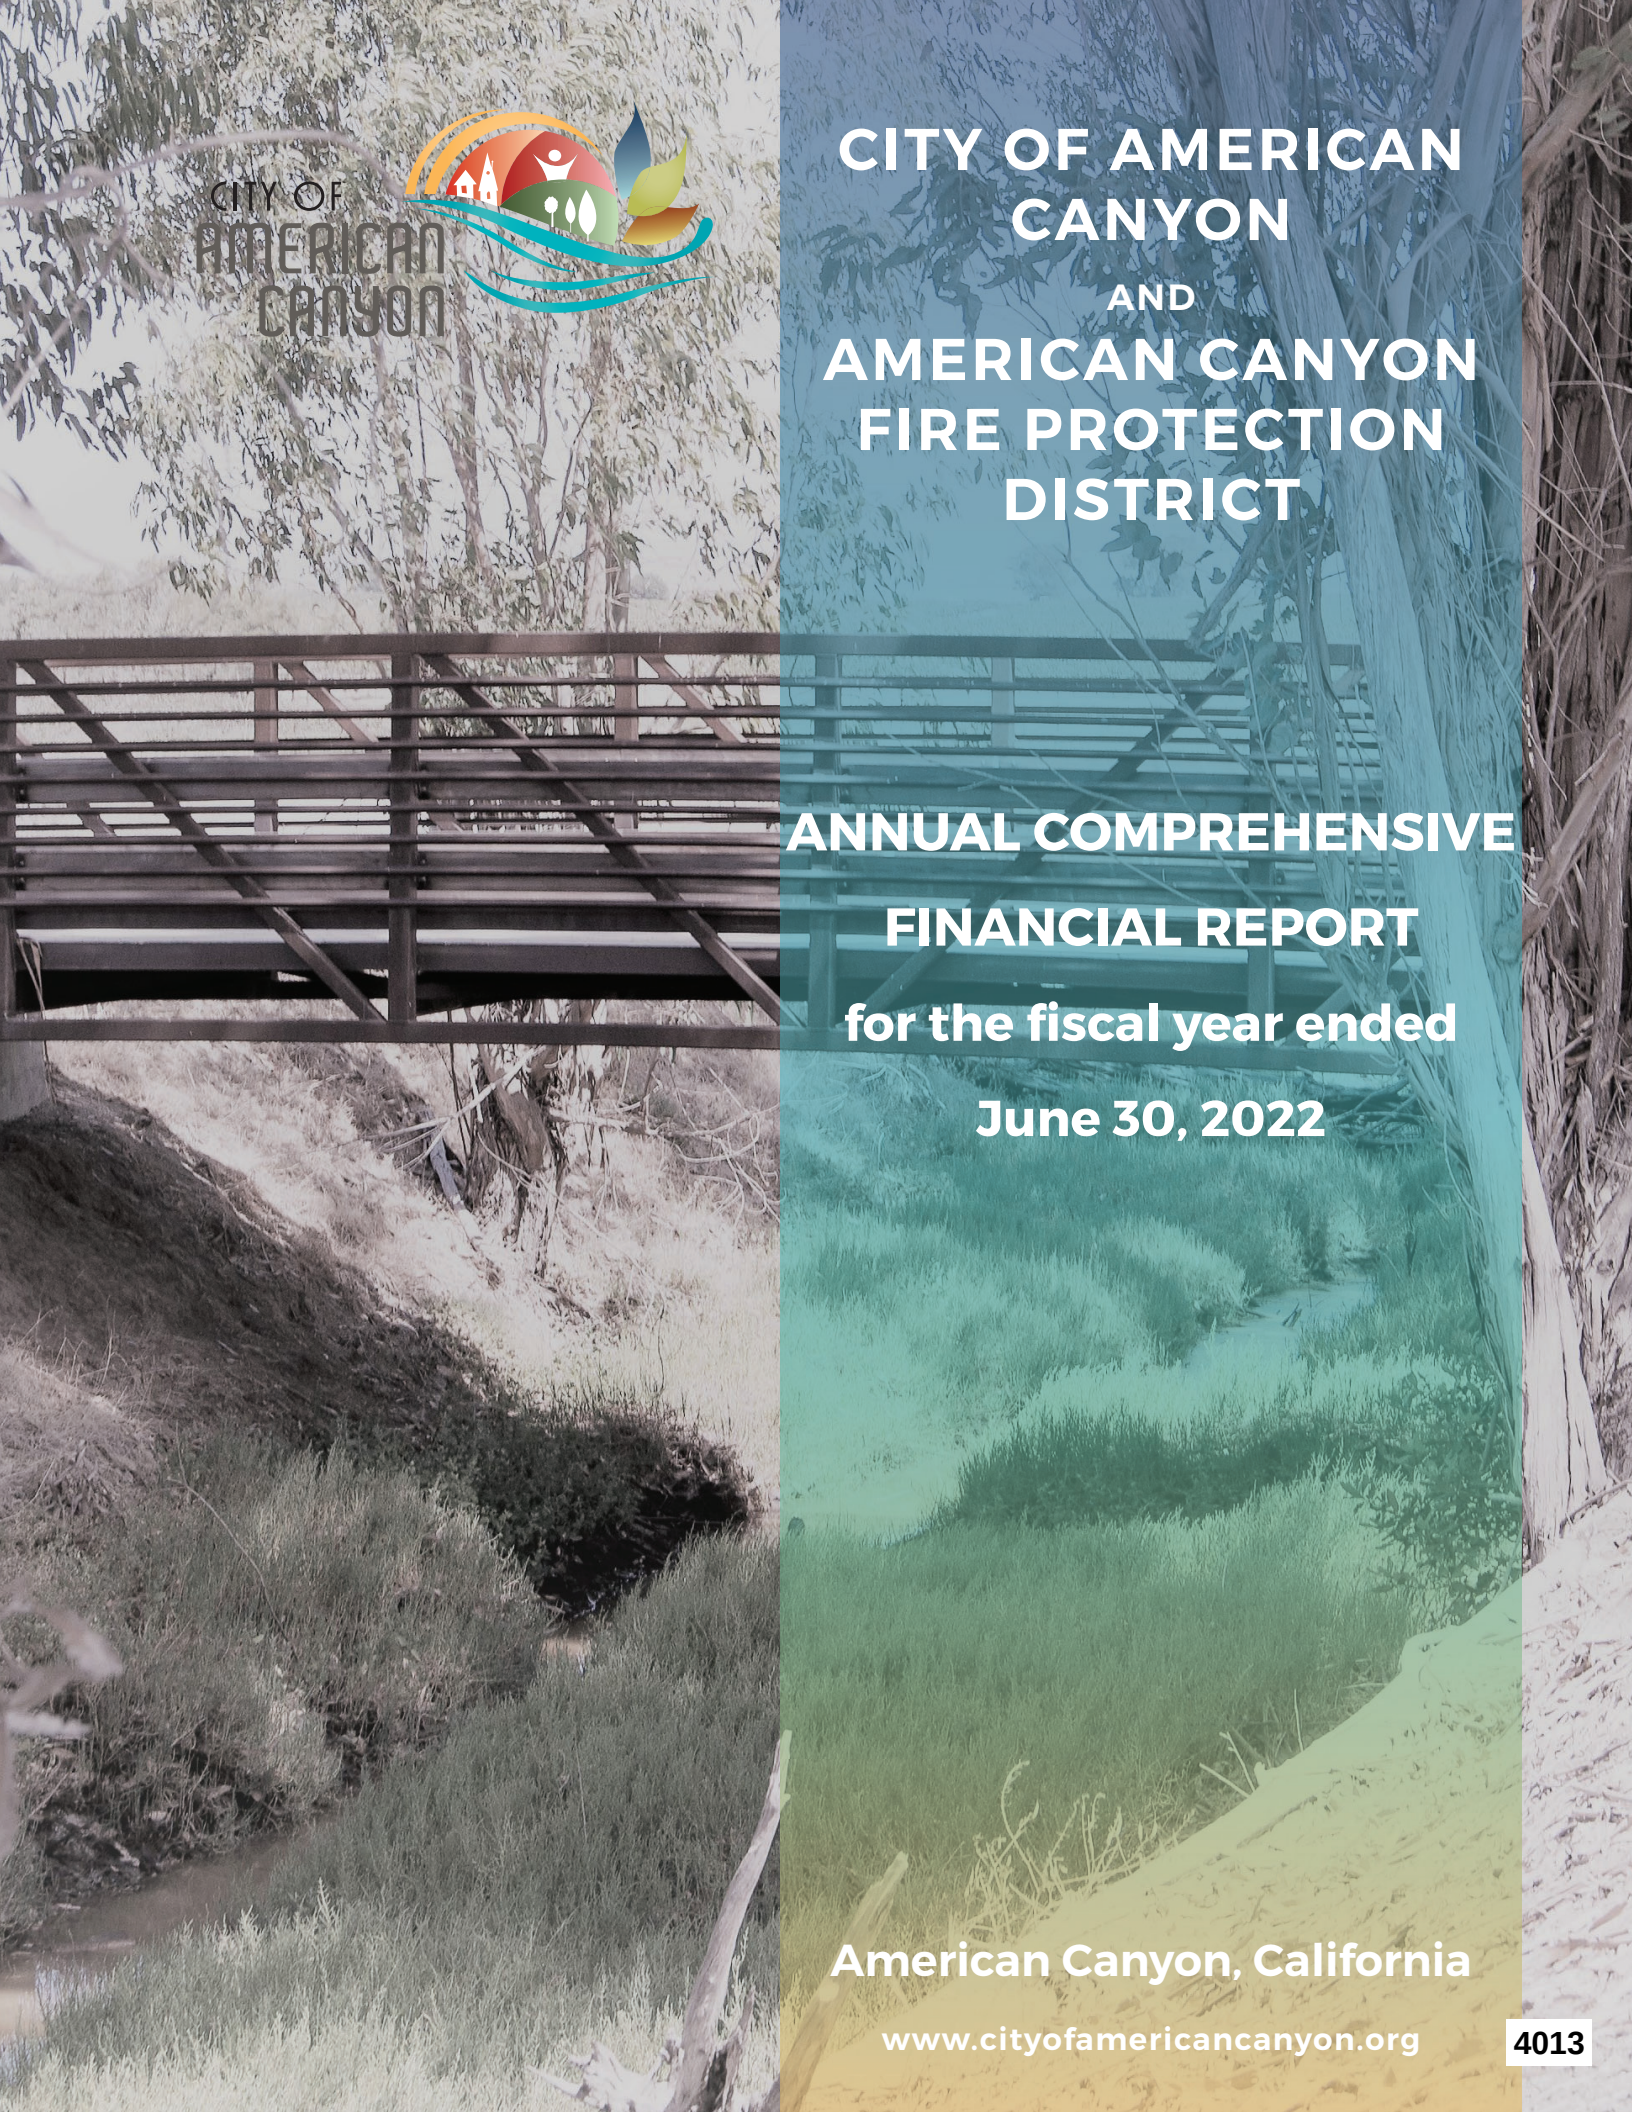
The ACFR also includes a "Management Discussion and Analysis" section, which provides financial highlights, an overview of the financial statements, and compares key financial data to the prior year. The conclusion of the report details a variety of supplemental financial data, debt and demographical statistics. Also included are four related communications: "Management Letter", "Governance Letter", "Appropriation Limit Testing for the City", and "Appropriation Limit Testing for the Fire District". In these letters, the auditors identified no material deficiencies in internal controls. The "Management Letter" noted matters for consideration that staff will be working on implementing in the next ACFR.

COUNCIL PRIORITY PROGRAMS AND PROJECTS

Organizational Effectiveness: "Deliver exemplary government services."

FISCAL IMPACT

The cost of the audit was consistent with the approved contract amount and the recommended action will have no impact on the City's Fiscal Year 2022-23 Budget. A full discussion of the City's financial status starts on Page 4 of the Fiscal Year 2021-22 ACFR.



Implied in all City Council Goals, Objectives, and Work Programs is the fundamental principle that the City will follow the City Council's adopted Fiscal Policy and will exercise the utmost financial discipline and accountability. In accordance with the City's adopted Fiscal Policy and pursuant to Section 37208 of the Government Code, the City Manager is responsible for preparing an audited Comprehensive Financial Report each year.

March 16, 2023

To the Honorable Mayor, Members of the City Council and Citizens of the City of American Canyon

We hereby submit the Annual Comprehensive Financial Report of the City of American Canyon for the fiscal year ended June 30, 2022. The fiscal year covers financial transactions from July 1, 2021 to June 30, 2022 on a modified or full accrual basis, depending on the fund type. The City follows a policy of preparing a complete set of financial statements in conformity with accounting principles generally accepted in the United States of America after the end of each fiscal year. An independent licensed certified public accounting firm audits these financial statements.

City management assumes full responsibility for the completeness and reliability of all of the information presented in this report. The City has established a comprehensive internal control framework that is designed both to protect the City's assets from loss, theft, or misuse and provides sufficiently reliable information that the City of American Canyon's financial statements are in conformity with U.S. generally accepted accounting principles. The cost of internal controls should not out-weigh their benefits and the internal controls are designed to provide reasonable rather than absolute assurance that the financial statements will be free from material misstatement. City management asserts that, to the best of our knowledge and belief, this financial report is complete and reliable in all material respects.

Richardson and Co. LLP, a licensed certified public accounting firm, has audited the City of American Canyon's financial statements. The goal of the independent audit was to provide reasonable assurance that the financial statements of the City of American Canyon, for the fiscal year ended June 30, 2022, are free of material misstatement. The independent audit involved examining, on a test basis, evidence supporting amounts and disclosures in the financial statements; assessing the accounting principles used and significant estimates made by management; and evaluating the overall financial statement presentation. Richardson and Co. LLP has concluded, based upon the audit, that there was a reasonable basis for rendering an unmodified opinion ("clean" opinion) that the City of American Canyon's financial statements for the fiscal year ended June 30, 2022 are fairly presented in conformity with U.S. generally accepted accounting principles. The independent auditor's report is presented as the first component of the financial section of this report.

Annual Comprehensive Financial Report (ACFR)

This ACFR contains financial information and data using the financial reporting format established for governments by the Governmental Accounting Standards Board (GASB). The GASB sets accounting and financial reporting standards for governments in the United States of America. The financial reporting standards require that management provide a narrative introduction, overview, and analysis to accompany the basic financial statements in the form of Management's Discussion and Analysis (MD&A). This letter of transmittal is designed to complement the MD&A and should be read in conjunction with it.

Immediately following the report of the independent auditors, you will find the City of American Canyon's MD&A.

Profile of the City and its Operations

Incorporated on January 1, 1992, the City of American Canyon is the second largest city in Napa County. The City's population as of January 1, 2022 was estimated to be 21,658 by the California State Department of Finance. American Canyon is located at the Southern end of the Napa Valley wine growing region in close proximity to the San Francisco Bay. It is bounded by the Napa River and a 500-acre wetland preserve to the west, the foothills of the Sulphur Springs Mountain Range to the east, the City of Vallejo to the south, the Napa Airport and numerous vineyards to the north.

The City operates under a council-manager form of government and is a general law city. Policy making and legislative authority are vested in the City Council. There are four elected Council Members and one elected Mayor. The Vice Mayor is selected annually by the Council. The non-partisan Mayor and City Council members serve staggered four-year terms. The Council's responsibilities include passing ordinances, adopting the City budget, appointing committees, and hiring the City Manager, Fire Chief and City Attorney. The City Manager implements the policies and ordinances of the City Council, appoints department heads, oversees and maintains the daily operations of the City.

The City provides a full range of municipal services including police and fire protection services through the American Canyon Fire Protection District; construction and maintenance of City streets, storm drains, bridges and similar infrastructure type assets; park maintenance and community recreation activities; short and long-range community planning; operation of water, wastewater, and recycled water utilities; and more. The City operates its water, wastewater, and recycled water systems in a fashion similar to private businesses, which is termed business-type activities in the financial statements.

The City's annual budget serves as the foundation for the City of American Canyon's financial planning and control system. Every year, each City department submits requests for appropriations to the City Manager. The City Manager uses these requests as a starting point for developing a proposed budget. The City Manager then presents the proposed budget to the City Council's Finance Committee followed by a presentation to the City Council. The Council holds public hearings on the proposed budget and then ultimately adopts a formal budget. The budget is adopted by fund, function, and department. During the fiscal year the City Manager and Council periodically review the City's actual financial activity in relationship to the original budget, and as necessary, amends the original budget to reflect changing needs.

Factors affecting Financial Condition

The information presented in the financial statements is best understood when it is considered in context with the City's particular economic climate and with the City's plans for the future.

Napa Valley is considered by many to be North America's legendary wine, food, and wellness capital. The valley's vineyards are planted on gently rolling hills and are very picturesque. Their bucolic charm attracts large numbers of tourists. It is estimated that each year 5 million tourists visit more than 300 wineries scattered throughout the valley. The lodging, restaurants, wineries, and shopping located throughout the valley make tourism a major contributor to the local economy. The City of American Canyon, at the south end of Napa Valley, benefits from some tourism; however, these economic benefits are enjoyed much more by those cities in the north valley. In 2010 the City joined the Napa Valley Tourism Improvement District (NVTID) to increase tourism in American Canyon. The NVTID provides valley-wide as well as local tourist activity marketing and promotion.

In addition to the tourism related economic benefits of proximity to the Napa Valley, American Canyon benefits tremendously as a wine processing hub. Because of our strategic location at the southern end of Napa County and with easy access to state and interstate highways, American Canyon's industrial district is home to millions of square feet of wine processing, bottling, storage, and shipping space. Demand for space in this area is very high, with very little vacancy and there is new development underway.

Beginning in fiscal year 2013-14, the Council directed Staff to enter a three-year "Stabilization Plan" in order to ensure the long-term fiscal sustainability of the City's finances. During this three-year stabilization period, critical reductions in expenses were slowly restored as revenue growth allowed. The 2015-16 fiscal year marked the final year of this successful plan. Since then, the City has benefited from improvements in both the national and local economy and revenues continued increasing gradually until the onset of the Coronavirus Pandemic (COVID-19) in early 2020.

COVID-19 was expected to have a dramatic impact on revenues and the City responded by reducing expenditures budgeted and incurred. The actual impact at year-end FY 2019-20 was far less than anticipated. With one-time Coronavirus Relief Funding, lower impact on actual revenues received, and the reduction in expenditures, the City ended that year near breakeven with a minimal General Fund deficit.

The pandemic continues to be part of our daily lives, but the cost-saving measures previously implemented by the City have resulted in favorable results for FY 2021-22. The passing of the American Rescue Plan Act (ARPA) of 2021 provided $350 billion in additional funding to state and local governments. The City received $4.9 million in ARPA funds and utilized the funds to improve infrastructure and parks. This includes street improvements, pedestrian and bike safety improvements, and skate park relocation and upgrades.

The City recently negotiated its Memorandum of Understanding (MOU) with employee bargaining units for five years after a one-year extension to the previous MOUs. The new MOUs will have an impact on salaries and benefits in the coming years.

Approximately 50% of general fund revenue received is from property taxes and are critical in supporting the cost of essential services provided by the City. For the FY 2021-22 the City budgeted a 4.5% increase in property taxes, and actually came in at a 6.9% increase. This was attributed to increasing values due to low supply and high demand, also fueled by low interest rates in the beginning of the fiscal year. Property tax is projected to increase an additional 4.3% in the 2022-23 fiscal year, in line with the total assessed valuation growth. Home values in American Canyon have had a median increase of value of 10.24% in 2022 on top of a 2021 increase of 11.40% with continued interest in industrial and residential development. With developable land selling and construction starting in the coming year, the City should experience further increases in assessed valuation and property tax revenues. New construction will also mean an increase in building permit revenue. However, recent interest rate increases could result in a tempering of sale prices and a reduction in higher priced homes sold as buyers begin to get priced out of those properties. The home mortgage market will continue to see high interest rates as long as inflation remains high, with the Federal Reserve signaling more hikes could follow until inflation comes down to their target rate of 2%.

The City's Transient Occupancy Tax (TOT) rate is 12%. FY 2021-22 TOT revenues have rebounded from the pandemic lows of FY 2020-21, nearly doubling to $1.6 million. For FY 2022-23, we have projected $1.6 million in TOT revenue, minimal to no growth is expected in TOT revenue as stubbornly high inflation begins to affect consumer discretionary travel spending, in addition to the unusual wet weather limiting travel plans to the area. We expect that American Canyon will continue to benefit from tourism in the Napa Valley as life continues to return to a semblance of normalcy. We also expect additional hotel rooms currently under construction in American Canyon now and in the next three years will bring additional TOT revenue.

Sales tax revenues came in 13% higher in FY 2021-22 compared to the adopted budget. This was due in large part to consumer purchasing increasing rather than decreasing as the pandemic continued, as well as the influx of government stimulus to the economy. FY 2022-23 sales tax revenue was recently revised upward by an additional $2.8 million as a result of a State audit determining that certain revenues belong to the City instead of the county pools. As a result of this audit determination, we are anticipating FY 2022-23 sales tax revenue to be 90% higher than originally budgeted. However, because this includes one-time recovery revenue, we expect FY 2023-24 revenues to decrease and be more in line with historical growth.

Staff will continue to closely monitor and review updated economic forecasts for any new developments that may positively or negatively affect the City's budget.

Capital Improvement Program

The City of American Canyon's capital improvement program is a long-range program for major municipal construction projects. Key projects currently in progress include:

- ✓ Knightsbridge Way Reconstruction and Water Main Improvements – The City is undertaking a project to replace the 8" water main on Knightsbridge Way between Danrose Drive and Elliott Drive, including all the courts: Regent Court, Park Lane, Lansford Court, Arden Court, and Linwood Lane. To maximize efficiency, once the underground work is complete, this project will also include the installation of ADA ramps, the road reconstruction of Knightsbridge Way, and a two-layer pavement treatment on the courts. It is anticipated that this project will advertise for construction by the end of 2023 with anticipated construction completion in Summer 2024.

- ✓ Green Island Road Reconstruction – The Green Island Road Reconstruction & Widening Project will bring much-needed infrastructure improvements to the Green Island Industrial District. The upgrades will significantly benefit the businesses within the district, which are a vital component of the City's economy. Established in 2019, the Green Island Road Community Facilities District will provide a significant portion of the funding for the project. In 2022, bids were advertised to underground existing overhead utilities. The construction contract was subsequently awarded to St. Francis Electric and work is anticipated to be completed in mid-2023. The final phases of the project—road reconstruction and Class I multi-use trail construction—will be advertised for bids after the utility undergrounding in late 2023, with estimated project completion in 2024.

- ✓ Pavement Rehabilitation Projects – Road Repair and Accountability Act (also known as SB1) and Measure T, (the half cent Napa Valley County Sales Tax for Road Repairs) funds will be used to repair/rehabilitate various streets in American Canyon on an annual basis. The streets selected are based on our pavement management program, considering public safety, underground utility needs, and available funding.

- ✓ Rancho Del Mar Paving and Utility Improvements – The Rancho Del Mar Subdivision is the oldest subdivision in American Canyon. In 2022, City Council prioritized federal American Rescue Plan Act (ARPA) funding to rehabilitate water and sewer utilities, provide for different pavement treatments including full reconstruction to local streets, upgrade curb ramps to ADA compliance, and implement thermoplastic striping and pavement markings. Streets included in this work are Rio Del Mar from Highway 29 to Carolyn Drive, all of Los Altos Place east of Carolyn Drive, Cassayre Drive, Flamingo Court, Del Rio Court, Alta Loma Drive, Joan Drive from Carolyn Drive to Los Altos Place, and Carolyn Drive from Rio Del Mar to Los Altos Place. Design will begin in 2023 with construction anticipated in 2024.

New Development

Key development projects include:

- ✓ Broadway District Specific Plan – The Broadway District is the heart of American Canyon. The Broadway District Specific Plan (BDSP) is transforming Broadway into a livable, mixed-use, small-town neighborhood with quality development. The Broadway District Specific Plan was updated in 2021. Development projects in the BDSP include the following:
  - o Home2Suites Hotel - A new 102-room Home2Suites hotel is under construction.
  - o Hampton Inn Hotel - A new 112-room Hampton Inn hotel construction is anticipated to begin in 2023.
  - o Napa Cove - A 66-unit affordable apartment project is under construction.
  - o Circle K - A Convenience store and gas station opened its doors to customers in February 2023.
  - o Residences at Napa Junction - A 435-unit apartment project is under review.
  - o Crawford/Broadway Townhomes - A 100-unit apartment townhome project is under review.
  - o Chicken Guy Restaurant - A quick serve restaurant with a drive-thru service is under review by the Planning Commission.
  - o Sunstone - A mixed use residential/commercial project of 20 apartments located on Napa Junction Road is under review.

