ATTACHMENT E1– NOTIFICATION, MONITORING, REPORTING AND RECORDKEEPING REQUIREMENTS

The Notification Requirements (section 1), Spill-specific Monitoring Requirements (section 2), Reporting Requirements (section 3) and Recordkeeping Requirements (section 4) in this Attachment are pursuant to Water Code section 13267 and section 13383, and are an enforceable component of this General Order. For the purpose of this General Order, the term:

- Notification means the notifying of appropriate parties of a spill event or other activity.
- Spill-specific Monitoring means the gathering of information and data for a specific spill event to be reported or kept as records.
- Reporting means the reporting of information and data into the online California Integrated Water Quality System (CIWQS) Sanitary Sewer System Database.
- Recordkeeping means the maintaining of information and data in an official records storage system.

Failure to comply with the notification, monitoring, reporting and recordkeeping requirements in this General Order may subject the Enrollee to civil liabilities of up to $10,000 a day per violation pursuant to Water Code section 13385; up to $1,000 a day per violation pursuant to Water Code section 13268; or referral to the Attorney General for judicial civil enforcement.

Water Code section 13193 et seq. requires the Regional Water Quality Control Boards (Regional Water Boards) and the State Water Resources Control Board (State Water Board) to collect sanitary sewer spill information for each spill event and make this information available to the public. Sanitary sewer spill information for each spill event includes but is not limited to: Enrollee contact information for each spill event, spill cause, estimated spill volume and factors used for estimation, location, date, time, duration, amount discharged to waters of the State, response and corrective action(s) taken.

1. NOTIFICATION REQUIREMENTS

1.1. Notification of Spills of 1,000 Gallons or Greater to the California Office of Emergency Services

Per Water Code section 13271, for a spill that discharges in or on any waters of the State, or discharges or is deposited where it is, or probably will be, discharged in or on any waters of the State, the Enrollee shall notify the California Office of Emergency Services and obtain a California Office of Emergency Services Control Number as soon as possible **but no later than two (2) hours** after:

- The Enrollee has knowledge of the spill; and
- Notification can be provided without substantially impeding cleanup or other emergency measures.

The notification requirements in this section apply to individual spills of 1,000 gallons or greater, from an Enrollee-owned and/or operated laterals, to a water of the State.

1.2. Spill Notification Information

The Enrollee shall provide the following spill information to the California Office of Emergency Services before receiving a Control Number, as applicable:

- Name and phone number of the person notifying the California Office of Emergency Services;
- Estimated spill volume (gallons);
- Estimated spill rate from the system (gallons per minute);
- Estimated discharge rate (gallons per minute) directly into waters of the State or indirectly into a drainage conveyance system;
- Spill incident description:
  - Brief narrative of the spill event, and
  - Spill incident location (address, city, and zip code) and closest cross streets and/or landmarks;
- Name and phone number of contact person on-scene;
- Date and time the Enrollee was informed of the spill event;
- Name of sanitary sewer system causing the spill;
- Spill cause or suspected cause (if known);
- Amount of spill contained;
- Name of receiving water body receiving or potentially receiving discharge; and
- Description of water body impact and/ or potential impact to beneficial uses.

1.3. Notification of Spill Report Updates

Following the initial notification to the California Office of Emergency Services and until such time that the Enrollee certifies the spill report in the online CIWQS Sanitary Sewer System Database, the Enrollee shall provide updates to the California Office of Emergency Services regarding substantial changes to:

- Estimated spill volume (increase or decrease in gallons initially estimated);
- Estimated discharge volume discharged directly into waters of the State or indirectly into a drainage conveyance system (increase or decrease in gallons initially estimated); and
- Additional impact(s) to the receiving water(s) and beneficial uses.

2. SPILL-SPECIFIC MONITORING REQUIREMENTS

2.1 Spill Location and Spread

The Enrollee shall visually assess the spill location(s) and spread using photography, global positioning system (GPS), and other best available tools. The Enrollee shall document the critical spill locations, including:

- Photography and GPS coordinates for:
  - The system location where spill originated.

    For multiple appearance points of a single spill event, the points closest to the spill origin.
- Photography for:
  - Drainage conveyance system entry locations,
  - The location(s) of discharge into surface waters, as applicable,
  - Extent of spill spread, and
  - The location(s) of clean up.

2.2 Spill Volume Estimation

To assess the approximate spill magnitude and spread, the Enrollee shall estimate the total spill volume using updated volume estimation techniques, calculations, and documentation for electronic reporting. The Enrollee shall update its notification and reporting of estimated spill volume (which includes spill volume recovered) as further information is gathered during and after a spill event.

2.3. Receiving Water Monitoring

2.3.1. Receiving Water Visual Observations

Through visual observations and use of best available spill volume-estimating techniques and field calculation techniques, the Enrollee shall gather and document the following information for spills discharging to surface waters:

- Estimated spill travel time to the receiving water;
- For spills entering a drainage conveyance system, estimated spill travel time from the point of entry into the drainage conveyance system to the point of discharge into the receiving water;
- Estimated spill volume entering the receiving water; and
- Photography of:
  - Waterbody bank erosion,
  - Floating matter,
  - Water surface sheen (potentially from oil and grease),

- Discoloration of receiving water, and
- Impact to the receiving water.

2.3.2. Receiving Water – Water Quality Sampling and Analysis

For sewage spills in which an estimated 50,000 gallons or greater are discharged into a surface water, the Enrollee shall conduct the following water quality sampling no later than **18 hours** after the Enrollee's knowledge of a potential discharge to a surface water:

- Collect one water sample, each day of the duration of the spill, at:
  - The DCS-001 location as described in section 2.3.4 (Receiving Water Sampling Locations) of this Attachment, if sewage discharges to a surface water via a drainage conveyance system; and/or
  - Each of the three receiving water sampling locations in section 2.3.4 (Receiving Water Sampling Locations) of this Attachment;

    If the receiving water has no flow during the duration of the spill, the Enrollee must report "No Sampling Due To No Flow" for its receiving water sampling locations.

The Enrollee shall analyze the collected receiving water samples for the following constituents per section 2.3.3 (Water Quality Analysis Specifications) of this Attachment:

- Ammonia, and
- Appropriate bacterial indicator(s) per the applicable Basin Plan water quality objectives, including one or more of the following, unless directed otherwise by the Regional Water Board:
  - Total Coliform Bacteria
  - Fecal Coliform Bacteria
  - *E-coli*
  - Enterococcus

  Dependent on the receiving water(s), sampling of bacterial indicators shall be sufficient to determine post-spill (after the spill) compliance with the water quality objectives and bacterial standards of the California Ocean Plan or the California Inland Surface Water Enclosed Bays, and Estuaries Plan, including the frequency and/or number of post-spill receiving water samples as may be specified in the applicable plans.

The Enrollee shall collect and analyze additional samples as required by the applicable Regional Water Board Executive Officer or designee.

2.3.3. Water Quality Analysis Specifications

Spill monitoring must be representative of the monitored activity (40 Code of Federal Regulations section 122.41(j)(1)).

Sufficiently Sensitive Methods

Sample analysis must be conducted according to sufficiently sensitive test methods approved under 40 Code of Federal Regulations Part 136 for the sample analysis of pollutants. For the purposes of this General Order, a method is sufficiently sensitive when the minimum level of the analytical method approved under 40 Code of Federal Regulations Part 136 is at or below the receiving water pollutant criteria.

Environmental Laboratory Accreditation Program-Accredited Laboratories

The analysis of water quality samples required per this General Order must be performed by a laboratory that has accreditation pursuant to Article 3 (commencing with section 100825) of Chapter 4 of Part 1 of Division 101 of the Health and Safety Code. (Water Code section 13176(a).) The State Water Board accredits laboratories through its Environmental Laboratory Accreditation Program (ELAP).

2.3.4. Receiving Water Sampling Locations

The Enrollee shall collect receiving water samples at the following locations.

Sampling of Flow in Drainage Conveyance System (DCS) Prior to Discharge

Sampling Location	Sampling Location Description
DCS-001	A point in a drainage conveyance system before the drainage conveyance system flow discharges into a receiving water.

Receiving Surface Water Sampling (RSW)[1]

Sampling Location	Sampling Location Description
RSW-001 Point of Discharge	A point in the receiving water where sewage initially enters the receiving water.
RSW-001U: Upstream of Point of Discharge	A point in the receiving water, upstream of the point of sewage discharge, to capture ambient conditions absent of sewage discharge impacts.

Sampling Location	Sampling Location Description
RSW-001D: Downstream of Point of Discharge	A point in the receiving water, downstream of the point of sewage discharge, where the spill material is fully mixed with the receiving water.

[1] The Enrollee must use its best professional judgment to determine the upstream and downstream distances based on receiving water flow, accessibility to upstream/downstream waterbody banks, and size of visible sewage plume.

2.4. Safety and Access Exceptions

If the Enrollee encounters access restrictions or unsafe conditions that prevents its compliance with spill response requirements or monitoring requirements in this General Order, the Enrollee shall provide documentation of access restrictions and/or safety hazards in the corresponding required report.

3. REPORTING REQUIREMENTS

All reporting required in this General Order must be submitted electronically to the online CIWQS Sanitary Sewer System Database (https://ciwqs.waterboards.ca.gov), unless specified otherwise in this General Order. Electronic reporting may solely be conducted by a Legally Responsible Official or Data Submitter(s) previously designated by the Legally Responsible Official, as required in section 5.8 (Designation of Data Submitters) of this General Order.

The Enrollee shall report any information that is protected by the Homeland Security Act, by email to SanitarySewer@waterboards.ca.gov, with a brief explanation of the protection provided by the Homeland Security Act for the subject report to be protected from unauthorized disclosure and/or public access, and for official Water Board regulatory purposes only.

3.1. Reporting Requirements for Individual Category 1 Spill Reporting

3.1.1. Draft Spill Report for Category 1 Spills

Within three (3) business days of the Enrollee's knowledge of a Category 1 spill, the Enrollee shall submit a Draft Spill Report to the online CIWQS Sanitary Sewer System Database.

The Draft Spill Report must, at minimum, include the following items:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Date and time the Enrollee was notified of, or self-discovered, the spill;
4. Operator arrival time;

5. Estimated spill start date and time;
6. Date and time the Enrollee notified the California Office of Emergency Services, and the assigned control number;
7. Description, photographs, and GPS coordinates of the system location where the spill originated;
    - If a single spill event results in multiple appearance points, provide GPS coordinates for the appearance point closest to the failure point and describe each additional appearance point in the spill appearance point explanation field;
8. Estimated total spill volume exiting the system;
9. Description and photographs of the extent of the spill and spill boundaries;
10. Did the spill reach a drainage conveyance system? If Yes:
    - Description of the drainage conveyance system transporting the spill;
    - Photographs of the drainage conveyance system entry location(s);
    - Estimated spill volume fully recovered from the drainage conveyance system;
    - Estimated spill volume remaining within the drainage conveyance system;
11. Description and photographs of all discharge point(s) into the surface water;
12. Estimated spill volume that discharged to surface waters; and
13. Estimated total spill volume recovered.

3.1.2. Certified Spill Report for Category 1 Spills

Within 15 calendar days of the spill end date, the Enrollee shall submit a Certified Spill Report for Category 1 spills, to the online CIWQS Sanitary Sewer System Database. Upon completion of the Certified Spill Report, the online CIWQS Sanitary Sewer System Database will issue a final spill event identification number.

The Certified Spill Report must, at minimum, include the following mandatory information in addition to all information in the Draft Spill Report per section 3.1.1 (Draft Spill Report for Category 1 Spills) above:

1. Description of the spill event destination(s), including GPS coordinates if available, that represent the full spread and reach of the spill;
2. Spill end date and time;
3. Description of how the spill volume estimations were calculated, including at a minimum:
    - The methodology, assumptions and type of data relied upon, such as supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
    - The methodology(ies), assumptions and type of data relied upon for estimations of the spill start time and the spill end time;

4. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
5. System failure location (for example, main, lateral, pump station, etc.);
6. Description of the pipe material, and estimated age of the pipe material, at the failure location;
7. Description of the impact of the spill;
8. Whether or not the spill was associated with a storm event;
9. Description of spill response activities including description of immediate spill containment and cleanup efforts;
10. Description of spill corrective action, including steps planned or taken to reduce, eliminate, and prevent reoccurrence of the spill, and a schedule of major milestones for those steps;
11. Spill response completion date;
12. Detailed narrative of investigation and investigation findings of cause of spill;
13. Reasons for an ongoing investigation (as applicable) and the expected date of completion;
14. Name and type of receiving water body(s);
15. Description of the water body(s), including but not limited to:
    - Observed impacts on aquatic life,
    - Public closure, restricted public access, temporary restricted use, and/or posted health warnings due to spill,
    - Responsible entity for closing/restricting use of water body, and
    - Number of days closed/restricted as a result of the spill.
16. Whether or not the spill was located within 1,000 feet of a municipal surface water intake; and
17. If water quality samples were collected, identify sample locations and the parameters the water quality samples were analyzed for. If no samples were taken, Not Applicable shall be selected.

3.1.3. Spill Technical Report for Individual Category 1 Spill in which 50,000 Gallons or Greater Discharged into a Surface Water

For any spill in which 50,000 gallons or greater discharged into a surface water, **within 45 calendar days** of the spill end date, the Enrollee shall submit a Spill Technical Report to the online CIWQS Sanitary Sewer System Database. The Spill Technical Report, at minimum, must include the following information:

1. Spill causes and circumstances, including at minimum:
    - Complete and detailed explanation of how and when the spill was discovered;

- Photographs illustrating the spill origin, the extent and reach of the spill, drainage conveyance system entrance and exit, receiving water, and post-cleanup site conditions;
- Diagram showing the spill failure point, appearance point(s), the spill flow path, and ultimate destinations;
- Detailed description of the methodology employed, and available data used to calculate the discharge volume and, if applicable, the recovered spill volume;
- Detailed description of the spill cause(s);
- Description of the pipe material, and estimated age of the pipe material, at the failure location;
- Description of the impact of the spill;
- Copy of original field crew records used to document the spill; and
- Historical maintenance records for the failure location.

2. Enrollee's response to the spill:
   - Chronological narrative description of all actions taken by the Enrollee to terminate the spill;
   - Explanation of how the Sewer System Management Plan Spill Emergency Response Plan was implemented to respond to and mitigate the spill; and
   - Final corrective action(s) completed and a schedule for planned corrective actions, including:
     - Local regulatory enforcement action taken against an illicit discharge in response to this spill, as applicable,
     - Identifiable system modifications, and operation and maintenance program modifications needed to prevent repeated spill occurrences, and
     - Necessary modifications to the Emergency Spill Response Plan to incorporate lessons learned in responding to and mitigating the spill.
3. Water Quality Monitoring, including at minimum:
   - Description of all water quality sampling activities conducted;
   - List of pollutant and parameters monitored, sampled and analyzed; as required in section 2.3 (Receiving Water Monitoring) of this Attachment;
   - Laboratory results, including laboratory reports;
   - Detailed location map illustrating all water quality sampling points; and
   - Other regulatory agencies receiving sample results (if applicable).
4. Evaluation of spill impact(s), including a description of short-term and long-term impact(s) to beneficial uses of the surface water.

3.1.4. Amended Certified Spill Reports for Individual Category 1 Spills

The Enrollee shall update or add additional information to a Certified Spill Report within **90 calendar days** of the spill end date by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The Enrollee shall certify the amended report.

After **90 calendar days**, the Enrollee shall contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a Spill Report. The Legally Responsible Official shall submit justification for why the additional information was not reported within the Amended Spill Report due date.

3.2. Reporting Requirements for Individual Category 2 Spill Reporting

3.2.1. Draft Spill Report for Category 2 Spills

Within three (3) business days of the Enrollee's knowledge of a Category 2 spill, the Enrollee shall submit a Draft Spill Report to the online CIWQS Sanitary Sewer System Database.

The Draft Spill Report must, at minimum, include the following items:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Date and time the Enrollee was notified of, or self-discovered, the spill;
4. Operator arrival time;
5. Estimated spill start date and time;
6. Date and time the Enrollee notified the California Office of Emergency Services, and the assigned control number;
7. Description, photographs, and GPS coordinates of the system location where the spill originated;

   If a single spill event results in multiple appearance points, provide GPS coordinates for the appearance point closest to the failure point and describe each additional appearance point in the spill appearance point explanation field;
8. Estimated total spill volume exiting the system;
9. Description and photographs of the extent of the spill and spill boundaries;
10. Did the spill reach a drainage conveyance system? If Yes:
    - Description of the drainage conveyance system transporting the spill;
    - Photographs of the drainage conveyance system entry location(s);
    - Estimated spill volume fully recovered from the drainage conveyance system;
    - Estimated spill volume remaining within the drainage conveyance system;

- Estimated spill volume discharged to a groundwater infiltration basin or facility, if applicable; and

11. Estimated total spill volume recovered.

3.2.2. Certified Spill Report for Category 2 Spills

Within 15 calendar days of the spill end date, the Enrollee shall submit a Certified Spill Report for the Category 2 spill, to the online CIWQS Sanitary Sewer System Database (https://ciwqs.waterboards.ca.gov). Upon completion of the Certified Spill Report, the online CIWQS Sanitary Sewer System Database will issue a final spill event identification number.

The Certified Spill Report must, at minimum, include the following mandatory information in addition to all information in the Draft Spill Report per section 3.2.1 (Draft Spill Report for Category 2 Spills) above:

1. Description of the spill event destination(s), including GPS coordinates if available, that represent the full spread and reach of the spill;
2. Spill end date and time;
3. Description of how the spill volume estimations were calculated, including at a minimum:
   - The methodology, assumptions and type of data relied upon, such as supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
   - The methodology(ies), assumptions and type of data relied upon for estimations of the spill start time and the spill end time;
4. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
5. System failure location (for example, main, pump station, etc.);
6. Description of the pipe/infrastructure material, and estimated age of the pipe material, at the failure location;
7. Description of the impact of the spill;
8. Whether or not the spill was associated with a storm event;
9. Description of spill response activities including description of immediate spill containment and cleanup efforts;
10. Description of spill corrective action, including steps planned or taken to reduce, eliminate, and prevent reoccurrence of the spill, and a schedule of major milestones for those steps;
11. Spill response completion date;
12. Detailed narrative of investigation and investigation findings of cause of spill;
13. Reasons for an ongoing investigation (as applicable) and the expected date of completion; and

14. Whether or not the spill was located within 1,000 feet of a municipal surface water intake.

3.2.3. Amended Certified Spill Reports for Individual Category 2 Spills

The Enrollee shall update or add additional information to a Certified Spill Report within **90 calendar days** of the spill end date by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The Enrollee shall certify the amended report.

After **90 calendar days**, the Enrollee shall contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a Spill Report. The Legally Responsible Official shall submit justification for why the additional information was not reported within the Amended Spill Report due date.

3.3. Monthly Certified Spill Reporting for Category 3 Spills

The Enrollee shall report and certify all Category 3 spills to the online CIWQS Sanitary Sewer System Database within 30 calendar days after the end of the month in which the spills occurred. (For example, all Category 3 spills occurring in the month of February shall be reported and certified by March 30th). After the Legally Responsible Official certifies the spills, the online CIWQS Sanitary Sewer System Database will issue a spill event identification number for each spill.

The monthly reporting of all Category 3 spills must include the following items for each spill:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Date and time the Enrollee was notified of, or self-discovered, the spill;
4. Operator arrival time;
5. Estimated spill start date and time;
6. Description, photographs, and GPS coordinates where the spill originated:
    - If a single spill event results in multiple appearance points, provide GPS coordinates for the appearance point closest to the failure point and describe each additional appearance point in the spill appearance point explanation field;
7. Estimated total spill volume exiting the system;
8. Description and photographs of the extent of the spill and spill boundaries;
9. Did the spill reach a drainage conveyance system? If Yes:
    - Description of the drainage conveyance system transporting the spill;
    - Photographs of the drainage conveyance system entry locations(s);
    - Estimated spill volume fully recovered from the drainage conveyance system; and

- Estimated spill volume discharged to a groundwater infiltration basis or facility, if applicable.

10. Estimated total spill volume recovered;
11. Description of the spill event destination(s), including GPS coordinates, if available, that represent the full spread and reaches of the spill;
12. Spill end date and time;
13. Description of how the spill volume estimations were calculated, including, at minimum:
    - The methodology and type of data relied upon, including supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
    - The methodology and type of data relied upon to estimate the spill start time, on-going spill rate at time of arrival (if applicable), and the spill end time;
14. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
15. System failure location (for example, main, pump station, etc.);
16. Description of the pipe/infrastructure material, and estimated age of the pipe/infrastructure material, at the failure location;
17. Description of the impact of the spill;
18. Whether or not the spill was associated with a storm event;
19. Description of spill response activities including description of immediate spill containment and cleanup efforts;
20. Description of spill corrective actions, including steps planned or taken to reduce, eliminate, and prevent reoccurrence of the spill, and a schedule of the major milestones for those steps; including, at minimum:
    - Local regulatory enforcement action taken against an illicit discharge in response to this spill, as applicable, and
    - Identifiable system modifications, and operation and maintenance program modifications needed to prevent repeated spill occurrences at the same spill event location, including:
      - Adjusted schedule/method of preventive maintenance,
      - Planned rehabilitation or replacement of sanitary sewer asset,
      - Inspected, repaired asset(s), or replaced defective asset(s),
      - Capital improvements,
      - Documentation verifying immediately implemented system modifications and operating/maintenance modifications,
      - Description of spill response activities,

- Spill response completion date, and
- Ongoing investigation efforts, and expected completion date of investigation to determine the full cause of spill;

21. Detailed narrative of investigation and investigation findings of cause of spill.

3.4. Monthly Certified Spill Reporting for Category 4 Spills

The Enrollee shall report and certify the estimated total spill volume exiting the sanitary sewer system, and the total number of all Category 4 spills to the online CIWQS Sanitary Sewer System Database, within 30 calendar days after the end of the month in which the spills occurred.

3.5. Amended Certified Spill Reports for Category 3 Spills

Within 90 calendar days of the certified Spill Report due date, the Enrollee may update or add additional information to a certified Spill Report by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The Enrollee shall certify the amended report.

After 90 calendar days, the Legally Responsible Official shall contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a certified Spill Report. The Legally Responsible Official shall submit justification for why the additional information was not reported within the 90-day timeframe for amending the certified Spill Report, as provided above.

3.6. Annual Certified Spill Reporting of Category 4 and/or Lateral Spills

For all Category 4 spills and spills from its owned and/or operated laterals that are caused by a failure or blockage in the lateral and that do not discharge to a surface water, the Enrollee shall:

- Maintain records per section 4.4. of this Attachment;

  The Enrollee shall provide records upon request by State Water Board or Regional Water Board staff.

- Annually upload and certify a report, in an appropriate digital format, of all recordkeeping of spills to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occurred.

A spill from an Enrollee-owned and/or operated lateral that discharges to a surface water is a Category 1 spill; the Enrollee shall report all Category 1 spills per section 3.1 of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order.

3.7. Monthly Certification of "No-Spills" or "Category 4 Spills" and/or "Non-Category 1 Lateral Spills"

If either (1) no spills occur during a calendar month or (2) only Category 4, and/or Enrollee-owned and/or operated lateral spills (that do not discharge to a surface water) occur during a calendar month, the Enrollee shall certify, within 30 calendar days after

the end of each calendar month, either a “No-Spill” certification statement, or a “Category 4 Spills” and/or “Non-Category 1 Lateral Spills” certification statement, in the online CIWQS Sanitary Sewer System Database, certifying that there were either no spills, or Category 4 and/or Non-Category 1 Lateral Spills that will be reported annually (per section 3.6 of this Attachment) for the designated month.

If a spill starts in one calendar month and ends in a subsequent calendar month, and the Enrollee has no further spills of any category, in the subsequent calendar month, the Enrollee shall certify “no-spills” for the subsequent calendar month.

If the Enrollee has no spills from its systems during a calendar month, but the Enrollee voluntarily reported a spill from a private lateral or a private system, the Enrollee shall certify “no-spills” for that calendar month.

If the Enrollees has spills from its owned and/or operated laterals during a calendar month, the Enrollee shall not certify “no spills” for that calendar month.

3.8. Electronic Sanitary Sewer System Service Area Boundary Map

The Legally Responsible Official shall submit, to the State Water Board, an up-to-date electronic spatial map of its sewer system service area boundaries. The map must be in accordance with section 5.14 (Electronic Sanitary Sewer System Service Area Boundary Map) of this General Order and the specification provided on the statewide Sanitary Sewer Systems program website. The map must include the location of wastewater treatment facility(ies) that treats the sewer system waste, if in the same sewer service boundary.

By the Effective Date of this General Order, specifications for the electronic sanitary sewer service area boundary map format will be provided on the statewide Sanitary Sewer Systems Order program website.

3.9. Annual Report (Previously termed as Collection System Questionnaire in General Order 2006-0003-DWQ)

A new Enrollee shall complete and submit its first certified Annual Report into the online CIWQS Sanitary Sewer System Database, **within 30 days of obtaining a CIWQS account**; Subsequent Annual Reports are due by April 1 of each year.

All enrollees shall update their previous year’s Annual Report, **by April 1 of each year after the Effective Date of this General Order,** for each calendar year (January 1 through December 31)**.**

The Annual Report must be entered directly into the online CIWQS Sanitary Sewer System Database. The Enrollee’s Legally Responsible Official shall certify the Annual Report as instructed in CIWQS;

The Annual Report must address, and update as applicable, the following items:

- Population served;

- Updated sewer system service area boundary map, if service area boundary has changed from original map submitted per section 5.14 (Electronic Sanitary Sewer System Service Area Boundary Map) of this General Order;
- Number of system operation and maintenance staff:
  - Entry level (less than two years of experience),
  - Journey level (greater than two years of experience),
  - Supervisory level, and
  - Managerial level;
- Number of operation and maintenance staff certified as a certified collection system operator by the California Water Environmental Association (CWEA), with:
  - Corresponding number of certified collection system operator grade levels (Grade I, II, III, IV, and V);
- System information:
  - Miles of system gravity and force mains,
  - Number of upper and lower service laterals connected to system,
  - Estimated number of upper and lower laterals owned and/or operated by the Enrollee,
  - Portion of laterals that is Enrollee's responsibility,
  - Average age the major components of system infrastructure,
  - Number and age of pump stations, and
  - Estimated total miles of the system pipeline not accessible for maintenance;
- Name and location of the treatment plant(s) receiving sanitary sewer system's waste;
- Name of satellite sewer system tributaries;
- Number of system's gravity sewer above or underground crossings of water bodies throughout system;
- Number of force main (pressurized pipe) above or underground crossings of water bodies throughout system;
- Number of siphons used to convey waste throughout the sewer system;
- Miles of sewer system cleaned;
- Miles of sewer system video inspected, or comparable (i.e., video closed-circuit television or alternative inspection methods);
- System Performance Evaluation as specified in section 5.11 (System Performance Analysis) of this General Order;
- Major spill causes (for example, root intrusion, grease deposition);

- System infrastructure failure points (for example, main, pump station, lateral, etc.);
- Ongoing spill investigations; and
- Actions taken to address system deficiencies.

3.10. Sewer System Management Plan Audit Reporting Requirements

The Enrollee shall submit its Sewer System Management Plan Audit and other pertinent audit information, in accordance with section 5.4 (Sewer System Management Plan Audits) of this General Order, to the online CIWQS Sanitary Sewer System Database **by six (6) months after the end of the 3-year audit period**.

If a Sewer System Management Plan Audit is not conducted as required: the Enrollee shall:

- Update the online CIWQS Sanitary Sewer System Database and select the justification for not conducting the Audit; and
- Notify its corresponding Regional Water Board (see Attachment F (Regional Water Quality Control Board Contact Information)) of the justification for the lapsed requirements.

The Enrollee's reporting of a justification for not conducting a timely Audit does not justify non-compliance with this General Order. The Enrollee shall:

- Submit the late Audit as required in this General Order; and
- Comply with subsequent Audit requirements and due dates corresponding with the original audit cycle.

3.11. Sewer System Management Plan Reporting Requirements

For an Existing Enrollee previously regulated by Order 2006-0003-DWQ: **Within every six (6) years after the required due date of its last Plan Update**, the Legally Responsible Official shall upload and certify a local governing entity-approved Sewer System Management Plan Update to the online CIWQS Sanitary Sewer System Database. If the electronic document format or size capacity prevents the electronic upload of the Plan, the Legally Responsible Official shall report an electronic link to its updated Sewer System Management Plan posted on its own website.

Order 2006-0003-DWQ required each enrollee to develop its initial Sewer System Management Plan per the following schedule, with required Plan updates at a frequency of 5-years thereafter:

Systems serving populations: Greater than 100,000: May 2, 2009

Between 100,000 and 10,000: August 2, 2009

Between 10,000 and 2,500: May 2, 2010

Less than 2,500: August 2, 2010

This Order carries forth the previously-required Plan Update schedule per Order 2006-0003-DWQ. Per the six-year Plan Update frequency required in this Order, the Enrollee shall upload and certify its first Plan Update, to the online CIWQS Sanitary Sewer System Database by the following due dates, with subsequent Plan Updates at the frequency of six years thereafter:

Systems serving populations: Greater than 100,000: May 2, 2025

Between 100,000 and 10,000: August 2, 2025

Between 10,000 and 2,500: May 2, 2026

Less than 2,500: August 2, 2026

For a New Enrollee: **Within twelve (12) months of its Application for Enrollment Approval date**, the Legally Responsible Official of a new Enrollee shall upload and certify a local governing entity-approved Sewer System Management Plan to the online CIWQS Sanitary Sewer System Database. If electronic document format or size capacity prevents the electronic upload of the Plan, the Legally Responsible Official shall report an electronic link to its Sewer System Management Plan posted on its own website. The due date for subsequent 6-year Plan updates, is six (6) years from the submittal due date of the new Enrollee's first Sewer System Management Plan.

4. RECORDKEEPING REQUIREMENTS

The Enrollee shall maintain records to document compliance with the provisions of this General Order, and previous General Order 2006-0003-DWQ as applicable, for each sanitary sewer system owned, including any required records generated by an Enrollee's contractor(s).

4.1. Recordkeeping Time Period

The Enrollee shall maintain records of documents required in this Attachment, including records collected for compliance with this General Order, and records collected in accordance with previous General Order 2006-0003-DWQ, for five (5) years.

4.2. Availability of Documents

The Enrollee shall make the records required in this General Order readily available, either electronic or hard copies, for review by Water Board staff during onsite inspections or through an information request.

4.3. Spill Reports

The Enrollee shall maintain records for each of the following spill-related events and activities:

- Spill event complaint, including but not limited to records documenting how the Enrollee responded to notifications of spills. Each complaint record must, at a minimum, include the following information:
    - Date, time, and method of notification,

- Date and time the complainant first noticed the spill, if available,
- Narrative description of the complaint, including any information the caller provided regarding whether the spill has reached surface waters or a drainage conveyance system, if available,
- Complainant's contact information, if available, and
- Final resolution of the complaint;

- Records documenting the steps and/or remedial action(s) undertaken by the Enrollee, using all available information, to comply with this General Order, and previous General Order 2006-0003-DWQ as applicable;
- Records documenting how estimate(s) of volume(s) and, if applicable, volume(s) of spill recovered were calculated;
- All California Office of Emergency Services notification records, as applicable; and
- Records, in accordance with the Monitoring Requirements in this Attachment.

4.4. Recordkeeping of Category 4 Spills and Non-Category 1 Lateral Spills

An Enrollee must maintain the following records for each individual Category 4 spill and for each individual non-Category 1 Enrollee-owned and/or operated lateral spill, and report in accordance to section 3.6 (Annual Certified Spill Reporting of Category 4 and/or Lateral Spills) of this Attachment.

Recordkeeping of Individual Category 4 Spill Information:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Description and GPS coordinates for the system location where the spill originated;
4. Did the spill reach a drainage conveyance system? If Yes:
   - Description of drainage conveyance system location,
   - Estimated spill volume fully recovered within the drainage conveyance system, and
   - Estimated spill volume remaining within the drainage conveyance system;
5. Estimated total spill volume exiting the sanitary sewer system;
6. Spill date and start time;
7. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
8. System failure location (for example, main, pump station, etc.);
9. Description of spill response activities including description of immediate spill containment and cleanup efforts;
10. Description of how the volume estimation was calculated, including, at minimum:

- The methodology and type of data relied upon, including supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
- The methodology and type of data relied upon to estimate the spill start time, on-going spill rate at time of arrival (if applicable), and the spill end time;

11. Description of implemented system modifications and operating/maintenance modifications.

Recordkeeping of Individual Lateral Spill Information:

1. Date and time the Enrollee was notified of, or self-discovered, the spill;
2. Location of individual spill;
3. Estimated individual spill volume;
4. Spill cause(s) (for example, root intrusion, grease deposition, etc.); and
5. Description of how the volume estimations were calculated.

Total Annual Spill Information:

1. Estimated total annual spill volume;
2. Description of spill corrective actions, including at minimum:
   - Local regulatory enforcement action taken against the sewer lateral owner in response to a spill, as applicable, and
   - System operation, maintenance and program modifications implemented to prevent repeated spill occurrences at the same spill location.

4.5. Sewer System Telemetry Records

The Enrollee shall maintain the following sewer system telemetry records if used to document compliance with this General Order, and previous General Order 2006-0003-DWQ as applicable, including spill volume estimates:

- Supervisory control and data acquisition (SCADA) system(s);
- Alarm system(s);
- Flow monitoring device(s) or other instrument(s) used to estimate sewage flow rates, and/or volumes;
- Computerized maintenance management system records; and
- Asset management-related records.

4.6. Sewer System Management Plan Implementation Records

The Enrollee shall maintain records documenting the Enrollee's implementation of its Sewer System Management Plan, including documents supporting its Sewer System Management Plan audits, corrections, modifications, and updates to the Sewer System Management Plan.

4.7. Audit Records

The Enrollee shall maintain, at minimum, the following records pertaining to its Sewer System Management Plan audits, and other internal audits:

- Completed audit documents and findings;
- Name and contact information of staff and/or consultants that conducted or involved in the audit; and
- Follow-up actions based on audit findings.

4.8. Equipment Records

The Enrollee shall maintain a log of all owned and leased sewer system cleaning, operational, maintenance, construction, and rehabilitation equipment.

4.9. Work Orders

The Enrollee shall maintain record of work orders for operations and maintenance projects.

ATTACHMENT E2 – SUMMARY OF NOTIFICATION, MONITORING AND REPORTING REQUIREMENTS

This Attachment provides a summary of notification, monitoring and reporting requirements, by spill category, and for Enrollee-owned and/or operated laterals as required in Attachment E1 of this General Order, for quick reference purposes only.

Table E2-1

Spill Category 1: Spills to Surface Waters

Spill Requirement	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a Category 1 spill of 1,000 gallons or greater, discharging or threatening to discharge to surface waters: Notify the California Office of Emergency Services and obtain a notification control number.	California Office of Emergency Services at: (800) 852-7550 (Section 1 of Attachment E1)
Monitoring	• Conduct spill-specific monitoring; • Conduct water quality sampling of the receiving water within **18 hours** of initial knowledge of spill of 50,000 gallons or greater to surface waters.	(Section 2 of Attachment E1)
Reporting	• Submit Draft Spill Report **within three (3) business days** of the Enrollee's knowledge of the spill; • Submit Certified Spill Report **within 15 calendar days** of the spill end date; • Submit Technical Report **within 45 calendar days** after the spill end date for a Category 1 spill in which **50,000 gallons or greater** discharged to surface waters; and • Submit Amended Spill Report **within 90 calendar days** after the spill end date.	(Section 3.1 of Attachment E1)

Table E2-2
Spill Category 2: **Spills of 1,000 Gallons or Greater That Do Not Discharge to Surface Waters**

Spill Requirements	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a Category 2 spill of 1,000 gallons or greater, discharging or threatening to discharge to waters of the State: Notify California Office of Emergency Services and obtain a notification control number.	California Office of Emergency Services at: (800) 852-7550 (Section 1 of Attachment E1)
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E1)
Reporting	• Submit Draft Spill Report **within three (3) business days** of the Enrollee's knowledge of the spill; • Submit Certified Spill Report **within 15 calendar days** of the spill end date; and • Submit Amended Spill Report **within 90 calendar days** after the spill end date.	(Section 3.2 of Attachment E1)

Table E2-3
Spill Category 3: Spills of Equal or Greater than 50 Gallons and Less than 1,000 Gallons That Does Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	Not Applicable	Not Applicable
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E1)
Reporting	• Submit monthly Certified Spill Report to the online CIWQS Sanitary Sewer System Database within **30 calendars days** after the end of the month in which the spills occur; and • Submit Amended Spill Reports **within 90 calendar days** after the Certified Spill Report due date.	(Section 3.3 and 3.5 of Attachment E1)

Table E2-4
Spill Category 4: Spills Less Than 50 Gallons That Do Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	Not Applicable	Not Applicable
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E1)
Reporting	• If, during any calendar month, Category 4 spills occur, certify monthly, the estimated total spill volume exiting the sanitary sewer system, and the total number of all Category 4 spills into the online CIWQS Sanitary Sewer System Database, within 30 days after the end of the calendar month in which the spills occurred. • Upload and certify a report, in an acceptable digital format, of all Category 4 spills to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occur.	(Section 3.4, 3.6, 3.7 and 4.4 of Attachment E1)

Table E2-5
Enrollee Owned and/or Operated Lateral Spills That Do Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a spill of 1,000 gallons or greater, from an enrollee-owned and/or operated lateral, discharging or threatening to discharge to waters of the State: Notify California Office of Emergency Services and obtain a notification control number. Not applicable to a spill of less than 1,000 gallons.	California Office of Emergency Services at: (800) 852-7550 (Section 1 of Attachment E1)
Monitoring	Conduct visual monitoring.	(Section 2 of Attachment E1)
Reporting	• Upload and certify a report, in an acceptable digital format, of all lateral spills (that do not discharge to a surface water) to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occur. • Report a lateral spill of any volume that discharges to a surface water as a Category 1 spill.	(Sections 3.6, 3.7 and 4.4 of Attachment E1)

ATTACHMENT F – REGIONAL WATER QUALITY CONTROL BOARD CONTACT INFORMATION

This Attachment provides a map, list of counties, and contact information to assist the Enrollee in identifying the corresponding Regional Water Quality Control Board office, for all Regional Water Board notification requirements in this General Order.

Region 1 -- North Coast Regional Water Quality Control Board:
Del Norte, Glenn, Humboldt, Lake, Marin, Mendocino, Modoc, Siskiyou, Sonoma, and Trinity counties.

RB1SpillReporting@waterboards.ca.gov or (707) 576-2220

Region 2 -- San Francisco Bay Regional Water Quality Control Board:
Alameda, Contra Costa, San Francisco, Santa Clara (Northern most part of Morgan Hill), San Mateo, Marin, Sonoma, Napa, Solano counties.

RB2SpillReports@waterboards.ca.gov or (510) 622-2369

Region 3 -- Central Coast Regional Water Quality Control Board:
Santa Clara (most of Morgan Hill), San Mateo (Southern portion), Santa Cruz, San Benito, Monterey, Kern (small portions), San Luis Obispo, Santa Barbara, Ventura (Northern portion) counties.

CentralCoast@waterboards.ca.gov or (805) 549-3147

Region 4 -- Los Angeles Regional Water Quality Control Board:
Los Angeles, Ventura counties (small portions of Kern and Santa Barbara counties).

rb4-ssswdr@waterboards.ca.gov or (213) 576-6600

Region 5 -- Central Valley Regional Water Quality Control Board:

Rancho Cordova (Sacramento) Office: Colusa, Lake, Sutter, Yuba, Sierra, Nevada, Placer, Yolo, Napa, (North East), Solano (West), Sacramento, El Dorado, Amador, Calaveras, San Joaquin, Contra Costa (East), Stanislaus, Tuolumne counties.

RB5sSpillReporting@waterboards.ca.gov or (916) 464-3291

Fresno Office: Fresno, Kern, Kings, Madera, Mariposa, Merced, and Tulare counties, and small portions of San Benito and San Luis Obispo counties.

RB5fSpillReporting@waterboards.ca.gov or (559) 445-5116

Redding Office: Butte, Glen, Lassen, Modoc, Plumas, Shasta, Siskiyou, and Tehama counties.

RB5rSpillReporting@waterboards.ca.gov or (530) 224-4845

Region 6 -- Lahontan Regional Water Quality Control Board:
Lake Tahoe Office: Alpine, Modoc (East), Lassen (East side and Eagle Lake), Sierra, Nevada, Placer, El Dorado counties.

RB6sSpillReporting@waterboards.ca.gov or (530) 542-5400

Victorville Office: Mono, Inyo, Kern (East), San Bernardino, Los Angeles (North East corner) counties.

RB6vSpillReporting@waterboards.ca.gov or (760) 241-6583

Region 7 -- Colorado River Basin Regional Water Quality Control Board:
Imperial county and portions of San Bernardino, Riverside, San Diego counties.

RB7SpillReporting@waterboards.ca.gov or (760) 346-7491

Region 8 -- Santa Ana Regional Water Quality Control Board:
Orange, Riverside, San Bernardino counties.

RB8SpillReporting@waterboards.ca.gov or (951) 782-4130

Region 9 -- San Diego Regional Water Quality Control Board:
San Diego county and portions of Orange and Riverside counties.

RB9Spill_Report@waterboards.ca.gov or (619) 516-1990

End of Order 2022-0103-DWQ

ATTACHMENT B – APPLICATION FOR ENROLLMENT

1. Enrollment Status: (Mark only one item)

☐ New Enrollee

☑ New Enrollee with previous regulatory coverage under Order 2006-0003-DWQ
(that failed to certify continuation of coverage in CIWQS per Order 2022-XXXX-DWQ)
Existing WDID Number: 755010507

2. Applicant Information:

Legally Responsible Official Submitting Application

First and Last Name: Perry Gerdes

Title: Water/Wastewater Superintendent

Phone: 951-849-3273

Email: pgerdes@banningca.gov

System Owner/Operator Name: City of Banning

Mailing Address: P.O. Box 998

City, State, Zip: Banning, CA 92220

County: Riverside

Sanitary Sewer System Name: City of Banning Collection System

Regional Water Quality Control Board(s): Colorado River Basin

Signature and Date: _____

3. Applicant Type (Check one):

☑ City ☐ County ☐ State ☐ Federal ☐ Special District

☐ Government Combination ☐ Private ☐ Other Non-governmental Entity

4. Wastewater Treatment Plant Receiving Sanitary Sewer System Waste:

Wastewater Treatment Plant Permittee: City of Banning Water Reclamation Facility

WDID No.: 7A330100015

5. Billing Information

Billing Address: P.O. Box 998

City, State, Zip: Banning, CA 92220

Billing Contact Person and Title: Perry Gerdes

Phone and Email Address: 951-849-3273, Pgerdes@banningca.gov

6. Application Fee:

The application fee, as required by Water Code section 13260, is based on the daily population served by the sanitary sewer system. See updated Fee Schedule. (https://www.waterboards.ca.gov/resources/fees/water_quality/)

Check one of the following and enter fee amount:

☑ Population Served < 50,000 – Total Fee submitted: $ $3,453.00

☐ Population Served ≥ 50,000 – Total Fee submitted: $ _____

Make the fee payment payable to the State Water Resources Control Board and mail the complete application package to:

State Water Resources Control Board, Accounting Office
P. O. Box 1888
Sacramento, CA 95812-1888

Attention: Statewide Sanitary Sewer System Program

7. Application Submittal Certification

I certify under penalty of perjury under the laws of the State of California that to the best of my knowledge and belief, the information in the submitted application package is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment.

Print Name: Pery Gerdes

Title: Water/Wastewater Superintendent

Signature: _____ Date: _____

August 9, 2023

Perry Gerdes
City of Banning
P.O. Box 998
Banning, CA 92220

NOTICE OF APPLICABILITY; NEW REGULATORY COVERAGE; STATEWIDE SANITARY SEWER SYSTEMS GENERAL ORDER, 2022-0103-DWQ

Dear Perry Gerdes:

Thank you for submitting the July 6, 2023, application package requesting regulatory coverage for the City of Banning under the Statewide General Order for Sanitary Sewer Systems.[1] The application package is approved. This Notice of Applicability serves as confirmation of new regulatory coverage under the Statewide General Order 2022-0103-DWQ, as follows:

- Agency name: City of Banning
- Sanitary Sewer System name: Banning City CS
- Waste Discharge Identification Number (WDID): 7SSO20023
- Regulatory Coverage Start Date: August 9, 2023

To comply with the Statewide General Order for Sanitary Sewer Systems, the City of Banning shall:

a. Designate a Legally Responsible Official, per Section 5.1 of the General Order.

b. Within 30 days from the date of this letter, obtain a California Integrated Water Quality System (CIWQS) user account per Section 2.2.3 of the General Order.

c. Within 12 months from the date of this letter, develop, certify, and upload an approved Sewer System Management Plan to the online CIWQS Sanitary Sewer System Database, per Section 5.2 of the General Order.

[1] Statewide Waste Discharge Requirements General Order for Sanitary Sewer Systems; State Water Board Order 2022-0103-DWQ. (https://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2022/wqo_2022-0103-dwq.pdf).

d. Conduct an internal audit of its Sewer System Management Plan and follow audit report due dates, per Section 5.4 of the General Order.

e. Update its Sewer System Management Plan at minimum every six (6) years after the date of its last Plan Update due date, per Section 5.5 of the General Order.

f. Designate Data Submitters, per Section 5.8 of the General Order.

g. Within 6 months from the date of this letter, develop and implement a Spill Emergency Response Plan, per Section 5.12 and per Attachment D, section 6 (Spill Emergency Response Plan) of the General Order.

h. Within 12 months from the date of this letter or by July 1, 2025, whichever is later, submit an electronic Sanitary Sewer System Service Area Boundary Map, per Section 5.14 of the General Order.

i. Within 30 days of obtaining a CIWQS account, submit the initial Annual Report, as specified in section 3.9 (Annual Report) of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of the General Order. Include also in the Annual Report, a running 10-year system performance analysis, per Section 5.11 of the General Order.

Failure to comply with the requirements set forth in this Notice of Applicability and the Statewide General Order for Sanitary Sewer Systems could result in an enforcement action as authorized by the California Water Code.

If you have any questions regarding the statewide Sanitary Sewer Systems General Order or this Notice of Applicability, please email your questions to SanitarySewer@waterboards.ca.gov.

Sincerely,

AG Kihara FOR

ORDINANCE NO. 1206

AN ORDINANCE BY THE CITY OF BANNING, CALIFORNIA, ADDING CHAPTER 31A TO THE BANNING ORDINANCE CODE PERTAINING TO INDUSTRIAL WASTEWATERS AND PRE-TREATMENT REQUIREMENTS

The City Council of the City of Banning, California, DOES HEREBY ORDAIN as follows:

SECTION 1. This Ordinance supplements Article V of Resolution No. 1983-13, pertaining to Industrial Discharge Regulations for the City of Banning sewer collection system, as follows :

CHAPTER 31A. INDUSTRIAL WASTEWATERS

Sec. 31A-1. Purpose.

The purpose of this Chapter is to provide for the maximum possible beneficial public use of the City's wastewater collection and treatment facilities through adequate regulations and permit requirements governing nonresidential discharges, to provide for equitable distribution of the City's costs, and to provide procedures for complying with requirements placed upon the City of Banning by other regulator agencies.

Sec. 31A-2. Superseding Previous Regulations.

This Chapter shall supersede all previous regulations and policies of the City of Banning governing items covered in this Chapter. Specifically, the provisions of this Chapter shall superseded Article V of that document entitled City of Banning Resolution No. 1983-13.

Sec. 31A-3. Definitions.

For the purposes of this Chapter, unless the context specifically indicates otherwise, the meaning of terms used shall be as follows:

a. "Categorical Pretreatment Standard" or "Categorical Standard" - Any regulation containing pollutant discharge limits promulgated by EPA in accordance with Sections 307(b) and (c) of the Act (33 U.S.C. § 1317) which apply to a specific category of users and which appear in 40 CFR Chapter 1, Subchapter N, Parts 405-471.

b. "City" - Authorized representatives of and facilities owned by the City of Banning.

c. "Clean Water Act" or "CWA" - The Federal Water Pollution Control Act, as amended, 33 U.S.C. 1251 et seq. 86 Stat. 916, Public Law 92-500.

d. "Contamination" - An impairment of the quality of the waters of the State by the introduction of waste material to a degree which creates a hazard to the public health through poisoning or through the spread of disease.

e. "Director of Public Works" - The person designated by the City of Banning to supervise the operation of the POTW, and who is charged with certain duties and responsibilities by this ordinance, or a duly authorized representative.

f. "Industrial Waste" - Includes non-domestic liquid or semisolid wastes from any producing, manufacturing, or processing operation of whatever nature.

g. "Interference" - A discharge, which alone or in conjunction with a discharge or discharges from other sources, inhibits or disrupts the POTW, its treatment processes or operations or its sludge processes, use or disposal; and therefore, is a cause of a violation of [the City's] NPDES permit or of the prevention of sewage sludge use or disposal in compliance with any of the following statutory/regulatory provisions or permits issued thereunder, or any more stringent State or local regulations: Section 405 of the Act; the Solid Waste Disposal Act, including Title II commonly referred to as the Resource Conservation and Recovery Act (RCRA); any State regulations contained in any State sludge management plan prepared pursuant to Subtitle D of the Solid Waste Disposal Act; the Clean Air Act; the Toxic Substances Control Act; and the Marine Protection, Research, and Sanctuaries Act.

h. "National Pollution Discharge Elimination System or NPDES Permit" - A permit issued pursuant to Section 402 of the Clean Water Act (33 U.S.C. 1342).

i. "New Source"

(1) Any building, structure, facility, or installation from which there is (or may be) a discharge of pollutants, the construction of which commenced after the publication of proposed pretreatment standards under Section 307(c) of the Act which will be applicable to such source if such standards are thereafter promulgated in accordance with that section, provided that:

(a) The building, structure, facility, or installation is constructed at a site at which no other source is located; or

(b) The building, structure, facility, or installation totally replaces the process or production equipment that causes the discharge of pollutants at an existing source; or

(c) The production or wastewater generating processes of the building, structure, facility, or installation are substantially independent of an existing source at the same site. In determining whether these are substantially independent, factors such as the extent to which the new facility is integrated with the existing plant, and the extent to which the new facility is engaged in the same general type of activity as the existing source, should be considered.

(2) Construction on a site at which an existing source is located results in a modification rather than a new source if the construction does not create a new building, structure, facility, or installation meeting the criteria of Section (1)(b) or (c) immediately above but otherwise alters, replaces, or adds to existing process or production equipment.

(3) Construction of a new source as defined under this paragraph has commenced if the owner or operator has:

(a) Begun, or caused to begin, as part of a continuous on-site construction program.

(i) any placement, assembly, or installation of facilities or equipment; or

(ii) significant site preparation work including clearing, excavation, or removal of existing buildings, structures, or facilities which is necessary for the placement, assembly, or installation of new source facilities or equipment; or

(b) Entered into a binding contractual obligation for the purchase of facilities or equipment which are intended to be used in its operation within a reasonable time. Options to purchase or contracts which can be terminated or modified without substantial loss, and contracts for feasibility, engineering, and design studies do not constitute a contractual obligation under this paragraph.

j. "Nuisance" - A discharge of wastewater in violation of City regulations or orders, or which is or could be harmful to or unreasonably affect the wastewater collection and treatment facilities of the City or which impairs or unreasonably affects the operation and maintenance of such facilities, or which violates quantity, quality or flow standards adopted by the City, and all wastewater discharges which unreasonably affect the quality of the City's treatment plant effluent in such a manner that receiving water quality requirements established by law cannot be met by the City.

k. "Pass Through" - A discharge which exits the City into waters of the United States in quantities or concentrations which, alone or in conjunction with a discharge or discharges from other sources, is a cause of a violation of any requirement of the City's NPDES permit (including an increase in the magnitude or duration of a violation).

l. "Person" - Any individual, partnership, firm, association, corporation, or agency, including the State of California and the United States of America.

m. "Pollutant" - Any domestic, municipal, commercial, industrial or agricultural waste material discharged in water.

n. "Pollution" - An alteration of the quality of the waters of the State by pollutants to a degree which unreasonably affects (1) such waters for beneficial use of (2) facilities which serve such beneficial uses.

o. "Premises" - A parcel of real property, or portion thereof, including any improvements thereon, which is determined by the City to be a single unit for purposes of receiving, using, and paying for wastewater disposal service. In making this determination, the City shall take into consideration such factors as whether the unit could reasonably be subdivided, number and location of side sewers, and whether the unit is being used for a single activity and, if not, what is the principal activity for wastewater disposal services.

p. "Pretreatment or Treatment" - The reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of pollutant properties in wastewater to a less harmful state prior to or in lieu of discharging or otherwise introducing such pollutants into the City's wastewater system. The reduction of alteration can be obtained by physical, chemical or biological processes, or through process changes or other means, except as prohibited by 40 CFR Section 403.6(d).

q. "Pretreatment Requirements" - Any substantive or procedural requirement related to pretreatment, other than a National Pretreatment Standard imposed on an industrial user.

r. "Pretreatment Standards" - Pretreatment standards shall mean prohibited discharge standards, categorical pretreatment standards, and local limits.

s. "Receiving Water Quality Requirements" - Requirements for the City's wastewater treatment plant effluent established by law or by State or Federal regulatory agencies for the protection of receiving water quality. "Requirements" shall include effluent limitations, and waste discharge standards, limitations, or prohibitions which may be promulgated or adopted from time to time by local, State or Federal regulatory agencies.

t. "Residential Wastewater" - The waterborne wastes derived from human habitation and use of residential, business, institutional, and industrial buildings or other structures.

u. "Septic Tank Waste" - Any sewage from holding tanks such as vessels, chemical toilets, campers, trailers, and septic tanks.

v. "Side Sewer" - A sewer conveying the wastewater of a user from a residence, building, or other structure to a City-owned interceptor sewer.

w. "Significant Industrial User"

(1) A user subject to categorical pretreatment standards; or

(2) A user that:

(a) Discharges an average of twenty-five thousand (25,000) GPD or more of process wastewater to the POTW (excluding sanitary, non-contact cooling, and boiler blowdown wastewater);

(b) Contributes a process wastestream which makes up five (5) percent or more of the average dry weather hydraulic or organic capacity of the POTW treatment plant; or

(c) Is designated as such by the City on the basis that it has a reasonable potential for adversely affecting the POTW's operation or for violating any pretreatment standard or requirement.

(3) Upon a finding that a user meeting the criteria in Subsection (2) has no reasonable potential for adversely affecting the POTW's operation or for violating any pretreatment standard or requirement, the City may at any time, on its own initiative or in response to a petition received from a user, and in accordance with procedures in 40 CFR 403.8(f)(6), determine that such user should not be considered a significant industrial user.

x. "Significant Noncompliance (SNC)" - the term shall mean:

(1) Chronic violations of wastewater discharge limits, defined here as those in which sixty-six percent (66%) or more of wastewater measurements taken during a six (6) month period exceed the daily maximum limit or average limit for the same pollutant parameter by any amount;

(2) Technical Review Criteria (TRC) violations, defined here as those in which thirty-three percent (33%) or more of wastewater measurements taken for each pollutant parameter during a six (6) month period equals or exceeds the product of the daily maximum limit or the

average limit multiplied by the applicable criteria (1.4 for BOD, TSS, fats, oils and grease, and 1.2 for all other pollutants except pH);

(3) Any other discharge violation that the Director of Public Works believes has caused, alone or in combination with other discharges, interference or pass through, including endangering the health of POTW personnel or the general public;

(4) Any discharge of pollutants that has caused imminent endangerment to the public or to the environment, or has resulted in the Director of Public Works exercise of its emergency authority to halt or prevent such a discharge;

(5) Failure to meet, within ninety (90) days of the scheduled date, a compliance schedule milestone contained in a wastewater discharge permit or enforcement order for starting construction, completing construction, or attaining final compliance;

(6) Failure to provide within thirty (30) days after the due date, any required reports, including baseline monitoring reports, reports on compliance with categorical pretreatment standard deadlines, periodic self-monitoring reports, and reports on compliance with compliance schedules;

(7) Failure to accurately report noncompliance; or

(8) Any other violation(s) which the Director of Public Works determines will adversely affect the operation or implementation of the local pretreatment program.

y. "Slug Load" or "Slug" - Any discharge at a flow rate or concentration which could cause a violation of the prohibited discharge standards in Section 31A-5 of this ordinance.

z. "Standard Industrial Classification (SIC)" - A classification pursuant to the Standard Industrial Classification Manual issued by the Executive Office of the President, Office of Management and Budget, 1972.

aa. "Standard Methods" - Analytical procedures described in the latest edition of "Standard Methods of the Examination of Water and Wastewater" as published by the American Public Health Association, the American Water Works Association, and the Water Pollution Control Federation.

bb. "Storm Water" - Any flow occurring during or following any form of natural precipitation and resulting therefrom.

cc. "Suspended Solids" - The concentration of non-filterable residue determined in conformance with Standard Methods procedures.

dd. "Toxic Pollutant" - Any pollutant or combination of pollutants listed as toxic in regulations promulgated by the Administrator of the Environmental Protection Agency under the provision of the CWA 307(a) or other Acts.

ee. "User or Industrial User" - Any person who contributes, causes or permits the contribution of wastewater into the City's collection and treatment facilities and is a source of indirect discharge.

ff. "Waste Material" - Includes any and all substances of liquid, solid, gaseous, or radioactive nature, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation of any nature.

gg. "Wastewater" - All residential and nonresidential material and waters, whether treated or untreated, discharged into or permitted to enter the wastewater collection system for processing in the wastewater treatment facilities of the City of Banning.

hh. "Wastewater Strength" - The quality of wastewater discharged as measured by its concentration, including its constituents and characteristics.

ii. "Wastewater System" - Includes intercepting sewers, wastewater treatment works, pumping stations, outfall sewers, and appurtenances constructed, operated, and maintained by the City of Banning for residential and nonresidential wastewater disposal purposes.

Abbreviations:

a. "CFR" - Code of Federal Regulations.

b. "POTW" - shall mean publicly owned treatment works.

c. "RCRA" - shall mean Resource Conservation and Recovery Act of 1976 Public Law (Pl) 94-580 and amendments thereto.

d. "SIC" - (standard industrial classification) shall mean the system of classifying industries identified in the SIC Manual, 1972, or subsequent edition, prepared by the Office of Management and Budget.

e. "EPA" - United States Environmental Protection Agency.

Sec. 31A-4. Permissible Discharges.

Wastewater may be discharged into side sewers for interception, treatment, and disposal by the City provided that such wastewater does not contain substances prohibited, or exceed limitations or wastewater strength, set forth in this Chapter; and provided further that the user pays all City wastewater disposal charges and is in compliance with all terms of this Chapter, including the permit provisions if applicable.

Sec. 31A-5. Prohibited Discharges.

No person shall discharge or deposit or cause or allow to be discharged or deposited into the City's wastewater system any wastewater containing or exhibiting the following:

a. Pollutants which create a fire or explosive hazard in the POTW, including, but not limited to, wastestreams with a closed-cup flash point of less than 140°F (60°C) using the test methods specified in 40 CFR 261.21.

b. Any toxic or poisonous solids, liquids or gases in such quantities that, alone or in combination with other waste substances, may create pass through or interference as defined by Section 31A-4, or create a hazard for humans, animals or the local environment, interfere detrimentally with wastewater treatment processes, cause a public nuisance, or cause any hazardous condition to occur in the wastewater system.

c. A pH lower than 5.0 or having any corrosive or detrimental characteristic that may cause injury to wastewater treatment or maintenance personnel or may cause damage to structures, equipment or other physical facilities of the wastewater system.

d. Any solids or viscous substance of such size or character, or in such quantity that they may cause obstruction to flow in the collection system or be detrimental to proper wastewater treatment plant operations.

e. Any rainwater, storm water, ground water, street drainage, subsurface drainage, roof drainage, yard drainage, water from yard fountains, ponds, or lawn sprays or any other uncontaminated water.

f. Any water added for the purpose of diluting wastes as a partial or complete substitute for adequate treatment to achieve compliance with this chapter.

g. Any free biodegradable or non-biodegradable oils or greases, petroleum oil or refined petroleum products.

h. Any dispersed petroleum or mineral based cutting oils, biodegradable oils, fats or greases in excessive concentrations that would tend to cause adverse effects on the wastewater system.

i. Any unreasonably large amount of suspended solids.

j. Pollutants, including oxygen-demanding pollutants (BOD, etc.), released in a discharge at a flow rate and/or pollutant concentration which, either singly or by interaction with other pollutants, will cause interference with the POTW.

k. Any strongly odorous compounds or compounds tending to create odors.

l. Dissolved sulfides above a concentration of 0.1 milligram/liter.

m. Any material inducing a high pH (pH greater than 9) which causes encrustation, scale or precipitates on sewer walls or other adverse effects on the wastewater system.

n. Any substance promoting or causing the promotion of toxic gases.

o. A temperature of 140° F or higher. At no time shall any person discharge wastewater causing the influent wastewater at the treatment plant to exceed a temperature of 104° F.

p. Any material requiring an excessive quantity of chlorine or other chemical compound used for disinfecting purposes.

q. Any excessive amounts of chlorinated hydrocarbon or organic phosphorus type compounds.

r. Any excessive amounts of deionized water, steam condensate or distilled water.

s. Any substance that may precipitate, solidify, gel, polymerize, or become viscous under conditions normally found in the wastewater treatment plant effluent.

t. Any material producing excessive discoloration of the wastewater treatment plant effluent.

u. Any particulate material that has not been ground sufficiently to pass through a 3/8-inch screen.

v. Any detergents, surface active agents, or other substances, in quantities sufficient to cause foaming in the wastewater system.

w. Any radioactive wastes in excess of Federal, State or County regulations.

x. Any trucked or hauled pollutants, except at discharge points designated by the Director of Public Works in accordance with Section 31A-17 (c) of this ordinance.

A minimum 8 hours prior notice of wrongul discharge and opportunity to correct shall be given by the Public Works Director to the User before commencement of an enforcement action for violation of subsections d, h, I, k, p, q, r, t or v immediately above.

Sec. 31A-6. Limitations on Discharges.

a. General Limitations. No person shall discharge or convey, or permit or allow to be discharged or conveyed, to the City wastewater system any pollutants of such character or quantity that will:

(1) Not be susceptible to treatment or interfere with the process of efficiency of the treatment system.

(2) Constitute a hazard to human or animal life, or to the stream or water course receiving the treatment plant effluent.

(3) Violate any Federal, State, or local Pretreatment standards, including Federal Categorical Pretreatment Standards found at 40 CFR Chapter I, Subchapter N, Parts 405-471.

(4) Any material or quantity of material which will cause the City's wastewater treatment plant effluent to exceed the concentration limits of its NPDES permit as established by the Colorado River Basin Regional Water Quality Control Board, and any subsequent amendments as are duly adopted from time to time by the Colorado River Basin Regional Water Quality Control Board.

b. The following values represent the average and maximum concentration levels of specific contaminants which may be present in a user's discharge to the City wastewater system:

Discharge Limits, mg/1

Parameter	Daily Maximum
Arsenic	0.05
Cadmium	0.05
Chromium	5.00
Copper	0.50
Lead	0.10
Mercury	0.10
Nickel	1.00
Silver	0.50

Nickel	1.00
Silver	0.50
Zinc	1.00
Cyanide	0.10
Total Toxic Organics	0.58
pH	5.0 -10.5
Radioactivity	*

*State of California Standards

Sec. 31A-7. Prohibited Discharge Locations.

a. It is unlawful for any person to discharge or cause to be discharged into any storm drain or storm water channel or natural watercourse, whether currently carrying water or not, or into any pipe or waterway leading to such drain, channel or watercourse, any solid or fluid material which will impair the useful functioning of such drain, channel, or watercourse, or cause expense to the City, or other public agency, in maintaining the proper functioning or same, or cause public nuisance or public hazard or cause detrimental pollution of natural surface or subsurface waters.

b. It is unlawful for any person to deposit or discharge into any sump which is not impermeable or into any pit or well, or onto the ground, or into any storm drain or watercourse any material which by seeping underground or by being leached or by reacting with the soil is detrimental to the usable underground waters and exceeds the range of the effects of ordinary non-industrial land uses on underground waters into which such wastes may seep, or which will violate any requirements of the Colorado River Basin Regional Water Quality Control Board.

Sec. 31A-8. Permit Requirement.

Permits must be obtained by all non-domestic users whose wastewater contains or may contain pollutants not normally found or in concentrations in excess of those normally found in domestic wastewater. Those users requiring permits shall include, but not be limited to, the following categories:

a. Users whose wastewater contains or may contain any substance which would cause the wastewater to be considered a prohibited discharge under this Chapter.

b. Any user that meets the criteria set forth in 40 CFR 403.3(t) and is designated as a Significant Industrial User (SIU).

c. Any other users determined by the Director of Public Works to require special regulation or source control.

Users for whom permits are mandatory must make application for and obtain a permit which shall govern each wastewater connection to the City's wastewater system.

Sec. 31A-9. Application.

Users seeking a wastewater discharge permit shall complete and file with the Director of Public Works an application form, within 30 days after the effective date of this Ordinance, and proposed new users shall apply at least 90 days prior to connecting to or contributing to the City's wastewater system. The application may require information including but not limited to: Estimated wastewater strength, estimated wastewater flow, average and peak wastewater discharge flow rates for each side sewer; locations of side sewers, sampling points, and pretreatment facilities; description of activity, facilities, and plant processes on the premises, including raw materials, processes and types of materials which are or could be discharged, SIC number; total product produced, by type; number and type of employees; and any other information the Director of Public Works may deem necessary to evaluate the permit application. Within 90 days the Director of Public Works shall approve or deny this application.

a. Application Signatories and Certification. All wastewater discharge permit applications and user reports must be signed by an authorized representative of the user and contain the following certification statement:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Sec. 31A-10. Terms and Conditions of Permit.

a. Terms. All wastewater discharge permits shall be expressly subject to all provisions of this Chapter. All permits shall contain the following terms:

(1) A group classification designation;

(2) Monitoring requirements;

(3) Requirements for reports of initial and continuing compliance;

(4) Requirements for pretreatment facilities.

b. Conditions. Wastewater Discharge Permits shall be expressly subject to all provisions of this Chapter and all other applicable regulations established by the City. Permits may contain the following:

(1) A permit application fee;

(2) Limitations on wastewater strength for the flow in each side sewer, including average and maximum concentrations of the wastewater constituents and characteristics;

(3) Limits on average and maximum rate of discharge, restriction of discharge to certain hours of the day, or requirements for flow regulation and equalization;

(4) Requirements for the installation of flow measurement or other facilities;

(5) Requirements for installation and maintenance of inspection and sampling facilities, including City access to the facilities;

(6) Specifications for monitoring programs which may include sampling locations, method of sampling, those chemical constituents to be reported upon, frequency of sampling, number, types, and standards for tests;

(7) Requirements for submission of technical reports or discharge reports, and authority for the Director of Public Works or designee to copy all such reports kept at the premises of the user;

(8) Requirements for maintaining and retaining plant records relating to wastewater discharge as specified by the City, and affording access to the City for the purposes of inspection and copying;

(9) Requirements for facilities to prevent accidental discharge of prohibited materials or other wastes regulated by this Chapter.

Sec. 31A-11. Permit Duration.

Permits shall be issued for a time period not to exceed five years and shall be stated to expire on a specific date. The user shall apply for permit re-issuance a minimum of 90 days prior to the expiration of the user's existing permit.

Sec. 31A-12. Change of Permit Terms and Conditions.

The City may change the terms and conditions of a wastewater discharge permit, including changing the average limits on the elements of wastewater strength, from time to time as circumstances may require. The City shall allow a user reasonable time to comply with any City required changes in the permit.

Any user desiring to make alterations of connections to the wastewater collection system, or desiring to modify its' industrial plant, process, or wastewater treatment facilities in a manner which would increase or decrease the flow rate or alter the quality of the wastewater discharge described in its Wastewater Discharge Permit shall first apply for an amended permit and obtain a revised Wastewater Discharge Permit approved by the Director of Public Works prior to the commencement of any construction of new facilities or operation of modified facilities. The Director of Public Works shall treat this in the same manner as an original application under Section 31A-10.

Upon promulgation of a National Categorical Pretreatment Standard, the Director of Public Works shall notify by registered letter all users whom may be subject to such standard, including the applicable reporting requirements under 40 CFR Section 403.12. Within 180 days after the promulgation of a National Categorical Pretreatment Standard, all applicable users shall make application to the Director of Public Works for a Wastewater Discharge Permit. Likewise, applicable users with an existing Wastewater Discharge Permit shall make application to the Director of Public Works for a revised Permit within 180 days after the promulgation of such standard. The City shall respond by issuing new or revised Wastewater Discharge Permits to the applicants. The new or revised Permit shall be issued within three months of the promulgation of the National Categorical Pretreatment Standard, and shall require compliance with such standard within the time frame prescribed by the standard.

Sec. 31A-13. Transfer of Permit Prohibited.

Wastewater discharge permits are issued to a specific user for a specific operation. A wastewater discharge permit shall not be reassigned or transferred or sold to a new owner, new user, different premises, or a new or changed operation.

Sec. 31A-14. Revocation of Permit.

Any user who violates the following conditions of its permit or of this Chapter, or of applicable State and Federal regulations, is subject to having its permit revoked by the Director of Public Works upon a minimum notice of three days.

Violations subjecting a user to possible revocation of its permit include, but are not limited to, the following:

a. Failure of a user to accurately report the wastewater constituents and characteristics of its discharge;

b. Failure of the user to report significant changes in operations, or wastewater constituents and characteristics;

c. Refusal of reasonable access to the user's premises for the purpose of inspection or monitoring; or

d. Violation of conditions of the permit.

Sec. 31A-15. Unusual Conditions, Special Agreements, and Waivers.

a. No statement contained in this Chapter prevents any special agreement or arrangement between the City and any industrial concern whereby a nonresidential waste of unusual strength or character may be accepted by the City for treatment.

b. If any discharge contains or may contain constituents which cause it to fail to conform to any of the requirements set forth in Section 31A-7, but the Director of Public Works finds that:

(1) The discharge will not cause harm to the wastewater system nor unreasonably or inequitably burden the operations of the system; and

(2) When considered together with similar excesses in discharges of other limited herein will not materially affect the ability of the City to meet the requirements of the Colorado River Basin Regional Water Quality Control Board on the City's wastewater treatment plant effluent (NPDES Permit), the Director of Public Works shall grant approval for discharge to the sewer with waiver or modifications of the requirements which would not be met, and so indicate on the user's permit.

c. The Director of Public Works shall not grant waiver of any requirement set forth by Federal or State regulation.

Sec. 31A-16. Administrative Authority.

The Director of Public Works is charged with responsibility for the City's wastewater control program, the administration and enforcement of the provisions of this Chapter and the City of Banning Industrial Waste Program Enforcement Response Guide.

To effectively administer and enforce the provisions of these regulations, the Director of Public Works may require any discharger to comply with any or all of the requirements of the following sections.

Sec. 31A-17. Pretreatment.

a. Users shall provide necessary wastewater treatment as required to comply with this Chapter and shall achieve compliance with all Federal Categorical Pretreatment Standards within the time limitations as specified by the Federal Pretreatment Regulations. Any facilities required to pretreat wastewater to a level acceptable to the City shall be provided, operated, and maintained at the user's expense. Detailed plans showing the pretreatment facilities operating procedures shall be submitted to the City for review, and shall be acceptable to the City before construction of the facility. The review of such plans and operating procedures shall in no way relieve the user from responsibility of modifying the facility as necessary to produce an effluent acceptable to the City under the provisions of this Chapter. Any subsequent changes in the procurement facilities or method of operation shall be reported to and be acceptable to the City prior to the user's initiation of the changes.

All records relating to compliance with Pretreatment Standards shall be made available to officials of the City, Regional Water Quality Control Board and EPA for inspection and copying upon request, including copies of records maintained on the premises of the user.

The City shall publish annually, in the largest daily newspaper published in the POTW's municipality, a list of the users which, during the previous twelve (12) months, were in significant noncompliance with applicable pretreatment standards and requirements. This procedure shall be as specified in 40 CFR Section 403.8 (f) (2) (vii).

b. Grease, oil and sand interceptors shall be provided when, in the opinion of the Director of Public Works they are necessary for the proper handling of liquid wastes containing grease in excessive amounts, or any flammable wastes, sand and other harmful materials; except that such interceptors shall not be required for private living quarters or dwelling units. All interceptors shall be of a type and capacity approved by the Director Public Works and located so as to be readily and easily accessible for cleaning and inspection. The requirement for installation of a grease, oil or sand interceptor shall be indicated in the user's wastewater discharge permit.

Grease and oil interceptors shall be constructed of impervious materials capable of withstanding abrupt and extreme changes in temperature. They shall be of substantial construction, watertight, and equipped with easily removable covers which when bolted in place shall be gas-tight and watertight.

All grease, oil and sand interceptors deemed necessary shall be installed and maintained at the owner's expense and shall be in efficient operation at all times.

c. Hauled wastewater shall be regulated by the following conditions of this ordinance:

(1) Septic tank waste my be introduced into the POTW only at locations designated by the Director of Public Works, and at such times as are established by the Director of Public Works. Such waste shall not violate Sections 31A-4, 31A-5, 31A-6 and 31A-7 of this ordinance or any other requirements established by the City. The Director of Public Works may require septic tank waste haulers to obtain wastewater discharge permits.

(2) The Director of Public Works shall require haulers of industrial waste to obtain wastewater discharge permits. The Director of Public Works may require generators of hauled industrial waste to obtain wastewater discharge permits.. The Director of Public Works also may prohibit the disposal of hauled industrial waste. The discharge of hauled industrial waste is subject to all other requirements of this ordinance.

(3) Industrial waste haulers may discharge loads only at locations designated by the Director of Public Works. No load may be discharged without prior consent of the Director of Public Works. The City as directed by the Director of Public Works may collect samples of each hauled load to ensure compliance with applicable standards. The Director of Public Works may require the industrial waste hauler to provide a waste analysis of any load prior to discharge.

(4) Industrial waste haulers must provide a waste-tracking form for every load. This form shall include, at a minimum, the name and address of the industrial waste hauler, permit number, truck identification, names and addresses of sources of waste, and volume and characteristics of waste. The form shall identify the type of industry, known or suspected waste constituents, and whether any wastes are RCRA hazardous wastes.

Sec. 31A-18. Protection from Accidental Discharge.

Each nonresidential user shall provide protection from accident discharge of prohibited materials or other wastes regulated by this Chapter. Facilities to prevent accidental discharge of such materials shall be provided and maintained at the user's expense. Detailed plans showing facilities and operation procedures to provide this protection shall be submitted to the Director of Public Works for review, and shall be approved by the Director of Public Works before construction of the facility. Review and approval of such plans and operating procedures shall not relieve the industrial user from the responsibility to modify its facility as necessary to meet the requirements of this Chapter.

Each user required to provide facilities for protection from accidental discharge shall be identified in the user's wastewater discharge permit. Permit provisions shall describe the extent of facilities required and shall outline a compliance schedule.

If, for any reason, a facility does not comply with or is unable to comply with the protection from accidental discharge limitations of this Chapter, the facility responsible for such discharge shall immediately notify the Director of Public Works so that corrective action may be taken to protect the treatment system.

In the event of any accidental discharge, a written report addressed to the Director of Public Works detailing the date, time and cause of the accidental discharge, the quantity and characteristics of the discharge and corrective action taken to prevent future discharges, shall be filed by the responsible nonresidential facility within five (5) days of the occurrence of the non-complying discharge.

At least once every two (2) years, the Director of Public Works shall evaluate whether each significant industrial user needs an accidental discharge/slug control plan. 'The Director of Public Works may require any user to develop, submit for approval, and implement such a plan. Alternatively, the Director may develop such a plan for any user. An accidental discharge/slug control plan shall address, at a minimum, the following:

a. Description of discharge practices, including nonroutine batch discharges;

b. Description of stored chemicals;

c. Procedures for immediately notifying the Director of Public Works of any accidental or slug discharge, as required by this section; and

d. Procedures to prevent adverse impact from any accidental or slug discharge. Such procedures include, but are not limited to, inspection and maintenance of storage areas, handling and transfer of materials, loading and unloading operations, control of plant site runoff, worker training, building of containment structures or equipment, measures for containing toxic organic pollutants, including solvents, and/or measures and equipment for emergency response.

Sec. 31A-19. Discharge Reports.

The Director of Public Works may require discharge reports, including but not limited to questionnaires, technical reports, sampling reports, and test analyses, and periodic reports of Wastewater discharge. Reporting requirements shall be as specified in the user's Wastewater Discharge Permit.

When a report filed by a user pursuant to this section is not adequate in the judgment of the Director of Public Works, such user may be required to supply additional information as deemed necessary.

The discharge report may include, but shall not be limited to, nature of the process, volume and rates of wastewater flow, a lab analysis of wastewater samples, elements, constituents, and characteristics of the wastewater, together with any information required in an application for wastewater discharge permit.

All costs associated with preparation of discharge reports, including the cost of wastewater analysis, shall be the responsibility of the user.

Those users subject to National Categorical Pretreatment Standards, shall comply with all reporting requirements in accordance with the General Pretreatment Regulations for Existing and New Sources of Pollution (Title 40 CFR Part 403). All reports specifically set forth in 40 CFR Part 403 shall be required pursuant to this Chapter. These include, but are not limited to:

a. Baseline Monitoring Reports:

(1) Within either one hundred eighty (180) days after the effective date of a categorical pretreatment standard, or the final administrative decision on a category determination under 40 CFR 403.6(a)(4), whichever is later, existing categorical users currently discharging to or scheduled to discharge to the POTW shall submit to the Director of Public Works a report which contains the information listed in paragraph (2) below. At least ninety (90) days prior to commencement of their discharge, new sources, and sources that become categorical users subsequent to the promulgation of an applicable categorical standard, shall submit to the Director of Public Works a report which contains the information listed in paragraph (2), below. A new source shall report the method of pretreatment it intends to use to meet applicable categorical standards. A new source also shall give estimates of its anticipated flow and quantity of pollutants to be discharged.

2. Users described above shall submit the information set forth below.

(a) Identifying Information. The name and address of the facility, including the name of the operator and owner.

(b) Environmental Permits. A list of any environmental control permits held by or for the facility.

(c) Description of Operations. A brief description of the nature, average rate of production, and standard industrial classifications of the operation(s) carried out by such user. This description should include a schematic process diagram which indicates points of discharge to the POTW from the regulated processes.

(d) Flow Measurement. Information showing the measured average daily and maximum daily flow, in gallons per day, to the POTW from regulated process streams and other streams, as necessary, to allow use of the combined wastestream formula set out in 40 CFR 403.6(e).

(e) Measurement of Pollutants.

(i) The categorical pretreatment standards applicable to each regulated process.

(ii) The results of sampling and analysis identifying the nature and concentration, and/or mass, where required by the standard or by the Director of Public Works, of regulated pollutants in the discharge from each regulated process. Instantaneous, daily maximum, and long-term average concentrations, or mass, where required, shall be reported. The sample shall be representative of daily operations and shall be analyzed in accordance with procedures set out in 40 CFR 136.

(iii) Sampling must be performed in accordance with procedures set out in 40 CFR 136.

(f) Certification. A statement, reviewed by the user's authorized representative and certified by a qualified professional, indicating whether pretreatment standards are being met on a consistent basis, and, if not, whether additional operation and maintenance (O&M) and/or additional pretreatment is required to meet the pretreatment standards and requirements.

(g) Compliance Schedule. If additional pretreatment and/or O&M will be required to meet the pretreatment standards, the shortest schedule by which the user will provide such additional pretreatment and/or O&M. The completion date in this schedule shall not be later than the compliance date established for the applicable pretreatment standard. A compliance schedule pursuant to this section must meet the requirements set out in Section 31A-19 b. of this ordinance.

(h) Signature and Certification. All baseline monitoring reports must be signed and certified in accordance with Section 31A-9 a. of this ordinance.

b. Compliance Schedule Progress Reports.

The following conditions shall apply to the compliance schedule required by Section 31A-19 a.(2)(g) of this ordinance.

(1) The schedule shall contain progress increments in the form of dates for the commencement and completion of major events leading to

the construction and operation of additional pretreatment required for the user to meet the applicable pretreatment standards (such events include, but are not limited to, hiring an engineer, completing preliminary and final plans, executing contracts for major components, commencing and completing construction, and beginning and conducting routine operation);

(2) No increment referred to above shall exceed nine (9) months;

(3) The user shall submit a progress report to the Director of Public Works no later than fourteen (14) days following each date in the schedule and the final date of compliance including, as a minimum, whether or not it complied with the increment of progress, the reason for any delay, and, if appropriate, the steps being taken by the user to return to the established schedule; and

(4) In no event shall more than nine (9) months elapse between such progress reports the Director of Public Works.

c. Reports on Compliance with Categorical Pretreatment Standard Deadline.

Within ninety (90) days following the date for final compliance with applicable categorical pretreatment standards, or in the case of a new source following commencement of the introduction of wastewater into the POTW, any user subject to such pretreatment standards and requirements shall submit to the Director of Public Works a report containing the information described in Section 31A-19 a.(2)(d-f) of this ordinance. For users subject to equivalent mass or concentration limits established in accordance with the procedures in 40 CFR 403.6(c), this report shall contain a reasonable measure of the user's long-term production rate. For all other users subject to categorical pretreatment standards expressed in terms of allowable pollutant discharge per unit of production (or other measure of operation), this report shall include the user's actual production during the appropriate sampling period. All compliance reports must be signed and certified in accordance with Section 31A-9 a. of this ordinance.

d. Periodic Compliance Reports.

(1) All significant industrial users shall, at a frequency determined by the Director of Public Works but in no case less than twice per year (in June and December), submit a report indicating the nature and concentration of pollutants in the discharge which are limited by pretreatment standards and the measured or estimated average and maximum daily flows for the reporting period. All periodic compliance reports must be signed and certified in accordance with Section 31A-9 a. of this ordinance.

(2) All wastewater samples must be representative of the user's discharge. Wastewater monitoring and flow measurement facilities shall be properly operated, kept clean, and maintained in good working order at all times. The failure of a user to keep its monitoring facility in good working order shall not be grounds for the user to claim that sample results are unrepresentative of its discharge.

(3) If a user subject to the reporting requirement in this section monitors any pollutant more frequently than required by the Director of Public Works, using the procedures prescribed in Section 31A-19 j. of this ordinance, the results of this monitoring shall be included in the report.

e. Reports of Changed Conditions.

Each user must notify the Director of Public Works of any planned significant changes to the user's operations or system which might alter the nature, quality, or volume of its wastewater at least ninety (90) days before the change.

(1) The Director of Public Works may require the user to submit such information as may be deemed necessary to evaluate the changed condition, including the submission of a wastewater discharge permit application under Section 31A-9 of this ordinance.

(2) The Director of Public Works may issue a wastewater discharge permit under Section 31A-8 of this ordinance or modify an existing wastewater discharge permit under Section 31A-12 of this ordinance in response to changed conditions or anticipated changed conditions.

(3) For purposes of this requirement, significant changes include, but are not limited to, flow increases of twenty percent (20%) or greater, and the discharge of any previously unreported pollutants.

f. Reports of Potential Problems.

(1) In the case of any discharge, including, but not limited to, accidental discharges, discharges of a nonroutine, episodic nature, a non-customary batch discharge, or a slug load, that may cause potential problems for the POTW, the user shall immediately telephone and notify the Director of Public Works of the incident. This notification shall include the location of the discharge, type of waste, concentration and volume, if known, and corrective actions taken by the user.

(2) Within five (5) days following such discharge, the user shall, unless waived by the Director of Public Works, submit a detailed written report describing the cause(s) of the discharge and the measures to be taken by the user to prevent similar future occurrences. Such notification shall not relieve the user of any expense, loss, damage, or other liability which may be incurred as a result of damage to the POTW,

natural resources, or any other damage to person or property; nor shall such notification relieve the user of any fines, penalties, or other liability which may be imposed pursuant to this ordinance.

(3) A notice shall be permanently posted on the user's bulletin board or other prominent place advising employees whom to call in the event of a discharge described in paragraph 31A-19 f.(1), above. Employers shall ensure that all employees, who may cause such a discharge to occur, are advised of the emergency notification procedure.

g. Reports from Unpermitted Users.

All users not required to obtain a wastewater discharge permit shall provide appropriate reports to the Director of Public Works as the Director of Public Works may require.

h. Notice of Violation/Repeat Sampling and Reporting.

If sampling performed by a user indicates a violation, the user must notify the Director of Public Works within twenty-four(24) hours of becoming aware of the violation. The user shall also repeat the sampling and analysis and submit the results of the repeat analysis to the Director of Public Works within thirty (30) days after becoming aware of the violation. The user is not required to resample if the Director of Public Works monitors at the user's facility at least once a month, or if the Director of Public Works samples between the user's initial sampling and when the user receives the results of this sampling.

(1) Any user who commences the discharge of hazardous waste shall notify the POTW, the Regional Water Quality Control Board, the EPA Regional Waste Management Division Director, and State hazardous waste authorities, in writing, of any discharge into the POTW of a substance which, if otherwise disposed of, would be a hazardous waste under 40 CFR Part 261. Such notification must include the name of the hazardous waste as set forth in 40 CFR Part 261, the EPA hazardous waste number, and the type of discharge (continuous, batch, or other). If the user discharges more than one hundred (100) kilograms of such waste per calendar month to the POTW, the notification also shall contain the following information to the extent such information is known and readily available to the user: an identification of the hazardous constituents contained in the wastes, an estimation of the mass and concentration of such constituents in the wastestream discharged during that calendar month, and an estimation of the mass of constituents in the wastestream expected to be discharged during the following twelve (12) months. All notifications must take place no later than one hundred and eighty (180) days after the discharge commences. Any notification under this paragraph need be submitted only once for each hazardous waste discharged. However, notifications of changed conditions must be submitted under Section 31A-19 e. of this ordinance. The notification

requirement in this section does not apply to pollutants already reported by users subject to categorical pretreatment standards under the self-monitoring requirements of Sections 31A-19 a., c., d. of this ordinance.

(2) Dischargers are exempt from the requirements of paragraph 31A-19 h. (1), above, during a calendar month in which they discharge no more than fifteen (15) kilograms of hazardous wastes, unless the wastes are acute hazardous wastes as specified in 40 CFR 261.30(d) and 261.33(e). Discharge of more than fifteen (15) kilograms of nonacute hazardous wastes in a calendar month, or of any quantity of acute hazardous wastes as specified in 40 CFR 261.30(d) and 261.33(e), requires a one-time notification. Subsequent months during which the user discharges more than such quantities of any hazardous waste do not require additional notification.

(3) In the case of any new regulations under Section 3001 of RCRA identifying additional characteristics of hazardous waste or listing any additional substance as a hazardous waste, the user must notify the Director of Public Works, the EPA Regional Waste Management Waste Division Director, and State hazardous waste authorities of the discharge of such substance within ninety (90) days of the effective date of such regulations.

(4) In the case of any notification made under this section, the user shall certify that it has a program in place to reduce the volume and toxicity of hazardous wastes generated to the degree it has determined to be economically practical.

(5) This provision does not create a right to discharge any substance not otherwise permitted to be discharged by this ordinance, a permit issued thereunder, or any applicable Federal or State law.

i. Analytical Requirements.

All pollutant analyses, including sampling techniques, to be submitted as part of a wastewater discharge permit application or report shall be performed in accordance with the techniques prescribed in 40 CFR Part 136, unless otherwise specified in an applicable categorical pretreatment standard. If 40 CFR Part 136 does not contain sampling or analytical techniques for the pollutant in question, sampling and analyses must be performed in accordance with procedures approved by EPA.

j. Sample Collection.

(1) Except as indicated by Section 31A-19 j.(2), below, the user must collect wastewater samples using flow proportional composite collection techniques. In the event flow proportional sampling is infeasible, the Director of Public Works may authorize the use of time proportional sampling or a minimum of four (4) grab samples where the user

demonstrates that this will provide a representative sample of the effluent being discharged. In addition, grab samples may be required to show compliance with instantaneous discharge limits.

(2) Samples for oil and grease, temperature, pH, cyanide, phenols, sulfides, and volatile organic compounds must be obtained using grab collection techniques.

k. Timing.

Written reports will be deemed to have been submitted on the date postmarked. For reports which are not mailed, postage prepaid, into a mail facility serviced by the United States Postal Service, the date of receipt of the report shall govern.

l. Record Keeping.

Users subject to the reporting requirements of this ordinance shall retain, and make available for inspection and copying, all records of information obtained pursuant to any monitoring activities required by this ordinance and any additional records of information obtained pursuant to monitoring activities undertaken by the user independent of such requirements. Records shall include the date, exact place, method, and time of sampling, and the name of the person(s) taking the samples; the dates analyses were performed; who performed the analyses; the analytical techniques or methods used; and the results of such analyses. These records shall remain available for a period of at least five (5) years. This period shall be automatically extended for the duration of any litigation concerning the user or the City of Banning, or where the user has been specifically notified of a longer retention period by the Director of Public Works.

Sec. 31A-20. Monitoring and Inspection Facility.

a. The City may require to be provided and operated at the user's own expense, monitoring facilities to allow inspection, sampling, and flow measurement of the building sewer and/or internal drainage systems. The monitoring facility should normally be situated on the user's premises, but the City may, when such a location would be impractical or cause undue hardship on the user, allow the facility to be constructed in the public street or sidewalk area, subject to approval of an encroachment permit, and located so that it will not be obstructed by landscaping or parked vehicles.

There shall be ample room in or near such a facility to allow accurate sampling and preparation of samples for analysis. The facility, sampling, and measuring equipment shall be maintained at all times in a safe and proper operation condition at the expense of the user.

Whether constructed on public or private property, the sampling and monitoring facilities shall be provided in accordance with the City's requirements and all applicable local construction standards and specifications shall be met. Construction shall be completed within 90 days following written notification by the City. Such notification may be as indicated in the user's Wastewater Discharge Permit.

b. The monitoring program may require user to conduct a sampling and analysis program of a frequency and type specified in the user's Wastewater Discharge Permit to demonstrate compliance with prescribed wastewater discharge limits. As specified in the user's Wastewater Discharge Permit, the user shall either:

(1) Conduct his sampling and analysis program provided he demonstrates to the Director of Public Works that he has the necessary qualifications and facilities to perform the work; and

(2) Engage a private laboratory, certified by the State of California Department of Public Health.

Sec. 31A-21. Inspection of Facilities.

The City may inspect the facilities of any user to ascertain whether the purpose of this Chapter and all requirements are being met. Persons or occupants of premises where nonresidential wastewater is discharged shall allow the City access at all reasonable times to all parts of the premises for the purposes of inspection, sampling, records examination and copying or in the performance of any of their duties. The City shall have the right to set up on the user's property such devices as are necessary to conduct sampling, inspection, compliance monitoring and/or metering operations. Where a user has security measures in force which would require proper identification and clearance before entry into their premises, the user shall make necessary arrangements with so that upon presentation of suitable identification, personnel from the City, the EPA, or their authorized representatives will be permitted to enter, without delay, for the purposes of performing their specific responsibilities.

The City shall randomly sample and analyze the effluent from nonresidential users to identify, independent of self-monitoring information supplied by the user, occasional and continuing noncompliance with the user's permit or other regulations set forth by this Chapter.

The City shall investigate instances of noncompliance as indicated in the user's self-monitoring reports or random inspection and surveillance activities described in this Section. Sample collection and analysis and the acquisition of other information shall be performed with sufficient care to produce evidence admissible in enforcement proceedings or in judicial

actions, and the user so investigated shall be liable for all charges incurred by the City for such investigation.

a. The City of Banning may adopt reasonable fees for reimbursement of costs of setting up and operating the City's Pretreatment Program which may include:

(1) Fees for wastewater discharge permit applications including the cost of processing such applications;

(2) Fees for monitoring, inspection, and surveillance procedures including the cost of collection and analyzing a user's discharge, and reviewing monitoring reports submitted by users;

(3) Fees for reviewing and responding to accidental discharge procedures and construction;

(4) Fees for filing appeals; and

(5) Other fees as the City may deem necessary to carry out the requirements contained herein. These fees relate solely to the matters covered by this ordinance and are separate from all other fees, fines, and penalties chargeable by the City. These fees may be set from time to time by resolution of the City Council.

Sec. 31A-22. Sampling.

a. The point of determining compliance with the provisions of this Chapter (and of the user's Wastewater Discharge Permit, if applicable) at the point of the discharge to the public wastewater system or such other upstream sampling point on the private lateral as mutually agreed upon by the nonresidential user and the Director of Public Works. Where multiple discharge permits to the City of Banning wastewater collection system are regulated by a Wastewater Discharge Permit, sampling must be carried out at an acceptable location for each permitted discharge. Where certain wastes are critical, the Director of Public Works may specify, through the provisions of the user's Permit, procedures for obtaining necessary samples and require that any persons discharging industrial wastewater install a measuring device and that samples be analyzed and measurements of flows taken and reported to the City, and such sampling and measuring device shall be made accessible to the Director of Public Works or his authorized representative.

Unless otherwise specified in the provisions of the user's Wastewater Discharge Permit, compliance with the requirements of this Chapter are based on the mean values obtained from analysis of composite industrial waste samples representative of the quality and quantity of discharge to the sewer. All such samples shall be weighted with the flow at the sampling point to furnish values weighted with time and quantity for

each required chemical constituent. The frequency of monitoring shall be as prescribed in the user's Wastewater Discharge Permit.

b. Sampling and analysis shall be performed in accordance with Section 304(g) of the Federal Water Pollution Control Act and contained in 40 CFR, Part 136 and amendments thereto or with any other test procedures approved by the Director of Public Works. Where 40 CFR, Part 136 does not include a sampling of analytical technique for pollutant in question, sampling and analysis shall be performed in accordance with the procedures set forth in the EPA publication, Sampling and Analysis Procedures for Screening of Industrial Effluents for Priority Pollutants, April, 1977, and amendments thereto, or with any other sampling and analytical procedures approved by the Director of Public Works.

Sec. 31A-23. Confidential Information.

Information and data on a user obtained from reports, surveys, wastewater discharge permit applications, wastewater discharge permits, and monitoring programs, and from the Director of Public Works inspection and sampling activities, shall be available to the public without restriction, unless the user specifically requests, and is able to demonstrate to the satisfaction of the Director of Public Works, that the release of such information would divulge information, processes, or methods of production entitled to protection as trade secrets under applicable State law. Any such request must be asserted at the time of submission of the information or data. When requested and demonstrated by the user furnishing a report that such information should be held confidential, the portions of a report which might disclose trade secrets or secret processes shall not be made available for inspection by the public, but shall be made available immediately upon request to governmental agencies for uses related to the NPDES program or pretreatment program, and in enforcement proceedings involving the person furnishing the report. Wastewater constituents and characteristics and other "effluent data" as defined by 40 CFR 2.302 will not be recognized as confidential information and will be available to the public without restriction.

Sec. 31A-25. Enforcement.

The City may adopt procedures and rules for the implementation and administration of this Chapter. The City shall enforce the provisions of this Chapter, including all requirements established or permits issued pursuant to this Chapter.

a. Requiring Discharger to Submit Schedule of Remedial or Preventive Measures. When the Director of Public Works finds that a discharge of wastewater is taking place, has taken place, or is threatening to take place that, has violated, violates or will violate prohibitions or limits prescribed by this Chapter or wastewater source control requirements or the provisions of a wastewater discharge permit, the Director of

Public Works may require the user to submit for approval of the Director of Public Works, with such modifications as deemed necessary, a detailed time schedule of specific actions the user shall take to correct or prevent a violation of requirements.

b. Issuance of Cease and Desist Order. When the Director of Public Works finds that a discharge of wastewater has taken place, is taking place or threatening to take place in violation of prohibitions or limits of this Chapter or wastewater source control requirements or the provisions of a wastewater discharge permit, the Director of Public Works may issue an order to cease and desist and direct that those users not complying with such prohibitions, limits, requirements, or provisions to (1) comply forthwith, (2) comply in accordance with a time schedule set up by the Director of Public Works, or (3) in the event of a threatened violation, take appropriate remedial or preventive action.

Sec. 31A-25. Appeal Procedure.

Any permit applicant, permit holder, or other user affected by any decision, action or determination, including cease and desist orders, made by the Director of Public Works in interpreting or implementing the provisions of this Chapter, or any permit issued hereunder, may file with the Director of Public Works written request for reconsideration within 10 days of such a decision, action, or determination, setting forth in detail the facts supporting the request. The Director of Public Works may elect to hold a hearing on the request. The request for reconsideration shall be acted upon by the Director of Public Works within 10 days from the date of filing or the close of the reconsideration hearing. The decision, action, or determination shall remain in effect during such period of review by the Director of Public Works.

If the ruling made by the Director of Public works is unsatisfactory to the user requesting reconsideration, he may, within 10 days after notice of the action by the Director of Public Works, file a written appeal to the City Council.

The written appeal shall state all pertinent aspects of the matter and shall include the hearing record if one was requested. The City Council may amend, modify, confirm or reject any decision judgment, or finding (including waivers) of the Director of Public Works provided the purpose and intent of this Chapter is not violated.

Sec. 31A-26. Criminal Penalties.

Any person who violates any provision of this Chapter, any standard, any standard adopted by this Chapter, or any permit or permit condition issued under this Chapter, is guilty of a misdemeanor, and shall be punished by a fine not exceeding $1,000 or six months in the Riverside County jail, or both, for each day on which a violation occurs.

Sec. 31A-27. Civil Enforcement Remedies and Penalties.

The violation of any provision of this Chapter, any standard adopted by this Chapter, or any permit or permit condition issued under this Chapter is hereby declared a public nuisance, and shall be abated by any means available under the law. The City may also pursue any of the alternative civil remedies herein against any discharger who violates the provisions of the Chapter.

a. Damage to Facilities. When the discharge of wastewater causes an obstruction, damage, or other impairment to City wastewater facilities, the Director of Public Works may assess a charge against the discharger for the work required to clean or repair the facility.

b. One Thousand Dollar Per Day Penalty. Any person who violates any order issued by the Director of Public Works or any provision of this Chapter, shall be liable civilly in a sum not to exceed One Thousand Dollars ($1,000) for each day in which such violation occurs. The City Attorney, upon request of the City Council, shall petition the Superior Court to impose, assess, and recover such sums.

c. Injunction. Whenever a discharge of wastewater is in violation of the provisions of this Chapter or otherwise causes or threatens to cause a condition of contamination, pollution, or nuisance, or for any violation of a pretreatment standard or requirement, the City may petition the Superior Court for the issuance of a preliminary injunction, to be followed by a permanent injunction, as may be appropriate, restraining the continuance of such discharge.

d. Termination of Service. The City may terminate or cause to be terminated wastewater treatment or wastewater service to any premise if a violation of any provision of this Chapter pertaining to control of wastewater is found to exist or if a discharge of wastewater causes or threatens to cause a condition of contamination, pollution, or nuisance, as defined in this Chapter. This provision is in addition to other statutes, rules, or regulations authorizing termination of service.

SECTION 2. SEPARABILITY. If any section, subsection, sentence, clause, phrase or portion of this ordinance is for any reason held invalid or unconstitutional by any court of competent jurisdiction, such portion shall be deemed a separate, distinct and independent provision and such holding shall not affect the validity of the remaining portions hereof.

SECTION 3. That all ordinances, or parts of ordinances, in conflict herewith are hereby repealed.

SECTION 4. That the City Clerk is hereby directed to certify to the passage of this ordinance and to cause the same or a summary to be published one time within 15 days of its passage in the Record Gazette, a newspaper of general circulation, printed and published in the City of Banning.

PASSED, APPROVED AND ADOPTED THIS 11th DAY OF February, 1997.

CERTIFICATION

I, Marie A. Calderon, City Clerk of the City of Banning, do hereby certify that the foregoing Ordinance No. 1206 was duly introduced at a regular meeting of the City Council of the City of Banning, California, held on the 14th day of January, 1997, and was duly adopted at a regular meeting of said City Council held on the 11th day of February, 1997, by the following vote, to wit:

AYES:	Councilmembers Jenkins, Palmer, Williams, Mayor Hunt
NOES:	None
ABSTAIN:	None
ABSENT:	Councilmember Lucsko

Marie A. Calderon, City Clerk
City of Banning

ORDINANCE NO. 1271

AN ORDINANCE OF THE CITY OF BANNING, AMENDING ORDINANCE NO. 1206, CHAPTER 31A. SECTION 31A-5, SUBSECTIONS (c) AND (m), SECTION 31A-6, SUBSECTION (b) AND SECTION 31A-10, SUBSECTION (b) OF THE BANNING MUNICIPAL ORDINANCE CODE RELATING TO INDUSTRIAL DISCHARGE REGULATIONS FOR THE CITY OF BANNING SEWER COLLECTION SYSTEM.

WHEREAS, Ordinance No. 1206 added Chapter 31A to the Banning Municipal Ordinance Code pertaining to industrial wastewater and pretreatment requirements in 1997; and

WHEREAS, it is essential that Chapter 31A of the Banning Municipal Ordinance Code be amended in order for the City to implement the Industrial Waste Pretreatment Program; and

WHEREAS, an engineering consultant, CGvL Engineers, has performed an extensive city-wide sampling program to develop technically based local limits for the City of Banning, as described in the "Development of Technically Based Local Limits for City of Banning" report dated November, 2001; and

WHEREAS, the City Council of the City of Banning has determined that a new pH limit range of 5.5 to 10.5 will replace that listed in Section 31A-5, Subsections (c) and (m); and

WHEREAS, the City Council of the City of Banning has determined that the "Summary of Recommended Local Limits" listed on Table 4-4 of the report will replace section 31A-6, Subsection (b) Discharge Limits; and

WHEREAS, the City Council of the City of Banning has determined that an Annual Industrial User Discharge Permit Application Fee of $500.00 be paid to the City of Banning and will replace Section 31A-10, Subsection (b) Conditions, Item No. 1 to state as such; and

WHEREAS, this ordinance amendment was presented to the Public Works Advisory Committee with a public hearing meeting on September 17, 2001, and the Committee has recommended that Ordinance No. 1271 be adopted, as proposed;

NOW, THEREFORE, BE IT ORDAINED by the City Council of the City of Banning as follows:

SECTION I. Section 31A-5, Subsections (c) and (m) of the Banning Municipal Ordinance Code are amended to read as follows:

"Section 31A-5. Prohibited Discharges."

No person shall discharge or deposit or cause or allow to be discharged or deposited into the City's sewer collection system any wastewater containing or exhibiting the following:

c) A pH lower than 5.5 or having any corrosive or detrimental characteristic that may cause injury to wastewater treatment or maintenance personnel or may cause damage to structures, equipment or other physical facilities of the wastewater system, as determined by the City Engineer.

m) Any material inducing a high pH (pH greater than 10.5), which causes encrustation, scale or precipitates on sewer walls or other adverse effects on the wastewater system, as determined by the City Engineer.

SECTION II. Section 31A-6, Subsection (b) of the Banning Municipal Ordinance Code is amended to read as follows:

"Section 31A-6. Limitations on Discharges."

b) The following values represent the maximum instantaneous discharge concentration levels of specific contaminants, which may be present in a user's discharge to the City of Banning's sewer collection system:

Pollutant	Daily Maximum, mg/L
Aluminum	140.0
Arsenic[a]	----
Cadmium	0.07
Chromium	3.3
Copper	1.2
Lead	0.55
Iron	11.0
Mercury	0.001
Nickel	1.5
Silver	6.6
Zinc	2.5
Cyanide	1.2[b]
Chloride	580
TDS[d]	2,710[c] + average water supply
TTO[e]	-----
pH	5.5-10.5

a) Data indicate no detectable arsenic enters the BWTP. Therefore, no limit is currently recommended.

b) Limit established based on best available technology economically achievable (BAT).

c) To be calculated annually and amended on each Industrial User Discharge Permit if there is more than a 10 percent change in TDS in the annual average water supply.

d) Based on the average TDS in the water supply (230 mg/L), a variable limit will be adjusted quarterly.

e) No historical data collected to indicate presence. Therefore, no limit is recommended until sampling results show presence.

SECTION III. Section 31A-10, Subsection (b) Item No. 1 of the Banning Municipal Ordinance Code is amended to read as follows:

"Section 31A-10. Terms and Conditions of Permit."

b) Conditions. Industrial User Discharge Permits shall be expressly subject to all provisions of this Chapter and all other applicable regulations established by the City. Permits will contain the following:

1) An Annual Industrial User Discharge Permit Application Fee of $500.00 to be paid to the City of Banning for the review of the permit application, review of the quarterly self monitoring reports and to ensure compliance of the permittee with the Permit requirements for the one year period. The Public Works Director is authorized to make necessary adjustments to such Annual Industrial User Discharge Permit Application Fee as required.

SECTION IV. Section 31A-10. Terms and Conditions of Permit, Subsection (b) Conditions. Item No.'s two (2) through nine (9) of the Banning Municipal Ordinance Code shall remain intact.

SECTION V. Following notice duly given by publication, the City Council has held a full and fair pubic hearing regarding the adoption of Ordinance No. 1271, "Amending Ordinance No. 1206, Chapter 31A. Section 31A-5, Subsections (c) and (m), Section 31A-6, Subsection (b) and Section 31A-10, Subsection (b) relating to Industrial Discharge Regulations for the City of Banning Sewer Collection System." All interested persons were offered the opportunity to hear and be heard regarding protests and objections to the adoption of Ordinance No. 1271. All protests and objections to the adoption of Ordinance No. 1271 are hereby overruled by the City Council.

SECTION VI. The Mayor shall sign this Ordinance and the City Clerk shall attest thereto and shall within fifteen (15) days, cause it, or a summary of it, to

be published one time in the Banning Record Gazette, a newspaper published and circulated in the City of Banning, and thereupon and thereafter this Ordinance shall become effective on the 30th day after the date of its adoption.

PASSED, ADOPTED AND APPROVED this 11th day of December, 2001.

STOPPER DETAIL

NOTES:

1. LATERAL SIZE TO BE DETERMINED ON THE BASIS OF TOTAL NUMBER OF FIXTURE UNITS DRAINED, BUT IN NO CASE SHALL THE LATERAL DIAMETER BE LESS THAN FOUR INCHES FOR SINGLE OR MULTIPLE FAMILY RESIDENTIAL AND SIX INCHES FOR COMMERCIAL OR INDUSTRAL. RISERS SHALL BE THE SAME SIZE AS THE LATERAL.
2. LATERAL TO BE INSTALLED TO PROPERTY LINE. ALL LATERALS ARE TO BE CONSTRUCTED OF EXTRA STRENGTH VITRIFIED CLAY PIPE. MUST BE INSTALLED WITH A MINIMUM HORIZONTAL OFFSET OF 36" FROM ALL OTHER UTILITIES.
3. PLACE SAND (SE 30 OR BETTER) A MINIMUN OF 4" BELOW THE PIPE AND 1' ABOVE THE TEE OR WYE, AND LATERAL.
4. IF RISER IS NOT BUILT, PLUG WYE BRANCH WITH STOPPER.
5. INSTALL A SEWER LOCATOR DISK AT THE END OF ALL LATERAL RUNS AT RIGHT OF WAY.
6. ONLY LATERAL RUNS ARE PERMITED TO BE EITHER "BELL AND SPIGOT", OR "BAND SEAL".

SEPARATION REQUIREMENTS FOR SEWER AND WATER

CASE 1:NEW SEWER BEING INSTALLED

ZONE: SPECIAL CONSTRUCTION REQUIRED FOR SEWER

A. SEWER LINES PARALLEL TO WATER MAINS SHALL NOT BE PERMITTED IN THIS ZONE WITHOUT APPROVAL FROM THE RESPONSIBLE HEALTH AGENCY AND WATER SUPPLIER.

B. A SEWER LINE PLACED PARALLEL TO A WATER LINE SHALL BE CONSTRUCTED OF:

1. EXTRA STRENGTH VITRIFIED CLAY PIPE WITH COMPRESSION JOINTS.
2. CLASS 4000, TYPE II, ASBESTOS-CEMENT PIPE WITH RUBBER GASKET JOINTS.
3. RUBBER GASKETED PRESSURE RATED PLASTIC PIPE (PER ASTM 2241), CLASS RATED PLASTIC WATER PIPE (PER AWWA C900 OR EQUIVALENT.
4. PLASTIC SEWER PIPE WITH FUSEDJOINTS (PER ASTM D3034) OR EQUIVALENT.
5. CAST OR DUCTILE IRON PIPE WITH COMPRESSION JOINTS.
6. REINFORCED CONCRETE PRESSURE PIPE WITH COMPRESSION JOINTS (PER AWWA C302-74).

C. A SEWER LINE PLACED CROSSING A WATER MAIN SHALL BE CONSTRUCTED OF:

1. DUCTILE IRON PIPE WITH HOT DIP BITUMINOUS COATING AND MECHANICAL JOINTS.
2. A CONTINUOUS SECTION OF CLASS 200 (DR 14 PER AWWA C900) PLASTIC PIPE OR EQUIVALENT, CENTERED OVER THE PIPE BEING CROSSED.
3. A CONTINUOUS SECTION OF REINFORCED CONCRETE PRESSURE PIPE (PER AWWA C302-74) CENTERED OVER THE PIPE BEING CROSSED.
4. ANY SEWER PIPE WITHIN A CONTINUOUS SLEEVE.

D. A SEWER LINE PLACED CROSSING A WATER MAIN SHALL BE CONSTRUCTED OF:

1. A CONTINUOUS SECTION OF DUCTILE IRON PIPE WITH HOT DIP BITUMINOUS COATING.
2. A CONTINUOUS SECTION OF CLASS 200 (DR 14 PER AWWA C900) PLASTIC PIPE OR EQUIVALENT, CENTERED ON THE PIPE BEING CROSSED.
3. A CONTINUOUS SECTION OF REINFORCED CONCRETE PRESSURE PIPE (PER AWWA C302-74) CENTERED ON THE PIPE BEING CROSSED.
4. ANY SEWER PIPE WITHIN A CONTINUOUS SLEEVE.
5. ANY SEWER PIPE SEPARATED BY A TEN-FOOT BY TEN-FOOT, FOUR INCH THICK REINFORCED CONCRETE SLAB.

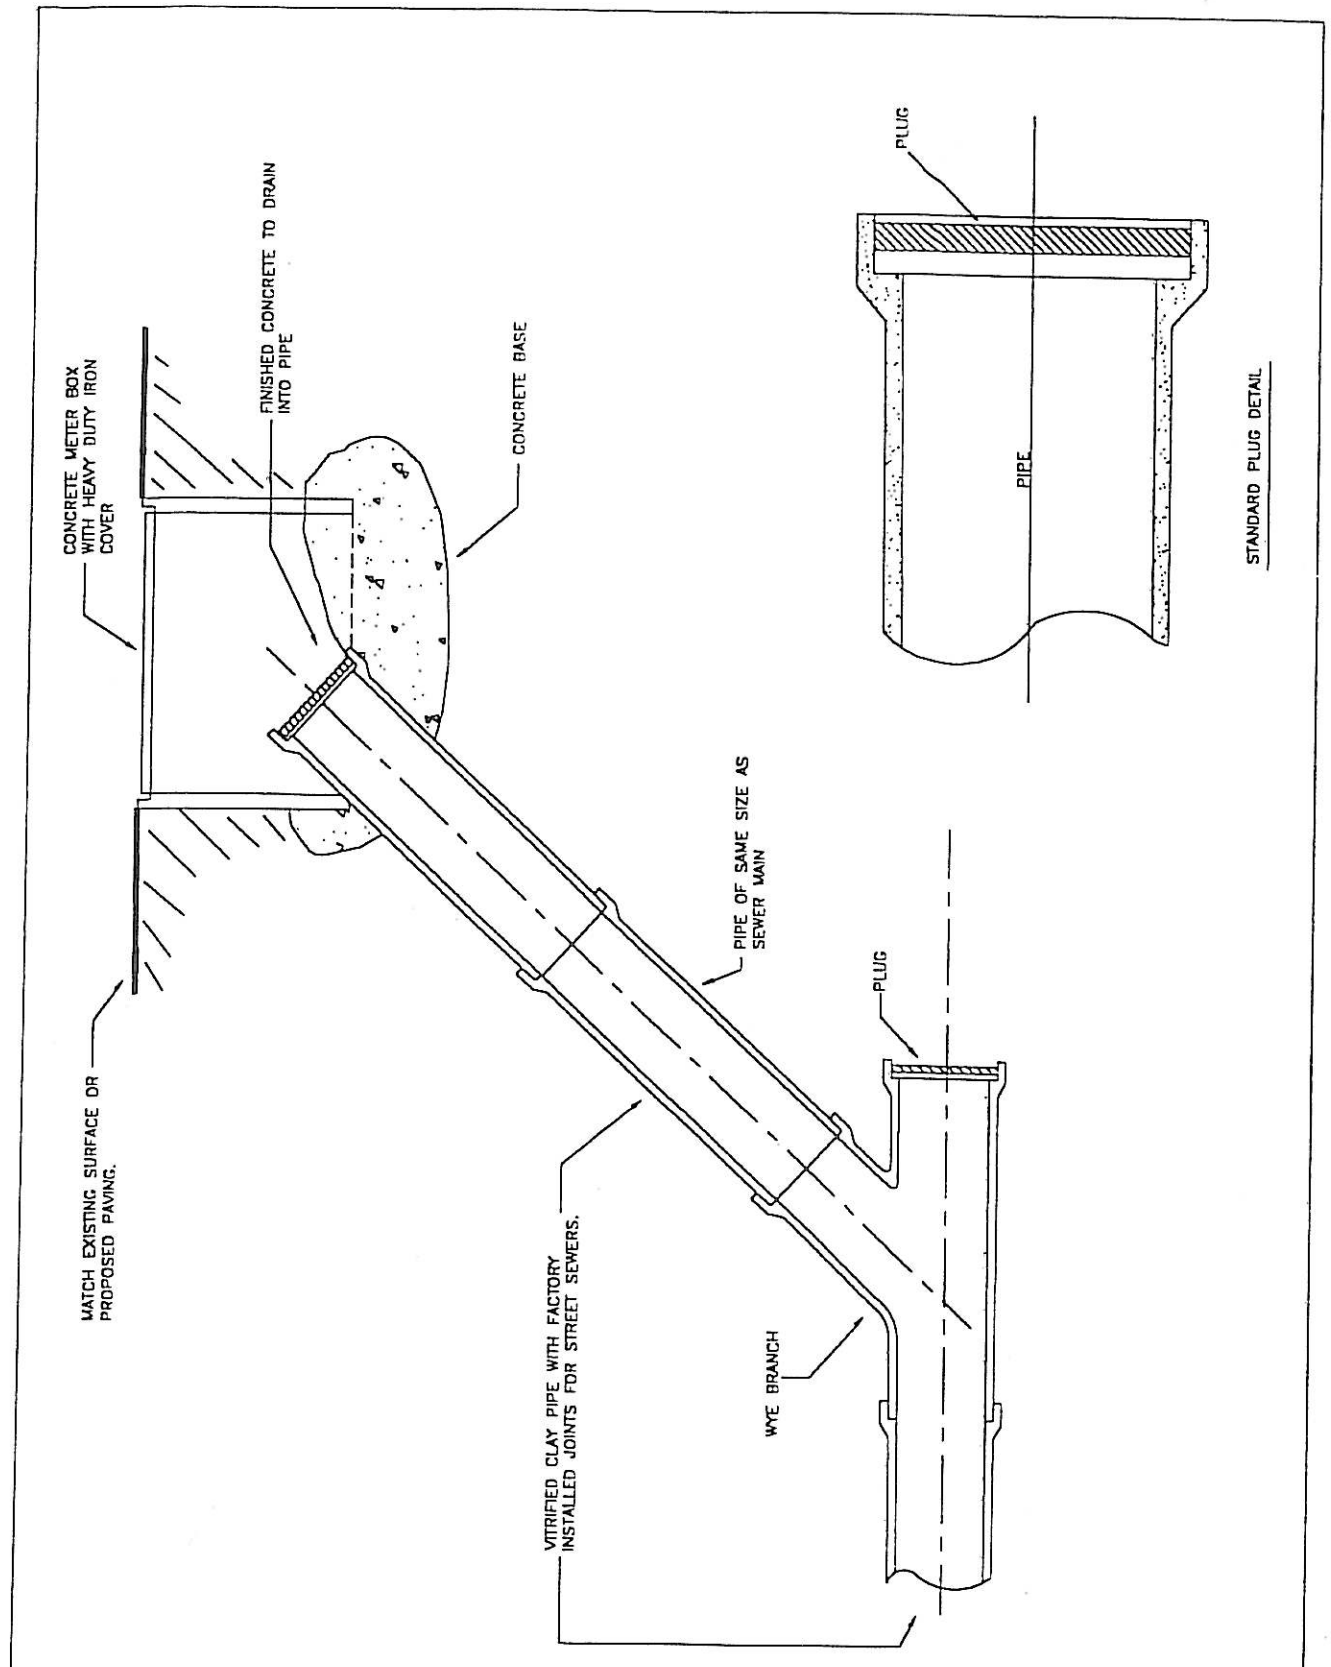
SEPARATION REQUIREMENTS FOR SEWER AND WATER

CASE 1:NEW SEWER BEING INSTALLED

ZONE



A. NO WATER MAINS PARALLEL TO SEWERS SHALL BE CONSTRUCTED WITHOUT APPROVAL FROM THEAPPROVAL FROM THE HEALTH AGENCY.

B. IF THE SEWER PARALLELING THE WATER MAIN DOES NOT MEET THE CASE 1, ZONE B, REQUIREMENTS, THE WATER MAIN SHALL BE CONSTRUCTED OF:
1. DUCTILE IRON PIPE WITH HOT DIP BITUMINOUS COATING.
2. DIPPED AND WRAPPED ONE-FOURTH-INCH-THICK WELDED STEEL PIPE.
3. CLASS 200, TYPE II, ASBESTOS-CEMENT PRESSURE PIPE.
4. CLASS 200 PRESSURE RATED PLASTICK WATER PIPE (DR 14 PER AWWA C900) OR EQUIVALENT.
5. REINFORCED CONCRETE PRESSURE PIPE, STEEL CYLINDER TYPE, PER AWWA (C300-74 OR C301-79 OR C303-70).

C. IF THE SEWER CROSSING THE WATER MAIN DOES NOT MEET CASE 1, ZONE C REQUIREMENTS, THE WATER MAIN SHALL HAVE NO JOINTS IN ZONE C AND BE CONSTRUCTED OF:
1. DUCTILE IRON PIPE WITH HOT DIP BITUMINOUS COATING.
2. DIPPED AND WRAPPED ONE-FOURTH-INCH-THICK WELDED STEEL PIPE.
3. CLASS 200 PRESSURE RATED PLASTICWATER PIPE (DR 14 PER AWWA C900) OR EQUIVALENT..
4. REINFORCED CONCRETE PRESSURE PIPE, STEEL CYLINDER TYPE, PER AWWA (C300-74 OR C301-79 OR C303-70).

D. IF THE SEWER CROSSING THE WATER MAIN DOES NOT MEET THE REQUIREMENTS FOR ZONE D, CASE 1, THE WATER MAIN SHALL BE CONSTRUCTED OF:
1. DUCTILE IRON PIPE WITH HOT DIP BITUMINOUS COATING.
2. DIPPED AND WRAPPED ONE-FOURTH-INCH-THICK WELDED STEEL PIPE.
3. CLASS 200 PRESSURE RATED PLASTIC WATER PIPE (DR 14 PER AWWA C900) OR EQUIVALENT.
4. REINFORCED CONCRETE PRESSURE PIPE, STEEL CYLINDER TYPE, PER AWWA (C300-74 OR C301-79 OR C303-70).

GENERAL NOTES
SANITARY SEWERS

1. ALL WORK SHALL COMPLY WITH THE CITY OF BANNING PUBLIC WORKS SPECIFICATIONS AND THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, LATEST EDITION, A.P.W.A. IN THE CASE OF CONFLICTS BETWEEN THE CITY OF BANNING PUBLIC WORKS SPECIFICATIONS AND THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS, THE CITY OF BANNING PUBLIC WORKS SPECIFICATIONS SHALL GOVERN.
2. TYPE OF PIPE SHALL BE V.C.P. (VITRIFIED CLAY PIPE) OR TRUSS PIPE.
3. SEWER MAINS MAY BE LAID THROUGH MANHOLES AND USED AS A FORM FOR THE INVERT.
4. FINAL TESTING FOR PIPELINE LEAKAGD SHALL BE MADE IN THE PRESENCE OF THE INSPECTOR FOR THE CITY, AFTER BACKFILL HAS BEEN INSPECTED AND APPROVED.
5. ALL TRENCHES SHALL BE COMPACTED TO 90% RELATIVE DENSITY.
6. THE CONTRACTOR SHALL NOTIFY THE CITY OF BANNING 48 HOURS PRIOR TO STARTING ANY WORK.
7. THE CONTRACTOR SHALL SET UP APPOINTMENTS TO REVIEW THE PLANS IN DETAIL WITH THE CITY PRIOR TO START OF CONSTRUCTION.
8. SEPARATION BETWEEN WATER LINES AND SEWERS SHALL CONFORM TO CITY OF BANNING AND STATE OF CALIFORNIA HEALTH DEPARTMENT REQUIREMENTS.
9. IT SHALL BE THE SEWER CONTRACTOR'S RESPONSIBILITY TO SET MANHOLE COVERS TO FINISH GRADE AFTER PAVING IN ACCORDANCE WITHTHE CITY OF BANNING STANDARDS.
10. ALL ELEVATIONS SHOWN TO BE EXISTING WERE TAKEN FROM RECENT SURVEY OF THE ENGINEER AND SHALL BE VERIFIED BY THE CONTRACTOR PRIOR TO CONSTRUCTION.
11. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO CLEAR THE RIGHT-OF-WAY IN ACCORDANCE WITH THE PROVISIONS OF LAW AS IT AFFECTS EACH UTILITY INCLUDING IRRIGATION LINES & APPURTENANCES AT NO COST TO THE CITY.
12. THE CONTRACTOR SHALL AT NO EXPENSE TO THE CITY PROVIDE ALL NECESSARY SAMPLES AND TESTS REQUIRED BY THE CITY TO ASSURE THAT THE QUALITY OF MATERIALS AND WORMANSHIP ARE IN ACCORDANCE WITH THESE PLANS AND SAID SPECIFICATIONS.
13. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL WORK AND SHALL MAINTAIN ALL FACILITIES COMPLETED AND UNCOMPLETED, UNTIL ACCEPTED BY THE CITY.
14. THE CONTRACTOR SHALL VERIFY LOCATION OF ALL EXISTING UTILITIES AND NOTIFY UTILITY COMPANIES 48 HOURS IN ADVANCE OF THE BEGINNING OF CONSTRUCTION.
15. ALL SEWER LATERALS SHALL BE MARKED ON CURB WHERE THEY ENTER STREET WITH A PERMANENT "S".

NOTES

1. PRECAST REINFORCED CONCRETE MANHOLES SHALL CONFORM TO THE APPLICABLE REQUIREMENTS OF A.S.T.M. C-478 AND:
   A. SHALL BE DESIGNED FOR A.A.S.H.O. H-20 LOADING.
   B. CONCRETE SHALL BE COMPACTLY VIBRATED, CENTRIFUGALLY SPUN, OR MECHANICALLY TAMPED.
2. SEWER MAINS ARE TO BE LAID THRU THE MANHOLE WHERE POSSIBLE AND USED AS A FORM FOR THE INVERT. THE TOP 1/8 DIAMETER OF THE PIPE IS TO BE BROKEN OUT TO A NEAT LINE. BROKEN EDGES SHALL BE PLASTERED SMOOTH WITH CEMENT MORTAR.
3. CONCRETE BASE SHALL BE OF CLASS "A" CONCRETE AND PLACED IN ONE OPERATION. CONCRETE INVERTS SHALL BE TRUE TO GRADE AND ALIGNMENT, AND FINISHED WITH A SMOOTH SURFACE. SPECIAL CARE SHALL BE USED IN FORMING ALL CHANNELS TO FACILITATE THE FLOW OF SEWAGE.
4. ALL MANHOLE TOPS SHALL BE INSTALLED WITH THE MANHOLE COVER OVER THE UPSTREAM INLET, EXCEPT AS OTHERWISE SPECIFIED.
5. SEE DRAWING SB-61 FOR DETAILS AND INSTALLATION OF MANHOLE COVER AND FRAME.
6. CONTRACTOR TO USE MANHOLES WITH A 24" CLEAR OPENING FOR SEWERS 24" DIA. AND SMALLER, AND 36" CLEAR OPENING FOR SEWERS LARGER THAN 24" DIA. UNLESS OTHERWISE DIRECTED BY THE ENGINEER. OPENING SHALL BE ORIENTED 180° FROM MANHOLE OUTLET.
7. STANDARD 48" & 60" MANHOLE AS SHOWN HEREON TO BE INSTALLED WHEN DEPTH TO PIPE SHELF IS GREATER THAN 5' FROM FINISHED STREET GRADE.
8. MANHOLE STEPS SHALL BE CAST IN PLACE AND ORIENTED 180° FROM MANHOLE OUTLET. GRADE RING STEPS SHALL BE PLACED BETWEEN GRADE RINGS AND GROUTED IN PLACE. BOTTOM STEP TO BE USED AS CLEANING HOOK AND SHALL BE PLACED 6" MIN. AND 12" MAX FROM TOP OF SHELF. 2 3
9. DIMENSIONS PERTAINING TO 60" I.D. REINFORCED MANHOLES SHOWN IN PARENTHESES (X").
10. JOINT SHALL BE 3/4" THICK CEMENT MORTAR NEATLY STRUCK AND POINTED, OR PREFORMED COLD-APPLIED READY-TO-USE PLASTIC JOINT SEALING COMPOUND AND PRIMER.

WFF	Wastewater Flow Factor
WWTP	Wastewater Treatment Plant

1.0 INTRODUCTION

1.1 Authorization

This report is prepared in accordance with the consulting engineering agreement for the water, sewer, and recycled water master plan update project between the City of Banning (City) and Carollo Engineers (Carollo), dated March 14, 2006. This report represents the findings of the work conducted for Task B (Sewer Master Plan Update). The findings of Task A (Water Master Plan Update) and Task C (Water Reuse Master Plan Update) are presented in separate reports.

1.2 Purpose and Objective

1.2.1 Purpose

The purpose of this Sewer System Study is to update the 1994 *Sewer Master Plan* that was prepared by NBS Lowry [1]. This document identifies the deficiencies of the City's existing sewer system under existing and ultimate sewer demands, provides recommendations for improvements to address these deficiencies, and summarizes these improvements in a Capital Improvement Program (CIP).

1.2.2 Objectives

The objectives of this Sewer System Study are:

1. Identify the existing and ultimate wastewater flows in the City.
2. Define planning and evaluation criteria for the City's sewer system.
3. Determine the deficiencies in the City's existing sewer system under existing and ultimate wastewater flows.
4. Determine improvements to address the system deficiencies under existing and ultimate wastewater flows.
5. Prepare a CIP including phasing and cost estimates for the recommended improvements to the City's sewer system.

1.3 Background

During the last decade, the City has experienced an increased level of land use planning activities that will continue to increase the City's wastewater flows. The City's wastewater flowrate has already increased with the completion of the Sun Lakes Development. Five

additional residential developments that are currently being planned within City's service area will further increase the City's sewer flows. These developments are:

- Five Bridges Development by Lennar
- Pardee Development by Pardee Homes
- Black Bench Development by SunCal Companies
- Loma Linda Development (Banning Bench)
- BDS Development south of Interstate 10

These developments are depicted on Figure 2.1. To accommodate the increase in sewer flows that are associated with these developments, the City recognized a need to update their sewer master plan. This study will evaluate the capacity of the City's existing sewer collection system to convey the existing and projected wastewater flows and make recommendations where needed to expand the existing sewer system.

1.3.1 Previous Studies

NBS Lowry prepared the previous *Sewer Master Plan* [1] in 1994. In this sewer system study, a number of sewer system improvements were recommended. These improvements and the status of implementing these improvements are summarized in Table 1.1. As shown in this table, the City has only implemented two of the recommended improvements to date, as the majority of improvements are associated with the proposed developments. This study will review the need for the remaining improvements and adjust the pipeline sizing where needed to address the updated wastewater flow projections.

Montgomery Watson Harza (MWH) completed a report titled "*Update of the Banning Wastewater Treatment Facility Expansion Plan*" [2] in March 2006. This study updated the 1994 Wastewater Treatment Plant (WWTP) Facility Upgrade Plan. The report evaluated process alternatives for the phased expansion of the WWTP to meet future increased wastewater treatment needs. A three stage WWTP expansion was recommended to increase the plant capacity from 3.6 million gallons per day (mgd) (2006) to 7.8 mgd (2025).

In addition, the General Plan and various specific plans were used to estimate the future wastewater flows. More information on these reports is in included in Section 2.

Table 1.1 Status of 1994 Sewer System Improvements Sewer System Study City of Banning		
No	**Sewer System Improvements[1]**	**Completed[2]**
1	Expansion of the Westward Avenue Lift Station by a capacity of 300 gpm	√
2	Add a diversion sewer line consisting of a diversion manhole and 1,100 lf of 10-inch sewer on Omar Street.	√
3	Add a parallel sewer line consisting of 700 lf of 12-inch sewers on Livingston Street.	-
4	Add a trunk sewer line consisting of 4,200 lf of 8-inch and 8,800 lf of 10-inch sewer lines on Highland Springs Avenue.	-
5	Add a trunk sewer line consisting of 14,700 lf of 8-inch, 3,600 lf of 10-inch, and 5,200 lf of 12-inch sewer on Highland Home Road.	-
6	Add a trunk sewer line consisting of one diversion manhole and 17,300 lf of 18-inch sewer on Deutsch.	-
7	Add a trunk sewer line consisting of 10,400 lf of 8-inch sewer on Banning Creek.	-
8	Add a parallel sewer line consisting of 800 lf of 12-inch sewer on San Gorgonio Avenue.	-
9	Add a trunk sewer line consisting of 10,400 lf of 8-inch sewer on the southern limits.	-
10	Add a trunk sewer line consisting of 3,000 lf of 8-inch sewer on 8th Street.	-
11	Add a trunk sewer line consisting of 11,600 lf of 8-inch sewer on Sunset Avenue.	-
12	Add 4,200 lf of 10-inch sewer lines, 4,200 lf of 10-inch force main and an 870 gpm lift station on the eastern limits.	-

(1) Improvements identified in 1994 Sewer Master Plan [1].
(2) As of August 2006.

1.4 Study Area

The study area of this sewer system study includes the entire City's service area. The City is located in the northwest portion of Riverside County and is situated along Interstate 10 approximately 30 miles east of the City of Riverside and 25 miles west of Palm Springs. The study area is shown on Figure 1.1.

The City encompasses 25 square miles and has a current population of approximately 29,000. Approximately 8 square miles or 32 percent of the City's service area is currently developed. The City is growing rapidly and has an estimated build out population of nearly 100,000. The five near-term developments as indicated on Figure 2.1 have a combined area of nearly 4 square miles and are projected to increase the City's population by 31,000 to 60,000. Hence, the City will still have significant room for growth after the completion of these developments.

Note:
1. This map contains data from the City of Banning GIS.
2. This map is intended for display and planning purposes only.

Figure 1.1 - Vicinity Map and Study Area

October 2006

1.5 Scope of Work

The scope of work for this Sewer System Study Update consists of the following tasks:

1) Collect and review all available reports, data, and other relevant information.

2) Determine population, land use and wastewater flow projections for existing and future development areas within the City's limits.

3) Update the wastewater model, which includes the following tasks.

    a) Develop model using H_2OMAP Sewer from MWH Soft, Inc.

    b) Select sub-basins within the collection system for calibration and analysis.

    c) Development of wastewater flow factors and peaking factors

    d) Calibration of the sewer model using flow monitoring data.

4) Use the calibrated model to detect sewer system deficiencies under the existing sewer flow and with the ultimate residential build-out development wastewater flow.

5) Prepare a report, including a summary of system deficiencies within the City's existing system, recommend system improvements to alleviate these deficiencies, and prepare a CIP.

1.6 Acknowledgments

Carollo Engineers wishes to acknowledge and thank all of the City's staff for their support and assistance in completing this project. Special thanks go to Paul Toor, George Thacker, John Holub, Jerry Aguilar, and Perry Gerdes.

1.7 Project Staff

The following Carollo Engineers staff members were principally involved in this project:

David Prasifka, P.E.	: Partner-In-Charge
Dennis Wood, P.E.	: Technical Review
Inge Wiersema, P.E.	: Project Manager/Project Engineer
Jim Patton, P.E.	: Staff Engineer
Chris Graf	: Staff Engineer
Coleen Sullivan	: Technical Staff/GIS

BLANK PAGE

2.0 LAND USE AND WASTEWATER FLOW PROJECTIONS

This Section describes the City's land use and estimated wastewater flow projections, which are based upon the City's land use plans. The land use discussion is divided into existing land use, specific plan land use for the near-term developments, and general plan land use for the City's ultimate land use. The wastewater flow projection discussion is divided into wastewater flow factors, peaking factors, and concludes with a wastewater flow projection summary.

2.1 Existing and Future Land Use

The existing, near-term, and build out land use types in the City described in this Section are based on the City's General Plan [6] , parcel information [7], aerial photography [8], and the specific plans for Five Bridges [9], Pardee [10], Black Bench [11], Loma Linda [12], and BDS [13]. The land use designations that are described in these documents are summarized below.

- **Residential - Rural.** This land use category includes all residential designations that have a density of 0-1 dwelling units per acre (du/ac).

- **Residential - Very Low Density.** This land use category includes all residential designations that have a density of 1-2 dwelling units per acre (du/ac). Based on this definition, this category includes the following land use designations: Very Low Density Residential [6]; Residential [13]; and PA-12, PA-13, and PA-15 [11].

- **Residential - Low Density.** This land use category includes all residential designations that have a density of 2-5 dwelling units per acre (du/ac). Based on this definition, this category includes the following land use designations: Low Density Residential [6], PA-1 through PA-11, PA-14, and PA-16 through PA-18 [11]; Minimum residential area of 6,000 square foot and greater [9]; Residential Areas 4, 8, 18, 24, 31, 33, 46, 47, 52, 53, 60, and 61 [10]; and Residential Areas 1, 3, 4, and 5 [12].

- **Residential - Medium Density.** This land use category includes all residential designations that have a density of 5-9 dwelling units per acre (du/ac). Based on this definition, this category includes the following land use designations: Residential Areas 1, 6, 11, 14, 17, 21, 22, 26, 28, 30, 35-45, 49-50, 55, 58, 62, and 64 [10]; and Residential Areas 2, 6, 7, 8, and 9 [12].

- **Residential - High Density.** This land use category includes all residential designations that have a density of 9-20 dwelling units per acre (du/ac). Based on this definition, this category includes the following land use designations: Garden Courts and Townhomes [9].

- **Commercial.** This land use category includes markets, service stations, restaurants, office buildings, hospitals, car washes, and other commercial service establishments.

- **Industrial.** This land use category includes all service industry and manufacturing establishments. This City does not include any heavy industry or water intensive industrial customers.

- **Public.** This land use category includes various types of public facilities, such as schools, libraries, office buildings, parking structures, and recreational areas. The (recycled) water demand in this category varies greatly.

- **Streets and Right-of-Way.** This land use category includes all major streets, flood control channels, powerline easements, and freeway right-of-ways, such as Interstate 10. Small residential streets are included in the gross residential area.

- **Airport.** This category includes the airport buildings, runways, and all airport related industrial and commercial areas. These include the Airport Operations District, the Airport Clear Zone District, the Airport Facilities District, and the Airport Planned Development areas.

2.1.1 Existing Land Use

The City of Banning has approximately 4,901 acres of developed area, which equals to about 21 percent of the City's service area. An aerial view of the City, that depicts the location of the existing developments [8], is shown on Figure 2.1. This figure shows that the majority of the developments are located along Interstate 10, while the non-developed areas are mostly located north of Interstate 10 and are partially covered with steep hillsides of the San Bernardino Mountains. The land use distribution of the existing developments is summarized in Table 2.1. As shown on this table, the majority (63 percent) of the developed areas are residential land use categories, while the remaining 37 percent of the developments are public, industrial, and commercial land uses.

2.1.2 Specific Land Use Plan

As mentioned in Section 1, the City has recently received five Specific Plans that describe the land use plans for proposed developments within the City boundaries. The five specific plans cover a combined area of approximately 3,270 acres, which equals approximately 14 percent of the City's service area. The developments and their respective planning areas and the distribution of the planned 10,308 dwelling units are as follows:

- ✓ Black Bench : 1,500 dwelling units
- ✓ Sunset : 2,160 dwelling units
- ✓ BDS : 481 dwelling units
- ✓ Pardee : 5,224 dwelling units
- ✓ Loma Linda : 944 dwelling units

The specific plan boundaries are depicted on Figure 2.1. The land use distribution of these five specific plans is summarized in Table 2.2.

Table 2.2 Specific Plan Land Use Summary
Sewer System Study
City of Banning

Development/ Land Use Category	Phase 1		Build Out	
	Area (acres)	Area (%)	Area (acres)	Area (%)
Black Bench				
Very Low Residential	0	0%	104	15%

Pardee Total	**409**	**100%**	**1,293**	**100%**
LOMA LINDA				
Low Residential	26	9%	79	17%
Medium Residential	36	13%	107	23%
Commercial	0	0%	12	3%
Public	0	0%	10	2%
Parks	37	13%	74	16%
Golf Course	185	65%	185	40%
Loma Linda Total	**284**	**100%**	**467**	**100%**
GRAND TOTAL	**1,243**		**3,270**	

Note: For the phasing of parks and golf courses, it is assumed that 50 percent of parks and 100 percent of golf course would be developed in Phase 1.

As listed in Table 2.2, the development of these specific plan areas is divided into two periods, Phase 1 and Build Out. Phase 1 is anticipated to be completed around year 2010, while build out conditions are projected to be reached around year 2030. The combined area of Phase 1 is approximately 1,243 acres, or 38 percent of the entire specific plans area at build out (3,270 acres).

2.1.3 General Plan Land Use

The ultimate land use for the City's service area is specified in the City's General Plan [6], which was adopted by City Council in January, 2006. The City's General Plan differentiates 27 land categories. For the purpose of this study, these categories are consolidated into ten generic land use designations, as shown on Figure 2.2. The areas of these ten land use categories are calculated from the City's GIS and are summarized in Table 2.3.

As shown in Table 2.3, residential land use categories cover 60 percent of the City's service area, while natural open space is the second largest land use, covering about 22 percent of the City's service area.

As shown on Figure 2.2, the majority of the areas that are not currently developed or part of the specific plans, are designated as natural open space and rural residential and cover hillsides of the San Bernardino Mountains.

Figure 2.2 General Plan Land Use

INSERT 11by17

Table 2.3 General Plan Land Use Summary Sewer System Study City of Banning		
Land Use Category	**Area (acres)**	**Area (%)**
Rural Residential	6,759	29%
Very Low Residential	2,369	10%
Low Residential	3,385	14%
Medium Residential	1,099	5%
High Residential	510	2%
Commercial	1,090	5%
Industrial	773	3%
Public	1,061	4%
Open Space - Parks	1,292	5%
Open Space - Nature	5,288	22%
Total	**23,628**	**100%**

2.2 Population

The City's population will increase significantly with the addition of the five new developments. The total developed area and the project population for Phase 1 and Built Out conditions are summarized in Table 2.4, while details are included in Appendix B. Table 2.4 shows that the five developments will increase the population to about 56 percent of the City's built out population, while covering only 31 percent of the City's service area. Hence, the development of the remaining areas will primarily consist of lower density land use types, such as LDR and AR. Based on 2.6 people per dwelling unit [14], the average density of the remaining development beyond the planning horizon of this study is approximately 1.0 du/ac.

Table 2.4 Population Projections by Area Sewer System Study City of Banning				
Area Description	**Area (acres)**	**Area (%)**	**Population (ppl)**	**Population (%)**
Existing Development	4,901	21%	28,982	29%
5 Developments - Phase 1	598	3%	7,239	7%
5 Developments - Phase 2 to Build Out	1,911	8%	21,913	22%
Remaining Development	16,218	69%	41,651	42%
Total	**23,628**	**100%**	**99,785**	**100%**

The City's projected population is summarized in Table 2.5. These projections are based on the following assumptions:

- The five developments will reach Phase 1 conditions in 2010

- The five developments will reach Build Out conditions in 2030
- The entire City's will reach Build Out conditions in 2050.

Table 2.5 Population Projections by Year
Sewer System Study
City of Banning

Year	Existing City[1]	Five Developments[2]	Total	Growth of Period
2005	28,982	0	28,982	
2010	31,998	7,239	39,237	7.1%
2030	47,548	29,152	76,700	4.8%
2050	76,495	29,152	105,647	1.9%

(1) The Existing City includes the City's entire service area with the exception of the five developments.
(2) Five Developments: Pardee, Black Bench, Loma Linda, Five Bridges, and BDS.

2.3 Historic Wastewater Flows

The current average daily flow received at the City's wastewater treatment plant is approximately 2.8 MGD. Historical average daily flows received at the City's plant are shown in Figure 2.3, while historical average monthly flows are shown in Figure 2.4.

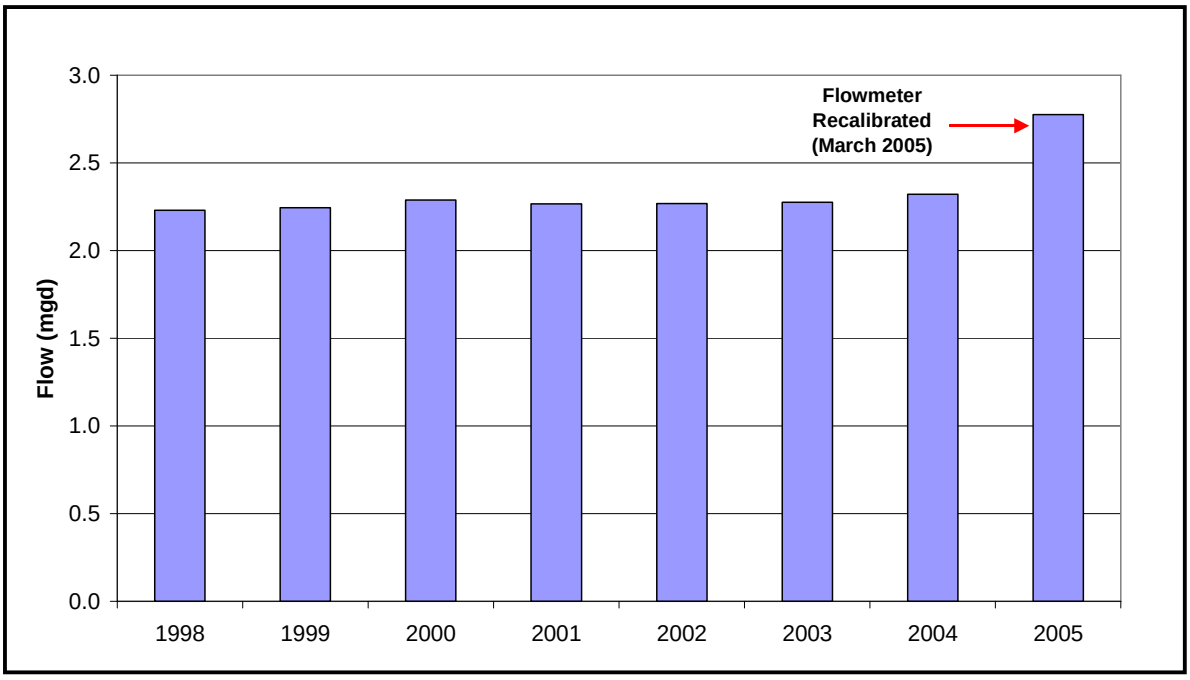

Figure 2.3 Historic Average Daily Plant Flows

As shown in Figure 2.3, the historical average daily wastewater flows at the Banning WWTP have been relatively constant in the period 1998 through 2004, while flows increased significantly in 2005. This increase was attributed to the recalibration of the existing flow meter at the WWTP.

The wastewater flow increased from 2.2 mgd (1998) to 2.3 mgd (2004), which equates to an increase of 4 percent. In 2005, the average daily flow increased to 2.8 mgd, which is 20 percent higher than recorded in 2004.

As shown in Figure 2.4, the seasonal wastewater flows variation at the Banning WWTP has also been fairly constant during this period, with February (month no. 2) being the month with the lowest flow and August (month no. 8) being the month with the highest flow.

Based on a review of the average monthly flows in the period 1998-2005, it was observed that the maximum monthly flow is 10 percent higher than the average monthly flow, while the minimum monthly flow is 10 percent lower than the average monthly flow. These variations are very typical for residential areas.

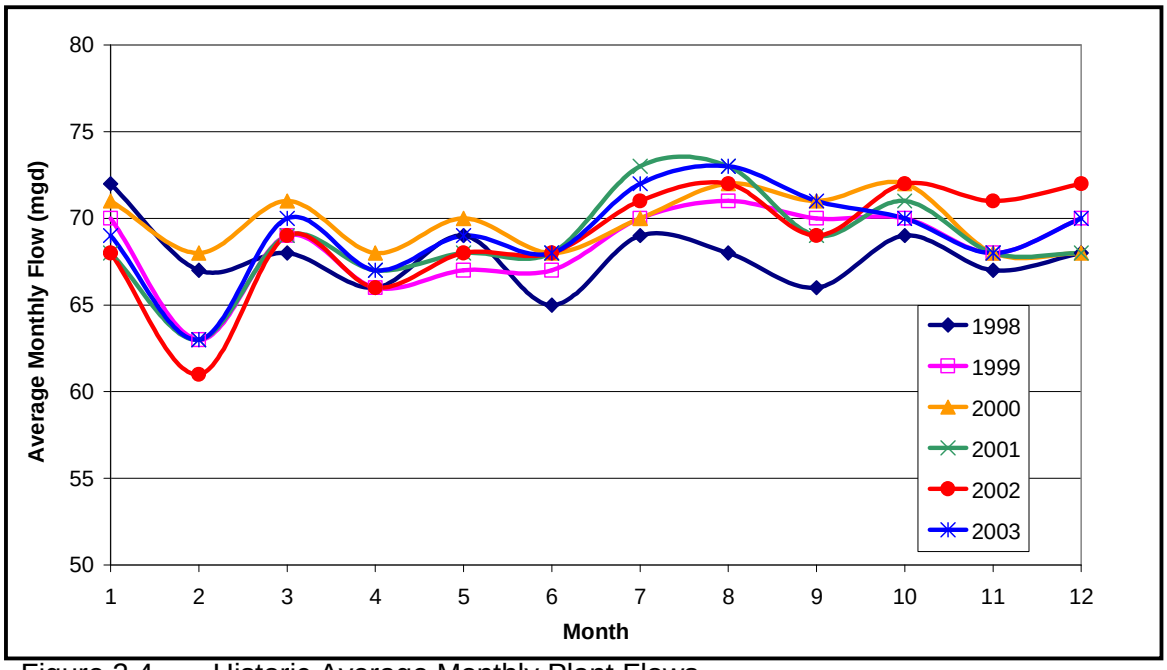

Figure 2.4 Historic Average Monthly Plant Flows

2.4 Wastewater Flow Factors

A wastewater flow factor (WFF) is the estimated amount of wastewater generation for a certain land use type. WFFs are typically expressed in gallons per day per capita (gpd/cap) for residential areas and gallon per day per acre (gpd/ac) for commercial, industrial, and public areas. These factors are used to estimate the average daily flow (ADF) for existing, phase one and ultimate development conditions by multiplying the WFF with the total number of people or acres within each land use area. The WWFs used for the projections presented in this study were derived from the calibration of the existing wastewater flow of 2.8 mgd, an average density of 2.6 ppl/du, and acreage per land use type, and the estimated percent build out for each subbasin (see Figure 5.2). Based on this information

the number of equivalent residential units (ERUs) and the average wastewater flow per ERU were calculated. The WFFs used in this study are summarized in Table 2.6.

Table 2.6 Wastewater Flow Factors
Sewer System Study
City of Banning

Land Use Category	Existing		Future	
	Density[(1)] (ERU/ac)	WFF[(2,3)] (gpd/ac)	Density[(1)] (ERU/ac)	WFF[(2,3)] (gpd/ac)
Rural Residential (RR)	0.5	77	0.5	77
Very Low Density Residential (VLDR)	1.5	230	2	230
Low Density Residential (LDR)	3	460	4	537
Medium Density Residential (MDR)	4	614	7	1,074
High Density Residential (HDR)	10	1,534	15	2,224
Commercial (C)	10	1,534	10	1,534
Industrial (I)	5	767	10	1,534
Public Facilities (P)	0	0	3	399
Open Space	0	0	0	0

(1) Based on a calibrated population of 29,000 people and 18,280 existing ERUs, which was calculated using the percent build out of existing developments by land use type and by subbasin.
(2) Based on 153.4 gpd/ERU, which was obtained from a density of 2.6 ppl/du and an average wastewater flow of 59 gpd/cap. The 59 gpd/cap was calculated from an average daily wastewater flow of 2.8 mgd, a density of 2.6 cap/ERU, and 18,280 ERUs.

