3/8/2021	I have reviewed your draft PROS opinion survey and find some of the terminology confusing, several omissions and several biased questions. 1. #2 & #3 questions, you bring up three separate entities; parks, outdoor recreation facilities and open spaces but then in #4, you refer to the third entity as recreation/athletic facilities and in #8 you go back to using outdoor recreation facilities. As some of the facilities listed in #4 such as Barrett Community Center and Twin Pines Park buildings have indoor as well as outdoor facilities, the terminology ""outdoor recreation facilities"" is confusing. Why not use the term indoor/outdoor recreation facilities for ALL questions to be consistent? 2. You omitted the Belmont Sports Complex as one of the most important indoor/outdoor recreation facilities in Belmont?? How about Hidden Canyon Open Space and John Brooks Open Space Preserve? 3. In #9, the question should just read ""The following would greatly enhance my experience with open spaces in Belmont"" (delete amenities and uses which is confusing). You also have a typo (it should be just open, not opens spaces). Widen and improve select existing trails is a biased question because it implies improvement which everybody favors and will elicit a strongly agree. You will then incorrectly infer that participants want wider trails. Reduce/limit number of trails is similarly biased because it implies restrictions which nobody wants and will elicit a strongly disagree. You will then incorrectly infer that participants want more trails. Since you allow everybody who are non residents of Belmont to answer your survey from all over the country, the answers to this survey will also represent organized special interest groups that have far more numbers than our ordinary citizens of Belmont. Therefore, this survey alone should not be used to determine the outcome of a 15 year Master Plan for our City of Belmont. Doing so could devalue property values and our tax base as well as irreversibly damage the eco-system and geological stability in our open spaces. Thank you for your attention.	Jennifer Lien

3/9/2021	Dear All, I sent an email to the Parks and Recreation Dept. before their January meeting and would like to share the pertinent information to everyone here because someone in the Advisory committee meeting asked about removing trails. I think the reply was that comments could be left. A possible reason for his question may be what I experienced on a hike on the Loop trail at Water Dog Lake. There was a very short bifurcation on this trail, and I took the left-hand trail to increase the social distance between me and my friend only to find that the trail had been modified into a bicycle ramp or jump that could not be walked down. This is the sort of unsanctioned trail that could be removed. I feel that simply having a place for additional comments would not fairly represent the community's concerns about trails and bicycles in Water Dog Open Space. It is very easy to tick a box to say you have an interest in e-bikes or want wider trails, but it takes more effort to leave a comment. Does this place an inherent bias in the survey? Regarding widening trails, in that same January email, I said mentioned that the poison oak on narrow trails makes it hard to move to allow bikes to pass. I want to reiterate a comment I made at the Advisory committee meeting: widening such trails is NOT AN IMPROVEMENT as this would encourage greater improper usage of these trails by bicyclists AND widening certain trails would remove very beautiful species of flowers (there are a couple of purple perennial flowers at the edge of one trail--I think the Loop trail). Rather, I think that bicycles should be restricted to wider trails. Finally, I want to encourage everyone to take into consideration the intent of the person who donated the land for Water Dog Open Space, which I believe was primarily to preserve a natural setting. Regards, Connie Tettenborn	Connie Tettenborn
3/20/2021	I wanted to provide you my thoughts on the upcoming Master Plan for the Belmont Parks Department. My husband and I have been residents of Belmont since 1985. We love the area and feel the Parks Department has done a lot to provide many avenues for recreation to all ages. My major point I do want to make is regarding the Open Space Water Dog trails. Over the many years, we have lived here we walked or hiked the Water Dig trails literally hundreds of times. Our kids hiked there as well. Over the last year however it has become too dangerous to hike or walk there due to the numerous bikers riding aggressively on the trails. There were several instances last year between May and September that my husband and I were nearly hit by bikers rounding curves which did not see us or we see them until they skidded into us. The fact that they ride on the single track trails is outrageous. We've tried to bring our 6 year old and 8 year old on the trails and they too have nearly been hit by bikers. As they are only 36 - 44 inches tall, bikers cannot see them running ahead of us. We now have to hold their hand if they want hike with us. As you can imagine, they do not want to be required to hold our hands on a 1-2 hour hike. Our daughter in law now refuses to let us take them on Water Dog trails out of fear for their safety. I must also mention that many of our friends and neighbors also have stopped coming to the trails due to their concerns over the bikers on the single track trails. I think this is ridiculous that long time residents fear for their lives and will totally avoid these trails. These single track trails should be kept open for walkers or hikers only. This should be a peaceful setting and not a situation where you need to be stressed and worried about your safety. I also want to say that we used to see deer, rabbits and other wildlife. This does not happen anymore and I attribute this to the bikers racing on these trails. Please make single track trails available only to hikers and walkers. My understanding that this land was supposed to be a preserve per grants from John Brooks. In addition, previous Master Plans(1992 and 1998) required this. Why was this not followed? I hope you will bring the Open Space back to its original intent and use. Thank you.	Pamela Stahl

3/29/2021	HI Karen, How does one observe/join the following PROS presentations listed on the City website? Other Presentations/Events for the PROS Plan: Belmont Rotary Presentation March 29th, 2021 12- 1 Pm Presentation at BRSSD Superintendent Meeting March 2nd, 2021 Do I interpret correctly that this is the consultant addressing these groups and offering a Q&A after? Are the comments received at these meetings "on the record"; will they be recorded for inclusion in public comments? Thanks, Kristin Mercer	Kristin Mercer
4/13/2021	Dear Parks and Recreation Commissioners and City Council Members, We have been Belmont residents for over thirty years and have raised our family here. Our three children have all gone through the local public schools; Central Elementary, Ralston Middle School and Carlmont High School (with the youngest now a Junior at Carlmont). In all these years we have greatly enjoyed the City's open space, including Waterdog Lake / Hidden Canyon and San Juan Canyon / Sugarloaf Mountain. This enjoyment includes walking, running, riding bicycles, exercising our dogs and enjoying nature. As you consider these open spaces in the new Master Plan, we urge you to maintain their current multi-use designation with no new restrictions. Consistent with this, we fully support the "Love Waterdog" campaign and associated outreach and education to trail users and groups to ensure safe and sustainable use of our trails. For the record, we are very grateful for the excellent work to maintain and enhance the trails and related facilities done by the partnership between the City's Public Works department and various volunteers. One request: Please install dog waste bags and garbage cans at the trailheads for San Juan Canyon (for example at the bottom of San Juan Blvd).	Patrick and Mai Wheeler
4/16/2021	It is important that Belmont pays attention to it's park trails. Right behind my home on Soho Circle is an ILLEGAL bike trail. The city has done NOTHING to protect me nor my neighbors from this trail. It is a disturbance to us and our neighbors. It is also a hinderance to our natural surroundings. It is also probably on my land. Many of us have complained to our Parks and Rec dept., but yet nothing gets done. Also, on weekends, this bike trail as well as the walking trail creates a massive parking situation on Hallmark. Yet, nothing gets accomplished by the city to clear these problems. WHAT CAN BE DONE???????	Kenneth. Lebovitz
4/17/2021	Hi PROS Advisory Committee Members and Park Commissioners, Last September I was given the opportunity to lead a few Park Commissioners on a walking tour of Hidden Canyon. It's very aptly named; most residents are largely unaware of this southern end of the Waterdog Open Space. But in fact Hidden Canyon is larger than the Waterdog acreage and the John Brooks acreage combined: Waterdog 51 acres John Brooks 49 acres Hidden Canyon 180 acres On our hike we stopped and discussed the extensive damages. We observed heavily eroded trails, especially on the southern slope where Rambler trail has ditches 4 feet deep and is widened to 30 feet in places. We saw drainage issues – some natural and some from homes above - that contribute to trail and slope damage. We hiked down the notorious Finch switchbacks, noting that no amount of maintenance could make them safe or sustainable. And we saw dirt and debris tossed into the creek – a direct violation of state guidelines for protection of riparian habitats. All of this is even more saddening when you become familiar with the Western Hills Area Plan, adopted in 1990. The Plan recognizes the unique chaparral, riparian and oak woodland habitats of the canyon – areas that are now designated as "sensitive communities" for the diversity of plants and the animals that call them home. I urge you all to visit Hidden Canyon and to learn why it's protection is so important to our regional Biodiversity Hotspot. Thank you, Kristin Mercer	Kristin Mercer

4/18/2021	As a resident of San Mateo, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider: Keep maintaining Waterdog Lake just as it is today. There are a ton of parks and outdoor spaces designated as ""hiking only"" available to hikers already, whereas mountain bikers already have very limited options. Please consider educating hikers that are uncomfortable sharing the trail about the hundreds of trails that are available for hiking exclusively in other areas. Closing Waterdog Lake Park to mountain bikers will result in people having less chances to engage in healthy exercise. I have biked dozes of times at Waterdog and never had any issues with hikers, it's easy to be careful and polite and make space for each other, even on single track. Some additional points: • Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces; • Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign. • Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year. • Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades. • Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that that chooses to habitate there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francscico Public Utilites Commission Peninsula Watershed.	Fabian Frank
4/19/2021	Hello, I support keeping Water Dog Open Space as a mountain biking friendly area. There are very few places like this in the Bay Area (maybe even country) and none on the Peninsula. Most other spaces in the Bay Area are for hikers only. This should be just thought of as a mountain biking park, it should get more funding to maintain the park but stay open to all types of use. It seems that people who are against this are very Not In My Backyard, as there are plenty of nearby places for great hiking but none for mountain biking. More people need to get outside and mountain biking offers people an outlet. Bikers love the outdoors and appreciate it. The more people who enjoy the outdoors and can appreciate it the more likely they are to care about the environment in other ways, i.e eat less meat, drive less, recycle, consume less, etc. All in all this is one of the best places to mountain bike in the area, people will have to drive hours to get to something similar. On top of that there is a very strong community around mountain biking at Water Dog and for years hikers, bikers, dog walkers, etc have all been able to enjoy the space with no real problems. So I would like to see more funding in the master plan to support mountain biking and other uses at Water Dog. Thanks, Mike	Michael Jaron

4/19/2021	Hello All, I forgot to email this to the above address so that all interested parties will receive this message regarding the survey. Are you getting ample input? Should the survey stay online longer? Thank you, Connie Dear Commissioners, I just noticed an online plea for mountain bikers to fill out the survey. Given that anyone can fill out the survey and may not necessarily give an honest answer regarding residency, is there some analysis that can be done to determine whether the survey results are valid and give Belmont citizens' views priority. We live here and pay city taxes and are responsible for the infrastructure here. Is there an estimated response rate, which could be compared with the number of people living in each neighborhood? Thank you, Connie Tettenborn, PhD	Connie Tettenborn
4/19/2021	To whom it may concern, Our trails, through our open space and parks are being overrun by bikers, and now some with electric bikes. This is largely because other cities are outlawing bikes in their parks and open spaces. These bikers disregard the safety of the walkers which always have to go off the trail to get out of their way often in unsafe situations like going up an embankment or into poison oak, unstable ground or a steep downslope. Many of the walkers are elderly and have a lot of trouble getting out of their way. Why are we making our parks and open spaces a playground for people that neighboring cities don't want in their parks and open spaces? We didn't work hard to preserve our open spaces for bikers! We had no idea at the time that they would end up being the predominate users since many walkers are finding it unpleasant and too dangerous to use with the proliferation of bikers. (I have a recurring fantasy of being blind and 'accidentally' poking my stick through the spokes of a fast passing bicycle.)	Gary Feierbach
4/21/2021	Hi, I have been mountain biking in Water Dog for years and absolutely treasure it! It's very unique to offer such amazing mountain biking right next to home. Love sharing the space with all (hiking, groups, nature walks, etc.). Please do not eliminate mountain bike riding there. There are many great hiking trails around, but only one place to mountain bike. Cheers, Julien	Julien Marcil

4/22/2021	Hi PROS committee and Park and Rec Commissioners, This Earth Day we are reflecting on sustainability for our planet. But since conservation begins at home, I'd like to address our sustainable stewardship of Belmont's Open Spaces. The first and foremost aspect of sustainability is balance. We want people to enjoy nature, but not to the detriment of the very thing they come to enjoy. That balance is achieved by managed trail density – enough trail access to enjoy nature, but not so much that it fragments habitats and destroys the ecosystem. Last year I undertook a study of all open spaces within 20 miles of Belmont. I compiled data for 44 of the comparable preserves, and shared this data with Parks Commissioners. Now I urge you to watch the video of this presentation: Open Space Preserves in the San Mateo Region. (choose the 12 minutes in full, or a 3-minute summary at this link) Fact: Waterdog has the highest trail density of any open space area on the peninsula, and probably the bay area. It has twice the trail density of other comparable small open space areas. This fragmentation and intensity of use is not sustainable. As stewards of our city and our planet we are tasked with adopting sustainable policies. For Waterdog that means fewer trails and a more thoughtful approach to trail planning. For the sake of future residents, please consider this legacy as you guide our new Master Plan. Feel free to contact me with questions. Thank you for your service to our City, Kristin Mercer 2035 Belmont General Plan Conservation Element p.5.3 "Belmont's extensive open spaces are part of the regional open space network on the San Francisco Peninsula. Notable landmarks in the city include San Juan Hills, Western Hills, Water Dog Lake, and Belmont Creek…. These connected open spaces are valuable because they provide travel corridors for wildlife and increase wildlife population diversity. They also play important roles in stormwater management, ecological functions, and other environmental conservation efforts	Kristin Mercer
4/30/2021	Hello Park Consultants to Belmont: I live on close to Waterdog Lake Park and have for a long time been concerned about how bikers are ruining the trails there. In addition, one time when I was walking there, I almost got hit by a biker. The trails are ruined because so many bikers in the Bay Area come to Belmont to bike in the Park; however, people like myself who live near the Park should be given first priority about its uses. I hope that you will stop all bikers from using the trails near the Park. Thank you for your attention! Carol	Carol Epstein
5/1/2021	Please review the following new video illustrating Belmonts Waterdog Preserve. waterdogpreserve.org/beauty-destroyed Regards, Bill Kurtz	Bill Kurtz

DATE	COMMENT	COMMENTER
5/6/2021	Dear PROS Advisory Committee: Last night at the Park & Rec Commission meeting, I gave e following public comments which I have put into the following email for your information. Thank You for your attention. San Mateo has over 50 open space preserves including Waterdog which has one of the smallest acreages yet more bike density than 90% of all other San Mateo open spaces. Because Waterdog is the only open space that allows mountain bikers on every single one of our 11 miles of Waterdog trails; both wide and narrow, bikers come from the entire Bay Area to sport speed on our narrow trails. Mountain bikers have readily admitted that their desire for crowding our narrow hiking trails is because they seek their adrenaline thrills and excitement that comes with speed riding the narrow trails in our Open Space. But the sheer increasing volume from all over the Bay Area for their recreation is overwhelming our environment and damaging the trails to the point that no amount of biker volunteer trail maintenance can now keep up with the ruts, gullies and trenches they create. Hikers also have a right to their recreation of a quiet walk in the woods and a day of peaceful contemplation of nature listening to the birds and the rustle of the trees. Hikers have a right to a place where they don't have to worry about bikers screaming up behind them at top speed, slamming on their brakes, shooting gravel everywhere and swerving around them forcing them to step into the poison oak before speeding off again. Bikers have falsely argued that they have a right to ALL the trails for their recreation in our open space, but that doesn't give them them the right to damage so many narrow trails in our Waterdog. An equitable plan where both parties can enjoy their form of recreation is to leave the Narrow, quiet winding trails for hikers enjoy and to allow both bikers and hikers to share the Wide trails as originally intended. The thrills of speed biking recreation on narrow trails are best left to the other San Mateo open spaces that are much larger than Waterdog with trails able to naturally recover from such a rigorous sport. Commissioners, as a long time Belmont resident, I truly feel it will be a shame if an entire generation of children will not have the opportunity to enjoy this natural beauty with quiet nature walks. So I ask you, "Isn't it more important to preserve the natural beauty of Waterdog for future generations than to cater to thrill sport seekers?" Jennifer Lien Belmont	Jennifer Lien
5/13/2021	Dear Commissioners and PROS Advisory Committee, The results of the online survey overwhelmingly point to the conclusion that Open Space is a major concern, reflected not only by the survey responses but also by all the comments. This is despite the fact that the survey is population skewed against seniors over 65 not in the habit of computer responses while staying home during Covid, and despite being biased with questions such as Widen and Improve existing trails which should have been asked separately as Improve is considered an agreeable word. Nevertheless, where Parks, Athletic facilities and Open Spaces were broken out, survey responses clearly indicated that over 79% reported walking does not feel safe (even if it is only based on the smaller number that responded), over 70% reported biking does not feel safe either and almost 84% agreed that there were safety concerns in Open Spaces. There is a problem with how the Open Space is currently being managed and deterring people from enjoying its beauty due to safety concerns. In addition, over 58% cited Open Space poor conditions and maintenance as a concern. Going forward, Open Spaces need to be treated differently from Parks and needs its own separate studies and I am glad that you have devoted a Focus Group to Open Space. Non-Belmont bikers heavily influenced the survey from as far away as San Jose, Menlo Park, Palo Alto and their comments readily admit they come to our Open Spaces specifically to mountain bike because NO other local open space allows mountain bikes. Non resident mountain bikers can share our facilities by using the wide trails for their recreation but need to respect the survey results regarding safety, trail conditions, maintenance and environment. Despite an overwhelming 51% response by non Belmont residents to this survey, I hope and expect that Belmont PROS Advisory members and Park and Rec Commissioners will make policy and management decisions that reflect your public service to Belmont resident taxpayers. Thank you for your attention Jennifer Lien	Jennifer Lien
5/13/2021	I would be interested in participating in the Open Space focus group	Jonathan Carter

5/18/2021	In order to really understand what the danger of hiking in the Belmont open space is really like I encourage you to review a couple videos. These are of bikers riding the trails in Waterdog. They are taken by the bikers themselves riding the trails. While viewing, place yourself on the trail as a hiker, a narrow single track trail, with one of these guys bearing down on you, or coming around a blind corner. Picture yourself with a young child on the trail while viewing. Also, notice the hikers that are encountered are either forced or expected to get off the trail to allow bikers to pass by them. I personally have had many, many experiences where I had the life scared out of me, and also clipped by passing bikers who just kept on going. Please also notice how narrow the trails are and the condition of the trails themselves, the rutting, the cut of the trail for thrill riding (they call this trail maintenance), the berms and tight bends, the riding over creeks and tree roots. Go to your browser and type in: youtube.com, in the search type in Trailkeepers, Water Dog Lake Park"" and watch several of the videos to truly understand my comments. I you have and problems, please feel free to contact me. Regards, Bill Kurtz	Bill Kurtz
5/18/2021	I would like to volunteer for the open space focus group. I think I have a unique perspective to offer and I'm looking forward to having productive conversations about the future of the open space. I also had a question about the survey results- a couple times during the meeting someone brought up a statistic, something like ""77% of people felt unsafe on the trails"" or similar. Someone had also said this was an incorrect/misleading interpretation of the results. Will you be posting the survey results online? I would like to look at them for myself. If you won't be posting them, could you at least clarify this statistic? Thanks!	Austin Fisher
5/19/2021	Hi, I'd like to participate in the focus group portion of the PROS Master Plan process. My order of preference would be: 1. Open Space 2. Youth	Scott Sisemore
5/22/2021	I write to you all in my head almost every morning. That is because we wake up to barking dogs at Barrett between 6 and 7 a.m. almost every day. The worst day is Sunday. This is despite our double-paned windows. The dog hours have gotten very popular this year. We have noticed a big increase in the number of dogs and noise. We know we live by a community center, one that has gotten busier every year we've lived here. But with the dog hours, you have taken away the only quiet hours we had - early morning, late evening and Sundays. Easter Sunday, having my elderly parents over for a socially distanced lunch - dogs barking. Mother's Day, enjoying our back yard with our kids - dogs barking. Today, we were awakened at 6:05 by a barking dog and while eating breakfast at 7:30, dogs barking frantically at other dogs outside the fence as their owners talked. We know people don't even notice our houses or realize how sound travels in this little valley. But this is the problem with having a dog park in a neighborhood. The thought of a permanent dog park at Barrett breaks our hearts. It does not matter that it will be moved a few hundred feet one way or the other (actually closer to us in the latest plan). There are not many of us living next to Barrett so perhaps it is easy to discount us. But we do have to live here 24/7. As you develop your all parks plan for the city, could you consider putting a permanent dog park on the Sports Complex site or some other site, away from any neighbors, no matter how few? We have been told (repeatedly) to call Belmont Police when we see someone with dogs during off hours or if there is excessive barking. I could call every day. We did for a few days when dog hours opened this year, because people broke the rules every day. The new signs helped a little. Soccer practice helped a lot. But the reality is, I don't want to call the police department every time there are dogs barking, someone there with dogs at the wrong time, or someone not picking up after their dog. One, this is exhausting. Two, there don't seem to be any consequences for people breaking the rules. Three, all of us Barrett neighbors occasionally have to call the police for more serious disruptions at Barrett, often late at night. The police dispatcher knows us all. I don't want to become an annoying presence to the police. We appreciate you trying to accommodate a wide variety of citizens in Belmont. But, as Barrett neighbors, we really would like some help with this situation. Please advise at your earliest convenience.	Rose Laflin and Justin Mauck

DATE	COMMENT	COMMENTER
5/24/2021	I'd like to see specific information on open space "best practices" and management. I believe it's very important for the Park Commissioners and Advisory Committee to have scientific studies and research available to review before making any decisions. So far, the survey has provided only opinions by community members and non residents. Obviously there is a wide disparity of opinions on what is desired. I strongly suggest that the Commissioners and Advisory Committee receive formal studies available. Thank you.	Bob Stahl
5/24/2021	Dear Director Shearer, Gates Associates, and Park Commissioners, Last fall I was given an opportunity to present my research on Open Space Trail Density to a few of the Parks Commissioners. Now I respectfully request the opportunity to give this presentation to members of the PROS Advisory Committee, in a study session format. Responsible land stewardship policies cannot be based on opinion; management of natural habitat is entirely different than management of recreationally developed parks. It requires a foundation in the science of ecology and environmental sustainability. While Belmont is lacking in that foundation, fortunately we are surrounded by open space management districts that do have extensive knowledge and experience. We should be looking to their examples to inform our policies. I surveyed over 50 preserves and parks from Pacifica to Santa Clara, and identified 44 open space districts comparable to Belmont's. I then compiled data on area, trail miles, and trail use to compare and contrast their policies. My presentation takes about 20 minutes using PowerPoint via Zoom. Multiple Commissioners and PROS members expressed a desire for more data, and I believe a broader awareness of other regional open spaces and their management policies will be a good starting point and foundation on which to build their study. I'd be pleased to provide a preview. I look forward to helping our community create a progressive and enduring open space master plan.	Kristin Mercer
5/24/2021	As a Belmont resident for over 47 years, I would like to state my opposition to the continuing destruction of the trails in the Water Dog Lake park area. The evidence is clear when I visit our beloved open space that mountain bikes are the culprit. In addition, mountain bikers seem to have little regard for those who are merely using the trails for walking/hiking. As a city, we need to take a stand against this destruction done by both citizens and visitors. I have seen this abuse first hand and the effects are truly disturbing.	Glenn Morgan
5/31/2021	Dear PROS Advisors, I'm glad the committee will be expanding focus on the topics of developed parks, seniors and athletic fields. However on the subject of open space, we do not need another ""focus group"" to identify the user's wants, needs and values - users have been sharing that for over a year. What is needed for Open Space is FACTS and science. The users are not the ones to make policy recommendations - that is the job of this committee. And good policy requires data, not opinion. Please schedule time for factual presentations on conservation best practices, trail standards, natural habitat management and stewardship policies of other open space authorities. I have submitted a request to present a data analysis of trail policies among all of the other open space districts in the San Mateo region. The powerpoint presentation takes about 20 minutes, and is necessary to your understanding of open space stewardship. Please feel free to contact me if you would like more information.	Kristin Mercer
6/7/2021	Just wanted to ask if you would be interested in getting external help with graphic design? We do all design work like banners, advertisements, photo edits, logos, flyers, etc. for a fixed monthly fee. We don't charge for each task. What kind of work do you need on a regular basis? Let me know and I'll share my portfolio with you.	Eric G
6/7/2021	Hi PROS folks. I just ran across this article and wanted to share it with this team because I found it really helpful (and challenging!). It provides some important things to consider as we discuss Belmont's outdoor spaces and recreation programs: https://www.melaninbasecamp.com/trip-reports/2021/5/20/a-refugees-guide-towards-a-more-inclusive-outdoors Enjoy! :)	Susan Wright

6/7/2021	please keep this area open for bikes. It's accessible and large, there is enough room for all outdoor activities. Please continue to allow bikes!	Ross Levy
6/22/2021	Dear Council Members, RE: Belmont Creek Stream Restoration Project. The June 22, 2021 staff report for this project states “The City will cultivate local stewardship of Belmont Creek.” How does this staff report statement comport with City failure to protect upper Belmont Creek which drains into Waterdog Lake? A year ago, I reported to your Parks Commission a half-mile long unauthorized trail forged through the sensitive Belmont Creek riparian area. This trail is illegal on many levels, and directly damages the creek and water quality as well as the surrounding habitat. I shared photo evidence of dumping and erosion into the creek, damage to the habitat of endangered species, vandalism of a 100-year-old 50-foot-tall heritage bay tree, removal of endangered plants, and proof that the trail was never approved by the city. To date the City has taken no steps to stop the eco-vandalism and illegal use of the trail. It is ironic that the City promises to protect and restore Belmont Creek, as the City Council intentionally looks the other way while portions of the Creek are being destroyed. The Belmont Creek riparian trail is: Unauthorized and was never approved by any City entity. The Park Director’s 2012 report stated there were “no new trails planned” after the construction of Lake Loop, and none have been approved since then. Violates the Open Space Master Plan which specifically identified this marsh area for environmental protection, Violates guidelines of the California Department of Water Resources, in neglect of the City’s contractual commitments of the Notre Dame Waterdog Lake lease and the John Brooks Preserve bequest, Violates Belmont’s own riparian guidelines as published in the Belmont leaflet “Erosion and Sediment Controls for Riparian Areas: · Do not rake up leaf litter and fallen branches of native plants. This material provides food and shelter for beneficial insects, a crucial part of the food chain. · Do not dump yard wastes or grass clippings into the creek or riparian corridor. They smother existing plants, causing erosion and spreading invasive, nonnative plants. Their decomposition also robs the water of valuable oxygen, affecting fish and other aquatic organisms. · Minimize soil compaction. Control the use of trails and other recreational activities. · Control erosion by protecting areas where flowing water meets bare soil, such as on dirt roads, trails, driveways, earthen drainage ditches, or patches of bare or · Protect existing native vegetation. Construction, compaction, tilling, changes to soil grade or drainage patterns, should not occur under the tree drip-line (from the trunk to the edge of vegetation canopy). Noted in the biologist report commissioned by Friends of Waterdog, which was sent to all City Council and Parks and Recreation Commissioners: “Contrary to these policies, the City allowed wet crossings and an unmapped trail to be constructed through the riparian community west of Water Dog Lake. Significant habitat loss occurred during trail construction. Ongoing use of the trail is causing additional habitat loss and degradation through trail widening, vegetation trampling and removal, and trail spidering, especially in the vicinity of Belmont Creek. The magnitude of impacts to riparian vegetation suggests a lack of environmental review and disregard for state regulations that protect riparian resources.” The riparian communities of the entirety of Belmont Creek are protected under section 1602 of California Fish and Game Code (Lake and Streambed Alteration Program), and the water bodies themselves are protected under the federal Clean Water Act, the State’s Porter-Cologne Water Quality Control Act, as well as section 1602 of California Fish and Game Code. Again, I ask the Council to instruct staff to immediately close this illegal trail and begin restoration of the habitat that has been vandalized by its unauthorized construction and use. Especially during this drought, protecting all riparian areas is vital to our preservation of this rare and protected habitat.	Kristin Mercer

6/23/2021	Hello Park Commission and PROS Committee Members, When the Master Plan process was getting underway, I compiled a review of all open space preserves in the San Mateo Region to better inform the Commission on the topic of Open Space Stewardship. Management of natural spaces requires very different objectives and knowledge than management of developed parks. I believe an awareness of stewardship policies and best practices adopted by other open space entities will better inform our own stewardship decisions, helping to ensure Belmont's natural spaces remain healthy for future generations. A good starting point is this review of all open space areas in the San Mateo region. I presented this data to members of the Park Commission in October 2020 and June 2021. This PDF is compiled from my original slide presentation. If you have any questions please feel free to contact me. Thank you for your work on behalf of the future of Belmont Parks and Open Space. Kristin Mercer	Kristin Mercer
7/15/2021	Hi, to whom it concerns, I'm Xuening, a current resident in [REMOVED], Belmont. I'm petitioning to build a mini park within walking distance. Our daughter Erica was born last August and is eager to learn to walk. As she gains mobility, the need for outdoor spaces for kids to play safely greatly increased. Most areas in Belmont have a playground within 10 mins walk, however, residences near us are underserved. A park at the top of Oak Knoll Drive could benefit tens/hundreds of residents nearby and I'm looking forward to hearing back. Best, Xuening	Xuening Liu
7/22/2021	Hello to the friendly folks in the Belmont Planning Commission! My wife and I and our two kids (ages 3 and 9 months) moved to [REMOVED] in May of this year. One of our neighbors recently mentioned that there was a petition for adding a small park at the top of Oak Knoll Dr. I would like to voice my support for the petition. Currently, I've been alternating between Twin Pines and Beresford Park to reach a playground where my kids can play. The closest park to us seems to be Patricia Wharton Park. While beautiful and well-maintained, it's rather small and suitable for only sitting. Having a park with a playground in walking distance for our neighborhood would be great! Thanks, Jason Wang	Jason Wang
7/25/2021	Hi all, I'm a homeowner at [REMOVED] here in Belmont. Our family (Joe Sexton, age 37; Abbye Sexton, age 38; and Jack Sexton, age 14 months) is excited very excited about the prospect of the mini-park at the top of Oak Knoll Drive. It would be so fun to have a walkable park where our son Jack could play and meet more neighborhood kids! Best, Joe	Joe Sexton

8/8/2021	Hello: We are a family of four living at [REMOVED]. We strongly support the petition from Henry Lin, to build a playground at the top of Oak Knoll. Our children are two and five years old and love going to the playgrounds. Unfortunately, there is no playground within walking distance of our home so we always need to drive to the park, which we do at least once a week. Having a playground on Oak Knoll would add significantly to our quality of life, removing the need to drive and providing some great exercise and fun to the kids instead of playing inside. Finally, the space is currently unused and seems to us perfectly appropriate for a little playground. Thank you very much! Robin, Jennifer, Audrey, and Xavier Raffard	Robin, Jennifer, Audrey, and Xavier Raffard
8/11/2021	Hello, I'm a resident of Belmont at [REMOVED], and I'm writing to request a mini-park in my neighborhood. My husband and I just moved to Belmont last September, and we are expecting our first child in January. While we love walking our dog through Patricia Wharton Park, we'd love to have a playground close by where our coming little one will be able to play with neighborhood kids. When we heard about the potential for a mini-park at the top of Oak Knoll Drive (a spot we walk to often), we thought that would be perfect for kids -- the street gets MUCH less traffic than the intersection where Patricia Wharton Park is located and would be much safer. We treasure the friendliness of our neighbors and would love the opportunity for our future children to make friends at a local park! Thank you for your consideration. Best, Tiffany Shih and Phil Savoie (and our future baby!)	Tiffany Shih
8/20/2021	It has come to my attention that certain members of the Belmont Heights Civic Improvements Association (BHCIA) have been pushing for use limitations and restrictions on the Open Space as part of the Master Plan. I would urge the city council and members of the committee to give an appropriate amount of skepticism to any statements made by Ms. Bobol and Mr. Cuviello. Despite the title of the association, neither they, nor any of the members of the BHCIA, speak for myself regarding this issue. Contrary, to Ms. Bobol and Mr. Cuviello's assertions, assertions, as a resident of the Belmont Heights neighborhood and frequenter of the surrounding open space, I do not support any restrictions to the shared use of trails at Waterdog Lake or closure of any trails. I appreciate the commission's work on the master plan and as the current Vice Chairman of the San Mateo County Assessment Appeals Board, I understand the dedication and sacrifice it takes to serve in an appointed role. Please feel free to call or email me if I can answer any questions or be of any help. Clinton Freeman	Clinton Freeman
8/20/2021	Dear City of Belmont Leadership, Please support the continued access to Water Dog for multi-use activities including mountain biking. The community (children and adults alike) benefits from access to the outdoors (exercise, experiencing nature, etc.). Please do not allow a small but loud group of individuals dictate how this community resource can be used. Providing "equitable access", "inclusion", supporting a "range of interests. . and community health and well-being" are all principles of the Master Plan. To deprive access to mountain bikers or even hikers would be at odds with these principles. I have hiked and ridden through Water Dog hundreds of times and have never experienced an issue. The proposed "solutions" from his minority group are extreme and would be a net negative to the community. Please support the broader community and the greater good by supporting continued, multi-use access to Water Dog. Feel free to call me should have you any questions or if it would be helpful for me to share my and my family's positive experiences with Water Dog. Thank you. Jim Miller	Jim Miller

8/20/2021	I understand that certain members of the Belmont Heights Civic Improvements Association (BHCIA) have been pushing for use limitations and restrictions on the Open Space as part of the Master Plan. Belmont Open Space and Waterdog in particular are outdoor gems of Belmont suitable for multi-use recreation. It is hard to imagine that the wildlife in the park is impacted to a greater degree whether on foot or bicycle. I have ridden nearly 10,000 miles in Waterdog over the past 20years. During this time I have not seen any significant impact to wildlife. While there has been some trail misuse and wear caused by mountain bikes over the years, this is an issue that needs to be remedied through vigilance and education. The current trail maintenance that has been lovingly accomplished makes it even safer and more enjoyable to hike and bike in the park. It is not fair to restrict access to Waterdog due to the misdeeds of a few park users. Thus, as a long time resident of the Belmont and frequent user of the surrounding open space, I do not support any restrictions to the shared use of trails at Waterdog Lake or closure of any trails. Lawrence Shubert	Lawrence Shubert
8/22/2021	To whom it may concern: Via our local NextDoor group, I have seen that members of our neighborhood association, the BHCIA, have been attempting to reduce the number of cross country meets we experience during the fall season. As a resident of Belmont Heights, I wish to say that the BHCIA does not speak for me in this regard. My family has lived here since 2003, and we live at the corner of Wakefield & Hallmark--kitty-corner from the entrance to the running course. We have absolutely experienced the rise in traffic, along with the buses, during the cross country season. However, my family really enjoys it. What a wonderful community resource. It's a beautiful course and I walk there nearly every day. When my son was young, he loved to see all the buses go by. When he got older, he opened a lemonade stand to cater to thirsty runners! I do no worry about the impact on housing prices, or the very minor inconvenience of some increased traffic on a few days a year. The course is meant to be used, and I so appreciate having it. We should continue to encourage our young people to be outside and to exercise. I do not feel the BHCIA has accurately represented the desire of our community. They have not done outreach and asked people how they feel. I have never seen a community survey about this specific issue. Please keep the cross country course open for meets, even a few large ones. It's a treasured resource. Sincerely, Cathy Pearl (former BHCIA VP)	Cathy Pearl
9/7/2021	Hi. 30-year ex-professional MTB rider of local trails and I have to say, the e-bikes are really just motorcycles. With 4" wide tires, big suspension, and typically armored pilots. And because they are motor-driven, can exceed 50lbs in weight so they tear up the trails. The bike I ride has 2.2" tires, and must be lightweight so I can pedal it up the hills! E-bikes just don't seem like bicycles to me, and are causing more harm than good, especially in Waterdog. I'd hate to see access for normal mtb taken away due to e-bike riding styles. Thanks Tom Sharp	Tom Sharp
9/27/2021	Dear Park and Recreation Committee. On this coming Thursday, I would hope you would add on to your agenda the Illegal Bike Trail that was constructed in the canyon behind many homes in Belmont Heights. As a homeowner right behind this trail, it is very disturbing to me with talking and dog barking that this brings to our neighborhood, in addition to numerous cars parked on Hallmark. We bought our home in Belmont Heights because it offered us tranquility and privacy. It appears that the City is now more interested in providing outdoor recreation to all the people of The Bay Area with our cross country track, hiking trail in Water Dog Park, and now an illegal bike tail. What if a biker should injure themself. Will the City be responsible? It is time for Parks and Recreation to support our Belmont constituents first and not try and placate everyone else in the Bay Area. Thank You Ken Lebovitz	Ken Lebovitz

9/30/2021	Hello PROS Plan team, I wanted to bring this foundation to your attention: https://www.saris.com/page/foundation A grant from this foundation could help with funding for the pump track. There could be other similar foundations to look into as well. Thanks, Austin Fisher	Austin Fisher
9/30/2021	Dear Parks and Rec Commissioners: Unfortunately, I am unable to attend tonight's meeting. I appreciate the work you are doing to improve Belmont. We have a big interest in increasing bicycles and pedestrian safety in Belmont. We'd like to increase percentage of students who can bicycle to school safely, have a safe place to leave their bikes, to reduce car traffic, and promote independence in kids, as well as health benefits We are also interested in safe cycling for all community members, Right now I will not ride on Ralston; the area from Alameda heading wesr towards Highway 92 and the bike bridge is too dangerous with cars going 40 mph (and often faster) with no bike lane or protection. If I won't ride, I don't expect Ralston Middle School Community to feel safe riding either. With nearly students getting transported in cars, traffic on Ralston is out of control. Encouraging students to walk or ride to school when we can ensure students safety us critical and would help meet several of your goals including making users feel safe, improving enviormental resiliance and sustainability (reducing traffic), and advancing community health and well-being by increasing physical activity, Ultimately protected bike lanes on Ralston would be ideal, even if it means reducing the median. Short-term changed should involve reducing the speed limit on Ralston to 25 mph all the time. This would need enforcement and could be facilitated with traffic warming techniques like speed bumps/humps that are being used in other parts of Belmont	
9/30/2021	Dear PROS plan committee, I have spoken at meetings before, so will keep introductions brief. Suffice it to say that I am a well entrenched community member in the city of Belmont, having lived here for close to 20 years with my wife. We are raising 3 wonderful children who are at this time attending public elementary, middle and high school! Go Wildcats, Rams, and Scotts!! We love our city and we love our parks and open space. I believe we are working on this PROS plan at just the perfect time! While we do this, we need to zoom out a bit and reflect on the major issue in the room - climate change. I don't think it would be responsible to look at any project right now, without at least incorporating climate change into the metrics. While it is overwhelming to think about the effects of greenhouse gasses and climate change, we can focus on the here and now. What can we do as a city and as a community to lead and ensure we are going in the right direction? We need to begin to tackle the sticky business of entrenched car culture. I see parents dropping off kids all over town in cars. Going to the store in cars. Everyone goes everwhere in cars. This IS entrenched car culture. However, we can make inroads quickly if we support creating safe routes for people to walk and bike to their destinations. Electric bicycles can flatten the hills - try one out! Green striping really does inform drivers that bicycles belong on the roads and are expected to be there. Reducing the speed limits on the streets to 25 MPH would do FANTASTIC things for our overall safety, for drivers, cyclists and walkers alike. Our roads would become quieter and safer. The drivers would lose 4 seconds on their Ralston speed records, and we would gain a happier and safer community. Improved signage and widening the bike lanes can make a huge difference in inviting potential cyclists to ride rather than drive. It is great to have wonderful parks around the city, but the parks and schools should be connected by greenways and very safe routes that are tested and marked and established. The connections are as important as the destinations. This way families can have confidence that their child will safely make it to school, the library or a park on time.	Thaddeus Block

9/30/2021 (con't)	Our community will benefit by riding more bicycles - better exercise and more independence from cars. There is an ebike club starting at Carlmont High School so our high school kids can easily get around town to school and extracurricular activities. Lets address climate change head on - and make a claim as a city! Lets promote PRO pedestrian and PRO bicycle routes in our PROS plan, and start disrupting the entrenched car culture. Sincerely, Thaddeus Block	Thaddeus Block
10/1/2021	Dear Parks and Rec Commissioners: Unfortunately, I am unable to attend tonight's meeting but would like to add my thoughts. Firstly, the work you are doing to improve Belmont is greatly appreciated, especially the attention to the efforts to build community by improving the local parks. One of my concerns is the safety of pedestrian and bike travel in Belmont for seniors like myself and for the children going to school and accessing those parks. I live in the Cipriani neighborhood and enjoy going to nearby Waterdog Park walking or cycling. I have stopped cycling on the Ralston corridor to Hallmark, Canada Rd and Sawyer Camp trails as I do not feel safe cycling next to cars going 40+ mph on a road with no bike lanes and narrow shoulders. I will put the bike on a car and begin cycling outside Belmont. Likewise, I do not use my bike to go to Carlmont to shop or have coffee, for the same reason. The congestion during school commute hours is awful, but I believe most parents would not feel safe letting their children cycle or walk to schools as I did at that age. They are missing out on a great experience that includes exercise and building independence as well as the obvious community and environmental benefits we all reap when we use our cars less. I am aware of Assembly Bill AB43 becoming law and making it feasible for Belmont to regulate the speed on the major arteries to schools and to access parks. I would like to see the speed on roads like Ralston and Alameda de las Pulgas reduced to 25 mph and speed bumps placed by the school zones. I would like to see police enforcement of traffic rules during the school commute hours. I see those things as "baby steps" that would not require much more expensive but greatly needed infrastructure changes such as protected bike lanes on those streets. Thanks for your efforts and please consider these options. Sincerely, Arnie Berman	Arnie Berman
10/1/2021	Dear Parks and Rec Commissioners: I am a long time resident of the Belmont-San Carlos area, a father of three and an experienced cyclist that rides upper Ralston on my bicycle nearly every day. Sadly, I am unable to attend tonight's meeting but would like to add my thoughts. First, the work you are doing to improve Belmont is greatly appreciated, especially the attention to the efforts to build community by improving the local parks. One of my concerns is the safety of pedestrian and bike travel in Belmont, especially for seniors and and for children going to school and accessing those parks. While I bike on upper Ralston daily, this road is extremely dangerous for most cyclists, as cars routinely travel 40+ mph (even 50+) on a road with no bike lanes and narrow shoulders. Additionally, traffic congestion during school commute hours is awful, but I believe most parents would not feel safe letting their children cycle or walk to schools. They are missing out on a great experience that includes exercise and building independence as well as the obvious community and environmental benefits we all reap when we use our cars less. I am aware of Assembly Bill AB43 becoming law and making it feasible for Belmont to regulate the speed on the major arteries to schools and to access parks. I would like to see the speed on roads like Ralston and Alameda de las Pulgas reduced to 25 mph and speed bumps placed by the school zones. I would like to see police enforcement of traffic rules during the school commute hours. I see those things as "baby steps" that would not require much more expensive but greatly needed infrastructure changes such as protected bike lanes on those streets. Thanks for your efforts and please consider these options. Respectfully, Andrew Hsu San Carlos Resident (former Belmont resident)	Andrew Hsu

10/3/2021	Dear PROS Committee and P&R Commission: I watched the 9/30 PROS Committee meeting on Zoom and wanted to compliment Gates & Associates for their excellent and informative presentation. I'm pleased with the progress on the plan and hope the city can stay on pace to get the plan completed. I also wanted to offer some feedback on some items that were discussed during the meeting. Hidden Canyon Park I am glad that developing Hidden Canyon Park is finally on the agenda. As you know, in the 1990s, that parcel of land was dedicated as a city park by the developer of the Hidden Canyon tract under the Quimby Act as a condition of allowing the subdivision to be built. Due to lack of leadership and initiative of prior city councils, that tract of land has been sitting fallow for nearly 30 years. I'm grateful that our city current leadership recognizes the need for this resource to be utilized as it was originally intended. I think a permanent bathroom would be a great addition to that park. Someone mentioned having interpretive/ educational aspects to it, and I think that was a great idea. There could be signs to educate park users about local flora and fauna, trail use courtesy, and trail stewardship. I also agree with the comments at the meeting that because the park is so close to the open space interface, it should be developed with a natural aesthetic to it, and amenities such as metal/plastic playground structures would be out of character with the space. This past summer, while in Bend, Oregon, I visited Rockridge city park. That park is much larger than Hidden Canyon. It has developed areas such as a large lawn, group picnic areas, a concrete skate park, etc. However, part of the park borders open space, and that portion of the park showcases some really great examples of natural amenities that blend in with the environment. Rather than a synthetic play structure, there is a "forest" of fossilized tree trunks and rocks placed for kids to play on. There are also beginner and intermediate mountain bike skills courses. These are very short loop trails with both natural and man-made wooden and stone obstacles designed to allow beginning and/or younger riders to hone their bike handling skills in a safe environment before heading onto trails where mistakes have bigger consequences. Both of these amenities would be a perfect fit for Hidden Canyon. There are some photos of the park here: https://www.bendparksandrec.org/park/rockridge-park/ (you can also do a Google Images search for Rockridge Park Bend), and I have also attached a few photos that I took while I was there. Connectivity At the meeting there were a number of comments about the importance of having connectivity between parks and amenities. I agree wholeheartedly with those comments. I think the city is doing a great job with the sidewalks along Ralston Avenue and look forward to more improvements to improve pedestrian and cycling connectivity throughout the city. During the meeting when pump tracks were discussed, a public commenter suggested that a pump track location in the main residential area of Belmont would be preferable to the Sports Complex, because that would allow users to safely bike there rather than traversing the hazardous Ralston / El Camino Real route. I agree with that commenter. Also, during this discussion, there was an aerial view of Hidden Canyon Park up on the screen, showing both a trail and road leading to the space, so that site has great connectivity - not only from Carlmont and Hastings Drives, but from Hallmark Drive (via the Lake Road Trail) Pump Track I'm very pleased to hear committee members speaking favorably about pump tracks. As you know there is strong grassroots community interest in a pump track, evidenced by the PROS survey results. Yesterday, I attended the Derby and Day in the Park event in Brisbane. They had a modular pump track set up for the event, which was a big hit. I have attached a few photos. I chatted with the gentleman from American Ramp Company (the outfit who supplied the track for the event), he said they build dirt, asphalt, and concrete pump tracks, and built a dirt one at Stafford Lake Park in Novato, and recently built a concrete one in Simi Valley. The portable one at the event is made out of plywood and bolts together, it is intended for temporary use. He said when they build concrete or asphalt ones, they use forms similar to the portable track to pour the asphalt or concrete. He said from a maintenance perspective, they prefer asphalt tracks because they hold up to wear very well, allow bikes, scooters, and skateboards, and surface damage is very easy to repair. Skate Park During the meeting, I was also happy to hear the committee members speaking favorably about skate parks, and really pleased to finally see a concrete proposal for a small skate park in the Ralston / Old County Road area. There were some concerns expressed about space limitations for a skate park, and whether it would be too small to be used. There is such a pent-up demand for this type of amenity in Belmont, it will get used no matter the size. Belmont's preteens and teens are starving for an amenity like this. As in Field of Dreams, if you build it, they will come.	Paul Sheng

DATE	COMMENT	COMMENTER
10/3/2021 (con't)	Coincidentally, while I was at the Brisbane event, I noticed they have a very small skate park right across the street from the event venue, which was being well-used and enjoyed by residents. I have attached a few photos to illustrate how a nice skate park can fit into a small space. During the meeting Brigitte mentioned that this park may be temporary in nature, and that can certainly be done, for example in Daly City has a skate park, which is not the greatest, but has prefabricated metal ramp and boxes rather than poured concrete. A few pictures are here: https://www.westcoastskateparks.com/skateparks/daly-city-skatepark-daly-city-california I'm sure that even if a small, temporary skate park is constructed, that will serve a a successful proof-of-concept, and I hope someday soon the city will construct a permanent skate park for its underserved teens. Thank you for all the time and effort you have been putting into our PROS Plan, keep up the good work, and I look forward to continued progress. Sincerely, Paul Sheng	Paul Sheng
10/3/2021	Hi Kelley, Thank you so much for this invitation. Unfortunately I did not get this email until it was too late. Is there a way that the communities involved with wanting to give input can send information via email? I've heard from a couple people that they would've needed more of a heads up. Been able to attend. Please let me know, I'd like for her to be proper input for this process. Thank you!	Ryen Motzek
10/19/2021	Dear Commissioners and PROS Committee, At the PROS meeting for Hidden Canyon staff got an earful from residents expressing disapproval of development in the neighborhood park. There are three important points to summarize: "Neighborhood" parks are defined in the General Plan (see below) as intended to serve only the immediate neighborhood, NOT to draw and serve visitors from the wider community. Located in sites where there is limited access and no parking, it is inappropriate to develop neighborhood parks as attractions for anyone who can't walk a few blocks to get there. Belmont Heights currently struggles with traffic, noise pollution and pedestrian safety issues due to heavy use of the Cross Country Course. This growing conflict is the result of ignoring the General Plan and failing to consider available infrastructure and neighbors when scaling plans. "Undeveloped" parks were never intended to be filled with amenities. The original plan for these open spaces was exactly at titled -"Undeveloped". They were intended as natural space for wildlife corridors and shelter for our neighborhood visitors (deer, birds, etc.), as quiet, contemplative natural settings, and breathing space. Humans need to resist the urge to build on every little bit of nature. These spaces are NOT awaiting development, but rather intentionally UN-developed. The Survey on which the consultants base their suggestions was wildly flawed. Over half of the respondents were NON Belmont residents. Yes, Belmont Parks are open to all visitors; but their intended purpose is to serve residents who live here and pay for them, not to attract and serve those from the wider community. Belmont's General Plan provides validity for our argument: 4.2 PARKS AND RECREATION PARK CLASSIFICATIONS The City provides its residents with several types of parks and recreation facilities. Parks are defined as land owned, leased, or provided to the City and used for public recreational purposes. In addition, there is joint use planning and operation of school district athletic facilities for public recreation. Parks and recreational facilities are classified as follows: • Mini Park. A small park ranging from a quarter-acre to 2 acres that is located within a residential area and is intended to provide play areas for small children or passive sitting areas for residents within a quarter-mile-radius. • Neighborhood Park. A medium-sized park ranging from 2 to 10 acres that provides basic recreational activities for a specific neighborhood within a one-mile radius. • Community Park. A large park ranging from 20 to 50 acres that includes passive and active recreation facilities that serve the entire city or a substantial portion of the city.	Kristin Mercer

EMAILS RECEIVED: INFO@BELMONTPROSPLAN.COM

DATE	COMMENT	COMMENTER
10/19/2021 (con't)	• School Park. Athletic fields and facilities that operate under joint use agreements between the City and the School District and are used by the community during non-school hours. • Special Facility. A facility such as a community center, athletic complex, aquatic center or other cultural or athletic facility that services a specific recreational need for all or a portion of the city's population. This is why I repeatedly plead with staff and planners to really read the existing General Plan, Conservation Element, and Parks Master Plan. These plans are our blueprint. Please respect them. Thank you, Kristin Mercer	Kristin Mercer
11/5/21	Dear City Council, Parks & Rec Commission, and PROS Committee: I watched the 11/3/21 meeting on Zoom and wanted to offer some input on Hidden Canyon Park. First, I thought Gates & Associates did a great job in presenting the draft parks improvement element of the PROS plan. I think the Parks staff and Gates have done a fantastic job of doing a needs assessment for our parks and recreational opportunities. The needs assessment shows a very clear need for additional parks in Belmont. Ralston Ranch and Hidden Canyon have been identified as two tremendous opportunities to fill our community's needs - particularly Hidden Canyon which offers the largest opportunity, both in terms of acreage and the proximity to the widest population. I was unable to make the focus group meeting for Hidden Canyon, but a friend of mine did and I was very disturbed by what he told me. It's my understanding that nearly 100% of the participants were either homeowners from the Hidden Canyon development, or homeowners / political operatives from Belmont Heights such as Pat Cuvielo, Deniz Bolbol, and Kristen Mercer. There was not a single renter or landlord representative from any of the many nearby apartment buildings that house thousands of renters. If you take a look on Zillow, you can see that the Hidden Canyon housing development consists of 31 single family houses, with market values ranging from $2.2M to $2.7M. These are among the priciest homes in the city, if not the priciest. As you know, the guiding principles of the PROS plan include the following points, among others: - Provide equitable access to resources and activities across the entire city - Promote inclusion to people of all backgrounds, regardless of race, gender, sexual orientation, socioeconomic position, or physical/cognitive ability - Make all users feel welcome and safe - Adapt to changing conditions and needs I'm concerned that the first two principles, equitable access and inclusion, are being steamrolled by elite special interests in this process. During the Parks & Rec Commission meeting, David Braunstein (PROS Committee member and former Belmont Mayor / City Councilman of 8+ years) made strong public comment advocating against any improvement in the Hidden Canyon park. He made an analogy that "just because you can build improvements in something like Yellowstone Park, it doesn't mean you should do it." In my opinion this is a false analogy. That analogy would be valid if there was a proposal to build things within the boundaries of the Open Space, but no one is proposing to do that. As you know, Hidden Canyon Park is a parcel of land that is already dedicated to city park use that sits between the Hidden Canyon development and the Waterdog Open Space. In the 1990s, the developer was required to grant that parcel to the city to be used as a park as a condition of the development permit. Specifically, the 1994 City Council resolution approving the Hidden Canyon tract states ". . . The 5.6 acre park area shall be dedicated to the City of Belmont for the provision of a park" and "The proposed park area will consist of a trail head, drinking fountains, and picnic tables to be developed by the City at a later date, subject to approval by the Parks and Recreation Commission." See https://ecmx.belmont.gov:81/Image/DownloadPdf/133919 It seems to me that Mr. Braunstein, as well as the 30 other households in the wealthy Hidden Canyon neighborhood, have a vested interest in keeping that city park lot barren and unappealing. Apparently they feel improvements would increase traffic on "their" street. I put "their" in quotation marks because Carlmont Drive is of course a public street paid for by taxpayer dollars, which everyone has the right to use. It would be a tremendous shame to see Hidden Canyon Park - the biggest opportunity we have to add desperately needed park infrastructure - lay fallow for the next 20 years, as it has for the past 27 years. In the sale and re-sale contract of every home in the in Hidden Canyon tract, there would have been a disclosure that the 5.6 acre lot at the end of Carlmont Drive was designated to be a city park. Over the past 27 years, it appears a sense of entitlement has developed in that neighborhood that they can keep that land fallow for their benefit, which is to the detriment to the entire city. Of course, as adjoining neighbors to the city park land, they are important stakeholders, and the process needs to consider the impact any development will have on them. However, I feel like in the process thus far, their voices are dominating the discussion to the exclusion of almost everyone else.	Paul Sheng

DATE	COMMENT	COMMENTER
11/5/2021 (con't)	Consider this: the undeveloped Hidden Canyon park land is 5.6 acres. That is roughly the same size as Barrett Community center. We have a choice of either providing all 30,000 citizens of our city with 5.6 acres worth of parkland to fill an unmet need for our increasing population, or we can kowtow to interests of 31 of the city's wealthiest households so they can have marginally fewer cars drive down "their" street. I think everyone is in agreement that development of Hidden Canyon Park should be as congruent with the natural setting as possible. It is not an appropriate place for things such as plastic playground equipment or splash pads. (However, a permanent bathroom would be a welcome addition - it would especially be appreciated by seniors and families with small children.) I really liked Commissioner Michaels' idea of a staff outpost with outdoor classroom space. That would provide a great launching point for city staff-guided nature walks, fishing clinics, etc. Something like a scaled-down version of the interpretive center/restroom building at Arastadero Preserve in Palo Alto is something that would fit nicely in the space. I have a question about the process as it pertains to Hidden Canyon Park. Mr. Braunstein is on the PROS Committee, he lives in the Hidden Canyon tract, and he has now gone on public record vigorously opposing any development of Hidden Canyon Park. (Mr. Braunstein has every right to express opinions at public meetings as a private citizen, and I have no issue with him expressing his opinions at the last Parks & Rec Commission meeting.) However, it seems like a conflict of interest for him to participate on the PROS Committee on items relating to Hidden Canyon Park. During Parks and Recreation Commission meetings, Commissioner Mittelstadt recuses himself when items of Commission business come up on trails adjoining his house. However, as a member of the PROS Committee, don't the same legal or ethical rules require Mr. Braunstein to recuse himself from items of PROS Committee business adjoining his house? I feel the Hidden Canyon Park issue is just one example of a larger issue with the PROS process that City Council and the Parks & Rec Commission needs to address. We need more balance, more equity, and more inclusion. Of course, every citizen on every side of the issue has the right to speak and be heard. However, the discussion is being dominated by "ghosts of Christmas past" - politicians who have been voted out of office years ago, and would-be politicians who don't have enough support to get into office. At each and every meeting, we are hearing from Deniz Bolbol (losing City Council candidate from 2018 election); Pat Cuvielo (losing City Council candidate from 2020 election), Kristen Mercer (former Planning Commissioner appointed by a prior political regime), and now former mayor/councilman Braunstein. It is a loud, constant drumbeat from the same tiny group of people every time. This is the least diverse demographic group I can possibly think of. They are all white, middle-aged to older retired or semi-retired political operatives who own $2.2M+ houses adjoining open space. To be clear, I am not saying these people should be marginalized or excluded from the process; I absolutely respect their First Amendment right to speak. However, they do not have the right to dominate every discussion and dictate how our community uses our land. There should be more balance in the process and more input from a broader and more diverse group of community members. More outreach is needed so regular community member voices can get heard over the roar of former/would be politicians. Finally, I want to make one thing very clear: I am by no means critical of Parks Director Shearer, Gates & Associates, or their respective staff. I think they are all doing a fantastic job with the PROS plan, and the issues with the process are not due to them, but rather the constant barrage from this group of political operatives who are aggressively trying to dominate the agenda. I have a concrete suggestion to bring some balance to this process, at least as it pertains to Hidden Canyon Park. There has already been a Hidden Canyon focus group meeting that was well-attended by the Hidden Canyon homeowners and Belmont Heights political operatives. How about conducting a second Hidden Canyon / Carlmont renter focus group? It will take some outreach to get those folks to the table, but it is well worth the effort. It just seems unfair and inequitable for policy decisions to be made on the basis of input from one tiny special interest group. Thank you for taking the time to read my lengthy email, and I very much appreciate all the time and effort you are all putting into our PROS Plan process. Regards, Paul Sheng	Paul Sheng
1/7/2022	"I'm co-President of the Homeview Neighborhood Association. I believe there was mention made last year of some additional work planned/considered for O'Donnell, such as a water-play area of some sort, and/or other improvements/additions to the Park. Please point me to the specific area in the PROS Plan that I can find detailed information on that. Thanks!!!!!"	Michael Fabel

1/9/2022	I just wish to express my desire that the open space at the top of Ralston Ranch which is under concideration for turning it into a Dog Park by the Belmont Parks and Rec. Dept. is very much unwanted! It would create more traffic noise and congestion in that area. It would also be detrimental to the indigenous wildlife which use it as a Crossing area within the San Juan Canyon. The area is also a hill which makes it most unsuitable for such a park. Thank you! Jeanette Sacco-Belli saccobellistudio.com	Jeanette Sacco-Belli
1/10/2022	Dear Parks Taskforce, I submitted the below letter on October 18th and there was no acknowledgement you received it. I also attended the last comment session and will attend this Wednesday. I ran a survey monkey pulse of our Ralston Ranch Neighbors and there was all but one respondent whose first choice was to keep the park as open space, focusing funds on maintaining and planting more trees over time. The other responded their first choice was a walking path. No one wanted a dog park. Finally, I would like to underscore the security and trash concerns outlined in my letter regarding the Len Turner Outlook - more often than not, trash is brimming over and posted signs for no drinking alcohol or parking after dusk are totally disregarded. Is this the responsibility of Belmont Police or Parks and Rec? Or perhaps both? I look forward to an acknowledgement and an answer on what can be done for the Outlook. Best regards - Wendy October 18th, 2021 Dear Belmont Parks and Recreation, Thank you for soliciting feedback on the Open Space Master Plan. We attended an earlier feedback session that was focused on a pump park at Water Dog Lake – these thoughts are specific to Ralston Ranch Park. Or as we lovingly call it after 24-years of living next to it, the Ralston Ranch Woods. 1. We would like to see all or a much larger % of the park left natural (A). Open space is what makes Belmont special and we are sad to see building being permitted in areas that had previously been restricted and the continued loss of wildlife habitat. Ralston Ranch Woods is home to owls, hawks, rabbits, deer and occasional fox, bobcats and mountain lions. We watch deer moving between the canyon on one side of RR to the other everyday (and our Ring cam is full of curious deer families grazing on our front lawn). So much of their open space is already encroached, it's really a shame to develop RR Woods – be it chopping down existing trees, or building sidewalks, fences and other structures. That said, we do understand that we're not the only stakeholders in this decision. So, we could support (B) and (C). 2. A play structure for small children (C) would be nice if positioned away from houses - and we already have a few benches (B) so that's not much of a change and would be a welcome addition for families who live and walk in the neighborhood. 3. Everything else – a dog park that clears trees and puts up fences, picnic tables and young adult gathering area directly on the other side of existing homes sounds awful. (D,E,F) First, dog parks are usually made of dirt (do you know how windy it gets up here?), surrounded by a chain link fence (how unsightly as you enter RRR) – and adding more parked cars at the only exit point for RRR (where we already have daycare drop-off and pick-up) will only add further the congestion. The clearing of trees also means more erosion. Most homes on the lower part of Ralston Ranch have sump pumps because of the water runoff in the winter that drains down the hill into their backyards – removing existing trees will only increase that problem. Second, Belmont has a problem managing gathering areas – look at the cars/people at the Len Turner Memorial Vista Point (even after dark) who smoke, leave alcohol bottles and trash spilling over trash bins for the crow to throw around. It's become a constant parking spot for Uber and Lift drivers, so the area needs more trash and recycling bins, more frequent servicing, and better monitoring by the police. Ditto for the car park areas at the trail head on Ralston Avenue and 92 intersections. Third, people already drive to RRR and park along the street to access the trail heads for mountain biking. I'd prefer to see the city put in a water fountain, trash and recycling cans at the RRR turn-around and service it regularly for all the folks using the 16-miles of trails cut into Belmont's open space - hikers, dog walkers and mountain bikers.	Wendy Miller

1/10/2022 (con't)	Lastly, encouraging the gathering of more people from outside the immediate neighborhood is simply inviting more crime. Robberies have increased in our area and the Belmont Police have acknowledged we are a quick getaway for criminals due to the easy access to 92, 101 and 280. Unintended consequences must be carefully considered – this would affect not only Ralston Ranch, but the other neighborhoods around us as well. If Homer and I had our druthers, we'd like to see the city expand (A) and just maintain the woods by trimming and clearing brush 2X year for fire safety, leaving all of the 70-plus trees alone. It would keep the space open for wildlife habitat and continue to be a place of solitude and quiet reflection for us humans. I'd like to see Belmont take better care of what we have (maintaining the trees, managing trash left by those already using our open spaces) and addressing issues at the vista point and car park areas. To add to the conversation, how about planting a grove of redwoods around a natural labyrinth? Some benches for quiet reflection or meditation would be delightful. If we have to develop the park, we could support B & C if tucked into a quiet space in the park – set away from homes. Thank you for asking for our input! Best Regards – Wendy Miller & Homer Wong	Wendy Miller
1/11/2022	Please find my past correspondence to P&R regarding this issue from the previous meeting. To summarize, the discussion from the previous meeting was well represented by the local nearby community and the overwhelming consensus by the community represented was for keeping the park as natural, open and undeveloped as possible. We support sitting areas and walking paths and potentially a play structure. Here are my concerns in general: Play Structure - is OK but should be located away from the fence lines of adjacent property owners to assure privacy and security Dog Park – This is a horrible location for a dog park for many reasons. As a local dog owner, I would prefer to use the easily accessible trails to walk my dogs as do most of the neighborhood. If I need to socialize my dogs at a dog park, Cipriani is already fairly close. If you mean to add a dog park here, Fox MS is a much better location for access, use of space and parking. Gathering/Picnic Areas – this can be just another attractive nuisance if not policed and maintained properly. Given our experience with the lookout, there is not much confidence that this will be done properly. Regardless, it should not be located against the adjacent resident for the aforementioned reasons above. Maintenance and Additional Trees – The park limits should be extended to back of sidewalk on Ralston Ranch so the park can be maintained properly. This area tends to be the least maintained area. It would be nice to get some screening additional trees along the sidewalk and below where people can peer into the homes from the street above. As mentioned in my past email, I would strongly recommend that any additional, replacement or mitigation trees be planted along the perimeters of the park especially at Ralston Ave and adjacent to those homes closest to the park to continue to provide both natural visual, privacy and wind + noise barriers. Regards Roy + Maria Schnabel	Roy and Maria Schnabel

1/11/2022	Dear Commissioners and PROS advisory representatives, Confusion about the designation of Neighborhood Park vs. Community Park, Mini Park, and Open Space has created community conflict. The 2035 General Plan Parks Element, section 4.2 (attached) differentiates between the classes of parks by size and appropriate use, and clearly Hidden Valley is intended as a "Neighborhood Park". 4.2 PARK CLASSIFICATIONS The City provides its residents with several types of parks and recreation facilities. Parks and recreational facilities are classified as follows: · Mini Park. A small park ranging from a quarter-acre to 2 acres that is located within a residential area and is intended to provide play areas for small children or passive sitting areas for residents within a quarter-mile-radius. · Neighborhood Park. A medium-sized park ranging from 2 to 10 acres that provides basic recreational activities for a specific neighborhood within a one-mile radius. · Community Park. A large park ranging from 20 to 50 acres that includes passive and active recreation facilities that serve the entire city or a substantial portion of the city. Gates Associates affirmed this principle in Community Meeting #3 (below); neighborhood parks are to serve an area of 1/8 to 1/4 mile ONLY – not the wider community or region. Hidden Valley is very clearly a "Neighborhood Park". It is only 5 acres – far too small to accommodate community-wide amenities without impacting park space. It's located at the end of a long dead-end residential street, with limited infrastructure and constrained emergency access in a high wildfire risk canyon. Traffic and Parking already overburden the entire length of Carlmont Drive (not just the single family homes), and providing parking for greater use would entail paving a large portion of the park. Social equity is NOT the issue in this case. These General Plan standards are based on resident security, visitor safety, traffic circulation, emergency services, and City infrastructure considerations. Some of the public confuse this park with the adjacent 200 acres of Hidden Canyon. Already this neighborhood is dangerously overtaxed, serving as the gateway access to that open space, which the City promotes regionally. Unwittingly the City has, without consideration for capacity or resident and visitor safety, drawn thousands of visitors from a far wider region than intended by the General Plan. The Park Master Plan MUST conform to General Plan standards, and your legal obligation is to ensure that conformance. Please make it clear to staff and consultants as well as the general public, that intensification of use in this tiny park is not their choice; both the General Plan and prudent consideration of public safety and City planning dictate Hidden Valley is NOT a community park, but a neighborhood park.	Kristin Mercer
1/12/2022	Hi Everyone, I wanted to reach out in support of your vision to maintain the trail system at Waterdog park and beyond as an inclusive trail system open to hikers, bikers, runners & pets. I live by Sugarloaf mountain with my wife and 2 kids and we visit Waterdog park every week as a family for a hike through the park. My kids love the bridges on the backside of the lake. My wife and I also visit the park on our mountain bikes and enjoy riding the entire park. It's wonderful! Big props to the crew that maintains all the trails! Superb job fixing the ruts, clearing the dead trees. Keep up the awesome work! Thank you! Ivan	Ivan Smiljanic

1/12/2022	Dear PROS plan committee, As residents of Ralston Ranch Road, we are writing in support of leaving Ralston Ranch Road park as natural as possible and to limit development of the park to perhaps a walking path with some benches and possibly a small children's play element. Our street abuts the Canyon and the deer use the park to cross from one side of the Canyon to the other side. Having a dog park that would bring people from outside the neighborhood would increase concerns regarding traffic and safety. Our street is unique in that it is a U shaped street that has two ways to enter, but only one exit. The hairpin turn is narrower than the rest of the street and the family that lives at the bottom of the hairpin does not have a garage and must park their cars on the street. When there are cars going in both directions at the hairpin turn, one must be very careful to avoid the other car as one also navigates around the parked cars. In addition, the sun can be quite blinding at that spot during sunrise and sunset. Even though there is supposedly only one way to exit from our street, visitors and delivery trucks often exit out the wrong way which creates a safety hazard for those coming through the narrow entry of our street off of Christian Drive. Also concerning is the fact that the proposed entry to the dog park is right by the only authorized street exit and that area will become very congested when there are multiple cars parked along both sides of the street while cars both enter and exit. Another concern about having our park become a destination for people from outside the neighborhood is the increased risk of burglaries. Our street is very close to the freeway and our local neighborhood has had burglaries in the past, and we do not want to potentially further endanger those who live here. Ralston Ranch Road is incredibly windy and on trash day, the wind often blows the trash, as it is being dumped mid-air, down the street. If we have a picnic area where the trash cans are overflowing like they are at the Len Turner Memorial Vista Point, this will further add to the litter problem we are experiencing. Having a picnic spot also gives people a chance to loiter after dark which may increase the prospects of safety concerns. The trees in the park create a windbreak and sound break for the homes on our street since we are right off of busy Ralston Avenue. Limiting development and leaving most of them undisturbed would be our neighborhood's preference. Our U shaped street slopes down from Ralston Avenue and some of the homes on our street have a sump pump to help with drainage. Removing a number of the trees for development may further exacerbate this drainage issue. In 2018 the trees also helped to prevent a car that went off of Ralston Avenue and into Ralston Ranch Road park from rolling all the way down into the homes adjacent to the bottom of the park. Although it would be nice to have a children's play element, we worry about an accident like this happening again as people often speed down Ralston Avenue. It would be a tragedy to have people, children, and dogs injured if our park was developed as proposed and became a heavily used park and this kind of roll-over accident occurred once more. Thank you for considering how the development of Ralston Ranch Road park will impact the wildlife and residents of the neighborhood. We hope the park will be left as natural as possible. Sincerely, Kip Leong and Yvonne Ong	Yvonne Ong

1/13/2022	Dear Park and Rec, I would like to make sure that the neighborhood thoughts regarding the development of the Ralston Ranch Park are clearly expressed to PROS and the Park and Rec Commission. Based on comments made on the zoom meet, we want to make sure that the park stays as natural as possible to allow for the wildlife to roam through easily to access either side of the canyon around the neighborhood. We also expressed support of making sure this space allows for the local neighborhood, which is defined as a 1 mile radius, to have equitable access to the park. We are in support of having the city develop a sitting area and walking paths through the park, with the additional suggestion of a meditation walking circle. Overall, we aren't opposed to a simple, small play structure, however we highlighted 1. our neighborhood is windy (one of, if not the windiest neighborhoods in Belmont- not conducive to being outside for extended periods of time) and foggy, 2. the play structure should not be placed up against the fence line of the neighbors properties but on the side of Ralston, 3. neighbors being concerned about trash accumulating and being blown around (as it is not maintained at the vista point), 4. bringing extra traffic into the neighborhood with the bend in the street (blind spot when sun is low in the sky at sunrise/sunset) and the 1-way turn around at the Christian exit, that a lot of outsiders use as an exit. Please consider that this property will require a significant amount of grading and that with erosion/water damage over time it will erode the natural drainage for the trees that are currently in the park. If the city puts in a seating area or a playground away from the residents fence line and closer to ralston avenue, it may need to consider building a retaining wall. A small playground or sitting area may possibly attract teenagers who might drink and smoke and cause a fire. In addition, the city will need to assess the PG&E line that runs along Ralston and goes to the station (at Christian) on Ralston Ranch Road. The line crosses somewhere from Ralston to Ralston Ranch Road. We do strongly oppose a dog park for many of the reasons stated above. Passive development (walking trails, meditation circle, sitting areas) for the Ralston Ranch Park is supported by this community. We appreciate the PROS committee reaching out to the local residents and hope that our opinions in developing the Ralston Ranch Park will be respected as it moves forward in developing our undeveloped parks in Belmont. Thank you, Carol Rossi	Carol Rossi
1/13/2022	I am Bob Stahl, an advisory member of the Belmont Prosplan. I want to let you know I've been receiving multiple emails from residents of the Ralston Ranch area who are against placing a dog park in the planned park area. They cite the limited street parking, narrow road, and increased traffic in the area from people coming from outside the area. They also believe installing a play structure is not in keeping with the naturalness of the area. Please take this into consideration in your planning. Thank you.	Bob Stahl
1/15/2022	Dear Parks & Recreation Commission: I thought the format for discussing the various parks at the 1/12/22 Parks and Recreation Commission meeting worked out very well, and the meeting was very collaborative, creative, positive, supportive, and productive. I know that emailed comments about parks are being tallied in the PROS plan, so rather than sending a separate email about each park, I will submit all of my input in this one email by highlighting the park name in bold, and ask that Gates & Associates tally these comments separately for each park. Patricia Wharton Park – I think the draft improvements are great, and I think That Comr. Foehr's idea of putting in boulders for small kids to climb on is an excellent idea. Wakefield Park – same as above, a walking path would be great. Again, excellent idea by Comr. Foehr for an observation deck for visitors to take in the view. In looking at Wakefield Park on Google Maps, it has a large barren area. Maybe that would be a place to consider a neighborhood pump track. Belamdea Park – all the draft improvements look great, and the proposal for a teen outdoor experience is a fantastic idea – our teen population is underserved and there's not much for teens to do after school. Many end up aimlessly hanging out at Carlmont Shopping Center. A teen outdoor zone at Belameda is very close to Carlmont High and would be an absolutely perfect location for that amenity. Hidden Canyon Park - I agree wholeheartedly with Comr. Michael's comments at the prior meeting, and they're worth quoting here:	Paul Sheng

DATE	COMMENT	COMMENTER
1/15/2022 (con't)	"I also believe a big part of this connection with the community does happen through Hidden Canyon. I think we should have an open space outpost here, offering a natural transition from city to park to open space. We should run staff programs here. Let little kids sample nature here. Offer wildlife education. Invite everyone to learn, respect, and help out. There's a ton we can do to enhance our open space while not turning the site into a manufactured, high-volume destination. In a smaller way, I think we should replicate this at all our major trailheads." I want to make a couple of points in response to public comments made by Deniz Bolbol, Pat Cuvielo, and Kristen Mercer, who were aggressively railing against any improvement to Hidden Canyon Park. They stated that Hidden Canyon is classified as a Neighborhood Park in the Master Plan, which is defined as "A medium-sized park ranging from 2 to 10 acres that provides basic recreational activities for a specific neighborhood within a one-mile radius." That is correct. But they went on to argue that because 10 or so Hidden Canyon tract homeowners essentially said "not in my backyard" to any improvement at the Hidden Canyon Focus Group meeting, no improvement should happen there. They also seemed to argue that the Master Plan legally requires Hidden Canyon to only serve the interests of those homeowners. Not so. First, as the Commission correctly pointed out, Neighborhood Parks are a classification in the Master Plan, not a restriction or mandate on how parks can and should be improved to serve the community. Second, consider what is actually within a one-mile radius of Hidden Canyon Park: Go to https://www.google.com/maps/place/Hidden+Canyon+Park/@37.5034277,-122.300551,17z/data=!3m1!4b1!4m5!3m4!1s0x808f9f62b039d777:0x84c7f24c0202cd4d!8m2!3d37.5034277!4d-122.2987105?hl=en and right-click your mouse pointer on the red marker for Hidden Canyon Park. A dialog box will come up. Click on the last item "Measure distance." Zoom out a bit, and then left-click your mouse on Casa Bona Avenue at Semeria Park. A line will appear, drawing a 1-mile radius to that point from the center of Hidden Canyon Park. If you left-click and hold the mouse pointer on the circle at the end of that line (the one at Semeria Park), you can rotate the line to see what's within a one-mile radius of Hidden Canyon Park. That one-mile radius encompasses at least a third, if not more, of Belmont's residential areas. It includes, for example: -all of the homes, condos, and apartments in the Carlmont neighborhood; -most of the homes in the area behind/between Barrett Community Center and Notre Dame University; -all of the homes and apartments off Ralston near Charles Armstrong School and off Alameda near Carlmont High School (even past the Belmont border, well into the Devonshire area of San Carlos); -a large portion of the Cipriani neighborhood surrounding Semeria Park and Cipriani Elementary; -nearly the entire Belmont Heights neighborhood, from Tahoe/Yosemite Drive, all the residential streets that branch off Hallmark, and well past the San Carlos/Belmont Border at Hallmark and Crestview; So even if one strictly views Hidden Canyon Park's classification as a "Neighborhood Park" under the Master Plan, then the "neighborhood" it serves -within a one-mile radius – includes portions of nearly every residential neighborhood in the city - and 100% of the Carlmont neighborhood, including all the apartments. (i.e. the highest-density neighborhood in the city.) Thus, under the Master Plan, Hidden Canyon park is intended to provide basic recreational activities for the thousands of people who live within that radius – not just the handful of homeowners in the pink townhouses on Carlmont Drive. Commissioner Michaels' vision for improvements to Hidden Canyon to serve as a natural transition to the open space is entirely consistent with the Master Plan, and the overwhelming majority of people in Belmont would like to see this vision come to fruition in the PROS Plan. Thank you for considering my comments, and thank you for all of the time, effort, and dedication you put into serving on the Commission. -Paul Sheng	Paul Sheng

1/29/2022	I want reiterate my request that the Water Dog open space have separate trails for bikers apart from hikers. Just yesterday my wife and I were on the John Brooks trail and two bikers raced past us nearly knocking us off the trail. They came from behind us without warning us and were within inches of us. They said nothing as they passed us. This has happened many times in the past. The bikes have also ruined many of the trails almost creating highly slick and deep trails. In addition they run over roots they may kill the trees. My wife and I hike the Rambler, Chaparral and John Brooks trails regularly and see very little wildlife(deer, rabbits, coyotes, snakes) than we have in prior years. I believe bikers have scared off many of these animals. Please restrict bikers to separate trails in future Water Dog trail plans. Thank you. Bob Stahl	Bob Stahl
2/4/2022	First I'd like to thank the Parks & Rec Commission for their dedication and measured approach to figure out how parks can best serve the Belmont community. After reviewing the proposed plans for Hidden Canyon, it seems clear to me, that developing this property in accordance with the Master Plan will be a wonderful addition to the Belmont community. The plans appear to thoughtfully provide spaces that will serve many needs. As someone who lives across the street from a neighborhood park, I love the community it provides and the opportunity to share the good fortune of living near an open space. And I'm sure the neighbors living around Hidden Canyon will find it equally rewarding to see others discover this special green space. I look forward to hearing more about the plans tonight! Thanks for all your work! Mandy Gibbs Belmont	Mandy Gibbs
2/4/2022	Dear Belmont Park and Rec Commission, Regarding Agenda item 6 B. I want to let you know that I am in favor of the development of Hidden Canyon park. The plans look stunning, and I believe that by developing this space, our community will be able to enjoy this breathtaking area. Thank you, Michelle Kelley "	Michelle Kelley
2/7/2022	I want the Park Commissioners and the Consultant reviewing the Open Space to know that the trails are unsafe to hikers and walkers due to bikers. In the last 5 days I've nearly been hit twice by bikers speeding around turns that stopped just 3-5 feet from me on the John Brooks trail. They skidded to a stop at the last second when they saw me. There was absolutely no warning to me as the bikers sped around blind curves. They had no bell or other device to warn me. I was fortunate in both these occurrences as I could have been crashed into by these bikers. Many of the trails are only 30"-36" wide and cannot accommodate a bike rider and a hiker. I implore you to restrict bikers from riding on any trail that is less than four feet wide. I must also state many of my friends will no longer walk or hike these trails due the danger posed by the bikers. Many of these Belmont residents have hiked these trails for years but they literally fear for their life on these trails due to the numerous bikers on the trails who sped on the trails making it extremely dangerous. At some point someone is going to be seriously injured. It falls on the biker who undoubtedly will be sued and also the City of Belmont for allowing this unsafe condition to exist. Thank you. Pamela Stahl	Pamela Stahl
2/14/2022	Brigitte, Attached please find a letter and attachments that we would like forwarded to WRA Consulting. Thanks, Paul	Paul Sheng

2/10/2022	As we turn our attention to the plan for Hidden Canyon Park, one great idea has been to add a nature interpretive center along with public restrooms and drinking fountains. An excellent example is the interpretive center down at Arastradero Preserve in Palo Alto. Worth checking out if you haven't been there. If we do build such a center, I was wondering if we could add a tool shed in the back to store our trail maintenance tools? I have them now stored on the side of my house, which is fine, but at some point Mrs. Carter might want to have her side yard back. And she's the boss! Also, I think we could raise funds pretty easily to build something if we put our minds to it. A lot of folks would donate. Warmly, Jonathan Carter, MD Lead, Waterdog Trailkeeper Volunteers	Jonathan Carter
2/24/2022	Good morning Brigitte, it was nice talking to you this morning and I'm very happy to hear that further discussion of a dog park at Ralston Ranch Park has been terminated. We are all eager to see what the new plan looks like and if the other points in this petition have also been addressed. Attached is a scan of our petition, with 97 signatures of residents within the 1-mile radius of Ralston Ranch Park - the area this park is intended to serve. Thank you for listening and I know we all share a love of Belmont and are trying to find a good compromise. Warmly - Wendy	Wendy Miller
2/24/2022	Dear Belmont Park and Rec Commissioners, +2 Noreen and Mike, Homeview's Co-Presidents, for perspective. I am excited about many of the additions and upgrades being planned for Belmont's parks and open spaces. With that being said, I took a moment to review the current Pros Plan and there is a current change being suggested that I think can be done without disrupting the usage of a key feature of the park for many of our young people. At present, there is a proposal to replace the half basketball court that sits on the eastern-most portion of O'Donnell park with a water feature which, on the surface (pardon the pun), is a fun idea! But, living near this park, I often observe that the two half court basketball areas are used very often by young people and that the eastern most half court (the one in the Pros Plan) has lower rims that allow for the very young to dribble and shoot baskets - something that clearly provides them with great joy and satisfaction. To replace those courts, even with something as exhilarating as a water feature, would be a net loss for many of the young people that use O'Donnell Park on a daily basis. Especially since we could still provide the water feature (as proposed by a member of the Parks and Rec Advisory Council) by just relocating it to the fenced in children's play area in the park a few meters due west of the current plan. Moreover, given the nature of water play with young kids running around the perimeter of water features, it seems to me that locating the water feature behind the existing fence and away from an unprotected intersection (Ralston and Kedith) is an elegant and much safer solution. Therefore, I would like to officially request that the ProsPlan be amended to relocate the proposed water feature from the east facing basketball court to the gated section of the park. Please let me know if I can do anything further to follow through with this humble request. And, thank you for your service to our community. Submitted respectfully, Eli Latimerlo Homeview (2003 - present)	Eli Latimerlo
2/25/2022	I heard that there were funds and initial bids to resurface the tennis courts at the park. I do not see that on the agenda nor anywhere else on the Belmont website. Don	Don Pierce

2/26/2022	I must again state the danger posed by bikers on the Water Dog trails. My wife and I have nearly been hit by bikers three times in the last three weeks by bikers on the John Brooks and Rambler trails. On many of these trails the width is less than 36 inches wide and there is no way for bikers to pass a walker or hiker safely without one party stopping to allow the other to pass. Each of the last 3 weeks a speeding biker has come within inches of hitting us. Twice they rounded a blind turn in front of us. Neither they nor us saw each other until the last few seconds. The most recent time a biker came speeding up right behind us and veered off the trail to avoid hitting us- fortunately. In any new plan for Water Dog Open Space, please plan to have separate trails for bikers and hiker/ walkers. Thank you. Bob Stahl	Bob Stahl
2/26/2022	Hello, this is Bob Stahl, a member of the Advisory Committee for the Belmont PROS Plan. I want to bring to your attention requests from several neighbors who have contacted me and raised serious concerns regarding several of the proposals regarding changes or additions to Hallmark Park. The concerns are as follows: 1.The residents do not want to add any amenities to the upper meadow up the hill from the tennis courts. Several have told me that they have seen group going up there in the past for parties, creating loud noise late at night. The neighbors also do not want to create an “attraction” or structures to draw more people to the area and possibly leave trash, have parties, create possible wildfires and frankly destroy the natural environment. There are residents living right below the meadow as well whose privacy would be invaded. 2. Residents are concerned about drawing numerous more people to the park which they believe should be a “neighborhood park”. The area is very over crowed on days when the track meets occur and they do not want to see similar situations from major changes that will bring in more people than local neighbors. 3. They do look forward to resurfacing of the tennis courts, adding pickle ball lines and resurfacing the path to get to the tennis courts which is seriously in need of repair. 4. Residents are divided on the idea of a bocce ball court. Several stated they like the idea but they have concerns about the building of it, where it would be placed and how it would be maintained with all the pine trees in the area and the current inability to maintain the parks with the low budget Belmont has for park maintenance. Others bring up the fact that they have a concern about this being an attraction for that would require moving the current tot lot and possible cutting down more trees. Residents also do not want more traffic in the area. 5. Overall, residents feel there are enough amenities already at Hallmark Park and that it would be great to just improve what is there I.e. the tennis courts, play structure, pathway to the tennis courts. Obviously the CSM cross country trail is already there and is enjoyed by many neighborhood residents on a regular basis. Residents enjoy the natural setting of Hallmark Park with the trees, some wild flowers, occasional deer, birds and rabbits. Thank you. Bob Stahl	Bob Stahl

2/27/2022	To Whom it may concern: We live at [REMOVED] and have for the past 30 years. We love it here mainly because it is away from the crowds of the peninsula and the bay area. It is quiet and usually there isn't a lot of traffic. Our children grew up here and now our grandchildren enjoy almost the same serene environment. Although Belmont is hardly the same sleepy town it was back then, this neighborhood has maintained its quaintness. We tolerate the track practices and races that take place every year. We clean up the garbage the visitors leave, we give up our street parking and we are kind and friendly to the crowds. We do this because we understand the uniqueness of the area and honestly don't mind sharing it. The garbage accumulates and often overflows at the park and it takes the city quite some time to clean it up. The crows and other wildlife rummage around it and create quite a mess. We tolerate that as well. However, we are not prepared to do this on a daily basis. If the city thinks for a moment that this will not affect our homes with the same issues we deal with when track season arrives, you are mistaken. If you want to update what is currently there, I am all for it. The current play structure is old and the wood is rotten and dangerous. The pathway is a trip hazard because of the tree roots coming through it. We already have a significant amount of people using the park daily for their workouts and tennis games. We don't need any more traffic. We paid to live here, we pay an association fee to keep the area in good condition. We don't need any interference from the city. If it's not broke, don't fix it. Sincerely, Michael and Stephanie Moore	Michael and Stephanie Moore
2/27/2022	Attn: Park and Rec. Commission As almost 50 yr residents in Belmont my wife and I are opposed to any additional structural buildings in Hallmark Park. We moved to Belmont many years ago to enjoy the natural setting and tranquility of the area. To date, this has changed with cross country racing, additional walking paths and illegal bike paths. All this has brought in additional people as well as additional vehicles and Hallmark Drive and adjoining areas have become parking lots as outsiders are using our area creating difficulty to drive and to park in the area that we live in. Enough is enough already! There are already existing dog parks, playground structures, ball courts etc that are nearby and are hardly used in Belmont and nearby areas. Belmont does not need anymore of these areas! Let our population enjoy our natural settings of wild life, plants, trees, birds and animals. Why is it necessary to cover every inch of our beautiful Peninsula Area with man made things. Lets enjoy nature. Thank you Ken and Bobbie Lebovitz	Ken and Bobbie Lebovitz
2/27/2022	"Park and Recreation Commissioners, My wife and I have happily resided at [REMOVED] for more than 43 years. We drive past Hallmark Park multiple times each week. Over those years, my family, I, and many of my neighbors have enjoyed the current setting and facilities in the park. In earlier days my family used the tennis courts. Now, at 81, I play golf weekly, and my wife regularly attends exercise classes. Our daughter and son have their own families in the Bay Area. But new families are regularly locating in Belmont Heights and will likely visit Hallmark Park, as their families grow. I and many of my neighbors are opposed to the commissions plan to expand the park, including new structures. Apparently the commissioners are not familiar with the fact that a bocce ball court requires daily maintenance of the playing surface for the balls to roll true. So, a skilled parks employee would need to tend to that on a daily basis with proper supplemental court surface dressing and leveling tools. We support the proposed maintenance of the existing facilities. But otherwise, please leave well enough alone. We are sure that the commission can find other worthy placed to spend the taxpayers hard earned money! Respectfully, Bill Larsen"	Bill Larsen

2/27/2022	We oppose addition of any man-made structures or surfaces in Hallmark Park. How have you missed the blaring message that Belmont residents value our natural settings? It's expressed in the Belmont Vision Statement: · Our natural surroundings inspire us to play, create, and contemplate. · Our actions today preserve and enhance Belmont's beauty for future generations. and Conservation Element: "Human safety and recreation opportunities must be balanced with maintaining the proper functioning of natural systems." (p.5.3) and your own PROS guiding principles: · Reflect our commitment to environmental resilience and sustainability · Respect the beauty and importance of our natural resources We moved to Belmont to raise our children in this natural setting. Every school-day they play on a schoolyard – on metal and plastic man-made structures; regulated, sanitized, surrounded by concrete with lines and rules. Outside school is where they learn about our natural world and Hallmark Park is their classroom. We teach them to understand habitats, ecosystems, and the extraordinary and delicate balance of all inhabitants of our planet. They learn by immersive play; adventuring, inventing games using natural materials and their own imagination. Exploring a deer trail, they learn about feeding habits, shelters, the predator-prey balance. Exploring the meadow they discover the incredible biodiversity of hundreds of plant species right under their noses. You have constructed play spaces at every school. But these natural meadows and woods are far more valuable, and rapidly vanishing. Children need natural settings accessible to their neighborhood – not just in distant national parks. We need these natural settings as the classrooms for future generations if we are to change our horrible path of environmental exploitation. Please leave Hallmark and all of our parks as natural as possible. Repair and maintain what you have. Replace dead trees with native species. But leave the meadows and woods untouched. Don't invest in more man-made structures. Invest in restoring nature and teaching to value our natural world. Thank you, Kristin and Frank Mercer	Kristin and Frank Mercer
2/27/2022	To whom it may concern: I'm not sure who came up with this idea of building out Hallmark Park with new gaudy structures & artificial walkways, but as a 34 year resident of Hallmark Drive, I protest this plan. I love the natural landscape presently available. I hope you understand that just upgrading & maintaining the tennis courts (with new lines for Pickle Ball), the paths that already exist, removing dead trees & replacing them with native plants & trees will be suffice & much cheaper in the long run. And maybe upgrading the play structure that is already there. Please: No new man-made structures or paths. Simplify this plan & keep nature on the top of the list! Sincerely, Michelle Speert	Michelle Speert

2/27/2022	Hello Belmont's Parks and Recreation: I am writing to you now to let you know that as 25-year residents of Belmont Heights, my husband and I have enjoyed many walks in our neighborhood and at Hallmark Park, and consider the park an attraction that makes our neighborhood very special. I was however, recently informed that you are considering adding to the park manmade structures in the upper meadow, as well as a bocce ball court and playground structures. While I support your efforts to maintain and/or upgrade the park's paths, tennis courts, and tot lot and to replace non-native plants with native oaks, bays and buckeyes, I do not support the addition of the proposed manmade structures, bocce ball court, and playground structures to the park since those additions will ruin the park's natural beauty. I look forward to hearing that the proposed additions will not be allowed. Thank you for your time. Carol	Carol Epstein
2/27/2022	Dear Park & Rec, I write as a resident of Belmont Heights to object to certain of the plans to "improve" Hallmark park. Years ago, in the 1970s, the BHCIA fought for preservation of this open space as a casual, natural park with tennis courts. The tennis courts were a specific wish of the Belmont Heights residents. Have we asked for a bocce ball court in our neighborhood? Have we been surveyed about a bocce court, or any other structural additions for that matter? Yes, the tennis courts, current paved paths, and tot lot have been sadly neglected over the years. We would be grateful for those long overdue upgrades, as well as replacing non-native with native plants. Please seek neighborhood specific input before going any further with plans for structures and paved paths in our "neighborhood park."" Respectfully, JoAnn Berridge	JoAnn Berridge
2/27/2022	To Whom It May Concern: Personally, I think the Hallmark Park should be upgraded but not to the extent to attract more visitors, e.g., making the tot lot like a McDonald playland! Adding the bocce court should be definitely rule out! It will not only make our neighborhood very noisy but also congested with more cars creating parking problems! Our neighborhood has already attracted many bicyclists in the Water Dog area. We don't want our neighborhood to become tourist attraction but for the enjoyment of us neighbors! Sincerely, Bessie Ip	Bessie Ip
2/28/2022	Park and Rec, Absolutely OPPOSED to your plan for new structures. Yes to fixing the current paths, tennis courts. Ron and JoAnn Berridge	Ron and JoAnn Berridge

2/28/2022	Thank you for all the work done on the PROS plan. The Summary of Feedback is a step in the right direction but it is misleading due to the omission of pertinent data - specifically the number of supporters for various new amenities or sentiments. Why is this important? The Commission is given this summary without knowing whether one sentiment is more broadly supported by Belmont residents than another. For example, the Hidden Canyon neighborhood meeting had tremendous neighborhood attendance. The vast majority of residents (approx 10-15) opposed building a bathroom and gave reasons why. Only 2-5 residents supported the building of bathrooms. Yet, reading the Summary of Feedback the Commission would have no idea the tremendous opposition to the bathrooms. This is because the Summary of Feedback merely states there was neighborhood support and opposition for the toilets -- which makes it sound like it was an evenly contested issue. This is not reflective of the public comments given at the neighborhood meeting. In an effort of transparency, on the Summary of Feedback, I urge staff to add the number of public comments received supporting each amenity or sentiment (the number can be put in parenthesis next to the sentiment). This will enable the Commission to have all the data when making decisions. Thank you. Deniz Bolbol	Deniz Bolbol
2/28/2022	We prefer keeping the Park largely as is. G& Y Weinstein	G& Y Weinstein
2/28/2022	We are dismayed at the planning for Hallmark Park. We absolutely need open space in our densely packed area of Hallmark homes. I would also be concerned of people coming in from other areas use the new spaces. Please let our native area along for animals and green areas. Rosemary Lake	Rosemary Lake
2/28/2022	I want to let you know my thoughts on the proposed plans for Hallmark Park. 1. This is a neighborhood park. The plan should not propose supposed improvements which will draw people driving to the park for events. It seems some of your plans will encourage this. 2. To plan an event space on the upper meadow is not something which should be done. This space is above homes just below the space. Leave it natural. Don't build an event venue. That is unnecessary and counter to having the space where animals roam. 3. Fix the tennis courts, put in pickle ball lines. 4. Improve the children's play area. Add another play structure. 5. Keep the entire area as natural as possible. 6. Repair the path leading to the tennis courts. 7. Don't build a bocce ball court. It's unnecessary and will require excavation of trees and land. 8. Please- this is a neighborhood park. This should not encourage people to drive from other areas to come here. Thank you. Pamela Stahl	Pamela Stahl

2/28/2022	Planning Commission and Others: This message is form Bob Beaulieu and Corinne Cho-Beaulieu – we have lived at 2649 Wakefield Drive in Belmont for over 25 years. We are asking you to please scrape any plans to change/modify Hallmark Park. We feel it is a beautiful park and nature walk , open to all just the way it is. In fact it is a real shame (in our opinion) that the city has already cut down so many trees Sometime this are simply beautiful and any intended improvement distracts form that beauty. I believe this is the case. Thanks you for listening , Bob Beaulieu and Corinne Cho-Beaulieu	Bob Beaulieu and Corinne Cho-Beaulieu
2/28/2022	I live across from Hallmark Park and for the past 40 years frequently visit or walk through it at least a couple times a week. It is a very small facility on a very small plot of land. It has a couple tennis courts which are frequently used by many local neighbors, and a small tot lot which is very seldom used. There is a path to walk around and some benches to sit and take in a view of the Bay Area. The setting is in a grove of trees, which makes it very relaxing. To try and add anything additional to this area would ruin and trash the tranquility of the setting. There is no room for a Bocce ball court (I do enjoy playing the game) without serious excavation and tree removal. To which the city just planted 20 new trees. The tot lot is more than sufficient, it is never crowded or frequented by more than one or two mothers/nannies at any given time. I bet I only see someone using it 1 out of 30 times I walk through. To even think of adding a Dog Park to this small space if ridiculous, there is no viable space to do this. Are you going to add a dog park for 3-4 dogs usage at a time? There is a very small clearing up behind the tennis courts which has a flat area about 30 x 30 yards, one side is fenced for SFPUC property and the rest has severely steep drop offs down to neighbors backyards. People tromping around there would have views into their property and the windows of their homes. If you even think of putting something up there, you better get approval and sign off from those people, as I am sure most don't know anything about what is going on with this proposal. Also, the existing tennis courts are in poor condition as is the small paved path that currently exists. It would be great to see them refurbished. The City is not able to maintain the small facility that exists currently, why do you think adding additional facilities would get care and maintenance. Where are the funds and personnel going to come from? Not the City of Belmont. Don't build more when you can't maintain what we already have. Keep the natural settings, we don't need additional man made structures replacing our trees. Bill and Pat Kurtz	Bill and Pat Kurtz

2/28/2022	Hello, Most of you know me pretty well. I wanted to take a few minutes to send you some information when I'm not on the clock and there is a bit less energy flying around. I do want to say I think the entire commission is doing a great job in general and in working on the PROS plan in particular. I can well imagine how difficult it is at times with the venomous negativity coming from a few but it appears you have been able to weather that and stay focused on a plan that looks to me like it is really coming together in a way that is going to benefit many many people in the community. This week's presentation is about community parks so that is what I'm going to talk about here. I was fortunate to be a commissioner when Semeria and then Davey Glen park were designed and built. Both parks had many rounds of public input. Davey Glen was such a physical challenge due to being on a hillside that we almost didn't make it across the finish line. But we did and both of these parks are serving as the quiet but well loved community parks they are supposed to be. Both parks started out with a good deal of very local opposition to any plan to change what was there. Remember what was there in both cases was a dirt lot people had just gotten used to. In the case of Semeria park, a vocal minority wanted the muddy, dirt lot to remain so they could park their work trucks there. Lots of hand wringing about parking and no place to park for residents when the park filled up. None of those fears materialized. Davey Glen had people up in arms at commission meetings talking about all the drug use that would happen with teenagers because its gonna be dark at night in there. None of that happened, in fact there is much more light in there at night and not some hidden drug den. So you will continue to hear these fears at meetings to discuss the details. SOME are legitimate fears about how their street will change. MOST are illegitimate stories being told because people don't want others to enjoy what they enjoy. In the case of people who live in the Pink homes at the top of Carlmont, everyone living there knows or should know the only reason those homes got built is because the developers and new buyers agreed to donate land and build a park at the end of the lane. What they don't seem to realize is that the park is going to create massive improvements for the people living in those homes. Lots of families in those homes have younger kids and thats exactly who tend to use these small parks the most. So now the city (we) are looking at some new small parks and improvements to existing parks. I strongly feel people trying to propose "Keep everything natural" don't really want anything changed at all. In my mind, there is no point in putting in a park if it doesn't attract young residents to play. So incorporating lasting play elements is essential. Once construction of park elements is completed, parks quickly look like they have always been there and the improvements are obvious. I strongly encourage you to go by Semeria and or Davey Glenn a few times over the next weeks as the plan comes together. What I think you will see is the parks are almost never crowded and yet are also almost never empty. These parks attract people in the neighborhood to get out of the house for a few hours. They rarely drive their cars to the park but sometimes do. Many of the park users are kids in strollers with moms or nanny. They grow up using and knowing the park, then they become teenagers and have other interests. That leaves room for the next set of kids in strollers and play age. Its what happens in parks. So please don't be afraid to be visionary in your plans. I love the idea of a Gateway to the open space and some of the examples could be copied as is, but why not create something of our own. Permanent and lasting conversation tables like we designed into Semeria and Davey glen provide for people to hang out and for people to have small parties or picnics. Once the initial construction is completed at Hidden Canyon, it will be more difficult to add or change once infrastructure has been installed. I encourage you to think big (well big for Belmont) and think of the people who will use the park. Plan for them not to appease the people who don't want a park anyway. If that is their only position and the city has decided a park is going in, its time to stop listening to the people who don't want the park. Listen to the people who will use it. I know you all have the community in mind or you wouldn't be spending your time on this commission since it has often been testy lately. But your commission works together WAY better than the commissions I was on and we were able to pull it off. I know you can too. Keep up the good work and I look forward to supporting your continued actions to make Belmont a better place to live for our residents. Hope that wasn't too long. I'll repeat some of it at the meeting. Have a great day. Kevin Sullivan"	Kevin Sullivan

3/1/2022	Greetings! For almost 35 years, we have resided in our home at the corner of Hallmark and Wakefield Drive – just across the street from the entrance to Hallmark Park. We have enjoyed our neighborhood park and appreciate and support a refresh and repair work for safety concerns and restoration of our wonderful views. The asphalt pathways are unsafe and in great need of repair due to years of neglect and incursion from tree roots. Over time, our original expansive views from the benches above the tennis court have been obscured by fast growing non native pine trees. We support restoring the natural landscape by removing all non native trees and increasing maintenance in order to reduce the possible fire danger in our area and restore our views. We support keeping our natural landscape and wildlife habitat which provides us with access to wildlife viewing and environmental education. Interpretive signage should be added to enhance the learning experience. Walking paths in the meadow area would be helpful. The current tot lot is suitable only for toddlers and preschoolers. We support enhancing it to meet current standards and provide amenities for our neighborhood elementary school children, while maintaining a look and feel that blends into the park's natural landscape. We suggest that the playground have a local wildlife and environmental theme to enhance the environmental component of the park. We do not think we need additional amenities to Hallmark Park when the focus should be on the natural environment, a children's playground and a tennis court. We are concerned that adding additional amenities, such as a dog run area, will increase the traffic in our neighborhood, negatively impact the natural setting, and increase city costs for increased upkeep and maintenance. Sincerely, Michele Cohen and Lewis Scarpace	Michele Cohen and Lewis Scarpace
3/1/2022	To the Commission, I currently live across the street from Hallmark Park and have lived here for more than 30 years. I do not support making any changes to Hallmark Park. I feel if the City wants to build a bocce court, a dog run course and picnic tables, more man-made structures that they should look into the other parks in our area that have more space to build upon and add these new improvements. The Belmont Sports Complex has a gravel parking lot where a large play structure could be added. This would give another area for families to use while they are attending baseball games at the complex. Younger siblings could play on the new structures while waiting for their brother's or sister's games to end. Added picnic tables and native trees could be planted in the area by the bandstands. Barrett Community Center should have a fenced in dog run. Since this park is located in the middle of Belmont and is more centralized. Twin Pines Park could gain more popularity from the addition of Bocce Ball courts and a newly built play structure. People could enjoy playing bocce ball after having spent the day in the park barbecuing. The courts could be built in the shaded areas so it would protect them from the summer heat. They would also be able to hear the music playing from the free music concerts on Sundays while playing bocce ball. Children could play on newly designed structures in this park. I feel that Hallmark Park should stay the way it currently is. The cross country course, tennis court and play structures that are currently there do not need to be redeveloped with additional play structures, dog parks, or bocce ball courts. We need to keep this park protected from the wildlife and birds of prey that live there. This is our responsibility as fellow Belmont citizens to keep the ecological habitat of that area SAFE!!!! This park is for our children and future grandchildren to enjoy. If we add more structures and destroy the ground and fields where the open animals roam, we will be destroying our natural habitat. Please take my suggestions into consideration. We need to protect and preserve what space we have left in our small town. Thank you for your time. Theresa Gotshalk	Theresa Gotshalk

3/1/2022	Hello Belmont Parks Commissioners, I do NOT NOT support any new development at Hallmark Park. It is already heavily used by Belmont residents and cross country races. The tennis courts and existing path and playground should be maintained. The existing vegetation of monterey pines can /should be replaced gradually by native trees. Whenever I walk there I see TRASH on the ground and in the street gutters by cars parked by people who visit the area already, we do not need more! I pick up trash a lot! Bocce courts and dog park would only invite loud rowdy groups to congregate (also at night when our Police could not easily see from the street) and leave trash. Our residential neighborhood does not need any more that! Put a dog park and other development at Barrett school where it is more centrally located with parking and not in a residential area. PLEASE LEAVE HALLMARK PARK AS IT IS! Make it easy for our Police to patrol. Sincerely, Lynn Ashby	Lynn Ashby
3/2/2022	Hello, I am a resident of Belmont Heights on Wakefield Drive since 2013. I am writing to express my concerns about the proposed plan for Hallmark Park. Neighborhoods are defined by certain characteristics, and this plan threatens to undermine and even destroy what makes Belmont Heights special. This is a quiet neighborhood that already attracts many people who live beyond its borders to enjoy the hiking and biking trails. Moreover, we and all our neighbors already experience the traffic congestion and related issues brought on by the frequent cross country meets. We were aware of the meets when we bought our home. This proposed plan, however, would irrevocably change the character of the neighborhood. When we purchased our home, our son was 4 years old. We knew that going to a playground would necessitate going to Fox School after school hours or driving to local park. However, we were drawn to the area for its quiet and for its easy access to nature as well as the excellent school district. We moved from Sunnyvale, which has numerous wonderful large parks, including one to which we we walked frequently as a family. But those parks have much dedicated parking and some separation from surrounding homes. Those parks have also been part of the landscape for a very long time. Even at a young age, we took our son down the path to Waterdog lake and he now at 12, enjoys bicycling the paths on his own or with friends. I am in favor of updating the tennis courts as as well as the tot lot without making it much larger. The path leading to the tennis courts is also in need of serious repair. I think Hallmark Park has no place for a bocce court or wider paved paths. Without additional parking, congestion would increase even further. Note the issues with parking and illegal U-turns and runners darting out into the streets that we already experience during country country meets. During the height of the pandemic when we were sheltering at home, I appreciated more than ever that our sidewalks offered us the opportunity to take walks at various times of the day. I don't see the need to create additional paths. These additional features also have the potential to attract late night gatherings. I hear from friends in San Mateo this is in issue at their parks. Please do not destroy what makes this neighborhood special. A neighborhood can't be all things. We knew when we moved here that we would be unable to walk to errands or to a large park, but the quiet, the extraordinary views, access to nature as well as the surrounding community and schools drew us to Belmont and this neighborhood in particular. Sincerely, Ines Salazar	Ines Salazar

3/2/2022	Hello Belmont Parks Commission, I DO NOT support the proposed plan to “renovate” the Hallmark Park area. Currently the tennis courts, children’s play structure, and walking paths are actively used, and enjoyed by Belmont citizens. The existing trees, other vegetation, and the open space should not be replaced with a dog park, additional play structures and bocce ball courts. Available funds should be put toward maintaining the tennis courts, existing vegetation, and walking paths. Older trees should be pruned, and parts of the walking paths have become dangerous trip hazards, and need to be repaired. Hallmark Park should remain as it is currently designed. Thank you for your consideration. Richard Ashby	Richard Ashby
3/2/2022	We are 36-year residents of the Belmont Heights residential area. Our draw to this area was the “”natural beauty”” and serenity of the landscape, watershed and preservation of vegetation and wildlife. The walking trails afford residents the rare opportunity to enjoy all of the above. The proposed plans to broaden, excavate, develop and populate one of the last remaining residential parks into a public community. This proposal will bring more automobiles into the area, and disturb the wildlife and peaceful community our families have enjoyed for years. Preservation of the unique and cherished gifts of nature we may ALL still enjoy without modernizing and injecting new development will destroy what has been preserved for years. We are one with nature here. Noise, cars, trash and disrespecting nature’s gift is unacceptable. The cross-country runs already bring hundreds of strangers and vehicles to our quiet community every Fall. Hallmark Park should not become a public recreation area. We are strongly opposed to the proposed changes to Hallmark Park. Thank you, Nace and Bonnie Passantino	Nace and Bonnie Passantino
3/2/2022	Hi there I am the resident of [REMOVED] in hallmark. Upgrading the play structure is very helpful for our family and the rest of families that have younger children. We are in favor of resurfacing the tennis court. I also think it is not a bad idea to have some seating area. This can be few benches. Having a looped walking path is a plus. I am not sure i support other ideas. Adding/replacing fountain to drink water is good idea too. The existing fountain was out of service some times back. Best Alireza razavi	Alireza razavi
3/3/2022	I just want to thank you all for your efforts and hard work on the Belmont Parks long term plans. Also, I very much appreciate that you are listening to residents of each community regarding what they consider important to their neighborhood park. As you heard last night and received through email, residents near Hallmark Park want to see the park remain in as natural state as possible, resurface the tennis courts and pathway there and possibly add something for 6-12 year old children. Also, they feel it’s important to leave the upper meadow in its natural state. Thank you again! Bob Stahl	Bob Stahl
3/12/2022	Hi Brigitte, As you and the Parks Commissioners are aware, I have done extensive research and collected lots of authoritative literature about the native habitat and wildlife of Waterdog and Hidden Canyon Open Spaces. I respectfully request this material be provided to the Open Space consultants for their consideration, and to inform their recommendations. This is email 1 of 4, coming separately because of the email attachment limitations. Attached please find the following PDF: Wildlife Habitat Impacts Waterdog Open Space.pdf California Tiger Salamander.pdf Rights of Nature for wcffg-1.pdf	Kristin Mercer

3/13/2022	Hi Brigitte, You will remember early in the PROS process I presented the John Brooks history powerpoint to you on Zoom. With the hiring of the City's Open Space consultants, WRA Environmental Consultants, I believe it is an opportunity to educate and inform them of important impacts and topics regarding Waterdog. I have attached the John Brooks presentation in PDF printable format for their consideration and trust you will forward it to them. In addition, under separate emails, I have sent 2 additional PDF printable format presentations on ""City Policies ignored"" (Past) and ""Sport of Mountain Biking"" plus related ""Media Reports"" which should also be of interest to the Consultants and PROS Committee. Thank you for your attention. Let me know if you have any questions. Let's treasure our Waterdog Open Space! Jennifer	Jennifer Lien
3/13/2022	Hi Brigitte, Attached please find my final printable PDF sent to you for the WRA Environmental Consultants to inform and educate them of the cumulative detrimental impacts to Waterdog trails, wildlife and habitat as well as endangerment of safety of hikers on narrow single-use trails. Also attached are several media reports that may be of interest to all on this topic. Thank you for your attention. Let me know if you have further questions. Let's preserve our Waterdog for generations to come! Jennifer	Jennifer Lien
3/13/2022	To Whom It May Concern, A warm thank you to the Parks and Rec Commissioners and Director for responding to our neighborhood's request not to have a dog park at Ralston Ranch Park. A neighbor shared the diagram of the proposed revised plans with me for the park which does not include the dog park. The plans do show picnic tables and a multi-purpose flexible space that says add seating space. Can you please elaborate as to the plans for the multi-purpose space and let us know how many picnic tables are planned? Our neighborhood does not want amenities that encourage loitering after dark which may increase the prospect of safety concerns. Also, Ralston Ranch Road can be incredibly windy and on trash day, the wind often blows the trash, as it is being dumped mid-air, down the street. If we have a picnic area where the trash cans are overflowing like they are at the Len Turner Memorial Vista Point, this will further add to the litter problem we are experiencing. Thank you, Yvonne Ong	Yvonne Ong
3/17/2022	Hi Brigitte, I was pleased to hear a consultant firm has been hired to provide an environmental evaluation of Waterdog. If I may, I'd like to submit this reduced summary of my Strava data review of biking activity done last year that I hope can be of value to the consultants. Instead the long Powerpoint, I condensed it down to some ride data on major trails, and a couple speed charts. Thanks, good luck with the process, and let me know if I can be of further help. Regards, Ed Mitchell	Ed Mitchell

DATE	COMMENT	COMMENTER
3/19/2022	Dear Commissioners, Thank you for the information that was provided last week on the status of parks in Belmont. I was interested in hearing about all the parks but my major concern is Hallmark Park since I live in close proximity to it. I was pleased to hear that most commissioners were not in favor of expanding the park. I walk through it frequently on my way to walking the cross country course. The tot lot is used infrequently and really does not need to be upgraded for older children. It is now a facility that is not used often and I do not think that the addition of modern equipment will increase its use. The tennis courts are though and need to be renovated as well as the sidewalks. I was also concerned about adding a bocce ball court or creating a facility on the hill. If a bocce ball court is added, you need to address ADA requirements and this area is not easily accessible. The area on the hill looks down into people's homes and impacts personal space. In addition, we may be the only park in Belmont that does not have at least one designated parking space. The only parking is on the street. Street parking can be busy with individuals parking to access the cross county course. I hope that you will continue to support no additional structures and facilities to Hallmark park. It is a beautiful wild life preserve and should be maintained as such. I have also walked in the Hidden Valley area. I agree that safe paths need to be maintained for bikers and walkers. Bikers often come down quickly off the canyon path and can potentially be dangerous to people sitting or walking in the area. I agree that signage about the wildlife would be educational but it needs to be maintained. Weathering takes a quick toll on signage so that it becomes eyesore if not maintained. Finally, I was very concerned that comments were made by commissioners that they had not visited some of the parks. How can one vote on changes to a park if they have not seen it? As an educational administrator, I attended board meetings twice a month for over 20 years. I recognize and appreciate the time that a commissioner volunteers to support a program. But I also know that accepting to be a commissioner comes with a responsibility to understand what one is reviewing and voting on. I suggest a field trip to the parks. I frequently watched such activities by board members to visit construction projects in my school district. It provided them with a better lens to make decisions. I encourage all commissioners to visit the Belmont parks so that they can be informed about their needs. Thanks you for hearing my concerns. Dr. Patricia Kurtz	Patricia Kurtz
3/21/2022	Hi, While I appreciate the efforts to resurface the tennis courts and add pickleball (both of which are definitely needed), I have a number of concerns (and suggestions) below: Concerns: I was disappointed to see that there was no new tennis courts added in the plan, despite the benchmarks showing that we are definitely below the surrounding areas and the ""ideal"" number suggests adding at least 2 courts. Currently the courts at Alexander park are always full and despite living near the park, I often have to go to other courts in neighboring cities to find an open court to play. While pickleball would be a welcome add to the city, I think adding them to the existing tennis courts would exacerbate the supply/demand issue, as it would create further competition for an already scarce resource (pickleball and tennis players competing for the same courts, which are already in high demand). Furthermore, playing tennis next to pickleball is less than ideal, especially since there's no dividing fencing between the courts. While resurfacing the courts, are in definite need, I worry the money spent to do so will not be optimized due to people using the courts for non-tennis activities (in Alexander Park at least). I think due to the proximity to the playground, often times kids will use the courts to ride bikes/scooters etc. Also, Alexander Park has become a de facto dog park, and dogs will often go into the courts, especially if the field is wet (I've found dog poop left on the courts). Suggestions: Please consider adding more dedicated tennis courts to the city. Perhaps at the open space next to the Belmont Sports Center? I think adding something like 4 or 5 courts in a single location would help address the supply issue. I would strongly suggest having dedicated pickleball courts rather than combining tennis and pickleball onto a single court. Again, seems like there's some open space next to the Belmont Sports Center to have both as separate amenities, but anywhere really would be great. To help preserve the newly resurfacing of courts at Alexander Park would suggest: Adding a seperate skate park somewhere nearby so that kids can have a place to ride their skateboards/ scooters rather than on the tennis courts	William Wong

3/21/2022 (con't)	Adding a dog park in Sterling Downs to give dogs a safe and dedicated area to exercise so that Alexander Park (and the church parking lot) is no longer used as a dog park Could replace the gates to the tennis courts with the subway style gate to make it more difficult to bring non-tennis equipment into the courts Lastly, to enhance the tennis courts would suggest: Adding wind nets... this is definitely needed as it gets pretty windy there adding fencing to divide the courts (to keep balls from rolling onto the neighboring court) Adding lights to extend the hours for which people could use the courts Thank you for the opportunity to provide feedback William Wong	William Wong
4/1/2022	We am looking forward to next week's PROS Advisory Committee meeting and want to reiterate my support for keeping Water Dog OS open for all: dog walkers, hikers, mountain bikers,etc. As avid naturalists, hikers, birders, and mountain bikers who have been using the trails at Water Dog for all of these activities for over 10 years, we believe Water Dog should continue to allow all of them. While we are aware there are a few very vocal activists who feel Mountain biking should be banned from most of the OS their arguments for doing so are flawed and over exaggerated. Animals and people are not being harmed by mountain biking. Actually it is the mountain bikers who make the trails safe and sustainable, if not for those of us putting in many hours of hard work every year, the trails would be in much worse shape. We are also very excited by all the improvements suggested for the parks in Belmont such as additional play structures, a place for teens, improved walking trails, a pump track and skate park, exercise space and a pool as well as keeping some spaces natural. It is clear that a lot of work has been done to meet the very diverse needs of the community. Thank you for all your hard work. Karen and John Moody	Karen and John Moody
4/1/2022	I have been to the Parks website and looked at plans. I still do not see any updates on when theTennis courts will be resurfaced.	Don Pierce
4/1/2022	I am a resident of San Mateo who has been very fortunate to use the Waterdog Open Space for 22 years. My wife and two boys also use this valuable community open space. I absolutely support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider: Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year. Open space recreation carries enormous benefits for the folks that live in Belmont and residents of surrounding cities, such as San Mateo - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades. Sincerely, Simon North	Simon North

4/1/2022	This month, the commission will be discussing Belmont's open space as part of the overall PROS plan. At some point, we need to discuss what our Waterdog trail map should be in the future? Are there redundant trails to remove? Are there additional trails that would add to the experience of the open space? I wanted to humbly suggest the following ""Future Waterdog Trail Map"" as a starting point for discussion of the open space. The green lines are existing trails. The blue line is a proposed new trail. The red lines are existing trails that I propose to remove. You can view this on Google Maps and play around with it by going to this link: https://www.google.com/maps/d/edit?mid=1iai29RPBIJMR8QFS0L1xM1fB-mbOpa8i&ll=37.505045261891965%2C-122.30845913638426&z=16 Here are the ideas: 1. Create a Belmont Creek Trail below the dam that follows the isocontour shown in blue. This would be good for a few reasons. First, it would allow folks to get from the Lyall Road entrance (bottom of Lake Road) to Hidden Canyon without having to climb out of the whole canyon. Second, it bypasses Carlmont Drive so one doesn't have to drive/cycle/bike along the houses on Carlmont Drive, improving their privacy. Third, it would allow us to clean up Belmont Creek below the dam (as suggested by our former director Jonathan Gervais). Fourth, it would spread out users more and decrease trail user density. Finally, it would complete a perimeter trail and allow many more permutations of loops for recreationalists to use. 2. Remove the Elevator redundant fall-line trail (red). This is a fall line trail and redundant with Elevator. It doesn't add anything to the park and is basically impossible to maintain. 3. Remove French Trail (red). This runs parallel to Ohlone. Although some like it and would like to see it preserved, creation of a Belmont Creek Trail (blue) would likely be an acceptable compromise to these users. Thank you for your continued support of our multi-use trail system at Waterdog. Jonathan Carter, MD Leader, Waterdog Trailkeepers Volunteers	Jonathan Carter
4/2/2022	Dear Sir/Madam, I regularly ride my mountain bike in Waterdog with friends and I am concerned about efforts to close it off to mountain bikers. My experience riding in Waterdog has always been positive and interactions with other users are always courteous and friendly. We are respectful of others and they always return the favor in kind. I trust that every effort will be made to keep the park opened to all users including cyclists. Thank you, Pierre Tremblay	Pierre Tremblay
4/4/2022	To Whom It May Concern: I am writing to express my support for continued bicycle access to Waterdog Lake Open Space. The community of bicyclists that frequent Waterdog–many of whom visit from surrounding areas–contribute both to the park and to the local community by: Volunteering their time to build and maintain the trails in the Waterdog OS. Patronizing local businesses, including: restaurants, bike shops, grocery stores, and gas stations. Not only does Waterdog serve as a fantastic outdoor recreation spot for Belmont residents; it also draws in cyclists from other communities around the peninsula who enjoy riding the trails as well. Waterdog is the cycling destination I visit the most, and I often will drop-in to a local restaurant for food and drinks after a ride with friends. Denying cyclists access to Waterdog would hurt the trails as well as local businesses. Sincerely, Eric Csongradi	Eric Csongradi

4/4/2022	Hello Belmont P&R Commission, I would like to voice my enthusiastic support and gratitude for continued mountain bike access to Waterdog Park, especially as you finalize the PROS Master Plan. Off-road cycling has been an ideal means to safely get my children off the couch and into the outdoors, while safely avoiding cars and traffic. Having access to mountain biking in a suburban setting on the Peninsula is a tremendous boon to the mid-Peninsula public, notably in San Mateo County as the county park system has largely marginalized the burgeoning cycling community. Belmont's leadership in providing equitable, thoughtful facilities to all user groups is a beacon on the Peninsula. I personally live in Portola Valley, where I also manage the town trail map and thus receive vocal input from many shockingly hostile user groups. The fortitude the commission has regularly shown in seeking openness and community throughout this process has been profoundly refreshing. Similarly the openness and good vibes my children and I have consistently experienced on Waterdog trails, from a diverse body of users, are a local treasure to be maintained. It is my sincere hope that trail access can be maintained for all, and that we can learn to embrace mutual community in the outdoors, rather than to seek the exclusion and division that some vocal minorities have been pushing for. May we all continue to safely have fun on trails together. I think the charter says it best! 4.4-4 Maintain and enhance trails in open spaces in Belmont. Continue to support opportunities for shared use of trails among multiple users, including pedestrians and mountain bicyclists. Promote knowledge, trail etiquette, and consideration of multiple users on trails through education programs and signage. Thank you for your consideration, and my best regards, Dave	Dave Evans
4/4/2022	I'm quite upset that we can't all get along and tolerate each other! I'm 64 years old and love to mountain bike or walk my dog at Waterdog. It's a great place and I have access from my house without getting into the car. I thought our son to mountain bike there and he had so much fun riding there with his friends. That is a great alternative to screen time. All the people that I have met on rides and walks are super friendly and respectful of each other. During COVID, it was almost the only outdoor park where one could go to and enjoy some exercise and nature. During the stressful times it was a sanctuary. My son had a routine to bike for 45 minutes in a free period in High school. It kept him in shape with no PT and only Zoom school. I hope for kinder people, that respect everybody and can enjoy Waterdog together as a community. Please keep Waterdog accessible for everybody. Sincerely Lotti Dunbar	Lotti Dunbar
4/4/2022	I am writing as a long-time (30+ years) Belmont resident to urge you to keep open space access open to all. Waterdog Open Space is the crown jewel of the Belmont Park and Recreation system and as such, we need to maintain inclusive access for all to enjoy. There is a small group of vocal citizens who want to restrict activities in the open space, but I do not believe their views reflect those of the wider community. The survey results support this view. Occasionally, I hear an anecdote about a "scary encounter" between mountain bikers and other trail users. I don't believe these are very common though we do need to work to make sure all users of the trails respect each other and share the trails responsibly. I do have an anecdote of my own to share. This past summer, I was riding in Waterdog and saw a number of people with dogs. I decided to count how many were leashed. On the Lake Road 3 dogs of 4 were on leashes -- good. On the other trails in the Open Space, I saw 8 dogs, none of which were leashed. Does this mean we should restrict dogs in the Open Space? Of course not! It means that trail users need to be educated, respectful to others on the trail. Thank you for your service to our community, Michael Munrow	Michael Munrow

4/4/2022	Hello, I am a 62 year-old retiree and wish to express my support for continued multi-use access to Waterdog Park. A former runner, I am now a cyclist (due to bi-lateral hip replacements) who appreciates the mountain bike trails the park provides. I also ride in many State, Santa Clara County and Mid-Pen Open Space parks and feel a multi-use approach has worked well over the years. Thank you. Andy Lott Sunnyvale, CA	Andy Lott
4/4/2022	Hello, My name is Jason Stewart. I am a mountain biker who frequents the trails at Waterdog lake. I first started riding there when I was a Carlmont high student back in the early 2000s. Waterdog is one of the few places that is close enough for those of us who live on the Peninsula to get a ride in after work or fit a quick ride in on a busy weekend. From my house on the San Carlos and Redwood City border, it is only a 15-minute drive to get to Waterdog. In order to get to similar trails in other open spaces, I would have to drive twice that distance if not further if Waterdog was closed to bicycles. We as mountain bikers do not have as many options to get out and exercise as hikers do. Please do not limit us further. Thanks, Jason Stewart	Jason Stewart
4/5/2022	I live just across Ralston from Waterdog, and wanted to drop a note that I'm in support of keeping Waterdog open to all recreational activities, including mountain biking. I've attended some of the City Council meetings and watched the PROS plan with interest. The handful of persistent local NIMBYs in Belmont Heights frequently dominate the meetings with their agenda of exclusion, but I hope the council sees through the fact that, although loud, these people are in quite a minority in the community, including their own neighborhood. I've heard about people "almost" getting all kinds of dramatic injuries, but haven't heard of any data about actual incidents. As a frequent user of the open space, I'm deeply skeptical that there is actually a problem here, and it sounds to me instead like people stirring fear, uncertainty, and doubt. Our trail system benefits from the trail maintenance the mountain bike groups donate, and I hope we keep Waterdog open to all. In the new Master Plan, I request you to consider: Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year. Thanks, Scott Hill Cipriani	Scott Hill
4/5/2022	Hello, As a resident of Belmont for the past 6 years, I want to voice my support for keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider: * Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces * Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. Our community has a need for recreational open space - Waterdog has served this public need well for decades. Thank you, Sam Chao	Sam Chao
4/6/2022	Hi Belmont staffs, I want to write to let you know about how awesome the trail access for mountain biker has been at waterdog lake. I commute from southbay to SF regularly, and always make a stop midway at Belmont's Waterdog Lake mid drive to get a morning workout in. It reduces my commute in half with this midpoint stop, and I am more energized for the workday afterword. Without this great and convenient access, I wouldn't normally stop in Belmont. Please continue to keep up the great access you offer to mountain biker like myself. Thank you Jacob Kwan	Jacob Kwan
4/6/2022	Please continue to allow multi use trail access at waterdog. Everyone has been getting along for decades there. please don't let a couple vocal neighbors determine the outcome and use of a park used by thousands.	Bob Estes
4/6/2022	I would like to tell you of my support keep Waterdog a multi-use trail system. It is a friendly place, close to home, to get outside for exercise whether on bikes or hiking with the dog. We frequently go out to eat or get food at Lunardi. I'd also like to remind you that many of the trails were built and are maintained by our mountain biking community. Sincerely, Judy Silverman	Judy Silverman
4/6/2022	Please maintain mountain bike access to Waterdog park. It is the only park that allows mountain biking that is easily accessible and nearby the local cities. Many of the trails in the park were built and continue to be maintained by mountain bikers. I have participated in both of these activities. I feel it is so unfortunate that a small group of citizens want to restrict access to this park. Please keep the park open to multi-user access. Thank You, Erik Cords	Erik Cords
4/7/2022	Dear Parks and Rec Commission, Thank you for always-thoughtful consideration of the issues, and I'm sorry that you have to endure so much abuse from the group of anti-recreation partisans who seek to close off access to our open space. I'm sure this is not what you had in mind when you volunteered to serve on the Commission, and I admire your patience. The anger in the voices of these public commenters was palpable. Perhaps they are frustrated that their narrative of environmental destruction by multi-use is simply without factual basis, and they are now resorting to name-calling and lashing out at the Commission itself. Generally, when a party to a debate resorts to name-calling and ad hominem attacks, that means they are unable to provide facts, evidence, reason, or logic to support their position. Attacking commenters who disagree with them as "ignorant" without providing any factual explanation of why the opposing party's position is somehow wrong does not add anything productive to the discussion. I wanted to make the below points during the meeting, but refrained since the meeting dragged on very late. I am writing mainly to correct some of the misinformation that came out in these public comments. First, it is unclear why it is "ignorant" to point out that one mile away from Waterdog open space, there is a 23,000 acre wildlife preserve at the SFPUC Peninsula Watershed which is a state-designated fish and game refuge, and a protected area within the UNESCO Golden Gate Biosphere Reserve.	Paul Sheng

4/7/2022 (con't)	While Waterdog can and should contribute to biodiversity, there is only so much it can do, given that it is 100% encircled by urban development and has a dam and a substantial amount of concrete storm drain infrastructure constructed within it to service those developments. WRA's preliminary analysis shows that anecdotal tales of environmental destruction are without foundation. Apex predators such as bobcat and mountain lion sightings at Waterdog are commonplace. When a habitat is in decline, the first animals to leave are apex predators. The presence of these apex predators demonstrate that Waterdog remains a healthy ecosystem. In his comments, Mr. Cuvielo lashed out at the cycling community for creating shortcuts and illegal trails. With regard to shortcuts, those are not a cycling-specific phenomenon. Unauthorized shortcuts are a problem in every trail system, whether or not they are multi-use. Hikers, runners, dog walkers, equestrians, and cyclists can all create them. What is unique about Waterdog is that volunteers from cycling community actively and successfully remove shortcuts on an ongoing basis. For example, on John Brooks trail, the hill behind Highlands Court became barren with trail braids, which can be seen in this Google Maps photo: https://www.google.com/maps/@37.5051375,-122.3052449,216m/data=!3m1!1e3?hl=en Those trail braids worsened substantially during the Covid lockdown induced increase in trail use. Volunteers from the Waterdog have completely closed off and restored the trail braids, and re-vegetated that hill with soil and plant material from the concrete drainage culverts that were clogged. If you look at that hill now, the trail braids in the Google Maps photo are no longer visible. On the other side of John Brooks in that same area, a social shortcut trail developed between John Brooks and Chaparral. The Trailkeepers completely brushed over and closed the entrance to that shortcut, and it is no longer usable. The formerly barren area at Rambler near the origin of Finch is in the process of being restored by the Trailkeepers. All trail braids have been closed, and it is being restored with plantings of native species, including six new California Oak seedlings which are taking root. A steep shortcut from that area to Elevator was also closed off by the Trailkeepers. A major shortcut on Chaparral near Berry trail was completely closed off. The list goes on and on. Photos of some of this trailwork can be seen in this Google Photos album: https://photos.google.com/share/AF1QipPD33TSN5_i4S6knTGCo2k53KWizGsV2s7-Zja6zp-D1BN6iYq6nFoKttJ1z0wCqg?key=b3UxZ2NpREpSbTREckJ2VlhxcXp2cWxlaDE3UTV3 Although there is no factual basis for this, Mr. Cuvelo, Ms. Bolbol, and Ms. Mercer continue to characterize the Soho Circle/ ""Flow"" trail and ""Ensatina"" trails as ""illegal"" or ""rogue"" trails. As pointed out in the Waterdog Open Space Stewards' February 14, 2022 letter, these characterizations are wrong. Those are legacy trails, and both trails appear on the trail map approved by City Council in 1998 as and are identified in solid orange lines as "proposed single-use trail." (Original and highlighted maps attached here for convenience.) For whatever reason, these two trails did not make their way onto the published trail map back in the late 1990s. These trails have been there for decades and are sustainable. These trails provide variety, spread out trail traffic which increases safety, and in the case of Soho Circle trail, provides access for maintenance of storm drain infrastructure. In response to commenter Pat Cuvielo's accusation to the Commission of changing its process for this item, I very much appreciated Comr. Mittelstadt's setting the record straight by calmly explaining what the process was, and how it was identical to the process that is always followed. Thank you again for the substantial amount of time you volunteer to serve on the commission, receive public comment during meetings, and reading the additional written public input. Sincerely, Paul Sheng	Paul Sheng
4/7/2022	Hello, Hi all, my name is Jack. I'd like to first start with a big vote of thanks to the team running this process; I think you all are doing a great job. I'm a resident of San Mateo going on 4 years and I am also a volunteer with the Waterdog Trail Keepers and have helped to maintain the trail network, rehabilitate areas of the open space, and we have also closed off some trails that were not sustainable. Id like to voice my support for maintaining the inclusive and equitable multi-use designation of the trails in the open space, and for their ongoing maintenance and upkeep with the possibility of new growth to adapt to the changing conditions and needs of the area. Looking at the currently published guiding principles of this process, there are a few items that stand out in my mind; safe, inclusive and equitable access, facilitating activities across a range of interests, actively maintaining the spaces to sustain the natural environment, and adapting to changing conditions and needs.	Jack Gaynor

EMAILS RECEIVED: INFO@BELMONTPROSPLAN.COM

DATE	COMMENT	COMMENTER
4/7/2022 (con't)	In my opinion the best way to meet these principles is to maintain the multi-use designation of the trails and to continue the great work being done to conserve the trail network, and to look to grow and upgrade the trail network so it can safely and sustainably be enjoyed by the many different people of our community for years to come. Well built and maintained trails facilitate ongoing and sustainable use of open spaces by a variety of users whether they be bikers, hikers, dog walkers, trail runners. There are proven methods that allow for clear sight lines, speed regulation, and proper drainage and sustainable use that also provide for an engaging experience for trail users and I'd like to advocate for additional efforts, both from volunteers and the city to maintain, upgrade and grow the grail network in the open space. Local organizations like the Sierra Buttes Trail Stewardship and the Santa Cruz Mountains Trail Stewardship have proven that multi-use trails can be built and maintained and such trail networks bring tangible benefits to the trail users and the local community and the team putting together the Open Space plan should reach out to these organizations to learn from their successful trail stewardship practices and to apply their practices to the Belmont Open Space. Actively maintaining the open space is in my opinion the way to achieve the guiding principles of this process; restricting access to certain user groups fundamentally goes against the guidelines to provide equitable and inclusive access. Given the changing conditions over the last 2 years I'd also like to advocate for additional facilities possibly in nearby park spaces to support the various users of the park and to enable inclusive and equitable access; permanent toilets, drinking facilities for people and pets, bike repairs stands, expanded parking I look forward to seeing the outcomes of this plan and continuing to enjoy the multi-use trails for many years to come. Thanks, Jack	Jack Gaynor
4/7/2022	Dear Parks and Rec Commission, At Tuesday night's PROS Advisory Committee meeting I was excited to hear from John Baas (PhD) and botanist and wetlands ecologist Ivy (I didn't catch her last name) from WRA Environmental Consultants. It was encouraging to hear their preliminary findings: the open spaces in Belmont including Waterdog and San Juan Canyon are currently in pretty good shape with regards to ecosystem health. Ivy mentioned two species in particular that she considered important in her assessment, the San Francisco Dusky Footed Wood Rat and a yellow blossomed shrub that is endemic to the San Francisco bay area, the Wester Leatherwood. Both appear to have healthy populations in the parks. My son and I were riding our bikes in Waterdog just yesterday (4/6/22) and while waiting for me to catch up on the Rambler trail, he spotted a bob cat sitting quietly on the trail ahead, about 50 feet away, watching him. It's common knowledge that apex predators prefer healthy ecosystems over degraded ones. The analysis done by an independent and neutral third party (WRA), although preliminary, clearly demonstrates that the ecological health of the open spaces is reasonably good and therefore compatible with current recreational usage patterns. Going forward, I hope that residents who continue to falsely assert that recreation is destroying the wildlife and the overall ecosystem in our open spaces are understood to be inconsistent with the professional ecologists. Furthermore, we hear plenty of complaints from the same residents that the trail density is too high in our open spaces. Since our open spaces are not nature preserves, the city is under no obligations regarding trail density. Our current open spaces are considered healthy by professional ecologists so trail density at it's current level appears sustainable. Frankly, I think the open spaces could use more trails. The public opinion poll conducted by Gates and Associates last year clearly shows that our residents like to get outside to hike, walk their dogs and ride bikes. What's wrong with priding ourselves on having abundant properly built and maintained trails? Sincerely, Scott Sisemore	Scott Sisemore

4/7/2022	Hello PROS plan advocates and commission, Today I am sending you a quick note as follow up to the two nights of meetings this week, both of which I attended and participated in with public comment. Thank you all for your time and effort on this important matter! I enjoyed WRAs presentation on Tuesday evening, and found their group to be well qualified given their extensive experience and credentials. It was great to hear from subject matter experts on the state of our open space. and was glad to hear that their scientists have already been out in the field for substantial time to catalog species and to gain a deep understanding of our recreational open space. And, I was heartened to hear WRA state that from their perspective the health of our forest and open space is quite good. This is what I personally believe to be true, but always nice to hear it confirmed by a real expert! I express my condolences that you and others continue to take abuse from a small anti-recreation vocal minority. I cringe every time they come on for public comment just to criticize, lecture, and name call - often times deliberately trying to spread misinformation. But this is democracy, and so they must be heard. Last night, after I made my personal comments in the public setting, I was derided by the next speaker Pat Cuvielo as 'ignorant, ignorant, ignorant....' Now, given the source of the criticism, I'm not feeling too hurt! But I would suggest that this is the sort of behavior we don't want to tolerate as a city, and it may be worthwhile setting more concrete ground rules at the beginning of each contested meeting to inform folks that this sort of behavior is not acceptable - if you agree. I also worry that the comments of myself and others who are in the camp of 'pro enviroment AND pro recreation' can also get repetitive. Personally, I tend to show up to these meetings in order to provide what I hope is a more balanced view. That said, I really appreciated commissioner Michaels comments last night. Paraphrasing, I heard that it would be appreciated if public comments would provide reasonable plans that incorporate both sides of the argument. Well said! I don't want the only public voices you hear to be from the anti-recreation group, because as we know from the citywide survey - the majority of our city is very supportive of recreational open space and multi use trail access. The challenge we have, is that the anti-recreation group seems to have lots of time on their hands, whereas most folks in the city have jobs and families to care for..... The issue we face at home, is much like we see on the national level and abroad. Issues are ever more hyper-polarized, and so groups feel like they can only get what they want if they argue extremes - and this can get very boring and repetitive. How can we change the conversation? I'm open to suggestions and feel free to reach out to me directly for a conversation. Last night I mentioned that our discussions feel like groundhog day - and they do! Its the same old arguments swirling around and around. The last speaker of the night, Mike, said it more eloquently. One statement he said I really liked. "we have to get to a point where we can make good use of this resource and be environmentally sound while we do it." I think that captures the issue perfectly in my mind. I don't have a great or concrete solution to the problem at hand, other than we have to work through a process that at times feels slow and inefficient. I do think that setting stronger ground rules at the beginning of these meetings would be helpful. Let folks know that name calling or bullying is unacceptable, and remind folks that first and foremost we are neighbors and we all want the same thing - a continued vibrant and healthy open space system. I would also suggest that you consider setting concrete boundaries to disallow agenda related comments during the general comment period. Last night we all sat through 30 minutes of agenda related comments which were allowed into the general comments, and this then pushed the dog discussion and PROS discussion later than they needed to be. So in summary, I want to thank you all again for your hard work and thoughtfulness as we approach this hot topic! I'm confident that we will get to a great solution for both the environment and for the entire community that loves and cherishes our beautiful open space. All the best, Thaddeus Block	Thaddeus Block

4/7/2022	Brigitte, Commissioners and PROS: On 4/5, I attended the Open Space PROS Advisory meeting but was dismayed to learn that this was the PROS Advisory's last meeting for the entire project! I believe a 5th PROS Advisory meeting devoted entirely to Open Space is absolutely necessary. Not allowing another PROS Advisory meeting for further discussion on our Open Space would be violating your last guiding principle to "Utilize a transparent Community Process to inform Decisions". This was the first opportunity for the PROS Advisory Committee to hear and see the WRA overview slide presentation on Open Space with no prior information given to the Committee for review. In a series of 30 rapid slides, John Baas, the project manager quickly covered the goals/policies which included the right ""buzzwords"", trail maintenance, habitat restoration, adaptive trail management, wildfire, environmental protection, visitor demand and safety and management, use of e-bikes, new unauthorized trails and protection of riparian resources which could have been used in any open space presentation. He provided no specifics or details regarding Belmont's Open Space leaving both participants and observers bewildered, scrambling to take notes as he spoke. Without presenting any relevant information specific to Belmont's Open Space, he asked the PROS Advisory Committee to help determine the allocation of his hypothetical pie chart which despite hypothetical, put a very low priority on important issues of Trail maintenance and Adaptive Trail Management which was not defined clearly. Both the PROS committee and Park & Rec Commission appeared confused and wondering what WRA expected from the Advisory Committee regarding each of these topics which could be an in depth discussion by itself. Several Advisory members even commented it was premature to assess any pie allocation before seeing a report with more information. One member asked for another Advisory meeting and I agree that this request should be granted, not only to determine the pie allocation but to discuss each of the goals/policies for our Open Space. To devote only one PROS Advisory meeting to the most important issue for Belmont, Waterdog Open Space and San Juan Canyon, after devoting so much time and effort to other parts of the PROS plan such as Neighborhood Parks is not only unfair, it appears to be attempting to bypass the proper process due for this important topic. Clearly, more specifics and information on each of WRA's goals and policies for Belmont as well as much more clarification on his 2 management alternatives briefly mentioned with no explanations are sorely needed before any assessment can be given. The PROS Advisory Committee deserves another meeting to discuss WRA's recommendations and alternatives before any decisions are made. The PROS process up till now has been fairly transparent and informative with proper focus groups and meetings providing guidance. Let's not mess up your hard fought process now by rushing through this most important topic of Belmont's Open Space without giving the PROS Advisory Committee their right to discuss and analyze WRA's recommendations and alternatives. Thank you for your attention. Jennifer Lien	Jennifer Lien

4/7/2022	In the April 5 WRA presentation I was pleased to hear mention of several important issues long overlooked in Belmont; riparian habitats, redundant and poorly designed trails, benchmarking stewardship policies of other open space districts, and the concept of adaptive management. I'm optimistic that Belmont can create an enlightened vision for a sustainable, biodiverse and healthy native habitat for our open spaces. However Belmont's Conservation Element policies regarding wildlife and natural habitat were largely omitted from the WRA draft goals. As you are aware, the Conservation Element is the section of our General Plan that addresses management of Open Space in Belmont, and as such is the most critical input into the Open Space plan. This is why the City RFP specifically cited awareness of Conservation Element policies. Belmont General Plan section 4.1: "The Parks, Recreation, and Open Space Element bears a strong relationship to the Conservation Element, which is required to provide direction regarding the conservation, development, and utilization of natural resources. The Parks, Recreation, and Open Space Element addresses open space for outdoor recreation, while the Conservation and Safety elements discuss open space for preservation of natural resources and open space for public health and safety, respectively." Belmont Conservation Element: "Human safety and recreation opportunities must be balanced with maintaining the proper functioning of natural systems….The habitats of the natural resources open spaces found in Belmont are discussed in more detail in the General Plan EIR." Goal 5.3: "Protect and restore biological and ecological resources in Belmont, including sensitive wildlife species and their habitats." Policy 5.3-4: Maintain functional wildlife corridors and habitat linkage in order to contribute to regional biodiversity and the viability of rare, unique or sensitive biological resources throughout the city and region. A mere focus on a few "species of special concern" is not adequate; the Conservation Element calls for a broad definition of functional habit for wildlife, including each of the sensitive natural habitat communities discussed in the Element. Belmont residents are counting on your influence. Please ensure these VITAL goals are incorporated into the Master Plan, along with proposed policies to achieve these goals. Thank you, Kristin Mercer	Kristin Mercer
4/10/2022	Dear PROS Plan Commission, I am writing on behalf of about 40 neighbors who live in the Monte Cresta Dr area. We have a beloved neighborhood hiking trail which some of us have used for decades - literally since 1975, as one couple told me, and a few other families in the 40-year range as well - which a developer is proposing to turn into a road and housing development. We walk our dogs on it every day, we have raised our families hiking on this trail. Given the lack of sidewalks in our area, this trail is one of the few protected areas where we can safely walk without worrying about getting hit by traffic. Its loss or diminishment would materially negatively impact our quality of life, not to mention cause ecological damage in disturbing the native flora and fauna of the area, especially given the excessive grading that would be required given the steep slope of the lots. Can you give us any advice as to how to preserve access to this trail, possibly by having it recognized as protected open space? This trail is the "paper road" or "unimproved section" of Monte Cresta Dr. Would love to set up some time to chat on this matter. Best, Jen Lai	Jen Lai