- ✓ Watson Ranch – The 300-acre Watson Ranch Specific Plan (WRSP) includes a new hotel, 1,253 residential units, parks, and other amenities. Development projects in the WRSP include the following:
  - o Artisan at Watson Ranch - 98 single-family homes are available for sale today.
  - o Lemos Pointe - A 186-unit affordable rental community is under construction.
  - o Harvest at Watson Ranch - 219-unit single family homes are under construction.
  - o The Hotel at the Napa Valley Ruins & Gardens - A 200-room resort hotel and 30 townhomes and flats were approved by the Planning Commission.
  - o Promontory at Watson Ranch - 216 single family homes with Accessory Dwelling Unit (ADU) options is under review.

- ✓ Napa Logistics Park - The Napa Logistics Park is nearing buildout with completion of a 200,000 SF Amazon Distribution Center in September 2021 (Building 3). Building 4, a 700,000 SF warehouse was completed March 2021. A Pacific Gas and Electric (PG&E) 100,000 SF Regional Maintenance facility is under construction.

- ✓ Commerce Court - A 330,000 SF wine warehouse on 35.85 acres was completed October 2020 at 1005 Commerce Court. A 217,000 SF wine warehouse (SDG 217) will begin construction in 2023.

- ✓ Giovannoni Logistics Center – A 2.4 million SF high cube wine warehouse business park on 208-acres, north of Green Island Road is under review by the City Council.

- ✓ Canyon Estates – A 35-single family large lot subdivision of custom homes is under construction. Custom home lot sales are ongoing.

- ✓ Oat Hill Residential – A 291-unit, 20-acre multifamily development on the east side of Oat Hill is under construction.

- ✓ Bell Products - A new business headquarters for Bell Products in the Green Island Industrial Park is under review.

- ✓ Ecological Center - An exciting project to transform the Wetlands Edge Corporation Yard into an Ecological Education Center through a partnership between the American Community & Canyon Foundation and the City of American Canyon is under review.
- ✓
- ✓ Green Island Solar Farm - A solar farm with associated RV storage proposed on Highway 29, north of Green Island Road is under review.

Paoli/Watson Lane Annexation

The City is preparing an annexation application on 85 acres at the City's northeast boundary. The annexation area would facilitate construction of Newell Road from its terminus in Watson Ranch to Highway 29. The Watson Lane residential area would remain in its current development pattern. Vacant land in the northern half of the annexation area could be considered for urban uses following annexation. An Environmental Impact Report that evaluates the project will be released for public review in March 2023.

General Plan Update

The City is preparing a comprehensive technical General Plan Update (GPU) for the first time since 1994. The General Plan is American Canyon's long-term blueprint for development of the City and land outside its boundaries that bears relation to its planning. The GPU will ensure all components of the General Plan are internally consistent and current with State Law. An Environmental Impact Report that evaluates the GPU will be released for public review in Mid-2023.

The Housing Element component of the General Plan was approved in January 2023. Staff is working toward certification by the State Department of Housing and Community Development (HCD) by responding to input received in February 2023.

Water Supply

The critical droughts from 2020-2021 brought to the forefront the City's need to continue to seek out permanent, reliable water sources to serve its residents and businesses. The City receives nearly all of its water from the Department of Water Resources' (DWR) State Water Project (SWP). Generally, this "raw water" is treated at the City's Water Treatment Plant (WTP) and then distributed to residents and businesses in the City's Water Service Area (which is larger than the City limits proper). The City also maintains connections with the Cities of Napa and Vallejo, who are able to provide treated water supplies if necessary. The City's Urban Water Management Plan demonstrates that the City has sufficient water to meet projected needs in the next 20 years. However, the City could benefit from a greater variety of water sources, better water quality, and less expensive water sources. As such, the City is pursuing several important options, including participation in new, regional surface water projects and potable re-use of recycled water from our Water Reclamation Facility. In recent years, the City has invested heavily in maximizing both the water quality and quantity of recycled water produced at the Water Reclamation Facility. The City has been successful in reducing demand for potable water by as much as 21-acre feet per year through conversion of potable water, uses for irrigation to recycled water and permanent changes to landscape and irrigation techniques.

In 2017, the City joined as a member of the Sites Reservoir Project. The Sites Project is a new proposed "off-stream" water storage reservoir that would hold approximately 1.8 million-acre feet. In fiscal year 2022-23, the City will continue to participate on the project team that is pursuing funding and ultimately, construction of this new water supply project. The City's share of the Sites Reservoir Project is 4,000-acre feet per year.

In May 2018, the City Council authorized new water rates beginning January 2019. The water rates will increase in each of the subsequent five years, with the last increase scheduled for January 2023. The City will no longer collect a drought surcharge of two dollars per unit. The rate increases are required to meet operational requirements, construct improvements to existing aging infrastructure, and to establish funding necessary to pay for additional water purchases. City staff is working on developing a new rate structure in fiscal year 2022-23, that will focus on all three of the City's enterprise funds and anticipates having updated rates take effect in January 2024.

Cash Resources

The cash and investments held by the City are sufficient to move forward into the new fiscal year, conduct operations, and embark upon the planned capital asset improvement programs. Please see Note C – Cash

and Investments beginning on page 38 of the ACFR.

Risk Management

The City limits its exposure to losses from unfavorable events, employee injuries, and from the risk of damages to City property by participating with other governments in an insurance pool wherein the risk of substantial monetary loss is transferred from the City to the insurance pool. Further information about this arrangement is included in the notes to the financial statements.

Long-Term Debt Administration

In accordance with the City's fiscal policy, the issuance of long-term debt is limited to capital improvements or projects that cannot be financed from current revenues or resources. The City may issue general obligation bonds, revenue bonds, certificates of participation or anticipation notes. The payback period of the debt is limited to the estimated useful life of the capital project or improvement. All debt service payments were made as required during the fiscal year, and the City complied with all required reserves and debt service covenants.

Postemployment Benefits

The City directly participates in the Public Employees Retirement System (PERS) of the State of California for all full-time employees. The City plans to fund each year's required contribution for its regular and public safety plans based on rates calculated by PERS after analyzing the city's workforce. With respect to retiree health care costs, the City's practice has been to pay the same premium for retired employees' health care as it does for active employees. The City plans to fund its actuarially required contribution (ARC). The City and Fire District have entered into irrevocable trusts with PERS to fund retiree health benefits. The City is considering contributing to an irrevocable trust for retirement benefits, but no decision has yet been made. The Fire District has decided not to participate. Additional information about the City's pension and other post-employment benefits plans are included in notes J and K to the financial statements and the required supplementary information section of this report. During 2017, the City completed negotiations with employees to reduce post-employment medical insurance benefits to future employees as they retire, which resulted in a decrease in long-term liability.

Awards

The City was awarded a Certificate of Achievement for Excellence in Financial Reporting by the Government Finance Officers Association (GFOA) for its comprehensive annual financial report for the fiscal year ended June 30, 2021. The Certificate of Achievement is a prestigious national award, recognizing conformance with the highest standards for preparation of state and local government financial report. In order to be awarded a Certificate of Achievement, a government must publish an easily readable and efficiently organized annual comprehensive financial report. This report must satisfy both generally accepted accounting principles and applicable legal requirements. A Certificate of Achievement is valid for a period of one year only. In our opinion, the current comprehensive annual financial report continues to meet the Certificate of Achievement Program's requirements and it will be submitted to the GFOA to determine its eligibility for recognition.

The City was also awarded the Distinguished Budget Presentation Award by the GFOA for its fiscal year 2021-22 Annual Budget. This prestigious award recognizes conformance with the highest budget standards and is awarded based on both content and presentation criteria. These awards are valid for a period of one year only.

Acknowledgements

The preparation of this report would not have been possible without the capable and dedicated services of the Finance Team. The Mayor and City Council also warrant special recognition for their continued

support, leadership and high expectations for professionalism in overseeing the City of American Canyon's financial affairs.

INDEPENDENT AUDITOR'S REPORT

To the City Council
City of American Canyon, California

Opinions

We have audited the accompanying financial statements of the governmental activities, the business-type activities, each major fund, and the aggregate remaining fund information of the City of American Canyon, California (the City), as of and for the year ended June 30, 2022, and the related notes to the financial statements, which collectively comprise the City of American Canyon, California's basic financial statements as listed in the table of contents.

In our opinion, the financial statements referred to above present fairly, in all material respects, the respective financial position of the governmental activities, the business-type activities, each major fund, and the aggregate remaining fund information of the City of American Canyon, California, as of June 30, 2022, and the respective changes in financial position and, where applicable, cash flows thereof for the year then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinions

We conducted our audit in accordance with auditing standards generally accepted in the United States of America. Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the City, and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinions.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the City's ability to continue as a going concern for twelve months beyond the financial statement date, including any currently known information that may raise substantial doubt shortly thereafter.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinions. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with generally accepted auditing standards will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with generally accepted auditing standards, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the City's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the City's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

Required Supplementary Information

Accounting principles generally accepted in the United States of America require that management's discussion and analysis, budgetary comparison schedules, schedules of the proportionate share of the net pension liability, schedules of contributions to the pension plan, schedules of changes in the net OPEB liability and related ratios and schedules of employer contributions to the OPEB plan be presented to supplement the basic financial statements. Such information is the responsibility of management and, although not a part of the basic financial statements, is required by the Governmental Accounting Standards Board, who considers it to be an essential part of financial reporting for placing the basic financial statements in an appropriate operational, economic, or historical context. We have applied certain limited procedures to the required supplementary information in accordance with auditing standards generally accepted in the United States of America, which consisted of inquiries of management about the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the basic financial statements, and other knowledge we obtained during our audit of the basic financial statements. We do not express an opinion or provide any assurance on the

information because the limited procedures do not provide us with sufficient evidence to express an opinion or provide any assurance.

Supplementary Information

Our audit was conducted for the purpose of forming opinions on the financial statements that collectively comprise the City's basic financial statements. The combining and individual nonmajor fund financial statements are presented for purposes of additional analysis and are not a required part of the basic financial statements. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the basic financial statements. The information has been subjected to the auditing procedures applied in the audit of the basic financial statements and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the basic financial statements or to the basic financial statements themselves, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the combining and individual nonmajor fund financial statements are fairly stated, in all material respects, in relation to the basic financial statements as a whole.

Other Information

Management is responsible for the other information included in the annual report. The other information comprises the introductory and statistical sections but does not include the basic financial statements and our auditor's report thereon. Our opinions on the basic financial statements do not cover the other information, and we do not express an opinion or any form of assurance thereon.

In connection with our audit of the basic financial statements, our responsibility is to read the other information and consider whether a material inconsistency exists between the other information and the basic financial statements, or the other information otherwise appears to be materially misstated. If, based on the work performed, we conclude that an uncorrected material misstatement of the other information exists, we are required to describe it in our report.

Richardson & Company, LLP

March 15, 2023

This section of the *City of American Canyon's* annual financial report presents our discussion and analysis of the City's financial performance during the fiscal year that ended on June 30, 2022. Please read it in conjunction with the City's audited financial statements, which follow this section.

FINANCIAL HIGHLIGHTS

- The City's total net position increased by about $4.8 million over the course of this year's operations after conducting all City operations and programs. The Citywide Statement of Activities reports a $4.8 million increase in net position for Governmental Activities using full accrual accounting and Business-type Activities did not change significantly. The assets and deferred outflows of the City exceeded its liabilities and deferred inflows by $374.6 million at the end of the 2022 fiscal year. The Citywide Statement of Net Position reports that $303.6 million is related to Governmental Activities and $71.0 million is related to Business-type Activities. Of that amount, $18.6 million (the unrestricted net position) may be used to meet the City's ongoing obligations and operating expenses for the next fiscal year.

- Governmental Funds reported combined fund balances of $42.3 million at June 30, 2022, an increase of $1.5 million compared to the prior year. Of these fund balances, $0.4 million is non-spendable, $26.0 million is restricted, $8.3 million is committed, $5.2 million is assigned, and $2.3 million is unassigned.

- Overall, city-wide revenues from all governmental and business-type activities were $52.1 million, a decrease of about $3.3 million compared to the prior year. This amount includes $1.2 million from capital grants and contributions for Governmental Activities and $1.8 million from Business-type Activities.

- The City's total expenses for all programs in fiscal year 2021-22 was $47.3 million, an increase of $2.1 million compared to the prior year.

- The General Fund ended fiscal year 2021-22 with a fund balance of $12.6 million, an increase of $0.4 million compared to the prior year of which $3.3 million was unassigned. The Fire District Operations Fund ended fiscal year 2021-22 with a $5.6 million fund balance, a decrease of $0.2 million compared to the prior year. The CDBG, Cal Home and HOME Loan Development Special Revenue Fund ended fiscal year 2021-22 with a fund balance of near breakeven and is unchanged compared to the prior year. The State and Federal Grants - City Special Revenue Fund ended fiscal year 2021-22 with a negative fund balance of $0.6 million and is unchanged compared to the prior year. The State and Federal Grants - City Special Revenue Fund ended fiscal year 2021-22 with a negative fund balance of $0.7 million and is unchanged compared to the prior year. The City Capital Projects Fund ended fiscal year 2021-22 with a fund balance of $0.1 million, which did not change significantly compared to the prior year. Other Governmental Funds reported a cumulative fund balance of $24.3 million available for special purposes, primarily infrastructure and capital asset additions.

- The City ended fiscal year 2021-22 with $25.0 million of available net position in its enterprise funds consisting of restricted and unrestricted net position. This is an increase of $0.6 million from the prior fiscal year. Internal Service Funds ended fiscal year 2021-22 with a cumulative unrestricted fund balance of $0.7 million and increase $0.5 million compared to the prior year.

OVERVIEW OF THE FINANCIAL STATEMENTS

This annual report consists of four parts – a *management's discussion and analysis* (this section), the *basic financial statements, required supplementary information,* and an optional section that presents *combining statements* for non-major governmental funds and proprietary funds. The basic financial statements include two kinds of statements that present different views of the City:

- The first two statements are *government-wide financial statements* that provide both long-term and short-term information about the City's *overall* financial status.

- The remaining statements are *fund financial statements* that focus on individual parts of the City government, reporting the City's operations in more detail than the government-wide statements.
  - The *governmental funds* statements tell how *general government* services such as public safety, community development, parks and recreation, public works and streets were financed in the *short term* as well as what remains for future spending.

  - *Proprietary fund* statements offer *short* and *long-term* financial information about the activities the government *operates like businesses*, such as the City's water, wastewater and recycled water systems.

The financial statements also include notes that explain some of the information in the financial statements and provide more detailed data. The statements are followed by a section of required supplementary information that further explains and supports the information in the financial statements. In addition to these required elements, we have included a section with combining statements that provide details about our non-major funds, each of which are added together and presented in single columns in the basic financial statements.

Figure A-1 summarizes the major features of the City's financial statements, including the portion of the City government they cover and the types of information they contain. The remainder of this overview section of management's discussion and analysis explains the structure and contents of each of the statements.

Figure A-1

Major Features of City of American Canyon's Government-Wide and Fund Financial Statements

		Fund Statements	
	Government-Wide Statements	**Governmental Funds**	**Proprietary Funds**
Scope	Entire City government	The activities of the City that are not proprietary or fiduciary, such as police, fire, streets, general government, and community services	Activities the City operates similar to private businesses: the water, wastewater, and recycled water funds and internal service funds
Required financial statements	• Statement of net position • Statement of activities	• Balance sheet • Statement of revenues, expenditures, and changes in fund balances	• Statement of net position • Statement of revenues, expenses, and changes in net position • Statement of cash flows
Accounting basis and measurement focus	Accrual accounting and economic resources focus	Modified accrual accounting and current financial resources focus	Accrual accounting and economic resources focus
Type of asset/liability information	All assets and liabilities, both financial and capital, and short-term and long-term	Only assets expected to be used up and liabilities that come due during the year or soon thereafter; no capital assets included	All assets and liabilities, both financial and capital, and short-term and long-term
Type of inflow/outflow information	All revenues and expenses during the year, regardless of when cash is received or paid	Revenues for which cash is received during or soon after the end of the year; expenditures when goods or services have been received and payment is due during the year or soon thereafter	All revenues and expenses during the year, regardless of when cash is received or paid

Government-wide Statements

The government-wide statements report information about the City as a whole using accounting methods similar to those used by private-sector companies. The statement of net position includes *all* of the City's assets and liabilities. All of the current year's revenues and expenses are accounted for in the statement of activities regardless of when cash is received or paid.

The two government-wide statements report the City's *net position* and how it has changed. The difference between the City's assets and liabilities is one way to measure the City's financial health or *position*.

- Over time, an increase or decrease in the City's net position is an indicator of whether its financial health is improving or deteriorating, respectively.

  The government-wide financial statements of the City are reported in two categories:

  - *Governmental activities* – All of the City's basic services are included here, such as general government, police, fire, community development, parks and recreation, and public works. Property taxes, sales taxes, transient occupancy taxes, special and other taxes, user charges and fees, and state, local and federal grants finance these activities.

  - *Business*-Type activities - The City charges fees to customers to help cover the costs of certain services. The City's water, wastewater, and recycled water enterprises are reported here.

Fund Financial Statements

The fund financial statements provide more detailed information about the City's most significant funds – not the City as a whole. Funds are accounting devices that the City uses to keep track of specific sources of funding and spending for particular purposes.

- The City's major funds, including the *General Fund; Fire District Operations; CDBG, CalHome and HOME Loan Development; State and Federal Grants – City; City Capital Projects; and Affordable Housing* are reported in separate columns, and all other governmental funds are aggregated in a single column.

- The City establishes other funds to control and manage money for particular purposes. Some funds are maintained to demonstrate that the City is properly using certain specific fees for their intended purpose (such as the City's impact fee funds).

- Other funds are maintained for similar purposes but also demonstrate the City's ability to repay its long-term debt obligations, such as bonds.

The City has three kinds of funds:

Governmental funds – The City's basic services are included in governmental funds, which focus on (1) how cash and other financial assets that can readily be converted to cash flow in and out, and (2) the balances left at year-end that are available for spending. Consequently, the governmental funds statements provide a detailed *short-term view* that helps one determine whether there are more or fewer financial resources that can be spent in the near future to finance the City's programs. Because this information does not encompass the additional long-term focus of the government-wide statements, we provide additional information at the bottom of the governmental funds' statement, or on the subsequent page, that explains the relationship (or differences) between them.

Proprietary funds – There are two different types of proprietary funds. *Enterprise funds* are used to report the same functions reported as business-type activities in the government-wide financial statements: the City's Water, Wastewater, and Recycled Water Operations. *Internal service funds* are

an accounting device used to accumulate and allocate costs internally. During the 2015 fiscal year, the City created internal service funds. Proprietary funds provide the same type of information as the government-wide statements, only in more detail. The proprietary fund statements provide separate information for the City's Water, Wastewater, and Recycled Water Operations, which are considered major funds of the City.

Fiduciary funds - These funds are used to account for resources held for the benefit of parties outside the government. Fiduciary funds are not reflected in the government-wide financial statements because the resources of those funds are *not* available to support the City of American Canyon's own programs. The accounting used for fiduciary funds is much like that used for proprietary funds.

FINANCIAL ANALYSIS OF THE CITY AS A WHOLE

Net Position. As summarized in Table A-1 below, the City's *combined* net position increased $4.8 million between fiscal years 2021 and 2022.

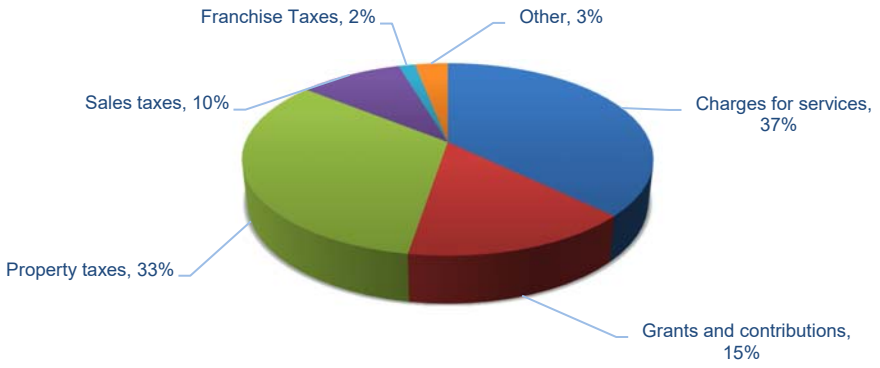

Table A-1
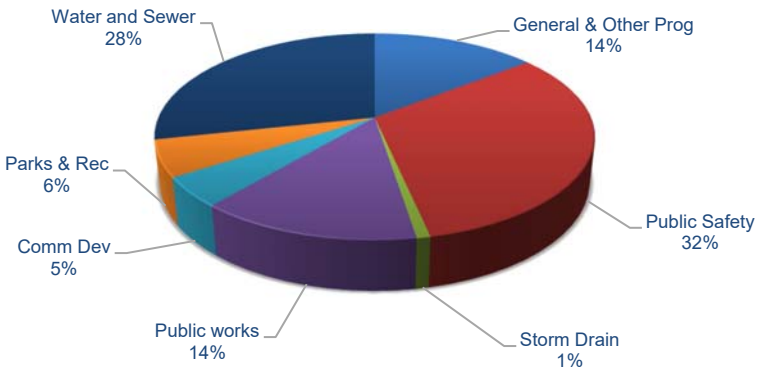
City of American Canyon's Net Position
(in millions of dollars)

	Governmental Activities		Business-Type Activities		Total		Total Percentage Change
	2021	2022	2021	2022	2021	2022	2021-22
Current and other assets	58.4	59.9	28.3	29.1	86.7	89.0	2.7%
Capital assets	274.4	275.2	53.5	51.8	327.9	327.0	-0.3%
Total assets	**332.8**	**335.1**	**81.8**	**80.9**	**414.6**	**416.0**	**0.4%**
Deferred Outflow of Resources	5.2	6.5	1.1	1.5	6.3	8.0	27.0%
Long-term debt outstanding	29.5	22.3	10.9	8.3	40.4	30.6	-24.3%
Other liabilities	8.2	7.3	0.8	1.7	9.0	9.0	0.0%
Total liabilities	**37.7**	**29.6**	**11.7**	**10.0**	**49.4**	**39.6**	**-19.8%**
Deferred Inflows of Resources	1.6	8.4	0.2	1.4	1.8	9.8	434.6%
Net investment in capital assets	267.6	269.2	47.3	46.0	314.9	315.2	0.1%
Restricted	32.2	34.1	6.1	6.7	38.3	40.8	6.5%
Unrestricted	(1.0)	0.3	17.7	18.3	16.7	18.6	11.3%
Total net position	**298.8**	**303.6**	**71.0**	**71.0**	**369.8**	**374.6**	**1.3%**

The net position of the City's governmental and business-type activities increased 1.3% to $374.6 million. The increase was primarily due to an increase in Grants and Contributions from COVID-19 pandemic relief. Approximately 84% of the City's net position is invested in capital assets such as buildings, land, equipment and facilities. About $6.4 million of ongoing capital assets were purchased this fiscal year and are invested in projects such as the Devlin Road Extension Project ($3.9 million), contributed property from developers, and in various Internal Service Funds fleet vehicles, radios, and fleet operations equipment. The remaining 16% of net position is represented by restricted and unrestricted net position. Notable receivables are the $2.6 million in Taxes and $2.5 million from Utilities. Approximately $3.5 million of Intergovernmental Receivables include American Rescue Plan Act (ARPA) COVID-19 relief funding of $2.5 million, and grant funding for CIP of $0.8 million, plus



COPS funding and other minor receivables. About 77.5% of the City's total liabilities are represented by long-term obligations including pension liabilities, lease revenue bonds, capital leases and loans from the State of California. A more detailed list of long-term liabilities is found in Note G – Long-Term Liabilities on pages 52-56.

Chart 1
Sources of Revenues

Changes in net position. The City's major sources of revenue and functional expenses are presented in charts 1 and 2. As summarized in Table A-2 on page 10, revenues for fiscal year 2021-22 totaled $52.1 million, a decrease of $3.3 million or 6.1% from the prior year. Grants and contributions revenue decreased $3.1 million primarily due to the one-time award from ARPA funding in fiscal year 2020-21 and capital contributions from developers. The City's primary source of discretionary revenue is property taxes which totaled $17.3 million or 33% of total revenues for the year and increased by 7.5% over fiscal year 2020-21 due to continued improvement in assessed valuation during the recent pandemic recession. Sales tax revenue increased by $0.6 million or 13.6% to $5 million in fiscal year 2021-22, due to additional discretionary revenues from telecommuting and individual assistance aide. Approximately $15.7 million or 30% of all City revenues were generated from water, wastewater, and recycled water service fees and other revenue.