As shown in this table, the flow factors used for projecting wastewater flows for the existing service area are lower than those used for projecting flows for the new development areas. The lower factors are based on the model calibration results, as discussed in Section 4, and reflect the estimated wastewater flows of the current developments in the City.

The higher flow factors used for the new development areas provide projected wastewater flows that are higher than the flows used for the existing developments to provide a more conservative basis for planning and account for densification within existing development areas.

2.5 Peaking Factors

It is important to consider the variability of wastewater flow when evaluating system hydraulics and sizing sewer system facilities and pipelines. Peaking factors represent the ratio of a particular flow condition compared to the average dry weather flow (ADWF) and are typically obtained by reviewing historical data.

The peaking conditions that are of particular significance to hydraulic analysis of the sewer system include the Peak Dry Weather Flow (PDWF) and the Peak Wet Weather Flow (PWWF). A more detailed description of the various wastewater flow components, including ADWF, PWWF, PDWF, and Infiltration and Inflow (I/I), are described in Section 4.

This section also presents daily historical flow data recorded at the WWTP (Figure 4.1) that are used to determine peaking factors.

Some systems do not experience a strong response to wet weather events due to the good condition of pipelines, soil characteristics, and rainfall patterns. These systems are typically sized for PDWF only. The PDWF is the peak flow on a dry day, which is determined by the diurnal flow pattern.

Systems that do experience a strong response in wastewater flows after a rainfall event should be sized for PWWF. Typical wet weather peaking factors of 2.0 are used to estimate peak flows at treatment facilities, while peaking factors ranging between 3.0 and 4.0 are used to estimate peak flows in the smaller upstream areas of sewer systems.

The flow monitoring program conducted for this study did not collect flows during a major storm event and did not contain hourly flow data. Therefore, it was decided that the peaking factors be based on the historical daily values obtained at the WWTP as presented on Figure 4.1. As explained in more detail in Section 4 and presented in Table 4.1, the following peaking factors were used in this sewer system study:

- PDWF = 1.7 times ADWF
- PWWF = 2.5 times ADWF (into treatment plant)
- PWWF = ADWF plus 500 gpd/ac (in collection system)

2.6 Diurnal Curve

In addition to seasonal flow variation, wastewater flows vary throughout a 24-hour period. In residential areas, flow peaks typically occur in the morning and late afternoon, while in non-residential areas, flow peaks typically occur throughout the day when businesses and industries are operating. Some industries use two or three 8-hour shifts, resulting in more continuous wastewater flows. As the City is primarily characterized by residential land use types and usage patterns of commercial and industrial users are unknown, one aggregate hourly wastewater flow curve, also knows as diurnal curve, is used in this study to describe and simulate wastewater flows throughout the day. The diurnal curve created from wastewater flows received at the WWTP on May 24, 2006 is shown on Figure 2.5.

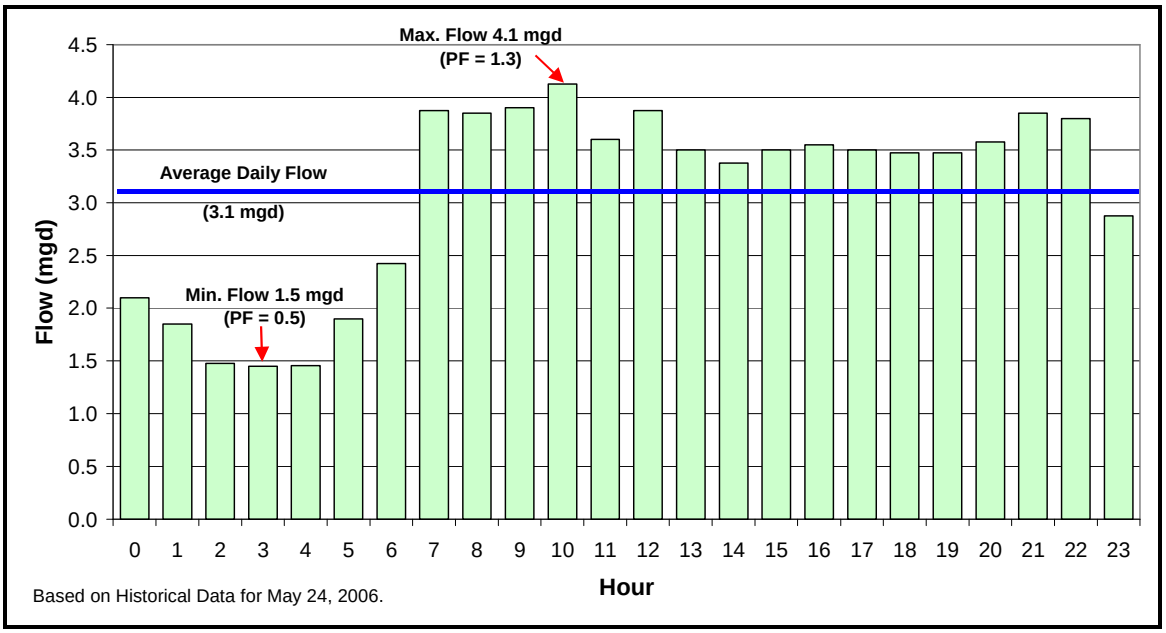

Figure 2.5 Wastewater Diurnal Curve

As shown on this figure, the maximum hour peaking factor is 1.3 and occurs around 10 AM. This factor is consistent with the flows recorded on January 12, 2005, when the average daily and peak hour flow were 2.8 and 3.4 mgd, respectively, resulting in a peak hour flow of 1.2. This diurnal curve was used for the hydraulic modeling analysis conducted for this study.

2.7 Wastewater Flow Projections

The City's wastewater flows for existing development areas and the five new developments were projected by using the wastewater flow factors as shown in Table 2.5, along with the calculated land use areas within the City limits. For residential areas, the average density of dwelling units per acre (du/ac) was also used to estimate the population and use per capita wastewater flow rates. The wastewater flows were projected for the existing developments (infill) in the City and the five developments under Phase 1 and Build Out conditions. The projected wastewater flows are summarized in Table 2.7 and Table 2.8, while detailed estimates by development for each of the planning periods (existing conditions, Phase 1, and Build Out) are included in Appendix B.

BLANK PAGE

3.0 WASTEWATER TREATMENT

This section discusses the existing wastewater treatment facilities in the City, the planned expansions, and the potential use of satellite plants to treat wastewater from one or multiple development areas. Cost estimates of the various treatment options are presented and compared to determine the most beneficial treatment configuration for the City that can accommodate the City's future wastewater flows. This section concludes with recommendations regarding the City's expansion of wastewater treatment facilities.

3.1 Existing Wastewater Treatment

All wastewater flows collected within the City's service area are currently treated at one facility, the Banning WWTP. This plant is located in the southeast portion of the City adjacent to Smith Creek and east of Hathaway Street as shown on Figure 5.1. The City has operated the treatment plant at this site since 1925 and has incrementally expanded various process components to maintain sufficient capacity to treat the increasing wastewater flows.

The wastewater treatment plant is designed to treat wastewater to secondary standards and consist of the following processes: headworks, screening, grit removal, two primary clarifiers, two trickling filters, and two secondary clarifiers. The headworks of the WWTP was sized for an ultimate capacity of 7.8 mgd, while the treatment plant has a rated capacity of 3.6 mgd. The average wastewater flow that is currently treated is approximately 2.8 mgd. Based on an evaluation of historical biochemical oxygen demand (BOD_5) concentrations it was determined that the existing trickling filters have the potential of exceeding the waste discharge requirements (WDR) limits of 30 mg/L BOD_5 when the flows exceed 2.8 mgd [2]. The City can use chemical treatment to increase the capacity of the existing trickling filters to 3.6 mgd.

The solids treatment at the Banning WWTP consists of a gravity thickener, two primary digesters, a secondary digester, sludge drying beds, and percolation ponds. Anaerobic digesters and sludge drying beds are used for sludge stabilization and dewatering. The plant currently discharges its effluent to percolation ponds. Solids are periodically removed from the drying beds and hauled off by a private contractor. Once off site, the sludge is disposed by a reputable solids hauler at a designated landfill site.

3.2 Future Wastewater Treatment

The projected growth in the City will increase the total wastewater flow that needs to be treated beyond the capacity of the existing Banning WWTP. As shown in Table 2.7, the projected ADWF for year 2030, which is the planning horizon of this study, is 8.2 mgd. As the existing WWTP has a rated capacity of 3.6 mgd, the City would need to expand their wastewater treatment capacity by 4.6 mgd to 8.2 mgd.

There are several options to increase the City's WWTP treatment capacity. The alternatives investigated in this study are:

1) Expansion of the Banning WWTP.

2) Expansion of the Banning WWTP and the construction of a new Satellite Plant that would treat wastewater from the Pardee development.

3) Expansion of the Banning WWTP and the construction of a new Satellite Plant that would treat wastewater from the Loma Linda and Black Bench developments.

4) Expansion of the Banning WWTP and the construction of two new Satellite Plants that would treat wastewater from the Pardee, Loma Linda and Black Bench developments.

The treatment plant capacities assumed for each alternative are summarized in Table 3.1. All alternatives are based on a planning horizon of year 2030, when the five developments are projected to reach build out. The future rated treatment capacities are based on the projected dry weather flows. It is assumed that the treatment plants would be designed such that they can handle the variation in flows during PDW and PWW conditions.

Table 3.1 Wastewater Flow Projections Summary
Sewer System Study
City of Banning

Alternative	WWTP (mgd)	Pardee SP (mgd)	LL & BB SP (mgd)	Total (mgd)
1: WWTP only	8.2	0	0	8.2
2: WWTP + Pardee SP	6.8	1.4	0	8.2
3: WWTP + LL&BB SP	7.5	0	0.7	8.2
4: WWTP + Pardee SP + LL&BB SP	6.1	1.4	0.7	8.2

Notes:SP = Satellite Plant; LL&BB = Loma Linda and Black Bench

It is assumed that all alternatives would include tertiary treatment of all wastewater flows in the City to serve the recycled water system. As discussed in the recycled water master plan prepared by Carollo Engineers in 2006 [3], the projected recycled water demand in the City exceeds the projected wastewater flows under high demand conditions. It is therefore necessary that all wastewater flows be treated to tertiary standards to maximize the City's recycled water use and reduce the need for additional potable water supplies to accommodate growth.

The four options are discussed in detail in the subsequent subsections. It should be noted that the potential expansion of the solids handling facilities, which would be equal in all alternatives, are not included in this analysis.

3.2.1 Alternative 1 - WWTP Expansion Only

The expansion of the Banning WWTP was evaluated in the study *Update of the Banning Wastewater Treatment Expansion Plan* that was prepared in 2006 [2]. This report evaluates various treatment process options and recommends that the plant be expanded to 7.8 mgd in three stages. The study recommends that the existing trickling filter (TF) capacity be removed and be replaced with activated sludge (AS) treatment. The capacity expansion is also based on the use of activated sludge. The study includes three options and site plans for the implementation of these processes using oxidation ditches, rectangular clarifiers, or circular clarifiers. However, no recommendations on the preferred option are made. The study identifies three stages to phase the process conversion and plant expansion. The rated capacity of the existing plant is also reduced from 3.6 mgd to 2.8 mgd due to the re-rated capacity of the existing trickling filters [2]. The planned capacity per stage, as identified in this study, is as follows:

- Stage 1: 4.05 mgd (addition of 1.25 mgd of AS capacity)
- Stage 2: 5.0 mgd (addition of 3.75 mgd of AS capacity and removal of 2.8 mgd of TF capacity)
- Stage 3: 7.8 mgd (addition of 2.8 mgd of AS capacity)

In addition to these treatment process changes and expansions, the City would need to provide 7.8 mgd of tertiary treatment to allow use of treated effluent for irrigation per Title 22 of the California Code of Regulations. Tertiary treatment processes include filtration, disinfection, chemical storage, chemical feed, recycled water pumping, and a control system.

This alternative consists of centralized wastewater treatment at the existing Banning WWTP site by expanding its current capacity up to the projected average DWF of 8.2 mgd, as listed in Table 3.1. Hence, expansions beyond the planned upgrades to the 7.8 mgd capacity identified in the *Update of the Banning Wastewater Treatment Expansion Plan* [2] would be required. It is assumed that Stage 3 would be increased from 2.8 mgd to 3.2 mgd to reach a total capacity of 8.2 mgd.

A cost estimate of the treatment process upgrades and expansions required to increase the City's treatment capacity to 8.2 mgd is summarized in Table 3.2. The unit cost used for these estimates are discussed in Section 5.

Based on a depreciation period of 30 years, 5 percent interest, and an average treatment capacity of 8.2 mgd, the overall unit treatment cost of this alternative is $650/mgd. It should be noted that tertiary treatment and solids handling costs are not included as these costs would be the same for all alternatives, and thus, do not impact the alternatives comparison.

Table 3.2 Cost Estimate Alternative 1 - WWTP Expansion Only Sewer System Study City of Banning			
Description	**WWTP ($million)**	**Satellite Plants ($million)**	**Total ($million)**
Construction Cost + Contingency	$23.9	$0.0	$23.9
Land Acquisition Cost	$0.0	$0.0	$0.0
Mark-Ups	$6.0	$0.0	$6.0
Total Capital Cost	**$29.9**	**$0.0**	**$29.9**

Note: Tertiary treatment and the potential expansion of the solids handling facilities are not included.

3.2.2 Alternative 2 - One Satellite Plant for Pardee

This alternative consists of wastewater treatment at two locations, the existing Banning WWTP site and a new Satellite Plant for the Pardee development.

The existing WWTP would be expanded from its current capacity to the projected average DWF of 6.8 mgd, as listed in Table 3.1. Hence, the required expansion is less than the planned upgrades the 7.8 mgd capacity identified in the *Update of the Banning Wastewater Treatment Expansion Plan* [2]. It is assumed that Stage 3 would be decreased from 2.8 mgd to 1.8 mgd to provide a total capacity of 6.8 mgd.

The Pardee Satellite plant would be located near the intersection of Eighth Street and Highland Springs Avenue, where it would collect and treat the wastewater flows generated by this new development. The projected average DWF for this satellite plant is 1.4 mgd.

A cost estimate of the treatment process upgrades and expansions required to increase the City's treatment capacity to 8.2 mgd is summarized in Table 3.3. The unit cost used for these estimates are discussed in Section 5.

Based on a depreciation period of 30 years, 5 percent interest, and an average treatment capacity of 8.2 mgd, the overall unit treatment cost of this alternative is $757/mgd. It should be noted that tertiary treatment and solids handling cost are not included as these costs would be the same for all alternatives, and thus, do not impact the alternatives comparison.

Table 3.3 Cost Estimate Alternative 2 - Pardee Satellite Plant Sewer System Study City of Banning			
Description	**WWTP ($million)**	**Satellite Plants ($million)**	**Total ($million)**
Construction Cost + Contingency	$21.5	$5.8	$27.3
Land Acquisition Cost	$0.0	$0.7	$0.7
Mark-Ups	$5.4	$1.5	$6.8
Total Capital Cost	**$26.8**	**$8.0**	**$34.8**

Note: Tertiary treatment and the potential expansion of the solids handling facilities are not included.

3.2.3 Alternative 3 - One Package Plant for Loma Linda and Black Bench

This alternative consists of wastewater treatment at two locations, the existing Banning WWTP site and one new Satellite Plant for the Loma Linda and Black Bench developments.

The existing WWTP would be expanded from its current capacity to the average DWF flow of 7.5 mgd, as listed in Table 3.1. Hence, the required expansion is less than the planned upgrade to the 7.8 mgd capacity identified in the *Update of the Banning Wastewater Treatment Expansion Plan* [2]. It is assumed that Stage 3 would be decreased from 2.8 mgd to 2.5 mgd to provide a total capacity of 7.5 mgd.

The Loma Linda and Black Bench satellite plant would be located near the intersection of Sunset Avenue and Wilson Street, where it would collect and treat the wastewater flows generated by these two developments. The projected average DWF for this satellite plant is 0.7 mgd.

A cost estimate of the treatment process upgrades and expansions required to increase the City's treatment capacity to 8.2 mgd is summarized in Table 3.4. The unit cost used for these estimates are discussed in Section 5.

Based on a depreciation period of 30 years, 5 percent interest, and an average treatment capacity of 8.2 mgd, the overall unit treatment cost of this alternative is $810/mgd. It should be noted that tertiary treatment and solids handling costs are not included as these costs would be the same for all alternatives, and thus, do not impact the alternatives comparison.

Table 3.4 Cost Estimate Alternative 3 - LL & BB Satellite Plant
Sewer System Study
City of Banning

Description	WWTP ($million)	Satellite Plants ($million)	Total ($million)
Construction Cost	$23.2	$6.4	$29.5
Land Acquisition Cost	$0.0	$0.4	$0.4
Mark-Ups	$5.8	$1.6	$7.4
Total Capital Cost	**$29.0**	**$8.3**	**$37.3**

Note: Tertiary treatment and the potential expansion of the solids handling facilities are not included.

3.2.4 Alternative 4 - Two Package Plants

This alternative consists of wastewater treatment at three locations, the existing Banning WWTP site, one satellite plant for the Pardee development, and one new Satellite Plant for the Loma Linda and Black Bench developments.

The existing WWTP would be expanded from its current capacity to the average DWF of 6.1 mgd, as listed in Table 3.1. Hence, the required expansion is less than the planned upgrade to a capacity of 7.8 mgd as identified in the *Update of the Banning Wastewater*

Treatment Expansion Plan [2]. It is assumed that Stage 3 would be decreased from 2.8 mgd to 1.1 mgd to provide a total capacity of 6.1 mgd.

The Pardee Satellite plant would be located near the intersection of Eighth Street and Highland Springs Avenue, where it would collect and treat the wastewater flows generated by this new development. The projected average DWF this satellite plant is 1.4 mgd.

The Loma Linda and Black Bench Satellite plant would be located near the intersection of Sunset Avenue and Wilson Street, where it would collect and treat the wastewater flows generated by these two developments. The projected average DWF this satellite plant is 0.7 mgd.

A cost estimate of the treatment process upgrades and expansions required to increase the City's treatment capacity to 8.2 mgd is summarized in Table 3.5. The unit costs used for these estimates are discussed in Section 5.

Based on a depreciation period of 30 years, 5 percent interest, and an average treatment capacity of 8.2 mgd, the overall unit treatment cost of this alternative is $912/mgd. It should be noted that tertiary treatment and solids handling costs are not included as these costs would be the same for all alternatives, and thus, do not impact the alternatives comparison.

Table 3.5 Cost Estimate Alternative 4 - Two Satellite Plants
Sewer System Study
City of Banning

Description	WWTP ($million)	Satellite Plants ($million)	Total ($million)
Construction Cost	$20.5	$12.2	$32.7
Land Acquisition Cost	$0.0	$1.1	$1.1
Mark-Ups	$5.1	$3.0	$8.2
Total Capital Cost	**$25.7**	**$16.3**	**$42.0**

Note: Tertiary treatment and the potential expansion of the solids handling facilities are not included.

3.2.5 Wastewater Treatment Recommendations

The comparison of treatment cost for the four alternatives is summarized in Table 3.6. As shown, the unit treatment costs are estimated to range from $650/mgd to $912/mgd.

Table 3.6 Alternatives Comparison - Treatment Cost Only
Sewer System Study
City of Banning

Capital Cost Component	Alt. 1 WWTP only	Alt.2 Pardee SP	Alt. 3 Loma Linda SP	Alt. 4 Two SPs
Total ($million)	$29.9	$34.8	$37.3	$42.0
Annual Cost ($million/yr)	$1.9	$2.3	$2.4	$2.7
Unit Cost ($/mgd)	**$650**	**$757**	**$810**	**$912**

Note: Tertiary treatment and the potential expansion of the solids handling facilities are not included.

Based on the data presented in Table 3.6, it can be concluded that it is most cost-effective to treat all wastewater flows at one facility. However, this comparison is limited to the cost of wastewater treatment and do not include other considerations such as:

- Collection system improvements: Each alternative would require different collection system improvements to convey the wastewater to the designated treatment facilities. The evaluation of the collection system and the identification of the collection system improvements for each alternative is included in Section 6.

- Solids Handling: All alternatives assume that the existing WWTP site has sufficient space to increase the solids handling capacity to 7.9, as solids handling at the satellite plants would be more costly, require additional land, and be subject to odor complaints. However, hauling of these solids would increase the City's overall operational cost for alternatives with satellite plants (Alternatives 2-4) compared to the operational cost of centralized treatment at the Banning WWTP (Alternative 1).

- Tertiary Treatment: The cost of tertiary treatment is not included in the cost estimates. However, the addition of tertiary treatment cost for alternatives with satellite plants (Alternatives 2-4) would be more costly than centralized tertiary treatment at the Banning WWTP (Alternative 1).

- Odor Control: The Banning WWTP is located in an area that is characterized by industrial land use types. The location of the satellite plants would be closer to the new residential developments, which could cause substantial odor complaints from residents.

- Land Acquisition and Siting: In addition to odor complaints, siting and acquisition of appropriate land for the satellite plants could be difficult, as these new developments are characterized by upscale housing and golf courses. The satellite plants would require a camouflage design and/or landscaping to blend in with the appearance of the community.

For a fair comparison basis of the alternatives, cost of both treatment and wastewater collection system improvements need to be considered. In addition, the cost difference in recycled water system improvements needs to be considered to provide a complete comparison basis. This cost comparison is presented in Section 6.

3.3 Wastewater Reclamation

The City must treat all wastewater flows to tertiary standards to implement the recycled water system as presented in the *2006 Recycled Water Master Plan* [3]. The purpose of this system is to maximize the City's recycled water use and reduce the need for additional potable water supplies to accommodate growth.

3.4 Sludge Management

Sludge produced at the Banning WWTP is currently dried at the wastewater treatment plant and hauled off site by a private contractor. However, the sludge handling capacity at the plant may not be sufficient in the future when the treatment of an additional wastewater flow will also result in an increase in sludge. It should be noted that this study does not include an evaluation of the City's sludge handling capacity needs and options as this is beyond the scope of this project. It is recommended that the City conduct a study to determine the best sludge management process.

4.0 PLANNING AND DESIGN CRITERIA

This section includes a discussion of the following planning and design criteria:

- Regulatory requirements
- Wastewater Flow Factors
- Wastewater Flow Components
- Pipeline Capacity Equations
- Flow Depth Criteria
- Pipeline Sizing
- Pump Capacity Criteria
- Cost Estimating Assumptions

4.1 Regulatory Requirements

Improvements to the sewer system should be designed to protect public health and safety in conformance with the guidelines and requirements of California Code of Regulations, Title 22, Division 4, Chapter 3, Article 1 through 10, Sections 60301 through 60355, the Riverside County Department of Health Services and the City of Banning. The City is also required to comply with all standards and conditions described in the Waste Discharge Requirements (WDR) which are requirements adopted by the California Regional Water Quality Control Board (RWQCB) Colorado River Basin Region. To provide recycled water, wastewater treatment also needs to meet Title 22 tertiary treatment standards.

4.2 Wastewater Flow Factors

For wastewater flow estimating purposes, the flow factors listed in Table 2.6 will be used.

4.3 Wastewater Design Flows

Historical monthly flows at the Wastewater Treatment Plant (WWTP) were reviewed and analyzed to determine monthly and seasonal fluctuations experienced by the sewer system. The design flow criteria included developing peaking factors for estimating peak dry weather flows (PDWF). A flow monitoring program was completed as part of this study; however, the data collected did not include any rainfall event to identify the wet weather flow components.

The City's wastewater flows consist of many components including the base wastewater flow (BWF), groundwater infiltration (GWI), and rainfall dependent inflow and infiltration (RDI). These flow components are described below.

4.3.1 Base Wastewater Flow

The BWF is the flow generated by the City's residential, commercial, and industrial customers. The flow has a diurnal pattern that varies by land use category. Typically, a residential diurnal has a two-peak pattern with the more pronounced peak following the wake-up hours of the day, and a less pronounced peak occurring in the evening. Commercial and industrial patterns, though they vary depending on the type of use, typically have more consistent higher flow patterns during business hours, and lower flows at night. Furthermore, the diurnal flow pattern experienced during a weekend may vary from the diurnal flow experienced during a weekday. The City's BWF is 2.8 mgd.

4.3.2 Groundwater Infiltration

Groundwater Infiltration (GWI), one of the components of I/I, is associated with extraneous water entering the sewer system through defects in pipes and manholes. This component is related to the condition of the sewer pipes, manholes, and groundwater levels. Groundwater infiltration may occur throughout the year, although groundwater infiltration rates are typically higher in the late winter and early spring. Dry weather groundwater infiltration (or base infiltration) cannot easily be separated from BWF by flow measurement techniques. The GWI rate in systems with minor infiltration could range from 0 to 200 gpd/net acre.

4.3.3 Inflow and Infiltration

During the wet weather season, sewer flows are higher due to infiltration and inflow of extraneous groundwater and storm water that may enter the sewers through pipe and manhole defects or direct drainage connections during a storm event. Wet weather inflow is defined as a sharp rise in flow in direct response to a rainfall event. Wet weather infiltration is a slower response to the rainfall event, which builds up with time and continues even after rainfall has stopped. The amount of infiltration into the City's system is related to the condition of the sewer pipes and manholes since infiltration enters through defects such as cracks and openings in pipes and manholes. I/I flows are also dependent upon groundwater levels and rainfall patterns. Peak I/I flows occur during major rainstorms and are related to the intensity and duration of rainfall.

Rainfall Dependent Infiltration and Inflow (RDI/I) are typically estimated by reviewing and examining flow components, and by conducting temporary or long-term flow monitoring programs. The flow monitoring conducted for this study did not include any rainfall events, and therefore, the RDI/I component could not be evaluated with City specific data.

To estimate the amount of inflow and infiltration, historical daily flows received at the WWTP were evaluated. The average and peak daily flows received at the Banning WWTP are depicted on Figure 4.1. As shown on this figure, the peak daily flow is typically 1.5 to 2 times higher than the average daily flow, while peak flows can range up to 3 times the average daily flow. On dry days, the peak flow is typically between 4 and 5 mgd. During wet weather events, the peak flow ranges from 6 to 7 mgd. Hence, the difference between peak flows on dry and wet days is approximately 2 mgd, which indicates a significant amount of infiltration and inflow (I/I) in the City's sewer system.

Based on this data, discussions with City staff, and review of typical values used in wastewater collection system design manuals, it was determined that the wet weather events in this study should be evaluated using an inflow and infiltration rate of 500 gpd/ac.

As this factor is an estimate, it is recommended that the City conduct additional long-term flow monitoring studies to determine the City's infiltration factor and adjust the recommended projects presented in this study accordingly.

4.4 Wastewater Peaking Factors

Peaking factors are used to consider the variability of wastewater flow when evaluating system hydraulics and sizing sewer system facilities and pipelines. Peaking factors represent the ratio of a particular flow condition compared to the average dry weather flow (ADWF) and are typically obtained reviewing by historical data.

The peaking conditions that are of particular significance to hydraulic analysis of the sewer system include the Peak Dry Weather Flow (PDWF) and the Peak Wet Weather Flow (PWWF). A more detailed description of the various wastewater flow components is discussed below.

4.4.1 Average Dry Weather Flow

The average dry weather flow (ADWF) is the average flow that occurs on a daily basis during the dry weather season, with no evident reaction to rainfall. The ADWF includes the BWF generated by the City's residential, commercial, and industrial users, plus the dry weather GWI component. The importance of this component lies in its use as a basis for expressing other flow components by applying multipliers to the ADWF.

Review of the California Irrigation Management Information System (CIMIS) Riverside Station precipitation data indicated that June through August are the typical dry weather months. Historical flow records for this period shows that the average flow in these months is typically 10 percent lower than the average flow of the entire year.

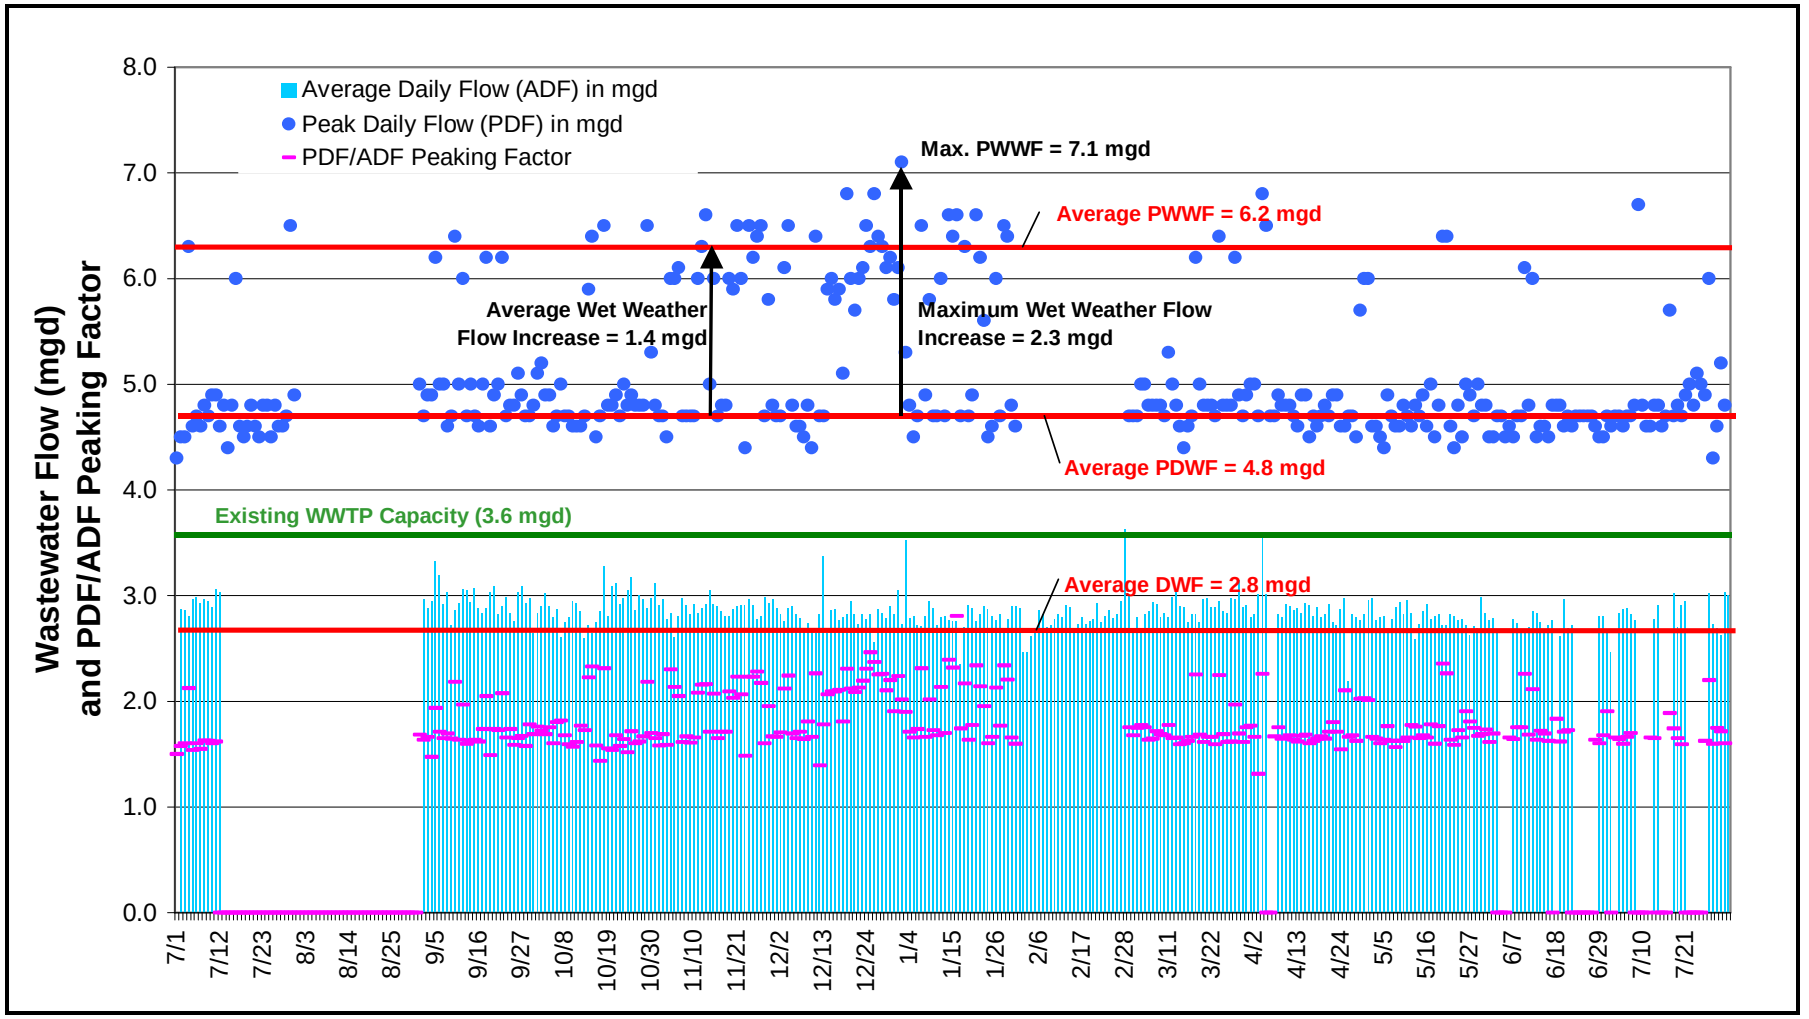

Figure 4.1 Historical Daily Plant Flows

4.4.2 Peak Dry Weather Flow

The peak dry weather flow (PDWF) is the highest observed hourly flow that occurs during the dry weather season. The peak dry weather flow component is typically used for designing the capacity of sewer pipes.

4.4.3 Peak Wet Weather Flow

The peak wet weather flow (PWWF) is the highest observed hourly flow that occurs during the wet weather season. The PWWF component is typically used for designing the capacity of the sewer system while providing some acceptable allowance for surcharging. Unlike the ADWF analyses, the hydraulic analysis during wet weather conditions (or PWWF) allows surcharging with the hydraulic grade line rising up to a foot below the manhole rim. Flows that exceeded that level are considered causing a deficiency.

During significant storm events, wet weather peaking factors can be as much as 5 to 10 times higher than the ADF. However, the WEF Manual of Practice FD-6 and ASCE Manual No. 62 suggest typical PWWF to ADWF ratios ranging between 3 and 4, with higher values indicating pronounced infiltration and inflows.

4.4.4 Recommended Peaking Factors

The peaking factors used in this study are summarized in Table 4.1. The PWWF with 500 gpd/ac to account for I/I governs the sizing of the collection system.

Table 4.1 Wastewater Peaking Factors
Sewer System Study
City of Banning

Flow Condition	Factor
PDWF(1)	1.7 * ADWF
PWWF - at WWTP(2)	2.5 * ADWF
PWWF - in Collection System(3)	PDWF + 500 gpd/ac (I/I)

(1) Per Figure 4.1: PDWF/ADWF = 4.8/2.8 = 1.7
(2) Per Figure 4.1: PWWF/ADWF = 7.1/2.8 = 2.5
(3) Per Figure 4.1: Maximum Flow Increase = 2.3 mgd. I/I = 2.6 mgd/4,900 acres (per Table 2.1) = 470 gpd/ac. This is rounded to 500 gpd/ac.

4.5 Pipeline Capacity Equations

Sewer pipe capacities are dependent on many factors. These include roughness of the pipe, the chosen maximum allowable depth of flow, and limiting velocity and slope. The Continuity equation and the Manning equation for steady-state flow are used for gravity sewer hydraulic calculations:

Continuity Equation: $Q = V * A$

Where: Q = peak flow (cfs)
V = velocity (fps)
A = cross-sectional area of pipe (ft^2)

Manning Equation: $V = (1.486 R^{2/3} S^{1/2})/n$

Where: V = velocity (fps)
n = Manning's coefficient of friction
R = hydraulic radius or area divided by wetted perimeter (ft)
S = slope of pipe (feet per foot)

4.5.1 Manning Coefficient (n)

The Manning coefficient 'n' is a friction coefficient and varies with respect to pipe material, size of pipe, depth of flow, smoothness of joints, root intrusion, and other factors. For sewer pipes, the Manning coefficient typically ranges between 0.011 and 0.017, with 0.013 being a representative value used for system master planning purposes. For this project, 0.013 will be used as the default value.

4.5.2 Velocity

A standard design practice for gravity sewer design is to maintain a minimum velocity of 2 fps when a sewer pipeline is half-full. At this velocity, the sewer flow will typically provide self-cleaning or scouring of sewage solids that have settled in pipes during low flow conditions. Due to the hydraulics of a circular conduit, velocity of half-full flow in pipes approaches the velocity of nearly full flow in pipes. All new pipelines should be designed such that the scouring velocity of 2 fps is achieved on a daily basis. Thus, new sewer pipelines should be designed with a minimum slope to meet this velocity.

Force mains should be sized to provide a pipeline velocity of between 2.0 to 6.5 fps.

4.5.3 Slopes

The minimum recommended pipeline slopes are listed in Table 4.2. The slopes shown in Table 4.2 are recommended for pipes with peak flows close to design capacity. Steeper slopes may be required for pipelines with lower peak flows. In any case, slopes should not be steep enough to allow for velocities that exceed 10 fps.

Table 4.2 Minimum Recommended Slopes for Circular Gravity Pipes Sewer System Study City of Banning		
Pipe Diameter (in)	**Minimum Slope (ft/ft)**	**Pipe Velocity (fps)**
8	0.0040	2.19
10	0.0030	2.20
12	0.0024	2.22
15	0.0017	2.17
18	0.0014	2.22
21	0.0011	2.18
24	0.0010	2.28

Source: 1994 City of Banning Sewer Maser Plan [1].
Note: All slopes are based on pipelines flowing half full (d/D = 0.5) at 2 fps.

4.5.4 Flow Depth Criteria

When designing sewer pipelines, it is common practice to adopt variable flow depth criteria for various pipe sizes. This criterion is expressed as a maximum depth of flow to pipe diameter ratio (d/D). Design d/D ratios typically range from 0.5 to 0.92, with the lower values typically used for smaller pipes since smaller pipes may experience flow peaks greater than planned or may experience blockages from debris, paper, or rags. A design d/D ratio of 0.75 is typically used for designing new gravity sewer pipes in the City.

Utilizing a d/D ratio of 0.75 for analysis purposes may lead to premature or unnecessary replacement of existing pipelines. Therefore, a d/D ratio of 0.92 will be utilized to evaluate City's existing trunk system, while a d/D ratio of 0.75 will be utilized for designing the future trunk system and evaluating existing pipelines equal or smaller than 12-inch in diameter. The criteria used in this study to determine whether pipes have sufficient conveyance capacity are listed in Table 4.3.

Table 4.3 Maximum Depth to Pipe Diameter Ratio Sewer System Study City of Banning	
Pipe Diameter (in)	**Maximum d/D Ratio (during PWWF)**
12 and smaller - existing pipelines	0.75
15 or larger - existing pipelines	0.92
15 or larger - new pipelines	0.75

To minimize the settlement of sewage solids, it is standard practice in the design of gravity sewers to specify that a minimum velocity of 2 feet per second (fps) be maintained when the pipeline is at design capacity. At this velocity, the sewer flow will typically provide self-

cleaning for the pipe. Due to hydraulics of a circular conduit, velocity of half-full flow in pipes approaches the velocity of nearly full flow in pipes.

4.5.5 Pipeline Sizing

All new gravity sewer pipelines should be sized to meet the d/D ratio and velocity criteria as mentioned above. Pipeline sizes are based on the City's standard diameters as listed in Table 4.4. As shown in Table 4.3, the smallest pipeline considered is 8-inches in diameter.

For locations where pipeline sizes change, and smaller sewer mains join a larger diameter sewer main, the invert of the larger sewer will be lowered sufficiently to maintain the same energy gradient. An approximate method for securing these results is to place the 0.8 depth point of both sewers at the same elevation. For master planning purposes, and in the absence of field data, sewer crowns will be matched at the manholes.

Table 4.4 Standard Pipeline Sizes
Sewer System Study
City of Banning

Pipe Diameter	Type Size
8 inches	Standard Size
10 inches	Standard Size
12 inches	Standard Size
15 inches	Standard Size
18 inches	Standard Size
21 inches	Standard Size
24 inches	Standard Size
30 inches	Non-standard Size(1)
33 inches	Standard Size
36 inches	Standard Size

(1) As the City has 30-inch diameter trunk mains, this size is proposed for future recommendations. However, the comparable standard size would be 31-inch diameter.

4.6 Pumping Capacity Criteria

Lift stations consist of pumps used to raise wastewater flows to higher elevation to continue gravity flow at reasonable pipe slopes and depths. Pump capacities should be sufficient to pump peak flow rates, such as the PWWF, experienced in the sewer system. Pumps with capacities less than anticipated peak flow rates are considered deficient.

Lift stations should also be able to handle the PWWF with the largest unit out of service to allow temporary outage of pumps and repairs. Standby power is recommended for all lift

stations. These criteria do not apply to the Caltrans LS, as the wet well at this LS can accommodate a long duration of wastewater flows.

4.7 Cost Estimating Assumptions

4.7.1 Cost Index

Cost estimates presented in this study are based on the current engineering and news record (ENR) cost index for the Los Angeles metropolitan area of 8,547 published in June, 2006. Future adjustments of cost estimates presented in this report can be estimated by increasing the estimated capital cost by the ratio of the future ENR to 8,547.

4.7.2 Unit Cost

The cost estimates presented in this report are based on the assumptions and unit construction costs listed in Table 4.5.

Table 4.5 Cost Estimating Assumptions
Sewer System Study
City of Banning

Category	Description	Assumption
Pipelines	***Diameter (inches)***	***Unit Cost ($/lineal ft)***
	8	$ 180
	10	$ 196
	12	$ 201
	15	$ 223
	18	$ 242
	21	$ 290
	24	$ 320
	27	$ 408
	30	$ 491
	33	$ 539
	36	$ 588
Lift Stations	***Capacity (hp)***	***Unit Cost ($/hp)***
	<50	$ 10,000
	50-100	$ 7,500
Land Acquisition	***Area (acres)***	***Unit Cost ($/acre)***
	All	$350,000

Table 4.5	Cost Estimating Assumptions (Continued) Sewer System Study City of Banning	
Category	**Description**	**Assumption**
Other Items	***Category***	***Construction Cost***
	Abandonment of LS	$100,000 (lump sum)
	Wastewater Treatment	$3,200,000 ($/mgd)
	Tertiary treatment	$1,000,000 ($/mgd)
Mark-ups	***Category***	***Mark-up (%)***
	Contingency	30% of Capital Cost
	Engineering, Design and Construction Mgmt	15% of Capital Cost + Contingency
	Legal and Administration	10% of Capital Cost +
Amortization	***Category***	***Unit***
	Depreciation period	30 years
	Interest	5 %

Land acquisition cost estimates are included for lift stations and satellite wastewater treatment plants. Lift stations are assumed to require 0.5 acres per facility, while the Pardee and Loma Linda satellite plants are assumed to require 2.0 and 1.0 acres, respectively. Capital costs do not include pipeline corridor purchases or easement costs because it was assumed that public ROW will be utilized wherever possible.

5.0 MODEL DEVELOPMENT

5.1 Model Methodology

The sewer model was created using the City's preliminary geographical information system (GIS) that is being prepared for the City during the development of this study (2005-2006). All sewer gravity mains and force mains were imported in H_2OMAP Sewer Suite Version 6. After the sewer pipelines were imported, model junctions were automatically created for all pipeline begin and end points to connect all sewer pipelines according to the connectivity presented in the City's GIS.

The pipeline diameters, manhole diameters, invert elevations, slope, pipeline material, manhole diameter, rim elevations, inlet elevations, and manhole depth were imported from the GIS into the model database, where available. The number of GIS records and the available data is summarized in Table 5.1.

Table 5.1 Model and GIS summary Sewer System Study City of Banning

System Component	No. of Records Total	No. of Records with data	Percent of Records with Data
Pipelines			
Diameter	2,314	2,307	100%
Length	2,314	1,745	75%
Inlet Elevation	2,314	1,725	75%
Outlet Elevation	2,314	1,802	78%
Slope(1)	2,314	1,742	75%
Material	2,314	2,306	100%
Manholes			
Diameter	1,726	1,517	88%
Rim Elevation	1,726	1,489	86%
Inlet Elevation	1,726	1,468	85%
Depth	1,726	1,470	85%

(1) Slopes with values equal or smaller than 1.000000 are considered not valid.

As shown in Table 5.1, approximately 25 percent of the pipeline data related to the pipeline slope (length, invert elevations, and slope) was missing in the GIS. Assumptions were made to complete the model pipeline database. Additional database fields were added to keep track of which pipelines include data that was input manually, obtained from as-built

drawings, or obtained from adjacent pipelines. The missing inverts were populated using one of the following methodologies:

- Use of invert from adjacent (upstream or downstream) pipeline;
- Use of depth and ground elevation of manholes. The manhole depth was obtained from City as-built drawings, where available and ground elevation of manholes were allocated from the City's 5-ft interval ground elevation contours;
- Use of ground elevation of manholes only. For manholes located on missing as-built drawings, a depth of 10 foot was assumed as initial value to calculate the invert elevation.
- Use of linear interpolation of inverts from adjacent pipelines.
- Use of the GIS slope values to calculate the upstream and downstream inverts.

After the pipeline network database was completely populated, the lift stations were input with the system controls, and connected to the sewer force mains. The pump curves of the lift stations were input based on manufacturer's data, where available, and information provided by City staff during field visits.

Once the model included all facilities, the sewer loads were allocated to all manholes to run the model and evaluate the pipeline profiles. Evaluation of these profile drawings showed that the City's GIS includes multiple vertical datums. As the research of datums and adjustment of GIS data is beyond the scope of this project, a number of "drop manholes" were created, to allow downstream flow throughout the sewer system, without the modification of a large number of GIS values.

It is recommended that the City update the model database with the final GIS data, once all GIS data is verified. The different vertical datums should be populated so that a common datum can be chosen and used to calculate the corrected elevations. If needed, the City should conduct surveys in the areas where pipeline profiles do not follow a continuous downhill pattern.

5.2 Collection System

The City's collection system consists of approximately 108 miles of 4-inch through 30 inch diameter sewers and includes four sewage lift stations and associated force mains as shown in Figure 5.1. All sewer pipelines flow by gravity with the exception of the force main. The "backbone" of the system consists of the trunk sewers, generally 15-inches in diameter and larger, that convey the collected wastewater flows to the City's WWTP.

The sewer system pipeline characteristics that are included in the model are summarized in Table 5.2. As listed in Table 5.2, the sewer model includes 115 miles of sewer mains, ranging from 4-inch to 30-inch in diameter. It should be noted that the model includes both

existing sewer mains and some future sewer main expansions; hence, the total length of model pipelines exceeds the existing sewer main length.

Table 5.2 Model Pipeline Characteristics Sewer System Study City of Banning

Pipeline Diameter (in)	Gravity Mains (mi)	Force Mains (mi)	Total Mains (mi)
4	0.1	1.0	1.1
6	6.4	0.4	6.8
8	85.0	0.0	85.0
10	1.0	0.2	1.2
12	8.6	0.0	8.6
15	8.6	0.0	8.6
18	1.2	0.0	1.2
21	3.3	0.0	3.3
24	0.1	0.0	0.1
30	0.4	0.0	0.4
Total	**114.6**	**0.6**	**115.2**

Note: Total lengths include all existing and some future sewer mains that are part of the sewer model.

5.2.1 Gravity System

The majority of the City's collection system is a gravity flow system consists of 6-inch and 8-inch diameter sewer mains. The most common sewer main material is VCP, however other materials such as Asbestos Cement and PVC pipelines are also present in the City's collections system. The most common pipeline size is 8-inches, representing to approximately 75 percent of the sewer collection system.

5.2.2 Pressurized System

While the majority of the City's collection system flows by gravity, a small portion (0.5 percent) of the City's sewer collection system is pressurized. The discharge piping from each of the lift stations is under pressure from the lift station pumps to the highest point in the pump discharge piping. Throughout the entire sewer system, approximately 0.6 miles of force mains exists and ranges from 4 inches to 10 inches in diameter. The majority of the force mains are CI and PVC pipe.

5.2.3 Lift Stations

The City's sewer collection system includes four active lift stations. In addition, two lift stations have been abandoned. The characteristics of the active lift stations are summarized in Table 5.3, while their locations are shown on Figure 5.1.

Table 5.3 Lift Station Summary Sewer System Study City of Banning				
Name	**Intersection Location**	**No. of Pumps**	**Design Flow (gpm)**	**Design Head (ft)**
Sun Lakes LS No. 1	Southwest of Riviera Av. and Crenshaw Cir.	2	210	100
Sun Lakes LS No. 2	South of Breckenridge Ave. and Myrtle Beach Dr.	2	135	60
Westward LS	1000 ft west of Sunset Ave. and Westward Ave.	3	1200 (2x) 900 (1x)	40
Caltrans LS	1400 ft east of Hathaway St. and Westward Ave.	1	180	50

5.2.4 Wastewater Treatment Plants

The wastewater plant, located near the intersection of Scott Street and Charles Street, is modeled as a system outlet with an elevation of 2100 ft msl. All sewer flows in the model will drain to this outlet, with the exception of scenarios that include satellite plants.

5.3 Wastewater Load Allocation

To distribute the wastewater flow in the model, the collection system was evaluated and 23 drainage basins, or subbasins were identified. These subbasins are shown on Figure 5.2.

The estimated wastewater flow within each subbasin was evenly distributed among the number of manholes that fall within each subbassin. Model nodes connected to lift stations and force mains were excluded from wastewater flow allocation.

The total wastewater flow of each subbasin was estimated based on a combination of the area of each land use type, the equivalent residential units (ERUs), and the estimated percent development of each subbasin. An average wastewater flow rate of 153 gpd/ERU (2.6 ppl/du * 59 gpd/cap) was based on the calibration of the actual wastewater flows, population, and land use mix in the City.

For example, the average wastewater flow for a 25 acre subbasin that consists of 15 acres of MDR, 5 acres of HDR, and 5 acres of commercial land use, and that is approximately 80 percent developed, is estimated as follows:

MDR: 80 % * 15 acres * 4 ERU/ac * 153 gpd/ERU = 7,344 gpd

LDR: 80 % * 5 acres * 3 ERU/ac * 153 gpd/ERU = 1,836 gpd

COM: 80% * 5 acres * 10 ERU/ac * 153 gpd/ERU = 6,120 gpd

Total: 15,300 gpd or 10.63 gpm

Figure 5.1 Existing Sewer Collection System

INSERT 11by17

If this subbasin contains 20 manholes, then the average sewer load per manhole is 0.531 gpm under ADWF conditions. This sewer load allocation method was used for existing conditions and build out ADWF conditions.

5.3.1 Existing System

The existing average day wastewater flow is approximately 2.8 mgd. The percent build out of the 23 subbasins under existing conditions was estimated using the aerial coverage of the City as presented in Figure 2.1. Subbasins 1, 6, 7, 14, and 23 are used for future sewer loads only, and therefore the percent developed of these subbasins was set as zero. The percent developed of the remaining subbasins was estimated to range from 10 percent to 100 percent. The number of manholes of the remaining subbasins ranged from 5 to 385 per subbasin. The total wastewater flow of 1,967 gpm (2.83 mgd) was distributed over 1911 manholes that are part of the existing system model scenario, with flows ranging from 0.32 to 4.94 gpm per manhole.

5.3.2 Model Calibration

The average day wastewater flow during the week of model calibration (July 10 - July 16) was 2.4 mgd. The wastewater flows in the model were allocated by applying a uniform scaling factor of 0.863 to the existing system sewer flows.

5.3.3 Year 2030

The average day wastewater flow for year 2030 is approximately 8.2 mgd. The percent build out of the 23 subbasins for year 2030 was adjusted to match the projected wastewater flows. Subbasins 1, 6, 7, 14, and 23 represent the five new development areas, and are all assumed to be 100 percent developed by year 2030. The percent developed of the remaining subbasins was estimated to range from 90 percent to 100 percent. The number of manholes of the 23 subbasins ranged from 1 to 385 per subbasin. The total wastewater flow of 5,694 gpm (8.2 mgd) was distributed over 1924 manholes that are part of the year 2030 model scenario, with flows ranging from 0.9 to 285 gpm per manhole.

5.4 Model Calibration

The Banning sewer model was calibrated to establish a level of confidence in the flows that it simulates. The calibrated model serves as an established benchmark for further analysis and evaluation.

Calibration is complicated by the fact that some data are known and unchanging; some are variable over time, while others are estimated. Pipe and manhole information such as diameter, lengths, slopes, and location are typically known and can usually be verified with as-built drawings of the City's sewer collection system. Flow data obtained from the WWTP records and from flow-monitoring vary with time of day, season, and total number of

customers. The City's model was calibrated for the flows recorded during the temporary flow-monitoring conducted in July 2006.

5.4.1 Flow Monitoring

The locations of the five flow monitors used to collect calibration data were selected such that portions of the City's collection system could be isolated for model calibration purposes. The locations are depicted on Figure 5.2 and described in Table 5.4. As shown on this figure, all flow monitors were installed south of Interstate 10 to isolate portions of the City's sewer collection system connected to large diameter trunk lines that convey wastewater in an easterly direction to the Banning WWTP.

Table 5.4 Flow Monitoring Locations
Sewer System Study
City of Banning

Flow Meter ID	Location	Nearest Intersection	Pipe Size (inches)
No. 1	Northern inlet to the WWTP.	Scott St. and Charles St.	18
No. 2	Southern inlet to the WWTP.	Scott St. and Charles St.	30
No. 3	Northern inlet into 21" main along Westward Av.	Westward Av. and 4th St.	15
No. 4	Western inlet into 21" main along Westward Av.	Westward Av. and 22nd St.	21
No. 5	Northern inlet into 21" main along Westward Av.	Westward Av. and 22nd St.	12

The flow monitoring results are summarized in Table 5.5, while details are included in Appendix C. The data presented in Table 5.5, which is also used for the model calibration, is based on the average values in the week of July 10 through July 16. The monitoring data for the previous week were disregarded due to a malfunctioning flow meter.

Figure 5.2 Tributary Areas and Monitoring Locations

INSERT 11by17

5.4.2 Calibration Methodology

The model was calibrated by comparing the average flows of the field data with the average flows predicted by the model over a 24-hour period. To produce stable wastewater flows at the WWTP inlet, the model was run for 3 days or 72 hours to account for the affect of attenuation. The average flow of the last 24-hour of the model run was calculated for each of the flow monitoring locations and compared with the field results. The following adjustments were made to match the field and model results:

- Adjustments of percent build out for each subbasin
- Adjustments of initial levels in the wet wells
- Adjustments of initial status of the lift station pump units
- Adjustments of lift station pump operating points
- Input of flow split ratios at critical manholes with multiple outlets

5.4.3 Calibration Results

The model calibration results are summarized in Table 5.6. As shown in this table, the predicted average flows in the model are within five (5) percent of the field data for four (4) of the monitoring locations, while one location shows a difference of 21 percent. It should be noted that the accuracy of the field measurements is likely not more than 10 percent. Hence, these results are satisfactory, and the model is considered calibrated.

BLANK PAGE

6.0 COLLECTION SYSTEM ANALYSIS

6.1 Evaluation Methodology

The calibrated hydraulic sewer model was used for the evaluation of the City's collection system. The following scenarios were evaluated:

- Existing System under Peak Dry Weather Flow (PDWF) conditions
- Existing System under Peak Wet Weather Flow (PWWF) conditions
- Future System under Peak Dry Weather Flow (PDWF) conditions
- Future System under Peak Wet Weather Flow (PWWF) conditions

The future system is defined as the collection system with extensions to serve the five new developments and the projected wastewater flows of year 2030. The future system also includes recommended improvements to address the existing system deficiencies, where applicable.

The PWWF conditions are modeled by adding a second wastewater flow to the PDWF for all model nodes to account for an average I/I of 500 gpd/acre [4], which corresponds to approximately 1 percent inflow of a 2-inch rainfall event in 24 hours. As discussed in Section 4, this amount of I/I is consistent with the City's historical wastewater flow increase during wet weather events.

The hydraulic model is ran for a 48-hour (2-day) extended period simulation to allow sufficient time to balance the wastewater flows throughout the collection system for the affect of flow attenuation. The model results are evaluated for the peak hours of the second day, which mostly occurs between 7 and 10 am (simulation hours 31 through 34), depending on the proximity to the WWTP.

The predicted values of d/D are used to identify pipelines where the depth in existing pipelines exceeds the available capacity, or where d/D is equal or greater than 0.92 (flowing full). New pipelines are sized such that d/D does not exceed 0.75. These and other evaluation criteria are described in more detail in Section 5.

6.2 Existing Collection System Analysis

6.2.1 Evaluation Conditions

The existing system model is run for two flow conditions, PDFW and PWWF. The average flow under PDWF conditions is 2.83 mgd. Based on a combined drainage area of the existing system subbasins (Figure 4.2) of 6,700 acres and an average I/I of 500 gpd/ac, the

total wet weather inflow is estimated to be 3.3 mgd. Hence, the PWWF modeled for the existing system evaluation is 6.2 mgd.

6.2.2 System Deficiencies

The deficiencies identified with the existing sewer collection system are summarized in Table 6.1. As shown in this table, the only system deficiencies occur during wet weather conditions. The ID's of these deficiencies are indicated with a prefix EWD (Existing Wet Weather Deficiency). The locations of these deficiencies are shown on Figure 6.1.

Table 6.1 Existing System Deficiencies
Sewer System Study
City of Banning

Deficiency ID	Model Pipe ID	Pipeline Location	Pipe Length (ft)	Pipe Size (in)	Design Flow[1] (gpm)	Peak Flow (gpm)	d/D ratio
Peak Dry Weather Flow Conditions							
n/a	n/a	n/a	n/a	n/a	n/a	n/a	n/a
Peak Wet Weather Flow Conditions							
EWD-1	1558	Ramsey Street between Omar Street and 15" trunkline.	80	8	310	552	>1
EWD-2	2019	From Wesley St. to the WWTP inlet	870	30	4,410	4,221	>1

(1) Design Flow or Capacity is based on a design velocity of 2 fps.
(2) This diameter needs to be verified, as the upstream pipeline is 12-inch in diameter. This deficiency would not exist, if this pipeline diameter is also 12-inches.

6.2.3 Recommendations

The recommended system improvements that address the identified deficiencies are summarized in Table 6.2 and are depicted on Figure 6.2. The ID's of the recommended projects for existing system improvements are indicated with a prefix EP (Existing Project).

Figure 6.1 Existing System and Future System Deficiencies

INSERT 11by17

Figure 6.2 Existing and Future System Recommendations

INSERT 11by17

As shown in Table 6.2, the deficient pipelines can either be paralleled or replaced with a larger pipeline. Both diameters are indicated in Table 6.2. It is recommended that the City conduct condition assessments for the pipeline segments that are identified as deficient to decide which method is most suitable for the project location. The cost estimates presented in the CIP are all typically based on pipeline replacements, as this provides a more conservative estimate for planning.

Table 6.2 Existing System Recommendations
Sewer System Study
City of Banning

Project ID	Pipeline Location	Pipeline Length (ft)	Parallel Pipeline Size (in)	Replacement Pipeline Size (in)
EP-1	Wesley St. between Hathaway St. and WWTP inlet	1,600	21-inch	36-inch(1)
EP-2	Ramsey St. between Omar St. and 15-inch trunk line on Ramsey	100	8-inch(2)	12-inch(2)

(1) Replacement of existing 30-inch diameter trunk line is not recommended. This main is assumed to remain in place in the CIP.
(2) The existing diameter (8") needs to be verified, as the upstream pipeline is 12-inch in diameter. This deficiency would not exist, if this pipeline diameter is also 12-inches.

It should be noted that one of the recommended projects, project EP-2, is a relatively short pipeline improvement, which typically would not be included in a sewer system study. This improvement is to avoid surcharging near the intersection of Ramsey Street and Omar Street, just north of Interstate 10, where flow from Omar Street merges into the 15-inch diameter trunk sewer that flows to the Westward Lift Station. If temporary surcharging is acceptable, this improvement could be given a lower priority and installed later than other system improvements. It is recommended that this deficiency be confirmed in the field during wet weather flows.

6.3 Future Collection System Analysis

6.3.1 Evaluation Conditions

The existing system model is run for two future flow conditions of year 2030, PDFW and PWWF. The average future flow under PDWF conditions is projected to be 8.2 mgd. Based on a combined drainage area of the future system subbasins (Figure 4.2) of 10,900 acres and an average I/I of 500 gpd/ac, the total wet weather inflow is estimated to be 5.4 mgd. Hence, the PWWF modeled for the future system evaluation is 13.6 mgd.

The future model includes the recommended pipelines that are needed to address the existing system deficiencies as listed in Table 6.2. In addition, pipelines required to collect the wastewater flows from the new developments were added to the model. Specific plans

were used, where available, to input the proposed pipeline alignments and diameter. The model was used to confirm these sizes and evaluate alternate routes.

6.3.2 System Deficiencies

The deficiencies identified with the future sewer collection system are summarized in Table 6.3 and Table 6.4. As shown in these tables, the majority of the system deficiencies occur during wet weather conditions. The ID's of the deficiencies are indicated with a prefix FDD (Future Dry Weather Deficiency) or a prefix FWD (Future Wet Weather Deficiency). The locations of these deficiencies are shown on Figure 6.1.

6.3.3 Recommendations

The recommended system improvements that address the identified deficiencies are summarized in Table 6.5 and are depicted on Figure 6.2. The ID's of the recommended projects for future system improvements are indicated with a prefix FP (Future Project).

As shown in Table 6.2, the deficient pipelines can either be paralleled or replaced with a larger pipeline. Both diameters are indicated in Table 6.4. It is recommended that the City conduct condition assessments for the pipeline segments that are identified as deficient to decide which method is most suitable for the project location. The cost estimates presented in the CIP are all typically based on pipeline replacements, as this provides a more conservative estimate for planning.

Table 6.5 also lists a number of projects that were considered as part of this sewer system study but are not included in the proposed CIP. Based on discussions with City staff it was determined that these projects, (FP-1, FP-2, and FP-4) are cost prohibitive and not desired due to the crossing with the Interstate 10, the railroad, the three streams and the related environmental issues. These projects are also depicted in grey in Figure 6.2. These projects were replaced with projects FP-14 and FP-15.

As listed in Table 6.2, it is recommended that Westward LS be abandoned. This recommendation was based on discussions with City staff. This lift station can be bypassed with the new gravity main (FP-3) along Crossroads Parkway between Sunlakes Boulevard and the new sewer main along Bobcat Road (FP-12).

To serve the new developments east of the WWTP, some gravity mains (FP-18 and FP-19), a new lift station (FP-17) and a force main (FP-20) are recommended. These facilities are sized to convey up to 90 percent of the development in tributary areas 21 and 22 (see Figure 5.2), which includes the area north of Interstate 15 and east of Hathaway Street. The projected ADWF for the lift station is approximately 450 gpm, while the projected PWWF is estimated at 680 gpm. When this station is sized for wet weather conditions with a lift of 150 feet, the capacity of this 1.0 mgd station is about 40 hp.

(1) These projects are replaced in the CIP by projects FP-14, FP-15, and upsizing of FP-12).
(2) Project FP-10 (30-inch diameter parallel pipeline) replaces project EP-1 (21-inch diameter parallel pipeline).

6.4 Future Treatment System Analysis

The projected growth in the City will increase the total wastewater flow that needs to be treated beyond the capacity of the existing Banning WWTP. As discussed in Section 3, there are several options to increase the City's WWTP treatment capacity. The alternatives investigated in this study are:

1) Expansion of the Banning WWTP

2) Expansion of the Banning WWTP and the construction of a new Satellite Plant that would treat wastewater from the Pardee development.

3) Expansion of the Banning WWTP and the construction of a new Satellite Plant that would treat wastewater from the Loma Linda and Black Bench developments.

4) Expansion of the Banning WWTP and the construction of two new Satellite Plants that would treat wastewater from the Pardee, Loma Linda and Black Bench developments.

The conveyance improvements required for each of these four alternatives are determined with the hydraulic sewer model and presented in this subsection. It should be noted that this analysis was performed with the system configuration that included project FP-1, FP-2, and FP-4 and did not include project FP-14 and FP-15. As the comparison study presented in this section still provides a relative scoring of each option, the analysis was not repeated with the modified system configuration as presented in the CIP that eliminated the routing via Highland Home Road to Bobcat Road for cost and environmental considerations.

6.4.1 Alternative 1 - WWTP Expansion Only

The system recommendations that are required to convey all the projected dry and wet weather wastewater flows to the Regional WWTP are presented in Tables 6.2 and 6.5.

6.4.2 Alternative 2 - One Satellite Plant for Pardee

The construction of a satellite wastewater treatment plant that would treat all wastewater flows from the Pardee development would decrease the City's wastewater flow under PDWF and PWWF conditions by 1.4 and 2.1 mgd, respectively. Due to this wastewater flow reduction, the following improvements that are required for centralized treatment at the Banning WWTP (Alternative 1) could be reduced in size or eliminated:

- FP-1: Eliminated
- FP-2: Reduced from 15-inch to 12-inch diameter
- FP-4: Reduced from 15-inch to 12-inch diameter
- FP-9: Reduced from 24-inch to 21-inch diameter
- FP-10: Reduced from 30-inch to 24-inch diameter
- FP-12: Reduced from 21-inch to 18-inch diameter

6.4.3 Alternative 3 - One Package Plant for Loma Linda and Black Bench

The construction of a satellite wastewater treatment plant that would treat all wastewater flows from the Loma Linda and Black Bench developments would decrease the City's wastewater flow under PDWF and PWWF conditions by 0.7 and 1.5 mgd, respectively.

Due to this wastewater flow reduction, the following improvements that are required for centralized treatment at the Banning WWTP (Alternative 1) could be reduced in size or eliminated:

- FP-7: Eliminated
- FP-9: Reduced from 24-inch to 21-inch diameter
- FP-10: Reduced from 30-inch to 24-inch diameter

6.4.4 Alternative 4 - Two Package Plants

The construction of a satellite wastewater treatment plant that would treat all wastewater flows from the Pardee, Loma Linda and Black Bench developments would decrease the City's wastewater flow under PDWF and PWWF conditions by 2.1 and 3.6 mgd, respectively. Due to this wastewater flow reduction, the following improvements that are required for centralized treatment at the Banning WWTP (Alternative 1) could be reduced in size or eliminated:

- FP-1: Eliminated
- FP-2: Reduced from 15-inch to 12-inch diameter
- FP-4: Reduced from 15-inch to 12-inch diameter
- FP-7: Eliminated
- FP-9: Reduced from 24-inch to 18-inch diameter
- FP-10: Reduced from 30-inch to 21-inch diameter
- FP-12: Partially reduced from 21-inch to 18-inch diameter

6.4.5 Recommendations

The capital cost estimates of the conveyance systems for the four alternatives are summarized in Table 6.6. Based on a depreciation period of 30 years, 5 percent interest, and an average treatment capacity of 7.9 mgd, the overall unit cost of treatment and collection system improvements are estimated. These unit costs are presented in Table 6.1. As shown in this table, the unit cost range from $1,169/mgd to $1,251/mgd.

Table 6.6 Alternatives Comparison Sewer System Study City of Banning				
Capital Cost Component	**Alt. 1 WWTP only**	**Alt.2 Pardee SP**	**Alt. 3 Loma Linda SP**	**Alt. 4 Two SPs**
Treatment[1] ($million)	$29.9	$34.8	$37.3	$42.0
Collection ($million)	$23.9	$20.9	$22.6	$20.0
Recycled Water[2] ($million)	$0.0	$0.8	($2.8)	($4.4)
Total ($million)	**$53.8**	**$56.6**	**$57.1**	**$57.6**
Capital Cost ($million/yr)	$3.5	$3.7	$3.7	$3.7
Unit Cost[3] ($/mgd)	**$1,169**	**$1,230**	**$1,241**	**$1,251**

(1) Tertiary treatment and the potential expansion of the solids handling facilities are not included.
(2) Based on the incremental recycled water system cost compared to Alternative 1 per Table 6.4 of RWMP [3]
(3) Based on a 30-year depreciation period of 30, 5 percent interest, and AWF of 7.9 mgd.

Based on this unit cost comparison, it can be concluded that Alternative 1 is the most cost-effective. However, the difference in capital and unit cost is not significant as it only varies +/- 3 percent from the average capital and unit cost. Other considerations are therefore more important and should determine if package plants are beneficial for the City. These other considerations include, but are not limited to:

- Land acquisition opportunities and constraints
- Odor control at the influent and effluent of the Satellite Plants
- Traffic related to hauling of solids to the Banning WWTP
- Additional staffing requirements for the Satellite Plants
- Appearance of satellite plants in residential areas
- Environmental issues
- Political factors

Based on these other considerations it is unknown at this time if the construction of satellite plants for the new developments will be implemented. Due to the uncertainties associated with the satellite plants it was decided to plan for the alternative with the most extensive conveyance improvements, Alternative 1, which consists of centralized wastewater treatment and the expanded regional WWTP. By planning for this alternative, the proposed collection system can accommodate all treatment alternatives, with and without satellite plants. The associated treatment plant recommendations are summarized in Table 6.7.

Table 6.7 Future Treatment System Recommendations Sewer System Study City of Banning		
Project ID	**Pipeline Location**	**Capacity (mgd)**
FP-21	WWTP Stage 1 expansion from 3.6 mgd to 5.1 mgd.	1.5
FP-22	Tertiary treatment of 5.1 mgd	5.1
FP-23	WWTP Stage 2 expansion from 5.1 mgd to 6.7 mgd	1.6
FP-24	Tertiary treatment expansion from 5.1 mgd to 6.7 mgd	1.6
FP-25	WWTP Stage 3 expansion from 6.7 mgd to 8.2 mgd	1.5
FP-26	Tertiary treatment expansion from 6.7 mgd to 8.2 mgd	1.5

6.5 Recommended System Configuration

The recommended sewer system consists of a conveyance system that is sized to treat all the existing and projected wastewater flows under dry and wet weather conditions at the Banning WWTP. The WWTP would need to be expanded by 4.6 mgd to a capacity of the projected average DWF of 8.2 mgd for year 2030. In addition, 8.2 mgd of tertiary treatment capacity would need to be installed and all pipeline improvements, as listed in Table 6.2 and Table 6.5, need to be implemented.

The phasing of these improvements, the cost estimates per project, and the phasing and allocation of the estimated cost are presented in the Capital Improvement Program, which is discussed in Section 7.

BLANK PAGE

.

7.0 CAPITAL IMPROVEMENT PLAN

The objective of this Section is to present the City's sewer system capital improvement program (CIP). This CIP consists of the phasing, cost estimates, and the allocation of project cost for the recommended improvements as defined in Section 6. The purpose of this CIP is to provide the City with a guideline for the planning and budgeting of its sewer system.

It should be noted that the model used for this Sewer System Study was created from preliminary GIS data, which has been further checked and updated since the start of the project. Based on the connectivity, elevation, and invert data issues encountered during the model creation and calibration (see Section 5), it is highly recommended that:

- The hydraulic model is updated with the new GIS data, when available;
- The updated model is re-calibrated under dry and wet weather conditions;
- All deficiencies and recommendations presented in study be verified with the updated calibrated model
- The CIP presented in this section is updated with the findings from these model verification runs.

7.1 Phasing of Improvements

The recommended improvements are divided into two development stages, Phase 1 and Build Out. The phasing of the improvements is summarized in Table 7.1 and graphically presented on Figure 7.2. As shown in Table 7.1 and Figure 7.2, the majority of the sewer system improvements are included in Phase 1.

Table 7.1 Sewer System Improvements - Phasing Sewer System Study City of Banning

Figure 7.1 Phasing of Proposed Sewer System Improvements

INSERT 11by17

7.2 Cost Estimates

The estimated construction cost and total capital cost are summarized by Phase in Table 7.2. These cost estimates are based on the unit cost assumptions listed in Table 4.5.

The distribution of the estimated capital cost for the proposed system for year 2030 conditions is graphically presented in Figure 7.2.

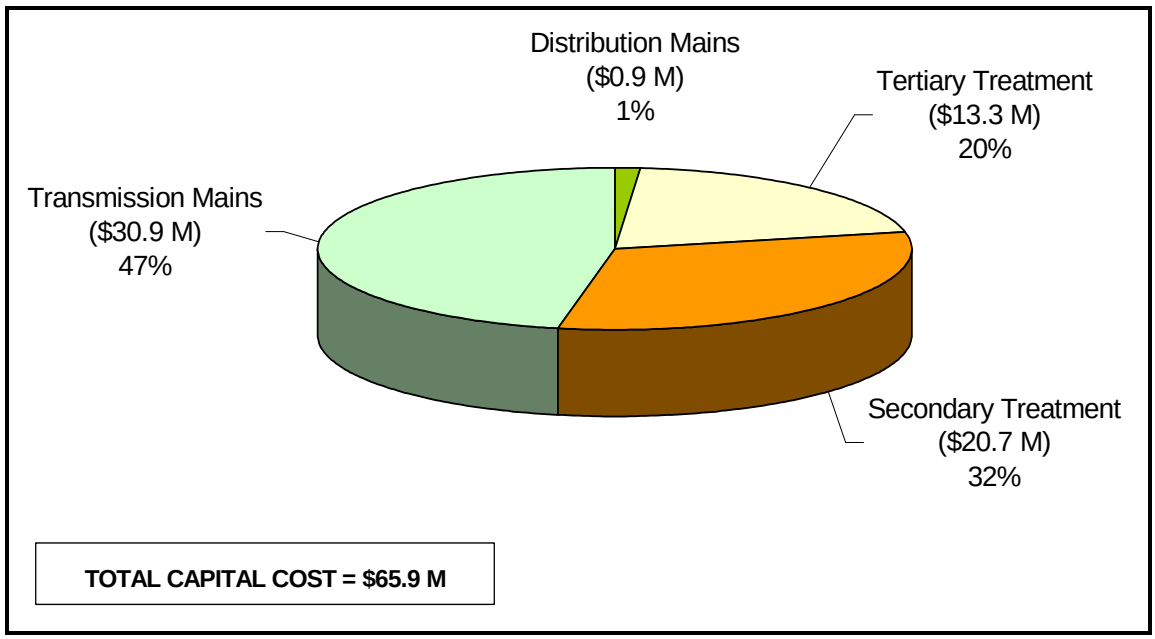

Figure 7.2 Distribution of Estimated Capital Cost

It should be noted that these cost estimates and the information presented in this CIP is based on the assumption that all projected wastewater flows will be treated at the Banning WWTP, which would require an expansion to a capacity of 8.2 mgd. However, as stated in Section 6.4, the difference in capital and unit cost between centralized treatment and the use of satellite plants is not significant. Other considerations are therefore more important and should determine if package plants are beneficial for the City. If these other considerations, such as land availability, make the use of satellite plants favorable, certain collection system improvements listed in this CIP can be reduced in size or avoided. The project changes per alternative are also described in Section 6.4.

Table 7.2 Sewer System Improvements - Cost Estimates (Continued)
Sewer System Study
City of Banning

Project ID	Project Description	Length (ft)	Size (in)	Unit Cost ($/lf)	Construction Cost ($)	Contingency ($)	Mark-ups[1] ($)	Capital Cost ($)
Other Improvements		**Size**	**Size**	**Unit**	**($/mgd)**			
FP-13	Abandonment of Westward LS	4.8	mgd	LS	$100,000	n/a	n/a	$100,000
FP-17	New Lift Station, 0.5 miles east of the WWTP	1	mgd	$400,000	$400,000	$120,000	$130,000	$650,000
FP-21	WWTP Stage 1 expansion from 3.6 mgd to 5.1 mgd.	1.5	mgd	$3,200,000	$4,800,000	$1,440,000	$1,560,000	$7,800,000
FP-22	Tertiary treatment of 5.1 mgd	5.1	mgd	$1,000,000	$5,100,000	$1,530,000	$1,658,000	$8,288,000
FP-23	WWTP Stage 2 expansion from 5.1 mgd to 6.7 mgd	1.6	mgd	$3,200,000	$5,120,000	n/a	n/a	$5,120,000
FP-24	Tertiary treatment expansion from 5.1 mgd to 6.7 mgd	1.6	mgd	$1,000,000	$1,600,000	$480,000	$520,000	$2,600,000
FP-25	WWTP Stage 3 expansion from 6.7 mgd to 8.2 mgd	1.5	mgd	$3,200,000	$4,800,000	$1,440,000	$1,560,000	$7,800,000
FP-26	Tertiary treatment expansion from 6.7 mgd to 8.2 mgd	1.5	mgd	$1,000,000	$1,500,000	$450,000	$488,000	$2,438,000
Subtotal Other Improvements		***18.6***	***mgd***	***n/a***	***$23,420,000***	***$5,460,000***	***$5,916,000***	***$34,796,000***
GRAND TOTAL		**n/a**	**n/a**	**n/a**	**$42,537,000**	**$11,204,000**	**$12,135,000**	**$65,876,000**

7.3 Phasing of Project Cost

The phasing of cost by project type is summarized in Table 7.3.

Table 7.3 Phasing of Sewer System CIP
Sewer System Study
City of Banning

System Component	Phase 1 ($ million)	Phase 2 ($ million)	Total ($ million)
Distribution	$0.9	$0.0	$0.9
Transmission	$21.3	$9.7	$30.9
Secondary Treatment	$12.9	$7.8	$20.7
Tertiary Treatment	$10.9	$2.4	$13.3
Total	**$46.0**	**$19.9**	**$65.9**

City of Banning
Spill Emergency Response Plan

Water and Wastewater Department
176 E Lincoln St.
Banning, CA. 92220

Adopted July 2009
Revisions:
5/2/2012; 4/21/2014;
6/30/2015; 11/24/2020;
6/1/2023; 6/1/2024

(Plan last updated June 1, 2024)

TABLE OF CONTENTS

1. Requirements 1
2. Introduction 2
3. Purpose 3
4. Goals and Objectives 3
5. Initial SSO Response Procedures 4
5.1 Staff Instructions 4
5.2 First Responder Duties and Responsibilities 6
5.3 Spill Response Supervisor 6
5.4 Water & Wastewater Superintendent 6
5.5 Industrial Pretreatment 7
6. Notification Procedures 7
6.1 Notification to the California Office of Emergency Services 7
6.2 Emergency Call Out Lists 8
7. Assessment, Containment, Traffic Control and Clean-up 10
7.1 Preliminary Assessment of Damage to Private/Public Property 10
7.2 Containment 10
7.3 Traffic and Crowd Control 10
8. Initial Estimates of Flow Volume 11
9. Additional Measures for Prolonged SSO Conditions 11
10. Clean-up 11
11. Monitoring Procedures 12
11.1 Receiving Water Visual Observations 12
11.2 Receiving Water – Water Quality Sampling and Analysis 12
11.3 Receiving Water Sampling Locations 13
11.4 Ground (Non-Surface Water) SSO 14

Spill Emergency Response Plan

The following document contains spill response procedures that are required by the State of California (Statewide Waste Discharge Requirements (WDR) – General Order WQ 2022-0103-DWQ. The Spill Emergency Response Plan is just one of eleven Sewer System Management Plan (SSMP) elements

1. Requirements

Each Enrollee shall develop and implement a Spill Emergency Response Plan (SERP) that identifies measures to protect public health and the environment. At a minimum, this plan must include the following:

a) Proper notification procedures so that the primary responders, appropriate regulatory officials, and appropriate regulatory agencies are informed of all (Sanitary Sewer Overflows) SSOs in a timely manner;
b) Proper notification of other potentially affected entities (e.g., health agencies, A program to ensure an appropriate response to all overflows;
c) Comply with the notification, monitoring, and reporting requirements of the General Order (WQ 2022-0103-DWQ), State law and regulations, and applicable Regional Water Board Orders;
d) Ensure that appropriate staff and contractors implement the Spill Emergency Response Plan and are appropriately trained;
e) Address emergency system operations, traffic control and other necessary response activities;
f) Contain a spill and prevent/minimize discharge to waters of the State or any drainage conveyance system;
g) Minimize and remediate public health impacts and adverse impacts on beneficial uses of waters of the State;
h) Remove sewage from the drainage conveyance system;
i) Clean the spill area and drainage conveyance system in a manner that does not inadvertently impact beneficial uses in the receiving waters;
j) Implement technologies, practices, equipment, and interagency coordination to expedite spill containment and recovery;
k) Implement pre-planned coordination and collaboration with storm drain agencies and other utility agencies/departments prior, during, and after a spill event;
l) Conduct post-spill assessments of spill response activities;
m) Document and report spill events as required in Order WQ 2022-0103-DWQ; and
n) Annually, review and assess effectiveness of the Spill Emergency Response Plan.

2. Introduction

The SERP provides procedures to ensure prompt and effective actions to minimize the impact of SSOs on the environment and public health. This plan includes protocols for spill containment, traffic control, cleanup operations, notification procedures, reporting mechanisms, and monitoring activities, SSO tracking, among other components.

This plan encompasses four (4) categories of SSOs, as defined by SWRCB Order WQ 2022-0103-DWQ. The categories are defined as follows:

- **Category 1** - A spill of any volume of sewage from or caused by a sanitary sewer system that results in a discharge to a surface water or a drainage conveyance system that discharges to surface waters when the sewage is not fully captured and returned to the sanitary sewer system or disposed of properly. Any spill volume not recovered from a drainage conveyance system is considered a discharge to surface water, unless the drainage conveyance system discharges to a dedicated stormwater infiltration basin or facility.

- **Category 2** - A spill of 1,000 gallons or greater, from or caused by a sanitary sewer system that does not discharge to a surface water.

- **Category 3** - A spill of equal to or greater than 50 gallons and less than 1,000 gallons, from or caused by a sanitary sewer system that does not discharge to a surface water.

- **Category 4** - A spill of less than 50 gallons, from or caused by a sanitary sewer system that does not discharge to a surface water.

Possible SSOs occur in one of three areas of the collection/treatment system as follows:

1. Collection System;
2. Lift Station; or
3. Treatment Plant

The response procedures for SSOs are determined by the classification and location of the SSO. While the objectives of the response remain the same, the coordination and personnel chain of communication is slightly different.

For spills on City property (i.e., at the Wastewater Reclamation Facility) on-site personnel report the spill to the Wastewater Reclamation Manager who makes operational decisions regarding the containment, recovery, and clean-up. All

documentation and reporting of the spill is performed by the Wastewater Operation Manager or their designee, through the completion of an SSO Report Form.

In the event of spills occurring in public areas like the lift station or collection system, notifications are promptly relayed to the relevant response team members. Upon arrival at the site, said personnel collects essential information regarding SSO location, potential cause(s), initial estimates of volume, containment requirements, etc. Further personnel and equipment are deployed as deemed necessary following the initial assessment conducted on-site.

Every effort will be made to ensure that all reported SSOs are responded to within the first hour of notification of the SSO.

3. Purpose

The primary purpose of the SERP is to offer detailed written procedures aimed at enhancing response efficiency, offering clear guidance on containment, cleanup and reporting, and minimize the overall risks associated with SSOs.

4. Goals and Objectives

The City acknowledges its duty to protect public health and the environment, as reflected in the objectives of the SERP. These objectives aim to:

- Ensure all reported SSOs are responded to immediately;
- Identify and allocate adequate resources needed in the response;
- Provide timely and adequate training, equipment and qualified staff to ensure effective response; and
- Ensure all SSOs are accurately reported and any SSO trends are identified and used to provide opportunities for continuous improvement.

The objectives of the SERP are to:

- Reduce the occurrence and the magnitude of SSOs;
- Protect the collection system, wastewater treatment facilities, and all appurtenances;
- Protect public and private property;
- Protect water quality;
- Protect Public Health, Safety, environment and property from SSOs;
- Prevent the discharge of sewage into surface waters;
- Contain the sewage discharged to the maximum extent possible;
- Establish perimeters and control zones to control public access to SSO area; and
- Prompt notification of spill information and potential impacts.

5. Initial SSO Response Procedures

This section outlines a strategy for mobilizing labor, materials, tools, and equipment to address or rectify any conditions that could potentially lead to or exacerbate an SSO.

5.1 Staff Instructions

Upon receiving a report of a potential SSO, the City gathers all pertinent details, including the time and date of the call, precise location, description of the issue, suspected time of the SSO occurrence, caller's contact information, and any additional observations provided by the caller. The relevant information is relayed to the designated staff member(s), who are then dispatched to the location to confirm and conduct an initial assessment of the situation. Staff notifications are typically made via telephone or mobile radio. Upon receipt of the dispatch, City personnel proceed promptly to the location of the SSO. Efforts are made to contain the overflow using existing equipment and resources to the fullest extent possible. The Water & Wastewater Superintendent or their assigned representative is briefed by the responding staff, who then determine whether additional crews, materials, equipment, and supplies are required.

The primary responsibilities of each employee in the spill response team are summarized in the following table. Additional details of the responsibilities are covered in the sections that follow.

SANITARY SEWER OVERFLOW RESPONSE TEAM		
	Responsibilities	Contact Information
First Responder	• Provide initial evaluation of spill severity • Call emergency services, as required • Notify Spill Response Supervisor • Stop spill and secure area as instructed by Spill Response Supervisor	Collection System Supervisor (951) 392-7172 or (951) 232-9236
Spill Response Supervisor	• Direct First Responder in initial actions to control spill and prevent public exposures to spill • Evaluate spill and determine actions to control and cleanup • Notify Water & Wastewater Superintendent • Mobilize personnel/equipment to respond to spill • Complete Sanitary Sewer Overflow Report (field form) and initiate agency notifications	Collection System Supervisor (951) 392-7172
Water & Wastewater Superintendent	• Authorize City resources to respond to spill • Communicate with Director of Water & Wastewater, and Regulatory Agencies. • Contact and direct outside services, as required, to respond to spill	(951) 849-3273 or Cell (951) 232-9236
Public Works Director	• Authorize City or contractors to respond to the spill • Communicate with City Manager, Regulatory Agencies, and public information officer	(951) 922-3134 Cell (951) 232-7288
Industrial Pretreatment	• Determine required sampling for spill and initiate investigation, as indicated, regarding potential sources of the cause of the SSO.	G&G (951) 683-3538 Cell (951) 858-1542

Table 5-1 Spills Response Duties & Contacts

5.2 First Responder Duties and Responsibilities

The first City Employee who arrives at the site of a SSO has the primary responsibility of taking immediate actions to protect the health and safety of the public. Secondly, the first responder must ensure that proper notifications are made to the Wastewater Department to initiate a timely and effective response needed to minimize the risks associated with the SSO.

Should the first responder determine that the SSO falls outside the City's jurisdiction (e.g., private lateral spill), yet an imminent danger to public health, property, or to the waterways of the United States is evident, prudent emergency actions are warranted until the responsible party provides action to mitigate the SSO. Upon arrival at a SSO, the first responder will:

- Determine the cause of the SSO, e.g. sewer line blockage, pipeline break, pump station mechanical or electrical failure;
- Call emergency services as required;
- Notify Spill Response Supervisor;
- Control public access to spill area; and
- If possible, take immediate steps to stop the overflow.

5.3 Spill Response Supervisor

The Spill Response Field Supervisor assumes primary management and coordination of all emergency activities and communicates with the Wastewater Reclamation Manager or Director. The supervisor will be responsible for the official spill volume estimate, coordinating spill control and cleanup efforts, and notifying the proper state, county and local regulatory agencies. The Spill Response Field Supervisor, or a designated City alternate, will fill out the Sewer Overflow Report Form (see Appendix A-1).

5.4 Water & Wastewater Superintendent

The Water & Wastewater Superintendent has the authority to approve the allocation of emergency response resources and liaises with the City's Public Utilities Director. If necessary, supplementary external resources are engaged to aid in the SSO response. Contact details for these additional external resources can be located in Section 6.4 of the SSMP.

5.5 Industrial Pretreatment

The City's Industrial Pretreatment team will assess the necessary sampling protocols during the evaluation and cleanup of the spill. The Coordinator will then commence an investigation into the origin and factors contributing to the SSO.

Industrial Pretreatment will assist as directed regarding regulatory reporting of the SSO event.

6. Notification Procedures

The Sewer Overflow Response Procedure presents a strategy to mobilize labor, materials, tools and equipment to rectify or address any condition that could potentially result in an unauthorized discharge. Overflows may be detected by City employees or members of the public (including businesses, residents, etc.), who may also report suspicious circumstances such as unusual odors or flooding, which could suggest the possibility of an overflow. The general flow of information is depicted in Appendix A-4.

During regular business hours, incoming calls received by the water/wastewater receptionist follow the routing outlined in Appendix A-4. However, calls received after business hours and on weekends are typically directed to the City police dispatch. The City police dispatch then relays the SSO information to the designated on-call wastewater staff. Subsequent information flow aligns with the process outlined in the flowchart in Appendix A-4.

Should the spill extend beyond the boundaries of the City's jurisdiction, efforts to contain and remediate the spill will persist. Nonetheless, the relevant agency will be promptly informed of the spill to ensure appropriate notifications are made and necessary actions are taken.

6.1 Notification to the California Office of Emergency Services

This notification requirement applies specifically to individual spills of **1,000 gallons or more** originating from City-owned and/or operated laterals that discharge into a water of the State.

Upon discovery of a spill that discharges into or onto any waters of the State or is deposited where it may enter any waters of the State, the City must promptly notify the California Office of Emergency Services (COES) and obtain a California Office of Emergency Services Control

Number. Notification must occur as soon as possible **but no later than two (2) hours** after the Enrollee becomes aware of the spill, provided that such notification does not significantly hinder cleanup efforts or other emergency measures.

The details necessary for COES notification align with the data to be entered into the SSO Report Form (AppendixA-1). Filling out this form will help outline the specifics needed as per the General Order

Following the initial notification to COES and until such time that the City certifies the spill report in the online CIWQS Sanitary Sewer System Database, the City will provide updates to COES regarding substantial changes to:

- Estimates spill volume (increase or decrease in gallons initially estimated);
- Estimated discharge volume discharged directly into waters of the State or indirectly into a conveyance system (increase or decrease in gallons initially estimated); and
- Additional impact(s) to the receiving water(s) and beneficial uses.

Appendix A-3 provides summary of notification, monitoring and reporting requirements per the General Order.

6.2 Emergency Call Out Lists

The City maintains a Confidential Contact List that includes key personnel within the City as well as vendors that may be called on to assist in the SSO Response. The following list delineates key responders:

CITY OF BANNING CONFIDENTIAL CONTACT LIST

Contractors

Merlin Johnson Construction, Inc.
Pipeline, Grading
Jake Johnson
P.O. Box 777
Mentone, CA 92359
Business: (909) 794-7702

5053 La Mart Dr., Unit 203
Riverside, CA 92507
Business: (951) 683-3538
Cell: 858-1542

7. Assessment, Containment, Traffic Control and Clean-up

City employees are responsible for minimizing the effects of any SSO. The following sections provide guidance for the first responder and/or the SSO response supervisor in the event of a SSO.

7.1 Preliminary Assessment of Damage to Private/Public Property

The first person at the scene gathers pertinent information and determines if the spill is an SSO. Next, the SSO classification (i.e., Category 1, 2, 3, 4 or private lateral) is determined. Regardless of the classification, all SSOs are managed uniformly. The primary objective is to promptly contain and remediate the area before the spill reaches a storm drain. Subsequently, documentation and reporting of the SSO become priorities. Alongside comprehensive reports, photographs are captured to document the spill and the containment and cleanup procedures employed. Upon receipt of a Sanitary Sewer Overflow (SSO) Report form, field notes are transcribed onto the form for official documentation.

7.2 Containment

After the initial assessment, all reasonable efforts will be made to contain the SSO (e.g., install plugs, sandbags, sand/rock, etc.)

7.3 Traffic and Crowd Control

The traffic and crowd control measures employed during SSO incidents can be summarized as follows:

Spills (less than 1,000 gallons)

A. Setup traffic cones to direct traffic from spill area.
B. Use staff personnel to control traffic and pedestrians.

Spills (1,000 to 10,000 gallons)

A. Contact Mutual Aid Contract cities as needed.
B. Perform lane closures as needed.
C. Close any affected entrances or exits from all public and private facilities.
D. Place proper signage for any lane closures including contaminated area signs.
E. Use caution tape and barricades to protect pedestrians from contaminated area.

Spills (> 10,000 gallons)

A. Assess spill situation.
B. Contact Mutual Aid contract cities as needed.
C. Inform local police and sheriff's department of any law enforcement needed road closures and traffic control.
D. Delegate the responsibilities to Mutual Aid team members to inform public of hazards also use signage to inform public of potential hazards to public health and safety.
E. Block public access to hazard using barricades, cones and caution tape.

8. Initial Estimates of Flow Volume

Initial assessments of flow volumes are conducted through onsite observations, relying on professional expertise and utilizing guidelines provided by reputable engineering firms and municipal agencies. The Best Practices Guidelines outlined in Appendix A-2 serve as a reference for making initial estimates of overflow volumes. Final figures are verified during cleanup and recovery operations, taking into account volumes returned to the sewer and estimations of unrecovered volumes.

9. Additional Measures for Prolonged SSO Conditions

For prolonged SSO conditions, a potable by-pass pump operation is established to circumvent any issues or obstructions, with contractors potentially enlisted if deemed necessary. Continuous or periodic monitoring of the by-pass pumping operation is implemented as needed.

10. Clean-up

Following an SSO event, thorough cleaning of the site(s) is required to remove any visible spill residue without causing unintended harm to the beneficial uses of receiving waters. The City's SSO clean up procedure is outlined below:

- Where feasible, the area undergoes comprehensive flushing and cleansing to remove any sewerage, employing high-pressure water hoses or Combination trucks. Solids and debris are flushed, collected, and transported away for disposal, while all flush water is contained and gathered for appropriate disposal. It is imperative that wash water does not enter storm drains, further contaminating the storm drain system.
- The SSO site is secured to prevent contact by members of the public until the site has been thoroughly cleaned. If necessary, signs regarding public health and safety are posted in accordance with Section 6.18.1 of the SSMP.
- The SSO site is disinfected using liquid bleach (sodium hypochlorite). Caution must be used to ensure that the disinfection chemicals used do not lead to or

cause violations of other NPDES Permit requirements concerning chlorine levels in waterways.

- To ensure proper disinfection, adequate contact time is implemented.
- In instances where spilled sewage creates standing water (ponding), the sewage is pumped out and all remaining residues removed.
- If sewage has discharged into a body of water that may contain fish or other aquatic life, disinfection is not performed, and the appropriate agencies are contacted for further instructions.

11. Monitoring Procedures

The following subsections contain monitoring procedures in accordance with the General Order. Appendix A-3 provides summary of notification, monitoring and reporting requirements per the General Order.

11.1 Receiving Water Visual Observations

Through visual observations and use of best available spill volume-estimating techniques and field calculation techniques, the City will gather and document the following information for spills discharging to surface waters:

- Estimated spill travel time to the receiving water;
- For spills entering a drainage conveyance system, estimated spill travel time from the point of entry into the drainage conveyance system to the point of discharge into the receiving water;
- Estimated spill volume entering the receiving water; and
- Photography of:
  - Waterbody bank erosion,
  - Floating matter,
  - Water surface sheen (potentially from oil and grease),
  - Discoloration of receiving water, and
  - Impact to the receiving water.

11.2 Receiving Water – Water Quality Sampling and Analysis

For sewage spills in which an estimated 50,000 gallons or greater are discharged into a surface water, the Enrollee shall conduct the following water quality sampling no later than 18 hours after the Enrollee's knowledge of a potential discharge to a surface water:

- Collect one water sample, each day of the duration of the spill, at:
  - The DSC-001 location as described in section 11.3 (Receiving Water Sampling Locations), if sewage discharges to a surface water via a drainage conveyance system; and/or
  - Each of the three receiving water sampling locations in section 11.3 (Receiving Water Sampling Locations);

- If the receiving water has no flow during the duration of the spill, the City must report "No Sampling Due To No Flow" for its receiving water sampling locations.

The City shall analyze the collect receiving water samples for the following constituents per section 2.3.3 (Water Quality analysis Specifications) of Attachment E1 to General Order 2022-0103-DWQ:

- Ammonia, and
- Appropriate bacterial indicator(s) per the applicable Basin Plan water quality objectives, including one or more of the following, unless directed otherwise by the Regional Water Board:
  - Total Coliform Bacteria
  - Fecal Coliform Bacteria
  - E-coli
  - Enterococcus

  Dependent on the receiving water(s), sampling of bacterial indicators shall be sufficient to determine post-spill compliance with the water quality objectives and bacterial standards of the California Ocean Plan or the California Inland Surface Water Enclosed Bays, and Estuaries Plan, including the frequency and/or number of post-spill receiving water samples as may be specified in the applicable plans.

11.3 Receiving Water Sampling Locations

The City shall collect receiving water samples at the following locations:

Sampling of Flow in Drainage Conveyance System (DCS) Prior to Discharge

Sampling Location	Sampling Location Description
DSC-001	A point in a drainage conveyance system before the drainage conveyance system flow discharges into a receiving water.

Receiving Surface Water Sampling (RSW)[1]

Sampling Location	Sampling Location Description
RSW-001 Point of Discharge	A point in the receiving water where sewage initially enters the receiving water.
RSW-001U: Upstream of Point of Discharge	A point in the receiving water, upstream of the point of sewage discharge, to capture ambient conditions absent of sewage discharge impacts.
RSW-001D: Downstream of Point of Discharge	A point in the receiving water, downstream of the point of sewage discharge, where the spill material is fully mixed with the receiving water.

[1] The City must use its best professional judgment to determine the upstream and downstream distances based on receiving water flow, accessibility to upstream/downstream waterbody banks, and size of visible sewage plume.

11.4 Ground (Non-Surface Water) SSO

SSOs to the ground that do not reach surface waters are monitored in accordance with any requirements stipulated by the RWQCB.

12. Private Property SSOs

The City will respond to all SSOs within their service area. If determined that a SSO originated from a sewer lateral or septic system on private property, the City will assist in the control and containment to ensure that the wastewater does not enter into storm drains, spillways, etc. The property owner will be informed of the blockage. The City will provide a copy of the Private Lateral Sewer Policy and notified of their responsibility to remove the blockage. If the SSO was a result of the sewer trunkline, the response crew will correct the problem. In each case, the City will report the spill in accordance with Section 6.8 of the SSMP.

13. Reporting Procedures

All reporting will be submitted electronically to the online CIWQS Sanitary Sewer System Database (https://ciwqs.waterboards.ca.gov), unless specified otherwise in the General Order. Electronic reporting will solely be conducted by a Legally Responsible Official or Data Submitter(s) previously designated by the Legally Responsible Official, as required in section 5.8 (Designation of Data Submitters) of the General Order.

Appendix A-3 contains a summary of notification, monitoring and reporting requirements per the General Order.

13.1 Reporting of Individual Category 1 Spills

Within three (3) business days of the City's knowledge of a Category 1 spill, the City will submit a **Draft Spill Report** to the online CIWQS Sanitary Sewer System Database. The Draft Spill Report will include the items outlined in section 3.1.1 of Attachment E-1 to the General order.

Within 15 calendar days of the spill end date, the City will submit a **Certified Spill Report for Category 1 spill**, to the online CIWQS Sanitary Sewer System Database. Upon completion of the Certified Spill Report, the online CIWQS Sanitary Sewer System Database will issue a final spill event identification number. The Certified Spill Report will include the items outlined in section 3.1.2 of Attachment E-1 to the General order.

For any spill in which **50,000 gallons or greater** discharged into a surface water, **within 45 calendar days** of the spill end date, the City will submit a **Spill Technical Report** to the online CIWQS Sanitary Sewer System Database. The Spill Technical Report will include the information stipulated in section 3.1.3 of Attachment E-1 to the General order.

13.2 Reporting of Individual Category 2 Spills

Within three (3) business days of the City's knowledge of a Category 2 spill, the City will submit a **Draft Spill Report** to the online CIWQS Sanitary Sewer System Database. The Draft Spill Report will include the items outlined in section 3.2.1 of Attachment E-1 to the General order.

Within 15 calendar days of the spill end date, the City will submit a **Certified Spill Report for Category 2 spill**, to the online CIWQS Sanitary Sewer System Database. Upon completion of the Certified Spill Report, the online CIWQS Sanitary Sewer System Database will issue a final spill event identification number. The Certified Spill Report will include the items outlined in section 3.2.2 of Attachment E-1 to the General order.

13.3 Reporting for Category 3 Spills

The City will report and certify all Category 3 spills to the online CIWQS Sanitary Sewer System Database **within 30 calendar days** after the end of the month in which the spills occurred. (For example, all Category 3 spills occurring in the month of February shall be reported and certified by March 30th). After the Legally Responsible Official certifies the spills, the online CIWQS Sanitary Sewer System Database will issue a spill event identification number for each spill. The monthly reporting of all Category 3 spills must include the items outlined in section 3.3 of Attachment E-1 to the General order.

13.4 Reporting for Category 4 Spills

The City will report and certify the estimated total spill volume exiting the sanitary sewer system, and the total number of all Category 4 spills to the online CIWQS Sanitary Sewer System Database, **within 30 calendar days** after the end of the month in which the spills occurred.

For all Category 4 spills and spills from its owned and/or operated laterals that are caused by a failure or blockage in the lateral and that do not discharge to a surface water, the Enrollee will:

- Maintain records per section 4.4. of Attachment E-1 to the General Order; and
- **Annually** upload and certify a report, in an appropriate digital format, of all recordkeeping of spills to the online CIWQS Sanitary Sewer System Database, by **February 1st** after the end of the calendar year in which the spills occurred.

13.5 Amended Certified Spill Reports

Should The City need to amend a Certified Spill Report for **Spill Categories 1-3**, the City will do so within **90 calendar days** of the spill end date by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The City will certify the amended report.

Should The City need to amend a Certified Spill Report **after 90 calendar days** of the spill end date, the City will contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a Spill Report. The Legally Responsible Official will submit justification for why the additional information was not reported within the Amended Spill Report due date.

14. Electronic Reporting Procedures

Sanitary Sewer Overflows (SSOs) are reported electronically to the State Water Resources Control Board. Spill reports must be entered into the California Integrated Water Quality System (CIWQS), which can be found at https://ciwqs.waterboards.ca.gov/.

  View no spill certification.

Figure 17-2 SSO Electronic Reporting CIWQS Menu Screen

From this menu, select "Modify Existing SSO". The next screen will prompt the user to create either a new SSO report or Search for an existing SSO Report. Select Search and a Report similar to the one shown on the next page will be generated. The CIWQS System will generate a listing of all reported SSOs with the SSO Event ID. The Event ID can be used to collect detailed information from each event.

15. Spill Report Debriefing

After the sewer spill has been mitigated and no more than one week after the incident, a spill-debriefing meeting should be held to discuss any problems encountered during each phase of the spill response procedure. All personnel involved with the incident are to attend and ensure the spill debriefing meeting presents an opportunity to correct any noted deficiencies and to better prepare for and respond to future SSOs.

16. Collection System Mapping

The City maintains maps of the collection systems and the storm drains as either a sewer atlas, updated on a regular basis, or electronically in the form of Geographic Information System (GIS). Utility maps are available via the City intranet.

Sewer Atlas maps are located at the Water & Wastewater Superintendent's office and a copy is placed in each sewer collection vehicle.

17. Training

The Wastewater Collection staff will participate in an annual training session scheduled with appropriate staff in one of the three distinct types of training which would demonstrate the strengths/weaknesses of the SSO. The three distinct types of training exercises that the agencies will participate include:

Orientation Exercise: Exercise consisting of brief lecture; overview of the requirements; and past experiences. It will serve as a session to instruct employees on plan and required documentation.

Tabletop Exercise: SSO is simulated, without actual deployment of equipment or resources. Participants play through discussion and the use of a facilitator. Exercise effectiveness is determined by the feedback from participants and impact on revisions to plans, procedures and systems.

Functional Full Scale Exercise: A spill event is simulated during the exercise. Controllers monitor the play, and observers record the player's actions. The exercise will provide opportunity to evaluate the plan's objectives. It will also test equipment, response time, training, resource, and work force capabilities.

Records of training and event participation will be recorded and maintained. At this time, no certification requirements are required, but may be imposed later by the RWQCB.

18. Public Advisory Procedure

All media inquiries will be directed to the City's Public Information Officer or the position designated for this purpose by the City Manager.

18.1 Temporary Signage

In public accessed areas, signage and barriers must be in place for the duration of the cleanup and disinfection process. Signs warning the public of a sewage release should be posted in the affected area. Signs should include, at a minimum, the wording of "raw sewage" (See Figure 20-1). Warning signs should remain posted until the Department of Environmental Health Division of Riverside County or RWQCB staff authorizes their removal, or until receiving water sample results indicate background levels (levels determined by upstream samples) have been attained.

Figure 20-1 Sewage Spill Sign

19. SERP Maintenance

19.1 Submittal and Availability of the SERP

The SERP does not have to be submitted to the State or Regional Board. The SERP must, however, be available for their review during routine inspections. As such, the SERP will be available at the City's Utility Department in both hard copy and electronic versions.

19.2 Review and Update of SERP

The SERP is a dynamic document and will be reviewed and revised to reflect current policies and procedures as needed. The SERP will be reviewed each year. The annual review of the plan will also ensure all provisions of the plan are being met and implemented. Any SERP deficiencies and updates will be identified and corrected. Any proposed changes to the SERP will be adequately communicated and reviewed. Changes become final when approved by the Director of Water and Wastewater.

20. Tracking SSOs

Sanitary Sewer Overflows (SSOs) are tracked using the same system that is used for electronic reporting (CIWQS) to the State Water Resources Control Board. (https://ciwqs.waterboards.ca.gov/).

Sign in using the login name and password that has been set up and assigned to identified wastewater plant management and staff.

The Summary Report is an excellent tool for looking at spill history at a glance that shows how many spills occurred during certain time frames; the volume of each spill; the location; and other important information that helps the city identify causes and history patterns that may serve as indictors for SSMP improvement opportunities. The following Report can be generated by going to the State Water Resources Control Board SSO Public Report web page at: https://ciwqs.waterboards.ca.gov/ciwqs/readOnly/PublicReportSSOServlet?reportAction=criteria&reportId=sso_overview.

Select SSO Report. Next, fill out the City or Zip Code and the time-period of interest.

Most tables on the CIWQS website can be saved as Excel Spreadsheets for further data analysis if necessary. The City will use the Reports for identifying deficiencies in the current program and for evaluating the best methods for improving the effectiveness of the SSMP.

Additionally, a “No-Spill Certification” Report can be generated that indicates all months where no SSO occurred. A sample copy of the No Spill Report Certification is shown in Figure 20-1.

No Spill Certification:

I certify under penalty of law that no spills occurred for the month specified below. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of a fine or imprisonment, for knowing violations. Clicking the "Certify" button below indicates my certification of this report and my understanding of the above conditions.

Month/Year Without Spills:* - Select Month - - Select Year -

Appendix A-1
Sanitary Sewer Overflow (SSO) Report Form

Use this form to enter sanitary sewer overflow data for submittal into the State Water Resources Control Board CIWQS SSO Online Database (https://ciwqs.waterboards.ca.gov)

GENERAL INFORMATION

Name *(person completing this form)*: _____Phone: _____

Spill location description (address, cross streets, or GPD coordinates): _____

_____

SSO DETAILS & CLASSIFICATION

Spill was first discovered or reported to the City at: Date: ___Time: _____:_____am/pm

Identify the SSO spill type (See State Order WQ 2022-0103-DWQ Section 5.13.1) and enter below:

☐ **Category 1 SSO** – Spills of any volume that reach surface water or a *drainage conveyance system* when the sewage is not fully captured and returned to the sanitary sewer system

☐ **Category 2 SSO** – Spills > than or = to 1,000 gallons that do not reach surface water

☐ **Category 3 SSO** – Spills > than 50 gallons but < than 1,000 gallons that do not reach surface water

☐ **Category 4 SSO** – Spills less than 50 gallons that do not reach surface water

☐ **Private Sewer Lateral (PSL) SSO** – (See State Order WQ 2022-0103-DWQ Section 5.15 and 5.16)

Did any obstacles impede your response or assessment of the reported spill? ☐Yes ☐No
(If yes, please describe (e.g., weather, traffic, communications, etc.) _____

_____

SSO DETAILS & CLASSIFICATION (Continued)

Estimated spill start date/time: Date: _____Time:_____:_____am/pm
Estimated operator arrival date/time: Date: _____Time: _____:_____am/pm
Estimated spill end date/time: Date: _____Time: _____:_____am/pm

☐Building/Structure ☐Street Curb/Gutter ☐Paved Surface ☐Unpaved Surface

☐Storm Drain ☐Surface Water ☐Drainage Channel

☐Storm Water Infiltration/Retention Structure/Field

☐ Other *(specify)*: _____

Final spill destination *(Check all that apply and attach photos of all areas checked)*:

Did the spill discharge to land? (Includes discharges directly to land, and discharges to a storm drain system or drainage channel that flows to a storm water infiltration/retention structure, field, or other non-surface water location) ☐Yes ☐No (Include photos as needed)

- If Yes, estimated spill volume discharged to land:_____gallons
- Estimated spill volume recovered from discharge to land: *(Do not include water used for clean- up):* _____Gallons Did the spill reach the storm drain? ☐Yes ☐No
- If Yes, estimated spill volume that reached storm drain : _____gallons
- Estimated spill volume recovered from storm drain: _____gallons

Did the spill reach drainage channel? ☐Yes ☐No

- If Yes, estimated spill volume that reached discharge channel: _____gallons
- Estimated spill volume recovered from drainage channel: _____gallons

Did the spill reach surface waters? ☐Yes ☐No

- If Yes, estimated spill volume and the rate at which the spill reached surface waters: gallons, _____gallons per minute

Methods used to estimate spill volumes *(Check all that apply. Use Volume Estimation Forms to document spill dimensions, shapes, and other volume estimation information)*:

☐Eyeball Method ☐Calculations from Spill Dimensions ☐Duration and Flow Rate

☐Open Channel Spill Estimation ☐Drop Bucket Method ☐Calculations Based on Pipe Size ☐Flow from Vent or Pick Holes ☐Flow around Manhole Cover ☐Flow from Manhole w/o a Cover Spill estimated flow rate: _____gallons per minute

Spill appearance point *(Check all that apply)*:

☐Gravity Mainline ☐Inside Building or Structure ☐Manhole

☐Other Sewer System Structure *(specify)*: _____

Spill cause *(Check all that apply)*

☐Debris - General ☐Debris – Rags ☐Root Intrusion ☐Debris from Construction

SSO DETAILS & CLASSIFICATION (Continued)

☐Construction Diversion Failure ☐Collection System Maintenance Caused Spill/Damage ☐Damage by Others Not Related to Collection System

☐ Other (specify) _____

Where did failure occur? *(Check all that apply)*:

☐Gravity Mainline ☐Manhole ☐Inside Building or Structure

☐Other *(specify)*: _____

Was this spill associated with a storm event? ☐Yes ☐No

Diameter of sewer pipe at the point of blockage or failure: _____inches

SSO ACTIONS & NOTIFICATIONS

Spill response activities *(Check all that apply)*:

☐Cleaned-up ☐Contained All or Portion of Spill ☐Mitigated Effects of Spill ☐Restored Flow ☐Returned All of Spill to Sanitary Sewer System ☐Other Enforcement Agency Notified ☐Other *(specify):* _____

_____

Spill Response Completion Date: _____

Spill corrective action taken: *(Check all that apply):*

☐Added Sewer to Preventive Maintenance Program

☐Adjusted Schedule/Method of Preventive Maintenance

☐Inspected Sewer Using CCTV to Determine Cause

☐Plan Rehabilitation or Replacement of Sewer

☐Repaired Facilities or Replaced Defect

☐Other *(specify)* _____

Cal OES NOTIFICATION REQUIREMENTS (As soon as possible but no later than 2 hours after knowledge of spill; and notification can be provided without impeding cleanup or emergency measures)

Cal OES Control Number *(required for Spills > than or = 1,000 gallons)*: _____

Cal OES Called Date/Time *(required for Spills > than or = 1,000 gallons):*_____

Date: _____Time:_____:____am/pm

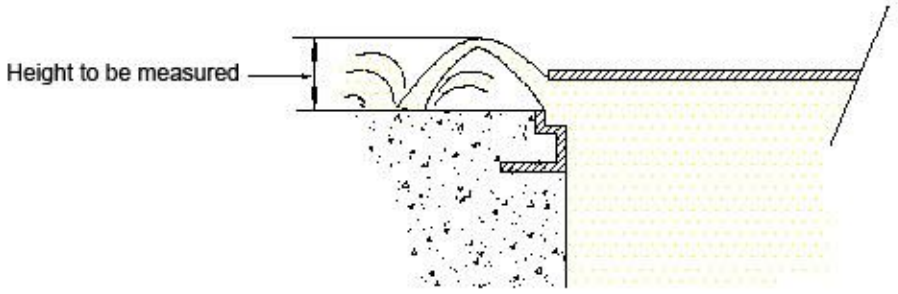
Disclaimer:
This sanitary sewer overflow table was developed by Ed Euyen, Civil Engineer, P.E. No. 33955, California, for County Sanitation District 1. This table is provided as an example. Other Agencies may want to develop their own estimating tables.



Collection System Collaborative Benchmarking Group
Best Practices for Sanitary Sewer Overflow (SSO) Prevention and Response Plan

The formula used to develop Table A measures the maximum height of the water coming out of the maintenance hole above the rim. The formula was taken from hydraulics and its application by A.H. Gibson (Constable & Co. Limited).

Example Overflow Estimation:

The maintenance hole cover is unseated and slightly elevated on a 24" casting. The maximum height of the discharge above the rim is 5 ¼ inches. According to Table A, these conditions would yield an SSO of 185 gallons per minute.

FLOW OUT OF M/H WITH COVER IN PLACE

This sanitary sewer overflow drawing was developed by Debbie Myers, Principal Engineering Technician, for Ed Euyen, Civil Engineer, P.E. No. 33955, California, of County Sanitation District 1.

Collection System Collaborative Benchmarking Group
Best Practices for Sanitary Sewer Overflow (SSO) Prevention and Response Plan

The formula used to develop Table B for estimating SSO's out of maintenance holes without covers is based on discharge over curved weir -- bell mouth spillways for 2" to 12" diameter pipes. The formula was taken from hydraulics and its application by A.H. Gibson (Constable & Co. Limited).

Example Overflow Estimation:

The maintenance hole cover is off and the flow coming out of a 36" frame maintenance hole at one inch (1") height will be approximately 660 gallons per minute.

FLOW OUT OF M/H WITH COVER REMOVED (TABLE "B")

This sanitary sewer overflow drawing was developed by Debbie Myers, Principal Engineering Technician, for Ed Euyen, Civil Engineer, P.E. No. 33955, California, of County Sanitation District 1.

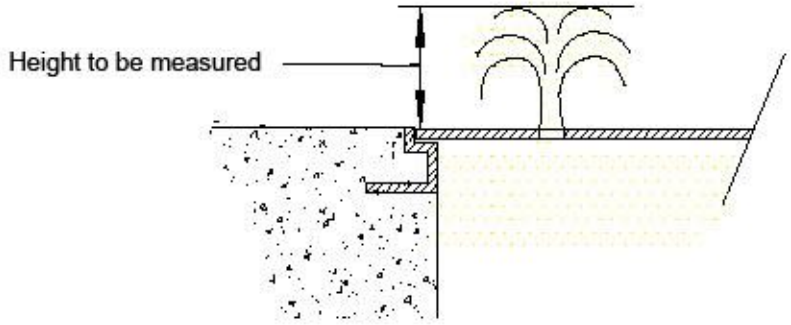
Disclaimer: This sanitary sewer overflow table was developed by Ed Euyen, Civil Engineer, P.E. No. 33955, California, for County Sanitation District 1. This table is provided as an example. Other Agencies may want to develop their own estimating tables.

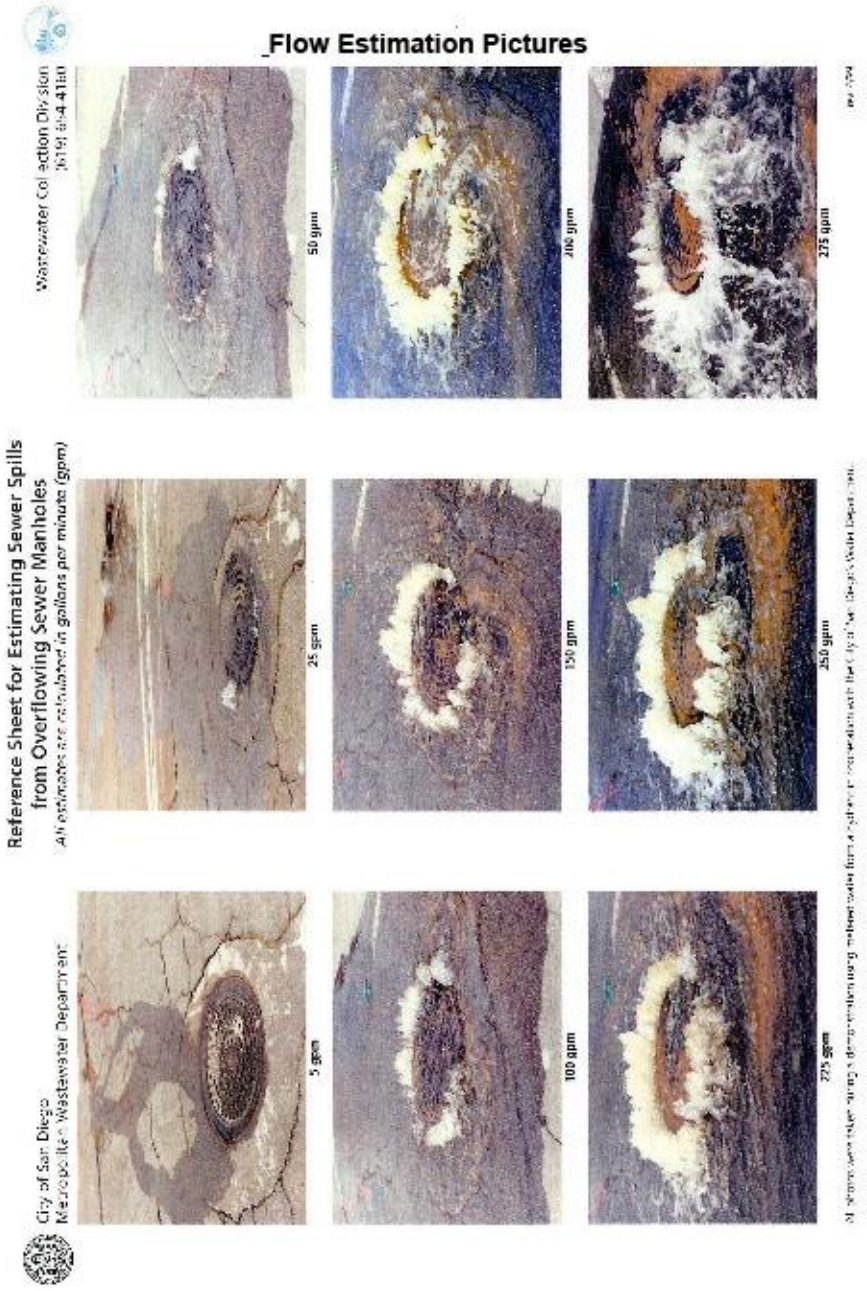


Collection System Collaborative Benchmarking Group
Best Practices for Sanitary Sewer Overflow (SSO) Prevention and Response Plan

The formula used to develop Table C is Q=CcVA, where Q is equal to the quantity of the flow in gallons per minute, Cc is equal to the coefficient of contraction (.63), V is equal to the velocity of the overflow, and A is equal to the area of the pick hole.[2] If all units are in feet, the quantity will be calculated in cubic feet per second, which when multiplied by 448.8 will give the answer in gallons per minute. (One cubic foot per second is equal to 448.8 gallons per minute, hence this conversion method).

Example Overflow Estimation:

The maintenance hole cover is in place and the height of water coming out of the pick hole seven-eighths of an inch in diameter (7/8") is 3 inches (3"). This will produce an SSO flow of approximately 4.7 gallons per minute.



FLOW OUT OF VENT OR PICK HOLE (TABLE "C")

This sanitary sewer overflow drawing was developed by Debbie Myers, Principal Engineering Technician, for Ed Euyen, Civil Engineer, P.E. No. 33955, California, of County Sanitation District 1.

[2] Velocity for the purposes of this formula is calculated by using the formula h = v squared / 2G, where h is equal to the height of the overflow, v is equal to velocity, and G is equal to the acceleration of gravity.

Collection System Collaborative Benchmarking Group
Best Practices for Sanitary Sewer Overflow (SSO) Prevention and Response Plan

APPENDIX A-3 – Summary of Notification, Monitoring and Reporting Requirements

Table A-3-1
Spill Category 1: Spills to Surface Waters

Spill Requirements	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a Category 1 spill of 1,000 gallons or greater, discharging or threatening to discharge to surface waters: Notify the California Office of Emergency Services and obtain a notification control number.	California Office of Emergency Services: (800) 852-7550
Monitoring	• Conduct spill-specific monitoring; • Conduct water quality sampling of the receiving water within **18 hours** of initial knowledge of spill of 50,000 gallons or greater to surface waters.	(Section 2 of Attachment E-1 to the General Order)
Reporting	• Submit Draft Spill Report **within three (3) business days** of the Enrollee's knowledge of the spill; • Submit Certified Spill Report **within 15 calendar days** of the spill end date; • Submit Technical Report **within 45 calendar days** after the spill end date for a Category 1 spill in which **50,000 gallons or greater** discharged to surface waters; and • Submit Amended Spill Report **within 90 calendar days** after the spill end date.	(Section 3.1 of Attachment E1 to the General Order)

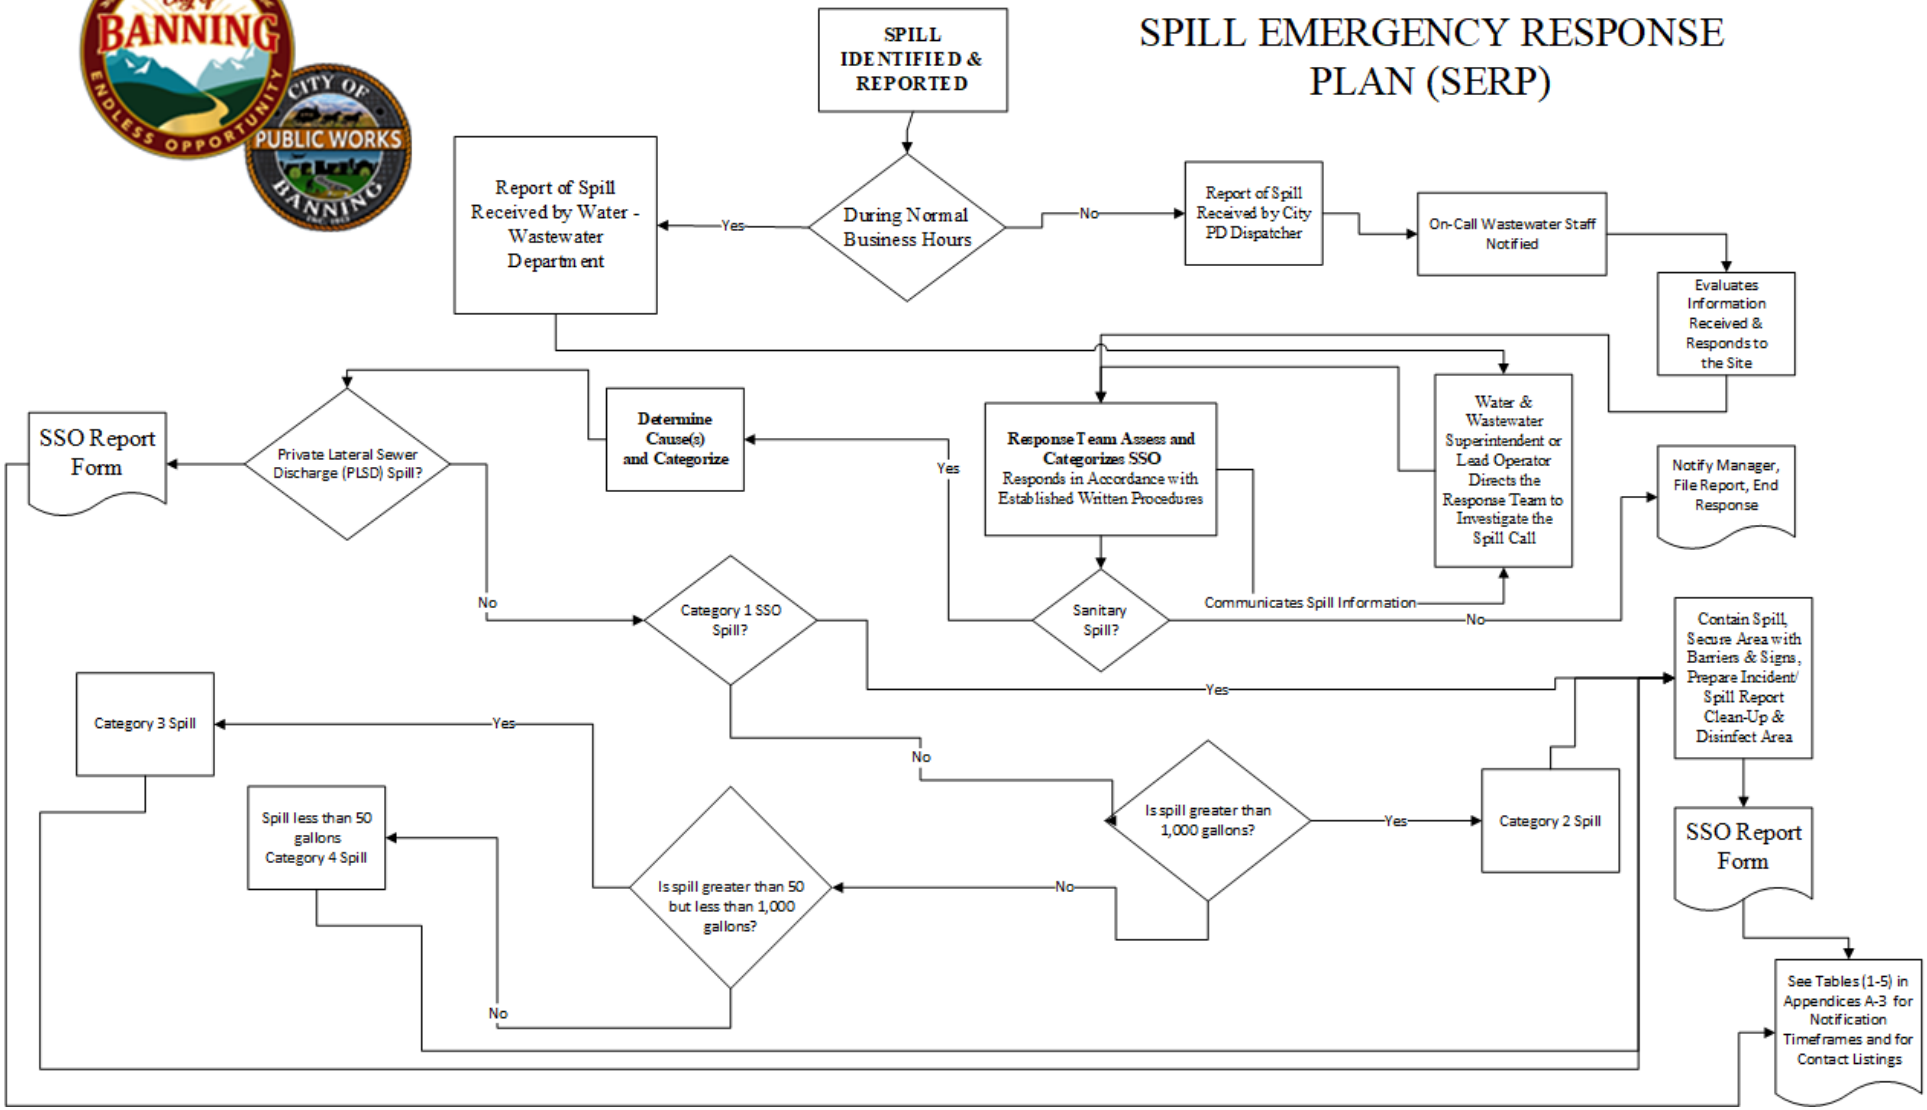
Table A-3-2
Spill Category 2: Spills of 1,000 Gallons or Greater That Do Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a Category 2 spill of 1,000 gallons or greater, discharging or threatening to discharge to waters of the State: Notify California Office of Emergency Services and obtain a notification control number.	California Office of Emergency Services: (800) 852-7550
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E-1 to the General Order)
Reporting	• Submit Draft Spill Report **within three (3) business days** of the Enrollee's knowledge of the spill; • Submit Certified Spill Report **within 15 calendar days** of the spill end date; and • Submit Amended Spill Report **within 90 calendar days** after the spill end date.	(Section 3.2 of Attachment E1 to the General Order)

Table A-3-3
Spill Category 3: Spills of Equal or Greater than 50 Gallons and Less than 1,000 Gallons That Does Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	Not Applicable	Not Applicable
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E-1 to the General Order)
Reporting	• Submit monthly Certified Spill Report to the online CIWQS Sanitary Sewer System Database within **30 calendars days** after the end of the month in which the spills occur; and • Submit Amended Spill Reports **within 90 calendar days** after the Certified Spill Report due date.	(Section 3.3 and 3.5 of Attachment E1 to the General Order)

Table A-3-4
Spill Category 4: Spills Less Than 50 Gallons That Do Not Discharge to Surface Waters



Spill Requirements	Due	Method
Notification	Not Applicable	Not Applicable
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E-1 to the General Order)
Reporting	• If, during any calendar month, Category 4 spills occur, certify monthly, the estimated total spill volume exiting the sanitary sewer system, and the total number of all Category 4 spills into the online CIWQS Sanitary Sewer System Database, within 30 days after the end of the calendar month in which the spills occurred. • Upload and certify a report, in an acceptable digital format, of all Category 4 spills to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occur.	(Section 3.4, 3.6, 3.7 and 4.4 of Attachment E1 to the General Order)

Table A-3-5
Enrollee Owned and/or Operated Lateral Spills That Do Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a spill of 1,000 gallons or greater, from an enrollee-owned and/or operated lateral, discharging or threatening to discharge to waters of the State: Notify California Office of Emergency Services and obtain a notification control number. Not applicable to a spill of less than 1,000 gallons	California Office of Emergency Services at: (800) 852-7550 (Section 1 of Attachment E1to the General Order)
Monitoring	Conduct visual monitoring.	(Section 2 of Attachment E-1 to the General Order)
Reporting	• Upload and certify a report, in an acceptable digital format, of all lateral spills (that do not discharge to a surface water) to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occur. • Report a lateral spill of any volume that discharges to a surface water as a Category 1 spill.	(Section 3.6, 3.7 and 4.4 of Attachment E1 to the General Order)

   - 4.1. Recordkeeping Time Period E1-20
   - 4.2. Availability of Documents E1-20
   - 4.3. Spill Reports E1-20
   - 4.4. Recordkeeping of Category 4 Spills and Non-Category 1 Lateral Spills E1-21
   - 4.5. Sewer System Telemetry Records E1-22
   - 4.6. Sewer System Management Plan Implementation Records E1-22
   - 4.7. Audit Records E1-23

4.8. Equipment Records E1-23
4.9. Work Orders E1-23

ATTACHMENT E1– NOTIFICATION, MONITORING, REPORTING AND RECORDKEEPING REQUIREMENTS

The Notification Requirements (section 1), Spill-specific Monitoring Requirements (section 2), Reporting Requirements (section 3) and Recordkeeping Requirements (section 4) in this Attachment are pursuant to Water Code section 13267 and section 13383, and are an enforceable component of this General Order. For the purpose of this General Order, the term:

- Notification means the notifying of appropriate parties of a spill event or other activity.
- Spill-specific Monitoring means the gathering of information and data for a specific spill event to be reported or kept as records.
- Reporting means the reporting of information and data into the online California Integrated Water Quality System (CIWQS) Sanitary Sewer System Database.
- Recordkeeping means the maintaining of information and data in an official records storage system.

Failure to comply with the notification, monitoring, reporting and recordkeeping requirements in this General Order may subject the Enrollee to civil liabilities of up to $10,000 a day per violation pursuant to Water Code section 13385; up to $1,000 a day per violation pursuant to Water Code section 13268; or referral to the Attorney General for judicial civil enforcement.

Water Code section 13193 et seq. requires the Regional Water Quality Control Boards (Regional Water Boards) and the State Water Resources Control Board (State Water Board) to collect sanitary sewer spill information for each spill event and make this information available to the public. Sanitary sewer spill information for each spill event includes but is not limited to: Enrollee contact information for each spill event, spill cause, estimated spill volume and factors used for estimation, location, date, time, duration, amount discharged to waters of the State, response and corrective action(s) taken.

1. NOTIFICATION REQUIREMENTS

1.1. *Notification of Spills of 1,000 Gallons or Greater to the California Office of Emergency Services*

Per Water Code section 13271, for a spill that discharges in or on any waters of the State, or discharges or is deposited where it is, or probably will be, discharged in or on any waters of the State, the Enrollee shall notify the California Office of Emergency Services and obtain a California Office of Emergency Services Control Number as soon as possible **but no later than two (2) hours** after:

- The Enrollee has knowledge of the spill; and
- Notification can be provided without substantially impeding cleanup or other emergency measures.

The notification requirements in this section apply to individual spills of 1,000 gallons or greater, from an Enrollee-owned and/or operated laterals, to a water of the State.

1.2. *Spill Notification Information*

The Enrollee shall provide the following spill information to the California Office of Emergency Services before receiving a Control Number, as applicable:

- Name and phone number of the person notifying the California Office of Emergency Services;
- Estimated spill volume (gallons);
- Estimated spill rate from the system (gallons per minute);
- Estimated discharge rate (gallons per minute) directly into waters of the State or indirectly into a drainage conveyance system;
- Spill incident description:
    - Brief narrative of the spill event, and
    - Spill incident location (address, city, and zip code) and closest cross streets and/or landmarks;
- Name and phone number of contact person on-scene;
- Date and time the Enrollee was informed of the spill event;
- Name of sanitary sewer system causing the spill;
- Spill cause or suspected cause (if known);
- Amount of spill contained;
- Name of receiving water body receiving or potentially receiving discharge; and
- Description of water body impact and/ or potential impact to beneficial uses.

1.3. *Notification of Spill Report Updates*

Following the initial notification to the California Office of Emergency Services and until such time that the Enrollee certifies the spill report in the online CIWQS Sanitary Sewer System Database, the Enrollee shall provide updates to the California Office of Emergency Services regarding substantial changes to:

- Estimated spill volume (increase or decrease in gallons initially estimated);
- Estimated discharge volume discharged directly into waters of the State or indirectly into a drainage conveyance system (increase or decrease in gallons initially estimated); and
- Additional impact(s) to the receiving water(s) and beneficial uses.

2. SPILL-SPECIFIC MONITORING REQUIREMENTS

2.1 *Spill Location and Spread*

The Enrollee shall visually assess the spill location(s) and spread using photography, global positioning system (GPS), and other best available tools. The Enrollee shall document the critical spill locations, including:

- Photography and GPS coordinates for:
  - The system location where spill originated.

    For multiple appearance points of a single spill event, the points closest to the spill origin.
- Photography for:
  - Drainage conveyance system entry locations,
  - The location(s) of discharge into surface waters, as applicable,
  - Extent of spill spread, and
  - The location(s) of clean up.

2.2 *Spill Volume Estimation*

To assess the approximate spill magnitude and spread, the Enrollee shall estimate the total spill volume using updated volume estimation techniques, calculations, and documentation for electronic reporting. The Enrollee shall update its notification and reporting of estimated spill volume (which includes spill volume recovered) as further information is gathered during and after a spill event.

2.3. *Receiving Water Monitoring*

2.3.1. Receiving Water Visual Observations

Through visual observations and use of best available spill volume-estimating techniques and field calculation techniques, the Enrollee shall gather and document the following information for spills discharging to surface waters:

- Estimated spill travel time to the receiving water;
- For spills entering a drainage conveyance system, estimated spill travel time from the point of entry into the drainage conveyance system to the point of discharge into the receiving water;
- Estimated spill volume entering the receiving water; and
- Photography of:
  - Waterbody bank erosion,
  - Floating matter,
  - Water surface sheen (potentially from oil and grease),

- Discoloration of receiving water, and
- Impact to the receiving water.

2.3.2. *Receiving Water – Water Quality Sampling and Analysis*

For sewage spills in which an estimated 50,000 gallons or greater are discharged into a surface water, the Enrollee shall conduct the following water quality sampling no later than **18 hours** after the Enrollee's knowledge of a potential discharge to a surface water:

- Collect one water sample, each day of the duration of the spill, at:
  - The DCS-001 location as described in section 2.3.4 (Receiving Water Sampling Locations) of this Attachment, if sewage discharges to a surface water via a drainage conveyance system; and/or
  - Each of the three receiving water sampling locations in section 2.3.4 (Receiving Water Sampling Locations) of this Attachment;

    If the receiving water has no flow during the duration of the spill, the Enrollee must report "No Sampling Due To No Flow" for its receiving water sampling locations.

The Enrollee shall analyze the collected receiving water samples for the following constituents per section 2.3.3 (Water Quality Analysis Specifications) of this Attachment:

- Ammonia, and
- Appropriate bacterial indicator(s) per the applicable Basin Plan water quality objectives, including one or more of the following, unless directed otherwise by the Regional Water Board:
  - Total Coliform Bacteria
  - Fecal Coliform Bacteria
  - *E-coli*
  - Enterococcus

Dependent on the receiving water(s), sampling of bacterial indicators shall be sufficient to determine post-spill (after the spill) compliance with the water quality objectives and bacterial standards of the California Ocean Plan or the California Inland Surface Water Enclosed Bays, and Estuaries Plan, including the frequency and/or number of post-spill receiving water samples as may be specified in the applicable plans.

The Enrollee shall collect and analyze additional samples as required by the applicable Regional Water Board Executive Officer or designee.

2.3.3. *Water Quality Analysis Specifications*

Spill monitoring must be representative of the monitored activity (40 Code of Federal Regulations section 122.41(j)(1)).

Sufficiently Sensitive Methods

Sample analysis must be conducted according to sufficiently sensitive test methods approved under 40 Code of Federal Regulations Part 136 for the sample analysis of pollutants. For the purposes of this General Order, a method is sufficiently sensitive when the minimum level of the analytical method approved under 40 Code of Federal Regulations Part 136 is at or below the receiving water pollutant criteria.

Environmental Laboratory Accreditation Program-Accredited Laboratories

The analysis of water quality samples required per this General Order must be performed by a laboratory that has accreditation pursuant to Article 3 (commencing with section 100825) of Chapter 4 of Part 1 of Division 101 of the Health and Safety Code. (Water Code section 13176(a).) The State Water Board accredits laboratories through its Environmental Laboratory Accreditation Program (ELAP).

2.3.4. *Receiving Water Sampling Locations*

The Enrollee shall collect receiving water samples at the following locations.

20.1 *Sampling of Flow in Drainage Conveyance System (DCS) Prior to Discharge*

Sampling Location	Sampling Location Description
DCS-001	A point in a drainage conveyance system before the drainage conveyance system flow discharges into a receiving water.

Receiving Surface Water Sampling (RSW)[1]

Sampling Location	Sampling Location Description
RSW-001 Point of Discharge	A point in the receiving water where sewage initially enters the receiving water.
RSW-001U: Upstream of Point of Discharge	A point in the receiving water, upstream of the point of sewage discharge, to capture ambient conditions absent of sewage discharge impacts.

Sampling Location	Sampling Location Description
RSW-001D: Downstream of Point of Discharge	A point in the receiving water, downstream of the point of sewage discharge, where the spill material is fully mixed with the receiving water.

[1] The Enrollee must use its best professional judgment to determine the upstream and downstream distances based on receiving water flow, accessibility to upstream/downstream waterbody banks, and size of visible sewage plume.

2.4. *Safety and Access Exceptions*

If the Enrollee encounters access restrictions or unsafe conditions that prevents its compliance with spill response requirements or monitoring requirements in this General Order, the Enrollee shall provide documentation of access restrictions and/or safety hazards in the corresponding required report.

3. REPORTING REQUIREMENTS

All reporting required in this General Order must be submitted electronically to the online CIWQS Sanitary Sewer System Database (https://ciwqs.waterboards.ca.gov), unless specified otherwise in this General Order. Electronic reporting may solely be conducted by a Legally Responsible Official or Data Submitter(s) previously designated by the Legally Responsible Official, as required in section 5.8 (Designation of Data Submitters) of this General Order.

The Enrollee shall report any information that is protected by the Homeland Security Act, by email to SanitarySewer@waterboards.ca.gov, with a brief explanation of the protection provided by the Homeland Security Act for the subject report to be protected from unauthorized disclosure and/or public access, and for official Water Board regulatory purposes only.

3.1. *Reporting Requirements for Individual Category 1 Spill Reporting*

3.1.1. Draft Spill Report for Category 1 Spills

Within three (3) business days of the Enrollee's knowledge of a Category 1 spill, the Enrollee shall submit a Draft Spill Report to the online CIWQS Sanitary Sewer System Database.

The Draft Spill Report must, at minimum, include the following items:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Date and time the Enrollee was notified of, or self-discovered, the spill;
4. Operator arrival time;

5. Estimated spill start date and time;
6. Date and time the Enrollee notified the California Office of Emergency Services, and the assigned control number;
7. Description, photographs, and GPS coordinates of the system location where the spill originated;
    - If a single spill event results in multiple appearance points, provide GPS coordinates for the appearance point closest to the failure point and describe each additional appearance point in the spill appearance point explanation field;
8. Estimated total spill volume exiting the system;
9. Description and photographs of the extent of the spill and spill boundaries;
10. Did the spill reach a drainage conveyance system? If Yes:
    - Description of the drainage conveyance system transporting the spill;
    - Photographs of the drainage conveyance system entry location(s);
    - Estimated spill volume fully recovered from the drainage conveyance system;
    - Estimated spill volume remaining within the drainage conveyance system;
11. Description and photographs of all discharge point(s) into the surface water;
12. Estimated spill volume that discharged to surface waters; and
13. Estimated total spill volume recovered.

3.1.2. *Certified Spill Report for Category 1 Spills*

Within 15 calendar days of the spill end date, the Enrollee shall submit a Certified Spill Report for Category 1 spills, to the online CIWQS Sanitary Sewer System Database. Upon completion of the Certified Spill Report, the online CIWQS Sanitary Sewer System Database will issue a final spill event identification number.

The Certified Spill Report must, at minimum, include the following mandatory information in addition to all information in the Draft Spill Report per section 3.1.1 (Draft Spill Report for Category 1 Spills) above:

1. Description of the spill event destination(s), including GPS coordinates if available, that represent the full spread and reach of the spill;
2. Spill end date and time;
3. Description of how the spill volume estimations were calculated, including at a minimum:
    - The methodology, assumptions and type of data relied upon, such as supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
    - The methodology(ies), assumptions and type of data relied upon for estimations of the spill start time and the spill end time;

4. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
5. System failure location (for example, main, lateral, pump station, etc.);
6. Description of the pipe material, and estimated age of the pipe material, at the failure location;
7. Description of the impact of the spill;
8. Whether or not the spill was associated with a storm event;
9. Description of spill response activities including description of immediate spill containment and cleanup efforts;
10. Description of spill corrective action, including steps planned or taken to reduce, eliminate, and prevent reoccurrence of the spill, and a schedule of major milestones for those steps;
11. Spill response completion date;
12. Detailed narrative of investigation and investigation findings of cause of spill;
13. Reasons for an ongoing investigation (as applicable) and the expected date of completion;
14. Name and type of receiving water body(s);
15. Description of the water body(s), including but not limited to:
    - Observed impacts on aquatic life,
    - Public closure, restricted public access, temporary restricted use, and/or posted health warnings due to spill,
    - Responsible entity for closing/restricting use of water body, and
    - Number of days closed/restricted as a result of the spill.
16. Whether or not the spill was located within 1,000 feet of a municipal surface water intake; and
17. If water quality samples were collected, identify sample locations and the parameters the water quality samples were analyzed for. If no samples were taken, Not Applicable shall be selected.

3.1.3. *Spill Technical Report for Individual Category 1 Spill in which 50,000 Gallons or Greater Discharged into a Surface Water*

For any spill in which 50,000 gallons or greater discharged into a surface water, **within 45 calendar days** of the spill end date, the Enrollee shall submit a Spill Technical Report to the online CIWQS Sanitary Sewer System Database. The Spill Technical Report, at minimum, must include the following information:

1. Spill causes and circumstances, including at minimum:
    - Complete and detailed explanation of how and when the spill was discovered;

- Photographs illustrating the spill origin, the extent and reach of the spill, drainage conveyance system entrance and exit, receiving water, and post-cleanup site conditions;
- Diagram showing the spill failure point, appearance point(s), the spill flow path, and ultimate destinations;
- Detailed description of the methodology employed, and available data used to calculate the discharge volume and, if applicable, the recovered spill volume;
- Detailed description of the spill cause(s);
- Description of the pipe material, and estimated age of the pipe material, at the failure location;
- Description of the impact of the spill;
- Copy of original field crew records used to document the spill; and
- Historical maintenance records for the failure location.

2. Enrollee's response to the spill:
   - Chronological narrative description of all actions taken by the Enrollee to terminate the spill;
   - Explanation of how the Sewer System Management Plan Spill Emergency Response Plan was implemented to respond to and mitigate the spill; and
   - Final corrective action(s) completed and a schedule for planned corrective actions, including:
     - Local regulatory enforcement action taken against an illicit discharge in response to this spill, as applicable,
     - Identifiable system modifications, and operation and maintenance program modifications needed to prevent repeated spill occurrences, and
     - Necessary modifications to the Emergency Spill Response Plan to incorporate lessons learned in responding to and mitigating the spill.
3. Water Quality Monitoring, including at minimum:
   - Description of all water quality sampling activities conducted;
   - List of pollutant and parameters monitored, sampled and analyzed; as required in section 2.3 (Receiving Water Monitoring) of this Attachment;
   - Laboratory results, including laboratory reports;
   - Detailed location map illustrating all water quality sampling points; and
   - Other regulatory agencies receiving sample results (if applicable).

4. Evaluation of spill impact(s), including a description of short-term and long-term impact(s) to beneficial uses of the surface water.

3.1.4. *Amended Certified Spill Reports for Individual Category 1 Spills*

The Enrollee shall update or add additional information to a Certified Spill Report within **90 calendar days** of the spill end date by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The Enrollee shall certify the amended report.

After **90 calendar days**, the Enrollee shall contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a Spill Report. The Legally Responsible Official shall submit justification for why the additional information was not reported within the Amended Spill Report due date.

3.2. *Reporting Requirements for Individual Category 2 Spill Reporting*

3.2.1. Draft Spill Report for Category 2 Spills

Within three (3) business days of the Enrollee's knowledge of a Category 2 spill, the Enrollee shall submit a Draft Spill Report to the online CIWQS Sanitary Sewer System Database.

The Draft Spill Report must, at minimum, include the following items:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Date and time the Enrollee was notified of, or self-discovered, the spill;
4. Operator arrival time;
5. Estimated spill start date and time;
6. Date and time the Enrollee notified the California Office of Emergency Services, and the assigned control number;
7. Description, photographs, and GPS coordinates of the system location where the spill originated;

   If a single spill event results in multiple appearance points, provide GPS coordinates for the appearance point closest to the failure point and describe each additional appearance point in the spill appearance point explanation field;
8. Estimated total spill volume exiting the system;
9. Description and photographs of the extent of the spill and spill boundaries;
10. Did the spill reach a drainage conveyance system? If Yes:
    - Description of the drainage conveyance system transporting the spill;
    - Photographs of the drainage conveyance system entry location(s);
    - Estimated spill volume fully recovered from the drainage conveyance system;
    - Estimated spill volume remaining within the drainage conveyance system;

- Estimated spill volume discharged to a groundwater infiltration basin or facility, if applicable; and

11. Estimated total spill volume recovered.

3.2.2. *Certified Spill Report for Category 2 Spills*

Within 15 calendar days of the spill end date, the Enrollee shall submit a Certified Spill Report for the Category 2 spill, to the online CIWQS Sanitary Sewer System Database (https://ciwqs.waterboards.ca.gov). Upon completion of the Certified Spill Report, the online CIWQS Sanitary Sewer System Database will issue a final spill event identification number.