4/11/2022	Dear PROS Committee and Park Commissioners, At the April 5 presentation by WRA, the PROS committee appropriately refused to speculate on resource allocation for our Open Space until they see the written assessment of the current ecological conditions (to know our needs). While our open space may seem healthy to the casual observer, there are many issues that have degraded the natural habitat – some in the past and some continuing. To omit, and thus ignore, these known issues will be simply greenwashing; we can't tackle our issues until we acknowledge them and agree they need fixing. Some of these issues reflect a lack of standards, and others constitute vandalism pure and simple. Belmont lacks standards for trail construction, defined trail use policies, and enforceable laws against vandalism of public lands. So long as we allow damaging practices we will be stuck in a cycle of constant repair and maintenance – working harder yet falling behind. However, if we first put a stop to ongoing damages, then we can free up future resources to invest in restoration and recreation. This is a principle of adaptive management, which WRA urges for Belmont. I expect to see the following issues included in the WRA Open Space assessment: Trails, geology, hydrology: Poorly designed trails; straight down slopes (causing erosion gullies, safety concerns), across steep cross-slopes (destabilizing slopes), encroaching on streams, and crossing mapped debris flows, Unsanctioned trails allowed to proliferate unaddressed, Active debris flows/landslides, Dumping of soil and cuttings into creeks, diverting natural flow, increasing silting and spreading invasives, Blockage of creek by wet crossings, Drainage culverts (concrete) clogged or overgrown, Exposed soils and destabilized slopes resulting from clear-cutting for fire breaks, Habitat and vegetation: Excessive trail density fragmenting habitat (2-5 times more miles per acre than comparable open spaces), Unnecessary removal of native vegetation far beyond the trail width, including native white yarrow, sticky monkey, sage and oaks, Abutting homes' vandalism including: topping public trees, stairs and paths from gates, invasive species from back gardens, dumping of brush cuttings, broad spraying Roundup on open space, drainage pipes/culverts discharge into open space, Soil and cuttings shoveled downhill onto vegetation below, Encroachment on riparian habitats and vital water sources for wildlife, Sudden oak death, Invasive species, most notably broom but also thistle, pines, and pampas grass, Drainage diverted directly onto oaks, leading to the decline and death of the tree, Trails and shortcuts undermining or compressing tree roots, leading to instability and decline of the tree, Improper branch cutting destabilizing the tree or introducing pathogens, Lumber and tools from unknown sources unmonitored, bringing pathogens and invasives. I hope WRA, PROS representatives and City officials will ensure the new master plan addresses these issues. Thank you, Kristin Mercer	Kristin Mercer
4/13/2022	Hello Kelley, In follow-up to both the most recent PROS meeting and P&R commission meeting, I, too, would like to recommend to WRA that they review what the Santa Cruz Mountains Trail Stewardship (https://santacruztrails.org/about) organization does. This group was just in the SJ Mercury news this week about their partnership to build more trails in newly obtained public land. I know that the LA and Marin county plans were used as a resource, but this is closer to home. Also, any mention of the San Francisco garter snake by a non-herpetologist needs to be verified. It is a beautiful snake that also has others that look similar. I learned this years ago at a meeting of the Bay Area Amphibian and Reptile Society :-) Thanks so very, very much for bearing with us in the community. Best regards, Lynn Bell	Lynn Bell

4/14/2022	Please do not limit mountain bike access in the WaterDog park. I really enjoy riding there during the weekdays as it is close to my house, the trails are well maintained, and it has a very good diversity of easy to technical trails. I personally try my best to be polite to all trail users, dog walkers, and whatever kind of animals I see and share the trails with. It is my personal belief that mountain bikers should give way to all other trail users, which is something I practice each and every ride. WaterDog also is a relative haven for young people who may not have access to drive long distances to enjoy outdoor activities, such as hiking and mountain biking. These outdoor activities should be encouraged and supported rather than discouraged and made impossible by a select, albeit very vocal, elites minority. I believe most trail users share the same philosophy whether on bike or on foot. I also do hike those trails and walk my dog there on occasion and I've never had a bad interaction with any one yet. I also enjoy riding to the higher elevations, getting off the bike and admiring the views. As for making it a nature preserve, what good is that if people aren't allowed to enjoy nature first hand? There is precious little open space left in the Bay Area where people can personally enjoy and interact with nature, especially on a mountain bike, please don't limit this further. I have lived in San Mateo County my entire 63 years and have seen too much land taken away from residents in the name of 'progress' and conservation. We need to have someplace to ride, hike, and walk. Sincerely, Russell Roeckel	Russell Roeckel
4/20/2022	Hi Brigitte, I wanted to let you know that I had a Zoom meeting with Craig Michaels last nite and presented the attached Powerpoint and video (Plse continue scrolling twice after the video to see my suggestions for Policy Actions and Goals). I want to be transparent and honest with you as I believe you have been with those of us that are trying to help preserve the future of Waterdog Open Space (I didn't want you to think I was going over your head by responding to Craig's invitation at the last P&R meeting to talk directly to the public). I made it clear to him that my number 1 priority is Fairness and Equity which are the first and third guiding principles of the PROS plan and in order to accomplish that, Hikers need their own narrow trails to enjoy secluded, peaceful, nature walks without having to worry that a mountain biker will be whizzing by forcing them to rush to the sides of the trails to let them pass. Many of our neighbor residents have let it be known to us that they no longer walk Waterdog trails because they are too dangerous and have instead driven their cars to other parks to enjoy nature. How is that Fair and Equitable to Hikers when Mountain Bikers from all over the Bay Area are allowed to run uncontrolled on All our trails forcing Hikers to have to go elsewhere? Thank you for your attention. Sincerely, Jennifer (You need to download the attached Powerpoint first and then you can watch at your leisure) Powerpoint Show https://mega.nz/file/fxpCDIIT#uUoD0PX8qoZe0WJZSaKa6-SHmCUbTwfYwWHB13s4DU4	Jennifer Lien

4/22/2022	Hi PROS Team, Brigitte suggested I forward you my presentation and email that I sent to her and made to Craig Michaels over Zoom this week. Below the links to the Powerpoint presentation in PDF and the KCRA video separately because the video is too big to play in the original link. Link to presentation in pdf format https://www.dropbox.com/s/d32qz2prf9sg34a/Craig%20Presentation%20v2.pdf?dl=0 Link to KCRA 3 video referenced in the pdf https://www.dropbox.com/s/w1e7tz3rbayu9uk/Illegal%20Trail%20Bike%20Jump%202%20-%20KCRA%20SOHO%20Low%20Low%20Res.mp4?dl=0 Thank you for your attention. Jennifer Lien	Jennifer Lien
4/29/2022	Dear Commissioners, I recently read the comments made during the April 6 Parks and Rec meeting and was both encouraged and disappointed. I am glad that the consultant, WRA, Inc., seems to be providing unbiased information. However, I noted that there continues to be two competing factions and that an appropriate compromise may not be reached. I am concerned that in an effort to appease a vocal group of mountain bikers, the true intent of the land gift will be dismissed. In regard to reaching a compromise, I believe the comment made by Jennifer who "called for all unauthorized trails to be closed, for some trails to be designated for hiking only (per the 1992 Plan), and for e-bikes to be banned," is a very fair and sound approach. While the city does want to encourage biking, it should be clear that biking to stores or work is different from recreational biking. E-bikes do not belong in the Open Space. I do not appreciate the buzz of a motor anywhere near me in what should be a quiet and peaceful place to enjoy nature. I do not want to worry about a cyclist trying to negotiate past me on a narrow trail. I do not like to worry about bikes whizzing by, but I can put up with that provided the path is wide enough to accommodate two-way traffic. Thank you for your attention. Regards, Connie Tettenborn	Connie Tettenborn

DATE	COMMENT	COMMENTER
5/4/2022	I would like to comment on the WRA presentation presented in April and also ask about the revised plans for Hallmark Park. First, regarding Hallmark Park. During the discussions of various park redesigns and future plans, it was discussed and I believe pretty much agreed that there is not a desire for a bocce ball court or an "event structure" at the meadow above Hallmark. The current website does not show any revision to the original proposed plan. When will the revision be posted on the PROS Plan website? Regarding the Water Dog Open Space, I want to make several comments. The presentation by WRA was extensive and overall well done but I feel several points need to be made. As an Advisory Committee member, long time Belmont resident of 30+ years and daily hiker on the John Brooks, Rambler and Chaparral trails, I feel that the surveys done missed several things: 1. Currently there are very few animals seen in the Open Space compared to prior years. In the past, it was common to see deer, rabbits, quail, coyotes and other wildlife. 2. Due to bikers now coming from all over the Bay Area as a mountain biking destination, many of my Belmont neighbors do not hike the trails as they consider it too dangerous. My wife and I have been nearly hit over a dozen times over the last 2-3 years by speeding bikers coming around blind curves. Many of the trails are only 24-36 inches wide which is not wide enough for a biker and a walker/hiker to pass safely. Certainly, many bikers are careful but many are not and view the trails as a mountain bike race competition. It's interesting to note that many residents feel it is literally safer to walk on the streets than walk on the WD trails! 3. The bikes have ravaged the trails in many cases destroying tree roots, cutting the roots and in many cases making the trails so slick that it is difficult to walk or hike them. 4. Some of the Open Space(John Brooks) was specifically granted as a donation with the proviso that it be a "preserve". Obviously this is not taken into consideration anymore and I don't understand why. Currently it is almost impossible to have a quiet "nature" walk there with bikers or the fear of bikers running a person over. 5. Many illegally constructed trails have been cut into the Open Space by the biker community. Let's close these. 6. I strongly recommend that there be a separation of biker or multi purpose trails from hiker/walker trails. I truly believe it's important to allow bikers-young and old- to bike the area but keep these two areas separate. Bikers should only be allowed on trails 48 inches or more wide. As you probably know, many local open space parks do not allow bikers at all. I'm very concerned about the future of this beautiful resource we have. Let's use it but protect it so it remains a sustainable habitat for nature and wildlife in our city. Thank you! Bob Stahl"	Bob Stahl
5/9/2022	Dear Parks & Recreation Commission, I watched the 5/4/22 Meeting and it seems to me that the consultant WRA is doing a very thorough and reasoned assessment of the open space. Their presentation was very informative, and validates what most community members have been saying all along, which is that the forests in Waterdog and San Juan are healthy, and contrary to what a tiny group of partisans keeps saying, the sky is not falling. It's becoming obvious now that the same four people in the community are the only ones who are making comments against shared multi-use access: Deniz Bolbol, Pat Cuvielo, Kristen Mercer, and the woman who has the screen name of ""ennifer" or "Jenn Jenn." I feel badly that both you and the consultant have to endure their tirades at every meeting. Please know that the community as a whole appreciates your all the time and effort you've been putting into this monumental task. I was really taken aback at a public comment Kristen Mercer made. She said something to the effect that children and seniors can't use the Waterdog trails because they're too scared of bikes. No evidence to support this was cited of course. That is the complete opposite of my experience. I ride and hike Waterdog on at least a weekly basis, and I see plenty of seniors and young children on the trails. She tried to claim it was an equity issue, but couching an ageist statement like this in equity terms is beyond the pale. Seniors can and do ride mountain bikes. You don't need to take my word for it, please see the attached letters (which I got from the PROS plan resource page) from seniors and near-seniors who cycle the trails and support multi-use.	Paul Sheng

DATE	COMMENT	COMMENTER
5/9/2022	"Jenn Jenn" lodged some grievance that the consultant is failing to consider the impact of "all the mountain bikers from all over the bay area who ride all the trails." This over-the-top statement belies a complete misunderstanding of the role Waterdog plays in the local trail resource system. Waterdog is a small trail system and is good for maybe a two hour or so ride. It is not a "destination" trail system. Yes, cyclists from out of town will ride Waterdog every now and again, but there's not enough there to make it a major attraction - it's not worth driving an hour plus to get to. If cyclists drive all the way from the South Bay, North Bay, or East Bay to the Peninsula, it's much more worth their while to ride the exponentially larger trail networks in the MidPeninsula Open Space District such as El Corte De Madera, Russian Ridge, Skyline Ridge, Saratoga Gap, and so on. For example, in Santa Cruz County, there is a small trail system at De La Vega Park, similarly sized to Waterdog. I've ridden there once or twice, but if I'm going to drive all the way to Santa Cruz County, It's much more worthwhile to ride the much larger trail systems at Soquel Demonstration Forest, Wilder Ranch, and so on. Anyway, if cyclists from out of town want to ride our trails, we should welcome them just as parks and open space areas in other areas welcome us. "Jenn Jenn" does not seem to understand the first two guiding PROS principles, which are to provide equitable access to resources and activities across the entire city, and promote inclusion to people of all backgrounds, regardless of race, gender, sexual orientation, socioeconomic position, or physical/cognitive ability. I always wonder if there is an undercurrent of racism behind these "locals only" attitudes. We saw this when this same group of folks were demanding that the Crystal Springs Cross Country Course be limited to local athletes only, which would shut out high school athletes from more diverse school districts from the East Bay and Central Valley. "Locals only" seems like a racist dog whistle for "whites only." It wouldn't be a Parks & Rec Meeting if Deniz Bolbol and Pat Cuvielo didn't make public comment about some perceived environmental disaster, but what was unusual about this meeting was that they both made comment on the agenda item on the consultant update, and later in the meeting, after comment for that item was closed, and public comment was opened up for items not on the agenda. As soon as that comment period opened, they both took the opportunity to make public comments about the consultant report. During Ms. Bolbol's comment, a commissioner started to say "with all due respect this time is for comments on items not on the agenda..." but Ms. Bolbol talked over the commissioner and bullied her way into completing her comment. If feel the Commission should take stronger action when public commenters are abusing the process like this. The Commission would be well within its rights to cut these comments off. It is unfair to the public, when someone who has already made a comment on an agenda item takes a "Mulligan" and gets further comment in, during a period with others are not expecting those comments to be made and are not prepared to respond. I would respectfully suggest that the Commission consult with the City Attorney on how to handle this situation in the future, because it is certain to happen again. Thanks again for everything you're doing, and keep up the good work. I think both the Commission and WRA are doing an excellent job of moving this process to the finish line in a measured, transparent, and considerate way. Regards, Paul Sheng	Paul Sheng
5/15/2022	Dear Commissioners and PROS committee, I was frustrated to hear WRA consultants deny that Belmont's open spaces serve as a wildlife corridor. It appears they confused the terms "wildlife migration" (long-distance seasonal movement of entire flocks or herds) with the correct term "connectivity corridors" (daily individual travel between interconnected open spaces). All Belmont residents know we have wildlife in our canyons – we see them daily on trails and meadows, and our cameras capture their nocturnal ventures into our yards. And we also intuitively know they cannot survive within these open space pockets alone – they travel between canyons by crossing streets, yards, and even alleys. These open spaces are not isolated islands – they are part of a large habitat archipelago. The consultants who wrote the General Plan Open Space and Conservation Elements, and 1992 Open Space Master Plan, as well as the California Department of Fish and Wildlife all recognize Belmont open spaces as part of a network of connected open spaces, important in preserving the biodiversity of our native species. To familiarize you with these authoritative sources, and how wildlife corridors work, I've put the facts into a few slides, below, and attach here the USDA Information Sheet on the topic. The presence of nature and wildlife is what drew us to live in these hills. Residents decry the saddening trend of fewer and fewer wildlife sightings, as human activity increases in their habitat. We entrust you to create plans and policies that embody our General Plan and preserve the habitat and connected corridors critical to our native wildlife. Thank you, Kristin Mercer	Kristin Mercer

5/18/2022	My name is Richard Newhauser. I live on Wakefield Dr. in Belmont and my backyard butts up to the Waterdog park. I support continued multi-use access to Waterdog. Waterdog has been successfully managed as a mutli-use trail system for decades, and the trails have been sustainable based in large part due to volunteer trailwork by cyclists, through the Waterdog Trailkeepers. My family, which includes my two sons, wife, and a dog, enjoy the trails daily through hikes, dog walks and Mt Biking. We love getting into the park as well as looking at it from our backyard. Please continue to allow multi-access to Waterdog. All the best, Richard "Rick" Newhauser	Richard Newhauser
5/26/2022	Brigitte, Park & Rec Commissioners and PROS Committee: After more than 2 years, you will be concluding the PROS Master Plan analysis and provide recommendations regarding our Open Space. During this time, many Belmont residents have provided informational reports, photos, videos and public comments on Waterdog summarized on our Belmont resident website (www.waterdogpreserve.org). The goal of all our efforts has been to guide this new Master Plan toward more Equity and Sustainability than past practices. This email presentation below summarizes the 4 main Waterdog trail issues with their solutions that allow All users to "Love Waterdog". Please take time to read it and think carefully regarding the important decisions you will make that impact us and future generations for years to come. Thank you for your attention. Jennifer Lien P. S. Brigitte, please forward this presentation to WRA consultants.	Jennifer Lien
5/27/2022	Hello, I plan to attend the Belmont PROS Advisory Committee meeting #5 on May 31. As the time provided for public comment is short and I am not a Belmont resident, I would like to provide some comments via email and let the local folks speak live. I'm a hiker and mountain biker in Santa Clara County. I visit Waterdog periodically as I have friends in the area. I enjoy the preserve and value the opportunity to ride and hike there. I strongly believe that it should continue to support multiple use including cycling. More and more, we are seeing that joint engagement from multiple user groups is leading to better open space opportunities. I am an active trail advocate and a frequent volunteer with the Santa Cruz Mountains Trail Stewardship. SCMTS evolved from a mountain biking advocacy organization into a multi-use advocacy and trail building organization, and we are seeing huge benefits from the partnerships the organization has developed with land managers and between user groups. The new trail system developments at Cotoni-Coast Dairies and San Vicente Redwoods, as well as completed projects such as Glenwood Preserve, use modern thinking in trail system and trail design to manage multiple uses. The Trail Stewardship harnesses the power of hundreds of volunteers to do great work for all types of trail users, and works to ensure that all users can have good experiences simultaneously – meaning that goal interference and user conflict is minimized. While the mountain biking advocates in Belmont may not be quite this organized, I see them consistently advocating actively for better behavior, to honor the requests of the land managers, and to maintain trails. My point is that the route to better open space interaction and experience is to engage the broad community constructively to build better trails and systems, maintain the systems for optimal experiences, and appeal to users to interact respectfully. Mountain biking communities are often the most active and engaged in trail building and maintenance, because they care deeply about quality of trails and have historically been shut out of many trail systems. I believe that Belmont's best path will be to partner with the trail users including mountain bikers to do work in the system (maintenance; retrofitting for better experience and user interaction; or new trail building where appropriate) and to broadcast and promote the land managers' requests (trail interaction; respect for the environment; etc.) to their larger user groups. Thanks very much for your consideration.	Craig Gleason

5/31/2022	To Whom it May Concern, I just want to express my support for mountain bike access to Waterdog. Unbiased data shows very limited trail damage by mountain bikers. Data also shows minimal disruption to wildlife. Continuing access to Waterdog not only encourages a healthier lifestyle, the presence of mountain bikers also help the local economy as they support local businesses and restaurants. Ron	Ron Martin
5/31/2022	Dear PROS Committee, I have lived in San Mateo for 10 years and now in San Carlos for 3. I regularly ride my bike at Waterdog for recreation and fitness 3-4 times a week. I have never had an encounter with anyone in the park that was negative. Hikers, Bikers and Dog walkers all get along great. Limiting access to any of them would greatly impact the local economy in my eyes. From the local bike shop to the starbucks and Lunardis all within minutes for a post ride snack. I just took my 7 year old for his first mountain bike ride last Saturday and he was hooked. Waterdog is an absolute gem and I would love to continue to ride there for years to come. Thank You, A Concerned Citizen	Chris Bushman
5/31/2022	Dear Ms. Shearer, Parks commissioners, and staff: Can you please point me to the 2035 population projections that were used as inputs to the current draft PROS master plan? I am specifically concerned that the updated draft Housing Element, which won't be released until June 8 and won't be finalized until late summer, includes much higher population figures than those in the current General Plan or even the 2017 Belmont Village Specific Plan. It would be good to confirm that the PROS work was done with the most up-to-date population figures. Thank you, Joanne Adamkewicz	Joanne Adamkewicz
5/31/2022	Dear Ms. Shearer, Thank you very much for getting back to me promptly! I really appreciate that. It makes sense that the PROS planning process started with the 2017 population projections. However, it is not finalized yet, and I very strongly hope that the latest figures can be incorporated somehow into this 2022 version of the PROS plan update, for two reasons. First, the new number is much higher than the old forecast of 30,500 residents in 2035. The current population of Belmont is 28,360 per the recent Districting process. The Housing Element projects an additional 4500 (RHNA target build out) to 8250 (full build out) residents, for a total of 32,860 - 36,610 residents by the year 2030. The total by 2035 is unknown but will be even higher - likely more than 25% greater than the 30,500 forecast. Second, the new population will not be evenly distributed throughout the city. In fact, 99% of the 4500-8250 new residents will be added to the eastern area of Belmont, raising the existing population of 7100 to as many as 15,000 people, with only nominal growth in the remaining areas of the city. Such lopsided development is a challenge for any city plan, including roads, sewers, schools -- and parks. I understand that the General Plan and the BVSP can and will be amended to address the growth envisioned in the Housing Element. But those documents deliberately leave the details up to the supporting elements, which includes the PROS master plan. But a plan based on a population forecast that is 25% too low, and with no consideration for geographic distribution of the growth -- such a plan will be obsolete within a year or two, and will fail at its goal of providing a useful blueprint for the future. I acknowledge that the entire planning exercise unfortunately cannot be re-done with the correct population forecast. It's too late. The table entitled ""IDEAL AMENITY QUANTITIES FOR 2021 AND 2035 POPULATIONS"" will remain unadjusted for the City's latest and most accurate population forecast, thus creating an obstacle to accurate planning by other City departments. So what I am requesting is that the text of the PROS plan acknowledge this disconnect. A statement should be added to the effect that the plan was developed with population forecasts from 2017; that the updated 2022 forecast shows growth to be faster, more dense, and more geographically concentrated than envisioned in the PROS plan; and that therefore, future modifications to the PROS master plan, the General Plan, and the BVSP should be pursued as appropriate to match this growth. Thank you for your consideration, and thank you for passing this on to your consultants as well.	Joanne Adamkewicz

6/1/2022	Dear Park Commissioners, At the PROS meeting David Braunstein rightly called out the elephant in the room. To paraphrase: both sides repeat the same arguments without listening to the other – we've missed an opportunity to build community. I have listened and I propose an equitable compromise solution; a trail use plan that provides space for a safe experience for users of differing interests and abilities, while protecting sensitive habitat. Seniors, families with little children, and those seeking tranquil nature are displaced by speeding bikes on narrow trails, and this imbalance is not equitable. On our streets, pedestrians are not asked to jump off the sidewalk for oncoming bikes. I have never suggested banning bikes – only that they be limited out of respect for the majority of residents who are NOT mountain bikers. ALL visitors have a right to use trails, but bikes are machinery for a sport that requires appropriate trails. I think this plan checks all the boxes! But I hope to inspire discussion with "the other side", who also have a right to enjoy their hobby in a safe and sustainable manner. I hope this compromise plan can move us forward to a solution that is equitable for all abilities and interest groups. Thank you Kristin Mercer	Kristin Mercer
6/1/2022	Dear Commissioners and Committee members, I spoke briefly after the PROS plan advisory committee meeting last night and thought it might be helpful to provide the following link. As I mentioned, the WRA, Inc., consulting firm neglected to review the documentation regarding the land gift of Waterdog Open Space. A discussion of it at a council meeting can be found here: https://www.waterdogpreserve.org/brooks-contact-violated There were two requirements: That it be named something like ""The John S. Brooks Memorial Preserve"" and that it be retained in perpetuity as open space with perhaps trails that are low use as at that time. Considering ""Habitat protection emphasis"" an alternative is simply wrong. It is not an alternative option--it is the PURPOSE of an open space. ""Preserve"" is in the actual name that was suggested! Any consideration of new trails must take this into account. For example, putting in a connecting path for bikes would possibly create an unacceptable increase in usage levels. No e-bikes should be permitted because they are motorized, including pedal-assist bikes. (Except for officers enforcing the leash law!) I did not have time to clarify my concluding remark about single-use trails. I would only be willing to allow bikes on the narrow trails if they slowed WAY down to pass and did not make me step close to poison oak to let them by. Thank you, Connie Tettenborn	Connie Tettenborn
6/4/2022	Hi John and Robin (please forward to Robin as I don't have her email) Thank you for your OSMP plan presented to PROS Advisory meeting on 5/31. You have asked for feedback and I have some suggestions since I have been involved with this process for over 2 years as a resident hiker living in Belmont for over 40 years. I have reviewed Category 2 of your plan (P19-34) ""Balancing recreational uses and Trail Management""; both your Base Plan ""must haves"" and your supplemental Recreational Alternatives Implementation (Easy, Medium or Hard) of the OSMP. PROS Advisory Committee members and Commissioners indicated that the OSMP appeared very general and vague and I agree. Rather than using general words like ""design, improve, prohibit, diversify, modify, adopt, diminish, add and develop"", the Base plan needs more specific implementation actions related to Waterdog. Below are ""must haves"" implementation specifics that would provide transparency and clarity in your final plan. 1. Clarify Single and Multi-Use Trails Are your definitions and criteria the same as defined in the 1992 Master Plan listed below? Over the past decade, these official guidelies for single-use have been discarded by recreational bikers making All trails unofficially multi-use. To this day, the City 2020 Trail map uses the term Single-Track trail and Wide Trail with no clarification, definitions, guidelines or criteria to distinguish each trail type. Sierra Club Guidelines for off street Biking	Jennifer Lien

EMAILS RECEIVED: INFO@BELMONTPROSPLAN.COM

DATE	COMMENT	COMMENTER
6/4/2022 (con't)	2. Designate Single-use for Hikers Only, Multi-use for both Bikers and Hikers (P20) Add definitions, guidelines and criteria for single-use and multi-use trails. Single-use trails for hikers are necessary because aggressive biking behavior on trails not designed for safe passing without long site-lines and on steep slopes create a public safety hazard for ALL users. Safety concerns have marginalized non-bike users which are the majority of residents. 3. Clarify that this statement is for authorized trails only. (P21) 4. Add "Balancing Recreation with Preserving Functional Ecosystems" (P23) Nowhere in your Base Plan is there a policy statement regarding the need to balance recreation with maintenance of natural systems, however, Belmont's General Plan clearly states "Human Safety and Recreation must be balanced with maintaining the proper function of Natural Systems" (Sec. 5.3). 5. Add criteria and conditions for closing existing unauthorized, unsafe and damaged trails and modification of altered trails (P27) Define and include criteria for legacy trails. P27 addresses future modification and approvals on open space lands but lacks policy on closing existing unauthorized, unsafe and damaged trails. Specifically, close Soho trail, illegally built in 2017 and the Riparian trail that damages the riparian habitat as they both violate the John Brooks donation contract (John Brooks contract and the 1977 Belmont City Council minutes attached below). Specifically, realign Canyon Creek trail that crosses the riparian habitat and Finch East to its original plan along the canyon rim to protect the wildlife and natural vegetation; away from all sensitive habitat and special status species located in the valley. Define and provide criteria for legacy trails that includes public review, engineering studies and environmental impact analysis. John Brooks Donation Contract: "Maintain as an unspoiled wild area or "green belt" in perpetuity" Belmont City Council acknowledges John Brooks wishes and conditions. 6. Add "no group activity permit should be issued if it involves noise that would disturb wildlife or other users" (P30) Change E-bike recommendation to allow for public discussion prior to conducting any policies and studies. Motorized E-bike noise is unnatural amplified sound that disturbs natural tranquility. 7. Add maximum 15 mph bike speed with enforcement Signage (P31) Delete equestrians as they are not allowed in Waterdog "Focusing on slowing travel speeds, maintaining safe speeds and adding calming features" can easily be accomplished by imposing a maximum 15 mph bike speed that many other parks and Sierra Club guidelines have already recommended. Without noting an actual speed, "safe speed" is purely subjective and meaningless. Sierra Club policy observes a maximum speed limit of 15mph for all bicycles. I hope the above suggestions for Base Plan Actions will assist you in providing more clarity, specifics and details regarding balanced recreation with ecosystem conservation in your final OSMP. Thank you for your attention. Jennifer Lien	Jennifer Lien

6/5/2022	Hi John and Robin (Please forward as I don't have Robin's email), Thank you for your OSMP presented to Belmont's PROS Committee on May 31, 2022. Our region is rated as a "Biodiversity Hotspot", and Belmont's Open Spaces are an integral and connected pocket of natural habitat essential to continuing biodiversity. But our open space is also essential to resident health and education. So achieving a sustainable balance between protection and recreation is the most important objective of this Plan. I thus object to the sly, but significant, replacement of "maintenance" for the actual General Plan priority of "maintaining the proper function of natural systems." Throughout my comments, attached, you will find balance between environment, recreation and natural hazards woven into the objective, policy and action. Decision makers need WRA to help craft clear criteria to weigh this balance. As observed by the PROS committee and Commission, many items are vague or lack specifics. Differing interpretations of current City Plans has led to conflict and inaction, so it's essential that the plan help clarify, not muddy the waters. Thus, I submit for your consideration very specific edits intended to provide clarity and avoid misinterpretation, to reduce future disputes. Thank you for your consideration, Kristin Mercer	Kristin Mercer
6/10/2022	Dear Belmont City Council, As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. My son and I have both worked on maintaining and improving trails in waterdog (at organized trail work days). The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come. Best, Nigel Ray	Nigel Ray
6/10/2022	As a long time Belmont resident, Advisory Committee member, and an individual who hikes the Water Dog trails 200+ days per year, I was very shocked and disappointed that the majority of Park & Rec Commissioners have already stated that they will recommend "multi use" trails in the Water Dog Open Space. This was stated at the Park & Rec meeting last week. I feel this decision does not take into consideration the numerous Belmont residents who feel that the most trails are unsafe due to the preponderance of bikers on narrow trails. It also is in conflict with the recommendation of the WRA report which lists on Table 9 to "Implement single-use and one-way trail segments in areas identified in the Recreation Use Assessment following sufficient public outreach". The WRA study also states that the trails should be designed and improved to facilitate safe trail use by all visitors. The decision to make all trails multi use violates this WRA recommendation in section P20. In section P21, WRA states "the City may prohibit certain trail uses or apply increased trail use restrictions within certain areas to enhance safety, minimize conflicts between trail users, and protect natural resources areas"". Why can't a certain number of trails be designated for hikers/ walkers only and this be implemented so that hikers do not have to worry about their safety and being run over by bikers? These should be the following trails: Berry, Chaparral, Raccoon Run, Rambler, Ohlone, Canyon Creek and Raccoon Run. As I stated, I and my wife hike the WD trails 200+ days per year and have done so for many years. We have been nearly hit by bikers 6 times in the last 12 months. The bikers have stated: "show us the statistics of injuries or accidents caused by bikers". Obviously the near misses to me and my wife do not show up in records but I can guarantee you that these near accidents have happened. Many of these near accidents occurred when bikers came around blind curves. They could not see us and we could not see them until the last seconds. We had to jump off the trail to avoid being hit. I must also say that numerous residents we meet walking on Belmont streets will no longer hike the WD trails due to the danger posed by the bikers. Many residents say it is not enjoyable or conducive to a peaceful walk anymore as they have to constantly watch out for bikers.	Bob Stahl

6/10/2022 (con't)	In the past two years we see less animals(deer, rabbits, quail, etc.) than in the past. Whereas we used to see deer on a weekly basis, we've seen only 3 deer since the beginning of this year. In addition, many of the trails are damaged by bikers who have worn down the trails and made it so slick it is hard to climb some of the hilly areas. The bikes have also damaged many tree roots. I must also request that you restrict the use of E bikes on the trails. E bikes go up to 28 MPH. Even Class 1 E bikes go 20 MPH and that can cause a severe injury if someone is hit by an E biker going 20 MPH. E bikes usually are 45-50 pounds and if someone is hit by an E bike at 15-20 MPH, they will be severely injured. Many are designed just like motor cycles and do not need pedal assist. These bikes are not safe for other users on the trails. Please take these ideas into consideration before finalizing your recommendations to the City Council. I believe it is your duty to represent all trail users. So far, you have shown favoritism to the bikers-many of them who do not even live in Belmont. Thank you. Bob Stahl	Bob Stahl
6/10/2022	Hi, As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails (Ensatina and Labor of Love), and leave them open to all users. 6/10/2022	Have been biking water dog for 26-years and just rode my favorite loop this morning. I strongly support the plan to keep all trails all access, including ebikes as I see the day not far off when I'll have to switch! Water dog is my favorite place to ride in California. I support the following. As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. 6/10/2022	I've read the recently released draft Recreation Use Assessment, and wanted to thank you all for the thoughtful approach to these recommendations. I'm a member of the Waterdog Open Space Stewards and agree with their positions on the recommendations in this draft posted at https://waterdogstewards.com/articles/update-on-recreation-at-waterdog. I'm a frequent user of the park, and volunteered when many of the trails we enjoy there were being built. I'm thrilled at the recommendation to officially recognize the trails that are currently not on the maps, but are well-built and enhance the open space. I also support the erosion remediation recommendations. I also support the WDOSS position that the trails at Waterdog should remain open (there are no redundant trails!) and multi-use. Waterdog has a wonderful community, and we should continue to embrace and foster it! Thanks again for your patience and thoughtfulness in this process. I know that the vocal minority who want to shut users out of Waterdog have been loud, and I'm happy to see that they have largely been unsuccessful in their hateful campaign here and at the Cross Country Course. --Scott	Scott Hill

6/10/2022	Hello. For the past 30 years or so, I've been a user of the Waterdog open space, and I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community (including by myself in years past), and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. I do oppose the use of e-bikes, as those are more like motorcycles, and do not fit into the people-powered ethos of waterdog, IMO I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you—Tom S, San Carlos CA	Tom S.
6/10/2022	Hello, As a hiker, dog owner and mountain biker my family and I love and use the Waterdog open space area several times a week. I am writing to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come. Sincerely, Rob	Robert Labatt
6/10/2022	As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, and bikers, as they always have been. I think that further enforcement of on-leash laws is needed for dog walkers. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. I also agree with allowing e-bikes, as they are limited as to speed and generally do not go any faster than normal bikes. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come.	Nicolas Olivares
6/10/2022	Dear Parks and Rec Commission, I reviewed the draft Recreation Use Assessment prepared by WRA Consultants for the PROS Plan, and I think overall the consultant's approach is very balanced and reasonable. For the most part I agree wholeheartedly with their assessments and recommendations, and I think they're both commonsense and based on solid science. I disagree with a couple of their recommendations though. WRA recommends making Ensatina trail a hiker-only trail, and the trail known as ""Labor of Love,"" ""Flow,"" and ""Soho Circle"" trail cycling-only. I agree with the comments Commissioner Michaels made at the last P&R Committee meeting, to the effect of ""we should allow as many people as possible to enjoy all of our trails."" For convenience, the recommendations from the report I'm referring to are pasted here: "Trail recommendations for designating as single use. Number 1 on the map below, trail connecting the John Brooks Trail with the Waterdog Lake Loop Trail. This trail could be a good candidate for designating as pedestrian use only due to the low tree branches and unique shady experience that may encourage slow travel through this area. There are also two parallel trails so access to trailheads would not be restricted. This trail may need additional improvements like realigning trail away from the creek in areas.	Paul Sheng

EMAILS RECEIVED: INFO@BELMONTPROSPLAN.COM

DATE	COMMENT	COMMENTER
6/10/2022 (con't)	Number 2 on the map below, loop trail to the south of the John Brooks Trail. This trail could be a good candidate for designating as cycling only due to its winding alignment and banked corners. Because this trail is a loop branching off of the John Brooks Trail, trailhead access would not be restricted. Users of this trail may already be encouraging a single direction of travel (see photo below) which they City may choose to codify and install official signage. However, this decision should rely on assessments of the need for a single direction of travel and visitor surveys." Making single-use trails (hiker-only or cycling-only) fosters division and resentment in the trail user community. Belmont doesn't have a dedicated park ranger, so in designating trails single-use, there's really no way for the City enforce the rule. It doesn't make sense to impose a rule that can't be enforced. Unfortunately, we have a few unhinged individuals in our community who have been known to physically accost and confront cyclists on the trails. I fear that if trails are designated single-use and a cyclist wanders onto the wrong trail, some self-appointed vigilante enforcer will confront or assault him or her. Single-use trails are essentially a solution in search of a problem. All of the trails in Waterdog have always been multi-use, and there's no compelling reason to segregate them. The two trails in question were built by volunteers from the cycling community, not exclusively for themselves, but for everyone to use and enjoy, including hikers, runners, and dog walkers. The basis for WRA's recommendation to make Ensatina (Number 2) hiker-only was "the low tree branches and unique shady experience that may encourage slow travel through this area." This doesn't seem like a good reason to systematically exclude an entire user group, and break with decades of Belmont's tradition of allowing all user groups to use and enjoy all the trails. The federal Bureau of of Land Management has a publication, Guidelines for a Quality Trail Experience, that makes some excellent points about shared multi-use trails: • Sharing helps build a trail community. Visitors are encouraged to cooperate in order to preserve and protect a common resource, and encountering other types of users on a trail helps to establish mutual respect and inspire courtesy. • Shared-use trails take better advantage of available space and trail mileage. Quite simply, they provide more trail for everyone to enjoy. https://www.blm.gov/sites/blm.gov/files/Guidelines-for-a-Quality-Trail-Experience-2017.pdf Ironically, some public commenters at the last P&R meeting were critical of the consultant and Commission for "not bringing the sides together." However, these same people are demanding single-use trails which literally do the opposite of bringing people together. Sharing is what brings people together, and sharing is what creates a sense of community. That's always been our tradition and practice, and I hope you will preserve that in the final voting and implementation of our PROS plan. As always, keep up the great work you're doing and thank you for taking the time to read my email. Regards, Paul Sheng	Paul Sheng
6/10/2022	Hi all, For the past 15 years my wife and I have enjoyed Waterdog for both hiking and mountain biking. We consistently go hiking there together every week or two, and I have biked there once or twice a week until I retired three years ago, and now I bike at Waterdog three times a week. I strongly support multi-use access to all the trails, in particular Ensatina and Labor of Love. These trails both provide unique challenges and joys for both hikers and bikers. I've never had a moment of "conflict" on the Labor of Love trail, either with another biker or with a hiker. I have had moments on the Ensatina trail where I had to yield the right-of-way to an uphill biker, or, as a biker, to a hiker going either direction. In all my interactions on Ensatina, there has never been an uncomfortable moment—I cheerfully and insistently give the right-of-way to all hikers, always encourage them to have a "great hike", and frequently offer advise on route selection (as someone who has been in Waterdog probably almost 2000 times!).	Michael Wright

6/10/2022 (con't)	I personally see no reason not to keep all trails open to all users. It is true that in our use over 15 years that I have had maybe 4 moments (either as a hiker or a biker) where I felt uncomfortable by the behavior of a mountain biker. Things being what they are, I've had at least as many moments where I felt that hikers were discourteous or acted in an unsafe manner. In maybe 2000 times using the resource, this is pretty negligible. I feel that if anything should be done to make Waterdog more enjoyably and safely usable for all users, it should be an education campaign. The existing signage is useful, but could be made more explicit with regards to right-of-way and suggestions for courteous behavior. I truly think that this would almost completely solve any issues that come from multi-use, and would leave all the trails open to all users. Thanks you, Mike Wright	Michael Wright
6/10/2022	Hi, I live in Redwood City and have been involved with trail building (trail at the end of the dam) as well as routine trail maintenance at Waterdog over many years (I started mountain biking at Waterdog in 2012). As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community - me personally included, and I strongly believe that all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I am both a mountain biker and a hiker and I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come. Thank you for your time and effort and support of trail use at Waterdog! Sincerely, Pamela James	Pamela James

6/12/2022	Hi Robin and John (please forward this email to Robin), 1. I couldn't agree more with WRA assessments that visitors to San Mateo County parks as well as Belmont Open Spaces reported walking/hiking and running are the predominant reasons for their visits while a much smaller proportion reported biking as their reason. This clearly indicates that OSMP should be focusing more on Pedestrians than currently is the case and WRA's recommendation to "designate trails as single use to improve feelings of safety by increasing predictability by allowing activity type" should be implemented. All visitors can share all trails but bike speeding is not appropriate use on narrow trails which should be reserved for purposes of "exercising, communing with nature and experiencing peace and quiet" No amount of passive bells, loaner bells, proper etiquette and signage will improve the pedestrian safety when mountain bikes speed past at 30 mph and take away from the natural experience of peace and quiet and improvement of mental well-being. Just on Canyon Creek alone, over 40% of Strava bikers report an average speed of 15-27mph on the entire trail while over 90% report maximum speeds up to 30 mph on portions of the trail putting pedestrian safety at risk with absolutely no peace or quiet. ED - Speed Distribution Strava.jpg 2. I vehemently disagree with designating Soho (labour of love), a previously unmapped trail as a one way bike trail. This is legally in flagrant violation of the John Brooks Preserve donation contract to preserve it in its natural state. For WRA to recommend that this unauthorized, unmapped trail be legalized for bikers only (no hikers) is a contradiction to their recommendation that previously unmapped trails (which have the highest number of categories of erosion) should be decommissioned or closed. Bikers want this trail as a one way downhill trail for speed racing, an active and competitive sport; hardly passive recreation. It sets a very bad precedent for allowing bikers to continue to build illegal, unmapped trails in anticipation they will be approved in the future. The Soho trail should be decommissioned and closed. 3. I agree that Waterdog has the highest trail density per acre at .04 miles per acre for both mapped and unmapped trails. It has 2.5 times the trail density of other local comparable small preserves which contributes to erosion, fragmented habitat and disruption of wildlife. Waterdog is already overbuilt with mapped and unmapped trails. 4. I agree with the use of remote motion activated cameras for gathering more data and information regarding pedestrian and cyclist activities, monitoring wildlife and monitoring a maximum 15 mph speed limit for cyclists. This additional data will be helpful in providing missing information to P&R for a complete analysis of the Open Spaces. 5. I disagree with E-bike approval for Waterdog as WRA failed to acknowledge that different classes of E-bikes are visually impossible to distinguish: therefore allowing Class 1 E-bikes means allowing ALL classes of E-bikes. The higher classes have larger, heavier motors and wider tires that will damage trails as their report clearly states that ""motorized trails experience most soil loss and erosion"". There is no need to authorize E-bikes when they currently already violate our open spaces! 6. I agree with passive recreation ideas such as P&R sponsored nature photography contests (particularly for kids), nature-led walks identifying vegetation and wildlife and weekly hiking trips by trail; all are ideas that support the predominant reasons why visitors visit our Open Spaces. Thank you for your attention. Jennifer Lien	Jennifer Lien

6/12/2022	Good afternoon, I live in San Mateo near Hillsdale High school and have been involved with trail building (Berry trail) as well as routine trail maintenance at Waterdog over many years. As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails. Waterdog has given us hours of mother-son times, enjoying the outdoors on our bikes, building skills, starting from our front door. The trail system was built and is maintained by the community, me personally included, and I strongly believe that all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for. The exceptions would be any trail closures and the single-use designation of two trails in the open space. I am a mountain biker, hiker and dog walker and I feel that all the trails should be open for all user groups to enjoy and that we need to respect the different user groups and use it with tolerance and harmony. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come. Thank you for your time and effort and support of trail use at Waterdog! Sincerely Lotti Dunbar	Lotti Dunbar
6/12/2022	Dear Belmont City Council, Parks and Recreation Commission and PROS committee I am a resident of Belmont for over 30 years, and have enjoyed the Belmont Open Spaces over all of that time. Hiking, Running, and Biking in those spaces has been an incredible experience for me. Over those years, I believe the conditions of Waterdog Open Space have improved greatly. I have been attending Parks and Recreation Commission meetings for the past couple of years, and have heard all the arguments over and over again. With the publication of the Draft Report, we have an unbiased appraisal of the condition of the Open Spaces and some recommendations for improvement going forward. This document, along with the results of the survey taken earlier in the planning process, and the results of the past city council election all point to the following conclusions: The open spaces are in very good condition, though there is room for improvement Wildlife are generally in good condition in the open spaces People really enjoy the opportunity to make use of the open space Restrictions on biking in the open spaces are opposed by a large majority of the public (data from the survey and results of the last city council election) Trails should be multi-use and we should encourage all to use the resources Some improvements mentioned in the Draft Report, including closure of the highly eroded “”fall line”” section on Rambler, and improving the riparian crossings with bridges, make a lot of sense to me. I hope that they will be implemented. I was heartened to hear several Park and Recreation Commissioners voice support for keeping the trails multi-use. This seems very much in line with the values of the Belmont community. The draft report does endorse making one trail one-way bike only and one trail hiking only. I think this is a recommendation that should not be implemented. Starting to designate trails as accessible to one group and not another is counter to the inclusiveness we strive to maintain in Belmont. Also, once this president is set, I can imagine a never-ending series of calls for evermore restrictive policies in the future. While this suggestion may appear to be a fair one-for-one trade, I do believe it would be a mistake to implement it. There was also a vague recommendation to close “”redundant”” trails. I’m not sure this is a good idea either. In some instances having more than one way to walk or bike may enhance the experience for all. We will see different things on different trails, and spreading out the users over more trails can make the trip more enjoyable for all. There has been a lot of work done to get to where we are today. I would like to take this opportunity to thank the Parks and Recreation Commissioners for their service to the community. I am hopeful that we can come away with a Master Plan that will continue to keep the Open Spaces great places for everyone to enjoy over the coming years. Respectfully, Michael Munrow	Michael Munrow

6/13/2022	I am reaching out to you as an avid user of the Waterdog open space area. I’d like to share my position to continue to support the multi-use recreation for all of the trails for all types of users to enjoy. I am also an advocate for the Waterdog Open Space Stewards and appreciate the policies that have been established for the well being of this area and the community. I ask that you please reconsider the proposal of certain trail closures and the single-use designation of two trails included in the open space. I would very much like to see this trail system, that was built and is being maintained by the community, remain open on a fully inclusive basis for all hikers, bikers, and dog walkers to enjoy. I look forward to enjoying this open space with all of my various community members for many years to come. Respectfully, Chris Miller	Chris Miller

6/13/2022	As a resident of Belmont living in the Belmont Heights neighborhood and frequent user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. I regularly hike, bird watch and explore nature in the Waterdog OS and occasionally bike the trails. The trail system was built and is maintained by the community, and all trails there should continue to be available to enjoy, as they always have been. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come. Regards, Karen Moody	Karen Moody
6/13/2022	I'm hoping to attend the open house this evening at Waterdog/Hidden Canyon. However, if I don't get a chance to speak, I want to get some of my thoughts out in advance. I've been enjoying Waterdog for close to 20 years, and a resident of San Mateo for a little over 10 years. In those 20 years, I've worked with Charles Jalgunas and Patti Ciesla (formerly of Passion Trail Bikes) and now the Trail Stewards of Waterdog during many trailwork days. One of the projects I'm most proud of is helping Patti construct the new lake loop trail, bringing my son on several occasions when he was maybe 3-5 years old. He's 14 now, and just finished his freshman year at Serra HS. During the pandemic, we got much more involved in mountain biking as a safe, social outdoor activity and found the Woodside Beasts. What we found with the Woodside Beasts was such a welcoming group who are passionate about the outdoors. Kids of all types and abilities are welcomed with open arms and provided the opportunity to enjoy many of the parks and open spaces in the Bay Area, incentivizing them to get outside and off of their devices. For me, this was so important during the pandemic, and will continue to be a great life lesson moving forward. Sadly, it appears there are a small, very vocal minority that are trying to limit access to trails for cycling in Waterdog. I've seen first hand how these teens and pre-teens have fallen in love with being outside, meeting new friends, and learning new life skills (first aid, trail maintenance, philanthropy, civic duty, etc.). However, there are people in our community that brand these kids as criminals or outlaws, and portray them in a negative light. That message can't be further from the truth. What infuriates me is that during a trail maintenance day, working alongside the Belmont Parks and Rec, the neighbors called the police on us (and the kids). It was so frustrating trying to explain to my son why the police were questioning the work we were doing, and that it was approved by the city. How can the city help change the neighborhood's perception of these young kids? They spend countless hours working to maintain trail systems and better communities from San Francisco down to Santa Cruz, only to be told they aren't welcome and are often scolded on the same trails they help maintain. Please keep Waterdog open to all users. It's such a beautiful space that should remain accessible for everyone to enjoy. Kind regards, Matt Leonard	Matt Leonard

I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come. Jamie Morgan	Jamie Morgan
6/13/2022	As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come. Thanks, Thad	Thad Trent
6/13/2022	I regularly use Waterdog open space, so wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users. Specifics to your draft recommendations: I do not support the restriction to hiking only on Ensatina Trail, the low hanging tree cover is a uniquely beautiful charm that my soul loves. I choose to enjoy while riding my bike, and would deeply like to continue to use this trail. I do not support changing Labor of Love into a bike only trail, it too has a really fun, low tree cover, but maily oak trees that I love. Please leave this open to all users. I do support making this trail one-direction only. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come. Best regards, Ryan	Ryan Fell

6/13/2022	Dear Community Officials, I bike in Waterdog park approximately three days a week year around. It is an amazing multi-use park that needs to remain accessible to all. I wear bells on my bikes and always yield to others on the trails and have had no issues with walkers, runners, etc. I've found people to be very hospitable, especially when bikers are careful and thoughtful like most are. As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come. Kind regards, David Johnson	David Johnson
6/13/2022	To whom it may concern, As a local resident and frequent user of the Waterdog open space, I strongly support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all the trails should continue to be available for hikers, dog walkers, and cyclists to enjoy equally. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exception that I am opposed to any trail closures and to the single-use designation of two trails in the open space. All the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users. Thanks, Chris Strahorn	Chris Stranhorn

6/14/2022	Dear Belmont Parks and Recreation, and City Council, I know you're in the planning stages of the open space master plan for Belmont Parks and recreation for the next 15 years, and as an avid mountain biker in the community I appreciate the opportunity to share my feedback. My name is Reid Brozek. I'm a 17 year-old mountain biker, and live 3 miles from Waterdog Lake Park. I have been riding at Waterdog for over 5 years, on average about 2 times per week. My first experiences at Waterdog was when I was completely new to the sport at around age 13. One day when my friends and I were at Waterdog trying to learn skills on the trails. One day around this time, three mountain bikers came down the trail. They were members of the Woodside Beasts, a local mountain biking team. The coach, Jarrod Ristow, made a friendly introduction and let us know about the team. I later joined, and so much of my positive mountain biking experiences and beyond have come from my development with the Beast organization, including the team practices at Waterdog Lake Park. Throughout my years with the Woodside Beasts, I have learned many aspects of trail riding etiquette that I follow and role model at Waterdog. These include being respectful to people passing by, letting our group know when we pass a group of hikers or fellow bikers by saying "hiker" or "rider" up, giving the right of way to people going up the trail, and pulling off to the side when there are larger groups of people. In addition, as part of the Woodside Beasts, the team organizes trail maintenance days at Waterdog, where we go out and clear the trail of debris including litter and we repair hazardous sections of the trail. These volunteer efforts improve the riding experience at Waterdog Lake Park for all riders, and also provide fun bonding time for the team, and instill a sense of pride in our sport. Some of the best aspects of riding at Waterdog are the short climbs, the technical sections on trails like Rambler, and how Waterdog is a multi-use space. But the very best thing about Waterdog is its location, because it is the only place with this size and type of terrain on the mid peninsula. I urge the City of Belmont, when considering their Open Space Master Plan, to preserve all existing trails at Waterdog and restore trails that have been recently blocked. The second issue I want to raise is the development of a pump track. In the Draft Recommendations for the Open Space Master Plan, the addition of a pump track was among the top amenities requested by the community. Currently, the closest pump track is in San Jose. A pump track in Belmont would have supported the development of my biking skills as a new rider, and I would still enjoy it today as an experienced rider. I want to advocate for younger riders in my community to give them opportunities when I was starting out. A pump track in Belmont would provide opportunities for people to get outside and be more active. Sincerely, Reid Brozek	Reid Brozek

6/15/2022	Hello, I am writing in support of multi-use recreation on the trails at the Waterdog open space. The trail system was built, and continues to be maintained, by the entire community. All trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. The singular group that is trying to change and remove access to the park for a much broader segment of multiple user groups is a niche segment of the community that does not represent the actual diverse population of Belmont and the broader population that enjoys Waterdog. Please keep this in mind when making a decision that could potentially prevent children, adults and families from enjoying this park as they have been, for generations to come. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come. Thanks, Justin Carr	Justin Carr
6/15/2022	Dear Belmont City Council, As a local who was raised in Belmont (Fox Elementary, Ralston Middle School, Carlmont High School), a current local resident in neighboring San Carlos and as a lifetime time user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. I was first introduced to Waterdog open space by my parents in the mid-1970s as we would enjoy weekly family hikes. As I grew older, I started riding the Waterdog trails and have enjoyed them for over 30 years! I am now a father and enjoy the same hiking and riding with my own family that I grew to love over the years. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been for as long as I can remember! I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come. Regards, Matt Herman	Matt Herman

6/17/2022	Hello Belmont/Waterdog decision-makers, Please retain multi-use trails at Waterdog. I have ridden my mountain bike at Waterdog for years. It is truly a great park to ride and wouldn't want it to change in any way, if possible. I know that mountain biking has become more popular in recent years and amidst the pandemic, and this has brought new users to the park, and possibly some riff-raff. Here is the copy/paste version: As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. 7/1/2022	Dear Commissioners and Councilmembers, An article in the San Francisco Chronicle (Electric bicycle ban on trails staying put--Per report, e-bikes could impact safety and environment) was brought to my attention today. I have copied some pertinent information regarding this decision, which I think is relevant to the Waterdog Open Space here in Belmont. Yes—some regions have opened up trails to e-bikes, but I think there is a big difference between recreational areas or parks, which have the primary purpose of recreation, and nature preserves with a primary purpose of preserving the natural environment. Below are quotes taken from the article. I added italics to emphasize the last statement. “Midpeninsula Regional Open Space District voted to uphold its ban on e-bikes on the majority of its trails.” “Observing that e-bike use has exploded in the region, the district undertook a thorough two-year policy review that looked at the potential impacts of allowing e-bikes on its nature preserves. In an exhaustive report, the authors assessed noise impacts to nearby bat populations, potentially excessive uphill speeds, fire risk, soil impacts, and the potential for conflicts among e-bikers and other visitors.” “The four directors who voted to keep the ban largely in place noted that Midpen’s mission is to balance healthy natural ecosystems with agricultural and recreational uses and view its preserves as distinct from parklands in that way.” “‘What I want to emphasize is our job is to properly care for nature preserves, and it’s a very different approach required by agencies that are managing parks,” said Midpen Director Curt Riffle. “I’ve concluded that I just cannot support allowing motorized or motor-assisted bicycles into our preserves.’ Director Karen Holman echoed that rationale, describing possible unknown negative impacts to wildlife wrought by e-bike riders who might venture down Midpen trails farther and faster than mountain bikers.” “Overall, directors expressed trepidation about a lack of scientific research on e-bike impacts in natural areas. ‘One consideration … is that based on our past history, once a use is allowed in an area, it becomes more difficult to restrict that use if we find that negative impacts are indeed occurring,’ said Midpen General Manager Ana María Ruiz.” This last point is critical to consider in the implementation of a pilot policy, as suggested on page xvi of the draft Open Space Master Plan. Also, it is apparent to me that opening up trails to e-bikes is not required to adhere to ADA regulations, given that the Midpeninsula Regional Open Space District voted to uphold its ban. Thank you for your careful consideration of this issue as you move forward. Regards, Connie Tettenborn	Connie Tettenborn

7/3/2022	Hi Brigitte, I want to call your attention to three significant errors on the PROS Drafts released June 28, 2022. These are not differences of opinion, but factual errors. I respectfully request these errors be corrected prior to submission of the drafts to City Council, and that these corrections be conveyed to the Commission in the July 6 discussion on the topic. I would greatly appreciate an e-mail acknowledgement of receipt of this notice, and confirmation that the errors will be corrected. Thank you, Kristin Mercer Unauthorized Trails incorrectly identified as authorized (WRA Draft Final Open Space, pg. 6 and 20) On the WRA trail maps, six illegal trails are mis-labeled as authorized (solid black line). As you can see on the most recent City trail map below, these trails are NOT authorized and were not approved by the City for good reasons: Ralston School – poses a security risk to students, was steep and badly eroded. This trail was closed by City actions in 2021. Berry shortcut to Brooks – dangerously steep, redundant because it connects two trails that intersect just a few yards to the east. Chaparral to Brooks at Highlands Court – redundant because it connects two trails that intersect at the Somerset entrance, dangerously steep and eroded, bisecting chaparral habitat. Elevator down to Chaparral – dangerously steep and eroded 2 ft ditch, causing widening yearly, bisecting chaparral habitat. From Ohlone to Ohlone – redundant, dangerous slope and cross slope with trail width less than 1 foot, undermined roots and killed two previously healthy oaks, bisecting sensitive oak and fern forest and introducing invasive species. Hastings Drive to Upper Creek – redundant, dangerously steep, highly eroded and widened beyond 10 feet. Many of these trails were identified by residents in 2020 when the City was asked, and promised, to close them. Ralston trail was closed at that time. Ohlone appeared in 2020-21. Hastings has been closed or not-used for many years. Taken together these mistakenly mapped trails add to about a mile. On top of these we have the 1.5 miles of illegal trails in the Brooks Preserve (not shown here). All totaled, illegal trails account for an added ~20% more trail miles than the City acknowledges. None of these trails have trail signage because the 2020 Trail Signage Committee acknowledged that these are NOT official trails. Illegal trails are a significant management issue that is totally omitted from the WRA assessment and recommendations, and should be documented as an area of focus. There is no justification for sanctioning these dangerous, redundant, unsustainable, unplanned and illegally created trails. Please revise the WRA maps to remove these trails. And again, please take action to close these illegal trails. E-bike policy -MidPen Open Space does not permit e-bikes (WRA Draft Final Open Space, pg.43) The WRA Draft Open Space Management Plan implies, on pg 43, that MidPen is poised to permit e-bikes on trails. In fact, at their June 29 meeting the MidPen board voted to ban e-bikes from narrow natural surface trails. This decision was based on an exhaustive study of impacts and policies of other open space stewardship agencies. It is thus reflective of the emerging “best practices” in light of the rapidly evolving e-technologies and growing use impacts from bike activity. The WRA draft needs to convey this recent ruling and correctly assess this emerging policy trend in order to avoid misleading Belmont decisionmakers. Pg 43. “More recently, the Midpeninsula Regional Open Space District (District) -which does not allow e-bikes on trails - commissioned a set of studies to investigate visitor perceptions and ecological impacts of e-bikes. A report on these studies to the Board of Directors submitted in March, 2022 included a recommendation that e-bikes be allowed wherever bikes were allowed (Midpeninsula Regional Open Space District, 2022), however, the matter remains under consideration by the District at the time of this report writing.” Attached is a recent Chronicle news article on the ruling, and you can also view the MidPen meeting online to verify this report (minutes not yet published). https://www.openspace.org/about-us/meetings/bod-20220629	Kristin Mercer

7/3/2022 (con't)	Errors on Figure ES-3 Park Access Radii Map (Gates Belmont PROS Plan Final Draft, pg.xi) The Park Access Radii map on the PROS PLAN FINAL page xi incorrectly identifies six Neighborhood Parks as Community Parks (shaded teal instead of green). Park typology does not change on account of access radii. Despite the fact that these parks serve a larger neighborhood, they are still neighborhood parks, not intended to provide amenities to serve the entire community. Misrepresenting the type classifications will lead to decisions adversely impacting those neighborhoods and overburdening the area. Please change the key-colors of the following parks to indicate they are Neighborhood parks (green), not Community parks (teal). The KEY for this graphic lacks the Community Park (orange dot) identifier. The Undeveloped parks (blue dot on the KEY) do not appear on the map.	Kristin Mercer
7/3/2022	Dear Brigitte, Park and Rec, City Council and PROS, As reported in WRA's final draft Open Space Management Plan (OSMP) the majority of visitors to open spaces seek nature: "exercising, communing with nature and experiencing peace and quiet" was cited in the 2021 Belmont survey as the leading purpose of visiting the Open Space. "walking, hiking and running while a much smaller proportion reported biking" was also the response to a survey of visitors to San Mateo County parks. Yet in Belmont's Waterdog, these purposes have been totally reversed with biking now the predominant activity, preventing residents and others from walking, hiking and running in peace and quiet, and communing with nature. The PROS guiding principles call for equity and inclusiveness, but currently the majority of residents are denied equitable access and inclusion; they don't feel welcome and safe and don't feel that their health and well being are advanced. Bikers have argued that pedestrians are equally welcome to use the narrow trails and insist they are inclusive, but this argument is disingenuous because bikes on trails meant for hiking are forcing foot traffic out of Waterdog. We have an exclusionary, regional bike-dominated destination. By creating dangers to pedestrians with competitive speeding up to 30 mph on the curves of narrow trails; seeking ever steeper slopes and jumps for excitement, and building berms around narrow curves for enhanced speed they have scared away neighbors with small children, driven away avid senior hikers and created an environment of fear of walking in Waterdog. And this exodus is being encouraged by a San Mateo bike leader's audacious public comments telling Belmont residents to go take a hike elsewhere other than Waterdog (click video link). https://mega.nz/file/asxDTBDK#bwOhYtyDj9uiPYbQBl3vpGMY27wOLjz03N4zNUXw1LU Let's be honest; no amount of "trail calming features" (bells, greetings, flat landings, slower speeds, reminder signs) will be enforceable and none of them will improve biker/hiker compatibility. Hikers walking at 1-5 mph seeking peace and quiet cannot compete with speeding 2- wheel machinery traveling up to 30 mph, whizzing past within inches on a 3-foot wide trail. This is neither safe nor conducive to either user group attempting to enjoy Waterdog, and is an accident waiting to happen. The compromise solution is to make the 5 following narrow trails - Lake Loop, Berry, Chaparral, Canyon Creek and Ohlone - off limits to bikes while all other authorized trails can be used by bikers (8 trails). All 5 of these narrow trails designated by the 1999 City Council for hiking only, are very steep or winding, have blind curves and few safe passing zones. Many slippery areas need staircases to make them safe for pedestrians, and stairs are not compatible with bikes. ALL trails can be open to all visitors on foot – without allowing access by machinery. Designate these 5 trails off limits to bikes and build safety staircases where necessary to enable the majority of park visitors who are now displaced from our trails. As you finalize your recommendations to City Council for approval, please keep in mind your guiding principles for the majority of users. Waterdog needs separate trails for separate users because peace and quiet, communing with nature and most importantly, pedestrian safety are just not compatible with speeding bikes. Don't let Belmont's Waterdog continue to be known as one of the only 2 local open spaces that allow bikes on every single trail; forcing hikers to go elsewhere, because such a City policy is truly neither equitable nor inclusive at all. Jennifer Lien	Jennifer Lien

7/5/2022	Dear Park Commissioners, I certainly know that the last two years spent reviewing the alternatives on the WD Open Space has been challenging and yet very worthwhile. As I have been an PROS Plan Advisory Committee member, it has also been enlightening and challenging. As I have noted previously, my wife and I hike the trails 200+ days a year and have done so for many years. Over the last two years, many more bikers have biked the trails. Through social media sites, the WD trails are featured as a great place for mountain bikers to come from all over the Bay Area. Unfortunately, many come to race and if not race, they still make it extremely unsafe for hikers and walkers. Now many walkers and hikers fear for their safety due to the bikers. In fact, many nearby residents to my home have personally told me they no longer walk or hike there due to the unsafe conditions. These include families with small children. Many of the trails have blind curves and steep hills which lead to these unsafe conditions. In addition, many of these trails are only 24”-30” wide. A walker and biker cannot safely pass one another without one party jumping off the trail. I would like to make the following request on behalf of myself and all residents of Belmont: Please make the following trails for hikers only: 1. Lake Loop 2. Berry 3. Chaparral 4. Canyon Creek 5. Ohlone This is only 5 trails. All other trails can be multi use. This gives everyone the satisfaction of enjoying what they want to do. The five trails mentioned above can be controlled with gates, turnstiles, stairs or other devices that would prohibit bikes from entering the hiking trails. As the WRA consultants state in the study, most visitors to the WD area want exercise but with peace and quiet. In addition, I strongly request that E bikes be prohibited from the trails. Even class 1 E bikes can go 20 MPH. These E bikes weigh 45-50 lbs. and if they hit someone going 20 MPH, that person will be severely injured. As I hope you are aware, the Mid Peninsula Regional Open Space District Board of Directors spent 2 years studying this matter and decided AGAINST allowing E bikes. They cited the noise factors, excessive speed, soil erosion, fire impacts and conflicts with other trail users(I.e.hikers). Please make this same decision for the WD Open Space. I hope you will consider these requests for the many walkers and hikers who want to use the beautiful open space in Belmont. Thank you. Bob Stahl	Bob Stahl
7/5/2022	Please find the article in San Francisco Chronicle on the Mid Peninsula Open Space Board’s decision on E bikes. Thank you.	Bob Stahl
7/5/2022	Brigitte and P&R Commission, I just recently learned that the PROS Plan Final Draft has been issued. At the beginning of this process, you repeatedly stated that you would keep interested parties abreast of developments in this process. I signed up for the PROS email list and to date this PROS Plan Final Draft has not been disclosed to the public who specifically submitted comments and signed up for PROS updates. I request that all interested parties be notified of the City’s release of the PROS Plan Final Draft and be given sufficient time to review the new document in order to provide meaningful comments. The issuance of such a final draft without adequate public comment time is not in conformance with best practices for public involvement. I only learned over the 4th of July weekend of this issuance of the PROS Plan Final Draft and understand was only made public on July 1, 2022. The 4th of July weekend is clearly not sufficient time for members of the public to provide meaningful comments. As a part of your and the Belmont P&R Commission’s commitment to transparency and keeping the public informed of this PROS process, I request notification be sent to all interested parties and to be given sufficient time to review the document. Thank you for your attention to this issue, Deniz Bolbol	Deniz Bolbol

7/5/2022	Cannot access plan. Requires app or creating an account on gates website. Why ?	Dirk Flote
7/5/2022	The major harm that mountain biking does is that it greatly extends the human footprint (distance that one can travel) in wildlife habitat. E-bikes multiply that footprint even more. Neither should be allowed on any unpaved trail. Wildlife, if they are to survive, MUST receive top priority! What were you thinking??? Mountain biking and trail-building destroy wildlife habitat! Mountain biking is environmentally, socially, and medically destructive! There is no good reason to allow bicycles on any unpaved trail! Bicycles should not be allowed in any natural area. They are inanimate objects and have no rights. There is also no right to mountain bike. That was settled in federal court in 1996: https://mjvande.info/mtb10.htm . It's dishonest of mountain bikers to say that they don't have access to trails closed to bikes. They have EXACTLY the same access as everyone else -- ON FOOT! Why isn't that good enough for mountain bikers? They are all capable of walking.... A favorite myth of mountain bikers is that mountain biking is no more harmful to wildlife, people, and the environment than hiking, and that science supports that view. Of course, it's not true. To settle the matter once and for all, I read all of the research they cited, and wrote a review of the research on mountain biking impacts (see https://mjvande.info/scb7.htm). I found that of the seven studies they cited, (1) all were written by mountain bikers, and (2) in every case, the authors misinterpreted their own data, in order to come to the conclusion that they favored. They also studiously avoided mentioning another scientific study (Wisdom et al) which did not favor mountain biking, and came to the opposite conclusions. Mountain bikers also love to build new trails - legally or illegally. Of course, trail-building destroys wildlife habitat - not just in the trail bed, but in a wide swath to both sides of the trail! E.g. grizzlies can hear a human from one mile away, and smell us from 5 miles away. Thus, a 10-mile trail represents 100 square miles of destroyed or degraded habitat, that animals are inhibited from using. Mountain biking, trail building, and trail maintenance all increase the number of people in the park, thereby preventing the animals' full use of their habitat. See https://mjvande.info/scb9.htm for details. Mountain biking accelerates erosion, creates V-shaped ruts, kills small animals and plants on and next to the trail, drives wildlife and other trail users out of the area, and, worst of all, teaches kids that the rough treatment of nature is okay (it's NOT!). What's good about THAT? To see exactly what harm mountain biking does to the land, watch this 5-minute video: http://vimeo.com/48784297. In addition to all of this, it is extremely dangerous: https://mjvande.info/mtb_dangerous.htm . The latest craze among mountain bikers is the creation of "pump tracks" (bike parks). They are alleged to teach bicycling skills, but what they actually teach are "skills" (skidding, jumping ("getting air"), racing, etc.) that are appropriate nowhere! If you believe that these "skills" won't be practiced throughout the rest of the park and in all other parks, I have a bridge I'd like to sell you! ... For more information: https://mjvande.info/mtbfaq.htm . The common thread among those who want more recreation in our parks is total ignorance about and disinterest in the wildlife whose homes these parks are. Yes, if humans are the only beings that matter, it is simply a conflict among humans (but even then, allowing bikes on trails harms the MAJORITY of park users -- hikers and equestrians -- who can no longer safely and peacefully enjoy their parks). The parks aren't gymnasiums or racetracks or even human playgrounds. They are WILDLIFE HABITAT, which is precisely why they are attractive to humans. Activities such as mountain biking, that destroy habitat, violate the charter of the parks. Even kayaking and rafting, which give humans access to the entirety of a water body, prevent the wildlife that live there from making full use of their habitat, and should not be allowed. Of course those who think that only humans matter won't understand what I am talking about -- an indication of the sad state of our culture and educational system.	Mike Vandeman

7/5/2022	Hello Kelly and Brigette, At the last minute, I'm offering a summary of my (scattered) thoughts regarding the Belmont PROS Plan. You both have invested a tremendous amount to time and energy shepherding this endeavor and I am so grateful to live in Belmont because of efforts such as yours. I believe my primary input to the panel was to be slanted towards our OSP which is fine since I hike in San Juan Canyon, Waterdog and or Hidden Canyon on a weekly basis; twenty plus years ago you would find me on my bike. To that end, my opinions are both as a biker and hiker, as well as a mother to an avid cyclist. Belmont enjoys the unique situation of having access to bike bridges spanning both 101 and 280 - I am not aware of another City on the Peninsula which has that feature. Add to that our wonderful open space for mountain biking, the presence of Belmont Bike shop, plus easy access to restaurants and shops along Ralston Avenue, and we have a city that should be a cyclist's destination. Perhaps the City could officially declare that we are bike-friendly in both access and safety. Bike-friendly does not mean that mountain bikers can rule the trails. I think the our OSP should be viewed for mellow, after-work or -school rides and a place to learn safe skills. This can be communicated via social media on various biking websites with the emphasis that our OSP is not where you bomb down the trail, but where you share it with flora, fauna and those not on bikes. I believe this message may be being shared already. I would ask that the City keep an open mind to reviewing the trail system to add an additional trail or two in an effort to better connect the OSP and, more importantly, to spread out the trail users. A thoughtfully placed and designed trail can ease over-use of an area, enhance enjoyment and potentially decrease any user conflict. For instance, there could be benefit to connecting Lake Road with Hidden Canyon via a trail towards Elevator. I was very pleasantly surprised that the WRA assessments found that our OSP is in good shape, especially considering the amount of use. I have personally seen the results of various volunteers clearing non-native brush and decommissioning unauthorized trails/shortcuts. The land looks better. Addressing the erosion on trails will further enhance the robustness of the system. The water crossing have always been a concern since I realize the importance of keep feet and wheels out of water as much as possible. Unfortunately, these water crossings that do not have a good overpass are mostly on unauthorized trails in both Waterdog and San Juan Canyon. To address the water crossing, the City of Belmont needs to decide whether to recognize the two Waterdog trails that are currently unauthorized, but appeared in a decades earlier City document, as well as the trails in San Juan. I realize this puts the City in a bit of a sticky wicket since I have no doubt some type of action will be instigated by a few anti-bike activists. However, the City needs to make the decision so we can move forward on management of our open space. That is what I have felt all along in this PROS process, the City needs to make the decision on what trails will be authorized. Only then can we move forward to safe guarding our open space. I am guarded on designating trails for a certain user group; instead I wold rather see all trails be able to handle all users. Thank you for allowing me to participate. I so wish we could have met in person as Zoom can be such a barrier to seeking common ground, but nevertheless I appreciate the opportunity to join the process. Best wishes for the Summer to you both. Sincerely, Lynn Bell	Lynn Bell
7/6/2022	I long ago signed up with PROS to be on the email list to receive updated information on PROS actions but don't seem to be receiving any updates but do get the City manager's updates. I definitely did not receive the final draft plan report that PROS Advisory and other residents received yesterday. Luckily, I am able to navigate the City website and found the draft plan myself beforehand but just wanted to let you know that there appears to be a glitch regarding communication of PROS actions to residents that signed up. Although we are almost at the end of the process, I want to make sure that I am on the email list to get all communications regarding the OSMP from here on please. Thank you for your attention to this matter. Jennifer Lien	Jennifer Lien

7/6/2022	July 6, 2022 Director Brigitte Shearer and Commissioners Belmont Department of Parks and Recreation 30 Twin Pines Lane Belmont, CA 94002 The recently released Belmont Draft Open Space Management Plan June 2022, submitted by WRA Inc. contains a statement about the Midpeninsula Regional Open Space District (MidPen) e-bike policy that requires correction: Pg 43. "More recently, the Midpeninsula Regional Open Space District (District) -which does not allow e-bikes on trails - commissioned a set of studies to investigate visitor perceptions and ecological impacts of e-bikes. A report on these studies to the Board of Directors submitted in March, 2022 included a recommendation that e-bikes be allowed wherever bikes were allowed (Midpeninsula Regional Open Space District, 2022), however, the matter remains under consideration by the District at the time of this report writing." At their June 29, 2022 meeting, the MidPen Board of Directors voted to uphold its ban on e-bikes on the great majority of its trails. They did approve class 1 and 2 e-bike access on 6.5 miles of improved (paved or wide hardened) trails in Rancho San Antonio Preserve in Cupertino and Ravenswood Preserve (Bay Trail) in East Palo Alto. This policy conforms with that of other open space entities that allow bikes in general only on paved roads and former ranch and logging roads. Please find our full comment letter attached. We appreciate the opportunity to submit comments on this Draft Open Space Management Plan, and hope that Belmont will continue notifying the community to enhance stewardship with the goals of preserving habitat, species, and equitable access. Sincerely, Gladwyn d'Souza Conservation Committee Chair Loma Prieta Chapter Sierra Club Cc: James Eggers Executive Director Loma Prieta Chapter Sierra Club Mike Ferreira Executive Committee Member Political Chair, Coastal Issues Chair Loma Prieta Chapter Sierra Club sent by: Barbara Kelsey she/her/hers Chapter Coordinator Sierra Club, Loma Prieta Chapter	Barbara Kelley
7/6/2022	FOR THE RECORD: Attached is a document that was included in the California Fish and Wildlife Journal-Recreation Special Issue 2020. This same issue included an article co-written by John Baas from WRA. The attached article, written by Elizabeth Lucas, concludes that the default scientific position is that recreational trails fragment habitat and have a negative impact on wildlife, and the more trail density the more negative impact. Just the opposite of what WRA concluded in its Final Draft of Belmont's OSMP, p. 46.	Pat Cuviello
7/8/2022	Dear City Council, The Open Space Element of the PROS plan has not received the transparent and public review that the Developed Parks section received. The PROS Park Specific process was discussed and revised over 2 years, whereas the Open Space draft was only released in June, and never fully reviewed. The Commission should have recommended only the Parks section and continued public discussion of Open Space policies at their July 6 meeting.	Jennifer Lien

DATE	COMMENT	COMMENTER
7/8/2022 (con't)	The PROS Open Space process officially started on March 5, 2022 with WRA initial recommendations, lacking the promised trail assessment. The report was vague and incomplete, and thus the committee deferred discussion. On 5/27 that WRA assessment was published – 2 days before the 5/31 PROS meeting, allowing no time for the committee to read or absorb the content. The OSMP final draft (136 pages) was not published until the day before this July 4th holiday weekend, and readers are now discovering serious oversights and missing key elements necessary for a basic framework for a Master Plan. I could see that the P&R Commissioners were struggling to make an approval decision just a day after receiving the "final" drafts totaling approx 300 pages. They openly expressed concerns, but felt pressed to act in order to meet your July 12 City Council meeting deadline. Under pressure to make a decision the Commissioners reluctantly approved the entire plan and at the last minute resorted to narrating multiple amendments to the Open Space element on the fly before recommending this inaccurate and incomplete document to you. The Open Space process was crammed into a 6 week period while the Park Specific process had over 2 years; neither equitable nor transparent and the result is half baked. Serious issues in the Open Space that need to be addressed now are being swept under the rug in this OSMP. I reexamined the current 1992 MP Open Space policy (Section VIII) to make some comparisons to this Open Space policy in the new OSMP. Ironically, the 1992 Open Space plan has more concrete policies and direction than the new plan. Two core issues that need to be addressed now are being kicked down the road as "future amendment projects". Trail Use and Design Guidelines: The 1992 Open Space plan (pg 45) established clear policy guidelines with definitions of multi-use and single-use trails. The City has failed to enforce these policies for two decades, and as a result this issue is at the core of all current conflicts. Instead of addressing this issue head on, as promised to residents at the outset of the plan process, this draft dodges the issue, and leaves the city without any clear trail use policy. The 1992 Master Plan designated 7 single-use trails for hikers only; why won't the P&R just designate 5 of these trails off limits to bikes so pedestrians can be safe? These 5 narrow trails (Lake Loop, Berry, Chaparral, Canyon Creek and Ohlone) are the most narrow, winding, lacking line of sight, steep, and deep in the valley which make them the most dangerous for hikers and bikers to share. Why are our P&R commissioners willing to believe bikers over hikers? Safety is a key objective of the plan, yet here it is totally ignored, as new Commissioner Simpson stated. Continuing to allow all trails to be multi-use is increasing serious safety issues and liabilities the City can least afford. With increasing bikers from all over the Bay area descending on Waterdog for competitive speeding/entertainment, biker/hiker accidents are going to increase, as indicated by last night's public comments and my previous video emailed to you. This very core issue is dividing our community; families, seniors and residents now avoid walking Waterdog, and instead drive elsewhere. In public statements, the bike-volunteer organizer even had the audacity to tell residents to go hike elsewhere! This policy needs to be addressed and established in this document now, not as a future amendment project. Illegal Trails: This issue was not a concern in 1992, before the advent of mountain biking, but is a serious issue now. For decades bikers, in the name of volunteer trail maintenance, have built unauthorized, illegal trails beyond the official 13 trails listed on the City map. Illegal trails and shortcuts have added an estimated 20% more miles to the official approved trail system. In particular, in 2017, bikers illegally built their "Labor of Love" trail in the valley below Soho Circle, plus a trail bisecting the Brooks Preserve protected marsh habitat. Bikers repeatedly claim they are justified in riding every Waterdog trail because they volunteer to do trail maintenance. Volunteers should not be getting special benefits and immunity from vandalism laws as payback because of their efforts. Do we sanction graffiti vandalism because of the effort put into it by the artist? This draft proposes to establish a policy of sanctioning illegally created trails without consideration of trail safety standards, environmental impact compliance, or public process, a completely irresponsible policy. Back in June of 2020, Brigitte stated that illegal trails like this one behind Soho Circle would be addressed in the new Master Plan. It has not, and it is a core issue that needs to be addressed now, not as a future project. Frankly, these two issues have been concerns for decades and never properly addressed. With the opportunity to approve a new 15 year Open Space Management Plan, now is the time is to address these serious issues instead of kicking the cans further down the road. Jennifer Lien Belmont	Jennifer Lien

DATE	COMMENT	COMMENTER
7/11/2022	Dear Belmont City Council members I am writing to you to comment on the Belmont Open Space Master Plan. All of the background information looks good but I agree the policies are too soft. For example just the first two: P1 - Limit trail construction, and facility development in riparian and other wetland areas. What does limit mean? How many trails and facilities do you consider limited? From what the consultant said in their comments I thought you would want to prohibit new trails in these areas. P2 - Monitor open space conditions with an emphasis on documenting the location, distribution, and abundance of special-status plants and plant communities, native grasses, wildflowers, and other native flora. What would you do after you monitor it? This doesn't tell us what to do with it – or not do with it – when it's identified, or measured, or whatever this is instructing us to do. Most of the policies are very vague and easily interpreted any way you want. For all the words written in this policy document, it really gives no guidance. I can imagine how it could easily be interpreted to support pretty much anything you want to do or build in the open space. So pretty quickly, staff and residents will be arguing over the definition of these terms and whether a project should be approved or not, depending on how they choose to interpret the words. Also, I don't know how you would measure if the plan was completed or was successful or not. A plan should have a list of actionable tasks that can be completed, or rules to be implemented and followed. I'm not sure this document will be of any use, and I agree with the commission that these policies need clarification. Respectfully, Frank Mercer	Frank Mercer
7/11/2022	Hi Belmont City Council, and Belmont Parks & Rec Department, Just wanted to send a quick note to you all before heading out of town for a couple of days. I'm writing in support of the Belmont PROS Plan and the process that got us here. It's been a long and comprehensive 18 month process and I support the conclusions for Waterdog open space, including maintaining all trails as multi-use, doing trail work to reduce erosion and protect the waterways within the park. It was great to meet Brigitte, the consultant team, Councilmember Lieberman, and others in person for the first time through all of this at the 'meet and greet' community engagement event back in June. I had a lengthy discussion with Brigitte about the whole process, and with the consulting team about their environmental backgrounds, and their approach to the process. I was impressed with how thoughtful and intelligent every discussion I had there was. I attended (virtually) the presentation of the plan to the Park & Recs Committee on July 6th and was dismayed to hear the same group of folks that have been so vocal about all that they don't like during the entirety of the last year and a half, complaining that the process was being rushed and somehow clandestine. They impugned the scientific approach of the consultants, and made several demonstrably incorrect assertions about environmental concerns, the process itself, and the goals and purposes of the Plan. In my view the process has been transparent, there have been several public meetings along the way, in which they all participated, as I heard them time after time. Thank you for your consideration, Joel Klein	Joel Klein
7/11/2022	Hi, We are Belmont homeowners and residents near the Waterdog Open Space, as well as frequent users of the Open Space. We support keeping Waterdog Open Space an accessible and sustainable place for outdoor recreation, but in a manner that is inclusive, suitable, and safe for ALL users. 1. We believe the proposed Open Space Management Plan does not adequately evaluate, plan for, or address the major issues with multi-use in the Open Space and how Belmont will manage it. We found the plan to be lacking in this area and ask for revisions to properly address some of the points below.	Alan Tsai

EMAILS RECEIVED: INFO@BELMONTPROSPLAN.COM

DATE	COMMENT	COMMENTER
7/11/2022 (con't)	2. We also believe there has not been sufficient time for Belmont residents to review the details of the extensive doc before it is finalized. We ask that the city's vote on this plan be postponed until there has been enough time for review and feedback -- very few have had the opportunity to digest the recently published doc with the actual plan details, after 18+ months of process and input from the community. Our personal experiences: The trails in the Open Space are mostly narrow and steep, single-track trails which are already difficult to share by nature -- combining with the continual increase in bikers and general high trail usage density has made it more and more difficult to fully enjoy the trails, especially as a frequent hiker/dog walker. Personally, we avoid hiking in the Open Space at many times (such as weekends and weekday evenings) since it is often not an enjoyable experience as a hiker given the bike traffic -- anecdotally this is a common theme and we expect many other hikers to have similar experiences. Despite generally pleasant and courteous interactions with bikers, we still end up having to actively avoid bikes or step off of narrow trails frequently, especially for groups of bikers. Unfortunately when conditions aren't suitable for multi-use, it's usually hikers who end up primarily excluded from safely and fully enjoying this outdoor resource. Our concerns with the current Open Space plan include the following: It does not include adequate evaluation on the safety, suitability, and practicality of the current shared-use trail structure throughout Waterdog. This should have been conducted on a per trail basis and evaluated against well-established best practices and standards on shared use. It does not address how Belmont plans to manage safe, multi-use trails, especially at its very high usage volumes. There is minimal detail provided on how to manage multi-use beyond reducing speed and best effort user education; the few points that are included are fairly generic. There is also no real mention or consideration for usage volume -- the plan suggests to "Measure recreation use in open spaces" but this does not seem like it was actually done, though it should be a critical input into the final plan and policies. It does not actually provide useful policy decisions or guidance on important points like single-use trails or e-bikes. Even the 1992 Open Space Master Plan provided more specific details in terms of trail guidelines (and it specifically designated multi-use as gravel 10-12' wide trails). It has a section on "Trail Design Features Specific to Mountain Bike Trails", pointing to Chapter 6 in the CA State Parks and Rec Trail Handbook. This chapter is specifically about designing "designated mountain bike trails", "specifically for cyclists" (quoted directly from the handbook), which should not be a primary consideration in designing our Open Space and shared use trails. Belmont's Open Space should not be focused on designing mountain bike trails, but rather continue to emphasize preserving open space as originally intended, while allowing and supporting multi-use and mountain biking where appropriate. The Open Space plan puts more detail into mountain bike trail design than actual guidelines on how multi-use should be effectively managed throughout to provide a safe and inclusive shared used open space. Overall, we found the proposed Open Space Management Plan to be very hand-wavy with inadequate detail on trail management and specific policy recommendations. It does not sufficiently address the concerns around multi-use voiced by many Belmont residents, and over-indexes on mountain bike trail design while not preserving the spirit of the original Open Space Master Plan and the goals of Belmont's Open Space. If the PROS plan is intended to guide our parks and open space for the next 15 years, we expect that it thoroughly addresses the major concerns and contains actual policies and guidance. As is, it feels like the city is rushing to adopt a long-term plan that is incomplete and missing critical evaluation/studies and details. Thanks, Alan and Shirley	Alan Tsai

DATE	COMMENT	COMMENTER
7/11/2022	Dear Belmont City Council, I live with my wife and three children (ages 10, 13, and 15) in the Cipriani neighborhood. When we moved to the city in 2005, we chose this city above others because of its natural beauty, abundant trees, great schools, and its multi-use open space trail system. Every day we are grateful to live in a city that had the vision to preserve the open space for our hikers, bikers, trail runners, and dog walkers to enjoy. Regularly we hike with our dog, and at other times we ride our mountain bikes throughout this trail system. We are a happier and healthier family, by virtue of this amazing resource. Over the past 18 months, I have been involved with the PROS plan effort as a community member, attending and speaking in favor of multi-use trails at several public meetings in this very transparent process. Many community members got involved when we learned that there was a small vocal minority looking to shut down trail use to mountain bikes, and potentially to other user groups as well. When the city conducted a high-quality survey, we learned that the vast majority of community members strongly wish to preserve our multi-use trail system access as is. We want to keep our trails open for everyone to enjoy, and this is reflected in the opening principles of the PROS plan – to promote inclusiveness and equity. I have been impressed with the Parks and Rec Commission, Parks and Rec Department, City Council, and our consultants Gates and Associates and WRA. Our city representatives have been very thorough and professional, even when verbally attacked by certain community members. The Parks and Rec Commission has now voted to support the current PROS plan. I have included a few of the points I found most interesting below: 1.) Both Waterdog and San Juan open space are in good environmental health (flora and fauna). 2.) Mountain bikes are not causing erosion or significant damage to the trails 3.) The open space trail system should be maintained as a multi-use trail system, based on community feedback and scientific evaluation by WRA. 4.) WRA did identify some issues with creek crossings, erosion, trail congestion, safety – and suggested that these can be mitigated by measures such as building appropriate bridges, fixing the trail lines of the old erosion-prone fire roads, providing calming features and pull outs for passing hikers and bikers. 5.) There may be opportunities to build additional trails to better serve our user groups and reduce potential congestion on the trails. I fully support the PROS plan that comes to Belmont City Council for review tomorrow, but wanted to address a couple of specific items in this letter: First, there is a question of whether or not to consider one or more trails as ‘hiker only’ or ‘biker only.’ Focusing on our PROS principles of inclusivity and equity, in a park that has long cherished its multi-use traditions, keeping the trails open to everyone seems to be the natural path forward. Trying to segregate certain user groups from certain trails is likely to lead to more user conflict in my opinion, not less. The current, simple, multi-use system is inclusive, equitable, and it is clearly working for the community. Lets not change this! Second, there is discussion about a pilot study for evaluating e-bikes on the trails. I support this study, because we don’t know enough yet about how e-bikes impact the park. I think it is likely that the study will show that e-bikes do no additional harm to the trails. At that point it really just becomes more of an aesthetic choice… Do we want these in the park? We’ll find out after some more evaluation and thought….. Lastly, certain members of the community complain that this process of developing the PROS plan was rushed, and non-transparent. They will complain bitterly that this was pushed through with insufficient time to review documents. But as you also know, the city elected to extend the process from a lengthy 12 months to an even lengthier 18 months specifically to accommodate more scientific study and to allow for a truly amazing amount of community outreach. It is clear to me, and many others, that the city has done a remarkable job on this extensive, transparent and scientific PROS plan. Delaying a vote in order to continue the debate will not provide additional gains in terms of further knowledge, but it will detract from much needed efforts elsewhere in the city. Thank you for your time in reading my lengthy letter! But more than that, thank you for your dedication to our city and our community. Sincerely, Thaddeus Block	Thaddeus Block

7/11/2022	Dear City Council, I wanted to offer some comments about item 9A on the agenda for tomorrow's meeting (Review and Adoption of the Parks, Recreation, and Open Space Master Plan). I'm sure you're receiving a lot of feedback so I wanted to briefly (for me) address some main points: 1. The staff recommendation to keep all trails multi-use, preserving the status quo, is the most reasonable path forward. The draft plan references looking into designating one unmapped trail cycling-only and one pedestrian-only, but otherwise does not recommend making any existing trails single-use. I'm well aware that a handful of people from Belmont Heights are demanding hiker-only trails. It might seem tempting to designate a few single-use trails as a compromise to a perceived conflict. However, designating single-use trails would represent a wholesale and radical change to the trail policies that have worked successfully for 30+ years. All of the trails in Waterdog have always been multi-use, and there's no compelling reason to segregate them now: The unbiased scientific study by the city's consultant (WRA) concluded that the existing recreational use (i.e. full multi-use) is not having a significant impact on the environment. So from an ecological perspective, there is no reason whatsoever to designate any trails single-use; Designating any single-use trails (whether pedestrian-only or cycling-only) fosters division and resentment in the trail user community; Belmont doesn't have a dedicated park ranger, so there's no practical way for the City enforce the rule; Unfortunately, we have a few angry individuals in our community who have been known to physically accost and confront cyclists on the trails. If a cyclist intentionally or unintentionally rides onto the wrong trail, a self-appointed vigilante enforcer may confront or assault him or her; Commissioner Michaels made an excellent point at the last P&R Committee meeting, to the effect of "we should allow as many people as possible to enjoy all of our trails," which is consistent with the PROS principles of providing equitable access to resources and activities across the entire city and promoting inclusion to people of all backgrounds; The federal Bureau of of Land Management has a publication, Guidelines for a Quality Trail Experience, that makes insightful points about shared multi-use trails: (1) "Sharing helps build a trail community. Visitors are encouraged to cooperate in order to preserve and protect a common resource, and encountering other types of users on a trail helps to establish mutual respect and inspire courtesy." (2) "Shared-use trails take better advantage of available space and trail mileage. Quite simply, they provide more trail for everyone to enjoy." There are no documented instances of a bicycle vs. pedestrian collision in over 30 years of multi-use. To the extent some individuals have safety concerns, those can be remedied by respite bulb-outs and trail calming features, which the consultant has already included in the plan. 2. The draft plan's e-bike policy - a pilot program - is sensible and should be implemented. The draft plan recommends a pilot policy allowing Class I (pedal-assisted) e-bikes on Waterdog's trails for at least one year to allow for further assessment. This is a rational and sensible way to deal with the relatively new phenomenon of e-bikes. The City is a small land manager and doesn't need to reinvent the wheel, The Midpeninsula Regional Open Space District (MROSD), which manages 65,000 acres of open space, is currently conducting e-bike studies and experimenting with e-bike policies The City can keep an eye on what MROSD is doing while simultaneously gathering its own data about how e-bike use is (or is not) affecting the Waterdog open space trails. After gathering enough data, the City can then get public input and make informed decisions, rather than kowtowing to people who are clamoring for an immediate ban without any justification. I don't think e-bikes should either be allowed in perpetuity or banned in perpetuity at this point - we don't have enough data to make an informed decision, so why not let the pilot program play out? Again, it may be tempting to implement a pat, "compromise" solution by limiting e-bikes to certain trails, but that will only result in limited and inconclusive data upon which to base future decisions for more permanent policies. 3. The PROS process was not rushed and there has been robust public input and consideration; there is no need to delay the decision.	Paul Sheng

7/11/2022 (con't)	I think the city has done an outstanding job of making this 18-month process transparent and inclusive. The City did online outreach, sent physical mailers, and created a dedicated PROS plan website with regular updates. There has been ample opportunity for public input through surveys, many public meetings, and the convening of a PROS committee. A group of activists paid for their own study with their own biologist, which was read and considered by the consultant. In addition to traditional public comment, members of the public were even given an opportunity for a back-and-forth dialogue with City staff and WRA at the open house event. The PROS committee included a vigorous anti-cycling activist, David Braunstein. Every person on every side of each issue had plenty of opportunity to have their voice heard. Some people may complain that the plan is comprehensive and the Parks & Rec Commission had less than a week to review it before their meeting. However, the P&R Commission was integrally involved in the plan from the beginning, and when the final draft was presented to them, it was not brand new information. Rather, it was the final refinement of a living document the Commission was intimately familiar with for many months. This process was robust and comprehensive. There is no need to drag it out for further study and debate; there are just a few individuals who don't like what the plan says, and they just want more time to tilt at windmills. The City has taken ample time to let this process play out, and there is no justification to kick the can down the road. The City has a lot of work to do - such as building a new community center - and it's high time to bring this comprehensive process to an end so the City can move on to other things that need attention. Thank you for considering my input. Sincerely, Paul Sheng	Paul Sheng
7/11/2022	Dear Council, I have been following the PROS process since it began in 2020, but I didn't even realize the Open Space section was published when I heard you are ready to vote to finalize it on Tuesday. I think the public needs more time to read and discuss these very important policies that will guide the future of our treasured Open Spaces. Please delay your vote and allow more discussion. I was promised by two Council Members and Director Shearer that this Plan would address the many illegal trails as well as the speeding bikes. I notified the city 2 years ago that someone – city officials will not admit who – carved over a mile of trail through the forest behind my home for a downhill bike racecourse. This area used to be pristine and sheltered forest – exactly as John Brooks was promised when he donated this land. We used to have deer, quail and bobcat that visited my yard; now they are all gone and I blame the bike traffic for making this habitat insecure for them. How can you excuse this vandalism and not even offer an explanation? I no longer walk in Waterdog – even though it's my own back yard – because of the bikes. They speed down hills and around curves and never yield. Hikers instinctively jump out of the way into the poison oak or mud because it's better than being struck by a bike traveling 20 miles an hour. Plus hundreds of wheels have eroded the trails so that the footing is dangerous – the ruts and slippery steep gravel slides make it too easy to twist an ankle or slip and fall. Many of my neighbors share similar feelings but since we don't hike there anymore our comments have been disregarded. We are still waiting for an answer from you about how you will manage this dangerous and damaging situation. Mimi Iversen	Mimi Iversen

7/11/2022	This is just a quick note to voice my support of the PROS plan ahead of the vote. While I know we'll hear from the loud, negative voices drummed up by Deniz Bolbol, Pat Cuviello, and Kristin Mercer (who've been trying to stir the pot as much as they can around this), I'm thrilled that cooler heads have prevailed. As part of Waterdog Open Space Stewards, I can tell you that the positive voices that have reached out through our channels has been tremendous, and we now have a few thousand people registered to show their support for multi-use access to Waterdog's trails. To hear the negative people tell it, this has been sprung upon them, when we know the truth: this process was extended many months to ensure that everyone had a chance to have their voices heard. And the voices have been heard: despite the narrative of the few who complain at every meeting, the trails are for everyone, and will continue to be under this plan. I want to thank the Parks & Rec Commission, the PROS members, Gates & Associates, and everyone else who has lived through this lengthy process. To the City Council: Please vote in favor of the plan so we can move forward with a clear vision for our open space. --Scott	Scott Hill
7/12/2022	I am writing to encourage you to FULLY ADOPT and APPROVE the Proposed Use and Management Plan for Waterdog Lake Park to include keeping the trails open to mountain bike access. I personally committed close to 500 hours of labor in the building and maintenance of those trails working alongside dozens of other cyclists. It would be a shame to allow a vocal small group who provided no labor and who do not use the park to shut out the group that helped develop the trail system. Please adopt the use and management plan and protect equal access to Waterdog Lake Park for cyclists, hikers, runner, and other trail users. Todd McGee	Todd McGee
7/12/2022	My understanding from many, many rides in Water Dog is that it was built, maintained, and improved by mountain bikers. It is a treasured trail offering technical riding so close to where we all live. I first learned to mountain bike at Water Dog when I lived nearby in Belmont. I was an avid member of the local mountain bike community, which shares a long history of community service and camaraderie. I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation, and am happy to see the science-based approach the city has taken with this plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed There has been an unfortunate history within the Bay Area of hikers/walkers taking aim at mountain biking as if we are the enemy. In my book, the more people we can get outdoors the better, and my love of mountain biking makes me a better trail steward and a better citizen. Please don't let the naysayers drown out the common sense approach that the city has created. We have successfully used the trail for multi-use for years, and we can continue to do so now. Thanks, Sandee Sheldon	Sandee Sheldon

7/12/2022	Good morning, I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation, and am happy to see the science-based approach the city has taken with this plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed It is important to keep the trails open to the current user groups. We moved to the Cipriani neighborhood for its access to the fantastic trails at Waterdog which we hike, ride and help maintain on a regular basis. Thank you, Jason Bromfield	Jason Bromfield
7/12/2022	Please keep Water Dog open to Mountain Bikes as well as all other users. The mountain bike community built the trail system and should not be shut out. Mike Prinvale	Mike Prinvale
7/12/2022	Hi Council members, I am a Belmont resident. I've heard that you are going to scrap the ban on e-bikes on the Waterdog trails. I think this is a dumb move. Please watch this short video on the website Singletracks. To be fair, these guys are more skilled than our local bikers, but the damages are the same. You must understand the damage this sport can do to the environment and eventual erosion to the trails. Plus, the speed these riders go on a trail is a hazard to others on the same trail. https://www.youtube.com/watch?v=0gt_iPMtPHM How To Ride Singletrack Faster | E-Mountain Bike Skills Sincerely, Frank M	Frank M.

7/12/2022	Hello, I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation, and am happy to see the science-based approach the city has taken with this plan. My family enjoys using Waterdog park as a multi-use space. We hike, walk or dog, ride bikes and enjoy Waterdog in so many ways today and do not want to have one of the few remaining true multi-use parks constricted in any way. For those that prefer hiking only there are many, many parks where they can practice that activity. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed Thank you, Rob	Rob Labatt
7/12/2022	Dear Council, I am a Belmont resident. Having only just been notified that the Open Space Draft is published I am shocked that you intend to vote to finalize it just a few days later. I think the public needs more time to read and consider these policies and what they mean for our open spaces. I ask you to delay the vote and answer public questions before rushing ahead. Residents of Hallmark were promised by two Council Members and Director Shearer that this Plan would address the many illegal trails as well as the speeding bikes. But I don't see any policy for that; in fact what I read sounds like status-quo, meaning anarchy on the trails and continued rogue trail making. Residents are increasingly aware of the importance of the natural habitat surrounding us, and setting a policy to intentionally disregard damages and trail safety sends a very regressive message – come visit the unregulated wild west of Belmont. This is why Hallmark drive is crowded with cars with bike racks every day of the week. This issue has been overlooked for a decade and the trend to more and more bikers will just make it worse. I urge you to reconsider the removal of all regulations, and do the hard work of setting and enforcing rules.	xsrider
7/12/2022	Hi Please adopt the open space plan in it's current form. Thanks Regards, Chris Ketner	Chris Ketner
7/12/2022	I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I am an avid hiker, biker, and outdoorsman. Waterdog is without a doubt a space that should be open to multiple forms of recreation. Hiking, biking, and dog walking should remain OPEN to the public. Waterdog is the only location on the peninsula that is close by and offers a multitude of activities. It is also one of the few places on the peninsula where bikes are allowed to ride on all trails. This space is crucial to the mental and physical wellbeing of the local community. Limiting access to this park would undoubtedly harm the community and limit those who use it daily. I strongly believe the new PROS management plan is exactly what the community needs, and the park should remain open to all forms of trail use. Thank you, Jeret Shuck	Jeret Shuck

7/12/2022	Dear Belmont City Council, I'm writing to affirm the Belmont PROS Management Plan in its current form. It's my humble opinion that the Belmont Parks and Recreation Department helmed by Brigitte Shearer has done a masterful job convening a democratic and efficient process to garner scientifically supported facts about the state of Belmont's Open Spaces. Moreover, Brigitte's team has provided ample opportunity for diverse voices to be heard and accounted for in the development, distribution, and certification of the Plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on safety, trail maintenance, and erosion control New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed Thank you, Eli Latimerlo	Eli Latimerlo
7/12/2022	As a long time user of Waterdog, I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation, and am happy to see the science-based approach the city has taken with this plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog s trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed Thank you, David Skinner	David Skinner
7/12/2022	Hi, I have for a long time enjoyed the Waterdog Open Space for recreation as mountain biker and walker. I have only had positive experiences over the years with other users and enjoying the many trails. I understand there is a vocal group that has a negative opinion on mountain bike access, wanting to restrict it to their own narrow vision of the space and robbing others of the opportunity to enjoy this community space. I disagree with this narrow view and plead that access remain open to all, which I understand the proposed plan does. Thank you for your efforts. Regards, Mark Lefebvre	Mark Lefebvre

7/12/2022	Hello I'm a resident of San Carlos, and I've been riding my mountain bike in Hidden Canyon for as long as I've lived in San Carlos – 17 years. I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation, and am happy to see the science-based approach the city has taken with this plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed Thank you. All the best Joe Paluska	Joe Paluska
7/12/2022	Hi, I am a long time supporter and user of waterdog park for running, biking, and hiking. It is a wonderful place for people to be active and outdoors. Changing the usage of Waterdog would be very detrimental to a large group of people and take away the benefit of young and old alike to get outside! I very much support the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation, and am happy to see the science-based approach the city has taken with this plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed Thank you, Dylan Howes	Dylan Howes

7/12/2022	As a decades-long trail user in Waterdog, I'm writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation, and am happy to see the science-based approach the city has taken with this plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed Thank you, Rich	Rich Schwerin
7/12/2022	Hello- I just wanted to drop you a short note to tell you that I enjoy recreating, specifically riding my mountain bike on singletrack trails in Waterdog Park. I strongly support the draft Parks, Rec and Open Space Management plan that would allow the STATUS QUO of CONTINUED MULTI-USE (including mountain bike) access to all trails including singletrack. I also support the conversion of unofficial legacy trails to officially sanctioned and supported multi-use trails. I enjoy the unique trails at Waterdog, and when I visit the park I also spend money in the local community. Thank you for your time. Frank Giraffe	Frank Giraffe
7/12/2022	Dear Parks and Recreation Commissioners and City Council, I'd like to offer my strong support for keeping the Waterdog Open Space an accessible and sustainable place for recreation, nature and building community. In the new Master Plan, I particularly support the following: Retain the existing (and unofficial legacy) trails for multi-use - hiking, biking, dog walking, exercise and connecting with nature Train and educate the trail users to ensure safe and sustainable use Maintain and preserve the trails in continued collaboration with community groups and volunteers to ensure our trails get healthier every year Improve Stream and Waterway crossings Add calming features to single track trails in order to decrease speeds while increasing the challenge for riders Expand the Open Space with new trails that make sense Open space recreation is so beneficial to Belmont locals - an oasis within silicon valley for stress reduction, exercise, revitalization, appreciation of nature, community pride, and quality of life improvement. Waterdog has served this public need for many years and can continue for many more with the support from me and many others like me. Please keep Waterdog multi-use and sustainable. Thank you, Neil	Neil R.

7/12/2022	Good day, As a 23+ year resident of Belmont and 20+ of them a mountain bike rider and trail steward in the Waterdog trail system, I want to support the PROS plan to continue the open space to be a multi use trail system. I would caution that making new trail rules on what you are not allowed to do within the open space would not be my recommendation until the current rules of what you are not allowed to do are enforced. There are obviously not enough resources to enforce the current rules (litter, e-bikes, off leash dogs, etc) so making new rules would be moot and essentially a waste. Water Dog Open Space is a fabulous resource and I applaud your efforts to maintain and improve the beautiful space! Regards, Steve Welter	Steve Welter
7/12/2022	As a next door neighbor to Belmont in the Laurelwood area, I'm a frequent user of Water Dog Lake Park. I'm writing in support of the plan. In particular I support the multi-use nature of the trails in Water Dog, having used them as a hiker and biker for the last decade. I think the e-bike policy is a step too far, but it's better than the NIMBY stuff happening from those who oppose it. Overall very much in support of the plan, the improvements, and the spirit of multi-use-trails. Thanks for your consideration. Chris Fox	Chris Fox
7/12/2022	Dear Belmont City Council, As a weekly user of Belmont's open space at Waterdog Lake and San Juan Canyon, I wanted to write to support the Parks, Recreation, and Open Space (PROS) Management Plan. The plan continues our community's support for multi-use trail recreation, as it should, and I'm happy to see the science-based approach employed by the city in the development of this plan. In addition to the designation of local trails as multi-use, I particularly appreciate the proposal of unofficial legacy trails to be officially recognized with new signage, and the potential for future new multi-use trails added to the open space. The proposed trail improvements and pilot program for Class 1 e-bikes is also appreciated. Thank you for continuing to keep open spaces open for many types of recreation! Sincerely, Rob Anagnoson	Rob Anagnoson
7/12/2022	[Body of three emails are blank with attachments]	Pat Cuviello
7/12/2022	I am a regular visitor to Waterdog Park and I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. 7/12/2022	Hello Belmont P&R Commission, I would like to voice my enthusiastic support for ratifying the proposed PROS Master Pan, particularly as it codifies multi-user access on the vast majority of trails. May hikers, bikers, dog walkers and all continue to learn to share the trails at Waterdog under the proposed plan! The level-headed and inclusive response of the council to various user groups has been consistently excellent. Belmont's leadership in providing equitable, thoughtful facilities to all user groups is a beacon on the Peninsula. I presently live in Portola Valley, where I now manage the town trail map and thus also receive vocal input from many shockingly hostile user groups. The fortitude the commission has regularly shown in seeking openness and community throughout this process has been profoundly refreshing. Similarly the openness and good vibes my children and I have consistently experienced on Waterdog trails, from a diverse body of users, are a local treasure to be maintained. I am pleased to see the official reports supporting those experiences with data! For our family, off-road cycling has been an ideal means to safely get my children off the couch and into the outdoors, while safely avoiding cars and traffic. Having access to mountain biking in a suburban setting on the Peninsula is a tremendous boon to the mid-Peninsula public, notably in San Mateo County as the county park system has largely marginalized the burgeoning cycling community. It is my sincere hope that trail access can be ratified and formalized for all, and that we can learn to embrace mutual community in the outdoors, rather than to seek the exclusion and division that some vocal minorities have been pushing for. May we all continue to safely have fun on trails together. I think the charter says it best: 4.4-4 Maintain and enhance trails in open spaces in Belmont. Continue to support opportunities for shared use of trails among multiple users, including pedestrians and mountain bicyclists. Promote knowledge, trail etiquette, and consideration of multiple users on trails through education programs and signage. Thank you for your consideration, your patience, and your fortitude. My best regards, Dave Evans	Dave Evans
7/12/2022	Hi there, I am writing today because I believe in accessible recreation for all, and strongly support the proposed Parks, Recreation, and Open Space (PROS) Management Plan. It is disappointing to hear that a vocal minority of community members could derail plans that would benefit the vast majority of residents of and visitors to the area. I am happy with the science behind the plan, and look forward to the community connections that multi-use trails create. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed Thank you, Katy	Katy Poniatowski

7/12/2022	Dear City Council, As Belmont is embarking upon a new Open Space Management Plan for the next 15 years, E-bikes is a topic brought up by WRA consultants for a Waterdog trial. Belmont has already done a couple of decades of unmonitored trials, resulting in resident hikers being driven away from Waterdog into the parks and open spaces of neighboring cities. E-bike, mountain bikes, and the biker culture are not compatible with the relaxed natural atmosphere expected by hikers. The Mid-Pen just banned E-bikes on natural surface trails and many surrounding Open Spaces ban E-bikes and mountain bikes from their natural trails. Do they know something we don't? What are the E-bikes doing in Waterdog? What 's going on in Waterdog? Please click the 2 videos below to appreciate what hikers have to confront while hiking in Waterdog. https://www.waterdogpreserve.org/ebike-speeding https://www.waterdogpreserve.org/what-is-going-on Best regards, Ken Lien	Ken Lien
7/12/2022	I support the Plan. I ride, run and hike Waterdog a couple of times a week, and i want to see the status quo for all those activities. Thank you, Mark Harnett	Mark Harnett
7/12/2022	I am writing today in concern for the proposed Parks, Recreation, and Open Space (PROS) Management Plan. While I support multi-use trail recreation, I have personally witnessed the increasing amount of trail decay and destruction from misuse of our irreplaceable Belmont preserve. Mountain biking is extremely fun, but the fragile clay soils are not ideal for the long term high volume use that we see today (especially since the advent of e-bikes which are in heavy use on the trails even today despite restrictions). This is especially true on our wetter days (as infrequent as they are these days), where I have observed frequent new-impact from what I must presume are novice mountain bikers who may not know better. So many embakements, corners, and trail edges have seen needless destruction from banking, carving and short-cutting to make them more exciting. Further, many of the steeper ascents are so deeply rutted from overuse that it will take years for these trails to begin to rehabilitate. That said, I am in favor of further recognition of many of the unofficial legacy trails to be incorporated into the official park plan for pedestrian access. I think efforts to improve erosion control and recovery will be greatly improved if we were to do even put a temporary suspension to MTB activity for a duration (maybe 5 years?). Finding a way to quantify that effort would be paramount to reconsidering such a supension in the future. In my mind the biggest risk to any of this mattering is a matter of enforcement, and regretfully I do not know much about how to go about that at an open space with so many points of ingress/egress. Thank you, - Michael Lehew	Michael Lehew

All of use use trail bells to alert bikers, hikers, and dog walkers of our presence in the area whenever doing any downhill riding. If we do come up on any of these on the trail, our speed is greatly reduced and come to a complete stop. Hikers and dog walkers are given the right away unless they insist we pass them. We make sure to greet, thank them, and also let them know of any other riders in our group to try to keep everyone safe and enjoy our time outdoors in nature. Many people thank us for our courtesy and use of these bells to help keep everyone safe. I know many of the people who help maintain the trailers are bikers themselves and would hate to see what would happen to these trails without their efforts as well. Thank you, Davide Mazza	Davide Mazza

7/12/2022	Dear Belmont City Council, I am a Belmont resident living in the Hallmark neighborhood. I no longer visit Waterdog trails because they are so damaged and so over-trafficked with bikes that it is not enjoyable. I think that in order to restore our park to the pleasant setting it once was you should: Stop the volunteers from digging up and widening the trails. I liked walking on the quiet little trails on the forest floor and enjoying the lush ferns and flowers. Volunteers hack back the plants to make it wider for their biking, and kill all the native flowers along the trail. And then they push the cuttings down the hill and they die there in piles on top of the other bushes. They dig ditches, leave useless planks, and cut back trees just so they won't bump their head. It's a depressing dead mess. Keep bikes off all the trails in the canyons and on the slopes – Chaparral, Ohlone, Rambler, Finch, and along the hidden canyon creek where they have widened it into a freeway. There is no passing room on a 3-foot wide trail and you can't widen the trail when it's on a steep cross-slope. The plants are trampled by people getting out of the way of bikes, bikes skidding off of the tight turns, taking shortcuts on curves or switchbacks, and even on occasion sliding off of the sloped trails. The ferns and wildflowers are covered with dust from their skidding, the tree roots are exposed tripping hazards. The stairs that used to be on steep sections to make it safer to get down without sliding on your rear, have all been completely eroded away and pushed down the hills by the bikers. Close the unmarked trails – the woods are torn up by random shortcuts, and bypasses. People make these trails for thrills so they are usually steep and straight downhill. One trail that began off of Elevator a few years ago turned into a 2-foot gully and now there is a second trail next to it, and both are so steep and graveled that they are dangerous to hike or bike. I have met hikers who are lost because they ran across some trail that is not planned and they got turned around. Get rid of the e-bikes. I talked with a group with e-bikes and they were bragging about how many more miles they cover in a day of riding. One guy said he rode twice as far with his ebike because he doesn't get tired. Covering distance is not the point of our trails – enjoying nature is the point and they certainly aren't doing that when they are flying as fast as they possibly can. I think that if they want an aerobic workout they should use their muscles, not a motor. Or go to a gym and leave the nature trails for those who appreciate nature. In short, someone needs to do something to manage the trails because it's a free-for-all now. When visitors see it so run down I think it sends a message that they don't have to respect nature here. Frank M	Frank Mercer
7/12/2022	I am a Belmont resident living in the Hallmark neighborhood. I recently noticed this post from the organizer of the Waterdog "Trailkeepers" group, who by the way is not even a Belmont resident. I have to wonder how he gained access to the "barrage of hatemails" that you have received in the past 3 days? Is someone from within the Belmont government sending out information on private letters received by city employees or members of the city council? Trailkeepers got the info from someone.. It seems to me that the only hate is this from the Trailkeepers organizers, calling residents haters for submitting input to their own city council. You should be made aware that the contact list of this post on Facebook (https://www.facebook.com/groups/2079772678916626) goes out to mountain bikers from the entire bay area, maybe beyond. And that it was at the urging of Jonathan Carter that over half of the respondents to the Belmont Parks Survey were NON residents who specifically ranked biking top priority. The voices of these non-residents have biased the entire public discussion on management of Belmont Open Space. Thank you	xsrider

7/12/2022	Dear City of Belmont: I'm a long time Mountain Biker and started Mountain Biking at Waterdog back in the early 90's where my appreciation for the Sport began. I am advocating to maintain Multi-use access at Waterdog. I believe Multi-Use is thriving but would excel further if additional safety measures for all are implemented: 1. Signage: There is not enough of this. I feel this would improve any safety concerns users may have. I feel it is essential to place signage in strategic locations such as the "Three Witches" - a series of hills with exposure - to remind trail users to be attentive and also walk on the Right side (adhere to the rules of the road). Furthermore, other blind areas where exposure is present. 2. Education: I think it would be valuable for the City to implement a class (in-person or virtually) to educate users on guidelines for trail use. This class would serve also as a reminder for trail etiquette and safety. For instance, refraining from using headphones while on the trail, staying alert and attentive, respecting the various flora and fauna, etc. The tricky part with this would be to incentivize people to take the course. Perhaps the City can work with the local shop: Belmont Bikes, to create a discount for taking the course, or discounts at other local shops like Village Host Pizza. I would be willing to volunteer some time to create a class like this. Lastly, I strongly feel maintaining Multi-Use access is imperative for our community here in Belmont. Like myself, there are various residents that enjoy Waterdog for biking and hiking. Many, including myself, find it therapeutic to go on a ride or hike after work to relax and unwind from the stresses of our days. Hence, full inclusion should be maintained. If you would like to contact me regarding ideas for Educating on Waterdog I would be happy to discuss and participate. Otherwise, I greatly appreciate your time and consideration with reading my input regarding Waterdog trail use. Sincerely, -Norbert Demanuele	Norbert Demanuele
7/12/2022	I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I have been a regular user of Waterdog Park for many years and support multi-use trail recreation. I am pleased the city has taken an in-depth look at the parks and come up with an exceptionally well reasoned plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control New trails to be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed I believe the plan is comprehensive and ready for implementation without further delay. Please vote FOR the plan tonight. Thank you, Olli Blackburn	Olli Blackburn

7/12/2022	Hello fine public servants - your efforts to continue to meet all the trail users needs are much appreciated! I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation, and am happy to see the science-based approach the city has taken with this plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed. Thank you, Frank Babbitt, a water dog frequenter since 1996…	Frank Babbitt
7/12/2022	I am writing today in support of the proposed Parks, Recreation and Open Space Plan which is up for a vote of approval tonight. I live locally and can walk and also ride my bike to Waterdog and Hidden Canyon Parks. I thoroughly enjoy the proximity to such a high quality outdoor experience so close to hime. I urge you to vote to approve the plan which includes: multi-use trails, maintaining & improving existing trails, and incorporating the legacy unofficial trails. One of the things that I appreciate about the trail network is that there are so many options and different ways to connect loops within the relatively compact space. I have previously volunteered constructing and maintaining trails and look forward to future opportunities to contribute to this valuable recreational open space. Thank you for your consideration, Tim Louis	Tim Louis

7/12/2022	I'm writing to provide support for the Belmont PROS management plan. More specifically, for continued multi-use trail access, and calming features for single-track trails and increased safety. I am a regular trail volunteer, and would love to assist with building new trails to the open space. I'm ambivalent about the Class 1 (20mph/no-throttle) e-bike policy, but feel a 1 year pilot would be a worthy test. Thank you kindly for your attention. Robert Escamilla San Mateo County Resident and frequent cyclist and runner at Water Dog	Robert Escamilla
7/12/2022	Hi, i'm writing to you today as a Waterdog trail user in support of the PROS management plan. Waterdog is an oasis of natural recreation and its accessibility from the urban areas of the peninsula is incredible, even in the context of the Bay Area's many parks and open spaces. Please proceed with the plan and keep the park open to all users: hikers, trail runners, and cyclists. The more people that enjoy the outdoors, the happier and healthier our community will be! -Peter	Peter Tennessen
7/12/2022	Hello. As a 25+ -year user of Waterdog, I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space To be clear, I do NOT support: A one-year pilot of a Class 1 e-bike policy be performed Thank you, Tom Sharp	Tom Sharp
7/12/2022	Dear Belmont City Council and Park Commission Parks are one thing, but Open Space requires a different skill set and ethos. It needs to be approached environmentally with respect for the wildlife it supports, not as a race track for bicycles to careen off the tree roots over the ground nesting birds and whatever else just to fly down the hillside as fast as possible. In response to my email, you said, "Let's build our back yard." I am a resident of Belmont and OUR back yard was a beautiful forest already "built" just in need of respect to the environment it provided for the wildlife. Go build YOUR backyard in YOUR back yard, NOT OURS! Mimi Iversen	Mimi Iversen
7/12/2022	Hi - As an regular cyclist and runner who uses water dog on a regularly I wanted to voice my support for the Pros plan and the Water Dog Stewards position. Please keep this amazing resource open to all types of recreation. Thank You, John Paradine	John Paradine

7/12/2022	Hello, I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. As an individual who has grown up in Belmont and been a long-time enjoyer of the community's outdoor spaces, I strongly support continued multi-use trail recreation. It would be a devastating loss to have Waterdog's trails become closed off to those many individuals who have enjoyed them for so long. I find these recommendations of the Plan to be particularly beneficial to Belmont as a whole: - The continued designation of Waterdog's trails as multi-use. - The construction of new trails and improvement of existing ones. - Guidelines and volunteer opportunities regarding trail maintenance. Thank you, Sava Iliev	Sava Iliev
7/12/2022	I am writing today in support of the proposed PROS Management Plan. I support multi-use trail recreation. 7/12/2022	Dear City Council, Attached please find my more comprehensive list of comments on the omissions and shortcomings of the OSMP draft under consideration July 12. The attached document details the following list of concerns about this Plan: Claim of exemption from CEQA (Categorically Exempt) is wrong Inconsistent with the General Plan Contains factual errors. Fails to consider City management ability and resources Fails to benchmark trail use, habitat protection and stewardship policies of other agencies. Eliminates the ban on motorized vehicles Unsupported claims regarding wildlife and habitat Fails to address trail safety Lacks quantifiable visitor volume assessment Omits General Plan considerations for the Wildlife Corridor Fails to address cumulative impacts of trail density on habitat I urge you to send this Plan back to the Commission to address these issues. Thank you, Kristin Mercer	Kristin Mercer
7/12/2022	I bike the trails at Water Dog lake 2-3 times a week in winter or summer. It is one of my favorite things about living in San Carlos/Belmont. I am now teaching my kids to bike respectfully and with care on the trails. I support mixed use trails - I believe it is critical to address any conflicts in shared resources thoughtfully, and would be devastated to see changes that completely prevented biking in such a wonderful park. Sincerely, Peter Liske	Peter Liske

7/12/2022	To whom it may concern, I am writing today this email to express my support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan for the, waterdog park. I am glad to see the systematic approach that is taken to improve the conditions of the park and the experience one will live when enjoying the park. In my view it is important to assess evolving situations and set up the necessary actions to keep improving to make our park enjoyable for most people and at the same time preserve our beautiful environment. Protecting the environment does not necessary require to close the park. It is important to educate a maximum of people and I believe that waterdog park is a very good case given its location, its geology and its variety of features that seduce bikers, hikers, dog walkers, runners … I am in favor of the multi-use trail recreation, and am happy to see the science-based approach the city has taken with this plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed Thanks for your attention, Pierre-xavier Thomas	Pierre-xavier Thomas
7/12/2022	Hello Parks and Rec. Team - Today I am writing in support of your proposed Parks, Recreation, and Open Space - the (PROS) Management Plan. I am a user of this park - love hiking and MTB riding and support multi-use of this area for trail access. I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed Thank you, Mike Timpano	Mike Timpano
7/12/2022	hello and thanks for listening! I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation and specifically: The continued designation of Waterdog's trails as multi-use Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders New trails be added to the Open Space much thanks! Luke Wroblewski	Luke Wroblewski

7/13/2022	Tonight you heard lots of misinformation from the mountain bikers, for example: 1. They claim that banning bikes keeps them off the trails. Of course that is a lie: they can all walk on the trails. Banning bikes is not discriminatory, because the same rule applies equally to everyone. 2. They claim that narrow trails slow down the mountain bikers. Watch any mountain biking video! Mountain bikers see all trails as a challenge to ride as fast as possible, including over the speed limit. 3. They claim that hikers cause as much erosion as mountain bikers. That is a lie. All of those claims ignore speed and distance travelled. Even if they caused the same amount of erosion per mile, mountain bikers travel much farther than hikers, and therefore cause more erosion. Knobby tires are perfectly designed to tear up the soil. Shoes are not. This was elucidated in my review of the scientific literature, https://mjvande.info/scb7.htm 4. They claim that mountain bikers help maintain the trails. But that is simply attempting (not successfully) to fix the damage that they themselves have caused! Isn't it better not to do the damage in the first place? And there is no way to restore soil that has been eroded away. 5. They claim that no one can detect a difference between erosion caused by mountain biking and e-biking. But that's obviously not true: an e-bike allows one to travel much farther, thus causing that much more erosion. Their greater speed also increases the amount of erosion per mile.	Mike Vandeman
7/13/2022	Dear Belmont City Council Members, We were hoping to comment via Zoom at yesterday's city council meeting on topic 9A regarding Waterdog trail access, but it got too late for us. We just wanted to say that we support continued access to Waterdog for mountain bikers on all trails. We ride the single-track trails for exercise and recreation as a family regularly. Mountain biking is one of the few activities that we can all enjoy together. We have been (and are) Belmont residents for over 13 years now and ride to the trailhead. We have also hiked the trails, but for one of us (William) hiking is much harder on the knees and there is much less exercise involved. As hikers and bikers, we have had a few encounters with fellow mountain bikers (and e-bikers) on some of the tighter single track trails. We worry mostly for our 12 year old son (who has been riding the trails for at least 5 years now). We have also had some interactions with hikers while we biked. We now ride with bells which has helped minimize encounters tremendously with other trail users, especially hikers (we have been thanked for having the bells by hikers on countless occasions). We try to be as courteous as possible to hikers, always stopping to let them have their right of way. Based on our experiences as both bikers and hikers, we wouldn't be against implementing some rules for bikers AND hikers on the trails: 1. Bikers need to always ride with bells. 2. Bikers need to ride without headsets on so they can hear other trail users (bells and voices). 3. Hikers and Bikers should always understand the trail rules with regards to right-of-way and NOT waive their rights. (Imagine the confusion at a 4-way stop if the driver on the right insists on relinquishing their right-of-way to the driver on the left!) a. We often see hikers, out of courtesy, move to the side of the trail and wave oncoming bikers by. This creates confusion and an expectation on the biker's part for similar behavior by all hikers. b. We love the challenge of being able to climb a difficult section of trail and are often frustrated when the downhill rider refuses to relinquish the right of way and tries to squeeze by, creating a dangerous situation. Many uphill riders in similar situations will automatically pull to the side out of 'courtesy' for the downhill rider. Again, this just creates confusion and an expectation on the downhill biker's part for similar 'courtesies' from all uphill bikers. 4. We wouldn't be against having a small set of trails designated 'hiking only', but no more than, say, 25-30%. 5. We are all for a ban on e-bikers, excluding those who ride e-bikes because of disabilities. Apologies for the long email, but we are passionate about biking and Waterdog access is one of the main reasons we chose to live in Belmont. Best regards, William, Nina, and Voneth	William, Nina, and Voneth

7/13/2022	Dear City Council, I am writing to tell you that hiker's safety at Waterdog Lake needs to take priority over the thrills of racing up and downhill on Mountain Bikes while supposedly "sharing the space", or creating illegal trails. I can't attend the City Council Meeting this Tuesday, but please put my position on the record, and please do the right thing to mitigate this issue. This is a Hot Mess right now. Respectfully, Roberta Stauffacher	Roberta Stauffacher
7/13/2022	Hi city council I am a Belmont resident and I am just learning that city is about to vote on 1600 page document that was released just a few days ago, Just before July 4, for the park and recreation committee meeting on July 6. NO ONE had time to read it! The public doesn't know and the plan is not even on the city website. The plan does not address most of the issues we brought up over the PROS process - including single use trails for safety. This is unacceptable. We want you to postpone this vote and to allow time for the public to read it and provide feedback to council and the PROS committee. Thank you Keyuri	Keyuri Shah

7/13/2022	I agree with the points raised in the email below. Please do not approve the master plan without addressing these deficiencies. Brad Lewis Dear Belmont Friends and Neighbors, Our City Council is poised to approve a fatally flawed Open Space Master Plan, just days after its publication. I'm asking you to email NOW to tell them to stop! The Plan does not resolve the most controversial issues that are driving hikers out of Waterdog; safety and illegal trails. Residents have not been heard. The plan allows biking on ALL trails regardless of safety or nature. Mountain bikers from the entire region flock to Waterdog because it is the only open space that does not regulate biking on narrow dirt trails, regardless of safety and trail damages. Bikers run timed speed competitions, build jumps and modify trails to increase speeds. Hikers on narrow and sloped trails jump out of the way into the shrubbery. Seniors, families with children, and anyone less agile are displaced by this imbalanced bike-centric climate. The plan proposes to sanction 3 miles of illegally forged, unsafe and damaging trails - none of which meet the safety or environmental standards recommended in that same document. These are steep, eroded, and dangerous for both hikers and bikers. Sanctioning this vandalism is irresponsible stewardship. The plan eliminates the ban on motorized bikes, leaving our trails wide open to all types of powerful e-bikes that are banned from dirt trails in other open spaces. For two years Belmont council members promised the Open Space Master Plan would address these dangerous and divisive issues. It doesn't. It kicks the can down the road, stating that the city should study or consider trail policies. Two wasted years does not excuse a flawed and hollow plan to guide us the next 15 years. We insist our Council address these issues NOW: 1. Keep bikes off the narrow, steep and sloping dirt trails. Bikes can use 5 miles of wide trails like Lake Road. Bikers themselves are welcome on all trails, but without their machinery. This policy works in every other open space district – why not here? 2. Close ALL unsanctioned trails. These are vandalism pure and simple, and no city policy should sanction vandalism. 3. Ban e-bikes from dirt trails except Lake Road, where they serve a valid need for transit and connectivity. At a recent hearing, a mountain biker from San Mateo suggested if Belmont residents don't like the bike traffic they should go elsewhere to hike! Visit waterdogpreserve.org to see the facts and links to documents for yourself. Your voice is urgently needed now. Emails are mandatory! Voices are even more powerful. Please do BOTH. Email link: CityCouncil@Belmont.gov and PRComm@Belmont.gov or go to waterdogpreserve.org ZOOM on Tuesday July 12, at 7 PM (Agenda) ZOOM ID 95745673035 Visitor safety and the health of our Open Space are priorities; the sport of mountain biking should not be allowed to endanger either. Thank you for speaking out, Kristin Mercer	Brad Lewis

7/13/2022	Dear City Council, As a Belmont native and frequent walker in Waterdog reserve, I was very disappointed to hear that you are considering to allow mountain bikes on all the trails. If you walk or run on the trails, you may be familiar with the fact that the bikes are constantly running walkers off the road, even causing collisions. However, far more distressing than this is learning that motorized dirt bikes are being considered. This decision will vastly change the landscape of this open space - forever. Motorized dirt bikes go incredibly fast - to the point that walkers and runners (which include families!) will no longer be safe (people will get run over and the city WILL get sued). They cause abundant noise pollution and air pollution. Worse over, I am concerned that Waterdog will become a mecca for motorized dirt bikes, because they are not allowed in most other reserves - for good reason. Please make the responsible decision and maintain the beautiful open space the way that it is- a shared space for walkers and cyclists. If you want to make a change to the area then I suggest dredging the lake to make it more safe and usable. Thank you, Becket Feierbach	Becket Feierbach
7/13/2022	We suggest: 1. Keep bikes off the narrow, steep and sloping dirt trails. Bikes can use 5 miles of wide trails like Lake Road. Bikers themselves are welcome on all trails, but without their machinery. This policy works in every other open space district – why not here? 2. Close ALL unsanctioned trails.These are vandalism pure and simple, and no city policy should sanction vandalism. 3. Ban e-bikes from dirt trails exceptLake Road, where they serve a valid need for transit and connectivity. Marjorie & Dobson Lo	Marjorie and Dobson Lo
7/13/2022	Att: City Council Members: You answer to US, not bikers that don't live here. Do YOUR JOB! We insist our Council address these issues NOW: 1. Keep bikes off the narrow, steep and sloping dirt trails. Bikes can use 5 miles of wide trails like Lake Road. Bikers themselves are welcome on all trails, but without their machinery. This policy works in every other open space district – why not here? 2. Close ALL unsanctioned trails. These are vandalism pure and simple, and no city policy should sanction vandalism. 3. 7/13/2022	Dear Belmont City Council members I am writing to you to comment on the Belmont Open Space Master Plan. All of the background information looks good but I agree the policies are too soft. For example just the first two: P1 - Limit trail construction, and facility development in riparian and other wetland areas. What does limit mean? How many trails and facilities do you consider limited? From what the consultant said in their comments I thought you would want to prohibit new trails in these areas. P2 - Monitor open space conditions with an emphasis on documenting the location, distribution, and abundance of special-status plants and plant communities, native grasses, wildflowers, and other native flora. What would you do after you monitor it? This doesn't tell us what to do with it – or not do with it – when it's identified, or measured, or whatever this is instructing us to do. Most of the policies are very vague and easily interpreted any way you want. For all the words written in this policy document, it really gives no guidance. I can imagine how it could easily be interpreted to support pretty much anything you want to do or build in the open space. So pretty quickly, staff and residents will be arguing over the definition of these terms and whether a project should be approved or not, depending on how they choose to interpret the words. Also, I don't know how you would measure if the plan was completed or was successful or not. A plan should have a list of actionable tasks that can be completed, or rules to be implemented and followed. I'm not sure this document will be of any use, and I agree with the commission that these policies need clarification. Respectfully, Frank Mercer	Frank Mercer
7/13/2022	Dear Belmont City Council Members, I am a Belmont resident and I heard that the council is scheduled to vote on The Belmont Parks and Recreation and Open Space (PROS) plan tomorrow. I am worried that the plan doesn't address the issues of contention around the use of the Belmont Open Spaces (bikes on narrow trails, e-bikes, illegal trails). I also find it concerning that a document of this size is released a few days before it is to be voted on. It almost seems like the process is rushed on purpose so folks cannot provide feedback on contentious issues. The representatives in the PROS committee need more time to communicate the plan to their respective neighborhoods and collect feedback from the residents. For these reasons, I am asking you to postpone the vote. Thank you, Tzvetelina Tzeneva	Tzvetelina Tzeneva
7/13/2022	Dear Council Members, Please be advised that our hiking trails in Water Dog Park should not be used by very powerful electric bicycles. We are a family that not only has bicycles, electric bicycles, and hike the water dog trails. To open up the trails to incompatible uses would not only eliminate our ability as seniors to safely hike on these trails or use them as they were initially intended. Being a longtime resident of the wonderful community of Belmont, and are very familiar with the area and what it is suited for. We truly understand the incompatibility of what you are proposing in the plan. PLEASE RECONSIDER and study further your "OPEN SPACE MASTER PLAN". It can have long lasting negative consequences as it is currently proposed. Sincerely, Dale and Marilyn O'Harra	Dale and Marilyn O'Harra

7/13/202	Hi Belmont City Council, and Belmont Parks & Rec Department, I'm writing in support of the Belmont PROS Plan. Congratulations on getting this plan through the process, I am aware that it's been a long 18 months. I want to thank you all for your dedication to this process, in particular, your willingness to listen to all sides, obtain comprehensive survey data, get expert scientific input from an external organization, and create a plan that meets the needs of the overwhelming majority of people who utilize the open space. I support the conclusions for Waterdog open space, including maintaining all trails as multi-use, doing trail work to reduce erosion and protect the waterways within the park. One last note. Throughout the process I attended many of the meetings in which you had to endure aggressive verbal attacks from a very uncooperative small group of individuals and I was continually impressed by your ability to listen and respond with composure and professionalism. Thank you for your dedication to Belmont, Karen Moody	Karen Moody
7/13/2022	Dear Belmont City Councilmembers: It has been brought to my attention that the Belmont parks and Recreation and Open Space plan is on the agenda for this Tuesday. I would like to ask City Council to postpone voting on a document that people are not aware of and have not had time to read or to provide input on. It would be quite beneficial to allow the people of Belmont to study the proposal and to make suggestions or voice ideas prior to the vote. Thank you. Sandra Raskin	Sandra Raskin
7/13/2022	Belmont Mayor and City Council Members, I've become aware that the City Council will be looking at the Belmont Open Space Master Plan. For the many years that I have lived in Belmont, I devoted much of my time to saving our open space especially the San Juan Canyon. Historically speaking, there were many other council members before me, who have saved part of Hastings development for open space (part of the Western Hills open space), and others who have saved the Western Hills, by allowing some development at the end of Carlmont Dr and saving the rest in open space and too many others to thank. After reading the many pages of the Plan, I have four serious concerns: 1. All unsanctioned trails need to be closed to protect the open space from vandalism. No city policy should sanction vandalism, 2. Bikes should keep off narrow, steep and sloping dirt trails. Bikers can use 5 miles of wide trails like Lake Road. 3. E-bikes should be banned from dirt trails except for Lake Road, where they serve a valid need for transit and connectivity. 4. Bikers should not be rewarded for creating new roads for themselves to use as they wish. This has been a practice for years. Please have the Park and Rec commission look at these four concerns as quickly as possible. Our open space is too important to be ruined by a few and the damages may not be reversible. Thank you, Coralin Feierbach Former Belmont Council member	Coralin Feierbach

7/13/2022	Dear City of Belmont officials, Our wooded spaces make Belmont unique. As a commuter on Ralston who connects with CalTrain, and as walker who enjoys Pine Knoll, Holly, as well as our wooded spaces, *please reconsider allowing our trails to become a free-for-all speedway.* Once trails are opened for more extreme use, it will not be possible to easily reclaim them — they'll be widened, and wet conditions + eBikes will make for muddy trenches that'll get deeper with time. Belmont is a welcoming place. Making our beloved woodlands an extreme biking Disneyland, however, is BAD for our residents and there is no benefit to allowing this. Bikers aren't going to pay an entrance fee or anything. Why would the City allow the quiet enjoyment of OUR woodlands to be given away to non -Belmonters who'll ruin our environment? Thanks for hearing that many of us are ANGRY that current leadership even thinks that this a good idea. Regards, Tracy Turner	Tracy Turner
7/13/2022	I understand that there is a resolution to be voted on July 12 by Belmont City Council concerning Waterdog Open Space that will allow cyclists to use all trails with no or very minimal controls. I have had many very dangerous close encounters with cyclists on the very narrow steep trails in the Belmont Open Spaces. It is to the point where I have to walk on other trails where other cities have tight controls on cyclists. As an example last week, I was walking in Laurelwood in the Belmont section, one responsible cyclist pulled to one side and let me safely walk past him, the other I had to leap to one side to avoid being run over, this was on a steep section where the cyclist had little or no control. There is no problem in this regard in the San Mateo City controlled paths in Laurelwood. There is a potential too for major legal liability costs for the inevitable accidents that will occur through Belmont City Council's failure to address this issue. Belmont City Council must address this issue to allow safe walking in all parks for which Belmont City Council is responsible.	John Aynsley

DATE	COMMENT	COMMENTER
7/13/2022	Dear City Council, On this week's Council agenda, the Parks and Rec Commission and Department will present you with a finalized Belmont Parks and Recreation Open Space Master Plan. This plan represents the culmination of 18 months of community outreach, an extensive public survey, focus groups, an advisory panel, two separate and independent consultants, and month-after-month of discussion and public commentary. The process has been exhaustive, transparent, and inclusive. Please vote in favor of the plan so we can move forward with a clear vision for our open space. I want to take the time to commend the Parks and Rec Commission and Director Shearer's Department for their leadership and effort in getting this plan together. They conducted one of the most successful public surveys ever performed in Belmont and truly took the time to understand how the public uses our open space and what was desired in the future. They also brought in recognized experts in ecology, open space management, and habitat preservation in order to analyze the state of our open space and tell us how we have been doing. The PROS Master Plan incorporates both the science and the public will into a plan that we can all be proud of! Now there are always haters, and as the saying goes, "the haters are gonna hate." You will hear from them this week: Deniz Bolbol (yes, the same Deniz who almost destroyed the beloved Belmont Cross Country Course access last year), her husband Pat Cuviello (failed City Council candidate), Kristen Mercer, (another failed City Council candidate) and Jennifer "Jen-Jen". We have heard from these four in every meeting for 2 years now. First we heard about how the open space was in shambles, the animals had been run off, the bikes had completely eroded the trails, and Waterdog was an ecological disaster. In truth, our expert consultants found that Waterdog is in pretty darn good shape - the flora and fauna are quite healthy, invasive species are lower than comparable open spaces, rogue trails and cut-throughs are less prevalent than comparative open spaces (for instance, in Marin), and the singletrack trails (made by cyclists) actually have less erosion than the old dirt roads (John Brooks, Rambler, etc) we inherited from the past. Next we heard that Belmont residents wanted a nature preserve. In truth, our Belmont PROS survey found that the majority of Belmont residents used the open space for recreation, and the majority actually desired more trails and more recreational opportunities. I would also remind the council that this survey reported results separately for both Belmont residents and non-residents. It turned out that both Belmont residents and non-residents agreed - the majority wanted to preserve and expand recreational open space access. Next the haters told us that Waterdog is unsafe for hikers - a claim used to justify restricting cyclist trail access despite the fact neither Parks and Rec, nor Belmont Police, have received significant reports of collision with injury. Out of desperation, at one point Deniz took to standing around a blind corner, while her husband Pat filmed, in hopes of entrapping a cyclist and documenting a collision. This bizarre behavior was reported to the Council earlier. No collision occurred. Although I can understand that hikers may want to have an experience without dogs or cyclists around, hikers have a plethora of nearby hiking-only trails to choose from: Crystal Springs Cross Country Course (17 feet from the Upper Lake Trail trailhead, 299 acres, 3 miles of trails), Big Canyon Park (16 acres, 1.7 miles of trails), Pulgas Ridge Preserve (366 acres, 6 miles of trails), Edgewood Preserve (467 acres, 10 miles of trails), Eaton Park (158 acres, 2 miles of trails), Mills Canyon Park (1,500 acres, 1.4 miles of trails), Phleger Estate (1,000 acres, 4.6 miles of trails), Huddart Park (973 acres, 28 miles of trails), and Foothills Park (1,400 acres, 15 miles of trails). In contrast, there are no cycling-only trails to serve the recreational needs of cyclists. For every mile of mixed use trails like Waterdog, there are over 5 miles of hiking-only trails within a 15 minute drive of Belmont, and no cycling-only trails. How could further restricting cycling access be fair? Finally, the haters, sensing their own defeat, will tell you this plan was sprung upon them, and the public has not had the proper time to read and digest it. In truth, the Commission and Department has done a fabulous job socializing this plan - we've had monthly Commission meetings, advisory board meetings, scope planning meetings, surveys, web campaigns, meet-and-greets in the park. The draft plan has been available for months and the finalized plan, incorporating even more input, contains no surprises. These haters have sought to sabotage the PROS process since day one. The haters, who seem to only know how to destroy a community, have had their say. Now, after two years, it is time to move forward. Belmont residents have a beautiful open space to hike, cycle, exercise the dog, enjoy the flowers and trees, get some fresh air, meet friends, and build community. It is a place of joy, peace, and fun. Thoreau wrote "Heaven is under our feet as well as over our heads." I think the reason people get so emotional about Waterdog is that they feel a little bit of Thoreau's Heaven under their feet when they visit. I know I do. Please help us preserve Waterdog and vote in favor of the PROS Open Space Master Plan. Jonathan Carter, MD Lead, Waterdog Trailkeeper Volunteers	Jonathan Carter