Chart 2
Functional Expenses

The total cost for all programs and services in fiscal year 2021-22 was $47.3 million which includes a wide range of services such as public safety, public works, community development, parks and recreation programs, storm drain, water and wastewater treatment plants and related distribution and collection systems. Major types of expenditures by function are shown in Chart 2. As summarized in Table A-2, for fiscal year 2021-22, expenses increased by $2.1 million or 5%. In this fiscal year, the General Government expenses decreased by $0.3 million, a 4% decrease from the prior year largely due to increased public safety costs of $0.9 million, and removal of furlough savings of approximately $0.5 million. Water, Wastewater and Recycled Water expenses were $0.7 million higher compared to prior year at $12.8 million. This increase is mainly the result of increased costs for producing water.

The City's largest operating expense was public safety services. The City's cost to provide police and fire protection services was $15.2 million or 32.1% of the City's total operating expenses followed closely by the water and sewer which collectively comprised $13.2 million or 27.9% of total expenses. Public Works and Storm Drain departments accounted for 14.4% of expenses, Parks and Recreation 5.7%, and Community Development 5.6%. The remaining 14.3% was expended on general City administration and other programs.

When all operations were concluded, governmental activities created a $4.8 million increase in net position and business-type activities did not change significantly for 2021-22.

Table A-2
Changes in the City of American Canyon's Net Position
(in millions of dollars)

	Governmental Activities		Business Type Activities		Total		Total Percentage Change

City Program Costs

Table A-3 presents the cost of each of the City's six largest programs: Public Safety, Public Works, Parks and Recreation, Water, Wastewater, and Community Development.

Table A-3
Cost of City of American Canyon's Programs
(in millions of dollars)

	Total Cost of Services		Percentage Change
	2021	2022	2021-2022
Public Safety	14.3	15.2	6.3%
Public Works (includes Storm drain)	6.6	6.9	4.5%
Community Development	1.7	2.2	29.4%
Parks and Recreation	2.8	2.7	-3.6%
Water	6.8	8.3	22.1%
Wastewater	6.0	4.9	18.3%
Recycled Water	-	0.3	100.0%
All other	7.0	6.8	-2.9%
Total	**$ 45.2**	**$ 47.3**	**4.6%**

The cost of all programs this year was $47.3 million, an increase of $2.1 million, or 4.6% compared with the prior year. For governmental activities, overall program costs increased $1.4 million, or 4.3%, mostly due to increases in public safety and general government.

Governmental Activities

As detailed on the Statement of Activities, the City's governmental program expenses totaled $33.8 million during the year. Program revenues, including grants, totaled $11.6 million leaving the City to fund the balance of $22.2 million with general revenues. Program revenues decreased by $3.4 million, while expenses increased by $1.4 million over the prior year. The decrease in the Program Revenues was due to one-time federal stimulus funding through the ARPA program ($4.9 million) and developer contributions ($3.6 million) received in FY2020-21.

Business-Type Activities

At 2021-22 fiscal year-end, the net position for the City's enterprise funds or business-type activities, the City's Water, Wastewater, and Recycled Water funds, did not change significantly from the prior year. In fiscal year 2021-22, charges for services increased by approximately $0.3 million or 2.2% compared to the prior year. Business-type revenues decreased by 6.5% overall compared to FY 2020-21. The decrease was primarily due to unrealized investment losses on the City's pooled investment portfolio offset by increases of $0.3 million in charges for services. Water fund expenses increased by $1.5 million or 22.1% compared to fiscal year 2020-21 and was primarily from increases in payments to the City of Vallejo for water rights and water purchases. Wastewater fund expenses decreased by $1.1 million primarily due to staff vacancies. The Recycled Water fund had very little activity for the fiscal year except asset transfers. This will change upon completion of the Enterprise Rate Study and the establishment of recycled water rates and charges.

FINANCIAL ANALYSIS OF THE CITY'S FUNDS

At the end of fiscal year 2021-22, the City's governmental funds had a combined fund balance of $42.3 million, about $1.5 million more than the prior year. This can be attributed to community development activities for planning and building, which added $1.8 million of restricted fund balance in 2021-22; and the General Fund's better than expected performance, due to combined cost cuts and vacancy savings increased fund balance $0.4 million. The Fire District Operations fund balance decreased by $0.2 million or 2.4% as a result of fiscal year 2021-22 operations.

The City's Cash and Investment accounts increased by $5.1 million compared to the prior year, totaling $78.9 million at fiscal year-end. The City's Restricted Cash and Investments totaled $7.0 million of that balance. Fiduciary Funds comprised another $8.1 million of that balance. The Water and Wastewater enterprise funds ended the year with $27.8 million in cash and investments available for future use, of which $6.7 million is restricted.

The City's General Fund had a deficiency of revenues over expenditures of $1.9 million before other financing sources. General Fund Property Taxes increased by $0.9 million, Sales Taxes increased by $0.3 million, Other Taxes increased $1.0 million. Charges for Services increased by $0.5 million compared to the prior year. The City's General Fund Expenditures increased by $2.0 million to $22.3 million mostly due to increase in salary and benefits costs as vacant positions became filled ($0.5 million), and the ending of furloughs for employees ($0.5 million); contract police services with the Napa County Sheriff's Office ($0.5 million). The Transfers in from Other Funds decreased by $0.2 million compared to the prior year mostly due to lower transfers to the General Fund, FY2020-21 included a $0.2 million CARES Act transfer from the Federal Grants Fund for police services. After including inter-fund transfers, the General Fund ended the fiscal year with an excess of $0.4 million.

The City's non-major governmental funds ended the fiscal year with a consolidated fund balance of $24.3 million. This entire fund balance amount is restricted with externally enforceable legal restrictions.

General Fund Budgetary Highlights

Over the course of the year, the City Council amended the City budget to fund new projects, avoid cost overruns, to account for unanticipated revenues. Additionally, adjustments were made as a result of the mid-year budget review. At year-end, including all adjustments, actual General Fund expenditures, were $2.1 million less than final budget amounts. Salary and benefit savings were the largest item $0.5M followed by legal and professional services $0.5M.

The General Fund's fund balance increased by $0.4 million from June 30, 2021 to June 30, 2022. The General Fund's primary source of discretionary revenue is property taxes which totaled $12.2 million or 59.8% of total revenues for the year and increased by 7.4% over the prior year. This was over budget $0.1 million. Non-property taxes came in over budget by $0.6 million and Charges for Services were $0.1 million more than the final budget.

CAPITAL ASSET AND DEBT ADMINISTRATION

Capital Assets

As of June 30, 2022, the City had invested $327.0 million (net of accumulated depreciation) in a broad range of capital assets, including land, vehicles, equipment, the water, wastewater, and recycled water systems, streets, and other capital assets (see Table A-4). This amount represents a net decrease, after additions and deductions, of about $0.9 million or -0.3% compared to the prior fiscal year. Additional information can be found in the notes to the financial statements, Note F – Capital Assets pages 48-51.

Table A-4

Long - Term Debt

At the end of fiscal year 2021-22, the City had about $11.1 million in long-term debt obligations outstanding. Of the $11.1 million, $5.4 million relates to the City's business-type activities and the remaining $5.7 million is applicable to governmental type financing activities. The remaining other long-term debt of $19.5 million are estimated employee benefits payable by the City. The City's component-unit, the City of American Canyon's Fire Protection District, has one long-term debt obligation from green energy upgrades of $0.3 million. It also has a $2.1 million liability for uninsured workers compensation claims.

For governmental type activities, the major long-term debt year-end balances consist of a refinanced $4.6 million financing agreement to purchase a commercial office building that was transformed into City Hall, and $0.5 million for green energy projects benefiting City Hall.

The City and Walmart agreed to share the cost of the traffic light and improvements at SR29. Walmart constructed the street light at a cost of $1.6 million and the City has agreed to reimburse Walmart for 75.85% of the cost or $1.2 million. The City reimbursed Walmart $179,796 for interest expense occurred in 2013. This was originally reported as a reduction in principal and no accrual of interest due was made. Management corrected this in FY2020-21 which had a $0.7 million increase in liability owed. The City made the full repayment from the Traffic Impact Fee Fund in FY2021-22.

For business-type activities, major long-term debt year-end balances are comprised of green energy projects for the benefit of Water enterprises of $1.2 million and Wastewater enterprises of $3.0 million; a $0.7 million State Revolving Fund loan used for construction of the City's wastewater treatment plant facility; and a $0.4 million State loan for water system improvement. The City has no bonded debt outstanding for its business-type activities.

Additional information about the City's long-term obligations can be found in the notes to the financial statements, Note G – Long Term Liabilities, on pages 52-56.

ECONOMIC FACTORS AND NEXT YEAR'S BUDGETS

With continued growth in the second half of 2021, U.S. GDP then contracted in the first two quarters of 2022. The contraction was attributed to the omicron variant of COVID-19 and the tapering of government spending. Government assistance payments to households and businesses all decreased as provisions of several federal programs expired. Supply chain issues continue to persist, with many logistics managers anticipating the supply chain not returning to normal until 2024 or after. These supply chain issues create production delays for products, creating limited supply, and while demand also remains high, this causes prices to go up. Inflation in the U.S. remains stubbornly high. Price increases in energy, food, and housing are having significant impacts on household budgets leaving them with little for discretionary spending. The Federal Reserve continues to raise interest rates to battle high inflation, unfortunately high interest rates increase the cost of home mortgages, the cost of borrowing for businesses and could have a negative impact on the economy. The greater risk in the short to medium term is this persistent high inflation, with the Federal Reserve continuing to raise rates until inflationary pressures subside.

The unemployment rate in California continues to decline. As of December 2022, the Employment Development Department reports a 3.7% unemployment rate. Restaurants and the hotel industry has seen some of strongest employment gains as these sectors were the hardest hit during the pandemic, significant increases have also been seen in the construction and health care sectors. Employers in the state have struggled to hire workers and fill positions. Since October 2021, there have been more job openings in California that there are workers to fill these positions, meaning that worker availability has been the primary constraint on job growth in the state.

American Canyon's sales tax receipts from April 2022 through June 2022 were 7.6% above the same period in 2021. Excluding reporting aberrations, actual sales were up 8.5%. Results reflected measurable improvement over lows one year ago, which had suffered due to COVID-19 impacts. Casual dining restaurants, which had severe access restrictions last year continued to report increases year over year, with Q2 2022 reporting a 12.3% increase. Net of aberrations, taxable sales for all of Napa County grew 14.2% over the comparable time period; the Bay Area was up 11.7%.

Approximately 50% of general fund revenue received is from property taxes. The annual CPI granted was 2.00% almost double the 1.036% granted last year. The year over year increase in citywide assessed valuation was $240.4 million, $78 million more than last year's $162 million increase. This growth was on the strength of industrial uses which were offset by vacant use declines as newly developed properties transition from vacant to other permanent uses. New construction throughout the City continues as building supplies shortages have subsided and demand for single family homes in the area is still strong. Many single family and multifamily residential projects are currently underway which will add to the overall assessed valuation in future years as homes are sold.

Detached Single Family Residence – City of American Canyon

Year	D-SFR Sales	Median Price	% Change
2017	188	$498,500	10.78%
2018	175	$525,000	5.32%
2019	186	$515,000	-1.90%
2020	165	$570,000	10.68%
2021	185	$635,000	11.40%
2022	93	$700,000	10.24%

With the first 7 months of sales data processed for 2022, SFRs are selling for 9.06% more than in the previous calendar year. Prices for the full calendar year 2021 increased 11.40%. The median price of all SFRs in 2022 is $700,000 which is $62,000 higher than the peak price experienced in 2006 at $638,000. The increased sale prices exceeded the previous historical high for the first time. Increased prices were driven by fewer properties offered for sale and new developments with higher price points in sales transactions. These factors contributed significantly to the growth experienced between tax years. Current trends indicate a tempering of sales prices resulting from higher interest rates, as well as a reduction in the number of transactions overall.

2022-23 Taxable Property Values:

Combined Values	Total
Total Values	$3,683,110,260
Total Exemptions	$78,329,328
Net Total Values	$3,604,780,932

The City anticipates continued increases in assessed valuation due to growing interest in industrial and residential development. Key development projects include the Broadway District Specific Plan, the Giovannoni Logistics Center, Canyon Estates, Oat Hill Residential multi-family residences, and continued development of Napa Logistics Park and Watson Ranch (the long-planned mixed-use commercial/retail town center). The City is also embarking on a General Plan Update, American Canyon's blueprint for development of the City and any land outside its boundaries that bears relation to its planning.

CONTACTING THE CITY'S FINANCIAL MANAGEMENT

This financial report is designed to provide our citizens, taxpayers, customers, investors, and creditors with a general overview of the City's finances and to demonstrate the City's accountability for the money it receives. If you have questions about this report or need additional financial information, contact the Finance Director, City of American Canyon, 4381 Broadway Street, Suite 201, American Canyon, California 94503.

CITY OF AMERICAN CANYON
Reconciliation of the Governmental Funds Balance Sheet to the Statement of Net Position
June 30, 2022

Total fund balance, governmental funds	$	42,276,897
Amounts reported for governmental activities in the Statement of Net Position are different because:		
Capital assets used in governmental activities are not current financial resources and, therefore, are not reported in the fund financial statements, but are reported in the governmental activities of the Statement of Net Position.		275,165,178
Revenues and loans receivable, which are deferred on the fund balance sheets because they are not available currently, are recognized as revenue in the Statement of Activities.		9,195,031
Internal service funds are used by management to charge the costs of activities to individual funds. The assets and liabilities of internal service funds are included in governmental activities in the Statement of Net Position. This amount excludes long-term assets and liabilities reported separately below.		796,748
Long-term assets and liabilities are not due and payable in the current period and are not included in the fund financial statements, but are included in the governmental activities of the Statement of Net Position.		
Prepaid rent and deposits		371,000
Accrued interest payable		(21,972)
Bonds, leases and contracts		(5,674,550)
Compensated absences		(748,333)
Uninsured claims		(2,133,981)
Net pension liability		(7,923,101)
Net OPEB liability		(5,799,544)
Employee pension differences to be recognized in the future as pension expense are reported as deferred outflows and inflows of resources on the Statement of Net Position.		(2,796,994)
Employee OPEB differences to be recognized in the future as OPEB expense are reported as deferred outflows and inflows of resources on the Statement of Net Position.		887,131
NET POSITION OF GOVERNMENTAL ACTIVITIES IN THE STATEMENT OF NET POSITION	$	303,593,510

The accompanying notes are an integral part of these financial statements.

CITY OF AMERICAN CANYON
Reconciliation of the Statement of Revenues, Expenditures, and Changes in Fund Balances of Governmental Funds to the Statement of Activities
For the Year Ended June 30, 2022

Net change in fund balances - total governmental funds:	$	1,546,543
Amounts reported for Governmental Activities in the Statement of Activities are different because:		
Governmental funds report outlays for capital assets as expenditures because such outlays use current financial resources. In contrast, the Statement of Activities reports only a portion of the outlay as expense. The outlay is allocated over the assets' estimated useful lives as depreciation expense for the period.		
Capital outlay		4,961,364
Condemnation deposit		107,000
Depreciation expense		(4,356,105)
Governmental funds do not present revenues that are not available to pay current obligations. In contrast, such revenues are reported in the Statement of Activities when earned.		(265,794)
Governmental funds report debt proceeds as current financial resources. In contrast, the Statement of Activities treats such issuance of debt as a liability. Governmental funds report repayment of bond principal as an expenditure. In contrast, the Statement of Activities treats such repayments as a reduction in long-term liabilities. This is the amount by which proceeds exceeded repayments, net of amortization of deferred amount on refunding.		1,269,867
Internal service funds are used by management to charge the costs of activities to individual funds. The net revenue of certain internal service funds is reported with governmental activities.		516,017
Some expenses reported in the statement of activities do not require the use of current financial resources and these are not reported as expenditures in governmental funds:		
Change in prepaid rent		(6,000)
Change in deferred outflows of resources-pension plan		212,407
Change in deferred outflows of resources-OPEB plans		1,067,002
Change in accrued interest payable		665,988
Change in compensated absences		34,616
Change in uninsured claims		(497,100)
Change in net pension liability		6,252,672
Change in net OPEB liability		115,269
Change in deferred inflows of resources-pension plan		(5,886,667)
Change in deferred inflows of resources-OPEB plans		(898,822)
CHANGE IN NET POSITION OF GOVERNMENTAL ACTIVITIES	$	4,838,257

The accompanying notes are an integral part of these financial statements.

NOTES TO THE BASIC FINANCIAL STATEMENTS

(This page intentionally left blank.)

NOTE A – SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The City of American Canyon (the City) was incorporated as a general law city in 1992. The City operates under the Council-Manager form of government and provides the following services: public safety (police and fire), highways and streets, water, wastewater, culture-recreation, public improvements, planning and zoning, transit and general administration.

The financial statements and accounting policies of the City conform with generally accepted accounting principles applicable to governments. The Governmental Accounting Standards Board (GASB) is the accepted standard-setting body for establishing governmental accounting and financial reporting principles. Significant accounting policies are summarized below:

Reporting Entity

The financial statements of the City include the financial activities of the City and its component units. The American Canyon Financing Authority and American Canyon Fire Protection District are legally separate entities for which the City is financially accountable and they are governed by the elected City Council. The Authority was formed to provide a method of financing public improvements, and the Fire District became part of the City when it was incorporated in 1992. The City has full accountability for the Authority's fiscal affairs. Management of the City has operational responsibility for the Fire District. The financial activities of the Authority and the Fire District are blended with those of the City and are reported in the City's governmental funds, and as capital assets and debt obligations of the City. Blended component units, although legally separate entities, are, in substance, part of the government's operations and so data from these units are combined with data of the primary government. Separate component unit financial reports are not prepared.

The City is a member of joint powers authorities (JPA) in which the City has only a residual equity interest in the related entity. The City is not liable for the liabilities of the entities if they dissolve under the related JPA agreement. However, Senate Bill 1912, effective January 1, 2019, requires members of a JPA that participates in a public retirement system to agree on the apportionment of the JPA's retirement liability to the members of the JPA if the JPA dissolves or otherwise terminates its contract with the public retirement system. The City is a member of the following JPAs: Napa Valley Transportation Authority (transit services), Napa Valley Transportation and Planning Agency (transportation planning), North Bay Water Reuse Authority (water conservation and recycling) and Napa County Stormwater Management Program (pollution prevention program), Napa County Stormwater Management Program (stormwater management) and Cooperative Joint Powers Dispatching Services Agreement (fire dispatching). The City is also a member of the insurance JPA's discussed in Note L. The financial statements of the JPAs are available on the websites of the related entities, if applicable.

Basis of Presentation

The City's Basic Financial Statements are prepared in conformity with accounting principles generally accepted in the United States of America. The Government Accounting Standards Board (GASB) is the acknowledged standard setting body for establishing accounting and financial reporting standards followed by governmental entities in the United States of America.

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect certain reported amounts and disclosures. Accordingly, actual results could differ from those estimates.

NOTE A – SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

Government-wide Statements: The Statement of Net Position and the Statement of Activities display information about the primary government (the City). These statements include the financial activities of the overall City government, except for fiduciary activities. These statements distinguish between the *governmental* and *business-type activities* of the City. Governmental activities generally are financed through taxes, intergovernmental revenues, and other nonexchange transactions. Business-type activities are financed in whole or in part by fees charged to external parties.

The Statement of Activities presents a comparison between direct expenses and program revenues for each segment of the business-type activities of the City and for each function of the City's governmental activities. Direct expenses are those that are specifically associated with a program or function and, therefore, are clearly identifiable to a particular function. Program revenues include (a) charges paid by the recipients of goods or services offered by the programs, (b) grants and contributions that are restricted to meeting the operational needs of a particular program and (c) fees, grants and contributions that are restricted to financing the acquisition or construction of capital assets. Revenues that are not classified as program revenues, including all taxes, are presented as general revenues.

Fund Financial Statements: The fund financial statements provide information about the City's funds. Separate statements for each fund category—*governmental and proprietary*—are presented. The emphasis of fund financial statements is on major individual governmental and enterprise funds, each of which is displayed in a separate column. All remaining governmental and enterprise funds are aggregated and reported as nonmajor funds.

Proprietary fund *operating* revenues, such as charges for services, result from exchange transactions associated with the principal activity of the fund. Exchange transactions are those in which each party receives and gives up essentially equal values. *Nonoperating* revenues, such as subsidies and investment earnings, result from nonexchange transactions or ancillary activities.

Major Funds

Major funds are defined as funds that have either assets, liabilities, revenues or expenditures/expenses equal to ten percent of their fund-type total and five percent of governmental and proprietary funds combined. The General Fund is always a major fund. The City may also report other funds it believes should be presented as major funds.

The City reported the following major governmental funds in the accompanying financial statements:

General Fund – The General Fund is used for all the general revenues of the City not specifically levied or collected for other City funds and the related expenditures.

Fire District Operations Special Revenue Fund – Accounts for revenues and the associated expenditures for fire services provided by the component unit fire protection district. The main sources of revenue are property taxes, assessments, and charges for services.

CDBG, CalHome and HOME Loan Development Special Revenue Fund – Accounts for housing rehabilitation made with Federal Community Development Grant monies.

NOTE A – SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

State and Federal Grants – City Special Revenue Fund – Accounts for grant funds received for improvements to various bus stop, curb ramps, bicycle path/trail from Chaucer Lane to existing trail, State Water Resources Control Board for recycled water projects, Urban Open Space and Recreation Program under the Safe Neighborhood Parks, Clean Water, Clean Air, Coastal Protection Bond Act of 2000.

City Capital Projects Fund – Accounts for major capital projects funded by various City sources. Major projects include Green Island Road Reconstruction/Widening and Devlin Road Extension Segment H.

Affordable Housing Capital Projects Fund – Accounts for fees collected from developers in lieu of providing affordable housing services.

The City reported all of its enterprise funds as major funds in the accompanying financial statements:

Water Enterprise Fund – Accounts for the operations of the City's water treatment and distribution system.

Wastewater Enterprise Fund – Accounts for the operation of the City's wastewater treatment plant and collection facilities.

Recycled Water Enterprise Fund – Accounts for the operation of the City's recycled water collection and distribution system.

The City also reports the following fund types:

Internal Service Funds – Account for building maintenance, fleet, information technology and legal services provided to other departments or agencies of the City on a cost-reimbursement basis.

Fiduciary Funds – These funds are used to account for assets held by the City in a fiduciary capacity for special assessment districts. They consist entirely of Custodial Funds. The financial activities of these funds are excluded from the City-wide financial statements but are presented in separate Fiduciary Fund financial statements.

Basis of Accounting

The government-wide, proprietary and fiduciary fund statements are reported using the full *accrual basis* of accounting. The government-wide and proprietary fund statements use the *economic resources measurement focus.* Revenues are recorded when *earned* and expenses are recorded at the time liabilities are *incurred,* regardless of when the related cash flows take place. The Fiduciary Fund statements are not reported using a measurement focus because only assets and liabilities are reported.

Governmental funds are reported using the *current financial resources* measurement focus and the *modified accrual* basis of accounting. Under this method, revenues are recognized when *measurable* and *available*. The City considers all revenues reported in the governmental funds to be available if the revenues are collected within sixty days. Expenditures are recorded when the related fund liability is incurred, except for principal and interest on general long-term debt, claims and judgments, and compensated absences, which are recognized as expenditures to the extent they have

NOTE A – SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

matured. Governmental capital asset acquisitions are reported as *expenditures* in governmental funds. Proceeds of governmental long-term debt and acquisitions under capital leases are reported as *other financing sources*. Those revenues susceptible to accrual at both the City-wide and fund level are property, sales and franchise taxes, current service charges, and interest revenue. Fines and licenses and permits are not susceptible to accrual because they are not measurable until received in cash.

Non-exchange transactions, in which the City gives or receives value without directly receiving or giving equal value in exchange, include taxes, grants, entitlements, and donations. On the accrual basis, revenue from taxes is recognized in the fiscal year for which the taxes are levied or assessed. Revenues from grants, entitlements, and donations are recognized in the fiscal year in which all eligibility requirements have been satisfied.

Grant revenues are recognized in the fiscal year in which all eligibility requirements are met. Under the terms of grant agreements, the City may fund certain programs with a combination of cost-reimbursement grants, categorical block grants, and general revenues. Thus, both restricted and unrestricted net position may be available to finance program expenditures. The City's policy is to first apply restricted grant resources to such programs, followed by general revenues if necessary.

Certain indirect costs are included in program expenses reported for individual functions and activities.

As a general rule, the effect of interfund activity has been eliminated from the government-wide financial statements. Exceptions to this general rule are exchange or exchange-like transactions between functions of the government. Elimination of these charges would distort the direct costs and program revenues reported for the various functions concerned.