The Certified Spill Report must, at minimum, include the following mandatory information in addition to all information in the Draft Spill Report per section 3.2.1 (Draft Spill Report for Category 2 Spills) above:

1. Description of the spill event destination(s), including GPS coordinates if available, that represent the full spread and reach of the spill;
2. Spill end date and time;
3. Description of how the spill volume estimations were calculated, including at a minimum:
    - The methodology, assumptions and type of data relied upon, such as supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
    - The methodology(ies), assumptions and type of data relied upon for estimations of the spill start time and the spill end time;
4. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
5. System failure location (for example, main, pump station, etc.);
6. Description of the pipe/infrastructure material, and estimated age of the pipe material, at the failure location;
7. Description of the impact of the spill;
8. Whether or not the spill was associated with a storm event;
9. Description of spill response activities including description of immediate spill containment and cleanup efforts;
10. Description of spill corrective action, including steps planned or taken to reduce, eliminate, and prevent reoccurrence of the spill, and a schedule of major milestones for those steps;
11. Spill response completion date;
12. Detailed narrative of investigation and investigation findings of cause of spill;
13. Reasons for an ongoing investigation (as applicable) and the expected date of completion; and

14. Whether or not the spill was located within 1,000 feet of a municipal surface water intake.

3.2.3. *Amended Certified Spill Reports for Individual Category 2 Spills*

The Enrollee shall update or add additional information to a Certified Spill Report within **90 calendar days** of the spill end date by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The Enrollee shall certify the amended report.

After **90 calendar days**, the Enrollee shall contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a Spill Report. The Legally Responsible Official shall submit justification for why the additional information was not reported within the Amended Spill Report due date.

3.3. *Monthly Certified Spill Reporting for Category 3 Spills*

The Enrollee shall report and certify all Category 3 spills to the online CIWQS Sanitary Sewer System Database within 30 calendar days after the end of the month in which the spills occurred. (For example, all Category 3 spills occurring in the month of February shall be reported and certified by March 30th). After the Legally Responsible Official certifies the spills, the online CIWQS Sanitary Sewer System Database will issue a spill event identification number for each spill.

The monthly reporting of all Category 3 spills must include the following items for each spill:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Date and time the Enrollee was notified of, or self-discovered, the spill;
4. Operator arrival time;
5. Estimated spill start date and time;
6. Description, photographs, and GPS coordinates where the spill originated:
    - If a single spill event results in multiple appearance points, provide GPS coordinates for the appearance point closest to the failure point and describe each additional appearance point in the spill appearance point explanation field;
7. Estimated total spill volume exiting the system;
8. Description and photographs of the extent of the spill and spill boundaries;
9. Did the spill reach a drainage conveyance system? If Yes:
    - Description of the drainage conveyance system transporting the spill;
    - Photographs of the drainage conveyance system entry locations(s);
    - Estimated spill volume fully recovered from the drainage conveyance system; and

- Estimated spill volume discharged to a groundwater infiltration basis or facility, if applicable.

10. Estimated total spill volume recovered;
11. Description of the spill event destination(s), including GPS coordinates, if available, that represent the full spread and reaches of the spill;
12. Spill end date and time;
13. Description of how the spill volume estimations were calculated, including, at minimum:
    - The methodology and type of data relied upon, including supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
    - The methodology and type of data relied upon to estimate the spill start time, on-going spill rate at time of arrival (if applicable), and the spill end time;
14. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
15. System failure location (for example, main, pump station, etc.);
16. Description of the pipe/infrastructure material, and estimated age of the pipe/infrastructure material, at the failure location;
17. Description of the impact of the spill;
18. Whether or not the spill was associated with a storm event;
19. Description of spill response activities including description of immediate spill containment and cleanup efforts;
20. Description of spill corrective actions, including steps planned or taken to reduce, eliminate, and prevent reoccurrence of the spill, and a schedule of the major milestones for those steps; including, at minimum:
    - Local regulatory enforcement action taken against an illicit discharge in response to this spill, as applicable, and
    - Identifiable system modifications, and operation and maintenance program modifications needed to prevent repeated spill occurrences at the same spill event location, including:
        - Adjusted schedule/method of preventive maintenance,
        - Planned rehabilitation or replacement of sanitary sewer asset,
        - Inspected, repaired asset(s), or replaced defective asset(s),
        - Capital improvements,
        - Documentation verifying immediately implemented system modifications and operating/maintenance modifications,
        - Description of spill response activities,

- Spill response completion date, and
- Ongoing investigation efforts, and expected completion date of investigation to determine the full cause of spill;

21. Detailed narrative of investigation and investigation findings of cause of spill.

3.4. *Monthly Certified Spill Reporting for Category 4 Spills*

The Enrollee shall report and certify the estimated total spill volume exiting the sanitary sewer system, and the total number of all Category 4 spills to the online CIWQS Sanitary Sewer System Database, within 30 calendar days after the end of the month in which the spills occurred.

3.5. *Amended Certified Spill Reports for Category 3 Spills*

Within 90 calendar days of the certified Spill Report due date, the Enrollee may update or add additional information to a certified Spill Report by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The Enrollee shall certify the amended report.

After 90 calendar days, the Legally Responsible Official shall contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a certified Spill Report. The Legally Responsible Official shall submit justification for why the additional information was not reported within the 90-day timeframe for amending the certified Spill Report, as provided above.

3.6. *Annual Certified Spill Reporting of Category 4 and/or Lateral Spills*

For all Category 4 spills and spills from its owned and/or operated laterals that are caused by a failure or blockage in the lateral and that do not discharge to a surface water, the Enrollee shall:

- Maintain records per section 4.4. of this Attachment;

  The Enrollee shall provide records upon request by State Water Board or Regional Water Board staff.

- Annually upload and certify a report, in an appropriate digital format, of all recordkeeping of spills to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occurred.

A spill from an Enrollee-owned and/or operated lateral that discharges to a surface water is a Category 1 spill; the Enrollee shall report all Category 1 spills per section 3.1 of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order.

3.7. *Monthly Certification of "No-Spills" or "Category 4 Spills" and/or "Non-Category 1 Lateral Spills"*

If either (1) no spills occur during a calendar month or (2) only Category 4, and/or Enrollee-owned and/or operated lateral spills (that do not discharge to a surface water) occur during a calendar month, the Enrollee shall certify, within 30 calendar days after

the end of each calendar month, either a “No-Spill” certification statement, or a “Category 4 Spills” and/or “Non-Category 1 Lateral Spills” certification statement, in the online CIWQS Sanitary Sewer System Database, certifying that there were either no spills, or Category 4 and/or Non-Category 1 Lateral Spills that will be reported annually (per section 3.6 of this Attachment) for the designated month.

If a spill starts in one calendar month and ends in a subsequent calendar month, and the Enrollee has no further spills of any category, in the subsequent calendar month, the Enrollee shall certify “no-spills” for the subsequent calendar month.

If the Enrollee has no spills from its systems during a calendar month, but the Enrollee voluntarily reported a spill from a private lateral or a private system, the Enrollee shall certify “no-spills” for that calendar month.

If the Enrollees has spills from its owned and/or operated laterals during a calendar month, the Enrollee shall not certify “no spills” for that calendar month.

3.8. *Electronic Sanitary Sewer System Service Area Boundary Map*

The Legally Responsible Official shall submit, to the State Water Board, an up-to-date electronic spatial map of its sewer system service area boundaries. The map must be in accordance with section 5.14 (Electronic Sanitary Sewer System Service Area Boundary Map) of this General Order and the specification provided on the statewide Sanitary Sewer Systems program website. The map must include the location of wastewater treatment facility(ies) that treats the sewer system waste, if in the same sewer service boundary.

By the Effective Date of this General Order, specifications for the electronic sanitary sewer service area boundary map format will be provided on the statewide Sanitary Sewer Systems Order program website.

3.9. *Annual Report (Previously termed as Collection System Questionnaire in General Order 2006-0003-DWQ)*

A new Enrollee shall complete and submit its first certified Annual Report into the online CIWQS Sanitary Sewer System Database, **within 30 days of obtaining a CIWQS account**; Subsequent Annual Reports are due by April 1 of each year.

All enrollees shall update their previous year’s Annual Report, **by April 1 of each year after the Effective Date of this General Order,** for each calendar year (January 1 through December 31)**.**

The Annual Report must be entered directly into the online CIWQS Sanitary Sewer System Database. The Enrollee’s Legally Responsible Official shall certify the Annual Report as instructed in CIWQS;

The Annual Report must address, and update as applicable, the following items:

- Population served;Updated sewer system service area boundary map, if service area boundary has changed from original map submitted per section 5.14 (Electronic Sanitary Sewer System Service Area Boundary Map) of this General Order;
- Number of system operation and maintenance staff:
    - Entry level (less than two years of experience),
    - Journey level (greater than two years of experience),
    - Supervisory level, and
    - Managerial level;
- Number of operation and maintenance staff certified as a certified collection system operator by the California Water Environmental Association (CWEA), with:
    - Corresponding number of certified collection system operator grade levels (Grade I, II, III, IV, and V);
- System information:
    - Miles of system gravity and force mains,
    - Number of upper and lower service laterals connected to system,
    - Estimated number of upper and lower laterals owned and/or operated by the Enrollee,
    - Portion of laterals that is Enrollee's responsibility,
    - Average age the major components of system infrastructure,
    - Number and age of pump stations, and
    - Estimated total miles of the system pipeline not accessible for maintenance;
- Name and location of the treatment plant(s) receiving sanitary sewer system's waste;
- Name of satellite sewer system tributaries;
- Number of system's gravity sewer above or underground crossings of water bodies throughout system;
- Number of force main (pressurized pipe) above or underground crossings of water bodies throughout system;
- Number of siphons used to convey waste throughout the sewer system;
- Miles of sewer system cleaned;
- Miles of sewer system video inspected, or comparable (i.e., video closed-circuit television or alternative inspection methods);
- System Performance Evaluation as specified in section 5.11 (System Performance Analysis) of this General Order;
- Major spill causes (for example, root intrusion, grease deposition);

- System infrastructure failure points (for example, main, pump station, lateral, etc.);
- Ongoing spill investigations; and
- Actions taken to address system deficiencies.

3.10. *Sewer System Management Plan Audit Reporting Requirements*

The Enrollee shall submit its Sewer System Management Plan Audit and other pertinent audit information, in accordance with section 5.4 (Sewer System Management Plan Audits) of this General Order, to the online CIWQS Sanitary Sewer System Database **by six (6) months after the end of the 3-year audit period**.

If a Sewer System Management Plan Audit is not conducted as required: the Enrollee shall:

- Update the online CIWQS Sanitary Sewer System Database and select the justification for not conducting the Audit; and
- Notify its corresponding Regional Water Board (see Attachment F (Regional Water Quality Control Board Contact Information)) of the justification for the lapsed requirements.

The Enrollee's reporting of a justification for not conducting a timely Audit does not justify non-compliance with this General Order. The Enrollee shall:

- Submit the late Audit as required in this General Order; and
- Comply with subsequent Audit requirements and due dates corresponding with the original audit cycle.

3.11. *Sewer System Management Plan Reporting Requirements*

For an Existing Enrollee previously regulated by Order 2006-0003-DWQ: **Within every six (6) years after the required due date of its last Plan Update**, the Legally Responsible Official shall upload and certify a local governing entity-approved Sewer System Management Plan Update to the online CIWQS Sanitary Sewer System Database. If the electronic document format or size capacity prevents the electronic upload of the Plan, the Legally Responsible Official shall report an electronic link to its updated Sewer System Management Plan posted on its own website.

Order 2006-0003-DWQ required each enrollee to develop its initial Sewer System Management Plan per the following schedule, with required Plan updates at a frequency of 5-years thereafter:

Systems serving populations: Greater than 100,000: May 2, 2009

Between 100,000 and 10,000: August 2, 2009

Between 10,000 and 2,500: May 2, 2010

Less than 2,500: August 2, 2010

This Order carries forth the previously-required Plan Update schedule per Order 2006-0003-DWQ. Per the six-year Plan Update frequency required in this Order, the Enrollee shall upload and certify its first Plan Update, to the online CIWQS Sanitary Sewer System Database by the following due dates, with subsequent Plan Updates at the frequency of six years thereafter:

Systems serving populations: Greater than 100,000: May 2, 2025

Between 100,000 and 10,000: August 2, 2025

Between 10,000 and 2,500: May 2, 2026

Less than 2,500: August 2, 2026

For a New Enrollee: **Within twelve (12) months of its Application for Enrollment Approval date**, the Legally Responsible Official of a new Enrollee shall upload and certify a local governing entity-approved Sewer System Management Plan to the online CIWQS Sanitary Sewer System Database. If electronic document format or size capacity prevents the electronic upload of the Plan, the Legally Responsible Official shall report an electronic link to its Sewer System Management Plan posted on its own website. The due date for subsequent 6-year Plan updates, is six (6) years from the submittal due date of the new Enrollee's first Sewer System Management Plan.

4. RECORDKEEPING REQUIREMENTS

The Enrollee shall maintain records to document compliance with the provisions of this General Order, and previous General Order 2006-0003-DWQ as applicable, for each sanitary sewer system owned, including any required records generated by an Enrollee's contractor(s).

4.1. *Recordkeeping Time Period*

The Enrollee shall maintain records of documents required in this Attachment, including records collected for compliance with this General Order, and records collected in accordance with previous General Order 2006-0003-DWQ, for five (5) years.

4.2. *Availability of Documents*

The Enrollee shall make the records required in this General Order readily available, either electronic or hard copies, for review by Water Board staff during onsite inspections or through an information request.

4.3. *Spill Reports*

The Enrollee shall maintain records for each of the following spill-related events and activities:

- Spill event complaint, including but not limited to records documenting how the Enrollee responded to notifications of spills. Each complaint record must, at a minimum, include the following information:
    - Date, time, and method of notification,

- Date and time the complainant first noticed the spill, if available,
- Narrative description of the complaint, including any information the caller provided regarding whether the spill has reached surface waters or a drainage conveyance system, if available,
- Complainant's contact information, if available, and
- Final resolution of the complaint;

- Records documenting the steps and/or remedial action(s) undertaken by the Enrollee, using all available information, to comply with this General Order, and previous General Order 2006-0003-DWQ as applicable;
- Records documenting how estimate(s) of volume(s) and, if applicable, volume(s) of spill recovered were calculated;
- All California Office of Emergency Services notification records, as applicable; and
- Records, in accordance with the Monitoring Requirements in this Attachment.

4.4. *Recordkeeping of Category 4 Spills and Non-Category 1 Lateral Spills*

An Enrollee must maintain the following records for each individual Category 4 spill and for each individual non-Category 1 Enrollee-owned and/or operated lateral spill, and report in accordance to section 3.6 (Annual Certified Spill Reporting of Category 4 and/or Lateral Spills) of this Attachment.

Recordkeeping of Individual Category 4 Spill Information:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Description and GPS coordinates for the system location where the spill originated;
4. Did the spill reach a drainage conveyance system? If Yes:
   - Description of drainage conveyance system location,
   - Estimated spill volume fully recovered within the drainage conveyance system, and
   - Estimated spill volume remaining within the drainage conveyance system;
5. Estimated total spill volume exiting the sanitary sewer system;
6. Spill date and start time;
7. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
8. System failure location (for example, main, pump station, etc.);
9. Description of spill response activities including description of immediate spill containment and cleanup efforts;
10. Description of how the volume estimation was calculated, including, at minimum:

- The methodology and type of data relied upon, including supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
- The methodology and type of data relied upon to estimate the spill start time, on- going spill rate at time of arrival (if applicable), and the spill end time;

11. Description of implemented system modifications and operating/maintenance modifications.

Recordkeeping of Individual Lateral Spill Information:

1. Date and time the Enrollee was notified of, or self-discovered, the spill;
2. Location of individual spill;
3. Estimated individual spill volume;
4. Spill cause(s) (for example, root intrusion, grease deposition, etc.); and
5. Description of how the volume estimations were calculated.

Total Annual Spill Information:

1. Estimated total annual spill volume;
2. Description of spill corrective actions, including at minimum:
   - Local regulatory enforcement action taken against the sewer lateral owner in response to a spill, as applicable, and
   - System operation, maintenance and program modifications implemented to prevent repeated spill occurrences at the same spill location.

4.5. *Sewer System Telemetry Records*

The Enrollee shall maintain the following sewer system telemetry records if used to document compliance with this General Order, and previous General Order 2006-0003-DWQ as applicable, including spill volume estimates:

- Supervisory control and data acquisition (SCADA) system(s);
- Alarm system(s);
- Flow monitoring device(s) or other instrument(s) used to estimate sewage flow rates, and/or volumes;
- Computerized maintenance management system records; and
- Asset management-related records.

4.6. *Sewer System Management Plan Implementation Records*

The Enrollee shall maintain records documenting the Enrollee's implementation of its Sewer System Management Plan, including documents supporting its Sewer System Management Plan audits, corrections, modifications, and updates to the Sewer System Management Plan Audit Records

The Enrollee shall maintain, at minimum, the following records pertaining to its Sewer System Management Plan audits, and other internal audits:

- Completed audit documents and findings;
- Name and contact information of staff and/or consultants that conducted or involved in the audit; and
- Follow-up actions based on audit findings.

4.7. *Equipment Records*

The Enrollee shall maintain a log of all owned and leased sewer system cleaning, operational, maintenance, construction, and rehabilitation equipment.

4.8. *Work Orders*

The Enrollee shall maintain record of work orders for operations and maintenance projects.

ATTACHMENT E2 – SUMMARY OF NOTIFICATION, MONITORING AND REPORTING REQUIREMENTS

This Attachment provides a summary of notification, monitoring and reporting requirements, by spill category, and for Enrollee-owned and/or operated laterals as required in Attachment E1 of this General Order, for quick reference purposes only.

Table E2-1
Spill Category 1: Spills to Surface Waters

Spill Requirement	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a Category 1 spill of 1,000 gallons or greater, discharging or threatening to discharge to surface waters: Notify the California Office of Emergency Services and obtain a notification control number.	California Office of Emergency Services at: (800) 852-7550 (Section 1 of Attachment E1)
Monitoring	• Conduct spill-specific monitoring; • Conduct water quality sampling of the receiving water within **18 hours** of initial knowledge of spill of 50,000 gallons or greater to surface waters.	(Section 2 of Attachment E1)
Reporting	• Submit Draft Spill Report **within three (3) business days** of the Enrollee's knowledge of the spill; • Submit Certified Spill Report **within 15 calendar days** of the spill end date; • Submit Technical Report **within 45 calendar days** after the spill end date for a Category 1 spill in which **50,000 gallons or greater** discharged to surface waters; and • Submit Amended Spill Report **within 90 calendar days** after the spill end date.	(Section 3.1 of Attachment E1)

Table E2-2

Spill Category 2: Spills of 1,000 Gallons or Greater That Do Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a Category 2 spill of 1,000 gallons or greater, discharging or threatening to discharge to waters of the State: Notify California Office of Emergency Services and obtain a notification control number.	California Office of Emergency Services at: (800) 852-7550 (Section 1 of Attachment E1)
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E1)
Reporting	• Submit Draft Spill Report **within three (3) business days** of the Enrollee's knowledge of the spill; • Submit Certified Spill Report **within 15 calendar days** of the spill end date; and • Submit Amended Spill Report **within 90 calendar days** after the spill end date.	(Section 3.2 of Attachment E1)

Table E2-3
Spill Category 3: Spills of Equal or Greater than 50 Gallons and Less than 1,000 Gallons That Does Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	Not Applicable	Not Applicable
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E1)
Reporting	• Submit monthly Certified Spill Report to the online CIWQS Sanitary Sewer System Database within **30 calendars days** after the end of the month in which the spills occur; and • Submit Amended Spill Reports **within 90 calendar days** after the Certified Spill Report due date.	(Section 3.3 and 3.5 of Attachment E1)

Table E2-4
Spill Category 4: Spills Less Than 50 Gallons That Do Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	Not Applicable	Not Applicable
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E1)
Reporting	• If, during any calendar month, Category 4 spills occur, certify monthly, the estimated total spill volume exiting the sanitary sewer system, and the total number of all Category 4 spills into the online CIWQS Sanitary Sewer System Database, within 30 days after the end of the calendar month in which the spills occurred. • Upload and certify a report, in an acceptable digital format, of all Category 4 spills to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occur.	(Section 3.4, 3.6, 3.7 and 4.4 of Attachment E1)

Appendix F

STATE WATER RESOURCES CONTROL BOARD
1001 I Street, Sacramento, California 95814
ORDER WQ 2022-0103-DWQ

STATEWIDE WASTE DISCHARGE REQUIREMENTS

GENERAL ORDER FOR SANITARY SEWER SYSTEMS

This Order was adopted by the State Water Resources Control Board on December 6, 2022.
This Order shall become effective **180 days after the Adoption Date of this General Order,** on June 5, 2023. The Enrollee shall comply with the requirements of this Order upon the Effective Date of this General Order.

This General Order does not convey any property rights of any sort or any exclusive privileges. The requirements prescribed herein do not authorize the commission of any act causing injury to persons or property, protect the Enrollee from liability under federal, state, or local laws, nor create a vested right for the Enrollee to continue the discharge of waste.

CERTIFICATION

I, Jeanine Townsend, Clerk to the Board, do hereby certify that this Order with all attachments is a full, true, and correct copy of the Order adopted by the State Water Board on December 6, 2022.

1. INTRODUCTION

This General Order regulates sanitary sewer systems designed to convey sewage. For the purpose of this Order, a sanitary sewer system includes, but is not limited to, pipes, valves, pump stations, manholes, siphons, wet wells, diversion structures and/or other pertinent infrastructure, upstream of a wastewater treatment plant headworks. A sanitary sewer system includes:

- Laterals owned and/or operated by the Enrollee;
- Satellite sewer systems; and/or
- Temporary conveyance and storage facilities, including but not limited to temporary piping, vaults, construction trenches, wet wells, impoundments, tanks and diversion structures.

Sewage is untreated or partially treated domestic, municipal, commercial and/or industrial waste (including sewage sludge), and any mixture of these wastes with inflow or infiltration of stormwater or groundwater, conveyed in a sanitary sewer system. Sewage contains high levels of suspended solids, non-digested organic waste, pathogenic bacteria, viruses, toxic pollutants, nutrients, oxygen-demanding organic compounds, oils, grease, pharmaceuticals, and other harmful pollutants.

For the purpose of this General Order, a spill is a discharge of sewage from any portion of a sanitary sewer system due to a sanitary sewer system overflow, operational failure, and/or infrastructure failure. Sewage and its associated wastewater spilled from a sanitary sewer system may threaten public health, beneficial uses of waters of the State, and the environment.

This General Order serves as statewide waste discharge requirements and supersedes the previous State Water Resources Control Board (State Water Board) Order 2006-0003-DWQ and amendments thereafter. All sections and attachments of this General Order are enforceable by the State Water Board and Regional Water Quality Control Boards (Regional Water Boards). Through this General Order, the State Water Board requires an Enrollee to:

- Comply with federal and state prohibitions of discharge of sewage to waters of the State, including federal waters of the United States;
- Comply with specifications, and notification, monitoring, reporting and recordkeeping requirements in this General Order that implement the federal Clean Water Act, the California Water Code (Water Code), water quality control plans (including Regional Water Board Basin Plans) and policies;
- Proactively operate and maintain resilient sanitary sewer systems to prevent spills;
- Eliminate discharges of sewage to waters of the State through effective implementation of a Sewer System Management Plan;
- Monitor, track, and analyze spills for ongoing system-specific performance improvements; and
- Report noncompliance with this General Order per reporting requirements.

An Enrollee is a public, private, or other non-governmental entity that has obtained approval for regulatory coverage under this General Order, including:

- A state agency, municipality, special district, or other public entity that owns and/or operates one or more sanitary sewer systems:
  - greater than one (1) mile in length (each individual sanitary sewer system);
  - one (1) mile or less in length where the State Water Board or a Regional Water Board requires regulatory coverage under this Order; or
- A federal agency, private company, or other non-governmental entity that owns and/or operates a sanitary sewer system of any size where the State Water Board or a Regional Water Board requires regulatory coverage under this Order in response to a history of spills, proximity to surface water, or other factors supporting regulatory coverage.

For the purpose of this Order, a sanitary sewer system includes only systems owned and/or operated by the Enrollee.

2. REGULATORY COVERAGE AND APPLICATION REQUIREMENTS

2.1. Requirements for Continuation of Existing Regulatory Coverage

To continue regulatory coverage from previous Order 2006-0003-DWQ under this General Order, **within the 60-days-prior-to the Effective Date of this General Order**, the Legally Responsible Official of an existing Enrollee shall electronically certify the Continuation of Existing Regulatory Coverage form in the online California Integrated Water Quality System (CIWQS) Sanitary Sewer System Database. The Legally Responsible Official will receive an automated CIWQS-issued Notice of Applicability email, confirming continuation of regulatory coverage under this General Order. All regulatory coverage under previous Order 2006-0003-DWQ will cease on the Effective Date of this Order.

An Enrollee continuing existing regulatory coverage is not required to submit a new application package or pay an application fee for enrollment under this General Order. The annual fee due date for continued regulatory coverage from previous Order 2006-0003-DWQ to this General Order remains unchanged.

A previous Enrollee of Order 2006-0003-DWQ that fails to certify the Continuation of Existing Regulatory Coverage form in the online CIWQS database by the Effective Date of this Order is considered a New Applicant, and will not have regulatory coverage for its sanitary sewer system(s) until:

- A new application package for system(s) enrollment is submitted per section 2.2 (Requirements for New Regulatory Coverage) below; and
- The new application package is approved per section 2.2.2 (Approval of Application Package (For New Applicants Only)).

2.2. Requirements for New Regulatory Coverage

No later than 60 days prior to commencing and/or assuming operation and maintenance responsibilities of a sanitary sewer system, a duly authorized representative that

maintains legal authority over the public or private sanitary sewer system is required to enroll under this General Order by submitting a complete application package as specified below and as provided in Attachment B (Application for Enrollment Form) of this General Order.

Unless required by a Regional Water Board, a public agency that owns a combined sewer system subject to the Combined Sewer Overflow Control Policy (33 U.S. Code § 1342(q)), is not required to enroll, under this Order, the portions of its sanitary sewer system(s) that collects combined sanitary wastewater and stormwater.

2.2.1. Application Package Requirements

The Application for Enrollment package for new applicants must include the following items:

- **Application for Enrollment Form**. The form in Attachment B of this General Order must be completed, signed, and certified by a Legally Responsible Official, in accordance with section 5.1 (Designation of a Legally Responsible Official) of this General Order. If an electronic Application for Enrollment form is available at the time of application, a new applicant shall submit its application form electronically; and
- **Application Fee**. A fee payable to the "State Water Resources Control Board" in accordance with the Fee Schedule in the California Code of Regulations, Title 23, section 2200, or subsequent fee regulations updates.

  The application fee for this General Order is based on the sanitary sewer system's threat to water quality and complexity designations of category 2C or 3C, which is assigned based on the population served by the system. The current Fee Schedule for sanitary sewer systems is listed under subdivision (a)(2) at the following website: Fee Schedule (https://www.waterboards.ca.gov/resources/fees/water_quality/).

2.2.2. Approval of Application Package (For New Applicants Only)

The Deputy Director of the State Water Board, Division of Water Quality (Deputy Director) will consider approval of each complete Application for Enrollment package. The Deputy Director will issue a Notice of Applicability letter which serves as approved regulatory coverage for the new Enrollee.

If the submitted application package is not complete in accordance with section 2.2.1 (Application Package Requirements) of this General Order, the Deputy Director will send a response letter to the applicant outlining the application deficiencies. The applicant will have 60 days from the date of the response letter to correct the application deficiencies and submit the identified items necessary to complete the application package to the State Water Board.

2.2.3. Electronic Reporting Account for New Enrollee

Within 30 days after the date of the Approval of Complete Application Package for System Enrollment, a duly authorized representative for the Enrollee shall obtain a CIWQS Sanitary Sewer System Database user account by clicking the "User Registration" button and following the directions on the CIWQS Login Page

(https://ciwqs.waterboards.ca.gov). If additional assistance is needed to establish an online CIWQS user account, contact State Water Board staff by email at CIWQS@waterboards.ca.gov. The online user account will provide the Enrollee secure access to the online CIWQS database for electronic reporting.

2.3. Regulatory Coverage Transfer

Regulatory coverage under this General Order is not transferable to any person or party except after an existing Enrollee submits a written request for a regulatory coverage transfer to the Deputy Director, at least 60 days in advance of any proposed system ownership transfer. The written request must include a written agreement between the existing Enrollee and the new Enrollee containing:

- Acknowledgement that the transfer of ownership is solely of an existing system with an existing waste discharge identification (WDID) number;
- The specific ownership transfer date in which the responsibility and regulatory coverage transfer between the existing Enrollee and the new Enrollee becomes effective; and
- Acknowledgement that the existing Enrollee is liable for violations occurring up to the ownership transfer date and that the new Enrollee is liable for violations occurring on and after the ownership transfer date.

The Deputy Director will consider approval of the written request. If approved, the Deputy Director will issue a Notice of Applicability letter which serves as an approved transfer of regulatory coverage to the new Enrollee.

3. FINDINGS

3.1. Legal Authorities

3.1.1. Federal and State Regulatory Authority

The objective of the Clean Water Act is to restore and maintain the chemical, physical, and biological integrity of the waters of the United States (33 U.S.C. 1251). The Water Code authorizes the State Water Board to implement the Clean Water Act in the State and to protect the quality of all waters of the State (Water Code sections 13000 and 13160).

3.1.2. Discharge of Sewage

A discharge of untreated or partially treated sewage is a discharge of waste as defined in Water Code section 13050(d) that could affect the quality of waters of the State and is subject to regulation by waste discharge requirements issued pursuant to Water Code section 13263 and Chapter 9, Division 3, Title 23 of the California Code of Regulations. A discharge of sewage may pollute and alter the quality of the waters of the State to a degree that unreasonably affects the beneficial uses of the receiving water body or facilities that serve those beneficial uses (Water Code section 13050(l)(1)).

3.1.3 Water Boards Authority to Require Technical Reports, Monitoring, and Reporting

Water Code sections 13267 and 13383 authorize the Regional Water Boards and the State Water Board to establish monitoring, inspection, entry, reporting, and recordkeeping requirements. Water Code section 13267(b), authorizes the Regional Water Boards to "require any person who has discharged, discharges, or is suspected of having discharged or discharging, or who proposes to discharge waste within its region… or is suspected of having discharged or discharging, or who proposes to discharge, waste outside of its region that could affect the quality of water within its region shall furnish, under penalty of perjury, technical or monitoring reports which the regional board requires…In requiring those reports, the regional board shall provide the person with a written explanation with regard to the need for the reports and shall identify the evidence that supports requiring that person to provide the reports." Water Code section 13267(f) authorizes the State Water Board to require this information if it consults with the Regional Water Boards and determines that it will not duplicate the efforts of the Regional Water Boards. The State Water Board has consulted with the Regional Water Boards and made this determination.

The technical and monitoring reports required by this General Order and Attachment E (Notification, Monitoring, Reporting and Recordkeeping Requirements) are necessary to evaluate and ensure compliance with this General Order. The effort to develop required technical reports will vary depending on the system size and complexity and the needs of the specific technical report. The burden and cost of these reports are reasonable and consistent with the interest of the state in protecting water quality, which is the primary purpose of requiring the reports.

Water Code section 13383(a) authorizes the Water Boards to "establish monitoring, inspection, entry, reporting, and recordkeeping requirements… for any person who discharges, or proposes to discharge, to navigable waters, any person who introduces pollutants into a publicly owned treatment works, any person who owns or operates, or proposes to own or operate, a publicly owned treatment works or other treatment works treating domestic sewage, or any person who uses or disposes, or proposes to use or dispose, of sewage sludge." Section 13383(b) continues, "the state board or the regional boards may require any person subject to this section to establish and maintain monitoring equipment or methods, including, where appropriate, biological monitoring methods, sample effluent as prescribed, and provide other information as may be reasonably required."

Reporting of spills from privately owned sewer laterals and systems pursuant to section 5.15 (Voluntary Reporting of Spills from Privately-Owned Sewer Laterals and/or Private Sanitary Sewer Systems) of this General Order is authorized by Water Code section 13225(c) and encouraged by the State Water Board, wherein a local agency may investigate and report on any technical factors involved in water quality control provided the burden including costs of such reports bears a reasonable relationship to the need for the report and the benefits to be obtained therefrom. The burden of reporting private spills under section 5.15 (Voluntary Reporting of Spills from Privately-Owned Sewer Laterals and/or Private Sanitary Sewer Systems) is minimal and is outweighed by the benefit of providing Regional Water Boards an opportunity to respond to these spills

when an Enrollee, which in many cases has a contractual relationship with the owner of the private system, has knowledge of the spills.

3.1.4. Water Board Authority to Prescribe General Waste Discharge Requirements

Water Code section 13263(i) provides that the State Water Board may prescribe general waste discharge requirements for a category of discharges if the State Water Board finds or determines that:

- The discharges are produced by the same or similar operations;
- The discharges involve the same or similar types of waste;
- The discharges require the same or similar treatment standards; and
- The discharges are more appropriately regulated under general waste discharge requirements than individual waste discharge requirements.

Since 2006, the State Water Board has been regulating over 1,100 publicly owned sanitary sewer systems (See section 3.1.5 (Previous Statewide General Waste Discharge Requirements) of this General Order). California also has a large unknown number of unregulated privately owned sanitary sewer systems. All waste conveyed in publicly owned and privately owned sanitary sewer systems (as defined in this General Order) is comprised of untreated or partially treated domestic waste and/or industrial waste. Generally, sanitary sewer systems are designed and operated to convey waste by gravity or under pressure; system-specific design elements and system-specific operations do not change the common nature of the waste, the common threat to public health, or the common impacts on water quality. Spills of waste from a sanitary sewer system prior to reaching the ultimate downstream treatment facility are unauthorized and enforceable by the State Water Board and/or a Regional Water Board. Therefore, spills from sanitary sewer systems are more appropriately regulated under general waste discharge requirements.

As specified in Water Code sections 13263(a) and 13241, the implementation of requirements set forth in this Order is for the reasonable protection of past, present, and probable future beneficial uses of water and the prevention of nuisance. The requirements implement the water quality control plans (Basin Plans) for each Regional Water Board and take into account the environmental characteristics of sewer service areas and hydrographic units within the state. Additionally, the State Water Board has considered water quality conditions that could reasonably be achieved through the coordinated control of all factors that affect water quality, costs associated with compliance with these requirements, the need for developing housing within California, and the need to protect sources of drinking water and other water supplies.

3.1.5. Previous Statewide General Waste Discharge Requirements

On May 2, 2006, the State Water Board adopted Order 2006-0003-DWQ serving as Waste Discharge Requirements pursuant to Article 4, Chapter 4, Division 7 of the Water Code (commencing with section 13260) for inadvertent discharges to waters of the State. Order 2006-0003-DWQ prohibited discharges of untreated or partially treated sewage. Order 2006-0003-DWQ also required system-specific management, operation, and maintenance of publicly owned sewer systems greater than one mile in length.

To decrease the impacts on human health and the environment caused by sewage spills, the previous Order required enrollees to develop a rehabilitation and replacement plan that identifies system deficiencies and prioritizes short-term and long-term rehabilitation actions. The previous Order also required enrollees to:

1. Maintain information that can be used to establish and prioritize appropriate Sewer System Management Plan activities; and
2. Implement a proactive approach to reduce spills.

The previous Order required Sewer System Management Plan elements for "the proper and efficient management, operation, and maintenance of sanitary sewer systems, while taking into consideration risk management."

On July 30, 2013, the State Water Board amended General Order 2006-0003-DWQ with Order WQ 2013-0058-EXEC, Amending Monitoring and Reporting Program for Statewide General Waste Discharge Requirements for Sanitary Sewer Systems.

Many enrollees of Order 2006-0003-DWQ have already implemented proactive measures to reduce sewage spills. Other enrollees, however, still need technical assistance and funding to improve sanitary sewer system operation and maintenance for the reduction of sewage spills.

3.1.6. Existing Memorandum of Agreement with California Water Environment Association

The California Water Environment Association is a nonprofit organization dedicated to providing water industry certifications, training, and networking opportunities. The Association's Technical Certification Program provides accredited sanitary sewer system operator certification for collection system operators and maintenance workers.

On February 10, 2016, the State Water Board entered into a collaborative agreement with the Association titled *Memorandum of Agreement Between the California State Water Resources Control Board and the California Water Environment Association - Training Regarding Requirements Set Forth in Statewide General Waste Discharge Requirements for Sanitary Sewer Systems*. The Memorandum sets forth collaborative training necessary for regulated sanitary sewer system personnel to operate and maintain a well operating system and ensure full compliance with statewide sewer system regulations.

On March 15, 2018, the State Water Board and the California Water Environment Association amended the existing Memorandum of Agreement to include collaborative outreach and expand training needs associated with further updates to Water Board regulations for sanitary sewer systems. The State Water Board encourages further Agreement updates as necessary to support improved sewer system operations and the professionalism of collection system operators.

3.2. General

3.2.1. Waters of the State

Waters of the State include any surface water or groundwater, including saline waters, within the boundaries of the state as defined in Water Code section 13050(e), and are inclusive of waters of the United States.

3.2.2. Sanitary Sewer System Spill Threats to Public Health and Beneficial Uses

Sewage contains high levels of suspended solids, pathogenic organisms, toxic pollutants, nutrients, oxygen-demanding organic compounds, oil and grease and other pollutants. Sewage spills may cause a public nuisance, particularly when sewage is discharged to areas with high public exposure such as streets and surface waters used for drinking, irrigation, fishing, recreation, or other public consumption or contact uses.

More specifically, sanitary sewer spills may:

- Adversely affect aquatic life and/or threaten water quality when reaching receiving waters;
- Inadvertently release trash, including plastics;
- Impair the recreational use and aesthetic enjoyment of surface waters by polluting surface water or groundwater;
- Threaten public health through direct public exposure to bacteria, viruses, intestinal parasites, and other microorganisms that can cause serious illness such as gastroenteritis, hepatitis, cryptosporidiosis, and giardiasis;
- Negatively impact ecological receptors and biota within surface waters; and
- Cause nuisance including odors, closure of beaches and recreational areas, and property damage.

Sanitary sewer system spills may pollute receiving waters and threaten beneficial uses of surface water and groundwater. Potentially threatened beneficial uses include, but are not limited to the following (with associated acronym representations as included in statewide water quality control plans and Regional Water Boards' Basin Plans):

- Municipal and Domestic Supply (MUN)
- Water Contact Recreation (REC-1) and Non-Contact Water Recreation (REC-2)
- Cold Freshwater Habitat (COLD)
- Warm Freshwater Habitat (WARM)
- Native American Culture (CUL)
- Wildlife Habitat (WILD)
- Rare, Threatened, or Endangered Species (RARE)
- Spawning, Reproduction, and/or Early Development (SPWN)
- Wetland Habitat (WET)
- Agricultural Supply (AGR)
- Estuarine Habitat (EST)

- Commercial and Sport Fishing (COMM)
- Subsistence Fishing (SUB)
- Tribal Tradition and Culture (CUL)
- Tribal Subsistence Fishing (T-SUB)
- Aquaculture (AQUA)
- Marine Habitat (MAR)
- Preservation of Biological Habitats of Special Significance (BIOL)
- Migration of Aquatic Organisms (MIGR)
- Shellfish Harvesting (SHELL)
- Industrial Process Supply (PROC)
- Industrial Service Supply (IND)
- Hydropower Generation (POW)
- Navigation (NAV)
- Flood Peak Attenuation/Flood Water Storage (FLD)
- Water Quality Enhancement (WQE)
- Fresh Water Replenishment (FRSH)
- Groundwater Recharge (GWR)
- Inland Saline Water Habitat (SAL)

3.2.3. Proactive Sanitary Sewer System Management to Eliminate Spill Causes

Finding 3 of the previous Order, 2006-0003-DWQ, states: “Sanitary sewer systems experience periodic failures resulting in discharges that may affect waters of the state. There are many factors (including factors related to geology, design, construction methods and materials, age of the system, population growth, and system operation and maintenance), which affect the likelihood of an SSO [sanitary sewer overflow]. A proactive approach that requires Enrollees to ensure a system-wide operation, maintenance, and management plan is in place will reduce the number and frequency of SSOs within the state. This approach will in turn decrease the risk to human health and the environment caused by SSOs.”

Many spills are preventable through proactive attention on sanitary sewer system management using the best practices and technologies available to address major causes of spills, including but not limited to:

- Blockages from sources including but not limited to:
  - Fats, oils and grease;
  - Tree roots;
  - Rags, wipes and other paper, cloth and plastic products; and
  - Sediment and debris.
- Sewer system damage and exceedance of sewer system hydraulic capacity from identified system-specific environmental, and climate-change impacts, including but not limited to:

- Sea level rise impacts including flooding, coastal erosion, seawater intrusion, tidal inundation and submerged lands;
- Increased surface water flows due to higher intensity rain events;
- Flooding;
- Wildfires and wildfire induced impacts;
- Earthquake induced damage;
- Landslides; and
- Subsidence.

- Infrastructure deficiencies and failures, including but not limited to:
  - Pump station mechanical failures;
  - System age;
  - Construction material failures;
  - Manhole cover failures;
  - Structural failures; and
  - Lack of proper operation and maintenance.
- Insufficient system capacity (temporary or sustained), due to factors including but not limited to:
  - Excessive and/or increased storm or groundwater inflow/infiltration;
  - Insufficient capacity due to population increase and/or new connections from industrial, commercial and other system users; and
  - Stormwater capture projects utilizing a sanitary sewer system to convey stormwater to treatment facilities for reuse.
- Community impacts, including but not limited to:
  - Power outages;
  - Vandalism; and
  - Contractor-caused or other third party-caused damages.

3.2.4. Underground Sanitary Sewer System Leakage

Portions of some sanitary sewer systems may leak, causing underground exfiltration (exiting) of sewage from the system. Exfiltrated sewage that remains in the underground infrastructure trench and/or the soil matrix, and that does not discharge into waters of the State (surface water or groundwater) may not threaten beneficial uses.

Underground exfiltrated sewage may threaten beneficial uses if discharged to waters of the State. Exfiltrated sewage that discharges to groundwater may impact beneficial uses of groundwater and pollute groundwater supply. Additionally, if in close proximity, exfiltrated sewage may enter into a compromised underground drainage conveyance system that discharges into a water of the United States, or into groundwater that is hydrologically connected to (feeds into) a water of the United States, thus potentially causing: (1) a Clean Water Act violation, (2) threat and impact to beneficial uses, and/or (3) surface water pollution.

3.2.5. Proactive Sanitary Sewer System Management to Reduce Inflow and Infiltration

Excessive inflow (stormwater entering) and infiltration (groundwater seepage entering) to sanitary sewer systems is preventable through proactive sewer system management using the best practices and technologies available. The efficiency of the downstream wastewater treatment processes is dependent on the performance of the sanitary sewer system. When the structural integrity of a sanitary sewer system deteriorates, high volumes of inflow and infiltration can enter the sewer system. High levels of inflow and infiltration increase the hydraulic load on the downstream treatment plant, which can reduce treatment efficiency, lead to bypassing a portion of the treatment process, cause illegal discharge of partially treated effluent, or in extreme situations make biological treatment facilities inoperable (e.g., wash out the biological organisms that treat the waste).

3.3. Water Quality Control Plans, Policies and Resolutions

The nine Regional Water Boards have adopted region-specific water quality control plans (commonly referred to as Basin Plans) that designate beneficial uses, establish water quality objectives, and contain implementation programs and policies to achieve those objectives. The State Water Board has adopted statewide water quality control plans, policies and resolutions establishing statewide water quality objectives, implementation programs and initiatives.

3.3.1. State Water Board Antidegradation Policy

On October 28, 1968, the State Water Board adopted Resolution 68-16, titled Statement of Policy with Respect to Maintaining High Quality of Waters in California, which incorporates the federal antidegradation policy. Resolution 68-16 requires that existing water quality be maintained unless degradation is justified based on specific findings.

The continued prohibition of sewage discharges from sanitary sewer systems into waters of the State aligns with Resolution 68-16. A sewage discharge from sanitary sewers to waters of the State is prohibited by this Order. Therefore, this Order does not allow degradation of waters of the State. In addition, this Order: (1) further expands the existing prohibition of sewage discharges to include waters of the State, in addition to waters of the United States as provided in previous Order 2006-0003-DWQ, and (2) enhances the ability for Water Board enforcement of violations of the established prohibitions.

3.3.2. State Water Board Sources of Drinking Water Policy

On May 19,1988, the State Water Board adopted Resolution 88-63 (amended on February 1, 2006), titled Sources of Drinking Water, establishing state policy that all waters of the State, with certain exceptions, are suitable or potentially suitable for municipal or domestic supply.

3.3.3. State Water Board Cost of Compliance Resolution

On September 24, 2013, the State Water Board adopted Resolution 2013-0029, titled Directing Actions in Response to Efforts by Stakeholders on Reducing Costs of

Compliance While Maintaining Water Quality Protection. Through this resolution, the State Water Board committed to continued stakeholder engagement in identifying and implementing measures to reduce costs of compliance with regulatory orders while maintaining water quality protection and improving regulatory program outcomes.

3.3.4. State Water Board Human Right to Water Resolution

On February 16, 2016, the State Water Board adopted Resolution 2016-0010, titled Adopting the Human Right to Water as a Core Value and Directing its Implementation in Water Board Programs and Activities, addressing the human right to water as a core value and directing Water Board programs to implement requirements to support safe drinking water for all Californians.

On November 16, 2021, the State Water Board adopted Resolution 2021-0050 titled Condemning Racism, Xenophobia, Bigotry, and Racial Injustice, and Strengthening Commitment to Racial Equity, Diversity, Inclusion, Access, and Anti-racism. Among other actions, through Resolution 2021-0050, the State Water Board, in summary as corresponding to this General Order, reaffirms its commitment to its Human Right to Water resolution, upholding that every human being in California deserves safe, clean, affordable, and accessible water for human consumption, cooking, and sanitation purposes. Resolution 2021-0050 provides the State Water Board commitment to:

- Protect public health and beneficial uses of waterbodies in all communities, including communities disproportionately burdened by wastes discharge of waste to land and surface water;
- Restore impaired surface waterbodies and degraded aquifers; and
- Promote multi-benefit water quality projects.

Through Resolution 2021-0050, the State Water Board also commits to expanding implementation of its Climate Change Resolution to address the disproportionate effects of extreme hydrologic conditions and sea-level rise on Black, Indigenous, and people of color communities, prioritizing:

- The right to safe, clean, affordable, and accessible drinking water and sanitation;
- Sustainable management and protection of local groundwater resources;
- Healthy watersheds; and
- Access to surface waterbodies that support subsistence fishing.

On June 7, 2022, the State Water Board adopted a Resolution, titled Authorizing the Executive Director or Designee to Enter into One or More Multi-Year Contracts Up to a Combined Sum of $4,000,000 for a Statewide Wastewater Needs Assessment, supporting the equitable access to sanitation for all Californians and implementation of Resolutions 2016-0010 and 2021-0050.

This General Order supports the State Water Board priority in collecting a comprehensive set of data for California's wastewater systems, including sanitary sewer systems. Data reported per the requirements of this Order will be used with data from other Water Boards' programs, to further develop criteria and create a statewide risk

framework to prioritize critical funding and infrastructure investments for California's most vulnerable populations, including disadvantaged or severely disadvantaged communities with inadequate or failing sanitation systems and threatened access to healthy drinking water supplies.

3.3.5. State Water Board Open Data Resolution

On July 10, 2018, the State Water Board adopted Resolution 2018-0032, titled Adopting Principles of Open Data as a Core Value and Directing Programs and Activities to Implement Strategic Actions to Improve Data Accessibility and Associated Innovation, directing regulatory programs to assure all monitoring and reporting requirements support the State Water Boards' Open Data Initiative.

3.3.6. State Water Board Response to Climate Change

On March 7, 2017, the State Water Board adopted Resolution 2017-0012, titled Comprehensive Response to Climate Change, requiring a proactive response to climate change in all California Water Board actions, with the intent to embed climate change consideration into all programs and activities.

3.4. California Environmental Quality Act

The adoption of this Order is an action to reissue general waste discharge requirements that is exempt from the California Environmental Quality Act (Public Resources Code section 21000 et seq.) because it is an action taken by a regulatory agency to assure the protection of the environment and the regulatory process involves procedures for protection of the environment (Cal. Code Regs., Title 14, section 15308). In addition, the action to adopt this Order is exempt from CEQA pursuant to Cal. Code Regs., Title 14, section 15301, to the extent that it applies to existing sanitary sewer collection systems that constitute "existing facilities" as that term is used in sections 15301 and 15302, to the extent that it results in the repair or replacement of existing systems involving negligible or no expansion of capacity.

3.5. State Water Board Funding Assistance for Compliance with Water Board Water Quality Orders

The State Water Board, Division of Financial Assistance administers the implementation of the State Water Board financial assistance programs, per Board-adopted funding policies. Among other funding areas, the Division administers loan and grant funding for the planning and construction of wastewater and water recycling facilities per funding program-specific policies and guidelines. Applicants may apply for Clean Water State Revolving Fund low-interest loan, Small Community Wastewater grant funding assistance, and other funding available at the time of application, for some of the costs associated with complying with this General Order.

Funding applicants may obtain further information regarding current funding opportunities, and Division of Financial Assistance staff contact information at the following website: Financial Assistance Funding - Grants and Loans | California State Water Resources Control Board.
(https://www.waterboards.ca.gov/water_issues/programs/grants_loans/)

Section 13477.6 of the Water Code authorizes the Small Community Grant Fund. The Small Community Grant Fund allows the State Water Board to provide grant funding assistance to small, disadvantaged communities and small severely disadvantaged communities that may not otherwise be able to afford a loan or similar financing for projects to comply with requirements of this General Order. The State Water Board also considers loan forgiveness on a disadvantaged community-specific basis.

For disadvantaged communities' wastewater needs, the State Water Board places priority on the funding of projects that address:

- Public health;
- Violations of waste discharge requirements and National Pollutant Discharge Elimination System (NPDES) permits;
- Providing sewer system service to existing septic tank owners; and
- High priority public health and water quality concerns identified by a Regional Water Board.

3.6. Notification to Interested Parties

On January 31, 2022, the State Water Board notified interested parties and persons of its intent to reissue Sanitary Sewer Systems General Order 2006-0003-DWQ by issuing a draft General Order for a 60-day public comment period. State Water Board staff conducted extensive stakeholder outreach and encouraged public participation in the adoption process for this General Order. On March 15, 2022, the State Water Board held a public meeting to hear and consider oral public comments. The State Water Board considered all public comments prior to adopting this General Order.

THEREFORE, IT IS HEREBY ORDERED, that pursuant to Water Code sections 13263, 13267, and 13383 this General Order supersedes Order 2006-0003-DWQ, Order WQ 2013-0058-EXEC, and any amendments made to these Orders thereafter, except for enforcement purposes and to meet the provisions contained in Division 7 of the Water Code (commencing with section 13000) and regulations adopted thereunder, and the provisions of the Clean Water Act and regulations and guidelines adopted thereunder, the Enrollee shall comply with the requirements in this Order.

4. PROHIBITIONS

4.1 Discharge of Sewage from a Sanitary Sewer System

Any discharge from a sanitary sewer system that has the potential to discharge to surface waters of the State is prohibited unless it is promptly cleaned up and reported as required in this General Order.

4.2. Discharge of Sewage to Waters of the State

Any discharge from a sanitary sewer system, discharged directly or indirectly through a drainage conveyance system or other route, to waters of the State is prohibited.

4.3. Discharge of Sewage Creating a Nuisance

Any discharge from a sanitary sewer system that creates a nuisance or condition of pollution as defined in Water Code section 13050(m) is prohibited.

5. SPECIFICATIONS

5.1. Designation of a Legally Responsible Official

The Enrollee shall designate a Legally Responsible Official that has authority to ensure the enrolled sanitary sewer system(s) complies with this Order, and is authorized to serve as a duly authorized representative. The Legally Responsible Official must have responsibility over management of the Enrollee's entire sanitary sewer system, and must be authorized to make managerial decisions that govern the operation of the sanitary sewer system, including having the explicit or implicit duty of making major capital improvement recommendations to ensure long-term environmental compliance. The Legally Responsible Official must have or have direct authority over individuals that:

- Possess a recognized degree or certificate related to operations and maintenance of sanitary sewer systems, and/or
- Have professional training and experience related to the management of sanitary sewer systems, demonstrated through extensive knowledge, training and experience.

For example, a sewer system superintendent or manager, an operations manager, a public utilities manager or director, or a district engineer may be designated as a Legally Responsible Official.

The Legally Responsible Official shall complete the electronic CIWQS "User Registration" form (https://ciwqs.waterboards.ca.gov/ciwqs/newUser.jsp). A Legally Responsible Official that represents multiple enrolled systems shall complete the electronic CIWQS "User Registration" form for each system.

The Enrollee shall submit any change to its Legally Responsible Official, and/or change in contact information, to the State Water Board within 30 calendar days of the change by emailing ciwqs@waterboards.ca.gov and copying the appropriate Regional Water Board as provided in Attachment F (Regional Water Quality Control Board Contact Information) of this General Order.

5.2. Sewer System Management Plan Development and Implementation

To facilitate adequate local funding and management of its sanitary sewer system(s), the Enrollee shall develop and implement an updated Sewer System Management Plan. The scale and complexity of the Sewer System Management Plan, and specific elements of the Plan, must match the size, scale and complexity of the Enrollee's sanitary sewer system(s). The Sewer System Management Plan must address, at minimum, the required Plan elements in Attachment D (Sewer System Management Plan – Required Elements) of this General Order. To be effective, the Sewer System Management Plan must include procedures for the management, operation, and maintenance of the sanitary sewer system(s). The procedures must: (1) incorporate the

prioritization of system repairs and maintenance to proactively prevent spills, and (2) address the implementation of current standard industry practices through available equipment, technologies, and strategies.

For an existing Enrollee under Order 2006-0003-DWQ that has certified its Continuation of Existing Regulatory Coverage, per section 2.1 (Requirements for Continuation of Existing Regulatory Coverage) of this General Order:

Within six (6) months of the Adoption Date of this General Order:

- The Legally Responsible Official shall upload the Enrollee's existing Sewer System Management Plan to the online CIWQS Sanitary Sewer System Database.

For a new Enrollee:

Within twelve (12) months of the Application for Enrollment approval date:

- The governing entity of the new Enrollee shall approve its Sewer System Management Plan; and
- The Legally Responsible Official shall certify and upload its Sewer System Management Plan to the online CIWQS Sanitary Sewer System Database.

5.3. Certification of Sewer System Management Plan and Plan Updates

The Legally Responsible Official shall certify and upload its Sewer System Management Plan and all subsequent updates to the online CIWQS Sanitary Sewer System Database.

5.4. Sewer System Management Plan Audits

The Enrollee shall conduct an internal audit of its Sewer System Management Plan, and implementation of its Plan, at a minimum frequency of once every three years. The audit must be conducted for the period after the end of the Enrollee's last required audit period. **Within six months after the end of the required 3-year audit period**, the Legally Responsible Official shall submit an audit report into the online CIWQS Sanitary Sewer System Database per the requirements in section 3.10 (Sewer System Management Plan Audit Reporting Requirements) of Attachment E1 of this General Order.

Audit reports submitted to the CIWQS Sanitary Sewer System Database will be viewable only to Water Boards staff.

The internal audit shall be appropriately scaled to the size of the system(s) and the number of spills. The Enrollee's sewer system operators must be involved in completing the audit. At minimum, the audit must:

- Evaluate the implementation and effectiveness of the Enrollee's Sewer System Management Plan in preventing spills;
- Evaluate the Enrollee's compliance with this General Order;
- Identify Sewer System Management Plan deficiencies in addressing ongoing spills and discharges to waters of the State; and

- Identify necessary modifications to the Sewer System Management Plan to correct deficiencies.

The Enrollee shall submit a complete audit report that includes:

- Audit findings and recommended corrective actions;
- A statement that sewer system operators' input on the audit findings has been considered; and
- A proposed schedule for the Enrollee to address the identified deficiencies.

A new Enrollee of this General Order (that did not have a sanitary sewer system enrolled in the previous State Water Board Order 2006-0003-DWQ) shall conduct its first internal Sewer System Management Plan audit for the time period between the date of submittal of its certified Sewer System Management Plan and the third subsequent December 31st date. The audit report must be submitted into the online CIWQS Sanitary Sewer System Database **by July 1 of the following calendar year**.

See the following tables for clarification:

Initial Audit Period and Audit Due Date for New Enrollees

	Audit Period	Audit Due Date
New Enrollee	Certified Sewer System Management Plan Submittal Date through the third subsequent December 31st date	July 1st date after audit period
Example	*Certified Sewer System Management Plan Submittal Date of August 2, 2025* *Audit Period of August 2, 2025 through December 31, 2027*	*July 1, 2028*

Initial Audit Period for Transition from 2-Year Audit Required in Previous Order 2006-0003-DWQ to 3-Year Audit Required in this General Order

	Audit Period	Audit Due Date
An Enrollee previously regulated by Order 2006-003-DWQ	A 3-year period starting from the end of last required 2-year Audit Period	Within six months after end of 3-year Audit Period
Example	*Last required Audit Period start date of August 2, 2021;* *Audit Period of August 2, 2021 through August 1, 2024*	*February 1, 2025*

Three-Year Ongoing Audit Period

	Audit Period	Audit Due Date
Each Enrollee	A 3-year period starting from the end of last required Audit Period	Within six months after end of 3-year Audit Period

5.5. Six-Year Sewer System Management Plan Update

At a minimum, the Enrollee shall update its Sewer System Management Plan every six (6) years after the date of its last Plan Update due date. (For an Enrollee previously regulated by Order 2006-0003-DWQ, the six-year period shall commence on the due date identified in section 3.11 of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this Order. The Updated Sewer System Management Plan must include:

- Elements required in Attachment D (Sewer System Management Plan – Required Elements) of this Order;
- Summary of revisions included in the Plan update based on internal audit findings; and
- Other sewer system management-related changes.

The Enrollee's governing entity shall approve the updated Plan. The Legally Responsible Official shall upload and certify the approved updated Plan in the online CIWQS Sanitary Sewer System Database in accordance with section 3.11 (Sewer System Management Plan Reporting Requirements) of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order. During the time period in between Plan updates, the Enrollee shall continuously document changes to its Sewer System Management Plan in a change log attached to the Plan.

5.6. System Resilience

The Enrollee shall include and implement system-specific procedures in its Sewer System Management Plan to proactively prioritize: (1) operation and maintenance, (2) condition assessments, and (3) repair and rehabilitation, to address ongoing system resilience, as specified in Attachment D (Sewer System Management Plan – Required Elements) of this General Order.

5.7. Allocation of Resources

The Enrollee shall:

- Establish and maintain a means to manage all necessary revenues and expenditures related to the sanitary sewer system; and
- Allocate the necessary resources to its sewer system management program for:
  - Compliance with this General Order,
  - Full implementation of its updated Sewer System Management Plan,
  - System operation, maintenance, and repair, and
  - Spill responses.

5.8. Designation of Data Submitters

The Legally Responsible Official may designate one or more individuals as a Data Submitter for reporting of spill data. The Legally Responsible Official shall authorize the designation of Data Submitter(s) through the online CIWQS database (https://ciwqs.waterboards.ca.gov) prior to the individuals establishing a CIWQS user account (https://ciwqs.waterboards.ca.gov/ciwqs/newUser.jsp) and entering spill data into the online CIWQS Sanitary Sewer System Database.

The Legally Responsible Official shall submit any change to its Data Submitter(s), and/or change in Data Submitter contact information, to the State Water Board within 30 calendar days of the change, by emailing ciwqs@waterboards.ca.gov and copying the appropriate Regional Water Board as provided in Attachment F (Regional Water Quality Control Board Contact Information) of this General Order.

5.9. Reporting Certification

The Legally Responsible Official shall electronically certify, on the Enrollee's behalf, all applications, reports, the Sewer System Management Plan(s) and corresponding updates, and other information submitted electronically into the online CIWQS Sanitary Sewer System Database, as follows:

"I certify under penalty of perjury under the laws of the State of California that the electronically submitted information was prepared under my direction or supervision. Based on my inquiry of the person(s) directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete, and complies with the Statewide Sanitary Sewer Systems General Order. I am aware that there are significant penalties for submitting false information."

Hardcopy submittals to the State Water Board must be accompanied by the above certification statement.

5.10. System Capacity

The Enrollee shall maintain the system capacity necessary to convey: (1) base flows during dry weather conditions, and (2) wet weather peak flows consistent with designated local historic storms. Design storms must take into account system-specific stormwater contributions via inflow and infiltration, and location-specific depth of groundwater and storm frequencies. The Enrollee shall implement capital improvements to provide adequate hydraulic capacity to:

- Meet or exceed the design criteria as defined in the Enrollee's System Evaluation and Capacity Assurance element of its Sewer System Management Plan; and
- Prevent system capacity-related spills, and adverse impacts to the treatment efficiency of downstream wastewater treatment facilities.

5.11. System Performance Analysis

The Enrollee shall include a running 10-year system performance analysis in its Annual Report. The analysis must include two CIWQS-generated graphs presenting the following information:

Graph 1 – Total Spill Volume per Year:

X axis: A 10-year period which includes the current calendar year and the nine previous calendar years;

Y axis: The total spill volume, per Spill Category, for each calendar year.

Graph 2 – Total Number of Spills per Year:

X axis: A 10-year period which includes the current calendar year and the nine previous calendar years;

Y axis: The total number of spills, per Spill Category, for each calendar year.

The current calendar year is the calendar year covered in the Annual Report.

The Enrollee shall generate the graphs in CIWQS, using the existing data in the online CIWQS Sanitary Sewer System Database at the following graph generation link: (https://ciwqs.waterboards.ca.gov/ciwqs/readOnly/PublicReportSSOServlet?reportAction=criteria&reportId=sso_operation_report).

5.12. Spill Emergency Response Plan and Remedial Actions

For Existing Enrollees (with regulatory coverage under Order 2006-0003-DWQ):

Within six (6) months of the Adoption Date of this General Order, the Enrollee shall update and implement its Spill Emergency Response Plan, per Attachment D, section 6 (Spill Emergency Response Plan) of this General Order.

For New Enrollees:

Within six (6) months of the Application for Enrollment approval date, the Enrollee shall develop and implement a Spill Emergency Response Plan, per Attachment D, section 6 (Spill Emergency Response Plan) of this General Order.

The Enrollee shall certify, in its Annual Report, that its Spill Emergency Response Plan is up to date.

The Spill Emergency Response Plan shall include measures to protect public health and the environment. The Enrollee shall respond to spills from its system(s) in a timely manner that minimizes water quality impacts and nuisance by:

- Immediately stopping the spill and preventing/minimizing a discharge to waters of the State;
- Intercepting sewage flows to prevent/minimize spill volume discharged into waters of the State;
- Thoroughly recovering, cleaning up and disposing of sewage and wash down water; and
- Cleaning publicly accessible areas while preventing toxic discharges to waters of the State.

5.13. Notification, Monitoring, Reporting and Recordkeeping Requirements

The Enrollee shall comply with notification, monitoring, reporting, and recordkeeping requirements in Attachment E1 of this General Order.

5.13.1. Spill Categories

Individual spill notification, monitoring and reporting must be in accordance with the following spill categories:

- **Category 1 Spill**

  A Category 1 spill is a spill of any volume of sewage from or caused by a sanitary sewer system regulated under this General Order that results in a discharge to:

  - A surface water, including a surface water body that contains no flow or volume of water; or
  - A drainage conveyance system that discharges to surface waters when the sewage is not fully captured and returned to the sanitary sewer system or disposed of properly.

    Any spill volume not recovered from a drainage conveyance system is considered a discharge to surface water, unless the drainage conveyance system discharges to a dedicated stormwater infiltration basin or facility.

A spill from an Enrollee-owned and/or operated lateral that discharges to a surface water is a Category 1 spill; the Enrollee shall report all Category 1 spills per section 3.1 of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order.

- **Category 2 Spill**

  A Category 2 spill is a spill of 1,000 gallons or greater, from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.

  A spill of 1,000 gallons or greater that spills out of a lateral and is caused by a failure or blockage in the sanitary sewer system, is a Category 2 spill.

- **Category 3 Spill**

  A Category 3 spill is a spill of equal to or greater than 50 gallons and less than 1,000 gallons, from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.

  A spill of equal to or greater than 50 gallons and less than 1,000 gallons, that spills out of a lateral and is caused by a failure or blockage in the sanitary sewer system is a Category 3 spill.

- **Category 4 Spill**

  A Category 4 spill is a spill of less than 50 gallons, from or caused by a sanitary sewer system regulated under this General Order that does not discharge to a surface water.

  A spill of less than 50 gallons that spills out of a lateral and is caused by a failure or blockage in the sanitary sewer system is a Category 4 spill.

5.13.2. Annual Report

The Enrollee shall submit an Annual Report (previously termed as Collection System Questionnaire in Order 2006-0003-DWQ) as specified in section 3.9 (Annual Report) of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order.

For new Enrollees: Within 30 days of obtaining a CIWQS account, a new Enrollee shall submit its initial Annual Report, as specified in section 3.9 (Annual Report) of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order.

5.14. Electronic Sanitary Sewer System Service Area Boundary Map

For continuing enrollees, starting on July 1, 2025, and no later than December 31, 2025:

For new enrollees – no earlier than July 1, 2025, or within 12 months of the Application for Enrollment approval date, whichever date is later:

The Legally Responsible Official shall submit, to the State Water Board, geospatial data detailing the locations of the Enrollee's sanitary sewer system service area boundary, per the required content and specifications in section 3.8 (Electronic Sanitary Sewer System Service Area Boundary Map) of Attachment E1 of this General Order, for each system identified by a WDID number.

An Enrollee of a disadvantaged community that may need assistance developing an electronic map to comply with this requirement, may contact State Water Board staff for assistance at SanitarySewer@waterboards.ca.gov.

5.15. Voluntary Reporting of Spills from Privately-Owned Sewer Laterals and/or Private Sanitary Sewer Systems

Within 24 hours of becoming aware of a spill (as described below) from a private sewer lateral or private sanitary sewer system that is not owned/operated by the Enrollee, the Enrollee is encouraged to report the following observations to the online CIWQS Sanitary Sewer System Database at the following link: https://ciwqs.waterboards.ca.gov:

- A spill equal or greater than 1,000 gallons that discharges (or has a potential to discharge) to a water of the State, or a drainage conveyance system that discharges to waters of the State; **or**
- Any volume of sewage that discharges (or has a potential to discharge) to surface waters.

In the CIWQS module, the Enrollee is encouraged to identify:

- Time of observation;
- Description of general spill location (for example, street name and cross street names);
- Estimated volume of spill;
- If known, general description of spill destination (for example, flowing into drainage channel, flowing directly into a creek, etc.); and
- If known, name of private system owner/operator.

The CIWQS database will make the name and contact information of the entity voluntarily reporting a private spill, accessible to State and Regional Water Board staff only. The CIWQS database will only make information regarding the actual spill, accessible to the public.

5.16. Voluntary Notification of Spills from Privately-Owned Laterals and/or Systems to the California Office of Emergency Services

Upon observing or acquiring knowledge of any of the following from a private sewer lateral or private sanitary sewer system that is not owned/operated by the Enrollee, the Enrollee is encouraged to notify the California Office of Emergency Services (as provided by Health and Safety Code section 5410 et. seq. and Water Code section 13271), or inform the responsible party that State law requires such notification to the Office of Emergency Services by any person that causes or allows a sewage discharge to waters of the State:

- A spill equal to 1,000 gallons or more that discharges (or has a potential to discharge) to waters of the State, or a drainage conveyance system that discharges to waters of the State; or
- A spill of any volume to surface waters.

5.17. Unintended Failure to Report

If an Enrollee becomes aware that they unintentionally failed to submit relevant facts in any report required in this General Order, the Enrollee shall promptly notify Regional Water Board and State Water Board staff. Regional Water Board contact information is included in Attachment F of this Order. State Water Board staff shall be contacted by email at SanitarySewer@waterboards.ca.gov for assistance in formally amending the corresponding report(s) in the online CIWQS Sanitary Sewer System Database.

5.18. Duty to Report to Water Boards

In accordance with Water Code section 13267 and/or section 13383, upon request by the State Water Board Executive Director (or designee) or a Regional Water Board Executive Officer (or designee), the Enrollee shall provide the requested information which the State or Regional Water Board deems necessary to determine compliance with this General Order.

5.19. Operation and Maintenance

To prevent discharges to the environment, the Enrollee shall maintain in good working order, and operate as designed, any facility or treatment and control system designed to contain sewage and convey it to a treatment plant.

6. PROVISIONS

6.1. Enforcement Provisions

The following enforcement provisions are based on existing federal and state regulations, laws and policies, including the federal Clean Water Act, the state Water Code and the State Water Board Enforcement Policy.

6.1.1. Enforceability of Clean Water Act and Water Code Violations

Noncompliance with requirements of this General Order or discharging sewage without enrolling in this General Order constitutes a violation of the Water Code and a potential

violation of the Clean Water Act and is grounds for an enforcement action by the State Water Board or the applicable Regional Water Board. Failure to comply with the notification, monitoring, inspection, entry, reporting, and recordkeeping requirements may subject the Enrollee to administrative civil liabilities of up to $10,000 a day per violation pursuant to Water Code section 13385; up to $1,000 a day per violation pursuant to Water Code section 13268; or referral to the Attorney General for judicial civil enforcement. Discharging waste not in compliance with the requirements of this General Order or the Clean Water Act may subject the Enrollee to administrative civil liabilities up to $10,000 a day per violation and additional liability up to $10 per gallon of discharge not cleaned up after the first 1,000 gallons of discharge; up to $5,000 a day per violation pursuant to Water Code section 13350 or up to $20 per gallon of waste discharged; or referral to the Attorney General for judicial civil enforcement.

6.1.2. Monetary Penalties

The Water Code provides the State and Regional Water Boards the authority to pursue formal enforcement actions, including imposing administrative liability and civil monetary penalties, for non-compliance with the requirements of this General Order and violations of the Clean Water Act.

6.1.3. Falsifying or Failure to Report

The Water Code provides that any person failing or refusing to furnish technical or monitoring program reports, as required under this General Order, or falsifying any information provided in the technical or monitoring reports is subject to administrative liability and civil monetary penalties. Any person who knowingly fails or refuses to furnish technical or monitoring program reports or falsifies any information provided in reports required by this General Order is subject to criminal penalties.

6.1.4. Severability of General Order

The provisions of this General Order are severable; if any provision of this Order, or the application of any provision of this Order to any circumstance, is held invalid, the application of such provision to other circumstances and the remainder of this Order shall not be affected thereby.

6.1.5. Indirect Discharges

In the event that a spill enters into a drainage conveyance system, the Enrollee shall take all feasible steps to prevent discharge of sewage into waters of the State by blocking or redirecting the flow in the drainage conveyance system, removing the sewage from the drainage conveyance system, and cleaning the system in a manner that does not inadvertently impact beneficial uses of the receiving water body.

6.1.6. Water Boards' Considerations for Discretionary Enforcement

Consistent with the State Water Board Enforcement Policy, when considering Water Code section 13327 factors, the State Water Board or a Regional Water Board may consider the Enrollee's efforts to contain, control, clean up, and mitigate spills. In assessing the factors, the State Water Board or the applicable Regional Water Board will consider:

- The Enrollee's compliance with this General Order with a focus on compliance with reporting requirements;
- The Enrollee's provision of adequate funding to implement the requirements of this General Order;
- The Enrollee's compliance with providing a complete and updated Sewer System Management Plan;
- The Enrollee's compliance with implementing its Sewer System Management Plan;
- The overall effectiveness of the Enrollee's Sewer System Management Plan with respect to:
    - System management, operation, and maintenance,
    - Adequate treatment facilities, sanitary sewer system facilities, and/or components with an appropriate design capacity, to reasonably prevent spills (e.g. adequately enlarging treatment or collection facilities to accommodate growth, infiltration and inflow, etc.),
    - Preventive maintenance (including cleaning, root grinding, and fats, oils, and grease control) and source control measures,
    - Implementation of backup equipment,
    - Inflow and infiltration prevention and control,
    - Appropriate sanitary sewer system capacity to prevent spills, and
    - The Enrollee's responsiveness to stop and mitigate the impact of the discharge;
- The Enrollee's compliance with identifying the cause of the spill;
- The Enrollee's use of available information and observations to accurately estimate the spill volume and identify the affected or potentially affected receiving waters;
- The Enrollee's thoroughness of cleaning up sewage in drainage conveyance systems after the spill(s);
- The Enrollee's use of water quality and biological monitoring and assessment to determine the short-term and long-term impacts to beneficial uses and the environment;
- The Enrollee's follow up actions to improve system performance;
- The Enrollee's implementation of feasible alternatives to prevent spills, such as:
    - Use of temporary storage or waste retention,
    - Reduction of system inflow and infiltration,
    - Collection and hauling of waste to a treatment facility,
    - Prevention of and/ or containment of spills due to a design storm event identified in the Enrollee's Sewer System Management Plan,

- Implementation of available equipment, technologies, strategies, and recommended industry practices for maintaining and managing sewer systems to prevent spills, and contain and eliminate discharges to waters of the State; and

- The spill duration and factors beyond the reasonable control of the Enrollee causing the event.

6.1.7. Enforcement Discretion Based on Reporting Compliance

Consistent with the State Water Board Enforcement Policy, the State Water Board or a Regional Water Board may consider the Enrollee's efforts to comply with spill reporting requirements when determining compliance with Water Code section 13267 and section 13383. When assessing Water Code section 13227 factors, the State Water Board or the applicable Regional Water Board will consider:

- The Enrollee's diligence to comply with all reporting requirements in this General Order;
- The use of best available information for the Enrollee's reporting of spill start date and start time in which the release of sewage from the sanitary sewer system initiated;
- The Enrollee's reporting of spill end date, and end time to be the date and time in which the release of sewage from the sanitary sewer system was stopped;
- The Enrollee's diligence to accurately estimate and report spill volumes;
- The Enrollee's subsequent verification and/or updates to initial Draft Spill Reports in accordance with this General Order; and
- The Enrollee's timely certification of required spill reports.

Consistent with Water Code section 13267 and section 13383, the State Water Board or a Regional Water Board may require an Enrollee to report the results of a condition assessment of a specified portion of the Enrollee's sanitary sewer system.

6.2. Other Regional Water Board Orders

It is the intent of the State Water Board that sanitary sewer systems be regulated in a manner consistent with federal and state regulations. This Order will not be interpreted or applied:

- In a manner inconsistent with the federal Clean Water Act;
- To authorize a spill or discharge that is illegal under either the Clean Water Act, the Water Code, and/or an applicable Basin Plan prohibition or water quality standard;
- To prohibit a Regional Water Board from issuing an individual National Pollutant Discharge Elimination System (NPDES) permit or individual waste discharge requirements superseding an Enrollee's regulatory coverage under this General Order for a sanitary sewer system authorized under the Clean Water Act or Water Code;

- To supersede any more specific or more stringent waste discharge requirements or enforcement orders issued by a Regional Water Board; or
- To supersede any more specific or more stringent state or federal requirements in existing regulation, an administrative/judicial order, or Consent Decree.

6.3. Sewer System Management Plan Availability

The Enrollee's updated Sewer System Management Plan must be maintained for public inspection at the Enrollee's offices and facilities and must be available to the public through CIWQS and/or on the Enrollee's website, in accordance with section 3.8 (Sewer System Management Plan Reporting Requirements) of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order.

6.4. Entry and Inspection

6.4.1. Entry and Availability of Information

The Enrollee shall allow State and Regional Water Board staff, upon presentation of credentials and other documents as may be required by law, to:

- Enter upon the Enrollee's premises where a regulated facility or activity is located or conducted, or where records are kept under the requirements of this General Order;
- Have access to and reproduce any records required to be maintained by this General Order;
- Inspect any facility and/or equipment (including monitoring and control equipment), practices, or operations required in this General Order; and
- Sample or monitor substances or parameters for assuring compliance with this General Order, or as otherwise authorized by the Water Code.

6.4.2. Pre-Inspection Questionnaire

The Enrollee shall provide pre-inspection information to State and Regional Water Board staff through the completion of a Pre-Inspection Questionnaire provided by Water Board staff.

ATTACHMENT A - DEFINITIONS

Annual Report

An Annual Report (previously termed as Collection System Questionnaire in Order 2006-0003-DWQ) is a mandatory report in which the Enrollee provides a calendar-year update of its efforts to prevent spills.

Basin Plan

A Basin Plan is a water quality control plan specific to a Regional Water Quality Control Board (Regional Water Board), that serves as regulations to: (1) define and designate beneficial uses of surface and groundwaters, (2) establish water quality objectives for protection of beneficial uses, and (3) provide implementation measures.

Beneficial Uses

The term “Beneficial Uses” is a Water Code term, defined as the uses of the waters of the State that may be protected against water quality degradation. Examples of beneficial uses include but are not limited to, municipal, domestic, agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves.

California Integrated Water Quality System (CIWQS)

CIWQS is the statewide database that provides for mandatory electronic reporting as required in State and Regional Water Board-issued waste discharge requirements.

Data Submitter

A Data Submitter is an individual designated and authorized by the Enrollee’s Legally Responsible Official to enter spill data into the online CIWQS Sanitary Sewer System Database. A Data Submitter does not have the authority of a Legally Responsible Official to certify reporting entered into the online CIWQS Sanitary Sewer System Database.

Disadvantaged Community

A disadvantaged community is a community with a median household income of less than eighty percent (80%) of the statewide annual median household income.

For the purpose of this General Order, there is no differentiation between a small and large disadvantaged community.

Drainage Conveyance System

A drainage conveyance system is a publicly- or privately-owned separate storm sewer system, including but not limited to drainage canals, channels, pipelines, pump stations, detention basins, infiltration basins/facilities, or other facilities constructed to transport stormwater and non-stormwater flows.

Enrollee

An Enrollee is a public, private, or other non-governmental entity that has obtained approval for regulatory coverage under this General Order, including:

- A state agency, municipality, special district, or other public entity that owns and/or operates one or more sanitary sewer systems:
  - greater than one (1) mile in length (each individual sanitary sewer system);
  - one mile or less in length where the State Water Resources Control Board or a Regional Water Quality Control Board requires regulatory coverage under this Order, or
- A federal agency, private company, or other non-governmental entity that owns and/or operates a sanitary sewer system of any size where the State Water Resources Control Board or a Regional Water Quality Control Board requires regulatory coverage under this Order in response to a history of spills, proximity to surface water, or other factors supporting regulatory coverage.

Environmentally Sensitive Area

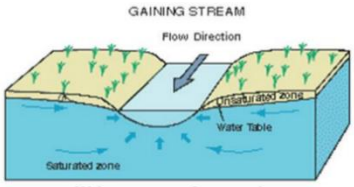
An environmentally sensitive area is a designated agricultural and/or wildlife area identified to need special natural landscape protection due to its wildlife or historical value.

Exfiltration

Exfiltration is the underground exiting of sewage from a sanitary sewer system through cracks, offset or separated joints, or failed infrastructure due to corrosion or other factors.

Flood Control Channel

A flood control channel is a channel used to convey stormwater and non-stormwater flows through and from areas for flood management purposes.



Governing Entity

A governing entity includes but is not limited to the following:

- A publicly elected governing board, council, or commission of a municipal agency;
- A Department or Division director of a federal or state agency that is not governed by a board;
- A governing board or commission of an organization or association; and
- A private system owner/manager that is not governed by a board.

Hydrologically Connected

Two waterbodies are hydrologically connected when one waterbody flows, or has the potential to flow, into the other waterbody. For the purpose of this General Order, groundwater is hydrologically connected to a surface water when the groundwater feeds into the surface water. (The surface waterbody in this example is termed a gaining stream as it gains flow from surrounding groundwater.)

Lateral (including Lower and Upper Lateral)

A lateral is an underground segment of smaller diameter pipe that transports sewage from a customer's building or property (residential, commercial, or industrial) to the Enrollee's main sewer line in a street or easement. Upper and lower lateral boundary definitions are subject to local jurisdictional codes and ordinances, or private system ownership.

A lower lateral is the portion of the lateral located between the sanitary sewer system main, and either the property line, sewer clean out, curb line, established utility easement boundary, or other jurisdictional locations.

An upper lateral is the portion of the lateral from the property line, sewer clean out, curb line, established utility easement boundary, or other jurisdictional locations, to the building or property.

Legally Responsible Official

A Legally Responsible Official is an official representative, designated by the Enrollee, with authority to sign and certify submitted information and documents required by this General Order.

Nuisance

For the purpose of this General Order, a nuisance, as defined in Water Code section 13050(m), is anything that meets all of the following requirements:

- Is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property;
- Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal; and
- Occurs during, or as a result of, the treatment or disposal of wastes.

Private Sewer Lateral

A private sewer lateral is the privately-owned lateral that transports sewage from private property(ies) into a sanitary sewer system.

Private Sanitary Sewer System

A private sanitary sewer system is a sanitary sewer system of any size that is owned and/or operated by a private individual, company, corporation, or organization. A private sanitary sewer system may or may not connect into a publicly owned sanitary sewer system.

Potential to Discharge, Potential Discharge

Potential to Discharge, or Potential Discharge, means any exiting of sewage from a sanitary sewer system which can reasonably be expected to discharge into a water of the State based on the size of the sewage spill, proximity to a drainage conveyance system, and the nature of the surrounding environment.

Receiving Water

A receiving water is a water of the State that receives a discharge of waste.

Resilience

Resilience is the ability to recover from or adjust to adversity or change, and grow from disruptions. Resilience can be built through planning, preparing for, mitigating, and adapting to changing conditions.

Sanitary Sewer System

A sanitary sewer system is a system that is designed to convey sewage, including but not limited to, pipes, manholes, pump stations, siphons, wet wells, diversion structures and/or other pertinent infrastructure, upstream of a wastewater treatment plant headworks, including:

- Laterals owned and/or operated by the Enrollee;
- Satellite sewer systems; and/or
- Temporary conveyance and storage facilities, including but not limited to temporary piping, vaults, construction trenches, wet wells, impoundments, tanks and diversion structures.

For purpose of this Order, sanitary sewer systems include only systems owned and/or operated by the Enrollee.

Satellite Sewer System

A satellite sewer system is a portion of a sanitary sewer system owned or operated by a different owner than the owner of the downstream wastewater treatment facility ultimately treating the sewage.

Sewer System Management Plan

A sewer system management plan is a living document an Enrollee develops and implements to effectively manage its sanitary sewer system(s) in accordance with this General Order.

Sewage

Sewage, and its associated wastewater, is untreated or partially treated domestic, municipal, commercial and/or industrial waste (including sewage sludge), and any mixture of these wastes with inflow or infiltration of stormwater or groundwater, conveyed in a sanitary sewer system.

Spill

A spill is a discharge of sewage from any portion of a sanitary sewer system due to a sanitary sewer system overflow, operational failure, and/or infrastructure failure. Exfiltration of sewage is not considered to be a spill under this General Order if the exfiltrated sewage remains in the subsurface and does not reach a surface water of the State.

Training

Training is in-house or external education and guidance needed that provides the knowledge, skills, and abilities to comply with this General Order.

Wash Down Water

Wash down water is water used to clean a spill area.

Waste

Waste, as defined in Water Code section 13050(d), includes sewage and any and all other waste substances, liquid, solid, gaseous, or radioactive, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation, including waste placed within containers of whatever nature prior to, and for purposes of, disposal.

Waste Discharge Identification Number (WDID)

A waste discharge identification number (WDID) identifies each individual sanitary sewer system enrolled under this General Order. A WDID number is assigned to each enrolled system upon an Enrollee's approved regulatory coverage.

Waters of the State

Waters of the State are surface waters or groundwater within boundaries of the state as defined in Water Code section 13050(e), in which the State and Regional Water Boards have authority to protect beneficial uses. Waters of the State include, but are not limited to, groundwater aquifers, surface waters, saline waters, natural washes and pools, wetlands, sloughs, and estuaries, regardless of flow or whether water exists during dry conditions. Waters of the State include waters of the United States.

Waters of the United States

Waters of the United States are surface waters or waterbodies that are subject to federal jurisdiction in accordance with the Clean Water Act.

Water Quality Objective

A water quality objective is the limit or maximum amount of pollutant, waste constituent or characteristic, or parameter level established in statewide water quality control plans and Regional Water Boards' Basin Plans, for the reasonable protection of beneficial uses of surface waters and groundwater and the prevention of nuisance.

ATTACHMENT B – APPLICATION FOR ENROLLMENT

1. Enrollment Status: (Mark only one item)

☐ New Enrollee

☐ New Enrollee with previous regulatory coverage under Order 2006-0003-DWQ
(that failed to certify continuation of coverage in CIWQS per Order 2022-XXXX-DWQ)
Existing WDID Number: _____

2. Applicant Information:

Legally Responsible Official Submitting Application

First and Last Name: _____

Title: _____

Phone: _____

Email: _____

System Owner/Operator Name: _____

Mailing Address:_____

City, State, Zip:_____

County:_____

Sanitary Sewer System Name: _____

Regional Water Quality Control Board(s): _____

Signature and Date: _____

3. Applicant Type (Check one):

☐ City ☐ County ☐ State ☐ Federal ☐ Special District

☐ Government Combination ☐ Private ☐ Other Non-governmental Entity

4. Wastewater Treatment Plant Receiving Sanitary Sewer System Waste:

Wastewater Treatment Plant Permittee:_____

WDID No.: _____

5. Billing Information

Billing Address: _____

City, State, Zip: _____

Billing Contact Person and Title: _____

Phone and Email Address: _____

6. Application Fee:

The application fee, as required by Water Code section 13260, is based on the daily population served by the sanitary sewer system. See updated Fee Schedule. (https://www.waterboards.ca.gov/resources/fees/water_quality/)

Check one of the following and enter fee amount:

☐ Population Served < 50,000 – Total Fee submitted: $ _____

☐ Population Served ≥ 50,000 – Total Fee submitted: $ _____

Make the fee payment payable to the State Water Resources Control Board and mail the complete application package to:

State Water Resources Control Board, Accounting Office
P. O. Box 1888
Sacramento, CA 95812-1888

Attention: Statewide Sanitary Sewer System Program

7. Application Submittal Certification

I certify under penalty of perjury under the laws of the State of California that to the best of my knowledge and belief, the information in the submitted application package is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment.

Print Name: _____

ATTACHMENT C - NOTICE OF TERMINATION

1. Enrollee Information

Enrollee Name: _____

WDID No:_____

Legally Responsible Official Requesting Termination of Coverage: _____

First and Last Name: _____

Title: _____

Phone: _____

Email: _____

Mailing Address: _____

City, State, Zip: _____

County: _____

Sanitary Sewer System Name(s) or Unique Identifier(s): _____

Regional Water Quality Control Board(s): _____

Signature and Date:_____

2. Basis of Termination

Explanation of termination, including subsequent regulatory coverage and subsequent owner/operator of enrolled sanitary sewer system, as applicable:

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

3. Regulatory Coverage Termination Certification

I certify under penalty of perjury under the laws of the State of California that to the best of my knowledge: 1) the sanitary sewer system I officially represent is not required to be regulated under the Statewide Waste Discharge Requirements for Sanitary Sewer Systems Order 2022-XXXX-DWQ, and 2) the information submitted in this Notice of Termination is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine or imprisonment. Additionally, I understand that the submittal of this Notice of Termination does not release sanitary sewer system agencies from liability for any violations of the Clean Water Act.

ATTACHMENT D – SEWER SYSTEM MANAGEMENT PLAN – REQUIRED ELEMENTS

A Sewer System Management Plan (Plan) is a living planning document that documents ongoing local sewer system management program activities, procedures, and decision-making – at the scale necessary to address the size and complexity of the subject sanitary sewer system(s). This Plan may incorporate other programs and other plans by reference, to address short-term and long-term system resilience through:

- Proactive planning and decision-making;
- Local government ordinances;
- Updated operations and maintenance activities and procedures;
- Implementation of capital improvements;
- Sufficient local budget to support staff resources, contractors, equipment, and training; and
- Updated training of staff and contractors.

The Enrollee's development, update, and implementation of a Sewer System Management Plan addressing the requirements of this Attachment is an enforceable component of this General Order. As specified in Provision 6.1 (Enforcement Provisions) of this General Order, consistent with the Water Code and the State Water Board Enforcement Policy, the State Water Board or a Regional Water Board may consider the Enrollee's efforts in implementing an effective Sewer System Management Plan to prevent, contain, control, and mitigate spills when considering Water Code section 13327 factors to determine necessary enforcement of this General Order.

This Attachment includes the following required elements that the Enrollee shall address in its Plan and subsequent updates. The Enrollee shall identify any requirement in this Attachment that is not applicable to the Enrollee's sewer system and shall explain in its Plan why the requirement is not applicable.

1. SEWER SYSTEM MANAGEMENT PLAN GOAL AND INTRODUCTION

The goal of the Sewer System Management Plan (Plan) is to provide a plan and schedule to: (1) properly manage, operate, and maintain all parts of the Enrollee's sanitary sewer system(s), (2) reduce and prevent spills, and (3) contain and mitigate spills that do occur.

The Plan must include a narrative Introduction section that discusses the following items:

1.1. Regulatory Context

The Plan Introduction section must provide a general description of the local sewer system management program and discuss Plan implementation and updates.

1.2. Sewer System Management Plan Update Schedule

The Plan Introduction section must include a schedule for the Enrollee to update the Plan, including the schedule for conducting internal audits. The schedule must include milestones for incorporation of activities addressing prevention of sewer spills.

1.3. Sewer System Asset Overview

The Plan Introduction section must provide a description of the Enrollee-owned assets and service area, including but not limited to:

- Location, including county(ies);
- Service area boundary;
- Population and community served;
- System size, including total length in miles, length of gravity mainlines, length of pressurized (force) mains, and number of pump stations and siphons;
- Structures diverting stormwater to the sewer system;
- Data management systems;
- Sewer system ownership and operation responsibilities between Enrollee and private entities for upper and lower sewer laterals;
- Estimated number or percent of residential, commercial, and industrial service connections; and
- Unique service boundary conditions and challenge(s).

Additionally, the Plan Introduction section must provide reference to the Enrollee's up-to-date map of its sanitary sewer system, as required in section 4.1 (Updated Map of Sanitary Sewer System) of this Attachment.

2. ORGANIZATION

The Plan must identify organizational staffing responsible and integral for implementing the local Sewer System Management Plan through an organization chart or similar narrative documentation that includes:

- The name of the Legally Responsible Official as required in section 5.1 (Designation of a Legally Responsible Official) of this General Order;
- The position titles, telephone numbers, and email addresses for management, administrative, and maintenance positions responsible for implementing specific Sewer System Management Plan elements;
- Organizational lines of authority; and
- Chain of communication for reporting spills from receipt of complaint or other information, including the person responsible for reporting spills to the State and Regional Water Boards and other agencies, as applicable. (For example, county

health officer, county environmental health agency, and State Office of Emergency Services.)

3. LEGAL AUTHORITY

The Plan must include copies or an electronic link to the Enrollee's current sewer system use ordinances, service agreements and/or other legally binding procedures to demonstrate the Enrollee possesses the necessary legal authority to:

- Prevent illicit discharges into its sanitary sewer system from inflow and infiltration (I&I); unauthorized stormwater; chemical dumping; unauthorized debris; roots; fats, oils, and grease; and trash, including rags and other debris that may cause blockages;
- Collaborate with storm sewer agencies to coordinate emergency spill responses, ensure access to storm sewer systems during spill events, and prevent unintentional cross connections of sanitary sewer infrastructure to storm sewer infrastructure;
- Require that sewer system components and connections be properly designed and constructed;
- Ensure access for maintenance, inspection, and/or repairs for portions of the service lateral owned and/or operated by the Enrollee;
- Enforce any violation of its sewer ordinances, service agreements, or other legally binding procedures; and
- Obtain easement accessibility agreements for locations requiring sewer system operations and maintenance, as applicable.

4. OPERATION AND MAINTENANCE PROGRAM

The Plan must include the items listed below that are appropriate and applicable to the Enrollee's system.

4.1. Updated Map of Sanitary Sewer System

An up-to-date map(s) of the sanitary sewer system, and procedures for maintaining and providing State and Regional Water Board staff access to the map(s). The map(s) must show gravity line segments and manholes, pumping facilities, pressure pipes and valves, and applicable stormwater conveyance facilities within the sewer system service area boundaries.

4.2. Preventive Operation and Maintenance Activities

A scheduling system and a data collection system for preventive operation and maintenance activities conducted by staff and contractors.

The scheduling system must include:

- Inspection and maintenance activities;

- Higher-frequency inspections and maintenance of known problem areas, including areas with tree root problems;
- Regular visual and closed-circuit television (CCTV) inspections of manholes and sewer pipes.

The data collection system must document data from system inspection and maintenance activities, including system areas/components prone to root-intrusion potentially resulting in system backup and/or failure.

4.3. Training

In-house and external training provided on a regular basis for sanitary sewer system operations and maintenance staff and contractors. The training must cover:

- The requirements of this General Order;
- The Enrollee's Spill Emergency Response Plan procedures and practice drills;
- Skilled estimation of spill volume for field operators; and
- Electronic CIWQS reporting procedures for staff submitting data.

4.4. Equipment Inventory

An inventory of sewer system equipment, including the identification of critical replacement and spare parts.

5. DESIGN AND PERFORMANCE PROVISIONS

The Plan must include the following items as appropriate and applicable to the Enrollee's system:

5.1. Updated Design Criteria and Construction Standards and Specifications

Updated design criteria, and construction standards and specifications, for the construction, installation, repair, and rehabilitation of existing and proposed system infrastructure components, including but not limited to pipelines, pump stations, and other system appurtenances. If existing design criteria and construction standards are deficient to address the necessary component-specific hydraulic capacity as specified in section 8 (System Evaluation, Capacity Assurance and Capital Improvements) of this Attachment, the procedures must include component-specific evaluation of the design criteria.

5.2. Procedures and Standards

Procedures, and standards for the inspection and testing of newly constructed, newly installed, repaired, and rehabilitated system pipelines, pumps, and other equipment and appurtenances.

6. SPILL EMERGENCY RESPONSE PLAN

The Plan must include an up to date Spill Emergency Response Plan to ensure prompt detection and response to spills to reduce spill volumes and collect information for prevention of future spills. The Spill Emergency Response Plan must include procedures to:

- Notify primary responders, appropriate local officials, and appropriate regulatory agencies of a spill in a timely manner;
- Notify other potentially affected entities (for example, health agencies, water suppliers, etc.) of spills that potentially affect public health or reach waters of the State;
- Comply with the notification, monitoring and reporting requirements of this General Order, State law and regulations, and applicable Regional Water Board Orders;
- Ensure that appropriate staff and contractors implement the Spill Emergency Response Plan and are appropriately trained;
- Address emergency system operations, traffic control and other necessary response activities;
- Contain a spill and prevent/minimize discharge to waters of the State or any drainage conveyance system;
- Minimize and remediate public health impacts and adverse impacts on beneficial uses of waters of the State;
- Remove sewage from the drainage conveyance system;
- Clean the spill area and drainage conveyance system in a manner that does not inadvertently impact beneficial uses in the receiving waters;
- Implement technologies, practices, equipment, and interagency coordination to expedite spill containment and recovery;
- Implement pre-planned coordination and collaboration with storm drain agencies and other utility agencies/departments prior, during, and after a spill event;
- Conduct post-spill assessments of spill response activities;
- Document and report spill events as required in this General Order; and
- Annually, review and assess effectiveness of the Spill Emergency Response Plan, and update the Plan as needed.

7. SEWER PIPE BLOCKAGE CONTROL PROGRAM

The Sewer System Management Plan must include procedures for the evaluation of the Enrollee's service area to determine whether a sewer pipe blockage control program is needed to control fats, oils, grease, rags and debris. If the Enrollee determines that a program is not needed, the Enrollee shall provide justification in its Plan for why a program is not needed.

The procedures must include, at minimum:

- An implementation plan and schedule for a public education and outreach program that promotes proper disposal of pipe-blocking substances;
- A plan and schedule for the disposal of pipe-blocking substances generated within the sanitary sewer system service area. This may include a list of acceptable disposal facilities and/or additional facilities needed to adequately dispose of substances generated within a sanitary sewer system service area;
- The legal authority to prohibit discharges to the system and identify measures to prevent spills and blockages;
- Requirements to install grease removal devices (such as traps or interceptors), design standards for the removal devices, maintenance requirements, best management practices requirements, recordkeeping and reporting requirements;
- Authority to inspect grease producing facilities, enforcement authorities, and whether the Enrollee has sufficient staff to inspect and enforce the fats, oils, and grease ordinance;
- An identification of sanitary sewer system sections subject to fats, oils, and grease blockages and establishment of a cleaning schedule for each section; and
- Implementation of source control measures for all sources of fats, oils, and grease reaching the sanitary sewer system for each section identified above.

8. SYSTEM EVALUATION, CAPACITY ASSURANCE AND CAPITAL IMPROVEMENTS

The Plan must include procedures and activities for:

- Routine evaluation and assessment of system conditions;
- Capacity assessment and design criteria;
- Prioritization of corrective actions; and
- A capital improvement plan.

8.1 System Evaluation and Condition Assessment

The Plan must include procedures to:

- Evaluate the sanitary sewer system assets utilizing the best practices and technologies available;

- Identify and justify the amount (percentage) of its system for its condition to be assessed each year;
- Prioritize the condition assessment of system areas that:
  - Hold a high level of environmental consequences if vulnerable to collapse, failure, blockage, capacity issues, or other system deficiencies;
  - Are located in or within the vicinity of surface waters, steep terrain, high groundwater elevations, and environmentally sensitive areas;
  - Are within the vicinity of a receiving water with a bacterial-related impairment on the most current Clean Water Act section 303(d) List;
- Assess the system conditions using visual observations, video surveillance and/or other comparable system inspection methods;
- Utilize observations/evidence of system conditions that may contribute to exiting of sewage from the system which can reasonably be expected to discharge into a water of the State;
- Maintain documents and recordkeeping of system evaluation and condition assessment inspections and activities; and
- Identify system assets vulnerable to direct and indirect impacts of climate change, including but not limited to: sea level rise; flooding and/or erosion due to increased storm volumes, frequency, and/or intensity; wildfires; and increased power disruptions.

8.2. Capacity Assessment and Design Criteria

The Plan must include procedures to identify system components that are experiencing or contributing to spills caused by hydraulic deficiency and/or limited capacity, including procedures to identify the appropriate hydraulic capacity of key system elements for:

- Dry-weather peak flow conditions that cause or contributes to spill events;
- The appropriate design storm(s) or wet weather events that causes or contributes to spill events;
- The capacity of key system components; and
- Identify the major sources that contribute to the peak flows associated with sewer spills.

The capacity assessment must consider:

- Data from existing system condition assessments, system inspections, system audits, spill history, and other available information;
- Capacity of flood-prone systems subject to increased infiltration and inflow, under normal local and regional storm conditions;

- Capacity of systems subject to increased infiltration and inflow due to larger and/or higher-intensity storm events as a result of climate change;
- Increases of erosive forces in canyons and streams near underground and above-ground system components due to larger and/or higher-intensity storm events;
- Capacity of major system elements to accommodate dry weather peak flow conditions, and updated design storm and wet weather events; and
- Necessary redundancy in pumping and storage capacities.

8.3. Prioritization of Corrective Action

The findings of the condition assessments and capacity assessments must be used to prioritize corrective actions. Prioritization must consider the severity of the consequences of potential spills.

8.4. Capital Improvement Plan

The capital improvement plan must include the following items:

- Project schedules including completion dates for all portions of the capital improvement program;
- Internal and external project funding sources for each project; and
- Joint coordination between operation and maintenance staff, and engineering staff/consultants during planning, design, and construction of capital improvement projects; and Interagency coordination with other impacted utility agencies.

9. MONITORING, MEASUREMENT AND PROGRAM MODIFICATIONS

The Plan must include an Adaptive Management section that addresses Plan-implementation effectiveness and the steps for necessary Plan improvement, including:

- Maintaining relevant information, including audit findings, to establish and prioritize appropriate Plan activities;
- Monitoring the implementation and measuring the effectiveness of each Plan Element;
- Assessing the success of the preventive operation and maintenance activities;
- Updating Plan procedures and activities, as appropriate, based on results of monitoring and performance evaluations; and
- Identifying and illustrating spill trends, including spill frequency, locations and estimated volumes.

10. INTERNAL AUDITS

The Plan shall include internal audit procedures, appropriate to the size and performance of the system, for the Enrollee to comply with section 5.4 (Sewer System Management Plan Audits) of this General Order.

11. COMMUNICATION PROGRAM

The Plan must include procedures for the Enrollee to communicate with:

- The public for:
  - Spills and discharges resulting in closures of public areas, or that enter a source of drinking water, and
  - The development, implementation, and update of its Plan, including opportunities for public input to Plan implementation and updates.
- Owners/operators of systems that connect into the Enrollee's system, including satellite systems, for:
  - System operation, maintenance, and capital improvement-related activities.

ATTACHMENT E1 – NOTIFICATION, MONITORING, REPORTING AND RECORDKEEPING REQUIREMENTS

Table of Contents

1. Notification Requirements E1-3
   - 1.1. Notification of Spills of 1,000 Gallons or Greater to the California Office of Emergency Services E1-3
   - 1.2. Spill Notification Information E1-4
   - 1.3. Notification of Spill Report Updates E1-4
2. Spill-Specific Monitoring Requirements E1-5
   - 2.1 Spill Location and Spread E1-5
   - 2.2 Spill Volume Estimation E1-5
   - 2.3. Receiving Water Monitoring E1-5
   - 2.4. Safety and Access Exceptions E1-8
3. Reporting Requirements E1-8
   - 3.1. Reporting Requirements for Individual Category 1 Spill Reporting E1-8
   - 3.2. Reporting Requirements for Individual Category 2 Spill Reporting E1-12
   - 3.3. Monthly Certified Spill Reporting for Category 3 Spills E1-14
   - 3.4. Monthly Certified Spill Reporting for Category 4 Spills E1-16
   - 3.5. Amended Certified Spill Reports for Category 3 Spills E1-16
   - 3.6. Annual Certified Spill Reporting of Category 4 and/or Lateral Spills E1-16
   - 3.7. Monthly Certification of “No-Spills” or “Category 4 Spills” and/or “Non-Category 1 Lateral Spills” E1-16
   - 3.8. Electronic Sanitary Sewer System Service Area Boundary Map E1-17
   - 3.9. Annual Report (Previously termed as Collection System Questionnaire in General Order 2006-0003-DWQ) E1-17
   - 3.10. Sewer System Management Plan Audit Reporting Requirements E1-19
   - 3.11. Sewer System Management Plan Reporting Requirements E1-19
4. Recordkeeping Requirements E1-20
   - 4.1. Recordkeeping Time Period E1-20
   - 4.2. Availability of Documents E1-20
   - 4.3. Spill Reports E1-20
   - 4.4. Recordkeeping of Category 4 Spills and Non-Category 1 Lateral Spills E1-21
   - 4.5. Sewer System Telemetry Records E1-22
   - 4.6. Sewer System Management Plan Implementation Records E1-22
   - 4.7. Audit Records E1-23

4.8. Equipment Records.....E1-23
4.9. Work Orders.....E1-23

ATTACHMENT E1– NOTIFICATION, MONITORING, REPORTING AND RECORDKEEPING REQUIREMENTS

The Notification Requirements (section 1), Spill-specific Monitoring Requirements (section 2), Reporting Requirements (section 3) and Recordkeeping Requirements (section 4) in this Attachment are pursuant to Water Code section 13267 and section 13383, and are an enforceable component of this General Order. For the purpose of this General Order, the term:

- Notification means the notifying of appropriate parties of a spill event or other activity.
- Spill-specific Monitoring means the gathering of information and data for a specific spill event to be reported or kept as records.
- Reporting means the reporting of information and data into the online California Integrated Water Quality System (CIWQS) Sanitary Sewer System Database.
- Recordkeeping means the maintaining of information and data in an official records storage system.

Failure to comply with the notification, monitoring, reporting and recordkeeping requirements in this General Order may subject the Enrollee to civil liabilities of up to $10,000 a day per violation pursuant to Water Code section 13385; up to $1,000 a day per violation pursuant to Water Code section 13268; or referral to the Attorney General for judicial civil enforcement.

Water Code section 13193 et seq. requires the Regional Water Quality Control Boards (Regional Water Boards) and the State Water Resources Control Board (State Water Board) to collect sanitary sewer spill information for each spill event and make this information available to the public. Sanitary sewer spill information for each spill event includes but is not limited to: Enrollee contact information for each spill event, spill cause, estimated spill volume and factors used for estimation, location, date, time, duration, amount discharged to waters of the State, response and corrective action(s) taken.

1. NOTIFICATION REQUIREMENTS

1.1. Notification of Spills of 1,000 Gallons or Greater to the California Office of Emergency Services

Per Water Code section 13271, for a spill that discharges in or on any waters of the State, or discharges or is deposited where it is, or probably will be, discharged in or on any waters of the State, the Enrollee shall notify the California Office of Emergency Services and obtain a California Office of Emergency Services Control Number as soon as possible **but no later than two (2) hours** after:

- The Enrollee has knowledge of the spill; and
- Notification can be provided without substantially impeding cleanup or other emergency measures.

The notification requirements in this section apply to individual spills of 1,000 gallons or greater, from an Enrollee-owned and/or operated laterals, to a water of the State.

1.2. Spill Notification Information

The Enrollee shall provide the following spill information to the California Office of Emergency Services before receiving a Control Number, as applicable:

- Name and phone number of the person notifying the California Office of Emergency Services;
- Estimated spill volume (gallons);
- Estimated spill rate from the system (gallons per minute);
- Estimated discharge rate (gallons per minute) directly into waters of the State or indirectly into a drainage conveyance system;
- Spill incident description:
  - Brief narrative of the spill event, and
  - Spill incident location (address, city, and zip code) and closest cross streets and/or landmarks;
- Name and phone number of contact person on-scene;
- Date and time the Enrollee was informed of the spill event;
- Name of sanitary sewer system causing the spill;
- Spill cause or suspected cause (if known);
- Amount of spill contained;
- Name of receiving water body receiving or potentially receiving discharge; and
- Description of water body impact and/ or potential impact to beneficial uses.

1.3. Notification of Spill Report Updates

Following the initial notification to the California Office of Emergency Services and until such time that the Enrollee certifies the spill report in the online CIWQS Sanitary Sewer System Database, the Enrollee shall provide updates to the California Office of Emergency Services regarding substantial changes to:

- Estimated spill volume (increase or decrease in gallons initially estimated);
- Estimated discharge volume discharged directly into waters of the State or indirectly into a drainage conveyance system (increase or decrease in gallons initially estimated); and
- Additional impact(s) to the receiving water(s) and beneficial uses.

2. SPILL-SPECIFIC MONITORING REQUIREMENTS

2.1 Spill Location and Spread

The Enrollee shall visually assess the spill location(s) and spread using photography, global positioning system (GPS), and other best available tools. The Enrollee shall document the critical spill locations, including:

- Photography and GPS coordinates for:
  - The system location where spill originated.

    For multiple appearance points of a single spill event, the points closest to the spill origin.
- Photography for:
  - Drainage conveyance system entry locations,
  - The location(s) of discharge into surface waters, as applicable,
  - Extent of spill spread, and
  - The location(s) of clean up.

2.2 Spill Volume Estimation

To assess the approximate spill magnitude and spread, the Enrollee shall estimate the total spill volume using updated volume estimation techniques, calculations, and documentation for electronic reporting. The Enrollee shall update its notification and reporting of estimated spill volume (which includes spill volume recovered) as further information is gathered during and after a spill event.

2.3. Receiving Water Monitoring

2.3.1. Receiving Water Visual Observations

Through visual observations and use of best available spill volume-estimating techniques and field calculation techniques, the Enrollee shall gather and document the following information for spills discharging to surface waters:

- Estimated spill travel time to the receiving water;
- For spills entering a drainage conveyance system, estimated spill travel time from the point of entry into the drainage conveyance system to the point of discharge into the receiving water;
- Estimated spill volume entering the receiving water; and
- Photography of:
  - Waterbody bank erosion,
  - Floating matter,
  - Water surface sheen (potentially from oil and grease),

- Discoloration of receiving water, and
- Impact to the receiving water.

2.3.2. Receiving Water – Water Quality Sampling and Analysis

For sewage spills in which an estimated 50,000 gallons or greater are discharged into a surface water, the Enrollee shall conduct the following water quality sampling no later than **18 hours** after the Enrollee's knowledge of a potential discharge to a surface water:

- Collect one water sample, each day of the duration of the spill, at:
  - The DCS-001 location as described in section 2.3.4 (Receiving Water Sampling Locations) of this Attachment, if sewage discharges to a surface water via a drainage conveyance system; and/or
  - Each of the three receiving water sampling locations in section 2.3.4 (Receiving Water Sampling Locations) of this Attachment;

    If the receiving water has no flow during the duration of the spill, the Enrollee must report "No Sampling Due To No Flow" for its receiving water sampling locations.

The Enrollee shall analyze the collected receiving water samples for the following constituents per section 2.3.3 (Water Quality Analysis Specifications) of this Attachment:

- Ammonia, and
- Appropriate bacterial indicator(s) per the applicable Basin Plan water quality objectives, including one or more of the following, unless directed otherwise by the Regional Water Board:
  - Total Coliform Bacteria
  - Fecal Coliform Bacteria
  - *E-coli*
  - Enterococcus

  Dependent on the receiving water(s), sampling of bacterial indicators shall be sufficient to determine post-spill (after the spill) compliance with the water quality objectives and bacterial standards of the California Ocean Plan or the California Inland Surface Water Enclosed Bays, and Estuaries Plan, including the frequency and/or number of post-spill receiving water samples as may be specified in the applicable plans.

The Enrollee shall collect and analyze additional samples as required by the applicable Regional Water Board Executive Officer or designee.

2.3.3. Water Quality Analysis Specifications

Spill monitoring must be representative of the monitored activity (40 Code of Federal Regulations section 122.41(j)(1)).

Sufficiently Sensitive Methods

Sample analysis must be conducted according to sufficiently sensitive test methods approved under 40 Code of Federal Regulations Part 136 for the sample analysis of pollutants. For the purposes of this General Order, a method is sufficiently sensitive when the minimum level of the analytical method approved under 40 Code of Federal Regulations Part 136 is at or below the receiving water pollutant criteria.

Environmental Laboratory Accreditation Program-Accredited Laboratories

The analysis of water quality samples required per this General Order must be performed by a laboratory that has accreditation pursuant to Article 3 (commencing with section 100825) of Chapter 4 of Part 1 of Division 101 of the Health and Safety Code. (Water Code section 13176(a).) The State Water Board accredits laboratories through its Environmental Laboratory Accreditation Program (ELAP).

2.3.4. Receiving Water Sampling Locations

The Enrollee shall collect receiving water samples at the following locations.

Sampling of Flow in Drainage Conveyance System (DCS) Prior to Discharge

Sampling Location	Sampling Location Description
DCS-001	A point in a drainage conveyance system before the drainage conveyance system flow discharges into a receiving water.

Receiving Surface Water Sampling (RSW)[1]

Sampling Location	Sampling Location Description
RSW-001 Point of Discharge	A point in the receiving water where sewage initially enters the receiving water.
RSW-001U: Upstream of Point of Discharge	A point in the receiving water, upstream of the point of sewage discharge, to capture ambient conditions absent of sewage discharge impacts.

Sampling Location	Sampling Location Description
RSW-001D: Downstream of Point of Discharge	A point in the receiving water, downstream of the point of sewage discharge, where the spill material is fully mixed with the receiving water.

[1] The Enrollee must use its best professional judgment to determine the upstream and downstream distances based on receiving water flow, accessibility to upstream/downstream waterbody banks, and size of visible sewage plume.

2.4. Safety and Access Exceptions

If the Enrollee encounters access restrictions or unsafe conditions that prevents its compliance with spill response requirements or monitoring requirements in this General Order, the Enrollee shall provide documentation of access restrictions and/or safety hazards in the corresponding required report.

3. REPORTING REQUIREMENTS

All reporting required in this General Order must be submitted electronically to the online CIWQS Sanitary Sewer System Database (https://ciwqs.waterboards.ca.gov), unless specified otherwise in this General Order. Electronic reporting may solely be conducted by a Legally Responsible Official or Data Submitter(s) previously designated by the Legally Responsible Official, as required in section 5.8 (Designation of Data Submitters) of this General Order.

The Enrollee shall report any information that is protected by the Homeland Security Act, by email to SanitarySewer@waterboards.ca.gov, with a brief explanation of the protection provided by the Homeland Security Act for the subject report to be protected from unauthorized disclosure and/or public access, and for official Water Board regulatory purposes only.

3.1. Reporting Requirements for Individual Category 1 Spill Reporting

3.1.1. Draft Spill Report for Category 1 Spills

Within three (3) business days of the Enrollee's knowledge of a Category 1 spill, the Enrollee shall submit a Draft Spill Report to the online CIWQS Sanitary Sewer System Database.

The Draft Spill Report must, at minimum, include the following items:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Date and time the Enrollee was notified of, or self-discovered, the spill;
4. Operator arrival time;

5. Estimated spill start date and time;
6. Date and time the Enrollee notified the California Office of Emergency Services, and the assigned control number;
7. Description, photographs, and GPS coordinates of the system location where the spill originated;
    - If a single spill event results in multiple appearance points, provide GPS coordinates for the appearance point closest to the failure point and describe each additional appearance point in the spill appearance point explanation field;
8. Estimated total spill volume exiting the system;
9. Description and photographs of the extent of the spill and spill boundaries;
10. Did the spill reach a drainage conveyance system? If Yes:
    - Description of the drainage conveyance system transporting the spill;
    - Photographs of the drainage conveyance system entry location(s);
    - Estimated spill volume fully recovered from the drainage conveyance system;
    - Estimated spill volume remaining within the drainage conveyance system;
11. Description and photographs of all discharge point(s) into the surface water;
12. Estimated spill volume that discharged to surface waters; and
13. Estimated total spill volume recovered.

3.1.2. Certified Spill Report for Category 1 Spills

Within 15 calendar days of the spill end date, the Enrollee shall submit a Certified Spill Report for Category 1 spills, to the online CIWQS Sanitary Sewer System Database. Upon completion of the Certified Spill Report, the online CIWQS Sanitary Sewer System Database will issue a final spill event identification number.

The Certified Spill Report must, at minimum, include the following mandatory information in addition to all information in the Draft Spill Report per section 3.1.1 (Draft Spill Report for Category 1 Spills) above:

1. Description of the spill event destination(s), including GPS coordinates if available, that represent the full spread and reach of the spill;
2. Spill end date and time;
3. Description of how the spill volume estimations were calculated, including at a minimum:
    - The methodology, assumptions and type of data relied upon, such as supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
    - The methodology(ies), assumptions and type of data relied upon for estimations of the spill start time and the spill end time;

4. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
5. System failure location (for example, main, lateral, pump station, etc.);
6. Description of the pipe material, and estimated age of the pipe material, at the failure location;
7. Description of the impact of the spill;
8. Whether or not the spill was associated with a storm event;
9. Description of spill response activities including description of immediate spill containment and cleanup efforts;
10. Description of spill corrective action, including steps planned or taken to reduce, eliminate, and prevent reoccurrence of the spill, and a schedule of major milestones for those steps;
11. Spill response completion date;
12. Detailed narrative of investigation and investigation findings of cause of spill;
13. Reasons for an ongoing investigation (as applicable) and the expected date of completion;
14. Name and type of receiving water body(s);
15. Description of the water body(s), including but not limited to:
    - Observed impacts on aquatic life,
    - Public closure, restricted public access, temporary restricted use, and/or posted health warnings due to spill,
    - Responsible entity for closing/restricting use of water body, and
    - Number of days closed/restricted as a result of the spill.
16. Whether or not the spill was located within 1,000 feet of a municipal surface water intake; and
17. If water quality samples were collected, identify sample locations and the parameters the water quality samples were analyzed for. If no samples were taken, Not Applicable shall be selected.

3.1.3. Spill Technical Report for Individual Category 1 Spill in which 50,000 Gallons or Greater Discharged into a Surface Water

For any spill in which 50,000 gallons or greater discharged into a surface water, **within 45 calendar days** of the spill end date, the Enrollee shall submit a Spill Technical Report to the online CIWQS Sanitary Sewer System Database. The Spill Technical Report, at minimum, must include the following information:

1. Spill causes and circumstances, including at minimum:
    - Complete and detailed explanation of how and when the spill was discovered;

- Photographs illustrating the spill origin, the extent and reach of the spill, drainage conveyance system entrance and exit, receiving water, and post-cleanup site conditions;
- Diagram showing the spill failure point, appearance point(s), the spill flow path, and ultimate destinations;
- Detailed description of the methodology employed, and available data used to calculate the discharge volume and, if applicable, the recovered spill volume;
- Detailed description of the spill cause(s);
- Description of the pipe material, and estimated age of the pipe material, at the failure location;
- Description of the impact of the spill;
- Copy of original field crew records used to document the spill; and
- Historical maintenance records for the failure location.

2. Enrollee's response to the spill:
   - Chronological narrative description of all actions taken by the Enrollee to terminate the spill;
   - Explanation of how the Sewer System Management Plan Spill Emergency Response Plan was implemented to respond to and mitigate the spill; and
   - Final corrective action(s) completed and a schedule for planned corrective actions, including:
     - Local regulatory enforcement action taken against an illicit discharge in response to this spill, as applicable,
     - Identifiable system modifications, and operation and maintenance program modifications needed to prevent repeated spill occurrences, and
     - Necessary modifications to the Emergency Spill Response Plan to incorporate lessons learned in responding to and mitigating the spill.
3. Water Quality Monitoring, including at minimum:
   - Description of all water quality sampling activities conducted;
   - List of pollutant and parameters monitored, sampled and analyzed; as required in section 2.3 (Receiving Water Monitoring) of this Attachment;
   - Laboratory results, including laboratory reports;
   - Detailed location map illustrating all water quality sampling points; and
   - Other regulatory agencies receiving sample results (if applicable).
4. Evaluation of spill impact(s), including a description of short-term and long-term impact(s) to beneficial uses of the surface water.

3.1.4. Amended Certified Spill Reports for Individual Category 1 Spills

The Enrollee shall update or add additional information to a Certified Spill Report within **90 calendar days** of the spill end date by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The Enrollee shall certify the amended report.

After **90 calendar days**, the Enrollee shall contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a Spill Report. The Legally Responsible Official shall submit justification for why the additional information was not reported within the Amended Spill Report due date.

3.2. Reporting Requirements for Individual Category 2 Spill Reporting

3.2.1. Draft Spill Report for Category 2 Spills

Within three (3) business days of the Enrollee's knowledge of a Category 2 spill, the Enrollee shall submit a Draft Spill Report to the online CIWQS Sanitary Sewer System Database.

The Draft Spill Report must, at minimum, include the following items:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Date and time the Enrollee was notified of, or self-discovered, the spill;
4. Operator arrival time;
5. Estimated spill start date and time;
6. Date and time the Enrollee notified the California Office of Emergency Services, and the assigned control number;
7. Description, photographs, and GPS coordinates of the system location where the spill originated;

   If a single spill event results in multiple appearance points, provide GPS coordinates for the appearance point closest to the failure point and describe each additional appearance point in the spill appearance point explanation field;
8. Estimated total spill volume exiting the system;
9. Description and photographs of the extent of the spill and spill boundaries;
10. Did the spill reach a drainage conveyance system? If Yes:
    - Description of the drainage conveyance system transporting the spill;
    - Photographs of the drainage conveyance system entry location(s);
    - Estimated spill volume fully recovered from the drainage conveyance system;
    - Estimated spill volume remaining within the drainage conveyance system;

- Estimated spill volume discharged to a groundwater infiltration basin or facility, if applicable; and

11. Estimated total spill volume recovered.

3.2.2. Certified Spill Report for Category 2 Spills

Within 15 calendar days of the spill end date, the Enrollee shall submit a Certified Spill Report for the Category 2 spill, to the online CIWQS Sanitary Sewer System Database (https://ciwqs.waterboards.ca.gov). Upon completion of the Certified Spill Report, the online CIWQS Sanitary Sewer System Database will issue a final spill event identification number.

The Certified Spill Report must, at minimum, include the following mandatory information in addition to all information in the Draft Spill Report per section 3.2.1 (Draft Spill Report for Category 2 Spills) above:

1. Description of the spill event destination(s), including GPS coordinates if available, that represent the full spread and reach of the spill;
2. Spill end date and time;
3. Description of how the spill volume estimations were calculated, including at a minimum:
   - The methodology, assumptions and type of data relied upon, such as supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
   - The methodology(ies), assumptions and type of data relied upon for estimations of the spill start time and the spill end time;
4. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
5. System failure location (for example, main, pump station, etc.);
6. Description of the pipe/infrastructure material, and estimated age of the pipe material, at the failure location;
7. Description of the impact of the spill;
8. Whether or not the spill was associated with a storm event;
9. Description of spill response activities including description of immediate spill containment and cleanup efforts;
10. Description of spill corrective action, including steps planned or taken to reduce, eliminate, and prevent reoccurrence of the spill, and a schedule of major milestones for those steps;
11. Spill response completion date;
12. Detailed narrative of investigation and investigation findings of cause of spill;
13. Reasons for an ongoing investigation (as applicable) and the expected date of completion; and

14. Whether or not the spill was located within 1,000 feet of a municipal surface water intake.

3.2.3. Amended Certified Spill Reports for Individual Category 2 Spills

The Enrollee shall update or add additional information to a Certified Spill Report within **90 calendar days** of the spill end date by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The Enrollee shall certify the amended report.

After **90 calendar days**, the Enrollee shall contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a Spill Report. The Legally Responsible Official shall submit justification for why the additional information was not reported within the Amended Spill Report due date.

3.3. Monthly Certified Spill Reporting for Category 3 Spills

The Enrollee shall report and certify all Category 3 spills to the online CIWQS Sanitary Sewer System Database within 30 calendar days after the end of the month in which the spills occurred. (For example, all Category 3 spills occurring in the month of February shall be reported and certified by March 30th). After the Legally Responsible Official certifies the spills, the online CIWQS Sanitary Sewer System Database will issue a spill event identification number for each spill.

The monthly reporting of all Category 3 spills must include the following items for each spill:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Date and time the Enrollee was notified of, or self-discovered, the spill;
4. Operator arrival time;
5. Estimated spill start date and time;
6. Description, photographs, and GPS coordinates where the spill originated:
    - If a single spill event results in multiple appearance points, provide GPS coordinates for the appearance point closest to the failure point and describe each additional appearance point in the spill appearance point explanation field;
7. Estimated total spill volume exiting the system;
8. Description and photographs of the extent of the spill and spill boundaries;
9. Did the spill reach a drainage conveyance system? If Yes:
    - Description of the drainage conveyance system transporting the spill;
    - Photographs of the drainage conveyance system entry locations(s);
    - Estimated spill volume fully recovered from the drainage conveyance system; and

- Estimated spill volume discharged to a groundwater infiltration basis or facility, if applicable.

10. Estimated total spill volume recovered;
11. Description of the spill event destination(s), including GPS coordinates, if available, that represent the full spread and reaches of the spill;
12. Spill end date and time;
13. Description of how the spill volume estimations were calculated, including, at minimum:
    - The methodology and type of data relied upon, including supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
    - The methodology and type of data relied upon to estimate the spill start time, on-going spill rate at time of arrival (if applicable), and the spill end time;
14. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
15. System failure location (for example, main, pump station, etc.);
16. Description of the pipe/infrastructure material, and estimated age of the pipe/infrastructure material, at the failure location;
17. Description of the impact of the spill;
18. Whether or not the spill was associated with a storm event;
19. Description of spill response activities including description of immediate spill containment and cleanup efforts;
20. Description of spill corrective actions, including steps planned or taken to reduce, eliminate, and prevent reoccurrence of the spill, and a schedule of the major milestones for those steps; including, at minimum:
    - Local regulatory enforcement action taken against an illicit discharge in response to this spill, as applicable, and
    - Identifiable system modifications, and operation and maintenance program modifications needed to prevent repeated spill occurrences at the same spill event location, including:
      - Adjusted schedule/method of preventive maintenance,
      - Planned rehabilitation or replacement of sanitary sewer asset,
      - Inspected, repaired asset(s), or replaced defective asset(s),
      - Capital improvements,
      - Documentation verifying immediately implemented system modifications and operating/maintenance modifications,
      - Description of spill response activities,

- Spill response completion date, and
- Ongoing investigation efforts, and expected completion date of investigation to determine the full cause of spill;

21. Detailed narrative of investigation and investigation findings of cause of spill.

3.4. Monthly Certified Spill Reporting for Category 4 Spills

The Enrollee shall report and certify the estimated total spill volume exiting the sanitary sewer system, and the total number of all Category 4 spills to the online CIWQS Sanitary Sewer System Database, within 30 calendar days after the end of the month in which the spills occurred.

3.5. Amended Certified Spill Reports for Category 3 Spills

Within 90 calendar days of the certified Spill Report due date, the Enrollee may update or add additional information to a certified Spill Report by amending the report or by adding an attachment to the Spill Report in the online CIWQS Sanitary Sewer System Database. The Enrollee shall certify the amended report.

After 90 calendar days, the Legally Responsible Official shall contact the State Water Board at SanitarySewer@waterboards.ca.gov to request to amend a certified Spill Report. The Legally Responsible Official shall submit justification for why the additional information was not reported within the 90-day timeframe for amending the certified Spill Report, as provided above.

3.6. Annual Certified Spill Reporting of Category 4 and/or Lateral Spills

For all Category 4 spills and spills from its owned and/or operated laterals that are caused by a failure or blockage in the lateral and that do not discharge to a surface water, the Enrollee shall:

- Maintain records per section 4.4. of this Attachment;

  The Enrollee shall provide records upon request by State Water Board or Regional Water Board staff.

- Annually upload and certify a report, in an appropriate digital format, of all recordkeeping of spills to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occurred.

A spill from an Enrollee-owned and/or operated lateral that discharges to a surface water is a Category 1 spill; the Enrollee shall report all Category 1 spills per section 3.1 of Attachment E1 (Notification, Monitoring, Reporting and Recordkeeping Requirements) of this General Order.

3.7. Monthly Certification of "No-Spills" or "Category 4 Spills" and/or "Non-Category 1 Lateral Spills"

If either (1) no spills occur during a calendar month or (2) only Category 4, and/or Enrollee-owned and/or operated lateral spills (that do not discharge to a surface water) occur during a calendar month, the Enrollee shall certify, within 30 calendar days after

the end of each calendar month, either a “No-Spill” certification statement, or a “Category 4 Spills” and/or “Non-Category 1 Lateral Spills” certification statement, in the online CIWQS Sanitary Sewer System Database, certifying that there were either no spills, or Category 4 and/or Non-Category 1 Lateral Spills that will be reported annually (per section 3.6 of this Attachment) for the designated month.

If a spill starts in one calendar month and ends in a subsequent calendar month, and the Enrollee has no further spills of any category, in the subsequent calendar month, the Enrollee shall certify “no-spills” for the subsequent calendar month.

If the Enrollee has no spills from its systems during a calendar month, but the Enrollee voluntarily reported a spill from a private lateral or a private system, the Enrollee shall certify “no-spills” for that calendar month.

If the Enrollees has spills from its owned and/or operated laterals during a calendar month, the Enrollee shall not certify “no spills” for that calendar month.

3.8. Electronic Sanitary Sewer System Service Area Boundary Map

The Legally Responsible Official shall submit, to the State Water Board, an up-to-date electronic spatial map of its sewer system service area boundaries. The map must be in accordance with section 5.14 (Electronic Sanitary Sewer System Service Area Boundary Map) of this General Order and the specification provided on the statewide Sanitary Sewer Systems program website. The map must include the location of wastewater treatment facility(ies) that treats the sewer system waste, if in the same sewer service boundary.

By the Effective Date of this General Order, specifications for the electronic sanitary sewer service area boundary map format will be provided on the statewide Sanitary Sewer Systems Order program website.

3.9. Annual Report (Previously termed as Collection System Questionnaire in General Order 2006-0003-DWQ)

A new Enrollee shall complete and submit its first certified Annual Report into the online CIWQS Sanitary Sewer System Database, **within 30 days of obtaining a CIWQS account**; Subsequent Annual Reports are due by April 1 of each year.

All enrollees shall update their previous year’s Annual Report, **by April 1 of each year after the Effective Date of this General Order,** for each calendar year (January 1 through December 31)**.**

The Annual Report must be entered directly into the online CIWQS Sanitary Sewer System Database. The Enrollee’s Legally Responsible Official shall certify the Annual Report as instructed in CIWQS;

The Annual Report must address, and update as applicable, the following items:

- Population served;

- Updated sewer system service area boundary map, if service area boundary has changed from original map submitted per section 5.14 (Electronic Sanitary Sewer System Service Area Boundary Map) of this General Order;
- Number of system operation and maintenance staff:
  - Entry level (less than two years of experience),
  - Journey level (greater than two years of experience),
  - Supervisory level, and
  - Managerial level;
- Number of operation and maintenance staff certified as a certified collection system operator by the California Water Environmental Association (CWEA), with:
  - Corresponding number of certified collection system operator grade levels (Grade I, II, III, IV, and V);
- System information:
  - Miles of system gravity and force mains,
  - Number of upper and lower service laterals connected to system,
  - Estimated number of upper and lower laterals owned and/or operated by the Enrollee,
  - Portion of laterals that is Enrollee's responsibility,
  - Average age the major components of system infrastructure,
  - Number and age of pump stations, and
  - Estimated total miles of the system pipeline not accessible for maintenance;
- Name and location of the treatment plant(s) receiving sanitary sewer system's waste;
- Name of satellite sewer system tributaries;
- Number of system's gravity sewer above or underground crossings of water bodies throughout system;
- Number of force main (pressurized pipe) above or underground crossings of water bodies throughout system;
- Number of siphons used to convey waste throughout the sewer system;
- Miles of sewer system cleaned;
- Miles of sewer system video inspected, or comparable (i.e., video closed-circuit television or alternative inspection methods);
- System Performance Evaluation as specified in section 5.11 (System Performance Analysis) of this General Order;
- Major spill causes (for example, root intrusion, grease deposition);

- System infrastructure failure points (for example, main, pump station, lateral, etc.);
- Ongoing spill investigations; and
- Actions taken to address system deficiencies.

3.10. Sewer System Management Plan Audit Reporting Requirements

The Enrollee shall submit its Sewer System Management Plan Audit and other pertinent audit information, in accordance with section 5.4 (Sewer System Management Plan Audits) of this General Order, to the online CIWQS Sanitary Sewer System Database **by six (6) months after the end of the 3-year audit period**.

If a Sewer System Management Plan Audit is not conducted as required: the Enrollee shall:

- Update the online CIWQS Sanitary Sewer System Database and select the justification for not conducting the Audit; and
- Notify its corresponding Regional Water Board (see Attachment F (Regional Water Quality Control Board Contact Information)) of the justification for the lapsed requirements.

The Enrollee's reporting of a justification for not conducting a timely Audit does not justify non-compliance with this General Order. The Enrollee shall:

- Submit the late Audit as required in this General Order; and
- Comply with subsequent Audit requirements and due dates corresponding with the original audit cycle.

3.11. Sewer System Management Plan Reporting Requirements

For an Existing Enrollee previously regulated by Order 2006-0003-DWQ: **Within every six (6) years after the required due date of its last Plan Update**, the Legally Responsible Official shall upload and certify a local governing entity-approved Sewer System Management Plan Update to the online CIWQS Sanitary Sewer System Database. If the electronic document format or size capacity prevents the electronic upload of the Plan, the Legally Responsible Official shall report an electronic link to its updated Sewer System Management Plan posted on its own website.

Order 2006-0003-DWQ required each enrollee to develop its initial Sewer System Management Plan per the following schedule, with required Plan updates at a frequency of 5-years thereafter:

Systems serving populations: Greater than 100,000: May 2, 2009

Between 100,000 and 10,000: August 2, 2009

Between 10,000 and 2,500: May 2, 2010

Less than 2,500: August 2, 2010

This Order carries forth the previously-required Plan Update schedule per Order 2006-0003-DWQ. Per the six-year Plan Update frequency required in this Order, the Enrollee shall upload and certify its first Plan Update, to the online CIWQS Sanitary Sewer System Database by the following due dates, with subsequent Plan Updates at the frequency of six years thereafter:

Systems serving populations: Greater than 100,000: May 2, 2025

Between 100,000 and 10,000: August 2, 2025

Between 10,000 and 2,500: May 2, 2026

Less than 2,500: August 2, 2026

For a New Enrollee: **Within twelve (12) months of its Application for Enrollment Approval date**, the Legally Responsible Official of a new Enrollee shall upload and certify a local governing entity-approved Sewer System Management Plan to the online CIWQS Sanitary Sewer System Database. If electronic document format or size capacity prevents the electronic upload of the Plan, the Legally Responsible Official shall report an electronic link to its Sewer System Management Plan posted on its own website. The due date for subsequent 6-year Plan updates, is six (6) years from the submittal due date of the new Enrollee's first Sewer System Management Plan.

4. RECORDKEEPING REQUIREMENTS

The Enrollee shall maintain records to document compliance with the provisions of this General Order, and previous General Order 2006-0003-DWQ as applicable, for each sanitary sewer system owned, including any required records generated by an Enrollee's contractor(s).

4.1. Recordkeeping Time Period

The Enrollee shall maintain records of documents required in this Attachment, including records collected for compliance with this General Order, and records collected in accordance with previous General Order 2006-0003-DWQ, for five (5) years.

4.2. Availability of Documents

The Enrollee shall make the records required in this General Order readily available, either electronic or hard copies, for review by Water Board staff during onsite inspections or through an information request.

4.3. Spill Reports

The Enrollee shall maintain records for each of the following spill-related events and activities:

- Spill event complaint, including but not limited to records documenting how the Enrollee responded to notifications of spills. Each complaint record must, at a minimum, include the following information:
    - Date, time, and method of notification,

- Date and time the complainant first noticed the spill, if available,
- Narrative description of the complaint, including any information the caller provided regarding whether the spill has reached surface waters or a drainage conveyance system, if available,
- Complainant's contact information, if available, and
- Final resolution of the complaint;

- Records documenting the steps and/or remedial action(s) undertaken by the Enrollee, using all available information, to comply with this General Order, and previous General Order 2006-0003-DWQ as applicable;
- Records documenting how estimate(s) of volume(s) and, if applicable, volume(s) of spill recovered were calculated;
- All California Office of Emergency Services notification records, as applicable; and
- Records, in accordance with the Monitoring Requirements in this Attachment.

4.4. Recordkeeping of Category 4 Spills and Non-Category 1 Lateral Spills

An Enrollee must maintain the following records for each individual Category 4 spill and for each individual non-Category 1 Enrollee-owned and/or operated lateral spill, and report in accordance to section 3.6 (Annual Certified Spill Reporting of Category 4 and/or Lateral Spills) of this Attachment.

Recordkeeping of Individual Category 4 Spill Information:

1. Contact information: Name and telephone number of Enrollee contact person to respond to spill-specific questions;
2. Spill location name;
3. Description and GPS coordinates for the system location where the spill originated;
4. Did the spill reach a drainage conveyance system? If Yes:
   - Description of drainage conveyance system location,
   - Estimated spill volume fully recovered within the drainage conveyance system, and
   - Estimated spill volume remaining within the drainage conveyance system;
5. Estimated total spill volume exiting the sanitary sewer system;
6. Spill date and start time;
7. Spill cause(s) (for example, root intrusion, grease deposition, etc.);
8. System failure location (for example, main, pump station, etc.);
9. Description of spill response activities including description of immediate spill containment and cleanup efforts;
10. Description of how the volume estimation was calculated, including, at minimum:

- The methodology and type of data relied upon, including supervisory control and data acquisition (SCADA) records, flow monitoring or other telemetry information used to estimate the volume of the spill discharged, and the volume of the spill recovered (if any volume of the spill was recovered), and
- The methodology and type of data relied upon to estimate the spill start time, on-going spill rate at time of arrival (if applicable), and the spill end time;

11. Description of implemented system modifications and operating/maintenance modifications.

Recordkeeping of Individual Lateral Spill Information:

1. Date and time the Enrollee was notified of, or self-discovered, the spill;
2. Location of individual spill;
3. Estimated individual spill volume;
4. Spill cause(s) (for example, root intrusion, grease deposition, etc.); and
5. Description of how the volume estimations were calculated.

Total Annual Spill Information:

1. Estimated total annual spill volume;
2. Description of spill corrective actions, including at minimum:
   - Local regulatory enforcement action taken against the sewer lateral owner in response to a spill, as applicable, and
   - System operation, maintenance and program modifications implemented to prevent repeated spill occurrences at the same spill location.

4.5. Sewer System Telemetry Records

The Enrollee shall maintain the following sewer system telemetry records if used to document compliance with this General Order, and previous General Order 2006-0003-DWQ as applicable, including spill volume estimates:

- Supervisory control and data acquisition (SCADA) system(s);
- Alarm system(s);
- Flow monitoring device(s) or other instrument(s) used to estimate sewage flow rates, and/or volumes;
- Computerized maintenance management system records; and
- Asset management-related records.

4.6. Sewer System Management Plan Implementation Records

The Enrollee shall maintain records documenting the Enrollee's implementation of its Sewer System Management Plan, including documents supporting its Sewer System Management Plan audits, corrections, modifications, and updates to the Sewer System Management Plan.

4.7. Audit Records

The Enrollee shall maintain, at minimum, the following records pertaining to its Sewer System Management Plan audits, and other internal audits:

- Completed audit documents and findings;
- Name and contact information of staff and/or consultants that conducted or involved in the audit; and
- Follow-up actions based on audit findings.

4.8. Equipment Records

The Enrollee shall maintain a log of all owned and leased sewer system cleaning, operational, maintenance, construction, and rehabilitation equipment.

4.9. Work Orders

The Enrollee shall maintain record of work orders for operations and maintenance projects.

ATTACHMENT E2 – SUMMARY OF NOTIFICATION, MONITORING AND REPORTING REQUIREMENTS

This Attachment provides a summary of notification, monitoring and reporting requirements, by spill category, and for Enrollee-owned and/or operated laterals as required in Attachment E1 of this General Order, for quick reference purposes only.

Table E2-1

Spill Category 1: Spills to Surface Waters

Spill Requirement	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a Category 1 spill of 1,000 gallons or greater, discharging or threatening to discharge to surface waters: Notify the California Office of Emergency Services and obtain a notification control number.	California Office of Emergency Services at: (800) 852-7550 (Section 1 of Attachment E1)
Monitoring	• Conduct spill-specific monitoring; • Conduct water quality sampling of the receiving water within **18 hours** of initial knowledge of spill of 50,000 gallons or greater to surface waters.	(Section 2 of Attachment E1)
Reporting	• Submit Draft Spill Report **within three (3) business days** of the Enrollee's knowledge of the spill; • Submit Certified Spill Report **within 15 calendar days** of the spill end date; • Submit Technical Report **within 45 calendar days** after the spill end date for a Category 1 spill in which **50,000 gallons or greater** discharged to surface waters; and • Submit Amended Spill Report **within 90 calendar days** after the spill end date.	(Section 3.1 of Attachment E1)

Table E2-2
Spill Category 2: **Spills of 1,000 Gallons or Greater That Do Not Discharge to Surface Waters**

Spill Requirements	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a Category 2 spill of 1,000 gallons or greater, discharging or threatening to discharge to waters of the State: Notify California Office of Emergency Services and obtain a notification control number.	California Office of Emergency Services at: (800) 852-7550 (Section 1 of Attachment E1)
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E1)
Reporting	• Submit Draft Spill Report **within three (3) business days** of the Enrollee's knowledge of the spill; • Submit Certified Spill Report **within 15 calendar days** of the spill end date; and • Submit Amended Spill Report **within 90 calendar days** after the spill end date.	(Section 3.2 of Attachment E1)

Table E2-3
Spill Category 3: Spills of Equal or Greater than 50 Gallons and Less than 1,000 Gallons That Does Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	Not Applicable	Not Applicable
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E1)
Reporting	• Submit monthly Certified Spill Report to the online CIWQS Sanitary Sewer System Database within **30 calendars days** after the end of the month in which the spills occur; and • Submit Amended Spill Reports **within 90 calendar days** after the Certified Spill Report due date.	(Section 3.3 and 3.5 of Attachment E1)

Table E2-4
Spill Category 4: Spills Less Than 50 Gallons That Do Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	Not Applicable	Not Applicable
Monitoring	Conduct spill-specific monitoring.	(Section 2 of Attachment E1)
Reporting	• If, during any calendar month, Category 4 spills occur, certify monthly, the estimated total spill volume exiting the sanitary sewer system, and the total number of all Category 4 spills into the online CIWQS Sanitary Sewer System Database, within 30 days after the end of the calendar month in which the spills occurred. • Upload and certify a report, in an acceptable digital format, of all Category 4 spills to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occur.	(Section 3.4, 3.6, 3.7 and 4.4 of Attachment E1)

Table E2-5
Enrollee Owned and/or Operated Lateral Spills That Do Not Discharge to Surface Waters

Spill Requirements	Due	Method
Notification	**Within two (2) hours** of the Enrollee's knowledge of a spill of 1,000 gallons or greater, from an enrollee-owned and/or operated lateral, discharging or threatening to discharge to waters of the State: Notify California Office of Emergency Services and obtain a notification control number. Not applicable to a spill of less than 1,000 gallons.	California Office of Emergency Services at: (800) 852-7550 (Section 1 of Attachment E1)
Monitoring	Conduct visual monitoring.	(Section 2 of Attachment E1)
Reporting	• Upload and certify a report, in an acceptable digital format, of all lateral spills (that do not discharge to a surface water) to the online CIWQS Sanitary Sewer System Database, by February 1st after the end of the calendar year in which the spills occur. • Report a lateral spill of any volume that discharges to a surface water as a Category 1 spill.	(Sections 3.6, 3.7 and 4.4 of Attachment E1)

ATTACHMENT F – REGIONAL WATER QUALITY CONTROL BOARD CONTACT INFORMATION

This Attachment provides a map, list of counties, and contact information to assist the Enrollee in identifying the corresponding Regional Water Quality Control Board office, for all Regional Water Board notification requirements in this General Order.

Region 1 -- North Coast Regional Water Quality Control Board:
Del Norte, Glenn, Humboldt, Lake, Marin, Mendocino, Modoc, Siskiyou, Sonoma, and Trinity counties.

RB1SpillReporting@waterboards.ca.gov or (707) 576-2220

Region 2 -- San Francisco Bay Regional Water Quality Control Board:
Alameda, Contra Costa, San Francisco, Santa Clara (Northern most part of Morgan Hill), San Mateo, Marin, Sonoma, Napa, Solano counties.

RB2SpillReports@waterboards.ca.gov or (510) 622-2369

Region 3 -- Central Coast Regional Water Quality Control Board:
Santa Clara (most of Morgan Hill), San Mateo (Southern portion), Santa Cruz, San Benito, Monterey, Kern (small portions), San Luis Obispo, Santa Barbara, Ventura (Northern portion) counties.

CentralCoast@waterboards.ca.gov or (805) 549-3147

Region 4 -- Los Angeles Regional Water Quality Control Board:
Los Angeles, Ventura counties (small portions of Kern and Santa Barbara counties).

rb4-ssswdr@waterboards.ca.gov or (213) 576-6600

Region 5 -- Central Valley Regional Water Quality Control Board:

Rancho Cordova (Sacramento) Office: Colusa, Lake, Sutter, Yuba, Sierra, Nevada, Placer, Yolo, Napa, (North East), Solano (West), Sacramento, El Dorado, Amador, Calaveras, San Joaquin, Contra Costa (East), Stanislaus, Tuolumne counties.

RB5sSpillReporting@waterboards.ca.gov or (916) 464-3291

Fresno Office: Fresno, Kern, Kings, Madera, Mariposa, Merced, and Tulare counties, and small portions of San Benito and San Luis Obispo counties.

RB5fSpillReporting@waterboards.ca.gov or (559) 445-5116

Redding Office: Butte, Glen, Lassen, Modoc, Plumas, Shasta, Siskiyou, and Tehama counties.

RB5rSpillReporting@waterboards.ca.gov or (530) 224-4845

Region 6 -- Lahontan Regional Water Quality Control Board:
Lake Tahoe Office: Alpine, Modoc (East), Lassen (East side and Eagle Lake), Sierra, Nevada, Placer, El Dorado counties.

RB6sSpillReporting@waterboards.ca.gov or (530) 542-5400

Victorville Office: Mono, Inyo, Kern (East), San Bernardino, Los Angeles (North East corner) counties.

RB6vSpillReporting@waterboards.ca.gov or (760) 241-6583

Region 7 -- Colorado River Basin Regional Water Quality Control Board:
Imperial county and portions of San Bernardino, Riverside, San Diego counties.

RB7SpillReporting@waterboards.ca.gov or (760) 346-7491

Region 8 -- Santa Ana Regional Water Quality Control Board:
Orange, Riverside, San Bernardino counties.

RB8SpillReporting@waterboards.ca.gov or (951) 782-4130

Region 9 -- San Diego Regional Water Quality Control Board:
San Diego county and portions of Orange and Riverside counties.

End of Order 2022-0103-DWQ

CITY OF BANNING
STAFF REPORT

TO:	**CITY COUNCIL**
FROM:	**Douglas Schulze, City Manager**
PREPARED BY:	**Emery Papp, Senior Planner**
MEETING DATE:	**July 9, 2024**
SUBJECT:	**Second Reading and Adoption of Ordinance 1605, Amending Table 17.08.020 of Section 17.08.020 of Article I of Chapter 17.08 of Division II of Title 17 of the City of Banning Municipal Code to Clarify that Affordable Housing Uses are Permitted by Right and are not Subject to Discretionary Action in Specified Zoning Districts as Required by State Law; and Making a Determination of Exemption from the California Environmental Quality Act**

RECOMMENDATION:

Conduct second reading and adopt Ordinance 1605.

BACKGROUND:

The 6th Cycle Housing Element Update, which spans the time period from 2021 through 2029, was adopted by the City Council on November 9, 2021 and was submitted to the California Department of Housing and Community Development (HCD) for certification review on November 18, 2021. At the conclusion of a 90-Day Review Period, HCD rescinded their previous conditional certification of the Housing Element and required revisions to an Ordinance previously approved by a former HCD reviewer. These revisions were detailed in the HCD comment letter dated February 21, 2022.

A revised 6th Cycle Housing Element Update was prepared, which addressed comments received from HCD and was reviewed by the Planning Commission on December 6, 2023, and was then reviewed and adopted by the City Council on January 9, 2024. The readopted 6th Cycle Housing Element was transmitted to HCD for Certification review. To be considered for Certification by HCD, the proposed Zoning Text Amendments contained in Ordinance 1600 were integral to implementing the Housing Element Programs. The adopted Ordinance 1600 was transmitted to HCD prior to the conclusion of HCD's 60-day review on March 14, 2024. A letter from HCD dated March 29, 2024, stated that although the City of Banning 6th Cycle Housing Element complied with the statutory requirements of State Housing Element law, the Housing Element was found to not be in substantial compliance due to the wording of a line item in Table 17.08.020, and the wording of footnote number 7 of the same table. Staff worked directly with HCD to garner tentative agreement of proposed amendments to Table 17.08.020, and footnote number 7, as shown in the attached Ordinance 1605.

On June 25, 2024, the City Council conducted first reading of and introduced Ordinance 1605, as read by title only. The zoning text amendments will become effective upon the 31st day after the City Council's of Ordinance 1605. Pursuant to an email conversation with HCD staff on May 17, 2024 (attached), the proposed Zoning Text Amendment/Ordinance 1605, when adopted, and an executed copy of which is transmitted to HCD, will garner certification of the 6th Cycle Housing Element. Until the 6th Cycle Housing Element is Certified by HCD, the City is not eligible to compete for federal, state, or

local grant money. If HCD continues to find that the City has a noncompliant Housing Element, the City can lose the ability to receive Community Development Block Grants as well as other negative incentives such as fines and increases to the City's Regional Housing Needs Assessment.

JUSTIFICATION:

Adoption of Ordinance 1605 will implement Zoning Text Amendment (ZTA 24-0050), a proposal to amend Table 17.08.020 in Banning Municipal Code ("BMC") Section 17.08.020, Residential Zoning Districts (Chapter 17.08, Article I, Division II); amending Permitted and Conditionally Permitted Uses by moving the line item for "Affordable Housing" to just below "Multi-Family Housing" in the Table; and amending footnote number 7 to Table 17.08.020 of the BMC from: "7 Housing developments in the VHDR district are permitted at a minimum density of twenty-four dwelling units to 30 dwelling units per acre, without a Public Hearing required. Applies only to affordable housing projects pursuant to Government Code Section 65583." to the following: "7 Affordable housing developments pursuant to Government Code Section 65583.2 and located within the multi-family housing zoning districts are permitted by right without a public hearing or discretionary action and, in the VHDR district, are permitted at a minimum density of 24 dwelling units to 30 dwelling units per acre."