7/13/2022	As a 40 year resident of Belmont, and someone who loves walking near Waterdog Lake, I was appalled to read the so-called “Master Plan” for this beautiful area. Clearly, the bike lobby is very influential in Belmont politics but I had no idea that cyclists come from outside the city to Waterdog Open Space to get their kicks and thrills in this area. We walk all over the Bay Area and have never come across such unregulated trail systems as we have in Belmont. When we walk in San Carlos, Portola Valley, Woodside, parts of the South Bay, East Bay and Marin, we never feel at risk of being bowled over by some thrill seeker on a bike. In other cities, it’s always very clear which trails cyclists may and may not use and they do not share narrow trails with hikers. Unfortunately, because some cyclists have a sense of entitlement when it comes to using trails, the reality is that bikes and hikers simply cannot share steep, narrow trails. Apart from the inherent dangers, why do you ignore the obvious environmental damage in places like Waterdog Open Space? Many of the cyclists degrade the trails and the surrounding areas and we have a responsibility to protect these areas for future generations. As for opening the trails to unregulated use by motorized bikes, there are no words to express my absolute disgust. Have you all lost your collective minds?We have come close to being knocked off the trails in Waterdog Open Space - are you going to wait for someone to get badly injured before you impose some sensible controls? What is it going to take for Belmont City Council to finally understand it has a responsibility to protect ALL users of the area? We see many older people walking the trails, children on bikes or walking, mothers with babies in strollers and many runners. It would seem that you are simply not concerned about about the “silent majority” and are obsessed with the idea of making Waterdog Open Space an adventure playground for cyclists from all over the Bay Area. I am very disappointed and saddened by these proposals and I hope they end up on the trash heap of Belmont history. We can do better. Eryl Aynsley	Eryl Aynsley
7/13/2022	Hello- I just wanted to drop you a short note to tell you that I enjoy recreating, specifically riding my mountain bike on singletrack trails in Waterdog Park. I strongly support the draft Parks, Rec and Open Space Management plan that would allow the STATUS QUO of CONTINUED MULTI-USE (including mountain bike) access to all trails including singletrack. I enjoy the unique trails at Waterdog, and when I visit the park I also spend money in the local community. Thank you for your time. Frank Giraffe	Frank Giraffe
7/13/2022	My husband I have lived in the Hallmark area since 1985 and we have always immensely enjoyed the open space. Our son and his friends would bike the trails in the summer months and they were often the only ones on the trails so they felt like explorers. Hiking on the trails was always so relaxing as you felt you were really in the wilderness, experiencing wildlife and wildflowers. Fast forward to 2020: The trails became like a freeway for speeding bikes and we often had to jump off to the side of the trails into poison oak to avoid getting hit by a biker coming around a curve or down a hill. It was no longer peaceful nor did you experience the wildlife as in the past. Unfortunately some of the trails on hills have become so slippery as they have been worn down by the amount of cycling on them that they are very slick and difficult to maneuver on. I understand why the cyclists love this area but it has increasingly become unsafe to share the trails with them. I know why they come here as they are not allowed on other trails in other Bay Area parkland. Since the pandemic my husband and I have started to enjoy Big Canyon in San Carlos because they do not allow bikes and where it is steep, they have stairs. Unfortunately it is quite a hike for us to even get there unlike the trails in the Water Dog open space. My husband often still wants to walk the trails and in the canyon but I often talk him out of it when it is a time we know there will be lots of bikes. I really hope Belmont makes some of the narrow trails hikers only and bring the safety and peace back to our lovely canyon. Let the bikers enjoy themselves on separate or multi use trail but please designate some trails for hikers only. I suggest the Berry trail, Lake Loop, Chapparral, Ohlone and Canyon Creek. Thank you. Pamela Stahl	Pamela Stahl

7/13/2022	Hi! I wanted to email and signal my strong support for the proposed Parks, Recreation, and Open Space (PROS) Management Plan for Waterdog Lake & Open Space. I am an avid hiker and mountain biker, and have loved having this amazing resource so close to enjoy with me and my family. As a physician I know how critical healthy recreation is for physical and mental health, and we are so lucky to have this amazing open space as a resource. I have personally never seen conflict between users, and think that we can all get along as we enjoy Waterdog. Please vote accordingly! Best, Justin	Justin Krogue
7/13/2022	To Our Belmont City Council Members. I feel it is time for the Council to listen to your constituents that you took allegiance to represent and NOT to bikers from all over our county and state. Our Waterdog Canyon should be enjoyed by your local residents and not be overtaken by a group of fun loving fanatics. Listen to your people and not to outsiders. The back of our property runs concurrent to an illegal bike trail. We hear voices, dogs barking, roars of bikes, etc. What happened to our quite neighbored from years ago. Why does Belmont have to become a sports arena? What happened to our beautiful and peaceful city, The Gem of the Peninsula. Again, please pay attention to your constituents and not a bunch of outsiders. Consider an Open Space Plan that befits The People of Belmont. Thank You Ken Lebovitz	Ken Lebovitz
7/13/2022	Dear Council Members! I lived in Belmont Heights for 31 years before moving to Oregon. During those years, we had no problems with this open space. Seems to me an easy compromise: one trail system for hikers and one for cyclists. Why is that so difficult? Please see the following: For two years Belmont council members promised the Open Space Master Plan would address these dangerous and divisive issues. It doesn't. It kicks the can down the road, stating that the city should study or consider trail policies. Two wasted years does not excuse a flawed and hollow plan to guide us the next 15 years. We insist our Council address these issues NOW: 1. Keep bikes off the narrow, steep and sloping dirt trails. Bikes can use 5 miles of wide trails like Lake Road. Bikers themselves are welcome on all trails, but without their machinery. This policy works in every other open space district – why not here? 2. Close ALL unsanctioned trails. These are vandalism pure and simple, and no city policy should sanction vandalism. 3. Ban e-bikes from dirt trails except Lake Road, where they serve a valid need for transit and connectivity.	Dennis Taugher
7/13/2022	Dear Belmont City Council Members, Please postpone voting on the PROS plan so the public can have more time to learn and provide input about the final document. As residents in the Bay Area, we appreciate the freedom to hike without being cautious to watch out for motorized bikes and regular bikes. In the past, we've witnessed bikes speed down paths which could be dangerous to hikers. Please postpone this issue to allow people to read and consider how the hiking trails in Belmont can be safer for hikers. Sincerely, Tony Chan	Tony Chan

In the past, we've witnessed bikes speed down paths which could be dangerous to hikers. Please postpone this issue to allow people to read and consider how the hiking trails in Belmont can be safer for hikers. Sincerely, Kathy Chan	Kathy Chan
7/13/2022	Dear Members of the Commission, As a Belmont resident of 30+ years, I am quite familiar with the trails at Waterdog Lake. For a while, I hiked them regularly but the continued and increased use of speeding mountain bikers on the narrow trails have left me fearing for my safety. Having to jump out of the way at a moment's notice takes the enjoyment out of a hike. In addition, I'm upset about the disastrous consequences to the trails, the surrounding sensitive habitat and the wildlife caused by erosion of the existing trails and the construction of illegal trails. Speeding mountain bikes, bike jumps, night biking and illegal trail construction are not in line with the goals stated in the Plan for Belmont's Open Spaces, such as making all users welcome and safe, Environmental Resource Protection, Balanced Recreation Uses and Trail Management and the Trail Standards and Guidelines. A quick search for prime mountain biking locations in San Mateo County reveals that Waterdog is near the top of the list. It is described as a singletrack mountain bike trail, and while the person in the introduction points out that it is a multi-use trail system and requests fellow riders to be courteous, the reviewers talk about the technical difficulty of the trails. These difficulties, such as exposed roots, were not part of the original trails which were meant for hikers, and now they pose a long-term danger to the trees themselves and also to the safety of hikers. Before you adopt the Open Space Master Plan, you must include the following: Keep bikes off the narrow, steep and sloping dirt trails to prevent further erosion and to make them safe for hikers. Close ALL unsanctioned trails. Do no sanction this form of vandalism. It will only encourage additional illegal trails. Instead, all unsanctioned trails should be restored to their original state, if that is even possible considering the damage that has been done from both the construction and the use. E-bikes should only be allowed on Lake Road. Part of what makes Belmont such a wonderful place to live is the proximity to a place like Waterdog Preserve. Yes, there are plenty of other preserves in the area, but why should Belmont residents be forced to drive out of town, so that mountain bikers can use the space and continually degrade it? Please make sure that Waterdog Preserve will have trails that are for hikers only so everyone can enjoy this precious resource. Sincerely, Birgit Merian https://www.singletracks.com/bike-trails/region/california/?city=San+Mateo	Birgit Merian

7/13/2022	Dear Belmont City Council Members: My name is Karen Geer and I have had the pleasure of living in Belmont since 2016. It has come to my attention that the Parks and Recreation Open Space (PROS) plan is slated to be voted on Tuesday, July 12, 2022. In learning more about this document and the issues surrounding it, I am perplexed that it is so quickly up for a vote! The report was delivered just before July 4 for the Parks and Recreation meeting on July 6 and it is going to be voted on by the city on July 12? While I approve of swift decisions, I think it is premature in this situation. I learned the report is 300+ pages with 1,600 pages of documents! Has the PROS Committee read or commented on this document? Have you had time to read this document? I have not had the opportunity to read it. Where is it on the city website? I could not find it. Since this is the first revision of the document in 30 years, I implore you to postpone the vote! It needs a proper review so the scope can be understood and errors corrected. Sincerely, Karen Geer	Karen Geer
7/13/2022	Dear Belmont City Council. I am si yum and have been residing at carlmont drive since 1997. I used to love this city because of the beautiful open space and peaceful walking trails. In the recent years, increasing numbers of mountain bikes basically took over all trails. Finally, I became the victim of this situation. Nov. 11, 2020, while my husband and I were walking on the water dog trail, I saw 3 bikes side by side running toward us. To avoid being run over, I quickly left the trail by crossing over the ditch (water drain) and up onto the slope. When I tried to return from the slope and over the ditch to the trail, I fell because of the slippery sands on the trail making me lose my balance. My right foot and ankle were injured, and I could not walk. I called the city and the park service and left a message and asked for someone to open the trail gate/bar so that my husband could pull his car in and take me home. No response at all. I called my daughter but she and her husband were in Oakland. I had to wait couple hours for them to drive over, find me on the trail and carry me back home. I spent almost 3 months on a wheel chair and slept on a sofa and took no bath. (Bed and bath are on second floor). X-ray, taken by dr. Rachel Wood in March 2021, showed my lower leg bone had a crack. Thought I feel my feet was somewhat recovered but swelling and paint are still existing. My right leg has no strength to support body balance. I am afraid of falling. I have physical therapy for a year. Lately, I received a steroids injection and will receive another dose soon. Dr. Wood says my foot most likely will stay in pain for the rest of my life. Lately, I get back to the hiking trails nervously. I kept thinking of how to protect myself, carrying a stick or/and a pepper spray… Or you tell me what kind of effective defensive tool I should carry with me to prevent another injury? Hikers on foot who want to enjoy our trails cannot defend themselves from a bike especially when they travel so fast. As we all know, on Ralston st, there are pedestrian way, bike lane and auto lanes. Pedestrians have the priority over all others. All others have to yield. Why not on the trails? Now, my husband loudly yells to warn me if he feels a bike approaching. Here, I demand the city to designate hiker trails and biker trails. If it is difficult to do, designate time, for instance, Monday and Wednesday for bikes and other days for hikers. A bike speed at 30 miles per hour can run a person to death. Until that happen one day, you will regret if you have human hearts. I have heard the plan that you have have been working on is supposed to be done but I am confused that there were no discussions on separate trails or safety measures. I waited and gave input a year ago and was told there would be separate discussion on the issues on our trails. How can this plan be done when I have not seen it or had time to tell our block person what I think ? What did the traffic study show? There are so many cars that bring bikers to our small park — I see this because my house is the one closest to the canyon ? What are the trails you are making so I can not get hurt again? I would like to see the plan and give you my feedback to make sure you are listening. Please do not vote and make final this plan until we can make sure it guarantees we can all be safe. Thank you for listening Sincere, Si yum	Si Yum

7/13/2022	Dear City Council, I'm requesting that you postpone the vote on the PROS document. As I understand it, the consultant released the document on July 4th, for the July 6th Parks and Recreation Committee meeting on July 6th. Therefore, there has been no or negligible time to comment on the 300-page report with 1600 pages of Appendices. Since we haven't had an update in 20 years, it seems very reasonable to allow 1-2 months for the report to be reviewed and consensus generated. We want to be able to provide feedback to you and the PROS committee. All the best, Paul Kotturi	Paul Kotturi
7/13/2022	Good morning, I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation, and am happy to see the science-based approach the city has taken with this plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed It is important to keep the trails open to the current user groups. We moved to the Cipriani neighborhood for its access to the fantastic trails at Waterdog which we hike, ride and help maintain on a regular basis. Thank you, Jason Bromfield	Jason Bromfield
7/13/202	Dear members, I feel strongly that e-bikes must be banned from dirt trails except for Lake Road. Bikes must be kept off the narrow, steep, and sloping dirt trails. I am not able to attend the meeting tonight, but please remember that hikers' safety and the health of our Open Space must be of prime importance. Sincerely, Shiela Cockshott	Shiela Cockshott

7/13/2022	Hello I am a current resident of San Mateo, near laurelwood. I am a hiker/biker outdoor enthusiast. I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation, and am happy to see the science-based approach the city has taken with this plan. In particular. I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed Thank you, Travis Roberson	Travis Roberson
7/13/2022	I am writing in favor of leaving Waterdog a multi use area. Hiking and biking. Thank you, Bill Balestreri	Bill Balestreri
7/13/2022	Dear Belmont City Council Members, My husband and I have been Belmont residents for almost 13 years near the Waterdog Park entrance at the end of Carlmont Drive. We enjoy hiking, trail running, and safe mountain biking. I am writing to you to request deferring the vote on our Belmont PROS plan scheduled for tonight, July 12th. This will allow the needed due diligence time to review the final, recently available, document to pose questions and concerns. Deferring the vote will also allow time to spread the word, so more folks are aware and have the same opportunity I am asking for myself. Many things changed over 30 years and we request the opportunity to thoroughly read and comment on something that will have an impact on our lives. Thank you for your consideration. Let's keep our Belmont PROS plan the fabric of our community. Best, Audrey	Audrey Sato
7/13/2022	Good day. I wanted to express my support today for the proposed Parks, Recreation, and Open Space Management Plan. I and my family are avid hikers and mountain bikers, and I believe multi-use trails are the best approach for this key part of our local trails infrastructure, recreation opportunity, and wilderness access. I'm sensitive to the needs of hikers — I am one — when riding at Waterdog. I try to exercise courtesy and haven't had any difficulties with hikers when I'm riding my bike. That said, I support explicit measures like the recommended calming measures to encourage cyclists' best behavior. I also support the plan's handling of erosion control and trail maintenance. My son and I have volunteered for trail maintenance work elsewhere in the region through the Trail Center and would happily help with trail maintenance closer to home, too. I'd also like unofficial legacy trails to be recognized and, where possible, new trails to be added for more exploration opportunities and lower density of trail users. Thank you for considering my views as you try to find the best use for this marvelous patch of wilderness in our midst. Stephen Shankland	Stephen Shankland

7/13/2022	Motorized bike use at Waterdog? Are you kidding me??? Please, please rethink the environmental impact and act NOW to prevent irreversible damage. The safety and health of both Bay Area residents, and of the limited open space available for our use, should be of paramount importance and protected NOW. Serious action on the equitable and ethical use and preservation of Waterdog is required NOW. Think about the future impact and not about pleasing the desires of one sporting interest group. Thank you, Mike and Linda Gold	Mike and Linda Gold
7/13/2022	(Dated 6/17/2021) Hi Brigitte. Happy to help. There are two documents relative to the intended uses of Hidden Canyon: Attached is the grant deed for Hidden Valley for Blackwell Developers, including the parcel maps showing the land designated as open space easement. In the owner's statement, the 4th paragraph describes the conditional use of the open space easement: WE FURTHER HEREBY DEDICATE ·AN·EASEMENT FOR OPEN SPACE OVER THOSE AREAS DESIGNATED AS 'OPEN SPACE EASEMENT': CONSTRUCTION WITHIN THE EASEMENT AREA SHALL BE LIMITED TO THE FOLLOWING: NATURAL OPEN SPACE. LANDSCAPING AND IRRIGATION SYSTEMS. FOOTPATHS, UNDERGROUND UTILITIES AND UTILITY EASEMENT AREAS, DRAINAGE FACILITIES AND SYSTEMS AND LAWFUL FENCES. This grant is consistent with the stipulations of the Western Hills Area Plan, adopted prior to this 1993 grant deed, which lists goal and objectives (pg 26) #9: Encourage a Public Greenbelt and Trail System: Pursue creation of a continuous greenbelt of publicly owned open space that will be appropriate for passive recreational uses as well as for walking trails. So there are in fact TWO references specifically limiting Hidden Canyon trails to walking/feet only. This is why I continually assert that Belmont has not complied with it's own planning documents. One of the primary stated purposes of the Western Hills Area Plan was to address geological instability in the canyon. By the 1990's the City had already completed the San Juan Canyon Plan specifically to address the geological instability of that canyon. Hidden Canyon – just half mile away -- is similar soils on even steeper slopes. The plan also addresses protection for the riparian and woodland ecology of the canyon. The background information in the Western Hills Plan, and the geological mapping included, are absolutely critical to evaluating any proposed trails in the canyon. In fact, today we see the failure of Rambler and Finch trails that were built without regard to the adopted 1998 Trail Map and the mapped geological instabilities of the canyon. We made these mistakes once – our hope is that we can now correct those mistakes and implement a more sustainable plan going forward. I continually remind residents that Hidden Canyon is in fact the single largest open space in the City and accounts for over half of all City open space. It comprises 65% of the total Waterdog area open space (Waterdog = 50 acres, John Brooks = 49 acres, Hidden Canyon = 187 acres). Western Hills was also the subject of a city-wide land use initiative – Measure F – in which voters formally adopted by majority vote a land use policy to prevent development on this land. A voter initiative is the most affirmative form of "user opinion survey", thus asserting the public opinion to protect and preserve these lands. Please ensure that ALL parties involved in the discussion and development of the Open Space Master Plan are fully aware of the important Western Hills documents and the relevant history and geology critical to any decisions about use of this open space. Thank you for guiding the master plan toward fact-based decisions to ensure sustainability of Belmont's valuable open spaces. Kristin	Kristin Mercer

7/13/2022	Dear Council member, As a long time Belmont resident and an avid hiker, I urge the City Council to close the biker built trails and to limit trail use for bikers. I have had several dangerous encounters with bikers on - what used to be - hiking trails. One encounter resulted in road rash on my face and knees and another in a bad case of poison oak. In both of these cases, I was forced to jump off the trail as the bikers were going much too fast to stop. For the bikers, it's all about the thrill of the ride. To most hikers, it's about a quiet, meditative experience in a natural setting. Please do the right thing and restrict bikers to designated trails and close the illegal biker built trails. Sincerely, Michael O'Neill	Michael O'Neill
7/13/2022	Dear Belmont City Councilmembers: I heard that The Belmont Parks and Recreation and Open Space (PROS) plan is on the agenda for this Tuesday. As a Belmont resident, I would like to ask city council to postpone voting on a document that many other residents haven't had time to read and/or provide feedback. The plan does not address most of the issues we previously brought up over the PROS process - including single use trails for safety. We personally use the Hidden Canyon Park trails several times a week. There have been a number of occasions where we could not safely get out of the way of on-coming bikers. Allowing bikers to share the very narrow trails with walkers is dangerous! Additionally allowing E-bikes spoils the natural ambiance of this lovely open space. Thank you for your consideration on this important matter. Marie & Stan Crouch	Marie and Stan Crouch
7/13/2022	My family has lived in Belmont for almost 50 years and we have enjoyed using the trails in Waterdog Park for most of that time. I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I am an avid trail runner and I support multi-use trail recreation and appreciate the work that has gone into this plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use (I have never encountered an issue after hundreds of hours on the trails.) Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control for direction when I volunteer New trails be added to the Open Space Thank you, Ron Cheechov	Ron Cheechov

7/13/2022	To the Belmont City Council: Please, please stop this plan from proceeding. It does not resolve the most controversial issues that are driving hikers out of Waterdog; safety and illegal trails. Residents have not been heard. My family has lived in the neighborhood since the 80s and the open trails have become overrun with bikers, damaged from all the tracks, and are not a high risk for walkers (ESPECIALLY young children and older individuals). The plan allows biking on ALL trails regardless of safety or nature. Mountain bikers from the entire region flock to Waterdog because it is the only open space that does not regulate biking on narrow dirt trails, regardless of safety and trail damages. Bikers run timed speed competitions, build jumps and modify trails to increase speeds. Hikers on narrow and sloped trails jump out of the way into the shrubbery. Seniors, families with children, and anyone less agile are displaced by this imbalanced bike-centric climate. The plan proposes to sanction 3 miles of illegally forged, unsafe and damaging trails - none of which meet the safety or environmental standards recommended in that same document. These are steep, eroded, and dangerous for both hikers and bikers. Sanctioning this vandalism is irresponsible stewardship. The plan eliminates the ban on motorized bikes, leaving our trails wide open to all types of powerful e-bikes that are banned from dirt trails in other open spaces. For two years Belmont council members promised the Open Space Master Plan would address these dangerous and divisive issues. It doesn't. It kicks the can down the road, stating that the city should study or consider trail policies. Two wasted years does not excuse a flawed and hollow plan to guide us the next 15 years. We insist you please address these issues NOW: 1. Keep bikes off the narrow, steep and sloping dirt trails. Bikes can use 5 miles of wide trails like Lake Road. Bikers themselves are welcome on all trails, but without their machinery. This policy works in every other open space district – why not here? 2. Close ALL unsanctioned trails. These are vandalism pure and simple, and no city policy should sanction vandalism. 3. Ban e-bikes from dirt trails except Lake Road, where they serve a valid need for transit and connectivity. Visitor safety and the health of our Open Space are priorities. The sport of mountain biking should not be allowed to endanger either. Thank you, Marisa A. Passantino	Marisa A. Passantino
7/13/2022	Dear Belmont City Councilmembers, My comments pertain to Agenda item 9.A for your meeting tonight at 7:00 p.m. I believe there are serious concerns regarding sharing of trails between hikers and bikes in the proposed Open Space Master Plan, and believe this issue deserves more discussion and should not be rushed. Please allow more time for consideration and do not make a decision tonight. City Clerk, please retain this email and entire email string with the official records for the meeting, and in accordance with your filing system for correspondence from residents. Sincerely, Tim E. Strinden	Tim E. Strinden

7/13/2022	I agree with Deniz 100%! Belmont unfortunately hasn't protected its native wildlife. Mountain bikers can enjoy all trails just as everyone else does: on foot! There is no good reason to allow bikes on any unpaved trails. Hi Mike, Perhaps you can login to the City Council meeting TOMORROW (TUESDAY) night to give public comments on management of Belmont's open spaces -- where mountain bikers dominate. Right now the open space agenda item 9A is at the end of the meeting. Unless the Council changes the order, 9A will likely not be heard until after 9p. If you can give public comments, it would be great if you emphasize that you are calling on the Council to: Add a measure in the resolution that acknowledges, as the General Plan and last Master Plan did, that our Open Spaces (Water Dog, Hidden Canyon and San Juan Canyon) are wildlife corridors and actions should be taken to protect wildlife and this important habitat and corridor. 1. Keep bikes off the narrow, steep and sloping dirt trails. Bikes can use 5 miles of wide trails like Lake Road. Bikers themselves are welcome on all trails, but without their machinery. This policy works in every other open space district □ why not here? 2. Close ALL unsanctioned trails. These are vandalism pure and simple, and no city policy should sanction vandalism. 3. Prohibit e-bikes from dirt trails except Lake Road, where they serve a valid need for transit and connectivity.	Mike Vandeman
7/13/2022	Dear Belmont City council members, I would like to ask city council to postpone voting on this document that the majority of people are not aware of/or not had time to read and understand yet. Thank you, Mark Greenbaum	Mark Greenbaum
7/13/2022	Please find attached my comments for the Council meeting on July 12, 2022 agenda item 9a (PROS Master Plan). Attachments 1-4 are included in this email. Additional attachments will be sent separately. Please contact me if you did not receive any of the emails or attachments. Thank you Deniz Bolbol [Three emails with attachments]	Deniz Bolbol
7/13/2022	[Body of email is blank with attachment]	Kristin Mercer
7/13/2022	Dear City Council Members, I just found out about Parks Master Plan on City Council's agenda, and am extremely concerned that council is voting on such a major policy constitution that is supposed to drive our philosophy on open space and parks for the next two decades -- when people have not had a chance to read it, digest it, and provide feedback to their PROS representative or council. I strongly encourage you to delay the voting so the residents can provide their feedbacks. Thanks Shuguang Ma	Shuguang Ma

7/14/2022	Dear City Council and planning teams, I wanted to write a short note regarding the go forward vote and plans for Waterdog park. There have been many recent discussions and focus on proposals to shut down Waterdogs multi-use trails. Please take the consideration to keep the park open to multi-use trails as this is so fundamental to the community. I have grown up close to Waterdog and have lived here for 52 years. I understand and appreciate what the local community parks do for our community and for people of different ages and activities. There are so few parks locally that provide the benefits that Waterdog provides to groups such as mountain bikers. I've ridden at Waterdog for years and find it to be a wonderful place to enjoy for exercise and respectfully sharing with other bikers and hikers. So many other parks are available for only hikers and equestrians (i.e. Edgewood and Huddard parks) which are larger and available. I would ask that the team look at the bigger picture around availability and access for the community as there is NO reason that hikers/bikers can coexist. I've never seen the park over capacity and appreciate all the respective manner by which I see hikers/bikers interact. I have never seen speed as a large concern due to the switchback nature of the trails and (up/down) nature of trails which creates a natural reduction in speed for most. If E-Bikes are an issue that is one area that should be considered as restriction due to the motorized nature of the bike. As a long time community member I ask that you please consider the vote to continue to keep Waterdog trails as multi-use in the same fashion as they are used today. No need to fix something that isn't broken. Best Regards, Daryl Elvander	Daryl Elvander
7/16/2022	I'm a Belmont resident and live on Yosemite Drive. My family has enjoyed walking the trails in our area, playing soccer on the fields and are looking forward to the future plans come to fruition. I would like to see the City Council adopt the PROS plan at its upcoming July 26 meeting. The draft PROS plan provides a great framework for our parks and open space policies. The Parks staff, Parks and Rec Commission, and their consultants have taken the time to get it right. I'm completely satisfied with how the process has played out. The City has gone above and beyond to make sure everyone had an opportunity to give input. It is time to see this plan adopted so the Parks and Rec Department can move one, and get to work on the Barrett Community Center. Thank you.	Jill Massa
7/16/2022	Dear Belmont City Council, I'm a Belmont resident in the Plateau-Skymont neighborhood and I would like to see City Council adopt the PROS plan at its upcoming July 26 meeting. The draft PROS plan provides a great framework for our parks and open space policies. The Parks staff, Parks and Rec Commission, and their consultants have taken the time to get it right. I'm completely satisfied with how the process has played out. The City has gone above and beyond to make sure everyone had an opportunity to give input. 18 months has been more than enough time to come up with this framework, and it leaves the door open for the community to tackle specific issues together later on down the road. I would really like to see this plan adopted so the Parks and Rec Department can move on, and get to work on the Barrett Community Center, whose revonation is a decade overdue! Some of the Belmont Heights homeowners who are a small but loud group have consistently displayed NIMBY(Not In My BackYard) syndrome. The city of Belmont needs to really take any input from them with a grain of salt. They tried to close down the Crystal Springs Cross Country Course last year. They steadfastly refuse to open up the artificial barrier between the end of Hallmark Dr and the end of Crestview Dr (of San Carlos) to eliminate any traffic through the Hallmark Dr. No other neighborhood in Belmont gets to enjoy such privilege. The city residents should not consistently give them special treatment! Regards, Sherice	Sherice Lee

7/17/2022	As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come. I have been biking and hiking these trails for 20 years now. I know many of the regulars by name. I have worked on several of these trails over the years. I love this area and want to continue to be able to bike and hike there. Sincerely, Darren Don	Darren Don
7/17/2022	Hi! I'm a Menlo Park resident, who loves exploring the various parks and recreation areas along the Peninsula. Over the years, I have enjoyed hiking and biking in Waterdog park and was pleased to see the city's draft PROS plan, which maintains those opportunities. I would strongly encourage City Council to adopt the PROS plan at its upcoming July 26 meeting. I was particularly impressed with consultant assessment of the park and the associated findings - indicating that the park is in good shape. The draft PROS plan provides a great framework for our parks and open space policies and it leaves the door open for the community to tackle specific issues together later on down the road. Best, Tara Moran	Tara Moran

7/17/2022	Dear pros plan team, As a Belmont resident, I've been following the PROS plan evolve over the last 18 months. The current draft PROS plan provides in my opinion a great framework for our parks and open space policies. I would like to see City Counsel adopt the PROS plan at its upcoming Jily 26 meeting. I would like to share my thanks to the Parks staff, Parks and Rec Commission, and their consultants for taking time to get it right. The City has gone above and beyond to make sure everyone had an opportunity to give input. The framework offers a clear direction to take, while leaving enough options open to tackle specific details toghether down the road. I would really like to see this plan adopted so the Parks and Rec Department can move on, and get to work on the Barrett Community Center. Regards, Robert Brouwer	Robert Brouwer
7/17/2022	I'm a Belmont resident who lives in the Belmont Height neighborhood on Yosemite Drive. I would like to see the City Council adopt the PROS plan at its upcoming July 26 meeting. I firmly support open use of Belmont's park resources, most notably Waterdog Lake. A visit to Waterdog lake along the trail from Hallmark drive is a highlight of any visit from our friends and family. On those visits, and those made with just our family, we will often bring a dog, kids on scooters or bikes and others walking. It is just so great to have a multiuse park, literally right in our backyard. I am pleased to hear that the Parks staff, Parks and Rec Commission, and their consultants have taken the time to get the PROS plan right. I'm satisfied with how the process has played out. 18 months has been more than enough time to come up with this framework, and it leaves the door open for the community to tackle specific issues together later on down the road. I would really like to see this plan adopted so the Parks and Rec Department can move one, and get to work on the Barrett Community Center. Thanks, MJ Edwards	MJ Edwards

I would really like to see this plan adopted so the Parks and Rec Department can move one, and get to work on the Barrett Community Center. Sincerely, Diana Berger	Diana Berger
7/17/2022	I'm a Belmont resident (for the past 16 years), and I would like to see City Council adopt the PROS plan at its upcoming July 26 meeting. The draft PROS plan provides a great framework for our parks and open space policies. The Parks staff, Parks and Rec Commission, and their consultants have taken the time to get it right. I'm completely satisfied with how the process has played out. The City has gone above and beyond to make sure everyone had an opportunity to give input. 18 months has been more than enough time to come up with this framework, and it leaves the door open for the community to tackle specific issues together later on down the road. I would really like to see this plan adopted so the Parks and Rec Department can move one, and get to work on the Barrett Community Center, which would be of great benefit to my family and children. Thank you, Ava Hristova	Ava Hristova
7/18/2022	Dear to whom it may concern: I live and own here in the Peninsula (San Mateo County) and an avid rider/fan of Waterdog for my mountain bike. I ride here on a weekly basis and really appreciate this beautiful resource. I vote respectfully to keep this trail system open for multi uses including mountain bikes. Thank you, Sung Chung	Sung Chung

7/18/2022	Please see my feedback below: Reserve narrow trails off limits to bikes, for hiker safety, peace and quiet. Close illegal trails; vandalism and thrill-riding should never be rewarded. Ban e-bikes from all trails except the wide Lake Road (for connectivity). Those unable to ride under their own power can hike like everyone else. Plus lithium batteries bring a fire hazard.	Saurin Shah
7/18/2022	I support all trails for everyone. Lived here 33 years overlooking the trail system (at Somerset Ct entrance). I watched the bikers and hikers carve out the trails and maintain them. Not sure why a certain group compares building the trails with graffiti and with selfish self-gain….that makes NO sense. The bikers and hikers put the trail system in for hikers and bikers who come from anywhere. There was never any question about this from day one. It was an effort for everyone, and I thanked them for their hard work and for helping us all. I didn't see the City pitching in money/help and now the City (or perhaps it is a group of "interested citizens") wants to dictate who uses the trails and exclude bikes from half the trails. Again, this was hard labor, maintenance labor, etc. by hikers and bikers. It helped far more than the individuals building those trails….if you are using the trails, thank those that built those trails! Bob Rush maintained the Crystal Springs Cross country trail for many many years. He was a coach and runner so do you call that being selfish? I don't. I used to run those trails and thanked him every time that I saw him. Not sure who the group is that is spreading a video of a rude cyclist. I thought that video misrepresented the way I experience bikers on the trail systems. Sure, a few inconsiderate bikers and HIKERS who don't share but most of the time I find that bikers wait for me as a 70-year-old hiker. And, as a slower hiker, I move out of the way for the faster hiker or biker when I have a clearing (not into poison oak). No one has ever forced me off the trail! Not once. I hear the bike brakes engaging and I look over my shoulder to check they are indeed stopping. They always do as they don't have the right of way and they know it. So, widen ALL the trails, increase the line of sight for all, and don't make "hiker only trails". And, enforce no hikers/bikers at night and no dogs off leash or on long leashes that trip hikers and impede cyclists as well. Sorry I cannot make the July 26th meeting. You may quote any of the above. Thank you! A concerned Citizen Karen Brunke	Karen Brunke
7/18/2022	I been riding the park or almost 25 years it is quite a jewel a of the Mid Peninsula. It is to only park I know of near metropolitan area that has quality single tracks . thanks	Tommy Kuo
7/18/2022	Hello, I'm a Belmont resident, and I would like to see the City Council adopt the PROS plan at its upcoming July 26 meeting. The draft PROS plan provides a great framework for our parks and open space policies. The Parks staff, Parks and Rec Commission, and their consultants have taken the time to get it right. I'm completely satisfied with how the process has played out. The City has gone above and beyond to make sure everyone has had an opportunity to give input. The 18 month timeline has been more than sufficient to develop this framework, and it leaves the door open for the community to tackle specific issues together later on down the road. I would really like to see this plan adopted so the Parks and Rec Department can move one, and get to work on the Barrett Community Center. It is a complete shame that a very small, selfish, group of homeowners with a NIMBY approach to the world are seeking to delay the process and potentially ruin the good use of our excellent Belmont outdoor space, despite data backing the proposed plan. I urge you to act on July 26th for the good of ALL Belmont residents, not a loud minority seeking to protect the interest of few. Thank you, Elisabeth Sargeant	Elisabeth Sargeant

7/19/2022	Dear Councilman Lieberman, When I saw this article in the Daily Journal https://www.smdailyjournal.com/news/local/belmont-to-discuss-parks-master-plan/article_ef4a6b76-0199-11ed-b960-c338f624b0c3.html my takeaway from it was that you're leaning towards delaying the plan to accommodate David Braunstein, Kristen Mercer, and a handful of other people in their small circle. I understand their position, I know they want to do anything they can to enshrine restrictions to open space access in the PROS plan. I am writing to respectfully ask you to consider (1) whether this is in the best interests of the community as a whole, and (2) whether aligning yourself with this group is a wise political move. But first, I want to address the implication in the article that the PROS process was somehow rushed at the end. It was not. Hundreds of pages of new documentation were not suddenly dropped on the public in the last three weeks. As Parks Director Shearer pointed out at the July 6 Parks & Recreation Commission meeting, nearly all of the information contained in the final draft has been part of the publicly available documents for more than a month, and in some cases, several months. Also, the individuals calling for delay are almost exclusively focused on the open space element. (Except for Mr. Braunstein, who consistently lobbies against any development of the fallow Hidden Canyon city park lot down the street from his house.) That open space element of the plan is 139 pages, and if you exclude the tables, it's only 87 pages - and within that 87 pages there are plenty of pictures and charts. I truly believe that adopting the PROS plan now is what's best for the community. The City's consultant WRA concluded that existing recreational use can continue on the existing mapped and unmapped trails without causing environmental harm. (By the way, the community has been using the two unmapped trails in Waterdog for years, and while WRA recommended improving stream crossings on one of them, it found neither trail has significant erosion, and found no justification for closing either of them.) The plan shouldn't be delayed - and the city shouldn't spend tens of thousands more in staff and consultant time to conduct many months' worth of meetings and focus groups so a handful of dissatisfied homeowners can keep beating a dead horse. Those individuals will never be satisfied unless and until they make the open space so exclusionary and unwelcome that it keeps their streets clear of park visitors. That is just never going to happen. And what would the ultimate result if the plan is modified for their desires? There will be a lot of Belmont voters who won't get to enjoy the open space as they have for the past 30 years, and they will be extremely unhappy about it. In exchange, a few affluent homeowners may get the marginal benefit of a small reduction in visitors to the open space next to their houses. The needs of the many should outweigh the needs of the few- especially when the "few" voluntarily chose to purchase homes knowing full well they were next to a popular community asset. When I read the quotes attributed to you in the Daily Journal that the PROS plan "needs more work," the public "[doesn't] feel the government is working for them" and we need to "clarify the policies," it sounded to me like a continuation of Mr. Braunstein and Ms. Mercer's quotes in the article, in an echo chamber completely detached from the PROS process I participated in. I'm sure you didn't intend it that way, but it also read to me like a slap in the face to the Parks and Recreation Commission and the Parks staff. I have been following this process closely and have either attended or watched nearly every meeting. The Commission and Department worked extremely hard, poured their hearts and souls in to the plan, and the process gave everyone more than enough opportunity to provide input. I think the plan is meticulous, amazingly well thought out, and provides a beautiful vision for our parks and open spaces over the next 15 years. I think it would be very disdainful to the hardworking commissioners and staff if the plan is sent back for a "do-over" just because it didn't give a few well-heeled and politically-connected constituents exactly what they wanted. I just don't understand what is vague about the plan. It's a framework, not a blueprint. The intent of the plan is not to resolve every disagreement between every member of the community about every use of every trail. Of course, City Council is the ultimate decisionmaker on the plan, and it has the prerogative to modify it. But allowing unelected political allies to dictate the process at the end is an affront to those of us who patiently participated in the process over the past 18 months. It feels like Lucy pulling away the football from Charlie Brown as he's about to kick it. It also sends the message that the council doesn't have confidence in the Parks Commissioners it appointed or Parks staff it hired. It's not a good look if council is willing to just toss aside the recommendations of the very staff and commissioners it entrusted with creating the plan if a few well-connected constituents don't like what it says. It makes Council look indecisive and ineffectual if it can't make a simple decision on a thoroughly-vetted plan that has already gone 6 months into overtime. When I read the article, it made me wonder, who's really in charge of our city, the current council, or members of prior councils?	Paul Sheng

7/19/2022 (con't)	During this process, the commissioners and staff had to endure what seemed to be, in my opinion, baseless accusations of misconduct, threats, abuse, and disrespect from the same crowd who are now demanding delay in adopting the plan. Don't take my world for it. Please watch the footage of P&R Commission's 7/6 meeting and fast forward to 105:57 for an example. https://belmont-ca.granicus.com/player/clip/818?view_id=1&redirect=true While the opponents to this plan conducted themselves, in my opinion, in a very reprehensible way, the Commissioners and Parks staff were very professional, kept their composure and focus, didn't take it personally, and took their substantive input into consideration when crafting the plan. The Commission created the plan based on comprehensively collected data, public input, and input from qualified experts, rather than emotions and unsubstantiated anecdotes. The Commissioners and Parks staff deserve to be congratulated, not denigrated. The people of Belmont are tired of hearing the same demands from the same handful of political operatives when it comes to the PROS plan and trail policies. While many Belmont residents are avid users of the open space, many are not. All of Belmont's residents, whether avid trail users or not, don't want to see this process dragged out any further, and we don't want pointless debates about the PROS plan sucking all of the oxygen out of the room. There's been talk of a pool and community center at Barrett Park for years now, and it seems like progress on that has come to a complete standstill. If you polled the entire city and asked "Would you rather have the Parks and Recreation Commission debate the PROS plan for another 6 months, or would you rather have it get to work on Barrett Community Center?" It's pretty clear what the result would be. Most of the individuals demanding delay are the same ones who made the wildly unpopular effort last year to have the Crystal Springs Cross Country Course's (CSCXC) permit revoked. Take a look back at this Nextdoor thread that started the whole controversy, and look at the outrage this sparked in the community: https://nextdoor.com/p/6m9z_N_b7LJg?utm_source=share&extras=MzI1NTM4Ng%3D%3D At the SMCCCD's 8/25/21 meeting on the CSCXC issue, there were 22 public speakers that made public comment against closing the course and/or limiting the number of events. By contrast, four public speakers, most of whom were BHCIA board members, spoke in favor of limiting access. (if you want to see it for yourself, go to https: /smccd.edu/boardoftrustees/meetings.php, click on the link for the 8/25/21 meeting part 1, and fast forward to 2:12:00. If you watch that video, go to 2:21:16 to see an impassioned comment by a Belmont Heights resident who gives an excellent breakdown of how the BHCIA board did not represent the views of the neighborhood. I was thankful when you, along with the rest of City Council, unanimously voted for a resolution in support of keeping the CSCXC course open. That course has strong parallels with Belmont's open space - both areas are very popular with the wider community, and there is no groundswell of support to restrict access to them. As you know, the San Mateo County Board of Supervisors subsequently passed a resolution in favor of preserving access to the course. The CSCXC issue and Pros Plan process have both shown us that the widely-held view of almost all voters in Belmont is this: we want to keep our open space recreational use policies basically the way they are. At every meeting, it's always the same half-dozen or less people who are demanding drastic changes to these policies. I know that Ms. Mercer, Ms. Bolbol, Mr. Cuviello, and Mr. Braunstein are politically connected and perhaps they can mobilize some votes in elections. But when it's so abundantly clear at this point that their desires are totally out of whack with what the community wants, I don't see the benefit of delaying the PROS plan to secure the support of that small voting bloc. When Mr. Cuviello ran for City Council in the 2020 election he lost, getting only 7.16% of the vote. When Ms. Bolbol ran for City Council in 2018, she lost by a wide margin as well. That tells you something - their platforms don't resonate with the vast majority of voters. I don't understand the logic of delaying the plan to cater to a group of people whose agenda is objectively out of step with just about the entire community. Also, following the outrage they sparked in connection with the CSCXC issue, the BHCIA has imploded. While the BHCIA may have been a political force to reckon with in the past, its board members went a bridge too far when they tried to get the CSCXC permit revoked. As a result, the Belmont Heights neighborhood woke up, realized what the BHCIA was doing in their name, and took action to put it to a stop. There are far more people who want to preserve recreational access than people who want to shut off access. I'm not saying that individuals with contrary viewpoints should be ignored or marginalized, they should absolutely be listened to. But when it's this clear-cut what the vast majority of the community wants, it doesn't seem fair to subsume the interests of the overwhelming majority of voters to a few politically-connected individuals. Thank you for taking the time to read my letter. The experience you bring to the council is a great asset, and I appreciate your thoughtful consideration of the issues when deciding whether to adopt or delay the plan. Sincerely, Paul Sheng	Paul Sheng

7/20/2022	To Whom It May Concern, This is to address some of the serious problems caused by the bikers at the Waterdog area. The bikers on Soho Trail behind the backyards of 5 Soho Circle and 10 Soho Circle, are creating disturbances to the homeowners of the above addresses! These homeowners constantly hear noises which have taken away the peace from them. They pay their property taxes, and they deserve the tranquility at where they live! In addition, some of the bikers use Ebikes which are operated with lithium battery. According to an Apple engineer it could cause fire, especially in this dry season! We don't want to have any fire to burn down houses!!! Furthermore, there are too many bikers on those narrow trails. Injuries can occur! A Belmont resident got injured with broken bones! She is still on pain medication. We don't want to see this happen again! Therefore, let's be considerate and wise not to let any disaster happen! Close those illegal trails to prevent noises at the backyards of some homeowners as well as to protect the City of Belmont from fire risk, and our residents from any injury! Your attention to these issues are greatly appreciated! Sincerely, Bessie Ip	Bessie Ip
7/20/2022	To the members of the Belmont City Council, We recently received an email notifying residents that once again, Belmont has a plan that caters to non-residents to the detriment of the homeowners and tax payers in our city. This time, it's the mountain bikers who have been making it very difficult and dangerous for residents to be on the trails in the Water Dog open space. On top of that, We've seen first-hand the trails, jumps and berms that have been illegally cut through the open space and experienced the dangerous way that mountain bikers have been making it virtually impossible to enjoy the trails in the open space that our taxes support. On top of that, the fact that the arrogant and dismissive attitude of mountain bikers and their organizations have for the residents of the area is not being addressed by our own city council is very disappointing. We have also seen first-hand mountain bikers carrying tools and building materials from their vehicles to build illegal trails. We have also seen mountain bikers on the cross country trail several times where it's clearly marked that bikes are not allowed. When confronted, their attitude is to be angry that the residents and tax payers are trying to stop them from destroying our open space. We urge you to reject the proposed Open Space Management Plan in its current form and instead develop a plan in collaboration with residents, homeowners and tax payers of our city instead of a special interest group who is actively destroying our open space at the expense of our environment and residents. The City Council and the City government also need to take definitive action aimed at removing the illegal trails that are damaging the environment and destroying the open space. Action on this issue is long overdue and it's bewildering how long this has gone unresolved. Sincerely, Lester Boeh	Lester Boeh

7/20/2022	Dear Belmont City Council, I am writing to urge you to adopt the Parks, Recreation, and Open Space Master Plan. This plan is the result of over a year's study and research by a qualified professionals. It reflects both the usage of the park and open spaces and high qualify environmental analysis. As a visitor a few times a year to ride bicycles in the Waterdog area, I have been impressed by the city's welcome to the multiple types of users. It sets it above many other cities in the area. The process was thorough and well executed. I reviewed the plans and attended one of the open houses. As a long time trail maintainer and observer of on other systems, I see the general qualify and opportunities to improve the trails and habitat, which the report covers well. Please approve the plan which keeps this gem of a system open to the current users and will improve it. It is well loved and used largely by the close neighbors and an asset to the City of Belmont. Thank you, Matthew Blain	Matthew Blain
7/20/2022	I am writing today in support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation and am happy to see the approach the city has taken with this plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space *Continued unlimited access for Class 1 e-bike* Thank you, Nicolas Olivares	Nicolas Olivares
7/20/2022	Dear City Council and Parks & Rec, I'm writing to request that you provide adequate time to assess the PROS plan that is up for vote tonight. I understand that this is a significant proposal that will have impact for decades to come, and it feels like the decision is being rushed with not enough time to make an informed decision. Given the very recent availability of the very long proposal, the community members have not been given nearly enough time to read it and share their thoughts and concerns with the decisionmakers. I'm deeply concerned about the safety aspect. I am a homeowner on Carlmont Drive, and I live very close to the open space. I purchased my home 8 years ago and expected that my small children would have a safe place here to ride their bikes on the street and hike peacefully on the trails. Instead, I'm too afraid to allow them to do these things due to the traffic and the fast bike riders on many of the trails. I understand that the proposal may bring an increase to traffic and may encourage more dangerous use of trails -- and I would like to see those concerns addressed. Thank you, Sherry Johnson	Sherry Johnson

DATE	COMMENT	COMMENTER
7/22/2022	Dear Belmont City Council members, As a resident of Belmont ([REMOVED]) and a frequent visitor (2x to 3x per week) to the Waterdog open space, I would like to express my sincere and strong support for the Open Space Master Plan (PROS plan) that was presented by the Parks & Recreation department (and their outside consultants) to the City Council at your last meeting. Before I begin to discuss why I support the open space plan, I'll share some of my stats. I'm a 58 year old male who has used running as a form of recreation and exercise and who has been riding mountain bikes in the Bay Area for the past 20 years. I've run the NYC marathon 5 times and the LA marathon 1 time, so I suppose it's more than just a hobby. I'm a college educated professional with a Master's degree in Curriculum & Instructions (I taught high school mathematics in Wisconsin for 10 years) and have an MBA (currently work in finance at a cyber security company based in Sunnyvale). I've lived in Belmont for over 3 years and have been a frequent visitor to the Waterdog open space over the past 20 years. During this time, I've been a hiker, runner and mountain biker on the fire roads and single track trails. I've seen numerous junior high and high school kids riding the trails. It is great to see these kids choosing a recreational option that is something they will be able to do well into their 60s (I'm hoping even later for me :-) while also having a group experience. It's been great to see. I've also had the opportunity to ride with a group of guys all in the 70s. I'd like to address some of the concerns that others have expressed in opposition to the Open Space Master Plan as it relates to the riding of mountain bikes in Waterdog. The bikes are scaring away the wildlife: In the past month, I've seen multiple deer grazing on the side of the trails, had a fawn run up a fireroad some 20 feet in front of me (we were both very surprised to see each other), had a baby quail literally run between the two wheels on my bike (again, we were both very surprised by this) and have seen numerous cottontail rabbits, quail and lizards (if that is what they are) dart across the trail. Earlier in the year, my friends and I came across a rattlesnake in the sun at the top of the 18 switchbacks, fortunately the snake moved on without any issues. Speed. Technology these days can tell us a lot of things. My normal ride is 8 miles. Over the course of these miles I climb 1,300 feet. I find the challenge to be a great workout. One of the concerns being expressed is excessive speed by mountain bikers. I'd like to point out a couple of things. First, according to my garmin watch, my average moving speed during my 8 mile ride is 6 mph. The single track trials are very windy, which reduces speed and the hills...well, they are steep in several places, again reducing speed. Second, I am able to ride faster on the fire roads, taking into account other traffic (hikers, bikers and other mountain bikers). The opposition is asking that the mountain bikes be only allowed to ride the fire roads, but that is where bikes would be going the fastest...not to mention, the variety is in the single tracks. Other users. I encounter other users of the park every time I'm in the park on my mountain bike. All users have been very courteous and careful to respect each other. I follow the rules of engagement, which is that bikers yield to hikers and runners and downhill riders yield to uphill riders. I've never had an incident or even a complaint leveled at me. The only issue I've ever had has been a hiker with a german sheppard. This dog is terrified of bikes and has tried to attack me a few times.I don't see this as the dog's fault, but the fault of the dog's owner who knows of their dog's fear of bikes. Fortunately, I was never injured and it's been a while since I've seen the woman and her dog on the trails. All bikes should be banned because I had an incident. Although the inconsiderate ones are very few, I'm sure something has happened along the way. That said, there are also very bad drivers on the freeways and streets of Belmont, and yet we do not ban all cars. I see no difference here. All parties can co-exist on the Waterdog trails if proper etiquette is followed, don't blame everyone for the bad behavior of a very small minority. Given the years and years of riding that has been happening on Waterdog's trails, I would like to see a police (or maybe it's fire) department report of the number of reported injuries/collisions within the park that has occurred due to an encounter with a mountain bike. I've not heard of any, but if the data exists, it would be good to know I attended several of the virtual meetings that were held by the Parks & Recreation department over the past 18 months. I believe the work that was done by P&R and their outside consultants was very complete and they heard from the public (including the opposition) several times during the process. The same people who have stated that they only just learned about the plans or haven't been able to express their concerns have been speaking at these public meetings. I've enjoyed the trail variety, the vertical nature of the park, and the uniqueness of this great recreational areas surrounded by the Belmont community. Waterdog has been successfully managed as a mutli-use trail system for decades.This special park should continue to be available for all users who have been able to co-exist within the ecosystem of the park. Thanks for your time and I welcome any questions. Regards, Peter	Peter Salkowski

DATE	COMMENT	COMMENTER
7/24/2022	Dear City Council and PROS Committee, I am a long-time Belmont resident, and I would like to see City Council adopt the PROS plan at an upcoming meeting. I understand the July 26 meeting agenda item has been deferred again which is unfortunate. A plan delayed is a plan denied. The draft PROS plan provides a great framework for our parks and open space policies. The Parks staff, Parks and Rec Commission, and their consultants have taken the time to get it right with many meetings, community input opportunity, and professional advisement. I am completely satisfied with how the process has played out. The City has gone above and beyond to make sure everyone had an opportunity to give input. 18 months has been more than enough time to come up with this framework, and it leaves the door open for the community to tackle specific issues together later on down the road. I would really like to see this plan adopted so the Parks and Rec Department can move on, and get to work on the Barrett Community Center and other pressing priorities. Brian Bishop	Brian Bishop
7/22/2022	Dear City Council and Parks and Rec Commissioners, I have attended every P&R and PROS meeting regarding the OSMP for the past 2 years and my observations should be of interest to all of you elected officials that represent us. The Developed Park Specific plans were discussed thoroughly and in depth with focus groups that involved each community for the past 18 months (kudos where kudos are due). For the past 18 months, I have participated in some of the Park Specific plans including my own Hallmark Park where the major resident theme was clearly: Let the NATURAL beauty flourish with the least amount of development and man-made amenities added to our local parks. However, the Open Space portion of the OSMP was crammed into a very short process (3 months) with an appearance of attempting to sweep the illegal issues that have dominated our Open Space for the past 30+ years under the rug yet again. I patiently waited 15 months for the outsourced OSMP consultants' reports that were finally hurriedly presented in March, 2022 with no specifics. At that time the WRA assessment was not even available, and the PROS advisory meeting had nothing to review. I subsequently sent several emails to all the P&R entities contradicting their vague and incomplete assessments. I commented on them at every public comment meeting after the March 5 initial assessment, obviously to no avail, because when the 136 page Final draft was released on July 6, I realized that no comments were incorporated – the draft was exactly as the original. I could see that P&R commissioners struggled at the July 6 meeting to approve this plan, most of them not having read it entirely. They finally approved sending this incomplete and inaccurate outsourced plan with vague "amendment recommendations" to CC on July 12. I am coming to you, City Council with the same issues I diligently presented to the entire PR team. You are the ultimate authority for the City of Belmont to argue against the powerful biker lobby (mostly non residents) that have illegally taken over Waterdog for the past 20+ years by their own admission; bikers being allowed on ALL trails instead of the multi-use designated trails as designated in the 1992 plan (https://www.waterdogpreserve.org/city-policies-ignored-1), bikers being allowed to build illegal trails anywhere in the Open Space with no City authorization or geological safety trail assessments (https://www.waterdogpreserve.org/brooks-contract-violated) and bikers illegally using E-bikes already on Waterdog trails for many years (https://www.waterdogpreserve.org/ebike-speeding). Nearly 2 years ago,I personally presented my carefully researched John Brooks Preserve PP to Brigitte to highlight the illegal Soho trail violations including violations of the 1977 donation contract to the City. At that time, Brigitte told me, she was the "new sheriff in town" which gave me hope because all this illegal activity was done before her watch. But to date, none of the three issues I mentioned above have been properly addressed and in particular, this illegal trail in the JB Preserve is audaciously being considered as a one way downhill slalom bike trail.	Jennifer Lien

7/22/2022 (con't)	I always use my precious 2-3 minute public comment time to address the relevant concerns and issues while bikers use their time to continually reiterate the same obsequious comments arguing that ALL trails should be multi-use; never even considering the safety, habitat and environmental damages that have occurred from their constant use. Two of the leading local biker advocates (Thaddeus Block & Kevin Sullivan) were actually Belmont Park and Rec commissioners during the time when all this illegal activity occurred. Ad nauseam, they repeat that because they help maintain the trails, they should have access to ALL trails. They fail to mention that they have been the ones building all the illegal trails for their own enjoyment and entertainment because no other local parks allow it. (This begs another question; why is Belmont one of only 2 Open Spaces in the entire Peninsula allowing it?) How is volunteering to clean up the trails they damaged and building illegal trails without authorization justify their reasoning? One of my neighbors even asked if " Belmont gets kickbacks from outsiders"! As elected representatives to our City of Belmont, we residents expect you to address taxpayers' concerns and issues before catering to the powerful non-resident biking lobby. Contrary to biker "fake news", residents do not want to ban bikes from Waterdog and residents do agree with equitable use for all and inclusiveness from all over the Bay Area. But the pendulum has swung too far in the wrong direction and now residents need safety on narrow trails for hikers only, residents need illegal trails such as Soho trail (Labor of Love) closed and E-bikes banned except on Lake road for transit connectivity. In a time where citizens have the lowest confidence in our government, now is the time for you as elected officials of Belmont to step up, spend the time on the proper process and address these important issues to regain credibility and transparency among your constituents. I trust you will. Jennifer Lien P. S. I have just received notification that the OSMP discussion will be delayed until September. This will allow you time to properly craft a Master Plan that takes community resident feedback into consideration. I urge you to keep this email in mind when you restart the process in early September. Thank you.	Jennifer Lien
7/25/2022	Pedestrians taking evasive action to avoid collision with cyclists on Waterdog Berry Path. Waterdog Open Space Plan (OSMP) (These remarks pertain to to the John Brooks Trail and not necessarily to the Waterdog Lake Road Trail. However, it is evident that any plans that include all trails must be complex and not rushed.) Having lived for 44 years in my house on Wakefield Drive bordered by the upper John Brooks Trail, I have observed our serene source of direct communication with the wonders of Nature devolve into a sometimes disturbing conflict between strollers or joggers with one or more bicyclists vying for a position on the trail, especially on narrow or 'blind' portions of the path. I have fond memories of strolling walkers, some with young children or animals in tow, without the interruption of competing bicyclists or occasional powered bicycles. Lately, I see or hear conflicts between hikers and bicyclists because two objects cannot occupy the same space at the same time. Currently, the strollers, children and animals (sometimes perilously) are required to step off the trail to allow the bicyclists to pass. Having trained locally for 6 months to walk in the Anchorage Midnight Sun 26.2-mile marathon in the past, I am familiar with most local trails—some can easily and safely accommodate hikers, joggers and bicyclists, some cannot safely. For example, the nearby six-mile paved Sawyer Camp Trail was designed and built to safely allow foot and bike traffic, the John Brooks Trail, mostly dirt along perilous precipices, was designed for walking or jogging, not to commingle both foot and bicycle traffic. I urge you not to despoil our precious Water Dog John Brooks Trail and nature preserve (designed for us as our access to immerse ourselves in the wonders of Mother Nature) by designing it to also become a bicycle path in opposition to its original intention by our wise City officials 50 years ago. Perhaps the bicyclists can use the Waterdog Lake Road Trail or the Sawyer Camp Trail, nearby and designed for multi-use. Both of these alternatives are safer for our citizens and minimize costly civil damage claims. Thank you, Joseph A. Brennan	Joe Brennan

8/30/2022	Dear City Officials, Belmont residents are losing the faith and trust in our local government. Please review the short PDF and embedded video link to understand why. Jennifer and Ken Lien	Jennifer and Ken Lien
9/6/2022	Hi Brigitte, Yesterday, I went for a ride before the heat of the day and snapped the following image… Thanks for everything you and your team does to maintain and protect our open spaces. Cheers! Eli	Eli Latimerlo
9/7/2022	Dear P&R Commission and Director Shearer, Thanks for the informative update on the PROS process at tonight's meeting. I almost raised my hand to speak, but I think you all deserve a little break from the exhaustive public comments you received at meetings over the past two years. I think you should all be proud of both the plan and the transparent process that led to it. By setting up the PROS website, doing the survey, and going through the exhaustive process of holding 35+ commission and committee meetings / focus groups. You went above and beyond to ensure the public had plenty of opportunities to be heard. The consultants have prepared an extremely well thought out plan, and the public has had ample time to read and digest it. I'm completely satisfied that you listened to and considered everything the public had to say. I especially appreciated having the opportunity to have two-way interaction with city staff and the consultant team at the open house event. The way you conducted the process is a testament to your diligence and out-of-the-box thinking. Our city is fortunate to have such a dedicated and insightful Parks and Rec Commission. Environmental review is an arduous process, and I'm sure the plan is in the good hands of the City Attorney and appropriate consultants/experts to ensure the plan is in full compliance with all of the complex environmental laws and regulations. Now that the plan is off to the experts and then Council for decision, I'm glad this will free up the Commission to focus on other important Parks and Recreation business. Given the weather lately, I think the public would like to see the community pool at Barrett be put at the top of the agenda! Best regards, Paul Sheng	Paul Sheng

9/9/2022	Submitting copy of this comment and study directly to PROS for the administrative record. Kristin Mercer Dear City Council, At the outset of the Parks Master Plan project residents were promised benchmarking of policies and best practices of neighboring Open Space areas. WRA did not deliver. Instead they provided half a page citing cherry-picked examples, and misrepresented those as comparable to Waterdog-San Juan Open Space. They are not. San Carlos Big Canyon supports their high trail density by banning bikes; their trails are less impacted and in far better condition than Belmont's. San Mateo's Sugarloaf allows bikes on service roads only. MidPen's Corte de Madera is eight times the size and 1/3 the trail density, with full-time rangers and a huge budget to combat mountain bike impacts, and they ban e-bikes explicitly to limit mountain-biking reach and impacts. WRA then went on to invent a new and meaningless statistic of "trail area", without justifying its relevance or providing any benchmark for the statistic. The correct benchmark, trail density, is widely recognized by the ecological community as a gauge for habitat fragmentation. Dozens of authoritative studies suggest that high trail density fragments habitat beyond its capacity to functionally sustain wildlife. It defies credibility that WRA is not aware of this body of knowledge. WRA's deception should not be legitimized in Belmont's Master Plan documents. The attached survey of every Open Space area in the entire San Mateo region (Trail Use Policy Benchmarking) tells the whole story. I shared this study with Parks staff and Commission in 2020, but now I have incorporated San Juan Canyon data, confirmed/updated all data, and expanded upon the analysis. I ask that Council direct Staff and Park Commission to revisit the Draft Open Space Plan to: Remove WRA's misleading, irrelevant and flawed statements, and Provide a data-based policy discussion, utilizing meaningful and valid benchmarks such as those in this survey. Belmont residents deserve honesty and transparency in City policy-making. Thank you, Kristin Mercer Attached are also 3 publications cited in the study and the 4th can be downloaded at this link https://www.srs.fs.usda.gov/pubs/61721	Kristin Mercer
9/9/2022	Submitting copy of this email and study directly to PROS for the administrative record. Kristin Mercer Dear Council, Early one spring morning in 2020 I was walking Lake Loop trail and spotted a lizard sunning himself on the trail. A mountain biker approached from behind, rang his bell and passed at a reasonable speed. But as he did he ran over and squished the lizard, right before of my eyes. That biker was not even aware that he killed a living creature, and if you asked him he would likely claim that he has never done any harm riding our trails. His perception is not accurate. For 20 years City officials have clung to the perception that the sport of mountain biking is "passive recreation." That perception is not accurate. In fact, we have a preponderance of evidence demonstrating that the sport of mountain biking (MTB) is not passive. Since the General Plan requires that "open spaces should include more passive uses" the sport of MTB is inconsistent with our General Plan. Bicycling can be practiced in a passive manner when riding the levies of the bay trail or paved level paths of Sawyer Camp trail. But the sport of mountain biking (MTB) is a different class than passive bicycling. MTB is marketed and practiced in Waterdog Open Space as a fast, rugged, skilled and competitive sport. MTB employs highly specialized, technically advanced equipment and gear. Participants seek specialized tracks with technical challenges, and disdain "sanitized" trails designed for sustainability and hiker safety. MTB as it is practiced on Belmont Open Space trails is an active sport, and is not consistent with the General Plan intent of passive use. Attached please find the arguments and extensive evidentiary record supporting this assertion. Due to file size limitations, attachments will be sent in a series of 3 emails with subject lines accordingly. Thank you Kristin Mercer	Kristin Mercer

9/22/2022	Dear City Council and Parks Commissioners The 2021 community PROS survey was intended to inform city policies for the new PROS Master Plan. Sadly, the survey methodology was flawed and the questions were generalized, thus yielding data of questionable use. More importantly, the process was hijacked by thousands of non-residents attempting to impose their demands upon Belmont residents. Upon introduction of the PROS survey at least one city official solicited non-resident participation by circulating the survey link via mountain-biking activist groups with a regional social media reach. As a result, 53% of respondents admitted being non-resident. Further the number claiming residency was inflated, suggesting additional falsified responses. What a shame; City credibility has been undermined and resident trust in the process dissolved. I know this council stresses the need for a planning perspective of regional cooperation. However ceding decisions about our priorities for Belmont’s Open Space and the use of Belmont taxpayer funds crosses the line. Yes, we consider the suggestions of those visiting our home, but it’s OUR home and we get to make the rules. Our guests don’t tell us how to spend our money and what amenities to provide. The public PROS discussion of the priorities for our Open Spaces has brought to mind the film Parasite. I appreciate the City’s’ disclosure of the raw survey data. I took a deep dive into Excel, and the attached paper highlights some of my findings. In short, I find that the inherent survey flaws make any interpretation of the data suspect. Only meta-trends can be regarded as reliable, and even then you should seek to validate such findings by comparison with other reputable sources. For example, three reputable survey sources- regional, state and national –confirm the finding that hikers and nature seekers far outnumber those seeking the active sport of mountain biking. If referenced in recommendations, the inherent survey bias should be transparently disclosed in the documents. Planners should be cautioned against basing important policy decisions on flawed and biased findings. Kristin Mercer	Kristin Mercer
9/22/2022	Dear City Council and Park Commissioners, Everywhere I look is evidence that other cities and agencies prioritize sustainability and visitor safety over the sport of MTB. This 37-slide Sierra Club presentation was shown at a public hearing of the East Bay Regional Parks District in 2021. The District affirmed their policy: “Bikes are allowed on most multi-use (wide) trails and prohibited on most narrow trails of allowing bikes on service roads only, not single track trails.” https://www.ebparks.org/recreation/biking If the public was allowed to see this presentation – if Belmont residents understood what’s really going on in the canyon trails – they would overwhelmingly support regulation (not banning, just limiting to wide trails!) When Belmont banned smoking it took courage to be the leader. In Open Space management Belmont is the laggard. It is not a controversial decision to follow best practices of every other open space district in the region. Thank you, Kristin Mercer	Kristin Mercer

DATE	COMMENT	COMMENTER
9/23/2022	Dear City Council and Park Commissioners, Over the past 2 years residents who have been displaced from Waterdog trails have submitted hundreds of pages of scientific and government research and policies supporting every aspect of our position. Some of it's posted on www.waterdogperserve.org. The Commission was presented with all this evidence but chose to ignore General Plan policy* and "best practices" of every other open space steward. Faced with thousands of MTB activists, resident voices were lost in the din. Regulating the sport makes sense from every single angle: General Plan conformance, environment, safety, social equity, fiscal, staff resources, legal liability, climate change and more. There is no MTB argument that holds up to scrutiny in the face of the facts. Attached is a summary of 10 facts and arguments that all support regulation (NOT ban) of the sport of MTB on our trails. I have extensive research material supporting each topic if you are interested. These are followed by 4 policies that would begin to address the inequitable and unsustainable status of our Open Spaces. I ask that the Commission be directed to return with a Master Plan that conforms with the General Plan by incorporating these 4 policies. * General Plan Action 4.4-5a: Ensure that the updated Parks, Recreation, and Open Space Master Plan includes: • Identification and implementation strategies for trail maintenance and design standards for trails through open space lands. • Measures to improve the visual quality and safety of trails and bikeways. • Identification trails that are no longer necessary or are causing resource damage such as erosion and implementation strategies to remove them. Thank you, Kristin Mercer	Kristin Mercer
9/30/2022	As long time hikers on the Water Dog trails, my wife and I would like to make our views known on what we feel is an equitable solution to the controversy over the past 2+ years concerning use by hikers and bikers. We believe it is impossible to satisfy everyone on this matter as bikers want all trails to be multi-use and hikers are against this. Hikers know that bikers create unsafe conditions as many speed on the trails and around the blind curves plus endanger walkers and hikers as many of the trails are too narrow for a biker and hikers to pass safely. One party has to get off the trail to pass, often in poison oak. Environmentalists have noted the damage to tree roots, erosion and worn down trails from bike tires, scaring off of wildlife previously inhabiting the open space. E bikes have made the trails more unsafe as they can speed up to 28 MPH on level ground and at higher speed on hills. They are also heavier, 45-50 lbs. and do greater damage to the trails. Bikers have also created illegal and unauthorized trails and these should be closed(Soho and Riparian). My wife and I believe it is extremely important that Belmont City officials(City Council and Park Department) create a Master Plan which is designed to protect, preserve and maintain the Water Dog Open Space as a natural habitat for future generations but that does allow for users to enjoy it in a fair and equitable way. Call it a compromise but why not designate the following trails for hikers only: Berry Trail Chapparral Canyon creek Lake Loop Ohlone Rambler All other trails can be open, multi-use trails. Lake Road would be multi-use and be the only trail which would allow E bikes. We believe this is a fair compromise which provides all users with safe and fun enjoyment of the beautiful Open Space. Thank you for your consideration. Bob and Pamela Stahl	Bob and Pamela Stahl

9/30/2022	Dear City Officials, Increasing misinformation and myths surrounding the Open Space hiker-biker debate continues to circulate in newspapers, on social media and biker blogs. This FAQ slideshow attempts to succinctly clarify the misconceptions and correct the inaccuracies regarding this contentious issue. As you assess trail use solutions in the new OSMP, please take the time to review these crucial issues of hiker-biker conflicts. This is a very important concern for many Belmont residents. Thank you for your attention. Jennifer Lien	Jennifer Lien
10/11/2022	Dear CC members and P&R commissioners, I found this important and informative video that should interest the City regarding proper and sustainable trail design that I believe should be incorporated in our new Open Space Master Plan. Coming from an engineering background, I value and appreciate the importance of thoughtful trail design for sustainability and to minimize future maintenance costs. This smart and refreshing approach should be applied to all of the open space trails in Belmont. I hope you will take the time to review this quick 5-minute video, and think about how it applies to our Waterdog trails. Our trails are mostly designed by mountain bikers based on their own criteria for speed and challenge for the past 25 years, and they don't contribute to sustainability and safety. Watch this trail design video explained by Vox: https://youtu.be/cFIdIVngeYA Thank you for taking this issue into consideration. Ken Lien	Ken Lien
10/26/2022	Dear Director Shearer and City Manager Oskoui. Subject: Belmont's Draft PROS Master Plan 2022-06-28 and OSMP 2022-06-24 WaterdogPreserve.org was created by a group of Belmont residents concerned about the declining health and safety of Belmont's Open Space. The San Francisco Peninsula is part of one of 36 global biodiversity hot-spots; defined as a biogeographic region with significant levels of biodiversity that is threatened by human habitation[1] . Preservation of earth's natural diversity is critical not just for plants and wildlife but for human health and well-being. Waterdog is one of the few remaining natural places in urbanized Belmont, but its functional ecological balance is impaired and visitor safety is threatened by poor maintenance and failure to adhere to adopted trail-use policies. The PROS Master Plan presents a unique opportunity for the City to correct this unsustainable path and restore a disciplined balance between recreation and conservation. We herein submit comments on the Draft PROS Master Plan dated 6/28/2022. Respectfully, Concerned Community Representatives of WaterdogPreserve.org Bob Beaulieu, Pat Braunstein, Joe Brennan, Corrine Cho-Beaulieu, Ray and Pauline Chau, Chris Collins, Coralin Feierbach, Laurent and Dana Gharda, Mimi Iversen, Bill Kurtz, Jennifer and Ken Lien, Kristin Mercer, Seid Alireza Razavi Majomard, Pam Rianda, Carol Rossi, Jeanette Sacco Belli, Sarah Sharafkandi, Michelle Speert, Bob and Pamela Stahl Cc: Scott Rennie, Belmont City Attorney Belmont City Council Belmont Parks Commission Gates + Associates (info@belmontprosplan.com) WRA Environmental Consultants [1] Center for Biological Diversity https://www.biologicaldiversity.org/about/contact/	Preserve WaterDog

11/10/2022	November 10, 2022 Brigitte Shearer, Director Department of Parks and Recreation 2 Twin Pines Lane Belmont, CA 94002 RE: Comments on Belmont PROS Plan Final Draft dated 06-28-2022 Dear Director Shearer, Sierra Club appreciates the opportunity to comment on the Belmont PROS Plan Final Draft dated June 28, 2022 and associated Open Space Management Plan. Our comments in the attached letter address those sections of the documents concerning Open Space policies. California is world renowned for its biological diversity and its unique plant and animal species. Approximately 40 of the state's 770 native wildlife species and about 2,100 of its 6,300 plant species are found nowhere else. Our region is one of the world's 25 biological hot spots, places of greatest biodiversity and greatest threat. Belmont's new PROS Open Space Master Plan offers an opportunity for Belmont to contribute to Federal, State and local goals to conserve these valuable biodiversity hotspots. Sierra Club endorses the comments of the WaterdogPreserve.org letter "Requirements for Belmont's Open Space Master Plan" dated October 26, 2022 (also attached with this letter). Thank you for your consideration. Respectfully Yours, Gladwyn d'Souza Conservation Committee Chair Sierra Club Loma Prieta Chapter Cc: James Eggers Executive Director Sierra Club Loma Prieta Chapter Sent by: Barbara Kelsey	Barbara Kelsey

DATE	COMMENT	COMMENTER
12/13/2022	Dear Director Shearer and Commissioners, The good news is Belmont received 3 inches of rain between Friday and Sunday morning (Dec 9-11). The bad news is the mountain bikers were out just hours after the last cloudburst to ride the open space trails in the mud. Attached is a video of six bikers entering Hidden Canyon at the unapproved Hallmark Parklet entrance on Sunday. This video illustrates two issues the City has failed to address: 1. Damage to muddy trails. Rain can be damaging to trails, but it's the rutting from wheels and traffic on muddy trails that really exacerbates drainage and erosion problems. Even mountain bikers denounce use of muddy trails, yet bikers are always the first ones on the trails following a heavy rain. In the video you can see the 5th biker slips and falls midway down this steep and slippery trail. At the bottom of the trail you can see the large puddle and generally muddy condition of the trails, as you would expect after prolonged rain. While the City discourages use of wet trails, Belmont has no clear or enforceable trail protection policy. Many open space agencies routinely close wet trails; some automatically, and others unilaterally by ranger judgment. Arastradero has pre-identified "seasonal" trails that are automatically closed following only 0.5" of rain and not reopened until after 48 hours of no rain(1). It's time for the Commission to establish a clear, practical and enforceable policy to close trails in muddy conditions. 2. Unauthorized trailheads. The trail shown in the video is not an approved trailhead, but large groups of bikers enter here, including night-riders entering after dark. In response, the City recently installed a log barrier, which only led the bikers to create a new trail around the adjacent tree, or to ride straight down the hill from the other end where no logs were placed. Additional logs might be needed to prevent increasing damages. In addition, signs such as those placed elsewhere indicating "Not a designated trail" or "closed for restoration – Do Not Enter" may be another way to alert users that this entrance is illegal. This location is just one of at least 6 unapproved open space access points. The uncontrolled access to trails sends a message that our open spaces are not valued enough to warrant respect and protection, and that illegal activities are not enforced. Residents want our Commission to assert control of our open spaces by adopting clear and enforceable laws against night-riding and entering through unauthorized trailheads. It is the role of the Parks Commission to deliberate and recommend policies for the protection of our open space. Thank you, Kristin Mercer (1) https://www.cityofpaloalto.org/News-Articles/Community-Services/Pearson-Arastradero-Preserve-Seasonal-Trails-Closed Arastradero Seasonal Trail Closures Published on November 28, 2022 All seasonal trails are CLOSED. Seasonal trails are Bowl Loop, Woodland Star, Woodrat, Wild Rye and the western part of Meadowlark. All other trails remain open year-round. For daily trail condition updates, please check the bulletin board in the preserve parking lot, or call the ranger office in Foothills Park at (650) 329-2423 to ask for the latest trail conditions in Pearson-Arastradero Preserve. How We Decide to Close Trails: We close the seasonal trails if rainfall exceeds 0.5 inches over 48 hours, or exceeds 1 inch within 7 days. Rainfall is measured in Foothills Park, near the headwaters of Arastradero Creek. Visit the Creek Monitor page to see the rainfall gauge that decisions are based on (note that the 24-hour total is a trailing total). How We Decide to Open the Trails: At the earliest, trails are evaluated after 48 hours of no rain. They are reopened only when dry. Which Trails are Subject to Seasonal Closure: In general the trails in the higher elevations on the western side of the preserve are the seasonal trails, plus Wildrye Trail in the lower part of the preserve. On the Pearson-Arastradero Preserve Trail Map(PDF, 288KB), the trails shown as dashed lines are the seasonal trails, with the exception of Bay Laurel which is now a year-round trail.	Kristin Mercer

1/3/2023	Hi Brigitte, The heavy rains this week led to multiple mudslides and flooding, and it's quite obvious that the open space trails are dangerous in these wet conditions. Further, even bikers acknowledge that they should not be riding on muddy trails as it damages the surface and leads to channeling of water that further erodes trails. Yet by noon on Sunday - 12 hours after record rains and flooding - the bikers were back in number, entering the trail system at the Hallmark Parklet – an unauthorized entrance. 2 weeks ago I sent video of numerous bikers entering via this unauthorized trail and even falling on the steep and muddy surface. On Sunday Jan 1 – hours after flooding and landslides, I took this video and photo of a parent who dropped off a teen to ride alone, knowing the trails were flooded and in places simply gone. Many others entered throughout the day. The fact that the City posted trail closure at other sanctioned entrances only drove bikers (no hikers) to this unsanctioned entrance in larger numbers. The lack of clear policy and enforcement is damaging our trails and endangering the public. We are in for two more rain events this week. I strongly urge the City to adopt a clear and enforceable policy immediately and to close trails at ALL entrances including the unsanctioned ones. Thank you, Kristin Mercer	Kristin Mercer
1/3/2023	I'm pleased to hear that. However there is no indication of that at the numerous unsanctioned entrances. I addition to the 7 sanctioned trail entrances to Waterdog/Hidden Canyon but I can point to at least 4 others. Thanks, Kristin	Kristin Mercer
2/28/2023	Palo Alto backs e-bike ban on Baylands trails | News | Palo Alto Online | Please see the ban on e-bikes instituted on the Baylands trails. I certainly hope that Belmont will also have this policy for the Water Dog Open Space Preserve. Thank you, Bob Stahl https://www.paloaltoonline.com/news/2023/02/28/palo-alto-backs-e-bike-ban-on-baylands-trails?utm_source=express-2023-02-28&utm_medium=email&utm_campaign=express	Bob Stahl
4/6/2023	Dear Park Commissioners, I watched Director Shearer's April 5 report of trail damages in Hidden Canyon with great interest, but no surprise. The areas where these trails failed were identified as unstable in the 1980's, mapped by a professional geologist, and documented in the 1990 Western Hills Area Plan (maps attached; click this link for the full Western Hills Area Plan). These failures were predictable because these trail segments were built across known active or potential debris flows. The first Waterdog trail system was designed by an engineer and approved by the City Council in 1999, based on the Western Hills study and the mapped geo-instabilities. His map did not include the 2 sections of Rambler trail that are now failing. These sections were built by "volunteers" without engineering study and with little understanding of the potential hazards. In fact this is not the first failure of Rambler in those unplanned sections. Rambler east had a significant slide (Rambler failure#1 attached) not long after it was built. The improvised "bridge" on Rambler west was necessitated by an erosion culvert that grows yearly; that culvert was not there when the trail was built. The slippage reported on Finch trail was predicted too; in 2021 I shared the attached photo of the sink-holes appearing on Finch where excessive brush clearance had increased erosion. The simple fact is these trail sections never should have been there to begin with. I have repeatedly implored the Commission to respect the Western Hills Area Plan, not just for principle but for economic pragmatism; some trails are both environmentally and economically unsustainable. The City invested good money in professional and science-based geological studies, then chose to ignore them. Now your choice is to either admit that these trails were inappropriate to begin with and close them permanently, or spend enormous sums on extensive man-made engineering in a canyon that was intended as natural open space. Respectfully, Kristin Mercer	Kristin Mercer

PRIORITIZE WILDLIFE AND HABITAT AT WATERDOG LAKE & OPEN SPACE

Dear Belmont Belmont,

As a local resident, someone who is concerned with wildlife and wilderness protection, and a supporter of In Defense of Animals, I am writing to urge you to prioritize the protection of wildlife and habitat at Waterdog Lake & Open Space in the PROS Master Plan.

Belmont offers many recreational opportunities, but Waterdog is its primary natural open space, and only by prioritizing protection over recreation will we leave future generations of all species the same beautiful and essential wild land we witness today.

While opportunities for outdoor recreation and simply being able to enjoy nature are important, with increasingly little habitat in the Bay Area, this open space is critical for wildlife, and provides an invaluable and much-needed corridor that many species rely on and benefit from.

Protecting spaces like this is also important to residents, who see and respect the value of conserving natural spaces and habitat; Belmont and San Francisco Bay Area residents care about the environment, and they care about protecting wildlife.

If the area is given over further to recreational purposes, it will cease to function as it should. I am also extremely concerned that trails will be further opened here to mountain bikers, who have been damaging trails and running over wild animals.

I sincerely hope you will put conservation first when planning the future of this open space, and prioritize the need to protect it over development.

Thank you for your kind consideration of this urgent matter.

Sincerely,

Subject: Park& Rec Priorities 2021 - give Open Space it's fair share
Attachments: Park Expenditure History 2014-2021.pdf

Hello Commissioners,

Belmont officials frequently exclaim how much they love Belmont's Open Spaces. Master Plans cite how open spaces contribute to our quality of life, and how they distinguish us from surrounding communities. Reports verify that without our open spaces Belmont would be ranked ***deficient*** in park area per capita. But the shameful truth is that this glowing praise has never translated to funding – Belmont has woefully underfunded Open Spaces and has never put its money where its mouth is. Open Space is Belmont's neglected stepchild.

The attached table shows expenditures for the Parks and Open Space accounts over the past 8 years. The data says it all. Open Spaces receive less than 1% the amount we spend on the other city parks – less than $17,000 yearly. We spend 5 times as much on just *athletic fields* as we do on our entire 300+ acres of open spaces. Is it any wonder that our trails are eroded and dangerous, our creeks and forest in decline, and we have resorted to volunteers for maintenance. For decades we have short-changed our open spaces and now this "pride of Belmont" is showing the neglect.

As commissioners your role – spelled out by City Code 2.166 - is to *"Advise the parks and recreation department in the preparation of the annual budget and long-range recreation and park capital improvement program."* Commissioners, now is the time to step up. I urge you to fulfil your role, and advise our Director and City Council that our park budget is seriously out of balance. Your budget should reflect our City priorities, and for years this plain fact has been ignored.

Setting priorities, as you are tonight, cannot be done without first considering funding. A necessary part of home ownership is the cost of taxes and upkeep; you don't buy a home without budgeting for payments and maintenance. So, while I admire the new "*love Waterdog*" campaign, I remind you that no program comes without cost. As commissioners, you have *no business* recommending programs to *increase* park use without first funding the maintenance to *mitigate* that use.

Until the City is willing to put it's money where it's mouth is, our Open Spaces will continue in decline, and the blame for the shameful degradation of Belmont's "*jewel*" will lay with the Commission. It's your JOB - your leadership is needed. Your *assigned role* is to advise in the preparation of the annual budget and capital improvements, and to ensure that *budgets align with priorities*. Please learn about the budget that you oversee. Then I urge you to advise the Director and City Council to correct the longstanding imbalance and **give Open Space it's fair share**.

Thank you,
Kristin Mercer

Subject: Local Artist Mural Proposal
Attachments: ChelseaStewart_CV (1).pdf; ChelseaStewart_MuralProposal.pdf

Hello Belmont Parks and Recreation board,
My name is Chelsea Stewart, and I am a local emerging contemporary artist. I would like to pass this mural proposal onto the Parks and Rec team, as well as those in charge of the Belmont Public Art Master Plan. I have copied my cover letter below for easier viewing. Thank you in advance!

-———

Dear Belmont Parks and Recreation Department & Public Art Master Plan team,

My name is Chelsea Stewart (she/her/hers), I am an emerging contemporary artist born and raised in Belmont. I am sending you this proposal in hopes of your consideration of seeing this public art project idea through. I would like to propose a mural design for a location in downtown Belmont. In this proposal, you will find 3 finalised possible mural designs, alongside research, inspiration, mockups and an estimated budget template. Below is a bit more information about myself as an artist and why I am sending this plan to you.

I am a Belmont local, and I graduated with a BFA in Studio Art from Cal Poly San Luis Obispo. For those that don't already know, a few years ago I did the Utility Box on the corner of Alameda de las Pulgas and Ralston Ave. This project was definitely a highlight as an artist, and the positive feedback I received has been so gratifying. The inspiration for the box was "public places of Belmont", in which I made a wayfinder sign surrounding the box to highlight local parts of Belmont, or places of interest, such as the Belmont Historical Society, Waterdog Lake, local parks and the Community Center. I did this idea because I wanted to highlight and promote the features that make Belmont, Belmont. And that is exactly why I am sending this to you, to further propel these values forward.

When I was in 6th grade at Ralston Middle School, for three years straight I would walk down to the Barrett Community Center to take art lessons with local fine art artist, Kevyn Warnock in Studio 17. There, I was able to see just how vibrant the local art was, meeting other artists such as Kay Podolsky and Ruth Waters. Sadly, these studios are no longer, but these three women were few of the many that had studios in the center and they made me realise that becoming an artist as an adult was something I wanted to pursue. I then took teen classes in Burlingame at Art Attack 911, and after Carlmont High School, where I was President of the Studio Art Club and helped finalise the installation of the mural behind the Performing Arts Center, I went on to graduate from Cal Poly SLO where "Learn by Doing" is now something I can't go a day without thinking.

This mural proposal is for the wall space next to Lorenzo's and the Village Cobbler shop, two places that I have grown up driving past and frequented weekly to order sandwiches from, so much so that at one point during my AYSO career, they had my family's orders memorized down to the avocado.

I hope that you take serious consideration into this proposal, as Belmont as a whole is a town I hold near and dear to my heart. As an emerging contemporary artist, I want the opportunities that Belmont has provided to be the catalyst of my career as a working artist. Lastly, I want to give back to the town that I love so much. I look forward to your reply and welcome any feedback you have regarding this proposal.

———

Thank you in advance for any consideration, and I am attaching the full Mural Proposal, along with my CV to this email. I look forward to hearing from you!

All the best,
Chelsea Stewart

Subject: public comment for Nov 4th Agenda #6D

Good evening,

I would appreciate if you would share this email with all commissioners & the director. Since public comments is limited, would you please read the **bold text** below on the record? I hope it's not too long. Thank you!
Deniz

Hello Commissioners and Director:

In an effort to ensure the Master Plan process is a highly responsive process, I urge you to consider and incorporate the following ideas when working with the consultant.

- Hold separate public engagement meetings to solely address the Open Space component:
The Master Plan covers a wide variety of activites -- from summer camp activities to construction of play parks. Open space management is a highly specialized area that includes various expert practices from protecting endangered and threatened species to ensuring uses are designed and regulated to protect the natural environment, wildlife and asthetic beauty. To adequately address this unique feature, it would be helpful to provide a separate forum for this public engagement.

- Provide platform for different user groups to address their concerns & preferences:
Because Belmont's open space allows multiple uses, it is important that the MP process provide residents with a variety of perspectives and information. **It would be helpful if the MP process provides opportunities at Master Plan meetings for different user groups to present information/data and answer questions. Allowing user groups to present at the meetings will ensure that Belmont residents are aware of varying options and make informed decisions.**

- Ensure open process and engagement:
When soliciting input from residents, it's important to present open-ended questions in order that residents' true preferences are captured. Consultants often want to create close-ended questions often forcing residents to pick from a poor set of options. Consultants often seek to create a process by which a desired outcome can be achieved, rather than an open process that allows the public engagement to lead the decision-making process.

- Belmont Master Plan process should prioritize Belmont resident input:
While Belmont welcomes all to enjoy our open space and ammenities, it is important that the P&R Department prioritize the Belmont's taxpaying residents. While asking for a street address is a violation of privacy, the Department should have a policy that Belmont residents should identify themselves so the Department knows when Belmont residents are providing input. Since Belmont residents are paying for this - their opinions should be prioritized.

Lastly, if this has not already been provided -- would the director please tell us if the City plans to engage an open space consultant -- if so, who is that?

Thank you very much.

To: P&R Comm
Subject: Waterdog Trailkeepers

Commissioners

In looking at a document prepared by Jonathan Carter on the "Waterdog Trailkeepers " site on Face Book. It showed proposals to be made throughout the open space preserve. I have a few questions.

1. Why does this document have the City of Belmont logo at the top of it? Is this organization now a certified part of the P & R, or is this a blatant misrepresentation? I would certainly like a vivid clarification of this.

2. Who reviews and certificates approval of these requests as I feel most are designed to improve biking? Is there anyone reviewing the environmental impact of these projects?

3. Does anyone from the City oversee the work being done from a structural viewpoint? I have notified you of one dangerous bridge that has resulted in my being hurt on it as well as other hiker/runners being hurt as it's very slippery when wet, not to mention a couple bikers my wife and I have had to assist who slid off of it. It has never been changed, repaired or addresses.

4. I feel if there was a committee that reviewed and asses trail proposals, that was made up of entities other than just the biking community it would be more beneficial to all, as it seem that P&R let's this group do as they please.

Regards,

Bill Kurtz

Subject: The First Trail Markers are installed!

Hello and Congratulations!

Daniel and his team successfully installed the first handful of Trail Markers this week.

I'm extremely excited about it. You can make plans and have dreams but sometimes getting projects in the ground is elusive. But we have put the first few in and are working on the rest of them.. I've been helping the team fill in the details since I have lots of hours on the trails.

Congratulations to the committee that worked so hard on this. A simple design is a complicated place to arrive. There were a lot of choices to be made and the committee was awesome in their energy to get it right.

Obviously it is dear to my heart. But it is also great timing to show the Commission and the Department are taking action to enhance the efforts of the volunteer trail working force. This is a clear example of the city devoting the efforts needed to improve the park for all its users. There will be more to come.

Thank you,

Ps. If you are detail oriented, the small angled wood at the base is temporary while the cement cures.

Subject: Incident at Waterdog

I'm writing today to report some disturbing incidents at Waterdog park.

I live here in Belmont and my backyard is directly adjacent to the open space. I hike and bike in the park multiple times per week.

A few weeks ago (November 20th) I was riding my bike clockwise around the lake trail and as I came down a steep hill into a corner I noticed Pat Cuviello holding his phone up as if to take photos or videos of me. He was standing right at the corner but slightly off the trail. As I came closer to the corner I saw Deniz Bolbol standing directly in the middle of the trail, right around the corner. I immediately recognized them as I've encountered them in the park in the past. As I slowed, almost to stop, Deniz just stood there silently in the middle of the trail, blocking the trail, with her phone out. I said something like, "Excuse me, I'd like to get by." She didn't respond, or move from blocking the trail, so I just sort of scooted to the side, off the trail a bit and went on my way.

It struck me as a very odd encounter, but as I continued to think about it, I realized they were intentionally placing themselves in a position where they could be hit by a cyclist, which would explain the strange behavior. At the very least it seemed like they might be trying to bait someone into getting angry and starting an altercation, or they might be just stirring up trouble with the intention of using the video recording later to justify their complaints about the other park users. At worst they might even be intending to cause an accident or injury with the purpose of suing a cyclist or the city.

I respect their right to express their views about park use, but at some point I think they have crossed a line where now they are just harassing other park users, and potentially endangering themselves and others.

Sent: Friday, December 11, 2020 9:40 AM
To: P&R Comm
Subject: Waterdog Lake Park Visitor Harassment and Concerns

Hello Belmont Parks and Rec Commissioners and Director,

My name is Marcelo Quiroz and I am a resident of Mountain View, CA and have lived in the Bay Area my entire life. Waterdog Lake Park is a special space and is where I first learned how to mountain bike back in 2005. I have grown up visiting Waterdog Lake Park and have been a regular visitor. The experiences, friends made, and memories are what make this space special, and I am sure other folks feel similarly. In my 15 years of visiting Waterdog Lake Park I have not had an unpleasant experience, despite the occasional poison oak rash.

It is my understanding that Belmont open space is not just for Belmont residents to access and enjoy.

From an August 5th City of Belmont Commission Regular Meeting meeting,

"Belmont's asset is its open space, The goal here is to try and make Belmont's open space system safe and enjoyable for all visitors. That is, and should continue to be our goal"

Earlier this week I had an encounter with 2 Belmont Heights residents when exiting Waterdog Lake Park on my Mountain Bike. Both residents were waiting and engaged me in an aggressive way, yelling that I "was not supposed to ride here". Confused and alarmed, I proceeded to leave the area on bike, unaware that I was being followed in a vehicle by the 2 Belmont Heights residents. I arrived at my destination 4 miles away, with the both Belmont Heights residents arriving shortly after. They had followed me. I have learned that the 2 Belmont Heights residents are Pat Cuviello and Deniz BolBol (President of the Belmont Heights Civic Improvement Association). What followed was a concerning and unsafe verbal attack by Pat and Deniz that resulted in calling the police. Belmont PD is aware of this encounter and assured me that the behavior of Pat and Deniz was unacceptable.

This whole experience has shaken me and has me questioning if I am welcome at Waterdog Lake Park. I have learned that there is a vocal effort by residents of Belmont Heights to prohibit mountain bikers from Waterdog Lake Trail and that residents have engaged in similar encounters with other park visitors. I hope that in the future, Waterdog Lake Park can continue to be an inclusive and welcoming park where visitors can access and move about freely and safely without harassment from local residents.

Best,

Marcelo

Subject: Save Waterdog Preserve

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks & Recreation Commissioners,

Apologies, my blank email was accidentally sent last night while composing using a different software.

In reading the Jan 13, 2021 staff report on the Trails Committee Update, I feel compelled to send you this email.

I am concerned about the reliance on volunteers for trail maintenance, especially without prior approved plans and close supervision. These volunteers have a dubious record in the past few decades, resulting in the dismal condition of Waterdog Preserve today. If we continue on the current path, we will not have a Waterdog Preserve and we will end up with a Waterdog amusement bike park instead.

Volunteers were never able to do adequate amount of maintenance to offset the damages done by their mountain biking activities. These volunteers consisted mostly of bikers that made use of the opportunity to construct new illegal trails instead of doing real trail maintenance. Berms were constructed in an arc shape to allow bikes to go around sharp corners without slowing down.

For example, the Soho Trail with berms was not constructed by bare hands in one day. Tools were brought into the park to construct it over a period of time. These volunteers legitimately brought these tools into the park under the guise of doing maintenance to construct illegal trails with features for mountain biking downhill thrills.

Berms construction requires removing the top layer of organic matters to expose the dirt layer. Mattocks and hoes are used to bust the ground up and loosen the dirt. Shovels or hoes are used to move the dirt into the turn to create a berm. Often the berm needs to be supported with the construction of a wood retaining wall. If any tree trunks, branches, roots or other vegetation are in the way, they are removed and tossed down the canyon to create wildfire hazard.

All these activities went on without the knowledge of the City or possibly with silent tacit approval. Do you know the nickname given by the bikers for Soho Trail is "Labor of Love"? This is the amount of misdirected efforts put into Waterdog Preserve. In this case, such construction activities are in direct violation of the John S Brooks land donation contract with the City.

Before Waterdog Preserve deteriorates to a point of no return, I hope you will be bold enough to stand up to special interests to save Waterdog Preserve for the future. Climate change is working against us. Vegetation is drying up and wildfires are raging. Wildlife habitats are damaged and the endangered wildlife are seeking refuge in our backyards. The number of wildlife species are reduced everyday. We cannot save the Amazon forest or the North Pole ice cap. The least we can do is to save the Waterdog Preserve in our little town.

Sincerely,

Ken Lien

Subject: Rare and Endangered SF Garter Snake in Waterdog

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Park Commissioners,

With as few as 1,000 remaining, this beauty below is the rare and endangered **San Francisco garter snake,** christened "the most beautiful serpent in North America."
It is found ONLY in SF and the peninsula, and needs a riparian (pond/wetland) habitat for survival.
I have seen *one* in Waterdog, and they *are documented on the General Plan Conservation Element* as present in Waterdog, but they are very rare and are protected under the Endangered Species Act (U.S Fish and Wildlife Service).

If you are not aware of this beautiful creature, and our legal obligation to protect it, I highly recommend visiting this website to fully appreciate the importance of the disappearing riparian habitat that supports the few remaining animals; https://sfgartersnake.wixsite.com/dhsseadisc/why-should-you-care:

Moreover I urge you to take immediate action to **close the illegally built trail,** cut by bikers, that bisects Waterdog marsh, trampling and fragmenting one of the few remaining habitats of this rare and endangered snake.
That trail violates both the existing Park Master Plan (which stipulates no development in that marsh) and the John Brooks Contract, and it contradicts the General Plan Conservation Element.

Respectfully,
Kristin Mercer

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

DRAFT

https://sfgartersnake.wixsite.com/dhsseadisc/slithering-for-survival

Due to the rising human population in the San Francisco Bay Area in the past 100 years, the delicate wetland habitats relied upon by the snake and its co-evolved prey is not only fragmented, but in many cases destroyed.

"The habitat of the San Francisco Garter Snake is unfortunately restricted to the highly developed San Francisco Peninsula, with all known populations of this beautiful snake inhabiting scarce wetlands in San Mateo County (Miller, 2006).
Originally, its habitat would have stretched south from San Francisco into the Santa Cruz Mountains, but because of human-induced habitat loss the species is now isolated to a meager fraction of their previous range (US EPA, 2010).
The principal food source of the San Francisco Garter Snake, the California Red-Legged Frog, is also severely endangered. Populations of the frog have declined 75% leaving its predators with less and less prey to sustain their own population (Kay, 1995). The boom in the invasive bullfrog populations which prey on the snake and its prey are largely because pet owners release their bullfrogs into local riparian corridors and wetland locations allowing their populations to rapidly multiply with other released pets, and leech into the niches of other native animals. In this way, the bullfrogs have affected San Francisco Garter Snake by creating interspecific competition, overeating and diminishing the California Red-Legged Frog populations resulting in little food left for the snakes. The endangerment of the native frog had a great influence on the endangerment its predator, the San Francisco Garter Snake (Swenty, 2016)."

Subject: From Ron Tussy-Waterdog Trails and Jump Situation

Follow Up Flag: Follow up
Flag Status: Flagged

Hi Brigette,

I was able to walk the Canyon Crest trail yesterday (1/19/21) at 5 PM to the jump and found that about 2 inches had been scraped off the top of this multi cubic yard jump, and not much else. The jump still is there and needs to be removed for the very reasons it violates the guidance of this open space area in that it completely alters the original terrain and creates a hazard on the steepest part of this trail where bikers are speeding the fastest. It is not a water bar. It is not a small bump in the trail. Yards of earthen material have been displaced from other parts of this trail to create this exclusively for the entertainment of more skilled bike riders. In essence, it is a landscape alteration to our open space further becoming "a terrain park" for bikers, to the detriment of all other users.

While walking up at the bottom, I encountered a downhill biker on a blind turn going at least 20 mph. He did not slow down one bit and was headed straight at me. I did not have time to throw myself out of his way so I held my arms up over my head for him to see me. He skidded his bike right up to my body and stopped. He then threw down his bike and started to verbally assault and threaten me for being in his way. I walked away, but this is an typical common occurrence from a large portion of bikers visiting our open space. I know I am only one of the many that used to walk that trail on my street (Carlmont) because of the threatening nature of bikers on walkers on that trail. I am ashamed to say I am a former bike racer. This has got to stop. The signage is ignored, only about 20% of bikers wear masks on the single track trails, and now bikers are thinking that the city wants them to have a terrain park exclusively for them, because of this terrain altered jump. It used to be that bikers and walkers coexisted peacefully on these trails. That stopped 10 years ago when the trails were altered by bike groups to be more speed friendly to bikers. I strongly urge you to take action on this terrain altered jump at your earliest opportunity. No where in all of San Mateo County parks or any San Mateo County open space does one find this kind of terrain altering jump purposefully put on trail systems. It is shameful this is allowed to happen. I welcome your response and I do want to show appreciation for the positive work to the trail that was accomplished. Thanks.

Ron Tussy

Looks like the Belmont Heights curmudgeons are trying to rally their forces (if there are any) to keep the Waterdog trail system for their-selves (see the email below). If they were SO interested in the perceived damage being done in the trail system, you would think they would have at least one picture of dog crap (given there are thousands of pounds left in the trail system)! I am a dog owner, so nothing against dogs. I just want to point out where this group is coming from. This group has one goal and one goal only and that is to try and prohibit bikes in the Waterdog trail system. The same trail system that was build by bikers and continues to be maintain substantially by bikers, but I digress.

Go ahead & beat your drums, it seems to give you something to do in your retirement.

Below is an email sent from "Karen" Mercer - I mean Kristen Mercer

Belmont's Waterdog and adjoining open spaces are what drew many of us to make our home here. But this "jewel of Belmont" is threatened by widespread environmental damage and serious safety issues stemming from poor management. How can we claim to value the environment while allowing destruction of precious natural habitats here in our own community? Waterdog needs us to speak up for its preservation, and right now we have the perfect opportunity.

The Belmont Parks and Rec department is drafting a new Parks and Open Space Master Plan that will guide the future of Waterdog and all our open spaces for the next 20 years. Resident input is needed to ensure this plan prioritizes preservation, and puts in place concrete and meaningful policies to enshrine this priority.

I have collaborated with a large group of concerned residents to assemble a website – www.waterdogpreserve.org - to help the public understand the unique and valuable natural ecosystems in our backyard, and to expose the extensive damages. Please take a moment to learn about these issues that affect us all. Then please click on the "Take Action" tab at the top of the page and email your opinions and concerns to the Park and Rec Dept and City Council via the website.

As stewards and stakeholders of our little town, your voice in saving Waterdog Open Space from environmental destruction is so important to us, as well as to future generations.

Thank you for caring
Kristin Mercer

Dear Parks and Recreation Commissioners and Members of the City Council,

As Belmont residents of some 55 years, we unequivocally support efforts to see policies prioritizing conservation and habitat protection incorporated in Belmont's new Open Space Master Plan. From our observations of activity in the Waterdog Open Space in particular, policy considerations should include:

Prohibiting bicycles on narrow hiking trails; prohibiting e-bikes and motorized vehicles on all trails

Destroying illegal trails, and restoring damaged ecosystems and wildlife habitat

Enforcing the closure of all open spaces from sunset to sunrise

Allocating park spending to equitably fund Open Space maintenance

Vigilant enforcement of all policies

Thank you for listening carefully to the voices of the general public as you deliberate appropriate uses and stewardship of Belmont's open spaces.

Respectfully,
JoAnn and Ron Berridge

Dear Parks and Recreation Commissioners and City Council,
As a resident of Belmont, I support designating Waterdog Open Space as a **Nature Preserve**. In the new Master Plan, all Open Space policy decisions should prioritize conservation and habitat protection, including:

- Designate narrow natural surface trails for hiking only, consistent with Best Practices of other open spaces
- Close illegal Open Space trails, and restore damaged ecosystems and fragmented wildlife habitat
- Enforce the closure of all open spaces from sunset to sunrise to protect wildlife and ensure safety; cite violators
- Prohibit e-bikes and motorized vehicles on all trails; cite violators
- Allocate park spending to equitably fund desperately needed Open Space maintenance
- Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance

Please incorporate these policies into the new Open Space Master Plan!

Best,
Keyuri

We are Ken and Bobbie Lebovitz, 10 Soho Circle.

The back of our property is now called the Soho Bike Trail. It is a man made trail, narrow and is illegal from our point of view. In addition, we feel that the illegal Soho Bike Trail could be on part of our property.

We have lived here for 48+ years and always enjoyed the peace and tranquility of our property. With this illegal bike trail, we are now confronted with noise, dogs barking and people talking. This is not what we originally planned for when we moved into our home.

In addition, on weekends and holidays we are also now confronted with an abundance of cars, people, kids and bikes on Lake Rd and Hallmark. It has become a parking lot with people walking across the street not in a crosswalk with lots of kids and not paying attention to drivers. It is our concern that one day there may be a serious accident. Its a challenge to drive thru this area on weekends and holidays.

We realize that during these times people need open space but it is unfair to the Belmont Heights Residences to subject them to the unwanted noise, congestion of the General Public.

It is necessary that the City Council and Parks and Recreation of Belmont develop a plan to minimize this congestion and not put all the burden on one small area of our City.

We would appreciate being kept informed at all times of your plans.

Thank you
Ken and Bobbie Lebovitz

Greetings,

My name is Ryen Motzek. I was raised in the town of Belmont in the 80's - 90's and started skateboarding then as well. I have been involved in the Bay Area skateboarding community for decades and about 14 years ago I co-founded Atlas with some good friends. Over the years we have seen a gradual uptick in skateboarding and various communities in the Bay Area have embraced the activity due to the many benefits it holds for the youth as well as a very broad age range. Now with skating in the olympics, and Covid skateboarding is growing at an unprecedented rate which is why I am reaching out to you. The city of Belmont is the home to many skaters and is in need of a skate friendly space. I realize there's other concerns that need to be addressed, it's something I'm very accustomed to hearing, but I'm really hoping to speak with you and have a chance to present the case.

Please let me know what works best for you... perhaps a zoom meeting this week or next?

Thank you for your time, talk soon.

-Ryen

Dear Parks and Recreation Commissioners and City Council,

As residents of Belmont, we support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, we request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.
- Exploring options for new trails to spread people out and relieve congestion
- Installing additional benches at key view spots

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, inculcation of conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

Thank you for your consideration as you develop the new Open Space Master Plan.

Kind Regards,

Karen & John Moody

Dearest City Council Members and Parks and Rec Commission,

My family and I visit Waterdog Open Space on a weekly basis, whether it's hiking together or biking together. It's literally our backyard, or right beyond the border of our backyard. As a resident and homeowner in Belmont (1100 Lassen Drive), I support keeping Waterdog Open Space accessible for the various use groups already allowed to use Waterdog for multi-purpose use.

I don't want to sound like a broken record, but unfortunately it seems I need to keep emailing in to voice my opinion. An added advantage of recreating at Waterdog is also the opportunity for us to participate in volunteer trail work and it's a great educational opportunity for our kids to learn about responsibility, volunteering and helping our community.

I know typically the loudest voices come from the unhappiest voices in the community. I wanted to email in and say I'm a happy voice, love the current multi-use aspect and I hope that the Master Plan will continue to serve oru recreational needs by continuing to allow and take into consideration the multi-use access of Waterdog. Thank you for your time.

-Esther Thomas

Dear Parks and Recreation Commissioners and City Council,

As an active Belmont resident(and former Cub Scout Den leader) with several young children and small dogs, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces • Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

Thank you for your consideration as you develop the new Open Space Master Plan.

Cliff Ng and family

Dear Parks and Recreation Commissioners and City Council,

As a resident of Belmont, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- *Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces*
- *Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.*
- *Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.*
- *The growing youth community needs these outlets, now more than ever. As we progress to a more digital life-style, our fellow citizens need these, but even more critical, our youth need more (not less) opportunities to connect with the outdoor community.*
- *Rather than reduce opportunities, increase them. Get our youth involved with connecting and maintaining these open spaces. Involve our youth groups and build a model in which our youth can play key roles with restoring, repairing, healing, and expanding these outdoor areas. We all need to be custodians of the outdoors and what better way than to get our youth involved sooner.*
- *As we deal with the current pandemic issues, these outdoor outlets are ways that we as a community can use as a way to reconnect with each other.*

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

Thank you for your consideration as you develop the new Open Space Master Plan.

Dear Parks and Recreation Commissioners and City Council,
As a resident of Belmont, I support designating Waterdog Open Space as a **Nature Preserve**. In the new Master Plan, all Open Space policy decisions should prioritize conservation and habitat protection, including:

- Designate narrow natural surface trails for hiking only, consistent with Best Practices of other open spaces
- Close illegal Open Space trails, and restore damaged ecosystems and fragmented wildlife habitat
- Enforce the closure of all open spaces from sunset to sunrise to protect wildlife and ensure safety; cite violators
- Prohibit e-bikes and motorized vehicles on all trails; cite violators
- Allocate park spending to equitably fund desperately needed Open Space maintenance
- Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance

Please incorporate these policies into the new Open Space Master Plan!

Subject: Waterdog Open Space - for the entire Belmont community

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commission,

I have lived in the Cipriani neighborhood for the past 16 years with my wife and now three children aged 14, 11, and 8. As a family we enjoy so many wonderful aspects of the city, from the fantastic library, to the rich parks and recreation programs, to our beautiful multi-use open space trail system. I volunteered as a Belmont parks and recreation commissioner for the city from 2012 to 2020, and I served as chair for one of those years.

Now is the time for the city council and parks and recreation commission to revise and redefine the parks and recreation open space master plan (PROS), as our currently operating master plan is from the 1990s. This broad reaching document will have an impact for decades to come on many parts of our city, and I am writing today to comment specifically on the future management of our beautiful recreational open space known as Waterdog. As you know, many of us are regularly out there hiking and biking, walking our dogs, and enjoying the fact that within just a few minutes we can depart the busy bay area and enter a beautiful and peaceful trail system for exercise and fresh air. The vision put forth in 1992 by the city to define this open space as recreational open space with a multi use trail system has served our community incredibly well. I believe that part of the reason our city is prospering and full of young and active families is due to the accessibility of our open space. I moved to Belmont in part because of the easy access to Waterdog open space for hiking and biking, and I know many people and families who have made similar choices in calling Belmont their home. I have met several people on the trail system who have decided to take jobs in the city of Belmont specifically because of the proximity of the trail system for hiking and biking.

For decades, our open space at waterdog has been a successful example of multi-use recreational trail systems. Any day of the week, you can see families hiking the trails with their children, folks walking dogs, hikers and trail runners, and mountain bikers. All, with big smiles on their faces, enjoying our amazing resource. I personally use the trails several times a week for hikes, dog walks, and bike rides. I can see that these trails build community, and that there is good understanding and respect among the different user groups – from dog walkers to hikers to bikers to trail runners.

So, it is my strong recommendation that while the council and commission review the important topics ahead for the PROS, we can rely on continuing a successful history of multi-use trail stewardship. We are all aware that one small but highly vocal group wants bikes removed from the park for unclear reasons. Why would we shut down the trails to one vibrant user group and keep it open to another? How would one even choose which group to eliminate? The answer is of course, continue our winning plan of embracing the entire community, allowing everyone to use their beautiful recreational open space trails. We can continue outreach and education to all trail users and groups to ensure continued safe and sustainable use of our trails. And of course, as a city I suggest we continue to support the wonderful volunteer groups that keep our trails safe, sustainable, and fun for all user groups.

Sincerely,

Thaddeus Block

Dear Parks and Recreation Commissioners and City Council,

As a resident of Belmont and avid cyclist, I support keeping Waterdog Open Space an accessible and sustainable place for multiple forms of recreation including cycling, connecting with nature and building community.

In the new Master Plan, I request you to consider:

- Maintaining and improving the trails for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces.
  - I have mountain-biked in Waterdog since we moved to Belmont in 2002 and believe that this is a treasure on the Peninsula.
  - Even with the many uses, to me it is an example of how we can all recreate in harmonious ways - I've never seen or even heard of instances where all the various uses of the park could not peacefully co-exist.
  - Quite the opposite - my experience in the park is one of courtesy and friendliness.
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails.
  - The "Love Waterdog" campaign is great.
  - I love Waterdog and I think everyone who has experienced it loves Waterdog! :)
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont Parks and Rec workers. Our trails get healthier every year.
  - Nothing comes for free, and that includes safe and environmentally friendly trails.
  - The great part about Belmont, and Waterdog, is that we are a committed community of volunteers.
  - I think it would be amazing to find ways to energize volunteerism around the park so that those who benefit from the open space also have a stake in its preservation for the future.

Thank you for your consideration as you develop the new Open Space Master Plan.

Sincerely,
John Garrish

Subject: Water Dog open space & Belmont Open Space Master Plan

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks & Rec commissioners and City Council members:

I just learned about the ongoing open space planning process and of an effort to eliminate bicycling from Water Dog Open Space. As a Belmont resident and voter for the last 16 years, I think this would be a poor choice and not in the best interest of the community. I haven't been on a mountain bike myself in several years and have never ridden in Water Dog. But I enjoy walking and running in Water Dog routinely and I have no problem sharing the trails with cyclists. Although she'll never write you a letter about it, my daughter rides there often.

Eliminating cyclists from Water Dog would be a serious mistake and will be bad for both Belmont and for Water Dog itself. The way to keep our environment and our parks cared for is to keep them open and used by as many people as possible. Every person kept out of an open space is one less person to care for and advocate for that open space. I have no data, but it seems fairly likely that the demographics of mountain bikers skews significantly younger than those who would restrict the park to pedestrians. That means that this change would disproportionately impact younger people who won't have the same fondness for Water Dog that many of us do. The step from an excluded disenfranchised population to a neglected, not-valued open space is small. It's also the case that this younger group isn't going to engage in letter writing and speaking at meetings as much as those who would have you ban cycling. So please don't be misled as to where the community stands due to a vocal minority.

Restricting the use of Water Dog because of a vocal few would be a mistake which will have implications for many years to come. It would be bad for Belmont and would make Water Dog less secure in the future. Please keep Water Dog open and accessible to as many people and as many uses as possible.

Sincerely,
David Hoffman

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

As a former resident of Belmont, and now San Carlos, I'm a very frequent visitor to the Waterdog open space. In fact, the Waterdog park was a big contributing factor to move to Belmont. While I moved to San Carlos, I'm in fact even closer to the Waterdog park compared to my Belmont address. The park is a place where I hike with friends, ride my mountain bike with friends and my kids on a weekly basis. And of course a place where my dog loves to come for runs, hikes and of course swimming in the lake.

As such my family (and all my friends and close community) support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I would like to request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is exactly what we need!
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year. The Trailkeepers group does an outstanding volunteer job to keep those trails in good shape, both for hikers and mountain bikers
- Exploring options for new trails to spread people out and relieve congestion
- Installing additional benches at key view spots

Open space recreation carries enormous benefits for the folks that live near the park- a local park for stress reduction, exercise, revitalization, appreciation of nature, inculcation of conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

As few more thoughts, when it comes to wildlife, I'm always amazed at what I see. Rabbits, deers, squirrels, the occasional rattlesnake and the elusive bobcats. How blessed are we to have this fauna in such a residential area. Even with the increased popularity of the park during Covid times, those creatures are thriving in the park. And having my youngest 8y old kid always ask to discover new trails on his little mountain bike is really making me smile! A lot better then all this screentime they are getting subjected too! Just recently he really had a blast on encanada (aka Poison Oak Trail) - so nice to be able to let kids discover these nice natural area's just a stone throw away from our house

Thank you for your consideration as you develop the new Open Space Master Plan.

Kind Regards,

Nicolas De Keyser

Subject: Please preserve Waterdog as recreational open space

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Belmont City Council and Parks and Recreation Commission,

As we embark upon the Master Open Space Planning processes, I write to encourage the City Council and Parks and Recreation Commission to reaffirm Waterdog Lake Park and Hidden Canyon's ongoing success as recreational open space.

I am a physician and avid outdoorsman. I live next to Waterdog and frequently cycle to, and through, the park for exercise. My daughters and I "plike" (pick up litter while hiking) in the park regularly – to exercise, to teach them community service, and to cultivate environmentalism within them. I also lead the Waterdog Trailkeepers, a volunteer group that donates about 500 hours a year to the park for trail maintenance. I do all this out of a genuine love for the park.

Many of us refer to Waterdog as a "gem" of nature and recreation. It is a place to walk, jog, run, cycle, and exercise in a beautiful natural environment of trees, flowers, and wildlife. Recreational open space reduces stress, provides relaxation and revitalization, builds community, increases awareness of the natural environment, fosters environmentalism, and serves the public good. Many of us have moved our families and settled next to the park specifically because Waterdog is an oasis within the densely populated Bay Area. As a physician, I can attest to the need for community recreational open space for our mental and physical well-being. We all need a place to exercise in a natural environment. If not Waterdog, where would we go?

From a land use point of view, Waterdog's best use is continued recreational open space. It is small – 200-300 acres depending on how you measure – and ringed with suburban development. Although some have proposed re-designation as a nature preserve, the truth is that Waterdog is far too small, and has far too many humans around, to seriously be considered for this purpose. Even if we removed every trail and tried to keep humans out, the animals in the park would still be impacted by the dogs, cats, and humans who live around the perimeter of the park. Humans have a need for open space, too. When you consider that we have already protected the SFPUC Peninsula Watershed's 23,000 acres of oak woodlands, coniferous forests, and serpentine grasslands as a preserve, it is reasonable for the public to allocate 300 acres, just 1% of what has been preserved already, for open space recreational use.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

With current recreational use, the park abounds with finch, towhees, quail, deer, bobcats, wild turkeys, rabbits, lizards, woodrats, snakes, and, yes, waterdogs! I personally have seen each of these in the past 12 months alone. These animals have adapted to human uses of Waterdog for over 100 years. There is no crisis here; the ecosystem of the park has been in a steady state for decades. Don't fall for the false narrative of others looking to weaponize environmentalism as a means to kick cyclists, runners, and other active users out of the park. These narratives serve only destroy community and pit neighbor against neighbor.

When I visit Waterdog, I see a community of hikers, dog-walkers, joggers, and cyclists enjoying the open space, respectful of one another and the wildlife that abounds. It is a place of joy. Waterdog is a testament to successful multiuse open space serving the public good. Please support the continued open space recreational use of Waterdog Lake Park.

Warmly submitted,

Jonathan Carter, MD

Hello Belmont Parks and REC

My name is Tomas Miyazono and I am a junior at Carlmont high school living in Belmont. It has come to my attention that several people are advocating to ban bicycles from waterdog. I started mountain biking about 2 years ago, largely because of a Waterdog being near my house. Waterdog has taught me many things. From trail etiquette to respecting nature, I have fallen in love with Waterdog. Many of these people advocating against mountain bikes make baseless claims such as mountain bikes cause erosion and trail damage, among other things. These people have no scientific evidence to back up their claims. Rain water streams going down trails is the primary cause of trail erosion. In reality, mountain bikers are the primary people helping maintain the trails because we love the park so much. It would be unwise to ban bikers, one of the main reasons the park is as beautiful as it is, from riding there. I hope the committee of parks and recreation looks at the science and not at the baseless claims these people advocating for the banning of bike make.

Thanks for your time,

Tomas Miyazono

Dear Parks and Rec Commissioners,

I'm a home owner in Belmont since 2006 and I relocated my business to Belmont in 2014. I have two kids. One just started at Carlmont and the other is in a BRSSD middle schooler. For seven years I managed my older son's little league baseball teams for the BRSLL so I am familiar with many of the outdoor park resources and playing fields in Belmont. My wife is currently the parliamentarian for our middle schoolers PTA. All of us are avid users of Water Dog Lake Park as hikers, dog walkers, trail runners and mountain bikers.

In fact, the close and easy access to trails for outdoor recreation are what brought us to Belmont. When we were shopping for a house on the peninsula in 2006 my one stipulation was to find something near trails. One day we visited an open house near Alexander Park in Sterling Downs and then drove around to get a feel for the neighborhood. On Old County Road we saw a sign pointing to a new bike shop. Behind the counter at Passion Trails we met Barry Stevens, an incredible Waterdog Lake Park advocate, who showed us a map of the park and described the local mountain bike community that had formed around the bike shop and Waterdog. When we got back in the car, I turned to my wife and said Belmont works for me. We quickly put an offer in on the Sterling Downs house and have been here ever since.

Having tuned-in to city council and parks and rec meetings over the last couple of months, I've heard a small yet vocal group complaining about mountain bike caused erosion and threatened wildlife along the trails in Water Dog Lake Park. I'd like to go on the record saying this is not my experience in the park.

Frankly, in my 15 years of hiking, birdwatching, dog walking and mountain biking in WDLP I don't think it's ever looked better. Thanks to the local Waterdog Trailkeepers there's been numerous improvements to the park this winter like converting wide segments of trails to narrow single track with vegetation restoration, maintaining the bridges as well as repairing vandalism.

On Pat Cuviello's new waterdogpreserve website he consistently juxtaposes pictures of old roads that are washed out due to erosion from rain with pristine sections of trail and infers that the erosion is 100% due to mountain bike riding. This is misleading at best and also a great example of "cherry picking". In fact, more mountain bikes are probably ridden on the pristine trail than the eroded sections (not all mountain bike riders are daredevils like Pat would like the public to believe).

My wife and I are sustaining members of the Sierra Club, the Nature Conservancy and Peninsula Open Space Trust (POST). We value the environment and support the preservation of wild places. If I thought I was tearing up the ground and disrupting the animals that call Water Dog Lake Park their home I wouldn't be in there on my mountain bike. Furthermore, cycling is an amazingly positive response to our global climate crisis and a great way for youth and adults to safely get exercise and get outdoors during the pandemic.

Please count me as a meaningfully involved community member that cherishes the trails and nature in Water Dog and believes that we can have both. They are not mutually exclusive. I want to work with city officials, Gates and Associates and community members during the PROs process to keep the open space open to all that use it respectfully.

Thanks!

Scott Sisemore

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Belmont City Council,

I have lived on Hillman Ave since 2013. I am proud to call Belmont home, and that is the birthplace of our children, now age 3 and 6. Waterdog holds a special place in our family's hearts. We spend hours in the park weekly hiking, biking and walking our dog Scooter. There is abundant wildlife considering this is such a developed suburban area.

Now it seems a small, but very vocal group wants to assert influence, right at the time the Council is considering parks and recreation open space master plan (PROS). The group, most of whom own large houses that border the park, seek to strip our park and trails of their multi-use status. I first became aware of this anti-biking group while volunteering in a city-approved trail maintenance group, where we were harshly confronted and filmed without permission.

While I don't understand the motivation of this group, I do know that they stand in stark contrast to almost all other park visitors. People like us are out here every day. We welcome those from outside of Belmont. We say hi to those we pass on the trail. We pick up trash (and other gross stuff) that isn't ours. We respect the trails, the hikers, bikers, and dogs. We wear a mask.

Cycling in the park has brought so much richness to my life and my family. It is healthy and fun. Through group rides and volunteering, I have met so many of our neighbors that would have otherwise been strangers. My son took his first trail ride a few months back. I am greatly looking forward to biking with both my children all over Waterdog for years to come.

Kind Regards,
Nate Yeakel

Dear Parks and Recreation Commissioners and City Council,

As I have easy access via Laurelwood Park and my whole family uses it multiple times a week, I support keeping Waterdog Open Space an accessible and sustainable place for all recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits as a local park for stress reduction, exercise, bringing families together, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. More on a personal note, I thought my son to mountain bike there and spent many happy days together with him, even as a teenager. The close by location served us well as one could just hop on the bike and ride right from the house, without getting into a car. Our community has a need for recreational open space - Water dog has served this public need well for decades and even more during COVID.

Thank you for your consideration as you develop the new Open Space Master Plan

Sincerely
Charlotte Dunbar

Dear Parks and Recreation Commissioners and City Council,

People come to Belmont just to mountain bike at Waterdog. It is probably the best "attraction " we have as a city for other people come to visit. I really can not think of too many other activities that would bring visitors to Belmont aside from games Sports Complex but i've seen most/all of the fans don't stick around just get back on 101 and go back home.

As a life long resident of Belmont I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining, improving and expanding the trails
• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The “Love Waterdog” campaign is great.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Subject: Waterdog Lake & Open Space

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

I recently became aware of a community action movement, waterdogpreserve.org, aiming to restrict mountain biking at Waterdog Lake & Open Space. I'm writing to oppose this position.

I love mountain biking, and I've been riding my mountain bike at Waterdog for fifteen years. I moved to Belmont back then in part because there were wonderful local trails that I and my family could ride. Keeping the park wide open to mountain biking makes Belmont a wonderful place to live.

I'm also an Eagle Scout and a PhD Biologist. I care about preserving the park... I've volunteered to maintain the park trails. Mountain biking does cause wear to trails, but not extreme wear, and the volunteer and city efforts to maintain the park seem largely effective.

I'd just encourage the city to continue to pursue a reasonable, balanced approach. Perhaps narrow trails should be closed right after heavy rain, like Arastradero Park does. Perhaps efforts should be made to contravene any illegal trail construction. Perhaps E-bikes should be restricted. But mountain biking is a positive recreational activity that should be encouraged, and it can certainly be allowed without compromising the important goal of stewardship of the park and its wildlife for future generations.

Thank you,
Alex Abbas

Subject: Open Space Master Plan input

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Belmont City Council and Parks and Recreation Commission,

With the Open Space Master Plan process underway, I wanted to give my input as a Belmont citizen of nearly 10 years. My wife and I married in 2002 and had our first apartment together in the Carlmont Heights apartment complex on Hastings Drive. One of the things we loved about that apartment was that we could access the Waterdog open space right across the street and go hiking, mountain biking, and trail running almost right out our front door. We would have liked to stay in Belmont when we purchased our first house, but no good opportunities came up, and we bought a 2 bedroom / 1 bath house just over the border in San Mateo. We started our family in San Mateo, our first son was born in 2007, and our second son was born in 2009. When our daughter was born in 2011, and all three kids crammed into one bedroom, it was time for a bigger house.

The housing market was tough in 2011, and we were fortunate enough to get an opportunity to purchase a 3 bedroom / 2 bath house in the Cipriani neighborhood that year. A major factor driving our decision to make our permanent home here, instead of many of the other neighboring cities was the Waterdog open space. There is no where else on the Peninsula where one can live in such close proximity to such interesting and physically challenging multi-use trails.

When our kids were small, we spent many hours pushing strollers up and down the Lake Road Trail and going to the lake. As our kids learned to ride bikes, many of the trails were too hard for them, but we were able to introduce them to mountain biking on the easier trails in the park. Now our kids are 14, 10, and 9, and one of the greatest ways we can spend quality time together as a family is to ride our bikes to Waterdog and enjoy a real singletrack mountain bike ride together. As our kids have grown, having this resource available gives us the opportunity to teach them about trail maintenance, sustainability, and stewardship, and we hope they will pass these values down to the next generation. Once my kids get further into their teens, we look forward to them riding out there on their own with their friends.

I'm providing this personal example to illustrate how vital Waterdog is to Belmont's families. There are many other families like mine in our community of over 30,000 people. It is not just families, single people, dog owners, seniors, and people from all walks of life benefit from this recreational access. I am confident that the vast majority of Belmont's citizens support the continued successful existence of multi-use recreational trails. As long as it's managed in a sustainable way (which has been the case for decades), multi-use recreation is the highest and best use of the park.

Multi-use recreation at the park also fosters a real sense of community. I regularly run into friends and neighbors in the park. The other day I was biking and crossed paths with another dad I knew from the cub scout pack years back who was out there trail running. I ride on certain mornings and tend to see the same hikers and dog walkers and enjoy a friendly exchange with them.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

I know there is a small but vocal minority clamoring to restrict recreational access to the park and demanding to have it designated as a nature preserve. From an ecological perspective, there is no rational basis for this. The park is surrounded on all sides by urban development. There is no need for this 300 acre park to serve as a restricted-access nature preserve when there is a 23,000 acre wildlife preserve less than a mile away (the SFPUC Peninsula Watershed). There is no scientific evidence that the park has been in anything less than an ecologically stable condition for decades. Based on my nearly 20 years experience as a park user, I feel the trails are less erosion-prone, and much better maintained now than when I first started riding them in 2003. This is due to our fantastic Parks department, which as been able to leverage the substantial volunteer resources of community groups such as the Waterdog Trailkeepers, which is mostly comprised of mountain bikers.

Hopefully I've illustrated the tremendous value that multi-use recreation brings to the community. I ask that the Council and Commission recognize this value during the Open Space Master Plan process and keep the success story of multi-use recreational access at the forefront during this process, so the generations to come will have the ability to enjoy this amazing recreational resource as we do now.

Very truly yours,

Paul Sheng

Dear Belmont City Council and Parks and Recreation Commission,

I'm writing to encourage the City Council and Parks and Recreation Commission to reaffirm Waterdog Lake Park and Hidden Canyon's ongoing success as recreational open space, as part of the master planning process.

I enjoy Waterdog for mountain biking, hiking with my family, and walking my dog. I have volunteered for trail maintenance with the Waterdog Trailkeepers. I can leave my home on my bike and be on the trails within minutes, providing a welcome respite from the stress of suburban life. I have introduced my children to the enjoyment of nature there, and shared my love of cycling with my teenage son.

Waterdog is unique and cherished as local open space in its commitment to multi-use recreation and its proximity to our homes. Although there are large amounts of undeveloped land on the Peninsula, vast amounts of it are closed to public access, such as the SFPUC watershed, or closed to bikes and dogs, as with most of the San Mateo County park trails. But people need recreational outdoors opportunities, which is what Waterdog and Hidden Canyon provide our community. It is relatively small and surrounded by homes on all sides - it's our local recreational outlet, not a nature preserve.

The stress and lockdowns during the COVID pandemic have driven more people than ever to recreate in one of the few open possibilities - parks. Usage is way up at open space all along the Peninsula. To accommodate this, we need to be finding ways to open more natural land for humans to recreate outside, not excluding some groups in favor of others. The Peninsula needs more multi-use trails, to spread out the increased usage better. I encourage the master plan to take this into account.

Thank you for your consideration.

Sincerely,
Rob Anagnoson

Dear Parks and Recreation Commissioners and City Council,
I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. Multi-use trails are valuable and important not to close off with broad strokes due to the acts of a few. Mountain biking has been a staple part of the area and a beacon of fun since I first learned to mountain bike. I grew up in Redwood city, lived right across the street from the Racoon Run trailhead for years, and now live in San Francisco but still visit Waterdog at least once a month, as Covid/travel restrictions have allowed. I support maintaining the multi-use access and allowing for all types of users to recreate. If however, there are restrictions for safety placed to aid blind turns, choke points, and convergences, with guidance, trail working crews can make interactions between different forms of transportation safer and not restrict anyone's access. An example can be to designate directionality of certain trails. Thank you for taking the time to read this and I hope to continue riding at waterdog for years to come.
-David Hallock

Dear Parks and Recreation Commissioners and City Council,

As a resident (10 years) of Belmont, I support keeping Water Dog Open space open for all users: hiking, dog walking, mountain biking, nature enthusiasts.

I have 3 children, ages 13, 11, and 9, we have enjoyed hiking, biking and walking our dog at Water Dog lake since my first child was a baby in a stroller. My sons attended the fishing class through the Parks and Recs and really enjoyed that class and have helped pick up trash through the Footsteps summer school camps.

The "Love Waterdog" campaign is doing a great job in ensuring our trails are safe. I attended your last virtual parks and rec meeting and have been impressed with Love Waterdog's recent endeavors. Keep it up, this is all about our community working together to preserving our trails for all to enjoy.

In fact, today as I write this letter my daughter (9 years old) will be biking with her friend (also a Belmont resident) at Waterdog lake. It is her friend's first time mountain biking and she is so excited. Their dads will be biking with them. They live in an apartment and do not have a backyard, but are very close to the Waterdog lake. I am hoping this chance to mountain bike with her friend will increase her confidence and foster a love for the outdoors for her whole family (including her 5 year old sister).

Thank you for your consideration as you develop the new open space master plan.

Regards,

Karen Sheng (Belmont resident and mom of 3 children).

To whom it may concern,

It has come to my attention that there is a movement to close parts of Waterdog to mountain bikers. As an avid mountain biker and hiker this causes me great distress. Mountain biking is a great family activity which involves fitness and being in the great outdoors.

As one of only a couple of mountain bike accessable trail networks on the peninsula Waterdog is very important to cyclists of all types. Mountain bikers are trail advocates often building and maintaining trail systems. Mountain bikers bring commerce to Belmont in the form of bike shops, coffee shops and eateries.
During these covid times mountain biking is a healthy activity which does not involve close contact with other people. This is vital to the mental health of many.

Mountain bikers and hikers CAN coexist on trails.

Regards,

Bryce Sluman

Dear Parks and Recreation Commissioners and City Council,

I have been a resident of Belmont for nearly 10 years and my family and myself love Waterdog Open Space. My three kids (16, 14, and 9) are growing up hiking and biking at Waterdog and it's been a memorable experience that will be with them for the rest of their lives. I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

Thank you for your consideration as you develop the new Open Space Master Plan.

Best Regards,
Justin Mauck

Belmont, CA

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Dear City Council Members and Parks & Recreation Directs,

As a member of the Belmont community and frequent user of Hidden Canyon Park and John Brooks Trail (to be referred to as Water Dog going forward) I just wanted to reach out and share my thoughts on the Master Open Space planning process. Every time I go to Water Dog, I see bikers, hikers, runners, and nature enthusiasts all sharing and enjoying the park together. My general impression is that the vast majority of the community wishes to keep Water Dog as the multipurpose recreational Open Space that it currently is. I have heard rumblings that a small, but very vocal, group wishes to *completely change* Water Dog from a recreational Open Space to a Nature Preserve. While I am no ecologist, I would think the size and location of Water Dog would not suit it to being changed to a nature preserve, and instead would only serve in denying members of the community a place to enjoy outdoor recreation. As I am sure you are aware, during the past year Water Dog saw a vast increase in use as people turned to outdoor recreation to help cope with all the stress that the pandemic had induced. I truly believe that taking away such a needed asset to the community would be a devasting blow to Belmont; and all others who travel to Belmont to enjoy Water Dog.

I would suggest in the Master Open Space planning process, instead you look into adding more trails at Water Dog to help facilitate the increased use and popularity of the park. Working with groups such as the Water Dog Trail Keepers and other engineering and environmental consultants, I am sure new trails could be developed to further enhance the Water Dog experience and enjoyment for all.

I truly appreciate your service to the Belmont community. I hope that whatever you decide, it is in the best interest of the community and not the interest of a few, but incredibly vocal and disruptive, individuals who in my opinion wish to hurt the community for their own self interests.

Kind regards,

Scott Hansen

Subject: Love MULTI-USE access at WaterDog Lake - Great Selling Point - Please keep open to all!!

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Commissioners and Council,

I am writing to ask that as the new Open Space Master Plan is developing, you please keep Water Dog Lake trails open to all for multi-use purposes!

I have lived in Belmont for almost 30 years and have been a frequent and consistent user of the Water Dog Lake Trails. We use the trails mostly for walking the dog and hiking/exercise. Our son loves to take the occasional bike ride there. In my experience, a VAST majority of the bike riders on the main trails have always been very courteous (much more so than many of the dog walkers). I love to see that others are out enjoying a nice day, each in their own way.

I am also a local real estate agent and I can tell you that the question of local parks and trails comes up all the time when buyers or renters are looking for something else to distinguish Belmont, other than our great schools! It is a huge community selling point to have such a wonderful and close by open space that everyone can use and enjoy (and that many can walk or ride to... without the need to get in the car!). Water Dog open space has served the local community need for trail diversity for decades. Everyone can share! Please don't cut out the many uses, to subsidize the wants of the few!

Sincerely,
Sherri Sunahara

Subject: Multi-use trail access at WaterDog Lake Preserve

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Team and City Council,

As a hiker and biker, I support keeping WaterDog an accessible and multi-use trail network designed to meet the needs of all. The trails in and around waterdog lake are very well built and carry a colorful history of multi-use, from moto to mt bike origins, to everyday hikers and walkers. Drainage is super efficient and sight-lines and grades are very agreeable to a wide range of skill levels.

As part of the master plan, I request you to consider maintaining trails in their current form, with options for all skill levels of Mt biking and hiking. High quality mt bike trails are very hard to come by in San Mateo county, and represent a destination for Belmont that should be celebrated, not divided.

Access to nature is critical for the well being of adults and children alike. I would encourage the city to consider ways to expand trail networks and encourage more cycling and hiking. It's possible the carlmont cross country course could be enhanced to reduce all traffic at waterdog, I would encourage expanding this to cyclists as well as hikers and runners. Let's find ways to expand the supply of (not argue over the access to) trails and open spaces.

Thank you for your consideration,

Ryan Kauffman

I lived in Belmont for 7 years but recently moved to Redwood City. I am still an avid parks user in all of San Mateo County and especially Belmont. I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

I support preserving wildlife habitat but not at the expense of long existing recreational use. People recreating on public land shouldnt have to choose between being pro wildlife and pro recreation. Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that that chooses to habitate there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francscico Public Utilites Commission Peninsula Watershed.

Why do I need to keep contacting the government to defend my rights? Why does my government not recognize mountain biking as a legitimate recreational activity and use of public space? I am tired of feeling continually threatened and attacked. please write mountain bike recreation into the master plan as a first class activity on equal footing with other human powered recreational activities.

*Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, excercise, revitalization, appreciation of nature, cultivating conservationist and environmental ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water Dog has served this public well for decades.

Thank you for your consideration as you develop the new Open Space Plan.

In addition, I'd like to add that local Belmont businesses do benefit from the mountain biking community. Most mountain bikers like to grab a bite to eat and hang out after a ride, and I've always found myself at a local eatery after my ride at Waterdog. Banning bikes at Waterdog will further divide our community, hurt businesses, and have a negative effect on the health and well being of many riders who find Waterdog as their only recreational release.

I strongly urge you to keep the trails Multi-Use.

Dear Parks and Recreation Commissioners and City Council,

We love our open space trails in Belmont, and we want them to stay open for EVERYONE to enjoy! Waterdog recreational open space is a great example of a successful multi-use trail system, with vibrant hiking and biking user groups out there daily. We all win when we can all get out for fresh air and exercise. These trails have been multi-use for decades, and there is no data to suggest that bicycles are causing problems for any particular user group, or to the environment. As a resident of Belmont, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- *Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces*
- *Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.*

Subject: Belmont Open Space Master Plan Public Comment

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

My name is Jack Gaynor and I am writing to provide a public comment for the Belmont Open Space Master Plan. My fiance and I have lived in the area and have enjoyed using the Open Spaces over the past three years that they were one of the deciding factors in our decision to settle here and start our family.

The various open spaces, particularly Waterdog, have been a constant source of joy over the past years, particularly during 2020. We are both hikers, mountain bikers and trail runners, and the multi-use nature of all the trails as they currently are has been one of the things we love about Waterdog as it means we can vary how we can enjoy the open space from day to day.

I have also volunteered with the Waterdog Trailkeepers to maintain the trails, fixing issues with drainage and adjusting the existing trails to better suit the multi-use nature, and I really appreciate that the Belmont Parks and Recreation department is collaborative in the care and maintenance of the trails.

As such I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community, for all trail users. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to all trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great, and the signage really helps to share the nature of Waterdog.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. Speaking personally I think we are doing a great job along with Belmont P&R workers, and our trails get healthier every year.

Open space recreation carries enormous benefits for the families that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space for all trail users - Waterdog has served this public need well for decades and I hope that the Master Plan will continue this great history into the future.

Please feel free to contact me if you need any additional comments.

Thanks,

Jack Gaynor

Dear Parks and Recreation Commissioners and City Council,

I want to express my sincerest support to keeping Waterdog Open Space an accessible and sustainable place for the variable ways our residents recreate. This helps build a stronger community, build awareness of nature, and stay fit. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

The last year has magnified our community's need for open space recreation. As a veteran and transplant, Belmont is the first place I have lived since leaving the service. The mere existence of Waterdog helped me settle on this fine city and I could not be happier with this choice. Biking and running in Water Dog has helped me maintain my sanity and self-esteem over the last four years. Giving my unique outdoor skills in service of the city as a trail maintenance volunteer has continued to make me feel like I am contributing to society.

There is also a deep sense of belonging this encourages in those of us that use the space. It provides us with a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades and I look forward to seeing the ways in which Waterdog continues to evolve for the future of recreation and preservation.

Sincerely yours,
--
John Newdick

Dear Parks and Recreation Commissioners and City Council,

I strongly support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining trails as they are for multi-use for hiking, biking, dog walking, exercise, connecting to nature, etc. Consistent with best practices of other open spaces
- Continuing outreach and education for trail users and groups to ensure sustainable use of our trails. The "Love Waterdog" campaign is great
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservations of the trails. They are already doing such a fantastic job. The trailers are IMPROVING over time!

On a personal note, Waterdog Open Space has been an essential part of my own mental health and well being. Especially during these times with Covid 19, it has been even more critical to get outside and share nature with the community in a healthy and safe way.

If you have any questions please feel free to contact me.

Thanks,
Eric Eastman

Dear Parks and Recreation Commissioners and City Council,

I am a 10-year resident of Belmont and I want to add my voice to those who are advocating for keeping Water Dog Open Space *open to all*.

I strongly encourage the development of a Master Plan that preserves or adds to recreational opportunities to Waterdog Open Space. In the new Master Plan, I request you to consider:

- Maintaining **multi-use trails** for hiking, biking, dog walking, trail running, and so on.
- Encouraging **safe and sustainable** use of our trails through outreach and education.
- Engaging and **collaborating with community groups** and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. These improvements are noticeable.

We all agree Water Dog is one of Belmont's treasures. It is a treasure *because* it supports diverse activities, not in spite of it. It has served Belmont residents and their childrens' recreation for several generations as space that is Open to all. With your help, it will continue to serve the **diverse recreational needs** of today's and tomorrow's families as well.

Thank you for your consideration as you develop the new Open Space Master Plan.

As a future resident and frequent visitor of Belmont, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

• Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that that chooses to habitate there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Fransisco Public Utilites Commission Peninsula Watershed.

Dear Parks and Recreation Commissioners and City Council,

I live on the Belmont-San Mateo border and am writing to support designating Waterdog Open Space as a Nature Preserve. In the new Master Plan, all Open Space policy decisions should prioritize conservation and habitat protection, including:

- Designate narrow natural surface trails for hiking only, consistent with Best Practices of other open spaces
- Close illegal Open Space trails, and restore damaged ecosystems and fragmented wildlife habitat
- Enforce the closure of all open spaces from sunset to sunrise to protect wildlife and ensure safety; cite violators
- Prohibit e-bikes and motorized vehicles on all trails; cite violators
- Allocate park spending to equitably fund desperately needed Open Space maintenance
- Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance

It's so sad to see the trails and wildlife habitat destroyed by over-use, and lack of maintenance and rule enforcement. Please do all that you can to restore and preserve this jewel. Please incorporate these policies into the new Open Space Master Plan!

Thank you for your attention to my concerns.

I am glad to hear that the whole Waterdog Open Space is under review for improvements that can be made.
It is a grand community park with a tremendous amount of volunteer effort over many years which is evident in how trails were laid out, how bridges were constructed, how extra steps were created to make passage of steep areas possible ,etc As an 85 year old woman I can still go on all the trails, some being advisable only if I bring "poles". That is just fine. Those difficult areas should remain as challenges to younger walkers and hikers. Since I hike there at least twice a month, I wish to make the following suggestions.

1. It would be best to improve signage to indicate to bicyclists the trails closed to them. (I must say that most cyclists are respectful of hikers and stop in wide spots to let one pass but I agree that the narrow trails should be closed to them.)

2. Continue to discourage shortcuts taken by both cyclists and walkers by blocking them!

3. I do not know which trails are being considered for closure. I think that links to neighborhoods of Hallmarkk, etc. should remain. I do think that the parallel trails on the south side of the Waterdog Lake should remain. They may be close...but the highest one is wide and for most of its length is suitable for cyclists.

4. Continue the work that has been done to avoid washouts from storms that occur on some trails; these flooded areas are not necessarily caused by cyclists.

5. During the Covlid, especially on weekends, there are many people enjoying the Open Spaces throughout the County. Volunteers could be at the gates at Lake, Carlmont, and Half Moon Bay with leaflets to show the pedestrian and cyclists the best routes for them and to make visiting cyclists aware of their responsiities.

6. There is a new connection from Crystal Springs. Middle School to the "road trail". Maintenance of that trail should be the responsibility of the teachers and students. Also, the craft teacher and students! at CSU could work with Belmont to become involved in refinements of bicycle routes as they are using them a lot under normal non-covid circumstances.

These are my thoughts.I am a 22 year resident of Belmont, cousin of Hartley Laughed (now deceased) who was a fervent Promoter of Open Space.....Laura Peterhans, 2021 Belle Monti....650-637-8783. lkpeterhans@yahoo.com

I am reaching out to support increased access to trail at Waterdog park in the city's new master plan, including increasing access for mountain biking. If is one of the great things about this park and personally it is a shining example in the peninsula of contentious land access.

This is one of the few parks in the area that allows bikes, and has great trails. Many more park systems are completely off limits to bikes. It shows the pressure and demand that is there and is not going away anytime soon. I urge to to consider this in you master plan. Thank you.

To whom it may concern,

I have recently learned that one of my favorite places to ride my bike upon getting off work in the morning is being threatened to close. I find this very disappointing to say the least. This park has provided much stress relief as well as physical health benefits to the local mountain bike as well as hiking community. A lot of the park trails are maintained by local volunteers that are hikers and mountain bikers to begin with. I truly don't understand why this conservation group finds it necessary to make an attempt at closing off such a gem of a place to enjoy the outdoors when there are several acres upon acres of protected wilderness right next door.

I'm urging the Local Officials to please not allow Waterdog Park to close to those fellow hikers, trail runners, mountain bikers, and families out on their daily walks. I am not a resident of Belmont but I do serve and am a part of this community.

I ask again, please do not consider the close of Waterdog Park.

Respectfully,

Jason Emmett

To whom it may concern,

I recently learned that there is a movement of people trying to disallow mountain bikers from using the trails at Water Dog Lake park in the upcoming Belmont Open Space master plan. I grew up in Belmont, attended Fox Elementary, Ralston Middle, and Carlmont High School. I've been riding my bike at Waterdog Lake Park with my brother since we were kids over 30 years ago, and my father rode his bike there years before that. We have always loved riding bikes in that canyon, and still meet there regularly to ride together, and even though our dad is no longer with us we share that connection in his memory. Mountain bikers have been instrumental in creating and maintaining those trails and I am incredibly disheartened that people are trying to take that away from us. Please do the right think and keep our Waterdog trails open for all who use them responsibly, including mountain bikers.