Proprietary funds distinguish *operating* revenues and expenses from *nonoperating* items. Operating revenues and expenses generally result from providing services and producing and delivering goods in connection with a proprietary fund's principal ongoing operations. The principal operating revenues of the City's enterprise funds and internal service funds are charges to customers for sales and services. The City also recognizes as operating revenue the portion of tap fees intended to recover the cost of connecting new customers to the system. Operating expenses for enterprise funds include the cost of sales and services, administrative expenses, and depreciation on capital assets. All revenues and expenses not meeting this definition are reported as nonoperating revenues and expenses.

Property Tax Revenues

Napa County assesses properties and bills, collects, and distributes property taxes to the City. The County remits the entire amount levied and handles all delinquencies, retaining interest and penalties. Secured and unsecured property taxes are levied on January 1.

Secured property tax is due in two installments, on November 1 and March 1, and becomes a lien on those dates. It becomes delinquent on December 10 and April 10, respectively. Unsecured property tax is due on July 1, and becomes delinquent on August 31.

The term "unsecured" refers to taxes on personal property other than real estate, land and buildings. These taxes are secured by liens on the property being taxed. Property tax revenues are recognized by the City in the fiscal year they are assessed, provided they become available as defined above.

NOTE A – SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

Restricted Assets

Certain proceeds of long-term debt are classified as restricted assets on the balance sheet because their use is limited by applicable bond covenants. Restricted cash includes the "reserve" account used to report resources set aside to make up potential future deficiencies in the bond's debt service. Restricted cash also includes unspent proceeds of special assessment debt transferred to City capital projects funds. The restricted assets in the Proprietary Funds also includes amounts collected that are restricted for capacity expansion.

Assets Held for Resale

Assets held for resale are carried at the lower of cost or market, but not greater than the net realizable value. In the Fund Financial Statements, an amount equal to the carrying value of the asset is reported as nonspendable fund balance because such assets are not available to finance the City's current operations.

Compensated Absences

Compensated absences are comprised of unpaid vacation and certain compensated time off, which are accrued as earned. A liability for compensated absences that are attributable to services already rendered and that are not contingent on a specific event that is outside the control of the government and its employees is accrued as employees earn the rights to the benefits. Compensated absences that relate to future services or that are contingent on a specific event that is outside the control of the government and its employees are accounted for in the period in which such services are rendered or such events take place. A liability for these amounts is reported in governmental funds only if they have matured, for example, as a result of employee resignations and retirements. The City's liability for compensated absences is recorded in the governmental activities, Internal Service, Water and Wastewater Funds as appropriate and are generally liquidated by these funds. The governmental activities compensated absences liability is liquidated by the General Fund and Fire District Operations Fund. The long-term portion of governmental activities compensated absences is liquidated primarily by the General Fund. The liability for compensated absences is determined annually.

Pension Plan

For purposes of measuring the net pension liability and deferred outflows/inflows of resources related to the pension plan, and pension expense, information about the fiduciary net position of the California Public Employee's Retirement System (CalPERS) plan (Plan) and additions to/deductions from the Plan's fiduciary net position have been determined on the same basis as they are reported by CalPERS. For this purpose, benefit payments (including refunds of employee contributions) are recognized when due and payable in accordance with the benefit terms. Investments are reported at fair value. The net pension liability is generally liquidated by the City's General, Fire District Operations, Internal Service, Water and Wastewater Funds.

NOTE A – SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

Other Postemployment Benefits (OPEB) Plans

For purposes of measuring the net OPEB liability, deferred outflows of resources and deferred inflows of resources related to the OPEB plans (Plans), and OPEB expense, information about the fiduciary net position of the Plans and additions to/deductions from the Plans' fiduciary net position have been determined on the same basis as they are reported by the Plans. For this purpose, the Plans recognize benefit payments when due and payable in accordance with the benefit terms. Investments are reported at fair value, except for money market investments and participating interest-earning investment contracts that have a maturity at the time of purchase of one year or less, which are reported at cost. The net OPEB liability is generally liquidated by the City's General, Fire District Operations, Internal Service, Water and Wastewater Funds.

New Pronouncements

In March 2020, the GASB issued Statement No. 94, Public-Private and Public-Public Partnerships and Availability Payment Arrangements. This Statement addresses issues related to public-private and public-public partnership arrangements (PPPs). PPPs are arrangements in which a government (the transferor) contracts with an operator (a governmental or nongovernmental entity) to provide public services by conveying control of the right to operate or use a nonfinancial asset, such as infrastructure or other capital asset (the underlying PPP asset), for a period of time in an exchange or exchange-like transaction. This statement requires that PPPs that meet the definition of a lease apply guidance in Statement No. 87, Leases, as amended, if existing assets of the transferor that are not required to be improved by the operator as part of the PPP arrangement are the only underlying PPP assets and the PPP does not meet the definition of a service concession arrangement. This Statement provides accounting and financial reporting requirements for all other PPPs: those that either (1) meet the definition of an SCA or (2) are not within the scope of Statement No. 87, as amended. This Statement also provides guidance for accounting and financial reporting for availability payment arrangements that include an arrangement in which a government compensates an operator for services that may include designing, constructing, financing, maintaining, or operating an underlying nonfinancial asset for a period of time in an exchange or exchange-like transaction. This Statement is effective for reporting periods beginning after June 15, 2022.

In May 2020, the GASB issued Statement No. 96, Subscription-Based Information Technology Arrangements (SBITA). This Statement 1) defines the term SBITA; 2) establishes that a SBITA results in a right-to-use subscription asset – an intangible asset – and a corresponding subscription liability; 3) provides the capitalization criteria for outlays other than subscription payments, including implementation costs to a SBITA; and 4) requires note disclosures regarding a SBITA. To the extent relevant, the standards for SBITA are based on the standards established in Statement No. 87, Leases, as amended. This statement is effective for fiscal years beginning after June 15, 2022.

In June 2020, the GASB issued Statement No. 97, Certain Component Unit Criteria, and Accounting and Financial Reporting for Internal Revenue Code Section 457 Deferred Compensation Plans. This Statement requires for the purposes of determining whether a primary government is financially accountable for a potential component unit, except for a potential component unit that is a defined contribution plan, a defined contribution OPEB plan, or an other employee benefit plan (for example, certain Section 457 plans), the absence of a governing board should be treated the same as the appointment of a voting majority of a governing board if the primary government performs the duties that a governing board typically would perform. This Statement also requires that the financial burden

NOTE A – SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

criterion in paragraph 7 of Statement No. 84, Fiduciary Activities, be applicable to only defined benefit pension plans and defined benefit OPEB plans that are administered through trusts that meet the criteria in paragraph 3 of Statement No. 67, Financial Reporting for Pension Plans, or paragraph 3 of Statement No. 74, Financial Reporting for Postemployment Benefit Plans Other Than Pension Plans, respectively. This Statement (1) requires that a Section 457 plan be classified as either a pension plan or an other employee benefit plan depending on whether the plan meets the definition of a pension plan and (2) clarifies that Statement 84, as amended, should be applied to all arrangements organized under IRC Section 457 to determine whether those arrangements should be reported as fiduciary activities. The requirements other than paragraph 4 and 5 are effective for periods beginning after June 15, 2021.

In April 2022, the GASB issued Statement No. 99, Omnibus 2022. This Statement enhances comparability in accounting and financial reporting and consistency in authoritative literature, including the classification and reporting of derivative instruments within the scope of Statement No. 53, Accounting and Financial Reporting for Derivative Instruments, that do not meet the definition of either an investment derivative instrument or a hedging derivative instrument; clarification of provisions of Statement 87, Leases, related to the determination of the lease term, classification of a lease as a short-term lease, recognition and measurement of a lease liability and a lease asset and identification of lease incentives; clarification of provisions in Statement No. 96, Subscription-Based Information Technology Arrangements, related to the subscription-based information technology arrangement term, classification as short-term and recognition of a subscription liability; extension of the period during which the London Interbank Offered Rate (LIBOR) is considered an appropriate benchmark interest rate for the qualitative evaluation of the effectiveness of an interest rate swap that hedges the interest rate risk of taxable debt; accounting for the distribution of benefits as part of the Supplemental Nutrition Assistance Program (SNAP); disclosures related to nonmonetary transactions; pledges of future revenues when resources are not received by the pledging government; clarification of provisions in Statement No. 34, Basic Financial Statements and Management's Discussion and Analysis for State and Local Governments, related to the focus of the government-wide financial statements; terminology updates related to provisions of Statement No. 63, Financial Reporting of Deferred Outflows of Resources, Deferred Inflows of Resources, and Net Position; and terminology used in Statement No. 53 to refer to resource flows statements. The provisions of this Statement are effective immediately through periods beginning after June 15, 2023.

In June 2022, the GASB issued Statement No. 101, Compensated Absences. This statement requires that liabilities for compensated absences be recognized for leave that has not been used that is attributable to services already rendered, accumulates and is more likely than not to be used for time off or paid in cash or settled through noncash means and leave that has been used but not paid in cash or settled through noncash means. Leave that is more likely than not to be settled through conversion to defined benefit postemployment benefits should not be included in the liability for compensated absences. This Statement requires that a liability for certain types of compensated absences, including parental leave, military leave and jury duty leave, not be recognized until the leave commences. Certain salary-related payments that are directly and incrementally associated with payments for leave also should be included in the measurement of the liabilities. With respect to financial statements prepared using the current financial resources measurement focus, this Statement requires that expenditures be recognized for the amount that normally would be liquidated with expendable available financial resources. Governments are allowed to disclose the net change in the liability if identified as such in the footnotes to the financial statements. The provisions of this Statement are effective for years beginning after December 15, 2023.

The City is currently analyzing the impact of the required implementation of these new statements.

NOTE B – BUDGETS AND BUDGETARY ACCOUNTING

Annual budgets are adopted on a basis consistent with generally accepted accounting principles for all government funds except the State and Federal Grants – Fire Special Revenue Fund and the Engie Fire Debt Service Fund. All annual appropriations lapse at fiscal year-end.

The appropriated budget is prepared by fund, department, division, object and line item. The City's department managers may make transfers of appropriations within a division. Transfers of appropriations between divisions require the approval of the City Manager. The legal level of budgetary control (i.e., the level at which expenditures may not legally exceed appropriations) is the fund level. All budget amounts presented in the accompanying financial statements have been adjusted for legally authorized revisions of the annual budgets during the year. Amounts represent the original budgeted amounts and all supplemental appropriations. The supplemental appropriations were immaterial.

The Fire Operations Special Revenue Fund, State and Federal Grants – City Special Revenue Fund, General Plan Update Special Revenue Fund, Traffic Impact Capital Projects Fund and Engie City Debt Service Fund had expenditures and transfers out in excess of the final appropriation for the fiscal year ended June 30, 2022 by $288,317, $106,973, $75,094, $234,038 and $64,597, respectively. The excess amounts were mainly due to minor unexpected costs or debt/projects approved by Council after the budget was adopted.

NOTE C – CASH AND INVESTMENTS

The City's dependence on property tax receipts, which are received semi-annually, requires it to maintain significant cash reserves to finance operations during the remainder of the year. The City pools cash from all sources and all funds except cash and investments held by trustees so that it can be invested at the maximum yield consistent with safety and liquidity, while individual funds can make expenditures at any time.

Policies

The City's investments are carried at fair value, as required by generally accepted accounting principles. The City adjusts the carrying value of its investments to reflect their fair value at each fiscal year end, and it includes the effects of these adjustments in income for that fiscal year.

Classification

Cash and investments are classified in the financial statements as shown below, based on whether or not their use is restricted under the terms of City debt instruments or agency agreements.

Cash and investments	$ 63,722,327
Restricted cash and investments	7,038,530
Total cash and investments of primary government	70,760,857
Cash and investments in Fiduciary Funds	4,283,105
Restricted cash and investments in Fiduciary Funds	3,833,611
Total cash and investments	$ 78,877,573

NOTE C – CASH AND INVESTMENTS (Continued)

Cash and investments as of June 30, 2022 consist of the following:

Cash on hand	$ 2,400
Deposits with financial institutions	1,226,507
Investments:	
Held by City	73,839,597
Held by fiscal agents	3,809,069
Total investments	77,648,666
Total cash and investments	$ 78,877,573

Cash and investments are used in preparing proprietary fund statements of cash flows because these assets are highly liquid and are expended to liquidate liabilities arising during the year.

Investments Authorized by the California Government Code and the City's Investment Policy

The City's Investment Policy and the California Government Code allow the City to invest in the following, provided the credit ratings of the issuers are acceptable to the City; and approved percentages and maturities are not exceeded. The table below also identifies certain provisions of the California Government Code, or the City's Investment Policy where the City's Investment Policy is more restrictive.

Authorized Investment Type	Maximum Maturity	Minimum Credit Quality	Maximum Percentage of Portfolio	Maximum Investment Per Issuer
Local Agency Bonds	5 years	A	30%	5%

California Asset Management Program (CAMP)	N/A	None	None	None

NOTE C – CASH AND INVESTMENTS (Continued)

Investments Authorized by Debt Agreements

The City must maintain required amounts of cash and investments with trustees or fiscal agents under the terms of certain debt issues. These funds are unexpended bond proceeds or pledged reserves to be used if the City fails to meet its obligations under these debt issues. The California Government Code requires these funds to be invested in accordance with City resolutions, bond indentures or State statutes. The table below identifies the investment types that are authorized for investments held by fiscal agents. The bond indentures contain no limitations for the maximum investment in any one issuer or the maximum percentage of the portfolio that may be invested in any one investment type. The table also identifies certain provisions of these debt agreements:

Authorized Investment Type	Maximum Maturity	Minimum Credit Quality
Bankers' Acceptances	360 days	A-1
U.S. Treasury Bills and Notes	None	N/A
State General Obligations	None	A
Municipal Obligations	None	Aaa/AAA
U.S. Government Agency Securities	None	AAA
U.S. Government Sponsored Securities	None	AAA

Money Market Fund	N/A	AAm
Defeasance Securities	N/A	N/A
Pre-refunded Municipal Obligations	None	AAA
Investment Agreements	N/A	AA
Unsecured Certificates of Deposit	30 days	A-1
CalTrust	None	N/A

Interest Rate Risk

Interest rate risk is the risk that changes in market interest rates will adversely affect the fair value of an investment. Generally, the longer the maturity of an investment, the greater the sensitivity of its fair value changes in market interest rates. As a means of limiting its exposure to fair value losses arising from rising interest rates, the City generally manages its interest rate risk by investing in the Local Agency Investment Fund (LAIF), which provides the necessary cash flow and liquidity needed for operations, as well as purchasing a combination of shorter term and longer term investments so that a portion of the portfolio is maturing or coming close to maturing evenly over time.

Information about the sensitivity of the fair values of the City's investments (including investments held by bond trustees) to market interest rate fluctuations is provided by the following table that shows the distribution of the City's investments by maturity or earliest call date:

NOTE C – CASH AND INVESTMENTS (Continued)

Authorized Investment Type	12 Months or less	13 to 36 Months	36 to 60 Months	Total
California Local Agency Investment Fund (LAIF)	$ 51,007,686			$ 51,007,686
U.S. Treasury Notes	197,695	$ 3,453,089	$3,713,049	7,363,833
U.S. Government Agency Obligations	299,206	3,420,329	988,605	4,708,140

Collateralized Mortgage Obligations		149,297		149,297
Total invesments	57,366,021	11,957,825	8,324,820	77,648,666
Cash on hand	2,400			2,400
Cash in bank	1,226,507			1,226,507
Total cash and investments	$ 58,594,928	$ 11,957,825	$8,324,820	$ 78,877,573

The City is a participant in the Local Agency Investment Fund (LAIF) that is regulated by California Government Code Section 16429 under the oversight of the Treasurer of the State of California. The City reports its investment in LAIF at the fair value amount provided by LAIF, which is the same as the value of the pool share. The balance is available for withdrawal on demand, and is based on the accounting records maintained by LAIF, which are recorded on an amortized cost basis. Included in LAIF's investment portfolio are collateralized mortgage obligations, mortgage-backed securities, other asset-backed securities, loans to certain state funds, United States Treasury Notes and Bills, and floating rate securities issued by federal agencies, government-sponsored enterprises, and corporations. The total fair value amount invested by all public agencies in LAIF is $231,867,874,452, which is managed by the State Treasurer. The Local Investment Advisory Board (Board) has oversight responsibility for LAIF. The Board consists of five members as designated by the State Statute. At June 30, 2022, these investments matured in an average of 311 days.

Credit Risk

Credit risk is the risk that an issuer of an investment will not fulfill its obligation to the holder of the investment. This is measured by the assignment of a rating by a nationally recognized statistical rating organization. The following are credit ratings issued by Moody's and Standard and Poor's as of June 30, 2022:

NOTE C – CASH AND INVESTMENTS (Continued)

Investment Type	Aaa/AAA	Aa1/AA+	Aa2/AA Aa3/AA-	A1/A+ P1	A2/A	A3/A-	Baa1/BBB+	Total

Not rated:								
LAIF								51,007,686
Exempt from credit rating disclosure:								
U.S. Treasury Notes								7,363,833
Total investments								$77,648,666

Concentration of Credit Risk

The investment policy of the City has no limitations on the amount that can be invested in any one issuer beyond what is stipulated by the California Government Code. Investments exceeding 5% of total investments are required to be disclosed under GASB Statement No. 40, which excludes U.S. Treasury securities, mutual funds and external investment pools. At June 30, 2022 there were no investments exceeding 5% of total investments.

Custodial Credit Risk

Custodial credit risk for deposits is the risk that, in the event of the failure of a depository financial institution, a government will not be able to recover its deposits or will not be able to recover collateral securities that are in the possession of an outside party. The custodial credit risk for investments is the risk that, in the event of the failure of the counterparty (e.g., broker-dealer) to a transaction, a government will not be able to recover the value of its investment or collateral securities that are in the possession of another party. The California Government Code and the City's investment policy do not contain legal or policy requirements that would limit the exposure to custodial credit risk for deposits, other than the following provision for deposits: The California Government Code requires that a financial institution secure deposits made by state or local governmental units by pledging securities in an undivided collateral pool held by a depository regulated under state law (unless so waived by the governmental unit). The market value of the pledged securities in the collateral pool must equal at least 110% of the total amount deposited by the public agencies. California law also allows financial institutions to secure public agency deposits by pledging first trust deed mortgage notes having a value of 150% of the secured public deposits. At June 30, 2022, the City had $1,619,134 in deposits at banks above the federally insured limit, which are collateralized by securities pledged by the financial institution, but not in the name of the City.

Fair Value Measurement

The City categorizes its fair value measurements within the fair value hierarchy established by generally accepted accounting principles. The hierarchy is based on the valuation inputs used to

NOTE C – CASH AND INVESTMENTS (Continued)

measure the fair value of the asset. Level 1 inputs are quoted prices in active markets for identical assets; Level 2 inputs are significant other observable inputs; Level 3 inputs are significant unobservable inputs.

The City has the following recurring fair value measurements as of June 30, 2022:

		Fair Value Measurements Using		
	Total	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Investments by fair value level:				
U.S. Treasury Notes	$ 7,363,833		$ 7,363,833	
U.S. Government Agency Obligations	4,708,140		4,708,140	
U.S. Corporate Obligations	5,916,306		5,916,306	
Asset-Backed Securities	2,299,825		2,299,825	
Supranational Note	752,286		752,286	
Collateralized Mortgage Obligations	149,297		149,297	
Total investments by fair value level	21,189,687	$ -	$ 21,189,687	$ -
Investments uncategorized:				
LAIF	51,007,686			
Negotiable Certificates of Deposit	1,342,670			
Money Market Mutual Funds	4,108,623			
Total investments	$ 77,648,666			

All securities classified in Level 2 are valued using pricing models that are based on market data, such as matrix or model pricing, which use standard inputs, which include benchmark yields, reported trades, broker/dealer quotes, issue spreads, two sided markets, benchmark securities, bids, offers and reference data including market research publications.

NOTE D – INTERFUND TRANSACTIONS

Interfund transactions between funds are reflected as loans, services provided, reimbursements or transfers. Loans are reported as receivables or payables as appropriate, and are subject to elimination upon consolidation. The City transfers resources among funds in the course of normal operations. Services provided, deemed to be at market or near market rates, such as vehicle maintenance, are accounted for as revenues and expenditures/ expenses. Transactions to reimburse a fund for expenditures/expenses initially made from it that are applicable to another fund are recorded as expenditures/expenses in the correct fund and as reductions of expenditures/ expenses in the original fund. All other interfund transactions are reported as transfers.

NOTE D – INTERFUND TRANSACTIONS (Continued)

Transfers Between Funds

With Council approval, resources may be transferred from one City fund to another. Transfers between funds during the fiscal year ended June 30, 2022 were as follows:

Fund Making Transfer	Fund Receiving Transfers	Amount Transferred	
General Fund	Cabernet Village Lease Debt Service Fund	$ 98,235	(C)
	Engie City Debt Service Fund	37,145	(A)
Major Governmental Funds:			
State and Federal Grants-City Special Revenue	City Capital Projects Fund	3,365,047	(B)
	Engie City Debt Service	153,435	(C)
	City Capital Projects Fund	180,775	(B)
Major Enterprise Funds:			
Water	General Fund	823,608	(A)
	City Capital Projects Fund	716,988	(B)
Wastewater	General Fund	765,906	(A)
	City Capital Projects Fund	20,449	(B)
Nonmajor Special Revenue Funds:			
Storm Drainage	General Fund	380,737	(D)
Measure T- Streets and Roads	City Capital Projects Fund	29,721	(B)
Gas Tax	General Fund	300,000	(A)
	City Capital Projects Fund	10,057	(B)
State Supplemental Law Enforcement	General Fund	163,491	(A)
Community Facilities District	City Capital Projects Fund	370,257	(B)
Nonmajor Capital Projects Funds:			
Park Improvement	City Capital Projects Fund	1,833	(B)
Traffic Impact	City Capital Projects Fund	23,309	(B)
Zero Water Footprint	Recycled Water Enterprise Fund	368	(A)
Nonmajor Debt Service Funds:			
Engie City	Wastewater Enterprise Fund	64,597	(B)
Engie Fire	Wastewater Enterprise Fund	36,189	(B)
		$ 7,542,147	

(A) Transfer resources to fund incurring expenditures
(B) Transfer to fund capital improvements
(C) Transfer to fund debt service payments
(D) Transfer to fund flood protection projects

Current Interfund Balances

Current interfund balances arise in the normal course of business and are expected to be repaid shortly after the end of the fiscal year. At June 30, 2022, the following funds have interfund balances.

NOTE D – INTERFUND TRANSACTIONS (Continued)

Fund Making Loan	Fund Receiving Loan	Amount
General Fund		
	Major Governmental Funds:	
	State and Federal Grants - City Special Revenue	$ 427,585
	Major Enterprise Funds:	
	Water Fund	750,785
	Wastewater	1,265,145
	Internal Service Funds:	
	Legal Internal Service Fund	179,750
	Nonmajor Special Revenue Funds:	
	Cannabis Fund	13,882
	Community Facilities District	243,868
Fire District Operations Special Revenue		
	Nonmajor Debt Service Funds:	
	Engie Fire	19,076
Wastewater Enterprise		
	Major Enterprise Funds:	
	Water Fund	32,797
	Fire District Operations Special Revenue	81,475
Engie City Debt Service		
	Major Enterprise Funds:	
	Wastewater	153,435
	Total Due To/Due From Other Funds	$ 3,167,798

Advances Between Funds

In December 2009, the Wastewater Enterprise Fund advanced the Water Enterprise Fund $4,907,024 for the Green Island Road Recycled Waterline project, Recycled Water Pump Station upgrade and other various construction projects. This loan accrued interest at 3% per year, but in 2021 the City Council approved Resolution 2021-269 that reduced the interest rate to the Local Agency Investment Fund interest rate retroactively to the State of California Local Agency Investment Fund. In 2021, this advance, along with the capital assets related to the recycled water projects, were transferred to the Recycled Water Fund. As of June 30, 2022, the Recycled Water Fund owed $5,541,683 including accrued interest on this advance, $129,402 to the Water Fund and $5,412,281 to the Wastewater Fund. The City intends to establish service charges in the Recycled Water Fund sufficient to repay the advance over the 15-year useful life of the capital assets.