FINDINGS:

Finding A: The proposed Amendment is consistent with the goals and policies of the General Plan.
Findings of Fact: The proposed amendment to Title 17 (Zoning) is consistent with the following goals and policies of the General Plan:

Community Development Element:
Goal. A balanced, well planned community including businesses which provides a functional pattern of land uses and enhances the quality of life for all Banning residents.

- Policy 1. The City maintain a land use map which assures a balance of residential, commercial, industrial open space and public lands.
- Policy 2. The Planning, Public Works and Economic Development staff shall be closely coordinated, to assure [sic] efficient and cost effective processing of applications.
- Policy 3. Development in all land use categories shall be of the highest quality.
- Policy 4. Specific Plans shall be required to for projects proposing one or more of the following: More than one residential land use designation; A combination of residential, commercial and/or industrial land use designation; or Extension of infrastructure (water, sewer and roadways) into an area where these do not exist.
- Policy 5. All land use proposals shall be consistent with the goals, policies and programs of this General Plan, and with the Zoning Ordinance.
- Policy 6. The City shall implement a program for art in public places.

Housing Element (6th Cycle Housing Element Update):
Goal. Promote the maintenance and preservation of the City's existing housing stock.

- Policy 1.1 Encourage the revitalization of the existing housing stock through rehabilitation programs.
- Policy 1.2 Continue to establish and enforce property maintenance regulations that promote the sound maintenance of property and enhance the livability and appearance of residential areas.
- Policy 1.3 Promote the development of attractive and safe housing to meet community needs.

Finding B. The proposed Amendment is consistent with the goals and policies of Title 17 of the Municipal Code (Zoning Ordinance).
Findings of Fact: The proposed amendment to Title 17 (Zoning) is internally consistent with the rest of Title 17. This proposed amendment will create opportunities for attractive and safe residential housing for all current and future City of Banning residents from all socio-economic groups. The Project will also

implement Housing Element Policy 2.2 by supporting the development of housing affordable to all income groups by utilizing a variety of public and private efforts.

Finding C: That the Planning Commission has independently reviewed and considered the requirements of CEQA.
Findings of Fact: As stated in Section 1 of this Resolution, Planning Division staff find and determine that the proposed amendments to Title 17 (Zoning), as set forth in Exhibit B to this Resolution, is not subject to CEQA pursuant to State CEQA Guidelines Section 15061(b)(3); the Planning Commission has reviewed staff's determinations of exemption from CEQA, and recommends that the City Council, based on its own independent judgement, concur with staff's determination of exemption and direct the Community Development Director to file the Notice of Exemption attached as Exhibit A to this Resolution. Environmental Determination Pursuant to the California Environmental Quality Act (CEQA) and the State CEQA Guidelines, the Project is exempt from the California Environmental Quality Act (CEQA) subject to Section 15061(b)(3), because it can be seen with certainty there is no possibility these amendments may have a significant effect on the environment. Subject to Section 15061(b)(3) (Review For Exemptions) of the CEQA Guidelines, no further analysis is required and a Notice of Exemption has been prepared for the Project. Future projects subject to proposed amendments to Title 17 (Zoning) will require a discretionary permit and CEQA review, and will be analyzed at the appropriate time in accordance with CEQA.

Public Communication: The proposed Ordinance 1605 (Zoning Text Amendment 24-0050) to achieve certification of the City of Banning 6th Cycle Housing Element was advertised in the Record Gazette newspaper on May 17, 2024 for the May 29, 2024 Planning Commission meeting; and on June 14, 2024, for the June 25, 2024 City Council public hearing. As of the date of this report, staff has not received any written comments on the project. On May 29, 2024, the Planning Commission voted unanimously to adopt PC Resolution 2024-11, recommending that the City Council adopt Ordinance 1605 and find that the project is exempt from the California Environmental Quality Act pursuant to Section 15061(b)(3) of the CEQA Guidelines.

FISCAL IMPACT:

Other than staff time, there are no anticipated fiscal impacts if the City Council adopts Ordinance 1605; but there are potentially severe sanctions if the Housing Element is not Certified by HCD. Submittal of future residential or mixed-use development applications pursuant to adopted Housing Element Programs, goals, and policies, will increase Community Development Department revenues and collection of Development Impact Fees.

ALTERNATIVES:

1. Conduct second reading of and adopt Ordinance 1605
2. Do not adopt Ordinance 1605 and provide alternative direction to staff.

1. Ordinance 1605.docx

ORDINANCE 1605

AN ORDINANCE OF THE CITY OF BANNING, CALIFORNIA, AMENDING TABLE 17.08.020 OF SECTION 17.08.020 OF ARTICLE I OF CHAPTER 17.08 OF DIVISION II OF TITLE 17 OF THE CITY OF BANNING MUNICIPAL CODE TO CLARIFY THAT AFFORDABLE HOUSING USES ARE PERMITTED BY RIGHT AND ARE NOT SUBJECT TO DISCRETIONARY ACTION IN SPECIFIED ZONING DISTRICTS AS REQUIRED BY STATE LAW; AND MAKING A DETERMINATION OF EXEMPTION FROM THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

The City Council of the City of Banning does hereby ordain as follows:

SECTION 1. Findings and Purpose.

A. On January 9, 2024, the City of Banning adopted a revised Housing Element update for the 6th Cycle based on comments received from the State of California Department of Housing and Community Development (HCD) and the public.

B. The City has submitted its revised Housing Element update to HCD for review and certification. HCD has 60 days to act, during which time the City must adopt certain zoning text amendments described in the Housing Element; including: (1) establishing residential density at 30 dwelling units per acre (DU/AC); (2) establishing a zone or zones that authorizes certain Multi-Family Residential (MFR)/High Density Residential) (HDR) housing projects or as a ministerial action (e.g., "by right"); (3) adopting objective residential development standards decreases the barriers to entry as related to Multi-Family Residential and High Density Residential development; and (4) establishing reasonable regulations for Multi-Family Residential and High Density Residential development, is necessary as a means of documenting and preserving these properties. City staff prepared Zoning Text Amendment 23-97503, as set forth in Ordinance 1600, which amended BMC Title 17 for the purpose of fulfilling the City's obligations under its Housing Element.

C. On January 10, 2024, the Planning Commission held a duly noticed public hearing on Zoning Text Amendment 23-97503, during which all interested persons were allowed to comment on the matter. After considering all of the evidence and testimony presented at that hearing, the Planning Commission adopted Resolution 2024-02, recommending that the City Council adopt Ordinance 1600 approving Zoning Text Amendment 23-97503.

D. On February 13, 2024, the City Council held a duly noticed public hearing on Zoning Text Amendment 23-97503, during which all interested persons were allowed to comment on the matter, and introduced Ordinance 1600. On February 27, 2024, the City Council adopted Ordinance 1600.

E. On March 14, 2024, City staff forwarded a certified copy of Ordinance 1600 to HCD as proof of rezones required to garner HCD Certification of the City of Banning 6th Cycle Housing Element. By letter dated March 29, 2024, HCD informed the City that Zoning Text Amendment 23-97503, as adopted by Ordinance 1600, did not fully comply with the requirements under Government Code Sections 65583.2(c), (h), or (i). Specifically, HCD stated that with respect to affordable housing uses, the City's amendments to the Zoning Ordinance must clearly state such uses are permitted "by right" and are not subject to discretionary review within the Medium Density Residential ("MDR"), High Density Residential ("HDR"), Mobile Home Park ("MHP"), and Very High-Density Residential ("VHDR") Zoning Districts consistent with the requirements under Government Code Section 65583.2.

F. In response to HCD's March 29, 2024 letter, City staff has prepared Zoning Text Amendment 24-0050, as set forth in this Ordinance, to amend Table 17.08.020 of Section 17.08.020 of Article 1 of Chapter 17.08 of Division II of Title 17 of the Banning Municipal Code to

clarify that affordable housing uses are permitted by right and are not subject to discretionary action, as required under State law, in the MDR, HDR, MHP, and VHDR Zoning Districts when 20 percent (20%) or more of the total unit count is reserved for lower-income households.

G. On May 17, 2024, the City gave public notice by advertising in the Record Gazette, a newspaper of general circulation within the City of Banning, of the holding of a public hearing before the Planning Commission at which the proposed amendments to Title 17 (Zoning) would be considered.

H. On May 29, 2024, the Planning Commission of the City of Banning held a duly noticed public hearing on Zoning Text Amendment 24-0050, during which all interested persons were allowed to comment on the matter.

I. Based on all of the evidence and testimony presented at that hearing, and the entirety of the administrative record in this matter, the Planning Commission recommended that the City Council adopt Ordinance 1605.

J. On June 11, 2024, the City gave public notice by advertising in the Record Gazette, a newspaper of general circulation within the City of Banning, of the holding of a public hearing before the City Council at which the proposed amendments to Title 17 (Zoning) would be considered.

K. On June 25, 2024, the City Council of the City of Banning held a duly noticed public hearing on Zoning Text Amendment 24-0050, during which all interested persons were allowed to comment on the matter.

L. Based on all of the evidence and testimony presented at both hearings, and the entirety of the administrative record in this matter, the City Council finds as follows:

a. All facts and findings set forth above in this Section 1 of the Ordinance are true and correct.

b. This Ordinance is consistent with the goals and policies of the City's revised Housing Element update and the City's General Plan as a whole.

c. This Ordinance is internally consistent with the Banning Municipal Code.

d. The proposed Zoning Text Amendment 24-0050 is exempt from the requirements of the California Environmental Quality Act ("CEQA") and the CEQA Guidelines pursuant to CEQA Guidelines Section 15061(b)(3) because it can be seen with certainty that there is no possibility that the proposed amendment, clarifying that affordable housing uses (where permitted in the City's Zoning Districts) are permitted by right and are not subject to discretionary action as required under State law, will have a significant effect on the environment. The proposed amendment is an administrative process of the City that will not result in direct or indirect physical changes in in the environment. The City Council has independently reviewed the administrative record concerning the proposed Zoning Text Amendment 24-0050 and the proposed CEQA determination, and based on its own independent judgement, finds that the amendment set forth in this Ordinance is not subject to, or exempt from, the requirements of CEQA and the State CEQA Guidelines pursuant to CEQA Guidelines Section 15061(b)(3).

M. All legal prerequisites to adoption of this Ordinance have occurred.

SECTION 2. Table 17.08.020 (Permitted, Conditional and Prohibited Uses) of Section 17.08.020 (Permitted, Conditional and Prohibited Uses) of Article I (General Provisions) of Chapter 17.08 (Residential Districts) of Division II (Land Use Districts) of Title 17 (Zoning) of the Banning Municipal Code is hereby amended as indicated by the following additions and deletions:

[1] Small family day care homes are permitted by right in single-family residences located in any residential zone. Small family day care homes are not permitted in multiple-family residences.
[2] Large family day care homes are conditionally permitted in single-family residences located in any residential zone. Large family day care homes are not permitted in multiple-family residences.
[3] Neighborhood-oriented retail stores, as defined in the General Plan, consist of "corner store" type development such as convenience stores, grocery or green grocer, video rental, drug stores, sit down restaurants, coffee shops or coffee bars or similar uses, less than five thousand square feet in total square footage.
[4] Temporary uses require temporary use permit. See Chapter 17.108 for provisions.
[5] Agricultural employee housing allowed with up to twelve units or thirty-six persons, and/or up to six workers as a single-family use.
[6] Cannabis Personal Cultivation must comply with the provisions of Chapter 5.34.

[7] **Affordable housing developments pursuant to Government Code Section 65583.2 and located within the multi-family housing zoning districts are permitted by right without a public hearing or discretionary action and, in the VHDR district, are permitted at a minimum density of 24 dwelling units to 30 dwelling units per acre.**

SECTION 3. If any section, subsection, paragraph, clause or phrase in this Ordinance, or any part thereof, is for any reason held to be invalid or unconstitutional, such decision shall not affect the validity of the remaining section or portions of this Ordinance or any part thereof. The Council hereby declares that it would have passed each section, subsection, subdivision, paragraph, sentence, clause, or phrase of this Ordinance, irrespective of any one or more sections, subsections, subdivisions, paragraphs, sentence, clauses or phrases may be declared invalid or unconstitutional.

SECTION 4. The City Clerk is directed to certify the passage and adoption of this Ordinance; cause it to be entered into the City of Banning's book of original ordinances; make a note of the passage and adoption in the records of this meeting; and, within fifteen (15) days after the passage and adoption of this Ordinance, cause it to be published or posted in accordance with California law.

SECTION 5. This Ordinance will become effective on the thirty-first (31st) day following its passage and adoption.

PASSED, APPROVED AND ADOPTED this 9th day of July 2024.

Alberto Sanchez, Mayor
City of Banning

ATTEST:

Caroline Patton, Administrative City Clerk
City of Banning

APPROVED AS TO FORM:

Serita Young, City Attorney
Richards, Watson & Gershon

CERTIFICATION:

I, Caroline Patton, Administrative City Clerk of the City of Banning, California, do hereby certify that Ordinance 1605 was duly introduced at a regular meeting of the City Council of the City of Banning, held on the 25th day of June 2024, and was duly adopted at a regular meeting of said City Council on the 9th day of July 2024, by the following vote, to wit:

CITY OF BANNING
STAFF REPORT

TO:	**CITY COUNCIL**
FROM:	**Douglas Schulze, City Manager**
PREPARED BY:	**Kevin Sin, Senior Civil Engineer** **Art Vela, Director of Public Works**
MEETING DATE:	**July 9, 2024**
SUBJECT:	**Accept as Complete Various Improvements Related to the Atwell Specific Plan Development and Authorize the 90% Bond Exoneration**

RECOMMENDATION:

City Council accept as complete various improvements related to the Atwell Specific Plan Development and authorize the 90% bond exoneration.

BACKGROUND:

On September 8, 2020, City Council adopted Resolution 2020-114 approving Final Tract Map Nos. 37390, 37390-1, 37390-2 and 37390-F (Phase 1B - PA 6, PA 7 and PA 8), releasing the maps for recordation; authorizing staff to sign the subdivision improvement agreements and final tract maps; and accepting various Performance and Labor and Material Bonds for public improvements.

As conditions of approval for the Atwell Specific Plan development, Tri Pointe Homes was required to sign subdivision improvement agreements and to submit bonds to assure the City that the required public improvements are constructed according to City standards and specifications.
These public improvements included street, water and sewer for Tract 37390-1 (PA 6) and the Meadowline Water Interconnect Facility (mechanical and civil) for Tract 37298-1 of the Atwell Specific Plan Development.

JUSTIFICATION:

Staff has verified through inspections that the required public improvements were completed per City standards and specifications and recommends that City Council accept the improvements as complete and authorize the 90% bond exoneration for the following bonds:

Bond #	Bond Amount	Improvements
CMS0339958	$551,310.00	Tract 37390-1 (PA 6) Sewer
CMS0339959	$1,196,959.68	Tract 37390-1 (PA 6) Street
CMS0339960	$592,940.00	Tract 37390-1 (PA 6) Water

The remaining 10% of the bond amounts will remain for a period of 12 months (maintenance period) at which point the 10% balance will be released and the improvements will become City owned and maintained improvements.

FISCAL IMPACT:

Not applicable

ALTERNATIVES:

Do not accept staff's recommendation and provide staff with additional direction.

SUBDIVISION IMPROVEMENT AGREEMENT

THIS SUBDIVISION IMPROVEMENT AGREEMENT ("Agreement") is made and entered into by and between the City of Banning, a municipal corporation ("City"), and the Subdivider whose name and address is set forth above in the Subdivision Reference Data.

RECITALS

A. Subdivider has presented to the City for approval and recordation a Final Map, identified above in the Subdivision Reference Data, of a proposed subdivision pursuant to the Subdivision Map Act of the State of California and the City's ordinances and regulations as such ordinances and regulations are vested under the development agreement recorded in the official records of the County of Riverside on July 17, 2012 as Document No. 2012-0332888 ("Development Agreement") relating to the filing, approval and recordation of subdivision maps (collectively referred to herein as the "Subdivision Laws").

B. A tentative map of the Subdivision was previously approved by City, subject to the Subdivision Laws and to the City's standard requirements as vested under the Development Agreement and conditions of approval contained in the City Council's Resolution of Approval, a copy of which is on file in the Office of the City Clerk and which is incorporated herein by this reference.

C. The Subdivision Laws establish, as a condition precedent to the approval of a Final Map, that the Subdivider comply with the City Council's Resolution of Approval and either (i) complete, in compliance with applicable City standards, all of the improvements and land development work required by the Subdivision Laws and the City Council's Resolution of Approval; or (ii) enter into a secured agreement with the City to complete the improvements and land development work within a period of time specified by the City.

D. In consideration of approval of the Final Map for the Subdivision by the City Council, Subdivider desires to enter into this Agreement whereby Subdivider promises to install and complete, at its sole expense, except as otherwise provided in a credit/reimbursement agreement as provided for in the Development Agreement, all public improvement work required by the City as set forth on the Improvement Plans (as defined below) for the proposed Subdivision. Subdivider has secured this Agreement by improvement security required by the Subdivision Laws and approved by the City. In any conflict between the terms in this Agreement and the Development Agreement, the Development Agreement shall be the controlling document.

E. Improvement Plans, and related specifications, numbered as designated above in the Subdivision Reference Data, for the construction, installation and completion of the Improvements identified in Schedule A hereto, have been prepared by the Subdivider, approved by the City Engineer, and are on file in the office of the City Engineer. Said Improvement Plans, and related specifications, subsequently modified by

the mutual written agreement of the parties, are hereby referred to as the "Improvement Plans" and are incorporated herein by this reference. Any improvement to be constructed pursuant to the Improvement Plan is hereby referred to individually as an "**Improvement"** and collectively as the "**Improvements"**.

NOW, THEREFORE, in consideration of the approval and recordation by the City Council of the Final Map of the Subdivision, Subdivider and City agree as follows:

1. SUBDIVIDER'S OBLIGATION TO CONSTRUCT IMPROVEMENTS

A. Subdivider shall, at its sole expense, unless otherwise provided in a credit/reimbursement agreement as provided for in the Development Agreement, and in compliance with the provisions of the Subdivision Laws, the Improvement Plans, conditions of approval of the Tentative Map, and all applicable City standards and fees, and in a good and workmanlike fashion, furnish, construct, install and guarantee (as set forth in Section 3) the Improvements, Grading, and Monumentation described on the tentative map and in the City Council's Resolution of Approval relating thereto (collectively, the "Improvements").

B. To the extent necessary to construct the Improvements, as determined by the City Engineer, the Subdivider shall acquire and dedicate, or pay the reasonable, documented cost of acquisition by City of, all rights-of-way, easements and other interests in real property for the construction or installation of the Improvements, free and clear of all liens and encumbrances. If the Subdivider is unable to acquire such rights-of-way, easements and other interests in real property by negotiation, then Subdivider shall, within 120 days of Final Map approval, enter into a condemnation agreement with City pursuant to Government Code Section 66462.5, by which the City will commence the process for the acquisition of the rights-of-way, easements or other real property.

C. Subject to any time extensions granted in accordance with Section 4, Subdivider shall complete all Improvements within its respective "Completion Period" specified in the Subdivision Reference Data; provided, however, that if the City Engineer reasonably determines in good faith that accelerated construction of the Improvements is essential in order to protect the public health, welfare and safety, the City Engineer shall give Subdivider not less than fifteen (15) business days' prior written notice to commence or accelerate installation and construction of such Improvements, or any portion thereof. The notice shall be in writing, and shall describe the work to be done by Subdivider, the time within which the work will commence, the period within which the work will be completed and identify the reasons that such early commencement is essential in order to protect the public health, welfare and safety. All or any portions of said Improvements may be required to be constructed or completed at a specified time, providing the foregoing criteria is met. If the Subdivider objects to the commencement or acceleration of the Improvements as specified by the City Engineer, Subdivider may appeal the decision of the City Engineer to the City Council. Any such appeal shall be filed with the City Clerk within 10 days after receipt by Subdivider of the written notice from the City Engineer.

D. If the Improvements to be constructed by Subdivider include monumentation, such monumentation shall be installed not later than thirty (30) days after the City's acceptance of all other Improvements pursuant to Section 2. As used herein, "monumentation" shall mean the setting of survey monuments and tie points in accordance with the Subdivision Laws, and the delivery to the City Engineer of tie notes for said points.

E. Subdivider shall , at its sole expense, unless otherwise provided in a credit/reimbursement agreement as provided for in the Development Agreement, replace or repair all public improvements, public utility facilities, and surveying or subdivision monuments which are destroyed or damaged as a result of any work performed by Subdivider under this Agreement during or after the Completion Period. Any such replacement or repair shall be subject to the approval of the City Engineer.

F. In addition to, and separate from, the indemnity obligations contained in Section 9 of this Agreement, and without limiting the City's remedies under general construction defect law, Subdivider shall be responsible for the care, repair and maintenance of the applicable portion of the Improvements until the latter of the following time periods: (i) the Improvements or applicable portion thereof is accepted in writing by the City; or (ii) the expiration of the required one-year guarantee and warranty period as specified herein; or (iii) the expiration of any applicable period of time requiring the care, repair and maintenance of the applicable Improvement specified in the Development Agreement (not including the term of any Development Agreement). Neither City, nor its officers, agents and employees, shall have any liability for any accident, loss or damage to the Improvements and that may result from the construction of the Improvements prior to their completion and written acceptance by the City

G. In addition to, and separate from: (1) the indemnity obligations contained in Section 7 of this Agreement, (2) the care, repair and maintenance provisions under paragraph E of this Section 1 of this Agreement; and (3) the warranty and guarantee provisions of Section 3 of this Agreement, Subdivider shall repair and correct, or be liable to the City for any cost to repair and correct, any defect in the construction of the Improvements that is identified by City within in accordance with general construction defect law ten (10) years after City's acceptance of the Improvement, provided the City provides written notice to Subdivider of the existence of the defect within that the time period under law, and the defect is caused directly or indirectly by the design, construction, functionality, installation, assembly or workmanship of Subdivider. Nothing contained in this paragraph is intended to limit or otherwise waive any right or cause of action under applicable construction defect law that City may assert against Subdivider.

H. Subdivider shall, at its sole expense, unless otherwise provided in a credit/reimbursement agreement as provided for in the Development Agreement, obtain all necessary permits and licenses for the construction and installation of the Improvements, give all necessary notices, and pay all applicable fees required by City ordinance or resolution and all taxes required by law.

I. Not less than seven (7) days prior to commencement of work on the Improvements, Subdivider shall give written notice to the City Engineer of the date fixed for such commencement of work in order that the City Engineer shall have adequate time to schedule all necessary inspections.

J. SUBDIVIDER shall pay all applicable City fees and costs stipulated in the latest fee resolution as adopted by the City Council from time to time as required for the development of the SUBDIVISION including but not limited to the following:

1. Building Permit Fees --- to be paid at the time of building permit issuance;

2. Final Map Plan Check Fees --- to be paid at time of submittal of final map for plan check and resubmittal of revised final map for plan check;

3. Final Map Moratorium Fees --- to be paid from cash deposit established at time of filing final map;

4. Plan Check and Review Fees --- to be paid from cash deposit established at time of filing improvement plans for plan check;

5. Encroachment Permit Fees --- to be paid at time of application for encroachment permit;

6. Inspection Fees --- to be paid from cash deposit established at time of construction permit issuance; and

7. Grading Permit Fee --- to be paid from cash deposit established at time of grading permit issuance.

K. Subdivider shall provide City with final Record Drawings of all plans developed for the Subdivision, showing all changes and as built conditions as specified in the Tentative Tract Map Conditions of Approval, and shall provide electronic image files of those final Record Drawings consistent with electronic image file size and type specifications of the City prior to the acceptance of improvements and release of bonds or other security.

2. <u>INSPECTION OF WORK AND FINAL ACCEPTANCE</u>

A. Subdivider shall at all times maintain proper facilities and safe access for inspection of the Improvements by the City Engineer and other City personnel and inspection consultants.

B. Upon completion of the work on all or any category of the Improvements, the Subdivider may request a final inspection by the City Engineer. Within forty-five (45) days of receipt of the written letter request, the City Engineer shall

inspect the Improvements and provide written notice to Subdivider of the list of items which have been found to be incomplete and the list of items which have been found to be complete. If the City Engineer determines that all or any specified category of the Improvements have been completed in accordance with this Agreement and in compliance with the Improvement Plans and all applicable City standards, then the City Engineer shall acknowledge that determination in a report to the City Council. If the Improvements that are completed are to be dedicated to or owned by the City (Improvements within City right of way and property for public use), the City Engineer's determination shall be submitted to the City Council for final acceptance by the City, unless such power to accept has been delegated by the City Council to the City Engineer or some other officer of the City, in which case the final acceptance shall be subject to the approval of that specified official. If the Improvements that are completed are to be dedicated to or owned by a public entity other than the City, the Subdivider's written request shall be submitted to the applicable public entity or other owner, for final acceptance. Subdivider shall bear all costs of inspection and determination of completeness in accordance with City's formally adopted and applicable fees and rates.

C. Acceptance of all or any specified category of the Improvements by the City Council shall be made upon recommendation and certification of the City Engineer following inspection of said Improvements pursuant to subparagraph B above. The City Council shall act upon the City Engineer's recommendation that such public Improvements have been completed unless such power to accept has been delegated by the City Council to the City Engineer or some other officer of the City, in which case the final acceptance shall be subject to the approval of that specified official. Acceptance by the City or by the governing body of the entity that is to accept dedication or ownership of the public improvements shall not constitute a waiver by the City or such other public entity of any defects in the public Improvements.

3. GUARANTEE AND WARRANTY OF THE IMPROVEMENTS

A. If, within a period of one year following acceptance by the City of the applicable Improvements specified in Schedule A, any Improvements or part of any Improvements specified in Section A furnished, installed or constructed by the Subdivider, or any of the work performed under this Agreement by Subdivider, fails to comply with any requirements of this Agreement, or the Subdivision Laws, or the Improvement Plans and related specifications, the Subdivider shall, without delay and without cost to the City, repair, replace or reconstruct any defective or otherwise unsatisfactory part or parts of the Improvements. Subdivider's obligations hereunder shall include the repair, replacement or reconstruction of all irrigation systems and all trees, shrubs, ground cover and landscaping for such one year.

B. Should the Subdivider fail or refuse to act promptly or in accordance with subparagraph A above, or should the exigencies of the situation require repair, replacement, or reconstruction to be undertaken before the Subdivider can be notified and can perform the necessary work, then the City may, in its discretion, make the necessary repairs or replacements or perform the necessary reconstruction and draw upon the Subdivider's improvement security to reimburse itself for the costs incurred. If

the Subdivider's improvement security does not cover the total cost of such repair, replacement, or reconstruction, the Subdivider shall reimburse the City for any excess costs incurred.

C. The security furnished for the faithful performance of the Subdivider's obligation to construct and install the Improvements described herein shall include the Subdivider's liability and obligation hereunder to provide the one-year guarantee and warranty of the Improvements.

4. TIME EXTENSIONS

A. Upon a showing by the Subdivider of good cause therefor, the duration of the Completion Period for the Improvements (or any of them) may be extended by the City Engineer in writing. As used herein, "good cause" may include, without limitation, delay resulting from, arising out of or relating to an act of the City; acts of God or force majeure, strikes, boycotts or similar job actions by employees or labor organizations which prevent the conduct of the work; findings made by a governmental entity that the site of a particular Improvement is of archeological significance or requires further permitting and approval; and/or actions or failure to act of native American monitor(s); and, the order of any court.

B. A time extension may be granted without notice to any surety or sureties of the Subdivider and shall not affect the validity of this Agreement nor release the surety or sureties on any bond given as an improvement security pursuant to this Agreement.

C. As a condition of any time extension provided for herein, the City Engineer, may require the Subdivider to furnish new or modified improvement security guaranteeing performance of this Agreement, as extended, in an increased amount as necessary to compensate for any projected increase in the Estimated Total Cost of Improvements, as determined by the City Engineer.

5. IMPROVEMENT SECURITY

A. Prior to City's execution of this Agreement, Subdivider shall provide as security to the City:

1. For Performance and Guarantee: Security in an amount equal to one hundred percent (100%) of the Estimated Total Cost of the Improvements, excluding Grading, as set forth above in the Subdivision Reference Data. The security shall be issued by a bonding company licensed to issue bonds in the State of California and having a Best rating of AAA or better. With this security, the form of which shall be subject to City Attorney's prior approval, the Subdivider assures faithful performance under this Agreement and guarantees the Improvements for one year after the completion and acceptance of the applicable portion of such Improvements, against any defective workmanship or materials or any unsatisfactory performance, pursuant to Section 3 hereof.

2. For Payment: Security in an amount equal to one hundred percent (100%) of the Estimated Total Cost of the Improvements, excluding Grading, as set forth above in the Subdivision Reference Data. The security shall be issued by a bonding company licensed to issue bonds in the State of California and having a Best rating of AAA or better. With this security, the form of which shall be subject to City Attorney's prior approval, the Subdivider guarantees payment to contractors, subcontractors, and persons renting equipment or furnishing labor or materials to them or to the Subdivider.

B. If the improvement security is a corporate surety bond and, in the opinion of the City, any surety or sureties thereon become insufficient, because (i) the surety becomes insolvent; (ii) the surety's bond rating is downgraded; (iii) the surety declares bankruptcy; or (iv) the surety is no longer deemed to be an admitted surety in California by the California Department of Insurance, or (v) the form of the surety or the amount is found by City to be in error or materially insufficient, the Subdivider shall renew or replace any such surety bond with good and sufficient surety or sureties within thirty (30) days after receiving from City written demand therefor.

C. The amount of security for performance, payment and warranty obligations provided by this section shall not include the cost of monumentation, as required by Government Code Section 66497 so long as a separate cash deposit or security acceptable to the City Engineer for the estimated cost of monumentation has been submitted to the City.

D. Improvement security consisting of corporate surety bonds, in a form accepted by the City Attorney, shall be filed with the City Engineer and then kept on file with the City Clerk. If a corporate surety bond is replaced by another approved bond, the replacement shall be submitted to the City Engineer and, upon filing with the City Clerk, shall be deemed to have been made a part of and incorporated into this Agreement. Upon submission to the City Engineer and then filing with the City Clerk of a replacement bond, the former improvement security shall be released following written approval of the City Engineer.

E. Modifications of the Improvement Plans and related specifications, and modifications of the Improvements, not exceeding ten percent (10%) of the original Estimated Total Cost of the Improvements, shall not relieve or release any improvement security furnished by Subdivider pursuant to this Agreement. If any such modifications exceed ten percent (10%) of the Estimated Total Cost of the Improvements, Subdivider shall furnish additional improvement security for performance and guarantee, and for payment, as required by subparagraph A above, for one hundred percent (100%) of the revised Estimated Total Cost of the Improvements.

F. Subject to any time extensions granted in accordance with Section 4 herein, the Subdivider shall be in default if the Subdivider has not completed all improvements within two years from the Execution Date of the Agreement and has not repaired any defects in the completed Improvements within the one-year guarantee and warranty period.

Alternatively, in the event of a default by the Subdivider pursuant to Section 10, and after written notice to Subdivider and reasonable opportunity to cure, City, at its sole option, shall have the right, without limiting any other rights and/or remedies available to City at law or in equity, to draw upon or utilize the improvement security furnished herewith to construct and install the Improvements itself. If City exercises this right, the release of any unused portion of such improvement security shall be in accordance with the procedures outlined in Section 6 herein, including any retention necessary for the one-year guarantee period.

6. REDUCTION OR RELEASE OF IMPROVEMENT SECURITY

A. All public Improvements (Improvements that are to be owned or dedicated to the City or other public entity as distinguished from those owned by a private community association) shall be first completed, deemed completed by the City Engineer and then accepted as complete by the City prior to release of sureties. All private Improvements (Improvements that are to be owned by a private community association and not dedicated or owned by the City or other public entity) shall be first completed and then accepted as complete in writing by the City Engineer.

B. Partial releases or reductions in the Subdivider's improvement (performance) security may be authorized prior to the City's acceptance of all Improvements required hereunder, as follows:

1. At the time that the Subdivider believes that the obligation to perform the work for which security was required is complete, the Subdivider may notify the City in writing of the completed work, including a list of work completed. Upon receipt of the written notice, the City shall review and comment or approve the completion of the required work within forty-five (45) days. If the City does not agree that all work has been completed in accordance with the plans and specifications for the Improvements, it shall supply a list of all remaining work to be completed within this 45-day period.

2. Within forty-five (45) days of receipt of the list of remaining work from the local agency, the Subdivider may then provide cost estimates for all remaining work for review and approval by the City. Upon receipt of the cost estimates, the City shall then have forty-five (45) days to review, comment, and approve, modify, or disapprove those cost estimates. The City shall not be required to engage in this process of partial release more than once between the start of work and completion and acceptance of all work; however, nothing in this section prohibits the City from allowing for multiple and phased partial releases as it otherwise deems appropriate.

3. If the City approves the cost estimate, the City shall release all performance security except for security in an amount up to two hundred percent (200%) of the cost estimate of the remaining work. The process allowing for a partial release of performance security shall occur when the cost estimate of the remaining work does not exceed twenty percent (20%) of the total original

performance security unless the City allows for a release at an earlier time. Substitute bonds or other security may be used as a replacement for the performance security, subject to the approval of the City. If substitute bonds or other security is used as a replacement for the performance security released, the release shall not be effective unless and until the City receives and approves that form of replacement security. A reduction in the performance security, authorized under this section, is not, and shall not be deemed to be, an acceptance by the City of the completed improvements in and of itself, and the risk of loss or damage to the Improvements and the obligation to maintain the Improvements shall remain the sole responsibility of the Subdivider until the applicable required public Improvements have been accepted by the City in writing and all other required improvements have been fully completed in accordance with the plans and specifications for the improvements.

4. The Subdivider shall complete the works of Improvement until all remaining items are accepted by the City.

5. Upon the completion of the Improvements, the Subdivider, or his or her assigns, shall be notified in writing by the City within forty-five (45) days.

6. Within sixty (60) days of the issuance of the notification by the City Engineer, any remaining performance security, except ten percent (10%) of the original amount of the security to guarantee and warrant the Improvements for the one-year guarantee and warranty period, shall be released within sixty (60) days of the issuance of the written statement of completion.

C. Security securing the payment to the contractor, his or her subcontractors and to persons furnishing labor, materials or equipment shall, after passage of the time within which claims of lien are required to be recorded pursuant to Title 3 (commencing with Section 9000) of Part 6 of Division 4 of the Civil Code and after acceptance of the work, be reduced to an amount equal to the total claimed by all stop notice claimants for whom stop notices have been filed with the City, and if no claims have been filed, the security shall be released in full.

D. The partial release provisions of this Section 6 shall not apply to any required guarantee and warranty period required by Section 66499.9 for the guarantee or warranty nor to the amount of the security deemed necessary by the local agency for the guarantee and warranty period nor to costs and reasonable expenses and fees, including reasonable attorneys' fees. Security furnished to guarantee and warrant the Improvements against any defective work or labor done or defective materials furnished, shall be released within thirty (30) days after the completion of the one-year period following completion and acceptance of all Improvements.

E. If Subdivider’s obligations relating to any Improvements are subject to the approval of another governmental agency, the City shall not release the improvement (performance) security therefor until the obligations are performed to the

satisfaction of such other governmental agency. Such agency shall have sixty (60) days after receipt of written notice from the Subdivider of the Subdivider's performance of the obligation to register its satisfaction or dissatisfaction. If at the end of that period it has not registered its satisfaction or dissatisfaction, it shall be conclusively deemed that the Subdivider's performance of the obligation was done to its satisfaction, and such improvement security shall be promptly released.

F. In the event the time periods for action by the City specified in this Section conflict with a shorter or longer time period for such actions as provided in Government Code Section 66499.7, the time periods in Government Code Section 66499.7 shall control.

7. INDEMNIFICATION OF CITY BY SUBDIVIDER

A. Neither the City, nor its officers, agents and employees, shall be liable or responsible for any accident, injury, loss or damage to either property or person attributable to or arising out of the defective design, construction, functionality, installation assembly or improper maintenance including, without limitation, the use of defective methods, materials or workmanship (collectively "Subdivider's Faults") of the Improvements by Subdivider, its officers, employees and agents. Subdivider shall indemnify, hold harmless and defend the City, its officers, agents and employees, from and against any and all losses, claims, costs, expenses, liabilities, damages, actions, causes of action and judgments, including attorneys' fees, arising directly or indirectly out of or attributable to Subdivider's Faults.

B. Subdivider's obligations under this Section 7 are not conditioned or dependent upon whether the City, or its officers, agents and employees, prepared, supplied or reviewed any Improvement Plans or related specifications in connection with the Subdivision or the Improvements, or has insurance or other indemnification covering any of these matters.

C. Subdivider's obligation to indemnify, hold harmless and defend the City under this Section 7 shall extend to injuries to persons and damages to or alleged taking of property resulting from the Subdivider's Faults, and the Improvements required herein, and shall likewise extend to claims asserted by adjacent property owners based upon the diversion of waters caused by the Subdivider's defective design or defective construction of public drainage systems, streets, and other public facilities or improvements. Except for a City Directive as defined below, the City's acceptance of the Improvements shall not constitute an assumption by the City of any responsibility or liability for any damage or alleged taking of property referenced herein. City shall not be responsible or liable for the design or construction of the Subdivision or the Improvements constructed or installed pursuant to the approved Improvement Plans or the Final Map, regardless of any act or omission by the City in approving the Improvement Plans or the Final Map, unless the particular Improvement design was required by the City over the written objection of the Subdivider, which objection stated that the Improvement design was potentially dangerous or defective and set forth an alternative design (a "City Directive"). After City's acceptance of the Improvements, the

Subdivider shall remain obligated to correct or eliminate all dangerous conditions created by defects in design, construction or Subdivider's Faults (other than those required by a City Directive); provided, however, that Subdivider shall not be responsible for routine maintenance as specified in Section 1(F) of this Agreement. Subdivider's indemnity obligations hereunder shall remain in effect for ten (10) years following acceptance of the respective Improvement(s) by the City Council. Subdivider acknowledges and agrees that Subdivider shall be responsible and liable for the Subdivider's Faults with respect to the Improvements and other work done pursuant to this Agreement, unless same is due to a City Directive. City shall not be liable for any acts or omissions in approving, reviewing, checking, correcting or modifying any Improvement Plans or related specifications, or in inspecting, reviewing or approving any work or construction of Improvements, unless same is due to a City Directive. The Subdivider's improvement security shall not be required to secure the Subdivider's obligations under this subparagraph C beyond the one-year guarantee and warranty period, unless the City Engineer provides notice to Subdivider prior to the expiration of the one-year period of the existence of, or continued existence of, defects in the improvements, in which case the portion of the improvement security to guarantee and warranty the improvements against defective work shall not be released and shall remain in place until the City Engineer provides written confirmation that the defects have been cured and corrected. The indemnity shall be effective retroactively to the earliest recordation date of the Final Map.

D. Subdivider shall pay and satisfy any judgment, award or decree that may be rendered against City, its officers, officials, employees, agents, representatives and volunteers (collectively hereinafter "City and City Personnel") to the extent of the indemnity provided above, in any such suit, action, or other legal proceeding, provided City gives Subdivider prompt written notice of such claim and allows Subdivider to undertake the defense thereof, and provided further that City cooperates in any such suit, action, or other legal proceeding, but shall retain its right to reject a settlement that the City deems, in its sole and absolute discretion, to be contrary to the interests of the City.

E. Subdivider's obligation to indemnify shall not be restricted to Insurance proceeds, if any, received by the City and City Personnel.

F. Subdivider, on behalf of itself and all parties claiming under or through it, hereby waives all rights of subrogation and contribution against City and City Personnel to the extent of the indemnity above provided.

8. INSURANCE

The following coverages will be provided by Subdivider and maintained on behalf of City and in accordance with the requirements set forth herein. If Subdivider performs construction activities through a general contractor, some or all of these insurance requirements for the period of construction may be satisfied by the general contractor's insurance coverages. In such case, Subdivider shall maintain during this same construction period, and after the construction period, the coverages shown below

as "Insurance After Construction." In addition, Subdivider may elect to obtain, for all or any portion of the Project, an "Owner-Controlled Wrap Up" insurance policy in satisfaction of the insurance requirements for general contractors and subcontractors provided it satisfies all of the insurance requirements below for general contractors and subcontractors. Throughout these specifications, the word "Subdivider" refers to the Party responsible to provide the coverages as specified and, depending on context, may refer either to Subdivider or to a separate General Contractor.

A. Insurance During Construction. Subdivider shall provide the following insurance during construction of the Improvements. Insurance requirements may be met through insurance provided by Subdivider's General Contractor:

1. Commercial General Liability Insurance. Commercial General Liability Insurance (primary) shall be provided on ISO-CGL Form No. CG 00 01 or equivalent coverage, including provisions for defense of additional insureds. Policy limits shall be no less than two million dollars ($2,000,000) per occurrence for all coverages and five million dollars ($5,000,000) general aggregate. City and its officers, employees and agents shall be added as additional insureds using ISO Form CG 20 10 11 85 or other revision of the CG 20 10 form if available from the insurer and reasonably acceptable to the City, not limiting coverage for the additional insured to "ongoing operations" or in any way excluding coverage for completed operations. Coverage shall apply on a primary non-contributing basis in relation to any other insurance or self-insurance, primary or excess, available to City or any officer, employee or agent of City. Coverage shall not be limited to the vicarious liability or supervisory role of any additional insured. Coverage shall contain no contractors' limitation or other endorsement limiting the scope of coverage for liability arising from pollution, explosion, collapse, or underground property damage.

2. Umbrella Liability Insurance. Umbrella Liability Insurance (or, at Subdivider's election, Excess Liability Insurance) (over primary) shall apply to bodily injury/property damage, personal injury/advertising injury, at a minimum. Coverage shall be at least as broad as any underlying coverage. Coverage shall be provided on a "pay on behalf" basis. There shall be no cross liability exclusion and no contractor's limitation endorsement. Policy limits shall be not less than five million dollars ($5,000,000) per occurrence and in the aggregate, including any limits required in the underlying policies. The policy shall have a starting date no later than and an ending date no earlier than those of the underlying coverages. The Named Insured (Subdivider or General Contractor as appropriate) may determine the layering of primary and excess liability insurance provided that if such layering differs from that described here, the actual coverage program meets the minimum total required limits and complies with all other requirements listed here.

3. Business Auto Coverage. Business Auto Coverage shall be written on ISO Business Auto Coverage Form CA 00 01 or the equivalent, including symbol (1) (any Auto). If Subdivider (or Contractor) does not own any

vehicles, this requirement may be satisfied by a non-owned vehicle endorsement to the general and umbrella liability policies. Limits shall be no less than one million dollars ($1,000,000) per accident. This policy shall be scheduled as underlying insurance to the umbrella policy required above for a total limit of no less than five million dollars ($5,000,000) each accident.

4. Workers' Compensation/Employer's Liability. Workers' Compensation/Employer's Liability shall provide workers' compensation statutory benefits as required by law. Employer's liability limits shall be no less than one million dollars ($1,000,000) per accident or disease. Employer's liability coverage shall be scheduled under the umbrella or excess liability policy described above. This policy shall be endorsed to waive any right of subrogation with respect to City, its officers, employees or agents.

5. Builder's Risk Insurance. Builder's Risk Insurance covering all real and personal property for "all risks" of loss or "comprehensive perils" coverage including but not limited to the perils of earth movement, including earthquake (if required by Subdivider's lender or if available at commercially reasonable rates) and flood for all Improvements.

B. Insurance After Construction. Upon completion of construction of the Improvements, and for the required one-year guarantee and warranty period for Improvements and the required 10-year indemnification period, Subdivider at Subdivider's expense shall maintain or cause to be maintained the following insurance:

1. Commercial Property Insurance. Commercial Property Insurance covering the Improvements. Coverage shall be at least as broad as the Insurance Services Offices broad causes of loss form CP 10 20, and reasonably approved of in writing by the City. Coverage shall be sufficient to insure 100% of the replacement value and there shall be no coinsurance provisions. The policy shall include an inflation guard endorsement, 100% rents coverage, contents coverage, coverage for personal property of others, ordinance or law and increased cost of construction coverage. Subdivider also agrees to provide builder's all-risk insurance using an inland marine form during the period of any major alteration or improvement, using the broadest form available.

The insurance coverage for the peril of earthquake required for this project is subject to availability on the open market at commercially reasonable premium cost, as determined by mutual agreement between Subdivider and City. If such earthquake insurance coverage should, after diligent effort by Subdivider, be unobtainable at such mutually determined commercially reasonable premium cost, then Subdivider shall obtain the maximum insurance reasonably obtainable at commercially reasonable premium cost (if any) and give notice to City of the extent of Subdivider's inability to obtain, in full, the required insurance, and in such event, Subdivider's obligation to procure and maintain such insurance may be excused, subject to City's verification of inability to obtain the required insurance. Subdivider and City agree that a premium cost of

earthquake insurance coverage of up to 150% of the premium cost paid by Subdivider for such coverage on the Effective Date (to be adjusted over time based on the Consumer Price Index,) shall constitute a commercially reasonable premium cost. Non-availability at commercially reasonable premium cost must be documented by a letter from Subdivider's insurance broker or agent indicating a good faith effort to place the required insurance and showing, at a minimum, the names of the insurance carriers and the declinations or quotations received from each.

2. Commercial General Liability Insurance. Commercial General Liability Insurance (primary) shall be provided on ISO-CGL form No. CG 00 01 or equivalent coverage, including provisions for defense of additional insureds. Policy limits shall be no less than two million dollars ($2,000,000) per occurrence for all coverages and five million dollars ($5,000,000) general aggregate. City and its officers, employees and agents shall be added as additional insureds using ISO form CG 20 10 or equivalent if available from the insurer and reasonably acceptable to the City. Coverage shall apply on a primary non-contributing basis in relation to any other insurance or self-insurance, primary or excess, available to City or any officer, employee or agent of City until the warranty period specified in this Agreement expires.

3. Umbrella Liability Insurance. Umbrella Liability Insurance (or, at Subdivider's election, Excess Liability Insurance) (over primary) shall apply to bodily injury/property damage, personal injury/advertising injury, at a minimum. Coverage shall be at least as broad as any underlying coverage. Coverage shall be provided on a "pay on behalf" basis. There shall be no cross liability exclusion. Policy limits shall be not less than five million dollars ($5,000,000) per occurrence and in the aggregate, including any limits required in the underlying policies. The policy shall have a starting date no later than and an ending date no earlier than those of the underlying coverages. Subdivider may determine the layering of primary and excess liability insurance provided that if such layering differs from that described here, the actual coverage program meets the minimum total required limits.

4. Workers Compensation Insurance. Workers' Compensation/Employer's Liability shall provide workers' compensation statutory benefits as required by law. Employer's liability limits shall be no less than one million dollars per accident or disease. Employer's liability coverage shall be scheduled under any umbrella or excess liability policy described above. Unless otherwise agreed, this policy shall be endorsed to waive any right of subrogation as respects City, its employees or agents.

5. Business Auto Coverage. Business Auto Coverage for vehicles owned, operated or maintained in any way connected with the project, shall be written on ISO Business Auto Coverage form CA 00 01 or the equivalent, including symbol (1) (any Auto). If Subdivider (or Contractor) does not own any vehicles, this requirement may be satisfied by a non-owned vehicle endorsement

20 10 11 85. Certificate(s) are to reflect that the insurer will provide 30 days' notice of any cancellation of coverage and policies are to have a "cancellation endorsement" to the same effect. Subdivider agrees to provide copies of any endorsements modifying coverage in any way upon request from City.

8. Subdivider shall provide proof that policies of insurance required herein expiring during the term of this Agreement have been renewed or replaced with other policies providing at least the same coverage.

9. Any actual or alleged failure on the part of City or any other additional insured under these requirements to obtain proof of insurance required under this Agreement in no way waives any right or remedy of City or any additional insured, in this or any other regard.

10. Subdivider agrees to require all subcontractors or other parties (but not including a general contractor) hired for this project to construct the Improvements to purchase and maintain insurance for general liability (minimum limit $1,000,000 per occurrence), automobile liability ($1,000,000 per accident) and workers' compensation (statutory benefits). Prior to the issuance of the Certificate of Completion for each Phase, Subdivider shall, upon request by City, provide the City with copies of all insurance policies, certificates and endorsements related to such Phase.

11. Subdivider agrees to monitor and review all coverage required by this Section and assumes all responsibility for ensuring that such coverage is provided as required here. Subdivider agrees to obtain certificates evidencing such coverage. Subdivider agrees that upon request, all agreements with subcontractors or others with whom Subdivider contracts with on behalf of City, and all certificates of insurance obtained in compliance with this paragraph will be submitted to City for review upon request by City. Failure of City to request copies of such documents will not impose any liability on City, or its employees.

12. Subdivider agrees to require that no contract used by any general contractor or subcontractor in connection with construction of the Improvements, or contracts Subdivider enters into on behalf of City, will reserve the right to charge back to City the cost of insurance required by this Agreement.

13. Where appropriate (such as in the case of automobile insurance coverages), coverage will not be limited to the specific location designated as the Property.

14. Subdivider agrees to provide notice to City of any claim or loss against Subdivider that includes City as a defendant promptly after Subdivider receives written notice or obtains knowledge thereof. City assumes no obligation or liability by such notice, but has the right (but not the duty) to monitor the handling of any such claim or claims if they are likely to involve City.

City agrees to provide similar notice to Subdivider of any such claims it is notified of respecting the Property.

15. Subdivider agrees not to attempt to avoid its defense and indemnity obligations to City, and its officers, employees, agents by using as a defense Subdivider's statutory immunity under workers' compensation and similar statutes.

16. Subdivider agrees to ensure that coverage provided to meet these requirements is applicable separately to each insured and that there will be no cross liability exclusions that preclude coverage for suits between Subdivider and City or between City and any other insured or Named Insured under the policy, or between City and any Party associated with City or its employees.

17. If Subdivider or any contractor or subcontractor is a Limited Liability Company, general liability coverage must apply so that the Limited Liability Company and its Managers, Members, Affiliates, and their employees are insureds.

18. Subdivider shall require General Contractor to maintain commercial general liability, and if necessary, commercial umbrella liability insurance with a limit of not less than $15,000,000 for each occurrence, until the warranty period specified in this Agreement expires.

19. Subdivider agrees to obtain and provide to City evidence of professional liability coverage for Architects, Engineers or other design professionals working on the Improvements. The limit of liability required is subject to City approval, but in no event to be less than $1,000,000 per claim and in the aggregate, and Subdivider shall use reasonable efforts to require and cause such professionals to maintain coverage with respect to each occurrence for at least three years following substantial completion of the work and, in the event Subdivider is unable to do so, Subdivider shall promptly inform the City of the scope of such efforts and the reasons that it was unable to do so. If Subdivider requests that the City approve a lower limit for any particular design professional Subdivider seeks to employ on the Improvements, City will evaluate each such request based on City's perception of liability exposure associated with the work that would be performed by that design professional.

20. To the extent a particular coverage or policy form or specification is not reasonably available from Subdivider's insurer or would result in an additional premium that is extraordinary or unreasonably disproportionate to the premium for the policy as a whole, then Subdivider shall provide substantially similar coverage reasonably acceptable to City for which the cost is not extraordinary or unreasonably disproportionate.

9. OWNERSHIP OF THE IMPROVEMENTS

A. Ownership of all or any category of the Improvements constructed and installed by the Subdivider pursuant to this Agreement and shown on the Map to be dedicated to the public shall vest, as applicable, in the City (or other specified governmental agency) upon acceptance of said Improvements by the City. The acceptance of the Improvements shall either be shown by a certificate on the Final Map or by subsequent resolution accepting the Improvements adopted by the City pursuant to Government Code Section 66477.2 and recorded with the County Recorder or by other writing.

B. The Subdivider shall at all times prior to the acceptance of the Improvements by the City, give good and adequate warning to the public of each and every dangerous and defective condition caused by the construction of the Improvements and shall take all steps reasonably necessary to protect the public from such dangerous or defective conditions. The Subdivider agrees and understands that until acceptance of the Improvements by the City in writing, each Improvement and Improvement area that is offered for dedication shall be under the charge of the Subdivider, and the Subdivider may close all or a portion of any street or area whenever necessary to protect the public during the construction of the Improvements.

10. PREPARATION AND RECORDATION OF CC&RS.

A. The Subdivider shall establish a Homeowners Association for the residential areas of the Final Map owned by Subdivider, and to pay all costs associated with the creation of the associations.

B. The Subdivider shall prepare and record Covenants, Conditions, and Restrictions (CC&Rs) which obligate each homeowners association to provide for maintenance of the shared facilities, improvements, and landscaping within the boundaries of the associations in perpetuity in accordance with the Development Agreement and conditions of approval. The CC&Rs shall describe the homeowners association and the City's responsibilities and rights, and shall be subject to the approval of the City prior to recordation.

C. The Subdivider shall implement applicable provisions of the Mitigation Monitoring and Reporting Program.

11. DEFAULT AND BREACH BY THE SUBDIVIDER AND REMEDIES OF THE CITY

A. Upon the occurrence of any of the following events, the Subdivider shall be deemed to be in default under this Agreement:

1. Subject to any time extensions granted in accordance with Section 4, failure to complete construction and installation of the Improvements or any of them by the completion date set forth above in the Subdivision Reference Data;

2. Failure to promptly correct or cure any defect in the Improvements or any of them (other than a City Directive) during the one-year guarantee and warranty period as required by Section 3.A or failure to commence correction or cure of any such defect or failure to diligently prosecute same to completion, in each instance following receipt by Subdivider of written notice that such defect exists;

3. Subject to any time extensions granted in accordance with Section 4, failure to perform substantial construction work of the Improvements or any of them, after commencement of work on same, for a period of thirty (30) days after Subdivider's receipt of written notice thereof from the City;

4. Insolvency, appointment of a receiver, or the filing of any petition in bankruptcy, whether voluntary or involuntary, and such is not cured or discharged within a period of thirty (30) days;

5. Commencement of a foreclosure action against the Subdivision or any portion thereof, or any conveyance by the Subdivider in lieu or in avoidance of foreclosure, within thirty (30) days after receipt by Subdivider of written notice thereof from the City; or

6. Failure to perform any other obligations in accordance with the terms and provisions of this Agreement within thirty (30) days after receipt by Subdivider of written notice thereof from the City.

B. City reserves to itself all remedies available to it at law or in equity for any breach of Subdivider's obligations under this Agreement. City shall have the right, without limitation of other rights or remedies, after written notice to Subdivider and a reasonable opportunity for Subdivider to cure any such alleged default, to draw upon or utilize any improvement security furnished hereunder to complete the Improvements or otherwise mitigate City's damages in the event of Subdivider's default.

C. Following Subdivider's receipt of written notice of alleged default and failure by Subdivider to promptly commence the cure of any alleged default and to diligently prosecute such cure to completion, the City may serve written notice of any such default upon the surety on any corporate surety bond furnished as improvement security hereunder, and request that said surety take over and complete the Improvements herein specified. If such surety, within thirty (30) days after service of such notice of default, does not give the City written notice of its intention to perform this Agreement, or does not commence such performance within thirty (30) days after notice to the City of such intention to perform, the City may take over the work and prosecute the same to completion, by contract or by any other method the City deems advisable, for the account and at the expense of the Subdivider and its surety.

D. Subdivider acknowledges that the Estimated Total Costs and Improvement Security amounts set forth herein may not reflect the actual cost of construction or installation of the Improvements, and, consequently, City's damages for

Subdivider's default shall be measured by the actual cost of completing the required Improvements. If the damages incurred by the City in taking over and completing the Improvements exceeds the principal amount of the improvement security, then the Subdivider shall reimburse the City in the amount of such excess damages.

E. Following Subdivider's receipt of written notice of alleged default and failure by Subdivider to promptly commence the cure of any alleged default and to diligently prosecute such cure to completion, City may, without liability for so doing, take possession of, and utilize in completing the Improvements, such materials, appliances, plant and other property belonging to Subdivider as may be on the site of the work and necessary for the performance of the work. Subdivider hereby consents to such entry by the City and its representatives, including contractors, following written notice to Subdivider upon the real property in the Subdivision owned by Subdivider and necessary for City to enter or access under this Agreement, in the event the City elects to maintain or complete the work on the Improvements following Subdivider's default.

F. Subdivider acknowledges and agrees that approval of the Final Map for the Subdivision conferred substantial rights upon the Subdivider, including the right to sell, lease or finance lots within the Subdivision, and that such approval constitutes the final act necessary to permit the division of land within the Subdivision. As a result, City will be damaged to the extent of the cost of construction or installation of the Improvements upon Subdivider's failure to perform its obligations under this Agreement, which failure is not promptly remedied by sureties or by Subdivider.

G. The City's failure to take an enforcement action with respect to a default, or to declare a default or breach, shall not be construed as a waiver of that default or breach or any subsequent default or breach of the Subdivider.

H. If City sues to compel Subdivider's performance of this Agreement, or to recover damages or costs incurred in completing or maintaining the work on the Improvements, and is the prevailing party, Subdivider agrees to pay all reasonable attorneys' fees and other costs and expenses of litigation incurred by the City in connection therewith, even if Subdivider subsequently resumes and completes the work.

12. RELATIONSHIP OF THE PARTIES

Neither Subdivider, nor any of Subdivider's contractors, employees or agents, are or shall be deemed to be, agents of the City in connection with the performance of Subdivider's obligations under this Agreement.

13. ASSIGNMENT

A. Subdivider shall not assign this Agreement, or any portion thereof without the prior written consent of the City in accordance with the Development Agreement. Any attempted or purported assignment in violation of this subparagraph A shall be null and void and shall have no force or effect.

B. The sale or other disposition of the Subdivision shall not relieve Subdivider of its obligations hereunder. If Subdivider intends to sell the Subdivision, or any portion thereof (except for the sale of individual lots with homes to individual purchasers), to any other person or entity, the Subdivider may request an assignment or novation of this Agreement and a substitution of improvement security. Upon the City's approval of the assignment or novation and substitution of improvement security, the Subdivider may request a release or reduction of the improvement security furnished pursuant to this Agreement.

14. NOTICES

All notices required or provided for in this Agreement shall be in writing and delivered in person or by mail, postage prepaid, and addressed as follows:

If to the City:	Art Vela Director of Public Works/City Engineer City of Banning 99 E. Ramsey Drive Banning, California 92220
If to the Subdivider:	To the address set forth above in the Subdivision Reference Data, or to such other address as may subsequently be designated in written notice to the City.

Notice shall be effective on the date that it is delivered in person, or, if mailed, three (3) days after the date of deposit in the United States Mail.

15. ENTIRE AGREEMENT

This Agreement constitutes the entire agreement of the parties with respect to its subject matter. All modifications, amendments, or waivers of any terms of this Agreement shall be in writing and signed by the duly authorized representatives of the parties. In the case of the City, the duly authorized representative, unless otherwise specified herein, shall be the City Engineer.

16. SEVERABILITY

The provisions of this Agreement are severable. If any portion of this Agreement is held invalid by a court of competent jurisdiction, the remainder of the Agreement shall remain in full force and effect.

17. INCORPORATION OF SUBDIVISION REFERENCE DATA AND RECITALS

The Subdivision Reference Data and the Recitals are incorporated into this Agreement.

18. GOVERNING LAW

This Agreement shall be governed by the laws of the State of California.

19. EFFECTIVE DATE OF THE AGREEMENT

This Agreement shall be and become effective as of the date that it is executed by a duly authorized officer or employee of the City, it being the intention of the parties that the Subdivider shall first execute this Agreement and thereafter submit it to the City. The City shall insert the effective date in the Subdivision Reference Data in all counterparts of this Agreement and shall transmit a fully executed counterpart to the Subdivider.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be executed by their respective officers, thereunto duly authorized, as of the dates set forth below their respective signatures.

[Note: All signatures must be acknowledged by a notary public and the acknowledgement must be attached. If signed by a Corporation, the signatures of two Corporate officers are required, unless a resolution of the Corporation's Board of Directors is provided indicating that the signature of the one signatory is sufficient to bind the Corporation.]

CITY OF BANNING

FAITHFUL PERFORMANCE BOND

Atwell - PA6 Monumentation
(Name or Tract Number of Subdivision)

KNOW ALL MEN BY THESE PRESENTS:

WHEREAS, Pardee Homes of California (hereinafter designated as "Principal") has executed a Subdivision Improvement Agreement ("Agreement" herein) with the City of Banning, a municipal corporation of the State of California ("City" herein), whereby Principal agrees to construct, install, complete and guarantee for one year after acceptance thereof, certain designated public improvements generally identified as follows: Atwell - PA6 Monumentation; and

WHEREAS, said Agreement is incorporated herein by this reference; and

WHEREAS, said Principal is required under the terms of said Agreement to furnish a corporate surety bond or other approved improvement security to guarantee the faithful performance of said Agreement;

NOW, THEREFORE, the Principal designated above, and RLI Insurance Company, as Surety, are held and firmly bound unto the City in the penal sum of Twenty Nine Thousand Nine Hundred Fifty Seven and 50/100 Dollars ($ 29,957.50), lawful money of the United States, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, successors, executors and administrators, jointly and severally, firmly by these presents.

The condition of this obligation is such that if the above-bounded Principal, his or its heirs, executors, administrators, successors, or assigns, shall in all things stand to, abide by, well and truly keep and perform the covenants, conditions and provisions in said Agreement and any modification thereof made as therein provided, on his or their part, to be kept and performed at the time and in the manner therein specified, and in all respects according to their true intent and meaning, and shall indemnify and save harmless the City, its officers, agents and employees, as therein stipulated; then this obligation shall become void; otherwise, this obligation shall be and remain in full force and effect.

As a part of the obligation secured hereby, and in addition to the face amount specified, costs and reasonable expenses and fees shall be included, including reasonable attorneys' fees, incurred by the City in successfully enforcing the obligation, all to be taxed as costs and included in any judgment rendered.

The Surety hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the Agreement, the work to be performed thereunder, or the Improvement Plans and related specifications accompanying the Agreement shall in any manner affect its obligations on this bond. The Surety hereby waives notice of any such change, extension of time, alteration or addition to the terms of the Agreement, the work, or the Improvement Plans and related specifications.

IN WITNESS WHEREOF, this instrument has been duly executed by the above-named Principal and Surety as of the date or dates set forth below the signatures of their authorized officers.

Note: All signatures must be acknowledged before a notary public. Attach appropriate acknowledgment.

INSTRUCTIONS FOR COMPLETING THIS FORM

This form complies with current California statutes regarding notary wording and, if needed, should be completed and attached to the document. Acknolwedgents from other states may be completed for documents being sent to that state so long as the wording does not require the California notary to violate California notary law.

- State and County information must be the State and County where the document signer(s) personally appeared before the notary public for acknowledgment.
- Date of notarization must be the date that the signer(s) personally appeared which must also be the same date the acknowledgment is completed.
- The notary public must print his or her name as it appears within his or her commission followed by a comma and then your title (notary public).
- Print the name(s) of document signer(s) who personally appear at the time of notarization.
- Indicate the correct singular or plural forms by crossing off incorrect forms (i.e. ~~he~~/she/~~they,~~ is /~~are~~) or circling the correct forms. Failure to correctly indicate this information may lead to rejection of document recording.
- The notary seal impression must be clear and photographically reproducible. Impression must not cover text or lines. If seal impression smudges, re-seal if a sufficient area permits, otherwise complete a different acknowledgment form.
- Signature of the notary public must match the signature on file with the office of the county clerk.
  - ❖ Additional information is not required but could help to ensure this acknowledgment is not misused or attached to a different document.
  - ❖ Indicate title or type of attached document, number of pages and date.
  - ❖ Indicate the capacity claimed by the signer. If the claimed capacity is a corporate officer, indicate the title (i.e. CEO, CFO, Secretary).
- Securely attach this document to the signed document with a staple.

That **RLI Insurance Company** and/or **Contractors Bonding and Insurance Company**, each an Illinois corporation, (separately and together, the "Company") do hereby make, constitute and appoint:

Paul Boucher, Janina Monroe, Dennis Langer, Michelle Haase, Timothy Noonan, Adriana Valenzuela, Jennifer Ochs, Martha Barreras, jointly or severally

in the City of Los Angeles, State of California its true and lawful Agent(s) and Attorney(s) in Fact, with full power and authority hereby conferred, to sign, execute, acknowledge and deliver for and on its behalf as Surety, in general, any and all bonds and undertakings in an amount not to exceed **Twenty Five Million** Dollars (**$25,000,000.00**) for any single obligation.

The acknowledgment and execution of such bond by the said Attorney in Fact shall be as binding upon the Company as if such bond had been executed and acknowledged by the regularly elected officers of the Company.

RLI Insurance Company and/or **Contractors Bonding and Insurance Company**, as applicable, have each further certified that the following is a true and exact copy of a Resolution adopted by the Board of Directors of each such corporation, and is now in force, to-wit:

> "All bonds, policies, undertakings, Powers of Attorney or other obligations of the corporation shall be executed in the corporate name of the Company by the President, Secretary, any Assistant Secretary, Treasurer, or any Vice President, or by such other officers as the Board of Directors may authorize. The President, any Vice President, Secretary, any Assistant Secretary, or the Treasurer may appoint Attorneys in Fact or Agents who shall have authority to issue bonds, policies or undertakings in the name of the Company. The corporate seal is not necessary for the validity of any bonds, policies, undertakings, Powers of Attorney or other obligations of the corporation. The signature of any such officer and the corporate seal may be printed by facsimile."

IN WITNESS WHEREOF, the **RLI Insurance Company** and/or **Contractors Bonding and Insurance Company**, as applicable, have caused these presents to be executed by its respective Vice President with its corporate seal affixed this 14th day of May, 2020.

CITY OF BANNING

PAYMENT BOND

Atwell - PA6 Monumentation
(Name or Tract Number of Subdivision)

KNOW ALL MEN BY THESE PRESENTS:

WHEREAS, Pardee Homes of California, (hereinafter designated as "Principal") has executed a Subdivision Improvement Agreement ("Agreement" herein) with the City of Banning, a municipal corporation of the State of California ("City" herein), whereby Principal agrees to construct, install and complete certain designated public improvements generally identified as follows: Atwell - PA6 Monumentation; and

WHEREAS, said Agreement is dated _____, 20__ and is incorporated herein by this reference; and

WHEREAS, said Principal is required under the terms of said Agreement, before entering upon the performance of the work, to file with the City a good and sufficient payment bond, or other approved security, to secure the claims to which reference is made in Title 3 (commencing with Section 9000) of Part 6 of Division 4 of the California Civil Code and in Government Code Section 66497;

NOW, THEREFORE, the Principal designated above, and RLI Insurance Company, as Surety, are held firmly bound unto the City and all contractors, subcontractors, laborers, materialmen and other persons employed in the performance of said Agreement and referred to in the above-referenced Civil Code and Government Code in the sum of Twenty Nine Thousand* Dollars ($29,957.50), for materials furnished or labor thereon of any kind, or for amounts due under the Unemployment Insurance Act with respect to such work or labor; that said Surety will pay the same in an amount not exceeding the amount hereinabove set forth; and in case suit is brought upon this bond, will pay, in addition to the face amount thereof, costs and reasonable expenses and fees, including reasonable attorneys' fees, incurred by the City in successfully enforcing such obligation, to be awarded and fixed by the court, and to be taxed as costs and to be included in the judgment therein rendered.

*Nine Hundred Fifty Seven and 50/100

It is hereby expressly stipulated and agreed that this bond shall inure to the benefit of any and all persons, companies and corporations entitled to file claims under Title 3 (commencing with Section 9000) of Part 6 of Division 4 of the Civil Code, and under Government Code Section 66497, so as to give a right of action to them or their assigns in any suit brought upon this bond.

Should the condition of this bond be fully performed, then this obligation shall become null and void, otherwise it shall be and remain in full force and effect.

The Surety hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of said Agreement or the Improvement Plans or related specifications accompanying the same shall in any manner affect its obligations on this bond, and it does hereby waive notice of any such change, extension, alteration or addition.

IN WITNESS WHEREOF, this instrument has been duly executed by the above-named Principal and Surety as of the date or dates set forth below the signatures of their authorized officers.

Note: All signatures must be acknowledged before a notary public. Attach appropriate acknowledgment.

INSTRUCTIONS FOR COMPLETING THIS FORM

This form complies with current California statutes regarding notary wording and, if needed, should be completed and attached to the document. Acknolwedgemts from other states may be completed for documents being sent to that state so long as the wording does not require the California notary to violate California notary law.

- State and County information must be the State and County where the document signer(s) personally appeared before the notary public for acknowledgment.
- Date of notarization must be the date that the signer(s) personally appeared which must also be the same date the acknowledgment is completed.
- The notary public must print his or her name as it appears within his or her commission followed by a comma and then your title (notary public).
- Print the name(s) of document signer(s) who personally appear at the time of notarization.
- Indicate the correct singular or plural forms by crossing off incorrect forms (i.e. ~~he~~/she/~~they,~~ is /~~are~~) or circling the correct forms. Failure to correctly indicate this information may lead to rejection of document recording.
- The notary seal impression must be clear and photographically reproducible. Impression must not cover text or lines. If seal impression smudges, re-seal if a sufficient area permits, otherwise complete a different acknowledgment form.
- Signature of the notary public must match the signature on file with the office of the county clerk.
  - Additional information is not required but could help to ensure this acknowledgment is not misused or attached to a different document.
  - Indicate title or type of attached document, number of pages and date.
  - Indicate the capacity claimed by the signer. If the claimed capacity is a corporate officer, indicate the title (i.e. CEO, CFO, Secretary).
- Securely attach this document to the signed document with a staple.

CITY OF BANNING

FAITHFUL PERFORMANCE BOND

Atwell PA6 Sewer Improvements
(Name or Tract Number of Subdivision)

KNOW ALL MEN BY THESE PRESENTS:

WHEREAS, Pardee Homes of California (hereinafter designated as "Principal") has executed a Subdivision Improvement Agreement ("Agreement" herein) with the City of Banning, a municipal corporation of the State of California ("City" herein), whereby Principal agrees to construct, install, complete and guarantee for one year after acceptance thereof, certain designated public improvements generally identified as follows: Atwell PA6 Sewer Improvements; and

WHEREAS, said Agreement is incorporated herein by this reference; and

WHEREAS, said Principal is required under the terms of said Agreement to furnish a corporate surety bond or other approved improvement security to guarantee the faithful performance of said Agreement;

NOW, THEREFORE, the Principal designated above, and RLI Insurance Company, as Surety, are held and firmly bound unto the City in the penal sum of Five Hundred Fifty One Thousand Three Hundred Ten and no/100 Dollars ($ 551,310.00), lawful money of the United States, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, successors, executors and administrators, jointly and severally, firmly by these presents.

The condition of this obligation is such that if the above-bounded Principal, his or its heirs, executors, administrators, successors, or assigns, shall in all things stand to, abide by, well and truly keep and perform the covenants, conditions and provisions in said Agreement and any modification thereof made as therein provided, on his or their part, to be kept and performed at the time and in the manner therein specified, and in all respects according to their true intent and meaning, and shall indemnify and save harmless the City, its officers, agents and employees, as therein stipulated; then this obligation shall become void; otherwise, this obligation shall be and remain in full force and effect.

As a part of the obligation secured hereby, and in addition to the face amount specified, costs and reasonable expenses and fees shall be included, including reasonable attorneys' fees, incurred by the City in successfully enforcing the obligation, all to be taxed as costs and included in any judgment rendered.

The Surety hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the Agreement, the work to be performed thereunder, or the Improvement Plans and related specifications accompanying the Agreement shall in any manner affect its obligations on this bond. The Surety hereby waives notice of any such change, extension of time, alteration or addition to the terms of the Agreement, the work, or the Improvement Plans and related specifications.

IN WITNESS WHEREOF, this instrument has been duly executed by the above-named Principal and Surety as of the date or dates set forth below the signatures of their authorized officers.

Note: All signatures must be acknowledged before a notary public. Attach appropriate acknowledgment.

INSTRUCTIONS FOR COMPLETING THIS FORM

This form complies with current California statutes regarding notary wording and, if needed, should be completed and attached to the document. Acknolwedgemts from other states may be completed for documents being sent to that state so long as the wording does not require the California notary to violate California notary law.

- State and County information must be the State and County where the document signer(s) personally appeared before the notary public for acknowledgment.
- Date of notarization must be the date that the signer(s) personally appeared which must also be the same date the acknowledgment is completed.
- The notary public must print his or her name as it appears within his or her commission followed by a comma and then your title (notary public).
- Print the name(s) of document signer(s) who personally appear at the time of notarization.
- Indicate the correct singular or plural forms by crossing off incorrect forms (i.e. ~~he~~/she/~~they,~~ is /~~are~~) or circling the correct forms. Failure to correctly indicate this information may lead to rejection of document recording.
- The notary seal impression must be clear and photographically reproducible. Impression must not cover text or lines. If seal impression smudges, re-seal if a sufficient area permits, otherwise complete a different acknowledgment form.
- Signature of the notary public must match the signature on file with the office of the county clerk.
  - Additional information is not required but could help to ensure this acknowledgment is not misused or attached to a different document.
  - Indicate title or type of attached document, number of pages and date.
  - Indicate the capacity claimed by the signer. If the claimed capacity is a corporate officer, indicate the title (i.e. CEO, CFO, Secretary).
- Securely attach this document to the signed document with a staple.

POWER OF ATTORNEY

RLI Insurance Company
Contractors Bonding and Insurance Company

9025 N. Lindbergh Dr. Peoria, IL 61615
Phone: 800-645-2402

Know All Men by These Presents:

That this Power of Attorney is not valid or in effect unless attached to the bond which it authorizes executed, but may be detached by the approving officer if desired.

That **RLI Insurance Company** and/or **Contractors Bonding and Insurance Company**, each an Illinois corporation, (separately and together, the "Company") do hereby make, constitute and appoint:

Paul Boucher, Janina Monroe, Dennis Langer, Michelle Haase, Timothy Noonan, Adriana Valenzuela, Jennifer Ochs, Martha Barreras, jointly or severally

in the City of Los Angeles, State of California its true and lawful Agent(s) and Attorney(s) in Fact, with full power and authority hereby conferred, to sign, execute, acknowledge and deliver for and on its behalf as Surety, in general, any and all bonds and undertakings in an amount not to exceed **Twenty Five Million** Dollars (**$25,000,000.00**) for any single obligation.

The acknowledgment and execution of such bond by the said Attorney in Fact shall be as binding upon the Company as if such bond had been executed and acknowledged by the regularly elected officers of the Company.

RLI Insurance Company and/or **Contractors Bonding and Insurance Company**, as applicable, have each further certified that the following is a true and exact copy of a Resolution adopted by the Board of Directors of each such corporation, and is now in force, to-wit:

> "All bonds, policies, undertakings, Powers of Attorney or other obligations of the corporation shall be executed in the corporate name of the Company by the President, Secretary, any Assistant Secretary, Treasurer, or any Vice President, or by such other officers as the Board of Directors may authorize. The President, any Vice President, Secretary, any Assistant Secretary, or the Treasurer may appoint Attorneys in Fact or Agents who shall have authority to issue bonds, policies or undertakings in the name of the Company. The corporate seal is not necessary for the validity of any bonds, policies, undertakings, Powers of Attorney or other obligations of the corporation. The signature of any such officer and the corporate seal may be printed by facsimile."

IN WITNESS WHEREOF, the **RLI Insurance Company** and/or **Contractors Bonding and Insurance Company**, as applicable, have caused these presents to be executed by its respective Vice President with its corporate seal affixed this 14th day of May, 2020.

CITY OF BANNING

FAITHFUL PERFORMANCE BOND

Atwell PA 6 Street Improvements
(Name or Tract Number of Subdivision)

KNOW ALL MEN BY THESE PRESENTS:

WHEREAS, Pardee Homes of California (hereinafter designated as "Principal") has executed a Subdivision Improvement Agreement ("Agreement" herein) with the City of Banning, a municipal corporation of the State of California ("City" herein), whereby Principal agrees to construct, install, complete and guarantee for one year after acceptance thereof, certain designated public improvements generally identified as follows: Atwell PA 6 Street Improvements; and

WHEREAS, said Agreement is incorporated herein by this reference; and

WHEREAS, said Principal is required under the terms of said Agreement to furnish a corporate surety bond or other approved improvement security to guarantee the faithful performance of said Agreement;

NOW, THEREFORE, the Principal designated above, and RLI Insurance Company, as Surety, are held and firmly bound unto the City in the penal sum of One Million One Hundred Ninety Six Thousand Nine Hundred Fifty Nine* Dollars ($ 1,196,959.68), lawful money of the United States, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, successors, executors and administrators, jointly and severally, firmly by these presents.
*and 68/100

The condition of this obligation is such that if the above-bounded Principal, his or its heirs, executors, administrators, successors, or assigns, shall in all things stand to, abide by, well and truly keep and perform the covenants, conditions and provisions in said Agreement and any modification thereof made as therein provided, on his or their part, to be kept and performed at the time and in the manner therein specified, and in all respects according to their true intent and meaning, and shall indemnify and save harmless the City, its officers, agents and employees, as therein stipulated; then this obligation shall become void; otherwise, this obligation shall be and remain in full force and effect.

As a part of the obligation secured hereby, and in addition to the face amount specified, costs and reasonable expenses and fees shall be included, including reasonable attorneys' fees, incurred by the City in successfully enforcing the obligation, all to be taxed as costs and included in any judgment rendered.

The Surety hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the Agreement, the work to be performed thereunder, or the Improvement Plans and related specifications accompanying the Agreement shall in any manner affect its obligations on this bond. The Surety hereby waives notice of any such change, extension of time, alteration or addition to the terms of the Agreement, the work, or the Improvement Plans and related specifications.

IN WITNESS WHEREOF, this instrument has been duly executed by the above-named Principal and Surety as of the date or dates set forth below the signatures of their authorized officers.

Note: All signatures must be acknowledged before a notary public. Attach appropriate acknowledgment.

CITY OF BANNING

PAYMENT BOND

Atwell PA 6 Street Improvements
(Name or Tract Number of Subdivision)

KNOW ALL MEN BY THESE PRESENTS:

WHEREAS, Pardee Homes of California, (hereinafter designated as "Principal") has executed a Subdivision Improvement Agreement ("Agreement" herein) with the City of Banning, a municipal corporation of the State of California ("City" herein), whereby Principal agrees to construct, install and complete certain designated public improvements generally identified as follows: Atwell PA 6 Street Improvements; and

WHEREAS, said Agreement is dated _____, 20__ and is incorporated herein by this reference; and

WHEREAS, said Principal is required under the terms of said Agreement, before entering upon the performance of the work, to file with the City a good and sufficient payment bond, or other approved security, to secure the claims to which reference is made in Title 3 (commencing with Section 9000) of Part 6 of Division 4 of the California Civil Code and in Government Code Section 66497;

NOW, THEREFORE, the Principal designated above, and RLI Insurance Company, as Surety, are held firmly bound unto the City and all contractors, subcontractors, laborers, materialmen and other persons employed in the performance of said Agreement and referred to in the above-referenced Civil Code and Government Code in the sum of One Million One Hundred*Dollars ($1,196,959.68), for materials furnished or labor thereon of any kind, or for amounts due under the Unemployment Insurance Act with respect to such work or labor; that said Surety will pay the same in an amount not exceeding the amount hereinabove set forth; and in case suit is brought upon this bond, will pay, in addition to the face amount thereof, costs and reasonable expenses and fees, including reasonable attorneys' fees, incurred by the City in successfully enforcing such obligation, to be awarded and fixed by the court, and to be taxed as costs and to be included in the judgment therein rendered.

*Ninety Six Thousand Nine Hundred Fifty Nine and 68/100

It is hereby expressly stipulated and agreed that this bond shall inure to the benefit of any and all persons, companies and corporations entitled to file claims under Title 3 (commencing with Section 9000) of Part 6 of Division 4 of the Civil Code, and under Government Code Section 66497, so as to give a right of action to them or their assigns in any suit brought upon this bond.

Should the condition of this bond be fully performed, then this obligation shall become null and void, otherwise it shall be and remain in full force and effect.

The Surety hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of said Agreement or the Improvement Plans or related specifications accompanying the same shall in any manner affect its obligations on this bond, and it does hereby waive notice of any such change, extension, alteration or addition.

IN WITNESS WHEREOF, this instrument has been duly executed by the above-named Principal and Surety as of the date or dates set forth below the signatures of their authorized officers.

Note: All signatures must be acknowledged before a notary public. Attach appropriate acknowledgment.

RLI Insurance Company and/or **Contractors Bonding and Insurance Company**, as applicable, have each further certified that the following is a true and exact copy of a Resolution adopted by the Board of Directors of each such corporation, and is now in force, to-wit:

> "All bonds, policies, undertakings, Powers of Attorney or other obligations of the corporation shall be executed in the corporate name of the Company by the President, Secretary, any Assistant Secretary, Treasurer, or any Vice President, or by such other officers as the Board of Directors may authorize. The President, any Vice President, Secretary, any Assistant Secretary, or the Treasurer may appoint Attorneys in Fact or Agents who shall have authority to issue bonds, policies or undertakings in the name of the Company. The corporate seal is not necessary for the validity of any bonds, policies, undertakings, Powers of Attorney or other obligations of the corporation. The signature of any such officer and the corporate seal may be printed by facsimile."

IN WITNESS WHEREOF, the **RLI Insurance Company** and/or **Contractors Bonding and Insurance Company**, as applicable, have caused these presents to be executed by its respective Vice President with its corporate seal affixed this 14th day of May, 2020.

CITY OF BANNING

FAITHFUL PERFORMANCE BOND

Atwell PA6 Water Improvements
(Name or Tract Number of Subdivision)

KNOW ALL MEN BY THESE PRESENTS:

WHEREAS, Pardee Homes of California (hereinafter designated as "Principal") has executed a Subdivision Improvement Agreement ("Agreement" herein) with the City of Banning, a municipal corporation of the State of California ("City" herein), whereby Principal agrees to construct, install, complete and guarantee for one year after acceptance thereof, certain designated public improvements generally identified as follows: Atwell PA6 Water Improvements; and

WHEREAS, said Agreement is incorporated herein by this reference; and

WHEREAS, said Principal is required under the terms of said Agreement to furnish a corporate surety bond or other approved improvement security to guarantee the faithful performance of said Agreement;

NOW, THEREFORE, the Principal designated above, and RLI Insurance Company, as Surety, are held and firmly bound unto the City in the penal sum of Five Hundred Ninety Two Thousand Nine Hundred Forty and no/100 Dollars ($ 592,940.00), lawful money of the United States, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, successors, executors and administrators, jointly and severally, firmly by these presents.

The condition of this obligation is such that if the above-bounded Principal, his or its heirs, executors, administrators, successors, or assigns, shall in all things stand to, abide by, well and truly keep and perform the covenants, conditions and provisions in said Agreement and any modification thereof made as therein provided, on his or their part, to be kept and performed at the time and in the manner therein specified, and in all respects according to their true intent and meaning, and shall indemnify and save harmless the City, its officers, agents and employees, as therein stipulated; then this obligation shall become void; otherwise, this obligation shall be and remain in full force and effect.

As a part of the obligation secured hereby, and in addition to the face amount specified, costs and reasonable expenses and fees shall be included, including reasonable attorneys' fees, incurred by the City in successfully enforcing the obligation, all to be taxed as costs and included in any judgment rendered.

The Surety hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of the Agreement, the work to be performed thereunder, or the Improvement Plans and related specifications accompanying the Agreement shall in any manner affect its obligations on this bond. The Surety hereby waives notice of any such change, extension of time, alteration or addition to the terms of the Agreement, the work, or the Improvement Plans and related specifications.

IN WITNESS WHEREOF, this instrument has been duly executed by the above-named Principal and Surety as of the date or dates set forth below the signatures of their authorized officers.

Note: All signatures must be acknowledged before a notary public. Attach appropriate acknowledgment.

INSTRUCTIONS FOR COMPLETING THIS FORM

This form complies with current California statutes regarding notary wording and, if needed, should be completed and attached to the document. Acknolwedgents from other states may be completed for documents being sent to that state so long as the wording does not require the California notary to violate California notary law.

- State and County information must be the State and County where the document signer(s) personally appeared before the notary public for acknowledgment.
- Date of notarization must be the date that the signer(s) personally appeared which must also be the same date the acknowledgment is completed.
- The notary public must print his or her name as it appears within his or her commission followed by a comma and then your title (notary public).
- Print the name(s) of document signer(s) who personally appear at the time of notarization.
- Indicate the correct singular or plural forms by crossing off incorrect forms (i.e. ~~he~~/she/~~they,~~ is /~~are~~) or circling the correct forms. Failure to correctly indicate this information may lead to rejection of document recording.
- The notary seal impression must be clear and photographically reproducible. Impression must not cover text or lines. If seal impression smudges, re-seal if a sufficient area permits, otherwise complete a different acknowledgment form.
- Signature of the notary public must match the signature on file with the office of the county clerk.
  - Additional information is not required but could help to ensure this acknowledgment is not misused or attached to a different document.
  - Indicate title or type of attached document, number of pages and date.
  - Indicate the capacity claimed by the signer. If the claimed capacity is a corporate officer, indicate the title (i.e. CEO, CFO, Secretary).
- Securely attach this document to the signed document with a staple.

POWER OF ATTORNEY

RLI Insurance Company
Contractors Bonding and Insurance Company

9025 N. Lindbergh Dr. Peoria, IL 61615
Phone: 800-645-2402

Know All Men by These Presents:

That this Power of Attorney is not valid or in effect unless attached to the bond which it authorizes executed, but may be detached by the approving officer if desired.

That **RLI Insurance Company** and/or **Contractors Bonding and Insurance Company**, each an Illinois corporation, (separately and together, the "Company") do hereby make, constitute and appoint:

Paul Boucher, Janina Monroe, Dennis Langer, Michelle Haase, Timothy Noonan, Adriana Valenzuela, Jennifer Ochs, Martha Barreras, jointly or severally

in the City of Los Angeles, State of California its true and lawful Agent(s) and Attorney(s) in Fact, with full power and authority hereby conferred, to sign, execute, acknowledge and deliver for and on its behalf as Surety, in general, any and all bonds and undertakings in an amount not to exceed **Twenty Five Million** Dollars (**$25,000,000.00**) for any single obligation.

The acknowledgment and execution of such bond by the said Attorney in Fact shall be as binding upon the Company as if such bond had been executed and acknowledged by the regularly elected officers of the Company.

RLI Insurance Company and/or **Contractors Bonding and Insurance Company**, as applicable, have each further certified that the following is a true and exact copy of a Resolution adopted by the Board of Directors of each such corporation, and is now in force, to-wit:

> "All bonds, policies, undertakings, Powers of Attorney or other obligations of the corporation shall be executed in the corporate name of the Company by the President, Secretary, any Assistant Secretary, Treasurer, or any Vice President, or by such other officers as the Board of Directors may authorize. The President, any Vice President, Secretary, any Assistant Secretary, or the Treasurer may appoint Attorneys in Fact or Agents who shall have authority to issue bonds, policies or undertakings in the name of the Company. The corporate seal is not necessary for the validity of any bonds, policies, undertakings, Powers of Attorney or other obligations of the corporation. The signature of any such officer and the corporate seal may be printed by facsimile."

IN WITNESS WHEREOF, the **RLI Insurance Company** and/or **Contractors Bonding and Insurance Company**, as applicable, have caused these presents to be executed by its respective Vice President with its corporate seal affixed this 14th day of May, 2020.

CITY OF BANNING

PAYMENT BOND

Atwell PA6 Water Improvements
(Name or Tract Number of Subdivision)

KNOW ALL MEN BY THESE PRESENTS:

WHEREAS, Pardee Homes of California, (hereinafter designated as "Principal") has executed a Subdivision Improvement Agreement ("Agreement" herein) with the City of Banning, a municipal corporation of the State of California ("City" herein), whereby Principal agrees to construct, install and complete certain designated public improvements generally identified as follows: Atwell PA6 Water Improvements; and

WHEREAS, said Agreement is dated _____, 20__ and is incorporated herein by this reference; and

WHEREAS, said Principal is required under the terms of said Agreement, before entering upon the performance of the work, to file with the City a good and sufficient payment bond, or other approved security, to secure the claims to which reference is made in Title 3 (commencing with Section 9000) of Part 6 of Division 4 of the California Civil Code and in Government Code Section 66497;

NOW, THEREFORE, the Principal designated above, and RLI Insurance Company, as Surety, are held firmly bound unto the City and all contractors, subcontractors, laborers, materialmen and other persons employed in the performance of said Agreement and referred to in the above-referenced Civil Code and Government Code in the sum of Five Hundred Ninety Two* Dollars ($ 592,940.00), for materials furnished or labor thereon of any kind, or for amounts due under the Unemployment Insurance Act with respect to such work or labor; that said Surety will pay the same in an amount not exceeding the amount hereinabove set forth; and in case suit is brought upon this bond, will pay, in addition to the face amount thereof, costs and reasonable expenses and fees, including reasonable attorneys' fees, incurred by the City in successfully enforcing such obligation, to be awarded and fixed by the court, and to be taxed as costs and to be included in the judgment therein rendered.

* Thousand Nine Hundred Forty and no/100

It is hereby expressly stipulated and agreed that this bond shall inure to the benefit of any and all persons, companies and corporations entitled to file claims under Title 3 (commencing with Section 9000) of Part 6 of Division 4 of the Civil Code, and under Government Code Section 66497, so as to give a right of action to them or their assigns in any suit brought upon this bond.

Should the condition of this bond be fully performed, then this obligation shall become null and void, otherwise it shall be and remain in full force and effect.

The Surety hereby stipulates and agrees that no change, extension of time, alteration or addition to the terms of said Agreement or the Improvement Plans or related specifications accompanying the same shall in any manner affect its obligations on this bond, and it does hereby waive notice of any such change, extension, alteration or addition.

IN WITNESS WHEREOF, this instrument has been duly executed by the above-named Principal and Surety as of the date or dates set forth below the signatures of their authorized officers.

Note: All signatures must be acknowledged before a notary public. Attach appropriate acknowledgment.

2. TYPE OF PIPE SHALL BE SDR 26 PVC.
3. SEWER MAINS MAY BE LAND THROUGH MANHOLES AND USED AS A FORM FOR THE INVERT.
4. FINAL TESTING FOR PIPELINE LEAKAGE SHALL BE MADE IN THE PRESENCE OF THE INSPECTOR FOR THE CITY, AFTER BACKFILL HAS BEEN INSPECTED AND APPROVED.
5. ALL TRENCHES SHALL BE COMPACTED TO 90% RELATIVE DENSITY.
6. THE CONTRACTOR SHALL NOTIFY THE CITY OF BANNING 48 HOURS PRIOR TO STARTING ANY WORK. PHONE: (909) 922-3142
7. THE CONTRACTOR SHALL SET UP APPOINTMENTS TO REVIEW THE PLANS IN DETAIL WITH THE CITY PRIOR TO START OF CONSTRUCTION.
8. SEPARATION BETWEEN WATERLINES AND SEWERS SHALL CONFORM TO CITY OF BANNING AND STATE OF CALIFORNIA HEALTH DEPARTMENT REQUIREMENTS.
9. IT SHALL BE THE SEWER CONTRACTOR'S RESPONSIBILITY TO SET MANHOLE COVERS TO FINISH GRADE AFTER PAVING IN ACCORDANCE WITH CITY OF BANNING STANDARDS.
10. ALL ELEVATIONS SHOWN TO BE EXISTING WERE TAKEN FROM RECENT SURVEY OF THE ENGINEER AND SHALL BE VERIFIED BY THE CONTRACTOR PRIOR TO CONSTRUCTION.
11. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO CLEAR THE RIGHT-OF-WAY IN ACCORDANCE WITH THE PROVISIONS OF LAW AS IT AFFECTS EACH UTILITY INCLUDING IRRIGATION LINES AND APPURTENANCES AT NO COST TO THE CITY.
12. THE CONTRACTOR SHALL, AT NO EXPENSE TO THE CITY, PROVIDE ALL NECESSARY SAMPLES AND TESTS REQUIRED BY THE CITY TO ASSURE THAT THE QUALITY OF MATERIALS AND WORKMANSHIP ARE IN ACCORDANCE WITH THESE PLANS AND SAID SPECIFICATIONS.
13. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL WORK AND SHALL MAINTAIN ALL FACILITIES COMPLETED AND UNCOMPLETED, UNTIL ACCEPTED BY THE CITY.
14. THE CONTRACTOR SHALL VERIFY THE LOCATION OF ALL EXISTING UTILITIES AND NOTIFY UTILITY COMPANIES 48 HOURS IN ADVANCE OF THE BEGINNING OF CONSTRUCTION.
15. ALL SEWER LATERALS SHALL BE MARKED ON CURB WHERE THEY ENTER STREET WITH A PERMANENT "S."
16. SEWER LATERALS ARE NOT ALLOWED TO BE CONSTRUCTED UNDER/WITHIN THE DRIVEWAY APPROACHES.
17. CCTV VIDEO INSPECTION WILL BE REQUIRED, AT CONTRACTOR'S EXPENSE, AND SUBMITTED TO THE CITY FOR REVIEW PRIOR TO ACCEPTANCE, ANY AFFECTS WILL NEED TO BE REPAIRED AT NO COST TO THE CITY. CCTV INSPECTION SHALL INCLUDE VERIFICATION OF PIPE SLOPES FOR ENTIRE LENGTH OF PIPE.
18. MANDREL TESTING OF SEWER SHALL OCCUR A MINIMUM OF 60 DAYS AFTER BACKFILL OF SEWER TRENCH.
19. BENDING OF SDR 26 PVC PIPE THROUGH PIPE BARREL IS NOT PERMITTED.
20. MAXIMUM DEFLECTION OF SEWER PIPE JOINTS IS ONE DEGREE, OR PER MANUFACTURER'S RECOMMENDATIONS, WHICHEVER IS LESS.

NOTE FOR SEWER TRENCH BACKFILL:

USE CITY STANDARD NO. S-15, S-16, S-17 FOR WATER TRENCH BACKFILL

ENGINEER'S NOTICE TO CONTRACTORS

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND OR OVERHEAD UTILITIES OR STRUCTURES SHOWN ON THESE PLANS ARE APPROXIMATE. THE ENGINEER ASSUMES NO LIABILITY AS TO THE EXACT LOCATION OF SAID LINES NOT FOR UTILITIES OR IRRIGATION LINES WHOSE LOCATION ARE NOT SHOWN. THE CONTRACTOR SHALL BE RESPONSIBLE FOR NOTIFYING ALL UTILITY AND IRRIGATION COMPANIES PRIOR TO WORK AND ACCURATELY IDENTIFY THESE LOCATIONS, WHETHER OR NOT SHOWN HEREON. AND IS RESPONSIBLE FOR ANY DAMAGE OR PROTECTION OF THESE LINES. PHASED UTILITY RELOCATIONS MAY BE NECESSARY AND SHALL BE THE CONTRACTOR'S RESPONSIBILITY OR CLOSELY COORDINATE HIS ACTIVITIES WITH THOSE OF ALL UTILITY COMPANIES. THE CONTRACTOR SHALL CALL IN A LOCATION REQUEST TO UNDERGROUND SERVICE ALERT (U.S.A.) PHONE 1-800-227-2600 TWO (2) WORKING DAYS PRIOR TO DIGGING. NO CONSTRUCTION PERMIT ISSUED BY PUBLIC WORKS DEPARTMENT SHALL BE VALID INVOLVING UNDERGROUND FACILITIES UNLESS THE APPLICANT HAS AN INQUIRY IDENTIFICATION NUMBER ISSUED BY U.S.A.

THE ESTIMATED QUANTITY FOR EACH SPECIFIC ITEM OF THE WORK DESIGNATED ON THE PLANS SHALL BE CONSIDERED AS APPROXIMATE ONLY AND NO GUARANTEE IS MADE THAT THE QUANTITIES WHICH CAN ONLY BE DETERMINED BY COMPUTATIONS, BASED ON THE DETAILS AND DIMENSIONS SHOWN ON THE PLANS, WILL EQUAL THE ESTIMATED QUANTITIES. THE ESTIMATE OF QUANTITIES IS PROVIDED BY THE ENGINEER ONLY FOR THE CONVENIENCE OF THE OWNER. THE CONTRACTOR SHALL MAKE HIS OWN DETERMINATION AND BE RESPONSIBLE FOR HIS OWN CONSTRUCTION QUANTITIES BEFORE SUBMITTING A BID. ANY ITEM OF WORK, OR PORTION THEREOF, REQUIRED BY THESE PLANS WHICH IS NOT SPECIFICALLY LISTED IN THE ESTIMATE OF QUANTITIES SHALL BE CONSIDERED AS INCLUDED IN THE OTHER ITEMS OF WORK.

LEGAL DESCRIPTION

PORTIONS OF LOTS 8, 10, 11 AND 19 OF TRACT MAP NO. 34330, FILED IN BOOK 429 OF MAPS, PAGES 84 THROUGH 103, INCLUSIVE, IN THE OFFICE OF THE COUNTY RECORDER OF RIVERSIDE COUNTY, CALIFORNIA

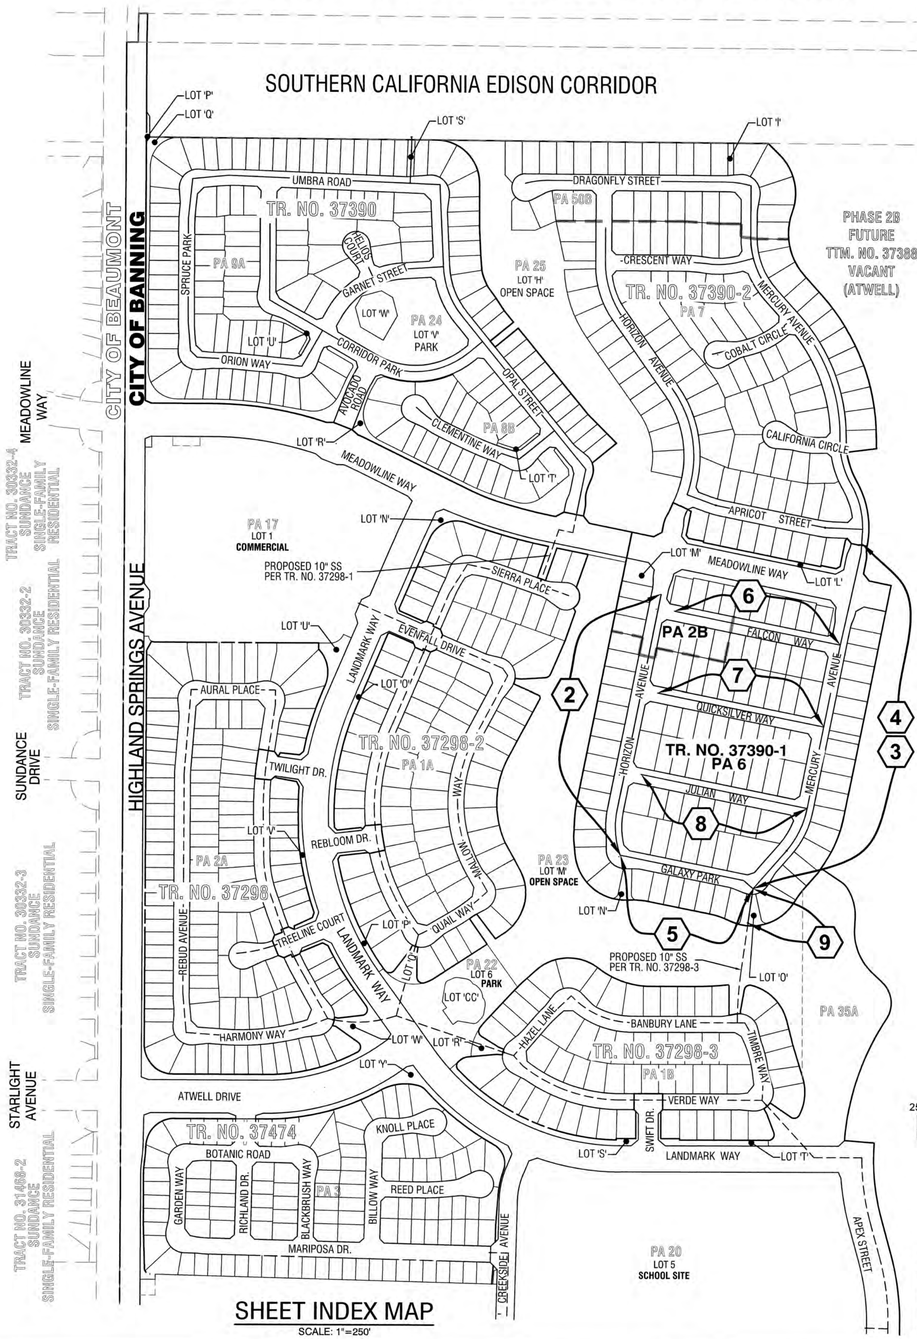
NOTIFICATIONS

AT LEAST 48 HOURS PRIOR TO COMMENCING CONSTRUCTION, CONTRACTOR SHALL NOTIFY:

WATER AND SEWER	CITY OF BANNING	(951) 922-3281
ELECTRIC	CITY OF BANNING	(951) 922-3260
CABLE	SPECTRUM	(866) 417-1039
TELEPHONE	FRONTIER COMMUNICATIONS	(909) 748-6649
GAS	SOUTHERN CALIFORNIA GAS COMPANY	(909) 335-7926

BENCHMARK

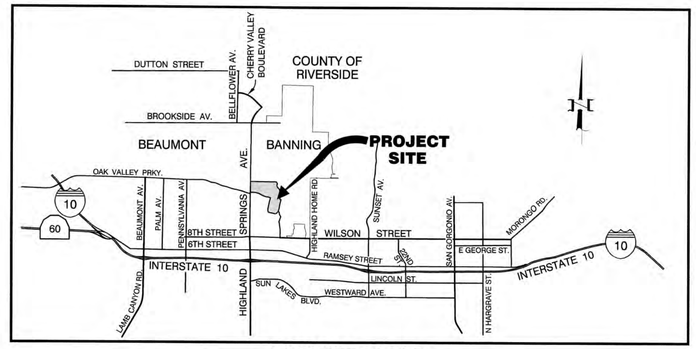
ELEVATIONS SHOWN HEREON ARE BASED ON BENCHMARK MWD 401 1992 - A 3 ¼" STANDARD ALUMINUM MWD DISK, FLUSH, IN BANNING, 0.6 MILES SOUTH ALONG HIGHLAND SPRINGS AVENUE FROM THE INTERSECTION OF HIGHLAND SPRINGS AVENUE AND THE SOUTHERN PACIFIC RAILROAD BRIDGE, 17.5 FEET EAST OF THE CENTERLINE OF HIGHLAND SPRINGS AVENUE AT THE NORTHWEST CORNER OF CATCH BASIN AT THE TOP OF CURB, 0.5 FEET EAST OF FACE OF CURB.
ELEVATION = 772.395m = 2534.10 ft (NAVD 88).



CONVERSION TO NGVD 29 CAN BE ACCOMPLISHED BY SUBTRACTING 2.66 ft FROM ALL ELEVATIONS PER VERTCON CALCULATION AT THE BENCHMARK. ELEVATION = 2531.44 ft (NGVD 29).

BASIS OF BEARINGS

THE BEARINGS FOR THIS SURVEY ARE BASED ON THE LINE BETWEEN STATIONS "TRAK" AND "MATH" (PORTIONS PER NATIONAL GEODETIC SURVEY, NAD 83, EPOCH 1995.5), AS SHOWN ON THE MAP FILED IN BOOK 102, PAGES 50 THROUGH 65 OF RECORDS OF SURVEY, IN THE OFFICE OF THE COUNTY RECORDER OF RIVERSIDE COUNTY, CALIFORNIA, BEING NORTH 52° 49' 02.84" EAST.



ASSESSORS PARCEL NUMBERS

PORTIONS OF 408-120-010, 408-120-012, 408-120-013 & 408-120-020

IN THE CITY OF BANNING, STATE OF CALIFORNIA

TRACT NO. 37390-1 ATWELL
ON-SITE STREET IMPROVEMENT PLAN

GENERAL NOTES:

1. ALL WORK SHALL BE IN ACCORDANCE WITH THESE PLANS, THE CITY OF BANNING STANDARD PLANS, THE CONTRACT PROVISIONS AND THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTIONS ("GREEN BOOK"). ALL REFERENCE SPECIFICATIONS AND STANDARDS SHALL BE THE LATEST EDITION UNLESS OTHERWISE NOTED.
2. WHEN A TECHNICAL CONFLICT IS FOUND TO EXIST IN THE CONTRACT DOCUMENTS THAT CAN NOT BE RESOLVED BY REFERENCE TO PRECEDENCE PROVISIONS IN THE "GREEN BOOK": THE CONTRACTORS SHALL IMMEDIATELY REPORT SAID CONFLICT TO THE CITY ENGINEERS FOR RESOLUTION.
3. ALL MATERIALS AND METHODS ARE SUBJECT TO THE APPROVAL OF THE CITY ENGINEER.
4. CONSTRUCTION PERMITS SHALL BE OBTAINED FROM THE CITY OF BANNING, ENGINEERING DEPARTMENT PRIOR TO THE START OF ANY WORK. INSPECTION COORDINATION SHALL BE REQUESTED AT LEAST TWO WORKING DAYS PRIOR TO THE START OF ANY WORK IN PUBLIC RIGHT-OF-WAY WITHIN THE CITY LIMITS.CALL {951) 922-3130 FOR AN INSPECTION REQUEST.
5. THE CONTRACTOR SHALL CONFORM TO ALL TRAFFIC CONTROL POLICIES, METHODS AND PROCEDURES DESCRIBED IN STATE OF CALIFORNIA MANUAL OF TRAFFIC CONTROLS, LATEST NON- METRIC EDITION UNLESS OTHERWISE DIRECTED BY THE CITY ENGINEER.
6. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO MAINTAIN BARRICADES, DELINEATORS OR OTHER TRAFFIC CONTROL DEVICES AT ALL TIMES.
7. THE CONTRACTORS SHALL OBTAIN A PERMIT TO PERFORM EXCAVATION OR TRENCH WORK FOR TRENCHES 5 FEET OR GREATER IN DEPTH FROM THE CALIFORNIA STATE DIVISION OF INDUSTRIAL SAFETY.
8. THE WALLS AND FACES OF ALL EXCAVATIONS GREATER THAN FIVE (5) FEET IN DEPTH SHALL BE GUARDED BY SHORING, SLOPING OF THE GROUND OR OTHER APPROVED MEANS PURSUANT TO THE REQUIREMENTS OF THE DIVISION OF INDUSTRIAL SAFETY OF THE STATE OF CALIFORNIA. TRENCHES LESS THAN FIVE (5) FEET SHALL ALSO BE GUARDED WHEN THE POTENTIAL EXISTS FOR GROUND MOVEMENT.
9. NO MATERIAL OR EQUIPMENT SHALL BE STORED IN THE PUBLIC RIGHT OF WAY WITHOUT OBTAINING A SEPARATE PERMIT FOR THAT PURPOSE.
10. THE LOCATIONS OF UTILITIES SHOWN HAVE BEEN DETERMINED FROM AVAILABLE INFORMATION, HOWEVER, IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO DETERMINE, IN THE FIELD, THE TRUE LOCATION AND ELEVATION OF ANY EXISTING UTILITIES, AND TO EXERCISE PROPER PRECAUTION TO AVOID DAMAGE THERETO. THE CONTRACTOR SHALL CONTACT UNDERGROUND SERVICE ALERT AT 1-800-277-2600 TWO WORKING DAYS BEFORE EXCAVATION.
11. THE CONTRACTOR SHALL COORDINATE CONSTRUCTION WITH ALL UTILITY COMPANIES INCLUDING, BUT NOT LIMITED TO, GAS, TELEPHONE, ELECTRIC, CABLE TELEVISION, LANDSCAPING, LANDSCAPE IRRIGATION, DOMESTIC WATER, RECLAIMED WATER, SEWER, STORM DRAIN, FLOOD CONTROL AND CALTRANS. ALL UTILITY COMPANIES SHALL BE GIVEN TWO WORKING DAYS NOTICE PRIOR TO WORK AROUND THEIR FACILITIES.
12. THE CONTRACTOR SHALL NOT OPERATE ANY FIRE HYDRANT OR WATER MAIN VALVES WITHOUT APPROPRIATE AGENCY AUTHORIZATION. CONTRACTOR SHALL COORDINATE WITH THE WATER DEPARTMENT, CITY OF BANNING FOR VALVE OPERATION AND WATER REQUIREMENTS.
13. CURVE DATA REFERS TO THE FACE OF CURB, UNLESS OTHERWISE NOTED.
14. STATIONING REFERS TO THE CENTERLINE OF STREETS EXCEPT WHERE OTHERWISE NOTED.
15. ADEQUATE CONSTRUCT/ON CONTROL STAKES SHALL BE SET BY THE ENGINEER TO ENABLE THE CONTRACTOR TO CONSTRUCT THE WORK TO THE PLAN GRADE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PRESERVATION OF BENCHMARKS AND CONSTRUCT/ON CONTROL STAKING.
16. THE CONTRACTOR SHALL NOT DISTURB EXISTING SURVEY MONUMENTS, MONUMENT TIES OR BENCH MARKS WITHOUT PRIOR NOTIFICATION TO THE CITY ENGINEER.
17. REMOVAL AND REPLACEMENT OF EXISTING SURVEY CONTROL, INCLUDING SURVEY MONUMENTS, MONUMENT TIES AND BENCH MARKS, SHALL BE DONE BY A REGISTERED CIVIL ENGINEER OR LICENSED LAND SURVEYOR. SURVEY MONUMENTS THAT WILL BE DESTROYED AS A RESULT OF THIS CONSTRUCT/ON SHALL BE REPLACED. THE CONTRACTOR SHALL NOTIFY THE ENGINEER ONE WEEK PRIOR TO CONSTRUCTION SO THAT TIES TO MONUMENTS CAN BE ESTABLISHED FOR LATER REPLACEMENT OF THE MONUMENT.
18. THE CONTRACTOR SHALL MAINTAIN ACCESS FOR LOCAL RESIDENTS AND BUSINESS AT ALL TIMES. A MINIMUM 12 FOOT LANE SHALL BE MAINTAINED AT ALL TIMES IN THE CONSTRUCT/ON AREA FOR RESIDENTS AND EMERGENCY VEHICLES.
19. THE CONTRACTOR SHALL PROVIDE AND MAINTAIN AN EFFECTIVE MEANS OF DUST CONTROL, INCLUDING ADEQUATE WATERING, AT ALL TIMES.
20. ALL GRADING OPERATIONS SHALL BE DISCONTINUED WHEN SUSTAINED WIND VELOCITIES EXCEED 25 MILES PER HOUR.
21. THE CONTRACTOR SHALL NOT CAUSE ANY EXCAVATED MATERIAL, MUD, SILT, OR DEBRIS TO BE DEPOSITED ONTO PUBLIC OR PRIVATE PROPERTY ADJACENT TO THE RIGHT OF WAY DURING CONSTRUCTION WITHOUT PRIOR WRITTEN APPROVAL.
22. NO TRENCH BACKFILL SHALL TAKE PLACE WITHOUT PRIOR APPROVAL OF THE CITY INSPECTOR.
23. A GEOTECHNICAL ENGINEER SHALL CERTIFY ALL BACKFILL COMPACTION, FAILURE TO OBTAIN THE REQUIRED DENSITY SHALL REQUIRE RE-WORKING OF THAT PORTION OF THE WORK UNTIL THE SPECIFIED DENSITY IS OBTAINED.
24. CARE SHOULD BE TAKEN TO PREVENT GRADES, DITCHES, AND SWALES FROM UNDERMINING STREET IMPROVEMENTS. UPON INSPECTION OF THE SITE, THE CITY ENGINEER MAY REQUIRE TEMPORARY NON-ERODEABLE SWALES ENTERING OR LEAVING IMPROVEMENTS.
25. THE FINAL LOCATION AND WIDTH OF DRIVEWAY APPROACH APRONS SHALL BE APPROVED AT THE TIME OF CONSTRUCTION AND SHALL CONFORM TO THE CITY OF BANNING STANDARD DETAILS.
26. ALL EXPOSED CONCRETE SURFACES SHALL CONFORM IN GRADE, COLOR AND FINISH TO MATCH EXISTING CONCRETE.
27. THE CONTRACTOR SHALL STAMP AN "S" IN THE FACE OF THE CURB AT THE LOCATION OF THE SEWER LATERAL.
28. NO CONCRETE SHALL BE PLACED UNTIL THE FORMS AND REINFORCING STEEL HAVE BEEN PLACED, INSPECTED AND APPROVED.
29. ALL UNDERGROUND UTILITIES SHALL BE INSTALLED, TESTED AND APPROVED PRIOR TO PAVING OF STREETS.
30. PAVEMENT STRUCTURAL SECTIONS SHOWN ARE MINIMUM AND SUBJECT TO REVISION AND APPROVAL OF THE CITY ENGINEER AS DETERMINED BY SOILS TESTS TAKEN AFTER COMPLETION OF ROUGH GRADING AND IN CONSIDERATION OF THE APPROPRIATE R-VALUE.
31. ACTUAL THICKNESS OF A.G. PAVEMENT AND/ OR BASE COURSE MATERIAL FOR STRUCTURAL STREET SECTIONS SHALL BE RECOMMENDED BY A GEOTECHNICAL REPORT AND SUBMITTED TO THE CITY OF BANNING FOR APPROVAL UPON COMPLETION OF ROUGH GRADING.
32. ALL MANHOLES, CLEAN OUT FRAMES, COVERS AND VALVE BOXES SHALL BE RAISED TO FINISHED GRADE BY THE PAVING CONTRACTOR UPON COMPLETION OF PAVING AND PER THE CITY OF BANNING'S REQUIREMENTS.
33. UPON COMPLETION OF CONSTRUCTION, CONTRACTOR SHALL RESTORE ALL SIGNING, STRIPING, BARRICADES, AND OTHER TRAFFIC CONTROL DEVICES TO THE SATISFACTION OF THE CITY ENGINEER.
34. CONTRACTOR SHALL RELOCATE AND/ OR REPLACE LANDSCAPING, SPRINKLERS AND SIDEWALKS AFFECTED BY THE CONSTRUCTION TO THE SATISFACTION OF THE CITY ENGINEER.
35. AS-BUILT DRAWINGS SHALL BE PROVIDED BY THE CONTRACTOR TO THE ENGINEER OF RECORD, WHO SHALL PROVIDE RECORD DRAWINGS TO THE CITY ENGINEER.
36. IF AND WHEN TRAFFIC LOOP DETECTORS ARE DISTURBED THEY SHALL BE REPLACED AS SOON AS POSSIBLE, PER THE CITY ENGINEER'S DIRECTION.
37. STREET NAME AND DIRECTIONAL SIGNS SHALL MEET ALL MUTCD AND CITY REQUIREMENTS.

LEGAL DESCRIPTION

PORTIONS OF LOTS 8, 10, 11 & 19; OF TRACT MAP NO. 34330, FILED IN BOOK 429 OF MAPS, PAGES 84 THROUGH 103, INCLUSIVE, IN THE OFFICE OF THE COUNTY RECORDER OF RIVERSIDE COUNTY, CALIFORNIA.

OWNER/APPLICANT/DEVELOPER

PARDEE HOMES
1250 CORONA POINTE COURT, SUITE 600
CORONA, CA 92879
(951) 428-4400
CONTACT: MICHAEL HEISHMAN

BASIS OF BEARINGS

THE BEARINGS FOR THIS SURVEY ARE BASED ON THE LINE BETWEEN STATIONS "TRAK" AND "MATH" (PORTIONS PER NATIONAL GEODETIC SURVEY, NAD 83, EPOCH 1995.5), AS SHOWN ON THE MAP FILED IN BOOK 102, PAGES 50 THROUGH 65 OF RECORDS OF SURVEY, IN THE OFFICE OF THE COUNTY RECORDER OF RIVERSIDE COUNTY, CALIFORNIA, BEING NORTH 52° 49' 02.84" EAST.

ASSESSORS PARCEL NUMBERS

PORTIONS OF 408-120-010, 408-120-012,408-120-013 & 408-120-020

ENGINEER'S NOTES:

CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS, AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER AND THE ENGINEER HARMLESS FROM ANY ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER OR ENGINEER.

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITIES OF STRUCTURES SHOWN ON THESE PLANS ARE OBTAINED BY A DILIGENT SEARCH OF AVAILABLE RECORDS, THE CONTRACTOR IS REQUIRED TO TAKE ALL PRECAUTIONARY MEASURES TO PROTECT THE UTILITIES SHOWN AND ANY OTHER LINES OR STRUCTURES NOT SHOWN ON THESE PLANS AND IS RESPONSIBLE FOR THE PROTECTION OF, ANY DAMAGE TO THESE LINES OR STRUCTURES. THE CONTRACTOR SHALL CALL UNDERGROUND SERVICE ALERT (USA) AT 1-800-227-2600 AT LEAST TWO WORKING DAYS PRIOR TO EXCAVATION IN ORDER TO DETERMINE ACTUAL FIELD LOCATION OF EXISTING UTILITIES.

BENCHMARK

ELEVATIONS AS SHOWN HEREON ARE IN TERMS OF THE NATIONAL GEODETIC VERTICAL DATUM OF NAVD 88 BASED LOCALLY UPON THE FOLLOWING BENCH MARK: 3-1/4" STANDARD ALUMINUM MWD DISK, FLUSH, LOCATED IN BANNING, 0.6 MILES SOUTH ALONG HIGHLAND SPRINGS AVENUE FROM THE INTERSECTION OF HIGHLAND SPRINGS AVENUE AND THE SOUTHERN PACIFIC RAILROAD BRIDGE, 17.5 FEET EAST OF THE CENTERLINE OF HIGHLAND SPRINGS AVENUE AT THE NORTHWEST CORNER OF CATCH BASIN AT THE TOP OF CURB, 0.5 FEET EAST OF FACE OF CURBS. ELEVATION=2534.10

Call before you Dig
Avoid cutting underground utility lines. It's costly.

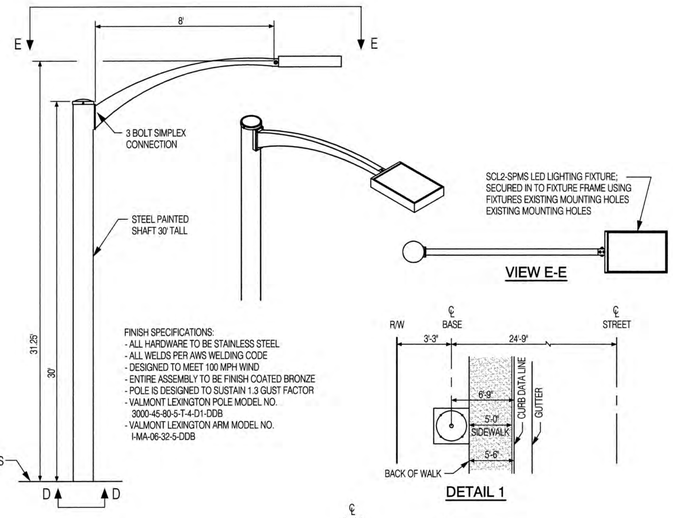
Last Edit: 02.12.2019 12:11:15 PM By: Station125
MDS File: 89406 XRB STBDR (37390-1).d
Plot Scale: 1" = 1' Dwg Scale: - 1
Plot Date: 05.21.2017 7:32:43 AM By: Station125

HORIZON AVENUE, MERCURY AVENUE, GALAXY PARK, JULIAN WAY, QUICKSILVER WAY AND FALCON WAY (PUBLIC)

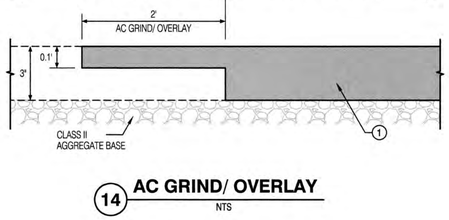
(MODIFIED LOCAL RESIDENTIAL STREET) TI=5.5



SCALE: HORIZ - 1"=10'
VERT - 1"=5'

NOTES:
1. CONCRETE SHALL BE CLASS 520-C-2500 P.C.C. CURED WITH WHITE PIGMENTED CURING COMPOUND.
2. FINISH SHALL BE FINE BROOM.
3. FLOWLINE SHALL BE STEEL TROWEL FINISH.
4. CURB SHALL HAVE WEAKENED PLANE JOINTS AT 10' INTERVAL; NO SCORE LINES ALLOWED.
5. SUBGRADE SHALL BE COMPACTED PER SOILS ENGINEER'S RECOMMENDATIONS UNDER CURB AND GUTTER.
6. WHEN CURB AND GUTTER IS PLACED BY AN EXTRUSION MACHINE, FINISH WORK SHALL PROVIDENT AN ACCEPTABLE FINISH AND WEAKENED PLANE JOINTS MAY BE SAWCUT.
7. MINIMUM GRADE = 0.40%
8. PAVEMENT SURFACE SHALL BE FLUSH WITH THE EDGE OF GUTTER (NO LIP) WHEN FRONTING THE BOTTOM OF A ACCESS RAMP.

2 6" WEDGE CURB & GUTTER CURB



NTS

NOTES:
1. THE BOLT PATTERN TEMPLATE SHOWN IS TYPICAL FOR MANY POLES. CONTRACTOR TO OBTAIN PROPER TEMPLATE FOR THE SPECIFIC POLE USED.
2. CONTACT THE C.O.B. ELECTRIC INSPECTOR 24 HOURS PRIOR TO POURING THE CONCRETE BASE. THE CONCRETE BASE MUST SIT FOR A MINIMUM OF 3 DAYS BEFORE INSTALLING STREETLIGHT POLE.
3. THE STREETLIGHT FOUNDATION SHALL BE CONSTRUCTED IN ONE POUR OF CONCRETE CLASS 560-C-3250 WITH A MAXIMUM 4-INCH SLUMP PER REQUIREMENTS LISTED IN SECTION 201 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION. THE BOTTOM OF THE FOUNDATION SHALL REST SECURELY ON FIRM, UNDISTURBED SOIL AND SURROUNDING SOIL MUST BE COMPACTED TO AT LEAST 90%.
4. IN EXTREME SOIL CONDITIONS AND WITH WRITTEN APPROVAL BY THE C.O.B. ELECTRIC INSPECTOR, 30' OF #6 BARE COPPER SOFT-DRAWN WIRE MAY BE INSTALLED IN LIEU OF THE PREFERRED GROUND ROD. 24" OF THIS GROUND MUST BE SPOOLED ABOVE THE CONCRETE BASE INSIDE OF THE STREETLIGHT POLE AND THE EXCESS WIRE BELOW THE CONCRETE BASE MUST BE COILED NEATLY IN THE FIRMLY TAMPED SOIL.

11 LED SOLAR STREET LIGHT INSTALLATION BEHIND SIDEWALK

NTS

14 AC GRIND/ OVERLAY

NTS

CONSTRUCTION NOTES AND ESTIMATED QUANTITIES

	STREET IMPROVEMENTS	UNIT	QUANTITY
1	CONSTRUCT 3" AC PAVEMENT OVER 8" CLASS 2 AGGREGATE BASE.	SF	133,375
2	CONSTRUCT 6" WEDGE CURB & GUTTER PER DET. SHT. NO. 2.	LF	8,175
3	CONSTRUCT EXTENDED SIDEWALK AT CATCH BASIN PER DET. SHT. NO. 3.	SF	172
4	CONSTRUCT 4" THICK P.C.C. SIDEWALK PER CITY OF BANNING STD. DWG. NO. C-213 (W=5.0').	SF	41,115
5	CONSTRUCT MODIFIED ACCESS RAMP, TYPE I, WITH PRECAST YELLOW TRUNCATED DOMES (ADA SOLUTIONS, INC. OR APPROVED EQUAL), PER CITY OF BANNING STD. DWG. NO. 214 AND DET. SHT. NO. 3	EA	12
6	CONSTRUCT MODIFIED CROSS GUTTER AND SPANDREL PER CITY OF BANNING STD. DWG. NO. C-211 AND DET. SHT. NO. 3.	SF	4,370
7	CONSTRUCT MODIFIED LOCAL DEPRESSION PER R.C.F.C. & W.C.D. STD. DWG. NO. LD201 AND DET. SHT. 3. ALSO SEE DETAILS ON STORM DRAIN IMPROVEMENT PLAN.	EA	5
8	ADJUST WATER VALVE TO GRADE PER CITY OF BANNING STD. DWG. NO. W-20.	EA	30
9	ADJUST SEWER MANHOLE TO GRADE PER CITY OF BANNING STD. DWG. NO. S-5.	EA	18
10	ADJUST STORM DRAIN MANHOLE TO GRADE PER CITY OF BANNING STD. DWG. NO. S-5.	EA	2
11	INSTALL LED SOLAR STREET LIGHT PER DET SHT. NO. 2.	EA	8
13	REMOVE 2x4 REDWOOD HEADER.	LF	72
14	CONSTRUCT 0.10' AC GRIND & MINIMUM 0.10' AC OVERLAY PER DET. HEREON.	SF	124
	SIGNING AND STRIPING	**UNIT**	**QUANTITY**
20	INSTALL MODIFIED SIGN POST PER R.C.T.D. STD. DWG. NO. 816 AND DETAIL SHT. NO. 10.	EA	7
21	INSTALL R1-1 SIGN ("STOP") PER CA MUTCD STD. AND DET. ON SHT. NO. 10.	EA	6
22	INSTALL MODIFIED STREET NAME SIGN PER R.T.C.D. STD. DWG. NO. 816 AND DET. ON SHT. NO. 10.	EA	8
23	INSTALL "STOP" PAVEMENT MARKING PER CALTRANS STD. DWG. NO. A24D	EA	6
24	INSTALL "12" WHITE STOP BAR STRIPE PER CALTRANS STD. DWG. NO. A24E.	LF	108
25	INSTALL BLUE REFLECTIVE FIRE HYDRANT PAVEMENT MARKER PER CITY STD. DWG. NO. W-18.	EA	12

NPDES GENERAL NOTES:

1. CONTRACTOR MUST ENSURE THAT THE CONSTRUCTION SITE IS PREPARED PRIOR TO THE ONSET OF ANY STORM. CONTRACTOR SHALL HAVE ALL EROSION AND SEDIMENT CONTROL MEASURES IN PLACE.
2. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE MAINTAINED UNTIL DISTURBED AREAS ARE STABILIZED. CHANGES TO THIS EROSION AND SEDIMENT CONTROL PLAN SHALL BE MADE TO MEET FIELD CONDITIONS ONLY WITH THE APPROVAL OF OR AT THE DIRECTION OF A REPRESENTATIVE OF THE ENGINEERING DEPARTMENT.
3. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE CHECKED BEFORE AND AFTER ALL STORMS TO ENSURE MEASURES ARE FUNCTIONING PROPERLY.
4. CONTRACTOR SHALL MAINTAIN A LOG AT THE SITE OF ALL INSPECTIONS OR MAINTENANCE OF BMP AS WELL AS ANY CORRECTIVE CHANGES TO THE BMPS OR EROSION AND SEDIMENT CONTROL PLAN.
5. IN AREAS WHERE SOIL IS EXPOSED, PROMPT REPLANTING WITH NATIVE COMPATIBLE DROUGHT-RESISTANT VEGETATION SHALL BE PERFORMED.
6. THE CONTRACTOR SHALL INSTALL THE STABILIZED CONSTRUCTION ENTRANCE PRIOR TO COMMENCEMENT OF GRADING. LOCATION OF THE ENTRANCE MAY BE ADJUSTED BY THE CONTRACTOR TO FACILITATE GRADING OPERATIONS. ALL CONSTRUCTION TRAFFIC ENTERING A PAVED ROAD MUST CROSS A STABILIZED CONSTRUCTION ENTRANCE. THE STABILIZED CONSTRUCTION ENTRANCE SHALL REMAIN IN PLACE UNTIL THE ROAD BASE ROCK COURSE IS COMPLETED.
7. ALL SEDIMENT DEPOSITED ON PAVED ROADWAYS SHALL BE SWEPT AT THE END OF EACH WORKING DAY OR AS NECESSARY.
8. CONTRACTOR SHALL PLACE BMPS AROUND ALL NEW DRAINAGE STRUCTURE OPENINGS IMMEDIATELY AFTER THE STRUCTURE OPENING IS CONSTRUCTED. THESE SHALL BE MAINTAINED AND REMAIN IN PLACE UNTIL THE CONSTRUCTION IS COMPLETED.
9. CONTRACTOR SHALL IMPLEMENT HOUSEKEEPING PRACTICES AS FOLLOWS:
   A. SOLID WASTE MANAGEMENT: PROVIDE DESIGNATED WASTE COLLECTION AREAS AND CONTAINERS. ARRANGE FOR REGULAR REMOVAL AND DISPOSAL. CLEAR SITE OF TRASH INCLUDING ORGANIC DEBRIS, PACKAGING MATERIALS, SCRAP OR SURPLUS BUILDING MATERIALS AND DOMESTIC WASTE DAILY.
   B. MATERIAL DELIVERY AND STORAGE: PROVIDE A DESIGNATED MATERIAL STORAGE AREA WITH SECONDARY CONTAINMENT SUCH AS BERMING. STORE MATERIAL ON PALLETS AND PROVIDE COVERING FOR SOLUBLE MATERIALS. RELOCATE STORAGE AREA INTO BUILDING SHELL WHEN POSSIBLE. INSPECT AREA WEEKLY.
   C. CONCRETE WASTE: PROVIDE A DESIGNATED AREA FOR A TEMPORARY PIT TO BE USED FOR CONCRETE TRUCK WASH-OUT. DISPOSE OF HARDENED CONCRETE OFFSITE. AT NO TIME SHALL A CONCRETE TRUCK DUMP ITS WASTE AND CLEAN ITS TRUCK INTO THE CITY STORM DRAINS VIA CURB AND GUTTER. INSPECT DAILY TO CONTROL RUNOFF AND WEEKLY FOR REMOVAL OF HARDENED CONCRETE.
   D. PAINT AND PAINTING SUPPLIES: PROVIDE INSTRUCTION TO EMPLOYEES AND SUBCONTRACTORS REGARDING REDUCTION OF POLLUTANTS INCLUDING MATERIAL STORAGE, USE, AND CLEANUP. INSPECT SITE WEEKLY FOR EVIDENCE OF IMPROPER DISPOSAL.
   E. VEHICLE FUELING, MAINTENANCE AND CLEANING: PROVIDE A DESIGNATED FUELING AREA WITH SECONDARY CONTAINMENT SUCH AS BERMING. DO NOT ALLOW MOBILE FUELING OF EQUIPMENT. PROVIDE EQUIPMENT WITH DRIP PANS. RESTRICT ONSITE MAINTENANCE AND CLEANING OF EQUIPMENT TO A MINIMUM. INSPECT AREA.
   F. HAZARDOUS MATERIALS MANAGEMENT: PREVENT THE DISCHARGE OF POLLUTANTS FROM HAZARDOUS MATERIALS TO THE DRAINAGE SYSTEM THROUGH PROPER MATERIAL USE, WASTE DISPOSAL AND TRAINING OF EMPLOYEES. HAZARDOUS WASTE PRODUCTS COMMONLY FOUND ONSITE INCLUDE, BUT ARE NOT LIMITED TO, PAINTS & SOLVENTS, PETROLEUM PRODUCTS, FERTILIZERS, HERBICIDES & PESTICIDES, SOIL STABILIZATION PRODUCTS, ASPHALT PRODUCTS AND CONCRETE CURING PRODUCTS.
10. IN CASE OF EMERGENCY, CALL THE CITY ENGINEER'S OFFICE AT (951) 922-3130.
11. EQUIPMENT AND WORKS FOR EMERGENCY WORK SHALL BE MADE AVAILABLE AT ALL TIMES DURING THE RAINY SEASON BY THE CONTRACTOR. NECESSARY MATERIALS SHALL BE AVAILABLE ON THE SITE AND STOCKPILED AT CONVENIENT LOCATIONS TO FACILITATE RAPID CONSTRUCTION OF EROSION CONTROL DEVICES WHEN RAIN IS EMINENT.
12. DEVICES SHALL NOT BE MOVED OR MODIFIED WITHOUT APPROVAL OF THE DESIGN CIVIL ENGINEER.
13. ALL REMOVABLE PROTECTIVE DEVICES SHALL BE IN PLACE AT THE END OF EACH WORKING DAY WHEN THE 5-DAY RAIN PROBABILITY FORECAST EXCEEDS 40% (DURING THE RAINY SEASON).
14. AFTER A RAINSTORM, ALL SILT AND DEBRIS SHALL BE REMOVED FROM CHECK BERMS, SILT FENCES AND SILT BASINS. EACH BASIN SHALL BE PUMPED DRY.
15. GRADED AREAS AROUND THE PROJECT BOUNDARY MUST DRAIN AWAY FROM THE FACE OF THE SLOPE AT THE CONCLUSION OF EACH WORKING DAY.
16. THE LOCAL GOVERNING AGENCY RESERVES THE RIGHT TO MAKE CHANGES OR MODIFICATIONS TO THESE NOTES AS DEEMED NECESSARY.
17. AREA SHALL BE MAINTAINED IN SUCH A STATE THAT FIRE ACCESS SHALL BE MAINTAINED AT ALL TIMES (INCLUDING THE NEIGHBORING PROPERTIES).
18. GRAVEL BAGS AND SILT FENCES SHALL BE INSTALLED AROUND CATCH BASINS.
19. CURB MARKERS SHALL BE PLACED ADJACENT TO ALL INLETS FOLLOWING THE CONSTRUCTION OF STREET IMPROVEMENTS AND AT THE DIRECTION OF THE PUBLIC WORKS INSPECTOR.

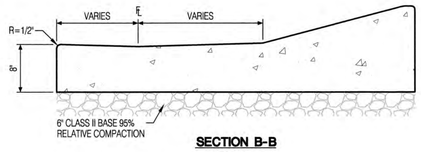
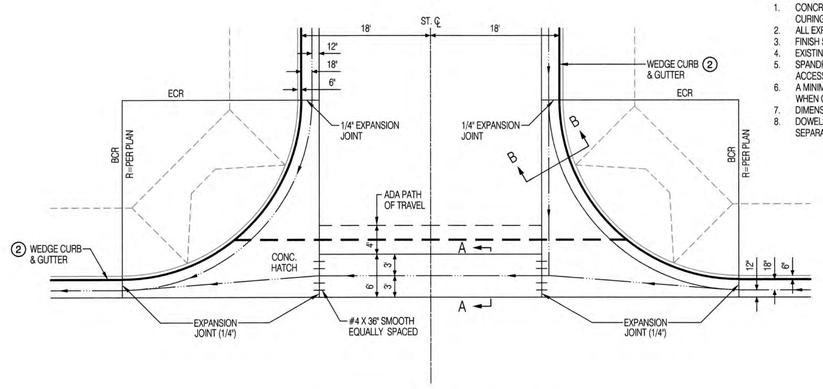
NTS

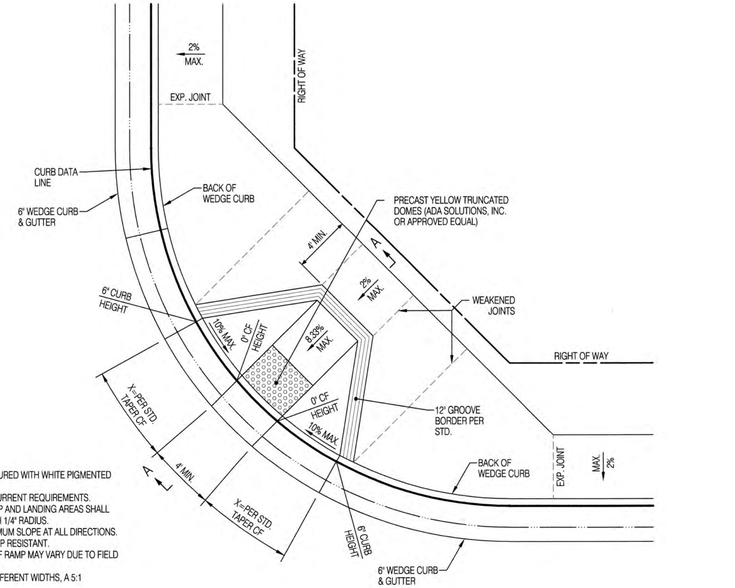


3 EXTENDED SIDEWALK AT CATCH BASIN

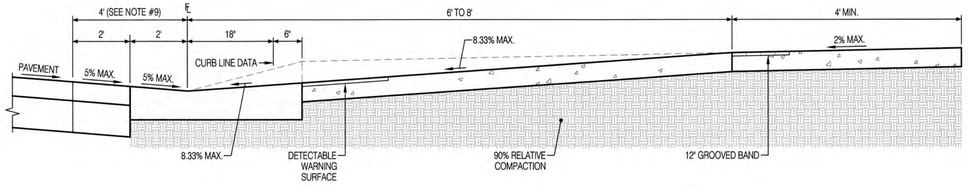


CB #1-4 & CB #T-1
NTS

SECTION A-A



SECTION B-B



NOTES.
1. CONCRETE SHALL BE CLASS 560-C-3250 P.C.C. CURED WITH WHITE PIGMENTED CURING COMPOUND.
2. ALL EXPOSED CORNERS SHALL BE FINISHED WITH 1/2" RADIUS.
3. FINISH SHALL BE FINE BROOM.
4. EXISTING P.C.C. SHALL SAWCUT AT SCORELINE PRIOR TO REMOVAL.
5. SPANDREL WEAKENED PLANE JOINT LOCATIONS WILL BE DETERMINED BY ACCESS RAMP LOCATIONS.
6. A MINIMUM OF 1' WIDE AC PAVEMENT (FULL DEPTH) REPAIR PATCH IS REQUIRED WHEN CROSS-GUTTER IS PLACED ADJACENT TO EXISTING A.C. PAVEMENT.
7. DIMENSIONS MAY BE INCREASED DEPENDING ON DRAINAGE CONSIDERATIONS.
8. DOWELS REQUIRED WHEN CROSS-GUTTER AND SPANDREL POURED SEPARATELY.

6 MODIFIED CROSS GUTTER

CITY STD. DWG. NO. C-211
NTS

NOTES:
1. CONCRETE SHALL BE CLASS 520-C-2500 P.C.C. CURED WITH WHITE PIGMENTED CURING COMPOUND.
2. ALL ACCESS RAMPS SHALL CONFORM TO ADA CURRENT REQUIREMENTS.
3. P.C.C. THICKNESS OF 4" FROM BCR TO ECR, RAMP AND LANDING AREAS SHALL BE MONOLITHIC.JOINTS SHALL HAVE EDGES WITH 1/4" RADIUS.
4. LANDING AT TOP OF RAMP SHALL HAVE 2% MAXIMUM SLOPE AT ALL DIRECTIONS.
5. RAMP SURFACE AND FLARED SIDES SHALL BE SLIP RESISTANT.
6. DIMENSIONS SHOWN FOR SLOPING PORTIONS OF RAMP MAY VARY DUE TO FIELD CONDITIONS.
7. WHERE NEW SIDEWALK JOINS EXISTING WITH DIFFERENT WIDTHS, A 5:1 TRANSITION IS REQUIRED.
8. DETECTABLE WARNING MATERIAL TO BE APPROVED BY CITY ENGINEER.
9. MAXIMUM SLOPES OF ADJOINING GUTTERS: THE ROAD SURFACE IMMEDIATELY ADJACENT TO THE CURB RAMP AND CONTINUOUS PASSAGE TO THE CURB RAMP SHALL NOT EXCEED 5% WITHIN 4 FEET OF THE BOTTOM OF THE CURB RAMP.

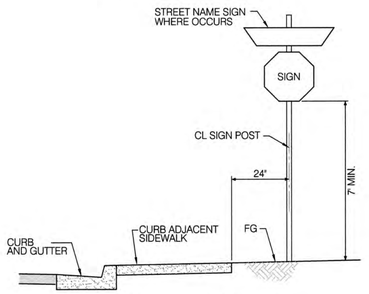
SIGNING & STRIPING IMPROVEMENT PLANS

SIGNING AND STRIPING GENERAL NOTES:

1. ALL MATERIAL AND WORK SHALL CONFORM TO THE LATEST EDITION OF CITY OF BANNING STANDARD PLANS, CALTRANS STANDARD PLANS AND STANDARD SPECIFICATIONS, AND CALIFORNIA MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES.
2. ALL TRAFFIC STRIPES, PAVEMENT MARKINGS, AND SIGNS SHALL BE REFLECTORIZED AND IN STANDARD SIZE. ALL STRIPING AND MARKING DETAILS SHALL MATCH CALTRANS STANDARD PLANS DETAILS. STENCILS FOR PAVEMENT MARKING SHALL MATCH CALTRANS STANDARD PLANS.
3. THE CONTRACTOR SHALL REMOVE ALL CONFLICTING STRIPES, PAVEMENT MARKINGS, AND RAISED PAVEMENT MARKERS IN ACCORDANCE WITH THE PLANS AND AS DIRECTED BY THE ENGINEER. WORD OR SYMBOL PAVEMENT MARKINGS SHALL BE REMOVED BY SANDBLASTING OR GRINDING A RECTANGULAR AREA COVERING THE WHOLE MARKING.
4. ALL CROSSWALKS SHALL HAVE 10 FEET IN BETWEEN THE 12-INCH WHITE OR YELLOW STRIPES.
5. ALL DOUBLE YELLOW STRIPES SHALL HAVE 3-INCH PAINTED BLACK LINE SEPARATING THE YELLOW STRIPES.
6. THE CONTRACTOR SHALL FURNISH AND INSTALL ALL TRAFFIC STRIPES, RAISED PAVEMENT MARKERS (RPMS), PAVEMENT MARKINGS, AND SIGNS IN ACCORDANCE WITH THE PLANS AND AS DIRECTED BY THE ENGINEER.
7. ALL PAVEMENT MARKINGS INCLUDING CROSSWALKS, LIMIT LINES, AND STOP BARS SHALL BE APPLIED WITH THERMOPLASTIC MATERIAL. ALL OTHER TRAFFIC STRIPES SHALL BE PAINTED IN TWO COATS.
8. ALL RPMS SHALL BE INSTALLED WITHIN SEVEN WORKING DAYS OF ROADWAY STRIPING. ALL EXISTING RPMS WITHIN THE PROJECT AREA SHALL BE REPLACED IN KIND OR REMOVED IN ACCORDANCE WITH THE PLANS, OR AS DIRECTED BY THE ENGINEER.
9. THE CONTRACTOR SHALL INSTALL STANDARD SIZE SIGN PANEL ON 2" SQUARE PERFORATED STEEL TUBE POST WITH TWO PIECE ANCHOR AND SLEEVE, FASTENED WITH 3/8" RIVETS WITH STAINLESS STEEL WASHERS, UNLESS OTHERWISE NOTED. THE EXACT LOCATION OF ALL SIGNS SHALL BE DETERMINED IN THE FIELD BY THE ENGINEER.
10. THE CONTRACTOR SHALL REMOVE SIGNS IN ACCORDANCE WITH THE PLANS AND AS DIRECTED BY THE ENGINEER. THE CONTRACTOR SHALL DELIVER REMOVED SIGNS TO THE CITY YARD OR AS DIRECTED BY THE ENGINEER.
11. THE CONTRACTOR SHALL SUBMIT A TRAFFIC SIGNAL TIMING SHEET TO THE CITY FOR REVIEW AND APPROVAL PRIOR TO THE BEGINNING OF CONSTRUCTION OF ANY NEW OR MODIFIED TRAFFIC SIGNAL. THE TIMING SHEET WILL MEET ALL REQUIREMENTS PER THE LATEST CALIFORNIA MUTCD, PART 4 "HIGHWAY TRAFFIC SIGNALS".
12. THE CONTRACTOR SHALL REPLACE ALL SIGNING AND STRIPING WITHIN PROJECT LIMITS DAMAGED OR ALTERED BY THE PROJECT, AS DETERMINED BY THE CITY ENGINEER.

CONSTRUCTION NOTES:



(20) INSTALL MODIFIED SIGN POST PER R.C.T.D. STD. DWG. NO. 816 AND DET. HERON.
(21) INSTALL R1-1 SIGN ("STOP") PER CA MUTCD STD. AND DET. HEREON.
(22) INSTALL MODIFIED STREET NAME SIGN PER R.T.C.D. STD. DWG. NO. 816 AND DET. HERON.
(23) INSTALL "STOP" PAVEMENT MARKING PER CALTRANS STD. DWG. NO. A24D
(24) INSTALL "12" WHITE STOP BAR STRIPE PER CALTRANS STD. DWG. NO. A24E.
(25) INSTALL BLUE REFLECTIVE FIRE HYDRANT PAVEMENT MARKER PER CITY STD. DWG. NO. W-18.

IN THE CITY OF BANNING, STATE OF CALIFORNIA

TRACT NO. 37390-1
WATER IMPROVEMENT PLAN

WATER GENERAL NOTES:

1. WATERLINE INSTALLATION SHALL BE IN ACCORDANCE WITH THE CITY OF BANNING WATER DEPARTMENT STANDARD DRAWINGS AND SPECIFICATIONS.
2. ALL MATERIALS, TESTING, AND INSPECTION OF PIPE SHALL BE IN CONFORMITY WITH THE REQUIREMENTS OF THE CITY OF BANNING WATER DEPARTMENT AND THE AMERICAN WATER WORKS ASSOCIATION (AWWA) STANDARDS.
3. ALL SERVICE CONNECTIONS SHALL BE 1" SERVICES AND 1" METERS UNLESS OTHERWISE NOTED, AND SHALL BE LOCATED AS SHOWN ON THE PLANS, ADJUSTED AS NECESSARY TO MISS DRIVEWAYS. SERVICES WILL BE 1" COPPER PIPE TYPE "K."
4. WATER SYSTEM WILL BE INSTALLED BY DEVELOPER AND OWNED AND OPERATED BY THE CITY OF BANNING AFTER ACCEPTANCE BY THE CITY COUNCIL.
5. THERE SHALL BE A MINIMUM OF 36"COVER FOR PIPES 12" Ø AND BELOW AND 42" COVER FOR PIPES 12" Ø AND ABOVE.
6. ALL WATER PIPE SHALL BE DUCTILE IRON PIPE (CLASS 350) WITH V-BIO POLYETHYLENE ENCASEMENT PER CITY STD. DWG. NO. W-31
7. PRIOR TO CONSTRUCTION OF PIPELINE, CONTRACTOR SHALL EXPOSE EXISTING WATERLINES AND VERIFY ITS LOCATION.
8. ALL VALVES SHALL BE TURNED ON OR OFF BY CITY OF BANNING WATER DEPARTMENT EMPLOYEES ONLY.
9. CONNECTIONS TO MAINS WILL BE MADE BY DEVELOPER AND UNDER THE CITY OF BANNING WATER DEPARTMENT SUPERVISION.
10. FIRE HYDRANTS SHALL BE JAMES-JONES J-4040 6" x 4" x 2½" (OR EQUAL), THE BODY SHALL BE BRONZE, IT WILL BE A 6-HOLE FLANGE. POSITIVE BREAK OFF RISER AND CHECK VALVE ASSEMBLY, PER STD. DWG. NO. W-18
11. ALL FIRE HYDRANTS SHALL HAVE GATE VALVE SHUTOFF LOCATIONS 1' OFF OF THE WATER MAIN AND MINIMUM OF 5' BETWEEN HYDRANT AND SHUTOFF VALVE.
12. ALL USES OF WATER DURING CONSTRUCTION WILL REQUIRE AN APPROVED BACK FLOW DEVICE
13. ALL WATER MAINS WILL BE INSTALLED IN THE STREET.
14. MAIN SIZE MINIMUM SHALL BE 8".
15. FIRE HYDRANTS SHALL BE MARKED BY FIRE HYDRANT SPOTTER ON PAVEMENT PER CITY STD. DWG. NO. W-18
16. LANDSCAPE METER LOCATIONS TO BE VERIFIED BY DEVELOPER AND ENGINEER PRIOR TO CONSTRUCTION.
17. SEE CORROSION ENGINEER'S PLAN FOR WATER MAIN CATHODIC PROTECTION WHERE REQUIRED, AS NOTED ON THESE PLANS.