Sincerely,
Brian Codianne

Dear Parks and Recreation COmmisioners a d City Council,

I want to commend you all on embarking on a Master Plan Project for Water Dog Park. I am resident of unincorporated San Mateo and don't have a city to call home so I have adopted Belmont due to its proximity and my love of the community and recreational opportunities.

Simply put, Water Dog park is a jewel and an incredible resource for Belmont residents and those of us in the surrounding communities. On any given day I see walkers, hikers, runners, mountain bikers, kids fishing, and teenagers simply hanging out. Plus, raptors of all sorts, rabbits, fox, coyote, and I imagine mountain lions though never seen one. All this in a small open space smack dab in the middle of a city.

I envision a master plan that listens to all users and in the end enhances all of the current recreational activities. I have no doubt the committee and consultants will be able to use park management practices to manage any user conflicts as in my experience these have been very minimal which speaks volumes considering how many people use the park.

Good luck and keep up the good work.

Alex Fernandez

Dear Park and Rec Commission of Belmont,

I am a homeowner and resident in San Mateo. I have enjoyed the many amazing Park and Recreation spaces in the peninsula for many years. Specifically, I have enjoyed hiking and mountain biking at Waterdog Open Space in Belmont. I support keeping Waterdog Open Space as an accessible and sustainable place for outdoor recreation. I am in favor of keeping the and maintaining the trails for hiking, biking, dog walking, and building community with neighbors. Please keep the Park and Recreation Open Space Master Plan inclusive to all outdoor activity.

In my many years of mountain biking in Waterdog, I have always had a positive and safe experience sharing the paths with hikers and dog walkers. The multi-use space brings community together. The Master Plan being open for all outdoor activities will continue to help support local restaurants and businesses in Belmont. Often times before and after my recreational activities, I have met with family and friends to buy food and support businesses around Waterdog.

Thank you for your time and consideration. Appreciate your work in building and supporting community.

Sincerely,
Gary Yee

Subject: Multil-use access must be part of the plan for Water Dog Park

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

As a frequent bike rider and hiker at Water Dog Park, and someone who has volunteered at trail maintenance days through the Water Dog Trailkeepers group of mountain bikers, I am concerned that a small, but very vocal group is using anecdotal data and NIMBY-ist tactics to try to restrict Water Dog park to one of its' key user groups: mountain bikers.

The answer to long-term space planning is inclusion, education, and planning for sustainable multi-use, not exclusion. I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
- Continuing to collaborate with community groups and volunteers, like the Water Dog trailkeepers, to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation and carries enormous benefits for the folks that live in and around Belmont. Every day I see families, on foot and on bikes, showing their kids the beauty of nature and the value of open spaces in their community. Closing off the park to cyclists will only serve to disconnect future generations of nature lovers and trail users from the park. Our community has a need for recreational open space - Waterdog has served this public need well for decades. With an inclusive long-term strategy and thoughtful outreach to all user groups, it will continue to serve that purpose for many more.

Dear City Council Members and Parks and Recreation Commissioners,

As a 30-year resident of Belmont, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces. If the past year of COVID has shown us anything, it is that outdoor recreation is vital to our health and well being.

Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. **Our trails get healthier every year.**

A small but vocal group seems to want to ban mountain biking from the Open Space. They propagate **false choices** such as we can have recreation or wildlife, but not both. When any examples of "bad behavior" by a mountain biker is discovered, it is cited as an excuse to ban all mountain bikers from the trails. This would be like saying that if any car speeds on Ralston Ave. we should ban all cars!

As an alternative, shared access and understanding among the various user groups is a much preferred option, in my opinion. People can be educated as to the issues that others perceive, and we can teach all users that their actions affect others. **"Do unto others as you would have them do unto you."**

Designating the open space as a wildlife preserve makes little sense. It is surrounded by all sides by residential development and is much better utilized for the citizens of Belmont as a place to take our families, walk our dogs, hike, run, and bike. One could argue that this 300 acre parcel is so small compared to the San Francsico Public Utilites Commission Peninsula Watershed (23,000 acres) that the benefit to wildlife is miniscule, especially when compared to the benefits to the citizens and voters of Belmont.

Thank you,
Michael Munrow

As a resident of San Carlos, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

• Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that that chooses to habitate there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francscico Public Utilites Commission Peninsula Watershed.

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

As a resident of Belmont and someone who actively enjoys the open recreation spaces in Belmont, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

In particular for this last year, where shelter-in-place was the norm, travel outside our local area was restricted, and many forms of recreation were sharply curtailed, the Waterdog trail system was a great outlet for my family in staying active and healthy. From our time on the trails, I see the multi-use opportunities as something to be strongly preserved--hiking, running, biking and dog walking--all activities my family has enjoyed at Waterdog.

Thank you for your consideration as you develop the new Open Space Master Plan.

Dear Parks and Recreation Commissioners and City Council,

I am a resident of San Mateo on the Belmont border and am writing to you to give my support for keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community.

Although not a resident of Belmont, I would like to provide some background to my experience with the Waterdog open space recreation area and how this area is a valuable part of my life. I moved to the Bay Area from Australia in 2000 and have been using this open space for hiking, dog walking, and mountain biking for 20 years. Access to this open space has been extremely valuable to me as a place to enjoy the outdoors and now as a place to enjoy with my wife and two sons. I have gained many friendships from using this open space and enjoy seeing the smiles on faces when I visit multiple times a week with my busy work and family schedule. This has been especially prevalent during COVID-19 where access to open space has been essential for physical and mental health. Not having this open space would leave a huge void in my family's life and the many community members that seek this open space for much needed exercise and relaxation.

In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Dear Parks and Recreation Commissioners,

I'm writing - again - in support of keeping Waterdog Open Space an accessible and sustainable place for fitness and recreation. I have been a resident of Belmont for almost 7 years and use Waterdog Lake Park 2-3 times a week. I have also put in many hours of trail maintenance over the past 2 years. The park has helped me form a bond with area and with the nature it provides, adding immensely to my quality of life as a transplant patient, and has given me a sense of pride for the city I live in.

In the new Master Plan, I request you to consider:
• Keeping trails open as they are for multi-use, maintaining best practices as other open spaces
• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The new signs and trail markers are awesome
• Maintaining collaboration between community groups, volunteers, and Belmont Parks and Recreation workers to support trail maintenance and preservation. I see real improvement here.

I hope we can put together a long term plan for sustained multi-use trails and avoid having to defend the park against half-truths, misinformation, and misleading statements made by the opposition to Waterdog Lake Park as a community investment in a shared public space that is the pride of healthy, growing, and active Belmont residents.

Sincerely,
David Paulsen

Dear Parks and Recreation Commissioners and City Council,
As an avid mountain biker, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:
* Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices if other open spaces
*Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
*Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.
Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmental ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water Dog has served this public well for decades.
I have only been to Waterdog once but it was an experience I'll never forget. I am looking forward to the next time I can come back with my friends and have an awesome day shredding then eating at the Dog Haus or one of the other restaurants on Ralston. Waterdog is truly a gem of a park and I envy those who live on the peninsula for having it so close. I'm strongly reconsidering relocating to Belmont solely so I can be closer to such an amazing park, I wouldn't move anywhere on the peninsula because nobody else has Waterdog.
Thank you for your consideration as you develop the new Open Space Plan.

Regards,

Raul Ceja

Dear Parks and Recreation Commissioners and City Council,

We have lived in Belmont for 29 years, coaching our kids through AYSO, Little League, Basketball and proudly watching them graduate from Carlmont and go on to college. We love our city and regularly use Waterdog for hiking, dog walking, and to mountain bike. We support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.
- The only recommended change I see is we could have some of the trails setup as one way to reduce the number of times we pass people in this COVID age (similar to how Pulgas Ridge setup one way trails).

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

Hello,

Where can I join the group wanting to keep cyclists off the Lake Loop Trail?

Can't walkers with their leashes dogs have one little loop away from cyclists tearing past them, causing us to scramble into the brush out of their way, sometimes with unleashed dogs?

Water dog trail is a free-for-all at the best of times, but count me as a Belmont resident who had to give up Lake Loop because of cyclists.

Thank you.

date expenditures. That being said, the City is also facing other financial pressures to its property taxes due to Sacramento's long standing actions, which results in an ongoing revenue loss in property tax, the General Fund's primary revenue source. With data available so far, the ongoing revenue loss is estimated at $1.8 million per year, and recovery action is required.

Since the last recession the City has implemented financial best practices including five year forecasts, which are particularly helpful for identifying the impact of trends over time. This longer view is important in times of crisis, allowing the City to plan thoughtfully and avoid abrupt service impacts to the community. The City has a history of taking intentional, proactive, and strategic steps to ensure the long-term fiscal sustainability of the City, including adopting a structurally balanced annual budget, funding long-term needs, and maintaining a minimum $5.0 million General Fund emergency reserve level. During the Mid-Year Review, Council has approved a list of revenue recovery and expenditure reduction strategies, with staff continuing to pursue a variety of fiscal and legislative mitigation strategies.

While long-term forecasts remains unclear by an unpredictable year, we now have a clearer perspective to revise our budget for the remainder of the current fiscal year and to refine our strategic direction for the next few years. With the Revised Budget, we continue to fund ongoing services from ongoing revenue, and use one-time revenues for one-time expenses. In addition, actions moving forward will include engaging the community to identify community service priorities and developing the budget for the 2022 fiscal year which starts on July 1, 2021 to address the ongoing financial crises and Council's strategic focus area.

Measure I 2020 Street Reconstruction Project

Late Spring 2020 the City noticed the 2020 Street Reconstruction Project for bid resulting in two bids in the amounts of $548,237 and $1,013,332 over the engineer's estimate of $2,125,000. Staff made the decision to reject the bids and modify the project for a re-bid during winter when the bidding climate is more competitive and could generate more interest among the contractors resulting in lower bids. The subsequent bid opening yielded a low bid at $2,079,019 resulting in taxpayer savings and the ability for the city to include 12 streets instead of just the 10 roadways in the base bid. The City will be awarding the contract to O'Grady Paving, Inc. and construction will take place this summer. See the 2020 Street Reconstruction Project - Staff Report for more information about the project.

Ralston Avenue Corridor Improvement Project Segment 3

The Ralston Avenue Corridor Improvement Project Segment 3 picks up where Segments 1 and 2 left off along Ralston Avenue. It is currently advertised, and the bids will be opened on March 2, 2021. Segment 3 will be improving Ralston Avenue between South Road and Alameda de las Pulgas to create more complete streets. The work will include improvements to the sidewalk, driveways, ADA ramps, bike lanes, crossings, striping and pavement. Construction is set to begin this April and will continue through summer. from the infields , creating a sharp infield arc. Red rock was added at various sites to fill in low spots. Other work included irrigation adjustments, weed removal from dugouts and field perimeters, as well as gate and latch repairs. Play ball! *(pics attached)*

Preparing against summer wildfires

Parks crews will be working with Cal Fire crews to conduct more fuel reduction off Cliffside Court. This project is done in consultation with SMC Fire.

Community Partner Programs/Grants Available

Sustainable Streets Master Plan

What if the streets in our communities were better designed to provide safety and protection for pedestrians and cyclists, help increase resilience against the effects of climate change, and beautify our neighborhoods?

To take the leap toward sustainable streets throughout the county, the City/County Association of Governments of San Mateo County created the **San Mateo Countywide Sustainable Streets Master Plan** in collaboration with Caltrans under the Climate Adaptation Planning Grant Program. This website is the permanent home for the plan and its associated documents. This long-term planning effort builds on years of watershed modeling and stakeholder input, and takes a closer look at how and where to build sustainable streets in San Mateo County that integrate stormwater management with local priorities, like bike and pedestrian mobility, transit improvements, climate change adaptation, and more. The plan also includes a down-scaled climate change analysis to better understand the potential future precipitation related impacts from climate change and how green stormwater infrastructure can help adapt to changing conditions.

San Mateo County Business Owners and Managers!

The SF Bay Area Green Business Program is hosting free info sessions to share best sustainable business practices and information on how to access a $500.00 microgrant. Learn more and sign up here: http://gogreennow.eventbrite.com

Water Heater Rebates Are Available

Rebates on heat pump water heaters (HPWH) are available. Peninsula Clean Energy will provide $1500 in rebates when customers replace a gas water heater. Combined with the BayREN rebate of $1,000, this is a significant incentive. CARE/FERA customers are eligible for an additional $1,000 rebate. If an electrical panel upgrade is needed, supplemental rebates are available for that.

See https://www.peninsulacleanenergy.com/heat-pump-water-heater/ for more details.

Subject: Keep Waterdog Multi-use

Dear Belmont City Council,

I have lived on Hillman Ave since 2013. I am proud to call Belmont home, and that is the birthplace of our children, now age 3 and 6. Waterdog holds a special place in our family's hearts. We spend hours in the park weekly hiking, biking and walking our dog Scooter. There is abundant wildlife considering this is such a developed suburban area.

Now it seems a small, but very vocal group wants to assert influence, right at the time the Council is considering parks and recreation open space master plan (PROS). The group, most of whom own large houses that border the park, seek to strip our park and trails of their multi-use status. I first became aware of this anti-biking group while volunteering in a city-approved trail maintenance group, where we were harshly confronted and filmed without permission.

While I don't understand the motivation of this group, I do know that they stand in stark contrast to almost all other park visitors. People like us are out here every day. We welcome those from outside of Belmont. We say hi to those we pass on the trail. We pick up trash (and other gross stuff) that isn't ours. We respect the trails, the hikers, bikers, and dogs. We wear a mask.

Cycling in the park has brought so much richness to my life and my family. It is healthy and fun. Through group rides and volunteering, I have met so many of our neighbors that would have otherwise been strangers. My son took his first trail ride a few months back. I am greatly looking forward to biking with both my children all over Waterdog for years to come.

Kind Regards,
Nate Yeakel

Subject: Save Waterdog Preserve

Dear Parks and Recreation Commissioners and City Council,

As a resident of Belmont Heights, I support designating Waterdog Open Space as a **Nature Preserve**. In the new Master Plan, all Open Space policy decisions should prioritize conservation and habitat protection, including:

- Designate narrow natural surface trails for hiking only, consistent with Best Practices of other open spaces
- Close illegal Open Space trails, and restore damaged ecosystems and fragmented wildlife habitat
- Enforce the closure of all open spaces from sunset to sunrise to protect wildlife and ensure safety; cite violators
- Prohibit e-bikes and motorized vehicles on all trails; cite violators
- Allocate park spending to equitably fund desperately needed Open Space maintenance
- Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance

Temporary ban on all mountain biking to allow for the healing of the open space terrain, until a time when it is determined this preserve can rebound from, and once again tolerate the destructive nature of cycling.

Please incorporate these policies into the new Open Space Master Plan!

Thank you.

Subject: Open Space Master Plan

Dear Parks and Recreation Commissioners and City Council,

As a resident of Belmont, I strongly support designating Waterdog Open Space as a Nature Preserve. In the new Master Plan, all Open Space policy decisions should prioritize **trail safety**, conservation and habitat protection, including:

• Designate narrow natural surface trails for hiking only, consistent with Best Practices of other open spaces. I have had so many very dangerous near misses from bikes that I now avoid using any of the Belmont trails. The danger is so great that I now go to the parks in neighboring cities where there are designated hiker only trails which is enforced through clear trail signage, good maps and trail steps that discourage bikers. A friend had a serious accident with a cyclist while walking on a trail across the Bay so the danger is particularly real for me. From a legal standpoint a consideration is the potential city liability for hiker/biker accidents because of the current lack of enforcement of safety standards that other cities perform.
• Close illegal Open Space trails, and restore damaged ecosystems and fragmented wildlife habitat
• Enforce the closure of all open spaces from sunset to sunrise to protect wildlife and ensure safety; cite violators
• Prohibit e-bikes and motorized vehicles on all trails; cite violators
• Allocate park spending to equitably fund desperately needed Open Space maintenance
• Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance

Please incorporate these policies into the new Open Space Master Plan!

Sincerely,

John Aynsley

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Dear City Council Members and Parks & Recreation Directs,

As a member of the Belmont community and frequent user of Hidden Canyon Park and John Brooks Trail (to be referred to as Water Dog going forward) I just wanted to reach out and share my thoughts on the Master Open Space planning process. Every time I go to Water Dog, I see bikers, hikers, runners, and nature enthusiasts all sharing and enjoying the park together. My general impression is that the vast majority of the community wishes to keep Water Dog as the multipurpose recreational Open Space that it currently is. I have heard rumblings that a small, but very vocal, group wishes to *completely change* Water Dog from a recreational Open Space to a Nature Preserve. While I am no ecologist, I would think the size and location of Water Dog would not suit it to being changed to a nature preserve, and instead would only serve in denying members of the community a place to enjoy outdoor recreation. As I am sure you are aware, during the past year Water Dog saw a vast increase in use as people turned to outdoor recreation to help cope with all the stress that the pandemic had induced. I truly believe that taking away such a needed asset to the community would be a devasting blow to Belmont; and all others who travel to Belmont to enjoy Water Dog.

I would suggest in the Master Open Space planning process, instead you look into adding more trails at Water Dog to help facilitate the increased use and popularity of the park. Working with groups such as the Water Dog Trail Keepers and other engineering and environmental consultants, I am sure new trails could be developed to further enhance the Water Dog experience and enjoyment for all.

I truly appreciate your service to the Belmont community. I hope that whatever you decide, it is in the best interest of the community and not the interest of a few, but incredibly vocal and disruptive, individuals who in my opinion wish to hurt the community for their own self interests.

Kind regards,

Scott Hansen

Subject: Water dog lake trail

Hello,

Where can I join the group wanting to keep cyclists off the Lake Loop Trail?

Can't walkers with their leashes dogs have one little loop away from cyclists tearing past them, causing us to scramble into the brush out of their way, sometimes with unleashed dogs?

Water dog trail is a free-for-all at the best of times, but count me as a Belmont resident who had to give up Lake Loop because of cyclists.

Thank you.

date expenditures. That being said, the City is also facing other financial pressures to its property taxes due to Sacramento's long standing actions, which results in an ongoing revenue loss in property tax, the General Fund's primary revenue source. With data available so far, the ongoing revenue loss is estimated at $1.8 million per year, and recovery action is required.

Since the last recession the City has implemented financial best practices including five year forecasts, which are particularly helpful for identifying the impact of trends over time. This longer view is important in times of crisis, allowing the City to plan thoughtfully and avoid abrupt service impacts to the community. The City has a history of taking intentional, proactive, and strategic steps to ensure the long-term fiscal sustainability of the City, including adopting a structurally balanced annual budget, funding long-term needs, and maintaining a minimum $5.0 million General Fund emergency reserve level. During the Mid-Year Review, Council has approved a list of revenue recovery and expenditure reduction strategies, with staff continuing to pursue a variety of fiscal and legislative mitigation strategies.

While long-term forecasts remains unclear by an unpredictable year, we now have a clearer perspective to revise our budget for the remainder of the current fiscal year and to refine our strategic direction for the next few years. With the Revised Budget, we continue to fund ongoing services from ongoing revenue, and use one-time revenues for one-time expenses. In addition, actions moving forward will include engaging the community to identify community service priorities and developing the budget for the 2022 fiscal year which starts on July 1, 2021 to address the ongoing financial crises and Council's strategic focus area.

Measure I 2020 Street Reconstruction Project

Late Spring 2020 the City noticed the 2020 Street Reconstruction Project for bid resulting in two bids in the amounts of $548,237 and $1,013,332 over the engineer's estimate of $2,125,000. Staff made the decision to reject the bids and modify the project for a re-bid during winter when the bidding climate is more competitive and could generate more interest among the contractors resulting in lower bids. The subsequent bid opening yielded a low bid at $2,079,019 resulting in taxpayer savings and the ability for the city to include 12 streets instead of just the 10 roadways in the base bid. The City will be awarding the contract to O'Grady Paving, Inc. and construction will take place this summer. See the 2020 Street Reconstruction Project - Staff Report for more information about the project.

Ralston Avenue Corridor Improvement Project Segment 3

The Ralston Avenue Corridor Improvement Project Segment 3 picks up where Segments 1 and 2 left off along Ralston Avenue. It is currently advertised, and the bids will be opened on March 2, 2021. Segment 3 will be improving Ralston Avenue between South Road and Alameda de las Pulgas to create more complete streets. The work will include improvements to the sidewalk, driveways, ADA ramps, bike lanes, crossings, striping and pavement. Construction is set to begin this April and will continue through summer. from the infields , creating a sharp infield arc. Red rock was added at various sites to fill in low spots. Other work included irrigation adjustments, weed removal from dugouts and field perimeters, as well as gate and latch repairs. Play ball! *(pics attached)*

Preparing against summer wildfires

Parks crews will be working with Cal Fire crews to conduct more fuel reduction off Cliffside Court. This project is done in consultation with SMC Fire.

Community Partner Programs/Grants Available

Sustainable Streets Master Plan

What if the streets in our communities were better designed to provide safety and protection for pedestrians and cyclists, help increase resilience against the effects of climate change, and beautify our neighborhoods?

To take the leap toward sustainable streets throughout the county, the City/County Association of Governments of San Mateo County created the **San Mateo Countywide Sustainable Streets Master Plan** in collaboration with Caltrans under the Climate Adaptation Planning Grant Program. This website is the permanent home for the plan and its associated documents. This long-term planning effort builds on years of watershed modeling and stakeholder input, and takes a closer look at how and where to build sustainable streets in San Mateo County that integrate stormwater management with local priorities, like bike and pedestrian mobility, transit improvements, climate change adaptation, and more. The plan also includes a down-scaled climate change analysis to better understand the potential future precipitation related impacts from climate change and how green stormwater infrastructure can help adapt to changing conditions.

San Mateo County Business Owners and Managers!

The SF Bay Area Green Business Program is hosting free info sessions to share best sustainable business practices and information on how to access a $500.00 microgrant. Learn more and sign up here: http://gogreennow.eventbrite.com

Water Heater Rebates Are Available

Rebates on heat pump water heaters (HPWH) are available. Peninsula Clean Energy will provide $1500 in rebates when customers replace a gas water heater. Combined with the BayREN rebate of $1,000, this is a significant incentive. CARE/FERA customers are eligible for an additional $1,000 rebate. If an electrical panel upgrade is needed, supplemental rebates are available for that.

See https://www.peninsulacleanenergy.com/heat-pump-water-heater/ for more details.

Hello, Belmont Parks a Recreation Commissioners:

It has come to my attention that the Parks and Recreations Open Space Master Plan is under review this year.

As a resident of Belmont and mother of three active children, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. We enjoy hiking, biking and exploring in this open space regularly. In fact, we find ourselves there several times a week. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for residents of Belmont and visitors. Waterdog has served the public well for decades, and especially during the pandemic, as other opportunities for recreation have been off limits.

Thank you for your consideration as you develop the new Open Space Master Plan.

Warmly,

Astrid Block

Subject: Preserve and protect Waterdog Open Space before it gets trashed

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Belmont Parks and Recreation Commissioners and City Council,
I have been a Belmont/San Carlos resident for 33 years and frequently hike Belmont Canyon and Waterdog trails. Due to overuse by mountain bikers, many trails have deep ruts, switchback cuts, and signs of erosion. On numerous occasions, I have been forced off the single-track trail by bikers riding very fast around blind corners. For these reasons, I support designating Waterdog Open Space as a Nature Preserve. In the new Master Plan, all Open Space policy decisions should prioritize conservation and habitat protection, including:

- Designate narrow natural surface trails for hiking only, consistent with best practices of other open spaces
- Close illegal Open Space trails, and restore damaged ecosystems and fragmented wildlife habitat
- Enforce the closure of all open spaces from sunset to sunrise to protect wildlife and ensure safety; cite violators
- Prohibit e-bikes and motorized vehicles on all trails; cite violators
- Allocate park spending to equitably fund desperately needed Open Space maintenance
- Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance

Please incorporate these policies into the new Open Space Master Plan!

Thank you, Laura

Laura Deck

Follow Up Flag: Follow up
Flag Status: Flagged

Hello P&R Commissioners and Council Members,

My name is Laurent Gharda, I live at 14 Somerset Ct.

As a frequent user (hiker) of the open space, for your consideration, I hope the following will be made a high priority as you formulate the Parks, Recreation, and Open Space (PROS) Master Plan:

- Trail usage: I wish as many trails as possible be designated for hikers only. Jumping out of the path to let bikes through is dangerous, tiresome and requires too much attention. It diminishes my enjoyment of the open space. I have no problem with bikers using mixed use trails which are wider and safer for all involved, but on many very narrow trails with poor visibility, I feel this is dangerous to hikers.
- Erosion: I'm concerned that many trails show signs of erosion. To my untrained eye, it seems as if much of that is caused by bikes.
- E-bikes: I hope there is a prohibition against these motorized vehicles, as it will only make worse my 2 concerns above.

Thank you for your consideration!

Laurent and Dana Gharda

To: P&R Comm
Subject: Evidence-Based Impact Review of Trail Usage

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Belmont Parks & Rec. Committee,

As a homeowner in Belmont, I feel greatly privileged to bike and hike in the open spaces here with my wife and children, and I am motivated to contribute how I can. In addition to attending P&R meetings and regularly communicating with mountain biker groups about responsible trail usage, I am writing this letter to provide evidence-based support from the Mountain Bikers of Santa Cruz Science Committee, who cite over 54 sources, for continued access by bikers to multiuse trails.

I would like to submit for your review the *Mountain Biking Impact Review Frequently Asked Questions,* provided by the Mountain Bikers of Santa Cruz Science Committee in 2019. It can be downloaded from https://mbosc.org/mtb-impact-faq/ by scrolling down to the button labelled "Download a PDF of All MTB Impact Review FAQs" and clicking on that button. Alternatively, you can request hard copies, or submit additional questions from the website.

For your convenience, I would like to quote a few of the points from this review, which seem most relevant to Waterdog and Belmont Open Spaces. My only changes to the content are [explanations of terminology in brackets]:

Hydrology & Geology

1) Does mountain biking generate more erosion and other trail damage than other types of recreational trail use? How do physical trail impacts differ based on user group?

- In general, studies have shown that there is no statistically significant difference in induced soil erosion, excavation, incision (ruts), and trail widening between biking and hiking, and both are far less impactful than horse riding.[1][2][3][4] Erosion on trails depends more on trail design, water drainage, levels of use, and soil properties.[5]
- The degree of physical impact related to trails is mostly dependent on trail maintenance regime rather than type of use.[4]
- There are a handful of studies that have been conducted over the past couple of decades looking into the comparative physical impacts (e.g. trail compaction/incision, trail widening, soil displacement and erosion) on trails by different user groups.[1][2][3][4] The general conclusions of these studies are that:
    - On properly-built and well-maintained trails there is little to no measurable difference between the relative impacts caused by mountain bikes vs. hikers.
    - Although there are few quantitative studies on the topic, it is generally accepted that informal/user-built trails tend to experience dramatically elevated rates of degradation due to poor design, management, and construction practices.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

- Additional research is needed to more accurately measure the variation of mountain bike impacts based on riding style (e.g. XC [normal trail riding, as in Waterdog], downhill [downhill only riding, as at chairlift access bicycle parks], dirt-jumps, etc.).

3) I frequently notice ruts in local trails. What causes these? Do they lead to more erosion? How can they be alleviated?

- Ruts, soil displacement, and compaction are unavoidable outcomes of trail use over time. Whether by foot, tire, or hoof, soil is being excavated and forms ruts over time. If left unattended, the path will continue to erode from precipitation events.[6][7][8]
- Rut creation is accelerated when trails are wet, which is why riding trails during and following rain events is highly discouraged.
- Proper trail construction and regular maintenance under the guidance of trail stewardship organizations (such as MBOSC) greatly alleviate the effects of regular use.[6][7][8]

Plants & Wildlife

1) Generally speaking, what is the impact of mountain biking on wildlife?

- The short answer is that it's complicated. It largely depends on the species encountered, the characteristics of the trail, and the conduct of the trail user.
- The creation and presence of human created trails may lead to the fragmentation of a landscape that was once intact.[1][2] The effects of fragmentation on wildlife vary depending on the species and the scale of analyses and impact.[3] Fragmentation has been found to be more severe in areas where unsanctioned trails are common.[4]
  - For instance, Red-legged Frogs can be adversely impacted if a trail traverses within 100 meters of its habitat.[5]
  - Research has found that some bird species have decreased nest survival, increased predation, or lower nest density in areas fragmented by trails.[6][7]
  - Other species, however, have been shown to use trails to their advantage for travel or foraging, demonstrating that the presence of trails can affect the local composition of species.[7]
- The trail user and that user's behavior also will dictate their impact on wildlife. Studies have shown that nesting birds may not be disturbed (e.g. the bird being startled from its nest/perch) by hikers or bikers quietly moving along a trail, but when trail users were noisy (e.g. talking) or when they stopped and/or approached the nest (e.g. birdwatchers), the likelihood of disturbance was significantly higher.[8][9][10] Most birds and mammals will react more strongly (i.e., flee) to off-trail recreationists than to on-trail users.[8][9][10][11][12]
- Research shows that noise can affect wildlife. Noise, however, is subjective and is perceived by different species in different ways.[13][14] Studies have show that bicyclists passing quickly may cause less noise disturbance than other recreationalist on the trail.[11][16][32]
- A number of papers have attempted to synthesize the existing research of recreational impacts on wildlife worldwide. Findings show that a majority (>60%) of the studies reviewed demonstrated some form of negative impact on wildlife from all types of trail use (mountain biking, hiking, horseback riding).[16][17][18]
  - However, these same studies suggest that while recreational trail use may impact individual or groups of animals, population-level impacts to a species are less well-studied and poorly known.

2) How do mountain bikes impact wildlife as compared to other trail users?

- Many studies examined the impacts of recreation on wildlife by user type(s). The majority of these studies however didn't specifically address mountain biking, nor do they distinguish between the

the variety of mountain bike riding types (e.g. cross-country [normal trail riding, as at Waterdog] vs. downhill [lift accessed resort riding]). The few studies that specifically addressed mountain biking have suggested the following:

- Across a number of studies, researchers found that ungulates (such as deer and elk) are equally or less likely to be disturbed by mountain bikers than by hikers, joggers, or horseback riders.[11][12]
- The negative effects of trail use on birds is equal across trail use types when users are quiet and continuously moving.[17] Birds tend to be more adversely affected when users stop along the trail, or when they make more noise.[8] [9] [10][19]
- A study in a network of wildland reserves in Southern CA of disturbance to medium and large mammals found that all user types had negative effects, and that some types of human disturbance were more negative than others (from most to least impactful: pedestrian, bicycles, vehicles, dogs, equestrians).[20]
  - This study's researchers refer to these impacts as a form of "mortality-free predation" due to the fact that these animals preferentially avoid habitat that humans are a part of.

Subject: I Support Mountain biking at Hidden Canyon and Waterdog parks

Follow Up Flag: Follow up
Flag Status: Flagged

Hello Commissioners,

I am a long time science teacher at Carlmont high school for 20 plus years, and a San Carlos resident. Throughout this time I have very much enjoyed biking and hiking at Waterdog and Hidden Canyon parks.
I have seen vast improvement of the trails driven by the mountain bike community over the past few years, and in my opinion the trails and conditions have improved dramatically since the early 2000s.
I know many students of Carlmont high school that ride several times a week in these parks as well. This is a great local outlet for them that they can access without getting a ride from parents or driving themselves. Though the Peninsula has many areas with trails, the number of bike accessible trails east of hwy 280 is extremely limited, most other mountain bike areas are a 30 minute drive away from Belmont. Waterdog/Hidden Canyon is one of the very few quality mountain bike areas that local adults and teens can access by bike, with no need for a car.
Very often I will bike to work in the morning at Carlmont high school and then finish my day with a ride on the trails of Waterdog/Hidden canyon in the afternoon.

I know that some community members have been lobbying to restrict bikes to only the fireroad portion of these parks. This would be a tragic reduction of available recreation space for our youth and adult residents. Additionally, I'm not sure how this could be enforced in any kind of practical way by the city of Belmont.

Here are some ideas for positive changes that I would like to share as well:

1. Bell use by mountain bikers. I currently use a $3 "bear bell" and hikers appreciate it. There could even be "borrow a bell stations" at the popular trail heads.
2. Better signage indicating trail difficulty-easy, moderate, difficult.
3. Continued trail improvements done by knowledgeable trail builders. Many of the erosion poor trails have existed for over 20 years and are due to poor trail creation. The Elevator trail is a prime example of this.
4. Some one way traffic for bikes on some of the trails to promote safety and more established routes.
5. Explore how many US cities are promoting mountain biking as a way to improve the economic and overall appeal of the community.

Thank you and I will virtually attend the upcoming meeting.

--
Best Wishes,
Josh Engberg

Subject: Support for multi-use trails and mountain bike access at Waterdog Open Space

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

I am a regular mountain bike user at Waterdog Lake Open space, which is a fantastic, well managed, not over-used, gem of a park. Parking is easy, access points from surrounding neighborhoods are abundant, and 99% of trail users are really friendly and respectful.

A group called "PreserveWaterdog" is attempting to take action and raise awareness to false issues related to mountain bike use of this space. This same type of fight has taken place elsewhere in the bay(Marin is a good example) and resulted in wasted resources and contentious interactions that don't improve things for anyone's interests. I love the peninsula and San Mateo county because the trail users, city employees, rangers up in the Midpen Parks and everyone is generally respectful of each other and the trail infrastructure and environment. Please don't feed into this hate and false information when considering the new Master Plan and Open Space policy.

Mountain bikes DO NOT make eroded double track like the picture they have of Rambler trail...that is caused by groups of hikers, the same types of paths can be found on Sugarloaf mountain on the northeast side where no mountain bikers climb or descend. Mountain bikes might cause multiple "lines" through a given section, but they will not cause a widespread eroded open section like shown in that picture. False information.

Riding mountain bikes on the beautiful single track available to us in the parks and open space of the peninsula has been a major boost for mine and other's mental health during this pandemic. Having access to these space so close to home has been a huge factor in my decision to continue to call this area my home.

The one exception that many mountain bikers will agree with...E Bikes. I fully support limiting access to these and all off road single track trails to human powered sports only. I am an avid off-road motorcycle rider but I only go to designated OHV areas for that. E-bikes allow unskilled riders to travel far too fast on blind sections of trail near others.

Thank you for taking the time to read this, please feel free to reach out if you have any questions!

Regards,
Evan Bissell

Dear Belmont City Council,

People have been taking up outdoor recreation in droves due to the pandemic, and now that they have fallen back in love with exercise and fresh air again they are here to stay. This is a huge boon to the health of the populace! There are a record number of hikers and cyclists, and we need MORE places and trails to use, not fewer! Waterdog is positioned to make for an excellent resource for recreation and a very poor nature preserve. Nature is vital too, of course! This just isn't the place to try to create a preserve.

Best wishes,
Robert

Dear Parks and Recreation Commissioners and City Council,

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

-Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc consistent with best practices of other open spaces.
-Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
-Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with the Belmont P&R workers. Our trails get healthier each year.

Open space recreation carries enormous benefits for the folks that live in the area - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades.

Thank you for your consideration as you develop the new Open Space Master Plan.

Dear Parks and Recreation Commissioners and City Council,

I strongly support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining trails as they are for multi-use for hiking, biking, dog walking, exercise, connecting to nature, etc. Consistent with best practices of other open spaces
- Continuing outreach and education for trail users and groups to ensure sustainable use of our trails. The "Love Waterdog" campaign is great
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservations of the trails. They are already doing such a fantastic job. The trailers are IMPROVING over time!

On a personal note, Waterdog Open Space has been a monumental resource both before and during the pandemic. It's wonderful to have such an amazing space to get outside and enjoy the outdoors. We are lucky, as mountain bikers, to have such a challenging and well kept trail right here in our backyard. All of my interactions with hikers and others at Waterdog have been friendly, cordial, and positive. It would truly be a shame to not keep Waterdog open for mixed use. I, myself, use the space for hiking, dog walking, as well as mountain biking. It's a true treasure to have.

If you have any questions please feel free to contact me.

Hello,
I hope this message finds you well. I would like to voice my support for continued multi use trail designation at Waterdog Park (Hiking and Biking). As a resident of san Mateo County, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

• Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that that chooses to habitate there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francscico Public Utilities Commission Peninsula Watershed.

Regards,
Michael Chin

Dear Parks and Recreation Commissioners and City Council,

As a resident of Belmont for the last 15 years, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc.
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails for all.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont parks and recreation workers. My family and friends all enjoy biking, hiking and exploring the trailsystem often.

Open space recreation carries enormous benefits for the folks that live in Belmont. When we take visiting friends and family on the trails they are envious of the access to a trailsystem like waterdog to enjoy nature on bike or foot. I am proud of our community for prioritizing the use of multi-use trails in the water dog open space, and feel it improves quality of life in Belmont. Our community has a need for recreational open space, and Water dog has served those needs for decades.

Thank you for your consideration as you develop the new Open Space Master Plan

Kevin Sinarle

Dear Parks and Recreation Commissioners and City Council,

I love Waterdog Open Space! My wife and I moved to San Carlos in 2009 as a newly married couple. The proximity to Waterdog was a major factor when determining the location for our house to start a family. Fast forward 12 years and we've thoroughly enjoyed living here and enjoyed the park as our family has grown from 2 to 4. We hike together as a family and practice fishing in the lake. I enjoy mountain biking and the ability to ride from my house to a trail network is invaluable. Our latest family ritual is a Sunday morning bike ride around Waterdog and then breakfast in Carlmont plaza. I sincerely hope that Waterdog Open Space can remain open and enjoyed by all users. The love of outdoors can be fostered in many ways and biking should not be discriminated against due to a few outspoken individuals. With a little care and respect, this valuable trail network can be enjoyed by all.

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces

Dear Belmont City Council,

I'm writing to express my support of keeping Waterdog Open Space preserve access open to all users. I am a resident of Menlo Park and a frequent visitor to Waterdog, as well as the local businesses for before & after needs. Multiuse access to Waterdog is a significant positive for Belmont and the surrounding communities, which many people enjoy-- as you can tell by the amount of users on any given day. Closing it to most is ignoring the needs of many for the benefit of only a few. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

To whom it may concern,

As a resident of Redwood City, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

- Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

- Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that chooses to habitat there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francisco Public Utilities Commission Peninsula Watershed.

Thank you,

Elliot Danforth

To whom it may concern -
It has come to my attention that there is consideration in making significant changes to the masterplan and potential to trail access at Waterdog limiting the use by some groups.
I am a resident of San Mateo, but frequent Waterdog on a regular basis and would hate to see the access limited.
In the new Master Plan, I request you to consider:
• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;
• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.
• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Dear Belmont Mayor, Parks and Recreation Commissioners and City Council,

///Personal message///
I am a Belmont resident, father and homeowner who loves our town and moved here expressly for the incredible access to our stunning outdoor spaces. Our family has settled here in large part because we "can live outdoors" (as well as the amazing schools and fantastic weather). We are walkers, hikers, road and mountain cyclists.

I know that personally, the mountain bike access to the Waterdog Open Space is a fundamental part of our families happiness and also our ability to have survived the Covid pandemic in good spirits. It is also worth noting that many people get a large amount of joy from saying hello to folks whom we meet on the trails both on foot and on bike - we have formed lifelong bonds on these trials. The neighborly attitude and kindness I have seen on the trails is another key part to our love of Belmont.

///statement of support and position///
I strongly support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining trails as they are for multi-use for hiking, biking, dog walking, exercise, connecting to nature, etc. Consistent with best practices of other open spaces
- Continuing outreach and education for trail users and groups to ensure sustainable use of our trails. The "Love Waterdog" campaign is great
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservations of the trails. They are already doing such a fantastic job. The trailers are IMPROVING over time!
- It is worth noting the new(BelMont Bikes) and established (Starbucks, Village pizza, bagel/sandwich shops) businesses which rely on cyclists for their livelihood.
- We should encourage a wide range of outdoor activities for residents of all ages in this era of too many screens and unhealthy sedentary lifestyles

///Call to action///
If you have any questions, please feel free to contact me - I would be thrilled to be involved in any planning, discussions or community events.

Thanks,

Gene Karshenboym

Dear Park and Recreation Commissioners and City Council,

As a Bay Area resident for 50 years, I support keeping Waterdog Open Space an accessible place for recreation and connecting with nature. In the Master plan, I request you to consider:

Maintaining the trails for multi use, including biking, hiking and dog walking.

Continuing outreach and education for all trail users to ensure safe and sustainable trails.

Continued collaboration with community groups and volunteers to support and maintain the trails. There are a lot of trails and the volunteers are doing a great job assisting the City by clearing and keeping the trails safe.

I have also heard there is a small group of people vocalizing an anti bike campaign at Waterdog. Please consider there are very few areas on the peninsula to mountain bike but there are many areas to walk and hike. I have been riding Waterdog for 20 years, afterwork and weekends, and i love it. The trails are fantastic and need to remain open for all to enjoy.

Thank you for your consideration

Brian

Dear Parks and Recreation Commissioners and City Council,

On a biweekly basis, I hop on my mountain bike and ride over to Waterdog to enjoy the miles of incredible shared open space trails. Recently, I've gone with my 10 year old son and 12 year old daughter and they both, especially the former, love it. It's one of the few activities they enjoy involving the outdoors besides organized sports (which are severely limited at the moment due to Covid). And as you can imagine, any hour spent away from their devices is an hour towards good mental health and fitness.

When I ride, I always carry a bell and "ding" it when I come around corners or hear people in the distance. That said, I ALWAYS yield to pedestrians and exchange pleasant greetings when we meet each other on the trails. Waterdog is one of the few places in public these days where I am reminded of the vibrant community we have here in Belmont. I have of course noticed that during the pandemic, the trails have become more congested than before, but almost everyone I see is cordial and friendly. I'm sure there are aggressive bike riders who may give a bad impression to a vocal minority. That said, I've personally run into more issues with off-leash dogs and bags of poop than I have seen involving riders.

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. Encourage riders to use bells. Put up signs on riding/hiking etiquette

Please do not takeaway this passion of mine and my kids. We love to hike, fish and bike at Waterdog. It would be a shame to lose the ability to enjoy the trails on our bikes.

Thank you.

Richard Sim

Subject: Open Space Master Plan Waterdog Lake and Hidden Canyon

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Belmont City Council and Parks and Recreation Commission,

As we embark upon the Master Open Space Planning processes, and as a Belmont resident, I write to encourage the City Council and Parks and Recreation Commission to reaffirm Waterdog Lake Park and Hidden Canyon's ongoing success as recreational open space.

Myself, wife, and two children (7 and 9) are Belmont residents, and we all use the Waterdog trail system. Our family from SF and San Mateo come to enjoy the park and all that Carlmont village has to offer. We hike and bike in the park weekly for exercise. My kids are learning to MTB on this awesome trail network. Waterdog/ Hidden Canyon park has played a major role in why we live in Belmont. Such a special space with inclusion for so many outdoor activities, and a wonderful sense of community.

Many of us refer to Waterdog as a "gem" of nature and recreation. It is a place to walk, jog, run, cycle, and exercise in a beautiful natural environment of trees, flowers, and wildlife. Recreational open space reduces stress, provides relaxation and revitalization, builds community, increases awareness of the natural environment, fosters environmentalism, and serves the public good.

From a land use point of view, Waterdog's best use is continued recreational open space. It is small – 200-300 acres depending on how you measure – and ringed with suburban development. Although some have proposed re-designation as a nature preserve, the truth is that Waterdog is far too small, and has far too many humans around, to seriously be considered for this purpose. Even if we removed every trail and tried to keep humans out, the animals in the park would still be impacted by the dogs, cats, and humans who live around the perimeter of the park. Humans have a need for open space, too. When you consider that we have already protected the SFPUC Peninsula Watershed's 23,000 acres of oak woodlands, coniferous forests, and serpentine grasslands as a preserve, it is reasonable for the public to allocate 300 acres, just 1% of what has been preserved already, for open space recreational use.

With current recreational use, the park abounds with finch, towhees, quail, deer, bobcats, wild turkeys, rabbits, lizards, woodrats, snakes, and, yes, waterdogs! I personally have seen each of these in the past 12 months alone. These animals have adapted to human uses of Waterdog for over 100 years. There is no crisis here; the ecosystem of the park has been in a steady state for decades. Don't fall for the false narrative of others

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

looking to weaponize environmentalism as a means to kick cyclists, runners, and other active users out of the park. These narratives serve only destroy community and pit neighbor against neighbor.

When I visit Waterdog, I see a community of hikers, dog-walkers, joggers, and cyclists enjoying the open space, respectful of one another and the wildlife that abounds. It is a place of joy. Waterdog is a testament to successful multi use open space serving the public good. Please support the continued open space recreational use of Waterdog Lake Park.

Respectfully,

Grant Sidey

Flag Status: Flagged

Dear Belmont City Council,

I am a long time resident of Belmont living and owning a home here for the past 35 years. My family and I have greatly enjoyed living in Belmont and have had much joy in being able to access Waterdog Open Space for recreational purposes including hiking and biking. It has served as a wonderful area for us as a community and spending time with family and friends of all ages connecting with nature. Our community has a need for this type of space, which Waterdog has served well for many years improving the quality of life in Belmont! I am reaching out to you as I understand that you are in process of developing a new Master Plan for this area.

As you develop the new Master Plan, I ask that you please consider to maintain the existing trails which are used for multiple purposes including exercising such as hiking, biking and dog walking, as well as community building and connecting with nature. These types of activities align with those of other Open Spaces in the area. I believe that the current volunteers and community groups who maintain the trails are doing an awesome job and the trails are in great shape.

I understand that there has been some discussion to change the park designation to be preserved as a wildlife preserve. I believe this would have negative impact on the overall Belmont community. Waterdog park is surrounded on all sides by residential development and the existing wildlife has adapted to the presence of people in this area. We are fortunate to already have a 23,000 acre wildlife preserve nearby on the other side of 280 (the San Francisco Public Utilities Commission Peninsula Watershed). Keeping the Waterdog Open Space as the recreational park it is today is one of the highlights that leads my family to desire to stay in this area.

One of the activities that I personally enjoy in Waterdog is being able to ride my mountain bike in a safe and natural environment which is easily accessible from my home. The alternative to this would be to ride in the city streets with much traffic where even an experienced biker such as myself does not feel safe; unfortunately there are few bike lanes in Belmont and the roads are not wide enough to be bike friendly. The only other option involves loading my bike and driving a distance to find another place to ride, which is not convenient nor good for the environment.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Just five years ago another Belmont institution, Belmont Iceland, closed operations suddenly and ended its long history of community recreation. Personally, I was involved with the hockey community there from 1978 until it closed in 2016. Needless to say, I was quite disappointed losing such an important part of our community. I had hoped that the city of Belmont could have kept the rink from closing permanently. Looking ahead to todays agenda and the possibility of not allowing mountain biking at Waterdog in Belmont, I stand strong in my convictions that this should not be allowed to happen for all the reasons stated above. For this 35 year resident of Belmont, I would very much like to see the Waterdog Open Space area remain the wonderful area it is serving the recreational needs of our community.

Thank you very much for your consideration.

Best regards,

Chris Miller

To: City Council; P&R Comm
Subject: Master Planning for Waterdog Open Space

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Belmont City Council and Parks and Rec Commissioners,

I have previously provided comments regarding Waterdog Open Space and have a few additional points in light of the current Master Planning process.

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. I support maintaining the trails, as they have been for years, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces. Waterdog is a particularly great place to learn to ride with plenty of challenges. My confidence soared after finally clearing the uphill "Witches" of the John Books Trail for the first time. There are plenty of young women in the community who also would benefit from that same boost.

Waterdog is an amazing neighborhood gem. I have been hiking and mountain biking at Waterdog for nearly a decade and have been pleased with the improvements made in recent years. While soil erosion from the rain is still a problem due to the construction of the trails, some of the drainage efforts in recent years appear to be successful. It's wonderful that we have a community of volunteers to help with improvement efforts. Please continue to involve the community for this volunteer work to maintain the trails for years to come.

I would support continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is a great start. I would encourage even more education for trail etiquette for both hikers and riders to improve the experience for all. Perhaps we could enlist a team of volunteer docents to guide such efforts? Some of the poor etiquette I have observed is usually with new riders who might not have had the luxury to ride with more experienced riders who could educate them. Supporting community rides, similar to the days of Passion Trail Bikes, is a good way to teach the less experienced. Perhaps we could encourage community hikes and rides with the local bike shop?

In addition to the stress relief from enjoying nature in our backyards, there is also the economic benefit of encouraging mountain biking in the community. Mountain bikes and repairs and maintenance are not inexpensive, and the riders are usually hungry and thirsty. It's a social sport, and part of the fun is hanging out with the community after the ride to enjoy a meal or a snack nearby.

Thanks for your consideration, and I look forward to many more years of enjoying the neighborhood open space.

Best regards,
Melissa Viotti

To whom it may concern,
As a resident of Burlingame, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. I have been riding my bike regularly at Waterdog for my entire life, and would be devastated if it is closed to cycling use. I have formed friendships with the many other hikers and bikers at Waterdog, and have witnessed the joy that it brings to the community as a shared space.
I am aware that with the growing popularity of mountain biking and competitive training apps such as Strava comes a concern for the safety of hikers. I recommend requiring cyclists to strap bells to their handlebars, making enough noise to alert hikers of their presence with ample time to yield. I have used these bells in other trail systems and know that they are effective at keeping hikers safe.
Please do not close the Waterdog Park to cyclists.
Josef Zagorski

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Belmont City Council and Parks and Recreation Commission:
As we embark upon the Master Open Space Planning processes, we write to encourage the City Council and Parks and Recreation Commission to reaffirm Waterdog Lake Park and Hidden Canyon's ongoing success as a multi-use recreational open space.
We're a family of 6 and have enjoyed a lifetime of the outdoors - open nature is our happy place. When we moved back to the area 10 years ago, we chose to live near Waterdog because of Waterdog and frequently cycle to, and through, the park for exercise. The children learned to ride mountain bikes safely in the park - first, up and down Lake Road and around the Lake Loop. As they've become better riders, we've expanded our routes to include all trails. They now frequently ride by themselves or with friends, and pre-Covid, we often picked them up in Carlmont Shopping center eating pizza or ice cream following a ride. We've taught them to be considerate cyclists the only way possible - by interacting with other trail users. We've encouraged volunteerism and community stewardship via trailwork days coordinated by the Waterdog Trailkeepers, a volunteer group that donates about 500 hours a year to the park for trail maintenance. We do all this out of a genuine love for the park and have instilled the same love and respect from my kids.
Personally, I enjoy Waterdog mostly by mountain bike because it is allowed there. I am an experienced cyclist having ridden thousands of miles in my 35+ years of riding. I choose mountain bikes almost exclusively these days, as I've had friends recently injured or killed by cars while riding on the road; I'll continue to take my chances with trees and rocks and hope my 50 year old frame stays intact. I enjoy the same qualities of all users in the park - the abundant wildlife, the "green time" amongst the oaks on the upper section of Rambler, and the columbine that blooms in the spring on Finch and Lake Loop. We're happy to share the space with the hikers, families, dog walkers, and trail runners and believe we can continue to share in such a wonderful environment.
In short, we support the continued multi-use aspect of the park. Its incredibly valuable for my and my family's sanity and happiness, and sense of community pride. We look forward to engaging with Parks and Recreation and the City Council on providing constructive feedback on the Open Space Master Plan and wish to enjoy Waterdog as is for another 10 years at least, hopefully longer.
With warmest regards,
The Switzer Family (Tom, Elizabeth, Alexander, Milo, Violet, and Ivy)

Hello,
As a homeowner and resident of Belmont I am extremely saddened to hear the possibility of reducing or eliminating recreational access to the trails at Waterdog park.

I regularly hike and bike the trails, often two or three times a week. Waterdog's recreational trails are a defining feature of our city and their loss would be deeply felt.

I urge the city to keep this space open to all. It is an amazing space that sets our city apart.

Thank you,

Jon Rein

Dear City Council, & Parks and Recreation Commissioners

Belmont's Waterdog Park is a wonderful resource for the community.
The summer before COVID I was cycling in the park when I came across a recent high school graduate instructing two rising 3rd graders on mountain biking skills. They had been riding weekly together for weeks. Fabulous!

I want to voice my support to keep Waterdog Open Space open to both hikers and cyclists. To maintain the existing trail network. To work with the current group of eager volunteers and to build relationships with new volunteers to maintain the park.

I understand the pressure from the COVID quarantine has many more trail users outside enjoying our parks. Please don't restrict access to parks at exactly the time that we should be expanding our open spaces.

With the Open Space Master Plan currently under consideration, please help maintain access to our parks.

Sincerely,

- Ryan Hollowell

Dear Commissioners,

I live on the Peninsula (albeit not in Belmont) and very much appreciate the parks and open spaces you make possible. I particularly enjoy Waterdog Lake Park, both for hiking and biking. This park packs an amazing variety of trails and views. My experiences with other park users have been incredibly positive, with all types of users being thoughtful and respectful to each other. I see family groups and people of all ages walking and biking there. During the pandemic almost everyone wears a mask and maintains safe distances.

I have heard there are calls to curtail mountain biking at Waterdog, and possibly all recreational use of the park. I am writing to urge you to maintain the availability of Waterdog for multi-use recreation, much as it is today. Based on my experience, a huge number of people are getting exercise, fresh air and a dose of outdoor beauty there. This is more important than ever now. For mountain bikers in particular, there are very few parks on the Peninsula where biking is allowed.

Thank you for your work and for considering my comment.

-Guy

Sirs.

My wife and family have used Waterdog and Laurelwood parks for over 25 years for hiking, biking and dog walking. These parks are a wonderful resource to us all - pandemic or not. Please keep the trails open to all users. As a hiker, I have never had a problem with rude or dangerous mountain bikers - people are always courteous and yield the right of way. As a mountain biker, I am always courteous and cautious around hikers. I believe that we all can continue to coexist peacefully in Belmont and San Mateo's outdoor spaces and should be allowed to keep doing so going forward.

Thank you for your time and hard work.

Best,
Daryl Yee

Hello, as a current user of Waterdog, I have heard that there are possibly plans to designate the park as a wildlife preserve and cut off access to trail users. I personally mountain bike at Waterdog often and love the neighborhood feel and location of the park. Removing access to the park would be like losing a local treasure. Please do not close Waterdog, outdoor activities are only becoming more popular and removing access to such a popular park does not make any sense. Save Waterdog! Thank you for listening.

Dear Parks and Recreation Commissioners and City Council,

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Cycling is a major part of SF culture and MTB provides a cultural outlet for those who enjoy the outdoors and cycling
- Mountain biking promotes stewardship of the land and preservation of the natural environment
- Local shops that cater to MTB'ers rely on folks having access to trails

Thank you,
Donovan Lee

RE: Water Dog Parks Accessibility for Mountain Biking

Dear Belmont Parks and Recreation Commission,

I'm writing in endorsement to keep the Water Dog Park accessible for Belmont, and more specifically, Hallmark residences to Mountain Biking. I've lived in Hallmark neighborhood since 2008 for the quality of the school district, but also the accessibility for the parks, including Hallmark Park and Water Dog park.

I've heard that there have been some complaints with movement to dis-allow the Water Dog park usage for Mountain Bikers last year and now again this year. Again this year, I would strongly vote against this restriction. The access of this part to family outings such as walking and hiking also includes mountain biking since there are families like my own who enjoy these trails for their kids as a family outing.

The Water Dog park is really the only mountain bike trail that is compatible with elementary and middle school bikers. These bikers don't degrade the environmental habitat since they rarely go off trail. These bikers have also formed Facebook groups who have donated time and money to keep trails well-groomed and safe. Many neighbors in Hallmark coordinate bike rides on a frequent basis at Waterdog and this involves both parents and children.

If you need further support for keeping Waterdog park accessible to the residence and public, please let me know.

Thank you,

Warren Nishikawa

Dear Parks and Recreation Commissioners and City Council,

As a current resident of Belmont (and a former Parks and Recreation Commissioner), I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces.

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Belmont Open Spaces, and our community government that maintains those spaces for their constituents, should always endeavor to benefit ALL of Belmont's citizens, not just some. Our community has a need for recreational open space - Water dog has served this public need well for decades.

Thank you for your consideration as you develop the new Open Space Master Plan.

Best Regards,

Eric Sullivan

As a Bay Area resident, hiker, biker, and general outdoor enthusiast, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

• Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that that chooses to habitate there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francscico Public Utilites Commission Peninsula Watershed.

Dear Parks and Recreation Commissioners and City Council,

I'm an avid hiker and bike rider, and frequently use Water Dog for both purposes. While I'm not a dog owner, I appreciate that the park is open for dogs as well. There are fewer and fewer places that are mixed use, and I think Water Dog excels at it. People in the park are generally very courteous, be it hikers putting on masks as you pass, dog walkers heeling their dogs, or mountain bikers yielding to others. The park is a gem, and I hope future plans are to further develop it as a mixed use park.

regards,
Rama

Hi,

I am a neighbor of Water Dog Lake Park and use the park all the time. I mountain bike here frequently, and take out of town guests hiking there, as well as bring my young son to explore nature.

I understand that there is an effort to restrict or ban mountain biking at the park. I am strongly opposed to this. Water Dog should remain multi-use, including by mountain bikers. Banning mountain biking would also put more cars on the roads, as local bikers would then have to drive to further multi-use trails.

Please keep water dog mountain-biking friendly and multi-use.

Thanks
Zane Rogers

Dear Commissioners and Councilmembers,

Please keep Waterdog Open Space open to bikers. Cycling is a great hobby and form of transportation, and the more places where it can be done safely, the more people will be drawn to it, which will decrease emissions and result in a healthier population. The last thing we should be doing right now is limiting spaces people can bike.

Please follow the lead of countries like Norway; if anything, adding new routes that are bike-only would alleviate congestion on the shared trails while also encouraging more people to exercise.

Thanks,
Dustin

Hello,

I'm hearing about a new planning process for Water Dog Lake Park that will define its use and access for the next 20 years. I'm also hearing that a small group of vocal people are pushing to restrict bicycle access on singletrack trails at Water Dog Lake Park and want to put in my two cents. Water Dog Lake Park has long been a loved mountain biking location and a number of its trails were built and/or maintained by the local mountain biking community. Restricting access to mountain bikers risks alienating a large and integral part of the Belmont community as well as the larger Bay Area community that utilizes and supports the park. Please keep this in mind. Perhaps collaborating with local mountain biking club groups and their leaders will help to find better solutions like trail etiquette education campaigns, signage, unidirectional trail traffic on certain days, etc.
Collaboration to bring concerned groups to the table can put together some great solutions. A couple of groups I know of and can suggest are Mere Mortals Mountain Biking (https://www.facebook.com/groups/90033746815), South Bay Mountain Biking Group (https://www.facebook.com/SouthBayMountainBikeGroup), and West Coast Mountain Bikers (https://www.facebook.com/westcoastmtb). Another great local stakeholder to speak to would be local cycling shops in Belmont and surrounding areas as well.

Sincerely,
Chris May

Hi folks - I understand you are looking at the future for the Waterdog open space. I have been really concerned recently by some extremists looking to severely limit use of the WaterDog open space. Please ensure access is left available for all users - not just the vocal few. I know in particular mountain bikers have been targeted which is unfortunate as I understand that that same group is responsible for much of the maintenance done currently. I am not a mountain biker but appreciate the trails being kept up to shape!

Please ignore the vocal few trying to limit access to the open space.

Thank you,

-Michael Noone

Subject: Master Open Space Planning process input

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Belmont City Council and Parks and Recreation Commission,

I've just learned that the City of Belmont is embarking upon a Master Open Space Planning process, and I wanted to give my input in support of keeping Waterdog Lake Park and Hidden Canyon designated as recreational open spaces.

This is a very personal issue for me: I'm 58 years old, and my wife and I have been Belmont homeowners for the last 14 years. We both hike, and I also mountain bike at Waterdog/Hidden Canyon. Access to this wonderful local park has helped to keep me sane through my wife's multiple cancer treatments, as well as during the current pandemic. Mountain biking on single track trails requires total concentration, and is my 'moving meditation.'

Bicycling on the road around here can be very scary. I remember reading about an accident when a cyclist was killed on Ralston Avenue by a driver who made an illegal left turn right in front of him, and then reading this: "Cars come first," Belmont City Council Member Coralin Feierbach declared in 2013. Feierbach acknowledged that "when you ride your bike on Ralston you take your life into your own hands." It made me very glad to have Waterdog as a place I could ride and be away from traffic. It's also when I started driving to Waterdog from my house near El Camino Real and Ralston, instead of riding. (I now periodically will ride over, time-of-day/traffic-depending, but it took me a long time to feel comfortable again after that.)

I attended a city council meeting on Zoom a couple of months back, and listened to a couple of people advocating to make Waterdog a nature preserve, claiming that mountain bikers are leading to its destruction and should be banned from the single track trails there.

One woman kept citing an environmental impact report prepared for the Crystal Springs Watershed and implied that it's considerations should apply to Waterdog. Afterwards, I called my father, Lawrence Klein, retired former General Manager of Hetch Hetchy Water and Power, which oversees the Crystal Springs Reservoir and Watershed and asked him about that. His response is that it is like comparing apples and oranges: The Crystal Springs Watershed has been protected for 100 years up to this point, whereas Waterdog has been a recreational open space for many years. The Crystal Springs watershed is protected both for water purity reasons, but also for endangered species found nowhere else, not issues

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

associated with Waterdog. He had other points as well, and would be happy to share them if any of you wish to contact him, please let me know and I'll put you in touch.

Another gentleman was claiming that riding bikes on single-track trails causes "channelizing" which leads to trail tread damage. I've taken trail design and maintenance classes, and my understanding is that, depending upon soil type and trail design and construction—especially gradient and drainage considerations—that it's primarily water flow that causes what he referred to as channelizing. He gave examples of local parks that don't allow bikes and do not have this issue. My wife and I then went for hikes at two local parks, Edgewood and Pulgas Ridge. I took extensive photos to illustrate trail design decisions, soil types and levels of compaction, drainage features, gradient variations, etc., and I can show you trails that have erosion channels created by water in parks where no bikes are allowed. It comes down to good design, correct construction, and regular maintenance. I'm happy to either share photos or go on hike(s) to look and discuss.

Midpeninsula Regional Open Space District and Arastradero Open Space and others are examples of open spaces that allow mountain biking on single track trails. They don't find it incompatible with other trail users or the fauna of the parks. They've found that with good trail design and maintenance, as well as signage and education about trail etiquette, that single track trails can be shared by all.

I was a part of the volunteer group that worked with the City of Belmont to build the Lake Loop. At that time I was just a volunteer laborer working to give back to the local park I love, but that experience made me curious about all the elements I detailed above, so when I learned that Mountain Bikers of Santa Cruz (MBOSC) had volunteer trail days as well, I started driving down to Santa Cruz to do volunteer trail maintenance down there. When MBOSC announced that they were putting together a Trail Crew Leader program I signed up immediately. It is a series of classes, both in the classroom and out in the field (or forest) that detail all the steps and considerations in trail design, construction, and maintenance.

Our 'final exam' was working on a hiking-only trail in Santa Cruz County (they work with the local land and park managers there) that needed to be rerouted to make it a sustainable trail: It was originally a 'fall line' trail. A fall line trail basically goes straight down a slope. It was channeled and rutted as water rushing down during wet weather eroded it every winter. The MBOSC trail design team rerouted it into a trail with switchbacks, so it crossed back and forth down the face of the slope, and we built drainage features into it: grade reversals, swales, etc. We then 're-naturalized the old trail, covering it with old branches and leaves and duff, so that it was hardly visible. It was a tremendous experience, and gave me a good appreciation for all of the elements involved. (For more info on that program, see: https://mbosc.org/crewleader/)

Please support the continued open space recreational use of Waterdog Lake Park. I'm happy to discuss more if you have any questions, please let me know.

Sincerely,

Joel Klein

Subject: Master Planning for Belmont's Open Space

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

This note is sent in support for keeping Belmont's open space areas open to all users. During my time as Parks and Recreation Director, I gave a yearly updates on the state of the trail system and open space. We are very lucky to have this open space and it enhances our quality of life in Belmont. It is one of the defining features of the town and a reason that some choose to move here.

The trails should remain open to all users. There is no data or reasonable basis for eliminating mountain bikes. Talking to the Belmont Police Department, there were no reported incidents of conflicts between mountain bikers and other users. As Judy King would say "this is a solution looking for a problem."

Here is what I think the master planning for the open space should focus on:

- Fire prevention- we need to double our efforts to reduce the potential for a catastrophic wildfire from devastating the canyon and nearby neighborhoods. Funds should be set aside to target areas for thinning and fire breaks.

- Invasive species- Waterdog lake contains some quality habitat that should be preserved and protected from the invasive scotch broom and start thistle that are pervasive. This also helps reduce the fire potential.

- Restoring Belmont Creek- The creek daylights below the dam and needs attention. This section could be restored to improve wildlife habitat and a thoughtful trail could be built along the creek to provide a natural experience.

Once again, do not get caught in the trail use issue and miss the important stuff. The trails do need some erosion control and regrading that can be accomplished by volunteer trail crews supplemented with paid for nonprofits and park staff. We built the Lake Loop Trail completely with volunteer labor which was a three year effort.

Thanks for your time and service to the community. I am pleased to see all the parks and recreation planning that is occurring. Parks management is doing a great job.
Sincerely, Jonathan Gervais

Subject: Bicycle access at Water Dog Lake Open Space

Follow Up Flag: Follow up
Flag Status: Flagged

Belmont Parks and Recreation Commission,

I am writing to advocate for continued bicycle access at Water Dog Lake Open Space.

I have been enjoying riding bicycles on the trails at Water Dog Lake Open Space for the last 30 years. It has been a great source of stress relief, socialization, exercise, and enjoyment. I've been able to introduce my 4 year old to the joys of mountain biking at Water Dog in the last year.

Many other Open Spaces in the Bay Area and nation-wide that have demonstrated the ability to manage multi-use trails. I believe Belmont Parks and Recreation Commission can also manage this with community support and by referencing the methods used by other Open Spaces in managing multi-use trails.

A few suggestions for how we can improve Waterdog Lake Open Space:
- Public trail work days
- Review and rework trail design to improve erosion control and increase line of sight
- Close, deconstruct, or incorporate off-map trails and features
- Educate trail users on regulations and trail etiquette via signage and volunteer trail stewards. (E-bike usage, speed limits, right-of-way, hours, etc)

I hope that Water Dog Lake Open Space can continue to be a part of my life and a place I can continue to share with my child, friends, family, and neighbors.

Regards,
Frank Spiteri

To whom it may concern:
I'm writing to comment on the Belmont Open Space Master Plan. I'm not a resident of Belmont, I live in Mountain View, but I wanted to comment in support of keeping Waterdog Open Space open to mountain bikes.
- I'm a reasonably well respected scientist and business leader (https://en.wikipedia.org/wiki/Ian_Goodfellow). Mountain bikers are not hooligans.
- Mountain biking is a great kind of exercise, and the main thing that has kept me sane during the pandemic.
- Mountain bikers visiting Belmont support Belmont businesses like restaurants and Belmont Bikes.
- I'm personally willing to commit my money or personal time to provide park upgrades or maintenance that would address any concerns about mountain biking. For example, I'm an Eagle Scout and have experience building trails, fences, cabins, etc. in outdoor recreational areas, and would be happy to help build a new responsibly designed pedestrian-only path for people who want to avoid mountain bikes.

Hi Folks,

I'm writing to voice my support for continuing the Waterdog trail network as is. It is a gem on the peninsula. Having an advanced trail network to bike on in your community is an amazing resource and it would be a shame to let it go to development or segment it to an exclusive use case (hiking only).

I can only imagine the pressure by some vocal citizens on the proper use of this trail network. At the end of the day, consider using data to make your decision.

For me personally, the waterdog trail network is what I've used since the 90s and it would be a shame to see the resource taken away.

Thanks,

Rob

Subject: Water Dog

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Belmont City Council and Parks and Recreation Commission,

I wanted to express my thoughts for consideration in development of the Water Dog Master Plan development.

I live near Water Dog and have used the park for over 30 years. My first experience with the Park was on a date in the 1990s where we took a great hike. In the years since I bought a home nearby as the recreational attractions of Belmont and San Mateo with Water Dog, Laurelwood and the Crystal Spring Cross Country trail were all a tremendous pull.

I've been on many walks and hikes with family at Water Dog. It's beautiful. There is abundant wildlife and a place where my kids and some of those in our scouting group can learn about nature.

In more recent years, as I experienced a number of issues with my knees, I really appreciated that Water Dog was also a spot where I could bike. I hadn't biked in 25 years but with my knees off limits for running for nearly 3 years, I needed some new exercise.

Water Dog is the only mountain biking destination I can bike to from my home. All other options are miles away down Skylinen road, or up in Pacifica or down in Santa Cruz. There are really very few places where one can ride a mountain bike as so much of the "open space" around us is closed as a nature preserve, or open just to hikers and joggers like Crystal Springs Cross Country Trail.

After 6 months of intense biking, I am happy to say my leg muscles are now strong enough that they hold my knees in place and I can also run again.

To show my appreciation I have been giving back to Water Dog as well. I have joined up with the Trail Keepers group and worked on 4 different projects in the last 3 months.

Water Dog is a tremendous resource. It's a place to clear my head, pound my body, and enjoy nature. I am excited to see what the next 20 years of Water Dog will bring and we can continue to use it as a scenic, natural, place for recreation and learning.

Gene McKenna

Belmonters –

As a Belmont homeowner of six years, I'm writing out of concern about rumors the Belmont Master Plan might consider limiting recreational access to Waterdog Lake & Open Space, including biking activity. I'm strongly in favor of keeping the Waterdog trails broadly available as a core element of our Belmont neighborhoods, as used by the wider community for many purposes. In my experience, hikers, bikers, dog-walkers, and families co-exist wonderfully there, and I'm proud that Belmont is known around the Bay Area for the quality of the biking trails there, as a "hidden jewel" in suburbia. Let's continue to highlight and support its success as a community resource, as an element of the Master Plan and a long-term benefit to the community.

Thanks & regards,
Andrew Boyko

Hello! I am writing this e-mail to inform the city of Belmont that as a resident of San Mateo County, I support keeping Waterdog Open Space a place open for various recreational use such as hiking, biking, dog walking, exercise, community building, and anything else it currently provides. This is such a great gem of a spot in the middle of a residential area, it would be a shame to have any one of these groups restricted from use of it.

I myself, frequent this open space for both mountain biking quite regularly. I have witnessed a really friendly community of bikers during my time here and would really be disappointed to have this group restricted from riding here in the future. Everyone is so friendly, courtesy, and willing to give out a helping hand when needed. These people do not litter the trails, if anything, they do a lot to help these trails. I have seen many of them using their own free time to help maintain the trails, cleaning them up, and doing whatever they can to provide a safe environment for everyone. I know they set a lot of limitations on additions they add, such as small jumps requiring a safe landing area and line of sight before and after it to know it's safe far before getting to this feature. Many of the riders use timber bell on their bikes as well. This is a fairly reasonably priced bell that is easy to turn on and off. The idea being any time you start a descend, you turn it on so anyone that may be along the trail knows far ahead of time that you are coming down that trail. This does not give the rider a excuse to travel at excessive speeds or to pass anyone they encounter. This is more about giving advance notice of them coming in that direction. Many riders focus on giving the pedestrian or dog the right away, but if they happen to hear the bell and decide to pull off to the side before we get there, they are always thanked. Many of the hikers and dog walkers I encounter thank me and my friends for using these bells to help keep everyone safe. Mountain biking and biking in general has really grown over the last year since the pandemic. It offers people a way to get outside, have a great workout, while also being fun. If nothing else, isn't this what we want right now more than anything? Ways for people to get outside and be healthy considering that we are going through a pandemic and the people who are most affected by it, are the ones who aren't in the best physical shape. I know I would be worried for my life right now if I didn't manage to lose the weight I did prior to Covid-19 being rampant. At one point I was just shy of 400 lbs. It took me over 2 years to lose that wait and biking helped me get to my goal weight of 185. It gave me something fun to do while getting myself healthy.

On top of all that, Waterdog is a destination spot for mountain bikers. People travel all over the bay area to ride here. These people are spending money at local businesses getting gas, buying food, going to bike shops, and shopping in general. There is many places to hike or take your dog in the bay area, but not nearly as many as there is to mountain bike. Losing this privilege would be a huge loss to the community. The people riding there make up a good majority of this community and feel like they have a right to it as much as anyone else. We don't want to be excluded from its use, nor do we want any other group to lose the use of it. I know many of our first responders, myself included, love having this outlet after a long day or week. Please I beg of you, please consider keeping this open space open to all groups as it currently is.

Dear Parks and Recreation Commissioners and City Council,

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use - including hiking, biking, dog walking, exercise, connecting with nature, etc..
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

The notion that mountain bikes cause more damage is scientifically unfounded as cited in peer reviewed literature on the subject, I invite you to look at some of the following reports as a sample of material available on the subject. MTB Environmental Impact Study , OFF-ROAD IMPACTS OFMOUNTAIN BIKES:A REVIEW AND DISCUSSION,

Open space recreation carries enormous benefits for the folks that live in Belmont and nearby. Our community has a need for recreational open space that supports biking - Waterdog has served this public need well for decades.

Thank you,

Debra A. Zupancic

Hello there,

As a former resident of San Mateo county and continued avid user of San Mateo opens pace, I would like to continue to keep Waterdog Open Space accessible for recreational use.

The trail system is a great way to build community, bringing different groups of people together that would not normally mix, but share a common passion for the outdoors. During this COVID era, it provides a way for people to work together while socially distancing and after the covid era it will provide economic stimulus to the community, with the nearby restaurants and shops that they so desperately need.

Throughout my time on those trails, I have not had one negative experience interacting with those on bikes, off bikes, with dogs, or without. Everyone has always been polite, given space and most importantly have been friendly. Those short but impactful interactions go a long way.

Kind Regards,
Ian Madsen

Hi members of the Parks & Recreation Commission and City Council,

My name is Kai and I'm a homeowner in San Mateo City and a resident in SMC for 6 years. I was shocked by the movement that is going to ban mountain biking in Waterdog so I'm writing to you to voice our concerns.

1. **Forward, not backward:** It's vital for people to stay healthy mentally and physically, especially during Covid times. With the population increase, what we need isn't limiting the activities in the park but to build better trails and be forward looking. Waterdog should remain multi-use trails for everyone.
2. **Protecting wildlife** is important to everyone including the mountain bikers. But there are vast amount of open space preserves and the SF watershed on the westside of 280. Waterdog has been surrounded by homes and schools already. Protection can be done more effectively elsewhere.
3. Personally I bike and hike in Waterdog every week. A mountain bike ban would take away this local gem from my family and me for very questionable reasons.
4. As a mountain biker and homeowner, I've contributed tax and donations to the maintenance of the local parks. I would not hesitate if the county/city invest **more funds in the trail building**.
5. **As for the trail etiquette**, I've been doing my part, including riding with a cow bell, yielding to hikers, and simply saying "hello", "how many behind us" when passing by. I do feel the need to educate new and old bikers to avoid any incidents or awkward moments. But banning bikes altogether is too extreme.

Please consider the voices from both side and let's find ways to move forward instead of shutting things down.

Regards,
Kailun Wu

Dear Parks and Recreation Commissioners and City Council,

I have been riding my bike, hiking, and walking my dog in the beautiful Waterdog park for many years and I support keeping the Open Space accessible to the countless bay area residents that use the park to relax and exercise. Having a haven of nature amidst the bustle of the peninsula offers a respite for the body and mind of so many residents. The attention to, and effects of, mental health in the population is becoming more widely recognized, and the Bay Area Open Spaces are what so many of us residents rely on to unwind, exercise, and live happy and healthy lives in our cities.

The more open spaces that exist in our cities, the happier and healthier the population, and the more opportunities to nurture environmental appreciation and the kind of habits that are constructive to society.

My father also grew up in the Bay Area and has told me many stories of his teenage years, biking up and down Waterdog's trails. I would very much like to continue making my own memories in these open spaces to pass down to my children.

Thank You,

Nicholas deCesare

Subject: Waterdog Open Space Master Plan

Follow Up Flag: Follow up
Flag Status: Flagged

Hello,
I support keeping Waterdog Open Space an accessible and sustainable place for recreation, inclusive of cyclists.

- Waterdog Open Space is one of the most accessible destinations for mountain bikers. Removing access would disproportionately affect kids and those who lack a vehicle to access more remote open space destinations.
- Waterdog also has a unique set of shorter trails which allows parents to introduce their children to riding and ride with them. People of different skill sets can be part of one community here.
- Many mountain bikers are a big part of the volunteer trail maintenance community. They help support the creation and maintenance of many trail networks.
- The Bay Area is home to the sport of mountain biking and many bicycle manufacturers and distributors. Their success depends on people having accessible places to ride.

Please consider maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces.

Sincerely,

Austin Appel

Sent: Tuesday, March 2, 2021 5:28 PM
To: City Council; P&R Comm
Subject: Please Continue to Allow Bikes on Trail in Waterdog

Follow Up Flag: Follow up
Flag Status: Flagged

Hi members of the Parks & Recreation Commission and City Council,
I have been a resident of San Mateo for over 10 years. My home is within walking/biking distance to Waterdog. I was deeply concerned when I learned about the potential changes in the Master Plan. Please allow me to share my thoughts.

I have been mountain biking at Waterdog for many years. Bikers get along well with hikers and the environment. I bike at Waterdog almost every other day if the ground is dry. From my conservations with other bikers. Many are from the local areas.

Biking at Waterdog is part of my life. Mountain biking has been a very important distraction for me, from work and other stresses in life. I enjoy coasting on the trails and keep my mind relaxed. In fact, I started mountain biking at Waterdog and I plan to start my son on mountain biking when he is ready.

I support preserving Waterdog and the wild life inhabitants. However, banning mountain biking from the multi-use single trails is NOT the way to do it. There are a few reasons:

1) Maintenance is the key: Either hiking or biking will have an impact on the trails. Proper maintenance keeps the trails in great form and prevents damage in other parts of the park. I have seen great maintenance work in the park over the years and the trails stayed the same year after years. If help is needed to maintain the trails, I would be more than happy to chip in. Either monetarily or physically.

2) Management can help: People's behaviors matter a lot more than the specific type of activities they do. I have seen bad behaviors of people hiking off trail, picking on wild flowers, bullying wild animals etc. Mountain bikers on the other hand, most of them are very focused on riding and well behaved.

3) Co-existence: Waterdog is completely surrounded by paved roads, houses and apartments. Preventing people from biking on the trails does not solve any problems. There is no evidence that mountain biking is more harmful to wild lives than hiking. I personally think the recreational value of allowing mountain biking on trails far out-weight the negatives.

4) Successful examples in other areas: There are other parks that allow mountain biking on the trails. The world famous Flow Trail is a good example. There are unbiased reviews there that are worth studying.

Finally, I would like to say that biking on the trails in Waterdog is extremely important for me, for my well being. Yes, there are other biking trails in other areas. Those are not convenient for a quick after-work relaxation ride. Waterdog, being local is too important. Please don't ban mountain biking from the Waterdog trails. Please let's work together to find a solution that works. I will dial into the meeting in case you need more inputs from me.

Sincerely,
Resident of San Mateo Highlands
Wei Wong

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Members of Belmont Park & Rec Commission:

I'm writing in enthusiastic support of Waterdog Park's continuing status as a multi-use open space, which I've enjoyed for mountain biking over the last decade-plus. As a resident of San Francisco, I realize there's zero reason why you should take what I have to say seriously, but felt compelled to write just because of what an amazing resource Waterdog is, and how much I truly love it. Over the years I've ridden there, the interactions I've had with other trail users have been overwhelmingly positive. As you're no doubt aware, this makes it virtually unique in the Bay Area: where other communities have failed to cultivate a sustainable and friendly multi-user open space network, Belmont has succeeded, massively so. Not sure how this was accomplished exactly -- I'm guessing a combination of some hard work by community advocates and an overall positive attitude of acceptance in the town in general -- but this is a real achievement and a success story that should be celebrated, not shut down.

I first started riding at Waterdog after a work colleague happened to mention it. In all honesty, previously I had no idea where Belmont actually was or how to get there. But I quickly fell in love with the park and the city overall, bringing my family back to eat downtown and frequent the businesses there. Once my daughter grew old enough to ride herself, I brought her to Waterdog on some of her first outings. It's accessibility and compactness makes it ideal for beginners, but there's also a sense of remoteness once you get into that tangle of trails that really has instilled in her a love of the outdoors. It's remarkable that such a place exists in such a densely-populated area, and can serve as a gateway for enjoying the wider natural resources that the Bay Area has to offer in spades.

While as a lover of the outdoors I'm certainly sympathetic to the desire to preserve habitats and tread lightly on the earth, we also need spaces that can introduce people to these environments in an accessible way, and cultivate this passion in as wide an audience as possible. Waterdog is a prime example of one of these spaces, and I hope that you can find a way to keep it open to users of all sorts for many years to come.

Many thanks for listening,

Hugh

Dear Parks and Recreation Commissioners and City Council,

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades.

As a Bay Area resident who comes to Waterdog park to mountain bike and hike often, I support keeping the park open to as many users as possible. This park is a palace of refuge for people from all over, and one of the few nearby outlets for residents. Especially in our current situation, the conversation should be about EXPANDING access to as many people as possible, rather than restricting it.

In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces.

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

• Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that that chooses to habitate there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francisco Public Utilities Commission Peninsula Watershed."

Regards,

Benjamin Siranosian

Dear Parks and Recreation Commissioners and City Council,

As a busy parent and healthcare worker I just want to thank you for Waterdog and Laurelwood park bike access. I can leave my door by mountain bike and be back in just over an hour. Access to trails is key and if we did not have these parks it would be multiple hours of driving, in packing, returning. This would make it undoable and contribute to traffic and emissions just to "get out in nature".

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces

Dear Parks and Recreation Commissioners and City Council,

I strongly support keeping the Waterdog Open Space an accessible and sustainable place for recreation, nature and building community. In the new Master Plan, please consider the following:

- **Retain** the existing trails for multi-use - hiking, biking, dog walking, exercise and connecting with nature
- **Train** and educate the trail users to ensure safe and sustainable use
- **Maintain** and preserve the trails in continued collaboration with community groups and volunteers to ensure our trails get healthier every year

Open space recreation is so beneficial to Belmont locals - an oasis within silicon valley for stress reduction, exercise, revitalization, appreciation of nature, community pride, and quality of life improvement.

Waterdog has served this public need for many years and can continue for many more with the support from me and many others like me.

Please keep Waterdog multi-use and sustainable.

Neil

Dear Parks and Recreation Commissioners and City Council,

My husband Jason and I moved to Belmont (Cipriani area) in 2017 primarily because of its amazing open space - particularly Waterdog Open Space. We are both hikers (with our dog) and mountainbikers, and the multi-use character of our local open spaces was #1 on our reason for choosing Belmont for our home.

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Parks & Recreation Commission and City Council members,

I have been a weekly rider in Waterdog Open Space for over ten years. During this time I have never encountered any conflict between any park users. Nor have I seen any adverse impact to flora or fauna; the space is full of wildlife and healthy vegetation.

After riding in Waterdog I would go to a local restaurant to eat with friends. If Waterdog was no longer available for riding we'd go elsewhere, taking our dining dollars to another city.

During the past year we've all learnt to appreciate the vital need open space plays in maintaining our mental and physical health. I support keeping Waterdog Open Space as an accessible and sustainable place for recreation, connecting with nature and building community.

In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

• Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades.

• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that that chooses to habitat there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francisco Public Utilities Commission Peninsula Watershed.

Thank you.

Dear Parks and Recreation Commissioners and City Council,

I wanted to express my support for keeping Waterdog Open Space accessible for all existing user groups as you plan for its future. My family has been utilizing the park for many years for hiking, dog walking, mountain biking and trail running. I have been taking my two son's there on their bikes since they were very young and just learning to ride on trails. There are very few locations throughout the Bay Area which allow such a variety of activities. It seems the only permissible activity in most other areas is just hiking without your dog. This just does not reflect the needs of the community. Waterdog has been an island in a sea of limitations. Please do not let one user group prioritize their perspective over others.

In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, or just enjoying the outdoors.
- Ongoing Outreach and education to trail users and groups to ensure safe and sustainable use of our trails.
- Continued help from community groups and volunteers to support the maintenance and preservation of the trails.

The city of Belmont has done a wonderful job in managing Waterdog and my family hopes that it continues to look toward the needs of the surrounding residents as it plans for the future.

Sincerely,

Rob Janosky & family
Burlingame, CA

I am a resident of Belmont living on Pullman Avenue near Waterdog Lake. I am writing to support keeping the Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community.

Over the last year I have been working from home in Belmont and unable to exercise or go to my local gym due closures from COVID. I have used this recreation open space to stay healthy and promote a healthy mindset for myself throughout the pandemic. I often go to Waterdog Open Space to hike, walk my dog, and mountain bike. Without this Open Space I will have to travel outside of my community to enjoy tranquility and stay healthy; this is one of Belmonts most valuable assets. Let's keep it accessible for the people of Belmont!

In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Dear Parks and Recreation Commissioners and City Council,

As a Belmont resident and long-time biker/hiker of Waterdog Lake Park and Open Space, I urge the Parks and Recreations Open Space Master Plan to continue to serve the community's recreational needs by continuing multi-use access to Waterdog Lake Park.

Bikers, hikers, wildlife and other park users have co-existed at Waterdog for decades. I know that there is a continued effort by a group of activists to ban mountain biking from the park, which I personally think is ill-advised and would do a disservice to the Belmont community. The mountain biking community has long supported the park by keeping the trails maintained and safe, as well as by promoting good trail etiquette (trail etiquette and wildlife education are my personal favourite contributions when participating in group rides.) With the proximity of Carlmont Plaza to the park, Waterdog Lake park users, including mountain bikers, bring economic benefits to the community. Removing Waterdog access from mountain bikers would service only a small vocal minority of the community whose objectives and questionable methods appear to be more personal than community-based. I have had some personal experience interacting with these individuals, and their confrontational methods were anything but educational and neighborly.

A small observation on wildlife and mountain biking: Banning mountain biking in Waterdog Lake Park to protect wildlife is a moot point. We Belmont residents are fortunate to live in a community where wildlife have integrated into our neighborhoods, and the wildlife in Waterdog lake park no doubt perceive humans as less of a threat than their natural predators. Conscientious wildlife-loving mountain bikers, like myself, are more likely to stop to appreciate critters, and safely coax them off the trails, than to harm them.

With that said, I echo the sentiments of the majority of our Belmont community:
I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:
• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Subject: Access to Waterdog Open Space

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

I have recently heard that there are hearings on potentially reducing access to Waterdog Open Space. I support keeping Waterdog Open Space an accessible and sustainable place for healthy recreation and for connecting with nature and building community. I only discovered Waterdog during the COVID shelter-at-home orders last year, and I am so thankful that this place exists. I have taken my family there for biking many times and it has helped to keep my family both physically and mentally healthy during this pandemic. In addition, when we visit Waterdog we also stop at the nearby Carlmont Village shopping area for lunch and coffee and I have started shopping at Belmont Bikes. Keeping Waterdog accessible to bikers and hikers helps Belmont's economy.

I have been cycling at Waterdog for 6 months now, and have only seen one bad interaction between hikers and bikers, where a biker who had stopped to rest did not move to the side of the trail and thus blocked a hiker from easily getting through. There was no malicious intent, merely ignorance, and the biker was quick to realize what they should have done. I have seen many, many great interactions with pleasantries exchanged, advice and suggestions about various trails on the park, directions given, etc. My overwhelming experience has been that both hikers and bikers coexist very well on the trails. With the pandemic, there are many new folks to both activities and they need to be educated on proper trail etiquette, posted signs and outreach will help to keep it enjoyable for both experienced users of Waterdog as well newcomers to the benefits of Waterdog.

In the new Master Plan, could you please consider:
• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for everyone - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades.

Thank you kindly for your time and attention to this email. I hope you all have a great day!

Sincerely,
Jim Tay

Hi members of the Parks & Recreation Commission and City Council,

My name is Carissa and as a resident of Berkeley but a long-time patron of Waterdog Open Space. I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature, and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.
- Open space recreation has enormous benefits for the community, especially during a pandemic like now, It's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improving quality of life.
- Protecting wildlife is important to everyone including the mountain bikers. But there are vast amount of open space preserves and the SF watershed on the westside of 280. Waterdog has been surrounded by homes and schools already. Protection can be done more effectively elsewhere.

Please consider the voices from both sides and let's find ways to move forward instead of shutting things down.

Regards,
Carissa Yao

Dear Parks and Recreation Commissioners and City Council,

I am writing to lend my support to the continued multi-use for the waterdog park, and to implore you not to limit the mountain biking access that has become such a special part of your community. As someone who has used these trails for the better part of 20 years I can say that it is very possible for hikers and bikers to co-exists with respect.

In the new Master Plan, I request you to consider:

Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces

Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is something that has been introduced to me, and is something I would be more than happy to recruit new users into .

Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Please keep me on any email distributions that might be topical and if there are public hearings as well.

With Respect-

Todd Hinders

Hi,
As a resident of Santa Clara County who usually visits Waterdog Open Space, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:
• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;
• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.
• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.
• Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.
• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that that chooses to habitate there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francscico Public Utilites Commission Peninsula Watershed."

Thanks,
Weiqi Zhang

As a resident of the San Mateo County, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces

- Continuing outreach and education to trail users and groups to ensure sage and sustainable use of out trails such as the excellent new "LOVE WATERDOG" campaign.

- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. Our trails are the best in our area!

Waterdog Open Space has been a true blessing for me. It allowed me to discover the amazing gift of cycling. I am now healthier than I have ever been and truly enjoy being outside and appreciate nature. Every encounter, in my experience between hikers, dog walkers or cyclists at Waterdog have been very respectful to each. As with any trail in the bay area, we are concerned for the safety of everyone, we respect and maintain our trails, and not take for granted this privilege that is given.

Designating the park as a wildlife presence makes little sense. The park is surrounded by residential development. The wildlife that are there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wild preserve when there is a 23,000 acre wildlife preserve just on the other side of the i-280. Waterdog Open Space is a place where family and friends in the area are allowed to take a break from their busy lives and enjoy time with each other and nature. Taking away this gift would be very disappointing to the community.

Thank you for your time,
Ervin Cabuhat
San Mateo County

Thank you for your consideration as you develop the new Open Space Master Plan.

I'd also like to add please consider that a few bad apples don't spoil the bunch. I see a lot of finger-pointing and blame but each group has some bad apples and just because they do shouldn't dramatically impact enjoyment for all.

Thank you, Mike

For those that are new to the sport, Waterdog has been one of the great gems in the bay area. Many of the trails being built and maintained through the efforts of local riding groups and bike shops, such as the now-closed Passion Trail Bikes in Belmont. Losing access would be tragic, so please take a moment to let your voice be heard.

Dear Parks and Rec Commissioners and City Council,

I'm a San Mateo (Laurelwood) resident who uses Water Dog a ton as a biking area. I typically ride from Laurelwood to the park, and it's been a tremendous resource for me and my fellow mountain bikers. I understand there is an effort under way to limit or eliminate mountain bikes from the park, and I'd certainly voice my strenuous objection. It's a unique park on the Peninsula, and one which allows me to exercise outside in the longer days we get in the spring, summer, and fall.

Water Dog is certainly not the first park where hikers have tried to ban mountain bikers, and won't be the last, but solutions have worked in a great many other places. One solution is dividing traffic–Water Dog seems in good shape to do this, where there are some singletrack trails that are great for mountain biking and not really that useful for hiking. It's not perfect and never will be, but seems to make more sense than banning bikes. Would we consider banning hikers? I don't think anyone would, as it's the least common denominator for trail use, but other than that, but banning one type of trail use would seem like a last resort after other measures had been tried.

In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades.

I volunteer for trail building and maintenance with MBOSC (Mountain Bikers of Santa Cruz) and would be happy to join similar efforts at Water Dog if it helps. Thanks!

--
Chris

Hi,
As a resident of Belmont, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

• Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that that chooses to habitate there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francscico Public Utilites Commission Peninsula Watershed."

Regards

Resident of sunnyslope Ave, belmont.

For those that are new to the sport, Waterdog has been one of the great gems in the bay area. Many of the trails being built and maintained through the efforts of local riding groups and bike shops, such as the now-closed Passion Trail Bikes in Belmont. Losing access would be tragic, so please take a moment to let your voice be heard.

Dear Parks and Recreation Commissioners and City Council,

I have benefitted and enjoyed Waterdog Park on my mountain bike for over 10 years and it is a mainstay of the cycling community. I am a member of Peninsula Velo, a local cycling team of over 280 members based in Belmont and San Mateo, and many of our members use Waterdog on a daily basis. I am also a coach for the local high school mountain bike team Woodside Beasts (https://woodsidebeasts.org/) where we promote healthy cycling for girls and boys in grades 6-12 through mountain biking. Waterdog is by far the best mountain biking park on the Peninsula because of the easy access.

We teach all of our student athletes how to ride respectfully on trails, control their speed, and announce their presence and thank other trail users. Instead of closing down this amazing resource to cyclists, I would hope the City of Belmont and Parks Department could instead work with local cycling and hiking groups to promote positive park use and keep this open to everyone. During COVID Waterdog has been a salvation to families everywhere looking to spend time outdoors without having to travel to the coast, so thank you for all of your efforts!

I personally would be happy to work with your team through Woodside Beasts and Pen Velo to promote responsible use and help maintain the park to ensure everyone can continue to enjoy and love Waterdog Park.

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

Our community has a need for recreational open space - Water dog has served this public need well for decades.
• I understand, some mountain bike practices such as riding at night, or riding when it has rained that are harmful to the trails; however, education is the key to stemming those practices. It is a minority of riders riding at night or right after it has rained. It would be just as easy to enforce no riding at night, or no riding for 24-48 hours after it rains, as to enforce no riding at all.
I appreciate your consideration,
Lucas Klein

Our community has a need for recreational open space - Water dog has served this public need well for decades.
• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that has developed a habitat there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when a 23,000 acre wildlife preserve lies just on the other side of 280, the San Francisco Public Utilities Commission Peninsula Watershed.
I urge you to consider what mountain biking at Waterdog means to both the massive group of local riders, and what it means to the city of Belmont. Mountain biking at Waterdog has brought riders from around the Bay Area, which have in turn helped the Belmont economy greatly. Especially during a pandemic, riders need local spots to get outside, stay active, and stay healthy, both physically and mentally. Thank you for your consideration.
Sincerely,
James Hiemstra
Local Mountain Biker

Subject: Support for Waterdog Mountain Bike Trails Remaining Open

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

I am writing to express my family's support keeping the mountain bike single track trails open in the Waterdog Open Space. Opportunities for mountain biking in the Bay are limited and closure of these trails would further challenge riders to find accommodating places for riding including our family.

Our 4 year old son who is becoming a better rider every day needs places where he can safely and legally ride without a long commute and mixed use areas such as Waterdog encourage him to become a responsible cyclist who looks out for and cares about the safety of others who share the wonderful outdoor areas we have and treasure.

Thank you sincerely for your consideration,
Lee Gorny

Commissioners,

I have been a property and business owner (Spiteri's Auto Service) in Belmont for nearly 40 years. During this time, I have been able to enjoy riding bikes at Water Dog park with my son and now our grandson (three generations). We appreciate having Water Dog in our community; it has been an excellent place for our family to bond; we have made many memories.

Please let me know how I can help or can be used as a sounding board for the committee.

Regards,
Chuck Spiteri

Follow Up Flag: Follow up
Flag Status: Flagged

Hello,

I wanted to appeal to your committee as you consider user groups and their impact on our city parks.
I am a 59 year old homeowner, who visits Waterdog and Hidden canyon at least twice a month. I can ride from my house on Hiller Street to access the park, or drive and walk in. I have done 4 hours of trailwork with a mountain biking group years ago, clearing the brush.

I hike in Waterdog, I mountain bike in waterdog. You may see me, I am the one yieding the trail, saying hello, letting you go by if you are a hiker or runner. I am the one who picks up wrappers dropped by others. I don't ride on trails that aren't trails, I don't skid, or ride too fast.

Mountain bikers are a diverse group, and I am one. A female, professional, kind, nature loving Belmont resident. I would be willing to do yearly trail work as a member, or be part of a citizen group to address issues created by other users.

Please continue to allow mountain bikers in our Belmont parks. We can foster appropriate behavior by being present and leading by example, educating other users in how to share our local open spaces.

Sincerely,

Nancy

Dear Belmont Community Members,

As a senior and avid hiker from San Mateo, I have on occasion (weekdays) very much enjoyed Hidden Canyon and the trails around Waterdog Reservoir. I was amazed that I met few fellow hikers but many bikers, sometimes the same bikers several times in a row! Clearly, per mile biking use by far outweighs pedestrian use in this area. On the trail, especially narrow single lane trails, you need to watch out for this fast traffic.

Limiting biking use and repair of trails damaged by biking could greatly benefit the beautiful and sensitive Waterdog Open Space!

Thank you for your attention,

Edith

Dear Park and Recreation commissioners:

I am a resident of Belmont and I think we can all agree that we have a beautiful Open Space gem in Waterdog with scenic, lovely trails, incredible rare and endangered wildlife species, beautiful creeks and marsh ecosystems that allow plants and animals to interact and survive. We can also all agree that we love connecting with nature, love the exercise and revitalization that this natural environment gives us that improves our quality of life. We can also all agree that both hikers and bikers should be able to safely enjoy Waterdog.

When past City officials created the current Master Plan in 1992, they understood these concepts and put forth an action plan stressing Preservation of our Open Space as a most important City goal. They specified **multi-use trails**, 10-12 feet wide for bikers, hikers, dog walkers AND designated narrow, earthen **single-use** paths 2-4 feet wide for hikers only to provide "a more secluded natural hiking experience than multi-use trails". This distinction allows bikers to enjoy their exercise on more suitable multi-use trails while allowing single-use family friendly trails for children, teens, parents and seniors to enjoy peaceful, tranquil walks without fear of colliding with bikers.

But, somehow, over the years, these trail designations disappeared and were ignored to such a point now that many of my neighbors and friends are totally afraid to hike Waterdog for fear of their safety. I think we can also agree that this is NOT what we want for our Open Space!

As you embark on this most important Open Space Master plan for the next 20 years, I hope you will "Honor The Past" that not only focused on preservation and conservation of our beautiful Open Space but also prioritized Safety for all participants so that future generations can enjoy this jewel of Belmont.

Jennifer Lien

Dear Members of the Parks and Recreation Commission,

Thank you for taking public comments on the Open Space Master Plan (agenda item 6.d for tonight's mtg).

Belmont is our hometown, and we wanted our children to grow with a deep connection to the community and place that raised them. Waterdog Open Space has been a big part of that, and I've attached a letter from my son as well.

We're still amazed that we can have mountain biking adventures in our own backyard! They're full of shining moments, indelibly etched into our boys' hearts.

And the wonderful community of volunteers and caretakers that love Waterdog have filled it with the kinds of lessons in character and create opportunities for service that will help them grow into the kinds of men that truly know how to be a part of a place and care for it.

We ask that you continue to make all Waterdog Open Space trails accessible to mountain bikers to enjoy and serve.

Best regards,

Jacob and Jessica Jin

Hello!
I am a resident of San Mateo but I frequent Belmont regularly and have my entire life. (My mom went to Norte Dame high school and my first job was in IT at the college)

As I know you are aware, there is a new energy around access in Waterdog especially from the mountain bike community and people that are concerned about mountain bikes in the park.

I am a hiker, a dog owner, AND a mountain biker. I love the existence of this park and think it's a precious resource for our community. As a hiker, I understand how Mtn Bikes can be annoying at times, and as a mountain biker I try my best to be respectful and careful of all bikers in the park. I know we can figure out ways to work together and co-exist.

I want to advocate for us all as a community to be open minded about how we approach the multi-use issues and not deny access to anyone. Without being able to ride in this park, I wont be able to get my post-ride Doc's Bagels!!! I love Doc's Bagels.

Thank you for reading, and I hope that all voices are heard in the upcoming planning that is kicking off soon.

-William Paoli

Subject: Mountain Biking at Waterdog

Follow Up Flag: Follow up
Flag Status: Flagged

Hello,

I wanted to reach out and voice my opinion regarding mountain biking at Waterdog park.

I'd like to say that I've been a regular rider and hiker of Waterdog and Hidden Canyon since moving to the Bay Area over a decade ago. I will typically ride there 2-3 days a week when the weather permits. The availability of trails to ride in Belmont is why my wife and I bought a home here.

As you know, a great deal of the work on the trails is taken care of by people that ride there. I myself have done a great deal of work maintaining these trails over the years. I'll often remove fallen trees in the winter, fill ruts and fix erosion as well as trim overgrowth when needed. I would argue that a majority of the erosion seen on these trails is from a lack of drainage and not from bikes. I'd also argue that hikers have rarely pitched in on city sanctioned trail days.

Since the beginning of the pandemic, I have noticed more traffic on the trails as more hikers and runners have decided to use them. I know that before the pandemic started, there were very few confrontations between mountain bikers and hikers. I think that signage posted in the park explaining trail etiquette could be useful in making sure that people understand who has the right of way. I'd like to see all trails remain multi-use as they currently are.

I believe that the ability to ride these great trails brings a fantastic value to our town. I absolutely believe that more Bay Area parks should allow mountain bikers as Belmont has.

Feel free to reach out if you have any questions for me.

Thank you,

Jason Bromfield

To the Leaders of Belmont;

I recently heard that the future of mountain biking in Water Dog park is in jeopardy. Consequently, I am sending this email to express my support of keeping Water Dog open to mountain biking. As an avid mountain biker, runner and hiker, Water Dog has become a tremendous part of my life and recreational pursuits. My 9 and 11 year old boys are now riding with me. The park has continued to be very safe and family friendly. Closing the park to mountain biking would be a true tragedy to hundreds of local residents. I am happy to be available for further discussion of this matter.
Respectfully,

Dear Parks and Recreation Commissioners and City Council,

My name is Julianne Kline and I am writing to provide a public comment for the Belmont Open Space Master Plan. My fiance and I have been enjoying Waterdog Park for years, so much so that we have recently bought a home 3 miles away. Waterdog is one of the major venues where I learned to mountain and gravel bike over the past three years. Since it's so close to home (we lived nearby before the home purchase too), I can ride directly from my door to the park. It is the only place to mountain bike in the area where I do not need to load my bike into my car to get there, which makes it a convenient and environmentally friendly option. The park is also technical, and gives a newer biker like me a chance to work on difficult skills. During this tough pandemic, Waterdog had kept me and my fiance sane. I love gravel biking up Lake Road Trail, up through Sheep Camp Trail where I can come out on Canada Road. After hours on end stuck inside working from home, I enjoy taking breaks to hike the Crystal Springs Cross Country Trail. The trails are so beautiful and fun. I've recently explored San Juan Canyon which I discovered through word-of-mouth. More signage on these trails would help in making them more accessible to the community.

Thank you for maintaining the beautiful trails and open spaces. I urge you to continue maintaining the trails for all trail users in the future plans, such that the multi-use nature of the trails will be retained for those of us who enjoy hiking, biking, dog walking, exercising, walking, etc. We look forward to building a life and a family here, and look forward to many years to come of use of the Belmont Open Spaces.
Thanks, Julianne

Subject: I support bicycle access at Water Dog Lake park

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks & Recreation Commission and Belmont City Council,

I am writing in support of maintaining the current multi-use trail access at Water Dog Lake Park. As a former resident of Belmont, still living nearby, the trails at Water Dog are a highlight in my day to day life. I primarily use Water Dog for mountain biking, but also frequently hike there. I loved showing the park off to visitors (on foot and wheels) when I lived on Geraldine Way a few years ago, and maintaining access for all in the next Master Plan will ensure that anyone can experience the gem at the heart of Belmont.

Having recently visited the park to ride, I was impressed that the trails were in better condition than I'd ever seen them, thanks in large part to the work of mountain bikers who do volunteer trail maintenance.

I was disheartened to hear that some individuals want to ban bicycle access to the park. Whatever their concerns may be, perhaps continuing to spread the myth that bikes damage trails, or because they simply don't like sharing, banning bikes would be a foolish change. Having a place for all people to recreate and enjoy the outdoors is more important than ever.

Thank you for your consideration and I have confidence you will make the right decision to support trail access for all in the Master Plan.

Best,
Alex Hillis

Flag Status: Flagged

Dear Parks and Rec Commissioners and City Council,

I have never sent this type of email to voice my position regarding trial access, but feel compelled given the proposed restriction to mountain bikes at Waterdog.

Open space recreation provides benefit to a wide variety of users in the Belmont and nearby area. The mountain bike community is an active group to maintain and care for the trail system at waterdog. We are one of many groups that greatly benefit from access to the open space and I feel strongly that it would be unjust to restrict access to this group.

Waterdog is a fantastic local park and trail system. It would be a shame to limit this to such a wide group of riders. Mountain bikes are already restricted on a number of trails and Waterdog has the opportunity to serve the public for years to come.

Thanks for the consideration.
Dan Politi

Subject: MTB access at Waterdog

Follow Up Flag: Follow up
Flag Status: Flagged

The Belmont Open Space Master Plan process is making its way through the Parks & Recreation Commission and ultimately to City Council. The Master Plan is a strategic document that studies the existing park system, facilities and recreation programming, and identifies a planning blueprint for the next 15-20 years to improve, protect and expand the City's network of parks, facilities and recreational services for the future.
There is a small but aggressive group of anti-recreation activists in Belmont whose goal it is to ban mountain biking from the Waterdog open space area. They are waging a campaign to have Waterdog designated as a "nature preserve" in the Master Plan and severely limit recreational access to the trails. If they succeed, mountain bike access to Waterdog could be lost for the next 20 years. Unfortunately their viewpoints are being over-represented to the Council and Commission because they have a lot of time on their hands to show up to meetings and send emails. They are very organized and have a dedicated website that villifies mountain bikers. Please note, these people actively monitor the MTBR Norcal forum so keep that in mind if posting any responses here.
It's important that the Parks & Recreation Commission and City Council don't get the wrong impression that this represents a majority view. It's vital that the community continues to have the ability to use Waterdog for recreation, and for the Master Plan to reflect this, because it will be in place for the next 15-20 years.
If you have a few moments, please send a brief email to CityCouncil@belmont.gov and PRComm@belmont.gov to let them know you would like the Master Plan to continue to serve our recreational needs by continuing multi-use access to Waterdog. You do not have to be a Belmont resident to provide feedback to the council and commission, but if you are a Belmont resident, please point that out because you are one of their direct constituents. If you can send an email, please do so before Tuesday March 2, 2021 because the next Parks & Rec Commission meeting is on Wednesday, March 3, 2021. (Also, if you're so inclined, feel free to appear by Zoom at the meeting and make public comment in favor of continued access. Here's a sample letter, feel free to use these points in your email:
As a [resident of Belmont, or other identifier], I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

Dear Parks and Recreation Commissioners and City Council,

As a resident and home owner of Belmont, I STRONGLY support keeping Waterdog Open Space an accessible and sustainable place for ALL recreation, connecting with nature and building community. in the new Master Plan, I request you to consider:

- Maintaining the trails, as they are currently, for multi-use: for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great. The vast majority of time both myself and my Family/friends have spent on the trails has been met with courtesy by all users (including and especially by those on bikes).
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

I know there is a very vocal, but small group opposing the use of some trails - especially by mountain bikers, and that they blame "destruction" and "erosion" of the habitat on this group. However, I believe they are using said group as an easy target for blame, rather than using actual scientific facts to back up any such claims. Please know that the silent majority would be deeply and negatively affected and outraged if any actions such as limiting access were to be considered, let alone adopted. Let's not give more weight to the whims of those vocal few than is warranted.

Thank you for your consideration as you develop the new Open Space Master Plan.

Sincerely,

Bryan I

As a Bay Area resident, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

As a government organization, the will of the people is not the loudest few voices in the room that will impact a physical space. Most people expect their government to just work, and assume amazing parks like Waterdog are working for everyone. Just because a minority of loud voices are against mountain biking, or making up environmental claims, or bogus erosion claims, isn't the foundation to base a major decision on.

Additionally - regardless of what is done, surely solutions can be put in place that reduce animosity between users. Is it that difficult to dedicate certain trails as priority in one direction for bikers? It would give all users a heads up, reduce angst, and be safety focused. The notion that someone needs every trail is fine, but is there really harm in giving users notification that certain segments are primarily used by one group and for everyone to be aware and safe? Do we really need to use taxpayer dollars to pay a ranger to enforce the vision of a few people, rather than common sense policies?

Lets start putting in common sense controls and not accomodating a few people who are simply loud.

Thanks

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

• Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that that chooses to habitate there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francscico Public Utilites Commission Peninsula Watershed."

Dear Parks and Recreation Commissioners and City Council,

I have lived in Belmont for 6+ years and am an avid user of the Waterdog Open Space. I firmly believe that having access to this space is extremely beneficial to the residents of Belmont. In the new Master Plan, I request you to consider

- Maintaining the trails as they are, multi-use for hiking, dog walking, biking, exercise, connecting with nature, etc.
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. I have seen more improvements to the trails in the last year, even with increased use due to COVID-19, than in previous years.

Having access to the trails around Belmont is what originally drew me to relocate our family here. I use the trails 5+ times a week. I appreciate the fact that I can educate my children on the nature around them as we live in this urban environment. I have also never had a negative experience on the trails whether I am riding a bike, hiking, or running with my dog. I would like to preserve these experiences for my family and future generations of Belmont residents.

Thank you for your consideration as you develop the new Open Space Master Plan.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades.

In addition, I think mountain bikers are the primary users of most of the trails. People tend to walk up the fire road and walk to Waterdog lake, but the majority of the trails, other than the two just listed, appear to me to be primarily used by mountain bikers. Some people do hike them, but they are not the majority of the users. I live in Crestview Estates, which is next to the park. I cycle the trails often, and my experience is I mostly see other bikers and not that many hikers. The ones who do hike them appear to be more committed to outdoor activities (they are usually pretty fit) and are more passionate. They want the trails closed so only hikers have access. I am 67 years old. I very much enjoy cycling the trails and think it is a mistake to limit mountain bikers. Especially when there are already hiking only parks already nearby such as Edgewood Park and the Crystal Springs trails.

Best Regards,

Frank McGorman

Dear Parks and Recreation Commissioners and City Council,
I support designating Waterdog Open Space as a **Nature Preserve**. In the new Master Plan, all Open Space policy decisions should prioritize conservation and habitat protection, including:

- Designate narrow natural surface trails for hiking only, consistent with Best Practices of other open spaces
- Close illegal Open Space trails, and restore damaged ecosystems and fragmented wildlife habitat
- Enforce the closure of all open spaces from sunset to sunrise to protect wildlife and ensure safety; cite violators
- Prohibit e-bikes and motorized vehicles on all trails; cite violators

Allocate park spending to equitably fund desperately needed Open Space maintenance

Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance
Please incorporate these policies into the new Open Space Master Plan!
Sincerely,
James Feichtl

Subject: Comment on Waterdog Multiuse Access

Follow Up Flag: Follow up
Flag Status: Flagged

As a Belmont resident for the last 10 years I'm writing in support of continued access for mountain biking in Waterdog.

My family and friends enjoy going to Waterdog to exercise on bikes and enjoy the outdoors. My kids and I regularly use the park as a way to connect with each other and spend time enjoying the outdoors, which has been a God send during the pandemic.

While I understand that some might see shared use as an inconvenience the trails have existed as a multiuse and the discussion should focus on how to keep Waterdog an accessable part of the community.

I would like to see more commitment from the City to invest in the trail maintenance, as the volunteer nature of the park means that everyone feels they are contributing in the 'right way' including home owners clearing brush to protect their views, to people blocking or modifying existing trails.

With the right balance I believe perceived conflicts can be resolved and the park can still be enjoyed by all.

Thanks,
Andrew Elliott

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council:

My family and I whole-heartedly support keeping Waterdog Open Space as an accessible place for multi-use: hiking, biking, dog walking, and connection with nature.

We've been San Mateo residents since 2002 and Waterdog has always been a wonderful place for us to visit and enjoy...more so during this pandemic. My favorite is a family hike around the lake. Waterdog is where I introduced my son to mountain biking when he was 9.

There are 2 things I often talk to the kids about: The first is the rules around sharing the trails with others. A couple of examples are when going downhill, we yield for hikers going up. And while biking, always slow down in typically busy sections regardless of whether we see others or not. The second thing is to respect nature and the trails we get to enjoy. An example is although we don't see a lot of trash out there, we pick it up when we do.

Here is a couple of pictures of us enjoying Waterdog.

Thank you for your time.

Best regards,
Van

Hello my name is Fred and I have been a loyal patron of Waterdog park for my entire life . I grew up in the area and learned to ride my bike in those very hills. It has come to my attention That there is a lobbying party that wants to make it illegal to ride on those trails.

I find it very hard to actually entertain that idea but I am aware how politics (internal city affairs/ pressure from certain parties) affect the judgement on decisions like this.

This park has been a homage for many generations for both riding, and hiking. Taking it away would thoroughly affect our mental and physical health!

WE NEED A PLACE TO RECREATE AND RIDE!

Not everyone has the luxury of working from home and taking off to skeggs, or Santa Cruz to ride their bicycle on a workday. Many of us need a place we can recreate after a regular work day.

With (COVID- restrictions)

We have lost the ability to work out in gyms , play sanctioned sports, travel, and pretty much the everything else.

Biking and the ability to be in nature a few steps from my home has givin me a sense freedom from the rat race. It has helped with my mental and physical health. Also, I've met life long friends , and business associates riding here.

We all have businesses and homes here! Taking this away from us is a slap in the face. WE should be able to *ride or bicycle -(With the amount of property tax, business tax, booster money to schools, and actual labor of cleaning and maintaining the trails)

Please don't take this away from us,

We care for the park, as of it is an extension our back yard. I grew up riding it, and plan on teaching my kids on the same trails!

Thank you,

Frederic

Dear Parks and Recreation Commissioners and City Council,

Hello, my name is Kurin Tu and I am a resident of San Mateo. For 18 years, I have really enjoyed the outdoor nature and the lake that Waterdog Park has to offer. My family and I have had many outings there and really find the quality of the park to be one of the nicest places to spend time with family and friends.

I am informed by my colleagues that you are starting the planning process for the Waterdog Park. In your planning, I would like for you to consider keeping the trails open for hiking, trail running, biking, bird watching and exercising activities. I would also like to request that we should continue to educate park visitors to understand the safe use of the trails. And last, continue to reach out to local communities seeking volunteers to help maintain the preservation of the trails and park.

I understand this is still early in the planning process but I would like to give my input. Please do consider keeping Waterdog park an open space recreation where many people can enjoy the great benefits that park has to offer.

Thank you so much for your time.

Best,
Kurin

From: CRAIG BALL
Sent: Thursday, March 4, 2021 5:49 PM
To: City Council; P&R Comm
Subject: Keep Waterdog Open Space open to all forms of recreation

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Council,
As a mountain biker that uses Waterdog Open Space 3+ times per week and local resident, I strongly support keeping the space an accessible and sustainable place for recreation, a location for connecting with nature, and means of building community. I am a regular POST donor and am an advocate for both human-accessible and -inaccessible open space on the mid-peninsula. In addition, I have worked to build and maintain trails the trails within the open space for the benefit of all users, as have may of my cyclist colleagues.

In the new Master Plan, I request you to consider:
• Maintaining the trails as they are for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building. This maintenance should be consistent with best practices of other open spaces;

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

• Especially apparent in these difficult times, open space recreation has enormous benefits for the community. It's a local destination for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades.

• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that chooses to inhabit the area has adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francisco Public Utilities Commission Peninsula Watershed, that is inaccessible to human use.

I hope this provides compelling reasons for keeping the space accessible for all users. Please contact me if I can expound on any of the items above.
Sincerely,
Craig Ball

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades.

Thank-you for your consideration,

Jonas Papaurelis

Subject: San Mateo County family supports multi-use trails (mountain bike friendly) at Water Dog Park

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

My family of four uses Water Dog as hikers, bikers, and nature explorers. We love the multi-use trails and the friendly and welcoming users. Please maintain an inclusive rather than exclusive trail system. Water Dog Park mirrors the success of Joaquin Miller Park in Oakland. Both parks demonstrated that hikers, dog-walkers, runners, bikes, and nature lovers can co-exist on the same trail, at the same time. Educating every user group how to share the trail through easy to read signs at trailheads will benefit the community as a whole and ensure the park remains a welcoming place for the community.

Best regards,

The Morse Family
San Mateo County Residents since 2012

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

As a resident of the south bay, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

• Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that chooses to habitate there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francisco Public Utilities Commission Peninsula Watershed.

Many people use waterdog as a release from the crazy life and work days we deal with in the city. Please keep it open to mountain bikers and all other user groups. It helps keep us sane from the hustle and bustle of the city.

Thanks,

Jonathan Reber

Hello,

I wanted to write a letter regarding access to Waterdog Park and its use in the new Master Plan for the future.

I would request for you to consider:

* Continuing the use of the trails as they are, for all users.
* Continuing outreach and education for all users to ensure the safe and sustainable use of the trails
* Continuing collaboration with groups and volunteers to support the maintenance and preservation of the trails

I would like to share something of a personal note about my thoughts on mountain biking in Waterdog. Waterdog Park is an absolute jewel of a park within the Peninsula because of the quality of mountain biking and proximity to users. I myself was brought to the sport of mountain biking because I live nearby and noticed people enjoying the park on mountain bikes. Because of its proximity, I am able to ride there multiple days a week. The ability to do this with the quality of biking has been nothing short of life changing. I would also note that while I cannot speak for all mountain bikers, my belief is that other mountain bikers care very much about the experience for all in the park. As well, some of the longer/outer trails such as Rambler and Finch are in use primarily by mountain bikers.

I hope you can take the above into consideration and understand fully what a wonderful and amazing spot this is. To remove access for mountain bikers would be a very significant and irreplaceable loss for this group. Thank you for your time.

Greg Harris

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space. Waterdog has served this public need well for decades.

Waterdog, and many other Bay Area open spaces, have taken on an increasingly important role in peoples' need for healthy outdoor activity and connection with nature which has been severely curtailed in the current COVID pandemic. Waterdog and these other open spaces have shown that users interested in a broad range of recreational activities can successfully use these spaces with adversely impacting either the natural state of the open spaces or the enjoyment of other users.

I urge you to maintain multi-use access for all current users of Waterdog Open Space to take advantage of this gem in the new Master Plan.

Regards,
Lonn Fiance

Dear Parks and Recreation Commissioners and City Council,

I strongly support keeping the Waterdog Open Space an accessible and sustainable place for recreation, nature and building community. In the new Master Plan, please consider the following:

- **Retain** the existing trails for multi-use - hiking, biking, dog walking, exercise and connecting with nature
- **Train** and educate the trail users to ensure safe and sustainable use
- **Maintain** and preserve the trails in continued collaboration with community groups and volunteers to ensure our trails get healthier every year

Open space recreation is so beneficial to Belmont locals and others, like me, who live in surrounding areas and appreciate the park and all it has to offer.

Waterdog has served this public need for many years and can continue for many more with the support from me and many others like me.

Please keep Waterdog multi-use and sustainable.

Thank you for your time and consideration,
Ted Ryan

Dear Parks and Recreation Commissioners and City Council,

As a 14-year resident of Belmont, I am writing to express my support for keeping Waterdog Lake Park and Hidden Canyon Open Space an accessible and sustainable place for recreation, including bike riding. I'm not a rider myself, but I support those who are, including my sons and husband, and I have had overwhelmingly positive interactions with bike riders when I'm hiking or jogging in the park.

In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces.

• Initiate a pilot program to explore ways to separate bike riders from walkers, for example, reserving certain days or times for one use or the other, or designating certain trails as "uphill bikes only" to control speed. However, the community should be involved in designing the pilot, which should be for a limited time, with feedback collected afterwards before making any permanent new rules about usage.

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for Belmont residents - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Follow Up Flag: Follow up
Flag Status: Flagged

Dear Commissioners,
Please submit these survey comments to the PROS Committee members and consultants:

Question #4 – does not list **Hidden Canyon Open Space** nor **John Brooks Preserve**. Hidden Canyon Open Space is the largest open space in Belmont (260 acres) and it is DIFFERENT than "Hidden Canyon *undeveloped PARK*", both in zoning and in planned uses. John Brooks is the size of Waterdog but is a *designated Preserve* by legal contract, and thus must not be lumped in with Waterdog. Please list ALL four Open Space areas (John Brooks Preserve, Hidden Canyon, San Juan Canyon, and Waterdog Lake).

Question #9 – Open Space – lists only amenities and programs, and overlooks the General Plan Goals for Open Space. These are the only areas in the city residents can come to observe wildlife, find tranquility and solitude, smell the forest, hear birds and study diverse ecosystems. These diverse ecosystems are emphasized in the 2035 General Plan for Open Space and the General Plan Conservation Element (attached). Developed *parks* offer amenities; *Open Space* is intended to preserve areas to appreciate nature for natures' sake, not engage in sporting activities. Suggestions expanding human incursion and impact are *inconsistent* with General Plan Goals and Policies.
Please include the following items in the #9 ratings:

- Protections for endangered species and their habitat
- Programs to conserve native trees and plants, remove invasive plants
- Prevent speeding bikes and fine violators
- Trails reserved for nature study, prohibiting bikes

Please Remove suggestions that increase human impacts such as lighting and, wider trails.

Questions #8 and #9 conflate issues. They are supposed to **differentiate** "Recreation Facilities" from "Open Space". *Recreation facilities* do not have "trail work and restoration"; this item confuses the topic of the question. Further, Open Space is not supposed to prioritize *amenities* – this suggestion prejudices the respondent with intent that is NOT supported by General Plan Open Space policies. Please delete these words from the questions, to maintain focus on the differentiated areas, and avoid respondents conflating the topics.

#8 The following ~~programs or activities~~ would greatly enhance my experience with outdoor recreation facilities in Belmont.

#9 The following ~~amenities or uses~~ would greatly enhance my experience with opens spaces in Belmont.

Thank you,
Kristin Mercer

Subject: survey comments

Follow Up Flag: Follow up
Flag Status: Flagged

As someone who has previously develop opinion polls, surveys and worked on focus groups, I found the survey difficult to follow due to the lack of organization and, in some questions, inconsistent use of categories (parks, open spaces, recreation facilities). Additionally, in some questions, conflating different categories and inconsistent use of terminology creates a lack of understanding of respondents' intentions.

Confusing questions, leading options, and conflating categories make any survey ineffective by failing to yield an accurate understanding of respondents' intentions. Inconsistencies and lack of organization may lead to confusion which would further negate capturing respondents' true intentions. Lack of clarity creates confusion and results will be left to interpretations rather than yielding clear, understandable results.

Because people likely will not spend excessive time trying to understand the intention of the question(s) -- making things as clear as possible is desirable.

While I would be happy to provide detailed feedback, I have limited my comments to a few obvious clarifications that are needed:

1. #5 "What **factors** limit your ~~ability to~~ visits our parks and open spaces"

"ability" refers to the participants' "skills" or "capability" or "talent" - rather I think you seek the factors that limit visitors' use of the parks and open spaces.

Clearly conflating parks and open spaces means you will not know which answers apply to which area -- parks or open spaces.

2. #5 relates to parks & open spaces and "facilities"
[]Poor condition/maintenance ~~**of facility**~~
[]~~**The facilities**~~ Does not accommodate my needs

*The word "facilities" has somewhat consistently be used to address recreation **facilities** -- now you use the word "facilities" in relation to parks and open spaces which is inconsistent and confusing*

3. #7 please clarify by adding **bold text**: "parks **(not recreation facilities or open spaces)**"

for clarification

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

4. #8 please clarify by adding **bold text**: "~~outdoor~~ recreation/**athletic** facilities **(not open spaces or parks)**"

for clarification

5. #9 please clarify by adding **bold text**: "open spaces **(not recreation facilities or parks)**"

for clarification

Again, the questions that conflate categories will not yield meaningful responses because the respondents' intention will be unknown. Ambiguous survey questions force an *interpretation* of the results; *interpretation* is usually not desired if capturing the respondents' true intentions is the goal.

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

I understand this beloved park is under review for restrictions on use. For the last decade I have used this park as my outdoor recreation area after work to release stress and enjoy nature on a mountain bike. I am saddened to hear that people are unsatisfied with the multi use system currently in place to allow hikers, dog walkers, and bikers. There are very few areas to ride a bike on trail close to the city limits.

From my experience, most people are friendly and allow each other to safely pass whether on foot or bicycle. Although, I realize there are always exceptions to the norm. For the most part Waterdog is a social and accepting place where I see familiar faces and smiles from bikers and hikers alike.

Please consider keeping the park open for multi use activities including bikes. Perhaps a system of sharing the trails could be instated. I have some ideas if you'd like to contact me.

Thank you for your time and deliberation,

Dear Parks and Recreation Commissioners and City Council,

I wholly agree with the current circulating email regarding Waterdog:

"I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use to include hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces.
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont as well as for visitors - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades."

In addition to the above - specific to the topic of mountain biking - this brings tremendous vitality and revenue to Belmont. I invite all my friends, acquaintances, and colleagues to ride and we always go eat and drink at one of the local restaurants or coffee shops afterwards. There is abundant data demonstrating the economic boon that mountain biking brings to small communities. It is estimated that for every 25,000 mountain bikers $1.5-2 million is infused into the economy. I assure you people visit from all over the Bay Area to ride Waterdog. And mountain biking IS the attraction with which Waterdog draws people from all over - it is the rare person that drives here just to hike or play at the lake. With respect to the mountain bikers themselves - courteousness is always at the top of the list in terms of deferring to hikers and dog walkers and though anecdotal, I have never witnessed anything to suggest otherwise form any other rider.

Let's not shoot our own town in the foot by restricting its greatest attraction.

Thank you for your consideration,

Alvaro Waissbluth MD

Dear Parks and Recreation Commissioners and City Council,

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades.

--
Thanks,
Avi

Dear Parks and Recreation Commissioners and City Council,

I have heard and read reports you are contemplating changes to the mixed use policy at Water Dog Lake Park. I support keeping Water Dog an accessible and sustainable place for recreation, connecting with nature, and building community.

I come to Belmont frequently to ride my mountain bike at Water Dog. And when I visit, I invariably patronize local businesses.

I appreciate that Water Dog is a multi-use park. My experience has been wholly positive. Bikers and pedestrians alike are considerate of each other and recognize in the other a kindred spirit: someone enjoying and sharing a beautiful resource.

Thank you for your consideration.

Dear Parks and Recreation Commissioners and City Council,

I reside in Marin County, but I write to you because unconstrained mountain biking threatens our open space preserves in the same way it does yours. Managers of public lands must give priority to protecting the safety of hikers and equestrians, and the environmental integrity of the resource.

I support designating Waterdog Open Space as a Nature Preserve. In the new Master Plan, all Open Space policy decisions should prioritize conservation and habitat protection, including:

- Designate narrow natural surface trails for hiking only, consistent with Best Practices of other open spaces
- Close illegal Open Space trails, and restore damaged ecosystems and fragmented wildlife habitat
- Enforce the closure of all open spaces from sunset to sunrise to protect wildlife and ensure safety; cite violators
- Prohibit e-bikes and motorized vehicles on all trails; cite violators
- Allocate park spending to equitably fund desperately needed Open Space maintenance
- Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance

I encourage you to incorporate these policies into your new Open Space Master Plan.

Dear Parks and Recreation Commissioners and City Council,

As a San Mateo County resident, I've recently got my son into mountain biking and we've really been enjoying the beautiful trails at Waterdog Open Space. My wife also hikes there. I strongly support and request keeping Waterdog available as an accessible and sustainable place for recreation, enjoying nature, and as a great place for the broader community.

In the new Master Plan, I request you to consider and support:

- Maintaining the trails as they are for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and grounds to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great!
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with the Belmont P&R workers.

Open space recreation carries enormous benefits for the local residents in Belmont and surrounding areas - a local space for exercise, reducing stress, revitalization, appreciation of nature, cultivating an understanding of the need for conserving the environment, local pride, and improving quality of life. Our community has a need for recreation and open space. Waterdog has served this need for decades.

Thank you for your consideration as you develop the new Open Space Master Plan.

Hi,

I am a 56 year old women and I have been riding my mountain bike at Waterdog for over 10 years. Mountain bikers like me are nature lovers and support many organizations like Sierra Club. We are also responsible giving people that love community and can often be found working on the trails at Waterdog to keep things up. We do live in a crowded area and Waterdog is a precious Open Space to all of us. Waterdog has a tricky topography- very steep- which makes it vulnerable to erosion. I agree that electric bikes should not be allowed but I feel hikers and bikers should have equal access. I do not bike on the weekend so I am not sure how crazy it is then but on weekdays there is plenty of room for all of us. Maybe certain times each group should have access to the park on weekends if it is too crowded. Again mountain bikers are equal to hikers in my mind.

Thank you for the work you do and your efforts to keep up Waterdog.

Regards,
Marilee Brooks

Flag Status: Flagged

Dear City Of Belmont,

Recently, a campaign has come to my attention to close Waterdog Park to cyclists, limiting its access to only foot traffic. I will say I am emphatically against this.

Limiting the use of public space is a disservice to the community in general. The times I have enjoyed a lap around the park by bike, I've been lucky enough to witness a broad array of patrons from other cyclists to the runner engaging in a trail workout, to families having a hike, to seniors walking the fire road with their pets. Waterdog Park is an open space that is enjoyable for an array of people looking to take advantage of the park.

Cycling is a great way for families to enjoy time together while getting exercise and experiencing more from the outdoors. Denying cycling in an open space limits the ability for youth to explore the outdoors while having fun and excitement.

I believe creating a dialog with the cycling community on how to share the space in a respectful manner for everyone to benefit would be a worth while step to ensuring this public space does not become private access for an elite few. I know I prefer to cut through Waterdog on my commute home rather than slog up Ralston during dangerous commute hours. Limiting access to the park would mean a much different cycling experience for me as well as those like me.

I hope you take my concern into consideration, and I am happy to elaborate in the future should you need me.

Thank you.

Fergus Liam

Dear Councilors and Recreation Parks and Commissioners,

I have hiked in these parks and was horrified by the damage done by mountain bikers. I understand that everyone likes to pursue their sport of choice, but given the current Climate/weather status, it is counterproductive and even foolhardy to allow the destruction of our wild spaces. Just because a machine makes it possible for man to do something, does not mean we should. Implementing ecosystem management best practices for habitat, vegetation and trail maintenance would certainly be a step in the right direction, but to survive, the area needs more than that. Prohibiting e-bikes is essential, as is closing all illegal trails.

In the new Master Plan, please designate Waterdog Open Space as a Nature Preserve, complete with the policing and policies that implies. I do put my money where my mouth is, being part of the community of 500 households who formed an assessment district to bu work from home and continue their pattern of heavy park use during the week.

Thank you for considering this plea. People will say we only have one plaet, or one Earth. It would be better to say that we need to mainrain one habitable Earth, a place which continues to be pleasant to inhabit.

Dear Parks and Recreation Commissioners and City Council,

My family and I wanted to provide some comments as you develop the new Master Plan. We venture onto the trails frequently for hiking, trail-running and biking with our kids. We have many friends in the community who do the same. We're so grateful to have this gem in our Belmont backyard, it has helped us so much during the coronavirus pandemic! Our elementary school-aged children will always remember their fun times in Waterdog and Hidden Canyon, and we hope to frequent these parks as a family for years to come.

We request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces. We find most of the people who use the trails to be courteous, follow the rules, and care deeply about preserving and protecting the park.

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year. We're so grateful for those who put in the time and effort and make the trails better for all of us!

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades.

Thanks for your consideration.

All best,
Katie Debski

I have a home in Truckee also, and spend a lot of time outdoors, at most trail heads, either federal, state or local there is this sign reminding trail users of the proper edicate, and also bike speeds. While we don't have equestrian traffic, the hiker to bike does apply. I bring this to point as it's an issue, while passing bikers yesterday, speeds were excessive with no attempt to slow down when they passed me, especially on narrow trails.

I recently tore the ligaments in my right knee and cannot just jump out of the way anymore, so I am very concerned.

Dear Members:

We have a beautiful city here in Belmont. The trails and natural habitat are great. With the Covid restrictions in place, Waterdog and the nature trails are good activities. Most people are friendly and obey the rules.

Unfortunately, over the last few months, there are more youths and teens racing and mountain biking creating dangers for hikers, especially seniors. Maybe some Waterdog and some trails could be limited to hiking and a few others to bikes.

Nobody wants more enforcement. It would nice to count on the common sense and safety consciousness of our neighbors, but that is naive. They are walkers without masks and dog owners who do not leash their dogs or clean up their poop.

We support designating Waterdog Open Space as a Nature Preserve.

Thank you.

Dear Parks and Recreation Commissioners and City Council,

I am writing to support keeping Waterdog Open Space an accessible and sustainable place for multi-use recreation, connecting with nature and building community.

In the your master Plan, please consider the following as they are so important to me and my neighbors:

- Building and opening more local multi-use trails to better distribute the increased usage seen in recent years.
- Maintaining the trails, as they are, for multi-use for biking, hiking, dog walking, exercise, connecting with nature, etc, consistent with best practices of other open spaces.
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails.
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

I have been enjoying our local open space since I was a kid, and now it is my children's favorite thing to do (especially with COVID). There are huge community benefits to open space - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades. It is important for there to be rules in place and for all of us to respect the open space, which we will always support.

Thank you for your consideration as you develop the new Open Space Master Plan.

Sincerely,

Michael Warren

This is just off the Somerset Gate, where you had blocked a cutoff with big logs, I showed you afterward that they just created a new trail
around, and one told me he was going to go wherever he pleased. The new trail is now very pronounced and being used by most of the bikers rather than use the designated trail. I have tried blocking it several times as shown, but they just remove it. These guys have no respect for the open space or the environment, I thought we could come to an equal use agreement, but the bikers are going to continue to give the finger and do what they want whenever they want. They are pushing me to believe that a ban on bikes is going to be the only solution, as there is nothing you can do to stop them.

Below are photos of a trail that has been developed over the past 6 months. It runs from the end of the John Brooks to the top of Finch. I'm sorry, but I don't think there is anything P&R can do to stop this, I also am starting to believe you don't have the gumption to really do anything. The bikers know you are not going to do anything, so continue to destroy the Waterdog habitat. The last picture shows what the new trail is avoiding, it's trashed so bad the bikers don't want to continue using it.

While on my walk today, I was nearly blown off the trail by 2 separate bikers who didn't even attempt to slow down when passing me, and due to a knee injury I could not quickly get out of the way if I had to, so so dangerous. I can only continue to urge you to do something about this before someone is seriously hurt or worse, and the habitat is destroyed beyond repair.

Dear Park and Recs and City Council,

As a resident of Belmont for over 17 years, I support keeping Waterdog Open Space an inclusive accessible place of nature for our community! I wrote to you back in February and I continue to believe that Waterdog Trails should be inclusive to the whole community for biking, hiking, dog walking, exercising and most importantly a main part of our community which brings all ages and neighbors together!

Open space areas such as Waterdog honestly do carry an enormous benefit to all of us who live here in Belmont and beyond. I would greatly appreciate you hearing our voices and allowing for a space that remains open to all of our community. Personally, our family mountain bikes, hikes, explores, and join our friends on these wonderful trails. Please do not exclude biking from one of the areas our family can access especially our children. We are lucky enough to be able to access Waterdog directly from our home which makes the area even more important to our entire family! We are privileged to have Waterdog Open Space in our community and I sincerely appreciate your efforts to continue providing inclusive open spaces.

Thank you,
Barbara Fetterly

To: Belmont Park and Recreation Department
30 Twin Pines Lane
Belmont, CA 94002

Barbara Fetterly

Belmont, CA 94002

Dear Belmont Park and Recreation Department,

I have been a resident of Belmont for over 17 years, and I am writing to express my full support in your pending decision to provide the community a pump track at the Waterdog location at the end of Carlmont Drive. The master plan the city has embarked upon is wonderful to ensure additional locations for our community to experience all Belmont has to offer. I support the pump track being a focus and top priority since it has been delayed and now bundled with the master plan. I appreciate the cities dedication to a longer term plan and keeping their word to the community to see it through.

Benefits:
Community building space
Skill development
Great exercise
Accessibility for Belmont families
Respect and appreciation of the outdoors

As a user of Waterdog Trail myself, I often hike there with my dog. Bikers have never been a concern for me and are always courteous and respectful. I do NOT support Waterdog Trail being turned into hiker only area. It limits our precious resources and divides the community and even our own family with an activity walking distance from our home. Waterdog Trail should be inclusive the community. As a member of a biking family, we appreciate having designated, safe, and beautiful land so close to home that we can utilize in multiple ways just outside our doorstep. Lastly, as a parent I greatly appreciate and encourage enhancing many of our cities amenities to encourage outdoor physical education for our kids to independently build skills, friendships, and a respect for the outdoors in their communities. The pump track would enhance and strengthen the master plan set forth by the city for ourselves, our kids and our community as a whole.

Our home is directly across from Semeria Park in Belmont. The community has garnered many benefits from this park. It has provided a safe communal location for a multitude of ages and groups to connect. We were part of the planning meetings for the park and I recall how excited everyone was to have the space. It has exceeded our families expectations as the years have gone by. I believe that the pump track at Carlmont Drive will be an asset to the community just as the park has been for our family and neighborhood. One main conversation I keep in mind every time I hear of a new beginning in Belmont is when a neighbor who was not 100% excited

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

about the park and did not attend the National Night Out the first year I hosted it in Semeria Park. He signed the petition to allow the event and close the street but did not attend. The second year he attended and took food home (the whole community brought potluck items). The third year he brought a table and food to share. This is what we have to look forward to when Belmont creates spaces within our community. How wonderful would it be to forge relationships from a simple act of a bike pump track! I believe the pump track will be similar in accomplishing its goal of providing safe, fun, physical opportunities to our entire community. What a gift the commission would bestow on the community of Belmont.

I urge you to move forward with the decision and keep it as a top priority to build a pump track at Waterdog trail at the end of Carlmont Drive. Our family and community would benefit from this! We fully support it!

Thank you for your time.
Sincerely,
Barbara Fetterly

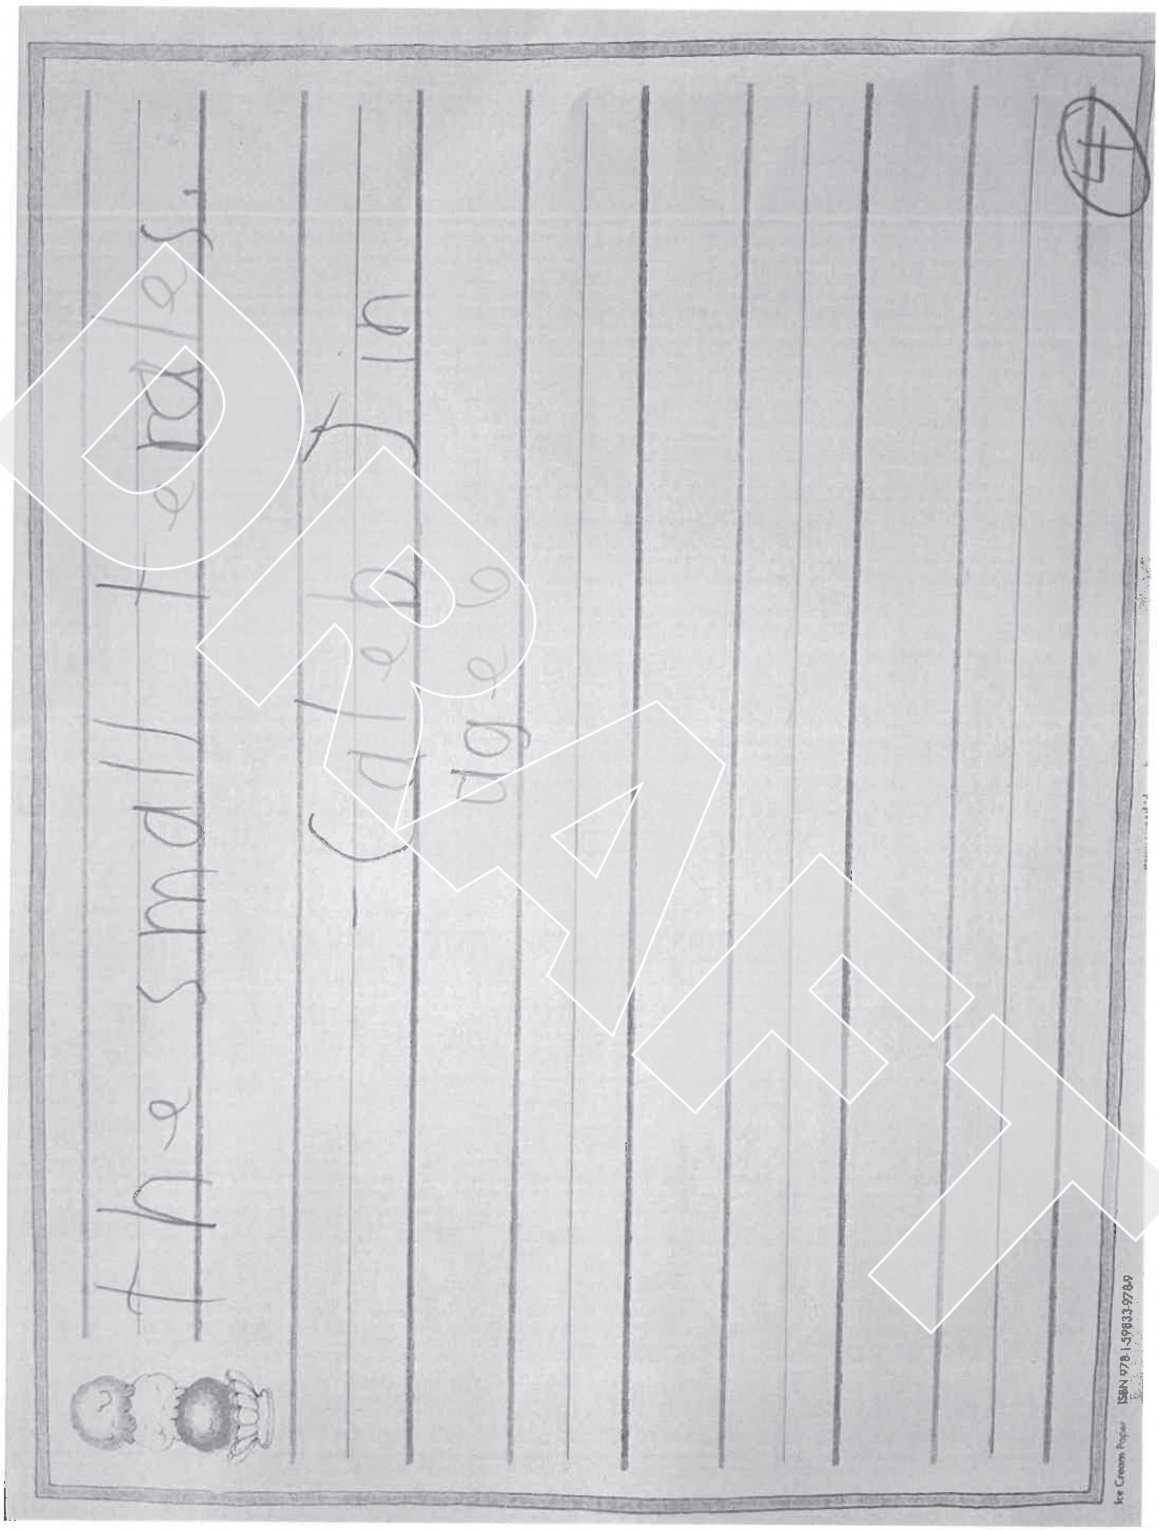
Dear Members of the Parks and Recreation Commission,

Thank you for taking public comments on the Open Space Master Plan (agenda item 6.d for tonight's mtg).