NOTE E – LOANS RECEIVABLE

At June 30, 2022, the City had the following loans receivable:

BEGIN Program	$ 8,341,471
Satellite Affordable Housing Association	3,005,326
Mid-Peninsula Housing Coalition Loan	2,166,189
HOME Program	1,622,294
CDBG Housing Rehabilitation Program	469,051
CalHome Program	268,298
Employee Home Purchase Assistance	1,535
Other	51,477
	15,925,641
Valuation allowance	(8,248,746)
Loans, net	$ 7,676,895

BEGIN Program

The City was awarded $1,080,000 ($30,000 each for 36 homes) from the State of California on August 17, 2005, plus an additional $6,038,900, from Mid-Peninsula Housing Coalition (MPHC), a non-profit organization, to grant loans to qualified low-income home buyers at Vineyard Place, a subdivision comprised of 45 single-family detached homes. Loan payments are deferred for the life of the loan, or until the homeowner sells the home, whichever occurs sooner. The loans will be forgiven, in stages, commencing in the 26th year of the loan, and totally forgiven after 30 years. As of June 30, 2022, residents owed the City $8,248,746 in loans offered by this program, which includes $2,756,046 of accrued interest.

Since these loans are secured by trust deeds which are subordinated to other debt on the associated projects or are only repayable from residual cash receipts on the projects, collectability of the outstanding balances may not be realized. As a result, the entire outstanding balances of the forgivable loans have been offset by a valuation allowance and is not reported on the balance sheet.

The BEGIN Fund also includes loans of $92,725, including accrued interest, which are not required to be forgiven. However, if the amount of net sale proceeds is less than the amount due under the loan, the City may forgive the loan to the extent that the amount due under the loan exceeds the net sale proceeds.

Satellite Affordable Housing Association Loan

The City made two separate loans to Satellite Affordable Housing Association (SAHA) totaling $2,730,000 for the development of 70 affordable housing units:

Acquisition and Development: The City loaned $1,050,000 for the acquisition and $750,000 for other development costs. The loan carries a 3% interest rate over a 57-year term. As part of the agreement, the City will receive a residual share of the cash flow from the project.

Construction: The City loaned $930,000 for the construction of the units. The loan is interest free over a 57-year term.

NOTE E – LOANS RECEIVABLE (Continued)

As of June 30, 2022, the loan balance was $3,005,326.

Mid-Peninsula Housing Coalition Loan

The City loaned the Mid-Peninsula Housing Coalition (MPHC) $2,265,000 interest free for the construction of the Vineyard Crossing Apartments. As part of the agreement, the City will receive a residual share of the cash flow from the project. As of June 30, 2022, the loan balance was $2,166,189.

HOME Program

The City provides loans to qualified first time buyers through the federally funded HOME Program. Under this program, principal and interest payments are deferred until the loan is refinanced or title to the property changes. These loans carry a 1% interest rate with a maturity of 30 years. As of June 30, 2022, residents owed the City $1,622,294 in loans offered by this program, including accrued interest.

CDBG Housing Rehabilitation Program

The City administers a Housing Rehabilitation Loan Program using the Housing and Community Development Act funds. Under this program, residents with incomes below a certain level are eligible to receive low interest loans, secured by deeds of trust, for construction work on their homes. Federal grants are used to fund these loans. Upon approval of loans, the City disburses the funds, and arranges for and collects repayments. These loans generally have interest rates of 3%, although some are zero-interest-rate loans, and are generally due upon transfer of the home or refinancing. As of June 30, 2022, residents owed the City $469,051 in loans offered by this program, including accrued interest.

CalHome Program

The City operates the CalHome Program to assist with the down payment or rehabilitation of manufactured homes. No interest accrues on the loans and principal payments are deferred until maturity. As of June 30, 2022, residents owed the City $268,298 in loans offered by this program.

Employee Home Purchase Assistance

The City provided home down payment assistance to its employees until through the year ended June 30, 2009 when the program was terminated. At June 30, 2022, there was one loan outstanding to an employee. To qualify for the program, employees were required to be full-time and purchase a home within the City limits. The maximum loan amount was 10% of the purchase price, or $50,000, whichever was less. Interest on the loans was determined using the current Local Agency Investment Fund rate. The maximum loan term was 20 years. As of June 30, 2022, the remaining employee owed the City $1,535 under this program.

NOTE F – CAPITAL ASSETS

All capital assets are valued at historical cost or estimated historical cost if actual historical cost is not available. Contributed capital assets are valued at their estimated acquisition value on the date contributed, which is the price that would be paid to acquire an asset with equivalent service potential in an orderly market transaction at the acquisition date. The City defines capital assets as equipment, vehicles, furniture and fixtures with an initial individual cost of more than $5,000 ($50,000 for infrastructure type assets) and an estimated useful life in excess of one year (30-75 years for infrastructure assets) with the exception of Federally funded acquisitions, which are $5,000 or more. Land is capitalized at an initial individual cost of more than $150,000. The cost of normal maintenance and repairs that do not add to the value of the asset or materially extend assets lives are not capitalized.

Depreciation is provided using the straight-line method which means the cost of the asset is divided by its expected useful life in years and the result is charged to expense each year until the asset is fully depreciated. Major outlays for capital assets and improvements are capitalized as projects are constructed. The City has assigned the useful lives listed below to capital assets:

Buildings and Improvements	20-30 years
Public Domain Infrastructure	50-75 years
System Infrastructure-Utility	60 years
Vehicles and Equipment	2-15 years

The cost of assets sold or retired and the related amounts of accumulated depreciation are eliminated from the statement of net position in the year of sale or retirement, and the resulting gain or loss is recognized in operations.

NOTE F – CAPITAL ASSETS (Continued)

Capital Asset Additions and Retirements

Capital assets at June 30 consisted of the following:

	Balance July 01, 2021 (as Restated)	Additions	Retirements	Transfers	Balance at June 30, 2022
Governmental Activities					
Capital assets, not being depreciated:					
Land	$ 10,162,813				$ 10,162,813
Street right of ways	165,187,812				165,187,812
Construction in progress	7,903,704	$ 4,841,577			12,745,281
Total capital assets, not being depreciated	183,254,329	4,841,577			188,095,906
Capital assets, being depreciated:					
Buildings and improvements	51,201,341				51,201,341
Machinery and equipment	8,536,587	193,079	$ (107,200)		8,622,466
Infrastructure - streets and storm drains	92,289,491				92,289,491

Depreciation Allocation

Depreciation expense is charged to functions and programs based on their usage of the related assets. The amounts allocated to each function or programs are as follows:

	Depreciation
Governmental Activities:	
Public safety	$ 342,033
Public works	3,514,201
Storm drain	497,307
Total Governmental Activities	$ 4,353,541

NOTE F – CAPITAL ASSETS (Continued)

Business-type Activities:	
Water	$ 1,282,037
Wastewater	1,561,144
Recycled Water	222,773
Total Business-type Activities	$ 3,065,954

Project Commitments

At June 30, 2022, the City had outstanding commitments with contractors for the following projects:

Project	Remaining Commitment
Transportation projects	$ 2,234,414
Parks projects	417,713
Community development projects	365,167
Wastewater projects	96,550
Planning projects	4,940
	$ 3,118,784

NOTE G – LONG-TERM LIABILITIES

The City generally incurs long-term debt to finance projects or purchase assets, which will have useful lives equal to or greater than the related debt. Activity in the City's long-term liabilities was as follows for the year ending June 30, 2022:

	Original Amount	Balance July 01, 2021 (as Restated)	Additions	Retirements	Balance June 30, 2022	Current Portion
Governmental Activities						
2020 City Hall Site Agreement 2.6%, due 05/01/34	$ 4,569,064	$ 4,569,064			$ 4,569,064	
Bank of America Financed Purchase ENGIE 1.79%, due 06/01/36	5,209,209	845,181		$ (43,180)	802,001	$ 41,371

All agreements below represent direct borrowings.

2020 City Hall Site Agreement

In October 2020, the Financing Authority entered into an agreement in the amount of $4,569,064 in order to terminate the 2007 Lease Financing and restructure the payments on the agreement to purchase the site and construct the City Hall. The terms of the agreement require semi-annual principal payments of $185,202 to $231,828 commencing on November 1, 2023, and semi-annual interest payments of $2,492 to $53,756 commencing on May 1, 2021, through May 1, 2034, which includes interest at 2.6%. In the event of default, the lender has the ability to direct and control remedies under the agreement, which includes termination of the agreement and re-lease of the property.

ENGIE Financed Purchase Agreement

In May 2020, the City entered into a purchase arrangement with a bank in the amount of $5,209,209 for equipment upgrades, replacements and installation to provide energy savings for the City. Debt service will be funded from the revenue of the General Fund, Fire District Fund, Water Fund, and Wastewater Fund. $15,354 of accrued interest was added to the principal balance by the lender after issuance during 2021. The contracts were split between governmental activities and business-type activities based on the proportion of future contract obligations. The contract rate is 1.79%. Monthly principal and interest payments ranging from $28,975 to $41,144 are due on the first of each month from July 1, 2021 to June 1, 2036. In the event of default, the agreement may be terminated and the equipment may be repossessed and 1% will be added to the interest rate.

NOTE G – LONG-TERM LIABILITIES (Continued)

Financed Purchase Agreement – Municipal Asset Management, Inc. Vac Con Truck

In July 2014, the City entered into a purchase arrangement for $314,188 to purchase sewer and storm drain equipment. The terms of the agreement require annual payments of $36,757 through June 17, 2024, which includes interest at 2.96%. In the event of default, the agreement may be terminated, and the equipment may be repossessed. Also, a late charge of 1% per month will be assessed.

Enterprise Lease Liability

During the year ended June 30, 2022, the City implemented GASB Statement No. 87, Leases, retroactivity to July 1, 2021. This Statement requires recognition of lease assets and liabilities for leases that previously were classified as operating leases and recognized as inflows of resources or outflows of resources based on the payment provisions of the contract.

On August 26, 2021, the City entered into a master lease agreement with Enterprise Fleet Management to lease vehicles for the City. The City leases six vehicles under the agreement with payments of $57,934 per year starting in 2023 and final payments of $45,523 in 2027 through June 22, 2027. The District recorded lease assets and a lease liability for the present value of the lease payments over the lease terms. For purposes of discounting future lease payments, the District used a discount rate of 6.85% charged by the lessor. The lease assets are being amortized over 5.0 years, which is the remaining term of the current leases. The lease assets and liability were recorded in a restatement as of July 1, 2021 of $244,687. As of June 30, 2022, the cost and accumulated amortization of the leased vehicles were $244,687 and $49,581, respectively. The agreement contains a default interest rate of the lesser of 18% or the highest rate permitted by law.

Cost Reimbursement Payable

The City entered into a cost sharing agreement with a property owner for the construction of a traffic light and improvements at an intersection. The property owner constructed the streetlight at a cost of $1,617,255 and the City has agreed to reimburse the property owner for 75.85% of the cost, or $1,226,688. The City repaid the payable, along with $845,743 of interest, during 2022.

State of California Davis – Grunsky Loan

The City obtained a loan in an original amount of $2,050,000 from the State of California Department of Water Resources under the Davis-Grunsky Act for the purpose of financing water system improvements. Interest payments are due each July 1 and January 1 with the final payment due December 31, 2027, ranging from $659 to $5,450. Principal payments are due each January 1 with a final payment due December 31, 2027, ranging from $53,204 to $79,631. The loan bears interest at 2.5% and the loan is secured by a pledge to levy taxes or assessments in amounts sufficient to pay debt service. The City makes repayments from its water enterprise fund from available resources. In the event of default, the State may take action in a court to enforce the levy and collection of taxes or assessments to pay amounts due under the agreement and may charge a default interest rate of 0.209% per month after the scheduled payment is more than 30 days past due.

State of California Revolving Fund Loan

The City obtained a $10,859,470 loan from the State of California Department of Water Resources under the State Revolving Loan Program for the purpose of obtaining financing to construct the City's wastewater treatment plant. The loan bears interest at 2.7% and is secured by a pledge of the City to maintain dedicated sources of revenue sufficient in amounts to provide for repayment of the loan.

NOTE G – LONG-TERM LIABILITIES (Continued)

Principal and interest on the loan is payable in annual installments of $741,881 due each July 15 through 2022. In the event of default, the State may take action in a court to enforce the levy and collection of taxes or assessments to pay amounts due under the agreement.

Financed Purchase – Municipal Finance, Inc.- Wastewater Membranes

In July 2015, the City entered into a lease purchase agreement for $2,004,200 for the acquisition and installation of equipment at a wastewater plant. The terms of the lease require annual principal payments of $157,222 through July 6, 2022, which includes interest at 3.55%. In the event of default, all unpaid principal and interest may be declared immediately due and payable. The default interest rate is 8%.

Debt Service Requirements

Future annual debt service requirements for long-term liabilities at June 30, 2022 were as follows:

	Governmental Activities					
Year Ending	Loans		Leases		Total	
June 30:	Principal	Interest	Principal	Interest	Principal	Interest
2023	$ 76,045	$ 114,335	$ 42,878	$ 15,056	$ 118,923	$ 129,391
2024	451,146	110,553	45,909	12,024	497,055	122,577
2025	428,017	100,626	49,155	8,779	477,172	109,405
2026	437,183	91,543	52,629	5,304	489,812	96,847
2027	450,549	82,233	43,888	1,635	494,437	83,868
2028-2032	2,399,412	263,942			2,399,412	263,942
2033-2037	1,197,739	35,474			1,197,739	35,474
Totals	$ 5,440,091	$ 798,706	$ 234,459	$ 42,798	$ 5,674,550	$ 841,504

Year Ending	Business-type Activities	
June 30:	Principal	Interest
2023	$ 1,012,856	$ 104,291
2024	308,252	78,945
2025	326,856	72,765
2026	333,726	66,335
2027	361,867	59,596
2028-2032	1,539,063	205,085
2033-2037	1,504,699	57,081
	$ 5,387,319	$ 644,098

The Water and Wastewater Funds have pledged a portion of their net revenue to repay $2,050,000 for the State of California Davis-Grunsky loan and $10,859,470 for the State of California Revolving Fund loan to finance certain capital improvements. Total principal and interest remaining on the Water Fund loan through 2028 is $469,294 and total principal and interest remaining on the Wastewater Fund loan through 2023 is $741,881. For fiscal year 2022, the principal and interest paid by the Water and Wastewater funds for these loans was $82,079 and $741,881, respectively. The Water Fund and the Wastewater Funds had net revenues of $2,660,637 and $2,174,079, respectively, in fiscal year 2022.

NOTE G – LONG-TERM LIABILITIES (Continued)

Arbitrage

Under U.S. Treasury Department regulations, all governmental tax-exempt debt issued after August 31, 1986 is subject to arbitrage rebate requirements, which stipulate, in general, that the earnings from the investment of tax-exempt bond proceeds, which exceed related interest expenditures on the bonds, must be remitted to the Federal government on every fifth anniversary of each bond issuance. The City has evaluated its bond issuance and no arbitrage liability was recognized as of June 30, 2022.

Special Assessment Debt Without City Commitment

At June 30, 2022, the outstanding principal amount of bonded debt issued by special assessment districts in the City was as follows:

LaVigne AD 2013 Reassessment Revenue Refunding Loan	$ 3,618,900
American Canyon Road East AD Refunding Revenue Bonds, Series 2015	9,955,000
Community Facilities District No. 2018-1 (Green Island Road Project) Special Tax Revenue Bonds, Series 2020	5,085,000

The City has no legal or moral responsibility with respect to the payment of this debt and has therefore not recorded it as a liability. The City is responsible, as the Districts' agent, for the Districts' cash receipts, disbursements and balances, which are reported as Custodial Fund transactions in the financial statements.

NOTE H – NET POSITION AND FUND BALANCES

Net Position: Net position is the excess of the City's assets and deferred outflows of resources over its liabilities and deferred inflows of resources. Net Position is segregated into the following categories at the government-wide and proprietary fund level:

Net investment in capital assets: This category groups all capital assets into one component of net position. Accumulated depreciation and the outstanding balance of debt that is attributable to the acquisition, construction or improvement of these assets reduces this category.

Restricted net position: This category presents external restrictions imposed by creditors, grantors, contributors or laws and regulations of other governments and restrictions imposed by law through constitutional provisions or enabling legislation.

Unrestricted net position: This category represents the net position of the City, which are not restricted or invested in capital assets net of related debt for any project or other purpose.

Fund Balance: Governmental fund balances represent the net current assets of each fund. Net current assets consists of a fund's assets and deferred outflows of resources over liabilities and deferred inflows of resources.

NOTE H – NET POSITION AND FUND BALANCES (CONTINUED)

The City's fund balances are classified in accordance with Governmental Accounting Standards Board Statement Number 54 (GASB 54), *Fund Balance Reporting and Governmental Fund Type Definitions*, which requires the City to classify its fund balances based on spending constraints imposed on the use of resources. For programs with multiple funding sources, the City prioritizes and expends funds in the following order: Restricted, committed, assigned, and unassigned. Each category in the following hierarchy is ranked according to the degree of spending constraint:

Nonspendable fund balances are not expected to be converted to cash within the next operating cycle and are typically comprised of long-term receivables, land held for resale, deposits with others, prepaid items and advances to other funds.

Restricted fund balances have external restrictions imposed by creditors, grantors, contributors, laws, regulations, or enabling legislation which requires the resources to be used only for a specific purpose.

Committed fund balances have constraints imposed by formal action of the City Council which may be altered only by formal action of the City Council consisting of an ordinance or resolution, which the City considers equally binding. The City Council has authority to establish, modify, or rescind a fund balance commitment through another ordinance or resolution.

Assigned fund balances are amounts constrained by the City's intent to be used for a specific purpose, but are neither restricted nor committed. Intent is expressed by the City Council or management and may be changed at the discretion of the City Council or management.

Unassigned fund balance represents residual amounts that have not been restricted, committed, or assigned. This includes the residual general fund balance and residual fund deficits, if any, of other governmental funds.

An individual governmental fund could include nonspendable resources and amounts that are restricted or unrestricted (committed, assigned, or unassigned) or any combination of those classifications. Restricted or unrestricted amounts are to be considered spent when an expenditure is incurred for purposes for which both restricted and unrestricted fund balance is available. Committed, assigned, then unassigned amounts are considered to have been spent when an expenditure is incurred for purposes for which amounts in any of those unrestricted fund balance classifications can be used.

The Fire District Board has established a contingency reserve which may only be used in the event the City experiences a 10% reduction in the operations fund property tax revenue or in the event of a declared emergency as defined by Health and Safety Code §13901. The reserve may also only be used according to a resolution of the governing body.

The City Council has established a General Fund contingency reserve which can only be used in the event the City experiences a 10% reduction in discretionary General Fund revenue compared to the prior fiscal year or in the event of a declared emergency as defined by Municipal Code 2.48.020.

The City's Capital Projects Reserve will be increased by a minimum of $100,000 per year until it reaches $2 million, and thereafter it will be increased by 3% or the annual CPI, whichever is greater.

The Economic Development Reserve was established at $1,000,000 and is to be used to further the City's adopted Economic Development program.

NOTE H – NET POSITION AND FUND BALANCES (CONTINUED)

Fund balances of governmental funds were categorized as follows as of June 30, 2022:

	General	Fire District Operations Special Revenue	CDBG, CalHome and HOME Loan Development Special Revenue	State and Federal Grants - City Special Revenue	City Capital Projects	Affordable Housing Capital Projects	Nonmajor Governmental Funds	Total Governmental Funds
Fund Balances								
Nonspendable:								
Property held for resale	$ 417,503							$ 417,503
Prepaid expenditures and deposits	24,911							24,911
Total Nonspendable	442,414							442,414
Restricted:								
Public safety								
Fire District capital acquisition							$ 992,569	992,569
Vehicle enforcement	149,694							149,694

Net Position and Fund Equity Deficits

The State and Federal Grants – City Special Revenue Fund, Recycled Water Enterprise Fund, Cannabis Special Revenue Fund, Community Facility District Special Revenue Fund, Engie Fire Debt Service Fund and Legal Internal Service Fund had deficit fund balances or net position of $661,487, $683,306, $13,882, $248,667 $20,810 and $201,217, respectively, at June 30, 2022. The deficit in the State and Federal Grants – City Special Revenue Fund was due to unavailable revenue that will be recognized in the subsequent year. The remaining deficits are expected to be covered by future grants, fees or charges for services in these funds.

NOTE I – DEFERRED COMPENSATION PLANS

The City offers three deferred compensation plans under IRC Section 457: The ICMA Retirement Corporation Internal Revenue Code (IRC) Section 457 Deferred Compensation Plan (the ICMA Plan), the VALIC IRC Section 457 Deferred Compensation Plan (the VALIC Plan), and the Public Agency Retirement System Section 457 FICA Alternative Retirement Plan (FICA ARP). Benefit terms for the deferred compensation plans are established by and may be amended by the City Council subject to provisions of employment agreements. The ICMA Plan is a voluntary plan available to all City employees with the exception to members of Fire Fighters Local 1186. The VALIC Plan is available to all City employees with the exception of unrepresented part-time, temporary and seasonal employees. The FICA ARP Plan is available to unrepresented part-time, temporary and seasonal employees not eligible for other retirement plans. Employee contributions to the ICMA Plan are voluntary and the City makes no contributions. Employer and employee contributions to the VALIC Plan are discretionary. The City contributes 3.3% of employees' pay to the FICA ARP and employees contribute a minimum of 4.2% of their compensation up to the IRC limits. Employees are fully vested in their contributions immediately after the contributions are made. For the year ended June 30, 2022, the City made contributions of $296,626 and employees made contributions of $21,705 to the deferred compensation plans.

NOTE J – PENSION PLANS

DEFINED BENEFIT PLAN

Plan Description: All qualified permanent and probationary employees are eligible to participate in the City's cost-sharing multiple-employer defined benefit pension plan (the Plan or PERF C) administered by the California Public Employees' Retirement System (CalPERS). PERF C consists of a miscellaneous risk pool and a safety risk pool and the following rate plans:

- City Miscellaneous Plan
- City PEPRA Miscellaneous Plan
- Fire Protection Miscellaneous Plan
- Safety Fire First Tier Plan
- Safety Fire Second Tier Plan
- Safety Fire PEPRA Plan (effective beginning fiscal year 2017)

Although one pension plan exists, CalPERS provides the information separately for the Miscellaneous and Safety Risk Pools and the information is presented separately where available. Benefit provisions under the Plan is established by State statute and City resolution. CalPERS issues publicly available reports that include a full description of the pension plans regarding benefit provisions, assumptions and membership information that can be found on the CalPERS website at www.calpers.ca.gov.

Benefits Provided: CalPERS provides service retirement and disability benefits, annual cost of living adjustments and death benefits to plan members, who must be public employees and beneficiaries. Benefits are based on years of credited service, equal to one year of full-time employment. Members with five years of total service are eligible to retire at age 50 (52 for PEPRA Miscellaneous Risk Pool) with statutorily reduced benefits. All members are eligible for non-duty disability benefits after 10 years of service. The death benefit is one of the following: the 1959 Survivor Benefit level 4, or the Optional Settlement 2W Death Benefit. The cost-of-living adjustments for each plan are applied as specified by the Public Employees' Retirement Law.

NOTE J – PENSION PLANS (Continued)

The Plan's provisions and benefits in effect at June 30, 2022, are summarized as follows:

	City Miscellaneous Prior to January 1, 2013	City PEPRA Miscellaneous On or after January 1, 2013	Fire Protection Miscellaneous Prior to January 1, 2013
Benefit formula (at full retirement)	2.0% @ 55	2.0% @ 62	3.0% @ 60
Benefit vesting schedule	5 years service	5 years service	5 years service
Benefit payments	monthly for life	monthly for life	monthly for life
Retirement age	50 - 55	52 - 67	50 - 60
Monthly benefits, as a % of eligible compensation	1.426% to 2.418%	1.0% to 2.5%	2.00% to 3.00%
Required employee contribution rates	7.00%	7.25%	6.75%
Required employer contribution rates	11.600%	7.730%	7.470%

	Safety Fire First Tier January 1, 1965 to May 5, 2010	Safety Fire Second Tier On or after May 5, 2010	Safety Fire PEPRA On or after January 1, 2013
Benefit formula (at full retirement)	3.0% @ 50	3.0% @ 55	2.7% @ 57
Benefit vesting schedule	5 years service	5 years service	5 years service
Benefit payments	monthly for life	monthly for life	monthly for life
Retirement age	50 - 55	50 - 55	50-57
Monthly benefits, as a % of eligible compensation	3.00%	2.40% to 3.00%	2.0% to 2.7%
Required employee contribution rates	9.00%	9.00%	13.00%
Required employer contribution rates	23.710%	21.790%	13.130%

Beginning June 29, 2019, the City and its General and Mid-Management bargaining units agreed the employees would reimburse 3.399% of the employer contribution and would equally share in any excess employer contributions exceeding 16% up to a limit of 5% of additional employee contribution. The employee reimbursement percentage was amended to 4.855% and 5% of the employer contribution on June 27, 2020 and October 5, 2021, respectively.

All rate plans except the PEPRA rate plans are closed to new members that are not already CalPERS participants.