NOTE FOR WATER TRENCH BACKFILL:

USE CITY STANDARD NO. W-30 AND W-31 FOR WATER TRENCH BACKFILL

ENGINEER'S NOTICE TO CONTRACTORS

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND OR OVERHEAD UTILITIES OR STRUCTURES SHOWN ON THESE PLANS ARE APPROXIMATE. THE ENGINEER ASSUMES NO LIABILITY AS TO THE EXACT LOCATION OF SAID LINES NOT FOR UTILITIES OR IRRIGATION LINES WHOSE LOCATION ARE NOT SHOWN. THE CONTRACTOR SHALL BE RESPONSIBLE FOR NOTIFYING ALL UTILITY AND IRRIGATION COMPANIES PRIOR TO WORK AND ACCURATELY IDENTIFY THESE LOCATIONS, WHETHER OR NOT SHOWN HEREON. AND IS RESPONSIBLE FOR ANY DAMAGE OR PROTECTION OF THESE LINES. PHASED UTILITY RELOCATIONS MAY BE NECESSARY AND SHALL BE THE CONTRACTOR'S RESPONSIBILITY OR CLOSELY COORDINATE HIS ACTIVITIES WITH THOSE OF ALL UTILITY COMPANIES. THE CONTRACTOR SHALL CALL IN A LOCATION REQUEST TO UNDERGROUND SERVICE ALERT (U.S.A.) PHONE 1-800-227-2600 TWO (2) WORKING DAYS PRIOR TO DIGGING. NO CONSTRUCTION PERMIT ISSUED BY PUBLIC WORKS DEPARTMENT SHALL BE VALID INVOLVING UNDERGROUND FACILITIES UNLESS THE APPLICANT HAS AN INQUIRY IDENTIFICATION NUMBER ISSUED BY U.S.A.

THE ESTIMATED QUANTITY FOR EACH SPECIFIC ITEM OF THE WORK DESIGNATED ON THE PLANS SHALL BE CONSIDERED AS APPROXIMATE ONLY AND NO GUARANTEE IS MADE THAT THE QUANTITIES WHICH CAN ONLY BE DETERMINED BY COMPUTATIONS, BASED ON THE DETAILS AND DIMENSIONS SHOWN ON THE PLANS. WILL EQUAL THE ESTIMATED QUANTITIES. THE ESTIMATE OF QUANTITIES IS PROVIDED BY THE ENGINEER ONLY FOR THE CONVENIENCE OF THE OWNER, THE CONTRACTOR SHALL MAKE HIS OWN DETERMINATION AND BE RESPONSIBLE FOR HIS OWN CONSTRUCTION QUANTITIES BEFORE SUBMITTING A BID. ANY ITEM OF WORK, OR PORTION THEREOF, REQUIRED BY THESE PLANS WHICH IS NOT SPECIFICALLY LISTED IN THE ESTIMATE OF QUANTITIES SHALL BE CONSIDERED AS INCLUDED IN THE OTHER ITEMS OF WORK.

CITY OF BANNING
STAFF REPORT

TO:	**CITY COUNCIL**
FROM:	**Douglas Schulze, City Manager**
PREPARED BY:	**Emery Papp, Senior Planner**
MEETING DATE:	**July 9, 2024**
SUBJECT:	**Butterfield Specific Plan Project ("Atwell") Annual Development Agreement Review for 2024**

RECOMMENDATION:

Receive and file the annual review of the Development Agreement for the Butterfield Specific Plan Project being developed by Tri Pointe Homes as the Atwell Master Planned Community, ensuring that the developer is proceeding in good faith and in accordance with Section 12.1 of the Development Agreement and Government Code Section 65865.1.

BACKGROUND:

Government Code Section 65865.1 requires that development agreements include provisions requiring periodic review at least every 12 months, at which time the applicant, or successor in interest thereto, must be required to demonstrate good faith compliance with the terms of the agreement. Section 65865.1 also states that if, as a result of such periodic review, the local agency finds and determines, on the basis of substantial evidence, that the applicant or successor in interest thereto has not complied in good faith with terms or conditions of the agreement, the local agency may terminate or modify the agreement.

The annual review requirements for the Butterfield Specific Plan Project are set forth in Section 12 of the Development Agreement for the Project. In accordance with Section 12 (pages 34-35) of the Development Agreement between the City of Banning ("City") and Pardee Homes ("Developer"), which was entered into on March 27, 2012, with a subsequent revised effective date of February 9, 2015, the City is conducting an annual review following the commencement of construction, to review the Developer's performance under the Development Agreement on or about each anniversary of the effective date of the Agreement. Try Pointe Homes is a successor in interest to Pardee Homes under the Development Agreement. The Developer has delivered the necessary information, reasonably requested by the City, regarding the Developer's performance under the Agreement. Staff has reviewed the information requested, performed a series of site inspections, conducted several meetings with the Developer, and determined that the Developer has, and continues to, demonstrate compliance with the Agreement. Based on the review, staff has also determined that the Developer is implementing the Development Agreement in good faith, and continues to comply with the provisions and regulations of the adopted Specific Plan, the certified Environmental Impact Report prepared for the Project, and the existing land use regulations applicable to the Project as set forth in the Banning Municipal Code and the Butterfield Specific Plan.

JUSTIFICATION:

A summary of the project activities, over the past year, is detailed in the Table 1 below:

TABLE 1: Atwell Development Activities:

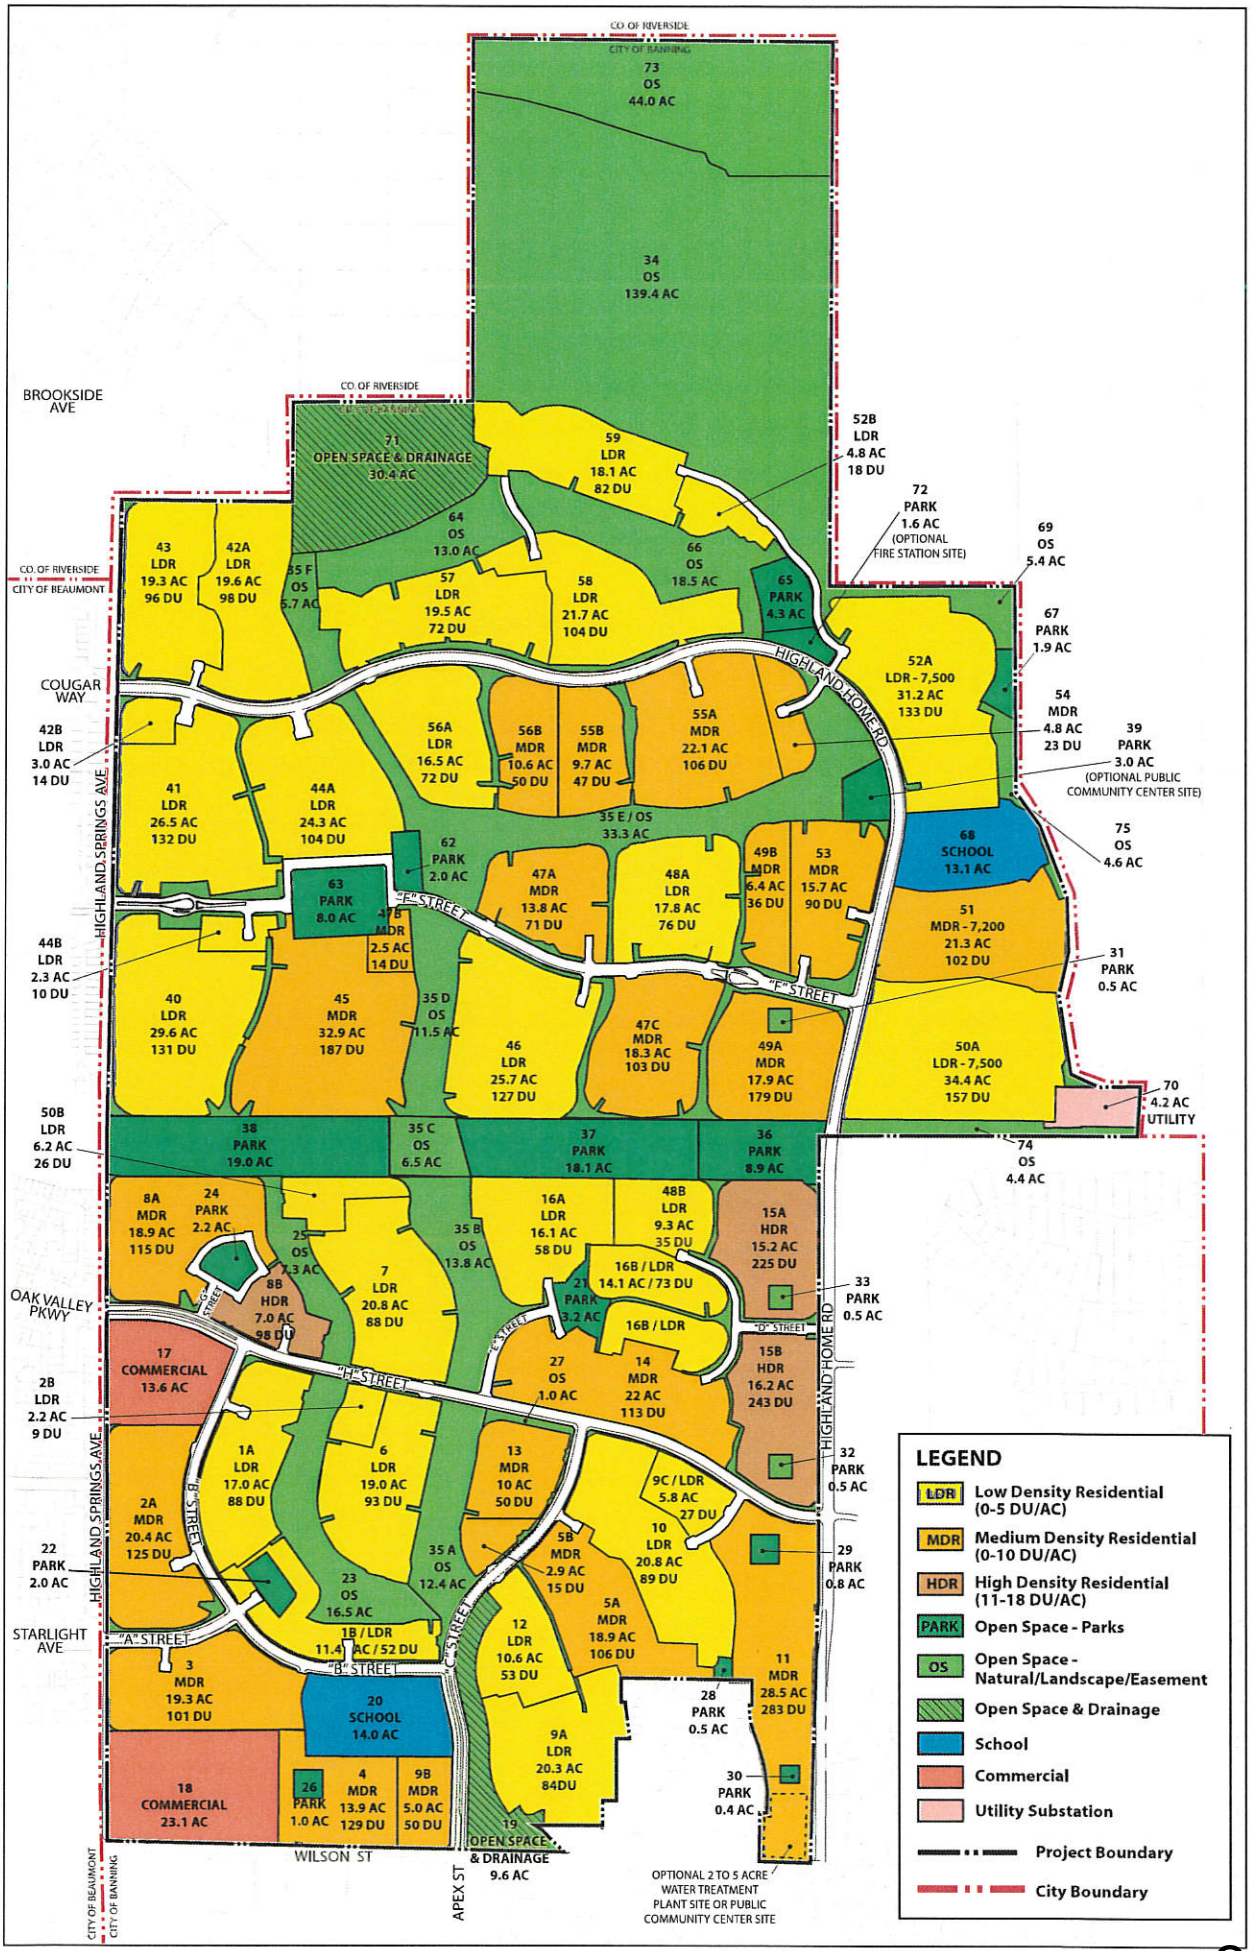
Section 1 - Definitions	Conforming/No Update
Section 2 – Exhibits	Conforming/No Update
Section 3 – Term	Conforming/No Update
Section 4 – Development of the Developer's Property	(4.7) A Development Impact Fee Update was completed in September 10, 2019.
Section 5 – Financing and the City's Obligations	Formation of the first, second and third Financing Districts have been completed with the bonds for all three series successfully sold. It is anticipated that the fourth Financing District being formed in the second/third quarter of 2024. A Development Impact Fee Agreement has been approved.
Section 6 – Time for Construction and Completion of Project	(6.1) The development is proceeding at an acceptable pace given current market conditions. (6.2) Permits: All residential permits have been pulled in Phase 1A, Phase 1B and Phase 2A-1. In the new development Phase 2B-1 approximately 51 permits have been pulled. Closings: There have been approximately 460 closings within in Phase 1A, approximately 355 closings within Phase 1B, and approximately 615 closings in Phase 2A-1. All of the homes in the in current phases are in various stages of construction. Sales continue to be strong but there is always the threat of rising interest rates, material costs and material lead times slowing the pace of sales. (6.2.3.) Infrastructure related plans are being developed, have been submitted or approved for all of various development phases. (6.2.4.) Developer has undergone a good faith effort to market the commercial retail planning area. All surrounding infrastructure is in place to accommodate construction should a commercial developer show interest in starting. All other provisions, of Section 6, is proceeding in good faith.

Section 7 – Development Impact Fees	(7.2.2) Development Impact Fee Studies are complete. Adjustments will be made at the 10-year review. (7.3.5.) Fee Impact Studies associated with reclaimed water facilities are complete. (7.5.1 – 7.5.3.) A TUMF Credit Agreement was executed by the City Council at the May 14, 2019 Meeting and work has been completed on Highland Springs Avenue between 8th Street/Wilson Street and Oak Valley Parkway/Meadowline Way.
Section 8 – Dedications and Conveyances of Property Interests	(8.1.1.) Plans have been submitted and are continuing to be submitted for review. Plans are being submitted and actively processed by the City for infrastructure improvements.
Section 9 – Processing of Requests and Applications: Other Government Permits	(9.2) A Deposit Reimbursement Agreement is executed between the Developer and City. (9.3) The City recently implemented a new planning checking software that has slowed the improvement plan turnaround times.
Section 10 – Amendment and Modification of Development Agreement	Conforming/ Settlement Agreement Passed updating Fee Waivers provisions.
Section 11 – Reservations of Authority	Conforming/No Update
Section 12 – Annual Review	Conforming/No Update
Section 13 – Default, Remedies & Termination	Conforming/No Update
Section 14 – Assignment	Conforming/No Update
Section 15 – Releases and Indemnities	Conforming/No Update
Section 16 – Effect of Agreement on Title	Conforming/No Update
Section 17 – City Officers and Employees: Non-Discrimination	Conforming/No Update
Section 18 – Mortgage Protection	Conforming/No Update
Section 19 – Miscellaneous	Conforming/No Update

Public Communication:
The Annual Review of the Development Agreement is a receive and file item and does not require a public hearing or public notice. At the time of this writing, no public comments have been received.

FISCAL IMPACT:
None. As required in Section 12 of the attached Development Agreement, the cost for the annual review is paid by the Developer.

ALTERNATIVES:
Receive and file the annual review of the Development Agreement for the Butterfield Specific Plan



Project.

Development Agreement Section/Provisions	Status
Section 1 - Definitions	Conforming/No Update
Section 2 – Exhibits	Conforming/No Update
Section 3 – Term	Conforming/No Update
Section 4 – Development of the Developer's Property	(4.7) A Development Impact Fee Update was completed in September 10, 2019.
Section 5 – Financing and the City's Obligations	Formation of the first, second and third Financing Districts have been completed with the bonds for all three series successfully sold. It is anticipated that the fourth Financing District being formed in the second/third quarter of 2024. A Development Impact Fee Agreement has been approved.
Section 6 – Time for Construction and Completion of Project	(6.1) The development is proceeding at an acceptable pace given current market conditions. (6.2) *Permits:* All residential permits have been pulled in Phase 1A, Phase 1B and Phase 2A-1. In the new development Phase 2B-1 approximately 51 permits have been pulled. *Closings:* There have been approximately 460 closings within in Phase 1A, approximately 355 closings within Phase 1B and approximately 615 closing in Phase 2A-1. All of the home sin the in current phases are in various stages of construction. Sales continue to be strong but there is always the threat of rising interest rates, material costs and material lead times slowing the pace of sales. (6.2.3.) Infrastructure related plans are being developed, have been submitted or approved for all of various development phases. (6.2.4.) Developer has undergone a good faith effort to market the commercial retail planning area. All surrounding infrastructure is in place to accommodate construction should a commercial developer show interest in starting. All other provisions, of Section 6, is proceeding in good faith.

Section 7 – Development Impact Fees	(7.2.2) Development Impact Fee Studies are complete. Adjustments will be made at the 10year review. (7.3.5.) Fee Impact Studies associated with reclaimed water facilities are complete. (7.5.1 – 7.5.3.) M 043

DEVELOPMENT AGREEMENT

between

THE CITY OF BANNING

("City")

and

PARDEE HOMES

A California Corporation

("Developer")

DEVELOPMENT AGREEMENT

THIS DEVELOPMENT AGREEMENT (this "Agreement") is entered into on March 27, 2012, between the CITY OF BANNING (the "City"), a municipal corporation, and PARDEE HOMES (the "Developer"), a California corporation, pursuant to Article 2.5 of Chapter 4 of Division 1 of Title 7, §§ 65864 through 65869.5 of the Government Code. The City and the Developer shall be referred to within this Agreement jointly as the "Parties" and individually as a "Party."

RECITALS:

A. Capitalized Terms. The capitalized terms used in these Recitals and throughout this Agreement shall have the meaning assigned to them in Section 1. Any capitalized terms not defined in Section 1 shall have the meaning otherwise assigned to them in this Agreement or apparent from the context in which they are used.

B. Development of the Developer's Property. Concurrent with the approval of this Agreement, the City has approved the Specific Plan, which contemplates low, medium and high density residential development, to a maximum total of 5, 387 dwelling units, 36 acres of commercial/retail development, schools, parks and supporting infrastructure on 1,543 acres, and a general plan amendment and a zone change and has certified a Final Environmental Impact Report, State Clearinghouse No. 2007091149, for the area described in Exhibit "A" (the "Developer's Property").

C. Legislation Authorizing Development Agreements. To strengthen the public planning process, encourage private participation in comprehensive planning and reduce the economic risk of development, the Legislature of the State of California adopted the Development Agreement Statute, authorizing the City to enter into an agreement with any person having a legal or equitable interest in real property providing for the development of such property and establishing certain development rights therein. The legislative findings and declarations underlying the Development Agreement Statute and the provisions governing contents of development agreements state, in Government Code §§ 65864(c) and 65865.2, that the lack of public facilities, including, but not limited to, streets, sewerage, transportation, drinking water, school, and utility facilities is a serious impediment to the development of new housing, and that applicants and local governments may include provisions in development agreements relating to applicant financing of necessary public facilities and subsequent reimbursement over time.

D. Intent of the Parties. The Developer and the City have determined that the Project is a development for which a development agreement is appropriate. The Parties desire to define the parameters within which the obligations of the Developer for infrastructure and public improvements and facilities will be met and to provide for the orderly development of the Developer's Property, assist in attaining the most effective utilization of resources within the City and otherwise achieve the goals of the Development Agreement Statute. In consideration of these benefits to the City and the public benefits of the development of the Developer's Property, the Developer will receive assurances that the City shall grant all permits and approvals required

for total development of the Developer's Property and will provide for the assistance called for in this Agreement in accordance with the terms of this Agreement.

E. Public Benefits of the Project. This Agreement provides assurances that the public benefits identified below in this Recital E will be achieved in accordance with the terms of this Agreement. The Project will provide local and regional public benefits to the City, including, without limitation:

1. Increased Tax Revenues. The development of the Developer's Property in accordance with the terms of this Agreement will result in increased real property and sales taxes and other revenues to the City.

2. Reduced Vehicle Miles Travelled. The Project will reduce vehicle trips by implementing a transportation demand management program that takes advantage of alternative modes of mass transit within the City.

3. Pedestrian Mobility. The Project encourages pedestrian mobility through the provision of walking paths, through signage guiding pedestrians to nearby destinations and through preservation of significant open space to create pleasant environments that will encourage walking.

4. Sustainable Design. The Developer will, to the extent reasonably feasible, include sustainable design for commercial and industrial uses and green building standards for residential construction.

5. Pedestrian Connection. The Project will include a series of public pedestrian trails throughout the Developer's Property.

6. Reduced Traffic Congestion. The Project will include improvements and contribute fees to improvements that will reduce congestion on local streets and the regional transportation network.

7. Public Schools. The Project will allow for the construction of elementary schools in both the Beaumont Unified School District and Banning Unified School District, which will benefit residents both within and outside the Project.

8. Natural Open Space. Over 56 acres of natural open space will be preserved in perpetuity.

9. Parks and Recreation. Park and recreation improvements include:

a. 58.5 acres of community and neighborhood parks

b. 8.0 acres devoted to private recreation centers.

c. 254 acres of public golf course or active open space amenity

d. 108.4 acres of other open space.

10. Financial Impact Mitigation. Based upon a study of financial impacts on the City, the Project will pay a Services Special Tax to alleviate negative financial impacts of the Project on the City.

F. Public Hearings: Findings. In accordance with the requirements of the California Environmental Quality Act (Public Resources Code § 21000, et seq. ("CEQA")), appropriate studies, analyses, reports and documents were prepared and considered by the Planning Commission and the City Council. The Planning Commission, after a public hearing on March 7, 2012, recommended, and the City Council, after making appropriate findings, certified, by Resolution No. 2012-24 adopted on March 27, 2012 a Final Environmental Impact Report for the Project, more specifically identified as the Final Environmental Impact Report for the Butterfield Specific Plan, State Clearinghouse No. 2007091149, as having been prepared in compliance with CEQA. On March 7, 2012, the Planning Commission, after giving notice pursuant to Government Code §§ 65090, 65091, 65092 and 65094, held a public hearing on the Developer's application for this Agreement. On March 27, 2012, the City Council, after providing the public notice required by law, held a public hearing to consider the Developer's application for this Agreement. The Planning Commission and the City Council have found on the basis of substantial evidence based on the entire administrative record, that this Agreement is consistent with all applicable plans, rules, regulations and official policies of the City.

G. Mutual Agreement. Based on the foregoing and subject to the terms and conditions set forth herein, Developer and City desire to enter into this Agreement.

NOW, THEREFORE, in consideration of the mutual promises and covenants herein contained, and having determined that the foregoing recitals are true and correct and should be, and hereby are, incorporated into this Agreement, the Parties agree as follows:

1. DEFINITIONS

The following words and phrases are used as defined terms throughout this Agreement. Each defined term shall have the meaning set forth below.

1.1 Acquisition Agreement. "Acquisition Agreement" shall have the meaning set forth in Section 5.1 below.

1.2 Anniversary Date. "Anniversary Date means the date of the anniversary of each year following the Effective Date established in Section 3.5.

1.3 Annual Review. "Annual Review" means the annual review of the Developer's performance of the Agreement in accordance with Section 12.1 of the Agreement and Government Code § 65865.1.

1.4 Applications. "Application(s)" means a complete application for the applicable land use approvals (such as a subdivision map, conditional use permit, etc.) meeting all of the current ordinances of the City provided that any additional or alternate requirements in those ordinances enacted after the Effective Date which affect the Project application shall apply only to the extent permitted by this Agreement.

1.5 Appraisal of Land Value. "Appraisal of Land Value" when referred to herein shall mean the determination by an experienced and independent MAI appraiser retained by City (Developer may veto any appraiser selected by City for good cause), in a written appraisal at fair market value based upon comparable sales of unimproved land, and serviced by the existing infrastructure, and with the development restrictions of the Specific Plan, and with the understanding that such value shall not exceed $80,000 per acre.

1.6 Assignment. "Assign" shall have the meaning set forth in § 14.1.1 below. All forms of use of the verb "assign" and the nouns "assignment" and "assignee" shall include all contexts of hypothecations, sales, conveyances, transfers, leases, and assignments.

1.7 Authorizing Ordinance. "Authorizing Ordinance" means Ordinance No. 1451 approving this Agreement, introduced on March 27, 2012 and adopted on April 10, 2012.

1.8 Building Permit. "Building Permit," with respect to any building or structure to be constructed on the Developer's Property, means a building permit for not less than the shell and core of such building or structure issued by the City's Division of Building and Safety.

1.9 CC&R's. "CC&R's" shall have the meaning set forth in Section 14.4 below.

1.10 Certificate of Compliance. "Certificate of Compliance" shall have the meaning set forth in Section 12.2 below.

1.11 Certificate of Occupancy. "Certificate of Occupancy," with respect to a particular building or other work of improvement, means the final certificate of occupancy issued by the City with respect to such building or other work of improvement.

1.12 CFD. "CFD" means a community facilities district for the Project allowed to be formed pursuant to the CFD Act by a Local Agency.

1.13 CFD Act. "CFD Act" means the Mello Roos Community Facilities Act of 1982 (Government Code § 53311 et seq.), as it may be amended from time to time, authorizing the imposition of special taxes to fund capital facilities and services.

1.14 City. "City" means the City of Banning, California.

1.15 City Council. The "City Council" means the governing body of the City.

1.16 City Development Agreement Ordinance. "City Development Agreement Ordinance" means Chapter 17.60 of the Zoning Ordinance which establishes a procedure for the consideration and approval of development agreements pursuant to the Development Agreement Statute.

1.17 City Manager. "City Manager" means the City Manager of City.

1.18 City Wide Traffic Improvements. "City Wide Traffic Improvements" means those traffic improvements identified in the Traffic Impact Mitigation Fee established in Article 7.

1.19 Claims or Litigation. "Claims or Litigation" means any challenge by adjacent owners or any other third parties (i) to the legality, validity or adequacy of the General Plan, Land Use Regulations, this Agreement, Development Approvals or other actions of the City pertaining to the Project, or (ii) seeking damages against the City as a consequence of the foregoing actions, for the taking or diminution in value of their property or for any other reason.

1.20 Dedicate or Dedication. "Dedicate" or "Dedication" means to offer the subject land to the City .

1.21 Default. "Default" refers to any material default, breach, or violation of a provision of this Development Agreement as defined in Section 13 below. "City Default" refers to a Default by the City, while "Developer Default" refers to a Default by the Developer.

1.22 Developed Property. "Developed Property" shall mean residential property for which a certificate of occupancy has been issued or a final inspection conducted.

1.23 Development Goals. "Development Goals" shall have the meaning set forth in Section 6.2 below.

1.24 Developer's Property. "Developer's Property" means the 1543 acres of land, more or less, described in Exhibit A in which Developer holds a legal or equitable interest and upon which the Project will be developed.

1.25 Development. "Development" means the improvement of the Developer's Property for purposes of effecting the structures, improvements and facilities composing the Project including, without limitation: grading, the construction of infrastructure and public facilities related to the Project, whether located within or outside the Developer's Property; the construction of structures and buildings; the installation of landscaping; and the operation, use and occupancy of, and the right to maintain, repair, or reconstruct, any private building, structure, improvement or facility after the construction and completion thereof, provided that such repair, or reconstruction takes place during the Term of this Agreement on parcels subject to this Agreement.

1.26 Development Agreement Statute. "Development Agreement Statute" means §§ 65864 through 65869.5 of the Government Code as it exists on the Effective Date.

1.27 Development Approvals. "Development Approvals" means all site-specific (meaning specifically applicable to the Developer's Property only and not generally applicable to some or all other properties within the City) plans, maps, permits, and entitlements to use of every kind and nature. Development Approvals includes, but is not limited to, specific plans, site plans, tentative and final subdivision maps, vesting tentative maps, variances, zoning designations, planned unit developments, conditional use permits, grading, building and other similar permits, the site-specific provisions of general plans, environmental assessments, including environmental impact reports, and any amendments or modifications to those plans,

maps, permits, assessments and entitlements. The term Development Approvals does not include rules, regulations, policies, and other enactments of general application within the City.

1.28 Development Impact Fees. "Development Impact Fees" means the monetary consideration, other than a tax or assessment, charged by the City in connection with mitigating the Project's specific impacts and the development of the public facilities related to the Development of the Project, including those fees, calculated on the basis of the number of residential units or square footage of non-residential development to be constructed, as set forth on Exhibit "D" attached hereto as well as those Development Impact Fees set forth in Exhibit B and being revised. Development Impact Fees do not include Processing Fees.

1.29 Development Plan. "Development Plan" means the Existing Development Approvals, Future Development Approvals and Existing Land Use Regulations.

1.30 Director. "Director" means the City's Director of Community Development or equivalent official.

1.31 Economically Distressed Year. "Economically Distressed Year" means any calendar year in which the number of building permits for single family dwelling units issued in Western Riverside County (includes all cities and unincorporated county territory) are less than 50% of the average number of building permits issued during the prior 25 years, based on the annual report of the California Construction Industry Research Board. For example, for the 25 year period from 1987 to 2011, inclusive, total permits issued were 235,455 and the annual average was 9418. In 2008, 2009, 2010 the total permits issued were 2794, 2717 and 3321, so all three years would have been declared "Economically Distressed" hereunder. If the number of building permits issued in any calendar year are not available from the California Construction Industry Research Board, then the City shall obtain them from any other reliable source measuring the same data over the period.

1.32 Effective Date. "Effective Date" means the date this Agreement becomes effective as set forth in Section 3.5.

1.33 Eligible Facitlities. "Eligible Facilities" means the Proposed Project Facilities and other public facilities, fees and contibutions for public facilities, as described in the Financing Plan.

1.34 Exaction. "Exaction" means Dedications, payment of Development Impact Fees and/or construction of public infrastructure by the Developer as part of the Development of the Project. The development will be subject to all development and/or in lieu fees currently in the process of being studied by the City as indentified in Section 7.22 so long as they are adopted prior to the issuance of building permits for specific portions of the development proposed herein. The amount of the fees shall be as required at the time of issuance of building permits.

1.35 Existing Development Approvals. "Existing Development Approvals" means only the Development Approvals which are listed on Exhibit "B."

1.36 Existing Land Use Regulations. "Existing Land Use Regulations" means those Land Use Regulations applicable to the Property in effect on the Effective Date.

1.37 Financing Plan. "Financing Plan" means Exhibit "H" attached hereto.

1.38 Force Majeure. "Force Majeure" shall have the meaning set forth in Section 19.2 below.

1.39 Future Development Approvals. "Future Development Approvals" means those Development Approvals applicable to the Developer's Property approved by the City after the Effective Date such as tentative tract maps, subdivision improvement agreements and other more detailed planning or engineering approvals.

1.40 General Plan. "General Plan" means the City's General Plan as it exists on the Effective Date, and as expressly amended by (i) General Plan Amendment 11-2501 approved by the City Council concurrently with this Agreement; and (ii) future amendments applicable to the Developer's Property, if permitted, by Article 11.

1.41 Goals and Policies for Financing. "Goals and Policies for Financing" or "Goals and Policies" means the City's goals and policies adopted in accordance with Section 5.2.1.

1.42 Golf Course/Active Open Space. "Golf Course/Active Open Space" means the area containing all of Planning Area 35 and Planning Area 39 as described in the Specific Plan and Sections 5.3 and 5.9.10 below.

1.43 Grading Permit. "Grading Permit" means a permit issued by the City's Division of Building and Safety which allows the excavation or filling, or any combination thereof, of earth.

1.44 Improvement Area. "Improvement Area" shall have the meaning set forth in Section 5.1 below.

1.45 Innocent Owner. "Innocent Owner" shall have the meaning set forth in Section 13.6 below.

1.46 LAFCO. "LAFCO" means the Riverside County Local Agency Formation Commission.

1.47 Land Use Regulations. "Land Use Regulations" means those ordinances, laws, statutes, rules, regulations, initiatives, policies, requirements, guidelines, constraints, codes or other actions of the City which affect, govern, or apply to the Developer's Property or the implementation of the Development Plan. Land Use Regulations include the ordinances and regulations adopted by the City which govern permitted uses of land, density and intensity of use and the design of buildings, applicable to the Property, including, but not limited to, the General Plan, the Specific Plan, zoning ordinances, development moratoria, implementing growth management and phased development programs, ordinances establishing development exactions, subdivision and park codes, any other similar or related codes and building and

improvements standards, mitigation measures required in order to lessen or compensate for the adverse impacts of a project on the environment and other public interests and concerns or similar matters. The term Land Use Regulations does not include, however, regulations relating to the conduct of business, professions, and occupations generally; taxes and assessments; regulations for the control and abatement of nuisances; building codes; encroachment and other permits and the conveyances of rights and interests which provide for the use of or entry upon public property; any exercise of the power of eminent domain; or similar matters.

1.48 Legal or Equitable Interest. "Legal or Equitable Interest" means (i) an option or purchase agreement or (ii) fee title evidenced by appropriate title insurance issued in favor of the Developer.

1.49 LMD. "LMD" means the Landscape and Maintenance District established pursuant to Streets and Highways Code § 22500 et seq. to fund parks, parkways, City rights of way landscaping and common areas.

1.50 Local Agency. "Local Agency" means any public agency authorized to levy, create or issue any form of land secured financing over all or any part of the Project, including, but not limited to, the City.

1.51 Lot. "Lot" means any of the parcels legally created within the Project as a result of any approved final subdivision, parcel or tract map, pursuant to the Subdivision Map Act or recordation of a condominium plan pursuant to Civil Code § 1352 .

1.52 Master Tract Map. "Master Tract Map" (or "A Map") means a large scale tract map covering one or more complete Planning Areas which will include all infrastructure necessary to develop the tract and a phasing plan as to the development of the infrastructure and the subsidiary subdivisions within the tract. The Master Tract Map is a subdivision map within the meaning of the Subdivision Map Act and shall meet the requirements of the Act and of this Agreement. The Master Tract Map may also be a financing map for purpose of financing the development of the Project or the conveyance of large lots and may not require the actual construction of improvements.

1.53 Mortgage. "Mortgage" means a mortgage, deed of trust, sale and leaseback arrangement or other transaction in which all, or any portion of, or any interest in, the Developer's Property is pledged as security.

1.54 Mortgagee. "Mortgagee" refers to the holder of a beneficial interest under a Mortgage.

1.55 Mortgagee Successor. "Mortgagee Successor" means a Mortgagee or any third party who acquires fee title or any rights or interest in, or with respect to, the Developer's Property, or any portion thereof, through foreclosure, trustee's sale, deed in lieu of foreclosure, lease termination, or otherwise from, or through, a Mortgagee. If a Mortgagee acquires fee title or any right or interest in, or with respect to, the Developer's Property, or any portion thereof, through foreclosure, trustee's sale or by deed in lieu of foreclosure and such Mortgagee subsequently conveys fee title to such portion of the Developer's Property to a third party, then such third party shall be deemed a Mortgagee Successor.

1.56 Municipal Code. "Municipal Code" means the City's Municipal Code as it existed on the Effective Date and as it may be amended from time to time consistent with the terms of this Agreement.

1.57 Non-Defaulting Party. "Non-Defaulting Party" shall have the meaning set forth in Section 13.1 below.

1.58 Owner. "Owner" means Pardee Homes and any successors during the period of time that each such person or entity owns fee title to any portion of the Developer's Property prior to the development of such portion of the developer's Property and subject to the terms of this Agreement.

1.59 Park fees. "Park Fees" means Development Impact Fees levied by the City for Open Space and Park Development pursuant to Chapter 15.68 of the Municipal Code.

1.60 Phase. "Phase" shall have the meaning set forth in Section 6.2 below.

1.61 Phasing Plans. "Phasing Plans" shall mean the detailed plans for development of the Proposed Project Facilities and other infrastructure and for the Project which are developed pursuant to Section 6.5 as a part of processing the Subdivision Maps.

1.62 Planning Area. "Planning Area" means each of the 75 planning areas described in the Specific Plan, and shown on Exhibit "A."

1.63 Planning Commission. "Planning Commission" means the City's Planning Commission.

1.64 Pre-Qualified Buyer. "Pre-Qualified Buyer" means a publicly traded builder or developer or a privately held merchant builder with a minimum net financial worth of Five Million Dollars ($5,000,000) who has constructed at least 75 homes in California during the preceding five year period.

1.65 Property Owner's Association or POA. "Property Owner's Association" or "POA" means one or more association formed among the owners of real estate located within the Property (as the same may be subdivided from time to time), including, but not limited to, one or more associations of homeowners and/or other associations of owners of industrial, commercial, educational and retail property.

1.66 Processing Fees. "Processing Fees" means (i) the City's normal fees for processing, environmental assessment/review, tentative tracts/parcel map review, plan checking, site review, site approval, administrative review, building permit (plumbing, mechanical, electrical, building), inspection and similar fees imposed to recover the City's costs associated with processing, review and inspection of applications, plans, specifications, etc., and (ii) fees and charges levied by any other public agency, utility, district or joint powers authority, whether or not City is a member of such body or such fees are collected by the City, and whether or not such fees are used for maintenance or capital outlay purposes.

1.67 Project. "Project" means the Development of the Developer's Property, pursuant to this Agreement and the Existing Land Use Regulations, as depicted on Exhibit "B" attached hereto.

1.68 Proposed Project Facilities. "Proposed Project Facilities" means those improvements set forth on Exhibit "F" attached hereto or otherwise included in conditions of approval of the maps.

1.69 Reimburse or Reimbursement. "Reimburse" or "Reimbursement" means the provision by the City of cash or credit in return for land, goods or services provided by Pardee Homes.

1.70 Reservations of Authority. "Reservation of Authority" shall have the meaning set forth in Article 11 below.

1.71 Services Special Tax. "Services Special Tax" shall mean the special tax authorized to be levied by the CFD(s) established over the Developer's Property to alleviate the negative fiscal impact of the Project on City services as established by the Fiscal Impact Analysis ("FIA") and as further described in Section 5.3 below.

1.72 Specific Plan. "Specific Plan" means the Butterfield Specific Plan, prepared by RBF Consulting and approved by the City Council by Ordinance No. 1450 introduced on March 27, 2012, adopted on April 10, 2012.

1.73 Subdivision Map. "Subdivision Map" (or "B Map") means the subsidiary subdivision maps for the development of any Tract which shall be consistent with the conditions of the Master Tract Map and shall contain its own phasing plan for the installation of the infrastructure and other improvements within the subdivision. All subdivision maps shall meet the requirements of the Subdivision Map Act including § 66473.7 (See 65867.5).

1.74 Subdivision Map Act. "Subdivision Map Act" means Government Code § 66412 et seq. as implemented by Title 16 of the Municipal Code.

1.75 Taxes. "Taxes" means general or special taxes, including but not limited to ad valorem property taxes, sales taxes, transient occupancy taxes, utility taxes or business taxes of general applicability citywide which do not burden the Developer's Property disproportionately to similar types of development in the City and which are not imposed as a condition of approval of a development project. Taxes do not include Development Impact Fees, Processing Fees or Traffic Control Facility Fees.

1.76 Ten or 10th Year Anniversary Review. "Ten Year Anniversary Review" means the review performed upon each 10th anniversary of the Effective Date as provided in Section 6.6.

1.77 Term. "Term" means that period of time during which this Agreement shall be in effect and bind the Parties, as defined in Article 6.7 below.

1.78 Traffic Control Facility Fee. "Traffic Control Facility Fee" means the fee set forth in Exhibit "B" attached hereto.

1.79 Transfer. "Transfer" shall have the meaning set forth in Article 14 below.

1.80 Trigger Percentages. "Trigger Percentages" shall have the meaning set forth in Section 14.1.1 below.

1.81 TUMF. "TUMF" means the Transportation Uniform Mitigation Fee promulgated by the Western Riverside Council of Governments and implemented by Chapter 15.76 of the Municipal Code.

1.82 Zoning Code. "Zoning Code" means Title 17 of the Municipal Code as it existed on the Effective Date except (i) as amended by any zone change relating to the Developer's Property approved concurrently with the approval of this Agreement, including Zone Change No. 11-3501, and (ii) as the same may be further amended from time to time consistent with this Agreement.

2. EXHIBITS.

The following are the Exhibits to this Agreement:

Exhibit "A": Map and Legal Description of the Developer's Property

Exhibit "B": Existing Development Approvals/Fee Studies

Exhibit "C": Estoppel Certificate

Exhibit "D": Development Impact Fees

Exhibit "E": Additional Agreements Concerning Development

Exhibit "F": Proposed Project Facilities

Exhibit "G": Highland Springs Avenue Improvements

Exhibit "H": Butterfield Project Financing Plan

3. TERM.

3.1 Term. The term of this Development Agreement (the "Term") shall commence on the Effective Date and shall continue for a period of forty (40) years, subject to review, as called for in Section 6.2 below, to determine whether the Development Goals have been met, and reduction in the Term of five (5) years for each time the Development Goals of a Phase are not met and extensions for Economic Distress, as provided in Sections 6.6.5 and 6.7 below.

3.2 Termination Upon Completion of Construction. This Agreement shall terminate with respect to any Lot, and such Lot shall be released and no longer subject to this Agreement, without the execution or recordation of any further document, when a certificate of occupancy has been issued for the last building on the Lot or, if no certificate is issued, when the final inspection for the last building on the Lot has taken place.

3.3 Termination for Default. This Agreement may be terminated due to the occurrence of any default in accordance with the procedures in Article 13.

3.4 Extension of the Term: The Term shall be extended by one (1) year for each Economically Distressed Year occurring during any Phase up to a maximum of three (3) years for any Phase.

3.5 Effective Date. This Agreement shall become effective upon the date thirty (30) days after the adoption of the Authorizing Ordinance if no Claim or Litigation have been filed which would prevent the Authorizing Ordinance from taking effect. If such a Claim or Litigation has been filed, then the Effective Date shall be the date that the Claim or Litigation has been successfully resolved in the City's favor, and the time for any further judicial review has run, so that the Authorizing Ordinance shall be effective. The City shall give Developer notice as to the date established as the Effective Date. The Effective Date is not otherwise tolled for any other Force Majeure as described in Section 19.2.

4. DEVELOPMENT OF THE DEVELOPER'S PROPERTY.

4.1 Right to Develop. During the Term, the Developer shall have a vested right to develop the Developer's Property (subject to Article 11 below) to the full extent permitted by the Development Plan and this Agreement. Except as provided within this Agreement, the Development Plan shall exclusively control the development of the Developer's Property (including the uses of the Developer's Property, the density or intensity of use, the maximum height and size of proposed buildings, the provisions for reservation or dedication of land for public purposes and the design, improvement and construction standards and specifications applicable to the Project). The maximum number of residential units authorized to be constructed hereunder and the approximate acreage of commercial development, without regard to any density bonus or incentive or concession for child care pursuant to Government Code §§ 65915 through 65918 or other similar legislation or regulation, is 5,387 units and approximately 36-acres of commercial development. In furtherance of the foregoing, the Developer retains the right to apportion the uses, intensities and densities, between itself and any subsequent Owners, upon the sale, transfer, or assignment of any portion of the Property, so long as such apportionment is consistent with the Existing Land Use Regulations and this Agreement.

4.2 Right To Future Approvals. Subject to the City's exercise of its police power authority as specified in Article 11 below, the Developer shall have a vested right: (i) to receive from the City all future Development approvals for the Developer's Property that are consistent with, and implement, the Existing Land Use Regulations and this Agreement; (ii) not to have such approvals be conditioned or delayed for reasons which are inconsistent with the Existing Land Use Regulations or this Agreement; and (iii) to Develop the Developer's Property in a manner consistent with such approvals in accordance with the Existing Land Use

Regulations and this Agreement. All future Development Approvals for the Developer's Property, including without limitation General Plan amendments, zone changes, or parcel maps or tract maps, shall upon approval by the City, be vested in the same manner as provided in this Agreement for the Existing Land Use Regulations, for the term of this Agreement.

4.3 Existing Development Approvals. Only those items specifically set forth on Exhibit "B" hereto are deemed Existing Development Approvals for purposes of this Agreement. Any approvals not included within Exhibit "B" shall not apply to the Project with the exception of those reservations set forth in Article 11 below.

4.4 Specific Plan. Land use and Development of the Property shall be governed by the Specific Plan and this Agreement. Notwithstanding any other provision of this Agreement, the Developer shall have the right, but not the obligation, to Develop the Developer's Property for the uses specified in the Specific Plan at the locations specified in the Specific Plan.

4.5 Priority Of Specific Plan. The City has determined that the Specific Plan is consistent with the General Plan and the Zoning Code. As such, the Specific Plan shall be the primary document governing the use and Development of the Developer's Property and, in the event of a conflict, shall prevail over any other of the Existing Land Use Regulations except for this Agreement, which prevails over the Specific Plan.

4.6 Later Enacted Measures. This Agreement is a legally binding contract which will supersede any initiative, measure, moratorium, statute, ordinance, or other limitation enacted after the Effective Date, except as provided in Article 11. Any such enactment which affects, restricts, impairs, delays, conditions, or otherwise impacts the implementation of the Development Plan (including the issuance of all necessary Future Project Approvals or permits for the Project) in any way contrary to the terms and intent of this Agreement shall not apply to the Project unless otherwise provided by State law.

4.7 Impact Fee Studies. As provided in Section 7.2, studies for certain Development Impact Fees, listed in Exhibit "D," will be performed after the Effective Date of this Agreement and shall become a part of the Existing Development Approvals. Additionally, Development Impact Fees are subject to review and adjustment as a part of the 10 Year Anniversary Reviews, in accordance with Section 6.6. The cost of performing the studies may be included in the fees.

5. FINANCING AND THE CITY'S OBLIGATIONS.

5.1 Formation of CFD(s) and LMDs. Subject to the provisions of this Article 5, some or all of the Eligible Facilities shall be funded through the City's formation of one or more CFDs and the levy of a special tax of the CFD(s) (the "Facilities Special Tax") and issuance of bonds secured by the Facilities Special Tax (the "Bonds") in accordance with the Financing Plan set forth in Exhibit H. Such CFD(s) shall, pursuant to Section 5.3, also be authorized to finance certain City public services costs (incurred as a result of Development of the Developer's Property) through the levy of a special tax, in the not to exceed amount set forth in the Financing Plan, on each residential unit located within the boundaries of such CFD(s) (the

"Services Special Tax"). Additionally, landscape maintenance districts ("LMDs") may be formed under Section 5.6.

5.1.1. Procedures for Formation. The City and the Developer shall cooperate in good faith to form one or more (i) CFDs and/or designate improvement areas therein (the "Improvement Areas"), (ii) LMDs and designate improvement areas therein (also "Improvement Areas"), and (iii) CFDs for the Special Services Tax (collectively referred to herein as the "Financing Districts"), which are consistent with the Financing Plan and which in the aggregate will encompass and encumber the Developer's Property. Final terms and conditions regarding the formation of the Financing Districts, their boundaries, Improvement Area boundaries, the rate and method of apportionment of the Services Special Taxes and Facilities Special Taxes to be levied in any CFD, LMD and/or Improvement Area (including any tax zones therein), any acquisition or construction agreements related thereto, and the terms of one or more series of Bonds to be issued in conjunction therewith shall be determined jointly by City and the Developer in accordance with the Financing Plan and the City's Goals and Polices for Financing . In conjunction with the formation of any Financing District, the Developer and the City shall cooperate in good faith to negotiate and finalize any acquisition and funding agreement prior to the formation of the first Financing District addressing the terms of construction, acquisition and financing of any of the Eligible Facilities to be funded by the Financing District (such agreement to be referred to herein as the "Acquisition Agreement"). Developer shall cooperate in the establishment of the levy over Developer's Property and not exercise any rights of protest.

5.1.2. Timing of Formation. Developer shall prepare all studies and submit all documents necessary to form the Financing Districts within one year after the adoption of City's Goals and Policies for Financing. After Developer has initiated formation of the Financing Districts, City shall form the Financing Districts consistent with the City's adopted Goals and Policies for Financing and State Law. City shall complete formation proceedings within 180 days after Developer makes the necessary submission. The Developer shall indemnify the City and hold it harmless against Claims or Litigation brought in connection with the formation of the Financing Districts.

5.1.3. Failure to Form Financing Districts. If any of the contemplated Financing Districts are not formed, or formed but not in accordance with the terms of this Agreement, through the failure of one Party to perform its obligations pursuant to Section 5.1, the other Party shall have the right, but not the obligation, to terminate this Agreement upon providing 30 days written notice to the Party which has failed to perform prior to the actual termination date.

5.2 Adoption of Goals and Policies for Financing. Before the Developer undertakes development of any units, the City shall retain a financial advisor and prepare a City-wide policy for undertaking land based CFD and assessment financing. The draft policy will be reviewed with the Developer and the City shall in good faith consider any comments made by the Developer on the draft policy. The goals and policies for Financing shall be adopted within 180 days after the Effective Date and shall be consistent with Exhibit H, including the Financing Parameters described therein. The goals and policies shall be adopted by Council by resolution and thereafter be the Goals and Policies for Financing. The City may amend the Goals and

Polices for Financing from time to time, and will be a part of the Existing Land Use Regulations hereunder, but such amendment shall not apply to the Development unless they are consented to by Developer.

5.3 Services Special Tax. The final Fiscal Impact Analysis prepared by the City's consultant, Willdan Financial Services, dated September 16, 2011, (the "FIA") demonstrates an overall negative fiscal impact on certain City public service costs incurred as a result of Development of the Developer's Property, including without limitation, the City's costs for police and fire services. The FIA demonstrates that such negative fiscal impact can fully be mitigated by an annual Services Special Tax, implemented as required by this Section 5.3 and the Financing Plan set forth in Exhibit "H" attached hereto. The annual services Special Tax shall not exceed $ 115 per dwelling unit of greater than 1820 square feet of habitable area and $92 per dwelling unit of 1820 or less square feet of habitable area in fiscal year 2013-14 and shall increase each fiscal year thereafter by 3%. The Services Special Tax may be levied in perpetuity and shall only be levied by the CFD(s) formed pursuant to Section 5.1 on residential parcels classified as Developed Property, but Developer shall cooperate in the establishment of the levy over Developer's Property and not exercise any rights of protest.

5.4 Planning Area 19, 35, 39 and 71 Drainage Facilities. In the event that the Developer, in its sole and absolute discretion, determines that the Golf Course is financially infeasible, the flood control improvements within Planning Areas 35 and 39 shall be considered Proposed Project Facilities and may be funded through the CFD(s). If this occurs, then portions of the land within Planning Areas 35 and 39 will be dedicated as public open space and the remaining portions dedicated to flood control appurtenances, to be transferred to the City or the Riverside County Flood Control District upon completion of the flood control facilities on such site and shall be improved to the Master Plan Standards of District. Plans for developing the necessary improvements shall be developed as a part of the Phasing Plans pursuant to Section 6.5, but improvements may not be required until the City Engineer determines that development will (i) intrude into the flood plan or (ii) cause the alteration of Smith Creek. The City Engineer may approve temporary improvements until the scale of the portion of the Project completed requires permanent structures. Upon transfer of the portions of the Planning Areas relating to the flood control facilities to the City or District, if the CFD(s) are formed or, as soon thereafter as the CFD(s) are formed, the City shall pay the agreed upon construction costs to the Developer from available CFD Proceeds in accordance with the Financing Plan. (Also see Sections 8.1.3. and 8.2.)

5.5 Reimbursement Agreements. If, and to the extent that, the Developer constructs or installs any infrastructure and/or facilities that have a capacity or size in excess of that required to serve the Project or to mitigate its impacts, the City shall reimburse the Developer for all costs and expenses incurred by the Developer in constructing such improvements for that portion of the Dedications, public facilities and/or infrastructure that the City, pursuant to this Agreement, may require pursuant to the Existing Land Use Regulations. The City further shall adopt ordinances, including but not limited to those authorized by Government Code § 66485 et seq., as may be required in order to impose a reimbursement obligation on other properties which may be served or benefited by the oversized infrastructure or facilities. The terms of the Reimbursement Agreements shall otherwise be consistent with the City's forms generally used with all other development projects of over 200 units. Such

reimbursement shall be paid to the Developer at the earliest opportunity out, and upon collection, of available fees from benefited developments so long as consistent with City's other contractual obligations. Repayment shall not extend beyond the Term of this Agreement.

5.6 Landscape Maintenance Districts. The City shall take, and Developer shall support, all steps necessary to establish LMD(s) or other maintenance districts, to fund maintenance of City parks, parkways, City rights of way landscaping, and common areas as provided in Section 5.1. The Developer shall make a deposit to pay the cost for review and approval of all agreements, studies, analysis and actions necessary for the establishment of the LMD(s).

5.7 Reimbursement for Pre-Approval Costs. The City shall provide fee credits to the applicable DIFs, as set forth below, for those residential units for which Commencement of Construction occurs by the twelfth anniversary of the Effective Date, but not more than for the first 1200 units. "Commencement of Construction" as used herein shall have the same meaning as under Section 6.3. The units eligible for fee credits for reimbursement shall be those of the 1200 which are not eligible for the incentive provided for in Section 6.8. If the incentive is taken in accordance with Section 6.8, then the amount of the credit for each unit for each fee shall be determined by taking the amount of cost to be reimbursed and dividing it by 1200 minus the number of units eligible for the incentive. As an example, if the total amount of the cost to be reimbursed is $227,500 and the number of units eligible for the incentive is 400, then the amount of the credit for each unit after the first 400 within the 12 years following the Effective Date will be $227,500/(1200-400) = $227,500/800 = $284 rounded to the nearest dollar. These fee reimbursements may be included in the subsequent fee studies performed pursuant to Section 7.2.2. [The per unit figure shown below assumes the credit is taken over 1200 units.]

5.7.1.1 A fee credit against updated Sewer Sanitary Fee and Recycled Water Fee of $227,500 or $189.60 per unit for the Corollo Study related to the sewer and recycled water master plans.

5.7.1.2 A fee credit against the updated Domestic Water Fee of $1,115,000 or $929.17 per unit for the consultant time related to the preparation of the City's 2010 Urban Water Management Plan.

5.7.1.3 A fee credit against the proposed revised Traffic Control Facility Fee of $105,000 or $875 per unit for the consultant time related to the preparation of the Traffic Impact Analysis and related traffic fee prepared documents.

5.7.1.4 A fee credit against the proposed revised Traffic Control Facility Fee of $45,000 or $375 per unit for the development of Citywide fees related to the Traffic Impact Fees study or other fee studies required as a result of entitlement activities.

5.7.1.5 A fee credit against the proposed revised Traffic Control Facility Fee or other appropriate fee of $550,000 or $462.50 per unit for the consultant time and plan preparation for required studies related to pre-project improvements to Highland Springs near the I-10 freeway.

5.7.1.6 A fee credit against the General Plan Fee of $187,500 or $156 per unit for the General Plan Traffic Circulation Element Amendment preparation.

5.8 Obligations of Developer Respecting Financing; No Speculation. Except as specifically provided herein, it is expressly understood that the Developer is fully responsible for the cost of the Project and obtaining any necessary construction or long term financing therefore. The Developer's Property shall be used solely to support the development of the Project and may not be pledged as security to support financing for any other purpose, in accordance with Article 18.

6. TIME FOR CONSTRUCTION AND COMPLETION OF PROJECT.

6.1 Timing of Development. The Parties acknowledge that the substantial public benefits to be provided by the Developer to the City pursuant to this Agreement are in consideration for, and in reliance upon, assurances that the City will permit Development of the Developer's Property in accordance with the terms of this Agreement. Accordingly, the City shall not attempt to restrict or limit the Development of the Developer's Property in any manner that would conflict with the provisions of this Agreement. The City acknowledges that the Developer cannot at this time predict the timing or rate at which the Developer's Property will be Developed. The timing and rate of Development depend on numerous factors such as market demand, interest rates, absorption, completion schedules and other factors, which are not within the control of the developer or the City. In Pardee Construction Co. v. City of Camarillo (1984) 37 Cal.3d 465, the California Supreme Court held that a construction company was not exempt from a city's growth control ordinance notwithstanding that the construction company and the city had entered into a consent judgment (tantamount to a contract under California law) establishing the company's vested rights to develop its property in accordance with the zoning. The California Supreme Court reached this result on the basis that the consent judgment failed to address the timing of development. It is the intent of the Parties to avoid the result of the Pardee case by acknowledging and providing in this Agreement that the Developer shall have the vested right to Develop the Developer's Property in such order and at such rate and at such time as the Developer deems appropriate, but in accordance with the Development Goals and the phasing plans developed in accordance with Section 6.5, and in accordance with other terms hereof or in the Development Approvals related to project phasing and timing. In addition to, and not in limitation of, the foregoing, but except as set forth in the following sentence, it is the intent of the Parties that no City moratorium or other similar limitation relating to the rate or timing of the Development of the Developer's Property or any portion thereof, whether adopted by initiative, referendum or otherwise, shall apply to the Developer's Property to the extent that such moratorium, referendum or other similar limitation is in conflict with this Agreement. Notwithstanding the foregoing, the Developer acknowledges that nothing herein is intended or shall be construed as (i) overriding any provision of the Existing Land Use Regulations to the phasing of development of the Project; or (ii) restricting the City from exercising the powers described in Section 11 of this Agreement to regulate development of the Property. Nothing in this Section 6.1 is intended to excuse or release the Developer from any obligation set forth in this Agreement which is required to be performed on or before a specified calendar date or event without regard to whether or not one or more Owners proceeds with any portion of the Project. The City acknowledges that the Project Phasing set forth in the Specific Plan does not require

that the Project be Developed in any specific order but, instead, are illustrative of how the Project may be Developed. The Project Phasing instead is controlled by this Agreement.

6.2 Development Goals. Notwithstanding the provisions of Section 6.1, the Developer must achieve certain goals and objectives in terms of Project development in order to keep the Agreement in place for the full term contemplated in Section 3.1. The development of the Project will be reviewed at each Ten Year Anniversary Review. The Development Goals are as follows:

Phase I (10th Anniversary)	▪ Development will begin near the corner of Highland Springs and Wilson unless otherwise agreed ▪ 1,200 Residential Units to be constructed ▪ Commercial retail development per 6.2.4 ▪ Outlet for Smith Creek and other improvements in Section 6.2.3.
Phase II (20th Anniversary	▪ 1,600 residential units to be constructed
Phase III (30th Anniversary)	▪ 1,400 residential units to be constructed
Phase IV (40th Anniversary)	▪ 1,187 residential units to be constructed

6.2.1. Cumulative Measure of Units. The Development Goals for each Phase shall be cumulative, e.g., if the Developer has constructed 2000 Residential Units in Phase I and 1000 Residential Units in Phase II, then the Developer will have met the Development Goal for Phase II even though less than 1500 Residential Units were constructed during Phase II.

6.2.2. More Detailed Phasing Plans Developed. Within each Phase, as defined above, more detailed phasing plans for each subdivision shall be developed in accordance with Section 6.5, and are subject to the City's review and approval as conditions of approval of the Tract or Subdivision Map and, as approved, shall become a part of the Existing Approvals.

6.2.3. Additional Phase I Development. In addition to the residential unit Development Goals, Phase I shall also include: (i) commercial development as specified in Section 6.2.4, (ii) the outlet for the Smith Creek flood control improvements at Wilson, (iii) the preparation and dedication of the Recreation/Emergency Center site described in Section 8.1.4, (iv) the satellite water treatment plant described in Section 8.3, (v) the water tanks described in Section 8.5; and (vi) such other Proposed Project Facilities as required by the Specific Plan and the Phasing Plans approved pursuant to Section 6.5. Notwithstanding the specification of timing as provided herein, with the approval of the City Manager, any public improvement required herein may be deferred for good cause.

6.2.4. Commercial Development. A minimum 23-acre retail-commercial site at the corner of Highland Springs and Wilson (Planning Area 18) will be prepared as a part of Phase I, and concurrently with the development undertaken pursuant to Section 6.8. Site preparation

shall require the grading of the Site, construction of surrounding streets, and bringing all necessary utilities and infrastructure for development. Developer shall also demonstrate a good faith effort undertaken over at least a five (5) year period to market the site for sale or lease to a suitable user. Additionally, Developer shall maintain the potential to expand the site to as much as 88 acres to permit a larger commercial development, provided that such expanded project obtains any necessary entitlements. Developer shall advise City within five (5) years of the Effective Date as to what interest there might be in the expanded project and the parties will mutually agree as to the scope of the project. The timely preparation and attempts to market this site is required for completion of Phase I and is subject to the same treatment as the residential units (i.e. phasing period can be prolonged for economic distress and the Term of Agreement can be shortened pursuant to Section 6.7). The goal of the City is to locate a significant sales tax generating "big box user" as the major tenant of the project. Accordingly, City retains the right to approve the major tenant in the project (tenants over 75,000 sq. ft), in accordance with the provisions in Article 14 as a transferee by lease or sale.

6.2.5. Extensions of Phases. The length of each Phase for the purposes of this Section 6.2 shall be extended by one (1) year for each Economically Distressed Year occurring during the Phase, up to a maximum of three (3) years as provided in Section 6.6.5.

6.3 Development Goals Satisfied By Commencement of Construction. The Development Goals for residential units specified above are satisfied if construction has commenced. "Commencement of Construction" of a residential unit means that building plans have been approved, that a building permit has been issued and that construction has commenced on the unit. The unit shall not be counted if the building permit expires without completion of the unit.

6.4 Public Improvements. The Parties understand and agree that the Specific Plan identifies the public infrastructure and though it contains phasing concepts, it does not specify precisely the phasing of the construction of public infrastructure. The development phasing will be consistent with the Specific Plan and this Agreement. The City desires that required public infrastructure generally be constructed in the early portion of the applicable phase of the development cycle subject to the guidelines specified below. In consideration of the foregoing, notwithstanding any provision herein to the contrary, the City shall retain the right to condition any Future Approvals to require Developer to dedicate necessary land, pay the development fees specified in Article 7, and/or to construct the required public infrastructure ("Exactions"), at such time as City shall determine in accordance with the process in Section 6.5 and subject to the following conditions:

A. The dedication, payment or construction must be to alleviate an impact caused by the Project or be of benefit to the Project; and

B. The timing of the Exaction should be reasonably related to the phasing of the development of the Project and said public improvements shall be phased to be commensurate with the logical progression of the Project development as well as the reasonable needs of the public and the improvements shall be completed based upon the needs of the general public existing from time to time.

When the Developer is required by this Agreement and/or the Development Plan to construct any public improvements which will be dedicated to the City or any other public agency, upon completion, and if required by applicable laws to do so, the Developer shall perform such work in the same manner and subject to the same construction standards as would be applicable to the City or such other public agency should it have undertaken such construction work. The Developer shall pay prevailing wages as required by law.

6.5 Development of Phasing Plans During Subdivision Map Approvals. The phasing and timing requirements for the construction of all development including public improvements shall generally be in accordance with the Development Approvals and applicable provisions of this Agreement (For example, Sections 6.2, 6.4, 6.5, 7.3, 8.0, etc.). Although the overall timing of Project development remains subject to the Developer's discretion based on market conditions in accordance with Section 6.1, there is a logical sequence to the development and certain improvements are required to be complete before phases of the Project can be considered complete and ready for occupancy. The Phasing Plan will be developed over time in accordance with the following process:

6.5.1. Master Phase Tract Map. Each Phase shall have a Master Tract Map which shall be submitted for financing and conveyance purposes only and no improvements may be constructed nor shall development be permitted pursuant to such approved Tract Map except through submission and approval of tentative and final Subdivsion Maps. Concurrently with processing of the Master Tract Map, all tentative Subdivision Maps for the Tract shall be submitted and processed.

6.5.2. Subdivision Maps. Each Master Tract Map shall designate future subdivisions within the Tract and the order of subdivision development to the extent that the need for development of public infrastructure dictates the logical progression of subdivision development. Each Subdivision Map shall show all infrastructure necessary for the development of the Subdivision. Each subdivision will have a written Phasing Plan approved by the Director and the City Engineer prior to commencement of development of the subdivision specifying when the lots within the subdivision will be developed and when all public infrastructure within the subdivision will be constructed. Generally all streets, lighting, curbs and gutters, sidewalks, parkway landscaping, asphalt concrete paving, traffic signs and stripping, medians, landscaping, drainage facilities, storm drains, water lines, sewer lines, utility lines, trails and other facilities within the subdivision must be completed before release of any occupancy permits within the subdivision. All conditions which require the provision of Proposed Project Facilities and Subdivision Improvements for the area covered by each tentative Subdivision Map must be satisfied, either through performance or through the provision of suitable security, prior to the approval and recordation of the Subdivision Map.

6.5.3. Proposed Project Facilities. Attached as Exhibit "F" are diagrams showing Proposed Project Facilities and depicting the major public infrastructure of the development, including roadways, detention basins, water lines, sewer lines, recycle water lines, utilities, storm drains and drainage facilities, treatment plants, power substations, community parks, community centers, fire stations, and other infrastructure serving area-wide populations. The Proposed Project Facilities serve multiple subdivisions, and may need to be constructed in the initial phase of a particular Tract, or even before certain Tracts can be developed. The

detailed phasing of construction will be provided through the Master Tract and Subdivision Phasing Plans, and subject to Section 6.4.

6.5.4. Time for Map Submission. The Developer shall submit all applications for tentative, or vesting tentative, Master Tract Maps and, concurrently with each application for a Master Tract Map, the applications for tentative, or vesting tentative, Subdivision Maps thereof within five (5) years of the Effective Date for the City's review and approval.

6.6 Ten Year Anniversary Review.

6.6.1. Generally. On or about each Tenth Anniversary of the Effective Date as provided herein, the City shall conduct the Ten Year Anniversary Review") the City and the Developer review to shall review the performance of this Agreement, and the development of the Project to see if the Development Goals have been met. The cost of the Annual Review shall be borne by the Developer and the Developer shall pay a reasonable deposit in an amount requested by City to pay for such review.

As part of each Ten Year Anniversary Review, sixty (60) days before each tenth anniversary of this Agreement, the Parties shall mutually meet and outline the review process, including (i) the information needed and formats, (ii) the schedule for performing the review, (iii) indentifying any needed consultants and studies, (iv) the adequacy of current DIFs and any anticipated need for changes, (v) any adjustments to needed public infrastructure, (vi) the estimated deposit needed to pay the City's costs of performing the review, and (vii) other matters necessary for the review.

The Developer shall deliver to the City all information reasonably requested by City (i) regarding the Developer's performance under this Agreement demonstrating that the Developer has complied in good faith with the terms of this Agreement and (ii) as required by this Agreement or the Existing Land Use Regulations. The Developer's submittal shall include a written explanation of any reasons why the Development Goals were or were not met, and any request for the modification of future Development Goals in the next 10 year period, and the reasons therefore.

The Developer shall submit its report on or before the Tenth Anniversary. Thereafter, the Director shall prepare and submit to City Council a written report on the performance of the Project. The Developer's written response shall be included in the Director's report. The report and recommendations to Council shall be made within 45 days of the anniversary, and a public hearing shall be held thereon.

6.6.2. Adjustment to DIFs. As provided in Section 7.2.2, all Development Impact Fees are subject to adjustment as put of the Ten Year Anniversary Review provided (i) the adjustment is based on the preparation a suitable analysis by an independent professional consultant experienced in performing such studies demonstrating the basis for the increase, (ii) the study is performed on a City-wide basis and applies to all development projects of 200 or more residential units, (iii) all infrastructure financed is included within the City's General Plan and capital projects master plan, (iv) the study demonstrates a reasonable nexus to

the Project and the fees are proportionate to the benefit received. The Development Impact Fees shall not contain any escalators but the studies justifying the fees may use cost numbers which recognize the ten year horizon of each study.

6.6.3. Parties Can Alter Development Goals Objectives. The Development Goals for the next Ten Year Anniversary Review period as set forth in Section 6.2 may be modified with the mutual agreement of the Parties at the time of the hearing set forth in Section 6.6.1. Unless the Parties reach agreement for modification, the Development Goals will remain as provided therein.

6.6.4. No Other Changes to Development Plan. Other than the Development Impact Fee adjustments provided in Section 6.6.2 which may be unilaterally approved by City subject to performing the required studies, no other changes to the Development Approvals may be made by City without the consent of Developer. Nothing herein shall restrict the City's reservations of rights under Article 11.

6.6.5. Extensions Due to Economic Distress.

6.6.5.1 Determination of Distress. As provided in Section 6.2.4, the Phases can be extended up to three (3) years due to the occurrence of an Economically Distressed Year(s). In any year in which Developer believes conditions exist to warrant Declaration of an Economically Distressed Year, within 30 days following the Anniversary Date, Developer shall submit his request therefore. Additionally, in support thereof, Developer shall provide City with a Report including the following: (i) a written analysis of County-wide data supporting the Declaration; (ii) publicly available reports concerning general market conditions affecting home building; (iii) analysis as to how general market conditions have affected the Project including demand, costs and financing; and (iv) forecasts concerning the next three (3) years. The Report is for informational purposes only and City shall not be permitted to disapprove the Declaration of Economic Distress if the data submitted meets the definition in Section 1.31. Within 30 days the City Manger shall review the Declaration and Report and determine if the data supports the declaration of an Economically Distressed Year. The City Manager's determination is appealable to the Council under Section 13.6.3, but not as a default thereunder.

6.6.5.2 Effect of Determination on 10-Year Review. Generally the effect of the declaration of an Economically Distressed Year shall also toll the performance of the 10 Year Anniversary Review. For example, if during any 10 year cycle, two years had been declared Economically Distressed, then the 10 Year Anniversary Review would be performed on or about the Anniversary Date of the 12th year, as otherwise provided in Section 6.6. The City, however, retains the right to elect to perform the DIF adjustments in accordance with Section 6.6.2 on the 10 Year Anniversary, or to defer the studies and do them in accordance with the general 10 Year Anniversary Review performed on the date to which the Phase has been extended due to the extensions for Economically Distressed Years pursuant to Section 6.2.4.

6.7 Failure to Satisfy Phasing Goals and Objectives. For reasons stated in Section 6.1, failure to achieve the Development Goals in any ten year period shall not be a default hereunder, but it shall cause the term of the Agreement to be shortened five (5) years.

Accordingly, a failure at the first Ten Year Anniversary Review shall cause the term of the Agreement in Section 3.1 to be reduced to 35 years, while a failure at the second review in year 20 (to achieve 3000 units) shall cause the Agreement to be shortened another five (5) years to 30 years (subject to any extension of the Term due to the occurrence of Economically Distressed Years as set forth in Section 3.4), but once the Term has been reduced, the lost time is not reinstated due to production of excess units in later phases.

The termination of this Agreement shall not alter the provisions of the Specific Plan concerning the zoning, density of development or any other regulatory provisions concerning the development of the Project, though the limitations provided in Article 4 on enactment of Future Land Use Regulations would be null and void.

6.8 Developer Incentives for Expedited Development.

6.8.1. Incentive for Early Development. The City wishes to establish new communities in the City and to encourage the early development of the Project, which, in light of current economic conditions, may require economic incentives to be provided to the Developer. Accordingly, the Developer shall be given a credit so that DIFs do not have to be paid for up to 500 residential units, if Commencement of Construction, as that term is defined in Section 6.3, occurs on or before the production dates in Section 6.8.4.

6.8.2. Conditions for Receipt of Credits. To receive the credits, the following conditions must be satisfied: (i) the units must be in Planning Areas 1 and 2 provided that, for good cause, City may approve building the units in alternative Planning Areas, (ii) each Tract containing residential units needs to be developed as a single unit with appropriate entry design features including walls, fountains, landscaping, signage and other features approved by City, (iii) the preparation of the commercial site in Planning Area 18 shall take place pursuant to Section 6.2.4, unless waived by City.

6.8.3. Fees Eligible for Credit. The DIFs eligible for credit are those identified as eligible in Exhibit "D."

6.8.4. Schedule. The credit shall be given for all units for which the Commencement of Construction, as that term is defined in Section 6.3, occurs within five (5) years after the Effective Date.

6.9 City Provided Assistance. The City shall provide the Developer with each of the items set forth in Exhibit "E."

7. FEES, TAXES AND ASSESSMENTS.

7.1 Processing Fees. During the Term of this Agreement, the City may require the Developer to pay all Processing Fees applicable to the Development of the Project at the rates in effect on the applicable application date or as described in this Agreement unless a specific amount is stated herein.

7.2 Development Impact Fees.

7.2.1. Limit on Exactions, Mitigation Measures, Conditions and Development Fees. Except for those fees expressly set forth in Sections 7.3 and 7.5 below, and for the reservations of authority in Article 11, the City shall charge and impose only those Exactions, mitigation measures and conditions, including, without limitation, dedications as are set forth in the Existing Land Use Regulations, and those fees relating to the Development of the Developer's Property as are expressly set forth in Exhibit "D" attached hereto, and no others. Per Section 7.4 below, Park Fees shall not be imposed during the life of this Agreement. The Developer shall pay the stated amount of all other fees shown in Exhibit "D" for the first 10 years of the Term, and subsequently adjusted amounts determined in accordance with Section 6.6.2.

7.2.2. Development Impact Fees to be Established Based on Studies. The City will study and establish DIFs within one year of the effective Date for the following: revised City Traffic Control Facility Fee, revised Domestic Water Fee, new Recycled Water Fee and revised Sanitary Sewer Fee. The Developer shall be obligated to pay the revised fees and the revised DIFs shall be considered part of the Existing land Use Regulations. The initial DIFs shall be established in accordance with fee studies meeting the requirements of Section 6.6.2.

7.2.3. Adjustment at 10 Year Anniversary Review. The Developer shall pay increased fees after the Ten Year Anniversary Review if those fees are adopted on a City wide basis after the preparation of, and are justified by, a suitable analysis demonstrating the basis for the increase in accordance with Section 6.6.2. The City shall be entitled to repeat the process of increasing the fees thereafter upon the same terms, during the Ten Year Anniversary Review in accordance with Section 6.6.2, throughout the Term of this Agreement.

7.2.4. Payment of Development Impact Fees. The Developer shall pay all Development Impact Fees with respect to Development commenced on the portion of the Developer's Property owned by the Developer. The Development Impact Fees set forth on Exhibit "D" attached hereto shall be paid at the issuance of the Certificate of Occupancy for each building. Unless otherwise specified herein, all other fees, including Processing Fees shall be paid when at issuance of building permits or otherwise when required by code.

7.3 Wastewater, Domestic and Reclaimed Water Facilities Development Impact Fees.

7.3.1. Wastewater Fees. The City levies two capital facilities fees related to wastewater: (i) a sewer collection fee; and (ii) a sewer frontage fee, but collectively such fees are referred to herein as sewer collection fees. The sewer collection fee shall be fixed in accordance with Section 7.2.1 above.

7.3.2. Construction of Wastewater Collection Infrastructure in Lieu of Fees. If any additions, improvements and/or upgrades to the City's wastewater collection system outside or within the boundaries of the Developer's Property are required in

connection with any Development of the Project, then with the mutual agreement of the parties, the Developer shall have the option to elect to construct some or all of such additions, improvements and/or upgrades at its sole cost and expense. The City shall develop the project specifications and shall undertake a design process to develop project plans and drawings meeting the City's specifications. The City may utilize the Developer to develop the plans and drawings if the design costs are competitive and Developer has retained competent design professionals who can timely perform the services. If, thereafter, the Developer wishes to construct the improvements, the Developer shall give City a fixed budget and construction schedule, while City obtains competitive bids. City may award the contract to the most competitive entity, considering price, financing, schedule and ability to perform. The contract may include liquidated damages provisions and other requirements to assure the timely and satisfactory completion of the project within budget. If performed by Developer, upon completion of such works of improvement, the Developer shall be entitled to offset the actual costs approved by City and incurred by it for the design, permitting, construction and installation of such works of improvement against any wastewater collection-related Development Impact Fees that may otherwise be payable in connection with future Development of the portion of the Developer's Property owned by the Developer.

7.3.3. Wastewater Treatment Capacity. The City shall use its best efforts to obtain the required permits and to construct the needed improvements to the City's wastewater treatment facilities in order to serve the Project as the need for additional facilities arises. The Developer shall include the construction of the wastewater treatment plant within the phasing plan developed pursuant to Section 6.5. The City estimates that a four year lead time is required with one year for design and one year for permitting with the remaining period needed for construction.

7.3.4. Wastewater, Domestic and Reclaimed Water Facilities and Fees. If any additions, improvements and/or upgrades to the City's water system, either domestic or reclaimed, outside or within the boundaries of the Developer's Property are required in connection with any Development of the Project, then with the City's approval, they may be undertaken by the Developer in accordance with the procedures in Section 7.3.2. Without limiting the generality of the foregoing, this includes the water tanks, pipelines and appurtenant facilities described in Section 8.5.

7.3.5. Recycled and Domestic Water Fees. Recycled and domestic water developer impact fees shall be established in accordance with Section 7.2.1 above. City does not currently have Development Impact Fees for reclaimed water facilities or for domestic water facilities for the Project. Within a year after the Effective Date, the City shall conduct a study to determine the reasonable charge and the Developer's pro rata share of the cost of such improvements. When adopted by the Council, the fees shall be considered incorporated herein as Existing Land Use Regulations, and shall be subject to further review at the Ten Year Anniversary Review as provided in Section 6.2.2.

7.4 Park Fees.

7.4.1. Construction of Facilities. The Developer will be constructing, installing and improving the park and recreation facilities listed below, which are

deemed to be park, recreation and/or open space for the purpose of complying with the Municipal Code's park fee requirements. All parkland and open space shall be maintained by the POA, the Developer, the City, the Golf Course operator or such other entity as approved by the City. Provided that all required parks and recreation facilities are constructed and installed in accordance with the Specific Plan and this Agreement, the Project shall not be subject to the imposition of Park Fees by the City. The City acknowledges that the value of the land and improvements for the park, recreation and open space land and facilities exceeds the aggregate of all park fees which may be charged by the City pursuant to the Municipal Code in connection with the proposed Development of the entire Project. The Developer shall construct and install within the Project's boundaries the following park and recreation facilities:

7.4.1.1 254-acre Golf Course or Active Open Space, as set forth in Sections 5.3 above and 8.1.3 below;

7.4.1.2 22 publicly accessible parks (each ranging in size from approximately less than 1 acre to over 16 acres), equipped by Developer with typical neighborhood park facilities, which may include picnic facilities, shade structures, playgrounds, turf areas, and related facilities as further defined in the Specific Plan and in accordance with the plans developed in Section 8.1;

7.4.1.3 Two private recreation centers, totaling approximately eight acres, which will be gated and accessible only to the residents of the Project. These centers may, but are not required to, include clubhouse facilities, restrooms, and other amenities as further defined in the Specific Plan; and

7.4.1.4 108.4 acres of additional open space as described in the Specific Plan.

7.4.2. Community Recreation Center. The City shall also be entitled to construct a community recreation center in Planning Areas 35 or 39, on any park or open space site or on any site identified for a public facility, such as a fire station or waste water treatment plant, if that site is not used for the public facility. Once the site has been identified, the Developer shall grade it and stub utilities to site. The Developer's obligations are further described in Section 8.1.4.

7.5 Traffic Impact Mitigation.

7.5.1. Fees to be Established. The City has established a Development Impact Fee for the purpose of collecting funds to pay for the cost of constructing localized transportation improvements. At the request of the City, the Developer may initiate a study to expand upon the existing Traffic Control Facility Fee to include additional improvements not currently covered in the fee. The fee includes signal costs and minor roadway improvements. The Developer shall pay the applicable Traffic Control Facility Fee established by the City in effect on the Effective Date or at the time that the new revised fee is established, pursuant to Section 7.2.1 above.

7.5.2. Highland Springs Interim Improvement Project. The Developer has initiated and will complete interim improvements to Highland Springs Avenue between Ramsey Street and the I-10 Freeway. These improvements include, but are not limited to, the synchronization of traffic signals along Highland Springs Avenue, relocation of traffic signals, closings and relocation of Joshua Palmer Way and the restriping and repaving of Highland Springs Avenue. The City believes that the current traffic impacts are caused by the Developer's earlier project in Beaumont. The City shall use its best efforts to coordinate with the City of Beaumont an agreement to reimburse a portion of the improvements either through the appropriate transportation fee credits or other mechanism.

7.5.3. The Developer to Construct Traffic Improvements In Lieu of Paying City Fair Share Fees. In the event the Developer is required to construct traffic improvements in lieu of paying the City's fair share fees, City shall reimburse the Developer for the cost of the completed improvements through Reimbursement Agreements mandating that any project larger than 20 dwelling units pay a prorated share for benefits associated with completion of the Project.

8. DEDICATIONS AND CONVEYANCES OF PROPERTY INTERESTS

8.1 Park Improvements.

8.1.1. Neighborhood/Community Parks. Prior to the construction of any parks, the Developer shall meet with both the Director and the Director of Parks and Recreation to review the provisions set forth in the Specific Plan outlining the facilities to be provided at each park and discuss the Developer's plans for near term construction of the parks. Prior to development of each park, a detailed site plan consistent with the Specific Plan shall be prepared by the Developer and approved by the Director and the Parks and Recreation Commissions. The Developer shall complete the construction of neighborhood parks, Planning Areas 22 through 34, 62, 64 through 67 and 72, and the parks in the SCE easement, Planning Areas 36 through 38, no later than the issuance of the final Certificate of Occupancy for residential units within the adjacent subdivisions. Active use park improvements may not be placed in the SCE easement parks if the Director and Commissions believe there are issues of public health with electro magnetic radiation. A subdivision separated from a park by a street shall not be considered to be adjacent to the park. The Parties shall, mutually, determine what constitutes the adjacent subdivision if a park adjoins more than one subdivision. Upon completion of each neighborhood park, the City shall after the one-year maintenance period has expired, within 10 working days, develop final punch lists of items to be corrected prior to acceptance by the City. Upon correction of final punch list items by the Developer, the City shall accept the park within 30 days of the date of the final inspection.

8.1.2. POA Recreation Centers. The POA Recreation centers identified in Planning Areas 21 and 63 shall be constructed by the Developer in accordance with the Tract Phasing Plan pursuant to Section 6.5.

8.1.3. Golf Course/Active Open Space. The Golf Course shall be constructed at the sole and absolute discretion of the Developer. The determination to construct the Golf Course will take place within the first phase of Phase I of development due to the need to construct of the flood control improvements for Smith Creek. The Golf Course will be maintained by a Developer selected operator and open to the public. The operator may sell annual play memberships. If, as described in Section 5.4 above, the Golf Course is determined to be financially infeasible, the Developer shall notify the Planning Department in writing and the open space and drainage provisions described in the Specific Plan shall dictate the uses allowed on Planning Areas 35 and 39. The revised use of Planning Areas 35 and 39 shall be approved by both the Planning Commission (as the recommending body) and City Council prior to construction. The revised plan shall incorporate active recreational use including biking and pedestrian trails, turnouts for exercise, viewing and educational facilities, all linkable to other tracts, parks and open space, landscaping and providing full public access.

8.1.4. Community Recreation/Emergency Center. The City's Parks Master Plan indentifies the need in the Project for a community recreation center, and this is even more necessary if the Golf Course is not developed. This Center would be on an approximately six (6) acre parcel in Planning Area 39 in lieu of the golf clubhouse, or alternatively could be located as a part of a community park or other available site including in Planning Area 71, or in lieu of the waste water treatment plant site in Planning Area 11. Depending on the site selected, the six (6) acres may be reduced so as to not adversely affect the development area of adjacent parcels from the development areas shown in the Specific Plan. The Center is contemplated as a 30,000 sq. foot facility. The plan for the Center shall be included in the Park Master Plan and the site plan shall be processed at the time the chosen Planning Area is developed, subject to the Phasing Plans approved pursuant to Section 6.5, and provided that if the City chooses to put the Center in Planning Area 11, it may be developed as part of Phase I provided that Developer shall satisfy the Phase I obligation by providing a developed Site, and need not fund the construction of the improvements if there are insufficient DIF's for credit. The Developer shall dedicate the site to City without charge. If developed as part of a park it shall be developed at the time required for parks in Section 8.1.1. The Center may include emergency operations and shelter components, and will also include appropriate landscaped grounds and facilities as specified in the Master Plan. The Center may be developed and constructed by Developer in the same manner as for the waste water treatment plant in Section 7.3.2, except as provided above.

8.2 Drainage Facilities. Planning Areas 19 and 71 are required areas of detention, recharge and conveyance of Project created and natural storm flows through the Project as set forth in Section 5.4 above. Planning Area 19 will consist of water quality basins, habitat restoration and flood conveyance facilities as well as the head works for the culvert underneath Wilson Street. This Planning Area may be ultimately transferred to the Flood Control District or City for acceptance and maintenance, but the Developer shall have the right to utilize it until such time as Development has fully or partially occurred for erosion control purposes. Planning Area 71 may be constructed in Phase I of the Project if required for the realignment of Smith Creek. This Planning Area may also consist of a large open reservoir, detention basin and recharge facility that may ultimately be transferred to the City or other appropriate body for acceptance and maintenance. The City shall have no obligation to accept

the facilities if they primarily benefit the Project and are for flood control purposes but City may do so if the recharge facility and reservoir facility is designed for water recharge purposes and City determines in its sole and absolute discretion that they are needed to enhance the City's water supply.

8.3 Satellite Water Treatment Plant. The Director of Public Works Director shall determine the location of a two to five acre portion of Planning Area 11 for the onsite treatment of Project-related and other localized wastewater flows. The City shall have an Appraisal of Land Value determined within one (1) year of the signing of this Agreement. The City shall grant a credit equal to the fair market value determined by the appraisal to the City's waste water impact fee, when that fee is established, which credit may be used by the Developer on a unit by unit basis. Title to the site shall be transferred to the City after the site has been graded by the Developer and utilities are stubbed to the site.

8.4 Fire Station Site. The Specific Plan has identified a site in Planning Area 60 as the possible site for a fire station. The City shall have the an Appraisal of Land Value performed for a site of up to two (2) acres within one (1) year of the signing of this Agreement. The City shall grant a credit equal to the fair market value determined by the appraisal to the City's Fire Facilities Development Fee which credit may be used by the Developer on a unit by unit basis. Title to the site shall be transferred to the City after the site has been graded by the Developer and utilities are stubbed to the site.

8.5 Water Tanks. The City's water facilities and improvements described in Section 7.3.4 include certain water tanks, pipelines, access roads and appurtenant facilities which largely serve the Development and must be located at specific locations and elevations to make the water system function correctly and maintain public health and safety. The water tanks shall be developed as follows:

A. A 500,000 gallon tank in Planning Area 73 at an high water elevation line of 3237 feet.

B. A 1.4 million gallon tank in Planning Area 73 at an high water elevation line of 3070 feet.

C. A 1.6 million gallon tank Planning Area 68 or 50 at an high water elevation line of 2822 feet.

Each tank will require a parcel from 1 to 1.5 acres in area and additional area for access, and shall be dedicated to City without charge after the site has been graded and stubbed out by Developer. The Developer may construct the improvements in accordance with Section 7.3.2 and receive fee credits to the water development impact fee on a unit per unit basis for the construction costs. The water tanks are considered part of the Proposed Project Facilities and shall be constructed in accordance with the Phasing Plans developed in accordance with Section 6.5 provided that the tanks in paragraph C above must be in Phase I.

9. PROCESSING OF REQUESTS AND APPLICATIONS: OTHER GOVERNMENT PERMITS.

9.1 Processing. In reviewing Future Development Approvals which are discretionary, the City may impose only those conditions, exactions, and restrictions which are allowed by the Development Plan and this Agreement. Upon satisfactory completion by the Developer of all required preliminary actions, meetings, submittal of required information and payment of appropriate processing fees, if any, the City shall promptly commence and diligently proceed to complete all required steps necessary for the implementation of this Agreement and the development by the Developer of the Project in accordance with the Existing Development Approvals. In this regard, the Developer, in a timely manner, will provide the City with all documents, applications, plans and other information necessary for the City to carry out its obligations hereunder and will cause the Developer's planners, engineers and all other consultants to submit in a timely manner all required materials and documents therefor. It is the express intent of this Agreement that the parties cooperate and diligently work to implement any zoning or other land use, site plan, subdivision, grading, building or other approvals for development of the Project in accordance with the Existing Development Approvals and those items set forth in Exhibit "E." Notwithstanding the foregoing, nothing contained herein shall be construed to require City to process Developer's Applications ahead of other projects in process in the City and City's obligations hereunder shall be subject to the City's workload and staffing at any given time.

9.2 Developer to Pay for Expedited Processing. If Developer elects, in its sole and absolute discretion, to request the City to incur overtime or additional consulting services to receive expedited processing by the City, the Developer shall pay all such overtime costs, charges or fees incurred by City for such expedited processing.

9.3 General Time Periods for Processing.

9.3.1. General Plan Review and Approval. The City shall provide comments within two weeks for all plan checks for required infrastructure, building, grading, both mass and finished, architectural, erosion control or any other required plan submittal and will not unduly extend amount of plan checks beyond three submittals provided that Developer's consultants are responsive . In the event that consensus between the City and the Developer regarding the content of the plans after the 3rd submittal can not be made, a meeting will be scheduled to discuss how to reconcile the differences.

9.3.2. Architectural Plan Submittal Process. The Developer shall submit architectural plans to the Planning Department for maximum two-week review of the entire plan set for each submittal for a maximum of three plan check reviews to ensure that they conform to the guidelines set forth in Specific Plan provided that Developer's consultants are responsive. In the event that consensus can not be made after the third plan check, a meeting will be coordinated with the plan checker, Planning Department and the Developer or the Developer's representative. The Planning Department, upon determining compliance with the guidelines set forth in the Specific Plan, shall approve the plans. This review is a ministerial action. Additional architectural enhancements that are above and beyond the design guidelines

will be implemented at the Developer's sole and absolute discretion but are subject to review by City if proposed.

9.4 Precise Grading/Plot Plan Revisions. In the event that the Developer wishes to revise house plan type or elevation on an approved plot plan or revised grading plan, City Engineering and Planning staff review and approval shall be done over the counter.

9.5 Additional Inspectors and Plan Checkers. In the event that the Developer requests it, the City shall permit overtime, including both additional days and hours, for inspections and plan checking at the Developer's expense. In the event that the City is unable to provide inspectors or plan checkers capable of meeting the demand for inspections or plan checks required for the Development of the Project in a timely fashion, the City shall, if requested to do so by the Developer and at the Developer's expense, employ additional private entities or persons to perform such services.

9.6 Tentative Subdivision Maps. The City shall extend through the Term hereof (pursuant to Government Code § 66452.6) all Master Tract Maps and all tentative and vesting tentative Subdivision Maps applied for by the Developer during the term of this Agreement and approved by the City in the future.

9.7 Multiple Final Subdivision Maps: The Developer may file as many final maps over a tentative Subdivision Map as it deems appropriate in its sole and absolute discretion.

9.8 Financing and Conveyance Maps: The Developer may have a Master Tract Map approved for the purpose of conveying portions of the Developer's Property to others and/or for the purpose of creating legal lots which may be used as security for loans to develop the Developer's Property and as provided in Section 6.5.1. Any such map shall not authorize any Development and shall not be subject to any conditions, Exactions or restrictions, other than monumentation and conditions which do not require the payment of money or the installation or construction of improvements.

9.9 Water Availability. Any final subdivision map prepared for the Developer's Property, or any portion of the Developer's Property, shall comply with the provisions of Government Code § 66473.7.

9.10 Other Governmental Permits. The Developer shall apply in a timely manner for such other permits and approvals as may be required from other governmental or quasi-governmental agencies having jurisdiction over the Project as may be required for the development of, or provision of services to, the Project. The City shall cooperate with the Developer in its efforts to obtain such permits and approvals.

9.11 Public Agency Coordination. The City and Developer shall cooperate and use reasonable efforts in coordinating the implementation of the Development Plan with other public agencies, if any, having jurisdiction over the Property or the Project.

9.12 Annexation. This Agreement's effectiveness over land within the Developer's Property that is currently not within the City nor within its sphere of influence is subject to the annexation of that land into the City. If the land is annexed into the City, the terms

of this Agreement shall automatically apply to all portions of that land upon its annexation. In the event that annexation of portions of the Developer's Property not currently within the City is not approved by LAFCO, or for any other reason is not annexed to the City, then any such portions shall be excluded from this Agreement. With the exception of land within Planning Area 43B, the City shall, subject to the negotiation of a tax allocation agreement with the County of Riverside acceptable to City, use its best efforts to expeditiously accomplish the annexation of those portions of the Developer's Property not within the City, or such portions thereof as may be approved by the developer, to the City.

10. AMENDMENT AND MODIFICATION OF DEVELOPMENT AGREEMENT.

10.1 Initiation of Amendment. Either Party may propose an amendment to this Agreement.

10.2 Procedure. Except as set forth in Section 10.4 below, the procedure for proposing and adopting an amendment to this Agreement shall be the same as the procedure required for entering into this Agreement in the first instance, and meet the requirements of the Development Agreement Statute § 65867.

10.3 Consent. Except as expressly provided in this Agreement, no amendment to all or any provision of this Agreement shall be effective unless set forth in writing and signed by duly authorized representatives of each of the Parties hereto and recorded in the Official Records of Riverside County.

10.4 Minor Modifications.

10.4.1. Flexibility Necessary. The provisions of this Agreement require a close degree of cooperation between the City and the Developer. Implementation of the Project may require minor modifications of the details of the Development Plan and affect the performance of the Parties under this Agreement. The anticipated refinements to the Project and the Development of the Developer's Property may demonstrate that clarifications to this Agreement and the Existing Land Use Regulations are appropriate with respect to the details of performance of the City and the Developer. The Parties desire to retain a certain degree of flexibility with respect to those items covered in general terms under this Agreement. Therefore, non-substantive and procedural modifications of the Development Plan shall not require modification of this Agreement.

10.4.2. Non-Substantive Changes. A modification will be deemed non-substantive and/or procedural if it does not result in a material change in fees, maximum residential density, maximum intensity of use, permitted uses, the maximum height and size of buildings, the reservation or dedication of land for public purposes, or the improvement and construction standards and specifications for the Project, including density transfers between phases. A "material change" is generally one which does not change the standard by ten percent (10%) or more. For example, for a height limit of 20 feet, a change of less than two feet is deemed non-material.

10.4.3. Hearing Rights Protected. Notwithstanding the foregoing, City will process any change to this Development Agreement consistent with state law and will hold public hearings thereon if so required by state law and the parties expressly agree nothing herein is intended to deprive any party or person of due process of law.

10.5 Effect of Amendment to Development Agreement. Except as expressly set forth in any such amendment, an amendment to this Agreement will not alter, affect, impair, modify, waive, or otherwise impact any other rights, duties, or obligations of either Party under this Agreement.

11. RESERVATIONS OF AUTHORITY.

11.1 Limitations, Reservations and Exceptions. Notwithstanding anything to the contrary set forth hereinabove, in addition to the Existing Land Use Regulations, only the following Land Use Regulations adopted by City hereafter shall apply to and govern the Development of the Developer's Property ("Reservation of Authority"):

11.1.1. Future Regulations. Future Land Use Regulations which (i) are not in conflict with the Existing Land Use Regulations, (ii) which would be applicable under the Development Agreement statute (§ 65866); (iii) if in conflict with the Existing Land Use Regulations but the application of which to the Development of the Developer's Property has been consented to in writing by Developer.

11.1.2. State and Federal Laws and Regulations. Where state or federal laws or regulations enacted after the Effective Date prevent or preclude compliance with one or more provisions of the Development Agreement, those provisions shall be modified, through revision or suspension, to the extent necessary to comply with such state or federal laws or regulations.

11.1.3. Public Health and Safety/Uniform Codes.

11.1.3.1 Adoption Automatic Regarding Uniform Codes. This Agreement shall not prevent the City from adopting Future Land Use Regulations or amending Existing Regulations which are uniform codes and are based on recommendations of a multi-state professional organization and become applicable throughout the City, such as, but not limited to, the Uniform Building, Electrical, Plumbing, Mechanical, or Fire Codes.

11.1.3.2 Adoption Regarding Public Health and Safety/Uniform Codes. This Development Agreement shall not prevent the City from adopting Future Land Use Regulations respecting public health and safety to be applicable throughout the City which directly result from findings by the City that failure to adopt such Future Land Use Regulations would result in a condition injurious or detrimental to the public health and safety and that such Future General Regulations are the only reasonable means to correct or avoid such injurious or detrimental condition.

11.1.3.3 Adoption Automatic Regarding Regional Programs. This Agreement shall not prevent the City from adopting Future Land Use Regulations or amending Existing Regulations which are regional codes and are based on recommendations of a county or regional organization and become applicable throughout the region, such as Western Riverside Council of Governments.

11.1.4. Amendments to Codes for Local Conditions. Notwithstanding the foregoing, no construction within the Project shall be subject to any provision in any of the subsequent Uniform Construction Codes, adopted by the State of California, but modified by the City to make it more restrictive than the provisions of previous Uniform Construction Codes of the City, notwithstanding the fact that the City has the authority to adopt such more restrictive provision pursuant to the California Building Standards Law, including, but not limited to, Health and Safety Code § 18941.5, unless such amendment applies City-wide. The City shall give Developer prior written notice of the proposed adoption of such amendment and Developer shall have the right to present its objections to the amendment.

11.2 Regulation by Other Public Agencies. It is acknowledged by the Parties that other public agencies not within the control of the City possess authority to regulate aspects of the Development of the Developer's Property separately from, or jointly with, the City and this Agreement does not limit the reasonable authority of such other public agencies.

11.3 Fees, Taxes and Assessments. Notwithstanding any other provision herein to the contrary, the City retains the right (i) to impose or modify Processing Fees and Development Impact Fees as provided in Article 7, (ii) to impose or modify business licensing or other fees pertaining to the operation of businesses, (iii) to impose or modify taxes and assessments which apply City-wide such as utility taxes, sales taxes and transient occupancy taxes, (iv) to impose or modify fees and charges for City services such as electrical utility charges, water rates, and sewer rates, (v) to impose or modify a community wide or area-wide assessment district which does not predominately apply to the Developer's Property, and (vi) to impose or modify any fees, taxes or assessments similar to the foregoing.

12. ANNUAL REVIEW.

12.1 Annual Monitoring Review. Following commencement of construction, the City and the Developer shall review the performance of this Agreement, and the Development of the Project, on or about each anniversary of the Effective Date (the "Annual Review"). The cost of the Annual Review shall be borne by Developer and Developer shall pay a reasonable deposit in an amount requested by City to pay for such review. As part of each Annual Review, within ten (10) days after each anniversary of this Agreement, the Developer shall deliver to the City all information reasonably requested by City (i) regarding the Developer's performance under this Agreement demonstrating that the Developer has complied in good faith with the terms of this Agreement and (ii) as required by the Existing Land Use Regulations.

The Director shall prepare and submit to Developer and thereafter to City Council a written report on the performance of the Project, and identify any deficiencies. If any deficiencies are noted, or if requested by a Councilmember a public hearing shall be held before the City Council on the report to Council. The Developer's written response shall be included in the Director's report. The report to Council shall be made within 45 days of the anniversary date.

If the City determines that the Developer has substantially complied with the terms and conditions of this Agreement, the Annual Review shall be concluded. If the City finds and determines that the Developer has not substantially complied with the terms and conditions of this Agreement for the period under review, the City may declare a default by the Developer in accordance with Section 13.1.

12.2 Certificate of Compliance. If, at the conclusion of an Annual Review, the City finds that the Developer is in substantial compliance with this Agreement, the City shall, upon request by the Developer, issue an Estoppel Certificate to the Developer in the form shown on Exhibit "C."

12.3 Failure to Conduct Annual Review. The failure of the City to conduct the Annual Review shall not be a Developer Default unless Developer fails to cooperate in providing necessary information.

13. DEFAULT, REMEDIES AND TERMINATION.

13.1 Rights of Non-Defaulting Party after Default. The Parties acknowledge that both Parties shall have hereunder all legal and equitable remedies as provided by law following the occurrence of a Default or to enforce any covenant or agreement herein except as provided in Section 13.2 below. Before this Agreement may be terminated or action may be taken to obtain judicial relief the Party seeking relief ("Non-Defaulting Party") shall comply with the notice and cure provisions of this Article 13.

13.2 No Recovery for Monetary Damages. The nature of a development agreement under the Development Agreement Statute is a very unusual contract involving promoting a very large development project facing many complex issues including geologic, environmental, finance, market, regulatory and other constantly evolving factors over an extremely long time frame. The high level of uncertainty and risk involved justify the extraordinary commitments made to the Developer. However, the original persons representing the parties and approving the transaction are only likely to be involved with the Project for a limited time in comparison to the over-all life of the Project.

It is highly likely that misunderstandings will develop over time. Moreover, municipal budgets are extremely constrained, and a threat of recovery of damages against a municipal entity may pressure a municipality with limited resources to settle in a manner adverse to its interests and those of its citizens. Finally, the municipal entity represents the public welfare of the entire community, a community who cannot directly represent themselves. The City Council has come to believe that entering into a development agreement with the Developer vesting the Developer with the extraordinary rights provided herein is in the best interests of the community

through the Developer's active engagement with the community and open communications over several years. It is critical to the success of this Project that as inevitable obstacles are met, and the persons implementing the Project change over the 40 year time span of the Project, that close working relationships be maintained. Accordingly, in this Agreement, the rights of enforcement are limited as follows (i) the remedy of monetary damages is not available to either Party, and (ii) there is no shortcut to a mediation or arbitration procedure where a nonelected representative can arbitrarily determine land use development issues.

For purposes of enforcement, stated positively, the Parties shall have the equitable remedies of specific performance, injunctive and declaratory relief, or a mandate or other action determining that the City has exceed its authority, and similar remedies, other than recovery of monetary damages, to enforce their rights under this Agreement. The Parties shall have the right to recover their attorney fees and costs pursuant to Section 19.9 in such action. Moreover, the Developer shall have the right to a public hearing before the City Council before any default can be established under this Agreement, as provided in Section 13. 6.

13.3 Recovery of Monies Other Than Damages.

13.3.1. Restitution of Improper Exactions. In the event any actions, whether monetary or through the provision of land, good or services, are imposed on the Development of the Developer's Property other than those authorized pursuant to this Agreement, the Developer shall be entitled to recover from City restitution of all such improperly assessed exactions, either in kind or the value in lieu of the exaction, together with interest thereon at the rate of the maximum rate provided by law per year from the date such exactions were provided to City to the date of restitution.

13.3.2. Monetary Default. In the event the Developer fails to perform any monetary obligation under this Agreement, City may sue for the payment of such sums to the extent due and payable. The Developer shall pay interest thereon at the lesser of: (i) ten percent (10%) per annum, or (ii) the maximum rate permitted by law, from and after the due date of the monetary obligation until payment is actually received by the City.

13.4 Compliance with the Claims Act. Compliance with this Article 13 shall constitute full compliance with the requirements of the Claims Act, Government Code § 900 et seq., pursuant to Government Code § 930.2 in any action brought by the Developer.

13.5 Notice and Opportunity to Cure. A Non-Defaulting Party in its discretion may elect to declare a Default under this Agreement in accordance with the procedures hereinafter set forth for any failure or breach of the other Party ("Defaulting Party") to perform any material duty or obligation of the Defaulting Party under the terms of this Agreement. However, the Non-Defaulting Party must provide written notice to the Defaulting Party setting forth the nature of the breach or failure and the actions, if any, required by the Defaulting Party to cure such breach or failure. The Defaulting Party shall be deemed in Default under this Agreement, if the breach or failure can be cured, but the Defaulting Party has failed to take such actions and cure such default within thirty (30) days after the date of such notice or ten (10) days for monetary defaults (or such lesser time as may be specifically provided in this Agreement).

However, if such non-monetary Default cannot be cured within such thirty (30) day period, and if and, as long as the Defaulting Party does each of the following:

1. Notifies the Non-Defaulting Party in writing with a reasonable explanation as to the reasons the asserted default is not curable within the thirty (30) day period;

2. Notifies the Non-Defaulting Party of the Defaulting Party's proposed cause of action to cure the default;

3. Promptly commences to cure the default within the thirty (30) day period;

4. Makes periodic reports to the Non-Defaulting Party as to the progress of the program of cure;

5. Diligently prosecutes such cure to completion, and

Then the Defaulting Party shall not be deemed in breach of this Agreement.

Notwithstanding the foregoing, the Defaulting Party shall be deemed in default under this Agreement if the breach or failure involves the payment of money but the Defaulting Party has failed to completely cure the monetary default within ten (10) days (or such lesser time as may be specifically provided in this Agreement) after the date of such notice.

13.6 Dispute Resolution.

13.6.1. Meet & Confer. Prior to any Party issuing a Default Notice hereunder, the Non-Defaulting Party shall inform the Defaulting Party either orally or in writing of the Default and request a meeting to meet and confer over the alleged default and how it might be corrected. The Parties through their designated representatives shall meet within ten (10) days of the request therefore. The Parties shall meet as often as may be necessary to correct the conditions of default, but after the initial meeting either Party may also terminate the meet and confer process and proceed with the formal Default Notice.

13.6.2. Termination Notice. Upon receiving a Default Notice, should the Defaulting Party fail to timely cure any default, or fail to diligently pursue such cure as prescribed above, the Nondefaulting Party may, in its discretion, provide the Defaulting Party with a written notice of intent to terminate this Agreement and other Agreements ("Termination Notice"). The Termination Notice shall state that the Nondefaulting Party will elect to terminate the Agreement and such other Agreements as the Non-defaulting Party elects to terminate within thirty (30) days and state the reasons therefor (including a copy of any specific charges of default) and a description of the evidence upon which the decision to terminate is based. Once the Termination Notice has been issued, the Non-defaulting Party's election to terminate Agreements will only be waived if (i) the Defaulting Party fully and completely cures all defaults prior to the date of termination, or (ii) pursuant to Section 13.6.3 below.

13.6.3. Hearing Opportunity Prior to Termination. Prior to any termination, a termination hearing shall be conducted as provided herein ("Termination Hearing"). The Termination Hearing shall be scheduled as an open public hearing item at a regularly-scheduled City Council meeting within thirty (30) days of the Termination Notice, subject to any legal requirements including but not limited to the Ralph M. Brown Act, Government Code Sections 54950-54963. At said Termination Hearing, the Defaulting Party shall have the right to present evidence to demonstrate that it is not in default and to rebut any evidence presented in favor of termination. Based upon substantial evidence presented at the Termination Hearing, the Council may, by adopted resolution, act as follows:

A. Decide to terminate this Agreement.

B. Determine that the alleged Defaulting Party is innocent of a default and, accordingly, dismiss the Termination Notice and any charges of default; or

C. Impose conditions on a finding of default and a time for cure, such that Defaulting Party's fulfillment of said conditions will waive or cure any default.

Findings of a default or a condition of default must be based upon substantial evidence supporting the following three findings: (i) that a default in fact occurred and has continued to exist without timely cure, (ii) that the Non-Defaulting Party's performance has not excused the default; and (iii) that such default has, or will, cause a material breach of this Agreement and/or a substantial negative impact upon public health, safety and welfare, or the financial terms established in the Agreement, or such other interests arising from the Project. Notwithstanding the foregoing, nothing herein shall vest authority in the City Council to unilaterally change any material provision of the Agreement.

Following the decision of the City Council, any Party dissatisfied with the decision may seek judicial relief consistent with this Article 13.

13.7 Waiver of Breach. By not challenging any Development Approval within 90 days of the action of City enacting the same, Developer shall be deemed to have waived any claim that any condition of approval is improper or that the action, as approved, constitutes a breach of the provisions of this Agreement. By recordation of a final map on all or any portion of the Developer's Property, the Developer shall be deemed to have waived any claim that any condition of approval is improper or that the action, as approved, constitutes a breach of the provisions of this Agreement.

13.8 Limitations on Defaults. Notwithstanding any provision in this Agreement to the contrary, a Default by one Owner shall not constitute a Default by an Owner of a portion of the Developer's Property, which is not the owner of the portion of the Developer's Property that is the subject of the Default (an "Innocent Owner"). Likewise, a Default by an Owner with respect to a Lot (or group of Lots) it owns or leases shall not constitute a Default by an Innocent Owner, nor shall the Default by another Owner of a portion of the Developer's Property not owned by an Innocent Owner constitute a Default of the Innocent Owner. Therefore, (i) no Innocent Owner shall have any liability to the City for, or with respect to, any

Default by another Owner or any Default of any other Owner, (ii) an Innocent Owner shall have no liability to the City for, or with respect to, any Default by any other Owner, and (iii) the City's election to terminate this Agreement as a result of a Default by an Owner shall not result in a termination of this Agreement with respect to either (x) any portion of the Developer's Property not owned by such Owner or (y) those Lots owned or leased by an Innocent Owner until such time that this Agreement would otherwise terminate in accordance with its terms.

13.9 Venue. In the event of any judicial action, venue shall be in the Superior Court of Riverside County.

14. ASSIGNMENT.

14.1 Right to Assign.

14.1.1. General. Neither Party shall assign (as hereinafter defined) or transfer (as hereinafter defined) its interests, rights or obligations under this Agreement without the prior written consent of the other, which consent shall not be unreasonably withheld or delayed. The term "assignment" as used in this Agreement shall include successors-in-interest to the City that may be created by operation of law. Notwithstanding the foregoing, the City shall have the right to sell, assign or transfer its interest in any real property dedicated or transferred to the City pursuant to the terms of this Agreement or to another public agency.

As used in this Section, the term "transfer" shall include the transfer to any person or group of persons acting in concert of more than seventy percent (70%) of the present equity ownership and/or more than fifty percent (50%) of the voting control of the Developer (jointly and severally referred to herein as the "Trigger Percentages") or any general partner of the Developer in the aggregate, taking all transfers into account on a cumulative basis, except transfers of such ownership or control interest between members of the same immediate family, or transfers to a trust, testamentary or otherwise, in which the beneficiaries are limited to members of the transferor's immediate family. A transfer of interests (on a cumulative basis) in the equity ownership and/or voting control of the Developer in amounts less than the Trigger Percentages shall not constitute a transfer subject to the restrictions set forth herein. In the event the Developer or any general partner of the Developer or its successor is a corporation or trust, such transfer shall refer to the transfer of the issued and outstanding capital stock of the Developer, or of beneficial interests of such trust; in the event that Developer or any general partner of the Developer is a limited or general partnership, such transfer shall refer to the transfer of more than the Trigger Percentages in the limited or general partnership interest; in the event that the Developer or any general partner is a joint venture, such transfer shall refer to the transfer of more than the Trigger Percentages of such joint venture partner, taking all transfers into account on a cumulative basis.

The Developer shall not transfer this Agreement or any of the Developer's rights hereunder, or any interest in the Developer's Property or in the improvements thereon, directly or indirectly, voluntarily or by operation of law, except as provided below, without the prior written approval of City, and if so purported to be transferred, the same shall be null and void. In considering whether it will grant approval to any transfer by Developer, which transfer requires City approval, City shall consider factors such as (i) the financial strength and capability of the

proposed transferee to perform the obligations hereunder; and (ii) the proposed transferee's experience and expertise in the planning, financing, development, ownership, and operation of similar projects. In no event shall the City's approval of any transfer be unreasonably withheld or delayed.

In addition, no attempted assignment of any of the Developer's obligations hereunder shall be effective unless and until the successor party signs and delivers to the City an assumption agreement, in a form approved by the City, assuming such obligations. No consent or approval by City of any transfer requiring the City's approval shall constitute a further waiver of the provision of this Section 14.1.1 and, furthermore, the City's consent to a transfer shall not be deemed to release the Developer of liability for performance under this Agreement unless such release is specific and in writing executed by City. In no event shall the City's release of the Developer from liability under this Agreement upon a transfer be unreasonably withheld or delayed.

Notwithstanding any provision of this Agreement to the contrary, City approval of a Transfer or Assignment of any portion of the Developer's Property under this Agreement shall not be required in connection with any of the following provided that such person or entity transferee or assignee assumes in writing all of the Developer's obligations under this Agreement and notifies the City in writing of the same:

A. Any mortgage, deed of trust, sale/lease-back, or other form of conveyance for financing and any resulting foreclosure therefrom.

B. The granting of easements or dedications to any appropriate governmental agency or utility or permits to facilitate the development of the Developer's Property.

C. A sale or transfer resulting from, or in connection with, a reorganization as contemplated by the provisions of the Internal Revenue Code of 1986, as amended or otherwise, in which the ownership interests of a corporation are assigned directly or by operation of law to a person or persons, firm or corporation which acquires the control of the voting capital stock of such corporation or all or substantially all of the assets of such corporation.

D. A sale or transfer of less than the Trigger Percentages between members of the same immediate family, or transfers to a trust, testamentary or otherwise, in which the beneficiaries consist solely of immediate family members of the trustor or transfers to a corporation or partnership in which the immediate family members or shareholders of the transferor who owns at least ten percent (10%) of the present equity ownership and/or at least fifty percent (50%) of the voting control of Developer.

E. A transfer of common areas to a POA.

F. Any transfer to an entity or entities in which the Developer retains a minimum of 51% of the ownership or beneficial interest and retains management and control of the transferee entity or entities.

G. Any transfer of interests in Owner for estate planning purposes to the heirs of Owner, provided that the heirs retain a minimum of 51% of the ownership or beneficial interest of the transferor entity and retain management and control of the transferee entity.

H. Any transfer of interest to a Pre-Qualified Buyer.

14.1.2. Subject to Terms of Agreement. Following any such Transfer or Assignment of any of the rights and interests of the Developer under this Agreement, in accordance with Section 14.1.1 above, the exercise, use and enjoyment of such rights and interests shall continue to be subject to the terms of this Agreement to the same extent as if the assignee or transferee were the Developer.

14.1.3. Release of Developer. Upon the written consent of the City to the complete assignment of this Agreement or the transfer of a portion of the Developer's Property and the express written assumption of the assigned obligations of the Developer under this Agreement by the assignee, the Developer shall be relieved of its legal duty from the assigned obligations under this Agreement with respect to the portion of the Developer's Property transferred, except to the extent the Developer is in default under the terms of this Agreement prior to the transfer.

14.1.4. No Approval of Terms of Loan by City. Notwithstanding anything to the contrary set forth herein with regards to the approval by the City of hypothecation, encumbrances or mortgages, the City shall only have the right to approve the identity of the Developer's lender, which approval will not be unreasonably withheld, taking into consideration such lender's financial strength, reputation, and other relevant factors. The City shall not have any right to approve any of the terms or conditions of the Developer's financing arrangements with third party lenders.

14.2 Sale to Pre-Qualified Buyer. Nothing herein shall prevent the Developer from selling a portion of the Developer's Property for residential development subject to any approved final subdivision map to a Pre-Qualified Buyer for construction of houses in accordance with the terms of this Agreement provided that the transferee must enter into appropriate agreements with the City to assure that all Development restrictions hereunder will be met.

14.3 Termination of Agreement With Respect to Individual Parcels Upon Sale to Public. Notwithstanding any provisions of this Agreement to the contrary, this Agreement shall terminate as to any Lot which has been finally subdivided and improved with all required public improvements and which is individually (and not in "bulk") sold to an owner-user and thereupon, and without the execution or recordation of any further document or instrument, such Lot shall be released from and no longer be subject to the provisions of this Agreement; provided, however, that CC&R's are placed of record in accordance with Section 14.4 below.

14.4 Declaration of Covenants. Conditions and Restrictions. Prior to the transfer of any portion of the Project to a third party, the Developer shall submit a proposed form of Declaration of Covenants, Conditions and Restrictions to be recorded against the applicable subdivision to the City for its review and approval ("CC&RS"). The CC&RS must be recorded prior to issuance of certificates of occupancy, and Developer shall pay City's review costs. It is anticipated that the CC&RS will contain, among other things, protective covenants to protect and preserve the integrity and value in the subdivision, including but not limited to use restrictions, maintenance covenants, EIR mitigation measures, restrictions under this Development Agreement which will continue to apply to the subdivision, covenants for construction and completion of the improvements and a provision giving the City the right to enforce the CC&RS, including the right to recover its enforcement costs if there is noncompliance following notice and the opportunity to cure.

15. RELEASES AND INDEMNITIES.

15.1 The City's Release As To Actions Prior To Effective Date. The City forever discharges, releases and expressly waives as against the Developer and its attorneys and employees any and all claims, liens, demands, causes of action, excuses for nonperformance (including but not limited to claims and/or defenses of unenforceability, lack of consideration, and/or violation of public policy), losses, damages, and liabilities, known or unknown, suspected or unsuspected, liquidated or unliquidated, fixed or contingent, based in contract, tort, or other theories of direct and/or of agency liability (including but not limited to principles of respondent superior) that it has now or has had in the past, arising out of or relating to this Agreement and the development agreement approved in 1993, and the currently existing land use plans for the Developer's Property or any portion thereof.

15.2 The Developer's Release As To Actions Prior To Effective Date. The Developer forever discharges, releases and expressly waives as against the City and its respective councils, boards, commissions, officers, attorneys and employees any and all claims, liens, demands, causes of action, excuses for nonperformance (including but not limited to claims and/or defenses of unenforceability, lack of consideration, and/or violation of public policy), losses, damages, and liabilities, known or unknown, suspected or unsuspected, liquidated or unliquidated, fixed or contingent, based in contract, tort or other theories of direct and/or of agency liability (including but not limited to principles of respondent superior) that they have now or have had in the past, arising out of or relating to this Agreement and the development agreement approved in 1993, and the currently existing land use plans for the Developer's Property or any portion thereof.

15.3 Third-Party Litigation.

15.3.1. Non-liability of City. As set forth above, the City has determined that this Agreement is consistent with the General Plan and that the General Plan and Development Approvals meets all of the legal requirements of State law. The Parties acknowledge that:

A. In the future there may be challenges to legality, validity and adequacy of the General Plan, the Development Approvals and/or this Agreement; and

B. If successful, such challenges could delay or prevent the performance of this Agreement and the development of the Developer's Property.

In addition to the other provisions of this Agreement, including, without limitation, the provisions of this Section 15, the City shall have no liability under this Agreement for any failure of the City to perform under this Agreement or the inability of the Developer to develop the Developer's Property as contemplated by the Development Plan or this Agreement as the result of a judicial determination that on the Effective Date, or at any time thereafter, the General Plan, the Land Use Regulations, the Development Approvals, this Agreement, or portions thereof, are invalid or inadequate or not in compliance with law.

15.3.2. Revision of Land Use Restrictions. If, for any reason, the General Plan, Land Use Regulations, Development Approvals, this Agreement or any part thereof is hereafter judicially determined, as provided above, to not be in compliance with the State or Federal Constitution, laws or regulations and, if such noncompliance can be cured by an appropriate amendment thereof otherwise conforming to the provisions of this Agreement, then this Agreement shall remain in full force and effect to the extent permitted by law. The Development Plan, Development Approvals and this Agreement shall be amended, as necessary, in order to comply with such judicial decision.

15.3.3. Participation in Litigation: Indemnity. The Developer shall indemnify the City and its elected boards, commissions, officers, agents and employees and will hold and save them and each of them harmless from any and all actions, suites, claims, liabilities, losses, damages, penalties, obligations and expenses (including but not limited to attorneys' fees and costs) against the City and/or Agent for any such Claims or Litigation (as defined in Section 1.10) and shall be responsible for any judgment arising therefrom. The City shall provide the Developer with notice of the pendency of such action and shall request that the Developer defend such action. The Developer may utilize the City Attorney's office or use legal counsel of its choosing, but shall reimburse the City for any necessary legal cost incurred by City. The Developer shall provide a deposit in the amount of 150% of the City's estimate, in its sole and absolute discretion, of the cost of litigation, including the cost of any award of attorneys fees, and shall make additional deposits as requested by City to keep the deposit at such level. The City may ask for further security in the form of a deed of trust to land of equivalent value. If the Developer fails to provide or maintain the deposit, the City may abandon the action and the Developer shall pay all costs resulting therefrom and City shall have no liability to the Developer. The Developer's obligation to pay the cost of the action, including judgment, shall extend until judgment. After judgment in a trial court, the parties must mutually agree as to whether any appeal will be taken or defended. The Developer shall have the right, within the first 30 days of the service of the complaint, in its sole and absolute discretion, to determine that it does not want to defend any litigation attacking this Agreement or the Development Approvals in which case the City shall allow the Developer to settle the litigation on whatever terms the Developer determines, in its sole and absolute discretion, but Developer shall confer with City before acting and cannot bind City. In that event, the Developer shall be liable for any costs incurred by the City up to the date of settlement but shall have no further obligation to the City

beyond the payment of those costs. In the event of an appeal, or a settlement offer, the Parties shall confer in good faith as to how to proceed. Notwithstanding the Developer's indemnity for claims and litigation, the City retains the right to settle any litigation brought against it in its sole and absolute discretion and the Developer shall remain liable except as follows: (i) the settlement would reduce the scope of the Project by 10% or more, and (ii) the Developer opposes the settlement. In such case the City may still settle the litigation but shall then be responsible for its own litigation expense but shall bear no other liability to the Developer.

15.4 Hold Harmless: Developer's Construction and Other Activities. The Developer shall defend, save and hold the City and its elected and appointed boards, commissions, officers, agents, and employees harmless from any and all claims, costs (including attorneys' fees) and liability for any damages, personal injury or death, which may arise, directly or indirectly, from the Developer's or the Developer's agents, contractors, subcontractors, agents, or employees' operations under this Agreement, whether such operations be by the Developer or by any of the Developer's agents, contractors or subcontractors or by any one or more persons directly or indirectly employed by or acting as agent for the Developer or any of the Developer's agents, contractors or subcontractors. Nothing herein is intended to make the Developer liable for the acts of the City's officers, employees, agents, contractors of subcontractors.

15.5 Survival of Indemnity Obligations. All indemnity provisions set forth in this Agreement shall survive termination of this Agreement for any reason other than the City's Default.

16. EFFECT OF AGREEMENT ON TITLE.

16.1 Covenant Run with the Land. Subject to the provisions of Sections 14 and 18 and pursuant to the Development Agreement Statute (§ 65868.5):

A. All of the provisions, agreements, rights, powers, standards, terms, covenants and obligations contained in this Agreement shall be binding upon the parties and their respective heirs, successors (by merger, consolidation, or otherwise) and assigns, devisees, administrators, representatives, lessees, and all other persons acquiring any rights or interests in the Developer's Property, or any portion thereof, whether by operation of laws or in any manner whatsoever and shall inure to the benefit of the parties and their respective heirs, successors (by merger, consolidation or otherwise) and assigns;

B. All of the provisions of this Agreement shall be enforceable as equitable servitudes and constitute covenants running with the land pursuant to applicable law; and

C. Each covenant to do or refrain from doing some act on the Developer's Property hereunder (i) is for the benefit of and is a burden upon every portion of the Developer's Property, (ii) runs with such lands, and (iii) is binding upon each party and each successive owner during its ownership of such properties or any portion thereof, and each person having any interest therein derived in any manner through any owner of such lands, or any portion thereof, and each other person succeeding to an interest in such lands.

17. CITY OFFICERS AND EMPLOYEES: NON-DISCRIMINATION.

17.1 Non-liability of City Officers and Employees. No official, agent, contractor, or employee of the City shall be personally liable to the Developer, or any successor in interest, in the event of any default or breach by the City or for any amount which may become due to the Developer or to its successor, or for breach of any obligation of the terms of this Agreement.

17.2 Conflict of Interest. No officer or employee of the City shall have any financial interest, direct or indirect, in this Agreement nor shall any such officer or employee participate in any decision relating to this Agreement which affects the financial interest of any corporation, partnership or association in which he or she is, directly or indirectly, interested, in violation of any state statute or regulation.

17.3 Covenant Against Discrimination. The Developer covenants that, by and for itself, its heirs, executors, assigns, and all persons claiming under or through them, that there shall be no discrimination against or segregation of, any person or group of persons on account of race, color, creed, religion, sex, marital status, national origin, or ancestry in the performance of this Agreement. The Developer shall take affirmative action to insure that employees are treated during employment without regard to their race, color, creed religion, sex, marital status, national origin or ancestry.

18. MORTGAGEE PROTECTION.

18.1 Definitions. As used in this Section, the term "mortgage" shall include any mortgage, whether a leasehold mortgage or otherwise, deed of trust, or other security interest, or sale and lease-back, or any other form of conveyance for financing. The term "holder" shall include the holder of any such mortgage, deed of trust, or other security interest, or the lessor under a lease-back, or the grantee under any other conveyance for financing.

18.2 No Encumbrances Except Mortgages to Finance the Project. Notwithstanding the restrictions on transfer in Section 14, mortgages required for any reasonable method of financing of the construction of the improvements are permitted but only for the following: (i) for the purpose of securing loans of funds used or to be used for financing the acquisition of a separate lot(s) or parcel(s), (ii) for the construction of improvements thereon, in payment of interest and other financing costs, and (iii) for any other expenditures necessary and appropriate to develop the Project under this Agreement, or for restructuring or refinancing any for same. No map permitted herein, even if for financing purposes, shall permit financing for other than purposes of developing the Project solely. The Developer (or any entity permitted to acquire title under this Agreement) shall notify the City in advance of any future mortgage or any extensions or modifications thereof. Any lender which has so notified the City shall not be bound by any amendment, implementation, or modification to this Agreement without such lender giving its prior written consent thereto. In any event, the Developer shall promptly notify the City of any mortgage, encumbrance, or lien that has been created or attached thereto prior to completion of construction, whether by voluntary act of the Developer or otherwise.

18.3 Developer's Breach Not Defeat Mortgage Lien. The Developer's breach of any of the covenants or restrictions contained in this Agreement shall not defeat or render void the lien of any mortgage made in good faith and for value but, unless otherwise provided herein, the terms, conditions, covenants, restrictions, easements, and reservations of this Agreement shall be binding and effective against the holder of any such mortgage whose interest is acquired by foreclosure, trustee's sale or otherwise.

18.4 Holder Not Obligated to Construct or Complete Improvements. The holder of any mortgage shall in no way be obligated by the provisions of this Agreement to construct or complete the improvements or to guarantee such construction or completion. Nothing in this Agreement shall be deemed or construed to permit or authorize any such holder to devote the Project or any portion thereof to any uses, or to construct any improvements thereon, other than those uses or improvements provided for or authorized by this Agreement.

18.5 Notice of Default to Mortgagee. Whenever the City shall deliver any notice or demand to the Developer with respect to any breach or default by the Developer hereunder, the City shall at the same time deliver a copy of such notice or demand to each holder of record of any mortgage who has previously made a written request to the City therefor, or to the representative of such lender as may be identified in such a written request by the lender. No notice of default shall be effective as to the holder unless such notice is given.

18.6 Right to Cure. Each holder (insofar as the rights of City are concerned) shall have the right, at its option, within ninety (90) days after the receipt of the notice, and one hundred twenty (120) days after the Developer's cure rights have expired, whichever is later, to:

A. Obtain possession, if necessary, and to commence and diligently pursue the cure until the same is completed, and

B. Add the cost of said cure to the security interest debt and the lien or obligation on its security interest;

provided that, in the case of a default which cannot with diligence be remedied or cured within such cure periods referenced above in this Section 18.6, such holder shall have additional time as reasonably necessary to remedy or cure such default.

In the event there is more than one such holder, the right to cure or remedy a breach or default of the Developer under this Section shall be exercised by the holder first in priority or as the holders may otherwise agree among themselves, but there shall be only one exercise of such right to cure and remedy a breach or default of the Developer under this Section.

No holder shall undertake or continue the construction or completion of the improvements (beyond the extent necessary to preserve or protect the improvements or construction already made) without first having expressly assumed the Developer's obligations to the City by written agreement satisfactory to City with respect to the Project or any portion thereof in which the holder has an interest. The holder must agree to complete, in the manner required by this Agreement, the improvements to which the lien or title of such holder relates, and submit evidence satisfactory to the City that it has the qualifications and financial responsibility necessary to perform such obligations.

18.7 City's Rights upon Failure of Holder to Complete Improvements. In any case where one hundred eighty (180) days after default by the Developer in completion of construction of improvements under this Agreement, the holder of any mortgage creating a lien or encumbrance upon the Project or portion thereof has not exercised the option to construct afforded in this Section or, if it has exercised such option and has not proceeded diligently with construction, the City may, after ninety (90) days' notice to such holder and if such holder has not exercised such option to construct within said ninety (90) day period, purchase the mortgage, upon payment to the holder of an amount equal to the sum of the following:

A. The unpaid mortgage, debt plus any accrued and unpaid interest (less all appropriate credits, including those resulting from collection and application of rentals and other income received during foreclosure proceedings, if any);

B. All expenses, incurred by the holder with respect to foreclosure, if any;

C. The net expenses (exclusive of general overhead), incurred by the holder as a direct result of the ownership or management of the applicable portion of the Project, such as insurance premiums or real estate taxes, if any;

D. The costs of any improvements made by such holder, if any; and

E. An amount equivalent to the interest that would have accrued on the aggregate of such amounts had all such amounts become part of the mortgage debt and such debt had continued in existence to the date of payment by the City.

If the City has not purchased the mortgage within ninety (90) days of the expiration of the ninety (90) days referred to above, then the right of the City to purchase shall expire.

In the event that the holder does not exercise its option to construct afforded in this Section, and if the City elects not to purchase the mortgage of holder, upon written request by the holder to the City, the City shall use reasonable efforts to assist the holder in selling the holder's interest to a qualified and responsible party or parties (as determined by City), who shall assume the obligations of making or completing the improvements required to be constructed by the Developer, or such other improvements in their stead as shall be satisfactory to the City. The proceeds of such a sale shall be applied first to the holder of those items specified in subparagraphs A through E hereinabove and any balance remaining thereafter shall be applied as follows:

(1) First, to reimburse the City for all costs and expenses actually and reasonably incurred by the City, including, but not limited to, payroll expenses, management expenses, legal expenses, and others;

(2) Second, to reimburse the City for all payments made by City to discharge any other encumbrances or liens on the applicable portion of the Project or to discharge or prevent from attaching or being made any subsequent encumbrances or liens due to obligations, defaults, or acts of the Developer, its successors or transferees;

(3) Third, to reimburse the City for all costs and expenses actually and reasonably incurred by the City, in connection with its efforts assisting the holder in selling the holder's interest in accordance with this Section; and

(4) Fourth, any balance remaining thereafter shall be paid to the Developer.

18.8 Right of City to Cure Mortgage Default. In the event of a default or breach by the Developer (or entity permitted to acquire title under this Section) prior to completion of the Project or the applicable portion thereof, and the holder of any such mortgage has not exercised its option to complete the development, the City may cure the default prior to completion of any foreclosure. In such event, the City shall be entitled to reimbursement from the Developer or other entity of all costs and expenses incurred by the City in curing the default, to the extent permitted by law, as if such holder initiated such claim for reimbursement, including legal costs and attorneys' fees, which right of reimbursement shall be secured by a lien upon the applicable portion of the Project to the extent of such costs and disbursements. Any such lien shall be subject to:

A. Any Mortgage; and

B. Any rights or interests provided in this Agreement for the protection of the holders of such Mortgages;

provided that nothing herein shall be deemed to impose upon the City any affirmative obligations (by the payment of money, construction or otherwise) with respect to the Project in the event of its enforcement of its lien.

18.9 Right of the City to Satisfy Other Liens on the Developer's Property After Conveyance of Title. After the conveyance of title and prior to completion of construction and development, and after the Developer has had a reasonable time to challenge, cure, or satisfy any liens or encumbrances on the Project, the City shall have the right to satisfy any such liens or encumbrances; provided, however, that nothing in this Agreement shall require the Developer to pay or make provision for the payment of any tax, assessment, lien or charge so long as the Developer in good faith shall contest the validity or amount thereof, and so long as such delay in payment shall not subject the Project or any portion thereof to forfeiture or sale.

19. MISCELLANOUS.

19.1 Estoppel Certificates. Either Party (or a Mortgagee under Section 18) may at any time deliver written notice to the other Party requesting an Estoppel Certificate stating:

A. The Agreement is in full force and effect and is a binding obligation of the Parties;

B. The Agreement has not been amended or modified either orally or in writing or, if so amended, identifying the amendments; and

C. There are no existing defaults under the Agreement to the actual knowledge of the party signing the Estoppel Certificate.

A Party receiving a request for an Estoppel Certificate shall provide a signed certificate to the requesting Party within thirty (30) days after receipt of the request. The Planning Director may sign Estoppel Certificates on behalf of the City. An Estoppel Certificate may be relied on by assignees and Mortgagees. The Estoppel Certificate shall be substantially in the same form as Exhibit "C."

19.2 Force Majeure. The time within which the Developer or the City shall be required to perform any act under this Agreement shall be extended by a period of time equal to the number of days during which performance of such act is delayed due to war, insurrection, strikes, lock-outs, riots, floods, earthquakes, fires, casualties, natural disasters, acts of God, acts of the public enemy, epidemics, quarantine restrictions, freight embargoes, governmental restrictions on priority, initiative or referendum, moratoria, processing with governmental agencies other than the City, unusually severe weather, third party litigation as described in Section 15.3 above, or any other similar causes beyond the control or without the fault of the Party claiming an extension of time to perform. An extension of time for any such cause shall be for the period of the enforced delay and shall commence to run from the time of the commencement of the cause, if written notice by the party claiming such extension is sent to the other Party within thirty (30) days of knowledge of the commencement of the cause. Any act or failure to act on the part of a Party shall not excuse performance by that Party.

19.3 Interpretation.

19.3.1. Construction of Development Agreement. The language of this Agreement shall be construed as a whole and given its fair meaning. The captions of the sections and subsections are for convenience only and shall not influence construction. This Agreement shall be governed by the laws of the State of California. This Agreement shall not be deemed to constitute the surrender or abrogation of the City's governmental powers over the Developer's Property.

19.3.2. Entire Agreement. This Agreement constitutes the entire agreement between the Parties with respect to the subject matter of this Agreement and this Agreement supersedes all previous negotiations, discussions, and agreements between the Parties. No parol evidence of any prior or other agreement shall be permitted to contradict or vary the terms of this Agreement.

19.3.3. Recitals. The recitals in this Agreement constitute part of this Agreement and each Party shall be entitled to rely on the truth and accuracy of each recital as an inducement to enter into this Agreement.

19.3.4. Mutual Covenants. The covenants contained herein are mutual covenants and also constitute conditions to the concurrent or subsequent performance by the Party benefitted thereby of the covenants to be performed hereunder by such benefitted Party.

19.4 Severability. If any provision of this Agreement is adjudged invalid, void or unenforceable, that provision shall not affect, impair, or invalidate any other provision, unless such judgment affects a material part of this Agreement in which case the parties shall comply with the procedures set forth in Section 15.3.3 above.

19.5 Joint and Several Obligations. All obligations and liabilities of the Developer hereunder shall be joint and several among the obligees.

19.6 No Third Party Beneficiaries. The only Parties to this Agreement are the Developer and the City and their successor and assigns. There are no third party beneficiaries and this Agreement is not intended, and shall not be construed, to benefit or be enforceable by any other person whatsoever.

19.7 Notice.

19.7.1. To Developer. Any notice required or permitted to be given by the City to the the Developer under this Development Agreement shall be in writing and delivered personally to the Developer or mailed, with postage fully prepaid, registered or certified mail, return receipt requested, addressed as follows:

Pardee Homes.
10880 Wilshire Boulevard, Suite 1900
Los Angeles, CA 90024
Attention: Legal department

With a copy to:

Kenneth B. Bley, Esq.
Cox, Castle & Nicholson LLP
2049 Century Park East, 28th Floor
Los Angeles, CA 90067-3284

or such other address as the Developer may designate in writing to the City.

19.7.2. To the City. Any notice required or permitted to be given by the Developer to the City under this Development Agreement shall be in writing and delivered personally to the City Clerk or mailed with postage fully prepaid, registered or certified mail, return receipt requested, addressed as follows:

City of Banning
99 E. Ramsey Street
Banning, CA 92220
Attention: Planning Director

With a copy to:

David J. Aleshire, Esq., City Attorney
Aleshire & Wynder, LLP
18881 Von Karman Avenue, Suite 400
Irvine, California 92612

or such other address as the City may designate in writing to the Developer.

Notices provided pursuant to this Section shall be deemed received at the date of delivery as shown on the affidavit of personal service or the Postal Service receipt.

19.8 Relationship of Parties. It is specifically understood and acknowledged by the Parties that the Project is a private development, that neither Party is acting as the agent of the other in any respect hereunder, and that each Party is an independent contracting entity with respect to the terms, covenants, and conditions contained in this Agreement. The only relationship between the City and the Developer is that of a government entity regulating the development of private property and the owner of such private property.

19.9 Attorney's Fees. If either Party to this Agreement is required to initiate or defend litigation against the other Party, the prevailing party in such action or proceeding, in addition to any other relief which may be granted, whether legal or equitable, shall be entitled to reasonable attorney's fees. Attorney's fees shall include attorney's fees on any appeal, and, in addition, a Party entitled to attorney's fees shall be entitled to all other reasonable costs for investigating such action, taking depositions and discovery and all other necessary costs the court allows which are incurred in such litigation. All such fees shall be deemed to have accrued on commencement of such action and shall be enforceable whether or not such action is prosecuted to a final judgment.

19.10 Further Actions and Instruments. Each of the Parties shall cooperate with and provide reasonable assistance to the other to the extent necessary to implement this Agreement. Upon the request of either Party at any time, the other Party shall promptly execute, with acknowledgment or affidavit if reasonably required, and file or record such required instruments and writings and take any actions as may be reasonably necessary to implement this Agreement or to evidence or consummate the transactions contemplated by this Agreement.

19.11 Time of Essence. Time is of the essence in:

A. The performance of the provisions of this Agreement as to which time is an element; and

B. The resolution of any dispute which may arise concerning the obligations of the Developer and the City as set forth in this Agreement.

19.12 Waiver. Failure by a Party to insist upon the strict performance of any of the provisions of this Agreement by the other Party, or the failure by a Party to exercise its rights upon the default of the other Party, shall not constitute a waiver of such Party's right to insist and demand strict compliance by the other Party with the terms of this Agreement thereafter.

19.13 Execution.

19.13.1. Counterparts. This Agreement may be executed by the parties in counterparts which counterparts shall be construed together and have the same effect as if all of the Parties had executed the same instrument.

19.13.2. Recording. The City Clerk shall cause a copy of this Agreement to be executed by the City and recorded in the Official Records of Riverside County

no later than ten (10) days after the Effective Date (Gov't Code § 65868.5). The recordation of this Agreement is deemed a ministerial act and the failure of the City to record the Agreement as required by this Section and the Development Agreement Statute does not make this Agreement void or ineffective.

19.13.3. Authority to Execute. The persons executing this Agreement on behalf of the Parties hereto warrant that (i) such Party is duly organized and existing, (ii) they are duly authorized to sign and deliver this Agreement on behalf of the Party he or she represents, (iii) by so executing this Agreement, such Party is formally bound to the provisions of this Agreement, (iv) the entering into of this Agreement does not violate any provision of any other Agreement to which the Party is bound and (v) there is no litigation or legal proceeding which would prevent the Parties from entering into this Agreement.

(SIGNATURES ON THE NEXT PAGE.)

IN WITNESS WHEREOF, the City and the Developer have executed this Agreement on the date first above written.

** Fee shall be revised annually based on the average percentage change over the previous calender year set forth in the Construction Price Index for the Los Angeles metropolitan area.*

EXHIBIT "E"
ADDITIONAL AGREEMENTS CONCERNING DEVELOPMENT

In addition to the other terms and conditions concerning the City's assistance to the Project, the City shall accommodate and expedite the development of the Developer's Property as follows:

1.0 CONSTRUCTION CONDITIONS

1.1 Provision of Utility Connections. The City shall provide, at the Developer's expense, any necessary temporary and permanent utility connections requested by the Developer for power, water service and sewer service prior to recordation of final map.

1.2 Allowance of Transformers. The City shall allow the setting of transformers without requiring adjacent streets to be fully paved. It is anticipated that 6' feet of curb and gutter will be placed adjacent to the transformer to ensure correct elevation of the transformer pad. In the event that the location or elevation change, the Developer shall incur the full costs of relocation of both the curb and transformer.

1.3 Temporary Water Pipes. Temporary above ground pipes for construction water and temporary fire hydrants will be acceptable for model and production homes prior to the first certificate of occupancy in the construction phase being developed.

1.4 Provision of Construction Water. The City shall provide "jumpers" or temporary construction water at the City's normal rate.

1.5 Temporary Use of City Sewer System. The City shall allow the temporary connection of construction trailers to the permanent City sewer system.

1.6 Temporary Use of City Water System. The City shall allow temporary connection of construction trailers to the permanent City water system, provided that all required backflow devices are installed to protect the integrity of the system.

2.0 MAINTAINENCE

2.1 Maintenance of Construction Activities. The Developer shall contract directly for all work required for the maintenance of construction related activities, including but not limited to recycling of construction materials, erosion control, temporary fence installation, and temporary power installation. The selection and retention of the contractor, subcontractor or other person or entity to do such work shall be made by the Developer in its sole and absolute discretion. Trash removal will be coordinated directly with City franchisee. In regards to recycled materials, the Developer will produce for the City, at its request, a manifest to confirm the location, type and amount of materials recycled.

3.0 STREETS

3.1 Timing of Street Paving. The Developer shall be allowed to begin construction of model and production homes without first paving streets. Paved streets shall be required as a condition for the issuance of the certificate of occupancy for the first production home in each construction phase. The Developer shall install all-weather access for construction and emergency personnel, which, during dry months, may, include maintained dirt roads.

3.1 Final Lift of Pavement. The City shall allow the installation of the final 1" of asphalt pavement through coordination with the Developer and the City's Public Works officials. If the final 1" of pavement is installed early in the Development of specific in-tract or on backbone streets, and if no structural failures have occurred within the street system, the City may require a fog coat seal prior to exoneration of any outstanding bonds.

4.0 GRADING/DRAINAGE

4.1 At Risk Grading. After the first plan check comments on either the rough or mass grading plans are received by the Developer, the City shall allow the Developer to begin grading operations for the area that is the subject of the plan check. The Developer acknowledges that any changes that may be required by the City will be made at the sole expense of the Developer.

4.2 Erosion Control. The Developer shall Develop the Developer's Property in such a way as to confine all storm water within the Project and shall, do so in a manner which adequately protects all construction within the Project. The Developer shall prepare an erosion control plan that will demonstrate methods that may be incorporated in the Development of the Project to protect downstream watersheds. The Developer shall manage and determine when erosion control measures need to be installed and maintained, but Developer shall comply with any order of City.

4.3 Drainage. Reverse lot drainage on lots that back up to open space, the Golf Course or parks shall be allowed provided that these areas are privately maintained by the Property Owners Association.

5.0 DEVELOPMENT CONDITIONS

5.1 Lot Line Adjustments. In the event that lot line adjustments are required for model complexes or adjustments to open space lots after the recordation of a final map, the City shall review the requested adjustment over the counter with City Engineering staff and the Developer or the Developer's representative. This will not be allowed for the construction of regular production homes.

5.2 Rear Residential Slopes. The Developer shall stabilize according to the City Grading and Landscape Ordinance the rear slope of all residential Lots prior to issuance of a Certificate of Occupancy but shall not be required to landscape and/or irrigate the slopes. It is the intention that rear yard landscaping will be required and installed within the time specified in the CCC & R's by the homeowner.

5.3 Use of Joint Trenches. The City shall allow the Developer, to utilize joint trenches if it deems it necessary for Internet capabilities and/or telecommunication purposes.

5.4 Curbs. The construction of wedge, rolled curb, or mountable curbs within residential and multifamily zoned Planning Areas shall be permitted at the Developer's sole and absolute discretion.

6.0 GOLF COURSE

6.1 Golf Course/Active Open Space Drainage Facilities. It is the Developer's intention that the flood control facilities proposed within this area will be constructed consistent with all applicable design standards for such facilities with their maintenance being the responsibility of the either the POA, the operator of the Golf Course, the Developer or the City and not the responsibility of the Riverside County Flood Control District (the "RCFCD") unless the facility has been identified as a Drainage Master Plan Facility by RCFCD.

6.2 Golf Course Water. The financial viability of the Golf Course will be dependent upon the costs to operate and maintain the Golf Course. The City shall provide water to the Project at a per unit rate not to exceed the cost highest tiered rate for irrigation water for the Golf Course for the Term of this Agreement.

7.0 PERMITTING

7.1 Fire Sprinkler Inspections. The City's Building and Safety Division shall serve as Special Fire Marshall for this project. Building and Safety shall be responsible for enforcing the then applicable provisions of the California Fire Code, and the California Building Standards Codes.

7.2 Bond Exoneration. Upon request by the Developer, the City shall generate a one-time punch list of items required for the full or partial exoneration of all Project-related improvement bonds, for improvements both within and outside of the Property. The City shall, within 5 days of receipt of a written request from the Developer, provide an inspector to determine if the punch list items have been corrected. Once it has been determined that they have been corrected, the City shall expeditiously exonerate the bonds, partially or fully, as applicable. No additional punch lists shall be generated once an improvement has been inspected and a punch list generated.

7.3 Building Permit Refunds. If a Building Permit has expired without construction having started on the structure for which the Building Permit was issued, the Developer shall be entitled to a refund of the building permit fee less 20% for an administrative fee. No refund will be provided if the request for the refund has not been provided to the City within 30 days of the Building Permit's expiration.

8.0 PREVAILING WAGES

The Developer shall pay prevailing wages in connection with the construction of the Project as required by law. To the extent that it is determined that Developer has not paid, or does not pay, prevailing wages required by law for any portion of the Project, Developer shall defend and hold the City harmless from and against any and all increase in construction costs, or other liability, loss, damage, costs, or expenses (including reasonable attorneys' fees and court costs) arising from or as a result of any action or determination that the Developer failed to pay prevailing wages in connection with the construction of the Project.

Developer acknowledges and agrees that should any third party, including but not limited to the Director of the Department of Industrial Relations ("DIR"), require Developer or any of its contractors or subcontractors to pay the general prevailing wage rates of per diem wages and overtime and holiday wages determined by the Director of the DIR under Prevailing Wage Law, then Developer shall indemnify, defend, and hold City harmless from any such determinations, or actions (whether legal, equitable, or administrative in nature) or other proceedings, and shall assume all obligations and liabilities for the payment of such wages and for compliance with the provisions of the Prevailing Wage Law. The City makes no representation that any construction or Site uses to be undertaken by Developer are or are not subject to Prevailing Wage Law.

9.0 COST OF DEVELOPMENT AGREEMENT

Developer has previously deposited approximately $200,000 with the City to pay all the City's outside consulting costs, costs of the environmental and legal review, and costs to process and obtain the Development Approvals, including this Agreement. As of March 1, such costs in aggregate exceed the amount deposited by $20,000, and additional costs are anticipated by the end of the approval process. Accordingly, before this Development Agreement shall be executed by the City, the Finance Director shall prepare a final written statement of costs incurred by City in the processing and approval of the Project, and Developer shall pay such amount in good money to City.

BUTTERFIELD PROJECT FINANCING PLAN

This Financing Plan sets forth the basic terms and conditions pursuant to which City and Developer will cooperate to establish one or more CFD(s) and designate Improvement Areas therein pursuant to the CFD Act to finance the Eligible Facilities in connection with the Project and to levy the Services Special Tax. Capitalized terms not otherwise defined in this Financing Plan shall be defined as provided in the Development Agreement.

1. Goals and Policies for Financing. The City will adopt general Goals and Policies for establishing CFDs. The Goals and Polices for Financing shall apply on a City-wide basis and may be amended from time to time. This Financing Plan shall be consistent with the City's Goals and Policies for Financing. The principal objectives of this Financing Plan are to:

a. Provide City and Developer reasonable certainty that each CFD will be established in accordance with the Goals and Policies and this Financing Plan.

b. Provide basic parameters for the levy of (i) the Facilities Special Tax (defined below) within each CFD or Improvement Area to pay directly for Eligible Facilities and to secure the issuance of bonds of each CFD or Improvement Area secured by and payable from the Facilities Special Tax in order to finance the Eligible Facilities ("**Bonds**") and (ii) the Services Special Tax.

c. Provide basic parameters for the issuance of Bonds by or for the CFD(s) and any Improvement Areas therein.

2. Formation. City shall initiate proceedings to establish a CFD, upon Developer's petition request pursuant to the CFD Act and submittal of City's standard application form and receipt of an advance from Developer in an amount determined by City to pay for City's estimated costs to be incurred in undertaking the proceedings to establish the CFD ("Formation Proceeding Costs"). City agrees that all such advances for Formation Proceedings Costs so long as the costs re reasonable and not due to the actions of developer, incurred in connection with the formation of such CFD shall be eligible for reimbursement out of the first available proceeds of Surplus Special Taxes (defined below) and Bonds of the CFD and/or Facilities Special Taxes to the extent approved by the City's Bond Counsel ("CFD Proceeds"). The exact terms and conditions for the advance of funds by Developer and the reimbursement of such advances shall be memorialized in a separate agreement between City and Developer. City agrees to use its best efforts to complete the proceedings to form each CFD and record the notice of special tax lien for the CFD and each Improvement Area therein within 210 days after City's receipt of Developer's complete application and deposit.