Belmont is our hometown, and we wanted our children to grow with a deep connection to the community and place that raised them. Waterdog Open Space has been a big part of that, and I've attached a letter from my son as well.

We're still amazed that we can have mountain biking adventures in our own backyard! They're full of shining moments, indelibly etched into our boys' hearts.

And the wonderful community of volunteers and caretakers that love Waterdog have filled it with the kinds of lessons in character and create opportunities for service that will help them grow into the kinds of men that truly know how to be a part of a place and care for it.



We ask that you continue to make all Waterdog Open Space trails accessible to mountain bikers to enjoy and serve.

Best regards,

Jacob and Jessica Jin

RE: Water Dog Parks Accessibility for Mountain Biking

Dear Belmont Parks and Recreation Commission,

I'm writing in endorsement to keep the Water Dog Park accessible for Belmont, and more specifically, Hallmark residences to Mountain Biking. I've lived in Hallmark neighborhood since 2008 for the quality of the school district, but also the accessibility for the parks, including Hallmark Park and Water Dog park.

I've heard that there have been some complaints with movement to dis-allow the Water Dog park usage for Mountain Bikers last year and now again this year. Again this year, I would strongly vote against this restriction. The access of this part to family outings such as walking and hiking also includes mountain biking since there are families like my own who enjoy these trails for their kids as a family outing.

The Water Dog park is really the only mountain bike trail that is compatible with elementary and middle school bikers. These bikers don't degrade the environmental habitat since they rarely go off trail. These bikers have also formed Facebook groups who have donated time and money to keep trails well-groomed and safe. Many neighbors in Hallmark coordinate bike rides on a frequent basis at Waterdog and this involves both parents and children.

If you need further support for keeping Waterdog park accessible to the residence and public, please let me know.

Thank you,

Warren Nishikawa

Greetings Belmontonians!

Thank you for your service.

I am writing to ask you to support mountain biking in Waterdog Open Space. Being an old geezer, it keeps me young(er). I could go on, but won't - you're smart enough to get the rest.

Thanks so much.

Dear Parks and Recreation Commissioners and City Council Members,

We have been Belmont residents for over thirty years and have raised our family here. Our three children have all gone through the local public schools; Central Elementary, Ralston Middle School and Carlmont High School (with the youngest now a Junior at Carlmont). In all these years we have greatly enjoyed the City's open space, including Waterdog Lake / Hidden Canyon and San Juan Canyon / Sugarloaf Mountain. This enjoyment includes walking, running, riding bicycles, exercising our dogs and enjoying nature. As you consider these open spaces in the new Master Plan, we urge you to maintain their current multi-use designation with no new restrictions.

Consistent with this, we fully support the "Love Waterdog" campaign and associated outreach and education to trail users and groups to ensure safe and sustainable use of our trails.

For the record, we are very grateful for the excellent work to maintain and enhance the trails and related facilities done by the partnership between the City's Public Works department and various volunteers.

One request: Please install dog waste bags and garbage cans at the trailheads for San Juan Canyon (for example at the bottom of San Juan Blvd).

Sincerely,

Patrick & Mai Wheeler

Dear Parks and Recreation Commissioners and City Council,

I support operating Waterdog Open Space as a **Mountain Biking destination**. In the new Master Plan, all Open Space policy decisions should include and as possible prioritize this use, including:

- Designate trails for Mountain Biking only, consistent with Best Practices of other open spaces
- Maintain and restore the trails to support this sport
- Prohibit e-bikes and motorized vehicles on all trails and enforce this closure
- Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance

Please incorporate these policies into the new Open Space Master Plan!

Subject: Support for multi-use of trails in Waterdog

Follow Up Flag: Follow up
Flag Status: Flagged

Dear government officials,
I am in support of shared-use for all trails in Waterdog. Shared use brings with it occasional conflicts, all of which are addressed effectively in other parks through better trail user education and signage reinforcing trail etiquette and local trail rules. Waterdog is no exception. As a hiker, trail runner and mountain biker, I understand that sharing trails places a responsibility on all users, and I do not believe that excluding one group of users because of perceived issues by a small group of other users is the right course of action. As we see with recent political situations, convincing arguments can be made for any point of view, which appeal to an individual group's desires and ignores the right to (responsible) access by all users. So I believe that the right approach is through education, signage and to a lesser degree, enforcement.

Flag Status: Flagged

Dear Parks and Recreation Commissioners,

Water Dog Lake Open Space is a gem and unique experience for all who use it. I am very concerned that the mixed use of its narrow trails will soon, if it hasn't already, lead to a serious or fatal accident.

There are two distinct groups of bicyclists using the trails. One group is very courteous and safety conscious. They ride slowly and will yield for hikers and make accommodations for seniors or the disabled.

The other group is intently focused on beating their time and are riding too fast for the narrow and winding conditions. They see hikers as a nuisance and just blow by at high speed and rely on the hikers to get out of the way. A collision on a trail could cause serious injury. The downside of the trails are very steep in certain areas and someone could get pushed down the hill and if the bicyclist doesn't stop they might now be noticed in the dense brush. This mentality has no regard for others and has resulted in a death of a senior in San Francisco.

https://sfist.com/2012/04/05/cyclist_who_struck_pedestrian_at_ca/

With respect to the narrow single track trails, there are only a few options to keep everyone safe and protect the City from liability:

1 Allow bikers only

2 Allow hikers only

3 Alternate hikers and bikers on odd/even days

More people have found Water Dog and the trails are busier that ever. Please make it safe for everyone, the writing is on the wall.

Thank you for your consideration in this matter.

To Whom It May Concern,

I was unpleasantly shocked with whoever created the website "https://www.waterdogpreserve.org/" Specifically the demonization of mountain bikers. Firstly, the video depicting mt. bikers as environmental terrorists is laughable. I've lived in the San Carlos/Redwood City area for 12 years now and have been riding mt. bikes at Waterdog since 1999. It has become more popular with day hikers since then, but 98% of the ones I encounter are extremely pleasant. I stop or they move out of the way, one party passes safely with a wave and a "thank you!" All good, everyone's happy. That video couldn't be further from the truth.

For over 10 years (more, maybe) mt. bikers were the stewards of the park, building new single track (narrow) trails with the guidance and approval from the city council. Now all of a sudden (although I'm sure there's always been complainers) we are environmental and human terrorists? Hardly. There are PLENTY of open spaces preserves where no bikes are allowed. Just down the street is Edgewood park, for example. Belmont is a gem for everyone to use and share responsibly, which is exactly what's been going on for more than 20 years. Please don't let these "social terrorists" ruin it for so many.

Thank you for your consideration.

Sincerely,

Greg Gavalakis

Hi,

I am writing to you in support of continuing to designate all trails in waterdog as multi-use in the master plan.

I've been mountain biking there for many years and have never had any negative experiences with hikers. We are usually both very courteous to each other and allow the other to pass when appropriate. Almost all hikers say have fun when we pass, and I always return the sentiment.

There are already many other open space parks, such as Edgewood, that are hiking only. I think it would be a mistake to also limit mountain biking in waterdog and cause further ill will between bikers and mountain bikers. The desires of a few should not

Dear City Council Members, Parks and Recreation members:

I have been a resident of both San Carlos and Belmont for the past 28 years. In that time I have also been an outdoor enthusiast and mountain biker. I started riding the trails in Waterdog in the early 90's and continue to enjoy this open space to this day. Waterdog has always been my "backyard" ride, where I can enjoy some fresh air, a challenging workout and some beautiful vistas, all within a couple of miles of my home. The beauty of riding Waterdog includes riding the single track trails, many of which were designed with cycling in mind. Pursuing mountain biking in any of the many open spaces in the greater Bay area requires a cooperative spirit and a willingness to lend a hand, whether that be offering some fellow park users some trail directions, volunteering time to help with trail maintenance or contributing to the many organizations that work with the trail stewards to maintain multi-user access. Myself, along with my fellow mountain bike enthusiasts always treat other trail users with respect and friendliness, making sure that any encounters are safe for everyone. This includes slowing down to a walking pace or stopping depending on the circumstances, as well as communicating the safest way to get by each other without jeopardizing anyone's safety. In all the years that I have ridden in Waterdog, I have never had a negative encounter with a hiker or fellow trail user.

I would ask that in any planning regarding the future of Waterdog, that it continue to be open and welcome to all trail users, whether that be on foot or bicycle.

Regards,

James Paugh

Brigitte,

Per our emails regarding new trail making just inside the Somerset gate, you had P&R people put a sign at the new trail that is being made around the existing log barriers. I thought, with the bee sign it was going to be a waste of time and a bit of a joke. Last Friday I found the sign moved out of the way and the trail extensively being cut and used. I replaced the sign as well as a lot of brush etc to hide the trail. Today on my walk, I see the brush removed, and your sign now thrown down over the hill. You have to get the message the bikers are sending - "we're going to do whatever we want wherever we want and no one is going to stop us". I'd like to know what P&R is going to do about this, because so far you haven't been able to do much to stop them and I'm getting really frustrated at the ongoing destruction.

Below this area, 50 yds, on the John Brooks Trail, there is another cut through that is trashing the environment. An attempt to stop this was done 2-3 months ago, also to no avail.

I mentioned another new trail (with Pictures) in the last email, you asked where it was. It's at the top end of the Rambler Trail , where it merges with the Finch. I would be glad to show it to you.

Bill Kurtz

Dear Parks and Recreation Commissioners and City Council,

As a [resident of Belmont, or other identifier], I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

Thank you for your consideration as you develop the new Open Space Master Plan.

Hello,

I support keeping Water Dog Open Space as a mountain biking friendly area. There are very few places like this in the Bay Area (maybe even country) and none on the Peninsula. Most other spaces in the Bay Area are for hikers only. This should be just thought of as a mountain biking park, it should get more funding to maintain the park but stay open to all types of use.

It seems that people who are against this are very Not In My Backyard, as there are plenty of nearby places for great hiking but none for mountain biking. More people need to get outside and mountain biking offers people an outlet. Bikers love the outdoors and appreciate it. The more people who enjoy the outdoors and can appreciate it the more likely they are to care about the environment in other ways, i.e eat less meat, drive less, recycle, consume less, etc.

All in all this is one of the best places to mountain bike in the area, people will have to drive hours to get to something similar. On top of that there is a very strong community around mountain biking at Water Dog and for years hikers, bikers, dog walkers, etc have all been able to enjoy the space with no real problems.

So I would like to see more funding in the master plan to support mountain biking and other uses at Water Dog.

Thanks,
Mike

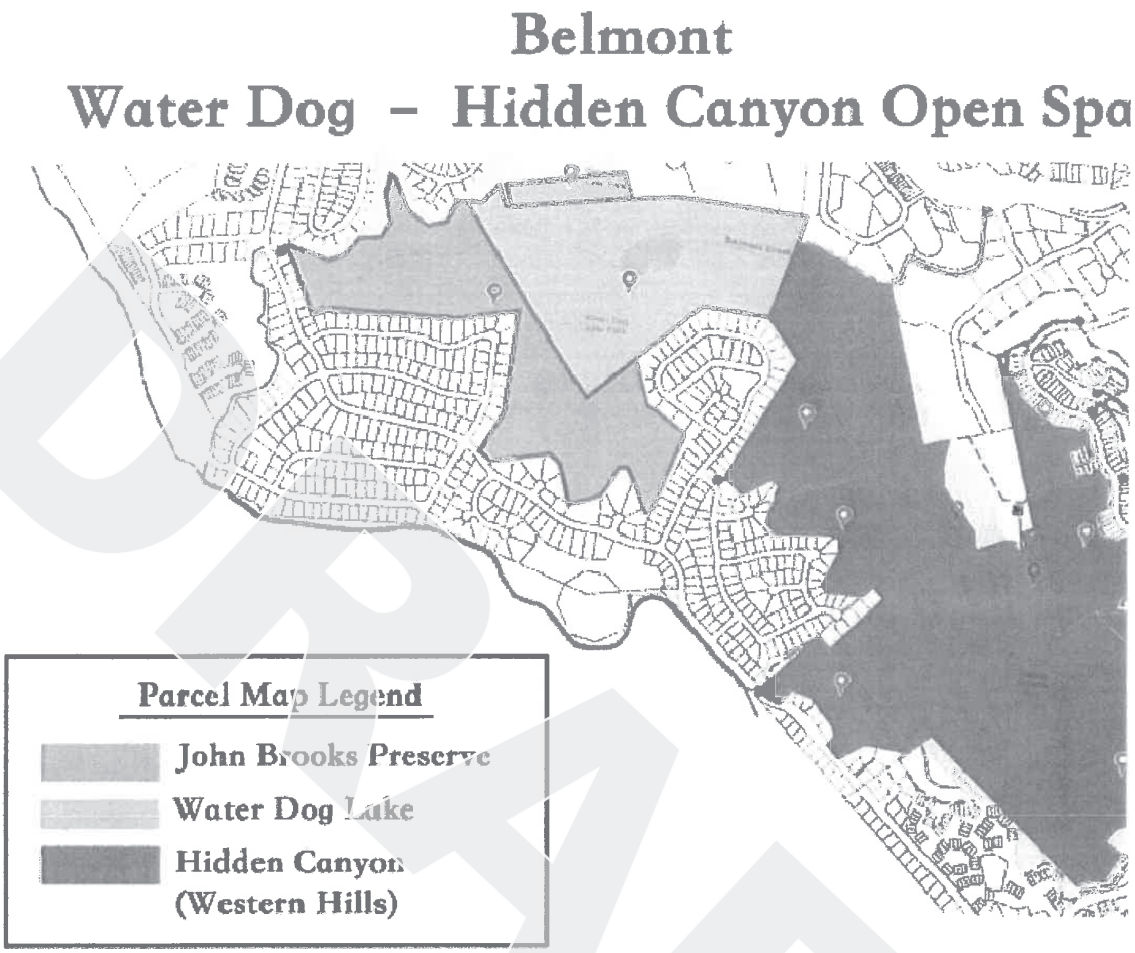
Hi PROS Advisory Committee Members and Park Commissioners,

Last September I was given the opportunity to lead a few Park Commissioners on a walking tour of Hidden Canyon. It's very aptly named; most residents are largely unaware of this southern end of the Waterdog Open Space. But in fact Hidden Canyon is larger than the Waterdog acreage and the John Brooks acreage *combined*:

- Waterdog 51 acres
- John Brooks 49 acres
- **Hidden Canyon 180 acres**



On our hike we stopped and discussed the extensive damages. We observed heavily eroded trails, especially on the southern slope where Rambler trail has ditches 4 feet deep and is widened to 30 feet in places. We saw drainage issues – some natural and some from homes above - that contribute to trail and slope damage. We hiked down the notorious Finch switchbacks, noting that no amount of maintenance could make them safe or sustainable. And we saw dirt and debris tossed into the creek – a direct violation of state guidelines for protection of riparian habitats.

All of this is even more saddening when you become familiar with the Western Hills Area Plan, adopted in 1990. The Plan recognizes the unique chaparral, riparian and oak woodland habitats of the canyon – areas that are now designated as "sensitive communities" for the diversity of plants and the animals that call them home. I urge you all to visit Hidden Canyon and to learn why it's protection is so important to our regional *Biodiversity Hotspot.*

Thank you,
Kristin Mercer

Subject: Keep Waterdog Lake the way it is

Follow Up Flag: Follow up
Flag Status: Flagged

As a resident of San Mateo, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

Keep maintaining Waterdog Lake just as it is today. There are a ton of parks and outdoor spaces designated as "hiking only" available to hikers already, whereas mountain bikers already have very limited options. Please consider educating hikers that are uncomfortable sharing the trail about the hundreds of trails that are available for hiking exclusively in other areas. Closing Waterdog Lake Park to mountain bikers will result in people having less chances to engage in healthy exercise. I have biked dozes of times at Waterdog and never had any issues with hikers, it's easy to be careful and polite and make space for each other, even on single track.

Some additional points:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, and community-building, consistent with best practices of other open spaces;

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails such as the excellent new "Love Waterdog" campaign.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

• Open space recreation has enormous benefits for the community, it's a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

• Designating the park as a wildlife preserve makes little sense. The park is surrounded by all sides by residential development. The wildlife that that chooses to habitate there have adapted to the presence of humans. There is no need to designate this 300 acre park as a wildlife preserve when there is a 23,000 acre wildlife preserve just on the other side of 280, the San Francscico Public Utilites Commission Peninsula Watershed.

Subject: Please KEEP Multi-use access to Waterdog!

Follow Up Flag: Follow up
Flag Status: Flagged

Hello Parks and Recreation Commissioners and City Council,

I live just off Edgewood Rd and I want to voice my support for keeping Waterdog Open Space a multi-use trail for hiking and biking in the new Master Plan. My son is just getting into biking and we much prefer to be in nature than in the woods. It's safer for him than being on the road, and it inspires him to love, and respect his neighborhood and nature! It helps provide a healthy outlet for exercise and energy for youth who can easily fall into indoors and video games.

There are not a lot of options for use close to home in the Belmont/Redwood City area and taking this away would remove options for use to take quick, responsible rides and increase emissions in travel, and less chances for more rides outside.

Ideally we continue maintaining the trails, as they are, for multi-use for hiking and biking.

Increase outreach and education on safe and sustainable use of our trails. The "Love Waterdog" campaign is great.

Continuing to support the maintenance and preservation of the trails.

Thank you for your consideration as you develop the new Open Space Master Plan!

Subject: WATERDOG ACCESS TO MOUNTAIN BIKERS

I understand that there is a plan to close access to waterdog park to mountain bikers. Me and several friends have been riding there for several years, Many of those trails if not all were built and maintained by mountain bikers. Im 62 a retired utility worker ,and my friends of the same age are law enforcement and firefighters. We are all responsible adults. We enjoy waterdog because of its access and wonderful trails. I understand that there are a handful of users that want to close the park to mountain bikers for environmental reasons. Do they plan on closing it also to dog walkers. My wife has bad hips and has problems hiking but she can ride a bike with no problems because its not weight bearing . Is it fair to a person like that to restrict access because of the selfish reasons of a few disgruntled people. I understand the pandemic has not helped the situation because of the increased use . Many of these people most likely never used the area prior to the pandemic. Please continue to allow access to all users as you have in past . Users of waterdog also frequent the nearby businesses which is a boost to Belmonts economy. Thankyou for your consideration in this matter.

I think there needs to be some compromise on both sides with respect to bicycle use in water dog and hidden canyon. A blanket ban on bikes is not in the best interest of the public. However, as a mountain bike myself, I think there are many MTB users who do not and will not where to any kind of etiquette.
In order to provide a peaceful experience for all users, it might be best to ban mtb use on some trails so that hikers might enjoy a more peaceful experience.

Dear Parks and Recreation Commissioners and City Council,

As a frequent visitor to Belmont, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Water dog has served this public need well for decades.

Thank you for your consideration.

Dear Parks and Recreation Commissioners and City Council,

I have lived in Belmont since I was 5 years old (25 now). I became interested in mountain biking at a young age, and having the privilege of living in Belmont with access to the wonderful Waterdog Lake trail system helped spark that interest into a life-long passion for outdoor recreation (mountain biking, hiking, backpacking), as well as an immense appreciation for nature. I think it is critically important to preserve access to this unique and special open space area for all uses (hiking, biking, running, recreation, family, community, etc) for generations to come.

As a resident of Belmont, I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community.

In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.

Subject: PROS Master Plan Survey

Dear Commissioners,

I just noticed an online plea for mountain bikers to fill out the survey. Given that anyone can fill out the survey and may not necessarily give an honest answer regarding residency, is there some analysis that can be done to determine whether the survey results are valid and give Belmont citizens' views priority. We live here and pay city taxes and are responsible for the infrastructure here. Is there an estimated response rate, which could be compared with the number of people living in each neighborhood?

Thank you,
Connie Tettenborn, PhD

Flag Status: Flagged

Dear City Officials,
When I first came to Belmont, in 1966, our family with two young daughters, quickly found Water Dog open space. We all spent many, many hours there and loved it. It was the thing we loved most about living here. Water Dog open space must be saved as a nature preserve. Not many cities are lucky enough to have such a jewel in their city.
This is the most important issue for me in Belmont. Now my grandchildren love it as much as their mothers do. It is a place to hike and look for animals and listen and look for birds. As Belmont gets more and more built up, our chances to be in such a wonderful nature place diminish. And what of the animals that live there? Will they all be displaced and to where?
Sport Mountain bikes, e-bikes, and any motorized vehicles are not compatible with a nature preserve.
I also feel that animals need to be protected and that means no people after sunset.
I hope you will agree with me and see that money is properly allotted to keep Water Dog as an open space preserve for all of us to enjoy.
I and all of my family look forward to many more years of enjoying Water Dog open space as a nature preserve.
Sincerely,
Shiela Cockshott

Subject: Sustainable balance for open space management?

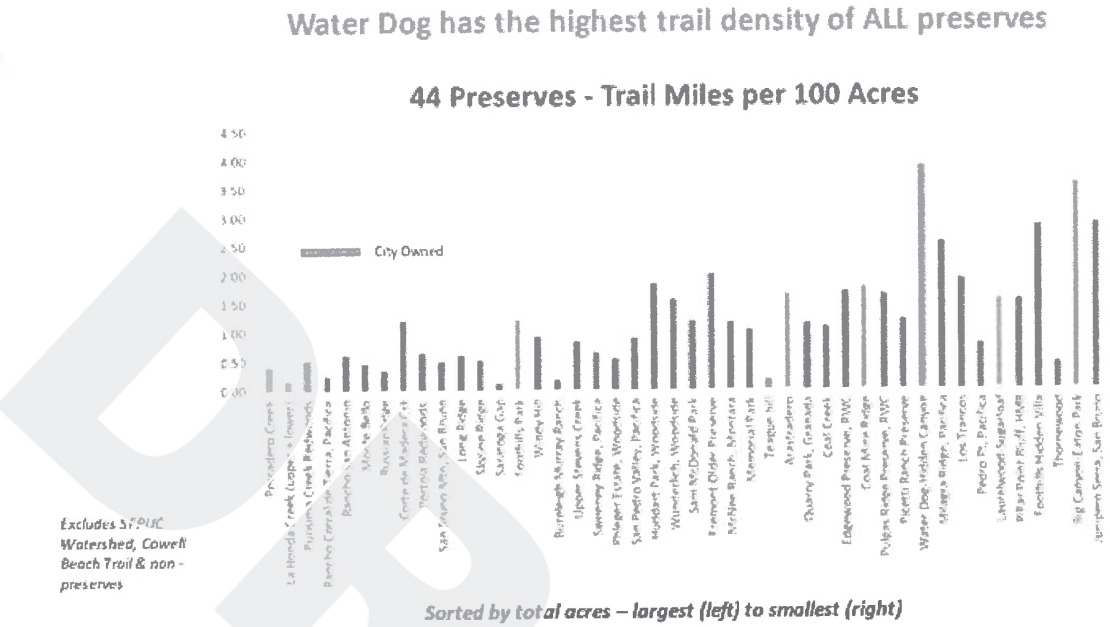
Follow Up Flag: Follow up
Flag Status: Flagged

Hi PROS committee and Park and Rec Commissioners,

This Earth Day we are reflecting on sustainability for our planet. But since conservation begins at home, I'd like to address our sustainable stewardship of Belmont's Open Spaces.

The first and foremost aspect of sustainability is *balance*. We want people to enjoy nature, but not to the detriment of the very thing they come to enjoy. That *balance* is achieved by managed **trail density** – enough trail access to enjoy nature, but not so much that it fragments habitats and destroys the ecosystem.

Last year I undertook a study of all open spaces within 20 miles of Belmont. I compiled data for 44 of the comparable preserves, and shared this data with Parks Commissioners. Now I urge you to watch the video of this presentation: Open Space Preserves in the San Mateo Region. (choose the 12 minutes in full, or a 3-minute summary at this link)



Fact: Waterdog has the **highest trail density of any open space area on the peninsula**, and probably the bay area. It has **twice the trail density of other comparable small open space areas.** This fragmentation and intensity of use is not sustainable.

As stewards of our city and our planet we are tasked with adopting sustainable policies. For Waterdog that means fewer trails and a more thoughtful approach to trail planning. For the sake of future residents, please consider this legacy as you guide our new Master Plan.

Feel free to contact me with questions.
Thank you for your service to our City,
Kristin Mercer

2035 Belmont General Plan Conservation Element p.5.3
"Belmont's extensive open spaces are part of the regional open space network on the San Francisco Peninsula. Notable landmarks in the city include San Juan Hills, Western Hills, Water Dog Lake, and Belmont Creek.... These connected open spaces are valuable because they provide travel corridors for wildlife and increase wildlife population diversity. They also play important roles in stormwater management, ecological functions, and other environmental conservation efforts."

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

I moved to this area two decades ago for the schools, environment and fantastic mountain biking, easily accessible in Waterdog Open Space. I, and my family, have enjoyed hiking and biking in Waterdog ever since the kids were very little. As a resident of San Carlos, with kids in Carlmont High School, I am proud of the Belmont/San Carlos community, and their joint progressiveness. I am shocked that a few narrow-minded, self-centered individuals, feel it is their right to limit the access and use of Waterdog for their own specific needs. I support keeping Waterdog Open Space an accessible and sustainable place for recreation, including mountain biking, connecting with nature and building community.

In the new Master Plan, I request you to consider:

• Maintaining the trails, as they are, for multi-use for hiking, mountain biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces

• Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great.

• Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Dear Parks and Recreation Commissioners and City Council,

I AM NOT in support of designating Waterdog Open Space as a Nature Preserve as put forward in the proposal – comments below. I am a long term Belmont resident, pay $20K per year in property tax, and use Waterdog 5 times per week for mountain biking.

- Designate narrow natural surface trails for hiking only, consistent with Best Practices of other open spaces – **NO, all trails should be open to mountain bikers – there is significant mountain bike traffic and making trails hiker-only will make the problem worse. Hikers also have many other trails nearby; mountain bikers have to go to Arastadero or up to Skyline blvd.**
- Close illegal Open Space trails, and restore damaged ecosystems and fragmented wildlife habitat - **NO, the charm of Waterdog is the challenging nature of trails. Put disclaimer signs up if you need to. And please don't waste funds on nice-to-do things, the trails are fine as they are.**
- Enforce the closure of all open spaces from sunset to sunrise to protect wildlife and ensure safety; cite violators – **AGREE**
- Prohibit e-bikes and motorized vehicles on all trails; cite violators – **AGREE**
- Allocate park spending to equitably fund desperately needed Open Space maintenance – **AGREE, BUT the most important things are: 1. Cutting bushes / trees and poison ivy back from the trails and 2. Repairing washout from the rain.**
- Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance – **Per comments above, don't use money unnecessarily - basic maintenance only please**

I hope you take these comments into consideration and rework the proposal accordingly
James Dimmick

Dear Belmont City Council Members,
When my husband recently made Brigitte Shearer aware that another illegal trail on the John Brooks trail in Water Dog Open Space had been made by bikers to go around the logs that the park and recreation had placed to close an illegal trail she promptly placed a sign DO NOT ENTER (not a designated trail, restoration underway) which was great but by the next morning when my husband and I walked by the bikers had just made two new trails around the sign!
I am just devastated to see the destruction of our beautiful wildlife preserve over this past year. I know not every biker disobeys the rules but even those who obey the rules create wear and tear on the trails that is very evident. I truly believe that the waterdog trails should be for people on foot only for many reasons including their own safety.
Let's keep this treasure preserved as it was intended for future generations to enjoy. Unfortunately, too many bikers are only concerned about their own enjoyment and disrespectful to hikers and walkers on the trails. I hope that the City Council will start to do the right thing before the trails are ruined beyond repair.
Thank you,
Pamela Stahl

Dear Parks and Recreation Commissioners and City Council,

As a long time resident of Belmont, an avid hiker (daily) and nature enthusiast, I have given up on going to Waterdog Open Space. In the past, I've hiked at Waterdog hundreds of times but now the bikes have taken over, destroyed much of the natural beauty, and have made it dangerous for pedestrians. Sadly, I now have to drive to Edgewood Park in Redwood City to have the kind of nature experience that to me, is essential!

I support designating Waterdog Open Space as a **Nature Preserve**. In the new Master Plan, all Open Space policy decisions should prioritize conservation and habitat protection, including:

- Designate narrow natural surface trails for hiking only, consistent with Best Practices of other open spaces
- Close illegal Open Space trails, and restore damaged ecosystems and fragmented wildlife habitat
- Enforce the closure of all open spaces from sunset to sunrise to protect wildlife and ensure safety; cite violators
- Prohibit e-bikes and motorized vehicles on all trails; cite violators
- Allocate park spending to equitably fund desperately needed Open Space maintenance
- Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance

Please incorporate these policies into the new Open Space Master Plan!

Sincerely,

Hi,

I wanted to let you know that there are many ways to protect the trails other than by banning bike usage. As an avid cyclist with knee problems, I can't hike, but I love exploring nature on my bike. Better trail management can allow for the preservation of the trails while keeping access open to all users of the open space. I emplore you to find solutions that will enable bikers and hikers access to as much of the park as possible.

That being said, I don't think motorized or e-bikes should allowed in these spaces. With proper gearing, anyone can ride a manual bike though these spaces and there is no need to allow access to e-bikes.

Best regards,
Reza Naima

TLDR: I oppose closing Waterdog Park to E Bikes and other bikes.

Hello Belmont Parks and Recreation,

I want to voice my concerns about movements to close water dog for mountain bikes and E bikes.

While illegal trails should be closed and monitored to preserve wild life. E bikes are neither automatically faster nor heavier than normal bikes. In fact my e bike is slower as it it is limited to 20 miles per hour. Downhill I often get passed by standard bikes and uphill we all go slow.

Thank your reading

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

In 1992 Belmont adopted a Park and Open Space Master Plan to guide the management of Waterdog, and in 1998 the City Council approved a trail map for Waterdog. But the reality of what was built violates both the Master Plan and the approved trail map.

The Open Space Master Plan clearly spells out trail standards, designating the narrow natural surface trails lower in the canyon for hiking ONLY. The 1998 trail map affirms that plan. Other City documents reveal the intent to prioritize *conservation* over recreation, and to ensure the long-term protection of our Open Space ecosystem. Now these policies are being ignored by today's City officials who are not enforcing City policies.

I support designating Waterdog Open Space as a **Nature Preserve**. In the new Master Plan, all Open Space policy decisions should prioritize conservation and habitat protection, including:

- Designate narrow natural surface trails for hiking only, consistent with Best Practices of other open spaces
- Close illegal Open Space trails, and restore damaged ecosystems and fragmented wildlife habitat
- Enforce the closure of all open spaces from sunset to sunrise to protect wildlife and ensure safety; cite violators
- Prohibit e-bikes and motorized vehicles on all trails; cite violators
- Allocate park spending to equitably fund desperately needed Open Space maintenance
- Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance
- Install signage prohibiting bikers from narrow single-track trails

Please incorporate these policies into the new Open Space Master Plan!

Thank you for your consideration.

Dear Belmont Parks & Recreation Commissioners and City Council,

As a 30+ year Belmont residents we urge you to designate Waterdog Open Space as a Nature Preserve. We are keenly hopeful that our city prioritizes preservation and conservation in the new Master Plan.

As we have personally almost been run down by speeding mountain bikers while walking in Waterdog, we urge you to designate narrow trails for hiking only.

Mountain bikers have illegally created ugly and destructive trails. We urge you to CLOSE these trails and restore the habitat to its natural state.

Please enforce the city rules of the area being closed from sundown to sunrise. Bikers have videotaped themselves inside Waterdog riding their bikes at night!

Please enforce city rules banning e-bikes and motorized vehicles on the trails. These are your rules, please make sure they are abided by.

Allocate spending to fairly support Belmont Open Spaces in order to keep them maintained.

Implement ecosystem management and Best Practices for habitat, vegetation and trail maintenance.

Waterdog Preserve should be a shining example of how Open Space can exist within a city. Belmont should be proud of our stewardship of Waterdog Preserve. But with mountain bikers daily trashing the trails, threatening wildlife and endangering hikers and walkers, we as Belmont residents are unable to reference Waterdog as a jewel of our city.

Please make the necessary changes so that Waterdog Preserve is safe, healthy and will last for future generations of Belmontians.

Warmly,

Shelley and Kevin Frost
Belmont

Subject: Please Save Belmont's Water Dog Lake Park & Open Space

Hello Belmont Parks and Recreation Commission,

My wife and I have been Belmont residents for over 30 years. We want to ask you to please SAVE our beloved Water Dog Lake Park from the mountain bike riders:

* there are too many of them
* many ride in packs and talk loudly to each other
* some bikers ride off trails endangering themselves and others
* some cause damages to the ground and vegetations and wild lives

My wife and I and our kids enjoy hiking the trails, but are finding some bikers are ruining the environment, creating safety concerns, and disrupting the peace and quiet of the nature reserve.

Water Dog Lake Park and Open Space is reaching its maximum capacity. We do not need to add more trails, we need to enforce existing rules. Thank you.

Sincerely,
Ray and Pauline Chau

Brigitte Shearer

From:
Sent: Monday, May 24, 2021 1:02 PM
To: PROS Committee; Brigitte Shearer; P&R Comm
Subject: Data on Open Space Stewardship

Dear Director Shearer, Gates Associates, and Park Commissioners,

Last fall I was given an opportunity to present my research on **Open Space Trail Density** to a few of the Parks Commissioners. Now I respectfully request the opportunity to give this presentation to members of the PROS Advisory Committee, in a study session format.

Responsible land stewardship policies cannot be based on opinion; management of *natural habitat* is entirely different than management of *recreationally developed parks*. It requires a foundation in the science of ecology and environmental sustainability. While Belmont is lacking in that foundation, fortunately we are surrounded by open space management districts that *do* have extensive knowledge and experience. We should be looking to their examples to inform our policies.

I surveyed over 50 preserves and parks from Pacifica to Santa Clara, and identified 44 open space districts comparable to Belmont's. I then compiled data on area, trail miles, and trail use to compare and contrast their policies. My presentation takes about 20 minutes using PowerPoint via Zoom. Multiple Commissioners and PROS members expressed a desire for more data, and I believe a broader awareness of *other* regional open spaces and their management policies will be a good starting point and foundation on which to build their study.

I'd be pleased to provide a preview. I look forward to helping our community create a progressive and enduring open space master plan.

Hi Brigitte,
I'd like to see specific information on open space "best practices" and management. I believe it's very important for the Park Commissioners and Advisory Committee to have scientific studies and research available to review before making any decisions.
So far, the survey has provided only opinions by community members and non residents. Obviously there is a wide disparity of opinions on what is desired.
I strongly suggest that the Commissioners and Advisory Committee receive formal studies available.
Thank you.

To: P&R Comm
Subject: Stop the waterdog lake and open space all these wild animals will die if you clear the land !

As a local resident, someone who is concerned with wildlife and wilderness defense of Animals, I am writing to urge you to prioritize the protection and open space in the PROS master plan. This must be done by reducing mountain bikes on wide fire-road trail only.

Belmont offers many recreational opportunities, but waterdog is it's primary natural open space, and only by prioritizing protection over recreation will leave future generations of all species the same beautiful and essential wild land we witness today.

While opportunities for outdoor recreation and simply bring able to enjoy nature are important, with increasingly little habitat in the bay area, this open space is critical for wildlife, and provides an corridor that many species rely on and benefit from.

As a local resident,I value protecting and conserving waterdog open space and wildlife habitat. If the current recreational usage of waterdog continues, it will cease to function as a healthy native habitat for wildlife.

I am also extremely concerned that allowing bikes on narrow trails, running over out wild animals and habitat destruction.

I sincerely hope you will put conservation first when planning the future of this open space, and prioritize the need to keep bikes on fire roads only to protect habitat and wildlife.

Thank you for your kind consideration of this urgent matter.

Subject: Waterdog Park

Dear Belmont Parks and Recreation,

As a Belmont Heights resident, I am concerned to hear that Parks and Recreation is considering expanding the number of trails in Waterdog park. It is my understanding that this is based on the results of your survey, which did not (and could not) control for the outsized input due to cycling advocacy groups.

While Waterdog is clearly an important peninsula resource (I often see families parking at the entrance) it is Belmont's responsibility to ensure that:

a) the trails are safe for both hikers and bikers and

b) the environmental degradation caused by overuse and abuse is halted and reversed.

What is clear is that the impact of irresponsible off-trail mountain biking activity is creating havoc with this precious resource. We are custodians not only for our neighbors and visitors, but also for the wildlife that we share the open space with. It is distressing to see the negative impact from just one segment of users.

Therefore, I urge you not to expand the use of Waterdog by opening yet more trails, but rather use resources to monitor use and discourage unlawful - and frankly dangerous - behavior, and repair the damage already done.

Thank you,

Jov Silen

Subject: Barrett Dog Hours

Dear Park and Recreation Director and Commissioners,

I write to you all in my head almost every morning. That is because we wake up to barking dogs at Barrett between 6 and 7 a.m. almost every day. The worst day is Sunday. This is despite our double-paned windows.

The dog hours have gotten very popular this year. We have noticed a big increase in the number of dogs and noise.

We know we live by a community center, one that has gotten busier every year we've lived here. But with the dog hours, you have taken away the only quiet hours we had - early morning, late evening and Sundays. Easter Sunday, having my elderly parents over for a socially distanced lunch - dogs barking. Mother's Day, enjoying our back yard with our kids - dogs barking. Today, we were awakened at 6:05 by a barking dog and while eating breakfast at 7:30, dogs barking frantically at other dogs outside the fence as their owners talked. We know people don't even notice our houses or realize how sound travels in this little valley. But this is the problem with having a dog park in a neighborhood.

The thought of a permanent dog park at Barrett breaks our hearts. It does not matter that it will be moved a few hundred feet one way or the other (actually closer to us in the latest plan). There are not many of us living next to Barrett so perhaps it is easy to discount us. But we do have to live here 24/7.

As you develop your all parks plan for the city, could you consider putting a permanent dog park on the Sports Complex site or some other site, away from any neighbors, no matter how few?

We have been told (repeatedly) to call Belmont Police when we see someone with dogs during off hours or if there is excessive barking. I could call every day. We did for a few days when dog hours opened this year, because people broke the rules every day. The new signs helped a little. Soccer practice helped a lot. But the reality is, I don't want to call the police department every time there are dogs barking, someone there with dogs at the wrong time, or someone not picking up after their dog. One, this is exhausting. Two, there don't seem to be any consequences for people breaking the rules. Three, all of us Barrett neighbors occasionally have to call the police for more serious disruptions at Barrett, often late at night. The police dispatcher knows us all. I don't want to become an annoying presence to the police.

We appreciate you trying to accommodate a wide variety of citizens in Belmont. But, as Barrett neighbors, we really would like some help with this situation. Please advise at your earliest convenience.

Sincerely,

Rose Laflin and Justin Mauck

Dear Parks and Recreation Commissioners and City Council,

As a Belmont resident, I support designating Waterdog Open Space as a **Nature Preserve.** In the new Master Plan, all Open Space policy decisions should prioritize conservation and habitat protection, including:

- Designate narrow natural surface trails for hiking only, consistent with Best Practices of other open spaces
- Close illegal Open Space trails, and restore damaged ecosystems and fragmented wildlife habitat
- Enforce the closure of all open spaces from sunset to sunrise to protect wildlife and ensure safety; cite violators
- Prohibit e-bikes and motorized vehicles on all trails; cite violators
- Allocate park spending to equitably fund desperately needed Open Space maintenance
- Implement ecosystem management Best Practices for habitat, vegetation and trail maintenance

Please incorporate these policies into the new Open Space Master Plan.

My family, friends, and I frequently hike in the Waterdog Open Space and often have to jump out of the way of approaching cyclists, sometimes ending in a patch of poison oak. Bikes must not be allowed on the narrow trails due to safety issues and to protect wildlife and the natural ecosystem.

Subject: San Mateo Region Open Space Trail Presentation
Attachments: Open Space Preserves in the San Mateo Region.pdf

Hello Park Commission and PROS Committee Members,

When the Master Plan process was getting underway, I compiled a **review of all open space preserves in the San Mateo Region** to better inform the Commission on the topic of Open Space Stewardship.

Management of natural spaces requires very different objectives and knowledge than management of *developed* parks. I believe an awareness of stewardship policies and best practices adopted by other open space entities will better inform our own stewardship decisions, helping to ensure Belmont's natural spaces remain healthy for future generations. A good starting point is this review of all open space areas in the San Mateo region.

I presented this data to members of the Park Commission in October 2020 and June 2021. This PDF is compiled from my original slide presentation. If you have any questions please feel free to contact me.

Thank you for your work on behalf of the future of Belmont Parks and Open Space.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Brigitte Shearer

From:
Sent: Tuesday, June 22, 2021 6:46 PM
To: City Council
Cc: P&R Comm; PROS Committee
Subject: Belmont Creek Stream Restoration Project

Dear Council Members,
RE: Belmont Creek Stream Restoration Project.
The June 22, 2021 staff report for this project states *"The City will cultivate local stewardship of Belmont Creek."*

How does this staff report statement comport with City failure to protect upper Belmont Creek which drains into Waterdog Lake?

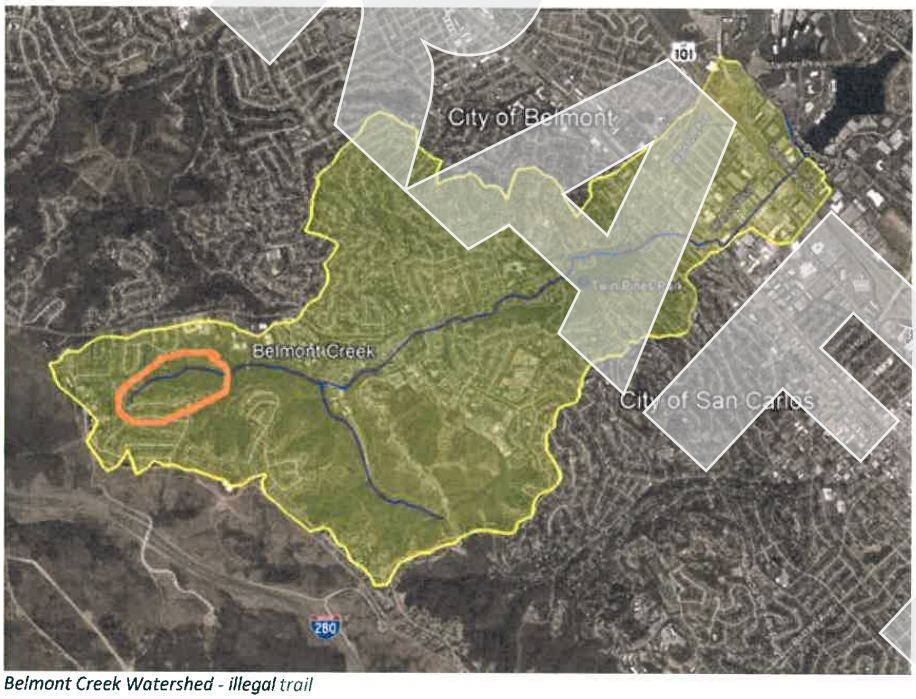
A year ago, I reported to your Parks Commission a half-mile long unauthorized trail forged through the sensitive Belmont Creek riparian area. This trail is illegal on many levels, and directly damages the creek and water quality as well as the surrounding habitat. I shared photo evidence of dumping and erosion into the creek, damage to the habitat of endangered species, vandalism of a 100-year-old 50-foot-tall heritage bay tree, removal of endangered plants, and proof that the trail was never approved by the city.

To date the City has taken no steps to stop the eco-vandalism and illegal use of the trail. It is ironic that the City promises to protect and restore Belmont Creek, as the City Council intentionally looks the other *way* while portions of the Creek are being destroyed.

The Belmont Creek riparian trail is:

1. **Unauthorized and was never approved by any City entity.** The Park Director's 2012 report stated there were "no new trails planned" after the construction of Lake Loop, and none have been approved since then.
2. **Violates the Open Space Master Plan** which specifically identified this marsh area for environmental protection,
3. Violates guidelines of the **California Department of Water Resources,** in neglect of the City's contractual commitments of the **Notre Dame Waterdog Lake lease and the John Brocks Preserve** bequest,
4. **Violates Belmont's own *riparian guidelines*** as published in the Belmont leaflet "Erosion and Sediment Controls for Riparian Areas:
   - Do not rake up leaf litter and fallen branches of native plants. This material provides food and shelter for beneficial insects, a crucial part of the food chain.
   - Do not dump yard wastes or grass clippings into the creek or riparian corridor. They smother existing plants, causing erosion and spreading invasive, nonnative plants. Their decomposition also robs the water of valuable oxygen, affecting fish and other aquatic organisms.
   - Minimize soil compaction. Control the use of trails and other recreational activities.
   - Control erosion by protecting areas where flowing water meets bare soil, such as on dirt roads, trails, driveways, earthen drainage ditches, or patches of bare or

EMAILS RECEIVED: PARKS + RECREATION COMMISSION



- Protect existing native vegetation. Construction, compaction, tilling, changes to soil grade or drainage patterns, should not occur under the tree drip-line (from the trunk to the edge of vegetation canopy).

5. Noted in the biologist report commissioned by Friends of Waterdog, which was sent to all City Council and Parks and Recreation Commissioners:

   "Contrary to these policies, the City allowed wet crossings and an unmapped trail to be constructed through the riparian community west of Water Dog Lake. Significant habitat loss occurred during trail construction. Ongoing use of the trail is causing additional habitat loss and degradation through trail widening, vegetation trampling and removal, and trail spidering, especially in the vicinity of Belmont Creek. ***The magnitude of impacts to riparian vegetation suggests a lack of environmental review and disregard for state regulations that protect riparian resources.****"*

The riparian communities of *the entirety of Belmont Creek* are protected under **section 1602 of California Fish and Game Code** (Lake and Streambed Alteration Program), and the water bodies themselves are protected under the **federal Clean Water Act**, the **State's Porter-Cologne Water Quality Control Act**, as well as section 1602 of California Fish and Game Code.

Again, I ask the Council to instruct staff to immediately close this illegal trail and begin restoration of the habitat that has been vandalized by its unauthorized construction and use. Especially during this drought, protecting all riparian areas is vital to our preservation of this rare and protected habitat.

Belmont Creek Watershed - illegal trail

DRAFT

Open Space Preserves
In the San Mateo Region

A study for policy makers for Belmont's Water Dog Open Space

Open Space Preserves of the San Mateo Region, 06-15-2021, K.D.Mercer

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Objective

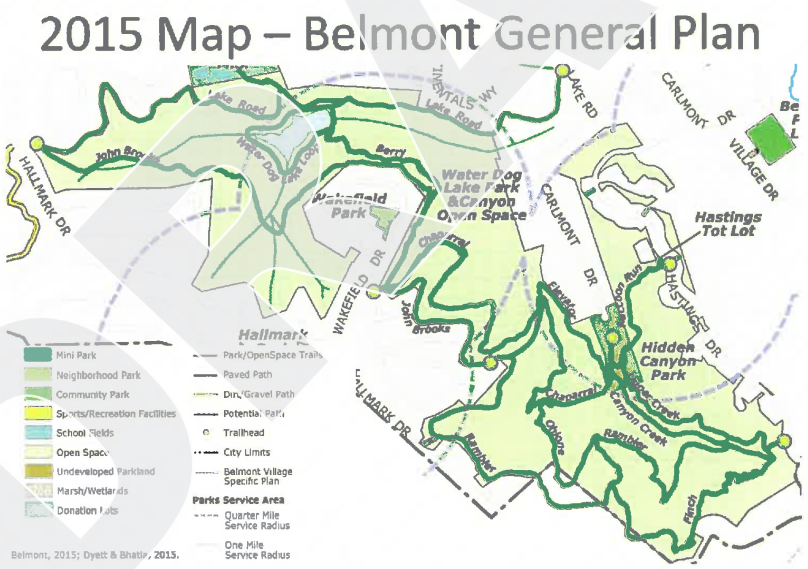
The objective of this study is to provide Belmont policy makers with the data and perspective needed to make the best stewardship decisions for the future of Belmont's Water Dog – Hidden Canyon open space. Management policies for open space must take into consideration geology, hydrology, stormwater, biological resources, ecosystems and wildlife habitats, as well as maintenance costs, infrastructure, wildfire hazards, safety, and more. All of these factors are impacted directly by trail density and trail uses, which in turn affect visitor volume and visitor impacts on the open space.

"While the extensive natural open space system provides numerous benefits for the Belmont community, it also brings challenges. Human safety and recreation opportunities must be balanced with maintaining the proper functioning of natural systems. For instance, the City has to manage invasive species, reduce fire hazards, and maintain trails as part of the effort to preserve and maintain the open spaces."

2035 General Plan, Conservation Element, p.5.3

The Study

- Study methodology
- Acreage (size) of 44 Regional Open Space Preserves
- Trail miles and trail density (miles/100 acres)
- Single-use vs. shared-use trails
- Track width of shared-use trails
- Summary
- Action plan to protect Water Dog – Hidden Canyon



Open Space Preserves of the San Mateo Region, 06-15-2021, K.D.Mercer

DRAFT

Study Methodology

The San Mateo region has a variety of nearly 50 Open Space Preserves, owned and managed by cities, counties, the state of CA, the federal government and multiple conservation agencies. Open Space preserves extending from Pacifica to Cupertino were surveyed and considered for inclusion in the study. The goal was to compare and contrast the trail policies and stewardship of *comparable* tracts of public open spaces and preserves. Therefore, developed city parks (with amenities like playgrounds, picnic areas, etc.), bay/wetland/marsh preserves, beach parks, and preserves under 50 acres were omitted from the comparison. Thus, a resulting 44 preserves were included in the analysis.

Data for this study was collected from online material provided by the managing entities. Most entities list the acreage and trail miles on their websites (see p.16). Where not available, acreage was obtained from county parcel maps. Where trail miles were not stated, miles displayed on the official trail map was summed. All trail miles represent mapped trails (*excluding* unsanctioned trails). For Belmont, acreage was taken from the sum of assessor parcels (see p. 15), and trail miles from the sum of Google-measured trails on the official city trail map.

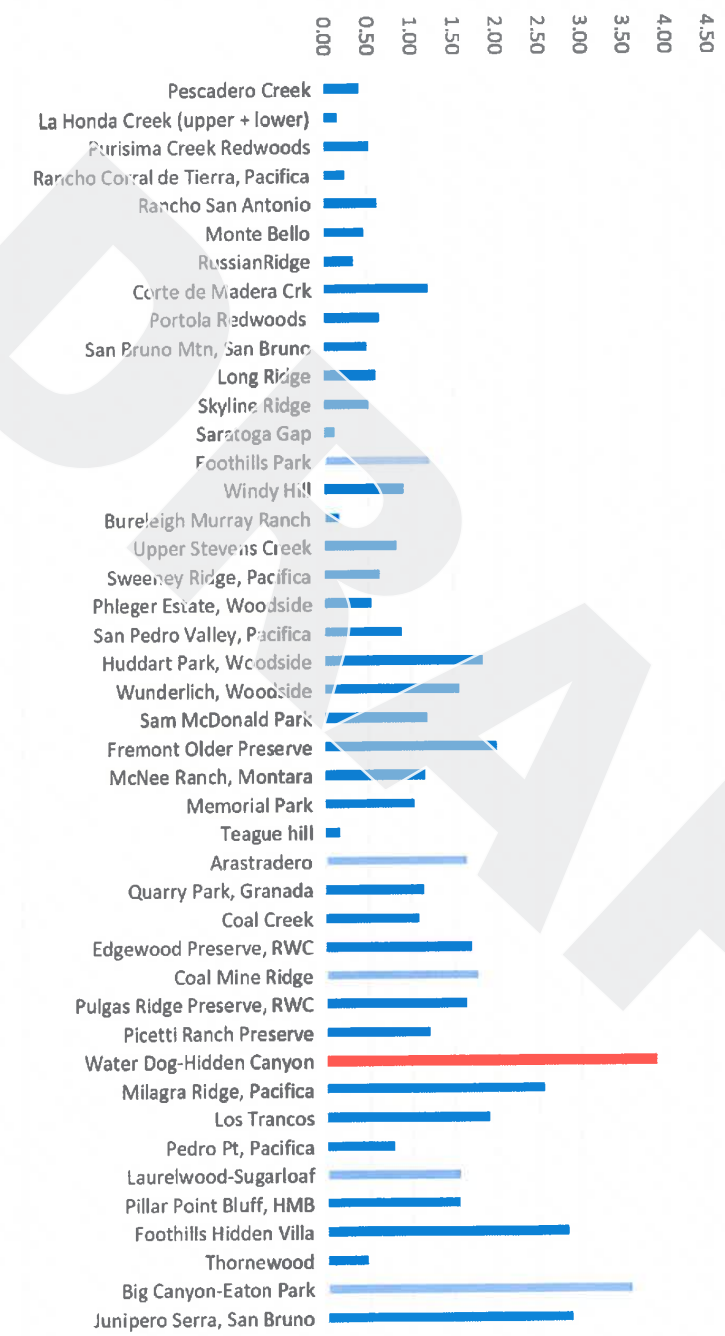
287-Acre Water Dog-Hidden Canyon Ranks 35th Among 44 Regional Preserves

At 287 acres, Water Dog is the 10th smallest of the 44 preserves included in the analysis. The chart below ranks preserves by acreage. Water Dog is shown in red, and the other 5 city-owned preserves in light blue.



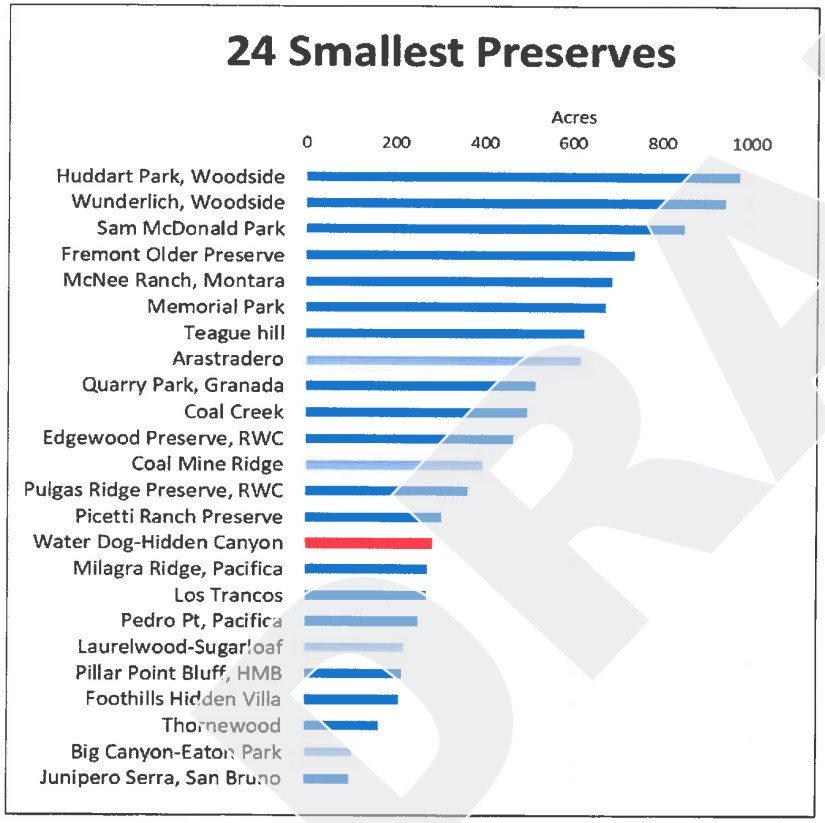
Open Space Preserves of the San Mateo Region, 06-15-2021, K.D.Mercer

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Water Dog has the Highest Trail Density of ALL Preserves

Using this same ranking by acreage, largest preserve on the left and smallest on the right, the table, below shows the number of trail miles per 100 acres for these same preserves. Naturally we would expect the smaller preserves (on the right of the chart) to have a higher ratio of trails *per acre*. But even amongst the smaller preserves, Water Dog is a clear outlier, with more trail miles per acre than any of the 44 preserves.

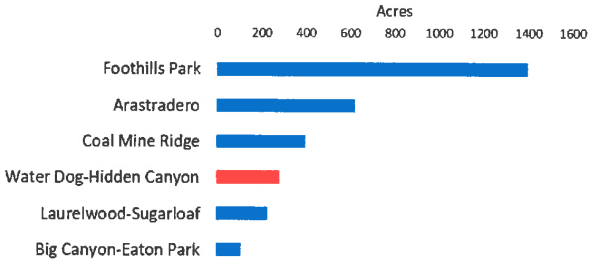


Open Space Preserves of the San Mateo Region, 06-15-2021, K.D.Mercer

DRAFT

Narrowing the Comparison to 24 Smaller Preserves – Those Under 1000 Acres

It's fair to argue that comparing Water Dog to much larger preserves is not equitable. So next we look at just the smaller of these preserves – those under 1000 acres. The graphs shown here include just the 24 preserves under 1000 acres. Again, the preserves are ranked from largest acreage on the top to smallest acreage on the bottom.

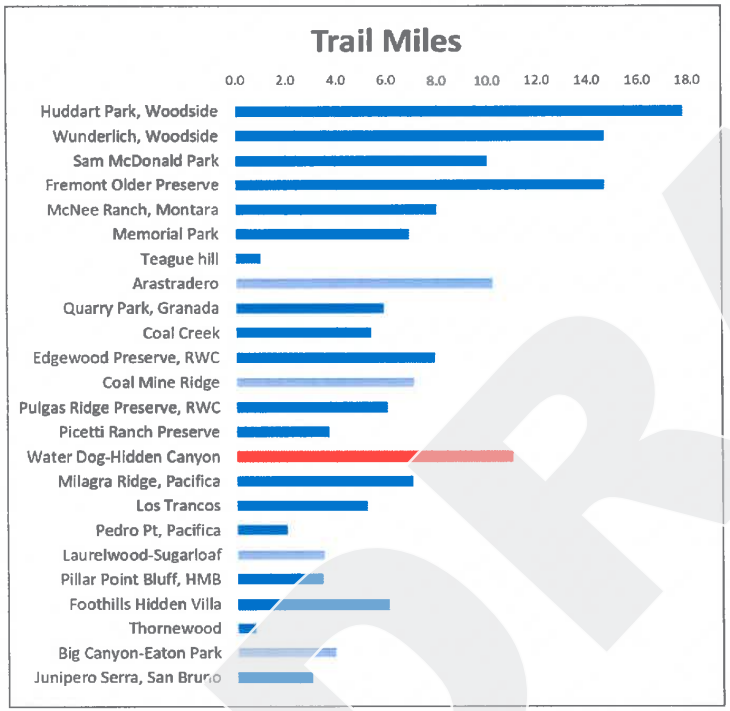


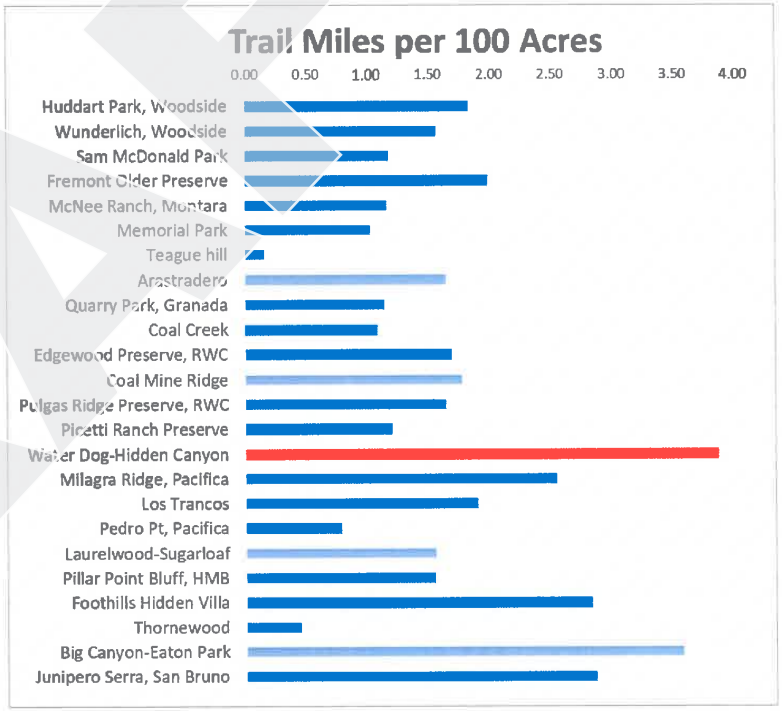
Open Space Preserves of the San Mateo Region, 06-15-2021, K.D.Mercer

287 Acre Water Dog is 10th smallest of regional preserves

The 6 City-Owned preserves range from 109 acres to 1,400 acres

City-Owned Preserves





DRAFT

Trail Miles and Trail Density of the 24 Smaller Preserves

For the 24 smallest preserves (under 1000 acres) these graphs are again ranked in the same order by acreage. On the left we see raw trail miles. Water Dog is an outlier, with more trail miles than all but three (larger) preserves in this group.

To equalize between the larger and smaller preserves, the second graph shows trail density; the ratio of trail miles *per 100 acres*. Water Dog is again an outlier with more than double the average trail density of comparable preserves.

Sorted by acres, largest to smallest. Light blue bars indicate city-owned preserves.

Open Space Preserves of the San Mateo Region, 06-15-2021, K.D.Mercer

DRAFT

Trail Mile Density among 44 San Mateo Region Open Space Preserves

Recall the data shown in the survey table on pages 2-3, where preserves were grouped by owner entities: Cities, Counties, MidPen and Others. Below are the *average trail densities* (trail miles per 100 acres) of the preserves maintained *by each managing entity group*. The average trail density of the 23 other smaller preserves is 1.47, and other city-owned preserves are 1.53. In contrast, Water Dog is a clear outlier with 2-5 times the trail density maintained by other entities.

Average Trail Miles per 100 Acres

County Owned Preserves (13)	.80
MidPen Owned Preserves (18)	.57
State-Fed-Agency Owned (7)	.50
Other City Owned Preserves (5)	1.53
Preserves Under 1,000 Acres (23)	1.47
Water Dog – Hidden Canyon	3.83

Water Dog Trails are over-built by a factor of 2-5 times

Trail density has a direct impact on both the *environment* and the user *experience*. Impacts on the environment include segmentation of wildlife habitats, disruption of wildlife corridors, soil disruption, erosion, drainage, impacts on waterways, invasive plant species, endangered species, and tree canopy health. Additionally, higher trail density increases visitor volume, which in turn impacts adjacent neighborhoods, emergency services, wildfire hazards, and even traffic and air quality. Visitors come to open spaces to experience tranquility, solitude and connection with nature, and the quality of this experience is determined by *both* trail traffic and the natural setting. **Responsible land management limits trail density in order to minimize negative impacts on the environment and the user experience.**

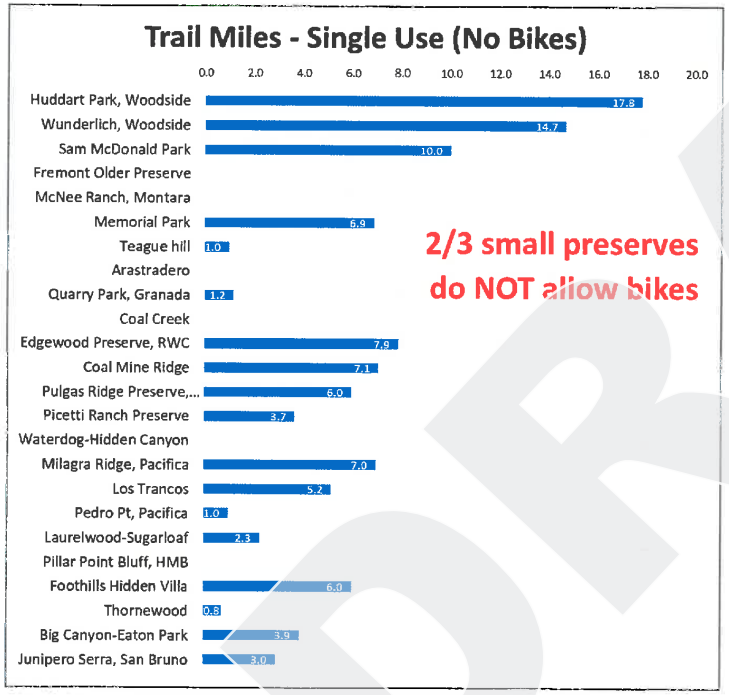
EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Half of Compared San Mateo Region Preserves Allow Bikes

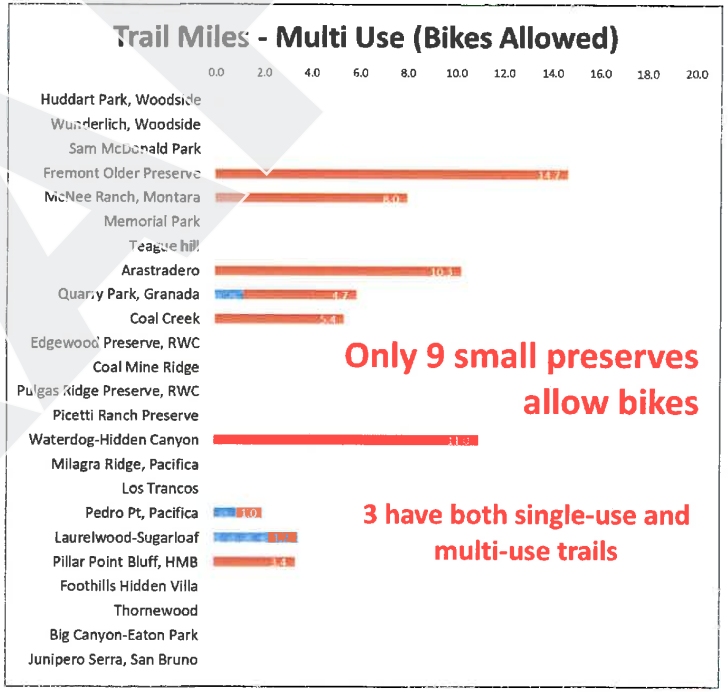
Of the 44 preserves compared in the analysis, 22 do not allow bikes at all (except on paved roads used by vehicles). The graph below shows the bike trail miles of the 22 preserves that allow bikes. Note, this is *bike* trail miles and excludes single-use *hiking* trail miles.

Water Dog has More Bike Miles than all but 4 Preserves

NOTE: None of the preserves surveyed in the region have bike-only trails.



Only one preserve (Upper Stevens Creek in Santa Clara County) has a one-way trail: 1.4 miles of **fire road allowing bikes one-way *uphill only***.

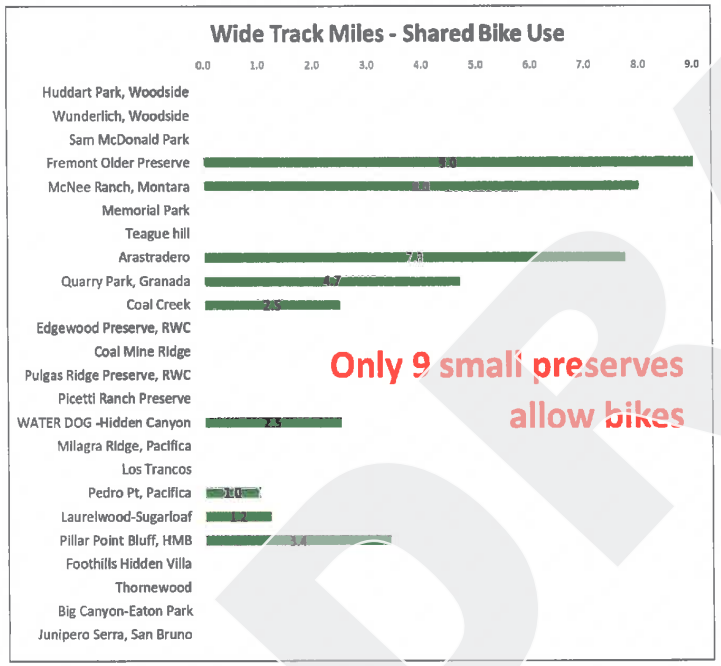


Open Space Preserves of the San Mateo Region, 06-15-2021, K.D.Mercer

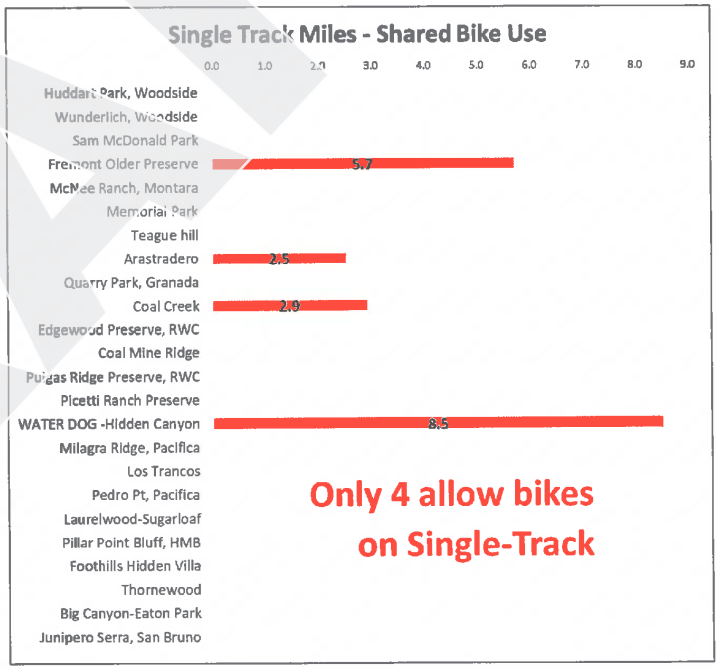
Only 9 of the 24 Smaller Preserves Allow Bikes

The graph on the left displays trail miles reserved for hikers only. Fifteen out of 24 smaller preserves DO NOT allow bikes on trails. Three others have a *mix* of single-use and multi-use trails; Quarry Park, Pedro Point, and Laurelwood-Sugarloaf (note the *multi-use* trail miles for these three parks on the graph on the right.) Water Dog allows bikes on every trail, regardless of width. The miles and density of trails for sport biking has made Water Dog a regional destination bike-park.

Water Dog has more bike-miles than all but the much larger Fremont Older



Open Space Preserves of the San Mateo Region, 06-15-2021, K.D.Mercer



DRAFT

Only 4 of the 24 Smaller Preserves Allow Bikes on Single Track Trails

The width of shared-use trails is an important factor for safety and compatibility. Hiker experience is greatly diminished by encounters requiring them to jump off-trail. This is why best-practices followed by other preserves restrict bike access on single-track trails. These graphs show the trail width in the **nine preserves that allow bikes on trails.** On the left are miles of trail that are unpaved roads; former ranch roads, logging roads, or service roads at least 6 feet wide. The majority of shared-use miles are *wide tracks*. On the right are trails requiring hikers to share *single-track* trails with bikes. All Water Dog single track trails are shared-use.

Water Dog has the most Shared Single-Track miles of the 24 smaller preserves.

Open Space Preserves of the San Mateo Region, 06-15-2021, K.D.Mercer

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

SUMMARY

Trail development and management of Water Dog open space is inconsistent with approved City plans and policies. Further, this study has shown that Water Dog trail policies are not consistent with the best-practices followed by comparable land stewards in the region.

❖ **Water Dog has twice the trail miles proportional to its size.**

Excessive trail density disrupts wildlife in their natural habitat, segments wildlife corridors, alters drainage patterns, introduces erosion, impacts waterways, and damages plants and tree root systems. With the highest trail density of all 44 preserves, Water Dog attracts more visitors, which in turn impacts adjacent neighborhoods, emergency services, wildfire hazards, and traffic.

❖ **Water Dog has more *bike* trail miles than all but four of the largest preserves.**

The miles and density of trails for *sport biking* has made Water Dog a regional destination bike-park, attracting bikers from all over the bay area. Half of the open space preserves in the region *ban bikes on all trails*. Amongst comparable smaller preserves, two out of three ban bikes from all trails.

❖ **Water Dog allows bikes on ALL single-track trails; zero trails are protected for the single use of hikers.**

Only 4 of the 24 comparable smaller preserves allow bikes on single-track trails. While Water Dog has become a regional destination for sport mountain biking, Belmont *residents are denied access* to the tranquility, solitude, and connection with nature that comes only from a quiet walk in the woods.

Open Space Preserves of the San Mateo Region, 06-15-2021, K.D.Mercer

DRAFT

ACTION NEEDED TO PROTECT WATER DOG-HIDDEN CANYON

- **Close all trails not approved on the 1998 Trail Map.**

  In 1998, Belmont's City Council approved nine miles of trail. The current City Trail Map shows 11 miles of trail, not counting an estimated 1-2 miles of existing unmapped trails.

- **Confine bike use to perimeter trails and roads.**

  The Council Approved 1998 Trail Map clearly designated only perimeter trails for multi-use, consistent with the policies adopted in the 1992 Open Space Master Plan.

- **Reserve single-track trails for hiking only.**

  The hiker experience and perception of safety is greatly diminished by encounters requiring them to jump off-trail at the command of a bell. Provide a safe hiking environment for hikers, including children and dogs, where narrow trails make passing dangerous.

- **Set a long-term goal to reduce trail density.**

  Aim for development in line with the 1.47 miles/100 acres average maintained by other preserves of Water Dog's size.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

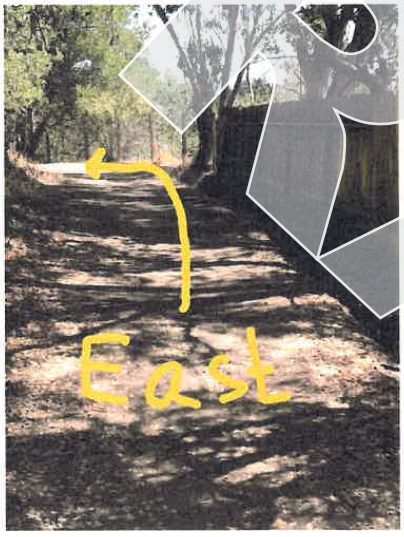
As the Trailforks Mountain Bike map below shows bikers have many trails within Belmont where they can pursue their hobby. It's shocking to see how many mountain bike trails there are in Belmont – I had no idea it was this bad! They don't need to be on Upper Lake Road Trail (circled in Orange). There are road surfaces that can be used to bike to Water Dog – Benson and Wemberly run almost parallel to the trail.



Please make Upper Lake Road Trail for foot traffic only. Give the tax paying residents of Belmont a safe place for seniors like me, physically challenged individuals like the gentleman in the video, parents with baby strollers, newly walking toddlers, and anyone else who wants a safe place to walk on a beautiful, canopied trail. This trail is ideal for these categories of users because the trail surfaces are relatively smooth, not too much slope, mostly shaded, with easy access from both Hallmark and Saint James.

Thank you for your time and consideration.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

The City Council Vision Statement included with Belmont's Fiscal 2022 Budget states on page 22 "We value and celebrate a strong commitment to diversity, *inclusion, safety*, equality and *dignity* for all individuals in Belmont."

Look at the attached video clip that was taken by me on May 31, 2021. Zoom in and you will see a man, who walks with great difficulty, going west on Upper Lake Road Trail. As I have seen this man before on this trail, I asked him about his recent experiences. He said it was awful for him to walk on this trail. Too many bikes for him to avoid. I asked him if it would be safer for him in the Preserve on Lake Road Trail and he said no way, too dangerous for him. The photos below show the blind curve, from both the west(uphill) and east(downhill) directions, that this man just completed as he walked in a westerly direction. Even though this is one of the widest trails on Upper Lake Road, he could have easily gotten hit by a bike as he cannot move out of the way and neither he, nor a biker, could see each other on this blind curve. How does his difficulty walking the trails of Belmont match with your Vision Statement?

Upper Lake Road Trail used to be a serene, safe place to walk without having to fear being hit by a bike on a blind curve. Not anymore. It has become the connector route from Sheep Camp Trail and Fox School Trail to Water Dog Lake Trails. Lots of bikes, lots of speed on a narrow trail with many blind curves.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

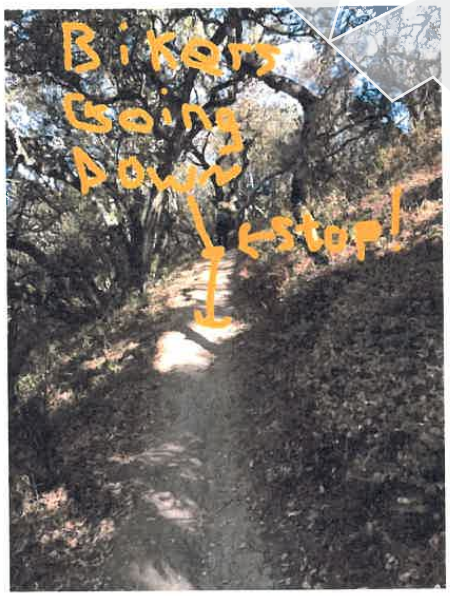
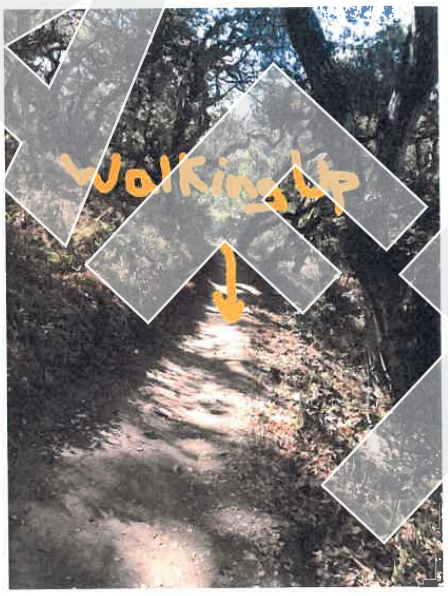
The City Council Vision Statement included with Belmont's Fiscal 2022 Budget states on page 22 "We value and celebrate a strong commitment to diversity, inclusion, *safety*, equality and dignity for all individuals in Belmont." How is it safe to have bikers and hikers on the same narrow trails? This video clearly shows that it is not safe and there was no "Wheels Yield to Heels" in this situation. *It's time for the City of Belmont to take a leadership position to ensure trail safety in Waterdog Preserve. Narrow trails on steep cross slopes encourage unsafe biking and endanger both hikers and the surrounding vegetation.*

Thank you for your time and consideration.



DRAFT



EMAILS RECEIVED: PARKS + RECREATION COMMISSION

The city's "Love Waterdog" sign at major trail heads starts with "W" defined as "Wheels Yield to Heels." Nice slogan, but ...

Look at the attached video clip that was taken by me on Berry Trail on May 30, 2021. You can see how narrow the trail is and how difficult it is for bikers and hikers to be on the trail at the same time. Although the two young men on bikes were polite and slowed down as they went downhill towards me, Berry Trail is very narrow at that point with a cliff on one side and a shrub covered hill on the other side. As you can hear on the video, I had to ask them to stop so that I could safely get around them by walking up onto the hill and into the shrubs which could easily have poison oak, ticks, or other pests. What should have happened in a situation like this is that the bikers should have stopped at the top of the hill and waited for me to reach a point where I could easily and safely step out of the way or pass by them. The only reason this was filmed is that another biker had just sped by me without slowing down so I thought I better start filming anyone who bikes near me in the event I get injured.

Photo of location on Berry Trail taken from both directions. Bikers should have stopped at the top and let me finish my uphill hike. Note narrow trail, shrubs on one side, drop off on the other side.

Subject: Follow up comment on 6/2/21 P&R Commission meeting

Dear P&R Commission:

I thought the discussion at the 6/2/21 meeting was very productive, and I wanted to offer a few follow-up comments:

Open space consultant

We heard from three public commenters whose knee-jerk reaction was to criticize the city's plan to retain a single consultant to evaluate trails, fire mitigation, conservation, and recreational use of open space. However, having a single consultant take a big-picture, holistic approach to evaluating open space issues is a perfectly rational and reasonable approach. Retaining four separate consultants will result in differing opinions on priorities, and then at the end someone will have to balance those priorities, so the city might end up having to hire a "referee" consultant to sort out all the opinions and data.

Open space management has to balance a number of sometimes competing interests, and that is presumably what the city is looking for: a consultant to take all of these interests into consideration and give unbiased and balanced opinions and suggestions. To the extent the consultant needs specialized analysis in any area, they can retain a sub-consultant to assist. I fully support the single consultant approach, and I'm sure the majority of the community does as well. We need consensus and balance on open space issues, not more balkanization and conflict.

Connectivity

I really liked Commissioner Austin's idea of a "hub and spoke" system with interconnected urban multi-use paths leading to different amenities and Commissioner Fox's idea to make use of underutilized alleys. Signs and/or QR codes with information about the area's history along these paths would be a great addition as well. When I was a kid growing up in San Jose, we would ride our skateboards all around town to different informal "skate spots" (because there were no local skate parks back then). Obviously, in Belmont, sidewalks and flat land are in short supply, but if we had interconnected multi-use paths leading to amenities around Belmont, it would give kids on skateboards, scooters, and bikes opportunities to get outdoors, go places safely, and have multi-hour adventures.

Pickleball

Comissioner Fohr was spot on when she commented on the importance of keeping abreast of trends and the future of recreation. Pickleball is the fastest growing sport in America and is accessible by every age group. See for example https://www.economist.com/united-states/2021/01/28/pickleball-is-the-fastest-growing-sport-in-america

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Pickleball would be a fantastic amenity for our community. It could be incorporated into senior programs as well as after-school and summer recreation programs. Pickleball is offered at Raslton middle school PE on makeshift courts and is very popular option for students. Many cities have tennis courts, but few have pickleball courts. This would be the perfect addition for Belmont, we're not a cookie-cutter community and this would be a unique amenity - and because pickleball is so accessible to a wide range of people, this is consistent with our community values of inclusivity. At Heather Farm Park in Walnut Creek, there are pickleball courts right next to a skate park, this has the effect of bringing community members of all ages into the outdoors together.

Skate parks, pump tracks, and other teen-focused amenities

In the PROS survey, there was overwhelming community interest in a pump track, and that amenity garnered the most interest out of all of the options. The time is ripe for that discussion to be restarted and pump tracks are worthy of inclusion in the master plan because they were the #1 desired amenity. During the meeting, there was mention of utilization of the abandoned space where the Ralston ropes course is, which was one of the sites under consideration when pump tracks were last before the commission. Commissioner Michaels mentioned he would like to keep that area adventurous, so I submit that a pump track would fill that need. The commission previously received extremely strong grassroots community interest in pump tracks, and that has now been validated by the survey.

Clearly there is also strong interest in skate parks, and they would help fill the void for our under-served preteen and teen population. Skate parks don't have to be a big undertaking, while there are very large ones such as Lake Elizabeth in Fremont and Cunningham Park in San Jose, small simple ones such as the Foster City Teen Zone and the Beresford Park skate pavilion in San Mateo are very good examples of modest parks. It would be completely feasible to have multiple small skate parks to serve different areas of the city, and that would dovetail nicely with Commissioner Austin's hub-and-spoke idea.

I appreciated Youth Commissioner Gibbs' perspective about places teens would like to hang out, I thought the idea of someplace with high elevation / views was great. He made a very insightful comment that teens (as well as people of all ages) need a reason to go to places. Just a simple, low-cost amenity could do that. For example, in a space like the Ralston Ave. scenic overlook, something like a concrete ping-pong table or a small workout station with pull-up and push-up bars could be added so people have a reason to go there and something to do besides sitting on a bench or in their car.

This didn't come up during the meeting, but Spikeball is a hugely popular activity with teens and young adults https://spikeball.com/ and does not require a big area. A small circular grass or sand area to play Spikeball in could be something that would attract teens to a park area. A small area like that could also be used for hacky sack, yoga, crossfit, or any number of activities.

I very much appreciated Commissioner Fohr's out-of-the box thinking, I had never heard of graffiti walls, and that would be an innovative addition and would help with the city's goal of more public art. I also liked her idea of a lighted area that would be open after dark. Again, some activity at a spot like that would be great, such as a spikeball area, ping-pong, half-court basketball, etc. Perhaps installing those amenities in close proximity to the police station would mitigate any safety concerns.

Bouldering and climbing wall

I thought Commissioner Austin's idea of a bouldering area was excellent - if you go by Castle Rock State Park on Skyline Boulevard, you can see that bouldering is an immensely popular outdoor activity. PROS Committe member Sisemore had an idea at the last committee meeting that large boulders for people to climb on could be placed at the empty park land at Hidden Canyon, which would be congruous with the natural landscape there. That could be supplemented with a climbing wall, and that empty space could finally be put to good use without altering the natural character of the area. Climbing walls don't have to

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

be boxy structures, they can be made with shapes and textures to mimic natural stone. Bouldering/climbing facilities (as well as skate parks and pump tracks for that matter) would also provide more options for city-run summer camps and outdoor recreation programs.

Just wanted to offer these follow up thoughts and comments on the many great ideas that were discussed at the meeting, and thank you for all the time and effort you put into serving on the commission.

Subject: Oak Knoll Park

Hello,

My wife and I have a 2 year old with another one on the way and would like to add a request for a mini park at the top of Oak Knoll as part of the city planning process. We live at and currently have to walk all the way down to Davey Glen to access a park (or drive). We walked a couple of times but the distance has made it pretty difficult. A park on Oak Knoll would be great even if it is limited to a mini-park with a single structure.

We moved to Belmont in 2020 and have really enjoyed it. A park in our vicinity would make it an even better place to raise our kids!

Thanks for your consideration of our park request.

Dear Sir/Madam,

I'm writing to support a petition to add a park near my neighborhood. I live at of Belmont and I have a 2-year-old child. He is very active but I struggle to find any playground for my child within walking distance. Henry Lin spoke with me that he thinks the top of Oak Knoll Drive would be a good place to have a mini-park. I think it'd be a great place for the children to play together.

Thanks,

Hi, to whom it concerns,

I'm Xuening, a current resident in , Belmont. I'm petitioning to build a mini park within walking distance. Our daughter Erica was born last August and is eager to learn to walk. As she gains mobility, the need for outdoor spaces for kids to play safely greatly increased.

Most areas in Belmont have a playground within 10 mins walk, however, residences near us are underserved. A park at the top of Oak Knoll Drive could benefit tens/hundreds of residents nearby and I'm looking forward to hearing back.

Best,
Xuening

Subject: Park Request on Oak Knoll Drive

Dear Planning Commission Team,

My name is Adriene Wong and my family and I have been Belmont residents on Oak Knoll Drive for 6 years now and have an active 2 year old toddler.

We've enjoyed the neighborhood with our daily walks with our toddler and along the way meeting several other families with little ones. We've all shared conversations of how we love the city and area and agreed that the only thing missing is a park within a reasonable walking distance. Our kids share rocks, sticks, and toys on the roadside— not the safest place to gather since the roads are narrow and not all drivers abide by the speed limit. It also became more apparent during the pandemic that we needed a space to play safely for our children.

I fully support Henry Lin's petition to build a park on top of Oak Knoll Drive. This will definitely be a great utilization of the vacant space there and help keep our children safer.

Sincerely,
Adriene Wong

Hello,
We are residents of Belmont for over five years and live on Oak Knoll Drive. I am writing this in support of our neighbor, Henry Lin's, proposal for a mini park at the top of Oak Knoll Drive. I have two children growing up in Belmont, and have missed having a park/playground that the children could walk to. The closest we have is on Davely Glen; given that the region is hilly and the climb can be steep, the park is inaccessible to the kids and elderly by foot.
A mini playground here would be such a wonderful addition to our community.

I hope you will consider giving us a place our children could walk to and where they can discover friends in their neighborhood.

Thank you,
Regards
Snigdha Sen

Subject: Park on top of Oak Knoll Dr

Hello to the friendly folks in the Belmont Planning Commission!

My wife and I and our two kids (ages 3 and 9 months) moved to in May of this year. One of our neighbors recently mentioned that there was a petition for adding a small park at the top of Oak Knoll Dr. I would like to voice my support for the petition.

Currently, I've been alternating between Twin Pines and Beresford Park to reach a playground where my kids can play. The closest park to us seems to be Patricia Wharton Park. While beautiful and well-maintained, it's rather small and suitable for only sitting. Having a park with a playground in walking distance for our neighborhood would be great!

Thanks,

Jason Wang

To: P&R Comm
Cc: Jim Miller
Subject: Please Support Continued Multi-Use Access at Water Dog

Dear Committee Members,

Please support the continued access to Water Dog for multi-use activities including mountain biking.

The community (children and adults alike) benefits from access to the outdoors (exercise, experiencing nature, etc.). Please do not allow a small but loud group of individuals dictate how this community resource can be used. Providing "equitable access", "inclusion", supporting a "range of interests… and community health and well-being" are all principles of the Master Plan. To deprive access to mountain bikers or even hikers would be at odds with these principles.

I have hiked and ridden through Water Dog hundreds of times and have never experienced an issue. The proposed "solutions" from his minority group are extreme and would be a net negative to the community.

Please support the broader community and the greater good by supporting continued, multi-use access to Water Dog.

Feel free to call me should have you any questions or if it would be helpful for me to share my and my family's positive experiences with Water Dog.

Thank you.

Jim Miller

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

From: Andrew Hsu
To: P&R Comm
Subject: Public Comment on (upper) Ralston road safety for bicycles and pedestrians
Date: Thursday, September 30, 2021 6:10:47 PM

Dear Parks and Rec Commissioners:

I am a long time resident of the Belmont-San Carlos area, a father of three and an experienced cyclist that rides upper Ralston on my bicycle nearly every day. Sadly, I am unable to attend tonight's meeting but would like to add my thoughts.

First, the work you are doing to improve Belmont is greatly appreciated, especially the attention to the efforts to build community by improving the local parks.

One of my concerns is the safety of pedestrian and bike travel in Belmont, especially for seniors and and for children going to school and accessing those parks. While I bike on upper Ralston daily, this road is extremely dangerous for most cyclists, as cars routinely travel 40+ mph (even 50+) on a road with no bike lanes and narrow shoulders. Additionally, traffic congestion during school commute hours is awful, but I believe most parents would not feel safe letting their children cycle or walk to schools. They are missing out on a great experience that includes exercise and building independence as well as the obvious community and environmental benefits we all reap when we use our cars less.

I am aware of Assembly Bill AB43 becoming law and making it feasible for Belmont to regulate the speed on the major arteries to schools and to access parks. I would like to see the speed on roads like Ralston and Alameda de las Pulgas reduced to 25 mph and speed bumps placed by the school zones. I would like to see police enforcement of traffic rules during the school commute hours. I see those things as "baby steps" that would not require much more expensive but greatly needed infrastructure changes such as protected bike lanes on those streets.

Thanks for your efforts and please consider these options.

Respectfully,
Andrew Hsu
San Carlos Resident (former Belmont resident)

Subject: Park and Rec Commission Meeting 9/30/2021
Date: Thursday, September 30, 2021 12:41:40 PM
Attachments: image.png

Dear Park and Rec Commisoners

Regretfully I am unable to attend tonight's meeting. I appreciate the work you are doing to improve Belmont.

We have a big interest in increasing bicycle and pedestrian safety in Belmont. We'd like to increase percentage of students who can bicycle to school safely, have a safe place to leave their bikes, to reduce car traffic and promote independence in kids, as well as the health benefits. We also are interested in safe cycling for all community members. Right now I will not ride on Ralston; the area from Alameda heading west towards Highway 92 and the bike bridge is too dangerous with cars going 40 mph (and often faster) with no bike lane or protection. If I won't ride, I don't expect the Ralston Middle School community to feel safe riding either. With nearly all students getting transported in cars, traffic on Ralston is out of control.
Encouraging students to walk or ride to school when we can ensure student safety is critical and would help meet several of your goals including making users feel safe, improving environmental resilience and sustainability (reducing traffic), and advancing community health and well-being by increasing physical activity.

Ultimately protected bike lanes on Ralston would be ideal, even if it means reducing the median. Short-term changes should involve reducing the speed limit on Ralston to 25 mph all the time. This would need enforcement, and could be facilitated with traffic warming techniques like speed bumps/humps that are being used in other parts of Belmont.

Dear Parks and Rec Commissioners:

Unfortunately, I am unable to attend tonight's meeting but would like to add my thoughts.

Firstly, the work you are doing to improve Belmont is greatly appreciated, especially the attention to the efforts to build community by improving the local parks.

One of my concerns is the safety of pedestrian and bike travel in Belmont for seniors like myself and for the children going to school and accessing those parks. I live in the Cipriani neighborhood and enjoy going to nearby Waterdog Park walking or cycling. I have stopped cycling on the Ralston corridor to Hallmark, Canada Rd and Sawyer Camp trails as I do not feel safe cycling next to cars going 40+ mph on a road with no bike lanes and narrow shoulders. I will put the bike on a car and begin cycling outside Belmont. Likewise, I do not use my bike to go to Carlmont to shop or have coffee, for the same reason. The congestion during school commute hours is awful, but I believe most parents would not feel safe letting their children cycle or walk to schools as I did at that age. They

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

are missing out on a great experience that includes exercise and building independence as well as the obvious community and environmental benefits we all reap when we use our cars less.

I am aware of Assembly Bill AB43 becoming law and making it feasible for Belmont to regulate the speed on the major arteries to schools and to access parks. I would like to see the speed on roads like Ralston and Alameda de las Pulgas reduced to 25 mph and speed bumps placed by the school zones. Subject: Research on Presence of Humans Disturbing Wildlife
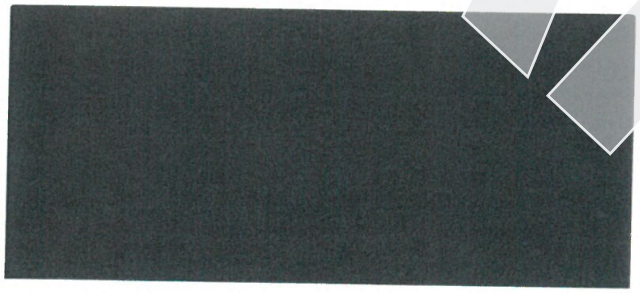
Date: Saturday, September 11, 2021 12:37:46 PM

Hello P&R Commissioners & Director,



As per my public comments at the last Commission meeting, I hope you will take time to read the well-documented article below that addresses the negative impact human presence has on wildlife in open spaces. The article discusses how wildlife is pushed out - not only from the immediate area where the human usage occurs but also from a zone around that usage. This causes wildlife to lose access to important habitats and forces them to find other places to live (in our case usually streets and neighborhoods).

This issue, the disturbance caused by human presence, is directly related to trail density in open spaces: the more trails, the fewer places where wildlife can live (forage, nest, rest, etc) in a safe, undisturbed environment.

I hope you will consider wildlife when you make decisions about recreational usage of our open space. What some may consider a "playground" for their recreational usage is our wildlife's only natural habitat home in the area ... a home that is quickly deteriorating.

Thank you for your consideration.
Deniz Bolbol

t's

In a recent review of hundreds of studies covering many species, we found that the presence of humans can alter wild animal and bird behavior patterns at much greater distances than most people may think. Small mammals and birds may change their behavior when hikers or birders come within 300 feet (100 meters) – the length of a football field. Large birds like eagles and hawks can be affected when humans are over 1,300 feet (400 meters) away – roughly a quarter of a mile. And large mammals like elk and moose can be affected by humans up to 3,300 feet (1,000 meters) away – more than half a mile.

change their behavior in response to human activities.

Decades of research have shown that outdoor recreation, whether it's hiking, cross-country skiing or riding all-terrain vehicles, has negative effects on wildlife. The most obvious signs are behavioral changes: Animals may flee from nearby people, decrease the time they feed and abandon nests or dens.

Advertisement:

Other effects are harder to see, but can have serious consequences for animals' health and survival. Wild animals that detect humans can experience physiological changes, such as increased heart rates and elevated levels of stress hormones.

And humans' outdoor activities can degrade habitat that wild specie reproduction. Human voices, off-leash dogs and campsite overuse unusable for many wild species.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Disturbing shorebirds can cause them to stop eating, stop feeding their young or flee their nests, leaving chicks vulnerable.

Effects of human presence vary for different species

For our study we examined 330 peer-reviewed articles spanning 38 years to locate thresholds at which recreation activities negatively affected wild animals and birds. The main thresholds we found were related to distances between wildlife and people or trails. But we also found other important factors, including the number of daily park visitors and the decibel levels of people's conversations.

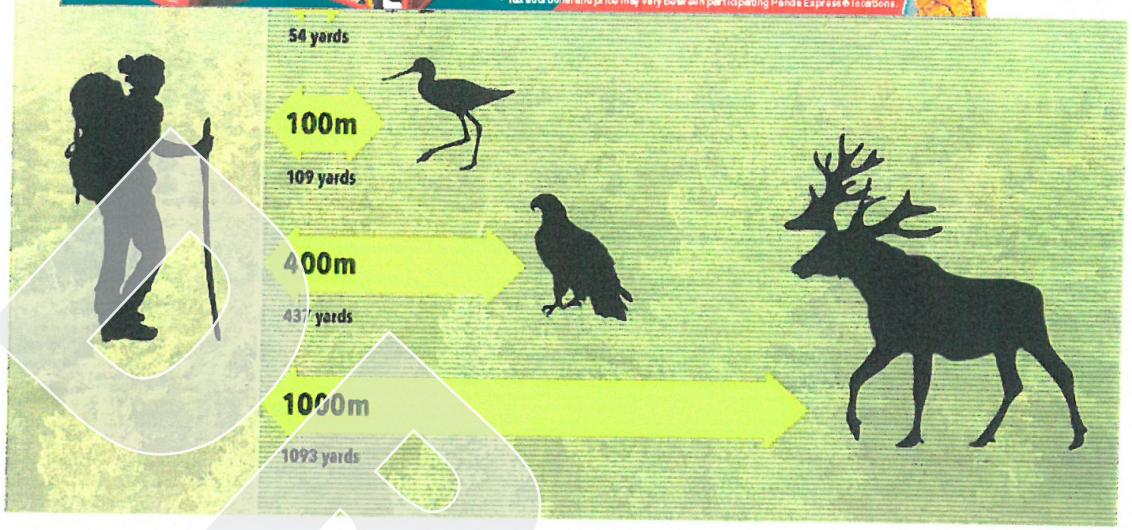
The studies that we reviewed covered over a dozen different types of motorized and nonmotorized recreation. While it might seem that motorized activities would have a bigger impact, some studies have found that dispersed "quiet" activities, such as day hiking, biking and wildlife viewing, can also affect which wild species will use a protected area.

Advertisement

Put

moto that they have been historically hunted are more likely to recognize – and flee from – a person walking than a person in a motorized vehicle.

Generally, larger animals need more distance, though the relationship is clearer for birds than mammals. We found that for birds, as bird size increased, so did the threshold distance. The smallest birds could tolerate humans within 65 feet (20 meters), while the largest birds had thresholds of roughly 2,000 feet (600 meters). Previous research has found a similar relationship. We did not find that this relationship existed as clearly for mammals.



We found little research on impact thresholds for amphibians and reptiles, such as lizards, frogs, turtles and snakes. A growing body of evidence shows that amphibians and reptiles are disturbed and negatively affected by recreation. So far, however, it's unclear whether those effects reflect mainly the distance to people, the number of visitors or other factors.

Human recreation starts to affect wild creatures' behavior and physical state at different distances. Small mammals and birds tolerate closer recreation than do larger birds of prey and large mammals. Sarah Markes, CC BY-ND

How to reduce your impact on wildlife

While there's much still to learn, we know enough to identify some simple actions people can take to minimize their impacts on wildlife. First, keep your distance. Although some species or individual animals will become used to human presence at close range, many others won't. And it can be hard to tell when you are stressing an animal and potentially endangering both it and yourself.

Second, respect closed areas and stay on trails. For example, in Jackson Hole, Wyoming, wildlife managers seasonally close some backcountry ski areas to protect critical habitat for bighorn sheep and reduce stress on other species like moose, elk and mule deer. And rangers in Maine's Acadia National Park close several trails annually near peregrine falcon nests. This reduces stress to nesting endangered species recover.

Date: Wednesday, September 1, 2021 2:36:06 PM

Hi,
I just heard that there is a meeting tonight to discuss outdoor recreation in Belmont. I am unable to attend but feel strongly that Belmont needs safer streets for cycling, with protected lanes on Ralston from beginning to end. Kids need a safe lane to get to and from school and activities, and other commuters and recreational riders need safe lanes to ride. Most neighboring cities have provided safe bicycle lanes and it is time Belmont creates them before we have more tragedies.

Thank you.

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

From: Jackie Sinnott
To: P&R Comm; City Council; Jackie Sinnott; Matthew Perotti
Subject: 4 way stop at the corner of Cipriani and Carmelita
Date: Wednesday, October 6, 2021 12:11:56 PM

Hello City Council and Park and Rec,

I was informed that you will be reviewing safety ideas in the Cipriani area and I wanted to reach out. We live at 2500 Casa Bona, somewhat new to the area, but have one in Kindergarten at Cipriani now (and another in preschool).

We love Belmont, but have missed having consistent sidewalks and noticed many blind corners in an otherwise safe and family friendly neighborhood.

With school back in session, one easy solution I see to making the neighborhood safer right here, is a **4 way stop at the corner of Cipriani and Carmelia.** There was an accident there two weeks ago, and many families near or crossing at that intersection daily. With poor visibility and no sidewalks, cars zooming by without a stop seems especially dangerous. Just today while I stood in the painted crosswalk (after walking my Kindergartner to school), three cars drove quickly past me while I waited for one to stop (disregarding me, the crosswalk or the fact that pedestrians have the right of way).

A 4 way stop at that intersection would be a great improvement to this neighborhood. It would make it a safer place to cross, possibly encourage more people to walk/bike to school and slow traffic in general, in a neighborhood with many kids out riding bikes and walking daily.

Thank you for your consideration!

To: P&R Comm; info@belmontprosplan.com
Cc: City Council; Brigitte Shearer
Subject: 9/30 PROS Committee meeting feedback
Date: Sunday, October 3, 2021 8:20:09 AM

Dear PROS Committee and P&R Commission:

I watched the 9/30 PROS Committee meeting on Zoom and wanted to compliment Gates & Associates for their excellent and informative presentation. I'm pleased with the progress on the plan and hope the city can stay on pace to get the plan completed. I also wanted to offer some feedback on some items that were discussed during the meeting.

Hidden Canyon Park

I am glad that developing Hidden Canyon Park is finally on the agenda. As you know, in the 1990s, that parcel of land was dedicated as a city park by the developer of the Hidden Canyon tract under the Quimby Act as a condition of allowing the subdivision to be built. Due to lack of leadership and initiative of prior city councils, that tract of land has been sitting fallow for nearly 30 years. I'm grateful that our city current leadership recognizes the need for this resource to be utilized as it was originally intended. I think a permanent bathroom would be a great addition to that park. Someone mentioned having interpretive/educational aspects to it, and I think that was a great idea. There could be signs to educate park users about local flora and fauna, trail use courtesy, and trail stewardship. I also agree with the comments at the meeting that because the park is so close to the open space interface, it should be developed with a natural aesthetic to it, and amenities such as metal/plastic playground structures would be out of character with the space.

This past summer, while in Bend, Oregon, I visited Rockridge city park. That park is much larger than Hidden Canyon, it has developed areas such as a large lawn, group picnic areas, a concrete skate park, etc. However, part of the park borders open space, and that portion of the park showcases some really great examples of natural amenities that blend in with the environment. Rather than a synthetic play structure, there is a "forest" of fossilized tree trunks and rocks placed for kids to play on. There are also beginner and intermediate mountain bike skills courses. These are very short loop trails with both natural and man-made wooden and stone obstacles designed to allow beginning and/or younger riders to hone their bike handling skills in a safe environment before heading onto trails where mistakes have bigger consequences. Both of these amenities would be a perfect fit for Hidden Canyon. There are some photos of the park here: https://www.bendparksandrec.org/park/rockridge-park/ (you can also do a Google Images search for Rockridge Park Bend), and I have also attached a few photos that I took while I was there.

Connectivity

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

At the meeting there were a number of comments about the importance of having connectivity between parks and amenities. I agree wholeheartedly with those comments. I think the city is doing a great job with the sidewalks along Ralston Avenue and look forward to more improvements to improve pedestrian and cycling connectivity throughout the city. During the meeting when pump tracks were discussed, a public commenter suggested that a pump track location in the main residential area of Belmont would be preferable to the Sports Complex, because that would allow users to safely bike there rather than traversing the hazardous Ralston / El Camino Real route. I agree with that commenter. Also, during this discussion, there was an aerial view of Hidden Canyon Park up on the screen, showing both a trail and road leading to the space, so that site has great connectivity - not only from Carlmont and Hastings Drives, but from Hallmark Drive (via the Lake Road Trail)

Pump Track

I'm very pleased to hear committee members speaking favorably about pump tracks. As you know there is strong grassroots community interest in a pump track, evidenced by the PROS survey results. Yesterday, I attended the Derby and Day in the Park event in Brisbane. They had a modular pump track set up for the event, which was a big hit. I have attached a few photos. I chatted with the gentleman from American Ramp Company (the outfit who supplied the track for the event), he said they build dirt, asphalt, and concrete pump tracks, and built a dirt one at Stafford Lake Park in Novato, and recently built a concrete one in Simi Valley. The portable one at the event is made out of plywood and bolts together, it is intended for temporary use. He said when they build concrete or asphalt ones, they use forms similar to the portable track to pour the asphalt or concrete. He said from a maintenance perspective, they prefer asphalt tracks because they hold up to wear very well, allow bikes, scooters, and skateboards, and surface damage is very easy to repair.

Skate Park

During the meeting, I was also happy to hear the committee members speaking favorably about skate parks, and really pleased to finally see a concrete proposal for a small skate park in the Ralston / Old County Road area. There were some concerns expressed about space limitations for a skate park, and whether it would be too small to be used. There is such a pent-up demand for this type of amenity in Belmont, it will get used no matter the size. Belmont's preteens and teens are starving for an amenity like this. As in Field of Dreams, if you build it, they will come. Coincidentally, while I was at the Brisbane event, I noticed they have a very small skate park right across the street from the event venue, which was being well-used and enjoyed by residents. I have attached a few photos to illustrate how a nice skate park can fit into a small space. During the meeting Brigitte mentioned that this park may be temporary in nature, and that can certainly be done, for example in Daly City has a skate park, which is not the greatest, but has prefabricated metal ramp and boxes rather than poured concrete. A few pictures are here: https://www.westcoastskateparks.com/skateparks/daly-city-skatepark-daly-city-california I'm sure that even if a small, temporary skate park is constructed, that will serve a a successful proof-of-concept, and I hope someday soon the city will

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

construct a permanent skate park for its underserved teens.

Thank you for all the time and effort you have been putting into our PROS Plan, keep up the good work, and I look forward to continued progress.

Sincerely,

Paul Sheng

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

From:
To: P&R Comm; PROS Committee
Subject: Neighborhood Parks are defined in the General Plan
Date: Tuesday, October 19, 2021 9:20:31 AM

Dear Commissioners and PROS Committee,

At the PROS meeting for Hidden Canyon staff got an earful from residents expressing disapproval of development in the neighborhood park. There are **three important points to summarize:**

1. "Neighborhood" parks are defined in the General Plan (see below) as intended to serve only the immediate neighborhood, NOT to draw and serve visitors from the wider community. Located in sites where there is limited access and no parking, it is inappropriate to develop neighborhood parks as attractions for anyone who can't walk a few blocks to get there. Belmont Heights currently struggles with traffic, noise pollution and pedestrian safety issues due to heavy use of the Cross Country Course. This growing conflict is the result of ignoring the General Plan and failing to consider available infrastructure and neighbors when scaling plans.
2. "Undeveloped" parks were never intended to be filled with amenities. The original plan for these open spaces was exactly at titled -"Undeveloped". They were intended as natural space for wildlife corridors and shelter for our neighborhood visitors (deer, birds, etc.), as quiet, contemplative natural settings, and *breathing* space. Humans need to resist the urge to build on every little bit of nature. These spaces are NOT *awaiting* development, but rather *intentionally UN-developed*.
3. The Survey on which the consultants base their suggestions was wildly flawed. Over half of the respondents were NON Belmont residents. Yes, Belmont Parks are open to all visitors; but their intended purpose is to *serve residents who live here and pay for them*, not to attract and serve those from the wider community.

Belmont's General Plan provides validity for our argument:

4.2 PARKS AND RECREATION

PARK CLASSIFICATIONS

The City provides its residents with several types of parks and recreation facilities. Parks are defined as land owned, leased, or provided to the City and used for public recreational purposes. In addition, there is joint use planning and operation of school district athletic facilities for public recreation. Parks and recreational facilities are classified as follows:

- **Mini Park.** A small park ranging from a quarter-acre to 2 acres that is located within a residential area and is intended to provide play areas for small children or passive sitting areas **for residents within a quarter-mile-radius.**

- **Neighborhood Park.** A medium-sized park ranging from 2 to 10 acres that provides basic recreational activities **for a specific neighborhood within a one-mile radius.**

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

• **Community Park.** A large park ranging from 20 to 50 acres that includes passive and active recreation facilities that **serve the entire city or a substantial portion of the city**.

• School Park. Athletic fields and facilities that operate under joint use agreements between the City and the School District and are **used by the community** during non-school hours.

• Special Facility. A facility such as a community center, athletic complex, aquatic center or other cultural or athletic facility that services a specific recreational need **for all or a portion of the city's population.**

This is why I repeatedly plead with staff and planners to really read the existing General Plan, Conservation Element, and Parks Master Plan. **These plans are our blueprint. Please respect them.**
Thank you ,
Kristin Mercer

Subject: RE: 4 way stop at the corner of Cipriani and Carmelita
Date: Wednesday, October 6, 2021 1:15:13 PM

Hi Jackie,

Thanks for reaching out and welcome to Belmont and the neighborhood. My kids (now 17 and 15) walked from my house on Read to Cipriani pretty much every day from the time they were 8 or so through completion of 5th grade. I know the area and the intersection well. I'm not aware of any Cipriani safety initiative. I don't think that's accurate. I think there might some confusion arising out of recent parks and rec PROS advisory committee.

Pedestrian safety is a high priority to the council and we've shown that in a lot of our actions. That said, inheriting a city where many of the roads don't have sidewalks sure doesn't make it easy. Those decisions were made in the 50s when the neighborhoods were being developed and while we are requiring sidewalks in conjunction with residential construction projects where it makes sense, it's still far from ideal. But there are realistic and insurmountable obstacles to adding sidewalks on Cipriani.

When it comes to stop signs and things like that, we rely on our public works department and our police department. I don't think the parks and rec department/commission would have any involvement although they do deal with our bike/ped plan.

That particular intersection received crosswalks for the first time a few years ago in response to some residents' request. There was some concern at the time that the safer bet was to discourage kids from crossing at that cross walk and direct them to cross at the four way stop at Cipriani and Buena Vista or Cip/Ponce. That's what the safe routes to school program used to show to my memory. I actually was concerned that installing the crosswalks would lead to more kids crossing there without the protection of a stop sign which would create a higher risk of danger, but some residents felt differently. IIRC, I think we looked at stop signs at that location then. I ***think*** that we can't put in stop signs at that Carmelita/Cipriani based on state law site line requirements. That said, I can't say with certainty that I am remembering correctly so I'm copying our excellent city manager (who was public works director at the time) Afshin Oskoui, our current public works director Peter Brown, and our interim Police Chief Ken Stenquist so they can add anything germane.

In the meantime, I ***highly*** recommend that anyone crossing with kids or any kids crossing without adults use the fourway stops at Buena Vista/Cip or Ponce/Cip depending on where they are coming from. That's much safer and has minimal impact from a walking time perspective (having done them all many times over the past 12 years.)

Thanks again for the contact and we'll follow up.

Charles

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

From: Tim Bussiek
To: P&R Comm
Subject: Safety comes first, life follows
Date: Wednesday, October 6, 2021 3:56:44 PM
Attachments: CA research biking adds to overall safety.pdf

Dear Parks and Rec Commissioners:

Unfortunately, I am unable to attend tonight's meeting but would like to add my thoughts. The work you are doing to improve Belmont is greatly appreciated, especially the efforts to build a human-centric community.

I most recently made a comment at the PROS meeting about focusing much more on the whole, on the public space that is our streets and everything else, as a destination and big part of our experience and life. An old example is that Napoleon had the roads planted with trees so his armies could march in the shade – of course car culture led to most of those trees being cut down as they were too dangerous for the fast moving cars.

We are now in a dramatically different world from the last decades, in just the last few years tremendous change has occured, and we need to act immediately and with great urgency. And we can:

- Post pandemic we don't need an infrastructure centered around work commute any more. So far it is persisting that we can do with about 40-60% less driving to work. Main congestion is now local.
- We are aching to be local, be humans, celebrate skills and venues and natural beauty, to BE. As we were forced to stick around, we saw that pedestrian areas (Laurel Street in San Carlos, many in SF etc.), parklets, turned out to be hugely welcome innovations. There is so much good will to build on right now.
- We are the worst offendors in terms of CO2 emissions for no real reason, for being lazy, not adjusting our behaviors. It would be so simple to do better, to be local. E.g. what if we had a super local event like the Waterdog Run, and people came by bicycle or on foot?

A key part is always speed, ensuring human-scale speed and safety. Any human being immediately senses the very real danger of fast 2ton vehicles – dangers can be mitigated but the experience will never be a positive one. The onus CANNOT be on the weaker part, especially children and elderly whom it seems we have made outcasts to our streets, and in the age we are in we the people through public government have to act to enforce livable and welcoming public space.

I'd like to kindly submit research that shows that reducing speeds and having bicycle safe conditions actually reduces overall injuries. Are we not negligent to do this for the sake of everyone anyway, to save lifes? Here is the main quote, please see attached the actual paper:

- *"Overall, high bicycling cities generally show a much lower risk of fatal crashes for all road users when compared to most of the other cities in our database. The fact that this pattern of low fatality risk is constant for all classes of road users strongly suggests that the crashes are taking place at lower speeds. ... our results strongly suggest that safety benefits for all road users can be derived from a*

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

combination of the same steps that tend to attract more bicyclists."

I am in touch with the author Wes Marshall, Professor of Engineering at the University of Colorado, and we could invite him to provide much more perspective on the reuslts.

In becoming livable in its public space, Belmont would only be part of a global pattern, here are just some recent examples:

- Berlin
- Amsterdam
- Paris
- Minneapolis
- Multiple cities
- Case for biking, cutting an individuals emissions by 67%
- Most visited destination

It is time we started polishing the jewel that Belmont is.

Thank you for your consideration.

Why Bike-Friendly Cities are Safer for all Road Users

Wesley Marshall

ABSTRACT

Given the growing evidence suggesting that cities with higher bicycling rates find lower fatality rates, we examine road safety data from 24 California cities. This analysis included accounting for crashes across all severity levels but also for three different classes of road users: vehicle occupants, pedestrians, and bicyclists. Additionally, we looked at issues of street and street network design to see what role these characteristics might play in affecting road safety outcomes.

Overall, high bicycling cities generally show a much lower risk of fatal crashes for all road users when compared to most of the other cities in our database. The fact that this pattern of low fatality risk is constant for all classes of road users strongly suggests that the crashes are taking place at lower speeds. The most notable difference found between the safer and less safe cities was the density of street intersections. While we do not yet have the data to fully disentangle the various contributing factors, our results strongly suggest that safety benefits for all road users can be derived from a combination of the same steps that tend to attract more bicyclists. In other words, improving the streets to better accommodate bicycles may in fact lead to a self-reinforcing cycle that can help enhance overall safety for all road users.

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

INTRODUCTION

Davis, California, often referred to as the bicycle capital of America since becoming the first city to gain "platinum" status from the League of American Bicyclists, should also be renowned for another reason: road safety. From 1996 through 2007, the years examined for this study, Davis endured only nine fatal road crashes, of which only three occurred on regular, non-limited access streets. And despite a greater percentage of people biking to work than any other city in the United States, not a single one of these fatal crashes involved a bicyclist. With a fatal crash rate in Davis of less than 1.5 per 100,000 residents, far fewer people are killed on their roads than in the U.S. as a whole, which average 14.5 fatalities per 100,000 residents.

Another American city recognized as a "platinum" bicycling city, Portland, Oregon, increased bicycle mode share from 1.2% in 1990 to 5.8% in 2000. At the same time, the total number of road fatalities went from averaging over 60 per year around 1990 to fewer than 35 per year since 2000 (1). Moreover, there were only 20 total road fatalities in Portland in 2008, which is a remarkable safety record (3.6 fatalities per 100,000 residents) for a city of over 550,000 people. Such fatal crash rates compare extremely favorably with the countries reporting the lowest crash rates in the world such as the Netherlands at 4.9 per 100,000 residents (2).

These outcomes are not uncommon; other researchers have reported notable decreases in fatality rates in cities that have successfully increased their bicycle mode share (3, 4). Conventional thinking about road safety would suggest that the outcome of lower road fatality rates with more bicycle riders would be unlikely since, in general, bicycle riders experience a much higher fatality rate per mile traveled. But given the growing evidence suggesting that this is not the case, we examine road safety data from 24 California cities in this paper to garner evidence as to why cities with high rates of bicycle use typically see lower rates of road fatality for all road users. In other to better understand the trends in these cities, we not only examine the number of crashes of different severity levels but also the relative risk of a fatality or a severe injury given the fact that a crash occurred. These analyses were conducted for three classes of road users - pedestrians, bicycle riders and vehicle occupants - in order to help us understand if the underlying patterns were similar for all road user types. We also used census data as a rough estimate of the number of people walking, biking and driving in each city in order to gain a better understanding of the relative exposure rates in these cities for the different classes of road users. Finally, we looked at issues of street and street network design to see what role these characteristics might play in affecting road safety outcomes.

STUDY BACKGROUND

This research was based on an initial database of over 150 California cities. We focused on California cities in order to help maintain consistency in the data, especially in comparing injury severity outcomes. The earlier papers based on this dataset concentrated on the street networks characteristics of 24 of these California cities representing twelve medium-sized cities with good safety records and twelve with poor safety records (5, 6). In this study, we further sub-divide the group of twelve safer cities into the following three groups of four cites based upon bicycle mode share: high bicycling cities, medium bicycling cities, and low bicycling cities. The cities included were:

Group 1: Highest Bicycling Safer Cities

- Berkeley
- Chico
- Davis
- Palo Alto

Group 2: Medium Bicycling Safer Cities

- Alameda
- San Luis Obispo
- Santa Barbara
- Santa Cruz

Group 3: Low Bicycling Safer Cities

- Cupertino
- Danville
- Cupertino
- San Mateo

Group 4: Less Safe Cities

- Antioch
- Apple Valley
- Carlsbad
- Madera
- Morgan Hill
- Perris
- Redding
- Rialto
- Temecula
- Turlock
- Victorville
- West Sacramento

Journey to work data was collected along with street network measures, street characteristics, socioeconomic data, traffic flow information, and over 230,000 individual crash records from eleven years of crash data. All of this information was geo-coded in a GIS database with the intention of facilitating a more comprehensive spatial analysis.

LITERATURE REVIEW

Few studies have specifically looked at how safety varies for all road users depending upon the amount of waking or biking that is occurring. Transit usage however is one mode that has in fact been evaluated in terms of overall road safety. In an international study, Kentworthy and Laube concluded that cities with higher transit use also tended to have lower overall fatality rates (7). Litman, in a separate study, found that the per capita fatality rates of U.S. cities were lower with increased transit use (8). One reason behind these results, as the authors point out, is that more transit use tends to lower the overall amount of vehicle use.

If reducing vehicle use through more transit usage can help in terms of overall road safety, then the idea that increases in biking and walking can have a similar effect is promising. However, it is important to understand that the fatality rate in terms of miles traveled for vehicle occupants is approximately ten times that of transit users while most studies have shown that the fatality rates in terms of miles traveled for biking and walking are higher than for driving (8). One potentially confounding factor is that calculating safety on a per-mile basis might not be appropriate given that most biking and walking trips are generally shorter in distance than driving trips. Another point to consider is the handful of studies finding an increase in overall bicyclist and pedestrian safety emerging with increasing numbers of bikers and walkers. The thinking is that a driver changes his or her expectations based upon the perceived possibility of encountering a bicyclist or pedestrian. So when the number of bikers and walkers increases to the point where drivers begin to expect conflicts, the driver's behavior begins to change for the better.

For example, a 1996 study by Lars Ekman found no linear association between bicyclist exposure and conflict rate in a comprehensive study conducted in Sweden (9). To be more specific, Ekman determined that the conflict rate for an individual bicyclist was higher when the number of bicyclists was low, with this conflict rate subsiding as the flow of bicyclists increased. In terms of conflict rates for a bicyclist, the number of bicyclists was more significant than the number of vehicles on the road. Ekman also found that the risk to pedestrians was not affected by the number of pedestrians.

Another examples is taken from the city of Copenhagen, where it was found that between 1990 and 2000, a 40% increase in bicycle kilometers traveled corresponded to a 50% decrease in seriously injured bicyclists (4). And in a 2003 study of California cities, Peter Jacobsen found results substantiating this idea of safety in numbers. Based on 68 California cities, but only one year of crash data, the results showed that the individual chance of a bicyclist or pedestrian being struck by a car drops with more people biking and walking (3).

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

These results are interesting because conventional wisdom links an increase in exposure with an increase in risk. Although not easily transferable to overall road safety, these studies do begin to suggest some explanation as to why places like Davis, Portland, and the Netherlands might be safety than places with lower bike use. While switching from driving to transit has been shown to decrease individual risk, switching from driving to biking or walking would, on average, increase individual risk. However, that average risk number does not explicitly consider situations were there is a critical mass of bikers and walkers that may be able to find better safety in larger numbers. In those cases, the idea that switching from driving to biking or walking can actually reduce one's individual risk is a possibility. In terms of overall road safety, strategies known to increase biking and walking such as traffic calming and decreasing vehicle speeds have also been shown to lead to better road safety outcomes (10, 11). Together, such strategies could help to reduce overall vehicle miles traveled (VMT), which could also play a role in improving road safety (12).

RESULTS

For the purposes of this study, the crashes analyzed only include those that did occur on surface streets and not those on limited access highways. This was done in order to fairly compare crashes on roads where walking and biking would be reasonably expected. Tables 1 and 2 summarize the data for this results section.

Mode Shares

Based on 2000 Census journey-to-work data, Figure 1 depicts biking, walking, and transit use for each set of cities. Also shown is the U.S. average for biking, walking, and transit use at 0.4%, 2.9%, and 4.6%, respectively (13). The high-bicycling cities in our study have more than 20 times more biking than the U.S. average, more than 2.5 times more walking, and 1.5 times more transit use. The low-bicycling cities and less safe cities match the U.S. average for biking and fall below the U.S. average for walking and transit use.

Overall vehicle mode share is well under 80% for the high-bicycling cities, 82% for the medium-bicycling cities, and over 94% for the low-bicycling cities and the less safe cities.

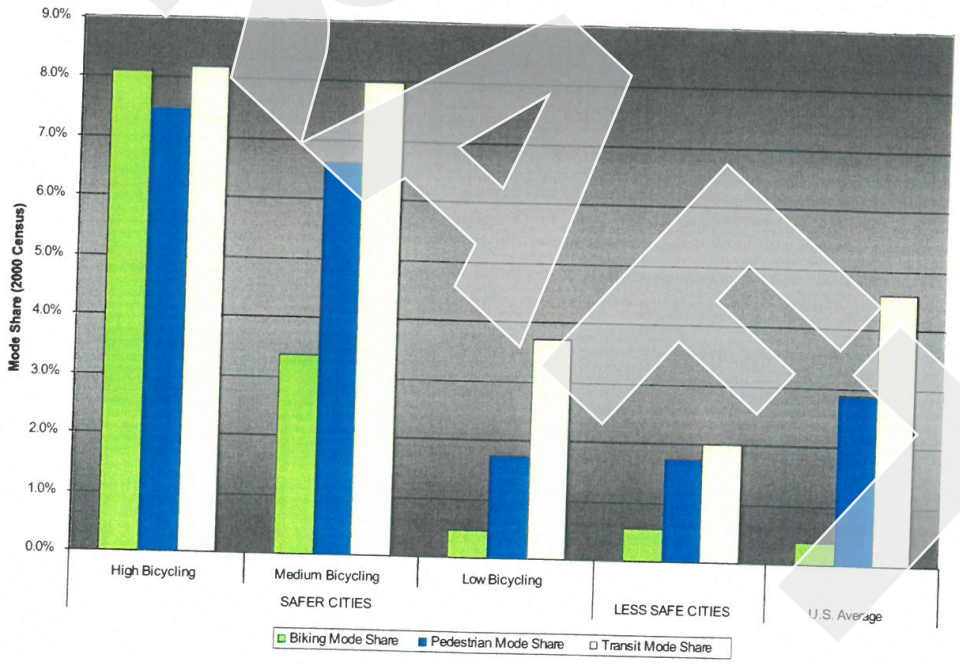

Figure 1 **Bicycle, Pedestrian, and Transit Mode Shares (2000 Census)**

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Road Safety

In terms of road safety, the differences are not always found in terms of the overall crash numbers. In fact, the cities with the lower fatality rates would seem to be less safe if we only looked at overall crash frequency. This is an important distinction because many safety studies often focus on the overall number of crashes and ignore crash severity. In our results, another important difference seems to be in what is happening after the crashes occur. The crash severity risk outcomes - based upon the percentage of crashes for each road user type that result in a fatality - show that if you are in a crash in one of the Group 4 cities, then you are much more likely to die than if the crash took place in a city from one of the other groups. Overall, the risk of a fatality should a crash occur is similar for the three groups of safer cities for each road user type. For the less safe cities, the chance of a vehicle occupant or pedestrian crash resulting in a fatality is over four times greater than what we found in each of the safer groups of cities. Moreover, the chance of a bicycle crash resulting in a fatality is over 11 times greater in the less safe cities than in the safer cities.

Another key consideration in better assessing safety is considering relative exposure. With the intention of getting a better handle on the relative amounts of driving, biking, walking, and transit use in these sets of cities, we used a simple road user exposure metric in which we multiplied city population by mode share to find a rough number of travelers by each mode. This is similar to the method used by Jacobsen; in his study, he assumed that even though journey-to-work trips represent a small percentage of total trips, the percentage of each mode found for commuters is proportional to all trips (3). Though this exposure metric is admittedly imprecise and might be inaccurate if we were interested in absolute rates for vehicle, pedestrian, and bicycle safety, it should function adequately as a proxy toward finding the relative safety rates for these 24 cities.

To put this approach into context, Figure 2 depicts the fatal crashes not occurring on surface streets over the eleven year study period for one city from the highest bicycling group, Santa Barbara, and one from the less safe groups of cities, Rialto. These two cities have almost the same level of population (~92,000) living at almost the same population density (~5,000 people per square mile). Despite these similarities, bicycling mode share in Santa Barbara is over 3.6% (on the low end of our eight higher bicycling cities) while bicycling mode share in Rialto is nearly negligible at 0.2%. Walking mode share is over 6.5% in Santa Barbara and 1.3% in Rialto. In terms of fatality rates, Santa Barbara had 19 vehicular deaths with over 78,000 estimated vehicle users for a rate of 2.2 vehicle deaths per year per 100,000 drivers while Rialto had 68 vehicular deaths and over 88,000 estimated vehicle users for a rate of over 7.0 driver deaths per year per 100,000 drivers. For walking, Santa Barbara experienced 16 deaths over eleven years with over 6,000 estimated walkers for a rate of 24.2 pedestrian deaths per year per 100,000 pedestrians. Rialto had 39 deaths with less than 1,200 estimated walkers for a rate of almost 300 pedestrian deaths per year per 100,000 pedestrians. Santa Barbara also had an estimated 3,356 estimated bicyclists with only two deaths over eleven years for a rate of 5.4 bicyclist deaths per year per 100,000 bicyclists. For Rialto, we find one fewer bicyclist death but only 165 estimated bicyclists for a rate of 55.1 bicyclist deaths per year per 100,000 bicyclists.

	(avg. per year per 100,000 estimated bicylists)				

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Now if we take this analysis to the city groups, we discover that even though the less safe cities have the lowest number of crashes occurring, Table 1 shows that these cities also found higher vehicle occupant crash rates across all severity levels. Another key consideration is the fact that even though the less safe cities had very low rates of biking and walking, they also experienced far more bicyclist and pedestrian fatalities than the other groups of cities. For a pedestrian, the fatality rate is more than 24 times greater in the less safe cities than in either of the city groups with significant biking, almost ten times greater for a severe injury, and over five times greater for all other pedestrian injuries. For the safer cities with low bicycling, the pedestrian fatality rate is approximately twice that found in the higher biking cities.

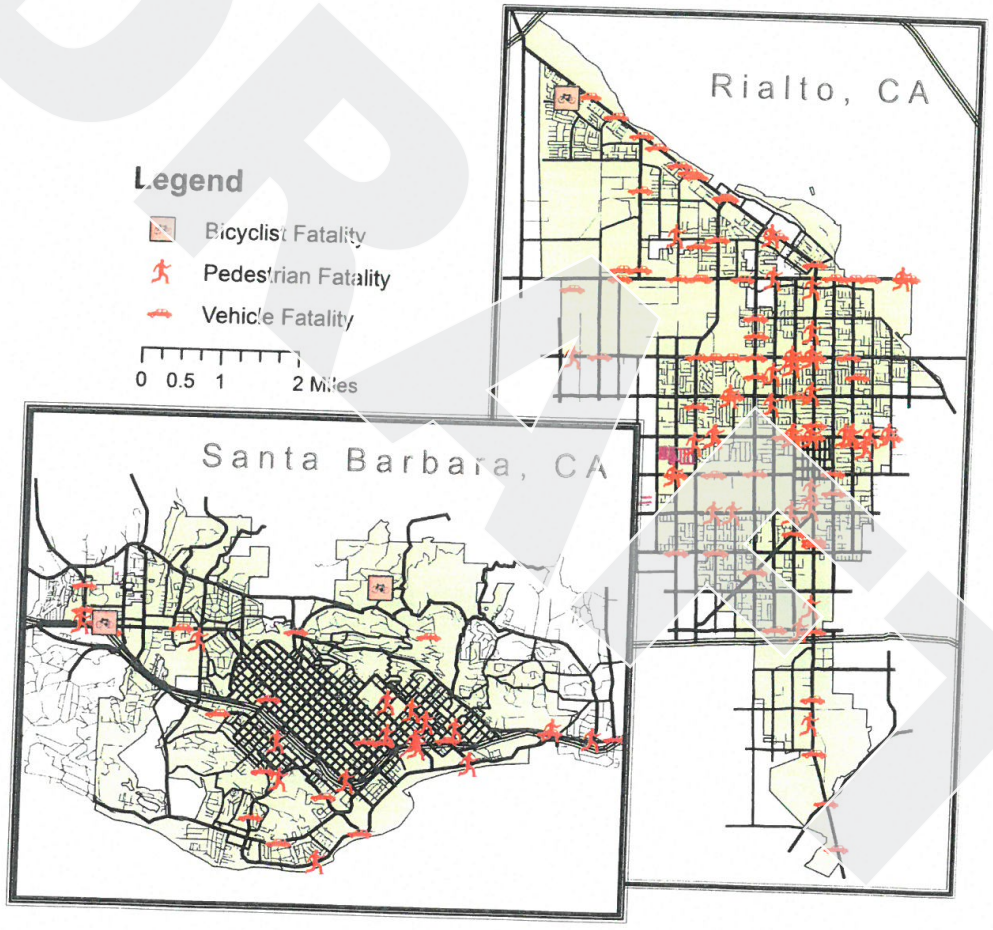

Figure 2 **Bicycle, Pedestrian, and Vehicle Fatalities for Santa Barbara & Rialto (1996-2007)**

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

For a bicyclist, the fatality rate is more than 75 times greater in the cities with the poor safety records compared to those with significant biking, over sixty times greater for a severe injury, and over seven times greater for all other bicyclist injuries. The safer cities with low bicycle mode shares had zero bicycle fatalities. However, in terms of all other injuries (including severe injuries) to a bicyclist, the crash rates were over 4 times greater in the low bicycling safe cities than in the higher biking cities.

Street Network Characteristics & Street Design

Overall, the variation in relative fatality rates, as well as the fact that a crash occurring in one of the less safe cities has a much higher chance of resulting in a fatality, suggests differences in the street network and in the design of the street. The data shown in Table 2 supports these findings. The constant factor for all three groups of safer cities when compared to the less safe cities was intersection density. For the two groups of higher bicycling cities, they also tended to be slightly more connected with fewer lanes and a narrower cross-section on the major streets than both groups of low-bicycling cities.

Table 2 Street & Street Network Characteristics

		SAFER CITIES		LESS SAFE CITIES
	High Bicycling	Medium Bicycling	Low Bicycling	
Street Network & Street Design				
Measure for Street Network Density				
Intersection Density *(intersections per sq. mi.)*	114.2	103.2	101.2	62.7
Measure for Street Connectivity				
Link to Node Ratio *(# links / # nodes including dead ends)*	1.39	1.38	1.25	1.29
Centerline Miles of Major Roads	49.5	45.9	26.9	65.2
Centerline Miles of Minor Roads	144.8	119.2	113.6	210.8
Total Centerline Miles *(average per city)*	199.0	169.6	146.0	281.8
Sidewalks	50.3%	38.3%	85.6%	48.4%
Bike Lanes	24.9%	23.6%	38.4%	15.6%
On-Street Parking *(% length of arterial / collector type streets)*	41.1%	28.4%	42.8%	23.0%
Avg. No. of Lanes	2.7	2.4	3.7	3.1
Avg. Width of Roadway Cross-Section *(average on arterial / collector type streets)*	50.9'	46.9'	59.7'	54.4'

In order to taking a closer look at intersection density with respect to safety, we developed the graphs shown in Figures 3 and 4. For all road users, the chance that a crash would result in a fatality tended to be lower for the cities with lower density street networks. This same trend was found for vehicle crashes, pedestrian crashes, as well as bicycle crashes.

As for the other street design considerations, we look again at Santa Barbara and Rialto shown in Figure 2. Overall, Santa Barbara had the fewest average number of lanes on the arterial/collector roads of any city in the database while Rialto averaged almost a full lane

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

more. Santa Barbara also has more than three times the length of bike lanes on these same roads and about 30% more on-street parking – all of which seem to play a role in the road safety and biking/walking outcomes for Santa Barbara.

Another interesting example is Carlsbad - one of the less safe cities - which also happens to have the highest percentage of bike lanes on the arterial/collector roads of all the cities in the database with nearly 70% of the total length of these roads having a bike lane present. However, Carlsbad is on the low end of the street connectivity and street network density range and also has the highest average number of lanes present on these major roads in the database. So even with a high degree of bike lanes present, Carlsbad's bicycle mode share is only 0.3%. On the other hand, Berkeley - one of the highest biking cities - has one of the lowest percentages of bike lanes present on the major roads. In this case, the difference might be in the fact that Berkeley has the highest street connectivity and street network density of all the cities as well as other strategies for accommodating bicyclists such as bike boulevards. This is certainly not to say that bike lanes are hazardous because the safer, high bicycling cities did in fact tend to have more bike lanes. For instance, Davis and Antioch find very similar population densities, street connectivities, and street network densities, but Davis has significantly better safety outcomes and also happens to cover almost 2.5 times more of their major roads with bike lanes. Overall, the results suggest that many of these street design factors, along with the street network measures such as intersection density, seem to work in coincidence toward helping create an environment with a higher degree of biking and walking as well as improved road safety.

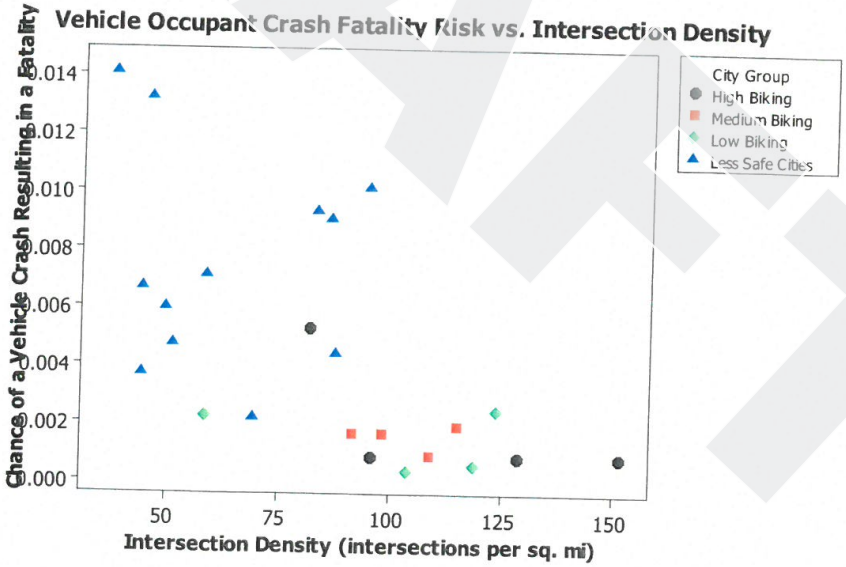

Figure 3 **Chance of Vehicle Crash Resulting in a Fatality vs. Intersection Density**

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

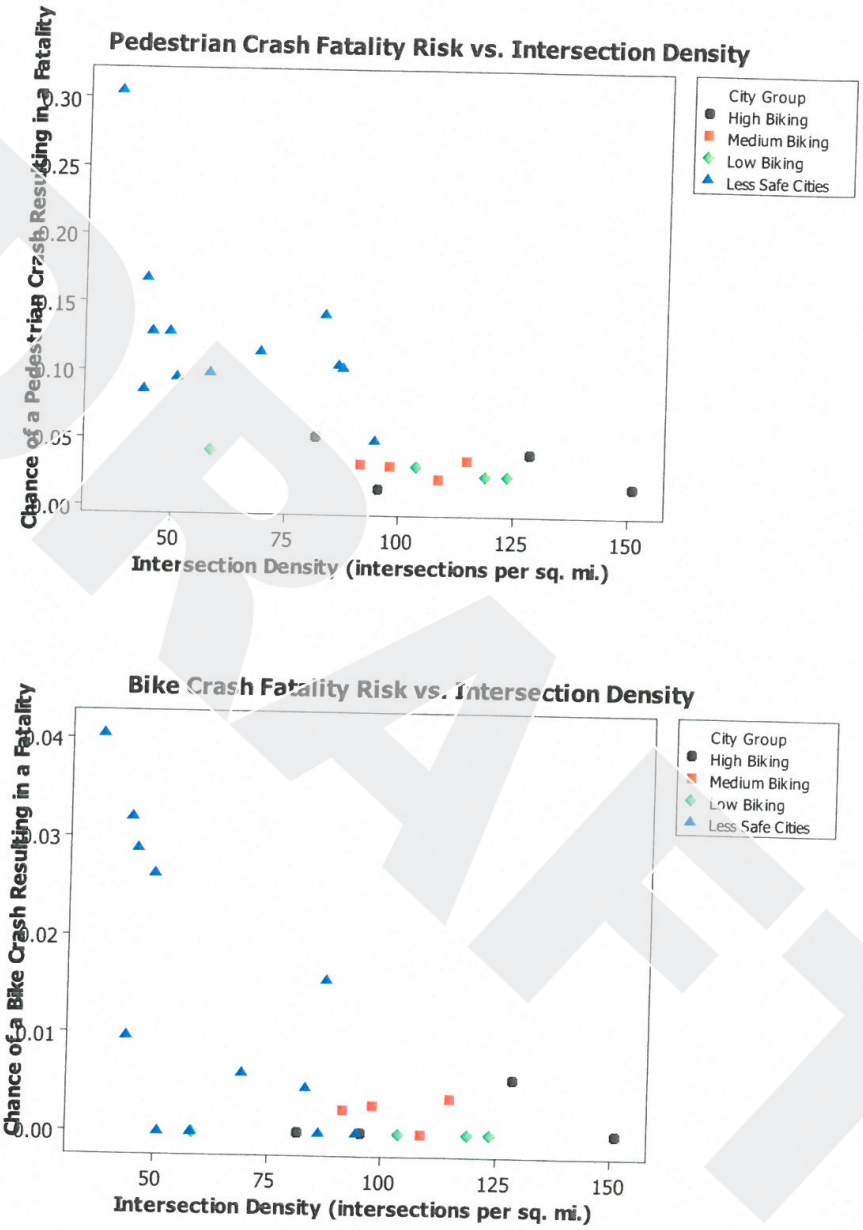

Figure 4 Chance of a Pedestrian or Bicyclist Crash Resulting in a Fatality vs. Intersection Density

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

CONCLUSION

High bicycling cities generally show a much lower risk of fatality or severe crashes for all road users when compared to many of the cities in our data base. The fact that this pattern is consistent for all classes of road users strongly suggests that the crashes are taking place at lower speeds in these high bicycling cities. The reason for lower speeds might be due to features such as traffic calming and other design elements that can help attract large numbers of bicyclists. Our street database contains some hints of these trends - for example, the high biking cities tend to have more bike lanes, fewer traffic lanes, and more on-street parking. At the same time, large numbers of bicycle users might also help lower vehicle speeds. It is important to note that the high biking cities do not necessarily have lower overall crash rates; rather, they have much lower severity levels for those crashes that do occur.

Our results also show that there is a group of four cities that have both low severity levels and low bike use. These cities represent an interesting hybrid exhibiting some characteristics in common with both the high-bicycling/low fatality cities as well as the low-bicycling/high fatality cities. These four cities tended to have high intersection densities similar to the values found in the high-bicycling cities; they also tended to have low levels of street network connectivity, more akin to the low-bicycling/high fatality cities. In other words, this subset of cities featured local streets high in cul-de-sacs but at a relatively high density. These cities also reveal some other unique features that might contribute to their lower fatality rates, including far fewer major roads than found in the other city groups.

Overall, the biggest difference found between the three groups of lower fatality cities and the high fatality cities was intersection density. The graphs depict the relationships between fatality risks and intersection densities for vehicle occupants, pedestrians, and bicyclists, respectively. Our results consistently show that high intersection density appears to be the single most important street design factor affecting crash severity. However, there appears to be other factors at work in leading to these lower fatality rates for both the high-bicycling cities and the low-bicycling/low fatality cities. In the case of the high-bicycling cities, these factors might include the work done to make the streets attractive to bicyclists as well as the sheer presence of many bike riders. We do not yet have the data to disentangle these effects, but our results strongly suggest that safety benefits for all road users can be derived from an amalgamation of the steps taken to attract more bicyclists; that is, as long as we define safety in terms of reducing fatality and severe crashes and not just in terms of reducing overall rates of crashes. Improving the streets to accommodate bicycles may in fact lead to a self reinforcing cycle that can help enhance overall safety for all road users. This combination of factors seems to go a long way toward overall safer and more sustainable cities.

Subject: Re: 4 way stop at the corner of Cipriani and Carmelita
Date: Wednesday, October 6, 2021 1:45:23 PM

Thank you so much for the quick and thorough response! What you are saying makes a lot of sense and I appreciate the background / recommendations.

If there is any way to possibly continue to look into stop sign installation, I would be interested to hear if it might be possible. However if it's not, that will be the end of it!

Thank you again for your time and please let me know if this might still be an option. I would be happy to pursue this through a different channel if this is not the right one.

With appreciation,

Jackie Sinnott

On Wed, Oct 6, 2021 at 1:15 PM Charles Stone - Mayor <cstone@belmont.gov> wrote:

Hi Jackie,

Thanks for reaching out and welcome to Belmont and the neighborhood. My kids (now 17 and 15) walked from my house on Read to Cipriani pretty much every day from the time they were 8 or so through completion of 5th grade. I know the area and the intersection well. I'm not aware of any Cipriani safety initiative. I don't think that's accurate. I think there might some confusion arising out of recent parks and rec PROS advisory committee.