Contributions: Section 20814(c) of the California Public Employees' Retirement Law requires that the employer contribution rates for all public employers be determined on an annual basis by the actuary and shall be effective on the July 1 following notice of a change in the rate. Funding contributions for the rate plan are determined annually on an actuarial basis as of June 30 by CalPERS. The actuarially determined rate is the estimated amount necessary to finance the costs of benefits earned by employees during the year, with an additional amount to finance any unfunded accrued liability. The City is required to contribute the difference between the actuarially determined rate and the contribution rate of employees.

NOTE J – PENSION PLANS (Continued)

For the year ended June 30, 2022, the contributions paid to Plan were as follows:

	City Miscellaneous Risk Pool	Fire Safety Risk Pool	Fire Miscellaneous Risk Pool	Total
Contributions - employer	$ 1,245,432	$ 988,461	$ 18,869	$ 2,252,762

Pension Liabilities, Pension Expenses and Deferred Outflows/Inflows of Resources: As of June 30, 2022, the City reported a net pension liability for its proportionate shares of the Plan as follows:

	Proportionate Share of Net Pension Liability/Asset
City Miscellaneous Risk Pool	$ 4,048,631
Fire Safety Risk Pool	4,987,426
Fire Miscellaneous Risk Pool	43,738
Total Net Pension Liability	$ 9,079,795

The City's net pension liability of each risk pool is measured as the proportionate share of the net pension liability. The net pension liability of each of the risk pools is measured as of June 30, 2021, and the total pension liability for each risk pool used to calculate the net pension liability was determined by an actuarial valuation as of June 30, 2020 rolled forward to June 30, 2021 using standard update procedures. The City's proportion of the net pension liability was based on a projection of the City's long-term share of contributions to the pension plans relative to the projected contributions of all participating employers, actuarially determined. The City's proportionate share of the net pension liability for each risk pool as of June 30, 2022 and 2021 were as follows:

	City Miscellaneous Risk Pool	Fire Safety Risk Pool	Fire Miscellaneous Risk Pool
Proportion - June 30, 2021	0.20221%	0.12336%	0.00178%
Proportion - June 30, 2022	0.21322%	0.14211%	0.00230%
Change - increase (decrease)	-0.01101%	-0.01875%	-0.00052%

For the year ended June 30, 2022, the City recognized pension expense (benefit) of $423,217, $882,817, $(18,559) and $1,287,475 for the City Miscellaneous Risk Pool, Fire Safety Risk Pool, Fire Miscellaneous Risk Pool and in total for the Plan, respectively. At June 30, 2022, the City reported deferred outflows of resources and deferred inflows of resources related to the Plan from the following sources:

NOTE J – PENSION PLANS (Continued)

City Miscellaneous Risk Pool	Deferred Outflows of Resources	Deferred Inflows of Resources
Pension contributions subsequent to measurement date	$ 1,245,432	
Differences between actual and expected experience	454,011	
Change in employer's proportion	274,506	$ (380,293)
Net differences between projected and actual earnings on plan investments		(3,534,245)
Total	$ 1,973,949	$ (3,914,538)
Fire Safety Risk Pool		
Pension contributions subsequent to measurement date	$ 988,461	
Differences between actual and expected experience	852,097	
Change in employer's proportion	95,960	$ (376,262)
Net differences between projected and actual earnings on plan investments		(2,968,477)
Total	$ 1,936,518	$ (3,344,739)
Fire Miscellaneous Risk Pool		
Pension contributions subsequent to measurement date	$ 18,869	
Differences between actual and expected experience	4,905	
Change in employer's proportion	34,623	(28,188)
Net differences between projected and actual earnings on plan investments		$ (38,181)
Total	$ 58,397	$ (66,369)
Total for Plan	$ 3,968,864	$ (7,325,646)

The amounts above reported as deferred outflows of resources related to contributions subsequent to the measurement date will be recognized as a reduction of the net pension liability in the subsequent fiscal year. Other deferred amounts related to the net differences between the projected and actual earnings on plan investments and all remaining amounts will be recognized as pension expense over 5 years and the average service lives of employees, respectively, as follows:

Year Ended June 30	City Miscellaneous Risk Pool	Fire Safety Risk Pool	Fire Miscellaneous Risk Pool	Total
2023	$ (685,187)	$ (403,142)	$ (3,600)	$ (1,091,929)
2024	(734,045)	(509,886)	(5,146)	(1,249,077)
2025	(809,254)	(666,772)	(7,544)	(1,483,570)
2026	(957,535)	(816,882)	(10,551)	(1,784,968)
	$ (3,186,021)	$ (2,396,682)	$ (26,841)	$ (5,609,544)

NOTE J – PENSION PLANS (Continued)

Actuarial Assumptions: The total pension liabilities in the actuarial valuations for each risk pool were determined using the following actuarial assumptions:

Valuation date	June 30, 2020
Measurement date	June 30, 2021
Actuarial cost method	Entry-Age Normal Cost Method
Amortization method	Level pecent of payroll
Asset valuation method	Market value
Actuarial assumptions:	
Discount rate	7.15%
Inflation	2.50%
Payroll growth	2.75%
Projected salary increase	0.4% - 8.5% Miscellaneous and 0.97% to 17.0% Safety (1)
Investment rate of return	7.15% (2)
Mortality	Derived using CalPERS membership data for all funds

(1) Depending on age, service and type of employment

(2) Net of pension plan investment expenses, including inflation

The mortality table used was developed based on CalPERS-specific data. The table includes 15 years of mortality improvements using Society of Actuaries Scale 90% of Scale MP 2016. For more details on this table, please refer to the December 2017 experience study report (based on CalPERS demographic data from 1997 to 2015) that can be found on the CalPERS website. All other actuarial assumptions used in the valuations were based on the results of an actuarial experience study for the period 1997 to 2015, including updates to salary increase, mortality and retirement rates. The Experience Study report can be found on CalPERS' website under Forms and Publications.

Discount Rate: The discount rate used in the accounting valuations to measure the total pension liability was 7.15% for each risk pool. To determine whether the municipal bond rate should be used in the calculation of a discount rate for each plan, CalPERS stress tested plans that would most likely result in a discount rate that would be different from the actuarially assumed discount rate. Based on the testing, none of the tested plans run out of assets. Therefore, the current 7.15% discount rate is adequate, and the use of the municipal bond rate calculation is not necessary. The long-term expected discount rate of 7.15% will be applied to all plans in the Public Employees Retirement Fund (PERF). The stress test results are presented in a detailed report that can be obtained from the CalPERS website.

The long-term expected rate of return on pension plan investments was determined using a building-block method in which best-estimate ranges of expected future real rates of return (expected returns, net of pension plan investment expense and inflation) are developed for each major asset class.

In determining the long-term expected rate of return, CalPERS took into account both short-term and long-term market return expectations as well as the expected pension fund cash flows. Using historical returns of all the funds' asset classes, expected compound returns were calculated over the short-term (first 10 years) and the long-term (11-60 years) using a building-block approach. Using the expected nominal returns for both short-term and long-term, the present value of benefits was calculated for each fund. The expected rate of return was set by calculating the single equivalent expected return that arrived at the same present value of benefits for cash flows as the one calculated using both short-term and long-term returns. The expected rate of return was then set equivalent to the single equivalent rate calculated

NOTE J – PENSION PLANS (Continued)

above and rounded down to the nearest one quarter of one percent.

The table below reflects the long-term expected real rate of return by asset class for the Plan. The rate of return was calculated using the capital market assumptions applied to determine the discount rate and asset allocation. These rates of return are net of administrative expenses.

Asset Class	New Strategic Allocation	Real Return Years 1 - 10(a)	Real Return Years 11+(b)
Public equity	50.0%	4.80%	5.98%
Fixed income	28.0%	1.00%	2.62%
Inflation assets	0.0%	0.77%	1.81%
Private equity	8.0%	6.30%	7.23%
Real assets	13.0%	3.75%	4.93%
Liquidity	1.0%	0.00%	-0.92%
Total	100.0%		

(a) An expected inflation of 2.00% used for this period.
(b) An expected inflation of 2.92% used for this period.

Sensitivity of the Proportionate Share of the Net Pension Liability to Changes in the Discount Rate: The following presents the City's proportionate share of the net pension liability for each risk pool, calculated using the discount rate for each risk pool, as well as what the City's proportionate share of the net pension liability would be if it were calculated using a discount rate that is 1-percentage point lower or 1-percentage point higher than the current rate:

	City Miscellaneous Risk Pool	Fire Safety Risk Pool	Fire Miscellaneous Risk Pool	Total
1% decrease	6.15%	6.15%	6.15%	6.15%
Net pension liability	$ 9,400,652	$ 9,045,139	$ 44,265	$18,490,056
Current discount rate	7.15%	7.15%	7.15%	7.15%
Net pension liability	$ 4,048,631	$ 4,987,426	$ 43,738	$ 9,079,795
1% increase	8.15%	8.15%	8.15%	8.15%
Net pension liability	$ (375,805)	$ 1,654,516	$ 43,302	$ 1,322,013

Fiduciary Net Position: Detailed information about each Plan's fiduciary net position is available in the separately issued CalPERS financial reports.

Payable to the Plan: At June 30, 2022, the City had no contributions payable to the City Miscellaneous and Fire Safety Risk Pools.

DEFINED CONTRIBUTION PLAN

The City offers the City of American Canyon Internal Revenue Code (IRC) Section 401a Government Money Purchase Plan (401a Plan), a single-employer defined contribution retirement plan, to at-will

NOTE J – PENSION PLANS (Continued)

management, mid-management and confidential employee unit members exempt from the Fair Labor Standards Act that are over 18 years of age. Benefit terms for the 401a Plan are established by and may be amended by the City Council subject to provisions of employment agreements. Employees are eligible to participate in the Plan on their date of hire. Employees are required to contribute 2% and the City is required to contribute 1% for mid-management and confidential employees and 2% for at-will management employees. Employees are immediately fully vested in their own contributions and City contributions. During the year ended June 30, 2022, the City's and employee contributions to the 401a Plan were $45,042 and $52,030, respectively.

NOTE K – OTHER POSTEMPLOYMENT BENEFITS

Plan Descriptions: The City's defined benefit OPEB Plan (City Plan) and the Fire District's defined benefit OPEB Plan (Fire Plan) are both agent multiple-employer defined benefit plans that provide OPEB benefits to retirees that meet eligibility requirements. The City Council has the authority to establish and amend the benefit terms of each Plan according to the Memorandum of Understanding with the labor units. The City Plan and the Fire Plan both participate in the CalPERS California Employers' Retiree Benefit Trust (CERBT) Fund, which is a Section 115 trust fund administered by CalPERS. The CERBT issues a publicly available financial statements that may be obtained from CalPERS at www.calpers.ca.gov.

City Plan Benefits Provided: To qualify for postemployment medical benefits, an employee must be eligible for benefits and retire from the City. The City Plan does not provide dental and vision coverage. Employees must retire with CalPERS benefits to be eligible for City Plan benefits. Nondisabled participants must be at least age 50 and have five years of service. Disabled participants do not have a minimum retirement age and must have five years of service. Employees/retirees and their eligible spouses and dependents receive medical benefits offered through CalPERS.

For City retirees hired prior to July 2016 and enrolled in CalPERS health coverage, the City contributes a monthly payment equal to 100% of the current "Supplemental/Managed Monthly Employee Only Rate for Kaiser Senior Advantage" to CalPERS. CalPERS deducts the remaining cost of the medical insurance premium from the retirees account. The City reimburses the retiree for 90% of the Kaiser HMO premium rates less the payment made to CalPERS for the "Supplemental/Managed Monthly Employee Only Rate for Kaiser Senior Advantage."

For retirees hired in or after July 2016 and enrolled in CalPERS health coverage, the City contributes a monthly payment equal to 100% of the current "Supplemental/Managed Monthly Employee Only Rate for Kaiser Senior Advantage" to CalPERS. CalPERS deducts the remaining cost of the medical premium from the retirees account.

Covered dependents of eligible retirees include spouses, domestic partners, and children under age 26 and never married (or any age if handicapped, subject to CalPERS approval). Surviving spouses of deceased retirees are covered for life on the same basis as when the retiree was alive. There are no benefits for surviving spouses or dependent children of active employees beyond COBRA continuation.

NOTE K – OTHER POSTEMPLOYMENT BENEFITS (Continued)

Fire Plan Benefits Provided: Employees must retire with CalPERS benefits to be eligible for Fire Plan benefits. Nondisabled participants must be at least age 50 and have five years of service. Disabled participants do not have a minimum retirement age and must have five years of service. Employees/retirees and their eligible spouses and dependents receive medical benefits offered through CalPERS. The Fire Plan offers retirees and their dependents access to dental, vision and life insurance for the remainder of their lifetime at the same premium rates applicable to active employees.

For employees hired prior to June 1, 2010, the District contributes the same amount for retirees as is contributed for similarly situated active employees. The District contributes the full premium up to 95% of the premium (determined reflecting coverage level and Basic, Combination or Supplemental rate) for the Kaiser Bay Area plan offered by CalPERS.

For employees hired on or after June 1, 2010, the Fire Plan has vesting requirements. Under the vesting program, employees must have ten years of CalPERS service, five of which must be with the City, to receive a contribution of 50%. An additional 5% contribution is received for each additional year of service up a 100% contribution after 20 years of service. The premium paid by the Fire Plan for employees hired on or after June 1, 2010 is subject to a cap. For 2022, the caps were $816 for retiree only coverage, $1,548 for the retiree plus one dependent and $1,983 for the retiree plus 2 or more dependents.

Employees Covered by Benefit Terms: At the June 30, 2021 actuarial valuation date, the following employees were covered by the benefit terms:

	City Plan	Fire Plan
Inactive employees or beneficiaries currently receiving benefit payments	42	17
Inactive employees entitled to but not yet receiving benefit payments	12	
Active employees	73	15
Total	127	32

Contributions: The City Council and Fire District Board have the authority to establish and amend the contribution requirements of the City and Fire District and employees with powers granted to it under the City Municipal Code and California Government Code, subject to the Memorandums of Understanding with employee bargaining units.

Employees are not required to contribute to the City or Fire Plans. During the fiscal year ended June 30, 2022, the City's direct payments of insurance premiums were $424,985, implicit subsidy was $130,871 and cash contributions to the trust were $278,943, resulting in total contributions of $834,799. During the fiscal year ended June 30, 2022, the Fire District's direct payments of insurance premiums were $252,987, implicit subsidy was $90,154 and cash contributions to the trust were $137,155, resulting in total contributions of $480,296. The City and Fire District make contributions to the CERBT, which is administered by CalPERS.

Net OPEB Liability: The City and Fire District's net OPEB liabilities were measured as of June 30, 2021, and the total OPEB liabilities used to calculate the net OPEB liabilities were determined by actuarial valuations as of June 30, 2020.

NOTE K – OTHER POSTEMPLOYMENT BENEFITS (Continued)

Actuarial Assumptions: The total OPEB liabilities at the measurement date were determined using the following actuarial assumptions, applied to all periods included in the measurement, unless otherwise specified:

	City Plan	Fire Plan
Valuation date	June 30, 2021	June 30, 2021
Measurement date	June 30, 2021	June 30, 2021
Actuarial cost method	Entry-age normal cost method	Entry-age normal cost method
Actuarial assumptions:		
Discount rate	6.00%	7.00%
Inflation	2.50%	2.50%
Salary increases	3.00%	3.00%
Investment rate of return	6.00%	7.00%
Mortality rates	Derived using CalPERS membership data	Derived using CalPERS membership data
Pre-retirement turnover	Derived using CalPERS membership data	Derived using CalPERS membership data
Healthcare trend rate	5.7% grading down to 4% in 2076	5.7% grading down to 4% in 2076
Percentage electing to cover spouse	60% for employees hired before and 45% for employees hired on or after July 1, 2016;	85%

Mortality information for the City and Fire Plans was developed from a blending of data and methodologies found in (1) the Society of Actuaries Mortality Improvement Scale MP-2021 Report and (2) the demographic assumptions used in the 2021Annual Report of the Board of Trustees of the Federal Old-Age and Survivors insurance and Federal Disability Insurance Trust Funds, published in 2021. The City and Fire Plans mortality improvement was based on the MacLeod Watts Scale 2020.

The pre-retirement turnover information was developed based on CalPERS' specific data. For more details, please refer to the December 2017 Experience Study Report. The Experience Study Report may be accessed on the CalPERS website www.calpers.ca.gov under Forms and Publications.

The long-term expected rate of return on OPEB plan investments was determined using a building-block method in which best-estimate ranges of expected future real rates of return (expected returns, net of OPEB plan investment expense and inflation) are developed for each major asset class. These ranges are combined to produce the long-term expected rate of return by weighting the expected future real rates of return by the target asset allocation percentage and by adding expected inflation.

The City and Fire District have both elected the CERBT Strategy 1 portfolio. The target allocation and best estimates of arithmetic real rates of return for each major asset class are summarized in the following table:

NOTE K – OTHER POSTEMPLOYMENT BENEFITS (Continued)

Asset Class	Target Allocation City Plan	Target Allocation Fire Plan	Long-term Expected Rate of Return City Plan	Long-term Expected Rate of Return Fire Plan
Global equity	40.0%	59.0%	8.90%	8.90%
Fixed income	43.0%	25.0%	5.54%	5.54%
Real estate investment trusts (REITs)	8.0%	8.0%	7.92%	7.92%
Treasury inflation protected securities (TIPS)	5.0%	5.0%	4.38%	4.38%
Commodities	4.0%	3.0%	5.79%	5.79%
Total	100.0%	100.0%		

Discount Rate: The discount rate used to measure the total City and Fire District OPEB liabilities was 6.00% and 7.05%, respectively. The City discount rate was lowered from 6.95% to 6.00% and the Fire District discount rate was lowered from 7.05% to 7.00%, from the previous measurement date. The projection of cash flows used to determine the discount rate assumed that City and Fire District contributions will be made at rates equal to the actuarially determined contribution rates. Based on those assumptions, the City and Fire Plans' fiduciary net positions were projected to be available to make all projected OPEB payments for current active and inactive employees. Therefore, the long-term expected rate of return on OPEB plan investments were applied to all periods of projected benefit payments to determine the total OPEB liabilities.

Changes in the Net OPEB Liability: Changes in the net OPEB liability were as follows during the year ended June 30, 2022:

	Increase (Decrease)		
City Plan	Total OPEB Liability	Plan Fiduciary Net Position	Net OPEB Liability/(Asset)
Balance at June 30, 2021	$ 9,884,937	$ 5,525,161	$ 4,359,776
Changes in the year:

Sensitivity of the Net OPEB Liability to Changes in the Healthcare Cost Trend Rates: The following presents the net OPEB liability of the City and Fire District, as well as what the City and Fire District's net OPEB liability would be if it were calculated using healthcare cost trend rates that are 1 percentage point lower or 1 percentage point higher than the current healthcare cost trend rates:

	1% Decrease	Current Healthcare Cost Trend Rates	1% Increase
Net OPEB liability - City Plan	$ 3,576,175	$ 5,148,342	$ 7,096,827

OPEB Plan Fiduciary Net Position: Detailed information about the City and Fire District Plan's fiduciary net position is available in the separately issued CERBT financial report at www.calpers.ca.gov.

NOTE K – OTHER POSTEMPLOYMENT BENEFITS (Continued)

	1% Decrease	Current Healthcare Cost Trend Rates	1% Increase
Net OPEB liability - Fire Plan	$ 1,420,888	$ 2,118,994	$ 2,973,167

OPEB Expense and Deferred Outflows of Resources and Deferred Inflows of Resources: For the year ended June 30, 2022, the City and Fire District recognized OPEB expense of $887,980 and $174,467, respectively, for a total OPEB expense of $1,062,447.

At June 30, 2022, the District reported deferred outflows of resources and deferred inflows of resources related to OPEB from the following sources:

City Plan	Deferred Outflows of Resources	Deferred Inflows of Resources
OPEB contributions subsequent to measurement date	$ 834,799	
Differences between actual and expected experience	79,793	$ (252,661)
Changes in assumptions	2,213,103	
Net differences between projected and actual earnings on plan investments		(787,087)
Total - City Plan	$ 3,127,695	$ (1,039,748)
Fire Plan		
OPEB contributions subsequent to measurement date	$ 480,296	
Differences between actual and expected experience		$ (965,174)
Changes in assumptions	386,040	(55,943)
Net differences between projected and actual earnings on plan investments		(450,761)
Total - Fire Plan	$ 866,336	$ (1,471,878)
Total - City and Fire Plans	$ 3,994,031	$ (2,511,626)

The amount reported as deferred outflows of resources related to contributions after the measurement date will be recognized as a reduction of the net pension liability in the subsequent fiscal year. Other amounts reported as deferred outflows of resources and deferred inflows of resources related to OPEB will be recognized in OPEB expense as follows:

Year Ended June 30	City Plan	Fire Plan	Total
2023	$ 159,722	$ (240,966)	$ (81,244)
2024	162,544	(237,661)	(75,117)
2025	152,158	(241,951)	(89,793)
2026	115,953	(241,632)	(125,679)
2027	319,211	(62,576)	256,635
Thereafter	343,560	(61,052)	282,508
	$ 1,253,148	$ (1,085,838)	$ 167,310

NOTE K – OTHER POSTEMPLOYMENT BENEFITS (Continued)

Payable to the OPEB Plan: At June 30, 2022, there were no significant payables to the OPEB plans.

NOTE L – RISK MANAGEMENT

Insurance Coverages

The City is a member of the Pooled Liability Assurance Network Joint Powers Authority (Plan JPA) for liability coverage of $1.0 million with excess liability coverage of $29 million through commercial carriers, for total coverage of $30 million, subject to a deductible of $25,000. Property and vehicle coverage is $500,000 with excess liability coverage through commercial carriers of $999,500,000, for total coverage of $1 billion. Flood damage coverage is $25 million.

The City is also a member of the Shared Agency Risk Pool (SHARP), which is administered by the Plan JPA, for worker's compensation insurance. Workers compensation insurance is provided by SHARP up to $250,000 and excess insurance exists through the Local Agency Worker's Compensation Excess Joint Powers Authority (LAWCX) that results in a coverage limit of up to $5,000,000 per claim. Excess commercial insurance is retained by LAWCX up to $5 million. The City has no deductible for such claims. Insurance transactions are accounted for in the City's General Fund.

The Plan, SHARP and LAWCX are governed by boards consisting of representatives from member agencies. The boards control the operations of the Plan, SHARP and LAWCX, including selection of management and approval of operating budgets, independent of any influence by member municipalities beyond their representation on the boards. Actual surpluses or losses are shared according to a formula developed from overall loss costs and spread to member entities on a percentage basis after a retrospective rating. Audited financial statements may be obtained from the Plan, SHARP and LAWCX at 1750 Creekside Drive, Suite 200, Sacramento, CA 95833.

The component unit Fire Protection District of the City obtains general, personal injury, fire damage, medical, products/completed operations annual aggregate, umbrella, management, cyber, auto, employee dishonesty and garage keepers liability insurance through its membership in the Fire Agencies Insurance Risk Authority (FAIRA). The District transfers the risk of loss to the Authority and is covered by the Authority from $10,000 to $1,000,000 per occurrence with an aggregate limit of $10,000,000 or $1 million for employee dishonesty coverage. Deductibles range from $250 to $7,500, depending on the coverage. The Fire Association Self Insurance System, a risk sharing pool, provides workers compensation insurance coverage for the Fire District. The System is self-insured for the first $750,000 of each claim and purchases commercial insurance excess coverage up to $5,000,000 per claim. The District has no deductible for works compensation insurance.

Liability for Uninsured Worker Compensation Claims: The City's liability for uninsured worker compensation claims, including estimated claims incurred but not reported, was estimated by management based on prior years claims experience and was computed as follows as of June 30:

NOTE L – RISK MANAGEMENT (Continued)

	Year Ended June 30, 2022	Year Ended June 30, 2021	Year Ended June 30, 2020
Unpaid claims, beginning of fiscal year	$ 1,636,881	$ 1,064,318	$ 724,016
Incurred claims (including IBNRs)	815,192	935,941	501,074
Claim payments	(318,092)	(363,378)	(160,772)
Unpaid claims, end of fiscal year	$ 2,133,981	$ 1,636,881	$ 1,064,318

The City has had no settlements that exceeded insurance coverage in the last three fiscal years, and no changes in insurance coverage have accrued from the prior year. The liability for uninsured claims is typically liquidated by the Fire District Operations Special Revenue Fund.