3. Boundaries. The CFD boundary, or the boundaries of all CFDs if more than one is formed, shall encompass the Project. Each CFD may contain multiple Improvement Areas based on phasing of the Project within the CFD.

4. Eligible Public Facilities and Discrete Components. Subject to the City's adopted Goals and Policies for Financing, and review by Bond Counsel, conditions set forth in the following paragraph, City may authorize the CFDs to finance the acquisition or construction of the Eligible Facilities, which may include the following:

a. public streets and other related improvements within the public right-of-way

b. water facilities

c. storm drain facilities

d. sewer facilities

e. public parks, open space and landscaping

f. electrical facilities to be extent reasonable

g. any public facility to be constructed by City for which Developer is required to make a cash contribution pursuant to the Project's conditions of approval or this Agreement or which is included in any City capital improvement fee program and which public facility is to be owned by the City, subject to credit against the corresponding fee.

The costs of any Eligible Facility to be constructed by Developer that are eligible to be financed with CFD Proceeds ("**Actual Costs**") shall include the following if permissible under the Act:

(i) The actual hard costs for the construction or the value of the Proposed Eligible Facility, including labor, materials and equipment costs;

(ii) The costs of grading related to the Eligible Facility;

(iii) The costs incurred in designing, engineering and preparing the plans and specifications for the Eligible Facility;

(iv) The costs of environmental evaluation and mitigation of or relating to the Eligible Facility;

(v) Fees paid to governmental agencies for, and costs incurred in connection with, obtaining permits, licenses or other governmental approvals for the Eligible Facility;

(vi) Costs of construction administration and supervision;

(vii) Professional costs associated with the Eligible Facility, such as engineering, legal, accounting, inspection, construction staking, materials and testing and similar professional services; and

(viii) Costs of payment, performance and/or maintenance bonds and insurance costs directly related to the construction of the Eligible Facility.

(ix) Any other costs permitted by law.

The Eligible Facilities constructed by Developer, and for which Developer elects to submit payment requests, shall be bid, contracted for and constructed in accordance with the Acquisition Agreement to be entered into between City and Developer at the time of formation of the first CFD. The Acquisition Agreement shall provide additional detail, consistent with the provisions of the Goals and Polices for Financing and this Development Agreement, with respect to the acquisition and construction of the Eligible Facilities, including a more detailed description of the specific Eligible Facilities that will be eligible to be financed through the CFD and discrete components of each Eligible Facility that may be reimbursed prior to the completion of the entire Eligible Facility. The Acquisition Agreement will also provide additional detail with respect to the financing of the City's construction of Eligible Facilities in satisfaction of corresponding City capital improvement fees, as elected by Developer. The CFD financing of the acquisition of an Eligible Facility constructed by Developer that is included in a City Capital improvement fee program or required by the Project conditions of approval, shall not preclude the Developer's receipt of corresponding fee credits.

5. Financing Parameters. Each CFD shall be authorized to levy Facilities Special Taxes of each Improvement Area and issue Bonds of each CFD or Improvement Area in one or more series to finance the Eligible Facilities in accordance with the basic parameters set forth below:

a. A precondition to the issuance of Bonds shall be that the value of the real property subject to Facilities Special Taxes required to repay the Bonds shall be at least three times the amount of the Bonds.

b. Each series of Bonds shall have a term of at least thirty (30) years and include escalating annual debt service commensurate with any annual escalation in the Facilities Special Taxes.

c. The total effective tax rate within each Improvement Area applicable to any residential parcel on which a residential dwelling has or is to be constructed, taking into account all ad valorem property taxes, voter-approved ad valorem property taxes in excess of one percent (1%) of assessed value, the annual special taxes of existing community facilities districts and community facilities districts under consideration and reasonably expected to be established (but excluding the Services Special Tax), the annual assessments (including any administrative surcharge) of existing assessment districts and assessment districts under consideration and reasonably expected to be established (but excluding assessments for maintenance and services), and the Facilities Special Taxes, shall equal two percent (2.00%) of the projected initial sales price of the residential dwelling unit and such parcel, as estimated at the time of formation of the applicable CFD, or such lesser amount requested by Developer. The Facilities Special Taxes may escalate by up to 2% per year.

CITY OF BANNING
STAFF REPORT

TO:	**CITY COUNCIL**
FROM:	**Douglas Schulze, City Manager**
PREPARED BY:	**Lincoln Bogard, Administrative Services Director** **Doug Schulze, City Manager**
MEETING DATE:	**July 9, 2024**
SUBJECT:	**City Attorney Annual Consumer Price Index (CPI) Adjustment**

RECOMMENDATION:

A motion approving annual rate increase in excess of 3% for Legal Services Agreement with Richards, Watson & Gershon.

BACKGROUND:

The Legal Services Agreement between the City of Banning and Richards, Watson & Gershon dated October 10, 2017 provides for annual rate increases beginning July 1, 2019 based on the percentage change in the Consumer Price Index. Attached letter from City Attorney Serita Young provides details regarding the Legal Services Agreement.

JUSTIFICATION:

Required by contract.

FISCAL IMPACT:

Agreement requires City Council approval for increases in excess of 4.26%. CPI for the Riverside-San Bernardino-Ontario region from March 2023 to March 2024 was 4.3%.The fiscal impact of this rate increase will depend on the actual hours billed for legal services during the period of July 1, 2024 – June 30, 2025.

ALTERNATIVES:

Do not approve and potentially breach contract with City Attorney.

Re: Annual CPI Adjustment in City Attorney Contract Rates Effective July 1, 2024 that requires City Council Approval

Dear Doug:

As you may know, the Legal Services Agreement between the City of Banning and Richards, Watson & Gershon dated October 10, 2017 ("Agreement") provides for annual rate increases beginning July 1, 2019 based on the percentage change in the Consumer Price Index. Specifically, Section 5A and 5B of the Agreement provides as follows:

> 5A. Compensation Rates. RWG shall be compensated for the performance of legal services in accordance with the Compensation Rate Schedule for the City ("Compensation Rate Schedule"), attached to this Agreement as Exhibit A and incorporated herein as though set forth in full. The terms of this Agreement and the Compensation Rate Schedule shall apply to legal services performed for entities affiliated with the City that may be established. Except as provided in paragraph B of this Section, the Compensation Rate Schedule, attached as Exhibit A, shall remain in effect until amended by mutual agreement of the parties.
>
> 5B. Adjustment in Rates by Change in CPI. Commencing July 1, 2019, and annually thereafter, the hourly rates set forth on Exhibit A shall automatically increase by the percentage change in the Consumer Price Index (All Urban Consumers; Los Angeles-Riverside-Orange County). The calculation shall be made using the month of April over the month of April in the prior year. Any such annual adjustment that equals or exceeds three percent (3%), and any other adjustments in the rates, shall require prior written approval of the City Council.

As you may know, in 2018 the United States Bureau of Labor Statistics eliminated the Los Angeles-Anaheim-Riverside Consumer Price Index and replaced it with the Riverside-San Bernardino-Ontario Index. We have used the Riverside-San Bernardino-Ontario Index for purposes of this year's rate adjustment.

Based on the foregoing, our office prepared a spreadsheet to determine the change in the Consumer Price Index (All Urban consumers for the Riverside-San Bernardino-Ontario region) over the applicable time period (March 2022 to March 2023). A copy of the spreadsheet is attached as **Attachment A**.

That spreadsheet shows the CPI changed **4.26%** over the applicable time period. As it is more than three percent (3%), the adjustment in rates by 4.26% is not automatic and does require City Council approval. After applying a 4.26% increase to our existing rates, the old rates (up to June 30, 2023) and the new rates (effective July 1, 2023) are shown on the revised version of Exhibit A to the Agreement attached hereto as **Attachment B**.

Upon your review, please place this request on an upcoming City Council agenda so that the City Council may consider and approve our request for that CPI adjustment to our rates.

Please let me know if you have any questions, or need any clarification or assistance from me in my private capacity.

Very truly yours,

Serita R. Young

Revised Exhibit A to Legal Services Agreement

EXHIBIT A

RICHARDS, WATSON & GERSHON
COMPENSATION RATE SCHEDULE CITY OF BANNING EFFECTIVE
JULY 1, 2024

General Municipal Services. This work consists of providing legal advice on municipal law matters, attendance at City Council and Commission meetings, workshops, staff meetings, preparation of routine ordinances and resolutions, and review and approval of standard agreements, and other services described in Section 2 of the Legal Services Agreement that are not listed under other categories of this Exhibit. The hourly rates for this work are:

	7/1/23	**7/1/24**
Shareholder Rate	$220	$229
Senior Attorney Rate	$220	$229
Associate Rate	$220	$229

The term "Senior Attorney" means a non-shareholder attorney with more than seven years of experience practicing law.

Tort Defense Litigation. Defense or prosecution of personal injury, death or property damage litigation based on alleged negligence or dangerous conditions of public property. The hourly rates for this work are:

	7/1/23	**7/1/24**
Shareholder Rate	$306	$319
Senior Attorney Rate	$275	$287
Associate Rate	Per Schedule	Per Schedule

General Litigation. All litigation services except litigation services specifically described elsewhere in this Exhibit, and including (without limitation), defense or prosecution of writs of mandate, injunctions, breach of contract, inverse condemnation, eminent domain, election proceedings, administrative proceedings, land use and personnel. The hourly rates for this work are:

	7/1/23	**7/1/24**
Shareholder Rate	$362	$377
Senior Attorney Rate	$336	$350
Associate Rate	Per Schedule	Per Schedule

Code Enforcement. Litigation initiated by the City to enforce the Banning Municipal Code or other State or local laws or regulations. The hourly rates for this work are:

	7/1/23	**7/1/24**
All attorneys blended rate	$245	$255

Land Use Projects. Advice concerning subdivision map applications, specific plan applications, zoning map and text applications, the drafting and negotiation of all development agreements, drafting and negotiation of land use entitlements for significant land use projects, specialized advice and representation on general plan, housing and zoning issues, and other related specialized legal advice and counsel, excluding land use litigation. The hourly rates for this work are:

	7/1/23	**7/1/24**
Shareholder Rate	$336	$350
Senior Attorney Rate	$306	$319
Associate Rate	Per Schedule	Per Schedule

Personnel and Labor Relations. Advice concerning employee hiring and termination, compensation and benefits, drafting, negotiating and amending employment agreements, labor negotiations, City internal administrative hearings relating to personnel and labor matters and advice compliance with City personnel policies, including but not limited to sexual harassment, excluding personnel litigation. The hourly rates for this work are:

	7/1/23	**7/1/24**
Shareholder Rate	$306	$319
Senior Attorney Rate	$275	$287
Associate Rate	Per Schedule	Per Schedule

Environmental. Legal work concerning state and federal hazardous waste laws, including CERCLA and NPDES, compliance audits, appearance before state and federal agencies concerning enforcement actions or permit applications, and litigation relating to such issues. The hourly rates for this work are:

	7/1/23	**7/1/24**
Shareholder Rate	$336	$350
Senior Attorney Rate	$306	$319
Associate Rate	Per Schedule	Per Schedule

Other Legal Services Outside of Section 2 or the Categories in this Exhibit. Legal services in specialized areas of the law, such as annexations and reorganizations, water rights, etc.

	7/1/23	**7/1/24**
Shareholder Rate	$336	$350
Senior Attorney Rate	$306	$319
Associate Rate	Per Schedule	Per Schedule

Schedule of Associate Rates:

	7/1/23	**7/1/24**
Third Year to Seventh Year Associates	$251	$262
First and Second Year Associates	$227	$237

Associate rates change annually based on Bar admission date.

Paralegal Rate:

	7/1/23	**7/1/24**
Paralegal Rate	$184	$192

Bond Counsel, Disclosure Counsel and Issuer Counsel Services.

RWG shall provide bond counsel, disclosure counsel and issuer counsel services in connection with the issuance of bonds or other securities by the City, the Successor Agency of the Former Banning Redevelopment Agency ("Agency"), any separate governmental entity formed by the City or governed by the members of the City Council, or a joint powers authority formed by the City. The compensation for those services shall be as follows:

(a) RWG shall charge $377.00 per hour for any of these services. The maximum total fee charged for an issuance shall not exceed an amount that the City Manager deems fair and reasonable based upon generally accepted industry standards and practices.

(b) RWG's costs and expenses would be paid in accordance with Paragraph C of Section 5 of the Agreement.

(c) In the event the proceedings for issuance of the bonds are terminated before closing, we would expect to be paid for our services to the date of abandonment at the hourly rate set forth above, but the amount of that payment would be subject to reduction at the sole discretion of the City Manager.

(d) In the event the City or Agency forms or is a member of a joint powers authority which has the power to issue bonds or other securities, RWG shall provide bond counsel, disclosure counsel and issuer counsel services to the joint powers authority in connection with the issuance of bonds or other securities, if and when requested by the joint powers authority, which for purposes of this Agreement shall be an Authority. The compensation for services in connection with service to the joint powers authority shall be as specified in subsections (a), (b) and (c) of this section of this Exhibit unless there is a separate contract or agreement with the joint powers authority that provides a fee schedule or rate.

CITY OF BANNING
STAFF REPORT

TO:	**CITY COUNCIL**
FROM:	**Douglas Schulze, City Manager**
PREPARED BY:	**Lincoln Bogard, Administrative Services Director**
MEETING DATE:	**July 9, 2024**
SUBJECT:	**Consideration of Resolution 2024-126, Declaring the Intent of the City to be Reimbursed for Certain Capital Expenditures from the Proceeds of Indebtedness**

RECOMMENDATION:

Approve Resolution 2024-126.

BACKGROUND:

The City recently undertook electric system improvement projects that are essential for it to deliver efficient and safe service to the community. To incur obligations that are tax-exempt, which provides the lowest cost of borrowing to the City, the City needs to comply with certain IRS requirements. The IRS allows a bond issuer to use the proceeds of its bond issuance to reimburse expenditures made prior to the time bonds are issued, but only so long as the City expresses an intent to do so prior to the actual issuance.

JUSTIFICATION:

A reimbursement resolution is the required expression of intent and is needed if the City will want to use proceeds of tax-exempt obligations to reimburse itself for costs it actually pays prior to the issuance of the obligations. It then can use the tax-exempt proceeds to reimburse itself for costs of the project paid up to 60 days prior to the date the resolution is adopted, subject to certain limitations, the main one being: reimbursement (bond issuance) must occur not later than 18 months after the later of (i) the date on which the expenditure is paid, or (ii) the date on which the project is placed in service, but in no event more than 3 years after the expenditure was paid. No reimbursement resolution is required for reimbursement of soft costs (with a 20% limit for soft costs older than 60 days prior to the resolution).

FISCAL IMPACT:

This would allow the City to help bring the cash balance in electric back to, or near, a positive balance. The repayment over the bond term, potentially 20 years, will help keep rate increases to a minimum. Rather than user fees alone bringing cash to the minimum Council set reserve level of $11 million over saw five years, that burden could be spread over up to a 20 year period and coincide better with the long-term asset lives.

ALTERNATIVES:

In order to reimburse from proceeds of the proposed tax-exempt obligations, the City has been advised by its municipal advisor that the City Council should adopt a resolution indicating the City's intent to so reimburse. The proposed resolution meets the IRS requirement enabling the reimbursement for prior expenditures. There is no consequence to the City if the obligations are ultimately not issued.

ATTACHMENTS:

1. Resolution 2024-126, Indebtedness.docx

RESOLUTION 2024-126

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF BANNING, CALIFORNIA, DECLARING THE INTENT OF THE CITY TO BE REIMBURSED FOR CERTAIN CAPITAL EXPENDITURES FROM THE PROCEEDS OF INDEBTEDNESS

WHEREAS, the City of Banning (the “City”) intends to construct and install improvements to its electric system that maintains and facilitates the City performing an essential governmental function (the "Project"); and

WHEREAS, the City will pay certain Capital Expenditures in connection with the Project (the "Expenditures") prior to the issuance of one or more series of tax-exempt obligations in the expected principal amount of up to $20.0 million (the "Indebtedness") for the purpose of financing costs associated with the Project; and

WHEREAS, the City reasonably expects that certain of the proceeds of the Indebtedness will be used to reimburse the City for the Expenditures; and

WHEREAS, Section 1.150-2 of the Treasury Regulations requires the City to declare its reasonable official intent to be reimbursed for prior Capital Expenditures made for the Project with proceeds of a subsequent borrowing.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Banning as follows:

SECTION 1. This declaration is made solely for purpose of establishing compliance with the requirements of Section 1.150-2 of the Treasury Regulations and does not bind the City to make any expenditure, incur any indebtedness, or proceed with the Project.

SECTION 2. The City declares its official intent to use proceeds of the Indebtedness to reimburse itself for Expenditures made on or after the date which is no more than 60 days prior to the date of adoption of this Resolution.

SECTION 3. The City will make a reimbursement allocation, which is a written allocation by the City that evidences the City's use of proceeds of the Indebtedness to reimburse itself for an Expenditure, no later than eighteen (18) months after the later of the date on which the expenditure is paid or the Project is placed in service or abandoned, but in no event more than three years after the date on which the Expenditure is paid.

SECTION 4. The City recognizes that exceptions are also available under the Treasury Regulations for certain "preliminary expenditures," costs of issuance, certain de minimis amounts, expenditures by "small issuers" (based on the year of issuance and not the year of expenditure) and expenditures for construction projects of at least five (5) years.

SECTION 5. The City Clerk shall certify to the adoption of this resolution and shall cause a certified resolution to be filed in the book of original resolutions.

PASSED, APPROVED AND ADOPTED this 09th day of July 2024.

Alberto Sanchez, Mayor
City of Banning

CITY OF BANNING
STAFF REPORT

TO:	**CITY COUNCIL**
FROM:	**Douglas Schulze, City Manager**
PREPARED BY:	**Brandon Smith, Lieutenant** **Derek Thesier, Acting Chief of Police**
MEETING DATE:	**July 9, 2024**
SUBJECT:	**Consideration of Resolution 2024-127, Approving the purchase of a 2024 Chevrolet Silverado and All Needed Up Fitting Using PACT Funds in an Amount Not to Exceed $97,250.00**

RECOMMENDATION:

Adopt Resolution 2024-127.

BACKGROUND:

The Banning Police Department strives to provide a safe community for all residents and visitors to the City of Banning. To help in accomplishing that goal, the Banning Police Department has partnered with several regional multi-agency task force organizations. The Banning Police Department currently provides one sworn peace officer to the Post-Release Accountability Compliance Team (PACT) and looks to add an additional body to the team in the future as staffing permits. Currently the Banning Police Department is supplied with one vehicle to be driven by the member on PACT. Securing a second vehicle while funds are available will allow for additional personnel to seamlessly join the team when staffing is available.

JUSTIFICATION:

The funding for the second vehicle is currently available for use by the Banning Police Department and if not used the funding will go unspent. Deciding not to purchase the second PACT vehicle now would cause a future financial burden to the City when the staffing resources become available.

FISCAL IMPACT:

Revenue has been provided by the Community Corrections Partnership Executive Committee in the amount of $238,150 in Fiscal Year 2023/24. Reimbursement for a second PACT vehicle and up fitting in an amount not to exceed $97,250.00 with a pre-approval by the Committee in the amount of $92,072.72. The approximately $5,000.00 shortfall will be covered using existing budgeted funds. An additional appropriation request in an amount not to exceed $97,250.00 in the Fiscal Year 2024/25 account 001-2200-421.90.52 will be used to purchase the 2024 Chevrolet Silverado and do all up fitting for use by PACT member.

ALTERNATIVES:

Do not adopt Resolution 2024-127 and provide alternative direction to staff. The City Council may choose to reject this action, which would result in unused PACT funds already awarded to the City of Banning going unspent.

RESOLUTION 2024-127

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF BANNING, CALIFORNIA, APPROVING THE PURCHASE OF A 2024 CHEVROLET SILVERADO AND ALL NEEDED UP-FITTING USING PACT FUNDS IN AN AMOUNT NOT TO EXCEED $97,250.00

WHEREAS, the City of Banning Police Department currently provides one sworn peace officer to the Post-Release Accountability Compliance Team (PACT); and

WHEREAS, the Police Department is supplied with one vehicle to be driven by the Department's PACT member; and

WHEREAS, the Department intends to add one additional member to the PACT as Department staffing permits; and

WHEREAS, the purchase of an additional vehicle to be driven by an additional future member of the PACT will allow for such additional personnel to seamlessly join the PACT when staffing permits; and

WHEREAS, the City has previously received funding from the Community Corrections Partnership Executive Committee that may be utilized to offset the cost of an additional vehicle for use by PACT, and such funds will go unspent if not used by the City; and

WHEREAS, the Department desires to purchase a 2024 Chevrolet Silverado from Diamond Chevrolet including the purchase of the following necessary up fitting for an amount not to exceed $97,250.00: (1) one Motorola APX 8500 all band mobile radio; (2) one Getac F110G7 tablet with accessories; and (3) up fitting for PACT service with Innovative Emergency Equipment.

NOW, THEREFORE, BE IT RESOLVED by the City Council of the City of Banning as follows:

SECTION 1. The City Council approves the purchase of one 2024 Chevrolet Silverado from Diamond Chevrolet using Community Corrections Partnership Executive Committee funding (PACT) from Fiscal Year 2023/24 in the amount of $55,000.00 and authorizes the City Manager to execute the purchase agreement on behalf of the City Council.

SECTION 2. The City Council approves up to $27,500 for upfitting vehicle costs, $5,250 for a Getac tablet and corresponding device supports, and $9,500 for a unit radio from Motorola, for a total outfitting cost of $42,250 using PACT funding in the amount of $37,072.72 with the remaining costs of approximately $5,000 to be expended from the existing budget account 001-2200-421.90.52.

SECTION 3. The City Council authorizes the City Manager, or designee, to make necessary budget adjustments, appropriations, and transfers related to this resolution.

SECTION 4. The City Clerk shall certify to the adoption of this resolution and shall cause a certified resolution to be filed in the book of original resolutions.

PASSED, APPROVED AND ADOPTED this 9th day of July 2024.

Terms & Conditions

THIS IS A QUOTATION ONLY AND IS NOT AN ORDER OR OFFER TO SELL.

All prices and descriptions are subject to change without notice. No contract for sale will exist unless and until a purchase order has been issued by you and accepted by Golden Star Technology Inc. ("GST"). By issuing a purchase order to GST, you agree to GST's Terms and Conditions of sale set forth in GST's quote, GST's invoice, and GST online Terms and Conditions (https://gstinc.com/resources/terms-and-conditions/). If there is a separate purchase agreement signed by both your company and GST, the separate agreement will govern.

The prices contained in this list may not be relied upon as the price at which GST will accept an offer to purchase products or provide services unless expressly agreed to by GST in writing. Products and/or services quoted were selected by GST based on specifications available at the time of the quotation and are not guaranteed to meet your specifications. Product and services specifications may be changed by the manufacturer without notice. All products are subject to availability from the manufacturer. It is your responsibility to verify product and service conformance to specifications of any subsequent contract.

The freight costs listed are estimates. Shipping costs may vary based on time of purchase, additional services required, quantity ordered, shipment carrier and warehouse sourced. Actual shipping costs will be calculated during shipment and will be reflected on your invoice.

For hardware product(s), manufacturer warranty will begin upon physical delivery of the hardware product(s) by the customer or GST warehouse. For software product(s), the manufacturer warranty will begin upon electronic or physical receipt of the software product(s) by you or GST. Any returns must be approved by GST based on manufacturer approval. More details at gstes.com/RMA.

Client acknowledges that applicable sales tax rates may change after the initial quotation is provided and before the final invoice is issued. In the event of a change in the applicable sales tax rate, GST reserves the right to adjust the sales tax amount accordingly. The Client agrees to pay the updated sales tax amount as required by applicable law at the time of the invoice issuance.

GST is not responsible for compliance with regulations, requirements or obligations associated with any contract resulting from this quotation unless said regulations, requirements or obligations have been passed to GST and approved in writing by an authorized representative of GST.

GST DOES EVERYTHING WE CAN TO ENSURE THAT THE PRICES WE HAVE QUOTED ARE CORRECT AND CURRENT. DUE TO SHORTAGES OF RAW MATERIAL, INCREASED LOGISTIC COSTS, AND TARIFFS, PRICING MAY INCREASE AT ANY TIME FROM OUR VENDORS AND MANUFACTURERS THAT IS OUT OF OUR CONTROL.

CITY OF BANNING
STAFF REPORT

TO:	**CITY COUNCIL**
FROM:	**Douglas Schulze, City Manager**
PREPARED BY:	**Emery Papp, Senior Planner**
MEETING DATE:	**July 9, 2024**
SUBJECT:	**Consideration of Resolution 2024-114, (1) Approving Tentative Parcel Map No. 38164, Allowing the Subdivision of Approximately 47 Gross Acres of Vacant Land Into Three Parcels; (2) Affirming the Planning Commission's Approval of Design Review No. 21-7008 and Denying an Appeal of that Decision and Permitting the Construction of a Proposed 619,959 Square Foot Industrial Warehouse Building, including 10,000 Square Feet of Office Space and a Combined 34,000 Square Feet of Retail/Commercial Buildings, on Real Property Located within the Boundaries of the Sun Lakes Village North Specific Plan Area (APN: 419-140-057); and (3) Adopting an Addendum under the California Environmental Quality Act (CEQA) and Making Findings in Support Thereof, Including Findings of Consistency with the Certified Environmental Impact Report Prepared for Amendment No. 5 to the Sun Lakes Village North Specific Plan (SCH # 2020029074)**

RECOMMENDATION:

Adopt Resolution 2024-114.

BACKGROUND:

Tentative Parcel Map (TPM) No. 38164 (Attachment No. 5) and Design Review (DR) No. 21-7008 (Attachment No. 6) propose to subdivide approximately 47.11 gross acres of vacant land located within the Sun Lakes Village North Specific Plan (SLVNSP) area into three commercial/industrial lots to accommodate the construction of a 619,959 square foot industrial warehouse building (the "Project" or the "Banning Point Project"), including a 10,000 square-foot integrated office component. The Project also proposes six new retail/commercial buildings collectively totaling approximately 34,000 square feet (sf), which range in size from 1,600 sf to 8,400 sf. One of the three parcels will remain undeveloped and is not a part of the Design Review application for the Banning Point Project. The Project is intended to be constructed in two phases. Phase 1 will consist of the construction of the industrial building. Phase 2 will consist of the construction of the retail/commercial buildings.

The Planning Commission voted on December 1, 2021, to approve DR No. 21-7008 and recommend approval of TPM No. 38614 to the City Council (Attachment Nos. 9 and 10), and the City Council approved the Project on February 17, 2022, by way of adoption of Resolution No. 2022 -14 (Attachment No. 11). The Pass Action Group (PAG) filed a lawsuit to challenge approval of the Project. (Pass Action Group v. City of Banning, et al., Riverside County Superior Court Case No. CVRI2201482.) The lawsuit alleged that the City failed to provide a fair hearing due to alleged bias by certain Councilmembers. The lawsuit also contended that the City violated the California Environmental Quality Act (CEQA) and the City's General Plan in approving the Project, and that the findings in support of the Project were not

supported by substantial evidence. Following briefing and a hearing on the merits, the trial court issued a ruling finding only that the City did not provide a fair hearing based on the court's conclusion that then-Councilmember Mary Hamlin was biased in favor of the Project. (Attachment No. 14) The court rejected all claims of bias as to Councilmember Wallace and Councilmember Sanchez, stating in its ruling that "their statements do not overcome the presumption that they are unbiased. There has been no showing of a financial or personal interest in the Project and no specific evidence demonstrating actual bias or a particular combination of circumstances creating an unacceptable risk of bias…." The court also rejected in its entirety all of PAG's substantive challenges, finding that the City fully complied with CEQA, that the Project is consistent with the City's General Plan, and that the City's findings were supported by substantial evidence, as discussed further below. As the court concluded in its ruling, the court "does not find that Petitioner [PAG] has carried its burden of proof on any remaining issue and would not grant the writ but for the fair hearing issue."

The court entered judgment and issued a writ of mandate directing the City to set aside the prior Project approval and to reconsider the Project without the participation of Councilmember Hamlin (Attachment No. 14).

JUSTIFICATION:

TPM No. 38164 and DR No. 21-7008 were presented to the Planning Commission at a duly noticed public hearing on October 19, 2021 (Attachment Nos. 8 and 16), and again on December 1, 2021 (Attachment Nos. 9 and 17). During the Planning Commission's public hearings, Commissioners heard public testimony from dozens of Sun Lakes Village residents and others living in the vicinity of the Project and having an interest in the City's determination regarding the proposed Project. Much of the public testimony centered around several core issues and concerns. A summary of these concerns is provided below:

- Public Notice
- Traffic/Circulation
- Air Quality
- Noise
- Lighting
- Building location
- Future Job Growth
- Golf Cart Access
- Sun Lakes Blvd. Extension
- Health Impacts

Included in Attachment 4 (Planning Commission Packet, December 1, 2021) is an Issues of Concern & Response Matrix, which provides clarification and technical back-up to support the City's position on the topics of concern discussed during public comment.

PLANNING COMMISSION ACTION:

Upon conclusion of the public hearing, and considering all the evidence in the public record, the Planning Commission voted at the December 1, 2021 meeting to recommend approval of TPM No. 38164 and acted to approve DR No. 21-7008 by a vote of three ayes and two noes, with zero absent or abstaining (3-2-0) (Attachment No. 9).

A copy of the Planning Commission's Resolution providing for its determinations and action is attached to this Report (Attachment No. 10).

APPEALS OF THE PLANNING COMMISSION'S DECISION AND HEARING DATES:

Pursuant to Banning Municipal Code Section 17.68.100, three applications seeking to appeal the Planning Commission's decision on the Project were received during the appeal period, following the Planning Commission's action. The first appeal application received was from Golden State

Environmental Justice Alliance and was rejected as being incomplete because it did not state the grounds or reasons for its appeal, did not request a specific action, and incorrectly described the Project. A second appeal was filed by Supporters Alliance for Environmental Responsibility (SAFER). That second appeal was later withdrawn on January 18, 2022, and SAFER subsequently announced its support for the Project. As a result, only the third appeal (Appeal) by PAG (Appellant) remains to be heard (Attachment No. 3). The Appeal applied to the Planning Commission's approval of DR No. 21-7008. The Planning Commission's action on TPM No. 38164 was a recommendation to the City Council.

On January 11, 2022, the City Council received those appeals and set a joint hearing on TPM No. 38164 and DR No. 21-7008 for January 31, 2022. Notice of that hearing was published in the Record Gazette newspaper on January 21, 2022, and was mailed on January 20, 2022, to property owners within 1,000 feet of the Project site.

On January 25, 2022, at the request of both PAG and the Applicant, the City Council acted to postpone the City Council hearing on the Project from January 31, 2022, to February 17, 2022 at 5:00 p.m. Notice of the rescheduled public hearing was published in the Record Gazette newspaper on February 4, 2022, and mailed on February 3, 2022 to property owners within 1,000 feet of the Project site, providing 10 days' notice of the rescheduled hearing date.

For this remand hearing before the City Council, notice of the public hearing was published in the Record Gazette newspaper on June 28, 2024 (Attachment Nos. 19 and 20), and mailed on June 25, 2024 (Attachment Nos. 20 and 21) to property owners within 1,000 feet of the Project site, providing 10 days' notice of the hearing date.

The Project consists of applications for TPM No. 38164 (Attachment No. 5) and DR No. 21- 7008 (Attachment No. 6), and an Addendum/Consistency Determination pursuant to CEQA (Attachment No. 7). The Project is located north of Sun Lakes Boulevard, east of Highland Springs Avenue, south of Interstate 10, and west of The Lakes Apartment Complex, and located in the SLVNSP area, as indicated in the attached exhibits.

TPM No. 38164:
TPM No. 38164 was submitted as part of the Project application review and proposes to subdivide the entire site (47-acres) into three (3) parcels. Parcel 1 will be approximately 6.9 acres in size and accommodate six (6) proposed retail/commercial buildings. Parcel 2 will be approximately 30.14 acres and the proposed industrial warehouse building. Parcel 3 is not intended for development at this time; however, it will share access with Parcel 2. Parcel 3 is approximately 9.96 acres in size and is labeled "Not A Part" (N.A.P.) of the Project. The City Engineer has determined that the proposed subdivision of the land is in conformity with the State Subdivision Map Act and the City's Subdivision Ordinance, and that all the proposed lots will have adequate access to public streets, sanitary sewer lines, water mains, fire hydrants, drainage structures and utilities.

The court found that "Substantial evidence supported the City's project approval findings," which includes the City's findings that "the tentative map and design review [are] consistent with the general plan and the specific plan amendment." (Attachment No. 14) The findings that were upheld by the Court are stated in Section 3 of Resolution 2024-114.

DR No. 21-7008:
The proposed industrial warehouse building measures 619,959 sf, which includes 10,000 square feet of office space to be built on Parcel 2 of the Map, as indicated in Figure 4, Site Plan below. The Project also proposes six retail/commercial buildings totaling approximately 34,000 sf., ranging in size from 1,600 sf to 8,400 sf. Building 1 will include a coffee restaurant with a drive-thru and the remaining five (5) buildings are intended for sit-down restaurant- type uses and other commercial and services uses. The SLVNSP land use and zoning designation provides for Business and Warehouse, Office and Professional, and Retail and Service, consistent with the proposed uses on each parcel. All of the

proposed uses are permitted by right by the SLVNSP.

The proposed industrial building and uses will be located as far away from residents to the extent possible. The building is separated by approximately 800 feet from the nearest Sun Lakes Country Club residence. The industrial building will be screened by eight-foot to fourteen-foot -high screening walls, landscaping, 24-foot-wide drive aisles, the six retail/restaurant buildings adjacent and along the frontage of Parcel 2. The Project is also screened by Sun Lakes Boulevard and median and parkway landscaping in the Sun Lakes Boulevard right-of-way.
The court found that “Substantial evidence supported the City’s project approval findings,” which includes the City’s findings that “the tentative map and design review [are] consistent with the general plan and the specific plan amendment.” (Attachment No. 14) The findings that were upheld by the court are stated in Section 4 of Resolution 2024-114.

Architectural Design:
The industrial warehouse building will be a contemporary styled concrete tilt-up building with painted and scored accents to provide shading interest. The elevations utilize a combination of materials and accents such as anodized aluminum windows and door frames with tempered glazing in a blue reflective color, metal canopies, and mullions.

The warehouse building will use Sherwin-Williams paint colors Extra White, with Gray Screen, Software, and Cyberspace for the main body of the building, and Heartthrob trim paint between the gray panels. The metal canopies will be Pure White with clear anodized mullions to accent the building. The proposed 14’ concrete tilt -up walls will screen the truck yards and the colors will match the paint and color variations of the warehouse building.

The main colors of the retail buildings will be Sherwin-Williams Extra White with White Brick, Warm Brick, and Metal Siding accents and trim colors. Storefront aluminum windows and door frames will use a blue reflective window glazing. Pure White metal canopies with clear anodized mullions will provide exterior accents and shade for the buildings.

Landscaping:
The SLVNSP requires projects to provide a minimum of 15% of the site to be covered with landscaping. Landscaping is provided along the parkway on Sun Lakes Boulevard, on the side and freeway setbacks adjacent to the property lines and buildings, and throughout the parking areas. The project proposes 39.7% of landscape coverage on Parcel 1 of TPM No. 38164 (the retail/restaurant parcel of the Project) and 16.23% of landscape coverage on Parcel 2 (the industrial site parcel of the Project). The existing median and parkway landscaping, in conjunction with the landscaping proposed for the commercial component, will effectively serve to buffer, and soften the prominence of the industrial warehouse building.

Streets/Circulation System:
The main access points for the Project are as follows:

- Access points off Sun Lakes Blvd: 40' wide driveway (at cul-de-sac) & 46' driveway (divided by 6' median) & 40' wide shared driveway;
- Access points for retail: West side - 24' wide driveway off Sun Lakes Village Dr & East side - Two (2) 26' wide driveways off shared driveway;
- Access points for warehouse: West side- 29'-10" wide driveway off Sun Lakes Village Dr & East side- Three (3) driveways 24' wide, 29' wide, 40' wide off shared driveway; and
- There are 24-foot -wide emergency vehicle access roads provided around the south and north sides of the retail buildings, throughout the north and south truck courts, around the industrial building and through all the parking areas of the site.

ENVIRONMENTAL DETERMINATION:
The Project has been reviewed in connection with the requirements of CEQA (Pub. Resources Code, §

21000 et seq.) and the State CEQA Guidelines (14 C.C.R. § 15000 et seq.).

The EIR prepared for Amendment No. 5 to the SLVNSP analyzed the potential development of 877,298 square feet of industrial and warehouse uses, 52,065 square feet of medical office uses, and 37,189 square feet of retail uses. The EIR analyzed the potential environmental impacts from this type of development in the areas of aesthetics, air quality, biological resources, cultural resources, energy, geology and soils, greenhouse gas emissions, hydrology and water quality, land use and planning, noise, transportation, tribal cultural resources, and utilities and service systems. The EIR concluded that Amendment No. 5 to the SLVNSP had the potential to result in a net increase of building square footage and that certain air quality, greenhouse gas emissions, and traffic impacts would be significant and unavoidable even after the imposition of mitigation and regulatory compliance. The Draft EIR was made available for review and comment from September 11, 2020, through October 26, 2020. A Notice of Availability was distributed to project stakeholders requesting to be notified, responsible and trustee agencies, and published in the Record Gazette newspaper. The Draft EIR and Amendment No. 5 were posted on the City's website and at City Hall for viewing. Comments received on the Draft EIR and the City's response to comments were incorporated in the Final EIR. After hearing all the facts in evidence, the City Council determined that the benefits of Amendment No. 5 outweighed the Amendment's environmental impacts and adopted a Statement of Overriding Considerations on December 8, 2020. The EIR was certified on December 8, 2020, and was never challenged. It is now final, beyond challenge, and conclusive in all respects.

Amendment No. 5 to the SLVNSP was adopted on December 8, 2020, by way of City Council Resolution No. 2020-141. Ordinance 1571 provides that there shall be a textual reference to Amendment. No. 5 to the SLVNSP included in the City's Zoning Code portion of the Municipal Code. That Ordinance was introduced on December 8, 2020, adopted on January 12, 2021, and became effective on February 11, 2021. The Certified EIR was never challenged and is now final, beyond challenge, and in effect for all purposes.

The Project proposes a smaller development than that analyzed in the EIR. The Project proposes 619,959 square feet of industrial uses, which is split between 75% (or 464,969 sf) of high-cube fulfillment center warehouse use and 25% (or 154,990 sf) of high-cube cold storage warehouse use, and 34,000 square feet of retail/commercial uses, along with the associated utility, parking, roadway, and landscaping improvements. The Project does not include development of any of the office uses analyzed in the EIR.

The mitigation measures imposed as part of the prior EIR remain valid and applicable to the Project and are identified in the Mitigation Monitoring and Reporting Program, Section 5, Pages 97 through 109 of the Banning Point/Sun Lakes Village North Specific Plan EIR Addendum/Consistency Checklist. The same benefits described in the Statement of Overriding Considerations for Amendment No. 5 to the SLVNSP remain applicable to the Project.

The prior EIR, which was a "Program EIR," has been reviewed to determine if the Project is within the scope of what was analyzed in the EIR. Based on this review and analysis, an Addendum/Consistency checklist entitled "Banning Point Addendum to the Sun Lakes Village North Specific Plan Amendment No. 5 Environmental Impact Report" (updated version dated February 10, 2022) ("Addendum"), has been prepared pursuant to Public Resources Code Section 21166 and CEQA Guidelines Sections 15162, 15164, and 15168(c).

CEQA Guidelines Section 15164(a) provides that the lead agency "shall prepare an addendum to a previously certified EIR if some changes or additions are necessary but none of the conditions described in Section 15162, calling for preparation of a subsequent EIR have occurred." CEQA Guidelines Section 15164(c) further provides that an "addendum need not be circulated for public review but can be included in or attached to the final EIR" and CEQA Guidelines Section 15164(e) provides that a "brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included" in the

addendum, the agency's findings, or elsewhere in the administrative record.

The Addendum evaluated the Project's potential environmental effects, in light of those effects previously disclosed in the prior EIR, to determine whether any of the conditions described in CEQA Guidelines Section 15162 calling for subsequent CEQA review have occurred.

All environmental impacts of Amendment No. 5 to the SLVNSP (including those impacts related to the development of industrial and warehouse uses, and retail uses, such as those proposed by the Project) were analyzed, disclosed, and mitigated as set forth in the EIR (SCH# 2020029074) that was certified on December 8, 2020; this conclusion is supported by the detailed Addendum and its supporting technical reports and data. Therefore, any potential environmental impacts resulting from the types of land development proposed by the Project already have been analyzed and disclosed in the certified EIR that is now final in all respects and is beyond challenge. Furthermore, a subsequent EIR is not required as discussed below.

Public Resources Code Section 21166 and the corresponding CEQA Guidelines Section 15162 provide that no subsequent EIR shall be prepared for a project unless, on the basis of substantial evidence in the light of the whole record, "major revisions" of the EIR are needed to reflect (i) substantial changes to the project involving new significant environmental effects or a substantial increase in the severity of previously identified significant effects; (ii) substantial changes to the circumstances under which the project is undertaken involving new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or (iii) new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, showing that the project will have one or more significant effects not discussed in the previous EIR, or significant effects previously examined will be substantially more severe than shown in the previous EIR, or mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative, or mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative. At this point in the process, "in-depth review has already occurred, the time for challenging the sufficiency of the original EIR has long since expired, and the question is whether circumstances have changed enough to justify repeating a substantial portion of the process." (Bowman v. City of Petaluma (2008) 185 Cal.App.3d 1065, 1073, 1074.) As a result, any issues with the earlier EIR that were raised or could have been raised are barred from further consideration. (Comm. for Green Foothills v. Santa Clara County Bd. of Supervisors (2010) 48 Cal.4th 32, 50).

No information has been presented to the City demonstrating that any of the criteria set forth in Public Resources Code Section 21166, or CEQA Guidelines Sections 15162 or 15163, are present.

(1) No information has been presented to the City to demonstrate that any substantial changes have occurred with respect to the Project involving new significant environmental effects or a substantial increase in the severity of previously identified significant effects. Rather, the Project proposes the exactly the same type of land uses analyzed in the EIR and approved as part of Amendment No. 5 to the SLVNSP, only smaller in scope and footprint. The Project therefore serves to implement the vision for the commercial and industrial core of Highland Springs Avenue and the Interstate 10 freeway, which is described in detail within Amendment No. 5 to the SLVNSP and is consistent the land use envisioned in the SLVNSP and its accompanying EIR. Furthermore, the Addendum comprehensively analyzed the Project in comparison to the EIR in each environmental impact area and concluded that there are no new or substantially greater impacts than those previously disclosed, analyzed, and mitigated (to the extent feasible) in the EIR. City staff, acting as the Lead Agency, has independently reviewed the Addendum and finds that the Addendum, including its supporting technical reports, constitutes substantial evidence in support of this conclusion.

(2) No information has been presented to the City to demonstrate that any substantial changes have occurred with respect to the circumstances under which the Project is undertaken involving new significant environmental effects or a substantial increase in the severity of previously identified significant effects. The Project remains consistent with the project described in the prior EIR for Amendment No. 5 to the SLVNSP and is smaller in scope than the development anticipated in that document and approved in Amendment No. 5 to the SLVNSP. There have been no changes to the SLVNSP area that would alter the ability of the Project to remain consistent with the SLVNSP and the environmental impacts analyzed in the prior EIR.

(3) No information has been presented to the City to demonstrate that there is any new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete showing that the Project will have any significant or more severe effects than those discussed in the prior EIR, or that additional mitigation measures or alternatives would substantially reduce any significant effects on the environment disclosed in the prior EIR. No information, let alone substantial evidence, has been presented to suggest that the current Project has environmental impacts beyond those previously analyzed, disclosed, and mitigated as set forth in the EIR. No information regarding any purported greater environmental impacts, or the need for additional mitigation or alternatives, has been presented.
The court concurred with these conclusions. As the court stated in its ruling, “There is no dispute but that the differences between the original project [that described in Amendment No. 5 to the SLVNSP] and the current version of the Project do not result in new significant environmental impacts. Indeed, the current version of the Project is significantly smaller than the original project.” The court thus found that “substantial evidence supported the City’s decision … to prepare an addendum instead of a supplemental or subsequent EIR for the Project.” (Attachment No. 14)

The City Staff finds, in the exercise of its independent judgment and based on substantial evidence in the whole of the record, that no further environmental review is required, including pursuant to Public Resources Code Section 21166, or CEQA Guidelines Sections 15162 or 15163 because (i) the Project will not have new or substantially more severe impacts than what was disclosed in the EIR; (ii) all applicable mitigation measures in the EIR remain applicable to the Project and are imposed on the Project as a condition of approval; and (iii) the Project will not require any new mitigation measures, all as documented in the Addendum. The Addendum and its supporting technical reports and memoranda constitute substantial evidence in support of this conclusion and the findings.

Multiple Species Habitat Conservation Plan (MSHCP).
The project is found to be consistent with the MSHCP. The project is located outside of any MSHCP criteria area and mitigation is provided through payment of the MSHCP Mitigation Fee.

RESPONSE TO APPELLANT’S LETTERS FROM DECEMBER 7, 2021, JANUARY 24, 2022, AND FEBRUARY 10, 2022:
On December 7, 2021, January 24, 2022, and February 10, 2022, the attorneys for the Pass Area Action Group (“Appellant”) submitted letters challenging the sufficiency of the 2020 Program EIR for use by the City in connection with approval of the proposed Project. Those Letters also made other assertions regarding accessibility of documents, public noticing, and issues related to the preparation of the 2020 Program EIR. Finally, the February 10, 2022, Letter asserted that certain councilmembers were biased in favor of the Project and should recuse themselves from decisions on the Project.

A. Adequacy and Sufficiency of the Program EIR for the Project is Documented in an addendum/Consistency Checklist Document and in CEQA Consultant’s Response to Comments.

The City caused an Addendum to be prepared which compared the potential impacts of the proposed Project to the project envisioned under the previously adopted the SLVNSP Amendment No. 5 and Certified Program EIR. The Addendum demonstrates that additional environmental review is not required

for the Project beyond what was analyzed and disclosed in the now final EIR and in the Addendum. All environmental impacts of Amendment No. 5 to the SLVNSP (including those impacts related to the development of industrial and warehouse uses, and retail uses, such as those proposed by the Project) were analyzed, disclosed, and mitigated as set forth in the EIR (SCH# 2020029074) that was certified on December 8, 2020. This conclusion is supported by the detailed Addendum and its supporting technical reports and data. Therefore, any potential environmental impacts resulting from the types of land development proposed by the Project already have been analyzed and disclosed in the certified EIR that is now final in all respects and is beyond challenge. In addition, the CEQA consultant responded to the Appellant's comments on this issue, providing further support for the sufficiency of the Addendum. The court agreed that substantial evidence supported the City's decision to proceed with an Addendum.

The court also expressly rejected PAG's contention that the Sunset Crossings project constitutes a substantial change in the circumstances under which the Project is undertaken, or new information that has become available which could not have been known before, such that a subsequent EIR was required. As the court explained, the potential that the Sunset Crossing project might have significant impacts "is not substantial evidence that the proposed project's incremental effects are cumulatively considerable. CEQA Guidelines § 15064(h)(4). Accordingly, the Court concludes that substantial evidence supported the City's decision not to include cumulative impacts from the Project and Sunset Crossroads in the environmental documents for the Project and to prepare an addendum instead of a supplemental or subsequent EIR for the Project."

B. Incorporation of The Sun Lakes Village North Specific Plan Amendment No. 5 into the Banning Municipal Code.

PAG's letter also makes multiple statements which can be generally consolidated into three non-CEQA issues which are summarized below:
Appellant's letter asserts that the City had not properly updated its Municipal Code to reflect inclusion of the Sun Lakes Village North Specific Plan Amendment No. 5 into the Code. Accordingly, the letter asserts that it has been impossible for the public to appropriately review the Project for consistency with the Sun Lakes Village North Specific Plan Amendment No. 5.
The Sun Lakes Village North Specific Plan Amendment No. 5 was adopted by Ordinance 1571. The Specific Plan Amendment was included in the agenda packet for the November 4, 2020, Planning Commission meeting and the December 8, 2020, City Council meeting. The agenda packets for those meetings, including the Draft Sun Lakes Village North Specific Plan Amendment No. 5, have been and are currently available on the City's website on the page that provides those agendas and packets. In addition, Ordinance No. 1571, which approved the Specific Plan Amendment, is listed in the on-line Banning Municipal Code under Supplementary Ordinance Table with a link to the Ordinance. Furthermore, a copy of the final approved version of the Specific Plan Amendment was provided to members of the public who made requests for the Specific Plan, including representatives of the Appellant, which provided the Appellants sufficient time to review the Specific Plan Amendment and to address the Project's consistency with the Banning Municipal Code. A copy of the final adopted Sun Lakes Village North Specific Plan Amendment No. 5 is currently on file with the Banning City Clerk where it is available for inspection by the public.

C. Public Notice for the December 2020 City Council Public Hearing on the Specific Plan Amendment.

Appellant's letter also asserts that the City did not send out public hearing notices to property owners and residents within 300 feet of the Project site advising them of the Planning Commission and City Council public hearings on the Sun Lakes Village North Specific Plan Amendment No. 5 before that Amendment was adopted by the City Council on December 8, 2020. The letter attempts to reinforce this argument by pointing out that the City was unable to provide any certificate or affidavit from a staff person that the required public hearing notices were mailed out and that the residents of Sun Lakes do not recall having received notice.

City files contain a copy of the public hearing notice that was sent to property owners in advance of the November 4, 2020, Planning Commission meeting and the December 8, 2020, City Council meeting. Also included in the City's files is a copy of the mailing labels, which contain the names and addresses of all 108 property owners within 300 feet of the project, as required by the Banning Municipal Code and state law. Among the property owners to whom notices were sent, three of them were for properties owned by the Sun Lakes Country Club Homeowners Association and the single property owner of The Lakes Apartment Complex, along with several individual property owners in the Sun Lakes Country Club neighborhood.

An Affidavit of Mailing is not legally required by state law and thus is not needed to comply with public noticing requirements. Moreover, the public hearing notices were advertised in the Record Gazette newspaper, a newspaper of general circulation in the City of Banning, published on October 23, 2020, for the Planning Commission hearing on November 4, 2020; and published on November 27, 2020, for the December 8, 2020, City Council meeting. Therefore, the City of Banning complied with state law and local ordinance to provide notice of the Sun Lakes Village North Specific Plan Amendment No. 5. Finally, no challenge was brought to those 2020 decisions regarding the Sun Lakes Village North Specific Plan Amendment No. 5 or the 2020 Program EIR. Pursuant to Section 15112 of the California Environmental Quality Act and CEQA Guidelines, the 180- day time to challenge the sufficiency of notice for the adoption of the Sun Lakes Village North Specific Plan Amendment No. 5 EIR has long since expired.

D. Notification to the SCAQMD and the California Air Resources Board when the 2020 Program EIR was Prepared.

The Appellant asserts that the City should have provided notice to the South Coast Air Quality Management District (SCAQMD) and the California Air Resources Board (CARB) in connection with the consideration of this Project.

Notice was provided to both SCAQMD and CARB when the land uses considered for this Project were proposed as part of the Sun Lakes Village North Specific Plan Amendment No. 5. That occurred when the Notice of Preparation for the 2020 Program EIR was transmitted electronically to SCAQMD and was filed with the State Clearinghouse as required (SCH #2020029074), and through the State Clearinghouse, notices were provided to various resource and trustee agencies, including CARB and SCAQMD. In response to that Notice of Preparation, the SCAQMD provided a comment letter dated March 17, 2020, from Lijin Sun, J.D., Program Supervisor, CEQA IGR, Planning, Rule Development & Area Sources. Furthermore, SCAQMD received notice of the Draft EIR, through the State Clearinghouse, when advertised in October of 2020, and did not provide a reply or response to the city at any time during the 45-Day Notice of Availability (NOA)/Notice of Completion (NOC) timeframe. Because the City determined that the Project now under consideration is consistent with the project evaluated in the 2020 Program EIR, an Addendum was prepared indicating that no additional environmental review is required for this Project. Pursuant to the CEQA Guidelines, there is no obligation to circulate a draft Addendum to trustee agencies or to the public for public comment. Therefore, no new or special notice to SCAQMD or CARB is required in connection with the processing of the proposed Project.

E. Allegations of Bias by Certain Councilmembers.

On February 10, 2022, the Appellant submitted a letter asserting that due to certain public comments made by councilmembers early in the process and before the matter was submitted to the City Council, that three councilmembers are biased in favor of the Project and should recuse themselves from decisions on the Project. As discussed above, the court issued a ruling finding only that the City did not provide a fair hearing based on the court's conclusion that then-Councilmember Mary Hamlin was biased in favor of the Project. The court rejected all claims of bias as to Councilmember Wallace and Councilmember Sanchez, stating in its ruling that "their statements do not overcome the presumption that they are unbiased."

ADDITIONAL PUBLIC COMMUNICATIONS:

The proposed Project was advertised in the Record Gazette newspaper on May 31, 2024 for a public hearing to be held before the City Council on June 11, 2024. After posting of the City Council meeting agenda packet on the City's website, it was brought to the attention of City staff that many of the staff report attachments were not visible to the public, and as a result, the entirety of the record was not available for public review. The June 11, 2024 City Council hearing for this item was therefore continued and re-noticed in the Record Gazette newspaper on June 28, 2024 for the July 9, 2024 City Council Meeting (Attachment Nos. 19 and 20). Public Notices were also mailed to property owners within a 1,000-foot radius of the Project site (Attachment Nos. 20 and 21). As of the date of this report, City staff had received several items of public communication for the public hearing to held before the City Council on July 9, 2024, which have been provided to the City Council under separate cover, and are attached to this staff report.

FISCAL IMPACT:

There is no fiscal impact associated with this action.

ALTERNATIVES:

1. Adopt Resolution 2024-114, as recommended (Attachment Nos. 1 and 2).
2. Adopt Resolution 2024-114, with modifications.
3. Do not adopt Resolution 2024-114 (Attachment Nos. 1 and 2), and provide direction to staff.

RESOLUTION 2024-114

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF BANNING, CALIFORNIA, (1) APPROVING TENTATIVE PARCEL MAP NO. 38164, ALLOWING THE SUBDIVISION OF APPROXIMATELY 47 GROSS ACRES OF VACANT LAND INTO THREE PARCELS; (2) AFFIRMING THE PLANNING COMMISSION'S APPROVAL OF DESIGN REVIEW NO. 21-7008 AND DENYING AN APPEAL OF THAT DECISION AND PERMITTING THE CONSTRUCTION OF A PROPOSED 619,959 SQUARE FOOT INDUSTRIAL WAREHOUSE BUILDING, INCLUDING 10,000 SQUARE FEET OF OFFICE SPACE AND A COMBINED 34,000 SQUARE FEET OF RETAIL/COMMERCIAL BUILDINGS, ON REAL PROPERTY LOCATED WITHIN THE BOUNDARIES OF THE SUN LAKES VILLAGE NORTH SPECIFIC PLAN AREA (APN: 419-140-057); AND (3) ADOPTING AN ADDENDUM UNDER THE CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) AND MAKING FINDINGS IN SUPPORT THEREOF, INCLUDING FINDING OF CONSISTENCY WITH THE CERTIFIED ENVIRONMENTAL IMPACT REPORT PREPARED FOR AMENDMENT NO. 5 TO THE SUN LAKES VILLAGE NORTH SPECIFIC PLAN (SCH # 2020029074)

WHEREAS, on December 8, 2020, the City Council certified the Final Environmental Impact Report (EIR) (SCH #2020029074) prepared for, and approved, Amendment No. 5 to the Sun Lakes Village North Specific Plan (SLVNSP) (Ordinance 1571 for Zone Change 20-3501). Amendment No. 5 revised the Specific Plan Land Use Plan from Retail Commercial (Auto Dealer) to Business Park & Warehouse (BW), Office & Professional (OP), and Retail & Service (RS), and revised the permitted land uses, development standards (including maximum building height, setbacks, open space, landscaping, parking, and signage), and design guidelines for the development and implementation provisions of the SLVNSP; and

WHEREAS, the EIR for Amendment No. 5 to the SLVNSP is now final, beyond challenge, and is conclusively presumed to comply with CEQA; and

WHEREAS, in furtherance of the interests of Sun Lakes Highland, LLC (Applicant), an application was submitted for approval of proposed Tentative Parcel Map No. 38164 (TPM 21-4001) to subdivide approximately 47.11 acres of vacant real property into three commercial and industrial parcels, and for Design Review No. 21-7008, to construct a 619,959 square-foot industrial warehouse building with 10,000 square feet of office space, and six retail/commercial buildings totaling 34,000 square feet and associated utility, parking, roadway, and landscaping improvements (all together, the "Project"), on real property identified as APN 419-140-057; and

WHEREAS, on October 19, 2021, and December 1, 2021, the Planning Commission conducted duly noticed public hearings on the Project, at which time interested persons had an opportunity to testify in support of or in opposition to the Project. At the conclusion of the public hearing on December 1, 2021, the Planning Commission adopted Resolution No. 2021-16, approving Tentative Parcel Map No. 38164 and approving Design Review No. 21-7008, including conditions of for approval of the Project. Pursuant to Banning Municipal Code Chapter 16.14, the Planning Commission's decision has been interpreted by City Staff and the City Council as a recommendation to the City Council for approval of Tentative Parcel Map No. 38164; and

WHEREAS, pursuant to Banning Municipal Code Section 17.68.100, three applications seeking to appeal the Planning Commission's decision on the Project were received during the appeal period following the Planning Commission's action; and

WHEREAS, an appeal application was received from Golden State Environmental Justice Alliance and was subsequently rejected as being incomplete because it did not state the grounds or reasons for its appeal, did not request a specific action, and incorrectly described the project; and

WHEREAS, an appeal application was received from Supporters Alliance For Environmental Responsibility (SAFER), who subsequently withdrew its appeal on January 18, 2022, and announced its support for the Project; and

WHEREAS, on December 7, 2021, the law firm of Shute, Mihaly & Weinberger submitted an appeal on behalf of Appellant, Pass Area Action Group (PAG)**,** and a three-page letter on behalf of Appellant, which was supplemented by a 428-page letter submitted via email on January 24, 2022 (the "Appeal")**;** and

WHEREAS, the public hearing on Tentative Parcel Map No. 38164 and the Appeal hearing on Design Review No. 21-7008 was scheduled for January 31, 2022, and in compliance with applicable law, the City provided public notice of the public hearing by advertising in the *Record Gazette* newspaper on January 21, 2022, and by mailing notices to all property owners within 1,000 feet of the subject site; and

WHEREAS, the City subsequently received requests from both Pass Area Action Group and the Applicant to continue the Appeal hearing to allow for additional time to review the materials related to the Project; and

WHEREAS, in recognition of the requests from both Appellant and Applicant for a continuance of the public hearing, at the regularly scheduled City Council meeting held on January 25, 2022, the City Council voted to cancel the Appeal hearing previously noticed January 31, 2022, and to reschedule the public hearing to February 17, 2022; and

WHEREAS, the City provided public notice of the rescheduled public hearing on Tentative Parcel Map No. 38164 and the Appeal hearing on Design Review 21-7008 by advertising in the *Record Gazette* newspaper on February 4, 2022, and by again mailing (on February 3, 2022) notices to property owners within a 1,000-foot radius of the subject site; and

WHEREAS, on February 17, 2022, the City Council of the City of Banning conducted a duly noticed public hearing on the Appeal, at which time all interested persons, including Appellant and Applicant, were given an opportunity to speak and to present both oral and written evidence in support of and in opposition to the Appeal. At the conclusion of the public hearing on February 17, 2022, the City Council adopted Resolution No. 2022-14, approving Tentative Parcel Map No. 38164, approving Design Review 21-7008 and denying the Appeal, including Conditions of Approval of the Project, and adopting an Addendum to the certified EIR prepared for Amendment No. 5 to the Sun Lakes Village North Specific Plan (SCH # 2020029074); and

WHEREAS, on April 18, 2022, PAG filed a Petition for Writ of Mandate and Complaint for Injunctive Relief ("Petition") with the Riverside County Superior Court (Case No. CVRI2201482), challenging the City of Banning's approval of the Project; and

WHEREAS, the lawsuit alleged that the City failed to provide a fair hearing due to alleged bias by Councilmembers Hamlin, Sanchez, and Wallace. The lawsuit also contended that the City violated CEQA and the City's General Plan in approving the Project, and that the findings in support of the Project were not supported by substantial evidence; and

WHEREAS, following briefing and a hearing on the merits, the trial court issued a ruling finding only that the City did not provide a fair hearing based on the court's conclusion that then-Councilmember Hamlin was biased in favor of the Project. The court rejected all claims of bias as to Councilmember Wallace and Councilmember Sanchez, stating in its ruling that "their statements do not overcome the presumption that they are unbiased. There has been no showing of a financial or personal interest in the Project and no specific evidence demonstrating actual bias or a particular combination of circumstances creating an unacceptable risk of bias…." The court also rejected in its entirety all of PAG's substantive challenges, finding that the City fully complied with CEQA, that the Project is consistent with the City's General Plan, and that the City's findings were supported by substantial evidence, as discussed further below. As the court concluded in its ruling, the court "does not find that Petitioner [PAG] has carried its burden of proof on any remaining issue and would not grant the writ but for the fair hearing issue."; and

WHEREAS, the court entered judgment and issued a writ of mandate directing the City to set aside and vacate the prior approval and to reconsider the Project without the participation of Councilmember Hamlin; and

WHEREAS, the City provided public notice of a public hearing on the Project by advertising in the *Record Gazette* newspaper on June 28, 2024, and by mailing (on June 25, 2024) notices to property owners within a 1,000-foot radius of the Project site; and

WHEREAS, on July 9, 2024, the City Council of the City of Banning conducted a duly noticed public hearing on the Project, at which time all interested persons, including Appellant and Applicant, were given an opportunity to speak and to present both oral and written evidence in support of and in opposition to the Project; and

WHEREAS, all legal prerequisites prior to the adoption of this Resolution have occurred; and

WHEREAS, the City Council has considered all information related to this matter, as presented at the public meetings of the City Council identified herein, including supporting reports by City Staff, written materials timely received by the City, and information provided during public meetings.

NOW THEREFORE, the City Council of the City of Banning does hereby resolve, determine, find, and order as follows:

SECTION 1. **Recitals**. This Council hereby specifically finds that all of the facts set forth in the Recitals above are true and correct, and are incorporated herein.

SECTION 2. **Environmental Findings**.

A. The Project has been reviewed in connection with the requirements of CEQA (Pub. Resources Code, § 21000\ *et seq*.) and the State CEQA Guidelines (14 C.C.R. § 15000 *et seq*.). Based upon all of the applications, plans, submittals, and evidence presented to the Planning Commission on October 19, 2021 and December 1, 2021, the additional submittals from the Appellant and the Applicant, and the public hearing held on July 9, 2024 (including written and oral staff reports and supporting documentation, together with public testimony), and in the exercise of its independent judgment based upon the whole of the record and the evidence presented to it, this Council hereby specifically finds and concludes, as provided in the succeeding subsections of this Section 2, as follows with

respect to environmental review related to the Project.

B. The EIR prepared for Amendment No. 5 to the SLVNSP analyzed the potential development of 877,298 square feet of industrial and warehouse uses, 52,065 square feet of medical office uses, and 37,189 square feet of retail uses. The EIR analyzed the potential environmental impacts from this type of development in the areas of: aesthetics, air quality, biological resources, cultural resources, energy, geology and soils, greenhouse gas emissions, hydrology and water quality, land use and planning, noise, transportation, tribal cultural resources, and utilities and service systems. The EIR concluded that Amendment No. 5 to the SLVNSP had the potential to result in a net increase of building square footage and that certain air quality, greenhouse gas emissions, and traffic impacts would be significant and unavoidable even after the imposition of mitigation and regulatory compliance. The City Council determined that the benefits of Amendment No. 5 outweighed the Amendment's environmental impacts, and adopted a Statement of Overriding Considerations on December 8, 2020. The EIR was certified on December 8, 2020, and was never challenged. It is now final, beyond challenge, and conclusive in all respects.

C. Amendment No. 5 to the SLVNSP was adopted on December 8, 2020, by way of City Council Resolution No. 2020-141. Its text was added into the City's Zoning Code portion of the Municipal Code by way of Ordinance No. 1571, which was introduced on December 8, 2020, adopted on January 12, 2021, and became effective on February 11, 2021. It was never challenged and is now final, beyond challenge, and in effect for all purposes.

D. The Project proposes a smaller development than that analyzed in the EIR. The Project proposes 619,959 square feet of industrial use (split between 75% [or 464,969 square feet] of high-cube fulfillment center warehouse use and 25% [or 154,990 square feet] of high-cube cold storage warehouse use), and 34,000 square feet of retail uses, along with associated utility, parking, roadway, and landscaping improvements. The Project does not include development of any of the office uses analyzed in the EIR.

E. The Project is found to be consistent with the Multi-Species Habitat Conservation Program (MSHCP). The Project is located outside of any MSHCP criteria area and mitigation is provided through payment of the MSHCP Mitigation Fee.

F. The mitigation measures imposed as part of the prior EIR remain valid and applicable to the Project and are identified in the Mitigation Monitoring and Reporting Program, Section 5, Pages 97 through 109 of the Banning Point/Sun Lakes Village North Specific Plan EIR Addendum/Consistency Checklist. The same benefits described in the Statement of Overriding Considerations for Amendment No. 5 to the SLVNSP remain applicable to the Project.

G. The prior EIR, which was a "Program EIR," has been reviewed to determine if the Project is within the scope of what was analyzed in the EIR. Based on this review and analysis, an Addendum/Consistency Checklist, entitled "Banning Point Addendum to the Sun Lakes Village North Specific Plan Amendment No. 5 Environmental Impact Report" (updated version dated February 10, 2022) ("Addendum") has been prepared pursuant to Public Resources Code Section 21166 and CEQA Guidelines Sections 15162, 15164, and 15168(c). CEQA Guidelines Section 15164(a) provides that the lead agency "shall prepare an addendum to a previously certified EIR if some changes or additions are necessary but

none of the conditions described in Section 15162, calling for preparation of a subsequent EIR, have occurred." CEQA Guidelines Section 15164(c) further provides that an "addendum need not be circulated for public review but can be included in or attached to the final EIR" and CEQA Guidelines Section 15164(e) provides that a "brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included" in the addendum, the agency's findings, or elsewhere in the administrative record.

H. The Addendum evaluated the Project's potential environmental effects in light of those effects previously disclosed in the prior EIR to determine whether any of the conditions described in CEQA Guidelines Section 15162 calling for subsequent CEQA review have occurred.

I. The City Council has considered whether additional environmental review is required for the Project beyond what was analyzed and disclosed in the now-final EIR and in the Addendum. All environmental impacts of Amendment No. 5 to the SLVNSP (including those impacts related to the development of industrial and warehouse uses and retail uses, such as those proposed by the Project) were analyzed, disclosed, and mitigated as set forth in the EIR (SCH# 2020029074) that was certified on December 8, 2020; this conclusion is supported by the detailed Addendum and its supporting technical reports and data. Therefore, any potential environmental impacts resulting from the types of land development proposed by the Project already have been analyzed and disclosed in the certified EIR that is now final in all respects and is beyond challenge. Furthermore, a subsequent EIR is not required as discussed below.

J. Public Resources Code Section 21166 and the corresponding CEQA Guidelines Section 15162 provide that no subsequent EIR shall be prepared for a project unless, on the basis of substantial evidence in the light of the whole record, "major revisions" of the EIR are needed to reflect (i) substantial changes to the project involving new significant environmental effects or a substantial increase in the severity of previously identified significant effects; (ii) substantial changes to the circumstances under which the project is undertaken involving new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or (iii) new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, showing that the project will have one or more significant effects not discussed in the previous EIR, or significant effects previously examined will be substantially more severe than shown in the previous EIR, or mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative, or mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative. At this point in the process, "in-depth review has already occurred, the time for challenging the sufficiency of the original EIR has long since expired, and the question is whether circumstances have changed enough to justify repeating a substantial portion of the process." (*Bowman v. City of Petaluma* (2008) 185 Cal.App.3d 1065, 1073-1074.) As a result, any issues with the earlier EIR that were raised or could have been raised are barred from further consideration. (*Comm. for Green Foothills v. Santa Clara County Bd. of Supervisors* (2010) 48 Cal.4th 32, 50.)

K. No information has been presented to the City demonstrating that any of the criteria set forth in Public Resources Code Section 21166, or CEQA Guidelines Sections 15162 or 15163, are present.

(1) No information has been presented to the City to demonstrate that any substantial changes have occurred with respect to the Project involving new significant environmental effects or a substantial increase in the severity of previously identified significant effects. Rather, the Project proposes the same type of land uses analyzed in the EIR and approved as part of Amendment No. 5 to the SLVNSP, but it is smaller in scope. The Project therefore serves to implement the vision for the commercial and industrial core of Highland Springs Avenue and the Interstate 10 freeway, which is described in detail within Amendment No. 5 to the SLVNSP, and is consistent the land use envisioned in the SLVNSP and its accompanying EIR. Furthermore, the Addendum comprehensively analyzed the Project in comparison to the EIR in each environmental impact area and concluded that there are no new or substantially greater impacts than those previously disclosed, analyzed, and mitigated (to the extent feasible) in the EIR. The City Council finds that the Addendum, including its supporting technical reports, constitutes substantial evidence in support of this conclusion.

(2) No information has been presented to the City to demonstrate that any substantial changes have occurred with respect to the circumstances under which the Project is undertaken involving new significant environmental effects or a substantial increase in the severity of previously identified significant effects. The Project remains consistent with the project described in the prior EIR for Amendment No. 5 to the SLVNSP and is smaller in scope than the development anticipated in that document and approved in Amendment No. 5 to the SLVNSP. There have been no changes to the SLVNSP area that would alter the ability of the Project to remain consistent with the SLVNSP and the environmental impacts analyzed in the prior EIR.

(3) No information has been presented to the City to demonstrate that there is any new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete showing that the Project will have any significant or more severe effects than those discussed in the prior EIR, or that additional mitigation measures or alternatives would substantially reduce any significant effects on the environment disclosed in the prior EIR. No information, let alone substantial evidence, has been presented to suggest that the current Project has environmental impacts beyond those previously analyzed, disclosed, and mitigated as set forth in the EIR. No information regarding any purported greater environmental impacts, or the need for additional mitigation or alternatives, has been presented.

(4) The court concurred with the conclusions above in Paragraphs (K)(1)-(3) of this Section 2. As the court stated in its ruling, “There is no dispute but that the differences between the original project [that described in Amendment No. 5 to the SLVNSP] and the current version of the Project do not result in new significant environmental impacts. Indeed, the current version of the Project is significantly smaller than the original project.” The court thus found that “substantial evidence supported the City’s decision … to prepare an addendum instead of a

supplemental or subsequent EIR for the Project."

L. The Appellant's contention in its January 24, 2022, letter that preparation of a program-level EIR for Amendment No. 5 to the SLVNSP was not proper is a time-barred attack on that EIR. The EIR was never challenged and is lawful, valid, and conclusive for all purposes. Furthermore, the SLVNSP is a Specific Plan and therefore is a legislative enactment and environmental review at the program, or plan, level was appropriate.

M. The Appellant's contention in its January 24, 2022, letter that the Project constitutes a "new" project not within the scope of that studied in the EIR is unfounded. As shown in the Addendum, and its supporting technical reports in the areas of air quality, greenhouse gas emissions, health risk assessment, trip generation memorandum, and vehicle miles traveled (VMT) analysis, Project impacts are not greater or more impactful than previously disclosed, analyzed, and approved in connection with Amendment No. 5 to the SLVNSP, including considering the addition of 154,990 square feet of high-cube cold storage warehouse use within the overall 619,959 square feet of industrial use. The Addendum and its supporting documentation expressly considered the use of high-cube cold storage industrial uses and found impacts to be within the scope of those analyzed in the EIR. The City Council expressly finds that the analysis contained in the Addendum and its supporting technical reports is credible, supported by facts, and constitutes substantial evidence.

N. The Appellant's contention in its January 24, 2022 letter that the EIR's analysis in the areas of transportation, air quality, greenhouse gas emissions, and noise is insufficient to apply to the Project is unfounded. The City Council finds that several of Appellant's contentions, including those set forth in the technical memoranda attached to their letter, are unfounded; rely on flawed assumptions (including but not limited to those related to horsepower, emission factors, and trip generation rates) leading to incorrect conclusions; are speculative (such as unsupported assumptions about the use of emergency diesel generators); or amount at most to a disagreement among experts, including over issues such as trip generation and trip lengths that were settled in the EIR and are now beyond challenge. A disagreement among experts is not a sufficient reason to set aside an EIR and a lead agency such as the City may choose to accept the determinations and conclusions in the EIR if they are supported by substantial evidence. (CEQA Guidelines Section 15151.) The City Council further finds that other of Appellant's contentions, such as that no vehicle miles traveled (VMT) analysis or noise impacts analysis have occurred, are factually incorrect and therefore lack foundation. The City Council also finds that other contentions, including those regarding the efficacy of mitigation measures imposed as part of Amendment No. 5 to the SLVNSP and its accompanying EIR, are time-barred and an impermissible collateral attack on the prior EIR. The City Council expressly finds that substantial evidence supports the conclusions in the certified EIR, and that no new information has been presented to invalidate these conclusions.

O. The Appellant's contention in its January 24, 2022, letter that a new cumulative impacts analysis was required is incorrect. The prior EIR included a cumulative impacts analysis; no such analysis is also required as a separate, standalone component of a determination that a subsequent EIR is not required.

P. The Appellant's contention in its January 24, 2022, letter that the City was required to separately notify South Coast Air Quality Management District (SCAQMD) and the

California Air Resources Board of the Project is incorrect. There is no obligation to notify other public agencies of an addendum or a determination that a project does not require additional environmental review. Furthermore, other public agencies were properly notified of the preparation of the prior EIR and then subsequently had the opportunity to comment on it. SCAQMD provided a comment on the notice of preparation of the EIR and then did not submit any comments on the EIR.

Q. The City Council finds, in the exercise of its independent judgment and based on substantial evidence in the whole of the record, that no further environmental review is required, including pursuant to Public Resources Code Section 21166, or CEQA Guidelines Sections 15162 or 15163, because (i) the Project will not have new or substantially more severe impacts than what was disclosed in the EIR; (ii) all applicable mitigation measures in the EIR remain applicable to the Project and are imposed on the Project as a condition of approval; and (iii) the Project will not require any new mitigation measures, all as documented in the Addendum. The Addendum and its supporting technical reports and memoranda constitute substantial evidence in support of the City Council's conclusion and findings. The City Council hereby adopts the Addendum.

R. The Community Development Director shall cause to be a filed a Notice of Determination for the Project in accordance with CEQA.

S. The custodian of records for the documents that constitute the record of proceedings upon which the City Council's decision is based is the City Clerk of the City of Banning. Those documents are available for public review in the Planning Division located at 99 E. Ramsey Street, Banning, California, 92220.

SECTION 3. **Tentative Parcel Map Findings**. Subsection (B) of Section 16.14.050 of the Banning Municipal Code provides that any action taken by the City Council with respect to Tentative Parcel Map No. 38164 shall be supported by the findings required by Sections 66427.1, 66473.5, 66474, 66474.1 and 66474.6 of the California Government Code and Section 21100 of the California Public Resources Code.

A. **Applicable Findings.** The City Council finds that Sections 66427.1 does not apply because this Project does not involve the conversion of residential real property into a condominium project, a community apartment project, or a stock cooperative project. The City Council also finds that Section 66474.1 does not apply because the City Council's action in this matter relates to a Tentative Parcel Map and not a Final Parcel Map. The City Council finds that the other sections noted in the introductory paragraph of this Section do apply to Tentative Parcel Map No. 38164. The following subsections are intended to provide the required findings in accordance with Government Code Sections 66473.5, 66474, and 66474.6 and Public Resources Code Section 21100.

B. **Tentative Parcel Map No. 38164 is consistent with the goals, policies and programs of the City's General Plan and with the Sun Lakes Village North Specific Plan Amendment No. 5.**

(1) The General Plan land use designations for the site are General Commercial and Business Park with a Specific Plan Overlay. The Specific Plan designations for the site are Business & Warehouse District and Retail and Service District. The Community Development Element of the General Plan provides that Specific Plan

land use designations become the General Plan overlay land use designations in the Specific Plan area.

(2) Tentative Parcel Map No. 38164 will divide the existing 47.11-acre property into three parcels consistent with the land uses proposed to be developed on the site and consistent with the General Plan and Specific Plan land use designations, as more fully explained in the succeeding subsections below. The subsections provided in this Subsection (B) provide the findings required by Government Code Sections 66473.5 and 66474(a).

(3) The proposed Project consists of the development of an industrial warehouse building of 619,959 square feet of gross floor area, which includes 10,000 square feet of office and a separate parcel containing six (6) retail/commercial buildings totaling 34,000 square feet to the south varying in size from 1,600 square feet to 8,400 square feet.

(4) The Community Development Element of the General Plan contains goals, policies, and programs for the development of industrial, commercial, and residential uses. With respect to the industrial uses, the General Plan specifies the general goal that "A balanced mix of non-polluting industrial land uses which provide local jobs for the City's residents." The Project will provide a non-polluting industrial use and provide jobs for City residents. Specifically, the industrial portion of the Project is not an industrial factory and the uses within the buildings and the warehouse operation are subject to several mitigation measures that require the use of electrical hookups at loading docks (AQ- 3), truck idling limitations (AQ-4), the use of electric or natural gas service equipment to reduce fuel consumption and emissions (AQ-5) and a minimum of three (3) electric-vehicle charging stations. In addition, other mitigation measures are imposed on the Project during the grading and construction of the site, including the use of low VOC paint (AQ-1) and limitations on grading activities to ensure emissions do not exceed SCAQMD's significance thresholds. With these mitigation measures, the Project will not exceed local significance thresholds for emissions and ensure that the Project satisfies the non-polluting goal for industrial uses as provided in the General Plan.

(5) The Community Development Element of the General Plan contains several policies applicable to industrial development projects including: Policy 6 that provides that the land use map shall include sufficient industrial lands for manufacturing, warehousing and distribution, while carefully considering compatibility with adjacent lands; Policy 8 that provides that industrial lands shall be located on major roadways with good access to Interstate 10, to assure that potential traffic impacts associated with tractor-trailers are minimized; and Policy 10 that provides that the Zoning Ordinance shall include principles, design standards and guidelines which encourage development of high quality industrial projects." The Project is consistent with Policy 6 because the size of the portion of the site designated for business and warehouse uses is relatively large (30.22 acres) and is appropriately located immediately adjacent to the I-10 freeway and the Southern Pacific Railroad line to the north of the Project site. In addition, the warehouse use is located on the portion of the site that will be screened and buffered from residential uses to the south and east by the retail and service buildings to be located in the Retail and Services District that exists between the residential uses in Sun Lakes to the south of Sun Lakes Boulevard and the

industrial building and by the Office and Professional District uses in the future that will exist between the warehouse uses and the residential and assisted living uses to the east of the Project site. The Project is consistent with Policy 8 because it will be immediately adjacent to Interstate 10 on the north, and the lot configuration and access points into and out of the site are designed to provide for the minimum amount of travel distance on Sun Lakes Boulevard to Highland Springs Avenue and then onto Interstate 10 and eventually from Sun Lakes Boulevard to the Sunset Avenue and onto Interstate 10 when the Sun Lakes Boulevard extension is completed. Finally, the Project, as more fully explained in connection the Project's consistency with the Specific Plan includes a variety of design elements, setbacks, landscaping features that will provide a high quality industrial project.

(6) The Economic Development Element of the General Plan provides the goal for a balanced, broadly based economy that provides a full range of economic and employment opportunities, while maintaining high standards of development and environmental protection. The Project will increase the availability of job opportunities for not only warehouse employees but also retail and service based business opportunities. The Applicant has asserted that the Project would create as many as 722 local jobs in the City of Banning. The proposed development and buildings will improve the City's property tax base, boost sales tax, provide jobs and revenue for the City's economy. The Applicant has asserted that the Project would generate approximately $4,119,780 to the City in Development Impact Fees and as much as $325,000 in annual tax revenues to the City. The Project is also consistent with the following applicable Economic Development Element Policies: Policy 2 for the City to take a proactive role in the recruitment of new businesses that will generate and broaden employment opportunities, increase discretionary incomes and contribute to City General Fund Revenues; Policy 3 to encourage infill development that will increase the efficiencies of new utilities, infrastructure and public services; and Policy 9 which require development to be responsible for its fair share of on-site and off-site improvements. The Project will provide physical space for a large business or businesses to conduct warehouse uses in the City and spaces for up to six new retail and service uses to serve the immediate community and the City. These new businesses will provide a wide range of different job opportunities from warehouse jobs to office, retail and services jobs and thereby create the diverse job opportunities in the City that will provide opportunities for residents to find new jobs to increase their discretionary incomes. Overall, through property tax, economic activity and job creation, the Project is anticipated to contribute to the City's General Fund revenues in an amount of approximately $325,000 per year. The Project is an infill project using a long-standing vacant site for land uses on lots configured and planned to be appropriately sited between other existing uses and already served by existing streets, utilities and infrastructure. Finally, the project includes design features to ensure all on-site amenities consistent with the City's development standards are paid for by the applicant and that fair share contributions in the form of payment of the City's applicable development impact fees are collected from the development.

(7) The Sun Lakes Village North Specific Plan Amendment No. 5 specifies Guiding Objectives for the development in the Specific Plan Area. Those Objectives are as follows: (1) Allow for a range of land uses that reflects current market conditions given the trend away from brick-and-mortar retail; (2) Respond to an increase in e-

commerce, especially driven by the coronavirus pandemic; (3) Promote high quality development to safeguard the existing asset of Sun Lakes Country Club and other development in the vicinity; (4) Locate and design truck courts and semi-truck circulation to minimize impacts on surrounding land uses and development; and (5) Expand access to restaurants, shopping, and services for the nearby Sun Lakes Country Club Community. The proposed Project accomplishes all these Objectives by reflecting current real estate market trends toward more e- commerce uses which necessarily includes warehouse uses as a key component of the supply chain required for the storage, shipping and availability of e-commerce goods. The lot configuration locates truck courts and semi-truck circulation towards the interior and northerly portion of the site next to the Southern Pacific Railroad line and Interstate 10 and away from the residential uses in the Sun Lakes Country Club. The design elements and project conditions will ensure that the landscape features and design elements projects a high quality development to safeguard the quality of development within the Sun Lakes Country Club community. Finally, the Project will provide up to six sites and buildings for restaurants, shopping and services for the Sun Lakes Country Club Community within the Retail and Service District of the Project site that is located immediately north of Sun Lakes Boulevard and convenient to that Community.

C. The design and improvement of the subdivision proposed under Tentative Parcel Map No. 38164 is consistent with the City's General Plan and the Sun Lakes Village North Specific Plan Amendment No. 5.

(1) The Tentative Parcel Map covers an area of approximately 47.11 acres and proposes to divide that area into three parcels to be consistent with the proposed land uses to be allowed on each of those parcels. Based on the findings contained in the subsections below, the design and improvement of the subdivision is consistent with the General Plan and the Sun Lakes Village North Specific Plan Amendment No. 5. The findings in the following subsections are intended to provide the analysis for approval of the Tentative Parcel Map under Government Code Section 66474 (b).

(2) The largest proposed parcel is 30.22 acres and is in the northwestern portion of the Map and is adjacent to backside of the Sun Lakes Village Shopping Center, the Southern Pacific Railroad and the Interstate-10 Freeway. This parcel is proposed for a warehouse building of approximately 619,959 square feet along with associated truck parking, loading, landscaping and other uses. The design of the subdivision to locate this large parcel closest to the Southern Pacific Railroad line and to Interstate 10 and then have this parcel improved with a warehouse and associated uses is consistent with the General Plan Policies 7 of the City's Industrial Land Use Goal which provides that there shall be sufficient lands for manufacturing, warehousing and distribution, while carefully considering compatibility with adjacent lands. Creating a parcel of 30.22 acres sufficient to accommodate the proposed warehouse building while at the same time placing that parcel closest to commercial uses to the west, a railroad line and Interstate 10 to the north, a future office building to the east and a new grouping of commercial retail and service buildings to the south, allows for the warehousing proposed uses farthest away from residential uses to the south and complies with this Policy of carefully considering compatibility with adjacent land uses. In addition, designing

this subdivision to accommodate a warehouse building is consistent with Policy 8 which provides that industrial lands shall be located on major roadways with good access to Interstate 10, to assure that potential traffic impacts associated with tractor- trailers are minimized. The design provides for access into and out of the site from Sun Lakes Boulevard to Highland Springs Avenue and onto Interstate 10.

(3) The second largest parcel is approximately 10.06 acres and is located on the eastern portion of the side and adjacent to an assisted living facility and residential units designed on smaller lots that are part of the Sun Lakes Country Club active adult/golf course community. On this lot, offices and professional uses are intended to be located but no development is currently proposed. This parcel is sufficient in size in terms of depth and width to accommodate a variety of building configurations that could be proposed on the site and meet all required development standards as set forth in Table 2 of the Sun Lakes Village North Specific Plan Amendment No. 5.

(4) The third and smallest parcel is approximately 6.83 acres and is located on the southern edge of the Map and adjacent to Sun Lakes Boulevard. On this lot, retail stores, restaurants and service uses are proposed as contemplated by the Sun Lakes Village North Specific Plan Retail and Service District designation for the site. This lot design will provide for up to six separate retail and service uses to not only serve the needs of the residential neighborhood to the south, but also provide a buffer and screen between those residential uses and the warehouse building north of that parcel.

(5) The Tentative Parcel Map is designed to meet City standards which provide satisfactory pedestrian and vehicular circulation, including emergency vehicle access. Specifically, Section 2.2.1.(Semi-Truck Access) of the Specific Plan identifies Sun Lakes Village Drive as an access point for semi-trucks to the Business & Warehouse District. Currently, the Sun Lakes Village Shopping Center utilizes Sun Lakes Village Drive for truck deliveries in both eastbound and westbound directions. Project's access points along Sun Lakes Boulevard have been evaluated and necessary driveway widening, adequate truck maneuvering, and signalized intersections have been provided as conditions of approval (See Street Improvement/Right of Way Conditions of approval, including Condition 27.) Additionally, the Project is located near Interstate 10 freeway which allows for ideal access to industrial-type lands and helps minimize potential traffic impacts, which is consistent with General Plan Policy Nos. 8 for the Industrial Goal of the Community Development Element.

D. The subject site is physically suitable for the type of development proposed under Tentative Parcel Map No. 38164.

(1) The Tentative Parcel Map covers an area of approximately 47.11 acres and proposes to divide that area into three parcels to be consistent with the proposed land uses to be allowed on each of those parcels. Based on the findings contained in the subsections below, the site contained within the boundaries of the Tentative Parcel Map is physically suitable for the type of development proposed pursuant to Tentative Parcel Map No. 38164. The findings in the following subsections are intended to provide the findings required by Government Code Section 66474(c).

(2) The largest proposed parcel is 30.22 acres and is in the northwestern portion of the Map and is adjacent to backside of the Sun Lakes Village Shopping Center, the Southern Pacific Railroad and the Interstate-10 Freeway. This parcel is approximately 1,316,349 square feet in size, exceeds the minimum parcel size of 10,000 square feet, has a lot depth of 876 feet that exceeds the minimum required depth of 100 feet, has a lot width of 1,270 feet which exceeds the minimum lot width of 70 feet, and is large enough to accommodate the proposed development of a 619,959 square-foot warehouse building with associated truck access and parking areas, loading docks, employee parking and landscape areas. The proposed floor area ratio will be 47% of the site and less than the 55% maximum allowed for the parcel. The development will be set back 10 feet from the north and west property lines of the site, consistent with required development standards, and allow for building setbacks to far exceed the required setbacks from the rear (185 feet when 20 feet is required) the side (70 feet when 20 feet is required) and front (185 feet when 20 feet is required). The parcel is also sufficient to provide for 402 parking spaces when 360-362 parking spaces are required by the Specific Plan and Banning Municipal Code Chapter 17.28.

(3) The second largest parcel is approximately 10.06 acres and is located on the eastern portion of the side and adjacent to an assisted living facility and residential units designed on smaller lots that are part of the Sun Lakes Country Club active adult/golf course community. On this lot, offices and professional uses are intended to be located but no development is currently proposed. This parcel is sufficient in size in terms of depth and width to accommodate a variety of building configurations that could be proposed on the site and meet all required development standards as set forth in Table 2 of the Sun Lakes Village North Specific Plan Amendment No. 5.

(4) The third and smallest parcel is approximately 6.83 acres and is located on the southern edge of the Map and adjacent to Sun Lakes Boulevard. On this lot, retail stores, restaurants and service uses are proposed. This parcel is approximately 297,492 square feet in size, exceeds the minimum parcel size of 6,000 square feet, has a lot depth of 200 feet that exceeds the minimum required depth of 100 feet, has a lot width of 1,300 feet which exceeds the minimum lot width of 60 feet, and is large enough to accommodate the proposed development of six commercial buildings ranging size from 1,600 square feet to 8,400 square feet for a total of 34,000 square feet, along with associated utility, parking roadway, and landscaping improvements. The proposed floor area ratio will be approximately 11% of the site and less than the 60% maximum allowed for the parcel. The development will satisfy the 20 foot and 10-foot landscape setbacks from Sun Lakes Boulevard and the west project boundary, respectively, and allow for building setbacks to exceed the required setbacks from the rear (30 feet when 20 feet is required) the side (80 feet when 20 feet is required) and front (100 feet when 10 feet is required). The parcel is also sufficient to provide for 289 parking spaces (16 for the drive-thru and 273 for the retail) when a total of 146 are required by the Specific Plan.

(5) All three of the parcels are relatively flat and are designed to take vehicular access from access points along Sun Lakes Boulevard that are adequate in location, design and configuration for truck traffic into and out of the warehouse parcel, the office parcel and the retail and service use parcel. All three parcels are adjacent to Sun Lakes Boulevard to provide water, sewer and electricity to the site.

E. The site is physically suitable for the proposed-density of development under Tentative Parcel Map No. 38164.

(1) As noted in the preceding section D above, the Tentative Parcel Map covers an area of approximately 47.11 acres and proposes to divide that area into three parcels to be consistent with the proposed land uses to be allowed on each of those parcels. Based on the findings contained in the subsections below, the site contained within the boundaries of the Tentative Parcel Map is physically suitable for the density of development proposed pursuant to Tentative Parcel Map No. 38164. The findings in the following subsections are intended to provide the findings required by Government Code Section 66474(d).

(2) The largest proposed parcel is 30.22 acres and is in the northwestern portion of the Map and is adjacent to backside of the Sun Lakes Village Shopping Center, the Southern Pacific Railroad and the Interstate-10 Freeway. This parcel is approximately 1,316,349 square feet in size and is large enough to accommodate the proposed development of a 619,959 square- foot warehouse building with associated truck access and parking areas, loading docks, employee parking and landscape areas. The proposed floor area ratio will be 47% of the site and less than the 55% maximum allowed for the parcel. The development will include landscape setbacks 10 feet from the north and west property lines of the site, consistent with required development standards, and allow for building setbacks to far exceed the required setbacks from the rear (185 feet when 20 feet is required) the side (70 feet when 20 feet is required) and front (185 feet when 20 feet is required). The parcel is also sufficient to provide for 402 parking spaces when 360-362 parking spaces are required by the Specific Plan and Banning Municipal Code Chapter 17.28. By achieving or exceeding all development standards, the density of the proposed development is suitable for the proposed site.

(3) The second largest parcel is approximately 10.06 acres and is located on the eastern portion of the side and adjacent to an assisted living facility and residential units designed on smaller lots that are part of the Sun Lakes Country Club active adult/golf course community. On this lot, offices and professional uses are intended to be located but no development is currently proposed. This parcel is sufficient in size in terms of depth and width to accommodate a variety of building configurations that could be developed up to the 60% floor area of the site allowed on the parcel and large enough so that it could meet all required development standards as set forth in Table 2 of the Sun Lakes Village North Specific Plan Amendment No. 5.

(4) The third and smallest parcel is approximately 6.83 acres and is located on the southern edge of the Map and adjacent to Sun Lakes Boulevard. On this parcel, retail stores, restaurants and service uses are proposed. This parcel is approximately 297,492 square feet in size and is large enough to accommodate the proposed development of six commercial buildings ranging size from 1,600 square feet to 8,400 square feet for a total of 34,000 square feet, along with associated utility, parking roadway, and landscaping improvements. The proposed floor area ratio will be approximately 11% of the site and less than the 60% maximum allowed for the parcel. The development will satisfy the 20 foot and 10-foot landscape setbacks from Sun Lakes Boulevard and the west project boundary, respectively, and allow for building setbacks to exceed the required setbacks from

the rear (30 feet when 20 feet is required) the side (80 feet when 20 feet is required) and front (100 feet when 10 feet is required). The parcel is also sufficient to provide for 289 parking spaces (16 for the drive-thru and 273 for the retail) when a total of 146 are required by the Specific Plan.

F. The design of the subdivision and improvements proposed under Tentative Parcel Map No. 38164 are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

(1) As previously discussed in the findings contained in Subsection B of this Section 3, Tentative Parcel Map No. 38164 is consistent with the Sun Lakes Village North Specific Plan Amendment No. 5. That Specific Plan was analyzed in the previously certified EIR for the Sun Lakes North Specific Plan Amendment No. 5. As previously discussed in Section 2 of this Resolution, which findings are incorporated herein by this reference as if fully set forth herein, and as demonstrated by the Addendum referred to in that Section, the EIR disclosed and evaluated all potential environmental impacts related to the development of the Project site with the current land uses. The EIR found no significant and unavoidable impacts to any biological resources, and the Addendum found that no new or substantially greater impacts would occur pursuant to the Project. A condition of the Tentative Map approval imposes all mitigation measures set forth in the Mitigation Monitoring and Reporting Program that was adopted with the Sun Lakes Village North Specific Plan Amendment No. 5. Based on the imposed mitigation measures, the environmental impacts arising from the design and improvement of the Tentative Parcel Map will be mitigated to a level less than significance to not cause substantial environmental damage within the meaning of subsection (e) of Government Code Section 66474 and Public Resources Code Section 21100.

(2) The site is currently vacant and does not contain any significant vegetation or habitat for wildlife. The site is not located within any Multiple Habitat Conservation Plan (MSHCP) Criteria Cell or subunit which indicates that this site contains no endangered, threatened, or listed species of plant or animal, or its habitat, on the site. The site is not mapped within an area where additional surveys are required for any amphibian, mammal or other criteria species. There is no evidence that vernal pool complex, similar bodies of water, or conditions suitable for forming such bodies of water exist on the site. The site is not within or adjacent to any MSHCP Conservation Areas. The site is mapped within a Borrowing Owl required habitat and a pre-construction Burrowing Owl Survey and a Nesting Bird Survey are imposed as mitigation measures for this Project (BIO-1 and BIO-2). Finally, the site is mapped within a Narrow Endemic Plant Species required habitat suitability assessment survey area and an assessment was performed that determined that the site did not provide suitable habitat for the San Diego ambrosia, Brand's phacelia and the San Miguel Savory. In addition, the site does not show any existing trees on site, but even it if did, BIO-3 would require replacement of such trees. Therefore, based on these findings and with the imposition of BIO-1 through BIO-3, potential impacts to biological resources will be mitigated to less than significance so as not to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat within the meaning of subsection (e) of Government Code Section 66474 and Public Resources Code Section 21100.

G. The design of the subdivision and improvements proposed under Tentative Parcel Map No. 38164 are not likely to cause serious health problems.

(1) Based on the warehouse building proposed to be developed on the site, and pursuant to Mitigation Measure AQ-7, a diesel health risk assessment was prepared which is attached to the Addendum document as Appendix B to that document. That analysis evaluated the potential mobile source health risk impacts to receptors (residents or workers) associated with the development of the Project. Health risk exposures were modeled in accordance with the guidelines in the SCAQMD's Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis. SCAQMD recommends using the Environmental Protection Agency's (U.S. EPA's) AERMOD model which has been employed accordingly. Risk calculations were conducted consistent with the Office of Environmental Health Hazards Assessment (OEHHA)'s 2015 Risk Assessment Guidelines. Detailed health risk modeling results are presented at Appendix B to this Memorandum. The analysis also evaluated potential health risk impacts that could result from exposure to Toxic Air Contaminants (TACs), including diesel particulate matter (DPM) generated by heavy-duty diesel trucks from on-site idling, on-site travel, and off-site travel. The modeled source area is shown in Exhibit D to the Appendix B of the Addendum Document. At the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to the Project is estimated at 1.32 in one million, which is less than the SCAQMD threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable SCAQMD threshold of 1.0. As such, the Project will not cause a significant human health or cancer risk at any potentially affected receptors within the meaning of subsection (f) of Government Code Section 66474.

(2) As noted in prior subsections, the design of proposed Tentative Parcel Map No. 38164 is in conformance with the City's General Plan, the Sun Lakes North Specific Plan Amendment No. 5 and the certified EIR. The Project has been conditioned to comply with all applicable Specific Plan requirements and requirements of the City's ordinances, codes, and standards including, but not limited to, the California Uniform Building Code, the City's Ordinances relating to Stormwater runoff management and controls. In addition, the design and construction of all improvements for the subdivision has been conditioned to be in conformance with adopted City street and public works standards. Based on the project design and its conformity to these standards, the design of the subdivision and its improvements are not likely to cause serious health problems within the meaning of subsection (f) of Government Code Section 66474.

H. The design of the subdivision and improvements proposed under Tentative Parcel Map No. 38164 will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision.

Other than easements for City of Banning water, sewer and electrical utilities, Southern California Edison, no easements of record or easements established by judgment of a court of competent jurisdiction for public access across the site have been disclosed in a search of the title records for the site and the City does not otherwise have any constructive or actual knowledge of any other such easements. Accordingly, the Parcel Map will not conflict with easements or access through the property within the meaning of subdivision (g) of Government Code Section 66474.

I. The design of the proposed Tentative Parcel Map No. 38164 provides, to the extent feasible, for future passive or natural heating or cooling opportunities in the subdivision.

Tentative Parcel Map No. 38164 does not propose any design features that would conflict with future passive or natural heating or cooling opportunities.

J. The discharge of waste from the proposed subdivision into an existing community sewer system would not result in a violation of existing requirements imposed by the California Regional Water Quality Control Board.

The discharge of sewage from the site will occur through a sewer connection within Sun Lakes Boulevard and proceed through a series of sewer pipes to the City's wastewater treatment plant in the southeast corner of the City. In connection with the approval of the Project, the applicant is required to obtain all necessary clearances and permits from the California Water Quality Control Board for the Colorado River Basin (Condition 20 (d)). With the design of the Project and Map and compliance with this condition, the discharge of waste into the City's sewer system will not result in a violation of Regional Water Quality Control Board requirements within the meaning of Government Code Section 66474.6.

SECTION 4. **Design Review Approval Findings.** Section 17.56.050 of the City of Banning Municipal Code requires that applications for Design Review approval satisfy certain specified findings and criteria. The City Council makes the following findings to approve Design Review 21-7008:

A. The proposed project is consistent with the General Plan.

(1) The General Plan land use designations for the site are General Commercial and Business Park with a Specific Plan Overlay. The Specific Plan designations for the site are Business & Warehouse District and Retail and Service District. The Design Review application seeks approval of buildings and improvements for development of an industrial warehouse building of 619,959 square feet of gross floor area, which includes 10,000 square feet of office and a separate parcel containing six (6) retail buildings totaling 34,000 square feet to the south varying in size from 1,600 square feet to 8,400 square feet.

(2) The Community Development Element of the General Plan contains goals, policies and programs for the development of industrial, commercial and residential uses. With respect to the industrial uses, the General Plan specifies the general goal that "A balanced mix of non-polluting industrial land uses which provide local jobs for the City's residents." The project will provide a non-polluting industrial use and provide jobs for City residents. Specifically, the industrial portion of the project is not an industrial factory and the uses within the buildings and the warehouse operation are subject to several mitigation measures that require the use of electrical hookups at loading docks (AQ- 3), truck idling limitations (AQ-4), the use of electric or natural gas service equipment to reduce fuel consumption and emissions (AQ-5) and a minimum of three (3) electric-vehicle charging stations. In addition, other mitigation measures are imposed on the Project during the grading and construction of the site, including the use of low VOC paint (AQ-1) and limitations on grading activities to ensure emissions do not exceed SCAQMD's

significance thresholds. With these mitigation measures the project will not exceed local significance thresholds for emissions and ensure that the Project satisfies the non-polluting goal for industrial uses as provided in the General Plan.

(3) The Community Development Element of the General Plan contains several policies applicable to industrial development projects including: Policy 6 that provides that the land use map shall include sufficient industrial lands for manufacturing, warehousing and distribution, while carefully considering compatibility with adjacent lands; Policy 8 that provides that industrial lands shall be located on major roadways with good access to Interstate 10, to assure that potential traffic impacts associated with tractor-trailers are minimized; and Policy 10 that provides that the Zoning Ordinance shall include principles, design standards and guidelines which encourage development of high quality industrial projects." The Project is consistent with Policy 6 because the size of the portion of the site designated for business and warehouse uses is relatively large (30.22 acres) and is appropriately located immediately adjacent to the I-10 freeway and the Southern Pacific Railroad line to the north of the Project site. In addition, the warehouse use is located on the portion of the site that will be screened and buffered from residential uses to the south and east by the retail and service buildings to be located in the Retail and Services District that exists between the residential uses in Sun Lakes to the south of Sun Lakes Boulevard and the industrial building and by the Office and Professional District uses in the future that will exist between the warehouse uses and the residential and assisted living uses to the east of the Project site. The Project is consistent with Policy 8 because it will be immediately adjacent to Interstate 10 on the north, and the lot configuration and access points into and out of the site are designed to provide for the minimum amount of travel distance on Sun Lakes Boulevard to Highland Springs Avenue and then onto Interstate 10 and eventually from Sun Lakes Boulevard to the Sunset Avenue and onto Interstate 10 when the Sun Lakes Boulevard extension is completed. Finally, the Project, as more fully explained in connection the Project's consistency with the Specific Plan includes a variety of design elements, setbacks, landscaping features that will provide a high quality industrial project.

(4) The Economic Development Element of the General Plan provides the goal for a balanced, broadly based economy that provides a full range of economic and employment opportunities, while maintaining high standards of development and environmental protection. The Project will increase the availability of job opportunities for not only warehouse employees but also retail and service based business opportunities. The proposed development and buildings will improve the City's property tax base, boost sales tax, provide jobs and revenue for the City's economy. The Project is also consistent with the following applicable Economic Development Element Policies: Policy 2 for the City to take a proactive role in the recruitment of new businesses that will generate and broaden employment opportunities, increase discretionary incomes and contribute to City General Fund Revenues; Policy 3 to encourage infill development that will increase the efficiencies of new utilities, infrastructure and public services; and Policy 9 which require development to be responsible for its fair share of on-site and off- site improvements. The Project will provide physical space for a large business or businesses to conduct warehouse uses in the City and spaces for up to six new retail and service uses to serve the immediate community and the City. These new

businesses will provide a wide range of different job opportunities from warehouse jobs to office, retail and services jobs and thereby create the diverse job opportunities in the City that will provide opportunities for residents to find new jobs to increase their discretionary incomes. Overall, through property tax, economic activity and job creation, these Project will contribute to General Fund revenues. The Project is an infill project using a long- standing vacant site for land uses on lots configured and planned to be appropriately sited between other existing uses and already served by existing streets, utilities and infrastructure. Finally, the project includes design features to ensure all on-site amenities consistent with the City's development standards are paid for by the applicant and that fair share contributions in the form of payment of the City's applicable development impact fees are collected from the development.

B. The proposed project is consistent with the Zoning Ordinance, including the development standards and guidelines for the district in which it is located.

(1) The Sun Lakes Village North Specific Plan Amendment No. 5, which was incorporated into the Zoning Ordinance as Section 17.96 by way of Ordinance No. 1591, provides the development standards and guidelines for the proposed Project site. The Specific Plan provides Guiding Objectives for the development in the Specific Plan Area. Those Objectives are as follows: (1) Allow for a range of land uses that reflects current market conditions given the trend away from brick-and-mortar retail; (2) Respond to an increase in e-commerce, especially driven by the coronavirus pandemic; (3) Promote high quality development to safeguard the existing asset of Sun Lakes Country Club and other development in the vicinity; (4) Locate and design truck courts and semi-truck circulation to minimize impacts on surrounding land uses and development; and (5) Expand access to restaurants, shopping, and services for the nearby Sun Lakes Country Club Community. The proposed Project accomplishes all these Objectives by reflecting current real estate market trends toward more e- commerce uses which necessarily includes warehouse uses as a key component of the supply chain required for the storage, shipping and availability of e-commerce goods. The proposed Project locates truck courts and semi-truck circulation towards the interior and northerly portion of the site next to the Southern Pacific Railroad line and Interstate 10 and away from the residential uses in the Sun Lakes Country Club. The design elements and project conditions will ensure that the landscape features and design elements projects a high quality development to safeguard the quality of development within the Sun Lakes Country Club community. Finally, the Project will provide up to six sites and buildings for restaurants, shopping and services for the Sun Lakes Country Club Community within the Retail and Service District of the Project site that is located immediately north of Sun Lakes Boulevard and convenient to that Community.

(2) As proposed, the Project meets all required development standards as outline in Section 3.1 (Development Standards) of the Sun Lakes Village North Specific Plan (SLVNSP). These include such requirements as setback, height, landscaping, parking, etc. Additionally, the Project meets those Design Guidelines outlined in Section 3.2 of the SLVNSP with regard to such elements as architectural articulation, blended use of building materials, and fenestration treatment. Therefore, the Project meets the City's Zoning Ordinance development standards

and design guidelines, as more fully explained in the following subsections.

(3) The warehouse building is proposed to be located on a 30.22- acre parcel located in the northwestern portion of the Project site and is adjacent to backside of the Sun Lakes Village Shopping Center, the Southern Pacific Railroad and the Interstate-10 Freeway. This parcel is entirely within the Business and Warehouse District of the Specific Plan which allows for a variety of warehouse uses as permitted uses in that District. The parcel on which the warehouse building will be located is approximately 1,316,349 square feet in size and is large enough to accommodate the proposed development of a 619,959 square- foot warehouse building with associated truck access and parking areas, loading docks, employee parking and landscape areas. The proposed floor area ratio will be 47% of the site and less than the 55% maximum allowed for the parcel. The development will include landscape setbacks 10 feet from the north and west property lines of the site, consistent with required development standards, and allow for building setbacks to far exceed the required setbacks from the rear (185 feet when 20 feet is required) the side (70 feet when 20 feet is required) and front (185 feet when 20 feet is required). The parcel is also sufficient to provide for 402 parking spaces when 360-362 parking spaces are required by the Specific Plan and Banning Municipal Code Chapter 17.28. By achieving or exceeding all development standards, the proposed warehouse component of the Project satisfies the finding that the Project is consistent with the applicable development standards.

(4) The retail and service buildings are proposed to be located on an approximate 6.83-acre parcel that is located on the southern edge of the Project Site and adjacent to Sun Lakes Boulevard. This parcel is entirely within the Retail and Service District of the Specific Plan which allows for a variety of retail, restaurant and service uses as permitted uses in that District. On this parcel, retail stores, restaurants and services buildings are proposed. This parcel is approximately 297,492 square feet in size and is large enough to accommodate the proposed development of six commercial buildings ranging size from 1,600 square feet to 8,400 square feet for a total of 34,000 square feet, along with associated utility, parking roadway, and landscaping improvements. The proposed floor area ratio will be approximately 11% of the site and less than the 60% maximum allowed for the parcel. The development will satisfy the 20 foot and 10-foot landscape setbacks from Sun Lakes Boulevard and the west project boundary, respectively, and allow for building setbacks to exceed the required setbacks from the rear (30 feet when 20 feet is required) the side (80 feet when 20 feet is required) and front (100 feet when 10 feet is required). The proposed Project will provide for 289 parking spaces (16 for the drive-thru and 273 for the retail) when a total of 146 are required by the Specific Plan.

C. The design and layout of the proposed project will not unreasonably interfere with the use and enjoyment of neighboring existing or future development and will not result in vehicular and/or pedestrian hazards.

(1) The design and layout of the proposed Project places the warehouse use on the largest of the three parcels (30.22 acres) and appropriately locates that parcel and warehouse building and associated uses immediately adjacent to the I-10 freeway and the Southern Pacific Railroad line to the north of the Project site. In addition, the warehouse use is located on the portion of the site that will be screened and

buffered from residential uses to the south and east by the retail and service buildings to be located in the Retail and Services District that exists between the residential uses in Sun Lakes Golf Course Community that lies south of Sun Lakes Boulevard and the industrial building and by the Office and Professional District uses in the future that will exist between the warehouse uses and the residential and assisted living uses to the east of the Project site. In addition, the warehouse building will back up against the rear of the Sun Lakes Village Shopping Center buildings rather than facing those Shopping Center buildings. By this design of the location of the warehouse building, the Project is not anticipated to unreasonably interfere with the use and enjoyment of neighboring uses and future development.

(2) The proposed Project locates truck courts and semi-truck circulation towards the interior and northerly portion of the site next to the Southern Pacific Railroad line and Interstate 10 and away from the residential uses in the Sun Lakes Country Club. The lot configuration and access points into and out of the site are designed to provide for the minimum amount of travel distance on Sun Lakes Boulevard to Highland Springs Avenue and then onto Interstate 10 and eventually from Sun Lakes Boulevard to the Sunset Avenue and onto Interstate
10 when the Sun Lakes Boulevard extension is completed. Sun Lakes Boulevard is a Major Highway between Highland Springs Avenue to Highland Home Road with adequate capacity for truck and automobile traffic volumes for commercial and industrial purposes. Signalized intersections are proposed to be installed at Highland Springs/Sun Lakes Boulevard and at Sun Lakes Boulevard/Country Club Drive to ensure safe pedestrian and vehicular crossing along Sun Lakes Boulevard. For these reasons, the development will not result in vehicular or pedestrian hazard.

D. The design of the proposed project is compatible with the character of the surrounding neighborhood.

(1) As explained in Subsection (C) above, the warehouse building and associated uses will be surrounded by compatible uses. The entire northern boundary of the site on which the warehouse building will be located is bounded by the Southern Pacific Railroad line and then Interstate 10. Locating a warehouse building up against that rail line and freeway corridor is entirely appropriate and compatible with transportation uses that occur on that rail line and freeway corridor. To the west of the warehouse building is the backside of the Sun Lakes Village Shopping Center. This is commercial development project that will shield the warehouse building from persons coming to and from that Shopping Center. Locating the warehouse building behind a commercial shopping center building will not interfere with the use of that Shopping Center and is compatible with that use. To the south of the warehouse building is the Retail and Service District of the Specific Plan. On that site there will be shops, restaurants and services businesses along with a parking lot. Located the warehouse to the rear of and on the backside of these retail and service buildings will not interfere with those retail and service business and is compatible with those uses. Finally, most of the easterly side the warehouse parcel will be adjacent to a currently vacant parcel that is proposed for office and professional uses. That future office and professional development on that easterly parcel will provide substantial screening and buffering of the residential and assisted living uses to the east of the warehouse building. In addition, a

landscape buffer along the entire easterly edge of the Project site will further screen the warehouse use from those other easterly uses. Finally, the placement of the warehouse building and associated uses on this site will mean that the warehouse building and truck uses on that site will be more than 800 feet from the northern boundary of the Sun Lakes Country Club residential community. For all these reasons, the design of the project to place and develop a warehouse building and use on the rear of the Project site and as buffered by the other buildings and uses surrounding that site, provides that it will be compatible with the character of the surrounding neighborhood.

(2) As noted in part (1) of this Subsection (D) above, the proposed retail, restaurant and service buildings to be located on the southerly parcel of the proposed development will be situated between Sun Lakes Boulevard on the south and the industrial warehouse building on the north. In addition, to the proposed landscaping along the frontage of Sun Lakes Boulevard, these retail, restaurant and service buildings and uses will function as a visual and physical buffer from the Sun Lakes Country Club residents on the south side of Sun Lakes Boulevard, the closest of which is approximately 800 feet away from the proposed industrial building. These proposed retail, restaurant and services uses in proximity of existing adjacent residential uses will also be similar to the uses in the existing commercial/retail uses in the Sun Lakes Village Shopping Center. These buildings and uses will provide needed retail, restaurant and service uses for the residents of the Sun Lakes Country Club community. For these reasons, the Project's proposed uses on the Retail and Service District parcel will be compatible with the surrounding neighborhood.

SECTION 5. Project Approval and Denial of Appeal. Based upon the findings and conclusions set forth in Sections 1 through 4 above, and all of the evidence (both written and oral) in the record, this City Council hereby approves Tentative Parcel Map No. 38164; denies the Appeal of the Planning Commission's approval of Design Review No. 21-7008, thereby upholding approval of Design Review No. 21-7008; and imposes all of the Conditions of Approval set forth on Exhibit A to this Resolution, which are hereby incorporated herein by this reference.

SECTION 6. Certification. The City Clerk shall certify to the adoption of this Resolution.

SECTION 7. Effect. This Resolution shall take effect immediately upon its adoption.

SECTION 8. Judicial Review. The time within which judicial review, if available, of this decision must be sought is governed by California Code of Civil Procedure Section 1094.6, unless a shorter time is provided by other applicable law. The City Clerk shall mail by first class mail, postage prepaid, a certified copy of this Resolution and a copy of the affidavit or certificate of mailing to the Appellant, Applicant, and any other persons or entities requesting notice of determinations related to the decision.

PASSED, APPROVED AND ADOPTED this 9th day of July 2024.

Alberto Sanchez, Mayor
City of Banning

ATTEST:

Caroline Patton, Administrative City Clerk
City of Banning

APPROVED AS TO FORM:

Serita R. Young, City Attorney
Richards, Watson & Gershon

CERTIFICATION:

I, Caroline Patton, Administrative City Clerk of the City of Banning, California, do hereby certify that the foregoing Resolution 2024-114, was duly adopted by the City Council of the City of Banning, California, at a regular meeting thereof held on the 9th day of July 2024 by the following vote, to wit:

AYES:

NOES:

ABSENT:

ABSTAIN:

Caroline Patton, Administrative City Clerk
City of Banning, California

PROJECT: Design Review No. 21-7008 & Tentative Parcel Map No. 38164 (TPM 21-4001)
SUBJECT: Conditions of Approval (City Council Resolution 2024-114)
APPLICANT: Pamela Steele, MIG, Inc.
LOCATION: North of Sun Lakes Boulevard, east of Highland Springs Avenue, south of Interstate 10, and west of Highland Home Road in the Sun Lakes Village North Specific Plan (APN 540- 180-055)

EXHIBIT A
To City Council Resolution 2024-114

*** All fair share agreements, covenant agreements and agreements subject to recordation will be subject to review and approval by the City Attorney and will include appropriate enforcement provisions by the City and be properly securitized.**

Community Development Department

A. GENERAL REQUIREMENTS:

1. The project shall always comply with all federal, state, County and City laws, codes, regulations, and standards, including those that relate to hazardous materials.

2. The applicant shall indemnify, protect, defend, and hold harmless, the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, from any and all claims, demands, lawsuits, writs of mandamus, and other actions and proceedings (whether legal, equitable, declaratory, administrative or adjudicatory in nature), and alternative dispute resolutions procedures (including, but not limited to, arbitrations, mediations, and other such procedures) (collectively "Actions"), brought against the City, and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof, that challenge, attack, or seek to modify, set aside, void, or annul, the action of, or any permit or approval issued by, the City and/or any of its officials, officers, employees, agents, departments, agencies, and instrumentalities thereof (including actions approved by the voters of the City), for or concerning the project, whether such actions are brought under the California Environmental Quality Act (CEQA), State Planning and Zoning Law, the Subdivisions Map Act, Code of Civil Procedure Section 1085 or 1094.5, or any other state, federal, or local statute, law, ordinance, rule, regulation, or any decision of a competent jurisdiction. It is expressly agreed that the City shall have the right to approve, which approval will not be unreasonably withheld, the legal counsel providing the City's defense, and that applicant shall reimburse City for any costs and expenses directly and necessarily incurred by the City in the course of the defense. City shall promptly notify the applicant of any Action brought and City shall cooperate with applicant in the defense of the Action.

3. Approval of this entitlement shall not waive compliance with any sections of the Banning Municipal Code (BMC), other applicable City ordinances, in effect at the time of building permit issuance.

4. The Project permitted under Design Review 21-7008 & Tentative Parcel Map 21-4001 shall commence construction within two (2) years from the date of this approval, or the Design Review shall become null and void. Additionally, if after commencement of construction, activities are discontinued for a period of one (1) year, the Design Review approval shall become null and void. The Community Development Director may, upon a written application

being filed 30 days prior to expiration and for good cause, grant a onetime extension not to exceed 12 months. Upon granting of an extension, the Community Development Director shall ensure that the Design Review complies with all current provisions of Title 17 of the Banning Municipal Code.

5. A copy of the signed Resolution of approval and all Conditions of Approval imposed on the Design Review shall be reproduced in legible form on the improvement plans submitted for review and approval as required by the reviewing department.

6. Prior to any occupancy/use of the project site, or business activity being commenced thereon, all Conditions of Approval shall be completed to the satisfaction of the Community Development Director.

7. A trash enclosure shall be provided with three decorative walls, enhanced wall caps, a pedestrian entrance, a gate, and a structural steel cover, in a style compatible with the structure's architecture. The gate shall be maintained in working order and shall remain closed except when in use.

8. Exterior lighting shall be shielded or recessed so that light is contained within the boundaries of the parcel on which the lighting is located. All lighting shall be directed downward and away from adjoining properties and public rights-of-way.

9. Any roof-mounted equipment or utility equipment on the side of the structure, or on the ground, shall not be visible from adjacent properties, the public right-of-way, or the parking lot. Any architectural screening that is proposed to shield the roof-mounted equipment shall be compatible in terms of colors and materials of the building. Landscape screening for ground mounted equipment shall be of sufficient size and quantity to fully screen the equipment.

10. Storage use and removal of toxic substances, solid waste, and flammable liquids shall conform to all applicable federal, state, and local regulations. All required licensing shall always be maintained in good order. Lapse or revocation of any required license shall result in the voiding of the Business License.

11. a. Prior to the issuance of the Temporary Certificate of Occupancy for the warehouse building the developer shall install all landscaping specified for the retail service district pursuant to city approved landscape plans.

11. b. A complete landscape/irrigation package prepared by a landscape architect licensed by the State of California shall be reviewed and approved by the Planning Division prior to issuance of building permit. The plans shall include the following elements:

    A. Water conservation concept statement.
    B. Calculation of maximum applied water allowance.
    C. Calculation of estimated total water use.
    D. Landscape design plan.
    E. Irrigation design plan.
    F. Certificate of substantial completion.
    G. The landscape plan shall demonstrate compliance with Zoning Ordinance requirements related to minimum dimensions and percentages of landscaping in parking areas, including required front yard setback landscaping.

12. The subject property shall be developed and maintained in accordance with the site plans stamped approved by the City and on file in the Planning Division, the conditions contained herein, and the applicable regulations within the Banning Municipal Code.

13. If human remains are encountered during grading and other construction excavation, the developer/owner shall stop/cease work in the immediate vicinity and the County Coroner shall be contacted pursuant to State Health and Safety Code Section 7050.5.

14. Trash collection shall occur between the hours of 8:00 a.m. and 6:00 p.m. only.

15. All graffiti shall be removed immediately or within 24 hours of notice from the City.

16. Hours of operation shall be no earlier than 7:00 a.m. and no later than 10:00 p.m.

17. Commercial zoning districts shall be permitted wall signs per the area of the wall (length times height of the wall). The area devoted to such signs shall not exceed twenty percent of the wall area. All parts, portions, and materials shall be maintained and kept in good repair. The display surface of all signs shall be kept clean, neatly painted, and free from rust and corrosion. Any cracked, broken surfaces, malfunctioning lights, missing sign copy or other unmaintained or damaged portion of a sign shall be repaired or replaced within thirty calendar days following notification by the City.
18. Pedestrian walkways should not intersect the drive-through aisles, but where they do, they shall have clear visibility, and they must be emphasized by enriched paving or striping.

PUBLIC WORKS DEPARTMENT:

19. A Public Works Permit shall be required prior to commencement of any work within the public right-of-way. The contractor working within the public right-of-way shall submit proof of a Class "A" State Contractor's License, City of Banning Business License, and Liability Insurance. Any existing public improvements, or public improvements not accepted by the City that are damaged during construction shall be removed and replaced as determined by the City Engineer or his/her representative

.

20. Prior to the issuance of any grading, construction, or public works permit by the City, the applicant shall obtain any necessary clearances and/or permits from the following agencies:
    - A. Fire Marshal (access)
    - B. Public Works Department (grading permits, street improvement permits)
    - C. Riverside County Flood Control & Water Conservation District (storm drain)
    - D. California Regional Water Quality Control Board Colorado River Basin (RWQCB)
    - E. South Coast Air Quality Management District (SCAQMD)

21. The applicant is responsible for meeting all requirements of permits and/or clearances from the above listed agencies. When the requirements include approval of improvement plans, the applicant shall furnish proof of such approvals when submitting improvements plans to the City.

22. The following improvement plans shall be prepared by a Civil Engineer licensed by the State of California and submitted to the Engineering Division for review and approval. A separate set of plans shall be prepared for each line item listed below. Unless otherwise authorized in writing by the City Engineer, the plans shall utilize the minimum scale specified and shall be drawn on 24” x 36” Mylar film. Plans may be prepared at a larger scale if additional detail or plan clarity is desired (Note: the applicant may be required to prepare other improvement plans not listed here pursuant to improvements required by other agencies and utility purveyors):

a. Rough Grading Plans	1" = 40' horizontal
A. (All Conditions of Approval shall be reproduced	
B. on last sheet of set)	
b. Haul Route Plans	1" = 40' horizontal
c. Clearing Plans	1" = 50' horizontal
A. (Include construction fencing plan)	
d. Erosion Control & SWPPP, WQMP	1” = 40’ Horizontal
A. (Note: a, b, c & d shall be reviewed	
B. and approved concurrently)	
e. Storm Drain Plans	1” = 40’ Horizontal
f. Street Improvement Plans	1" = 40' Horizontal
	i.1" = 4' Vertical
g. Precise Grading Plans	1" = 40' Horizontal
h. Landscaping Plans	1” = 20 Horizontal
i. Water Improvement Plans	1” = 40’ Horizontal
	i.1” = 4’ Vertical
j. Sewer Improvement Plans	1” = 40’ Horizontal
	i.1” = 4’ Vertical

23. Other engineered improvement plans prepared for City approval that are not listed herein shall be prepared in formats approved by the City Engineer prior to commencing plan preparation.

24. All off-site plan and profile, street improvement plans, and signing & striping plans shall show all existing improvements for a distance of at least 200-feet beyond the project limits, or at a distance sufficient to show any required design transitions.

25. A small index map shall be included on the title sheet of each set of plans, showing the overall view of the entire work area.

26. Upon completion of construction, the Developer shall furnish the City with reproducible record drawings on Mylar film of all improvement plans that were approved by the City Engineer. Each sheet shall be clearly marked "As-Built" or "As-Constructed" and shall be stamped and signed by the engineer or surveyor certifying the accuracy and completeness of the drawings. The applicant shall have all AutoCAD files submitted to the City, revised to reflect the “As-Built” conditions.

Street Improvements/Right-of-Way

Construct right-of-way improvements (driveway approach, sidewalk, parkway, raised median, access ramp, street lighting, etc.) fronting the site per City of Banning Standard Drawings. Street lights shall be installed offset of the existing street lights.

27. Installation of a traffic signal at the intersection of Sun Lakes Boulevard, future Driveway 3 (as shown in the TIA) and Country Club Drive. Project applicant shall reach out to the Sun Lakes Country Club staff to discuss impacts to their access.

28. Provide paved golf cart access adjacent to the sidewalk through the property and at the proposed traffic signal entrance.

29. Construct street improvements as identified by the project's traffic impact analysis (TIA).

30. The City and Developer are to enter into a Public Improvement Agreement to guarantee the construction of the public improvements as listed in the Conditions of Approval and as shown on the approved plans. The applicant shall work with the City Attorney's Office to execute the Agreement and pay all related legal processing fees.

31. All street improvement designs shall provide pavement and lane transitions per City of Banning and Caltrans standards for transition to existing street sections.

32. Any public improvements damaged during the course of construction shall be replaced to the satisfaction of the City Engineer, or his/her designee.

33. The applicant shall plant and perpetually maintain trees, shrubs, and ground cover placed in the parkway, slopes adjacent to public right-of-ways constructed in connection with the project. This includes providing irrigation and the clearing of debris and weed removal. The applicant shall be required to enter into a Landscape Maintenance Agreement for the perpetual maintenance of landscaping within the public right-of-way fronting the project site.

34. All required public improvements for the project shall be completed, tested, and approved by the Engineering Division prior to issuance of any Certificate of Occupancy.

GRADING & DRAINAGE:

35. Submit a Drainage Study with hydrologic and hydraulic analysis for developed and undeveloped (existing) conditions to the Engineering Division for review and approval. The study and analysis shall be prepared by a civil engineer licensed by the State of California. Drainage design shall be in accordance with Banning Master Drainage Plan adopted by Riverside County Flood Control and Water Conservation District (RCFCD), RCFCD Hydrology Manual, and standard plans and specifications. The 10-year storm flow shall be contained within the street curbs, and the 100- year storm shall be contained within the street right-of-way; when this criteria is exceeded, additional drainage facilities shall be designed and constructed.

36. At a minimum, all development will make provisions to store runoff from rainfall events up to and including the one-hundred three-hour during event. Post-development peak urban runoff discharge rates shall not exceed pre-development peak urban runoff discharge rates.

37. Prior to issuance of any building permit, the applicant shall install trash filters in all catch basins adjacent to the site and/or will be constructed as part of the storm drain improvements for this development. The trash filters shall comply with the requirements of the Trash Amendment as amended and approved in accordance with California Regional Water Quality Control Board Colorado River Basin Region Order No. R7-2013-0011.

38. If the site is located in a Flood Area as identified in Flood Insurance Rate Map dated August 28, 2008 the developer is responsible for providing a certification by a registered professional engineer or architect demonstrating that encroachments shall not result in any increase in flood levels during the occurrence of the base flood discharge.

39. The project grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage areas, outlet points and outlet conditions. Otherwise, a drainage easement shall be obtained for the release of concentrated or diverted storm flows. The project shall accept and convey storm flows from the adjacent property to the north.

40. The applicant shall comply with Chapter 13.24 “Stormwater Management Systems” of the Banning Municipal Code (BMC) and Title 18 “Grading, Erosion and Sediment Control” of the California Building Code related to excavation and grading; and, the State Water Resources Control Board’s orders, rules and regulations.

41. For construction activities including clearing, grading or excavation of land that disturbs one (1) acre or more of land, or that disturbs less than one (1) acre of land, but which is a part of a construction project that encompasses more than one (1) acre of land, the applicant shall be required to submit a Storm Water Pollution Protection Plan (SWPPP) and file a Notice of Intent (NOI) with the Regional Water Quality Control Board.

42. The applicant shall ensure that the required SWPPP is available for inspection at the project site at all times through and including acceptance of all improvements by the City.

43. The applicant’s SWPPP shall include provisions for all of the following Best Management Practices (“BMPs”):

44. Temporary Soil Stabilization (erosion control).

45. Temporary Sediment Control.

46. Wind Erosion Control.

47. Tracking Control.

48. Non-Storm Water Management.

49. Waste Management and Materials Pollution Control.

50. All erosion and sediment control BMPs proposed by the applicant shall be designed using the CASQA BMP handbook and approved by the City Engineer prior to any onsite or offsite grading, pursuant to this project.

51. The approved SWPPP and BMPs shall remain in effect for the entire duration of project construction until all improvements are completed and accepted by the City.

52. Prior to issuance of any grading or building permit, a Project-Specific Water Quality Management Plan (WQMP) shall be reviewed and approved in accordance with California Regional Water Quality Control Board Colorado River Basin Region Order No. R7-2013-0011.

53. Prior to the issuance of any building permit(s), a precise grading plan shall be submitted to the City Engineer for review and approval. A grading permit shall be obtained prior to commencement of any grading activity.

54. Grading and excavations in the public right-of-way shall be supplemented with a soils and geology report prepared by a professional engineer or geologist licensed by the State of California.

55. Prior to the issuance of a building permit, the applicant shall provide a lot pad certification stamped and signed by a qualified civil engineer or land surveyor. Pad certification shall list the pad elevation as shown on the approved grading plan, the actual pad elevation and the difference between the two, if any. Such pad certification shall also list the relative compaction of the pad soil.

TRAFFIC/CIRCULATION:

56. Prior to the issuance of a grading permit or building permit, the applicant shall submit and obtain approval in writing from the Fire Marshall for the plans for all public or private access drives or streets. The plans shall include plan and sectional views and indicate the grade and width of the access road measured flow-line to flow-line. When a dead-end access exceeds 150 feet or when otherwise required, a clearly marked fire apparatus access turnaround must be provided and approved by the Fire Marshall. Applicable covenant, conditions or restrictions or other approved documents shall contain provisions which prohibit obstructions such as speed bumps/humps,control gates or other modifications within said easement or access road unless prior approval of the Fire Marshall is granted.

57. Driveway grades shall not exceed eight percent unless approved by the City Engineer.

58. Access drives to the public right-of-way shall be restricted to those approved by the City Engineer as shown on the approved plans.

59. Prior to the issuance of any certificate of occupancy, all fire hydrants shall have a blue reflective pavement marker indicating the hydrant location on the street/access driveway as approved by the Fire Marshall and must be maintained in good condition by the property owner until the street is accepted for maintenance.

60. Prior to the issuance of a grading permit or building permit, the applicant shall conduct a Traffic Impact Analysis and submit the report to the Engineering Division for review and approval. All mitigation identified in the Traffic Impact Analysis shall be implemented by the applicant to the satisfaction of the City Engineer.

TRASH & RECYCLING:

61. Construction debris shall be disposed of at a certified recycling site. It is the responsibility of the developer to contact the City's franchised solid waste hauler, Waste Management of the Inland Valley, at 1-800-423-9986 for disposal of construction debris.

62. The developer shall participate in the City's recycling and diversion programs by providing a solid waste enclosure to accommodate necessary solid waste containers.

63. All new development projects including, but not limited to, industrial and business buildings and facilities, as well as, multi-family complexes shall provide a solid waste enclosure to accommodate trash, recycle and organics waste bins and/or containers. Solid waste enclosures for multiple tenant properties, such as a shopping center, must design the enclosure to accommodate all waste containers of the property.

64. Solid waste enclosures shall be located on the site to be serviced.

65. The enclosure shall be designed for the exclusive use of housing solid waste containers including trash, recyclable and organics materials.

66. Enclosures Design Criteria:
    a. The size and dimensions of the trash enclosure shall be based on the required number and size of containers at a minimum accommodating one (1) container each for trash, recyclables and organics materials.
    b. Enclosure shall be architecturally compatible with the primary building on site to provide a coordinated design.
    c. Exterior materials and colors of the enclosure shall match the building walls.
    d. Chain link fencing with or without/plastic slats is prohibited.
    e. Enclosure shall have solid metal or wood gates with latches that can be secured in an open or closed position.
    f. Enclosures shall be constructed in a permanent manner.
    g. Exterior must be fully enclosed with solid roofing to prevent rainfall from entering the enclosure and to prevent wind dispersal, as well as, offsite transport of trash and recycling.
    h. Provide the minimum clearance for collector and user accessibility.
    i. City Engineer approval shall be obtained in writing prior to the construction of any solid waste enclosure.

WATER:

67. Submit water improvement plans to the Public Works Department along with anticipated peak water demands and hydraulic analysis to justify pipe sizes. Pipes shall be ductile iron, wrapped in V-Bio polyethylene. All water services 2" and smaller shall use plastic-coated copper tubing.

68. Separate irrigation meters will be required for outdoor use.

69. All commercial, industrial, and irrigation water services shall have Reduced Pressure Principle Backflow Preventors. RP Backflow Preventors shall be of a model approved by USC.

70. On-site fire hydrants shall be part of a privately-owned and maintained fire protection system. Private fire hydrants shall be painted safety red, to differentiate from publicly-owned fire hydrants which are typically yellow.

71. Because of the project's location at a pressure zone boundary, an above-ground pressure regulating station may be required, pending review of the water improvement plans by the City Engineer.

RECYCLED WATER:

72. Plans for a purple-pipe non-potable irrigation system shall be designed and submitted to the Public Works Department. Pipes shall be ductile iron, wrapped in purple V-Bio polyethylene. All water services 2" and smaller shall use plastic-coated copper tubing. Plans should include a signage plan typical of a non-potable irrigation system.

73. An interim connection between the potable and non-potable systems shall be installed by way of a single backflow preventor, until such a time as the City's non-potable backbone system is extended west along Sun Lakes Blvd.

WASTEWATER:

74. A sewer improvement plan shall be prepared and submitted to the Public Works Department, extending the public sewer from Sun Lakes Blvd. Sewer main material shall be PVC SDR 26. Sewer system design shall avoid placing manholes in low spots, or connecting storm water drainage facilities to the sewer system.

75. When available, estimated sewer discharge quantities and quality shall be submitted to the Public Works Department for review. Depending on the nature of the discharge, grease interceptor(s) may be required.

FEES:

76. Plan check fees for professional report review (geotechnical, drainage, WQMP, etc.), and all improvement plans review, shall be paid at the time of submittal of said documents for review and approval in accordance with the fee schedule in effect at the time of submittal.

77. Public Works Inspection fees shall be paid prior to issuance of any permits in accordance with the fee schedule in effect at time of time of scheduling.

78. A plan storage fee shall be paid for any engineering plans that may be required prior to issuance of certificate of occupancy in accordance with the fee schedule in effect at the time the fee is paid.

79. Water, Sewer, and Non-potable impact fees shall be paid prior to issuance of Building permit. Water meter and water meter installation fees shall be due prior to meter release.

FINAL PARCEL MAP:

80. Prior to approval of the Final Map, the applicant shall construct on-site and off-site

improvements required for the development of the property in accordance with the approved plans and satisfy its obligations for same, or shall furnish a fully secured and executed Subdivision Improvement Agreement on terms agreed to by the Parties guaranteeing the construction of such improvements and the satisfaction of its obligations for same, or shall agree to any combination thereof. For off- site improvements, the procedures and requirements of Government Code Section 66462.5 shall apply, including the potential acquisition of those rights by the City or waiver of the City's requirement to obtain those rights.

81. Security for the construction of public improvements in accordance with Government Code Section 66499 shall be as follows:

a. Faithful Performance Bond	100% of estimated cost
b. Labor and Material Bond	100% of estimated cost
c. Monumentation Bond	$5,000.00

82. Securities for the public improvements shall be on file with the City Clerk prior to scheduling the final map for approval by City Council. Unit prices for bonding estimates shall be those specified or approved by the City Engineer.

83. Revisions to the tentative map during plan check including, but not limited to, lot line alignments, easements, improvement plan revisions, and similar minor changes that are in substantial compliance with the tentative map, or associated conditions of approval, shall be administratively approved through the plan check process with the mutual consent and approval of the Developer, the Community Development Director and City Engineer. Final maps shall be amended in accordance with the Subdivision Map Act.

84. Prior to approval of any final map the applicant shall identify and include in its improvement plans those routine structural and non-structural Best Management Practices (BMP's).

85. Submit a copy of the title report, closure calculations, and any separate instruments or necessary right-of-way documents to the Engineering Division prior to final map approval.

86. An original Mylar of the final map (after recordation) shall be provided to the City for the record files.

87. Public improvements shall be completed and accepted by City of Banning prior to release of Faithful Performance Bond and Labor and Material Bond for such improvements. Faithful Performance Bond for applicable public improvements shall be reduced to 10% once City accepts improvements into maintenance period. Final 10% to serve as the maintenance bond for the 1- year maintenance period.

88. A record of all street centerline monument ties shall be submitted to the Engineering Division upon completion of improvements or prior to release of Monumentation Bond.

FIRE DEPARTMENT:

89. Fire Hydrants and Fire Flow: Prior to the issuance of building permits, plans for the water system shall be submitted to the fire department for review and approval. The water system shall be capable of delivering the required fire flow. Fire hydrant(s) location and spacing shall comply with the fire code. An approved water supply for fire protection during construction shall be made available prior to the arrival of combustible materials on site. Reference 2016

California Fire Code (CFC) 507.5.1, 3312, Appendices B and C.

90. Fire Department Access: Prior to building permit issuance, provide a site plan showing the fire lanes. Access roads shall be provided to within 150 feet to all portions of the exterior building walls and shall have an unobstructed width of not less than 24 feet. The construction of the access roads shall be all weather and capable of sustaining 40,000 lbs. over two axles for areas of residential development and 60,000 lbs. over two axels for commercial developments. Approved vehicle access, either permanent or temporary, shall be provided during construction Ref. CFC 503.1.1, 3310.1 and 503.2.1

91. Requests for installation of traffic calming designs/devices on fire apparatus access roads shall be submitted and approved by the Office of the Fire Marshal. Ref. CFC 503.4.1

92. Grading Permit Fire Department Review: Submittal to the Office of the Fire Marshal for Precise Grading Permit will be required.

93. Construction Permits Fire Department Review: Submittal of construction plans to the Office of the Fire Marshal for development, construction, installation and operational use permitting will be required. Final fire and life safety conditions will be addressed when the Office of the Fire Marshal reviews these plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code, and related codes, which are in effect at the time of building plan submittal.
94. Phased Construction Access: If construction is phased, each phase shall provide approved access for fire protection prior to any construction. Ref. CFC 503.1

95. Fire Sprinkler System: All new commercial structures 3,600 square feet or larger shall be protected with a fire sprinkler system. Ref CFC 903.2 as amended by the City of Banning.

96. Fire Alarm and Detection System: A water flow monitoring system and/or fire alarm system may be required and determined at time of building plan review. Ref. CFC 903.4, CFC 907.2 and NFPA 72

97. Knox Box and Gate Access: Buildings shall be provided with a Knox Box. The Knox Box shall be installed in an accessible location approved by the Office of the Fire Marshal. All electronically operated gates shall be provided with Knox key switches and automatic sensors for access. Ref. CFC 506.1

98. Addressing: All commercial buildings shall display street numbers in a prominent location on the address side and additional locations as required. Ref. CFC 505.1 and County of Riverside Office of the Fire Marshal Standard #07-01

99. Buildings in excess of 300,000 square feet in area shall be required to provide a fire command center for fire department operations and shall comply with 2019 CFC sections 508.1.1 through 508.1.8 as amended and adopted by the City of Banning and Riverside County Fire. (2019 CFC 508.1)

100. Emergency Responder Radio Coverage Systems: Projects that do not meet the exceptions set forth by the Riverside County Office of the Fire Marshal shall provide plans for an emergency responder radio coverage system. Ref. CFC 510.1 and Riverside County Office of the Fire Marshal Technical Policy #TP19-002

101. Strategic Planning Review: This planning case will also be reviewed by Riverside County Fire Department Strategic Planning for the cumulative impact on the Fire Department's ability to provide an acceptable level of service. Additional requirements may be conditioned by Strategic Planning to mitigate these impacts. Questions for Strategic Planning can be addressed to RRUStrategicPlanningBureau@fire.ca.gov.

102. Use the Above Statement only if it meets the Strategic Planning Case Review Criteria below:

a. Environmental Impact Reports
b. General Plan Amendments
c. Specific Plans
d. Developments that are in very high fire hazard severity zones in the LRA and developments in the SRA
e. Residential with 500 or more dwelling units
f. Commercial/Industrial developments of 1,000,000 sq ft or more

103. The developer shall pay for and install traffic signal preemption devices on up to 5 traffic signal intersections from and including Ramsey/Highland Springs to Sun Lakes Boulevard/Highland Springs, not to exceed the cost of $100,000. The applicant shall coordinate these efforts with both the City of Banning and Beaumont.

104. The applicant shall contribute an amount equal to the Development Impact Fee (DIF) payment for the development, $175,000, to go toward a fire apparatus for a future fire station in the area.

Banning, CA 92220

Re: Planning Commission Approval of Design Review 21-7008 and Tentative Parcel Map 31864

Dear Mr. Rush:

We represent the Pass Area Action Group, an association of local community members opposed to the approval of Design Review 21-7008 and Tentative Parcel Map 31684 (together, the "Project"). Many members reside in the over-55 communities adjacent to the Project site, and many have increased sensitivity to the severe air pollution associated with large-scale refrigerated warehouse projects. Our clients are seriously concerned about the City of Banning's ("City") rushed, inadequate approval process, and its lack of transparency. We respectfully request the City Council defer any hearing or decision on the Project to allow the public more time to effectively provide their input on the Project.

On December 8, 2020, the City certified a Program Environmental Impact Report ("the 2020 Program EIR") for amendments to the Sun Lakes Village North Specific Plan and the Banning Zoning Ordinance to allow for warehouse, retail, and office land uses on a single parcel.[1] At this time, no specific development project had been proposed.

Subsequently, the Project was proposed, requiring City approval of applications for design review and a tentative parcel map. On December 1, 2021, the Planning Commission approved Design Review 21-7008 and recommended approval of Tentative

[1] City of Banning, Resolution 2020-141, at 1 (Dec. 8, 2020).

Parcel Map 31864.[2] The City then filed a Notice of Determination ("NOD") indicating there was no need to prepare a new or supplemental EIR for the specific Project, because the 2020 EIR adequately analyzed the Project's impacts.[3]

The City's sole reliance on the 2020 Program EIR contradicts the California Environmental Quality Act ("CEQA"). Program EIRs may be prepared for a "series of actions," or a "large-scale planning approval." CEQA Guidelines §§ 15168 15152. CEQA authorizes "tiering," allowing agencies to refrain from doing an EIR for a project if a previous Program EIR adequately analyzed the project's impacts. Guidelines § 15152(a). This type of "tiering" is generally only appropriate when the Program EIR is a prepared for a "general plan, policy, or program," and the subsequent project is "site-specific." Guidelines § 15152(b).

The 2020 Specific Plan and Zoning Ordinance amendments were not appropriate subjects for a Program EIR. They effected only development of a single site, and thus were not a "large-scale planning approval." Since it was prepared before the Project was proposed, it is also lacking in crucial details that only became available after the Project proposal. The Statement of Overriding Considerations adopted in connection with 2020 Program EIR suffers the same flaw.

Despite this lack of project-specific analysis, the City proposes to approve the Project without preparing a subsequent EIR. The 2020 Program EIR, however, was prepared without information about the type and operations of warehouse that would eventually be developed. The City now knows that the Project includes a large-scale, refrigerated warehouse. Careful analysis would probably show that this aspect of the Project, which was "not known and could not have been known" when the 2020 Program EIR was certified, will lead to air quality and greenhouse gas impacts more severe than that EIR indicates; a subsequent EIR is therefore required. Guidelines § 15162. If the City has performed the required analyses, it has not shared them with the public or met any of CEQA's procedural requirements.

The City's premature filing of the NOD also violates CEQA. Pursuant to the CEQA Guidelines, a lead agency is required to file an NOD "*after* deciding to . . . approve a project." Guidelines § 15094. Tentative Parcel Map 31864, however, has never been approved. Under the City Municipal Code, the City Council is responsible for approving tentative parcel map applications. Banning Municipal Code § 16.14.050(A). While the Planning Commission has recommended approval of the Map, the City

[2] City of Banning, Planning Commission Report, at 8-9 (Dec. 1, 2021).
[3] City of Banning, Notice of Determination (Dec. 1, 2021).

Council has not approved it. Therefore, the NOD was premature, and should be withdrawn. (This additionally means that no appeal is required to bring the Tentative Map to the City Council; that hearing must be held for Project approval, regardless of any appeals.)

The rushed, procedurally-deficient nature of the City's CEQA process greatly worries our clients, who will be significantly harmed if the City continues to expedite approval of the Project. ensure that our client has a complete picture of the proposal and its environmental impacts, we will soon be submitting (1) a Public Records Act request seeking relevant analytical documents, and (2) an appeal of the Planning Commission's approval of Design Review 21-7008 (again, no appeal of the Tentative Map recommendation is required). The City should not make any decision on this project until the City has provided the requested documents and our client and other community members have had time to properly respond to this neighborhood-altering project.

Very truly yours,

SHUTE, MIHALY & WEINBERGER LLP

AGENDA

REGULAR MEETING OF THE BANNING PLANNING COMMISSION
CITY OF BANNING, CALIFORNIA

Wednesday, December 1, 2021 @ 6:30 PM
City Council Chambers, 99 E. Ramsey Street
And via Video/Teleconference

To observe and participate in the on-line video portion of the meeting through your personal computer or device enter the following or click on the link:

https://us02web.zoom.us/j/82794878682?pwd=SFUrMGNKQVlQRHMxaTFHMnJIYk92QT09

Meeting ID: 827 9487 8682
Password: 894694

One tap mobile: +16699009128,82794878682#
Dial in: +1 669 900 9128 US
Meeting ID: 827 9487 8682
Find your local number: https://us02web.zoom.us/u/kfO5uo7yb

To observe the live meeting through your personal computer, but not participate with video or oral comments, you may use your computer or smart phone to enter the following or click on the link: https://banninglive.viebit.com
or on the Banning Government Channel on Cable Television

You may also **email comments** to: scalderon@banningca.gov

I. CALL TO ORDER OF A REGULAR MEETING: Chairman Shaw

- Pledge of Allegiance: Vice-Chair Brosious
- Roll Call: Commissioners Brosious, Krick, Lopez, Santana, Chairman Shaw

II. PUBLIC COMMENTS: - *On Items Not on the Agenda*

A three-minute limitation shall apply to each member of the public who wishes to address the Chairman and Commissioners for items not on the agenda. No member of the public shall be permitted to "share" his/her three minutes with any other member of the public. (Items received under this heading may be referred to staff or future study, research, completion and/or future Commissioner Action.) PLEASE STATE YOUR NAME AND ADDRESS FOR THE RECORD.

III. CONSENT CALENDAR ITEMS:

Note: All items listed on the Consent Calendar may be enacted by a single motion without separate discussion. If a discussion or a separate vote on any item is desired by a Planning Commissioner, that item may be removed from the Consent Calendar and considered separately. All remaining items not removed from the Consent Calendar by a Planning Commissioner shall be voted on prior to discussion of the item(s) requested to be pulled.

Minutes – November 3, 2021, Regular Meeting……..…… **Page 1**

IV. PUBLIC HEARING:

1. **NOTICE OF EXEMPTION FOR CONDITIONAL USE PERMIT NO. 21-8018 (CUP 21-8018) TO CONSIDER A PROPOSAL TO ALLOW A TATTOO STUDIO LOCATED AT 191 NORTH SAN GORONIO AVENUE WITHIN THE DOWNTOWN COMMERCIAL LAND USE DISTRICT (APN:540 164-006).**

Staff Report – Adam Rush……..……..…….....**Page 4**

Order of Procedure:
1. Staff report presentation
2. Applicant Presentation
3. Planning Commission questions for staff and applicant
4. Open public comments
5. Close public comments
6. Planning Commission discussion
7. Motion and Second
8. Planning commission discussion on motion
9. Call the question

Recommendation:

That the Planning Commission adopt Resolution 2021-19:

I. Make a determination under CEQA Guidelines that the project is Categorically Exempt from the California Environmental Quality Act (CEQA) pursuant to Section 15301 (Existing Facilities); and

II. Approve Conditional Use Permit 21-8018 for a Tattoo Studio in the Downtown Commercial zoning district in the City of Banning.

2. CONSIDERATION OF DESIGN REVIEW NO. 21-7008 & TENTATIVE PARCEL MAP NO. 38164, A PROPOSED MIXED-USE INUSTRIAL/RETAIL DEVELOPMENT ON APPROXIMATELY 47-ACRES PACEL THE SUN LAKES VILLAGE NORTH SPECIFIC PLAN, AS AMENDED. THE PROJECT INCLUDES A SHELL INDUSTRIAL BUILDING MEASURING 619,969 SQUARE FEET, WHICH INCLUDES 10,000 SQUARE FEET OF OFFICE SPACE. IN ADDITION, THE PROJECT PROPOSES SIX (6) RETAILER/RESTAURANT BUILDINGS TOTALING 34,000 SQUARE FEET. THE TENTATIVE PARCEL MAP WILL SUBDIVIDE THE 47-ACRE PARCEL INTO THREE (3) LOTS, FOR FINANCING AND CONVEYANCE PURPOSES. (APN: 419-140-057).