Pedestrian safety is a high priority to the council and we've shown that in a lot of our actions. That said, inheriting a city where many of the roads don't have sidewalks sure doesn't make it easy. Those decisions were made in the 50s when the neighborhoods were being developed and while we are requiring sidewalks in conjunction with residential construction projects where it makes sense, it's still far from ideal. But there are realistic and insurmountable obstacles to adding sidewalks on Cipriani.

When it comes to stop signs and things like that, we rely on our public works department and our police department. I don't think the parks and rec department/commission would have any involvement although they do deal with our bike/ped plan.

That particular intersection received crosswalks for the first time a few years ago in response to some residents' request. There was some concern at the time that the safer bet was to discourage kids from crossing at that cross walk and direct them to cross at the four way

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

stop at Cipriani and Buena Vista or Cip/Ponce. That's what the safe routes to school program used to show to my memory. I actually was concerned that installing the crosswalks would lead to more kids crossing there without the protection of a stop sign which would create a higher risk of danger, but some residents felt differently. IIRC, I think we looked at stop signs at that location then. I ***think*** that we can't put in stop signs at that Carmelita/Cipriani based on state law site line requirements. That said, I can't say with certainty that I am remembering correctly so I'm copying our excellent city manager (who was public works director at the time) Afshin Oskoui, our current public works director Peter Brown, and our interim Police Chief Ken Stenquist so they can add anything germane.

In the meantime, I ***highly*** recommend that anyone crossing with kids or any kids crossing without adults use the fourway stops at Buena Vista/Cip or Ponce/Cip depending on where they are coming from. That's much safer and has minimal impact from a walking time perspective (having done them all many times over the past 12 years.)

Thanks again for the contact and we'll follow up.

Charles

(I've also copied our parks and rec director just in case I've missed something that she knows of.)

Subject: 4 way stop at the corner of Cipriani and Carmelita

Hello City Council and Park and Rec,

I was informed that you will be reviewing safety ideas in the Cipriani area and I wanted to reach out. We live at , somewhat new to the area, but have one in Kindergarten at Cipriani now (and another in preschool).

We love Belmont, but have missed having consistent sidewalks and noticed many blind corners in an otherwise safe and family friendly neighborhood.

With school back in session, one easy solution I see to making the neighborhood safer right here, is a **4 way stop at the corner of Cipriani and Carmelia.** There was an accident there two weeks ago, and many families near or crossing at that intersection daily. With poor visibility and no sidewalks, cars zooming by without a stop seems especially dangerous. Just today while I stood in the painted crosswalk (after walking my Kindergartner to school), three cars drove quickly past me while I waited for one to stop (disregarding me, the crosswalk or the fact that pedestrians have the right of way).

A 4 way stop at that intersection would be a great improvement to this neighborhood. It would make it a safer place to cross, possibly encourage more people to walk/bike to school and slow traffic in general, in a neighborhood with many kids out riding bikes and walking daily.

Thank you for your consideration!

Jackie Sinnott

Subject: Re: Belmont Parks and Recreation Master Plan - Advisory Committee Meeting #3 Thursday
Date: Sunday, October 3, 2021 1:15:13 PM

Hi Kelley,

Thank you so much for this invitation. Unfortunately I did not get this email until it was too late. Is there a way that the communities involved with wanting to give input can send information via email? I've heard from a couple people that they would've needed more of a heads up. Been able to attend.

Please let me know, I'd like for her to be proper input for this process. Thank you!

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

From: Meredith Larsen
To: P&R Comm; City Council
Subject: safety in Cipriani
Date: Wednesday, October 6, 2021 12:09:55 PM

Dear City Council and Parks and Recreation Committee,

I have lived in Belmont for 6 years on Carmelita Ave at Cipriani. We have two young children, one who will start at Cipriani next year and hopefully we will walk to school. Thank you for putting in a crosswalk at our intersection. Our block is often parked on by Cipriani families who walk to school and use that crosswalk. Unfortunately, the crosswalk (while well intended) is in a very dangerous intersection around a blind curve with hedges that are rarely cut back by the neighbor. There was a two vehicle accident there about two weeks ago and very often when we drive out that way, we almost get into an accident from an oncoming car going downhill way too fast on Cipriani. I would never let my children walk to school using that crosswalk by themselves and as I said, I use alternative routes to make the turn onto Cipriani from Carmelita.

I understand you are having a meeting about walking and street safety. My neighbors and I would LOVE to have a 4 way stop sign at the intersection of Carmelita and Cipriani. I understand that it's a route for the fire trucks and emergency vehicles, but hopefully they could go through quickly even with the stops in an emergency- as they do at Ponce and Carmelita. More safety and possible sidewalks are definitely needed in this area where we have Cipriani School and Semeria Park.

Thank you for your consideration and let us know how we can further support the installation of stop signs at this location.

Warmly,
Meredith Larsen

To: P&R Comm
Subject: Convert tennis courts to pickleball courts
Date: Saturday, November 13, 2021 10:49:53 PM
Attachments: Video.MOV

Dear Parks & Rec Commission,
I've spoken to you in the past about the growing popularity of Pickleball and how great it is for communities.
It's a sport that anyone can show up, alone or with a group and has a traditional rotation of games that end when one team reaches 11.
For every 2 tennis courts, you can convert to 6 pickleball courts simply and while not having to spend too much.
But again, the most important thing is how great it is for the community.
Please see the following video of Foster City's Pickleball courts and you will see how many people enjoy it.
There is no downside to converting a couple tennis courts to 6 pickleball courts.
What will it take to finally make this happen?
Please send me a reply so I know.

Sincerely,
Greg Cala

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Parks and Recreation:

My general comments regarding the current Park proposal for Ralston Ranch Park.

Firstly, I am unsure as to why the park limits are not extended all the way to the edge of sidewalks on Ralston Ave. It would make sense that this portion be included so that P&R can be responsible for maintaining and up keeping the entire area. It does not make sense to exclude this area as it provides another natural location to plant mitigation, replacement and screening trees for the community.

Screening trees are important as they provide mitigation from wind, visual intrusion, natural screens for wildlife to pass through the community, and on occasion an obstruction for wayward vehicles that come off Ralston Ave. Yes, this has happened and more than once; and the last one made it pretty far down the hill.

As for the elements of your plan:

DOG PARK
I am not sure that this location is the best and most appropriate location for a dog park.

Typically dog parks service wider community areas. Cipriani is the much better dog park for the overall community and services much of the local community in our area. Regardless, the proximity of Cipriani would limit the usage of this specific dog park to a smaller, defined part of the community and more than likely nearby San Mateo residents.

Residents of both of the Belmont communities should be the focus of this park and they both have established trailheads into the great open park areas adjacent to these communities. We have numerous dog owners in the community, including myself, and I personally prefer to walk my dogs through the trail system so that both the dogs and myself get exercise. So as a dog owner adjacent to this park, I would probably rarely use it. I am sure that will be true for most of the RRR community.

This type of park also does not have great parking and access. The roadway set up with one exit probably is not great for any more added traffic. Every person parking to access the park would have to work as a single trip in each direction for each visit. There are already bikers and hikers that use the trailhead at the cul de sac that park along the street, and most of these users also go out illegally through the Christian exit. This is just another traffic safety risk, especially at that intersection.

As I see it, most of this community would not necessarily use the dog park. However, most of the park is being captured as a dog park. As stated I am not sure that is the best usage of the space in the park for the neighborhood and the community.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

If having a dog park to service this part of the community is important to P&R, I would suggest studying other location and more specifically a dog park at Fox Elementary School as an extension of your JUA. This would be much more ideal as it supports a wider section of this community, including the Hallmark neighborhood. It allows for better usage of the park spaces and a more functional dog park, with much better access and parking.

GATHERING/PICNIC AREAS

Gathering areas are fine as long as they are well maintained and policed. We already have local experience with the attractive nuisance at the lookout with the drinking, smoking and sexual activity only 500' away. As a result, there is much apprehension from providing just another location for bad behavior to occur even closer to our homes.

Regardless of this, the plan placing these gathering spaces, picnic areas and such directly adjacent to the homes is not good planning. These should be located farther away to preserve and protect the privacy of this home owners. This is another consequence of having most of the functional space being used for a dog park. If you remove the dog park, the other tier 2 amenities can be better situated farther from the homes, including any play structures, gathering areas, picnic areas, garbage receptacles, etc. It would also create one specific space that is more open, and that is easier to access, use, maintain, and police.

This still does not mitigate the parking and traffic related issues. The goal should be to make this park be a destination primarily for the local communities surrounding it and not to draw in people from outside the community neighborhoods, especially those that have to specifically access it by car. Better for the community and better for the environment. We appreciate this upcoming forum to discuss the park as I think getting a better understanding of what the actual local affected communities want from this park is beneficial and good planning.

Ultimately, I think that maintaining or preserving as much of the park as open space is probably a more ideal use of this park space. Your current online survey also seems to bear this out as only a very small percentage view the current space as unsatisfactory. If you eliminate those with no opinion than 85-90% of the respondents feel that the park in its current condition is excellent or satisfactory with over 60% of that in the excellent column.

I would also recommend that any additional, replacement or mitigation trees be planted along the perimeters of the park especially at Ralston Ave and adjacent to those homes closest to the park to continue to provide both natural visual, privacy and wind barriers.

Regards,

Roy and Maria Schnabel

Subject: Ralston Ranch Park

Hello City Council and City Clerk

Thank you for allowing us to make comment on the planning of the undeveloped Ralston Ranch park area. I was able to join and participate in the virtual focus group meeting held in Oct. My husband and I are hoping that this undeveloped park can be considered as a tier 1 park (available for local neighbors, by foot within 1//18 of a mile radius) to meet the needs of this neighborhood. We believe that deeming it as a tier 1 park will provide access and enjoyment to all in the neighborhood. Let me clarify why.

Ralston Ranch Road is unique. It is surrounded by open space, with one side butting up to our main through way in Belmont, Ralston Ave. This piece of open space called Ralston Ranch Park is a necessary piece of land for our wildlife in the canyon. This area allows our wildlife to move freely from one side of the open space to the other. Neighbors have seen and captured on camera multiple species of wildlife traveling through this small piece of land to access either side of our open space areas.

Ralston Ranch Road has wide streets with parking available. However, one side of the street is a one-way only, coming in from Christian Ave. Our concern, as we've seen from people parking cars on the street to use the trails, is that the cars will go out the wrong way, and use our driveways to turn around to leave the street onto Ralston. It is a horseshoe shaped street with a blindspot at the bend especially when the sun is set low, either in the morning or at sunset. With the street being wide and on a hill, people tend to also drive too fast, especially around the bend which can lead to increased chances of accidents.

Ralston Ranch Road is in a great location with easy access to the 92 interchange. However, this easy access to the 92 interchange, is a concern. If the Ralston Ranch Park is developed into a tier 2 park, it would invite people from outside of our immediate area, making it a place to congregate with possible unwanted visitors. Please don't make our neighborhood more susceptible to crime and destruction of our property. In addition, if it becomes a tier 2 park

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

area, then there will be more trash that will be blown around on our street, ultimately landing into the waterways and open space area.

Please consider that if a dog parklet, playground or other tier 2 type of development is created on Ralston Ranch Park, it will greatly impact our safety, the traffic on our one street, and the wildlife. Belmont has 2 dog parks. Wouldn't those asking for a dog park in Belmont prefer it to be placed somewhere else, closer to where they live to give them equal access? A small, simple playground might be feasible, but has the city assessed how windy, foggy, damp, and cold it is at the top of Ralston Ave.? There is a marked change in temperature from the intersection of Alameda de los Plugas and Ralston Ave to the intersection of Ralston Ranch Road and Ralston Ave.

As a neighborhood, we would like to keep Ralston Ranch Park as open as possible, with as little impact as possible to nature and our safety. Please consider this space for walking paths, a meditation walking circle, and/or a simple bench to sit on to enjoy the view. This will allow the wildlife to move freely, and keep the neighborhoods around Ralston Ranch Park safe.

Thank you again for the opportunity to provide input in how to create our undeveloped parks in Belmont.

Respectfully yours,
Carol Rossi

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

From: Paul Sheng
To: P&R Comm; info@belmontprosplan.com; City Council
Subject: Follow up on Hidden Canyon Park issues discussed at 11/3/21 meeting
Date: Friday, November 5, 2021 9:19:55 PM

Dear City Council, Parks & Rec Commission, and PROS Committee:

I watched the 11/3/21 meeting on Zoom and wanted to offer some input on Hidden Canyon Park. First, I thought Gates & Associates did a great job in presenting the draft parks improvement element of the PROS plan. I think the Parks staff and Gates have done a fantastic job of doing a needs assessment for our parks and recreational opportunities. The needs assessment shows a very clear need for additional parks in Belmont. Ralston Ranch and Hidden Canyon have been identified as two tremendous opportunities to fill our community's needs - particularly Hidden Canyon which offers the largest opportunity, both in terms of acreage and the proximity to the widest population.

I was unable to make the focus group meeting for Hidden Canyon, but a friend of mine did and I was very disturbed by what he told me. It's my understanding that nearly 100% of the participants were either homeowners from the Hidden Canyon development, or homeowners / political operatives from Belmont Heights such as Pat Cuvielo, Deniz Bolbol, and Kristen Mercer. There was not a single renter or landlord representative from any of the many nearby apartment buildings that house thousands of renters. If you take a look on Zillow, you can see that the Hidden Canyon housing development consists of 31 single family houses, with market values ranging from $2.2M to $2.7M. These are among the priciest homes in the city, if not the priciest.

As you know, the guiding principles of the PROS plan include the following points, among others:

- Provide equitable access to resources and activities across the entire city
- Promote inclusion to people of all backgrounds, regardless of race, gender, sexual orientation, socioeconomic position, or physical/cognitive ability
- Make all users feel welcome and safe
- Adapt to changing conditions and needs

I'm concerned that the first two principles, equitable access and inclusion, are being steamrolled by elite special interests in this process. During the Parks & Rec Commission meeting, David Braunstein (PROS Committee member and former Belmont Mayor / City Councilman of 8+ years) made strong public comment advocating against *any* improvement in the Hidden Canyon park. He made an analogy that "just because you can build improvements in something like Yellowstone Park, it doesn't mean you should do it." In my opinion this is a false analogy. That analogy would be valid if there was a proposal to build things within the boundaries of the Open Space, but no one is proposing to do that. As you know, Hidden Canyon Park is a parcel of land that is *already dedicated to city park use* that sits between the Hidden Canyon development and the Waterdog Open Space. In the 1990s, the

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

developer was *required* to grant that parcel to the city *to be used as a park* as a condition of the development permit. Specifically, the 1994 City Council resolution approving the Hidden Canyon tract states ". . . The 5.6 acre park area shall be dedicated to the City of Belmont for the provision of a park" and "The proposed park area will consist of a trail head, drinking fountains, and picnic tables to be developed by the City at a later date, subject to approval by the Parks and Recreation Commission." See https://ecmx.belmont.gov:81/Image/DownloadPdf/133919

It seems to me that Mr. Braunstein, as well as the 30 other households in the wealthy Hidden Canyon neighborhood, have a vested interest in keeping that city park lot barren and unappealing. Apparently they feel improvements would increase traffic on "their" street. I put "their" in quotation marks because Carlmont Drive is of course a public street paid for by taxpayer dollars, which everyone has the right to use.

It would be a tremendous shame to see Hidden Canyon Park - the biggest opportunity we have to add desperately needed park infrastructure - lay fallow for the next 20 years, as it has for the past 27 years. In the sale and re-sale contract of every home in the in Hidden Canyon tract, there would have been a disclosure that the 5.6 acre lot at the end of Carlmont Drive was designated to be a city park. Over the past 27 years, it appears a sense of entitlement has developed in that neighborhood that they can keep that land fallow for their benefit, which is to the detriment to the entire city. Of course, as adjoining neighbors to the city park land, they are important stakeholders, and the process needs to consider the impact any development will have on them. However, I feel like in the process thus far, their voices are dominating the discussion to the exclusion of almost everyone else.

Consider this: the undeveloped Hidden Canyon park land is 5.6 acres. *That is roughly the same size as Barrett Community center*. We have a choice of either providing all 30,000 citizens of our city with 5.6 acres worth of parkland to fill an unmet need for our increasing population, or we can kowtow to interests of 31 of the city's wealthiest households so they can have marginally fewer cars drive down "their" street. I think everyone is in agreement that development of Hidden Canyon Park should be as congruent with the natural setting as possible. It is not an appropriate place for things such as plastic playground equipment or splash pads. (However, a permanent bathroom would be a welcome addition - it would especially be appreciated by seniors and families with small children.) I really liked Commissioner Michaels' idea of a staff outpost with outdoor classroom space. That would provide a great launching point for city staff-guided nature walks, fishing clinics, etc. Something like a scaled-down version of the interpretive center/restroom building at Arastadero Preserve in Palo Alto is something that would fit nicely in the space.

I have a question about the process as it pertains to Hidden Canyon Park. Mr. Braunstein is on the PROS Committee, he lives in the Hidden Canyon tract, and he has now gone on public record vigorously opposing any development of Hidden Canyon Park. (Mr. Braunstein has every right to express opinions at public meetings as a private citizen, and I have no issue with him expressing his opinions at the last Parks & Rec Commission meeting.) However, it seems like a conflict of interest for him to participate on the PROS Committee on items relating to Hidden Canyon Park.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

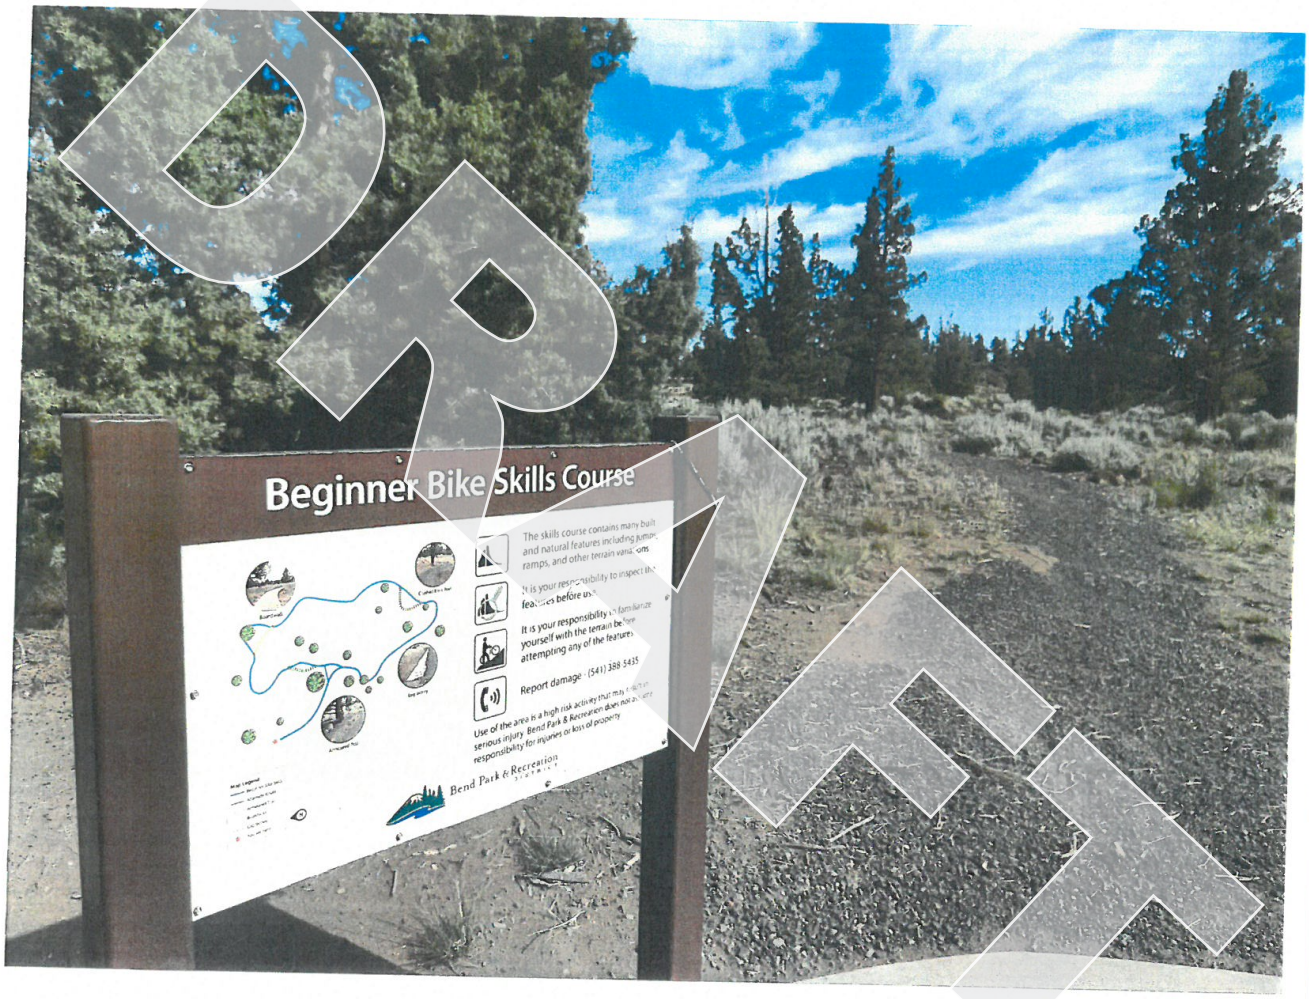
During Parks and Recreation Commission meetings, Commissioner Mittelstadt recuses himself when items of Commission business come up on trails adjoining his house. However, as a member of the PROS Committee, don't the same legal or ethical rules require Mr. Braunstein to recuse himself from items of PROS Committee business adjoining his house?

I feel the Hidden Canyon Park issue is just one example of a larger issue with the PROS process that City Council and the Parks & Rec Commission needs to address. We need more balance, more equity, and more inclusion. Of course, every citizen on every side of the issue has the right to speak and be heard. However, the discussion is being dominated by "ghosts of Christmas past" - politicians who have been voted out of office years ago, and would-be politicians who don't have enough support to get into office. At each and every meeting, we are hearing from Deniz Bolbol (losing City Council candidate from 2018 election); Pat Cuvielo (losing City Council candidate from 2020 election), Kristen Mercer (former Planning Commissioner appointed by a prior political regime), and now former mayor/councilman Braunstein. It is a loud, constant drumbeat from the same tiny group of people every time. This is the least diverse demographic group I can possibly think of. They are all white, middle-aged to older retired or semi-retired political operatives who own $2.2M+ houses adjoining open space. To be clear, I am not saying these people should be marginalized or excluded from the process; I absolutely respect their First Amendment right to speak. However, they do not have the right to dominate every discussion and dictate how our community uses our land. There should be more balance in the process and more input from a broader and more diverse group of community members. More outreach is needed so regular community member voices can get heard over the roar of former/would be politicians.

Finally, I want to make one thing very clear: I am by no means critical of Parks Director Shearer, Gates & Associates, or their respective staff. I think they are all doing a fantastic job with the PROS plan, and the issues with the process are not due to them, but rather the constant barrage from this group of political operatives who are aggressively trying to dominate the agenda. I have a concrete suggestion to bring some balance to this process, at least as it pertains to Hidden Canyon Park. There has already been a Hidden Canyon focus group meeting that was well-attended by the Hidden Canyon homeowners and Belmont Heights political operatives. How about conducting a second Hidden Canyon / Carlmont *renter* focus group? It will take some outreach to get those folks to the table, but it is well worth the effort. It just seems unfair and inequitable for policy decisions to be made on the basis of input from one tiny special interest group.

Thank you for taking the time to read my lengthy email, and I very much appreciate all the time and effort you are all putting into our PROS Plan process.

Regards,



Paul Sheng

From: Charles Stone - Mayor
To: Ed Seubert
Subject: Re: New parks
Date: Saturday, November 27, 2021 2:48:29 PM

Ed,

Thanks so much for the email. The city talked to NDNU about potentially buying the property about 4-5 years ago when the lead term was ending. They weren't even close to a ball park we could afford, so we exercises our fifty year option for a really insanely cheap deal. It would be financially irresponsible for us to buy it for what NDNU wants while we can lease it as cheap as we are contractually able to.

I love the idea, but the improvements you suggest are also far, far outside our financial wherewithal (for now.) in terms of parks/rec big expenditures the community center is probably next on the list and we're still unsure how to pay for that. It would likely take a tax measure.

That said, I'll spend some more time thinking about it.

Be well,

Charles

Mayor Charles Stone
City of Belmont
One Twin Pines Lane
Belmont, CA 94002

Unless otherwise noted, the opinions, viewpoints, and perspectives contained in this email are my own, and do not represent the official position of the City of Belmont or its City Council. Please do not share those opinions, viewpoints, and perspectives with other members of the Belmont City Council so as to avoid the potential development or appearance of a consensus outside a scheduled public meeting, which is prohibited under California's Brown Act. I also respectfully request that you refrain from sharing the opinions, viewpoints, and perspectives of other Belmont City Council members with me. If you are contacting me about a development application or appeal that is pending before the City Council, I am not able to read your email because it constitutes an ex parte communication. I will, however, forward your email to city staff and it will be made part of the record. Thank you.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Site Visitor Email

I realize I'm late to the party but here's an outside the envelope idea I've had for many years. NDNU appears desperate for money. Buy Water Dog Lake from them. Build trails to access the water, and improve the lake and dam's appearance. Allow swimming. Surface the outflow all the way to the bay. Start buying properties along the stream course as they become available. Develop a linear park along the shores of the creek with walking trails, benches, observation platforms, history and nature interpretive signs, etc. that nearly transects the city. The city has two absolute gems (the lake and the creek) within its boundaries but their potential for enhancing life in the city has been usurped and/or squandered to date. Once you get over pondering the opposition and impossibility of this idea, try imagining how life would be different if our city had, as its central statement, an accessible lake where we encouraged people to cool off and have fun and a miles-long streamside park.

Subject: Comments on Parks element of PROS plan

Dear Parks & Recreation Commission:

I thought the format for discussing the various parks at the 1/12/22 Parks and Recreation Commission meeting worked out very well, and the meeting was very collaborative, creative, positive, supportive, and productive. I know that emailed comments about parks are being tallied in the PROS plan, so rather than sending a separate email about each park, I will submit all of my input in this one email by highlighting the park name in bold, and ask that Gates & Associates tally these comments separately for each park.

Patricia Wharton Park – I think the draft improvements are great, and I think That Comr. Foehr's idea of putting in boulders for small kids to climb on is an excellent idea.

Wakefield Park – same as above, a walking path would be great. Again, excellent idea by Comr. Foehr for an observation deck for visitors to take in the view. In looking at Wakefield Park on Google Maps, it has a large barren area. Maybe that would be a place to consider a neighborhood pump track.

Belamdea Park – all the draft improvements look great, and the proposal for a teen outdoor experience is a fantastic idea – our teen population is underserved and there's not much for teens to do after school. Many end up aimlessly hanging out at Carlmont Shopping Center. A teen outdoor zone at Belameda is very close to Carlmont High and would be an absolutely perfect location for that amenity.

Hidden Canyon Park - I agree wholeheartedly with Comr. Michael's comments at the prior meeting, and they're worth quoting here:

"I also believe a big part of this connection with the community does happen through Hidden Canyon. I think we should have an open space outpost here, offering a natural transition from city to park to open space. We should run staff programs here. Let little kids sample nature here. Offer wildlife education. Invite everyone to learn, respect, and help out. There's a ton we can do to enhance our open space while not turning the site into a manufactured, high-volume destination. In a smaller way, I think we should replicate this at all our major trailheads."

I want to make a couple of points in response to public comments made by Deniz Bolbol, Pat Cuvielo, and Kristen Mercer, who were aggressively railing against any improvement to Hidden Canyon Park. They stated that Hidden Canyon is classified as a Neighborhood Park in the Master Plan, which is defined as "A medium-sized park ranging from 2 to 10 acres that provides basic recreational activities for a specific neighborhood within a one-mile radius." That is correct.

But they went on to argue that because 10 or so Hidden Canyon tract homeowners essentially said "not in my backyard" to any improvement at the Hidden Canyon Focus Group meeting, no

1

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

improvement should happen there. They also seemed to argue that the Master Plan legally requires Hidden Canyon to only serve the interests of those homeowners. Not so.

First, as the Commission correctly pointed out, Neighborhood Parks are a *classification* in the Master Plan, not a restriction or mandate on how parks can and should be improved to serve the community.

Second, consider what is actually within a one-mile radius of Hidden Canyon Park: Go to https://www.google.com/maps/place/Hidden+Canyon+Park/@37.5034277,-122.300551,17z/data=!3m1!4b1!4m5!3m4!1s0x808f9f62b039d777:0x84c7f24c0202cd4d!8m2!3d37.5034277!4d-122.2987105?hl=en and right-click your mouse pointer on the red marker for Hidden Canyon Park. A dialog box will come up. Click on the last item "Measure distance." Zoom out a bit, and then left-click your mouse on Casa Bona Avenue at Semeria Park. A line will appear, drawing a 1-mile radius to that point from the center of Hidden Canyon Park. If you left-click and hold the mouse pointer on the circle at the end of that line (the one at Semeria Park), you can rotate the line to see what's within a one-mile radius of Hidden Canyon Park. That one-mile radius encompasses at least a third, if not more, of Belmont's residential areas. It includes, for example:

-all of the homes, condos, and apartments in the Carlmont neighborhood;

-most of the homes in the area behind/between Barrett Community Center and Notre Dame University;

-all of the homes and apartments off Ralston near Charles Armstrong School and off Alameda near Carlmont High School (even past the Belmont border, well into the Devonshire area of San Carlos);

-a large portion of the Cipriani neighborhood surrounding Semeria Park and Cipriani Elementary;

-nearly the entire Belmont Heights neighborhood, from Tahoe/Yosemite Drive, all the residential streets that branch off Hallmark, and well past the San Carlos/Belmont Border at Hallmark and Crestview;

So even if one strictly views Hidden Canyon Park's classification as a "Neighborhood Park" under the Master Plan, then the "neighborhood" it serves -within a one-mile radius – includes portions of nearly every residential neighborhood in the city - and 100% of the Carlmont neighborhood, including all the apartments. (i.e. the highest-density neighborhood in the city.) Thus, under the Master Plan, Hidden Canyon park is intended to provide basic recreational activities for the *thousands of people who live within that radius* – not just the handful of homeowners in the pink townhouses on Carlmont Drive.

Commissioner Michaels' vision for improvements to Hidden Canyon to serve as a natural transition to the open space is entirely consistent with the Master Plan, and the overwhelming majority of people in Belmont would like to see this vision come to fruition in the PROS Plan.

Thank you for considering my comments, and thank you for all of the time, effort, and dedication you put into serving on the Commission.

-Paul Sheng

Subject: Staff undermines your transparency - Suggestions

Dear Park and Rec Commissioners:

I have participated and listened to many Park and Recreation meetings discussing the Open Space Master Plan updates including your recent Jan 12 commission meeting. I have also listened to several of Linda Gates powerpoint presentations and I do believe you all are attempting to do your best regarding transparency, encouraging suggestions and comments and I believe in your integrity in navigating this complex and at times, controversial process.

However, I believe all your efforts are being **undermined by your Staff reports.** Many of us don't have the time to comb through every presentation and fact check every Staff report and therefore rely on your Staff to give the public an accurate and comprehensive "executive summary", however, I am finding their reports increasingly **biased and not reflective of all the information and data available.**

For example, the January 12 Staff report on "Summary of Comments on Draft Park Improvements" summarizes email comments but ignores the important verbal comments from your Focus meetings. Community Feedback from the most important stakeholder, the Hidden Valley (HV) residents on Oct. 26, 2021, is omitted. Was there not enough time from Oct 26 to Jan 12 to consolidate all comments regarding HV and summarize in an objective report? How can they leave out the most important comments coming from the community stakeholders that will be forever forced to live with your recommendations and decisions?

HV callers on Oct 26 cited excessive traffic and parking already burdening their neighborhood. Several urged only small incremental
additions taking care not to increase use. Many opposed any fencing, dogs, gardens or artificial structures. None supported dogs, bike use, yoga or gathering spaces as the staff report claims in their summary. (Please read the comments for yourself which have been provided below from your youtube recording).

Further, the email comments from HV on the PROS website don't even add up to the Staff stated summary. In reality, comments overwhelmingly oppose development. Over half of email respondents asked to prioritize the natural setting and wildlife, and even those who support amenities qualify that they must fit and complement the natural setting.

Staff summary statements appear to represent biased visitor comments that are totally out of synch with HV actual comments. This leads me to conclude that certain members of your Staff are biased and undermining your transparency and credibility. Your Staff reports should be carefully reviewed prior to publication because that is the one document that the community can easily review among the myriad of documents, presentations and reports that you publish and these summaries should be fact checked and not "cherry picked"; comments should clearly be delineated between local resident and visitor comments and both represented.

Several immediate suggestions to increase your transparency and credibility:

4

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Suggestion #1 - If you are truly committed to transparency and integrity, your February review of Hidden Valley and Ralston Ranch park recommendation commission meeting should republish the Staff summary report with the Hidden Valley quotes that lists the residential community comments first and separately list below the visitor comments to clearly distinguish the two groups.

Suggestion #2 - It is now more difficult to find your Belmont Pros Plan on the City website having to navigate four clicks to find it (i.e. Depts, Park and Rec, Parks and Recreation Projects, and Pros Master Plan). Why don't you feature Belmont's most important 15 year "Green and Sustainable" Master Plan on the **home page** where the entire left hand side is totally blank with wasted space (https://www.belmont.gov). **Post your February meeting details for Hidden Valley and Ralston Ranch with the corrected Staff summary a week before your February meeting for residents to easily find and review.**

In addition, add the link (https://belmontprosplan.com/resources) on the home page which allows residents to easily find all the presentations, advisory meetings and community comments with ease. (Please update your resources page with Linda Gates *latest Nov 3 presentation*) and keep the link up to date.

Respectfully,
Jennifer Lien

Public Comments October 26 2021 – Hidden Canyon Focus Group PROS plan

Public comments begin @ 10 minutes https://www.youtube.com/watch?v=Jj48PQtG0rE

1.Patricia: Lived on the street 20 years, came for nature and its already high use and recent increase is exponential. Traffic already an impact on dead end street, already too many cars. Its' already highly used so don't try to add more to it.

2.Christine, Carlmont Drive original owner: This is *already* heavily used. Was aware of planned park but asking remember this is a quiet neighborhood and home – sanctuary away from hustle and bustle. Wants to see area cleaned up but NOT amenities that would encourage lingering in the park with groups and activities. Allow the space to remain quiet - not draw more use and attention. Loves open spaces and nature. Opposes restrooms and outdoor classrooms. Limited access, difficult emergency access.

3.Barbara, Carlmont Dr resident: It's already heavily used; speeding cars all day long and crazy at weekends with cars parked the full length of street. Maintenance and safety are already a problem that need to be addressed before you consider putting anything else there. Adding anything else would increase these burdens.

4.Deniz: I hope city listens to neighbors; these plans include things that will create conflict with wildlife. Bathrooms increase it as destination, draw people from a wider area. Gardening and dog park conflicts with wildlife (fencing, disruption, not natural) Needs to be as naturalistic and low use as possible, not a destination for others from the wider bay area.

5.Speaking from other side of town and should respect neighbors but also listen to whole city. Thinks something can respect the natural environment and not negatively impact residents but serve the whole city. Supports small pump track to complement trail use.

6.Jessie, Carlmont Dr. resident: Agrees with other residents; This is long dead-end road and single access is the bottleneck and in-out doubles the impact. Measure is not the size of the park – it's access. Make any changes incrementally because if you draw too much traffic you can't go back.

7.Homeowners on Carlmont: Enjoy natural beauty, favors open natural nature low key like picnic table or children's feature – nothing fenced or dogs that would change the open nature. Don't fill entire space – only add incrementally to gauge increased impacts.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Continued,
Public Comments October 26 2021 – Hidden Canyon Focus Group PROS plan

8.Shirley, Carlmont Dr. resident: Have you actually measured the traffic? Yes parks are open to all but this is already over capacity. It's not just the *park* size, its overall capacity so you need to consider the balance across different areas – wants to see study done of projected added impacts before.

9.Kelly, Carlmont Drive resident: Agrees with Shirley and Jessie – first evaluate existing evening and weekend traffic and how much can be added. Existing parking inadequate. Keep natural setting, i.e. picnic and children's feature but not fencing or dogs. Already *not* maintained; restroom smells and dogs off leash not enforced; fears more use and lack of enforcement.

10.Pat, Belmont resident: This park is specifically identified in the General Plan to serve a *neighborhood*, even though it is open to all. The notion that an open space is undeveloped simply because there are no human-built structures is wrong. Wildlife uses it heavily and they were not polled in the survey. No fencing, paving or play structures - would conflict with the wildlife that uses and moves through the area. Consider picnic tables but ensure food-trash is secured from wildlife. Opposes restrooms or permanent structures.

11.Think of all Belmont as a park; think about reducing local traffic by making streets more pedestrian/bike friendly to help all parks.

12.Echo Pat– this designated undeveloped because it was intended to be natural space compatible with the natural setting it is in. Humans need to resist the urge to build on every space we have. Dogs and gardening are inconsistent with natural setting. Regardless of safe streets if you're attracting visitors from a wider area they will drive. Should be natural, consistent with undeveloped open space.

13.Space is flat and barren in summer and muddy in winter, needs facelift. Supports restroom, kids play area but with rocks and natural materials, more oak trees maybe some picnic tables. Concerned about classroom use.

14.Cindy, Carlmont resident: First bring current amenities up to standard; disrepair, trail signs, invasive species. Start slowly on current problems before adding.

Closing: Brigitte assured there would be no barbecues or fire pits.

Consultant assured attendees that they would listen and consider resident input. We're trying to provide amenities for the next 15 years. Further comments please email info@belmontprosplan.com.

Subject: Pros Plan for Ralston Ranch park area

I am Bob Stahl, an advisory member of the Belmont Prosplan.
I want to let you know I've been receiving multiple emails from residents of the Ralston Ranch area who are against placing a dog park in the planned park area. They cite the limited street parking, narrow road, and increased traffic in the area from people coming from outside the area. They also believe installing a play structure is not in keeping with the naturalness of the area.
Please take this into consideration in your planning.
Thank you.

Subject: Ralston Ranch Park development

Dear Park and Rec,
I would like to make sure that the neighborhood thoughts regarding the development of the Ralston Ranch Park are clearly expressed to PROS and the Park and Rec Commission. Based on comments made on the zoom meet, we want to make sure that the park stays as natural as possible to allow for the wildlife to roam through easily to access either side of the canyon around the neighborhood. We also expressed support of making sure this space allows for the local neighborhood, which is defined as a 1 mile radius, to have equitable access to the park. We are in support of having the city develop a sitting area and walking paths through the park, with the additional suggestion of a meditation walking circle. Overall, we aren't opposed to a simple, small play structure, however we highlighted 1. our neighborhood is windy (one of, if not the windiest neighborhoods in Belmont- not conducive to being outside for extended periods of time) and foggy, 2. the play structure should not be placed up against the fence line of the neighbors properties but on the side of Ralston, 3. neighbors being concerned about trash accumulating and being blown around (as it is not maintained at the vista point), 4. bringing extra traffic into the neighborhood with the bend in the street (blind spot when sun is low in the sky at sunrise/sunset) and the 1-way turn around at the Christian exit, that a lot of outsiders use as an exit. Please consider that this property will require a significant amount of grading and that with erosion/water damage over time it will erode the natural drainage for the trees that are currently in the park. If the city puts in a seating area or a playground away from the residents fence line and closer to ralston avenue, it may need to consider building a retaining wall. A small playground or sitting area may possibly attract teenagers who might drink and smoke and cause a fire. In addition, the city will need to assess the PG&E line that runs along Ralston and goes to the station (at Christian) on Ralston Ranch Road. The line crosses somewhere from Ralston to Ralston Ranch Road. We do strongly oppose a dog park for many of the reasons stated above. Passive development (walking trails, meditation circle, sitting areas) for the Ralston Ranch Park is supported by this community. We appreciate the PROS committee reaching out to the local residents and hope that our opinions in developing the Ralston Ranch Park will be respected as it moves forward in developing our undeveloped parks in Belmont.

Thank you, Carol Rossi

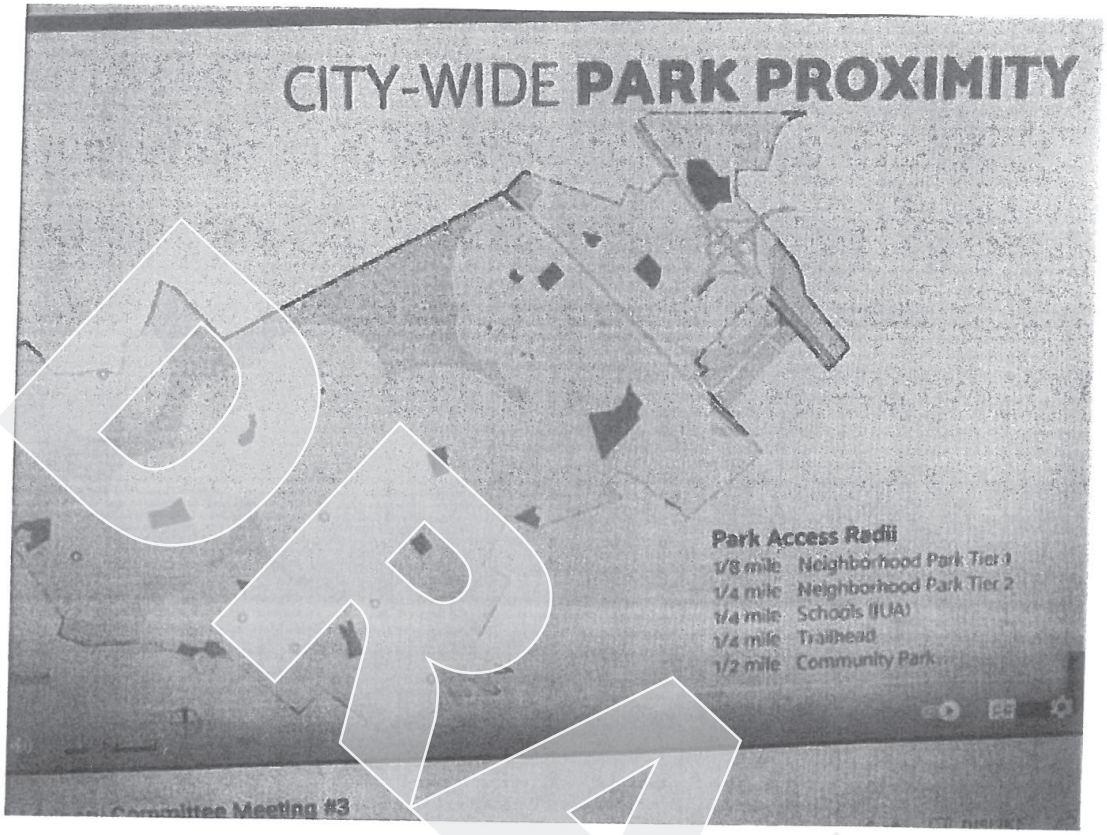
To: PROS Committee; P&R Comm
Subject: Hidden Valley Neighborhood Park Defined in General Plan
Attachments: GPsection4ParksOpenSpace2015.pdf

Dear Commissioners and PROS advisory representatives,

Confusion about the designation of *Neighborhood Park* vs. *Community Park, Mini Park, and Open Space* has created community conflict.
The 2035 General Plan Parks Element, section 4.2 (attached) differentiates between the classes of parks by size and appropriate use, and clearly Hidden Valley is intended as a "Neighborhood Park".

> 4.2 PARK CLASSIFICATIONS
>
> The City provides its residents with several types of parks and recreation facilities. Parks and recreational facilities are classified as follows:
>
> - **Mini Park.** A small park ranging from a quarter-acre to 2 acres that is located within a residential area and is intended to provide play areas for small children or passive sitting areas for residents within a quarter-mile-radius.
> - **Neighborhood Park.** A medium-sized park ranging from 2 **to 10 acres** that provides basic recreational activities **for a specific neighborhood within a one-mile radius.**
> - **Community Park.** A large park ranging from 20 to 50 acres that includes passive and active recreation facilities that serve the entire city or a substantial portion of the city.

Gates Associates affirmed this principle in Community Meeting #3 (below); neighborhood parks are to **serve an area of 1/8 to 1/4 mile ONLY** – not the wider community or region.



Hidden Valley is very clearly a "Neighborhood Park".

1. **It is only 5 acres** – far too small to accommodate community-wide amenities without impacting park space.
2. It's located at the end of a long dead-end residential street, with limited infrastructure and **constrained emergency access in a *high wildfire risk* canyon**.
3. **Traffic and Parking already overburden** the entire length of Carlmont Drive (not just the single family homes), and providing parking for greater use would entail paving a large portion of the park.

Social equity is NOT the issue in this case. These General Plan standards are based on resident security, visitor safety, traffic circulation, emergency services, and City infrastructure considerations. Some of the public confuse this park with the adjacent 200 acres of Hidden Canyon. Already this neighborhood is dangerously overtaxed, serving as the *gateway access to that open space,* which the City promotes regionally. Unwittingly the City has, without consideration for capacity or resident and visitor safety, drawn thousands of visitors from a far wider region than intended by the General Plan.

The Park Master Plan MUST conform to General Plan standards, and **your legal obligation is to ensure that conformance**.
Please make it clear to staff and consultants as well as the general public, that intensification of use in this tiny park is not their *choice*; both the General Plan and prudent consideration of public safety and City planning dictate Hidden Valley is NOT a community park, but a neighborhood park.

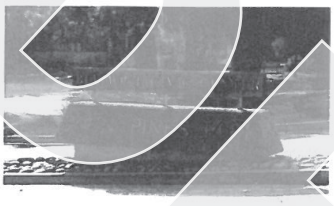
DRAFT



EMAILS RECEIVED: PARKS + RECREATION COMMISSION

4 Parks, Recreation, and Open Space Element

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Twin Pines Park is the largest park and recreational facility serving Belmont residents.

4.1 INTRODUCTION

This element presents the goals, policies, and actions for parks, recreation, and natural open space in Belmont. The City of Belmont's parks and recreation system is integral to its sense of community and quality of life. The city has excellent open space resources and great weather many months of the year, encouraging people to be outdoors. Maintenance, improvements, and programming of parks, recreation, and open space resources are provided by the Department of Parks and Recreation. Maintaining existing facilities, acquiring and developing additional facilities to meet future needs, and providing programming for parks and recreation areas as the city's population grows are important components of this element.

RELATIONSHIP TO STATE LAW

California State law (Government Code sections 65302(e) and 65560-65567) requires California cities to adopt an Open Space Element as part of their General Plan. Open space land is defined in the California Government Code as any parcel or area of land or water that is essentially unimproved and devoted to open space use, and that is designated on a local, regional or State open space plan, including open space for the preservation of natural resources and open space for outdoor recreation. Along with the Housing Element, the Open Space Element has the most detailed statutory intent and, next to Land Use, is the broadest in scope.

The California Subdivision Map Act enables a city to require dedication of land or fees in lieu of land dedication for neighborhood and community parks as a condition of development approval. Known as the "Quimby Act" (Government Code section 66477), it also establishes the criteria for determining the land dedication requirement and in-lieu fee based on park standards. The City of Belmont's 2014 parkland dedication requirements and in-lieu fees are discussed in this element.

RELATIONSHIP TO OTHER GENERAL PLAN ELEMENTS

The Parks, Recreation, and Open Space Element bears a strong relationship to the Conservation Element, which is required to provide direction regarding the conservation, development, and utilization of natural resources. The Parks, Recreation, and Open Space Element addresses open space for outdoor recreation, while the Conservation and Safety elements discuss open space for preservation of natural resources and open space for public health and safety, respectively.

Because open space and park facilities are essential components of a balanced land use pattern, the Land Use Element also has a strong relationship to this element. The

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

intent of the Parks, Recreation, and Open Space Element, however, is not to establish land use policies for open space areas, but rather to outline recreational strategies in harmony with land use policies. In addition, the classification of open space and parks relates to the amount and location of the population, which is another relationship to the Land Use and Housing elements. The Parks, Recreation, and Open Space Element is also related to the Circulation Element in that designated bicycle routes, trails, and pedestrian routes provide critical access to and through open space and parklands.

RELATIONSHIP TO COMMUNITY VISION

The Parks, Recreation, and Open Space Element is most closely tied to the "natural beauty" and "thriving culture" values in the Belmont Community Vision:

Natural Beauty

- We choose to make our home among these beautiful hills, trees, parks, views, and open spaces.
- Our natural surroundings inspire us to play, create, and contemplate.
- Our actions today preserve and enhance Belmont's beauty to make it even lovelier for future generations.
- Our wooded residential areas are diverse, peaceful and well maintained.

Thriving Culture

- Our playgrounds and athletic fields are of high quality and in high gear.

4.2 PARKS AND RECREATION

PARK CLASSIFICATIONS

The City provides its residents with several types of parks and recreation facilities. Parks are defined as land owned, leased, or provided to the City and used for public recreational purposes. In addition, there is joint use planning and operation of school district athletic facilities for public recreation. Parks and recreational facilities are classified as follows:

- **Mini Park.** A small park ranging from a quarter-acre to 2 acres that is located within a residential area and is intended to provide play areas for small children or passive sitting areas for residents within a quarter-mile-radius.
- **Neighborhood Park.** A medium-sized park ranging from 2 to 10 acres that provides basic recreational activities for a specific neighborhood within a one-mile radius.
- **Community Park.** A large park ranging from 20 to 50 acres that includes passive and active recreation facilities that serve the entire city or a substantial portion of the city.

Belmont's parks help create a sense of community.

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

The Belmont Sports Complex (top) and the Barrett Community Center (bottom) are used for many recreational programs.

- **School Park.** Athletic fields and facilities that operate under joint use agreements between the City and the School District and are used by the community during non-school hours.
- **Special Facility.** A facility such as a community center, athletic complex, aquatic center or other cultural or athletic facility that services a specific recreational need for all or a portion of the city's population.

EXISTING FACILITIES AND RECREATION PROGRAMS

Currently, the City manages the maintenance of and improvement to 14 developed parks, two undeveloped parks, 11 athletic fields, nearly 320 acres of open space, and over 160,000 square feet of public buildings. Figure 4-1 shows the existing parks and recreation facilities in Belmont, as well as planned improvements and open space lots that have been donated to the City in recent years but have not been improved as parks. Table 4-1 below provides a list of existing parks and recreational facilities and open space areas in the city and the approximate acreages for each. In general, mini parks have a service area of about one-quarter-mile radius, neighborhood parks have a service area of about one-mile radius, and community parks serve the entire city. The City has a joint use agreement with the Belmont/Redwood Shores Elementary School District for the athletic fields at Fox, Ralston, Nesbit, and Central Schools. The City maintains the fields and schedules all non-school hours. The joint use agreement is up for consideration of renewal in 2019. Table 4-1 also lists undeveloped open space areas that are available to the public for recreational uses, which is discussed in more detail below in Section 4.3.

The Parks and Recreation Department offers recreation programs for Belmont residents of all ages, which are highly valued by the Belmont community. The City operates recreation programs, a preschool, and camps for children and youth; exercise, sports, and enrichment programs such as yoga and softball for adults; and diverse programs, including language groups, knitting, and Tai Chi, for seniors. The Twin Pines Senior and Community Center, the Barrett Community Center, and the Belmont Sports Complex are used for many of the recreational programs. Priorities for recreation programs in the coming years include identifying the recreational aspirations of the Belmont community and evaluating which recreational programs to continue and which to change to better meet the community's needs and interests.

PLANNED IMPROVEMENTS TO PARKS AND RECREATION FACILITIES

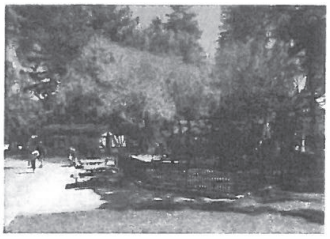
In addition, several improvements to parks and recreation facilities are planned or

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

DRAFT

underway as of 2017. Davey Glen Park was recently developed from an undeveloped lot to a neighborhood park, and the Belmont Sports Complex is in the design process for artificial turf installation. Barrett Community Center is being considered for a complete redesign of the site and a new community center. As detailed in the Belmont Village Specific Plan, improvements are planned for the Belmont Village Priority Development Area (PDA) that will ensure access to parks and other community gathering spaces as the area intensifies, including opportunities for new plazas and improved connections to Twin Pines Park and Belmont Creek.

ACCESS TO PARKS AND RECREATIONAL FACILITIES



Ideally, every residence should be within a quarter-mile (5 minute walking distance) of a park. Figure 4-2 shows the areas within a quarter-mile and half-mile "as the crow flies" from mini, neighborhood, and community parks. It also shows the areas within 5 and 10 minute walking distances, or walksheds, for mini, neighborhood, and community parks and school fields. The map also shows the City's parks service area standards for the one-quarter mile service area radius and one-mile service area radius for context.

With the hilly topography in Belmont, many of the parks require a long and circuitous walk in residential neighborhoods. Thus, areas that are actually within a five-minute walking distance for many parks and fields are often smaller than the service areas. Due to the uneven distribution of smaller parks in the city, many residents do not have access to parks and open spaces within walking distance. Residential neighborhoods with poor access to developed parkland are primarily north of Ralston Avenue and west of El Camino Real, in the Central, Country Club, Plateau, and Skymont neighborhoods.

In general, parks and recreation facilities in Belmont can be accessed by vehicles as well as on foot. Mini and neighborhood parks are often connected to sidewalks and have street parking options. Off-street parking spaces are available for all community parks and recreational facilities. The three main trailheads for the Water Dog Lake open space have parking available, although many of the lesser entrances generally do not have parking options on site at the entrance, and visitors are encouraged to park elsewhere and access the trails on foot.

CURRENT STANDARDS AND DEFICIENCIES

This General Plan continues the goal established in the previous General Plan and 1992 Parks, Recreation, and Open Space Master Plan to provide for 5.0 acres of parks for every 1,000 residents, with 2.0 acres of community parks and 3.0 acres of

Twin Pines Park offers outdoor amenities for residents and access to Belmont Creek.

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

FIGURE 4-1: PARKS, OPEN SPACE, AND TRAILS

Source: City of Belmont, 2015; Dyett & Bhatia, 2015.

BELMONT GENERAL PLAN 4-7

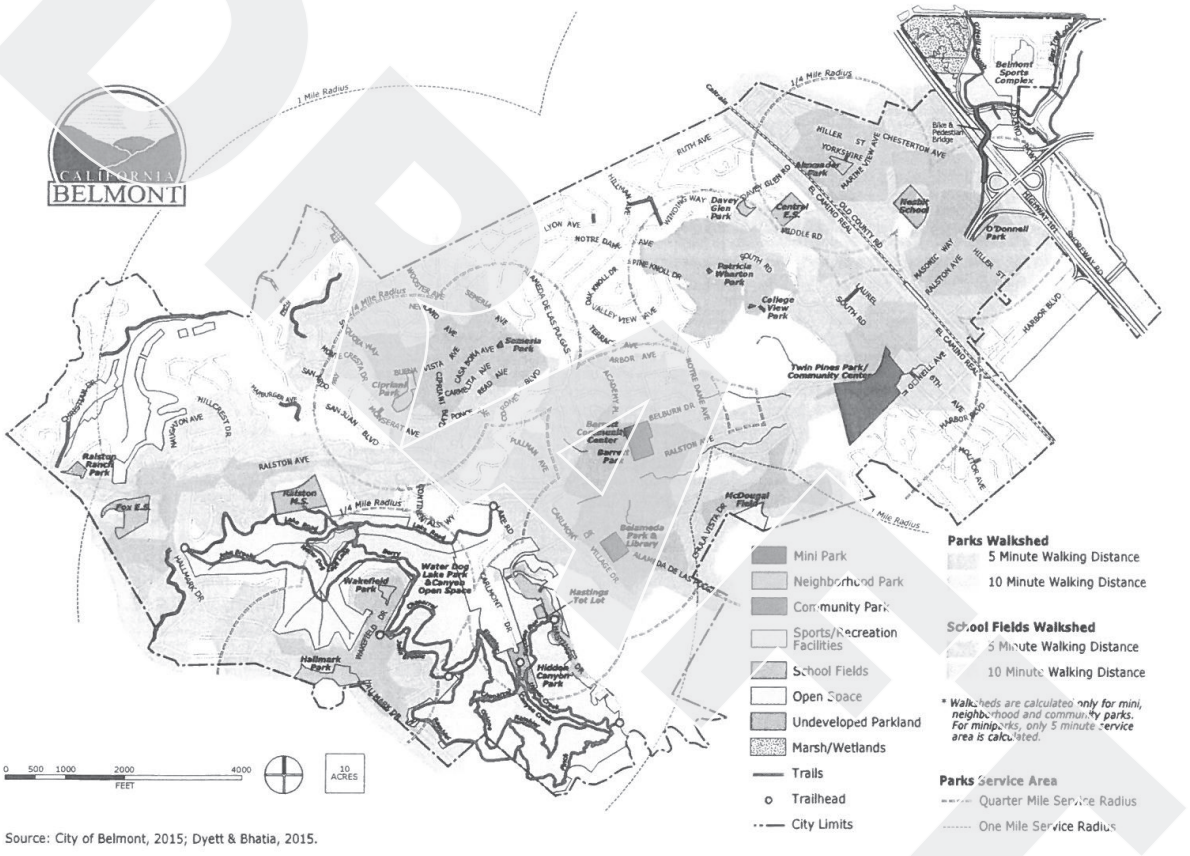
EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Most new public open spaces in the Belmont Priority Development Area (PDA) will be plazas and mini parks, incorporated into the urban environment.

neighborhood and mini parks. Based on the city's 2013 population of 26,400 and the existing park facilities totaling 112.2 acres, Belmont provides an overall ratio of 4.3 acres of park area per 1,000 residents. This figure is below the General Plan and Master Plan standard of 5.0 acres of parkland per 1,000 residents. Additionally, this figure includes two undeveloped park areas, as well as about 23 acres of school park area that are under a joint use agreement with the City, which is up for renewal in 2019. If the joint use agreement is not renewed, the Belmont community could potentially face an even greater shortage of parks and recreational facilities.

While Belmont currently falls short of achieving its developed parkland standard, the city has many acres of open space and miles of trails. Based on the 2013 population of 26,400 residents and the existing open space areas totaling 293.6 acres, Belmont provides 11.1 acres of open space for every 1,000 residents. When the parks and open space areas are combined, Belmont provides a total ratio of 15.4 acres of parks and open space per 1,000 residents. Belmont provides a total of 9.6 miles of trails, resulting in a ratio of 0.4 miles of trails per 1,000 residents.

Through 2035, Belmont's population is projected to grow to about 30,500. If the City's parkland standard remains the same (5.0 acres per 1,000 residents), the City would need to add about 40.3 acres of parks and recreational facilities by 2035 to overcome the existing deficiency as well as serve new population growth. To retain the current ratio of 4.3 acres per 1,000 residents, the City would still need to add 19 acres of parkland.



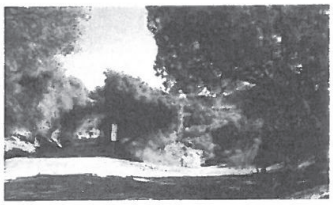
Achieving the Standard

The State's 1975 Quimby Act allows cities to require dedication or in lieu fees for community and neighborhood parkland contributions for new development in a city. The Act allows for a required dedication of up to three acres per 1,000 residents, or up to five acres per 1,000 residents to match the existing ratio if it is higher than three acres per 1,000 residents. In Belmont, based on the 2014 Quimby Land Dedication Requirement and In-Lieu Fee Study, the area of existing neighborhood and community parks was determined to be 3.87 acres per 1,000 residents, so the City's parkland dedication standard was set to 3.87 acres per 1,000 residents. However, the parkland facilities and open space inventory was recently updated by the City, and the area of existing neighborhood and community parks was determined to be 4.3 acres per 1,000 residents.

The Mitigation Fee Act (Government Code section 66000) allows cities to establish, increase, or impose a fee as a condition of approval of a development project if certain requirements are met. Cities must identify the purpose and use of the fee, and they also must demonstrate a reasonable relationship or

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

FIGURE 4-2: PARK ACCESSIBILITY



Source: City of Belmont, 2015; Dyett & Bhatia, 2015.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

The General Plan aims to create a extensive system of parks, plazas, and other open spaces that serves the entire Belmont community, enhances community identity, and is conveniently located for community use.

The General Plan aims to preserve and protect the natural open space in Belmont.

"nexus" between new development that occurs within the city and the need for additional facilities as a result of new development. In October 2014, the City of Belmont published a Park Impact Fee Nexus Study to meet the Mitigation Fee Act requirements.

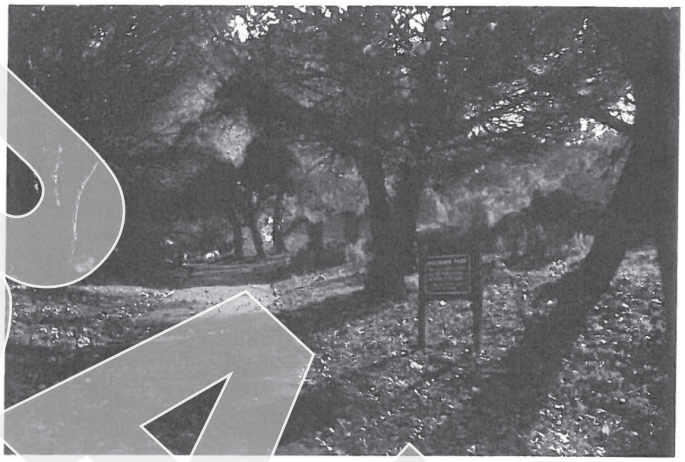
In October 2014, Belmont also adopted a Park Impact Fee for residential and nonresidential development, ensuring that all new growth in Belmont (not just developments to which the Quimby Act applies) contribute to the City's park and recreation resources commensurate with their impact.

Parks, Recreation, and Open Space Master Plan

The City plans for the development, operation, improvement, and maintenance of parks and recreational facilities in the Parks, Recreation, and Open Space Master Plan. It contains an inventory and analysis of existing parks and open spaces and potential new park areas, as well as analysis of current demand and future trends for parks and recreational facilities. The Plan identifies detailed policies and standards for parks and recreational facilities, and it contains an implementation plan with actions, costs, and funding sources. These policies and standards are incorporated by reference into the Parks, Recreation, and Open Space Element and constitute additional policies and standards for parks and recreational facilities as required by the Quimby Act. Last updated in 1992, an update to the Parks, Recreation, and Open Space Master Plan is an implementation priority for the General Plan.

4.3 NATURAL OPEN SPACES FOR RECREATION

OPEN SPACE FRAMEWORK



The California Government Code (Section 65560(b)) recognizes six types of open spaces, including open space for 1) natural resources, 2) managed production of resources, 3) outdoor recreation, 4) public health and safety, 5) military support, and 6) tribal resources. Three of these are present in Belmont: open space for outdoor recreation, which is addressed in this element; and open space for natural resources and for public health and safety, which are addressed in the Conservation and Safety elements. Natural open spaces in Belmont are shown on Figure 4-1.

NATURAL OPEN SPACES FOR RECREATION IN BELMONT

Trails and natural open spaces offer community benefits as places for exercise, recreation, and solitude, and also play a key role in physically connecting the community and creating a network of open spaces. The City of Belmont has a total of 317 acres of natural open space, plus an additional 24

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

acres of private common open space and three acres of marshland. San Juan Canyon and Water Dog Lake provide outdoor recreational opportunities for the community, including hiking and biking trails and access to other open space networks in the region, such as the Sugarloaf Open Space. Providing sufficient resources to manage and improve the city's open spaces and trails has been a priority identified by Belmont community members throughout the General Plan Update process.

Hallmark Park, located on the western edge of Belmont, features a playground, tennis courts and trails connecting to other open spaces in Belmont.

DRAFT

GOALS, POLICIES, AND ACTIONS

PARKS AND RECREATION

GOAL 4.1 Provide an expanded, high quality, and diversified park system that serves the entire Belmont community, enhances community identity, and is conveniently located for community use.

Policy 4.1-1
Use the Parks, Recreation, and Open Space Master Plan to define the vision, goals, and strategies for maintaining and improving Belmont's park system and to guide implementation efforts.

Action 4.1-1a: Update the Parks, Recreation, and Open Space Master Plan at least once every 10-15 years to ensure that it accurately reflects the community's priorities and available resources. The update should include:

- Assessment of the parks and recreation needs of existing and future residents.
- In addition to a citywide evaluation of the parkland standards, evaluation of parkland standards on a neighborhood level to determine which neighborhoods are currently underserved.
- Appropriate uses of parks and recreational facilities based on a needs assessment.
- Opportunities and priorities for expanding and enhancing the park system and recreational facilities, especially in underserved areas that would benefit from additional mini or neighborhood parks.
- Determine the use or designation for the open space behind Carlmont High School. Detailed recommendations for specific parks, facilities, and neighborhoods, including identification of potential opportunities for scientific, artistic, and historic exploration and discovery within Belmont's parks and recreational facilities.
- Financing strategies and funding priorities for parks and recreation facilities.

Policy 4.1-2
Strive to achieve and maintain a citywide standard of at least 5.0 acres of mini, neighborhood, and community parks per 1,000 residents, targeting a breakdown of 3.0 acres/1,000 residents for community parks and 2.0 acres/1,000 residents for neighborhood parks.

Action 4.1-2a: Establish priorities for use of park impact fees and in-lieu fees to achieve and maintain the citywide parkland standard, based on needs and priorities identified in the updated Parks and Open Space Master Plan.

Action 4.1-2b: Support acquisition or development of parks in Belmont, especially in neighborhoods that are currently underserved, to meet the City's parkland standard.

Action 4.1-2c: Pursue opportunities to convert underutilized parcels into mini parks or community spaces as is feasible, prioritizing those in areas that are currently underserved.

Action 4.1-2d: Develop a pilot program for "parklets" or "pop-up parks" to create small but functional public open spaces in street parking spaces or other underutilized places in the public right of way. *Refer to the Belmont Village Specific Plan for potential appropriate locations in the Village area.*

Action 4.1-2e: Encourage the installation of recreation areas and privately-owned public spaces in new developments and redevelopments including areas for off-leash dog running, events, and exercise.

Action 4.1-2f: Consider park uses for Hidden Canyon Park and Ralston Ranch Park based on community need.

Action 4.1-2g: If it becomes available, acquire the vacant lot adjacent to the Belmont Sports Complex for additional athletic fields for the community.

4-12 PARKS, RECREATION, AND OPEN SPACE ELEMENT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Policy 4.1-3 Ensure that all development projects comply with the City's parkland dedication requirements, in accordance with the Quimby Act, to provide adequate land for parks, open space, landscaping, and trails in appropriate locations through the dedication of land or otherwise providing for mini parks, planned trails, and other recreational space.

Action 4.1-3a: Meet with development applicants early in the entitlement process to ensure understanding of and compliance with the City's parkland dedication requirements.

Action 4.1-3b: If parkland is to be dedicated (rather than an in-lieu fee paid), work with the applicant during the site planning process to ensure that parks/recreation facilities are appropriately sited and designed to best serve the new development and the Belmont community at large.

Policy 4.1-4 Create different zoning classifications for parks and open space in the *Zoning Ordinance*. Park zones should include recreational uses along with associated structures, and infrastructure and open space should include more passive uses. The new designations should be consistent with the General Plan land use designations "Open Space" and "Public/Community Facilities." *See also descriptions and policies in the Land Use Element.*

Action 4.1-4a: Update the Zoning Ordinance to include the appropriate zoning classifications for the parks and open spaces in Belmont.

GOAL 4.2 Ensure that a wide variety of public community and recreation facilities are available to the entire Belmont community for recreational, social, and cultural activities.

Policy 4.2-1 Review and update the types, amounts, and locations of community and recreation facilities as part of the Parks, Recreation, and Open Space Master Plan.

Action 4.2-1a: As part of the Parks, Recreation, and Open Space Master Plan, conduct a facilities needs assessment to determine the Belmont community's current needs and priorities for recreational facility space. The needs assessment should consider the unique needs of various groups within Belmont, including but not limited to children, teens, seniors, and pet-owners.

Action 4.2-1b: As part of the Parks, Recreation, and Open Space Master Plan, include **a policy to consider the range of effects of artificial turf in the environment, including reducing water use and increasing groundwater runoff, when evaluating projects to use artificial turf on new or existing athletic fields** in Belmont.

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Policy 4.2-2
Building on the needs assessment, improve the quality and quantity of public community facilities in Belmont.

Action 4.2-2a: Create a community-based vision for the new Barrett Community Center, and pursue implementation of the redesigned community center facilities. Consider changing the name to the Belmont Community Center.

Action 4.2-2b: Extend efforts to improve the quality of the athletic fields in Belmont.

Policy 4.2-3
Continue joint use agreements with other agencies, institutions, and private organizations for public use of recreational facilities not owned by the City, especially in neighborhoods deficient in recreational facilities, if the joint use agreements can help meet the city's recreational needs and if the terms are favorable to the City.

Action 4.2-3a: Consider renewing the joint use agreement with the Belmont-Redwood Shores School District for public use of recreational facilities, and review the terms of the agreement to ensure they are favorable to the City. Prepare a contingency plan to implement if the joint use agreement is not renewed.

Action 4.2-3b: Consider pursuing joint use agreements with other public agencies, such as Sequoia Union High School District, for public use of recreational facilities, and review the terms of potential agreements to ensure they are favorable to the City.

Action 4.2-3c: Consider partnering with Notre Dame de Namur University, private schools, or other organizations to deliver recreational facilities to the community including at the site of Barrett Community Center.

Action 4.2-3d: Periodically review and amend the City's joint use agreements for public use of recreational facilities not owned by the City, to ensure that the agreements include responsibilities and obligations for the City that can be reasonably met and fulfilled, such as those related to maintenance, custodial services, and equipment and storage.

GOAL 4.3 Improve the quantity and quality of recreational programming and services to provide varied recreational opportunities for the entire Belmont community.

Policy 4.3-1 Continue to provide recreational programs and services to serve the entire Belmont community.

Action 4.3-1a: Periodically conduct a programming needs assessment to determine the Belmont community's goals and needs for the types, amounts, and qualities of recreational programs and services. Ensure that the needs assessment considers the unique needs of various groups within Belmont, including but not limited to children, teens, and seniors.

Action 4.3-1b: Use the findings and recommendations of the programming needs assessment to guide recreational programming in Belmont.

Action 4.3-1c: Pursue creation of creative recreation facilities, even those that are small in size, into infill areas of redevelopment focus, such as the BVSP.

Policy 4.3-2 Support other agencies, private organizations, and institutions that serve the Belmont community with recreational, social, and cultural activities.

Action 4.3-2a: Allow, as feasible, other agencies, private organizations, and institutions to use or rent the City of Belmont's public facilities to host recreational, social, and cultural activities for the benefit of the Belmont community.

Action 4.3-2b: Encourage other agencies, private organizations, and institutions that provide similar recreational and cultural services to pool resources for the benefit of the Belmont community.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

OPEN SPACE

GOAL 4.4 Continue to develop and support a balanced and integrated open space system reflecting a variety of considerations, including natural resource conservation, outdoor recreation, and public health and safety, to ensure synergies between various open space components and compatibility with land use planning.

Policy 4.4-1 Continue to designate and protect open space lands for the preservation of scenic areas, natural drainage ways, and plant and wildlife habitats; for outdoor recreation; and for public health and safety. *See also policies in the Conservation and Safety elements.*

> **Action 4.4-1a:** Develop a policy for acquisition of open space lands in Belmont including consideration of condition, connectivity, and usefulness of the lands. Develop a list of preferred properties for acquisition that will enhance the open space resources in Belmont.

Policy 4.4-2 Maintain connectivity between large open spaces in Belmont and the region, including the Waterdog Lake area, San Juan Hills area, Sugarloaf Mountain, and the open space in the San Francisco Public Utility District's Crystal Springs watershed.

Policy 4.4-3 Consistent with the San Juan Hills and Western Hills area plans, cluster development in the hillside areas of western Belmont in order to maintain contiguous habitat areas, minimize grading, and limit exposure to steep slopes and other sensitive areas. *See also policies in the Land Use Element.*

Policy 4.4-4 Maintain and enhance trails in open spaces in Belmont. Continue to support opportunities for shared use of trails among multiple users, including pedestrians and mountain bicyclists. Promote knowledge, trail etiquette, and consideration of multiple users on trails through education programs and signage.

Policy 4.4-5 Use the Parks, Recreation, and Open Space Master Plan to establish priorities for the protection, enhancement, and improvement of open space lands and trails for recreation purposes.

> **Action 4.4-5a:** Ensure that the updated Parks, Recreation, and Open Space Master Plan includes:
>
> - Identification and implementation strategies for trail maintenance and design standards for trails through open space lands.
> - Measures to improve the visual quality and safety of trails and bikeways.
> - Identification trails that are no longer necessary or are causing resource damage such as erosion and implementation strategies to remove them.

Policy 4.4-6 Develop programs to control invasive plant species that threaten the natural resources.

Policy 4.4-7 Continue programs to reduce the fire danger in the open space. *See Policy 5.1-3 in the Conservation Element.*

Policy 4.4-8 Develop interpretive programs to help engender appreciation for the open space resources in Belmont.

GOAL 4.5 Preserve and protect open space resources using various methods available to the City.

Policy 4.5-1 Consider open space dedication or acquisition of fee title land to ensure long-term preservation and protection only if public liability exposure can be acceptably limited to the extent feasible.

Policy 4.5-2 Protect Belmont Creek from future encroachment through regulation, development review, conservation easements, or other appropriate actions.

> **Action 4.5-2a:** Evaluate the necessity of a stream buffer overlay zone around Belmont Creek and tributaries to facilitate management and protection of the waterway. Such a zone would apply to areas where the creek

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

flows above ground through developed areas and would ensure that any new development adjacent to the creek is designed and built in such a way that the stream environment is not degraded.

Action 4.5-2b: Consider creek restoration projects that alter the creek corridor to enhance the function of the waterway, including restoration through Twin Pines Park.

Policy 4.5-3 Continue to prohibit off-road motorized vehicle use in open space areas to prevent damage to the environment.

Policy 4.5-4 Seek to preserve the existing open space areas in the San Juan Hills and Western Hills, consistent with the Area Plans, especially on steep hillsides and sensitive habitat areas.

Action 4.5-4a: As the San Juan Hills and Western Hills area plans are updated following the adoption of the General Plan, reevaluate land that is appropriate for development versus what should be conserved.

GOAL 4.6 Improve and increase public access into open space areas where feasible and safe.

Policy 4.6-1 Maintain and improve access to parks and open space, especially in areas that lack land for additional parkland dedication and in areas where topography and lack of sidewalks inhibits easy pedestrian access to parks and recreation facilities.

Action 4.6-1a: Identify where formal or informal off-street paths and trails through neighborhoods are or can be established and maintained. Prioritize those paths and trails that improve pedestrian access and connectivity where it is currently limited, and where paths may link underserved neighborhoods to parks, recreation facilities, regional trails, and other community amenities.

Action 4.6-1b: Identify locations where trails and trail connections can be improved or established in open space recreation areas, such as potential new trail connections to the San Juan Canyon and Sugarloaf Mountain from the Vista Point.

Action 4.6-1c: Explore opportunities to obtain easements to expand Belmont's multi-use trail system.

Action 4.6-1d: Encourage members of the Belmont community, either as individuals or through an organization, to contribute to the care and maintenance of established neighborhood trails.

Policy 4.6-2 Improve public access and connections to Belmont Creek. Promote use of this waterway corridor for passive recreation, education, and research.

Action 4.6-2a: When restoring or enhancing the riparian vegetation and habitat along the Belmont Creek corridor, improve public access to and along the waterway, especially near Twin Pines Park and City Hall, where it is safe and feasible.

Policy 4.6-3 In multimodal transportation planning efforts, such as corridor studies and active transportation plans, ensure that parks, recreation facilities, and open spaces are considered key destinations for linkages to the bicycle and pedestrian networkst.

SUPPORT FOR PARKS, RECREATION, AND OPEN SPACE

GOAL 4.7 Pursue sufficient and dedicated funding for acquisition, operations, protection, maintenance, and management of parks, recreation facilities, and natural open spaces and to meet the recreational programming and service needs of the Belmont Community.

Policy 4.7-1 Ensure that residential and nonresidential development projects contribute to the City's park, recreation, and open space resources commensurate with their impacts, through the Quimby Act and establishment and collection of park impact fees.

Action 4.7-1a: Periodically review and amend the City's parkland dedication and in-lieu fee requirements for residential subdivisions, consistent with the Quimby Act.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Action 4.7-1b: Periodically review park development costs and building trends to assess any changes in costs, and update the Park Impact Fee Nexus Study as needed, to establish new fees consistent with the Mitigation Fee Act (California Government Code Section 66000 et seq.).

Policy 4.7-2 Continue to work with local, regional, and State agencies, nonprofit and community organizations, foundations, and grant sources to provide funding for Belmont's open space, parks, and recreation and assistance with maintenance and programming.

Policy 4.7-3 Support, where appropriate and feasible, partnerships with private businesses to conduct limited operations in park and recreation facilities (e.g. a concessions stand) to generate a revenue stream that may contribute to operations and maintenance costs.

Policy 4.7-4 Encourage community involvement in the stewardship of Belmont's natural resources, including public and private work programs and special events to maintain open space lands.

Dear Belmont Park and Rec Commission,
Regarding Agenda item 6 B.
I want to let you know that I am in favor of the development of Hidden Canyon park. The plans look stunning, and I believe that by developing this space, our community will be able to enjoy this breathtaking area.
Thank you,
Michelle Kelley

Subject: Hidden Canyon open space

First I'd like to thank the Parks & Rec Commission for their dedication and measured approach to figure out how parks can best serve the Belmont community.

After reviewing the proposed plans for Hidden Canyon, it seems clear to me, that developing this property in accordance with the Master Plan will be a wonderful addition to the Belmont community. The plans appear to thoughtfully provide spaces that will serve many needs.

As someone who lives across the street from a neighborhood park, I love the community it provides and the opportunity to share the good fortune of living near an open space. And I'm sure the neighbors living around Hidden Canyon will find it equally rewarding to see others discover this special green space.

I look forward to hearing more about the plans tonight!
Thanks for all your work!

Mandy Gibbs

Subject: Water Dog Open Space

I want the Park Commissioners and the Consultant reviewing the Open Space to know that the trails are unsafe to hikers and walkers due to bikers. In the last 5 days I've nearly been hit twice by bikers speeding around turns that stopped just 3-5 feet from me on the John Brooks trail. They skidded to a stop at the last second when they saw me. There was absolutely no warning to me as the bikers sped around blind curves. They had no bell or other device to warn me. I was fortunate in both these occurrences as I could have been crashed into by these bikers.
Many of the trails are only 30"-36" wide and cannot accommodate a bike rider and a hiker. I implore you to restrict bikers from riding on any trail that is less than four feet wide.
I must also state many of my friends will no longer walk or hike these trails due the danger posed by the bikers. Many of these Belmont residents have hiked these trails for years but they literally fear for their life on these trails due to the numerous bikers on the trails who sped on the trails making it extremely dangerous. At some point someone is going to be seriously injured. It falls on the biker who undoubtedly will be sued and also the City of Belmont for allowing this unsafe condition to exist.
Thank you.

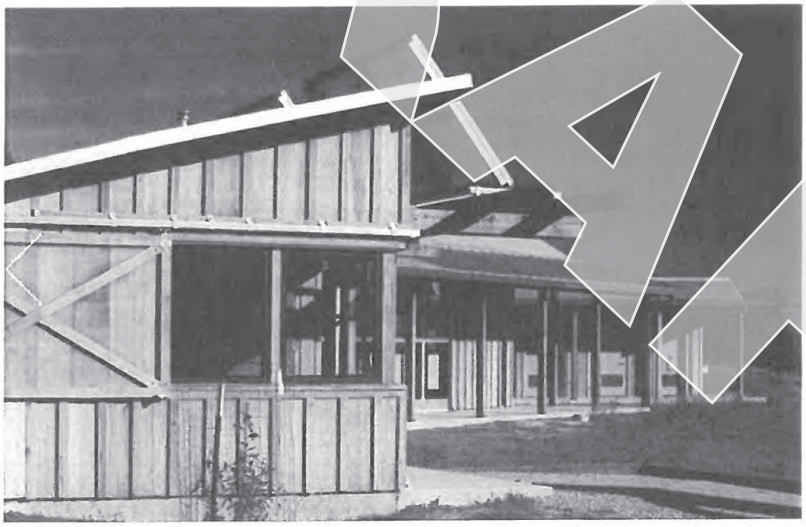
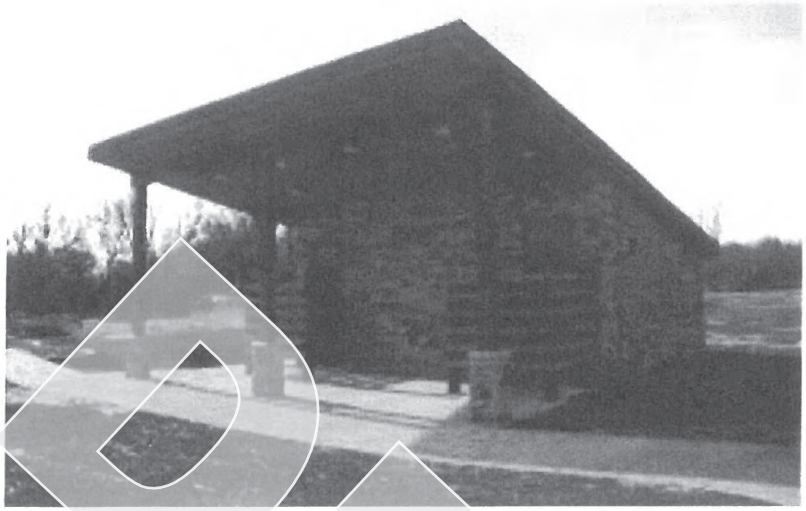
Sent: Thursday, February 10, 2022 9:04 PM
To: P&R Comm; Brigitte Shearer; Daniel Ourtiague
Subject: idea for Hidden Canyon park



As we turn our attention to the plan for Hidden Canyon Park, one great idea has been to add a nature interpretive center along with public restrooms and drinking fountains. An excellent example is the interpretive center down at Arastradero Preserve in Palo Alto. Worth checking out if you haven't been there.

If we do build such a center, I was wondering if we could add a tool shed in the back to store our trail maintenance tools? I have them now stored on the side of my house, which is fine, but at some point Mrs. Carter might want to have her side yard back. And she's the boss!

Also, I think we could raise funds pretty easily to build something if we put our minds to it. A lot of folks would donate.



Warmly,

Jonathan Carter, MD

Subject: Ralston Ranch Park petition - neighbors within < 1-mile radius

Good morning Brigitte, it was nice talking to you this morning and I'm very happy to hear that further discussion of a dog park at Ralston Ranch Park has been terminated. We are all eager to see what the new plan looks like and if the other points in this petition have also been addressed.

Attached is a scan of our petition, with 97 signatures of residents within the 1-mile radius of Ralston Ranch Park - the area this park is intended to serve.

Thank you for listening and I know we all share a love of Belmont and are trying to find a good compromise.

Warmly - Wendy

Petition: Protect Our Open Space at Ralston Ranch Park

Dear Belmont Council and Parks and Recreation,

This petition represents the voices of homeowners in and around Ralston Ranch Park. We have attended city meetings and sent letters, but it appears there is still discussion about a dog park and other forms of development. By signing this document, we ask that you listen to the voices of those this park is meant to serve – Belmont residents within a 1-mile radius.

1. **We would like to see the entire park left natural.** Open space is what makes Belmont special and we are sad to see building permits granted for areas that had previously been restricted resulting in the continued loss of wildlife habitat. Ralston Ranch "woods" has more than 70 trees and is home to wood rats, bees, owls, hawks, rabbits, deer and occasional foxes, bobcats and mountain lions. We have already taken so much of their habitat; to see existing trees chopped down, land graded and sidewalks, fences and other structures added would be a shame.

2. **If we can't leave the entire park natural, a minimal amount of space should be developed.** Grading and removal of trees should be avoided. A play structure for small children and benches away from existing homes would be intended to serve families who live and walk in the neighborhood within a 1-mile radius.

3. **We STRONGLY oppose a dog park and gathering places.** Cipriani dog park is within a 1-mile radius for neighbors who don't want to walk their dogs on a leash, and during a recent feedback session, you heard a plea from one of the Ralston Ranch neighbors who's special needs children are triggered by dogs and will be severely impacted.

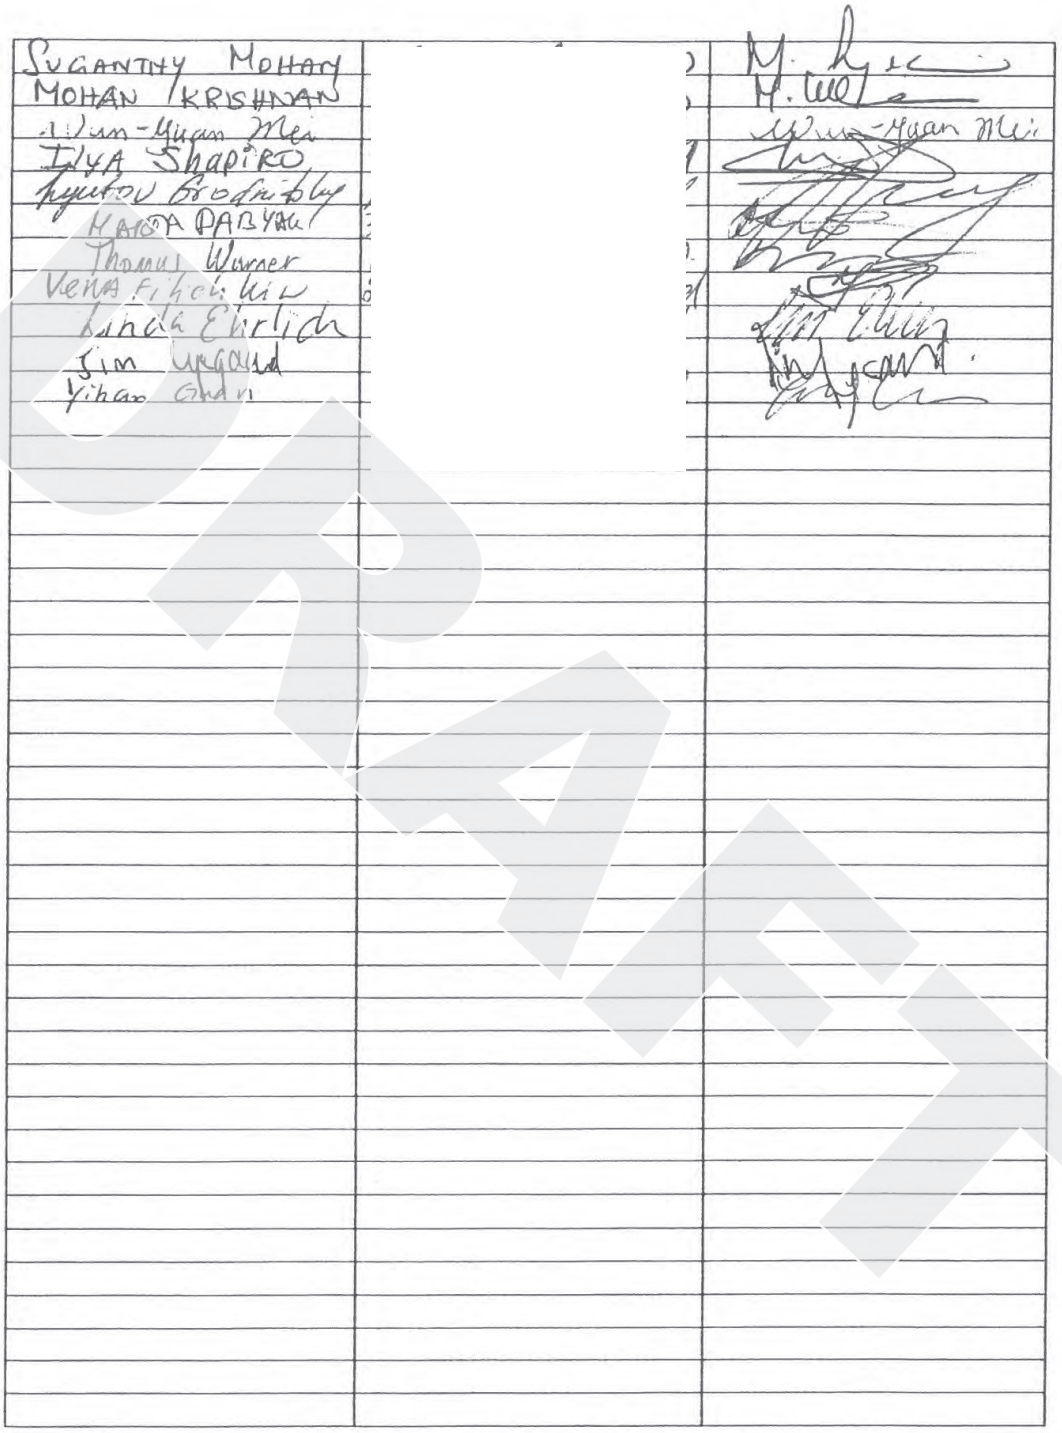
4. **Let's focus on improving what currently exists.** People already drive to Ralston Ranch Road (RRR) and park along the street to access the trailheads on both ends of RRR for hiking, dog walking and mountain biking. Let's instead put in a water fountain, trash and recycling cans at the RRR turn-around and service it *regularly* for the folks using the 16-miles of trails cut into Belmont's open space - which already encroaches wildlife habitat. And please, improve the sanitation and surveillance of Leo Ryan lookout. Trash overflows, broken liquor bottles on the sidewalk, and cars parked at all hours despite a sign that says no alcohol or use after sunset.

5. **And let's not create opportunity for increased crime.** The Leo Ryan lookout peers directly into the backyards and homes on either side of the lookout and just last night (Feb 11th) we had four men casing our neighborhood with flashlights and breaking into cars on our street. Inviting more people from outside the neighborhood with an excuse to "gather" alongside the fences of residences invites further crime. The Christian Avenue neighbors have had similar experiences,

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

and as Belmont Police have said, our location is an easy get-away because of the nearby on-ramps to highways 92, 280 and 101.

Unintended consequences must be carefully considered – these decisions cannot be reversed and will affect Ralston Ranch, Skymont, Canyon, Hallmark and other neighborhoods – and also the Belmont we leave to the next generation.



Sincerely,

Ralston Ranch and Surrounding Neighborhoods

Let's instead put in a water fountain, trash and recycling cans at the RRR turn-around and service it *regularly* for the folks using the 16-miles of trails cut into Belmont's open space - which already encroaches wildlife habitat. And please, improve the sanitation and surveillance of Leo Ryan lookout. Trash overflows, broken liquor bottles on the sidewalk, and cars parked at all hours despite a sign that says no alcohol or use after sunset.

5. **And let's not create opportunity for increased crime.** The Leo Ryan lookout peers directly into the backyards and homes on either side of the lookout and just last night (Feb 11th) we had four men casing our neighborhood with flashlights and breaking into cars on our street. Inviting more people from outside the neighborhood with an excuse to "gather" alongside the fences of residences invites further crime. The Christian Avenue neighbors have had similar experiences,

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

and as Belmont Police have said, our location is an easy get-away because of the nearby on-ramps to highways 92, 280 and 101.

Unintended consequences must be carefully considered – these decisions cannot be reversed and will affect Ralston Ranch, Skymont, Canyon, Hallmark and other neighborhoods – and also the Belmont we leave to the next generation.

Sincerely,

Ralston Ranch and Surrounding Neighborhoods

Subject: Continued danger from bikers on Water Dog trails

I must again state the danger posed by bikers on the Water Dog trails. My wife and I have nearly been hit by bikers three times in the last three weeks by bikers on the John Brooks and Rambler trails. On many of these trails the width is less than 36 inches wide and there is no way for bikers to pass a walker or hiker safely without one party stopping to allow the other to pass.
Each of the last 3 weeks a speeding biker has come within inches of hitting us. Twice they rounded a blind turn in front of us. Neither they nor us saw each other until the last few seconds. The most recent time a biker came speeding up right behind us and veered off the trail to avoid hitting us- fortunately.
In any new plan for Water Dog Open Space, please plan to have separate trails for bikers and hiker/walkers.
Thank you.

Subject: Hallmark Park

To Whom it may concern:

We live at 2605 Wakefield Drive and have for the past 30 years. We love it here mainly because it is away from the crowds of the peninsula and the bay area. It is quiet and usually there isn't a lot of traffic. Our children grew up here and now our grandchildren enjoy almost the same serene environment. Although Belmont is hardly the same sleepy town it was back then, this neighborhood has maintained its quaintness. We tolerate the track practices and races that take place every year. We clean up the garbage the visitors leave, we give up our street parking and we are kind and friendly to the crowds. We do this because we understand the uniqueness of the area and honestly don't mind sharing it. The garbage accumulates and often overflows at the park and it takes the city quite some time to clean it up. The crows and other wildlife rummage around it and create quite a mess. We tolerate that as well. However, we are not prepared to do this on a daily basis.

If the city thinks for a moment that this will not affect our homes with the same issues we deal with when track season arrives, you are mistaken. If you want to update what is currently there, I am all for it. The current play structure is old and the wood is rotten and dangerous. The pathway is a trip hazard because of the tree roots coming through it. We already have a significant amount of people using the park daily for their workouts and tennis games. We don't need any more traffic. We paid to live here, we pay an association fee to keep the area in good condition. We don't need any interference from the city. If it's not broke, don't fix it.

Subject: Hallmark Park

Dear Commissioners,

I write as a resident of Belmont Heights to object to certain of the plans to "improve" Hallmark park. Years ago, in the 1970s, the BHCIA fought for preservation of this open space as a casual, natural park with tennis courts. The tennis courts were a specific wish of the Belmont Heights residents. Have we asked for a bocce ball court in our neighborhood? Have we been surveyed about a bocce court, or any other structural additions for that matter? Yes, the tennis courts, current paved paths, and tot lot have been sadly neglected over the years. We would be grateful for those long overdue upgrades, as well as replacing non-native with native plants. Please seek neighborhood specific input before going any further with plans for structures and paved paths in our "neighborhood park."

Respectfully,
JoAnn Berridge

Subject: Help Preserve Hallmark Park

To Whom IT May Concern:

Personally, I think the Hallmark Park should upgraded but not to the extent to attract more visitors, e.g., making the tot lot like a McDonald playland!

Adding the bocce court should be definitely ruled out! It will not only make our neighborhood very noisy but also congested with more cars creating

parking problems!

Our neighborhood has already attracted many bicyclists in the Water Dog area. We don't want our neighborhood to become a tourist attraction but for

the enjoyment of us neighbors!

Sincerely,

\Bessie Ip

Sent: Monday, February 28, 2022 8:43 AM
To: info@belmontprosplan.com; P&R Comm
Subject: public comment: agenda item 6B

Thank you for all the work done on the PROS plan.

The Summary of Feedback is a step in the right direction but it is misleading due to the omission of pertinent data - specifically the number of supporters for various new amenities or sentiments.

Why is this important?

The Commission is given this summary without knowing whether one sentiment is more broadly supported by Belmont residents than another. For example, the Hidden Canyon neighborhood meeting had tremendous neighborhood attendance. The vast majority of residents (approx 10-15) opposed building a bathroom and gave reasons why. Only 2-5 residents supported the building of bathrooms. Yet, reading the Summary of Feedback the Commission would have no idea the tremendous opposition to the bathrooms. This is because the Summary of Feedback merely states there was neighborhood support and opposition for the toilets -- which makes it sound like it was an evenly contested issue. This is not reflective of the public comments given at the neighborhood meeting.

In an effort of transparency, on the Summary of Feedback, I urge staff to add the number of public comments received supporting each amenity or sentiment (the number can be put in parenthesis next to the sentiment). This will enable the Commission to have all the data when making decisions.

Thank you.

To: P&R Comm
Subject: You are doing a GREAT job.

Hello,

Most of you know me pretty well. I wanted to take a few minutes to send you some information when I'm not on the clock and there is a bit less energy flying around.

I do want to say I think the entire commission is doing a great job in general and in working on the PROS plan in particular. I can well imagine how difficult it is at times with the venomous negativity coming from a few but it appears you have been able to weather that and stay focused on a plan that looks to me like it is really coming together in a way that is going to benefit many many people in the community.

This week's presentation is about community parks so that is what I'm going to talk about here.

I was fortunate to be a commissioner when Semeria and then Davey Glen park were designed and built. Both parks had many rounds of public input. Davey Glen was such a physical challenge due to being on a hillside that we almost didn't make it across the finish line. But we did and both of these parks are serving as the quiet but well loved community parks they are supposed to be. Both parks started out with a good deal of very local opposition to any plan to change what was there. Remember what was there in both cases was a dirt lot people had just gotten used to. In the case of Semeria park, a vocal minority wanted the muddy, dirt lot to remain so they could park their work trucks there. Lots of hand wringing about parking and no place to park for residents when the park filled up. None of those fears materialized. Davey Glen had people up in arms at commission meetings talking about all the drug use that would happen with teenagers because its gonna be dark at night in there. None of that happened, in fact there is much more light in there at night and not some hidden drug den.

So you will continue to hear these fears at meetings to discuss the details. SOME are legitimate fears about how their street will change. MOST are illegitimate stories being told because people don't want others to enjoy what they enjoy. In the case of people who live in the Pink homes at the top of Carlmont, everyone living there knows or should know the only reason those homes got built is because the developers and new buyers agreed to donate land and build a park at the end of the lane. What they don't seem to realize is that the park is going to create massive improvements for the people living in those homes. Lots of families in those homes have younger kids and thats exactly who tend to use these small parks the most.

So now the city (we) are looking at some new small parks and improvements to existing parks. I strongly feel people trying to propose "Keep everything natural" don't really want anything changed at all. In my mind, there is no point in putting in a park if it doesn't attract young residents to play. So incorporating lasting play elements is essential. Once construction of park elements is completed, parks quickly look like they have always been there and the improvements are obvious. I strongly encourage you to go by Semeria and or Davey Glenn a few times over the next weeks as the plan comes together. What I think you will see is the parks are almost never crowded and yet are also almost never empty. These parks attract people in the neighborhood to get out of the house for a few hours. They rarely drive their cars to the park but sometimes do. Many of the park users are kids in strollers with moms or nanny. They grow up using and knowing the park, then they become teenagers and have other interests. That leaves room for the next set of kids in strollers and play age. Its what happens in parks.

2

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

So please don't be afraid to be visionary in your plans. I love the idea of a Gateway to the open space and some of the examples could be copied as is, but why not create something of our own. Permanent and lasting conversation tables like we designed into Semeria and Davey glen provide for people to hang out and for people to have small parties or picnics. Once the initial construction is completed at Hidden Canyon, it will be more difficult to add or change once infrastructure has been installed. I encourage you to think big (well big for Belmont) and think of the people who will use the park. Plan for them not to appease the people who don't want a park anyway. If that is their only position and the city has decided a park is going in, its time to stop listening to the people who don't want the park. Listen to the people who will use it.

I know you all have the community in mind or you wouldn't be spending your time on this commission since it has often been testy lately. But your commission works together WAY better than the commissions I was on and we were able to pull it off. I know you can too. Keep up the good work and I look forward to supporting your continued actions to make Belmont a better place to live for our residents.

Hope that wasn't too long. I'll repeat some of it at the meeting. Have a great day.

Kevin Sullivan

Environmental Impacts of Mountain Biking: Science Review and Best Practices

By Jeff Marion and Jeremy Wimpey

Mountain biking is still a relatively new activity whose environmental impact and contribution to trail degradation is poorly understood. As with all recreational pursuits, it is clear that mountain biking contributes some degree of environmental degradation. In the absence of adequate research, land and trail managers have frequently been cautious, implementing restrictive regulations in some instances (Edger 1997). Surveys of managers have shown that they frequently perceive mountain biking to be a substantial contributor to trail degradation but lack scientific studies or monitoring data to substantiate such concerns (Chavez and others 1993; Schuett 1997). In recent years, however, a small number of studies have been conducted that help clarify the environmental impacts associated with mountain biking. This article describes the general impacts associated with recreational uses of natural surface trails, with a focus on those studies that have examined mountain biking impacts.

Trails are generally regarded as essential facilities in parks and forests. They provide access to remote areas, accommodate a diverse array of recreational activities, and protect resources by concentrating visitor trampling on narrow and resistant tread surfaces. Formal or designated trails are generally designed and constructed, which involves vegetation removal and soil excavation. These changes may be considered "unavoidable," in contrast to "avoidable" post-construction degradation from their subsequent use (e.g., trail widening, erosion, muddiness), or from the development and degradation of informal visitor-created trails.

Common environmental impacts associated with recreational use of trails include:

- Vegetation loss and compositional changes
- Soil compaction
- Erosion
- Muddiness
- Degraded water quality
- Disruption of wildlife

This article is organized into four broad categories: impacts to vegetation, soil, water, and wildlife.

Impacts to Vegetation: General Research

On formal trails, most vegetation is typically removed by construction, maintenance, and visitor use. This impact is necessary and "unavoidable" in order to provide a clear route for trail users. One goal of trail construction and maintenance is to provide a trail only wide enough to accommodate the intended use. Trails made wider than this through visitor use or erosion represent a form of "avoidable" impact. For example, a doubling of trail width represents a doubling of the area of intensive trampling disturbance. Wider trails also expose substantially greater amounts of soil to erosion by wind or water.

The creation and maintenance of trail corridors also removes shrubs and trees, allowing greater sunlight exposure that favors a different set of groundcover plants within trail corridors. Occasional trailside trampling within trail corridors also favors the replacement of fragile plants with those more resistant to trampling traffic. For example, shade-tolerant but fragile broadleaved herbs are frequently replaced by grasses and sedges that are trampling-resistant and require more sunlight to survive. Trail construction, use, and maintenance can also be harmful when trails divide sensitive or rare plant communities.

Trampling - the action of crushing or treading upon vegetation, either by foot, hoof, or tire - contributes to a wide range of vegetation impacts, including damage to plant leaves, stems, and roots, reduction in vegetation height, change in the composition of species, and loss of plants and vegetative cover (Leung & Marion, 1996; Thurston & Reader, 2001). Trampling associated with "avoidable" off-trail traffic can quickly break down vegetation cover and create a visible route that attracts additional use. Complete loss of vegetation cover occurs quickly in shady forested areas, less quickly in open areas with resistant grassy vegetation. Regardless, studies have consistently revealed that most impact occurs with initial or low use, with a diminishing increase in impact associated with increasing levels of traffic (Hammit & Cole, 1998; Leung & Marion, 1996). Furthermore, once trampling occurs, vegetative recovery is a very slow process.

Compositional changes in the vegetation along trail corridors can have both beneficial and adverse effects. Trampling-resistant plants provide a durable groundcover that reduces soil loss by wind and water runoff, and root systems that stabilize soils against displacement by heavy traffic. The ecological impacts of such compositional changes are not fully known, except when non-native vegetation is introduced to and spreads along trail corridors. Many of these species are disturbance-associated and are naturally limited to areas where the vegetation is routinely trampled or cut back. However, a few non-native species, once introduced to trail corridors, are able to out-compete native plants and spread away from the trail corridor in undisturbed habitats. Some of these species form dense cover that crowd out or displace native plants. These "invasive" species are particularly undesirable and land managers actively seek

to prevent their introduction and spread. Unfortunately their removal is difficult and expensive.

Impacts to Vegetation: Mountain Biking-Specific Research

Only one study found specifically addresses the vegetation impacts associated with mountain biking. Thurston and Reader (2001) conducted an experimental trampling study involving mountain bikers and hikers in Boyne Valley Provincial Park of Ontario, Canada. The researchers measured plant density (number of stems/area), diversity (number of species present), and soil exposure (area of mineral soil exposed) before and after 500 one-way passes by bikers and hikers.

Data analysis and statistical testing revealed that the impacts of hiking and biking were not significantly different for the three indicators measured. They also concluded that impacts from both hikers and bikers were spatially confined to the centerline of the lane (trail).

Impacts to Vegetation: Management Implications

Trail managers can either avoid or minimize impacts to vegetation through careful trail design, construction, maintenance, and management of visitor use. Here are some recommendations to reduce vegetation impacts:

- Design trails that provide the experience that trail users seek to reduce their desire to venture off-trail.
- Locate trails away from rare plants and animals and from sensitive or critical habitats of other species. Involve resource professionals in designing and approving new trail alignments.
- Keep trails narrow to reduce the total area of intensive tread disturbance, slow trail users, and minimize vegetation and soil impacts.
- Limit vegetation disturbance outside the corridor when constructing trails. Hand construction is least disruptive; mechanized construction with small equipment is less disruptive than full-sized equipment; skilled operators do less damage than those with limited experience.
- Locate trails on side-hills where possible. Constructing a side-hill trail requires greater initial vegetation and soil disturbance but sloping topography above and below the trail bench will clearly define the tread and concentrate traffic on it. Trails in flatter terrain or along the fall line may involve less initial disturbance but allow excessive future tread widening and off-tread trampling, which favor non-native plants.
- Use construction techniques that save and redistribute topsoil and excavated plants.

There are also important considerations for maintaining and managing trails to avoid unnecessary ongoing impacts to vegetation:

- While it is necessary to keep the trail corridor free of obstructing vegetation, such work should seek to avoid "day-lighting" the trail corridor when possible. Excessive opening of the overstory allows greater sunlight penetration that permits greater vegetation compositional change and colonization by non-native plants.
- An active maintenance program that removes tree falls and maintains a stable and predictable tread also encourages visitors to remain on the intended narrow tread. A variety of maintenance actions can discourage trail widening, such as only cutting a narrow section out of trees that fall across the trail, limiting the width of vegetation trimming, and defining trail borders with logs, rocks, or other objects that won't impede drainage.
- Use education to discourage off-trail travel, which can quickly lead to the establishment of informal visitor-created trails that unnecessarily remove vegetation cover and spread non-native plants. Such routes often degrade rapidly and are abandoned in favor of adjacent new routes, which unnecessarily magnify the extent and severity of trampling damage.
- Educate visitors to be aware of their ability to carry non-native plant seeds on their bikes or clothing, and encourage them to remove seeds by washing mud from bikes, tires, shoes, and clothing. Preventing the introduction of non-natives is key, as their subsequent removal is difficult and costly.
- Educate visitors about low impact riding practices, such as those contained in the IMBA-approved Leave No Trace Skills & Ethics: Mountain Biking booklet (www.LNT.org).

For further reading see: Cessford 1995; Gruttz and Hollingshead 1995; Thurston and Reader 200l.

Impacts to Soils: General Research

The creation and use of trails also results in soil disturbance. Some loss of soil may be considered an acceptable and unavoidable form of impact on trails. As with vegetation loss, much soil disturbance occurs in the initial construction and use of the trail. During trail construction, surface organic materials (e.g., twigs, leaves, and needles) and organic soils are removed from treads; trails built on sidehill locations require even more extensive excavation. In addition, the underlying mineral soils are compacted during construction and initial use to form a durable tread substrate that supports trail traffic.

In contrast, post-construction soil displacement, erosion, and muddiness represent core forms of avoidable trail impact that require sustained management attention to avoid long-lasting resource degradation. This degradation can reduce the utility of trails as recreation facilities and diminish the

quality of visitor experiences. For example, soil erosion exposes rocks and plant roots, creating a rutted and uneven tread surface. Erosion can also be self-perpetuating when treads erode below the surrounding soil level, hindering efforts to divert water from the trail and causing accelerated erosion and muddiness. Similarly, excessive muddiness renders trails less usable and aggravates tread widening and associated vegetation loss as visitors seek to circumvent mud holes and wet soils (Marion, 2006).

Research has shown that visitors notice obvious forms of trail impact, such as excessive muddiness and eroded ruts and tree roots, and that such impacts can degrade the quality of visitor experiences (Roggenbuck and others., 1993; Vaske and others., 1993). Such conditions also increase the difficulty of travel and may threaten visitor safety. Remedying these soil impacts can also require substantial rehabilitation costs. Clearly, one primary trail management objective should be the prevention of excessive soil impacts. Let's examine four common forms of soil impact in greater detail:

The Four Common Forms of Soil Degradation on Trails:

- Compaction
- Muddiness
- Displacement
- Erosion

Compaction: Soil compaction is caused by the weight of trail users and their equipment, which passes through feet, hooves, or tires to the tread surface.

Compacted soils are denser and less permeable to water, which increases water runoff. However, compacted soils also resist erosion and soil displacement and provide durable treads that support traffic. From this perspective, soil compaction is considered beneficial, and it is an unavoidable form of trail impact. Furthermore, a primary resource protection goal is to limit trailside impacts by concentrating traffic on a narrow tread. Success in achieving this objective will necessarily result in higher levels of soil compaction.

The process of compacting the soil can present a difficult challenge, especially on new trails. Unless soils are mechanically compacted during tread construction, initial use compacts the portions of the tread that receive the greatest traffic, generally the center. The associated lowering of the tread surface creates a cupped cross-section that intercepts and collects surface water. In flat terrain this water can pool or form muddy sections; in sloping terrain the water is channeled down the trail, gaining in volume, speed, and erosive potential.

Displacement: Trail users can also push soil laterally, causing displacement and development of ruts, berms, or cupped treads. Soil displacement is particularly evident when soils are damp or loose and when users are moving at higher rates

of speed, turning, braking, or other movements that create more lateral force. Soil can also be caught in hooves, footwear, or tire treads, flicked to the side or carried some distance and dropped. Regardless of the mechanism, soil is generally displaced from the tread center to the sides, elevating inslopes or berms, and compounding drainage problems.

Muddiness: When trails are located in areas of poor drainage or across highly organic soils that hold moisture, tread muddiness can become a persistent problem. Muddiness is most commonly associated with locations where water flows across or becomes trapped within flat or low-lying areas. Soil compaction, displacement, and erosion can exacerbate or create problems with muddiness by causing cupped treads that collect water during rainfall or snowmelt. Thus, muddiness can occur even along trails where there is sufficient natural drainage. Subsequent traffic skirts these problem spots, compacting soils along the edges, widening mud holes and tread width, and sometimes creating braided trails that circumvent muddy sections.

Erosion: Soil erosion is an indirect and largely avoidable impact of trails and trail use. Soil can be eroded by wind, but generally, erosion is caused by flowing water. To avoid erosion, sustainable trails are generally constructed with a slightly crowned (flat terrain) or outsloped (sloping terrain) tread. However, subsequent use compacts and/or displaces soils over time to create a cupped or insloped tread surface that intercepts and carries water. The concentrated run-off picks up and carries soil particles downhill, eroding the tread surface.

Loose, uncompacted soil particles are most prone to soil erosion, so trail uses that loosen or detach soils contribute to higher erosion rates. Erosion potential is closely related to trail grade because water becomes substantially more erosive with increasing slope. The size of the watershed draining to a section of trail is also influential - larger volumes of water are substantially more erosive.

Water and the sediment it carries will continue down the trail until a natural or constructed feature diverts it off the tread. Such features include a natural or constructed reversal in grade, an outsloped tread, rocks or tree roots, or a constructed drainage dip or water bar. Once the water slows, it drops its sediment load, filling in tread drainage features and causing them to fail if not periodically maintained. Sediment can also be carried directly into watercourses, creating secondary impacts to aquatic systems. Properly designed drainage features are designed to divert water from the trail at a speed sufficient to carry the sediment load well below the tread, where vegetation and organic litter can filter out sediments. A well-designed trail should have little to no cumulative soil loss, for example, less than an average of one-quarter inch (6.3 mm) per year.

Impacts to Soils: Mountain Biking-Specific Research

Several studies have evaluated the soil impacts of mountain biking.

Wilson and Seney (1994) evaluated tread erosion from horses, hikers, mountain bikes, and motorcycles on two trails in the Gallatin National Forest, Montana. They applied one hundred passes of each use-type on four sets of 12 trail segments, followed by simulated rainfalls and collection of water runoff to assess sediment yield at the base of each segment. Control sites that received no passes were also assessed for comparison. Results indicated that horses made significantly more sediment available for erosion than the other uses, which did not significantly vary from the control sites. Traffic on pre-wetted soils generated significantly greater amounts of soil runoff than on dry soils for all uses.

Marion (2006) studied 78 miles (125 km) of trail (47 segments) in the Big South Fork National River and Recreation Area, Tennessee and Kentucky, measuring soil loss along transects across the trail to evaluate the influence of use-related, environmental, and management factors. Sidehill-aligned trails were significantly less eroded than trails in valley bottom positions, in part due to the influence of periodic floods. Trail grade and trail alignment angle were also significant predictors of tread erosion. Erosion rates on trails with 0-6 percent and 7-15 percent grades were similar, while erosion on trails with grades greater than 16 percent were significantly higher. And there was significantly greater erosion on fall line trails (alignment angles of 0-22 degrees) than those with alignments closer to the contour.

This study also provided an opportunity to examine the relative contribution of different use types, including horse, hiking, mountain biking, and ATV. Trails predominantly used for mountain biking had the least erosion of the use types investigated. Computed estimates of soil loss per mile of trail also revealed the mountain biking trails to have the lowest soil loss.

White and others (2006) also examined trails predominantly used for mountain biking in five ecological regions of the Southwest along 163 miles (262 km) of trail. Two trail condition indicators, tread width and maximum incision, were assessed at each sample point. Results show that erosion and tread width on these trails differed little in comparison to other shared-use trails that receive little or no mountain biking.

Goeft and Alder (2001) evaluated the resource impacts of mountain biking on a recreational trail and racing track in Australia over a 12-month period. A variety of trail condition indicators were assessed on new and older trail segments with uphill, downhill, and flat trail sections. Results found that trail slope, age, and time were significant erosion factors, and that downhill slopes and curves were the most susceptible to erosion. New trails experienced greater amounts of soil compaction but all trails exhibited both compaction and loosening of soils over

time. The width of the recreational trail varied over time, with no consistent trend, while the width of the racing trail grew following events but exhibited net recovery over time. Impacts were confined to the trail tread, with minimal disturbance of trailside vegetation.

Bjorkman (1996) evaluated two new mountain biking trails in Wisconsin before and for several years after they were opened to use. Vegetation cover within the tread that survived trail construction work declined with increasing use to negligible levels while trailside vegetation remained constant or increased in areas damaged by construction work. Similarly, soil compaction within the tread rose steadily while compaction of trailside soils remained constant. Vegetation and soil impacts occurred predominantly during the first year of use with minor changes thereafter.

Wohrstein (1998) evaluated the impacts from a World Championship mountain biking race with 870 participants and 80,000 spectators. Erosion was found only on intensively used racing trails in steep terrain where alignments allowed higher water runoff. The mountain biking routes exhibited higher levels of compaction but to a shallower depth in comparison to the spectator areas, where compaction was lower but deeper.

Cessford (1995) provides a comprehensive, though dated, summary of trail impacts with a focus on mountain biking. Of particular interest is his summary of the two types of forces exerted by bike tires on soil surfaces: The downward compaction force from the weight of the rider and bike, and the rotational shearing force from the turning rear wheel. Mountain bikers generate the greatest torque, with potential tread abrasion due to slippage, during uphill travel. However, the torque possible from muscle power is far less than that from a motorcycle, so wheel slippage and abrasion occur only on wet or loose surfaces. Tread impact associated with downhill travel is generally minimal due to the lack of torque and lower ground pressures. Exceptions include when riders brake hard enough to cause skidding, which displaces soil downslope, or bank at higher speeds around turns, which displaces soil to the outside of the turn. Impacts in flatter terrain are also generally minimal, except when soils are wet or uncompacted and rutting occurs.

Impacts to Soils: Management Implications

Soil loss is among the most enduring forms of trail impact, and minimizing erosion and muddiness are the most important objectives for achieving a sustainable trail. Soil cannot easily be replaced on trails, and where soil disappears, it leaves ruts that make travel and water drainage more difficult, prompting further impacts, such as trail widening.

Existing studies indicate that mountain biking differs little from hiking in its contribution to soil impacts. Other factors, particularly trail grade, trail/slope

alignment angle, soil type/wetness, and trail maintenance, are more influential determinants of tread erosion or wetness.

There are a number of tactics for avoiding the worst soil-related impacts to trails:

- Discourage or prohibit off-trail travel. Informal trails created by off-trail travel frequently have steep grades and fall-line alignments that quickly erode, particularly in the absence of tread maintenance. Exceptions include areas of solid rock or non-vegetated cobble.
- Design trails with sustainable grades and avoid fall-line alignments. (See p. 112 for more)
- When possible, build trails in dry, cohesive soils that easily compact and contain a larger percentage of coarse material or rocks. These soils better resist erosion by wind and water or displacement by feet, hooves and tires.
- Minimize tread muddiness by avoiding flat terrain, wet soils, and drainage-bottom locations.
- Use grade reversals to remove water from trail treads. Grade reversals are permanent and sustainable - when designed into a trail's alignment they remain 100 percent effective and rarely require maintenance.

Other strategies are more temporary in nature and will require periodic maintenance to keep them effective:

- While the use of a substantial outslope (e.g., 5 percent) helps remove water from treads, it is rarely a long-term solution. Tread cupping and berm development will generally occur within a few years after tread construction. If it is not possible to install additional grade reversals, reshape the tread to reestablish an outsloped tread surface periodically, and install wheel-friendly drainage dips or other drainage structures to help water flow off the trail.
- If it is not possible to install proper drainage on a trail, consider rerouting trail sections that are most problematic, or possibly hardening the tread.
- In flatter areas, elevate and crown treads to prevent muddiness, or add a gravel/soil mixture in low spots.

Finally, it is important to realize that visitor use of any type on trails when soils are wet contributes substantially greater soil impact than the same activities when soils are dry. Thus, discouraging or prohibiting the use of trails that are prone to muddiness during rainy seasons or snowmelt is another effective measure. Generally such use can be redirected to trails that have design or environmental attributes that allow them to better sustain wet season uses.

For additional information about minimizing soil impacts through trail design, construction, maintenance, and tread hardening, see Trail Solutions.

Impacts to Water Resources: General Research

Trails and their use can also affect water quality. Trail-related impacts to water resources can include the introduction of soils, nutrients, and pathogenic organisms (e.g., Giardia), and alter the patterns of surface water drainage. However, in practice, these impacts are avoidable, and properly designed and maintained trails should not degrade water quality. Unfortunately there is very little research to draw from on these topics, and none that is specific to mountain biking.

Poorly sited and/or maintained trails can be eroded by water, with tread sediments carried off by runoff. Generally, if water control features such as grade reversals and outsloped treads are used to divert runoff from trails, the water drops its sediment close to trails, where it is trapped and held by organic litter and vegetation. Soils eroded from trails rarely enter water bodies, unless trails cross streams or run close to stream or lake shorelines and lack adequate tread drainage features. Since many recreational activities, such as fishing, swimming, boating, and viewing scenery (e.g., waterfalls) draw visitors and trails to the vicinity of water resources, it is often necessary to route trails to water resources or visitors will simply create their own informal trails.

Trails that are close to water resources require special consideration in their design and management to prevent the introduction of suspended sediments into bodies of water. Eroded soil that enters water bodies increase water turbidity and cause sedimentation that can affect aquatic organisms (Fritz and others 1993). Trout and other fish lay their eggs in gravels on the bottom of streams and lakes, and sediments can smother those eggs, reducing reproductive success. Sedimentation can also hurt invertebrate organisms, which serve as food for fish and other creatures. In addition, some sediment may contain nutrients that can contribute to algal blooms that deplete the dissolved oxygen in water bodies when they die off.

Poorly designed trails can also alter hydrologic functions - for instance, trails can intercept and divert water from seeps or springs, which serve important ecological functions. In those situations, water can sometimes flow along the tread, leading to muddiness or erosion and, in the case of cupped and eroded treads, the water may flow some distance before it is diverted off the trail. changing the ecology of small wetland or riparian areas.

Trail users may also pollute water with pathogenic organisms, particularly those related to improperly disposed human waste. Potential pathogenic organisms found through surveys of backcountry water sources include Cryptosporidium spp., Giardia spp., and Campylobacter jejuni (LeChevallier and others, 1999; Suk and others, 1987; Taylor and others, 1983). This is rarely a significant concern where trail use is predominantly day-oriented, and waste issues can be avoided

by installing toilet facilities or following Leave No Trace practices (i.e., digging cat-holes for waste away from water resources).

Impacts to Water Resources: Management Implications

The same trail design, construction, and maintenance measures that help minimize vegetation and soil impacts also apply to water. But there are also some additional efforts needed to protect water resources:

- Trails should avoid close proximity to water resources. For example, it is better to build a trail on a sidehill along a lower valley wall than to align it through flat terrain along a stream edge, where trail runoff will drain directly into the stream.
- It is best to minimize the number of stream crossings. Where crossings are necessary, scout the stream carefully to select the most resistant location for the crossing. Look for rocky banks and soils that provide durable surfaces.
- Design water crossings so the trail descends into and climbs out of the stream crossing, preventing stream water from flowing down the trail.
- Armor trails at stream crossings with rock, geotextiles, or gravel to prevent erosion.
- Include grade reversals, regularly maintained outsloped treads, and/or drainage features to divert water off the trail near stream crossings. This prevents large volumes of water and sediment from flowing down the trail into the stream, and allows trailside organic litter, vegetation, and soils to slow and filter water.
- On some heavily used trails, a bridge may be needed to provide a sustainable crossing.
- Where permanent or intermittent stream channels cross trails, use wheel-friendly open rock culverts or properly sized buried drainage culverts to allow water to cross properly, without flowing down the trail.

Impacts to Wildlife: General Research

Trails and trail uses can also affect wildlife. Trails may degrade or fragment wildlife habitat, and can also alter the activities of nearby animals, causing avoidance behavior in some and food-related attraction behavior in others (Hellmund, 1998; Knight & Cole, 1991). While most forms of trail impact are limited to a narrow trail corridor, disturbance of wildlife can extend considerably further into natural landscapes (Kasworm & Monley, 1990; Tyser & Worley, 1992). Even very localized disturbance can harm rare or endangered species.

Different animals respond differently to the presence of trail users. Most wildlife species readily adapt or become "habituated" to consistent and non-threatening recreational activities. For example, animals may notice but not move away from

humans on a frequently used trail. This is fortunate, as it can allow high quality wildlife viewing experiences for visitors and cause little or no impact to wildlife.

Other forms of habituation, however, are less desirable. Visitors who feed wildlife, intentionally or from dropped food, can contribute to the development of food-related attraction behavior that can turn wild animals and birds into beggars. In places where visitors stop to eat snacks or lunches, wildlife quickly learn to associate people with food, losing their innate fear of humans and returning frequently to beg, search for food scraps, or even raid unprotected packs containing food. Feeding wild creatures also endangers their health and well-being. For instance, after food-attracted deer in Grand Canyon National Park became sickly and dangerously aggressive, researchers found up to six pounds of plastic and foil wrappers obstructing intestinal passages of some individuals.

The opposite conduct in wildlife - avoidance behavior - can be equally problematic. Avoidance behavior is generally an innate response that is magnified by visitor behaviors perceived as threatening, such as loud sounds, off-trail travel, travel in the direction of wildlife, and sudden movements. When animals flee from disturbance by trail users, they often expend precious energy, which is particularly dangerous for them in winter months when food is scarce. When animals move away from a disturbance, they leave preferred or prime habitat and move, either permanently or temporarily, to secondary habitat that may not meet their needs for food, water, or cover. Visitors and land managers, however, are often unaware of such impacts, because animals often flee before humans are aware of the presence of wildlife.

Impacts to Wildlife: Mountain Biking-Specific Research

The impacts of mountain biking on wildlife are similar to those of hikers and other non motorized trail users.

Taylor and Knight (2003) investigated the interactions of wildlife and trail users (hikers and mountain bikers) at Antelope Island State Park in Utah. A hidden observer using an optical rangefinder recorded bison, mule deer, and pronghorn antelope response to an assistant who hiked or biked a section of trail. The observer then measured wildlife reactions, including alert distance, flight response, flight distance, distance fled, and distance from trail. Observations revealed that 70 percent of animals located within 330 feet (100 m) of a trail were likely to flee when a trail user passed, and that wildlife exhibited statistically similar responses to mountain biking and hiking. Wildlife reacted more strongly to off-trail recreationists, suggesting that visitors should stay on trails to reduce wildlife disturbance. While Taylor and Knight found no biological justification for managing mountain biking any differently than hiking, they note that bikers cover more ground in a given time period than hikers and thus can potentially disturb more wildlife per unit time.

This study also surveyed 640 hikers, mountain bikers, and horseback riders on the island to assess their perceptions of the effects of recreation on wildlife. Most respondents felt they could approach animals far closer than the flight distance suggested by the research, and 50 percent felt that recreational uses did not have a negative effect on wildlife.

Another study evaluated the behavioral responses of desert bighorn sheep to disturbance by hikers, mountain bikers, and vehicles in low- and high-use areas of Canyonlands National Park (Papouchis and others., 2001). Following observations of 1,029 bighorn sheep/human interactions, the authors reported that sheep fled 61 percent of the time from hikers, 17 percent of the time from vehicles, and 6 percent of the time from mountain bikers. The stronger reaction to hikers, particularly in the high-use area, was attributed to more off-trail hiking and direct approaches to the sheep. The researchers recommended that park officials restrict recreational uses to trails, particularly during the lambing and rut seasons, in order to minimize disturbance.

An experimental study in Switzerland evaluated the disturbance associated with hiking, jogging, and mountain biking on high elevation chamois, which are goat-like mammals found in the European mountains (Gander & Ingold 1997). The authors assessed alert distance, flight distance, and distance fled, and found that approximately 20 percent of the animals fled from trailside pastures in response to visitor intrusions. The authors found no statistically significant differences, however, between the behavioral responses of animals to the three different types of user, and authors concluded that restrictions on mountain biking above timberline would not be justified from the perspective of chamois disturbance.

A study of the Boise River in Idaho examined flushing distances of bald eagles when exposed to actual and simulated walkers, joggers, fishermen, bicyclists, and vehicles (Spahr 1990). The highest frequency of eagle flushing was associated with walkers (46 percent), followed by fishermen (34 percent), bicyclists (15 percent), joggers (13 percent), and vehicles (6 percent). However, bicyclists caused eagles to flush at the greatest distances (mean = 148 meters), followed by vehicles (107m), walkers (87m), fishermen (64m), and joggers (50m). Eagles were most likely to flush when recreationists approached slowly or stopped to observe them, and were less alarmed when bicyclists or vehicles passed quickly at constant speeds. Similar findings have been reported by other authors, who attribute the difference in flushing frequency between walkers and bikers/vehicles either to the shorter time of disturbance and/or the additional time an eagle has to "decide" to fly (Van der Zande and others. 1984).

Safety issues related to grizzly bear attacks on trail users in Banff National Park prompted Herrero and Herrero (2000) to study the Morraine Lake Highline Trail. Park staff noted that hikers were far more numerous than mountain bikers on the trail, but that the number of encounters between bikers and bears was disproportionately high. For example, three of the four human-grizzly bear

encounters that occurred along the trail during 1997-98 involved mountain bikers. Previous research had shown that grizzly bears are more likely to attack when they first become aware of a human presence at distances of less than 50 meters. Herrero and Herrero concluded that mountain bikers travel faster, more quietly, and with closer attention to the tread than hikers, all attributes that limit reaction time for bears and bikers, and increases the likelihood of sub-fifty meter encounters. In addition, most of the bear-cyclist encounters took place on a fast section of trail that went through high-quality bear habitat with abundant berries. To reduce such incidents, they recommended education, seasonal closures of the trail to bikes and/or hikers, construction of an alternate trail, and regulations requiring a minimum group size for bikers.

Impacts to Wildlife: Management Implications

Many potential impacts to wildlife can be avoided by ensuring that trails avoid the most sensitive or critical wildlife habitats, including those of rare and non-rare species. There are a number of tactics for doing this:

- Route trails to avoid riparian or wetland areas, particularly in environments where they are uncommon. Consult with fish and wildlife specialists early in the trail planning phase.
- For existing trails, consider discouraging or restricting access during sensitive times/seasons (e.g., mating or birthing seasons) to protect wildlife from undue stress.

The education of trail users is also an important and potentially highly effective management option for protecting wildlife. Organizations should encourage Leave No Trace practices and teach appropriate behaviors in areas where wildlife are found:

- Store food safely and leave no crumbs behind - fed animals too often become dead animals.
- It's OK for wildlife to notice you but you are "too close" or "too loud" if an animal stops what its doing and/or moves away from you.
- It's best to view wildlife through binoculars, spotting scopes, and telephoto lenses.
- All wildlife can be dangerous - be aware of the possible presence of animals and keep your distance to ensure your safety and theirs.

Conclusion

While land managers have long been concerned about the environmental impacts of mountain biking, there are still very few good studies published in peer-reviewed journals. White and others (2006) and Hendricks (1997) note that the majority of mountain biking research has focused on social issues, such as

conflicts between trail users. As a consequence, the ecological effects of mountain biking on trails and natural resources remain poorly understood.

Still, an emerging body of knowledge on the environmental impact of mountain biking can help guide current management decisions. All of the existing scientific studies indicate that while mountain biking, like all forms of recreational activity, can result in measurable impacts to vegetation, soil, water resources, and wildlife, the environmental effects of well-managed mountain biking are minimal.

Furthermore, while the impact mechanics and forces may be different from foot traffic, mountain biking impacts are little different from hiking, the most common and traditional form of trail-based recreational activity.

Key observations about the environmental impacts of mountain biking:

1. Environmental degradation can be substantially avoided or minimized when trail users are restricted to designated formal trails. Many studies have shown that the most damage to plants and soils occur with initial traffic and that the per capita increase in further impact diminishes rapidly with increasing subsequent traffic. Many environmental impacts can be avoided and the rest are substantially minimized when traffic is restricted to a well-designed and managed trail. The best trail alignments avoid the habitats of rare flora and fauna and greatly minimize soil erosion, muddiness, and tread widening by focusing traffic on side-hill trail alignments with limited grades and frequent grade reversals. Even wildlife impacts are greatly minimized when visitors stay on trails; wildlife have a well-documented capacity to habituate to non-threatening recreational uses that occur in consistent places.
2. Trail design and management are much larger factors in environmental degradation than the type or amount of use. Many studies have demonstrated that poorly designed or located trails are the biggest cause of trail impacts. As evidence, consider that use factors (type, amount, and behavior of trail visitors) are generally the same along the length of any given trail, yet there is often substantial variation in tread erosion, width, and muddiness. These impacts are primarily attributable to differences in grade and slope alignment angle, soil type and soil moisture, and type of tread construction, surfacing, and drainage. This suggests that a sustainable trail that is properly designed, constructed, and maintained can support lower-impact uses such as hiking and mountain biking with minimal maintenance or degradation.
3. The environmental degradation caused by mountain biking is generally equivalent or less than that caused by hiking, and both are substantially less impacting than horse or motorized activities. In the small number of studies that included direct comparisons of the environmental effects of different recreational activities, mountain biking was found to have an impact that is less than or comparable to hiking. For example, Marion and

Olive (2006) reported less soil loss on mountain bike trails than on hiking trails, which in turn exhibited substantially less soil loss than did horse and ATV trails. Similarly, two wildlife studies reported no difference in wildlife disturbance between hikers and mountain bikers (Taylor & Knight 2003, Gander & Ingold 1997), while two other studies found that mountain bikers caused less disturbance (Papouchis and others. 2001, Spahr 1990). Wilson and Seney (1994) found that horses made significantly more sediment available for erosion than hikers or mountain bikers, which were statistically similar to the undisturbed control. One final point to consider, however, is that mountain bikers, like horse and vehicle users, travel further than hikers due to their higher speed of travel. This means that their use on a per-unit time basis can affect more miles of trail or wildlife than hikers. However, an evaluation of aggregate impact would need to consider the total number of trail users, and hikers are far more numerous than mountain bikers.

Mountain Bike Management Implications

So what does this mean for mountain biking? The existing body of research does not support the prohibition or restriction of mountain biking from a resource or environmental protection perspective. Existing impacts, which may be in evidence on many trails used by mountain bikers, are likely associated for the most part with poor trail designs or insufficient maintenance.

Managers should look first to correcting design-related deficiencies before considering restrictions on low-impact users. By enlisting the aid of all trail users through permanent volunteer trail maintenance efforts, they can improve trail conditions and allow for sustainable recreation.

MOUNTAIN BIKING IMPACT REVIEW FAQs — HYDROLOGY & GEOLOGY 9

1) Does mountain biking generate more erosion and other trail damage than other types of recreational trail use? How do physical trail impacts differ based on user group? 10
2) What about unsanctioned (illegal) trails and features? 10
3) I frequently notice ruts in local trails. What causes these? Do they lead to more erosion? How can they be alleviated? 11
4) Does trail erosion caused by trail users lead to sediment in local streams? How problematic is it? 11
5) What can i do as a trail user to minimize my impact to the trail, soil, and adjacent drainages? 12

MOUNTAIN BIKING IMPACT REVIEW FAQs — PLANTS & WILDLIFE 13

1) Generally speaking, what is the impact of mountain biking on wildlife? 14
2) How do mountain bikes impact wildlife as compared to other trail users? 14
3) What threatened or endangered species are present in the Santa Cruz area and how do mountain bikes and trails impact them? 15
4) Are there linkages between mountain bikes and the presence/spread of harmful and invasive species? Can mountain bikes spread harmful species more than other trail users? 16
5) What can I do as a trail user to minimize my impact to wildlife and the environment? 16

MOUNTAIN BIKING IMPACT REVIEW FAQs — SOCIAL ISSUES 17

1) User-created illegal mountain bike trails are popular and prolific locally. Can expanding the network of sanctioned bike trails alleviate the problem? Or will individual trail builders continue to build unsanctioned trails? 18
2) What number of legal trails are necessary to build to satisfy the demand by the biking community now and in the future? How will Santa Cruz County sustainably be able to accommodate and manage this user community? 18
3) As a mountain biker, what can I do to help reduce conflict between various trail users? 18
4) What can we do we keep our trails safe and available to everyone? 19

MOUNTAIN BIKING IMPACT REVIEW FAQs — ABOUT THIS PROJECT

ABOUT THE MOUNTAIN BIKING IMPACT REVIEW FAQs

These Mountain Biking Impact Review FAQs pose questions that we believe are the most frequently asked concerning the social and environmental impacts of mountain biking and trail construction. The answers to these questions were created based on a comprehensive literature search on the relationships of trails and recreational trail users (specifically mountain bikes, but also other user groups) and natural resources within the following topics: Hydrology and Geology, Plants and Wildlife, and Social Issues. We, the members of the Mountain Bikers of Santa Cruz science committee, are scientists, mountain bikers, hikers, and environmentalists in search of facts. In these Mountain Biking Impact Review FAQs we share our unbiased findings.
We hope you learn something, we sure did!

MOUNTAIN BIKING IMPACT REVIEW FAQs — ABOUT THIS PROJECT

ABOUT MOUNTAIN BIKERS OF SANTA CRUZ

Mountain Bikers of Santa Cruz (MBOSC) is a 501(c)(3) non-profit organization that was founded in 1997 to support, preserve, and expand trail access and responsible mountain biking in Santa Cruz County. We have since become a highly skilled trail stewardship organization with expertise in advocacy, trail and bike park design, construction and maintenance, volunteer management, and project funding.

We are driven by passionate volunteers and high-caliber professional staff who promote legal and sustainable mountain bike access through trail construction, event promotion, and collaboration throughout the county. Strategic partnerships with land managers, other trail users, and the local bike industry help MBOSC build new trails and support sustainable trail use. MBOSC has proven to be an invaluable partner for local land managers, investing nearly $1,900,000, over 20,400 hours of staff time, and over 26,250 hours of volunteer time in trail construction and maintenance since 2012. During our 2017/18 trail work season, 398 volunteers and MBOSC staff performed 3,828 hours of trail work at our local State and City Parks and at Soquel Demonstration State Forest.

MBOSC is focused on furthering our mission to make Santa Cruz the best place to be a trail-user. With more opportunities to expand trail access in the county than at any point in history, MBOSC is planning to make the most of these opportunities.

MOUNTAIN BIKERS OF SANTA CRUZ

ABOUT THE MBOSC SCIENCE COMMITTEE

Like most great ideas, the concept of the MBOSC Science Committee was created after a great day on the trails. Following a Wilder Ranch Dig Day in March 2017, MBOSC Executive Director Matt De Young, President John Leckrone, and emeritus Science Committee chair Dr. Meagan Hynes were discussing how Meagan's professional background in soil science could help inform how soil types in Wilder Ranch State Park related to erosion risk. This conversation led Matt, John, and Meagan to consider all the ways MBOSC members and the general public could benefit from a better understanding of the science behind trail construction and mountain biking environmental impacts. The MBOSC Science Committee was formed in October 2017.

MEET THE RESEARCHERS

The following members of the MBOSC Science Committee worked together to compile these Mountain Biking Impact Review FAQs:

Masters of Science, Wildlife Biologist

Masters of Environmental Science and Management, Applications Engineering and Spatial Analysis Consultant

Masters of Science, Geologist

Bachelor of Science in Chemical Engineering, Chemical Engineer

Bachelor of Science, Project Geologist, Petralogix Engineering, Inc.

Bachelor of Science and Planetary Science, Santa Cruz Bicycles Quality Control Inspector

MOUNTAIN BIKING IMPACT REVIEW FAQs — HYDROLOGY & GEOLOGY

1) DOES MOUNTAIN BIKING GENERATE MORE EROSION AND OTHER TRAIL DAMAGE THAN OTHER TYPES OF RECREATIONAL TRAIL USE? HOW DO PHYSICAL TRAIL IMPACTS DIFFER BASED ON USER GROUP?

- In general, studies have shown that there is no statistically significant difference in induced soil erosion, excavation, incision (ruts), and trail widening between biking and hiking, and both are far less impactful than horse riding.[1] [2] [3] [4] Erosion on trails depends more on trail design, water drainage, levels of use, and soil properties.[5]
- The degree of physical impact related to trails is mostly dependent on trail maintenance regime rather than type of use.[4]
- There are a handful of studies that have been conducted over the past couple of decades looking into the comparative physical impacts (e.g. trail compaction/incision, trail widening, soil displacement and erosion) on trails by different user groups.[1] [2] [3] [4] The general conclusions of these studies are that:
  - On properly-built and well-maintained trails there is little to no measurable difference between the relative impacts caused by mountain bikes vs. hikers.
  - Although there are few quantitative studies on the topic, it is generally accepted that informal/user-built trails tend to experience dramatically elevated rates of degradation due to poor design, management, and construction practices.
  - Additional research is needed to more accurately measure the variation of mountain bike impacts based on riding style (e.g. XC, downhill, dirt-jumps, etc.).

2) WHAT ABOUT UNSANCTIONED (ILLEGAL) TRAILS AND FEATURES?

- User created trails are unplanned and don't undergo the rigorous environmental review and design that modern, sanctioned, official trails usually do.
- Unsanctioned technical trail features are fairly unique to mountain biking.[3] They are often built unsustainably and their impacts can spread beyond the immediate area when they fall into disrepair and riders create alternate paths. They may involve greater soil excavation, timber harvesting, importing of materials, and potentially greater amounts of garbage as a byproduct.[3]
- Trails and features planned and built under the direction of trail stewardship organizations (such as MBOSC), local land managers, or collaborations between the two, are more sustainable with minimized areas of impact.
  - In Perth, Australia, partners constructed a sanctioned technical trail system adjacent to a sensitive National Park which had been affected by illegal riding and trail building. The environmental impact on the National Park was significantly reduced after the adjacent bike park was completed, demonstrating the benefit of partnerships between land management and trail stewardship organizations in decreasing the negative impacts of unsanctioned trail use.[3]

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

3) I FREQUENTLY NOTICE RUTS IN LOCAL TRAILS. WHAT CAUSES THESE? DO THEY LEAD TO MORE EROSION? HOW CAN THEY BE ALLEVIATED?

- Ruts, soil displacement, and compaction are unavoidable outcomes of trail use over time. Whether by foot, tire, or hoof, soil is being excavated and forms ruts over time. If left unattended, the path will continue to erode from precipitation events.[6] [7] [8]
- Rut creation is accelerated when trails are wet, which is why riding trails during and following rain events is highly discouraged.
- Proper trail construction and regular maintenance under the guidance of trail stewardship organizations (such as MBOSC) greatly alleviate the effects of regular use.[6] [7] [8]

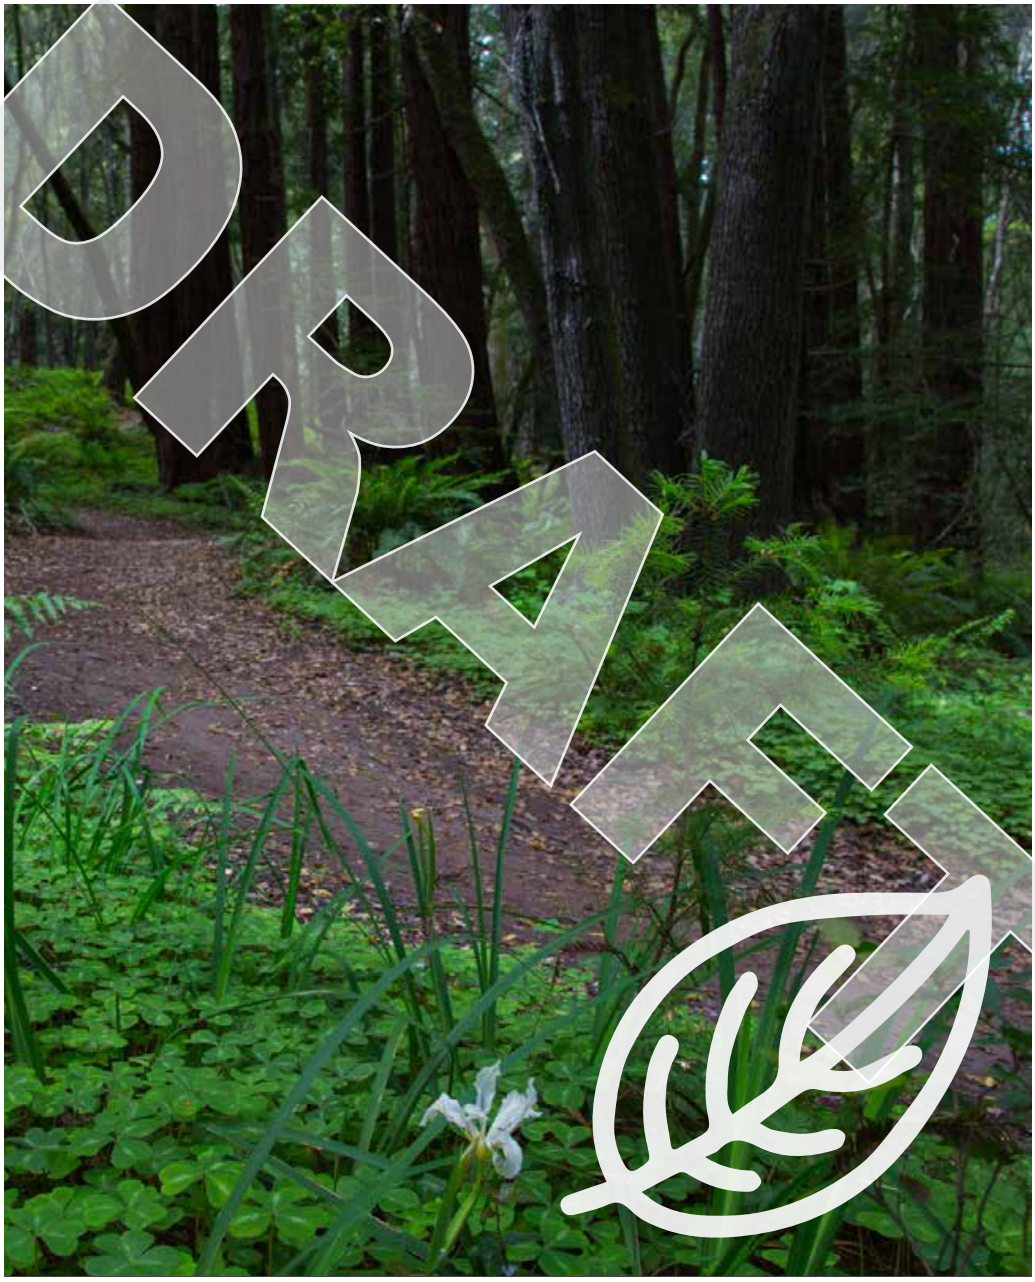
4) DOES TRAIL EROSION CAUSED BY TRAIL USERS LEAD TO SEDIMENT IN LOCAL STREAMS? HOW PROBLEMATIC IS IT?