NOTE M – OTHER COMMITMENTS AND CONTINGENT LIABILITIES

On March 11, 2020, the World Health Organization declared the outbreak of a coronavirus (COVID-19) pandemic. The COVID-19 outbreak disrupted supply chains and affected production and sales across a range of industries. The City has lost a significant amount of revenue due to the pandemic and has responded by reducing spending. The extent of the impact of COVID-19 on the City's operational and financial performance will depend on certain developments, including the duration and spread of the outbreak, and the impact on customers, employees and vendors, all of which are uncertain and cannot be predicted. At this point, the extent to which COVID-19 may impact the financial condition or results of operations is uncertain.

The City participates in a number of federal and state grant programs subject to financial and compliance audits by the grantors or their representatives. The amount, if any, of expenditures that may be disallowed by the granting agencies cannot be determined at this time. Management believes that such disallowances, if any, would not have a material effect on the financial statements.

The City is a defendant in a number of lawsuits that have arisen in the normal course of business, the outcome of which cannot be predicted with certainty. In the opinion of the City Attorney, these actions when finally adjudicated will not have a material adverse effect on the financial position of the City.

The City has an agreement with the Napa County Flood Control and Water Conservation District (Napa Flood) to acquire water from the California State Water Project through the year 2035. Each year, the State determines the capital and operating costs associated with Napa Flood's share of the North Bay Aqueduct as well a charge dependent on water deliveries. The City's share of these costs is approximately 18%. The City is obligated to pay the capital component even if does not receive water. The amount paid under this contract during the year ended June 30, 2022 was approximately $2.1 million, of which $713,000 was related to the capital component. A similar payment will be required each year through 2035. The State Water Project contractors and State Department of Water Resources are currently negotiating to extend the contract beyond 2035.

In December 2019, the Council approved an agreement for consulting services for the Comprehensive General Plan 2040 Update in an amount not to exceed $1,466,574. As of June 30, 2022, $336,000 has been spent on this project.

NOTE M – OTHER COMMITMENTS AND CONTINGENT LIABILITIES (Continued)

The City has a contractual relationship with Sites Project Authority (the Authority), which is developing the Sites Reservoir Project (the Project) in the Sacramento Valley. The Project is an off-river reservoir that would capture excess water from major storms to save for drier periods. Under the 2019 Reservoir Project Agreement, as amended, the City has agreed to pay its proportional share of yearly budgeted Authority operating costs for approved phases of the Project. The City currently has a participation of 4,000 acre-feet, resulting in a percentage participation in the Project of 2.39%, which could change based on State of California and United States Bureau of Reclamation final participation in the Project. Participation results in rights to a "Storage Allocation" in the Project and proportional rights to any future power generation revenue developed. The Storage Allocation may be transferred by the City with the written consent of Authority members, which may not be unreasonably withheld. During the years ended June 30, 2022 and 2021, the City contributed $145,500 and $400,000, respectively, to the Authority, which is reported as a non-depreciable asset in the City's Water Fund.

In June 2021 the City was awarded a Federal Coronavirus Local Fiscal Recovery Fund allocation from the American Rescue Plan Act in the amount of approximately $4.9 million that may be used for eligible costs incurred from March 3, 2021 to December 31, 2024. The funds were received in two installments of $2.45 million in July 2021 and 2022. The funds may be used: 1) to respond to the COVID-19 public health emergency and support activities to decrease the spread of the virus; 2) address negative economic impacts caused by the public health emergency including assistance to households, small businesses, nonprofits, or to provide aid to impacted industries such as tourism, travel, and hospitality; 3) replace lost public sector revenue to the extent of the reduction in revenue was experienced due to the pandemic; 4) provide premium pay to eligible workers or grants to employers of workers who perform essential work during the public health emergency; and 5) invest in water, sewer, and broadband infrastructure. Unspent amounts would be returned to the U.S. Treasury.

NOTE N – SUBSEQUENT EVENTS

In November 2022, the Council approved construction contracts totaling $1,796,000 for the Green Island Road utility underground project.

In August 2022, the Fire District Board approve a financing agreement of $1,842,000 for the purchase of two fire engines. Repayment will be made over seven years at an interest rate of 2.54%.

NOTE O – RESTATEMENT

During the year ended June 30, 2022, the City implemented GASB Statement No. 87, *Leases,* which resulted in recognition of certain lease assets and liabilities for leases with a term of over twelve months. As a result, lease assets and a lease liability of $224,687 was recorded as of July 1, 2021. See Note G for additional information about the City's leases.

Measurement period - fiscal year ended June 30	2021	2020	2019	2018	2017
Methods and assumptions used to determine contribution rates:					
Actuarial cost method			Entry Age Normal Cost Method		
Amortization method			Level percentage of payroll, closed		
Amortization period			30 years		
Asset valuation method			Market value of assets		
Discount rate	6.90%	7.05%	6.95%	7.10%	7.28%
Inflation	2.50%	2.75%	2.50%	2.75%	2.75%
Payroll growth	3.00%	3.25%	3.00%	3.25%	3.25%
Investment rate of return	6.90%	7.05%	7.05%	7.10%	7.28%
Healthcare trend, initial	5.70%	6.50%	6.50%	7.50%	8.00%
Healthcare trending down to	4.00%	5.00%	5.00%	5.00%	5.00%
Retirement age			Most recent CalPERS Experience Study		
Mortality			Most recent CalPERS Experience Study		
Percentage electing to cover spouse	85%	85%	85%	85%	85%

Omitted years: GASB Statement No. 75 was implemented during the year ended June 30, 2018. No information was available prior to this date. Information will be added prospectively as it becomes available until 10 years are reported.

NON-MAJOR GOVERNMENTAL FUNDS

SPECIAL REVENUE FUNDS

Storm Drainage Special Revenue Fund – Accounts for the proceeds and expenditures of sales taxes received under the Napa County Flood Protection Sales Tax.

Measure T Streets and Roads – Accounts for the voter approved sales tax funds received for the maintenance, reconstruction and rehabilitation of streets, roads and transportation infrastructure.

Gas Tax – Accounts for proceeds and expenditures of gas tax revenue received under the California Streets and Highways Code.

BEGIN Program – Accounts for revenue granted by the California Department of Housing and Community Development to reduce local regulatory barriers to affordable homeownership housing and provide down-payment assistance loans to qualifying homebuyers.

State Supplemental Law Enforcement – Accounts for revenue granted from the state General Fund for Citizen Option for Public Safety (COPS) program to provide supplemental public safety services for front line law enforcement including anti-gang, community crime prevention and juvenile justice programs.

La Vigne Landscape and Lighting – Accounts for maintenance expenses of the three District zones which are paid for through property tax assessments placed on owner's annual tax bills.

La Vigne Open Space – Accounts for the costs to maintain open space at the La Vigne Open Space.

Newell Park Open Space – Accounts for the costs to maintain open space at the Newell Open Space.

State and Federal Grants - Fire – Accounts for State and Federal Grants received for fire services.

Cannabis – Accounts for developer deposits and fees received to reimburse the City for costs associated with reviewing commercial cannabis business permits and conditional use permits.

Community Facilities District – Accounts for resources accumulated from property owners for Community Facilities District maintenance.

General Plan Update – Accounts for fees collected for the purpose of updating the City's general plan to meet the demand of new development.

Legal Settlement – Accounts for legal settlements to be used for specific purposes or projects.

CAPITAL PROJECTS FUNDS

Fire Mitigation – Accounts for a special voter approved new development tax for the purchase of the fire apparatus and facilities.

Park Improvement – Accounts for impact fees collected by new development to be used for adding new parks, park improvements, and recreation facilities.

Traffic Impact – Accounts for impact fees collected by new development to be used for street improvements.

Infrastructure – Accounts for bond proceeds restricted for street and road modernization projects.

Civic Facilities – Accounts for impact fees collected by new development to be used for Civic Facilities improvement projects.

Utility Underground – Accounts for fees collected from developers in lieu of providing undergrounding of utilities.

Zero Water Footprint – Accounts for mitigation monies collected to offset new water and sewer capital demands associated with development projects.

DEBT SERVICE FUNDS

Cabernet Village Lease – Accounts for debt service on lease financing for the purchase of the commercial office building at 4381 Broadway Street which was converted to a new City Hall facility.

Engie City – Accounts for debt service on lease financing for the purchase of equipment for the City.

Engie Fire – Accounts for debt service on lease financing for the purchase of equipment for fire services.

INTERNAL SERVICE FUNDS

(This page intentionally left blank.)

INTERNAL SERVICE FUNDS

Internal service funds are established to account for goods or services provided by one department within the City to other departments or other government units on a cost reimbursement basis. The following are internal service funds:

Building Maintenance – Accounts for the maintenance of all city facilities including janitorial, security alarms, door locks and building related equipment.

Fleet – Accounts for the maintenance of services to city vehicles and equipment using city staff and contracting service out when necessary.

Information Technology – Accounts for the maintenance of services to city computer systems including the financial management system, utility billing system, and building permit software.

Legal – Accounts for legal costs incurred by the City.

CUSTODIAL FUNDS

(This page intentionally left blank.)

CUSTODIAL FUNDS

American Canyon Road East Assessment District – These assessment bonds were issued to finance major street and road realignments and improvements of the American Canyon Road East. The bonds are secured by special assessments levied against properties within the District.

La Vigne Assessment District – These assessment bonds were issued to finance water and sewer connection fees of the La Vigne Subdivision. The bonds are secured by special assessments levied against properties within the District.

Community Facilities District No. 2018-1 – The District was formed to account for the Community Facilities District No. 2018-1 (Green Island Road Project) Special Tax Bonds, Series 2020 debt service and maintenance expenses of the Green Island Road Community Facilities District. The bonds are secured by special assessments levied against commercial properties within the District.

Tourism Improvement District – The District was formed to account for the local share of a 2% annual assessment on room rental revenue at lodging businesses through June 16, 2025 that is used for marketing programs, special event sponsorship and other programs to benefit lodging businesses paying the assessment by attracting overnight visitors.

STATISTICAL SECTION

This part of the City's Comprehensive Annual Financial Report presents detailed information as a context for understanding what the information in the financial statements, note disclosures, and required supplementary information says about the City's overall financial health. In contrast to the financial section, the statistical section information is not subject to independent audit.

Financial Trends
These schedules contain trend information to help the reader understand how the City's financial performance and well being have changed over time:

1. Net Position by Component
2. Changes in Net Position
3. Fund Balances of Governmental Funds
4. Changes in Fund Balances of Governmental Funds

Revenue Capacity
These schedules contain information to help the reader assess the City's most significant local revenue source, the property tax:

5. Own Source Tax Revenue
6. Assessed Actual Value of Taxable Property
7. Direct and Overlapping Property Tax Rates
8. Principal Property Taxpayers
9. Property Tax Levies and Collections

Debt Capacity
These schedules present information to help the reader assess the affordability of the City's current levels of outstanding debt and the City's ability to issue additional debt in the future:

10. Ratios of Outstanding Debt by Type
11. Ratios of General Bonded Debt Outstanding
12. Computation of Direct and Overlapping Debt
13. Computation of Legal Bonded Debt Margin
14. Debt Pledged Revenue Coverage

Demographic and Economic Information
These schedules offer demographic and economic indicators to help the reader understand the environment within which the City's financial activities take place:

15. Demographic and Economic Statistics
16. Principal Employers

Operating Information
These schedules contain service and infrastructure data to help the reader understand how the information in the City's financial report relates to the services the City provides and the activities it performs:

17. Full-Time Equivalent City Government Employees by Function/Program
18. Operating Indicators by Function/Program
19. Capital Asset Statistics by Function/Program

Sources
Unless otherwise noted, the information in these schedules is derived from the Comprehensive Annual Financial Reports for the relevant year.

Prior Years

Note: Exempt values are not included in Total.
In 1978 the voters of the State of California passed Proposition 13 which limited taxes to a total maximum rate of 1%, based upon the assessed value of the property being taxed. Each year, the assessed value of property may be increased by an "inflation factor" (limited to a maximum of 2%). With few exceptions, property is only reassessed as a result of new construction activity or at the time it is sold to a new owner. At that point, the property is reassessed based upon the added value of the construction or at the purchase price (market value) or economic value of the property sold. The assessed valuation data shown above represents the only data currently available with respect to the actual market value of taxable property and is subject to the limitations described above.

Notes:

[1]In 1978, California voters passed Proposition 13 which set the property tax rate at a 1.00% fixed amount. This 1.00% is shared by all taxing agencies for which the subject property resides within. In addition to the 1.00% fixed amount, property owners are charged taxes as a percentage of assessed property values for the payment of any voter approved bonds.

[2]Overlapping rates are those of local and county governments that apply to property owners within the City. Not all overlapping rates apply to all city property owners.

[3]City's Share of 1% Levy is based on the City's share of the general fund tax rate area with the largest net taxable value within the city. ERAF general fund tax shifts may not be included in tax ratio figures.

[4]Total Direct Rate is the weighted average of all individual direct rates applied by the government preparing the statistical section information.

Prior Years

Note: Source is City of American Canyon Tax Collection records and Napa County Assessor records. Property taxes are levied and collected pursuant to an arrangement commonly referred to as the Teeter Plan. Under the Teeter Plan, the County allocates and remits to the City the full amount of each years tax levy, and the County then retains any delinquencies as collected by the County.

Ratios to Assessed Valuation:

Total Direct Debt ($5,674,550)	**0.15%**
Total Overlapping Tax and Assessment Debt.	2.25%
Combined Total Debt	**2.40%**

Data Source: California Municipal Statistics, Inc.

(1) The percentage of overlapping debt applicable to the city is estimated using taxable assessed property value. Applicable percentages were estimated by determining the portion of the overlapping district's assessed value that is within the boundaries of the city divided by the district's total taxable assessed value.

(2) Excludes tax and revenue anticipation notes, enterprise revenue, mortgage revenue and non-bonded capital lease obligations.

Schedule 13
City of American Canyon
Computation of Legal Debt Margin
Last Ten Fiscal Years

	Fiscal Year	Assessed Value	Debt Limit	General Bonded Debt	Legal Debt Margin	Net Debt Margin

MANAGEMENT LETTER

To the City Council and Management
City of American Canyon
American Canyon, California

In planning and performing our audit of the financial statements of the governmental activities, the business-type activities, each major fund, and the aggregate remaining fund information of the City of American Canyon (the City) as of and for the year ended June 30, 2022, in accordance with auditing standards generally accepted in the United States of America, we considered the City's internal control over financial reporting (internal control) as a basis for designing audit procedures that are appropriate in the circumstances for the purpose of expressing our opinions on the financial statements, but not for the purpose of expressing an opinion on the effectiveness of the City's internal control. Accordingly, we do not express an opinion on the effectiveness of the City's internal control.

Our consideration of internal control was for the limited purpose described in the preceding paragraph and was not designed to identify all deficiencies in internal control that might be material weaknesses or significant deficiencies and, therefore, material weaknesses or significant deficiencies may exist that were not identified. However, as discussed below, we identified a deficiency in internal control that we consider to be a significant deficiency.

A deficiency in internal control exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct, misstatements on a timely basis. A material weakness is a deficiency, or a combination of deficiencies, in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected, on a timely basis. We did not identify any deficiencies in internal control that we consider to be material weaknesses.

A significant deficiency is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance. We consider the following deficiency to be a significant deficiency.

Closing Entries

We re-imported the general ledger and then had an additional 34 adjustments and closing entries to report the City's activity in accordance with Generally Accepted Accounting Principles. The final closing entries were not provided until two weeks prior to the board meeting package due date for the meeting in which the ACFR was being presented, which increases the likelihood of an error being made that was not identified during the audit. We recommend the City review the adjustment list provided during the audit and consider which entries can be posted prior to the start of the audit in the future to increase audit efficiency.

The following additional items have been presented for the City's consideration:

Capital Assets

A number of projects reported as construction in progress had no activity for many years. We recommend the City determine whether those projects have been completed and should be transferred to depreciable assets or if the assets should be written off. Note that feasibility studies are required to be expensed as incurred until the City Council approves the related project.

We noted a difference between capital outlay expenditures and additions to capital assets. As part of the yearly closing process, the City should review the transactions in the capital outlay accounts to ensure amounts have been properly recorded as capital assets. If transactions do not meet the criteria for capitalization, they should be transferred to another expenditure account.

It may be useful to reconcile capital outlay expenditures and to update the capital asset detail list throughout the year rather than catching up the full year's accounting at year-end when preparing for the audit.

Pension and OPEB Plans

We reported differences between the pension plan account balance summary prepared by the City's accounting consultant and OPEB valuations and the general ledger that are reported on the summary of unadjusted differences. We recommend the City prepare a summary that combines the deferred outflows, liability, deferred inflows and pension/OPEB expense for the City's three pension plans and two OPEB plans and reconciles to the combined balances reported in each City fund in the future to provide consolidated check figures for balances recorded.

Cash Reconciliation

We recommend the City prepare a combined cash and investments reconciliation with each account in a column and reconciling items in rows that reconciles to total combined governmental activity, business-type activity and fiduciary fund cash and investments accounts. This would simplify the reconciliation of cash and investments to the balance sheet and footnotes during the audit. Many city clients prepare a similar reconciliation. We were informed last year that the City is waiting until after their accounting system is upgraded before implementing this suggestion.

* * * * *

We would like to take this opportunity to acknowledge the courtesy and assistance extended to us during the course of the audit. This communication is intended solely for the information and use of management, the City Council and others within the organization and is not intended to be, and should not be, used by anyone other than these specified parties.

GOVERNANCE LETTER

To the City Council
City of American Canyon, California

We have audited the financial statements of the governmental activities, the business-type activities, each major fund, and the aggregate remaining fund information of the City of American Canyon (the City) for the year ended June 30, 2022. Professional standards require that we provide you with information about our responsibilities under generally accepted auditing standards, as well as certain information related to the planned scope and timing of our audit. We have communicated such information in our letter to you dated September 28, 2019. Professional standards also require that we communicate to you the following information related to our audit.

Our Responsibilities under U.S. Generally Accepted Auditing Standards

As stated in our engagement letter dated September 28, 2019, our responsibility, as described by professional standards, is to express opinions about whether the financial statements prepared by management with your oversight are fairly presented, in all material respects, in conformity with U.S. generally accepted accounting principles. Our audit of the financial statements does not relieve you or management of your responsibilities.

Generally accepted accounting principles provide for certain required supplementary information (RSI) to supplement the basic financial statements. Our responsibility with respect to management's discussion and analysis, budgetary comparison schedules for the General and major special revenue funds, schedules of the proportionate share of the net pension liability, schedules of contributions to the pension plan, schedules of contributions to the other postemployment benefits plan and schedules of funding progress of the other postemployment benefits plan, which are RSI, which supplement the basic financial statements, is to apply certain limited procedures in accordance with generally accepted auditing standards. However, the RSI will not be audited and, because the limited procedures do not provide us with sufficient appropriate evidence to express an opinion or provide any assurance, we will not express an opinion or provide any assurance on the RSI.

We have been engaged to report on the combining and individual fund financial statements which accompany the financial statements but are not RSI. Our responsibility for this supplementary information, as described by professional standards, is to evaluate the presentation of the supplementary information in relation to the financial statements as a whole and to report on whether the supplementary information is fairly stated, in all material respects, in relation to the financial statements as a whole.

We have not been engaged to report on the introductory and statistical sections, which accompany the financial statements but are not RSI. Our responsibility with respect to this other information in documents containing the audited financial statements and auditor's report does not extend beyond the financial information identified in the report. We have no responsibility for determining whether this other information is properly stated. This other information will not be audited and we will not express an opinion or provide any assurance on it.

Planned Scope, Timing of the Audit, Significant Risks, and Other

An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements; therefore, our audit involves judgment about the number of transactions to be examined and the areas to be tested.

Our audit included obtaining an understanding of the entity and its environment, including internal control, sufficient to assess the risks of material misstatement of the financial statements and to design the nature, timing, and extent of further audit procedures. Material misstatements may result from (1) errors, (2) fraudulent financial reporting, (3) misappropriation of assets, or (4) violations of laws or governmental regulations that are attributable to the entity or to acts by management or employees acting on behalf of the entity. We generally communicate our significant findings at the conclusion of the audit. However, some matters could be communicated sooner, particularly if significant difficulties were encountered during the audit where assistance is needed to overcome the difficulties or if the difficulties may lead to a modified opinion. We also communicate any internal control related matters that are required to be communicated under professional standards.

Significant Audit Matters

Qualitative Aspects of Accounting Practices

Management is responsible for the selection and use of appropriate accounting policies. The significant accounting policies used by the City are described in Note A to the financial statements. The City implemented Governmental Accounting Standards Board (GASB) Statement No. 87, *Leases*. The implementation of GASB Statement No. 87 resulted in the recognition of a lease liability and an intangible right-to-use lease asset. Notes F, G and O to the financial statements describes the impact of GASB Statement No. 87 on the City's financial statements. We noted no transactions entered into by the City during the year for which there is a lack of authoritative guidance or consensus. All significant transactions have been recognized in the financial statements in the proper period.

Accounting estimates are an integral part of the financial statements prepared by management and are based on management's knowledge and experience about past and current events and assumptions about future events. Certain accounting estimates are particularly sensitive because of their significance to the financial statements and because of the possibility that future events affecting them may differ significantly from those expected. The most sensitive estimates affecting the City's financial statements were management's estimates of the allowance for uncollectible accounts and loans receivable, including accrued interest thereon, qualifying expenses claimed under grants, the depreciable lives used for capital assets, the liability for self-insured workers' compensation claims, the discount rate used to discount the lease liability, the net pension liability and the net other postemployment benefits liability. Management has determined an allowance for uncollectible accounts and loans receivable is necessary based on estimates of collectability and estimated collateral values. The City has an administrator for the self-insurance program that develops the estimate of the incurred, but unreported claims liability. The City has actuarial calculations performed on its net pension liability and net other postemployment benefits liability. We evaluated the key factors and assumptions used to develop the estimates in determining that they are reasonable in relation to the financial statements taken as a whole. The City has recorded an

allowance for doubtful accounts on most of its BEGIN program loans and its shared appreciation loans and related accrued interest of $8,248,746 because of the previous decrease in property values and the uncertainty if repayment will be received. This allowance does not affect fund balance because these loans are offset by deferred inflows of resources.

Certain financial statement disclosures are particularly sensitive because of their significance to financial statement users. The most sensitive disclosures affecting the financial statements were:

Net Pension Liability: The disclosure of the net pension liability in Note J to the financial statements discusses the pension liability that is reflected in the Statement of Net Position and related deferred balances as well as the assumptions that were used to determine the amounts and other required disclosures. The required supplementary information schedules also provide historical information on the pension obligation.

Net Other Postemployment Benefits (OPEB) Liability: The disclosure of the net OPEB liability in Note K to the financial statements discusses the liability that is reflected in the Statement of Net Position and related deferred balances as well as the assumptions that were used to determine the amounts and other required disclosures.

The financial statement disclosures are neutral, consistent, and clear.

Difficulties Encountered in Performing the Audit

The completion of the audit was delayed because the City did not finalize the capital asset balances until mid-February 2023. No other difficulties were encountered during the audit.

Corrected and Uncorrected Misstatements

Professional standards require us to accumulate all known and likely misstatements identified during the audit, other than those that are clearly trivial, and communicate them to the appropriate level of management. The following adjustments and closing entries were posted during the audit:

- The fair value adjustment on investments was updated
- An allowance was placed on capacity fees receivable recorded in a prior year that have not been collected for conservatism
- Capital assets balances were updated
- Accrued salaries were recorded
- Capital assets were trued-up and depreciation expense recorded
- Entries to true-up pension and other postemployment benefit balances
- Lease entries were posted
- ENGIE balances were reallocated between funds according to the cost sharing percentages
- Capital outlay expenditures were trued up to capital asset additions
- Entries were posted for government-wide reporting, such as reallocation of depreciation by activity, elimination of entries for full accrual accounting, true-up of restricted net position, elimination of fund balance commitments and assignments, etc.

- Reclassifications were made within the different categories of net position and fund balance

The attached schedule also summarizes uncorrected misstatements of the financial statements. Management has determined that their effects are immaterial, both individually and in the aggregate, to the financial statements taken as a whole.

Disagreements with Management

For purposes of this letter, a disagreement with management is a financial accounting, reporting or auditing matter, whether or not resolved to our satisfaction that could be significant to the financial statements or the auditor's report. We are pleased to report that no such disagreements arose during the course of our audit.

Management Representations

We have requested certain representations from management that are included in the management representation letter dated March 15, 2023.

Management Consultations with Other Independent Accountants

In some cases, management may decide to consult with other accountants about auditing and accounting matters, similar to obtaining a "second opinion" on certain situations. If a consultation involves application of an accounting principle to the City's financial statements or a determination of the type of auditor's opinion that may be expressed on those statements, our professional standards require the consulting accountant to check with us to determine that the consultant has all the relevant facts. To our knowledge, there were no such consultations with other accountants.