Staff Report – Lisa Edwards……..…….....**Page 8**

Order of Procedure:
1. Staff report presentation 2. Applicant Presentation 3. Planning Commission questions for staff 4. Open public comments 5. Close public comments 6. Planning Commission discussion 7. Motion and Second 8. Planning commission discussion on motion 9. Call the question (Roll call vote)

Recommendation:

That the Planning Commission adopt Resolution 2021-16, recommending the City Council:

I. Make the determination that the Project, and the circumstances under which the Project is undertaken, do not involve substantial changes which will result in new significant environmental effects, and the Project does not involve new information of substantial importance which shows that the Project will have significant effects not discussed in the prior FEIR. All potential environmental impacts associated with the "Sun Lakes Village North Specific Plan Amendment No. 5" project and the Project are adequately addressed by the prior FEIR, the Statement of Overriding Considerations, the MMRP. Therefore, in accordance with CEQA Guidelines Section 15162 (Subsequent EIRs and Negative Declarations), a Notice

of Determination (NOD) has a been prepared for the Commission to consider in conjunction with the Project.

II. Approve Design Review 21-7008 and Tentative Parcel Map 38164 for a proposed Industrial Warehouse building which includes office space and six retail/restaurant buildings. The Tentative Parcel Map will subdivide a 47-acre parcel into three (3) lots, for financing and conveyance purposes in the Sun Lakes Village North Specific Plan Area.

V. PLANNING COMMISSIONER COMMENTS:

VI. COMMUNITY DEVELOPMENT DIRECTOR COMMENTS:

VII. ADJOURNMENT:

The City of Banning Planning Commission is hereby adjourned to the regular Planning Commission meeting of January 12, 2021, starting at 6:30 p.m. in the City Council Chambers. In compliance with the Americans with Disabilities Act, if you need special assistance to participate in this meeting, please contact the Planning Division (951) 922-3125 or email the Planning Commission Recording Secretary at scalderon@banningca.gov. Notification 48 hours prior to the meeting will enable the city to make reasonable arrangements to ensure accessibility to this meeting [28 CFR 35.102-35.104 ADA Title II].

PLANNING COMMISSION REGULAR MEETING

99 E Ramsey Street, Banning, CA

Wednesday, November 3, 2021 - 6:30 PM

ACTION MINUTES

I. CALL TO ORDER at 6:30 p.m.

ROLL CALL

Present: Vice Chairman Brosious, Commissioner Krick, Commissioner Lopez, Commissioner Santana.

Absent: Chairman Shaw.

II. PUBLIC COMMENTS: (ITEMS NOT ON THE AGENDA)

Public comments opened.

I. Schuler, resident of Banning, wished to alert the Commission, and the residents, about an upcoming project that submitted an application for an approval of ten warehouses; it will be between Sun Lakes Blvd. and Sunset Ave. She said this project will bring additional truck traffic that is not needed.

J. Hagen, resident of Banning, spoke about a recent explosion (resulting in fire) at a cannabis growth facility in Orange County, that resulted in fatalities. He asked the Commission for support to make a motion to City Council to re-establish the set-back limitation of cannabis establishments back the original approval of 600' from residential zones.

L. Hagen, resident of Banning, asked about a property that recently sold and was wondering if this property will be a future cannabis growth facility. She asked if the City is going to have inspectors that will be checking facilities for violations.

Public comments closed.

III. CONSENT CALENDAR ITEM

ACTION: Motion/Second (Krick/Santana)

Motion Carried 4-0-1, Chairman Shaw absent. Roll call vote.

To approve: Minutes – October 19, 2021, Adjourned Meeting.

IV. PUBLIC HEARING: opened at 6:35 p.m.

1. NOTICE OF EXEMPTION FOR ZONE TEXT AMENDMENT 21-97503 TO CONSIDER A PROPOSAL TO AMEND CHAPTERS 5.33, 17.12, AND 17.54 OF THE BANNING MUNICIPAL CODE TO ELIMINATE THE LIMITATION ON THE NUMBER OF CANNABIS RETAILERS PERMITTED IN THE CITY, TO AUTHORIZE THE OPERATION OF CANNABIS RETAILERS IN THE GENERAL COMMERCIAL ZONE AND AUTHORIZE CANNABIS DISTRIBUTORS AND MANUFACTURERS IN THE BUSINESS PARK ZONE, AND MAKING ADDITIONAL CONFORMING AMENDMENTS TO REGULATIONS PERTAINING TO CANNABIS RETAILERS PERTAINING TO COMMERCIAL CANNABIS BUSINESS IN THE CITY OF BANNING, CALIFORNIA

   Commissioners had questions for staff.

   Public comments opened.

   L. Hagen, resident of Banning, said she doesn't understand why we need to saturate our city with so many cannabis cultivation facilities and would prefer an effort be given to other type of business that can come to town.

   J. Hagen, resident of Banning, asked the Commission not to approve this proposal. He said staff is blinded with imaginary dollar signs and continue to fall into same pitfalls and rework ordinances to eliminate restrictions, remove setbacks and now want to remove the cap.

   Public comments were closed by the Vice-Chair.

   Discussion was made among staff and the Commission regarding the proposed Zone Text Amendment.

   Commissioner Krick made a motion to approve the cap on the number of cannabis retailers permitted within the Highway Serving Commercial (HSC) zone only.

   > RECOMMENDING THAT THE CITY COUNCIL MAKE A DETERMINATION OF EXEMPTION UNDER CEQA GUIDELINES SECTION 15061(b)(3), AND APPROVE ZONING TEXT AMENDMENT 21-97503, AMENDING TITLE 17 OF THE BANNING MUNICIPAL CODE TO ELIMINATE THE NUMERIC CAP ON THE NUMBER OF CANNABIS RETAILERS PERMITTED WITHIN THE HIGHWAY SERVING COMMERCIAL (HCS) ZONE OF THE CITY~~, ALLOW FOR THE OPERATION OF CANNABIS RETAILERS IN THE GENERAL COMMERCIAL ZONE, ALLOW CANNABIS DISTRIBUTION AND MANUFACTURING IN THE BUSINESS PARK ZONE, AND MAKE ADDITIONAL CONFORMING AMENDMENTS TO REGULATIONS PERTAINING TO CANNABIS RETAILERS~~

   ACTION: Motion/Second (Krick/Brosious)

   That the Planning Commission adopt Resolution 2021-18:

I. Make a determination under CEQA Guidelines that the project is Categorically Exempt from the California Environmental Quality Act (CEQA) pursuant to Section 15060 (b)(3), because the proposed Amendment is not a project as defined by CEQA Guidelines Section 15378; and

II. Approve Zone Text Amendment 21-97503, amending Title 17 of the Banning Municipal Code to eliminate the numeric cap on the number of cannabis retailers permitted within the Highway Serving Commercial (HSC) Zone of the City.

(Motion Carried 5-0) Roll call vote.

V. PLANNING COMMISSIONER COMMENTS

Commissioner Santana asked where the traffic reports can be found for certain projects.

VI. COMMUNITY DEVELOPMENT DIRECTOR COMMENTS

Director Rush gave an update regarding the Banning Point project.

VII. ADJOURNMENT

Adjournment of the Planning Commission of the November 3, 2021, Meeting at 8:30 p.m.

The next regular meeting of the Banning Planning Commission is scheduled for Wednesday, December 1, 2021, at 6:30 p.m. in the City Council Chambers.

Minutes prepared by:

Sandra B. Calderon

_____
Sandra B. Calderon
Development Project Coordinator/Recording Secretary

CITY OF BANNING
PLANNING COMMISSION STAFF REPORT

TO: **PLANNING COMMISSION**

FROM: **Adam B. Rush, Community Development Director**

MEETING DATE: **December 1, 2021**

SUBJECT: **Resolution 2021-19, approving a CEQA Exemption and Conditional Use Permit No. 21-8018 (CUP 21-8018) to allow a Tattoo Studio located at 191 North San Gorgonio Avenue the Downtown Commercial Land Use District (DC) (APN: 540-164-006)**

RECOMMENDED ACTION:

Planning Commission adopt Resolution 2021-19 approving the following:

1. Making a determination under CEQA Guidelines that the project is Categorically Exempt from the California Environmental Quality Act (CEQA) pursuant to CEQA Guidelines Section 15301 (Existing Facilities).

2. Approving Conditional Use Permit 21-8018 to allow a tattoo studio with related services in the Downtown Commercial (DC) General Plan Designation and Zoning District subject to the recommended Conditions of Approval.

APPLICANT INFORMATION:

Project Location: 191 N. San Gorgonio Ave.

APN Information: 540-164-006

Project Applicant: Jessica Herring
37635 Quintana Dr.
Murrieta, CA 92543

Property Owner: William Ira & Bill Willens Trust
191 N. San Gorgonio Ave.
Banning, CA 92220

REQUEST:

The applicant is requesting approval of a Conditional Use Permit to provide tattoo services within an existing 1,213 square foot lease space within an existing commercial tenant space. The proposed project is located within the Downtown Commercial (DC) Zoning District on real property located at 191 N. San Gorgonio Ave.

BACKGROUND AND DESCRIPTION:

The surrounding commercial environment is fully developed with one-to-two story buildings that are similar in size and architectural theme to the Downtown Commercial District. The proposed tattoo studio is located at what is considered "the heart" of the Banning Downtown and is consistent with the nature and type of development envisioned. The adjacent commercial buildings are currently occupied with several small business including the Dorthey Ramon Learning Center, the Substation Deli, a Candy Store, and several other uses that are similar in size and use. The proposed Conditional Use Permit application seeks to allow tattoo services at three workstations in the existing 1,213 square foot tenant space, including the customer lobby, drawing table, and administrative space.

The site is located within the Downtown Commercial (DC) zoning district, wherein Tattoo and Body Piercing Studios are permitted with approval of a Conditional Use Permit by the Planning Commission. The Downtown Commercial (DC) zoning district is the City's visitor and tourist destination where the City promotes businesses and uses that contribute to a walkable environment during afternoon and evening hours, and where the public can enjoy a variety of food, beverages, and entertainment while patronizing the City of Banning.

Land Use Summary Table

	Existing Land Use	**Zoning Designation**	**General Plan Designation**
Subject Site	Single-story retail	Downtown Commercial (DC)	Downtown Commercial (DC)
North	Banning Library	Downtown Commercial (DC)	Downtown Commercial (DC)
South	Mixed-Use Residential/Commercial	Downtown Commercial (DC)	Downtown Commercial (DC)
East	Vacant	Downtown Commercial (DC)	Downtown Commercial (DC)
West	Single-story retail	Downtown Commercial (DC)	Downtown Commercial (DC)

ANALYSIS:

Zoning

Table 17.12.020 ("*Permitted, Conditional and Prohibited Commercial and Industrial Uses*") of Title 17 of the Zoning Code permits Tattoo and Body Piercing Studios in the Downtown Commercial (DC) zoning district subject to approval of a Conditional Use Permit.

The Project will occupy the 1,213 square foot lease space and is proposing operational hours of 10:00 pm to 10:00 pm, Monday through Saturday. The applicants have stated that the atmosphere of the art studio is a professional setting. With the attached Conditions of Approval, requiring sanitary conditions and specifying employee conduct and inspections, the services are not anticipated to have a negative impact on the area businesses or the community.

The Police Department, the Code Enforcement Division and the Fire Department may enter any tattoo and body piercing business during regular business hours to make reasonable inspections to ascertain whether the provisions of Chapter 17.12.050 of the Banning Municipal Code are being complied with, provided reasonable and normal business operations shall not be interfered with by said inspection.

Parking Requirements

The vacant tenant space has accomodated a number of businesses over the years and has always been maintained in a state of good repair. The size of the tattoo business is not anticipated to generate significant traffic or need for parking and available public parking is located to the east and southeast, both within city-owned lots. Parking is free in the downtown area and past business have functioned well without any parking issues. Per Banning Municipal Code Section 17.24.020 ("*Applicability*") all new projects, redevelopment projects, and project modifications which add twenty-five percent or more to a structure's building area are required to conform to the development standards set forth in Division III of Title 17 of the Banning Municipal Code, including regulations related to off-street parking, setbacks, public street improvements, storage, and fences, walls, and hedges. The applicants' proposal seeks approval of a use, not an expansion of the existing building area. Therefore, the proposed use is not subject to the development standards set forth in Division III of Title 17 of the Banning Municipal Code. Further, staff finds that the exisitng parking is adequate to serve patrons of the proposed tattoo studio and no additional parking is required.

Conclusion

Staff recommends approval of the subject project as the proposed project is consistent with the requirements of the General Plan and Zoning Code, while not effecting the environment. The project adequately meets the performance standards and guidelines

as discussed in the staff report; or, will meet those requirements as stated in the conditions of approval and upon review and approval of the construction plans and specifications.

ENVIRONMENTAL DETERMINATION:

California Environmental Quality Act (CEQA)

In accordance with CEQA Guidelines § 15301 (Existing Facilities), a Class 1 Categorical Exemption of the California Environmental Quality Act (CEQA), the project is exempt from further environmental review. A Class 1 Categorical Exemption consists of the operation, repair, maintenance, permitting, leasing, licensing, or minor alteration of existing public or private structures, facilities, mechanical equipment, or topographical features, involving negligible or no expansion of existing or former use.

MULTIPLE SPECIES HABITAT CONSERVATION PLAN (MSHCP):

Planning Division staff has determined that the project is not subject to MSHCP as the project is an existing facility and no new exterior improvements are identified.

PUBLIC COMMUNICATION

Proposed Conditional Use Permit 21-8018 and was advertised in the Record Gazette newspaper on November 19, 2021. Notice was also mailed to all property owners within 300-feet of the project site and posted in two public places (Banning Library and City Hall). As of the date of this report, staff has not received any written comments for or against the project.

CITY OF BANNING
PLANNING COMMISSION REPORT

TO: **PLANNING COMMISSION**

FROM: **Adam B. Rush, Community Development Director**

PREPARED BY: **Lisa Edwards, Contract Planner and Serita Young, Assistant City Attorney**

MEETING DATE: **December 1, 2021**

SUBJECT: **DESIGN REVIEW NO. 21-7008 & TENTATIVE PARCEL MAP NO. 38164, A PROPOSED MIXED-USE INDUSTRIAL/RETAIL DEVELOPMENT ON APPROXIMATELY 47-ACRES WITHIN THE SUN LAKES VILLAGE NORTH SPECIFIC PLAN, AS AMENDED. THE PROJECT INCLUDES A SHELL INDUSTRIAL BUILDING MEASURING 619,959 SQUARE FEET, WHICH INCLUDES 10,000 SQUARE FEET OF OFFICE SPACE. IN ADDITION, THE PROJECT PROPOSES SIX (6) RETAIL/RESTAURANT BUILDINGS TOTALING 34,000 SQUARE FEET. THE TENTATIVE PARCEL MAP WILL SUBDIVIDE THE 47-ACRE PARCEL INTO THREE (3) LOTS, FOR FINANCING AND CONVEYANCE PURPOSES. (APN: 419-140-057).**

RECOMMENDED ACTION:

Staff recommends that the Planning Commission take the following action:

1. Adoption of Planning Commission Resolution No. 2021-16:

    a. Pursuant to the California Environmental Quality Act (CEQA) and the CEQA Guidelines, the Community Development Department has considered the potential environmental impacts of the Project. Community Development Department staff has also reviewed the Final Environmental Impact Report (FEIR) for the "Sun Lakes Village North Specific Plan Amendment No. 5" project certified by the City Council on December 8, 2020 (Resolution 2020-141) and the Statement of Overriding Considerations and Mitigation,

Monitoring, and Reporting Program (MMRP) adopted by the Council on the same day, including the impacts and mitigation measures identified therein. Based on that review, the Community Development Department has determined that the Project and the circumstances under which the Project is undertaken do not involve substantial changes which will result in new significant environmental effects, and the Project does not involve new information of substantial importance which shows that the Project will have significant effects not discussed in the prior FEIR. All potential environmental impacts associated with the "Sun Lakes Village North Specific Plan Amendment No. 5" project and the Project are adequately addressed by the prior FEIR, the Statement of Overriding Considerations, the MMRP. Therefore, in accordance with CEQA Guidelines Section 15162 (Subsequent EIRs and Negative Declarations), a Notice of Determination (NOD) has a been prepared for the Commission to consider in conjunction with the Project.

b. Approve Design Review No. 21-7008, subject to the following:
   i. Compliance with the Conditions of Approval contained in Planning Commission Resolution 2021-16.
   ii. The site shall be developed and maintained in accordance with the Plans dated April 30, 2021 approved by the City.

c. Approving Tentative Parcel Map 38164, subject to the following:
   i. Compliance with the Conditions of Approval contained in Planning Commission Resolution No. 2021-16.

PROJECT / APPLICANT INFORMATION:

Project Owner:	Sun Lakes Highland, LLC 1200 N. 52nd St. Phoenix, AZ 85008
Project Applicant:	MIG 1650 Spruce St., Ste. 106 Riverside, CA 92507
Project Location:	North of Sun Lakes Boulevard, east of Highland Springs Avenue, south of Interstate 10, and west of The Lakes Apartment Complex, all located in the Sun Lakes Village North Specific Plan No. 5
APN Information:	419-140-057

PROJECT DESCRIPTION:

The project contains two separate land use types, an industrial warehouse, and a retail component, both which reflect compliance and consistency with the recently updated Sun Lakes village North Specific Plan, Amendment 5 ("Specific Plan"). The industrial warehouse is to the north of the site on 30.14 acres and the retail buildings are on 6.9 acres. This application includes a Design Review Application, a Tentative Parcel Map, and an Environmental analysis.

BACKGROUND:

On November 4, 2020 the Planning Commission considered Amendment 5 to the Sun Lakes North Specific Plan. This amendment produced an entirely new land use plan and zoning for this legacy Specific Plan, originally approved in the late 1980's. The Specific Plan area had remained undeveloped for over 30-years due to overly restrictive zoning, failed real estate transactions, and continued community opposition. Prior to the most recent amendment, the entire Specific Plan was designated as Retail Commercial, and the implementing zoning ordinance was even more restrictive, thus requiring very specific and sometimes fickle development plans to continually stall before they reached the engineering stage.

In late 2019, the City initiated an overhaul of the Specific Plan in order to foster future economic development and position the property to take advantage of current economic trends. It was in consultation with the property owner, but utilizing City-managed contract planning staff, that the current version of the plan was developed, vetted, and presented to the Commission for review and consideration.

After careful consideration, the City Council approved the Specific Plan Amendment and certified an Environmental Impact Report (EIR) (Resolution 2020-141) along adopting a statement of overriding considerations. This statement acknowledges that significant impacts to the environment will occur yet are outweighed by the substantial economic benefit potential of the Project. Further, the Council determined that the Project will create significant job opportunities, increase both property and sales tax revenue, and continued to diversify the City's land use potential.

FURTHER CONSIDERATIONS:

During the October 19, 2021 Public Hearing, the Commission heard public testimony in connection with the Project. A majority of public testimony came from the Sun Lakes Community and was mainly in opposition to the Project. The Commission solicited testimony from a large number of Sun Lakes residents, which centered around several core issues of concern. A summary, but not an exhaustive list of the concerns are provided below:

- Public Notice
- Traffic/Circulation
- Air Quality
- Noise
- Lighting
- Building location
- Future Job Growth
- Golf Cart Access
- Sun Lakes Blvd. Extension
- Health Impacts

Attached herein is an Issues of Concern & Response Matrix, which provides clarification and technical back-up to support the City's position on this variety of topics

PROJECT ANALYSIS:

The northern portion of the Project site is a proposed Industrial Warehouse Building measuring 619,959 square feet (sf), which includes a 10,000 square foot of office space. In addition, the Project includes six (6) Retail buildings totaling approximately 34,000 sf., which range in size from 1,600 sf to 8,400 sf. Building 1 will include a coffee restaurant with a drive-thru and the remaining five (5) buildings are intended for sit-down restaurant-type uses. The current Specific Plan Land Uses are designated as Business and Warehouse, Office and Professional, and Retail and Service.

Surrounding Land Uses and Zoning

TABLE 1 – Land Uses:

NORTH	EAST	SOUTH	WEST
Interstate 10	Sun Lakes Country Club, The Lakes Assisted Living and Vacant land	Sun Lakes Country Club	Sun Lakes Village Shopping Center

TABLE 2 – Zoning:

NORTH	EAST	SOUTH	WEST
Public Facilities (PF)	Medium Density Residential (MDR)/Open Space (OS)	Medium Density Residential (MDR)/Open Space (OS)	General Commercial (GC)

Architectural Design

The industrial warehouse building will be constructed with concrete tilt-up walls with painted and scored accents. The design provides glazing and color variation to ease the length of the industrial warehouse building. The elevations utilize a combination of materials and colors. The warehouse building will use paint by Sherwin-Williams with colors *Extra White* with *Gray Screen, Software, and Cyberspace* with trims of *Heartthrob* between the gray panels. There are aluminum windows and door frames with tempered glazing in a blue reflective color that will be located on the wall panels, the building corners, and the four (4) potential office areas. There are *Metal Canopies with Pure White* and *clear Anodized Mullions* to accent the building. The proposed 14' concrete tilt-up walls will screen the truck yards and the colors will match the paint and color variations of the warehouse building.

The main colors of the retail buildings will be Sherwin-Williams *Extra White* with accents colors of *White Brick, Warm Brick, and Metal Siding*. The storefront aluminum windows and door framing will use a blue reflective window glazing and is also located on the wall panels and the building corners. There are *Pure White Metal Canopies* with *clear Anodized Mullions* to provide distinction accents to the buildings.

Landscaping

Landscaping is provided along the parkway on Sun Lakes Boulevard, on the side and freeway setbacks adjacent to the property lines and buildings, and throughout the parking areas. The project provides landscaping over the 15% requirement with 16.23% on the industrial site and 39.7% on the retail site.

Circulation - Access and On-Site

The main access points for the Project are as follows:

- Access points off Sun Lakes Blvd: 40' wide driveway (at cul-de-sac) & 46' driveway (divided by 6' median) & 40' wide shared driveway
- Access points for retail: West side - 24' wide driveway off Sun Lakes Village Dr & East side - Two (2) 26' wide driveways off shared driveway
- Access points for warehouse: West side- 29'-10" wide driveway off Sun Lakes Village Dr & East side- Three (3) driveways 24' wide, 29' wide, 40' wide off shared driveway
- There are 24'-0' wide emergency vehicle access roads provided around the south and north sides of the retail buildings, throughout the north and south truck courts, around the industrial building and through all the parking areas of the site.

Development Standards

Future industrial buildings are subject to the Sun Lakes Village North Specific Plan zoning standards and development design guidelines, which are summarized in the following table:

TABLE 3 – Development Standards (I):

Development Standards Industrial Warehouse Building	Required	Provided
Lot Size	10,000 s.f.	1,316,349 s.f.
Lot Width	70 feet	1,270 feet
Lot Depth	100 feet	876 feet
Building Height	55 feet	47'-6"
Building Setbacks: Front Side Rear	 20 feet 20 feet 20 feet	 185 feet 70 feet 185 feet
Building Coverage	55%	47%
Landscape Coverage	15% of lot minus building area	16.23%
Fence/Wall Height	8 feet	Fence – 8 feet Wall – 14 feet
Parking Requirements		
Office – 1 space per 300 s.f.	40	40
Warehouse Parking – 22 spaces plus 1 space per 2,000 s.f. over 20k s.f.	322	362

The retail and restaurant buildings will be subject to the Sun Lakes Village North Specific Plan zoning standards for development and design, which are provided in the following table:

TABLE 3 – Development Standards (R)

Development Standards Retail and Restaurant Buildings	Required	Provided
Lot Size	6,000 s.f.	297,492 s.f.

Development Standards Retail and Restaurant Buildings	**Required**	**Provided**
Lot Width	60 feet	1,300 feet
Lot Depth	100 feet	200 feet
Building Height	35 feet	20' – 6"
Building Setbacks: Front Side Rear	 0 feet 20 feet 20 feet	 100 feet 80 feet 30 feet
Building Coverage	55%	11.4%
Landscape Coverage	15% of lot minus parking area	34.9%
Fence/Wall Height	6 feet	N/A
Parking Requirements		
Drive Thru – 1 space per 100 s.f.	16	16
Retail – 1 space per 250 s.f.	130	273

The Project has been reviewed by Planning Department staff and determined to either meet or exceeds all required standards.

Tentative Parcel Map

A Tentative Parcel Map is submitted as part of this application review and will subdivide the entire site (47-acres) into three (3) parcels. Parcel 1 will accommodate the six (6) retail buildings, Parcel 2 will provide for the industrial warehouse building, and the third parcel is not intended for development at this time, however, there is an access road illustrated on the plans. That parcel is labeled "Not A Part" (N.A.P.).

Phasing

The Project is being proposed in two phases. Phase 1 will consist of the industrial building with construction projected to begin early 2022. Phase 2 will consist of the retail portion and is projected to begin construction early 2023.

Environmental Review

Upon the City's request, the applicant provided a "Sun Lakes Village North Specific Plan Consistency Determination" to conclude if the Project would be consistent with the previous EIR prepared for the Sun Lakes Village North Specific Plan. Since the project

is approximately 300,000 net square feet less in developed area than the project envisioned in the preceding EIR, the following findings can be made:

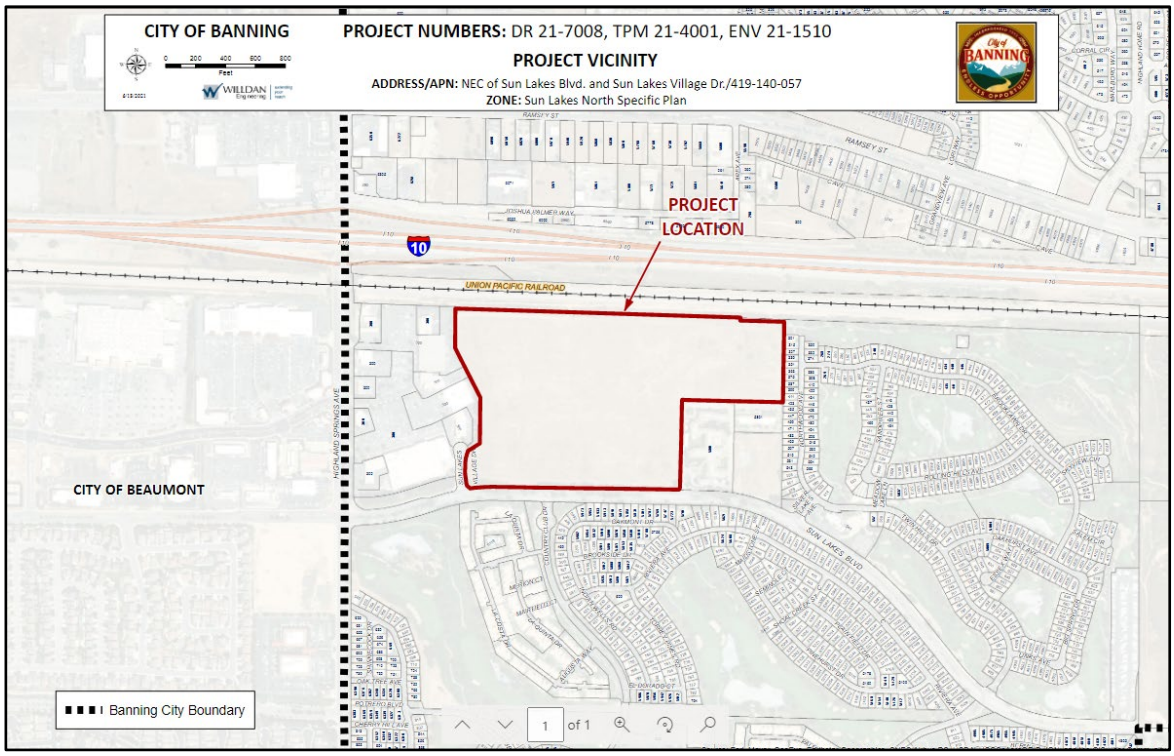
1. The Vehicle Miles Travelled (VMT) being used is a threshold for traffic less intense than originally envisioned in the Specific Plan Amendment No. 5 EIR.

2. The projected air quality, while still unattainable in the South Coast Air Basin, is less impactful than the project envisioned in the Specific Plan Amendment No. 5 EIR

3. The proposed project will provide significantly more landscaping.

As the implementing Project is less intensive that previously approved through the Specific Plan Amendment, the development is an environmentally superior alternative to the maximums allowed under the EIR. Therefore, the analysis for the Project is consistent with, or is superior to, the expectations considered under the Specific Plan. As such, and no further review or mitigation is required as all significant impacts were disclosed under the previous EIR, the adoption of Resolution 2020-141, which includes the Council's the Statement of Overriding Considerations and Mitigation, Monitoring, and Reporting Matrix (MMRP). Therefore, in accordance with CEQA Guidelines Section 15162, no further environmental review or mitigation measures are required.

FIGURE 1. Vicinity Map



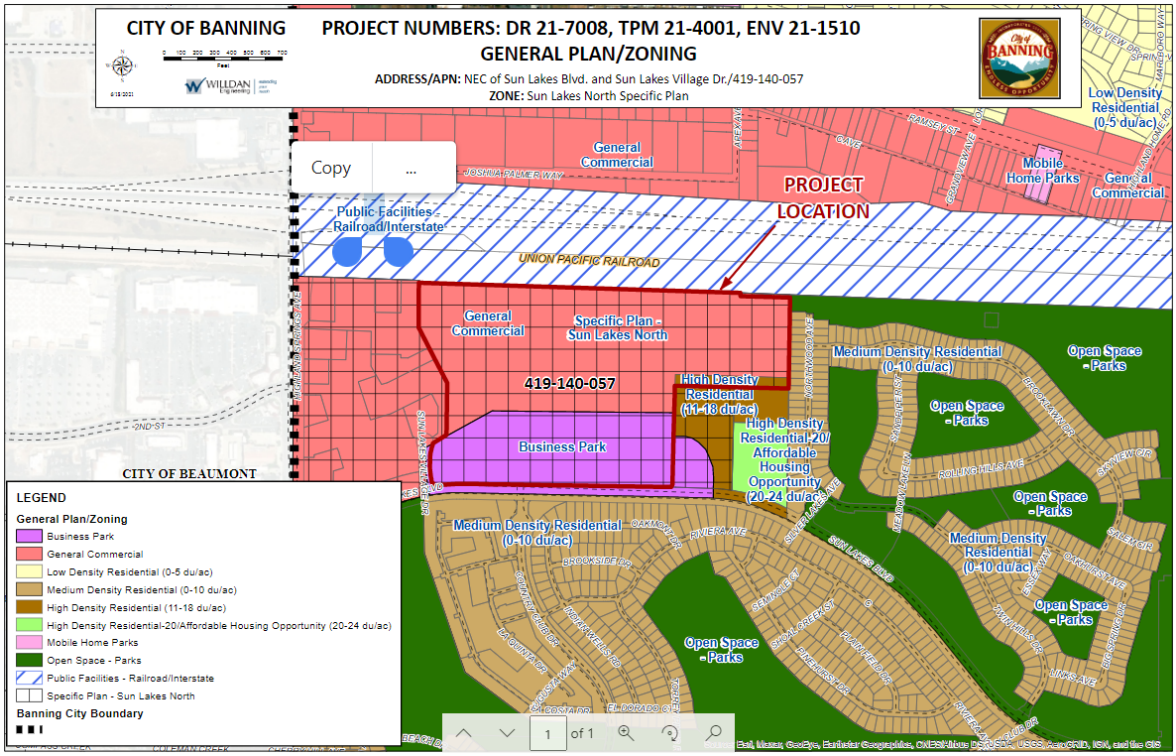


FIGURE 2. Zoning Map

PUBLIC COMMUNICATION:

The proposed Project was advertised in the Record Gazette newspaper on November 19, 2021. As of the date of this report, City staff has received numerous correspondence (primarily in the form of email) that were in opposition to the proposed project.

TOPIC	ISSUE OF CONCERN	LOCATION W/IN THE DOCUMENT	CITY'S RESPONSE	APPLICANT'S RESPONSE
Public Notice	Was the Project noticed in a manner consistent with state law, city ordinance, and similar to all other Planning Commission project types?	October 19th and December 1st Staff Reports, located on the last few pages of the report.	The City published a written notification, in the Record Gazette, on October 8th which were prepared for the October 19th Planning Commission (PC) Public Hearing. Proof of publication, as received from the Record Gazette, is attached to this report. Furthermore, the City requested Property Owner Notification Labels, from the County of Riverside's Assessor's Office. These labels were generated on May 18, 2021. The labels conform to §65091(a) – (d) and Chapter 17.68.020 of the Banning Municipal Code (BMC), which (in-part) requires notification to be mailed to all property owners within a 300-foot radius. The labels generated 98 separate addresses, three of which include the Sun Lakes HOA (local and corporate offices) and the property owner for The Lakes Assisted Living facility as well. ***It is important to note that §65093 of the Planning and Zoning Laws, states, "Failure of any person or entity to receive notice given pursuant to this title, or pursuant to the procedures established by a charted city, shall not***	The Applicant has agreed with the City's request to generate property owner notification labels to increase the radius from 300-feet to 1,000-feet (more than 3-times greater than the minimum distance required by §65091(a) – (d) and Chapter 17.68.020 of the BMC. Again, these notices were physically mailed to the Sun Lakes HOA offices (both on-site and at their corporate headquarters). In addition, the property owner of The Lakes Assisted Living facility also received their fourth public notice regarding the Project. In addition, the City has provided noticed via email to the Sun Lakes HOA Manager, Mr. Jason Ewals and copied to C. Mitchell. This email notification was transmitted on November 17th and received the same day. Copies of these emails are attached herein.

			constitute grounds for any court to invalidate the actions of a local agency for which the notice was given.	
Traffic/Circulation	Daily & AM/PM Peak Hour Truck Trips; Queuing of trucks along Sun Lakes Blvd.; interaction between planned golf cart paths and truck traffic	Draft Environmental Impact Report (DEIR) Master Traffic Impact Analysis (MTIA) and CEQA Addendum and Project-level Traffic Impact Analysis (PTIA)	**TRUCK TRIPS:** The City's Traffic Consultant completed a Master TIA in September, 2020. Table 4-2, of the Master TIA, details that 21 (4+ axle truck) trips are inbound, and 5 trips are outbound, in the AM Peak Hour. Conversely, 5 (4+ axle truck) trips are inbound, and 17 (4+ axle truck) trips are outbound in the PM Peak Hour. In total, the Master TIA concluded that only 48 (4+ axle truck) trips would occur each weekday (M-F). In October, 2021 the Applicant's Traffic Consultant completed a Project-level TIA, which analyzed three separate industrial uses. According to Table 3, of the October 4, 2021 TIA the report concluded that a total of 26 truck trips would occur in ***both*** the AM and PM Peak Hours. This is a maximum of 13-trucks per day, during normal business days (M-F). This is a reduction of 25 truck trips (12.5 trucks per day) from the Master TIA.	
	Concerns regarding the stacking of trucks on both Sun Lakes Village Drive and Sun Lakes Blvd. was expressed during public testimony.	CEQA Addendum Site Plan		

	Concerns regarding the interaction between semitrailers and golf carts was raised during public testimony.	Site Plan	***The updated Project-level TIA evaluated a development plan that is approximately 70% the size of the Specific Plan. The updated TIA concludes that no more than 3 trucks per hour (per work day) will enter and exit the Project site.*** **TRUCK QUEUING:** The City's Public Works Department conditioned the Project to extend the left-handed turn pocket, from eastbound (E/B) Sun Lakes Blvd. into N/B Sun Lakes Village Drive, which provides direct access into the Albertson's shopping center. This improved turn pocket will be approximately 150-feet long and is adequate to remove trucks from the existing two E/B through lanes as drivers approach the Sun Lakes Main Gate. In addition, the City has conditioned the construction of a dedicated truck stacking lane, on the easterly R/W of Sun Lakes Village Drive that will be separate from either the N/B or S/B travel lanes within Sun Lakes Village Drive. As stated above, the Project-level TIA concluded that a maximum of ***3 trucks per hour***	

			will enter and exit the Project site. According to the Federal Department of Transportation (DOT), the maximum average length of a commercial semitrailer is 48-feet; however, semitrailers up to 53-feet may also operate without a permit.[1] By using the maximum semitrailer length (including the tractor and cab) of 53-feet, adequate travel area is provided to accommodate the maximum number of semitrailers to and from the project site. **GOLF CART PATH**: The City Council held a study session during the October 12, 2021 meeting, during which the Public Works Director presented three scenarios to accommodate golf cart travel from the Sun Lakes community, northerly across Sun Lakes Blvd., westerly along the northerly R/W of Sun Lakes Blvd. and accessing the Sun Lakes Shopping Center via Sun Lakes Village Drive. The Sun Lakes Village North Specific Plan requires the	

[1] https://ops.fhwa.dot.gov/freight/publications/size_regs_final_rpt/index.htm#length

			accommodation of golf cart access per Policy 2.2.3. As such, the City has conditioned the Project which requires a dedicated golf cart path to be constructed from the southerly Right-of-Way (R/W) of Sun Lakes, to the northerly R/W and into the Project's parking lot. This lot will be located adjacent to Sun Lakes Blvd. The required Golf Cart path will traverse northerly, to the ternal drive aisle that segregates the industrial and retail uses.	
Air Quality	Due to the increase in truck traffic, resulting from the Project, an unhealthy and potentially dangers	Concerns related to the emission of diesel particulate matter ('PM'), resulting from the travel and transport of Semitrailers.	According to the Air Quality/GHG Impact Analysis (prepared as part of the Specific Plan Amendment, dated July 9, 2020) the Project, which evaluated a square-footage maximum of 877,298 sq. ft. specifically for industrial/warehouse uses. The estimated generation of Particular Matter (PM) – for both 10 and 2.5 microns – is 42.93 pounds per day (lbs./day) of PM_{10} and 12.15 lbs./day of $PM_{2.5}$. The South Coast Air Quality Management District (SCAQMD) regulates the emission of several pollutants of concern, for both	

			construction and operational aspects of any new development project. Consequently, the SCAQMD is responsible for establishing *Mass Daily Thresholds* for the following pollutants of concern: NOx, CO, VOC, SOx, and PM_{10}. For Particulate Matter, SCAQMD Thresholds of Significance are 150 lbs./day for PM_{10} and 17 lbs./day for $PM_{2.5}$ (when a sensitive receptor is positioned at-least 100-feet from the Project property line.[2] According to Google Earth®, the nearest residential dwelling is in excess of 600-feet from any industrial operation. Compared to the SCAQMD established thresholds, the maximum daily emissions of PM2.5 is 166 lbs./day; again, the July 9, 2020 Air Quality Impact Analysis concluded that a maximum of 12.15 lbs./day will be generated from an anticipated project size of approximately 877,000 sq. ft. Therefore, the June 9, 2020 Air Quality Impact Analysis concluded that both measurements of Particulate Matter emissions are below the	

[2] Page B-1, http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/particulate-matter-(pm)-2.5-significance-thresholds-and-calculation-methodology/final_pm2_5methodology.pdf?sfvrsn=2

			established thresholds set forth by SCAQMD. As required by the Certified EIR, an updated Air Quality Impact Analysis is required, prior to the approval of any implementing project. As such, an updated Air Quality Impact Analysis was prepared by Urban Crossroads for the subject Project. The updated report evaluated the implementing project, which was reduced from 877,298 sq. ft. to 619,959 sq. ft. (which is approximately a 30% reduction in the overall development area). As shown on pages 7-9 (of the updated report), the Project will have a less than significant impact upon local air quality pollutants of concern, primarily those associated with diesel fuel and semitrailer truck trips (e.g., PM_{10} and $PM_{2.5}$). It is further stated within the report that the long-term operational impacts will not create an adverse impact upon the health of the surrounding community. As stated on Page 11, of the updated report, the Project will increase the potential cancer risk by ***1.32 in every one (1) million residents***). For example, this	

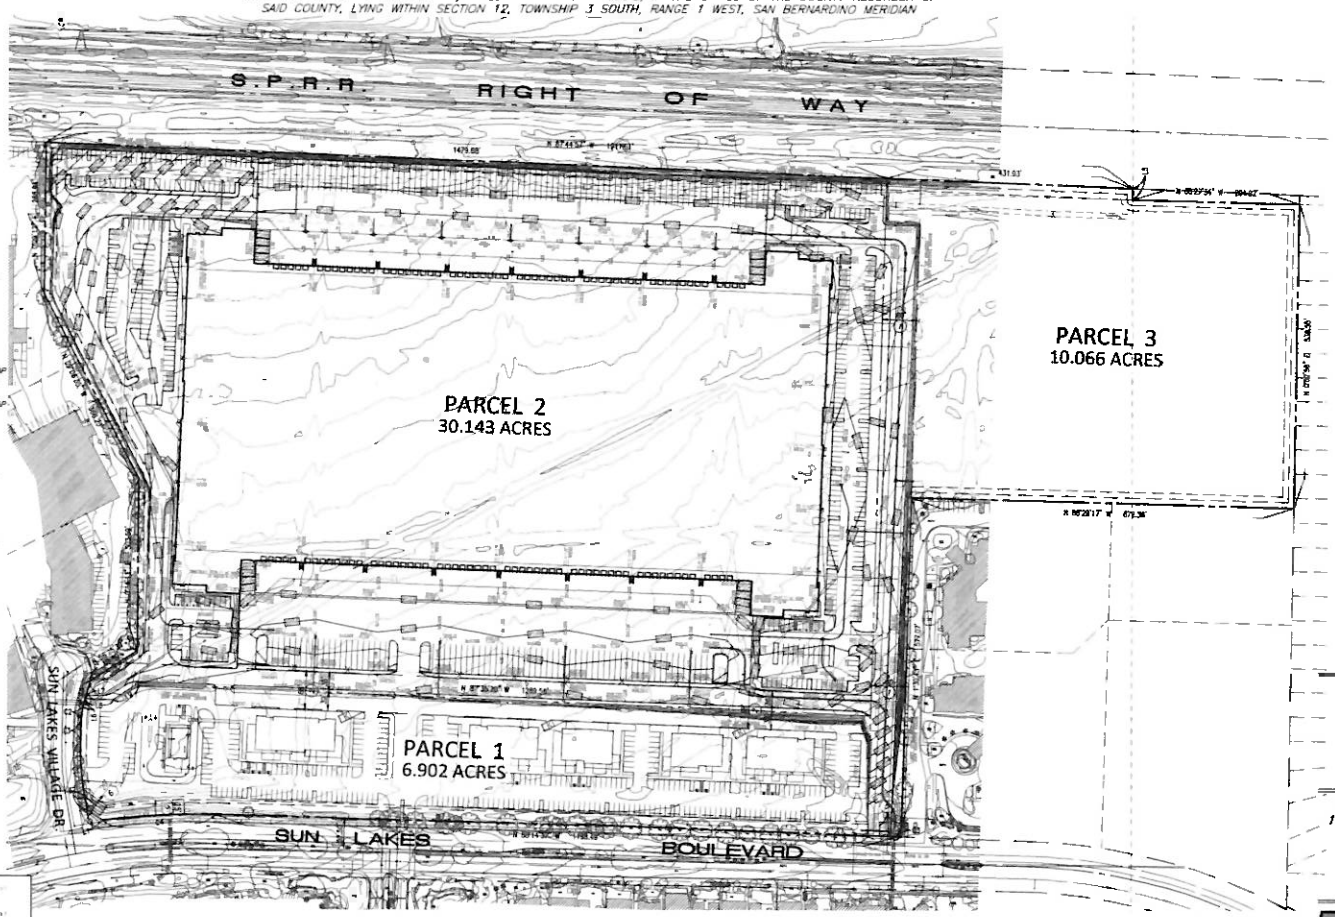
			would be an increase in approximately one (1) additional person developing a cancer related to negative Air Quality for a City approximately 33 times the size as the City of Banning.	
Increases to Noise	That the Project will result in a permanent and significant increase in the ambient noise levels which will negatively impact the surrounding community	CEQA Addendum; Sun Lakes Village North Specific Plan Noise Monitoring Report (dated July 9, 2020)	The Applicant's consultant conducted an ambient noise monitoring study on July 1, 2020. Based on recommendations of Caltrans and the FTA, it is not necessary to collect measurements at each individual building or residence, because each receiver measurement represents a group of buildings that share acoustical equivalence. The noise report concluded that Daytime ambient noise levels range from 59.0 to 64.0 dBA Leq and Nighttime noise levels range from 51.3 to 57.6 dBA Leq. The operational noise impacts will exceed the City's noise standards of 55 dBA, at three proposed locations: (1) Parking Lot; (2) Semitrailer loading and unloading; and (3) truck delivery area. The maximum daytime noise impacts are 75 dBA for all three measurements. Therefore, the Project has been conditioned to provide for	

			sufficient buffering, the construction of sound walls or similar features that reduces daytime noise.	
Light Pollution	Concerns that the parking lot and security lighting will increase light pollution and disturb surrounding residents.	Specific Plan Amendment No. 5 – Design Guidelines and Draft EIR – Chapter 4.1 (Aesthetics)	The City's Municipal Code requires all lighting to be directed downward and shielded from public view. In addition, lighting shall not be permitted which blinks, flashes, or is of unusually high intensity or brightness. Exterior lighting shall be shielded or recessed so that light is contained within the boundaries of the parcel on which the lighting is located. All lighting shall be directed downward and away from adjoining properties and public rights-of-way.	
Building Location/Size	Concerns that the size and location of the proposed industrial building will obscure natural views and degrade the existing landscape	Specific Plan Amendment No. 5 – Design Guidelines and Draft EIR – Chapter 4.1 (Aesthetics)	The Specific Plan sets forth comprehensive design standards that separate semitrailers from passenger vehicles and pedestrians; provides an internal drive aisle linking the Retail & Service District to the Office & Professional District. The adopted amendments to the Development Standards and Design Guidelines section of the Specific Plan establish general provisions for site design, circulation, architecture, landscape, walls, fences, screening, and buffers.	

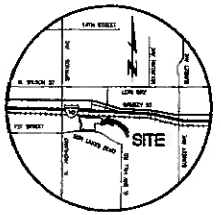
Future Job Growth	Concerns that the Project will not create sufficient employment in order to justify is operation	Sun Lakes – *Executive Summary of Economic Benefit Analysis* (DPFG)	According to an Economic Analysis, prepared by Development, Planning, & Financing Group, Inc. (DPFG) – dated November, 2020, the Project will create 722 permanent jobs at build-out. In the first phase, which is the Industrial Warehouse, the DPFG report concludes that 296 permanent jobs will be created. The second phase (Retail) will create 70, and the office park will contribute the remaining 356 job.	
Sun Lakes Blvd. Extension	Concerns that the extension Sun Lakes Blvd. will not be constructed until after the Project begins construction. Therefore, traffic will be irreparably harmed.	Sun Lakes Blvd. Construction Documents & Specific Plan Phasing Plan (Pg. 4.2-10 of the EIR)	The City anticipates the release of Bid Documents, associated with the Sun Lakes Extension Blvd. Roadway Project in late 2022. This will allow construction to start in early 2023 and be completed by the end of 2023. If approved, the Banning Point project can obtain Building Permits by Summer of 2022 and complete the construction of 619,969 sq. ft.in approximately 8-months. Assuming both of these timelines stay on track, the timeframe between construction of the Industrial warehouse versus the Sun Lakes Blvd. extension	

			roadway project will be approximately 6-months. Given that the extension will not likely be completed before a Certificate of Occupancy is issued, the Project has been condition for the additional circulation improvements as stated in the Traffic section above.	

SHEET 1 OF 1



TENTATIVE PARCEL MAP NO. 38164



IN THE CITY OF BANNING, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA,

BEING A SUBDIVISION OF A PORTION OF THE REMAINDER PARCEL ON PARCEL MAP NO. 22175, AS PER MAP FILED IN BOOK 145 PAGES 61 THROUGH 67, INCLUSIVE OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, LYING WITHIN SECTION 12, TOWNSHIP 3 SOUTH, RANGE 1 WEST, SAN BERNARDINO MERIDIAN

APNs:

15. EXTERIOR DOWNSPOUT WITH OVERFLOW SCUPPER,
16. Z GUARD
17. APPROXIMATE LOCATION OF ELECTRICAL ROOM

GENERAL NOTES - FLOOR PLAN

A. THIS BUILDING IS DESIGNED FOR HIGH PILE STORAGE WITH FIRE ACCESS MAN DOORS AT 100' MAXIMUM O.C. A SEPARATE PERMIT WILL BE REQUIRED FOR ANY RACKING/CONVEYER SYSTEMS.
B. FIRE HOSE LOCATIONS SHALL BE APPROVED PER FIRE DEPARTMENT.
C. THE BUILDING FLOOR SLAB IS SLOPED, SEE "C" DRAWINGS FOR FINISH SURFACE ELEVATIONS.
D. WAREHOUSE INTERIOR CONCRETE WALLS ARE PAINTED WHITE. COLUMNS ARE TO RECEIVE PRIMER ONLY. ALL GYP. BD. WALLS IN WAREHOUSE TO RECEIVE 1 COAT OF WHITE TO COVER.
E. SLOPE POUR STRIP 1/2" TO EXTERIOR AT ALL MANDOOR EXITS. SEE "S" DRAWINGS FOR POUR STRIP LOCATION.
F. ALL DIMENSIONS ARE TO THE FACE OF CONCRETE PANEL WALL, GRIDLINE, OR FACE OF STUD U.N.O.
G. SEE CIVIL DRAWINGS FOR POINT OF CONNECTIONS TO OFF-SITE UTILITIES. CONTRACTOR TO VERIFY ACTUAL UTILITY LOCATIONS. PLUMBING/ELECTRICAL COORDINATION.
H. FOR DOOR TYPES AND SIZES, SEE DETAIL SHEET AD.4. NOTE: ALL DOORS PER DOOR SCHEDULE ARE FINISH OPENINGS.
I. CONTRACTOR TO PROTECT AND KEEP THE FLOOR SLAB CLEAN. ALL EQUIPMENT TO BE DIAPERED INCLUDING CARS AND TRUCKS.
J. ALL EXIT MAN DOORS IN WAREHOUSE TO HAVE ILLUMINATED EXIT SIGN. HARDWARE.
K. HIGHLY FLAMMABLE AND COMBUSTIBLE MATERIAL SHALL NOT BE USED OR STORED IN THIS BUILDING.
L. EACH EXTERIOR EXIT DOOR SHALL BE IDENTIFIED BY A TACTILE EXIT SIGN WITH THE WORDS "EXIT". THE MOUNTING HEIGHT FOR SUCH SIGNAGE SHALL BE 60" FROM FINISH FLOOR LEVEL TO THE CENTER OF THE SIGN.
M. NON-ACCESSIBLE DOOR. PROVIDE WARNING SIGN LOCATED IN THE INTERIOR SIDE PER CBC 1133B.1.1.1
N. ALL ROOF MOUNTED MATERIALS SHALL BE FULLY SCREENED FROM PUBLIC VIEW, SEE A/A4.1 OFFICE SECTION.

FLOOR SLAB AND POUR STRIPS REQ.

THESE NOTES ARE VERY MIN. REQUIREMENT. SEE "S" DWGS FOR ADDITIONAL REQUIREMENTS

1. FLOOR COMPACTION - 95%
2. TRENCH COMPACTION - 90%
3. BUILDING FLOOR SLAB:
   A. 6" THICK MIN. UNREINFORCED CONCRETE OVER COMPACTED SOILS
   B. 3/4" - 16"LONG @ 12" O.C. DOWELS AT ALL CONSTRUCTION JOINTS
      3/4" - 16"LONG @ 24" O.C. DOWELS IN DOWEL BASKET AT ALL CONTROL JOINTS.
   C. 4,000 P.S.I. REQUIREMENT.
   D. SLUMP TO BE 4" +/- 1"
   E. JOINT SPACING PER A.C.I. 302-1R-96
   F. SAW-CUT DEPTH 1/4 T; SOFT SAW-CUTTING WITHIN 2 HRS OF FINISHING
4. CONTRACTOR TO BUILD FOR CLASS V FLOOR PER A.C.I. 302-1R-96
5. CONCRETE SLAB TO HAVE STEEL FLOAT HARD TROWEL BURNISHED FINISH.
6. CONTRACTOR TO CURE SLAB TO BE WET CURING USING BURLINE FOR 7 DAYS MIN.
7. ALL EQUIPMENT & MOVING VEHICLES SHALL BE DIAPERED.
8. NO CRANES, CONCRETE TRUCKS, OR ANYTHING HEAVIER WILL BE PLACED ON THE SLAB.
9. SLAB TO BE FF35 FL24 MEASURED WITHIN 24 HOURS.
10. NO FLY ASH IN THE CONCRETE
11. WHERE [ ] INDICATED, PROVIDE VAPOR BARRIER (15MIL STEGO OR EQUAL) UNDER THE CONCRETE SLAB. PROVIDE SAND PER SOILS ENGINEER OR MANUFACTURER'S RECOMMENDATION.
    CONCRETE SLAB IN FUTURE OFFICE AREAS, WHERE SAND OVER VIQUEEN ARE REQUIRED, SHALL BE NATURALLY HYDRATED WITHOUT USE OF BURLENE, CURING COMPOUND, OR RELEASE AGENTS.
    CONTROL/CONSTRUCTION JOINTS SHALL NOT BE FILLED WITH MM-80 JOINT FILLER IN FUTURE OFFICE AREAS.
12. SEAL CONCRETE SLAB W/ "LIPIDOLITH" SEALER

KEYNOTES - ELEVATIONS

1. CONCRETE TILT-UP PANEL(PAINTED). FINISH GRADE VARIES. SEE "C" DRAWINGS. WATERPROOF ALL WALLS WHERE GRADE IS HIGHER AND EXPOSED TO THE WEATHER ONE SIDE. WATERPROOFING TO BE PROTECTED WITH PROTECTION BOARD AND A MIN. 12" OF GRAVEL. PROVIDE TRENCH DRAIN AT BOTTOM AND DAYLIGHT TO CURB OR TAKE TO STORM DRAIN. NOT REQUIRED AT DOCK HIGH CONDITION OR AT RAMP WALLS.
2. PANEL JOINT. SEE "S" DRAWINGS. SEE 4/AD.3
3. PANEL REVEAL. ALL REVEALS TO HAVE A MAX. OF 3/8" CHAMFER. REVEAL COLOR TO MATCH ADJACENT BUILDING FIELD COLOR. U.N.O.
4. OVERHEAD DOOR @ DRIVE THRU. SEE DOOR SCHEDULE. PROVIDE COMPLETE WEATHER-STRIPPING PROTECTION ALL AROUND. PAINT TO MATCH FIELD COLOR.
5. OVERHEAD DOOR @ DOCK HIGH. SEE DOOR SCHEDULE. PROVIDE COMPLETE WEATHER-STRIPPING PROTECTION ALL AROUND. PAINT TO MATCH FIELD COLOR.
6. CONCRETE STAIR, LANDING AND GUARDRAIL W/ METAL PIPE HANDRAIL. PROVIDE NON SKID NOSING TO MEET ADA REQUIREMENTS. PROVIDE CONTRASTING COLORED 3" WIDE WARNING STRIPE INTEGRAL TO CONCRETE AT TOP LANDING AND BOTTOM TREAD PER ADA REQUIREMENTS.
7. METAL LOUVER, SEE DETAIL 8/AD.4. PAINT TO MATCH BUILDING COLOR
8. HOLLOW METAL DOORS, SEE DOOR SCHEDULE. PROVIDE FOR RAIN DIVERTER ABOVE DOOR. PAINT TO MATCH FIELD COLOR.
9. EXTERIOR METAL DOWNSPOUT WITH 2 OVERFLOW SCUPPERS. SEE DETAIL 12,13,14,15/AD.3.
10. DOCK BUMPER. SEE DETAIL 4/AD.4.
11. ALUMINUM STOREFRONT FRAMING WITH TEMPERED GLAZING AT ALL DOORS, AND WINDOWS. SEE DETAIL 12/AD.4
12. METAL GATE WITH KNOX BOX PER FIRE DEPARTMENT SEE 8/AD.2 PRIME AND PAINT BLACK
13. EXTERIOR METAL STAIR. SEE DETAILS 1, 2, 3, 3A, 5/AD.5.
14. INTERIOR ROOF DRAIN WITH 2 OVERFLOW SCUPPERS. CONTRACTOR TO VERIFY WITH "P" DWGS. SEE DETAIL 17/AD.3.
15. NOT USED.
16. ILLUMINATED BUILDING ADDRESS PER FIRE DEPT. REQUIREMENTS. 2" THICK HIGH DENSITY FOAM "HELVATIC BOLD" LETTER W/ 1/16" PVC FACES EPOXY TO WALL. COLOR TO BE SELECTED BY ARCHITECT.
17. CONCRETE RAMP AND GUARDRAIL W/ METAL HANDRAIL.
18. PARAPET RETURN. SEE ROOF PLAN AND "S" DWGS.
19. ROOF LINE BEYOND.
20. EXTERIOR LIGHTING FIXTURE. CENTER BETWEEN PANEL OR ON JOINT U.N.O. SEE "E" DWGS.
21. CONC. FILLED STEEL BOLLARDS, SEE FLR. PLAN.
22. NOT USED.
23. TUBE STEEL CANOPY. SEE "S" DWG. DETAILS 17, 19/AD.3A.
24. DOWNSPOUT PROTECTION. SEE DETAIL 2/AD.3A.

SAFETY NOTES - GLAZING

NOTE: EACH LIGHT OF SAFETY GLAZING MATERIAL INSTALLED IN HAZARDOUS LOCATIONS SHALL BE IDENTIFIED BY PERMANENT LABEL THAT SPECIFIES THE LABELER, AND STATES THAT SAFETY GLAZING MATERIAL HAS BEEN UTILIZED IN SUCH INSTALLATIONS.

A. GLAZING IN INGRESS AND EGRESS DOORS EXCEPT JALOUSIES.

B. GLAZING IN FIXED AND SLIDING PANELS OF SLIDING DOOR ASSEMBLIES AND PANELS IN SWING DOORS OTHER THAN WARDROBE DOORS

C. GLAZING IN STORM DOORS.

D. GLAZING IN ALL UNFRAMED SWINGING DOORS.

E. GLAZING IN DOORS AND ENCLOSURES FOR HOT TUBS, WHIRLPOOLS, SAUNAS, STEAM ROOMS, BATHTUBS, AND SHOWERS.

F. GLAZING IN FIXED OR OPENABLE PANELS ADJACENT TO A DOOR WHERE THE NEAREST EXPOSED EDGE OF THE GLAZING IS WITHIN 24 INCHES ARC OF EITHER VERTICAL EDGE OF THE DOOR IN A CLOSED POSITION AND WHERE THE BOTTOM EDGE OF THE GLAZING IS LESS THAN 60 INCHES ABOVE THE WALKING SURFACE.

G. GLAZING IN AN INDIVIDUAL FIXED OF OPENABLE PANEL, OTHER THAN DESCRIBED IN ITEMS E AND F, THAT MEET ALL OF THE FOLLOWING ARE PRESENT:
1. EXPOSED ARE OF AN INDIVIDUAL PANE GREATER THAN 9 SQUARE FEET.
2. EXPOSED BOTTOM EDGE LESS THAN 18 INCHES ABOVE THE FLOOR.
3. EXPOSED TOP EDGE GREATER THAN 36 INCHES ABOVE THE FLOOR.
4. ONE OR MORE WALKING SURFACES WITHIN 36 INCHES HORIZONTALLY OF THE PLANE OF THE GLAZING.

H. GLAZING IN RAILINGS REGARDLESS OF HEIGHT ABOVE A WALKING SURFACE. INCLUDING ARE STRUCTURAL BALUSTER PANELS AND NONSTRUCTURAL IN-FILL PANELS.

I. GLAZING IN WALLS AND FENCES USED AS THE BARRIER FOR INDOOR AND OUTDOOR SWIMMING POOLS AND SPAS WHEN ALL OF THE FOLLOWING CONDITIONS ARE PRESENT:
1. THE BOTTOM EDGE OF THE GLAZING IS LESS THAN 60 INCHES ABOVE THE POOL SIDE OF THE GLAZING.
2. THE GLAZING IS WITHIN 5 FEET OF A SWIMMING POOL OR SPA WATER'S EDGE.

J. GLAZING IN WALLS ENCLOSING STAIRWAY LANDINGS OR WITHIN 5 FEET OF THE BOTTOM AND TOP OF STAIRWAYS WHERE THE BOTTOM EDGE OF THE GLASS IS LESS THAN 60 INCHES ABOVE A WALKING SURFACE.

GENERAL NOTES - ELEVATIONS

A. ALL PAINT COLOR CHANGES TO OCCUR AT INSIDE CORNERS UNLESS NOTED OTHERWISE.
B. ALL PAINT FINISHES ARE TO BE FLAT UNLESS NOTED OTHERWISE.
C. T.O.P. EL= TOP OF PARAPET ELEVATION.
D. F.F. = FINISH FLOOR ELEVATION.
E. STOREFRONT CONSTRUCTION: GLASS, METAL ATTACHMENTS AND LINTELS. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS PRIOR TO INSTALLATION.
F. CONTRACTOR SHALL FULLY PAINT ONE CONCRETE PANEL W/ SELECTED COLORS. ARCHITECT AND OWNER SHALL APPROVE PRIOR TO PAINTING REMAINDER OF BUILDING.
G. BACK SIDE OF PARAPETS TO HAVE SMOOTH FINISH AND BE PAINTED WITH ELASTOMERIC PAINT.
H. FOR SPANDREL GLAZING, ALLOW SPACE BEHIND SPANDREL TO BREATH.
J. USE ADHESIVE BACK WOOD STRIPS FOR ALL REVEAL FORMS.
K. THE FIRST COAT OF PAINT TO BE ROLLED-ON AND THE SECOND COAT TO BE SPRAYED-ON

ENLARGED NORTH ELEVATION C

scale: 1/18" = 1'-0"

KEYNOTES - ELEVATIONS

1. CONCRETE TILT-UP PANEL(PAINTED). FINISH GRADE VARIES. SEE "C" DRAWINGS. WATERPROOF ALL WALLS WHERE GRADE IS HIGHER AND EXPOSED TO THE WEATHER ONE SIDE. WATERPROOFING TO BE PROTECTED WITH PROTECTION BOARD AND A MIN. OF 6" OF GRAVEL. PROVIDE TRENCH DRAIN AT BOTTOM AND DAYLIGHT TO CURB OR TAKE TO STORM DRAIN. NOT REQUIRED AT DOCK HIGH CONDITION OR AT RAMP WALLS.
2. PANEL JOINT. SEE "S" DRAWINGS. SEE 4/AD.3
3. PANEL REVEAL. ALL REVEALS TO HAVE A MAX. OF 3/8" CHAMFER. REVEAL COLOR TO MATCH ADJACENT BUILDING FIELD COLOR. U.N.O.
4. OVERHEAD DOOR ⊕ DRIVE THRU. SEE DOOR SCHEDULE. PROVIDE COMPLETE WEATHER-STRIPPING PROTECTION ALL AROUND. PAINT TO MATCH FIELD COLOR.
5. OVERHEAD DOOR ⊕ DOCK HIGH. SEE DOOR SCHEDULE. PROVIDE COMPLETE WEATHER-STRIPPING PROTECTION ALL AROUND. PAINT TO MATCH FIELD COLOR.
6. CONCRETE STAIR, LANDING AND GUARDRAIL W/ METAL PIPE HANDRAIL. PROVIDE NON SKID NOSING TO MEET ADA REQUIREMENTS. PROVIDE CONTRASTING COLORED 3" WIDE WARNING STRIPE INTEGRAL TO CONCRETE AT TOP LANDING AND BOTTOM TREAD PER ADA REQUIREMENTS.
7. METAL LOUVER, SEE DETAIL 8/AD.4. PAINT TO MATCH BUILDING COLOR
8. HOLLOW METAL DOORS, SEE DOOR SCHEDULE. PROVIDE COMPLETE WEATHER STRIPING ALL AROUND DOOR. PROVIDE FOR RAIN DIVERTER ABOVE DOOR. PAINT TO MATCH FIELD COLOR.
9. EXTERIOR METAL DOWNSPOUT WITH 2 OVERFLOW SCUPPERS. SEE DETAIL 12,13,14,15/AD.3.
10. DOCK BUMPER. SEE DETAIL 4/AD.4.
11. ALUMINUM STOREFRONT FRAMING WITH TEMPERED GLAZING AT ALL DOORS, AND WINDOWS. SEE DETAIL 12/AD.4
12. METAL GATE WITH KNOX BOX PER FIRE DEPARTMENT SEE 8/AD.2 PRIME AND PAINT BLACK
13. EXTERIOR METAL STAIR. SEE DETAILS 1, 2, 3, 3A, 5/AD.5.
14. INTERIOR ROOF DRAIN WITH 2 OVERFLOW SCUPPERS. CONTRACTOR TO VERIFY WITH "P" DWGS, SEE DETAIL 17/AD.3.
15. NOT USED.
16. ILLUMINATED BUILDING ADDRESS PER FIRE DEPT. REQUIREMENTS. 24"H x 2" THICK HIGH DENSITY FOAM "HELVATIC BOLD" LETTER W/ 1/16" PVC FACES EPOXY TO WALL. COLOR TO BE SELECTED BY ARCHITECT.
17. CONCRETE RAMP AND GUARDRAIL W/ METAL HANDRAIL.
18. PARAPET RETURN. SEE ROOF PLAN AND "S" DWGS.
19. ROOF LINE BEYOND.
20. EXTERIOR LIGHTING FIXTURE. CENTER BETWEEN PANEL OR ON JOINT U.N.O. SEE "E" DWGS.
21. CONC. FILLED STEEL BOLLARDS, SEE FLR. PLAN.
22. NOT USED.
23. TUBE STEEL CANOPY. SEE "S" DWG. DETAILS 17, 19/AD.3A.
24. DOWNSPOUT PROTECTION. SEE DETAIL 2/AD.3A.

SAFETY NOTES - GLAZING

NOTE: EACH LIGHT OF SAFETY GLAZING MATERIAL INSTALLED IN HAZARDOUS LOCATIONS SHALL BE IDENTIFIED BY PERMANENT LABEL THAT SPECIFIES THE LABELER, AND STATES THAT SAFETY GLAZING MATERIAL HAS BEEN UTILIZED IN SUCH INSTALLATIONS.

A. GLAZING IN INGRESS AND EGRESS DOORS EXCEPT JALQUSIES.
B. GLAZING IN FIXED AND SLIDING PANELS OF SLIDING DOOR ASSEMBLIES AND PANELS IN SWING DOORS OTHER THAN WARDROBE DOORS
C. GLAZING IN STORM DOORS.
D. GLAZING IN ALL UNFRAMED SWINGING DOORS.
E. GLAZING IN DOORS AND ENCLOSURES FOR HOT TUBS, WHIRLPOOLS, SAUNAS, STEAM ROOMS, BATHTUBS, AND SHOWERS.
F. GLAZING IN FIXED OR OPENABLE PANELS ADJACENT TO A DOOR WHERE THE NEAREST EXPOSED EDGE OF THE GLAZING IS WITHIN 24 INCHES ARC OF EITHER VERTICAL EDGE OF THE DOOR IN A CLOSED POSITION AND WHERE THE BOTTOM EDGE OF THE GLAZING IS LESS THAN 60 INCHES ABOVE THE WALKING SURFACE.
G. GLAZING IN AN INDIVIDUAL FIXED OF OPENABLE PANEL, OTHER THAN DESCRIBED IN ITEMS E AND F, THAT MEET ALL OF THE FOLLOWING ARE PRESENT:
   1. EXPOSED ARE OF AN INDIVIDUAL PANE GREATER THAN 9 SQUARE FEET.
   2. EXPOSED BOTTOM EDGE LESS THAN 18 INCHES ABOVE THE FLOOR.
   3. EXPOSED TOP EDGE GREATER THAN 36 INCHES ABOVE THE FLOOR.
   4. ONE OR MORE WALKING SURFACES WITHIN 36 INCHES HORIZONTALLY OF THE PLANE OF THE GLAZING.
H. GLAZING IN RAILINGS REGARDLESS OF HEIGHT ABOVE A WALKING SURFACE. INCLUDING ARE STRUCTURAL BALUSTER PANELS AND NONSTRUCTURAL IN-FILL PANELS.
I. GLAZING IN WALLS AND FENCES USED AS THE BARRIER FOR INDOOR AND OUTDOOR SWIMMING POOLS AND SPAS WHEN ALL OF THE FOLLOWING CONDITIONS ARE PRESENT:
   1. THE BOTTOM EDGE OF THE GLAZING IS LESS THAN 60 INCHES ABOVE THE POOL SIDE OF THE GLAZING.
   2. THE GLAZING IS WITHIN 5 FEET OF A SWIMMING POOL OR SPA WATER'S EDGE.
J. GLAZING IN WALLS ENCLOSING STAIRWAY LANDINGS OR WITHIN 5 FEET OF THE BOTTOM AND TOP OF STAIRWAYS WHERE THE BOTTOM EDGE OF THE GLASS IS LESS THAN 60 INCHES ABOVE A WALKING SURFACE.

GENERAL NOTES - ELEVATIONS

A. ALL PAINT COLOR CHANGES TO OCCUR AT INSIDE CORNERS UNLESS NOTED OTHERWISE.
B. ALL PAINT FINISHES ARE TO BE FLAT UNLESS NOTED OTHERWISE.
C. T.O.P. EL.= TOP OF PARAPET ELEVATION.
D. F.F. = FINISH FLOOR ELEVATION.
E. STOREFRONT CONSTRUCTION: GLASS, METAL ATTACHMENTS AND LINTELS. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS PRIOR TO INSTALLATION.
F. CONTRACTOR SHALL FULLY PAINT ONE CONCRETE PANEL W/ SELECTED COLORS, ARCHITECT AND OWNER SHALL APPROVE PRIOR TO PAINTING REMAINDER OF BUILDING.
G. BACK SIDE OF PARAPETS TO HAVE SMOOTH FINISH AND BE PAINTED WITH ELASTOMERIC PAINT.
H. FOR SPANDREL GLAZING, ALLOW SPACE BEHIND SPANDREL TO BREATH.
J. USE ADHESIVE BACK WOOD STRIPS FOR ALL REVEAL FORMS.
K. THE FIRST COAT OF PAINT TO BE ROLLED-ON AND THE SECOND COAT TO BE SPRAYED-ON

1 Introduction

1.1 – Introduction and Background

This Addendum / Consistency Checklist ("Addendum"), its appendices, and related supporting environmental documents have been prepared to determine whether and to what extent the City of Banning's ("City") Environmental Impact Report ("Program EIR" or "PEIR", Clearinghouse No. 2020029074) prepared for Amendment Number 5 (No. 5) to the Sun Lakes Village North Specific Plan ("SLVNSP") remains sufficient to address the potential impacts of the proposed Banning Point development ("Project" or "proposed Project"), or whether additional documentation (e.g., a subsequent EIR) is required under the California Environmental Quality Act ("CEQA") (Pub. Resources Code, Section 21000, et seq.).

The City approved Amendment No. 5 to the SLVNSP in December 2020, which updated SLVNSP's Land Use Plan from Retail Commercial (Auto Dealer) to Business Park & Warehouse (BW), Office & Professional (OP), and Retail & Service (RS). Amendment No. 5 revised the permitted land uses, development standards (including maximum building height, setbacks, open space, landscaping, parking, and signage), design guidelines for development, and administration and implementation provisions of the SLVNSP. The City is the Lead Agency for the SLVNSP under CEQA, and the City prepared the PEIR as the CEQA compliance document for SLVNSP Amendment No 5. The PEIR concluded that Amendment No. 5 had the potential to result in a net increase of building square footage in the SLVNSP planning area and found that certain air quality, greenhouse gas emissions, and traffic impacts of Amendment No. 5 would be significant and unavoidable even with mitigation and regulatory compliance. The PEIR was certified by the City Council on December 8, 2020 (Ordinance 1571 for Zone Change 20-3501).

1.2 – Proposed Project

The Project applicant proposes warehouse/office and retail commercial development within the SLVNSP area. The City, as the Lead Agency, must determine if the Project complies with the SLVNSP and its PEIR and what type of CEQA compliance document, if any, must be prepared. The proposed Project includes development of a 619,959 square foot warehouse and development of six commercial-retail buildings ranging in size from 1,600 square feet to 8,400 square feet (34,000 total square feet) along with associated utility, parking, roadway, and landscaping improvements. The location of the Project site is shown in Exhibit 1 (Specific Plan Location Map), and the SLVNSP area is shown in Exhibit 2 (SLVNSP Area Map).

1.3 – Addendum / Consistency Checklist Analysis

This Addendum has been prepared pursuant to Public Resources Code § 21166 and CEQA Guidelines §§ 15162, 15164, and 15168(c). This Addendum evaluates the Project's potential environmental effects in light of those effects previously disclosed in the PEIR to determine whether any of the conditions described in Guidelines § 15162 calling for subsequent CEQA review have occurred. The PEIR is available for review at the City's Planning Department, 99 East Ramsey Street, Banning, California 92220.

CEQA Guidelines § 15164(a) provides that the lead agency "*shall prepare an addendum* to a previously certified EIR if *some changes or additions are necessary* but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred." Subsection (c) further provides that an "addendum need not be circulated for public review but can be included in or attached to the final

EIR," and subsection (e) states that a "brief explanation of the decision not to prepare a subsequent EIR pursuant to Section 15162 should be included" in the addendum, the agency's findings, or elsewhere in the administrative record.

CEQA Guidelines § 15168(c)(2) provides that "if the agency finds that pursuant to Section 15162, no subsequent EIR will be required, the agency can approve the activity as being within the scope of the project covered by the Program EIR" and that "[w]hether a later activity is within the scope of a Program EIR is a factual question that the lead agency determines based on substantial evidence in the record." Subsection (c)(4) further provides that "[w]here the later activities involve site-specific operations, the agency *should use a written checklist or similar device* to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were within the scope of the Program EIR."

Finally, CEQA Guidelines § 15162 (cross referenced by §§ 15164 and 15168) provides that

> (a) When an EIR has been certified or negative declaration adopted for a project, no subsequent EIR shall be prepared for that project unless the lead agency determines, on the basis of substantial evidence in the light of the whole record, one or more of the following:
>
> (1) Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
>
> (2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
>
> (3) New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the negative declaration was adopted, shows any of the following:
>
> (A) The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
>
> (B) Significant effects previously examined will be substantially more severe than shown in the previous EIR;
>
> (C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
>
> (D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Per the above, this Addendum functions as both an "addendum" and a "written checklist," as called for in CEQA Guidelines §§ 15164(a) and 15168(c)(4). As such, this Addendum analyzes the Project's potential environmental effects in light of those effects disclosed in the PEIR consistent with CEQA Guidelines § 15162.

As detailed in this Addendum, no further CEQA review is required for the Project beyond the PEIR and this Addendum because (1) the Project will not have new or substantially more severe impacts than what was disclosed in the PEIR, (2) all applicable mitigation measures in the PEIR will be incorporated into the Project's approval, and (3) the Project will not require any new mitigation measures.

This Addendum and its supporting documents constitute substantial evidence supporting the conclusion that preparation of a supplemental or subsequent EIR or ND is not required prior to approval of the Project.

1.4 – Summary of Results

The analyses in Sections 4.1 through 4.21 of this Addendum conclude that the Project reflects minor changes to the project described in the certified PEIR (i.e., the SLVNSP). Table 1 (Banning Point Project v. SLVNSP - Consistency Analysis) evaluates the consistency of the Project with the development identified in the PEIR and also shows that the Project is equal to or less intense than what was planned.

Table 1
Banning Point Project v. SLVNSP – Consistency Analysis

SLVNSP Sun Lakes Village North Specific Plan
SP Specific Plan

[1] SLVNSP Table 1, Allowable Land Uses
[2] SP numbers based on industrial park and commercial retail uses evaluated in PEIR
[3] Architectural projections and focal elements may exceed the height limit up to 25 percent.
[4] Per Zoning Code Chapter 17.28 based on building type and square footage
[5] Per Code except walls and fences may exceed the maximum height specified in the Banning Zoning Code to satisfy the screening requirements of the SLVNSP Design Guidelines.

There are no substantial changes resulting from the Project or the circumstances in which the Project will be undertaken that require major revisions of the PEIR. The Project does not require preparation of a subsequent or supplemental EIR due to either the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects. As such, this Addendum analysis is the appropriate method of CEQA compliance for the Project.

2.4 – Sun Lakes Village North Specific Plan Area and Location

The SLVNSP area is located just north of Sun Lakes Boulevard and between Sun Lakes Village Drive and Silver Lake Avenue in the City of Banning, California (See Exhibit 1). The SLVNSP Area is approximately 47.11 acres and is divided into three districts: a 30.22-acre Business Park & Warehouse (BW) district in the northwest portion of the plan area, a 10.06-acre Office & Professional (OP) district in the northeast portion of the plan area, and a 6.83-acre Retail & Service (RS) district in the southwest portion of the plan area along Sun Lakes Boulevard (See Exhibit 2). The SLVNSP area is comprised of a single contiguous parcel.

- Latitude 33° 55’ 26.92” North, Longitude 116° 56’ 27.82” West
- APN: 419-140-057

2.5 – Sun Lakes Village North Specific Plan

The SLVNSP is a specific plan under state planning law and is one of several policy and regulatory tools used by the City to implement the City’s General Plan, which specifically incorporates the SLVNSP under a Specific Plan Overlay. The SLVNSP implements the General Plan through the establishment of more detailed policies, regulations, and actions specifically focused on the SLVNSP area. The SLVNSP generally provides for the use and focused development policies for properties within the 47.11-acre plan area. The Business & Warehouse District is the largest district under the SLVNSP at approximately 30.22 acres. It is located in the northwestern portion of the plan area, adjacent to the Sun Lakes Village Shopping Center, the Southern Pacific Railroad, and the Interstate-10 Freeway. The Office & Professional District is approximately 10.06 acres and is located in the east part of the plan area adjacent to an assisted living facility and residential units designed on smaller lots that are part of the Sun Lakes Country Club active adult/golf course community. The allowable land uses in this district are intended to be of a nature that limits impacts on the existing adjacent sensitive uses. The Office & Professional District also creates a buffer between its adjacent uses and development within the Business & Warehouse District. The Retail & Service District is the smallest district at approximately 6.83 acres. It is located on the southern edge of the plan area adjacent to Sun Lakes Boulevard. The land use objectives for this district are to provide convenient shopping and neighborhood-related

services to meet the daily needs of nearby residents, create high quality development adjacent to the Sun Lakes Boulevard frontage, and screen development within the Business & Warehouse District. The SLVNSP also provides for improvements to the circulation system, increased on-street parking, streetscape improvements, and enhanced development standards and design guidelines.

At the time the SLVNSP was prepared, there were no land use entitlements being sought. The following development assumptions for the SLVNSP planning area were assumed and analyzed in the PEIR:

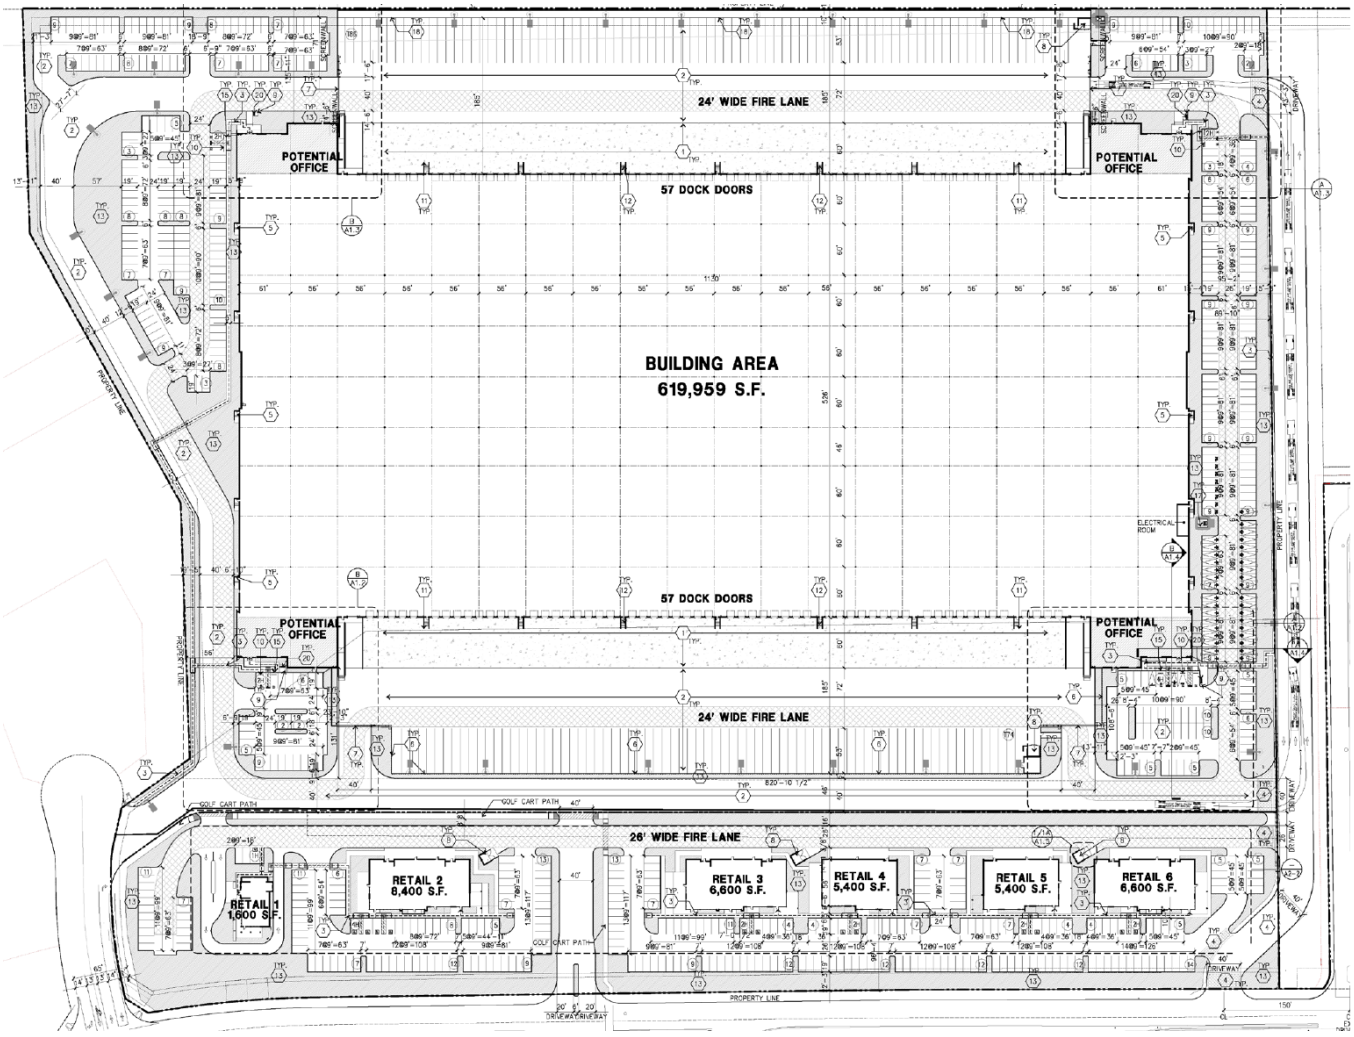
- 877,298 square feet (sf) of Industrial Park
- 52,065 sf of Medical Office
- 37,189 sf of Retail Use

2.6 – General Plan Land Use Designation

Business Park with Specific Plan Overlay
General Commercial with Specific Plan Overlay

2.7 – Zoning District

Specific Plan:
Business & Warehouse District
Retail & Service District
Office & Professional District



2.8 – Banning Point Project Description

Proposed Development Plan

The proposed Project includes construction of an approximately 619,959-square foot high-cube warehouse and development of six retail commercial buildings totaling approximately 34,000 square feet (See Exhibit 3, Site Plan). A Tentative Parcel Map, which would divide the site into three parcels, has been submitted as part of the Project application. Parcel 1, located on the southern part of the Project site, would accommodate six retail buildings. Parcel 2, located on the northern part of the site, would include the industrial warehouse building. Parcel 3, located on the eastern part of the site, is not proposed for development at this time, but an access road would be installed. The impacts associated with this access road are addressed in this Addendum. The following provides more details about each component of the Project site.

Industrial Warehouse. The industrial warehouse would be developed on the northern portion of the site that consists of 30.22 acres. The warehouse building would include approximately 619,959 square feet of high-cube warehouse space, with approximately 154,990 square feet dedicated to high-cube cold storage use (or 25% of floor area), a permitted use under the SLVNSP, and approximately 10,000 square feet dedicated to office uses; potential locations for office space are identified at the corners of the building. Approximately Fifty-seven (57) truck dock doors would be located along the northern side of the building and 57 dock doors would be located along the southern side. Parking spaces to accommodate trucks would be located in the vicinity of the truck dock doors. Car parking

would be generally located east and west of the building. The warehouse building would be single-story and approximately 47.5 feet tall. The northern portion of the site that would include the warehouse development would include approximately 112,998 square feet of landscaping, comprising approximately 16.23 percent of the site area. The warehouse development will provide approximately 391 standard parking stalls and 11 ADA accessible stalls (402 total stalls). The proposed industrial warehouse building would have a total of approximately 114 dock doors, 153 truck trailer parking stalls, 9 short term bicycle parking stalls, and 9 long-term bicycle parking stalls. Table 2 (Warehouse Specifications and Requirements) provides a summary of the warehouse specifications as well as relevant development provisions.

Although the industrial warehouse building is intended to be used as an industrial warehouse, an end user has not been identified at this time. However, the applicant requests approval of a 24 hours per day/7 days per week operational schedule to allow for flexibility for future tenants. This Addendum and accompanying technical appendices evaluate all Project impacts based upon the conservative, worst-case assumption that the Project will operate 24 hours per day/7 days per week.

Table 2
Warehouse Specifications and Requirements

Development Standards Industrial Warehouse Building	Development Standard	Proposed Warehouse[1]
Lot Size	10,000 SF	1,316,349 SF

Office – 1 space per 300 s.f.	34	40
Warehouse Parking – 22 spaces plus 1 space per 2,000 s.f. over 20k s.f.	317	362

[1] NOTE: all numerical values are approximate

The industrial warehouse building would be constructed with concrete tilt-up walls with painted and scored accents. The design provides glazing and color variation along the length of the industrial warehouse building. The exterior elevations uses a combination of materials and colors. The warehouse building will use paint by Sherwin-Williams with colors *Extra White* with *Gray Screen, Software, and Cyberspace* with trims of *Heartthrob* between the gray panels. There are aluminum windows and door frames with tempered glazing in a blue reflective color that will be located on the wall panels, the building corners, and the four potential office areas. There are *Metal Canopies with Pure White* and *clear*

Anodized Mullions to accent the building. The proposed 14-foot concrete tilt-up walls will screen the truck yards and the colors will match the paint and color variations of the warehouse building.

Retail Buildings. The retail commercial building would be developed on the southern portion of the site that consists of 6.83 acres. The proposed retail commercial buildings range in size from approximately 1,400 square feet to 8,400 square feet. Building 1 will include a coffee or similar restaurant with a drive-thru and the remaining five buildings will be for retail and/or restaurant uses. The southern portion of the Project site would be developed with the retail commercial buildings and will include approximately 104,602 square feet of landscaping, comprising approximately 34.9 percent of the site area. The retail commercial development will provide approximately 276 standard parking stalls and 13 ADA accessible stalls (289 total stalls). Table 3 (Retail Buildings Specifications and Requirements) provides a summary the retail buildings specifications as well as relevant development provisions.

The main colors of the retail buildings will be Sherwin-Williams *Extra White* with accent colors of *White Brick, Warm Brick, and Metal Siding*. The storefront aluminum windows and door framing will use a blue reflective window glazing and is also located on the wall panels and the building corners. There are *Pure White Metal Canopies* with *clear Anodized Mullions* to provide distinction accents to the buildings.

Table 3
Retail Buildings Specifications and Requirements

Development Standards Retail and Restaurant Buildings	Required	Proposed Retail Buildings
Lot Size	6,000 s.f.	297,492 s.f.
Lot Width	60 feet	1,300 feet
Lot Depth	100 feet	200 feet
Building Height	35 feet	20’ – 6”
Building Setbacks: Front Side Rear	 0 feet 20 feet 20 feet	 100 feet 80 feet 30 feet
Building Coverage	55%	11.4%
Landscape Coverage	15% of lot minus parking area	34.9%
Fence/Wall Height	6 feet	N/A
Parking Requirements		
Drive Thru – 1 space per 100 s.f.	16	16
Retail – 1 space per 250 s.f.	130	273

[1] NOTE: all numerical values are approximate

Access and Circulation

The Project has one driveway on Sun Lakes Village Drive and two driveways on Sun Lakes Boulevard. All semi-truck access will be limited to the driveway on Sun Lakes Village Drive, and the two Sun Lakes Boulevard driveways will serve the commercial/retail portion of the Project.

The westerly Sun Lakes Boulevard driveway will be the main retail driveway, which will be signalized, allow full access, and be aligned with existing Country Club Drive. The easterly driveway on Sun Lakes Boulevard will be restricted to right-in/right-out access, which will be controlled by a raised median.

Onsite circulation will include a minimum 40-foot drive aisle around the perimeter of the business/warehouse building. A 26-foot wide emergency/fire access road will be provided on the north side of the commercial/retail portion.

Grading and Drainage

The Project's grading plan indicates the site will require approximately 120,663 cubic yards of cut and 120,663 cubic yards of fill, including over-excavation and shrinkage, so earthwork will be balanced onsite. The Project site is covered by the Master Drainage Plan for the City of Banning ("Drainage Plan"), prepared by the Riverside County Flood Control and Water Conservation District ("District") in 1975. The Project site currently drains south toward to Sun Lakes Boulevard. The portion of the site which drains to Sun Lakes Boulevard sheet flows to the existing storm drain system which then conveys the flows to Smith Creek to the east. The conceptual site plan for the Project (Exhibit 3) indicates a detention basin will be located in the southeast corner of the site which will provide long-term onsite and downstream flood protection. The basin will be designed to store runoff from rainfall events up to and including the 100-year, 3-hour duration event. Post development peak urban runoff discharge rates would not exceed pre-development peak urban runoff discharge rates (RPG 2021a, b).

Utilities

Existing utilities include a 12-inch potable water main and a 12-inch sewer main within Sun Lakes Boulevard. The Project site naturally flows to storm drains at the southwest and southeast corners of the site; stormwater is then conveyed to Smith Creek to the east or Potrero Creek to the west (RPG 2021b). Existing electricity, natural gas, and telecommunications utilities beneath Sun Lakes Boulevard will serve the Project via lateral connections.

Project Phasing and Construction Scheduling

The Project is planned in two phases over a period of 18-22 months. Phase 1 will consist of the industrial building with construction projected to begin in early 2022 and completed by the end of 2022. Phase 2 will consist of the retail buildings to start construction in early 2023 and be completed by late 2023.

2.9 – Surrounding Land Uses

The proposed Project is bounded on the north by railroad tracks, Interstate-10 (I-10), and commercial uses further north. Residential uses are located to the east, and commercial and industrial uses to the west. Sun Lakes Boulevard borders the site to the south, with residential uses further south. Surrounding uses are summarized in Table 4 (Surrounding Land Uses and General Plan and Zoning Designations) below and as shown in Exhibit 2.

Table 4
Surrounding Land Uses and General Plan and Zoning Designations

Direction	General Plan Designation	Zoning Designation	Existing Land Use
Project Site	Business Park with Specific Plan Overlay and General Commercial with Specific Plan Overlay	Specific Plan: Business & Warehouse, Office & Professional, and Retail & Service	Vacant Land
North	Public Facilities/ Rights-of-Way	N/A	Interstate-10 UPRR & SPR Railroads
South	Public Facilities/ Rights-of-Way Medium Density Residential	Sun Lakes Specific Plan	Sun Lakes Boulevard Single-Family Residences
East	Medium Density Residential High Density Residential Affordable Housing Opportunity	Sun Lakes Specific Plan	Senior Apartments Single-Family Residences
West	General Commercial (with Specific Plan Overlay)	Sun Lakes Specific Plan	Commercial Shopping Center

2.10 – Environmental Setting

The Project site is currently undeveloped but is surrounded on all sides by industrial, commercial, and residential development, as well as roadway and highway features. The site is comprised of mostly dirt and non-native weeds/ruderal vegetation that has little value as natural habitat, although there are a number of trees along the southern and southeastern boundaries of the site. The site is relatively flat and slopes slightly from northwest to southeast with an elevation ranging between approximately 2,565 feet above mean sea level (AMSL) at the northwest corner of the site to 2,545 feet AMSL on the southeast side of the site. There are no on-site water features indicative of potential riparian habitat or wetlands. The site is located just east of the Banning Pass and has views of Mt. San Gorgonio and the San Bernardino Mountains to the north and the San Jacinto mountains to the south. Air quality can be poor at times due to high winds and transport of air pollutants out of the Los Angeles Basin and the San Bernardino Valley to the west. The site was part of the Stewart Ranch, but no improvements from the ranch remain. Residential uses of the Sun Lakes Village community are located to the south (across Sun Lakes Boulevard) with a business park to the west and various residential neighborhoods to the east. Railroad tracks and the I-10 Freeway are located just north of the site and scattered residential uses are located further to the north across the freeway from the Project site.

2.11 – Required Approvals

The Project would require the following approvals:

- Design Review
- Tentative Parcel Map

2.12 – Other Public Agency Whose Approval is Required

- None

This Page Intentionally Left Blank

3 Determination

3.1 – Environmental Categories Potentially Affected

The environmental categories checked below were identified in the SLVNSP PEIR as being a 'Potentially Significant Impact,' and the following sections of this Addendum will identify to what degree the proposed Project contributes to these previously identified significant impacts.

☐	Aesthetics	☐	Agriculture Resources	☑	Air Quality
☐	Biological Resources	☐	Cultural Resources	☐	Energy
☐	Geology /Soils	☑	Greenhouse Gas Emissions	☐	Hazards & Hazardous Materials
☐	Hydrology / Water Quality	☑	Land Use / Planning	☐	Mineral Resources
☐	Noise	☐	Population / Housing	☐	Public Services
☐	Recreation	☑	Transportation/Traffic	☐	Tribal Cultural Resources
☐	Utilities / Service Systems	☐	Wildfire	☐	Mandatory Findings of Significance

3.2 – Determination

☐	The Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
☐	Although the Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the Project have been made by or agreed to by the Project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
☐	The Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
☐	The Project MAY have a 'potentially significant impact' or 'potentially significant unless mitigated' impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
☑	The Project could have a significant effect on the environment, but all of its potentially significant effects (a) have been adequately analyzed in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION. As such, no further environmental documentation (e.g., a subsequent EIR) is required.

This Page Intentionally Left Blank

4 Evaluation of Environmental Impacts

The purpose of this Addendum is to evaluate the environmental categories in terms of any changed conditions from the approved SLVNSP to the proposed Project (e.g., project changes, changed circumstances, or new information of substantial importance) that may produce a changed environmental result (e.g., a new significant impact or substantial increase in the severity of a previously identified significant effect) pursuant to CEQA Guidelines §§ 15162, 15164, and 15168(c). As such, the Addendum's checklist analysis uses the standard environmental categories provided in Appendix G of the CEQA Guidelines but provides answer columns for evaluation consistent with the considerations listed in Guidelines § 15162(a).

Mitigation measures identified in the PEIR and applicable to the proposed Project are discussed under each environmental section and are listed in Section 5 – Applicable Mitigation Measures.

As discussed in the following sections, the proposed Project would not result in new significant environmental effects or a substantial increase in the severity of impacts previously identified by the PEIR.

EXPLANATION OF CHECKLIST EVALUATION CATEGORIES (COLUMNS)

Effect Not Examined in Program EIR?

Pursuant to CEQA Guidelines § 15168(c)(1), this column indicates whether the Project would have effects that were not previously examined by the PEIR, which new effects could necessitate subsequent CEQA review.

Conclusion in Program EIR?

This column summarizes the conclusion of the SLVNSP PEIR concerning the environmental issue listed under each topic.

Proposed Changes Involving New or More Severe Impacts?

Pursuant to CEQA Guidelines § 15162(a)(1), this column indicates whether any changes represented by the proposed Project will result in new significant environmental impacts not previously identified or mitigated by the PEIR or whether the changes will result in a substantial increase in the severity of a previously identified significant impact.

New Circumstances Involving New or More Severe Impacts?

Pursuant to CEQA Guidelines § 15162(a)(2), this column indicates whether there have been substantial changes with respect to the circumstances under which the Project will be undertaken that will require major revisions to the PEIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

New Information Showing New or More Severe Impacts?

Pursuant to CEQA Guidelines § 15162(a)(3), this column indicates whether new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the PEIR was certified, shows any of the following:

(A) The Project will have one or more significant effects not discussed in the previous EIR or Negative Declaration;

(B) Significant effects previously examined will be substantially more severe than shown in the previous PEIR;

(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the Project, but the Project proponents decline to adopt the mitigation measure or alternative; or

(D) Mitigation measures or alternatives that are considerably different from those analyzed in the previous PEIR would substantially reduce one or more significant effects on the environment, but the Project proponents decline to adopt the mitigation measure or alternative.

If the additional analysis completed as part of this environmental review were to find that the conclusions of the PEIR remain the same and no new significant impacts are identified, or identified impacts are not found to be substantially more severe, or additional mitigation is not necessary, then the question would be answered “No,” and no subsequent environmental review would be required.

DISCUSSION FOLLOWING CHECKLIST EVALUATION

A discussion of the elements of the checklist is provided under each environmental category in order to clarify the answers regarding the proposed Project in relation to SLVNSP PEIR. The discussion provides information about the particular environmental issue, how the Project relates to the issue, and the status of any mitigation that may be required or that has already been implemented. Applicable mitigation measures from the PEIR that apply to the proposed Project are listed under each environmental category.

Conclusion

Each section ends with a summary of the conclusion of the preceding analysis.

4.1 – Aesthetics

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Have a substantial adverse effect on a scenic vista?	No	Less than Significant Impact	No	No	No
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within view from a state scenic highway?	No	Less than Significant Impact	No	No	No
c) In non-urbanized area, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	No	Less than Significant Impact	No	No	No
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	No	Less than Significant Impact	No	No	No

Proposed Project in relation to PEIR

(a) **Scenic Vistas.** The SLVNSP and surrounding areas contain no designated scenic vistas although San Gorgonio Mountain and the San Bernardino Mountains are visible to the north and northeast. The surrounding lands contain largely suburban scale developed land uses and neighborhoods. The SLVNSP PEIR determined the SLVNSP would have less than significant impacts and no mitigation was required. Since the proposed Project would be developed under the SLVNSP, it would have similar less-than-significant impacts to scenic vistas.

(b) **Visual Resources within a State Scenic Highway.** There are no roadways in the SLVNSP area that are designated or eligible for listing as a State Scenic Highway or locally designated scenic route. In addition, the SLVNSP area contains no visual resources or historic resources. Therefore, any development that implements the SLVNSP, such as the Project, would have no impacts on scenic resources.

(c) **Degrade Existing Visual Character.** The surrounding area is largely built out with industrial, office, commercial, and residential uses. In addition, there is undeveloped land in the Project vicinity that is designated for future development with similar uses. The PEIR concluded that the SLVNSP does not significantly change the existing development pattern and appearance of the surrounding area, although it would allow the area to develop with higher intensity of uses. The PEIR concluded that the SLVNSP would actually improve the visual quality and character of the area by adding an upgraded use to valuable undeveloped land along a major interstate. The SLVNSP implements development standards, design guidelines, and landscaping and streetscape requirements to enhance the visual quality of the planning area and surrounding area. With regard to building height, the SLVNSP does not change existing regulations. The PEIR determined impacts to be less than significant, and no mitigation was required.

The proposed Project would be developed consistent with the design and development requirements of the SLVNSP. Thus, the size and scale of the proposed buildings are consistent with the surrounding area. The overall appearance of new buildings within the Project would be consistent with the scale and size allowed under the SLVNSP. Therefore, the proposed Project would have less than significant impacts, and no mitigation is required.

(d) **Light and Glare.** The SLVNSP area and surrounding areas currently have high ambient levels of night lighting for private property security and street lighting. The PEIR found that although the level of development would increase through implementation of the SLVNSP, light and glare affecting residences and other light-sensitive uses was expected to be similar to current levels since City regulations regarding lighting would continue to apply. Therefore, the Project's light and glare impacts would be less than significant and no mitigation is required.

Conclusion. As analyzed in the PEIR, the proposed Project would comply with the City's night-time light regulation and would thus have less than significant impacts. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.2 – Agriculture and Forest Resources

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	No	No Impact	No	No	No
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	No	No Impact	No	No	No
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104 (g))?	No	No Impact	No	No	No

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
d) Result in loss of forest land or conversion of forest land to non-forest use?	No	No Impact	No	No	No
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	No	No Impact	No	No	No

Proposed Project in relation to PEIR

(a) Designated Farmland. As described in the PEIR Initial Study, which is included in Appendix A of the PEIR**,** according to the Riverside County Parcel Report obtained from the *Map My County* website on January 17, 2020, the site is identified as Farmland of Local Importance and Urban-Built Up Land. As such, the site does not contain any lands designated as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance as mapped by the State Department of Conservation Farmland Mapping and Monitoring Program. The Project has no potential to convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to a non-agricultural use and no impact would occur in this regard.

(b) Williamson Act. According to the Riverside County Parcel Report for the Project, the site is not under a Williamson Act Contract. The Project site is designated as Business Park (with Specific Plan Overlay) and General Commercial (with Specific Plan Overlay). There is no agricultural zoning or uses in close proximity to the Project site. Therefore, the Project would not conflict with existing zoning for agricultural use.

(c) Forest Zoning. The current General Plan land use designations are Business Park with Specific Plan Overlay and General Commercial with Specific Plan Overlay. The Specific Plan zoning designations are Business & Warehouse, Office & Professional, and Retail & Service. The Project site does not contain any forest lands, timberland, or timberland zoned as Timberland Production, nor are any forest lands or timberlands located on or nearby the Project site. Because no lands on the Project site are zoned for forestland or timberland, the Project has no potential to impact such zoning. No impact would occur.

(d) Loss of Forestland. The Project site and surrounding properties do not contain forest lands, are not zoned for forest lands, nor are they identified as containing forest resources by the General Plan. Because forest land is not present on the Project site or in the immediate vicinity of the Project site, the

Project has no potential to result in the loss of forest land or the conversion of forest land to non-forest use. No impact would occur.

(e) Conversion of Land. The Farmland Mapping and Monitoring Program classifies the Project site as Farmland of Local Importance. Farmland of Local Importance is either currently producing or has the capability of production; but does not meet the criteria of Prime, Statewide or Unique Farmland.

The site can be considered to be Fallow Agricultural Land. The description of this habitat and vegetation communities is based on the definitions found in MSHCP Section 2.1.3 and A Manual of California Vegetation: Second Edition (Sawyer et al. 2009). Fallow Agricultural Land includes fallow fields that have been recently disked, plowed, or are no longer used to produce crops and are slowly being encroached by non-native herbaceous plant species. In some cases, native annual wildflowers become established in fallow agricultural lands. As such, the Project site is not currently providing active agricultural land of use to the local economy.

In addition, the Project site has been planned for industrial, business park, and commercial uses by the General Plan since 1983 and this type of development has been anticipated for the Project site. Therefore, no unanticipated impact would occur.

Conclusion. There are no agricultural or forest related resources in or near the Project area that would be impacted. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.3 – Air Quality

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations.

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Conflict with or obstruct implementation of the applicable air quality plan?	No	Significant Impact	No	No	No
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard?	No	Significant Impact	No	No	No
c) Expose sensitive receptors to substantial pollutant concentrations?	No	Less than Significant Impact	No	No	No
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	No	Less than Significant Impact	No	No	No

Proposed Project in relation to PEIR

(a) Conflict with AQMP. The SLVNSP area is within the South Coast Air Basin, which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD) and subject to the 2016 Air Quality Management Plan (AQMP). Pursuant to the methodology provided in Chapter 12 of the SCAQMD *CEQA Air Quality Handbook*, a proposed project's consistency with the 2016 AQMP is assessed under two criteria:

- **Criterion 1**. Would the proposed project be consistent with the growth assumptions in the AQMP? Growth forecasts and associated assumptions are included in the 2016 AQMP, which are designed to achieve attainment for all criteria air pollutants within the Basin while still accommodating growth in the region. Projects that are consistent with the AQMP growth assumptions would not interfere with attainment of air quality standards because their growth is included in the projections used to formulate the AQMP.

- **Criterion 2**. Would the proposed project increase the frequency or severity of a violation of air quality standards or cause a new violation? This refers to violations of the California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS). In developing its CEQA significance thresholds, SCAQMD considered the emission levels at which a project's individual emissions would be cumulatively considerable (page D-3, SCAQMD 2003).

The PEIR concluded that the SLVNSP was inconsistent with the 2016 AQMP under both of SCAQMD's criteria because the SLVNSP would result in exceedances of SCAQMD's daily pollutant emissions thresholds for volatile organic compounds (VOC) during construction and nitrogen dioxide (NOx) during construction and long-term operation, and this would occur even with implementation of the PEIR's mitigation measures AQ-1 through AQ-7.

The Project will include less square footage than what was approved in the SLVNSP. As discussed in Checklist Question 4.3(b) below and detailed in the Project's air quality report (Urban Crossroads, July 2021a, updated February 2022)(Appendix A), the Project will not exceed any of SCAQMD's daily pollutant emissions thresholds, either during construction or long-term operation. As such, the Project, unlike the SLVNSP project, will be consistent with the 2016 AQMP, and the Project impacts under this threshold will be less than significant.

(b) Cumulative Increase in Air Pollution. The South Coast Air Basin is in "non-attainment" status for several criteria pollutants. SCAQMD has developed regional and localized significance thresholds for regulated pollutants. Any project in the South Coast Air Basin with daily emissions that exceed any of the indicated regional or localized significance thresholds would be considered to contribute to a projected air quality violation.

A detailed air quality assessment was prepared for the PEIR, which evaluated the development of 877,298 square feet of industrial park use and 37,189 square feet of commercial retail use within the area bounded by the currently proposed Project. There were also medical office uses evaluated in the EIR, but this portion of the SLVNSP is east and outside of the proposed Project boundary.

As noted, a detailed air quality and greenhouse gas report (Urban Crossroads, July 2021a, updated February 2022)(Appendix A) has been prepared for the proposed Project, which analyzes 619,959 square feet of warehousing space and 34,000 square feet of retail and fast-food commercial uses. This air quality report assumed up to a quarter of the warehouse space would be used for cold storage and the rest for high-cube logistics warehousing. This report assumed the commercial space along Sun Lakes Boulevard would be similar to that examined in the PEIR with the addition of a drive-through coffee establishment.

Construction-Related Impacts

The PEIR assumed that construction of the SLVNSP would occur over a 15-month period once construction commenced and concluded that construction-related emissions impacts would be significant for VOC emissions even with mitigation. As a result, the PEIR concluded that the SLVNSP would result in significant unavoidable project construction-related impacts and cumulatively considerable impacts related to construction.

The Project is planned in two phases over a period of 18-22 months. Phase 1 will consist of the industrial building with construction projected to begin in early 2022 and completed by the end of 2022. Phase 2 will consist of the retail buildings to start construction in early 2023 and be completed by late 2023. Table 5 (Air Quality Impacts from Project Construction) shows the estimated "worst case" maximum daily emissions from Project construction compared to the SCAQMD thresholds. Table 5 demonstrates

that construction of the proposed Project would not exceed the established SCAQMD thresholds, so unlike the SLVNSP project, this impact is less than significant. Although no Project-specific mitigation is required, during construction, the Project will still implement PEIR Mitigation Measures AQ-1 regarding painting and AQ-2 regarding grading, as well as SCAQMD construction-related regulations, such as for dust control.

Table 5
Air Quality Impacts from Project Construction

Pollutant Characteristics	**Emissions (pounds/day)[1]**					
	VOC	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
Maximum Daily Emissions	19.30	61.52	64.23	0.17	14.13	6.85
SCAQMD Thresholds	75.0	100.0	550.0	150.0	150.0	55.0
Exceeds Thresholds?	No	No	No	No	No	No

Source: Table 3, UR 2021a
[1] Emission results rounded off from UR 2021 report

Long-Term Operation

The PEIR concluded that the long-term operational emissions impacts of the SLVNSP would be significant only for NOx as a result of vehicle traffic generation, even with the PEIR's mitigation measures AQ-3 through AQ-6. As a result, the PEIR concluded that the SLVNSP would result in significant unavoidable impacts and cumulatively considerable impacts related to long-term operation.

As detailed in the Project's air quality report, the Project's long-term operational emissions are anticipated to be less than significant for all SCAQMD thresholds. Table 6 (Air Quality Impacts from Project Operation) shows the estimated "worst case" maximum daily emissions from the Project's long-term operations compared to the SCAQMD thresholds. Table 6 also shows the air pollutant emissions estimated from the PEIR for the portion of the SLVNSP within the Project area.

Table 6
Air Quality Impacts from Project Operation

Total Maximum Daily Emissions	**Emissions (pounds/day)[1]**					
	VOC	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
PEIR Estimate (for Project area)	29.1	36.8	107.0	0.4	33.6	9.4
Proposed Project	28.6	49.1	161.9	0.5	48.9	13.7
SCAQMD Thresholds	55.0	55.0	550.0	150.0	150.0	55.0
Exceeds Thresholds?	No	No	No	No	No	No

Source: Tables 1 and 5, UR 2021a
[1] Emission results rounded off from UR 2021 report

Although no Project-specific mitigation is required, during operation, the Project will still implement EIR Mitigation Measures AQ-3 regarding electrical hookups at loading docks, AQ-4 regarding idling limits, AQ-5 requiring electric or natural gas "yard" equipment, and AQ-6 regarding electric vehicle charging stations.

It should also be noted that the Project will eventually have to comply with SCAQMD Rule 2305 regarding truck-related warehouse emissions. In May 2021, the SCAQMD adopted the Warehouse Indirect Source Rule which seeks to reduce nitrogen oxide and particulate matter emissions produced by light- and heavy-duty trucks and tractor-trailers (mainly diesel) traveling to and from warehouses by

regulating the owners and operators of warehouse facilities considered to be the "indirect source" of those emissions. Rule 2305 implements SCAQMD's Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program and applies to owners and operators of existing and new warehouses within the South Coast Air Basin. Warehouse operators must earn a specific number of points (called WAIRE Points) through emissions-reducing activities or payment of mitigation fees to offset the number of truck trips to and from warehouses under their control. Warehouse operators incur their WAIRE Points obligations on a weighted basis, with, until 2026, larger obligations for larger warehouse facilities, and for warehouses hosting larger vehicles (e.g., tractors or tractor-trailers). Rule 2305 will be phased in over three years, applying to larger warehouses first. The Initial Compliance Period begins on January 1, 2022 for warehouses 250,000 square feet or more, on January 1, 2023 for warehouses 150,000 feet or more, and on January 1, 2024 for warehouses 100,000 square feet or more. Although it is likely that compliance with Rule 2305 will decrease the Project's emissions, in order to prepare a more conservative analysis, no reductions in emissions are assumed. While the PEIR concludes that the SLVNSP's construction and operational impacts are significant and unavoidable, the Project's impacts are not significant and thus less than the impacts specified in the PEIR.

Mitigation Measures

The PEIR recommended the following mitigation measures which will be implemented during grading, construction, and operation of the warehouse portion of the Project:

Grading/Construction

AQ-1 **Use Low VOC Paint.** To reduce VOC emissions associated with architectural coating, the project designer and contractor shall reduce the use of paints and solvents by utilizing pre-coated materials (e.g., bathroom stall dividers, metal awnings), materials that do not require painting, and require coatings and solvents with a VOC content lower than required under Rule 1113 to be utilized. The construction contractor shall be required to utilize "Super Compliant" VOC paints, which are defined in SCAQMD's Rule 1113. Construction specifications shall be included in building specifications that assure these requirements are implemented. The specifications for each implementing the development project shall be reviewed by the City of Banning's Building and Safety Division for compliance with this mitigation measure prior to issuance of a building permit.

AQ-2 **Grading Limitations.** During the City's review process for applications under the Specific Plan, the applicant shall conduct or shall have conducted modeling of the regional and the localized emissions (NOx, CO, PM10, and PM2.5) associated with the maximum daily grading activities estimated for the proposed individual developments one acre or larger. If the modeling shows that emissions would exceed the SCAQMD's significance thresholds for those emissions, the maximum daily grading activities of the proposed development shall be limited to the extent that could occur without resulting in emissions in excess of SCAQMD's significance thresholds for those emissions. For implementing projects within the Specific Plan, the applicant shall be responsible for submitting a focused project level air quality assessment that includes the modeling of localized on-site emissions associated with daily grading activities anticipated for the proposed development.

Operation

AQ-3 **Electrical Hookups for Loading Docks.** Trucks accessing the Project site may have auxiliary power units (APU) and/or transport refrigeration units (TRUs). Therefore, electrical hookups shall be installed at all loading docks, and to reduce/replace APU use while trucks

are parked along the docks, to allow trucks with APU and/or TRUs with electric standby capabilities to plug in when TRUs are in use to reduce diesel fuel consumption and resulting NOx emissions. The City shall verify electrical hookups have been installed prior to occupancy.

AQ-4 **Idling Limits.** All facilities shall post signs informing users of requirements limiting idling to five minutes or less pursuant to Title 13 of the California Code of Regulations, Section 2485 in order to reduce diesel fuel consumption and resulting NOx emissions. No overnight/long-term parking will be allowed. The City shall verify signage has been installed prior to occupancy.

AQ-5 **Electric or Natural Gas Service Equipment.** Service equipment (i.e., yard hostlers and forklifts) used within the site shall be electric or compressed natural gas powered to reduce diesel fuel consumption and resulting NOx emissions.

AQ-6 **Electric Vehicle Charging Stations.** Prior to approval of implementing commercial plot plan(s) within the Project the City of Banning Planning Division shall ensure that the plot plan(s) include a minimum of three (3) electric-vehicle charging stations. The electric vehicle charging stations also shall be depicted on building plans for implementing development within Project site. Prior to issuance of occupancy permits for the proposed commercial land uses within the Project site, the City of Banning Building and Safety Department shall ensure that a minimum of three electric vehicle charging stations have been installed on-site.

In addition to these six measures, the PEIR recommended Mitigation Measure ("MM") AQ-7 that required the preparation of a "Health Risk Assessment (HRA) during the City's review process for any future development applications under the Specific Plan that proposes a warehouse or distribution project." AQ-7 required that the (warehouse) applicant "shall submit a Health Risk Assessment that is prepared pursuant to the *Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis* by the SCAQMD. If the modeling showed that emissions would exceed the SCAQMD's significance thresholds for those emissions, …performance-based measures shall be required in order reduce emissions to less than significant levels". Measure AQ-7 was to be completed as part of the City's review process. To comply with that measure, the air quality report for the Project includes an HRA, and the results are presented in Sub-Section (c) below. With implementation of Mitigation Measures AQ-1 through AQ-6 from the PEIR, the Project would not result in a cumulatively considerable net increase of any criteria pollutant, and no additional Project-specific mitigation is required. However, the PEIR concluded that air quality impacts would be significant, and thus would be cumulatively considerable, but the preceding analysis demonstrates that the air quality impacts of this Project will be less than significant with mitigation.

(c) Sensitive Receptors. The PEIR evaluated air quality impacts of the SLVNSP and determined that future warehousing could have significant impacts on nearby residential uses and their residents (referred to as "sensitive receptors"). EIR Mitigation Measure AQ-7 required preparation of a Health Risk Assessment (HRA) for any future warehouse uses to determine any specific impacts of an actual development proposal and to determine if mitigation would be required. Potential impacts may result from both construction and/or operation of warehousing. The first step in the analysis is to determine if the Project exceeds any of the Local Significance Thresholds (LSTs) established by the SCAQMD.

LSTs - Construction

Pursuant to MM AQ-2 of the PEIR, the following analysis is presented to determine if the proposed Project would be required to implement any limitations on grading activity to prevent localized air quality

impacts to nearby sensitive receptors. The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology*. The SCAQMD has established that air quality impacts are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs) which represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses. Table 7 (Local Significance Thresholds – Impacts from Project Construction) summarizes the Project's localized construction emissions compared to the applicable thresholds. Table 7 indicates emissions from Project construction will not exceed the SCAQMD's LSTs and are therefore less than significant. No mitigation beyond that outlined in the PEIR would be required (MM AQ-1 and AQ-2) for construction impacts.

Table 7
Local Significance Thresholds – Impacts from Project Construction

Total Maximum Daily Emissions	Emissions (pounds/day)[1]			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Proposed Project	60.7	31.2	13.8	6.8
SCAQMD Thresholds	236.0	2,817.0	38.0	12.0
Exceeds Thresholds?	No	No	No	No

Source: Table 4, UR 2021a
[1] Emissions results rounded off from UR 2021 report

LSTs - Operation

Table 8 (Local Significance Thresholds – Impacts from Project Operation) summarizes the operational air quality localized emissions resulting from the Project. According to Table 8, the proposed Project's operational-related activity would not exceed the applicable regional significance thresholds, and a less than significant impact would occur, and no mitigation beyond that outlined in the PEIR would be required (MM AQ-3 through AQ-6) for operational impacts.

Table 8
Local Significance Thresholds – Impacts from Project Operation

Total Maximum Daily Emissions	Emissions (pounds/day)[1]			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Proposed Project	6.1	6.9	1.9	0.6
SCAQMD Thresholds	236.0	2,817.0	10.0	3.0
Exceeds Thresholds?	No	No	No	No

Source: Table 6, UR 2021a
[1] Emission results rounded off from UR 2021 report

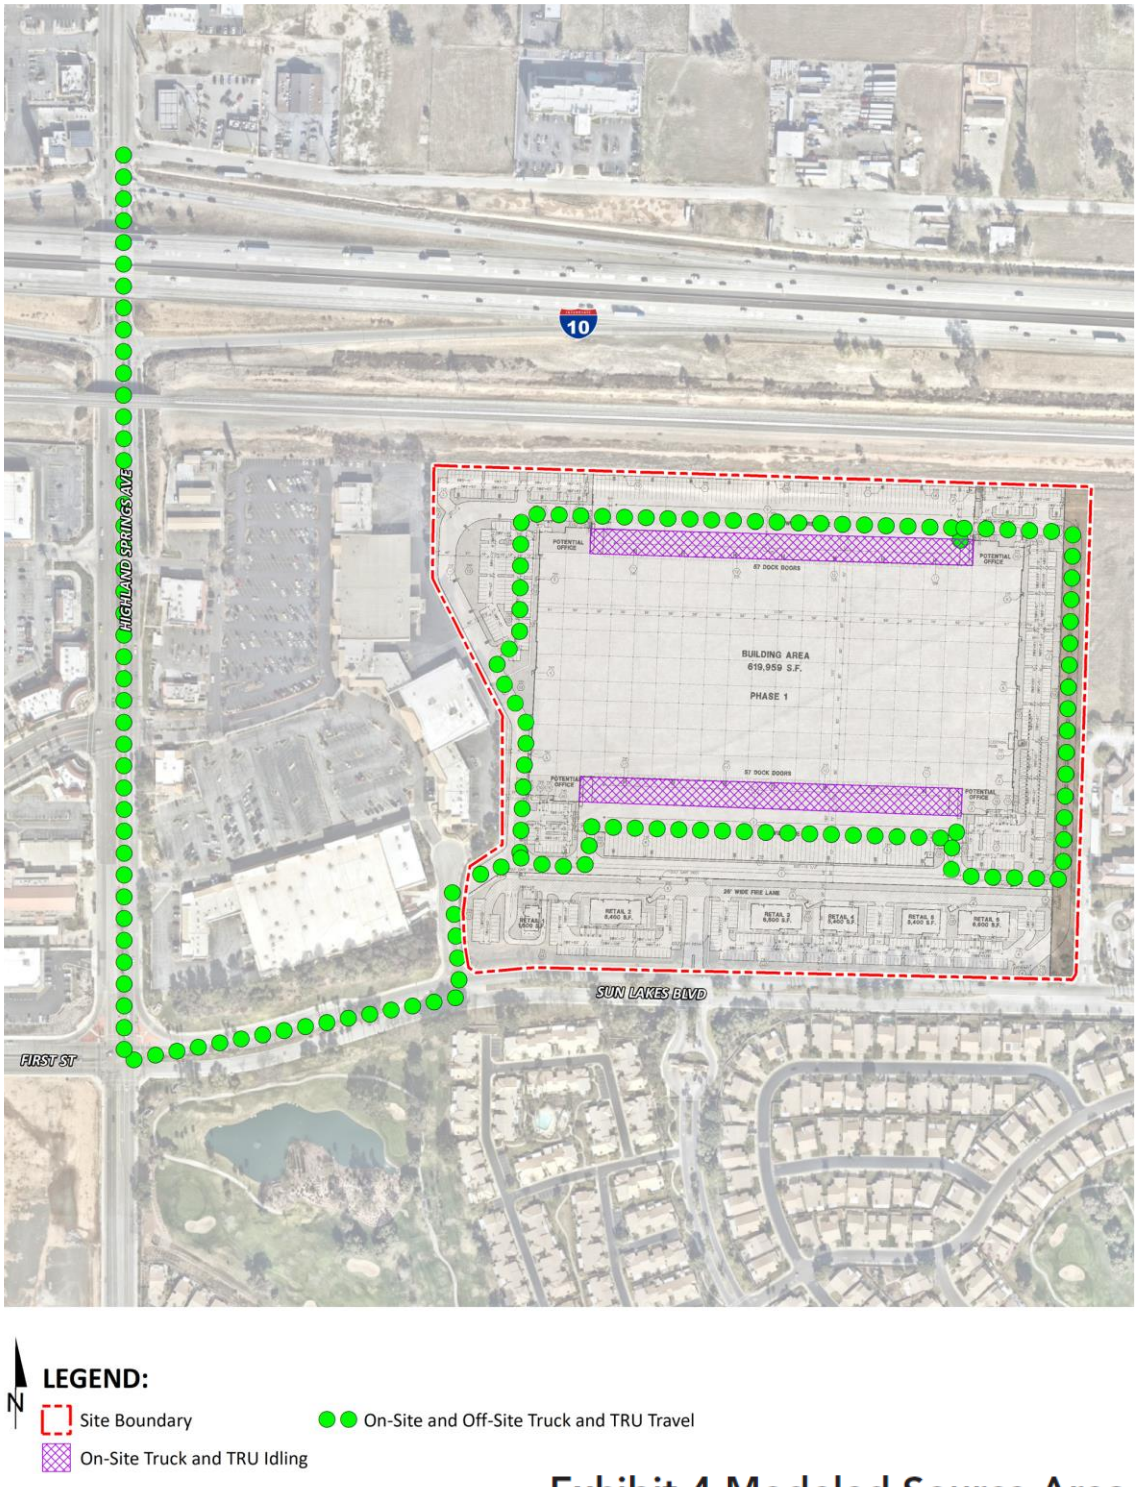
Health Risk Assessment

Pursuant to PEIR MM AQ-7, a diesel health risk assessment (HRA) has been prepared for the proposed warehouse project. This analysis evaluates the potential mobile source health risk impacts to receptors (i.e., local residents or workers) associated with the development of the Project. Health risk exposures were modeled in accordance with guidelines issued by the SCAQMD and the State Office of Environmental Health Hazards Assessment (OEHHA). The boundaries of the modeled source area are shown in Exhibit 4 (Modeled Source Area Map). To assess the potential for long-term operational impacts, the HRA identified the following five (5) receptor locations, as shown on Exhibit 5 (Sensitive

Receptor Locations), as representative of the closest sensitive receptors to the Project site for more detailed analysis. All distances were measured from the Project site boundary to the outdoor living areas (e.g., private backyards) or at the building façade, whichever was closer to the Project site.

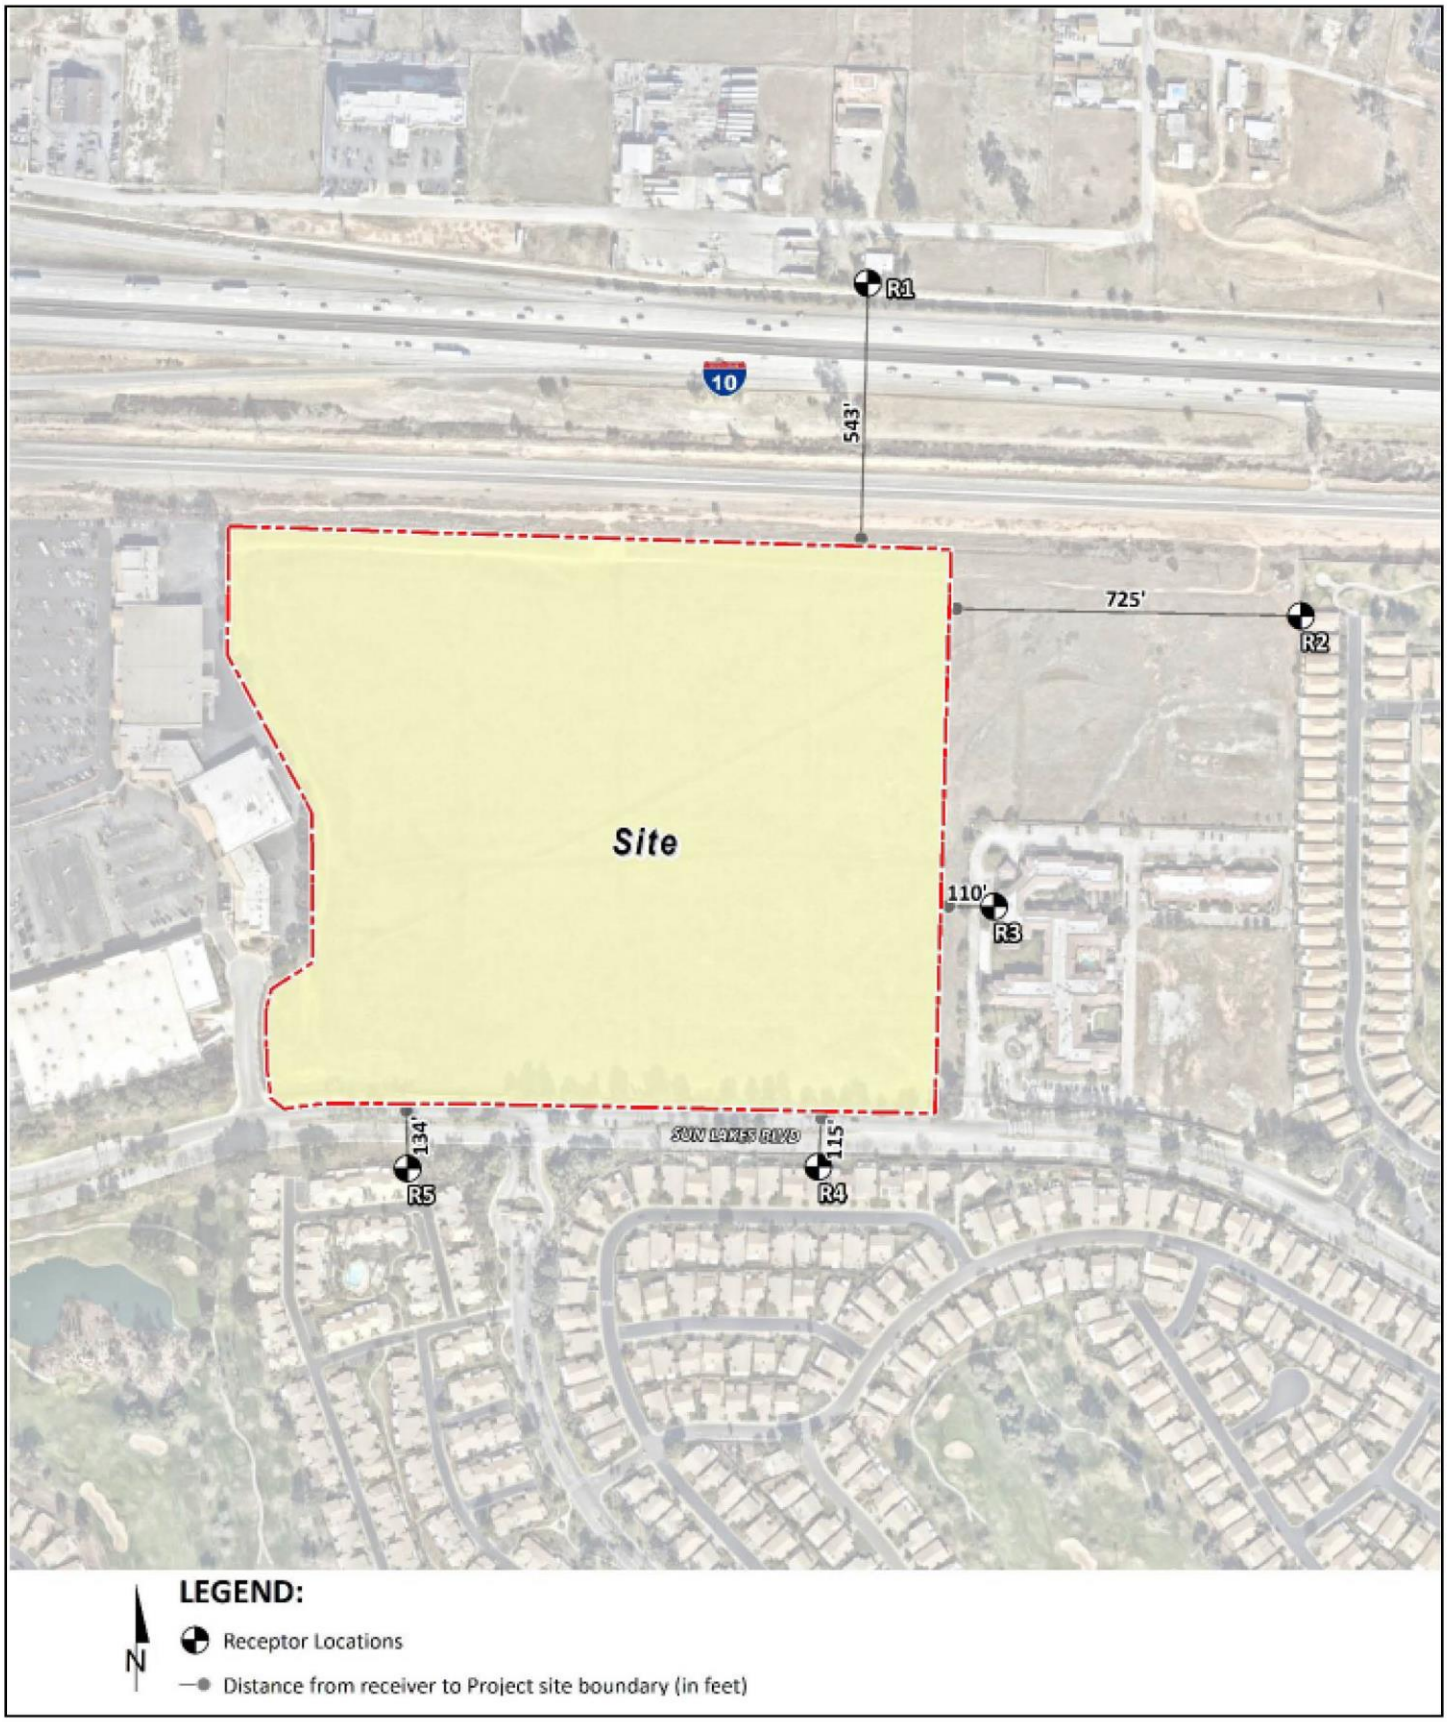
R1 Location R1 represents the existing residence at 5778 Joshua Palmer Way, approximately 543 feet north of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R1 is placed at the building façade.

R2 Location R2 represents the residence at 301 Northwood Avenue, approximately 725 feet east of the Project site. Receptor R2 is placed at the private outdoor living area (backyard).



R3 Location R3 represents the existing Assisted Living and Memory Care at 5801 Sun Lakes Boulevard, approximately 110 feet east of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R3 is placed at the building façade.

R4 Location R4 represents the existing residence at 5831 Oakmont Drive, approximately 115 feet south of the Project site. Receptor R4 is placed at the private outdoor living area (backyard).



R5 Location R5 represents the existing residence at 6111 Wingfoot Avenue, approximately 134 feet south of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R5 is placed at the building façade.

The HRA evaluated potential health risk impacts that could result at the five closest sensitive receptor locations from exposure to Toxic Air Contaminants (TACs), including diesel particulate matter (DPM) generated by heavy-duty diesel trucks from on-site idling, on-site travel, and off-site travel. At the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk from Project-related emissions was estimated at 1.32 in one million, which is less than the SCAQMD significance threshold of 10 in one million. At these same locations, non-cancer risks were estimated to be less than 0.01, which would not exceed the applicable SCAQMD significance threshold of 1.0. Therefore, the Project will not cause a significant human health or cancer risk at any potentially affected receptors, and no specific HRA-related mitigation is required.

Banning, California

(d) Other Emissions. According to the SCAQMD *CEQA Air Quality Handbook*, land uses associated with odor complaints include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding or any manufacturing uses that could create objectionable odors. The PEIR concluded that the SLVNSP would have a less than significant impact with respect to creating objectionable odors affecting a substantial number of people because it would not include any of these types of uses. Because the Project similarly does not include such uses, it would also have a less than significant impact, and no mitigation is required.

Conclusion. The PEIR indicated that development of the SLVNSP would result in significant air quality impacts in terms of AQMP consistency and cumulative air pollutant emissions exceeding established standards. However, the Project proposes approximately 30 percent less development on the site compared to that evaluated in the PEIR. The Project's Air Quality Assessment indicates the Project would not conflict with the AQMP and would not result in air pollutant emissions that would exceed or cause violations of established standards. A health risk assessment for the Project was also prepared per the PEIR's MM AQ-7. The Project will implement MMs AQ-1 through AQ-6 as recommended in the PEIR. In these ways, the Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.4 – Biological Resources

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	No	Less than Significant with Mitigation	No	No	No
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?	No	No Impact	No	No	No
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	No	No Impact	No	No	No
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	No	No Impact	No	No	No

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	No	Less than Significant with Mitigation	No	No	No
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	No	Less than Significant with Mitigation	No	No	No

Proposed Project in relation to PEIR

(a) Listed or Sensitive Species. As described in the PEIR, most of the site is non-native annual grassland, with a small patch of southern willow scrub at the southwest corner and a narrow strip of California buckwheat scrub along the northeastern site boundary. Ornamental trees line the southern and western boundaries and part of the eastern boundary. These trees are either on adjacent properties or along Sun Lakes Boulevard.

A total of 36 plant species were identified during the survey prepared as part of the P EIR. Of the 36 species, 19 (53 percent) are non-native. Additional annual plant species may occur but were not detected due to timing of the survey. No federal or state-listed plants or special status plants were observed. The site is not within U. S. Fish and Wildlife Service (USFWS) designated critical habitat for any listed plant species. Listed and special status plants known from the region are either absent, not expected to occur, or have low potential for occurrence onsite.

No special status plant species were identified during the PEIR's survey, but the survey was not conducted during the flowering season for most species. The site has long-term and ongoing anthropogenic disturbance and undisturbed natural habitat capable of supporting special status plants is not present. Most special status plants known from the region are either absent or not expected to occur onsite; a few have low potential for occurrence. No special status plants have moderate or high potential to occur onsite.

A total of 15 wildlife species (mostly birds) were detected during the PEIR's survey. No federal or state-listed endangered or threatened species were observed. The site is not within USFWS designated critical habitat for any listed wildlife species. No special status wildlife species were observed. Most listed or special status species are not expected to occur or have low potential for occurrence except as described below.

No burrowing owls, occupied burrows, or owl sign was observed during the PEIR's survey. However, because burrowing owls can occupy the site in the future, Mitigation Measure BIO-1 is required.

Mitigation Measures

BIO-1 **Pre-Construction Burrowing Owl Survey.** Within 30 calendar days prior to grading, a qualified biologist shall implement focused preconstruction surveys. Surveys shall be conducted by a CDVW-approved biologist prior to the initiation of ground disturbance (including but not limited to mobilization and staging, clearing, grubbing, vegetation removal, fence installation, demolition, and grading). In conformance with Burrowing Owl Survey instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area (2006) and California Burrowing Owl Consortium's 1993 protocols (which are recommended by the CDFW), the surveys will consist of a minimum of three site visits. A brief biological technical report will be prepared and submitted to the City that describes the results of the preconstruction survey. The report shall be reviewed by the City prior to the issuance of a grading permit. If the preconstruction survey does not identify burrowing owls in the impact area, a grading permit may be issued without restriction. If it is determined that burrowing owls have colonized the project site prior to the initiation of construction, the project proponent shall immediately inform RCA, USFWS, and CDFW and will be required to prepare a Burrowing Owl Protection and Relocation Plan for approval by RCA, USFWS, and CDFW prior to initiation of ground disturbance. If burrowing owls are determined to be present in areas proposed for ground disturbance, the following avoidance measures will be implemented:

a. Occupied burrows shall not be disturbed during the nesting season (March 1 through August 31) unless a qualified biologist approved by CDFW verifies through noninvasive methods that either the birds have not begun egg laying and incubation or that juveniles from the occupied burrows are foraging independently and are capable of independent survival. Owls on-site after March 1 will be assumed to be nesting unless evidence indicates otherwise. This nest protection buffer will be maintained until August 31 or based on monitoring evidence, until the young owls are foraging independently or the nest is no longer active.

Unless otherwise authorized by CDFW and/or the RCA, a 250-foot buffer, within which no activity will be permissible, will be maintained between project activities and nesting burrowing owls during the nesting season. This protected area will remain in effect until August 31 or based upon monitoring evidence, until the young owls are foraging independently. For burrowing owls present during the nonbreeding season (generally September 1 to January 31), a 150-foot buffer zone will be maintained around the occupied burrow(s).

b. If there is any possibility that owls will be injured or killed as a result of construction activities, the birds may be passively relocated during the nonbreeding season in coordination with the City, RCA, and CDFW. Relocation of owls will be performed by a qualified biologist using one-way doors, which should be installed in all burrows within the impact area and left in place for at least two nights. Immediately prior to the initiation of grading, these one-way doors will be removed and the burrows backfilled. To avoid the potential for owls evicted from a burrow to occupy other burrows in the impact area,

one- way doors will be placed in all potentially suitable burrows in the impact area when eviction occurs.

c. Preparation of a Burrowing Owl Protection and Relocation Plan may be required if active and/or passive relocation is necessary. The relocation plan will outline the basic process and provides options for avoidance and mitigation. The relocation plan will be approved by the RCA, USFWS, and CDFW prior to implementation.

There is suitable habitat for nesting birds on and adjacent to the site. Nesting birds may utilize trees and other vegetation, structures, idle vehicles/equipment, and open ground. Although no raptor nesting was observed during the period of time the PEIR's surveys were conducted, there is suitable habitat for nesting birds on and adjacent to the site that can be occupied in the future; therefore, Mitigation Measure BIO-2 is required.

BIO-2 **Nesting Bird Survey.** Prior to the issuance of a grading permit, the City of Banning Planning Department shall ensure vegetation clearing and ground disturbance shall be prohibited during the migratory bird nesting season (February 1 through August 31), unless a migratory bird nesting survey is completed in accordance with the following requirements:

a) A migratory nesting bird survey of the Project's impact footprint shall be conducted by a qualified biologist within three business (3) days prior to initiating vegetation clearing or ground disturbance.

b) A copy of the migratory nesting bird survey results report shall be provided to the City of Banning Planning Department. If the survey identifies the presence of active nests, then the qualified biologist shall provide the Planning Department with a copy of maps showing the location of all active nests and an appropriate buffer zone around each nest sufficient to protect the nest from direct and indirect impact. The size and location of all buffer zones as determined by a qualified biologist, shall be subject to review and approval by the Planning Department. The nests and buffer zones shall be field checked weekly by a qualified biological monitor. The approved buffer zone shall be marked in the field with construction fencing, within which no vegetation clearing or ground disturbance shall commence until the qualified biologist and Planning Department verify that the nests are no longer occupied and the juvenile birds can survive independently from the nests.

No federal or state-listed endangered or threatened wildlife species or special status wildlife species were observed during the PEIR's survey. Due to long-term and ongoing anthropogenic disturbance, undisturbed natural habitat capable of supporting most special status wildlife is generally lacking onsite. Most special status wildlife known from the region are either absent, not expected to occur, or have low potential for occurrence onsite, except as described below.

With implementation of Mitigation Measure BIO-1 and BIO-2, this potential impact would be considered less than significant.

(b) Riparian or Sensitive Habitat. As described in the PEIR, there is no vernal pool habitat onsite. Soil types mapped (and observed) onsite are not consistent with an alkali playa or vernal pool complex. Pools or depressions characteristic of vernal pool habitat were not observed onsite. No Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) species listed for protection associated with riparian/riverine areas or vernal pools were observed. No evidence of ponding was observed onsite. Tire ruts are present on an access road along the northern site

boundary, but the ruts were dry at the time of the survey and soils onsite are sandy to coarse sandy loam (i.e., well drained). Therefore, there will be no impacts to riparian or sensitive habitat.

(c) Wetlands. As described in the PEIR, there are no USGS mapped blue-line streams onsite. A shallow trench is present along the site's southern boundary (along Sun Lakes Boulevard) and trends from west to east. A double culvert is present at the southeast corner of the site. A small area of willow thicket is present in the southwest corner of the site in association with a trench. Another shallow trench is present within the central portion of the site and trends from west to east. No water or evidence of flow was observed in these trenches during the survey. The trenches appear to be remnants of past disturbance involving water quality or flood control measures and do not have connectivity with any natural waterway. There would be no impact to wetlands.

(d) Wildlife Movement. As described in the PEIR, wildlife movement activities usually fall into one of three movement categories: dispersal (e.g., juvenile animals dispersing from natal areas or individuals extending their range), seasonal migration, and movements related to home range activities (e.g., foraging for food or water, defending territories, or searching for mates, breeding areas, or cover). The site is surrounded by major roadways and residential developments and does not function as part of a wildlife corridor. There would be no impact to wildlife migratory corridors.

(e) Local Policies. According to the PEIR, the Project site contains a number of trees along the southern and southeastern boundaries of the site. The PEIR stated that tree removals are strongly discouraged and require replacement under City of Banning Municipal Code Section 17.32.060. It was also indicated it was unknown if these trees would be removed as part of future development. The EIR required that Mitigation Measure BIO-3 in the event the trees were removed.

The Project landscape plan does not show preservation of any existing trees onsite, nor does it indicate if any existing trees will be reused onsite. It does show that dozens of new trees (ten different species) will be planted in and around the proposed commercial buildings and the warehouse property. Assuming the development plan will remove the onsite trees, the Project will be required to implement EIR Mitigation Measure BIO-3.

Mitigation Measures

BIO-3 **Native Tree Removal.** Native trees to be impacted by development of projects pursuant to the Specific Plan shall be assessed by a certified arborist as to the viability and value of the trees to determine if mitigation and replacement are required. Removal of healthy, shade-providing, and aesthetically valuable trees shall be strongly discouraged and shall conform with the policies and programs of the City of Banning General Plan. A tree removal and replacement plan shall be required for the removal and replacement of all trees more than 50 years of age unless their removal is required to protect the public health and safety. Each identified tree removed shall be replaced with at least one 36-inch box specimen tree, in addition to any other required landscaping.

(f) Habitat Conservation Plans. As described in the PEIR, the Project site is located within the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). The MSHCP, a regional Habitat Conservation Plan was adopted on June 17, 2003. The intent of the MSHCP is to preserve native vegetation and meet the habitat needs of multiple species, rather than focusing preservation efforts on one species at a time. The MSHCP provides coverage (including take authorization for listed species) for special-status plant and animal species, as well as mitigation for impacts to sensitive species. Based on the Habitat Assessment (Appendix D of the PEIR):

1) The site is not mapped within any MSHCP Criteria Cell or subunit.

2) The site is not mapped within an area where additional surveys are required for any Amphibian, Mammal, or other Criteria Area Species.

3) The project will not impact any Riparian/Riverine or Vernal Pool areas.

4) The site is not within or adjacent to any MSHCP Conservation Areas and therefore does not require mitigation measures pursuant Section 6.1.4 (pertaining to Urban/ Wildlands Interface) of the MSHCP, which presents guidelines to minimize indirect effects of Projects in proximity to the MSCHP Conservation Areas.

5) The site is mapped within a Burrowing Owl (BUOW) required habitat suitability assessment survey area. Therefore, to be thorough, a habitat suitability assessment for BUOW was conducted during site visit. The result of the assessment was that no BUOW habitat or BUOW sign was detected on site, and this species is currently considered absent from the Project area. However, because BUOW have been known to occupy disturbed sites, Mitigation Measure BIO-1 is required.

6) The site is mapped within a Narrow Endemic Plant Species required habitat suitability assessment survey area. Therefore, to be thorough, a habitat suitability assessment for the three listed Narrow Endemic Plant Species was conducted during site visit. Based on habitat requirements for specific species, availability and quality of habitats needed by the three Narrow Endemic Plant Species, it was determined that the Project site does not provide suitable habitat for Narrow Endemic Plant species San Diego ambrosia, Brand's phacelia, and San Miguel Savory.

With implementation of Mitigation Measures BIO-1 and BIO-2, potential impacts related to the MSHCP would be reduced to less than significant levels.

Conclusion. The Project site does not contain wetlands, riparian habitat, sensitive plants or animals, or other important biological resources. With implementation of Mitigation Measures BIO-1, BIO-2, and BIO-3, potential impacts to biological resources will be reduced to less than significant levels. In these ways, the Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.5 – Cultural Resources

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	No	No	No	No	No
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	No	No	No	No	No
c) Disturb any human remains, including those interred outside of dedicated cemeteries?	No	Less than Significant Impact	No	No	No

Proposed Project in relation to PEIR

(a) Historical Resources. The Project area lies within Stewart Ranch which was utilized for grazing, agricultural, and water control/conveyance purposes. This suggests that any buried historic artifacts and/or deposits that may be present would most likely reflect those activities (e.g., horse shoes, tacks, barbed wire, sparse occurrences of tin cans and glass bottles, other water conveyance/control features, etc.) and would most likely not be considered historically significant in and of themselves.

As described in the PEIR, the Project area was once part of Stewart Ranch, owned and operated by Reznor P. Stewart between 1883 and 1933 and by his daughters Laura May and Clara between 1933 and 1967. L&L, which prepared cultural resources reports for the PEIR, identified a linear resource (RPGX-1H) in the Project area consisting of an earthen bermed ditch constructed by a bulldozer sometime before 1953 and associated with water control/conveyance efforts instituted on the ranch along Potrero Creek and Smith Creek. RPGX-1H was evaluated and recommended not eligible for the CRHR and does not qualify as a historic resource under CEQA. Therefore, there would be no impact to a significant historic resource.

(b) Archaeological Resources. As described in the PEIR, the Project area appears to have low sensitivity for prehistoric archaeological resources, and it is unlikely that intact, subsurface prehistoric archaeological deposits would be uncovered during Project construction. Grading of the site would therefore have a low to moderate sensitivity in terms of revealing archaeological resources. Thus, there are no impacts and no mitigation measures are required based on the results of the cultural resources assessment. For additional information on tribal cultural resources, which can be related to archaeological resources, see impacts and mitigation discussed in Section 4.17, Tribal Cultural Resources.

(c) Human Remains. As described in the PEIR, the Project site does not contain a cemetery, and no known formal cemeteries are located within the immediate site vicinity. If human remains are discovered during Project grading or other ground disturbing activities, the Project would be required to comply with the applicable provisions of California Health and Safety Code §7050.5 as well as Public Resources Code §5097 et. seq. If the Coroner determines the remains to be Native American, the California Native American Heritage Commission (NAHC) must be contacted and the NAHC must then immediately notify the "most likely descendant(s)" of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours and engage in consultations concerning the treatment of the remains as provided in Public Resources Code Section 5097.98. Compliance with established health and safety regulations will reduce potential impacts to less than significant levels and no mitigation is required.

Conclusion. There are no historic resources on the Project site, and the Project area appears to have low sensitivity for prehistoric archaeological resources. Additionally, compliance with established health and safety regulations will reduce potential human remains impacts to less than significant levels. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

NOTE. As a result of Native American Consultation (NAC) under SB 18, the PEIR did include mitigation for unanticipated discovery of cultural resources as outlined in this document under Section 4.17, Tribal Cultural Resources. No additional NAC is required for this consistency analysis.

4.6 – Energy

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	No	Less than Significant Impact	No	No	No
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency??	No	Less than Significant Impact	No	No	No

Proposed Project in relation to PEIR

(a) Energy Consumption. As described in the PEIR, construction of the development anticipated in the SLVNSP would result in short-term energy demand from construction equipment and from worker and vendor vehicle trips to and from the Project site. There is no aspect of the proposed short-term construction process that would result in the inefficient, wasteful, and unnecessary consumption of energy because all construction equipment operating on the Project would be required to meet applicable regulatory requirements for fuel efficiency.

Energy demand would result from delivery, employee, and visitor vehicle/truck trips to and from the Project site. Energy that would be consumed by Project-generated traffic is a function of total vehicle miles traveled (VMT) and estimated vehicle fuel economies of vehicles accessing the Project site.