- Soil displacement is an inevitable byproduct of trail construction and use. The severity of displacement and the potential for that soil to erode and find its way into waterways depends on many factors including soil type, trail design (grade, slope, drainage, etc.), water management, connectivity to a waterway, and degree and type of trail use.[2] [5] [6]
- The cardinal rule when designing and building a trail—no matter what type of users it is intended for—is to "keep the water off of the trail and keep the trail out of the water". This means that a sustainably designed and built trail should minimize the interaction between displaced trail-dirt and streams, and properly account for the factors that might increase erosion.[7] [8] [9] That said, poorly designed and built trails can certainly lead to more soil displacement and erosion, and a higher risk of sediment ending up in local streams.[2] [5]
- The majority of streams in our region are ephemeral and only see water during winter storms. Heavy rainfall during winter storms have high energy, cause landslides, and have the potential to transport sediment from small tributary drainages to waterways such as Laguna Creek or the San Lorenzo River.[10] Salmon and aquatic invertebrates depend on the rocky bottoms of these streams for survival. Therefore, loose dirt from human disturbance can potentially be damaging to the aquatic life, and the degree of impact from this runoff depends on the timing, volume and location.[11]
- Dirt roads, particularly the numerous poorly-maintained fire roads throughout the Santa Cruz region, are a significant potential contributor of sediment delivery to local streams, and specific management actions are in place to target these roads and reduce these impacts.[12] [13] There are few studies which attempt to quantify the volume of sediment delivery to streams from trails as compared to dirt roads.
  - One study from West Virginia modeled sediment in streams from various road and trail stream-crossings.[9] The researchers found sediment loads from un-improved trail stream-crossings to be 10 times greater than expected loads from an undisturbed forest. Sediment from fire roads with minimal improvements (water bars) was 200 times greater than an undisturbed forest. Sediment from

fire roads with significant erosion improvements (water bars, mulching, and brush cleared for fire mitigation) was similar to that of unimproved trails.

- The study did not model trails that were designed and built using best management practices for erosion and stream crossings. More research—particularly regionally appropriate studies and studies including appropriate trail design—is needed on this subject.

- While there is no doubt that some sediment generated by trail users (particularly on poorly designed and maintained trails) will ultimately find its way to local streams, the magnitude of this contribution—and its impact on aquatic life—is significantly less than that from un-maintained dirt roads, large rain storms, or landslide events.[11] [12]
  - Even so, our goal as trail stewards is to do what is in our power (e.g. trail design, maintenance, education) to minimize those impacts.[7] [8] [9] In addition to sustainable trail construction that reduces soil displacement, MBOSC has built bridges across major stream crossings to avoid direct impact of trail users on these streams.



5) WHAT CAN I DO AS A TRAIL USER TO MINIMIZE MY IMPACT TO THE TRAIL, SOIL, AND ADJACENT DRAINAGES?

- Stay on the designed pathway of the trail, avoid unsanctioned trails and off-trail features.[14] [15]
- Slow or stop for hikers and oncoming riders to allow sufficient room for them to pass. Trails get widened and trail-side vegetation is impacted more when hikers have to step aside for bikers.[2] [14] [15]
- Avoid muddy or excessively wet trails. A good rule of thumb is that if the trail is soft enough to leave tire tracks, it is also soft enough to be damaged by riders. Wait a day or two before you head back out.[14] [16]
- If there are mud puddles in the trail, carefully ride through them. Don't go around them since that will widen the trail.
- Likewise, if there are ruts in the trail, ride them. Don't go around since that will lead to trail widening.
- Avoid last-minute, quick braking as this can lead to ruts and accentuate trail damage. As much as skill and visibility allow, look down the trail, anticipate what is ahead, and check your speed ahead of time.
- Learn how to feather your brakes; don't skid your tires.

MOUNTAIN BIKING IMPACT REVIEW FAQs — PLANTS & WILDLIFE

1) GENERALLY SPEAKING, WHAT IS THE IMPACT OF MOUNTAIN BIKING ON WILDLIFE?

- The short answer is that it's complicated. It largely depends on the species encountered, the characteristics of the trail, and the conduct of the trail user.
- The creation and presence of human created trails may lead to the fragmentation of a landscape that was once intact.[1] [2] The effects of fragmentation on wildlife vary depending on the species and the scale of analyses and impact.[3] Fragmentation has been found to be more severe in areas where unsanctioned trails are common.[4]
  - For instance, Red-legged Frogs can be adversely impacted if a trail traverses within 100 meters of its habitat.[5]
  - Research has found that some bird species have decreased nest survival, increased predation, or lower nest density in areas fragmented by trails.[6] [7]
  - Other species, however, have been shown to use trails to their advantage for travel or foraging, demonstrating that the presence of trails can affect the local composition of species.[7]
- The trail user and that user's behavior also will dictate their impact on wildlife. Studies have shown that nesting birds may not be disturbed (e.g. the bird being startled from its nest/perch) by hikers or bikers quietly moving along a trail, but when trail users were noisy (e.g. talking) or when they stopped and/or approached the nest (e.g. birdwatchers), the likelihood of disturbance was significantly higher.[8] [9] [10] Most birds and mammals will react more strongly (i.e., flee) to off-trail recreationists than to on-trail users.[8] [9] [10] [11] [12]
- Research shows that noise can affect wildlife. Noise, however, is subjective and is perceived by different species in different ways.[13] [14] Studies have show that bicyclists passing quickly may cause less noise disturbance than other recreationalist on the trail.[11] [16] [32]
- A number of papers have attempted to synthesize the existing research of recreational impacts on wildlife worldwide. Findings show that a majority (>60%) of the studies reviewed demonstrated some form of negative impact on wildlife from all types of trail use (mountain biking, hiking, horseback riding).[15] [17] [18]
  - However, these same studies suggest that while recreational trail use may impact individual or groups of animals, population-level impacts to a species are less well-studied and poorly known.

2) HOW DO MOUNTAIN BIKES IMPACT WILDLIFE AS COMPARED TO OTHER TRAIL USERS?

- Many studies examined the impacts of recreation on wildlife by user type(s). The majority of these studies however didn't specifically address mountain biking, nor do they distinguish between the wide variety of mountain bike riding types (e.g. cross-country vs. downhill). The few studies that specifically addressed mountain biking have suggested the following:
  - Across a number of studies, researchers found that ungulates (such as deer and elk) are equally or less likely to be disturbed by mountain bikers than by hikers, joggers, or horseback riders.[11] [12]

- The negative effects of trail use on birds is equal across trail use types when users are quiet and continuously moving.[17] Birds tend to be more adversely affected when users stop along the trail, or when they make more noise.[8] [9] [10] [19]
- A study in a network of wildland reserves in Southern CA of disturbance to medium and large mammals found that all user types had negative effects, and that some types of human disturbance were more negative than others (from most to least impactful: pedestrian, bicycles, vehicles, dogs, equestrians).[20]
  - This study's researchers refer to these impacts as a form of "mortality-free predation" due to the fact that these animals preferentially avoid habitat that humans are a part of.

3) WHAT THREATENED OR ENDANGERED SPECIES ARE PRESENT IN THE SANTA CRUZ AREA, AND HOW DO MOUNTAIN BIKES AND TRAILS IMPACT THEM?

- There are numerous plants and animals in Santa Cruz county listed as threatened or endangered. These include: Red-legged Frog, Tiger Salamander, Long-toed Salamander, Marbled Murrelet, Steelhead & Coho Salmon, Mount Hermon June Beetle, Ohlone Tiger Beetle, Smith's Blue Butterfly, Zayante Band-winged Grasshopper, San Francisco Popcorn Flower, Santa Cruz Tarplant, Robust Spineflower, and San Francisco Dusky-Footed Woodrat.[21] [22]
- Threats to these species vary based on where they exist and how they respond to human disturbance.
  - Sedimentation in the San Lorenzo river and its tributaries is detrimental to salmon, a problem that can be made worse from erosion of poorly-built trails (see the Hydrology and Geology section, page 9). These impacts, as well as impacts to amphibians such as the Red-legged Frog[23] can be alleviated by proper trail construction and routing trails away from sensitive riparian areas.
  - The Ohlone Tiger Beetle (Cicindela ohlone) lives in coastal terrace habitat with open native grassland.[24] Historically it was known to exist in Pogonip Park and Moore Creek Preserve, but was last seen in 2004.[21] An increased awareness of trail users and regulation of mountain bike speed has been shown to have positive effects on the Ohlone tiger beetle on the University of California, Santa Cruz, campus.[25]
  - Sensitive plants such as the San Francisco Popcorn Flower, Santa Cruz Tarplant, and Robust Spineflower, are susceptible to trampling by off-trail users, and to the introduction of non-native species.[24] These impacts are mitigated by limiting off-trail use and by comprehensive vegetation surveys prior to any new trail construction or re-routing.

4) ARE THERE LINKAGES BETWEEN MOUNTAIN BIKES AND THE PRESENCE/SPREAD OF HARMFUL AND INVASIVE SPECIES? CAN MOUNTAIN BIKES SPREAD HARMFUL SPECIES MORE THAN OTHER TRAIL USERS?

- Sudden Oak Death (SOD) is known to occur in Santa Cruz County (suddenoakdeath.org). Hikers and mountain bikers don't differ in their ability to transmit the pathogen,

but research shows that the farther one travels on a trail, the higher the chance of encountering, picking up and distributing the pathogen.[26] Moist soil in shoes/tires can harbor live pathogens, whereas dried soil is less likely to re-infect, meaning washing shoe and tire tread of mud is critical in preventing the spread of SOD. Given the ability of recreationists to act as a vector in the transmission of SOD, public recreation lands tend to have higher incidence of SOD infected trees than do private lands closed to recreation.[26]

- Brown-headed cowbirds (who trick other birds into protecting and feeding their young, at the expense of the other species' own chicks) are known to be attracted to and use trails and open-corridors as access routes into forest interiors.[27] [28] [29 [30] However, other research on the subject did not find any relationship between cowbird abundance or nest exploitation and distance from trails.[7]
- In terms of invasive plants, trails and trail users can act as vectors and provide new opportunities for their spread. One study showed that the presence of invasive plant species decreased with distance from both trails and roads, and that invasive species cover was greater near unsanctioned trails. Due to the low sample size it is unclear whether trail type or distance from the nearest road was responsible for this trend.[31]

5) WHAT CAN I DO AS A TRAIL USER TO MINIMIZE MY IMPACT TO WILDLIFE AND THE ENVIRONMENT?

- When it comes to Sudden Oak Death, it is good to be cognizant of your tires' ability to transmit this disease and clean your tires when riding in a new place. Also, the wetter the soil, the easier it is for harmful passengers to hitch a ride on a shoe or tire. This is another reason why it is better to ride or hike trails that aren't muddy or excessively wet.
- Studies show that it's best to keep moving when out on the trails and to maintain conversation at low or moderate levels.
    - Especially if you're riding in the early morning or late evening, when local species (such as bobcats, coyotes, and deer) are more active, be mindful of your speed and volume and how it might affect wildlife.
- When you do see wildlife, do not approach it.

MOUNTAIN BIKING IMPACT REVIEW FAQs

SOCIAL ISSUES

MOUNTAIN BIKERS OF SANTA CRUZ

17

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

MOUNTAIN BIKING IMPACT REVIEW FAQs — SOCIAL ISSUES

1) USER-CREATED ILLEGAL MOUNTAIN BIKE TRAILS ARE POPULAR AND PROLIFIC IN THE SANTA CRUZ AREA. CAN EXPANDING THE NETWORK OF SANCTIONED BIKE TRAILS ALLEVIATE THE PROBLEM? OR WILL INDIVIDUAL TRAIL BUILDERS CONTINUE TO BUILD UNSANCTIONED TRAILS?

- The creation of unsanctioned trails is not just isolated to mountain bikers, and unsanctioned trails are a symptom of an unmet need for legitimate trail use options. There is a general lack of research attempting to quantify the degree to which sanctioned trail networks alleviate the illegal trail building.
  - Anecdotally, according to an outdoor recreation planner for the BLM, fewer rogue trails tend to appear when agencies work closely with local mountain biking groups rather than trying to manage an area alone.[1]

2) WHAT NUMBER OF LEGAL TRAILS ARE NECESSARY TO BUILD TO SATISFY THE DEMAND OF THE BIKING COMMUNITY NOW AND IN THE FUTURE? HOW WILL SANTA CRUZ COUNTY SUSTAINABLY BE ABLE TO ACCOMMODATE AND MANAGE THIS USER COMMUNITY?

- MBOSC is working to better understand this topic in Santa Cruz County through trail counting systems and collaborative projects with land managers and researchers.
- In Santa Cruz County, we have 220 miles of official single-track trails, of which less than 40 miles are open to bikes (this does not include fire roads).[2] The average rider in Santa Cruz County rides 15 miles per week and rides an average of 3 times per week.[3]

3) AS A MOUNTAIN BIKER, WHAT CAN I DO TO HELP REDUCE CONFLICT BETWEEN VARIOUS TRAIL USERS?

- Research indicates that interactions between mountain bikers and other trail users rarely generate conflicts on trails.[4] However, people riding mountain bikes are commonly perceived as a hazard to other trail users and this perception (more than actual interaction) can become a source of conflict.[5]
- Hikers and equestrians generally have safety concerns based on cyclist speed, cyclists not showing caution on blind corners, and cyclists surprising hikers and equestrians on trails due to the fact that they are comparatively quiet and are perceived to move more quickly.[6]
- While trail designers and land managers can play a large role in reducing multi-use trail conflict by designing trails with improved sight lines, passing opportunities, and adequate signage, it is the mountain biking community's interactions with other user groups that will shape perceptions of the sport and its user community. Mountain bikers can reduce potential conflict (or negative perceptions) while riding multi-use trails by:
  - Reducing speed well ahead of encountering other trail users. (A mountain biker may know how quickly hydraulic disk brakes will slow them down, but most hikers may not.)

- Slowing down on blind corners.
- Politely alerting other trail users on approach (e.g. using friendly verbal contact or a bike bell).

4) WHAT CAN WE DO WE KEEP OUR TRAILS SAFE AND AVAILABLE TO EVERYONE?

- It is imperative that mountain bikers be courteous, responsible, and acknowledge that they are members of the greater trail community. Popular perceptions are not in mountain bikers' favor, so the more we can do to dispel myths and help re-shape those perceptions, the better.
- For example, studies show that non-biking groups who actually encountered mountain bikers on trails had more positive opinions of mountain bikers compared with those who did not encounter mountain bikers.[4] [6]
  - We all use the trails for the common purpose of enjoying our beautiful environments, so the kinder and more communicative we can be with each other, the more enjoyment we will all get out of it.
- Reviews of conflicts on public lands indicate that the frequency of actual hazardous incidents between mountain bikers and other trail users is very low.[5]
  - Further research is warranted, but based on findings to date, actual incidents between mountain bikers versus hikers appears to be minimal.
  - MBOSC understands that a perceived safety conflict is still a significant issue, and we do our best as trail designers and stewards to address perceived and real safety concerns (such as facilitating positive social interaction, improving trail sight lines, and promoting the construction of user specified trails).

SUPPORT MBOSC

Projects like the Mountain Biking Impact Review FAQs would not be possible without support from the MBOSC community. If you want to help make Santa Cruz the best place to be a trail user, please consider supporting the organization by becoming a member, donating, or volunteering!

BECOME A MEMBER — *MBOSC.org/membership*

When you become a member of MBOSC, you'll feel good knowing that you support building and maintaining Santa Cruz area trails. Your membership dues help fund:

- Advocacy for new trail projects
- Trail restoration, maintenance, planning, and construction projects
- Volunteer training and education
- Races and community events

VOLUNTEER — *MBOSC.org/volunteer*

MBOSC is powered by dedicated and passionate volunteers. Volunteering promotes community, opportunity, achievement, and sustainability—and it's fun! There are many opportunities to volunteer, from digging on the trails to helping out at races. You could even sit on one of the MBOSC committees, such as the Science Committee that dedicated themselves to creating this document!

DONATE — *MBOSC.org/donate*

MBOSC's work relies on fundraising efforts, and a financial donation is the easiest way to support that work. You can donate to the MBOSC general fund, or you can ask about specific projects that need support if you'd like your contribution to be more focused.

MBOSC EXPANDS TRAIL ACCESS IN THE SANTA CRUZ AREA FOR ALL TRAIL USERS, AND YOUR SUPPORT HELPS MBOSC BUILD NEW TRAILS FOR YOU TO ENJOY.

A Comparative Study of Impacts to Mountain Bike Trails in Five Common Ecological Regions of the Southwestern U.S.

Dave D. White
M. Troy Waskey
Grant P. Brodehl
Pamela E. Foti

EXECUTIVE SUMMARY: A rapid increase in mountain biking participation over the past thirty years has led to concerns about ecological impacts to recreation environments, especially trails. It is widely accepted that recreational use of natural areas inevitably results in some degree of change to resource conditions, and managers must consider the social acceptability and ecological significance of such changes in their decision making. The ecological impacts of mountain biking, however, and relationships between impacts and trail features remain poorly understood.

This study uses Common Ecological Regions (CERs) as a mapped ecological framework to guide comparative analysis of differences in maximum trail incision and trail width at varying slope levels for mountain bike trails in five CERs in the southwest U.S. A point-measurement trail assessment procedure was utilized to measure maximum incision and width for 163.2 miles of mountain bike trails. Results show a significant effect of CER on trail width and maximum incision and a significant effect of trail slope on maximum trail incision. Maximum trail width and incision were greatest in the Arizona/New Mexico Mountains region, perhaps due to environmental features such as erodiable soils and sparse trailside vegetation, higher use, and/or user behavior. Maximum incision increased consistently with slope for three of five CERs.

Relative to other trail impact research, the sites assessed in this study were in similar condition to other trails on the specific parameters measured. The findings from this study reinforce results from previous research that certain impacts to mountain bike trails, especially width, are comparable or less than hiking or multiple-use trails, and significantly less than impacts to equestrian or off-highway vehicle trails.

KEYWORDS: Recreation ecology, recreation impacts, ecological impacts, impact assessment, trail management

Mountain biking is an increasingly popular outdoor recreation activity in North America. Although use estimates vary, according to the recent National Survey on Recreation and the Environment (2003), general bicycling was the second most popular land-based recreation activity in the United States. Of those who bicycled, an estimated 45.2 million people, or nearly 21% of the American public biked on backcountry roads, trails, or cross country on a mountain bike at least once in the twelve months prior to the survey. Mountain biking provides important individual benefits (e.g., physical exercise and opportunities to experience nature), social benefits (e.g., family bonding), environmental benefits (e.g., preservation of natural areas for trails), and economic benefits (e.g., local and regional economic stimulus). Over the past two decades, technological improvements in mountain bike materials, components, and designs have facilitated dramatic increases in participation, allowing more and more people to realize the benefits of this recreation activity.

The rapid expansion of mountain biking also has led to concerns over the potential for undesirable social and ecological impacts to recreation environments. Management issues include safety of trail users, conflict, crowding, and resource degradation. The increase in mountain biking popularity thus far has outpaced efforts to understand this activity's associated impacts, leading to confusion, user conflict, and, in some cases, strict regulations for mountain biking on public lands (Edger, 1997). In some cases, managers have implemented actions such as spatial and temporal zoning, dispersal strategies, and trail closures to address concerns. Such direct management actions that limit access can be controversial and raise issues of equity. Furthermore, the lack of scientific understanding of ecological impacts on mountain bike trails limits informed decision making. A nationwide study of U.S. state park directors conducted by Schuett (1997) demonstrated the potential for uninformed management actions. Schuett found that 67% of state park directors felt that resource degradation from mountain biking was a problem in their parks, but less than 13% of the park systems had actually conducted any studies to assess the resource impacts from mountain biking. Similarly, Chavez (1993) cited studies that suggested U.S. Forest Service and U.S. National Park Service managers were concerned about resource degradation from mountain biking, but managers "could not discern whether damage was specifically because of mountain bike use" (p. 1). As Hendricks, Ramthun and Chavez (2001) noted, "Resource impacts attributable to mountain bikes have remained debatable and understudied. At this time there is not a well-developed body of research on the environmental impacts of off-road cycling" (p. 40).

It is widely accepted that recreational use of natural areas inevitably results in some degree of change to resource conditions, and managers must consider the magnitude, social acceptability, and ecological significance of such changes in their decision-making processes. In the absence of sound scientific information, however, managers may apply a precautionary principle, and choose to restrict use or take regulatory action that is based

on intuition, influence from advocacy groups, and questionable studies. Clearly, further research is needed to inform the development of best management practices to support sustainable mountain biking on established and properly constructed recreation trails.

Among the key factors affecting trail impacts deserving further study are: ecological attributes, such as vegetation and soil composition; use-related factors, such as amount and timing of use; and management factors such as trail design, alignment, and slope (Hammit & Cole, 1998; Leung & Marion, 1996). Although these significant influential factors and associated impacts have been identified, there have been relatively few quantitative studies of mountain bike trail impacts published to date that serve as building blocks for establishing relationships among the variables.

Furthermore, although there has been an increasing focus on the ecosystem concept in conservation and resource management in parks and recreation areas, the field of recreation ecology to date has not adopted a standardized mapped ecological region framework for organizing and comparing the studies that are conducted. Theoretically informed mapped ecological region frameworks are useful for classifying landscapes into hierarchical spatial units that represent characteristic patterns in the biophysical environment, human activities and impacts, and social and cultural meanings associated with landscapes (McMahon et al., 2004). Such frameworks are useful for describing and interpreting status and change in landscapes. McMahon et al. summarized the use of such frameworks by resource agencies in the U.S. and Canada which had mandated landscape assessments, biodiversity analysis, environmental monitoring and assessment, and selected indicators and standards for understanding environmental stressors and responses. According to McMahon et al., "The use of regions to stratify the underlying variability in natural conditions may increase the likelihood of detecting and understanding an environmental response generated by human activities" (p. 113). As recreation impacts are known to be related to both biophysical characteristics (e.g., soil, vegetation, and topography) as well as human activity (e.g., recreation type and amount, management intervention) it seems apparent that integrating impact studies with ecological regional frameworks might be fruitful. Also, using a standardized ecological region framework may facilitate the integration of recreation impact research into the widely accepted ecosystem research, assessment, and management framework.

To address these research needs, the goals of this study are twofold: one, to propose the use of Common Ecological Regions (CERs) (McMahon et al., 2001) as a mapped ecological region framework to guide comparative recreation impact research; and two, to evaluate the relationships between two influential factors and two common trail impacts. Specifically, this study assessed differences in maximum trail incision and trail width at varying slope levels for mountain bike trails in five common ecological regions in the southwest U.S.

Trail Impacts and the Emergence of Mountain Bike Research

The study of ecological impacts, often referred to as recreation ecology, has been, and continues to be a prominent field of inquiry for researchers, land managers, and academic professionals. Cole (1987) suggested that the field of recreation ecology began over 65 years ago with Meinecke's (1928) work on recreation impacts in the California Redwood State Parks. Recreation impacts research intensified during the 1960s and early 1970s as federal land management agencies sponsored studies to improve recreation management in natural areas. According to Leung and Marion (2000), the essence of today's ecological impact research and management lies in the desire to gain knowledge and to understand relationships among key causal and influential factors and significant effects. This knowledge is necessary to prevent, mitigate, and manage resource impacts. Campsites and trails receive the most attention from recreation impact researchers, with studies taking place in both remote backcountry and semi-remote front country settings.

The primary impact to recreation resources associated with trails occurs during initial trail design and construction (Birchard & Proudman, 2000; Sun & Walsh, 1998). Although this impact has the greatest magnitude and highest ecological significance, it is widely viewed as socially acceptable as the individual, social, and economic benefits of trail-based recreation typically outweigh the associated environmental costs (Cole, 1987). Most trail impact literature and recent research is organized around environmental and visitor-related factors (Hammit & Cole, 1998; Leung & Marion, 1996). Environmental impacts can be divided into four general categories: impacts to wildlife, water, vegetation, and soil. Visitor-related factors include amount of use, type of use, and user behavior. The foundation of recreation ecology research provides a platform for examining impacts associated with mountain biking.

The unprecedented explosion in mountain biking as a trail activity was sparked in the 1970s when cyclists began modifying bikes for off-road use (Schwartz, 1994). With balloon tires, a low, flat headset, and high clearance frame, mountain bikes brought drastic changes to places like Marin County, California. Fisher describes the early days: "In the mid-'70s we had a kind of cult riding everywhere on these clunkers" (Schwartz, 1994, p. 77). In 1981, Specialized Bicycle Components produced the first off-the-rack mountain bike, the Stumpjumper, and by 1999 mountain bike sales accounted to one-half of all units sold and one-third of all gross revenue for U.S. bicycle retailers (Bicycle Retailer & Industry News, 1999). In magazine articles from the 1980s, headlines portrayed mountain bikes as "Two-Wheel Terrors" (Foote, 1987) and "Vicious Cycles?" (Coello, 1989), and questioned whether mountain biking was "Sport or Spoil-Sport?" (Staub, 1984). Sensational captions depicted the "impacts" typical of mountain biking. Below a photo of bikers maneuvering a set of switchbacks, Foote included, "On the trail: cyclists pose a threat to nature" (p. 72). Next to a photo of two parallel bike tracks, Coello added the caption, "Along the

White Rim Trail, a jeep road in Canyonlands National Park, cyclists have gouged furrows on their way to the canyon rim" (p. 52). Cessford (1995a) questioned whether tread marks were an easy target, and one wonders if Coello would have made a similar statement about footprints leading to the canyon rim. Countering these claims, Grost (1989) noted that bikes "don't eat hay, grass ... or defecate" (p. 50) and "weigh about 872 pounds less than a horse" (p. 76).

In the 1980s and 1990s researchers began serious study of the social and environmental consequences of mountain biking. Hendricks (1997) recognized that "the 1990s have seen the mountain bike controversy mature from social and environmental issues debated with anecdotal evidence in board meetings, in popular magazines and through newspaper editorials to a land management issue supported by serious inquiry and examination" (p. 3). Researchers studied mountain biker demographics, preferences, and perceptions (Antonakos, 1993; Bowker & English, 2002; Cessford, 1995b; Goeft, 2000; Hollenhorst et al., 1995; Ruff & Mellors, 1993; Symmonds et al., 2000); manager preferences and management strategies (Baker, 1990; Chavez, 1996a, 1996b; Hendricks et al., 2001; Leberman & Mason, 2000; Mason & Leberman, 2000; Moore & Barhlow, 1997; Ruddell & Hendricks, 1997; Schuett, 1997); and social conflict (Banister et al., 1992; Carothers et al., 2001; Cessford, 2002; Ramthun, 1995; Watson et al., 1991).

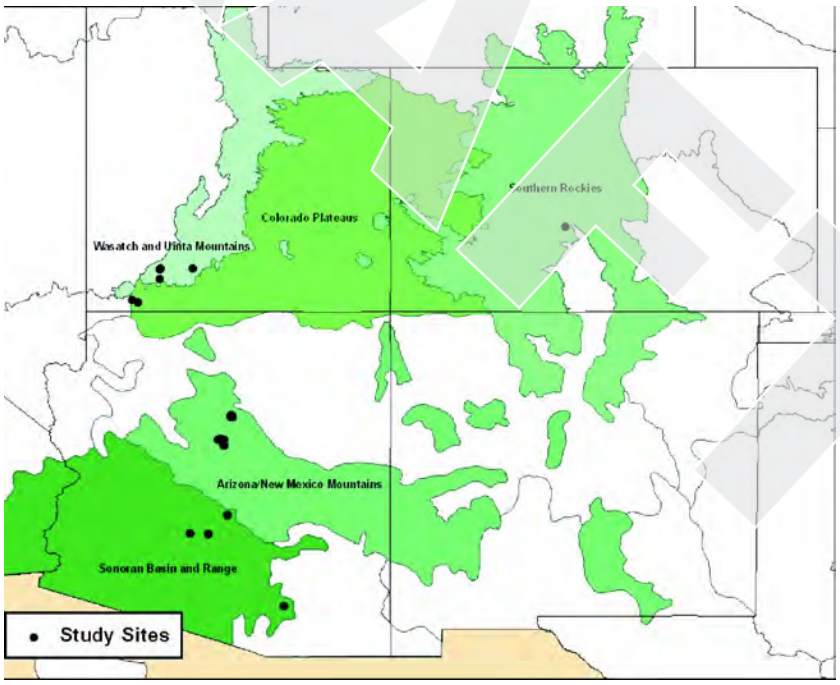
The ecological impacts of mountain biking, however, remained poorly understood. In fact, several researchers indicated a need for further study in this area (Cessford, 1995a, 1995b; Chavez, 1996a; Chavez et al., 1993; Goeft, 2000; Goeft & Alder, 2001; Hendricks, 1997; Jacoby, 1990; Schuett, 1997; Thurston & Reader, 2001; Wilson & Seney, 1994). The absence of concrete information was evident in the earliest publications. In an early summary of mountain biking literature, Cessford (1995a) discussed ecological impacts and presented several astute observations, though the majority of his conclusions were derived from other forms of recreation, such as hiking and off-road motorcycling. His most notable inference was that mountain bikes will generate the most torque during uphill travel, but considerably less pressure on the trail in comparison to other users when moving downhill, although degradation is possible "in extremely wet conditions, on uncompacted surfaces, or due to poor braking practices" (p. 9). Cessford also admitted that the research available at that time could not reliably discern whether mountain biking was any more or less impacting than hiking, a sentiment shared by Ruff and Mellors (1993).

At the time of Cessford's (1995a) literature review, few physical impact studies included mountain biking. Wilson and Seney's (1994) quasi-experimental approach examined the effects of a mountain bike, hiker, horse, and motorcycle on runoff and sediment yield for trail sample plots in the Gallatin National Forest, Montana. The results of this analysis indicated that the four uses did not significantly alter runoff. With respect to sediment yield on pre-wetted plots, the horse and hiker dislodged more

material than the motorcycle and mountain bike. On dry plots, the hiker, mountain bike, and motorcycle produced similar sediment yields, but again the horse produced highest yield. Sediment yield for each use was greater for pre-wetted plots than for dry plots. Wilson and Seney acknowledged that soil texture and slope are equally important factors as used in determining sediment yield. Another comparative quasi-experimental design was applied to mountain biking by Thurston and Reader (2001), who assessed the effects of hiking and mountain biking on vegetation loss, species loss, and soil exposure. Their most pertinent finding was that there was no significant difference between the impacts of hiking and mountain biking for the three variables.

Bjorkman's (1998) dissertation included two studies conducted in Wisconsin's forests. In the first project, Bjorkman determined that sediment yield and erosion associated with mountain biking were lower on a surface treated with a nylon/polypropylene liner and covered with a material made from recycled tires than on an untreated trail. For the second analysis, Bjorkman monitored a variety of impact variables over the first five seasons of, and 90,000 passes on, two newly opened mountain biking trails. The primary findings were: the greatest change in vegetation loss, compaction, cross sectional area and centerline depth on steep slopes, and mean trampled width occurred early in trail use; impacts were largely confined to the trail centerline; and erosion and trail width were greatest on slopes with ≥ 24 percent grade, though erosion was not significant on less steep slopes. In similar research, Goeft and Alder (2001) examined changes in soil compaction, erosion, trail width, and vegetation cover over one year on both recreation and racing trails in southwestern Australia. They noted that erosion was greatest on downhill slopes and at curves, and that erosion and compaction were strictly on-trail impacts. Off-trail vegetation impacts and changes in trail width proved insignificant, though both were most pronounced following a race. Widening was also more likely on wet soils and during the rainy season.

From these studies, several key points are evident. The magnitude of ecological impacts attributed to mountain biking appear to be comparable to those of hiking, and appear less than motorized trail use and equestrian use. In many cases, soil structure, slope, and environmental factors are as influential as type and amount of use in determining impacts such as soil loss. If managed properly, impacts such as compaction and vegetation loss can be confined to the trail, with minimal damage to trail peripheries. Mountain bikes have the greatest potential to damage trails in wet and muddy conditions and on steep uphill (spinning tires) and downhill slopes (skidding), which may prove problematic for managers, as many mountain bikers prefer challenging technical sections. In Bjorkman's (1998) words, "Usage has little influence in explaining impacts to the trail... The first several thousand passes create the most change whether later total use levels are 10,000 or 90,000" (p., 122). Though these limited findings acknowl-



edge an incomplete understanding of the physical impacts of mountain biking, they do provide an early indication of conditions that may exist in the field.

Study Methods

Common Ecological Regions (CERs) Provide an Organizing Spatial Framework

This study was conducted in five common ecological regions in the southwest U.S.: Sonoran Basin and Range; Arizona/New Mexico Mountains; Colorado Plateau; Southern Rocky Mountains; and Wasatch and Uinta Mountains (see Figure 1). These ecological regions are a subset of a larger spatial framework developed through a cooperative partnership of nine U.S. federal earth science and resource management agencies. The CER spatial framework "is a mapped set of geographic regions that supports agency programs or studies" that was developed to guide cooperative ecosystem research efforts and facilitate "regionally generalized results from local investigations" (McMahon et al., 2001, p. 293-294). Thus, by using the ecological regions framework developed by the cooperating agencies, which include the Forest Service, Bureau of Land Man-

Figure 1
Map of Study Sites

agement, Fish and Wildlife Service, and National Park Service, researchers may obtain an "increased measure of confidence in moving from the results of their investigations to characterizing the region as a whole" (McMahon et al., p. 301).

The common ecological regions are based on similarities in biotic, abiotic, terrestrial, and aquatic features of the environment as well as social and cultural meanings attached to those environments (McMahon et al., 2004). These various factors were incorporated into the CERs from the amalgamation of three preliminary spatial frameworks developed by the Forest Service (USFS), Environmental Protection Agency (EPA), and National Resource Conservation Service (NRCS) (McMahon et al., 2001). Each of these three prevailing frameworks was created according to agency agendas and management directions. The latest Forest Service framework, for example, was spawned from an agency focus on ecosystem-based approach to managing national forests and grasslands. The NRCS major land resources framework was shaped from practical USDA requirements for soil classifications necessary for assessing agriculture potential and land use. The MLRA and other NRCS frameworks and soil maps work in a hierarchical manner when placed under the umbrella of the CER framework. Similar to the original USFS approach, the EPA framework is aligned with an overall ecosystem view. McMahon et al. (2001) provided a thorough review of how these three original and contributing frameworks have undergone subsequent quantitative and qualitative analysis to create the interagency coordinated CERs.

The five CERs in which data were collected for this study are characterized by vegetation, soils, physiographic, land use, land cover, and geology elements represented in the contributing frameworks mentioned above. The Sonoran Basin and Range region is characterized by extensive areas of palo verde-cactus shrub and giant saguaro cactus and has large tracts of federally managed lands. The basins are marked by grama-tobosa shrubsteppe while the ranges are covered with oak-juniper woodlands, and ponderosa pine on the higher elevations. The Arizona/New Mexico Mountains region is a relatively dry, warm environment, with chaparral at lower elevations, pinyon-juniper, and oak woodlands at lower to middle elevations, and higher elevations covered by Ponderosa pine forests and smaller areas of spruce, fir, Douglas fir, and aspen. In the Colorado Plateau region, differences in elevation distinguish this region from nearby Arizona/New Mexico Plateau where it reaches lower and Wyoming Basin to the north as it is generally more elevated. In large, low-lying areas, saltbrush-greasewood vegetation is dominant. The pinyon-juniper woodlands of the elevated plateaus of this region include sheer sidewalls of abrupt changes in local relief, ranging from 300-600 meters. The Wasatch and Uinta Mountains region, also the westernmost region in this study, encompasses a central area of high, precipitous mountains with intermittent valleys, plateaus, and open high mountains. Vegetation is manifest in a banded pattern where aspen, chaparral, and juniper-pinyon and oak are

common at middle elevations. The region is also typified by less lodgepole pine and a greater emphasis on grazing livestock than in the neighboring Middle Rockies region to the north. Finally, the Southern Rockies region, which marks the eastern extent of the areas studied, includes high elevations and steep, rocky mountains. Large portions of this region are covered by coniferous forest, while the highest elevations take on alpine characteristics. Similar to the Wasatch and Uinta Mountains region, elevation banding dictates vegetation, soil, and land use in the Southern Rockies region. Lower elevations contain grasses and shrubs and are grazed heavily. Moderate elevations include grazing and are covered by Douglas fir, ponderosa pine, aspen, and juniper and oak woodlands. Higher elevations are abundant with coniferous forests that receive minimal grazing activity (US Environmental Protection Agency, 2005). Although there is variability in biotic and abiotic elements within ecological regions, this spatial framework provides a useful system for segmenting the region and providing context for interpretation and extrapolation of environmental research findings.

Trail Selection

The goal of the trail selection procedure was to identify mountain bike trails or trail segments within each ecological region that were generally typical of trail conditions in that region. A comprehensive list of potential trail segments was developed in cooperation with land management agencies and mountain bike and trail associations. The focus was to identify trail segments identified by the responsible management agency as system trails—in keeping with the purpose of the research to examine impacts to existing trails where mountain biking might be sustained as a legitimate activity. Some trail segments were initially user-created but had been adopted into the agency trail system if design parameters were within agency specifications. To isolate impacts associated with mountain bike trails to the greatest extent possible in a field research setting, trail segments were excluded from the sample frame if motorized use, equestrian use, or multiple-use was dominant. We initially planned to use a 3 x 3 x 5 full factorial design with three levels of use (low/medium/high) and three levels of slope (low/medium/high) across five ecological regions; however, once candidate trail segments were identified, the necessary diversity in use level in each region was lacking, given the use-type restrictions. Specifically, there were inadequate data points to fill cells for low use levels for four of the five CERs and medium use level for two of the five CERs. Ultimately, a total of 162.3 miles of trails were purposively selected in the five common ecological regions. Thus, several limitations of the completed sample should be noted, including the lack of diversity in use levels across the five study regions, the lack of verifiable use level information, and the small number of sample points collected in the Colorado Plateau region, which resulted from time and resource limitations for the field research data collection. Future researchers should consider collecting systematic trail use level information using trail counters or other methods.

The completed sample of trail segments in each region cannot be determined to be representative of that region and extrapolation of the study findings to the ecological region as a whole, is inappropriate at this time, and thus our findings should be cautiously interpreted at larger spatial scales. By adopting the common ecological regions as an eco-spatial framework for recreation impact research, however, we aim to encourage the long-term development of a comprehensive knowledge base of impact conditions across these regions. The CER framework is available for download as a GIS layer (US Environmental Protection Agency, 2005) and subsequent research utilizing this framework would facilitate comparative spatial analyses and ultimately confident generalizations about the relationships between specific causative and non-causative but related factors and specific impacts across different regions of the U.S., thus overcoming one of the limitations of recreation impact research—namely that research tends to be opportunistic, site-specific and driven by specific management concerns.

Trail Impact Assessment Procedures

A point-measurement trail assessment procedure was utilized in this study, focusing on measuring maximum incision and trail width. The point sampling method is most appropriate for assessing trail impacts, such as incision and width, which are continuous along the trail (Marion & Leung, 2001). For the point measurement method, a bicycle wheel measuring computer was used to identify systematic sampling points at intervals located every 805m (1/2 mile) along the trail after a random start point near the trailhead. Leung and Marion (1999) examined the influence of sampling interval on the accuracy of trail impact assessments for frequency of occurrence and lineal extent for four common impacts (tread incision, wet soil, exposed roots, multiple trailing) and found that intervals of less than 100m provided the most accurate estimate of lineal extent. Recognizing the inefficiency of such sampling intensity for most settings, however, the authors concluded that "sampling intervals between 100m-500m are therefore recommended to achieve an appropriate balance between estimate accuracy and efficiency of field work" (p. 178). Thus, a limitation of this study is a large sampling interval relative to other studies and the potential for loss in accuracy. The justification for this approach was to include as large a sample of trail miles as possible across a broad geographic region in this exploratory investigation.

At each sample point, trail boundaries were defined to include the area where the vast majority of trail use (>90%) occurred by identifying visually obvious disturbance indicated by changes in ground vegetation height, cover and composition. Temporary stakes were placed at the trail boundaries to establish a transect perpendicular to the trail tread. Trail width was defined as the distance between the trail boundary points and measured in inches to the nearest inch. A taut nylon cord was stretched between the base of the stakes and maximum trail incision (MIC) was measured as the maximum depth from the string to the trail surface in inches to the nearest

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

quarter inch. At each measurement point, technicians used digital camera to capture site images and recorded locations using Global Positioning System (GPS) receiver. Data were collected between May 2003 and March 2005 during the primary use season for each ecological region, entered into an online Microsoft Access 2003 database and analyzed using SPSS (Version 12).

Results

Data for the study were collected from 162.3 miles of mountain bike trails across five common ecological regions, which resulted in 319 point measurements (see Table 1). Of the 162.3 miles of trails assessed, 91.7 miles were managed by the U.S. Forest Service, 27.5 miles by a county parks and recreation agency, 16.4 miles by a state government agency, 17.8 miles by the Bureau of Land Management, and 8.9 miles by a city government.

Table 1
Mileage of Mountain Bike Trails Assessed and Number of Sample Points Across Three Categories of Slope for Five Common Ecological Regions

	Mileage	Sample points			
		< 5%	5% to 10%	> 10%	Total
Colorado Plateaus	17.8	9	21	7	37
Wasatch and Uinta Mountains	26.8	16	19	19	54
Southern Rockies	29.3	15	25	12	52
Arizona / New Mexico Mountains	35.6	26	25	25	76
Sonoran Basin and Range	52.8	52	22	26	100
Total	162.3	118	112	89	319

Mountain biking was the dominant activity on all trail segments, with three trails engineered specifically for this use.

Trail slope is a key factor influencing potential for impacts to soil and vegetation on recreation trails (Goeft, 2000; Wilson & Seney, 1994) with trail slopes greater than 12% typically associated with higher potential for degradation. As shown in Table 2, 37% of the sample points had a slope of less than 5%, 35% had a slope of 5% to 10%, and 27% had a slope greater than 10%. The mean slope for all sample points in the study was 7.6% with a minimum of 0% and a maximum of 38%. Considering the trail segments in each of the CERs, the mean slopes were: Sonoran Basin and Range (7%); Arizona/New Mexico Mountains (8%); Colorado Plateau (7%); Southern Rocky Mountains (7%); Wasatch and Uinta Mountains (8%).

The mean maximum trail incision, or trail depth, across all sample points was 1.48 in. with a median of 1.0 in. and maximum 10.0 in. The

Table 2
Mean Trail Width and Maximum Incision at Three Slope Levels Across Five Common Ecological Regions

Common Ecological Region	Trail Grade	Trail Width (ft.)	MIC (in.)
Colorado Plateaus	< 5%	1.87	0.78
	5% to 10%	2.24	1.14
	> 10%	2.41	1.00
Wasatch and Uinta Mountains	< 5%	2.14	1.06
	5% to 10%	2.31	1.31
	> 10%	2.28	1.74
Southern Rockies	< 5%	1.94	1.73
	5% to 10%	2.10	2.00
	> 10%	4.02	1.67
Arizona / New Mexico Mountains	< 5%	3.45	1.62
	5% to 10%	4.12	1.88
	> 10%	2.61	2.20
Sonoran Basin and Range	< 5%	2.48	0.83
	5% to 10%	2.34	1.55
	> 10%	1.84	1.61

mean trail width across all sample points was 32 in., with a median of 26 in. and a maximum of 109 in. Table 3 displays the values for trail width and maximum trail incision by each trail slope category and across the five ecological regions. Multiple analysis of variance (MANOVA) was used to examine the relationships between the influential factors of CER and slope and the impacts of trail width and maximum trail incision. For MANOVA, the assumption is that dependent variables are multivariate normal; however analysis of variance is robust to departures from normality. The results, displayed in Table 4, showed a significant main effect of CER on both trail width and maximum trail incision. Average trail width for the sample points was significantly higher in the Arizona/New Mexico Mountains than all other regions; this was followed by Sonoran Basin and Range, Wasatch and Uinta Mountains, Southern Rocky Mountains, and Colorado Plateau. MIC was highest for the sample points in the Arizona/New Mexico

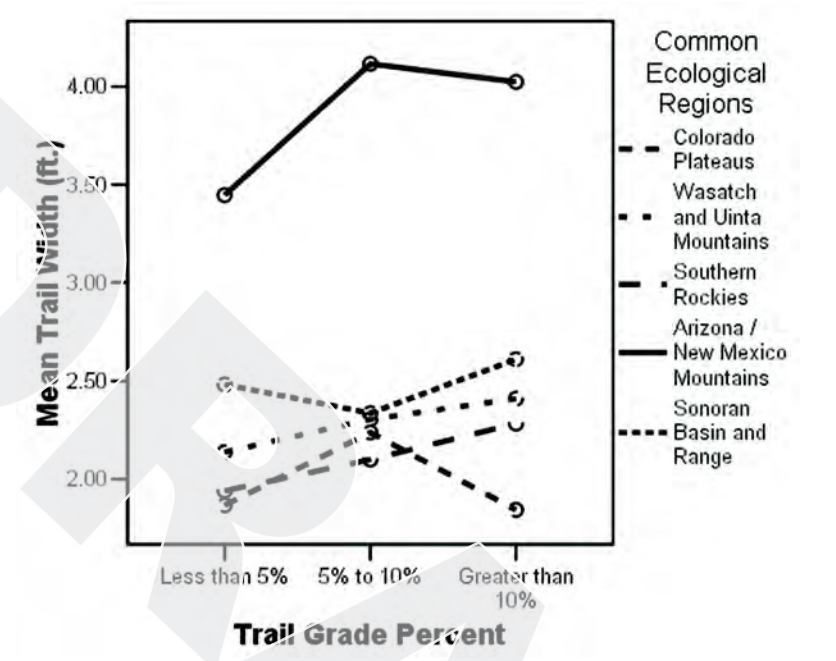
Mountains, followed by Southern Rocky Mountains, Wasatch and Uinta Mountains, Sonoran Basin and Range, and Colorado Plateau.

There was a significant main effect of trail slope on maximum trail incision—as slope increased, maximum incision increased. MIC for slopes of less than 5% was significantly lower than slopes of 5% to 10% and significantly lower than for slopes of greater than 10%. The latter two slope categories were not significantly different. There was not a significant main effect of trail slope on trail width, but, generally, as slope increased, trail width increased. Average trail width was 30 in. for slopes less than 5%, 32 in. for slopes 5% to 10%, and 34 in. for slopes greater than 10%. Figure 2 displays the findings for MIC across three categories of trail slope for each CER. For three of the five CERs—Arizona/New Mexico Mountains, Sonoran Basin and Range, and Wasatch and Uinta Mountains—incision was smallest on slopes less than 5%, higher on slopes 5% to 10%, and highest on slopes greater than 10%. In the two other regions, different patterns emerged. In the Colorado Plateaus, MIC increased from 0.78 in. at slopes less than 5% to 1.14 in. at slopes of 5% to 10%, but fell to 1.00 in. at slopes of greater than 10%. MIC for sample points in the Southern Rockies CER was 1.73 in. at less than 5% slope and increased to 2.00 in. at 5% to 10% slopes, but MIC lowest at slopes of greater than 10% (1.67 in.).



The effects of slope and CER on trail width are graphed in Figure 3. As noted earlier, slope did not have a significant effect on width for the sample points in the study, although in general higher slopes were associated with

Figure 2
Mean Maximum Trail Incision at Three Different Slope Levels Across Five Common Ecological Regions

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Figure 3
Mean Trail Width at Three Different Slope Levels Across Five Common Ecological Regions

higher trail width. For sample points in three of the five CERs—Arizona/New Mexico Mountains, Wasatch and Uinta Mountains, and Southern Rockies, the trend lines show higher slopes to be associated with increasing width, but the differences are small. Trail width for the sample points in the Arizona/New Mexico Mountains was significantly greater than all other regions at each slope level. In this region, width increased from 42 in. at less than 5% slope to 50 in. at 5% to 10% slopes and 48 in. at greater than 10% slope. For sample points in Colorado Plateaus, width increased from 22 in. at the lower slopes to 27 in. at the middle slopes, but then dropped to 22 in. at the steeper slopes. On the contrary, trail width for points in the Sonoran Basin and Range was lowest in the 5% to 10% slope category. The interaction between CER and slope was not significant.

Conclusions

Data for this study were collected from 319 sample points gathered from 162.3 miles of mountain bike trails in five common ecological regions of the southwest United States. Significant differences were identified between trails in different common ecological regions for both trail width and maximum incision. Trail width at sample points in the Arizona/New Mexico Mountains was significantly higher than sample points for all other

regions. These finding may be explained by environmental features such as vegetation associations or soil, or by use-related variables or management factors at the specific trails included in this study. Without adequate controls, it is not possible to isolate the effects of each contributing factor, but several explanations are plausible. Environmentally, the dominant vegetation for most trail segments in the Arizona/New Mexico Mountains was sparse chapparal and pinyon-juniper and the soil was mostly sandy-loam to loam. Such relatively sparse vegetation and fine, homogenous soils may not prevent trail widening as effectively as, for instance, the imposing trailside cactus vegetation and rockier soils in the Sonoran Basin and Range or the more densely forested portions of the Southern Rockies and Wasatch and Uinta Mountains. Regarding use-related factors, the sampled trails in the Arizona/New Mexico Mountains region are located in the Coconino National Forest near Sedona and Flagstaff, Arizona and these trails were the most heavily used in the study. The trails are popular for day hiking and it is hypothesized that heavy use and user behavior contributed to increased width. For instance, although systematic observation of recreation behavior was not part of this study, field researchers' notes suggest that as mountain bikers passed others on the higher-use trails, users leave the main tread, disturbing soil and vegetation. This use-related explanation is consistent with Marion and Leung's (2001) study of trails in Great Smoky Mountains National Park, which found that trail width was the only impact condition significantly related to use level. Regarding maximum incision, values were significantly higher in the Arizona/New Mexico Mountains and Southern Rockies regions than all other regions.

Consistent with previous mountain bike trail research (Goeft & Alder, 2001; Wilson & Seney, 1994), increasing slope was associated with greater impact; in this case maximum incision. Specifically, MIC was greater at slopes of 5% to 10% than at slopes of less than 5% in all five CERs. This finding is significant, suggesting a direct relationship between slope and MIC, especially at small to moderate slopes. Future research might test this hypothesis through a multiple regression analyses to isolate the relative contribution of slope and ecological characteristics, as well as use level, and management agency. Although the interaction between CER and slope was not statistically significant, the pattern of results in the data show that MIC on sample points from two regions—Southern Rockies and Colorado Plateaus—was lower at slopes of greater than 10% than at slopes of 5% to 10%. This pattern may be explained by increased management attention to those trail segments at greater slopes, lower use on steep trail segments, or by more resistant soils. Further investigation is necessary to determine if environmental features, use-related variables, or management factors mediate the relationship between slope and incision at higher slopes. Trail slope was related to maximum incision but not trail width.

Relative to other trail impact research, the sites assessed in this study were in similar condition on the specific parameters measured. Average overall trail width for all sample points in our study was 32 in., with a median

of 26 in., and average maximum incision was 1.48 in. with a range of 0 to 10 and median of 1.0 in. The width and depth of the trails in this study are similar to the multiple use trails Great Smoky Mountains National Park discussed by Marion and Leung (2001), where point sampling method found the range of width to be 9 in. to 57 in. with a median of 17 in., and a range of incision within current tread boundary of 0 in. to 6 in. and a median of 0 in. Average width in our study was similar to lower use mountain bike trails in Australia studied by Goeft and Alder (2001), which found width to range from 17 in. to 26 in., and mountain bike trails in Tennessee assessed by Marion and Olive (2004), which found average width to be 24 in. In the Marion and Olive study, average width for horse trails was 81 in. and average width on ATV trails was 104 in.; in that study, bike trails had significantly less erosion as measured by cross-sectional area, and less muddiness than horse and ATV trails as well. Similarly, Aust et al. (2005) found an average width of 82 in. for equestrian trails in Hoosier National Forest in Indiana. The findings from our study thus reinforce results from previous research that certain impacts to mountain bike trails, especially width, are comparable or less than hiking or multiple-use trails, and significantly less than impacts to equestrian or off-highway vehicle trails. Although our study focused on only two impacts, when combined with the findings of previous studies (Goeft & Alder, 2001; Wilson & Seney, 1994), a consensus seems to be emerging that recreation impacts to mountain bike trails are largely confined to the main tread and mountain biking is likely a sustainable activity on properly managed trails, at least in the environments studied thus far. To determine the sustainability of mountain biking, however, further research is warranted into other, potentially more ecologically significant impacts, such as wildlife disturbance or introduction and spread of invasive species, and across a broad range of ecological regions.

Our study does suggest that moderate to severe slopes are an area of management concern for increased incision; although we did not assess erosion (e.g., through cross sectional area), this is also a concern for moderate to severe slopes. This is potentially problematic as studies have shown that mountain bikers tend to prefer trails with steeper slopes, downhill features, and sharp curves (Cessford, 1995b; Goeft & Alder, 2001; Hollenhorst et al., 1995). For the trails in our study, the impacts were relatively modest, but systematic monitoring would be prudent. Managers may also want to clearly define and encourage a narrow trail tread in environments, such as the Arizona/New Mexico Mountains, that facilitate free travel along the trail periphery and on multiple-use trails where hikers and bikers frequently pass one another.

A final contribution of this study is the introduction of CERs as an organizing eco-spatial framework for recreation impact research. Additional studies that use this framework will facilitate comparisons of findings and ultimately allow for increased statistical power and meta-analyses to isolate the relative importance of various causal and influential factors on a

wide range of impacts. Such studies, especially when using GIS analyses, have the potential to assist researchers and managers in moving from localized investigations to regionalized generalizations. Despite limitations, this study represents an exploratory first step in this progression.

Acknowledgments:

This research was supported through a Cooperative Agreement between the Bureau of Land Management, Arizona State University, and Northern Arizona University, and facilitated by the Colorado Plateau Cooperative Ecosystem Studies Unit. The authors would like to acknowledge Don Applegate from BLM Arizona and Phil Morlock from Shimano American Corporation for their support and assistance with this project.

February 14, 2022

Via email bshearer@belmont.gov

Brigitte Shearer, Director
Belmont Parks & Recreation Department
30 Twin Pines Lane
Belmont, CA

Dear Ms. Shearer,

We are the Waterdog Open Space Stewards (WDOSS), a local community organization with wide local membership, (193 active members and over 3,000 on our mailing list) consisting of cyclists, hikers, runners, and dog walkers. We advocate for sustainable, equitable and inclusive policies for Belmont's open space. Our platform is that Belmont's successful 30+ history of inclusive multi-use access to open space (bike/hike/run/dog) has served our community well. We want to see these policies continue both for the community of today, and for generations to come.

We respectfully request that you forward this letter to WRA Environmental Consultants, Inc. for consideration under Task 2 of its scope of work for Belmont's comprehensive open space management plan, which includes reviewing ". . .the report prepared by Mr. Scott Cashen. . . and any other relevant studies prepared by other local environmental groups." In this letter we hope to provide our perspective on sustainability and open space management issues, and we will provide a critique of the study prepared by Mr. Scott Cashen.

While we advocate for equitable, inclusive, and sustainable trail access for *all user groups* (hikers, cyclists, runners, dog walkers), this letter will focus primarily on cyclists, because a handful of people are lobbying for severe restrictions to recreational access, and are blaming any and all problems in the

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

open space on the cycling community. In our view this position is not supported by science, local user experiences, or land management best practices.

Peer-reviewed studies on the impact of cycling on trail systems show that cycling has no more impact than hiking, and that trail maintenance is the most important factor in preventing erosion.

We have attached for WRA's consideration some peer-reviewed studies on the impact of cycling on trails. The key takeaways from these studies are that the existing body of research does not support the prohibition or restriction of mountain biking from a resource or environmental protection perspective.

Existing studies indicate that cycling differs little from hiking in its contribution to soil impacts. Other factors, particularly trail grade, trail/slope alignment angle, soil type/wetness, and trail maintenance, are far more influential determinants of tread erosion or wetness. Land managers should look first to correcting design-related deficiencies before considering restrictions on low-impact users. By enlisting the aid of all trail users through volunteer trail maintenance efforts, they can improve trail conditions and allow for sustainable recreation.

- *Environmental Impacts of Mountain Biking: Science Review and Best Practices* by Jeff Marion and Jeremy Wimpey
- *A Comparative Study of Impacts to Mountain Bike Trails in Five Common Ecological Regions of the Southwestern U.S.* by Dave White, Troy Waskey, et al.
- *Mountain Biking: A Review of the Ecological Effects* by Miistakis Institute prepared for Parks Canada

While not a true peer-reviewed academic study, we have also attached a publication by the Mountain Bikers of Santa Cruz Science Committee, *Mountain Biking Impact Review Frequently Asked Questions* which is a helpful resource.

Volunteer trail maintenance by the local cycling community is vital to the continued sustainability of trails Belmont's open space.

As you know, the Belmont Parks and Recreation Department has a staff of 10 who are responsible for 63 acres of parks, 25 acres of school sports fields, 300+ acres of open space, and approximately 155,000 square feet of city facilities. Parks staff also oversee tree removal permits and the city's medians and gateways. The leanly-staffed department does not have sufficient resources for the considerable task of maintaining Waterdog's trails. For many years, volunteers from the cycling community have served as an extremely

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

valuable asset that the Parks and Recreation Department has been able to leverage to keep the trails properly maintained in the open space.

The vast majority of volunteer trail maintenance is provided the Waterdog Trailkeepers, a Facebook group with over 400 members, most of whom are cyclists. This group has provided volunteer trail maintenance for many years, but a detailed recordkeeping system did not begin until 2018. Attached is a current spreadsheet of the Trailkeepers volunteer hours. An article on trail maintenance can be seen here.

From February 2019 to February 2021, there have been 40 separate trail maintenance days with over 800 volunteer hours and 183 volunteers committed to the maintenance and improvement of trails at Waterdog. One of the largest projects the group has undertaken was to fix the drainage issue on the Lake Loop trail in February 2020, which involved 24 volunteers with over 120 volunteer hours to complete.

More recent examples of trailwork in 2021-2022 can be viewed here. The photos show a French drain and cobblestone rock tread added to Chapparal trail in a perpetually wet ravine, tread improvements on John Brooks and Rambler trails, a felled tree cleared on Ohlone trail, small bridges added to Rambler trail to prevent rutting in muddy spots, de-berming and re-sloping the tread on Chapparal to reduce water acceleration and channeling, restoring a previously barren area at Rambler trail, where trail braids have been eliminated and and six native California Oaks have been planted, eliminating a trail shortcut on Rambler trail, clearing of concrete drainage ditches, and bags containing approximately 1/2 ton of concrete fragments hauled out from Rambler trail.

Designating the 300 acre Waterdog / Hidden Canyon open space as a nature preserve makes little sense given there is a 23,000 acre wildlife refuge one mile away.

The Waterdog open space is approximately 200-300 acres in size, and since the 1970s, it has been completely surrounded on all sides by the large, single-family homes of the Belmont Heights residential development.

About one mile away from the western edge of Waterdog open space, there is a 23,000 acre wildlife preserve: the San Francisco Public Utilities Commission (SFPUC) Peninsula Watershed. It is a state-designated fish and game refuge, and a protected area within the UNESCO Golden Gate Biosphere Reserve.

Waterdog is far too small and has far too many humans around to seriously be considered to be set aside as a nature preserve. Even if humans were completely banned from the borders of the open space, the animals in the open space would still be impacted by the dogs, cats, and humans who

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

completely surround its perimeter. Unlike the fleeting and transitory presence of trail users, those homes and roadways completely encircling the open space have an associated impact that is present 24 hours a day, 7 days a week. More detail on this issue can be found in this article.

Continued multi-use access is clearly what the community wants.

As WRA will see when evaluating the PROS Plan documents, the PROS survey results showed that the public is overwhelmingly in favor of multi-use trails supporting hikers, bikers, trail runners, and dog walkers. For example, 2,153 respondents (77%) rated Waterdog's condition as excellent. The following respondents agreed the following would "greatly enhance" the open space experience: Trail Maintenance 2,448 (87%), adding trails 1,999 (71%), and improving trails 1,278 (46%) By contrast, only 945 (34%) respondents prioritized habitat protection, only 797 (28%) supported designating certain trails for certain uses, and a paltry 135 respondents (5%) checked off "Reduce number of trails." There was excellent turnout for the survey, and the results were clear. An article about the survey results is here.

Another data point to consider is that there was a candidate in the 2020 Belmont City Council election who was the only candidate to run on a platform of restricting recreational access to open space and having the Waterdog/Hidden Canyon open space designated as a nature preserve. That candidate was soundly defeated, getting only 7% of the vote.

Restricting bicycles to fire roads is unreasonable.

One of the radical changes to the status quo being demanded by anti-recreation lobbyists is banning bicycles from all trails except for fire roads. As we detail further in this article, segregating trails by user group and creating privileged classes of open space users contradicts the PROS guiding principles, which are to (1) Provide equitable access to resources and activities across the entire city; (2) Promote inclusion to people of all backgrounds, regardless of race, gender, sexual orientation, socioeconomic position, or physical/cognitive ability, and (3) Make all users feel welcome and safe.

If bicycles were limited to fire roads, the only bike-legal trails would be the Lake Road Trail (1.3 miles), and two short, non-contiguous sections of the John Brooks Trail that add up to less than one mile. Cyclists would be shut out of more than 75% of the trail system mileage, and there would be no way to do a loop ride in the trail system.

Lobbyists attempt to justify a segregationist approach by claiming that hikers cannot hike in peace or have quiet solitude with cyclists on the trail. In actuality, it is the recreational needs of cyclists that are currently underserved by our regional network of open space parks. Cyclists are limited to Waterdog

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

and El Corte de Madera Creek Preserve (25 minutes away), whereas hikers have a plethora of local options, completely free of cyclists, to choose from: Crystal Springs Cross Country Course (17 feet from the Upper Lake Trail trailhead, 299 acres, 3 miles of trails), Big Canyon Park (10 minutes away[1], 16 acres, 1.7 miles of trails), Pulgas Ridge Preserve (11 minutes away, 366 acres, 6 miles of trails), Edgewood Preserve (12 minutes away, 467 acres, 10 miles of trails), Eaton Park (14 minutes away, 58 acres, 2 miles of trails), Mills Canyon Park (16 minutes away, 1,500 acres, 1.4 miles of trails), Phleger Estate (22 minutes away, 1,000 acres, 4.6 miles of trails), Huddart Park (24 minutes away, 973 acres, 28 miles of trails), and Foothills Park (25 minutes away, 1,400 acres, 15 miles of trails). These areas provide ample opportunities for hiking-only trail access.

Hikers, cyclists, runners, and dog walkers have successfully shared Waterdog open space trails for decades. Bringing all of these groups together outside fosters park users' sense of shared community. Segregating trails by user group is not a viable option from an equity and inclusiveness perspective, and as the scientific studies provided show, there is no justification for restricting classes of users from trails from a resource or environmental protection perspective.

The study by Scott Cashen is biased, flawed, and was commissioned by anti-recreation lobbyists.

In our opinion, the report of Scott Cashen has the veneer of a scientific study, but upon further examination it reveals flawed methodology, it perseverates on cycling and exposes clear bias, likely in an effort to serve the ends of the patron(s) of the study. It is our understanding that it was presented to the PROS Committee by Pat Cuviello, who is a lobbyist demanding that Waterdog open space be designated as a wildlife preserve, and the candidate who lost the City Council election in 2020 on this platform.

It appears to us that Mr. Cashen specializes in serving clients who seek to stop projects based on impacts to wildlife. His top Google search results show he was hired by the Sierra Club to challenge a habitat protection plan, hired by a group to to oppose a solar project, hired to oppose a dam project, and so on.

Mr. Cashen serves as a litigation expert witness, and it appears to us he is hired exclusively by parties seeking to stop projects based on impacts to wildlife. When an expert is exclusively hired by one side of an issue, it raises questions in our mind as to whether that expert is in the business of providing unbiased scientific opinions, or serving as an advocate for a particular side.

[1] Driving times measured from Hidden Canyon Park parking lot to parking lot of the other location by car, per Google Maps.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

We question the scientific validity of the report, because it cites only to studies that support it's theme that mountain biking is the root of all environmental destruction. A truly scientific study would acknowledge and critically discuss the body of scientific literature showing that cycling differs little from hiking in its contribution to environmental impacts, and then provide evidence of how those studies are somehow wrong or inapplicable. The Cashen report does none of this. Rather, it "cherry-picks" studies that support the desired result. This fails the third and most important step of the basic scientific method, which is to (1) make an observation that describes a problem, (2) create a hypothesis, (3) *test the hypothesis*, and (4) draw conclusions and refine the hypothesis.

We also question the validity of the conclusions drawn in the report. In general, the report cites impressive-sounding literature on the threats to flora and fauna, but then provides tenuous and/or unsupported connections (or no connection at all) to how those phenomena actually occur in Belmont's open space. For example, without providing any citation or support for this proposition, the report declares "Wildlife injuries or fatalities are more likely to occur due to collisions with bicycles because mountain bikers travel much faster than hikers. Reptiles, including the endangered San Francisco Garter Snake, are especially vulnerable to collisions with mountain bikes because reptiles often use open conditions created by trails for thermoregulation..." yet the report concedes that the San Francisco Garter Snake only has the "*potential* to occur in the study area."

Mr. Cashen is a biologist, not a land use attorney, and his credentials do not describe any background, training, or experience in the law of charitable land conveyances. Yet the report offers opinions about the legality of the scope of the city's utilization of the open space based the original land grant by John Brooks. In our opinion, there is no credible basis for these conclusions, and when an expert opines on issues outside his scope of expertise to argue for a result, that demonstrates bias.

Ensatina and Flow trails are sustainable and have served the public well for years.

There are 14 trails recognized in the city's current published trail map. In addition, there are two public prescriptive / social trails that do not appear on the published trail map, but are well-established, well-maintained and have been enjoyed by the public for years. Both of these trails were solidly constructed, follow the topographic contour lines of the terrain for the most part, and are not causing any measurable environmental degradation. These trails provide variety, route options with shade, and reduce the chances of trail user conflicts by spreading out trail traffic over more trails.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Some people try to characterize these trails as “illegal,” “unsanctioned,” or “rogue” trails. These characterizations are wrong. Both trails appear on the trail map approved by City Council in 1998 as and are identified in solid orange lines as “proposed single-use trail.” Although the reasons are not clear, these two trails did not make their way onto the published trail map back in the late 1990s. A copy of the resolution and trail map are attached. (Note: because the quality of the orange trail lines on the image is poor, two versions of the 1998 trail map are attached, one original image, and one with the two trails highlighted.)

The first trail is known as “Ensatina,” and connects the Lake Loop Trail with the John Brooks Trail. While this trail exists in a riparian area, it is well-compacted. Environmental impacts can be mitigated with continued maintenance, improvement, and construction of bridges over creek crossings.

The second one is known by various names including “Flow Trail” and “Labor of Love." This trail is a loop that connects with John Brooks Trail in two places, and runs behind Comstock Circle and Hallmark Drive. It is not feasible to remove this trail because it provides the only access to portions of the city storm drain infrastructure that runs throughout the open space. It runs alongside multiple drainage culverts and storm drain connections, which require periodic cleaning and maintenance.

Concrete storm drain culverts along “Flow” trail in need of maintenance.

To: P&R Comm
Subject: Concerns about local parks

Dear Commissioners,

Thank you for the information that was provided last week on the status of parks in Belmont. I was interested in hearing about all the parks but my major concern is Hallmark Park since I live in close proximity to it. I was pleased to hear that most commissioners were not in favor of expanding the park. I walk through it frequently on my way to walking the cross country course. The tot lot is used infrequently and really does not need to be upgraded for older children. It is now a facility that is not used often and I do not think that the addition of modern equipment will increase its use. The tennis courts are though and need to be renovated as well as the sidewalks. I was also concerned about adding a bocce ball court or creating a facility on the hill. If a bocce ball court is added, you need to address ADA requirements and this area is not easily accessible. The area on the hill looks down into people's homes and impacts personal space. In addition, we may be the only park in Belmont that does not have at least one designated parking space. The only parking is on the street. Street parking can be busy with individuals parking to access the cross county course. I hope that you will continue to support no additional structures and facilities to Hallmark park. It is a beautiful wild life preserve and should be maintained as such.

I have also walked in the Hidden Valley area. I agree that safe paths need to be maintained for bikers and walkers. Bikers often come down quickly off the canyon path and can potentially be dangerous to people sitting or walking in the area. I agree that signage about the wildlife would be educational but it needs to be maintained. Weathering takes a quick toll on signage so that it becomes eyesore if not maintained.

Finally, I was very concerned that comments were made by commissioners that they had not visited some of the parks. How can one vote on changes to a park if they have not seen it? As an educational administrator, I attended board meetings twice a month for over 20 years. I recognize and appreciate the time that a commissioner volunteers to support a program. But I also know that accepting to be a commissioner comes with a responsibility to understand what one is reviewing and voting on. I suggest a field trip to the parks. I frequently watched such activities by board members to visit construction projects in my school district. It provided them with a better lens to make decisions. I encourage all commissioners to visit the Belmont parks so that they can be informed about their needs.

Thanks you for hearing my concerns.

Dr. Patricia Kurtz

LETTER TO BELMONT CITY COUNCIL

Everyone supports recreation. But isn't walking through a natural setting recreation? Recreation is also enjoying the peace and quiet, exploring nature, seeing birds and hearing them sing. All ages can enjoy this rare and splendid natural environment. We already have a playground and tennis courts in Hallmark Park. We do not need to cover up what's left with yet more structures.

The reason most of us live here in this neighborhood has to do with the natural space around us. You have already cut down perfectly healthy trees of which only one out of four was dead or a problem in the first place. The "excuse" was that their roots were interfering with the path. The path could have easily been modified to accommodate the beautiful healthy trees you cut down and you did nothing to repair the path anyway!

Then you spent more money planting new trees. These new trees will take 20 or more years to begin doing what the trees you cut down were already doing. They were reducing the carbon in the atmosphere, providing a place for birds to nest and supporting the wildlife. You also cut down these trees at bird nesting time, so we lost even more of our habitats for wildlife.

You have claimed that you don't have enough money to maintain what is already there in Hallmark Park. But somehow you found the money to cut down perfectly healthy trees

2

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

and plant new trees instead of spending a much lesser amount that could have easily modified the path. Now you want to build more structures which will add a cost you say you can't afford in the first place.

More important is what this park already gives us something most other parks can't: a peaceful natural setting. This little piece of nature sets it apart and is another form of recreation not found in virtually any of the other parks around us. Please don't ruin this little oasis by building more structures. Let's leave something of its natural setting for the enjoyment of peace and quiet and for wildlife to flourish. And think of the money you'll save!

Thank you for your consideration.

Mimi Iversen, resident of Hallmark neighborhood

Hi there
I am the resident of 4 elder dr in hallmark. Upgrading the play structure is very helpful for our family and the rest of families that have younger children. We are in favor of resurfacing the tennis court. I also think it is not a bad idea to have some seating area. This can be few benches. Having a looped walking path is a plus. I am not sure i support other ideas. Adding/replacing fountain to drink water is good idea too. The existing fountain was out of service some times back.

Subject: Preserve Hallmark Park

We are 36-year residents of the Belmont Heights residential area. Our draw to this area was the "natural beauty" and serenity of the landscape, watershed and preservation of vegetation and wildlife. The walking trails afford residents the rare opportunity to enjoy all of the above.

The proposed plans to broaden, excavate, develop and populate one of the last remaining residential parks into a public community. This proposal will bring more automobiles into the area, and disturb the wildlife and peaceful community our families have enjoyed for years. Preservation of the unique and cherished gifts of nature we may ALL still enjoy without modernizing and injecting new development will destroy what has been preserved for years. We are one with nature here. Noise, cars, trash and disrespecting nature's gift is unacceptable.

The cross-country runs already bring hundreds of strangers and vehicles to our quiet community every Fall. Hallmark Park should not become a public recreation area.

We are strongly opposed to the proposed changes to Hallmark Park.

Thank you,

Nace and Bonnie Passantino
Hallmark Drive

Subject: proposed Hallmark Park plan

Hello,

I am a resident of Belmont Heights on Wakefield Drive since 2013. I am writing to express my concerns about the proposed plan for Hallmark Park. Neighborhoods are defined by certain characteristics, and this plan threatens to undermine and even destroy what makes Belmont Heights special.

This is a quiet neighborhood that already attracts many people who live beyond its borders to enjoy the hiking and biking trails. Moreover, we and all our neighbors already experience the traffic congestion and related issues brought on by the frequent cross country meets. We were aware of the meets when we bought our home. This proposed plan, however, would irrevocably change the character of the neighborhood. When we purchased our home, our son was 4 years old. We knew that going to a playground would necessitate going to Fox School after school hours or driving to local park. However, we were drawn to the area for its quiet and for its easy access to nature as well as the excellent school district. We moved from Sunnyvale, which has numerous wonderful large parks, including one to which we we walked frequently as a family. But those parks have much dedicated parking and some separation from surrounding homes. Those parks have also been part of the landscape for a very long time.
Even at a young age, we took our son down the path to Waterdog lake and he now at 12, enjoys bicycling the paths on his own or with friends.

I am in favor of updating the tennis courts as as well as the tot lot without making it much larger. The path leading to the tennis courts is also in need of serious repair. I think Hallmark Park has no place for a bocce court or wider paved paths. Without additional parking, congestion would increase even further. Note the issues with parking and illegal U-turns and runners darting out into the streets that we already experience during country country meets. During the height of the pandemic when we were sheltering at home, I appreciated more than ever that our sidewalks offered us the opportunity to take walks at various times of the day. I don't see the need to create additional paths. These additional features also have the potential to attract late night gatherings. I hear from friends in San Mateo this is in issue at their parks.

Please do not destroy what makes this neighborhood special. A neighborhood can't be all things. We knew when we moved here that we would be unable to walk to errands or to a large park, but the quiet, the extraordinary views, access to nature as well as the surrounding community and schoosl drew us to Belmont and this neighborhood in particular.

Sincerely,
Ines Salazar

To: <info@belmontprosplan.com>

Greetings!

For almost 35 years, we have resided in our home at the corner of Hallmark and Wakefield Drive – just across the street from the entrance to Hallmark Park. We have enjoyed our neighborhood park and appreciate and support a refresh and repair work for safety concerns and restoration of our wonderful views.

The asphalt pathways are unsafe and in great need of repair due to years of neglect and incursion from tree roots. Over time, our original expansive views from the benches above the tennis court have been obscured by fast growing non native pine trees.

We support restoring the natural landscape by removing all non native trees and increasing maintenance in order to reduce the possible fire danger in our area and restore our views.

We support keeping our natural landscape and wildlife habitat which provides us with access to wildlife viewing and environmental education. Interpretive signage should be added to enhance the learning experience. Walking paths in the meadow area would be helpful.

The current tot lot is suitable only for toddlers and preschoolers. We support enhancing it to meet current standards and provide amenities for our neighborhood elementary school children, while maintaining a look and feel that blends into the park's natural landscape. We suggest that the playground have a local wildlife and environmental theme to enhance the environmental component of the park.

We do not think we need additional amenities to Hallmark Park when the focus should be on the natural environment, a children's playground and a tennis court.

We are concerned that adding additional amenities, such as a dog run area, will increase the traffic in our neighborhood, negatively impact the natural setting, and increase city costs for increased upkeep and maintenance.

Sincerely,

Michele Cohen and Lewis Scarpace

To: P&R Comm
Subject: Mountain biking in Waterdog Park

Please do not limit mountain bike access in the WaterDog park. I really enjoy riding there during the weekdays as it is close to my house, the trails are well maintained, and it has a very good diversity of easy to technical trails. I personally try my best to be polite to all trail users, dog walkers, and whatever kind of animals I see and share the trails with.

It is my personal belief that mountain bikers should give way to all other trail users, which is something I practice each and every ride.

WaterDog also is a relative haven for young people who may not have access to drive long distances to enjoy outdoor activities, such as hiking and mountain biking. These outdoor activities should be encouraged and supported rather than discouraged and made impossible by a select, albeit very vocal, elites minority.

I believe most trail users share the same philosophy whether on bike or on foot. I also do hike those trails and walk my dog there on occasion and I've never had a bad interaction with any one yet. I also enjoy riding to the higher elevations, getting off the bike and admiring the views.

As for making it a nature preserve, what good is that if people aren't allowed to enjoy nature first hand? There is precious little open space left in the Bay Area where people can personally enjoy and interact with nature, especially on a mountain bike, please don't limit this further.

I have lived in San Mateo County my entire 63 years and have seen too much land taken away from residents in the name of 'progress' and conservation. We need to have someplace to ride, hike, and walk.

Sincerely,
Russell Roeckel

San Mateo, CA 94401

Subject: Open Space Assessment by WRA Consultants

Dear PROS Committee and Park Commissioners,

At the April 5 presentation by WRA, the PROS committee appropriately refused to speculate on resource allocation for our Open Space until they see the written assessment of the current ecological conditions (to know our needs). While our open space may seem healthy to the casual observer, there are many issues that have degraded the natural habitat -- some in the past and some continuing. To omit, and thus ignore, these known issues will be simply greenwashing; *we can't tackle our issues until we acknowledge them and agree they need fixing.*

Some of these issues reflect a lack of standards, and others constitute vandalism pure and simple. Belmont lacks standards for trail construction, defined trail use policies, and enforceable laws against vandalism of public lands. So long as we allow damaging practices we will be stuck in a cycle of constant repair and maintenance – working harder yet falling behind. **However, if we first put a stop to *ongoing* damages, then we can free up *future resources to invest* in restoration and recreation.** This is a principle of *adaptive management*, which WRA urges for Belmont. **I expect to see the following issues included in the WRA Open Space assessment:**

Trails, geology, hydrology:

- Poorly designed trails; straight down slopes (causing erosion gullies, safety concerns), across steep cross-slopes (destabilizing slopes), encroaching on streams, and crossing mapped debris flows,
- Unsanctioned trails allowed to proliferate unaddressed,
- Active debris flows/landslides,
- Dumping of soil and cuttings into creeks, diverting natural flow, increasing silting and spreading invasives,
- Blockage of creek by wet crossings,
- Drainage culverts (concrete) clogged or overgrown,
- Exposed soils and destabilized slopes resulting from clear-cutting for fire breaks.

Habitat and vegetation:

- Excessive trail density fragmenting habitat (2-5 times more miles per acre than comparable open spaces),
- Unnecessary removal of native vegetation far *beyond the trail width*, including native white yarrow, sticky monkey, sage and oaks,
- Abutting homes' vandalism including: topping public trees, stairs and paths from gates, invasive species from back gardens, dumping of brush cuttings, broad spraying Roundup on open space, drainage pipes/culverts discharge into open space,
- Soil and cuttings shoveled downhill onto vegetation below,
- Encroachment on riparian habitats and vital water sources for wildlife,
- Sudden oak death,
- Invasive species, most notably broom but also thistle, pines, and pampas grass,
- Drainage diverted directly onto oaks, leading to the decline and death of the tree,
- Trails and shortcuts undermining or compressing tree roots, leading to instability and decline of the tree,
- Improper branch cutting destabilizing the tree or introducing pathogens,
- Lumber and tools from unknown sources unmonitored, bringing pathogens and invasives.

I hope WRA, PROS representatives and City officials will ensure the new master plan addresses these issues.
Thank you,

Kristin Mercer
Belmont resident

Subject: Belmont Open Space Goals

Dear Commissioners and PROS Committee,

In the April 5 WRA presentation I was pleased to hear mention of several important issues long overlooked in Belmont; riparian habitats, redundant and poorly designed trails, benchmarking stewardship policies of other open space districts, and the concept of adaptive management. I'm optimistic that Belmont can create an enlightened vision for a sustainable, biodiverse and healthy native habitat for our open spaces.

However Belmont's Conservation Element policies regarding **wildlife and natural habitat** were largely omitted from the WRA draft goals. As you are aware, the Conservation Element is the section of our General Plan that addresses management of Open Space in Belmont, and as such is the most critical input into the Open Space plan. This is why the City RFP specifically cited awareness of Conservation Element policies.

Belmont General Plan section 4.1: *"The Parks, Recreation, and Open Space Element **bears a strong relationship to the Conservation Element**, which is required to provide direction regarding the conservation, development, and utilization of natural resources. The Parks, Recreation, and Open Space Element addresses open space for outdoor recreation, while the **Conservation and Safety elements discuss open space for preservation of natural resources and open space for public health and safety**, respectively."*

Belmont Conservation Element: *"Human safety and recreation opportunities **must be balanced** with maintaining the **proper functioning of natural systems**.... The habitats of the natural resources open spaces found in Belmont are discussed in more detail in the General Plan EIR."*
*Goal 5.3: **"Protect and restore biological and ecological resources** in Belmont, including sensitive **wildlife species and their habitats**."*
*Policy 5.3-4: Maintain functional **wildlife corridors** and habitat linkage in order to contribute to regional **biodiversity** and the viability of rare, unique or **sensitive biological resources** throughout the city and region.*

A mere focus on a few "species of special concern" is not adequate; the Conservation Element calls for a **broad definition of functional habit for wildlife, including each of the sensitive natural habitat communities discussed in the Element.**
Belmont residents are counting on your influence. **Please ensure these VITAL goals are incorporated into the Master Plan, along with proposed policies to achieve these goals.**

Thank you,
Kristin Mercer
Belmont resident

Subject: Needed - Another PROS ADVISORY Meeting devoted to Open Space

Brigitte, Commissioners and PROS:

On 4/5, I attended the Open Space PROS Advisory meeting but was dismayed to learn that this was the PROS Advisory's last meeting for the entire project! I believe a 5th PROS Advisory meeting devoted entirely to Open Space is absolutely necessary. Not allowing another PROS Advisory meeting for further discussion on our Open Space would be violating your last guiding principle to "Utilize a transparent Community Process to inform Decisions".

This was the first opportunity for the PROS Advisory Committee to hear and see the WRA overview slide presentation on Open Space with no prior information given to the Committee for review. In a series of 30 rapid slides, John Baas, the project manager quickly covered the goals/policies which included the right "buzzwords", trail maintenance, habitat restoration, adaptive trail management, wildfire, environmental protection, visitor demand and safety and management, use of e-bikes, new unauthorized trails and protection of riparian resources which could have been used in any open space presentation. He provided no specifics or details regarding Belmont's Open Space leaving both participants and observers bewildered, scrambling to take notes as he spoke. Without presenting any relevant information specific to Belmont's Open Space, he asked the PROS Advisory Committee to help determine the allocation of his hypothetical pie chart which despite hypothetical, put a very low priority on important issues of Trail maintenance and Adaptive Trail Management which was not defined clearly.

Both the PROS committee and Park & Rec Commission appeared confused and wondering what WRA expected from the Advisory Committee regarding each of these topics which could be an in depth discussion by itself. *Several Advisory members even commented it was premature to assess any pie allocation before seeing a report with more information. One member asked for another Advisory meeting and I agree that this request should be granted, not only to determine the pie allocation but to discuss each of the goals/policies for our Open Space.*

To devote only one PROS Advisory meeting to the most important issue for Belmont, Waterdog Open Space and San Juan Canyon, after devoting so much time and effort to other parts of the PROS plan such as Neighborhood Parks is not only unfair, it appears to be attempting to bypass the proper process due for this important topic. Clearly, more specifics and information on each of WRA's goals and policies for Belmont as well as much more clarification on his 2 management alternatives briefly mentioned with no explanations are sorely needed before any assessment can be given. The PROS Advisory Committee deserves another meeting to discuss WRA's recommendations and alternatives before any decisions are made.

The PROS process up till now has been fairly transparent and informative with proper focus groups and meetings providing guidance. Let's not mess up your hard fought process now by rushing through this most important topic of Belmont's Open Space without giving the PROS Advisory Committee their right to discuss and analyze WRA's recommendations and alternatives.

Thank you for your attention.

Subject: 4/6 parks and rec meeting

Hello PROS plan advocates and commission,

Today I am sending you a quick note as follow up to the two nights of meetings this week, both of which I attended and participated in with public comment. Thank you all for your time and effort on this important matter!

I enjoyed WRAs presentation on Tuesday evening, and found their group to be well qualified given their extensive experience and credentials. It was great to hear from subject matter experts on the state of our open space, and was glad to hear that their scientists have already been out in the field for substantial time to catalog species and to gain a deep understanding of our recreational open space. And, I was heartened to hear WRA state that from their perspective the health of our forest and open space is quite good. This is what I personally believe to be true, but always nice to hear it confirmed by a real expert!

I express my condolences that you and others continue to take abuse from a small anti-recreation vocal minority. I cringe every time they come on for public comment just to criticize, lecture, and name call - often times deliberately trying to spread misinformation. But this is democracy, and so they must be heard.
Last night, after I made my personal comments in the public setting, I was derided by the next speaker Pat Cuvielo as 'Ignorant, ignorant, ignorant....' Now, given the source of the criticism, I'm not feeling too hurt! But I would suggest that this is the sort of behavior we don't want to tolerate as a city, and it may be worthwhile setting more concrete ground rules at the beginning of each contested meeting to inform folks that this sort of behavior is not acceptable - if you agree.

I also worry that the comments of myself and others who are in the camp of 'pro enviroment AND pro recreation' can also get repetitive. Personally, I tend to show up to these meetings in order to provide what I hope is a more balanced view. That said, I really appreciated commissioner Michaels comments last night. Paraphrasing, I heard that it would be appreciated if public comments would provide reasonable plans that incorporate both sides of the argument. Well said! I don't want the only public voices you hear to be from the anti-recreation group, because as we know from the citywide survey - the majority of our city is very supportive of recreational open space and multi use trail access. The challenge we have, is that the anti-recreation group seems to have lots of time on their hands, whereas most folks in the city have jobs and families to care for.....

The issue we face at home, is much like we see on the national level and abroad. Issues are ever more hyper-polarized, and so groups feel like they can only get what they want if they argue extremes - and this can get very boring and repetitive. How can we change the conversation? I'm open to suggestions and feel free to reach out to me directly for a conversation.

Last night I mentioned that our discussions feel like groundhog day - and they do! Its the same old arguments swirling around and around. The last speaker of the night, Mike, said it more eloquently. One statement he said I really liked. "we have to get to a point where we can make good use of this resource and be environmentally sound while we do it." I think that captures the issue perfectly in my mind.

I don't have a great or concrete solution to the problem at hand, other than we have to work through a process that at times feels slow and inefficient.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

I do think that setting stronger ground rules at the beginning of these meetings would be helpful. Let folks know that name calling or bullying is unacceptable, and remind folks that first and foremost we are neighbors and we all want the same thing - a continued vibrant and healthy open space system. I would also suggest that you consider setting concrete boundaries to disallow agenda related comments during the general comment period. Last night we all sat through 30 minutes of agenda related comments which were allowed into the general comments, and this then pushed the dog discussion and PROS discussion later than they needed to be.

So in summary, I want to thank you all again for your hard work and thoughtfulness as we approach this hot topic! I'm confident that we will get to a great solution for both the environment and for the entire community that loves and cherishes our beautiful open space.

All the best,
Thaddeus Block

Subject: Belmont's Healthy Open Spaces!

Dear Parks and Rec Commission,

At Tuesday night's PROS Advisory Committee meeting I was excited to hear from John Baas (PhD) and botanist and wetlands ecologist Ivy (I didn't catch her last name) from WRA Environmental Consultants. It was encouraging to hear their preliminary findings: the open spaces in Belmont including Waterdog and San Juan Canyon are currently in pretty good shape with regards to ecosystem health.

Ivy mentioned two species in particular that she considered important in her assessment, the San Francisco Dusky Footed Wood Rat and a yellow blossomed shrub that is endemic to the San Francisco bay area, the Wester Leatherwood. Both appear to have healthy populations in the parks.

My son and I were riding our bikes in Waterdog just yesterday (4/6/22) and while waiting for me to catch up on the Rambler trail, he spotted a bob cat sitting quietly on the trail ahead, about 50 feet away, watching him. It's common knowledge that apex predators prefer healthy ecosystems over degraded ones.

The analysis done by an independent and neutral third party (WRA), although preliminary, clearly demonstrates that the ecological health of the open spaces is reasonably good and therefore compatible with current recreational usage patterns.

Going forward, I hope that residents who continue to falsely assert that recreation is destroying the wildlife and the overall ecosystem in our open spaces are understood to be inconsistent with the professional ecologists.

Furthermore, we hear plenty of complaints from the same residents that the trail density is too high in our open spaces. Since our open spaces are not nature preserves, the city is under no obligations regarding trail density. Our current open spaces are considered healthy by professional ecologists so trail density at it's current level appears sustainable.

The public opinion poll conducted by Gates and Associates last year clearly shows that our residents like to get outside to hike, walk their dogs and ride bikes. What's wrong with priding ourselves on having abundant properly built and maintained trails?

Let's keep Belmont's open spaces open for everyone who uses them respectfully.

Sincerely,

Scott Sisemore

Attachments:	1998 trail map (original).pdf; 1998 map (flow and ensatina highlighted).pdf

Dear Parks and Rec Commission,

Thank you for always-thoughtful consideration of the issues, and I'm sorry that you have to endure so much abuse from the group of anti-recreation partisans who seek to close off access to our open space. I'm sure this is not what you had in mind when you volunteered to serve on the Commission, and I admire your patience.

The anger in the voices of these public commenters was palpable. Perhaps they are frustrated that their narrative of environmental destruction by multi-use is simply without factual basis, and they are now resorting to name-calling and lashing out at the Commission itself. Generally, when a party to a debate resorts to name-calling and *ad hominem* attacks, that means they are unable to provide facts, evidence, reason, or logic to support their position. Attacking commenters who disagree with them as "ignorant" without providing any factual explanation of why the opposing party's position is somehow wrong does not add anything productive to the discussion.

I wanted to make the below points during the meeting, but refrained since the meeting dragged on very late. I am writing mainly to correct some of the misinformation that came out in these public comments. First, it is unclear why it is "ignorant" to point out that one mile away from Waterdog open space, there is a 23,000 acre wildlife preserve at the SFPUC Peninsula Watershed which is a state-designated fish and game refuge, and a protected area within the UNESCO Golden Gate Biosphere Reserve. While Waterdog can and should contribute to biodiversity, there is only so much it can do, given that it is 100% encircled by urban development and has a dam and a substantial amount of concrete storm drain infrastructure constructed within it to service those developments.

WRA's preliminary analysis shows that anecdotal tales of environmental destruction are without foundation. Apex predators such as bobcat and mountain lion sightings at Waterdog are commonplace. When a habitat is in decline, the first animals to leave are apex predators. The presence of these apex predators demonstrate that Waterdog remains a healthy ecosystem.

In his comments, Mr. Cuvielo lashed out at the cycling community for creating shortcuts and illegal trails. With regard to shortcuts, those are not a cycling-specific phenomenon. Unauthorized shortcuts are a problem in *every* trail system, whether or not they are multi-use. Hikers, runners, dog walkers, equestrians, and cyclists can all create them.

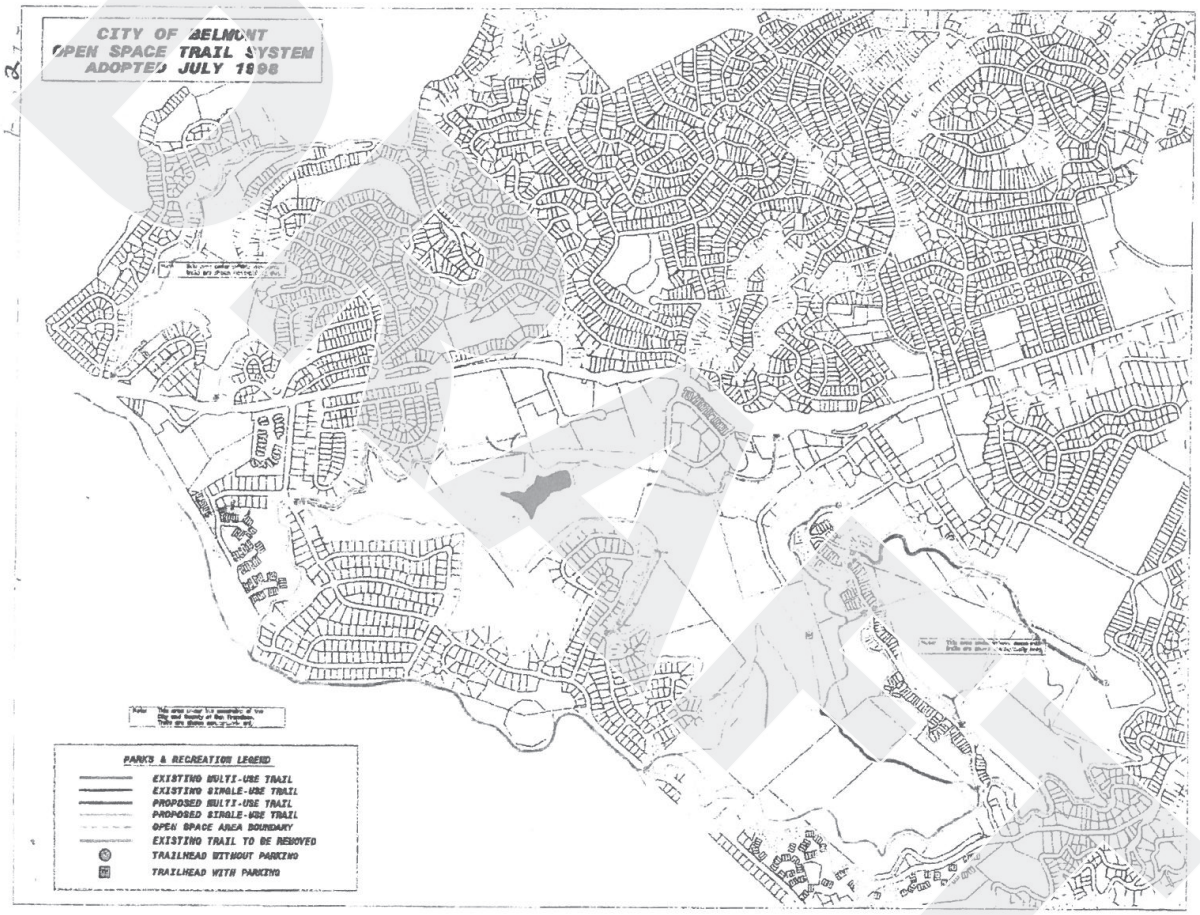
What is unique about Waterdog is that volunteers from cycling community actively and successfully *remove* shortcuts on an ongoing basis. For example, on John Brooks trail, the hill behind Highlands Court became barren with trail braids, which can be seen in this Google Maps photo: https://www.google.com/maps/@37.5051375,-122.3052449,216m/data=!3m1!1e3?hl=en
Those trail braids worsened substantially during the Covid lockdown induced increase in trail use. Volunteers from the Waterdog have completely closed off and restored the trail braids, and re-

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

vegetated that hill with soil and plant material from the concrete drainage culverts that were clogged. If you look at that hill now, the trail braids in the Google Maps photo are no longer visible.

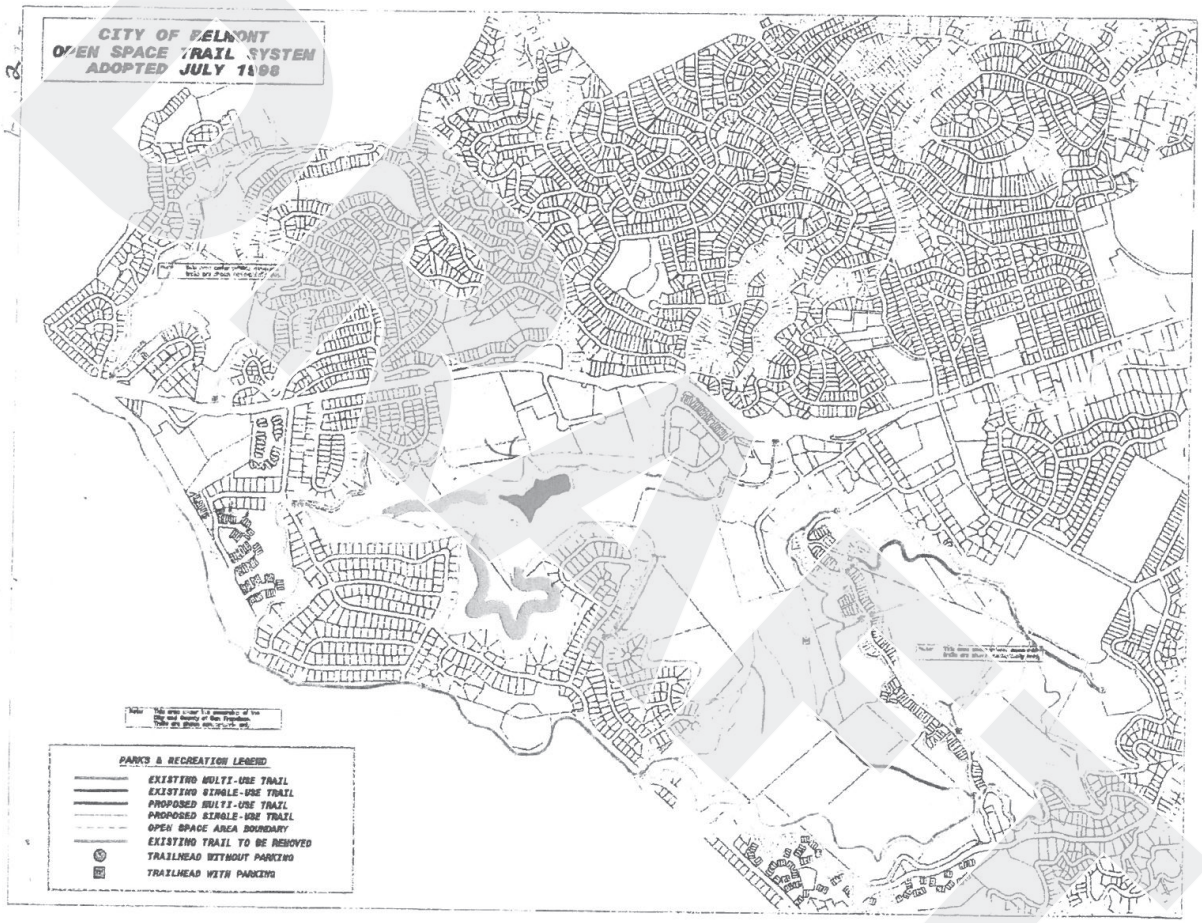
On the other side of John Brooks in that same area, a social shortcut trail developed between John Brooks and Chaparral. The Trailkeepers completely brushed over and closed the entrance to that shortcut, and it is no longer usable. The formerly barren area at Rambler near the origin of Finch is in the process of being restored by the Trailkeepers. All trail braids have been closed, and it is being restored with plantings of native species, including six new California Oak seedlings which are taking root. A steep shortcut from that area to Elevator was also closed off by the Trailkeepers. A major shortcut on Chaparral near Berry trail was completely closed off. The list goes on and on. Photos of some of this trailwork can be seen in this Google Photos album: https://photos.google.com/share/AF1QipPD33TSN5_i4S6knTGCo2k53KWizGsV2s7-Zja6zp-D1BN6iYq6nFoKttJ1z0wCqg?key=b3UxZ2NpREpSbTREckJ2VlhxcXp2cWxIaDE3UTV3

Although there is no factual basis for this, Mr. Cuvelo, Ms. Bolbol, and Ms. Mercer continue to characterize the Soho Circle/ "Flow" trail and "Ensatina" trails as "illegal" or "rogue" trails. As pointed out in the Waterdog Open Space Stewards' February 14, 2022 letter, these characterizations are wrong. Those are legacy trails, and both trails appear on the trail map approved by City Council in 1998 as and are identified in solid orange lines as "proposed single-use trail." (Original and highlighted maps attached here for convenience.) For whatever reason, these two trails did not make their way onto the published trail map back in the late 1990s. These trails have been there for decades and are sustainable. These trails provide variety, spread out trail traffic which increases safety, and in the case of Soho Circle trail, provides access for maintenance of storm drain infrastructure.



In response to commenter Pat Cuvielo's accusation to the Commission of changing its process for this item, I very much appreciated Comr. Mittelstadt's setting the record straight by calmly explaining what the process was, and how it was identical to the process that is always followed.

Thank you again for the substantial amount of time you volunteer to serve on the commission, receive public comment during meetings, and reading the additional written public input.



Sincerely,

Paul Sheng

Subject: Open Space - What should the future Waterdog trail map be?

This month, the commission will be discussing Belmont's open space as part of the overall PROS plan. At some point, we need to discuss what our Waterdog trail map should be in the future? Are there redundant trails to remove? Are there additional trails that would add to the experience of the open space?

I wanted to humbly suggest the following "Future Waterdog Trail Map" as a starting point for discussion of the open space. The green lines are existing trails. The blue line is a proposed new trail. The red lines are existing trails that I propose to remove. You can view this on Google Maps and play around with it by going to this link:
https://www.google.com/maps/d/edit?mid=1iai29RPBIJMR8QFS0L1xM1fB-mbOpa8i&ll=37.50504526189196 5%2C-122.30845913638426&z=16

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Here are the ideas:

1. Create a Belmont Creek Trail below the dam that follows the isocontour shown in blue. This would be good for a few reasons. First, it would allow folks to get from the Lyall Road entrance (bottom of Lake Road) to Hidden Canyon without having to climb out of the whole canyon. Second, it bypasses Carlmont Drive so one doesn't have to drive/cycle/bike along the houses on Carlmont Drive, improving their privacy. Third, it would allow us to clean up Belmont Creek below the dam (as suggested by our former director Jonathan Gervais). Fourth, it would spread out users more and decrease trail user density. Finally, it would complete a perimeter trail and allow many more permutations of loops for recreationalists to use.
2. Remove the Elevator redundant fall-line trail (red). This is a fall line trail and redundant with Elevator. It doesn't add anything to the park and is basically impossible to maintain.
3. Remove French Trail (red). This runs parallel to Ohlone. Although some like it and would like to see it preserved, creation of a Belmont Creek Trail (blue) would likely be an acceptable compromise to these users.

Thank you for your continued support of our multi-use trail system at Waterdog.

Jonathan Carter, MD
Leader, Waterdog Trailkeepers Volunteers

Subject: Supporting Mountain Bikes at Waterdog in the PROS Master Plan

Hello Belmont P&R Commission,

I would like to voice my enthusiastic support and gratitude for continued mountain bike access to Waterdog Park, especially as you finalize the PROS Master Plan.

Off-road cycling has been an ideal means to safely get my children off the couch and into the outdoors, while safely avoiding cars and traffic. Having access to mountain biking in a suburban setting on the Peninsula is a tremendous boon to the mid-Peninsula public, notably in San Mateo County as the county park system has largely marginalized the burgeoning cycling community.

Belmont's leadership in providing equitable, thoughtful facilities to all user groups is a beacon on the Peninsula. I personally live in Portola Valley, where I also manage the town trail map and thus receive vocal input from many shockingly hostile user groups. The fortitude the commission has regularly shown in seeking openness and community throughout this process has been profoundly refreshing. Similarly the openness and good vibes my children and I have consistently experienced on Waterdog trails, from a diverse body of users, are a local treasure to be maintained.

It is my sincere hope that trail access can be maintained for all, and that we can learn to embrace mutual community in the outdoors, rather than to seek the exclusion and division that some vocal minorities have been pushing for. May we *all* continue to safely have fun on trails together. I think the charter says it best!

> 4.4-4 Maintain and enhance trails in open spaces in Belmont. Continue to support opportunities for shared use of trails among multiple users, including pedestrians and mountain bicyclists. Promote knowledge, trail etiquette, and consideration of multiple users on trails through education programs and signage.

Thank you for your consideration, and my best regards,

:: Dave

Subject: Waterdog Lake Mountain Bike Access

Hello,

My name is Jason Stewart. I am a mountain biker who frequents the trails at Waterdog lake. I first started riding there when I was a Carlmont high student back in the early 2000s. Waterdog is one of the few places that is close enough for those of us who live on the Peninsula to get a ride in after work or fit a quick ride in on a busy weekend. From my house on the San Carlos and Redwood City border, it is only a 15-minute drive to get to Waterdog. In order to get to similar trails in other open spaces, I would have to drive twice that distance if not further if Waterdog was closed to bicycles.

We as mountain bikers do not have as many options to get out and exercise as hikers do. Please do not limit us further.

Thanks,
Jason Stewart

Subject: love to mountain bike at Waterdog

I'm quite upset that we can't all get along and tolerate each other!
I'm 64 years old and love to mountain bike or walk my dog at Waterdog. It's a great place and I have access from my house without getting into the car. I thought our son to mountain bike there and he had so much fun riding there with his friends. That is a great alternative to screen time.
All the people that I have met on rides and walks are super friendly and respectful of each other.
During COVID, it was almost the only outdoor park where one could go to and enjoy some exercise and nature. During the stressful times it was a sanctuary. My son had a routine to bike for 45 minutes in a free period in High school. It kept him in shape with no PT and only Zoom school.
I hope for kinder people, that respect everybody and can enjoy Waterdog together as a community. Please keep Waterdog accessible for everybody.

Sincerely
Lotti Dunbar

Subject: PROS Advisory Committee Update

Hello Advisory Committee!

It's high time to provide an update of where we are on the PROS plan for Belmont's Parks, Recreation and Open Space. Since we last met, the Consultants, Staff and Commission have continued to work on the following:

1. Refining the 'Big Ideas' of the plan
2. Sharing proposed park improvements via the City's website and social media to encourage the community to provide input on the draft recommendations.
3. Reviewing these improvements at the January, February and March commission meetings – trying to cover them all in one meeting was too onerous. So we've split them up over 3 meetings. The 3rd batch is Wednesday evening. Comments on any park are welcome at any meeting, but breaking things into more manageable batches has worked well so far. The Commission meeting video recordings are available online
4. Securing an open space consultant to address important Open Space topics that require unique expertise.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

The fourth and final Advisory Committee meeting will focus on open space topics. This meeting is scheduled for April 5 at 7pm. The Open Space Consultant will present an update of work completed to date. A meeting invitation will be sent soon.

In the meantime, please continue to encourage your neighborhood to share comments and feedback with us. There are several channels to do so:

1. Email to PRCOMM@belmont.gov to send comments to the P&R Commission
2. Email to info@belmontprospan.com to send comments to the PROS team – staff and consultant
3. Go to www.belmontprosplan.com and click on the green 'PROVIDE FEEDBACK' button to see the draft recommendations and send comments on a specific park.
4. Join the March 2 Commission meeting to provide public comment

We have received helpful comments already. For our two currently undeveloped parks, Hidden Canyon and Ralston Ranch, the consultants have provided revised draft improvements. For all other parks, we're collecting all the feedback and will be updating the recommendations following the March Commission meeting.

Please let me know if you have any questions.

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Brigitte Shearer

From: Mike Munrow <[redacted]>
Sent: Monday, April 4, 2022 8:00 AM
To: P&R Comm; info@belmontprosplan.com
Subject: Waterdog Open Space

I am writing as a long-time (30+ years) Belmont resident to urge you to keep open space access open to all. Waterdog Open Space is the crown jewel of the Belmont Park and Recreation system and as such, we need to maintain inclusive access for all to enjoy.

There is a small group of vocal citizens who want to restrict activities in the open space, but I do not believe their views reflect those of the wider community. The survey results support this view.

Occasionally, I hear an anecdote about a "scary encounter" between mountain bikers and other trail users. I don't believe these are very common though we do need to work to make sure all users of the trails respect each other and share the trails responsibly.

I do have an anecdote of my own to share. This past summer, I was riding in Waterdog and saw a number of people with dogs. I decided to count how many were leashed. On the Lake Road 3 dogs of 4 were on leashes -- good. On the other trails in the Open Space, I saw 3 dogs, none of which were leashed. Does this mean we should restrict dogs in the Open Space? Of course not! It means that trail users need to be educated, respectful to others on the trail.

Thank you for your service to our community,
Michael Munrow

Subject: Waterdog park

Dear Sir/Madam,
I regularly ride my mountain bike in Waterdog with friends and I am concerned about efforts to close it off to mountain bikers. My experience riding in Waterdog has always been positive and interactions with other users are always courteous and friendly. We are respectful of others and they always return the favor in kind. I trust that every effort will be made to keep the park opened to all users including cyclists.

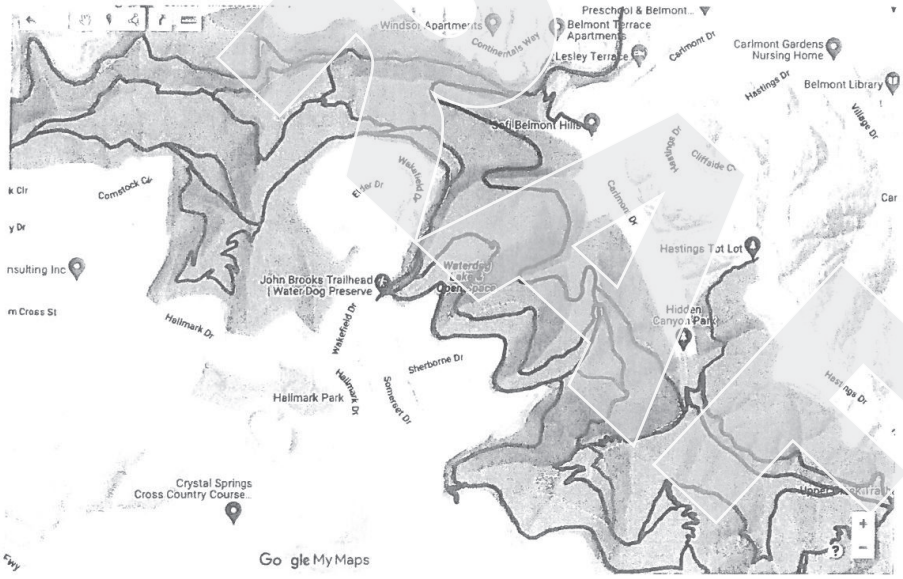
DRAFT



EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Brigitte Shearer

From: Jonathan Carter
Sent: Friday, April 1, 2022 8:49 PM
To: Brigitte Shearer; Daniel Ourtiague; P&R Comm
Subject: Open Space - What should the future Waterdog trail map be?

This month, the commission will be discussing Belmont's open space as part of the overall PROS plan. At some point, we need to discuss what our Waterdog trail map should be in the future? Are there redundant trails to remove? Are there additional trails that would add to the experience of the open space?

I wanted to humbly suggest the following "Future Waterdog Trail Map" as a starting point for discussion of the open space. The green lines are existing trails. The blue line is a proposed new trail. The red lines are existing trails that I propose to remove. You can view this on Google Maps and play around with it by going to this link: https://www.google.com/maps/d/edit?mid=1iai29RPBIJMR8QFS0L1xM1fB-mbOpa8i&ll=37.505045261891965%2C-122.30845913638426&z=16

Here are the ideas:
1. Create a Belmont Creek Trail below the dam that follows the isocontour shown in blue. This would be good for a few reasons. First, it would allow folks to get from the Lyall Road entrance (bottom of Lake Road) to Hidden Canyon without having to climb out of the whole canyon. Second, it bypasses Carlmont Drive so one doesn't have to drive/cycle/bike along the houses on Carlmont Drive, improving their privacy. Third, it would allow us to clean up Belmont Creek below the dam (as suggested by our former director Jonathan Gervais). Fourth, it would spread out users more and decrease trail user density. Finally, it would complete a perimeter trail and allow many more permutations of loops for recreationalists to use.
2. Remove the Elevator redundant fall-line trail (red). This is a fall line trail and redundant with Elevator. It doesn't add anything to the park and is basically impossible to maintain.
3. Remove French Trail (red). This runs parallel to Ohlone. Although some like it and would like to see it preserved, creation of a Belmont Creek Trail (blue) would likely be an acceptable compromise to these users.

Thank you for your continued support of our multi-use trail system at Waterdog.

Subject: PROS Master Plan--Waterdog Lake Open Space

Dear Commissioners,

I recently read the comments made during the April 6 Parks and Rec meeting and was both encouraged and disappointed. I am glad that the consultant, WRA, Inc., seems to be providing unbiased information. However, I noted that there continues to be two competing factions and that an appropriate compromise may not be reached. I am concerned that in an effort to appease a vocal group of mountain bikers, the true intent of the land gift will be dismissed. In regard to reaching a compromise, I believe the comment made by Jennifer who "called for all unauthorized trails to be closed, for some trails to be designated for hiking only (per the 1992 Plan), and for e-bikes to be banned," is a very fair and sound approach. While the city does want to encourage biking, it should be clear that biking to stores or work is different from recreational biking. E-bikes do not belong in the Open Space. I do not appreciate the buzz of a motor anywhere near me in what should be a quiet and peaceful place to enjoy nature. I do not want to worry about a cyclist trying to negotiate past me on a narrow trail. I do not like to worry about bikes whizzing by, but I can put up with that provided the path is wide enough to accommodate two-way traffic.

Thank you for your attention.

Regards,

Connie Tettenborn

Cc: P&R Comm
Subject: PROS Draft Feb 22 not updated

Hi Brigitte,
According to the staff report for Wednesday May 4: *"The Draft Park Recommendations currently available at www.BelmontPROSplan.com reflect feedback received through March 11, 2022."*

However what is posted online is the February 22 draft.
https://static1.squarespace.com/static/5fa97ce837660971762c7be4/t/6216d8963ece480f686c23a3/1645664420549/Public_DRAFT_Recommendations_Feb2022.pdf

This draft does NOT reflect the decisive neighborhood feedback on Hallmark Park, or any others. At the meeting where Hallmark was discussed, three of the commissioners stated that the upper meadow should NOT be disturbed and that we do not want to attract groups there. The viability of bocce-ball was challenged for maintenance purposes and lack of resident interest. Most importantly, residents written comments overwhelmingly expressed a desire to maintain the natural setting and not add any more man-made amenities, and *commissioners agreed with this principle*.

Residents were promised that this planning process would be transparent and reflective of community input. Please provide an actual updated PROS plan that truly reflects all of the resident and commissioner input.

Thank you,
Kristin Mercer

Subject: Re: Belmont PROS Plan - Open Space and Hallmark Plan revised plan

I would like to comment on the WRA presentation presented in April and also ask about the revised plans for Hallmark Park.

First, regarding Hallmark Park. During the discussions of various park redesigns and future plans, it was discussed and I believe pretty much agreed that there is not a desire for a bocce ball court or an "event structure" at the meadow above Hallmark. The current website does not show any revision to the original proposed plan. When will the revision be posted on the PROS Plan website?

Regarding the Water Dog Open Space, I want to make several comments.
The presentation by WRA was extensive and overall well done but I feel several points need to be made.
As an Advisory Committee member, long time Belmont resident of 30+ years and daily hiker on the John Brooks, Rambler and Chaparral trails, I feel that the surveys done missed several things:

1. Currently there are very few animals seen in the Open Space compared to prior years. In the past, it was common to see deer, rabbits, quail, coyotes and other wildlife.
2. Due to bikers now coming from all over the Bay Area as a mountain biking destination, many of my Belmont neighbors do not hike the trails as they consider it too dangerous. My wife and I have been nearly hit over a dozen times over the last 2-3 years by speeding bikers coming around blind curves. Many of the trails are only 24-36 inches wide which is not wide enough for a biker and a walker/hiker to pass safely. Certainly, many bikers are careful but many are not and view the trails as a mountain bike race competition.
It's interesting to note that many residents feel it is literally safer to walk on the streets than walk on the WD trails!
3. The bikes have ravaged the trails in many cases destroying tree roots, cutting the roots and in many cases making the trails so slick that it is difficult to walk or hike them.
4. Some of the Open Space(John Brooks) was specifically granted as a donation with the proviso that it be a "preserve". Obviously this is not taken into consideration anymore and I don't understand why.
Currently it is almost impossible to have a quiet "nature" walk there with bikers or the fear of bikers running a person over.
5. Many illegally constructed trails have been cut into the Open Space by the biker community. Let's close these.
6. I strongly recommend that there be a separation of biker or multi purpose trails from hiker/walker trails. I truly believe it's important to allow bikers-young and old- to bike the area but keep these two areas separate. Bikers should only be allowed on trails 48 inches or more wide. As you probably know, many local open space parks do not allow bikers at all.

I'm very concerned about the future of this beautiful resource we have. Let's use it but protect it so it remains a sustainable habitat for nature and wildlife in our city.
Thank you!

Kristen,
The website has been updated with the design that had been developed to reflect the comments from the community and commission.
This had been created a while ago, but was inadvertently not uploaded in a timely manner.
Thank you for bringing this oversight to our attention.

At this time, the only new proposed amenity is a multi purpose flex space (letter e). Shaded seating is suggested in this draft recommendation. As stated previously, these are draft recommendations. Outreach, particularly to the adjacent community, will be conducted before any improvements are undertaken.

Dear Parks & Recreation Commission,

I watched the 5/4/22 Meeting and it seems to me that the consultant WRA is doing a very thorough and reasoned assessment of the open space. Their presentation was very informative, and validates what most community members have been saying all along, which is that the forests in Waterdog and San Juan are healthy, and contrary to what a tiny group of partisans keeps saying, the sky is not falling. It's becoming obvious now that the same four people in the community are the only ones who are making comments against shared multi-use access: Deniz Bolbol, Pat Cuvielo, Kristen Mercer, and the woman who has the screen name of "Jennifer" or "Jenn Jenn." I feel badly that both you and the consultant have to endure their tirades at every meeting. Please know that the community as a whole appreciates your all the time and effort you've been putting into this monumental task.

I was really taken aback at a public comment Kristen Mercer made. She said something to the effect that children and seniors can't use the Waterdog trails because they're too scared of bikes. No evidence to support this was cited of course. That is the complete opposite of my experience. I ride and hike Waterdog on at least a weekly basis, and I see plenty of seniors and young children on the trails. She tried to claim it was an equity issue, but couching an ageist statement like this in equity terms is beyond the pale. Seniors can and do ride mountain bikes. You don't need to take my word for it, please see the attached letters (which I got from the PROS plan resource page) from seniors and near-seniors who cycle the trails and support multi-use.

"Jenn Jenn" lodged some grievance that the consultant is failing to consider the impact of "all the mountain bikers from all over the bay area who ride all the trails." This over-the-top statement belies a complete misunderstanding of the role Waterdog plays in the local trail resource system. Waterdog is a small trail system and is good for maybe a two hour or so ride. It is not a "destination" trail system. Yes, cyclists from out of town will ride Waterdog every now and again, but there's not enough there to make it a major attraction - it's not worth driving an hour plus to get to. If cyclists drive all the way from the South Bay, North Bay, or East Bay to the Peninsula, it's much more worth their while to ride the exponentially larger trail networks in the MidPeninsula Open Space District such as El Corte De Madera, Russian Ridge, Skyline Ridge, Saratoga Gap, and so on. For example, in Santa Cruz County, there is a small trail system at De La Vega Park, similarly sized to Waterdog. I've ridden there once or twice, but if I'm going to drive all the way to Santa Cruz County, It's much more worthwhile to ride the much larger trail systems at Soquel Demonstration Forest, Wilder Ranch, and so on. Anyway, if cyclists from out of town want to ride our trails, we should welcome them just as parks and open space areas in other areas welcome us.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

"Jenn Jenn" does not seem to understand the first two guiding PROS principles, which are to provide equitable access to resources and activities across the entire city, and promote inclusion to people of all backgrounds, regardless of race, gender, sexual orientation, socioeconomic position, or physical/cognitive ability. I always wonder if there is an undercurrent of racism behind these "locals only" attitudes. We saw this when this same group of folks were demanding that the Crystal Springs Cross Country Course be limited to local athletes only, which would shut out high school athletes from more diverse school districts from the East Bay and Central Valley. "Locals only" seems like a racist dog whistle for "whites only."

It wouldn't be a Parks & Rec Meeting if Deniz Bolbol and Pat Cuvielo didn't make public comment about some perceived environmental disaster, but what was unusual about this meeting was that they both made comment on the agenda item on the consultant update, and later in the meeting, after comment for that item was closed, and public comment was opened up for items not on the agenda. As soon as that comment period opened, they both took the opportunity to make public comments about the consultant report. During Ms. Bolbol's comment, a commissioner started to say "with all due respect this time is for comments on items not on the agenda..." but Ms. Bolbol talked over the commissioner and bullied her way into completing her comment. If feel the Commission should take stronger action when public commenters are abusing the process like this. The Commission would be well within its rights to cut these comments off. It is unfair to the public, when someone who has already made a comment on an agenda item takes a "Mulligan" and gets further comment in, during a period with others are not expecting those comments to be made and are not prepared to respond. I would respectfully suggest that the Commission consult with the City Attorney on how to handle this situation in the future, because it is certain to happen again.

Thanks again for everything you're doing, and keep up the good work. I think both the Commission and WRA are doing an excellent job of moving this process to the finish line in a measured, transparent, and considerate way.

Regards,

Paul Sheng

Subject: Waterdog MTB Access

Follow Up Flag: Follow up
Flag Status: Flagged

Dear Parks and Recreation Commissioners and City Council,

I support keeping Waterdog Open Space an accessible and sustainable place for recreation, connecting with nature and building community. In the new Master Plan, I request you to consider:

- Maintaining the trails, as they are, for multi-use for hiking, biking, dog walking, exercise, connecting with nature, etc., consistent with best practices of other open spaces
- Continuing outreach and education to trail users and groups to ensure safe and sustainable use of our trails. The "Love Waterdog" campaign is great
- Continuing to collaborate with community groups and volunteers to support the maintenance and preservation of the trails. They are doing a great job along with Belmont P&R workers. Our trails get healthier every year.

Open space recreation carries enormous benefits for the folks that live in Belmont - a local park for stress reduction, exercise, revitalization, appreciation of nature, cultivating conservationist and environmentalist ideals, fostering community pride, and improvement of quality of life. Our community has a need for recreational open space - Waterdog has served this public need well for decades.

In addition, I think mountain bikers are the primary users of most of the trails. People tend to walk up the fire road and walk to Waterdog lake, but the majority of the trails, other than the two just listed, appear to me to be primarily used by mountain bikers. Some people do hike them, but they are not the majority of the users. I live in Crestview Estates, which is next to the park. I cycle the trails often, and my experience is I mostly see other bikers and not that many hikers. The ones who do hike them appear to be more committed to outdoor activities (they are usually pretty fit) and are more passionate. They want the trails closed so only hikers have access. I am 57 years old. I very much enjoy cycling the trails and think it is a mistake to limit mountain bikers. Especially when there are already hiking only parks already nearby such as Edgewood Park and the Crystal Springs trails.

Best Regards,

[redacted]

Commissioners,

I have been a property and business owner [redacted] in Belmont for nearly 40 years. During this time, I have been able to enjoy riding bikes at Water Dog park with my son and now our grandson (three generations). We appreciate having Water Dog in our community; it has been an excellent place for our family to bond; we have made many memories.

Please let me know how I can help or can be used as a sounding board for the committee.

Regards,
[redacted]

Dear Parks and Recreation Commissioners and City Council Members,

We have been Belmont residents for over thirty years and have raised our family here. Our three children have all gone through the local public schools; Central Elementary, Ralston Middle School and Carlmont High School (with the youngest now a Junior at Carlmont). In all these years we have greatly enjoyed the City's open space, including Waterdog Lake / Hidden Canyon and San Juan Canyon / Sugarloaf Mountain. This enjoyment includes walking, running, riding bicycles, exercising our dogs and enjoying nature. As you consider these open spaces in the new Master Plan, we urge you to maintain their current multi-use designation with no new restrictions.

Consistent with this, we fully support the "Love Waterdog" campaign and associated outreach and education to trail users and groups to ensure safe and sustainable use of our trails.

For the record, we are very grateful for the excellent work to maintain and enhance the trails and related facilities done by the partnership between the City's Public Works department and various volunteers.

One request: Please install dog waste bags and garbage cans at the trailheads for San Juan Canyon (for example at the bottom of San Juan Blvd).

Sincerely,

[redacted]
Belmont, CA 94002

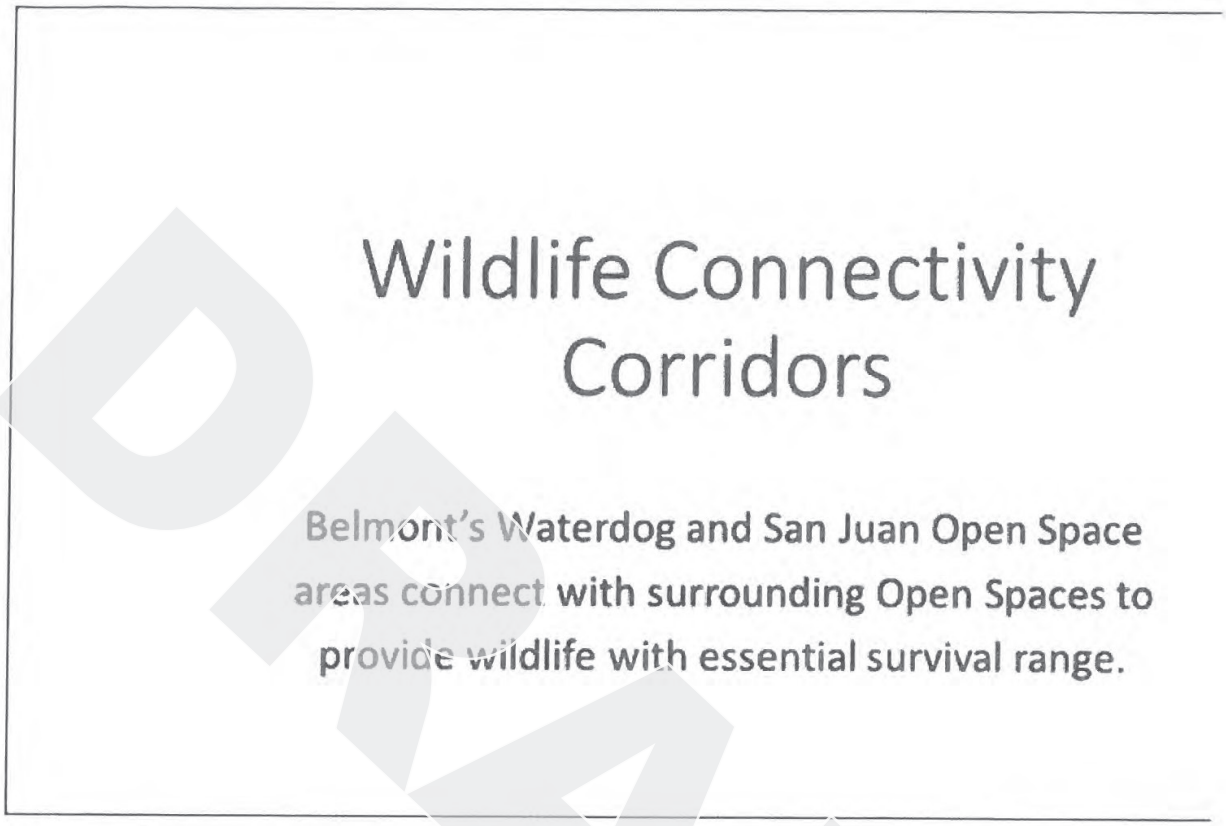
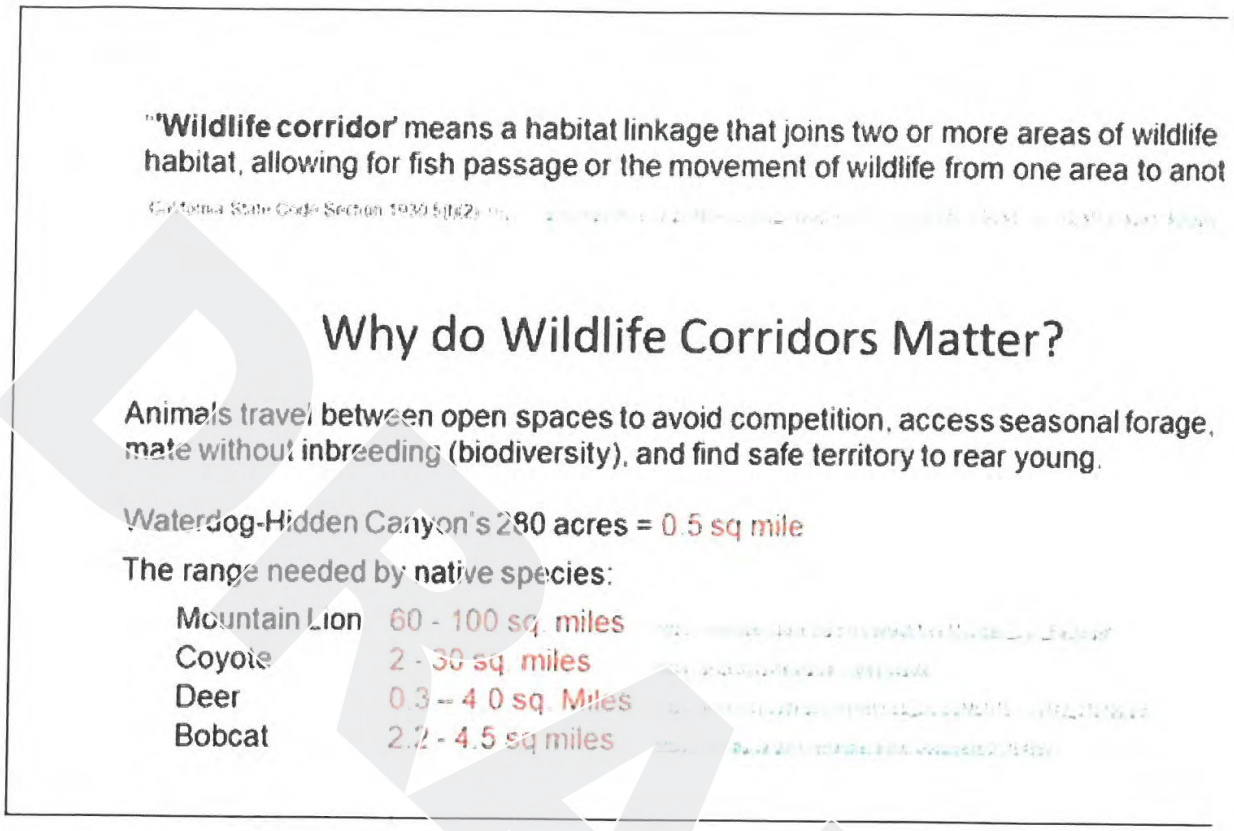
Subject: FW: Wildlife Connectivity Corridors of Belmont Open Spaces
Attachments: Wildlife Corridor Benefits USDA.pdf



Dear Commissioners and PROS committee,
I was frustrated to hear WRA consultants deny that Belmont's open spaces serve as a wildlife corridor. It appears they confused the terms "wildlife *migration*" (long-distance seasonal movement of entire flocks or herds) with the correct term "*connectivity corridors*" (daily individual travel between interconnected open spaces).

All Belmont residents know we have wildlife in our canyons – we see them daily on trails and meadows, and our cameras capture their nocturnal ventures into our yards. And we also intuitively know they cannot survive within these open space pockets alone – they travel *between* canyons by crossing streets, yards, and even alleys. These open spaces are not isolated islands – they are part of a large habitat archipelago. The consultants who wrote the General Plan Open Space and Conservation Elements, and 1992 Open Space Master Plan, as well as the California Department of Fish and Wildlife all recognize Belmont open spaces as part of a network of connected open spaces, important in preserving the biodiversity of our native species. To familiarize you with these authoritative sources, and how wildlife corridors work, I've put the facts into a few slides, below, and attach here the USDA Information Sheet on the topic.

The presence of nature and wildlife is what drew us to live in these hills. Residents decry the saddening trend of fewer and fewer wildlife sightings, as human activity increases in their habitat. We entrust you to create plans and policies that embody our General Plan and preserve the habitat and connected corridors critical to our native wildlife.



Thank you,
Kristin Mercer

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Belmont 2015 General Plan

Parks and Open Space - POLICY 4.4-2

"Maintain connectivity between large open spaces in Belmont and the region, including the Waterdog Lake area, San Juan Hills area, Sugarloaf Mountain, and the open space in the San Francisco Public Utility District's Crystal Springs watershed."

Conservation Element - 5.2 OPEN SPACE RESOURCES

"Belmont's extensive open spaces are part of the regional open space network on the San Francisco Peninsula. Notable landmarks in the city include San Juan Hills, Western Hills, Water Dog Lake, and Belmont Creek. The watershed for the San Francisco Public Utility District is located to the west of Belmont, and Sugarloaf Mountain is located to the north. These connected open spaces are valuable because they provide travel corridors for wildlife and increase wildlife population diversity."

Subject: Waterdog support for multi-use

My name is Richard Newhauser. I live on Wakefield Dr. in Belmont and my backyard butts up to the Waterdog park.

I support continued multi-use access to Waterdog. Waterdog has been successfully managed as a multi-use trail system for decades, and the trails have been sustainable based in large part due to volunteer trailwork by cyclists, through the Waterdog Trailkeepers.

My family, which includes my two sons, wife, and a dog, enjoy the trails daily through hikes, dog walks and Mt Biking. We love getting into the park as well as looking at it from our backyard.

Please continue to allow multi-access to Waterdog.

All the best,
Richard "Rick" Newhauser

Subject: Comments on Waterdog trails and multi-use for May 31 meeting

Hello,

I plan to attend the Belmont PROS Advisory Committee meeting #5 on May 31. As the time provided for public comment is short and I am not a Belmont resident, I would like to provide some comments via email and let the local folks speak live.

I'm a hiker and mountain biker in Santa Clara County. I visit Waterdog periodically as I have friends in the area. I enjoy the preserve and value the opportunity to ride and hike there. I strongly believe that it should continue to support multiple use including cycling.

More and more, we are seeing that joint engagement from multiple user groups is leading to better open space opportunities. I am an active trail advocate and a frequent volunteer with the Santa Cruz Mountains Trail Stewardship. SCMTS evolved from a mountain biking advocacy organization into a multi-use advocacy and trail building organization, and we are seeing huge benefits from the partnerships the organization has developed with land managers and between user groups. The new trail system developments at Coloni-Coast Dairies and San Vicente Redwoods, as well as completed projects such as Glenwood Preserve, use modern thinking in trail system and trail design to manage multiple uses. The Trail Stewardship harnesses the power of hundreds of volunteers to do great work for all types of trail users, and works to ensure that all users can have good experiences simultaneously – meaning that goal interference and user conflict is minimized. While the mountain biking advocates in Belmont may not be quite this organized, I see them consistently advocating actively for better behavior, to honor the requests of the land managers, and to maintain trails.

My point is that the route to better open space interaction and experience is to engage the broad community constructively to build better trails and systems, maintain the systems for optimal experiences, and appeal to users to interact respectfully. Mountain biking communities are often the most active and engaged in trail building and maintenance, because they care deeply about quality of trails and have historically been shut out of many trail systems. I believe that Belmont's best path will be to partner with the trail users including mountain bikers to do work in the system (maintenance; retrofitting for better experience and user interaction; or new trail building where appropriate) and to broadcast and promote the land managers' requests (trail interaction; respect for the environment; etc.) to their larger user groups.

Thanks very much for your consideration.

Craig Gleason

Subject: Waterdog Trails Summary - 4 Issues and their Solutions
Date: Thursday, May 26, 2022 6:33:17 PM

Brigitte, Park & Rec Commissioners and PROS Committee:

After more than 2 years, you will be concluding the PROS Master Plan analysis and provide recommendations regarding our Open Space.

During this time, many Belmont residents have provided informational reports, photos, videos and public comments on Waterdog summarized on our Belmont resident website (www.waterdogpreserve.org). The goal of all our efforts has been to guide this new Master Plan toward more Equity and Sustainability than past practices.

This email presentation below summarizes the 4 main Waterdog trail issues with their solutions that allow All users to "Love Waterdog".
Please take time to read it and think carefully regarding the important decisions you will make that impact us and future generations for years to come.

Thank you for your attention.

Jennifer Lien
Belmont

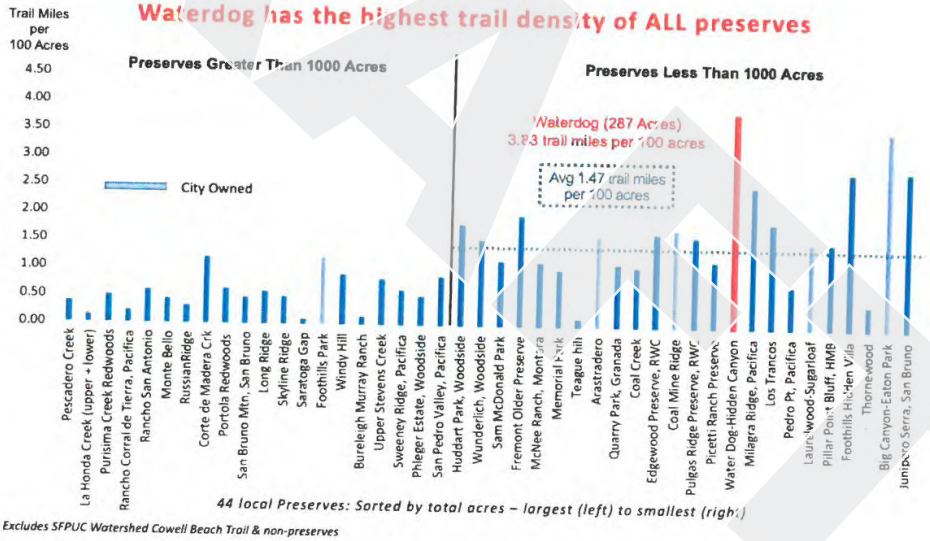
P. S. Brigitte, please forward this presentation to WRA consultants.

Waterdog Trails Summary

4 Major Issues

1. Excessive Trail Density
2. Unauthorized and Altered Trails
3. Hikers Displaced by Bike Use on ALL Trails
4. E-Bikes Add Traffic and Trail Wear

With acknowledgement to many Belmont residents for their data references
www.waterdogpreserve.org



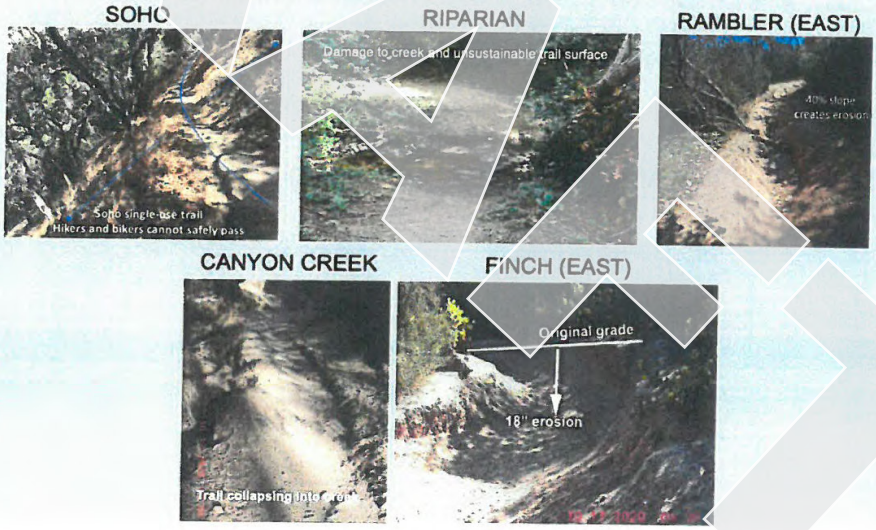
DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Issue # 1 – Excessive Trail Density

Waterdog-Hidden Canyon High Trail Density Damages Habitat

- Highest trail miles per 100 acres among ALL local preserves
- 2.5 times the trail miles per 100 acres among smaller preserves under 1000 acres (Waterdog has 287 acres)
- Waterdog is overbuilt with too many trails



EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Issue # 2 – Unauthorized and Altered Trails

Unauthorized Trails Are Dangerous, Steep, Eroding and Damage Habitat

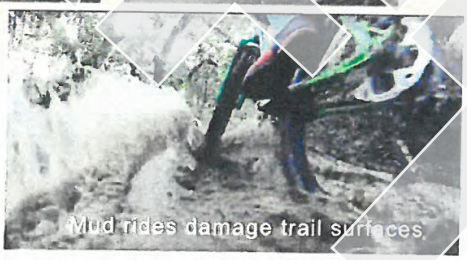
- Soho, Riparian and Rambler (East) built without approval, with steep grades, are dangerous, eroding, and damaging natural habitat.
- Canyon Creek trail damages creek bank vegetation, silts creek and threatens water quality.
- Finch East built off-plan with steep zigzag switchbacks is dangerous, eroded, and unmaintainable.