Other Audit Findings or Issues

We generally discuss a variety of matters, including the application of accounting principles and auditing standards, with management each year prior to retention as the City's auditors. However, these discussions occurred in the normal course of our professional relationship and our responses were not a condition to our retention.

Other Matters

We applied certain limited procedures to management's discussion and analysis, budgetary comparison schedules for the General and major special revenue funds, schedules of the proportionate share of the net pension liability, schedules of contributions to the pension plan, schedules of contributions to the other postemployment benefits plan and schedules of funding progress of the other postemployment benefits plan, which are required supplementary information (RSI) that supplements the basic financial statements. Our procedures consisted of inquiries of management regarding the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the basic financial statements, and other knowledge we obtained during our audit of the basic financial statements. We did not audit the RSI and do not express an opinion or provide any assurance on the RSI.

We were engaged to report on the combining and individual fund financial statements which accompany the financial statements but are not RSI. With respect to this supplementary information, we made certain inquiries of management and evaluated the form, content, and methods of preparing the information to determine that the information complies with accounting principles generally accepted in the United States of America, the method of preparing it has not changed from the prior period, and the information is appropriate and complete in relation to our audit of the financial statements. We compared and reconciled the supplementary information to the underlying accounting records used to prepare the financial statements or to the financial statements themselves.

We were not engaged to report on the introductory and statistical sections, which accompany the financial statements but are not RSI. Such information has not been subjected to the auditing procedures applied in the audit of the basic financial statements, and accordingly, we do not express an opinion or provide any assurance on it.

INDEPENDENT ACCOUNTANTS' REPORT ON AGREED-UPON PROCEDURES APPLIED TO APPROPRIATIONS LIMIT TESTING

To the City Council
City of American Canyon, California

We have performed the procedures enumerated below to the accompanying calculation of the Appropriation Limit of the City of American Canyon (the City) for the year ended June 30, 2022. The City and the League of California Cities (as presented in the publication entitled *Agreed-upon Procedures Applied to the Appropriations Limitation Prescribed by Article XIII-B of the California Constitution*) have agreed to and acknowledged that the procedures performed are appropriate to meet the intended purpose to assist the City in meeting the requirements of Section 1.5 of Article XIIIB of the California Constitution. The City's management is responsible for the Appropriations Limit calculation. This report may not be suitable for any other purpose. The procedures performed may not address all the items of interest to a user of this report and may not meet the needs of all users of this report and, as such, users are responsible for determining whether the procedures performed are appropriate for their purposes.

The procedures performed and our findings were as follows:

1. We obtained the City's calculation of the 2021/2022 appropriations limit and compared the limit and annual adjustment factors included in the calculation to the limit and annual adjustment factors that were adopted by resolution of the City Council.

   Finding: No exceptions were noted as a result of our procedures.

2. We compared the methodology used to determine the cost-of-living adjustment component to Article XIIIB which states that the City may annually adjust the component for either the change in California per capita personal income or, the percentage change in the City's assessed valuation which is attributable to non-residential new construction. We recalculated the factor based on the above information.

   Finding: No exceptions were noted as a result of our procedures.

3. We compared the methodology used to determine the population adjustment component to Article XIIIB which states that the City may annually choose to adjust the component for either the change in population in the County in which the City is located, or the change in population within the unincorporated area of the County in which the City is located. We recalculated the factor based on the above information.

   Finding: No exceptions ere noted as a result of our procedures.

4. We compared the prior year appropriations limit presented in the accompanying Appropriations Limit Calculation to the prior year appropriations limit adopted by the City Council for the prior year.

   Finding: No exceptions were noted as a result of our procedures.

5. We recalculated the 2021/2022 Appropriation Limit by multiplying the product of the two above factors by the 2020/2021 appropriation limit.

   Finding: No exceptions were noted as a result of our procedures.

6. We compared the City's actual revenues to the computed appropriation limit for fiscal year 2021/2022.

   Finding: For the 2021/2022 fiscal year, the City's actual revenues subject to the appropriations limit did not exceed the appropriation limit adopted by resolution of the City Council.

We were engaged by the City to perform this agreed-upon procedures engagement and conducted our engagement in accordance with attestation standards established by the AICPA. We are not engaged to and did not conduct an examination or review engagement, the objective of which would be the expression of an opinion or conclusion, respectively, on appropriations limit calculation. Accordingly, we do not express such an opinion or conclusion. Had we performed additional procedures, other matters might have come to our attention that would have been reported to you. No procedures have been performed with respect to the determination of the appropriations limit for the base year, as defined by *Article XIII-B* of the California Constitution.

We are required to be independent of the City and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements related to our agreed-upon procedures engagement.

This report is intended solely for the use of the City Council and management of the City and should not be used by those who have not agreed to the procedures and taken responsibility for the sufficiency of the procedures for their purposes. However, this report is a matter of public record and its distribution is not limited.

INDEPENDENT ACCOUNTANTS' REPORT ON AGREED-UPON PROCEDURES APPLIED TO APPROPRIATIONS LIMIT TESTING

To the Fire Protection District Board
City of American Canyon Fire Protection District
City of American Canyon, California

We have performed the procedures enumerated below to the accompanying calculation of the Appropriation Limit of the City of American Canyon Fire Protection District (the District) for the year ended June 30, 2022. The District and the League of California Cities (as presented in the publication entitled *Agreed-Upon Procedures applied to the Appropriations Limitation Prescribed by Article XIII-B of the California Constitution*) have agreed to and acknowledged that the procedures performed are appropriate to meet the intended purpose to assist the District in meeting the requirements of Section 1.5 of Article XIIIB of the California Constitution. The District's management is responsible for the Appropriations Limit calculation. This report may not be suitable for any other purpose. The procedures performed may not address all the items of interest to a user of this report and may not meet the needs of all users of this report and, as such, users are responsible for determining whether the procedures performed are appropriate for their purposes.

The procedures performed and our findings were as follows:

1. We obtained the District's calculation of the 2021/2022 appropriations limit and compared the limit and annual adjustment factors included in the calculation to the limit and annual adjustment factors that were adopted by resolution of the Fire Protection District Board.

   Finding: No exceptions were noted as a result of our procedures.

2. We compared the methodology used to determine the cost-of-living adjustment component to Article XIIIB which states that the District may annually adjust the component for either the change in California per capita personal income or, the percentage change in the District's assessed valuation which is attributable to non-residential new construction. We recalculated the factor based on the above information.

   Finding: No exceptions were noted as a result of our procedures.

3. We compared the methodology used to determine the population adjustment component to Article XIIIB which states that the District may annually choose to adjust the component for either the change in population in the County in which the District is located, or the change in population within the unincorporated area of the County in which the District is located. We recalculated the factor based on the above information.

   Finding: No exceptions were noted as a result of our procedures.

4. We compared the prior year appropriations limit presented in the accompanying Appropriations Limit Calculation to the prior year appropriations limit adopted by the Fire Protection District Board for the prior year.

   Finding: No exceptions were noted as a result of our procedures.

5. We recalculated the 2021/2022 Appropriation Limit by multiplying the product of the two above factors by the 2020/2021 appropriation limit.

   Finding: No exceptions were noted as a result of our procedures.

6. We compared the District's actual revenues to the computed appropriation limit for fiscal year 2021/2022.

   Finding: For the 2021/2022 fiscal year, the District's actual revenues subject to the appropriations limit did not exceed the appropriation limit adopted by resolution of the Fire Protection District Board.

We were engaged by the District to perform this agreed-upon procedures engagement and conducted our engagement in accordance with attestation standards established by the AICPA. We are not engaged to and did not conduct an examination or review engagement, the objective of which would be the expression of an opinion or conclusion, respectively, on Appropriations Limit Calculation. Accordingly, we do not express such an opinion or conclusion. Had we performed additional procedures, other matters might have come to our attention that would have been reported to you. No procedures have been performed with respect to the determination of the Appropriations Limit for the base year, as defined by *Article XIII-B* of the California Constitution.

We are required to be independent of the District and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements related to our agreed-upon procedures engagement.

This report is intended solely for the use of the Board of Directors and management of the District and should not be used by those who have not agreed to the procedures and taken responsibility for the sufficiency of the procedures for their purposes. However, this report is a matter of public record and its distribution is not limited.

TITLE

Maintenance and Utilities Department, Sewer/Wastewater Division Update

RECOMMENDATION

Receive a Presentation on Maintenance and Utilities Department, Sewer/Wastewater Division Update

CONTACT

Felix Hernandez, III, Maintenance and Utilities Director
Jay Atkinson, Water Reclamation Facility Operations Manager

BACKGROUND & ANALYSIS

The Maintenance and Utilities Department is responsible for the treatment and distribution of drinking water; the collections, reclamation, and reuse of wastewater; compliance with all environmental regulations related to water, wastewater, stormwater, and solid waste; and management of the City's facilities and fleet. The City operates a Water Treatment Facility, Water Reclamation Facility (WRF) and Corporation Yard. The WRF processes wastewater for either discharge to receiving waters or for recycled water production and distribution.

The City's WRF was the first commissioned in 2002 as one of the first Membrane Bio-Reactor (MBR) Treatment Facilities in the state of California. Its design allows for an average dry weather flow of 2.5 million gallons per day (MGD), and a peak wet weather flow of 5 MGD. Currently, serving approximately 25,000 residents, along with businesses, including large food processors and other industrial discharges. There are four MBR process trains, each consisting of an anoxic zone and an aerobic zone. The WRF is both a secondary and tertiary treatment facility; secondary water is UV disinfected and discharged to the Napa River, while tertiary water is chlorinated for irrigation.

The sewer collections division which is now located at the WRF, maintains 54 miles of underground pipe, 5 pump stations, lateral cleaning and sewer repairs, CCTV or video underground pipe, respond to any and every sanitary sewer overflow (SSO). The crew assists all other divisions as needed.

COUNCIL PRIORITY PROGRAMS AND PROJECTS

Organizational Effectiveness: "Deliver exemplary government services."

FISCAL IMPACT

None

ENVIRONMENTAL REVIEW

15378(b) - The action is not a "Project" subject to the California Environmental Quality Act ("CEQA") because it does not qualify as a "Project" under Public Resources Code Sections 21065 and 21080 and in Section 15378(b) of Title 14 of the California Code of Regulations

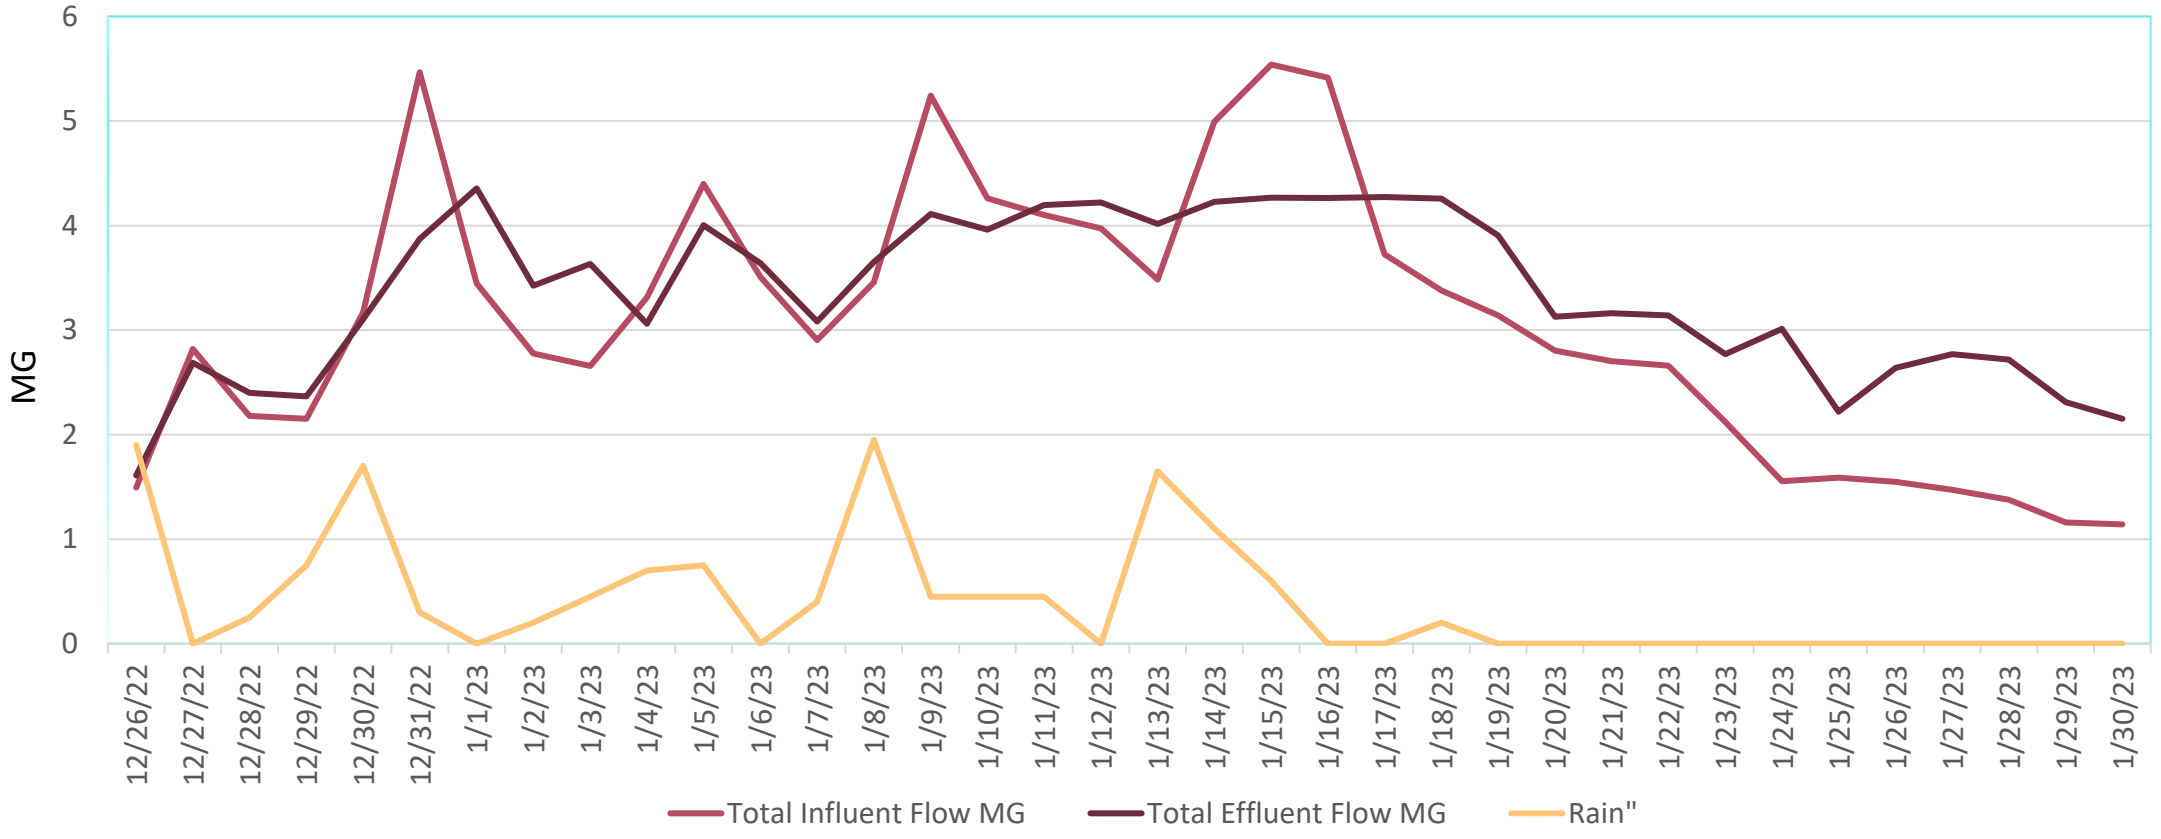
Wastewater Treatment/Sewer Collections Update

March 21, 2023

FACILITY OVERVIEW

OPERATIONS AND MAINTENANCE STAFF



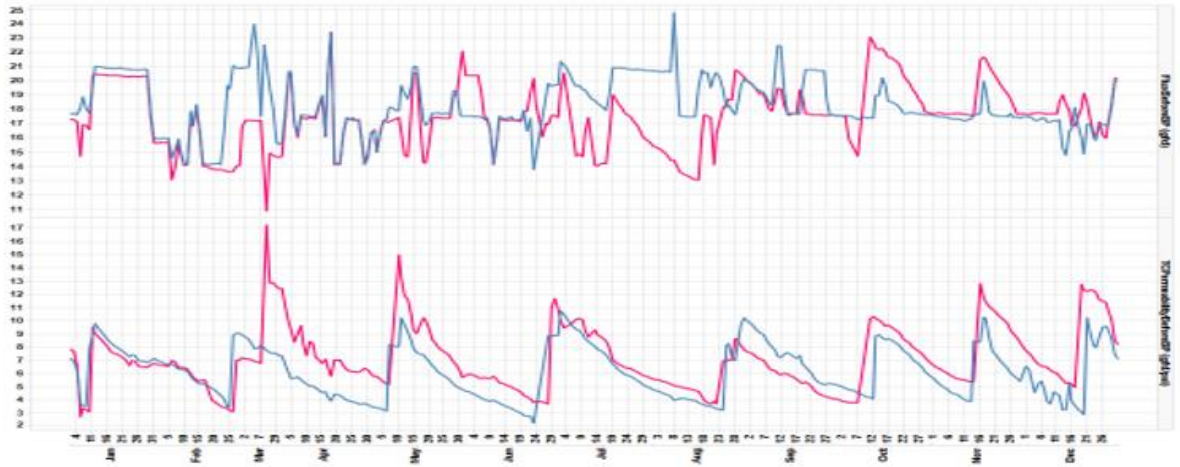
TREATMENT FACILITY

- The City owns and operates two collection systems that convey domestic and industrial wastewater separately to the Facility, which provides advanced secondary treatment of wastewater and has an average dry weather design capacity of 2.5 million gallons per day (MGD) and a peak wet weather capacity of 5.0 MGD. From April 2018 to March 2021, the Facility treated an average daily influent flow of 1.57 MGD.

- The City's NPDES permit and the *Waste Discharge Requirements for Mercury and PCBs from Municipal and Industrial Wastewater Discharges to San Francisco Bay* (CA0038849, Order No. R2-2017-0041), which was adopted by the San Francisco Bay Water Board on November 8, 2017 and became effective on January 1, 2018.

- Membrane-filtered final effluent is disinfected with chlorine to produce recycled water for distribution through the existing recycled water system. Recycled water is regulated under the State Water Resources Control Board's *General Water Reuse Order* (WQ 2016-0068-DDW).

STORM EVENT 2022-2023



Total Influent Flow – 104 million gal

Treated flow - 108 Million Gal

- NPDES Permit Renewal Complete (5yr cycle)
  - Long history with Regional Board Regulators. No surprises with successful permit renewal
- Stress Testing and Local Limits Assessment
  - Preliminary Stress Test Data indicates an ability to treat increased organic load
- Napa Logistics Pump Station
  - Green Island Pump Station Decommissioned
  - Napa Logistic Pump Station Commissioned

SEWER COLLECTIONS DIVISION

SSMP ADOPTED 2021-2022

The State of California requires publicly owned sanitary sewer systems to develop and implement a Sewer System Management Plan (SSMP), including measures to control and mitigate sewer spills. The City maintains and periodically audits and updates its SSMP pursuant to the State requirements.

SEWER COLLECTIONS RESPONSIBILITIES

- Maintain 54 miles of sewer collection pipe, five sewer pump stations, Repair and inspect lateral lines, Sewer line repairs, CCTV inspections, SSO spill response , Support WRF operations through cross training,

Equipment Advantages

Ability to operate the suction and jetter functions at the same time, needed for cleaning dirty line lines by sucking out the solids while cleaning the lines.

Accumulator setting adds a jackhammer action to the jetter function which can aid in clearing tougher blockages.

Fully operational, wireless remote control. Allows for operation of the boom, suction and jetter functions from a distance when it's safer to do so. Jetting may get messy and sewer gasses may accumulate near operator. It's dangerous to be near the suction when in operation and should never be near it. When you need to operate the boom when not near the controls. Having a remote is ideal in some conditions.

- Lateral launch kit. A smaller 150 ft reel of 3/8 in. Hose with nozzle made for addressing sewer laterals and smaller lines. Our old unit did not have this ability and would require a separate piece of equipment when a lateral blockage occurred.

EQUIPMENT USED TO MAINTAIN SYSTEM

The Maintenance and Utilities Department, Sewer Collection Division took delivery of a new Vactor 2100i in August 2022. The upgraded equipment greatly enhances staff efficiency and versatility.

- Holds 2,400 gallons in the debris tank compared to our old unit that held 850 gallons.
- Can pump longer distances than older unit.
- RDB (Rapid Deployment Boom) speeds up the process when operating the vacuum suction.
- Holds 1500 gallons of water compared to old unit which held 800 gallons.
- Up to 80 GPM of flow compared to the old unit that had 50 GPM Max.

Upgraded Equipment

Upgraded equipment helps staff provide the best service to our citizens. Providing health and human safety as well as preventing potential property damage.

CCTV Camera – CUES flexitrax C550 system

Inspection of underground facilities like sewer collection and storm water mains are vital for proper maintenance and repair. Data collected can be implemented into CIPs as well integrated with GIS.

City Council Committee Report

Submitted by: * Councilmember Mark Joseph

Council Meeting Date: 03/21/2023

Event Date: 2023-03-15

Event Type Committee Report

Event Title: * Napa Valley Transportation Authority (NVTA)

Event Report: Attended the monthly Board meeting. Highlights included approving a design contract to renovate the building--when it was first built, there were unfinished areas. Now we will increase office space, provide showers (for employees taking active transportation methods to work) and legally required wellness room, and expand the bus driver break room. We also received an update on the Vision Zero project, and authorized Requests for Proposals for the latest TFCA funding (for projects that will reduce vehicle air pollution, such as EV Charging Stations, Bike lanes, etc.)

Also represented NVTA in Leadership Napa Valley's Government Day. This was a good opportunity to meet future and current leaders.

Event Date:

Event Type Community Event

Event Title: * City-related Events and Activities

Event Report:

- Attended the Chamber's State of the City event at LaStrada's. This was very well attended and the presentation really highlighted our progress, and included an update from NVTA and the Chamber.
- Attended the Farm Bureau's Ag Day at the Town and Country Fairgrounds. A huge crowd of elementary school aged kids. They seemed to have a great time. I got a chance to meet with some Board of Supervisors, including my LNV Class 14 alumni, Chair Gregory!
- Phone call with Maureen Trippe with Slow Down Napa. She reached out to learn more about what we're doing on traffic calming. Had a nice conversation discussing various traffic calming strategies.

File/Photo Upload Ryan Gregory Cleo and Mark 3-2023.jpg 3.39MB

Max file size for all uploads is 10 MB

Event Date:

Event Type Community Event

Event Title: * Community Events and Activities

Event Report:

- Kiwanis Crab Feed: this was our first in-person crab feed since the pandemic. We made around $16,000 net, and everyone had a great time. It was a good learning experience for the Club, since it was a new venue (Boys and Girls Club). I attended the monthly board meeting and a de-briefing on the crab feed.
- Because of the Crab Feed, I missed the Broadway Project meeting, which I had planned to attend.
- Napa Working Families Coalition: I hadn't attended one of these meetings in a while. There was discussion about their recent fund raiser and the status of various projects, including housing elements and infrastructure projects. They are also working on linking local projects with new Federal funding. We should take advantage of this.
- Holi Festival: Despite the inclement weather, there was a good turnout for this event. A lot of newcomers, including Clarence Mamaril and Allie Ikeda. Relocating the event to Comm Park II added a lot of costs to the event.
- Napa County Democratic Central Committee (NCDCC): Attended the online monthly meeting. We heard from Tim Frank, who is working on Smart Growth strategies with the Napa Working Families Coalition, and Assembly person Cecilia Aguiar-Curry, who was seeking support for her ACA1 (55% threshold on Affordable Housing and Infrastructure bonds) and AB659 (HPV vaccination requirements). We supported both.

- Met with Sherry Tennyson and Napa Valley College staff to plan a Healthy People Healthy Planet event on Earth Day at Wetlands Edge Park.
- Met with Brenda Knight and Clarence Mamaril to plan the upcoming Juneteenth event. Brenda will make a presentation to Council on March 7.
- AmCan Arts Foundation: Attended the monthly meeting. We covered a lot of topics, from grant proposals to our community mosaic project to upcoming events.
- Meet the Leader/Chris Benz: This is a regular online meeting highlighting community leaders and former LNV alumni. This month was Chris Benz, who is a very effective and engaged member of the Napa Valley community--she has been instrumental in moving our Climate Action agenda locally.