Operational use of energy would include heating, cooling, and ventilation of buildings; operation of electrical systems, security functions, use of on-site equipment and appliances; and indoor, outdoor, perimeter, and parking lot lighting. As shown in Table 4.5-5 of the PEIR, the development of the SLVNSP would create a net increase in electricity demand of approximately 1,679,221 kWh per year. This net increase is well within SCE's systemwide net increase in electricity supplies of approximately 15,273 GWh annually over the 2012-2024 period. The proposed Project is a part of the planned development under the SLVNSP and proposes less development than evaluated within the PEIR. Therefore, there are sufficient planned electricity supplies in the region for the estimated net increase in electricity demands, and buildout under the proposed Project would not require expanded electricity supplies.

As shown in Table 4.5-5 of the PEIR, the Project would generate a net increase in natural gas demand of approximately 248,201 KBTU/yr. This net increase is well within the Southern California Gas Company's systemwide natural gas supplies of approximately 923 million therms during the 2017 period. The proposed Project is a part of the planned development under the SLVNSP and proposes less development than evaluated within the PEIR. Therefore, there are sufficient planned natural gas supplies in the region for the estimated net increase in natural gas demands, and buildout under the proposed Project would not require expanded natural gas supplies.

It should be noted that the SLVNSP and its PEIR evaluated a warehouse with 877,298 square feet (sq. ft.) and retail uses with 37,189 sq. ft. while the current proposed Project has only 619,959 sq. ft. of warehousing and 34,000 sq. ft. of retail uses. This means the proposed Project is approximately 30 percent smaller or less intense than the development evaluated in the PEIR, so overall energy use of the Project would be proportionally less than that estimated in the PEIR.

Additionally, the Project would be required to include verification demonstrating compliance with the applicable Building and Energy Efficiency Standards and are required to be reviewed. The Project would also be required to adhere to the provisions of CALGreen, which established planning and design standards for sustainable site development, energy efficiency (in excess of the California Energy Code requirements), water conservation, material conservation, and internal air contaminants.

Even though the Project would increase the consumption of electricity and natural gas resources, the Project would not increase demand such that SoCalGas and SCE would need to plan for new regional electricity or natural gas facilities, the construction of which could cause significant environmental effects; this potential impact would be considered less than significant.

(b) Conflict with Local Plan. The PEIR demonstrated that the SLVNSP's development, including that proposed on the Project site, was consistent with the CARB Scoping Plan for minimizing GHG emissions on a regional basis. The Project will be required to show verification demonstrating compliance with applicable Building and Energy Efficiency Standards and is also required to be reviewed prior to approval of building permits. The City was a participant in the Sub-Regional Climate Action Plan for the Western Riverside Council of Governments (WRCOG) which has energy conservation strategies and has its own municipally owned utilities. The Project would also be required to adhere to the provisions of CALGreen, which established planning and design standards for sustainable site development, energy efficiency, water conservation, material conservation, and internal air contaminants. Therefore, the Project is consistent with GHG management plans, and impacts are less than significant.

Conclusion. The Project would not result in a wasteful use of energy or conflict with energy plans. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.7 – Geology and Soils

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:	No	Less than Significant Impact	No	No	No
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	No	Less than Significant Impact	No	No	No
ii) Strong seismic ground shaking?	No	Less than Significant Impact	No	No	No
iii) Seismic-related ground failure, including liquefaction?	No	Less than Significant Impact	No	No	No
iv) Landslides?	No	Less than Significant Impact	No	No	No
b) Result in substantial soil erosion or the loss of topsoil?	No	Less than Significant Impact	No	No	No
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	No	Less than Significant Impact	No	No	No

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1997), creating substantial direct or indirect risks to life or property?	No	Less than Significant Impact	No	No	No
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	No	Less than Significant Impact	No	No	No
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	No	Less than Significant with Mitigation	No	No	No

Proposed Project in relation to PEIR

(a) Faults and Seismic Shaking. As described in the PEIR's Initial Study, the Project site is not located within an Alquist-Priolo (AP) Earthquake Fault Zone, and no known faults underlie the site. The Riverside County Parcel Report for the site indicates that the site has a "low" potential for liquefaction. The Project site is relatively flat and there are no slopes on the site that are subject to a landslide. The Project site is located in a seismically active area of Southern California and is expected to experience moderate to severe ground shaking during the lifetime of the Project. Detailed design-level geotechnical studies and building plans pursuant to the California Building Standards Code are required prior to approval of construction.

As a mandatory condition of Project approval, the Project would be required to construct the proposed structures in accordance with the California Building Code (CBC). Detailed design-level geotechnical studies and building plans pursuant to the California Building Standards Code are required prior to approval of construction. The City's Building and Safety Department would review the building plans through building plan checks, issuance of a building permit, and inspection of the building during construction, which would ensure that all required CBC seismic safety measures are incorporated into the building. Compliance with the CBC as verified by the City's review process, would reduce impacts related to strong seismic ground shaking to less than significant levels.

(b) Erosion. As described in the PEIR's Initial Study, the Project site has been historically graded and is regularly grubbed/disced, and the loss of topsoil is not a significant impact. Soils in the Project area are particularly prone to erosion during the grading phase, especially during heavy rains. Reduction of the erosion potential can be accomplished through implementation of a Storm Water Pollution Prevention Plan (SWPPP), which specifies Best Management Practices for temporary erosion controls. Such measures typically include temporary catch basins and/or sandbagging to control runoff and contain sediment transport within the Project site. The SWPPP is required for plan check and approval by the City's Building and Safety Department, prior to provision of permits for the Project, and would include construction BMPs. With adherence to existing regulations, this potential impact would be considered less than significant.

(c) Unstable Geologic Unit. As described in the PEIR's Initial Study, the Project site is relatively flat, and there are no slopes on the site that are susceptible to a landslide. Lateral spread or flow are terms referring to landslides that commonly form on gentle slopes and that have rapid fluid-like flow movement, like water. The Project site is relatively flat and there are no slopes on the site that are susceptible to lateral spreading. The Riverside County Parcel Report for the site indicates that the site is "susceptible" to subsidence. Soils in the Project area have been mapped as consisting primarily of well-drained, sandy loams of the Ramona sandy loam series. Sandy loams are not expansive and compact well for construction. The Riverside County Parcel Report for the site indicates that the site has a "low" potential for liquefaction. Sandy loams have a low potential for collapse and there are no mining activities occurring on or near the Project site.

Detailed design-level geotechnical studies and building plans pursuant to the California Building Standards Code are required prior to approval of construction. Compliance with the recommendations of a site specific geotechnical study for soils conditions is a standard practice and would be required by the City Building and Safety Department. Therefore, compliance with the requirements of the California Building Standards Code as identified in a site specific geotechnical design would be reviewed by the City for appropriate inclusion, as part of the building plan check and development review process, would reduce potential for the above described seismic issues to a less than significant level.

(d) Expansive Soils. As described in the PEIR's Initial Study, the Project site is generally underlain by Ramona sandy loam soil which is generally not considered to be expansive. In addition, detailed design-level geotechnical studies and building plans pursuant to the California Building Standards Code are required prior to approval of construction.

(e) Septic Systems. The Project does not include the use of septic tanks or alternative waste water disposal systems.

(f) Paleontological Resources. As described in the PEIR, the Project has a possibility of encountering paleontological resources underlying the Pleistocene deposits located on the site during grading activities. Implementation of Mitigation Measure GEO-1 will ensure impacts to paleontological resources are less than significant with mitigation incorporated.

Mitigation Measures

GEO-1 **Paleontological Resource Impact Mitigation Program.** Prior to the issuance of a grading permit, the Project Proponent shall prepare a paleontological resource impact mitigation program (PRIMP) for the grading and excavation phase of the Project, including both on- and off -site activities. The PRIMP shall be submitted for review and approval to the City of Banning Community Development Department and shall conform to the guidelines of the Society of Vertebrate Paleontology; including the following:

a) A trained paleontological monitor shall be present during initial mass grading or deep trenching activities within the Project in sediment areas determined likely to contain paleontological resources. If paleontological resources are located within excavation, the monitoring program will change to full-time. The monitor shall be empowered to temporarily halt or redirect construction activities to ensure avoidance of adverse impacts to paleontological resources. The monitor shall be equipped to rapidly remove any large fossil specimens encountered during excavation. During monitoring, samples shall be collected and processed to recover microvertebrate fossils. Processing shall include wet screen washing and microscopic examination of the residual materials to identify small vertebrate remains. Upon encountering a large deposit of bone, salvage of all bone in the area shall be conducted in accordance with modern paleontological techniques. All fossils collected during the Project shall be prepared to a reasonable point of identification. Excess sediment or matrix shall be removed from the specimens to reduce the bulk and cost of storage. Itemized catalogs of all material collected and identified shall be provided to the museum repository along with the specimens. A report documenting the results of the monitoring and salvage activities and the significance of the fossils will be prepared. All fossils collected during this work, along with the itemized inventory of these specimens, shall be deposited in a museum repository for permanent curation and storage. All fossils collected during this work, along with the itemized inventory of these specimens, shall be deposited in a museum repository for permanent curation and storage.

Unique Geologic Features. As described in the PEIR, the Project site is relatively flat and the subsurface material encountered at the site consists of disturbed topsoil and native soils. The upper native soils consist of Ramona sandy loam and this type of soil feature is not considered “unique.” Based on the analysis above, the Project would not directly or indirectly destroy a unique geologic feature.

Conclusion. The proposed Project would either have no impacts or less than significant impacts related to geologic and soil constraints with implementation of standard grading, dust control, and erosion control measures and adhering to existing regulatory compliance. There are no unique geologic features at the Project site, and implementation of Mitigation Measure GEO-1 will ensure that potential impacts to paleontological resources would be less than significant. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.8 – Greenhouse Gas Emissions

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	No	Significant Impact	No	No	No
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	No	Less than Significant with Mitigation	No	No	No

Proposed Project in relation to PEIR

(a) Greenhouse Gas Emissions. A detailed assessment of Greenhouse Gas (GHG) emissions was prepared for the PEIR, which studied the development of 877,298 square feet of industrial park use and 37,189 square feet of commercial retail and fast food restaurant uses within the area bounded by the currently proposed Project. There were also medical office uses evaluated in the PEIR, but this portion of the SLVNSP is east and outside of the proposed Project boundary. The PEIR determined that buildout of the SLVNSP would result in total emissions from construction and long-term operation of 11,966.30 MTCO2e, which exceeds the SCAQMD Tier 3 screening thresholds for both a project-specific and cumulative impact. The PEIR concluded that the SLVNSP's GHG impacts would be significant even with implementation of Mitigation Measures GHG-1 through GHG-6.

A detailed GHG assessment (GHGA) was prepared for the proposed Project, which assumed 619,959 square feet of warehousing space and 34,000 square feet of retail and fast-food commercial uses (Urban Crossroads, July 2021a, updated February 2022)(Appendix A). The GHGA assumed that up to a quarter of the warehouse space would be dedicated to cold storage and the rest for high-cube logistics warehousing. The GHGA assumed the commercial space along Sun Lakes Boulevard would be similar to that examined in the PEIR with the addition of a drive-through coffee establishment.

Construction and operational GHG emissions associated with the proposed Project are summarized in Table 9. As shown, the proposed Project's GHG emissions would exceed the applicable significance thresholds consistent with the finding identified in the PEIR. The Project's GHG emissions would also slightly exceed what was anticipated in the PEIR, but this is not considered a new or substantially more severe impact than what was disclosed in the PEIR. The Project's increase is only approximately 7%, which would not itself exceed the applicable significance threshold. This slight increase is considered a de minimis increase in the context of GHG as a global, rather than a national, statewide, regional, or local impact; globally it is estimated that the world emits approximately 50 billion tons of GHG emissions

annually. The proposed Project would also have to implement Mitigation Measures GHG-1 through GHG-6 prior to and during Project construction.

Table 9: Project GHG Emissions	
Emission Source	**Emissions (MT/yr CO2e)[1]**
PEIR Estimate (for Project area)	8,190.5
Project's Total Annual Emissions (Amortized Construction + Operations)	8,795.4
SCAQMD Interim Threshold	3,000
Exceeds Threshold?	**Yes**

Source: Table 7, UC 2021a

[1] Metric Tons Per Year of Carbon Dioxide equivalents

Mitigation Measures

The PEIR recommended the following mitigation measures, which will be implemented prior to and during construction of the Project:

GHG-1 **GHG Reduction Documentation.** Prior to the issuance of a building permit, documentation that the following GHG reduction measures shall be implemented by future development projects is required. Documentation may consist of a letter stating how the project will comply and identify the verification mechanism for each measure required below (e.g. shown on building plans1``1, landscaping plans, etc.) The project shall devise a comprehensive water conservation strategy to reduce water use during project operation. The strategy will include the following:

1) Install drought-tolerant plants for landscaping.

2) Install water-efficient irrigation systems, such as weather-based and soil-moisture- based irrigation controllers and sensors, for landscaping according to the California Department of Water Resources Model Efficient Landscape Ordinance.

3) Ensure that all landscape and irrigation measures follow the City of Banning's Landscaping and Water Conservation requirements.

GHG-2 **Building Design.** The project will design building shells, building components, such as windows, roof systems and electrical systems to meet 2016 Title 24 Standards (or applicable requirements in effect at the time a building permit is applied for).

GHG-3 **LEED Features.** Buildings will be designed to provide CALGreen Standards with Leadership in Energy and Environmental Design (LEED) features for potential certification and will employ energy and water conservation measures in accordance with such standards. This includes design considerations related to the building envelope, HVAC, lighting, and power systems. Additionally, the architectural expression such as roofs and windows in the buildings will relate to conserving energy.

GHG-4 **Energy Efficient Lighting.** Prior to the issuance of a building permit, building plans shall require that high-efficiency lighting (such as LED lighting that is 34 percent more efficient than fluorescent lighting) be installed within buildings on-site.

GHG-5 **Efficient Building Materials/Equipment.** The project will utilize building materials/methods and heating equipment that are efficient and reduce emissions that may include, but not limited to, high-efficiency heat pumps; thin insulating materials; windows and building

surfaces with tunable optical properties; high efficiency lighting devices; improved software for optimizing building design and operation; low cost, easy to install, energy harvesting sensors and controls; interoperable building communication systems; and optimized control strategies.

GHG-6 **Reduce Indoor Water Demand.** Prior to the issuance of a building permit, building plans shall require that all faucets, toilets, and showers installed in the proposed structures utilize low-flow fixtures that would reduce indoor water demand by 20% per CalGreen Standards.

(b) Conflict with applicable plans. The PEIR determined that, until the City formally adopts a climate action plan, local development is not required to be consistent on a project-by-project evaluation of GHG emissions identified in the Western Riverside Council of Governments Subregional Climate Action Plan, so the SLVNSP was evaluated relative to the goals of AB 32, SB 32, the City's adopted General Plan policies that pertain to GHG emissions, and the Southern California Association of Governments' *2016-2040 Regional Transportation Plan/ Sustainable Communities Strategy* (2016 RTP/SCS or Plan). The PEIR found the SLVNSP to be consistent with or not in conflict with applicable requirements of those plans (SLVNSP Draft PEIR, pp. 4.7-12 to 4.7-15).

The City still has not adopted a climate action plan, and the proposed Project will be required to show verification demonstrating compliance with the same standards applied to the SLVNSP, including the Building and Energy Efficiency Standards and will also be required to be reviewed prior to approval of building permits. The City was a participant in the Sub-Regional Climate Action Plan for the Western Riverside Council of Governments (WRCOG), which has energy conservation strategies and has its own municipally owned utilities. The Project would also be required to adhere to the provisions of CALGreen, which established planning and design standards for sustainable site development, energy efficiency, water conservation, and material conservation, all of which will contribute to reduced GHG emissions from the Project. Finally, the Project will be required to implement Mitigation Measures GHG-1 through GHG-6 which are consistent with regional and state plans to reduce GHG emissions in California. Therefore, because the Project is consistent with the SLVNSP, the Project is similarly consistent and would not conflict with all applicable GHG plans. As such, the Project's impact under this threshold is less than significant.

Conclusion. The PEIR determined that the entire SLVNSP would result in significant GHG emissions, including the planned development of the Project site for industrial and commercial uses. The proposed Project is anticipated to generate slightly higher emissions than what was disclosed in the PEIR, even after implementation of the mitigation identified in the PEIR. However, the Project's slight increase in emissions is not considered to result in a new or substantially more severe impact than what was disclosed by the PEIR. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.9 – Hazards and Hazardous Materials

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	No	Less than Significant Impact	No	No	No
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	No	Less than Significant Impact	No	No	No
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	No	Less than Significant Impact	No	No	No
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	No	No Impact	No	No	No

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard or excessive noise for people residing or working in the Project area?	No	No Impact	No	No	No
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	No	Less than Significant Impact	No	No	No
h) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?	No	No Impact	No	No	No

Proposed Project in relation to PEIR

(a) and (b). Hazardous Materials. As described in the PEIR Initial Study, heavy equipment that would be used during construction of the Project would be fueled and maintained by substances such as oil, diesel fuel, gasoline, hydraulic fluid, and other liquid materials that would be considered hazardous if improperly stored or handled. In addition, materials such as paints, roofing materials, solvents, and other substances typically used in building construction would be located on the Project site during construction. Improper use, storage, or transportation of hazardous materials could result in accidental releases or spills, potentially posing health risks to workers, the public, and the environment. The potential for accidental releases and spills of hazardous materials during construction is a standard risk on all construction sites, and there would be no greater risk for improper handling, transportation, or spills associated with future development that would be a reasonable consequence of the development of the Project than would occur on any other similar construction site. Construction contractors are required to comply with all applicable federal, state, and local laws and regulations regarding hazardous

materials, including but not limited requirements imposed by the Environmental Protection Agency, California Department of Toxic Substances Control, South Coast Air Quality Management District, and the Regional Water Quality Control Board.

The Project is proposed as a speculative project and no actual tenants have been identified at this time. Any business that operates any of the facilities at the Project site and that handles and/or stores substantial quantities of hazardous materials (§ 25500 of California Health and Safety Code, Division 20, Chapter 6.95) would be required to prepare and submit a Hazardous Materials Business Emergency Plan (HMBEP) to the Riverside County Department of Environmental Health (RCDEH) in order to register the business as a hazardous materials handler. Such a business is also required to comply with California's Hazardous Materials Release Response Plans and Inventory Law, which require immediate reporting to Riverside County Fire Department and State Office of Emergency Services regarding any release or threatened release of a hazardous material, regardless of the amount handled by the business. Potential hazardous materials impacts associated with long-term operation of the Project is not expected to pose a significant hazard to the public or environment through the routine transport, use, or disposal of hazardous materials, nor would the Project increase the potential for accident operations which could result in the release of hazardous materials into the environment because use, transport, handling, and disposal of any hazardous substances must comply with all federal, State and local laws regulating their management and use. As such, impacts are less than significant.

(c) Proximity to Schools. As described in the PEIR's Initial Study, the Project site is not located within one-quarter mile of an existing or proposed school. The nearest school is the San Gorgonio Middle School, located approximately 2 miles northwest of the Project site. In addition, as discussed in Section 4.9 (a) and (b) above, the use and handling of all hazardous or potentially hazardous materials must comply with all applicable federal, State, and local agencies and regulations. Impacts are less than significant.

(d) Government Code Section 65962. The PEIR's Initial Study notes that the Project site is not included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5; no impact would occur.

(e) Airport Land Use Plan. As noted in the PEIR's Initial Study, the Project site is located approximately 4.5 miles west of the Banning Municipal Airport and is not within the Banning Municipal Airport Compatibility Plan. There is no impact.

(g) Emergency Plans. As described in the PEIR's Initial Study, the City does not have an established evacuation route; however, depending on the location and extent of an emergency, major surface streets could be utilized to route traffic through the City. The I-10 Freeway and State Highway 243 to State Route 79 are also major regional access routes serving the City which could be used during disaster events. Emergency access to the Project site is available from Sun Lakes Boulevard. During construction and long-term operation, the Project would be required to maintain adequate emergency access for emergency vehicles to Sun Lakes Boulevard as required by the City. Therefore, the Project would not result in a substantial alteration to the design or capacity of any public road that would impair or interfere with the implementation of evacuation procedures. Because the Project would not interfere with an adopted emergency response or evacuation plan, impacts are less than significant.

(h) Wildfire Risks. As described in the PEIR's Initial Study, the Project site is not located in or near state responsibility areas or lands classified as very high fire hazard severity zones and no impact would occur.

Conclusion. As outlined above, the Project has no impact or less than significant impacts related to hazards, hazardous materials, or wildfires. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.10 – Hydrology and Water Quality

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water supply?	No	Less than Significant Impact	No	No	No
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	No	Less than Significant Impact	No	No	No
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would:	No	Less than Significant Impact	No	No	No
i) result in substantial erosion or siltation on- or off-site;	No	Less than Significant Impact	No	No	No

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;	No	Less than Significant Impact	No	No	No
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	No	Less than Significant Impact	No	No	No
iv) impede or redirect flood flows?	No	Less than Significant Impact	No	No	No
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	No	No Impact	No	No	No
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	No	Less than Significant Impact	No	No	No

Proposed Project in relation to PEIR

(a) **Violate Water Quality Standards.** The PEIR indicates the Project site is located within the Whitewater River Region, which includes the urbanized areas that lie approximately between Banning and the San Gorgonio Pass area to the northwest and the Salton Sea to the southeast. The area of Riverside County in the Whitewater River Region is under the jurisdiction of the Colorado River Regional Water Quality Control Board ("Regional Board"). The Project site is subject to the Whitewater River Region Stormwater Management Plan (SWMP) which describes those activities and programs implemented by the Permittees to manage urban runoff to comply with the requirements of the National Pollutant Discharge Elimination System (NPDES) municipal separate storm sewer system (MS4) permit (MS4 Permit) for the Whitewater River Region. The Permittees have revised the SWMP to address

2013 MS4 Permit requirements related to the planning and permitting of New Development and Redevelopment Projects within their jurisdictions. The objective of the program is to ensure that controls are in place to prevent or minimize water quality impacts from New Development and Redevelopment Projects to the maximum extent practical (MEP).

Per the City's development review requirements, the Project applicant will prepare a Storm Water Pollution Prevention Plan (SWPPP) to demonstrate how it will control short-term water pollution during construction by implementation of Best Management Practices (BMPs). In addition, the Project will prepare a Water Quality Management Plan (WQMP) to demonstrate how it will control long-term water quality impacts during operation of the Project. The SWPPP and WQMP will be supported by hydrological calculations to demonstrate both short- and long-term water pollution related to the Project site will be protected and maintained within established MEP regulatory limits. Preparation of the SWPPP and WQMP are regulatory requirements of the City and Regional Board to comply with the MS4 permit, therefore, they are not considered project-specific mitigation under CEQA.

The conceptual site plan for the Project (see Exhibit 3) indicates a water quality/detention basin for the Project will be located in the southeast corner of the site, just east of the proposed commercial uses, which will provide long-term protection of water quality for the site. The Project will be subject to water quality standard requirements of the City and Regional Board and will be required to comply with the local MS4 permit; therefore, they are not considered project-specific mitigation under CEQA. With regulatory compliance, water quality impacts of the Project will be less than significant and no mitigation is required.

(b) **Groundwater Supplies.** The PEIR indicates the City has five sources of groundwater storage supply: Banning Storage Unit; Banning Bench Storage Unit; Banning Canyon Storage Unit; Beaumont Storage Unit; and Cabazon Storage Unit. Because the City's water supply is primarily groundwater, the City is not subject to short-term water shortages resulting from temporary dry weather conditions. Further, as part of the Beaumont Basin adjudication, the City has the option of storing up to 80,000-acre feet of water in the Beaumont Basin. At the end of calendar year 2014, City of Banning had 46,774 AF of water available in Beaumont Basin storage. The City also purchases State Water Project (SWP) water from the San Gorgonio Pass Water Agency (SGPWA), which is one of 29 state water contractors. Quantities of SWP water purchased are recharged to the Beaumont Basin. Although the City may expect variable reliability in availability of SWP water due to ongoing drought conditions in the state. Fortunately, SWP is not the City's primary source of water and short-term declines in SWP water availability would be offset by the City's substantial reserves of stored groundwater. These fluctuations would therefore not result in a substantial impact to the City's water supply over the long-term.

The conceptual site plan for the Project (previous Exhibit 3) indicates a detention basin for the Project will be located in the southeast corner of the site which will prevent post-development increases in runoff from the site. To accomplish this the proposed basin will detain storm water much of which will eventually percolate back into the local groundwater supply. The design of the basin will be supported by hydrological calculations to demonstrate it will meet the established regulatory requirements of the City and County Flood Control District. Meeting these requirements is considered regulatory compliance and is not considered project-specific mitigation under CEQA. With regulatory compliance, water quality impacts of the Project will be less than significant and no mitigation is required.

(c) **Alter Drainage Patterns.** The PEIR indicates the Project is covered by the Master Drainage Plan for the City of Banning ("Drainage Plan") prepared by the Riverside County Flood Control and Water Conservation District ("District") in 1975. The Project site currently drains south toward to Sun Lakes Boulevard. The portion of the site which drains to Sun Lakes Boulevard, sheet flows to the existing storm drain system which then conveys the flows to Smith Creek to the east. Section 13.24.110 of the

City's Municipal Code requires land development activities to manage stormwater runoff from the property. Control BMPs include constructing storage and/or infiltration facilities to store runoff from rainfall events up to and including the 100-year, 3-hour duration event. Post development peak urban runoff discharge rates would not exceed pre-development peak urban runoff discharge rates.

The conceptual site plan for the Project (previous Exhibit 3) indicates a detention basin for the Project will be located in the southeast corner of the site which will provide long-term onsite and downstream flood protection. The design of the basin will be supported by hydrological calculations to demonstrate it will meet the established regulatory requirements of the City and County Flood Control District. Meeting these requirements is considered regulatory compliance and is not considered project-specific mitigation under CEQA. With regulatory compliance, water quality impacts of the Project will be less than significant and no mitigation is required.

(d) **Other Water-Related Risks or Pollution.** The PEIR indicates FEMA is responsible for determining flood elevations and floodplain boundaries. According to FEMA Flood Insurance Rate Map Panel No. 060246, the Project site is not located within an Area of Minimal Flood Hazard (i.e., not within a 100-year flood plain). Therefore, the potential risk of flooding on the site is minimal. The Project site is 53 miles inland of the Pacific Ocean and at an elevation of 2,553 feet above the level of the ocean (there are also two mountain ranges between the ocean and Banning). Therefore, the Project will not have a significant risk from a tsunami. A seiche is a standing seismic wave in bodies of water that can cause dam or reservoir collapse during major earthquakes. There are no dams or large bodies of water in the general area of the Project so there is little risk from seiche. Since there is little risk of flooding, a tsunami, or a seiche affecting the Project, there is little to no risk of pollutants being released during flooding or inundation events. There are no impacts.

(e) **Conflict with Water Quality or Groundwater Management Plans**

Water Quality Control Plan. The PEIR indicates the Colorado River Regional Water Quality Control Board regulates waste discharges to minimize and control their effects on the quality of the region's ground and surface water. As it affects the Project, the primary regulatory tool is the National Pollutant Discharge Elimination System (NPDES). The Clean Water Act prohibits anybody from discharging "pollutants" through a "point source" into a "water of the United States" unless they have an NPDES permit. The permit will contain limits on what you can discharge, monitoring and reporting requirements, and other provisions to ensure that the discharge does not hurt water quality or people's health.

As indicated in Section 4.10.a above, the Project will implement drainage system improvements consistent with existing water quality regulatory requirements of the City and State. Therefore, the Project will not conflict with or obstruct implementation of a Water Quality Control Plan. With regulatory compliance, impacts are less than significant and no mitigation is required.

Sustainable Groundwater Management Plan. The PEIR indicates the Beaumont (groundwater) Basin has already been adjudicated and the City has the option of storing up to 80,000-acre feet of water in that basin. At the end of calendar year 2014, City of Banning had 46,774 AF of water available in Beaumont Basin storage. In addition, the City also purchases State Water Project (SWP) water from the San Gorgonio Pass Water Agency (SGPWA) to recharge to the Beaumont Basin.

The State Sustainable Groundwater Management Act (SGMA) classifies California's 515 groundwater basins into one of four categories high, medium, low, or very low-priority. The Project site is located within the Coachella Valley-San Gorgonio Pass Basin and is classified as "medium" priority. The SGMA requires medium- and high-priority basins to develop groundwater sustainability agencies (GSAs), develop groundwater sustainability plans (GSPs), and manage groundwater for long-term sustainability.

The City of Banning in conjunction with other agencies is currently developing the Groundwater Sustainability Plan for the San Gorgonio Pass Sub-basin of the Coachella Basin. At this time, the Plan is not adopted but when approved it will manage and monitor groundwater affecting the Project area.

Conclusion. The PEIR concludes that development of the SLVNSP, including the Project site, would not have significant impacts on hydrology, water quality, and other water-related resources and constraints, and no mitigation was recommended. With regulatory compliance, the preceding sections have demonstrated the proposed Project would also not have any significant water-related impacts The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.11 – Land Use and Planning

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Physically divide an established community?	No	No Impact	No	No	No
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	No	Less than Significant Impact	No	No	No

Proposed Project in relation to PEIR

(a) Divide neighborhoods. The PEIR Initial Study states: "An example of a project that has the potential to divide an established community includes the construction of a new freeway or highway through an established neighborhood. The Project site consists of approximately 47-acres of undeveloped land that is adjacent to railroad tracks and the I-10 Freeway to the north and existing development to the east, south, and west. There is no impact." (IS/NOP SLVNSP PEIR, p. 39.)

The Project site consists of approximately 37 acres of undeveloped land that is adjacent to railroad tracks and the I-10 Freeway to the north and existing development to the east, south, and west. Sidewalk and road improvements along the north side of Sun Lakes Boulevard will help connect existing neighborhoods east and west of the Project site. In addition, the Project has no components that would divide an established community (such as a new freeway through an established neighborhood). Therefore, similar to the PEIR Initial Study conclusion, the Project will have no impact.

(b) Conflict with Applicable Plans. The current General Plan land use designations are Business Park with Specific Plan Overlay and General Commercial with Specific Plan Overlay. The SLVNSP zoning

designations are Business & Warehouse, Office & Professional, and Retail & Service. The PEIR concluded that policies, standards, and regulations outlined in the SLVNSP were consistent with existing City land use regulations and would not conflict with existing General Plan policies, the Western Riverside County MSHCP, SCAG's RTP/SCS goals, as well as a variety of other regulatory documents identified and outlined in the Land Use section of the PEIR, with implementation of the mitigation measures identified in the PEIR.

The Project is a part of the planned development area under the SLVNSP and proposes approximately 30 percent less development than evaluated within the PEIR. The proposed Project is therefore consistent with the growth limits evaluated in the PEIR. The Project is also consistent with the various land use-related plans evaluated in the PEIR which have not changed substantially since the PEIR was certified in 2020. Therefore, impacts related to land use plans are less than significant, and no mitigation is required.

Conclusion. The Project is consistent with the various land use-related plans evaluated in the PEIR, which have not changed substantially since the PEIR was certified in 2020. Therefore, impacts related to land use plans are less than significant. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.12 – Mineral Resources

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	No	No Impact	No	No	No
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	No	No Impact	No	No	No

Proposed Project in relation to PEIR

(a) Designated Mineral Resources. As described in the PEIR Initial Study, the Project site is located within a mineral resource zone area classified as MRZ-3 as identified in Exhibit IV-8 in the City of

Banning General Plan. Areas classified as MRZ-3 are defined as containing mineral deposits, the significance of which cannot be evaluated from available data. The City of Banning General Plan identifies one aggregate producer within its planning area; the Banning Quarry which is located in the eastern portion of the City approximately 1.25 miles northeast of the Project site. There are no mining operations on the Project site, and implementation of the Project would not result in the loss of known mineral resources.

(b) Local Mineral Designations. The SLVNSP identifies land uses within the Project site as Business & Warehouse District and Retail & Service District, which generally allow for warehouse, office, and retail uses. As such, the Project site is not delineated on a local general plan, specific plan or other land use plan as a locally important mineral resource recovery site. There is no impact.

Conclusion. The Project site does not contain identified mineral resources either at a state level or local level that can be reasonably extracted given existing onsite and surrounding land uses. Therefore, there would be no impacts regarding mineral resources The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.13 – Noise

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	No	Less than Significant with Mitigation	No	No	No
b) Generation of excessive groundborne vibration or groundborne noise levels?	No	No Impact	No	No	No

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	No	No Impact	No	No	No

Proposed Project in relation to PEIR

(a) Noise Exceeds Standards. The PEIR concluded that the background ambient noise levels in the Project study area are dominated by auto and heavy truck activities on Sunset Lakes Boulevard and parking lot vehicle movements. It should also be noted that the railroad tracks and the I-10 Freeway north of the site also contributes to ambient noise. The PEIR stated the maximum base ambient noise level in Municipal Code Section 8.44.050 applicable to the Project is 75 dB(A) while existing ambient noise levels in the vicinity of the site range from 60.4 to 66.2 dB(A).

Construction Noise. Noise from grading and construction is typically considered significant only if it occurs outside the allowable times as described by the City's Municipal Code Chapter 8.44.090 (7:00 AM and 6:00 PM). However, the PEIR determined that construction noise from the Project site could be significant for the closest noise sensitive uses, which are the single-family homes located approximately 15 feet east of the Office & Professional District of the SLVNSP planning area and the senior apartments/assisted living/memory care residential facility located 60 feet east of the planning area. The PEIR recommended Mitigation Measure NOI-1 to reduce this impact to less than significant levels. To minimize noise impacts of the proposed Project, Mitigation Measure NOI-1 from the PEIR will be implemented.

Operational Noise. According to the PEIR, the General Plan noise limit associated with the Business & Warehouse (BW) and Retail & Service (RS) Districts of the SLVNSP are 75 db(A) during the daytime and 65 dB(A) at night (10 PM – 7 AM). The noise assessment prepared for the PEIR determined that noise from parking lot vehicle movements and truck unloading/dock activities around the warehouse could exceed these indicated standards. In addition, the PEIR concluded that truck deliveries to the commercial uses could also exceed these standards (PEIR Table 4.10.4, Project Operational Noise Level Impacts to Sensitive Receptors (RPG 2020a)). The PEIR recommended Mitigation Measure NOI-2 once specific development plans were proposed to ensure the warehouse and commercial uses on the site would not have significant operational noise impacts on nearby sensitive receptors to the east and south of the Project site. PEIR Table 4.10-5 demonstrated that the SLVNSP would not have significant operational traffic-related noise impacts on surrounding land uses.

Mitigation Measures

Construction

NOI-1 **Construction Noise Mitigation Plan.** Prior to issuance of grading and/or building permits, a note shall be provided on grading and building plans indicating that ongoing during grading and construction, the property owner/developer shall be responsible for requiring contractors to implement the following measures to limit construction-related noise:

1) The project applicant shall limit construction activities to the daytime hours between 7 AM to 6 PM, as prescribed in Section 8.44.090(E) of the City's Municipal Code.

2) For all project construction zones, all internal combustion engines on construction equipment and trucks are fitted with properly maintained mufflers consistent with manufacturer's standards.

3) For all project construction zones, stationary equipment such as generators, air compressors shall be located as far as feasible from nearby noise-sensitive uses. If such stationary equipment produces noise emissions that are directional, said equipment shall be oriented to direct noise emissions away from sensitive receptors.

4) For all project construction zones, stockpiling and staging should be located as far as feasible from nearby noise-sensitive receptors.

5) For construction activity within 50 feet of any noise-sensitive receptors, a temporary noise barrier shall be installed by the applicant/developer. This temporary noise barrier shall be installed prior to the onset of construction and be located between the single-family residences, senior apartments/assisted living/memory care residential facility and the construction zone and all sensitive receptors. The temporary sound barrier shall provide a reduction in noise that will meet the City's construction noise threshold of 55 dBA. The noise barrier shall be a minimum height of 8 feet and be free of gaps and holes and must achieve a Sound Transmission Class (STC) of 35 or greater. The barrier can be either (a) a ¾-inch-thick plywood wall OR (b) a hanging blanket/curtain with a surface density or at least 2 pounds per square foot. For either configuration, the construction side of the barrier shall have an exterior lining of sound absorption material with a Noise Reduction Coefficient (NRC) rating of 0.7 or higher.

Operation

NOI-2 **Final Acoustical Report.** Prior to issuance of the first building permit for any project, the property owner/developer shall submit a final acoustical report prepared to the satisfaction of the Planning Director to address potential noise impacts to nearby residences. The report shall demonstrate that the project incorporates sufficient noise-attenuation features if needed so that the City's exterior and interior standards in Municipal Code Sections 8.44.070 and 8.44.090(E) and 4.10 NOISE 4.10-11 in the City's Noise Element are maintained at nearby residences. Compliance can be achieved with (a) sufficient buffering distances so that nearby sensitive receptors are not significantly impacted by future commercial development OR (b) sufficiently high and long sound barrier wall(s) that are placed between commercial noise sources and receptors (for example, in the case of garbage compactor equipment) OR (c) other adequate noise reduction methods that are approved by the Planning Director or their designee. In all cases, the noise reduction measures shall be technically demonstrated to achieve the appropriate target noise level(s) for both exterior and interior environments for

nearby residences, as appropriate (e.g., sufficient wall or berm height, sufficient buffering distance, appropriate sound encapsulation/insulation methods, etc.). The individual project owner/developer shall submit the noise mitigation report to the Planning Director for review and approval. Upon approval by the City, the project acoustical design features shall be incorporated into the future development.

Per Mitigation Measure NOI-2, a detailed noise assessment was performed on the proposed Project Site Plan (Urban Crossroads, original November 2021, updated February 2022)(Appendix D).

Construction. Using appropriate reference construction equipment noise levels and the CadnaA noise prediction model, the noise assessment calculated the Project's construction noise level impacts at the nearest sensitive receiver locations, as shown in Exhibit 6, Sensitive Noise Receptor Locations. To assess the worst-case construction noise levels, the Project construction noise analysis relies on the highest noise level impacts when the equipment with the highest reference noise level is operating at the closest point from the edge of primary construction activity (Project site boundary) to each receiver location.

Exhibit 6: Sensitive Noise Receptor Locations

As shown in Table 10, Construction – Exterior Noise Levels, the exterior noise levels from construction are expected to range from 48.9 to 69.0 dBA Leq, and the highest construction levels are expected to range from 60.9 to 69.0 dBA Leq at the nearest receiver locations from the SLVNSP planning area.

Table 10: Construction - Exterior Noise Levels

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})					
	Site Preparation	Grading	Building Construction	Paving	Arch. Coatings	Highest Levels[2]
R1	65.9	67.9	60.9	58.9	55.9	67.9
R2	58.9	60.9	53.9	51.9	48.9	60.9
R3	67.0	69.0	62.0	60.0	57.0	69.0
R4	66.5	68.5	61.5	59.5	56.5	68.5
R5	66.2	68.2	61.2	59.2	56.2	68.2

Source: Table 8-2, Urban Crossroads, 2022

1 Noise Receiver Locations shown in Exhibit 6
2 Construction noise level calculations based on distance from the construction activity measured from the Project site boundary to the nearest receiver locations.

To evaluate whether the Project will generate potentially significant short-term noise levels at off-site sensitive receiver locations, the City's interior construction noise level limit for residential uses of 55 dBA Leq is used as the acceptable threshold for construction noise at the nearby sensitive receiver locations. Table 11, Construction – Interior Noise Impacts, shows the highest construction noise levels will range from 35.9 to 44.0 dBA Leq with the estimated interior noise reduction of 25 dBA Leq which will satisfy the City's 55 dBA Leq interior construction noise level standard. Therefore, unmitigated Project construction noise levels will be less than significant at the nearest sensitive receiver locations.

Table 11: Construction – Interior Noise Impacts

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})				
	Highest Construction Noise Levels[2]	Interior Noise Reduction	Interior Noise Level	Threshold	Threshold Exceeded?[3]
R1	67.9	-25	43	55	No
R2	60.9	-25	36	55	No
R3	69.0	-25	44	55	No
R4	68.5	-25	44	55	No
R5	68.2	-25	43	55	No

[2] Highest construction noise level calculations based on distance from the construction noise source activity to the nearest receiver locations as shown on Table 10
[3] Do the estimated Project construction noise levels exceed the City's construction noise level threshold?

Operation. Using standard reference noise levels to represent the proposed Project operations, the noise assessment calculated noise levels from typical Project activities, including loading dock operations, roof-top air conditioning units, drive-through speakerphone, trash enclosure activity, parking lot vehicle movements, and truck movements (see Exhibit 7, Operational Noise Source Locations). Table 12, Operational Noise Levels, shows the Project operational noise levels during the daytime hours of 7:00 a.m. to 10:00 p.m. The daytime hourly noise levels at the off-site receiver locations are expected to range from 38.4 to 47.5 dBA Leq.

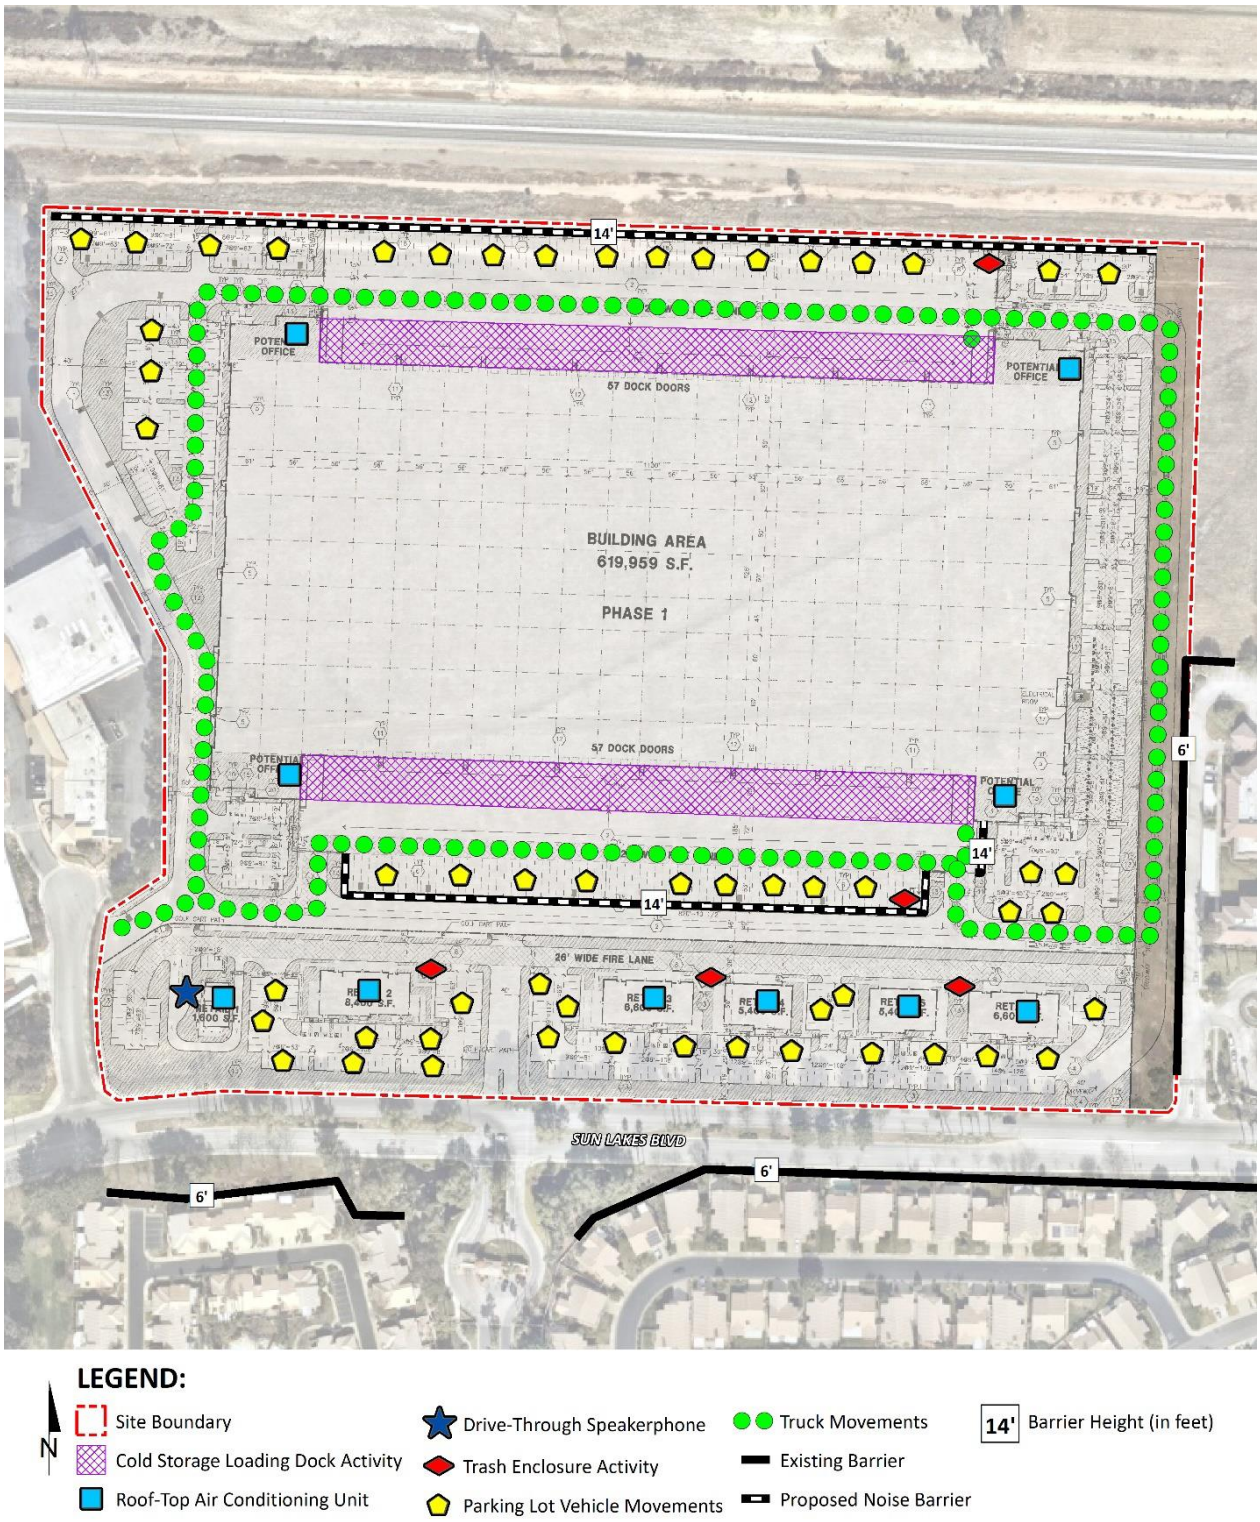

Exhibit 7: Operational Noise Source Locations

Table 12 also shows that the Project's operational noise levels during the nighttime hours of 10:00 p.m. to 7:00 a.m. The nighttime hourly noise levels at the off-site receiver locations are expected to range from 37.4 to 46.5 dBA Leq.

Table 12: Operational Noise Levels

Noise Source[1]	Operational Noise Levels by Receiver Location (dBA L_{eq})				
	R1	R2	R3	R4	R5
Daytime Hours (7:00 a.m. to 10:00 p.m.)					
Loading Dock Activities	47.3	37.3	34.7	44.1	44.5
Roof-Top Air Conditioners	31.0	26.8	36.1	39.1	37.7
Drive-Thru Activity	0.0	0.0	0.0	0.0	8.5

[1] See Exhibit 7 for noise source locations

To demonstrate compliance with local noise regulations, noise levels from Project operations at the nearest sensitive receiver locations were compared to the City's applicable exterior noise level standards. Table 13, Operational Noise Level Compliance, shows the operational noise levels associated with the Project will satisfy the City's exterior noise level standards at the nearest receiver locations with the planned 14-foot-high screen wall on the northern Project boundary and the southern loading dock boundary as shown in Exhibit 7, Operational Noise Source Locations. Therefore, the Project's operational noise impacts are less than significant at the nearest noise-sensitive receiver locations.

Table 13: Operational Noise Level Compliance

Receiver Location[1]	Noise Levels (dBA L_{eq})[2]		Noise Standard (dBA L_{eq})		Exceeds Standard?[4]	
	Daytime	Nighttime	Daytime	Nighttime[3]	Daytime	Nighttime
R1	47.5	46.5	60	68.3	No	No
R2	38.4	37.4	60	60.4	No	No
R3	44.1	42.9	60	57.0	No	No

[3] Exterior noise level standards adjusted to reflect the ambient noise levels per the City Municipal Code, Chapter 8.44.050
[4] Do the estimated Project operational noise source activities exceed the noise level standards?

Noise level increases resulting from the Project are evaluated based on the Appendix G CEQA Guidelines described above at the closest sensitive receiver locations. Under CEQA, consideration must be given to the magnitude of the increase, the existing ambient noise levels, and the location of noise-sensitive receivers to determine if a noise increase represents a significant adverse environmental impact. This approach recognizes that there is no single noise increase that renders the noise impact significant. The noise assessment uses the significance criteria shown in Table 14, Noise Impact Significance Criteria, to provide an additional assessment of Project noise impacts.

Table 14: Noise Impact Significance Criteria

Analysis	Land Use	Conditions	Significance Criteria	
			Daytime	Nighttime
Operational	Residential	Exterior Noise Level Limit[1]	55 dBA L_{eq}	45 dBA L_{eq}
	Noise-Sensitive[2]	if ambient is <60 dBA L_{eq}	$\geq$ 5 dBA L_{eq} Project increase	
		if ambient is 60-65 dBA L_{eq}	$\geq$ 3 dBA L_{eq} Project increase	
		if ambient is >65 dBA L_{eq}	$\geq$ 1.5 dBA L_{eq} Project increase	
Construction	Noise-Sensitive	Interior Noise Level Threshold[3]	55 dBA L_{eq}	NA
		Vibration Level Threshold[4]	0.3 PPV (in/sec)	NA

Source: Table 4-1, Urban Crossroads, February 2022 NA = construction activities are not planned during the nighttime hours
"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

In addition to compliance with the City's noise standards, the noise assessment calculated the Project's operational noise level increases as discussed above. The Project's operational noise levels are combined with the existing ambient noise level measurements for the nearest receiver locations potentially impacted by Project operational noise sources. As shown in Table 15, Operational Noise Level Increase, the Project will generate daytime and nighttime operational noise level increases ranging from 0.0 to 0.4 dBA Leq at the nearest receiver locations. Project-related operational noise level increases will not exceed the operational noise level increase significance criteria presented in Table 14 above. Therefore, the incremental Project operational noise level increase is considered less than significant at all receiver locations.

Table 15: Operational Noise Level Increase

Noise Characteristics	Receiver Location[1]				
	R1	R2	R3	R4	R5
Daytime Hours (7:00 a.m. to 10:00 p.m.)

6 Significance Criteria as shown on Table 14

Offsite Traffic Noise Analysis. The Project's noise assessment by Urban Crossroads (November 2021, updated February 2022) also includes an analysis of noise impacts from offsite Project-related traffic. This offsite analysis was based on traffic data from the Project's traffic assessment ("TA"), also prepared by Urban Crossroads (January 2022, updated February 2022). The noise assessment includes an analysis of existing traffic noise levels plus traffic noise generated by the proposed Project for informational purposes and to fully analyze all the existing traffic scenarios identified in the TA. However, this condition would not actually occur since the Project would not be fully constructed and operational until opening year conditions.

Table 16, Existing Plus Project Traffic Noise Impacts, shows that the Project off-site traffic noise level increases range from 0.0 to 0.9 dBA CNEL on the study area roadway segments. Based on the City's significance criteria for off-site traffic noise, land uses adjacent to the study area roadway segments would experience less than significant noise level impacts due to unmitigated Project-related traffic noise levels.

Table 16: Existing Plus Project Traffic Noise Impacts

Road/Segment	CNEL at Receiving Land Use (dBA)[1]			Incremental Noise Level Increase Threshold[2]	
	No Project	With Project	Project Increase	Limit	Exceeded?
Highland Springs Ave.					
North of I-10 Fwy WB Ramps[3]	76.0	76.0	0.0	1.5	No
North of 2nd Street[3]	74.4	74.7	0.3	1.5	No
North of 1st Street[3]	72.8	73.3	0.5	1.5	No

Source: Table 7-5, Urban Crossroads, February 2022

[1] Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses.
[2] The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use. Exceeded? = Does the Project create an incremental noise level increase exceeding the City's significance criteria?
[3] These segments have non-sensitive land uses adjacent while the unmarked segments have sensitive (residential) uses adjacent.

In addition to the Existing plus Project scenario, the noise assessment examined offsite noise impacts from Project traffic in the horizon year 2040. Table 17 shows Year 2040 Traffic Noise Impacts with Project conditions, indicating that the Project's off-site traffic noise level increases range from 0.0 to 0.6 dBA CNEL on the study area roadway segments. Based on the City's significance criteria for off-site traffic noise, land uses adjacent to the study area roadway segments would experience less than significant noise level impacts due to unmitigated Project-related traffic noise levels.

Table 17: Year 2040 Traffic Noise Impacts

Road/Segment	CNEL at Receiving Land Use (dBA)[1]			Incremental Noise Level Increase Threshold[2]	
	No Project	With Project	Project Increase	Limit	Exceeded?
Highland Springs Ave.					
North of I-10 Fwy WB Ramps[3]	77.2	77.2	0.0	1.5	No

Source: Table 7-6, Urban Crossroads, February 2022

[1] Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses.
[2] The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use. Exceeded? = Does the Project create an incremental noise level increase exceeding the City's significance criteria?
[3] These segments have non-sensitive land uses adjacent while all the other segments have sensitive (residential) uses adjacent.

With implementation of the PEIR's Mitigation Measures NOI-1 and NOI-2, construction and operational noise impacts from the Project will be reduced to less than significant levels, and no additional mitigation is required.

(b) Excessive Vibration. The PEIR indicated that vibration generated by construction equipment or vehicles and trucks during operation can result in varying degrees of ground vibration, depending on the equipment or vehicle involved. Vibration is typically measured as peak particle velocity (PPV) in inches per second of movement. The operation of construction equipment causes vibrations that spread through the ground and diminish in strength with distance. Buildings situated on soil near the active construction area respond to these vibrations, which range from imperceptible to low rumbling sounds, with perceptible vibrations and slight damage at the highest vibration levels. Typically, construction-related vibrations do not reach vibration levels that would result in damage to nearby structures. The PEIR indicated that potential vibration damage would occur at 0.3 PPV in/sec for old residential structures, 0.5 PPV in/sec for new residential structures.

The PEIR concluded that the closest residential structures to the SLVNSP planning area, are approximately 15 feet east of the Office & Professional District, would experience vibration levels of up to 0.04 PPV which is well below the damage threshold of 0.3 PPV for older residential structures and below the damage threshold of 0.5 PPV for new residential structures. Therefore, vibration levels generated during construction of the proposed Project, which is over 110 feet away from residential receptors, would be less than significant, and no mitigation measures are required.

The PEIR also determined that vehicle and truck movements from ongoing Project operations would not generate significant levels of vibration, so impacts would be less than significant and not require mitigation.

Construction. Based on vibration levels typical for various construction equipment types, the proposed Project's noise assessment estimated the potential for human response (annoyance) and building damage using the vibration methodology recommended by the Federal Transit Authority. Table 18, Construction Vibration Impacts, 8-5 presents the Project's related vibration levels at the nearby receiver locations. At distances ranging from 110 to 725 feet from Project construction activities, construction vibration velocity levels are estimated to range from 0.001 to 0.010 in/sec PPV. Based on maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec), the typical Project construction vibration levels will not exceed the building damage thresholds at any of the noise sensitive receiver locations. In addition, the typical construction vibration levels at the nearest sensitive receiver locations do not occur during the entire construction period but rather occur only during the times that heavy construction equipment is operating adjacent to the Project site boundaries.

Table 18: Construction Vibration Impacts

Construction Activity	Receivers[1]				
	R1	R2	R3	R4	R5
Distance to Construction Activities (feet)[2]	543	725	110	115	134
Typical Construction Vibration Levels PPV (in/sec)[3]					
Small bulldozer	0.000	0.000	0.000	0.000	0.000
Jackhammer	0.000	0.000	0.004	0.004	0.003
Loaded Trucks	0.001	0.001	0.008	0.008	0.006
Large Bulldozer	0.001	0.001	0.010	0.009	0.007
Highest Vibration Level	0.001	0.001	0.010	0.009	0.007
Thresholds PPV (in/sec)[4]	0.3	0.3	0.3	0.3	0.3
Threshold Exceeded?[5]	No	No	No	No	No

5 Does the peak vibration exceed the acceptable vibration thresholds?

(c) Airport/Airstrip Noise. The PEIR states that the Banning Municipal Airport is located approximately 4.5 miles east of the Project site. According to the Banning Municipal Airport Compatibility Plan, the Project site is not located within the area of influence of the plan. Therefore, there are no impacts and no mitigation required.

Conclusion. The PEIR concluded that the SLVNSP, including development of the Project site, would have less than significant noise impacts with implementation of Mitigation Measures NOI-1 and NOI-2. The proposed Project is of the same type but less intense than the development evaluated in the PEIR. The Project will implement PEIR Mitigation Measures NOI-1 and NOI-2. Pursuant to MM NOI-2, a noise assessment has been prepared for the Project, and it confirms that the Project will not have any significant noise or vibration impacts. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.14 – Population and Housing

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	No	Less than Significant Impact	No	No	No
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	No	No Impact	No	No	No

Proposed Project in relation to PEIR

(a) Induce Population Growth. As described in the PEIR Initial Study, the implementation of the SLVNSP would not directly result in population growth because it does not propose any residential dwelling units. It is anticipated that new employees generated by the Project could come from within the local area and would not generate the need for any housing. The proposed Project would be consistent with the development anticipated under the SLVNSP and would provide additional employment as outlined in the PEIR, but it does not include any residential uses. This potential impact would be considered less than significant.

(b) Displace Housing. The Project site does not contain any existing residential housing. Therefore, implementation of the Project would not displace existing housing, nor would it necessitate the construction of replacement housing elsewhere, so there would be no impact.

Conclusion. The new warehouse and retail uses to be developed by the Project may result in some amount of indirect or induced housing and/or population growth to the degree that the new Project attracts residents choosing to buy a house or rent an apartment and move into the City. However, the Project is not expected to result in the displacement of any existing City residents (population) or housing by its development. Therefore, potential impacts are considered to be less than significant. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.15 – Public Services

Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Fire protection?	No	Less than Significant Impact	No	No	No
b) Police protection?	No	Less than Significant Impact	No	No	No
c) Schools?	No	Less than Significant Impact	No	No	No
d) Parks?	No	Less than Significant Impact	No	No	No
e) Other public facilities?	No	Less than Significant Impact	No	No	No

Proposed Project in relation to PEIR

(a) Fire protection. As described in the PEIR Initial Study, fire protection services for the Project site would be provided by the City through a contractual agreement with the Riverside County Fire Department, which contracts with the California Department of Forestry. Through a mutual aid agreement with surrounding communities, including Beaumont, Calimesa, and Cabazon, each city has access to and benefits from the services provided by fire stations in other cities.

The Project site is served by Fire Station #20 located approximately 0.6 roadway miles west of the site at 1550 E. 6th Street, Beaumont, CA. Development of the Project would impact fire protection services by placing an additional demand on existing Riverside County Fire Department resources should its resources not be augmented. To offset the increased demand for fire protection services, the Project would be conditioned by the City to provide a minimum of fire safety and support fire suppression activities, including compliance with State and local fire codes, fire sprinklers, a fire hydrant system, paved access, and secondary access routes. Furthermore, the Project would be required to comply

with the provisions of the City's Development Impact Fee Ordinance, which requires a fee payment to assist the City in providing for fire protection facilities. Payment of the Development Impact Fee would ensure that the Project provides fair share funds for the provision of additional fire protection facilities. The Project would not result in the need for new or physically altered fire facilities in order to maintain acceptable service ratios, response times or other performance objectives, and this potential impact would be considered less than significant.

(b) Police protection. As described in the PEIR Initial Study, the Project site is currently serviced by the City's Police Department which is located approximately 4.5 miles east of the Project site at 125 E Ramsey Street in Banning. Development of the Project would impact police protection services by placing an additional demand on existing police resources should its resources not be augmented. The Project would be required to comply with the provisions of the City's Development Impact Fee Ordinance, which requires a fee payment to assist the City in providing for police protection facilities to offset impacts created by new development. Payment of the Development Impact Fee would ensure that the Project provides fair share funds for the provision of additional police protection facilities. In addition, the Project site is located in a developed area of the City which is routinely patrolled. It is not anticipated that new police facilities would need to be constructed to serve the Project in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services, and this potential impact would be considered less than significant.

(c) Schools. As described in the PEIR Initial Study, the Project does not include housing which would generate additional students to be served by the Banning Unified School District. The Project would be required to pay applicable development fees to the Banning Unified School District in accordance with the Leroy F. Greene School Facilities Act of 1998 (Senate Bill 50). Pursuant to Senate Bill 50, payment of school impact fees constitutes complete mitigation under CEQA for Project-related impacts to school services; this potential impact would be considered less than significant.

(d) Parks. As described in the PEIR Initial Study, the Project does not create a direct additional need for parkland as it does not propose residential uses. However, new employees of the Project may create an incremental indirect increase in the use of local parks. The payment of development impact fees would reduce any indirect Project impacts related to parks; this potential impact would be considered less than significant.

(e) Other public facilities. As noted above, development of the Project would not result in a direct increase in the population and would not increase the demand for public services which would require the construction of new or expanded public facilities. The Project would be required to comply with the provisions of the City's Development Impact Fee Ordinance, which requires a fee payment to assist the City in providing public facilities. Payment of applicable Development Impact Fees would ensure that the Project provides fair share of funds for additional public facilities; this potential impact would be considered less than significant.

Conclusion. The Project would increase the need for fire and police services, but not to the extent that new facilities would be required. As the Project does not includes residential uses, no significant impact to schools or parks is expected, and the Project applicant would be required to pay all applicable development impact fees. The potential impacts are considered to be less than significant. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.16 – Recreation

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Would the Project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	No	Less than Significant Impact	No	No	No
b) Does the Project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	No	No Impact	No	No	No

Proposed Project in relation to PEIR

(a) Increase Park Use. As described in the PEIR Initial Study, the Project would not cause a substantial physical deterioration of any park facilities or would accelerate the physical deterioration of any park facilities because the Project does not propose residential dwelling units which would increase the population that would use parks. New employees of the Project may create an incremental indirect increase in the use of local parks, however, this potential impact would be considered less than significant.

(b) Need for New Parks. As described in the PEIR Initial Study, the Project does not propose any recreational facilities or require the construction or expansion of recreational facilities which might have an adverse effect on the environment. In addition, no offsite parks or recreational improvements are proposed or required as part of the Project; there would be no impact related to construction or expansion of recreational facilities.

Conclusion. The proposed project does not include residential uses, and any increase in park or recreational facility usage associated with construction of the Project would be considered minimal as the Project would not increase the population that would use park facilities. Furthermore, the Project applicant would need to pay applicable parks related development impact fees. The potential recreation impacts are considered to be less than significant. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or

substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.17 – Transportation

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Conflict with a program plan, ordinance or policy addressing the circulation system including transit, roadway, bicycle and pedestrian facilities?	No	Less than Significant Impact	No	No	No
b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	No	Significant Impact	No	No	No
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	No	Less than Significant Impact	No	No	No
d) Result in inadequate emergency access?	No	Less than Significant Impact	No	No	No

Proposed Project in relation to PEIR

(a) Circulation Plan Consistency. Although the vehicle miles traveled (VMT) methodology is now applied in evaluating potential transportation impacts of a project, the City's General Plan identifies standards for maintaining an adequate level of service (LOS) for City streets and intersections. To be consistent with the 2020 State CEQA Guidelines, a LOS analysis is not required for purposes of this CEQA analysis. However, a trip generation and a VMT assessment of the Project were prepared to determine if the Project would generate more traffic than was estimated for the SLVNSP or evaluated in its PEIR (UC 2021b-c)(see Appendices B and C).

Trip Generation. A traffic study was prepared for the PEIR, which evaluated the development of 877,298 square feet of industrial park use and 37,189 square feet of commercial retail use within the area bounded by the currently proposed Project. There were also medical office uses evaluated in the PEIR, but this portion of the SLVNSP is east and outside of the proposed Project boundary. Table 19 (Project Trip Generation vs. PEIR Estimate) indicates the portion of the SLVNSP within the Project boundaries would generate 3,844 actual-vehicle trips, or 4,530 Passenger Car Equivalent (PCE) trips, under the assumptions of the PEIR, which takes into account truck lengths when estimating vehicle trips.

A detailed Traffic Assessment (TA) was prepared for the proposed Project based on 619,959 square feet of warehousing space and 34,000 square feet of retail and fast-food commercial uses (Urban Crossroads, January 2021b, updated February 2022)(Appendix B). The TA assumed up to a quarter of the warehouse space was for cold storage, and the rest was for high-cube logistics warehousing. The TA assumed the commercial space along Sun Lakes Boulevard would be similar to that examined in the PEIR with the addition of a drive-through coffee establishment. The TA shows that the proposed Project would generate 2,292 actual-vehicle trips, or to 2,730 PCE trips, as shown in Table 19.

Table 19
Project Trip Generation vs. PEIR Estimate

Traffic Condition	AM Peak Hour	PM Peak Hour	Daily Total
PEIR Estimate (for Project area)			
Actual Vehicles	375	445	3,844
PCE[1]	440	498	4,530
Proposed Project			
Actual Vehicles	317	337	2,292
PCE[1]	340	359	2,730

Source: Tables 3 and 4, UC 2021b
[1] PCE = Passenger Car Equivalents based on the number of passenger cars and truck trips

As shown, the Project generates fewer trips than what was anticipated by the PEIR for the SLVNSP. This analysis is presented for informational purposes only because generation of trips, which affects the performance of intersections and road segments, no longer needs to be analyzed under CEQA, as automobile delay is no longer considered a significant environmental impact.

Transit. The PEIR stated that The Pass Transit System, which consists of two independent transit systems, the Banning Municipal Transit System and the Beaumont Municipal Transit System, provides for a coordinated bus service to the cities of Banning and Beaumont. Beaumont Transit has bus service along Highland Springs Avenue, 2nd Street, and 1st Street via Route, Route 4, and Community Link 120/125. Pass Transit has bus service along Highland Springs Avenue, 2nd Street, and 1st Street via Route 1, Route 5, and Route 6. The closest bus stop is within the Sun Lakes Village residential community located across Sun Lakes Drive just south of the Project site. There are no bus stops currently located on Sun Lakes Boulevard adjacent to the Project site. In addition, Sun Lakes Boulevard is a fully improved with curb, gutter, sidewalk, and a landscaped parkway adjacent to the Project site.

The Project applicant is proposing to construct two (2) access driveways on Sun Lakes Boulevard, which will be constructed to meet City standards. The driveways do not have the potential to preclude the availability of bus service to the Project site when it is completed. The existing transit routes could potentially serve the Project since transit service is reviewed and updated by Beaumont Transit and

Pass Transit periodically to address ridership, budget, and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. Therefore, any Project impacts will be less than significant and no mitigation is required.

Bicycle and Pedestrian Trails. According to the PEIR, there are existing pedestrian facilities, including sidewalks and crosswalks in the vicinity of the Project site that are available to serve the Project. The Circulation Element of the City General Plan does not indicate that this portion of Sun Lakes Boulevard will have a bicycle lane or trail associated with full improvements. However, Highland Springs Avenue south of Sun Lakes Boulevard has a bicycle lane on the west side of the street. Section 5.106.4.1.2 of the CalGreen Code requires that the Project provide secure bicycle parking which will be included at various locations throughout the Project site. Therefore, any Project impacts will be less than significant, and no mitigation is required.

Summary. Based on this information, the Project will not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities. Any impacts will be less than significant, and no mitigation is required.

(b) CEQA Guidelines Section 15064.3(b). The PEIR included an assessment of VMT impacts from the SLVNSP and concluded that VMT impacts were significant and could not be reduced to less than significant levels, even with implementation of Mitigation Measure VMT-1.

In response to Senate Bill (SB) 743, the California Natural Resource Agency certified and adopted new CEQA Guidelines in December 2018, which now identify Vehicle Miles Traveled (VMT) as the most appropriate metric to evaluate a project's transportation impact under CEQA (Section 15064.3). Effective July 1, 2020, the previous CEQA metric of level of service (LOS), typically measured in terms of automobile delay, roadway capacity and congestion, will no longer constitute a significant environmental impact.

In addition to the trip generation assessment (UC 2021b), a detailed VMT assessment was prepared for the Project (UC 2021c). To aid in the transition to VMT assessment, the Governor's Office of Planning and Research (OPR) released a Technical Advisory on Evaluating Transportation Impacts in CEQA Based on OPR's Technical Advisory. The City of Banning has developed their own *Traffic Impact Analysis Guidelines for Local Transportation Analysis and Vehicle Miles Traveled Analysis* (City Guidelines), which is currently in draft form and pending final City Council adoption. The draft City Guidelines were utilized to prepare this Project VMT analysis, which is consistent with the City's Guidelines.

Project Screening

The City's Guidelines provide details on appropriate "screening thresholds" that can be used to identify when a proposed land development project is anticipated to result in a less than significant impact without conducting a more detailed analysis. The applicable screening thresholds to the Project are broken into the following types: Transit Priority Area (TPA) Screening; Map-Based Screening based on Low VMT Area; Local-Serving Retail Screening; and Project Type Screening. A land development project need only meet one of the above screening thresholds to result in a less than significant impact. For the purposes of this analysis, the initial VMT screening process where applicable has been conducted using the WRCOG VMT Screening Tool (Screening Tool), which uses screening criteria consistent with the screening thresholds recommended in the City's Guidelines.

(1) TPA Screening

Consistent with guidance identified in the OPR Technical Advisory and City Guidelines, projects located within a Transit Priority Area (TPA) (i.e., within ½ mile of an existing "major transit stop"[i] or an existing stop along a "high-quality transit corridor"[ii]) may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a project:

- Has a Floor Area Ratio (FAR) of less than 0.75;
- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

Based on the Screening Tool results, the Project site is not located within ½ mile of an existing major transit stop, or along a high-quality transit corridor. Therefore, the TPA screening threshold is not met.

(2) Low VMT Area Screening

The City Guidelines state that, "proposed residential, office, industrial, or mixed-use projects, which are located within the low VMT zones identified after applying appropriate VMT analysis thresholds (provided later in this chapter) in the screening tool, and which do not require a GPA or COZ would be deemed to have less than significant impact." The Screening Tool uses the sub-regional Riverside County Transportation Analysis Model (RIVTAM) to measure VMT performance within individual traffic analysis zones (TAZ's) within the WRCOG region. The Project's physical location based on parcel number was selected within the Screening Tool to determine the relevant TAZ's VMT as compared to the jurisdictional average (see Attachment B). The Project boundary is located in TAZ 4344 and would appear to be within a low VMT generating TAZ based on daily home-based work (HBW) VMT per worker. Based on a review of the land use information contained within TAZ 4344 for the RIVTAM base year (2012) model, the zone includes very low levels of employment and low amounts of population and household data. The proposed Project would significantly increase the quantity and type of employment uses in the zone and would therefore not be entirely consistent with the underlying land use assumptions. Therefore, the Low VMT Area screening threshold is not met.

(3) Local Serving Retail Screening

The City Guidelines provide that local serving retail projects less than 50,000 square feet may be presumed to have a less than significant impact absent substantial evidence to the contrary. In addition to local serving retail, other types of local serving uses such as day care centers, non-destination hotels, affordable housing, places of worship, municipal services, and other local serving uses may also be

[i] Pub. Resources Code, § 21064.3 ("'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.").

[ii] Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

presumed to have a less than significant impact as they tend to shorten vehicle trips. The retail uses within the proposed Project do not exceed the 50,000 square feet screening threshold, and the retail uses are designed to be local-serving. The Project Type screening threshold is met for the Project's retail component only.

(4) Project Trip Screening

The City's Guidelines identifies that projects generating fewer than 500 daily vehicle trips (for projects requiring a GPA and fewer than 1,000 daily vehicle trips (for projects not requiring a GPA) are anticipated to meet the City's Project Trip Screening threshold and result in a less than significant impact. Based on the Project's forecasted trip generation (see UC 2021b), the Project would generate more than 1,000 daily vehicle trips. Therefore, the Project Trip screening threshold is not met.

Summary of Project Screening. The Project's retail component is anticipated to have a less than significant impact. Since none of the applicable land development screening criteria were met for the Project's industrial component, the VMT Analysis included more in-depth VMT analysis for the Project's industrial component only.

Industrial Assessment

The Riverside Transportation Analysis Model (RIVTAM) is a tool to estimate VMT as it considers interaction between different land uses based on socio-economic data such as population, households, and employment. The City Guidelines provide that until RIVCOM is released by WRCOG, RIVTAM is the appropriate tool for conducting VMT analysis for land use projects in the City. The Project's VMT was calculated using the most current version of RIVTAM. Adjustments in socioeconomic data (SED) (i.e., Project employment) was made to a separate TAZ within the RIVTAM model to reflect the Project's proposed employment uses (i.e., industrial). Table 20 (Project Employment Estimate) summarizes the employment estimate for the Project which is consistent with the land use to employment generation factors from the Riverside County General Plan.

Table 210
Project Employment Estimate

Land Use	Building Area (SF)	Building Area Per Employee (SF)	Estimated Employees[1]
Industrial	619,959	1,030	602

Source: Table 1, UC 2021c
[1] Riverside County General Plan Employment Factors

Consistent with recommendations contained in the City's Guidelines, calculation of VMT for "other land uses" that are not residential or retail land use types are evaluated using VMT per employee. For land uses where VMT per capita or VMT per employee are suitable metrics, the City Guidelines suggest the use of the Production-Attraction (PA) trip matrices be utilized. Using these matrices, Project generated VMT was calculated consistent with the PA matrices methodology identified in Section 5.4, Detail VMT Forecasting Methodology, of the City Guidelines. VMT is then normalized by dividing by the number of Project employees. As shown in Table 21 (Project VMT Per Employee), the Project's VMT per employee is 14.26 miles per worker.

Table 11
Project VMT Per Employee

VMT Characteristic	Baseline
Employment	602
VMT	8,582
HBW VMT/Workers[1]	14.26

Source: Table 2, UC 2021c
[1] HBW VMT/Workers is a measure of all auto trips between home and work and does not include heavy duty truck trips or freight, which is consistent with OPR direction and Riverside County VMT calculation guidelines.

The City's Guidelines provide VMT thresholds for their predominant land use types such as residential, office, and retail. For "other land uses," City Guidelines state the threshold as "any net increase in VMT per employee for uses that are consistent with the General Plan, and for projects seeking a GPA the threshold would be 10.9 VMT per employee". As the proposed Project is consistent with the SLVNSP Amendment No. 5, which is consistent with the General Plan, a threshold of no net increase in VMT per employee was utilized. The VMT per employee value previously calculated for the Amendment No. 5 is utilized as the impact threshold.

Table 22 (VMT Per Employee Comparison) provides a comparison between the Project's generated VMT per employee to the VMT per employee previously calculated by the PEIR for the SLVNSP Amendment No. 5. The VMT per employee value for the approved Amendment No. 5 was 14.33, while the Project's calculated VMT per employee value is 14.26. As shown in Table 22, the Project would not result in a net increase in VMT per employee and would therefore not result in a significant impact relative to VMT and CEQA Guidelines.

Table 12
VMT Per Employee Comparison

VMT Characteristic	Baseline VMT Per Employee
PEIR (Amendment No. 5)	14.33
Proposed Project	14.26
Difference (Project vs. PEIR)	-0.07
Net Increase?	No

Source: Table 3, UC 2021c

VMT Impact Summary. The Project's retail component falls below the City's adopted local serving retail screening threshold, and therefore the retail component of the Project has a less than significant VMT impact. The Project's industrial component was then evaluated and compared to the City's adopted impact threshold of no net increase in VMT per employee. The Project generated VMT per employee value was found to be less than that already disclosed by the PEIR for the approved Amendment No. 5 to the SLVNSP. Therefore, the Project's potential VMT impacts are less than significant, and no additional mitigation is required. However, the PEIR recommended Mitigation Measure VMT-1, which will be implemented as part of the proposed Project.

Mitigation Measures

VMT-1 **Pedestrian Network Improvements.** Prior to the issuance of a building permit, site plans for future development shall provide a pedestrian access network to link areas of the Project site internally and to Sun Lakes Boulevard.

The Project will have less than significant impacts regarding VMT, and although mitigation is therefore not required, the Project will include implementation of PEIR Mitigation Measure VMT-1.

(c) **Circulation Design Hazards.** The PEIR indicates this section of Sun Lakes Boulevard is fully improved with a curvilinear alignment but contains no geometric design features (e.g., sharp curves or dangerous intersections) that are considered hazardous. Final Project site plans will be subject to City review and approval, which will ensure that driveway intersections and internal circulation are safe, with adequate sight distance, driveway widths and stop signs for entering and exiting the site. The Project area is suburban in nature with no agricultural uses, so there is little potential for conflict with other uses. Therefore, the Project will have no impacts due to a hazardous geometric design feature or incompatible uses, and no mitigation is required.

(d) **Emergency Access.** Sun Lakes Boulevard provides immediate emergency access to the Project site, while regional access is provided by Highland Springs Avenue a quarter mile to the west with ramps to the I-10 Freeway immediately north of the site. Per state Fire and Building Codes, sufficient space will be provided around the building for emergency personnel and equipment to access the site. The warehouse will be required to comply with the California Fire Code in terms of emergency access to the building itself. The Project site plan includes three ingress/egress access points, one 40-foot wide signalized intersection off of Sun Lakes Boulevard, one 40-foot access road at the southeast corner of the site, and one 40-foot point from Sun Lakes Village Drive at the southwest corner of the Project site. The site plan also shows a minimum 24-foot wide fire lane around both the warehouse building and the commercial buildings. Therefore, the Project will not result in inadequate emergency access. Impacts will be less than significant, and no mitigation is required.

Conclusion. The PEIR concluded that VMT impacts of the SLVNSP/ Amendment No. 5 were significant even with mitigation. The PEIR determined the other transportation-related impacts were less than significant. A VMT assessment of the currently proposed Project shows that the Project would have less than significant impacts based on its current design. For consistency, the Project will also implement PEIR Mitigation Measure VMT-1. The Project's TA also shows that the Project will generate fewer trips than what was disclosed by the PEIR for the SLVNSP. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.18 – Tribal Cultural Resources

Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a Cultural Native American tribe, and that is:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Listed or eligible for listing in the California Register of Historical resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or	No	No Impact	No	No	No
b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	No	Less than Significant with Mitigation	No	No	No

Proposed Project in relation to PEIR

(a) Eligible for Listing. As described in the PEIR, the Project area has low sensitivity for prehistoric archaeological resources, and it is unlikely that intact, subsurface prehistoric archaeological deposits would be uncovered during Project construction. Sensitivity for encountering historic-age archaeological resources is considered low-to-moderate. However, the Project area lies within Stewart Ranch, and the land within the Project area was utilized for grazing, agricultural, and water control/conveyance purposes. This suggests that any subsurface historic artifacts and/or deposits that may be present would most likely reflect those activities (e.g., horse shoes, tacks, barbed wire, sparse occurrences of

tin cans and glass bottles, other water conveyance/control features, etc.) and would most likely not be considered historically significant. Thus, there is no impact, and no mitigation measures are required.

(b) Significant Tribal Resources. As described in the PEIR, the City consulted with the Morongo Band of Mission Indians under SB 18 and AB 52, and it was determined that tribal cultural resources may be encountered during grading activities. Therefore, the PEIR recommended Mitigation Measures TCR-1 through TCR-6, which will be implemented by the Project. No additional consultation is required for this consistency analysis.

Mitigation Measures

TCR-1 **Retain Qualified Professional Archaeological Monitor.** Prior to the issuance of a grading permit, the Applicant shall retain a qualified professional archaeological monitor who meets U.S. Secretary of the Interior Standards (SOI). The monitor shall be present during all ground disturbing activities to identify any known or suspected archaeological and/or cultural resources. The monitor will conduct an Archaeological Sensitivity Training, in conjunction with the Tribes Tribal Historic Preservation Officer (THPO). The training session will focus on what the archaeological and tribal cultural resources that may be encountered during earthmoving activities and the procedures to be followed in such an event.

TCR-2 **Archaeological Monitoring and Treatment Plan.** Prior to the issuance of a grading permit, the qualified archaeologist shall develop an Archaeological Monitoring and Treatment Plan to address the details, timing and responsibility of all archaeological and cultural resource activities that occur on the project site, in coordination with Tribe.

TCR-3 **Tribal Monitoring Agreement.** Prior to the issuance of grading permits, the applicant shall enter into a Tribal monitoring agreement with the Morongo Band of Mission Indians for the project. The Tribal Monitor shall be on-site during all ground disturbing activities including clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all water supply, electrical, and irrigation lines, and landscaping phases of any kind. The Tribal Monitor shall have the authority to temporarily divert, redirect, or halt the ground disturbance activities to allow identification, evaluation, and potential recovery of cultural resources.

TCR-4 **Specific Conditions.** The Morongo Band of Mission Indians requests the following specific conditions to be imposed in order to protect Tribal cultural, and/or archaeological resources within the project area. This includes cultural materials both on the surface and buried. Should human remains be encountered on the surface or during any and all ground-disturbing activity (i.e. grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all water supply, electrical, and irrigation lines, and landscaping phases, excavation of any kind), work in the immediate vicinity of the discovery shall immediately stop (within 100-foot buffer of the discovery), the area shall be protected, project personnel/observers restricted, and the County Coroner to be contacted pursuant to State and Safety Code §7050.5. and Public Resources Code (PRC) § 5097.98. In the event human remains are found and identified as Native American, the landowner shall also notify the City Planning Department so that the City can ensure PRC § 5097.98 is followed. No photographs are to be taken except by the Coroner.

a) In the event that Tribal Cultural Resources or other cultural resources are discovered during project development and construction, all work in the immediate vicinity of the discovery shall stop (within 60-foot buffer of the discovery) and the area protected by fencing

and guarding until a qualified archaeologist (i.e. meeting Secretary of the Interior standards) assesses the discovery. Overall project work may continue during this period of assessment.

b) If archaeological assessment indicates that significant Native American cultural resources or other cultural resources are present, a Treatment Plan must be prepared in consultation with the Tribe. The developer will notify the Lead Agency and contract with qualified Cultural Resources Management (CRM) firm to develop the Treatment Plan.

c) If requested by the Tribe, the developer or the project archaeologist shall, in good faith, immediately initiate consultation with the Morongo Band of Mission Indians regarding further actions to be taken including, but not limited to, avoidance, preservation in place, removal, and disposition.

TCR-5 **Inadvertent Discovery During Grading.** In the event that archaeological or tribal cultural resources are unearthed during ground-disturbing activities, ground-disturbing activities shall stop (within 60-foot buffer of the discovery) or shall be diverted away from the vicinity of the find, so that the find can be evaluated by the qualified Archaeologist. A treatment plan shall be developed by a qualified Archaeologist (meeting SOI standards) in consultation with the Tribe and the City Planning Department to include relinquishment of all artifacts through one of the following methods:

a) This reburial area of cultural resource items shall be away from any future impacts and reside in perpetuity. Reburial shall not occur until all cataloguing; analysis and any necessary special studies have been completed on the cultural resources. Details of contents and location of the reburial shall be documented in a Final Report and shall remain as confidential.

b) The Tribes Most Likely Descendant (MLD) may wish to rebury the human remains and/or associated funerary objects, as close to the place of their discovery, in an area that will not be subject to future disturbances and reside in perpetuity. The place(s) of reburial will not be disclosed by any party and is exempt from the California Public Records Act (California Government Code § 6254[r]). Reburial location of human remains will be determined by the landowner, City Planning Department, in consultation with the Tribes Most Likely Descendant (MLD).

c) Curation at a Riverside County Curation facility that meets federal standards per 36 CFR Part 79 and therefore will be professionally curated and made available to other archaeologists/researchers and tribal members for further study. The collection and associated records shall be transferred, including title, and are to be accompanied by payment of the fees necessary for permanent curation. Evidence shall be provided in the form of a letter from the curation facility identifying that archaeological materials have been received and that all fees have been paid.

TCR-6 **Documents.** Any and all cultural documents created as a part of the project (Archaeological Monitoring and Treatment Plans, isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to consulting Tribe.

Conclusion: With implementation of PEIR Mitigation Measures TCR-1 through TCR-6, the potential impacts to tribal cultural resources will be less than significant. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.19 – Utilities and Service Systems

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	No	Less than Significant Impact	No	No	No
b) Have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry and multiple dry years?	No	Less than Significant Impact	No	No	No
c) Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's Projected demand in addition to the provider's existing commitments?	No	Less than Significant Impact	No	No	No

Would the Project:

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	No	Less than Significant Impact	No	No	No
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	No	Less than Significant Impact	No	No	No

Proposed Project in relation to PEIR

(a) Utility Infrastructure. The PEIR indicated construction of the SLVNSP would require connections to existing water, wastewater treatment, storm water drainage, electric power, natural gas, or telecommunications facilities. The PEIR stated the Project area was already served by these utilities. Off-site utility improvements needed to serve the Project site would occur within existing improved rights of way and on-site within areas already planned for development by the Project. The PEIR concluded there were no components of the Project's proposed utility connections that would result in significant environmental impacts, and no mitigation was required.

(b) Sufficient Water Supplies. To assess the ultimate effect of the SLVNSP's water demands and service needs, the City of Banning Water Department has prepared a Water Supply Assessment (WSA) in accordance with SB 610 as part of the PEIR process. The SLVNSP was estimated to have a total annual water demand of 279 acre-feet per year (afy). The expected water demand for the entire SLVNSP was within the City's total projected water supplies available during normal, single dry, and multiple dry water years for the next 20 years. Therefore, the PEIR concluded there would be adequate water supplies to meet the projected water demand associated with the SLVNSP in addition to the existing and other planned future uses of the City's water system.

The proposed Project represents a large portion but not all of the approved SLVNSP land uses (i.e., it does not include 52,065 square feet of medical offices within the Office & Professional District). The proposed Project is also approximately 30 percent less intense (i.e., less warehouse and commercial development) than was evaluated in the PEIR. Since the WSA prepared for the SLVNSP addressed development in excess of the proposed Project, it can be concluded the City can provide sufficient water over the long-term to serve the proposed Project. Impacts are less than significant, and no mitigation is required.

(c) Wastewater Treatment Capacity. The PEIR indicated that wastewater flows collected within the City's service area are currently treated at one facility, the Banning Wastewater Treatment Plant. The plant has capacity to treat up to 3.6 million gallons per day (MGD) and treated an average of 2.07 MGD in 2016. According to the City, the entire SLVNSP was estimated to generate approximately 53,580 gpd (0.5 MGD) which represented 1.78% of the treatment plant's capacity in 2025 and 1.16% in 2040 (PEIR Table 12). The PEIR concluded this represented a less than significant impact, and no mitigation was required.

The proposed Project represents a large portion but not all of the development proposed within the SLVNSP. Since the PEIR concluded the wastewater from the entire SLVNSP was less than significant, then wastewater generated by the proposed Project would likewise be less than significant in terms of wastewater treatment capacity, and no mitigation is required.

(d) Solid Waste Infrastructure. The PEIR indicated that Waste Management Inc. is the franchise waste hauler for all customers in the City of Banning. The Riverside County Waste Management Department provides recycling and disposal services for the City. Solid waste generated by the SLVNSP would be disposed of at three landfill facilities in Riverside County, the Badlands Sanitary Landfill, the El Sobrante Landfill, and the Lamb Canyon Sanitary Landfill. These three landfills have a total combined capacity of 282.5 million cubic yards and a remaining (residual) capacity of approximately 180 million cubic yards of waste. The Badlands facility is expected to close in 2022, the Lamb Canyon facility in 2029, and the El Sobrante facility in 2051 (PEIR Table 13). The PEIR estimated the entire SLVNSP would generate approximately 1,689 tons or 6,255 cubic yards of solid waste per year. At that time, that amount of waste represented 0.018% of the remaining capacity of the Badlands Sanitary Landfill, 0.003% of the El Sobrante Sanitary Landfill, and 0.0001% of the Lamb Canyon Sanitary Landfill. Therefore, the PEIR concluded the Project's solid waste would not make a significant contribution to the landfill capacity and that current landfill facilities were sufficient. Impacts would be less than significant, and no mitigation was required.

The proposed Project represents a large portion but not all of the development proposed within the SLVNSP. Since the PEIR concluded the solid waste generated by the entire SLVNSP was less than significant in terms of landfill capacity, the wastes generated by the proposed Project would likewise be less than significant, and no mitigation is required.

(e) Solid Waste Regulations. As described in the PEIR Initial Study, the Project operator(s) would be required to coordinate with the waste hauler to develop collection of recyclable materials for the commercial facility on a common schedule as set forth in applicable local, regional, and State programs. Recyclable materials that would be recycled by the commercial facility include paper products, glass, aluminum, and plastic. Additionally, the Project's waste hauler would be required to comply with all applicable local, State, and Federal solid waste disposal standards, thereby ensuring that the solid waste stream to the landfills that serve the commercial facility are reduced in accordance with existing regulations. This potential impact would be considered less than significant.

Conclusion. The PEIR concluded that utility and service demands of the entire SLVNSP were less than significant, and no mitigation was required. Since the proposed Project is a large portion but not all of the development planned under the SLVNSP, the proposed Project would also have less than significant impacts related to utilities and services. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.20 – Wildfire

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

		Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a)	Substantially impair an adopted emergency response plan or emergency evacuation plan?	No	No Impact	No	No	No
b)	Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of wildfire?	No	No Impact	No	No	No
c)	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities), that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	No	No Impact	No	No	No
d)	Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	No	No Impact	No	No	No

Proposed Project in relation to PEIR

(a) through (d). As described in the PEIR Initial Study, the Project site is not located in or near state responsibility areas or lands classified as very high fire hazard severity zones, and no impact would occur. The Project would be within the scope of what is permitted by the SLVNSP and what was evaluated in the PEIR and would not produce new or substantially more severe environmental impacts. As such, no subsequent environmental analysis and no new mitigation are required.

4.21 – Mandatory Findings of Significance

	Effect Not Examined in Program EIR?	Conclusion in Program EIR?	Proposed Changes Involving New or More Severe Impacts?	New Circumstances Involving New or More Severe Impacts?	New Information Showing New or More Severe Impacts?
a) Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	No	Less than Significant with Mitigation	No	No	No
b) Does the Project have impacts that are individually limited, but cumulatively considerable?	No	Less than Significant with Mitigation	No	No	No
c) Does the Project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	No	Less than Significant Impact	No	No	No

(a) **Significant Biological or Cultural Impacts.** The PEIR identified no endangered or threatened species on or supported by the Project site. As stated in Section 4.4, development of the proposed Project would not cause a fish or wildlife population to drop below self-sustaining levels or restrict the movement/distribution of a rare or endangered species. Development of the proposed Project would result in the conversion of approximately 37.05 acres of vacant, disturbed land to industrial warehouse and retail commercial uses. The proposed Project would not affect any threatened or endangered species or habitat. Impacts to migratory birds, the burrowing owl, and nesting bird species would be mitigated to a less than significant level with adherence to **Mitigation Measures BIO-1 through BIO-3** from the PEIR, which require burrowing owl and nesting surveys prior to ground-disturbing activities, as well as protection for native trees. Potential impacts to onsite biological resources are reduced to a less than significant level with adherence to the identified mitigation measures.

The site once supported the Stewart Ranch but there are no known unique ethnic or cultural values associated with the site, nor are there any Native American, religious, or sacred uses associated with the Project site. There are also no structures present that would be eligible for listing in either the National Register of Historic Places or the California Register of Historical Resources, so they are not considered historical resources under CEQA, and thus there will be no significant impacts resulting from the development of the Project on these resources. **Mitigation Measures TCR-1 through TCR-6 and GEO-1** have been identified to mitigate potential impacts associated with the discovery of unanticipated subsurface historical, archaeological, tribal cultural, and/or paleontological resources (respectively) during excavation operations. Adherence to regulatory requirements and the recommended mitigation measures would reduce potential impacts associated with cultural, historic, or paleontological resources to a less than significant level.

(b) **Cumulative Impacts.** The proposed Project site is located within an area that has been designated for industrial and commercial uses. The PEIR determined that air quality and greenhouse gas impacts from short-term construction and long-term operation of the SLVNSP would be significant, even with adherence to **Mitigation Measures AQ-1 through AQ-6 and GHG-1 through GHG-6** identified in the PEIR. Potential cumulative impacts related to geology and soils (regarding erosion) and water quality are addressed by regulatory compliance regarding erosion control.

The type, scale, and location of the proposed Project is consistent with and less intense than that evaluated in the PEIR, and the Project is consistent with the General Plan and the SLVNSP (zoning) for the Project site. Because of this consistency, the other potential cumulative environmental effects of the proposed Project would fall within those already identified in the PEIR. Therefore, no cumulative impact greater than those identified in the PEIR would result from either the construction or occupation of the proposed Project and implementation of the recommended Project mitigation.

(c) **Substantial Adverse Effects on Human Beings.** As detailed in the preceding responses, development of the proposed Project would not result, either directly or indirectly, in adverse effects to human beings. Short- and long-term construction noise impacts are addressed by **Mitigation Measures NOI-1 and NOI-2**, and no significant noise impacts are anticipated to occur with the implementation of the proposed Project.

As documented in the PEIR, development of the Project site will not result in any significant direct or cumulative impacts related to hydrology (in terms of flooding), hazards, or hazardous materials. In addition, the Health Risk Assessment prepared for the Project shows that there would be no significant cancer or non-cancer health risks from the proposed warehouse or commercial uses on nearby sensitive receptors, so mitigation is not required.

Mitigation Monitoring and Reporting Program

Project: City of Banning – Banning Point Project ***Date: February 10, 2022***

**** denotes mitigation measure is from the Sun Lakes Village North Specific Plan EIR***

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
Air Quality	**AQ-1* Use Low VOC Paint.** To reduce VOC emissions associated with architectural coating, the project designer and contractor shall reduce the use of paints and solvents by utilizing pre-coated materials (e.g. bathroom stall dividers, metal awnings), materials that do not require painting, and require coatings and solvents with a VOC content lower than required under Rule 1113 to be utilized. The construction contractor shall be required to utilize "Super Compliant" VOC paints, which are defined in SCAQMD's Rule 1113. Construction specifications shall be included in building specifications that assure these requirements are implemented. The specifications for each implementing development project shall be reviewed by the City of Banning's Building and Safety Division for compliance with this mitigation measure prior to issuance of a building permit.	Prior to issuance of a building permit	Building and Safety Division	Plans to specify use of Low VOC coatings
Air Quality	**AQ-2* Grading Limitations.** During the City's review process for applications under the Specific Plan, the applicant shall conduct or shall have conducted modeling of the regional and the localized emissions (NOx, CO, PM10, and PM2.5) associated with the maximum daily grading activities estimated for the proposed individual developments one acre or larger. If the modeling shows that emissions would exceed the SCAQMD's significance thresholds for those emissions, the maximum daily grading activities of the proposed development shall be limited to the extent that could occur without resulting in emissions in excess of SCAQMD's significance thresholds for those emissions. For implementing projects within the Specific Plan, the applicant shall be responsible for submitting a focused project level air quality assessment that includes the modeling of localized on-site emissions associated with daily grading activities anticipated for the proposed development.	Prior to issuance of a grading permit	Planning Division	Submit air quality study for review and approval
Air Quality	**AQ-3* Electrical Hookups for Loading Docks.** Trucks accessing the Project site may have auxiliary power units (APU) and/or transport refrigeration units (TRUs). Therefore, electrical hookups shall be	Prior to issuance of a Certificate of Occupancy	City Inspectors	Verify installation of electrical hookups

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
	installed at all loading docks, and to reduce/replace APU use while trucks are parked along the docks, to allow trucks with APU and/or TRUs with electric standby capabilities to plug in when TRUs are in use to reduce diesel fuel consumption and resulting NOx emissions. The City shall verify electrical hookups have been installed prior to occupancy.			
Air Quality	**AQ-4* Idling Limits.** All facilities shall post signs informing users of requirements limiting idling to five minutes or less pursuant to Title 13 of the California Code of Regulations, Section 2485 in order to reduce diesel fuel consumption and resulting NOx emissions. No overnight/long-term parking will be allowed. The City shall verify signage has been installed prior to occupancy.	Prior to issuance of a Certificate of Occupancy	City Inspectors	Verify installation of signs
Air Quality	**AQ-5* Electric or Natural Gas Service Equipment.** Service equipment (i.e., yard hostlers and forklifts) used within the site shall be electric or compressed natural gas powered to reduce diesel fuel consumption and resulting NOx emissions.	Prior to issuance of a Certificate of Occupancy	Planning Division	Owner/Lessee to provide documentation of vehicle fuel sources
Air Quality	**AQ-6* Electric Vehicle Charging Stations.** Prior to approval of implementing commercial plot plan(s) within the Project the City of Banning Planning Division shall ensure that the plot plan(s) include a minimum of three (3) electric-vehicle charging stations. The electric vehicle charging stations also shall be depicted on building plans for implementing development within Project site. Prior to issuance of occupancy permits for the proposed commercial land uses within the Project site, the City of Banning Building and Safety Department shall ensure that a minimum of three electric vehicle charging stations have been installed on-site.	Prior to approval of implementing plot plan and Certificate of Occupancy	Planning Division	Verify charging stations on site plan
	AQ-7* Heath Risk Assessment. During the City's review process for any future development applications under the Specific Plan that proposes a warehouse or distribution project, the applicant shall submit a Health Risk Assessment pursuant to the "Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis." If the modeling shows that emissions would exceed the SCAQMD's significance thresholds for those emissions, the following performance-based measures shall be required in order to reduce emissions to less than significant levels. The measures shall include the following:	During project application review and processing	Planning Division	Submit Health Risk Assessment report. This report has been prepared and is included with this Addendum for review and approval by the City

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
	1) Prior to the issuance of any grading permits, the applicant and/or building operators shall submit construction plans and a construction vehicle management plan to the City of Banning denoting the proposed schedule and projected equipment use. The construction vehicle management plan shall include such things as: idling time requirements; requiring hour meters on equipment; and documenting the serial number, horsepower, age, and fuel of all onsite equipment. The plan shall include that California state law requires equipment fleets to limit idling to no more than 5 minutes. Construction contractors shall provide evidence that low emission mobile construction equipment will be utilized or that their use was investigated and found to be infeasible for the project as determined by the City. 2) Prior to issuance of an occupancy permit, the operator of a warehouse/distribution center use shall place signs that identify CARB anti-idling regulations. At a minimum, each sign shall include: 1) instructions for truck drivers to shut off engines when not in use; 2) instructions for trucks drivers to restrict idling to no more than 5 minutes once the vehicle is stopped, the transmission is set to "neutral" or "park", and the parking brake is engaged; and 3) telephone numbers of the building facilities manager and CARB to report violations. 3) Prior to the issuance of an occupancy permit for a warehouse/distribution center use, the City shall require operators of the proposed facilities to encourage the vendor trucks to incorporate energy efficiency improvement features through the Carl Moyer Program— including truck modernization, retrofits, and/or aerodynamic kits and low rolling resistance tires—to reduce fuel consumption. 4) Prior to the issuance of a building permit for a warehouse/distribution center use, the building shall be designed to provide infrastructure to support use of electric-powered forklifts and/or other on-site equipment.			
Biological Resources	**BIO-1* Pre-Construction Burrowing Owl Survey.** Within 30 calendar days prior to grading, a qualified biologist shall implement focused preconstruction surveys. Surveys shall be conducted by a	Within 30 days prior to the start of grading	Planning Division	Developer shall retain qualified biologist and

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
	CDVW-approved biologist prior to the initiation of ground disturbance (including but not limited to mobilization and staging, clearing, grubbing, vegetation removal, fence installation, demolition, and grading). In conformance with Burrowing Owl Survey instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area (2006) and California Burrowing Owl Consortium's 1993 protocols (which are recommended by the CDFW), the surveys will consist of a minimum of three site visits. A brief biological technical report will be prepared and submitted to the City that describes the results of the preconstruction survey. The report shall be reviewed by the City prior to the issuance of a grading permit. If the preconstruction survey does not identify burrowing owls in the impact area, a grading permit may be issued without restriction. If it is determined that burrowing owls have colonized the project site prior to the initiation of construction, the project proponent shall immediately inform RCA, USFWS, and CDFW and will be required to prepare a Burrowing Owl Protection and Relocation Plan for approval by RCA, USFWS, and CDFW prior to initiation of ground disturbance. If burrowing owls are determined to be present in areas proposed for ground disturbance, the following avoidance measures will be implemented: a. Occupied burrows shall not be disturbed during the nesting season (March 1 through August 31) unless a qualified biologist approved by CDFW verifies through noninvasive methods that either the birds have not begun egg laying and incubation or that juveniles from the occupied burrows are foraging independently and are capable of independent survival. Owls on-site after March 1 will be assumed to be nesting unless evidence indicates otherwise. This nest protection buffer will be maintained until August 31 or based on monitoring evidence, until the young owls are foraging independently or the nest is no longer active. Unless otherwise authorized by CDFW and/or the RCA, a 250-foot buffer, within which no activity will be permissible, will be maintained between project activities and nesting burrowing owls during the nesting season. This protected area will remain in effect until August 31 or based upon monitoring evidence, until the young owls are foraging independently. For burrowing owls present during the	If owls found onsite prior to grading	Planning Division	submit study to City for review and approval Biologist to prepare a Burrowing Owl Protection and Relocation Plan and submit to resource agencies for review and approval

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
	nonbreeding season (generally September 1 to January 31), a 150-foot buffer zone will be maintained around the occupied burrow(s). b. If there is any possibility that owls will be injured or killed as a result of construction activities, the birds may be passively relocated during the nonbreeding season in coordination with the City, RCA, and CDFW. Relocation of owls will be performed by a qualified biologist using one-way doors, which should be installed in all burrows within the impact area and left in place for at least two nights. Immediately prior to the initiation of grading, these one-way doors will be removed and the burrows backfilled. To avoid the potential for owls evicted from a burrow to occupy other burrows in the impact area, one- way doors will be placed in all potentially suitable burrows in the impact area when eviction occurs. c. Preparation of a Burrowing Owl Protection and Relocation Plan may be required if active and/or passive relocation is necessary. The relocation plan will outline the basic process and provides options for avoidance and mitigation. The relocation plan will be approved by the RCA, USFWS, and CDFW prior to implementation.			
Biological Resources	**BIO-2* Nesting Bird Survey.** Prior to the issuance of a grading permit, the City of Banning Planning Department shall ensure vegetation clearing and ground disturbance shall be prohibited during the migratory bird nesting season (February 1 through August 31), unless a migratory bird nesting survey is completed in accordance with the following requirements: a) A migratory nesting bird survey of the Project's impact footprint shall be conducted by a qualified biologist within three business (3) days prior to initiating vegetation clearing or ground disturbance. b) A copy of the migratory nesting bird survey results report shall be provided to the City of Banning Planning Department. If the survey identifies the presence of active nests, then the qualified biologist shall provide the Planning Department with a copy of maps showing the location of all active nests and an appropriate buffer zone around each nest sufficient to protect the nest from direct and indirect impact. The size and location of all buffer zones as determined by a qualified biologist, shall be subject to review and approval by the Planning	Provide setbacks if active nests are found per BIO-1	Planning Division	Monitoring by qualified biologist if needed during grading with final report upon completion

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
	Department. The nests and buffer zones shall be field checked weekly by a qualified biological monitor. The approved buffer zone shall be marked in the field with construction fencing, within which no vegetation clearing or ground disturbance shall commence until the qualified biologist and Planning Department verify that the nests are no longer occupied and the juvenile birds can survive independently from the nests.			
Biological Resources	**BIO-3* Native Tree Removal.** Native trees to be impacted by development of projects pursuant to the Specific Plan shall be assessed by a certified arborist as to the viability and value of the trees to determine if mitigation and replacement are required. Removal of healthy, shade-providing, and aesthetically valuable trees shall be strongly discouraged and shall conform with the policies and programs of the City of Banning General Plan. A tree removal and replacement plan shall be required for the removal and replacement of all trees more than 50 years of age unless their removal is required to protect the public health and safety. Each identified tree removed shall be replaced with at least one 36-inch box specimen tree, in addition to any other required landscaping.	Prior to removal of onsite trees	Planning Division	Arborist to certify removal of trees as appropriate per tree removal and replacement plan
Geology and Soils	**GEO-1* Paleontological Resource Impact Mitigation Program.** Prior to the issuance of a grading permit, the Project Proponent shall prepare a paleontological resource impact mitigation program (PRIMP) for the grading and excavation phase of the Project, including both on- and off -site activities. The PRIMP shall be submitted for review and approval to the City of Banning Community Development Department and shall conform to the guidelines of the Society of Vertebrate Paleontology; including the following: a) A trained paleontological monitor shall be present during initial mass grading or deep trenching activities within the Project in sediment areas determined likely to contain paleontological resources. If paleontological resources are located within excavation, the monitoring program will change to full-time. The monitor shall be empowered to temporarily halt or redirect construction activities to ensure avoidance of adverse impacts to paleontological resources. The monitor shall be equipped to rapidly remove any large fossil specimens encountered during excavation. During monitoring, samples shall be collected and processed to recover microvertebrate fossils. Processing shall include wet screen washing and microscopic	Prior to issuance of a grading permit	Planning Division	Proof qualified paelontologist has been retained and PRIMP has been prepared, approved, and implemented

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
	examination of the residual materials to identify small vertebrate remains. b) Upon encountering a large deposit of bone, salvage of all bone in the area shall be conducted in accordance with modern paleontological techniques. c) All fossils collected during the Project shall be prepared to a reasonable point of identification. Excess sediment or matrix shall be removed from the specimens to reduce the bulk and cost of storage. Itemized catalogs of all material collected and identified shall be provided to the museum repository along with the specimens. d) A report documenting the results of the monitoring and salvage activities and the significance of the fossils will be prepared. All fossils collected during this work, along with the itemized inventory of these specimens, shall be deposited in a museum repository for permanent curation and storage. e) All fossils collected during this work, along with the itemized inventory of these specimens, shall be deposited in a museum repository for permanent curation and storage.			
Greenhouse Gas Emissions	**GHG-1* GHG Reduction Documentation.** Prior to the issuance of a building permit, documentation that the following GHG reduction measures shall be implemented by future development projects is required. Documentation may consist of a letter stating how the project will comply and identify the verification mechanism for each measure required below (e.g., shown on building plans, landscaping plans, etc.) 1. The project shall devise a comprehensive water conservation strategy to reduce water use during project operation. The strategy will include the following: • Install drought-tolerant plants for landscaping. • Install water-efficient irrigation systems, such as weather-based and soil-moisture- based irrigation controllers and sensors, for landscaping according to the California	Prior to issuance of a building permit	Planning Division	Verification letter accepted demonstrating compliance

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
	Department of Water Resources Model Efficient Landscape Ordinance. • Ensure that all landscape and irrigation measures follow the City of Banning's Landscaping and Water Conservation requirements.			
Greenhouse Gas Emissions	**GHG-2* Building Design.** The project will design building shells, building components, such as windows, roof systems and electrical systems to meet 2016 Title 24 Standards (or applicable requirements in effect at the time a building permit is applied for).	Prior to issuance of a building permit	Community Development Department	Review and approve Title 24 calculations
Greenhouse Gas Emissions	**GHG-3* LEED Features.** Buildings will be designed to provide CALGreen Standards with Leadership in Energy and Environmental Design (LEED) features for potential certification and will employ energy and water conservation measures in accordance with such standards. This includes design considerations related to the building envelope, HVAC, lighting, and power systems. Additionally, the architectural expression such as roofs and windows in the buildings will relate to conserving energy.	Prior to issuance of a building permit	Community Development Department	Provide proof of LEED compliance
Greenhouse Gas Emissions	**GHG-4* Energy Efficient Lighting.** Prior to the issuance of a building permit, building plans shall require that high-efficiency lighting (such as LED lighting that is 34 percent more efficient than fluorescent lighting) be installed within buildings on-site.	Prior to issuance of a building permit	Community Development Department	Plans demonstrate high efficiency lighting to be installed
Greenhouse Gas Emissions	**GHG-5* Efficient Building Materials/Equipment.** The project will utilize building materials/methods and heating equipment that are efficient and reduce emissions that may include, but not limited to, high-efficiency heat pumps; thin insulating materials; windows and building surfaces with tunable optical properties; high efficiency lighting devices; improved software for optimizing building design and operation; low cost, easy to install, energy harvesting sensors and controls; interoperable building communication systems; and optimized control strategies.	Prior to issuance of a building permit	Community Development Department	Plans demonstrate specified materials and equipment provided
Greenhouse Gas Emissions	**GHG-6* Reduce Indoor Water Demand.** Prior to the issuance of a building permit, building plans shall require that all faucets, toilets, and showers installed in the proposed structures utilize low-flow fixtures that would reduce indoor water demand by 20% per CalGreen Standards.	Prior to issuance of a building permit	Community Development Department	Plans demonstrate specified materials and equipment provided
Noise	**NOI-1* Construction Noise Mitigation Plan.** Prior to issuance of grading and/or building permits, a note shall be provided on grading and building plans indicating that ongoing during grading and	Prior to issuance of a grading or building permit	Planning Division	Plans demonstrate compliance with restrictions

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
	construction, the property owner/developer shall be responsible for requiring contractors to implement the following measures to limit construction-related noise: 1) The project applicant shall limit construction activities to the daytime hours between 7 AM to 6 PM, as prescribed in Section 8.44.090(E) of the City's Municipal Code. 2) For all project construction zones, all internal combustion engines on construction equipment and trucks are fitted with properly maintained mufflers consistent with manufacturer's standards. 3) For all project construction zones, stationary equipment such as generators, air compressors shall be located as far as feasible from nearby noise-sensitive uses. If such stationary equipment produces noise emissions that are directional, said equipment shall be oriented to direct noise emissions away from sensitive receptors. 4) For all project construction zones, stockpiling and staging should be located as far as feasible from nearby noise-sensitive receptors. 5) For construction activity within 50 feet of any noise-sensitive receptors, a temporary noise barrier shall be installed by the applicant/developer. This temporary noise barrier shall be installed prior to the onset of construction and be located between the single-family residences, senior apartments/assisted living/memory care residential facility and the construction zone and all sensitive receptors. The temporary sound barrier shall provide a reduction in noise that will meet the City's construction noise threshold of 55 dBA. The noise barrier shall be a minimum height of 8 feet and be free of gaps and holes and must achieve a Sound Transmission Class (STC) of 35 or greater. The barrier can be either (a) a ¾-inch-thick plywood wall OR (b) a hanging blanket/curtain with a surface density or at least 2 pounds per square foot. For either configuration, the construction side of the barrier shall have an exterior lining of sound absorption material with a Noise Reduction Coefficient (NRC) rating of 0.7 or higher.			
Noise	**NOI-2* Final Acoustical Report.** Prior to issuance of the first building permit for any project, the property owner/developer shall submit a	Prior to issuance of the first building permit	Planning Division	Submit final acoustical report

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
	final acoustical report prepared to the satisfaction of the Planning Director to address potential noise impacts to nearby residences. The report shall demonstrate that the project incorporates sufficient noise-attenuation features if needed so that the City's exterior and interior standards in Municipal Code Sections 8.44.070 and 8.44.090(E) and 4.10 NOISE 4.10-11 in the City's Noise Element are maintained at nearby residences. Compliance can be achieved with (a) sufficient buffering distances so that nearby sensitive receptors are not significantly impacted by future commercial development OR (b) sufficiently high and long sound barrier wall(s) that are placed between commercial noise sources and receptors (for example, in the case of garbage compactor equipment) OR (c) other adequate noise reduction methods that are approved by the Planning Director or their designee. In all cases, the noise reduction measures shall be technically demonstrated to achieve the appropriate target noise level(s) for both exterior and interior environments for nearby residences, as appropriate (e.g., sufficient wall or berm height, sufficient buffering distance, appropriate sound encapsulation/insulation methods, etc.). The individual project owner/developer shall submit the noise mitigation report to the Planning Director for review and approval. Upon approval by the City, the project acoustical design features shall be incorporated into the future development.			for review and approval. This report has been prepared and is included with this Addendum for review and approval by the City
Trans-poration	**VMT-1* Pedestrian Network Improvements.** Prior to the issuance of a building permit, site plans for future development shall provide a pedestrian access network to link areas of the Project site internally and to Sun Lakes Boulevard.	Prior to issuance of a building permit	Planning Division	Verify plans show required pedestrian network improvements
Tribal Cultural Resources	**TCR-1* Retain Qualified Professional Archaeological Monitor.** Prior to the issuance of a grading permit, the Applicant shall retain a qualified professional archaeological monitor who meets U.S. Secretary of the Interior Standards (SOI). The monitor shall be present during all ground disturbing activities to identify any known or suspected archaeological and/or cultural resources. The monitor will conduct an Archaeological Sensitivity Training, in conjunction with the Tribes Tribal Historic Preservation Officer (THPO). The training session will focus on what the archaeological and tribal cultural resources that may be encountered during earthmoving activities and the procedures to be followed in such an event.	Prior to issuance of grading permits or any ground-disturbing activities	Planning Division	Provide staff training and monitor grading

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
Tribal Cultural Resources	**TCR-2* Archaeological Monitoring and Treatment Plan.** Prior to the issuance of a grading permit, the qualified archaeologist shall develop an Archaeological Monitoring and Treatment Plan to address the details, timing and responsibility of all archaeological and cultural resource activities that occur on the project site, in coordination with Tribe.	Prior to issuance of grading permits or any ground-disturbing activities	Planning Division	Prepare, submit, and obtain approval of Archaeological Monitoring and Treatment Plan
Tribal Cultural Resources	**TCR-3* Tribal Monitoring Agreement.** Prior to the issuance of grading permits, the applicant shall enter into a Tribal monitoring agreement with the Morongo Band of Mission Indians for the project. The Tribal Monitor shall be on-site during all ground disturbing activities including clearing, grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all water supply, electrical, and irrigation lines, and landscaping phases of any kind. The Tribal Monitor shall have the authority to temporarily divert, redirect, or halt the ground disturbance activities to allow identification, evaluation, and potential recovery of cultural resources.	Prior to issuance of grading permits or any ground-disturbing activities	Planning Division	Provide signed copy of tribal agreement to the City
Tribal Cultural Resources	**TCR-4* Specific Conditions.** The Morongo Band of Mission Indians requests the following specific conditions to be imposed in order to protect Tribal cultural, and/or archaeological resources within the project area. This includes cultural materials both on the surface and buried. Should human remains be encountered on the surface or during any and all ground-disturbing activity (i.e. grubbing, tree and bush removal, grading, trenching, fence post placement and removal, construction excavation, excavation for all water supply, electrical, and irrigation lines, and landscaping phases, excavation of any kind), work in the immediate vicinity of the discovery shall immediately stop (within 100-foot buffer of the discovery), the area shall be protected, project personnel/observers restricted, and the County Coroner to be contacted pursuant to State and Safety Code §7050.5. and Public Resources Code (PRC) § 5097.98. In the event human remains are found and identified as Native American, the landowner shall also notify the City Planning Department so that the City can ensure PRC § 5097.98 is followed. No photographs are to be taken except by the Coroner.	During grading or other ground-disturbing activities	Planning Division	Contact/coordinate with County Coroner and tribal groups as appropriate

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
	A) In the event that Tribal Cultural Resources or other cultural resources are discovered during project development and construction, all work in the immediate vicinity of the discovery shall stop (within 60-foot buffer of the discovery) and the area protected by fencing and guarding until a qualified archaeologist (i.e. meeting Secretary of the Interior standards) assesses the discovery. Overall project work may continue during this period of assessment. B) If archaeological assessment indicates that significant Native American cultural resources or other cultural resources are present, a Treatment Plan must be prepared in consultation with the Tribe. The developer will notify the Lead Agency and contract with qualified Cultural Resources Management (CRM) firm to develop the Treatment Plan. C) If requested by the Tribe, the developer or the project archaeologist shall, in good faith, immediately initiate consultation with the Morongo Band of Mission Indians regarding further actions to be taken including, but not limited to, avoidance, preservation in place, removal, and disposition.			
Tribal Cultural Resources	**TCR-5* Inadvertent Discovery During Grading.** In the event that archaeological or tribal cultural resources are unearthed during ground-disturbing activities, ground-disturbing activities shall stop (within 60-foot buffer of the discovery) or shall be diverted away from the vicinity of the find, so that the find can be evaluated by the qualified Archaeologist. A treatment plan shall be developed by a qualified Archaeologist (meeting SOI standards) in consultation with the Tribe and the City Planning Department to include relinquishment of all artifacts through one of the following methods: A) This reburial area of cultural resource items shall be away from any future impacts and reside in perpetuity. Reburial shall not occur until all cataloguing; analysis and any necessary special studies have been completed on the cultural resources. Details of contents and location of the reburial shall be documented in a Final Report and shall remain as confidential. B) The Tribes Most Likely Descendant (MLD) may wish to rebury the human remains and/or associated funerary objects, as close to the	During grading or other ground-disturbing activities	Planning Department	Halt work and development/ implement a treatment plan

Impact Category	Mitigation Measures*	Implementation Timing	Responsible Monitoring Party	Monitoring/ Reporting Method
	place of their discovery, in an area that will not be subject to future disturbances and reside in perpetuity. The place(s) of reburial will not be disclosed by any party and is exempt from the California Public Records Act (California Government Code § 6254[r]). Reburial location of human remains will be determined by the landowner, City Planning Department, in consultation with the Tribes Most Likely Descendant (MLD). C) Curation at a Riverside County Curation facility that meets federal standards per 36 CFR Part 79 and therefore will be professionally curated and made available to other archaeologists/researchers and tribal members for further study. The collection and associated records shall be transferred, including title, and are to be accompanied by payment of the fees necessary for permanent curation. Evidence shall be provided in the form of a letter from the curation facility identifying that archaeological materials have been received and that all fees have been paid.			
Tribal Cultural Resources	**TCR-6* Documents.** Any and all cultural documents created as a part of the project (Archaeological Monitoring and Treatment Plans, isolate records, site records, survey reports, testing reports, etc.) shall be supplied to the applicant and Lead Agency for dissemination to consulting Tribe.	Within 60 days of completion of grading if AMTP documents produced	Planning Department	Qualified archaeologist provides AMTP documents to City

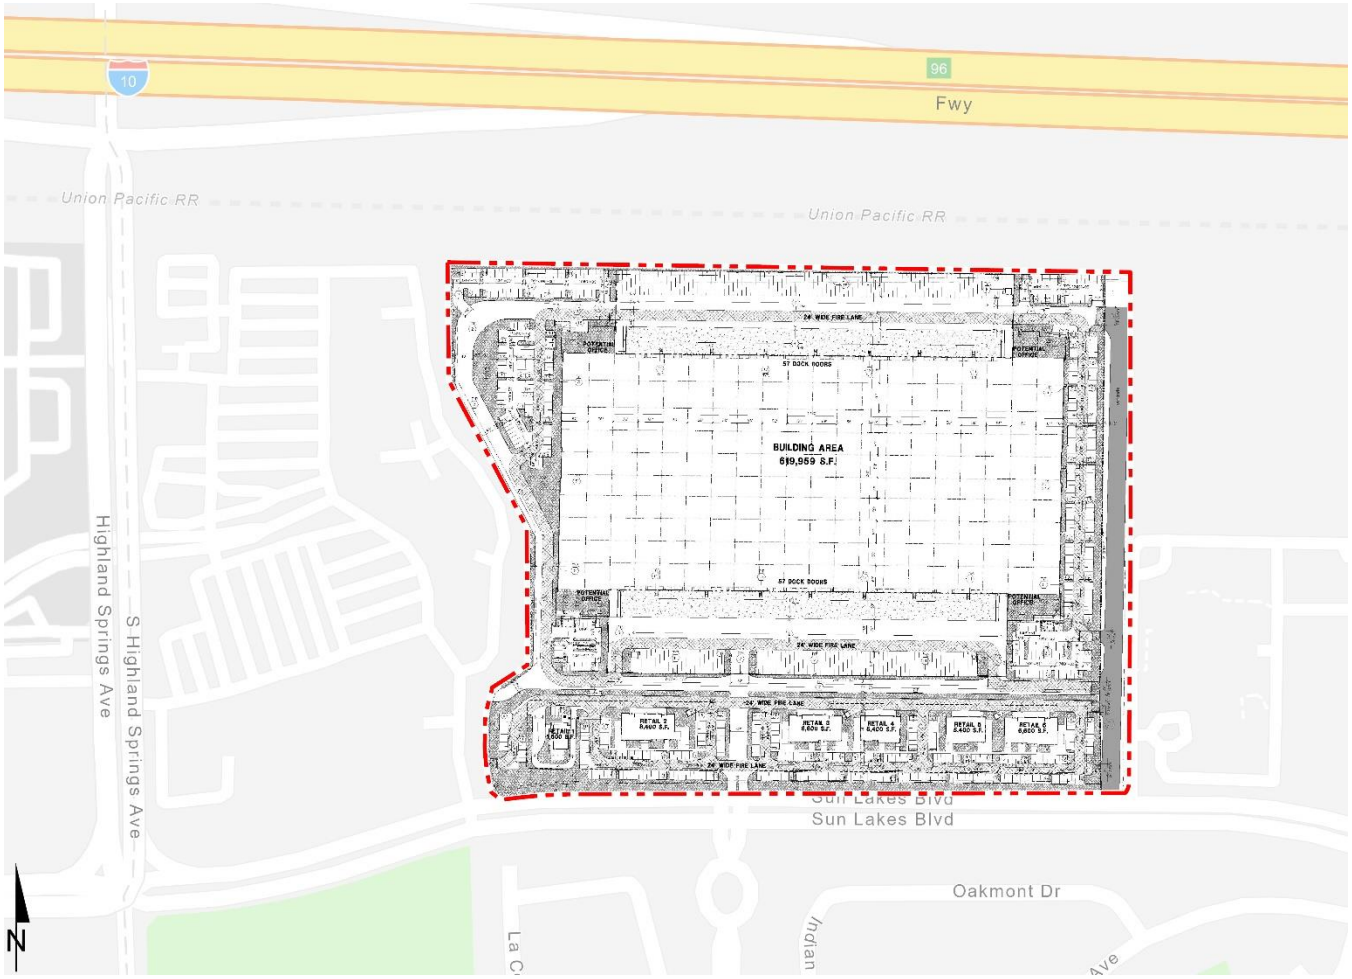
Banning, CA 92220

SUBJECT: BANNING POINT AIR QUALITY, GREENHOUSE GAS, & HEALTH RISK ASSESSMENT MEMORANDUM

Dear Mr. Adam Rush:

Urban Crossroads, Inc. is pleased to provide the following Air Quality, Greenhouse Gas, & Health Risk Assessment Memorandum for the Banning Point Project ("Project"), which is located on the northeast corner of Sun Lake Village Drive and Sun Lake Boulevard in the City of Banning, as shown on Exhibit A. The nearest sensitive residential land uses are located east and south of the project site. Specifically, the following assessment has been prepared in support of the proposed Project CEQA Addendum/Consistency Checklist to determine whether the proposed Project would result in new or substantially different air quality, greenhouse gas, or health risk impacts than those considered and addressed in the Sun Lakes Village North Specific Plan Amendment No. 5 Final Environmental Impact Report (referred to as "Certified EIR") dated October 28, 2020.

PROJECT DESCRIPTION



The Certified EIR evaluated the development of 877,298 square feet of industrial park use and 37,189 square feet of commercial retail use within the area bounded by the proposed Project. There was also 52,065 square feet of medical office use evaluated in the Certified EIR, however, this portion of the Specific Plan lies outside of the proposed Project boundary. As such, only the industrial park and commercial retail uses have been contemplated for the purposes of this assessment.

The Project is proposed to consist of 464,969 square feet of high-cube fulfillment center warehouse use (75% of the industrial use), 154,990 square feet of high-cube cold storage warehouse use (25% of the industrial use), 16,200 square feet of fast-food restaurant without drive-through window use, 1,600 square feet of coffee-donut shop with drive-through window use, and 16,200 square feet of shopping center use as shown on Exhibit B. Consistent with the Certified EIR, the industrial uses are proposed on the northern end of the site with the commercial retail uses fronting Sun Lakes Boulevard to the south.

EXHIBIT A: LOCATION MAP

EXHIBIT B: SITE PLAN

CERTIFIED EIR MITIGATION MEASURES

The Certified EIR included the following mitigation measures. The proposed Project is required to implement the following mitigation measures as follows.

AQ 1- Use Low VOC Paint: To reduce VOC emissions associated with architectural coating, the project designer and contractor shall reduce the use of paints and solvents by utilizing pre-coated materials (e.g. bathroom stall dividers, metal awnings), materials that do not require painting, and require coatings and solvents with a VOC content lower than required under Rule 1113 to be utilized. The construction contractor shall be required to utilize "Super Compliant" VOC paints, which are defined in SCAQMD's Rule 1113. Construction specifications shall be included in building specifications that assure these requirements are implemented. The specifications for each implementing development project shall be reviewed by the City of Banning's Building and Safety Division for compliance with this mitigation measure prior to issuance of a building permit.

AQ-2: Grading Limitations. During the City's review process for applications under the Specific Plan, the applicant shall conduct or shall have conducted modeling of the regional and the localized emissions (NOx, CO, PM10, and PM2.5) associated with the maximum daily grading activities estimated for the proposed individual developments one acre or larger. If the modeling shows that emissions would exceed the SCAQMD's significance thresholds for those emissions, the maximum daily grading activities of the proposed development shall be limited to the extent that could occur without resulting in emissions in excess of SCAQMD's significance thresholds for those emissions. For implementing projects within the Specific Plan, the applicant shall be responsible for submitting a focused project-level air quality assessment that includes the modeling of localized on-site emissions associated with daily grading activities anticipated for the proposed development.

AQ 3-Electrical Hookups for Loading Docks: *Trucks accessing the Project site may have auxiliary power units (APU) and/or transport refrigeration units (TRUs). Therefore, electrical hookups shall be installed at all loading docks, and to reduce/replace APU use while trucks are parked along the docks, to allow trucks with APU and/or TRUs with electric standby capabilities to plug in when TRUs are in use to reduce diesel fuel consumption and resulting NOx emissions. The City shall verify electrical hookups have been installed prior to occupancy.*

AQ 4-Idiling Limits: All facilities shall post signs informing users of requirements limiting idling to five minutes or less pursuant to Title 13 of the California Code of Regulations, Section 2485 in order to reduce diesel fuel consumption and resulting NOx emissions. No overnight/long-term parking will be allowed. The City shall verify signage has been installed prior to occupancy.

AQ 5-Electric or Natural Gas Service

Equipment: Service equipment (i.e., yard hostlers and forklifts) used within the site shall be electric or compressed natural gas powered to reduce diesel fuel consumption and resulting NOx emissions.

AQ-6-Electric Vehicle Charging Stations:

Prior to approval of implementing commercial plot plan(s) within the Project the City of Banning Planning Division shall

ensure that the plot plan(s) include a minimum of three (3) electric-vehicle charging stations. The electric vehicle

charging stations also shall be depicted on building plans for implementing development within Project site. Prior to issuance of occupancy permits for the proposed commercial land uses within the Project site, the City of Banning Building and Safety Department shall ensure that a minimum of three electric vehicle charging stations have been installed on-site.

AQ-7-Health Risk Assessment:

During the City's review process for any future development applications under the Specific Plan that proposes a warehouse or distribution project, the applicant shall submit a Health Risk Assessment for that is prepared pursuant to the "Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis." If the modeling shows that emissions would exceed the SCAQMD's significance thresholds for those emissions, …performance-based measures shall be required in order reduce emissions to less than significant levels.

GHG-1: GHG Reduction Documentation. Prior to the issuance of a building permit, documentation that the following GHG reduction measures shall be implemented by future development projects is required. Documentation may consist of a letter stating how the project will comply and identify the verification mechanism for each measure required below (e.g. shown on building plans, landscaping plans, etc.) The project shall devise a comprehensive water conservation strategy to reduce water use during project operation. The strategy will include the following:

1) Install drought-tolerant plants for landscaping.

2) Install water-efficient irrigation systems, such as weather-based and soil-moisture- based irrigation controllers and sensors, for landscaping according to the California Department of Water Resources Model Efficient Landscape Ordinance.

3) Ensure that all landscape and irrigation measures follow the City of Banning's Landscaping and Water Conservation requirements.

GHG-2: Building Design. The project will design building shells, building components, such as windows, roof systems and electrical systems to meet 2016 Title 24 Standards (or applicable requirements in effect at the time a building permit is applied for).

GHG-3: LEED Features. Buildings will be designed to provide CALGreen Standards with Leadership in Energy and Environmental Design (LEED) features for potential certification and will employ energy and water conservation measures in accordance with such standards. This includes design considerations related to the building envelope, HVAC, lighting, and power systems. Additionally, the architectural expression such as roofs and windows in the buildings will relate to conserving energy.

GHG-4. Energy Efficient Lighting. Prior to the issuance of a building permit, building plans shall require that high-efficiency lighting (such as LED lighting that is 34 percent more efficient than fluorescent lighting) be installed within buildings on-site.

GHG-5. Efficient Building Materials/Equipment. The project will utilize building materials/methods and heating equipment that are efficient and reduce emissions that may include, but not limited to, high-efficiency heat pumps; thin insulating materials; windows and building surfaces with tunable optical properties; high efficiency lighting devices; improved software for optimizing building design and operation; low cost, easy to install, energy harvesting sensors and controls; interoperable building communication systems; and optimized control strategies.

GHG-6. Reduce Indoor Water Demand. Prior to the issuance of a building permit, building plans shall require that all faucets, toilets, and showers installed in the proposed structures utilize low-flow *fixtures that would reduce indoor water demand by 20% per CalGreen Standards.*

CURRENTLY APPROVED PROJECT EMISSIONS

The Certified EIR evaluated the development of 877,298 square feet of industrial park use and 37,189 square feet of commercial retail use within the area bounded by the proposed Project. There was also 52,065 square feet of medical office use evaluated in the Certified EIR, however, this portion of the Specific Plan lies outside of the proposed Project boundary. As such, only the impacts of the industrial park and commercial retail uses have been addressed in this assessment. This portion of the project approved in the Specific Plan and analyzed in the Certified EIR is called the "Currently Approved Project". Tables 1 and 2 summarize the operational air quality and greenhouse gas emissions that would result from the Currently Approved Project.

TABLE 1: CURRENTLY APPROVED PROJECT MAXIMUM DAILY OPERATIONAL AIR QUALITY EMISSIONS SUMMARY

	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Total Maximum Daily Emissions	29.14	36.80	106.96	0.39	33.62	9.42

Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

LOCALIZED CONSTRUCTION EMISSIONS

Pursuant to MM AQ-2 of the Certified EIR, the following analysis is presented to determine if the proposed Project would be required to implement any limitations on grading activity to prevent localized impacts to nearby receptors. The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology) (5). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs). The SCAQMD established LSTs in response to the

SCAQMD Governing Board's Environmental Justice Initiative I-4[1]. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses. Table 4 includes a summary of the Project's construction localized emissions compared to the applicable thresholds.

TABLE 4: PROJECT CONSTRUCTION LOCALIZED SIGNIFICANCE AIR QUALITY EMISSIONS SUMMARY

Maximum On-Site Construction Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions	60.71	31.21	13.82	6.75
SCAQMD Localized Threshold	236	2,817	38	12
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

OPERATIONAL ACTIVITY

Operational emissions associated with the proposed Project are summarized on Table 5. As shown, the proposed Project's operational-related activity would not exceed the applicable regional significance thresholds and a less than significant impact would occur and no mitigation beyond the required mitigation from the Certified EIR would be required. Table 6 summarizes the operational air quality localized emissions resulting from the Project. These emissions totals include potential emissions that may result from transport refrigeration units (TRUs) associated with the refrigerated portion of the Project.

TABLE 5: PROJECT OPERATIONAL MAXIMUM DAILY OPERATIONAL AIR QUALITY EMISSIONS SUMMARY

	Emissions (lbs/day)					
	VOC	NO_X	CO	SO_X	PM_{10}	$PM_{2.5}$
Total Maximum Daily Emissions	28.67	49.96	162.6	0.54	48.91	13.72
SCAQMD Regional Threshold	55	55	550	150	150	55

[1] The purpose of SCAQMD's Environmental Justice program is to ensure that everyone has the right to equal protection from air pollution and fair access to the decision-making process that works to improve the quality of air within their communities. Further, the SCAQMD defines Environmental Justice as "…equitable environmental policymaking and enforcement to protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of air pollution."

TABLE 6: PROJECT OPERATIONAL LOCALIZED SIGNIFICANCE AIR QUALITY EMISSIONS SUMMARY

Maximum On-Site Construction Emissions	Emissions (lbs/day)			
	NO_X	CO	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions	6.95	7.65	1.96	0.63
SCAQMD Localized Threshold	236	2,817	10	3
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

GREENHOUSE GAS EMISSIONS

Construction and operational GHG emissions associated with the proposed Project are summarized on Table 7. These emissions totals include potential emissions that may result from transport refrigeration units (TRUs) associated with the refrigerated portion of the Project. As shown, the proposed Project's GHG emissions would exceed the applicable significance thresholds consistent with the finding identified in the Certified EIR. This is not a new or more severe impact than what was already disclosed in the Certified EIR.

TABLE 7: PROJECT GHG EMISSIONS SUMMARY

Emission Source	Emissions (MT/yr)
	Total CO_2E
Total Annual Emissions (Amortized Construction + Operations)	8,812.61
SCAQMD Interim Threshold	3,000
Significant?	**YES**

HEALTH RISK ASSESSMENT

Pursuant to MM AQ-7, a diesel health risk assessment has been prepared. This analysis evaluates the potential mobile source health risk impacts to receptors (residents or workers) associated with the development of the Project. Health risk exposures were modeled in accordance with the guidelines in the SCAQMD's Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis. SCAQMD recommends using the Environmental Protection Agency's (U.S. EPA's) AERMOD model which has been employed accordingly. Risk calculations were conducted consistent with the Office of Environmental Health Hazards Assessment (OEHHA)'s 2015 Risk Assessment Guidelines. Detailed health risk modeling results are presented at Appendix B to this Memorandum.

RECEPTOR LOCATIONS

To assess the potential for long-term operational impacts, the following receptor locations, as shown on Exhibit C, were identified as representative locations for focused analysis. To describe the potential off-site Project health risks, five receptor locations in the vicinity of the Project site were identified. All distances are measured from the Project site boundary to the outdoor living areas (e.g., private backyards) or at the building façade, whichever is closer to the Project site.

R1: Location R1 represents the existing residence at 5778 Joshua Palmer Way, approximately 543 feet north of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R1 is placed at the building façade.

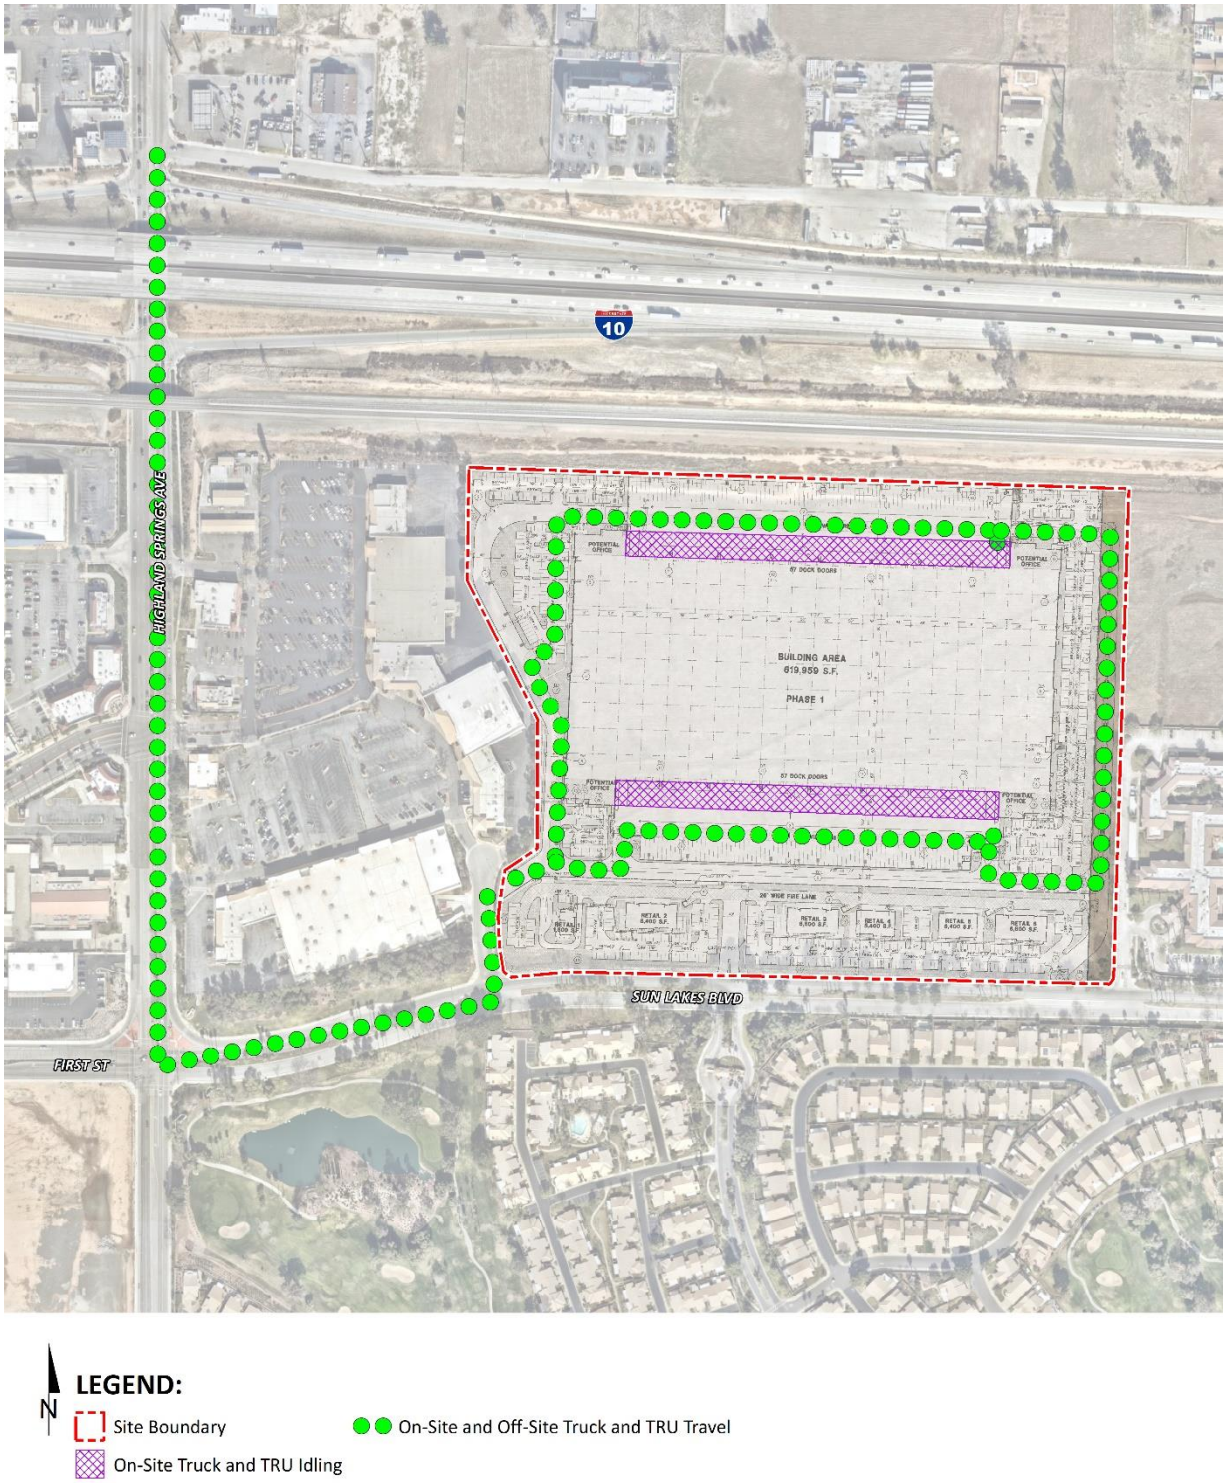
R2: Location R2 represents the residence at 301 Northwood Avenue, approximately 725 feet east of the Project site. Receptor R2 is placed at the private outdoor living area (backyard).

R3: Location R3 represents the existing Assisted Living and Memory Care at 5801Sun Lakes Boulevard, approximately 110 feet east of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R3 is placed at the building façade.

R4: Location R4 represents the existing residence at 5831 Oakmont Drive, approximately 115 feet south of the Project site. Receptor R4 is placed at the private outdoor living area (backyard).

R5: Location R5 represents the existing residence at 6111 Wingfoot Avenue, approximately 134 feet south of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R5 is placed at the building façade.

TAC EMISSIONS AND RISK ESTIMATE



More specifically the analysis presented here evaluates potential health risk impacts that could result from exposure to Toxic Air Contaminants (TACs), including diesel particulate matter (DPM) generated by heavy-duty diesel trucks from on-site idling, on-site travel, and off-site travel, and emissions associated with TRUs. The modeled source area is shown on Exhibit D.

At the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to the Project is estimated at 1.67 in one million, which is less than the SCAQMD threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable SCAQMD threshold of 1.0. As such, the Project will not cause a significant human health or cancer risk at any potentially affected receptors.

EXHIBIT C: RECEPTOR LOCATIONS

EXHIBIT D: MODELED SOURCE LOCATIONS

AIR QUALITY AND GREENHOUSE GAS EMISSIONS COMPARISON

Tables 8 and 9 compare air quality and greenhouse gas emissions associated with the Currently Approved Project to the proposed Project. As shown, emissions would result in a slight increase with respect to air quality and greenhouse gas emissions associated with the Project. Notwithstanding, the Project would not result in a new or substantially more severe air quality or greenhouse gas impact than what was previously disclosed in the Certified EIR. As shown on Table 8, the Currently Approved Project, the proposed Project, and the variance between the two projects, *do not* exceed the applicable SCAQMD regional thresholds of significance.

TABLE 8: AIR QUALITY EMISSIONS COMPARISON

Project	Emissions (lbs/day)					
	VOC	**NO_X**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**
Currently Approved Project	29.14	36.80	106.96	0.39	33.62	9.42
SCAQMD Regional Threshold	55	55	550	150	150	55
Significant?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**
Proposed Project	28.67	49.96	162.6	0.54	48.91	13.72
SCAQMD Regional Threshold	55	55	550	150	150	55
Significant?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**
Variance	***-0.47***	***13.16***	***55.64***	***0.15***	***15.29***	***4.30***
SCAQMD Regional Threshold	55	55	550	150	150	55
Significant?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

Similarly, as shown on Table 9, the Currently Approved Project and proposed Project both exceed the SCAQMD interim GHG threshold. Although the proposed Project results in a slight increase of 604.87 metric tons of GHG emissions compared to the Currently Approved Project, this increase does not constitute a substantially more severe GHG impact than what was disclosed in the Certified EIR. There is no established metric for determining whether an increase in GHG emissions constitutes a substantially more severe impact. As such, it is appropriate to use the SCAQMD interim threshold to determine whether the increase is substantially more severe. As shown on Table 9, the increase in emissions would *not* exceed the SCAQMD interim numeric threshold, therefore the potential impact is not substantially more severe than what was previously disclosed in the Certified EIR.

TABLE 9: GHG EMISSIONS COMPARISON

Project	Annual Emissions ($MTCO_2e$)
Currently Approved Project	8,190.53
SCAQMD Interim Threshold	3,000
Significant?	**YES**
Proposed Project	8,812.61
SCAQMD Interim Threshold	3,000
Significant?	**YES**
Variance	***622.08***
SCAQMD Interim Threshold	3,000
Significant?	**NO**

Respectfully submitted,

URBAN CROSSROADS, INC.

Haseeb Qureshi,
Associate Principal

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Intensity factors adjusted to reflect the RPS for 2022

Land Use -

Construction Phase - Operations run only

Off-road Equipment - Operations run only

Vehicle Trips - Trip characteristics based on information provided in the Traffic analysis

Operational Off-Road Equipment - Based on SCAQMD High Cube Warehouse Truck Trip Study White Paper Summary of Busniess Survey Results (2014)

Fleet Mix - Passenger Car Mix estimated based on the CalEEMod default fleet mix and the ratio of the vehicle classes (LDA, LDT1, LDT2, MDV, & MCY). Truck Mix based on information in the Traffic analysis

Fast Food Restaurant with Drive Thru	1.60	1000sqft	0.04	1,600.00	0
Regional Shopping Center	16.20	1000sqft	0.37	16,200.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2023
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	340.53	**CH4 Intensity (lb/MWhr)**	0.03	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Intensity factors adjusted to reflect the RPS for 2023

Land Use - Total Project Area (Commercial Uses) is 6.83 acres

Construction Phase - Construction anticipated to be completed in 2023

Off-road Equipment - Hours are based on an 8-hour workday

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment -

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Banning Point (Commercial Construction - Unmitigated) - Riverside-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Trips and VMT - Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Site Preparation, Grading, and Building Construction

Grading - Analysis conservatively assumes that up to 10 acres can be disturbed per day

Architectural Coating - AQ-1: Use Low VOC Paint

Vehicle Trips - Construction run only

Energy Use - Construction run only

Water And Wastewater - Construction run only

Solid Waste - Construction run only

Construction Off-road Equipment Mitigation - Rule 403

Fast Food Restaurant with Drive Thru	1.60	1000sqft	0.04	1,600.00	0
Regional Shopping Center	16.20	1000sqft	0.37	16,200.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2023
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	340.53	**CH4 Intensity (lb/MWhr)**	0.03	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Intensity factors adjusted to reflect the RPS for 2023

Land Use - Total Project Area (Commercial Uses) is 6.83 acres

Construction Phase - Construction anticipated to be completed in 2023

Off-road Equipment - Hours are based on an 8-hour workday

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment -

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Banning Point (Commercial Construction - Unmitigated) - Riverside-South Coast County, Summer

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Trips and VMT - Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Site Preparation, Grading, and Building Construction

Grading - Analysis conservatively assumes that up to 10 acres can be disturbed per day

Architectural Coating - AQ-1: Use Low VOC Paint

Vehicle Trips - Construction run only

Energy Use - Construction run only

Water And Wastewater - Construction run only

Solid Waste - Construction run only

Construction Off-road Equipment Mitigation - Rule 403

Regional Shopping Center	16.20	1000sqft	0.37	16,200.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2023
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	340.53	**CH4 Intensity (lb/MWhr)**	0.03	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Intensity factors adjusted to reflect the RPS for 2023

Land Use - Total Project Area (Commercial Uses) is 6.83 acres

Construction Phase - Construction anticipated to be completed in 2023

Off-road Equipment - Hours are based on an 8-hour workday

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment -

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Banning Point (Commercial Construction - Unmitigated) - Riverside-South Coast County, Winter

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Trips and VMT - Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Site Preparation, Grading, and Building Construction

Grading - Analysis conservatively assumes that up to 10 acres can be disturbed per day

Architectural Coating - AQ-1: Use Low VOC Paint

Vehicle Trips - Construction run only

Energy Use - Construction run only

Water And Wastewater - Construction run only

Solid Waste - Construction run only

Construction Off-road Equipment Mitigation - Rule 403

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Refrigerated Warehouse-No Rail	154.99	1000sqft	3.56	154,990.00	0
Unrefrigerated Warehouse-No Rail	464.97	1000sqft	10.67	464,969.00	0
Other Asphalt Surfaces	530.34	1000sqft	12.17	530,340.00	0
Parking Lot	555.00	Space	3.82	166,050.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2022
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	353.15	**CH4 Intensity (lb/MWhr)**	0.03	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - Intensity factors adjusted to reflect the RPS for 2022

Land Use - Total Project Area (Industrial Uses) is 30.22 acres

Construction Phase - Construction anticpated to be completed in 2022

Off-road Equipment - Hours are based on an 8-hour workday

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Off-road Equipment -

Off-road Equipment - Crawler Tractors used in lieu of Tractors/Loaders/Backhoes

Banning Point (Industrial Construction - Unmitigated) - Riverside-South Coast County, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Applied

Trips and VMT - Vendor Trips adjusted based on CalEEMod defaults for Building Construction and number of days for Site Preparation, Grading, and Building Construction

Grading - Analysis conservatively assumes that up to 10 acres can be disturbed per day

Architectural Coating - AQ-1: Use Low VOC Paint

Vehicle Trips - Construction run only

Energy Use - Construction run only

Water And Wastewater - Construction run only

Solid Waste - Construction run only

Construction Off-road Equipment Mitigation - Rule 403