Damages on Unauthorized and Altered Trails

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Issue # 3 - Hikers Displaced by Mountain Bikes

Families and Seniors denied equitable enjoyment of safe nature trails

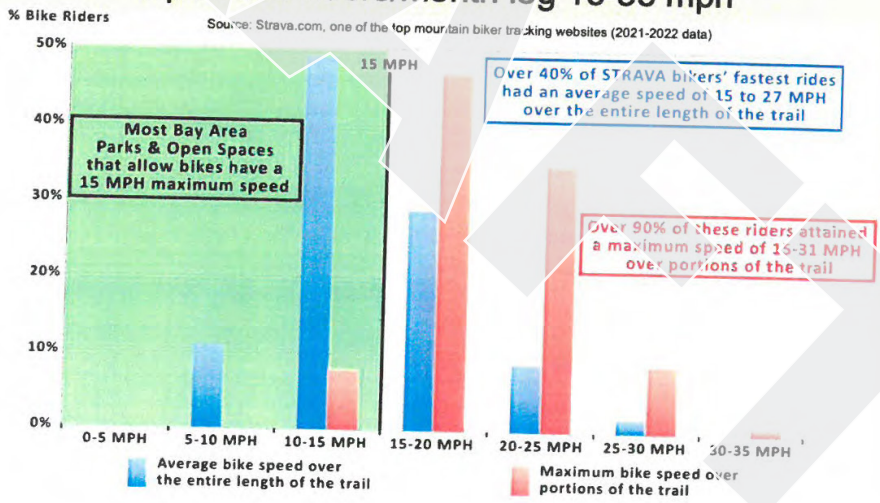


- Sport of Mountain Biking on ALL trails: both wide and narrow
- Heavy bike traffic at competitive speeds endangers ALL users
- Aggressive biking forces families and seniors to go elsewhere
- Bike jumps damage trails; skidding exacerbates erosion

Sport of Mountain Biking Creates Unsustainable Trail Wear

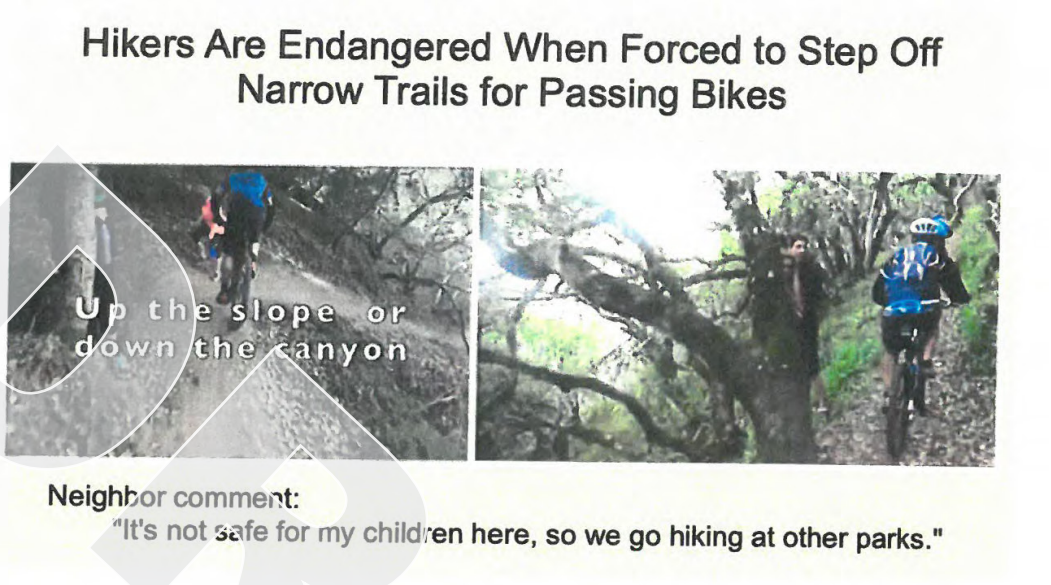
EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Heavy Bike Traffic Displaces Hikers & Damages Trails

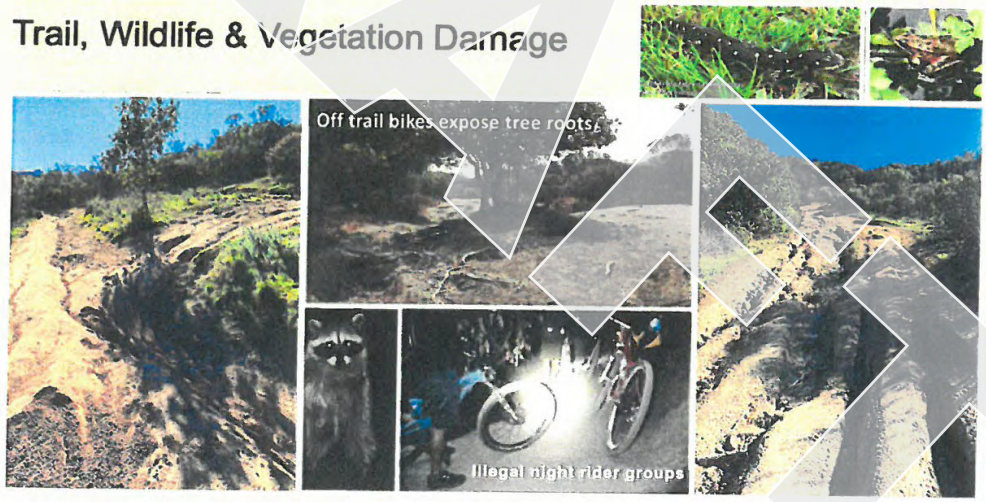


Source: Strava.com, one of the top ride-tracking websites (2021-2022 data)

Waterdog Map Trail or *New Unmapped Trail*	Rides/month May 2021-Mar 2022
Lake Road	970
John Brooks, mid	760
Berry	670
Canyon Creek	600
Rambler	650
John Brooks, upper	640
Finch	550
Chaparral	420
Upper Creek	400
Labor of Love/That Trail (Soho Trail)	500



- Actual rides are several times higher than this self-reported Strava data.
- Current City Policies favor biking on ALL trails to the detriment of hikers.



Single Use Trails for hikers only (current Master Plan) Unauthorized Illegal Trail

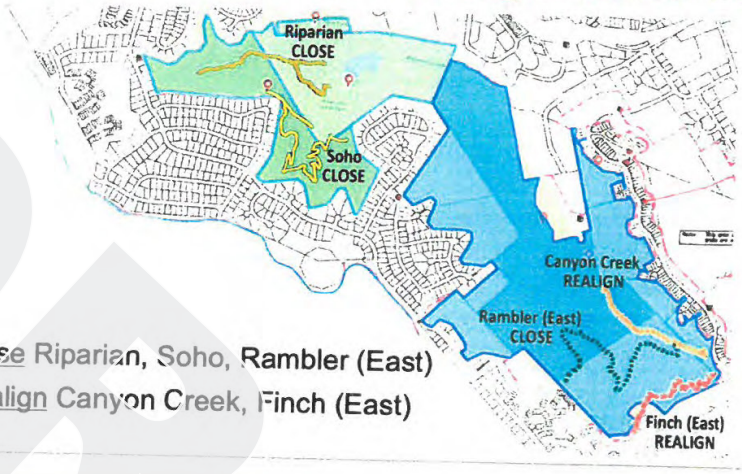
Canyon Creek Trail is a Speed Competition Track
Up to 600 riders/month log 15-35 mph

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Issue # 4 - E-Bikes

Rapidly Rising Use adds Impacts and Displaces More Hikers



- E-bikes cover more miles, multiplying trail wear
- Faster speeds, motorized power, wider tires exacerbate current trail hazards and damage.
- E-bike classes are visually indistinguishable - Regulating by class is unenforceable.

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Solution # 1
Close Unauthorized Trails & Realign Altered Trails

- Close Riparian, Soho, Rambler (East)
- Realign Canyon Creek, Finch (East)

Solution # 2
Provide Equity of Safe Access for Families & Seniors
Narrow Trails for Hiking Only

Bikers and Hikers Share Multi-use Trails (6)

Lake Road Trail
Upper Lake Road Trail
John Brooks Trail
Elevator Trail
Rambler Trail (West)
Finch Trail (West)
Upper Creek Trail

Hikers Only – No Bikes Single-use Trails (7)

Lake Loop Trail
Berry Trail
Chaparral Trail
Raccoon Run Trail
~~Upper Creek Trail~~
Canyon Creek Trail
Ohlone Trail

Close

Soho Trail
Riparian Trail
Rambler Trail (East)

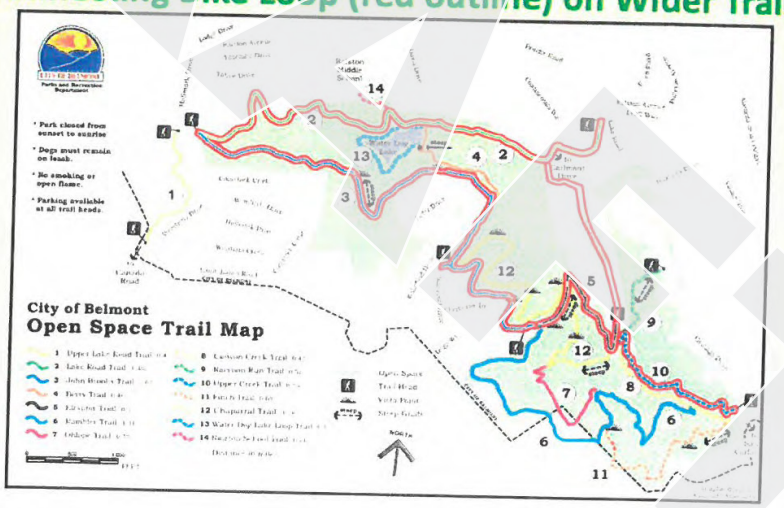
Realign

Canyon Creek Trail
Finch Trail (East)

DRAFT

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Solution # 2
Follow City Master Plan Policy for Multi & Single-Use Trails



Multi-Use Trails:

- hikers, mountain bicyclists, and equestrians
- Gravel-surfaced, **10 to12 feet** to allow emergency, service, and fire
- **higher elevations** where they would help create a fire break
- Trail gradients of **10% or less**, 15% considered maximum

Single-Use Trails:

- **Hikers** only
- **Narrow earthen paths from 2 to 4 feet in width**
- For the **lower elevations** including **valley floors**
- Provide more **secluded, natural hiking experience**

Solution # 3
Connecting Bike Loop (red outline) on Wider Trails

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

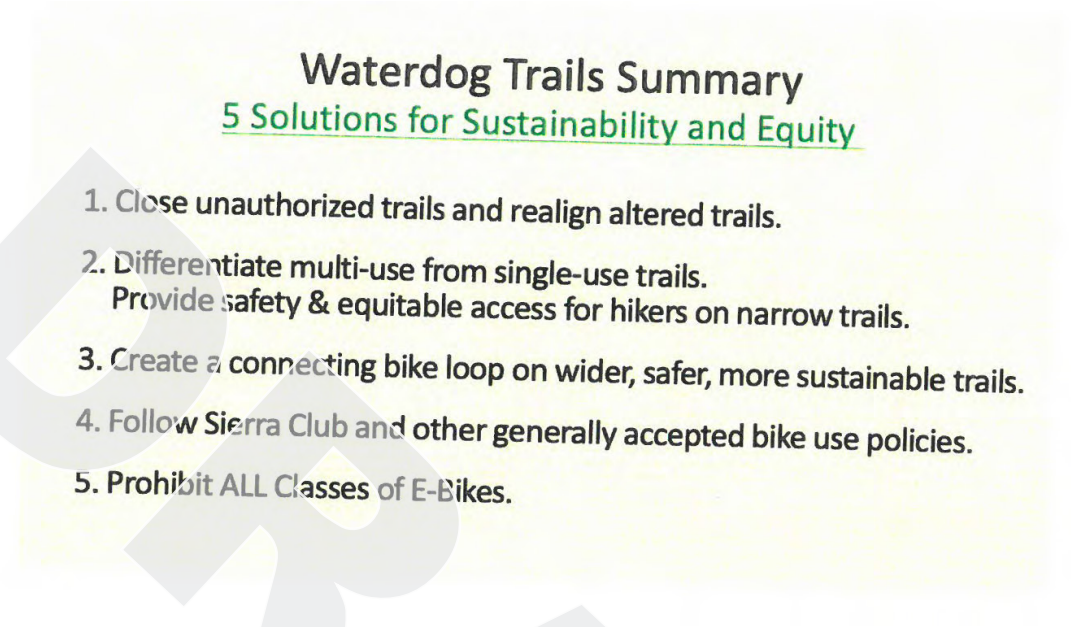
Solution # 4 – Follow Sierra Club Bike Use Criteria

SIERRA CLUB

Appendix C - Criteria

When a land management agency reviews suitability of a trail for bicycle use, bicycle use should not be allowed where it would cause the following measurable effects. This list is not all-inclusive.

1. Significant soil erosion or significant damage to streams or fish habitat.
2. Rutting, impairment of trail drainage, breakdown of trail shoulders, and other forms of damage not correctable using U.S. Forest Service trail maintenance standards and techniques.
3. Significant disturbance of plants or animals or their habitat.
4. Damage to archaeological, scientific, historical, or other significant resources, including rare natural features of interest for scientific study.
5. Danger to the safety of bicyclists or other users because of bicycle speed, steep grades, steep terrain, sharp curves, slippery or unstable trail surfaces, or limited visibility. See Appendix D for design features that can improve safety.
6. Significant displacement or annoyance of other non-motorized users.



https://www.sierraclub.org/policy/road-use-bicycles

Solution # 5 – Prohibit ALL Classes of E-Bikes

- Recent e-bike technology makes it extremely difficult to differentiate mountain bikes from classes of motorized bikes.
- The impacts of higher speed, heavier weight and powerful motors threaten ecology and wildlife In Waterdog Open Space.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Waterdog Trails Summary

5 Solutions for Sustainability and Equity

1. Close unauthorized trails and realign altered trails.
2. Differentiate multi-use from single-use trails.
   Provide safety & equitable access for hikers on narrow trails.
3. Create a connecting bike loop on wider, safer, more sustainable trails.
4. Follow Sierra Club and other generally accepted bike use policies.
5. Prohibit ALL Classes of E-Bikes.

Draft Memorandum: Management Alternatives and Environmental Assessment
for the Open Space Management Plan as part of the Belmont Parks Recreation and Open Space Plan

MANAGEMENT ALTERNATIVES

Introduction

The purpose of the Open Space Management Plan (OSMP) is to ensure the open space holdings of the City of Belmont (City) be maintained in perpetuity for the multi-benefits of recreation, plant communities and wildlife habitat, and hazard mitigation. The OSMP is a subset of the Parks, Recreation and Open Space Master Plan. The OSMP affirms objectives, policies, implementation actions that will allow the City to enhance how its open spaces are monitored, managed, maintained, and reported on. Following feedback from the PROS Advisory Committee, City of Belmont Parks and Recreation Commission, and community input during the winter and spring of 2022, the City and Consultants have grouped the identified objectives, policies, and implementation actions into three categories: 1) environmental sustainability; 2) balancing recreation uses and trail management; and, 3) natural hazard mitigation.

The City is currently considering a range of alternatives to the OSMP that reflect desired outcomes. The Base Plan includes the "must-have" objectives and policies, while the Recreation Emphasis Alternative and the Habitat Protection Emphasis Alternative include additional objectives and policies to supplement of the Base Plan. These alternatives are introduced below.

Base Plan

The Base Plan builds on existing City planning document objectives, policies, and implementation actions to protect sensitive resources, guide trail maintenance and manage recreation, and mitigate the risk of natural hazards. This approach implements best practices for comparable open space environmental sustainability through policies that promote viable and diverse native plants and wildlife, and protect and restore natural water courses. The Base Plan utilizes balanced recreation policies aimed at sustainable trail design and visitor safety. Additionally, this plan reinforces natural hazard mitigation through detailed policies that prioritize reducing the risk and severity of wildfire within City open spaces and adjacent residential areas, as well as regional planning and coordination.

Recreation Emphasis Alternative

The Recreation Emphasis Alternative would supplement the Base Plan by augmenting trail and recreational use policies and implementation actions. This approach ensures trails and supporting amenities are proactively adapted to meet growing community needs.

Habitat Protection Emphasis Alternative

The Habitat Protection Emphasis Alternative would enhance the Base Plan by including additional policies to prioritize the protection of native plant communities and wildlife. Under this alternative, additional resources may be focused on the enhancement of natural areas through habitat restoration.

Implementation Actions

Below are the recommended implementation actions for the Base Plan, with additional recommendations specific to the Recreation Emphasis Alternative and the Habitat Protection Emphasis Alternative. The Implementation actions are designed to accomplish one or more of the policies laid out in the Management Alternatives– policies are referenced by the policy number and the notation "P#". These actions have been developed from the recommendations described in both the Environmental Assessment (attached) and Recreation Use Assessment (forthcoming).

Categorization Method

Each action has been categorized using the scale below to estimate the feasibility and ease of implementation. Additionally, actions that are written in bold type have been determined to be urgent due to environmental or social impacts outlined in the Environmental Assessment or the Recreation Use Assessment documents. These urgent actions should be prioritized for implementation regardless of the feasibility and or ease.

TABLE 7. CATEGORIES OF FEASIBILITY AND EASE OF IMPLEMENTATION OF RECOMMENDED ACTIONS.

Easy	Medium	Hard
These actions can be performed immediately under existing City programs, funding, or with minimal additional effort.	These actions require additional planning, equipment, staffing, funding – either internal or external, or other operational changes.	These actions may require substantial planning, interagency coordination, staffing, funding, or other operational changes.

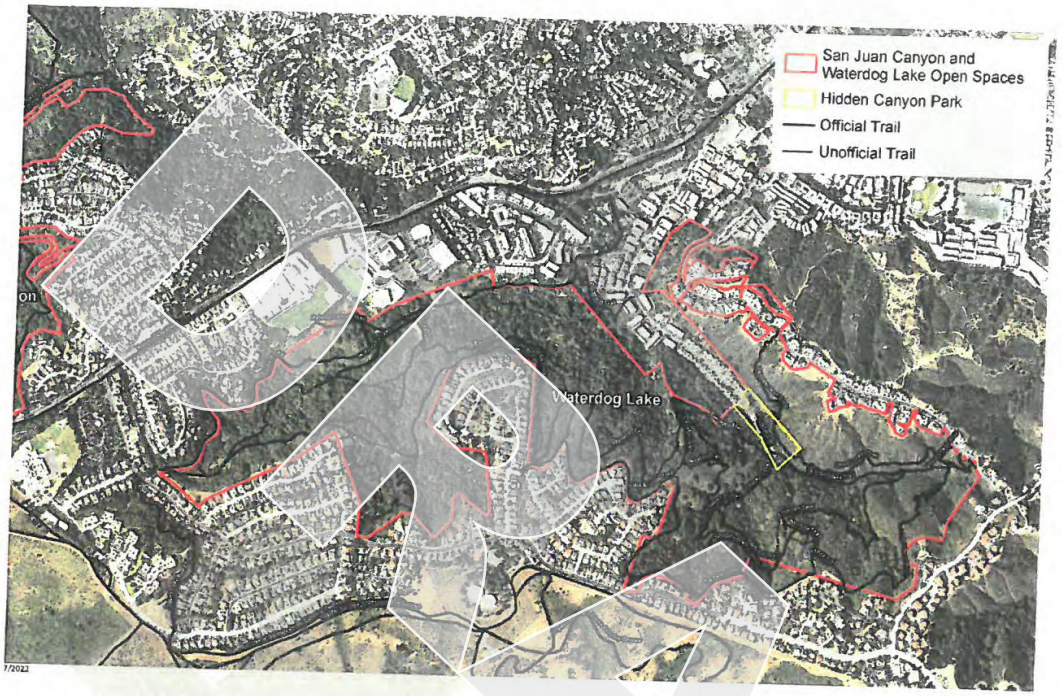
ENVIRONMENTAL ASSESSMENT

1.0 Introduction



This memorandum provides an assessment of existing conditions pertaining to biological resources, recreation (including trail use), and wildfire hazards at Water Dog Park and San Juan Canyon Open Space in the City of Belmont, San Mateo County, California. Following the baseline information collected for these resources, management recommendations are provided to promote a balanced and fair approach that considers environmental protection, public health and safety, diverse recreation, and sustainability. This assessment was conducted by WRA, Inc. (WRA) at the request of the City of Belmont Parks and Recreation Department (City) to inform and support the parks, recreation, and open space (PROS) master planning process, particularly for the Waterdog Lake & Open Space and San Juan Canyon Open Space (Figure 1). This memorandum describes the results of the site visit, which assessed the open space areas for (1) the presence of sensitive biological communities, special-status plant species, and special-status wildlife species, (2) the potential for the site to support special-status plant and wildlife species.

In addition to documenting existing biological communities and sensitive habitats in both park units, WRA broadly assessed the baseline quality of such habitats located near the trails. This will enable the Parks Department to track and evaluate any changes in habitat quality, and implement management actions accordingly. Since this is a high-level planning effort intended to inform actions at a later time, there is no "project" in which impacts can be assessed. "Projects" include tangible actions undertaken by the City's Parks Department and can be, but is not limited to: trail repair, trail building, constructing footbridges, pruning back vegetation along trails, sediment dredging, and vegetative fuels management.

Waterdog Lake & Open Space (Waterdog or WDL) is approximately 293 acres and features the following: trails which meander through chaparral, oak woodland, and riparian habitats; a viewshed of the San Francisco Bay; and Waterdog Lake at its center. San Juan Canyon Open Space (San Juan Canyon or SJC) is approximately 82 acres, located approximately ¾-mile west of Waterdog, across Ralston Way. This open space features similar habitats as Waterdog. Both open spaces are generally surrounded by single-family residential land use.

2.0 Regulatory Background

The following sections explain the regulatory context of the biological assessment, including applicable laws and regulations that were applied to the field investigations and would apply to any future, ground disturbing actions to sensitive and common species that the city may choose to implement following adoption of the Open Space Management Plan (OSMP).

2.1 Special-Status Species

Special-status species include those plants and wildlife species that have been formally listed, are proposed as endangered or threatened, or are candidates for such listing under the federal Endangered Species Act (FESA) or California Endangered Species Act (CESA). These Acts afford protection to both listed and proposed species. In addition, California Department of Fish and Wildlife (CDFW) Species of Special Concern (SSC), and National Marine Fisheries Service (NMFS) Species of Concern (SOC), are species that face extirpation if current population and habitat trends continue. U.S. Fish and Wildlife Service (USFWS) Birds of Conservation Concern, sensitive species included in USFWS Recovery Plans, and CDFW special-status invertebrates are also considered special-status species. Although CDFW Species of Special Concern generally have no special legal status, they are given special consideration under CEQA. In addition to regulations for special-status species, most birds in the United States, including non-status species, are protected by the Migratory Bird Treaty Act (MBTA) of 1918. Under this legislation, destroying active nests, eggs, and young is illegal. Bat species designated as "High Priority" by the Western Bat Working Group qualify for legal protection under Section 15380(d) of the CEQA Guidelines. "High Priority" species are defined as "imperiled or are at high risk of imperilment based on available information on distribution, status, ecology and known threats".

Plant species included within the California Native Plant Society (CNPS) Inventory of Rare and Endangered Plants (Inventory, CNPS 2020) with California Rare Plant Rank (Rank) of 1, 2, and 3 are also considered special-status plant species and must be considered under the CEQA. Some Rank 4 plant species meet the definitions of Section 1901 Chapter 10 of the Native Plant Protection Act or Sections 2062 and 2067 of the California Fish and Game Code (CFGC) that outlines CESA. However, the CNPS and CDFW strongly recommend that these species be fully considered during the preparation of environmental documentation related to CEQA. This may be particularly appropriate for the type locality of a Rank 4 plant species, for populations at the periphery of a species range, or in areas where the taxon is especially uncommon or has sustained heavy losses, or from populations exhibiting unusual morphology or occurring on unusual substrates. A description of Ranks is provided below in Table 1.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

TABLE 1. DESCRIPTION OF RANKS AND THREAT CODES

California Rare Plant Ranks (formerly known as CNPS Lists)	
Rank 1A	Presumed extirpated in California and either rare or extinct elsewhere
Rank 1B	Rare, threatened, or endangered in California and elsewhere
Rank 2A	Presumed extirpated in California, but common elsewhere
Rank 2B	Rare, threatened, or endangered in California, but common elsewhere
Rank 3	Plants about which more information is needed - A review list
Rank 4	Plants of limited distribution - A watch list
Threat Ranks	
0.1	Seriously threatened in California
0.2	Moderately threatened in California
0.3	Not very threatened in California

2.2 Sensitive Biological Communities

Sensitive biological communities include habitats that fulfill special functions or have special values, such as wetlands, streams, and riparian habitat. These habitats are regulated under federal regulations (such as the Clean Water Act [CWA]), state regulations (such as the Porter-Cologne Act, the CDFW Streambed Alteration Program, and CEQA), or local ordinances or policies (such as City or County Tree Ordinances, Special Habitat Management Areas, applicable Local Coastal Programs, and General Plan Elements).

2.3 Waters of the United States

Section 404 of the CWA gives the U.S. Environmental Protection Agency (EPA) and the U.S. Army Corps of Engineers (Corps) regulatory and permitting authority regarding discharge of dredged or fill material into "navigable waters of the United States". Section 502(7) of the CWA defines waters as "waters of the United States, including territorial seas." Section 328 of Chapter 33 in the Code of Federal Regulations (CFR) defines the term "waters of the United States" as it applies to the jurisdictional limits of the authority of the Corps under the CWA.

A summary of the definition of "waters of the U.S." in 33 CFR 328.3 as published in 1986 includes:

(1) All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
(2) All interstate waters including interstate wetlands;
(3) All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce including any such waters: (i) which are or could be used by interstate or foreign travelers for recreational or other purposes; or (ii) from which fish or shellfish are or could be taken and sold

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

in interstate or foreign commerce; or (iii) which are used or could be used for industrial purpose by industries in interstate commerce;
(4) All impoundments of waters otherwise defined as waters of the United States under the definition;
(5) Tributaries of waters identified in paragraphs (a) (1)—(4) of this section:
(6) The territorial seas;
(7) Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (a) (1)—(6) of this section.

Areas not considered to be "waters of the United States" are exempted under the Preamble to the 1986 Rule and subject to a case-by-case analysis, including:

(1) Non-tidal drainage and irrigation ditches excavated on dry land.
(2) Artificially irrigated areas which would revert to upland if the irrigation ceased.
(3) Artificial lakes or ponds created by excavating and/or diking dry land to collect and retain water and which are used exclusively for such purposes as stock watering, irrigation, settling basins, or rice growing,
(4) Artificial reflecting or swimming pools or other small ornamental bodies of water created by excavating and/or diking dry land to retain water for primarily aesthetic reasons.
(5) Waterfilled depressions created in dry land incidental to construction activity and pits excavated in dry land for the purpose of obtaining fill, sand, or gravel unless and until the construction or excavation operation is abandoned and the resulting body of water meets the definition of waters of the United States (see 33 CFR 328.3(a)).

In the Corps Rivers and Harbors regulations (33 CFR Part 329.4), the term "navigable waters of the U.S." is defined to include all those waters that are subject to the ebb and flow of the tide, and/or presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

The limits of Corps jurisdiction under Section 404 as given in 33 CFR Section 328.4 are as follows:
(1) *Territorial seas:* three nautical miles in a seaward direction from the baseline;
(2) *Tidal waters of the U.S.:* high tide line (HTL) or to the limit of adjacent non-tidal waters;
(3) *Non-tidal waters of the U.S.:* ordinary highwater mark or to the limit of adjacent wetlands; or
(4) *Wetlands:* to the limit of the wetland.

The Corps has developed standard methods and data reporting forms contained in the *U.S. Army Corps of Engineers Wetlands Delineation Manual* (Corps Manual; Environmental Laboratory 1987) and the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region* (Arid West Supplement; Corps 2008) to determine the presence or absence of Waters of the U.S. The procedures described in the Corps Manual were used to identify wetlands and non-wetland waters in the Study Area that are potentially subject to regulation under Section 404 of the CWA.

2.4 Waters of the State

The Dickey Water Pollution Act of 1949 and Porter Cologne Act of 1969 established the State Water Resources Control Board (SWRCB) and nine Regional Water Quality Control Board (RWQCB) districts in the State of California. The SWRCB and each RWQCB district regulates activities in Waters of the State, which include Waters of the U.S. Waters of the State are defined by the Porter-Cologne Act as "any surface

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

water or groundwater, including saline waters, within the boundaries of the state." In addition, the SWRCB has adopted a wetland definition that is similar to, but slightly different from, that used by the Corps. The state definition as adopted in April 2019 and currently in effect, states that:

> *An area is wetland if, under normal circumstances, (1) the area has continuous or recurrent saturation of the upper substrate caused by groundwater, or shallow surface water, or both; (2) the duration of such saturation is sufficient to cause anaerobic conditions in the upper substrate; and (3) the area's vegetation is dominated by hydrophytes or the area lacks vegetation.*

The RWQCB regulates discharges of fill and dredged material under Section 401 of the CWA and the Porter-Cologne Water Quality Control Act through the State Water Quality Certification Program. State Water Quality Certification is necessary for all projects that require a Corps permit, or fall under other federal jurisdiction, and have the potential to impact waters of the State. In order for a Section 404 permit to be valid, Section 401 of the CWA requires a Water Quality Certification or waiver to be obtained. The Water Quality Certification (or waiver) determines that the permitted activities will not violate water quality standards individually or cumulatively over the term of the action. Water quality certification must be consistent with the requirements of the CWA, CEQA, the CESA and Porter-Cologne Act.

If a proposed project or portion of a proposed project does not require a federal permit, but does involve dredge or fill activities that may result in a discharge to Waters of the State, the RWQCB has the option to regulate the dredge and fill activity under its state authority in the form of Waste Discharge Requirements or Certification of Waste Discharge Requirements. In these cases, a Water Quality Certification is not necessary under Section 401 of the CWA because federal jurisdiction does not apply.

2.5 Streams, Lakes, and Riparian Habitat

Streams and lakes, as habitat for fish and wildlife species, are subject to jurisdiction by CDFW under Sections 1600-1616 of the CFGC. Alterations to or work within or adjacent to streambeds or lakes generally require a 1602 Lake and Streambed Alteration Agreement. The term stream, which includes creeks and rivers, is defined in the California Code of Regulations (CCR) as follows: "a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having a surface or subsurface flow that supports or has supported riparian vegetation" (14 CCR 1.72). In addition, the term stream can include ephemeral streams, dry washes, watercourses with subsurface flows, canals, aqueducts, irrigation ditches, and other means of water conveyance if they support aquatic life, riparian vegetation, or stream dependent terrestrial wildlife (CDFG ESD 1994). Riparian is defined as, "on, or pertaining to, the banks of a stream;" therefore, riparian vegetation is defined as, "vegetation which occurs in and/or adjacent to a stream and is dependent on, and occurs because of, the stream itself" (CDFG ESD 1994). Removal of riparian vegetation also requires a Section 1602 Lake and Streambed Alteration Agreement from CDFW.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

2.6 Other Sensitive Biological Communities

Other sensitive biological communities not discussed above include habitats that fulfill special functions or have special values. Natural communities considered sensitive are those identified in local or regional plans, policies, regulations, or by the CDFW. The CDFW ranks sensitive communities as "threatened" or "very threatened" and keeps records of their occurrences in its Natural Diversity Database (CNDDB, CDFW 2020). Sensitive plant communities are also identified by CDFW on their *List of California Natural Communities Recognized by the CNDDB* (CDFW 2020). Impacts to sensitive natural communities identified in local or regional plans, policies, regulations or by the CDFW or USFWS must be considered and evaluated under CEQA (CCR: Title 14, Div. 6, Chap. 3, Appendix G). Specific habitats may also be identified as sensitive in City or County General Plans or ordinances.

2.7 Relevant City of Belmont Policies

Policies relative to management and conservation of the city's open space areas are found in the following planning documents:

- Belmont Parks and Open Space Plan (1992)
- City of Belmont General Plan, Parks and Conservation Elements (2017)
- The Western Hills Area Plan (1990)

2.7.1 Belmont Parks and Open Space Plan (1992)

Action focused recommendations from the 1992 Belmont Parks and Open Space Plan include the following:

- The preserved open space should be retained in a natural state for passive recreation, education, and aesthetic purposes.
- Vegetation management will be required to create and maintain native ecosystems and for fire control.
- Development should be limited to those types of facilities that support the intended passive uses, including trails, trailheads, signage, picnic areas, and small neighborhood parks.

Relevant policies from the 1992 Belmont Parks and Open Space Plan include the following:

- Assist the Fire Protection District to identify wildland fire hazard areas and develop fire access roads.
- Preserve large contiguous units of open space.
- Protect wildlife habitat by maintaining wildlife corridors and preserving habitat and corridors in new residential neighborhoods.

2.7.2 City of Belmont General Plan, Parks and Conservation Elements (2017)

Relevant goals and policies from the 2017 General Plan Parks and Conservation Elements (City of Belmont 2017) include the following:

- Continue to develop and support a balanced and integrated open space system reflecting a variety of considerations, including natural resource conservation, outdoor recreation, and public health

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

and safety, to ensure synergies between various open space components and compatibility with land use planning.

- Continue to designate and protect open space lands for the preservation of scenic areas, natural drainage ways, and plant and wildlife habitats; for outdoor recreation; and for public health and safety. See also policies in the Conservation and Safety elements.
- Maintain connectivity between large open spaces in Belmont and the region, including the Waterdog Lake area, San Juan Hills area, Sugarloaf Mountain, and the open space in the San Francisco Public Utility District's Crystal Springs watershed.
- Consistent with the San Juan Hills and Western Hills area plans, cluster development in the hillside areas of western Belmont in order to maintain contiguous habitat areas, minimize grading, and limit exposure to steep slopes and other sensitive areas. See also policies in the Land Use Element.
- Develop programs to control invasive plant species that threaten the natural resources.
- Continue programs to reduce the fire danger in the open space.
- Preserve and protect open space resources using various methods available to the City.
- Protect Belmont Creek from future encroachment through regulation, development review, conservation easements, or other appropriate actions.
- Seek to preserve the existing open space areas in the San Juan Hills and Western Hills, consistent with the Area Plans, especially on steep hillsides and sensitive habitat areas.
- Protect and maintain open space for the preservation of natural resources.
- Ensure that any improvements recommended for open space areas are appropriate for the type of open space and the use proposed.
- In portions of Belmont that include significant open space resources, use area plans to address the balance and interface between natural and developed areas.
- Reduce risk of wildland fire, ecological succession, and pathogen threats (such as Sudden Oak Death) through active maintenance of public spaces and education and enforcement of development standards on private property.
- Ensure that future acquisitions of open space land are compatible with the City's open space strategy and long-term interests.
- Protect and restore biological and ecological resources in Belmont, including sensitive wildlife species and their habitats.
- Support the protection, preservation, restoration, and enhancement of habitats of State or federally listed rare, threatened, endangered and/or other sensitive and special status species, and favor enhancement of contiguous areas over small, segmented remainder parcels.
- Continue to maintain, protect, restore, and enhance Belmont's ecologically important areas and seek to reduce impacts on them, including the creek corridors, the open space, and the wetlands around O'Neill Slough.
- To the greatest extent feasible, ensure that development does not disturb sensitive habitat and special status species by requiring appropriate and feasible mitigation measures.
- Maintain functional wildlife corridors and habitat linkage in order to contribute to regional biodiversity and the viability of rare, unique or sensitive biological resources throughout the city and region.
- In design and construction, require use of best practices that preserve natural resources, such as soil, trees, native plants, and permeable surfaces.
- Avoid light pollution and unnecessary glare by requiring development projects to use design features and shielding methods that cast outdoor light downward and minimize glare and to install the minimum amount of outdoor lighting necessary for safety and security.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

- Encourage the planting of native trees, shrubs, and grasslands in order to preserve the visual integrity of the landscape, provide habitat conditions suitable for native vegetation, and ensure the maximum number and variety of well-adapted plants are maintained.
- Goal 5.4 Preserve and restore Belmont's waterways and adjacent corridors as valuable community resources that serve as plant and wildlife habitats, groundwater recharge facilities, flood control and irrigation components, and connections between open space areas.
- Restore Belmont Creek to enhance ecological functions, biological resources, hydrology function, and flood control.
- Preserve, where possible, natural watercourses or provide naturalized drainage channels within the city. Where necessary and feasible, implement restoration and rehabilitation measures.
- Protect, restore, and enhance a continuous corridor of native riparian vegetation and wildlife habitat along Belmont's waterways, water bodies, and wetlands.
- Preserve and enhance the natural riparian environment along waterway corridors, including Belmont Creek, by minimizing environmental and visual impacts. See also Policy 4.5-2 in the Parks, Recreation, and Open Space Element.
- Preserve water quality by promoting the protection of Belmont's creeks and other natural water bodies from pollution.
- Continue to participate in the San Mateo Countywide Water Pollution Prevention Program.
- Encourage residents and businesses to use best management practices (BMPs) to reduce water pollutant loads that result from daily activities, such as using landscaping chemicals and fertilizers and repairing and washing cars outdoors.
- Require development projects to incorporate structural and non-structural best management practices (BMPs) to mitigate or reduce the projected increases in pollutant loads, in accordance with the NPDES permit guidelines.
- Ensure that the design and construction of new infrastructure elements does not contribute to stream bank or hillside erosion or creek or wetland siltation, and incorporates site design and source control BMPs, construction phase BMPs, and treatment control BMPs to minimize impacts to water quality.
- Implement water pollution prevention methods to the maximum extent practicable, supplemented by pollutant source controls and treatment.

2.7.3 The Western Hills Area Plan (1990)

Relevant goals and policies from the 1990 Western Hills Area Plan include the following:

- Encourage Open Space Protection: Encourage the preservation of open space in areas of scenic, natural resource, and recreational value, as well as areas that are geologically hazardous or steeply sloped. Assist private landowners in finding ways for them to manage and permanently preserve private open space.
- Preserve and maintain existing open space areas.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

3.0 Methods

On March 8, 21, and 22, 2022 WRA biologists, Ivy Poisson and Brian Kearns, traversed over 10 miles of existing trails within the Study Area to:

1. Ground-truth vegetation communities obtained from the San Mateo County vegetation mapping dataset (2021)
2. Determine if existing conditions provide suitable habitat for special-status plant or wildlife species,
3. Determine the baseline conditions of habitat quality within view from the trails,
4. Conduct a qualitative trail assessment, and
5. Determine the open spaces' consistency with existing regulations and policies.

A list of incidental species observations was also compiled. Plant nomenclature follows the Jepson Flora Project (2022), except where noted. For cases in which taxonomic discrepancies occur between Baldwin et al. and the Inventory, precedence was given to the species classification used in the Inventory.

3.1 Sensitive Biological Communities

The San Mateo County vegetation mapping dataset (2021) was examined to provide baseline information on plant communities. Biological communities present in the Study Area were classified based on existing plant community descriptions described in the *Preliminary Descriptions of the Terrestrial Natural Communities of California* (Holland 1986) and *A Manual of California Vegetation* (Sawyer et al. 2009). However, in some cases it is necessary to identify variants of community types or to describe non-vegetated areas that are not described in the literature. Biological communities were classified as sensitive or non-sensitive as defined by CEQA, and other applicable laws and regulations. Each biological community is given a state or global ranking, ranging from 1 to 5. These rankings are defined below, with G indicating global status, and S indicating state status for California. State and/or global rankings of 1, 2, or 3 are considered sensitive.

1 **Critically Imperiled** — At very high risk of extinction or elimination due to very restricted range, very few populations or occurrences, very steep declines, very severe threats, or other factors.
2 **Imperiled** — At high risk of extinction or elimination due to restricted range, few populations or occurrences, steep declines, severe threats, or other factors.
3 **Vulnerable** — At moderate risk of extinction or elimination due to a fairly restricted range, relatively few populations or occurrences, recent and widespread declines, threats, or other factors.
4 **Apparently Secure** — At fairly low risk of extinction or elimination due to an extensive range and/or many populations or occurrences, but with possible cause for some concern as a result of local recent declines, threats, or other factors.
5 **Secure** — At very low risk of extinction or elimination due to a very extensive range, abundant populations or occurrences, and little to no concern from declines or threats.

Non-sensitive biological communities are those communities that are not afforded special protection under CEQA, and other state, federal, and local laws, regulations and ordinances, and generally are ranked 4 or 5 on a global or state level. These communities may provide suitable habitat for some special-status plant or wildlife species and are discussed below. Sensitive biological communities are defined as those communities that are given special protection under CEQA and other applicable federal, state, and local

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

laws, regulations and ordinances. Applicable laws and ordinances are discussed above. Special methods used to identify sensitive biological communities are discussed below.

3.1.1 Wetlands and Waters

The Study Area was surveyed at a reconnaissance level to determine if any wetlands and waters potentially subject to jurisdiction by the Corps, RWQCB, or CDFW were present. The assessment was based primarily on the presence of wetland plant indicators but may also include any observed indicators of wetland hydrology as defined by the Corps Manual (Environmental Laboratory 1987) and the ***Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region*** (Corps 2008). Any potential wetland areas were identified as areas dominated by plant species with a wetland indicator status of obligate wetland (OBL), facultative wetland (FACW), or facultative (FAC) as given on the U.S. Department of Agriculture: National Wetland Plant List (Corps 2020). Evidence of wetland hydrology can include evidence such as visible inundation or saturation, surface sediment deposits, algal mats and drift lines, and oxidized root channels. Given that the site visits did not include a routine-level wetland delineation and was only reconnaissance level, soils were not examined in the field as part of this assessment. Streams were remotely mapped in ArcGIS using hydrologic modeling tools. Using the 2010 ARRA lidar dataset, streams were modeled using a 3-acre watershed with a nearest neighbor algorithm to determine flowlines.

3.2 Special-status Species

Potential occurrence of special-status species in the Study Area was evaluated by first determining which special-status species occur in the vicinity of the Study Area through a literature and database search. Database searches for known occurrences of special-status species was for the San Mateo and eight surrounding 7.5-minute U.S. Geological Survey (USGS) quadrangles. The following sources were reviewed to determine which special-status plant and wildlife species have been documented to occur in the vicinity of the Study Area:

- CNDDB records (CDFW 2022)
- USFWS Information for Planning and Conservation Species (USFWS 2022)
- CNPS Inventory records (CNPS 2022)
- California Bird Species of Special Concern (Shuford and Gardali 2008)
- USFWS Critical Habitat Mapper (USFWS 2022)

Special status species are defined as federally or state listed species (threatened or endangered; FT, ST, FE, SE), CDFW Species of Special Concern (SSC) and CDFW Fully Protected (FP). In addition to federal and state listing status for plant species, species with a California Native Plant Society Rare Plant Ranking (CRPR) of 1 through 4 is also included in this report.[1] Bats are also given special consideration if they are listed by the Western Bat Working Group (WBWG) as Medium or High.[2]

---

[1] *Definitions of CRPR ranking is available here: https://www.cnps.org/rare-plants/cnps-rare-plant-ranks*

[2] *WBWG "High" designation represents those species considered the highest priority for funding, planning, and conservation actions; "medium" designation indicates a level of concern that should warrant closer evaluation, more research, and conservation actions of both the species and possible threats.*

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

3.3 Habitat Quality

The overall habitat quality of the Study Area was evaluated based on the cover of native versus non-native plant species, presence and extent of invasive plant species, and extent of anthropogenic disturbance. General notes and observations of plant species composition were made throughout the Study Area by WRA biologists while traversing throughout the existing trail network, followed by a review of aerial imagery, in order to assign a general value to the Study Area. This assessment is qualitative in nature and should not be interpreted to be a comprehensive assessment of each biological community that is identified within the Study Area. The definitions of habitat quality ranking are listed below.

TABLE 2. HABITAT QUALITY CATEGORIES

High Quality / Mostly Intact • Vegetation is composed of greater than 75% native plant cover • Invasive species are generally absent based on visual estimates from the trail network • Visible evidence of vegetation trampling by trail users is absent or negligible
Moderate Quality / Moderately Altered or Impacted • Vegetation is composed of greater than 50% native plant cover • Invasive species are present but was observed to be less than 50 square feet based on visual estimates from the trail • Visible evidence of vegetation trampling by trail users is present but not extensive
Low Quality • Vegetation is composed of less than 50% native plant cover based on visual estimates from the trail • Invasive species are present, comprise more than 100 square feet, and is observed to be crowding out/negatively impacting native species within the vegetation community • Visible evidence of vegetation trampling by trail users is present but not extensive
Low Quality / Extensively Altered or Impacted • Vegetation is composed of less than 50% native plant cover based on visual estimates from the trail • This habitat features an invasive species as a dominant or codominant in the tree/shrub/herb stratum • Visible evidence of vegetation trampling by trail users is present and extensive

3.4 Trail Assessment

The purpose of the trail environmental condition assessments was to generally characterize environmental conditions on open space trails, which could be used to develop recommendations that could be implemented as part of the OSMP. A qualitative assessment of trail conditions on both existing mapped trails (those shown by City maps) and existing unmapped trails (those which are not shown on City maps) was made based on the level of erosion and vegetation impacts observed. Categories include high, medium, and low erosion; these categories are defined in Table 3 below, along with a representative photo of the category. Point data were collected along the existing mapped trail feature. In addition, WRA also noted if adjacent vegetation shows signs of impacts (trampling, what appears to be obvious/illegal vegetation trimming). Maps of trail conditions can be found in the *Recreation Use Assessment*.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Draft Memorandum: Management Alternatives and Environmental Assessment for the Open Space Management Plan as part of the Belmont Parks Recreation and Open Space Plan

TABLE 3. TRAIL CONDITION CATEGORIES

High	**High Erosion** There are more than two deep ruts located along the length of the trail, and there are several observations that it significantly interferes with pedestrian and cycling activities where it causes trail users to create additional pathways to avoid this erosion feature. For this category, evidence of trail user impacts resulting from the erosion feature includes more than one of the following: trail widening, braided trails, unsanctioned trails, soil compaction, and vegetation trampling.	
Medium	**Medium Erosion** There are one or two noticeable ruts forming along the length of the trail, and there are some observations that it significantly interferes with pedestrian and cycling activities. For this category, evidence of trail user impacts resulting from the erosion feature includes one of the following: trail widening, braided trails, unsanctioned trails, soil compaction, and vegetation trampling.	
Low	**Low Erosion** There is a shallow rill forming along the length of the trail, but there are no observations that it significantly interferes with pedestrian and cycling activities. There is no evidence of trail users negatively impacting adjacent vegetation to avoid this erosion feature.

4.0 Results

4.1 Biological Communities and Vegetation Management

Non-sensitive biological communities in the Study Area include developed areas, coast live oak woodland (*Quercus agrifolia*, S4 G5), eucalyptus groves (*Eucalyptus* spp., not ranked), coyote brush scrub (*Baccharis pilularis*, S5 G5), California sagebrush scrub (*Artemisia californica*, S5 G5), chamise chaparral (*Adenostoma fasciculatum*, S5 G5), non-native annual grassland (not ranked), and developed. Sensitive biological communities include California bay woodland (*Umbellularia californica*, S3 G4), arroyo willow thickets (*Salix lasiolepis*, S3 G4), and California buckeye groves (*Aesculus californica*, S3 G3). **Figure 2** and **Figure 3** shows the location of each biological community for WDL and SJC, respectively. Descriptions for each biological community are provided below, the mapped extent of each biological community within each open space is identified in Table 4.

TABLE 4. BIOLOGICAL COMMUNITIES WITHIN THE STUDY AREA

Biological Community[1]	Natural Community[3]	Waterdog (acres)	San Juan Canyon (acres)	% of Study Area
Non-Sensitive[4]				
broadleafed upland forest	coast live oak woodland	146.75	48.59	52.1
broadleafed upland forest	eucalyptus groves	1.59	0.05	0.4
coastal scrub	coyote brush scrub	18.82	18.45	9.9
chaparral	California sagebrush scrub	22.84	-	6.1
chaparral	chamise chaparral	52.01	-	13.9
chaparral	mixed shrub	8.97	-	2.4
valley and foothill grassland	non-native annual grassland	8.78	4.93	3.7
developed[2]		0.84	2.07	0.8
Sensitive[4]				
broadleafed upland forest	California bay woodland	22.62	-	6.0
riparian woodland	arroyo willow	7.23	5.87	3.5
riparian woodland	California buckeye groves	1.70	1.68	0.9

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Coast live oak woodland (*Quercus agrifolia*, S4 G5) are known from the outer and inner Coast Ranges, Transverse Ranges, and southern coast from northern Mendocino County south to San Diego County. This vegetation community is typically located on terraces, canyon bottoms, slopes, and flats underlain by deep, well-drained sandy or loam substrates with high organic content (Sawyer et al. 2009). Within the Study Area, coast live oak woodlands occupy approximately 194 acres, or 51.8 percent. Coast live oak woodlands are generally found in the cooler, north-facing slopes in Waterdog and throughout San Juan Canyon. Dominant species in the tree layer include coast live oak, California bay, and California buckeye, with coast live oak comprising greater than 50 percent of the relative cover in this stratum, with less than 30 percent relative cover of California bay. Most stands contain a relatively dense and well-developed tree canopy reducing the density of a shrub layer to scattered individuals. Shrub species observed in the coast live oak woodlands include poison oak (*Toxicodendron diversilobum*), snowberry (*Symphoricarpos albus*), sticky monkey flower (*Diplacus aurantiacus*), coyote brush, toyon (*Heteromeles arbutifolia*), elderberry (*Sambucus nigra* ssp. *caerulea*), and blueblossom (*Ceanothus thyrsiflorus*). The herbaceous layer is dominated by a mix of shade tolerant native herbs and non-native, invasive forbs. Native species includes but is not limited to the following: common yarrow (*Achillea millefolium*), California mugwort (*Artemisia douglasiana*), miner's lettuce (*Claytonia perfoliata*), soaproot (*Chloragalum pomeridianum*), bee plant (*Scrophularia californica*). Non-native herbaceous species include oat grass (*Avena fatua*), ripgut brome (*Bromus diandrus*), scarlet pimpernel (*Lysimachia arvensis*), and sow thistle (*Sonchus asper*).

Eucalyptus groves (*Eucalyptus* spp., not ranked) are known from the Coast Ranges and Central Valley, typically as planted woodlands and shelterbelts to buffer coastal winds and provide shade. These groves are not described in Holland (1986), but are included in Sawyer et al. (2009), which describes eucalyptus groves as *Eucalyptus globulus* Semi-Natural Woodland Stands. This vegetation alliance is dominated by one of several eucalyptus species, which are not native to North America. Eucalyptus groves are frequently situated in rural and semi-urbanized settings, along streams, and coastal hills and prairies. Eucalyptus groves comprise 0.4% of the Study Area and is limited to a small stand in the within the northeastern corner of Waterdog, at the end of Cliffside Court. A small stand of trees was observed in San Juan Canyon, along Ralston Ranch Road.

Coyote brush scrub (*Baccharis pilularis*, S5 G5) is described by Sawyer (2009) as known from the outer Coast Ranges and Sierra Nevada Foothills from Del Norte County south to San Diego County. This vegetation community is typically located on river mouths, riparian areas, terraces, stabilized dunes, coastal bluffs, open hillsides, and ridgelines on all aspects underlain by variable substrate of sand to clay (Sawyer et al. 2009). Within the Study Area, this biological community often intergrades with coast live oak woodland and California sagebrush scrub, and share many of the common species found in the understory, like poison oak, California sagebrush, blue blossom, and California blackberry (*Rubus ursinus*).

California sagebrush scrub (*Artemisia californica*, S5 G5) is known from the outer Coast Ranges, western Transverse Range, and Peninsular Ranges from Marin County south to San Diego County. This vegetation community is typically located steep, well-drained slopes underlain by shallow alluvial and colluvial derived soils (Sawyer et al. 2009). Within the Study Area, California sagebrush scrub is only found within Waterdog. This community often intergrades with coast live oak woodland, California bay woodland, and coyote brush scrub. The majority of California sagebrush scrub occurs in the southeastern section of Waterdog. Coast live oak was occasionally observed within this scrub community, but the individual oak trees were still relatively small and is at low cover. Other shrub species observed include coyote brush, poison oak, and sticky monkey flower. Species within the herbaceous layer consist of a mix of native and nonnative species; native species include purple needle grass and Pacific sanicle, non-native species include compact brome and scarlet pimpernel.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Chamise chaparral (*Adenostoma fasciculatum*, S5 G5) occurs across cismontane California in a variety of topographic settings from coastal bluffs to steep, lower montane slopes (Sawyer et al. 2009). This biological community is found only at Waterdog, on the arid, south-facing slopes. Other shrub species observed within this community include California sagebrush, coyote brush, poison oak, blueblossom, sticky monkey flower, and common manzanita (*Arctostaphylos manzanita*). Occasionally, French broom was also observed (*Genista monspessulana*). Native species observed in the herbaceous layer include purple needle grass (*Stipa pulchra*), manroot (*Marah fabacea*), and soap plant. Non-native species include compact brome (*Bromus madritensis*), scarlet pimpernel, and black mustard (*Brassica nigra*).

Mixed shrub (no ranking) consist of an even mix of California sagebrush, chamise, and coyote brush in the shrub layer. Since these three species are co-dominants (approx. 30% relative cover each), this does not fit into any of the vegetation classifications and membership rules described by the Manual of California Vegetation (CNPS 2022b). Other non-dominant shrubs include sticky monkey flower, toyon, fuchsia flowered gooseberry (*Ribes speciosum*), and buck brush (*Ceanothus cuneatus*). Species observed in the herbaceous layer are similar to the other shrub-scrub communities described previously.

Non-native annual grassland (no ranking) is described by Holland (1986) as a dense to sparse cover of non-native annual grasses with flowering culms 0.2- to 1-meter-high and is often associated with numerous species of showy-flowered annual forbs. Most species found in this biological community within the Study Area include non-native grasses and forbs that are characteristic of disturbed areas. This includes oatgrass (*Avenua fatua*), black mustard (*Brassica nigra*), bull thistle (*Cirsium vulgare*), common stork's bill (*Erodium botrys*), Italian ryegrass (*Festuca perennis*), fennel (*Foeniculum vulgare*), barley (*Hordeum murinum*), burr medic (*Medicago polymorpha*), Harding grass (*Phalaris aquatica*), English plantain (*Plantago lanceolata*), and lesser trefoil (*Trifolium dubium*). Native species observed in this habitat type include purple needlegrass (*Stipa pulchra*), nude buckwheat (*Eriogonum nudum*), California goldfields (*Lasthenia californica*), pineapple weed (*Matricaria discoidea*), and Torrey's melic grass (*Melica torreyana*). Occasionally, there are small individuals of coast live oak or coyote brush appearing in this community, but this generally appears at less than 1% absolute cover – i.e., not in large enough absolute or relative cover to be classified as coast live oak woodland or coyote brush scrub. Generally, no clear dominants for any of the species listed above were observed in this habitat type; as such, there was no vegetation community from the Manual of Californica Vegetation that was suitable to be applied. Non-native annual grassland is found in both open spaces, has no ranking, and is not considered to be a sensitive habitat type.

Developed areas are areas within the park extent that have been cleared of natural vegetation communities and sometimes consist of impermeable surfaces like concrete. Developed areas are fairly limited within the open space areas (approximately 2% of the Study Area) and are restricted to the outer edges of the open spaces that are adjacent to residences.

California bay woodland (*Umbellularia californica*, S3 G4) are known from the inner and outer Coast Ranges, Transverse Ranges, and Sierra Nevada Foothills from Del Norte County south to San Diego County. This vegetation community is typically located on terraces, canyon bottoms, north-facing slopes, and rock outcrops underlain by shallow to deep sand to loam substrates (Sawyer et al. 2009). Within the Study Area, this community type is found along streams in canyon bottoms and intergrades with arroyo willow thickets. Dominant species in the tree layer include California bay and coast live oak with California bay comprising greater than 30 percent of the relative cover in this stratum. In most locations, the tree canopy is extremely dense, therefore reducing the shrub and herbaceous layers within these communities.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Scattered individuals of shrubs include poison oak, and fuchsia flowered gooseberry. The herbaceous layer is relatively depauperate and dominated by shade tolerant forbs including California maidenhair (*Adiantum jordanii*), miner's lettuce, California bedstraw (*Galium californicum*), manroot, Pacific sanicle (*Sanicula crassicaulis*), and chickweed (*Stellaria media*). California bay is a noted alternate host for sudden oak death (SOD) caused by the water mold, *Phytophthera ramorum*.

Arroyo willow thickets (*Salix lasiolepis*, S4 G4) are common throughout the state of California and consist of a canopy dominated by arroyo willows. To qualify as a true arroyo willow thicket, there must be 50% relative cover in the shrub or tree canopy (Keeler-Wolf et al. 2003) or at least 25% absolute cover. Understory plants consist of typical scrub vegetation which varies throughout the community's geographic range. This community is typically found along stream banks and benches, slope seeps, and along drainages (CNPS 2020b). Within the Study Area, arroyo willow thickets are found along canyon bottoms, adjacent to streams. Coast live oak trees are also found within the tree stratum but are typically around 10-15% of the relative cover. Poison oak is found growing among the arroyo willows, with stinging nettle (*Urtica dioica*), bee plant, common snowberry, and soap plant occurring in the herbaceous layer.

California buckeye groves (*Aesculus californica*, S3 G3) are known from the southern Cascade Range, Coast Ranges, northern Transverse Range, and Sierra Nevada Foothills from Siskiyou County south to Ventura County. This vegetation community is typically located on shallow, moderate to well-drained soils in canyons and alluvial terraces (Sawyer et al. 2009). Within the Study Area, California buckeye groves can be found along canyon bottoms, adjacent to streams; this commonly intergrades with the California bay and arroyo willow thickets along the riparian corridor. California buckeye groves are limited, at 0.9% of the Study Area. Co-dominant species within the tree stratum include California buckeye, California bay, and coast live oak. The understory is fairly depauperate, with coyote brush and stinging nettle being the most observed species.

4.2 Special-Status Species

Since both Waterdog and San Juan Canyon contain similar habitats (e.g., coyote brush scrub, coast live oak woodland, arroyo willow thickets, and annual grasslands), the assessment of special-status species applies to both parks, unless otherwise noted.

A total of 94 special-status plant species and 59 special-status wildlife species were evaluated for potential to occur within the Study Area. Of these, 11 special-status plant species and 7 special-status wildlife species have moderate/high potential to occur or are present within the Study Area. Species were ruled out if the Study Area was not within the known/expected range for the species, if the Study Area does not contain suitable habitat/microhabitat necessary to support this species, or if the species is generally understood to be extirpated from the region. All plant and wildlife species observed during the March 2022 site visits are included as Attachment A. The full list of the special status-species considered for this project is listed in Attachment B. Each species that has moderate/high potential to occur on site, or are present, are discussed below.

4.2.1 Plants

Franciscan onion (*Allium peninsulare* var. *franciscanum*), CRPR 1B.2. **Present.** Franciscan onion is a perennial forb in the lily family (Liliaceae) that blooms from May to June. It typically occurs on dry hillsides underlain by clay substrate, often derived from serpentine, in cismontane woodland and valley and

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

foothill grassland habitat at elevations ranging from 165 to 975 feet (CDFW 2022, CNPS 2022). This species has a serpentine affinity rank of weak indicator (1.8) (Safford et al. 2005). Associated species include California bay, California buckeye, coast live oak, leather oak (*Q. durata*), and purple needlegrass (CDFW 2022). This species was documented within both Waterdog and San Juan Canyon open spaces in 2015, located within coast live oak woodland (CDFW 2022). This species was not observed during the March site assessments; however, the surveys did not take place during the blooming period for this species and was not intended to be a rare plant survey.

Bent-flowered fiddleneck (*Amsinckia lunaris*), CRPR 1B.2. **Moderate Potential**. Bent-flowered fiddleneck is an annual forb in the forget-me-not family (Boraginaceae) that blooms from March to June. It typically occurs in open areas within cismontane woodland, valley and foothill grassland, and coastal bluff scrub habitat often underlain by clay substrate at elevations ranging from 10 to 1,625 feet (CDFW 2022, CNPS 2022). Associated species include coast live oak, buck brush, poison oak, common yarrow, goldenback fern (*Pentagramma triangularis*), one-sided bluegrass (*Poa secunda*), woolly sunflower (*Eriophyllum lanatum*), and slender wild oat (*Avena barbata*) (CDFW 2022). Cismontane woodland and valley and foothill grassland habitats are present within the Study Area. The nearest documented CNDDB occurrence is 1.5 southwest of San Juan Canyon open space, and 1.5 miles northwest of Waterdog, in 2018 (CDFW 2022). This occurrence was in native and non-native grassland on a south-facing slope; similar habitats are found within the Study Area.

Pink star-tulip (*Calochortus comosa*), CRPR 4.2. **Moderate Potential.** Coastal scrub and meadows and seep habitat are present within the Study Area, along with seasonally moist meadows and forested habitats. The nearest occurrences are 5 miles to the northwest, within the Crystal Springs reservoir recreation area.

San Francisco collinsia (*Collinsia multicolor*), CRPR 1B.2. **Present.** San Francisco collinsia is an annual herb that blooms from March to May. It typically occurs in closed-cone coniferous forest and coastal scrub at elevations ranging from 100 to 900 feet (CNPS 2022). Associated species include poison oak, coyote brush, California coffeeberry (*Frangula californica*), snowberry, California blackberry, western leatherwood, oso berry (*Oemleria cerasiformis*), baby blue eyes (*Nemophila menziesii*), and California buttercup (*Ranunculus californicus*, CDFW 2022). Coastal scrub habitat and moist, shady scrub or forest microhabitat is located within the Study Area boundary; there is one CNDDB occurrence in San Juan Canyon and two CNDDB occurrences in Waterdog Lake Open Space.

Western leatherwood (*Dirca occidentalis*), CRPR 1B.2. **Present**. Western leatherwood is a deciduous shrub in the mezereum family (Thymelaeaceae) that blooms from January to April, but is typically identifiable via vegetative structures into late summer and/or early fall. It typically occurs on brushy, mesic slopes in partial shade in broadleaf upland forest, chaparral, closed-cone coniferous forest, cismontane woodland, North Coast coniferous forest, riparian forest, and riparian woodland habitat at elevations range from 165 to 1,285 feet (CDFW 2022, CNPS 2022, Baldwin et al. 2012). Associated species include coast live oak, California bay, poison oak, toyon, California buckeye, coyote brush, yerba buena (*Clinopodium douglasii*), sword fern (*Polystichum munitum*), Pacific sanicle, and Douglas iris (*Iris douglasiana*) (CDFW 2022). Western leatherwood has several CNDDB occurrences within Waterdog and was observed during trail and habitat assessment surveys in March.

California bottle-brush grass (*Elymus californicus*), CRPR 4.3. **Moderate Potential**. California bottle-brush grass is a perennial graminoid in the grass family (Poaceae) that blooms from May to November. It typically occurs along stream banks or other mesic sites within broadleaf upland forest, cismontane woodland, North Coast coniferous forest, and riparian woodland habitat at elevations ranging from 45 to

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

1,530 feet (CNPS 2022). Associated species include Douglas fir (*Pseudotsuga menziesii*), coast redwood (*Sequoia sempervirens*), California bay, red alder (*Alnus rubra*), California hazelnut (*Corylus cornuta* var. *californica*), California coffeeberry, California blackberry, sword fern, hedge nettle (*Stachys ajugoides*), bracken fern (*Pteridium aquilinum*) and woodland brome (*Bromus laevipes*) (CNPS 2022, California Consortium of Herbaria 2022). California bottle-brush grass has a moderate potential to occur in the Study Area due the presence of broadleafed upland forest, cismontane woodland, and riparian forest habitats are located within the Study Area, and microhabitats of sandy humus soils are also present to support this species. The nearest documented CNPS occurrence is 2 miles to the northeast.

San Mateo woolly sunflower (*Eriophyllum latilobum*), FE, SE, CRPR 1B.1. **High Potential.** San Mateo woolly sunflower is a perennial herb that blooms from May to June. It typically occurs in cismontane woodland, coastal scrub, and lower montane coniferous forest habitats at elevations ranging from 150 to 1085 feet (CNPS 2022). Associated species include coast live oak, California buckeye, California bay, foothill needle grass (*Stipa lepida*), California sagebrush, and white globe lily (*Calochortus albus*) (CDFW 2022). Suitable habitat of cismontane woodland and coastal scrub habitats are located within the Study Area, microhabitats of roadcuts are present, and most of the associated species were also observed throughout the Study Area. The nearest CNDDB occurrence is 1.5 miles to the northwest, along a road.

Harlequin lotus (*Hosackia gracilis*), CRPR 4.2. **Moderate Potential.** Harlequin lotus is a perennial forb in the pea family (Fabaceae) that blooms from March to July. It typically occurs in wetlands or ditches in broadleaf upland forest, coastal scrub, closed-cone coniferous forest, cismontane woodland, coastal prairie, meadow and seep, marsh and swamp, North Coast coniferous forest, and valley and foothill grassland habitat at elevations ranging from 0 to 2,275 feet (CNPS 2022). This species has a wetland indicator status of facultative wetland (FACW). Associated species include coyote brush, little quaking grass (*Briza minor*), California oat grass (*Danthonia californica*), blue-eyed grass (*Sisyrinchium bellum*), subterranean clover (*Trifolium* subterraneanum) (CCH2 2022). Suitable habitat of broadleafed upland forest, cismontane woodland, coastal scrub, marshes and swamps, and meadows and seeps and microhabitats of wetlands and roadsides are present. The nearest CNDDB occurrence is approximately 2 miles west of the Study Area.

Bristly leptosiphon (*Leptosiphon acicularis*), CRPR 4.2. **Moderate Potential.** Bristly leptosiphon is an annual forb in the phlox family (Polemoniaceae) that blooms from April to July. It typically occurs in chaparral, cismontane woodland, coastal prairie, and valley and foothill grassland habitats at elevations ranging from 175 to 4,875 feet (CNPS 2022). Bristly leptosiphon has a moderate potential to occur within the Study Area due to the presence of associated species and vegetation types; however, this species typically occurs in natural open or herbaceous serpentine and/or volcanic areas. The nearest CNPS occurrence is 2.5 miles to the west.

Arcuate bush-mallow (*Malacothamnus arcuatus*), CRPR 1B.2. **Present.** Arcuate bush-mallow is a shrub that blooms from April to September. It typically occurs in chaparral and cismontane woodland habitats at elevations ranging from 50 to 1165 feet (CNPS 2022). Associated species include coast live oak, bigberry manzanita (*Arctostaphylos glauca*), chamise, western leather wood, California sagebrush, coyote brush, and buck brush (CDFW 2022). Chaparral and cismontane woodland habitat and gravelly alluvium microhabitats are present within the Study Area, in addition to a documented CNDDB occurrence within Waterdog as of 2013. This species was not observed during the March 2022 trail assessment and habitat reconnaissance surveys, which was conducted before the bloom period.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Woodland woolythreads (*Monolopia gracilens*), CRPR 1B.2. **Present.** Woodland woolythreads is an annual herb that blooms from March to July. It typically occurs in broadleafed upland forest, chaparral, cismontane woodland, north coast coniferous forest, and valley and foothill grassland habitats at elevations ranging from 330 to 3935 feet (CNPS 2022). Associated species include yerba santa (*Eriodictyon* spp.), chamise, buck brush, poison oak, bigberry manzanita, and sticky monkey flower (CDFW 2022). Suitable habitat of broadleafed upland forest, chaparral, cismontane woodland, and valley and foothill grassland and microhabitat of grassy sites in openings is present to support this species. There is a CNDDB occurrence within/adjacent to Waterdog; this record was documented in the 70s, and location is approximate, not exact.

Choris's popcornflower (*Plagiobothrys chorisianus* var. *chorisianus*), CRPR 1B.2. **Moderate Potential.** Choris's popcornflower is an annual herb that blooms from March to June. It typically occurs in chaparral, coastal prairie, coastal scrub at elevations ranging from 10 to 525 feet (CNPS 2022). Associated species include common yarrow, coyote brush, common toad rush (*Juncus bufonius*), brass buttons (*Cotula coronopifolia*), fringed willowherb (*Epilobium ciliatum*), California blackberry and Buck's horn plaintain (*Plantago coronopus*) (CDFW 2022). Chaparral and coastal scrub habitats are located within the Study Area, and microhabitats of mesic sites (and low-lying depressions) are present to support this species. The nearest CNDDB occurrence is approximately 2 miles to the southwest.

Chaparral ragwort (*Senecio aphanactis*), CRPR 2B.2. **Present.** Chaparral ragwort is an annual herb that blooms from January to April. It typically occurs in chaparral, cismontane woodland, coastal scrub at elevations ranging from 50 to 2625 feet (CNPS 2022). Associated species include California buckwheat (*Eriogonum fasciculatum*), nude buckwheat, stork's bill, redstem filaree, black sage (*Salvia mellifera*), California sagebrush, and soap root. Chaparral, cismontane woodland, and coastal scrub habitats are present within the Study Area, and a there is a CNDDB occurrence within or near Waterdog.

4.2.2 Wildlife

Moderate or higher potential to occur

Western (Pacific) pond turtle (*Actinemys marmorata*), CDFW Species of Special Concern. The western pond turtle is the only native freshwater turtle in California. This turtle is uncommon to common in suitable aquatic habitat throughout California, west of the Sierra-Cascade crest and Transverse Ranges. Western pond turtles inhabit perennial aquatic habitats, such as lakes, ponds, rivers, streams, and canals that provide submerged cover and suitable basking structures, such as rocks and logs (Zeiner et. al. 1990). Western pond turtles prefer to nest on unshaded upland slopes close to their aquatic habitat, and hatchlings require shallow water with relatively dense emergent and submergent vegetation for foraging for aquatic invertebrates (Jennings and Hayes 1994).

A small number of turtles were briefly observed swimming in Waterdog Lake, although it could not be determined whether the turtles were invasive red-eared sliders (*Trachemys scripta*) or pond turtles. Turtle habitat in general within the Study Area is limited to waterdog lake, as no other perennial water bodies of this size exist. Emergent vegetation is present on the side of the lake most distant from the existing dam, and downed timber and rocky shorelines could provide suitable basking sites. Breeding habitat at this location would mostly be limited to the slope against the existing levee, which appears highly trafficked by recreational users. Given the presence of suitable habitat and the observation of turtles in

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

waterdog lake, it is highly likely that native turtles such as western pond turtle could be present in this aquatic habitat and occasionally in adjacent uplands.

Olive-sided flycatcher (*Contopus cooperi*), CDFW Species of Special Concern. The olive-sided flycatcher is a summer resident in California, wintering in Latin America. It breeds in a variety of forested habitats, typically coniferous forests at higher elevations, but also in mixed forest and woodlands at lower elevations. Breeding habitat is often associated with forest openings and edges, both natural (e.g., meadows, canyons) and man-made (e.g., logged areas) (Altman and Sallabanks 2012). Nests are usually in conifers, and placed at variable height on the outer portions of branches. This species forages for insects, usually from prominent tree snags.

Although this species was not observed during site visits, mixed low-elevation forests are common within the Study Area and could support nesting by this species. This species may be more commonly observed foraging within the Study Area.

White tailed kite (*Elanus leucurus*), CDFW Fully Protected Species. The white-tailed kite is resident in open to semi-open habitats throughout the lower elevations of California, including grasslands, savannahs, woodlands, agricultural areas and wetlands. Vegetative structure and prey availability seem to be more important habitat elements than associations with specific plants or vegetative communities (Dunk 1995). Nests are constructed mostly of twigs and placed in trees, often at habitat edges. Nest trees are highly variable in size, structure, and immediate surroundings, ranging from shrubs to trees greater than 150 feet tall (Dunk 1995). This species preys upon a variety of small mammals, as well as other vertebrates and invertebrates.

While this species is usually observed in closer proximity to San Francisco Bay, higher elevation areas characterized by small trees interspersed with grasses and low shrubs could provide nesting or foraging habitat for this species within the Study Area.

San Francisco (saltmarsh) common yellowthroat (*Geothlypis trichas sinuosa*), CDFW Species of Special Concern. This subspecies of the common yellowthroat is found in freshwater marshes, coastal swales, riparian thickets, brackish marshes, and saltwater marshes. Their breeding range extends from Tomales Bay in the north, Carquinez Strait to the east, and Santa Cruz County to the south. This species requires thick, continuous cover such as tall grasses, tule patches, or riparian vegetation down to the water surface for foraging and prefers willows for nesting (Shuford and Gardali 2008).

Although this species is more typically documented nesting in salt marshes around the San Francisco Bay Area, more isolated patches of riparian vegetation within the Study Area could potentially support nesting by this species. This type of vegetation exists around Waterdog Lake and along stream drainages adjacent to trails.

Hoary bat (*Lasiurus cinereus*), WBWG Medium. Hoary bats are highly associated with forested habitats in the western United States, particularly in the Pacific Northwest. They are a solitary species and roost primarily in foliage of both coniferous and deciduous trees, near the ends of branches, usually at the edge of a clearing. Roosts are typically 10 to 30 feet above the ground. This species tolerates a wide range of temperatures and has been captured at air temperatures between 0 and 22 degrees Celsius. They usually emerge late in the evening to forage, typically from just over one hour after sunset to after midnight.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Many of the CNDDB occurrences in the immediate vicinity that document this species are older "specimen samples" from the early 1900's. However, this species is known to occur in forested habitats within the San Francisco Bay Area and immediate vicinity. Forested habitats within the Study Area, particularly in the vicinity of riparian areas that could provide sources of forage, should thus be considered to have moderate potential to support Hoary bat and other non-status bats with baseline protections.

San Francisco dusky-footed woodrat (*Neotoma fuscipes annectens*), CDFW Species of Special Concern. This subspecies of the dusky-footed woodrat occurs in the Coast Ranges between San Francisco Bay and the Salinas River (Matocq 2004). Occupied habitats are variable and include forest, woodland, riparian areas, and chaparral. Woodrats feed on woody plants, but will also consume fungi, grasses, flowers, and acorns. Foraging occurs on the ground and in bushes and trees. This species constructs robust stick houses/nests in areas with moderate cover and a well-developed understory containing woody debris. Breeding takes place from December to September. Individuals are active year-round and generally nocturnal.

Woodrat houses were observed widely throughout the Study Area, both along riparian strips and in more upland thickets of various types of shrubs. Densest concentrations of houses, however, were observed along creek drainages. While no woodrat individuals were observed, this species should be assumed to have potential to nest in any portion of the Study Area with a relatively dense understory.

American badger (*Taxidea taxus*), CDFW Species of Special Concern. The American badger is a large, semi-fossorial member of the Mustelidae (i.e. weasel family). It is found uncommonly within the region in drier open stages of most scrub, forest, and herbaceous habitats where friable soils and prey populations are present. Badgers are typically solitary and nocturnal, digging burrows to provide refuge during daylight hours. Burrow entrances are usually elliptical (rather than round), and each burrow generally has only one entrance. Young are born in the spring and independent by the end of summer. Badgers are carnivores, preying on a variety of fossorial mammals (especially ground squirrels) and occasionally other vertebrates and their eggs. Home ranges for this species tend to be large, depending on the habitat available; population density averages one badger per square mile in prime open country (Long 1973).

This species is likely to avoid highly trafficked areas where trails have been relatively compacted, or densely forested or vegetated habitats that dominate the Study Area. However, friable soils and more open habitats exist in higher elevation locations within the Study Area that could support this species. It thus has moderate potential to occur.

Unlikely to occur

California red-legged frog (*Rana draytonii*). Federal Threatened, CDFW Species of Special Concern. The California red-legged frog (CRLF) is the only native "pond frog" found throughout much of California. Suitable aquatic breeding habitat is characterized by deep and still or slow-moving water associated with emergent marsh and/or riparian vegetation, typically with at least 20 weeks of continuous inundation (USFWS 2010). Suitable features include ponds (perennial and non-), streams/creeks, seasonal wetlands, springs, seeps, man-made features (e.g. stock ponds, roadside ditches), marshes, dune ponds, and lagoons. Dependent upon local conditions, CRLF may complete its entire life cycle in a particular habitat patch (e.g., a perennial pond suitable for all life stages), or utilize multiple habitat types. In aquatic features that dry down seasonally, CRLFs often undergo aestivation (a period of inactivity) during the dry months, retreating to small mammal burrows or other substrates that provide suitable refugia (Thomson et al. 2016). Adults and sub-adults (newly metamorphosed individuals) may disperse from breeding

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

habitats to nearby riparian and/or aestivation areas in the summer. Conversely, during the rainy season CRLFs may migrate from aestivation sites to waters suitable for breeding. During such dispersals, frogs can travel over one mile over a variety of topographic and habitat types (Bulger et al. 2003). Upland dispersal habitats are variable and typically include riparian corridors, grasslands, and oak savannas.

CRLF has been documented to occur in the vicinity of the Study Area, mainly within Crystal Springs reservoir and wetlands immediate adjacent (CDFW 2022). However, no occurrences have been documented within the Study Area or in locations immediately adjacent. Interstate 280 also constitutes a near complete dispersal barrier for this species, except in locations where hydrologic connectivity allows passage of this species from known occupied habitats and source populations (e.g., San Mateo Creek). The Study Area does not contain any potential corridors that would allow the passage of this species from known occupied habitats to habitats within the Study Area. Potentially suitable breeding habitats for this species within the Study Area are also extremely limited, given that most stream features are intermittent or ephemeral and do not possess appropriate vegetation for the attachment of egg sacks. Waterdog Lake has potentially suitable habitat for this species given that it is a perennial water body, but to WRA's knowledge the species has not been identified within this water body and dispersal to this isolated location is unlikely. Considering barriers to dispersal and the relative lack of suitable habitat, CRLF is unlikely to occur within the Study Area.

4.3 Habitat Quality

Except for developed portions of the site, eucalyptus groves, and the non-native annual grassland, the plant species observed within the Study Area are mostly native. This is also demonstrated by the biological communities listed in the previous section; over 90% of the Study Area consist of native biological communities. Invasive species were observed but was generally limited to patches of less than 50 square feet and represent a small portion of the overall Study Area. Unsurprisingly, the primary cause of vegetation impacts is from unauthorized trails and the inadvertent expanded width of trails (resulting from braided trails).

As such, the overall habitat quality of the Study Area is high quality to moderate quality, with the areas adjacent to trails and residential development generally being moderate quality. Areas adjacent to development/residential tend to be disturbed, via fire breaks that are then recolonized by non-native species annual species (non-native annual grassland). Some areas adjacent to homes were observed to have large patches of ice plant, and vegetation clearing where the tops of coast live oak and other shrubs were removed. Areas with limited anthropogenic influence (set back from residential uses and major trails), have high quality habitat.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

4.4 Trail Environmental Conditions

The number of instances where erosion was noticed on both existing mapped and existing unmapped trails is shown in Table 5. The instances of erosion are categorized by the qualitative level, low, medium, high. In addition, approximately 50 stream crossings were identified along existing trails, and these crossings varied in terms of crossing mechanism. This ranges from a free-span wooden footbridge to a plank placed across the stream, to stepping stones.

TABLE 5. TRAIL EROSION INSTANCES.

Location	Low Erosion	Medium Erosion	High Erosion	Total Erosion Instances
Waterdog				
Existing Mapped Trails	127 (56%)	77 (34%)	25 (11%)	229
Existing Unmapped Trails	59 (83%)	7 (10%)	6 (8%)	71
San Juan Canyon				
Existing Mapped Trails	5 (38%)	7 (54%)	1 (8%)	13
Existing Unmapped Trails	11 (85%)	2 (15%)	0 (0%)	13

4.5 Wildfire Hazard Analysis

4.5.1 Wildfire Hazards

Based on the San Mateo County Hazard Mitigation Plan, Calfire has rated Belmont's two open space areas as having very high wildfire hazards for WDL, and high hazards for SJC. These hazard ratings are based on multiple factors including:

- Vegetation type and density
- Topography (fires that start on slopes tend to travel uphill)
- Weather (including wind speed and direction, and relative humidity)
- Potential Fire Behavior (e.g., flame lengths, ability to generate embers)
- Potential to damage human life and structures

The two open space areas include steeply sloped, vegetated areas adjacent to residential areas and thus have been assigned relatively high wildfire hazard ratings. Figures 2 and 3 depict vegetation types across the city's two open space areas. The majority of vegetation in WDL and SJC is coastal live oak.
According to the wildfire hazard reduction and resource management plan prepared by East Bay Regional Park District, the following fuel reduction methods are typically used to reduce wildfire fuels on Bay Area open space lands:

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

- Hand Labor;
- Mechanical Treatment;
- Chemical Treatment;
- Prescribed Burning and;
- Grazing.

Due to the configuration of, access to, and slopes within the WDL open space area, the only practical treatments for wildfire fuel reduction are hand labor and grazing. In contrast, SJC has better access for vehicles and large types of equipment, and therefore could be appropriate for using mechanical treatments to reduce wildfire fuels. Due to the proximity of Belmont's residential areas to adjacent open space areas, neither chemical treatment or prescribed burning are recommended as fuel reduction treatments.

4.5.2 Fuel Hazards by Vegetation Types

Both ignition potential and fuel hazards are rated depending on the vegetation type as shown in Table 6.

TABLE 6. FIRE HAZARD RATING FOR FUEL TYPES VEGETATION TYPE.

Vegetation Type	Hazard Rating	Ignition Potential[1]
Grasslands and Herbaceous Vegetation		
Coastal Prairie	Moderate	2
Serpentine Bunchgrass Grasslands	Low	2
California Annual Grasslands	Moderate	1
Ruderal Vegetation	Moderate	3
Scrub Vegetation		
Maritime Chaparral (Manzanita-Chinquapin)	Extreme	6
North Coastal Scrub-Xeric	Extreme	4
North Coastal Scrub-Mesic	High	8
Coyote Brush Scrub	High	4
Non-native Scrub	High	6
Woodlands and Forest Plantations		
Mature Eucalyptus Forest	High	1
Young Eucalyptus Forest	High	2
Mature Monterey Pine Forest	Moderate to High	2

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

Draft Memorandum: Management Alternatives and Environmental Assessment for the Open Space Management Plan as part of the Belmont Parks Recreation and Open Space Plan

Vegetation Type	Hazard Rating	Ignition Potential[1]
Young Monterey Pine Forest	High	2
Oak-Bay Woodland	Low	6-8
Redwood Forest	Low	8
Riparian Woodland	Low	8

Source: Wildfire Hazard Reduction and Resource Management Plan, EBRPD, 2010
1 ignition potential was ranked 1 to 10, where the highest potential is represented by a "1" and the lowest potential is ranked by a "10."

Wildfires tend to start in vegetation that ignites easily such as annual grasslands, or coastal scrub. Once ignited, these vegetation types have a significant influence on a wildfire's rate of spread. Woodland areas tend to ignite much more slowly than grassland and shrub vegetation types, but once ignited can contribute to greater heat per unit area, and higher flame lengths. Under extreme weather conditions all vegetation types have the ability to contribute to a wildfire's rate of spread, heat per unit area, and flame length.

The majority (approximately 147 acres) of vegetation in the WDL open space area is coastal live oak (Figure 3), which has a low hazard rating and ignition potential, since it is associated with oak-Bay woodland. This situation also applies to the SJC open space area, with the majority of vegetation there mapped as coastal live oak. However, the area west of Hastings Drive is classified as chamise which is associated with the North Coastal Scrub-Xeric vegetation type, and has an extreme fuel hazard rating. Based on aerial photograph review, the open space areas that abut residential areas have little to no vegetation. The city engages in wildfire fuel reduction activities in the WDL open space area, as depicted in Figures 4 and 5. There were three areas that were treated in 2021, and another group of areas treated in 2019 and 2021, also shown in Figures 4 and 5.

5.0 Recommendations

5.1 Habitat and Species

Although the habitat within the open space areas appears to be in good health, there are still management considerations and actions that should be taken to ensure this valuable community resource continues to thrive, for both residents and wildlife alike. The following recommendations are a result of observations from the reconnaissance site visits and community feedback.

Sudden Oak Death.

Sudden oak death (SOD, or *Phytophthora ramorum*) is a pathogen that is a common management concern for Belmont's Open Spaces. Although SOD has been detected in San Mateo County (and much of the west coast), there are no current or active cases reported by statewide, citizen science SOD mapping efforts through Calinvasives or University of California Berkeley's SODmap (Calflora 2022 and UC Berkeley 2022). There are no reported cases in San Juan Canyon open space, and there are three confirmed positive cases documented in Waterdog. These three cases are located along Lake Road Trail on a bay tree in 2014, one along Berry trail on a coast live oak tree in 2008, and another off-trail (southwest of Berry Trail) on a bay tree in 2013. However, these cases are inactive according to follow-up visits to the same infected trees as part of the Calinvasives mapping program in 2016, 2016, and 2014, respectively (Calflora 2022).

Although there are no known active cases according to these databases, it is still possible that SOD is present and dormant within Belmont's Open Spaces. Therefore, recommendations for SOD management include adding educational signage and decontamination equipment at all trailheads for these open spaces. Educational signage may include but is not limited to the following: photos that show what symptoms of SOD look like, how to report cases to the citizen science programs mentioned previously (if observed), how to reduce the risk of spread by avoiding trails 24-48 hours after a significant precipitation event and encouraging trail users to remove tracked mud found on the bottom of shoes and bike tires. Decontamination stations located at access points may include boot brushes and 70% isopropyl alcohol spray bottles that are mounted to the educational signage.

Invasive Species.

Several observations of invasive species were detected within Waterdog and San Juan Canyon.[3] This includes ice plant (*Carpobrotus edulis*, Cal-IPC: High), pampas grass (*Cortaderia selloana*, Cal-IPC: High), French broom (*Genista monspessulana*, Cal-IPC: High), and English ivy (*Hedera helix*, Cal-IPC: High). Trail working groups like Friends of the Waterdog and Waterdog Trailkeepers indicated current efforts to control these species, and these efforts were observed during the site assessment. For example, only the

[3] *Invasive species are typically defined as California Invasive Plant Council (Cal-IPC) species rated Moderate or High. Species ranked as "high" is defined as "... species [that] have severe ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal and establishment. Most are widely distributed ecologically." Moderate is defined as "... species [that] have substantial and apparent—but generally not severe—ecological impacts on physical processes, plant and animal communities, and vegetation structure. Their reproductive biology and other attributes are conducive to moderate to high rates of dispersal, though establishment is generally dependent upon ecological disturbance. Ecological amplitude and distribution may range from limited to widespread."*

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

vegetative (non-flowering) portions of pampas grass were observed, as someone had removed the flowering heads to prevent the species from re-seeding.

Recommendations for managing invasive species found within the Study Area include early detection and response. Early detection and response is a best management practice for invasive species control that focuses monitoring for new or spreading occurrences of undesirable species, then applies the most effective management action for the control of the species. For example, if an invasive species is primarily spread via seed, then attempts would be made to remove the flowering portion of the plant before the seeds have a chance to develop, mature, and spread. Another example would be species that spread via rhizome/stolons; the entire plant would be manually removed to prevent further spread.

Public community meetings for the open space planning efforts indicate that "Friends" groups already have this type of program in place; therefore, continued collaboration between the City and community groups would be helpful for invasive species control efforts. Another advantage of the SOD decontamination stations (brushes and rubbing alcohol) also reduces the inadvertent introduction of weedy species by trail users.

Additional Surveys.

Due to the large Study Area and number of special-status species with potential to occur, protocol-level surveys for these species are recommended once the City has a clearly established project, with a project description (which includes the limits of disturbance). Having clearly defined project footprints, or smaller study areas, for protocol-level surveys will allow the City to use resource management budget wisely and comply with applicable federal, state, and local policies. This is because the number of species with potential to occur may be tailored based on the habitat present within the project footprint and will generally result in reduced species that need protocol-level surveys to determine presence/absence.

Generally, appropriately timed work can avoid or minimize impacts to special-status species and sensitive natural resources. For example, vegetation management activities should take place during September through January to avoid impacts to nesting birds. Nesting bird season is generally accepted as February 1 through August 31 for the City of Belmont. Another example includes conducting ground disturbance activities during the dry season (June through October), particularly if the project footprint will be located near waterways.

Habitat Enhancement and Restoration Opportunities.

While most of the habitats found within the open spaces were in good condition, there are still opportunities for habitat enhancement and restoration, particularly within the non-native annual grassland and creek crossings spots within riparian corridors. As stated in the habitat description, the non-native annual grassland was observed to have mostly non-native species, with some native grasses and forbs. The presence of small patches of purple needlegrass (perennial bunchgrass) found in the understory of shrubs and within disturbed areas is promising, and this could be expanded by additional seeding, or planting more plugs of other perennial native bunchgrasses to compete with the non-native annuals. This should be followed up by monitoring these re-seeded or revegetated areas, with some supplemental water to help perennial bunchgrasses get established.

Generally, stream crossings should be minimized to the greatest extent feasible. Paths may be re-routed or consolidated to reduce the number of stream crossings. Retired crossings should be decommissioned

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

by placing signs indicating trail closure and habitat restoration, with physical barriers placed, like logs, while vegetation is filling back in. Vegetation will generally grow back in abandoned trails, but intervention may be needed if soil compaction or vegetation impacts are extensive. Revegetation methods like willow staking are common in riparian restoration efforts and would be appropriate for most creek crossing decommissioning locations within the open space. Where crossings are inevitable, a hydrologically appropriate crossing (that allows passage during high water flow events) should be planned and placed. This helps the waterway take its natural course with minimal anthropogenic influence, like increased erosion due to mechanical erosion from trail users. Collaborations between the City and with citizen science groups or "Friends" groups could help ensure the success of these efforts.

5.2 Wildfire Reduction Hazard

1. If the city desires a more aggressive fuel treatment plan, develop and implement an annual fuel treatment plan.
2. Maintain the currently treated areas as depicted in Figures 4 and 5.
3. Evaluate wildfire fuel conditions in San Juan Canyon for possible treatment. There are multiple areas with coyote brush scrub that could be treated to reduce wildfire hazards.
4. Continue to maintain the low vegetation area west of Hastings Drive, and consider expanding this area downhill, subject to avoiding nesting bird season, and any other types of environmental requirements.

5.3 Environmental Strategy for OSMP Implementation

The OSMP Base Plan and two management alternatives have multiple implementation actions that will involve various forms of ground disturbing activities. Actions fall into three categories: environmental sustainability, balanced recreational uses and trail management, and natural hazard mitigation (focused solely on wildfire hazards). Potential actions to support environmental stability could involve habitat restoration of native bunchgrass or installing drainage features or a trail bridge to reduce trail erosion. Actions associated with balanced recreational uses and trail management might include designating some trails one way, designating a parallel segment of trail as one-way or single use, or constructing a new separate trail adjacent to an existing trail to separate pedestrian and bicycle trail use. Actions intended to reduce naturals could involve cover reduction of highly flammable vegetation in areas where feasible and safe to do so via manual labor.

As noted in the table 7 below, to comply with the California Environmental Quality Act (CEQA), most, if not all, of these types of actions could be achieved by preparing a Categorical Exemption (CE), which is generally the most expeditious means of complying with CEQA. CEQA Guidelines Sections 15301-15323 describe a variety of categories that might apply to OSMP implementation actions. In some cases, the applicable CE class may not apply if mitigation measures are required to protect biological resources, or any other type of resource.

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

TABLE 7. CEQA COMPLIANCE FOR OSMP IMPLEMENTATION ACTIONS

OSMP Implementation Actions	Applicable Categorical Exemption Categories	Activities and limitations
Installing a trail bridge	Section 15303: Class 3, New Construction or Conversion of Small Structures.	A new bridge installation would need to avoid placing any bridge feature below the ordinary highwater mark (OHWM).
Native bunchgrass restoration	Section 15333: Class 33, Small Habitat Restoration projects	Projects not to exceed five acres in size to assure the maintenance, restoration, enhancement, or protection of habitat for fish, plants, or wildlife.
Installing trail drainage features	Section 15304: Class 4, Minor Alterations to the Land	Grading on land with a slope of less than 10 percent.
Designating with new signage a trail as one-way	Section 15311: Class 11, Accessory Structures	Consists of construction and placement of minor structures including but not limited to on premise signs.
Designating with new signage a parallel trail segment as one-way or single use	Section 15311: Class 11, Accessory Structures	Consists of construction and placement of minor structures including, but not limited to, signs on premises.
New trail construction	Section 15303: Class 3, New Construction or Conversion of Small Structures.	Applicability would depend on avoiding trail construction below the OHWM, avoiding construction activity during nesting bird season, and avoiding any impacts to sensitive habitats or species.
Vegetation removal or pruning	Section 15304: Class 4, Minor Alterations to the Land	Fuel management activities within 300 feet of structures to reduce volume of flammable material

To qualify for a CE and comply with CEQA, an implementation action cannot:

- Occur in a location where the implementation action could impact an environmental resource of hazardous or critical concern in an area mapped by a local, state, or federal agency;
- Create cumulative impacts spatially or over time;
- Have a significant impact due to extraordinary circumstances;
- Adversely impact a state designated scenic highway;
- Be located on a site designated as hazardous per Government Code 65962.5; or
- Adversely impact a historic resource.

Finally, it should be noted that there are several types of potential implementation actions associated with the OSMP that mostly likely could not covered by completing a CE. These could include:

- Armoring a streambank;
- Constructing a new trail if it crosses a creek; and
- Tree removal during bird nesting season.

Brigitte Shearer

From: Joanne Adamkewicz
Sent: Tuesday, May 31, 2022 11:12 AM
To: info@belmontprosplan.com; P&R Comm; Brigitte Shearer
Subject: question: 2035 population projections for PROS plan?

Dear Ms. Shearer, Parks commissioners, and staff:

Can you please point me to the 2035 population projections that were used as inputs to the current draft PROS master plan?

I am specifically concerned that the updated draft Housing Element, which won't be released until June 8 and won't be finalized until late summer, includes much higher population figures than those in the current General Plan or even the 2017 Belmont Village Specific Plan. It would be good to confirm that the PROS work was done with the most up-to-date population figures.

Thank you,
Joanne Adamkewicz
Yorkshire Way

Subject: Mountain Bike access to Waterdog

To Whom it May Concern,

I just want to express my support for mountain bike access to Waterdog. Unbiased data shows very limited trail damage by mountain bikers. Data also shows minimal disruption to wildlife. Continuing access to Waterdog not only encourages a healthier lifestyle, the presence of mountain bikers also help the local economy as they support local businesses and restaurants.

Subject: Waterdog Access

Dear PROS Committee, I have lived in San Mateo for 10 years and now in San Carlos for 3. I regularly ride my bike at Waterdog for recreation and fitness 3-4 times a week. I have never had an encounter with anyone in the park that was negative. Hikers, Bikers and Dog walkers all get along great. Limiting access to any of them would greatly impact the local economy in my eyes. From the local bike shop to the starbucks and Lunardis all within minutes for a post ride snack. I just took my 7 year old for his first mountain bike ride last Saturday and he was hooked.

Waterdog is an absolute gem and I would love to continue to ride there for years to come.

Thank You, A Concerned Citizen.

Subject: RE: question: 2035 population projections for PROS plan?

Thank you for your inquiry Joanne,

To date, as the PROS project began in early 2020, it has been using the 2035 forecasted population projection of 30,500 residents from the 2035 General Plan (2017) for all build-out scenarios.

The scope of the housing element analysis assumes that the City will complete subsequent General Plan and BVSP amendments to ensure all documents are consistent with the updated growth projections. In the meantime, as our planning document is currently underway, I'll share these recently updated projections with the PROS plan consultant

Subject: question: 2035 population projections for PROS plan?

Dear Ms. Shearer, Parks commissioners, and staff:

Can you please point me to the 2035 population projections that were used as inputs to the current draft PROS master plan?

I am specifically concerned that the updated draft Housing Element, which won't be released until June 8 and won't be finalized until late summer, includes much higher population figures than those in the current General Plan or even the 2017 Belmont Village Specific Plan. It would be good to confirm that the PROS work was done with the most up-to-date population figures.

Thank you,
Joanne Adamkewicz

Subject: Re: question: 2035 population projections for PROS plan?

Dear Ms. Shearer,

Thank you very much for getting back to me promptly! I really appreciate that.

It makes sense that the PROS planning process started with the 2017 population projections. However, it is not finalized yet, and I very strongly hope that the latest figures can be incorporated somehow into this 2022 version of the PROS plan update, for two reasons.

- First, the new number is much higher than the old forecast of 30,500 residents in 2035. The current population of Belmont is 28,360 per the recent Districting process. The Housing Element projects an additional 4500 (RHNA target build out) to 8250 (full build out) residents, for a total of **32,860 - 36,610** residents by the year 2030. The total by 2035 is unknown but will be even higher - likely more than **25% greater** than the 30,500 forecast.

- Second, the new population will not be evenly distributed throughout the city. In fact, 99% of the 4500-8250 new residents will be added to the eastern area of Belmont, raising the existing population of 7100 to **as many as 15,000 people**, with only nominal growth in the remaining areas of the city. Such lopsided development is a challenge for any city plan, including roads, sewers, schools -- and parks.

I understand that the General Plan and the BVSP can and will be amended to address the growth envisioned in the Housing Element. But those documents deliberately leave the details up to the supporting elements, which includes the PROS master plan. But a plan based on a population forecast that is 25% too low, and with no consideration for geographic distribution of the growth -- such a plan will be obsolete within a year or two, and will fail at its goal of providing a useful blueprint for the future.

I acknowledge that the entire planning exercise unfortunately cannot be re-done with the correct population forecast. It's too late. The table entitled "IDEAL AMENITY QUANTITIES FOR 2021 AND 2035 POPULATIONS" will remain unadjusted for the City's latest and most accurate population forecast, thus creating an obstacle to accurate planning by other City departments.

So what I am requesting is that the text of the PROS plan acknowledge this disconnect. A statement should be added to the effect that the plan was developed with population forecasts from 2017; that the updated 2022 forecast shows growth to be faster, more dense, and more geographically concentrated than envisioned in the PROS plan; and that therefore, future modifications to the PROS master plan, the General Plan, and the BVSP should be pursued as appropriate to match this growth.

Thank you for your consideration, and thank you for passing this on to your consultants as well.
Best regards,
Joanne Adamkewicz

Subject: RE: question: 2035 population projections for PROS plan?

Joanne,
The PROS plan document has not yet been completed. I'm working with the consultant to review our benchmarking and amenity ratio analysis to see what impacts this new population information may have on the plan.

I also understand your concern about where in Belmont this increase is likely to occur.
In anticipation of that, the draft recommendations already include additional amenities at the Belmont Sports Complex, Alexander Park, and O'Donnell Park and new opportunity (park) sites in the downtown area. These draft recommendations will undergo further community engagement before any improvements or final designs are implemented. (exception: Alexander Park tennis court resurfacing which will be underway shortly)

Thank you very much
Brigitte

Subject: Waterdog Recreation Trails

Hello Belmont,

Waterdog was the origin of a great ride tradition where I formed some of the best friendships in my life.

As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been.

I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users.

I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come.

Thank you,

Brook

Subject: Water dog | Support multi-use recreation on all trails

Hello,

As Belmont resident and an avid user of the Waterdog open space, I wanted to write in support of multi-use recreation of the trails in Water dog. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers and dog walkers to enjoy, as they always have been.

Thank you for using a scientific approach to policy making in Waterdog. I support the Waterdog Open Space Stewards and agree with the draft recommendations published recently with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. I've been hiking and biking in Water dog for over a decade hand never felt a situation where trails had to be restricted for enjoying a nice outdoors.

In the decade we have been living in Belmont, we love the city for all it has to offer. I am committed to doing my part to make Water Open Space safe an inclusive to all.

Please leave all trails in the park open to all users. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come.

Best Regards

Tushar

Hello Belmont/Waterdog decision-makers,

Please retain multi-use trails at Waterdog. I have ridden my mountain bike at Waterdog for years. It is truly a great park to ride and wouldn't want it to change in any way, if possible. I know that mountain biking has become more popular in recent years and amidst the pandemic, and this has brought new users to the park, and possibly some riff-raff.

Here is the copy/paste version.

As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been.

Dear Belmont City Council,

As a local who was raised in Belmont (Fox Elementary, Ralston Middle School, Carlmont High School), a current local resident in neighboring San Carlos and as a lifetime time user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. I was first introduced to Waterdog open space by my parents in the mid-1970s as we would enjoy weekly family hikes. As I grew older, I started riding the Waterdog trails and have enjoyed them for over 30 years! I am now a father and enjoy the same hiking and riding with my own family that I grew to love over the years. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been for as long as I can remember!

I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Subject: Waterdog Open Space Access

Hello,

I am writing in support of multi-use recreation on the trails at the Waterdog open space. The trail system was built, and continues to be maintained, by the entire community. All trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been. The singular group that is trying to change and remove access to the park for a much broader segment of multiple user groups is a niche segment of the community that does not represent the actual diverse population of Belmont and the broader population that enjoys Waterdog. Please keep this in mind when making a decision that could potentially prevent children, adults and families from enjoying this park as they have been, for generations to come.

I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users.

I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come.

Thanks,

Justin Carr

Subject: Waterdog Recreation Trails

To Belmont City Council,

As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been.

I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users.

I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come.

Best,
Devin Sezgen

Subject: Waterdog Multi-Use Park Support

Dear Community Officials,

I bike in Waterdog park approximately three days a week year around. It is an amazing multi-use park that needs to remain accessible to all. I wear bells on my bikes and always yield to others on the trails and have had no issues with walkers, runners, etc. I've found people to be very hospitable, especially when bikers are careful and thoughtful like most are.

As a user of the Waterdog open space, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been.

Subject: I support continued multiuse recreation on all trails in Waterdog

I regularly use Waterdog open space, so wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been.

I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. I feel that all the trails should be open for all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making to these two trails, and leave them open to all users.

Specifics to your draft recommendations:

- I do not support the restriction to hiking only on Ensatina Trail, the low hanging tree cover is a uniquely beautiful charm that my soul loves. I choose to enjoy while riding my bike, and would deeply like to continue to use this trail.
- I do not support changing Labor of Love into a bike only trail, it too has a really fun, low tree cover, but maily oak trees that I love. Please leave this open to all users. *I do support making this trail one-direction only.*

I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come.

Best regards,

Ryan

Subject: Waterdog PROS

I'm hoping to attend the open house this evening at Waterdog/Hidden Canyon. However, if I don't get a chance to speak, I want to get some of my thoughts out in advance.

I've been enjoying Waterdog for close to 20 years, and a resident of San Mateo for a little over 10 years. In those 20 years, I've worked with Charles Ialgunas and Patti Ciesla (formerly of Passion Trail Bikes) and now the Trail Stewards of Waterdog during many trailwork days. One of the projects I'm most proud of is helping Patti construct the new lake loop trail, bringing my son on several occasions when he was maybe 3-5 years old. He's 14 now, and just finished his freshman year at Serra HS.

During the pandemic, we got much more involved in mountain biking as a safe, social outdoor activity and found the Woodside Beasts. What we found with the Woodside Beasts was such a welcoming group who are passionate about the outdoors. Kids of all types and abilities are welcomed with open arms and provided the opportunity to enjoy many of the parks and open spaces in the Bay Area, incentivizing them to get outside and off of their devices. For me, this was so important during the pandemic, and will continue to be a great life lesson moving forward.

Sadly, it appears there are a small, very vocal minority that are trying to limit access to trails for cycling in Waterdog. I've seen first hand how these teens and pre-teens have fallen in love with being outside, meeting new friends, and learning new life skills (first aid, trail maintenance, philanthropy, civic duty, etc.). However, there are people in our community that brand these kids as criminals or outlaws, and portray them in a negative light. That message can't be further from the truth. What infuriates me is that during a trail maintenance day, working alongside the Belmont Parks and Rec, the neighbors called the police on us (and the kids). It was so frustrating trying to explain to my son why the police were questioning the work we were doing, and that it was approved by the city.

How can the city help change the neighborhood's perception of these young kids? They spend countless hours working to maintain trail systems and better communities from San Francisco down to Santa Cruz, only to be told they aren't welcome and are often scolded on the same trails they help maintain.

Please keep Waterdog open to all users. It's such a beautiful space that should remain accessible for everyone to enjoy.

Kind regards,
Matt Leonard

San Mateo, CA 94403

Subject: Multi-use Plan for the Belmont Open Space

Dear Belmont City Council,

As a weekly user of Belmont's open space at Waterdog Lake and San Juan Canyon, I wanted to write to support multi-use recreation on the trails there. The trail system was built and is maintained by the community, and all trails there should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been.

I support the Waterdog Open Space Stewards, and agree that the draft Recreation Use Assessment released by the Belmont PROS Commission is what the community is asking for, with a few exceptions. In particular, the single-use designation of two trails in the open space seems opposed to the community-building that Waterdog has always provided. I feel that all the trails should be open for all user groups to enjoy. However, designation of some trails as directional may help reduce conflicts.

Additionally, I oppose the elimination of "redundant trail segments." Not only do minor alternatives provide for a more varied experience by frequent users such as myself, but the additional trail space reduces the possibility of conflict by spreading out users more.

Thank you for using a scientific approach to policy making in Belmont; please apply the same kind of data-based decision making to these two trails designated for single-use, and leave them open to all users. I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come.

Sincerely,
Rob Anagnoson

Subject: Comments on Draft Report

Dear Belmont City Council, Parks and Recreation Commission and PROS committee

I am a resident of Belmont for over 30 years, and have enjoyed the Belmont Open Spaces over all of that time. Hiking, Running, and Biking in those spaces has been an incredible experience for me. Over those years, I believe the conditions of Waterdog Open Space have improved greatly. I have been attending Parks and Recreation Commission meetings for the past couple of years, and have heard all the arguments over and over again.

With the publication of the Draft Report, we have an unbiased appraisal of the condition of the Open Spaces and some recommendations for improvement going forward. This document, along with the results of the survey taken earlier in the planning process, and the results of the past city council election all point to the following conclusions:

- The open spaces are in very good condition, though there is room for improvement
- Wildlife are generally in good condition in the open spaces
- People really enjoy the opportunity to make use of the open space
- Restrictions on biking in the open spaces are opposed by a large majority of the public (data from the survey and results of the last city council election)
- Trails should be multi-use and we should encourage all to use the resources

Some improvements mentioned in the Draft Report, including closure of the highly eroded "fall line" section on Rambler, and improving the riparian crossings with bridges, make a lot of sense to me. I hope that they will be implemented.

I was heartened to hear several Park and Recreation Commissioners voice support for keeping the trails multi-use. This seems very much in line with the values of the Belmont community. The draft report does endorse making one trail one-way bike only and one trail hiking only. I think this is a recommendation that **should not** be implemented. Starting to designate trails as accessible to one group and not another is counter to the inclusiveness we strive to maintain in Belmont. Also, once this president is set, I can imagine a never-ending series of calls for evermore restrictive policies in the future. While this suggestion may appear to be a fair one-for-one trade, I do believe it would be a mistake to implement it.

There was also a vague recommendation to close "redundant" trails. I'm not sure this is a good idea either. In some instances having more than one way to walk or bike may enhance the experience for all. We will see different things on different trails, and spreading out the users over more trails can make the trip more enjoyable for all.

There has been a lot of work done to get to where we are today. I would like to take this opportunity to thank the Parks and Recreation Commissioners for their service to the community. I am hopeful that we can come away with a Master Plan that will continue to keep the Open Spaces great places for everyone to enjoy over the coming years.

Respectfully,
Michael Munrow

Subject: Feedback - WRA Recreational Assessment

Hi Robin and John (please forward this email to Robin),

1. I couldn't agree more with WRA assessments that visitors to San Mateo County parks as well as Belmont Open Spaces reported walking/hiking and running are the *predominant* reasons for their visits while a much smaller proportion reported biking as their reason. This clearly indicates that OSMP should be focusing more on Pedestrians than currently is the case and WRA's recommendation to **"designate trails as single use to improve feelings of safety by increasing predictability by allowing activity type"** should be implemented. All visitors can share all trails but bike speeding is not appropriate use on **narrow** trails which should be reserved for purposes of "exercising, communing with nature and experiencing peace and quiet" No amount of passive bells, loaner bells, proper etiquette and signage will improve the pedestrian safety when mountain bikes speed past at **30 mph** and take away from the natural experience of peace and quiet and improvement of mental well-being.

Just on *Canyon Creek alone,* over 40% of Strava bikers report an average speed of 15-27mph on the entire trail while over 90% report maximum speeds up to **30 mph** on portions of the trail putting pedestrian safety at risk with absolutely no peace or quiet.

25

EMAILS RECEIVED: PARKS + RECREATION COMMISSION

2. I vehemently *disagree* with designating Soho (labour of love), a previously unmapped trail as a one way bike trail. This is legally in **flagrant violation of the John Brooks Preserve donation contract to preserve it in its natural state.** For WRA to recommend that this unauthorized, unmapped trail be legalized for bikers only (no hikers) is a contradiction to their recommendation that previously unmapped trails (which have the highest number of categories of erosion) should be decommissioned or closed. Bikers want this trail as a one way downhill trail for **speed racing,** an active and competitive sport; hardly passive recreation**.** It sets a very bad precedent for allowing bikers to continue to build illegal, unmapped trails in anticipation they will be approved in the future. **The Soho trail should be decommissioned and closed.**

3. I *agree* that Waterdog has the highest trail density per acre at .04 miles per acre for both mapped and unmapped trails. It has 2.5 times the trail density of other local comparable small preserves which contributes to erosion, fragmented habitat and disruption of wildlife. **Waterdog is already overbuilt with mapped and unmapped trails.**

4. I *agree* with the use of **remote motion activated cameras** for gathering more data and information regarding pedestrian and cyclist activities, monitoring wildlife and monitoring a **maximum 15 mph speed limit** for cyclists. This additional data will be helpful in providing missing information to P&R for a complete analysis of the Open Spaces.

5. I *disagree* with E-bike approval for Waterdog as WRA failed to acknowledge that different classes of E-bikes are visually impossible to distinguish: therefore allowing Class 1 E-bikes means allowing ALL classes of E-bikes. The higher classes have larger, heavier motors and wider tires that will damage trails as their report clearly states that "motorized trails experience most soil loss and erosion". **There is no need to authorize E-bikes when they currently already violate our open spaces!**

6. I *agree* with **passive recreation ideas** such as P&R sponsored nature photography contests (particularly for kids), nature-led walks identifying vegetation and wildlife and weekly hiking trips by trail; all are ideas that support the predominant reasons why visitors visit our Open Spaces.

Thank you for your attention.

Jennifer Lien

Subject: Recreation Use Assessment - Belmont Open Space

Belmont City Council,

As a regular user of the Waterdog open space for the past 3 years (and an occasional user of the park for the 15+ years before that), I am writing to express my support for the multi-use recreation on the trails within the park. The trail system was built and is maintained by the community, and all trails within the park should continue to be available for hikers, bikers, and dog walkers to enjoy, as they always have been.

I am an avid mountain biker, runner and occasional hiker of the Waterdog trails. I've found the park to be a gem that is enjoyed by all uses. In addition, my interactions with other park users have always been friendly, courteous and enjoyable. If followed, the standard rules of conduct that already exist for bikers, runners, hikers and dog walkers are sufficient to allow all user groups to enjoy the park to its fullest extent.

I support the Waterdog Open Space Stewards, and agree that the draft recommendations published recently are what the community is asking for, with the exceptions of any trail closures and the single-use designation of two trails in the open space. All trails should be open to all user groups to enjoy. Thank you for using a scientific approach to policy making in Waterdog; please apply the same kind of data-based decision making on the two trails that are designated for single use. I believe that data will show that these trails should remain open to all users.

I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come.

Regards,

Peter Salkowski

On a personal note, my 65 year old father and I (39) have greatly enjoyed riding e-mountain bikes (eMTB) at Waterdog. Waterdog is one of the only parks on the mid-peninsula that allows eMTBs and it is a game changer for my dad who can ride single track again. Being able to relive the nostalgia of my childhood by riding bikes with my dad is truly special, and I have Waterdog's support for multi-use recreation to thank for that.

I look forward to Belmont having a fully inclusive recreation plan for Waterdog that will keep it a great place for all users to enjoy for years to come.

Sincerely,

Nolan Nichols

Subject: Waterdog open space use

Hi all,

For the past 15 years my wife and I have enjoyed Waterdog for both hiking and mountain biking. We consistently go hiking there together every week or two, and I have biked there once or twice a week until I retired three years ago, and now I bike at Waterdog three times a week.

I strongly support multi-use access to all the trails, in particular Ensatina and Labor of Love.

These trails both provide unique challenges and joys for both hikers and bikers. I've never had a moment of "conflict" on the Labor of Love trail, either with another biker or with a hiker.

I have had moments on the Ensatina trail where I had to yield the right-of-way to an uphill biker, or, as a biker, to a hiker going either direction. In all my interactions on Ensatina, there has never been an uncomfortable moment—I cheerfully and insistently give the right-of-way to all hikers, always encourage them to have a "great hike", and frequently offer advise on route selection (as someone who has been in Waterdog probably almost 2000 times!).

I personally see no reason not to keep all trails open to all users. It is true that in our use over 15 years that I have had maybe 4 moments (either as a hiker or a biker) where I felt uncomfortable by the behavior of a mountain biker. Things being what they are, I've had at least as many moments where I felt that hikers were discourteous or acted in an unsafe manner. In maybe 2000 times using the resource, this is pretty negligible.

I feel that if anything should be done to make Waterdog more enjoyably and safely usable for all users, it should be an education campaign. The existing signage is useful, but could be made more explicit with regards to right-of-way and suggestions for courteous behavior. I truly think that this would almost completely solve any issues that come from multi-use, and would leave all the trails open to all users.

Thanks you,

Mike Wright

Subject: Draft Recreation Use Assessment Feedback

I've read the recently released draft Recreation Use Assessment, and wanted to thank you all for the thoughtful approach to these recommendations. I'm a member of the Waterdog Open Space Stewards and agree with their positions on the recommendations in this draft posted at https://waterdogstewards.com/articles/update-on-recreation-at-waterdog.

I'm a frequent user of the park, and volunteered when many of the trails we enjoy there were being built. I'm thrilled at the recommendation to officially recognize the trails that are currently not on the maps, but are well-built and enhance the open space. I also support the erosion remediation recommendations.

I also support the WDOSS position that the trails at Waterdog should remain open (there are no redundant trails!) and multi-use. Waterdog has a wonderful community, and we should continue to embrace and foster it!

Thanks again for your patience and thoughtfulness in this process. I know that the vocal minority who want to shut users out of Waterdog have been loud, and I'm happy to see that they have largely been unsuccessful in their hateful campaign here and at the Cross Country Course.

Subject: Fwd: Water Dog Open Space-Park & Rec recommendations

As a long time Belmont resident, Advisory Committee member, and an individual who hikes the Water Dog trails 200+ days per year, I was very shocked and disappointed that the majority of Park & Rec Commissioners have already stated that they will recommend "multi use" trails in the Water Dog Open Space. This was stated at the Park & Rec meeting last week. I feel this decision does not take into consideration the numerous Belmont residents who feel that the most trails are unsafe due to the preponderance of bikers on narrow trails. It also is in conflict with the recommendation of the WRA report which lists on Table 9 to "Implement single-use and one-way trail segments in areas identified in the Recreation Use Assessment following sufficient public outreach".

The WRA study also states that the trails should be designed and improved to facilitate safe trail use by **all** visitors. The decision to make all trails multi use violates this WRA recommendation in section P20.

In section P21, WRA states "the City may prohibit certain trail uses or apply increased trail use restrictions within certain areas to enhance safety, minimize conflicts between trail users, and protect natural resources areas". Why can't a certain number of trails be designated for hikers/ walkers only and this be implemented so that hikers do not have to worry about their safety and being run over by bikers? These should be the following trails: Berry, Chaparral, Raccoon Run, Rambler, Ohlone, Canyon Creek and Raccoon Run.

As I stated, I and my wife hike the WD trails 200+ days per year and have done so for many years. We have been nearly hit by bikers 6 times in the last 12 months. The bikers have stated: "show us the statistics of injuries or accidents caused by bikers". Obviously the near misses to me and my wife do not show up in records but I can guarantee you that these near accidents have happened. Many of these near accidents occurred when bikers came around blind curves. They could not see us and we could not see them until the last seconds. We had to jump off the trail to avoid being hit. I must also say that numerous residents we meet walking on Belmont streets will no longer hike the WD trails due to the danger posed by the bikers. Many residents say it is not enjoyable or conducive to a peaceful walk anymore as they have to constantly watch out for bikers.

In the past two years we see less animals(deer, rabbits, quail, etc.) than in the past. Whereas we used to see deer on a weekly basis, we've seen only 3 deer since the beginning of this year.

In addition, many of the trails are damaged by bikers who have worn down the trails and made it so slick it is hard to climb some of the hilly areas. The bikes have also damaged many tree roots.

I must also request that you restrict the use of E bikes on the trails. E bikes go up to 28 MPH. Even Class 1 E bikes go 20 MPH and that can cause a severe injury if someone is hit by an E biker going 20 MPH. E bikes usually are 45-50 pounds and if someone is hit by an E bike at 15-20 MPH, they will be severely injured. Many are designed just like motor cycles and do not need pedal assist. These bikes are not safe for other users on the trails.

Please take these ideas into consideration before finalizing your recommendations to the City Council.

I believe it is your duty to represent all trail users. So far, you have shown favoritism to the bikers-many of them who do not even live in Belmont.

Thank you.
Bob Stahl

To: P&R Comm
Subject: Waterdog Lake improvement suggestions

Dear Commissioners,

I was deeply disturbed by the suggestion to add structures to the lakefront apart from the pier that exists already. A yoga platform? An art installation? ABSOLUTELY NOT!! Please remember that this is Waterdog Open Space which should really be called the John S. Brooks Open Space Preserve. It is NOT a park!! It should be maintained in a natural state to the degree possible. NO water sculpture! National wilderness areas request that people not build rock sculptures for good reason. Open space and wilderness areas are supposed to be undeveloped and give the visitor the feeling of the great outdoors away from urban amenities! If there is a concern for the safety of kids in the natural setting of the lake, bring along more adults for supervision. Do not try to conform the lake to your idea of what a beach should be. NO PICNIC TABLES! I equate the Open Space to a small version of a wilderness area. It is what it is-- leave it as is. Having a shuttle for handicap persons is possibly OK, so long as the shuttle does not remain in the area. Greater use is not always good. Be careful that you do not love the lake to death. And please leave nature to provide her own art!

Thank you,
Connie Tettenborn

Subject: Waterdog Openspace

Dear Commissioners and Committee members,

I spoke briefly after the PROS plan advisory committee meeting last night and thought it might be helpful to provide the following link. As I mentioned, the WRA, Inc., consulting firm neglected to review the documentation regarding the land gift of Waterdog Open Space. A discussion of it at a council meeting can be found here:
https://www.waterdogpreserve.org/brooks-contact-violated
There were two requirements: That it be named something like "The John S. Brooks Memorial Preserve" and that it be retained in perpetuity as open space with perhaps trails that are low use as at that time.
Considering "Habitat protection emphasis" an alternative is simply wrong. It is not an alternative option--it is the PURPOSE of an open space. "Preserve" is in the actual name that was suggested! Any consideration of new trails must take this into account. For example, putting in a connecting path for bikes would possibly create an unacceptable increase in usage levels. No e-bikes should be permitted because they are motorized, including pedal-assist bikes. (Except for officers enforcing the leash law!) I did not have time to clarify my concluding remark about single-use trails. I would only be willing to allow bikes on the narrow trails if they slowed WAY down to pass and did not make me step close to poison oak to let them by.

Thank you,
Connie Tettenborn
Belmont, CA

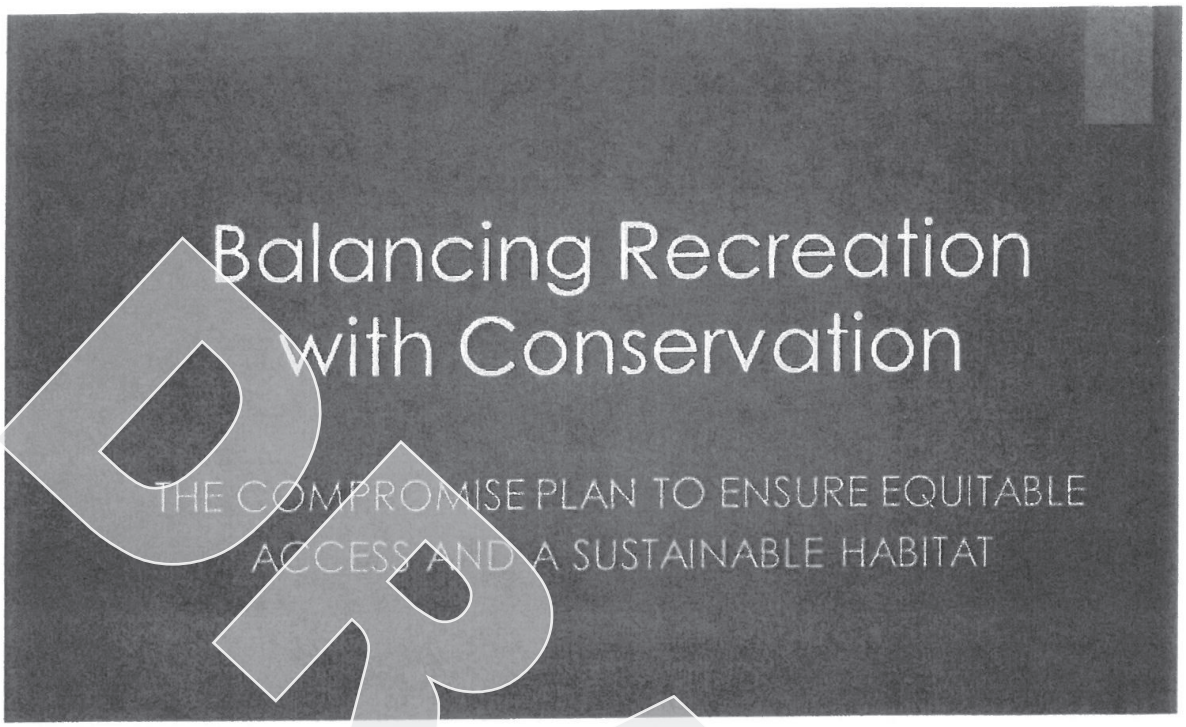
Subject: Compromise Trail Plan for Waterdog Open Space
Attachments: Compromise Trail Plan.pdf

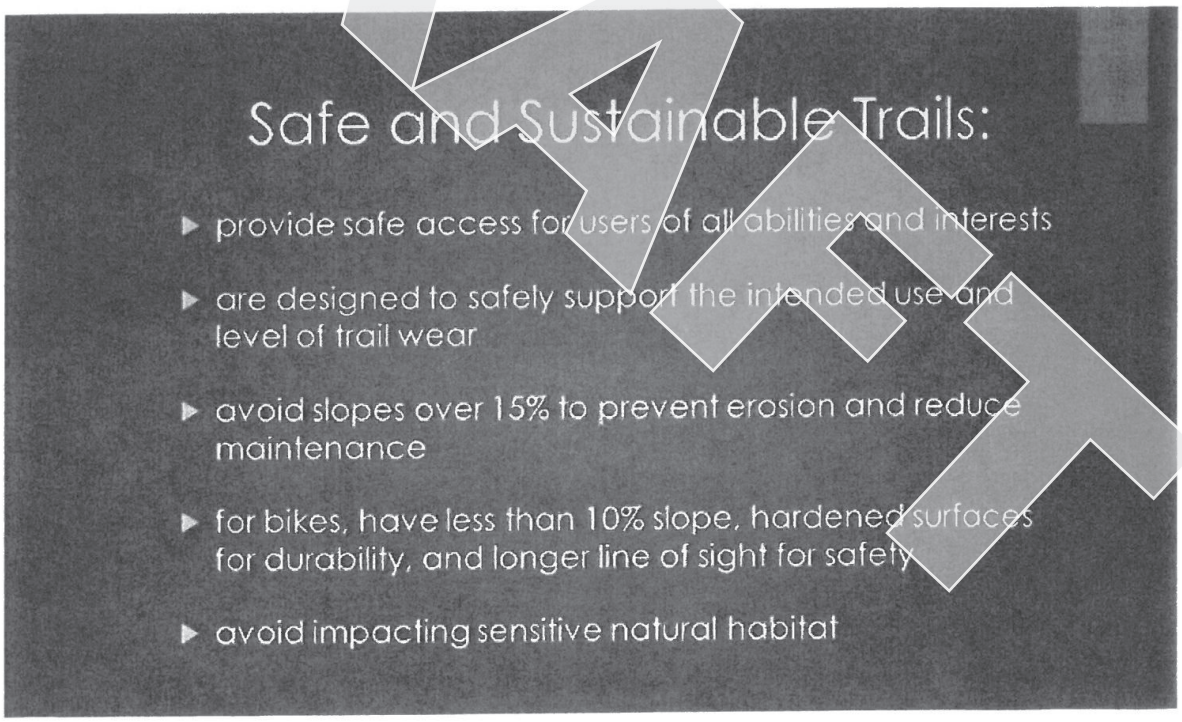
Dear Park Commissioners,

At the PROS meeting David Braunstein rightly called out the elephant in the room. To paraphrase: *both sides repeat the same arguments without listening to the other – we've missed an opportunity to build community.*

I have listened and I propose an **equitable compromise solution**; a trail use plan that provides space for a safe experience for users of differing interests and abilities, while protecting sensitive habitat.



Seniors, families with little children, and those seeking tranquil nature are displaced by speeding bikes on narrow trails, and this imbalance is not equitable. On our streets, pedestrians are not asked to jump off the sidewalk for oncoming bikes.
I have never suggested banning bikes – only that they be limited out of respect for the *majority of residents who are NOT mountain bikers*. ALL visitors have a right to use trails, but bikes are machinery for a sport that requires *appropriate trails*.



I think this plan checks all the boxes! But I hope to inspire discussion with "the other side", who also have a right to enjoy their hobby in a safe and sustainable manner. I hope this compromise plan can move us forward to a solution that is equitable for all abilities and interest groups.

Thank you
Kristin Mercer

Subject: Preserving Belmont's Open Space

Brigitte,

Thank you for your response in that the City or P&R did not open up the trails. However, someone has. So it occurred to me that Vandals are prevalent in the Open Space, they build trails whenever and wherever they please. The City closing the trails is irrelevant, for over 10 years now vandals have built trails, cut down trees and foliage, rerouted critical drainage, polluted creeks and waterways, created increased fire hazard, enabled erosion of trails that cannot be corrected, cut trails into hillsides rendering them unstable and susceptible to landslides, and driven out 90% of the wildlife that use to occupy the area. I walk the trails 2-5 times a week and have not seen a deer in over two years.

Until recently, the small canyon area off the entrance at Wakefield and Somerset, we used to see hundreds of Banana Slugs migrate through the area this time of the year. Now, I cannot find one. How much additional ecological damage is occurring that you have no clue about. In my opinion, over time, there are homes on the rim of the Open Space that could be in danger from landslides.

Why is this happening? I believe it is because the City has turned a blind eye to this activity and allowed it to occur and continue. It is why when the city has many trails closed, the vandals have just ignored the city, signs and barriers. They have gone behind the barriers, cut away damaged hillsides to create new trails around severely damaged ones, without regard to engineering or environmental concerns, or seeking permission from the City of Belmont itself. They believe the Open Space trail system is their private sporting domain, not public property and vital natural habitat.

Intentional damage of city property is vandalism. I believe most of these Vandals do not even live in the City, but come from all over the Bay Area. My question to you all, is what and when are you going to do something about it. This is a resource the City must protect for future generations and it is failing miserably to do so.

Subject: RE: Waterdog Trail Closures & PROS Progress

Brigitte,

Thanks for the response.

I'm not concerned about the storms or associated damage...nature happens. What I'm worried about is the weeks-long lack of response to the damage, the seemingly permanent closures, and the glacial pace of the CEQA review. The damage isn't all _that_ bad, from what I can tell: a ~30-ft slide on Chapparal, some fairly short damaged sections on Rambler, and needed remediation near the foot bridge that had erosion around it. This is the kind of work that the Trailkeepers are capable of handling, and I understand that a proposal was sent in.

I fear that the complaints and nuisance lawsuits of the few regular misanthropes have paralyzed the city management, and effectively locked the regular users of the park—and its volunteer force—out. Other areas have managed to stabilize and open their trail systems; as far as I can tell, it's just Belmont that is frozen in its tracks. It's now May and—aside from the rain for the past couple of days—the park has already been drying out. If work isn't started while there's some moisture to work with, I fear it will be months until repair/realignment can be put in place on Chapparal.

The CEQA review is a completely opaque process to those outside it. I'd love to hear some details, milestones, and associated dates in the P&R update on the plan to repair and reopen the trails, as well as the PROS plan.

Subject: Waterdog Trail Closures & PROS Progress

Commissioners,

I'm writing today to express my frustration at the apparent lack of progress—or at least, the lack of communication of progress—regarding the trail closures at Waterdog. The trail closures are unprecedented in my experience at the park, and I don't understand why the volunteer efforts have been blocked. This shoulder season is prime time to do trial maintenance, repair, and re-routing, yet it feels like we're wasting the opportunity. I know that the Waterdog Trailkeepers are willing and eager to do this work, and yet haven't been given clearance to do it. We've had damage of this magnitude before, when the Rambler trail suffered from winter landslides a few years ago, and it was repaired by the community quickly, and was completed without wholesale closure.

We're now in some of the most beautiful weeks to enjoy the open space, and it's marred by having two important trails closed, with no apparent plan in place to repair them. The lack of information in the updates in the recent P&R meetings has been equally frustrating.

When can we expect volunteer work to be unblocked, and the trails re-opened?

On another note, the CEQA review for the PROS plan was supposed to have started last Fall. When is this scheduled to complete, so that the plan can move forward? Again, the lack of communication and information has been frustrating.

Subject: RE: Dangerous trail conditions warrant immediate closure

I'm pleased to hear that. However there is no indication of that at the numerous *unsanctioned* entrances. I addition to the 7 sanctioned trail entrances to Waterdog/Hidden Canyon but I can point to at least 4 others.
Thanks,
Kristin

The trails were closed on 12/31 and remain closed. We will be reiterating that later today.

Brigitte

On Jan 3, 2023, at 11:15 AM, wrote:

Hi Brigitte,
The heavy rains this week led to multiple mudslides and flooding, and it's quite obvious that the open space trails are dangerous in these wet conditions. Further, even bikers acknowledge that they should not be riding on muddy trails as it damages the surface and leads to channeling of water that further erodes trails. Yet by noon on Sunday - 12 hours after record rains and flooding - the bikers were back in number, entering the trail system at the Hallmark Parklet – an unauthorized entrance.

2 weeks ago I sent video of numerous bikers entering via this unauthorized trail and even falling on the steep and muddy surface. On Sunday Jan 1 – hours after flooding and landslides, I took this video and photo of a parent who dropped off a teen to ride *alone*, knowing the trails were flooded and in places simply gone. Many others entered throughout the day. The fact that the City posted trail closure at other *sanctioned* entrances only drove bikers (no hikers) to this *unsanctioned* entrance in larger numbers. The lack of clear policy and enforcement is damaging our trails and endangering the public. We are in for two more rain events this week. I strongly urge the City to adopt a clear and enforceable policy immediately and to close trails at ALL entrances including the unsanctioned ones.

Thank you,
Kristin Mercer

SUBJECT	COMMENT	COMMENTER
Belmont dog residents	Hi there, Love our parks and recreation in Belmont. Thank you for all you do. As you know Covid brought the number of dogs to an all time high in our community. We love our dog parks off leash, occasional sidewalks, parks and trails. We've met so many wonderful neighbors and dogs - it's a delight! We appreciate the effort to try and provide off-leash time on the grass for the dogs at Barrett. While disappointing, we know Cipriani field is not technically for dogs. My question there a way to post a sign, amend the rules that dogs use the grass space "when children are not present"? That field has grown so unusable for soccer teams, I've never seen the field used in the last 2-3 years except recreationally. While I'm very grateful dog park, its smaller size prohibits many dogs from using it and there are typically little scuffles there between them as they vie for space and balls and dog toys. There's just no where to move to. Whereas the grassy area is bountiful and results in many happy dogs and humans. Thanks so much for trying to create the space for everyone. You are appreciated!	Angela Raffin 6/18/2022
Support the Multi-Use plan	Please count my support of the proposed Parks, Recreation, and Open Space (PROS) Management Plan. I support multi-use trail recreation, and am happy to see the science-based approach the city has taken with this plan. In particular, I support the Plan's following recommendations: The continued designation of Waterdog's trails as multi-use Unofficial legacy trails be officially recognized, and signage added for them Stream and waterway crossings be improved Calming features be added to single track trails in order to decrease speeds and increase challenge (fun) for riders Guidelines on trail maintenance and erosion control and (and look forward to volunteering in the parks for trail work) New trails be added to the Open Space A one-year pilot of a Class 1 e-bike policy be performed Thank you, Mike Timpano	Mike Timpano 7/12/2022
Open Space Brush Clearing in Western Hills	Hi, we have owned and lived in our current home since 1996. Every year we clear grasses and brush from the city-owned land behind our home in cooperation with neighbors. The last few years invasive weeds (i.e., scotch thistle, cotton thistle, and scotch broom) have take over the hillsides making clearing increasingly difficult. Because these plant spread aggressively it would be beneficial if a broader program could control them, such as by using goats to clear the open space. Goats consume the entire plant and it's seed pods. However, contracting to do this on a broad area such as the city land below and adjacent to our home on Cliffside Court and Hastings Drive is beyond the capabilities of any single homeowner. We will be continuing to eliminate growth annually behind our property, but the rapid spread of the invasive weeds will continue to make the situation harder to maintain every year as each season new plants are seeded and grow. This represents a growing fire danger and increasing expense for homeowners. I'd like to discuss how a coordinated abatement of the invasive species can be achieved with the City of Belmont. I know this is a widespread problem and perhaps you have recommendations or actions that we can support. Please let me know who we can discuss this with. Sincerely, Stephan Joe Hielscher	Joe Hielscher 6/19/2023
Dead Monterey pine at trailhead	You probably already know this, but in case it hasn't been reported or noticed, there is a large dead Monterey pine at the open space trailhead on Hastings near the Generac generator. There are many houses nearby and this is a large fuel load in the neighborhood. I live up on Club Drive and worry about the fire danger in the canyon. I hike the trails often and when I see cigarette butts I shudder, as I did this morning. Thanks very much.	Lucy Dobson 11/3/2023

OSMP **PURPOSE**

OPEN SPACE MANAGEMENT PLAN:

A SET OF OBJECTIVES, POLICIES, AND PRIORITIES BASED ON…

- **Environmental Assessment**: trails, stream crossings, habitat, vegetation
- **Recreational Use Assessment**: impact of recreation on sensitive resources
- Site visits + data collected in the field
- Relevant databases + peer-reviewed literature
- Community input
- Regional best practices, guidelines + regulations

Environmental Sustainability

Balanced Recreation Use

Natural Hazard Mitigation

OSMP **FINDINGS**

KEY TAKEAWAYS

1. Overall habitat quality is high
2. Existing nature-based recreational use can continue on trails
3. Continue wildfire fuel reduction efforts

PRIORITIES

TIER 1

- Improve stream crossings (H)
- Seasonal/weather-dependent restrictions on maintenance (E)
- Fuels reduction plan (M)
- Monitor recreation use (H)

TIER 2

- Nature-based recreation programs (M)
- Volunteer restoration programs (E)
- Trail calming features (H)

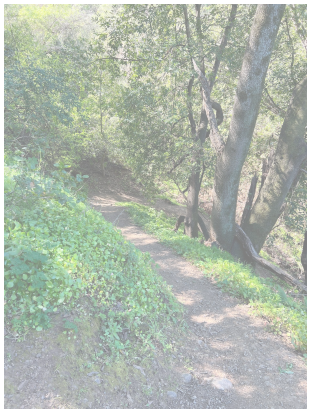
Easy

These actions can be performed immediately under **existing** City programs, funding, or with minimal additional effort.

Medium

These actions require **additional** planning, equipment, staffing, funding – either internal or external, or other operational changes.

Hard



These actions may require **substantial** planning, interagency coordination, staffing, funding, or other operational changes.

NEXT STEPS

- Utilize the methodology presented in the OSMP for ongoing observation + monitoring
- Develop an annual Fuel Reduction Plan
- Conduct engineering studies for future stream crossing projects
- Adopt trail design guidelines

(specific to Belmont OR adopt an existing set from the State or other reputable source)

IMPLEMENTATION

PRIORITIZATION: BASED ON THE ABILITY OF A RECOMMENDATION TO...

- Further the PROS goals
- Respond to community priorities
- Resolve an existing deficiency
- Address an existing condition

FUNDING + PARTNERSHIPS: OPPORTUNITIES TO COLLABORATE ON...

- Capital improvements
- Maintenance + operations

ACTION PLAN: IMPORTANT TARGETS IN THREE TIME FRAMES...

- Short term > Long term > Ongoing

RECENT **REVISIONS**

THE PROS PLAN WAS **RECOMMENDED** BY THE PARKS AND RECREATION COMMISSION ON JULY 6, 2022 TO CITY COUNCIL FOR APPROVAL **WITH THE FOLLOWING AMENDMENTS**...

1. Consolidate the OSMP's Base Plan and Management Alternatives objectives, policies, and implementation actions into a single plan.
2. Clearly present priority recommendations in the OSMP by theme - environmental sustainability, balanced recreation uses and trail management, and natural hazard mitigation.
3. Pursue the creation of dedicated parkland in downtown Belmont and the Belmont Village Specific Plan area in response to potential residential density increase in the area due to anticipated housing unit development as outlined in the 2023-2031 Housing Element update.
4. Apply consistent terminology to remove ambiguity.
5. Refine specific graphics for clarity.

2024 COMMISSIONER COMMENTS

REVISION **SUMMARY**

FORMATTING

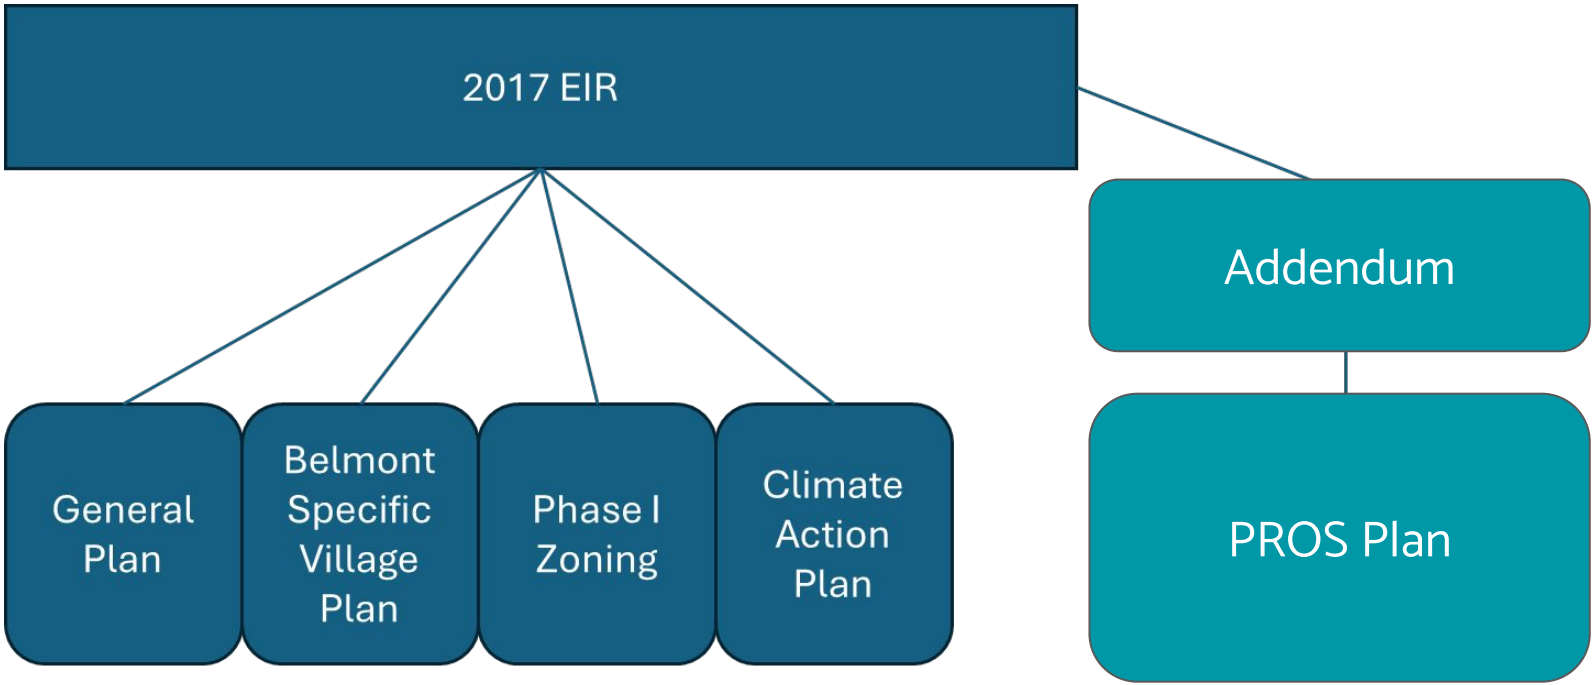
1. Color-coding graphics, tables, headers
2. Reorganizing sections
3. Presenting information visually

CONTENT

1. Defining terminology
2. Streamlining text for clarity and flow
3. Elaborating on new concepts
4. Reflects latest meetings + available info

NOT CHANGED: THE PRIMARY TAKEAWAYS OF THE DOCUMENT...

- Inventory + Needs Assessment
- Opportunities + Recommendations
- Prioritization Matrix + Action Plan



CEQA PATHWAY

- The PROS Plan was reviewed according to California Environmental Quality Act (CEQA)
- Policies and actions in the PROS Plan (including OSMP) were largely already addressed in the General Plan EIR
- To retain consistency and reduce redundancy, **an addendum to the 2017 EIR** was prepared
- The addendum and the 2017 EIR are programmatic – ***they address potential impacts that may result from the implementation of policies and actions***

Addenda are used to make changes or additions to prior EIRs or NDs without major changes to the

- Project,
- Circumstances,
- Information.

CEQA **UPDATE**

2017 EIR
General Plan
Belmont Specific Village Plan
Phase I Zoning
Climate Action Plan
Addendum
PROS Plan

EIR ADDENDUM

- The addendum analyzed the potential impacts from the PROS Plan as they relate to the impacts discussed in the 2017 EIR

FINDINGS

- Limited new impacts were less than significant
- No new significant impacts that had not already been discussed - no additional review is needed
- All mitigation measures will apply

NEXT **STEPS**

1. ADOPT A RESOLUTION TO APPROVE THE PROS PLAN AND CEQA ADDENDUM

2. AS SPECIFIC PROJECTS EMERGE, INITIATE COMMUNITY ENGAGEMENT

3. PERIODICALLY REVISIT THE PROS PLAN AS RESOURCES BECOME AVAILABLE + PRIORITIES CHANGE

STAFF REPORT

Meeting Date: March 12, 2024
Agency: City of Belmont
Staff Contact: Jozi Plut, City Clerk, jplut@belmont.gov, 650-595-7414
Agenda Title: Appointment to City Commissions and Committee
Agenda Action: Motion

Recommendation

(1) Motion to appoint at least two residents to the Planning Commission;
(2) Motion to appoint at least two residents as voting members and up to two non-voting youth members to the Parks and Recreation Commission;
(3) Motion to appoint one resident to the Measure I Committee.

Strategic Focus Area

Fiscal and Organizational Sustainability

Background

The City of Belmont has two Commissions, and a Committee. During the Months of November 2023 to January 2023, the City of Belmont held an open recruitment for applicants to fill open positions on the Planning Commission, Parks and Recreation Commission, and Measure I Committee. Each Commission and Committee is charged with advising the City Council on policy matters and completing assignments as directed by the City Council. Some bodies like the Planning Commission have a regulatory role.

The Planning Commission is a regulatory body and a quasi-judicial body. The Commission makes land use decisions for the City based on the City's General Plan and other focused regulations, such as the Zoning Ordinance, the Belmont Village Specific Plan (BVSP), and area plans.

Presently up to ten commission seats are potentially available, with up to four on the Planning Commission if Council wishes to increase the current five-member Planning Commission to a seven-member Planning Commission, and up to four voting seats on the Parks and Recreation Commission and two non-noting youth seats on the Parks and Recreation Commission. The Council may choose to fill five or seven seats on the two commissions. Measure I Committee has one seat available. Appointment periods are at the Council's discretion and are typically for one, two or three years.

The Planning Commission currently has five members, two of which have reached the end of their appointment periods. To fully staff the five-member Planning Commission, the Council would need to make two appointments which may be for the typical three-year appointment period. If the Council chooses not to make an appointment from among the current applicants, the commission could continue to function with three filled seats, but all three current commissioners would need to be present to establish a quorum.

The Parks and Recreation Commission currently has seven voting members, four of which have reached the end of their appointment periods. To fully staff a seven-voting member commission, the Council would need to make four appointments. To fully staff a five-voting member commission, the Council would need to make two appointments. If the Council chooses not to make an appointment from among the current applicants, the commission could continue to function as a five-member commission with three filled seats, but all three current commissioners would need to be present to establish a quorum. Appointments are for two years under Belmont City Code Section 2-166(b)(2) unless the Council sets a different period.

Additionally, in late fall 2023 the Council Conducted interviews for the Measure I Committee and appointed four members to the five-member board. Recruitment continued in early 2024, and one member of the public applied and was interviewed. In order to stagger the appointment periods, the Council may wish to consider making the appointment through either October 2026 or October 2027.

Analysis

The City Council held panel interviews of commission and committee applicants for consideration of the available positions. The applicants are as follows for each body:

Planning Commission Applicants

Brad Lewis
Cherry Twigg
David Kramer (I)*
Honsan Chung
Joanna Adamkewicz
John Selin
Nathan Majeski (I)*

Parks and Recreation Commission Applicants

Austin Lee (I)*
Bubby Whitmore
Craig Michaels(I)*
Loren Thomas
Pat Cuviello
